ABOUT IDG BOOKS WORLDWIDE

Welcome to the world of IDG Books Worldwide.

IDG Books Worldwide, Inc., is a subsidiary of International Data Group, the world's largest publisher of computer-related information and the leading global provider of information services on information technology. IDG was founded more than 25 years ago and now employs more than 8,500 people worldwide. IDG publishes more than 275 computer publications in over 75 countries (see listing below). More than 90 million people read one or more IDG publications each month.

Launched in 1990, IDG Books Worldwide is today the #1 publisher of best-selling computer books in the United States. We are proud to have received eight awards from the Computer Press Association in recognition of editorial excellence and three from *Computer Currents'* First Annual Readers' Choice Awards. Our best-selling ...*For Dummies*[®] series has more than 50 million copies in print with translations in 38 languages. IDG Books Worldwide, through a joint venture with IDG's Hi-Tech Beijing, became the first U.S. publisher to publish a computer book in the People's Republic of China. In record time, IDG Books Worldwide has become the first choice for millions of readers around the world who want to learn how to better manage their businesses.

Our mission is simple: Every one of our books is designed to bring extra value and skill-building instructions to the reader. Our books are written by experts who understand and care about our readers. The knowledge base of our editorial staff comes from years of experience in publishing, education, and journalism — experience we use to produce books for the '90s. In short, we care about books, so we attract the best people. We devote special attention to details such as audience, interior design, use of icons, and illustrations. And because we use an efficient process of authoring, editing, and desktop publishing our books electronically, we can spend more time ensuring superior content and spend less time on the technicalities of making books.

You can count on our commitment to deliver high-quality books at competitive prices on topics you want to read about. At IDG Books Worldwide, we continue in the IDG tradition of delivering quality for more than 25 years. You'll find no better book on a subject than one from IDG Books Worldwide.

The Value of Microsoft Certification

As a computer professional, your opportunities have never been greater. Yet you know better than anyone that today's complex computing environment has never been more challenging.

Microsoft certification keeps computer professionals on top of evolving information technologies. Training and certification let you maximize the potential of Microsoft Windows desktop operating systems; server technologies, such as the Internet Information Server, Microsoft Windows NT, and Microsoft BackOffice; and Microsoft development tools. In short, Microsoft training and certification provide you with the knowledge and skills necessary to become an expert on Microsoft products and technologies—and to provide the key competitive advantage that every business is seeking.

Microsoft offers you the most comprehensive program for assessing and maintaining your skills with our products. When you become a Microsoft Certified Professional (MCP), you are recognized as an expert and are sought by employers industry-wide. Technical managers recognize the MCP designation as a mark of quality—one that ensures that an employee or consultant has proven experience with Microsoft products and meets the high technical proficiency standards of Microsoft products.

As an MCP, you receive many benefits, such as direct access to technical information from Microsoft; the official MCP logo and other materials to identify your status to colleagues and clients; invitations to Microsoft conferences, technical training sessions and special events; and exclusive publications with news about the MCP program.

Research shows that organizations employing MCPs also receive many benefits:

- A standard method of determining training needs and measuring results—an excellent return on training and certification investments
- Increased customer satisfaction and decreased support costs through improved service, increased productivity, and greater technical self-sufficiency
- A reliable benchmark for hiring, promoting, and career planning

- Recognition and rewards for productive employees by validating their expertise
- Retraining options for existing employees, so they can work effectively with new technologies
- Assurance of quality when outsourcing computer services

Through your study, experience, and achievement of Microsoft certification, you will enjoy these same benefits, too, as you meet the industry's challenges.

Nancy Lewis
General Manager
Microsoft Training and Certification

Foreword to the MCSE Series

Certifications are an effective way of “selling your skills” to prospective employers, since they represent a consistent measurement of knowledge about specific software or hardware products. Because of their expansive product line and tremendous marketing efforts, Microsoft certifications have become the gold standard in the exploding certification industry. As a Microsoft Certified Professional, you are recognized as a “Subject Matter Expert” as defined by objective standards. As a training organization, we recognize the value of offering certification-level training. In fact, approximately 55 percent of students in our Microsoft classes are working toward certification, and I expect that number to continue to rise.

Studies have been conducted that show increased productivity among Microsoft Certified Solutions Developers versus noncertified programmers. Additionally, compensation for Microsoft Certified Systems Engineers and Microsoft Certified Solutions Developers averages higher than for those without certification. For individuals looking for a career in these areas, there is no better metric of legitimacy that can be placed on a resume than Microsoft certification credentials.

Information Systems/Information Technology (IS/IT) decision-makers for ExecuTrain clients worldwide increasingly require certifications for their IS employees. Often, individuals are required to be certified or find that certification was their competitive edge in landing the job. Conventional wisdom and every study you read indicates these trends will continue as technologies become more a part of daily business in corporations.

Microsoft recently certified the 100,000th Microsoft Certified Professional. I expect this number to balloon as corporations make certification part of IS staff job descriptions. I predict certified candidates can expect better-paying jobs and positions with more technical responsibility to match their hard-won certification. Although the number of MCPs rises daily, that population is eclipsed by the more than 200,000 open IT positions reported today. Microsoft tracks these open positions and would like to fill each of them with MCPs. My bet is that if anyone can make the math work, they can.

Kevin Brice

About the Author

Alan R. Carter is a Microsoft Certified Systems Engineer (MCSE), a Microsoft Certified Internet Professional (MCIP), and a Microsoft Certified Trainer (MCT). He teaches Microsoft Official Curriculum courses throughout the U.S. He also participates in the development of new courses and other educational materials. In addition to his Microsoft certifications, Alan is a Certified Network Professional (CNP), a Novell Master Certified Network Engineer (CNE), and a Certified Novell Instructor (CNI). He lives in Kirkland, Washington. He welcomes comments from his readers and can be contacted via the Internet at alan_carter@usa.net.

To Timothy

Foreword

When I first met Alan Carter, the author of this book, my understanding of networking was pretty uneven. I knew a great deal about some aspects, but nearly nothing about others. My basic computing fundamentals were sound, but I had not yet taken the step of applying those fundamentals to the big picture of networking.

I met Alan when I signed up for his classes. I had heard a number of very positive comments about his training skills from several of my colleagues, and his experience and certifications constituted a veritable laundry list of acronyms. However, what was important to me was learning to apply networking skills to the computing foundation I had already acquired, and expanding my abilities specifically to Enterprise-level network operating systems. Alan helped me achieve just that.

Alan's vast real-world experience and intimate product knowledge provided the learning context and background I needed to pair up with my more theoretical computing basics. My benchmark for a good instructor is one who can tailor the subject to my needs, provide real-world insight and details to round out my knowledge base, and expand my understanding without simply drilling down to the rote details. Alan's teaching style and provocative discussions do exactly that. He answered my questions just as they were forming on my tongue. He provided compelling real-world examples at every turn, so I never got distracted by the details or lost the big picture.

This is not to say that Alan isn't careful with the details! He is completely familiar with the products and the people who build them. His attention to minutiae makes both his training courses and this book excellent resources for every detail. He understands inside out not only what it takes to pass these difficult exams, but also what real-world skills a certified professional must bring to the table to be effective on the job.

In this book, Alan brings you the same excellence and detail that he does in his training courses. Absolutely every exam objective is covered here — with labs and exercises to reinforce your hands-on experience. More importantly, Alan's vast training experience and product background will provide you with the context you

need in the real world, not just on paper. Getting through the Windows NT MCSE exams is no easy task. Fortunately, you've made the right decision in choosing Alan's book to help prepare for these crucial exams.

Donald E. Dillenburg
Senior Network Integrator
Bank of America Northwest
MCSE, CNE, ASE

Preface

Welcome to the MCSE Certification Series! This book is designed to help you acquire the knowledge, skills, and abilities you'll need to pass three of the Microsoft Certified Professional exams:

- Exam No. 70-73: Implementing and Supporting Microsoft Windows NT Workstation 4.0
- Exam No. 70-67: Implementing and Supporting Microsoft Windows NT Server 4.0
- Exam No. 70-68: Implementing and Supporting Microsoft Windows NT Server 4.0 in the Enterprise

If you're *not* planning to take one or more of these exams, but you want to develop a comprehensive working knowledge of the Microsoft Windows NT (referred to mostly from here on out simply as Windows NT or NT) products, then this book is also for you.

This book is designed to be the only book or course you'll need to prepare for and pass the NT exams. However, the goal of this book is *not* to make you into an NT guru. I'll cover NT to the depth of the exam objectives, but not go substantially beyond that point. If, during the course of your study, you find yourself wanting more depth, detail, and advanced technical tidbits, I heartily recommend the following resources:

- *Microsoft Windows NT Workstation Resource Kit for version 4.0* (Microsoft Press, 1996)
- *Microsoft Windows NT Server Resource Kit for version 4.0* (Microsoft Press, 1996)
- *Inside Windows NT* (Microsoft Press, 1993)
- *Inside the Windows NT File System* (Microsoft Press, 1994)

How This Book Is Organized

This book is organized into seven major parts, followed by a Resources section that contains appendices and supplemental materials, plus a compact disc. These major parts closely parallel the Microsoft Certified Professional exam objectives for the three Windows NT 4.0 exams.

Within these major parts, each chapter begins with an overview of the topics that will be covered in that chapter. Then pertinent information on each topic is presented. A Key Point Summary follows, summarizing the chapter highlights and reviewing important material. At the end of each chapter are Instant Assessment questions to make sure you understand and can apply what you've read. Additionally, at the end of many chapters there are review activities, and hands-on lab exercises so you can master the specific tasks and skills tested by the exams.

I should explain, at this point, why the preparation guides for the NT Workstation and NT Server exams have been combined into a single book, rather than presented as two separate books. Simply stated, NT is NT. Yes, there are some differences between NT Workstation and NT Server, but the two products are fundamentally the same operating systems. When we talk about NT, we are talking about a coherent body of knowledge. When you learn to perform a task using Windows NT Workstation, it's usually the same as learning the same task on Windows NT Server. Throughout this book, therefore, except where differences are noted, NT refers to *both* NT Workstation and NT Server.

Part I: Overview

The Overview discusses the basics of Windows NT Workstation and Windows NT Server, including a section on the architecture of Windows NT.

Part II: Installation and Configuration

This part covers, in detail, installing and configuring Windows NT Workstation and Windows NT Server, including chapters on configuring disks, using Control Panel, deploying Windows NT from a server, and managing printing.

Part III: Managing Resources

This part explains how to use the features, services, and tools that come with Windows NT. It explains user and group accounts, account policy, auditing, user rights, user profiles, and system policy. It covers managing and optimizing Windows NT Server Directory Services, as well as sharing and securing file systems. It teaches the reader how to access network resources, how to use NT Server tools, and how to back up and restore data.

Part IV: Connectivity

Connectivity is all about how NT functions in a network setting. Protocols, particularly TCP/IP, are examined. This section discusses the coexistence of Windows NT with Novell NetWare, as well as migrating from a NetWare environment to a Windows NT environment. You will learn how to install and configure Remote Access Server, and also learn about connectivity with Macintosh computers.

Part V: Running Applications

In this part, I introduce the application environments and explain how to optimize applications to run under Windows NT.

Part VI: Monitoring and Optimization

This part explores how to monitor and optimize the performance of a specific computer or an entire network. You will learn how to use tools such as Performance Monitor and Network Monitor to gather data. I also examine the basics of capacity planning.

Part VII: Troubleshooting

From basic to advanced troubleshooting, this part covers it. You'll learn how to approach a troubleshooting situation, as well as which resources to consult when you're stumped by a problem.

Part VIII: Resources

The supplemental materials at the back of the book contain a wealth of information. In addition to a detailed glossary and thorough index, you'll find the following information in the appendices: exam preparation tips; answers to chapter Instant Assessment questions, Review Activities, and Hands-on Labs; a Mini-Lab Manual that features all of the Hands-on Lab Exercises from the book; Windows NT planning forms; and a description of the compact disc contents. Appendices A, B, and C, which contain the exam objectives for each of the three Windows NT 4.0 exams, also include detailed Exam Objectives Cross-Reference Charts for study purposes.

CD-ROM

The compact disc included with this book contains the following materials: an electronic version of this book in Adobe Acrobat format; excerpts from *MCSE Career Microsoft®!* (IDG Books Worldwide, 1997); Adobe Acrobat Reader; Microsoft Internet explorer version 3.01; Validate! Windows NT 4.0 Workstation and Server practice exams; Microsoft Training and Certification Offline CD-ROM; *MicroHouse Technical Library* (evaluation copy); and Diskeeper Lite (evaluation copy).

How to Use This Book

This book can be used either by individuals working independently or by groups in a formal classroom setting.

For best results (and we both know that the only acceptable results are passing scores on the MCSE exams), I recommend the following plan of attack as you use this book. First, read the chapter and the Key Point Summary at the end. Use this summary to see if you've really got the key concepts under your belt. If you don't, go back and reread the section(s) you're not clear on. Then do *all* of the Instant Assessment section questions and review activities at the end of the chapter. Finally, *do* the hands-on lab exercises. Remember, the important thing is to master the tasks that will be tested on the exams. There's really no way to master tasks without seeing the various NT screens over and over again.

When you do the hands-on lab exercises and are asked to type something, the text you are instructed to type will be printed in bold, like this:

WORKGROUP

Important words and concepts appear in italics, and all filenames, folder names, directories, Uniform Resource Locators (URLs), and code appear as monospaced font.

The chapters of this book have been designed to be studied sequentially. In other words, it would be best if you complete Chapter 1 before you proceed to Chapter 2. A few chapters could probably stand alone, but all in all, I recommend a sequential approach. The hands-on lab exercises have also been designed to be completed in a sequential order and often depend on successful completion of the previous labs.

After you've completed your study of the chapters and reviewed the questions and lab exercises in the book, use the compact disc to take the assessment exams and practice tests. The assessment exams and practice tests will help you assess how much you've learned from your study and will also familiarize you with the type of exam questions you'll face when you take the real exams. Once you identify a weak area, you can restudy the corresponding chapters (including the review questions and lab exercises) to improve your knowledge and skills in that area. Use the exam objectives cross-reference charts in the appendices to help you determine on which chapter(s) to redouble your efforts.

Prerequisites

Although this book is a comprehensive study and exam preparation guide, it does not start at ground zero. I do assume you have the following knowledge and skills at the outset:

1. Basic terminology and basic skills to use a Microsoft Windows product. (This could be Windows 95, Windows for Workgroups, or a Windows NT product.)
2. Basic mouse skills: being able to left-click, right-click, use the pointer, and so on.
3. Networking knowledge or experience equal to the scope required to pass the Microsoft Certified Professional Networking Essentials Exam (Exam No. 70-58).

If you meet these prerequisites, you're ready to begin this book.

If you don't have the basic Windows experience or mouse skills, I recommend you either take a one-day Windows application course or work through a self-study book, such as *Windows 95 For Dummies* (IDG Books Worldwide, Inc.), to acquire these skills *before* you begin this book.

If you don't have the networking knowledge or experience, I recommend you use a tool such as *Networking Essentials MCSE Study Guide* by Jason Nash (IDG Books Worldwide, Inc.), to obtain this knowledge, and pass the Networking Essentials exam *before* you begin this book.

How to Determine What You Should Study

Your individual certification goals will ultimately determine which parts of this book you should study. If you want to pass two or three of the Microsoft Certified Professional NT exams, or simply want to develop a comprehensive working knowledge of NT, I recommend you study, in sequential order, the entire book.

If you are preparing for the Implementing and Supporting Microsoft Windows NT Workstation 4.0 exam, I suggest you follow the recommended study plan, shown in Table 1.

If you are preparing for the Implementing and Supporting Microsoft Windows NT Server 4.0 exam, I suggest following the recommended study plan shown in Table 2.

If you are preparing for the Implementing and Supporting Microsoft Windows NT Server 4.0 in the Enterprise exam, I suggest following the study plan shown in Table 3.

TABLE 1 CHAPTERS AND LABS THAT PREPARE YOU FOR THE IMPLEMENTING AND SUPPORTING MICROSOFT WINDOWS NT WORKSTATION 4.0 EXAM

<i>CHAPTER NUMBER</i>	<i>CHAPTER TITLE</i>	<i>RECOMMENDED LABS</i>
1	Overview of Windows NT Workstation and Windows NT Server	None
2	Installing Windows NT Workstation and Windows NT Server	Lab 2.1, Lab 2.2
3	Configuring Disks	Lab 3.3
4	Using Control Panel	Lab 4.6
5	Server-Based Deployment	Lab 5.7
6	Managing Printing	Lab 6.8, Lab 6.9
7	Managing User and Group Accounts	Lab 7.10
9	Managing User Profiles and System Policy	Lab 9.13
12	Sharing and Securing File Systems	Lab 12.18, Lab 12.20
13	Accessing Resources on the Network	Lab 13.21, Lab 13.22
16	Networking Using TCP/IP	Lab 16.26
17	Coexistence with NetWare	Lab 17.29
19	Installing and Configuring Remote Access Service (RAS)	Lab 19.32
21	Running Applications on Windows NT	Lab 21.34
22	Using Performance Monitor	Lab 22.35
25	Performance Optimization	Lab 25.37
26	The Troubleshooting Process	None
27	Advanced Troubleshooting Topics	Lab 27.39

**TABLE 2 CHAPTERS AND LABS THAT PREPARE YOU FOR THE IMPLEMENTING
AND SUPPORTING MICROSOFT WINDOWS NT SERVER 4.0 EXAM**

<i>CHAPTER NUMBER</i>	<i>CHAPTER TITLE</i>	<i>RECOMMENDED LABS</i>
1	Overview of Windows NT Workstation and Windows NT Server	None
2	Installing Windows NT Workstation and Windows NT Server	Lab 2.1, Lab 2.2
3	Configuring Disks	Lab 3.3, Lab 3.4
4	Using Control Panel	Lab 4.5, Lab 4.6
5	Server-Based Deployment	Lab 5.7
6	Managing Printing	Lab 6.8, Lab 6.9
7	Managing User and Group Accounts	Lab 7.10
8	Managing Account Policy, User Rights, and Auditing	Lab 8.11, Lab 8.12
9	Managing User Profiles and System Policy	Lab 9.13, Lab 9.14
12	Sharing and Securing File Systems	Lab 12.18, Lab 12.19, Lab 12.20
13	Accessing Resources on the Network	Lab 13.21
14	Using Windows NT Server Tools	Lab 14.23
15	Backing Up and Restoring Data	Lab 15.24
16	Networking Using TCP/IP	Lab 16.27, Lab 16.28
17	Coexistence With NetWare	Lab 17.30
18	Migrating to Windows NT from NetWare	None
19	Installing and Configuring Remote Access Service (RAS)	Lab 19.32
22	Using Performance Monitor	Lab 22.35
25	Performance Optimization	Lab 25.37
26	The Troubleshooting Process	None
27	Advanced Troubleshooting Topics	None

TABLE 3 CHAPTERS AND LABS THAT PREPARE YOU FOR THE IMPLEMENTING AND SUPPORTING WINDOWS NT SERVER 4.0 IN THE ENTERPRISE EXAM

<i>CHAPTER NUMBER</i>	<i>CHAPTER TITLE</i>	<i>RECOMMENDED LABS</i>
1	Overview of Windows NT Workstation and Windows NT Server	None
2	Installing Windows NT Workstation and Windows NT Server	Lab 2.1, Lab 2.2
3	Configuring Disks	Lab 3.3, Lab 3.4
4	Using Control Panel	Lab 4.5
5	Server-Based Deployment	None
6	Managing Printing	Lab 6.8, Lab 6.9
7	Managing User and Group Accounts	Lab 7.10
8	Managing Account Policy, User Rights, and Auditing	Lab 8.11, Lab 8.12
9	Managing User Profiles and System Policy	Lab 9.13, Lab 9.14
10	Managing Windows NT Directory Services	Lab 10.15, Lab 10.16
11	Optimizing Windows NT Server Directory Services	Lab 11.17
12	Sharing and Securing File Systems	Lab 12.18, Lab 12.19, Lab 12.20
13	Accessing Resources on the Network	Lab 13.21, Lab 13.22
14	Using Windows NT Server Tools	Lab 14.23
15	Backing Up and Restoring Data	Lab 15.24
16	Networking Using TCP/IP	Lab 16.25, Lab 16.26, Lab 16.27, Lab 16.28
17	Coexistence With NetWare	Lab 17.30, Lab 17.31
18	Migrating to Windows NT from NetWare	None
19	Installing and Configuring Remote Access Service (RAS)	Lab 19.32
20	Macintosh Connectivity	Lab 20.33
22	Using Performance Monitor	Lab 22.35
23	Using Network Monitor	Lab 23.36
24	Capacity Planning	None
25	Performance Optimization	Lab 25.37, Lab 25.38
26	The Troubleshooting Process	None
27	Advanced Troubleshooting Topics	Lab 27.39

Hardware and Software You'll Need

You will need access to various hardware and software to be able to do the hands-on lab exercises in this book. It is extremely important that you do these labs to acquire the skills tested by the Microsoft Certified Professional exams.

If you have the minimum hardware listed below, you will be able to complete *most* of the hands-on lab exercises in this book, and certainly all of the critical exercises. To be able to perform *all* of the labs, however, you will need the additional hardware as well.

Minimum hardware requirements:

- Intel-based computer with 486/33 processor, 16MB RAM, and 500MB–1GB available hard disk space
- CD-ROM drive
- Mouse
- VGA monitor and graphics card

tip

I strongly recommend that you only use hardware found on the Microsoft Windows NT Hardware Compatibility List, which is shipped with the NT product, or can be accessed via Microsoft's World Wide Web site at <http://www.microsoft.com/networkstation>, or at <http://www.microsoft.com/ntserver>.

Optional additional hardware:

- Additional computer (with the same minimum specifications as the first one)
- Network adapter and cabling (if you have the additional computer listed above)
- Printer
- Tape drive
- Modem and Internet connection (so you can access online resources)

caution

Warning! Some of the lab exercises in this book have the potential to erase or corrupt data on existing hard disk drives. Make sure you back up all important data and programs *before* you attempt to perform any of the lab exercises. Or do the labs on a computer that does not contain any vital data or programs.

Software requirements:

- Microsoft Windows NT Workstation 4.0
- Microsoft Windows NT Server 4.0

Icons Used in This Book

Several different icons used throughout this book draw your attention to matters that deserve a closer look:

Workstation
Server
Enterprise

This icon identifies the MCSE certification exam(s) pertinent to the content adjacent to it. You'll see this icon at the beginning of each chapter and alongside hands-on labs and review activities.

concept link

This icon points you to another place in this book (or to another resource) for more coverage on a given topic. It may point you back to a previous chapter where important material has already been covered, or it may point you ahead to let you know that a concept will be covered in more detail later on.

caution

Be careful here! This icon points out information that can save you a lot of grief. It's often easier to prevent tragedy than to fix it afterwards.

exam
preparation
pointer

This icon identifies important advice for those studying to pass the three Microsoft Certified Professional exams on Windows NT.

in the
real world

I know this will be hard for you to believe, but sometimes things work differently in the real world than books—or software documentation—say they do. This icon draws your attention to the author's real world experiences, which will hopefully help you on the job, if not on the Microsoft Certified Professional exams.

note

This icon points out an interesting or helpful fact, or some other comment that deserves emphasis.

web links

This icon indicates an online resource that you can access to obtain products, utilities, and other worthwhile information.

Here's a little piece of friendly advice, or a shortcut, or a bit of personal experience that might be of use to you.

I guess that about wraps up the general comments. From here you can get started on the nuts and bolts of learning about NT and get ready to pass those exams. I wish you great success!

Acknowledgments

“No man is an island, entire of itself,” wrote John Donne. There’s no time when that statement is more true than when you’re producing a book like this one. It’s a tremendous undertaking — not just by the author, but by scores of other people, too.

With that thought in mind, I’d like to take this opportunity to thank the following people who helped make this book possible:

First of all, thanks to Thomas Willingham, MCSE, MCT for connecting me with IDG Books. Without you, Thomas, this project would have never happened.

Thanks also to fellow authors Martin Matthews and David James Clarke IV for freely sharing your wisdom and advice.

A very hearty thanks to Chris Gradwohl, MCSE, MCT and to Mark Knutson, MCPS, CNE for the many painstaking hours you both spent reviewing this book technically. You guys kept me on my toes, and I appreciate it.

Special thanks to everyone at IDG Books who worked way “above and beyond the call of duty” to get this book into production on schedule, including: Tracy Thomsic, lead development editor; Anne Hamilton, acquisitions editor; Ellen Dendy and Kay Keppler, development editors; Lothlórien Baerenwald, lead copy editor, and Tracy Brown, Katie Dvorak, Marcia Baker, and Donna Scism, copy editors, and the entire graphics and production staff. Many thanks also to Walter Bruce, publishing director, and Brenda McLaughlin, senior vice president and group publisher of the Computer Publishing Group.

I also want to thank my family and friends for their tremendous support during this project. Especially, I thank my wife, Pat, whose hard work helped turn this man’s dream of authoring a book into a reality.

The publishers would like to thank Becky Kirsinikas and Holly Heath of the Microsoft ICV program for their prompt responses and information gathering efforts, and the staff at Waggener Edstrom — Joscelyn Zell, Ryan James, and Kelly Stremmel — for providing IDG with crucial help and information.

Chapter 4: Using Control Panel	115
Overview of Control Panel	117
Managing Peripherals and Devices	119
Accessibility Options	119
Devices	119
Display	120
Keyboard	121
Modems	121
Mouse	123
Multimedia	123
PC Card (PCMCIA)	123
Ports	124
Printers	124
SCSI Adapters	125
Tape Devices	126
UPS	126
Licensing	127
Networking	128
Changing the Computer/Domain Name of a Domain Controller	128
Changing the Computer/Domain/Workgroup Name of a Stand-Alone Server or a Windows NT Workstation Computer.	130
Protocols and Services	132
Installing and Configuring Protocols and Services	138
Configuring Bindings and Network Access Order	139
Configuring Network Adapters.	142
Managing Services.	144
Managing the Server	145
Configuring Directory Replication	145
Managing the System.	149
Application Performance and Virtual Memory.	149
Environment Variables	150
Startup/Shutdown.	150
Hardware Profiles	152
User Profiles	154
Other Control Panel Applications	154
Add/Remove Programs	154
Console	154
Date/Time	155

Fonts	155
Internet	155
ODBC	155
Regional Settings	155
Sounds	156
Telephony	156
Troubleshooting Common Configuration Problems.	156
Key Point Summary	158
Applying What You've Learned	160
Instant Assessment	160
Review Activities	161
Hands-on Lab Exercises	163
Chapter 5: Server-Based Deployment	173
What Is Server-Based Deployment?	175
Preparing for Server-Based Deployment.	176
Using Network Client Administrator	177
Creating an Installation Disk Set	178
Creating a Network Installation Startup Disk.	179
Automating Setup of Windows NT.	182
Creating and Using Answer Files (Unattend.txt).	183
Using Uniqueness Database Files	187
Automating Application Installation During Setup.	189
The \$OEM\$ Subfolder	189
Key Point Summary	191
Applying What You've Learned	193
Instant Assessment	193
Hands-on Lab Exercise	194
Chapter 6: Managing Printing	199
Printing Terminology	201
Windows NT Printing Overview.	202
The Print Process	202
Creating and Connecting to Printers	205
Steps to Create a Printer.	205
Steps to Connect to a Printer.	207
Print Monitors	211
Localmon	211
Hpmon	211
AppleTalk	215

TCP/IP	217
NetWare	220
Configuring Print Server Properties.	221
Changing the Spool Folder	222
Creating Forms	223
Managing Ports	224
Configuring Printer Properties.	226
Assigning a Separator Page.	226
Assigning Forms to Paper Trays	227
Printer Security	228
Printing to Multiple Ports (Printer Pools)	234
Scheduling Printers and Setting Printer Priorities	236
Sharing a Printer	239
Troubleshooting Common Printing Problems	243
Key Point Summary	246
Applying What You've Learned	250
Instant Assessment	251
Review Activities.	252
Hands-on Lab Exercises.	253

Part III: Managing Resources 257

Chapter 7: Managing User and Group Accounts	259
Creating and Managing User Accounts	261
Built-in User Accounts.	262
Creating a User Account	262
User Account Properties	266
Copying User Accounts	276
Applying Properties to Multiple Accounts	278
Renaming and Deleting User Accounts.	279
Creating and Managing Groups	280
Local Groups	281
Global Groups	283
Comparison of Local and Global Groups	285
Built-in Groups	286
Special Groups	288
Renaming and Deleting Groups	289
Key Point Summary	290

Applying What You've Learned	293
Instant Assessment.	293
Hands-on Lab Exercise	294
Chapter 8: Managing Account Policy, User Rights, and Auditing	303
Managing Account Policy	305
Password restrictions	306
Account lockout.	308
Managing User Rights	311
User rights	312
Assigning user rights.	315
Managing Auditing	317
Key Point Summary	321
Applying What You've Learned	322
Instant Assessment.	323
Hands-on Lab Exercises.	323
Chapter 9: Managing User Profiles and System Policy	333
Managing User Profiles	335
Contents of a User Profile.	335
How a User Profile Is Created	338
Customizing the Default User Profile Folder.	340
Customizing the All Users Profile Folder	344
Roaming User Profiles	345
Mandatory User Profiles.	347
Deleting User Profiles	349
Managing System Policy	350
User Policy	351
Group Policy.	352
Computer Policy	353
How System Policy Is Applied	354
Creating a System Policy File	356
Logon Scripts.	360
Key Point Summary	361
Applying What You've Learned	365
Instant Assessment.	365
Hands-on Lab Exercises.	366
Chapter 10: Managing Windows NT Directory Services	377
Overview of Windows NT Directory Services.	379
Trust Relationships	380

Trust Terminology	381
One-way Trusts	382
Two-way Trusts	385
Trusts Are Non-transitive	387
Logging On.	388
The NetLogon Service	388
Directory Services Architecture	393
Single Domain Model.	394
Single Master Domain Model	394
Multiple Master Domain Model	395
Complete Trust Domain Model	396
Using Groups to Manage Users in a Multiple Domain Environment	398
Example 1: Using Global Groups and Built-in Groups in a Single Master Domain Model	399
Example 2: Using Global Groups and Built-in Groups in a Multiple Master Domain Model	401
Key Point Summary	403
Applying What You've Learned	406
Instant Assessment Questions	407
Review Activity	408
Hands-on Lab Exercises	410
Chapter 11: Optimizing Windows NT Server Directory Services	425
Why Optimize Windows NT Server Directory Services?	427
Determining the Size of the Directory Services Database	428
Determining the Appropriate Number of Master Domains	429
Determining the Ideal Number of Domain Controllers	431
Optimizing Directory Services in a WAN Environment.	432
Optimizing Location of BDCs	432
Optimizing Directory Services Synchronization	434
Key Point Summary	440
Applying What You've Learned	443
Instant Assessment.	444
Hands-on Lab Exercise	445

Chapter 12: Sharing and Securing File Systems	449
Managing File and Folder Attributes	451
Managing Shared Folders	454
Sharing a Folder.	454
Shared Folder Permissions	457
Modifying a Share	462
Administrative Shares	465
Managing NTFS File and Folder Security	466
NTFS Permissions.	467
Assigning NTFS Permissions to Files and Folders.	470
How NTFS Permissions are Applied to New, Moved, and Copied Files and Folders.	476
How NTFS and Share Permissions Interact.	477
Planning Strategies for Sharing and Securing Resources	478
Planning Form: Sharing and Securing Resources	479
Taking Ownership of Files and Folders	480
Auditing Files and Folders on NTFS Partitions	482
Configuring Auditing for Files and Folders on NTFS Partitions	483
Using Event Viewer to View Auditing Results	486
Troubleshooting Common Resource Access and Permission Problems. . . .	490
Key Point Summary	490
Applying What You've Learned	494
Instant Assessment.	494
Hands-on Lab Exercises.	496
Chapter13: Accessing Resources on the Network	513
Browsing.	515
Browser roles	515
The Browsing Process	517
Configuring the Computer Browser service	521
Browsing on Transport Protocols	524
Connecting to Shared Folders.	525
Naming Conventions.	526
Using Windows NT Explorer	526
Connecting from the Command Line	528
Key Point Summary	529
Applying What You've Learned	532
Instant Assessment.	533
Hands-on Lab Exercises.	534

Chapter 14: Using Windows NT Server Tools	539
Windows NT Server Tools	541
NT Server Tools for Windows 95 Computers	541
NT Server Tools for Windows NT Workstation Computers.	545
Using Windows NT Server Tools to Manage an NT Server Computer	549
Using Server Manager to Remotely Promote a BDC to a PDC	550
Key Point Summary	552
Applying What You've Learned	554
Instant Assessment.	554
Hands-on Lab Exercise	555
Chapter 15: Backing Up and Restoring Data	559
Backing Up Files and Folders	561
What to Back Up	561
Backup Types	562
Backup Strategies	563
Performing a Backup Using Windows NT Backup	566
Using the Schedule Service to Automate Backups	570
Restoring Files and Folders.	571
Test Your Backup with a Trial Restore	571
Performing a Restore Using Windows NT Backup	571
Key Point Summary	574
Applying What You've Learned	576
Instant Assessment.	576
Hands-on Lab Exercise	577
 Part IV: Connectivity	 581
Chapter 16: Networking Using TCP/IP	583
Overview of TCP/IP	585
IP Addressing	586
Subnet Masks	587
Default Gateway Addresses.	588
Assigning IP Addresses.	589
Assigning IP Addresses by Using a DHCP Server	589
Assigning IP Addresses Manually	594
IP Routing.	596
Static Routing	596
Dynamic Routing	597

The DHCP Relay Agent	599
Windows Internet Name Service (WINS)	601
Installing and Configuring WINS	602
Microsoft DNS Server.	604
Installing and Configuring Microsoft DNS Server	606
Publishing On The Internet.	612
Microsoft Internet Information Server.	613
Peer Web Services Versus Internet Information Server.	624
Troubleshooting Common TCP/IP Connectivity Problems	626
Key Point Summary	627
Applying What You've Learned	632
Instant Assessment.	632
Hands-on Lab Exercises.	634
Chapter 17: Coexistence With NetWare	643
Windows NT in a NetWare Environment	645
NWLink IPX/SPX Compatible Transport.	647
Frame types	647
Network Numbers	649
Installing and Configuring NWLink IPX/SPX Compatible Transport.	650
Routing NWLink IPX/SPX Compatible Transport	653
Installing and Configuring RIP for NWLink IPX/SPX Compatible Transport	654
SAP Agent.	656
Installing SAP Agent	656
Client Service for NetWare (CSNW)	658
Installing Client Service for NetWare	658
Configuring Client Service for NetWare.	660
Gateway Service for NetWare (GSNW)	662
Installing Gateway Service for NetWare	662
Configuring Gateway Service for NetWare.	664
Using CSNW and GSNW to Access Resources on NetWare Servers	670
File and Print Services for NetWare (FPNW)	671
Directory Services Manager for NetWare (DSMN)	672
Troubleshooting Common NetWare Connectivity Problems	672
Key Point Summary	674

Applying What You've Learned	677
Instant Assessment	677
Hands-on Lab Exercises	679
Chapter 18: Migrating to Windows NT from NetWare	685
Migrating to Windows NT from NetWare	687
Migration Tool for NetWare	687
Using the Migration Tool for NetWare	689
Performing Trial Migrations and an Actual Migration	697
Configuring NetWare Client Computers to Access the Windows NT Server Computer After Migration	701
Key Point Summary	701
Applying What You've Learned	703
Instant Assessment	704
Chapter 19: Installing and Configuring Remote Access Service (RAS)	705
RAS Overview	707
RAS Connection Types	708
Connection Protocols Supported by RAS	709
Transport Protocols Supported by RAS	711
RAS NetBIOS Gateway	712
RAS Name Resolution	713
Installing and Configuring RAS	713
Installing RAS	713
Configuring Modems and Ports	714
Configuring Protocols and Encryption	716
Completing the RAS Installation	724
Using Remote Access Admin to Manage the RAS Server	725
Assigning Dialin Permission and Configuring Call Back Security	726
Configuring Dial-Up Networking Connections	729
Configuring and Using Phonebook Entries	729
Configuring Dial-Up Networking to Connect to the Internet	739
Configuring PPTP Security	740
Troubleshooting Common RAS Problems	742
Key Point Summary	743
Applying What You've Learned	747

Instant Assessment	747
Review Activity.	748
Hands-on Lab Exercise	749
Chapter 20: Macintosh Connectivity	755
Overview of Macintosh Client Connectivity and Services for Macintosh	757
Installing Services for Macintosh	757
Creating a Macintosh-Accessible Volume	761
Password Encryption for Macintosh Client Computers	764
Macintosh Printing	765
Sharing a Windows NT Printer with Macintosh Client Computers	766
Connecting to an AppleTalk Print Device.	766
Key Point Summary	769
Applying What You've Learned	771
Instant Assessment	771
Hands-on Lab Exercise	772
 Part V: Running Applications.	 775
Chapter 21: Running Applications on Windows NT.	777
Application Environments	779
MS-DOS Environment	779
Win16 Environment.	781
Win32 Environment	783
POSIX Environment	784
OS/2 Environment	784
Application Support on Diverse Hardware Platforms.	785
Application Priorities	786
Starting Applications at Various Priorities	787
Configuring Foreground Application Priority Boost	788
Using Windows NT Task Manager.	790
Using Task Manager to Stop an Application	790
Using Task Manager to View Performance Statistics	791
Using Task Manager to Change an Application's Base Priority.	792
Troubleshooting Common Application Problems	795
Key Point Summary	796
Applying What You've Learned	800

Instant Assessment.	800
Review Activity.	801
Hands-on Lab Exercise	802

Part VI: Monitoring and Optimization 807

Chapter 22: Using Performance Monitor 809

What Is Performance Monitor?	811
Performance Monitor Objects, Instances, and Counters	811
Installing the SNMP Service to Obtain TCP/IP Objects and their Counters	814
Installing Network Monitor Agent to Obtain the Network Segment Object and its Counters	816
Enabling the PhysicalDisk and LogicalDisk Objects and their Counters.	818
Using Performance Monitor to Gather and View Statistics.	819
Chart View	821
Alert View	825
Report View	828
Log View.	830
Key Point Summary	835
Applying What You've Learned	836
Instant Assessment.	837
Hands-on Lab Exercise	838

Chapter 23: Using Network Monitor 847

What Is Network Monitor?	849
Installing Network Monitor	850
Using Network Monitor to Capture Network Packets.	851
Configuring Network Monitor to Capture Using Promiscuous Mode	854
Capturing Packets.	858
Saving Captured Data	864
Using Network Monitor To View Captured Packets.	864
Using the Capture Window Dialog Box	865
Using the Capture Summary Dialog Box.	868
Key Point Summary	872
Applying What You've Learned	874
Instant Assessment.	875
Hands-on Lab Exercise	876

- Chapter 24: Capacity Planning 881**
 - Fundamentals of Capacity Planning 883
 - Establishing a Baseline. 883
 - Gathering Data over Time. 884
 - Using Data to Predict Future Utilization 885
 - Capacity Planning Your Server 885
 - Memory 887
 - Processor. 888
 - Disk 889
 - Network 891
