Psychology (Specification A) PSYA1

Unit 1 Cognitive Psychology, Developmental Psychology and Research Methods

Wednesday 25 May 2011 9.00 am to 10.30 am

You will need no other materials.

Time allowed

- 1 hour 30 minutes

Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- Do all rough work in this book. Cross through any work you do not want to be marked.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 72.
- Question 3 should be answered in continuous prose. You may use the space provided to plan your answer. In Question 3, you will be assessed on your ability to:
 - use good English
 - organise information clearly
 - use specialist vocabulary where appropriate.

Section A Cognitive Psychology and Research Methods

Answer **all** questions in the spaces provided.

Total for this question: 8 marks

1 (a) **A, B and C** relate to memory. Write the appropriate letter in the box below. The first one has been done for you.

A 7 ± 2

B Up to 30 seconds without rehearsal
Write letter **B** in the appropriate box below.

C Mainly acoustic
Write letter **C** in the appropriate box below.

	Short-term memory	Long-term memory
Encoding		
Capacity	A	
Duration		

(2 marks)

1 (b) Outline the working memory model.

2 A psychologist carried out an experiment using an independent groups design. The psychologist wished to investigate the effectiveness of a strategy for memory improvement. In one condition, participants were taught a memory improvement strategy. In the other condition, participants were not taught this memory improvement strategy. All participants were asked to memorise 10 pictures of familiar objects. For example, the first was a doll, the second was an apple. All participants were then given 50 pictures each, and asked to select the original 10.

The psychologist did a pilot study before carrying out the experiment. The results of the experiment are shown in **Table 1** on page 5.

2 (a) Write a directional hypothesis for this experiment.

.....
.....
.....
.....

(2 marks)

2 (b) Explain what is meant by an independent groups design.

.....
.....

(1 mark)

6 Psychologists sometimes use case studies to study children. One example was of a boy who was discovered at the age of six. He had been kept in a darkened room and had had almost no social contact with people.

6 (a) How could a psychologist maintain confidentiality when reporting a case study?

.....
.....
.....
.....

(2 marks)

6 (b) Psychologists use a range of techniques to gather information in case studies.

Outline **one** technique which the psychologist could use in this case study.

.....
.....
.....
.....

(2 marks)

Total for this question: 6 marks

- 7** Some research has suggested that there is a relationship between the time children spend in day care and their aggressive behaviour. Researchers selected a group of school children who had been in day care. They asked the children’s mothers to estimate how many hours a week their children had spent in day care. They measured the same children’s aggression.

Relationship between average hours spent in day care and aggression

- 7 (a)** How many children are represented in this scattergram?

.....
 (1 mark)

- 7 (b)** Suggest **one** way in which the children’s aggression could be measured.

.....

 (2 marks)

Question 7 continues on the next page

Turn over ►

7 (c) In the media, it was claimed that the results showed spending time in day care caused the children to become aggressive.

Explain why this claim may be untrue.
