# INTRODUCTION Wait Until the Evening

One must wait until the evening To see how splendid the day has been.

-SOPHOCLES

As the Captain of the Yale swimming team stood beside the pool, still dripping after his laps, and listened to Bob Moses, the team's second-best freestyler, he didn't know what shocked him more—the suggestion or the fact that it was Moses who was making it.

Ed Richards knew that Moses was brilliant—even "Five A" Johnson, who regularly received the top grade in every course he took each term, said that Moses could have stood first in the Class of 1909 if he hadn't spent so much time reading books that had nothing to do with his assignments—but the quality that had most impressed Richards and the rest of '09 was his idealism. The poems that the olive-skinned, big-eyed Jew from New York wrote for the Yale literary magazines, sitting up late at night, his bedroom door closed against the noise from the horseplay in the dormitory, were about Beauty and Truth. When the bull sessions got around, as they did so often, now that the Class was in its senior year, to the subject of careers, Moses was always talking—quite movingly, too—about dedicating his life to public service, to helping the lower classes. And just the other evening, in the midst of a desultory discussion about which fraternity's nominee should be elected class treasurer, Moses had jumped to his feet and argued so earnestly that class officers should be chosen on merit rather than fraternity affiliation, that the criterion shouldn't be who a man's friends were but what he could do, that Johnson had said to Richards afterwards, "I feel as if I've had an awakening tonight." And now, Richards realized, this same Bob Moses was suggesting that they get money for the swimming team by deliberately misleading Og Reid.

Ogden Mills Reid was the best thing that had ever happened to swimming at Yale. Since the legendary Walter Camp, athletic director as well as football coach, was hoarding the football receipts for a new stadium, there

was no money to replace the dank, low-ceilinged pool, which wasn't even the right length for intercollegiate swimming events. There was no allocation from the university for travel expenses or even for a coach. But Reid, who had been Yale's first great swimmer, not only paid the team's expenses but, week after week, traveled up to New Haven from New York to do the coaching himself. This year, after a long fight, Moses had succeeded in organizing the wrestling, fencing, hockey, basketball and swimming teams into a "Minor Sports Association" which would conduct a general fund-raising effort and divide the money among the teams, in the hope that the existence of such a formal organization would coax new contributions from alumni. The theory was good, Richards had thought at the time, but there was one hitch: any money contributed specifically to one of the teams also had to go into the general fund. Richards doubted that Reid, who was interested only in swimming, would want to contribute to a general fund and he wondered if the swimmers might not end up with even less money than before. But Moses had seemed to have no fears on that score. And now, standing beside the pool, Richards was beginning to understand why. Moses, dressed in suit, vest and a high collar that was wilting in the dampness, had just announced that he was skipping practice to go to New York and see Reid, and when Richards had expressed his doubts that the alumnus would contribute, Moses had smiled and said, "Oh, that's all right. I just won't tell him it's going to an association. He'll think it's the regular contribution to the swimming team."

Now Richards said slowly, "I think that's a little bit tricky, Bob. I think that's a little bit smooth. I don't like that at all."

With astonishing rapidity, the face over the high collar turned pale, almost white. Moses' fists came up for a moment before he lowered them. "Well, you've got nothing to say about it," he said.

"Yes, I do," Richards said. "I'm the captain. I'm responsible. And I'm telling you not to do it."

"Well, I'm going to do it anyway," Moses said.

"If you do," Richards said, "I'll go to Og and tell him that the money isn't going where he thinks it is."

Moses' voice suddenly dropped. His tone was threatening. "If you don't let me do it," he said, "I'm going to resign from the team."

He thought he was bluffing me, Richards would recall later. He thought I wouldn't let him resign. "Well, Bob," Richards said, "your resignation is accepted."

Bob Moses turned and walked out of the pool. He never swam for Yale again.

Forty-five years later, a new mayor of New York was being sworn in at City Hall. Under huge cut-glass chandeliers Robert F. Wagner, Jr., took the oath of office and then, before hundreds of spectators, personally administered the oath, and handed the coveted official appointment blanks, to his top appointees.

But to a handful of the spectators, the real significance of the ceremony

was in an oath not given. When Robert Moses came forward, Wagner swore him in as City Park Commissioner and as City Construction Coordinator—and then, with Moses still waiting expectantly, stopped and beckoned forward the next appointee.

To those spectators, Wagner's gesture signaled triumph. They were representatives of the so-called "Good Government" organizations of the city: the Citizens Union, the City Club, liberal elements of the labor movement. They had long chafed at the power that Moses had held under previous mayors as Park Commissioner, Construction Coordinator and member of the City Planning Commission. They had determined to try to curb his sway under Wagner and they had decided to make the test of strength the Planning Commission membership. This, they had decided after long analysis and debate, was Moses' weak point: As Park Commissioner and Construction Coordinator he proposed public works projects, and the City Charter had surely never intended that an officeholder who proposed projects should sit on the Planning Commission, whose function was to pass on the merits of those projects. For nine weeks, ever since Wagner's election, they had been pressing him not to reappoint Moses to the commission. Although Wagner had told them he agreed fully with their views and had even hinted that, on Inauguration Day, there would be only two jobs waiting for Moses, they had been far from sure that he meant it. But now they realized that Wagner had in fact not given Moses the third oath-and the Planning Commission job. And, looking at Moses, they could see he realized it, too. His face, normally swarthy, was pale with rage.

The more observant among these spectators, however, noticed that after the ceremonies Moses followed Wagner into his inner office. They knew all too well what he would be saying to the new mayor; he had said it often enough, publicly and privately, orally and in writing, to Wagner's predecessors, Vincent R. Impellitteri and William O'Dwyer, and, even earlier, to the great La Guardia. "He's threatening to resign," they whispered to one another.

They were right. Behind the closed doors of the inner office, Moses was putting it to Wagner straight: If he didn't get the third post, he would quit the other two. And he'd do it right now.

Wagner tried frantically to stall. The Planning Commission oath? the Mayor said. There must have been an oversight. Some clerk must have forgotten to fill out the appointment blank. Nothing to worry about. He'd see to it in a few days. Moses walked out of the Mayor's office and into the little room down the hall where a deputy mayor and his assistant were filing the appointment blanks. Snatching an unused blank off a sheaf on a table, he sat down at the table and filled it out himself. Then he walked back to Wagner's office and, without a word, laid the paper on the Mayor's desk.

Without a word, the Mayor pulled the paper toward him and signed it.

Robert Moses possessed at the time of his confrontation with Ed Richards an imagination that leaped unhesitatingly at problems insoluble to other men—the problem of financing minor sports had been tormenting Yale

deans for two decades—and that, seemingly in the very moment of the leap, conceived of solutions. He possessed an iron will that put behind his solutions and dreams a determination to let nothing stand in their way—to form the Minor Sports Association he, only an undergraduate, had faced up to, and had finally faced down, Walter Camp, who was implacably opposed to its formation. And he possessed an arrogance which made him conceive himself so indispensable that, in his view, his resignation was the most awful threat he could think of.

Robert Moses possessed the same qualities during his confrontation with Robert Wagner. But by then he also possessed something more. He possessed power.

Power is the backdrop against which both confrontation scenes should be played. For power was the reason for the contrast in their denouements.

The whole life of Robert Moses, in fact, has been a drama of the interplay of power and personality. For a time, standing between it and him was an interceding force, the passionate idealism he had expressed in the Yale bull sessions. Dedicating his life to public service, he remained, during the first years of that service, the idealist of those bull sessions, an idealist possessed, moreover, of a vision of such breadth that he was soon dreaming dreams of public works on a scale that would dwarf any yet built in the cities of America. He wandered tirelessly around New York, and a woman who occasionally wandered with him said he was "burning up with ideas, just burning up with them," ideas for great highways and parks circling the city's waterfront and for more modest projects that he thought would also improve the quality of life for the city's people—little shelters, for instance, in Central Park so that mothers could change their babies' diapers without having to go all the way home. And when he argued for his ideas before the Good Government organization for which he worked and before the Board of Estimate, he was very careful always to have his facts ready, never to exaggerate them and always to draw from them logical conclusions, for he believed that Truth and Logic would prevail. When he decided to specialize, the area he chose—civil service reorganization—was one based on the same principle with which he had "awakened" "Five A" Johnson, the principle that jobs should be given and promotions based on merit rather than patronage. And he dedicated himself to that principle with the devotion of the acolyte. Brought into the administration of reforming Mayor John Purroy Mitchel in 1914, Moses devised, in a year of unremitting labor, a system that made every aspect of a city employee's performance—including facets of his personality—subject to a numerical grade. And for three additional years he fought for adoption of his system, battling a Board of Estimate dominated by one of the most corrupt political machines the United States had ever known, speaking night after night—a tall, very slim, very handsome young man with deep, burning eyes, dressed, often and appropriately, in a white suit, clutching a bulging briefcase and introduced to audiences as "Dr. Moses" in recognition of his Ph.D.—into hails of abuse from furious municipal employees who owed their jobs not to merit but to Tammany Hall, and observers said that the viciousness of the jeering crowds seemed to make no impression on him, so deeply did he believe that if only they could be made to understand how good his system was, they would surely support it. In those pre-World War I years of optimism, of reform, of idealism, Robert Moses was the optimist of optimists, the reformer of reformers, the idealist of idealists.

So great a nuisance did he make of himself that in 1918 Tammany Hall decided it had to crush him. It did so with efficiency. At the age of thirty, with the grading papers for his system being used as scrap paper, the Central Park shelters and great highways unbuilt, Robert Moses, Phi Beta Kappa at Yale, honors man at Oxford, lover of the Good, the True and the Beautiful, was out of work and, with a wife and two small daughters to support, was standing on a line in the Cleveland, Ohio, City Hall, applying for a minor municipal job—a job which, incidentally, he didn't get.

When the curtain rose on the next act of Moses' life, idealism was gone from the stage. In its place was an understanding that ideas—dreams—were useless without power to transform them into reality. Moses spent the rest of his life amassing power, bringing to the task imagination, iron will and determination. And he was successful. The oath that was administered to Robert Wagner in City Hall on January 1, 1954, should have given Wagner supreme power in New York. That was the theory. In democratic America, supposedly, ultimate power rests in the voters, and the man for whom a majority of them cast their votes is the repository of that power. But Wagner knew better. The spectators may have thought that he had a choice in dealing with Moses. He knew that he did not. Why, when Moses pushed the appointment blank across his desk, did the Mayor say not a word? Possibly because there was nothing to say. Power had spoken.

With his power, for twenty years prior to the day he strode out of City Hall in triumph (and for an additional fourteen years thereafter), Robert Moses shaped a city and its sprawling suburbs—and, to an extent that would have astonished analysts of urban trends had they measured the implications of his decades of handiwork, influenced the destiny of all the cities of twentieth-century America.

The city in which the shaping by his hand is most evident is New York, Titan of cities, colossal synthesis of urban hope and urban despair. It had become a cliché by the mid-twentieth century to say that New York was "ungovernable," and this meant, since the powers of government in the city had largely devolved on its mayor, that no mayor could govern it, could hope to do more than merely stay afloat in the maelstrom that had engulfed the vast metropolis. In such a context, the cliché was valid. No mayor shaped New York; no mayor—not even La Guardia—left upon its roiling surface more than the faintest of lasting imprints.

But Robert Moses shaped New York.

Physically, any map of the city proves it. The very shoreline of metropolis was different before Robert Moses came to power. He rammed bulkheads of steel deep into the muck beneath rivers and harbors and crammed into the space between bulkheads and short immensities of earth and stone,

shale and cement, that hardened into fifteen thousand acres of new land and thus altered the physical boundaries of the city.

Standing out from the map's delicate tracery of gridirons representing streets are heavy lines, lines girdling the city or slashing across its expanses. These lines denote the major roads on which automobiles and trucks move, roads whose very location, moreover, does as much as any single factor to determine where and how a city's people live and work. With a single exception, the East River Drive, Robert Moses built every one of those roads. He built the Major Deegan Expressway, the Van Wyck Expressway, the Sheridan Expressway and the Bruckner Expressway. He built the Gowanus Expressway and the Throgs Neck Expressway. He built the Cross-Bronx Expressway and the Throgs Neck Expressway, the Nassau Expressway, the Staten Island Expressway and the Long Island Expressway. He built the Harlem River Drive and the West Side Highway.

Only one borough of New York City—the Bronx—is on the mainland of the United States, and bridges link the island boroughs that form metropolis. Since 1931, seven such bridges were built, immense structures, some of them anchored by towers as tall as seventy-story buildings, supported by cables made up of enough wire to drop a noose around the earth. Those bridges are the Triborough, the Verrazano, the Throgs Neck, the Marine, the Henry Hudson, the Cross Bay and the Bronx-Whitestone. Robert Moses built every one of those bridges.

Scattered throughout New York stand clusters of tall apartment houses built under urban renewal programs and bearing color, splashed on terraces and finials, that in the twentieth-century American cityscape marks them as luxury dwellings. Alongside some of these clusters stand college lecture halls and dormitories. Alongside one stand five immense dingy white expanses of travertine that are Lincoln Center, the world's most famous, costly and imposing cultural complex. Alongside another stands the New York Coliseum, the glowering exhibition tower whose name reveals Moses' preoccupation with achieving an immortality like that conferred on the Caesars of Rome (feeling later that he could make the comparison even more exact, he built Shea Stadium, remarking when it was completed, "When the Emperor Titus opened the Colosseum in 80 A.D. he could have felt no happier"). Once the sites of the clusters contained other buildings: factories, stores, tenements that had stood for a century, sturdy, still serviceable apartment houses. Robert Moses decided that these buildings would be torn down and it was Robert Moses who decided that the lecture halls and the dormitories and the cultural center-and new apartment houses-would be erected in their place.

The eastern edge of Manhattan Island, heart of metropolis, was completely altered between 1945 and 1958. Northward from the bulge of Corlears Hook looms a long line of apartment houses devoid of splashes of color, hulking buildings, utilitarian, drab, unadorned, not block after block of them but mile after mile, appearing from across the East River like an endless wall of dull brick against the sky. Almost all of them—ninety-five looming over the river in the first two miles north of Corlears Hook—are public

housing. They—and hundreds of similar structures huddled alongside the expressways or set in rows beside the Rockaway surf—contain 148,000 apartments and 555,000 tenants, a population that is in itself a city bigger than Minneapolis. These buildings were constructed by the New York City Housing Authority, 1,082 of them between 1945 and 1958. Robert Moses was never a member of the Housing Authority and his relationship with it was only hinted at in the press. But between 1945 and 1958 no site for public housing was selected and no brick of a public housing project laid without his approval.

North of the public housing are two immense "private" housing developments: Stuyvesant Town and Peter Cooper Village. Moses was the dominant force in their creation, too (as he was in the creation of an even larger "private" housing development in the Bronx, Co-op City). And still further north along the East River stand the buildings of the United Nations head-quarters. Moses cleared aside the obstacles to bringing to New York the closest thing to a world capitol the planet possesses, and he supervised its construction.

When Robert Moses began building playgrounds in New York City, there were 119. When he stopped, there were 777. Under his direction, an army of men that at times during the Depression included 84,000 laborers reshaped every park in the city and then filled the parks with zoos and skating rinks, boathouses and tennis houses, bridle paths and golf courses, 288 tennis courts and 673 baseball diamonds. Under his direction, endless convoys of trucks hauled the city's garbage into its marshes, and the garbage filled the marshes, was covered with earth and lawn, and became more parks. Long strings of barges brought to the city white sand dredged from the ocean floor and the sand was piled on mud flats to create beaches.

And no enumeration of the beaches, parks, apartment houses, bridges, and roads that Robert Moses himself built in New York does more than suggest the immensity of the man's physical influence upon the city. For the seven years between 1946 and 1953, the seven years of plenty in public construction in the city, seven years marked by the most intensive such construction in its history, no public improvement of any type—not school or sewer, library or pier, hospital or catch basin—was built by any city agency, even those which Robert Moses did not directly control, unless Robert Moses approved its design and location. To clear the land for these improvements, he evicted the city's people, not thousands of them or tens of thousands but hundreds of thousands, from their homes and tore the homes down. Neighborhoods were obliterated by his edict to make room for new neighborhoods reared at his command.

And his influence upon New York went far beyond the physical. In twentieth-century America, no city's resources, not even when combined with resources made available by the state and federal governments, came close to meeting its needs. So cities had to pick and choose among these needs, to decide which handful of a thousand desperately necessary projects would actually be built. The establishment of priorities had vast impact on not only the physical but the social fabric of the cities, on the quality

of life their inhabitants led. In New York City, for thirty-four years, Robert Moses played a vital role in establishing the city's priorities. For the crucial seven years, he established *all* its priorities.

Out from the heart of New York, reaching beyond the limits of the city into its vast suburbs and thereby shaping them as well as the city, stretch long ribbons of concrete, closed, unlike the expressways, to trucks and all commercial traffic, and, unlike the expressways, bordered by lawns and trees. These are the parkways. There are 416 miles of them. Robert Moses built every mile. Still within the city limits, stretching northward toward Westchester County, he built the Mosholu Parkway and the Hutchinson River Parkway. In Westchester, he built the Saw Mill River Parkway, the Sprain Brook Parkway and the Cross County Parkway. Stretching eastward toward the counties of Long Island, he built the Grand Central Parkway, the Belt Parkway, the Laurelton Parkway, the Cross Island Parkway, the Interborough Parkway. On Long Island, he built the Northern State Parkway and the Southern State Parkway, the Wantagh Parkway and the Sagtikos, the Sunken Meadow and the Meadowbrook. Some of the Long Island parkways run down to the Island's south shore and then, on causeways built by Robert Moses, across the Great South Bay to Jones Beach, which was a barren, deserted, windswept sand spit when he first happened upon it in 1921 while exploring the bay alone in a small motorboat and which he transformed into what may be the world's greatest oceanfront park and bathing beach. Other Long Island parkways lead to other huge parks and other great bathing beaches. Sunken Meadow. Hither Hills. Montauk. Orient Point. Fire Island. Captree. Bethpage. Wildwood. Belmont Lake. Hempstead Lake. Valley Stream. Heckscher. Robert Moses built these parks and beaches.

The physical works of Robert Moses are not confined to New York and its suburbs. The largest of them are hundreds of miles from the city, stretched along the Niagara Frontier and—in distant reaches of New York State known to natives as "the North Country," north even of Massena, a town where frost comes in August and the temperature can be thirty below by November—along the St. Lawrence River.

North from Massena the land rolls barren and empty. Only an occasional farmhouse interrupts the expanse of bare fields and scraggly woods. You can drive for twenty miles without passing another car. But turn a bend in the road and there is the St. Lawrence—and, stretched across it, one of the most colossal single works of man, a structure of steel and concrete as tall as a ten-story apartment house, an apartment house as long as eleven football fields, a structure vaster by far than any of the pyramids, or, in terms of bulk, of any six pyramids together, a structure so vast that the thirty-two bright-red turbine generators lined up on its flanks, each of them weighing fourteen tons, are only glistening specks against its dull-gray massiveness. And this structure, a power dam, is only the centerpiece of Robert Moses' design to tame the wild waters of the St. Lawrence, a design that includes three huge

control dams built to force the river through the power dam's turbines. After the dams were built—and the steel forests of transmission towers which distribute the electricity created by water passing through turbines—Robert Moses adorned their bulk with a garland of parks, of campgrounds, picnic areas, overlooks, of beaches built beside lakes that he built, and of miles and miles of more parkways. And at Niagara, Robert Moses built a series of dams, parks and parkways that make the St. Lawrence development look small.

One measure of the career of Robert Moses is longevity. His power was measured in decades. On April 18, 1924, ten years after he had entered government, it was formally handed to him. For forty-four years thereafter —until the day in 1968 when he realized that he had either misunderstood Nelson Rockefeller or had been cheated by him and, in either case, had lost the last of it—he held power, a power so substantial that in the fields in which he chose to exercise it, it was not challenged seriously by any Governor of New York State or, during a thirty-four year period, 1934 to 1968, in which it extended over city as well as state, by any Mayor of New York City. He held this power during the administrations of six Governors— Alfred E. Smith, Franklin D. Roosevelt, Herbert H. Lehman, Thomas E. Dewey and W. Averell Harriman, as well as Rockefeller. He held it during the administrations of five Mayors-Fiorello La Guardia, William O'Dwyer, Vincent Impellitteri, Robert F. Wagner, Jr., and John V. Lindsay. And in 1974, at the age of eighty-five, he was fighting with desperate cunning to get it back.

Another measure of his career is immortality. Men strive for a sliver of it; Robert Moses had it heaped upon him. Not only is there a Robert Moses State Park on Long Island, there is another Robert Moses State Park at Massena. There is a Robert Moses Causeway on Long Island, a Robert Moses Parkway at Niagara. The great dam at Niagara is named for him. And over the entrance to the dam at Massena, in letters of stainless steel each three feet high, gleam the words "Robert Moses Power Dam."

Another measure is in statistics. By the 1960's, expenditures for public works in America were federal-sized, and a federal cabinet officer might have charge of the distribution of billions of dollars. But merely distributing money is not building. In terms of true building—personal conception and construction—Robert Moses was unique in America. Without including the cost of schools, hospitals, garbage incinerators, sewers and other improvements whose location and design he approved but which were physically constructed by others, without including the amount of money poured by private sources into construction that also had to be approved by him—including, in fact, only those public works that he personally conceived and completed, from first vision to ribbon cutting—Robert Moses built public works costing, in 1968 dollars, twenty-seven billion dollars. In terms of personal conception and completion, no other public official in the history of the United States built public works costing an amount even close to that figure. In those terms,

Robert Moses was unquestionably America's most prolific physical creator. He was America's greatest builder.

More significant than what Robert Moses built is when he built it. That was how he put his mark on all the cities of America.

When Robert Moses began building state parks and parkways during the 1920's, twenty-nine states didn't have a single state park; six had only one each. Roads uninterrupted by crossings at grade and set off by landscaping were almost nonexistent. Most proposals for parks outside cities were so limited in scope that, even if they had been adopted, they would have been inadequate. The handful of visionaries who dreamed of large parks were utterly unable to translate their dreams into reality. No one in the nation seemed able to conceive of proposals-and methods of implementing them -equal to the scope and complexity of the problem posed by the need of urban masses for countryside parks and a convenient means of getting to them. New York City residents heading for Long Island's green hills and ocean beaches, for example, had to make their way, bumper to bumper, along dusty rutted roads the most modern of which were exactly eighteen feet wide. Those who made it to the Island found that the hills and beaches had been monopolized by the robber barons of America, who had bought up its choicest areas with such thoroughness that there was hardly a meadow or strip of beach within driving distance of New York still open to the public. So fierce was their opposition—and so immense their political power—that New York park enthusiasts had stopped thinking of putting parks on Long Island.

But in 1923, after tramping alone for months over sand spits and almost wild tracts of Long Island woodland, Robert Moses mapped out a system of state parks there that would cover forty thousand acres and would be linked together—and to New York City—by broad parkways. And by 1929, Moses had actually built the system he had dreamed of, hacking it out in a series of merciless vendettas against wealth and wealth's power that became almost a legend—to the public and to public officials and engineers from all over the country who came to Long Island to marvel at his work. When Jones Beach, capstone of the system, opened, it opened to nationwide praise of a unanimity and enthusiasm not to be heard again for a public work until the completion of the Tennessee Valley Authority project a decade later-and the enthusiasm led directly to the creation of scores of state parks in other states, parks built on engineering and philosophic principles that came largely out of the old August Belmont Mansion on Long Island where Robert Moses sat, pounding his palm on what had been Belmont's dinner table and planning out a system far vaster than Long Island's for all New York State. Over the decades, the state park movement developed other leaders, but it was always to be in his debt. And there was never to be any doubt that the breadth of his vision kept him unique within its ranks. At the end of his leadership of the New York system, the total acreage of the state parks in the fifty states was 5,799,957. New York State alone had 2,567,256 of those acres—or 45 percent of all the state parks in the country.

To a few men, young engineers whose passion had been fired by a

dramatic facet of their profession—the construction of highways—the Belmont Mansion was Delphi. They came to it to learn, not just the engineering of great roads, for they could learn engineering elsewhere, but rather a secret available at that time nowhere else: the secret of how to get great roads built. For them, the big table at which Moses sat was an altar on which they laid their dreams in the hope of learning the alchemy by which the dreams might be transmuted into concrete and asphalt and steel. And they were luckier than the Greeks, whose journey to their oracle was over narrow mountain paths. They were able to drive to the mansion on the Southern State Parkway and they could still recall, decades later, their awe at first seeing its stone-faced bridges and opulent landscaping. And when they were admitted to the Belmont dining room, they were not spoken to in riddles but in blunt lectures that contained a whole new doctrine on the building of urban public works in a democratic society. As the young men grew older, they became the road builders of America, the heads of state and city highway departments, key officials of the Federal Bureau of Public Roads, caterers of an orgy of public works without precedent in history. And as the roads they built rolled across America, the mark of Robert Moses was as much a part of those roads as the steel mesh on which their concrete pavement was laid. Bertram D. Tallamy, chief administrative officer of the Interstate Highway System during the 1950's and '60's, says that the principles on which the System was built were principles that Robert Moses taught him in a series of such private lectures in 1926.

Parkways were, in general, laid through thinly populated suburbs or open countryside and were designed to carry only cars. Expressways would be laid—after World War II—through cities, and were designed to carry trucks also, to serve as arteries for the commerce as well as the pleasure of a people. When Robert Moses began building expressways, there were plenty of plans for expressways—but few expressways. Politicians boggled at two political problems that would attend the implementation of the plans: their fantastic cost and the necessity of removing from their path and relocating thousands, even tens of thousands, of voters. For years—decades—in every city in the country, the expressways remained on the drawing boards. In every city, that is, except one. In New York, immediately after World War II, Robert Moses began ramming six great expressways simultaneously through the city's massed apartment houses. A decade later, outside New York, there were still only a few stretches of urban expressway in the United States, but Moses' six pioneer expressways were largely completed. When, in 1956, sufficient funds to gridiron America with expressways were insured by the passage of the Interstate Highway Act, an act in whose drafting Moses played a crucial if hidden role, it was to New York that the engineers of a score of state highway departments came, to learn the secrets of the Master. The greatest secret was how to remove people from the expressways' paths and Robert Moses taught them his method of dealing with people. This method became one of the trademarks of the building of America's urban highways, a Moses trademark impressed on all urban America. Robert Moses' influence on the development of the expressway system in the United States

was greater than that of any other single individual. He was America's greatest road builder, the most influential single architect of the system over which rolled the wheels of America's cars. And there was, in this fact, an irony. For, except for a few driving lessons he took in 1926, Robert Moses never drove a car in his life.

In 1949, the federal government enacted a new approach to the housing problems of cities: urban renewal. The approach was new both in philosophy—for the first time in America, government was given the right to seize an individual's private property not for its own use but for reassignment to another individual for his use and profit—and in scope: a billion dollars was appropriated in 1949 and it was agreed that this was only seed money to prepare the ground for later, greater plantings of cash.

Most cities approached urban renewal with caution. But in New York City, urban renewal was directed by Robert Moses. By 1957, \$133,000,000 of public monies had been expended on urban renewal in all the cities of the United States with the exception of New York; \$267,000,000 had been spent in New York. So far ahead was New York that when scores of huge buildings constructed under its urban renewal program were already erected and occupied, administrators from other cities were still borrowing New York's contract forms to learn how to draw up the initial legal agreements with interested developers. When Moses resigned from his urban renewal directorship in 1960, urban renewal had produced more physical results in New York than in all other American cities combined. Says the federal official in charge of the early years of the program: "Because Robert Moses was so far ahead of anyone else in the country, he had greater influence on urban renewal in the United States—on how the program developed and on how it was received by the public—than any other single person."

Parks, highways, urban renewal—Robert Moses was in and of himself a formative force in all three fields in the United States. He was a seminal thinker, perhaps the single most influential seminal thinker, in developing policies in these fields, and the innovator, perhaps the single most influential innovator, in developing the methods by which these policies were implemented. And since parks, highways and urban renewal, taken together, do so much to shape cities' total environment, how then gauge the impact of this one man on the cities of America? The man who was for thirty years his bitterest critic, Lewis Mumford, says:

"In the twentieth century, the influence of Robert Moses on the cities of America was greater than that of any other person."

With his power, Robert Moses built himself an empire.

The capital of this empire was out of public sight—a squat, gray building crouching so unobtrusively below the Randall's Island toll plaza of the Triborough Bridge that most of the motorists who drove through the toll

booths never even knew that the building existed. And most of them were ignorant also of the existence of the empire.

But men whose interest in geography centered on the map of power knew of its existence very well indeed. They realized that although theoretically it was only a creature of the city, it had in fact become an autonomous sovereign state. And, realizing that—although its outward form was a loose confederation of four public authorities, plus the New York City Park Department and the Long Island State Park Commission—it was actually a single-headed, tightly administered monarchy, these men described it with a single name, derived from the bridge and the Authority that were its centerpieces: "Triborough."

Anyone who doubted Triborough's autonomy had only to look at its trappings. The empire had its own flag and great seal, distinctive license plates and a self-contained communications network, an elaborate teletype hookup that linked the gray building and the provincial capitals at Belmont Lake, Massena and Niagara. It even had its own island—Randall's—on which it administered every structure and every inch of land. Randall's Island was near the geographic center of New York, but the waters of the East River, Bronx Kill and Hell Gate were a moat between it and the city, and from the air, with its hundreds of acres of lawn, the island appeared separate, a bright green oasis, sharply defined by a blue border, in the midst of the city's vast grayness. And the separateness was more than symbolic: no inhabitant of the city could drive across the island without paying Triborough a tribute in coin.

Triborough had its own fleets, of yachts and motorcars and trucks, and its own uniformed army—"Bridge and Tunnel Officers" who guarded its toll booths, revolver-carrying Long Island Parkway Police who patrolled its suburban parks and roads—responsible to no discipline but that of Robert Moses. To command the army, under Moses, it had its own generals and admirals, senior officers of the United States Army and Navy who, upon retirement, took service under its banner. It had its own constitution: the covenants, unalterable by city, state or federal government, of its bond resolutions. It governed by its own laws: the Rules and Regulations that it promulgated to regulate conduct within its dominions. And, most significantly, it had its own source of revenue: the quarters and dimes that poured in a silver stream into the toll booths at which it collected tribute.

It was a vast empire. In 1960, the year of its furthest expansion, the land area under its direct control—the parks of Long Island and New York City, the highways and highway-bordering playgrounds in the city and the enclaves in which are placed the upstate power dams—totaled 103,071 acres, 161 square miles, an area half as large as New York City. But the best measure of the size of the empire was its wealth; its annual income—the toll-booth revenue, the fees it received for the use of electricity produced at Massena and Niagara, the yearly budgets of the Long Island State Park Commission and the City Park Department—ran as high as \$213,000,000; the surplus of just one of its four constituent public authorities, the Tri-

borough Bridge and Tunnel Authority, ran to almost \$30,000,000 a year.

The courtiers and courtesans of this empire wallowed in an almost Carthaginian luxury. Favored secretaries, for example, had not only bigger cars than city commissioners (as well as round-the-clock chauffeurs so that they could be on call twenty-four hours a day) but also higher salaries. As for the men closest to the throne, the cadre of Triborough administrators known as "Moses Men," not even his most suspicious critics ever came close to guessing the extent of the wealth he poured into their hands. He made not a handful but scores of men—a low-salaried draftsman who caught his eye, a struggling young hot-dog seller, architects, engineers, contractors, bankers, restaurateurs, concessionaires, developers—millionaires and multimillionaires.

Within this empire, Robert Moses lived like an emperor.

Like an emperor, his every wish was foreseen. On Sundays, when he rested, one of the three boat captains who took turns skippering his favorite yacht waited by a telephone, sometimes for the entire day, just in case he might decide that he wanted to go fishing. Like an emperor, he preferred his own table; people who wanted to dine with Moses had to come to him. And to insure that he could entertain them on an imperial scale, luxurious dining rooms were set up adjacent to the four offices—one at Randall's Island, one at Belmont Mansion and two in downtown office buildings—among which he divided his time. Although only one of them could be used at a time, each of them was equipped with a full-time staff of chef and waiters.

Luncheons were only one aspect of his hospitality. When a dam or park was to be opened upstate, chartered planes flew hundreds of guests not just to the opening but to a whole weekend of lavish receptions. In New York, highly paid Triborough officials had as their principal duty the entertainment of Moses' guests. They conducted tours of the empire, pointing out its principal natural features—the towers of the Triborough Bridge, marching like the façades of twin cathedrals across the East River, the long lawns of Riverside Park—and repeating, at each monument, the legends, burnished by time and constant retelling, of how Robert Moses had created it. And the thousands of guests at the summer capital of the empire, Jones Beach, were entertained -in a million-and-a-half-dollar restaurant whose main purpose, judging from its financial statements, was to entertain them; in a four-million-dollar stadium that he had turned over to his favorite bandleader, Guy Lombardo, virtually as a gift on which Lombardo reaped immense personal profits, so that Lombardo's orchestra would be constantly on call—on a scale and with a sumptuousness that was as close as anyone in America ever got to the entertainment afforded by a monarch.

The wealth of the empire enabled Moses to keep many city officials in fear. With it, he hired skilled investigators he called "bloodhounds" who were kept busy filling dossiers. Every city official knew about those dossiers, and they knew what use Moses was capable of making of them—since the empire's wealth allowed him to create an awesomely efficient public relations machinery. They had seen him dredge up the dark secrets of men's pasts and turn them into blaring headlines. On the occasion of Paul Screvane's appointment as city representative to Moses' 1964–65 World's Fair, Mayor Wagner said to

him: "Paul, my experience with Moses has taught me one lesson, and I'll tell it to you. I would never let him do anything for me in any way, shape or form. I'd never ask him—or permit him—to do anything of a personal nature for me because—and I've seen it time and time again—a day will come when Bob will reach back in his file and throw this in your face, quietly if that will make you go along with him, publicly otherwise. And if he has to, he will destroy you with it."

There were men whose past contained not even a speck of grist for Moses' mill. This, however, was no guarantee against attack. Perhaps their fathers had committed an impropriety. If so, Moses would visit the sins of the fathers on the children. A respected financier, rising in a City Planning Commission hearing to oppose a zoning change sponsored by Moses, was astounded to hear Moses reply by reading into the hearing transcript newspaper accounts of a scandal, unconnected in any way with zoning, in which the financier's father had been involved—forty years before, when the financier was eight years old.

And if Moses possessed no derogatory information at all about an opponent or his forebears, this was still no guarantee against attack. For Moses was an innovator in fields other than public works. He practiced McCarthyism long before there was a McCarthy. He drove Rexford G. Tugwell out of his City Planning Commission chairmanship—out of New York, in fact—helped drive Stanley M. Isaacs out of his borough presidency and destroyed the public careers of a dozen other officials by publicly, and falsely, identifying them as "Pinkos" or "Planning Reds" or "followers of the Ogpu," the Soviet secret police. There were two widespread Communist witchhunts in New York City, one in 1938 and one in 1958. Both relied heavily on "information"—much of it innuendo or outright falsehood—leaked to newspapers by Moses.

The fear in which Moses was held because of these factors was intensified by his memory. Cross him once, politicians said, and he would never forget. And if he ever got the chance for revenge, no consideration would dilute his venom. For a twenty-year period that did not end until 1968, Moses was given by the State Department of Public Works a secret veto power over the awarding of all state contracts for public works in the New York metropolitan area. No engineer who had ever forcefully and openly disagreed with a Moses opinion ever received even one of the thousands of contracts involved.

Moses was able to shape a city and to build an empire because the supple mind that had conceived of a Minor Sports Association for Yale and innovations in the civil service system for New York City—and also of substantial portions of the New York State Constitution—had focused on the possibilities of an institution still in its infancy as an urban force when he came to it in 1934: the public authority. He raised this institution to a maturity in which it became the force through which he shaped New York and its suburbs in the image he personally conceived.

Operating through an authority, Moses could keep the public from finding out what he was doing, and this was an important consideration with him. If, throughout his half century and more in the public eye, he displayed an eagerness and a flair for publicizing certain aspects of his career and his life, he displayed an equal eagerness and flair for making sure that only those aspects—and no others—were known. There were, for example, men and women who knew Robert Moses for half a century who never knew that he had a brother, or that in the city in which Robert Moses lived in luxury, that brother spent the last thirty years of his life in a poverty so severe that he lived in a fifth-floor walkup flat in an old tenement huddled against the piers of South Ferry.

The official records of most public agencies are public records, but not those of public authorities, since courts have held that they may be regarded as the records of private corporations, closed to scrutiny by the interested citizen or reporter.

This was very important to Robert Moses. It was very important to him that no one be able to find out how it was that he was able to build.

Because what Robert Moses built on was a lie.

The lie had to do with the nature both of the man and of the public authority. Moses said that he was the antithesis of the politician. He never let political considerations influence any aspect of his projects—not the location of a highway or housing project nor the award of a contract or an insurance commission, he said. He would never compromise, he said. He never had and he never would. That, he said, was the way politicians got things done, but he was no politician. He knew what should be done and he intended to do it the right way or not at all. He said this at the beginning of his career and he said it at the end; in 1961, at the trial of a borough president who had received favors from an urban renewal contractor, Moses, on the witness stand, was asked whether the contract had not been awarded as part of a "deal." Moses' face paled with rage. "In forty years of public life," he said, "I have never made a deal."

Public authorities are also outside and above politics, Moses said. Their decisions are made solely on the basis of the public welfare, he said. They have all the best features of private enterprise. They are businesslike—prudent, efficient, economical. And they are more. They are the very epitome of prudence, efficiency, economy. And they have another advantage over conventional governmental institutions as well. Since they finance their projects through the sale of revenue bonds to private investors, they therefore build these projects without using any public funds. Projects built by authorities, he said, cost the taxpayers nothing.

These statements were believed implicitly for almost forty years by the public to which they were made. And this is not surprising. For Robert Moses repeated his contentions a thousand times and for four decades they were repeated, amplified and embellished by a press that believed them, too.

Because of the forty years of adulation of the newspapers—and of the public that read the newspapers—for forty years nothing could stand in Moses' way. No Mayor or Governor dared to try to breast the wave of public

opinion in whose curl Moses rode. One President tried. Franklin Delano Roosevelt, the most bitter enemy that Moses ever made in public life, attempted as President to exact vengeance for humiliations previously received at Moses' hands. But although he made his move at the very zenith of his own popularity and prestige, the President found himself forced to retreat by a storm of acclaim for Moses that rolled not only through New York but across the country and that, ironically, left Moses embedded more firmly than ever in the public consciousness as the fearless defier of politicians. For forty years, in every fight, Robert Moses could count on having on his side the weight of public opinion.

The beliefs on which that opinion was based were never disproved or even seriously questioned, not even during the final, bitter decade of Moses' career, a decade during which his policies were subjected to steadily increasing criticism. For even during that decade, the criticism was of Moses' projects more than of the methods by which he accomplished those projects. The reason for this was simple. The vast majority of the public accepted the legend as fact. And even those skeptics who were disposed to test its truth had no facts with which to make the test, because the records of Triborough and the mouths of its ministers were so effectively sealed. If, however, they had been able to see the records and open the mouths, they would have learned that the legend was a gigantic hoax.

Prudent, efficient, economical? So incredibly wasteful was Moses of the money he tolled from the public in quarters and dimes that on a single bridge alone he paid \$40,000,000 more in interest than he had to. Authority projects cost the taxpayers nothing? Covert "loans" made to authorities by the state—loans designed never to be repaid—ran into the hundreds of millions of dollars. The cost of city-purchased land on which authority facilities were built ran into the hundreds of millions. The cost of taxpayer-financed toll roads leading to authority facilities ran into the billions. And the loss in tax revenue because authority-controlled land was removed from the tax rolls drained the city year after year.

Most important, had the records of the authorities been open, they would have disproved another aspect of the lie: the legend that Robert Moses was no "politician," that he operated at a higher level than that implied in the derogatory connotations attached to that noun, that he managed to create his public works at a remove from politics. Actually, as these records prove, Robert Moses' authorities were a political machine oiled by the lubricant of political machines: money. Their wealth enabled Moses to make himself not only a political boss but a boss who in his particular bailiwick—public works—was able to exert a power that few political bosses in the more conventional mold ever attain.

Even had the records been available, of course, the public might not have understood their significance. For Moses was a political boss with a difference. He was not the stereotype with which Americans were familiar. His constituency was not the public but some of the most powerful men in the city and state, and he kept these men in line by doling out to them, as Tammany ward bosses once handed out turkeys to the poor at Thanksgiving,

the goodies in which such men were interested, the sugar plums of public relations retainers, insurance commissions and legal fees. This man, personally honest in matters of money, became the locus of corruption in New York City. Robert Moses made himself the ward boss of the inner circle, the bankroller of the Four Hundred of politics. Far from being above the seamier aspects of politics, he was-for decades-the central figure about whom revolved much of the back-stage maneuvering of New York City politics. Triborough's public relations retainers ran to a quarter of a million dollars a year, its legal fees to a quarter million, its insurance commissions to half a million—a total of a million dollars a year. Moses parceled out retainers, fees and commissions to city and state political leaders on the basis of a very exact appraisal of their place in the political pecking order. And an examination of the records of the recipients leads to the conclusion that, year after year, it was the men who received Moses' turkey baskets who fought against any diminution in Moses' power-and for whatever public works project he was pushing at the moment.

Beyond graft and patronage, moreover, Moses also displayed a genius for using the wealth of his public authorities to unite behind his aims banks, labor unions, contractors, bond underwriters, insurance firms, the great retail stores, real estate manipulators—all the forces which enjoy immense behind-the-scenes political influence in New York. He succeeded in mobilizing behind his banner economic forces with sufficient weight to bend to his aims the apparatus so carefully established in City Charter and State Constitution to insure that, in deciding on such projects, the decisive voice would be that of the people. He used economic power for political ends—so successfully that in the fields he carved out for his own, fields in which decisions would shape the city's future for generations if not for centuries, he made economic, not democratic, forces the forces that counted in New York. And because he spoke for such forces, it was his voice that counted most of all.

"He gave everybody involved in the political setup in this city whatever it was that they wanted," one official recalls. "Therefore they all had their own interest in seeing him succeed. The pressure that this interest all added up to was a pressure that no one in the system could stand up against, because it came from the system itself." And since the mayor's power and career rested on this system, he was as helpless to stand against the pressure Moses could exert as was anyone else. When Robert Moses walked into Wagner's office on that Inauguration Day in City Hall and shoved the appointment blank across Wagner's desk, Wagner had no choice but to sign it. Given the circumstances of the Democratic Party in New York City, he couldn't let Robert Moses resign. What Moses had succeeded in doing, really, was to replace graft with benefits that could be derived with legality from a public works project. He had succeeded in centralizing in his projects—and to a remarkable extent in his own person—all those forces which are not in theory supposed to, but which in practice do, play a decisive role in political decisions.

Corruption before Moses had been unorganized, based on a multitude of selfish, private ends. Moses' genius for organizing it and focusing it at a central source gave it a new force, a force so powerful that it bent the entire

city government off the democratic bias. He had used the power of money to undermine the democratic processes of the largest city in the world, to plan and build its parks, bridges, highways and housing projects on the basis of his whim alone.

In the beginning—and for decades of his career—the power Robert Moses amassed was the servant of his dreams, amassed for their sake, so that his gigantic city-shaping visions could become reality. But power is not an instrument that its possessor can use with impunity. It is a drug that creates in the user a need for larger and larger dosages. And Moses was a user. At first, for a decade or more after his first sip of real power in 1924, he continued to seek it only for the sake of his dreams. But little by little there came a change. Slowly but inexorably, he began to seek power for its own sake. More and more, the criterion by which Moses selected which city-shaping public works would be built came to be not the needs of the city's people, but the increment of power a project could give him. Increasingly, the projects became not ends but means—the means of obtaining more and more power.

As the idealism faded and disappeared, its handmaidens drifted away. The principles of the Good Government reform movement which Moses had once espoused became principles to be ignored. The brilliance that had invented a civil service system was applied to the task of circumventing civil service requirements. The insistence on truth and logic was replaced by a sophistry that twisted every fact to conclusions not merely preconceived but preconceived decades earlier.

Robert Moses was America's greatest builder. He was the shaper of the greatest city in the New World.

But what did he build? What was the shape into which he pounded the city?

To build his highways, Moses threw out of their homes 250,000 persons—more people than lived in Albany or Chattanooga, or in Spokane, Tacoma, Duluth, Akron, Baton Rouge, Mobile, Nashville or Sacramento. He tore out the hearts of a score of neighborhoods, communities the size of small cities themselves, communities that had been lively, friendly places to live, the vital parts of the city that made New York a home to its people.

By building his highways, Moses flooded the city with cars. By systematically starving the subways and the suburban commuter railroads, he swelled that flood to city-destroying dimensions. By making sure that the vast suburbs, rural and empty when he came to power, were filled on a sprawling, low-density development pattern relying primarily on roads instead of mass transportation, he insured that that flood would continue for generations if not centuries, that the New York metropolitan area would be—perhaps forever—an area in which transportation—getting from one place to another—would be an irritating, life-consuming concern for its 14,000,000 residents.

For highways, Moses dispossessed 250,000 persons. For his other

projects-Lincoln Center, the United Nations, the Fordham, Pratt and Long Island University campuses, a dozen mammoth urban renewal projects—he dispossessed tens of thousands more; there are available no accurate figures on the total number of people evicted from their homes for all Robert Moses public works, but the figure is almost certainly close to half a million; the one detailed study by an outside agency shows that in a ten-year period, 1946 to 1956, the number was 320,000. More significant even than the number of the dispossessed were their characteristics: a disproportionate share of them were black, Puerto Rican-and poor. He evicted tens of thousands of poor, nonwhite persons for urban renewal projects, and the housing he built to replace the housing he tore down was, to an overwhelming extent, not housing for the poor, but for the rich. The dispossessed, barred from many areas of the city by their color and their poverty, had no place to go but into the already overcrowded slums-or into "soft" borderline areas that then became slums, so that his "slum clearance programs" created new slums as fast as they were clearing the old.

When he built housing for poor people, he built housing bleak, sterile, cheap—expressive of patronizing condescension in every line. And he built it in locations that contributed to the ghettoization of the city, dividing up the city by color and income. And by skewing city expenditures toward revenue-producing services, he prevented the city from reaching out toward its poor and assimilating them, and teaching them how to live in such housing—and the very people for whom he built it reacted with rage and bitterness and ignorance, and defaced it.

He built parks and playgrounds with a lavish hand, but they were parks and playgrounds for the rich and the comfortable. Recreational facilities for the poor he doled out like a miser.

For decades, to advance his own purposes, he systematically defeated every attempt to create the master plan that might have enabled the city to develop on a rational, logical, unified pattern—defeated it until, when it was finally adopted, it was too late for it to do much good.

"One must wait until the evening . . ." In the evening of Robert Moses' forty-four years of power, New York, so bright with promise forty-four years before, was a city in chaos and despair. His highways and bridges and tunnels were awesome—taken as a whole the most awesome urban improvement in the history of mankind—but no aspect of those highways and bridges and tunnels was as awesome as the congestion on them. He had built more housing than any public official in history, but the city was starved for housing, more starved, if possible, than when he had started building, and the people who lived in that housing hated it—hated it, James Baldwin could write, "almost as much as the policemen, and this is saying a great deal." He had built great monuments and great parks, but people were afraid to travel to or walk around them.

For all these reasons, this book attempts to tell two stories at once: how New York, forty years ago a very different city from the city it is today, became

what it has become; and how the idealistic Robert Moses became what he has become. It must try to be a book about what happened to the city and what happened to the man. For, to an extent few people have really understood, these two stories are one story. Would New York have been a better place to live if Robert Moses had never built anything? Would it have been a better city if the man who shaped it had never lived? Any critic who says so ignores the fact that both before and after Robert Moses-both under "reform" mayors such as John Purroy Mitchel and John V. Lindsay and under Tammany mayors such as Red Mike Hylan and Jimmy Walker—the city was utterly unable to meet the needs of its people in areas requiring physical construction. Robert Moses may have bent the democratic processes of the city to his own ends to build public works; left to themselves, these processes proved unequal to the building required. The problem of constructing largescale public works in a crowded urban setting, where such works impinge on the lives of or displace thousands of voters, is one which democracy has not yet solved.

Moses himself, who feels his works will make him immortal, believes he will be justified by history, that his works will endure and be blessed by generations not yet born. Perhaps he is right. It is impossible to say that New York would have been a better city if Robert Moses had never lived.

It is possible to say only that it would have been a different city.

# 

IDEALIST

٠. -

## 1. Line of Succession

ROBERT Moses was born on December 18, 1888. He was not given a middle name—because his mother saw no reason for one.

Bella Moses was a strong-willed woman, so strong-willed, in fact, that some of her relatives said she was too much like her mother—and not enough like her father. Bella's parents, Robert's grandparents, were first cousins. Both had been born—Bernhard Cohen in 1821, Rosalie Silverman five years later-in the small Bavarian village of Reckendorf to struggling merchant families, two of the tens of thousands of German-Jewish families made highly susceptible to "America fever" by laws that segregated them in crowded Judengassen and forced them to pay the humiliating "Jew toll" whenever they made a trip away from the ghetto. The statutes also prohibited Jews from owning any land except that on which their houses stood or from dealing in any goods that could not be carried with them. Bavaria, where German anti-Semitism was most virulent, had even set a limit on the number of Jewish marriages in an attempt to keep the Jewish population down. The Silvermans left Reckendorf for New York while Rosalie was in her teens. Bernhard Cohen had been taken to Frankfurt am Main as a child by parents who hoped that life for Jews in Germany would be better outside Bavaria; when this hope was dashed, they waited until Bernhard was twenty-one, and then sent him and a younger brother, Samuel, to America, where the brothers opened a small dry-goods store in Mobile, Alabama. In 1848, they moved to New York, rented a small office and became dry-goods importers. Bernhard met his cousin and in 1849 they were married.

Business prospered and the Cohen brothers branched out into real estate with such success that they were soon considered millionaires. Their father had been able to send them to America with a little cash in their pockets, so they had never suffered the desperate poverty that had afflicted other German-Jewish immigrants of the 1840's—the brothers Seligman, Abraham Kuhn, Simon Guggenheim and his son Meyer, for instance—who, without enough capital to open stores, had had to earn it trudging through rural Pennsylvania with heavy packs on their backs and sticks in their hands to ward off dogs, peddling merchandise from farmhouse to farmhouse. Perhaps for this reason, the brothers, Bernhard in particular, never displayed the lifelong preoccupation with wealth that flogged the one-time peddlers along a gyre of financial expansion that eventually made them merchant princes, international bankers and mining tycoons—men whom Cleveland

Amory labeled the Jewish Grand Dukes, who were not part of the Four Hundred but rather of their own One Hundred and who created in New York City their own, self-contained society that was known among themselves as "Our Crowd." By the time he was fifty, Bernhard, security assured, was leaving business affairs largely in Samuel's hands and taking an interest, unusual among Jewish businessmen in New York in the 1870's, in civic affairs. Becoming convinced of slum residents' need for more "breathing space," he launched a successful campaign to persuade the city fathers, who were not at all sure that they hadn't already made a gigantic mistake by removing a huge hunk of land from the tax rolls to create Central Park, to set aside other, smaller areas for more parks. Among his friends he gained a reputation as an incisive and visionary analyst of social problems. In 1875, Joseph Seligman resigned from the traditional "Jewish seat" on the City School Commission and Mayor William H. Wickham appointed a non-Jew to fill the vacancy. The German-Jewish community was outraged. "We want the unsectarian character of our public schools preserved," editorialized The Jewish Times. "We do not want to be delivered into the hands of disguised missionaries in the persons of principals who smuggle in sectarian prayers and hymns in our public schools." The German Jews decided to unite behind a single man and insist on his appointment to the commission, and the man they chose was Bernhard Cohen, who was appointed in January 1877. If not one of the richer or more famous members of Our Crowd, he was one of the most respected.

Yet, within the circle of his family, Cohen was almost pitied. His grand-children, years after his death, remembered him as a tall, slim man, handsome with an aquiline nose and pale-blue eyes. They recalled that he was generous, very gentle and mild, a little absent-minded, and so unfailingly courteous in manner that when he visited his granddaughters he would kiss their hands rather than their faces. But what they recalled most vividly about Bernhard Cohen was how unmercifully he was bullied by his wife. "My grandmother had the reputation of being as hard as nails," one says. "She had that reputation because of the way she treated her husband."

Rosalie Silverman had been a beautiful girl, tall, statuesque, with a whiteness of skin that made her black hair and full red lips all the more striking. She aged early, however, and she aged hard, becoming terribly wrinkled and gaunt—her eyes sunken, her long thin nose jutting out sharply from the wrinkles. Only her hair remained youthful, and the fact that it stayed jet black until her death at the age of ninety-three led her family to believe she dyed it. She bore five children—Bella, three other girls and a son, David—but she was not the stereotype Jewish mother. In fact, when two of the girls—Emma, who had married banker Adolph Openhym, and Lydia, wife of Kuhn, Loeb & Co. partner Abraham Wolf—became fatally ill while still in their twenties, wasting away for months before they died, it was Bernhard, not Rosalie, who visited them every day and helped with the nursing. Rosalie, a relative recalls, "seemed to want to forget about them."

Rosalie's bent was intellectual rather than maternal. She was a voracious reader of philosophy and history as well as fiction. Her hobby was crossword

puzzles and she made a practice of racing through several of them every day in both English and German newspapers. A sharp mind was coupled with a sharp tongue, which she used on those who disagreed with her opinions. And she was unusually frank for a Jewish—or Gentile—housewife of her era. Once one of her granddaughters was amazed to realize that Old Grannie Cohen was about to give her an unsolicited lecture on sex. "One must be very much in love to enjoy it," Old Grannie began, and she proceeded, with none of the delicacy ladies usually attached to such discussions at the turn of the century.

With underlings, Grannie Cohen was flashingly imperious. After her husband died, she moved with her maid, Susan, into a suite in the fashionable Windsor Hotel, on Fifth Avenue between Forty-sixth and Forty-seventh streets, and sent out invitations to a "suite-warming" luncheon. On the day before the luncheon she decided she didn't like the chandelier in her living room. Marching down to the front desk, she ordered a new chandelier, told the clerk it must be installed by the following day at 10 A.M., cut off his protestations with a curt "I won't take 'no' for an answer!" and swept out the door without waiting for a reply.

Grannie Cohen's definition of underlings, moreover, apparently included the general public. When buying tickets for a railroad trip or a play, her practice was to eye the queue of ticket buyers disdainfully and then stride up to the first man on it and simply elbow him out of the way.

And the definition appeared to include her husband. "The way Grannie Cohen treated Grandfather Cohen was quite striking," the granddaughter recalls. "She absolutely sat on him." Many of the more intellectual members of Our Crowd became impressed during the 1870's with the philosophy of a German rabbi's son named Felix Adler, who was talking about substituting ethics for religious piety. Rosalie Cohen became one of Adler's most enthusiastic supporters. When the Society for Ethical Culture was formed in 1876, with Joseph Seligman as its first president, she became a member—and so did Bernhard Cohen, who previously had been one of the most devout members of Temple Emanu-El, the stronghold of Reform Jewry in New York. On May 13, 1897, after absent-mindedly taking a walk in the rain without an umbrella, Bernhard caught pneumonia and, four days later, died. His funeral services were conducted by Dr. Adler.

Old age did not change Grannie Cohen. In her nineties, she still walked almost every day to public and lending libraries to obtain books, and Robert's college friends who were present when she dropped in on the Moses family were astonished at the range of her knowledge. In summers, at the Moses summer home at Lake Placid, she would arise early, open an imposing stack of German- and English-language newspapers to their crossword puzzles, sit down on a porch overlooking the lake and begin working on puzzles in two languages. Within an hour she would be back inside, chatting with the college boys animatedly about the latest trends in art or science, and one of the boys, happening to glance through the pile of papers she had left on the porch, noticed that every word of every puzzle was completed. Age certainly did not wither her independence. Until she died, she did her own marketing every

day. She refused to allow herself to be examined by doctors, even by her grandson Nathan E. Brill, an official of Mount Sinai Hospital and discoverer of "Brill's disease," a form of typhus fever. And, despite the entreaties of her children, she would not allow the bell pull in her hotel room to be moved from the door to a spot near her bed so that she could summon Susan more easily in case of emergency. "I'll never be too sick to walk across the room," she said. In fact, although she became very hard of hearing, she was seldom sick at all—until a night in July 1919, a month after her ninety-third birthday. On that evening, she went to bed with a German crossword puzzle. At midnight, with the puzzle almost completed, she arose, walked across the room, rang the bell pull and, when the maid arrived, said calmly, "Susan, call Dr. Brill. I'm dying." When Dr. Brill arrived, she was dead.

The striking features that had been Rosalie's portion as a girl were passed on to her son and three oldest daughters, all of whom were considered to have made "good" marriages. "Looks ran high in the Cohen family," friends say. But Rosalie's youngest daughter, Bella (she never used her real name, Isabella), was a slim girl and young woman of less than medium height whose features, except for a too prominent, rather high-bridged nose, were, under brown curly hair, exceedingly plain. So were her clothes. Unlike her mother, Bella had a quiet, unassuming manner that combined with her slimness and curls to give her the appearance, even in her twenties, of a sweet little girl. She also possessed a kindliness that is not remembered as one of Rosalie's most noticeable attributes. "Bella was always doing nice things for people, little thoughtful things," recalls one of her cousins, Hilda Hellman. When Hilda's young son Geoffrey broke a leg in an automobile accident and had to spend time in Mount Sinai, he could be sure of an almost daily visit—and present—from his "Aunt Bella."

Nonetheless, of Rosalie's five children, Bella was the one most like her mother. If her looks weren't as impressive, her mind was. Educated by private tutors and then at Charlier, the exclusive finishing school, she could speak both French and German fluently and had a wide acquaintance with the literature of both countries. And if her appearance was that of a quiet and sweet little girl, quite different from her mother, people who bothered to talk to the little girl found that the appearance was deceiving. In discussing her opinions, Bella was mannerly and soft-spoken, but the opinions delivered in that soft voice were direct, forceful—and not particularly susceptible to alteration. In fact, people who tried to alter them came to realize rather quickly that while Bella's voice was soft, the things she might say with it could be sharp indeed. "After you had talked to her," recalls an acquaintance, "you began to observe her more closely. And it didn't take you long to realize that under that quiet manner was an astonishing amount of arrogance. She was her mother's daughter."

In 1886, at the age of twenty-six, Bella married Emanuel Moses, a thirty-five-year-old department-store owner from New Haven. He was a dark, tall, shaggy man, with warm, kindly eyes, a soft mustache and a gentle, slow

manner. Born in Cologne of a family in which was mingled blood of both German Jews and Sephardic Jews from Seville, he had started out in America as a lace merchant and then had opened a little department store in New Haven and built it into a successful business. But he was too slow and quiet for the Cohens; they felt that Bella had not made a very good marriage in comparison with her sisters; they felt, in fact, that Bella had married beneath her.

Emanuel and Bella moved to New Haven, which in 1886 was a quiet, charming little town celebrated for its elm-lined streets, a meticulously manicured sixteen-acre Central Green and beautiful public buildings and parks. They settled down in 83 Dwight Street, a big, rambling house with a broad, shaded porch and a generous helping of the gingerbread that characterized the architecture of the period, and it was in that house that their three children were born, Paul Emanuel in 1887, Robert in 1888 and Edna Marion in 1891.

Dwight Street, two blocks from the Yale University campus, was a wide, sleepy, dirt street shaded by some of the biggest of New Haven's elms. The houses along it were substantial, if not elegant, and they were built close to the wooden sidewalk, so that most of the big lots consisted of back yards, and in those yards, because the families on the street were well-off manufacturers and businessmen, were well-tended grape arbors and stables—and inside the stables were horses and carriages. The numerous children of Dwight Street rode up and down the street on those horses, with coachmen or house servants leading them and carefully holding them in to a walk, and played on the shady porches or in the spacious back yards under the tall trees, and there were so many servants in the big houses that mothers didn't scold if boys like "Mr. Paul" or "Mr. Robert," who slept in the same bedroom on the second floor of No. 83, got their Eton collars and Little Lord Fauntleroy suits dirty. To the end of their lives, the three Moses children would remember New Haven with fondness. Searching for an adjective to describe Dwight Street, Robert Moses would say "comfortable"; Paul would say "shady, well-kept, nice."

If the Moses children were happy in New Haven, so was their father. His department store was prospering and he had begun to buy up property in the city, including the Chamber of Commerce Building on Temple Street. But Bella disliked New Haven. She felt there was no cultural activity there worth talking about, and she felt she was many cuts above the run of the local matrons. In 1897, the Moses family moved to New York.

Many years later, Robert Moses would say, "I didn't like New York at all. It was too big; the crowds, the noise and the confusion were terrible. I wanted to go back to New Haven, to go to Yale and to become Governor of Connecticut. I felt that way all during my years in New York...."

Emanuel Moses never let anyone know how he felt. In order to move he had to sell his store and his real estate holdings. In 1897, he was forty-six years old, a businessman who had achieved success and who had seemed to be heading for more. Moreover, he had liked running his store. He was a businessman who enjoyed being in business.

He was to spend the rest of his life in retirement.

\*

In New York, Bella found a cause. It was the Settlement House movement. In 1897, the year the Moses family moved from New Haven, hundreds of thousands of Eastern European Jews, who had been working eighteen hours a day for a wage of two or three rubles a week, formed Der Algemayner Idisher Arbeter Bund, the General League of Jewish Workers, in Russia, Poland and Lithuania, in a last, despairing, foredoomed attempt to improve their lot, which was even harder than that which German Jews like the Cohens and Silvermans had fled a half century earlier. In Czarist Russia, the vast ghetto known as the Pale of Settlement had become a morass of the most bitter poverty. The virtual legalization of discrimination in the May Laws of the 1880's had touched off a series of savage pogroms. When the strikes called by the cobblers, tailors and weavers who had formed the General League were broken-by bloodshed, imprisonment and torture-the Jews of Eastern Europe felt that their only hope was escape to America. They poured into New York at a rate of ninety thousand a year. By 1907, there would be close to a million Jews in the city, by 1915 a million and a half-28 percent of its population. Eastern European Jews arrived in the New World scarred by the lash and the knout, idealistic and socialistic—and dirt poor. Families were shoehorned into blocks of railroad flats, while fathers used their meager savings to stock pushcarts—and learned, all too slowly, that peddling, which had worked so well for the Seligmans, Guggenheims and Kuhns, was no longer the path to riches in America.

To aid these immigrants, the Lower East Side settlement houses sprang up, funded and staffed largely by New York's established German-Jewish community. And Bella Moses, newly returned to New York, soon became an enthusiastic funder and staffer. She worked first at the famous Henry Street Settlement, but soon transferred her allegiance to Madison House, one of the smallest and newest of the settlement houses and therefore one in which she could play a more prominent role.

Two characteristics of Bella's work for Madison House, which was to continue for more than thirty years, soon became apparent.

One was a characteristic shared by many of the German Jews who traveled down to the Lower East Side in carriage and cab from the servanted enclave around Temple Emanu-El. It was a characteristic that moved one of their chroniclers to call their philanthropy "something very close to patronage." For while the motives which impelled the rich Jews to help the poor Jews were certainly in part manifestations of Zedakah, the religious principle of charity, historians have also found other motives. They have found that many German Jews—solid, respectable, Americanized—were embarrassed by the gruff, uncouth, shaggy-bearded, conspicuously un-Americanized newcomers. "Those people," the Germans felt, were loud, pushy, aggressive—"the dregs of Europe." They spoke of them in terms others applied to the Yellow Peril, the German-Jewish press lamenting the "un-American ways"

of the "wild Asiatics." The German Jews even coined a word for their coreligionists, a word based on the fact that many Russian names end in "ki." The word was "kikes." Yet, despite their efforts to make clear the difference between themselves and the newcomers, they realized that non-Jews were lumping them all together, taking the behavior of the newcomers as the stereotype by which they thought of all Jews.

The solution, many German Jews felt, was to make the shabby immigrants "respectable," to clean them up, dust them off and teach them to act "like Americans." For this reason, the early settlement houses, while working tirelessly to give the newcomers a better life, to provide free lodging, meals and medical care, also emphasized lectures on manners, morals and the dangers of socialism. Many German Jews seemed to feel, as one commentator put it, "as if [they were] assuming the white man's burden"; their philanthropy was that of "patron lords doling out funds to the poor, the miserable, the dependent and the patronized."

If this description was to some extent true of the movement as a whole, it was to a great extent true of Madison House, whose official history says it was established "To help in the Americanization of residents of the Lower East Side." And to some of her relatives, the description fitted Bella's philanthropy. Undoubtedly there ran through her work a strain of genuine idealism. Deeply moved by the plight of the slum residents she met at Madison, she talked of "helping the lower classes" in terms of a holy crusade. "Public service"—service such as Madison House was furnishing—was a phrase which came more and more frequently to her lips, and she said public service was a cause to which one could happily devote one's life. But she also never forgot that the lower classes were lower. Recalls one relative: "Her attitude to these people was 'You're my children; I know best; you do what I tell you and I'll take care of you.' "Rosalie Silverman Cohen began to refer to her daughter derisively as "Lady Bountiful."

The other characteristic of Bella's work for Madison House was one much rarer among the platoons of wealthy German-Jewish matrons on the boards of trustees of the settlement houses. Bella, graying now and often spectacled, could have passed for one of these matrons, although her clothes were plainer than most. Like them, she made liberal financial contributions -Madison House could count on her for an annual donation of about \$10,000. But unlike many of the matrons, Bella also began to show an active day-after-day interest in the development of the philanthropy to which she gave money—and as the years went by, the trustees and workers of Madison House became aware that her interest was really in one particular type of development. Bella's concern was not captured by the more philosophical aspects of settlement-house work; she sat back quietly during discussions of lecture content or of the best methods of strengthening ties between immigrant parents and American-born children. But when the discussions turned to the laying out of basketball courts in the back yard of the House or the creation of a summer camp in the country for slum children, the slim little woman would lean forward and her fingers would begin to drum restlessly on the table and her soft voice would begin to inundate the

other trustees with a flood of ideas. It was not long before the trustees came to realize that for a gray-haired housewife and mother, Bella Moses had a most unusual interest in physical construction. Behind her spectacles were the eyes of the builder.

The eyes could glitter with enthusiasm over the smallest details. When the board agreed to provide living quarters for House staffers, it was Bella Moses who thought of providing the quarters with a lounge so the young men and women could have a place to chat together during their off hours—and it was Bella who went out and found the perfect centerpiece for the lounge, a heavy table six feet across supported by a pedestal instead of legs so that people could sit around it more easily. When the board decided to set up a temporary summer camp in Pelham Bay Park, it was Bella who thought of putting old rugs under the beds to make the tents warmer. And when, in 1900, Madison House decided to embark on its largest project, the construction of a permanent summer camp, the ideas began to pour out of Bella Moses in a steady stream.

The camp was to be built on an old farm in a beautiful valley near Putnam, New York. Bella began to appear at trustees' meetings with proposed layouts of the camp and then with proposed layouts of interiors of the camp buildings. When the camp was opened, Bella and Emanuel visited it every weekend during the season. Often they would make the sixty-mile trip up from New York with their special friends on the board, Olga and Moritz Kirchberger and middle-aged bachelor Herman Wolff. When the Kirchbergers and Wolff agreed that it would be nice to spend longer periods in the camp, Bella proposed that they should all chip in and pay for the construction of a summer lodge big enough for two couples and a bachelor. And when the comfortable, solidly built structure was completed, it was Bella who suggested an agreement under which the building would become the camp's property, its residence for teen-age girls, when all five owners were dead.

In expounding her proposals, Bella was always a lady. She never raised her voice. But veneered only thinly by her excellent manners was a certain aggressiveness—and if there was a prolonged disagreement with her proposals, the veneer could wear thin indeed. When discussing a project in which she was especially interested, Bella had always displayed impatience with other people's ideas, but in her later years on the Madison House board she seemed more and more unwilling even to consider such ideas—or, in fact, to listen to them. Says one House staffer who sat in on board meetings: "In a quiet way, Mrs. Moses could really be quite . . . impatient. She knew what she wanted and she intended to have it." Says another: "She liked to get things done. And if she had to step on toes to get them done, she'd step on toes."

Some of Bella's proposals were based on generalized theories. You should always buy the best, she would say. Having the best equipment made people respect it—and take care of it. Some of the trustees, feeling that Madison House, perennially broke, should economize, were annoyed, but

Bella brooked no compromise. When the head worker was furnishing the staff quarters, for example, she instructed him: "Now, there'll be no pictures dragged out of people's closets. Buy pictures—and buy pretty ones." She was convinced also of the importance of symbols. They were needed, she said, to "give the children a sense of identity," by which she meant a sense that they were part of Madison House. As soon as the camp was opened, she designed a huge "Camp Madison" banner and hung it in the dining hall.

Once Bella got involved in a project, no task was too small for her. Camp counselors saw the slim little matron inspecting the grounds hour after hour. When the inspections disclosed flaws, she was not bashful in bringing them to people's attention. "We had been taught that in social work you should be somewhat permissive," recalls one of the workers. "She wasn't that kind of person. If she saw that the kids weren't cleaning up the bunks properly, she'd say, 'Now get busy! Get that bunk cleaned up!' If she came back and it still wasn't clean, she'd say, 'Didn't I tell you to clean it up?" "And if her hints didn't bring results, she had more direct methods. If a floor remained unswept too long, she'd grab a broom and sweep it herself. Beds were supposed to be made before breakfast, but one bunk never seemed to get them done in time. One morning, Bella said shortly, "I'll make them for you"—and did, all ten of them.

When disputes arose among the trustees, there was one vote Bella could always count on. Emanuel Moses was a member of the board, too, although, as one trustee commented, "he was so quiet you'd hardly know it." The trustees came to know Emanuel as a likable and generous man—but they also learned that his wife did the talking for the Moses family. This was true in the Moses home as well. "The relationship between Mother and Father was simple," Paul Moses would recall. "Father did what Mother directed."

If the relationship seemed similar in general to that of Bella's own parents, there were more specific parallels, too. Like Rosalie, Bella had especially strong feelings about religion: she did not believe in it. She did not want her sons to be circumcised, to be bar-mitzvah—or to have any training whatsoever in the Jewish faith. She wanted her family to be members of the Society for Ethical Culture. Her husband was more religious, but Bella's feelings were the ones which prevailed, as her mother's had prevailed. When Rosalie had joined the Society for Ethical Culture, Bernhard had joined, too. When Bella joined the Society, so did Emanuel.

Bella Moses' children grew up in snug luxury. The family lived at 20 East Forty-sixth Street, just off Fifth Avenue, in the heartland of the German-Jewish elite. The neighborhood was one of lavish private homes. The Seligman house was almost directly across the street from the Moseses', and two doors down lived the Lehmans; their youngest child, Herbert, was a student at Williams College. It was a neighborhood in which the children all knew one

another; they visited one another's homes, so alike with the varnished oak and black-walnut paneling, red damask and green repp, heavy-legged, plump-cushioned sofas, gold-fringed lamps and Dresden figurines. They played together in Central Park while private tutors stood sentry duty, and, the boys wearing white gloves, attended Viola Wolff's dancing classes together.

The house in which the Moses children were raised—among oak paneling and red damask—was the one in which their mother had lived when she was a girl; when Bernhard Cohen died, he had left it to Bella in his will, and when she decided that the Moses family would move back to New York, her mother had been happy to move out of the house and into the suite at the Windsor a block away. The house was a large brownstone—five stories and a basement—but there was plenty of money to run it; if the Moseses were not nearly as rich as the Lehmans, the Seligmans or other Grand Dukes such as the Schiffs, they were, in turn-of-the-century terms, rich enough; between Bella's share of her father's estate and the sale of Emanuel's New Haven interests, the family had assets of about \$1,200,000. Bella was able to command an establishment that included an extremely talented German cook and three maids, including a long-time retainer known as "Old Annie."

The two Moses boys slept in custom-made beds, six feet six inches long, on hair mattresses woven to order by the most famous mattressmaker in New York, C. P. Rogers. They slept in the same room again, but adjoining their New York bedroom was their own library-study, its walls lined with books. Once Paul counted them; there were more than two thousand. Dinner was served—off the finest Haviland china—in a paneled dining room along one wall of which stood a tremendous sideboard bearing gleaming crystal decanters. After dinner, the family would repair to the library, whose walls were covered with Rembrandt and Dürer prints, and Old Annie would pour coffee from a silver coffeepot into French demitasse cups—each cup a different bright color—that cost twenty-four dollars apiece.

In the summer, there were trips to Europe, or Grannie Cohen might rent a summer place in Elberon, one of the expensive resort towns along the New Jersey shore that had become known collectively as the "Jewish Newport." Grannie's house would be much smaller than the Lewisohns' Elberon castle on a hill, of course, but it would be big and roomy. The Moseses wouldn't travel down from New York by private railroad car as did the Schiffs, but they did have a touring car and chauffeur. And the boys would have a wonderful time.

They always had a wonderful time with Grannie Cohen. If she had, in the opinion of some, not been overly attentive to her own children, she doted on her grandchildren. Every spring, as soon as the weather turned warm, she would take Robert and Paul on a weekend to Atlantic City, purchasing the railroad tickets by the elbowing method while the two little boys watched the imperious old lady with awe. After checking into a hotel, with the manager himself showing her to her room, she would take the boys out along the Boardwalk and cram their pockets full of tickets to the thrill rides at Young's Pier and Hyler's. And when the boys rode the roller coasters or

the loop-the-loop, they would not be unaccompanied. Sitting between them, holding tight to her huge hat, would be Rosalie Silverman Cohen, then in her late seventies, laughing with glee.

Bella was strict with her children. Running a taut house, she ordered every aspect of their lives. Their advice was not solicited—even about their own clothes. Once, opening a closet to get their tuxedos for a party, they found that the dress suits had disappeared and new ones had been hung in their places. When they inquired, Old Annie explained that their mother had decided that the old ones were no longer "suitable." On one visit to Brooks Brothers, Paul asked for a green cap; his mother ordered a red one—for no reason that he could see except that he had asked for green.

Bella was particularly interested in the boys' education. She selected as their tutors young men with outstanding credentials; the boys' favorite, for example, had just returned from Oxford, where he had taken a double first in classics and literary humanities. When Paul was thirteen, Robert twelve and Edna nine, the children were enrolled in the Ethical Culture School. After two years, the boys were transferred to the Dwight School for two years and then were sent to board for a year at one of the most expensive of college preparatory schools, the Mohegan Lake Academy near Poughkeepsie, before they went on to college, Paul to Princeton and Robert, who had never forgotten his desire to return to New Haven, to Yale.

Even while the boys were at Ethical Culture and Dwight, Bella hired tutors to give them additional instruction. And she furnished still other instruction herself, assigning them books by Laurence Sterne and other of her favorite authors to read, and then holding long discussions with them—and with Edna when she was old enough—about the books' meaning. Casually reading a passage, she would suddenly turn to one of the children and ask, "What's that mean?" "And when she asked that," Paul would recall more than half a century later, "you had better know." Even while the children were playing, they were reminded of the importance of good English. If one of them mispronounced a word, down the stairs would come their mother's voice saying, "What was that? What was that?"

Edna did not flourish in this atmosphere. An extremely plain, shy girl, she became more and more quiet and withdrawn. But everybody exclaimed over Bella's two boys. Just over a year apart in age, in appearance they might almost have been twins. They were tall—Paul an even six feet, Robert an inch taller—and graceful and very slim, although Robert was wiry and strong and had wide shoulders and wrists that hinted at a frame that would one day be powerful. Their height and the darkness of their hair and skin made them resemble their father, but the father's somewhat broad features had been refined in the boys so that they were stunningly handsome, with high cheekbones and slim, almost aquiline noses to go with full, sensual lips and wide, deep, liquid gray eyes. While the father's skin was dark, the blood of Seville ran even closer to the surface in his sons, making their faces olive-colored, almost swarthy backdrops for smiles that everyone

agreed were charming. And where the father's movements were deliberate and calm, theirs were flashing and the set of their heads was haughty. If Paul was quicker to smile, both boys were equally quick to anger; they had tempers that went with the haughtiness. They looked like two young, handsome, passionate Spanish grandees set down by mistake in the stodgy red damask of Forty-sixth Street.

And the boys' minds were as remarkable as their looks. Teachers at the schools they attended told Bella with a unanimity that must have become almost monotonous that her sons were brilliant. And they were popular, not only with girls, who were attracted by their quick wit as well as by their looks, but with the boys with whom they went to school, although Paul was the more popular—Robert was more of a loner. Robert was interested in athletics, but not in sports which required him to be part of a team. He preferred, instead, gymnastics, swimming and track, sports in which the athlete competes alone. In track, he chose the loneliest of events, the crosscountry run.

If the handsome, sparkling brothers made quite a picture in the library after dinner, framed by dark wood and Rembrandts, black-uniformed Old Annie hovering behind them with silver service as they chatted with mother, father and sister over demitasse, the picture was complemented by conversation that was the quick play of quick minds, wit striking fire from wit. If there were no visitors present, Edna joined in. The father, of course, was the outsider. It was not that anyone was actually rude to him, relatives and friends would recall. His family's attitude was, rather, amiably patronizing. In the words of one visitor, "It was the kind of thing where, when Emanuel said something, the kids would say good-naturedly, 'Oh, Dad! Oh, Father!' And then they'd go right on with what they had been saying. It was as if everyone, including him, had sort of accepted the fact that he had nothing to contribute." After he moved to New York, Emanuel Moses did a lot of reading. "Reading," he would often say, "is the solace of old age."

Relatives and friends began to notice that within this family circle, an inner circle was forming. It was Robert Moses and his mother. More and more, within the family, they formed a small, increasingly private clique. More and more, it became apparent that Robert was his mother's favorite. This favoritism was expressed with the intensity that characterized everything Bella did. All her children were spoiled, spoiled by maids and cooks and grandmother, spoiled by wealth. But in Robert's case, the spoiling was also done by his mother. Increasingly, Bella Moses began to cater to her younger son's every whim. "You would never think of this word in connection with Bella," one relative says. "But the only word you could use to describe her treatment of Robert was 'doting.'"

No one was sure of the explanation. Relatives speculated that it was because Bella's slashing, incisive mind had found in Robert a mind with like qualities. Perhaps this was part of the explanation, but it ignored the fact that her other son possessed the same qualities. Perhaps another part of the explanation was that when the family discussions grew especially lively, Robert knew where to stop. On issues about which Bella felt especially

strongly, Paul would often disagree with his mother. Robert never did. And Bella Moses, after all, was not a woman who liked to be disagreed with.

And part of the explanation, almost certainly, was that Robert tendered his mother the sincerest form of flattery. If Bella cherished the ideal of public service, public service conceived of in idealistic, almost Platonic terms, this ideal was becoming the theme of more and more of Robert's conversation, too. More and more, in the after-dinner chats in the library, Robert began to talk about dedicating his life to "helping people."

The imitation went beyond enunciation of ideals. People who had classified as a manifestation of supreme and deep-rooted arrogance Bella's refusal to be swayed by—or, in later years, even to listen at length to—the opinions of others, now began to notice this same arrogance in Robert. They noticed also that, increasingly, the rhythms of Robert's voice echoed the sharpness of his mother's sallies. The tall, handsome young man even adopted—consciously or unconsciously—a distinctive pose favored by the graying, bespectacled, plain little woman, an unusual tilt of the head. When a person disagreed with Bella, she had a way of leaning her head back on her neck and staring at the disagreer through the bottom of her spectacles with her eyes half closed, quizzical and skeptical. People began to notice that, while Robert Moses did not wear glasses, he was beginning to adopt, in arguments, the same tilt of the head.

In later decades, when Robert Moses was famous almost as much for his personality as for his achievements, observers would marvel at the depth and degree of his outspokenness, stubbornness, aggressiveness and arrogance. They would wonder at the origin of the mold in which he had been formed in so hard a cast. But relatives and friends of the Moses family never wondered. Whatever it was that made Robert Moses the way he was, they knew, whatever the quality that had shaped an unusual—in some ways unique—personality, the quality was one that they had watched being passed, like a family heirloom, from Robert Moses' grandmother to his mother to him. "Robert Moses," these people would say, "is Bella Moses' son."

#### 2. Robert Moses at Yale

IF HIS MOTHER spoiled Robert Moses, his college did not. Bella may not have considered him a Jew, but his classmates did, and at Yale University in 1905, this made a difference.

Not in theory, of course. When Robert Moses went back to New Haven, Yale men were proudly proclaiming the university a "democracy of talent" that had spiritually entered the twentieth century by throwing off its traditional social shackles; to prove it, undergraduates made a point of calling every classmate by his first name.

But in fact Yale was still a tightly sealed society. Of the 351 members of the class of 1909 who entered Yale with Moses in September 1905, most had graduated from the "right" Episcopalian private preparatory schools—thirty-three from Andover, for example, twenty-three from Hotchkiss and seventeen from St. Paul's. Moreover, as one of Moses' classmates recalls, "as soon as you got to Yale, you found out that its structure was a social pyramid," its base the select Sophomore Societies, its next step the even more select Junior Fraternities, its apex the three Senior Societies—Skull and Bones, Scroll and Key and Wolf's Head. Sixty years later, surviving members of the class of 1909 could still remember watching classmates burst into tears on Tap Day when they realized that they were not to be selected for a Senior Society.

"The competition that counted at Yale was the competition to get to the top of that pyramid," Moses' classmate says. "If you weren't in at least a Junior Fraternity, you were a nobody." But the competition was not open; it was largely based on family background, social connections and prep-school associations. And to no one was it closed more tightly than to Jews, of whom there were five in Moses' class—listed as "Hebrews" in the Freshman Blue Book and lumped with the class's eighteen Roman Catholics under "Miscellaneous Denominations." In the seventy-three years that the Senior Societies had been in existence they had never tapped a single Jew. And whatever the feelings of Bella's boy about whether he was or was not Jewish, there were no doubts in the minds of his classmates. In his memoir of life at Yale, poet Leonard Bacon, an 'oger, would begin a description of Moses with the words "I saw . . . a most attractive Jew."

It wasn't only religion that made Moses an outsider during his first years at college. Not yet seventeen years old when he sat in Dwight Hall listening to President Arthur Twining Hadley's opening address, he was two years younger than most of his classmates. Men from the same prep school generally roomed together as freshmen, but while the five other men in 1909 from Mohegan Lake "were fond of Bob, they kind of regarded him," in the words of a classmate, "as a young boy"—and they didn't invite him to room with them. In his freshman year, he boarded alone in a doctor's house near the campus; if he participated in any extracurricular activities, or linked his arms with classmates to dance down Chapel Street and cheer Ted Coy for his three touchdowns against Princeton, or if he came rushing out of his room at the cry of "Riot!" to help freshmen overturn trolley cars and pelt policemen with water bombs, nobody noticed him. Boys selected their sophomore roommates from the friends they had made at Yale; in his sophomore year, Bob Moses again roomed alone, this time in a dormitory. Lonely, he frequently hung around the suite in another dormitory in which the Mohegan Lake alumni lived. Classmates remember him in his first two years as "diffident," "quiet" and "shy." One of the wealthy prep-school graduates who roomed in the big, friendly suites in Vanderbilt, most prestigious of the dormitories, would recall him as "almost a recluse."

At night, when the other students on his floor began to roughhouse, Moses would quietly close his door. Alone in his room, he would write poems—dreamy-eyed romances and imitations of Walter Pater and Swinburne. And he would read. When he found a subject that interested him, he would clear the library shelves of books on the subject, lug them back to his room, stack them on his desk and read through the stack until it was finished.

Ironically, it was the reading and writing he did behind the door closed against his classmates' shouts that first made them take an interest in him. There was on the campuses of that era a respect for scholarliness and brilliance, and Bob Moses' classmates slowly began to realize the extent to which he possessed these qualities. One of the members of the Mohegan Lake suite says: "I liked Bob from the first, but in the beginning it was a sort of paternal feeling. When he'd come around to the room, he'd seem so young and lost. But then I began to be attracted to him for his mind. I loved Latin; I got very high marks in it, but I knew just enough Latin to know that Bob was on a level way above mine. He really knew Latin. I started talking to him—and I became aware of a quality of mind that was exceptional. He was brilliant. I liked talking to him, and I became friendly with him. And that was what happened between Moses and a lot of people; by the end of sophomore year or the beginning of junior year, people were beginning to talk about him. He became admired for his scholarship—and all of a sudden we noticed he was coming around to our suite less and less. He had gotten friends of his own."

Moses began to submit his poetry for publication, not to the famous Yale Literary Magazine, where Leonard Bacon and cadaverous, freckle-faced, red-haired Sinclair Lewis were among the classmates competing for places on the board, but to a newer, less prestigious publication—the Yale Courant. Encouraged by the acceptance of a poem for the December 1907

issue, he contributed more poems and several short stories, and when, in March 1908, the new *Courant* editorial board was selected, he was on it.

He also joined the Yale swimming team. Swimming occupied approximately the same position in relation to other sports at Yale as the *Courant* did to the *Lit*. Intercollegiate competition in the sport had begun only a few years before, and few colleges had swimming teams. A highlight of meets was still an event called the "plunge for distance," in which the winner was the competitor who, after diving into the pool, could travel the farthest without moving his arms or legs. At Yale, the team practiced—in an ancient, dank, low-ceilinged, too-short pool—only three times a week. The *Yale Daily News* reported the results of the meets—when it reported them at all—at the very end of the list of sports results, after even fencing and wrestling, and thanks to the influence of Walter Camp, who felt that the famous Yale "Y" should be worn only by football, hockey and baseball players—he wasn't too sure about hockey and baseball—swimmers were eligible only for a "Ysa," an insignia standing for "Yale Swimming Association."

Moses joined the swimming team as a sophomore. If he ever won a race, the victory was not reported in the *News*. But he was known as a hard worker in practice and a fierce competitor in meets, and he could be counted upon for second- or third-place points in either the fifty-yard or the hundred-yard crawl. As a junior, Moses was elected manager, an honor which entitled him to arrange meets and buy the team's train tickets.

Swimming and the *Courant* enabled Bob Moses to broaden his acquaintance at Yale. And the classmates who got to know him began to see something special in the tall, slim Jew from New York, very handsome in the required high, rounded collar, who had the huge, emotional eyes and earnest, passionate manner of the idealist, the poet, the lover (in the phrase they learned in a popular course on Walter Pater) of the Good, the True and the Beautiful.

The eyes and the manner, these classmates learned, were not misleading. Not only was Bob Moses a poet but his poems were poems like the dreamy-eyed "Song of the Arctic Nereid, a hymn to the nymphs of the sea," or "Fragments from the French":

Fair night! Fair night!
Afar the day has fled;
Fair night! Fair night!
A torch divine o'erhead
God's goodness flames eternal and abides
Our erring footsteps keeps and, watching, guides,
Fair night! Fair night!

To-morrow!

But is the morrow sure
To-morrow!

The lashes slumber lure;

Ah! Shall we greet the dawning day,

Perchance in vain we longing say,

To-morrow!

And the idealism was deep. Not only had Bob Moses read most of Pater; he believed in what he had read. He loved learning genuinely and for its own sake. If he was competitive in swimming, he wasn't in classroom work. He wasn't uninterested in marks, but he wasn't especially concerned about them either. He spent night after night behind a closed door reading, but his friends began to realize that the reading was not for grades; sometimes they would look at the stack of books on his desk and not one of them had anything to do with the courses he was taking; they were there because they interested him. And their subjects covered a wide spectrum of knowledge; if Moses seemed particularly fascinated by literature and history, he was also reading everything he could find on the history of art. One of his friends was taking German; he came across a phrase one day that seemed to fit Bob Moses—durstig Geist. Moses did indeed, the friend said, have a "thirsty mind."

After his sophomore year, one of his new friends went with Moses to Europe. Many college men spent their summers in Europe in the halcyon days before the Great War, but most of them spent their eight weeks abroad in the lobbies of the fashionable hotels of Paris, Rome and Geneva, striking up conversations, under the indulgent eyes of chaperons, with young ladies making their Grand Tours. Moses, the friend reported on their return to Yale, bounded out of bed early in the morning to be at museums when they opened, and he stayed in the museums all day. In Venice, which became his favorite European city, he spent hours in front of the famous Veronese frescoes and Michelangelo statues—and more hours searching out frescoes and statues that his companion had never heard of but about which Moses, in those long nights behind the closed door, had learned every detail.

Moses' greatest enthusiasm was reserved for a more famous work of art—the "Mona Lisa." He seemed riveted to the floor of the Louvre in front of the painting. When he got back to Yale in the fall, he wrote poems about it, including one, apparently done in the style of Swinburne's "Dolores," that called her "Our Lady Divine."

In literature his greatest enthusiasm was for Samuel Johnson. Chauncey Brewster Tinker, a young professor whose empathy for Johnson's era was reflected in an almost eighteenth-century courtesy and insistence on form but whose austerity was burned away on the lecture platform by what one colleague called "the white fire of the poet," made his "Johnson and His Circle" course "a journey in a beautiful and exciting country." Wandering off on his own, Bob Moses explored that country's byways. The assigned reading included excerpts from Boswell's biography of Johnson; Moses read the book complete, became interested in biography and proceeded to read stacks of biographies as well as books on the nature of that genre.

His friends began to see that Moses' idealism was not confined to the printed page. If the more perceptive members of his class realized that "democracy of talent" was a false description of life at Yale, Moses had specific ideas on how to make the slogan a reality. The suggestion that class officers be chosen on merit rather than on the basis of fraternity membership was not the only remedy for Yale's social ossification which Moses proposed,

both in late-evening bull sessions and in the *Courant*. He was also, for instance, insistent that some sort of "social recognition" should be given for scholastic achievement. And, in at least-one instance, he proved his willingness to fight for his ideals.

Moses not only enjoyed swimming himself; he was convinced that the sport should receive more emphasis at Yale because, as a classmate put it, "he regarded [it] as something in which every undergraduate could take pleasure, as contrasted with the gladiatorial sports like football and baseball." He had the same feeling about other minor sports, such as tennis, track, golf, gymnastics, fencing, shooting and wrestling, all of which had, like swimming, been only recently incorporated into the intercollegiate athletic scene. His enthusiasm about them reached such a peak, in fact, that his friends jokingly began to call him "the minor sport."

Every attempt to upgrade such sports at Yale had run head on into the frenzy over football—it was the era when gridiron heroes like Ted Coy and Tad Jones were the campus gods, when the winner of the Big Three title was national champion, when every victory was celebrated with bonfires and torchlight parades down Chapel Street—and into the personal opposition of Camp, who, in addition to being first among the Eli football pantheon, had the more practical advantage of being treasurer of the Athletic Union. With the Yale Bowl that was his dream drawing ever closer to reality, Camp had been squirreling away the annual surplus of the Union with such enthusiasm that it had already reached \$120,000, and he was not about to turn any of it over to the sports he derided.

Bearding Camp in his suite at the New Haven House, Moses suggested a distribution of some of the football surplus among the minor sports. Camp flatly refused to give a nickel.

Another undergraduate might have left quietly. Recalling the scene, Moses was to say: "What you have to understand is what a colossal influence he had; he dominated all of athletics there; his word was absolutely law." But this undergraduate, before leaving, told Camp that someday the minor sports would be just as important on the intercollegiate scene as baseball and hockey. And although Camp treated the prediction as "kind of a joke," he was soon to stop laughing. For Moses refused to let the matter drop.

In editorials in the *Courant* and the *Yale Daily News*, Moses attacked with a directness unusual in college publications of the day. Pointing out that almost as many men participated in minor as in major sports, Moses accused Yale's "football managers"—a euphemism understood perfectly by the Yale community—of being "unjust" to "one-half of Yale athletics."

Camp let it be known that he was personally offended. The editorials continued. Dean "Baldy" Wright called Moses to his office for a friendly but pointed discussion. The editorials continued. And when Moses came up with a plan to create a Minor Sports Association that would hold a single fundraising drive, raise \$3,500, and, through an executive committee composed of the sports' managers, distribute it among the various teams according to their needs, the dean hastily gave the association permission to appeal to

alumni for contributions, and also brought back word of a concession from Camp that was small but significant, coming from a man who had previously run Yale athletics without making any concessions at all: if the association raised \$3,200, Camp's Athletic Union would contribute the other \$300.

Persuading the minor sports to combine into one association, which meant turning over their finances to an outside body, proved almost as difficult as persuading Camp. Hockey and basketball, which were classed among these sports but were popular enough among students so that their managers could generally raise money by a door-to-door appeal on campus, were particularly reluctant. Yet because hockey and basketball were the only two of the minor sports in which there was much interest, their participation was essential.

Moses argued that even for hockey and basketball the existence of a formal association would make it much easier to obtain money from alumni and students who had treated as a joke the many separate appeals from the different minor sports. And the idealist also argued on higher grounds. In one editorial, he wrote: "As far as Basketball and Hockey are considered per se, they have nothing to gain. But . . . there must be a sacrifice on the part of the Basketball and Hockey teams for the sake of common good. . . ."

Hockey and basketball agreed to join. The other sports followed. On June 11, 1908, Moses was able to announce the formation of the Yale University Minor Sports Association.

With Moses organizing its fund drives, the association proved to be more vigorous than Camp had expected. When he realized the extent of its fund-raising efforts among alumni, traditional fountainhead of football funds, Moses was called in by Dean Wright and advised to be "calm and dignified." Any "undue pressure" on alumni, he was warned, would result in the withdrawal of the \$300 offer. Moses promptly made the threat public in the Courant and announced that the fund-raising would continue.

Moses' friends—and men on campus who had previously hardly noticed him—were impressed by his courage. Sixty years after he graduated, one member of the swimming team could recall that "the report was that he and Camp had quite a go at it. We thought it was quite a thing." Moses' idealism began to be talked about widely in the class—and it was because of this that Ed Richards was all the more surprised when, on a day in January 1909, he climbed out of the pool after doing his laps and heard what Moses was suggesting about Og Reid.

"After I had accepted his resignation," Richards recalls, "he began to put pressure on me to take him back on the team and let him go ahead with his approach to Reid. He managed to work up an amazing amount of pressure. He really was very clever about it. He got the managers [of the other minor sports] to send a delegation to me to talk me out of it. I told them, 'No, it's not an honest way to treat Og Reid. He's always treated us very nicely.' Then Bob went to the man who was the heart and soul of swimming at Yale—Maxie Swartz. Maxie was really just the janitor at the pool, but he was a good old guy. He took a lot of interest in the swimmers, and he was always around the team. Bob got Maxie to ask me to take him

back. He had Maxie tell me, 'Oh, Reid has plenty of money. He'll never miss a little of it.' But I talked it over with a few other guys on the team and they said I was right and I refused Maxie too."

Although Richards' firmness terminated Moses' connection with Yale athletics, his activity in more esoteric areas of campus life continued. His interest in art and poetry had made him a member of 1909's little clique of intellectuals and esthetes and, to some extent, he was becoming its leader. He was active on the *Courant*. He may not have been invited to join any of the more "important" clubs at Yale, but he became president of the one he did join, the Kit Cat Club, a new organization which was named after the group of convivial literary spirits who had surrounded Samuel Johnson and which included "Yale men who have shown literary ability and interest in literary subjects." During his senior year, he and a classmate published *Yale Verse*, an anthology of the best undergraduate poetry of the previous ten years.

Moses' academic work continued to be outstanding. A half century after he graduated, a professor said: "I well remember Robert Moses in my classes. He was alert, enthusiastic, very active, always doing 'A' work. . . . He was a model student. It is the energy of the man . . . and his very great intelligence that I remember most clearly. . . ." Seniors were awarded "Premiums," small cash awards established by alumni for outstanding work; Moses won a handful for math and English and Latin, in English composition for an essay on the "Mona Lisa," besides making Phi Beta Kappa.

Though Moses had lived alone during his first two years at Yale, in his last two he had roommates, as a senior Raymond P. McNulty and Elias "Five A" Johnson. "I didn't come to him," Johnson recalls. "He approached me and asked me to room with him. Of course I was glad to. We had been friendly before. But I think the fact that he approached me is an indication of a tendency I noticed in Bob; he selected his friends."

The friends Bob Moses selected were of a specific type: cultured, artistic, interested in the things he was interested in, many of them members of the tight little circle that included members of Kit Cat and the Courant. They included Malcolm T. Dougherty, who had already displayed the talent that was to make him a prominent painter of marine life, class poets like Bacon, Carl Thurston and Ed Proctor, and Courant and Lit contributors like James McConaughy, later Governor of Connecticut, and Harold Phelps Stokes, later chief editorial writer of the New York Herald Tribune.

Johnson, a very poor boy from Chicago attending Yale on a scholar-ship, was perhaps Moses' closest friend. He had already earned a reputation as the class "brain," and if Moses loved to read, "Five A" loved to study. Night after night, the two young men would retire immediately after supper to their living room in White Hall and stay at their desks until midnight or one or two o'clock in the morning, when they'd take long walks which usually ended at a little all-night luncheonette which served the turn-of-the-century equivalent of the late-evening hamburger—a heaping bowl of corn flakes and milk.

In honor of Johnson's slimness—he carried a hundred and twenty

pounds on a five-foot seven-inch frame—Moses gave him a new nickname, "Slat." On weekends, he often took Slat home to the apartment Bella and Emanuel had rented in 1906 in a large apartment house at the corner of Central Park West and Seventieth Street, coming down to New York by train and across town from the station by horse-drawn streetcars. To while away time on the trips, the boys would play an early version of Twenty Questions, "Ask Me Another," but Johnson, despite his five "A's," confessed himself hopelessly outclassed. "Bob had the damnedest questions on art and poetry and what not through the ages," he would recall. "His reading was fantastic."

His circle of friends liked and admired Bob Moses. "He was always glad to see you," one says. "He really liked you—and you liked him." He might love to read, but he was certainly no "greasy grind." He enjoyed jokes—telling them and hearing them—and he had a quick, infectious laugh. Tall and strong, he enjoyed running and mountain climbing, once leading several friends to the top of Whiteface Mountain in the Adirondacks. He and Johnson might spend most evenings studying, but on some evenings they would walk along Chapel Street, where the "townies," New Haven girls who were not averse to meeting Yale boys, paraded, and Moses was notably successful at striking up conversations, much to the discomfort of the painfully shy Slat. "I remember that one night when we were reading, Bob suddenly jumped up and said, 'Come on, let's take a walk,' "Slat recalls. "We went down Chapel Street and there were a couple of girls ahead of us, and he made some kind of remark and they started laughing. I got afraid and went back to the room, but he walked off with them."

What his friends admired most was his idealism. Sometimes, it took rather odd forms. One night, he and the scrawny Johnson had an argument that escalated into a short but violent fight, and Moses showed no hesitation in knocking sprawling a man so much smaller than he. But once Johnson was down, Moses helped him up and, shaking his hand, congratulated him on his courage in fighting someone bigger and stronger. In discussions about campus life, however, Moses was more consistent. His appeals for true democracy at Yale continued. The argument about which fraternity's nominee should be given the class office was one example. Johnson was trying to convince a group of classmates of the right of his fraternity to the job, when Moses suddenly jumped up and, in Johnson's recollection, "bawled the living daylights out of me. He was saying things like 'What does the fraternity have to do with it? It should be on the basis of ability.' But it wasn't so much what he said as the way he said it. You could see he was speaking from the heart; you could see the honesty coming through in what he was saying. And all of a sudden, I was ashamed. Of course, I saw, he was right. Why should money or influence or who a guy's friends were matter?"

When bull-session discussions turned to careers after college, Moses said he was going to "go into public service." He didn't have any specific plans, and even talked occasionally of teaching government. But, more and more, his thinking seemed to his friends to be turning to a more active role. He wanted, he told them, to help the underprivileged, the lower

classes, the people ground down by forces beyond their control. These phrases were not unusual ones among college seniors. But Moses' friends were impressed by the intensity, the evident, deep belief, with which he spoke them.

As Moses' acquaintance expanded, moreover, so did the admiration. When, during his senior year, his class held elections for the seven-member Senior Council, the winners were six fraternity men and Bob Moses, who, with fifty-nine votes, came in third.

Other barriers could not be breached, of course. As graduation neared, 1909 elected its socially prestigious Class Day Committees. Moses was elected to neither the Class Supper Committee, the Senior Prom Committee, the Cap and Gown Committee-nor to any of the sixteen other committees selected. By the time the class graduated, forty-five men were in the Senior Societies, one hundred in the Junior Fraternities, fifty-one in the Sophomore Societies—and Moses was not one of them. He never lived in Vanderbilt Hall. And to many of the men who did live in Vanderbilt and who did participate in the secret ceremonies of Skull and Bones or Wolf's Head, the honors that Robert Moses did achieve were unimportant. "Frankly," says one of them in accents ancestral, "I couldn't tell you what the Kit Cat Club was. Or the Senior Council." When 1909 voted for its outstanding members, Moses received only a few scattered votes as "Brightest," "Most Scholarly" and "Done Most for Yale." In the official Class History, which listed the rosters of clubs and committees and their outstanding members, his name hardly appeared at all.

But what was, perhaps, significant about Bob Moses and the Class History was not that his name appeared in it infrequently but that it appeared in it at all. His achievements at Yale might be dim beside those of the prepschool Episcopalian leaders of the secret societies, but they were bright indeed for a Jew. If in his first two years at Yale Bob Moses had been a lonely nobody, in his last two years he had become considerably more than that.

And the way in which he had become more was, in the light of his later career, even more significant. He became a campus figure partly, of course, because of the brilliance and idealism that were part of his inheritance. He displayed also, in his refusal to knuckle under to Walter Camp, his inherited stubbornness—and a considerable amount of real moral courage. But, in the light of his later career, what is most interesting is that when he realized that, because of the handicap of his religion, his brilliance and idealism would not take him to the top in the world of Yale, he made, within Yale, a world of his own, and a world, moreover, in which, in collegiate terms, he had power and influence.

He never went out for the *Lit* but he made himself an important member of the staff of a less prestigious publication. He never went out for a major sport but he was active in a minor one. He was never invited to join one of the better clubs but he was president of the lesser club he did join. And if he was not included in the more select social circles of the class, he created a circle of his own, a small coterie of persons with like interests, a

coterie within which he was the acknowledged leader. The men in the coterie admired Bob Moses. The men he chose to be his friends were happy to be chosen.

Alongside the massive cathedrals of Yale's traditions, buttressed by prejudice and pride, Bob Moses had erected his own small but sturdy structure. "In our little world . . . ," Bacon was to say, "he made himself a position of power."

In the light of Moses' later career, that was the key point.

### 3. Home Away from Home

As a senior at Yale, Moses had decided to go on to Oxford. He had wanted to go as a Rhodes Scholar, but every third year the prestigious scholarships were not awarded, and 1909 was a third year.\* Unwilling to wait until 1910—and with no financial need to—he paid his own way.

Asked in later years why he had chosen Oxford for his postgraduate work, Moses would shrug and say there had been no special reason. But his choice turned out to be an apt one. He was to find in Oxford a spiritual home.

The marriage of Bernhard Cohen and Rosalie Silverman had been a marriage of brilliant mind with brilliant mind—and of idealism, crystallized in a desire to improve the lives of the lower classes, with an overweening arrogance. The strain of brilliance, idealism and arrogance had surfaced in a daughter, Lady Bountiful, and had been passed on through her-undiluted, strong but somewhat formless—to her son Robert. Oxford, using the brilliance as catalyst, was to refine the other two ingredients in the strain. Two years among her spires and statue-crowned columns, her quadrangles and cloisters, her towers that had whispered to Matthew Arnold "the last enchantments of the Middle Ages," would boil the fattiness out of the idealism, rendering out of a vague desire to "help people" not only a clear, definable concept of public service but also a specific means of performing that service. Two years among her richly paneled halls, her ancestral tankards and inlaid croziers, among begowned processions led by bedels carrying silver staves and among gardens tended by a thousand gardeners would distill the arrogance, potent though it already was, and make it still more potent by adding to its essence a philosophical base, the British belief, firm indeed in the early twentieth century and epitomized in the trappings and teachings of Oxford, in the duties—and the rights—of those born to wealth and privilege.

Oxford in 1909 was the castle keep of British conservatism. The key to its ancient gates was wealth; in the year Robert Moses entered Oxford's Wadham College, the university was largely closed to the student whose family was not rich. Conservatism characterized the attitude of its students—including the ninety Americans among them. When, three months after Moses' arrival, an American Club was organized, its first meeting featured two speakers who said, respectively, "We are as much interested as anyone

<sup>\*</sup> The system was changed in 1916.

in preserving Oxford as a home of English conservatism and tradition" and "We should carry into the bustle and stir of the New World, the atmosphere of the Old."

As strong as Oxford's conservatism was its emphasis on public service. Its tone in 1909 had been set for the preceding three centuries by rich young men who were sent to the university as a preliminary to public life and who, from positions in Parliament or the civil service or the learned professions, actually did, after graduation, govern Britain and its vast territories overseas. But the leavening of devotion to public service with an unabashed insistence on the rights and privileges of aristocracy could not help but make that devotion somewhat patronizing, infusing it with a strong air of condescension and noblesse oblige in its most obnoxious form. It was a refined, more subtle but also more deeply rooted version of the attitude of the German Jews of New York toward the Russian and Polish latecomers, of Bella toward the children whose parents didn't even know how to bring them up so they would be able properly to clean the cabins Madison House had been kind enough to build for them.

Bella's son was very happy at Oxford. His most frequent companion was Mal Dougherty, his friend from Yale, who was also studying at Wadham. "Bob had a very good time at Oxford," Dougherty recalls. "He liked it very much. It was such a relief after Yale. Yale had that pseudodemocracy, but it was not democratic at all; it was snooty, with all that social tradition. When we got to Oxford, we found all this changed. It was understood by everyone there that by the very fact that you belonged to Oxford, you were the select and the elect. You didn't have to compete for prestige or honors to become one of the elite. Because you were there, you were the elite." Moses' understanding of this fact—and his acceptance of it—shone through an article he sent to the Yale Alumni Weekly. "There is a moribund institution for workingmen's sons somewhere in Oxford," he sneered. "I have never yet met an undergraduate who knew its exact location, nor have I met anyone who did not become incoherent with rage when it was defended."

Moses liked the gentleman's life that Oxford offered. Breakfast, lunch and tea were served in the students' rooms, and they were encouraged to entertain friends—of whom Moses had plenty. Says one classmate, "Bob was almost universally loved." The first American in history to be elected captain of the Dark Blue water-polo team, he was also swimming captain, although, as at Yale, if he ever won a race, the victory went unrecorded. Taking up debating, he became the first American ever to be elected president of the august Oxford Union, that hardiest of debating clubs.

Oxford's exemption of students from all marks and tests except for a single, all-inclusive examination given after two years appealed to the student who even at Yale had refused to be bound by the confines of his courses. "The Oxford education . . . confers on the average undergraduate independence of mind," he wrote in the *Alumni Weekly*.

Vacations were an especially happy time. Moses and Dougherty spent their "vacs" on walking tours of England or traveling abroad, often with Moses' roommate, John Gilbert Higgins, a Rhodes Scholar from Newfoundland who sported a long knitted scarf and a thick Irish brogue.

In Switzerland, the youths tried out a sport that was just beginning to attract the attention of American tourists: skiing. In Italy, Moses saw again the frescoes and statues he had loved as an undergraduate and spent hours being gondolaed around Venice, a city with which he had fallen in love. Every summer, his family would sail to Europe and take a large suite of rooms in a hotel overlooking the Lake of Lucerne. There, Moses and Dougherty played tennis, swam and climbed mountains.

In 1911, a Rhodes Scholar named El Allail, the son of an Egyptian bey, invited Moses and Dougherty to visit Egypt. Crossing the Mediterranean on a leaky, shuddering tub named the Equator, the youths found themselves in the company of hundreds of Levantine natives and a troupe of women Dougherty describes as "international tarts sailing for the winter season in Cairo and Alexandria." On the first night out of Marseilles, the Equator's captain selected one, disappeared with her into his cabin-and remained there for the rest of the four-day voyage. The same procedure was followed by every other officer except an aged quartermaster. The engines broke down -along with the latrines. But when the ship-and its attendant aroma-arrived at Alexandria, El Allail ensconced Moses and Dougherty in luxury. The three youths spent the days swimming on a magnificent beach at the mouth of the easternmost branch of the Nile and evenings chatting over dinner with the highest British colonial and native Egyptian officials, including the Khedive of Egypt. The Khedive must have been impressed with Moses; he asked him to be his secretary.

The mark of Oxford's influence would be plain on Robert Moses for the rest of his life.

Oxonians habitually wore "bags," old flannel trousers so long unpressed that they were completely shapeless, and sweaters or heavy tweed jackets. The academic gowns required for lectures were often worn along with bedroom slippers. Moses, who had always been exceptionally neat in dress before Oxford, would return to New York affecting a carelessness about attire that at times went to extremes. Insisting he needed only one suit, he would wear it until it was shiny. He had only one pair of shoes, which he never shined; returning home on a rainy day, he would sit in front of the fire in the Moseses' luxurious living room, holding his feet close to the flames, making a point of telling friends that he couldn't go out again until his shoes had dried because he didn't have another pair. He obtained new underwear and socks only when his mother bought them for him. After his marriage, his wife would take over this chore and, since he refused to go to clothing stores at all, would select suits herself, have them brought to their apartment and arrange for a tailor to come and fit them there.

And if Moses was to return from Oxford with a somewhat studied indifference toward clothes, he was to display the same attitude toward money, an attitude which some friends felt, from remarks that Moses made,

was an attempt to imitate the scions of British nobility he met at Oxford who never thought of money because they had no need to. His family first saw this attitude on board the luxury liner *Potsdammer* in the harbor at Southampton, where they had just picked up Robert before going on to Lucerne. When Emanuel began to tell his son about money that had been deposited for his Oxford expenses in a London bank account, Robert, who previously had had a normal college boy's interest in his allowance, said loftily, "I don't want to talk about things like that." The affectation that may have underlain this attitude is suggested by another trait that became apparent at Oxford: a seeming compulsion to pick up checks, to be the host at every gathering. Dougherty, who was not in need of subsidy, recalls: "If you went anywhere with Bob—to lunch or dinner or to have a drink—he'd grab the check and just *insist* on paying it. It got so people felt a little annoyed. But if you grabbed one first, you'd have to have sort of a squabble with him about it."

Oxford was also influencing the young man on more significant levels. In long letters to his parents, he said that he had definitely decided to dedicate his life to public service. On his return to the United States, he said, he would make a career in government. He even had his field picked out; he intended to become an expert on the renowned British civil service so that he could inculcate its principles in America. Government pay might not be high, he said, but he didn't care about money. Bella Moses read the letters to relatives with approval.

And while Oxford was refining and strengthening Moses' idealism, it was having the same effect on his arrogance, which, increasingly took the form of galloping Anglophilia. Moses' admiration for things Oxonian broadened into an admiration—strikingly deep—for all things British. Coupled with this feeling was one almost of scorn for things American. Writing to the Yale Alumni Weekly in praise of the single-examination Oxford system of education, he went beyond the praise to say: "I hesitate to imagine the introduction of such a scheme in the United States, where intellectual independence is safeguarded by daily recitations . . ."

There was another overtone, too. Under the influence of Oxford's conservative insistence on the rightness of the British system's provisions for keeping the reins of government in the hands of a highly educated upper class, Moses came more and more to admire that system. Such admiration, of course, postulated as a concomitant an amiable contempt for the capability for government found in members of the "lower" classes—which in this context included everyone not a member of the British nobility. And from this attitude, it was a logical step to reserve supreme contempt for those whom the British aristocracy considered most incapable of self-rule—the people of the nations British troops had conquered, which meant, in general, people of color, brown, yellow or black.

Moses took this step.

With agitation for increased self-government rising in Great Britain's

colonies, Oxford in 1911 sponsored a World Congress on Race Problems to examine the question—along with the broader question of general discrimination by Great Britain against colored people. Delegations were sent by the colonies and by liberal organizations from many European countries. American students selected Moses to represent their country because of his reputation as a debater.

Previous speakers had pleaded for equality, for fraternity, for "immediate brotherhood." Moses' point of view was somewhat different. Immediate brotherhood, he said flatly, was "not practical." The "subject peoples" of the British Empire were simply not ready for self-government yet. Furthermore, he didn't see any time in the near future when they would be.

As the audience realized what they were hearing, a certain restiveness began to develop. When Moses started explaining—quite clearly—why he didn't think the "subject peoples" would be ready for self-government for a long time, several subject people rose and charged at him. One step ahead of them was roommate Higgins. He grabbed Moses, shoved him through a door at the back of the speakers' platform, and hustled him out of the building.

The climax of Moses' academic career was the thesis he submitted for a Ph.D. degree: The Civil Service of Great Britain.

The thesis contained no "torch divine o'erhead." The floridness of Moses' Yale poetry and prose style had turned hard, cogent and marvelously lucid at Oxford. Short, hard sentences must have carried his professors through the intricacies of parliamentary in-fighting and regulation rewriting with refreshing ease. He displayed not only a complete familiarity with a bewildering array of bureaucratic technicalities but a gift for the felicitous phrase. Describing Carlyle's appeal to Parliament to muck out the "Augean stables of bureaucracy," Moses wrote that Carlyle appealed with "excremental eloquence." Macaulay's speech on the need for promotion by merit was, he said, "the most masterly vindication of the principles of competition ever left unanswered."

Not only Moses' prose style but what was behind the style had hardened, too. The all-too-conscious revelation in the thesis's pages of what the British civil service symbolized to Robert Moses demonstrated that two years of Oxford had solidified the cast of mind formed in the mold of heredity and upbringing. The youth who had been raised in an atmosphere pervaded by a mixture of idealism and arrogance had found the rationale for such noblesse oblige in the British theory of the rights and duties of the upper classes; the thesis with which he laid the capstone of his education focused down on the British civil service as the embodiment of this attitude, the practical result of this theory. And he saw the result as glorious.

The thesis reveals its author as a man convinced that public service is a noble calling and one that must be based on the highest ideals. Moses did not believe that the "perfection" of the British civil service system was an end in itself. Rather, he saw it as an instrument, an indispensable one, for the implementation of great social reforms. Progressive nations, he wrote,

had begun creating new departments of government to free mankind from the traditional horrors of old age, disease and unemployment. "These new departments," he said, "must have leaders and a personnel" with outstanding qualifications if they are to fulfill their noble purpose. His idealism is further documented by his admiration, an admiration that approached idolatry, for the uncompromising reformers—Trevelyan, Northcote, "the genius" Macaulay—who had fought to make the civil service system equal to the new demands, and by the vehemence, the sincere, deep passion, of the phrases with which he described the patronage system that had been the reformers' chief obstacle.

Quoting descriptions of the incompetents whom patronage foisted upon the service, he cited a report which concluded, "Patronage is the worst form of bribery," and concurred—with feeling. "The incessant demands of office-seekers, and the contemptible meanness and petty irritations attendant on a distribution of favors," are, he said, "intolerable." Merit, "oren competition," Moses said again and again, should be the sole basis of appointment and promotion in public life.

Mingled with the idealism, of course, was the arrogance. It was sub-ordinate to the idealism; if the idealism was displayed in Moses' convictions about what should be done, the arrogance emerged only in his convictions as to who was best suited to do it. But it was every bit as pure and uncompromising. The Civil Service of Great Britain reveals its author as the possessor of a depth of class feeling and conservatism more appropriate to a retired Colonel of the Guards than a young progressive from New York City. "Open competition" may be what the young author said he wanted—but the openness was to certain individuals only. "Merit" may be the determinant he said he desired, but it was not merit based on a man's handling of his job. The competition Moses wanted was a competition open only to a highly educated upper class. The merit he was talking about was merit not in public service but in the education given exclusively to members of that class.

What Moses admired in the British civil service was that it had two separate and distinct classes: a very small administrative and policy-making "upper division" reserved for "university men," and a much larger "lower division" consisting of "clerks of ordinary education" selected through examinations on the high-school level who "do the lower and more mechanical work." The class differentiation that Moses admired was a rigid one. Carefully placed technical hurdles made it difficult, almost impossible, for a young man, even one of dedication, industry, ambition and talent, to rise out of the lower division.

"Brilliant," Moses called this setup. "Far-sighted." It attracts into public service precisely the men most needed there, "the most intelligent and capable young men in universities," he said. And it keeps them in government by reserving for them posts from which they can exert real influence and authority.\*

<sup>\*</sup> With criticisms of the system Moses had little patience. "The question of admitting natives to the Indian service comes up now and again, but it can hardly be said to be

Was there, perhaps, a question as to the democracy of such a system? Moses' answer was that a civil service with no class differentiation is "one of mediocrity" and "such democracy is false democracy." What about the young man who educates himself, who goes to night school, perhaps, and earns a college degree while he is in the lower division of the civil service? Might not he be considered fit for promotion? Well, Moses said,

[My] conclusions on this difficult question of democracy versus education in the civil service are these:

In a sense it is a cruel thing to set up class distinctions—even if they only be intellectual . . .

But where does our sympathy lead us? Can the state repair the defects of heredity or of early education? Can it endow the average individual with the intelligence, acuteness and cultivation which economic exigencies have denied him? . . .

There should be no social bar to promotion from the lowest to the highest place—but let us not fool ourselves. When we have made every possible provision for the encouragement of early promise, when we have prepared every child as far as possible for its suitable vocation, the subordinate employees of the government . . . who are fit to rise above the ranks will be few and far between.

As for recent complaints of the lower-class civil servants about wage scales and working conditions, Moses said there was no need to worry about those subjects:

The writer believes—in spite of Mr. Walling and his socialistic brethren—that the civil servant may safely depend upon the public parliamentary recognition of the justice of his cause, upon the fairness of the Treasury or a minister . . . and upon royal commissions . . . to get real grievances redressed and reasonable demands granted.

What was of more concern to "the writer," in fact, was that the lowerclass workers might not understand this and might continue agitating might, in fact, even form *unions!* Hopefully, a sense of loyalty would stop the workers short of such an act of open rebellion, but if this should not be the case, Moses said, "in the last analysis," there must be "the remorseless exercise of the executive power of suppression and dismissal to solve this question."

The last chapter of Moses' thesis is a plea to his own country to adopt the British system for its own civil service. The chapter is pervaded by contempt for the standards of government service in the United States, where "spoilsmen" and job-hungry politicians lurk everywhere, and "we have been so busy fighting for a full realization of the competitive principle . . . that the great problems of division, of intellectual qualifications . . . and attracting the best men into our government departments have been quite neglected," so that government is staffed by "a very miscellaneous and often ill-educated

acute," he said. "Few care to make the trip to England." The suggestion that examinations be held also in India has "been voted down thus far," he noted, and this is "fortunate." "There are as many places open to them now as they are reasonably capable of filling."

division of clerks." Patronage must be eliminated and an upper division created immediately, he said.

To follow Moses' suggestions, the United States would have had to close almost completely the higher ranks of government service not only to all men without a college degree but to all men without a degree from an Ivy League college. In fact, by logical extension of Moses' philosophy, graduates of Columbia, Cornell, Brown, Dartmouth and Penn would be allowed in those higher ranks only by sufferance; in his view, government in America should be ruled, as was football at the time, by men whose birth and breeding had allowed them to attend one of three colleges—Princeton, Harvard or, of course, Yale.

Moses said in his thesis that he feared that America's acceptance of this suggestion would be delayed by its exaggerated concern for equality. Most men are simply incapable of handling the demands of government service, Moses said, and the time has come for Americans to realize it. "We must decide," the young author said, "how much encouragement we may honestly offer to those who expect to rise from the ranks without the almost essential early education of the university man." Moses saw only one real hope for his country—the fact that a man who met his highest standards, Woodrow Wilson of Princeton, had just been elected President. Wilson's writings, Moses felt, "show not only a clear understanding of the defects of our . . . civil service, but also a keen realization of the executive leadership necessary to remedy them."

Moses had begun the thesis after graduation—with honors—from Oxford in June 1911. After a last summer in Lucerne, he spent the fall of 1911 doing research in London. Then he spent a term studying political science at the University of Berlin. Returning to New York in the summer of 1912, he moved back into his old room on Central Park West—it was the height of his one-suit, one-pair-of-shoes period, but Bella at least made sure that the suit was an expensive white tropical from Brooks Brothers—and began writing. He enrolled in Columbia University's School of Political Science, but took no courses formally, spending most of his time on the thesis, which he completed in the summer of 1913. As soon as he finished it, and even before he took the oral examinations for the Columbia Ph.D. he was to receive, he entered public service by getting a job with the Training School for Public Service of the Bureau of Municipal Research, a private fact-finding organization located in an office building at 261 Broadway, which was about to become a virtual arm of the city government.

Robert Moses' education was over. He was beginning the career in public service about which he so often had talked with so passionate an idealism. The quadrangles of Oxford were behind him. Instead of cloisters, there would be the arena. And one day in the summer of 1913, dressed in his clean white suit, Robert Moses carried his bright, shining idealism down to 261 Broadway and flung it on the table to find out what it was worth in the game of life.

. . --

# THEREFORMER

. . -

## 4. Burning

IT MUST HAVE SEEMED like a great time to be young and a reformer in New York. In all American history, in fact, it would have been hard to find a better time. The young idealist entered public service in the very year in which there came to crest a movement—Progressivism—that was based, to an extent greater perhaps than any other nationally successful American political movement, on an idealistic belief in man's capacity to better himself through the democratic process.

An outgrowth of the agrarian Populist crusade of the 1880's and 1890's, the Progressive movement had been swelled before the turn of the century by the enrollment of America's urban middle class, its conscience awakened by Lincoln Steffens, Jacob Riis and other muckrakers who dramatized the poverty of the slums, and by the testimony of its own eyes, which could see all too well—in the horrors of child labor and the sweatshop—the problems that flowed from the new industrial order. In searching for the causes of these problems, Progressives settled on the most easily identifiable —the giant corporations and corrupt political bosses who they felt had stolen mythical America away from its people. To exorcise these demons—to force a return to the political democracy and economic individualism that Americans were fond of believing had once existed in their country—they advocated reforms equally simplistic, so simplistic, in fact, that they proved primarily that the old American impulse to do good was still intact. And they were reforms that a young man who wanted to do good, a young man like Bob Moses, could advocate with all his heart. One of the major demands of Progressivism was one that he himself had called for in his Ph.D. thesis: removal of the spoils system from the federal civil service. And if, in the thesis, he had discussed the need for great new departments of government to combat the excesses of industrialism, more and more the reformers were coming to demand intervention by government, the only St. George hefty enough to slay dragons of the size being bred in America. In 1913, the cheers for Wilson's "New Freedom" reform program were ringing from virtually every corner of the country except the bastions of privilege. In the statehouses, it was the era of Altgeld of Illinois, of Pingree of Michigan, of Charles Evans Hughes, exposer of corruption in New York's large insurance companies, and of Robert Marion La Follette, who broke the power of the railroads in Wisconsin and sponsored laws limiting working hours for women and children. It was the very height of an era of optimism and hope for America.

As the time was right for Bob Moses, so, seemingly, was the place. If there was an epicenter of the idealism that was rolling across America, it was the ninth floor of 261 Broadway. The impulse to do good may have been rampant beneath the domes of statehouses and the national capitol, but it reached its zenith in city halls. Perhaps this was because in cities corruption was more visible than in federal politics, issues more succinctly dramatized. Or perhaps it was because the reforming impulse thrived on problems, and it was in the cities, swelling with the immigrant tide, faced with problems of housing, schooling, policing, fire protection, traffic regulation and sewage disposal on a new scale, that America's problems were beginning to loom largest.

Unlike European cities, which also mushroomed in the Industrial Age but which had been built atop previous centuries' strong administrative foundations, America's had sprung into gianthood relatively overnight, often organized around nothing but the factory or the mill, and had no such tested governmental framework. What framework they did have was undermined by blatant corruption, their governments controlled by private interests and by political bosses who, with their Christmas baskets and everything the baskets symbolized, marshaled hundreds of thousands of ignorant voters into vast, seemingly impregnable political machines. "With very few exceptions," asserted historian Andrew D. White, "the city governments of the United States are the worst in Christendom—the most expensive, the most inefficient, and the most corrupt."

To combat these conditions, reform movements sprang up in almost every large city in the United States—and in no city was Progressivism more vigorous than in New York. In New York, its spearhead was the Bureau of Municipal Research. To many observers, in fact, the Bureau was the spearhead of municipal reform not only in New York but throughout the United States; historian Charles A. Beard was later to conclude that its methods constituted "nothing short of a revolution in the . . . approach to such matters."

The three young men who had founded the Bureau in 1907-William H. Allen, Henry Bruère and Frederick A. Cleveland-believed, as did the city's older reformers who had backed them financially, that the growth of forces which had diminished the individual's control over his own destiny had made it incumbent on government to ride to his rescue with increased welfare services. But this trio-known among reformers as "the ABC"added to the reform ethos new elements derived from two other passions of the era, natural science and scientific management. The emphasis of natural science on empiricism, on firsthand observation, on the obtaining of facts, led them to conclude that it was vain to talk about changing the philosophy of government before learning the facts of government, and they said therefore that the first step toward reform should be analysis of government operations. From scientific management—the age was marveling at the assembly-line techniques introduced by Henry Ford-they concluded that after government operations had been analyzed, the next step should be not a change in philosophy but an improvement in such operations to make

them "efficient" and "economic," to insure that the city would get far more for each dollar spent than in the past, and would therefore be financially more able to do what the voters desired.

Their philosophy, seemingly so elementary, was new in 1907. Previously, in New York and in all American cities, reform crusades had been of the "throw the rascals out" variety; stung to fury by particularly blatant corruption, "Good Government" elements would rise up, oust the reigning political bosses and seat in the mayor's chair a hero who they hoped would "save" the city. But salvation was invariably denied because the administrative systems of cities were so chaotic that change in the direction of government was all but impossible. "Budget," for example, was only a dictionary word; in turn-of-the-century America, not a single city possessed one. Allocating money with reference to the total amount available and to the relative urgency of the needs of the various city departments was therefore impossible. Scientific accounting techniques, only recently incorporated into American business, had never been adapted to government, so uspartmental requests for appropriations were not itemized and therefore items could not be compared with comparable expenditures in the past. In New York, for example, the Board of Estimate made appropriations without even checking to see if there was, or would be, sufficient money available in the city's treasury to cover them; if money ran out, the Board simply issued revenue bonds to make up the difference. Departmental requests to the Board were lump-sum requests which showed in only the most general way how the departments proposed to spend the money they were asking for. Unable to analyze these requests, the Board simply cut each by the same, predetermined percentage, a procedure which some departments circumvented by requesting five times as much money as they really needed.

Given such administrative chaos, the careers of the reform heroes were predictable. In city after city, they failed to make an appreciable dent in municipal problems and, after a term or two, the rascals they had thrown out were back in. In New York, where the businessmen reformers of the Citizens Union had thrust Columbia University President Seth Low into the mayoralty in 1902, Tammany had taken back City Hall in 1904. Said Bruère: "There was the constant futile search for the great administrator, great by instinct and personality. He wasn't found because he doesn't exist. A great administrator needs the tools and techniques of sound administration." The search, he said, "should not be so much for good men as for these good tools and techniques; the idea should be not so much to jail the grafters as to install [in government] business systems which will make grafting difficult." Before government could become humanitarian, he said, it must become businesslike.

The city's businessmen listened to the ABC and put up the money so they could go to work.

Confident that if the citizenry only knew the facts about government it would take the right steps, the three young men decided first to determine and disseminate such facts. Momentarily stymied by the refusal of notoriously corrupt Manhattan Borough President John F. Ahearn to show them his

records, they began to check records that could not be hidden—the construction contract specifications that borough presidents were required by law to publish in newspapers—to see if the specifications were being followed. Construction workers began to notice the presence of young men in high collars, vests and bowler hats who spent whole days performing such inexplicable maneuvers as counting bags of cement. When the count was finished, the young men had discovered—and proved—that the city had, in collusion with favored contractors, paid for hundreds of thousands of dollars of supplies—supplies such as bags of cement—that had never been delivered. The Bureau of Municipal Research published its first report, How Manhattan Is Governed.

In the time-honored ploy of politicians whose party is in power, Ahearn demanded an official investigation, assuming that it would be conducted by Tammany faithful. Unknown to him, however, Mayor George B. McClellan, Jr., had just decided to break with Tammany. McClellan gave Ahearn the investigation he had asked for-but the man appointed to conduct it was an independent twenty-eight-year-old Yale graduate and lawyer, John Purroy Mitchel. Mitchel confirmed the Bureau's findings. City Club President George McAneny, ignoring Tammany pressures on his business, volunteered to deliver Mitchel's report personally to Governor Hughes with his own endorsement, and Hughes summoned Ahearn to public hearings in Albany. At the hearings, Ahearn said he didn't know anything about the contracts; Hughes said he should have—and removed him from office. As the businessmen reformers hastily established a fund to make the Bureau a permanent institution, the ABC started counting bags of cement in the Bronx and Queens—a mathematical exercise which would result in the removal from office of the presidents of both those boroughs.

The offices of the Bureau were filled with excitement; the ABC, young themselves, gathered around them a group of recent university graduates determined to reform municipal government. They had a sense of mission; one, writing a history of the Bureau, said there was in it "not a little romance." Said another: "The men in training were looking for adventure—and most of them found it."

The young men developed techniques that were to reform every aspect of municipal government and create "a new literature on the science of public administration." They devised the first budget used by any municipal governmental unit, a primitive model employed by the New York City Health Department in 1908. They invented line-by-line itemization to eliminate lumpsum budget requests, and organization charts similar to those coming into use in business to make responsibility easier for voters to pinpoint. When enthusiastic press support forced the Board of Estimate to adopt the Bureau's innovations, city departments, for the first time, had to show what they had spent money for in the past year and which items they wanted increases for—and, for the first time, citizens could understand and could judge a department's record. Tammany Hall called it the "Bureau of Municipal Besmirch"—but its exposés led to the election in 1909 of anti-Tammany reformer William J. Gaynor as mayor. And when reformers McAneny

and William A. Prendergast were elected to borough presidencies, they reorganized their offices along lines the Bureau suggested.

In 1911, the Bureau founded its Training School for Public Service, the first educational institution in the United States dedicated solely to preparing young men for work in government. The young idealists of the era of optimism saw in it a chance to obtain training in a field in which their idealism could most easily be translated into effective action. By 1913, there were hundreds of applicants for its handful of places.

Bob Moses was one applicant for whom a place was waiting, since his mother was a cousin of one of the Bureau's trustees, Columbia professor Edwin R. A. Seligman, and a friend of several others. When he finished his thesis, he was allowed to enroll immediately, was told to share one of the tables that served as desks with a student named Meador and was taken on the tour of City Hall that was the students' introduction to municipal government.

In theory—even his own theory—Moses should have been happy at the Bureau. With its concentration on the improvement of the mechanics of government, it was, after all, addressing itself to concerns that he had expressed in his thesis. The admission policy of the Training School, moreover, answered the main demand of the thesis: the need for "university men" in public service. Only applicants of the most impeccable scholastic background were accepted.

Moses understood this. In his thesis, he had written that the Bureau and its Training School were "the system of the future in American cities."

But once he became part of the Training School, it didn't take Moses long to decide that the system of the future wasn't going to be his future. In the field of public administration, the Training School was unique in its down-to-earth practicality. Pupils not only were put through intensive reading courses on the theory of budget making, accountancy, scientific management, chart making and the use of forms, summaries and statements, but also spent long days in city offices watching budgets actually being made up and did their scientific management homework sitting in city offices trying to figure out ways to eliminate unnecessary personnel and analyzing projects the city was undertaking, to see if they were really needed. They did the legwork for the Bureau members who were heading the investigations which would result in exposure of corruption or waste in city government.

The students were filled with an *esprit* so strong that it seemed sometimes as if it must surely waft out the windows of 261 Broadway and melt some of the soot from the blackened granite of the Tweed Courthouse below. They believed in the importance of what they were doing; a half century later, rheumy eyes would light up and smiles would curl corners of wrinkled lips as they talked about it, and they talked in terms old soldiers reserve for old battles. "How would I sum up what we were doing?" one would say. "We were fighting to make democracy work, that's what we were doing!" They were very proud of their position in the army of idealism. They idolized their leaders; Allen, Bruère and Cleveland, they knew, were the very men who had charged through a hail of public abuse and private threats to pull

down three Tammany chieftains. Who knew what victories over corruption might not be won through the use of the information they were collecting in their daily reconnaissance through the files of City Hall? Watching John Purroy Mitchel stride by their tables to confer with his friend Bruère, they whispered to one another that they hoped the young lawyer would decide to accept the Fusion nomination for mayor. The ninth floor bubbled with excitement. "You couldn't walk in there without getting an assignment," recalls one Training School student. "You'd open the door and someone would yell, 'Hey! Glad to see you! Get up a memorandum on this!' And you'd go back out the door and over to City Hall without even taking your hat off."

For a while Moses seemed at home in this atmosphere. He did the legwork, wrote the memos, joined the other Training School students for twenty-cent lunches at Childs and for their one big splurge of the week, a six-course Sunday dinner at Lüchow's, which might cost as much as \$1.25. He didn't interrupt, as they didn't interrupt, when one of the older Bureau staffers was telling again the story of how everybody in the Bureau had jumped to his feet and cheered on the day that a reporter brought the news that Governor Hughes had just announced that the charges against Ahearn merited a public hearing.

At first, he was very popular with the other students. He was pleasant and friendly and had a gift for putting people at ease. Many of the students admired Moses. Those from midwestern universities were new to New York and slightly awed by the big city. Moses obviously knew his way around. Moreover, most of them were struggling along on students' allowances, and they knew he came from a wealthy family; they were thinking about what they were going to do after graduation from the Training School, and they knew Moses would be able to choose his job without regard for financial considerations. In the late afternoons, when they were all heading for the subway for the ride home, they watched him grab a taxicab. Occasionally, they might be talking about an opera they had seen the night before, having been lucky enough to secure standing-room tickets, and they would ask Moses if he had seen it. Oh yes, he would say, his family had a box. But the young idealists admired Moses most for his education. It wasn't just that he had been to Yale; the world's principal centers of education for public service were Oxford and the University of Berlin, and Moses had studied at both. Now he was attending the most advanced school for public administration in the United States; one of his friends wondered, quite seriously, whether Bob Moses was not the man best educated in public administration in the whole country.

Within a few months, however, the students began to notice another quality in Moses, a quality which became more apparent almost day by day. Blazing behind the big gray eyes, they now saw, was a furious impatience. Within months after entering the Training School, Moses made clear that he felt he had learned all it had to offer. He was irritated by the report cards, by the weekly conferences with his Bureau advisers, by all the aspects of school life that made him remember that it was a school and that he was still, at the age of twenty-five, a student.

Burning 65

In particular, he resented the legwork. The Training School men were required to summarize the results of their investigations in memos that had to be written as if they were official Bureau reports but that would actually be seen only by the Bureau men who were writing the real reports that would be published. Moses wanted his memos published. He began to press for admission to the Bureau itself, making clear that, because he had an allowance from his mother, he would require no salary; within a year, on that financial basis, he was admitted; his student days were over.

The impatience was not slaked. No sooner was he in the Bureau than he began to make cutting comments about its procedures: the voluminous filing and cross-filing of all information was a waste of time, he said; the weekly staff luncheons were a waste of time; the Bureau's constant emphasis on procedure was a waste of time. The Bureau wasn't "getting enough done," he said. But it was becoming apparent to many of his colleagues that the Bureau would never be able to get enough done to satisfy Moses, no matter how many "technicalities" it dispensed with, simply because the Bureau was merely an agency that investigated and advised government. The way to get things done, Moses was making clear, was to be in government. Through Bella, he had a nodding acquaintance with several members of Mayor Gaynor's administration; he began to neglect his work at the Bureau and spend more and more time at City Hall hanging around their offices. His colleagues began to whisper about Bob Moses. The slang of the era contained a phrase that described what they thought he was doing. He was, they whispered, "pushing his acquaintance" at City Hall. There was an adjective heard frequently in the whispers, too. The adjective was "ambitious." Bob Moses, the idealists of the Bureau said, was interested-much too interested-in making a name for himself.

But if there was ambition, that was only a part of what was driving Bob Moses. And the whisperers never saw the other part. For they never saw what Moses did in the late afternoons after he grabbed the taxicabs.

Sometimes, of course, Moses would tell the cab driver to take him straight home. But often he would ask to be dropped off across the West Side, on Riverside Drive, at the end of Seventy-sixth Street near the Hudson River. And as he climbed out of the cab there, he climbed out into a scene far different from the doormanned serenity of Central Park West.

He would be standing on the high bluff that was Riverside Drive; behind him, if he looked up, stately apartment houses would appear to be swaying over him against a backdrop of moving clouds. But he would be looking down. Below him, along the edge of the river, was a wasteland, a wasteland six miles long, stretching from where he stood all the way north to 181st Street. The wasteland was named Riverside Park, but the "park" was nothing but a vast low-lying mass of dirt and mud. Running through its length was the four-track bed of the New York Central, which lay in a right-of-way that had been turned over to the railroad by the city half a century before. Unpainted, rusting, jagged wire fences along the tracks barred the city from its waterfront; in the whole six miles, there were exactly three bridges on which the tracks could be crossed, and they led only to private boating clubs.

The engines that pulled trains along the tracks burned coal or oil; from their smokestacks a dense black smog rose toward the apartment houses, coating windowsills with grit. The smog had an acrid odor, but people who lived in the apartments hardly noticed it; it was scarcely worth mentioning alongside the stench that seemed to hang over Riverside Drive endlessly after each passage of a train carrying south to the slaughterhouses in downtown Manhattan carload after carload of cattle and pigs. When, despite the smell, Riverside Drive residents were driven by the heat to open their windows, they were kept awake at night by the clank of the couplings which hooked the cars together.

Walking in the park was adventure; the walker sank at intervals into the landfill of which it had been constructed, for water had eaten away much of the fill from below. In many spots, it had broken through the crust of the fill to form little lakes. Every year the park grew smaller, as its edge crumbled into the river.

Areas that were still solid had been appropriated by the railroad for wood-lined pits in which coal was piled. Lying along the river were heaps of rotting timbers, stored years before by some city department and forgotten. At Seventy-ninth and Ninety-sixth streets, untreated garbage mounded toward the sky; the Sanitation Department used those areas as dumping grounds from which the garbage was transferred to scows which towed it out to the open sea, but somehow the rate of transfer was never fast enough to clear the refuse away entirely. Other solid spots held human refuse: derelicts who had built tar-paper shanty towns considered so dangerous that the police stayed away from them. At night, the open fires over which the derelicts cooked flickered in the darkness below the Drive.

Looking south, Moses could see the bluff sink and the park narrow until both disappeared, and houses, factories and warehouses crowded close to the waterfront. The railroad tracks wended their way between the buildings, making several sharp curves, and then emerged on Eleventh Avenue, along which, at street level, trains inched their way in a straight line down to the foot of the island. In front of every train, to warn away pedestrians and drivers, rode a cowboy on a horse, waving a large red flag. Since the trains came at frequent intervals and moved extremely slowly along the avenue, traffic was frequently backed up for blocks. Often, a driver would become impatient and ignore the warning flag. For that reason, Eleventh had become known as "Death Avenue." For years, the city had tried without success to find a solution to the problem posed by the presence of the railroad along the West Side.

In the late afternoons, as the sun sank toward the Palisades across the Hudson, Bob Moses walked along Riverside Drive. He walked down the steep paths to the park, over one of the bridges across the tracks and, skirting the dirty tar-paper shacks, along the edge of the clean blue river. And as he walked, he dreamed. One Sunday in 1914, he was crossing the Hudson by ferry to picnic in New Jersey. With him were some college friends and their dates, one of whom was Frances Perkins, later to be United States Secretary

of Labor. As the ferry pulled out into the river, Moses leaned on the rail, watching Manhattan spread out behind the boat. Miss Perkins happened to be standing beside him and suddenly she heard Moses exclaim, "Isn't this a temptation to you? Couldn't this waterfront be the most beautiful thing in the world?" As the woman looked at him in astonishment, words began to pour out of Bob Moses and she realized that "he had it all figured out. How you could build a great highway that went uptown along the water. How you'd have to tear down a few buildings at Seventy-second Street and bring the highway around a curve. . . . He wanted places where people could leave their boats safely, public clubs . . . like private clubs." Staring back at the bleak mud flats covered by a haze of smoke from the railroad engines, she heard Moses paint for her a picture of what the scene could be like on a Sunday—the ugly tracks completely hidden by the great highway, cars traveling slowly along it, their occupants enjoying the view, and along the highway stretching green parks filled with strollers, tennis players and families on bicycles. There would be sailboats on the river and motor yachts tied up in gracefully curving basins. And the thing that astonished her most, Miss Perkins was to recall, was that Bob Moses had the exact location of tennis courts and boat basins quite definitely in mind; the young Bureau staffer beside her was talking about a public improvement on a scale almost without precedent in turn-of-the-century urban America, an improvement that would solve a problem that had baffled successive city administrations for years. And "he had it all figured out."

Moses was to talk again to Miss Perkins. Every time he did, her astonishment grew. "He was always burning up with ideas, just burning up with them!" she was to say. "Everything he saw walking around the city made him think of some way that it could be better." Happening once to comment that it was too bad that mothers who took infants to Central Park had to leave when diapers needed changing and go all the way home, she saw her idle words strike instant fire in Moses' mind. Why not build diaper-changing shelters? he asked. They could be small structures, used for no other purpose; you wouldn't even need attendants—the cost would be small. Or perhaps they could be additions to comfort stations already built—the cost would be smaller yet. It should certainly be looked into. Moreover, not all the ideas that he told her about required concrete and steel. Bob Moses, she realized, had thought through detailed new concepts of city budget making and social welfare legislation, prison administration and school administration, filing systems and methods of conducting public hearings.

But while Frances Perkins was impressed by Moses' imagination, the Bureau was more impressed by his impatience. Challenged at staff meetings about some details of those of his ideas that he had presented, he responded as Bella did at Madison House board meetings, making it clear that he wasn't much interested in long discussions. The ideas were good; what was needed now was to put them into practice.

Impatience became frustration. Moses wanted the Bureau to take up his ideas officially at once and press the city to adopt them. The Bureau had other projects on which it was already working and which it considered equally important. When it got to Moses' projects, they would have to be thoroughly studied. And as to those suggestions about public works projects like the highway—well, the ABC was not at all certain that the Bureau had the expertise or the responsibility to start suggesting public works.

The frustration boiled over. Moses became more and more critical of some of the Bureau's own procedures, which he felt were keeping it from accomplishing as much as it could. This criticism—offered, with conspicuous lack of tact, by one of the newest members of the Bureau—rubbed senior staffers the wrong way. They felt the procedures had brought the Bureau success; they were particularly incensed at several of Moses' suggestions aimed at speeding up the preliminary work that went into reports. While Bruère felt that some of these suggestions were worth looking into, Cleveland and Allen were more precise, careful men who believed in checking every possible aspect of a situation before writing anything about it, and most of the staffers agreed with this philosophy.

The reaction to rebuff was not graceful. Moses' irritation with the Bureau began to spill over into his work. He didn't feel it was important any more. Investigations didn't accomplish anything. He didn't want to count barrels of concrete; he wanted to pour them. He had said the weekly staff luncheons were a waste of time; the Bureau, believing they were valuable for interchange of ideas, declined to eliminate them-so Moses simply stopped attending. With increasing frequency, sent over to City Hall to get material for a report, he would return without the material and say he had met one of the city officials he knew "and we had a very interesting conversation." Acting as adviser to several Training School students, Moses developed the habit of writing large question marks in the margins of their reports next to statements he questioned—and the papers often were returned with their margins literally filled with these indications of his displeasure. Sometimes, the papers were not returned at all. "I have your memorandum and it's no damn good," he would say to a student. "I threw it in the wastebasket." And the student would find out that Moses meant exactly that; the memo had actually been thrown away; the student would never see it again. He used his tongue as a lash on his advisees. One, considered a brilliant prospect and in fact later to become one of the country's leading experts on police administration, emerged from a conference with Moses so depressed that he gave up his hopes of a public career and resigned from the Bureau. It was only with difficulty that he was persuaded to return. Bruère, who knew Bella and Emanuel Moses socially, stayed tolerant toward their son, but Cleveland and Allen made it clear they were not prepared to put up with his behavior much longer; Moses, they said, just couldn't seem to learn to work as part of a team. Bureau gossip said he would be fired shortly.

\*

Only one person at the Bureau was sympathetic.

She was a woman who worked as Cleveland's secretary.

Mary Louise Sims was slim, of less than medium height and rather plain, but gay and vivacious. With ash-blond hair and a clear white skin, she looked fresh and clean. She came from Dodgeville, Wisconsin, one of the six children of a Cornishman who worked in the little town's lead and zinc mines. Mary's family didn't consider itself poor, but, as one of her sisters put it, "there wasn't much money to throw around." When Mary decided that she wanted to go to college, she had to earn her first year's tuition as a seventeen-year-old teacher in Dodgeville's one-room little red schoolhouse and then, after she entered the University of Wisconsin, work her way through. After she graduated and began to work full time in Madison, the state capital, a portion of her earnings each week was still put aside for college tuition—for a younger sister.

In Madison, Mary was a secretary, but that was not an adequate description of the work she did. Her employer was Francis E. McGovern, the Governor of Wisconsin, and McGovern noticed that Mary had an instinct for and insight into politics, including the merciless in-fighting that was part of the decor in any statehouse. He used her as confidente and adviser.

But Mary's ambitions were not for herself. She had sought out a job with a politician not because she was interested in politics but because she was interested in what politics could do. She was another of the moths who in the years before World War I hovered so thickly around the flame of idealism. In 1913, Cleveland and Allen visited Madison to study Wisconsin's governmental structure. No one could explain it better than Miss Sims, the Governor said, and delegated her to show the visitors around. She had already become interested in the "efficiency and economy" movement. In the course of the tour, Cleveland and Allen talked to her about how they were trying to make democracy work, about fighting to free government to institute reforms that would really help people. Mary resigned as the Governor's secretary and came to New York to work for the Bureau. In 1914 she was thirty—four and a half years older than Bob Moses—and was known to Bureau staffers and students for her friendliness, her quick wit and the depth of her belief in what they were doing. Bob Moses fell in love with her.

Although women had always been attracted to him, Moses had never before, although he was twenty-five years old, centered attention on any particular one. But now he talked about Mary constantly, and he talked about her in terms that left no doubt that the pedestal he had placed her on was a high one. The lover of the Good, the True and the Beautiful seemed to feel that he had found their embodiment. "He was," a friend said, "very, very much in love."

His devotion was complete. Taking Mary along on his walks around the city, he poured out to her his ideas—and his frustration at the indifference with which they were received by the Bureau. At the Bureau, they would meet in the library, among the books, and they would sit and talk for hours. He introduced her to his friends. They noticed that she was always gay and

laughing but that she could also, in a quiet way, deliver a remark that could demolish an opponent's argument—or an opponent.

The Bureau's whisperers soon learned that it was unwise to let Mary hear their criticisms of Moses. If she did, she would not hesitate to let them know where, despite her feelings for the Bureau, her first loyalties now lay. They just didn't understand Bob, she would say. One day he would get a chance to show what he could do.

And, as it turned out, the chance came soon. Having finally accepted the Fusion nomination, John Purroy Mitchel had been elected mayor on November 4, 1913, at the age of thirty-four. Bruère had become his closest confidant, the expert who provided the tinder to fuel Mitchel's zeal; Bruère provided the facts and theories, Allen was to say, and "Mitchel took fire" with them. Now, as mayor, Mitchel made Bruère City Chamberlain. And he asked the Bureau to list the city departments most in need of reorganization and to recommend Bureau experts equipped to advise on the reorganization. Near the top of the Bureau's list was the Municipal Civil Service Commission, and Allen, Bruère and Cleveland found that only one staffer in the Bureau was an expert on civil service. They had no choice but to submit his name to Mitchel, and when, in 1914, the Mayor appointed a new Civil Service Commission, he asked the commissioners to rely for technical assistance on this man and to regard him as if he were in fact on the city payroll.

The new commissioners found the man a more than willing assistant. At last, he was being given a chance to participate in the actual workings of government itself, in workings that could change men's lives, in workings that could make a city a better place to live. Into the work of the Municipal Civil Service Commission, Bob Moses hurled all his energy and all his brilliance, all his zeal for reform, all the long-pent-up enthusiasm and fire of the boundless idealism of his youth.

## 5. Age of Optimism

IN SETTING OUT to reform New York City's civil service, Bob Moses was setting out to break into the plunderhouse of politics.

The wheels of the Tammany war machine might be greased with money, but the machine was pulled by men, the men who voted Democratic themselves, the men who rounded up newly arrived immigrants and brought them in to be registered Democratic, the men who during election campaigns rang doorbells and distributed literature to those immigrants and to their own friends and neighbors and on Election Day shepherded them to the polls to vote Democratic. And the most succulent of the carrots that lured these men forward, that kept their shoulders braced against the ropes that pulled the Tammany machine, was the carrot of jobs, jobs for themselves, jobs for their wives, jobs for their sons. The only source of jobs on the scale required was the city itself. So the jobs Tammany had to control in order to control the city were the city's jobs-positions as policemen, firemen, sanitation workers, court clerks, process servers, building inspectors, secretaries, clerks. There were, in 1914, 50,000 city employees and this meant 50,000 men and women who owed their pay checks-and whose families owed the food and shelter those pay checks bought—not to merit but to the ward boss. Patronage was the coinage of power in New York City. And reforms of the civil service such as Moses was to propose were therefore daggers thrust at the heart of Tammany Hall.

Tammany understood this well. And Tammany knew how to defend itself. It always had.

Reformers might have forced the adoption of civil service merit systems in one city after another. But in New York, though Tammany might have been forced to make token reforms in other areas of government, civil service was the line at which reform stopped. In New York, in 1914, "merit" was still votes deliverable. The "ability" that determined who got the jobs and which jobholders got promotions and raises was still number of relatives—relatives of voting age—or rightness of connections.

Under such a system, civil service was chaos. Offices were filled with so many clerks and secretaries that supervisors couldn't possibly provide work for all of them. One secretary might be receiving \$25 a week. The secretary at the desk next to hers, doing identical work, might be receiving \$47 a week. Some city typists were getting \$1,200 a year. Others were getting \$4,000. When giving tests of the ring-the-gong variety to candidates for jobs

requiring physical strength—lifeguard or fireman, for example—the examiner painted over the candidate's side of the dial which registered the force with which the gong was struck, so that only the examiner could see the results, and the results the examiner reported frequently had a relationship less to strength than to amount—the amount of money the candidate pressed into his hand. More than 1,200 employees had been exempted from any competitive examination at all.

No aspect of city mismanagement was more frustrating to reformers than civil service maladministration. What good were campaigns to change the government, if the people running it, administering its machinery, were still the same unqualified, inefficient, indifferent political hacks?

John Purroy Mitchel's announcement that he intended to clean up the civil service therefore was especially cheering to reformers. The impeccability of the reform credentials of the two men he selected to form the majority on the three-member Municipal Civil Service Commission—new chairman Henry Moskowitz, a meek, disheveled social worker who had been the first headworker of Bella and Emanuel Moses' Madison House, and banker Darwin R. James, a natty one-time Princeton track captain and president of the Brooklyn Bureau of Charities—cemented their optimism. Samuel H. Ordway, chairman of the Civil Service Reform Association, said, "We expect great things . . . a real advance in civil service administration."

But generations of Tammany civil service commissioners, masters in their own way of the art of government, had been there first. Anxious to blaze a path straight to the door of rectitude, Moskowitz and James found themselves trapped instead in a maze of technicalities constructed over decades primarily to keep great things from happening. Civil service administration, the two reformers soon realized, was an art and a science—and it was an art and a science they knew absolutely nothing about.

Not trusting long-time commission secretary Frank A. Spencer or Spencer's assistants to lead them out of the maze, Moskowitz and James tried to fire them, learned to their frustration that one of the technicalities prevented this and settled for transferring them to other departments. And they turned to the young man from the Municipal Research Bureau as their guide.

From a technical standpoint, they made a good choice. Two men who had read Moses' thesis—it had been published—were Luther C. Steward, first president of the National Federation of Federal Employees, and H. Elliot Kaplan, later president of the New York Civil Service Commission and executive director of the Civil Service Reform Association. Years later, when Kaplan had read everything there was to read on civil service, he was asked to evaluate the thesis and said simply, "It was a masterpiece." There were, he said, "very few people in the United States in 1914 who knew much about civil service. Bob Moses really knew." Steward's wife, who had been working beside her husband in 1914, was even more emphatic. "Bob Moses wasn't one of the men in this country who understood civil service best at that stage," she said. "He was the man who understood it best."

James and Moskowitz asked Moses for a plan of action.

Moses said that the first step had to be a reform of the city's efficiency-rating system, the system of ratings given by supervisors to their subordinates to help determine whether to promote a civil service employee or give him a pay raise; under the present method, ratings didn't give the Civil Service Commission enough information for a sound judgment.

Making an evaluation system precise was perhaps the most difficult job in civil service, Moses explained; each job had to be broken down into component parts, so that each part could be graded, and in totaling the grades each part had to be given a mathematical weight corresponding to its importance in the job as a whole. But he knew how to do it, he said. Impressed, James and Moskowitz told him to go ahead—and let it be known that they were considering bringing the Bureau staffer into city employ and starting him off at the top: as Spencer's replacement as commission secretary.

Then, one morning, Bob Moses found his name in a newspaper. ONLY "GENTLEMEN" NEED APPLY, a headline said. THAT IS MOSES' THEORY OF CIVIL SERVICE REQUIREMENTS.

Because he "is being considered as a likely successor to Frank Spencer," said the article under the headline, Moses' Ph.D. thesis, "of which he acknowledges the authorship, and in which he openly advocates that positions in the government service should be open only to university men and 'gentlemen who had inherited breeding and culture,' has caused a mild sensation in civil service circles."

It was a small article, five paragraphs in the Brooklyn *Eagle*, and no other paper bothered to pick it up. But it must have served as a warning to the Mitchel administration of the line of attack that would be used if Moses was appointed—and of Moses' peculiar vulnerability, because of the thesis "of which he acknowledges the authorship," to such an attack. There was no more talk of the appointment.

The article marked the first appearance of Moses' name in a New York newspaper. It was his first direct acquaintance with a newspaper "leak." To the average reader, it would seem that a reporter had discovered the thesis himself, or had been motivated to look for it because of the "mild sensation" he had noticed in civil service circles. But there had been no "sensation," mild or otherwise, over Moses' rumored appointment; hardly anyone in city government even knew who he was. Actually, Tammany had simply done a little research and tipped off a reporter to the existence of the thesis and had told him what he would find if he went up to the public library and looked at it.\*

The story could be taken as a "first" of another type, too, a first hint of what was to come, a gentle intimation that politics, in its own way, was rougher than water polo, that the race Bob Moses was entering was not a swimming relay in which judges watched the touch-offs to insure that every-

<sup>\*</sup> After its publication, it became a family joke that only six copies had been sold: three to Bob's mother and three to his grandmother.

thing was fair. It could be taken as a reminder of how important patronage was to Tammany—far too important to let anyone take it away. Disposing of a young man's hopes for a minor city appointment was so simple it was hardly worth mentioning; a little newspaper leak, done offhand by some politician who had more important things on his mind, could take care of that. Were the threat to grow more serious, however, there were other methods.

If it was a hint, however, Moses didn't take it. He would have liked Spencer's job, but the job wasn't what was important to him; reforming the civil service was. He set out to do it.

The Bureau assigned ten men to Moses as assistants. The idea of working under him didn't appeal to the older men, but the younger ones, who hadn't known him before, liked him. "He worked all of us hard," one of them recalls. "But he worked himself harder. He was at the Bureau when you got in in the morning, and he was still there when you left at night. He'd lose his temper, but it was silly to argue with him anyway, because you knew darn well that he had looked the point up before he talked to you and knew it better than you did."

Moses' assistants sat for days watching city workers perform their jobs so that they could break each job down into gradable components. They observed employees of private businesses. They interviewed department heads and civil service commissioners in other cities. Soon memos addressed to "Dr. Moses" were flooding onto his desk. By the spring of 1915, he was able to begin writing the Detailed Report on the Rating of the Efficiency of Civil Service Employees, Excepting Members of the Uniformed Forces in the Police and Fire Services and in the Lower Ranks of the Street Cleaning Service. Day after day, he sat in the Bureau, his fine-pointed pen racing over the pages of yellow legal note pads. Often, coming across a point he wanted to check himself, he would fling himself out of his chair and out of the Bureau offices, and stride, sometimes breaking in his haste into a few steps of a run and then self-consciously checking himself and settling back into a walk, over to City Hall or the Municipal Building, where he could see records and officials himself. Soon, to save time, he asked for and was given a desk of his own in the Civil Service Commission offices on the fourteenth floor of the Municipal Building. his first toehold in the halls of power. He wrote and rewrote sections of the report before sending them off to the typist. And when they returned, the fine-pointed pen slashed at the neat pages, crossing out words, putting in others, clarifying, refining, hardening. On July 8, 1915, after nineteen months of work, he typed on a Bureau letterhead: "Dear Commissioner James: I am transmitting herewith detailed report . . ."

Under the present system, Moses reported, most department heads simply gave each of their hundreds of employees "C"—or average—ratings on their "report cards" rather than try to pinpoint outstanding or delinquent workers. To obtain more accurate ratings, he wrote, department heads must be required to give each employee arithmetical grades in dozens of categories. In addition, there must be a complete "reclassification" of the civil service, adding many new levels, to insure that employees would be given

the precise salary and authority they deserved. There must be a complete "standardization" of salaries so that employees doing the same type of work would be getting the same pay even if they were working in different departments. The commission should have authority to see that promotions and raises were given strictly on the bases established under the system.

Moses' proposal was a codification of idealism. Omitted, at the insistence of Moskowitz and James, was any mention of "higher division," "lower division" or "university men." There was to be only one standard for promotion in public life: "open competition," how hard and well a man worked and how he performed on examinations. Examination results would be posted in public, and report cards would be open to public inspection so that every city employee would know the basis whereon he and his competitors were judged. Seniority would become unimportant; not experience but ability would be crucial.

The proposal was of a purity, a strength and a scope that was almost more religious than governmental. The system was to be completely new, Moses said. All traces of the old must be washed away. And it must be all-embracing. All government service, he said, could be divided into sixteen categories: executive, legislative, judicial, professional, subprofessional, educational, investigational, inspectional, clerical, custodial, street cleaning, fire, police, institutional, skilled trades and labor. Each category could be divided into specific jobs—custodial, for example, into caretakers, janitors, watchmen, storekeepers and bridge tenders. Each job could be scientifically analyzed to show its "functions" and "responsibilities." Each function and responsibility—and there were dozens of them for most jobs could be given a precise mathematical weight corresponding to its importance in the over-all job. And the success of the employee in each function and responsibility could be given a precise mathematical grade. These grades would, added together according to weight and combined in service records for each employee, "furnish conclusions expressed in arithmetical . . . terms" and these conclusions and these alone should be "used as a basis for salary increase and promotion."

It was the proposal of a fanatic. John Calvin specifying permissible arrangements for women's hair in sixteenth-century Geneva was not more thorough than was Bob Moses enumerating the "functions" and "responsibilities" of New York's civil servants. No aspect of conduct on the job was too small to be graded. Even personality must be reduced to number. "Personality," Moses said, "includes those intangible elements the existence of which do not readily admit of proof, but nevertheless . . . each employee must be rated on personality." Men would have to make sacrifices for the sake of the system: acknowledging that some present employees would not score high enough on his tests for the jobs they held, he had a simple solution—such employees would have to accept demotions and pay cuts. Unnecessary employees, he said, would have to be "eliminated."

The idealism was harsh and uncompromising. In judging the ability of

an examining officer, said one of Moses' aides, echoing Moses' views, a "pretty fair clue" is the number of "below standard" ratings given: the more "below standard" ratings, the better the examining officer. If there could be such a thing as a Calvinistic civil service efficiency-rating system, Moses had devised it.

Moses did not deny there was a human element involved; he knew of its existence all too well—it was constantly interfering with the mathematical perfection of his system, and it must be suppressed. "It is essential," he said, "to have a definite, almost a mechanical, program of adjustments in order to avoid personal and political pressure." For some reason, it was hard to make examiners understand this. They were always becoming sympathetic to individuals and talking about the "human factor," and "an examiner who . . . always wishes to take the 'human factor' into consideration is a dangerous man to associate with such work. The consideration of the 'human factor' is entirely a matter of policy for policy-determining bodies in applying salary and grade specifications." The infusion of people, moreover, was always interfering with the work to be done. Annoyed that his recommendations had to be discussed at public hearings, he noted that because of the time he had to spend at such hearings, "it is difficult to . . . keep the field work running smoothly and correspondence up to date." There must, he said, "be some limit to public discussion."

Shining through all Moses' statements was confidence, a faith that his system would work, a belief that the personalities of tens of thousands of human beings could be reduced to mathematical grades, that promotions and raises could be determined by a science precise enough to give every one of those human beings the exact rewards he deserved. Asked once if it might not prove difficult to divide a job like that of janitor into different levels based on different functions and responsibilities, Moses replied flatly that it would not be difficult at all. To the expert, he said, such differences are "clearly discernible." When someone ventured to argue that it might be hard to bring under his system appointees in policy-making posts because policy-making ability was too subtle to measure, Moses could barely restrain his impatience. "There is no reason why it cannot be worked out in that way," he said.

Moses also had confidence that his system would be adopted. It would take "courage and integrity" to push it through, he said, but the city at last had a mayor with such qualities—and with an educational background that would enable him to understand that the system was good and that its adoption would so improve the civil service as to make it truly an instrument for the betterment of the lives of the city's people. Moses talked often about Mitchel; the young mayor was his beau ideal of the public servant, the embodiment of the virtues enumerated in the Ph.D. thesis.

And certainly the first reactions to Moses' Detailed Report must have made the confidence seem justified. Terming it "pioneer work," the Civil Service Reform Association said that Moses' efficiency-rating system was the most thorough ever devised. Moskowitz called it "an epoch in the administration of civil service law." James said: "No city, state or national civil service has anything commensurate with this." Mayor Mitchel announced that he would push for the system's adoption. Bella and Emanuel had purchased nineteen acres of land in Lake Placid—Hawk Island—for a summer retreat and had been up there for more than a month. Now, his report finished and praised, their son hurried to join them for what was to be a golden summer. He felt very close to attaining a goal in which was tied up all the idealism of his youth—the accomplishment of a concrete achievement that would truly help people. And now his attention was focused on the girl who seemed somehow a part of that idealism.

"Bob was very much in love that summer," a friend recalls. "We did a lot of swimming and mountain climbing in the Adirondacks, but Bob was talking about Mary all the time." He brought her up to meet his parents, and Bella liked her immediately. On August 15, 1915, one month after he had handed in the report, he and Mary were married. The ceremony was performed at the nonsectarian Labor Temple in New York City by its director, a Presbyterian minister, and the couple honeymooned in a rustic camp near Lake Placid.

Returning to New York in the fall, the couple moved into a small apartment on Ninety-fifth Street near West End Avenue. They had no regular income except Mary's salary at the Bureau, and before the end of the year they knew she was pregnant—a daughter, Barbara, would be born on May 23, 1916—and would have to stop working. But Bella said she would give them enough to get by on; she didn't want Robert to interrupt his work by taking a paying job. Neither Mary nor Bob had much interest in the things that forced other young couples to be concerned with money, anyway; they were perfectly happy, for example, to furnish their living room with only Bella's old sofas and their own shiny idealism.

Every morning—early—Moses would get a call from a young lawyer named George Gove, who lived nearby. "I'm leaving," Gove would say and hang up. Moses would be standing in the street when Gove arrived.

Together, the two young men would walk down Broadway all the way to the Flatiron Building on Twenty-third Street, where Gove had his office—and then Moses would continue alone to the Municipal Building, some six miles south of Ninety-fifth Street.

Gove was a tall, rawboned farmer's son from Wisconsin who regarded himself as a good walker, but he had trouble keeping up with Moses. As they walked, Moses would talk and, as his thoughts raced, his legs seemed to keep pace, so that at times he was almost trotting in his eagerness to get downtown. "We talked about everything under the sun," Gove recalls—art, philosophy, history. The one subject not mentioned was one other young men might have dwelt on: making money. "He just wasn't interested in that," Gove says. The subject that dominated the talk was government and particularly the government of New York City. "He was all caught up in his work," Gove says.

Moses was sure the work was going to pay off. Historians call those

last years before America's entry into the Great War America's Age of Optimism; it was Bob Moses' age of optimism, too. His superiors couldn't praise him enough, and took his advice eagerly. When, during a speech, they were asked a particularly sticky question, Moses would lean forward and whisper the answer. They had authorized the printing of the detailed forms on which the arithmetical grades were to be reported, and in the rectangles of heavy yellow paper Moses could see the first tangible results of his years of education for public service. Forms had already been sent to several of the more cooperative departments, and the rest were in boxes stacked in a corner of one of the Civil Service Commission offices, ready to go.

Moses' demeanor revealed his confidence. Openly mocking the weekly staff luncheons and elaborate filing systems, he made no secret of his contempt for the Bureau. Chatting with Bureau staffers, he took care to let them know, in a studiedly offhand fashion, that it was fine to be doing "real work" at last.

He carried himself with an air of vast knowledge. "There was, in his makeup, very little doubt," one of the staffers was to say years later. Another recalls that Moses was the first person he saw on his first day at the Bureau. "Here was this tall, handsome character in a white suit—a summer tropical kind of suit—and he was talking on the telephone to the street-cleaning commissioner. I gathered from the conversation that someone had been advocating some new method of cleaning the streets and the commissioner was saying that he didn't think much of the suggestion. And all of a sudden this character in the white suit raps out, 'Well, we don't think much of it, either.' You should have heard the tone! It was so definite! I thought it was an extraordinary tone for a guy to use who had never been confronted with the problem. I sized him up immediately as self-confident, opinionated and critical." Getting to know Moses, the new staffer found no reason to change his evaluation. "He seemed to regard himself as one of the anointed," he said.

But reality was just around the corner.

Tammany's wily old sachems had probably realized early what Moses' plan would mean for them: it would effectively destroy their control of the civil service. But the sachems, unwilling openly to oppose reform themselves, had said nothing, biding their time. And now the development they had been waiting for was coming to pass; the system's 50,000 members were beginning to realize what the plan would mean for them.

The downgrading of seniority in Moses' system would mean that these city employees would lose a large advantage—in many cases their only advantage—over bright young outsiders trying for their jobs. The elimination of unnecessary jobs would mean that some of them would be out of work entirely. Moses' insistence on demotion for men who failed to score high enough on new examinations to qualify for the jobs they presently held would have the most far-reaching effects of all. Men who had run their ward boss's errands for years in return for advancement up the civil service ladder now came to realize that under Moses' system the rewards for which they had

waited so long might be snatched from them; in fact, for many of them, "might" was only a euphemism; they knew all too well what their qualifications were and how they would make out on honestly run examinations.

Moreover, Moses' system would effectively bar the simplest path to future raises. Under the old system, once a civil service worker reached Grade Five, the highest grade for clerical employees, he could be given raises, raises without limit as to number or amount, without having to take any examinations at all; all that was necessary was approval from his department head—and since department heads gave raises on the advice of Tammany bosses, the loyal party worker could be assured that his loyalty would be rewarded. Grade Five was, in fact, the biggest carrot that Tammany possessed. More than 10,000 of the 50,000 city employees were at that level, and while the base pay for Grade Five was \$3,260 a year—in itself a handsome wage when the average clerical worker in private industry earned \$2,100 a year—the earnings of many of the 10,000 had been raised to \$6,500 or even \$7,500.

Under Moses' system, all civil service workers at Grade Five—all 10,000 of them—would have their pay reduced to \$3,260 a year and would have to pass examinations for any future raises. Even if they passed the examinations they would have to climb back up the monetary ladder one step at a time, for promotions were to be given only level by level. And examinations would no longer be given, as they had been, to cozy groups of two or three competitors, or to one man who happened to be the only person who had been notified that the examination was being given. To climb back up to their former salaries, Grade Fivers would be competing with hundreds of applicants.

As the realization of these facts began to seep down to the mass of civil service employees, there was hysteria in the ranks. Protest meetings were arranged.

Young Bob Moses volunteered to speak at the meetings. He wasn't ashamed of his system, he said. He was proud of it. He would be glad to defend it.

But Moses wasn't at Oxford any more. The only effect of his courage was to make things easier for his enemies. Civil service reorganization was a subject so complicated that it was difficult to interest even civil service workers in it. What was needed was a single, visible object on which the workers could focus their hatred. And now Moses had given them such an object—himself.

He was the perfect target. Tall, in a white suit, elegant, haughty, arrogant instead of conciliatory when challenged, he stood before the thousands of sullen, clerkish men like the very epitome of the efficiency expert they feared and hated. And they expressed their hatred and fear in boos and catcalls and vicious, shouted insults.

Moses refused to quit. Night after night, carrying a heavy leather briefcase crammed with facts and statistics he almost never got to use, he stood before civil service employees' associations, speaking into a hail of abuse.

"Once you saw him on those nights, you could never forget him," Kaplan

recalls. "Tall, handsome—he'd get up on the platform and go right to bat. He wouldn't pull his punches or try to modify the things he was saying so they'd be less unpopular. Those people had come to hate the word 'efficiency.' Talking 'efficiency' to them was waving the red flag before the bull. But in those speeches it was efficiency, efficiency, efficiency. The more they booed him, the more self-confident, even arrogant, he seemed. In the worst of it, he went right on talking, and with the attitude 'When I say this is it, this is it!'

But the outspokenness and the courage, along with the arrogance and the lecturing tone, had no effect other than to increase the opposition to his system, to rouse the fury of 50,000 voting men and women to fever pitch.

Tammany knew how to use the opportunity he had given it; while not openly opposing reorganization, it linked the plan with the man the employees hated. Recalls one observer, "Reclassification became Moses in these people's eyes." The employees' associations began to circulate petitions calling for the removal of Moses and the men who had appointed him—Moskowitz and James—and those petitions, bearing tens of thousands of names, were submitted to the Board of Estimate. But still Tammany made no overt move. Still the Tiger waited.

Then there began to be doubts about Moses' proposals in the camp of his supporters. Even the most ardent had misgivings about telling men who had become accustomed to making—and supporting their families on—\$6,500 to \$7,500 a year that they were now making \$3,260 a year. Even the adoring Kaplan said "that was a little unfair, really. Put in a new system—okay. But don't adversely affect people who had been working under the old system. Not everyone who was making a good salary in Grade Five was doing so just because of political connections, remember. Some had worked their way up on their own. And a lot of the people who had been given their chance through politics were doing good jobs and deserved the money. You shouldn't suddenly take it away from them." Henry Moskowitz, declaring that "no one can deny [the] soundness and [the] justice of the principle of standardization," said nonetheless that "a ruthless application of the principle . . . is unwise. In my judgment it should be gradually assimilated and apply to the vacant positions as they arise."

But Moses argued against compromise. If the principle behind his system was right, he said, there should be no compromising with it. Making exceptions, he said, would kill the whole plan. If the plan was based on salary standardization, then salaries really had to be standard—all salaries. Moskowitz gave in. Some reformers, considering the commission unreasonable, turned lukewarm in their support.

It was the moment Tammany had been waiting for. The Board of Estimate it controlled scheduled hearings on the standardization proposal.

The support Moses expected from Mitchel seemed forthcoming at first. The Mayor and Fusion Comptroller William A. Prendergast urged the Board to adopt standardization and "cut to the bone" unnecessary positions.

But Tammany packed the hearings with Moses' opponents. Rising to defend his plan, a tall, slim, figure in white among the red-faced, burly, cigar-

smoking Tammany politicians in their black derbies that they wore even indoors, he could hardly be heard through the boos. Speaker after speaker related stories of particularly deserving individuals whose standard of living would be reduced, unfairly, under the plan.

Gradually Tammany's strategy became apparent. Each disputed case, the speakers were saying, should be decided on its individual merits by the Board's Bureau of Standards and included as a separate item in the budget, a policy which would not only drag out the hearings indefinitely but would in itself defeat the principle of universal standardization. The Tammany members of the Board said that after careful consideration they didn't see how any other policy could be adopted; humane considerations, fairness, justice—these must not be ignored. They were in favor of standardization, they said, they intended to adopt the Moses plan, but the plan must be modified where individual situations required it. Even pro-Fusion newspapers couldn't find anything to criticize in that.

Mitchel and Prendergast became noticeably silent. When a vote was taken, it was unanimous. Mitchel and Prendergast joined with Tammany to vote for individual consideration.

Moses was disappointed but still hopeful. The Board had, after all, said it intended to adopt standardization. Once the plan was adopted, the exceptions could gradually be eliminated one by one.

But the hearings dragged on and on; there were, after all, hundreds of civil service workers who believed, many with reason, that the proposed reclassification was unfair to them. Their stories made good newspaper copy. Technical arguments for reclassification did not. The Moses proposal began to appear in an unfavorable light.

After weeks of hearings, the Bureau of Standards finally submitted its recommendations to the Board of Estimate, which thereupon adopted a budget including Moses' proposed schedule of civil service grades and salaries, along with hundreds of individual budget items for the individual workers who had persuaded the Bureau of Standards they should be excluded from the schedule. In what was expected to be a matter of routine, the new schedule then went to the Board of Aldermen for approval—and the aldermen vetoed portions of it and added to it dozens of general civil service levels which did not correspond to any levels in the Moses plan. At the end of 1915, the only real result of Moses' effort was still the stacks of yellow form cards.

Nineteen-sixteen was frustration and disillusionment. To meet the aldermen's objections to some of the specific job specifications and salary scales, Moses worked endlessly revising them—only to find when he resubmitted them that the aldermen had still other objections which they had somehow neglected to mention before. There was again no open opposition, nothing that Moses' supporters could seize on as evidence of Tammany opposition to reform; instead, there was again stalling and obfuscation and confusion—and, for Bob Moses, defeat.

Even the efficiency-rating forms of which he had been so proud were turning into symbols of frustration. Attempts to persuade more departments to use them proved fruitless. Roaming restlessly through the commission offices, he had to look every day at the pile of boxes containing the forms—and the pile never got smaller.

The forms that had been distributed were not being used properly. Most of the department heads who had accepted them were reluctant to do the vast amount of work that would be necessary if their many squares and blanks were to be filled in with precise arithmetical grades. Those few who were willing to do the work needed help in using the new system. To provide this help—and to make sure that all departments were using the new salary scales and that employees were doing the work consistent with their salaries the Civil Service Commission had to rely on its examiners. The enforcement of Moses' system was in their hands. And these were men from the old Tammany regime who, too smart to give Moskowitz and James "grounds for dismissal" by openly defying them, undermined the system by the subtle but effective tactic of slowness in learning and laxness in enforcing the new rules. Moses understood full well that the examiners were making a farce out of his system. "Nothing," he said bitterly, "can make salary standardization more ridiculous than to put it into the hands of [such] men." But it was in their hands, nonetheless, that it remained.

Judges, he learned, were men, too, for all their black robes—and often they were men who had been dressed in those robes by Tammany. When certain department heads refused to hold competitive examinations for elevator-operator positions, the commission ordered the operators dismissed. One, who ran an elevator in the Bronx County Courthouse, brought suit to enjoin the dismissal, arguing that because prisoners rode in his elevator on their way to and from courtrooms, his job was "sensitive" and "exceptional." Of course it was, the judge said reassuringly—and granted the injunction.

The darkening of Bob Moses' optimism occurred against the backdrop of the darkening of America's. A new mood was abroad in the land. "Our country is at peace with the world at war" had been one of Woodrow Wilson's re-election slogans in 1916, but now the War Gods were slogging relentlessly across the Atlantic; the words in the scare headlines were "Lusitania" and "U-Boat" and, finally, "Zimmermann." War, not progress, was on the horizon. Aims changed—the world was to be made safe for democracy; that was a large enough order for even the idealism of youth to handle at one time.

In New York City, the fading of idealism on the municipal level had been especially rapid. With reform enthroned in City Hall, not all reformers stayed reformers. Before Mitchel's election, the policy of the Bureau of Municipal Research had been to investigate city government no matter who was running it, but after his election, Cleveland announced, "When its friends are in power, a citizen research agency should not publish unfavorable information." The city's Good Government organizations had become much less active. One reason was that they did not want to hurt what they considered the city's last, best chance against Tammany. But there was also another reason. As Allen himself put it: "One reason for this conspiracy of

silent criticism and public applause cannot be too baldly stated or too vividly remembered, namely, almost every agency of outside criticism 'had its feet in the trough'—to use a conventionalized term for sharing in political patronage." Moses could hardly have been unaware that while he was fighting to bring all civil service positions under competitive examination, no fewer than forty-seven Charities Department inspectors had been appointed by reformer John Kingsbury without examination, in clear violation of the law—or that every one of the forty-seven had previously worked for the private organization which Kingsbury had headed. Moses must have known, as all City Hall observers knew, that city offices ranging from clerkships to judgeships were being filled by reformers from lists furnished by pro-Fusion ward leaders.

Moses' idol had developed a case of galloping clay feet. John Purroy Mitchel's elegance had worked against him. Wearer of the dress suit, winner of the one-step contest at costume balls of the Four Hundred, the Boy Mayor had given himself the image of a friend of the wealthy. His independence had worked against him, too. Scornful of public relations, he refused to change his friendships—or even to go to the public with explanations of many of his actions as mayor, so that many of the notable reforms he initiated never got the publicity they deserved. His investigations cut waste in city government but, preoccupied with economy, he did not want to do anything with the money thus saved, but save it. His boasts were not of what was being done to meet the city's needs but of what was being done to save the city's money. Even his admiring biographer would have to admit, "His concern was for the city rather than for its people."

What probably disillusioned Moses most about Mitchel was not the Boy Mayor's elegance but his proposed "solution" of the problem of the railroad tracks below Riverside Drive. Mitchel proposed giving the New York Central exclusive control of the West Side waterfront and allowing the railroad to cure the Death Avenue problem by elevating its tracks below Fifty-ninth Street, a move that would have permanently blighted a large slice of downtown Manhattan. In return for these favors, Mitchel asked the railroad to pay \$300,000—an amount not even sufficient to rehabilitate Riverside Park. A furious Citizens Union called the plan a "giveaway" to a railroad owned by Mitchel's social friends—and it was. And the Mayor's plan would have forever deprived the city of the waterfront highway and park Moses had dreamed of.

In the area of civil service, however, Mitchel was Moses' best hope. The Mayor promised to press again in 1917 for standardization and reclassification. After more than three years of unremitting work on the technicalities of civil service, Moses was still fascinated by them and by the potentiality for public good in their improvement. They are not "dry and dull as some may suppose from reading printed salary schedules," he said in 1917. "A student who wishes to see city government as a whole will find no more interesting . . . study than that afforded by a standardization program."

He was still confident. "I believe that the final results of the work in New York City will be regarded as entirely satisfactory," he said. Why shouldn't they be? Hadn't he demonstrated—over and over again, by logic and by science—that his system would improve the city's government? Didn't all the city's top officials now understand this? "A second and revised edition of the standard specifications . . . is about to be published for the Board of Estimate," he said. "Presumably this will be the final edition." The final edition! Galahad thought he was in sight of the Grail.

Bob Moses had done little else but fight for his system for more than three years. Now, in 1917, he fought harder. He made more speeches; he lobbied more editorial writers. He argued with the borough presidents and aldermen whose votes would decide the system's fate.

Getting in to see these officials was never easy. Unless Moskowitz or James knew the official personally, Moses would first have to ask them to speak to some official they knew who did. Then that official would ask the other to see Moses. When the time came for his appointment, he would often be kept waiting—since he was surely among the least important of visitors—in City Hall anterooms, eyed by secretaries who could gauge his unimportance by the length of time their bosses kept him waiting. And when they finally ushered him in, Moses would know that he was talking to a man who regarded the talk only as an irritation. Yet he never stopped trying—and he never stopped hoping.

Unfortunately for his hopes, however, 1917 was an election year and John Purroy Mitchel wanted to be re-elected—and, with 50,000 civil service employees infuriated by Moses' proposals, Tammany nominee John F. "Red Mike" Hylan was making them a major campaign issue. Tammany wanted City Hall back and Tammany speakers were telling mass meetings of city employees, "We do not believe we should have so many efficiency experts"—and the employees were jumping to their feet and bellowing in reply, "A new mayor! A new mayor!" When Moses' system came up before the Board of Estimate, Mitchel was silent. The system was not adopted. Moses' idol, the epitome of the cultured university man in politics, did take one definite step in regard to civil service, however. In October, a month before the election, he fired Henry Moskowitz as Civil Service Commission chairman and replaced him with a man acceptable to the employees.

When Red Mike Hylan swept into City Hall—Mitchel, who had been elected in 1913 by the largest plurality in New York's history, was turned out in 1917 by an even larger plurality—Progressivism in the city was dead. "We have had all the reform that we want in this city for some time to come," Hylan said, and issued an order soon after taking office in 1918: all Bureau staffers who had been working with city agencies were to be dismissed at once.

Dismissed, Moses watched as the handful of civil service innovations that represented the pathetically small accomplishment of his four years of effort were destroyed one by one. The meager measure of standardization that had been enacted was abolished by amendments to the 1918 budget. The few positions that had been removed from the exempt list were placed back on it. Hylan's department heads ended the use of the efficiency records. The

yellow forms of which Moses had been so proud were henceforth to be used, if they were used at all, only as scrap paper.

Within months of Hylan's inauguration, in fact, civil service in New York was plunged into depths unknown since the heyday of the Tweed Ring forty-five years before. Non-Tammany employees were forced out of their jobs by humiliating assignments and pay cuts. Hundreds of positions previously competitive were made exempt because of their "exceptional and sensitive" nature. The exemptions covered lifeguards, chauffeurs—and, as a final sprinkle of salt in Moses' wounds, a very highly paid "special examiner" to the Civil Service Commission itself. The special examiner was Frank A. Spencer, the man Moskowitz and James had fired and whom, once, in his days of optimism, Bob Moses had hoped to replace.

In an attempt to help men who might try to reform civil service in other cities, Moses summed up in a speech to a political science convention "certain deductions" which he had made from his experiences. The main deduction was a simple one. "Executive support" was the essential you could not do without. "When a program for standardization work is first made," he said bitterly, "an effort should be made to get the persons who are responsible to pledge themselves to stand squarely behind the program."

At times in his summation, there was an attempt at the old self-confident tone. But it was a sad attempt. Trying to analyze the maneuvers which had bound his system in parliamentary red tape and then, with the red tape holding it helpless, had hacked it to death, Bob Moses finally stopped and said simply, "It is futile to attempt to establish beyond doubt who of the many agencies involved . . . is responsible. . . ." His dream, a dream for which he had fought with all the strength, brilliance and purity of purpose of youth and idealism, was dead—and he couldn't even be sure who had killed it.

The net result of all his work was nothing. There was no civil service standardization, no great highway along the Hudson, no mothers' shelters in Central Park. Intending to reform the city, he had worked hard and mastered with a supreme mastery reform's techniques. Convinced he was right, he had refused to soil the white suit of idealism with compromise. He had really believed that if his system was right—scientific, logical, fair—and if it got a hearing, the system would be adopted. In free and open encounter would not Truth prevail? And he had gotten the hearing.

But Moses had failed in his calculations to give certain factors due weight. He had not sufficiently taken into account greed. He had not sufficiently taken into account self-interest. And, most of all, he had not sufficiently taken into account the need for power.

Science, knowledge, logic and brilliance might be useful tools but they didn't build highways or civil service systems. Power built highways and civil

service systems. Power was what dreams needed, not power in the hands of the dreamer himself necessarily but power put behind the dreamer's dreams by the man who had it to put there, power that he termed "executive support." Neither he himself nor James or Moskowitz had had such power. And the man who did, the man on whom he had counted for support, the mayor who was the epitome of his idealization of the public official, had not, in the final test, been willing to use his power on behalf of Bob Moses' dreams.

Bob Moses in 1918 was a man, not so young any more, looking for a job. Offered an army commission as a lieutenant, he decided after some hesitation not to serve in the war. A friend, Benjamin Van Schaick, was an executive of the government's Emergency Fleet Corporation, which had recently been created to build a new American merchant fleet, and Van Schaick got Moses an executive job with the corporation. But when Moses arrived in Washington, he found he had no clearly defined duties. Temper flaring, he demanded a new assignment and was sent to the huge shipbuilding works on Hog Island in the Delaware River. Too late, he realized he had made a mistake. "That was a stupid move," he was to say. "The place to be was with the top people in Washington." Hog Island was booming like a California gold field with the influx of tens of thousands of shipworkers, and the only home he could find for his daughter and his wife, who was pregnant again, was a rather shabby apartment.

The Hog Island operation was being conducted with all the inefficiency that might be expected from a massive production effort thrown together in wartime haste. When Moses complained about the inefficiency—the ship-yard often had scores of hulls and not a single keel to attach them to—he was ignored by Hog Island officials. Trying to outflank the officials, he wrote a report detailing the inefficiency and proposing a complete new material-procurement method and persuaded Van Schaick to give it directly to Washington. Washington was impressed and called the local officials on the carpet. Their response was to wait until Washington's interest died down and then call Moses in and fire him.

Van Schaick, who quit voluntarily when he heard what had happened to his friend, procured them both executive positions at a Long Island City factory that was producing airplane engines, but when the war ended in November, the factory was closed down.

Moses had no choice. He had to go back to the Bureau of Municipal Research and ask the men he had scorned for a job. When they finally agreed to give him one, the stipend and duties attached were insultingly small.

Most of Moses' contemporaries were no longer at the Bureau. They had moved on to bigger things. Many, protected by civil service provisions from Hylan's wrath, were deputy commissioners in New York City governmental agencies, some were full commissioners in Philadelphia or Chicago. Some were executive secretaries of private welfare and social work agencies. Others had

been hired away by reform groups in other cities to form new municipal research bureaus. Still others, like Raymond Moley, an associate professor at Western Reserve University in Cleveland, were on university faculties. But Moses' continuing attempts to find a niche outside the Bureau brought him only humiliation. One day, Moley happened to be in Cleveland City Hall. As he walked down a corridor, he saw a long line of men waiting to be interviewed for a minor municipal job. One of the men on the line was Bob Moses. And he didn't get the job.

Back at the Bureau, Moses graded students' papers and gave lectures. When the Bureau finally managed to place him with a government agency, the United States Food Commission, he found not only that he was going to be little more than a clerk but that his superior would be another former Bureau staffer, a man several years younger than he. And even this job shortly disappeared. His second child had just been born and it was another daughter, Jane. Moses had desperately wanted a son, but now doctors told Mary she would be unable to have any more children. Bella kept giving the couple money, but she didn't seem to realize how much more was needed now that there were two little girls in the family, and Bob and Mary didn't like to ask for more. They were very short of money. Once Mary worriedly confided to a friend that she had owed a grocery bill for weeks and didn't know how she was going to get the money to pay it. Their apartment, at West End Avenue and Eighty-seventh Street, was too small, and a larger one was out of the question.

The mood of the country, so optimistic when Moses had entered public life five years before, was one of pessimism and disillusionment. As clouds of discord blotted over hopes for an honorable and lasting peace, sunlight ceased to gleam on old illusions and enthusiasms. The star of the man whom Moses had idolized on the national level as he had idolized Mitchel on the local—highly educated university man Woodrow Wilson—was waning. Progressivism was all but dead. There was little talk of reform.

Moses' own mood was one new to him. He seemed confused and worried. With his thirtieth birthday less than a month away, not only dreams but hopes had disappeared. He had been trained for work in government, but with Hylan in control in New York there was obviously no place for him in city government. He had no connections in Washington. There was a new Governor in New York State, elected in an upset—Alfred E. Smith—but Smith was a Tammany man, one of the Tammany men, in fact, who had been most vociferous in scorn of Moses' civil service proposals. Moses had met Smith several years before, when he had been city sheriff, and had not been at all impressed by the short, paunchy Irishman with the red face, gold-filled teeth and loud, rasping voice. "He is a typical Tammany politician," he said to a friend at the time. "What can you expect from a man who wears a brown derby on the side of his head and always has a big cigar in the corner of his mouth?"

Smith was the very antithesis of Moses' ideal of a politician. Whether

it was really true that he had never read a book all the way through, the story was plausible; not only had Smith never been to a university, he had never been to a high school—and he boasted about that fact. His remark on the floor of the State Assembly that his only degree was "FFM"—for the Fulton Fish Market, where he had worked as a boy—was already a legend. There seemed as little likelihood of a place for Bob Moses—for his dreams or for himself—on the state level as on the city. There seemed, in fact, to be no place anywhere for him to turn.

And then, one day, Bob Moses got a call from Henry Moskowitz's wife, Belle.

## THERISE TO

POWER

## 6. Curriculum Changes

SHE WASN'T "Mrs. M" then, or "Moskie," or "Lady Belle." Nicknames would come later when, all but unknown to the public but an almost legendary figure among politicians, she would be possessed of more power and influence than any woman in the United States. She would be called "Mrs. M" by the man who had given her that power and influence, Alfred Emanuel Smith, and by the young social workers and reformers she had recruited to Smith's service. That nickname would be used, in an attempt at familiarity, by politicians who, on favor-seeking visits to Albany, would notice her sitting unobtrusively in a corner of the Governor's office, a short, plump and motherly woman who sat placidly knitting and waiting for the Governor to turn to her, as he did before making any important decision, and ask: "What do you think, Mrs. M?" She would be called "Moskie" by the Irish overlords of Tammany Hall who resented her influence over Smith and who, unable no matter how hard they tried to attribute it to any motive even faintly scandalous, seized in desperation on the fact that she and most of her recruits, men like Joseph Proskauer, were Jewish; in the security of the Fourteenth Street wigwam, they were wont to bellow an anti-Semitic ditty that began with the bitter words "Moskie and Proskie/Are the brains of Tammany Hall." She would be called "Lady Belle" by young social workers who could not persuade her to recruit them and who gave her that nickname—in whispers they were very careful she didn't overhear-because they resented the calmness and assurance with which she sat against the wall at settlement-house tea-and-cookies receptions on New York's Lower East Side, looking over the crowd, and then beckoned to her someone whose work had caught her eye-a Sam Rosenman or a Howard Cullman or a Frances Perkins—and asked them if they would be interested in a nomination to the Assembly or the State Senate, or, perhaps, in a stateagency post she happened to know might shortly become vacant. With that question, she would set the young man or woman she had chosen on the road to the realization of his dreams.

But in late November 1918, when she telephoned Bob Moses, Belle Moskowitz was not a legendary figure—or even an especially impressive one—among the reformers who drifted in and out of the Bureau offices. Everyone knew Belle. Although she was only forty years old, she had been part of the reform movement long before there was a Bureau, ever since she was eighteen, when, slender, dark-eyed, beautiful and passionately idealistic, the daughter of a poor Jewish watchmaker from Eastern Europe,

she had begun working, at Madison and other settlement houses, with immigrants even poorer than herself. Writing, producing and directing plays for the Educational Alliance, she was appointed its director of entertainment while she was still a student at Columbia, carrying a schedule that included every course she could find in the university catalogue that she thought might help her to understand, and assist, the underprivileged.

In 1903, she married one of the young men with whom she had been working at the Alliance, an artist and architect named Charles M. Israels. They had three children. In 1911, Israels died. In 1914, no longer a beautiful girl but an extremely plump and plainly dressed matron, she married social worker Henry Moskowitz. Dozens of reform leaders attended both weddings. Reformers regarded Belle as one of their inner circle.

But had anyone troubled to closely study her career, he would have seen that there was a difference between Belle and the average reformer: Belle Moskowitz's dreams became realities.

In 1909, for example, the Women's City Club, under Belle's direction, began an investigation of the city's so-called "dancing academies." The "academies" were the only easily accessible places of weekday recreation for the poor girls of the Lower East Side who worked in garment-center sweatshops. These girls, many of them in their early teens, were unsophisticated. But the academies served liquor at tables on the dance floor, had rooms ready for hasty rental down adjacent corridors and seemed expressly designed for what reformers euphemistically referred to as "the downfall of young women."

Reformers had been railing for years against the academies but previous clean-up efforts had followed the familiar pattern: investigations which caused newspaper furor and loud demands for change, verbal acquiescence by Tammany, and then, after the furor died down, business as before.

Belle altered the pattern. Instead of loudly denouncing conditions at the academies, she quietly checked incorporation certificates to learn the names of their owners—and found that they included both Tammany leaders and community pillars. Instead of giving the names to the newspapers, which would have brought headlines but not results, since all her ammunition would have been used up, she went to the leaders and pillars and told them she would keep their names secret if they saw to it that regulatory legislation was passed—and strictly enforced. It was. "These laws," the *Times* editorialized, "did more to improve the moral surroundings of young girls" than any other single social reform of the period.

When, in 1913, after years of struggle, garment workers' unions finally forced dress manufacturers to agree to the appointment of an impartial arbitrator to hear workers' grievances, union leaders realized that the appointment of a typical reformer—one ready, with Pavlovian predictability, to side with the workers in every case—would alienate the employers and wreck the system. They suggested Belle Moskowitz for the job. The employers, knowing her only as one of the reform crowd, agreed reluctantly—but they quickly found that Belle decided each case on its merits. The attorney for the employers' association admitted: "She understood the union

leaders perfectly. She understood the employers quite as well. No one could fool her." And her recommendations for the improvement of working conditions in the industry were accepted by both sides—and implemented.

But in November 1918, when Mrs. Moskowitz telephoned Bob Moses, no one had studied her career, and none of the young men at the Bureau paid the quiet, matronly woman any special attention when she would drop by, as she sometimes did in the late afternoon, to chat with Bruère or Cleveland. Moses, on the day that she telephoned, didn't even know what activity she was currently engaged in. He wondered what she wanted.

Governor-elect Smith, Mrs. Moskowitz told him, had decided to appoint an official commission to draw up a plan for the complete reorganization of the state's administrative machinery and for the implementation of sweeping social welfare reforms. The Governor-elect, she said, intended to use the report as the basic program for his administration.

The commission, Mrs. Moskowitz said, would be composed of the state's most distinguished citizens, but Governor-elect Smith had appointed her as its executive head, and she was looking for a "chief of staff" to work under her and head its work force, which would include at least fifty persons. This chief of staff, she said, would have a free hand in hiring the fifty and complete charge of the day-to-day work of the commission. Would Dr. Moses be interested in the job?

Dr. Moses said he would.

The next day, Mrs. Moskowitz took Moses to see the Governor-elect in his apartment at the Biltmore Hotel. The meeting was brief and cordial. When Mrs. Moskowitz introduced Moses, all Smith said was that if this young man was her choice for the job, he was sure Dr. Moses would do a good job. From the Biltmore, she took the new appointee straight to the Hall of Records, at the corner of Chambers and Lafayette streets, where a whole section of the third floor had been allocated to the commission, to show him his office, a large, handsomely appointed room that was the first office of his own that Moses had ever had. The commission's work was to get underway immediately, Mrs. Moskowitz said. Bob should start hiring his staff at once.

The Bureau of Municipal Research, where, only a day before, Moses had been working, was just four blocks away from the Hall of Records, but Moses had come in that day a long way from the Bureau by any measurement other than distance. He had been looked down on by his associates there as a loudmouth and a failure. Now, after a single telephone call from a woman he hardly knew, he was suddenly in a position to call those associates—and invite them to apply to him for jobs.

Bob Moses was never to learn why, of all the brilliant, dedicated reformers she knew, Belle Moskowitz had picked him for the first official job she had had it in her power to dispense. Perhaps it was because she had heard about him from her husband. Perhaps it was because, of all those reformers, it was he who had most strongly caught her shrewd and appraising

eye. Whatever the reason, he never learned it. But he was able to find out from reformer acquaintances how she had come to be so trusted by Al Smith that the Governor-elect had given her that power.

Most reformers regarded Smith as the epitome of all that they detested in the Tammany politician. Not only was he uneducated and uncouth—his spitting and drinking were legend—but, more important, he took Tammany's orders unquestioningly. For years, he had been Boss Charlie Murphy's chief henchman in Albany, and as president of the Board of Aldermen during Mitchel's mayoralty he had led the opposition that outsmarted and defeated the Boy Mayor at every turn. Al Smith's ethics, according to most reformers, matched his habits.

But a handful of reformers, those who had actually had occasion to work with Smith, had astounded their friends even before his nomination for Governor by arguing not only that Smith was not a typical Tammany politician but that this red-faced, jut-nosed, gold-toothed, harsh-voiced smoker of big cigars and wearer of brown derbies and suits with wide stripes was, in fact, the best hope that existed for the actual enactment into law of the social welfare measures for which they had fought so long with so little real success. One of this handful of pro-Smith reformers, Moses was told by his acquaintances, was Belle Moskowitz. She was, they said, among the most enthusiastic of the group. She had, in fact, come to see in Smith the instrument through which her dreams for the poor people of New York City would become realities.

The gubernatorial election of 1918 had been the first in New York State in which women were allowed to vote. Uncertain how to appeal to the new voters, Smith had felt he needed a woman active in female civic organizations who could sell him to such groups. Most of the female do-gooders around town wanted nothing to do with Smith's campaign. But Belle volunteered eagerly.

However similar their ultimate aims were to turn out to be, Smith had nothing but contempt for typical reformers. Regarding them as wild-eyed, impractical and, most important, incapable of producing results, he called them "crackpots." Women reformers, he had found, were invariably crackpots. Women, he felt, didn't belong in politics anyway. In the tight little tenement Irish world in which he lived, most of them confined their interests to their homes and their children, and that was how it should be. He was prepared to listen to his new adviser with no more than token interest.

He agreed only reluctantly to her suggestion that he address a luncheon of the Women's University Club. Uneducated, he felt he would be out of place before an audience of college graduates. He planned to make a brief talk filled with platitudes—and as hasty an exit as possible.

Sitting on the dais, looking down on the audience of smartly dressed women chattering over fruit cocktail, his misgivings increased. "What the hell am I going to say to a bunch of women like this?" he growled.

"If you're smart," the motherly lady by his side replied, "to this bunch of women you'll make the same speech you'd make to a bunch of businessmen."

Taken aback, Smith decided to give it a try. He spoke on the economic issues of the campaign. A master at gauging crowd reaction, he saw as he spoke that the technique was succeeding, and when he finished, the reception was as enthusiastic as the ones he received in Tammany clubhouses.

Smith had been given almost no chance to win. Tammany's strength was traditionally more than offset in statewide campaigns by the combination of the solid core of educated, independent, anti-Tammany voters in New York City and the solidly Republican, rural, Protestant, Prohibitionist strongholds upstate. Smith realized that he must win over the independent voters, but in the early stages of the campaign he had been having little success. After the luncheon, he began to rely more and more on Belle Moskowitz for advice in handling them. And when, thanks in part to a hefty chunk of their support, he had won the governorship and called a conference at the Biltmore apartment to map out his program, he had invited her to attend.

Smith told the roomful of burly Irishmen that, because of the inefficiency and duplication of effort he had observed during his twelve years as a state assemblyman, he wanted to reform the state's administrative machinery. The plump little Jewish matron sitting among them had long wanted such reform too, because without improvement in the machinery of government, it was useless to talk about the social reforms of which she had long dreamed. When Smith asked for ideas on how to start a drive for administrative reform, Belle had one ready. Even before he took office in January, she said, he should form a Commission for Reconstruction, Retrenchment and Reorganization in the state government.

To the bluff old Irish leaders seated around the little matron, her suggestion had seemed like one they would expect from a reformer. They waited for her to talk about all the benefits that would accrue to mankind from such a commission.

Slipping the word "retrenchment" into the commission title would be a great public relations device, Mrs. Moskowitz had said quietly, connoting as it did economy and prudence.

Smith had been elected because of the support he had been able to draw from independent voters and Republicans, Mrs. Moskowitz had continued. If he wanted to be re-elected, he had to keep such support. The state's Republicans, as they all knew, were divided into two branches. One was the GOP's "regular" organization, bossed by arch-reactionary William ("Big Bill") Barnes of Albany, which ran the state in an atmosphere of such corruption that GOP legislators were known as the "Black Horse Cavalry" because of their looting expeditions against the state treasury. The other branch was the GOP's "federal crowd," which contained most of the party's impulse to public good and had earned its title by the distinguished service rendered in Washington by Charles Evans Hughes and a cadre of stalwarts of the Progressive Republican movement that had swept Theodore Roosevelt to the governorship of the state and then to the presidency—Elihu Root, TR's Secretary of State, Henry L. Stimson, later Secretary of War, and George W. Wickersham, later Attorney General. The "federal crowd" had been pressing for administrative and social welfare improvements for years. They would be enthusiastic about a "Reconstruction, Retrenchment and Reorganization Commission." In fact, they would be happy to serve on it, and they would tend to feel kindly toward the Governor who had asked them to. The "regular" Republicans, who would see in talk of "reconstruction" a threat to their control of the state government, could be expected to oppose the commission's work. Its creation, therefore, would have the dual effect of splitting the Republican Party and lining up with Smith those Republicans who exemplified Progressivism and reform to independent voters. The support of such Republicans would help negate Smith's greatest handicap, the Tammany label he bore. In addition, she reminded the leaders, the "federal crowd" were heavy campaign contributors.

Before the motherly little woman had finished speaking, the roomful of politicians had realized that they were listening to a master politician. Al Smith had bought her suggestion on the spot.

Reorganization of the state government was not a new idea. It had been a basic reform tenet for years, and in 1915 a Bureau of Municipal Research study commissioned by a State Constitutional Convention had found no fewer than 169 separate state departments, bureaus, boards, committees and commissions, many with overlapping functions—taxes, for example, being collected by seven different agencies, public works being carried out by ten. Some agency heads were responsible to the Governor, some to the Legislature and some to officials who were themselves elected by the people and were hence not responsible to either Governor or Legislature. Some agency heads appointed by the Governor were removable only by the Legislature, and there seemed to be almost as many different procedures of removal as there were men who could be removed. His term was only two years, and the terms of some gubernatorial appointees were longer, so that each incoming Governor was forced to entrust the carrying out of some of his policies to men appointed by previous Governors, who might be politically opposed to him. Such nominal members of the executive department as the state engineer, treasurer and secretary of state were not appointed but elected and, therefore, even if they were of the Governor's party, did not owe their primary allegiance to the Governor but to the voters and could, if they wished, ignore his wishes with impunity.

Most important, the study found that the Governor possessed little real authority. Not he but the chairmen of the various committees of the reactionary and corrupt Legislature controlled the state's purse. The document that was called a state budget was actually a collection of appropriations drawn up by these chairmen. No legislator—or any other state official—reviewed the collection, balanced one appropriation against another, cut them down to agreed-upon necessities or measured them against estimated revenue. Even after the document was formally printed, individual legislators continued to introduce their own "private" bills, generally for pork-barrel public works projects, which required public expenditures, and these, when passed, did not even appear in the "budget." No one bothered to add them

up, so that, when the Legislature adjourned, no one could be sure how much money it had appropriated. The Governor technically had the power to veto appropriations, but since state law forbade him to veto *part* of an appropriation item, legislators simply made sure that each debatable expenditure was lumped with one too essential to be vetoed.

The Bureau had become convinced that it was this lodging of administrative power in Legislature rather than Governor that, more than any other single fact, explained the utter failure of twenty years of effort by a succession of liberal Governors such as Roosevelt and Hughes to increase the involvement of the state with the new needs of its people. Because the Governor stood at the head of the state and represented all of its people rather than just one assembly or senate district, the Governor must be held responsible if the state failed to move as the voters wanted it to move. But going hand and hand with responsibility, the Bureau said, must be power. If a man was to be held responsible for moving government, he must be given power to move it, "executive power commensurate with executive responsibility" in the Bureau's slogan.

To get power into the hands of the executive, the Bureau recommended a centralization of governmental functions. The 169 agencies should be combined into twelve departments headed by men appointed by, and removable by, the Governor, whose term should be lengthened to four years. An "executive budget" system should be instituted. Under it, department heads would submit financial requests to the Governor, who would weigh the requests against the resources and needs of the state and propose an over-all budget. Only then would the budget be submitted to the Legislature, which would review it, in a series of hearings that would insure that the public could understand it, and then would have the power to reduce it by eliminating items. The Governor would therefore be proposing the way the state was to be run; the Legislature would be reviewing the proposal, and if the differences between Legislature and Governor proved irreconcilable, the public would settle them at the next election. Furthermore, after policy had been established, it was to be administered by the Governor instead of by the Legislature's many committee chairmen.

The Bureau's 1915 report, Government of the State of New York, was 768 pages long. With reform leaders taking the floor to argue for its principles, many of its key points were adopted by the Constitutional Convention. But Tammany and the upstate bosses outwitted the reformers by persuading them to combine all the proposed constitutional amendments in a single package, and distaste for one or two unimportant but unpopular amendments, combined with a quiet mobilization of Tammany and upstate machines, resulted in the defeat of the package in a November 1915 referendum.

Bob Moses, who, as a Bureau staffer, had worked on its 1915 report and who now, in his new job, recruited other staffers who had worked on that report, expected at first that the report of the Reconstruction Commission would be practically a duplication. But there was a bigger difference between working

for the Bureau and working for Belle Moskowitz than sumptuousness of office arrangements. The Bureau made recommendations; Mrs. Moskowitz made laws. The Bureau got enthusiastic and excited; Mrs. Moskowitz got things done. And no sooner had her chief of staff begun work, two weeks before his thirtieth birthday, than she began to teach him *how* things got done.

The lessons started almost immediately. When Moses submitted a preliminary outline of suggested commission goals, he included a phrase straight out of the reform textbooks and his Municipal Civil Service Commission days: "Elimination of unnecessary . . . personnel." Mrs. Moskowitz struck the phrase out. Personnel, she said, were voters. You didn't antagonize voters. When Moses, copying a 1915 Bureau recommendation, suggested that the unwieldy ten-member "council" which ran the Department of Agriculture be scrapped in favor of a single, professional commissioner, she pointed out that the council memberships were distributed by the Legislature and were among the choicest patronage posts it possessed. The Governor, she said, would need the support of the Legislature if his program were to be approved. The council, she said, would remain.

The lessons were given in daily morning conferences. Moses would arrive brimming over with ideas and impatient for their approval. But the reception they received from Mrs. Moskowitz was somewhat different from the one his ideas had been accorded by Mr. Moskowitz. As Moses excitedly paced around her office, she would sit calmly, attentive but noncommittal. When he finished, she usually would not say anything for several minutes. Often, she would praise the ideas, and break into a smile, full of real pleasure, at Moses' inventiveness. But, equally often, Moses' ideas would be thrown out.

"There was a real divergence of opinion there," staffers recall. "Moses was very theoretical, always wanting to do exactly what was right, trying to make things perfect, unwilling to compromise. She was more practical; she wanted to do the same things as Moses, but she wanted to concentrate on what was possible and not jeopardize the attaining of those things by stirring up trouble in other areas." And her decisions were always final. While Moses paced and argued, trying to change her mind, Mrs. Moskowitz would sit quietly and, when Moses had finished, would quietly repeat her earlier decision. "There was never any question," recalls another staffer, "that she was the boss."

Often, Moses would come bursting out of Mrs. Moskowitz's office cursing under his breath. Striding around the large room in which thirty staffers had desks, he would let the breath out. "He used to call Mrs. Moskowitz all kinds of names which weren't gentlemanly at all," one of the men who sat in that room recalls. "I remember him saying, over and over, 'Do you know what that old she son of a bitch told me this morning?" "Once, lunging across the room in a rage so blind that he thudded into a desk, he paused for a moment, leaned down to the startled man sitting at it, and muttered grimly, "I could have kicked that woman in the shins!"

But, in spite of the cursing, there was a difference in Bob Moses. The man who had not hesitated to criticize to their faces his superiors at the

Bureau of Municipal Research was careful that his cursing of Mrs. Moskowitz was done out of her earshot. "He certainly didn't talk to her the way he talked about her," a staffer recalls. While he might dispute a decision heatedly, he stopped arguing once she made clear that the decision was final.

Some of the staffers believed this change of attitude was due to a new-found prudence in a man aware that the opportunity he had been given with the commission might be his last chance to make good in his chosen career. One says: "If he had talked to Mrs. Moskowitz the way he talked to Cleveland or Allen—or to Mr. Moskowitz—he would have been thrown out, and if he had been thrown out of that job, that would have been the end of Bob Moses, and he knew it."

Such an explanation, however, failed to take into account the full extent of the difference. For one thing, Moses was not only obeying Mrs. Moskowitz but also obviously studying the lessons that she was teaching, and studying them hard. His conversation began to include the phrases of practical politics as well as those of scientific management textbooks. His analysis of a state job began to take into consideration not only whether the position was necessary for the betterment of mankind but also who had appointed the man who now held the position. He learned to weigh the governmental gains that might be achieved by the position's elimination and by the use for worthier purposes of the salary allocated to it against the political losses the elimination might entail—how much it would antagonize the appointer and how great an obstacle such antagonism might be to Smith's over-all program.

The difference went deeper. It was not just that he obeyed Mrs. Moskowitz and it was not just that he learned her way of thinking; rather it was that, after a while, he seemed almost eager to learn. He had always scorned the considerations of "practical" politics. Practical politicians had crushed and destroyed his dreams and had come near to crushing and destroying him. They had done it with an ease that added humiliation to defeat. And now, given a chance to learn their methods, Bob Moses seemed almost enthusiastic about embracing them.

He was an apt pupil. In his first conferences with Mrs. Moskowitz, they had discussed how the commission would go about obtaining from the Republican-dominated state agencies the information—on salary and internal organization and promotion policy, for example—needed to evaluate the agencies' work. Moses' initial reaction was straightforward. Why couldn't commission staffers simply demand the information? he asked. Smith was Governor, wasn't he? If an agency proved recalcitrant, Smith could simply order the agency head to cooperate. Mrs. Moskowitz made clear that the commission wouldn't proceed along any such lines. In the first place, she said, many of the agencies regarded themselves as independent of the Governor; an order he gave them might be disobeyed. Even if it was obeyed, it could cause hard feelings and the Governor didn't want hard feelings; he wanted reform. He had only two years to make a start on it, and he was going to have plenty of trouble no matter how he went about it. He didn't want any more than was absolutely necessary. The commission must be very

careful not to stir up any that could possibly be avoided. And not only did Moses, once so impatient and impolitic, become a model of discretion on his trips to Albany, talking only to men to whom Smith's aides could introduce him as a friend; to his staffers he repeated over and over, in urgent, handwritten notes: "Be careful. Remember that we must not embarrass the Governor." And the commission was able to avoid any angry confrontations with agency heads.

The eyes that had picked Bob Moses out of the herd of young reformers were watching his progress. It was as spectacular as it had been at Oxford, where he had learned part of the political science. There, he had graduated with honors. Belle Moskowitz, who taught him another aspect of the science, did not confer degrees, but she awarded him her own type of honor: by the spring of 1919, less than six months after she had taken over Moses' tutelage, she was leaving the supervision of the State Reconstruction Commission almost entirely in his hands.

The commission's work meshed with his personal convictions. Reorganizing government to make it more responsive to social needs was an aim that he had enunciated for himself in his Oxford thesis, and all his work in government thereafter had only strengthened his belief in the urgency of the need for such reorganization. More specifically, the reorganization on which the Reconstruction Commission was embarked was almost certainly going to be designed to increase the powers of the state's chief executive, and power for the executive was another theme that, at least in implication, ran through the thesis.

The commission's work, moreover, was of a scope and an aim consonant with the sweeping, soaring, almost visionary quality of his idealism. For years he had laughed bitterly with other young reformers at the open chicanery of the Black Horse Cavalry, at the inefficiency of the system which sent tax collectors from seven different state agencies to the same factory, at the utter hopelessness of the administrative machinery of New York State. Now, at last, here was a chance to replace that machinery, not just to oil it but to take it apart and haul it away, and then replace it with a new one. Here was a chance to change a state, the most populous and influential in the nation.

If Moses was hopeful of success this time, his hopefulness was not the naïve overconfidence of his Civil Service Commission days. The success or failure of the Reconstruction Commission's efforts, he understood, was not in the hands of the commission but depended on someone else. But he had real hope that this time the someone else might come through.

Moses had been quite prepared to be disappointed by the Governor he had called "a typical Tammany politician." But Al Smith's speech to the prominent liberal Democrats, independents and "federal" Republicans on the commission at its first meeting had certainly not been *pro forma*. Mangled cigar stub stabbing out from his wet lips at the vested, watch-fobbed civic

leaders before him, he had rasped, "Is this commission going to do something or is it just going to offer a report? Are you going to have something definite that can be put into effect to benefit the state? Because if you are not, the sooner you report and go out of existence the better." Nor had Smith's actions been pro forma when the Black Horse Cavalry refused his request for \$75,000 to enable the commission to begin work. Here was a ready-made opportunity to reap political capital. As Mrs. Moskowitz had surmised, the GOP's federal wing raged against their party's legislators, along with most of the state's important newspapers. Without doing anything else, simply by letting the commission die and pointing out that the Legislature had killed it, Smith would have scored a political coup. But Smith did something else. He asked the members of the commission to put up the \$75,000 themselves, and when they did, he publicly promised that he would abide by, and sponsor, any recommendations it made when it completed its report.

Often now, in the late afternoon, the Governor would drop by the commission offices. He came primarily to obtain Mrs. Moskowitz's advice on some problem or other. "You could see," says one of the young commission staffers, "that Smith really trusted her. Over and over again, I heard him say, 'Now, Mrs. M, you do so and so or you look into such and such this week and let me know how you feel about it." But on his way to the little office in the corner that had been reserved for him—and equipped with a big brass spittoon—the Governor would stop and chat with the staffers, telling them the inside stories of political in-fighting going on in Albany or kidding them about the pretty secretaries in the commission stenographic pool next door. When he finished talking to Mrs. Moskowitz, he would call them into his office and—between well-aimed expectorations toward the spittoon—he would tell more stories. He would talk to them seriously, too. The frank, serious blue eyes that looked so out of place over the big-veined nose and the gold-filled teeth in the flushed face would stare straight into theirs. I won't let you down, he would say. You just get the facts and come up with the recommendations. I'll fight for them. "Nobody could help liking Al Smith," one of the young men said. "You had to like him-and you had to believe in him."

Moses had worked hard before. He worked harder now. Some of his young staffers worked late; when they left, a light was almost always still shining through the frosted-glass top half of the door to Moses' office. In the morning, the staffers would find on their desks long, detailed memos—signed "Robert Moses, Chief of Staff"—outlining new assignments.

Moses would criticize staffers' reports mercilessly. When he returned them, they would be adorned with large, angry double question marks. Sloppy phrasing would be slashed through. "Most essential question not discussed at all," Moses scribbled on one report. "What overhead organization do you propose? Do you believe in a commission or a single commissioner? If the latter, should a rules-making board be attached to him?"

Staffers became accustomed to seeing Moses' handwriting filling the margins and spilling over their type and, scrawled across the top of the first page, heavily underlined: "REVISE ALL!"

Activity in the office revolved around the tall, wiry figure with the shock of black hair who worked in shirt sleeves rolled up to the elbow. He had appointed an "assistant chief of staff," reformer Channing Schweitzer, but, too impatient to work through a chain of command, when he had something to say to one of the staffers, he would come out of his office and say it himself.

The tension disclosed in the heavy underlining of the written criticism on the reports would sometimes spill over in short but violent bursts of anger. When a key piece of paper was misfiled one day and a secretary had to report she could not locate it, he glared around the room and shouted, while the staffers discreetly studied the tops of their desks, "Where the hell did it go? Who's got it? Who's got it?"

But if Bob Moses often shouted, he also often laughed, his teeth gleaming in a broad infectious grin, and his laughter was never louder than when it was directed at one of his own mistakes—which he was usually the first to point out. He was friendly with the staffers, seeming to spend as much time during the day out in the big room in which their desks were located as in his office, hunting up luncheon companions with an easy and charming air that brought together large groups to accompany him to the German rathskellers that lined the street back of the Hall of Records. Over lunch, he was a good listener and, with his vivid accounts of his latest hassle with Mrs. Moskowitz, and his vivid descriptions of the big shots on the commission to whom she had introduced him, a good talker.

His personality, his knowledge and his application inspired the young men under him. Many of them would go on to distinguished careers, but they would look back across the decades at the time they spent working for Moses as one of the high points of their lives.

"'Dedication' has become sort of a phony word," staffer John Gaus said shortly before he died in 1969, "but that's what Moses had. People who are terrifically hard workers you have got to respect anyway, but it was more than just how hard he worked. He was a vibrant and driving person—you just knew that if you wanted to work for him, you had to be on your toes, but on the other hand that you would be treated with complete frankness, and you also knew that here was one person who was really thinking of the public interest above everything else. He talked to you hard and direct, but he made you feel that you were both on the same side, fighting for the same things. He made you want to work for him."\*

<sup>\*</sup> Moses so fascinated Gaus that for more than two decades, while the young social worker was carving out a reputation as an author of books on public administration and as a professor of government at Harvard University, never seeing Moses during all that time, he collected every newspaper clipping about Moses that he saw, just so he could keep track of his career. After he retired, in 1961, Gaus began collecting clippings on Moses again, filing them in cartons which he kept in the attic of his Utica, New York, home, and he kept filling those cartons until the day of his death.

With the state's coffers closed to the commission by the Legislature, money was constantly tight. Salaries were very low. But the young men said it didn't matter. In the spring of 1919, funds ran out entirely, and while Smith and Mrs. Moskowitz scrounged for private contributions, the young men received neither salary nor expenses for six weeks. Gaus and Morris Lambie, another young reformer, researching in Albany, were able to keep eating only by borrowing money from relatives. Once Gaus wrote Schweitzer, "Since the wolf is approaching so near that I can hear his howls distinctly, I wonder if you can find one of those precious valentines lying around signed by Belle Moskowitz and assuring the bearer that the Guaranty Trust will do its damnedest to trade it in for good U.S. notes. If last month's salary is in the offing, why I want to be there, too." But when Gaus at last got hold of the pieces of information he needed to complete his report on the State Labor Department, money was forgotten. Mailing the report to Schweitzer, with a special-delivery stamp that cost him a substantial portion of the last change in his pocket, Gaus attached to the report a note: "Happy Days! Let the people rule!"

Moses' jubilation matched Gaus's. None of the staffers found any reason to complain about their chief's enthusiasm over their successes. He had, they said, no "side," no pomposity. He was, they said, very "democratic." If they noticed a difference between the manner in which he treated them, men who were almost his equals, and the manner in which he treated men a step lower on the commission's totem pole, they didn't think it important. But the difference was there. The memos Moses addressed to lower-echelon personnel were different in tone from even the most peremptory of those he sent to the staffers. In a memo addressed to a chart maker, for example, Moses laid out his assignment in the tone of an army drill sergeant, unsoftened by a single "please" or courteous adverb. "In connection with your assignment," he wrote, "you will do the following. . . . You will prepare a chart showing the present departments. . . . You will prepare a chart showing the proposed organization. . . . You will keep in touch with Mr. Gaus, Mr. Buck and myself. . . . You will consult other members of the staff before putting the chart in ink."

Moses' energy seemed inexhaustible. For the summer of 1919, he and Mary, along with two other couples with small children, the Henry Bruères and Frances Perkins and her husband, Paul Wilson, rented bungalows near a beach in Douglaston, Queens. Moses never caught any train out from Manhattan but the latest available, which arrived in Douglaston about eight-thirty. Darkness would be falling, but Moses would always go for a swim. Plunging into the water, he would strike straight out Little Neck Bay, his arms windmilling rhythmically and powerfully, his head growing smaller and smaller in the distance. His friends would joke that he didn't seem likely to stop until he had crossed Long Island Sound and reached the shore of Westchester County, which, on clear days, was a low black line on the horizon.

"He was a wonderful swimmer," Frances Perkins would recall. "I never saw a man who could swim so long, so easily, so far, with such confidence and security. We used to get nervous. He'd go way out where you

couldn't see him. It being dark, we'd finally lose sight of him entirely. . . . One night he must have been gone an hour and a half before he came back." The watchers thought he had drowned. "Henry was discussing how we should break the news to Mary. 'What shall we tell her?' We were all urging each other, 'Let's wait a little while. Don't call the police yet.' It wasn't until long after dark that the anxious viewers on the beach saw Moses returning.

On Sundays, Moses didn't go into his office but, as if unable to relax, would spend the days energetically teaching the three sets of children to swim, the evenings telling them stories he made up himself. "He was so good with children," Miss Perkins recalled.

By the latter part of the summer, Moses was forced to work even harder. The commission's funds were running out, and the private contributions which had sustained its work were falling off. With his usual disregard for financial considerations, Moses had paid little attention to this state of affairs. If Gaus and Lambie were living off relatives, so was he —the major part of his income was still coming from his parents—but this didn't seem to bother him, and as for the work of the commission, he vaguely assumed that with all those wealthy men interested in its success, whatever was needed would somehow be raised. They had so much money they'd never miss a little of it, he would say. And anyway, fund raising was not his province but that of the commission's executive committee. In July, however, Mrs. Moskowitz told him that he must begin laying off his staff at once. He had to let some of the young men go with only a week's notice. By Labor Day, the staff had been disbanded. Some sections of the report existed only in recommendation memos, others only in rough-draft form. Only a few sections were actually completed. Lugging the commission's files to his already cramped apartment, Moses wrote the rest of the report alone. By October, it was finished.

The Report of the Reconstruction Commission to Governor Alfred E. Smith on Retrenchment and Reorganization in the State Government contained little that was startlingly original. It didn't have to. In that government, little had changed. The Bureau of Municipal Research, in presenting its report to the 1915 Constitutional Convention, had concluded that the state's administrative organization "has nothing in common experience or human reason to commend it." But in the intervening four years, the situation had only worsened. The Bureau's investigators had counted with shock 169 separate and independent state agencies; in 1919, Moses' investigators counted 187. The organization chart of the sovereign state of New York still looked like a web spun by a drunken spider, and the man elected to represent all the people of the state was still trapped in the web, unable to exercise power or leadership.

What made the report written in the small apartment on Eighty-seventh Street a remarkable document was its clarion tone and its clarity. Viewed as part of the long reform movement in New York State, which set much of the tone for Progressivism in the United States, it was the summing up of this movement. The essence of the spirit of reform was captured in its 419 pages, so completely did the words they bore synthesize both its philosophy and its passion.

The prose with which Moses prefaced the report had in particular the ring of the battle trumpet. The 5,200-word opening declaration of "Underlying Principles," written almost entirely by Moses and left untouched by Belle Moskowitz, contained hard, lucid, driving reasoning that reduced complexities to fundamentals. Dealing with a point that reformers generally tried to avoid because of their fear that it was a weak spot in their argument, Moses plunged instead to its heart and found there complete compatibility with the basic reform belief in an increased participation by the citizen in government.

"The only serious argument advanced against . . . [the] proposed reorganization and budget system is that it makes the Governor a czar," he wrote.

The Governor does not hold office by hereditary right. He is elected for a fixed term by universal suffrage. He is controlled in all minor appointments by the civil service law. He cannot spend a dollar of the public money which is not authorized by the Legislature of the State. He is subject to removal by impeachment. If he were given the powers here proposed he would stand out in the limelight of public opinion and scrutiny. Economy in administration, if accomplished, would redound to his credit. Waste and extravagance could be laid at his door. Those who cannot endure the medicine because it is too strong must be content with waste, inefficiency and bungling-and steadily rising cost of government. The system here proposed is more democratic, not more "royal," than that now in existence. Democracy does not merely mean periodic elections. It means a government held accountable to the people between elections. In order that the people may hold their government to account they must have a government that they can understand. No citizen can hope to understand the present collection of departments, offices, boards and commissions, or the present methods of appropriating money. A Governor with a cabinet of reasonable size, responsible for proposing a program in the annual budget and for administering the program as modified by the Legislature, may be brought daily under public scrutiny, be held accountable to the Legislature and public opinion, and be turned out of office if he fails to measure up to public requirements. If this is not democracy then it is difficult to imagine what is.

As in Moses' Oxford thesis, the tone of "Underlying Principles" was often lecturing and dogmatic. Refusing to debate whether the consolidated state agencies should be under Governor or Legislature, he wrote: "The Constitution says that the executive power shall be vested in the Governor. . . . There is no other way." But, as in the thesis, the tone was also evangelistic. "A consolidation of a hundred or more offices . . . affects political patronage vitally," he wrote, "and it requires considerable courage and intelligence"; nevertheless, state after state was taking steps toward such reorganization. A steadily more informed citizenry, demanding efficiency and economy in government, was pushing them forward, he said. It was time for New York to join the march.

In those 5,200 words—and in other sections of the 22,000-word "Sum-

mary of Recommendations" with which the report began—was distilled the essence of the philosophy of Progressivism in general and the Bureau of Municipal Research in particular. It was all there, the bywords which New York's reformers had been chanting for twenty years—"executive budget," "longer terms," "consolidation," "responsibility," "commensurate power"—the incantation, like a drum roll underlying the chant, of "efficiency and economy," the idealistic belief that citizen knowledge of the intricacies of government and participation in those intricacies was the panacea for democracy. At one point, defending the imposition of an income tax, Moses wrote, "One of the possible benefits [because of people's interest in the spending of their money] will be the development among . . . citizens of . . . a more vital interest in state organization and expenditures."

In specific recommendations, Moses followed the Bureau's creed, except where practical considerations introduced by Mrs. Moskowitz intruded, commandment by commandment.

The 187 agencies should be consolidated into departments—sixteen instead of twelve because of Mrs. Moskowitz—and each department headed by a single officer except in certain cases where considerations—Mrs. Moskowitz's—dictated the retention of a council or board.

The Governor should be given the power to appoint—and remove—all department heads and key administrative officials, with the exception of the comptroller, whose independence is necessary because his function should be to act as a watchdog on expenditures, including those of the Governor.

The Governor should be given the power to designate certain of his appointees as a "Cabinet," which would meet regularly to advise him.

The Governor's term should be extended to four years.

The long list of elected state officials should be reduced to the Governor, lieutenant governor, attorney general and comptroller.

An "executive budget" system—including not only expenditures but a plan for raising the revenues necessary to pay for them—should be drawn up by the Governor, and only then submitted to the Legislature; it should be safeguarded, at every step, by public hearings to doubly insure that the financial policy of the state would not be decided upon behind the closed doors of either Executive Chamber or committee room.

The commission's recommendations, which took 44 pages to summarize, were backed up with 375 pages of remarkable detail. The governments of other states—every other state—were analyzed. So were every one of New York State's 187 agencies. Included were descriptions of each agency's powers, tabulations of the laws which had, over the years, given them those powers, analyses of how their powers overlapped those of other agencies, descriptions of the power they would be given under the proposed reorganization plan, lists of the personnel of every existing and every proposed agency, the salaries and duties of the personnel, the organization charts (some of which, folded for inclusion in the bound report, opened out to a full five feet in length). Lists were made of the personnel each of the departments should have—down to the precise number of clerks a specific commissioner might need.

For internal changes within agencies or departments—and thousands of them were recommended—only new laws, "statutory changes," would be required, the report concluded. For three of the proposed major governmental changes—creation of the sixteen departments with provision that all existing state agencies and any that might be established in the future would be placed in one of them; institution of the executive budget system; and extension of the Governor's term to four years—the state's constitution would have to be amended, each amendment requiring passage by two Legislatures, elected in different years, and approved by the state's voters in a referendum.

Moses assumed a proprietary attitude toward the report. Certainly he was the driving force in its preparation, wrote its brilliant introduction himself and rewrote many other sections. Yet he was not the only person who had contributed to it, and he seemed unwilling to admit that fact. "I wrote the report, no question about it," he insisted in later years. "I wrote or rewrote everything in it."

It was the practice at the time to list at the beginning of such reports the names of all individuals and organizations who had worked on them, but most members of Moses' staff found that their names were mentioned nowhere. Unhappy about that, they were even more bitter that the Bureau, which they revered and on whose principles and 1915 report on the same subject this report was based, was not mentioned even once in the document they regarded as the historical climax of all its work, not even in those sections for which the Bureau had, at Moses' request, done all the work. Moreover, Moses' boast that he "rewrote everything" in the report was not strictly correct. Comparison of staffers' rough-draft recommendations for two departments—the only such rough drafts available today—with the finished versions published in the report show that they are practically identical.

Moses' attitude led to one particularly bitter episode. Parts of the "Summary of Recommendations," the second half of the introduction, were written, at Moses' request, by Charles A. Beard, then director of the Bureau's Training School and already a noted historian. In particular, Beard wrote the summary of reorganization advances in other states. Whether Moses did any rewriting at all of Beard's work cannot be determined, but Bureau staffers who saw the historian's original copy feel it was included in the final report substantially as written. They were astounded, therefore, to hear that after Beard had written a magazine article on reorganization advances, Moses had accused the author of *An Economic Interpretation of the Constitution* of plagiarism.

"A bunch of us walked into Beard's office one day and there he was, just ready to spit he was so outraged, waving this letter from Moses," recalls one staffer. "The letter said Beard had, in effect, plagiarized from the commission's report. We were astounded; in the academic world, there are few sins as bad as stealing another fellow's work and that was what Moses was accusing Beard of—and we all *knew* Beard had written that section, not Moses.

And as we were reading the letter, Beard kept muttering, 'Well, what do you think of this?' He was so angry he didn't know what else to say."

Whether Moses wrote all of it or part, the Reconstruction Commission report was something of which a man could be proud. From the moment, on October 10, 1919, that it was published, it was hailed as a historic document, not only by Smith, who had sponsored it, and not only by the reformers, who saw in it the finest exposition of their philosophy, but, more importantly, by the men who Belle Moskowitz had hoped would hail it—the Republican "federal crowd." Charles Evans Hughes-former crusading investigator, Governor, Secretary of State, Justice of the Supreme Court and Republican nominee for the presidency, now returned to private life as a lawyer and "first citizen" of New York State—and Congressman Ogden Livingston Mills, a noted authority on taxation and government finance, volunteered to head a City Club study of the report, which concluded that it was "deserving of unreserved approbation." When a Philadelphia reformer solicited suggestions from Colonel Henry L. Stimson on reorganizing Pennsylvania's archaic governmental structure, Stimson replied with a copy of the report and an attached note that said, "This paper is, I think, the most helpful one that I could put in your hands . . . to give you an idea of . . . what I believe to be the correct principles of state government."

An informal "citizens committee" was formed to back efforts to implement the report, and a little money was raised for the fight. Moses was named secretary of the committee and given a small salary that, with Bella's subsidy, enabled him to continue working full time for reorganization, and, in January 1920, when Smith publicly announced that he would push during the upcoming legislative session for adoption of the report's recommendations, he was assigned the job of making the committee an effective force to assist the Governor.

The first step was to "get the names," to enlarge the committee by adding members whose prestige would lend it political clout. With Hughes, Mills and Stimson already aboard, the job was easy. As the letterhead of the Citizens Committee on Reorganization in the State Government was continually reprinted so that the names of the latest joiners would be on it, the list above "Robert Moses, Secretary" came to include a cross-section of elements of the state who normally would have had nothing to do with a Governor who bore the stamp of Tammany.

The second step was to get money for the fight, and Moses wrote the members of the Citizens Committee for help. Their responses were smaller than their names—Stimson would scribble to his secretary on each of Moses' appeals, "Send \$25"—but numerous enough to enable Moses to move the committee's files out of his apartment and into a small office at 305 Broadway. When the three constitutional amendments were introduced in the Legislature on February 9, 1920, Moses wrote again: "The campaign for adoption must now be pushed with the greatest energy. . . . It will be necessary to raise about

\$2,000." When, in May, legislative committee chairmen refused to let the amendments come to the floor for a vote and Smith announced that he was considering calling a special session to force a decision, Moses wrote, "We need \$1,500." "This budget," he added, "presumes the minimum of expenditures. To date, the expenses of this committee have been kept down by volunteer assistance and maintenance of an extra office at the home of the secretary without expense to the committee." The plea so moved Stimson that he scribbled: "Send \$50."

For "executive support," Moses—for the first time in his life—did not have to plead. You just get the facts and come up with the recommendations, Al Smith had told the commission staffers. He would fight for them. And now, he fought, stumping the state to remind the voters that the commission's recommendations were supported by the GOP's most prestigious members and should be treated as nonpartisan proposals instead of as bills being pushed on a Republican Legislature by a Democratic Governor trying to curb its powers.

Al Smith on the stump was a political weapon of the highest caliber. "I believe that I enjoy some little reputation for keeping my word," he said in one speech. "I will give it—I will give it to this Legislature—that if they will come with me, take this report, do the best that they can with it, I am not going to be the fellow who insists on getting his bill the way it is printed [without compromise, in the form it is first introduced] because usually that fellow doesn't want the bill. . . . And I will promise them now that at no time in the future will it ever be referred to by me, or anybody over whom I have any control, as any program of mine. The fact of the matter is: It is not my program. The real truth about it is I could not think that all out myself."

When, at a Women's City Club debate between Smith and Lieutenant Governor Seymour Lowman, a Republican, Lowman charged that the reorganization program was "Governor Smith's attempt to make himself a king," Smith arose and, after alluding—just long enough to bring tears to the women's eyes—to his poverty-stricken youth in an Oliver Street tenement, pointed to himself with a deprecatory gesture and said, with plenty of sarcasm and just the right little touch of bitterness: "Behold the King, the King of Oliver Street."

To get the maximum use out of the big names on the Citizens Committee, Mrs. Moskowitz wanted them—and their support of Smith's proposals—kept in the public eye. But they were under pressure from furious Republican regulars who told them, correctly, that their financial contributions and prestige were being used to build the career of a Tammany man at the expense of their own party. Many, in fact, were on the verge of resigning. Tact had to be used in handling them. Tact had never been one of Moses' long suits, but now he had been taught by Belle Moskowitz. When he arranged luncheons of the committee and asked its big names to make speeches at the luncheons, speeches that the press would report, he made the requests, and pressed for answers, persistently but gently. He displayed a willingness to compromise that was also new to him. When some members of the committee, expressing doubts that all the report's recommendations were correct,

threatened to resign, Moses wrote assuring them that "these amendments are not final, but are subject to correction after consultation." There were few resignations—none from significant "names"—and, month after month, Moses directed an almost daily fusillade of support for Smith's position from Hughes, Stimson, Wickersham and even, in what amounted to the most impressive coup for Smith, from former State Republican Chairman Frederick C. Tanner.

Under this onslaught, the Legislature reeled. Republican assemblymen and senators assured the public that they were interested in reorganization too, and introduced bills of their own which they said had the same objectives as the commission's. This put the battle on a technical level. Smith needed rapid analyses of the Republican bills to determine whether their sponsors' claims for them were true. Mrs. Moskowitz summoned Moses to Albany and, with Mary making sure he had the \$5.42 for the fare in his pocket, he left the apartment at 6 A.M. to catch the early train to the capital.

At first, Moses worked in a small office in the recesses of the capitol, but as the legislative session moved toward a climax, he was called more and more frequently to the Executive Chamber. Having him at hand saved everybody time. If the Governor and his advisers wanted to know how many jobs a proposed GOP bill would eliminate and whose jobs they were, or whether the wording of a bill conflicted with seemingly contradictory wording in the Constitution, or whether there was any precedent to back up a proposal of their own, or how many secretaries there were in the Public Works Department, or how much was spent annually on printing by the Insurance Department, or under what act the Conservation Commission was empowered to bottle and sell water from Saratoga Springs, it was easier to ask Moses than to try to find out the answer themselves. Because Moses always knew. "He thought fast and he answered quickly," says one who observed him at this time. "He seemed to know the makeup of every department in the state and what its powers were and exactly which sections of law it got those powers from. And he almost seemed to know it all by heart."

Moses' technical expertise gave Smith the ammunition he needed. When Republican legislators introduced bills that appeared to consolidate all public works construction into a single department headed by a "Public Works Commissioner," it was Moses who discovered—and enabled Smith to announce to the press—that the bills did not specifically mention any method of appointment for the commissioner and that, under parallel sections of the State Constitution, he would therefore be an elected official rather than one appointed by and responsible to the Governor. When Republican legislators introduced bills that created the sixteen new departments which the commission had recommended, it was Moses who discovered—so that Smith could announce—that the bills contained no provision that all state agencies be placed in one or another of the departments and, therefore, under existing provisions of the Constitution, all existing agencies would continue to be independent of the departments. A furious Republican senator strode into the Executive Chamber one day and asked Smith, "Who is this

fellow Moses anyway?" The Governor leaned back and laughed. "Why," he said, "he's one of your crowd. He's a Republican." (The senator, checking, found that Moses did, indeed, call himself an "independent Republican.") By the time the session ended, the Legislature had been bludgeoned into passing bills incorporating most of the Reconstruction Commission's "statutory changes" and the sixteen-department constitutional amendment, although the amendment would have to be repassed by another Legislature. And although the Legislature voted down the executive-budget and four-year-term proposals, Moses felt confident that the whole program would be passed during Smith's next term.

But the next term was not Smith's. With the backing of many of the old-line reformers, independents and Republicans who normally would have supported his opponent, Nathan L. Miller, the Governor ran 1,090,000 votes ahead of his ticket. But the head of the ticket was presidential candidate James M. Cox, and Cox, along with the Democratic vice presidential nominee, young Franklin Delano Roosevelt, was caught up in the Harding landslide and lost New York State by 1,200,000 votes. In an era in which ticket splitting was far more unusual than it would be a half century later, more than a million New Yorkers had split their ballot to vote for Al Smith. The phenomenon was considered unprecedented in American politics. Elderly reformer William Church Osborn wired Smith, "Even in defeat, you came closer to swimming up Niagara Falls than any man I have ever seen." But the man the wire was addressed to was, nonetheless, a loser—and, Moses was afraid, so was the Reconstruction Commission program.

For a while, dreams had seemed near to realization. Genuine accomplishment had seemed close. Moses had, after all, been the moving force in the drafting of a plan to remake the machinery by which more than ten million people were governed, and he had watched the bills that embodied a substantial portion of that plan move tortuously but steadily along the road to reality. But without at least the sixteen-department constitutional amendment, the statutory changes were meaningless, and, in 1921, Miller opposed the amendment's repassage and the Legislature never let it, or the executive-budget and four-year-term proposals, out of committee. The Citizens Committee on Reorganization in the State Government—with its "extra office at the home of the secretary without expense to the committee"—was disbanded.

To anyone who was, at the time, watching the career of the secretary, these developments must have seemed just another defeat in a life already crammed with defeats. In reality, however, something new had happened, something that would not only insure that the Reconstruction Commission's proposals would eventually become law but that would also change the shape of Bob Moses' life.

Out of public office in 1921 and 1922, Al Smith was back in New York, working as president of a large trucking company. The company's owners were Irishmen from the Old Neighborhood, men who were not only the

friends of Al Smith's youth but who, in his maturity, idolized him. Since the company's offices were on Canal Street, only eight blocks from City Hall, a continual stream of city officials, men who had risen through the Tammany organization with Smith, walked the eight blocks to drop in on "the Governor" and pass the time of day. Hoping that Smith would accord them the supreme honor, an invitation to walk home with him across the Neighborhood to his apartment on Oliver Street, the company's owners and the city officials would often find excuses to hang around his office in the late afternoon.

Moses, meanwhile, was working (for a new reform organization, the New York State Association) in a shabby cubicle at 305 Broadway barely large enough for his desk and that of a part-time secretary. He was close to being out of even quasi-official touch with government. Occasionally, he would have lunch with one of the few people he knew in the City Hall area, former Bureau or Reconstruction Commission staffers like Ernie Willvonseder who were now lower-echelon city employees, but more often he had to eat alone. He had few visitors. But, in the late afternoon, the phone would often ring. Moses would pick up the receiver. "Bob," Al Smith would rasp, "how about walking home with me?"

The two men made an odd pair as they walked through the winding, narrow streets of the Lower East Side in the twilight, one of them tall, slim, handsome and aristocratic in bearing, the other, short, potbellied, florid. The taller man, striding out with long, springing steps, continually had to shorten his stride to let the other, who walked with a slow, extremely pigeontoed gait, catch up. Their progress was further slowed by Smith's popularity. He seemed to know almost every man and woman who passed, and when one of them stopped to chat, he would stop, too, and talk with him without appearance of impatience while his companion would stride restlessly in little circles, or, trying desperately to stand still and listen politely, would nervously clench and unclench his fists.

But between the chats with passers-by, there was plenty of time for talking between Moses and Smith, and not all the talking was done by the former Governor. In fact, as twilight walk succeeded twilight walk, more and more of it was done by Moses. The ideas on government which he had poured forth for almost a decade, the theories, proposals, plans, advice—the dreams—with which he had bored staffers at the Bureau of Municipal Research, examiners at the Municipal Civil Service Commission, borough presidents, park commissioners and a legion of minor city officials, now were poured forth again.

The late-afternoon calls from Smith became more frequent. With regularity now, when the two men had arrived at the old red-brick tenement in which the former Governor lived, he would invite Moses up for dinner.

And one day Bob Moses barged into Ernie Willvonseder's office. He was striding fast, almost running, more excited than Ernie had ever seen him before.

"Ernie," he said, "Al Smith listens to me."

## 7. Change in Major

MEN WHO SAW in the bond between Robert Moses and Alfred Emanuel Smith a key to the shape in which the future of New York State and New York City unfolded, as well as to one of the great stories of American politics, never told in its full depth—the blood feud between Smith and Franklin D. Roosevelt—would wonder what had forged between the two men of independence and pride and ambition a tie so strong that, transcending independence and pride and ambition, it would be ended only by death.

Certainly there was nothing in the backgrounds of the two men to bring them close.

Moses' youth was set against a backdrop of Lucerne and Elberon, broad elm trees and leafy arbors, red damask and paneled walls, and coffee streaming from a spout of silver into bright, fragile cups. Smith spent his youth in the Fourth Ward, a wilderness of tenements stretching away from the foot of the Brooklyn Bridge. His grandparents had come to earth in that ward, for no better reason than that they happened to see a "Rooms to Let" sign hung out only a few blocks from the Beekman Street pier where they were deposited in 1841 by the Black Ball Line—along with a shipload of other ragged Westmeath Irish—and they were too hungry and too tired to walk farther. They lived all the rest of their lives in the Fourth Ward. Al Smith's parents lived there, too, and Al Smith, who was born over a barbershop at 174 South Street on December 30, 1873, was to spend all his youth and young manhood in the shadow of the bridge, within an enclave—its borders sharply defined on the south by Water Street, where the tenements were crammed with prostitutes, and on the west by the Bowery, which was lined with flophouses and saloons—held tenaciously by the ward's "respectable" Irish families.

Never leaving it for longer than a day's outing, he grew up in the narrow compass of a neighborhood whose life revolved around two institutions, St. James Roman Catholic Church and the Downtown Tammany Club, and in which, as one who worked there put it, morality was simple, "virtue was virtue, vice was vice," and the views of the parents were the views of the children as to which was which. On summer evenings, the children would sit on the stoops of the tenements and talk until Father Kean rapped on the window of the St. James Parish House as a signal that it was time to go to bed. And they went—as their parents had gone when they were children and Father Kean's predecessor, Father Farelly, had rapped

for them. Bob Moses was neither circumcised nor bar-mitzvah, but young Al Smith was a faithful St. James altar boy, awakening early on bleak, cold winter mornings—with his mother always up even earlier to prepare his breakfast—and trudging up Cherry Hill in the dark to serve at the six-o'clock mass.

At the age at which Bob Moses was being led on horseback along Dwight Street and taken for walks in Central Park, Al Smith was scampering along the hectic Lower East Side waterfront, playing hide-and-seek among the bales and crates that cluttered the East River piers, dangling daringly from the sailing ships' bowsprits that made a line of spears over the horsedrawn trucks clattering along the cobblestones of South Street, playing tag, during an era in which the city didn't build playgrounds in slums, in narrow side streets or in the wider cleared spaces alongside the big, smelly fish market at the foot of Fulton Street, and tobogganing in winter down streets left uncleared of snow by a city that didn't bother to plow the slums. When he learned to swim, he learned in the river, with the spars of the sailing ships looming overhead and garbage floating on the water. Al Smith never went to Central Park; that was regarded by the neighborhood as a preserve for the wealthy—"uptowners," the Fourth Ward called them—who would send their Eton-collared children to its quiet glades with private tutors. His idea of an outing was the Downtown Tammany Club's annual picnic, for which hundreds of sweating neighborhood families—and cases of beer, candy, ears of corn, ice cream and cheap toys-were loaded into huge wagons for the nine-mile trip to Sulzer's Harlem River Park at 126th Street.

At the age at which Bob Moses was being taught by private schools and private tutors, Al Smith was being taught by the good nuns of the St. James Parochial School and trying to avoid Father Kean's stern eye. And while Moses' tutors reported that he was brilliant, the nuns had a very different story to tell about the Smith boy. As one chronicler put it: "The boy had no great fondness for books . . . and showed no inclination to study. . . . He never cared much for school. A passing mark was all he ever desired—and all he ever achieved." And he didn't always achieve that. Al Smith had bright, cheerful eyes and an appealing smile, but there was only one characteristic that set him apart from his classmates—his unusually loud voice. It was no surprise to the nuns that he won medals in citywide parochial-school public-speaking contests.

At the age of thirteen, he didn't have to worry about school any more. Moses' father retired young, but Smith's, a large, powerful Civil War veteran of thundering voice, an inexhaustible supply of funny stories and many friends, had to work too hard. Driving his own truck, loading and unloading heavy cargoes, he would come home no matter how cold the day so wet with sweat that his first move would be to peel off his shirt and undershirt and plunge his face and arms into a tub of cold water to cool off. He worked six or seven days a week and often he got home so late that there would be days and nights on end when Al would not see the father who liked to put his little boy on his knee during family excursions to the beer gardens along the Bowery, regale him with stories and let him sneak sips of his beer. In 1885,

the father's health broke, and, unable any longer to do manual work, uneducated and with no skills, he was forced to take work as a night watchman. One by one, he had to sell his horses and finally his truck, but the proceeds of the sales were soon eaten up by doctors' bills and medicine. In November 1886, he died. All he left his son was his self-assurance; it was only through the charity of his friends that funeral expenses were paid. Al's mother was left almost penniless. Walking back from the funeral to the small flat, alone except for Al and his ten-year-old sister, Mary, she muttered, half to herself, "I don't know where to turn." Mary heard her brother say, "I'm here. I can take care of you."

At first, determined to keep her son in school, Al's mother refused to let him work. The very evening of the funeral, holding her children by the hand, she went to an umbrella factory and got a job that she could start the next morning.

Rising before dawn to get breakfast for her children and prepare their lunches, Al's mother would work until dark at the factory, and then come home to make supper and clean the flat. Since the salary she earned at the factory wasn't enough to support three persons, she asked for piecework that she could do at home and, when Al closed the door to his bedroom to go to sleep at night, he would see her bending over the work. A frail woman, within months her own health was affected, and she had to leave the factory. With the help of friends, she opened a tiny grocery and candy store in the basement of the building in which the Smiths lived, but it quickly became obvious that the store would never provide enough to support the family. She could get charity, she knew, but widows who were unable to support their children had the children taken away and placed in institutions. She had heard about the institutions. Anything was better than that. A few months after his thirteenth birthday, a month before he would have graduated from St. James, which had only eight grades, Al Smith left school and went to work.

First he was a newsboy, then a "chaser" for a trucking firm, spending his days on the run, taking assignments for the firm's drivers from the main office and trying to find the drivers in the streets of the Lower East Side so that they would not have to waste time returning to the office. The job paid three dollars a week. In the evenings, he tended counter at the little store while his mother rested. After two years, with income from the store dwindling and the family desperate, he became a shipping clerk—for eight dollars a week. Two years later, with the intake from the store down to almost nothing, he looked for another job and finally found one that would pay him four dollars more. The job was at the Fulton Fish Market.

Al Smith rolled heavy barrels of fish in and out of the market, put the fish on ice, cleaned them and wrapped them. He worked from four o'clock in the morning until five in the afternoon, except on Friday. On Friday, he started work at three. Returning home at night tired and dirty and reeking of fish, he scrubbed off the odor and went downstairs to the store. But in the 1890's twelve dollars a week was almost enough to support a mother and a sister. He stayed at the market for four years. Then, to increase his pay to

fifteen dollars, he became a laborer, carrying heavy pipes at a pump works. It wasn't until 1896, when he was twenty-two years old, that he got his first political job.

Moses and Smith came to public service not merely out of different backgrounds, but with different attitudes and for different reasons.

Not even Al Smith's best friends ever said that he went into politics to help the lower classes. He went because, perhaps, he was gregarious and politics for a young man in the Fourth Ward without connections was, in its early stages, mostly hanging around the Downtown Tammany Club or Tom Foley's saloon with other young men, drinking beer, singing around a piano and telling stories while waiting for a contract from Foley. He went because, perhaps, it was a natural course for a young man with little education who wanted to get ahead in the ward's politics-drenched atmosphere—and because, perhaps, he saw no other way out of a life that for most of the years he could remember had been rolling heavy barrels and lifting heavy pipes.

Moses prepared for his career by passing examinations and writing a thesis; Smith prepared for his by executing contracts. A "contract," to Tammany Hall, was something to be done, an assurance to a local undertaker that Tammany would pay for a loyal Democrat's funeral even if his family could not, a discreet visit to a brothel to warn of an upcoming police raid or to police headquarters to ease business-cramping parking restrictions in front of a liquor store belonging to a heavy campaign contributor.

In the Fourth Ward, contracts were given out by Foley, one of the most remarkable of the Tammany district leaders who ran their districts—and looked after the welfare of the straight-ticket-voting Democrats in them—as English squires looked after the welfare of their country villages. "Big Tom" was a square-shaped mustachioed, quiet man who spent most of each day at the Downtown Tammany Club, listening to the cries for help—for a boy who had been arrested, for a process server who had been fired, for a policeman who had been shifted to a Staten Island beat—with unfailing patience. Although his saloons thrived, he was to die a poor man, their profits trickling, along with the payoffs and the campaign contributions, through his fingers into those of his constituents. The only payment he ever asked for the favors he dispensed was a straight Democratic vote—and so heartily were his constituents willing to make this form of repayment that his district regularly rolled up Democratic majorities that made him the most powerful district leader in the city.

Born to wealth that he believed would make him always independent, Moses felt no compulsion to turn associates into friends; arrogance is, after all, one of the coefficients of money. Arrogance would have been an unaffordable luxury to Smith: the equation of politics as he knew it contained a factor of friendship that had at least as heavy a weight as the factor of respect. In the evenings, after work, Smith began to hang around the saloons or the Tammany Club, hoping that Foley would give him a contract, and

when he was given one, he executed it with graciousness and tact. Some of the historians who would later analyze his career would speculate that, as one put it, "he made an effort, he trained himself, to be more than ordinarily helpful and obliging." Friends would deny it, saying that there had been something in his nature that had made him, even as a young boy, friendly and eager to assist someone in trouble. Whether it was natural or cultivated, as Al Smith executed the contracts, he displayed a gift for getting along with people that was so highly developed as to be almost genius. Joining the St. James Players, who put on plays to support the parish's orphanage, studying acting from the cheapest seats in the highest balconies at Broadway theaters, he became the parish's star villain, playing Corry Kinchela in Dion Boucicault's *The Shaughraun* so enthusiastically that children began jokingly to hiss him when they saw him on the street. Everyone in the neighborhood seemed to know the slim, clean-cut youth with the soft smile and the loud, happy laugh—and everyone seemed to like him.

Older men were watching him now. Father Kean liked to tell how Smith had tried to refuse to play any more villains. The hisses in the street were becoming louder, he had complained, and in the last production, when he had snarled at the girl who refused him, "You will yet be mine," the boos and catcalls from the gallery had annoyed him. He was going to be a hero or nothing next time, he had said. But all that had been necessary was for the Father to call him in and say, "Alfred, we have over two hundred little girls in the orphanage and it is getting harder every year to feed and clothe and care for these girls," and Alfred had said simply: "Give me the part." When touchy matters—such as visits by respectable parish girls to neighborhood saloons with their dates—had to be brought up with the young people, the Father began to look to Smith to do it; somehow, when Smith handled it, not only did the visits stop but nobody became hurt or angry. He had joined the Seymour Club, a social organization founded by a wealthy old grocer and Tammany financial backer named Henry Campbell. Campbell began looking to Smith to organize club excursions, then he began inviting him home for Sunday dinners—and, in 1896, when there became available a city job as a server of jury notices that paid \$900 a year, Campbell saw that Smith got it.

In 1900, after promising her parents that he would never become a professional actor, Smith married Katherine (Katie) Dunn, and the couple took a flat in the neighborhood, Smith's mother moving to Brooklyn to live with Mary and her husband. The children—there would be five—came quickly, and Smith's devotion to his family became a joke, a fond joke, among the people in the ward who saw him wheeling one child and holding the hand of another as he and Katie walked across the Brooklyn Bridge every Sunday after church, rain or shine, to visit his mother.

But in the evenings, after supper, Al Smith left his family and went down to the clubs and saloons. And now another man was watching the youth whom everybody liked—Tom Foley. Signing him up as a campaign speaker, Foley soon saw that even in this heartland of Irish platform eloquence, Smith was something special. And, more important, he saw that

Smith could be counted on; his praise of a Democratic candidate's personal qualifications was just as fervent whether he knew the candidate or not. To the other adjectives with which men described Smith, Foley added one that, in the lexicon of the Democracy of New York City, had a special significance —Smith was, he said, "regular." In 1903, he offered him a nomination for state assemblyman. Proving to be a remarkable campaigner even though, in Foley's districts, remarkable campaigning was not a necessity for Democratic candidates, in November 1903, a month before his thirtieth birthday, Al Smith won his first election.

Katie tied two brooms upright on the iron railings that lined the six steps to the doorway of the tenement in which the Smiths lived. It was a traditional gesture in the neighborhood, symbolizing a clean sweep by Tammany. Inside, in his living room, holding his mother's hand as he accepted congratulations, Alfred E. Smith, red-faced and loud in victory, resplendent in a new suit with wide-set, broad pinstripes, a tie that matched his voice, and a pearl stickpin, a big black cigar tilted cockily up from the corner of his red, wet lips, seemed the typical, "regular" Tammany brave.

Yet what lurked behind the war paint? Al Smith went to Albany unprepared to be a legislator—or even to sleep away from home. On his first night in the capital, he noticed a large fire blazing in the fireplace of his hotel, saw that the room to which he and another new Tammany assemblyman, Tom Caughlan from "Battery Dan" Finn's district, had been assigned was not near any exits, and was so worried that the hotel would burn down and they would be trapped that he made Caughlan spend the night playing pinochle so that they would be awake for any emergency. Arriving in the Assembly Chamber the next morning, he was bewildered by the formalities of the opening session and was shunted by leaders who had no time even to talk to him to a desk so far from the Speaker's podium that he often couldn't hear the rulings. When he did hear, he often didn't understand. Overcome by the intricacies of the legislative process, he sat day after day in the high-ceilinged chamber in silence. During the whole session, he did not make a single speech. He was not appointed to a single committee.

Worst of all were the bills. Every morning when he arrived at his desk, there would be a pile of new ones a foot high. He would try the one that looked simplest, perhaps an act setting the maximum size of vehicles using public highways. "The provisions of this subdivision," he read, "shall not apply to vehicles and implements or combinations thereof not over thirteen feet in width and designed and intended for use solely for farm purposes when owned or in the possession of a dealer in farm implements and equipment and within a radius of fifty miles of the principal place of business of such a dealer, including transportation of such vehicles, implements and combinations thereof as a load on another vehicle, such vehicle or load not to exceed thirteen feet in width, during the same period and under the same conditions and restrictions as hereinbefore in this subdivision provided for such vehicles and implements and combinations thereof when used solely for farm purposes."

This was the simplest. The one underneath it might be eleven pages

long, beginning: "Without limiting the generality of the following provisions of this section, property owned by the city and property used for transportation purposes exclusively pursuant to the provisions of a joint arrangement or of a joint facilities agreement or trackage rights agreement shall all be exempt from special ad valorem levies." The next one might be thirteen pages and it might start: "Paragraph (h) of subdivision six of section two hundred thirty-five of the banking law, as last separately amended by chapters forty-six, fifty-one and five hundred eighty-five of the laws of eighteen hundred ninety-nine, is hereby amended to read . . ."

As he sat there staring down at the desk, a page boy would deposit another pile of bills on it. The wording was difficult enough for the expert. It might have been designed to mock a man whose schooling had ended in the eighth grade, who had never liked to read even the simple books of childhood, who, he had said once, had in his entire life read only one book cover to cover: The Life of John L. Sullivan.

As far as the course of the Empire State was concerned, it did not seem to matter if Al Smith understood the bills or not. The Democrats, a badly outnumbered minority in the Senate and Assembly, a party that had not elected a Governor since 1893, had no real say in the state's affairs. Most of the Democratic legislators, understanding this, and understanding that in the rare instances in which their votes were important they would be told how to cast them by their leaders back in New York, took their jobs with the lightness they felt they deserved. They spent their evenings in "The Gut," a strip of whorehouses and cheap saloons down the hill from the capitol.

Smith, whose devotion to Katie was—and remained always—legendary as long as he lived, had no interest in the whorehouses, but he loved to sit with his fellow assemblymen in the saloons and drink beer and sing and, when he worked up his nerve, tell a joke or two. As often as they, rousted out of a saloon by the Assembly sergeant-at-arms for a vote, he would appear in the Chamber with his derby over one ear. His clothes were of the same cut, his voice as loud, his language as crude. In appearance, he was one of them.

But late in the evenings, when the parties were still loud, Al Smith would leave the saloons, and as he left his steps would quicken.

Hurrying back to his tiny furnished room in a cheap boardinghouse, he would sit down at a rickety desk. On the desk he would earlier have piled the bills that had been introduced that day. Al Smith would begin reading them. Not only the bills which bore on a subject in which he was interested, and not only the bills which dealt with his Assembly District, and not only the bills which dealt with New York City. Sitting at the rickety desk in the furnished room, Smith read all the bills, even those which concerned the construction of a side road or a tiny dam in some remote upstate district. And as he read them, he tried to understand them. Why had one legislator included in a bill a provision that the dam be built by the Conservation Department rather than by the Department of Public Works? What had been in the mind of another that led him to specify that the side road must be

surfaced with a specific type of asphalt? Later in the night, Smith would hear bursts of song and laughter as the other legislators left the saloons. One by one, if he looked out the window in his room which faced the capitol, he could see the lights in the huge gray building go out. Still the man who had never liked to read read on.

It must have seemed like the most useless of exercises. In his second term, he was appointed to two committees, but they were the Committee on Banks and the Committee on Public Lands and Forests and, as he remarked in later years, "I had never been in a bank except to serve a jury notice and I had never seen a forest." Again, he did not make a single speech during the entire session. The Democratic leaders had no interest in him except for his nod of assent at the end of a discussion. And the expenses of living in Albany—for which legislators received no reimbursement—ate up an assemblyman's \$1,500 salary. By May, all except \$250 was gone and seven incomeless months stretched ahead of him. In despair, he told Foley he didn't want to run again. "Meet me at Holtz's for breakfast tomorrow morning," Foley said.

Over ham and eggs, Foley offered Smith another job, New York City Superintendent of Buildings. Smith's eyes lit up.

Foley's were narrow. Watching the younger man closely, he said, If you take the job, of course, you'll never be a big man in this town. I gave you a start toward being one. It's tough for a beginner in Albany. You can't learn what you need to know up there in a couple of years. But you're learning. And you've got great popularity in the district. I think you're on the right track. And I'm willing to stick with you if you want to go back. But maybe you ought to chuck it. "Maybe," Big Tom Foley said, "you're right in thinking that Albany is too tough for you."

Foley said he would give Smith a week to think it over.

In a week, Smith said he wanted to go back.

When he went back, he read harder. Since most of the bills amended or referred back to other bills passed years before—and not described in the new bills—he took to spending evenings in the Legislative Library reading those old bills. Since some of the most confusing wording was based on legal technicalities, Smith began to borrow lawbooks from law libraries and take them back to the furnished room with him. Sometimes, leafing through the thick volumes, he thought wryly that their very appearance would have intimidated him a few years before. Tired of listening to speeches he couldn't understand, he would pay clerks for transcripts and study the transcripts. Near the end of the session, the annual appropriations measure, hundreds of pages long, containing tens of thousands of items, was published. No one, so far as anyone in Albany could remember, had ever read the entire appropriations bill. In 1906, Al Smith read it.

Now, he was to say later, Albany began to make some sense to him. But he kept that fact to himself. Years later, Foley would say, "He would never admit that he knew anything about a subject until he knew everything about it." To his fellow legislators, he was still the typical Tammany regular. He cleared his votes with Foley, never argued with the leaders—

and instead of making speeches saved his voice for the nightly singing in the saloons.

He had many friends in Albany now. He arrived at the capitol each morning with a fresh supply of jokes, hilarious stories told in a variety of dialects, and legislators and clerks would crowd around him to hear them. During a debate on a bill proposing to regulate Chinese laundries, Smith suddenly burst into the Assembly Chamber bearing a huge sign decorated with Chinese characters.

Surprisingly, his friends included Republicans as well as Democrats. No one would have seemed less likely to get along with the aristocratic upstate Republicans, born into families that controlled the great utilities and banks of the state and educated among the Ivy, than Al Smith, but his jokes had them roaring, too. The rising star of a band of reforming Republicans who were trying to unseat the Black Horse Cavalry was young Jimmy Wadsworth, a scion of one of the wealthiest families in Rochester and a former Yale baseball star. Wadsworth soon began to make a regular supper trio with Smith and a slow-talking, forceful, young German-born state senator who had become particularly close to Smith, Robert F. Wagner, Sr. Elected Speaker, Wadsworth handed Smith some choice committee assignments. In 1908, after Smith had swept his district for the fifth time, he found himself, on his return to Albany, one of the capitol's most influential Democrats. He was expected now to use the voice that he had kept silent so long.

And when he did, people began to listen. The years spent reading the obscure minor bills began to pay off. Because no matter what the subject was, the other legislators began to realize, Al Smith understood it. In some way that they were unable to figure out, he had become familiar with their little pet projects, their side roads, the peculiar problems of their districts.

Moreover, when Smith rose to speak, the Assembly Chamber became a place of drama. "His presence electrifies and wins over even his opponents," Dean Christian Gauss of Princeton University was to say. "His . . . voice makes his listeners tingle."

The voice was nasal, grating, harsh and insistent—and unforgettable. One journalist wrote that it had trumpets in it. Coupled with the wit of the man who used it, it could tear an opponent apart or make bored men roar with laughter. (A Buffalo assemblyman once tried to correct Smith's grammar. The Assembly, well aware of Smith's lack of education, waited silently for his reply. Slowly he arose. "I will," he said with dignity, "refer the gentleman from Buffalo to the rule that says, 'When a pluperfect adjective precedes a noun, insert a plus.'") It could even hold the attention of the legislators during arcane discussions of state finances. One reporter wrote: "Discussion of the annual appropriation bill used to be the signal for a general exodus from the Assembly Chamber. But not so when 'Al' Smith took the floor. He could keep the members in their seats hours on end with his masterly dissection of that measure."

Charles F. ("Silent Charlie") Murphy, the unsmiling Irishman who had risen from saloon keeper to the leadership of all Tammany Hall, had

been hearing a lot about Smith. Now he said he'd like to meet him. After the meeting, someone said to Murphy, "He's a nice young fellow. He has a lot of ability. It's too bad he isn't a college man." Murphy looked at the speaker a long moment. "If he was a college man," he said at last, "he wouldn't be Al Smith." In 1911, aided by revelations of widespread corruption among Republican legislators, the Democrats won control of both houses for the first time in eighteen years. Murphy had the Democratic caucus elect Smith majority leader of the Assembly.

In a position of importance at last, Al Smith carried out orders. Using the powers of his office ruthlessly, he rammed through the Assembly, as Bob Wagner was ramming it through the Senate, the notorious "Murphy Charter," which weakened New York City's civil service system and added thousands of patronage jobs to its payroll.

Good Government groups railed at Smith. The Citizens Union called him "one of the most dangerous men in Albany." Identifying him, day after day, as "Smith, the Tammany man," newspapers joined in the outcry. "The Democratic caucus," said a disgusted editorial in the New York World, "is Charles F. Murphy at one end of a telephone wire and the Democratic leader at the other end." In all his years in the Legislature, one political observer was to say, Smith had never been anything more than "the brilliant henchman at Albany of the organization housed in the ornate and shabby building on Fourteenth Street."

But such analyses were incomplete. Most legislators spent as little time as possible in Albany, coming to the capital only one or two days a week and spending the rest of their time attending to their outside business interests. Murphy saw to it that Smith was offered a well-paying position with a firm doing business with the city. Finances were still tight for Smith. He could have used the money. But he turned the offer down. Instead, he spent most of every week—all of many weeks—in the capital. Not only did he attend every hearing held by every committee of which he was a member but, legislators began to notice, he would slip quietly into hearings held by committees of which he was not a member and sit in the back of the hearing rooms, following the testimony intently. At night, he would still party loudly and happily—and he would still slip away from most parties early.

Now he would slip away not to a cheap furnished room but to the plush majority leader's suite at the Ten Eyck Hotel. Now the face bent over the pile of bills was considerably fuller than the face that had been bent over the pile seven years before; it was redder and its teeth, once so white, were capped with gold and yellowed by the cigar butts clenched unendingly between them. Now there was a considerable paunch beneath the pinstripes.

But the face still bent over the bills.

And now a new element was added to the background of the picture. Sweatshops didn't close on Saturday, and on the Saturday afternoon of March 26, 1911, hundreds of employees of the Triangle Shirtwaist Company, most of them girls from the Lower East Side, were still bending overswatches of material on the eighth, ninth and tenth floors of a building overlooking New York's Washington Square. Someone in the tenth-floor work-

room lit a cigarette and tossed the match away. It hadn't burned out when it fell into the ankle-deep litter around the sewing machines.

There was a puff of smoke, and then a sheet of flame. The exits were inadequate, the doors to many locked. As the terrified girls jammed against them in panic, scores were crushed to death. Others were suffocated by the heavy smoke. As it billowed around them and the flames crept closer, girls leaped from the windows. Bodies smashed against the sidewalks and tore through sidewalk gratings. The death toll was 141.

Reformers had been haranguing against unsafe conditions in the sweatshops for years, but their harangues had thudded without effect against political stockades buttressed with campaign contributions of factory owners. Now they descended on Albany, led by men like Henry Moskowitz, a bunch of near-hysterical women, and one very quiet one, Henry Moskowitz's wife.

Demanding the formation of a commission to investigate factory conditions and to recommend remedial legislation, the reformers brought with them a list of potential commission members. Smith, conferring with them, agreed to most of the names but added one: his own.

At first, the reformers on the State Factory Investigating Commission looked at "Smith, the Tammany man," askance. Then the commission's work began. It took the members to all the major cities of the state. Now and again one or another of the reform members would miss a trip, but they noticed that Smith never did. They watched his face as, day after day, he saw what life in the factories was like. They watched his expression when he saw whole families, mothers with their children, little boys and girls, working all the daylight hours seven days a week in rooms in which there was not a single window, when, after one factory manager had insisted that no children under the age of seven were employed in his plant, commission staffers found such children jammed into an elevator that had been hidden between floors to escape the commission's notice. When the reform members of the commission made their proposals, they waited for Smith's reaction.

You make the proposals, he told them. I'll fight for them.

Even while Good Government organizations were continuing to rail against him—the 1912 Citizens Union summary of his record was even more devastating than its 1911 summary—a few reformers were starting to tell their friends another story.

Al Smith, they said, had absolutely no "general theory." His naïveté in matters of philosophy was ridiculous. When he talked about social welfare legislation, it was in terms of "us" against "them," of the "people" against the "interests," of the Fourth Ward against the factory owners. But the "people," the Fourth Ward, did seem to mean something very special to him. No one could listen to him talk about how doctors' bills could eat up a man's savings and leave his family destitute, about how penniless mothers feared that "the charities" would take their children, about children who grew to manhood without ever having a pair of new shoes, without believing that his determination to help them was real. No one could look at his face when he talked and not *know* it was real. First one and then another of the reformers began to tell their friends that they had really come to believe

that maybe, just maybe, after decades of waiting, reform in New York had found at last, in the red-faced Tammany henchman, the instrument for which it had been waiting: the champion who would fight for their dreams in the political arena and turn them into laws. And some of the more romantic among them, examining Smith's long, slow rise through the ranks of Tammany, began to speculate that perhaps all the time he had been executing its dirty work he had been waiting for the chance to do good.

When the commission's recommendations, embodied in bills, came up in the Legislature, Smith fought for them. From their seats in the spectator galleries high up over the Assembly Chamber, the reformers could see him roaming the narrow aisles between the legislators' desks, pleading, cajoling, threatening, bargaining, dealing, trading votes—using every trick he had learned in his years of working for Tammany.

Smith's debating ability was already legendary, but never, observers wrote, had he spoken like this. During a debate on a bill that would have required "one day's rest in seven" for women and children, Republican legislators beholden to cannery interests pleaded for exemptions for canneries. Smith waited until every Republican had finished. Then he rose and walked between their desks down to the well of the Chamber. Whirling to face them, he said quietly, "I have read carefully the commandment 'Remember the Sabbath Day to keep it holy.' I am unable to find any language in it that says, 'except in the canneries.' "Without another word, he returned to his seat. On another occasion, the man whose mother had once feared that her son would be taken from her rose to speak on widows' pensions.

Mr. Speaker, what happens when death takes from the family the provider? The widowed mother goes to the police court or to the charity organization and her children are committed to an institution, and from the moment the judge signs the commitment the people of the city of New York are bound for their support. Let us see what effect that has upon the State itself. The mother stands in the police court. She witnesses the separation of herself and her children. They are torn away from her and given over to the custody of an institution, and nothing is left for her to do but to go out into the world and make her own living. What must be her feelings? What must be her idea of the State's policy when she sees these children separated from her by due process of law, particularly when she must remember that for every one of them she went down into the valley of death that a new pair of eyes might look out upon the world? What can be the feelings in the hearts of the children themselves, separated from their mother by what they must learn in after years was due process of law, when they must in after years learn to know what the State's policy was with respect to their unfortunate condition?

That is the old system. That is the dark day we are walking away from. That is the period that, by this policy, we are attempting to forget.

What new policy does this bill inaugurate? What new system does this bill inaugurate? The State of New York reaches out to them, "We recognize in you a resource of the State and we propose to take care of you, not as a matter of charity, but as a government and public duty." What a different feeling that must put into the hearts of the mother and the children! What better citizens that

policy must make! Why? Because it instills into that young heart a love, a reverence and a devotion for the State of New York and its sovereign power.

We are pledged to conserve the natural resources of the State. Millions of dollars of the taxpayers' money, untold and uncounted millions, have been poured into that channel. We have been in a great hurry to legislate for the interests. We have been slow to legislate along the direction that means thanksgiving to the poorest man recorded in history—He who was born in the stable at Bethlehem.

Al Smith's eloquence was useless in the 1912 session, because the Republicans had recaptured control of the Assembly. But in November 1912, the Democrats grabbed it back—and Murphy had the party's caucus elect Smith Assembly Speaker for the 1913 session.

He had never dreamed, Al Smith told friends, that an uneducated Mick from the Fourth Ward could rise so high. That he might rise higher, he was to say later, never crossed his mind. He had, after all, about reached a point beyond which, in America, no Al Smith had ever risen. No Catholic had ever been given a presidential nomination nor, for that matter, any Irish Tammany man a nomination for high statewide office. A Governor or a United States senator was supposed to, in the words of one historian, "present an image—in appearance, speech and manners—appropriate to his high office" and "somehow it was incongruous to think of an Irishman up from the city streets in such a post." Tammany men, while they might not say so, felt that way themselves; they felt unpolished and crude and very uneducated beside the "uptowners"—and they never pushed themselves forward for the top spots.

As Assembly Speaker, Smith was all that Tammany could have desired, building up the organization's patronage and power—and pushing through liquor-law amendments that allowed the sale of alcoholic beverages at hotels that Charlie Murphy favored, and forbade such sales at hotels that Silent Charlie did not.

Some observers bemoaned Smith's lack of dignity. Pounding his gavel with great swings of his arm, bellowing parliamentary rulings in a hoarse gravel voice that one writer called a "Bull-of-Bashan roar," he sometimes seemed to them like a carnival barker. He sometimes ate lunch on the podium. He talked with food in his mouth.

But seldom in the history of the Legislature had its business been transacted so smoothly and expeditiously. Cutting short long-winded speakers, hustling routine bills through at a rate that reporters clocked at eight per minute, Smith was, on the high Speaker's podium, a commanding figure.

And if Smith fought for Tammany's bills, he did not stop fighting for the factory commission's. By the end of the session, many of them had been passed, even a revolutionary workmen's compensation measure. In 1914, the Republicans regained power. Albany was filled with high-priced lobbyists representing insurance companies. Amendments to the compensation measure were introduced that looked innocent but that would in reality tear out its heart. All the amendments did, their sponsors protested, was provide that there could be direct settlements between workmen and insurance com-

panies instead of enforced resort to the machinery provided by the Work-men's Compensation Act of 1913. All that they did was enable the working man to get money sooner.

"And for whom are you doing this?" Smith demanded as he stood in the well of the Chamber and faced the Republicans. Those of them who were his friends saw not a hint of friendliness in his eyes now. "Does the working man want it? No! Does the Legislature want it? No! Does the compensation commission want it? Then what other interested party is there? The Casualty Company! That's who you are working for. . . . The agent can shake the long green before the widow or suffering laborer and tell them if they sign away their rights they can get so much but if they wait they can take their chance on getting something months hence. That carries us back to the good old days when we had no compensation law. Be honest and repeal the whole law and stop faking." A Republican legislator rose to protest, but Smith's voice cracked out like a whip. "You and your Governor have ruined the compensation law," he said. "You have gone the limit for the casualty companies. The people's case is lost."

Up in the high galleries that overlooked the floor, the reformers stood and cheered. The compensation law might be lost but they knew the Republicans would never dare to touch the others now. Great advances had been secured. And, more important, at last they had their champion. Smith, the Tammany man, had made their dreams come true. They hastened to hang others on his lance.

But even when Smith took up the banner of the reformers, he never put down the mace of the practical politician. He himself made no bones about this fact. If cynics said that he had recognized in child labor, disability insurance and workmen's compensation a great political issue, Smith said it too. When someone told him that his views were antagonizing factory owners, he would laugh and say that factory owners lived on Fifth Avenue and "There's no Democratic votes on Fifth Avenue; they're all over on Ninth and Tenth, where I live." Fighting for the working man, for better working conditions for women and children—that, he knew, was an issue on which you couldn't miss. The man who fought for the commission's legislation would be a man fighting on the side of the angels. Supporting its recommendations was more than good politics; it was the best politics.

When he had in some instances to drop either the banner or the mace, it wasn't the mace that fell. In the 1915 Constitutional Convention, he fought for the Municipal Research Bureau's recommended reorganization of the state government. Of all the issues raised by the reformers, reorganization was the one he most eagerly embraced because his years in Albany had allowed him to see for himself the almost incredible inefficiency of the system. But on the morning of August 27, 1915, Smith, who had spent all August 26 fighting shoulder to shoulder with the federal crowd for reorganization, waited in the capitol entrance hall for Progressive Republican Frederick C. Tanner, and when Tanner arrived, he pulled him aside.

"Fred," Smith said, "I've got to pull out on you in this debate." As Tanner recalled it later:

I said, "What's the matter?" And he said, "Well, I had a telephone call from the old man last night."

I said, "Do you mean Fourteenth Street?" And he said, "Yes." Of course this meant that Mr. Murphy had decided that the Democratic organization would oppose the Constitution when it was finally submitted on Election Day, and that it would not do for . . . Smith to give [his] support to a bill in the convention when the party would oppose it in its submission.

After the convention, Smith campaigned against the proposed new, reorganized Constitution. First and foremost, he was a party man.

Even though Smith felt that times—and people's needs—were changing, he did not try to break away from the party but to change it to meet the times. Every Friday evening, Tammany's sachems would meet for dinner in a private room at Delmonico's Restaurant. Now, in those meetings, Smith began to try to persuade the older men that the party should begin taking a different stance. Tammany had always held the allegiance of the lower classes with the turkey baskets at Christmas and the outings and the civil service jobs, but now people were becoming better educated, he said. Their needs were broadening and increasing. They were beginning to ask for more—and to look to government to provide that more. Tammany should become the champion of social welfare legislation. It should do so because it was the party of the people and the new needs of the people were real needs. And it should do so because it was good politics. Why should Tammany take a chance of losing the massed votes of the Lower East Side to uptown reformers who even now were sponsoring such legislation?

From the head of the table, Silent Charlie listened silently to Smith and other young sachems like Wagner. Murphy knew that Tammany must change. He knew it because of the reasons the young men gave—and he knew it because of a consideration of his own. Never had one of their own kind risen to Governor or senator; never, despite the power of Kelly and Croker before him, never, despite his own power, had a Tammany man ever come even close to the top prize in the Democratic Party for which Tammany supplied so many of the votes. Always Tammany was thought of as the party of Tweed and Kelly and Croker, of the poor from the Old Country who might be fit to sweep the streets but not to sit in the Governor's Mansion or the White House. Becoming identified with Progressivism, becoming known as the party of social progress, would be a way to shatter that image forever. Pushing to the forefront bright young men identified with such causes rather than with the ancient rituals of Tammany would be a way to spawn candidates who would shatter forever the unseen but heavy chains that weighed down the Irish Catholic in America. Why, already, wasn't at least one of his bright young men, as true to Tammany, as loyal, as regular as even he, Charlie Murphy, could wish, also an object of praise by the Good Government organizations which habitually damned anyone who sat around the table in Delmonico's? Hadn't the young man, once assailed by the Citizens Union,

recently received one of its highest ratings? Hadn't he been praised in the *Herald?* Charlie Murphy looked down the table at the young man. He gave the okay for Tammany to sponsor the legislation the man wanted. He built up the young man's reputation by running him for sheriff of New York County in 1915 and for president of the New York City Board of Aldermen in 1917. And in 1918, he wrenched from the grip of the upstate Democratic leaders the Democratic nomination for Governor and handed it to Alfred E. Smith.

When Smith won—it was the sixteenth time he had run for public office and the sixteenth time he had won—the inaugural parade up Albany's State Street was led by the Sixty-ninth Regiment of the National Guard, New York City's own Fighting Sixty-ninth. The sidewalks along the route—and the steps of the capitol at its end—were packed with Smith's neighbors from the Fourth Ward. All the night before, arriving by the thousands on trains from New York, they had tramped the streets of Albany and jammed the restaurants, hoisting beer steins in toasts to the new Governor and singing a new, catchy two-step, "The Sidewalks of New York." Their presence was symbolic. Smith's election was the triumph of the immigrants, the oath he took on the capitol steps the next morning, as his mother stood in the place of honor at his side, the first ever taken in America for a state's highest office in the accent of Ireland.

During Smith's first term, it was not that he broke loose from his party but that the party freed him. Shortly after the election, Murphy summoned him to his Long Island estate, Good Ground. Tammany would be asking him for many things, Tammany's leader said, but he had been thinking of what it meant to have a boy from the Old Neighborhood in the Governor's chair. Should Tammany ever ask for anything Smith felt would stand in the way of becoming a great Governor, all Smith had to do was tell him so and the request would be withdrawn. There were to be no strings attached to the job. Smith was to be his own man. And for a start, Murphy said, Smith would not have to worry about patronage considerations. He and Foley would keep the job hunters off the Governor's back.

Smith reappointed deserving Republicans to their judgeships and administrative posts and brought into his inner circle reformers like Belle Moskowitz, Frances Perkins, tall, olive-skinned, mustached Joseph Proskauer, and, to head the Highway Department, that trough of fatty contracts at which Tammany had been hoping to feed, Colonel Frederick Stuart Greene, an urbane engineer who wrote short stories and who displayed a complete indifference to the demands of politics in the administering of his department. The Governor did so not only because he shared Murphy's dream and not only because he genuinely wanted to help the state's urban masses but also because it was good politics. Grover Cleveland, he pointed out to his friends, had become a national figure because "the idea got around the country that he was independent of everybody."

Smith's policies were Progressive—in his first term, he bludgeoned the Legislature into restoring the Workmen's Compensation Law, increased the state's contributions to teachers' salaries by \$22,000,000 and fought for

governmental reorganization and for shorter hours and better working conditions for women and children—for the same mixture of reasons.

Smith had no patience for those who didn't understand those reasons. He had no patience for reformers who, unlike Belle Moskowitz, didn't understand the importance of practical politics in getting things done, who refused to compromise, who insisted on having the bill as it was written, who raged loudly at injustice, who fought single-mindedly for an unattainable ideal. Their pigheadedness had the effect of dragging to political destruction politicians who listened to them, of ruining careers men had taken years to build. He had seen it happen. And, more important, what was the inevitable result of their efforts? Since they refused to compromise and operate within the political framework—the only framework within which their proposals could become reality—the laws they proposed were never enacted, and therefore at the end of their efforts the people they had wanted to help, the people who he knew so well needed help, hadn't been helped at all. If anything, they had been hurt; the stirring up of hard feelings and bitterness delayed less dramatic but still useful reforms that might have been enacted. When the reformers were finished with all their hollering and were back in their comfortable homes, the widows of the Fourth Ward would still be forced to give up their children before they could get charity. What good was courage if its only effect was to hurt those you were trying to help?

So Smith despised the noncompromisers, the starry-eyed idealists. He despised, in other words, most reformers. He coined words to describe them: "mush brains," "double-domes," "crackpots," "Goo Goos." Al Smith despised, in short, what Bob Moses had been.

But he didn't despise Moses.

There were other reformers who were personally friendly to the Governor and who were vital to his political future—men his own age like wealthy Abram Elkus and men Moses' age like Proskauer—but Elkus and Proskauer were seldom if ever invited up to the Oliver Street flat for dinner. For Moses, during 1921 and 1922, the invitations came more and more often. If, after dinner, old cronies from the Neighborhood would drop by and take Smith out to the local taverns for a drink and a song or two around the backroom piano, Smith always insisted that Moses come along. In fact, discovering that Moses had a passable bass to go with his tenor, he insisted that Moses be a part of whatever quartet was hastily arranged for the evening's barbershopping, and when Moses tried to beg off, Smith would drag him out of his seat and make him stand beside him and harmonize.

The reason for the attachment was uncertain. As one of Smith's cronies put it, "They were opposites, two exact opposites, opposites all the way down the line." Was it, as some Fourth Warders, given to cliché, speculated, a "father and son" relationship? Given the affection Smith bore for his own three sons, this seemed too pat an explanation, although it was not difficult to understand why some believed it. Emily Smith would recall how, one night after dinner, her father, who had been making pointed remarks for weeks about the pale-blue Brooks Brothers shirts that seemed to comprise Moses' entire shirt collection, suddenly heaved himself out of his chair at

the dinner table and strode into the bedroom. Returning with a large box. he said to Moses, "I'm tired of looking at your blue shirts, so I bought you some." And, opening the box, he spilled out, in striped and silken profusion, a dozen of Sulka's best. The Smiths certainly began to treat Moses like one of the family. "He was like an artist in a way," Emily would recall. "He was dressed, not dirtily, but as if he didn't care. His suits might be okay, but they were obviously quite old or not very well pressed. We always kidded him about his clothes. One night after dinner he started to leave and Dad said, 'Emily, you go down with Bob and see he doesn't take one of my hats and leave his here.' And I can still see Dad and Bob laughing there." Or was the reason for the attachment, as other old acquaintances speculated, that Al Smith, who outwardly laughed at his lack of formal education and never seemed to mind his lack of money, actually felt both lacks keenly and was thus ready to be impressed by a man he thought had such a wealth of both? Was it, as some reformers thought, that, since Smith preferred to get his information from people rather than from books and memos, he needed around him advisers who could talk fluently on concepts of government and who could describe situations and projects so vividly that he could see them in his mind's eye-and that Moses, with his gift for words, was simply the most fluent and descriptive of talkers? Or was it that the man who had worked so hard to learn the art of government was able to tell exactly how hard another man had worked to learn that art-and knew that Bob Moses had, in different circumstances, worked as hard as he? Was it that the man who had learned the art so thoroughly that it must have been boring for him to talk with even the most knowledgeable of his advisers had found a man who had learned it as well as he?

Only one thing was certain. Whatever the reason for the feeling, it was there.

And therefore, if the man who despised what Bob Moses had been liked Moses so much, Moses must have greatly changed.

He had.

For the first part of the Smith interregnum, Moses seemed to be the reformer he had always been.

The Reconstruction Commission, of course, went out of existence with the ouster from power of the Governor it had been advising. Within days after the 1920 election, Mrs. Moskowitz had to tell Moses that there remained in the commission's exchequer only enough funds to pay his very small stipend and the rent on the very small office at 305 Broadway until the end of the year. Moses faced the prospect of being out of a job again on January 1, 1921. But in late November 1920, a tall, elegantly dressed, cheerful and charming man walked into the little office. He was Richard Spencer Childs, whom Moses had heard of but never met, although Childs had graduated from Yale just a year before him.

Richard Childs was the very model of the scientific management reformer. Seeing politics in terms of "good" and "evil"—the latter was a term

he used in connection with Tammany Hall—he had determined to remove the possibility of evil from municipal government in the United States and make it efficient, economic and businesslike. Having inherited the public relations genius that had enabled his father to clean up millions with a new soap powder named Bon Ami, he had already succeeded in cheerfully forcing down the throats of more than a hundred astounded municipalities a nonpartisan "city manager" form of government. Finding that a single cause did not quench his thirst for reform, he had become concerned by the fact that while New York City had a Citizens Union to rate the city's legislators, act as a watchdog over city spending and publish a bulletin that gave civic-minded citizens the information they needed to play their proper role in city government, there was no similar organization that covered the state as a whole and could exert a statewide influence for good. Childs decided to put up the money to start one, but found he had a personnel problem. With his own time fully occupied, he would have to leave the new organization almost entirely in someone else's hands, and, reviewing the list of his reform acquaintances, he concluded that none of them could handle the job. Then, one evening, doing his nightly reading of publications dealing with government that poured into his apartment from every part of the United States, he turned to one he had put aside for several months because of its length, the Report of the Reconstruction Commission to Governor Alfred E. Smith. Richard Childs had read thousands of such reports; he had written dozens himself. He knew exactly how good this one was. He spent most of the night reading it and, in the morning, walked directly from his breakfast table to 305 Broadway. "I needed no recommendations," he would recall. "I had read the work." Finding Moses at his desk in the little office, Childs introduced himself, announced that he was about to form a statewide Good Government organization and offered him a post, which he explained would unfortunately carry only a small salary, as its secretary and executive officer.

Childs had expected the man across the desk to say that he would consider the offer, that he would let him know in a day or two. At the least, he had expected to be asked some questions. Instead, without even a pause, Moses replied in a single word: "Yes."

Moses' acceptance of the offer elevated him instantly to a position of new importance in the reform movement. A statewide association of leading reformers from both parties would automatically become the rallying point not only for a continued fight for reorganization but for the state's reform sentiment as a whole, which had always dissipated its strength among too many local organizations. Moses dealt on a day-to-day basis with the old giants of the New York City reform movement—Hughes, Root, Stimson, Wickersham, Elkus, the legendary Charles Culp ("CC") Burlingham, Albert S. Bard, and William Jay Schieffelin, fighter against Tammany and the sweat-shop, who in 1920 was completing the first decade of a thirty-two-year term as chairman of the Citizens Union (Childs would be his successor). He also dealt with the young lawyers and social workers who were coming up through

reform ranks in the city and would one day take the places of the older men: Stanley Isaacs, Morris Ernst, Nathan Straus, Jr., Raymond V. Ingersoll, Henry H. Curran, Robert S. Binkerd, Charles C. Lockwood, three young matrons who stood out from the mass of broad-hatted luncheoneers, Frances Perkins, Mary Simkhovitch and Mrs. William P. (Jen) Earle, and the one of the younger men who had already made a citywide name for himself with his courageous championing of John Purroy Mitchel's first investigative efforts—George McAneny. Joining them on the New York State Association's "advisory council" were upstate reform leaders never before associated with their New York City counterparts in one group.

Inviting these men to contribute to the association's monthly sixteenpage State Bulletin or to speak at luncheon meetings at the Whitehall Club on Battery Place or the Ten Eyck Hotel in Albany, soliciting their appearance at public hearings before legislative committees considering bills in which the association was interested, Moses became well known to all of them. And as they heard him speak at the Whitehall Club or the Ten Eyck and read his work in the State Bulletin, many of these men, old and young, Democrat and Republican, saw in him the embodiment of the finest qualities of the reform spirit. During this period, he stayed true to the aims of reform. Working out of another small downtown office, he campaigned through the Bulletin for reform's hallowed causes: social welfare legislation, a "direct primary" system that would end the nomination of candidates by boss-dominated party conventions, the publication of a "state journal" similar to the Congressional Record so that interested citizens could study legislative debates and thus obtain information on which to base intelligent judgments of state activities and, of course, for the repassage by the new Legislature of the reorganization amendments that would foster efficiency and economy in state government. He campaigned against special-interest bills, against the subservience of legislators of both parties to their local bosses. Lauding legislators whose work he approved, he did not hesitate to admonish those he felt had strayed from the path of righteousness, lamenting, for example, that "Senator [Frederick M.] Davenport [of Oneida County] seems to us to be losing some of the almost religious fire which made him an unusual and significant figure in state politics. The truth is that the Senator is back on the bandwagon with the regulars. . . . He is not by nature or at his best a rural conservative. To get the most out of himself and for his supporters, a man must act in character." He enshrined the worst of the party hacks in his own "Legislative Hall of Fame." Every issue of the Bulletin devoted a full page to the "objects" of the New York State Association: "To press for progress toward responsive, responsible, efficient and democratic government in the state, to increase the number of citizens and local organizations which understand and influence state government . . ." And the Bulletin's other pages were written in the same tone. Denouncing a legislative proposal he felt had been introduced only as a matter of expediency, Moses concluded flatly: "The principle is the important thing."

The association's members approved of that tone. To them, the failure of the association to win even a single major fight was secondary. In the world

of these idealists, there were other factors to be considered. "Moses was a very scrupulous researcher," Childs recalls. "He was very reliable. You could always be certain of the facts you read in the *Bulletin*." In 1921, when more than three hundred of New York City's most influential reformers formed a fusion "Coalition Committee" in an abortive effort to prevent Red Mike Hylan's re-election as mayor, they selected Moses as its secretary. He seemed, to most of them, the very model of the reformer, even down to the shabbiness of his tiny office and the fact that, to supplement his salary and Bella's subsidy, he lectured on political science at New York University.

Some of Moses' closest personal friends and at least one member of his family, however, were becoming puzzled.

"When Robert would come over to the house for dinner now," recalled his brother Paul, "it was 'Al Smith this' and 'Al Smith that.' All he could talk about was Smith—what Smith had said that day when Robert walked him home or about some idea Smith had had." The man who had always talked—and who still talked—of most politicians with such scorn talked of Smith with respect and admiration and something that was close to reverence. Moses' brother and friends saw nothing wrong with such a feeling. But they couldn't help noticing that, in discussing Smith, Moses was talking less and less about the great issues of the time with which Smith had been involved and more and more about political maneuvers which the former Governor had described to him. "Why, when he got enthusiastic about something now, and started to really go on about it in that way he had, it was more than likely something that, when you thought about it later, was really nothing more or less than some cheap political trick," one friend said.

And when Smith decided in 1922 to run against Miller for Governor, the puzzlement spread to a broader circle of reformers. They began to feel that the model reformer, presented in the secretaryship of the New York State Association with a great chance for increasing the effectiveness of the reform movement, was instead systematically trying to pervert the association into a tool to further Smith's political career.

In 1922, every issue of the Bulletin contained an attack on Miller. Because it was an election year, Moses wrote in one issue, "The Governor's organ is keyed for harmony. The soft pedal will be on, and . . . someone will pull out the Republican vox humana stop if it is not jammed from disuse." When Miller claimed that his economy measures had reduced the number of state employees by 2,500, Moses made his own analysis of civil service figures and wrote that the number had actually been increased by 983. A furious Miller called a press conference and declared that "like most all of the statements made by that association, it is untrue, and is a piece of the propaganda that this association is scattering all over the state." He knew where the blame lay, he said. It lay with Robert Moses. Moses' work, Miller charged, was of a "partisan character."

In at least one instance, moreover, Moses' eagerness to attack Miller led him into a mistake inconsistent with the scrupulous, reliable research of the days when his only interest had been in reform. He charged that the Governor had overspent the executive-department budget and then, to conceal the fact, had paid the difference out of his own pocket and had had the state repay him out of "sums set aside for other purposes." Miller replied—and proved —that he had indeed paid the difference, which had totaled over \$8,000, but had refused to allow the state to repay him because he felt himself responsible. The discussion, Miller said, was valuable for only one purpose: "It discloses the animus of Mr. Moses and shows how hard put to it he is to find something to criticize." The New York Herald editorialized: "Mr. Moses is now engaged, not for the first time, in manifesting his superiority to the facts. . . . Mr. Moses has got a number of things all wrong. Why shouldn't he? He assumes to be a complete censor and impeccable Cato of what is done or undone at Albany. . . . he excites pity and sorrow among all the friends of noble civic objects, the fruitful pursuit of which requires exact knowledge, free from megalomania." The Herald was a Republican newspaper. Democratic newspapers, embarrassedly attempting to ignore the dispute, kept silent. So, because there was really no reply he could make, did Moses.

The effect on the association was predictable. "The whole aim was that it would be nonpartisan," Childs lamented. Although many of the younger New York City reformers, both Republican and Democratic, were still sympathetic to Moses, believing that he simply had made a mistake, the older city reformers and the upstaters, Republican almost to a man, were outraged that they were linked with a man who had slandered without cause a Governor of their party. Colonel Stimson, encountering Childs on the street one day, said that he had decided to resign from the association. "You're all right, Childs," the Colonel said, "but that Moses is a rough character."

Other members of the association also resigned. Its growth had been hampered by the differences in viewpoint between liberal New Yorkers and rural conservatives and by the physical difficulties involved in bringing both groups together in a state as large as New York and as short on good roads. But there had been signs of progress. The membership had been increasing, and city and upstate members were beginning to be more understanding of the other's viewpoints. Several of the more wealthy upstaters had even indicated to Childs their intention to become major contributors.

Now, of course, such hopes were dead. The chance to unify reform sentiment in the state and make it a force capable of influencing state decisions was gone. In fact, it was to be gone indefinitely. A half century later, with the sole exception of the single-sex League of Women Voters, New York would still have no statewide Good Government organization. In later years, it was impossible for Childs, who deeply admired Moses, to escape the feeling that Moses' actions had killed the best chance for a Good Government movement that New York State ever had.

Almost as disconcerting to Childs as Moses' sudden partisanship was Moses' attitude. When Childs taxed him about the partisanship, Moses took his protests lightly and seemed amused and not trying especially hard to conceal the amusement. Childs, he said, just didn't understand how politics worked.

Childs received further proof of how much Moses had changed during the latter stages of the 1922 campaign. He and several other reformers familiar

with a particular aspect of state government noticed that whenever Smith discussed it, he was making misstatements. The misstatements weren't very important ones; they didn't affect the main thrust of Smith's stand on the issue, with which the reformers thoroughly agreed, but they felt Smith would like to have the facts straight. Knowing that Moses was working on Smith's campaign staff, they pointed them out to him. "We were," recalls one, "absolutely shocked at Bob's reaction. He threw back his head and laughed at us and said, 'Why, we know that. But it sounds a hell of a lot better this way, doesn't it?' Bob had always been so truthful. Now Bob was telling us that Smith was telling a deliberate lie—and Bob was condoning it."

Under Belle Moskowitz's tutelage, Bob Moses had changed from an uncompromising idealist to a man willing to deal with practical considerations; now the alteration had become more drastic. Under her tutelage, he had been learning the politicians' way; now he almost seemed to have joined their ranks.

More, he was openly scornful of men who hadn't, of men who still worried about the Truth when what counted was votes. He was openly scornful of reformers whose first concern was accuracy, who were willing to devote their lives to fighting for principle and who wanted to make that fight without compromise or surrender of any part of the ideals with which they had started it.

Bob Moses was scornful, in short, of what he had been.

Moses had transferred his allegiance, and the transfer was appreciated by the man to whom he was now giving it. Al Smith won back the Governorship—by 387,000 votes, the largest plurality any gubernatorial candidate had ever been given in the state, a plurality large enough to pull in behind him every other Democratic nominee for statewide office.

And when, on January 2, 1923, Al Smith went back to Albany, he took Bob Moses with him—and he took him back big.

## 8. The Taste of Power

UNDER A CEILING fifty feet above the floor, walls of marble from Siena, onyx from Mexico, granite pillars from the quarries of New England. Arched windows of stained glass. Facing the presiding officer's dais, a semicircle of fifty-one desks and chairs of oak and burgundy-red leather, set on burgundy broadloom. The Senate Chamber of the State of New York in 1923.

At desk number eighteen on the center aisle, the Democratic floor leader's desk, a short, very slim, very blue-eyed, dark-haired man. Pinchwaisted one-button suit, slenderest of cravats, a shirt from a collection of hundreds, pearl-gray spats buttoned around silk-hosed ankles, toes of the toothpick shoes peeking out from the spats polished to a gleam. Pixie smile, the "vivacity of a song and dance man," a charm that made him arrive in the Senate Chamber "like a glad breeze." Well-timed pauses, head cocked to preface the witticism, brow raised to indicate disbelief, hands tugging at waistcoat or briefly caressing it with upward flicks of expressive palms, forehead dabbed by handkerchief plucked from left-hand breast pocket by left hand instead of by right hand crossing over the chest because a crossed-over hand separates an actor from his audience. The Prince Charming of Politics. The author of "In the Valley Where My Sally Said Goodbye" and "Will You Love Me in December As You Do in May?" slicing through the ponderous arguments of the ponderous men who sat around him with a wit that flashed like a rapier. Beau James. Jimmy. The Honorable James J. Walker strutting his stuff.

And kneeling beside desk number eighteen, one knee on the burgundy broadloom, a tall man, dark-brown, almost black hair receding a little but still slim and handsome with clean-cut and sensitive features, stretching his neck up to whisper to Walker the facts that provided the ammunition for the floor leader's sallies, bending close when the floor leader sat down, murmuring to him urgently.

The fact that Bob Moses had to kneel on the floor in the Senate Chamber was symbolic in ways other than as an indication of his new-found reverence for politics. Just as Moses had no place there that belonged to him—the fifty-one chairs were reserved for the fifty-one elected senators, and officious sergeants-at-arms made sure that no one else, no matter how frequent his presence within the Chamber, sat down in one—so he had no official position

in any branch of the state government. His only title—his only salary—was still that of secretary of the New York State Association.

But the fact that he was kneeling next to the floor leader's desk, at the very center of the Senate action, was also symbolic. For in Albany in 1923, Moses was a key figure in capitol maneuvering. Republican senators, cut to pieces day after day by Jimmy Walker's sallies on reorganization or the executive budget but knowing that Walker had no patience to master such subjects himself, knew that it was Moses who was coaching him step by step. And when—during debates in which his continual presence was not required—they saw Moses hurrying at intervals into the Chamber and over to desk eighteen, bending down over Walker, whispering briefly and then hurrying out again, they knew that the messages he bore came directly from Al Smith. The big hand that had pulled Moses out of his chair in Fourth Ward saloons to sing close harmony had now reached out and pulled him into the innermost circle of the Governor's advisers.

Moses was one of the little group which, in the late afternoon, would be swept by Smith out of the Executive Chamber and over to the home of his daughter Emily and her husband, John A. Warner, to chat with him as he bounced the Warners' baby daughter on his knee for an hour. He was one of the group who then followed the Governor over to the "menagerie" he had set up in the rear yard of the Executive Mansion. (The Governor loved animals—he had decided to keep, instead of giving to zoos, the animals bestowed by admirers as gifts. As a result, the menagerie contained tiger and bear cubs, goats, a fox and an elk, and, as permanent residents, six dogs, a mother raccoon with three baby raccoons, and three monkeys.) Moses would be one of the group that several times a week dined with Smith, at a table filled with his children's friends and made merry by the jokes he kept cracking with the servants, and after dinner returned to the Executive Chamber to participate in the legendary bill-vetoing and -signing sessions conducted over bottles of Scotch and Irish whiskey, which featured impromptu skits, songs and softshoe routines by the Governor—and his almost uncanny ability to recall details of other bills he had read over the years. "Look at this one," he would growl. "I fought against it six years ago and here it is again, just tricked up a little."

It was a mixed circle: Tammany men like George B. Graves, in his thirty-second year of service to Democrats in Albany, John F. Gilchrist, one of Smith's boyhood friends, and George V. (the Fifth) McLaughlin, a bluff, red-faced banker; and three tall, slim reformers—Moses, Proskauer and the stentorian, Roman-nosed journalistic genius with a thatch of bright red hair and a big, swinging stride, Herbert Bayard Swope. All three were master talkers. Pacing around the room, circling, interrupting, outshouting one another, they made proposals, discussed them, refined them. And interrupting and outshouting them, the Governor, the voice of experience in the quartet of reform, refusing to let anyone agree or curry favor with him, hashing out ideas as an equal. And, always, sitting apart, knitting, saying nothing until the Governor turned to her and asked, "What do you think, Mrs. M?" the plump,

matronly little woman—a woman whose qualities astonished the capital more each day. She could mother reporters and bring them chicken soup when they were sick and call them at midnight with the inside tips that they treasured, but when one wrote something about Smith that she didn't like, she knew how to persuade his editor to transfer him from the Albany beat. (When, years later, he again wrote something she didn't like, she could tell the reporter's friends, smiling sweetly, "Well, he had better remember that I got him before.") Her loyalty to Smith was so complete that when, knowing she needed money to raise her children, Tammany leaders offered her a choice of lucrative city posts in an attempt to woo her from the Governor's side, she refused so that she could continue as his unpaid adviser.

It was exciting being part of that circle. It was exciting working for Smith. His enormous plurality made him feel free at last of all constraints, at home in the Governorship. He ran an informal office—when the waiting room was filled with people, the door to the inner office would swing open and Al Smith, ruddy-faced and red-nosed, in shirt sleeves, suspenders and uptilted cigar, would come out and greet each in turn with a wonderful gold-filled smile and the question "What can I do for you?" He was never too busy to see reporters, putting his feet up on his desk as he talked to them, revolving in his swivel chair to spray first one and then the other of the two big brass cuspidors that had been placed at either side of his office. He obviously enjoyed every minute of his banter with them and, giving them his private number at the Mansion, told them to call him day or night.

But underneath the joviality was a rock-hard toughness. The blue eyes could, in the words of one reporter, "turn to steel, absolute steel." Moses and the rest of Smith's inner circle might be free to argue with him but when, after consulting with Mrs. M, he had made his decision, the decision was final. None of them called him anything but "Governor." He could end a telephone call asking for a favor by rasping out the single word "No" and slamming down the receiver. Once he had made up his mind he was inflexible.

It was exciting watching how he maneuvered. If one was close enough to Smith, there was little one couldn't learn about the game of politics—the game that wasn't a game at all—and Moses was close enough. He could watch the Governor twist arms, offer incentives and drop, one by one, with matchless guile, the veils from in front of threats. Watching Smith banter with reporters, seeing how much time he devoted to winning their friendship, Moses learned how important the press was in politics. Seeing that Smith used the banter to cover up the fact that he wasn't telling the reporters anything he didn't want them to know, Moses learned how the press could be used.

He could learn to keep things simple. The Governor wanted no technicalities in his speeches: he himself, with the genius that made him the greatest campaigner of his time, reduced every argument to its most basic terms. During the 1922 campaign against Miller, for example, Smith was scheduled to speak at a county fair in Rochester. Moses had written a draft of a proposed speech that disproved—dollar by dollar, it seemed—Miller's claims that his economies had saved the state \$14,000,000. When Smith

arose, however, he looked out over the huge crowd of farmers and uttered just two sentences.

"Governor Miller says he saved the state fourteen million dollars," Smith said. "All I want to know is—where is it, and who's got it?" Then he sat down. For a moment the farmers were silent, puzzled. Then Moses, seated by the speaker's platform, heard the crowd begin to murmur, then to laugh, and finally to break into applause and cheers.

Moses was close enough to Jimmy Walker—physically if not spiritually—to learn from him, too, as he coached the mercurial Beau James on the technical aspects of the administration proposals that the floor leader had to steer through a Senate in which the Democrats had a bare one-vote majority. When Ellwood Rabenold, a reformer who had been elected to the Senate on the Democratic ticket and whose independence was continually imperiling the one-vote majority, not only refused Walker his vote on one crucial measure but rose on the Senate floor to chastise the floor leader for "undue pressure," Moses, kneeling beside Walker, heard the dapper little man snarl under his breath, "I'll ruin him, I'll ruin him"—and he watched as, in succeeding months, Walker remorselessly drove Rabenold out of politics. Kneeling there on the burgundy carpet, Moses heard the deals by which other Democrats—and Republicans, when needed—were kept or brought into line: the judgeship traded for a senator's vote on a crucial issue, the "campaign contribution" promised for an alteration in a legislator's stand.

Being close to Smith was exciting to Moses for another reason. For a decade, ever since he had entered public service, his mind had been teeming with ideas. But not a single one had become reality.

Now, for the first time, when Moses had an idea, he had a good chance of seeing it implemented. If something was wrong and he knew—just knew—exactly how to make it right, there was a real chance that it would be made right. Ultimately, he had learned through his experience with John Purroy Mitchel, it all came down to a question of power. An idea was no good without power behind it, power to make people adopt it, power to reward them when they did, power to crush them when they didn't. If he still had no position and no power of his own, if his only power was the confidence of one man, still, in Al Smith's Albany, when that one man was Al Smith, that was a not inconsiderable amount of power. "Executive support," he had learned, was the essential that one could not do without if one did not have power of one's own. Now he had that support.

And he got a lot done.

Smith, long angered by the state prison system's complete lack of interest in rehabilitating prisoners for their return to society, asked Moses to study the state's penal machinery. Moses proposed getting youthful offenders into a nonprison atmosphere by turning poorly attended state agricultural schools into minimum-security reformatories. To aid rehabilitation of adult prisoners, he proposed starting small industries in prisons and paying the prisoners for

their work. And he proposed abolishing the notoriously repressive State Correction Commission and creating a new, more liberal State Correction Department.

Moses' plan aroused the opposition he had expected from the Correction Commission bureaucrats and the Legislature, but Smith incorporated Moses' prison-industry suggestion in an administration bill, pushed it through the Legislature in 1923, turned the agricultural schools into reformatories by the same method in 1924 and told Moses to draw up the laws creating the new department.

Smith wanted to eliminate grade crossings, the thousands of intersections on the same level of roads and railroad tracks that every year caused not only delays to motorists but deaths running into the hundreds. Other Governors had had the same desire, but the sheer cost of the job—the simplest elimination, in open countryside, cost \$60,000—put it beyond the traditional scope of state expenditures. And the subservience of the Republican legislators to the railroads had insured that the railroads would not be forced to pay. Each year, as a gesture, the Legislature would appropriate the funds for a handful of crossing eliminations, but, because of division of responsibility among the many state agencies involved, even these were generally not completed. Smith asked Moses to look into the situation.

Moses recommended that the state and the railroads split the cost and that the state finance its share by selling revenue bonds authorized by a constitutional amendment. Smith accepted the recommendation—and fought for it, campaigning for the amendment across the state. With the press denouncing Republican opposition to such unprecedented governmental expenditure and interference with private enterprise, the 1924 Legislature was forced to pass the amendment, the 1925 Legislature to repass it, and in 1926 the voters ratified it by a margin of more than a million votes. While the amendment was still being debated, Smith asked Moses to see if anything could be done to speed up grade-crossing eliminations already authorized. Moses devised a form that could be sent to Highway Division regional engineers showing the steps in each elimination and the suggested target dates for completion of each step. And these forms were not allowed to yellow in stacks in the corner of some office. Smith ordered Highway Superintendent Greene to send them out to the engineers—and to see that they used them.

Moses had a taste of power now, and he liked the taste—so obviously that, to some observers, it seemed as if he liked the taste in and for itself. Keen-eyed little Reuben Lazarus, who had been brought to Albany from the Old Neighborhood as an Assembly page when Smith was Assembly Speaker and had already become one of the most knowledgeable men in the capitol on the intricacies of bill drafting, remembers that "when I first used to see Moses in Albany, before he had any power, he was a striking figure, dark and handsome, tall and gangly, striding down the corridors with those long strides of his, but he was withdrawn, he was within himself. But then, when Smith brought him up there, he began to be, quite suddenly and quite

noticeably, a lot more arrogant, stiff-necked and self-assertive." Belle Moskowitz's son, Carlos Israels, noticed the same transformation when Moses visited the Moskowitzes. "Now he attitudinized when he talked. He would lean back, cross his knees and hold his pipe in an affected attitude."

The man who had had to wait outside so many offices liked being on the inside of everything. He talked—perhaps a bit more than was discreet—about what Jimmy Walker had said to him and about what he had said to Walker. He liked to describe how some assemblyman had refused his instructions on a bill and how he had told the Governor about it and how the Governor had laid down the law, and, thereafter, how the assemblyman had jumped to obey when he, Moses, gave him instructions. If what he was on the inside of was a world he would once have despised, he did not seem to remember those earlier feelings now. Reform work was, more and more, an irritating intrusion on his time. The hours he put in at the New York State Association office each week became fewer and fewer. The gaps between issues of the State Bulletin, once a monthly publication, grew longer and longer. And when the Bulletin did appear now, it made less and less pretense of being a reform pamphlet. More and more, it resembled a Tammany Hall broadside in support of Al Smith.

Reorganization, of course, was the key to all the hopes of Smith—and of Mrs. Moskowitz and the other reformers around the Governor. No sooner had he been returned to office in 1923 than he hurled down the gauntlet to the Legislature with a special message, drafted by Moses, that restarted the three reorganization amendments down the tortuous road to law. The Legislature passed the amendments consolidating state departments and reducing the number of elected state officials in 1923 and again in 1924, after battles in which Walker and Democratic Assembly leaders fought for every vote—and Moses hurried up and down the marble stairs of the capitol between the Executive Chamber on the second floor and the Senate and Assembly Chambers on the third, bringing them fresh ammunition.

Day after day, during the reorganization fight, Smith had watched Moses drafting the bills that contained the specifics of departmental reorganization: which agency went in which department, which powers were given to each agency. Bill drafting was called by Albany insiders "the black art of politics." An expert bill drafter had to know thousands of precedents so that he could cull out the one, embodying it in the bill he was working on, that would make the bill legal, or so that he could, by careful wording, avoid bringing the new act within the purview of an old one that might make it illegal. He had to know a myriad ways of conferring, or denying, power by written words. He had to know how to lull the opposition by concealing a bill's real content. For years, everyone had known the identity of the best bill drafter in Albany: Alfred E. Smith. And Smith had never been shy about accepting that accolade. But now, when someone brought up the subject, Smith said, "The best bill drafter I know is Bob Moses."

Al Smith was a man who believed in paying his debts. In 1923, he found for Moses a state sinecure with high pay and a low work load: the

directorship of a board that would supervise the industries that, thanks to Moses, had been installed in state prisons.

Moses told Smith he didn't want the job.

"What do you want, then?" Smith asked.

"Nothing," Moses replied.

Over and over during 1923 and the beginning of 1924, as Smith watched Moses driving himself in his service, he asked Moses what he wanted. Over and over again, Moses said, "Nothing."

And then, one day, there was something. The something was parks.

## 9. A Dream

PARKS WAS A SUBJECT listed frequently during the 1920's on the agendas of New York City Good Government organizations.

Parks had always been a concern of reformers who were fond of referring to the need for "breathing spaces for the slums" or "lungs for the city," and the agitation for increased respiratory facilities in New York—generally for playgrounds in low-income areas—had been long and insistent.

But other reform causes had been pressed with more urgency. With so much open space then in the city's outlying boroughs, there had seemed no rush to reserve any of it, and the cost of condemning buildings in the slums, so heavily built up that any other method of obtaining space there seemed unfeasible, was so prohibitive that even the most zealous of reformers had found it difficult to suggest such a step seriously. Other matters, it had seemed, should take precedence. There would be time to get to parks.

Now, suddenly, there wasn't any time. The population of New York City had increased from 4,766,883 to 5,620,048 between 1910 and 1920, and now, in the Twenties, the rate of increase was accelerating, and most of it was occurring outside Manhattan. When Bob Moses had returned to the city from Oxford in 1913, some of Brooklyn, most of the Bronx and practically all of Queens had been woods, meadows or farmland. Now red bricks, like those that had imprisoned the Lower East Side in tenements, were being cemented into walls in Brooklyn's remaining green fields, and in the Bronx and Queens great stretches of woodland and field were blossoming hideously with developers' "Spanish stucco haciendas" and "Colonial farmhouses," all available on the new merchandising gimmick: the installment plan. Vacant land, the first and irreplaceable essential for parks, was vanishing in New York City, and it was vanishing fast.

And time had another dimension now. Assembly lines, mass-production techniques—the whole new technology that would make it possible, by 1929, for sixty-nine workers to produce as much as one hundred had in 1920—had given it as a gift to the American working man. Before World War I, a seventy-hour factory week had been common; in 1920, the average was sixty hours; in 1929, just before the Crash, it would be forty-eight. The Saturday half holiday was becoming a part of American life; the full holiday was becoming more common; small-town businessmen who hadn't yet forgotten what was the devil's handmaiden were muttering at Kiwanis Club luncheons about Henry Ford's institution of annual vacations—with pay!—

for his workers. Before the eyes of America a bright new world of mass leisure was unfolding.

And along with time the new technology brought a means by which the time could be used to conquer space. In 1909, after sixteen years of experimentation with gasoline-driven vehicles, Ford had announced the invention of the Model T, which could be mass-produced, and, with the unrolling of the unparalleled prosperity of the Twenties, which gave the average American money to spend on luxuries, America beat a path to Ford's door and to the doors of his imitators. The number of automobile-owning families in the country in 1919 was less than seven million; by 1923, it would be twenty-three million.

Their newly acquired leisure time and the mobility to use it to conquer space meant, to the urban masses of America, something very particular. The countryside was no longer inaccessible. For millions of New York fathers, thanks to the machine parked near their door, no longer did a Sunday outing have to be to a Bowery beer garden or a hard-surfaced playground framed by the grimy buildings that they saw every day. Suddenly, it could be to grassy meadows beneath expanses of blue sky, perhaps even to white sand and sparkling surf. They could escape the city, and, more important, they could free their children for a time from its clutches; they could take them boating and hiking and camping, could roam with them through fields and forests, sprawl with them eating picnic lunches on blankets. They could let them do the things that they themselves had done so seldom when they were children. When they taught their sons to swim now, it would not have to be in the East River. Without even a delay for cranking up-self-starters had become standard equipment-they piled into their Fords (or Lexingtons, Maxwells, Briscoes, Hudsons, Templars, Dodges, Buicks, Chevrolets or Cadillacs) on weekends and headed out of New York City.

They headed into disappointment. Most of the land around the city was in private hands and closed to them. To the north, in Westchester County, there were indeed public parks, the rolling hills and green playing fields they sought, but Westchester had barred its parks to anyone not a resident of the county. Fourteen miles north of the city, beyond Mount Vernon, Bronxville, Scarsdale and White Plains, was an unrestricted attraction, Kensico Dam, surrounded by 2,500 acres of trees and meadows, but, since the Bronx River Parkway was still under construction, the only way to get to Kensico—after crossing the Harlem River on the narrow Broadway drawbridge that caused traffic jams even when it wasn't raised (as it was on the average of fourteen times each day) or on the even narrower East River bridges to the south and creeping through the narrow and often unpaved streets of the Bronx—was to take another narrow road that led through the traffic-clogged downtowns of the four Westchester communities. Families who left New York in the morning were lucky to arrive at Kensico by late afternoon.

To the west of New York City, across the broad Hudson River, was a vast preserve open to the city's masses: Palisades Interstate Park. Founded in 1900, funded by the Rockefellers and Harrimans with \$15,000,000, it was

considered, with its lakes, landscaped drives, herds of elk, and buildings erected "to resemble the eternal hills themselves," the finest park in the United States.

Getting there, however, could be eternal. Since there were no bridges or vehicular tunnels across the Hudson—the Holland Tunnel would not be opened until 1927—the only way across the river was on ferries, the same method the Dutch had used after having purchased Manhattan from the Indians three hundred years before. The Palisades Park Commission operated two that ran to the park itself, but they carried between them only five thousand persons. Every Saturday and Sunday morning in summer, when the ferry ticket takers nailed up the signs that said, in large black letters, FULL, there were thousands of disappointed faces—of fathers carrying picnic baskets and mothers carrying babies, of children who had been so excited about the trip that they hadn't been able to sleep the night before-still in front of them. Privately operated ferries plied the Hudson, but their New Jersey termini were some forty miles south of the park, so families using them had to bring their cars. A ferry carried twenty-four cars at a trip; often, at ten o'clock on a weekend morning, there would be hundreds of cars lined up at the ferry slips in Manhattan. Disembarking in New Jersey, families faced a drive on two-lane roads through the narrow streets of Weehawken, Englewood and Alpine.

So desperate were New York's masses that they made the trip anyway—in steadily increasing numbers. (In 1921, attendance at the park was 3,100,000. In 1922, it topped 4,000,000.) Every year, the Rockefellers and Harrimans built more playing fields and campsites, and nonetheless every year the playing fields and campsites were so jammed that Palisades Park on weekends, for all its beautiful woods and landscaped drives, seemed as crowded as the city its visitors had come to it to escape.

Increasingly, the eyes of the city's masses—and of the reformers interested in providing parks for them—were turning to the east.

The east was Long Island.

Separated from Manhattan only by the East River, it stretched out into the Atlantic Ocean for eighty miles, its bulk about twenty miles wide, and then threw two curving spits of land thirty-nine miles farther out so that its shape reminded Walt Whitman of a whale ducking its great head to plunge beneath the southern tip of Manhattan while its flukes waved behind. Its westernmost sixth was Brooklyn and Queens, crammed in 1920 with two and a half million people, a population greater than that of all but eight states in the Union, but beyond the eastern border of Queens that marked the end of New York City lay, divided into the counties of Nassau and Suffolk, another 1,373 square miles—878,720 acres—inhabited by less than a quarter of a million people, one person to every four acres, an area four times the size of the whole city and with a population less than one twenty-fifth as large, a prodigal extravagance of precisely that luxury of which New York was rapidly being drained: space.

And what space. Once, before the Ice Age, Long Island had been only the easternmost extension of the barren plains stretching out from the newformed Alleghenies. But the weight of two great glaciers rumbling down from Hudson Bay had pushed under the ocean a wide, deep valley, turning it into a body of water that would one day be called, at different spots along its route, Long Island Sound, Hell Gate, East River and the Narrows, and thereby freeing the land south and east of the valley from the mainland. Then the glaciers had cut into this land hundreds of indentations, so that when the ice had melted, its sharp edges softening and retreating, the north shore of Long Island was fjords and coves, harbors and bays, straits and peninsulas, an endless, beautiful coastline. The melted ice ran south, flooded a huge lowlying meadow on the south side of the Island and left on the ocean side of the meadow just enough low sand bars and dunes to form a barrier beach that checked the force of the Atlantic rollers before they smashed on the Island and then let them continue as gentle waves that washed the Island's shore. The ocean deposited on it gleaming white sand that gave it long horseshoes of beaches, while between the sand bars and the Island, on top of the meadow, a long, narrow, beautiful bay was created. And the tides of eons gently etched into the south shore of the mainland a panorama of incredibly twisting channels and coves and necks, of sandy shoals and tiny bays off the big one, of a marshland catacomb.

Before the two glaciers, the land had been flat, but the glaciers had pushed before them boulders, gravel, sand and clay and, coming to a halt on Long Island and melting there, had left such debris behind as two great ridges that marked the outlines of their farthest advance. The ridges lay along the flatness like a pair of scissors, with the bolt holding the blades in a place called the Wheatley Hills. One blade trailed off along the northern fluke of the Island in a mass of small rocks and pebbles; the other cut down, far out along its length, to the southern fluke and reached out along the fluke in a mass of gravel, clay and rock hills, crowned with gnarled and twisted trees, that ended in a series of steep bluffs. Over the centuries, the ridges had been smoothed and shaped into chains of gently rolling hills that ran to the edge of the whitecapped Sound and the hills had been covered with lush growths of trees—beech, oak, maple and elm, copses of sassafras and dogwood, birch and pine-so that the North Shore of Long Island became "a fresh, green breast of the New World," and, looking at it, F. Scott Fitzgerald would think that "for a transitory enchanted moment man must have held his breath in the presence of this continent, compelled into an aesthetic contemplation he neither understood nor desired, face to face for the last time in history with something commensurate to his capacity to wonder.' In summer, to the sweltering masses of New York, the cool green hills and rolling surf of Long Island beckoned like a vast playground filled with the milk and honey of leaves and grass, of sun and sand, that would sweeten the bitterness of city life.

Certainly, the Island seemed open to them. Unlike the Hudson, the East River had been spanned by great bridges—Williamsburg, Queensborough, Manhattan and Brooklyn—and running out from the bridges through Brooklyn and Queens, to the very threshold of the Island, were

three boulevards—Northern, Conduit and Queens—one of which, Northern, was perhaps the widest highway in the country. For Brooklyn and Queens residents, moreover, there was no necessity for either bridges or boulevards. Long Island was just down the road.

So was disappointment.

The Island's South Shore, the edge of the meadow that had been transformed into the Great South Bay, offered gentle waves and sandy beaches. But the bay was the haunt of the baymen, a closemouthed, independent breed, some of them descendants of families that had "followed the bay" since the Revolution, others New England Yankees who, hearing about the bay's bountiful harvests of oysters and clams, tommycods and smelts, had left the whaling boats and had moved to Long Island, bringing with them their taciturnity and distrust of outsiders.

Less than thirty miles from the borders of New York City, the baymen lived in a world that resembled nothing so much as the remote fog banks of Nova Scotia. Their lives revolved around the bay. When its tides were flood, no matter what the hour, through the thick, damp mist, hip boots slung over their shoulders, caps pulled low over their eyes, they trudged to their weather-beaten little trawlers and crept out into the fog, returning hours later so heavily laden that only the bows and sterns of the boats were out of the water. They loved the bay's sparkle in summer, its cool breezes; somehow they loved its treacherous shoals and tides and the hidden traps of swamp grass that tangled their boats' propellers. Forced off it by winter storms, they settled down in taverns near the piers that jutted into it, drinking (they were famous for their drinking) and spinning legends about it. Once you were "bay salted," they said, you would never leave.

They were fiercely determined to keep their world for themselves. The bay bottoms, the hell-fire preachers in their weather-beaten little churches constantly reminded them, were "sacred," their "priceless natural heritage," and when it came time each year for the townships that bordered on the Great South Bay—Hempstead, Oyster Bay,\* Babylon, Islip and Brookhaven—to sell leases to mine the bay's underwater crops of shellfish, the baymen crowded into town halls to listen while the leases were awarded—and no outsider was ever given a lease. No authority could awe them. In 1892, when the German liner Normannia arrived in New York flying the yellow flag that signaled a cholera epidemic on board, the state bought the only hotel on Fire Island so it could quarantine the passengers and crews there. Trawler-loads of armed baymen met the Normannia as it tied up to the hotel dock and cut loose its hawsers, and only the dispatch of a National Guard regiment put down the uprising.

Distrusting anyone "from away," the baymen distrusted especially anyone from New York. Hating the city—many boasted that they had never

<sup>\*</sup> The incorporated villages of Hempstead and Oyster Bay are, respectively, in the center and northern part of Long Island but the Townships of Hempstead and Oyster Bay, of which the villages are a part, extend to the South Shore and the barrier beach.

been there—they feared that its "foreigners," hordes of long-haired Slavs, hook-nosed Jews and unwashed Irishmen, would descend on and befoul their beautiful beaches at the first slackening in their vigilance.

And to keep such intruders away, their township boards had created, on every piece of publicly owned waterfront property that might conceivably attract visitors from the city, "parks" whose exclusive use was by statute reserved to township residents.

The baymen's land-locked cousins, the farmers of Long Island, were men of conviction, too. In no part of New York State were the white hoods of the Ku Klux Klan, an organization whose venom was directed in the 1920's not only against Negroes but also against Jews and Catholics, as numerous as in Suffolk County. Three successive chairmen of Suffolk's Republican Party had been members of the Klan, and anyone who needed an additional symbol of its power had only to look at the flagpole in front of the Islip Town Hall: the pole, read the inscription on an attached plaque, had been donated by the Islip branch of the Ladies of the Klan and gratefully accepted by the Town Board. (In 1928, when Al Smith ran for President, fiery crosses would blaze on the hills of Alabama and Mississippi—and, by orders of the county GOP organization, on the hills of Suffolk.) Combining with the baymen to dominate the Suffolk political picture, the farmers had no difficulty persuading the county's supervisors to make sure that there was not a single park in Suffolk open to city residents.

And it was neither the baymen nor the farmers who most firmly barred Long Island to those who hungered for it. The huddled masses of New York City had a far more powerful enemy. It was wealth—vast, entrenched, impregnable wealth—and the power that went with it. For it was to Long Island that the robber barons of America had retired to enjoy their plunder.

These were the men who, during the "Middle Ages of American industry," the half century of unbridled industrial expansion following the Civil War, had harnessed America's vast mineral resources and tapped its longstored capital to create needed industrial growth but who, to turn that growth into personal wealth, had stationed themselves at the "narrows" of production, the key points of production and distribution, and exacted tribute from the nation. They were the men who had blackmailed state legislatures and city councils by threatening to build their railroad lines elsewhere unless they received tax exemptions, outright gifts of cash—and land grants so vast that, by 1920, the elected representatives of America had turned over to the railroad barons an area the size of Texas. They were the men who had bribed and corrupted legislators—the Standard Oil Company, one historian said, did everything possible to the Pennsylvania Legislature except refine it—to let them loot the nation's oil and ore, the men who, building their empires on the toil of millions of immigrant laborers, had kept wages low, hours long, and had crushed the unions. Their creed was summed up in two quotes: Commodore Vanderbilt's "Law? What do I care for law? Hain't I got the power?" and J. P. Morgan's "I owe the public nothing."

The northern tip of Long Island's Glen Cove peninsula was Morgan's estate, the waters beside it the anchorage for his great black yacht, Corsair,

and all the northern reaches of the peninsula were "Morgan Country." His son—Morgan the Younger, reporters called him—and four partners of the House of Morgan lived there, their yachts riding to anchor beside that of their father and chief, and so did George F. Baker, the chop-whiskered, taciturn Sphinx of Wall Street who was the president of the First National Bank, the largest single stockholder of both AT&T and United States Steel (his holdings in Big Steel alone totaled \$212,500,000 in 1920), and who rode at the right hand of Morgan the Elder in the turn of the century's bloodiest stockmarket raids. Baker was old now—cighty in 1920—but not too old to lift his sword; in 1930, when he was ninety and America was in the Depression, he climbed out of bed, pushed aside his doctors, strode to his office and, in a series of incredible stock manipulations, increased his fortune in that year alone by \$50,000,000.

To the south of the Morgans lay the demesnes of Standard Oil, where Charles Pratt and Stephen C. Harkness, partners of John D. Rockefeller the First, had carved out adjoining fiefs on either side of a small stream. On his, Pratt built six manor houses for his six sons.

South of the Pratts, around Westbury in the Wheatley Hills, the bolt of the scissors that made Long Island beautiful, there established himself Henry Phipps, full partner of Andrew Carnegie, a man who, while Carnegie drove men to ordeals of sweat, grime and injury in the roaring steel mills of western Pennsylvania, obtained the cash to let Carnegie build more mills by using a talent "for keeping a check in the air as long as any man." Around him, in the hills, Phipps gathered his children and grandchildren. To the west of the Phippses' lands, also in Wheatley, lay "Harbor Hill," the 480-acre holding of Clarence Hungerford Mackay, president, board chairman and major stockholder of the Postal Telegraph Cable Company, precursor of Western Union, who had, during World War I, defied President Wilson's attempts to put the telegraph to use in America's service. North of Mackay lay the principality of Child's Frick, son of Henry Clay Frick, baron of coal and coke, who had gained his legendary wealth during the Panic of 1873 by purchasing for a pittance the land of desperate farmers without telling them that it contained coal, the raw material of the coke essential to steelmaking, then by crushing other rivals in the field and, with a virtual monopoly of the fuel in his hands, by quintupling its price.

To the west of Mackay stretched the fiefs of other barons of American business—the sugar truster Claus Spreckels, for example, and other Standard Oil heirs like Payne Whitney, who in the early 1920's was paying an annual income tax of a million and a half dollars. To the east of the Phippses there were more Whitneys; Ogden Livingston Mills, congressman son of Darius Ogden Mills of the San Francisco "bank ring"; and the lawyers who were the barons' trusted counselors, Colonel Henry L. Stimson, Rockefeller's Robert W. De Forest, Morgan's John W. Davis and Colonel H. Rogers Winthrop, and Francis P. Garvan, the brain behind the Chemical Trust; and, finally, in the eastern outpost of Centerport, the castle of fierce old Commodore Vanderbilt's indolent grandson, Willie. Mingled with the barons were representatives of older wealth—won by gentler means—and of newer. There

were six hundred estates on the North Shore, most of them more than fifty acres in size, some of them hundreds of acres, some of them thousands. The turrets of the barons' castles loomed above the trees along the entire North Shore of Nassau County and fifteen miles deep into Suffolk.

The castles reflected the extent of their triumphs. Mrs. John S. Phipps, already mistress of seven other houses, wanted her Long Island residence to look exactly like the great eighteenth-century English manor houses. To make sure that it would, the famous London manor-house architect George Crawley was summoned to the Wheatley Hills to design "Westbury House" and to stay for years until it was completed-a masterpiece of cherry-red brick and limestone, Georgian chimneys and a pale-gold roof rising above the trees, complete with a vault for the family silver, separate rooms for glasses and china and luggage, silver-plated bathroom fixtures and doorknobs, and a cellar so large that in 1960 the Nassau County Office of Civil Defense would designate it as a bomb shelter large enough to hold eighteen hundred persons. To make sure that the mood of England should not be lost in the furnishings, envoys of the Phippses scoured England for furniture made by Chippendale himself. The armoire in Mrs. Phipps's bedroom had belonged to James II. The mantel clock in her study was made by the clockmaker to King George II. The desk in the hall outside it was the desk on which Cromwell had signed the death warrant of Charles I.

And the Phippses were noted for their modesty and restraint. Westbury House, after all, contained only thirty-two rooms. The F. W. Woolworth mansion in Glen Cove contained sixty-two, and included not only solid gold instead of silver-plated bathroom fixtures and doorknobs but a dining-room ceiling gilded with fifteen hundred square feet of fourteen-carat gold. The Tiffany Estate in Laurel Hollow contained eighty-two. The Phippses had a private golf course and two private polo fields, but guests of the Marshall Fields in Lloyd Neck were not forced to limit their activities to polo or golf, since their hosts had also provided them with tennis courts, badminton courts, squash courts, indoor and outdoor swimming pools, sailboats, motorboats, skeet ranges—and a thousand-acre hunting preserve. No extravagance was too great. Finding that all the large hills in the Cold Spring Harbor area, where he wanted to build a chateau, were taken, Otto Kahn built a hill of his own, a small mountain, in fact, and since hauling the necessary earth and stone to the site required a railroad line, he built a railroad line.

The sports of the feudal lords of the Old World were the sports of these feudal lords of the New. The North Shore echoed to the thunder of their horses' hooves, and to the bay of their hounds as, hunting fox and deer, they ranged unchallenged across the estates, riding in a single hunt from one end of Nassau County to the other. And they partied on a scale the New World had seldom seen, outdoing themselves with swimming pools bearing thousands of orchids, diamond tiaras for lady guests, cigarettes wrapped, and designed to be smoked, in hundred-dollar bills, until an awed America named the North Shore "The Gold Coast."

And if their displays of wealth were awesome, so were their displays of selfishness. The robber barons intended to keep their world for themselves.

There was a reason for the size of their fiefs, for their willingness to buy—and, year after year, to pay taxes on—hundreds of acres that they kept in woods and never used. There was a reason for the height and thickness of the walls around those fiefs. There was a reason for their private police forces and armed guards. They needed vast acreage in order that their castles could be set far enough back from public roads so that they would not have to see the public. They needed walls so that the public should understand that it was not wanted on their acres. They needed armed guards to protect their borders from those members of the public who might, on a Sunday excursion to the country, climb a wall to get at the empty green fields beyond. They were willing, they told each other, to spend anything necessary "to keep our privacy"—by which they meant to keep the public out of their demesne.

And in their view this demesne included the whole North Shore.

The officials they controlled allowed all public roads not needed for their own access to their estates to fall into disrepair to discourage public use. Lest the public turn instead to rail transportation, a group of them led by Charles Pratt, who had learned how to handle annoyances from his mentor, Rockefeller, bought sufficient stock in the Long Island Rail Road to control its policies—and saw to it that the railroad's North Shore lines were kept especially antiquated and rickety.

The magnet that most strongly drew the city masses, of course, was their desire to swim in Long Island Sound, and the barons of the North Shore knew what to do about that.

The shore front on the Great Neck peninsula, the first of the series of peninsulas that compose most of the North Shore in Nassau and western Suffolk, was entirely in their hands, except for a few slivers owned by less wealthy individuals who emulated the barons in keeping their property for their own use. So was the shore front on the next peninsula, except for two pieces of property at its tip, Sands Point. One was a small crescent of beach, rather rocky, owned by an elderly widow, a native of Long Island, who liked to see people having fun and had not only resisted entreaties that she bar them from the property but had stubbornly refused, even for an outrageously high price, to sell her beach to those who would; it was in the process of being condemned by a village board controlled by the barons. The other, at the very tip of the peninsula, opposite Execution Rock, where the original, slaveowning settlers of Sands Point had disposed of troublesome slaves by chaining them to the rock at low tide and letting them drown as the tide crept over them, was a sandier five-acre beach owned by the federal government and holding the Sands Point Lighthouse.

The beach could be reached only by a road that crossed an adjacent, privately owned property, but the federal government had purchased an easement for public use of that road. When, however, the adjacent property was purchased by Mrs. Oliver Belmont, a cold-eyed grande dame famed for her priceless parure of emeralds and for her "Marble House" at Newport, a white marble structure whose pilasters and capitals were modeled on, although somewhat larger than, those of the Temple of the Sun at Baalbek, she

erected across the southern edge of the property, stretching from one side of the peninsula to the other, a wall made of solid concrete three feet thick, twelve feet high, topped with sharp black spikes and iron dragons' heads. Persons who asked the armed guards stationed at the massive iron gate to allow them to pass were informed that the federal government had "surrendered" its easement and that the road could be used only by persons "having official business" at the lighthouse—a fact federal officials brusquely confirmed.

On the next peninsula, Glen Cove, there were five beaches open to the public, two owned privately and three by Oyster Bay Township, rocky and unappealing, pitifully narrow strips of pebbles and weeds for whose use city residents had to pay exorbitant rates, and whose combined capacity was less than ten thousand.

There were long stretches of more appealing beach open to the public in Cold Spring Harbor, the area east of the Glen Cove peninsula, but the barons of Cold Spring had solved that problem; they had built a gate across the only road that led to the beach and stationed armed guards at the gate. Would-be beachgoers who questioned their authority were told that the road was on private property, a legal question somewhat difficult to research on a summer weekend.

Every foot of the two commas of land east of Cold Spring—Lloyd Neck and Eatons Neck—was owned by barons. Huntington Township, just beyond them, contained forty-eight miles of shoreline; 1,250 feet of it were open to the public.

Like those on the South Shore, then, the beaches on the North Shore of Long Island had been effectively closed to city residents. A New Yorker who wanted to take his family for a swim on Long Island could head only for Long Beach on the South Shore, tedious to reach because of inadequate roads and so crowded that it seemed like an extension of the filthy, incredibly jammed Coney Island beach in Brooklyn. The North Shore stood impregnable against the importunings of the masses.

And the barons of the North Shore knew how to keep it impregnable. Accustomed to dealing in the political marketplace (so many of the largest contributors to the Republican Party came from the North Shore that during the 1920's the GOP's National Finance Committee contained forty-nine members—one from each of the forty-eight states and one from Nassau County), they furnished the bulk of the war chest of the state Republican organization—and of the smooth-running Nassau County GOP machine. And they knew how to get value for money spent. They saw to it that key legislative committee chairmen were men who took orders. They sent to Albany as the assemblymen and senators from Nassau County young knights from their own ranks-bright-eyed, enthusiastic F. Trubee Davison, son of Morgan partner Henry P.—or young villagers whom their eyes had picked out as promising men to enlist in their service, such as a handsome, ambitious young lawyer whose father had been Theodore Roosevelt's coachman at Sagamore Hill, Leonard W. Hall. And while state roads of broader width, better paving and improved design might be built elsewhere, they were

not built on Long Island. A strangely permissive state law, moreover, allowed the barons to incorporate their estates into self-governing "villages" so that the measures necessary to keep out the city hordes could be legitimatized, given "governmental status"—and enforced by "village police forces," which before incorporation had been their privately employed guards.

So when the families of New York City reached Long Island, they found the milk and honey sour indeed.

If they were heading for the North Shore on Northern Boulevard, 160 feet of smooth macadam shrank to eighteen at the city line. The cars heading east had to cram into a single file. As they crept along, the paving of the boulevard deteriorated, so that each family had to watch the cars ahead jounce, one after the other, into gaping potholes, and then wait for the jolts themselves. More and more frequently, they came to unpaved stretches in which, if there had been a recent rain, cars became mired, bringing the endless line behind them to a halt. If the earth was dry, thick clouds of dust hung over the unpaved stretches, turning dirty the gay dress Mother had worn for the excursion.

As the families drove, they could see on either side of them, through gates set in stone walls or through the openings in wooden fences, the beautiful meadows they had come for, stretching endlessly and emptily to the cool trees beyond. But the meadows and trees were not for them. The gates would be locked and men carrying shotguns and holding fierce dogs on straining leashes would point eastward, telling the families there were parks open to them "farther along." There was no shade on Northern Boulevard and the children became cranky early. In desperation, ignoring the NO TRESPASSING -PRIVATE PROPERTY signs that lined the road, fathers would turn onto the narrow strip of grass between the boulevard and the wall paralleling it and, despite the dust and the fumes from the passing cars, would try to picnic there. But the guards were vigilant and it was never long until the fathers had to tell the kids to get back into the car. Later, in Oyster Bay Town and Huntington, they would come to parks, tiny but nonetheless parks, but as they approached them they would see policemen at their entrances and the policemen would wave them on, explaining that they were reserved for township residents. There were, the policemen shouted, parks open "farther along."

Of those who turned off the boulevard, trying to find a beach, the lucky ones found a spot on the five rocky strips on the Glen Cove peninsula. The others, searching mile after mile for a piece of beach not marked PRIVATE, seldom even got close enough to glimpse the water, for most of the roads down to it had locked gates across them. They would turn south again, heading back to the boulevard.

The more persistent, who determined to head east until they discovered someplace to swim or picnic, found the road becoming worse and worse. They would see Long Island villagers sitting on the fences and laughing at the families who, because of engine overheating or in a desperate try at a piece of grass, pulled off the road. The line of cars was so solid, the radiator of one almost touching the tailgate of the one before it, that, once out

of the line, it was hard for a car to get back in—and it was fun, the villagers said, to watch them try.

At the head of Hempstead Harbor, the inlet that separates the Sands Point and Glen Cove peninsulas, Northern Boulevard dipped down, curving and winding, rutted and potholed, unpaved in one stretch, and became the Main Street of Roslyn Village. It narrowed as its width was cut by sidewalks in front of little stores, and then, on the other side of the town, wound upward again before resuming its eastern course. Roslynites, watching the endless line of cars, said it took two hours just to get through town, but this was, of course, an exaggeration. In 1923, state officials clocked it on successive Sundays and found you could make it in an hour and a quarter. The officials also determined the length of time it took on an average Sunday to get from the Queensborough Bridge to Huntington, a distance of 32.4 miles. The time was four hours.

If the New Yorkers stayed on Northern Boulevard long enough, there were, indeed, after the estates and guards of the Gold Coast had been left behind—and even if the promised parks "farther along" never materialized—plenty of quiet places with grass and trees in which one could picnic. Why, Smithtown, the township beyond Huntington, alone had 92.5 acres of cemeteries, and fallen tombstones made excellent picnic tables. When the cemeteries were filled, there were always farms, for although the Suffolk farmers were as determined as the barons to keep the foreigners off their lands, they couldn't afford guards to help them do it, and they never seemed to have enough dogs and sons with pitchforks to do the job thoroughly, although they certainly tried. New Yorkers could even swim in Smithtown, if they found a beach whose owner wasn't around. Everyone knew they could, because, every Monday, newspapers would carry stories about the city residents who, swimming in the choppy Sound without the protection of lifeguards, had drowned in Smithtown waters.

Most New Yorkers, however, didn't last to Smithtown. They turned around and slunk home, eating their picnic lunches in their cars, washing them down with bitterness and frustration. If they swam on Long Island, they swam in their cars in their sweat.

Northern Boulevard was not, of course, the only route to the North Shore from New York. There was also Jericho Turnpike. There was one difference between Northern Boulevard and Jericho Turnpike. Jericho Turnpike was two feet narrower.

And the greed of the robber barons had not been satisfied by the riches of the North Shore. Led by Horace O. Havemeyer, the "Sultan of Sugar," a group of them had seized the choicest areas of the South Shore, a series of promontories below East Islip that jut out into the Great South Bay about midway along its sixty-mile length.

They lived there in a splendor equal to that of the North Shore—and they displayed an equal determination to keep their privacy unimpaired. When one of their number, Julian T. Davies, died in 1922, they feared that his estate might be bought by some undesirable or, worse, subdivided. A group of them, led by Havemeyer and his brother-in-law, W. Kingsland Macy,

decided to turn it into a private club. The obstacles might have deterred less determined men. Davies had owned only 231 acres and most of them were marshland that was covered by water at high tide, so that there was only enough solid land for a nine-hole golf course. To make the second nine, they were told, dredges would have to work for a year to haul up sand and fill in the marshland with it. They set the dredges to work.

To design the course, they brought over an Englishman who was the most famous golf-course designer in the world. To help the members with their swings, they hired a famous touring professional. They staffed the kitchen with the best chefs they could find. For those members who wanted to sail, they built a large boat basin. And when all was ready, they thought of a name, the Timber Point Club, and opened the club—to exactly one hundred persons.

"You could play golf there on a weekend and if there were two other golfers on the whole course, you considered the place crowded," recalls Robert Hollins, the son of one of the members. "God, that place was empty."

And that was exactly how the members wanted it. As they toured the majestic course that sloped down to the bay, men in caps and knicker-bockers and long socks, ladies in long pleated skirts and middy blouses, they considered the lack of people as big an asset as the view. In 1923, Suffolk County established a Mosquito Control Commission and asked various members of the club for contributions. "God, the mosquitoes in the summer were unbelievable on that golf course," Hollins says. "You'd look at the fellow you were playing with and there might be twenty on his face." But most Timber Pointers gave nothing. If the commission got rid of the mosquitoes, Mrs. Hollins explained, more "foreigners" might find the South Shore attractive and try to live there. "I'd rather have the mosquitoes," she told her friends.

To keep the public out was worth any price. When the property adjoining the Timber Point Club, a 1,500-acre estate owned by an eccentric old millionaire who had never been one of them, anyway, George C. Taylor, came on the market after his death, the Timber Pointers raised \$250,000 to buy it. Then they hired caretakers, stocked it with herds of deer and flocks of wild pheasant—all for less than ten days of hunting a year and an additional guarantee that they would never have to look over from their golf course and see on the land adjoining it anyone they didn't know.

Thanks to the barons and the baymen, the sandy beaches of the South Shore were as thoroughly closed off to New Yorkers as the rocky beaches of the North. Those New Yorkers who could not afford the exorbitant charges at Long Beach or squeeze into the limited public area of the beach there were shunted along the South Shore from village to village until they reached the flat, unshaded, bleak potato fields of Suffolk County.

And the shunting on the South Shore was along Merrick Road, an artery as narrow as Northern Boulevard and even more congested, which crossed the clogged downtown areas of a dozen South Shore villages and was intersected at half a hundred locations by the tracks of the Long Island

Rail Road, so that every time a train came through, the line of cars, miles long, would have to stop and wait until the crossing gates went up again.

And still, the need was so great that every summer weekend families from New York City flocked to Long Island, trying Jericho Turnpike instead of Northern Boulevard, or the South Shore instead of the North, or a side road they had noticed the weekend before and which would, they felt sure, lead to a beach they could use—an endless eastward-bound stream of baseless hope that lasted from dawn to late afternoon. And all forecasts showed that the need would rapidly grow greater still: the city's population, which had increased by a million persons during the past ten years, was expected to increase by another million during the next ten.

Given the need, therefore, and the possibility that Long Island could meet it, the thoughts of reformers interested in parks had for years turned first to the Island. Here, they all saw, was the land of the greatest opportunity.

But they also saw, even the most unrealistic of them, that the amount of power with which they had to contend on Long Island was such that efforts to create parks there seemed, even to themselves, foredoomed.

In the past, the governments that created parks had been the governments of the areas in which the parks would be located. The township and village governments on Long Island would never create such parks. Conservationists had begun to talk about "state parks," but a state park had to be created by a state, and New York State's Legislature was controlled by the Long Island barons. A dozen proposals by the Good Government organizations for Long Island parks had been introduced in that Legislature; not one had ever made it out of committee.

The scope of the problem discouraged reformers as much as the political difficulties involved.

Parks large enough to serve any appreciable portion of New York City's millions would have to be measured in the hundreds of acres, and since Long Island was run almost entirely by hostile local governments and landowners, how could those acres possibly be obtained? By purchase? Long Island property was valuable, immensely valuable in the hills and along the beach front where parks should be located. By condemnation? Condemnation of valuable property on the scale required would be fantastically expensive—in fact, unheard of in America. And since the barons' battalions of lawyers could be expected to fight condemnation with every tactic available, the proceedings would take years.

And if, somehow, the parks were created, how would people get to them? Long highways would be required, and their rights-of-way would necessarily cross hundreds, if not thousands, of different properties, and that meant hundreds, if not thousands, of landowners who would be ready to fight, and that would mean hundreds and thousands of additional condemnation proceedings. The reformers realized that even in the unlikely event that they won on Long Island, that they actually succeeded in unhorsing the powerful barons, they wouldn't know what to do with their victory. The

problem was so big, the reformers thought it was insoluble; by 1922, their "park" discussions concerned mainly the creation of more small playgrounds in the city and the improvement of playground equipment.

Often, when Bob Moses went home at night, he would be coming from such "park" discussions, because Smith, trying to maintain his liaison with reform groups in preparation for another run for Governor, frequently asked him to be his "observer" at reformers' conferences.

Moses tendered such discussions only cursory attention. With his attacks on Governor Miller occupying his time, wordy debates over whether a playground site should be on Fourteenth or Fifteenth Street interested him not at all.

But during the summer of 1922, when Bob Moses went home, he went to Long Island. Invited to weekends in Babylon by friends during 1921, he and Mary had fallen in love "with the town, with the bay, with the whole South Shore." In 1922, they rented a bungalow of their own for the summer. So when the discussions on parks ended, he would hurry to the Long Island Rail Road station and catch a train on the South Shore line.

The trips from and to the city took over an hour—forty-five years later, Moses could still reel off without effort the names of the stops as the conductors had chanted them: "Valley Stream, Lynbrook, Oceanside, Rockville Centre, Freeport, Merrick, Amityville, Lindenhurst and Babylon"—and the train was hot. Moses would try to bury himself in work, but every so often he would look up and glance out the window. And after a while he began to notice that, while most of the route was filled with one-family homes, there were, between some of the villages, thick leafy bands of woods and, gleaming brightly through the trees, the blue water of ponds and streams.

The woods were all to the north of the railroad, the left-hand side of the train going out to Babylon and the right-hand going into the city. Bob Moses began now always to sit on the side nearest them. It was the 1920's; the men around him would be sitting studying the stock-market quotations in their newspapers. Bob Moses sat and stared out the train window.

One weekend he went to Babylon Town Hall and asked what the woods were. An old-timer told him he must be talking about the old Brooklyn water-supply properties, the streams and the areas around them in Nassau and Suffolk counties that Brooklyn, then an independent city, had purchased in 1874, fenced off and kept guarded so that, in case of a water shortage, it would be able to dam the streams and use their water. On Monday morning, Moses stopped by the New York Municipal Building and asked a clerk in the Department of Water Supply if the city used those properties. Why, no, the clerk said, it never had. There had never been any need. And, come to think of it, now that New York had acquired the huge Croton and Ashokan reservoirs upstate and built aqueducts from them to the city, there probably never would be.

And suddenly, the eyes that had looked at the mud flats below Riverside

Drive and seen a great highway and a great park were looking at something else. The eyes that "burned with ideas" were burning again—and they were focused on Long Island.

Most of the water-supply properties were set far enough north of Merrick Road, behind blocks of private homes, to be invisible from it, but Merrick Road was the only way of getting close to them. Moses had never learned to drive, but he obtained from Smith the use of a car and chauffeur and a letter authorizing the guards at the properties to let him enter their gates. And on weekend mornings, as the line of cars from the city crept east along the road, Moses, leaving Babylon, had himself driven west.

Arriving at the spot he had marked from the train, Moses would order the chauffeur to drive north along side streets until there was no more road for a car, and then he would get out and walk through back yards and vacant lots and along footpaths until he reached the gates and could show his letter to the guards. Then he would plunge into the woods.

They contained surprises.

Through the train windows, he had glimpsed in the woods that lay between Merrick and Freeport a small pond. When he got into those woods on foot, he found the pond, but, beyond it, he could see another gleam of water. Reaching that, he found a larger pond and, beyond it, another gleam. Beyond that, there was another. There were four ponds, linked by a stream that ran due north, and each was larger than the one before. Lilies floated in them. Pickerel and trout flickered beneath the pads. Huge oaks, beeches, birches and pines surrounded him. And as he tramped steadily north, there seemed no end to them. He was not in a small woods, he realized, but in a forest—it would survey out at more than seven hundred acres—that lay untouched in the heart of Nassau County.

There were another four ponds—and another wooded seven hundred acres—stretching south from Wantagh all the way to the Great South Bay. There were 595 more acres near Massapequa. Between Valley Stream and Lynbrook, there were only fifty acres, but in the center of them was a lake a quarter mile across. And when he entered the woods between Lynbrook and Rockville Centre, he realized he had come to something that dwarfed the others. The thin band of woods that he had seen from the train at that spot ran north for more than three miles, broadening as it went. Within the woods were long, rolling meadows. He had heard that somewhere in the woods was a reservoir, where a stream had actually been dammed by Brooklyn municipal engineers decades before, that couldn't be seen from the train, and he pushed on, trying to find it. With branches slapping at his face and vines tangling his feet, he came at last to a man-made embankment. Scrambling up, he peered over its top—and there before him lay a body of water almost a mile long and half a mile wide. It was much bigger than the big reservoir in Central Park, he realized. And there was more land around it, he guessed—and he turned out to be right—than there was in Central Park.

Back on Merrick Road, Moses saw the cars from the city still creeping along in the dust and heat, thousands of them, tens of thousands, crammed with people searching desperately for a little patch of green, a spot of clear water, and most of them destined that weekend to find neither.

And behind him, not a quarter mile from the road but unknown to all but one in a thousand of the drivers on it—and closed to even that one—was land, a vastness of land, overflowing with the fruits they sought. Land that didn't have to be purchased. Land that didn't have to be condemned. Land that was owned not by the governments of Long Island, which viewed the masses of New York City as foreigners, but by the government of New York City. Land that could be opened to the city's people merely by turning a key.

Adding together the acreage of the various tracts of woods, Moses could hardly believe the figures. They totaled 3,500 acres. Three thousand five hundred acres just sitting there empty and unused.

And ideally situated. All five tracts were within thirty miles of Manhattan, within eleven miles of the city line. The woods between Valley Stream and Lynbrook, in fact, were only two miles from that line.

And what you could do with those acres! There could be hiking trails through the woods, of course, and picnic sites in the clearings. But there could be more. When reformers, when park planners in general, talked about large parks they talked in terms of keeping them unspoiled and rustic, as close to nature as possible. Even Central Park contained relatively few facilities for any sports other than walking.

But Moses saw a different vision. He had noticed meadows back in those woods that seemed just made to order for baseball diamonds, and level spaces with only a few trees that could be cleared for tennis courts. Why, a portion of the biggest tract, the one between Lynbrook and Rockville Centre, seemed almost made to order for a golf course. And why should people be restricted to looking at the ponds and lakes? Why couldn't they swim in them? That great reservoir alone could cool thousands of sweating youngsters from the city! And there were so many acres available that even after all the facilities were laid out, there would still be vast stretches of woods that could be left untouched except for rustic hiking trails.

Suddenly, the burning eyes were looking at everything on Long Island in terms of parks.

Having fallen in love with the South Shore, Moses had done so with his customary fullness of passion. He kept the Babylon village librarian scurrying to the cabinet in which were locked the ancient, privately printed books that recounted the legends of the Great South Bay. Buying an old bayman's old, broad-bottomed, very slow motorboat, partly covered with a canopy, which Mary named the Bob, he putt-putted around the bay following the maps described in the books, sometimes with Mary and his daughters, often alone. Heading out to the pier where the Bob was moored, he paused frequently to chat with the sailors who were too old to follow the bay any more and instead

spent their days sitting on upturned oyster barrels looking out over it; and, finding him a willing listener to their stories, the old men told him about hidden inlets and about meadows where flocks of wild birds nested, and he spent long days exploring them. Sometimes, in fact, he spent days that were too long; then, as he sat in reverie, the bay's ebbing tide would leave the *Bob* stranded on a sand bar. After a while, Mary knew what it meant when darkness came and her husband still hadn't returned from the bay; she would call a friend, Harry Fishel, whose boat had a shallower draft, and Fishel would go out and bring him in. In the morning, the two men would return to the *Bob*, now refloated by the flooding tide, and Moses would go back on board with a sandwich Mary had prepared—and spend another day on the bay.

Moses' attention had early been caught by the barrier beach, the strip of dunes and beach grass and wild marshes about five miles offshore that from the pier was a long low line on the horizon across the bay. Baymen called it "the strand." Deserted except for a few tiny, scattered summer colonies, an aura almost of mystery hung over it. The baymen told stories of murders and duels to the death on it between sailors armed only with hand spikes. The summer colonies had names—"Short Beach," "Gilgo" but the names didn't match those on the old maps he found in the library. The very shape of the strand was different. That, the baymen explained to him, was because the ocean was constantly remolding it. Because the "set" of the Atlantic off Long Island was inexorably to the west, they said, sand and pebbles were continually washed up at its western end and the beach grew longer every year. But storms, particularly the howling "sou'easters," also swept away part of the strand each winter, slashed new inlets through its dunes, closed old ones. The name "Fire Island" by which the easternmost section of the strand was known was actually a corruption of "Five Islands," a name given to it in the eighteenth century when it had been divided into five parts by four inlets, all of which have since completely disappeared.\*

Fire Island stretches from Bay Shore in Babylon Township east to Moriches. The western section of the strand, separated from Fire Island by a narrow inlet, parallels Long Island from Bay Shore all the way to Freeport. This section was called, vaguely, "Jones Beach." Even the oldest baymen weren't certain where the name had come from, but Moses was. In the old books in the Babylon Library, he had read about Major Thomas Jones, a seventeenth-century Welshman whose valor at the Battle of the Boyne moved King James II to grant him a commission as a privateer. ("That was far from being a pirate," one of the old books emphasized; "it was a *legitimate* business.") Jones made a fortune legitimately plundering ships that did not fly the English flag. In 1695, he purchased thousands of acres of the deserted strand from Long Island's fierce Indian tribes "for a

<sup>\*</sup> Contrary to the belief, held even by some Long Island historians, that Fire Island was named for the signal fires set by whalers and pirates, the old documents in the Babylon Library—they can still be found there—show conclusively that it was originally "Five Islands."

barrel of good cidar," peopled it with crews which dashed out in longboats to capture whales drifting nearby—and made another fortune. Marrying beautiful Freelove Townsend, he erected a house—with thick walls and slits for rifles—on one of the necks of land which at that time linked the strand to Long Island.

After Jones's death, sou'easters tore away the necks, and the strand became an island itself. Between it and the mainland, the underwater reeds grew thicker. The tides tugged at the sand underneath the Great South Bay and the channels between the shoals became more and more crooked and treacherous, sometimes shifting course from week to week. People who tried to sail or motorboat to Jones Beach had to get out and push their boats off sand bars so frequently that one bay captain referred to his weekend journeys as his "walks to the Beach." The summer-cottage colonies grew smaller and smaller. In winter, except for occasional hunters after wild birds and a few hermits who lived in caves hollowed out of the dunes, Jones Beach was deserted.

Sometimes, when Bob Moses stepped out of his boat onto Jones Beach, he could not see another human being. In front of him would be nothing but a wide, straight strip of the whitest sand he had ever seen, stretching unbroken until it disappeared at the horizon, sliding on one side beneath the ocean surf, rising on the other into dunes covered with tufts of beach grass, little gnarled bushes and stunted trees, with, between the dunes, marshes of a peculiar, striking grayish-green color from which swooped up herons and gulls. He had returned to it a hundred times, pushing and pulling his little boat through the reeds, to sit lonely on the beach with wind rustling his hair, drinking in the wild, desolate scene.

Had he been still the poet he had been at Yale, Moses might have looked at this scene and thought of Byron. But now he was thinking of parks. He looked at Jones Beach with eyes that had looked at crowded New York City and had seen a hundred ways of improving it—and he realized that the emptiness of the strand, its endless, untouched vistas, was a clean canvas on which he could draw whatever he chose. And, looking at it that way, he realized that all the landscape needed was the painting in of people to make it a bathing beach, a great bathing beach, a bathing beach such as America had never seen. Moreover, the people, the masses of New York City, were amazingly close. Jones Beach had seemed so cut off from the world, but, he realized with a start, when he stood on its western end he was less than twenty-five miles from Times Square.

The problem, of course, was to get the people out there, and now in the evenings, in his Babylon bungalow, Bob Moses began to study maps of Long Island. One night he suddenly noticed that the water-supply properties off Merrick Road lay in a row. A straight line could be drawn through them. Therefore, so could a road. If a road were built out from New York so that it traversed those properties, a substantial part of the right-of-way would not have to be purchased or condemned. Moreover, the road could give the city masses easy access to the water-supply properties, which he had already determined were themselves ideal for parks. And since one of the

properties, the one at Wantagh, ran all the way down to the Great South Bay, another road—connecting with the road leading out from New York—could be built south down to the bay without the necessity of any purchase or condemnation at all. Once it reached the bay, it would be directly opposite Jones Beach. And since the bay was so shallow, it ought to be easy to construct a causeway from the end of the road to the beach. "That was the idea behind Jones Beach and the Southern State Parkway," Moses would recall years later. "I thought of it all in a moment."

As he thought about the road, he thought about the Bronx River Parkway. Although it hadn't yet been opened, the newspapers were full of stories about it. With the exception of a three-mile stretch of the Fenway in Boston and, of course, the transverse roads in Central Park, the parkway would be the first highway in the country to eliminate traffic lights and intersecting traffic by lifting all crossroads above it. The bridges that carried the crossroads would be faced with stone to blend in with the scenery, and the bordering right-of-way would be completely landscaped. Newspapers were predicting that it would be the most beautiful road in America. A road through the Long Island water-supply properties, Moses realized, would, on that portion of it which traversed the properties, be lined with the beautiful trees he had seen. The north-south road running from it to the bay would be lined with trees its entire length, and the causeway across the water would cross the bay panorama. The roads he was thinking of, he realized, could be more beautiful than the Bronx River Parkway.

The line he had drawn on the map through the water-supply properties seemed to point like an arrow into Long Island's South Shore. Looking beyond its point, the easternmost of the properties, Moses saw a series of promontories jutting out into the Great South Bay. He recalled that the promontories were supposed to be beautiful. And on weekends now, Moses had himself driven east.

From the car, he could see that most of the promontories were private estates, but in East Islip he noticed a large piece of property fenced off but overgrown with underbrush and weeds and apparently deserted. A real estate agent told him that it had belonged to an eccentric old millionaire named Taylor and, when he died, had been purchased by a group of wealthy men who allowed it to grow wild because they used it as a game preserve.

There may have been caretakers on the Taylor Estate, but Moses didn't see them when he returned to it. Tramping through the brush and the woods, frightening groups of deer, startling coveys of pheasants, he came to a group of out-buildings, all deserted and all except one, which had been turned into a hunting lodge, crumbling. Looming over them was an old mansion, paint peeling, with broken windows. In front of the mansion was a long meadow of uncut, waving grass that had evidently once been an imposing lawn. Beyond it was white sand and then the dark blue-gray of the bay, and beyond the bay, just a line on the horizon, the dunes of Fire Island. Stirring the trees, the grass and the water was the gentle breeze which Moses had learned from the baymen invariably cooled the bay shore every day from about eleven o'clock in the morning until near sundown. Overhead was a

lot of sky. To the east, across a little stream, was an expanse of carefully manicured grass and, on it—the only human figures anywhere to be seen —several foursomes in caps and knickerbockers and long socks striding along with the caddies of the Timber Point Club. Moses had taken to carrying a yellow legal note pad on his excursions. On it now he began to sketch the property, and on the sketch he drew lines, some to indicate where the bathhouses for the bathing beaches would be, others to show a golf course, still others to outline where a public bridle path would wind through the trees and where the fences would be placed to pen the deer and pheasants so youngsters could watch them.

The mind leaped on. Were there similar vacant properties on the North Shore? Soon, through woods and meadows overlooking Long Island Sound, there was striding a tall, athletic figure dressed in corduroy pants, heavy shoes and, usually, an old and stained windbreaker, and carrying in one hand a yellow legal note pad. Within weeks, Moses had discovered in Smithtown a vacant estate magnificently suited to his purpose. As he walked north through its thousand wooded acres, he noticed they sloped steadily downhill and he assumed they were sloping down to the beach, but when the woods ended, he found himself staring at a huge, pale-green expanse of grass that was actually below the level of the beach beyond, and he thought in that instant of a name for the estate: "Sunken Meadow."

The road to Sunken Meadow? It could, perhaps, run from New York along the middle of the Island, where the only opposition would be that of farmers, but Moses knew at once that the road wasn't going to go there. If scenery was an attribute of parkways, why, here was a chance to run a parkway through real scenery: the Gold Coast estates. At night, now, Moses began to pore over maps of the North Shore, his pencil sketching out alternate routes. He saw on the map the names across which his pencil was sketching: Phipps, Whitney, Garvan, Morgan, Mackay, Vanderbilt, Otto Kahn. But he saw in his mind a road bordered, beyond the grassy right-of-way, by the magnificent stands of trees the robber barons had imported from Europe and by hedges neatly trimmed by their legions of gardeners.

And the pencil kept sketching.

The mind leaped on. It took as its compass not an island but a state.

The state's other large cities—Albany, Buffalo, Rochester, Schenectady, Syracuse, Troy, Utica—were growing, not as fast as New York but fast enough. So was their need for state parks.

But the State Legislature, considering parks a luxury outside city limits, refused to give them any. In 1922, there wasn't a single state park in New York anywhere east of the Hudson River. West of the Hudson, between the Palisades and Buffalo, there were twenty—nineteen enclaves around famous old mansions or Revolutionary War battlefields that had been purchased by private philanthropists and donated to the state, and one, a thousand-acre tract on the Genesee River, that was New York's only state park of substantial size, donated by Buffalo philanthropist William Pryor Letchworth.

Even when the state was given land, it didn't take care of it. In 1923, the total legislative appropriation for upkeep of state parks would be \$30,000. The philanthropists or their descendants or the historical societies designated in their wills to administer the parks had to pay for their upkeep. Permanent improvements—even comfort stations—were all but unheard of. Most parks could not be reached by automobile. In 1922, those state parks that did exist in New York went all but unused.

Part of the difficulty, Moses had learned while running the Reconstruction Commission, went back to the old question of organization. Fearing—knowing—that the state would let them run down, the parks' donors had turned their administration over to men or societies dedicated to the preservation of historic or scenic attractions. Montcalm and Spy Island "State Parks," for example, were administered by the Fort Oswego Chapter of the Daughters

of the American Revolution. Having no authority over private individuals or organizations, the Legislature was reluctant to give them money. And since no central body of any type unified their activities, they presented to the Legislature the spectacle of separate agencies competing with each other for funds.

This lack of unified administration also meant that a considerable potential source of power for parks was dissipated. In many cases, the trustees of the parks were political leaders in the upstate counties in which they lived and from which came many of the Republican legislative leaders. United, the park trustees could have exerted considerable influence in Albany, but, acting separately, they dissipated their influence.

State park administration was one area in which the Reconstruction Commission's recommendations had been ignored. A group of the commission's trustees, including many of the upstate park philanthropists, had begun making a "comprehensive study" of the state's park needs but had stopped when the commission was disbanded. Moses, not interested in parks, had given the report scant attention, anyway. But now he asked the philanthropists to complete the study under the aegis of the New York State Association. He toured their parks with them, urged them to make recommendations for their development, delicately urged the more conservative of them to think in terms of improved roads and enlarged accommodations. And he urged them to start thinking in terms of a unified state park system that would be a formal part of state government. They need not worry about losing control of their beloved parks to faceless bureaucrats in Albany, he assured them; control of each park could be left in the hands of the men then administering it, and to insure that future appointments to the commissions would not become involved in politics, the commissionerships could be unpaid jobs. But if there was a single state body controlling parks, the demands for funds from the different sources interested in parks could be funneled into it and focused, so as to put more heat on the Legislature. When their recommendations for their individual parks came in, he combined them in a report, A State Park Plan for New York, which he wrote himself and issued in the name of the New York State Association.

The report was a seminal document in the history of parks in America. Its scope was in itself revolutionary: New York's park needs, it said, were so great that they could not be met by ordinary legislative appropriations; a bond issue would be required—and the amount of the issue should be \$15,000,000. But it was not the scope that startled most; New York and other states had floated bond issues for parks before, even if none of the issues had been nearly so large as that Moses proposed. Rather, it was the philosophy. The expenditure of proceeds from previous bond issues had been restricted to land acquisition and in the word "acquisition" was embodied the philosophy that had always in the past governed parks in America, the belief that parks were only land and the trees and grass and brooks on the land, that their sole purpose was to serve as "breathing spaces" for the city masses and to enable them to relax and meditate among beautiful surroundings, to commune with nature, and that they should therefore be kept in their natural state. If the city masses no longer were content with communing, if they wanted space not only to meditate but to swing—to swing baseball bats, tennis rackets, golf clubs and the implements of the other sports that their new leisure time had enabled them to learn—this was a desire that had not yet been translated into governmental action in the United States.

But Moses translated it. The \$15,000,000 bond issue, he said, must specifically authorize the Legislature "to provide for permanent improvements as well as the acquisition of land . . . for large facilities which make a park accessible and attractive to people." "Conservation"—the previous park ideal—had to be combined with "recreation," he said. Furthermore, he said, "permanent improvements" did not mean only improvements within parks; it also meant means to get to them—"parkway and boulevard connections between state parks and between state parks and neighboring centers

A Dream 167

of population." And state parks should no longer be talked of as separate entities; there should be a state park system; the state should be divided into eleven regions and all the state parks in each of these regions should be administered by a single regional "state park commission"—the Long Island parks he proposed, for example, by a Long Island State Park Commission. The presidents of those commissions should sit as a State Council of Parks, which would coordinate and unify park policy.

Moses' park report was soon being read—and hailed—by park planners all over the United States. But if its recommendations were to become reality, they would have to become reality through a man who didn't read reports and who seemed highly unlikely to be a parks enthusiast.

Al Smith "somewhat lacked," as one writer put it, "Theodore Roosevelt's zest for 'the strenuous life.' "If there was a sport in which the Governor was interested, his friends didn't know it. He refused to go with them to football or baseball games or even to boxing matches. When he took his family swimming, he watched them from the beach, his little pot belly protruding through his bathing suit, a cigar clenched firmly in his teeth, eyeing the ocean warily. Smith's childhood, moreover, had not prepared him to appreciate Moses' insistence on active sports for the masses.

When Moses began explaining his park plan, the Governor was dubious. Its cost astounded him. "You want to give the people a fur coat when what they need is red flannel underwear," he said once.

But Moses had one advantage. Smith's mind was the type that responded most enthusiastically to what Frances Perkins called "the graphic presentation." The Governor, she said, "wanted you to tell him what it looked like. . . . He got more information out of people who would tell him the exact thing they'd seen, [who] described the detail. . . . Then he saw what it was like." Anxious to improve the lives of the urban poor, he was especially anxious to improve them through things he could actually see improving them; his Governorship was distinguished by his emphasis on works of physical construction, solid and visible. Nothing was more visible than the physical entity that was a park, and no one was a more vivid describer, a more graphic presenter, than Bob Moses. After Smith's election in November 1922, Moses persuaded him to visit the New York City watershed properties. They were barren in winter, but with his gift for words Moses made the Governor see them as they could be in summer, with leaves on the trees and people sitting at picnic tables under them. Day after day, pacing restlessly back and forth before the Governor's desk, he poured out his ideas in a continual flow of words. Sometimes the other members of Smith's inner circle had to smile at Moses' vehemence and earnestness. Once, as the torrent of words flowed over him, the Governor gradually began sinking lower and lower in his chair, and, with Moses still talking, disappeared at last under his desk. But when he poked his head up, he was smiling.

Moses persuaded Smith to attend a meeting of the New York State Association park committee at the Whitehall Club and made a lengthy,

passionate speech. At its end, Smith arose. "Bob, you win," he said. He directed Moses to draft a special message to the Legislature asking for passage of legislation establishing a State Council of Parks and authorizing submission of the \$15,000,000 proposal to the people in referendum. On April 18, 1923, two weeks after Moses finished the message, Smith delivered it

Under state law, only one bond issue could be submitted to the voters each year. Smith had also proposed an issue for new hospitals and mental institutions. Moses pleaded that parks should come first, but Smith disagreed. When the Governor delivered the message Moses had drafted, he announced he would not push for adoption of its proposals until 1924. It was clear to his advisers that the Governor was worried about public reaction to an expenditure for parks of such unprecedented dimensions.

The reaction was not long in coming. Smith's secretaries reported a most remarkable upsurge in the volume of his mail. It came from the City Club of New York ("Congratulations!" club secretary Raymond Ingersoll wrote delightedly) and from Pomona Grange Number 416 ("God bless you! Sincerely, Matilda Hunt, secretary-treasurer"). It came from slum dwellers and suburbanites. And unlike the mail on most issues, this mail did not contain letters on both sides of the issue. There was, the Governor's secretaries reported, apparently only one side to this issue: everyone was for parks.

There was hardly a newspaper in the state, moreover, that did not write an editorial supporting the message. And the praise did not stop at the state's borders. From all over the country, letters were sent to "Governor Smith, Albany" expressing hopes that the writers' own states might follow his example. Wrote the chairman of the National Conference on State Parks: "The New York program . . . will stimulate valuable work in other states. . . . You are rendering a real service not only to your own state, but to other states of the Union which will have the advantage of following your experience."

Mark Antony, shrewd politician, knew the potency of parks as an issue. Rousing the mob to fury against Caesar's "honorable" slayers, he reserved for a climax the reading of Caesar's will. "Let but the commons hear this testament," he cried, "and they would go and kiss dead Caesar's wounds." And it was not the revelation that Caesar had left each Roman citizen, "every several man," seventy-five drachmas that sealed Antony's victory over the citizens' emotions but rather his revelation that

... he hath left you all his walks, His private arbors and new-planted orchards, On this side Tiber; he hath left them you, And to your heirs for ever; common pleasures, To walk abroad and recreate yourselves,

Al Smith, shrewd politician, had risen to the Governorship on great issues, and he was not slow to recognize a new one when it came along. An

A Dream 169

Albany reporter watched the awareness grow on the Governor and his circle. "You could see them beginning to realize that doing what Moses wanted would be politically advantageous," he recalls. "One of them told me that supporting parks meant that the Governor would be helping the lower- and middle-class people, and thereby winning their support, and that the intellectuals would be for him because they saw parks as part of the new pattern of social progress. So you'd have all three groups supporting you. And besides, 'parks' was a word like 'motherhood.' It was just something nobody could be against." During the spring of 1923, Smith assured Moses he would push for adoption of the park program in 1924.

And in the summer of 1923, Moses went back to tramping around Long Island.

"I went with him once," a friend says. "We walked all day through one piece of beautiful wild country after another. And he never slowed down. He was tireless." Generally, Moses preferred to be by himself. He walked alone through vast, empty shuttered mansions, through potato fields where farmers worked peacefully, not knowing that the man looking at them was planning to take their fields away. Walls and guards kept him from getting a good look from paved public roads at the route he was considering for the northern parkway, but he discovered unpaved back roads through many of the estates, and he spent days walking along those deserted paths, a solitary figure with a long stride. Through the trees he could see the great castles; at their gates, on little black and gold signs, he could see the names of the great barons who had built them. And the barons, private behind their walls, did not know that staring at those walls was a man determined to tear them down.

Few men had ever viewed Long Island entire. One who had was Walt Whitman, who saw it as a "Sea-Beauty! stretch'd and basking! Isle of sweet brooks of drinking water—healthy air and soil! Isle of the salty shore and breeze and brine!" Now Moses saw it entire, and if he had written poetry once, he wrote park reports now, and brooks, healthy air, salty shore and breeze and brine meant parks. Standing on Montauk Point, where Long Island's southern fluke ends in the steep bluffs plunging abruptly into the Atlantic, Whitman had said, "I stand as on some mighty eagle's beak." Now Moses went to see Montauk, not with the eyes of the poet but with those of the park planner. "The Montauk peninsula," he wrote, "is an extraordinary mass of clay, gravel and rock with high bluffs on the south shore and, back of the bluffs, kettleholes and rolling hills clothed with bayberry, shrubs and gnarled and twisted trees. The irregular shore line and a number of small islands . . . form a veritable patchwork of smaller peninsulas, straits and bays which afford many miles of beaches, dunes and varied waters for cruising, fishing, swimming, golfing and other forms of recreation."

Driving back from Montauk along the southern fluke, Moses discovered endless other miles of unused beaches in Hampton Bays. He found still more on Long Island's northern fluke at Orient Point, where farmers lived in farm-

houses built in the seventeenth century. Searching out deserted estates, he found two in the center of the Island, one owned by the son of financier August Belmont, the other by a family named Yoakum. And roaming one day far out in Suffolk County, near Wading River, he stumbled upon a magnificent brick and stone mansion, set upon a bluff overlooking Long Island Sound, that was not only deserted but looked as if it had never been lived in. Inquiring later, he found out it never had. The man who commissioned the famous architect Stanford White to design it and who named it "Wildwood," financier Roland G. Mitchell, had died just as it was being finished in 1906, and the spacious, high-ceilinged rooms had remained shuttered and unfurnished ever since.

Again and again, Moses returned to the lonely strand, not only to Jones Beach but to Fire Island, where a state park, the only one on Long Island, was located, on the two-hundred-acre grounds of the hotel the state had purchased in 1892 to house the passengers from the cholera-ridden *Normannia*.

In 1918, fire had destroyed the hotel, as well as the boardwalks and comfort stations that the state had erected, and when Moses stepped out of the *Bob*, he found "Fire Island State Park" deserted. Charred ruins lay on the sand. The only undamaged structure was the nine-story-high wooden Fire Island telegraph tower, from which the sighting of arriving clipper ships had once been flashed to Manhattan.

Studying maps, Moses was puzzled. They showed the park as comprising the westernmost portion of Fire Island, except for a little enclave on the island's tip which was occupied by an unmanned Coast Guard station. The telegraph tower, which stood on the station, was shown at the very tip. But as Moses stood alongside the tower, the island stretched westward as far as he could see.

Then he remembered what the baymen had told him about the set of the ocean. Since 1892, the waves had been piling sand on Fire Island's western end. He began to walk along the new land—and he walked for four miles. The Coast Guard station wasn't a little enclave any more; its area, he calculated, was at least six hundred acres. And the station was deserted. No one even knew the added six hundred acres were there.

By the end of the summer of 1923, Moses knew that his plans for Long Island had been far too small. Now he wanted not just a state park on Jones Beach but another one, which would include the unmapped six hundred acres, across the inlet on Fire Island. He wanted state parks on the South Shore not just at the Taylor Estate but in Hampton Bays and at Montauk Point. He wanted parks on the Sound not just at Sunken Meadow but at Wildwood, Lloyd Neck and Orient Point. And he wanted two in the center of the Island, at the Belmont and Yoakum estates. He wanted forty thousand acres of parks. He wanted not just a parkway along the South Shore and one along the North Shore but a parkway connecting them far out on Long Island so that families from New York City could drive out on

A Dream 171

one, loop around and drive home on the other without retracing their path. He wanted another parkway—he wanted two more parkways—linking both the northern and southern parkways with two causeways running to Jones Beach. He wanted still another parkway linking them with Fire Island. He wanted 124 miles of parkways. And he wanted the parkways to be broader and more beautiful than any roads the world had ever seen, landscaped as private parks are landscaped so that they would be in themselves parks, "ribbon parks," so that even as people drove to parks, they would be driving through parks.

Near the latter part of the summer, Alfred E. Smith found himself being chauffeured around Long Island, with Moses sitting beside him, pointing and talking. Smith became enthusiastic about the plans. He asked Mrs. Moskowitz to look into the situation, and Moses gave her the full tour. She approved, and Smith told Moses that when the park program was submitted to the Legislature in 1924, it could be expanded.

"Why don't you take the whole thing over yourself?" the Governor asked. "Why don't I make you president of the Long Island State Park Commission?"

Years later, Moses could recall his thoughts. "I had always had an interest in physical construction, anyhow," Bella's son would remember. "And I had always had an interest in the outdoors; I had done a lot of hiking and fishing and swimming in the Adirondacks, remember. And I was very interested in parks, particularly in the Long Island work."

He said he would like the job.

## 10. The Best Bill Drafter in Albany

Dreams—visions of public works on a noble scale—had been marching through Bob Moses' mind in almost continuous procession for a decade and more. Not one of them had marched out of his mind into reality.

But during that decade, Bob Moses had learned what was needed to make dreams become realities. He had learned the lesson of power.

And now he grabbed for power with both hands.

To free his hands for the grab, he shook impatiently from them the last crumbs of the principles with which he had entered public service and for which, during the years of his idealism, he had fought so hard.

As a reformer, believing in the principle of centralization in government, he had recommended in the Reconstruction Commission report that all state agencies be included in one of sixteen departments and no longer function as independent bodies. Specifically, Moses had recommended in the report that each agency's budgetary request be submitted to the department head and that the department head have power to act on that request as he saw fit before passing it on to Governor and Legislature. The heads of agencies within departments, he had recommended, should have absolutely no independence in budget making. He had been eloquent on the point. "The more spigots there are in the barrel, the more difficult it is to keep a watch on them," he had written. "There are too many streams and rivulets running out of New York's treasury." As a reformer, Moses had seen no need to make park administration an exception to the principle. The Reconstruction Commission report specified that parks would be administered by a bureau in the Conservation Department, a bureau that would be totally subordinate to the Conservation Commissioner.

But now Moses was interested in parks, and parks were to be an exception. Not on the surface, of course. On the surface, on the face of the bill Moses drafted establishing a State Council of Parks, the council was to be included in the Conservation Department and subordinate to the Conservation Commissioner. The council's budget, in accordance with reorganization principles, could be submitted to Governor and Legislature only by the Conservation Commissioner; a clause in the bill specifically said so. But another clause, further down in the bill, said, "The budget shall be prepared by

the State Council of Parks." Precedents had established the statutory meaning of the word "prepared." In this context, it meant that the Council Chairman—not the Conservation Commissioner—had the authority to screen the financial requests of the eleven regional park commissions, weigh one against the other and decide which should be included in the council's budget request. The Conservation Commissioner would get to see the regional commissions' requests only after the Council Chairman had finished with them. He would not even know about the requests made by regional commissions which the Council Chairman had turned down. All he was really empowered to do, therefore, was receive a completed park budget and hand it to the Governor exactly as he received it, and, the bill provided, the Council Chairman from whom he would be receiving the budget would be elected by the council—not appointed by him or by the Governor. Within the reorganized framework of state government, therefore, parks would be a separate, self-governing, very independent duchy.

As a reformer, Moses had fought for the principle of executive power commensurate with executive responsibility, and, believing in the principle, he had recommended in his Reconstruction Commission report that appointed officials should never have terms longer than the Governor's term and that they should always be removable by the Governor if they did not follow his orders. He had been eloquent on the point. "No Governor can be held responsible for the policies and conduct of high officers whom he does not appoint and whom he cannot remove," he had written. "If New York wants . . . efficient government, it must make someone responsible who can be held to account and give him power commensurate with his obligations. There is no other way."

But now Moses was to be an appointed official. And although he could count on Smith's support, Smith would not always be Governor. So there was another way. The bill Moses drafted establishing the Long Island State Park Commission provided that the term of its president—himself—would be six years, three times as long as the Governor's. And it further provided that no Governor could remove the park commission president just because the president was not following the Governor's orders. Removal, the bill provided, could only follow the filing by the Governor of detailed, specific charges of actual misconduct and a formal, public hearing, with both sides represented by counsel, on those charges.

It was not, moreover, the violation of stated principles for the purpose of cementing himself in office that most clearly revealed the change in Moses. Rather, it was the method by which he insured that, once in office, he would have specific powers sufficient for his purpose. For the method was that of concealment and deviousness.

Once, no reformer, no idealist, had believed more sincerely than he in free and open discussion. No reformer, no idealist, had argued more vigorously that legislative bills should be fully debated, and that the debates should be published so that the citizenry could be informed on the issues.

But free and open debate had not made his dreams come true. Instead, politicians had crushed them. And now he was going to make sure that,

with the exception of Al Smith and Belle Moskowitz, no one—not citizenry, not press, not Legislature—was going to know what was in the bills dealing with parks that the Legislature was going to pass. The best bill drafter in Albany set to work.

First and foremost, parks were land, and land was generally acquired by government through condemnation. But condemnation in 1924 was a slow process, since the state could not take title to property until a condemnation commission set its value. And since the property's owner could appeal to the courts if not satisfied with the commission's evaluation, he could delay the state further. He therefore possessed in his opposition to the state a weapon, even if it was a small one—and in the hands of the barons of Long Island, small weapons could become large.

So one clause within Chapter 122 of the Laws of 1924, "AN ACT TO PROVIDE FOR the location, creation, acquisition and improvement by the state of parks, parkways and boulevards in the counties of Nassau and Suffolk," a clause buried deep within the act, empowered the Long Island State Park Commission to acquire land by condemnation and appropriation "in the manner provided by section fifty-nine of the conservation law."

In 1924, "appropriation" had only one meaning in a legislative context: an allocation of funds by the Legislature. Most legislators-probably all legislators-would, if asked, have said that was the only meaning the word had ever had. And since section fifty-nine of the conservation law had been passed in 1884, most legislators had not read it. But the best bill drafter in Albany had read it—and he knew that in that section "appropriation" had quite a different meaning. Worried in 1883 about incursions by lumbering companies into the Adirondack forests, the Legislature empowered the Conservation Commission to condemn the forests and preserve them. But during that year, between the start of the condemnation proceedings and the actual transfer of title, the lumbermen stripped the parcels being condemned of their trees. In 1884, therefore, the Legislature passed an act-section fiftynine of the conservation law-empowering the state to "appropriate" forest lands and defining "appropriation" as a procedure in which a state official could take possession of the land by simply walking on it and telling the owner he no longer owned it-and that if he wanted compensation, he would have to apply to the condemnation commission himself.

The "appropriation" method had never been used anywhere except in remote forests. It had never been intended for use in city, suburban or farm areas. Taking a man's land and telling him it would be paid for later was simply unheard of if the land had any substantial intrinsic value, as it always did in settled areas, and not just the value of things on it, such as trees. Moreover, the method had never been used anywhere for more than thirty years because of doubts about its constitutionality. But the Legislature had never gotten around to repealing section fifty-nine.

Deviousness was used in other sections of the act he drafted as well. Section eight, for example, entitled "General Powers," supposedly enumerated the powers of the Long Island State Park Commission over its land, and the powers enumerated in this section seemed innocuous enough. But in succeed-

ing sections of the act, each power was "defined," and each successive definition broadened the commission's authority.

The commission had the right to operate parks, section eight said. But section nine said that "the term . . . parks as used in this act . . . shall be deemed to include . . . parkways . . . boulevards and also entrances and approaches thereto, docks and piers, and bridges . . . and such other . . . appurtenances as the . . . commission shall utilize . . ." And the term "parkways" was significant. The Legislature had specifically written into the State Highway Law provision that the supervisors of each county had veto power over the location of highways within its borders. But, because parkways hadn't existed when the provision was written, the Highway Law didn't mention parkways—and there was no local check over their location.

The commission had the right to "acquire . . . real estate," section eight said. But section ten said that "the term real estate as used in this act shall be construed to embrace all uplands, lands under water . . . and all real estate heretofore or hereafter acquired or used for railroad, street railroad, telephone, telegraph or other public purposes. . . . " And the words "lands under water" were significant. Under legal precedent, owners of land fronting on the Great South Bay owned the land offshore to the distance of one mile—and if the commission owned land fronting on the bay, it therefore would own part of the bay itself, including the baymen's "sacred" bay bottoms.

By the time the "defining" of the terms used in section eight was finished, the Long Island State Park Commission would be empowered, if the act was passed, to write its own laws, hire policemen to enforce them and prosecutors to prosecute them. By the time it was finished, the commission would, if the act was passed, have over its land, land which if Moses had his way would total forty thousand acres, virtually all the powers granted to the City of New York in the city's charter.

Almost every clause in the act contained a sleeper. Section fifteen ostensibly dealt with the procedure to be used in acquiring property owned by other state agencies. But, apparently tagged on as an afterthought, there was another paragraph: "The... Commission shall have power to improve, maintain and use the lands of the municipalities adjoining the parks and parkways of the Commission, with the consent of the local authorities having jurisdiction thereof." The paragraph appeared innocent enough. Since the commission was operating in Nassau and Suffolk counties, what legislator would stop to consider that some lands on Long Island might be owned by New York City and that, once the act was passed, the Long Island State Park Commission would not need the consent of Long Island officials to use that land because "the local authorities having jurisdiction thereof" would not be Long Island officials but New York City officials? Once the act was passed, Moses would be able to use the city's water-supply properties despite the objections of the municipalities in which those properties were located.

Moses concealed his purposes not only from those who, if they knew them, might oppose them—the legislators—but from those who thought they were his allies, the old men who had worked on the New York State Association report and who, through their individual commissions, had been running the parks in the state for so many years. If these men were to oppose his plans, they could, with their control of their local legislators, pose a formidable obstacle to passage. So he didn't tell the old men about the true scope of his plans for the State Council of Parks. In fact, knowing that they were concerned about the fate of the pieces of land they had guarded so long, he assured them over and over that the establishment of the council would in no way affect their control over those lands. "It is," he wrote them, "merely a coordinating agency." Parks in each region, he promised them, would remain under the control of the regional commissioners.

Moses had to know that what he was saying was false. He knew that since regional commissions had to submit their budget requests to the Parks Council, the council, not the commissions, would decide how much money went to each region. The council, not an individual commission, would decide over-all park policies which would affect each commission's parks. And since the commissions would be rivals for funds, there was little danger of them banding together against the man who ran the council. That man would be in complete charge of all the state parks.

Not knowing what was in the bill, believing in coordination and believing in Moses, the old men supported it and him.

Having drafted the bills, Moses looked around for someone to introduce them.

F. Trubee Davison, the son of Morgan partner Henry P. Davison of Glen Cove, had been sent by the barons of the North Shore of Long Island to the State Assembly in 1923, just one year after his graduation from Yale. In 1924, he was only twenty-two years old and, in his own words, "wide-eyed and eager." Not only was he a Yale man but he was, within the limits approved by the barons, interested in reform, and Moses had found plenty to talk to him about. "He was charming," Davison recalls, "and I enjoyed talking with him a lot and I admired his obvious brains." And he was, he recalls, frankly flattered that a member of the Governor's inner circle would spend so much time with a freshman assemblyman.

Moses asked Davison to introduce the bills that would establish a State Council of Parks and a Long Island State Park Commission. He told him nothing about his plans for parks and a parkway on the North Shore. In fact, he told him very little of any of his plans, leaving the impression that the bills were routine measures and that the kind of parks he was talking about were parks in the traditional mold.

Davison was a believer in parks in that mold. He was flattered to be asked to introduce the bills. And when Moses told him that the Governor would like to see him and thank him for his support, he was overwhelmed. His visit to the Executive Chamber with Moses at his elbow was the first time he had ever met Al Smith in person. He didn't think to ask many questions about the bills—and he certainly didn't think to look up section fifty-nine of the conservation law or to study definitions of powers. Just to make sure he wouldn't have much time to even if he wanted to, Moses delayed giving him the bills until the last week of the session. "I never realized what

the word 'appropriation' meant," Davison recalls. "I thought it meant what it had always meant, so far as I knew: appropriation of money to be spent. Whenever someone asked me what it meant, I told them that's what it meant."

Not that many people asked him, of course. There was little interest in the bills and when, in the last-minute adjournment rush, they came to the floor, there was not a word of debate about them. On April 10, 1924, on the last day of the session, Assembly and Senate passed them both by unanimous vote.

Moses was in a fever of impatience. On April 12, he wrote George Graves, Smith's secretary: "My dear George: As soon as you get a chance will you ask the Governor, please to sign the bill creating the State Council of Parks so that a meeting of this Council can be held at an early date." On April 18, a pen in the Executive Chamber scrawled across the bills: "Approved—AES." On the same date, Smith appointed to the regional park commissions the men whose names he had previously agreed upon with Moses. He appointed Moses president of the Long Island State Park Commission, a post that gave him automatic membership on the State Council of Parks, and as Moses' co-commissioners on the three-member Long Island Commission the Governor appointed two men Moses knew he could count on to let him run the commission by himself. On April 30, Moses and the other heads of the regional park commissions met in Albany and, with paternal smiles in his direction, the older commission heads elected the youngest member of the State Council of Parks as its chairman.

At the age of thirty-five, Robert Moses had power. And no sooner did he have it than he showed how he was going to use it.

IV THEUSE OF POWER

## 11. The Majesty of the Law

Law? What do I care for law? Hain't I got the power?

---COMMODORE VANDERBILT

THE REFERENDUM on the \$15,000,000 park bond issue was still seven months away. Even if the vote was favorable, the money would not be available to Moses until the 1925 Legislature made specific appropriations out of the proceeds of the bond sale. But at Smith's request the 1924 Legislature appropriated \$225,000 from general state revenues to allow Moses to begin work.

With some of this money, he rented a suite on the fourteenth floor of the Vincent Building at 302 Broadway, diagonally across from City Hall. From the windows of the suite, he could see, beyond City Hall, the Municipal Building, on the fourteenth floor of which he had once watched his civil service rating forms gathering dust in a corner and in which he had considered himself lucky to have even a desk of his own. He could look three blocks down Broadway and see No. 261, where he had worked for the Bureau of Municipal Research first in impatience and later in humiliation. And directly opposite his windows was 305 Broadway, in which had been located the tiny, shabby cubicle in which he had wound up the affairs of the Reconstruction Commission as its money ran out. Now he reserved the large corner room of the suite for his own, laid down expensive carpeting and hung up expensive drapes. He purchased for his own use the most prestigious automobile in America, a black Packard limousine, and hired a chauffeur. He filled the office with his friends, from Benjamin Van Schaick ("I never forgot what he did for me during the war and as soon as I could I dug him out and brought him into the commission as executive secretary") and his Yale roommate, Raymond P. McNulty, its counsel, right down to the secretaries. And then Robert Moses, who had spent four years of his life arguing that personal considerations such as friendship should never be allowed to influence civil service appointments and that no civil servants should be exempt from competitive examinations, worked quietly through Smith's office to exempt his friends from civil service examinations. And he

was so lavish in purchasing automobiles for his friends' use and furnishings for their offices that by summer he had spent \$63,089 of the \$225,000 on such "overhead expenses."

Moses' Yale classmate Harold Phelps Stokes was an assistant to Secretary of Commerce Herbert Hoover. During the first week after his appointment, Moses dashed off a letter informing Stokes of the existence of the six hundred new acres at the Fire Island Coast Guard station and asking him to persuade Hoover to release them as an addition to the adjoining two-hundred-acre Fire Island State Park. When Hoover agreed, Moses had, in a single step, quadrupled the state park acreage on Long Island. During the first week after his appointment, he called on the New York City Commissioner of Water Supply, Gas and Electricity, Nicholas J. Hayes, and asked Hayes to release the 3,500 acres of city watershed properties. Hayes said that his responsibility was to protect the city's water supplies, not to give them away, but he was a good Tammany regular and a call from Al Smith persuaded him to accept a compromise Moses suggested: that the city keep control of the water on the properties and give the commission a "surface easement" that would allow it to use the rest of the land for parks.

Much of the remainder of the route for the envisioned "Southern State Parkway" was farmland. Moses quickly learned not to visit farmers during the day when they were occupied with chores. Instead, in the twilight of Long Island spring evenings, a big black Packard and uniformed chauffeur would be standing in the front yards of neat little farmhouses in Valley Stream, Rockville Centre and Merrick while inside, at the kitchen table, Robert Moses sat, jacket off, tie loosened and shirt sleeves rolled up, drinking what he later remembered as an endless succession of glasses of beer and trading an endless succession of loud jokes with an endless succession of jovial, florid-faced but canny German and Dutch farmers, trying to bargain them down to the price-\$1,200 per acre—that he had set for right-ofway. Soon he had obtained options from a dozen farmers from whom he needed infertile land or land on the very edges of their farms, for which \$1,200 per acre (payable by June 30, 1925, out of the anticipated legislative appropriation) was a good price. Approaching the socialites who headed the corporation that had purchased the old Taylor Estate next to the Timber Point Club in East Islip and turned it into a hunting preserve, he received a pleasant surprise: they had visited the estate only once in 1923 and were thinking of selling. Talking to them earnestly and winningly of the public service they would perform by selling to the state, he persuaded them to accept \$250 and give him an option, subject to approval by the other stockholders, to purchase the estate for \$250,000, payable by June 30, 1925. After he worked on the owners of the land he coveted at Hampton Bays and Sunken Meadow, they gave him similar options. The Montauk Point and Lloyd Neck owners seemed ready to follow suit. By the end of the summer of 1924, he seemed well on his way to establishing a state park system on Long Island on the basis of his charm alone.

But the charm could vanish swiftly. He joked and laughed with the farmers, but when one made clear that he would not sell his land, Moses could change in an instant to quite a different approach. P. G. Rasweiler was one of the five burly, thick-necked, red-faced sons of John Jacob Rasweiler, a Brooklyn-born farmer of German ancestry who had gone broke trying to raise lettuce, spinach, cabbage and cauliflower on a farm in Valley Stream and then had sold it and purchased another in Malverne, where, in PG's words, "we all six of us broke our backs to make it pay." PG remembers well the day the "parkway business" started. "The farm was doing good," he recalls. "Then Moses came one day. He introduced himself as 'I'm Robert Moses, representing the State of New York. We're going to put a parkway through this section of Long Island.' He was very polite, very diplomatic, at first. But when he saw my father wasn't going to sell, he stood up in our kitchen and he said: 'You know, Mr. Rasweiler, the state is all-supreme when it comes to a condemnation proceeding. If we want your land, we can take it.'

"Father wanted to make an agreement with him—he didn't want to have to go to the lawyers—but Moses wanted to take twenty acres from us. The whole farm was only eighty, eighty-five acres. The twenty acres was the choice of the whole farm. It had been woodland; we had worked hard to get it cleared off. We had just gotten it cleared, and it was just about ready to begin making money for us. It was right in the middle of the farm; if he took it, all our rows would be cut in half—how could you plow? And he was offering us \$1,200—the same price he was offering for bad land on the edges of other farms. That wasn't fair. But when we tried to explain that to him, he wouldn't even listen to us. Father asked him to go on the north boundary line instead. Father said if he'd take it from the boundary and not from the middle, he'd give it to the state for nothing. But Moses said no. His whole attitude was: 'This is where we're going, and that's it.'"

The next day, as John Jacob and his five sons were in the fields, a young engineer Moses had hired, Sidney M. Shapiro, drove up with a surveying crew. "They just walked on the property and set up their things without asking permission," P. G. Rasweiler recalls. "Father asked them if they had papers from a court, and they didn't." John Jacob walked into his house, came out with a shotgun, put it against Shapiro's chest, and said, "I'll blow you to hell if you don't get off my land." Getting off, Shapiro telephoned Moses, who said, "Get the state troopers and go back there."

"They wanted to scare you, I guess," Rasweiler says. "But Father asked the troopers if the surveyors could go on our land without papers, and the troopers asked them if they had papers and they said no and the troopers said to them, 'You can't go on this man's property without papers,' and they went away. So we thought we had won, but the next day, they set up their things on the next farm—Moses only wanted land on the edges of that, so the farmer was friendly to him—and got the survey lines they needed from there and they condemned up the piece of property they wanted. We went to the Court of Claims and got \$2,700 an acre—more than twice what Moses offered us. We kept what was left of the farm, but it

wasn't the same. Me? I went into the trucking business—worked for my brother-in-law."

The charm could vanish as quickly with a financier as with a farmer. The Timber Pointers were shocked when they learned that Moses planned to turn the adjoining estate into a public park. Pointing to the spot where the proposed park would run alongside the club's golf course, old Horace Havemeyer, "the Sultan of Sugar," growled to his young brother-in-law, stockbroker W. Kingsland Macy: "I tell you, Macy, if they get a park over there, there'll be so much screwing you won't be able to tee up a ball." Havemeyer, Macy and Wall Street trader Buell Hollister had even more reason to be disturbed than the other ninety-seven Timber Point members. Anxious to attract more of "the right kind of people" to East Islip, the trio had recently decided to purchase the Taylor Estate themselves, divide its 1,486 acres into thirty building lots and sell them, at prices ranging from \$50,000 on up, to thirty persons so right that they would even be invited to join, on purchase of a lot, the Timber Point Club. The proposition promised to be highly rewarding financially as well as socially. Now, to forestall Moses, Havemeyer, Hollister and Macy hastily persuaded the Timber Pointers in the Deer Range Corporation, the corporation that had turned the Taylor Estate into a hunting preserve, to overrule their officers, deny Moses the option he had been promised and instead sell the estate to them for the same \$250,000 he had offered—plus 50 percent of any profit they made on subsequent resales. Learning of these machinations, Moses asked Macy to drop around to his office. When the stockbroker arrived, Moses bluntly ordered him not to consummate the deal. Macy indignantly refused to agree. Then, as he was later to testify under oath, "Mr. Moses told me they were going to take that place away from us and nothing we could do would stop it. . . . Mr. Moses informed me that he had the arbitrary power to seize this property, which was owned by myself and my associates, even though the state did not have one cent to pay for it. . . . Mr. Moses told me that he could take my home away from me. He told me personally that his power was such that he could seize my house, put me out of it and arrest me for trespass if I tried to get into it again. . . . Mr. Moses told me not only that he possessed this arbitrary power, but that he was able to control the press of New York City, so as to hold me up to such obloquy that I would not be able to stand it." And Moses was as good as his word. No sooner had Havemeyer, Hollister and Macy actually purchased the Taylor Estate than, without even a pretense of negotiating with them as the law required, he directed Park Commission attorneys to draw up a Notice of Entry and Appropriation and serve it on the three men—and while it was being served he stationed armed state troopers on the property and instructed them not to allow the three men to enter it even to remove personal property they had left there.

The route Moses had planned for his "Northern State Parkway" ran, west to east, through the estates of Mrs. Henry Phipps, Payne Whitney, Claus Spreckels, Clarence Hungerford Mackay, Henry Carnegie Phipps, Henry Payne Whitney, Francis P. Garvan, E. D. Morgan, Mrs. William K.

Vanderbilt II, Bronson Winthrop, Henry Rogers Winthrop and Otto Kahn.

The Phippses, Whitneys, Spreckelses, Mackays, Garvans, Morgans, Vanderbilts, Winthrops and Kahns refused even to discuss the parkway with Moses. One summer weekend in 1924, as they relaxed in the manor houses which they had so carefully secured against the public, they noticed, outside their gates, surveying crews setting up their telescope-like surveying levels—and pointing the telescopes in their direction. They dispatched servants to inquire what the surveyors were doing—and the servants returned with the information that the surveyors said that they were "laying out the route for the parkway." Astonished, the barons took a closer look at where the telescopes were pointing—and found that it was right at their houses. In some cases, before the guards could chase them away, the surveyors laid out a line of red and white flags to mark the exact route of the parkway—and the flags marched straight across their lawns and right by their front doors.

The barons dispatched their lawyers to Moses, and Moses did not treat those lawyers with the deference to which they were accustomed. The exact nature of his conversation with Colonel Henry L. Stimson is unknown, but Stimson stormed out of the meeting to write Governor Smith: "I believe thoroughly in the importance of improved highway facilities and parks. . . . But, my dear Governor, it cannot be done in this country by Napoleonic methods." Another lawyer told Moses that there was enough power in Wheatley Hills to insure that no parkway would ever run through there. "Well," Moses replied, "we're going to teach the Wheatley Hills people a lesson." To all the barons' lawyers, he spelled it out bluntly: If their clients were willing to donate land for the parkways, its location could be shifted away from their houses to the borders of their huge estates. But if they weren't cooperative, the commission had the power to appropriate the land right next to their houses—and it was going to do so.

"Appropriate?" the lawyers asked one another. What did that mean? In law offices all along Wall Street, pages were hastily turned to section fifty-nine of the State Conservation Law. And then calls were hastily placed to F. Trubee Davison.

"I felt awful, of course," Trubee was to recall. "It's a terrible, high-handed way for a public official to act, to threaten someone with the loss of his home unless he surrenders land. But Moses had the power to do it. He could walk in and take it. And he had the power under the law I had introduced. There was nothing else for me to do but to admit to these fellows who called that I just hadn't studied it thoroughly before I introduced it." One attorney, after studying the law, wrote a friend: "The powers most innocently expressed in Sections Eight and Nine are, when read in conjunction with Section Eighteen, sufficiently broad to permit this Commission to take over the whole of Suffolk County" as long as the Governor was willing to sign the appropriation form.

And even while the lawyers were studying the powers conferred by

the act, Moses was giving new evidence of his intention to use them. In August, the owners of the Montauk Point land he wanted learned that Carl G. Fisher, developer of Miami Beach, was planning to transform Montauk into a similar resort area. If he succeeded, their land would become immensely valuable. They notified Moses that they would not sign the option agreement. He promptly appropriated the choicest portion of their land, a 1,700-acre tract called "Hither Hills." A week later, he appropriated twenty-two other acres on Lloyd Neck.

The lawyers told their clients they were in for a fight.

The skirmishers made contact first on the Taylor Estate. The attorneys for Havemeyer, Hollister and Macy's Pauchogue Corporation informed their clients that the powers given to the Long Island State Park Commission by the act Moses had drawn were broad—but that, broad as they were, Moses had overstepped them. He may have written the law, they said, but he had also broken it.

Section fifty-nine of the Conservation Law gave the commission the power to appropriate land, the attorneys said, but section fifty-nine also said that the power could be used only after negotiations with property owners had failed and no price could be agreed upon. Moses had never negotiated; he had never bothered to mention a price to any representative of Pauchogue; he had never even spoken to any representative after Pauchogue had purchased the Taylor Estate. Moreover, the State Constitution forbade any state agency to buy, condemn or appropriate land unless it had enough money on hand to pay for it. Moses had appropriated the Taylor Estate on December 4, 1924. The referendum had been passed, but under its provisions the \$15,000,000 was not available to acquire land until each specific acquisition had been approved by the Legislature, and the Legislature had, of course, given no such approvals. The Legislature hadn't even met since the referendum. Even if Moses contended that the \$225,000 allocated to the Long Island Commission by the 1924 Legislature could be used for land acquisition—a contention of extremely doubtful legality—the Taylor Estate was worth more than \$225,000. Moses himself had admitted that by offering \$250,000 for it. And Moses didn't have even the \$225,000 any more. Out of that sum, before the appropriation, he had spent \$63,000 on "overhead expenses," not to mention the money he owed the owners of the land he had appropriated at Montauk and Lloyd Neck. The Taylor Estate appropriation, the attorneys said, was clearly illegal. They could surely demonstrate this to Governor Smith, they said, and before an appropriation could take effect, Smith had to sign the appropriation form.

The Timber Pointers did not lack for means to bring their contentions to the Governor's attention. At their behest, visits were paid to his Biltmore Hotel apartment not only by prominent Republican leaders of the Legislature, friends of Smith from his legislative days, and not only by the single most powerful Republican in New York State—GOP national committeeman Charles D. Hillies—but also by Tammany's apple-cheeked ally, Democratic

boss John McCooey of Brooklyn. One night, as the Governor relaxed at the Biltmore, there appeared before him, ushered in by a pair of Smith's dearest Tammany friends, W. Kingsland Macy himself, and Macy offered Smith, in this personal appeal, a list of an even dozen other Suffolk County estates closer to the city, beautiful in their own right—a dozen estates whose owners wanted to sell. And, he said, if the commission insisted on having an estate in East Islip, why couldn't it buy Willie Vanderbilt's "Idle Hour"? It was as large as the Taylor Estate, as heavily wooded, it had almost as much shore front on the bay—and Vanderbilt's heirs were trying to sell for \$150,000, \$100,000 less than the price offered for the Taylor Estate, which, he said, was actually worth much more than the price offered.

It was obvious to his advisers that Smith was uncertain. The efficacy of parks as an issue had been proven again in his 1924 re-election campaign. Running against popular young Colonel Theodore Roosevelt, Jr., he had turned his campaign tours into appeals for passage of the park referendum. Although Republican presidential candidate Calvin Coolidge had carried New York State and the Democrats had lost control of the Legislature, Smith had run nearly a million votes ahead of his ticket and won re-election. And, noting that the referendum had carried by nearly a million votes, he felt that no small part of his victory was due to his identification with parks.

Nonetheless, the question of the legality of Moses' appropriation still bothered him. The appropriation form to which Moses was asking him to affix his signature began with the words: "I, Alfred E. Smith, Governor of the State of New York, being satisfied that there is available a sum representing fair compensation for the land to be entered and appropriated, do hereby approve . . " How could he possibly be so satisfied? His advisers, listening to the Governor thinking out loud on the subject, believed he would probably not sign.

After the election, the Governor scheduled a closed hearing on the appropriation. Havemeyer, Hollister and Macy were confident when they arrived at the Biltmore with their attorneys. Moses, arriving with McNulty and two other commission attorneys, was not.

But the outcome of the hearing was not to hinge on legalities. Smith, anxious to learn for himself the basics of both sides' positions, conducted it informally, bantering, telling jokes, encouraging the principals as well as their attorneys to talk. And the Sultan of Sugar talked. Explaining why he didn't want a park in East Islip, Horace Havemeyer said he feared the town would be "overrun with rabble from the city."

In later years, Smith's biographers, describing the hearing, pictured the Governor as laughing at the remark and saying, with a grin, "Rabble? Why, that's me."

The words Smith actually used were similar, but there was no grin. When Havemeyer used the word "rabble," Smith looked up at him. The blue eyes were steel. The laughter in the room died away. "Rabble? That's me you're talking about." He reached out a hand and seized the appropriation form. Trying desperately to turn his remark into a joke, Havemeyer said quickly, "Why, where's a poor millionaire to go nowadays if he wants

to be alone?" "Try the Harlem River Hospital," Smith said. The Harlem River Hospital was an insane asylum. As Havemeyer flushed, the Governor signed the form.

The hearing was over, but the fight for the Taylor Estate was not. It would be waged without quarter in both regular and special sessions of the New York State Legislature, and in twenty-five separate appellate court proceedings. It would fill the front pages of newspapers across the state for two years, delay for almost that long all expenditures for any of the parks of which Robert Moses had dreamed, and bring to the brink of ruin not only those dreams but Moses' personal reputation and career. But before it was over, Moses would be hauled back from the brink by Al Smith, with a helping tug from Belle Moskowitz, and his reputation, seemingly certain to be tarnished by his actions, would be burnished instead so that he gleamed in the public consciousness with the aura he would bear for the next thirty years: the aura of a fearless, fiercely independent public servant who loved parks above all else and was willing to fight for parks against politicians, bureaucrats and the hated forces of wealth and influence.

The Taylor Estate fight also transformed a quiet, conservative stockbroker and connoisseur of antiques into a major New York State political figure.

The stockbroker was W. Kingsland Macy, a tall, slender former Harvard Crimson editor one year older than Moses, who invariably wore starched high round collars and dark-blue suits with vest, and often pincenez. Not wealthy, but well off, Macy seemed, with his seat on the Exchange, his modest but well-tended East Islip estate and his love of antiques and old houses, the very model of the country gentleman, except that, unlike brother-in-law Havemeyer and the other members of the Timber Point Club, he was noticeably uninterested in making money. As one observer of his career was to write, "All the while he had a vague idea that he would like to enter politics, but he did not know how to go about it." And since he was an unsmiling man with the thin, tight-pressed lips of the ascetic, very reserved even with friends, it seemed unlikely that he would find out. But, as the observer was to write, "No man living excels Macy in the capacity for appreciating an outrage that has been perpetrated against his rights. He cherished and cultivated his wrongs as other men worship Old Masters." And now Macy felt that Moses had wronged him.

The day after the hearing at the Biltmore, new fuel was heaped on Macy's outrage. His lawyers had notified Moses that an appeal was planned, and Moses' lawyers had agreed that the matter was still in abeyance—and that a hunting party of Deer Range stockholders could be held the next day as scheduled. But when the hunters' limousines pulled up to the property, barring their way were men in uniform carrying revolvers, state troopers who refused to allow them even to remove the hunting clothes they had previously left there and that had certainly not been included in any

appropriation. The astounded millionaires saw other men in uniform—Conservation Department workers, they were told—rounding up the pheasants and mallards, also unappropriated, that they had raised and that they still owned and putting them in trucks to be hauled away. Within days, Macy was receiving reports that crews of state workmen had begun cutting down trees and tearing down buildings on the property.

Havemeyer and Hollister were businessmen. Smith's action had cost them the opportunity for a large profit, but at least they could, through the Court of Claims, get their money back-with interest. They saw no point in throwing good money after bad by fighting the state. But Macy no longer viewed the situation strictly in business terms. "There is a question of importance . . . because of certain fundamental principles of this Government which are being ruthlessly overthrown by the Long Island Commission," he wrote his partners. "Moses never even tried to negotiate with us. He decided to seize first and negotiate afterward. There was no condemnation, no proceedings, no notice to us. They threw a cordon of state troopers around the property and now they say, 'Your remedy is to go to the Court of Claims for compensation." If Moses could do this to us, Macy said, he could do it to anyone. "No one's home is safe." The principles, he said, were too important to be surrendered without a fight. He tried to persuade Havemeyer and Hollister to invest in a legal fight to oust the commission from the property. Hollister refused. Havemeyer agreed to pay half of all legal expenses up to \$25,000, but said he would not spend a cent beyond that.

On December 31, 1924, Pauchogue's lawyers began the fight by asking Suffolk County Court to enjoin the Long Island State Park Commission from altering the property until a trial could be held to determine if the appropriation was legal. Judge George H. Furman issued the temporary injunction on the same day it was applied for, allowing the state troopers to remain on the property to insure that its condition was not changed before the trial but prohibiting them from interfering with its use by Pauchogue for whatever purpose the corporation wished—including hunting. And Furman added to his decision a line that seemed to confirm Macy's contentions. The appropriation, the judge said, was clearly illegal.

Hastily striking an alliance with the North Shore robber barons, Macy agreed that the best strategy was to cut off all Park Commission funds until new laws were passed taking from it the right of condemnation by appropriation. Because of the barons' control of the Legislature, there seemed little doubt that the strategy would succeed.

But Macy was handicapped by principles. When a reporter from the New York *Herald Tribune* asked him to show him around the Taylor Estate so that he could see if it was really inaccessible and unsuitable for a park, Macy disdained to seize this opportunity to sway the press. No, he told the reporter, he did not want to influence his thinking. He was sure the truth would be obvious. He would not accompany him. "Macy," Moses

was to say, "was the amateur in politics." Once, Moses had been the amateur. But he wasn't any longer. And he knew how to take advantage of someone who was—as became apparent on January 8, 1925, on the front page of *The New York Times*.

A FEW RICH GOLFERS ACCUSED OF BLOCKING PLANS FOR STATE PARK, the headline said. R. B. MOSES OF LONG ISLAND COMMISSION TELLS OF FIGHT FOR SITE ON SOUTH SHORE—INFLUENCE USED, HE SAYS. The story began: "Robert B. [sic] Moses, President of the Long Island State Park Commission, charged yesterday that a little group of wealthy men was obstructing the commission's plan to create a state park on the South Shore, five miles east of Islip, and that legal action had been taken by them only when every avenue of social and political influence had failed." The next two paragraphs were a restatement of that theme. The "wealthy men" were allowed one paragraph—the fourth—for rebuttal; they were not heard from again until paragraph twenty-six, by which point the *Times*'s readers had had spread before them, almost verbatim, Moses' press release, a press release written by a man who had once been the master of "scrupulous, reliable" research but who had become a master propagandist—one who did not let facts stand in the way of his aims.

Moses' release harped on the fact that his opponents were "wealthy residents," "rich residents," "rich people," "possessed of every sort of political and social influence." Nowhere did his release mention the fact that a judge had found his action illegal. And nowhere in the story, which ran for thirty-four paragraphs, did the *Times* see fit to mention that piece of information. Unable to avoid mentioning the injunction, Moses said it had been granted by a "local judge," a phrase with implications. "We will fight it," he said. "Upon its outcome depends whether the public or a small group of rich people can have a playground there."

Any reader who arrived at paragraph twenty-six would begin to notice that there were some other sides to the story. Contrary to Moses' statement, Macy said at that well-buried point, it was not just "a few rich golfers" who objected to the park but a large majority of the residents of Islip Town and Suffolk County. And the point of the injunction, he said, was that Moses had violated the law and seized property without due process. "If the commission can do this," he said, "it can, by passing a resolution and getting the mere formality of the Governor's signature, seize any man's home, dispossess him and put state troopers there to prevent his re-entering. It is for that reason that we have taken the issue to court." But when the Times finally gave him a chance to talk, Macy talked too much. Not trying to dodge the "influence" issue, he sought to defend it. "We did use influence," he said. "But we could not go around and see every citizen in the state about the matter. We saw various representative men, and we did go to the Governor. Mr. Moses went to the Governor, too. Well, I am a citizen of the state of New York and I have as much right to see the Governor as Mr. Moses."

Such public relations naïveté, combined with the *Times*'s slanting, made Moses' debut in a headline on the front page of the nation's most respected

newspaper a triumph. While Macy had won the first round in a court of law, Moses had won the first round in the court of public opinion.

In the former court, Moses could not evade the facts that the Times had relegated to paragraph twenty-six. When, as he had promised the Times's readers, he did "fight" the injunction issued by the "local judge," asking the State Supreme Court to invalidate it, Supreme Court Justice James C. Van Siclen refused. "The defendants have proceeded and are proceeding and threatening to proceed in a manner which tends irregularly, illegally and beyond their powers, under and in violation of the laws and Constitution of the State of New York and of the United States, to invade and seize the property of the plaintiff," Van Siclen said. The injunction would remain in force until a full trial was held. Such a trial, the judge made clear, could result not only in the return of the Taylor Estate to Pauchogue, but also in the assessing of substantial damages against the Long Island State Park Commission, against the individual commissioners, including Robert Moses, against New York State and even, conceivably, against Governor Smith. To indicate his own feelings in the matter, Van Siclen ordered the commission to pay Pauchogue a symbolic ten dollars in court costs.

Now Moses' only hope was the Legislature. If it appropriated—"segregated" was the legal term—\$250,000 of the bond-sale revenues for purchase of the Taylor Estate, he could argue that the commission had seized the estate in anticipation of the segregation. This was a weak defense—but at least it was a defense. If the Legislature did not segregate the \$250,000, the commission—Moses—would have no legal defense at all. He would have no money to pay for the land he had taken.

The Legislature, however, was controlled by the state's Republican Party, and that party was dominated financially by the barons, philosophically by a concern for the rights of private property, precisely the rights endangered by unstatutory appropriation, and politically by its desire to embarrass Alfred E. Smith, the man who had shattered its control of New York State. Because, in its view, one of Smith's appointees had broken the law, and Smith had, by signing the appropriation form, helped him do it, they saw an ideal chance for such embarrassment if the facts of the case were brought out. On February 11 and 26, 1925, the Senate Finance Committee held hearings in Albany.

Throughout the hearings, despite the efforts of Finance Committee Chairman Charles J. Hewitt to gavel him into silence, Moses was on his feet, berating witnesses. "I never knew of persons to come before a legislative hearing with dirtier hands than the people of East Islip," he shouted at one.

But shouting could not drown out the facts. To refute Moses' contention that only a "few rich golfers" opposed the park, more than a dozen elected officials testified that the majority of Suffolk's 150,000 and Islip Township's 21,000 residents opposed it. The chairman of Suffolk's Board of Supervisors, the county's governing body, testified: "We are opposed to the methods of the Long Island Commission. . . . We are afraid of persons who act as they have." And when Moses himself was summoned to the stand,

the questioner was F. Trubee Davison, and Davison had learned a great deal about asking questions since the day, a year before, on which he had agreed to introduce Moses' park bills.

"Did you have the money available at the time [the appropriation was made]?" Davison demanded.

"That is a question for the courts to decide," Moses replied.

"Well, did the commission believe it had the money available to pay a reasonable value on this property?" Davison demanded.

"Yes, we did," Moses said. The money appropriated to the Long Island State Park Commission by the 1924 Legislature.

"Well, let us see about it," Davison said. "The Legislature appropriated \$225,000. Did you spend any of that money before the Taylor Estate case came up?"

"Yes, some of it," Moses admitted.

"Well," Davison said, "how did you arrive at your arithmetic? You had only \$225,000 to start with and you admit you spent some of it. How could you have enough to cover the Taylor case?"

"We think we had it," Moses said. But Davison had made his point. After the hearing, Moses printed up "transcripts" of the hearing—with his own damaging admissions carefully omitted—and mailed them to state officials and legislators. But the officials and legislators had followed the hearings themselves. The state has "an obligation" to have money available to pay people before taking their property, said Attorney General Albert Ottinger, a Republican. Moses' actions, said the state's chief legal officer, were clearly "illegal." The day following the hearing, Assembly Speaker Joseph A. McGinnies said that the Legislature would strip the power of appropriation from the commission. And he said that the Legislature would certainly not segregate any money at all—ever—for the purchase of the Taylor Estate.

In the Legislature and the courts, then, the issue appeared in February 1925 all but settled: To realize a dream of unprecedented scope, Robert Moses, by use of the law, had armed himself with unprecedented powers—and then, finding that these powers were still inadequate, he had deliberately gone beyond them, beyond the law. "Entry and appropriation" was, even as defined in law, of questionable constitutionality in its negation of the individual's rights when his property was coveted by the state. And Moses had gone beyond the definition to use the power of the state with even less restraint than the law allowed. But both courts and Legislature understood the situation; before both courts and Legislature, Moses stood stripped of all defenses and, it seemed in February 1925, both courts and Legislature would now step in and rectify the situation, the courts by affording redress to the individuals injured by his actions, the Legislature by insuring that he never again had the opportunity similarly to injure any other individual.

But the ultimate court in which the fate of Moses and his dream was

to be resolved would be the court of public opinion. And in this court, Robert Moses had close to hand three formidable weapons.

One was the fact that, like motherhood, parks symbolized something good, and therefore anyone who fought for parks fought under the shield of the presumption that he was fighting for the right—and anyone who opposed him, for the wrong.

The second was the fact that it was possible to paint the issue, as Moses had already done, not only as park supporters vs. park deniers, but also as wealth vs. lack of wealth, privilege vs. impotence, influence vs. helplessness, "rich golfers" vs. the sweating masses of the cities.

The third was the ultimate political weapon: Alfred Emanuel Smith.

The Republican majority in the Legislature drafted a bill, introduced by upstate Senator Warren T. Thayer, segregating \$6,000,000 of the bond issue for acquisition of various parks but not appropriating any funds for acquisition of the Taylor Estate. The bill also amended the laws Davison had introduced on Moses' behalf the year before. It eliminated appropriation as a method of obtaining park land in developed areas and also provided that all land acquisition for parks or parkways, including acquisition by condemnation, must be approved by the Republican-controlled State Land Board, that all park or parkway construction must be approved by the Republican-controlled State Board of Estimate and Control, that all engineering work on parks and parkways must be carried out by the State Engineer, an elected official who was then a Republican, and that all legal work connected with parks and parkways must be carried out by the office of the Republican State Attorney General, Albert Ottinger. During the last week in March, shortly before adjournment, the Legislature passed the bill. Smith vetoed it. (His veto, said Eberly Hutchinson, chairman of the Assembly Ways and Means Committee, was clearly the work of "that expert and abusive propagandist, practiced in exciting the prejudices of the uninformed and a habitual defamer of the Legislature, Robert Moses," who had boasted to him that if the Legislature did not pass a bill he liked, the Governor would veto it.) But the veto did not help Moses or Smith. They needed \$250,000. If it wasn't segregated, Moses' acts would be declared flatly illegal in court, and no Governor would be able to put a good face on such a development, especially a Governor who was, even peripherally and only because he had been misled by an appointee, involved. Early in April, Smith told his advisers that he would summon the Legislature back into special session to try to force it into the segregation.

Moses' only hope of not having to appear in court without money or promise of money for the appropriation was to stall court proceedings until after the special session. Frantically, the commission's attorneys employed every legal stratagem available. They moved to strike certain clauses out of Pauchogue's complaint. Van Siclen denied the motion. They appealed his decision to the Appellate Division of the State Supreme Court. The Appellate Division denied the appeal. They appealed the denial to the Court of Appeals. Then they went back to Van Siclen's court and moved to strike other

clauses. Van Siclen denied the motion. They appealed the decision. April dragged into May. The case, the judge commented, should have been tried long ago. But the commission attorneys filed new motions. Then they sought "judgment on pleadings," a device which required the filing of a long series of successive briefs by both sides. Their briefs ran longer and longer. One was 275 pages. Then they appealed the decisions to the Appellate Division. Every appeal was denied—but every one used up time.

Macy raged at the delays. "A speedy determination of the issue is what the public, the county and the state are entitled to," he said. Although his rage did not require new fuel, Moses provided some anyway. Macy, the lover of antiquity, had determined to reserve one of the thirty homesites for himself and to restore the old Taylor mansion, a fantastic mass of pillars, turrets and cupolas, and its outbuildings, to their original condition. But one Sunday in May, strolling around the property, he found the walls of the boathouse riddled with bullet holes. Targets tacked to the walls explained them. The state troopers had been using the building for pistol practice. As he stared aghast at the damage, he heard someone coming through the woods, and turning, saw another Sunday stroller: Robert Moses. Macy protested to Moses, pointing out that the courts had specifically forbade the commission to injure the property in any way. Moses replied with a grin: It's lucky it was this building. We're going to tear it down anyway.

Once let him get Moses on the stand, Macy was sure, and the boasting would stop. He hungered for the court decision which he was certain would vindicate him. But Moses kept stalling.

So did Smith. All through April and May, Moses, anxious, was nudging the Governor to call the special session. So, for less personal reasons, were Smith's other advisers. Since he had a great issue, they said, wouldn't it be best to press it while it was still fresh in the public's mind?

Wait, Smith said. He had thought of something his advisers hadn't. New York City wasn't hot in April. It wasn't hot in May. New Yorkers weren't desperate to get out of the city in April and May, desperate for a bathing beach such as the one the Taylor Estate would provide. In April and May, they hadn't yet reached the point at which they didn't care at all about the legal technicalities of park acquisition; they hadn't yet reached the point at which all that mattered was that someone was trying to provide them with a place to swim—and someone else was standing in his way.

On June 1, a Monday, the first of the inevitable summer heat waves settled over the city like a hot, soggy blanket. By the weekend, the temperature was in the nineties. The city's people fled it. Traffic jams on Long Island were worse than ever. So great was the frustration that when motorists reached a town park in Huntington and found police barring the gates, they assaulted the police in such force that more than forty were arrested. On June 10, Smith announced the special summer session—in a speech that was the first ever carried on a statewide radio hookup.

"There are people in this state who are opposed to parks," Al Smith said. His rasping, friendly, compelling voice sliced through the static of the crystal sets in tens of thousands of steaming living rooms in which sat

families who had spent that last weekend in a desperate search for parks. "There are people in this state who are opposed to parks, to the park program, because they do not desire public parks or parkways too close to their private estates, golf clubs and fox-hunting and polo fields."

Smith spoke for two and a half hours. Slowly, painstakingly, he detailed the whole background of his side of the fight, the attempts to remove parks from politics, the Republicans' insistence on injecting into park administration other, politically dominated state agencies, on making the final decision on proposed land acquisition rest not with the State Council of Parks but with the State Land Board.

"Let us compare both bodies," he said. "Let us see who are the members of the Park Council." He listed their names, lingering over several. "Everybody knows Judge Clearwater," he said. "He is one of the leading lawyers of the country. . . . He has been connected with the Niagara State Reservation since its establishment many years ago and has repeatedly been reappointed by Governors of all shades of political opinion. . . . Everyone knows Franklin D. Roosevelt . . . one of the heads of the Boy Scout movement in the country. . . ." Many of these men, he pointed out, were Republicans. All were "serving the state without pay. Many have contributed large sums of money from their personal fortunes for the purchase of lands which they have presented to the state as a gift."

What is the Land Board? he asked rhetorically: "A purely political body." Its entire staff consists of one clerk and two land appraisers, all political appointees in office only since last January. "They don't visit the lands," he said. "They don't know where they are."

"Where," he growled, "did the suggestion come from that this Board be injected into the park program?" From the wealthy people on Long Island who want the program to be controlled by an agency "easily subject to influence and manipulation." The Land Board had never even been mentioned in connection with parks until the Long Island State Park Commission proposed taking a little of their land.

Slowly and carefully, the Governor spelled out his side of the Taylor Estate and Northern State Parkway fights, the need for park land on Long Island, the great natural beauty of the spot selected, the attitude of the opponents, a "few wealthy men," at the Biltmore hearing.

"As between the few and the many to be benefited," Al Smith said, "I cast my lot with the many, and I signed the papers necessary to acquire the property by entry and appropriation. Immediately thereafter, high-priced legal talent was brought in to defeat the purposes of the state." It was from them and from their masters that the suggestion came to place the park program under the Land Board and to paralyze the program until this was done, because they knew that, "before the Land Board, the golf club would probably win."

So, Smith said, "there is a greater question here than Park Councils, Attorney Generals or Land Boards. There is a question of what will ultimately become of the \$15,000,000 authorized by the people. Will it buy choice park spots and locate parkways where there is fine air and scenic

beauty, or will money, power and influence compel the state to buy for the people that which nobody else wants? The people are either going to get these parks and parkways through the properly organized commissions . . . or this program will be given into the hands of the very men who now desire to weaken it in the interests of the few . . ."

And Al Smith wound up his speech as only Al Smith could. He was willing to leave the question to the people, he said. "I am laying it before them in plain everyday language and I am leaving it to them to serve notice on their servants and representatives in the Legislature just exactly what their wishes are," he said. "The cure for the evils of democracy is more democracy. Let us battle it out right in the shadow of the capitol itself and let us have a decision, and let us not permit the impression to go abroad that wealth and the power that wealth can command can palsy the arm of the state."

In his speech, Smith avoided discussing the legalities or constitutionality of the appropriation. And he avoided, except for a single passing reference, any mention of Robert Moses.

The Republicans tried to shift the focus back to the Governor's controversial appointee and his actions. Replying on the radio the next evening, John Knight, Senate majority leader, said:

The issue is one of law and order as against lawlessness and a violation of sacred constitutional property rights. With scarcely a dollar in sight or available for payment, Robert Moses, with the written approval of Governor Smith and with the aid of the State Police, seized property of the admitted value of \$250,000 and excluded the owners from such property. The question as to the legality of that action is one for the courts, and it appears that the owners of this property have brought an action against Mr. Moses for large damages. That is the big reason why Mr. Moses is so much concerned at this time and why he wants an extra session and funds to pay for this property.

It is, Knight said, because a curb is needed on such wanton abuse of power that a check by an outside body, such as the Land Board, is needed. The Legislature, he said, must "safeguard private property against future unlawful seizure." Attorney General Ottinger issued a statement detailing the "extravagance" of Moses' \$63,000 expenditures for cars and office furnishings.

But "sacred constitutional property rights" and the price of office furnishings weren't the issue to the steaming millions of New York City—or of the state's other cities. Twice more before the session Smith took to the air to speak, twice more he pounded on the theme of the few against the many, of wealth, privilege and influence against the masses, of parks against the millionaires' golf clubs. The mailboxes of legislators were situated in 1925 in the "midway," the corridor between Senate and Assembly Chambers on the third floor of the capitol. Each morning, as reporters headed for the legislative chambers, they could see those mailboxes. After each of Smith's speeches, the mailboxes were overflowing with letters and postcards supporting the Governor.

And the press didn't help the Republicans. June 1925 was a hot news month. John Thomas Scopes was being tried in the sleepy town of Dayton, Tennessee, and among the two million words a day being telegraphed out of Dayton were enough to fill endless columns in the New York papers. More page-one columns were devoted to speculation over the fate of Roald Amundsen, whose expedition to the North Pole hadn't been heard from in four weeks, until on June 19 the Times could report AMUNDSEN BACK SAFE. But in New York and other cities of New York State, no story was big enough to knock the park fight off page one. The Times, for example, carried during the thirty days of June twenty-eight park-fight stories, seven in the lead spot, as well as a long summary in its Sunday magazine, reprints in full of the texts of the long speeches by Smith and Knight, and eight editorials. The editorials of all the big-city papers—with the exception of the New York Herald Tribune, notorious during the latter part of the 1920's for its espousal of the upper-class viewpoint—seemed to be vying with one another in whipping up public support for the Governor's stand. The Times, in its only direct confrontation with the issue Macy considered important in the fight, said that perhaps Moses had broken the law, but that there were more important principles involved than that. "It seems not unlikely that Chairman Moses has exceeded his legal authority. But he is acting in the interest of the people at large and of all future generations. . . ."

The support for Smith and Moses spilled off the editorial pages into the supposedly impartial news columns. The paper in which this tendency was most striking was the *Times*, both because the paper strove so diligently for objectivity on other issues and because of its reputation. ("The *Times* was the bible, emerging each morning with a view of life that thousands of readers accepted as reality," its biographer, Gay Talese, was to write. "They accepted it on the simple theory that what appeared in the *Times* must be true.") The slanting in the *Times*'s initial story on the Taylor Estate fight—the verbatim recitation of all Moses' points and the burying of Macy's—was not corrected in succeeding stories. Stories about court developments—which were unfavorable to Moses—were kept short and relegated to inside pages. Van Siclen's flat statement that the appropriation was illegal and a violation of both law and the constitutions of the state and nation was on page twenty-one, and it was exactly five paragraphs long. More favorable stories on political developments were front-paged and allowed to run interminably.

It was not just a case of inequality in space and play. The *Times*'s articles repeated, day after day, as if they were uncontested facts, the key contentions made by Moses and Smith. Story after story, for example, contained some version of the following paragraph:

Wealthy members of the Timber Point Golf Club used social and political influence to try to get the Commissioners to withdraw. That failing, they created the Pauchogue Land Corporation and bought the estate.

The key contentions of Moses' opponents were almost totally ignored. Only the most diligent readers of the *Times* could understand, for example, that the fact that Moses had appropriated the property without money to pay for

it was of importance; the fact was hardly ever mentioned, and the mentions it was given were fleeting. When Ottinger revealed Moses' \$63,000 expenditures for "overhead," the *Times* buried the story on an inside page and handled it this way:

Albany—What is considered here as an attempt at retaliation by Republicans on Governor Smith for his veto of the Thayer State Park bill is contained in a letter of censure sent by Attorney General Ottinger to Robert Moses.

Moses' reply attacked the Attorney General for delays in searching title for proposed park acquisitions; it all but ignored the "overhead." A *Times* editorial said: "Chairman Moses' reply is a model of moderate statement."

As the crucial special session neared, the *Times* began to resemble a Democratic house organ. Its article on the eve of the session said: "The Governor believes in parks. He loves them. . . . The Governor is well aware that he has a stiff battle ahead and is preparing to meet the situation with his usual vigor and undaunted courage." His motives for calling the special session, "a contest that may add a new epic to the annals of the State," the article said, were clear: "an abiding faith that the public can force this legislation in its own interest." Other possible motives—such as an upcoming, all but indefensible court action—were never mentioned.

Part of the explanation for the *Times*'s attitude was the friendship of Adolph S. Ochs, the self-made man from Knoxville who had become its owner and guiding spirit, with the self-made man from the Fourth Ward. During the 1920's, Smith regularly spent summer weekends at Ochs's summer home on Lake George.

Part was the intense interest of Ochs, his only living child, Iphigene, Iphigene's husband, Arthur Hays Sulzberger, Sulzberger's niece-in-law, Mrs. Cyrus L. Sulzberger—of a whole clutch of Ochses and Sulzbergers, in fact —in parks. The old patriarch himself took a particular interest in preserving the Saratoga Battlefield; in 1927, Moses, trying to buy up those portions not yet owned by the state, would find himself short of money—and Ochs would purchase two key parcels and hold them for the state until the money was available. In 1925, Mrs. Cyrus L. Sulzberger was active in the Park Association of New York City. Iphigene, a somber-eyed and idealistic young matron deeply concerned with social problems, had already begun to channel the idealism—and a remarkable amount of enthusiasm and energy that was concealed but not muted by her serene manners and gentle voice-into Park Association work. She had been, she would tell the author forty years later, "thrilled" by Moses' state park work and anxious that the city should also get moving, and in 1925 she was active on a Park Association committee that was mapping a vast city land-acquisition program —and that listened raptly to Moses, who had agreed to help them work it out.

The feeling of the publisher and his family showed up in the news columns of the *Times* probably not as a result of any direct orders to editors or reporters but as the result of their understandable sensitivity to their

bosses' feelings. Albert L. Warner, one of the paper's Albany reporters, recalls: "Parks and conservation—they were dear to Mr. Ochs's heart and consequently dear to the hearts of *Times* editors. So I was on the lookout for any attempt to interfere with parks. Not that I had specific instructions to do so, but the editors would react favorably to park and conservation stories, so the reporter naturally keeps his eyes alert for stories of this type." When, in 1931, Ochs received the annual award of the Park Association, the lettering on the illuminated scroll said: "*The New York Times*, under his leadership, has made itself the mouthpiece of friends of the parks, using its great influence to educate the public to an understanding of the place of the parks in modern life."

Whatever the reason, the daily press coverage of the park fight made Smith and Moses look very good—and the Republican legislators look very bad.

The Republican legislators realized this. Faced with an election campaign in November, many of those from New York and downstate districts began to panic. But Hillies and GOP national committeeman George K. Morris, representatives of the powers that ran the party, traveled to Albany and held them in line with naked threats and blandishments. And the upstate legislators didn't have to be concerned about November. One-man, one-vote upstate agitation was decades in the future; these legislators represented New York State's rotten boroughs: districts whose voters numbered in the thousands, not the hundreds of thousands, and who were farmers who had no interest in parks and who were, moreover, fanatically opposed to government spending. The idea of spending millions for parks had appalled them in the first place; the bond referendum might have rolled up a statewide majority of more than a million, but, with a single exception, Ulster, where old park philanthropist Judge Alphonse Trumpbore Clearwater took the stump for it, every upstate county had voted against it. Upstate New York in 1925 was a stronghold of Prohibitionism, of Protestantism, of prejudice, of Ku Klux Klannism—and of Republicanism. Opposing Smith's park policies could only help upstate Republican legislators, not hurt them. As the legislators arrived in Albany for the special session, bitter against being called to the capitol in the summer heat, reporters asked them if there was any chance of a change in their position. "We'll melt in our seats first," one said. When a reporter asked Knight if he might change his mind, Knight replied, "I don't change my mind very often, do I?"

Nonetheless, Smith smote them hip and thigh. The Republicans held a majority of seven in the Senate and forty-two in the Assembly; he had to switch four votes in the Senate and twenty-two votes in the Assembly to win. He sent Moses and other emissaries to the Republican members of the State Council of Parks, the old men who had been fighting for parks for decades, and asked them to intercede with the legislators from their districts. The park philanthropists were men who ordinarily had influence in Republican councils; no legislator from a district anywhere near the headwaters of the Hudson dared publicly to oppose Judge Clearwater's wishes. At a Republican caucus, the park philanthropists spoke one after the other; not

a single legislator dared openly to argue against them, but they had their orders; a reporter wrote that, when the speeches were finished, "the Republican leaders sat speechless, until they finally filed their terse refusal to reconsider and quit the conference."

Persuasion having failed, the Governor tried other methods. West-chester, he saw, was a weak spot in the Republican wall: Boss William Ward wanted a new charter for the county, one that would centralize its government under his thumb, and the necessary county referendum on the charter could be authorized only by Legislature—and Governor. A bill authorizing the referendum happened even then to be awaiting Smith's signature or veto. Moses paid a visit to Ward and one of Ward's senators, Seabury C. Mastick. Smith signed the bill—and soon political observers were reporting that Ward had promised Smith the votes of the seven legislators he controlled, and that Mastick might even introduce the park bill Smith wanted.

The Citizens Union and City Club reformers had great influence with Republican legislators from New York City. Smith sent Moses to see them. The younger reformers admired Moses; many of the older men were disenchanted with him, but they believed in the cause for which he was fighting, and they rallied to it: "Park development . . . should be determined by sound principles. These sound principles, the Citizens Union believes, were outlined by the State Council of Parks." With reformers who still had doubts, Smith lent a hand. When, in a chat in the City Club lounge, lawyer Joseph M. Price told Moses that perhaps a central supervisory body such as the Land Board wasn't a bad idea, Moses excused himself, went to a telephone and called Smith in Albany—and hardly had the chat ended when Price received a telegram from the Governor explaining why the Land Board idea was bad. Reformer William B. Roulstone boarded a train to Buffalo, in a single day persuaded the Buffalo Council of Catholic Women, the Buffalo Civic Club and the Buffalo Central Labor Council to pass resolutions supporting Smith's stand—and then headed for Syracuse and a dozen other upstate cities and towns. The upstate park philanthropists were out working, too, old Judge Clearwater himself driving night after night to little villages to talk on their local radio stations, Franklin D. Roosevelt of Hyde Park assailing "the invisible hand behind the . . . Republican . . . policy."

Then Smith and Mrs. Moskowitz conceived a master stroke: they told Moses to call a meeting of the seventy-three regional park commissioners and to hold it in the Executive Chamber at 2 P.M. June 22—just six hours before the opening of the special session—a move that insured that the influential commissioners would be on hand during the session, available to bring further pressure on wavering legislators, and to dramatize to press and public the contrast between the attitude of the Legislature and of men genuinely interested in parks. GOP leaders pleaded with the commissioners not to attend, telling them that they were working against their own party, but the old men were loyal to their parks. They canceled vacation and business trips, and all but nineteen of the seventy-three were present, packed into the visitors' gallery of the Assembly Chamber along with the largest

crowd the Chamber had ever held, as Smith, speaking not from the raised Speaker's chair but in the well of the Chamber, a spot where he had stood so many times before, stood so close to the senators seated on folding chairs brought in specially for the occasion that he could touch them. And he told them: You created the State Parks Council. I kept politics out of it by appointing to it these men, mostly Republicans. They include some of the greatest men in the state. And it's their plan, not mine, that you're killing.

Smith's speech brought the packed galleries to their feet cheering. Smith had asked the Legislature for permission to have his speech broadcast; it had not dared refuse. Four microphones had been set up in the Assembly Chamber well, and as the cheers thundered down on the legislators, they could look at the microphones and know that they were being echoed throughout the state.

But when the Republican legislators emerged from behind the closed and guarded doors of their caucus, not a single one—not one from New York City, not even one from Westchester County—was still supporting Smith. Not only would the GOP not segregate the funds Smith had asked for, but by a straight party-line vote, the Legislature repassed the identical bill that Smith had vetoed. With the Legislature confronted by an outpouring of public pressure as great as any in the state's history, the barons of Long Island had laid down the law to the lawmakers—and their orders had been obeyed.

The roll call in the Senate was completed at 5 P.M., in the Assembly at 6:30. At exactly 7 P.M., the Governor again vetoed the bill, in a sequence that a *Times* reporter wrote "is likely to set a mark in legislative history for the record-breaking speed with which it went the route from legislative approval to executive condemnation."

Bitterness roiled over Albany. In a voice "shaking with emotion," John Knight, usually so stolid, stood at his Senate desk and cried, "He [Smith] ought to sign this bill instead of dancing up and down like a spoiled child."

"People on Long Island [are] afraid to go to bed for fear that when they wake up in the morning they would find their property seized by Robert Moses," another Republican senator shouted. Jumping out of his seat, a Democrat replied: "Is it not true that if they don't go to bed on Long Island it is because the bedsheets may be in use elsewhere?"—a reference to the Ku Klux Klan. And Jimmy Walker, his suavity gone for a moment, his cravat for once askew, shook his fist at the Republican senators and shouted, "These millionaires made their millions out of the poor despised kikes and wops of the tenements whom, through you, they are now seeking to shut out . . . from a day in the country."

From the Governor's chambers, Smith thundered that "sealed orders" had been delivered to the GOP. The Westchester delegation had "welched," he said. Seabury Mastick had promised him support—he did not say what he had promised Mastick in exchange—but Mastick later had confessed to

him that there had been brought to bear on him "too much pressure" for him to resist. Others quoted Mastick as saying that he had been told bluntly that if he supported Smith, "my career would end."

The facts which confronted Smith and Moses after the special session were as bitter as the shouting: not a cent had been appropriated for park acquisition or development. The option on the two miles of beach front at Hampton Bays was lost, and the land was promptly bought by three developers, who divided it into lots and began to erect bungalows on them. The option on Sunken Meadow was lost, and while the land was not sold, its value had obviously been tripled or quadrupled by the publicity. Other property on Long Island that Moses had coveted was being swallowed up by real estate developments.

More important—politically, at least—there was still no money to lacquer even a veneer of legality over the ugly surface of the Taylor Estate appropriation. An angry Justice Van Siclen had scheduled the Taylor Estate trial for September I—and had said that no further delays would be tolerated. On that date, Macy was at last going to get Moses on the witness stand, and Moses was going to have to admit that he still didn't have money available to pay Macy for the property he had taken from him. Smith and Moses might have reaped a windfall in the political arenas of Albany, but, they knew, that advantage would be lost when the act they were defending was flatly declared illegal.

"Well," Smith said to Moses one afternoon when the two men and Mrs. Moskowitz were alone in the Biltmore apartment, "can't you get someone to give you the money to make the thing stick?" Who? Moses said. The kind of money they were talking about was too much for his own family even to consider; real wealth was required, and people with real wealth were the people who were angriest at him. No, he said, he didn't know anybody. And they couldn't take a chance on a turndown; if they asked someone who refused, and then spread the story that they were desperate for funds to legalize the seizure, the Republicans would make capital of it—and so would Macy's lawyers. They could make only one phone call—and they couldn't make a mistake in deciding whom it would go to.

The two men turned to Mrs. Moskowitz, who had been sitting quietly in the corner, her head bent over her knitting. "August Heckscher," she said.

Smith was doubtful. He knew that Heckscher, a seventy-six-year-old multimillionaire philanthropist, was a recreation enthusiast who had already donated a playground to New York City. But a playground cost a few thousand dollars; what was required here was a quarter of a million. And Heckscher was an elf of a man—so short that when he sat on a chair his shoes dangled several inches above the floor—with a snow-white goatee, a snow-white fringe of hair around his bald pate, spectacles and a perpetual serene little smile. He would know that he would probably become involved in the lawsuit if he gave the money, and he hardly seemed the type of man who would voluntarily enter so savage a fight. But Mrs. Moskowitz, who

had worked with Heckscher on various charities, thought he would, and she telephoned him. He agreed immediately. If it was true—as Moses' opponents were to charge—that the little millionaire demanded in return that the park be named after him, Moses must have considered this a cheap price to pay for the opportunity to be able to say in court that he had money to pay for what he had taken.\*

Even with Heckscher's contribution, the court fight did not go well. Commenting that "it would be a pretty state of affairs if a state commission could go about seizing land with gifts provided by private individuals," Macy's attorney, Charles H. Tuttle, later a Republican candidate for Governor, said that if Moses used the money to reappropriate the land, he would be confessing that the first appropriation had been illegal—and Macy and his partners would be entitled to damages for that first appropriation. And the second appropriation would be as illegal as the first because, he said, state law required that the money for a land appropriation come from legislative segregation, not from some other source. Moses apparently feared Tuttle was right. Smith tried privately to persuade Macy to accept Heckscher's \$250,000—plus another \$12,000 the millionaire had donated to take care of accrued interest—for the first appropriation and drop the fight. Even when Macy indignantly refused, Moses apparently tried to avoid reappropriation: when the formal examination before trial began, the step had not yet been taken.

At times, Moses seemed almost desperate to avoid being put under oath. On the day he was scheduled to be examined, he didn't show up in court. Tuttle asked Justice Selah B. Strong to cite him for contempt, but Strong accepted a commission attorney's explanation that Moses had believed that arrangements had been made for him to be examined at his office.

And when Moses, ordered to appear, finally took the stand, he did not make an impressive witness. Testifying under oath, he swore that he had never been advised by anyone that the Taylor Estate appropriation would be illegal unless the Legislature segregated money for it. Had he not been advised precisely that several times, Tuttle demanded—orally and in a written memorandum—by Deputy State Attorney General Irving I. Goldsmith? No, Moses said. Tuttle thereupon produced the Goldsmith memorandum and waved it in front of Moses as he sat on the witness chair. Before the start of the actual trial, Moses, apparently forced into the act, took the step of reappropriation, and his attorneys began a new series of delaying actions in an attempt to stall the proceedings until January, when there would convene in Albany a new Legislature that just conceivably might give him the appropriation he needed. Assailing the commission's "dilatory tactics," Norman S. Dike, the latest in the relay of judges sitting on the case, said the trial would begin October 18 without fail. On October 18, he called the case—and Moses was not present. "I especially asked Mr. Moses to be here at the opening of

<sup>\*</sup> Heckscher was the grandfather of the August Heckscher who was New York City Park Commissioner during the Lindsay administration.

this trial, and he might have had the courtesy to grant the court's request," Dike said from the bench. "It seems as if his absence, unaccounted for, shows a studied effort to affront the court." Tuttle asked that he be punished for contempt, but Dike accepted a commission attorney's explanation that he had advised Moses it would not be necessary for him to appear. The attorney then moved for a jury trial—and when Dike granted the motion, the start of the trial was delayed until December 6. On December 7, the commission attorneys filed more than six hundred pages of briefs asking for dismissal of the case—but Dike peremptorily denied the motion, and there was a note in his decision that the commission could only have considered ominous. As the *Times* reported: "In his decision yesterday [the] judge . . . ruled that the Commission had not had appropriated at the time the Taylor Estate was seized, the funds necessary."

There were ominous developments on another front, too. Jones Beach was owned by the townships of Hempstead, Oyster Bay and Babylon, and while the Long Island State Park Commission could buy, condemn or appropriate land owned by private individuals, state law provided that property owned by a township could be transferred to other ownership only by a vote of the township's residents.

Moses had decided to try Babylon, where he spent his summers, first. On July 18, 1924, he had appeared in the red-brick Babylon Town Hall and asked the Town Board to hold a referendum.

The five board members just stared at him. They had been elected, placed in their seats at the board table, by the votes of the baymen, and they knew that one way to make sure they would not be re-elected would be to demonstrate anything less than complete vigilance over the priceless heritage of the sacred bay bottoms. The Babylon Leader reminded them that "Babylon wants this land which has been hers . . . for nearly a century and a half before the State came into existence to keep as a heritage for its children. . . . Keep it—it is a park at present—a natural park swept by breezes from the bay and ocean. Enjoy it as it is or improve it. But keep itnever surrender one inch." Let the commission spend its money elsewhere, its editorials advised Moses, "before it . . . attempts to snatch property that the residents of the Town of Babylon intend to keep for their children's children until the end of time." Within two months after Moses' request for a referendum, not only the Babylon Town Board but the governing board of every village on the South Shore of Suffolk County—as well as the villages' chambers of commerce, boards of trade and civic associations—were lined up against the proposal, and Judge James B. Cooper, editor and owner of the Leader, could proclaim with satisfaction that "the project at present has as much chance of carrying as a Great South Bay clam has of growing teeth." When Moses turned to Oyster Bay, furious Oyster Bay citizens formed a "Save Our Beaches" committee that within days had a membership of thousands. In desperation, Moses turned to Hempstead, although he knew that votes in Hempstead Town, as, indeed, in all of Nassau County, went whichever way the county's iron-fisted Republican boss, G. Wilbur Doughty, wanted, and he had been unable to convince Doughty to want Jones Beach development. Doughty allowed the proposition to be placed on the ballot in the November 1925 election, and the vote was 12,106 to 4,200 against it.

Forty years later, Robert Moses would remember how he had felt in 1925 when he heard the Hempstead referendum results. "It looked like we'd lost Jones Beach," he would recall. "It looked absolutely hopeless." More than with any other single project, his dreams had been tied up with Jones Beach. And so had his sense of urgency. He had been hearing with increasing frequency rumors that real estate developers were making deals with Doughty's machine to have the town turn over the land to them for private development. In his mind's eye, he could see those vast stretches of untouched sand covered with shabby bungalows. He knew there would never be another opportunity to create a great beach so close to New York City. "You know," he would recall, "if we lost Deer Range, it would have been bad, but it wouldn't have been the end of the world. But if we had lost Jones Beach..." His voice would trail off. And then, remembering, he would say, "And I thought we had lost it."

At the end of 1925, Robert Moses might well have thought he had lost his entire Long Island dream.

The fact that development of Jones Beach could not be begun without approving votes from three townships—and that the one township that had voted had disapproved by a three-to-one margin—was only part of the story.

Not only the options for beautiful Sunken Meadow and for the beach at Hampton Bays but those for the Southern State Parkway right-of-way for which he had drunk beer with farmers had lapsed for lack of money to honor them.

His negotiations with the North Shore barons for right-of-way for the Northern State Parkway had dragged to a complete halt. He had secured easements from New York City for its watershed properties, but he had no money to develop those properties as parks, and there was no money in sight to enable him to do so. There was no money in sight to develop any park on Long Island. The Legislature had refused to appropriate any in 1925, and there was no reason to believe that the Long Island barons would be any less secure in their control of the Legislature in 1926.

Al Smith's loyalty and August Heckscher's money had pulled him back from the edge of the precipice along which he had been tightrope-walking in the Taylor Estate affair, but he was shortly—all too shortly—to stand trial in the affair, and the outcome of the trial might well result in the loss to the state of that property, too. And even if Heckscher's gift let the state keep the Taylor Estate, there was no money in sight to legitimatize the appropriations at Montauk Point and Lloyd Neck.

The only concrete result of all the talk about parkways on Long Island had been an increase in the rate at which real estate promoters were littering the Island with their rows of houses. Every week that winter brought the announcement of another large tract of farmland bought by a developer who was planning to erect model homes on it in the spring.

It had been more than a year since Robert Moses had announced his revised and broadened park and parkway plan, a plan which had, after all, included parks and parkways not only on Long Island but throughout the rest of New York State, along the Niagara Frontier, in the Genesee Valley, in the farmland of the Taconic region, and among the peaks of the Alleghenies, Catskills and Adirondacks. Now, more than a year later, parks and parkways were still located nowhere but in the map of Moses' imagination. After all the talking, all the planning, all the fighting, they simply didn't exist. And at the end of 1925, there seemed little possibility that they would come into existence at any time in the foreseeable future. If one looked ahead a decade, even a generation, it seemed unlikely that any substantial part of the dream would be reality.

Within three years, almost all of it would be reality.

## 12. Robert Moses and the Creature of the Machine

THERE WERE MANY complex reasons for the realization of Robert Moses' state park and parkway plan. But the key reason was simple: the further evolution of Robert Moses.

The construction of parkways—like the construction of conventional highways—was a potential source of great wealth to politicians. Parkways meant construction contracts. Politicians who had a say in which firms received those contracts could expect financial remembrances from a successful firm, if indeed they-or a relative or a trusted associate known in political terminology as a "bag man"—did not actually own a piece of it. Parkways meant real estate transactions, generally either purchase or condemnation, both methods under which landowners could expect to do well financially; state public works officials, anxious to begin construction and not too concerned about price because the money they were offering was not their own, were traditionally more generous than private buyers. If politicians were the landowners—if they bought the land at pre-parkway prices, from owners who didn't know the parkway was coming, and then sold it to the state at right-of-way prices—they could expect a large profit. It took longer to get one's money through condemnation, but the rewards could be even greater; the success of politically well-connected attorneys in winning high condemnation awards from Court of Claims judges who also had risen through the ranks of political machines was an open secret in legal circles in New York State during the 1920's—as it would be in the 1960's. And parkways meant development: sleepy countrysides long static because of their inaccessibility suddenly became desirable locations for factories and housing developments when a parkway brought them close to a city or large town. Land in these areas became suddenly valuable. Land near the parkway's exits, automatic focal points for development, became particularly valuable. The politician who bought this land at pre-parkway prices and sold it as or after the parkway was being built could reap great profit, and the politician who bought the land but instead of selling it developed it himself, building himself the houses and factories, could reap a fortune. Moreover, in terms of development, the impact of a parkway spread in ever-widening ripples: stores and laundries and gas stations and insurance brokerage firms for the residents of the houses, subcontractors and material-supply houses for the factories. This meant a burgeoning in land sales, insurance premiums, legal fees—in all the areas in which politicians grow fat. It meant as well an intangible, but intense, additional attraction for politicians: in a dormant area, opportunities were limited because everything was cut and dried, prices for land, for instance, being well known and firmly established; in an area opened by a road, everything was changing almost on a day-to-day basis; opportunities were wide open.

To take advantage of the financial opportunities provided by a parkway, a politician had to have foreknowledge. If he wanted to be first on line with his recommendations for construction contract awards, he had to know that the highway was going to be built. If he wanted to buy land that was to be acquired for the highway's right-of-way or land strategically near the highway, he had to know where the highway was going to be built, not its general location but its precise route, so that he could buy the exact lots that would be acquired, and he had to know before the owners knew so that, not knowing that their land might be valuable, they would sell cheap. And politicians had a weapon they could use in obtaining such advance information; if they did not get it, they would not approve the building of the highway.

The young Robert Moses, the idealist of Yale and Oxford and the Municipal Civil Service Commission, would not have even considered trading contracts or information for approval. Even the older Robert Moses of the New York State Association, a Moses more admiring of the ways of politicians, would not have done it; that Moses could in 1922 still reserve his bitterest State Bulletin sallies for the Nassau County Republican machine because of its link with "political contractors." Even the Moses of 1924, doffing his principles to lighten himself for the pursuit of his greatest dream, wouldn't do it. No sooner had he announced his park plan in 1924 than intimates of the Governor wrote him asking for advance information on parkway location; Moses indignantly refused to give it to them. Senate Finance Committee Chairman Charles J. Hewitt offered to sell the State Parks Council a tract of land he owned in Fair Haven; despite Hewitt's importance to his dream, Moses refused to buy.

Moses apparently took the same attitude in his 1925 attempt to persuade Hempstead Township to cede him its portion of Jones Beach. Hempstead was controlled by Nassau County GOP leader G. Wilbur Doughty. "Today they talk about political bosses," Leonard W. Hall, former national chairman of the Republican Party, would say in the 1960's. "They don't know what a real boss was. Doughty was a real boss. When he spoke, the discussion was over. He always kept his word; he was known for that. But cross him and you were finished. There's no one like him today. We used to call him the Last of the Mohicans." A square-faced man with a walrus mustache, Doughty had an almost visionary concept that rural Long Island would one day be a heavily populated suburban area and was always interested in suggestions for public works that could help open the Island to development. But his vision was heavily mortgaged to practicality: he ran

one of the most corrupt political machines in the state—"In Nassau County," one observer said, "zoning was bought and sold like potatoes"—and much of the corruption revolved around public works. Doughty's brother-in-law, "Uncle Andy" Weston, was president of Booth & Weston, the largest contracting firm in the county, and Booth & Weston, along with Hendrickson Bros., Inc., another firm with which Doughty had close ties, were habitually given the lion's share of county contracts. And since many GOP county committeemen happened to be on the payroll of the two construction firms, the firms helped Doughty keep them in line. The link between Nassau politicians and contractors had come close to surfacing in 1922; in that year, a Supreme Court Justice had impaneled a grand jury to investigate it and the investigation had already turned up a loan from Booth & Weston to Assemblyman Thomas A. McWhinney before McWhinney persuaded the Legislature to pass a bill establishing a commission to investigate the judge, a move that effectively stymied the grand jury. Moses had followed the case closely in his State Bulletin; calling the bill "legislative brigandry," he had nominated it for his "Worst Bill of the Session" award and had castigated the Nassau GOP machine and McWhinney, whom he termed "the creature of the machine." Moses must have known what it took to get things done in Nassau County, but he apparently wasn't willing to do them; the best proof of that was, perhaps, the defeat of his Jones Beach referendum.

But in late 1925, the dream all but dead, Moses held a series of private meetings with Doughty. There is, of course, no record of what transpired at these meetings, and no proof that any deal was entered into. But certain developments ensued:

- Moses announced that future planning for Jones Beach would be conducted in conjunction with a delegation from Hempstead Township, which would, of course, have access to commission plans showing the precise location of the proposed Meadowbrook Causeway to Jones Beach, and the chairman of the Hempstead delegation turned out to be Assemblyman Thomas A. McWhinney. And Moses was soon meeting regularly with "the creature of the machine" on an extremely friendly basis.
- Within two months after Moses and McWhinney began meeting, a lawyer who was a member of the Nassau GOP's inner circle formed a corporation with a group of associates. The only business the corporation ever transacted was the purchase and sale of land, and the only land it ever purchased and sold was 265 acres of undeveloped, all but worthless meadow and swamp land, 99.5 acres of which would become the right-of-way for the Meadowbrook Causeway, the remaining 165.5 acres of which would, when the causeway had been completed and the land's value enhanced, be sold by the corporation to private developers.
- When the contracts for the causeway, and for other Park Commission projects on Long Island, were awarded, a substantial number went to Uncle Andy Weston and Hendrickson Bros., Inc.
- And the Last of the Mohicans abruptly left the tepee of the commission's opponents and smoked the peace pipe with Robert Moses, supporting every one of Moses' Long Island proposals.

Doughty's friendship was to give Moses his first real hold on Jones Beach. After the meetings between the two men, the Republican boss told Moses to resubmit, with some minor revisions, the proposal so soundly defeated in the November 1925 referendum. Moses did so in November 1926, and the three-to-one margin against the proposal magically became a three-to-one margin in favor, Hempstead Town voting, 18,872 to 5,076, to cede to the Long Island Park Commission "all right, title, interest and jurisdiction . . . to all that certain town land . . . commonly known as Jones Beach."

More immediately, the friendship altered the balance of power in the over-all state park fight. On December 21, 1925, ten days after Moses agreed to cooperate with McWhinney and the Hempstead Town delegation, the Suffolk County Board of Supervisors passed a resolution asking the Legislature to abolish the Long Island Park Commission. They sent it to the Nassau Board of Supervisors, expecting that body to concur in the request, as it had the year before. To the shock of the Suffolk officials, Nassau declined to do so. The two counties in which the Park Commission was operating were no longer united in opposing it.

The GOP front in Albany was no longer solid, either, because of the votes Doughty controlled in the Senate and Assembly.

Republican ranks were already under severe pressure over parks. In New York City, Al Smith, taking command of Tammany Hall in fact if not in title after Charlie Murphy's death, had snatched the Democratic mayoral nomination away from Red Mike Hylan and handed it to Jimmy Walker, and Walker, at his inauguration on January 1, 1926, had announced support of the vast program of city park-land acquisitions prepared by the city's Park Association with Moses' help. There would be a referendum in November to authorize the necessary bonds, and women's clubs and a reformers' Committee of One Thousand had already launched a mammoth public education campaign. All in all, 1926 was not the year to be opposing parks.

Upstate Republican legislators might be insulated in their rotten boroughs, but it wasn't only legislators whose names would be on the ballot in 1926. Al Smith would be campaigning for re-election, and Republican strategists were determined to knock him out of the Governorship. They had already persuaded the man they regarded as *their* strongest candidate, Ogden Livingston Mills, to leave Congress and run against him. And there was a United States Senate seat up for grabs, too, and the present occupant of the seat was James J. Wadsworth himself, the former Assembly Speaker and one of the state's most powerful Republicans.

No sooner had the Legislature convened, therefore, than Wadsworth summoned the legislative leaders to an Albany hotel suite and told them a compromise on the park fight was in order. The compromise could not be over the Northern State Parkway, he said; the interests of too many of their friends were involved there. But the Taylor Estate was a different story;

Havemeyer, the only Timber Pointer with real influence, didn't seem really interested; Macy did—but Macy had little influence of his own. The Taylor Estate, the Republican leaders agreed, could be sacrificed.

Smith, with his park plans stalled and the threat of the potentially embarrassing Taylor Estate court fight hanging over him in an election year, was not averse to a compromise. In a secret meeting with Hewitt and Hutchinson, the Governor agreed that he would not ask for funds to acquire right-of-way for the Northern State Parkway until Moses came up with a route acceptable to the barons, and he agreed that, even after the right-of-way had been acquired, he would not ask for funds to begin construction until the Southern State Parkway had reached the point at which it would connect with the Jones Beach causeway, a point about fifteen miles into Nassau County. In return, Hewitt and Hutchinson agreed that the Southern State Parkway could be built and that the entire \$15,000,000 proceeds of the park referendum would be segregated in 1926; work could therefore begin immediately on Moses' upstate park program and his Long Island projects, including Jones Beach, the causeway leading to it from the Southern State Parkway—and Deer Range (soon to be August Heckscher) State Park.

Since the 1925 Taylor Estate fight had revolved around the question of whether an outside agency, the Republican-controlled State Land Board, should have authority over the State Parks Council, a face-saving device had to be worked out on that point so that it would appear that neither side had surrendered. On January 26, 1926, Smith and the GOP legislative leaders announced that they had agreed that expenditures of the \$15,000,000 would be supervised, as the GOP had insisted—but, as Smith had insisted, not by the Land Board. Instead, it was announced, expenditures would be supervised by a committee of three: Smith, Hewitt and Hutchinson.

Macy got his first hint of what was happening when he learned that the segregations of the \$15,000,000 included an item of \$25,000 for "Deer Range Park, permanent improvement of buildings," and \$170,000 to begin the purchase of right-of-way for the Southern State Parkway, that strip of concrete Macy had always been afraid would reach out toward East Islip. Rushing to Albany, he confronted Hutchinson, and the assemblyman answered his questions evasively. The amateur in politics realized that the professionals had betrayed him.

Hewitt and Hutchinson had been pleased with the compromise with Smith. By postponing work on the Northern State Parkway until fifteen miles of the Southern State were built, they thought they were consigning the former road to some far-distant limbo; construction of the fifteen-mile-long Bronx River Parkway, after all, had taken fourteen years. And since they could outvote Smith two to one on the committee set up to supervise park expenditures, they assumed they could keep the pace of construction on the Southern State slow.

Economy, moreover, was as important to them as delay; their upstate

conservatism had been affronted by the thought of spending even a million dollars on parks and parkways in a single section of the state; they could see that the actual amount involved would eventually be far higher than the million, but they wanted to keep it down to the bare minimum that they felt was all the state could afford.

But no sooner had they given Moses \$170,000 for Southern State right-of-way, confident that that amount would allow him to purchase no more than a mile or two, than the Nassau County Board of Supervisors, now suddenly, and mysteriously, enthusiastic over Moses' projects, purchased additional miles and presented them to the Long Island Park Commission as a gift. Playing on the greed of real estate developers who owned land in the parkway's path, Moses persuaded them to donate right-of-way so that the rest of their property could be opened to development. Suddenly awakened to the fact that the New York City watershed property could be used as right-of-way, Hewitt and Hutchinson realized with a shock that the land for the Southern State was almost all in Moses' hands—all the way out to that magic point where it would trigger the start of work on the Northern State.

Although no funds had been appropriated for surveying and engineering, there were suddenly surveyors and engineers out on the right-of-way, men furnished by the State Department of Public Works-whose Long Island office just happened to be located at the former August Belmont Estate near Babylon that Moses had acquired and turned into a state park, making the old Belmont Mansion his headquarters. And these men, they were told, were drawing up plans with unprecedented speed. Even as they digested this news, a bill was introduced in the Legislature providing for a million dollars for "the construction, reconstruction and widening of highway routes in Nassau and Erie Counties"-including \$350,000 for "construction of the Southern State Parkway." They had no trouble understanding why Erie, a Republican stronghold, had been given even more money than Nassau in the bill-Erie's legislators would be even more determined than Nassau's that the bill should pass, and an alliance of the GOP legislators from these two counties with the Democrats would make it impossible for Hewitt and Hutchinson to prevent its passage.

The parks on Long Island were also being developed at a rate they could hardly believe, since they had kept appropriations for such development small. When they checked, they found that park roads were being constructed by DPW crews and park buildings refurbished by Conservation Department crews.

They took a look at the bills Trubee Davison had introduced for Moses in 1924 and found in them a specific provision stating that while the Long Island Park Commission would have final say on the design of parkways—as well as full control of them when completed—their physical construction could be financed out of DPW allocations. They found that the landscaping was being financed out of "routine" 1926 Conservation Department requests for "tree nurseries." The Lloyd Neck lighthouse property was being developed with a Conservation Department appropriation for "oyster cul-

ture." When they waxed indignant, they were told blandly that the light-house property could certainly be used for oyster culture. There was nothing the slightest bit illegal about anything Moses was doing. The best bill drafter in Albany, they realized, had been at work again.

And when they protested to the Governor, he bourbon-coated the pill he was making them swallow. Inviting them to see for themselves what Moses was doing, he suggested they come to New York City first, sleep over at the Biltmore and then go on to Long Island in the morning. At the Biltmore, as Moses would later recall, "the Governor got Hewitt and Hutchinson to stay overnight in his apartment. They were drinking bozos, you know, and they were really putting it away. As the evening wore on, the Governor put some records on and he was teaching these two fellows to dance. I left at 2 A.M. [Henry] Lutz [a Moses aide] stayed until five and he told me that it was about then that the Governor and he and Hewitt put Hutchinson to bed. Hewitt got up at seven the next morning and ordered a big breakfast for himself and the Governor and they went in to ask Hutchinson what he wanted and Hutchinson sort of groaned, lying there in bed, and said, 'Governor, go away. The stomach revolts at the thought of food.'" During the tour, Smith was at his friendliest. "You see," Moses would say, "in so many cases, things come down to personalities, to the human factor. And they loved the Governor." And even if they hadn't, what, after all, could they do? The Highway and Conservation Department budgets had already been approved. Money was being spent under them. If they tried to reopen the budgets, it would be a mess. And what would the press say? After all, there was the election coming. They decided not to interfere with the program.

The court fight still loomed ahead of Moses, but Smith was able to help him with that, too.

During 1926, Moses continued his technique of stalling the trial while talking as though there were not the slightest doubt about its outcome. In an article he wrote in May outlining the over-all progress of the state park plan, he said blandly, "The state has acquired Deer Range Park." All through May, Moses' attorneys continued filing motions and, when judges overruled the motions, appealing their decisions to higher courts, and when the higher courts threw out the appeals, taking them to still higher courts. Three separate dates were set for trial—and on each of them appeals were still pending and judges had to grant the commission postponements. All through May, Moses' laborers were converting the ballroom of the old Taylor mansion into a cafeteria, the sitting room into a comfort station, setting up tents on the beach to serve as bathhouses and hacking rough roads through the woods so that motorists could reach them. By mid-May, "Deer Range State Park" was opened to the public.

On May 25, State Supreme Court Justice Selah B. Strong received word from Albany that the state's highest court, the Court of Appeals, had thrown out the last of Moses' appeals, in a decision which supported every one of Macy's contentions, even to the point of saying that if the commission's

right to peremptory appropriation was upheld, "the conclusion logically follows that it has a charter wide as the wind, withal, and might seize for park purposes all the lands in Nassau and Suffolk-counties." Scheduling the trial for June 4, Justice Strong told Walter H. Pollack, who was heading the team of five attorneys handling the case for the commission, that he would not postpone it again for any reason.

On June 4, Pollack was not in court. One of his four colleagues told Strong—falsely—that Pollack was occupied in another courtroom. Strong said the trial was going on anyway. "We will not participate," Pollack's colleague said—and all four commission attorneys walked out of the courtroom, leaving the commission without counsel.

Strong adjourned the trial for a day to give Pollack a chance to appear. On the next day, Pollack and his colleagues were again absent. Strong adjourned it again—and again no attorneys appeared. On the fourth day, the judge allowed a jury to be chosen and told Macy's attorney, Charles H. Tuttle, to present his case. The jury found that both appropriations of the Taylor Estate had been illegal, the first because the commission did not possess \$250,000, the second because while it had the money, the money came from a private gift instead of from a legislative segregation, the only legal source of funds for a peremptory appropriation. The jury assessed each of the three commissioners—Robert Moses, Townsend Scudder and Clifford Jackson—\$22,000 apiece in punitive damages. Strong "perpetually enjoined" the commission from entering the Taylor Estate and ordered the state troopers removed forthwith. Watching the judge sign the injunction and hand it to the Suffolk County sheriff, watching the sheriff leave the courtroom to serve the injunction on the troopers, Macy thought he had won at last. Declared Tuttle: "The vindication is now complete."

Bella and Emanuel Moses were at their summer lodge at Camp Madison. Every morning a Madison House social worker delivered a New York Times to their door. When he handed it to them on the morning after the verdict, and they leafed through it—all the trial stories were on the inside pages now—and learned of the \$22,000 judgment against their son, they groaned, and Bella Moses said, "Oh, he never earned a dollar in his life and now we'll have to pay this." The social worker recalls: "It was just assumed that they would pay it. They always paid all his debts."

The day after the verdict, Pollack, suddenly free of other court engagements, appealed on the grounds that the Long Island State Park Commission had not been represented by counsel. A Brooklyn Supreme Court Justice denied the appeal, calling the lack of representation a "deliberate and intentional" attempt to delay the proceedings. But the Appellate Division agreed to hear the appeal—at its fall term—and invalidated Strong's injunction until then. The troopers returned to the property and, during the summer, Moses took reporters on trips to "Deer Range Park," and the reporters rhapsodized about the families enjoying its facilities. In the fall,

the Appellate Division upheld Pollack's appeal and ordered a new trial. And this trial, which was to be the closest thing to a legal showdown that was to occur in the case, was to contain a new factor: Al Smith's appearance as a witness for Moses.

Smith's appearance marked the "first time in a generation, probably longer, that a chief executive of the state has appeared in court in the role of a witness." Platoons of reporters followed the Governor as he, Moses and Mrs. Moskowitz boarded a Long Island Rail Road train for the three-hour trip to Riverhead. At the station, he was met by an American Legion band which played "The Sidewalks of New York" as it accompanied him to the courthouse. There, he was escorted to the chambers of Justice James A. Dunne. The Governor talked with Dunne in private and then the judge escorted him into the courtroom so that he could give his testimony—he was on the stand for only fifteen minutes, spent most of the time recounting the Biltmore hearing and was not cross-examined—and as soon as he stepped off the stand, the judge adjourned court. The Governor joined him in his chambers for lunch.

In the newspapers, Smith's appearance dwarfed the legal issues involved in the trial. Whether it had the same effect in the mind of Justice Dunne is unknown, which is unfortunate because the judge, not the jury, decided the case, and his directions to the jury, which precluded it from making a decision on the essential point at issue, were rather sharply at variance with those of the many other judges who had been involved with the case.

Dunne directed the jury to find that the first appropriation of the Taylor Estate had been illegal but that the second had been legal and the property therefore now belonged to the Long Island Park Commission. The only function of the jury, he told it, was to decide whether Pauchogue had suffered substantial financial damages as a result of the first seizure. If it had not, he said, the jury should fix the damages against the commission at six cents. The jury did so. Macy was to believe until he died that Smith's entrance in the case had played a role in the judge's removal from the jury's hands of the right to make a decision on the key point in the case: the legality of the second appropriation. "The Governor came down and took the judge out to lunch—what chance did we have?" he was to say.

Whether Dunne's decision would have remained the binding legal word in the case if both sides had continued the legal battle on equal terms, if both sides had continued to make use of all their remedies at law—if the Pauchogue Corporation had been able to press through higher courts *its* appeals as the Long Island Park Commission had been able to press *its* appeals—is impossible to determine. For both sides weren't equal.

Lawsuits take money. The state's supply of this commodity is comparatively bottomless. The private citizen's is not. And now W. Kingsland Macy was running out of money.

Macy himself was not wealthy. Havemeyer was, but, saying "This . . .

should be considered a business affair," he had told Macy he would have to pay all legal expenses over \$25,000.

At the time, Macy had thought that \$25,000 would be ample. But as the commission's lawyers began to pile appeal on top of appeal, he wrote Havemeyer that, to a layman, "the ramifications of this litigation are almost beyond belief." And ramifications meant money. If Moses' lawyers were constantly filing new briefs, Macy's had to file briefs in reply. The briefs had to be printed in standard legal form, and they were running into thousands of pages. The printing bill for a single appeal ran to \$3,652.63. The stenographic transcript for a single appeal cost \$545. And finally, of course, there were the lawyers' fees. Lawyers like Tuttle and the experts required to handle appeals didn't come cheap. The first bill for "services rendered" was delivered to Macy on April 28, 1925. It was for \$10,000. Even before the trial in Dunne's court began, the \$25,000 mark had been reached. To Macy, the idealist, the case represented something that was more important than money. When Havemeyer wrote, "This . . . is my limit," Macy replied that he would carry on alone. Appeals attorneys told him that if he was willing to press the fight vigorously, he would probably win, although the victory might not come until the case had been transferred out of the state courts and into the United States Supreme Court, which would focus on the basic constitutionality of the use by a state agency of one individual's money to seize the property of another. Macy authorized them to proceed. But Moses' attorneys continued to make motions and file briefs, and when Macy's appeal from Dunne's decision finally reached the Appellate Division in February 1928, his legal costs had mounted to \$43,192.61 —a burden beyond his financial resources. By April 1928, his attorneys were dunning him for payment of a \$1,100 bill. Although the case would eventually be brought before the Court of Appeals, which upheld Dunne's decision, and an attempt was made to bring it to the United States Supreme Court—Justice Louis Brandeis brought the legal fight to an end on January 21, 1929, four years after the Biltmore hearing, by refusing to issue a writ of certiorari which would have enabled the Court to hear the case—it was obviously not pressed vigorously in these last stages, as though the case were really over already.

And, in fact, it was. Moses had never stopped developing the Taylor Estate—as if its acquisition were a fait accompli. By the spring of 1927, he had laid concrete for access roads and parking fields, set out scores of stone fireplaces and picnic tables, erected wooden bathhouses with showers and lockers and finished renovating the mansion and outbuildings, at a total cost of hundreds of thousands of dollars. During the summer of 1927, it had hundreds of thousands of visitors. By the time the higher courts came to rule on the question of whether the Taylor Estate was a park, it was a park. What was a judge to do? Tell the state to tear up the roads and tear down the buildings, to destroy what hundreds of thousands of dollars of the public's money had been spent to build? Tell the people who had visited the Taylor Estate that they could visit it no more? In theory, of course, judges should not be influenced by such considerations. But judges are human. And their

susceptibility to such considerations was undoubtedly increased by Moses' willingness to attack publicly those of them who ruled against him, as he had done to the "local judge," thereby letting the public know exactly who it was who was closing the park to them.

The final hearing before the State Court of Appeals was the twenty-fifth separate appellate proceeding in the Taylor Estate case. The case was, the *Herald Tribune* said, "a landmark in eminent domain."

It was also a landmark in the lifescapes of two men. W. Kingsland Macy, who had possessed before it a vague desire to enter politics, had been precipitated by it into the political arena—and had found he enjoyed fighting there. And Macy had learned in his first bout many tricks. After fighting Robert Moses, he was to say, fighting anyone else was easy. Becoming active in 1927 in the Suffolk County Republican organization, within a year he threw out its leader and seized his place. When the Depression loosened for a moment the barons' stronghold on the state's GOP organization, Macy tore it from their grasp and by 1932 was Republican State Chairman. Although the GOP's Old Guard later re-formed and ousted him from the chairmanship, he was to rule Suffolk County, unchallenged, for more than thirty years. When there came a time when it would be useful to him to be in the State Senate, he sent himself to the State Senate; when he wanted to go to Congress, he sent himself to Congress. Macy's views were liberal, and he introduced progressive governmental innovations in Suffolk County, but to achieve his aims he ruled the county as an old-time political satrapy. Ruthless and cunning, he seemed to know every trick of bending men to his will, and he bent them so successfully that Kingsland Macy was called "the Little King of Suffolk County."

And when, after Macy had fought his way to power, Robert Moses, needing his help, made overtures of friendship, Macy accepted them. Although the strength of their personalities often made them clash, the two one-time "amateurs in politics" were for more than thirty years the closest of political allies, allies so close, in fact, that when, in 1962, cancer-ravaged King Macy knew he was about to die, Moses was the only person outside his immediate family whom he wanted to see.

Robert Moses had also learned from the Taylor Estate fight, his first use of power, lessons that would govern his behavior for the rest of his life.

One, hammered home in his consciousness by the results of his accommodation with G. Wilbur Doughty, was that the simplest method of accomplishing his aims was to use the power he possessed in all its manifestations, even those that as recently as a year previously he had shrunk from using. So thoroughly did he embrace this lesson—and the "creature of the machine" that was its embodiment—that when, in 1927, a vacancy occurred on the Long Island Park Commission, he had Smith appoint McWhinney to it.

The simplicity—combined with the feeling of accomplishment—might well have made Moses ask himself if it really made any difference whether

he worked with Tom McWhinney. What difference did it make if the state purchased the right-of-way for the Meadowbrook Causeway from a bunch of farmers or from a bunch of Republican insiders? What difference did it make if he gave a road-building contract to Uncle Andy Weston? What difference did it make to the public—and what difference did it make to him? What did he care if Doughty's friends made money from his dreams? If they did, he had learned, the dream would become reality. If they did not, he had learned, it wouldn't. And the dream was the important thing; the dream was what mattered.

This lesson Robert Moses translated into phrases that began to appear in his letters and, according to associates, his conversation after the Taylor Estate fight: "The important thing is to get things done." "You can't make an omelet without breaking eggs." "If the end doesn't justify the means, what does?"

Another lesson Moses learned was that, in the eyes of the public, the end, if not justifying the means, at least made them unimportant. Al Smith had succeeded in blurring in the public's mind the legal technicalities of the fight—by focusing the public's mind on the end of the fight: parks.

The value of parks as an issue was another lesson. As long as you were fighting for parks, you could hardly help being a hero. When the Taylor fight started, he himself had been all but unknown. During the fight, he had been portrayed in a hundred front-page stories and a hundred editorials as a hero, as a man "acting in the interest of the people at large and of all future generations."

This lesson Robert Moses would often recite to associates. He would put it this way: As long as you're fighting for parks, you can be sure of having public opinion on your side. And as long as you have public opinion on your side, you're safe. "As long as you're on the side of parks, you're on the side of the angels. You can't lose."

There were other lessons, too. Whatever the motivation that had impelled him to take the risk of starting to transform the Taylor Estate into a park while the courts had still seemed likely to rule that it was not a park -a fearless determination to do what he knew was right regardless of the consequences, a blind faith in Smith's ability to rescue him from consequences, a desperation to see at last the beginning of the realization of at least one of his dreams, or, perhaps, an insight, the insight of a political genius, that physical development would help rather than hurt his cause the risk had been magnificently justified. And he had understood the significance of that justification. Once you did something physically, it was very hard for even a judge to undo it. If judges, who had to submit themselves to the decision of the electorate only infrequently, were thus hogtied by the physical beginning of a project, how much more so would be public officials who had to stand for re-election year by year? If he had needed a gift from August Heckscher to make victory certain, what did that prove? Only that once you physically began a project, there would always be some way found of obtaining the money to complete it. "Once you sink that first stake," he would often say, "they'll never make you pull it up."

These lessons had other implications. If ends justified means, and if the important thing in building a project was to get it started, then any means that got it started were justified. Furnishing misleading information about it was justified; so was underestimating its costs.

Misleading and underestimating, in fact, might be the only way to get a project started. Since his projects were unprecedentedly vast, one of the biggest difficulties in getting them started was the fear of public officials—not only upstate conservatives but liberal public officials as well—concerned with the over-all functioning of the state that the state couldn't afford the projects, that the projects, beneficial though they might be, would drain off a share of the state's wealth incommensurate with their benefits.

But what if you didn't tell the officials how much the projects would cost? What if you let the legislators know about only a fraction of what you knew would be the projects' ultimate expense?

Once they had authorized that small initial expenditure and you had spent it, they would not be able to avoid giving you the rest when you asked for it. How could they? If they refused to give you the rest of the money, what they had given you would be wasted, and that would make them look bad in the eyes of the public. And if they said you had misled them, well, they were not supposed to be misled. If they had been misled, that would mean that they hadn't investigated the projects thoroughly, and had therefore been derelict in their own duty. The possibilities for a polite but effective form of political blackmail were endless. Once a Legislature gave you money to start a project, it would be virtually forced to give you the money to finish it. The stakes you drove should be thin-pointed—wedge-shaped, in fact—on the end. Once you got the end of the wedge for a project into the public treasury, it would be easy to hammer in the rest.

Another lesson Moses learned from his first use of power was the latitude given him by its possession.

In the Taylor Estate fight, Moses had broken the law. On this point there had been no judicial disagreement; no court had ruled that his first appropriation of the estate was legal; every court that had ruled on it had ruled it illegal.

But what had happened to him as a result? He had been fined six cents—two cents, actually, if he wanted to insist that the other two Long Island park commissioners pay their share of the fine.

Part of the reason was the Heckscher gift, of course. But a more basic one was that power—specifically, the power that came with the money he could dispose of as a state official—insulated him from the law's retribution. He had been able to employ lawyers numerous enough and clever enough to utilize the technicalities of the law to frustrate the intent of the law, to throw enough sand into the machinery of justice to slow its gears sufficiently so that they could not mesh and produce the conclusion which its spirit demanded. Even an opponent as determined as W. Kingsland Macy—and as well equipped with money as Macy was—had had to abandon his search for ultimate justice. Justice delayed, the Taylor Estate case proved, was truly justice denied. And, Moses must have realized (for he demonstrated

the realization in subsequent actions), as long as he had public power, as long as he was representing the state, he would have the means of employing as many lawyers as he needed, of delaying, and thereby denying, justice to his opponents, of shielding himself from its punishments. If there was one law for the poor, who have neither money nor influence, and another law for the rich, who have both, there is still a third law for the public official with real power, who has more of both. After the Taylor Estate fight, Robert Moses must have known—he proved it by his actions—that he could, with far more impunity than any private citizen, defy the law. He gloried in the knowledge; he boasted and bragged about it. For the rest of his life, when a friend, an enemy—or one of his own lawyers—would protest that something he was doing or was proposing to do was illegal, Moses would throw back his head and say, with a broad grin, a touch of exaggeration and much more than a touch of bravado: "Nothing I have ever done has been tinged with legality."

There was one more lesson. It was one he had started learning years before, and now it had finally sunk in. Would dreams—dreams of real size and significance and scope—the accomplishment his mother had taught him was so important, ever be realized by the methods of the men in whose ranks he had once marched, the reformers and idealists? He asked the question of himself and he answered it himself. No. The method he had adopted to turn his Long Island dream into reality was the way to accomplish something. It was the way to get things done. It was, he concluded, the only way.

One million dollars was the amount available to Long Island out of the \$15,000,000. He had told the Legislature that one million would be the cost of the Long Island program. He knew that actually the million would pay for only a fraction—a small fraction—of the program. But he had learned how to get things done. With the million, he drove a lot of stakes.

Instead of spending the million to complete a few parks, he spent it to acquire the land for many-for Montauk Point State Park and Hither Hills State Park and Wildwood State Park and Sunken Meadow State Park and Belmont Lake State Park and Hempstead Lake State Park and Valley Stream State Park—and to at least begin development of all of them, as well as the Fire Island State Park and Jones Beach State Park he had previously acquired. By the end of 1926, the beaches of Long Island, once reserved for the rich, were dotted with wooden bathhouses open to all. Families who weren't interested in ocean swimming had to travel along Merrick Road only two miles beyond the city line before they came to the Valley Stream Park's wooded ninety-seven acres and calm blue lake, and in the woods hiking trails, picnic tables and fireplaces, and on the lake floats, diving boards, sliding ponds and rowboats were awaiting their use. By the end of 1926, moreover, the road was begun that would free city drivers from the tyranny of Merrick Road. By the time surveying of the route for the Southern State Parkway was completed, it was August. DPW engineers

protested that it was too close to the cold, damp Long Island winter to begin construction, but there was plenty of time to drive stakes. To show the public quickly how beautiful his parkways would be, he decided that the first segment would be the 2.78-mile loop around the huge reservoir in Hempstead Lake State Park, the prettiest portion of the whole route.

On August 28, 1926, with only a handful of engineers and an uninterested construction gang as an audience, Robert Moses dug a spade into the soil near the reservoir and jerked it out. The earth that came up with it was the first ever turned for a Robert Moses road. His talk with Frances Perkins about the highway below Riverside Drive had taken place in 1914, a full twelve years before. He had been planning roads ever since. As he stood there still holding the shovel, a foreman gave a signal and laborers began to shovel dirt into the small, spoke-wheeled dump trucks that in the 1920's served as earth-moving machines. Robert Moses stepped back and watched the work begin.

Hutchinson and Hewitt were amazed and angry over Moses' progress in 1926. Counting the DPW and Conservation Department funds he had used, he had already spent on Long Island parks far more than the million dollars that was supposed to pay for the whole Long Island park and parkway system, and now he submitted park-improvement requests that totaled a million dollars more. And who knew what innocent-appearing items in 1927 DPW and Conservation Department budget requests concealed additional funds Smith was planning to make available to Moses? A wholly disproportionate share of the state budget was being spent on Long Island. In a private confrontation with Smith and Moses, they said that Moses' plans were too grandiose. Their cost was beyond the ability of the state to pay, they said, and parks were simply not needed on the scale he proposed.

The conflict came to a head over Jones Beach. In 1926, public bathing beaches in America fell into one of two classifications: ill-equipped huddles of shabby, unpainted wooden bathhouses that contained nothing but toilets, showers and lockers; or "boardwalk beaches" such as Coney Island and Atlantic City, which had surrendered the beauty of their seascapes to roller coasters, weight-guessing games, blaring funhouses, bawling barkers and other carnival concessions. But Robert Moses wasn't thinking of unpainted wood or carnivals.

One day, he invited to Jones Beach Gilmore Clarke, landscape architect of the Bronx River Parkway, Harvey W. Corbett, the architect responsible for the design of some of the Long Island barons' most beautiful manor houses, several other famous architects, landscape architects and engineers, and a handful of young commission staffers with whose work he had been impressed. As the little group of men stood on the vast, empty expanse of sand, Moses began pointing.

One bathhouse would be over there, he said, and the other over there. But then they would be almost a mile apart, the men with him pointed out. Yes, he said, and they should understand at once that he wasn't talking

about ordinary bathhouses. These were going to contain ten thousand lockers apiece. In addition to bathrooms and shower rooms, they were going to contain wading pools, diving pools and swimming pools, and the swimming pools were going to be large enough to accommodate hundreds of bathers at a time. There were going to be canopied terraces above the pools so people could sit in the shade and watch the swimmers, and there were going to be other terraces on which people could dine at tables set beneath gaily colored umbrellas. The bathhouses were going to contain solaria. They were going to contain restaurants in every price range. Although they were at a bathing beach, they were going to be constructed not of wood but of stone and brick, and the stone and brick were going to be of the finest quality. They were going to be surrounded by landscaped lawns, hedges and flower beds. And he wanted the bathhouses designed with as much care as the finest public buildings in America. With this difference: most public buildings in America were too heavy and stodgy, designed only to impress and awe. The bathhouses would have to be quite large, of course, but they were buildings for people to have a good time in; the architecture must encourage people to have fun. It must be airy and light, gay and pleasant. There must be a thousand little touches to make people feel happy and relaxed. And he didn't want the bathhouses to spoil the panorama. Let them be designed to complement it, not dominate it. The panorama was long, low lines of sand and dunes and the sweep of the ocean. Let the lines of the bathhouses be long, low and sweeping, he said, horizontal rather than vertical. One other thing, he said. The bathhouses were going to have at least one innovation never included in any public or private building in America: diaper-changing rooms. He had designed them himself, he said. They would be divided into cubicles and each cubicle would contain only a diaper-disposal basket, a washbasin, a mirror and a shelf for a mother to lay her baby on. And the shelf shouldn't be table-height, he said. He had watched mothers changing diapers and higher shelves would make it easier.

Frances Perkins would have smiled.

Yanking an envelope from his pocket, Moses began to sketch on its back: Two X's to represent the bathhouses, lines to show how they would be connected on the beach side by a wide boardwalk, on the bay side by an "Ocean Parkway." Midway between the two X's, where the causeway from the mainland would join the parkway, he drew a large circle between two squares. The causeway would end in a circle, he said. People who didn't want to use the bathhouses could drive around it and into the squares, parking lots each large enough to hold ten thousand cars, and then walk with their families to the beach through underpasses under the parkway, or they could drive around the circle, stop on the beach side, drop their families off first, and then park in the lots and walk back to the beach to join them. Or, if they didn't want to go to the beach at all, they could simply keep driving on the parkway east or west. The families that got out at the circle would walk to the beach along a broad mall that ended at the boardwalk, and along the boardwalk would be open-air cafés serving inexpensive meals and a restaurant with cuisine, atmosphere and service equal to the finest

in America. And stretching off to either side would be outdoor games: pitchand-putt golf, table and paddle tennis, shuffleboard, roller-skating rinks, baseball fields set in little stadia. For the evenings, there would be bandstands and dancing under the stars. He sketched in restaurants, parking lots, playing fields and bandstands until there was no more room on the envelope.

One of the famous architects standing around Moses said, "Are you crazy?" The others knew what the architect meant. As one was later to put it: "It was the scale of the thing—nothing on a scale like this had ever been done in public recreation in America. Here we were on an absolutely deserted sand bar—there was no way even to get there but by boat—and here was this guy drawing X's on the back of an envelope and talking about bathhouses like palaces and parking lots that held ten thousand cars. Why, I don't think there was a parking lot for ten thousand cars anywhere in America. And landscaping? Landscaping on a sand bar? We weren't even sure anything would grow on a sand bar. We thought he was nuts."

The men gathered around Moses included some of the biggest names in American architecture, but they didn't think big enough for him. When they began drawing up tentative plans, the plans naturally included a water tower; fresh water had to be provided in great quantities in any large park, of course. But their water towers were conventional water towers: aluminum storage tanks set on four spindly uprights, they were exactly like the ones that, in other parks, were invariably the unsightliest feature of the landscape. Moses determined to turn the potentially ugliest part of the park he had planned into its most beautiful. He already knew that he wanted a focal point for the beach, a beautiful centerpiece big enough to be seen from miles away, that would be a symbol of Jones Beach, something that visitors could identify with—he was, after all, the son of the woman who had ordered the huge "Camp Madison" banner-and it might as well be the water tower. But he had a hard time getting the architects to think in his terms. "I was very anxious to have this water tower mean something architecturally," he recalls. "I got the top people out there and I asked them about it. The first suggestion came from our chief engineer and I said, 'That's the goddamnedest stupid thing I've ever heard.' And then someone suggested a lighthouse, and I said, 'No, goddammit, we're not going to have any lighthouse.' We already had a lighthouse, for God's sake." (He was referring to the Fire Island lighthouse, which was visible from the eastern end of Jones Beach.) On the next trip to the beach, Harvey Corbett suggested that the water tower be designed as an Italian campanile, or church bell tower. There were many different types, Corbett said, and started to reel them off. As he was reeling, he mentioned the one in Venice. Venice! "I like the one in Venice best," Moses said. According to one of the men there, "he pulled out another one of his envelopes and sketched the campanile in Venice right there—and that's how the water tower was done. And that's the way 'most everything was done. He had the architects and engineers there, but he was the architect and the engineer of Jones Beach. He's more responsible for the design of Jones Beach than any architect or engineer or all of us put together."

Finding the bathhouse designs submitted by the famous architects unimaginative, Moses selected those of an unknown young commission staffer, Herbert Magoon. Magoon had designed two vast pleasure palaces to sit upon the sand. One was a long, low, sweeping expanse of brick and stone and green-tinted glass. Its central portion—a terrace raised just five feet above the beach; behind the terrace, wide expanses of green-tinted glass separated by thin vertical stone columns that held another, set-back terrace surmounted by canopies, and behind that terrace a wall topped with flagswas set off from two wings of glass and brickwork by two simple, square, flat-topped medieval turrets. It was simple, almost austere, from a distance, but Magoon's detail drawings showed Moses that the turrets and walls had been cunningly worked with a thousand little devices of stone and brick. The other bathhouse was, if also of stone and brick, much gayer-Middle Eastern, in fact, almost Moorish. If the first bathhouse, despite its lack of height, resembled a medieval castle like those from which knights rode forth to join the Crusades, the second looked like one of the castles the knights saw when they reached the Holy Land. Each of its two towers, which seemed, at sixty feet, very tall against the dunes, was topped, in fact, with a green turret that swirled upward into a little spear point as did the helmets of the sultan's warriors the knights might have had to fight. Moses was ecstatic over the designs. He loved them, he said. But, the morning after he first saw them, he called in Magoon with endless lists of small changes he wanted to make.

Moses decided himself how he wanted the bathhouses faced. He was determined that the stone and brick of the façades would blend in perfectly with the beach on which they stood. One of the samples brought to him was obviously the perfect type of stone: Ohio sandstone was gray with just enough tinges of tan and blue to catch the colors of sand and sea. Selecting the brick was harder. Nothing seemed exactly right. Then, one day, passing the Barbizon Hotel on East Sixty-third Street, he noticed that it was faced with a random pattern of beige, brown and brownish-red that would catch the color of the sand and complement it. He decided that, to give the Jones Beach development unity, every structure of any size built there would be faced with Ohio sandstone and Barbizon brick.

The architects hastened to explain to him that Ohio sandstone and Barbizon brick were simply not used on public buildings. They were among the most expensive of all facing materials. Why, by using them on structures as large and elaborate as those he had in mind, each bathhouse would cost alone what Moses had originally said would be the cost of the entire Long Island park system: a million dollars.

Ohio sandstone and Barbizon brick it was going to be, Moses replied.

Hutchinson and Hewitt were "guys from the backwoods," recalls one who knew them. "When you said 'water tower' to them, that meant a tank on four skinny poles. A bathhouse was a little wooden thing you put up for fifty or a hundred bucks so the boys couldn't watch the girls undressing.

And here Moses comes along and tells them he wants to spend a million dollars on one." They flatly refused to give him anything like it. Only after Smith had pleaded with them for hours did they consent to appropriate a total of \$150,000—for the water tower and both bathhouses.

Moses' architects expected him to tell them to scale down their plans. "You just go right on the way you were doing," Moses told them.

"You forget all about what the appropriation is. I'm never going to put up just a tank on poles."

He had already told Smith his plan. "I told him, 'We'll put all the money into the foundation for one bathhouse and then, when it gives out, we'll just go back and tell them they'll have to give us more or leave the foundation just sitting there with no building on top of it.' The Governor thought it was kind of a good joke."

The foundation laid, Moses invited Hewitt and Hutchinson down to see what he had done. To make matters stickier, blowing sand had completely buried the foundation the night before they arrived, and there was not a trace of it visible. All that existed, as far as the two legislators could see, was a god-forsaken sand bar that could be of no possible use to anyone—and the knowledge that, somewhere on it, on their authorization, had been spent \$150,000 of the taxpayers' money.

They raged. They demanded that Smith fire Moses. In Moses' words, "They went to the Governor and said, 'Get rid of that son of a bitch and we'll go along with something reasonable.'"

But, in Moses' words, "The Governor never backed away from me." So Hutchinson and Hewitt said they would see that Moses was impeached. And they guaranteed the Governor that every appropriation for every park in the state would be cut off until this mess was cleaned up.

But Moses had applied his lessons well. When his antagonists began to think about the situation, they realized they were trapped. What, exactly, for all their power, could they do? Charge that he had misled them—thereby admitting that they hadn't investigated the project thoroughly enough in advance? Deny him further funds—thereby insuring that the \$150,000 already spent would be utterly wasted?

And wasn't the overriding issue the same one—Parks vs. No Parks—with which Smith had destroyed them in 1925? Did they want to make him a hero again?

There was, really, very little they could do. Trying to salvage some revenge, they refused, in making the 1927 budget appropriations, to give Moses any money at all for the second bathhouse, for which the foundation had not been laid, and they saw to it that the additional funds they gave him for other Long Island park projects were far less than he wanted even to complete the buildings already begun. But such satisfactions were small ones. They knew that the difference needed to complete the projects to Moses' specifications could easily be made up by Smith out of the appropriations to other state departments.

## 13. Driving

DESPITE ITS OUTCOME, the battle over the bathhouses filled Moses with a sense less of triumph than of dread, of a need for haste so frantic that it was almost desperation. Time, he was afraid, was running out on his dream—and it was running out fast.

The battle had shown him how little chance he would have of completing his dream without the unflinching support of Alfred E. Smith in the Governor's chair. He knew that he could never hope to receive anything near the full amount he still needed from the Legislature, and the public itself might well waver in its support for his parks if it knew their full cost. He had Smith as Governor now. But he wasn't going to have him for long. Al Smith, he knew, was going to be a candidate for President in 1928, and that meant that he could not, under state law, be a candidate for Governor. On January 1, 1929, there was going to be a new Governor. He probably would be a Republican. Even if he were a Democrat, he would not be Al Smith. January 1, 1929, was less than two years away. And two years was far too short a time for completion of a dream that encompassed three long roads and a score of huge parks. His only hope, he knew, was to complete enough of the roads and parks before Smith left office so that the public could see how great they were going to be and would demand that they all be completed.

So Moses drove himself and he drove his men.

Turning the upstairs bedrooms of August Belmont's mansion into offices, Moses filled the offices with engineers and architects. He himself worked downstairs.

"Belmont had had this tremendous dining room, and there was this huge table there, and Moses made it his conference table," recalls William J. Junkamen, an attorney hired to assist commission counsel Raymond McNulty. "The conferences would start at nine o'clock in the morning and sometimes you couldn't leave until after midnight. And you just worked like hell all day long. Supper was a matter of dashing out and getting a bite to eat as quick as you could." Insisting that the engineers in charge of a project prepare a schedule showing the date on which each of its phases would be completed, Moses would move up the deadlines—by days, by weeks, sometimes by months—until the engineers felt it was absolutely impossible to meet them. And then he insisted that they be met. "The time was never long enough," Gilmore Clarke says. "But that was all the time you were going to get, and he let you know it." James J. Flynn, captain of the State Police

Driving 227

troop assigned to the commission, recalls, "If he wanted a job done, he wanted it done. Period. And he wouldn't take any alibis if it wasn't done; he didn't want alibis, he used to say."

Moses knew exactly what he wanted each of his men to do, and he was impatient when they had difficulty grasping that fact. William H. Latham, a young engineer from the Massachusetts Institute of Technology, was also assigned to observe and report on meetings of the Nassau County Board of Supervisors. "I came back from the first meeting and in giving him my report, I generalized," Latham recalls. "He corrected me, but I guess I didn't get it, and the second time, I started to generalize again. Well, he didn't let me get very far. His palm came down on that table of Belmont's and he jumped up and he paced around that table and he told me he wanted facts, no assumptions. All he wanted from me was what had happened at that meeting. He'd draw his own conclusions. And he let me know right there and then that if I couldn't do it that way, he'd have to find another engineer."

And, Latham adds, Moses wasn't "really angry" at him on that occasion. Latham, an athlete and outdoorsman, is a tall, rangy man with huge shoulders and an easy, friendly grin. But the grin fades when he says, "I won't talk about what he's like when he's really angry."

Another technique was the silent treatment. "All of a sudden," a staffer recalls, "you just wouldn't be called in to sit at the conferences any more. He wouldn't talk to you if he passed you in the hall. And then, one day, you'd just be gone."

The men who stayed didn't resent Moses' methods. "If he drove other men hard," says Junkamen, "he drove himself harder."

He was supervising a dozen nonpark projects for Smith, of course, and he was constantly commuting to Albany, a four-hour train trip away. During legislative sessions, he tried to make his trips on Mondays because the Legislature convened each week on Monday evening and it was then that GOP strategy became apparent—and the Governor liked to have his advisers gathered in the Executive Chamber ready to counter it. So that he could get in a full day's work in Albany before the Executive Chamber session, Moses left his New York apartment at 6 A.M. to catch the early train to the capital and avoid a car trip made tortuous by the lack of a through road. When the session broke up, usually well after the last train back had left at midnight, Moses would ask Smith for the use of a state car and chauffeur. He had a lot of work to do back on Long Island, he'd say. If he drove back at once, he'd be able to start in the morning.

Albany wasn't the only duty that pulled Moses from Long Island. To supervise the State Council of Parks, he had to spend at least part of three days a week in New York City. To inspect the regional commissions' upstate projects, he was constantly being driven to or from Watkins Glen or Chittenango Falls or Letchworth Gorge.

But when his car pulled up in front of the Belmont Mansion, Moses never seemed tired. Charging into Arthur Howland's office, he would slam the door behind him and listen to the chief engineer's problems. Then, one by one, he would call in the other top commission officials and, behind the closed door, listen to theirs. Then the door would fly open and he would charge out into the dining room and sit down at the huge table and begin solving the problems. Junkamen recalls: "He might have been working in New York and not arrive out at Belmont until three o'clock in the afternoon, but then he would work from three until ten o'clock or midnight. Another day, I might get there at nine o'clock in the morning and he'd already be there working at the big table. Then I'd go out on some errand and wouldn't get back until supper time, and he'd still be sitting there. And he'd still be sitting there at midnight." Saturdays were no different. "Hours didn't mean anything to him," Latham says. "Days of the week didn't mean anything to him. You worked when there was work to be done, that was all." And there was always work to be done. Since none of the staffers dared leave the mansion until Moses left, they longed for him to get a telephone call from Mary, which usually got him away from the big table and back to his house in Babylon. "Sometimes," Junkamen recalls, "Ray McNulty would slip out and call her and put her up to calling." One Saturday night, repeated telephone calls from Mary failed to bring Bob home, and at ten o'clock she showed up at the mansion. Striding into the conference room, she "just took him by the ear in a very nice but firm way" and pulled him to his feet, Junkamen recalls. "He just laughed and went along—and then we could all go home."

Going home did not, however, necessarily mean a cessation of work for Moses. Giving Howland a key to his Babylon house on Thompson Avenue, he told the chief engineer to stop by every morning on his way to the mansion. Almost invariably, when Howland arrived at about 7:30 A.M., there would be waiting for him on the flat-topped bottom post of the banister a large manila envelope crammed with notes, memos and handwritten letters ready to be typed and mailed, an envelopeful of testimony to what Moses had been doing during the night while his men slept. He tried to keep Sundays free for his family, teaching Jane and Barbara to swim or sail, taking them for picnics, telling them stories. But often the girls would notice that their father had disappeared. When that happened, they knew he was out on the big screened porch on the side of the house, scribbling furiously on a yellow legal pad. And most of the family picnics were held in one of his parks. "Hell," one of the men working under him remembers, "any Sunday at all you could expect to look around and see the boss and his wife and kids and he'd be making notes as he walked along if he saw something he didn't like. So you figured if he was working, why shouldn't you be?"

There were other reasons, too, why the men who stayed didn't resent the driving.

"It was exciting working for Moses," one of the commission staffers recalls. "He made you feel you were a part of something big. It was almost like a war. It was you fighting for the people against those rich estate owners and those reactionary legislators. And it was exciting just being around him. He was dynamic, a big guy with a booming laugh. He dominated that scene in the mansion. He would sit there with people running back and forth around him and he would be banging his hand down on that big table and

Driving 229

giving orders—and when he gave orders, things happened! Howland would go hurrying out of the room and twenty-five draftsmen would hurry to their tables and start drawing or surveyors would jump into their cars and head out on the road."

And, men recalled, incongruous as it might seem to use the word "fun" in connection with unremitting work, it was, nevertheless, fun to work for Bob Moses. "There was a very informal atmosphere in the mansion," one engineer says. "Everyone worked in their shirt sleeves—my recollection of Moses is of him sitting with his tie pulled down and over to one side, sleeves rolled up—and there was always a lot of joking going on." And the joking, the engineer says, went both ways. "You weren't afraid to kid him."

He turned the commission staff into a big family. If he couldn't get home to his wife and children as much as he would have liked, he brought them to his work. Commission staffers became accustomed to seeing Barbara and Jane playing on the playground equipment that Moses had brought from all over the United States and set up on the mansion's lawn so that he could test it. Jane was much more adventurous than her quiet, shy, dark-haired sister, who eyed the equipment with distrust, and the staffers laughed to watch the little blonde tomboy scramble around on the top bars of the jungle gyms and swing higher and higher on the swings. Mary was always around. She was the hostess at the little luncheons that Moses would have catered at the mansion if a politician or key landowner was visiting. She was a pleasant, easy friend to the young men working for her husband and a confidante, a sympathetic shoulder for their wives to cry on, who remember her with real affection. Moses was always consulting her; says Mrs. Harold Morse, a friend, "Bob used to say that the only decisions he made that were mistakes were the decisions he had neglected to talk over with Mary first."

He and Mary organized outings and insisted that Howland, Latham, Shapiro, McNulty and Junkamen—and Tom McWhinney, with whom Moses was getting along famously—bring their wives and children along. The outings were very informal—fishing trips on the commission motor launch Apache or clambakes—and they were fun. Recalls McWhinney's daughter, Dolie, twenty-eight at the time: "We used to go over to Fire Island for the whole weekend. There was an old frame building at the Coast Guard station there, and we'd sleep in it on cots, all the men in one room and the women and kids in another. There weren't any stores on Fire Island, so we'd bring most of our food along and go trolling from the Apache or clamming for the rest." While the women were cleaning the catch, the men would dig a great hole in the sand, cover its bottom with logs and light them for the clambake. There would be bonfires on the beach at night, and singing.

Moses set the tone. His clothes were a constant source of merriment. His pants were khakis faded white or corduroys only some of whose holes had been patched. Possibly because his hairline was beginning to recede, he wore, no matter what the weather, a hat—the same hat. "Robert!" Mary would say. "Take off that hat!" Everyone would laugh. "It was one of those fedoras with a big brim and it was completely shapeless and all stained," Dolie McWhinney recalls. "It was the funniest hat you ever saw. And Bob

would never take it off except when he went swimming." He helped arrange the logs for the clambake, helped clean up afterward, helped with the children. Because Charlie Smisek, the *Apache*'s skipper, would be away from home all weekend, Moses insisted that Charlie's wife, Mae, come along, and he went out of his way to make the Smiseks feel at home. "There was no side to Bob Moses at all then," an acquaintance says. The only thing that set him apart was his swimming: hurling himself through the first of the big Atlantic rollers, he would appear on the far side of its tumult swimming and head straight out into the Atlantic, far beyond where even outdoorsman Latham would dare to go.

Of all the reasons why Moses' men didn't resent his driving, the one most frequently mentioned in their reminiscences is that he brought out the best in them. One of Junkamen's duties was to work with Long Island villages on zoning restrictions on the land adjoining the Southern State Parkway. "Mr. Moses wanted five hundred feet on either side of the parkway zoned in the highest residential classifications," Junkamen recalls. "And he didn't want any water tanks or other unsightly structures near them, either. Zoning was a relatively new thing. Hardly a village on Long Island had a zoning ordinance. I had to draw up a lot of what we wanted myself. Then Mr. Moses would have to speak to officials in the municipality and get them to draft over-all zoning ordinances in which our stuff could be incorporated. I'd have to work with the local counsel every step of the way. And then, after the ordinances were adopted, I'd have to work with the local zoning board when people tried to break the restrictions. And I found that at every step of the way, Mr. Moses had ideas that started me thinking along whole new lines."

Constantly, Moses was encouraging his architects and engineers to use their imagination, to make their designs different from and better than any similar designs done before. When the men designing a drawbridge for the Jones Beach causeway submitted their first design, he said, "I know you can do drawbridges. Can you do beautiful drawbridges?" In their second design, the bridge operators' quarters were no longer the standard ugly shacks but turrets faced with stone worked with the silhouettes of sailing ships. Gilmore Clarke thought he had surpassed himself in the design of bridges for the Bronx River Parkway. But he found Moses had some new standards. He wanted variety, Moses told him. Not only were the bridges to be designed to harmonize with the landscape and not only were they to be stone-faced, but every bridge on every parkway on Long Island—all one hundred of them—was going to be different from every other bridge.

Engineers assigned to design guard rails and light poles for the park-ways expended tremendous effort making the standard iron poles graceful. But iron wouldn't blend in with a rustic setting, Moses said. Guard rails and light poles would have to be made of wood. But it had been proven that no form of wooden guard rails would resist the impact of a speeding car, the engineers said. Moses sent them back to ponder the problem again, and this time one thought of drilling holes in wooden rails and inserting strong steel cable—and now all the rails on all the parkways could be wood.

Driving 231

As always, it was on Jones Beach that Moses' imagination focused. He thought himself of many little touches to make people feel happy and relaxed there. The dunes, he said one day, were a natural protective wall for an archery range, so archery should be included as one of the sports offered at the beach. And why just have ordinary targets? he said. Why not let kids shooting arrows feel they were really in the Middle Ages, when archers stormed castles? Let some of the targets be cutouts in the shape of enemy bowmen crouching behind castle turrets. Why just have signs directing people to various activities? he asked. Why not decorate the signs with ironwork showing the activities—and showing them in humorous fashion? One day, a designer rather hesitantly showed him a design for the directional signs to the men's rooms. The design was the silhouette of a man, obviously in a desperate hurry, rushing to a bathroom so fast that the little boy he was dragging behind had his feet pulled off the ground. It was, of course, a little daring, the designer began. Daring! Moses said. He wanted his designers to be daring. This was a great design, he said. It would be used.

"Mr. Moses was no lawyer, but he had a great knowledge and grasp of the law," Junkamen would say. "He was not an engineer, but he had a great knowledge of engineering. He knew politics, he knew statesmanship—he was an altogether brilliant man. If you were working with him, you just had to learn from him—if only through osmosis." One of the commission's engineers rhapsodizes: "I don't think there was a man who came into daily contact with him who wasn't inspired to do better work than he had thought he was capable of doing."

If the political difficulties involved in creating a park on Jones Beach were enormous, the physical difficulties were of a size to match. Building on a barrier beach proved to be a very different proposition from building on the mainland. Commission engineers found themselves faced with a succession of problems engineers never encountered on mainland jobs. Cleveland Rodgers, Moses' first biographer, was to write that sometimes it seemed as if Nature herself had "joined forces with the skeptics and obstructionists who had fought Moses all the way from Albany to the beach." But Moses refused to let Nature stand in his way.

None of Moses' engineers had expected work on the barrier beach to continue in winter because drifting ice packs that kept boats off the Great South Bay for days at a time could maroon anyone caught on the strand. But with Smith's time as Governor running out, winters could not be wasted. Moses told the engineers taking surveys for the causeway to cache emergency supplies of food in a shack on the beach and keep working. Even on mornings when wind was whipping the bay into waves and ice was coating the piers, Sid Shapiro led his hip-booted surveyors into boats for the trip across.

One day, while they were on the strand, ice packs closed the bay. It stayed closed for ten days. All the cached food ran out except pancake batter, and the surveyors lived on pancakes. For the rest of his life, Sid Shapiro would never be able to stomach another pancake. But when the ice

cleared and the surveyors returned to Babylon, Shapiro could tell Moses, who was standing on the dock waiting for a report, that ten days' more work had been completed.

The completed surveys contained the worst of news. The mean level of the existing barrier beach, Moses was told, was only two feet above mean sea level. During storms, the ocean rose six, seven or even eight feet and covered the strand almost completely. This did not matter as far as the portion of the beach that was to be a beach was concerned, but the portion that was to hold Moses' buildings and parking lots and parkway would have to be built up to a mean height of fourteen feet if they were not to be submerged in every storm, and if he wanted a road seventeen miles long along it, it would have to be built up to that height for seventeen miles. The job could be done, of course—floating dredges, huge pumps mounted on barges, could suck up hydraulic fill, which would become sand when dry, from the bay bottom, and pipelines could spill it out over the strand. But approximately forty million cubic yards of fill would be required. The job would take months—and it would be expensive. Even Smith quailed at this, and Moses had to talk fast and hard to persuade the Governor to go along. But he did persuade him, and the largest floating dredges in the United States were brought to the bay as soon as spring cleared the ice off it in 1927. The job could not be completed by the time ice set in again in the winter, but Moses refused to let the dredges leave. Their crews could live on them, he said, and all through the winter of 1927-28 they did, and the pumps kept working. "Night after night," Shapiro recalls, "they kept working to midnight."

When the sand from the bay bottom was spread on the barrier beach, it proved to be the worst problem of all. It was beautiful to look at, dazzling white and fine-grained, but the fineness meant that when it dried, it blew. Even the lightest breeze stirred it into the air in swirls so thick that the strand looked like a desert during a violent sandstorm.

"It was always blowing in your face when you worked," Shapiro remembers. "When it got bad, it would fill your eyes, your ears and your nose as fast as you could clean them out. You'd be choking and coughing. You'd be talking to somebody not three feet away and an especially violent gust would come, and you couldn't even see him any more. You couldn't even see the hand in front of your face." During the day, workmen would dig an excavation. At night, the sand would fill it in—so completely that the workmen couldn't even find its edges. One workman who left his car with its rear end turned into the wind for a few days came back to find the numerals—and all other color—completely erased from its rear license plate.

Moses dispatched landscape architects to other Long Island beaches to find out why the sand on older, natural dunes was more stable. They reported that it was because of the presence on these dunes of a form of "beach grass" (Ammophilia arenaria), whose roots, seeking water in the dry sand, spread horizontally rather than vertically and thus held sand around it in place. But to be effective, they reported, the grass had to be planted thickly—hundreds of thousands, even millions, of clumps would be required to hold down the new dunes on Jones Beach—and it could be planted only

Driving 233

by hand. In the summer of 1928, on the desolate sand bar on the edge of the ocean, amid half-completed building skeletons that looked like ancient ruins, was a panorama out of the dynasties of the Pharaohs: hundreds, thousands, of men, spread out over miles of sand, kneeling on the ground digging little holes and planting in them tiny bundles of grass.

The peculiarities of man seemed sometimes to join with those of nature to thwart Moses. But he would not be thwarted.

The contract to build the causeway had been awarded to an Atlantic City, New Jersey, firm. In the autumn of 1927, the president of the firm coolly informed Moses that its money had run out and it couldn't meet its payroll. Its laborers wouldn't work without pay, and work would have to stop unless \$20,000 was found immediately. Moses drove to Albany, but Smith told him that every cent that could be squeezed out of the Highway Bureau budget—in fact, every cent that could be squeezed out of the budget of any department—had already been squeezed. More money would be available in the 1928 appropriations, of course, but they wouldn't be available until after January 1. Promising to pay her back as soon as the appropriations came through—he did—Moses borrowed the \$20,000 from his mother and paid the laborers himself. And they kept working.

To the east of the portion of Jones Beach ceded to him by Hempstead Town, directly in the path of his proposed Ocean Parkway, lay five hundred acres of meadowland owned by Oyster Bay Town and leased as a duck-hunting preserve to a group of wealthy sportsmen headed by Solomon Guggenheim. When Moses appropriated the tract, the sportsmen obtained an injunction and served it on the contractor. But Moses met the contractor on the dredge and, as Cleveland Rodgers put it: "The legal papers somehow slipped off the deck into the swirling waters. . . . When the hunters, in their furlined cloaks and escorted by their formidable legal advisers, arrived a few days later to shoot ducks, under full protection of the law, they found the meadow" slashed through and filled in for the parkway.

And always, day after day, summer and winter, Moses was out on the job, encouraging the men in the field. "People will work harder for you if they have a good time," he told the Morses, and he urged the laborers working on Jones Beach to go swimming during their lunch hour. Organizing softball games on the beach, he umpired them himself. Joking with the men, he made fun about his hat. And he told them what a great project they were building. "He had a gift for leading men," Shapiro recalls. "Those men idolized him. You'd see him walk up to a pickax gang that was tired and talk to them awhile and when he walked away, you could see those pickaxes swing faster."

Hanging over Moses was the realization that every battle he won brought him closer to one there seemed no way of winning—and whose loss would mean that his dream would remain substantially incomplete. Every step he took to develop the land ceded him by Hempstead and Oyster Bay only brought him closer to the day when he must face up to the fact that the rest

of Jones Beach was not his. Its eastern half-nine miles long, thirteen hundred acres-still belonged to Babylon Township. Hutchinson and Hewitt might think the park he was laying out was already too big; he knew that, to serve the metropolitan area adequately, it would one day have to be far bigger—and the only place for expansion was Babylon's land. Moreover, if he didn't get that land before the Wantagh Causeway and Ocean Parkway, which would run up to its edge, made it accessible and immensely valuable, he knew he would never get it. And unless he got it, there was nothing to prevent Babylon from building a road to connect with the parkway and lining it with hot-dog stands, gas stations and tiny, ugly summer bungalows that would march right up to the edge of his great park and spoil forever its pristine beauty. Without Babylon's land, moreover, the Ocean Parkway would be only half as long as he wanted it, and it would be difficult to build a causeway and loop it back to mainland Long Island and the Southern State Parkway because he had planned to cut the expense of that causeway by running it over Captree Island, a tongue of land at the eastern end, Babylon's end, of Jones Beach, which extended up toward the mainland. And since it was the eastern end of Jones Beach that almost touched Fire Island, without it he would never be able to build a bridge from Jones Beach to Fire Island and thus enable the Ocean Parkway to continue along Fire Island to the Hamptons.

Babylon's baymen had never forgiven him for his attempt to grab the town's "sacred birthright." When Mary went shopping in town now, the tradesmen eyed her coldly. Sounding out the Town Board members again about a referendum, Moses found them still fully aware of their constituents' feelings.

Moses tried threats. Many of the thousand commission and Highway Bureau employees at Belmont Lake lived in Babylon, and therefore, Moses reminded the town's businessmen, much of the \$400,000 monthly payroll was spent in the town. "Doubtless," he said, "more congenial headquarters for the state's work on Long Island can be found elsewhere." But the town was unmoved. The Town Board assured its constituents that there was not going to be any referendum. And without one, there was, under the State Constitution, simply no way in which Moses could get the town's land.

But Moses at last found a weak spot in Babylon's defenses.

"I heard about it by the sheerest kind of accident," he told the author decades later.

"I was thinking then about learning to drive—I never really did—and I was practicing one morning in a Model T in the driveway of this big estate out in Babylon owned by a guy named Willard Reed, whose father, who had been dead for years at this point, had been a Democratic county court judge in Suffolk, the only Democrat on the county court, at the time Grover Cleveland was re-elected.

"I saw Willard sitting on the porch rocking and drinking, and he called to me and said, 'Come on up and have a drink.' So we sat rocking away there and talking and after a while he said, 'I hear you're having some Driving 235

trouble getting some land.' I said, 'Yes, we are.' And he said, 'The Babylon fellows don't want to cooperate?' and I said, 'No.'

"And he said, 'I remember a story my father told me once. You know the whole question of the ownership of the bay bottom in Babylon Town came up a long time ago and my father and another judge, a fellow in Amityville named Samuel Hildreth, were appointed to pass on it. And I think you'd be interested in what was found. You'll never find the decision in Riverhead [the county seat, where court records were kept] because the supervisors will have made sure it's missing. But Hildreth is alive.'

"I said, 'Tell me more, Willard.' He said, 'I think I've told you enough. You go and see this [Hildreth] fellow in Amityville and you tell him I told him to talk to you.' I did, and Hildreth said that way back, in 1848 maybe or 1856, two bills had been introduced in the Legislature. See, before that, the underwater rights in the bay, the bay bottoms, had belonged to the state. But one of these two bills transferred the rights in Nassau County to the various towns in Nassau along the bay and the other transferred the rights in Suffolk to the various Suffolk towns. Well, everyone on Long Island always just assumed that both of these had passed, but Hildreth told me that when he and Judge Reed had looked into it, they had found that for some reason no one seemed to know, maybe just an oversight, only one passed—the Nassau one.

"I said, 'Do I gather then that half the bay bottom belongs to the state? That Babylon doesn't own its bay bottom at all?' And I put all our bloodhounds on it and I found those bills, and I found that Hildreth's story was true.

"Well, in all this time, the supervisors could have gotten the ownership of those lands transferred without any trouble, but I guess they had just decided to let things lie and had kept issuing licenses to fish the bay bottoms when they had no right to. And so I blackjacked them. We told them that we'd trade them the [Jones Beach] land for the bay bottoms. Well, they didn't want to trade. They didn't want to give the land. But we told them that if they didn't, we'd let the people know that the town didn't own the bay bottom after all, that they'd been issuing licenses when they had no right to, that in all the years that had been available to remedy the mistake, they had never taken the simple step of obtaining title to the bay bottoms, that they had been negligent in their stewardship of the town's 'sacred heritage." To be convicted in the public eye of such negligence would have been even worse for them than to give away the barrier beach. The bay bottoms were much more important to the baymen; that was what their livelihood depended on. "We blackjacked them, that's all. We threatened to tell. And we said, 'Now, there's one way to adjust this thing.'"

The way—the ultimatum that Moses presented to the Town Board—was to authorize the referendum and to issue a ruling that would give Moses a real chance of winning it: the voting would not be restricted to the town's taxpaying property owners but would be open to anyone who lived there—including the several hundred state employees who had recently moved into

apartments. This ruling would violate common sense and common practice—generally, only property owners, a town's taxpayers, were allowed to vote in referenda involving the permanent removal of town property from tax rolls—but Moses did not leave the board members much choice. If the referendum passed, giving the beach land to the state, he told them, the state would in turn quietly give the bay bottoms to the town, and they could go right on issuing licenses; if the referendum passed, he would never tell their constituents about their negligence. And if it didn't pass, he would.

To lull the town's baymen and property owners into overconfidence, the Town Board did not explode the bombshell about voting eligibility until three days before the election. Everything, in fact, was done so fast that the old-time residents never had a chance to organize. Without warning, at a routine meeting held on March 14, 1928, with few residents present, the Town Board, saying for the record that it was opposed to the beach ceding but felt "the people's voice" should be heard, authorized the referendum—and scheduled it for the same day as party primary elections—April 3, 1928, less than three weeks away. "Judases!" Judge Cooper cried.

The Park Commission flooded the local post office with mailings seeking to reassure Babylonians on points that were worrying them. One reassurance concerned a rumor that tolls would be charged on the Wantagh Causeway, that Babylonians would have to pay to use their own land. Absolutely not, Moses said. In a letter he wrote to the *Leader*—and which was printed by Cooper, who made a noticeable effort to give space to his foe's views—Moses promised: "The state causeway and boulevard will be free."

Nonetheless, the judge could not conceive that, even with the voter eligibility ruling, the referendum would pass. No politician, he didn't understand certain other tactics the Town Board had used; he saw, for example, no significance in the fact that while the hours for voting in the primary were noon to 9 P.M., the hours for voting in the referendum ended at 6 P.M.

None of the older residents of Babylon were prepared for election day. As they strolled to the polls, they suddenly noticed cars bearing state shields and crammed with men racing through the streets of the quiet village. They were Park Commission and DPW vehicles carrying employees to vote. Undoubtedly, many of these employees were—under the suddenly relaxed eligibility ruling—eligible to vote. But opponents at the polls said that they recognized many as men who did not have even apartments in the town and were therefore ineligible. When, however, election inspectors tried to check their names against the list of eligible voters in the election registers with which election inspectors were customarily provided, they found that somehow the Town Board had neglected to provide registers this time, and the inspectors were unable to deny the state employees the right to vote. Realtors had cars out, too, rounding up voters known to favor the proposal and transporting them to the polls. But Moses' overconfident—overconfident because hoodwinked—opponents did not have a single car in operation. In addition, many potential "no" voters—one estimate said two hundred—were confused by the fact that the polls remained open until nine; they showed

Driving 237

up after six, only to be told that while they could vote in the primary, voting in the referendum had been closed. The final tally showed that "Babylon Town" had ceded its portion of Jones Beach to the state by seven votes. Wrote Cooper: "The verdict was nothing short of a crime and the method by which it was obtained is scandalous." Moses issued a statement, too. He called the referendum results "a vote of confidence in the Park Commission."

The sands were running out on Al Smith's Governorship. Moses' construction crews did not quit for the winter of 1927–28; their grading machines pushed aside snow as well as earth as they smoothed the path for the Southern State Parkway. The Great South Bay froze solid; the men stretching the Jones Beach causeway across it pitched tents on the ice and lived on it.

Early in 1928, an astonished Hutchinson and Hewitt realized that the completion of the Southern State Parkway and Jones Beach causeway, on which they had hinged the beginning of the Northern State and which they had assumed was years, if not decades, away, was rapidly approaching. Frantically, they tried to delay it. In another year, Al Smith wouldn't be Governor. Out of Moses' \$4,500,000 1928 budget request, they slashed \$626,000. But Smith found the money in the departmental budgets, and the construction crews kept working.

Moses had not been given funds for his Long Island parks and parkways until the spring of 1926. By the end of the summer of 1928, in a period of less than three years, every foot of right-of-way for the Southern State Parkway was in his hands, a seven-mile stretch, from near the New York City line to and around the Hempstead reservoir, was completed. Long rows of newly planted elms and maples lined it and stone-faced bridges, every one different, were carrying crossroads over it so that nothing should interrupt the swift passage of its users. A second seven-mile stretch, from the reservoir to Wantagh, was completed except for the landscaping. A third seven-mile stretch, from Wantagh to Babylon, was graded and ready for paving. And the fill for the Wantagh Parkway had been laid, a pavement placed on top of the fill and three of the four bridges that would carry the causeway across the bay completed.

When Moses had become president of the Long Island State Park Commission on April 18, 1924, there had been one state park on Long Island, the almost worthless 200-acre tract on Fire Island. By the end of the summer of 1928, there were fourteen parks totaling 9,700 acres. Because 6,775 of those acres had been acquired—from Hempstead. Oyster Bay and Babylon towns, the U.S. Department of Commerce, New York City and private individuals—as gifts, the Long Island parks had cost the state a total of about a million dollars. At 1928 land values, they were worth more than fifteen million.

By the end of the summer of 1928, the watershed properties off Merrick Road had been filled with bathhouses, baseball fields and bridle paths. Picnic areas with thousands of tables sat under their trees. Slides, swings and jungle gyms spotted their clearings. Their lakes were decorated with floats, diving boards, sliding ponds, rowboats and canoes. Heckscher State Park contained miles of paved roads for cars and dirt roads for horseback riders, acres of athletic fields, bathhouses holding five thousand lockers, a boardwalk, a bathing pavilion with restaurants and snack bars, an inland canal for rowboating, and a marina at which sailboats could be moored. There were more bathhouses, more boardwalks, more playing fields, more snack bars, more picnic areas, more campsites at Sunken Meadow, Wildwood, Orient Beach, Montauk Point and Hither Hills state parks. On Jones Beach, two years before a desolate sand bar, there stood now, awaiting only the finishing touches that would be added in 1929, a bathhouse like a medieval castle, a water tower like the campanile of Venice, a boardwalk, a restaurant and parking fields that held ten thousand cars each. In the history of public works in America, it is probable that never had so much been built so fast.

During the summer of 1928, park-seeking families heading out of New York City began to feel Long Island open up to them. Week by week, word spread. At the beginning of the summer, the bathhouse at Valley Stream State Park contained a thousand lockers. For a few weekends, these were sufficient. Then they were not. Another thousand lockers were added. Then another thousand. And, even so, by the end of the summer, thousands of would-be bathers were being turned away every weekend. By the end of the summer, attendance at Long Island's state parks had passed half a million.

New Yorkers knew who was primarily responsible for the boon they had been given. It would have been difficult for them not to know. For the press was turning Robert Moses into a hero.

The lionization was on a scale as vast as the achievement. The Twenties was an age for heroes, of course, and if 1927 was Lindbergh's year in the New York press, 1928 was Moses'. Albert Einstein, who announced his theory of relativity in that year, was all but ignored in the city's thirteen daily newspapers, but New York's reporters strove for new adjectives to describe the park builder, one writer concentrating on his physical attributes ("tall, dark, muscular and zealous"), another on the mental ("a powerful and nervous mind"), a third on the moral ("fearless," "courageous") to describe "Rhodes Scholar" Robert A. Moses, Robert B. Moses, most frequently Robert H. Moses (reporters could not seem to reconcile themselves to his lack of a middle initial).

Editorial writers chimed in. "His labors have been unwearied and successful," said the *Times*, "his energy and persistence . . . great." "He has been a faithful, earnest and efficient incumbent," said the *World*. "He has done excellent work." Even the *Herald Tribune* was beginning to look on his works and find them good.

And the praise, on front pages and editorial pages alike, continued day after day. If readers were reminded once during 1928 that Moses was serving the state without pay, they were reminded a hundred times.

Driving 239

Moses' lionization in the press had a practical benefit. It insured that he would be allowed to finish the job he had started. No one would dare stop it now.

The Long Island dream was safe.

If the press erred in its description of Moses' achievements, it erred on the side of under-, not over-, statement.

Long Island was only one segment of his state park system. The \$14,000,000 allocated for upstate parks in the bond issue was not nearly enough for the system he had in mind. Many of his hurried trips around the state were, therefore, attempts to persuade wealthy men who owned undeveloped land in scenic areas to give their land to the public.

Luckily, many of these men were the old park patriots. The state had never bothered to buy a single foot of Lake George's hundreds of miles of shoreline, and cheap resorts and rooming houses were proliferating on its shores. Lumbermen had stripped the surrounding mountains of their softwood forests and were starting on the hardwoods. The denuded soil was being washed away by rains. But midway along the lake a branch of water jutted out to the northwest, and of the eleven thousand virgin acres on the tongue of land thus formed-most of it called Tongue Mountain-six thousand were owned by a group of wealthy men who were also public-spirited. He persuaded them to donate their land to the state. The remaining five thousand acres on the tongue were owned by a family that was about to sell it to a lumbering company, but the family's attorney was Captain N. Taylor Phillips, a key figure in that stronghold of the park patriots, the American Scenic and Historic Preservation Society. Working through Phillips, Moses persuaded the family to lower its asking price from forty dollars per acre to fifteen—and when he bought the whole tract, he had succeeded in preserving for posterity a substantial part of the Lake George region for a total cost of \$75,000.

With the money he had saved, Moses preserved the historic battlefields at Fort Stanton and Oriskany and, with Adolph Ochs's help, at Saratoga. He purchased the 10,692 still untouched acres of Whiteface Mountain, which he had so often climbed as a youth, thus insuring that generations of youths who came after him would also be able to climb it. By the end of the summer of 1928, the scattered little historic reservations that Moses had inherited had been expanded into a system that included seventy parks totaling more than 125,000 acres. And he had used \$5,000,000 of the bond issue to beat the lumbermen to great untouched tracts in the Adirondacks and Catskills and build up the state's forest preserve to 2,218,000 acres.

When he had the parks, Moses built roads to link them with the nearest highways, and suddenly families in Rochester and Syracuse and Albany were visiting places they had hardly heard of before—not only Letchworth Gorge and Watkins Glen but Boonville Gorge, Rudd Pond, Roaring Brook and Ore Pit. If they simply wanted to drive through these parks, there were

gravel roads they could do that on. If they wanted to hike, there were hiking paths and nature trails through the woods; if they wanted to swim, there were paths down to beautiful, hidden mountain lakes and bathhouses in which they could change into swimming outfits; if they wanted to picnic, there were picnic grounds of which every detail was designed to preserve the fresh, virgin quality of the woods; if they wanted to camp out, there were campsites, designed with equal care, laid out next to cool mountain brooks.

Newspapers in Rochester rhapsodized over Letchworth State Park, newspapers in Albany over Thacher State Park, newspapers in Buffalo over the park on Devil's Island that overlooked Niagara Falls. But these newspapers had little interest in the Long Island parks, and New York City newspapers had little interest in the upstate parks. So no newspaper, no matter how enthusiastic it was over what editorial writers called "Robert Moses' great park program," comprehended the full extent of the program's magnitude—or the full extent of its greatness.

Perhaps the most remarkable characteristic of these parks and parkways that were becoming physical realities in 1928 was that they were, for the most part, the parks and parkways he had proposed in the New York State Association park reports he had written in 1922 and 1923. They were located in the places he had proposed, and the details of their development—down to the façades of their bathhouses and how many lockers and parking spaces each would have—followed the plans Moses had made for them.

Robert Moses had dreamed a dream immense in scope. By the end of the summer of 1928, the dream—all of the dream, even Jones Beach, which had seemed doomed to diminution in reality—was either reality or well on its way to becoming reality.

## 14. Changing

LASHED BY HIS DESIRE for the realization of his dreams, Bob Moses had changed even before he became president of the Long Island State Park Commission on April 18, 1924, from the idealist who put his faith in truth and reason to the pragmatist who put his faith in power. But the acquisition of power in his own name on that date, and his use of power thereafter, broadened the change, accelerated it, intensified it, raised it to an entirely new level.

For once Bob Moses came into possession of power, it began to perform its harsh alchemy on his character, altering its contours, eating away at some traits, allowing others to enlarge.

The potential for these changes had always been there, like a darker shadow on the edge of the bright gold of his idealism. With each small increase in the amount of power he possessed, the dark element in his nature had loomed larger, becoming prominent enough for sharp-eyed men to begin to notice it. Had not Reuben Lazarus said, "When Smith brought him [up to Albany], he began to be, quite suddenly and quite noticeably, a lot more arrogant"? Such men concluded that Moses, even more than most other men, liked power in and for itself; some of them suspected that if Moses ever obtained in substantial measure power of his own, the alteration in his character would become a transformation.

But even sharp-eyed men could not be prepared for the extent of the transformation. For adulthood was, after all, only a part of the pattern of Moses' life, and they had not seen the other part of the pattern. They could not know, therefore, how far back in the over-all pattern the dark thread ran. They could not know how inextricably it was knotted into the pattern's most central design. They had seen Moses' fingers drum impatiently on a table when someone dared to disagree with him, but they had never seen drumming impatiently another set of fingers. They had seen Bob Moses tilt back his head and look down his nose in the prosecutor's stance, but, not having known Moses in his boyhood, they couldn't know where the tilt came from. They may have known Bob Moses, but they did not know Bob Moses' mother. They did not know Bob Moses' grandmother. And therefore they could not know the origin—or the depth—of his susceptibility to the infection of power. They could not know that the susceptibility lay not in Albany but in family-in heredity or upbringing or some combination of the two. He was "Bella Moses' son," the one of her children most like her, the one in whom

surfaced most strongly the mixed strain of passionate idealism and overweening arrogance that she had inherited from *her* parents, Grannie and Bernhard Cohen. When the idealism died, the arrogance was already well rooted and strong. If it was given nourishment, it would expand. And power feeds arrogance. As Moses obtained power, therefore, the traits symptomatic of his arrogance became steadily more noticeable. The pattern's hue darkened.

His mother had always displayed—as a Madison House trustee and as a wife—a conviction of her own infallibility and a predisposition to impose her will on others, an unwillingness to listen to others, a burning impatience to see her solutions to problems implemented, to Get Things Done. Moses' imagination seemed most easily fired, as his mother's had been, by physical problems and physical solutions, problems that could be solved by construction, by the shaping of concrete and steel. And the resemblance in traits between mother and son went beyond that. As a staffer at the Bureau of Municipal Research, he had displayed the same dogmatism and the same impatience. Bob Moses had wanted his own way—and he had wanted it when he wanted it.

And now that he had power, he was going to see that he got it.

He had never wanted to listen to people who disagreed with him. Now, in the main, he didn't have to. "When he talked to you," recalls Leonard W. Hall, then a state assemblyman, "he'd just tell you what he was going to do. If you disagreed with him and tried to explain your feelings, or even started asking questions, he would cut right in, slash at you, without answering the questions, making you feel stupid for asking. And if you were talking to him on the phone, he'd just hang up on you. I remember talking to him on the phone and disagreeing with him about something and I was in the middle of a sentence and the damn phone was slammed down."

Moses had always displayed contempt for people he felt were considerably beneath him, the colored "subject people" of the British Empire, for example, or civil servants who hadn't attended Oxford or Cambridge. At the Municipal Civil Service Commission, his irritation at having to interrupt his work for public hearings indicated a tendency to feel that the public he was serving was beneath him, that its suggestions about its own destiny were not worth listening to. Now that feeling about the public was intensified. When the Governor's office received a letter making a suggestion about parks or criticizing one of the regional commissions, the letter was invariably referred by George Graves, Smith's secretary, to Moses for a suggested reply that could be sent back over the Governor's signature. Now, more and more frequently, Moses would suggest that no one bother to reply at all.

His contempt was not limited to the public. It included, apparently, most state legislators. If he wasn't hanging up on them in mid-sentence, he was treating them with extravagant disdain. "They didn't dislike him just because politically he was cutting them to pieces," Hall recalls. "They disliked him personally. He acted with a complete arrogance. He insulted those men to their face." Sniffing at the patronage possibilities at Jones Beach as though they were sea air, Senate Finance Committee Chairman Jeremiah F. Twomey of Brooklyn asked Moses to drop around for a chat

before the Finance Committee hearings on a Jones Beach appropriation bill. According to Hall, to whom Twomey told the story:

"Twomey says, 'Bob, it looks like there'll be a lot of jobs out there, and I was wondering if we could get a couple.'

"Bob answers very softly, very gently, very politely. 'What did you have in mind, Jerry?' he asks. Jerry mentions one job, and Moses says very softly, very politely, 'Do you have anything else on your mind, Jerry?' Jerry, completely taken in, thinking that for once this fellow is going to be reasonable, mentions a couple of other jobs, and Moses says, 'Do you have anything else on your mind, Jerry?' Jerry says, 'Well, that's about all.' And Moses says, 'Jerry, you can take that bill and stick it up your ass!' "

Moses had always been impatient. Most men didn't move fast enough for him. Now he could do something about it.

The park philanthropists on the State Council of Parks didn't move fast enough for him.

There were many reasons. For one thing, most of the regional commissions whose chairmen comprised the council were made up of men with a different philosophy of parks from his. This was understandable. They were, in the main, elderly men, men out of the days when parks had meant "conservation" rather than "recreation." Even during the 1920's, of course, parks still meant "conservation" to most park experts; there wasn't one in the country who would lean as heavily as Moses to thinking of parks as baseball fields and tennis courts rather than as glades and forests and hiking trails. The regional commissioners, men of the older era, had become interested in parks to preserve as much of nature's beauties as possible from a ruthless civilization. When they saw the developer's bulldozer imperiling a favorite piece of woodland, they purchased the woodland with their own money and presented it to the state, and when they realized that the state would not provide sufficient funds to preserve it as it should be preserved, they put up the money themselves, year after year, and they put up their time, too, spending weekends and vacations on inspection trips, often making needed repairs with their own hands. In drawing up their wills, they chose carefully the men they wanted to administer the properties after they were gone—and these men, too, felt that preserving the properties in the condition in which they had received them was a sacred trust. Proposals for huge parking fields, for restaurants—these seemed to them to conflict with the ideals they had sworn themselves to preserve. If the state now wanted to "develop" those parks, well, certainly some development was necessary; as long as it was done slowly and carefully, it could be worked out—but they wanted to make sure that the development did not destroy the natural qualities they treasured.

There were other reasons, too, for Moses' impatience with the regional commissioners. At bottom, the philosophy of government on which they had been weaned emphasized the rights of the individual. They believed, therefore, that governmental power should be used with the utmost restraint. They were, frankly, dismayed by the way Moses had used entry and appropriation against Havemeyer and Macy, by the way he had threatened to use

it against the North Shore barons. And they didn't intend to use such techniques themselves, even if using slower techniques meant that parks and parkways in their areas wouldn't be acquired as fast as Moses wanted.

A more important source of conflict in their dealings with Moses, however, had nothing to do with philosophy. It was simply that the old men wanted to remain in charge of the parks they loved.

Moses had let them believe that they would remain in charge. He had given them no hint of his true purposes. For Moses had needed them. He had needed their prestige, their reputation (as strong with legislators as with the public) for uprightness, for unselfishness and for devotion to the cause of parks. He had needed the backing of their names.

And they had given him that backing. During the debate over the \$15,000,000 bond issue, they had made use of their influence in their home counties to mute upstate resentment toward such a large spending proposal. Judge Ellis J. Staley of Albany had spoken night after night to civic groups in Albany, Troy and Schenectady. Judge Alphonse Trumpbore Clearwater, elderly and ailing, had climbed out of a sickbed in Kingston to tour Ulster County so successfully that that bastion of conservatism had, to Al Smith's astonishment, actually given the referendum a majority. During the Taylor Estate fight, the old park men had let Smith invoke their names—"everyone knows Judge Clearwater"—to dramatize the fact that even these dyed-inthe-wool Republicans could not support the Republican legislative proposals for parks. GOP leaders had told them that Smith was using them to destroy their party. Many of the park men had felt there was some truth in this. But parks came first with them. And when Smith, through Moses, had asked them to come to Albany, they had come.

They had given Moses the help he asked because they believed what he had told them. When he assured them—as he did over and over both in letters and to their faces—that under his park plan they would "continue their duties and powers," that they would continue to administer the parks they loved, that the State Parks Council was merely an "advisory agency," they believed him. And when the bill creating the State Parks Council was signed, their leaders had elected him its chairman.

But now Moses didn't need them any more.

Not a month after his election, Judge Staley, who administered John Boyd Thacher Park near Albany for the American Scenic and Historical Preservation Society, routinely sent to the state a request for \$15,000 to build a new caretaker's cottage. State officials told the astonished judge that all such requests now had to go through the State Parks Council, through Moses. And Moses disapproved the request. "The height of impertinence," Staley told the society's trustees. They agreed. "It is highly desirable," they said in the minutes of their meeting of May 26, 1924, "that there be a clear understanding of the difference between the powers of the Council as 'a central advisory agency' and the executive powers of 'the existing commissions, boards and organizations governing the . . . parks.'"

They got their clear understanding. When, during the summer of 1925, they submitted to the council their budget requests for 1926, Moses curtly

disapproved many of them. When they tried to circumvent Moses by sending them to state budget officials as they had in the past, the officials sent them back telling them that under the new Parks Council law, all park budget requests had to be transmitted to the state through the council. At a council meeting at 261 Broadway, Judge Clearwater "reminded" Moses that the council's powers were "advisory," not "supervisory." Really? Moses replied coldly. Might he suggest that the judge read the law?

The old park men read the law—and began to realize what they had done.

The realization grew.

Moses had written the Parks Council bylaws. At the first meeting after he had been elected chairman, when he was still charming the old park men, they had approved them, believing them only a formality. Now, reading the bylaws, they realized that all power in the council was centralized in its chairman. The council's finance committee, the key unit which would weigh the requests of the regional commissions, was not elected by them but appointed by him—and he had appointed to three of its five places council staff members hired by and responsible only to the chairman. The whole council staff was responsible to the chairman. And this staff was empowered in the bylaws to draw up the plans for all state parks, including their state parks.

The old men reluctantly decided they would have to deny Moses a second one-year term—and suddenly realized, when they tallied up votes, that while their commissions controlled a majority of the state parks, they did not control a majority of the State Parks Council. Six of its eleven votes were in Moses' hands: Moses' own; two cast by Smith appointees not directly connected with parks, the State Conservation Commissioner and the director of the State Museum; three cast by the presidents of three new regional commissions which did not at the moment have any parks to administer but which Moses had insisted—for reasons the old park men now understood—be represented on the council and to which Smith had appointed men who would take Moses' orders. The old park men had many reservations about Moses' over-all park policies as well as about his plans for specific parks. For one thing, they were concerned about his eagerness to develop parks that were far outside city limits-Heckscher was fifty miles from Times Square, Letchworth fifty miles from Rochester-without providing any means of transportation to them other than auto; the truly poor masses of the cities didn't own automobiles, they pointed out; how were they to reach these parks? But every time they raised such points, they were voted down. And Moses was re-elected to the chairmanship in 1925, 1926, 1927 and 1928.

Some of Moses' fights with the elderly park philanthropists could be viewed as conflicts of philosophy—as his determination not to allow his dreams to be thwarted by other men's smaller-scale vision—although the closer one

examines their details, the more it appears that the crucial conflict in each was between his demand for speed and their feeling that since once nature was altered by man, it could never be restored to its original condition, any changes in the magnificent gorges and mountains which had been entrusted to them must be considered with painstaking care and designed to blend in with the existing topography; the American Scenic and Historic Preservation Society, for example, did not object to making Letchworth State Park more accessible to the public and to furnishing accommodations for families wanting to stay overnight; they just wanted the proposed inn-and large adjoining parking garage—built on the rim of the beautiful Genesee River Gorge rather than right in its heart, as Moses proposed. On other battles between Moses and the old park men, however, it is more difficult to place any philosophical interpretation. The nature of these fights hints that power was now, for the first time in his life, becoming an end in itself, that he was beginning to crave it now not only for the sake of dreams but for its own sake, that although, through his bill drafting, he had given himself much of the power in the field of parks, he was no longer satisfied with much of the power, that he now wanted all the power in the field.

The suspicion is aroused most strongly by his treatment of the commissioners of the state park at Niagara.

There were five Niagara commissioners—all of them elderly men—but the two most active had long been Judge Clearwater and Ansley Wilcox.

"Everyone knows Judge Clearwater," Smith had said, and, in regard to the Central Tier at least, the Governor may have been very nearly right. At seventy-seven Alphonse Trumpbore Clearwater of Kingston was a legend throughout the band of thinly populated counties that stretched three hundred miles across the middle of the state. Tall and thin, with a face that would have been cold were it not for the upward turn of the corners of his mouth, he was a wing-collared embodiment of devotion to the public good. He had been both district attorney of Ulster County and a lawyer who, in an era in which the poor often went unrepresented in court, represented the poor—and as both prosecutor and defender his brilliance and, despite a dry and precise speaking style, his remarkable oratorical ability made him a lawyer other lawyers feared to oppose. While still young, Judge Clearwater had been president of the State Bar Association and a Justice of the State Supreme Court; men said he could, had he wished, been Governor. But he did not so wish. Instead of a politician, he became a historian, and he served his state by studying its history-scholars regarded his knowledge as unequaled—and by selecting from appointments proffered by its Governors not those that would have brought him fame but those that would enable him to help preserve its locales of history and beauty, such as Niagara State Park. His selflessness was widely known; although he had renounced politics, his voice was regarded by politicians as the most influential in the Central Tier. When in 1925 a desperate Moses, assuring Clearwater that the Parks Council would be only an "advisory" body, had asked the judge to help him in the Taylor Estate fight, he had come, old and ill, to Albany to stand before a hostile Republican caucus and argue in Moses' behalf. When legis-

lators had begun criticizing Moses' spending proposals for Niagara as extravagant, Clearwater had written him a letter saying "Your views . . . are just"—and that line of criticism had abruptly stopped. Of all the old park men, Clearwater had been Moses' most effective supporter.

Ansley Wilcox, who had served as a Niagara park commissioner for forty years, was a chubby old gentleman with a white walrus mustache. A successful attorney, he lived in a stately Georgian mansion on Buffalo's fashionable Delaware Avenue. But Ansley Wilcox had been a brilliant student at Yale and after graduation he had gone on to Oxford. Then, attracted by the ideals of the municipal reform movement, he had spent years campaigning, fruitlessly, for a civil service merit system for Buffalo. Then he began to fight for parks. While still in his twenties, he determined to rescue the gorge overlooking Niagara Falls from the factories, mills and cheap rooming houses that were creeping along its edge. Spending two years of his own time appraising the land, he had determined that it would take \$1,500,000 to condemn it and, in 1885, after a courageous and bitter fight, had persuaded the Legislature to appropriate the money and create Niagara State Park, which by the 1920's was nationally known, the single most famous park in the country. If Moses had studied Wilcox's life, he might have noticed more than a few resemblances to his own.

But Moses wasn't interested in studying Wilcox's life. And he didn't need Clearwater any more. The two old men—the entire Niagara Commission in fact—were a constant irritant to him. Why? No one could accuse the Niagara commissioners of excessive conservatism or of being too limited in their aims for improving the Niagara Park, long allowed by the Legislature to deteriorate, and for extending the park—along with connecting parkways and bridges—all along the Niagara Frontier. Their aims were, in most important respects, identical with Moses'. So was their insistence on speed.

Ansley Wilcox, in fact, had even more reason to want speed than Moses. In 1925, Wilcox was dying of what his obituaries would call "the wasting disease"—cancer. And Wilcox knew he was dying. He wanted desperately to see before he died at least the beginning of the refurbishment of the park he had created as a young man and had administered, frequently with his own money, for forty years, and at least a start on the park extension and parkway that would preserve forever the gorge he loved.

To speed the refurbishment, which included the acquisition of a new elevator to carry tourists down the cliffs near the falls to the famed Cave of Winds, Wilcox had persuaded another commission member, Paul A. Schoellkopf, president of the Niagara Falls Power Company, to have power-company engineers draw up plans for the elevator so that construction could begin as soon as funds were allocated. And he had done everything he could to enable the commission to get a fast start on the parkway along the edge of the Niagara gorge. Knowing that the \$1,000,000 allocated to Niagara in the park referendum would pay for only a fraction of the necessary right-of-way, he asked Schoellkopf, whose power company owned much of the land along the gorge, to agree to donate easements if the commission acquired the rest of the right-of-way. Schoellkopf, who knew the

nature of Wilcox's illness and the reason for his desire for haste, agreed. When a small but key parcel came on the market and Wilcox was afraid it would be purchased and developed by private interests, he and Schoellkopf purchased it and presented it to the commission as a gift. When two more key pieces came on the market in 1925, he persuaded Schoellkopf to have the power company purchase them and hold them until the commission received, at the 1926 legislative session, an appropriation to allow it to purchase them in turn. The admiration in which Wilcox was held helped the parkway along; several of his friends said they would buy parcels needed for the right-of-way and give them to the commission in his name, and Schoellkopf advanced money to speed the transactions. The only point of contention between the Niagara commissioners and Moses was that the commissioners wanted to carry out the Niagara development themselves, to keep, as Moses had solemnly promised them they could, power over the park's development and administration, to remain in charge of what was to them a cherished piece of nature instead of turning it over to a faceless bureaucracy in the Parks Council offices in New York City, three hundred miles away. In so wanting, they stood in the way of Moses' absolute control of state parks.

Clearwater, the Niagara Commission's representative on the Parks Council, was a larger irritant for the same reason. When the judge argued that the council was only an "advisory" body and that the regional commissions should be allowed latitude in their work, he was arguing, in effect, against absolute control of all state parks by Moses. And when Alphonse Clearwater spoke, the other council members sitting around the table with him seemed to remember more clearly the promises Moses had given them and the principles of park development that they had once been determined not to surrender. Several times, the judge had even swayed Robert H. Treman, the chairman of one of the three new regional commissions, and the decisive sixth vote had been cast against a Moses proposal.

The refusal of the Niagara Commission to submit to his control had already, Moses complained, made him look "ridiculous." In submitting park spending plans to the three-man committee of the Governor, Hutchinson and Hewitt, Moses, anxious as always to obtain as much money as possible as quickly as possible, had asked for immediate allocation of Niagara's whole million-dollar appropriation. But when Hutchinson asked Wilcox if the commission really needed the whole sum in 1926, Wilcox refused to lie. He said that the commission could use no more than \$400,000 of the money in that year.

The Niagara Commission's independence was threatening to cause Moses serious problems. While the commission envisioned a complete parkway system around Niagara Falls, he wanted it to extend all the way to Buffalo, twenty-five miles away. The Niagara commissioners had no objection to the plan, but they didn't want to be responsible for it; they were not trying to build a vast park system; they were interested only in the land they knew and for whose protection they had been fighting for so many years. Furthermore, the parkway Moses wanted would be primarily in Erie County; they felt the newly created Erie County Park Commission should

have jurisdiction over it. But the bond issue gave money for improvements on the Niagara Frontier only to the Niagara Commission, and they were afraid that under the law they would be forced to assume responsibility for it. When Moses asked them to give \$100,000 of their million for planning of the Erie County section of the parkway, they objected because they felt the whole million was needed around the falls, but they said that they would give it anyway—as long as in return a law was passed making clear that the portion of the parkway in Erie County was not their responsibility. This apparently minor point appeared to worry Moses beyond all relationship to its legal importance, possibly because asking the Legislature to pass new park reorganization laws might give it the opportunity to oust him from control. Furthermore, the existence of open conflict within the Parks Council was a threat to his assertion of absolute dominance over it; as long as maneuverings within the parks empire he was creating were kept quiet, he could quietly work his will within it; let it once become a source of controversy and the Legislature might well begin stepping into it, and the Legislature would not be disposed to allow his dominance to continue.

So Moses moved against the Niagara commissioners. First, although they had a superintendent and an engineer to direct the commission's staff and day-to-day affairs, Moses demanded that they appoint an "executive officer"—who they suspected would be one of his men. They refused.

Then there ensued in April and May 1926 a number of Parks Council meetings at which the commission had no representative present. Clearwater, its authorized representative, was suddenly struck down by an illness so severe that doctors gave him no chance of living. Wilcox, his authorized substitute, was too weak to take his place. And council members who were friends of the two old men reported that in their absence rumors—vicious rumors—were being circulated about them in whispers at council meetings. Someone—Wilcox felt sure he knew who—was hinting darkly that the Niagara Commission, in making its park and parkway plans, had sold out to the interests of Schoellkopf's power company. On June 3, Smith wrote Moses a letter—Wilcox was always to believe that Moses wrote it, and persuaded Smith to sign it—asking Moses to investigate "transactions and relations between the Niagara Reservation Commission and the power companies, including the reservation of easements by the power companies on land sold by them to the commission."

"I also wish to learn," said the innuendo-loaded letter, "whether this park commission has laid out a program which will insure the protection of the Niagara Riverfront . . . or whether they are just buying isolated pieces of land along the banks of the river and leaving the rest of the land in the hands of the power company and other private interests."

Wilcox could hardly believe what he read. Moses, he was sure, was behind the letter, but Moses had known and approved of the commission's arrangements with the power company.

But Wilcox had gotten only a taste of what was in store for him.

Moses called a meeting of the Parks Council for June 26 to consider the Governor's letter. Wilcox, Schoellkopf and the two other Niagara Com-

mission members, Robert W. De Forest and Robert H. Gittins, met and prepared resolutions giving their side of the story and sent them to Moses, asking him to have them read to the council. No Niagara commissioners were present at the council meeting-Clearwater and Wilcox were unable to travel—and they learned after the meeting that Moses had not even told the council about the existence of the resolutions and instead had persuaded it to appoint a five-member committee to investigate the matter at a hearing at the Parks Council office in New York City on July 15. The committee, the Niagara commissioners realized, was packed against them; there was one old park man, Major William A. Welch of the Palisades Commission, on it, and its chairman, Jay Downer of Westchester, although an engineer friendly to Moses and an exponent of the new park theories, was regarded as a man of integrity, but the third member was a representative of Conservation Commissioner Alexander MacDonald, and Moses and his friend and aide, Henry Lutz, were members ex officio, so Moses had three votes out of the five.

Whether the only available record of the hearing is complete is impossible to ascertain. The only transcript available was made by Rose Pedrick, Moses' secretary, and Wilcox later complained in a letter to Moses that "several times the stenographer was told to omit things, or portions of the discussion, which were really of the greatest relative significance." These omissions appear at two crucial points in the transcript as "discussions off the record" and once Miss Pedrick refers to an "argument between Mr. Gittins and Mr. Moses" without telling what the argument was about.

Complete or not, however, the transcript is interesting.

What are the specific charges against us? Wilcox demanded as soon as the hearings began. There are no charges, Downer hastily replied. This is not an investigation—"Take that word from the record. This conference; it is a conference. Substitute the word 'conference.'"

You mean there is no one willing to stand up here to our faces and make charges? Wilcox asked. "No, sir. No, sir," Downer replied. "No charges have been made by anybody so far as I know." The only reason the committee was interested in the commission's relations with the power company, he said, was that the Legislature might be reluctant to allocate money for land along the gorge until the power company gave definite written assurances, preferably legal options, that it would give the commission easements over the intervening lands it owned so that the Legislature could be assured that the parkway would be continuous. The only thing the committee wanted was an assurance from Wilcox and Schoellkopf that their informal agreements would be formalized.

Well, Wilcox said, there is a letter written by Governor Smith, "implying that we are handling the thing not for the public interest but for the interests of other people . . . of the power company . . . plainly implying it, so much so that he might as well have charged it in terms . . . just as plainly as if it were put in a little more brutal language, charging us with collusive and improper relations. . . . If the English language has any mean-

ing, it means that." Where did the Governor get his information—false information, outright lies, in fact—on which the letter was based? Moses said hastily, "Mr. Downer, may I interrupt a moment. . . . Personally, I regard the question of where the Governor got his information as something that we have no right to go into." And Downer hastily agreed. Throughout the hearing, which would go on for six hours, at a high cost in pain and weariness to Wilcox and to De Forest-who was seventy-nine years old and so ill that he had been in bed for more than a month—the Niagara commissioners would seek to learn what the charges against them were and why, if there were no charges, they had been summoned to New York City. Throughout the hearing, Downer would evade a direct answer, trying to focus attention on a number of minor matters that had nothing to do with the power company. Near the end of the long day, Downer tried to conclude the hearing. "Just one minute," Wilcox said, and insisted that "the big question that appears in the Governor's letter" be discussed. He made the committee listen while he read into the record Schoellkopf's contributions to the parkway plan, and presented proof that the power company was not getting anything from the informal arrangement and in fact was donating to the state land worth hundreds of thousands of dollars. The Governor's letter talked about "transactions and relations between the . . . Commission and the power companies including the reservation of easements by the power companies on land sold by them to the Commission," Wilcox said. Why, he said, no power company had ever "sold an acre of land to our Commission or made any reservation [easement] whatever on any land whatever." And Downer, as if his sense of fairness had at last won over his loyalty to Moses, said for the record that he had, in fact, toured the Niagara site himself and had been "impressed with . . . the many things that they [the power company] . . . had planned to do for the furtherance of the parkway."

"We have no time to waste in hearing any defense of gentlemen of your reputation as to any collusion with anybody, and this committee will not go into any such question," Downer said. "We are not interested and we do not believe any such things and have nothing in our minds in regard to it. We know your reputations too well to believe you would do such a thing. . . . There is no such thing in the minds of this committee." And when Wilcox insisted that he be formally exonerated of any wrongdoing in his informal argreements with Schoellkopf, Downer said flatly, "I have no fault to find with that transaction," a position with which Welch heartily agreed. Moses, who had repeatedly interrupted Downer and the commissioners during discussions of the other, minor subjects, had been noticeably silent. Now he said, "I would like to ask as a question of fact whether or not the money in the case of the two parcels we discussed before was or was not furnished by the power company." And Downer said flatly, "What if it was, Mr. Moses?"

Downer's anxiousness to avoid discussion of the "big question" raised in Smith's—or Moses'—letter deprived Wilcox of an opportunity to get the committee's approval of acquisition by the power company of a key piece of land that had just come on the market and that Wilcox was eager to have Schoellkopf snap up and turn over to the commission for the parkway before someone else bought it and began to build on it. This, Wilcox was to say, was a bitter disappointment to him. "The opportunity . . . is slipping and my interest and ability to act are waning," he wrote, "and I fear this promising plan may come to naught." But at least the commissioners felt they had been exonerated.

But they had not reckoned with the full extent of the change in Robert Moses. The Niagara commissioners felt sure that Downer's report on the hearing would be fair. And they were right. The committee chairman wrote that Schoellkopf's only relationship with the commission had been to assist it and to have his power company assist it, at considerable expense to both himself and his company. Such criticisms as Downer did make of the commission's operations, based on the minor matters discussed at the hearings, dealt with technicalities, and so did his recommendations for changes in its procedures. But when the Parks Council met on July 24—with Wilcox, exhausted by the earlier trip to New York and the strain of the hearing, again confined to bed and absent—Downer's report was not distributed. Neither was its summary, which contained the exoneration. Instead, its list of "recommendations," which concentrated on the technicalities and did not include the exoneration or even mention the "big question," was readso hastily that an aide Wilcox had sent to take notes was able to gain only a general idea of its contents—and the innocuous recommendations were adopted.

Wilcox's aide asked Henry Lutz to send a copy of the report to Wilcox, and Lutz promised he would do so. On July 30, Wilcox had not received it, and he sent Lutz a telegram asking for it. Lutz did not even reply.

On August 3, Wilcox, in bed, unable to determine what the report about him said or if it had been sent to the rest of the Parks Council, wrote Lutz. His letter was, considering the provocation, one of remarkable courtesy. The harshest line in it was its last: "If there is a copy of that report in existence or available, I should be glad to have it as soon as convenient."

Lutz did not reply. But Moses did. The first sentence of his letter to Wilcox was: "I will pass over without extended comment the unpleasant tone of your letter. I presume that you have become so accustomed to addressing people in this way that you are hardly aware of its effect on others." He was writing, Moses said, to defend Lutz from Wilcox's attacks. Downer's report, Moses said, was not ready, although the Parks Council had adopted its "conclusions" and "the action taken by the Council has been outlined to the Governor." An astounded Wilcox realized that Moses had sent a copy of his, Moses', letter to the seventy-two other regional commissioners without sending them a copy of Wilcox's letter—and therefore the commissioners could have no way of knowing that Wilcox's letter had not in fact been unpleasant, and they could not know the events that had led up to it.

Since Wilcox's letter was not insulting, why did Moses say it was? In Wilcox's view, Moses realized that the Downer report would not make the Niagara commissioners look bad to the other regional commissioners and

would not justify to Smith what he had almost certainly told Smith about them, that he therefore needed another issue to divert attention from the main one, and that he seized on Wilcox's innocuous letter as the whole cloth out of which to manufacture it. In any case, his handling of the letter was consistent with his other actions in the matter. He had sent the seventythree regional commissioners copies of Smith's letter implying wrongdoing by the Niagara Commission, but he had not sent the regional commissioners —he had not even let them know of the existence of—the Niagara Commission's resolutions that gave its side of the story. He had read at a Parks Council meeting Downer's "recommendations" which seemed to find some fault, however minor, with the commission, but not the summary which exonerated the commission of the major charges. And now he accused Wilcox of writing an abusive letter to a council employee, without allowing the regional commissioners to see the letter for themselves—and to see that it was not abusive. It is impossible to avoid the conclusion that Moses had determined to hound from the state park organization a group of elderly men whose only crime was their refusal to allow him to exercise unbridled power in that organization and to remove them from control of the park they loved, the park that one of them had created, the park to which they had given so much of their lives.

When he received Moses' letter, Wilcox, who had been confined at home, weak and in pain, since his trip to New York, left his bed and went to his office to dictate a reply. He was unable to stay there long or to work in substantial stretches, and it took him five days to finish it. But he finished it. And although its main purport was to exonerate himself from charges of discourtesy and dishonesty, it was also a telling document in charting the evolution of Robert Moses.

"You speak from a high position," Ansley Wilcox wrote.

Seemingly, this should bring with it a feeling of responsibility and consideration, not merely a sense of dominating authority and a desire to have your own way without opposition in all matters, large and small. It might have led you to show some special consideration to the Niagara Commission and Commissioners, owing to their age and long service and the experience of all of them, giving them an intimate knowledge of many special local problems which you and other members of the State Council, however wise and experienced in general, are only able to guess at; and owing to the desperate illness and disability of Judge Clearwater, our President, and partial disabilities of Mr. De Forest and myself. But it has not produced any such consideration—quite the contrary. . . . Our Commission and its members have been treated by you unfairly and brutally to a degree which cannot be expressed in polite language.

Your rage toward Judge Clearwater and me, Wilcox wrote Moses, is a "poisonous thing." And what, Wilcox asked, is the reason for it? Nothing but the fact that, while supporting in general your park policies, we have "ventured on occasion to speak out in meetings views opposing your policies, and [have] beaten them more than once. This could not be forgotten."

Wilcox denied that his letter to Lutz had been abusive.

"Neither you nor anyone can point out anything offensive in my letter

to Mr. Lutz, except to one conscious of trying to play tricks, who finds himself caught and exposed . . . I was feeling indignant, but I had a right to be indignant," Wilcox wrote. You accused us of dishonesty—yes, it was you; you were responsible for the vicious rumors that came up in Parks Council meetings when neither Clearwater nor I were present to repudiate them; you wrote the letter signed by Smith; "the letter does not sound at all like Governor Smith, and it does sound like you"—and then when Downer's report showed us to be innocent, you did not let us or anyone else see the report. Probably the Governor has not seen it either, Wilcox wrote. "You say . . . that 'The action taken by the Council has been outlined to the Governor." I am sure it has—"by you, I suppose, and in your own way."

Wilcox's letter, which detailed his "transactions and relations" with the power company, covered ten single-spaced typewritten pages. "That it is too long, I know well," he concluded. "Few will read it and probably none will appreciate it."

The old man was right. His letter lay unread in an unopened folder in a dusty Albany warehouse for forty-two years. And although, in the forty-third year, the folder was opened (by the author) and the letter was read, and although it provided the first detailed account of the changes wrought in Robert Moses by his hunger for power, it could not right the worst of all the injustices Moses perpetrated on Ansley Wilcox. During Moses' long reign as State Parks Council chairman, the plaques previously placed in Niagara State Park by Wilcox's friends to commemorate the contributions to the park made by him and the other old Niagara commissioners were systematically removed—to be replaced with plaques bearing Moses' name. When the parkway along the Niagara gorge was built, it was named after Moses and so was the power dam that became the centerpiece of the park. By the time Moses' reign was over, it would be impossible to find anywhere in Niagara State Park even a single hint that anyone except Moses had been responsible for its creation.

Wilcox's letter had no appreciable effect on Moses. With it, Wilcox sent a request for the names and addresses of the seventy-two other regional commissioners, "to whom you sent your abusive and misleading and unfair and domineering letter," so that he could send copies—along with copies of his letter to Lutz—to them so that they could judge for themselves. Moses never replied. Instead, he continued his assault on the old men, if by more roundabout means. If he could not oust them quickly, his actions seemed to indicate, he would wear them down.

First, a series of charges were filed against the commission's superintendent and chief executive officer, Emil R. Waldenberger. The commissioners investigated and cleared him. Then Moses told Smith that because of the illnesses of Judge Clearwater, Wilcox and De Forest, the commission was "not functioning," and in March 1927 Smith asked De Forest, in the most delicate of terms because of De Forest's great prestige, if he might not prefer a post on the State Housing Board instead. De Forest had, in fact,

long wanted to resign. But the old men were loyal to their compatriots. "I would rather not put myself in the position of a deserter," he replied.

In reality, Clearwater had confounded his doctors and recovered—months before. De Forest sent a copy of Smith's letter to the judge, and the judge wrote a letter of his own. He still had the gift of words.

"The Governor's letter . . . seems like a wound in the house of a friend," he wrote. "I have for him a great admiration. He has all the elements of greatness and none of its limitations.

"Unfortunately, some men greatly his inferior have secured access to him and to a considerable extent have his confidence, which unhesitatingly they abuse to gratify their ambitions, their interests and their animosities. By them he at times has been misinformed."

The commission has been functioning, the judge wrote. Would the Governor like to know how? And he proceeded to list page after page of extensive land-acquisition negotiations that had been carried out in recent months.

He knew why Moses was lying, the judge wrote. "The situation at Niagara affords opportunities for spectacular publicity not offered by any other of the State Parks, and . . . there are members of the Council of Parks who desire to dominate it in order to capitalize those opportunities for their own glorification." Furthermore, he was not afraid to speak out against those of Moses' policies with which he did not agree. "Now there seems to be a somewhat widespread feeling that because of the Governor's friendship for him, Mr. Moses expects an attitude of abject acquiescence from the members of Council . . . and that unless he receives it, reprisals may be expected."

Moses let the "not functioning" issue drop.

But time is not on the side of old men. The progress of Wilcox's disease was slow but steady. In July 1927, he was forced to resign from the commission, and Smith accepted Moses' recommendation on his replacement. Then Moses convinced the Governor that the activities of the Niagara Commission could not be adequately carried out unless the commission made the new member its executive officer with full powers to act for it. He convinced the Governor not to sign any appropriations for the Niagara Park unless the old commissioners gave the new one this power. In order to realize their dream, in order even to keep functioning the park they loved, the old men were forced to turn it over to someone else. At the end of the fight for control of Niagara State Park, Robert Moses had won.

He won every fight in the State Parks Council. By the end of 1928, most recalcitrant regional commissioners had been replaced, as their terms expired, by men amenable to administration of their parks by the council's central staff, which, through Lutz, took orders from Moses. To further insure that votes within the council would no longer hinge on the changeable margin of a single vote, two new members were named, the State Historian, directly appointed by Smith, and the president of a new regional commission, all of whose members were appointed by Smith.

Parks had never been a source of power before. Since the traditional function of park commissions had been to preserve the land in its natural

state, the later developments—construction contracts, jobs—that made parks a source of power had never been a significant consideration. Parks were a source of power now, but the old park men didn't want power. They just wanted to be left alone to preserve and pass on beauty to other generations, and when, as in the case of the Erie County Parkway, the chance for power came their way, they backed away from it.

Politicians failed to grasp the new reality until too late. By the time they finally realized—one can see the realization growing in their correspondence of 1927 and 1928—that a new organ of state government was being created that would dispense yearly millions of dollars in construction contracts and thousands of jobs, Moses had the state park system too firmly in his control for it to be pried loose. He would remain president of the Long Island State Park Commission and chairman of the State Parks Council until 1962, and during the thirty-eight years of his reign over state parks these parks would, even as his activities expanded into other fields, be a constant source of power that he could use to expand his influence in those fields.

In politics, power vacuums are always filled. And the power vacuum in parks was filled by Robert Moses. The old park men saw beauty in their parks. Moses saw beauty there, too, but he also saw power, saw it lying there in those parks unwanted. And he picked it up—and turned it as a weapon on those who had not thought it important and destroyed them with it. Whether or not he so intended, he turned parks, the symbol of man's quest for serenity and peace, into a source of power.

Moses could have done nothing, of course, without Al Smith's constant support.

The old park men pleaded with the Governor for justice. "I am very sure that on the same knowledge of facts there would be no difference at all as to any park matters between you and me," De Forest wrote, and others, too, told him he was being misled. They asked the Governor for appointments so that they could tell him their side of the disputes.

But the appointments they were given were few and far between. And although they didn't know it, most—perhaps all—of the letters they wrote Smith complaining about Moses were sent by Smith's office to Moses for "suggested" replies—and the replies Moses suggested were generally sent out over Smith's signature without a word being changed.

The pattern was the same in Moses' relations with the Legislature. He might have told Jerry Twomey to stick a bill up his ass, but, Twomey told Len Hall, "within two days, Al Smith had me on the phone and I had to put the bill through." The Legislature might rage at Robert Moses—Twomey wasn't the only legislator insulted to his face, Hall not the only one on whom he slammed down the telephone—but no legislator dared to stand up to a Governor who was a master of every method of bending men to his will. As long as Al Smith stuck by Moses, the Legislature could do nothing about him.

And Al Smith stuck. In the midst of the Thayer bill fight, with Smith threatened by political embarrassment because of Moses' actions, a wealthy New Yorker who had been a victim of Moses' insults stormed into Smith's office. According to one Smith biographer, he asked angrily, "'Do you want to settle this park fight?"

- "'Yes,' the Governor said.
- "'Then I'll tell you how to do it.'
- " 'How?'
- "The visitor banged his fist on the Governor's desk.
- "'Get rid of Moses!' he shouted.
- "The Governor leaped to his feet, his face suddenly purple with rage.
- "'Get out of my office, you idiot!' he roared."

Why Smith stuck was a question that had many answers.

One was that he was a politician. In capitol corridors, Moses may have been a handicap to the Governor, but in voting booths the parks that he built were a priceless asset to Smith. About Colonel Frederick Stuart Greene, the short-story-writing engineer who refused to consider politicians' wishes in awarding contracts but who got roads built that won voters' appreciation, Smith once said, "He may be a devil in May, but he's an angel in November," and the Governor might have said the same thing about Moses. In 1926, desperate to derail the Governor before the 1928 presidential campaign, the state GOP ran against him its strongest candidate, Congressman Ogden Livingston Mills. Campaigning vigorously, Mills tried to focus voters' attention on the unprecedented expenditures of Smith's administration, but the Governor easily diverted them by reminding them, over and over, that Mills was one of the North Shore barons, "that small handful of wealthy millionaires on Long Island [who] said: 'We do not want the rabble from New York coming down into our beautiful country." Smith won a fourth term—the first Governor to do so since De Witt Clinton a century before and he credited a large part of his 257,000-vote plurality to the parks issue.

Smith was not only a politician; he was a Tammany politician. In the simple Tammany code, the first commandment was Loyalty. Smith's loyalty to his appointees was legendary. Once he gave a man a job, he was fond of saying, he never interfered with him unless he proved himself incapable of handling it.

And Smith knew that none of his appointees worked harder for him than Moses. When his daughter Emily, her father's confidante and perhaps the person who best understood him, was asked why her father stuck by Moses, she would begin her analysis by saying simply, "Bob worked so hard for Father, you know."

Beyond politics was the fact that the boy from the Fulton Fish Market wanted so passionately to improve the lives of the people of the Fourth Ward—and of a hundred Fourth Wards throughout the state. And parks were, unlike improvements in teachers' salaries or other highly praised but unmeasurable accomplishments of his administration, an accomplishment that he could *see*, an accomplishment whose visible, concrete existence could

prove to him that he had indeed done something for his people. When he saw families picnicking under the tall trees at Valley Stream or swimming at Sunken Meadow, he could feel that he had measurably improved their lives. So many of the things that made him most satisfied with his administration had been the result of Moses' work.

As for his refusal to listen to Moses' opponents, Smith was well aware, as a politician, that every public improvement caused outcries. "You can't get a road built if you're going to listen to every farmer who doesn't want it to go across his land," he often said. Listening to protesters undermined his appointee, and got himself involved in enemy-making situations. Staying out of such situations—leaving responsibility with his appointee—enabled him to stay out of the fights which attended upon the building of public improvements while still allowing him to take full credit for their completion. Moreover, most of Moses' opponents, after all, were upstate legislators or politicians. Smith knew the depth of their reactionism, their narrow-mindedness, their utter inability to understand the needs of the city masses. As Emily put it, "Father wouldn't care what Bob did or said to the GOP legislators. After all, Father was fighting them himself. And Father thought the legislators really were terribly wrong. He felt the things Bob wanted to do were right."

In the opinion of those close to the Governor, he didn't realize how drastic the methods were that Moses was using to accomplish his aims. He didn't understand that Moses was going beyond the actions of other appointees, handling protesters with needless harshness, stirring up protests by his arrogance, creating problems where there need not have been problems. "Particularly with little people," Emily says; "I didn't think that Father really knew how Moses was treating them." And there was, of course, no reason why the Governor would; they didn't have his ear or, since he seldom read even memos from appointees and almost never letters from the public, his eye. And the press, which might have publicized their complaints, was firmly in Moses' corner.

And behind the political considerations there were the personal. Al Smith was a fighter, and he liked fighters. One night Smith heard Richard Childs, introducing Moses at a dinner, smilingly tell his audience: "You all know Bob, of course. He's so forthright and honest that if he saw a man across the street who he thought was a son of a bitch, he would cross the street and call him a son of a bitch, lest by passing him in silence, his silence be misconstrued." Smith roared at the description—and, thereafter, when someone would criticize Moses, the Governor would often give it himself, with evident delight.

And Moses reciprocated. He knew how much he owed Smith for the realization of his dreams. "We could have done nothing without him," he would say. He knew how much he owed Smith for rescuing him from a life of obscurity and failure. "Most of what little I know of the practice of government I learned from this remarkable Gamaliel," Moses would write. "Without him I would have been just another academic researcher." After the Governor's death in 1944, Moses wrote, "The few remaining members of

the Smith brigade think of him often and at the strangest times, see him in moments of action and relaxation, inspiration and ease. We hear his rough voice...."

Moses may have mocked to their faces men of wealth and influence and insulted the most powerful members of the State Legislature; he treated Al Smith with a respect that to those who saw the two men together was unforget-table. Said Belle Moskowitz's son, Carlos Israels: "When Moses was with Smith, he would always be spouting out ideas, pacing, gesticulating, talking. But it was the talking and gesticulating of an enthusiastic boy with his father, a father whom he admired and to whom he was very respectful." Joseph Proskauer said: "He acted to Smith as he acted to no one else, with deference and respect."

Smith was always "Governor" to Moses. He never addressed him—either in letters or in speech—as anything but "Governor." And this was a fact more significant with Robert Moses than it would be with other men. Moses would, during the forty years after Smith left Albany, serve under five other Governors. He never addressed them—in letters or in speech—except by their first names. He never called any one of them "Governor." For Robert Moses, there would always be only one Governor.

During the final years of Smith's reign, he and Moses became closer and closer. Smith saw that Moses was invited to the most intimate of Tammany soirees, the notoriously boisterous get-togethers at William F. Kenny's Tiger Room. The Tammany bigwigs who had looked at him askance soon came to like him and, when they mentioned this to Smith, the Governor would beam happily. Often, after dinner in the Executive Mansion or, in New York, in the Biltmore suite or a friend's apartment, Smith would say, if Moses had not been present at the dinner, "I wonder what Bob's doing tonight—let's get him." Someone would call Moses. When he arrived, Smith would say, "Bob, let's go to Dinty Moore's," and the two men would sit for hours in a back room specially reserved for the Governor, drinking beer, cracking crabs and talking. "That talk was something," Howard Cullman would recall. "You could tell just listening to the two of them that there were two men with real brains."

Not that the talk was all serious. Often, the Governor and Moses would, to the delight of listeners, go into a sort of rapid-paced comic dialogue on the Albany scene. Says Emily Smith: "It would be more fun to be there listening to Father and Bob than to be out at a theater or dancing somewhere." Or Smith would, if there was a piano handy, jump up, walk over to it and say to Moses, "Come on, Bob, let's show these people what we can do." One of the men who watched Smith and Moses harmonizing on such occasions says, "There was a tie there that was beyond business or politics." Says another: "You could tell just by looking at the two of them together that they liked each other a lot."

## 15. Curator of Cauliflowers

APPROVAL BY THE LEGISLATURE in 1923 and 1924 of the department-consolidating, ballot-shortening amendment—recommended in the Reconstruction Commission report Moses had finished in his little apartment on West Eighty-seventh Street in 1919—permitted its submission to the state's voters, who approved it in November 1925. Henceforth, of the state's top officials, only the Governor, Lieutenant Governor, Attorney General and Comptroller would be elected.

Vicious legislative in-fighting over the laws necessary to implement the consolidation amendment—in-fighting in which Moses was the key behind-the-scenes figure—went on for another year. But the State Department Law of 1926, while establishing eighteen departments instead of the sixteen Moses had proposed, was in most crucial respects a restatement of the report Moses had written for the Reconstruction Commission seven full years before. It consolidated within the eighteen departments every one of the existing 187 agencies, forbade the creation of any new departments and eliminated overlapping agency functions. When the constitutional amendments establishing the executive budget system and the four-year gubernatorial term proposed in the Reconstruction Commission report were repassed, approved in referendum and signed into law—the executive budget amendment in 1928, the four-year-term amendment in 1932—the report written in Moses' apartment became, substantially unchanged, the administrative machinery of the State of New York.

The fight had been a long one for Robert Moses. He had begun working on the Reconstruction Commission report in 1918 and had completed it in 1919. He had written the administration bills, drafted the gubernatorial messages and supplied the technical information for the legislative fights that had resulted in passage of the consolidation—short-ballot amendment in 1920 and repassage, after the 1921 defeat, in 1923 and 1924. Following passage of the referendum in 1925, he had played a key role in the drafting of the State Department Law of 1926. The executive budget proposal did not start down the path to legislative and voter approval until 1926 and it was not enacted into law until 1928. But when it was, at the end of a decade of work for Robert Moses, the Governor of the State of New York possessed at last the power the Governor had always been intended to possess.

Political scientists said so in the patois of political science. The re-

organization "released the executive's energy to provide the leadership required in the twentieth century," one said. Al Smith said so in the patois of Al Smith. "When the Governor wants to talk about the state hospitals he will have one man to talk to," he exulted. "When he wants to talk about public parks, he will have one man to talk to, and the same way when he wants to talk about agriculture, charities, education." For the first time, he knew, when he wanted to move the state down a particular path, he could make it move.

Before his fourth term was over, "against the tide of the Twenties" that blinded most of a prosperous nation to the needs of its urban masses, Al Smith had not only forced through a recalcitrant Legislature measures that improved working conditions and reduced working hours for men, women and children, but had also lashed state departments into enforcing the measures. He had not only forced through the first large-scale, low-cost housing program in the United States, increased teachers' salaries tenfold and obtained equal pay for women teachers, but had also moved a dozen state departments into less dramatic but equally vital efforts to meet needs in areas of their jurisdictions. He had not only persuaded voters to approve bond issues of unprecedented size for state hospitals, mental hospitals and prisons but had also geared up the departments responsible for building these institutions to do so with unprecedented speed. He had written on the statute books of New York such a sweep of social welfare statutes that Oscar Handlin could say that they "made the most difficult state the best-governed one in the Union . . . [and] awakened the conscience of the nation to the needs of the urban working people." Franklin D. Roosevelt, as President, was to say that "practically all the things we've done in the federal government are like things Al Smith did as Governor of New York."

Robert Moses himself was conspicuously uninterested in social welfare reforms. But these reforms would have been impossible of attainment without the executive budget and departmental consolidation and reorganization. Even more impossible of attainment would have been another Smith achievement: while expanding manyfold the state's role in helping its people meet their needs, he succeeded, over the course of his four terms, in substantially cutting state taxes. Walter Lippmann called the reorganization of New York's administrative machinery "one of the greatest achievements in modern American politics." Robert F. Wagner, Sr., asked to name Smith's most important achievement, said flatly: "The reorganization." And many other states modeled their reorganizations directly on New York's. Says Leslie Lipson, author of The American Governor from Figurehead to Leader, the definitive study of the development of state government in America, "New York is the great classic of the reorganization movement." In that classic, Robert Moses played the leading role. Most of Moses' achievements were highly visible achievements—monuments of concrete and steel—which may be expected to endure in the public consciousness for as long as they stand. But his achievement in reshaping the machinery by which New York State's millions of inhabitants are governed to make it substantially more

responsive to the changing and growing needs of those millions is an episode all but lost to history. And it may be that this achievement is at least the equal of any of the others.

Reorganization made the Department of State the "catch-all" repository for scores of minor functions that did not fit logically into any other department. The Secretary of State was made responsible for accepting and filing incorporation papers, compiling election results and county-by-county enrollment figures, supervising the Hell Gate Pilots and the Wardens of the Port of New York and licensing auctioneers, private detectives, real estate salesmen, theater-ticket agencies and poolrooms.

Unexciting as these functions were, they all required manpower—and manpower was jobs and jobs were patronage. The Secretary of State would control a sizable harvest of the carrots that kept political workers straining at the ropes that pulled political machines.

The Secretary of State would, moreover, possess several functions that were not at all minor, including jurisdiction over the state's Athletic, Racing and Land Office commissions. And Smith had announced that he intended to use the Secretary as a coordinator of all state construction work and as coordinator of the Cabinet, that body of department heads which, for the first time, was going to be meeting as a group to advise the Governor—as, in fact, a sort of "Deputy Governor" with power second only to himself.

So politicians of both parties raged when, in January 1927, Smith nominated Robert Moses as New York's first appointed Secretary of State. Democrats raged because Moses was a Republican (an "Independent Republican" according to the press), and Republicans indignantly denied the charge, former GOP State Treasurer—and Nassau County estate owner—Lewis H. Pounds calling him a "political orphan."

The depth and unanimity of the feeling transcended party affiliation. Moses had for years been either insulting or ignoring legislators of both parties. And now the Legislature was being asked—for under reorganization the Senate had to approve key gubernatorial nominations—to approve his elevation to the second most important post in the state. One observer says: "When he walked down a corridor in the capitol and passed a group of legislators, you could see their eyes follow him as he passed, and you could see how many enemies—bitter, personal enemies—he had. I really believe that Robert Moses was the most hated man in Albany."

But Robert Moses didn't have to worry about enemies as long as his friend stuck by him. And his friend stuck. Smith's unprecedented popularity—proven by the ease with which he defeated Mills, a popular Republican running in a heavily Republican state—had given him unprecedented power in the state. And he let the Senate know that he would, if necessary, use every bit of that power on behalf of Robert Moses. He had, the Governor said, been accepting help from Moses for years. Now he wanted to formalize the arrangement.

GOP senators tried to find an issue by saying that no man should hold

more than one high-ranking state job at a time. If Moses wanted confirmation, they said, he would have to give up his park posts. But, as a Brooklyn *Eagle* reporter put it:

... None of the objectors forgot for an instant that Alfred E. Smith is still the king, mikado or just plain "boss" of the state.

The Democrats cannot openly object to his course and get away with it. The Republicans know that Smith will politically outjockey them if they don't watch every step taken in opposition to him. The result is that Robert Moses, despite all opposition, in all probability will be confirmed.

The Eagle—and other newspapers throughout the state with the notable exceptions of the New York Herald Tribune and Hearst's tabloids—helped strengthen the probability with a paean of praise. Said a January 22 front-page Eagle headline: PATRONAGE CROWD SORE—KNOWLEDGE THAT MOSES WILL BUCK THEM, CHIEF BASIS FOR FIGHTING HIM. Three days later, it made another point: ATTACK ON MOSES BY G.O.P. LAID TO HIS L.I. PARK FIGHT—PLAN SEEN TO SHELVE HIM TO AID RICH LANDOWNERS.

GOP senators were inundated with pro-Moses missives. In a sprawling hand on the back of a postcard, Howard D. Brown of East Islip wrote Senator George Thompson of Suffolk County: "Mr. Moses did sidetrack the millionaire, so the man on the street could get Parks on Long Island. Your vote for him would be appreciated by all common people." Thompson hastily assured his constituents that his vote would, indeed, be for Moses. When, on January 31, 1927, the Senate clerk called a general voice vote on the nomination there was a loud chorus of "Nays." But when the clerk called the role name by name, only two senators were willing to go on record against it.

The appointment marked a first for Moses as well as for the state. Although he had been working on and off for various governmental bodies for fourteen years, the Secretary's \$12,000 per year salary was the first he had received on a regular basis from government. It was, in fact, the first substantial salary he had received from anyone. Although some of his mother's relatives had been commenting pointedly for years that married men ought to at least try to support their own families, Bella Moses had always maintained that she was proud of Bob and completely happy in his choice of jobs. Despite her protestations, however, Bella Moses may have been just a little relieved that her favorite child was, at the age of thirty-eight, finally off her dole. When a friend told her, while she was attending a Madison House board meeting, that her son's appointment had just been confirmed, she breathed a sigh of relief and murmured: "At last, at last, he's going to start earning a living."

As Secretary of State, Robert Moses was a reporter's dream. If the press thrives on conflict, he provided it with ample nourishment, sallying forth almost daily to "strip the license from" unscrupulous ticket brokers, un-

scrupulous private detectives, unscrupulous real estate salesmen and inefficient Hell Gate Pilots and Port Wardens. His image, already shiny as a result of newspaper accounts of his park activities, was brought to an even higher gloss.

When Moses announced that he was fighting not only crooks but something that to the American mind loomed as a menace of approximately equal proportions—politicians—new highlights were added to his sheen. They didn't fade even when the ringing announcement was followed by a very dull thud—as it was in his attempt to make himself the state's boxing czar.

Before reorganization, the State Athletic Commission had run boxing, and commissionerships had been coveted by Tammany boyos since boxing promoters had learned the wisdom of crossing the commissioners' palms with free tickets, called "Annie Oakleys" because ticket takers punched holes in them similar to Little Sure Shot's bullet holes, to distinguish them in the count from paid-for ducats. By 1927, in fact, sports writer W. O. McGeehan was noting that Annie Oakleys had become "so common that customers of prize fights who wanted to be exclusive insisted upon paying for their tickets and getting them unperforated." In 1927, moreover, the chairman of the commission was James Aloysius Farley and Farley was carrying things to an extreme in cultivating friends, particularly among the contractors and politicians who might have occasion to use the services, or to have the city use the services, of his burgeoning building-materials company; since it cost him nothing to entertain these friends with fight tickets, he cultivated many of them. When Jim Maloney, the Boston Bull, outpointed Bridgeport Jack Delaney in Madison Square Garden on February 18, 1927, more than \$30,000 worth of Annie Oakleys were distributed.

Farley, a fast-rising political heavyweight who had never been accused of cramping his style with undue loyalty to the Marquis of Queensbury, was a feared opponent. But less than three weeks after Moses assumed jurisdiction over the Athletic Commission, the new Secretary of State declared that he wanted "to protect the fellow with the thin pocketbook, who is just as much interested in boxing as the millionaire fight fan," and announced that henceforward no commissioner could accept free tickets. Half of all tickets, moreover, would be placed on sale on the evening of the fight, to insure that there would be plenty for the general public.

In vain, promoter Tex Rickard told Moses the plan was unworkable. When the desperate Farley and his fellow commissioners, anxious not to disappoint their friends, bought hundreds of tickets for the Dempsey-Sharkey fight and gave them away, Moses ruled that henceforth commissioners could not buy tickets, either. They could not properly regulate a sport "if they are recipients of favors from the people they are supposed to regulate," he said.

But Moses' lack of ring savvy began to show. His swings grew wilder. On one occasion, when there was a row over a decision in a prize fight, he declared: "Any decision should be unanimous. If not, then I will make the decision."

Selling half of Madison Square Garden's 18,000 seats the evening of the fight led only to monumental tie-ups at the ticket windows. Within a year, Moses gave up. "Frankly admitting," as one reporter put it, that he "knows little about the fight game," he announced that the Athletic Commission would be put back in full control of the sport. He was really more interested in parks anyway, he said. No more was heard about unanimous decisions.

In the eyes of the crowd, however, he had chalked up another win. He had, after all, been once again publicly identified as an ally of the "fellow with the thin pocketbook" and as a foe of the millionaire as well as the politician. He even got a title. During his brief but eventful ring career, sports writers, intrigued with his academic background, dubbed Robert Moses "Curator of Cauliflowers."

Though Moses' battles with private detectives and boxing promoters earned him reams of newsprint in 1927 and 1928, the significant accomplishments of his tenure as Secretary of State were accomplishments for which he never received any public notice. And they came in fields in which the Secretary of State supposedly had no power.

Al Smith put him into those fields. When the Governor had said he would put Moses in charge of the Cabinet, he meant *really* in charge. At his direction, Moses assumed responsibility for spurring the heads of other departments into the gallop at which Smith wanted them to move.

The Governor was particularly anxious about public works. Until he came to office, state institutions for men and women convicted of crimes and men and women whose only crimes were mental or physical illness were ancient, crowded and filthy. During his Governorship, against the unwavering opposition of a Republican Party that continually screamed that his financial policies would wreck the state, he persuaded the state's voters to pass referenda allocating not only \$15,000,000 for parks and \$50,000,000 for hospitals but also \$300,000,000 for grade-crossing elimination and \$100,-000,000 for prisons, mental institutions and other public works. The buildings those bond revenues would buy would symbolize something to him. They would be something he could look at, as he could look at parks, and know that he had really done something for the people he had wanted to do something for. Further—and this was no small consideration since he was as much a politician as a reformer and now he had his eye on bigger prizes than a Governorship—they would symbolize something to the voters of other states. He wanted those buildings finished, and when progress on them was too slow, his solution was to make Moses personally responsible for speeding it up.

Running the Department of State, playing a key role in reorganizing the state government and creating, in a space of time unprecedentedly small, a state park and parkway system unprecedentedly large, might seem like a load large enough for one man to handle, but, as Moses drove around Long Island now, pushing his parks, he was haunted by other problems. His

secretaries, driving out from New York or Belmont Lake, would be trying to find him to deliver messages from Graves, the Governor's secretary—"The Governor told me to drop you a note and say not to forget about the Long Island hospital situation," one said—and there might be a dozen such messages in a single mail. As Moses paced through a clearing at Sunken Meadow or Valley Stream, a band of aides behind him scribbling furiously while he fired instructions at them, across the clearing would come, trotting, the gray-uniformed, Sam Browne-belted, Stetsoned figure of a state trooper dispatched by the Governor to find him and bring him to a telephone for a message too urgent or too confidential to entrust to the mails. As he stood with his engineers and contractors on Jones Beach, discussing the progress of the causeway across the bay, across the bay would come a boat and in it, standing up as it neared shore so he could jump out and reach Moses the more quickly with the urgent message he bore, would be another Stetsoned figure.

Moses had always possessed tremendous energy and the ability to discipline it. Now he disciplined it as never before, concentrated it, focused it on his work with a ferocious single-mindedness.

Sloughing off distractions, he set his life into a hard mold. Shunning evening social life, especially the ceremonial dinners that eat up so much of a public official's time, he went to bed early (usually before eleven) and awoke early (he was always dressed, shaved and breakfasted when Arthur Howland arrived at 7:30 to pick up the manila envelope full of memos).

The amenities of life dropped out of his. He and Mary had enjoyed playing bridge with friends; now they no longer played. Sundays with his family all but disappeared. He did not golf; he did not attend sporting events; he was not interested in the diversions called "hobbies" that other executives considered important because they considered it important that they relax; he was not interested in relaxing. Since he left to Mary the paying of bills and the selection of his clothes, even the hiring of barbers to come to his office and cut his hair, his resources of energy were freed for the pursuit of his purposes. His life became an orgy of work.

Even so, there was never enough time; minutes were precious to him. To make sure that he had as many of them as possible, he tried to make use of all those that most other men waste.

He had always worked in his car while traveling; now he turned the big Packard limousine into an office. With Howland sitting beside him on the rear seat, three other engineers swiveled around on the jump seats and another two crammed in beside the chauffeur, he held staff meetings in the limousine—while another limousine trailed behind so that when Moses was finished with his men, he could drop them off and they could be driven back to Belmont Lake while he continued on to his destination. The door pockets in the Packard were crammed with yellow legal note pads and sharp-pointed pencils, and he spent his hours alone in the car writing letters and memos that his secretary could type up later.

Often, a secretary was in the car to take his dictation. Usually, it was Hazel Tappan. Miss Tappan was a tall, broad-shouldered Juno whose

elaborately marcelled hairdos did nothing to conceal the strength and harshness of her features. "There was," an acquaintance says, "no softness to her." A stenographer fast enough to keep up with the drumfire of Moses' dictation, she also displayed a talent for giving orders—and Moses gave her material on which to exercise her talents. Two secretaries worked full time for Moses at the State Parks Council offices, now occupying an entire floor at 302 Broadway, three more worked at the Long Island Park Commission offices at Belmont Lake. Moses made Miss Tappan his personal secretary and put her in charge of them, demoting Rose Pedrick, his former personal secretary, who was nonetheless to remain on his personal secretarial staff, hating Miss Tappan all the time, for more than a decade.

Wanting Miss Tappan available whenever he needed secretarial assistance, Moses placed at her disposal a car and three chauffeurs, who worked around the clock in eight-hour shifts. On many mornings she arrived at his home at 7:30 A.M., her car pulling up behind that of Howland, who was picking up Moses' night-written memos, and she would get into Moses' limousine so that he could start dictating the minute he stepped in. As she drove with him, her car followed behind so that whenever he was finished with her, she could get out of his car, step into her own, and speed back to Belmont Lake or 302 Broadway to parcel out the work among the subordinate secretaries while he, chauffeured by one of his three chauffeurs, continued on to his destination.

Lunches were a constant source of irritation to Moses; he hated to interrupt his work for them. Now he began refusing invitations to lunch. Anyone who wanted to dine with him came to his office, and a secretary would run out for sandwiches.

The annoyances that plague busy executives had to be done away with. One of the worst was the telephone; he was continually being interrupted in the middle of one call by another urgent incoming message. Finally he had a new telephone setup installed. Under it, there were many lines into his secretary's office but only one from hers into his; on the single telephone that remained on his desk there were no buttons. If he was talking on that telephone, all other callers—with the single exception of Governor Smith, for whom all other calls were dropped—had to wait until he was finished. He was very pleased with this stratagem, and he used it for the rest of his life. The five Governors who succeeded Smith and the five Mayors of New York City for whom Moses would work had to get used to being told that Mr. Moses would have to call them back; he could not talk at the moment because his line was tied up.

Then there were intercoms; he liked to see his men face to face when he was giving them orders. His intercom was thrown out and in its place on his desk there was installed a panel with buttons that, when pressed, triggered a harsh buzz in the offices of his top executives. When the buzzer sounded in an executive's office, he was expected to drop everything and get to Moses' office fast. "He didn't want any intercom," says Assembly Speaker Perry B. Duryea, Jr., who, in 1962, succeeded Moses as president of the Long Island Park Commission and moved behind Moses' desk at

Belmont Lake. "When he hit that button, he wanted Shapiro at the door. I tried it and I'll tell you, it certainly throws off an aura of power. You just press a buzzer and you look up and there's a man standing in your door waiting for your orders."

A third feature of Moses' office was his desk. It wasn't a desk but rather a large table. The reason was simple: Moses did not like to let problems pile up. If there was one on his desk, he wanted it disposed of immediately. Similarly, when he arrived at his desk in the morning, he disposed of the stacks of mail awaiting him by calling in secretaries and going through the stacks, letter by letter, before he went on to anything else. Having a table instead of a desk was insurance that this procedure would be followed. Since a table has no drawers, there was no place to hide papers; there was no escape from a nagging problem or a difficult-to-answer letter except to get rid of it in one way or another. And there was another advantage: when your desk was a table, you could have conferences at it without even getting up.

Such techniques stretched his already vast personal resources, but sometimes it seemed as if they had been stretched too far, that they must break under the strain.

There were small signs of the pressure he was under. Often, too rushed to be careful when he was shaving, he would appear for early appointments with nicks still bleeding on his face. As a young man, his handwriting had been well formed, even his signature clear and legible. In the early 1920's, the handwriting began to scrawl; by 1928, it was generally almost totally illegible to anyone not familiar with it. Parts of the scrawls on yellow legal note paper often could not be deciphered even by his secretaries—with the exception of Miss Tappan. "She was," one of the other secretaries recalled, "the only person in the world who could read Mr. Moses' handwriting."

And there were larger signs, too. The fuse, always short, that ignited his temper had been chopped down to a nub. The broad smile with which he greeted underlings could disappear in an instant if their reports displeased him. The hard mask that replaced it would turn pale, almost white, as his rage mounted. And then a wave of deep red, almost purple, would seep up out of his collar and over his face. The palm of his big right hand would begin to smack down on the table as he talked, and his secretaries, listening outside the closed door to his office, trying to smile at each other, would hear his voice begin to rise. Lunging out of his chair, he would stride around the room, bellowing, his eyes wild, and sometimes as he walked he pounded his clenched fist into the walls so hard that the skin was ripped from his knuckles. Oblivious to the pain, he would sit back down at his desk and grab the next batch of papers with bleeding hands.

If Moses' olive-tinted face had been both strong and sensitive during his youth and young manhood, now it was just strong. It had filled out; it broadened downward from the drastically receding forehead. The nose and high cheekbones were fleshed out and the jaw beneath them had become massive, almost prognathous, the dominant feature of the face. Always arresting, the face was still so, but now not because of handsomeness, al-

though the smile was still white-toothed, red-lipped, broad and charming. No longer the face of a poet, it was the face of a man accustomed to command; one could imagine it carved, in all its arrogance and strength, on a sarcophagus to represent a Pharaoh of Egypt. The neck was thick enough to be an adequate pedestal for that face—Moses was constantly yanking his shirt collar open as if it were too tight and thereby exposing a prominent Adam's apple—and so were his shoulders and the wrists beneath his shirt cuffs, which he impatiently rolled up out of his way as he worked. He was a big man—six feet, one inch tall, his weight now about 210 pounds—and when he pulled off his shirt to go swimming, his chest was broad and his arms heavy and muscular. "A big face, a big smile, a big voice—the over-all impression he gave was of bigness, strength, power," recalls a woman who knew him. And his rage could fill a room. Some of Moses' former executives, long retired and out of his reach, were persuaded to discuss certain aspects of their relationships with Moses, but not one of them would discuss what Moses said to him in his rages. "I don't want to discuss what he said to me," one executive said quietly. "I don't want to discuss it ever." But one thing was certain: earlier Robert Moses had led men; now he drove them.

With women, Moses was unfailingly courteous. "He was always a gentleman with us," says one of his secretaries. "You could hear him yelling in his office, but if you went in to take dictation, you found him the same as usual—very fast as a dictater but clear and with a pleasant word for you. And if he had time, he'd be very friendly. He'd start a conversation with you, he'd talk to you. Oh, he could talk you into anything, that man."

But occasionally the strain would tell even with his secretaries. Sometimes, as they typed a long, important letter, they'd glance up and Moses would be standing behind them, reading as they typed, too impatient to wait until they had finished. "Sometimes," one recalls, "when you got to the bottom of a page, he'd actually grab it right out of your typewriter. On a long, complicated letter, he would make a lot of drafts, and he'd stand right at your machine as you did each one, grabbing it out and making corrections."

"When Mr. Moses was around," says another secretary, "you didn't go out to eat. You ate at your desk. And when he buzzed you, you left your lunch and went in." Quitting for the day at five o'clock was unheard of. "When Mr. Moses was around, you just worked. Period. If there was work to be done, you did it before you went home." Despite the courtesy and the friendliness, despite the admiration—too weak a term—they obviously felt for Mr. Moses, his secretaries found themselves awaiting the rasp of his buzzer as nervously as did his male executives.

Water alone slackened the tautness of his existence. Water seemed to attract him. He changed his New York City office because he couldn't see a river from it, and when he moved into his new one, which afforded a sweeping view of the Hudson, he had his desk placed facing the window. When he was able to afford better living quarters in the city, he chose an apartment facing the East River. When he moved from that apartment, his sole requirement for a new apartment was that it also face the river. In the

living rooms of both apartments were copies of Jane's Sailing Ships, and Moses would look up from his work whenever he heard a whistle from a passing boat and try to identify it. He would spend his evenings walking beside the river. His office at Belmont Lake looked out over the lake. And his Babylon house on Thompson Avenue, of course, backed on a creek that led to the Great South Bay.

Almost every day, sometimes twice a day, no matter how busy he was, Moses would swim. He preferred the ocean; he left time for a swim whenever he was over on Jones Beach; as soon as the causeway was completed, even before it was open to the public, he drove across it to swim in the ocean almost every day during the summer and, indeed, in spring and fall, too, no matter how cold the weather. He would change into a bathing suit in his car, jump out of his limousine and run down across the beach, waving a towel as happily as a boy, plunge through the first breakers, come up on their far side and swim so far out that his men shook their heads in admiration. Sometimes, heading home to Thompson Avenue at midnight, he would tell his chauffeur to head for Jones Beach instead, and there, after running across the deserted beach, he would swim far out to sea, utterly alone under the stars. If he couldn't get to the ocean, he swam in the Great South Bay, or, before it became too polluted, in the creek behind his house. And in winter he used the indoor pool on the estate of a Babylon friend who had given him a key, his arms windmilling him through seemingly endless laps. And no matter where he swam, when he emerged from the water his dripping face was always fresh, smiling and happy.

When he had work that didn't have to be done at his desk, he would take it on board the Park Commission yacht moored at a Babylon dock, even though he would have to spend most of his time on the boat plowing through sheafs of papers while the captain cruised the bay. When he got a day free to spend with his family, the day was spent fishing, swimming, crabbing, sailing—he was good with small sail—off the South Shore. "He just loved that bay," an acquaintance says. "Every time he went out on it, it seemed to invigorate him."

And no matter how thin his remarkable capacity for work seemed stretched in the evening, a night's sleep never failed to restore its resiliency, just as it healed the shaving nicks on his face. No matter how long he had worked the day before, when Miss Tappan pulled up to his house in the morning, he would always come through the front door of his house as briskly as if he had just returned from a vacation—although, all during 1927 and 1928, he did not take a single one of those. Moses' executives learned to try to get appointments with "RM" during the morning. "He wasn't so tense, so wound up, then," one explained. "As the day went on, you could see it getting worse and worse, but the next morning he was fresh again."

As much as any other quality, it was an ability to pick and organize men that enabled Moses to handle so brutal a workload.

He had a gift for picking them out of the throng of draftsmen, engineers and architects at Belmont Lake. "Time and again," one of his top executives recalls, "RM would ask the name of some lower-echelon guy—'Who was

that guy you sent in with the bathhouse plans last week?'—that kind of thing. And when you told him, he'd say, 'Why don't you try giving him a little more responsibility and see how he handles it.' Well, it was amazing. The man he picked out might be some guy you yourself had hardly noticed. And RM certainly hadn't had any time to watch the guy at any length at all. But it seemed like every time, he was right; when you gave the guy more responsibility, he was ready to handle it, and you could start moving him up through the organization."

Moses ran the Long Island State Park Commission and the State Parks Council like an army. "Everything was by the 'chain of command,' " an aide recalls. "Everyone had to go through that chain. If you sent him a note with a suggestion or a complaint, he would send it right back to you with a note scribbled on it: 'Have you talked to your superior about this?' " Even with most top officials, he communicated primarily by memo. Only a handful of men in his organization dealt directly with him.

The men who rose through this chain shared a capacity for hard work. Alongside the telephones in his Babylon home and in his New York apartment, Moses kept lists of his aides' phone numbers, and he used that list around the clock, frequently at 2 or 3 A.M. If they went out at night, they had to leave phone numbers at which they could be reached, and they became accustomed to having ushers search them out in darkened theaters to ask them to come to the manager's office for an urgent phone call. Vacations weren't allowed to interfere. If Moses needed a man when the man was in Florida, the man was summoned home, "although," as William Latham put it, "RM was always very good about telling you to go right back and enjoy yourself as soon as you were done with whatever it was he had needed you for." Nor were social obligations allowed to interfere. When Moses called Latham at his Babylon home one Sunday as Latham was broiling steaks for guests gathered around his outdoor barbecue, Moses' only words were: "I'm at 302 [Broadway]. How long will it take you to get here?" Latham's only words in reply: "Forty-five minutes." (He made it in forty.)

They also shared a capacity for subservience. Increasingly, now, Moses showed an unwillingness to be argued with by underlings. His staff became increasingly wary about giving suggestions. An aura of fear began to pervade Moses' relationships with his staff. Colonel William S. Chapin, for example, a tall, powerfully built man of immense engineering capabilities, a key figure during World War II in the building of the famed Burma Road, ate lunch at his desk virtually every day for twenty years because he was afraid RM might call and find him absent.

Absolute loyalty was required of them. As one keen observer of the Moses organization put it: "Once a problem had been explored and discussed, it was what he [Moses] wanted that mattered, not what they thought. Once the Moses policy line was adopted, no one ever knew what a Moses deputy thought unless his thoughts were those of Moses himself." They were forbidden to talk to the press; anyone who violated that order was fired. Incredibly hard-working, incredibly loyal—dedicated, faceless—they were

already becoming recognized by public officials as an elite cadre within the ranks of the state's civil servants and had already been given the name "Moses Men."

Once they had proven themselves to him, Moses took pains with their training. They were, most of them, engineers and architects, and he was constantly distressed with their weakness in the use of the English language. So he taught them to write. Like a high-school English teacher, he gave them reports to write and letters to draft for his signature and then he corrected the reports and letters and had the authors redo them-sometimes over and over again. In the beginning of this process, he disposed of crude efforts with the single remark "This ain't English!" scrawled across them. When they had learned to write letters in the style he wanted, he let them draft letters for his signature and set them to work teaching their subordinates how to draft letters for their signatures. When his men had mastered a felicity of phrase, he proceeded to refinements. Their purpose was to get public projects built, he would tell them, and to get them built they had to know how to persuade people of their worth—and the key to persuading people was to keep their arguments simple. Down from Buffalo in 1926, without an appointment, long rolls of blueprints spilling from under his arms, came Bert Tallamy, in later years Federal Highway Administrator but then just a young highway engineer, willing to wait a whole day outside Moses' office in the hope of getting the master's advice on how to implement a plan he had conceived for a road from Buffalo to Niagara Falls. When he was finally admitted to the presence, he began to unroll his blueprints on the huge table in August Belmont's dining room. Tallamy had spent days coloring different parts of them so that Moses could more easily study them. But Moses shoved them impatiently aside without looking at them. "The first thing you've got to learn," he said, "is that no one is interested in plans. No one is interested in details. The first thing you've got to learn is to keep your presentations simple."

Moses taught his men not to waste time. He didn't want engineers wasting time debating legal points or lawyers discussing engineering problems. If a legal problem arose at a staff meeting and an engineer ventured an opinion on it, he would cut him short with a curt "Stop practicing law. Leave that to the lawyers."

He even taught them social graces so that they could dine with men in positions of power. When a man from an outside organization such as the State DPW was being considered for a position, Moses would have Howland and Shapiro invite the man to their homes for a "friendly" game of bridge so that they could observe him in a social setting. And Moses had no hesitation about handing out basic tips of social etiquette to his aides. If changes in personality were required, Moses saw that they also were made. Shapiro, for example, was painfully shy. Moses would take him to social gatherings and order him to charm a particular official. Before long, Shapiro was charming.

Some of these men broke under the strain of the demands Moses placed upon them. More than one of the men close to Moses in the 1920's had taken

to drink by the 1930's and been dismissed. There were stories of nervous breakdowns within the ranks and of marital difficulties caused by men's inability to work at the pace Moses required and still find time for their families. There was at least one suicide,

But those who didn't break were rewarded. Advancement was rapid. And he had the knack, the knack of the great executive, of delegating authority completely. His men learned that once a policy in their area of authority had been hammered out by Moses, the details of implementing that policy were strictly up to them; all their boss cared about was that they get it done. They therefore had considerable power of their own, and this was incentive to those of them who wanted power.

In rewarding his men financially, Moses was hampered by civil service limits on pay and promotion schedules, but his ingenuity found a hundred ways around those strictures. If a man wasn't making what Moses thought he should be, he would put the man's wife on the payroll in some job that required no work—such as answering the telephone in their home—and pay her an additional stipend. He early hit on the idea of using Park Commission labor and contractors to build homes—generally, comfortable, spacious two-story Colonial houses—for his top executives on park property so that they would be spared the expense of rent, and of using Park Commission personnel to maintain the houses so that they had none of the other expenses of the normal homeowner, either. The Park Commission even picked up the heating and electricity bills for these executives. To make sure that no fuss would be raised about the unusual procedure, the houses were generally built on secluded pieces of park property, so that the public didn't even know of their existence.

The rewards Moses offered his men were not only power and money. If they gave him loyalty, he returned it manyfold. Moses might criticize his men himself, but if an outsider tried it—even if the outsider was right, and Moses privately told his aide so—Moses would publicly defend him without qualification.

And the most valued reward—the thread that bound his men most closely to him—was still more intangible. "We were caught up in his sense of purpose," Latham explained. "He made you feel that what we were doing together was tremendously important for the public, for the welfare of people." The purposes were, after all, the purposes for which they had been trained. They were engineers and architects; engineers and architects want to build, and all Moses' efforts were aimed at building. Men who worked for him had the satisfaction not only of seeing their plans turned into steel and concrete, but also of seeing the transformation take place so rapidly that the fulfillment was all the more satisfying. Moses' men feared him, but they also admired and respected him—many of them seemed to love him.

The increasing illegibility of Moses' signature was one result of the amount of work he was doing for the state. There were others. They were the public works that were completed by the end of Smith's last term. By

December 31, 1928, new hospitals, some specially designed for care of crippled children, for mentally disabled veterans and for the blind, the deaf-and-dumb and tuberculosis sufferers, dotted the state. Great new state asylums for the insane had been completed, as well as an institute for the study of the causes of insanity. Sing Sing and other new prisons had been constructed. So had a State Health Laboratory, a State Teachers College at Albany and a thirty-story building behind the capitol to house previously scattered state offices. During the more than three decades that the Legislature had been ordering the elimination of grade crossings, exactly twelve had been eliminated\* before Smith came to office. By the time he left the Governorship, more than two hundred had been eliminated. As for highways, when Smith left he could boast that "We have built since 1919 three thousand miles of new highways and reconstructed two thousand miles."

With the added responsibilities, of course, came added power. Shuffling the offices on the capitol's second floor, Smith gave Moses the one next to the Executive Chamber to use when he was in Albany. The location of the office was symbolic. The capitol's readers of the map of power knew that in governmental matters—Belle Moskowitz was the chief adviser on political matters and there was no rivalry between her and Moses; they liked and respected each other—Moses was next in power to the Governor.

Smith let the capitol know it. He wanted no interference with Moses in the jobs he had been given, he said whenever a cabinet member complained that Moses, in his speeding up of construction projects, was interfering in the affairs of his department. One top departmental engineer repeatedly refused to accept Moses' orders. Smith called the engineer in-and fired him on the spot. The engineer chose a bar near the capitol to drown his sorrows. By the end of the day, many of his friends in other departments and the Legislature had seen him there. To all who approached him he poured out the story of the injustice that had been done him. The engineer may have been looking for sympathy, and to his face, certainly, his auditors gave it, but in the power-conscious capitol what was important to them about his tale of woe was the lesson they learned from it: as long as Smith was Governor, Moses was not to be crossed. By nightfall, the story—and the lesson had been absorbed by the capitol. When the New York Tribune, in an analysis of the capitol scene, headlined in 1927: MOSES SECOND IN POWER TO THE GOVERNOR, the capitol knew that the headline was true.

As to the effect on personality of the infusion of ever larger doses of power, the clearest evidence was in two remarkable extemporaneous speeches that Moses delivered in 1927 before two associations of Long Island real estate brokers.†

<sup>\*</sup> Omitting the cities of Syracuse, Buffalo and New York, where state laws gave jurisdiction over the work to city administrations.

<sup>†</sup> We have a record of them because W. Kingsland Macy, feuding with Moses at the time, sent a stenographer to take notes.

The speeches dealt with the future of Long Island. The Island was, Moses said, a gigantic cul-de-sac, a body of land with no outlet on its eastern end. Therefore, he said, the Island "is not a commercial community." Instead, it is a place for people to live and play, mostly play. It is "a natural recreational community, the inevitable playground for millions of people in the metropolitan section." New roads, therefore, should be parkways designed to bring people out from New York City for recreation and not for any other reason. The scope of the Island's interlocking problems—water supply, zoning, transportation—can never be solved by the existing system of government; there are simply too many separate and independent municipalities—towns, villages and cities—to allow coordinated planning. "Before you can solve these problems," he said, "you have got to change the system of county and town government. This is an obsolete form; you can't tackle the job with it."

What was remarkable was Moses' tone, his remarkable self-confidence. When he said, "The form of government you have will not solve your problems here," he added: "That is not a theory; I am sure of it." And this was no servant of the people trying to persuade. The opposition to parks on Long Island, he told the Long Islanders, was "stupid opposition." There "has been too much lack of cooperation by [the Island's] public officials, too much tendency to criticize." And it must stop. "The townspeople want to deliberate about park propositions. There is a limit to the amount of deliberation that can be done."

We will do the planning, he said. We don't need your help. We don't need your suggestions. "We don't need so much advice and cooperation as to the general program as we need help and advice with the specific problems as they come up. Theory and plans we take for granted." By specific details, he made clear, he meant only putting pressure on local governing bodies to approve specific sections of parkway or park plans.

And if Long Island didn't cooperate, he said, it would be too bad for Long Island. "The state has a limited amount of money," he said. "It can be spent elsewhere." And if the "stupid opposition" doesn't cease, it will be. "It can and will be used elsewhere if we can't get the cooperation. Somebody else is going to get it."

Some people must be hurt by progress, he said. But that is unavoidable. "You can't make an omelet without breaking eggs."

"There are people who like things as they are," he said. They cannot be permitted to stand in the way of progress. "I can't hold out any hope to them. They have to keep moving further away. This is a great big state and also there are other states. Let them go to the Rockies."

In other extemporaneous statements, Moses showed no hesitancy in displaying his feelings about the importance of law. After he had decided to return the control of boxing to the Athletic Commission, he was busy for a time defending the commissioners, and when a reporter asked him if they had not in some instances violated the law, Moses replied that that really wasn't important. "Whether the commissioners have gone beyond their legal rights, I haven't any idea," he said. "One duty naturally leads to

another. Sometimes it happens that in order to do one thing in the right way, it becomes necessary to do something else."

Sometimes Moses' feelings about the law were expressed less ambiguously. While building bathhouses on Long Island, he ran afoul of the State Industrial Commissioner. The commissioner was Frances Perkins, who once, a decade and a half earlier, had stood on the deck of a ferry and listened to a young man with burning eyes talk about a great highway along the waterfront. In the decade and a half since that Sunday, the young man had learned how to build great highways.

"He was building [the] bathhouses in violation of an . . . ordinance," Miss Perkins recalled. The ordinance specified that union labor be used on the job, but Moses had "just hired the local handymen and unemployed laborers to do brick masons' work. . . ."

I called him up to say, "You mustn't do that. Naughty, naughty, you can't do that. What are you thinking of?"

Well... he treated me to ... vituperation ... although we were on the most intimate of personal terms... He was building bathhouses for the people of New York.... He was going to have bathhouses for the people of New York.... He just gave me the devil.

I said, "There's a law about this, Robert. I hate to tell you this, but I shall have to invoke the law about this matter."

Moses said, "Well, go ahead and invoke it! Do anything you think you can do. These bathhouses are going to be built. I'm just going to keep right on building them. You do the best you can to stop it."

He went ahead and built his bathhouses. I invoked all the elements of law enforcement available, but before they got around to making the inspections, issuing the orders, getting him into court and coping with the various postponements that he was able to get, the bathhouses were done and people were going swimming out of them. . . . I think the court rebuked him, but even the court didn't have the nerve to tear them down.

Nor, it was charged, were Moses' feelings about the law confined to bathhouse building. Angry East Islip and Babylon residents had long been complaining about the breakneck speed at which Moses' big Packard limousine sped through the quiet streets of their villages. On July 31, 1927, Moses led sixty members of the State Parks Council on a tour of Long Island. Long Islanders complained that the cavalcade of limousines carrying the council members sped through the streets of those villages at excessive speed while outriders—state troopers on motorcycles—cleared the way by forcing pedestrians and other cars off the road. When the cavalcade arrived at the Babylon Town dock where the Park Commission yacht was moored, the residents complained, the troopers forced everyone except council members off the dock, despite the fact that it was a public dock. As old Judge Cooper editorialized: "We got a taste of what authority in the wrong hands means."

Disregard for law, of course, implies regard for that which law is a barrier against: naked force, power sufficient to bend society or individuals,

if not protected by law, to its will. And this, too, now became noticeable in the character of Robert Moses.

Moses was playing by the rules of power now and one of the first of those rules is that when power meets greater power, it does not oppose but attempts to compromise. He had met power invulnerable to him—or even to his champion in the Governor's chair—in the barons of Long Island's North Shore. And where once, in laying out the original route of the Northern State Parkway exactly where he believed it should ideally go, laying it out without compromise, running it right past the massive porticos of the barons' castles, he had spat in the eye of power, now he hastily administered eyewash.

He would not move the parkway route down out of the hills the barons held and onto the plains in the Island's center. This would mean that the parkway could never be truly beautiful. But, within the hills, there were many possible routes, and he was willing to compromise with the barons on which route would finally be chosen. He made deals: with at least a dozen barons he covenanted that he would move the parkway away from the homes to the edges of their property, out of sight of their castles, if they would in return donate the right-of-way so that he would not need a legislative appropriation for it; with a dozen more, where moving it to their estates' borders was impractical, he agreed to move it as far as was practical—and, so the estate would not be sliced in half by the parkway, so that equestrians could proceed unchecked on their rides and hunts, to build, at state expense, bridges, one for each estate, over the parkway for the exclusive use of the baron in residence and his retainers and guests.

The compromising did not stop there. Were the barons afraid that the alien hordes brought to Long Island on the parkway might encroach on their lands? Precautions against this could be arranged. Specifically, he would covenant with the concerned barons that there would be no exits from the parkway within their borders. And he gave his solemn oath that state troopers patrolling the parkway would be under orders to keep automobiles from the city moving, not allowing their occupants to picnic, or even to stop, by the side of the parkway within their borders. Publicly, Moses never stopped excoriating the Long Island millionaires. But in private, many of them were coming to consider him quite a reasonable fellow to deal with.

None found him more reasonable than financier Otto Kahn. In dealing with Kahn, Moses, in his excursions beyond the limits of the spirit of the law, went further than he had ever gone before. The Legislature, subservient to the will of the barons, refused all through 1924, 1925, 1926 and 1927 to give Moses a cent for the Northern State Parkway. Funds were refused even for the surveying of proposed routes—a refusal which made it almost impossible for Moses to work out deals with the barons because he could not be sure whether routes proposed were engineeringly feasible. But in 1926, Kahn learned that Moses intended to run the parkway right through the middle of the eighteen-hole private golf course he had constructed for his pleasure on his Cold Spring Harbor estate.

Kahn, who happened to be a relative of Moses—he was married to the daughter of one of Bella's sisters—offered to secretly donate \$10,000 to the Park Commission for surveys, if some of the surveys found a new route for the parkway in the Cold Spring Harbor area, a route which would not cross his estate at all. And Moses accepted the money.

Regard for power implies disregard for those without power as is demonstrated by what happened after Moses shifted the route of the Northern State Parkway away from Otto Kahn's golf course. The map of the Northern State Parkway in Cold Spring Harbor is a map not only of a road but of power—and of what happens to those who, unwittingly, are caught in the path of power.

The parkway was originally supposed to run through Otto Kahn's estate. Since Otto Kahn had power—the power that went with money—he was able to get the route shifted to the south. South of Otto Kahn's estate lay the estates of two other men of wealth and of influence with the Legislature—Congressman Ogden Livingston Mills and Colonel Henry Rogers Winthrop. The Congressman and the Colonel were able to get the route shifted farther south, far enough so it would not touch their estates either. But shifting the route south of the Mills and Winthrop estates meant that it would run through the estates of two other men of wealth and influence, Colonel Henry L. Stimson and Robert W. De Forest. So the route was shifted south again. And south of the Stimson and De Forest estates lay a row of farms, and farmers had neither wealth nor influence.

James Roth was one of those farmers. When he had purchased his forty-nine acres in 1922, much of it had been woodland and all of it had been rocky. Roth had hauled away the rocks and cut down the trees. He owned a team of horses, but they could not budge many of the stumps. As the horses pulled at them, Roth pulled beside them. So did his wife, Helen. So that both would be freed for the pulling, their son, Jimmy, at the age of five, had to learn how to handle the team. As his parents sweated at the ropes, he sat on one of the horses, kicking him forward.

After the farm was cleared, the Roths found that the southern fifteen acres were no good for planting. But the rest of the land was rich and fertile. In the afternoons, during harvest season, James Roth, who had been up since before dawn working in the fields, would load up one of his two wagons and drive to market. While he was gone, his wife and son, who in 1927 was six, would load the other. When Roth returned he would—without pause, since every minute was important to a farmer trying to work thirty-four acres without a hired man—unharness the team, hitch it to the loaded wagon and begin the trip again—while Helen and Jimmy would reload the first wagon. But by 1927 the farm had begun paying. "We felt pretty secure," Jimmy recalls. "We had a nice farm. In those days, a farm wasn't just real estate, like it is now. In those days, a farm was your living. It was your home. And we had a nice farm."

Then, in 1927, a representative of the Long Island State Park Commission—of Robert Moses—drove up to the Roths' farm and told them the state was condemning fourteen acres out of the farm's center for the Northern State Parkway. James Roth argued with Moses' representative. He pleaded with him. All he wanted the commission to do, Roth said, was to move the parkway route about four hundred feet south, less than a tenth of a mile. That would put it in the barren part of the farm. Taking fourteen acres from the center meant that a substantial part of the fertile acreage would be gone. Even more important, it meant that the farm would be sliced in two. How would he get from one side to the other? How would he be able to work it? But Moses' representative refused to listen to the Roths. The route had been decided on the basis of engineering considerations, he said. It could not possibly be changed.

Robert Moses had shifted the parkway south of Otto Kahn's estate, south of Winthrop's and Mills's estates, south of Stimson's and De Forest's. For men of wealth and influence, he had moved it more than three miles south of its original location. But James Roth possessed neither money nor influence. And for James Roth, Robert Moses would not move the parkway south even one tenth of a mile farther. For James Roth, Robert Moses would not move the parkway one foot. Robert Moses had offered men of wealth and influence bridges across the parkway so that there would be no interference with their pleasures. But he wouldn't offer James Roth a bridge so that there would be no interference with his planting.

In years to come, James Roth would talk often about the injustice that had been done him. "My father was really rocked by this; he talked about it until the end of his life," says his son, Jimmy, who had watched his father and mother sweating side by side over their land. "And I don't know that I blame him. I'll tell you-my father and mother worked very hard on that place, and made something out of it, and then someone just cut it in two. To have someone take away something you have . . ." The farm never really paid again. There just wasn't enough fertile acreage left. And the Roths found that it took fully twenty-five minutes to drive their team to the nearest road that crossed the parkway and then to get back to plow the other side of the farm. Each round trip took about fifty minutes, and these were fiftyminute segments slashed out of the life of a man to whom every minute was necessary. "It was quite a ways," Mrs. Roth recalls. "It was quite a ways for a man who was working hard already." The condemnation award "never came to much," Mrs. Roth says. And because there were two separate, rather small pieces of property instead of a single big one, she says, they couldn't even sell the farm.

The situation was the same for the other Cold Spring Harbor farmers whose farms were ruined by the Northern State Parkway. To the end of their lives most of them would remember the day on which they heard that "the road was coming" as a day of tragedy. There was only one aspect of the tragedy that alleviated their bitterness. That was their belief that it was unavoidable, that the route of the parkway had indeed been determined by

engineering considerations, and therefore really could not be changed. Forty years later, when the author asked them about the possibility of the parkway being built through the big estates to the north, not one of those farmers thought that such a possibility had ever existed.

Moses was given a further increase in power as a result of Smith's bid for the presidency in 1928.

No associate of the Governor was more enthusiastic about the bid than Moses. On the June night when the Democratic Party was balloting at its convention in Houston and the Executive Mansion in Albany was overflowing with reporters, well-wishers and hangers-on, the porches and the grounds outside filled with throngs, Moses was one of the handful who were invited to join the Smith family in the big second-floor room in which the Governor was trying to listen to the balloting over the static. When Ohio's votes gave Smith the nomination and Emily Smith ran to her father and threw her arms around his neck, it was to Moses that Belle Moskowitz turned and said, almost crying, "Bob, it's over!" And other people in the room were to say that they had never seen Moses happier than at that moment.

Belle's remark was, after all, understandable; Al Smith had run in twenty-two elections and he had won twenty-one, and in the one he had lost he ran almost a million votes ahead of his ticket. She—and Moses and the other members of the Smith inner circle in the room with the Governor—didn't see how he could lose. (Al Smith got up from the big armchair in which he had sat for hours, his attention on the radio, motionless except for the grinding of his lips against his big cigar and the stroking of one hand on the neck of his Great Dane, Jeff, walked over to a small bar, grabbed two handfuls of ice cubes, began dropping them into glasses and said, "Now, all of yez! Come aboard!")

But Moses did not play a major role in the Smith presidential campaign. The Governor had long since stopped using him as a speech drafter—"He had a great respect for Bob's viewpoint on everything except speeches," Howard Cullman says. "The Governor said Bob would just murder him on those. He said Bob had no idea of the public pulse on most issues"—and the campaign was run by Mrs. Moskowitz and by a group of wealthy Irish Catholics who had recently become close to Smith.

So Moses was spared being with his Gamaliel when he went down to defeat in what Oscar Handlin has called "a dark episode in American history." He wasn't with him when, on his tours of a South and a West that he hardly knew, Smith realized that the gay renditions of "The Sidewalks of New York" were being drowned out by whispers that were the surface hissing of what Handlin has called "the dark secret prejudice against the urban foreigners," including Catholics "held in subservience to a foreign despot by an army of priests and bishops." Moses never saw the fiery crosses that burned on the hills of Kansas and Oklahoma—and on the Shinnecock

Hills of Suffolk County—as Smith's campaign train passed. Moses wasn't on the train when the realization spread through it that the prejudice and intolerance could not be licked and that even if it could, 1928, with the "Hoover Market" booming and the nation prosperous and complacent, just wasn't a Democratic year.

Moses' contribution to the Smith campaign was twofold. First, his accomplishments provided the ammunition for the most successful of Smith's speeches, those which concentrated on his record as Governor. Second, while Smith was campaigning, Moses ran the state for him.

This was no minor task; voters in 1928 were far less tolerant than those in 1974 are about officeholders neglecting their duties to seek higher office, and Smith realized that the Republican legislators would take full advantage of any opportunity to charge him with laxness. To make sure that there was no opportunity, Smith gave Moses full authority over all state departments during the months he spent on the campaign trail. He even told Moses to use his office and sit in his big chair in the Executive Chamber. Moses did so. He presided over the drawing up of the 1929 state budget, the first in the state's history to be drawn up under his executive budget plan. He handled the Governor's mail, screening it for important letters that should be sent on to him—and making sure that he never saw the obscene threats that terrified Smith's wife, Katie, when she read them. While Smith was campaigning, Moses ran New York. And the measure of his success in the job was that there wasn't a single Republican charge of laxness in that period.

Moses had no opportunity to take pleasure from either his power or his success as Smith's surrogate. Time, which had for so long panted hungrily at his heels, had drawn close enough to nip them now.

Smith had been prevented by law from running for Governor at the same time he was running for President, and while a new Governor could not oust Moses as Long Island Park Commission head—his six-year term, after all, did not expire until 1930—he could effectively kill any of his park projects that were not well under way when he was inaugurated. And while Moses had accomplished so much during his four years in office, the accomplishments were as nothing beside his dreams. There was, in 1928, so much yet to do. Although the entire right-of-way for the Southern State Parkway had been acquired and construction started on much of it, not a single section had been completed. Without that section, the public would not see how great it was going to be and would not be ready to support him against any Governor who tried to keep him from completing it up to the same—expensive—standards. The Wantagh Causeway to Jones Beach was not completed, and since the public could not see the strand, how could it know he was justified in the expenditure of whatever millions were needed to make it the greatest bathing beach in the world? The Northern State Parkway was not even begun. Unless he could announce that a substantial

portion of the right-of-way had been acquired, how could he force a new Governor into building the road? So in November and December of 1928, construction crews were out on the Southern State and the Wantagh, and the surveyors were out along the route of the Northern State.

Those close to Robert Moses knew that there was justification for his urgency, a reason for the desperation which now seemed to underlie his haste. "Without his loyalty to me," Moses was to say about Al Smith, "I could have done nothing." He had had Al Smith—and his loyalty—for ten years. But now he was to have Al Smith no more. And the man who was to follow Moses' greatest friend into the Governor's chair was Moses' deadliest enemy.

## 16. The Featherduster

THERE IS AN EXPRESSION used in Albany to describe the relationship of two men between whom there exists bad feeling when that feeling has existed for years, has resisted every attempt at reconciliation and has only deepened with the passage of time, to a point where "dislike" is not so fitting a name for it as "hatred." In discussing two such men, one assemblyman will say to another, with a knowing shake of his head: "They go back a long way."

Robert Moses and Franklin Delano Roosevelt went back a very long way.

Roosevelt's relationship with the whole circle of advisers around Al Smith was an ambivalent one. They needed him, and they knew it. Any Irish Catholic, city-bred, militantly Wet, Tammany politician, even an Al Smith, needed help with the Protestant, farm-bred, militantly Dry, Tammany-hating upstate New York farmers. Upstate Democrats of stature were in short supply. In fact, Roosevelt was the only one.

And you could hardly ask for a better ally. The tall, handsome, aristocratic Groton and Harvard graduate, who looked exactly like the Hudson River squire he was, had won upstate acceptance of his anti-Tammany bona fides in 1911, during his first State Senate term, by rallying a band of young colleagues and leading them to victory in what had seemed a hopeless cause: their fight against the selection for a vacant United States Senate seat of Silent Charlie Murphy's candidate, railroad frontman William F. ("Blue-Eyed Billy") Sheehan.\* Thereafter, upstaters were willing to listen to Roosevelt when he told them, as he did at countless county fairs, that "farmers like you and I" should support Smith because the Governor had risen above the Tammany background from which he had sprung.

If, moreover, Smith had ambitions that went beyond New York State—and he did—he needed an emissary to the Democratic Party's rural-Dry-Protestant wing. And young Franklin bore a name which, throughout the country, possessed the magic that a half century later would infuse the name Kennedy. More than one newspaper, praising his performance as the 1920 Democratic vice-presidential nominee and noting that he had followed

<sup>\*</sup> Until 1913 United States senators were selected by state legislatures.

Cousin Teddy into the New York Legislature and an Assistant Secretaryship of the Navy, had commented that if TR's sons proved unable to carry the old Rough Rider's banner back up the steps of the White House, there was another member of the family who might do it for them.

His every intervention on Smith's behalf had been immensely helpful. Striding, athletic and graceful, to the speaker's podium at the 1920 Democratic National Convention, he had seconded the Governor's token presidential nomination in an effective speech. In July 1922, with Smith, out of office, taking his evening walks home with Moses, Roosevelt, crippled now, got Smith's gubernatorial candidacy off the ground with an open letter calling on him to run. Floor manager for Smith at the 1924 national convention, he had been his nominator, too, swinging to the platform on crutches and delivering a speech that, using a phrase from Wordsworth, dubbed the Governor "the Happy Warrior of the Political Battlefield"—a speech that historian Mark Sullivan called "a noble utterance." Among Smith's happier moments during the convention's interminable 103 ballots were Roosevelt's appearances at the microphone to rally his supporters. So enthusiastic a Smith supporter was he that when the Governor ran in 1926 against Theodore Roosevelt, Jr., the new Assistant Secretary of the Navy, and Franklin Roosevelt found himself physically unable to campaign against his cousin, he sent his wife to do it. (To remind voters of Theodore Jr.'s connection, peripheral at worst, with the Teapot Dome oil scandal, Eleanor Roosevelt constructed a huge cardboard cutout of a teapot blowing steam, tied it on the top of a car and with it trailed her cousin-in-law around the state, a maneuver which she later ruefully admitted had been a "rough stunt.")

But Roosevelt was never really part of the Smith inner circle. As Oscar Handlin put it, he "had been brought up in an atmosphere that stressed the compulsive understatement. . . . It was inevitable that he should feel awkward in Smith's suite at the Biltmore. All those people! He may never actually have dined at the Tiger Room, but he must have heard stories of the goings-on. He could not, without denying his own background, fail to disapprove of the kinds of people Al and his friends were."

And yet, as Handlin added, "mingled with the disapproval was a touch of envy at being left out of the fun." Roosevelt obviously wished he had Moses' gift for blending in easily with the Governor and his hard-drinking, hard-talking friends. Wanting to be part of the Biltmore scene, feeling awkward about going there alone, Roosevelt would, in 1923, often telephone Moses in the late afternoon from his office at 120 Broadway and ask if he might stop by, pick him up and go up to the hotel with him.

Moses took Roosevelt along, but the latter's appearances at the Biltmore were always touched with restraint. Smith appreciated Roosevelt's help and felt a genuine affection for him and Eleanor. Shy about his lack of grammar, the Governor almost never wrote personal letters, but he wrote many to the Roosevelts after Campobello, short, gruff notes full of sympathy and cheer. But, despite the Governor's efforts to erase it, the line between

the Fourth Ward contract executor and the Ivy Leaguer—the line which Moses had so thoroughly erased in his own case—always remained drawn between Smith and Roosevelt. Once, with regret in his voice, Smith told a friend: "Franklin just isn't the kind of man you can take into the pissroom and talk intimately with."

Furthermore, Smith and his circle had something less than respect for Roosevelt's abilities. This attitude was understandable. Roosevelt's Harvard classmates had felt the same way. Mocking his propensity for hopping into, and out of, different interests in quick and shallow succession, they called him "the featherduster." After college, because of the same propensity, Roosevelt had not been a particularly successful lawyer or businessman. An acquaintance would recall that when, at the age of twenty-eight, he decided to enter politics, running for state senator from Dutchess County, "everybody called him 'Franklin' and regarded him as a harmless bust." In Albany, his haughty manner, accentuated by "his habit of throwing up his head so as to give the appearance of looking down his nose, his pince-nez-all this, combined with his leadership in the anti-Sheehan fight, stamped him as a snob and branded his ideas, in the outraged language of one regular Democrat, as 'the silly conceits of a political prig.' "Frances Perkins was to remember him arguing with two or three colleagues, "his small mouth pursed up," saying, "'No, no, I won't hear of it!'" Tammany's Big Tim Sullivan was only summing up the prevailing opinion in Albany when he said, "Awful, arrogant fellow, that Roosevelt." Moreover, as Handlin notes, to the hard, shrewd men around the Governor, who had clawed their way up through a tough world and who knew state government in detail, Roosevelt, with his airy plans, his many hobbies and "his glittering, sweeping discourses, seemed a hopelessly impractical intellectual."

For some reason, Smith's advisers overlooked the fact that not Silent Charlie Murphy but the "political prig" had been the winner of the Sheehan fight. And, after his polio attack in 1921, they did not seem to consider what it had taken for Roosevelt to decide to go back into politics at a time when, Eleanor Roosevelt was later to recall, he was lying in bed and working for hours to try to wiggle one toe. Roosevelt's head had always been tilted at that gay, confident angle; they didn't seem to think of the strength that had had to be found somewhere to keep it tilted now. The agonizing steps he had taken to the podium to give his Happy Warrior speech were the manifestation of an indomitable spirit, but Smith's intimates never thought of the speech without giggling over what had preceded it. The story as they knew it would be somewhat different from that recounted by historians, or by Dore Schary, who in Sunrise at Campobello portrayed FDR as saying, when Smith asked him to let Joseph Proskauer help write the speech, "I won't mind the addition of a few phrases. But, Al, what I say will have to be what I want to say." Actually, when Smith and Proskauer walked into Roosevelt's office at Smith campaign headquarters and asked him to make the nominating speech, Roosevelt replied, "I'd like to, but I'm so busy with the delegates—Joe, will you write me a speech?"

"I had already written a speech, the Happy Warrior speech," Proskauer would tell the author. "I waited a few days and then sent it to him. He asked me to come in and talk about it. He said, 'Joe, I can't make that speech. It's too poetic. You can't quote a Wordsworth poem to a bunch of politicians.'"

Proskauer told the author—and so did Smith's daughter Emily and two other Smith intimates—that he kept insisting on retaining the Happy Warrior line while Roosevelt kept insisting that it be removed. Otherwise, Roosevelt said, he would refuse to give the speech. Roosevelt even wrote a speech of his own.

"Finally," Proskauer recalled, "I said why didn't we get a third person to come and take a look and try to reconcile the two speeches. I said, 'I was thinking of [Herbert Bayard] Swope.' He said, 'Fine.' That night we went to Frank's apartment. Swope made a faux pas. We hadn't told him who had written them and he read Frank's speech first, threw it on the floor and said, 'Joe, this is the goddamnedest, rottenest speech I've ever read!' Then he read mine and he said, 'This is the greatest speech since Bragg nominated Cleveland!'\* Roosevelt continued to argue and to say he refused to give my speech. Finally about midnight, I got up and said, 'Frank, we're all exhausted. I have just enough authority from the Governor to tell you you'll either make that speech or none at all.' And he said, 'Oh, I'll make the goddamned speech and it'll be a flop!'"

The laughter which boomed out at the Tiger Room or the Biltmore suite when Swope or Proskauer repeated the story—and they repeated it often—helped to blind the men sitting in those jovial watering holes to developing traits in Roosevelt's character. And, more important, it blinded them also to the fact that, while he was completely loyal to Smith, he was using his position as a campaigner for a presidential candidate to keep in touch with key Democrats across the country in preparation for a presidential bid of his own. They never guessed that he even had a timetable—a run for the Governorship in 1932 and the Presidency in 1936. As one Roosevelt biographer put it, the Smith advisers regarded their acquisition as "no more than a showy but harmless piece of window dressing."

All the advisers, that is, except one. Sitting off in a corner of the Biltmore suite, away from the laughter, Belle Moskowitz, who had seen in the thirty-year-old failure Robert Moses something no one else had seen, was watching "harmless" Franklin Roosevelt. And, by 1924, she had come to the conclusion that he was a threat, a very dangerous threat, to her dream that Alfred E. Smith would one day sit in the White House.

The other advisers didn't take this view seriously. For once, they said, Mrs. M was wrong.

<sup>\*</sup> At the 1884 Democratic National Convention, General Edward S. Bragg seconded (not nominated) Grover Cleveland for President in a speech that was so eloquent—it included the memorable phrase "They love him for the enemies he has made"—that the galleries stood and urged him on with shouts of: "A little more grape, General! A little more grape!"

In 1924, when Smith appointed Moses president of the Long Island State Park Commission, the Governor appointed Roosevelt chairman of the Taconic State Park Commission. The thin veneer of friendliness between Moses and Roosevelt thereupon flaked off abruptly and completely.

Moses would attribute the break to a single incident, revolving around gnarled, emaciated little Louis M. Howe, Roosevelt's devoted adviser, whom Smith's circle, because of his habitually dirty, sweat-stained collars and suits dotted with food stains and flecked with cigarette ashes, called "Lousy Louie."

When Roosevelt attempted to appoint Howe secretary of the Taconic Commission, Moses stepped in. If Roosevelt wanted a "secretary and valet," he said, he would have to pay him himself.

Getting Howe the secretary's job, which paid \$5,000 per year, was important to Roosevelt. Unable to move around freely, he knew that he would be able to remain in politics only if he was able to delegate most of the tasks he had formerly performed himself. He therefore needed an organization, even if it was only two or three secretaries, but he had to have Howe to direct them and to represent him at political meetings he himself could no longer attend, and he was not financially able to pay Howe an adequate salary. Howe had been about to accept a lucrative offer from private industry when Roosevelt was stricken, but as soon as he had learned of the tragedy at Campobello, he had declined the job. Roosevelt had to find a place for him on some governmental payroll and the only governmental body on which Roosevelt held an official position in 1924 was the Taconic Commission. But Moses was adamant. The State Parks Council would veto any salary for Howe as secretary, he said.

Moses was always to contend that the bad blood between him and Roosevelt flowed from this single incident. Howe never forgave him for the "valet" insult, he said, and took every opportunity to poison Roosevelt's mind against him. "You see," Moses would tell the author, "Roosevelt was in such terrible physical shape that he was home at night a lot, and a person in that kind of condition is very susceptible to the people who are there with him in that house all night. And Howe was always there. And Roosevelt would listen to his stories. It was a result of his illness—he was susceptible to that kind of thing."

But the feeling between Moses and Roosevelt burned too deep to be attributable to a single incident. Personality may have had something to do with it. Moses, after all, was not the only one of the two men whom Albany had found arrogant. Moses was not the only one of the two men who had been given a sip of power, who had liked the taste and who wanted more. And much of the feeling was certainly due to the fact that during the early 1920's Moses was not the only one of the two men dreaming about parks and parkways. During the same years that Robert Moses was tramping the hills and beaches of Long Island, envisioning great parks and parkways

there, Franklin Roosevelt was tramping—in his imagination—the hills and rolling farmland of his native Dutchess County, envisioning great parks and parkways there. His ideas were on a scale as big as Moses'. And in the park system that Moses was building, there was room for only one man with big ideas.

Roosevelt had been interested in parks long before Moses, in fact. Both because of his own preoccupations and because of his interest in his famous cousin's campaign to conserve natural resources, he had, from childhood, "cared deeply about nature—about land, water and trees." For years, he had been planting yellow poplar and white pine seedlings by the thousands at the Roosevelt mansion at Hyde Park. Concerned about the destruction of New York's great forests by lumber companies, he proposed in 1922 the formation of a syndicate that would purchase a tract within a hundred miles of New York City and operate it as a park, as private interests operated forests for recreation in Europe.

If Moses knew Long Island as few men knew it, Roosevelt could, in the days when he could walk, say the same thing about Dutchess County and about the other three counties-Putnam, Columbia and Rensselaerwhose gently rolling hills made with Dutchess a continuous soft green border, broken only by the patchwork of cultivated fields, all along the east bank of the Hudson from Westchester to Albany. He had long had his eye on particularly beautiful tracts which he wanted preserved from commercial exploitation—he had, in fact, been negotiating on behalf of the Boy Scouts for one in Putnam County. He was especially enthusiastic about a plan to have New York build a tri-state park, in cooperation with Massachusetts and Connecticut, at the juncture of those three states. The Bronx River Parkway, just opened in Westchester County and a wonder of the world, was pointing at the Taconic region. Even before he was appointed to the Taconic Commission, Roosevelt had envisioned joining to the Bronx River Parkway a new parkway that would head straight north through the Taconic farm counties to parks that could be created there, thereby opening up the lovely Hudson Valley. The parkway as he envisioned it would eventually extend all the way to Albany, and thus make accessible to New York City the beauties of the Adirondack, Berkshire and White mountains. When Smith and Moses-badly needing his name in the Taylor Estate fight-offered Roosevelt the chairmanship of the Taconic Park Commission, whose jurisdiction would encompass the whole east bank of the Hudson from Westchester to Albany, Roosevelt asked if he would be able to build the parkway. Moses apparently gave him assurances on the point-Roosevelt was later to remind Smith that he had—and Roosevelt eagerly accepted.

Within months, he had old Clarence Fahnestock primed to donate his 6,169 acres at Lake Oscawana as a state park and he had completed arrangements for the transfer of three smaller tracts farther north. Having himself driven around the countryside, he had selected sites for "small camping parks" that he wanted built along the parkway. He was sketching himself picnic tables and fireplaces and thinking about which type of rock should

be used to face bridges over the parkway so that it would blend in most naturally with the landscape.

Roosevelt was impatient to get this "splendid project" under way; the price of the land for the Boy Scout camp had risen 30 percent in the two years he was negotiating for it. He was driven, as was Moses, by the knowledge that soaring land values were making land acquisition continually more difficult. "The securing of the rights of way for the state should," he wrote, "be immediately put through."

But there was insufficient money in the park allocations made by the Legislature even for Moses' Long Island park plan, and he didn't want any spent on a 125-mile parkway somewhere else. And, it may be, he didn't want within the park system he was so assiduously welding into a monolithic entity responsive solely to his command any opening wedges driven for a project that would be under the command of another vigorous, independent man. Repeatedly, Moses' State Parks Council slashed Roosevelt's budget requests to a level insufficient even to begin acquiring right-of-way for a parkway. The money allowed was not sufficient even for the Taconic Commission to hire an adequate executive staff, and Roosevelt charged that the lack of staff prevented the commission from making plans that would allow it to spend, on small parks, even the meager amount of money it was allotted. In addition, Moses now said a Taconic Parkway should not extend north to Albany but should end only a few miles north of New York City.

Matters came to a head in November 1926.

In submitting during that month his budget request for 1927, Roosevelt asked for funds for engineering plans for the Taconic Parkway, for right-of-way surveys and for salaries for an adequate staff (including Louis Howe). When the State Parks Council met to consider the regional commissions' budget requests (Roosevelt was in Warm Springs, Georgia, where he went every winter to try to coax his dead legs back to life), it disapproved those of the Taconic Commission, on the grounds that it had not spent all the money allocated to it in the past.

Returning north, Roosevelt had at least one bitter face-to-face confrontation with Moses, the details of which can only be imagined. Then Roosevelt tried to go over Moses' head. In December 1926, he wrote Smith asking the Governor to restore the funds he had requested. "It is an absurd and humiliating position to be put in, to be informed that we could have no money because through lack of an Executive we have not been able to properly expend the money we had and then to be informed that we cannot have an Executive because we have not been given more money," he wrote.

But Smith was taking Moses' word as to what was happening in park matters. He asked Moses about the Taconic situation and Moses wrote Smith: "I suggest you write him [Roosevelt] a letter along the line attached." The "attached" said that of course the parkway would go through—it did not say through to where—but that there was so much competition for the limited money available that it must be concentrated on those projects which were moving ahead fastest, and the Taconic Parkway was not one of those.

In fact, the "attached" said, "practically none" of the money already allocated to the Taconic Commission had been spent. Smith sent the letter to Roosevelt exactly as Moses had written it.

A year later, the State Parks Council eliminated from the Taconic Commission's request all funds except those needed for bare maintenance of existing parks. Roosevelt wrote Smith that "the other members of the Commission and I feel very strongly that" the elimination "ends the necessity for the usefulness of the Commission. We have practically no function left." Moses simply used us, Roosevelt said. "The enormous appropriations for . . . Long Island while, perhaps, necessary, prove merely that we have been completely useful [to] other people." And we won't be used any more: "Unless something is done, the Commissioners do not feel it is worth while to continue."

This was serious; there was a presidential election coming up and Smith needed Roosevelt; in fact, he wanted Roosevelt to nominate him again. He apparently intervened; the commission's operating funds were increased. And Roosevelt was assured, apparently by Moses, that when the Parks Council submitted to the Smith-Hewitt-Hutchinson committee requests for additional allocations out of a new \$10,000,000 park bond issue that had been passed in 1927, it would ask for \$200,000 for Taconic Parkway right-of-way.

But when the three-man committee met, on January 23, 1928, and approved all regional allocations except one, that one was the Taconic. On January 30, 1928, Roosevelt wrote Smith a letter that was as revealing—in the depth of the bitterness it displayed toward Moses—as it was remarkable, coming as it did from the pen of the man who would later shepherd his country through depression and war.

"I wasn't born yesterday!" Franklin D. Roosevelt wrote the Governor. "You see I have been in the game so long that I now realize the mistake I made with this Taconic State Park Commission was in not playing the kind of politics that our friend Bob Moses used. . . . You know, just as well as I do, that Bob has skinned us alive this year—has worked things so beautifully that his baby on Long Island is plentifully taken care of and that all the other Park Commissions up-state, except ours, are getting practically what was approved by the State Council of Parks. When the State Council of Parks approved appropriations to the Taconic State Park Commission of nearly \$200,000, Bob knew perfectly well that it would not go through and had his tongue in his cheek when he tried to tell us that he was trying to get it through. ... As a matter of practical fact, I am very certain in my own mind that we could have got at least some appropriation for acquisition of land this year if Bob and you had gone after it. The money is there—within the total of the budget. For instance, Bob told me himself the other day that on the contract for the New York State Office Building, a couple of hundred thousand dollars will be saved."

As park men like Ansley Wilcox and Judge Clearwater had charged before him, Roosevelt charged that Moses had lied about him to Smith when he was not around to refute the lies. "I am sorry to say it is a fact that Bob Moses has played fast and loose with the Taconic State Park Commission since the beginning," Roosevelt wrote. "I give him great credit for many

accomplishments and for his fine vision of a complete State Park system, but he has been guilty of making so many false statements about the Taconic State Park Commission which I have checked up and know all about, that I am very certain that you have been given a very erroneous lot of information about the Commission."

As Wilcox and Clearwater had charged before him, Roosevelt charged that Moses had lied about him to the other members of the Parks Council when he was not around to refute the lies. "One example is sufficient!" he wrote. "Bob told the State Council of Parks that the Taconic State Park Commission had done nothing to cooperate with Massachusetts and Connecticut authorities. As a matter of fact we have not only cooperated with them from the beginning, but are in close touch with them at all times and can tell you or him at any moment just what the situation is in both those states."

Moses will have a chance to lie about me no more, Roosevelt said. "The Commissioners do not want to be the first to make a break in your splendid State-wide Park program, but they have been put in a position where I do not see that they can in any decency" do anything but resign.

Al Smith, who so seldom wrote personal letters, now sat down and wrote one to Franklin D. Roosevelt.

"I know of no man I have met in my whole public career who I have any stronger affection for than for yourself," he wrote. "Therefore, you can find as much fault with me as you like. I will not get into a fight with you for anything or for anybody."

The letter had its effect. Roosevelt did not resign. But the letter did not change the Taconic Parkway situation—or the Moses-Roosevelt situation.

At the 1928 Democratic convention, Roosevelt was again Smith's floor manager. Observers noted that at times during his nominating speech, the cheering seemed to be as much for him as for Smith, and there were some suggestions that Roosevelt—a bearer of TR's name, a Protestant and an attractive vice-presidential candidate even in defeat in 1920—would make a better presidential candidate than the Governor. Belle Moskowitz's comments about Roosevelt began to be more caustic. But Smith himself felt the cheers were no more than Roosevelt deserved—and in September the Governor asked Roosevelt to be his successor in Albany.

Moses had argued against the choice. There are indications that he half-expected Smith to name him instead, to try to force him on the Democratic Party. Although he had always identified himself as an "independent Republican" when reporters asked him his political affiliation, he quietly enrolled as a Democrat when he registered to vote in 1928—a bit of opportunism that did him no good, since his name was never seriously mentioned for the Governorship that year by Smith or anyone else. Moreover, among those men whose names were seriously considered, Roosevelt was the one Moses least wanted to get the post. He told the conclaves of Democratic leaders to which Smith brought him that Roosevelt did not possess either the mental capacity or the application to be Governor. To Frances Perkins, he said that Roosevelt's only asset was a smile. "It's a pity to have to have him and that Al has set his heart on him," he told her. "It's un-

doubtedly a good name to carry the ticket with . . . but, of course, he isn't quite bright." The other Smith aides agreed with this view, but mental capacity was not as important to them as political realities. With "Rum, Romanism and Tammany" rapidly becoming the overriding issue of the presidential campaign, they feared that only Roosevelt's name on the ticket could keep New York's upstate Protestant Drys from stampeding into the Republican camp—and denying Smith the forty-five electoral votes of his own state. Estimating that Roosevelt was a full 200,000 votes stronger than any other candidate, they felt that he was the only man with a chance to defeat the attractive GOP gubernatorial nominee, Attorney General Albert Ottinger. As for his ability, Smith's advisers felt he didn't need much; they felt that Moses' reorganization had so streamlined the state government that Roosevelt's lack of administrative experience would not be serious. And Smith himself had a higher opinion of Roosevelt's ability than his aides, and he emphasized that Roosevelt's nomination would assure the party of having a candidate of integrity.

Roosevelt was genuinely reluctant to run—he and Howe had decided that with the nation prosperous under a Republican President, 1928 was not going to be a Democratic year and that their original timetable, calling for a gubernatorial run in 1932, was correct. To stay out of the reach of persuasion while the State Democratic Convention was convening in Rochester, he took himself off to Warm Springs. But he could not escape the telephone, and over it Smith persuaded him to run. The next night, he was nominated by acclamation. Moses turned to Emily Smith and said, shouting so she could hear him above the uproar: "He'll make a good candidate but a lousy Governor."

The man Smith assigned to brief Roosevelt on campaign issues and draft his speeches, Belle Moskowitz's discovery, Samuel I. Rosenman, was at first not altogether enchanted with his assignment. "I had heard stories of his being something of a playboy and idler, of his weakness and ineffectiveness," he recalled. "That was the kind of man I had expected to meet." But he began almost instantly to wonder if such unfavorable views of Roosevelt were correct. "The broad jaw and upthrust chin, the piercing, flashing eyes, the firm hands—they did not fit the description. . . . He was friendly, but there was about his bearing an unspoken dignity which held off any undue familiarity." During the campaign, Rosenman watched Roosevelt pull himself laboriously to his feet as his car arrived in a town, snap his steel braces to hold his body erect, and then, chin up, cigarette holder tilted at the most nonchalant of angles, the cane on which he leaned the only visible sign of any disability, laughingly reassure the crowd that newspaper speculation about his health was exaggerated. By the end of the campaign, Rosenman knew that the Smith camp's assessment of Roosevelt had been very

But Moses had not changed his opinion. "I don't like him," he told Frances Perkins during this period. "I don't believe in him. I don't trust him."

His comments became more vicious. Miss Perkins recalled Moses saying to her about Roosevelt, "'He's a pretty poor excuse for a man.' . . . He said

so to me in just those words—'He's a pretty poor excuse for a man.' "He never actually mentioned the full extent—or what he imagined to be the full extent—of Roosevelt's disabilities, recalled another member of the Smith entourage, "but he was always hinting around about it in the most vicious kind of way. 'Vicious'—that was the only word for it." His comments took in not only Roosevelt but his wife as well. "I wouldn't repeat what he said about Eleanor Roosevelt," another Smith aide said. "Just say he dwelt on her physical appearance and her voice and was quite insulting."

The comments got back, as comments made in political circles always seem to do, to their targets. And Roosevelt responded in kind. During this same period, he told Frances Perkins that, if he was elected, "I'm not going to have Bob Moses around, Frances, because I don't trust him. I don't like him. I don't trust him. . . . There'll be trouble." Roosevelt's feeling for Moses, says one man who knew both, was at least equal in intensity to Moses' feeling for Roosevelt. "You can employ euphemisms to describe the electricity that was present when those two men were in the same room," he says, "but if you are going to be accurate, you have to say there was real hatred there."

Election Day in 1928 was November 6. The dark forces to which Handlin referred had done their work well on the boy who had thought he could rise from the Fourth Ward to be President. Alfred E. Smith received 87 electoral votes to Herbert Hoover's 444. He even lost New York State. But Franklin Delano Roosevelt polled 2,130,193 votes to Ottinger's 2,104,193. The man who hated Robert Moses was Governor.

Al Smith was bitter over the anti-Catholic prejudice that had marked the campaign. But, at first, that was the only bitterness. He seemed reconciled, even relieved, to be out of politics. After twenty-five years in public office, he wanted to settle down with Katie and spend more time with the grandchildren he adored. After twenty-five years, he was still poor—the Governor's salary in 1928 was only \$10,000, less than that of his cabinet officers—and he was tired of that, too; he wanted security in his old age and something to leave his sons. John J. Raskob, William T. Kenny and other friends had offered him the presidency of the Empire State Building Corporation, which was erecting New York's tallest skyscraper, at a salary of \$50,000 per year. "I have had all I can stand of it. As far as running for office is concerned that's finished," he said, and at the time he meant it; one proof was his voluntary surrender of the titular leadership of the national Democratic Party; another was his refusal to intervene when his ally Judge George Olvany was forced out as head of Tammany Hall in 1929—if Smith had intended to run for President in 1932 he would certainly have attempted to maintain control of Tammany to keep a base of electoral votes on which to build a campaign. In November 1928, as he packed up so that Roosevelt could move into the Executive Mansion early—and busied himself personally overseeing the installation of the ramps Roosevelt would need to move in a wheelchair around the mansion and the capitol-Alfred E. Smith, the Happy Warrior, was ready to retire, still mostly happy, from politics. He certainly bore no personal animosity toward Roosevelt, and, raised in the Tammany tradition in which men were retired from active service honorably when the time for retirement came (the warriors who had held high political office becoming sachems, assured until they died of a voice in running the Hall) to make room for younger men coming along, "he considered," as Proskauer put it, "that he and Roosevelt were members of the same team."

Moreover, Smith felt that Roosevelt could be trusted to continue his programs. This was important to him. All through 1928, he had been pressing the Legislature for further improvements in working conditions for women and children, for extensions of the Workmen's Compensation Act, for liberalized welfare legislation, for movement in the new field of old-age pensions; and the Legislature had refused to be moved on these issues. Now he wanted Roosevelt to press for them. And certainly there was every reason for him to feel that his successor would. All during the campaign, Roosevelt had pledged himself to continue Smith's policies. His typical campaign speech, the New York Herald Tribune said, began with "a few words of fulsome praise for Alfred E. Smith." In the first weeks after the election, Smith was looking forward to helping the younger man get a good start in Albany. When he and Katie moved out of the Executive Mansion, in early December, he took a suite in the De Witt Clinton Hotel at the bottom of the little park in front of the capitol steps, so he would be available if his successor wanted to confer with him, and waited for Roosevelt to call.

And there he waited.

After a week had passed and Roosevelt had not contacted him, Smith swallowed his pride and telephoned the new Governor. He told Roosevelt that he had assumed he would want some assistance with the details of his inaugural address and first message to the Legislature, and had asked Mrs. Moskowitz to prepare a list of items that might be included. Roosevelt replied that the address and the message were almost finished, but he would be glad to show them to Smith and Mrs. Moskowitz when they were. And this, as Arthur Schlesinger puts it, "he 'forgot' to do. When the address was given, it was devoted largely to rural problems and made hardly a reference to what had gone before." When puzzled reporters asked Roosevelt whether he was going to continue the Smith policies, his evasive answer was: "Generally, for that is what we said all through the campaign."

Explanations for Roosevelt's treatment of Smith vary from historian to historian, depending on whether the historian has received most of his information from intimates of Roosevelt or of Smith. Roosevelt-oriented historians say that Smith, whether or not he intended to continue to run the state after he had left office, gave that impression to Roosevelt (they cite his offer of Mrs. Moskowitz's help on the inaugural address as one way he did so). Personal feelings aside, these historians point out, Roosevelt had long viewed the Governorship as a way station on the road to the White House, began planning for a 1932 presidential bid immediately after the election—and knew that if Smith changed his mind and decided to run for the presidency, he would be the man Roosevelt would have to beat. His greatest political problem in Albany, moreover, would be to get out from

under the shadow of the man generally acknowledged to have been the state's greatest Governor.

But political considerations alone seem inadequate to account for Roosevelt's actions. One is forced to take into account another side of his complex character, the side which Raymond Moley was to call a "lack of directness and sincerity," and of which Robert Sherwood was to say that "at times he displayed a capacity for vindictiveness which could be described as petty." This side was frequently to be on display when Roosevelt dealt with people he had needed once but needed no longer. "Roosevelt was never at his best in getting rid of people no longer useful to him," Oscar Handlin was to write. "The lack of directness and candor in his actions left a bitter impression of shiftiness, of disloyalty, and of ingratitude." And the impression was to be strengthened in his relations with Smith and Smith's people, in Moley's opinion, because "Roosevelt . . . was deeply sensitive to the fact that so many among the people who knew him . . . believed, for one reason or another, that he lived beyond his intellectual means." Says Moley: "This opinion hurt Roosevelt, but he braced his determination to overcome it. It may be added that with this effort came a not quite Christlike tendency to beat down not only the opinion itself but those who held it. It is not remarkable, therefore, that when he became governor he did not avail himself of Smith's generous tender of help and advice. . . . The mighty engine of governmental power was not destined to spare those who had once deluded themselves with a notion that Roosevelt was a weak man." Of the many books written on Roosevelt, it is significant that every one whose author was an intimate of both Roosevelt and Smith-Miss Perkins, Proskauer, Rosenman and Jim Farley, for example-stresses this side of Roosevelt's character in attempting to explain his treatment of Smith.

The final humiliation of Al Smith at the hands of the man he had asked to be his successor revolved around Robert Moses.

Among the subjects Roosevelt was not anxious to discuss with Smith during the period between the election and the inauguration was that of the appointments he would make. Finally, Smith, humbling himself again, went to see Roosevelt at the Executive Mansion. Trying to make the Governorelect see that they were both members of the same team, he said, "You know, I'll always be ready to help you. I'll always come up any time you want me. I'll talk to anyone you want me to talk to. I'll negotiate with anyone about anything. . . . I know all these people. I don't have anything [to do]." He said he understood that Roosevelt would want to replace most of his appointees with his own men. There were only two members of his administration who he thought were absolutely indispensable. They were Mrs. Moskowitz, whose title was "personal secretary to the Governor," and Moses. Roosevelt, describing this conversation to Frances Perkins, said that Smith told him, "You see, Mrs. Moskowitz knows all about everything. She knows all the plans. She knows all the people. She knows all the different characters and quirks that are involved in everything. She knows who can and who will

do this or that." As for Moses, Roosevelt told Miss Perkins that Smith is "very dependent on Bob Moses, as you know, and thinks very highly of him. He feels that nobody else can carry on the parks, or the highways, or even the state hospitals except Moses, because he's got so much ability."

Roosevelt was evasive. And in the days following the Executive Mansion conference, Smith could see which way the wind was blowing. Roosevelt took pains to let reporters know that he had not had a single conference with Mrs. Moskowitz. He dodged their questions about Moses.

Mrs. Moskowitz was, after all, more of a personal adviser to Smith than a state official. He did not again raise with Roosevelt the question of her reappointment. But Smith felt, as one observer recalls, "that it would be a tragedy—a real tragedy—for the state to lose Moses' services as Secretary of State. There just wasn't anyone else with his ability around." Telephoning Roosevelt again, he asked for an appointment. Roosevelt was at Hyde Park, sixty miles from Albany, but, for Moses, Smith made a journey to Canossa. He was rewarded by an end to evasion. As soon as he had finished pleading with Roosevelt to reappoint Moses, the Governor-elect leaned back, puffed on his cigarette for a moment and then said flatly: "No. He rubs me the wrong way."

It is significant that, although Moses held other state positions, the conversation between Smith and Roosevelt concerned only the Secretaryship of State for the reasons why Moses' other positions were not discussed do much to pinpoint the sources of his power.

Moses' six-year term as president of the Long Island State Park Commission did not expire until 1930; although Roosevelt was Governor and the commission presidency was a gubernatorial appointment, Moses did not need Roosevelt's approval to remain in the post. The chairmanship of the State Parks Council was conferred not by the Governor but by the council. Moses did not need Roosevelt's approval to remain in that post, either.

The only way Roosevelt could remove Moses from either of his park posts was by bringing formal charges against him. But charges of what? If Moses had been guilty of impropriety or illegality, how was a Governor supposed to know it? Moses kept the operation of the commission so secret that no outsider knew where to start looking for proof or could guess whether, if he did look, he would find any. A Governor could, of course, launch a full-scale investigation into the commission, but this would involve the gravest political risks since public opinion was firmly behind Moses. And what if the investigation did not find anything? Then it would look like a malicious attempt to defame a great man. An attempt could be made to defeat Moses at the next State Parks Council election, but his careful stacking of the council membership had made that very difficult. The Governor could, of course, change the membership, but only gradually since the members' terms were also six years. And if word of a council-packing attempt got out, public opinion would again side with Moses. Parks were supposed to be free from politics.

As he had done in the little world of Yale, Robert Moses had erected within New York State a power structure all his own, an agency ostensibly part of the state government but only minimally responsive to its wishes. The structure might appear flimsy but it was shored up with buttresses of the strongest material available in the world of politics: public opinion. A Governor—even a Governor who hated the man who dwelt within that structure—would pull it down at his own peril.

Moses understood this. Asked forty years later why Roosevelt did not oust him from his park posts, he would laugh and say, "He couldn't afford to. The public wouldn't have stood for it. And even if he tried to, it would have been very difficult. See, the law didn't permit it, except on charges. It was set up that way, see. That's the way it was set up." This explanation came at the end of a four-hour interview. All during it, Moses had been serious and guarded in his statements. But when he said this, he suddenly threw back his head and laughed, a laugh of pure enjoyment. "That," he said, still laughing, "was the way it was set up, don't you see?"

Roosevelt apparently saw. Moses pushed matters to a head himself. The duties of Secretary of State included the organization of the inaugural ceremonies—it was the Secretary, in fact, who would administer the oath of office to the new Governor—and Moses had to confer with Roosevelt about the arrangements. At the end of one conference, he raised the subject of his reappointment, and, when Roosevelt dodged, Moses demanded, "You don't want me to stay on, do you?" Whatever Roosevelt's exact reply was, he made it clear that Moses' assumption was not incorrect. But the Governor-elect had then to make it clear that he was talking only about the Secretary-ship. He had to ask Moses hastily to stay on his park jobs. Revenge could not have been nearly as sweet as he had hoped.

The aftermath of the conversation must have made it positively sour. Stalking out of Roosevelt's office, Moses immediately composed a curt letter saying that he would resign as Secretary of State "when Governor Smith leaves Albany." Then he released it to the press, embarrassing Roosevelt, who had no successor ready to announce.

Moses, moreover, included in the letter a paragraph saying, "In accordance with our understanding, I shall carry on the state park work." And a flood of editorials greeted this statement with relief. "It is gratifying," said the World. "Gratifying," chimed in the Times. And Roosevelt, in a hastily composed one-paragraph reply to the resignation letter, had to express gratification, too, saying, "I am, of course, very happy that you will continue to carry on the work . . . You have rendered conspicuous service and I can assure you that I shall often avail myself of your continued cooperation."

The identity of the replacements for Moses and Mrs. Moskowitz could not have been more insulting to Al Smith if Roosevelt had selected them with that aim in mind. As his personal secretary, he chose Guernsey Cross, whose sole qualification was that he was big and strong enough for the Governor to lean on when he walked. As Secretary of State, he chose the Boss of the

Bronx, Edward J. Flynn, whose experience in government, as distinguished from politics, was nonexistent and who didn't even want the job and would not agree to take it until Roosevelt, after Moses resigned, frantically pursued him on a trip around Europe by transatlantic telephone calls and cables. ("The basic reason for my appointment," Flynn later wrote, "was that Roosevelt did not want to appoint Moses.") Flynn's lack of experience in government forced Roosevelt to downgrade the Secretaryship, reducing it mainly to its licensing and ceremonial functions. Flynn never devoted much time to it and it was never again to be a sort of Deputy Governorship, or, in fact, of any real importance in the state governmental setup. What made Roosevelt's refusal to reappoint Moses all the more bitter to Smith was that the new Governor, anxious to avoid any appearance of an open break with his immensely popular predecessor, reappointed sixteen of the eighteen members of Smith's cabinet, every one except Moses, the only one Smith had asked him to reappoint, and the State Industrial Commissioner, a minor official whose dismissal Smith intimates interpreted as a "throw-in" so that newspapers would not be able to comment that Moses had been the only one thrown out.

At the inauguration, however, Smith and Roosevelt put on a show of harmony. When Franklin and Eleanor moved into the Executive Mansion on December 31, Al, who had returned to the mansion for the occasion, met them at the door and, as reporters crowded close to listen, said, "A thousand welcomes. We've got the home fires burning and you'll find this is a fine place to live." Roosevelt, turning to the reporters, said, "I only wish Al were going to be right here for the next two years." One reporter, watching Al depart, waving his brown derby, as the crowd sang "Auld Lang Syne," wrote that Roosevelt was wearing "a smile that had a trace of wistfulness." The next day, at the official inaugural ceremony, the charade continued. In a brief valedictory, Smith praised Roosevelt to the crowd that jammed the Assembly Chamber.

Only Moses would not put on a show. When Roosevelt stood up to take the oath, Moses realized for the first time just how weak his legs were. ("The platform was high above the crowd," he told the author, "and people couldn't see what was going on, but both his legs had to be locked upright, the hinges squeaking and then snapping into place.") But that didn't stop Moses from doing what he had planned. When Roosevelt made his way to the lectern, one arm gripping a cane, the other the arm of his eldest son, James, and placed his hand on the family's two-hundred-year-old Dutch Bible, Moses administered the oath of office—and, as soon as it was finished, without waiting for Roosevelt's inaugural address, stalked off the platform and out of the Chamber.

## 17. The Mother of Accommodation

Now Robert Moses no longer had behind him a Governor of whose unquestioning loyalty he could, right or wrong, always be certain. "Executive support," about which he had not had to worry for ten years, was a source of concern again. And within three months after Roosevelt had succeeded Smith, Moses was to be reminded how much difference this could mean to him.

The great piece of his business left unstarted at the close of Smith's regime was the Northern State Parkway. In the North Hills, the name given to the terminal moraine near the New York City line, Moses had found a line of small farms that could make a right-of-way—twisting, turning, but still a right-of-way between the holdings of the North Hills barons. Where there was not the slightest crevice between estates, he had introduced into the parkway's route still more curves, so that it would run along the very edges of the barons' estates and not disturb the serenity of their manor houses. He had threaded the route along that portion of the rough at the Links Country Club that could most easily be spared without spoiling the barons' favorite golf course. And by paying them tribute in the form of private bridges and personal entrances, he had persuaded them to donate the right-of-way he needed. The barons of the Dix Hills in the western portion of Suffolk County-Otto Kahn, Stimson, Mills, Winthrop and De Forest—had thrown back with contemptuous ease his attempt to penetrate the fastnesses they controlled, but Kahn's \$10,000 had enabled him to snatch from James Roth and other meek farmers of the plains to the south thirteen more miles of right-of-way.

But between the North Hills and Dix Hills stood the Wheatley Hills, the meeting place of the two moraines, the bolt of the scissors that made Long Island beautiful. And in the Wheatley Hills, the estates—identified by black-and-gold signs bearing such names as Morgan, Whitney, Winthrop, Grace, Garvan and Phipps—clustered around the little village of Old Westbury so thickly that there was no path, no matter how tortuous, that could be picked out without running through their holdings. These barons there-

fore refused to parley and instead hired champions to fight Moses—and the champions included Grenville Clark, whose brilliance as an attorney was not at all dimmed in their eyes by the fact that he had been a Harvard classmate of Franklin D. Roosevelt.

Even before Roosevelt's inauguration, Clark was writing to him at Warm Springs suggesting an alternate route—with a sharp southward dip just before it got to Old Westbury so that it avoided the Wheatley Hills completely.

Dashing off his own letter to Warm Springs, Moses told Roosevelt that Clark was trying to "change the location of about six miles of right-of-way in the center of the parkway, for the sole purpose of avoiding a few people whom he represents." This, Moses said, would involve "torturing the parkway down toward the middle of the island where the landscaping problem is almost insuperable." He would never agree to do so. To brace up Roosevelt, he added that the Wheatley Hills barons are "people of large wealth who have always been able to buy what they wanted or to get what they wanted by influence and pressure. It is difficult for these people to believe there is anyone they cannot reach in some way."

For several months, Moses seemed to be winning the fight. Roosevelt drove over the two routes himself and wrote Clark that he saw no reason to change Moses' plans.

But those plans were soon to be changed nonetheless. For Grenville Clark discovered how Otto Kahn, Moses' relative, had persuaded Moses to shift the parkway route off his private golf course.

Clark relayed the discovery to Hutchinson and Hewitt. The two legislative leaders telegraphed Moses demanding "a complete list of all properties . . . payment for which has been made or is intended to be made by funds from private sources for any parkway or proposed parkway," and "a complete list of persons who have given funds to the Long Island Parkway [sic] Commission." And the telegram demanded: "Please also state whether the route of any proposed parkway was ever tentatively laid out over, through or near the land of any donors of money. . . . If so, after receipt of such gift, was route of any proposed parkway changed so as to run over or through a different part of the land of any donor or donors, or so as not to run at all through or near such land?"

At first, Moses was defiant. Hastily sending an explanation to Roosevelt, he admitted that Kahn had given \$10,000, but said that "the idea that we shifted our route to please one man because he gave us some money is too absurd to entertain." The "real reason" for the shift, he said, "was the objection of" Stimson, De Forest and "various others" to the routing of the parkway across their land, and their refusal to donate land unless the route was shifted south—a statement which conveniently ignored the fact that if the route hadn't been shifted off Kahn's land in the first place, it would never have touched their land and their donations would not have been needed.

At first, Moses' new executive gave him support, backing the Wheatley Hills route. But Clark began hinting that any attempt to push that route would result in the disclosure to the public of the Moses-Kahn deal, which, he said, if "finally brought to light will not make a creditable chapter in the history of this State." Various attempts at compromise failed, and Clark—and Hewitt and Hutchinson—made clear to Roosevelt that any attempt to obtain legislative appropriations for the Northern State Parkway until its route had been shifted out of the Wheatley Hills would result in an all-out fight.

The fight over the Taylor Estate—now to be named Heckscher State Park—had been an all-out one, of course, but there would be a significant difference this time. The issue in the first case had been that of millionaires blocking the public; in the Northern State Parkway case, it would be that of a millionaire giving \$10,000 to keep his private golf course untouched and the money being used to throw hard-working farmers off their land. It was not the type of issue likely to redound to the credit of the official who had accepted the \$10,000 and thrown the farmers off their land—or of a Governor who was placed in the position of defending his action.

Whether Roosevelt was motivated by the threat of public disclosure to prevail on Moses to compromise is not definitely known. But the following sequence of events is clear. On October 23, 1929, Clark gave Roosevelt what amounted to an ultimatum: he and his clients had decided, he said, that it was impossible to reach any kind of agreement with Moses, because he refused to compromise and was highly insulting, and that a full-scale fight would be launched during the 1930 legislative session. Nineteen-thirty was an election year; among those running for re-election would be Franklin D. Roosevelt. Less than two weeks after Clark issued the barons' ultimatum to Roosevelt, Moses agreed to a "compromise." Under the "compromise," the Northern State suddenly altered its eastward course at Glen Cove Road, the western border of the Wheatley Hills, just as it was about to plunge into the estate area, and instead swung south for two full miles, far enough so that when it resumed its course, it would never come near the Wheatley Hills. To make it appear that the "compromise" was really a compromise and that both sides, instead of just the state, had given in, Moses announced to the public with great fanfare that the barons had agreed to pay the state \$175,-000, which he said would pay for the entire cost of the detour. Actually, however, the cost of the additional right-of-way alone would be \$2,250,000, so that more than 90 percent of the bill for the accommodation Moses reached with the barons had to be footed by the state's taxpayers.

The long-term costs to the public of Moses' accommodation include figures that cannot be prefaced with dollar signs. For one thing, the accommodation condemned users of the parkway to a perpetual detour of five miles around the Wheatley Hills. Coupled with the six-mile detour forced on parkway users by Moses' previous accommodation with Otto Kahn and the other Dix Hills barons, it meant that a commuter who lived anywhere east of Dix Hills and who used the parkway to get to his job in New York City was condemned to drive, every working day of his life, twenty-two extra and unnecessary miles. He had to drive 110 unnecessary miles per week, 5,500 per year—all because of Moses' "compromise." By the 1960's there were about

or the "Gold Coast."\* Robert Moses' "compromise" with the North Shore barons amounted to unconditional surrender. In later years, most of the barons would have disappeared from the Long Island scene. The names of most of them would be unfamiliar to the new generations using the Northern State Parkway. But every twist and curve in that parkway—and, in particular, the two great southward detours it makes around the Wheatley and Dix Hills—is a tribute to their power, and to the use to which they put it after they discovered the chink in Moses' armor. Farmer James Roth was not the only person who paid for Moses' deal with Otto Kahn.

The completeness of Moses' surrender—coupled with the fact that Moses never surrendered on any park or parkway issue while Smith was

Governor—makes it difficult to escape the conclusion that the change in Governors had something to do with it. By accepting Otto Kahn's \$10,000, Moses had presented his opponents with a weapon which they used to club him—and New York State—into submission. But, by illegally appropriating the Taylor Estate, he had presented many of the same opponents in that battle with an equally dangerous weapon. And somehow Al Smith had avoided its swings and beaten them into the ground. Fighting under the Squire of the Hudson was not precisely the same as fighting under the King of Oliver Street.

There were other differences. In Albany, where a legislative session is round after round of hastily formed alliances, trust in a man's word is all-important; when a man promised his support on a bill, he could not later take it back; if he did so, the word on him would soon begin to circulate through the corridors of the capitol, and when discussing their relationships with him, legislators would say, "We deal in writing"—a phrase which, in Albany, was the ultimate insult. Al Smith could say, "When I give my word, it sticks." Now, in the corridors of the capitol, many men were saying of the new Governor, "We deal in writing." Diminutive Reuben Lazarus, the one-time legislative page boy who had since become one of the capitol's most knowledgeable bill drafters, good enough to be New York City's legislative representative, believed that he had been misled twice within a month by Roosevelt when he asked the Governor his intention on bills important to Tammany Hall, and told Roosevelt to his face: "Governor, from now on we deal in writing; and I'm going to demand a bond on your signature."

No man had more bills awaiting signature than Robert Moses. And Roosevelt seemed to take special delight in misleading him. Once Lazarus was sitting in the anteroom outside the Governor's office, "and I heard Moses, inside, shout, 'Frank Roosevelt, you're a goddamned liar and this time I can prove it! I had a stenographer present!' And Moses came storming out of FDR's office without even seeing me, he was so thoroughly angry. I was next and I walked in. The Governor's face was breaking into a grin of real pleasure. He . . . acted as though he had just come out of the bath after a clean shave in the morning." After several such incidents, Moses developed a new routine for his trips to Albany; he would arrive early in the morning for conferences with Roosevelt at the Executive Mansion, but even though the Governor might promise that a bill then on his desk for signature would be signed, Moses would not leave the capitol until it was.

But if Roosevelt gave Moses a hard time before doing so, he did nonetheless sign most of Moses' bills. And although he may have hated Moses, during the four years of his Governorship he gradually increased, not decreased, Moses' power.

He did so, moreover, despite the fact that Moses never trimmed his sails in their personal relationship. He never called Roosevelt "Governor," and he made a point of not doing so; not only in private letters but also in official correspondence it was always "Dear Frank."

He refused to follow conventional lines in their official relations, either. Although his State Parks Council was a part of Roosevelt's administration, the council adopted major new policies without conferring with the Governor about them—sometimes even without notifying the Governor about them. Once, when Moses had the council pass a resolution asking the Legislature to remove all historical state reservations from the council's control and turn them over to the Department of Education, the Governor was reduced to begging Henry Lutz, "Will you be good enough to let me know whether the report is true. . . ."

Moses may have obeyed Al Smith's patronage suggestions without question, but he wouldn't even listen to Roosevelt's. As Jones Beach and other state parks opened during Roosevelt's regime, the number of jobs at Moses' disposal steadily increased. By 1930, the number of lifeguards, special police, gardeners, parking-field and bathhouse attendants, janitors and toll takers at the Long Island parks was more than fifteen hundred. Long Island Democrats eyed these jobs greedily—and expectantly, since Moses was a subordinate of a Democratic Governor. After they had asked Moses for some jobs and had been refused, they appealed to Roosevelt to order him to make some available. Roosevelt gingerly suggested to Moses that he cooperate, and Moses curtly refused. The Governor's personal requests received the same treatment. Roosevelt sent on to Moses a job application with a notation attached—"Dear Bob: This is an old school boyfriend of mine and I would be very glad if you could help him in some way." Moses replied by simply sending the Governor a copy of the official employment regulations of the commission, which included the sentence: "Recommendations based upon merely personal or political acquaintance will not be considered."

And the explanation for the increase in Moses' power during Roosevelt's Governorship certainly wasn't that he gave in like a good subordinate if he had a difference of opinion with his chief over a matter of policy. In fact, if his powers of persuasion were not sufficient to persuade Roosevelt to alter what Moses felt was an unwise decision, he did not hesitate to mobilize forces against the Governor.

For years, Roosevelt, naval buff and lover of the sea, had wanted to transform Fort Schuyler, a little-used fifty-six-acre Army base at Throgs Neck in the Bronx, into a Merchant Marine Academy. The folding chairs set up on the Assembly Speaker's dais for his inauguration had hardly been stored away when he began prodding the Army to close the base and turn the land over to the state. In 1931, the Army finally agreed—but no sooner had it done so than Moses announced that Fort Schuyler should be turned into a park instead. When the Governor refused even to consider that suggestion—Fort Schuyler, he said, was going to be a Merchant Marine Academy; the matter was closed—Moses mobilized his forces.

The Park Association of New York City met to formally endorse Moses' suggestion. So did the Washington Heights Taxpayers Association, the Public Schools Athletic League, twenty-five other civic organizations "of a total membership of half a million" organized into a committee to back the park plea—and the Sulzbergers' *Times*. The influentials who made up the Park

Association's board of directors took the trouble to write personally to Roosevelt on the issue. After conferring with Moses, Nathan Straus, Jr., association president, said, "If it's made an academy it will train three or four hundred boys; if it's made a park, 300,000 to 400,000 people will use it every summer weekend."

Apparently Roosevelt did not realize for some time that it was actually Moses who was behind the opposition. As late as January 8, 1932, Guernsey Cross, obviously under the impression that Moses was on the Governor's side, wrote to ask him for a suggested reply that the Governor could make to a letter from George F. Mand, president of the Bronx Chamber of Commerce. Moses replied promptly: "Attached is suggested reply to [Mand]. 'Dear Mr. Mand: I agree with you . . . that it is much more important to use this area for municipal recreation purposes than to make it the headquarters for the U. S. Merchant Marine Academy, which can well be taken care of with a smaller and cheaper piece of land outside the city limits.'" Cross hurriedly asked Conservation Commissioner Henry Morgenthau to draft the reply instead.

Even after he realized Moses' involvement, however, there was nothing Roosevelt could do. When Samuel Rosenman and Herbert Lehman, contacted by reform leaders, both asked him to forget about the academy, he must have realized that he was surrounded, and he surrendered. (He was able to realize this pet project only after he had been elected President. On December 29, 1932, two days before his term as Governor ended, he signed, on behalf of New York State, a lease proffered by the War Department giving the land to the state for a New York Merchant Marine Academy. And even at this date, Roosevelt did not make any public announcement of the transaction, so that the public did not learn what he had done until he was no longer Governor.)

Part of the explanation for Moses' increased power was simply the breadth and depth of his knowledge of the government at whose head Roosevelt, with little preparation, suddenly had found himself. No one knew the vast administrative machinery the Governor was supposed to run better than this man the Governor hated. To a considerable extent, the machinery was his machinery; he, more than any other individual, had drafted the executive budget system, the departmental consolidation and the hundreds of bills that implemented those constitutional amendments. He, more than any other individual, knew the considerations—constitutional, legal and political—that lay behind wording in those laws that was otherwise so puzzling. He knew the precedents that made each point in them legal-and the precedents that might call their legality into question. He knew the reason behind every refinement, every clarification—and every obscuration—in the laws' final versions. When discussing a point of law with some young state agency counsel, Moses liked to let the lawyer painstakingly explain the legal ramifications involved and then say dryly: "I know. I wrote the law." This store of knowledge, coupled with an intelligence capable of drawing upon it with computer-like rapidity, constituted a political weapon which no Governor could afford to let rust in his arsenal.

Roosevelt's very first major administrative hurdle—the compilation of his first budget—taught him Moses' indispensability. The 1929 budget would be the first drawn up under the executive budget system Moses had codified. But no sooner had Roosevelt presented it to the Republican Legislature—a 411-page "complete plan of proposed expenditures and estimated revenues"—than the Legislature struck at its heart, tacking on to the appropriation bills a rider that would give the chairmen of its finance committees, Hewitt and Hutchinson, an equal say with the Governor in determining how each department should spend the lump sums proposed for it by the Governor. The rider was the last desperate challenge of men who saw their power being stripped from them, and they didn't spare the invective; a Syracuse assemblyman, referring to Roosevelt as "that man downstairs," trumpeted that "the very foundation of the State is in danger with this message of avarice, usurpation and presumption."

Roosevelt was unsure how to deal with the challenge. So were his legal advisers, some of whom told him to avoid a test of the issue in the courts since a decision could go either way and since while it was being decided all state expenditures might be paralyzed. The new Governor's initial inclination was to sign the bills, distasteful though their rider may have been.

When, however, he asked Moses' opinion, he was told to veto the bills. The courts, Moses said, would hold that the Governor's budget was constitutional and the Legislature's unconstitutional—and it was perfectly possible to work out a method for financing state activities while the courts were deliberating. Roosevelt sent his former law partner, Basil O'Connor, to see George Wickersham, the reformer and ex-United States Attorney General, and Wickersham said Moses was right. As Roosevelt drafted a veto message, he found himself asking Moses for "suggestions." Moses gave them—and the message as delivered to the Legislature was substantially the one Moses wrote. When lawyers began to draft the Governor's brief, they found themselves relying more and more on Moses for background information. Then they realized they were relying on him for strategy. On November 19, 1929, the seven members of the state's highest court, the Court of Appeals, held unanimously, as Moses had predicted they would, that the Legislature's action was unconstitutional. The principle of executive and legislative separation was at last irrevocably established in New York State and Roosevelt had learned the truth of a saying of Al Smith's: "If Bob Moses says it's constitutional, it's constitutional."

And then there was Moses' record of accomplishment and his potential for more accomplishment, the fact that Moses had gotten things done and could get things done again. Moses' cleverness in writing laws cementing himself in power helped explain Roosevelt's initial decision not to try to take that power away. But a large part of the explanation for Roosevelt's subsequent willingness to increase Moses' power was not cleverness but accomplishment, the record of what Moses had done with the power he had given himself. For the accomplishment and the potential for more accomplishment had very strong political connotations indeed.

The program for which Moses had so frantically shoveled sod under

Smith came to full bloom in the first of Roosevelt's gubernatorial summers. The summer of 1929 was the summer of the "Hoover Market." It was the summer of General Motors, Radio and Big Steel, of AT&T, of General Electric, which would by Labor Day hit 306, having more than tripled its price in eighteen months. The summer of 1929 was the summer of Big Bill Tilden, who won his seventh American amateur tennis championship, of Bobby Jones and his putter, Calamity Jane, who together carried off the U.S. Open golf championship, of Ernest Hemingway's Farewell to Arms and of Thomas Wolfe, whose first novel, Look Homeward, Angel, was uncrated at the bookstores in June. It was the summer of Kate Smith, who began in those golden months her career as a radio songstress, and of Gertrude Berg, who in those months first shouted "Yoo Hoo!" across a Bronx airshaft. And the summer of 1929 was the summer of Robert Moses.

Heckscher State Park was formally opened in June and the onlooker who shouted "God bless him!" when Moses was introduced was only sounding the first note of the chorus of hosannas the summer was to bring. "You owe this park . . . to the amazing public spirit of Robert Moses," August Heckscher told 15,000 cheering onlookers, and Lieutenant Governor Lehman, praising Moses for his "vision and courage," agreed.

The Southern State Parkway was opened in July, and fathers driving their families along the lovely tree-shaded road—which, with a width of forty feet, seemed wonderfully wide—were explaining to their wives what "no grade crossings" meant and telling their children as they passed Wantagh that by the end of the summer they would be able to take another parkway there and drive down to the ocean and swim, and every newspaper story on the Southern State coupled its marvels with the name of its creator.

And when, on August 4, 1929, the Wantagh Causeway opened the way to Jones Beach, the hosannas became a hallelujah chorus.

On the day the causeway opened, 25,000 cars rolled across it. In the first month of its operation, attendance at Jones Beach State Park—which legislators had said would never justify its investment because people would never drive forty miles to a park on a sand bar—topped 325,000. The press—not only New York's press but the press of the entire country—spoke of the expanses of surf and sand in tones of awe. Reporters vied with one another in searching for superlatives to describe the parking areas that one said "look as big as a cattle range" and bathhouses "such as you have never seen before."

The praise wasn't only for the size of the park's buildings; it was for the taste with which they had been designed and the ingenuity with which there had been worked into their steel and stone delicate details which the eye, to its delight, was endlessly discovering. Visitors could see that the nautical theme had been carried out everywhere. Walking along the mile-long boardwalk connecting the two bathhouses, they noticed that the boardwalk railing was a ship's railing. Bending down to drink from a water fountain, they found that the fountains were turned on and off by ships' pilot wheels. Looking for trash cans, they found them concealed in ships' funnels. Looking up, visitors saw on the flagpoles crow's-nests and yardarms and halyards

decorated with long rows of bright semaphore signals. They saw ships' lanterns swinging on davits from the lampposts. Looking down, expecting the paved walks in the park to be standard gray concrete, they were surprised by mosaics—of compasses, maps and the gay seahorse that Moses had chosen as the emblem of Jones Beach—set into the concrete. The games along the boardwalk were ships' games: shuffleboard, quoits, deck tennis, Ping-Pong. Even the pitch-and-putt golf course was made maritime by the placing near every hole of some reminder of the sea—a rusty anchor, the keel of an ancient boat, old rum kegs retrieved from the Great South Bay. All Jones Beach employees were garbed as sailors, complete with sailor caps, and their supervisors wore officers' uniforms, complete with gold braid. And every button on the uniforms was engraved with a seahorse.

Architects exclaimed over the long, low sweeping lines of the bathhouses and restaurants, their medieval and Moorish cast, the combination of Ohio sandstone and Barbizon brick ("Perfect!" exulted one architect. "Perfect!") with which they were faced. They were startled when, searching for the water tower, they realized that it was concealed in the 200-foot-high campanile. They described with delight the diaper-changing rooms, the cutouts of bowmen crouching against the dune that formed the backdrop for the archery range, the symbolic ironwork cutouts on the directional signs, the gay devices of stone and brick—all the touches that Robert Moses, standing alone on a deserted sandbar, had decided he must have in his great park. "It is in the smaller things that Mr. Moses is at his very best," Architectural Forum was to say. "Usually a public institution of any kind in this country has been the occasion for especially dull architecture and walls of cheerless dimensions which invite only the scribbling of small obscenities. But Mr. Moses, being essentially a romanticist, has revived the handicraft spirit in his designers, with the result that the equipment at Jones Beach exhibits irrelevant and endearing good spirits. The architecture has the great virtue of being scaled down to the size of a good time." Even the Herald Tribune could only wax rhapsodic over this "most prosaically named, most beautifully landscaped of beaches."

And the letters on the editorial page almost outdid the editorials. Ernest Biehl of Manhattan, just back from a cross-country trip, hastened to take pen in hand to inform his fellow *Times* readers: "I have visited nearly all of the important beach resorts in this country and I must say that nowhere on this continent is there a public or private beach that is even comparable to the one that the State under Robert Moses has built." A thousand lettersto-the-editor echoed Biehl's appraisal. A nation looked at Robert Moses' dream and found it good.

And not just the nation. Delegations of architects and park designers came from France, from England, even from Scandinavia, traditional leader in park development, to learn from Jones Beach. Their comments were summed up by one Englishman who said flatly, "This is the finest seashore playground ever given the public anywhere in the world."

Never, observers agreed, had any park been kept as clean as Jones Beach. College students hired for the summer were formed into "Courtesy

Squads." Patrolling the boardwalk, conspicuous in snow-white sailor suits and caps, they hurried to pick up dropped papers and cigarette butts while the droppers were still in the vicinity. They never reprimanded the culprits, but simply bent down, picked up the litter and put it in a trash basket. To make the resultant embarrassment of the litterers more acute, Moses refused to let the Courtesy Squaders use sharp-pointed sticks to pick up litter without stooping. He wanted the earnest, clean-cut college boys stooping, Moses explained to his aides. It would make the litterers more ashamed. He even issued the Courtesy Squaders large cloths so that they could wipe from the boardwalk gobs of spittle. His methods worked. As one writer put it: "You will feel like a heel if you so much as drop a gum wrapper."

The lines of wire trash receptacles on the clean white sand were only a symbol of the emphasis on cleanliness there also. At intervals, loudspeakers sounded a bugle call, and then an announcer, in a carefully modulated tone, "thanked" the visitors for their cooperation in keeping the beach clean. "The effect," as one observer wrote, "is magical. In no time at all, every guilty culprit is doing KP in his immediate area."

Moses' methods extended to his parkways. Stetsoned state troopers stopped every car entering them and gave the driver a card printed with "Rules of the Road," which carefully spelled out rules against roadside picnicking and littering. And the rules were enforced. Littering summonses were issued wholesale. Occasionally, when troopers came across a whole bag of garbage that had been tossed from an automobile window, they would try to identify the driver from the contents. If they could, they would call on him at his home to issue a summons—and Moses would see that there was a troop of newspaper photographers along to record the culprit's expression when he opened his door.

The public praised also the success with which Moses had kept Jones Beach free of the usual amusement-park trappings of other public beaches. "There are no concessions, no booths, no bawling hot-dog vendors," marveled one writer. "You won't see any weight-guessers or three-throws-for-a-dimeand-win-a-dolly alleys or blaring funhouses. For almost the first time in the history of public beaches, this beach is conceived as a spot for recreation, not amusement stimulated by honky-tonk." Whenever Jones Beach was the subject of a magazine article, it seemed, and it was the subject of literally scores in the 1930's, the article contained—at least once—the word "wholesome."

The public beat a path to Moses' door. In 1930, the attendance at Jones Beach would be 1,500,000, in 1931, 2,700,000, in 1932, 3,200,000. The path itself, so recently completed, was jammed to capacity—and then to overcapacity. Although all grade crossings had been eliminated on the Southern State, two, one at Sunrise Highway and one at Merrick Road, remained on the Wantagh because of the refusal of the Legislature to allocate money for the bridges that would carry the two cross roads over the causeway. For the same reason, there was a half-mile gap between the Southern State and the Wantagh. By 1930, traffic was backing up at those spots for more than a mile on summer Sundays. In 1931, the Legislature allocated

funds for the bridges and a spur between the two roads. Moses was jubilant. "The traffic capacity of the causeway will be more than doubled," he said.

The facilities at Jones Beach proved inadequate. Both bathhouses were usually filled by noon. The parking lots as big as cattle ranges were jammed as full as sardine tins. Valley Stream, Heckscher and Sunken Meadow state parks were just as crowded. Moses revealed more of the plans he had kept secret, and enlarged them.

There should be an increase in facilities—bathhouses, parking fields and concessions—at all state parks on Long Island, he said. There should be a short parkway—he named it the "Heckscher Spur"—linking the Southern State with Heckscher State Park and a "Sunken Meadow State Parkway" linking the Northern State with Sunken Meadow State Park.

During the fall of 1930, the two-mile-long Ocean Parkway extending along the barrier beach from Jones Beach eastward toward Fire Island was opened. When he had asked the Legislature for money for the parkway, Moses had said that two miles of an ocean drive was all he had in mind. Now he revealed that he actually had been concealing a few other miles ninety-eight, to be precise. Why, he demanded, shouldn't there be a continuous road, bordered by the rolling Atlantic, all the way from Breezy Point on the Rockaway peninsula in New York City to Montauk Point at the tip of Long Island, a distance of one hundred miles? It would not be difficult to create an Ocean Parkway through the Rockaways and Long Beach by widening existing streets and turning them into an ocean drive, he said. The gap between these two beaches could easily be bridged. So could the gap between Long Beach and the Jones Beach portion of the strand. In fact, he had already broached to Hempstead Town-to G. Wilbur Doughty and Tom McWhinney, to be precise—the possibility of Hempstead's building that bridge, and Hempstead seemed amenable. (Hempstead should have been amenable; some indications of the size of the political boodle involved in such a construction job may be garnered by the fact that one of the contractors involved secured the job by paying \$75,000 in cash to the Nassau County Republican organization and—just to insure against any criticism—another \$75,000 to the county's Democratic organization.) Thanks to the deeds of land on the Jones Beach portion of the strand that he had accepted from Oyster Bay, wheedled from Hempstead and politically blackmailed from Babylon, the Long Island Park Commission had already in hand the rightsof-way for the parkway along most of this eleven-mile portion, which was called, in order eastward from Jones Beach State Park, High Hill Beach, Tobay Beach, Gilgo, Cedar Island Beach, Oak Beach and Captree. At Captree a causeway would jump a narrow inlet-and the Ocean Parkway would be on Fire Island. There, for fifty miles, it could run along the sand, the ocean stretching broad on one side, the bay beautiful on the other, until the barrier beach swung back at Moriches to join the southern fluke of the whale's tail that was Long Island's eastern end. By pointing out to them that the building of a road along Fire Island would make their land immensely more valuable, he had, he disclosed, already persuaded sixty-seven of the seventy property owners on Fire Island whose lands would be traversed by the parkway to donate the right-of-way, and although two of the three laggards-immensely wealthy and immensely stubborn spinster sisters named Smith—owned so much of the land needed that no public body could afford to condemn it, he was confident that they would sign up shortly. When the Legislature balked, he pointed out that the land deeded to the state by the townships was worth millions of dollars. Did the legislators propose to let it go to waste? The legislators may have considered doing so, but in 1930 the public applause for the two miles of Ocean Parkway already opened made it obvious that such a course would be unwise. During the 1931 legislative session, money was appropriated to extend the road eight miles farther through High Hill, Tobay and Gilgo beaches. The Fire Island portion of the plan had to be dropped when the Smith sisters, for undisclosed reasons, refused to donate, but Moses came up with a substitute plan extending the Ocean Parkway all the way along the Jones Beach portion of the barrier beach to Captree, and then bringing it back to the mainland on a causeway and linking it up to the Southern State Parkway with a spur parkway. There would be time to get to Fire Island later.

Editorials hailed each new Moses plan. The best proof of the universality of their appeal was furnished by Long Island, which for so long had resisted them. At the opening of Heckscher State Park, two shy little girls had been ushered onto the porch of the Taylor Mansion to present Moses with a silver loving cup donated by the East Islip Community Association, a group that had been among the most vocal of W. Kingsland Macy's supporters in Macy's battle against the park. The presentation was symbolic. Long Island's real estate men adored Moses for opening the Island to development and thus further inflating its already ballooning land values. Long Island's people had realized that they had the easiest access to the beaches he had created. A 1930 referendum in Islip Township, stronghold of the baymen and farmers, on a proposition to deed the Long Island Park Commission land on Captree to facilitate the building of the Captree causeway passed by a margin of more than three to one. Long Island politicians, fully aware now of the financial benefits that would accrue to them from Moses' plans, saw the political benefits, too. Immediately following the referendum, both Nassau and Suffolk County Boards of Supervisors spent millions condemning right-of-way for Moses' proposed parkways and presented it to him as a gift.

No Governor would want to be placed in the position of opposing so immensely popular a program—or its creator. Financing Moses' projects placed an immense strain on the state budget. In 1929, with only those announced under Smith under way, their construction, including money spent on them out of the Public Works Department budget, cost the state \$5,424,750, more than 70 percent of the entire state expenditure on construction projects in the metropolitan region, including Westchester County. And as the parks were opened, the cost of their maintenance began to be a sore point. Roosevelt was jolted by budget requests for almost a million in "per-

sonal service"—salaries—for the Long Island parks alone. Thinking of his national image, not yet aware that liberal public spending might be a way to cushion the effects of the Depression, the Governor was anxious not to give opponents the chance to portray him as a big spender. By the end of 1930, moreover, state revenues had been so slashed by the Depression that the state budget was quiveringly taut. Throughout his second term he was continually pressing his cabinet members to cut costs. There was constant friction over Moses' budget requests.

But in these battles with the Governor, Moses played the popularity that was his trump card for all it was worth. In fact, so sure was he—and he was right—that Roosevelt was afraid he would resign that he began using the technique, when Roosevelt crossed him on major issues, of threatening to do so. Resignation threats begin appearing in Moses' letters to Roosevelt in the middle of 1930; by the end of that year, he had refined the wording. In November 1930, for example, Roosevelt slashed his budget requests for appropriations in the 1931 budget and Moses wrote him: "If proposed cuts . . . stand, I do not want any responsibility for the program."

A similar threat had been strikingly ineffective when made to Ed Richards beside the swimming pool at Yale. But given the fact of his tremendous popularity, it was very effective now. Over the four years of Roosevelt's Governorship a pattern emerged. Moses would submit a budget request far higher than the previous year's; Roosevelt would cut it back almost to the level of the previous request. Moses would tell Roosevelt he would have to resign if he didn't get the funds he wanted. Roosevelt, usually through an intermediary, would back away from the fight, restoring a substantial portion of the cut.

The Legislature was frantic. In 1928, Moses had assured them that the cost of the Ocean Parkway's initial two-mile stretch would be \$3,150,000. They had allocated the money, and in 1929 he showed up before them again. The \$3,150,000 had been spent, he said, but he had neglected to tell them that the cost of paving the parkway would be extra—\$850,000 extra. But they had been trapped. The hydraulic fill for the road had been dredged, the right-of-way graded, the surveying completed, the plans drawn. The \$3,150,000 had been spent. Were they now to waste this money by refusing funds to complete the job? Cut as the legislators would, and they always cut, the amount of the annual allocation to the Long Island Park Commission rose steadily, from \$3,150,000 in the last year of Smith's regime to \$4,000,000 in 1929, \$4,700,000 in 1930 and \$5,700,000 in 1931. By stake driving and whipsawing, Robert Moses was getting what he wanted from them.

And the projects moved forward. In 1931, the Southern State Parkway was extended from Wantagh to Massapequa, in 1932, from Massapequa to Amityville—the public marveled at the fact that there was a route clear across Nassau County without a single traffic light or intersection. Park facilities were constantly being expanded. A new bathhouse, chlorination plant and playground were built at Valley Stream State Park; ten tennis courts, a miniature golf links and a bridle path at Hempstead Lake; a whole

new bathing beach and a spacious stone bathhouse at Heckscher; a causeway to open up new portions of the beach at Sunken Meadow; a loop drive at Montauk Point. And the picnic tables, campfire sites and acres of new parking fields mounted by the hundreds. Some measure of the scope of Moses' achievement is afforded by attendance figures. The number of visits to the Long Island state parks approximated 3,000,000 in 1930; the total number of visits to all national parks in the United States in that year was 3,400,000.

More than not opposing such a program, a Governor would want to be identified with it.

Roosevelt was not present at the first two opening ceremonies Moses staged during his administration, the plaque unveiling at Heckscher State Park and a ribbon cutting on Southern State Parkway. The state representative was Lieutenant Governor Lehman, and at least one source says that the reason was that Moses, to teach Roosevelt a lesson, invited Lehman instead of him. But after a working relationship was evolved between Moses and Roosevelt, all that changed.

When the Jones Beach opening ceremonies were held, Roosevelt was there, having been wheeled up on the boardwalk on a ramp Moses had thought to have constructed. When it came time, during the gubernatorialelection-year summer of 1930, to mortar into place the cornerstone for the West Bathhouse, it was Roosevelt who was invited to wield the troweland to tell 75,000 cheering onlookers that the building, which he said would cost \$600,000, "would help insure health and happiness" for generations of New Yorkers. Moses also invited the Governor to tour all the Long Island parks. The tour was staged on a Sunday, and the Monday papers were full of pictures of the Governor smiling out over the picnickers at Valley Stream and Hempstead Lake. When he arrived at Heckscher State Park, where bathers had been complaining about overcrowding in the bathhouse, Moses even let him be the one to announce (to cheers and applause) that ground would be broken for a new one by the end of the summer. It was the kind of publicity that money can't buy. Roosevelt was so pleased that, in his speeches, he called Moses "Bob."

In 1931, Moses invited Roosevelt to lay the cornerstone for the monument marking the start of the Northern State Parkway and afterward Moses' limousine led the Governor's to Jones Beach, for lunch in the balcony restaurant in the new bathhouse the construction of which had officially begun the year before. The attendance at Jones Beach that day was 100,000, and as word spread that Roosevelt was present, a great sea of faces pressed close to the restaurant. When the Governor, moved, made his way to a balcony over the bathhouse swimming pool for an impromptu talk, the bathers in the pool shouted happily up at him and cheered. Jones Beach had been an expensive development, the Governor shouted back to them, but "it was the best money the state ever spent." If he recalled in that moment of euphoria that the bathhouse on whose balcony he was standing had cost \$1,000,000 instead of the \$600,000 he had been told it would a year earlier, he did not mention the discrepancy.

Al Smith was present at every dedication, too—as long as Smith lived,

Moses would never hold a cornerstone laying, a ribbon cutting, or any public ceremony of any type anywhere in the state without inviting the "Governor" and offering him a prominent spot on the program—but Roosevelt couldn't even bridle at this. There was, in regard to the Long Island park system, more than enough credit to go around.

Moses was fond of repeating at this time a quote often used in Albany. "You can get an awful lot of good done in the world if you're willing to let someone else take the credit for it." Certainly Moses was willing at least to share the credit for the work he had done with the man he needed if he was to get more done.

And if accomplishment, and willingness to share the credit for that accomplishment, was part of the explanation for the increase in Moses' power under a Governor who had no inclination to increase it, the accomplishment helped explain this contradiction in other ways, too.

One way is that no Governor could sit in the Executive Chamber long without discovering just how hard—how incredibly hard—it was, even for a Governor, to get things, big things, done. No Governor, having made this discovery, could look at what Robert Moses had gotten done without being impressed, without feeling admiration for his ability, without a recognition of his extraordinary capacity as a public servant. And the proof of this is that through some of the letters and memos written to Moses by Roosevelt during the last two years of his four-year gubernatorial regime, through letters and memos interspersed with others in which irritation and even rage are only thinly glossed over—for Roosevelt's personal animosity toward Moses never lessened—there runs a tone that is unmistakably respect.

Another way is that accomplishment proves the potential for more accomplishment. The man who gets things done once can get things done again. And the potential for accomplishment has very strong political connotations indeed. For political, if not personal, reasons, Roosevelt wanted needed—to get things done. Furthermore, he was trapped, as all politicians in elected executive offices are trapped, by the inexorable equation of democracy and public works. Elections come every two years, or four, and the official who wants re-election needs a record of accomplishment on which to run. Such a record, in the America of the first half of the twentieth century (and perhaps in the America of the second half of the twentieth century, too), from a political standpoint should be most ideally a record of public works and it has to be a record of public works completed-roads opened, bridges built, housing-project apartments occupied, bathhouses crowded with bathers, parks in which the happy shouts of children fill the ear and not just the imagination. It is no good still to be laying cornerstones on Election Day. By then, a public official in executive office must have ribbons he can cut, monuments to which he can point with pride. This is a requirement established by democracy as it has evolved in America, yet the realities of the democratic process in America make it almost impossible to get a road, a bridge, a housing project, a bathhouse or a park approved and built in two years—or four. The Governor who finds a man who can inject into the democracy-public works equation a factor of personality so heavy as to unbalance it and get public works built during the span of a single term of office has little choice, if he is ambitious for political success, but to heap on that man more and more responsibilities, even though the giving of responsibilities carries with it the grant of more power.

In this context, moreover, Moses' arrogance toward opposition was an asset rather than a liability to an elected official. Almost all public works arouse some opposition—roads require land, and some of the citizens from whom the land must be taken do not want it taken—and if the opposition is directed at an elected official, it can be translated into votes against him the next time his name appears on a ballot. But by leaping to deal with opposition himself, and by dealing with it in a way that antagonized the opposition, Moses made himself a lightning rod, drawing the anger at the project onto himself and leaving the elected official unscathed. The official therefore could bask in the credit—at least some of the credit—from the majority of voters, who until the 1960's worshipped public works projects in and for themselves, while escaping the wrath of the minority who opposed it.

In 1930, the president of the Valley Stream Chamber of Commerce asked Roosevelt to inspect the worst grade-crossing problem on Long Island, a spot in the center of the village. Roosevelt agreed, and when his limousine was surrounded by a large crowd of local businessmen and one handed him a petition to Public Service Commission Chairman Milo Maltbie demanding immediate action, Roosevelt, in a grandstand gesture, signed the petition himself.

The gesture showed Roosevelt's gift for public relations, but, having made it, the Governor now had to provide some action—difficult to do because the engineering problems involved were incredibly complex and the railroad had threatened to tie the whole matter up in court for years if the state attempted to force a solution on it.

Having played the ham, Roosevelt needed someone to pull his eggs out of the fire. He selected Moses, who made it very clear that he was doing the job only as a favor. Nonetheless, his first glance at the problem produced a solution. Maltbie turned it down. But when Moses wrote Roosevelt, "Under the circumstances, I must ask to be relieved of any further responsibility," the Governor hastily interceded with Maltbie—and Moses' solution was adopted, immediately eased the traffic situation and brought praise to Roosevelt for "solving" the problem.

No Governor would interfere with an official who could thus spectacularly achieve on his behalf. He wouldn't interfere even when the official actually tried to strangle a colleague.

The incident occurred in Moses' office in the State Parks Council suite. Moses was presiding over a meeting of the council's finance committee when Raymond H. Torrey walked into the room.

Torrey, a pudgy little man, a bird watcher, hiker and lover of the deep woods who spent weekends building lean-tos on Adirondack trails so that other hikers would have shelter, had long been a symbol of frustration to Moses. His very presence in the Parks Council offices was a reminder to Moses that his control of that body, while substantial, was not total. Torrey

had long been secretary of the American Scenic and Historic Preservation Society, whose trustees had long been ashamed that they could not afford to pay him an adequate salary, and in the days of the Taylor Estate fight, when Moses had so desperately needed the help of the society's park patriots, he had sought to cultivate them by naming Torrey secretary of the Parks Council at a salary of \$6,000 per year. After the fight, when Moses, not needing them any more, was scourging the patriots out of their parks and trying to wrest Letchworth Park from the society's control, he had reduced Torrey's salary as much as civil service laws allowed and made his title a meaningless one by giving his responsibilities to his "assistant," Henry Lutz. But civil service laws prevented Moses from firing Torrey and he was a constant reminder that the society still had some say in Letchworth's administration.

Torrey had proven a thorn in Moses' side in other ways, too. He saw the fight over the Northern State Parkway route through the eyes of the dedicated conservationist; familiar—more familiar perhaps than any other man—with the beauties of the North Shore's glacial moraine, he didn't want a highway, no matter how beautifully landscaped, to run along it. When a newspaper article appeared supporting this view, Torrey reprinted it in the society's monthly newsletter.

On September 12, 1929, Moses learned that Torrey had provided information about Parks Council proceedings on the parkway route to Grenville Clark, the attorney for the North Shore barons, from whom Moses had been attempting to hide his maneuvering. He left word that Torrey should report to his office as soon as he came in. Torrey did so, walking in on the finance committee meeting.

Cursing, his face alternately paling and purpling with rage, Moses began to heap abuse on Torrey. Torrey said that the information he had given Clark was information to which any member of the public was entitled. Moses then launched into a tirade about the reprinting of the newspaper article in the society newsletter. Torrey said that Moses had no right to tell him what he could print.

"God damn you!" Moses shouted. "What do you mean by doing something like that?"

Torrey was mild-mannered, almost invariably soft-spoken. And among his closest friends were Jewish social workers from the Lower East Side settlement houses. "I have endured many verbal assaults from Mr. Moses, and said little, because he is bigger than I am, and because we [the society] have been almost alone in the council in our defense against his aggressions," Torrey was to write. But "his manner and curses irritated me on this occasion beyond further restraint, and I retorted: 'You big noisy kike, you can't talk to me like that.'"

Lunging from his chair, Moses seized Torrey's throat and began choking him. So violent was his rage that when finance committee member Jay Downer tried to pull Moses off, he was at first unable to do so and had to exert all his strength to pry loose first one of Moses' hands and then the other.

As he freed Torrey, Downer grabbed Moses around the waist to hold him and told the smaller man to get away. But as Torrey headed for the door, Moses broke free, picked up a heavy smoking stand and match holder, three-foot steel base and all, and, shouting "You goddamned son of a bitch," hurled it at him. Only the fact that another committee member, DeHart Ames, grabbed Moses' arm as he was letting go the heavy missile made it fall short.

Recounting the incident in a letter to Roosevelt, Torrey said, "I was, of course, at fault for using 'kike,' " but added that Moses' conduct was only one example of his "truculence and violence against anyone who opposes him." Under Moses' control, Torrey wrote, "the Council has lost its original character, as an advisory body of eminent citizens, working amicably together, and has become a vehicle for securing advantages for Moses, for granting favors for his supporters, and for supporting his hostility to any who oppose him." He asked Roosevelt to limit Moses' powers. When the Governor did not reply, Torrey gave his letter to the press. But Moses was not at all abashed. His only regret, he said, was that he had not been permitted to "finish that crackpot." And Roosevelt, pressed for comment by reporters, would say only, "It is a matter for the State Council of Parks and I do not figure in it." The only result of Moses' assault was that Torrey resigned, allowing Moses to appoint Henry Lutz to his place, and the trustees of the American Scenic and Historic Preservation Society, realizing that their conflict with Moses had reached an intolerable pass and that they could not win, in 1930 gave up the society's control of Letchworth Park and its place on the Parks Council, thereby making Moses' control of that body absolute.

Roosevelt wouldn't interfere even when he found out that Moses was discouraging Negroes from using many of his state parks.

Underlying Moses' strikingly strict policing for cleanliness in his parks was, Frances Perkins realized with "shock," deep distaste for the public that was using them. "He doesn't love the people," she was to say. "It used to shock me because he was doing all these things for the welfare of the people. . . . He'd denounce the common people terribly. To him they were lousy, dirty people, throwing bottles all over Jones Beach. 'I'll get them! I'll teach them!' . . . He loves the public, but not as people. The public is just the public. It's a great amorphous mass to him; it needs to be bathed, it needs to be aired, it needs recreation, but not for personal reasons—just to make it a better public." Now he began taking measures to limit use of his parks. He had restricted the use of state parks by poor and lower-middle-class families in the first place, by limiting access to the parks by rapid transit; he had vetoed the Long Island Rail Road's proposed construction of a branch spur to Jones Beach for this reason. Now he began to limit access by buses; he instructed Shapiro to build the bridges across his new parkways low-too low for buses to pass. Bus trips therefore had to be made on local roads, making the trips discouragingly long and arduous. For Negroes, whom he considered inherently "dirty," there were further measures. Buses needed permits to enter state parks; buses chartered by Negro groups found it very difficult

to obtain permits, particularly to Moses' beloved Jones Beach; most were shunted to parks many miles further out on Long Island. And even in these parks, buses carrying Negro groups were shunted to the furthest reaches of the parking areas. And Negroes were discouraged from using "white" beach areas—the best beaches—by a system Shapiro calls "flagging"; the handful of Negro lifeguards (there were only a handful of Negro employees among the thousands employed by the Long Island State Park Commission) were all stationed at distant, least developed beaches. Moses was convinced that Negroes did not like cold water; the temperature at the pool at Jones Beach was deliberately icy to keep Negroes out. When Negro civic groups from the hot New York City slums began to complain about this treatment, Roosevelt ordered an investigation and an aide confirmed that "Bob Moses is seeking to discourage large Negro parties from picnicking at Jones Beach, attempting to divert them to some other of the state parks." Roosevelt gingerly raised the matter with Moses, who denied the charge violently-and the Governor never raised the matter again.

Roosevelt wouldn't interfere even when Moses (ostensibly to raise money for soaring park maintenance costs) further limited park use by the poor by instituting parking fees at all state parks, fifty cents at Jones Beach, twenty-five at the rest, in violation of the American tradition of free parks.

There was a flood of letters to Roosevelt from Depression-impoverished citizens who said that they had to scrimp to get enough money for the gas to drive to the park, and that the extra quarter would be the straw that would sometimes make it impossible for them to afford the outing. Moses had announced that in some parks "there will be free parking space for those unable to pay . . . somewhat remote from the center." This, protesters said, would only make poor families pay a toll in pride instead of coin. "Who would wish to be classed among those 'unable to pay'?" one asked. "To come walking in from the remote parking fields would be to exhibit the badge of poverty." Roosevelt wrote Moses: "I was a good deal impressed by the complaint . . . I also think fifty cents is too high . . . Frankly, I think the people have a legitimate kick. Won't you seriously take up the question of reducing the Jones Beach charge?"

No, Moses said, he wouldn't. And when Roosevelt pressed again, he brought out his resignation threat. Reducing the charge would force him to reduce Jones Beach maintenance standards, he said. "The entire character of the place would be changed," and if it was, "I do not care to be associated . . ." Roosevelt may have felt that "the people have a legitimate kick," but in the face of such a defense, the Governor punted. Not only did he drop his own request for reconsideration; when the Legislature passed a bill prohibiting fees in state parks, he vetoed it.

Not only does a Governor not interfere with an official like Robert Moses; he heaps on him more and more responsibilities. No matter what the job was, it seemed, if it was difficult Roosevelt turned to the same man. During 1930, 1931 and 1932, Moses handled more than a dozen special assignments for Roosevelt and produced results on every one. And if increasing Moses' responsibilities meant increasing his power—giving him

more money to work with, more engineers, architects, draftsmen and police to work with—well, the Governor simply had no choice but to increase that power.

By 1932, with the Governor, running for President, less able than ever to afford a public controversy in his own state with so popular a figure, if one of the two characters in the Moses-Roosevelt drama was dominant, it was not the Governor but his appointee. The hatred between Roosevelt and Moses flared up only occasionally during the four years that the former spent in the Executive Chamber in Albany. But that passion—and the desire for revenge that it engendered—was only banked, not extinguished, and it never stopped smoldering. It was to blaze up into the open later, when Roosevelt was President.

But Roosevelt was not President yet. And he could not yet afford to indulge such a passion. In his dealings with Moses during his gubernatorial years, necessity was the mother of accommodation.

The uniqueness of Moses' relationship to the Governor of whose administration he was at least nominally a member was emphasized when Al Smith finally decided to run against him for the Democratic presidential nomination. Moses calmly informed Roosevelt that he would be taking a few weeks off—to work for Roosevelt's opponent.

The Happy Warrior's last campaign was born, and was to die, in unrelieved bitterness.

Smith had plenty to be bitter about. Roosevelt's systematic—and pointed—disregard of his predecessor had continued. Smith could not reconcile himself to the fact that the younger man, of whom he had been so fond and to whom he had given the gubernatorial nomination, had turned on him. Friends who visited him in New York found that Roosevelt was becoming almost an obsession with him. "Do you know, by God, that he has never consulted me about a damn thing since he has been Governor?" he said to one. "He has taken bad advice from sources not friendly to me. He has ignored me!"

And Roosevelt was not the only younger man who had treated Smith with ingratitude. The treatment he had received from Jimmy Walker had wounded him even more deeply. At the request of Walker's father, an old friend, he had taken Walker under his wing when the young legislator had first come to Albany, rooming with him, steering him up the legislative ladder, helping him time and again out of the scandals in which he was constantly becoming embroiled because of his drinking, his compulsive philandering and his inability to pay attention to the job to which he had been elected. When Smith determined in 1925 to oust Hylan from the mayoralty, Walker had asked Smith to make him Hylan's successor. Smith had told Walker frankly that he felt too worried about his playboy antics to do so. Walker had tricked him into changing his mind. He disappeared completely from the night spots that were his usual haunts and began to be seen in more respectable establishments with his wife. When he told Smith

he was on the wagon for good, Smith secured him the nomination. But what Smith didn't know was that Walker had been engaging in all his old activities, but had been doing so in a secluded penthouse rented for him by a friend who had reasons of his own for wanting Beau James to be Mayor. Safely installed in City Hall, Walker had shipped his wife off to Miami for an extended vacation, returned to his public habits—and when Smith had left the Governorship and lost power, Walker had begun ousting Smith's friends from key city posts to make way for his own men, called by one observer "the worst element in Tammany Hall." Then Walker began taking over the Hall. Smith could have stopped him but, determined to stay out of politics, he disdained to do so. When he realized the depth of the corruption pervading city government, he tried to reassert his authority, but by then it was too late. Walker was even able to force out Smith's man, Judge George W. Olvany, as Tammany leader, with Olvany attempting to save face by "resigning" because of "ill health." And then Walker publicly humiliated Smith. At the annual dinner of the Inner Circle, the press-room regulars at City Hall, Walker paused during his speech, turned to Olvany, and with a glance at Smith that no one in the room missed, said, "How's your health, George?" The reporters laughed, and Smith knew they were laughing at him as much as at Olvany. And when Walker hand-picked Olvany's successor, he chose Smith's enemy, John F. Curry. There was no place left for Smith in the party he had loved and led.

All through 1931, Smith refused to run for the presidency. One by one, the state's key Democrats, Farley and Flynn notable among them, came to him and said that Roosevelt was asking them to join his campaign but that their first loyalty was to Smith; all he had to do was ask them to stick with him and they would do so. And all through 1931, Smith told them that he would never be a candidate for the presidency and that they were free to join Roosevelt, which they did.

But in early 1932, Smith's bitterness spilled over. His intimates would long debate whether Smith entered the presidential race because he wanted the nomination himself or because he wanted to deny it to the man who had treated him so cavalierly. Probably both elements were mixed. Certainly, Smith was motivated by personal ambition: in 1932, he was, after all, only fifty-eight years old, still vigorous and bored with the life of a businessman. He was motivated also by the fact that the Depression made election of the Democratic candidate, even a Catholic Democratic candidate, a virtual certainty, and he desperately wanted to prove that being a Catholic and an Irishman did not disqualify a man from the presidency. One visitor, listening to Smith recount how it had been the religious issue that had defeated him in 1928, said, "He felt so terribly hurt, so outraged by that, and the point that he was making was that having been defeated on that issue in a year in which he was bound to be defeated, everybody, including FDR, should have stood aside to let him have the nomination in a year in which he could have been elected! He was very much wrought up about it, he pounded his fists and his voice got loud. He shouted at times in that conversation." But no consideration was stronger than Smith's feelings toward

Roosevelt in pushing him at the last moment into a race foredoomed by the fact that Roosevelt had a four-year head start.

Moses saw at once that the effort was hopeless. "The Smith movement never had a chance," he was to recall. "It started very late, and really had no organization to speak of." He never let himself be deluded by those reminders of past glories which gave Belle Moskowitz, Henry Moskowitz, Judge Proskauer, Herbert Bayard Swope and George McLaughlin flashes of hope: the rallying of Walker and Tammany to Smith's side after Roosevelt had authorized Samuel Seabury to investigate corruption in New York City; the defection to Smith's banner of big-city organizations and the consequent raising of his delegate count to 201; the wild cheers of the tremendous throng that lined his route from the La Salle Street Station in Chicago to the Congress Hotel, where a Smith-for-President headquarters had been hastily established. But practical realities did not weigh with Moses where Al Smith was concerned. Moses was one of those who struggled to the end in convention maneuvering so bitter that Ed Flynn called it "a fight to the death," who fought to hold together an alliance of dark horses that denied Roosevelt the nomination until the fourth ballot, who thought for a few brief hours that they actually had Roosevelt stopped and would be able to force the party to turn to Smith, and whose hopes were finally dashed when the ex-Governor's old adversary, William Randolph Hearst, used his influence with California's William G. McAdoo and John Nance Garner, Governor of Texas, to force the California and Texas delegations to switch to Roosevelt. Moses was one of the small group of friends who sat down with Smith in front of a radio in the Congress Hotel to listen to the last ballot, who watched the former Governor haul himself wearily out of his chair as soon as McAdoo began the speech that signaled the California switch and with a wave of his hand direct them to start packing so they could leave Chicago. He was one of those who sneaked out of the Congress Hotel by a side door with Smith at the moment that crowds were jamming the front entrance to greet the arriving Roosevelt, who listened to the ex-Governor, cornered by reporters, refuse to say he would support his party's choice and who watched anxiously as Smith sat silent on the long train ride home with his face marked by what one observer called a "tired sadness." And if Moses accepted Smith's defeat with his mind, he never accepted it with his heart. A month after the convention, with "Happy Days Are Here Again" drowning out the strains of "The Sidewalks of New York" forever in the Democratic Party's consciousness, Smith's campaign staff held its first and only reunion, complete with a menu featuring "Nuts McAdoo," "Celery Farley" and "Branchless Olives Roosevelt" in the Empire State Club in the Empire State Building. And Moses' contribution to the occasion reflected his bitterness. It was a quotation from Shakespeare that he selected for an epigraph on the menu's cover:

Politics is a thieves' game.

Those who stay in it long enough are invariably robbed.

## 18. New York City Before Robert Moses

Now ROBERT Moses' EYES were turning again to the city around which, as a youth, he had wandered "burning up" with ideas for its improvement.

Nowhere had America's Great Depression struck harder than in America's greatest city.

New York in 1932 was half-completed skyscrapers, work on them long since halted for the lack of funds, that glared down on the city from glassless windows. It was housewives scavenging for vegetables under pushcarts. It was crowds gathering at garbage dumps in Riverside Park and swarming onto them every time a new load was deposited, digging through the piles with sticks or hands in hopes of finding bits of food. New York was the soup kitchens operated from the back of army trucks in Times Square. It was the men, some of them wearing Chesterfield coats and homburgs, who lined up at the soup kitchens with drooping shoulders and eyes that never looked up from the sidewalk. New York was the breadline, "the worm that walks like a man."

New York was the postman handing you the registered letter that you both knew was the eviction notice. It was the long queues that formed in the early afternoon at the Municipal Lodging Houses, and it was the desperate haste of the men turned away to get to one of the nearby bars which allowed customers who purchased even a single drink to sleep on the floor as long as there was space. Subways were truly for sleeping, and when patrolmen walked along station platforms rapping on soles, the men lying there arose without a protest, carefully gathering up their pallets of newspapers, shuffled onto a train and rode to the next station, where they spread their papers and lay down again.

More than 10,000 of New York's 29,000 manufacturing firms had closed their doors. Nearly one of every three employables in the city had lost his job. An estimated 1,600,000 New Yorkers were receiving some form of public relief. Many of those fortunates who had kept their jobs were "underemployed," a euphemism for the fact that they worked two or three days a week or two weeks a month—or, if they worked full time, were paid a fraction of their former salaries; stenographers, earning \$35 to \$40 per

week in 1928, were averaging \$16 in 1933; Woolworth's was paying full-time salesladies \$7 per week.

Parents skimped for their children—by December 1932 many parents could hardly remember a time when they hadn't been skimping—but skimping was only forestalling the inevitable. There was meat on the table twice a week and then once—and then not at all. Then there were no eggs. Parents could make their children feel it was an honor that they didn't have to drink milk any more and could drink coffee instead, but the lack of proper diet took a toll. "Looking back, we can see quite a change," said one schoolteacher. "The children haven't any pep; they don't seem like the same youngsters they were a year ago." They seemed tired; they didn't seem to learn as fast. Said a school nurse: "When you go into a classroom you notice a different expression on [their] faces. . . . There is a strained, anxious look not natural in children at all."

Sometimes the things that outsiders didn't see were worst of all. Teachers didn't see the children whose families were poorest; such children had dropped out of school because they had no money for carfare, lunches or suitable clothes. Staffers at the city's free health clinics were encouraged by the fact that the number of malnutrition cases they handled was rising only gradually (although by 1934 such cases nevertheless would account for 60 percent of all clinic work). Then the staffers realized that many people suffering from malnutrition simply weren't going to the clinics because they knew perfectly well what was wrong with them—and also knew that they would be unable to do anything about it. And no one could see a state of mind; all one could do was try to describe it, as Martha Gellhorn did: "Everywhere there seemed a spreading listlessness, a whipped feeling. . . . I find them all in the same shape—fear, fear . . . an overpowering terror of the future."

The city's government did little to help its people.

The will to help was not the force that drove that government. That force was greed. During the fifteen years in which Red Mike Hylan and then Beau James Walker had been Chief Magistrate of America's greatest city, the Tammany leaders who served under them had seemed motivated primarily by the desire to siphon the city's vast resources into a vast trough on which they could batten.

Former Judge Samuel Seabury's invesigation of corruption in the city, which had begun in 1930, had revealed how successfully this siphoning had been accomplished, exposing the bank accounts, running into the hundreds of thousands of dollars, of literally dozens of city officials, who followed one another to the witness stand in a seemingly endless procession that was dubbed "The Tin Box Parade" after one testified that he had found \$360,000 in his home in "a tin box . . . a wonderful tin box." Then Seabury turned to the Magistrates Courts. Witnesses revealed that hundreds of innocent housewives and working girls had been framed as prostitutes and, if they could not raise the cash to buy their freedom, had been jailed, sometimes for months, by a

cabal of crooked vice-squad policemen, court clerks and magistrates. Shocked by the strangling in Van Cortlandt Park of one scheduled female witness her teen-age daughter committed suicide a week later—the city listened in horror to the others Seabury paraded to the stand. One told of helping vicesquad patrolmen trail a young married woman as she inspected houses with a male real estate agent. When they had returned to her home and were waiting for her husband to arrive and conclude the transaction, the police broke in, frightened the real estate agent out of testifying and arrested her. Other witnesses testified that, when business was slow, the vice squad simply "raided" flats in Negro Harlem and made wholesale arrests at random. When Mayor Walker took the stand-"Don't look him straight in the eye," warned a Seabury aide familiar with Beau James's charm, and the former judge stood sideways to Walker as much as possible while questioning him—Seabury revealed that the Mayor had personally accepted more than a million dollars in "beneficences" from firms doing business with the city. On September 1, 1932, while Governor Roosevelt was pondering whether or not to remove Walker from office, the Mayor resigned and sailed for Europe to join Betty ("Monk") Compton, last and loveliest of his paramours, thereby following a traveling precedent established by Robert C. Van Wyck, the first mayor (1898-1901) of the consolidated city, who had died in Paris, and the man who had hand-picked Van Wyck for the job, Tammany boss Richard Croker, who had died in England. Surrogate John Patrick O'Brien won the special election to fill the remaining year of Walker's term, but he proved to be as much a creature of Tammany as his predecessors. While Tammany leaders were trying to persuade the electorate that they had no control over him, O'Brien was replying to reporters who asked him who his Police Commissioner would be, "I don't know. They haven't told me yet." And during O'Brien's administration local Tammany relief administrators would siphon off a big chunk of federal relief payments before they reached their intended recipients—and the city would continue to do nothing to supplement federal programs, although a supplement would have been helpful, since federal payments averaged seventeen dollars per week per family. Tammany would try to use federal payments to build its political power, putting ward heelers on relief payrolls under several different names so that they could draw several salaries for themselves. And the federal payrolls did not show whether the men receiving its money were the men who most needed it. In New York City under Tammany Hall, the test for employment on a federal project was generally politics rather than need; most applicants had to be cleared by their local Tammany leader; one leader boasted, "This is how we make Democrats."

Even had the city wanted to help its people, it would have been unable to. The Depression had forced New York to total up at last the cost of its Rake's Progress under the Hylan and Walker administrations.

When Hylan became mayor of New York on January 1, 1918, the city's population was 5,872,143. Fifteen years later, when Walker resigned, it

was 6,930,446—an increase of 15 percent. During that same period, the city's budget rose from \$240,519,858 to \$631,366,298—an increase of 250 percent. The per capita cost of the budget increased by 200 percent. Year in and year out between January 1, 1918, and December 31, 1932, the city's debt increased at a rate equal to \$100,000 per day, until, on the latter date, it had reached the staggering total of \$1,897,481,478—a figure that was almost equal to the combined debt of the forty-eight states and that required an annual appropriation for debt service (the payment of interest and amortization) of \$209,960,338, almost a third of the entire budget.

Since jobs were the fuel of Tammany's political machine, a disproportionate share of the rest of the budget went to purchase that fuel; between the day Hylan entered office and the day Walker left it, the number of city employees almost doubled, and their salaries, paid as political rewards at levels far above those paid for similar work in private industry, almost tripled. In 1932, they totaled \$311,937,199.

City officials acted as if they believed that the budgetary gyre could go on widening indefinitely. They based their optimism on the fact that the value of taxable real estate in the city, the base of the city's tax structure, was increasing almost as fast as city expenditures. As a result, even while the city's budget soared, there was only a slight increase in the real estate tax rate. If the Hylan and Walker administrations had erected a huge superstructure of city expenditures, that superstructure was nonetheless resting on a base that they thought was steadily broadening.

Even before the Depression, however, the rate of increase in the base had begun to slow down ominously. The annual percentage of increase in the value of taxable real estate in the city was 12 in 1927 but only 9 in 1928 and 8 in 1929. The Depression forced this key percentage down to 6 in 1930, 3 in 1931, 1 in 1932. And the Depression forced up another key percentage, the percentage of real estate taxes which the city was unable to collect; in the years between 1928 and 1932 this percentage was, successively, 11, 13, 15, 18, 26. The uncollected balance of the 1932 real estate tax, the tax which had to finance the bulk of the city's debt service and current expenditures, was \$137,613,213. The base on which the top-heavy superstructure of city finances teetered was shrinking, and it was shrinking fast. The superstructure began to topple.

In desperation the city deferred its required annual payments to the Teachers Retirement Fund and expropriated Sinking Fund surpluses already obligated for small-scale public improvements. Unable despite these expedients to meet even its ordinary day-to-day expenses, it was forced to borrow to pay them—at interest rates set higher and higher by bankers increasingly leery of the city's ability to repay. By 1931, even Jimmy Walker was talking about "economizing."

But the city's economizing capacity was limited because one-third of its budget was allocated for an all but irreducible debt service and because of political realities: the city payroll had become the payroll of the Tammany political machine, and while a city might reduce the number of its employees or their salaries, it was less easy for a political machine to throw its retainers off the payroll or substantially reduce their stipends. City construction contracts had become the main ingredient of the rich swill of graft to which the palate of Tammany leaders—including those party leaders who held high city office—had become accustomed; city officials could reduce a city's appropriations for construction, but men accustomed to feeding at a well-filled trough were far less ready to reduce their own portions. Even while talking economy, city officials made clear that they would not economize on construction appropriations or salaries. (There was one exception: one group of city employees—schoolteachers—were not part of the Tammany machine. In 1930 and 1931, the city fired 11,000 schoolteachers.) The 1932 city budget was the highest ever. The city proposed to finance it with a record increase in the real estate tax rate.

But the day of reckoning for fifteen years of Tammany rule was at hand. When, in January 1932, the city attempted to float new loans to meet the payroll coming due at the end of the month, bankers, convinced that the loans could not be repaid if the city spent money during the coming year at the rate it proposed, refused to make them unless the budget was reduced. The city complied by virtually halting all repairs to its physical plant. It refinanced a quarter-billion dollars of subway bonds, which the city had planned to redeem out of current revenues, by selling long-term bonds in their stead—an expedient which loaded future generations of city taxpayers with a monstrous rapid-transit debt.

Still the city's balance sheet reddened. By December 1932, it was forced to go hat in hand to the bankers again, and when new loans were made contingent on further budget reductions, it had no choice but to cut the salaries of city employees by 6 to 33 percent. And hundreds of millions of dollars in short-term revenue notes would be coming due in 1933 and there was no money in sight to pay them.

Although Walker and O'Brien attempted to do so, it was a misleading oversimplification to blame the Depression for all of New York's problems. The truth was that the city had been falling further and further behind in the race to meet the needs of its people in good times as well as bad, and under reform as well as Tammany administrations.

The city's failure was most apparent, and the problems largest, in those categories of municipal responsibility in which the betterment of its people's lives required the construction of public works on a scale commensurate with the city's size. The concern of the people's tribunes during the Low and Mitchel reform administrations had been for the people's welfare, but that welfare had been conceived of primarily as a lessening of the burden on taxpayers through governmental economy rather than through the construction of civic improvements whose cost would increase that burden. And while Tammany administrations had spent the taxpayers' money with a lavish hand, the taxpayers had received in return surprisingly little increment in

life-improving steel and concrete, because the disproportionate amount of the city's budget funneled by Tammany into salaries—into patronage—left little money available for construction contract appropriations.

The quality of men added to the city payroll, moreover, did not match the quantity, thanks to Hylan's destruction of civil service safeguards. If there was a man less devoted to the merit system than Red Mike, it was his successor; when Beau James departed for Europe, he left behind him, on the rosters of the engineering staffs of the borough presidents, the staffs which alone under the existing City Charter were empowered to draw the plans for major public improvements, a group of "engineers" of whom a substantial percentage lacked a high school diploma. And the city's resultant lack of technical expertise crippled its ability to carry out, or even conceive, complicated public works.

So did the amount of graft, the grease which kept the Tammany machine moving smoothly. From condemnation awards—"Every time the city built a school, a politician went into the real estate business," La Guardia growled —to certificates of completion, every step toward a public improvement required a payoff. Since contractors had to include the cost of such payoffs in their estimates of the cost of city construction work, their bids had to be inflated accordingly. The amount of steel and concrete that a city dollar purchased was correspondingly reduced, and the size of contracts the city awarded was not matched by improvements to the civic estate. "The city did not get what it paid for," commented Fusion financial expert Joseph D. McGoldrick. "Although it certainly paid for what it got"—several times over. For its single major public improvement, the construction of the Independent Subway System, the Walker administration paid \$800,000,000—approximately twice what outside experts said the job should have cost. And when the \$800,000,000 had been spent, substantial portions of the subway were still uncompleted.

And since the hands which city inspectors held out, palms up, to contractors could not easily be doubled into hard fists of regulation, the quality of public works in New York City was more than slightly suspect. No fewer than forty public schools constructed during Walker's administration had to be closed for major repairs—for ceilings that fell, roofs that leaked, stairways that collapsed and plumbing that didn't work at all—within a year of opening.

The gap between the city's physical plant and the increasing needs of its expanding population had, then, been widening in virtually all areas of municipal responsibility. The total accomplishment of the Walker administration in public housing, for example, consisted of the rehabilitation of some of the tenements on one block, and the number of public hospital beds when Beau James left office was precisely the same as when he entered it. But because of the sudden burgeoning in the use of the automobile and in the desire for active recreation, the city's failure to produce for its people was especially galling in precisely those areas in which Robert Moses had already produced, just outside New York City, so much: highways, bridges and parks.

New York was strangling on its traffic. In 1918, when Hylan took

office, there were 125,101 motor vehicles in the city; in 1932, there were 790,173. In all those fifteen years not a single usable mile of arterial highway had been constructed within the city's borders. Motorists were forced to travel through or around New York in 1932 on the same local streets that had existed in 1918, streets complete with intersecting traffic, traffic lights—and traffic jams reporters had long since run out of adjectives attempting to describe.

In 1913, Robert Moses had stood on a high bluff overlooking the muddy wasteland that was Riverside Park and had envisioned a great parkway running through it. In 1932, there was still no highway. The city had begun construction in 1927 of a West Side Elevated Highway running along the waterfront from the Battery as far uptown as Seventy-second Street, the park's southern border. But the pace of construction had been so slow that, when the Depression brought it to a halt in 1931, substantial portions of the highway had not been built—not that that mattered much, since neither had the entrance and exit ramps that would make it usable. And since there were no plans to extend the highway through Riverside Park, motorists heading for Westchester and New England still had to make their way through—and add to—the congenital traffic jams of Manhattan and the Bronx before they could reach the broad Saw Mill River Parkway, which Moses had built down to the city line.

Queens had once been the only borough with adequate through roads. Manhattan families heading for Nassau and Suffolk counties, once past the East River bridges, had not encountered serious delays until they reached the city line and the narrow roads beyond. But with the construction beyond the line of Moses' parks and parkways, the situation was now reversed; the lure of his creations had steadily increased the traffic flow through Queens, and its boulevards were inadequate to handle it. Furthermore, none of the boulevards linked up with a parkway, so drivers wanting to use one had to endure local streets before they got to it.

As for Brooklyn, borough of churches, its inhabitants had been praying for a way out of it for decades. There was, in the entire borough, not a single major through thoroughfare. There was no way out of its vast center, no way to reach Manhattan or Queens or Nassau County, except via local streets. And the streets of Brooklyn, like those of Queens, were becoming more clogged every year; the population of the two boroughs increased by more than a million between 1920 and 1930.

As for connections for automobiles under or over the water which separated the city's boroughs, there hadn't been one built in a quarter of a century.\* Manhattan motorists bound for the Bronx, Westchester or New England, after crawling uptown through Manhattan's congestion, found when they reached Manhattan's northern boundary, the Harlem River, that the only way to cross it to get to the congested streets of the Bronx was the

<sup>\*</sup> Two connections had been built, by the Port of New York Authority, between the city and New Jersey: the Holland Tunnel, which opened in 1927, and the George Washington Bridge, which opened in 1931.

Broadway drawbridge, only three lanes wide and so crammed with pillars that traffic tie-ups at either end often extended for blocks. On an average day in 1932, the bridge was raised fourteen times to permit the passage of ships. When one of these raisings occurred at rush hour, the tie-up could extend for miles.\*

The population of Long Island, concentrated in Brooklyn and Queens, was more than four million in 1932—greater than all except eight states. But except for a few small and ancient ferries that plied the East River, the only way on or off Long Island for motorists was the same quartet of "East River bridges" that had existed in 1909. Long Island still didn't possess a single vehicular link with the mainland United States. The Island didn't possess a single vehicular link with Manhattan Island north of Fifty-ninth Street, where the Queensborough Bridge touched down. The Queensborough, in fact, was the only link with Manhattan north of Corlears Hook, where the Brooklyn, Manhattan and Williamsburg spans debouched traffic onto the already jammed thoroughfares of the Lower East Side.

On an average weekday in 1933, 238,277 trucks and cars, three times what they were built to handle, poured onto the East River bridges. The Queensborough carried more cars than any other span in the country.

The inadequacy of the approaches to these bridges was matched by the inadequacy of their roadways. Built for horses, not automobiles, they were too narrow for cars and so slippery that, according to a police report, on the Brooklyn Bridge alone, "a dozen accidents were not uncommon on a rainy day."

City officials had been talking for years about repaving the bridges, but no repaving had been done. They had been talking for years about widening their roadways, but no widening had been done. Although in 1932 the Queensborough Bridge had been open for a quarter of a century, the city had not yet gotten around even to marking lanes on it. At either end of the bridge were traffic lights; when they were red, bridge traffic stopped completely. A 1931 police study found that during rush hours the average driver, frantically shifting gears while trying to keep his car in an unmarked lane, spent forty-three minutes negotiating the 1,182 feet of the Queensborough span. The city had created two additional lanes on the Queensborough upper roadway in 1931, but when the lanes were opened, it was discovered that there had been a slight miscalculation: the lanes were too narrow; cars were constantly skinning their tires on the granite curbs. The lanes had to be closed while workmen laboriously chipped away the edges of the curbstones—and the workmen would be chipping, and the lanes would be closed, for three years.

The lack of new interborough bridges and tunnels wasn't due to a lack of ideas; New York was littered with evidence to prove that there had

<sup>\*</sup> Northbound motorists could, of course, cross the Harlem River on one of seven bridges that had been built years before—the newest was finished in 1910—miles to the south. But these bridges debouched into the most congested section of the Bronx, miles from the parkways and other broad roads of Westchester.

been plenty of those. But the evidence also proved how difficult it was, in New York, for ideas to become reality.

In a weed-filled vacant lot in Riverdale just north of the Harlem River stood a marble column a hundred feet high with a strangely unfinished look about its top. There was supposed to be a statue up there, a statue of Hendrick Hudson, for the vacant lot had been purchased by the city as the northern bridgehead of a "Hendrick Hudson Bridge" that was supposed to ease the congestion on the Broadway drawbridge, and a statue of the Great Navigator was supposed to look down on the span that bore his name. But although the lot had been purchased, and the column erected, in 1909, in 1932 work had still not started on the statue—or the bridge.

On the shoreline in Brooklyn's Bay Ridge section, at the edge of the Narrows, stood two rude wooden palisades, rotting from a decade's exposure to sea spray. The palisades had been erected to keep children from falling into two huge holes, each ninety-six feet deep. Directly across the Narrows, dug into the Staten Island shoreline, were two similar holes. The four holes had been the start of the shaft heads for a great "Narrows Tube" designed to link Brooklyn with Staten Island. Work on the tube had begun in 1921. The city had spent more than \$7,000,000 on it. But digging had been stopped in 1923 and never resumed, and in 1932 the project was dead—the four empty holes the only evidence of the money spent on it.

And marching across low-lying Ward's Island in the East River were seventeen massive masonry piers, each of them forty feet thick, eighty feet long, more than a hundred feet high. These piers had been erected to support the central span of the "triborough bridge," first proposed in 1910, that would link together at last Manhattan, the Bronx and Queens. But in 1932 the piers had been standing for more than two years, and there was still no bridge for them to support—and hope that there ever would be was rapidly fading.

As for New York's parks, they were scabs on the face of the city.

Parks were the city's legacy from reformers who had fought against long odds for their creation; under Tammany they had become fiefs administered for private gain. The Brooklyn Park Department paid for hundreds of thousands of cubic yards of landfill that it never received. It constructed a large restaurant and for a yearly rental of ten dollars turned over its keys to a restaurateur who was allowed to keep all profits. When a Brooklyn brick manufacturer needed ten acres for a new storage area, the department allowed him to rent ten acres of Dyker Beach Park—for a rental of \$2.50 per year. And during his term as Brooklyn Park Commissioner, James J. Browne banked \$1,071,713.

Some of the city's choicest public beach front—in Wolfe's Pond Park on Staten Island and at Orchard Beach in the Bronx, for example—was rented to political insiders, who, for a fee of fifteen dollars, were allowed to erect private bungalows on it, and to form "civic associations" that promulgated regulations closing the beaches to the public.

Because parks were a handy place to conceal drunks and loafers, Tammany staffed the park departments with the dregs of its barrel of ward

heelers. Because skilled laborers' higher salaries would reduce the amount of patronage that could be distributed, Tammany balked at hiring skilled workers even for those jobs that required skills. So that most of the park department budgets could be devoted to salaries, Tammany scrimped on materials and equipment, spending exactly \$225,000 of the total park budget of \$8,576,319 on such luxuries in 1932—and in that year 90 percent of park department vehicles were still horse-drawn.

By 1932, the paths, walks and roadways in New York's parks were miles of broken pavement. The lawns, seldom mowed, sometimes looked more like meadows. So many trees were dying that some of the loveliest tree-bordered walks were bordered mostly by stumps—the result of allowing unskilled and unsupervised workers to prune trees by simply climbing up to the top of their ladders and sawing trees off at that height, since they were reluctant to risk their own limbs by climbing out on trees'. According to a Park Association survey, there was not a single structure of any type in any park in the city that was not in need of immediate repair.

What the city called a playground was an open space—equipped with slides and a swing or two, sometimes equipped with nothing at all—around which chicken wire had been strung. Most "playgrounds" were not surfaced; rain turned them into mud holes. Others were surfaced with cinders spread loosely over the dirt, and mothers hated to let their children play in them because they knew the children would come home covered with cuts.

If one of the hundreds of statues in the parks was undamaged in 1932, the Park Association couldn't find it. The faces of the statues were masses of bird droppings. Obscenities had been written on—and never erased from—their chests. Their identifying plaques had been torn off. Swords were missing from sheaths, laurel wreaths from brows. Poets plucked at broken harps, saints stood on cracked pedestals. An Indian hunter had lost his bow. The tiger in Central Park was slipping off his rock. The bayonets had been stolen off the rifles of the soldiers in the Seventh Regiment Memorial on Fifth Avenue.

The ironwork that could be seen in the parks—the fences, benches and playground equipment—was pitted and caked with rust. The condition of the ironwork that couldn't be seen was indicated by the rarity of the comfort stations whose plumbing worked.

Since park concessions were handed out to anyone who could raise the necessary payoff, pushcarts and ramshackle booths crowded park paths—there were nineteen along one short path in Battery Park, each with its own carnival-type barker—and since many sold substandard food, there were recurring reports of sickness among children who ate the hot dogs they sold.

Bryant Park, six priceless acres of green amid the concrete masses of midtown, had been allowed to become a haven for drunks and idlers. In 1932, the city obligingly trucked away two of the park's principal ornaments, eight-foot-high statues of Washington Irving and James Marion Sims, founder of the first women's hospital in New York, and allowed a "George Washington Bi-Centennial Celebration Commission" (debonair Grover Whalen, one of Walker's police commissioners, was chairman) to erect a flimsy reproduc-

tion of Federal Hall, the building in which Washington was inaugurated, in the park and then fence it off and place turnstiles at its corners so that the public would be forced to pay admission to see the hall. When the public declined in great numbers to do so, the commission went out of existence without funds to demolish its creation. After picking up the demolition tab, the city discovered that it had managed to lose the Irving and Sims statues. Possibly because the omission of five tons of granite and metal would not be easily concealed in a reconstructed park, Bryant Park was not reconstructed—and in January 1934 it was a weed-filled vacant lot.\*

Central Park, most famous and beautiful of the city's open spaces, "the most noble, the most praiseworthy, the most philanthropic of all our public works," according to an 1876 New York Herald editorial, had been the creation of Calvert Vaux and the genius of urban landscape, Frederick Law Olmsted, who, in 1857—with Olmsted still an unknown young park department employee—had won a nationwide contest with their design for the park. Olmsted had driven thousands of men to plant half a million trees and shrubs on its 840 rocky, barren and arid acres and to create bowers, mazes, lawns and vistas, revolutionary sunken transverse roads (that were criticized because people said there would never be sufficient traffic across the park to justify them), bridle paths (that were criticized because few New Yorkers

On some days total attendance in the park was so low that only twenty persons paid their twenty-five cents to see it. Whalen then conceived the idea of combining the exhibit with "patriotic movies"—which turned out to be Mickey Mouse cartoons. When interest remained low, Italian opera was tried. The commission couldn't even raise enough money to demolish Federal Hall and restore Bryant Park to its original condition, as it had promised to do in its contract with the city. It announced that "a large part of the population feels that this patriotic shrine should be retained" and went out of existence, leaving \$76,254 in largely unexplained "expenses," and Sears, Roebuck holding the bag for its contribution. The "Hall" stood, crumbling around the edges, in the huge vacant lot that Bryant Park had become until the city, embarrassed by the screams of rage from the Park Association, tore down the structure at its own—or rather at its taxpayers'—expense.

The Bi-Centennial Celebration did, of course, provide Whalen with valuable experience in running a public exposition. He put it to use in running the 1939 New York World's Fair—which lost \$200,000,000.

<sup>\*</sup> The Bi-Centennial Commission was one of the more hilarious episodes in the city's history. Its "board of directors" contained a number of well-meaning DAR types who had lent their names to what they thought was an attempt to honor the Father of the Country, but the presence of Whalen, an intimate of some of Tammany's most greedy insiders, was the tip-off to the fact that the celebration was intended as a public-scalping party—a suspicion confirmed when food-selling concessions at the "celebration" were handed out to Tammany favorites. First, the commission announced that it would finance the construction of "Federal Hall" by "allowing" citizens to sign a "patriotic roll call"—for a fee of one dollar per signature designed to raise \$150,000. Despite parades beginning, or ending, at Washington Arch, and led by Jimmy Walker himself, that were designed to whip up public enthusiasm, the roll call was answered by only 18,629 patriots. Sears, Roebuck & Co. then announced that it would lend the commission the money against turnstile receipts—but the finished structure into which that firm's money was sunk turned out to be a plaster and papier-mâché structure that swayed alarmingly and looked barely strong enough to withstand a good wind.

owned saddle horses), delicate and colorful gardens (that were criticized because people said there would always be enough room in New York for private gardens). Then, his vision completed as he wanted it, Olmsted had fought Tammany for a decade to preserve it, his health and spirit breaking in the fight. Finally ousted as Park Commissioner after a series of worsening nervous breakdowns, he had had to watch hordes of Tammany laborers tear the ivy from the Arsenal walls, "clean up" his beloved "wildernesses," sweep moss and ferns out of all the rocky crevices with house brooms and hack down thousands of trees and shrubs along Fifth Avenue so that park strollers could better view the mansions being built there. And, in 1932, Central Park showed the ravages of the sixty years of neglect that had followed Olmsted's ouster.

The park's lawns, unseeded, were expanses of bare earth, decorated with scraggly patches of grass and weeds, that became dust holes in dry weather and mud holes in wet. Its walks were broken and potholed. Its bridle paths were covered with dung. The once beautiful Mall looked like the scene of a wild party the morning after. Benches lay on their backs, their legs jabbing at the sky. Trash baskets had been overturned and never righted; their contents lay where they had spilled out. The concrete had been stripped off drinking fountains so completely that only their rusting iron pipes remained. And nine out of every ten trees on the Mall were dead or dying.

The red brick of the Arsenal at Fifth Avenue and Sixty-fourth Street had been stuccoed over and painted, and when the stucco had flaked away, the bare spots had been repainted in what was supposed to be the same color but wasn't. The building's turrets, which had made it so quaintly medieval, had been covered with striped wooden cupolas, which were supposed to make it gay, but the wood had broken and caved in and had never been repaired. The ground floor was used as a park department garage; the three upper floors were used mostly as a warehouse to store department records.

Around the Arsenal squatted the twenty-two ancient wooden animal houses of the Central Park Menagerie, crumbling away beneath their yellow paint. So rotted were their walls that park department officials feared that a single charge from a large animal, perhaps maddened by fire, might tear the cage bars right out of them. Instead of rebuilding the animal houses, the department had stationed keepers in front of the lion and tiger cages with rifles and had instructed them to shoot the big carnivores if fire broke out.

The Menagerie was filled with surprises. Because it gratefully accepted any gift that would fill a cage, and people therefore donated their unwanted family pets, it was housing in 1932, alongside the hyacinth cockatoos and the vulturine guinea fowl, several dozen canaries, and, in a cage between the mountain lions and the leopards, an Airedale. Because the Menagerie did not adequately care for its animals or dispose of them when they grew old, its exhibits included such old pensioners as a senile tiger, a puma with rickets and a semi-paralyzed baboon. Its most fearsome exhibits were rats, which roamed it in herds and had become so bold that they were stealing food from the lions' feeding pans. The most vivid memory carried away by many

visitors was of the sickening stench that rose from the dung-heaped Barbary-sheep pen.

Almost directly across the park, off Central Park West, was Jacob Wrey Mould's sheepfold, considered by some critics the finest existing example of the full-blown architecture of the mid-nineteenth century, and from a distance the sheep who grazed opposite it on the Green or Sheep Meadow, under the care of a resident shepherd who twice a day held up traffic on the park's West Drive to herd his flock across, made a picture as pretty as Olmsted had envisioned. But a closer look disclosed that, because for generations the sheep had been allowed to inbreed, every one of them was malformed.

Unlovely as the scenery in the parks might be, there was little to do in the parks except contemplate it. Provision for active sports was so inadequate that although Tammany reserved permits for the city's 162 baseball diamonds for teams which had the blessing of its aldermen—Negro teams from politically powerless Harlem seldom got one—there were still 942 teams with permits waiting to use the diamonds on a typical Sunday. Waiting time at tennis courts was measured in hours, and the city's one modern golf course was so crowded on weekends that, the Herald Tribune reported, "a player standing on line at dawn is lucky if he gets through his rounds by sunset."

New York was a city of islands, a city surrounded by, permeated by, water. But with Orchard Beach and Wolfe's Pond Park handed over to Tammany insiders, the only acquaintance that most of the city's lower-income families, who did not own cars and thus were virtually barred from Jones Beach, made with the ocean surf was at Coney Island, where a million people, treading gingerly among broken glass and filth that seemed never to be cleaned up, jammed the beach so full on a Sunday that one could hardly see the sand. The beach at Jacob Riis Park in the Rockaways was used only sparsely, but there was a reason: there was no way for a family without a car to reach it, and families with cars could reach it only after a tortuous trip. Swimming in one's own neighborhood, moreover, was all but unheard of; in the entire city, there were in 1932 two tiny outdoor swimming pools. Children who wanted to wade and splash in an outdoor shower could wade in the gutters after they unscrewed fire-hydrant covers; no one had ever heard of wading pools in playgrounds.

The men who worked in the parks complemented the scenery. Even in an era in which every city department was staffed through patronage, the five borough park departments were something special. Recalls one observer: "You couldn't tell the difference between a park employee and the bums hanging out in the parks." The weight of the rheumy-eyed drunks who served as lifeguards at Jacob Riis Park, Rockaway Beach and Coney Island was as excessive for their job as were their ages. "The first time I saw those guys lined up in their swimming costumes, I could hardly believe it," recalls Samuel M. White, who was later put in charge of them. "Some of them ran 225 or 250 pounds. And there were guys there sixty years old." Even on summer Sundays, they used the lifesaving dories for fishing. Not all the lifeguards would go out in the dories, of course. Some of them were afraid to; they

didn't know how to swim. Parents who took their children to city beaches on Sundays learned not to allow them near the shacks on the beach labeled "First Aid Station." The shacks were invariably filled with prostitutes sleeping off the effects of their Saturday-night parties with the lifeguards. ("Those whores were as unbelievable as the guys," White recalls. "They were some of the ugliest women I have even seen.") The aged biddies in charge of park comfort stations were widows of Tammany ward heelers and they understood that no work was required of them. According to one reporter: "Some had curtained off all but, say, two of the eight toilet compartments, had imported chairs, tables and hangings into the cozy space, and frequently had in their friends to afternoon tea." The lady in charge of the comfort station perched on a rocky bluff overlooking the Metropolitan Museum of Art spent her time there removing much of the plumbing and then building herself a cozy little sitting room, in which she had installed a grand piano. The chords of a Chopin nocturne startled more than one woman who entered the comfort station in good faith.

The Depression added its own touches to the parks: the shack towns named, bitterly. "Hoovervilles," in which homeless men sought refuge. One of the largest was a collection of more than two hundred hovels of old boards, flattened gasoline tins and pieces of sheet iron and cardboard in the dried-out bed of the abandoned Central Park Receiving Reservoir behind the Metropolitan Museum of Art; at night its inhabitants are birds they caught in the park's bird sanctuary.

It wasn't what the Depression did to existing parks that most worried New York's reformers, however; they were more concerned about its effect on the city's plans to acquire new ones.

Nothing was more disturbing to reformers than the city's lack of park land. In 1932, only 14,827 acres, or 7.28 percent of its area, had been set aside for the recreation of its citizens, a percentage smaller than that set aside for recreation in any of the other ten largest cities in the world or in America. And almost half the 14.827 acres were not really parks but only land intended for parks: 3.256 of those acres, for example, were contained in the two "marine parks" in Brooklyn and Staten Island, and these two parks were nothing but utterly undeveloped marshlands under water part of each day.

There was least park land, moreover, in those areas that needed parks the most. For generations, reformers had been attempting to nerve city officials to buy up tenements, tear them down and thereby shatter with shafts of sunlight the solid shadows of slum streets. But the difficulties of relocating tenement families, the veto power over city policies exercised by powerful Tammany district leaders who didn't want Democratic voters removed from their districts, and the lack of will to civic improvement had kept the Hylan and Walker administrations from taking the leap. And the economy-minded Low and Mitchel administrations, led to the brink several times, had always shied away at the last moment because of the sheer enormity of the cost in-

volved. As a result, after nearly a century of agitation for the creation of "breathing spaces" in slums (Moses' grandfather, Bernhard Cohen, had been one of the agitators during the 1870's), there were on the Lower East Side—in an area a mile wide into which were crammed more than half a million people—exactly two small parks, neither of which contained a single piece of play equipment. With the exception of a block-square dirt- and weed-covered vacant lot owned by the city at Corlears Hook just to the east of this area, there was not another clearing in the wilderness of tenements stretching away from the massive granite piers of the Brooklyn Bridge all the way to Tompkins Square—thirty-one blocks to the north. And if one stood, atop the Upper West Side's high ridge, in Morningside, St. Nicholas or Colonial Park and looked down to where the ridge fell suddenly into an alluvial plain once known as Harlem Flats, which in 1932 contained the city's Spanish, Negro and Italian slum areas, he would see nothing between the end of Central Park on 110th Street down to his right and the beginning of Coogan's Bluff at 155th Street down to his left but a vast expanse of the asphalt gray of streets, the tar-paper gray of tenement roofs and the dingy brick red of tenement walls stretching endlessly eastward until it was at last mercifully cut short by the East River, an expanse in which, except for a poignant hint on the rocky slopes of Mount Morris Park at 124th Street, there did not exist a single patch of green. Wrote one reformer: "In the winter months, when the sun is most needed, it is no uncommon sight to see herds of children blocking the streets in sections where a little sun has been allowed to penetrate because there happen to be a few low buildings on one side of the street."

If slum children could not have parks, reformers had pleaded, at least let them have the tiny, pathetic, chicken-wire-fenced, cinder-paved substitute known as playgrounds. But in 1932, after generations of such pleading, there were only four playgrounds on the Lower East Side and two playgrounds in Harlem. In all Brooklyn, there were only thirty-six playgrounds. In all New York, a city which in 1932 contained approximately 1,700,000 children under twelve years of age, there were only 119, or one for every 14,000 children.

"Children's gardens" in playgrounds were the only places in which most slum children could engage in that most precious of childhood activities: digging. So few were the playgrounds—and their "gardens"—that they could accommodate no more than a handful of those who wanted to use them. Playground supervisors made children stand on line with their pails and shovels until a spot in the gardens was open, and the lines were so long that most of the little girls and boys could see at a glance that they were unlikely to get a turn. Most of them stood on the line anyway; childhood, after all, is the time of hope—and there was, after all, little else for them to do.

Reformers had at least hoped that the difficulty of obtaining park land in areas of the city that had already been built up had taught city officials the necessity of reserving land for parks in other areas before *they* were built up. But all during the 1920's, as they watched with horror, the city allowed developers to devour its open spaces without making more than a few gestures

in this direction. Before the reformers' eyes, the red bricks that had walled out the sun in the Lower East Side and Harlem were cemented into place on the hills and meadows of the Bronx and Queens. "It looks as though all sunshine will soon be crowded out and dark shadows take its place," one reformer wrote in despair.

While campaigning for mayor in 1925, Jimmy Walker had promised to spend money lavishly to renovate Central Park. And no one could accuse him of a complete breach of faith. For not four hundred yards beyond the Sixty-fifth Street Transverse Road which formed the northern border of the Menagerie, visible from the Barbary-sheep pen when winter stripped the leaves from the park's trees, was dramatic evidence that, in at least one location in Central Park, Walker had more than kept his word. Not four hundred yards beyond the Transverse Road stood the Central Park Casino, a legend in its time.

The Casino was the brain child of restaurateur Sidney Solomon, front man for a cabal of socialites and Tammany officials who felt the need, as Walker euphemistically put it, of a sanctuary in which they might "entertain visitors without being molested." He asked the Mayor to let him establish one in the Casino, a low, rambling brick-and-stone building that had been built in the park in 1864 as a "Ladies Refreshment Salon" and had since been turned into a quiet little night club.

Walker owed Solomon a great debt. The restaurateur had introduced him to his favorite tailor. Throwing out the night club's previous owner, the Mayor turned it over to Solomon—for a rental of \$8,500 a year, a sum which turned out to be equal to one night's receipts.

"The Casino will be our place, Monk," Walker reportedly said to his mistress, Betty (Monk) Compton. (Mrs. Walker's place was apparently Florida, the state to which she had been packed off for an extended vacation.) Although Solomon retained the celebrated Viennese interior decorator Josef Urban, who announced that he would strive for "a feeling of wind among young leaves," none of Urban's sketches was executed until Jimmy and Monk approved. The Mayor, whose disregard of city affairs was legendary, dedicated himself to making the Casino perfect in every detail. When it had been renovated—at a cost to Solomon and his backers of \$365,000—and the restaurateur was about to announce its opening, Walker noticed that one of the bandstands blocked the headwaiter's view of the main entrance and thus deprived him of time to screen his guests and decide how important they were and where to seat them. He insisted that a new entrance be constructed—and it was, at a cost of \$22,000.

When it opened, the Casino was hailed by one well-qualified observer as "the swankiest restaurant New York has yet seen." The dining pavilion was silver and maroon; the ballroom, except for Urban's flowing golden murals, all black glass; the dayroom fumed knotty pine. Emil Coleman's popular society orchestra played in the pavilion, Leo Reisman's in the Black and Gold Room. Spelling the orchestras were two pianists, the famous Nat

Brandwynne and a handsome youngster, unknown, on whom Solomon had decided to take a chance: Eddie Duchin.

But the Casino was more than a restaurant or a night club. The Casino was Jimmy Walker's Versailles. Friends joked that the Mayor spent more time there than he did at City Hall. When his limousine pulled into view, the doorman would scurry inside and signal the orchestra, so that when Beau James and Betty entered, it would be to strains of "Will You Love Me in December?" Holding hands with Betty, sipping champagne while she sipped beer, the Mayor would receive the parade of visitors to his table with careless ease, and sometimes, when Betty asked him to dance, he would even arise, pinchwaisted and slim in the tuxedo with the shiny lapels that people were beginning to copy, and glide with her around the floor, and the Mayor's friends would know that he was feeling very good indeed, for although he was so graceful a dancer that he had once wanted to be a professional, for years before he met Betty he had refused to dance a step, for reasons he never told anyone.

The regulars at Walker's court played their parts well. They brought their own champagne, their chauffeurs cooling it outside in the Rolls-Royces lined up along the dark paths until the doorman signaled that another bottle was wanted at table. Their wives and girl friends crowded around the bandstands so Reisman and Coleman and Brandwynne could autograph their slippers. Their spending was in character; one insurance man always announced his arrival by handing a thousand-dollar bill to the bandleader. At closing time, the bills fluttering down onto the hat-check girls' little silver trays seemed to one observer to be mostly hundreds. Reisman and Coleman were offered fabulous fees to play on after closing at private homes, and when the society crowd discovered Duchin, there was no limit to their generosity; a member of the Grace steamship family once paid him \$20,000 to play at a party. The Depression? What Depression? "Until La Guardia came in, we never had a losing day, panic or no panic," Solomon was to say. And in a duplex upstairs retreat, closed to the public, its very existence concealed by the building's lowering mansard roof, Tammany politicians were entertained by Broadway chorus lines—rushed to the Casino en masse by motorcycle escort. And all the while, in a small adjoining office, its walls covered with green moiré and its ceiling with gold leaf, its heavy door carefully soundproofed, Walker held court for favor seekers and politicians, and it was there, insiders said, that much of the city's business was transacted.

Moses' attention had been drawn back to New York even before the Depression. Realizing in 1926 that city officials were not following through on promises to plan a new Queens road network to feed the Long Island parkways he was building, he had, during a solid year of conferences, all but begged the officials to widen Queens, Northern and Conduit boulevards and other major east-west thoroughfares in Brooklyn and Queens, to link Queens Boulevard with the Northern State Parkway, to make good on the promise given to him in 1924 and widen the two-mile stretch of Central

Avenue, the narrow winding farm road that was the only route to the Southern State Parkway. Disturbed that Bronx and Westchester residents could reach his Long Island parks only by driving down into Manhattan and across the Queensborough Bridge, he had persuaded Al Smith to urge a start on construction of the long-talked-about "triborough" bridge.

But in 1932, six years later, not even a start had been made on building these thoroughfares (with the exception of Queens Boulevard, on which work was proceeding so desultorily that its completion was nowhere in sight), and the farms that in 1926 could have been acquired cheaply for the rightof-way had become subdivisions the city could no longer afford to buy. Central Avenue was still unwidened; six years after the opening of the most modern highway in the United States the only approach to it was still a farm road. And as for the Triborough Bridge, the ring of the pile drivers hammering in its foundations after Mayor Walker had broken ground on October 25, 1929, had a distinctly hollow undertone, for while city officials were proclaiming that New York's traffic problems would be largely solved on the day that cars could speed up its mighty ramps, Moses was asking the project's chief engineer, a Tammany hack who had entered city service in 1886 as an axman, where the cars were going to go when they came downand was learning that no one had thought to plan even a single approach road at any one of the bridge's three termini. And upset as Moses was at that, he soon realized that it was likely to be of no consequence. October 25, 1929, was a Friday, the Friday after "Black Thursday," the day of the stockmarket crash. The proximity of the two days proved significant. The city's \$5,400,000 initial allocation, largely wasted on extravagant condemnation awards, counsel fees and other items of Tammany graft, ran out after the Ward's Island piers had been built, and the city was prevented by the Depression from raising any additional funds for the project; in 1932 it had been at a complete standstill for two years.

Moses' plans for New York were not confined to Queens. The city's prestigious Park Association, inspired by his Long Island work to attempt again to save the city's fast-disappearing open spaces, had formed the Metropolitan Park Conference and made him its chairman. Assigning selected State Parks Council staffers to city problems (without the knowledge of the Legislature, of course), he furnished the reformers with the ingredient their efforts had been lacking: the expertise of engineers, landscape architects, draftsmen and surveyors experienced in park work. There were plenty of ideas for park acquisition floating around the city; some had been floating around for decades. Now Moses firmed up these ideas, made them concrete, codified them in terms that enabled the reformers to present specific demands to the Walker administration.

And Moses gave the reformers something as valuable as his organization. He gave them his vision. No sooner had he become chairman of the Metropolitan Park Conference than he began driving endlessly around New York. The big black Packard that had once been pulled up in the yards of Long Island farmhouses was parked now at the edge of the lonely marshes on the shore of Jamaica Bay; in the empty, rocky fields on a deserted Bronx

peninsula known as Ferry Point; and at the spot on Riverside Drive to which, twenty years before, he had taken taxicabs while he was conceiving his great highway along the Hudson. And while his chauffeur waited in the car, he was walking around, with the same long, restless strides with which he had covered Long Island, lost in concentration, occasionally making sketches on a yellow legal note pad.

On February 25, 1930, before five hundred civic leaders gathered in the Grand Ballroom of the Hotel Commodore for the Park Association's annual dinner, Robert Moses, dressed in tuxedo and black tie (tied by Mary), rose to his feet and tugged a cord which dramatically pulled the drapery from a huge map of New York City hanging behind the dais. Running across the map were heavy red lines. One, which started in Brooklyn at the Brooklyn Bridge, ran along the borough's western and southern shores, skirting Jamaica Bay, and then, in Queens, headed north along the city's eastern boundary. The shore-front portion, Moses said, was a "Marginal Boulevard"—he had not yet named it the "Belt Parkway"—which would provide a quick circumferential passage around Brooklyn. The portion that ran north along the city boundary was a "Cross Island Parkway." A third of the way up its length, it crossed and linked up with the Southern State Parkway. Two-thirds of the way up, it crossed and linked up with the Northern State and with the proposed Grand Central Parkway. And at its end was a bridge—a "Ferry Point-Whitestone Bridge," he called it, not yet having named it the "Bronx-Whitestone"—that would enable motorists to speed across Long Island Sound. And then . . .

The audience's eyes followed the pointer in Moses' hand. At the northern end of the Ferry Point-Whitestone Bridge was another line, heading northeast to link up with the Hutchinson River Parkway that he had already built in Westchester County almost as far north as the Connecticut border. This, Moses said, was a "Hutchinson River Parkway Extension."

The audience, most of whose members had been concerned for years about the city's traffic problems, grasped at once the significance of what Moses was showing them. If the Marginal Boulevard, the Ferry Point—Whitestone Bridge and the Hutchinson River Parkway Extension were built, they saw, motorists would be able to leave Manhattan Island on the Brooklyn Bridge and then proceed over broad modern roads, unhindered by a single traffic light, all the way around Brooklyn to the Long Island parkways and parks. In addition, Manhattan and Brooklyn motorists would be presented with a through route to the Bronx, Westchester and New England—and so would motorists from Nassau and Suffolk counties. And, looking at it in reverse, the Bronx, Westchester and New England would suddenly be brought within easy access of the Long Island parks.

Moses' pointer reversed itself, tracing the Marginal Boulevard backward around Brooklyn. When it got to the Narrows, at a point opposite Staten Island, it stopped. Planners had long dreamed of a crossing between Brooklyn and Staten Island, Moses said; the Narrows Tube had been only one of several abortive attempts to make that dream reality. Now it was time to finish the tube. As soon as it was built, it could be linked with a parkway

system on scenic Staten Island—more red lines rimmed the shoreline there—and, via a parkway straight across the island, with the Goethals and Outerbridge Crossing bridges on its western shore. And on the other side of those crossings, the audience realized with a start, was New Jersey! Moses' plan would give the city at last the long-discussed "northeastern bypass," the route, so long vaguely dreamed of by planners, that would enable traffic to and from New England and points south of the city to avoid crowded Manhattan Island and stop jamming its streets, that would free Manhattan forever from tens of thousands of cars and trucks that flooded into it every day although it was not their destination.

And there wouldn't be only one bypass route. The pointer flicked back across the Narrows and then eastward and northward along the Marginal Boulevard until it reached its intersection with the Grand Central Parkway. The western terminus of the Grand Central was no longer Queens Boulevard, the audience saw; now the parkway extended westward all the way to the point where the Triborough Bridge was supposed to touch down in Queens. And from the proposed Bronx terminus of the Triborough, red lines radiated out northwestward along the Harlem River to the Saw Mill River Parkway he was building in Westchester County and northeastward along Bruckner Boulevard to the Hutchinson River Parkway Extension. These, Moses said, would be other parkways—and as he said it, the reform leaders sitting on the dais suddenly realized that the lines behind Moses formed a whole series of rough but concentric rings that would provide a whole series of possible bypass routes around the city and at the same time would make the parks and parkways Moses had built on Long Island easily accessible to any family in the city with a car. Manhattan motorists would be able to drive all the way to Jones Beach without ever being slowed by a traffic light or intersecting traffic. Turn those red lines on Moses' map into concrete, they realized, and motorists in great sections of the city would be largely freed from the trap of local streets in which they had been so long confined.

There were other lines on the map, too. One ran along the western shore of Manhattan Island all the way up to the Harlem River, over the river and up through the Bronx. If the West Side Elevated Highway was extended up through Riverside Park, Moses said, and if it was carried across the Harlem by the Henry Hudson Bridge, and if it then ran north to the city line, its northern terminus would be within three miles of the southern terminus of the Saw Mill River Parkway the state was constructing. If the city built the parkway—the "Henry Hudson Parkway," he called it—he would see that the state extended the Saw Mill River Parkway south to meet it, and there would be a continuous through route from the bottom of Manhattan Island to Westchester County.

A Henry Hudson Parkway would provide further advantages, Moses explained. It would give the city a fast, modern route to the George Washington Bridge. On the other side of that bridge was Palisades Interstate Park. It would no longer be difficult to reach it. All New Jersey, in fact, would be opened to motorists from the west side of Manhattan. And if the

Henry Hudson Parkway was built properly and a great park created alongside it on what was now the mud flats of Riverside Park, the city's residents would not even have to leave the city to find beauty. They would be able to drive along the water, the river stretching to one side of them, the green of the park to the other, above the park the spires of Manhattan. It would be a public improvement unequaled in the world!

Before he finished talking about parkways, Moses said, he had a final point. The plan he proposed was admittedly somewhat ambitious. But it was realistic—and it was realizable. The dream of opening to the residents of New York City the beauty of the lands around it was in reach. After all, he said, much of it was already reality. The Southern State, Northern State and Hutchinson River parkways were already built, the Saw Mill River Parkway begun. Much of the rest of it was begun: the State Council of Parks was committed to building the Saw Mill River Parkway and Hutchinson River Parkway extensions; at least a start had been made on the Triborough Bridge and the West Side Highway. All that needed to be done was to knit these elements together.

Now, he said, he wanted to discuss parks. His listeners, who had noticed that the park along the Henry Hudson Parkway was colored green on the map, saw that much of the land bordering the other parkways Moses was proposing was also green.

All along the parkways, he said, there should be small parks. The parkways' right-of-way itself should be "ribbon parks" similar to those along the parkways on Long Island. Obtaining the necessary land would be easy along much of the Marginal Boulevard and Cross Island Parkway, and along all the parkways in Staten Island, because the areas these parkways ran through were still largely undeveloped and land there was cheap. It would be expensive to buy land along some of the other parkways. But it was never going to become cheaper. It would only become more expensive. It should be bought now.

The larger green areas on the map, he said, represented larger parks. Specifically, he said, they represented a substantial portion of the last areas of natural beauty remaining in the city. The corridor parks he was proposing in eastern Queens, for example, running roughly along the route of the proposed Grand Central Parkway, represented the last undeveloped portions of the heavily forested hills of the glacial moraine. The parks he was proposing along the north shore of Jamaica Bay represented the last chance to preserve from commercial exploitation the bay's wild marshes and abundant animal and bird life. The park he was proposing on the meadows at Flushing Bay represented the last chance to preserve a portion of that bay from development. These parks, he said, should be purchased at once. His engineers had compiled estimates of their cost, and it was \$30,000,000. A bond issue for that amount should be authorized at once by the Board of Estimate. Admittedly it would take a hard fight to persuade the Board to do what had to be done. He invited the people listening to him to join in that fight.

The reformers stood up and cheered when Moses had finished, but the reaction of city officials was somewhat less satisfying. For all the cooperation he received from them he might still have been the starry-eyed idealist of 1914 arguing in the language of a Yale bull session for the construction of mothers' shelters in Central Park.

The scale of his plans was too big for them. Not one city official, he would recall, seemed capable of comprehending a highway network on the scale he had proposed—a fact which would not have been surprising even if the officials had been men of vision, since no highway network on that scale had ever been proposed for any city in America, or, for that matter, any city in the world.

The scale of the money involved was too big for them. The total cost would obviously be in the hundreds of millions of dollars, and they felt there was no sense in the city even considering such an amount.

What the city officials could comprehend about Moses' plan they didn't like. The relocations involved for his highways would be on a scale almost unknown in the city: the Whitlock Avenue approach to the Triborough Bridge in the Bronx would alone require the condemnation of buildings containing more than four thousand apartments—voters' apartments.

Moses' general plans for his parkway system were turned over for analysis to city engineers, who, sensing the attitude of their superiors, did not rush to begin working on them. Try as he would, Moses could not get the city to move on them. And once the Depression began to tighten its hold on New York, there was no longer much sense in trying to get the city to move. In 1932, the city had not even begun seriously considering any of the parkways he had proposed at the Hotel Commodore dinner two years before.

Walker's administration did agree in 1930 to issue \$30,000,000 in bonds to buy new park land. In 1930, the city acquired 2,530 acres that would be known as Great Kills and Willowbrook parks on Staten Island; Highland, Alley Pond and Kissena parks in Queens; and Owl's Head Park in Brooklyn. But, by the end of that year, it was becoming apparent that the city's people had needs even more pressing than the need for parks, even if there had still been any market for the bonds that had to be sold to buy them. In 1932, with only \$4,000,000 of the \$30,000,000 spent—and exactly one tenement-area park acquired—even most reformers were agreeing that acquisition of park land was a luxury that New York would have to postpone to some other, happier, decade.

When Roosevelt, under Moses' prodding, agreed to fight the Depression with a state public works program of unprecedented size, Moses saw the agreement as a chance to make the city move. The state had never spent any money on roads in New York City, but Moses persuaded Roosevelt to authorize the state's Temporary Emergency Relief Administration to pay the construction costs of the Grand Central Parkway and the Central Avenue linkup with the Southern State Parkway, and of another, "Interborough," parkway, long proposed but never built, that would provide

access into and out of central Brooklyn. The city would have to pay only for the right-of-way. The Legislature, having learned the inadvisability of giving Moses an opportunity to drive the opening wedge for a project that would later turn out to cost many times what he had estimated, gave Moses only \$5,000,000, payable at the rate of a paltry \$1,000,000 per year. All other expenses, the bill provided, must be paid by the city. But in the city Moses had no political leverage. The Board of Estimate kept delaying approval of the route, the allocations for right-of-way kept getting involved in endless snarls and at the end of 1933 Moses could look back and see that it had taken him as long to build a total of two miles of the parkway projects in Queens as it had taken him to build twenty-two miles of the Southern State Parkway.

Roosevelt's successor as Governor, Herbert H. Lehman, deeply respected Moses. Says one man who served as an adviser to both: "Roosevelt saw Jones Beach in terms both of people swimming and in terms of the political gains that could come from those people swimming. Herbert Lehman thought only of helping people to go swimming and be happy. And he felt that no one could do that job better than Robert Moses."

Within a month after Lehman took office in January 1933, he handed to Moses even more power than Roosevelt had given him. In 1932, Congress, at President Hoover's request, had created the Reconstruction Finance Corporation to help self-supporting public works projects. Lehman set up a State Emergency Public Works Commission to screen such projects and determine which should be submitted to Washington, and named Moses its chairman. This post gave Moses the power to get work under way on his huge park and parkway plan for the Niagara Frontier; a Niagara Frontier Bridge Authority was established, received \$2,800,000 in federal funds and constructed bridges that linked both the north and south ends of Grand Island, near Buffalo, to the mainland. A Thousand Islands Bridge Authority built the international bridge to Canada. Under his direction, a New York State Bridge Authority was established to purchase—through agreements he negotiated—the Bear Mountain Bridge from the Harrimans and its other private owners. A Saratoga Springs Authority began refurbishing and expanding the spa. Negotiating in Washington with the RFC, Moses obtained funds for the Port of New York Authority to construct the Lincoln Tunnel and for the city to construct Hillside, Knickerbocker and other housing developments. And he persuaded Mayor O'Brien to ask the Legislature to establish a Triborough Bridge Authority that could issue its own bonds, secured by toll revenues, and that would therefore be eligible for aid from the newly formed federal Public Works Administration, and the PWA granted a \$44,200,000 combination loan and grant to the Authority on condition that the city make certain additional token contributions. But hardly had the Tammany-controlled Authority gotten its hands on the first installment of the grant than it blew it on inflated condemnation awards and counsel fees; in addition, the city proved unable to make even the first installment of its token payment. The PWA thereupon cut off funds and announced that no more would be forthcoming until the city paid up and the Authority cleaned up—and in 1933 there were no immediate prospects of either development.

In vain, Moses pointed out to the Board of Estimate that the money the TERA and PWA were prepared to spend in New York would create vast improvements in the city—at virtually no cost to its taxpayers. In vain, he pointed out that the money would put thousands of hungry men to work for salaries that would feed their families. Such considerations were not of interest to the Tammany-dominated Board. And those that were of interest, Moses, outside the city's power structure as he was, could not offer them.

All through 1933, the city's financial situation worsened. In May, City Comptroller Charles W. Berry informed Mayor O'Brien that the city would be unable to pay \$100,000,000 in short-term revenue notes coming due in June. The bankers agreed to extend the notes only after the city agreed to an almost doubled interest rate and budget cuts so stringent that they made it all but impossible for the city to keep its physical plant in repair. And, despite the extension, in September Berry told O'Brien that the city would be unable to meet its October 24 payroll.

After nine days of frantic meetings in which a worried Governor Lehman participated, the bankers agreed on September 27 to further extensions—after the city agreed to accept even more stringent repayment provisions, and to balance its 1934 budget.

The city's worries were still not over. It required legislative authorization to meet the bankers' demands, but the Legislature's Republican majority saw the city's plight as a lever they could use to pry various concessions from Lehman, and a long, tense bargaining session ensued. Not until October 18, just six days before the city would, by all common business definitions, enter a state of bankruptcy, was the authorization given. And a look ahead was hardly reassuring. The amount of short-term revenue notes coming due in the next two years was \$500,000,000.

Nevertheless, in the summer of 1933, Moses was convinced that events were moving for, rather than against, him. For during that summer, over a period of several weeks, he was convinced that he was going to get a chance personally to move the city—as its next mayor.

## 19. To Power in the City

IN NEW YORK CITY, 1933 was the year of the Goo Goo.

Dormant since debonair John Purroy Mitchel had one-stepped it into the ground nearly two decades before, the city's Good Government movement—"Goo Goos" was the politicians' epithet for the men and women in it—had been hauled back on its feet by stern-visaged, cane-carrying Samuel Seabury. In the early stages of the Seabury investigation, the city had only snickered at the fantastic alibis offered by the participants in the Tin Box Parade. Pretty young women had thrown roses at Jimmy Walker's feet as he left the hearing room after testifying. But as Seabury's quiet, courteous but relentless prodding reached higher and higher and the revelations it uncovered became more and more sordid—not even a \$10,000,000 welfare fund for the unemployed went unlooted—and as the deepening Depression made the public less tolerant of the making of illegal fortunes with its money, the laughter faded. In the last weeks of the hearing, when Seabury left the courthouse in Foley Square for lunch, thousands of men and women hung out the windows of surrounding office buildings to cheer him. (The judge courteously raised his hat but did not smile.) Mayor John Patrick O'Brien was proving that his gaffe about the Police Commissioner was in character; a master of the malapropism, he told a Harlem audience, "My heart is as black as yours," and he didn't do much to win the Jewish vote when he told a synagogue audience that he had always admired "that scientist of scientists, Albert Weinstein." O'Brien would be the Democratic nominee in the regular election to be held in November 1933, and obviously he would not be the most formidable of candidates. With Roosevelt, spurned by Tammany at the 1932 Democratic National Convention, moving as President to take control of the city away from the Wigwam, the stars that made Fusion feasible—incontrovertible scandal and Democratic disunity—had never been more favorably in conjunction.

All the reformers needed was a candidate with charisma. Founding a City Fusion Party, they united with the city's Republican Party in a Fusion Conference Committee whose purpose was to select one. And when Seabury, their first choice, refused to run and they began considering other names, Robert Moses' was prominent among them.

New York's reformers considered Moses one of them.

The Old Guard of reform viewed him almost paternally. Darwin James and Henry Moskowitz liked to tell anecdotes about his work for them on the Municipal Civil Service Commission. Henry H. Curran, Fusion candidate against Hylan in 1921, remembered Moses as secretary of his campaign committee. Joseph M. Price, a wealthy dress manufacturer and chairman of the City Club's board of trustees, remembered him pleading earnestly in the City Club lounge for the club's support for the executive budget proposal. And Richard Spencer Childs, who had made Moses secretary of his New York State Association, delighted in telling friends (inaccurately): "I am the man who gave Bob Moses his first job."

Other, slightly younger, reformers—men in their fifties like Stanley Isaacs and Raymond Ingersoll—considered Moses a comrade-in-arms. And he was nothing less than an idol to many of a new generation of reformers, including six-foot five-inch, blond and blue-eyed Newbold Morris, a Yale graduate who at thirty was president of the Silk Stocking Fifteenth Assembly District Republican Club; college professors like Wallace S. Sayre, twenty-eight, of New York University, and Adolf A. Berle, Jr., thirty-eight, and Joseph D. McGoldrick, thirty-two, of Columbia; and young experts in public administration like Rufus E. McGahen, thirty-nine, secretary of the Citizens Union, and Paul Blanshard, forty-one, director of the City Affairs Committee of New York, who were spending enough evenings studying legislative bills and debating municipal policy in the lounges of the City Club and Citizens Union to prove that the Tammany view of man was still, as one historian puts it, "only partially valid; men are moved by things other than just narrow self-interest."

The attitude of the reformers toward Moses was understandable. Not only had he fought in so many causes in which they believed; he had triumphed. Reformers who had learned through bitter, repeated experience the difficulty of translating ideas into realities were almost in awe of his success in doing so. Lillian Wald of the Henry Street Settlement wrote him: "May I... tell you how profoundly I admire your genius in designing the parks and procuring them for the community." "His . . . administrative accomplishment at Albany," Rufus McGahen said, was "amazing."

The reformers didn't know the details of those triumphs. They were not, after all, on the inside of state government, where Moses' power plays had been executed, and they knew nothing of his methods. If there had been a change in Robert Moses, none but a handful of them had even an inkling of it, and those who had seen glimpses of the change had, like Childs, been charmed into forgetting them by a Moses who needed their continuing support. They attributed Moses' arrogance to brilliance, his impatience to zeal.

Moreover, reformers, more than slightly addicted to a black-and-white view of morality and life, tended to classify all government officials as either "politicians," who were in public service for power and money, who put those considerations ahead of the common good and who had debased

politics into a somewhat questionable way of making a living; or as "public servants," who were "nonpolitical" and therefore good. And they had no doubts about which class Moses belonged to. As a Bureau staffer, no reformer had been more scornful of practical politicians than he. His well-publicized refusal to accept a salary for his services, coupled with his frequent denunciations of patronage and of favoritism in contracts and condemnation awards, convinced reformers, since they had no reason to question his sincerity, that his views had not been changed just because he had obtained power. "The principle is the important thing," he had written. They thought he still believed that. "High purpose," Richard Childs was to tell the author. "And ability. And not interested in getting something for either the boys or for himself—utterly selfless in all of it. That was how I thought of Moses."

His brilliance was legendary among them. In the field of public administration, they agreed, his mind was unequaled in suppleness and inventiveness. Lillian Wald was not the only reform leader who used the word "genius" in describing Moses. One reformer who maintained a certain detachment about reformers because he was at home not only in the paneled board room of the City Club but also in the bare-walled clubhouses of Brooklyn's Fourth Assembly District—where he had proved himself a canny practical politician by ousting the old-line Republican boss and installing himself in his place was Paul Windels. Says Windels: "Those people [reformers] could get a little starry-eyed sometimes, and at that time they were very starry-eyed indeed about Bob Moses. They saw in him a man whose ideals were just as high as theirs and who had in addition qualities which enabled him to accomplish things of revolutionary magnitude in the public sphere. The younger men there, and some of the older ones, too, to tell you the truth—they idolized that man. They seemed to consider him the Beau Ideal of what the reformer should be. And to tell you the truth, I thought I was a pretty shrewd cookie -and sometimes I felt the same way."

More practical considerations also recommended Moses to them as a candidate. First, there was the immense favorable publicity he had received. This was no candidate respected in the councils of reform but unknown to the public; this was a candidate about whose virtues the public had been educated for years. More important, there was Moses' relationship with Al Smith. The Brown Derby was still the most popular figure in the city. When, early in 1933, a downtown Tammany club had begun circulating petitions urging him to run for mayor, it collected more than 200,000 signatures in one week before Smith issued a statement categorically refusing to make the race. The Fusion leaders knew how Smith felt about Moses. If Moses ran, they believed, Smith would either break with Tammany and support him or, at the least, remain neutral. And either of those stands, they believed, would result in a mass Democratic defection to Moses, a defection essential to victory in a city in which the party registration of enrolled voters was almost four to one Democratic.

Before the Fusion Conference Committee began meeting in March

1933, Moses was contacted by City Club board chairman Price, who had, as chairman of the legendary Committee of One Hundred and Seven, been the prime mover behind John Purroy Mitchel's nomination in 1913, and who wanted now to play the same role for Moses. Moses assured Price that he would accept the Fusion nomination if it was offered to him. As soon as Seabury turned down a renewed offer of the nomination, Price brought Moses' name before the Fusion Committee and received an almost unanimously favorable response.

But Seabury had not been present at the meeting. And Seabury's opinion of Moses was markedly different from that of other reformers.

He didn't like him. Opinionated as well as dedicated, Seabury was accustomed to deference when he presented his views (reformers fondly called him "the Bishop" because of his pontifical air, although they were careful to do so behind his back), and deference was not Moses' strong suit. In 1932 the two men had had a bitter confrontation in Al Smith's Fifth Avenue apartment when Seabury attempted to win the ex-Governor's support for a City Charter revision that would determine membership on the City Council on the basis of proportional representation and would therefore encourage minority parties and help end Tammany's domination of the council. Seabury and Moses, a foe of proportional representation, had argued for hours before Smith, who, ill with a severe cold, was propped up in bed, too hoarse to speak. Exactly what happened at the confrontation is unrecorded, but Moses says, "He [Seabury] didn't stand up very well. He didn't seem to have his stuff [facts] at all. It was a very, very painful session."

More than personality differences lay behind Seabury's hostility to Moses, however. Its root lay in the judge's hostility to Tammany Hall—and in his conviction that Moses' election would allow Tammany to retain control of the city.

A direct descendant of "Speak for Yourself, John" and Priscilla Alden of the Mayflower, whose ancestors included Samuel Jones, "the Father of the New York Bar," and a long line of distinguished Episcopalian clergymen, Samuel Seabury had, even as a boy studying in his father's library with the portraits of a dozen famous ancestors peering down, stern and patrician, on his work, been markedly aware and proud of this lineage of law and righteousness, and determined to live up to it.

He was an idealist. In his youth an adoring disciple of single-tax philosopher Henry George, he was elected at the age of twenty-one president of the Manhattan Single-Tax Club. At twenty-four, he gave up his own nomination as Citizens Union Party candidate for the State Assembly to play Sancho Panza in that most gallant of all the Don Quixote rides of New York politics, George's mayoralty campaign of 1897. (When that impossible dream was ended by George's death less than a week before Election Day, Seabury followed on horseback behind the casket—adorned with white roses and the inscription "Progress and Poverty"—as the body of his idol was borne through the streets of the city with half a million citizens watching

and the hats coming off as the cortege approached and the whisper going through the great crowds: "Uncover, uncover.")

And his idealism had a target. All his life Samuel Seabury stalked the Tiger. While still in his teens, he took to the street corners—and was stoned by Tammany hooligans—as he spoke against Tammany candidates as an independent Democrat. As a young lawyer, in love with the law, he hated the Tammany-controlled judges who turned New York's courts into instruments of politics rather than justice. Representing, in a hundred cases, men unjustly accused by police who took orders from Tammany and unfairly tried before judges who took orders from Tammany, he knew the bitterness of a hundred unjust defeats.

Just as his idealism grated against Tammany, so did his ambition, which was also strong. His bearing and a rare, stern eloquence made him stand out among the crowd of young reformers. Winning a plurality that for a Citizens Union Party candidate was unprecedented, he was elected a judge over his fellow men at the age of twenty-eight. Soon his fairness and firmness awed even his Tammany colleagues on the City Court into assigning him the most difficult cases. His prematurely white hair, parted in the center, his ruddy complexion, his flowing black robes, his pince-nez—and his bearing—made him a striking figure on the bench. He needed no gavel to quiet spectators, a biographer wrote—"His mien alone served to silence the courtroom." He sat through one long case, according to the New York World, "as if his face had been carved out of stone." At thirty-three, he was elected to the State Supreme Court, at forty-one to the Court of Appeals, at forty-three he was running for Governor.

Tammany ordered its braves, in voting for the Democratic state ticket, to ignore the man at its head, and he lost.\* He hoped the nomination would come his way again in 1918, but that was the year Silent Charlie Murphy saw that it was handed to Al Smith. Embittered, Seabury retired to private life and a series of monumental legal fees and for more than ten years kept silent on public issues until, suddenly swooping out of the past to take on Tammany Hall in 1930, he revealed that prosperity had not blunted his zeal for reform and that he was still a man against the machine.

There was no telling how far Seabury might have climbed in politics if he had become Governor. The terminus he had in mind was the White House—in 1932, on the strength of the publicity he received from his investigations, he authorized the launching of a try for the Democratic presi-

<sup>\*</sup> Another element in his defeat—which took place in 1916—was Theodore Roosevelt. TR, whose Progressive Party had joined reform Democrats in support of Seabury's run for the Court of Appeals, persuaded Seabury to resign from the bench and run for Governor in the first place, promising to support him against the GOP nominee, Charles S. Whitman. But after Seabury had won the Democratic nomination, Roosevelt, breaking his word, rejoined the GOP and commanded the Progressives to back Whitman. (Seabury paid a visit to Sagamore Hill. Roosevelt started to say something, but Seabury interrupted. "Mr. President, you are a blatherskite!" he said, and stalked out.)

dential nomination—and the hatred for Tammany that had been ignited by his idealism was fueled by the wreckage the Tiger had made of his ambitions. Much of his bitterness centered on Al Smith. While most other reformers felt that Smith had risen above the organization, Seabury felt, as he had always felt, that Smith had simply put a respectable smile on the face of a tiger that was as voracious as ever. If anything, he felt, Smith was more inimical to the public interest than the depredations of the most corrupt ward leaders, because his popularity provided them with protective coloration. And, of course, it was Smith who, by winning five times in a row the Democratic gubernatorial nomination, had insured that Seabury would not be able to follow the gubernatorial road back to the public eye. "He had a real conviction about Smith," Moses told an interviewer. "It amounted to an actual hatred. He felt that Smith had prevented him from being Governor and if he had been Governor he would have been President. Seabury hated the Governor, really hated him." By 1933, wrote a Seabury biographer, "his anti-Tammany stand was not merely a cause. It was a mania." The narrowness of his perspective made him feel that the most significant fact about Moses was that he was Smith's protégé. If Moses became mayor, Seabury thought, the ex-Governor would have an opportunity to move Tammany quietly back into control of City Hall. Reform's great opportunity to cleanse the city, the opportunity he had given it, would be lost.

When Joseph Price, following the Fusion Conference Committee meeting, told Seabury its members were for Moses, Seabury refused to approve the choice. And he strongly hinted—he would "reserve all personal liberty of action" was the way he put it—that if the committee nominated Moses, he would enter his own candidate in the race. Recalling his own feelings, Moses said later: "Nobody could be elected without Seabury. With Seabury on his side, anyone running on a Fusion ticket could have won that year. Without him—no, it would have been absolutely impossible to win." Moses issued a statement saying: "I am not a candidate for the Fusion nomination for mayor and should not accept the nomination if it were offered to me."

The Fusion leaders agreed that Seabury's support was crucial. And even if they hadn't felt that way, they would have been reluctant to go against his wishes. They began looking for other candidates. Price drafted an angry statement of resignation from the committee. "The best equipped and most able man considered for the Fusion nomination, a man fearless and independent, was objected to by Judge Seabury upon the narrow-minded reason that he is a close friend of Alfred E. Smith, the most popular man in New York City," the statement said. "The Fusion Conference itself was practically unanimous for Mr. Moses. . . ." But Price was persuaded to withdraw his resignation, to leave unpublished his statement—and to join with the rest of the committee in a search for another candidate.

Five reformers were to be offered the nomination during the hectic weeks that followed.

But these were men to whom politics was something more than an avenue for the realization of personal ambitions. Two of the five—judges—

said that they were happy being judges; a third, a business executive, preferred a career in private life to one in public. And if they did have political ambitions, they subordinated them to principle. Raymond Ingersoll, fiftyeight, a wealthy respected social worker who had served as a park commissioner in the Mitchel administration and as a campaign manager in Smith's 1924 gubernatorial campaign, wanted to be mayor but was afraid his health would not allow him to do the job properly, and so he declined the nomination. Then Seabury and Maurice P. Davidson, chairman of the City Fusion Party, taking a room in the Hotel Commodore to avoid reporters, offered the nomination to Nathan Straus. Wrote Davidson: "I remember how he came into the room; slim, well-groomed, and how he removed his gloves, laid down his hat and cane, and how delighted he was with the offer, and how he said 'nothing has occurred in my lifetime or would ever occur which would bring me greater happiness than the opportunity to serve as mayor of the City of New York, but I ask forty-eight hours to consider.' We met again several days later, and he said that he had discussed the matter with some of his advisers and had decided to decline. . . . The ill-fated star of Adolf Hitler was rising. . . . Jews were accused by Hitler of endeavoring to encompass the control and government of the whole world. Ridiculous and absurd as those charges were, Nathan Straus refused to accept a nomination for Mayor at a time when Herbert Lehman was Governor because it might give credence in some quarters to Mr. Hitler's charges. He felt that in the interest of the welfare of his own people of the Jewish faith and in order not to handicap the success of the reform movement in New York it was up to him to subordinate any and all personal ambition in the interests of the public good and he, too, therefore declined."

There was a politician who wanted the nomination, wanted it desperately. "Fiorello H. La Guardia was standing in the wings—not standing, but moving around very, very rapidly," Davidson was to write. "He would send for me every once in a while and say, 'How are you getting on?' . . . He would say, 'Well, who's your latest mayor?' and I would tell him. He would jump around and shake his fist and he'd say, 'Well, there's only one man going to be the candidate, and I'm the man. I'm going to run. I want to be mayor.'"

La Guardia, a nominal Republican too liberal for most Republicans, had already lunged for the prize twice before. In 1921, president of the Board of Aldermen, he had sought the nomination from the Fusion committee of which Moses was secretary, but the reformers had turned instead to Henry Curran, one of their own, and when La Guardia ran against Curran in the Republican primary, he had failed to carry a single borough. In 1929, the Little Flower had received the Republican nomination, and the only remarkable aspect of his campaign against Jimmy Walker, then at the height of his popularity, was the size of his defeat: failing to carry a single assembly district, La Guardia received only 367,675 votes to Walker's 867,522. Then, in 1932, after five terms as a congressman from Latin East Harlem, where he had constructed an aptly named personal Italian-American

political machine—the Gibboni (apes)—La Guardia had been defeated by a Tammany hack. Out of a job at the age of fifty, branded a loser, only by winning the mayoralty could he resuscitate a political career that seemed to be gasping out its last breath.

La Guardia possessed qualifications for making the run beyond the fact that, half Jewish and half Italian, married first to a Catholic and then to a Lutheran of German descent, himself a Mason and an Episcopalian, he was practically a balanced ticket all by himself. Campaigning for mayor in 1929, he had made charges—many of the city's magistrates were corrupt; except for Al Smith, "there isn't a Tammany politician that would care to have his bank account examined"—that the city had thought exaggerated until the Seabury investigations, which began just a month after the election, had proved that most of them were understatements. As the Tin Box Parade swung into full stride, the *Times* commented that La Guardia was the only man with the right "to stand up in New York City today and say: 'I told you so.'"

But La Guardia, son of immigrants, raised in tenements, possessor of neither a high-school nor an undergraduate college degree,\* was from a different background than the reformers, and this was not an unimportant point with them. The members of the Fusion Conference Committee, and much of that segment of New York for which the committee spoke, were, as one of La Guardia's biographers put it, "educated at the best colleges, financially secure, eminent in the professions and business, and primarily old-stock American Protestant but also significantly Jewish. . . . The fusionists came, in short, from Gotham's gentry." And the attitude of many of them was, if not bigoted, at least parochial. "They preferred one of their own kind as Mayor or at least a type more like themselves" than the swarthy little Italian-American.

La Guardia's personal style was screaming, ranting, fist-shaking and more than a little irresponsible. (Learning that a family had been burned to death while the mother tried unsuccessfully to telephone the Fire Department, he insinuated that the telephone company was guilty of murder. Testifying before a legislative committee on rent controls, he said, "I come not to praise the landlord but to bury him.") These men who distrusted excess distrusted him. And he did not hesitate to play melting-pot politics, to wave the bloody flag, to appeal, in one of the seven languages in which he could harangue an audience, to the insecurities, resentments and prejudices of the ethnic groups in the immigrant district he had represented in Congress. ("I can outdemagogue the best of demagogues," he told one aide. "I invented the low blow," he boasted to another.) His naked ambition for high office, his cockiness, truculence and violent temper—while he was president of the Board of Aldermen, Curran once had to restrain him physically from striking the City Comptroller—repelled them.

<sup>\*</sup> He had earned an LL.B. from New York University Law School by attending classes, mostly in the evening, from 1907 to 1910.

Furthermore, although the reformers considered themselves liberals, their definition of the term was decidedly pre-Depression, and La Guardia was far too liberal for them. A New Dealer before the New Deal, he made a career for himself as a leader of the have-nots against the haves-and they were haves. His efforts in Congress might have made him, in his biographer's words, "the plumed knight of organized labor," but organized labor, militant, aggressive organized labor, was not precisely what reformers had in mind when they spoke moist-eyed of the working man. La Guardia lashed out, moreover, at the city's businessmen who were Fusion's financial cornerstones, charging, without offering proof, that big property owners were receiving low assessments on their property. When in 1929 he attempted to falsely persuade voters that he was a Fusion as well as a Republican candidate, the Citizens Union replied with a statement characterizing him as an opportunistic, excitable, unpredictable radical. Many reformers, La Guardia's biographers say, were happy that his ouster from Congress had apparently put an end to "an obnoxious career propelled by unstable and dangerous ambitions." The fact that in 1933 La Guardia was "the only professional Republican politician in the city who could dramatize both himself and an issue" did not move them. Moreover, Republican leaders detested this Republican whom they considered a radical. They flatly refused to accept him. Seabury, while not committing himself, noted that La Guardia was an excellent campaigner; the judge wanted to win. But every time La Guardia's name was brought up, it was greeted with open hostility by most other members of the Fusion Conference Committee. Running out of candidates, they began again to lean to Moses. Price asked him to reconsider his withdrawal. Seabury began pushing more strongly for La Guardia, possibly because he saw him as the only remaining viable alternative to Moses, but on July 26 Price took an informal telephone poll of the Fusion Conference Committee. The vote was eighteen for Moses, five for La Guardia. Moses agreed to let Price present his name again. He felt that Seabury, confronted by the fait accompli of the nomination, would not split the movement and would back him.

The Fusion leaders felt the same way. A meeting of the committee was scheduled for the following afternoon at the Lawyers Club, 115 Broadway, at 3 P.M. A room was reserved. Reporters were alerted that an important announcement would be made. Everything was in readiness to offer Moses the Fusion nomination for Mayor of the City of New York. As late as noon on July 27, Moses must have felt confident that he had it.

But at noon on July 27, three hours before the meeting was to convene, Seabury invited Davidson to lunch at the Bankers Club and demanded the nomination for La Guardia. When Davidson told him that the committee had decided to give it to Moses, Seabury struck the table with his clenched fist so hard that dishes rattled loudly in the suddenly hushed dining room.

"You sold out to Tammany Hall," the judge shouted. "I'll denounce you and everybody else. You sold out the movement to Tammany Hall." Leaving his guest at the table, he strode out of the dining room to the

elevator. Davidson, remonstrating, followed, but Seabury, in the elevator, turned and said, "You sold out. Goodbye"—and the door shut in Davidson's face.

Striding back to his office, which was located at 120 Broadway, directly across from the Lawyers Club where the Fusion Committee was to meet, Seabury issued a statement broadly hinting that he would run another ticket. The Fusion leaders, realizing that they had miscalculated, began to search frantically for a new candidate. Moses, learning of these developments by telephone from Price, told him that he didn't want his name placed in nomination.

In an attempt to placate Seabury while not alienating the Republicans, who still refused to nominate La Guardia, the committee nominated independent Democrat John F. O'Ryan, former member of the City Transit Commission. The reporters covering the Fusion meeting ran across Broadway to Seabury's office to learn his reaction. Seabury hardly knew O'Ryan-and since he knew his ignorance was shared by the voters, he believed O'Ryan could not win. Seeing by now a tiger behind every bush, the Judge told the reporters that this was the reason O'Ryan had been nominated. Tammany, he charged, had forced Republican leaders, some of whom "have long been the owned and operated chattels of Tammany Hall," to nominate a weak candidate. O'Ryan withdrew for the sake of unity. A new "harmony committee" was formed. It included not only Seabury but the one man who could match him in prestige among the reformers, Charles Culp ("CC") Burlingham, who at eighty-two still had the gift of making men forget their differences and remember their common cause. When Seabury began to roar "sellout" during one harmony committee meeting, Burlingham said, "Sit down, Sam, sit down." While the other members goggled at hearing the Bishop called by his first name, he sat down. And after midnight on August 4, CC persuaded the committee members, with the exception of Price and Davidson, who held out for Moses to the last, to authorize Seabury to call a waiting La Guardia and tell him the nomination was his.

The reform movement of New York City had wanted Robert Moses for mayor. Of all the influential reformers, only one had been firmly opposed to him. Given the almost certain success in 1933 of a Fusion ticket headed by so popular a candidate, it is hardly an overstatement to say that only one man had stood between Moses and the mayoralty, between Moses and supreme power in the city. But that man had stood fast; at the last moment, as Moses must have felt the prize securely within his grasp, it was denied him.

During the first two months of the mayoral campaign—which had been turned into a three-way race by the entry, with support from President Roosevelt, James A. Farley and Bronx Boss Edward J. Flynn, of anti-Tammany Democrat Joseph V. McKee—Moses declined to participate. His

visceral hatred of Roosevelt had been intensified by his philosophical antipathy to the President's social welfare policies, which he referred to in private as "socialistic." And the liberal La Guardia, who as a lame-duck congressman had introduced in early 1933 several bills favored by the incoming administration, was identified in Moses' mind with the New Deal.

But tough-minded reformer-politician and key Fusion strategist Paul Windels, believing in late October that La Guardia's campaign was losing momentum and needed a lift, asked Raymond Ingersoll to ask Moses to endorse the Little Flower.

Moses agreed. With less than two weeks remaining before Election Day, he suddenly abandoned his role as bystander. And his entry into the campaign had an impact even more dramatic than Windels had foreseen. For Moses' radio speeches and printed statements burst above the murk of the city's political battlefield like a Roman candle whose sparkle, coming from a shower of glittering, sharp-pointed barbs flung off by a graceful and witty malice, was both hard and brilliant.

Assailing Tammany and its mayors in a radio broadcast, Moses urged voters to remember "the strange characters they have seen occupying the places of Judge Gaynor and John Purroy Mitchel in City Hall—Hylan, the ranting Bozo of Bushwick; Walker, half Beau Brummel and half guttersnipe, and John P. O'Brien, a winded bull in the municipal china shop." Is it any wonder, he asked, that younger voters, who could not remember a non-Tammany mayor, "must think of the great office of Chief Magistrate with derision and contempt?"

As for the Farley-Flynn candidate, Moses said, he was a "pious fraud" whose attempt to portray himself as a reformer would forever be known in the city's history as "the strange interlude of 'Holy Joe' McKee." Electing McKee mayor, and thereby giving power to Farley and Flynn, would bring to City Hall only "another kind of Tammany."

"Do you think," he asked, "that the Currys, McCooeys, Farleys and Flynns are in any essential respect different from the Murphys, McCooeys, McCabes and McCalls of the cartoons of a generation ago? Do you think that the McCooey of today, who is the last living link between these two dynasties, is not the same old McCooey of the early 1900's? Let the younger voters ask the older voters this question. There can be no doubt of the answer."

Each of Moses' statements had its own sharp bite. "The Great Statesman McKee," he said in one, "is a synthetic character which never actually existed on sea or land, puffed up by the press . . . and now in the process of deflation. There's a large amount of unfairness to the individual in this process, but in the end it arrives at the truth."

And each statement contained praise for La Guardia couched in a prose that had to it a ring that sounded all the clearer above the dull clangor that is political strife in New York. "No one has ever questioned your independence," Moses told the Little Flower in a public statement. "You have no strings on you. You are not engaged in an obscure struggle for the con-

trol of a rotten political machine. You are free to work for New York City. Go to it."

"Moses' statements were no small help," Paul Windels recalls. "His support of La Guardia did more than any other single thing, I think, to give the impression that La Guardia did mean to give the city an independent administration." Moses' statements were front-paged, while others' were buried next to the bra and girdle ads. And their value was further enhanced because newspapers gave their readers the impression that he was speaking not only for himself but also for someone whose name was even more potent a political force in the city than his. Al Smith had not been able to bring himself to back either of his party's candidates. All during the election campaign the press pressed the Happy Warrior for a statement. When it was not forthcoming, reporters drew conclusions from Moses' statements. Pointing out that Moses was "one of Alfred E. Smith's closest friends," the World-Telegram said that his endorsement of La Guardia "has invoked a powerful, if silent, reinforcement to help La Guardia win." Moses, who was not speaking for Smith, tried to dispel the impression that he was. But La Guardia's advisers did all they could to foster that impression. When Moses was introduced to the crowd at a climactic Fusion rally at Madison Square Garden, the band played "The Sidewalks of New York." Before beginning his prepared speech, Moses said: "I have no desire to appear on this platform under false colors, much as I appreciate the implications involved in the instructions to the band. I do not come here as an emissary of my distinguished friend and former chief, who remains, in the affections of the people, the first citizen of this city." But at the end of Moses' speech, the band struck up the same tune.

Within a week after the votes were counted, La Guardia invited Moses to join his administration. Whether he had promised, through Ingersoll, to do so in order to obtain Moses' support—the making of such a deal might explain Moses' sudden decision to break his silence on the campaign—is unknown; but there were plenty of other explanations for the invitation.

Some of the explanations were rooted in personality. Fiorello La Guardia had an affection for his city. His wife recalls that when, after twelve years of trying, he finally became its mayor, "it was like he owned the United States. Nobody should do anything to it." With his romantic temperament, he wanted to beautify the city. He had a grand—if vague—conception of a metropolis whose citizens would pass their daily rounds in surroundings that uplifted the spirit. "Too often," he once said, "life in New York is merely a squalid succession of days; whereas in fact it can be a great, living adventure." And he thought of such beautification primarily in terms of public works. "He liked physical accomplishment," recalls Paul J. Kern, La Guardia's first law secretary at City Hall. "He liked to get things built for people; on Sundays, we used to drive around the city trying to think of things that should be built in the city."

La Guardia admired men who built. Lawyers, to lawyer La Guardia, were bad. He often remarked that a lawyer was like a prostitute: a man hired a prostitute to use her body and he hired a lawyer to use his brains and knowledge of the law. And, he would say, he didn't know but that the man who hired the prostitute got the better of the bargain. Engineers were good. "Engineers fascinated him," recalls Joseph D. McGoldrick, his Comptroller. "Lawyers were always getting in his way, telling him things he couldn't do. La Guardia didn't like people who told him what he couldn't do. But engineers could do things. They got things built for people." Says Kern: "He stood like a child in front of the simplest engineering feat." La Guardia's favorite evening watering hole was the Engineers Club at 32 West Fortieth Street, where he was an honorary member. Reuben Lazarus, who often watche I him sitting in the club bar listening raptly to the club's nonhonorary members talk about their achievements, says, "Engineers were his gods." And, although he hardly knew Moses, Moses' achievements especially awed him. He told Windels that he had, more than once, driven over the Long Island parkways "for inspiration."

Other explanations for La Guardia's invitation to Moses were rooted in politics.

La Guardia had won with only 40 percent of the vote; he was still a Republican in a Democratic town, a Republican who had been enabled to win largely because Democratic votes had been split between O'Brien and McKee. He could not count on another split, or on another Fusion-boosting Seabury investigation, in 1937; he knew that his political future depended, as one of his biographers has written, "on his giving New Yorkers the spectacularly good government he [had] promised them."

Specifically, La Guardia had promised to staff the city's government with nonpolitical, nonpartisan experts. To the public, Robert Moses epitomized the nonpolitical, nonpartisan expert. His appointment would prove that La Guardia was keeping his promise. And his immense popularity could not help rubbing off on the mayor who brought his talents to the city.

There were other reasons rooted in politics.

La Guardia feared Al Smith. He well knew that if Smith had been running against him, he would not be mayor, and he knew what would happen if Smith decided to run in 1937, or even to lend his immense prestige to some other candidate who would unify the overwhelming Democratic majority in the city. Making Smith's favorite a part of his administration would do much to keep the Happy Warrior happy—and off the warpath.

La Guardia knew that if he was to produce good government in a bankrupt city, the first requirement was money. "You know," he told a reporter earnestly, "I am in the position of an artist or a sculptor. . . . I can see New York as it should be and as it can be. . . . But now I am like the man who has a conception that he wishes to carve or to paint, who has the model before him, but hasn't a chisel or a brush." The only source of money to purchase a chisel or a brush of the size La Guardia had in mind was the federal government. Its President was not of La Guardia's party. He knew

that Moses had enjoyed great success on Long Island in obtaining federal funds—and he did not know of the hatred between Roosevelt and Moses.

Furthermore, La Guardia knew that a key reason for Moses' success in obtaining federal money was that Moses had plans for huge public works ready at the moment the money became available. To get plans, you needed first a large staff of engineers trained in building such works. He knew that the city departments did not have such staffs and he knew that Moses did. Moses needed La Guardia if he was to realize his great park and parkway plan for New York City—but La Guardia also needed Moses.

Moses knew it. To La Guardia's invitation, he replied with conditions. "I told the Mayor," he was to recall, "that I was not interested in taking the city job unless I had unified power over all the city parks and, even then, only as part of the unified control of the whole metropolitan system of parks and parkway development."

"Unified" was the operative adjective. There were five separate, independent park departments in New York City in 1933, one for each borough, each with its own borough park commissioner. If the five commissionerships were abolished and all five departments were consolidated into one, Moses said, he would be willing to be its commissioner—if the commissioner's authority was extended to include not only parks but parkways and if he was allowed to keep his state jobs. And since the key to a unified parkway program was the Triborough Bridge, he must also insist on control of the independent agency charged with the construction of that bridge, the Triborough Bridge Authority. He had a plan to finance construction of a "Marine Parkway Bridge" to the Rockaways: the plan was to create another authority to accept the necessary \$10,000,000 federal contribution. He wanted control of that authority, too. La Guardia agreed. The Mayor-elect could hardly restrain himself from blurting out the news before the arrangement was finalized. Seated at a dinner party next to Iphigene Ochs Sulzberger, who was bemoaning the state of the city's parks, he told her, "Don't worry. I'm appointing the best man in the United States as park commissioner!" In fact, when Moses suggested that he himself draft the bill consolidating the park departments and setting forth the powers he would possess as New York City Park Commissioner, La Guardia had seen no reason not to agree to that, too. It was the first bill submitted to the Legislature by the La Guardia administration. Neither man considered the Triborough appointment particularly significant; both still considered the Authority nothing more than a toll-collecting agency that would finish building a single bridge and then go out of business as soon as its cost was paid off. But they anticipated opposition in the Legislature, whose permission would be required for a state official to take a city job. The upstate Republicans who were the Legislature's leaders felt that Moses already possessed too much power, and would resist giving him more. Democratic legislators from the city would be opposed to his appointment because of the contracts and patronage it

would cost the party. And there were philosophical as well as personal and political objections. Concentrating in a single individual authority over both state and city parks and over most major road-building projects in the New York metropolitan region would give too much power to that individual, no matter who he was, some legislators said. Furthermore, in his state job, that individual would be the Governor's appointee; in his city job, the Mayor's. If the city's elected officials were to veto one of the projects he proposed to them in his capacity as a city official, he would be able to use his influence with the Governor to bring the state's influence to bear on the city officials to force the city into compliance with his will. The situation could also work in reverse. This line of reasoning could be carried on indefinitely, said one state senator: "No man is big enough to serve two masters." This was one reason why there was a law against the simultaneous holding of state and city jobs. And, some legislators attempted to remind the public, there were other, equally persuasive reasons. "Dual officeholding," they said, weakened the constitutional provision that the city should be a separate, independent entity within the state.\* There would be plenty of legislative opposition just to his proposed appointment as Park Commissioner; there was no sense in letting the Legislature know that La Guardia actually intended to appoint Moses to three city jobs, but permission was necessary for him to take each of them. The best bill drafter in Albany told La Guardia not to worry. Buried deep within the bill he drafted—it was Section 607, to be precise—allowing him to accept the park commissionership was the apparently innocuous phrase "an unsalaried state officer shall not be ineligible to hold any other unsalaried office filled by appointment of the Mayor." The camouflage worked. Unsalaried offices generally referred to meaningless honorary positions; not one legislator appears to have realized that it could also refer to an authority commissionership.

The opposition that boiled down from Albany anyway was blasted by the press—and by reformers who normally would have been the first to oppose a violation of the separation of state and city that they had always viewed as vital, and to oppose giving one man such power. They were not opposed now because the man was the one official they were confident would not abuse that power. And the reformers had considerable influence over the Republican legislators from the city. Soon Herbert Brownell, Jr., already, at twenty-nine, not only a state assemblyman but also a partner in a prestigious Wall Street legal firm, was speaking on behalf of the "Moses bill." Another GOP legislator from the city, Jay E. Rice, was arguing against

<sup>\*</sup> The courts had always emphatically upheld the law against dual officeholding. One memorable case, in fact, had enlivened the political vocabulary with a new phrase. In 1924, Murray Hulbert, the president of the city's Board of Aldermen, had innocently accepted membership on the Finger Lake State Park Commission, believing that because the park post was unsalaried it did not fall within the law's purview. But the City Comptroller, disagreeing, stripped Hulbert of his more important, salary-paying city job and the courts upheld the action—a circumstance which thereafter led Albany wags to refer to any suggestion that a city official be given a state job as an attempt to give the man "the finger."

Brownell when, as the Herald Tribune noted, "Mr. Rice was called on the telephone from New York and returned to the Assembly Chamber to withdraw his objection." The string-pulling Long Island barons who had come to see Moses as a friend pulled their strings. La Guardia gave assurances that the city was not surrendering any of its independence. "The city retains complete control through its properly constituted authorities over every cent it spends and everything it does." Governor Lehman, admiring Moses, sent the Legislature an emergency message to rush the bill through. Both the Mayor and the Governor—the two most powerful men in the state—were on Moses' side. So was the most popular; Al Smith publicly supported the appointment. While the press was still playing up the pledges by Tammany legislators to fight the bill to the finish, Moses knew that the fight was already finished and that he had won. When a reporter called him for comment after one heated debate, Moses said, "There's nothing to get excited about." On January 19, 1934, Lehman signed the "Moses bill." That same day Moses joined a line of minor city officials waiting outside La Guardia's office. When his turn came, he entered the office and was sworn in as New York's first citywide Park Commissioner.

Tammany's three Triborough commissioners held six-year terms, but the financial manipulations of two of them had been so blatant that La Guardia's investigators quickly uncovered them; one resigned and the other was dismissed. On February 4, at 11:57 A.M., a certificate of appointment as Secretary and Chief Executive Officer of the Triborough Bridge Authority, signed by the Mayor, was brought to the city clerk's office by one of the Mayor's secretaries and filed there. The name on the certificate was "Robert Moses." With the appointment to the second vacancy of George V. (the Fifth) McLaughlin, the bluff, red-faced Brooklyn banker and friend of Al Smith's who had long been Moses' friend and ally, control of the Authority was his. As soon as it was, a new bill was introduced, providing for the creation of a Marine Parkway Authority. Its powers were in general the same as those of the Triborough Bridge Authority. But there was one innovation. Those powers would not be exercised by a three-man board; the Authority would have only a "sole member." And that member, the man in whom all the powers of the Authority were lodged, would be "the Park Commissioner of New York City." On April 9, with scarcely any debate, the bill was passed by the Legislature and signed by the Governor.

There were now seven separate governmental agencies concerned with parks and major roads in the New York metropolitan area. They were the Long Island State Park Commission, the New York State Council of Parks, the Jones Beach State Park Authority, the Bethpage State Park Authority, the New York City Park Department, the Triborough Bridge Authority and the Marine Parkway Authority. Robert Moses was in charge of all of them.

The New Deal's attempts to combat the Depression had apparently already given New York an opportunity to refurbish existing city parks. Harry

Hopkins' federal Civil Works Administration, set up in November 1933, had 68,000 men working on park clean-up projects in the city by Christmas. But Moses and his top Long Island park administrators, driving around to the parks to see what those men were doing, found that the city had given them neither adequate tools, materials, supervision nor instructions. Crews were laying asphalt roads and paths without adequate foundations—and even as they laid one section, another, completed a week earlier, was already heaving and cracking behind them from frost action. Six thousand men, assigned to "move ash dumps" in Riverside Park, were standing on the banks of the Hudson pecking at frozen cinders; two thousand were standing on truck beds on a little reef off Staten Island "building up" the reef by dumping out sand—which was washed away, at a cost of five dollars per cubic yard, almost as fast as they could dump it. Fifty-four hundred more were assigned to Brooklyn's Marine Park, purchased during the Mitchel administration and allowed to remain undeveloped for twenty years. Moses' engineers sneaked into the cupola of an old mansion in the park so that they could watch the work unobserved—and found that there was nothing to watch. Spread out over expanses of sand wastes and marshlands, in a scene more reminiscent of a French bivouac during the Retreat from Moscow than a park reclamation project, all but a handful of the fifty-four hundred sat huddled around small fires built against the freezing wind whipping out of Jamaica Bay. Some were passing around wine bottles held in brown paper bags. Others were throwing dice. Most had no tools—and Moses' men understood why when they saw men chopping up shovels and using their handles as firewood. Adding a poignant detail to the scene were a few men who had kept their tools and who obviously wanted to work; they spent hours "raking" the frozen ground or building little fences out of stone they found in the area, "just so," as one of them was later to recall, "I could feel I was doing something to earn my money."

Moses himself spent a lot of time at Orchard Beach, a very low, very narrow sand bar that linked together the eastern edges of Hunters Island and Rodman Neck, two of the little wooded pieces of land at the eastern fringe of Pelham Bay Park that were washed by the water of Long Island Sound. Here, in New York's northeastern corner, so far from any built-up areas in 1934 that visitors could hardly believe they were still within the borders of America's largest city, was located New York's most ambitious park project. When Moses arrived, \$346,750 had been spent on bathhouses, a breakwater and a retaining wall running behind the sand bar and designed to turn the bar into a bathing beach convenient to the bungalows of the six hundred families, Bronx Democratic stalwarts all, to whom most of Hunters Island and Rodman Neck had been leased. The engineer who designed the bathhouses, which were constructed of granite paving stones and had cost \$84,000 apiece, had apparently been inspired by the Black Hole of Calcutta; the only ventilation in the thirty-foot-high buildings was provided by a few narrow slits near the ceilings. The breakwater had been run out into the Sound through the very center of the beach, thereby splitting it in two and forcing anyone wanting to get from one half to the other to climb over the top—which wasn't easy, since the breakwater designer had neglected to include steps. But the location of the retaining wall made reservations about this splitting of the beach irrelevant. The engineer who designed the wall had apparently seen the sand bar only at low tide; he had placed the wall so close to the water that, for most of the day, the waves lapped right up against it—and there was no longer any beach left to be split.

Moses dispatched teams of engineers to "inventory" New York City's parks—their acreage (incredibly no one knew their exact size), the buildings, paths, roadways, statues and equipment in them, the condition of these items and the type and amount of labor and materials that would be required to renovate them. He filed this information in a loose-leaf notebook kept atop his desk. By the time he was sworn in as Park Commissioner, the notebook was more than a foot thick, and he had a list of 1,800 urgent renovation projects on which 80,000 men could immediately be put to work.

But renovation was only a small part of Moses' plan. Day after day during the bitterly cold November and early December of 1933, while the great city lay inert in the grip of its long malaise, Robert Moses was being chauffeured around it in the big Packard, Hazel Tappan beside him with a stenographer's note pad open on her lap. Twenty years before, as a young staffer at the Bureau of Municipal Research, Robert Moses had wandered around New York City "burning up with ideas, just burning up with them." Now Moses was not young—one of the days he spent in the big Packard was his forty-fifth birthday—but he was still burning. "Sometimes it seemed to me that his voice never stopped," Miss Tappan recalls. "Things just kept pouring out of him. I remember once we were downtown someplace and he wanted to see some underground garage—for sanitation trucks or something —under a city building there to see if it would interfere with some plans he had for putting a park on the street near it and we started to go down this spiral ramp and it was getting darker and darker and he was still dictating. And finally it was almost pitch-black and he was still dictating. To this day I can see it getting darker and darker and that voice going on and on. Until finally I had to say, 'Mr. M! Mr. M! Wait a minute! I can't see!'"

By late December, the outline of his ideas for large-scale park construction projects was ready, and now, crowded into the Packard with him and Miss Tappan were his Long Island engineers. They came in relays. One crew would drive with him to certain parks—describing these trips, one engineer echoed Frances Perkins' words of two decades before, "Everything he saw made him think of some way it could be better"—and then that crew would go back to Babylon and translate his ideas into general engineering plans while another would head out with him to other parks.

Relays were needed to keep up with him. "His orders just poured out," recalls the engineer. "Bam! Bam! So fast that we used to all try to take them down at once so that when we got out to Babylon we could put them together and maybe get one complete list of everything he wanted. You'd start at dawn—hell, sometimes we'd start before dawn; I remember

driving around Manhattan when everybody was still sleeping except the milkmen, maybe, and the cops on the beats. I remember once a cop really jumping when that big black car filled with men came around a corner in front of him—and by late afternoon, I can tell you, your head would be just absolutely spinning. But he'd still be firing things at you." Didn't they break for lunch? "You didn't break for lunch when you were out driving around with Robert Moses."

Soon the engineers' concepts of his ideas were being presented for his approval.

With few exceptions—City Hall is perhaps the most notable—the public works of New York City were hack work designed by hacks. But the men driving around with Robert Moses were not hacks. They included the unknown young architects, landscape architects and engineers—the Herbert Magoons and Earle Andrewses—responsible for Jones Beach and the other highly acclaimed Long Island parks. And they included Major Gilmore D. Clarke and Aymar Embury II. Clarke, designer of the Bronx River Parkway and other outstanding examples of highway beautification, was in 1934 the most famous landscape architect in the United States; he had been in the process of retiring from public work to accept lucrative private assignments. Embury, an architect, had designed Princeton University's classic Class of 1915 Dormitory and many of Long Island's most beautiful estates—parks in themselves. In 1934, he had waiting for him "more private business commissions than he could handle in a decade." Moses persuaded Clarke and Embury to come to work on New York's parks.

As had been the case with the famous architects who had gathered around him on the barren sand bar called Jones Beach a decade earlier, however, some of the men with him in the big Packard in 1934 had difficulty grasping the extent of his vision. When the plans came in for Riverside Park, where, twenty years before, he had dreamed of a great highway along the water, a highway that would cover the ugly tracks and cleanse the West Side of Manhattan of the smoke and stench from the trains that ran along it, they left the tracks uncovered. The engineers told him that to cover them would add millions to the cost of the park development—for which at the moment there was almost no money at all in sight, not to mention the additional millions that would be needed to build the Henry Hudson Bridge across the Harlem River Ship Canal and a parkway linking the bridge with the Saw Mill River Parkway. Moses told them to worry only about the plans; he would worry about getting the money for them.

Exasperated with their plans for Orchard Beach, he loaded the architects into the big Packard and drove out onto barren, snow-covered Hunters Island.

Standing under winter-stripped trees on a little hill that rose out of the marshes that fringed the islet, he looked across at Rodman Neck, four hundred yards away, at the sand bar, covered now with a thin scum of ice, that held them tenuously together, at the Tammany-built breakwater and Hole of Calcutta bathhouses, and at the six hundred private bungalows.

The sand bar would never be a decent bathing beach as long as those monstrosities were there, he said. He wanted them torn down; he didn't care how much they had cost—tear them down! And tear down those goddamned bungalows—yes, all six hundred of them. He had been spending a lot of time wandering around up here in the afternoons, he said, and he had decided

that the beach should consist of more than just the sand bar. If it extended all the way around the eastern shore of both Hunters Island and Rodman Neck, it would be almost a mile long and almost crescent-shaped. In fact, if it extended over to the Twin Islands—he pointed to two islets to the northeast separated from Hunters Island by two narrow strips of waterthe length could be a full mile and the shape of the crescent perfect. He wanted the beach extended to the Twin Islands, he said; the strips of water couldn't be very deep; fill them in. And he wanted the sand on the beach to be gleaming white ocean sand like the kind at Jones Beach and the Rockaway beaches, not their present coarse, pebble-filled gray Long Island Sound sand. The sand could be dredged off the Rockaway beaches and then brought here by barge, up the East River to the Sound. Behind the beach, paralleling its mile-long crescent, he wanted a bathhouse—designed with the same imagination, the same attention to detail, as the bathhouses at Jones Beach, he said; he didn't want it looking like the typical public bathhouse. But that didn't mean it should look like the Jones Beach bathhouses, he said; if his men looked around him, they would see that the setting here was very different from that at Jones Beach. The setting there was the long, low sweep of sand and sea; here it was hills and trees. The Jones Beach bathhouse had been long and low, its lines horizontal; the lines here should be more vertical—perhaps they should start thinking about columns, maybe even a colonnade. He would leave it to them, but he didn't want any of them forgetting that the function of a bathhouse wasn't to impress or overawe; it was to help people have a good time—he wanted it light, airy and gay. And for God's sake, he said, use this kind of imagination on the city's other parks—all the city's parks.

## 20. One Year

ON JANUARY 19, 1934, Governor Lehman signed the legislation allowing Robert Moses to become the first commissioner of a citywide Park Department. At 5 P.M. that same day, Mayor La Guardia swore Moses into office at City Hall. As soon as his right hand came down from the oath, Moses turned to the assembled reporters and told them he had an announcement to make: the five borough park commissioners and the five borough park superintendents, along with the commissioners' personal secretaries and stenographers, and assorted deputy commissioners and other top-level park aides, were fired—"as of now."

The next morning at 9 A.M., a fleet of chauffeured black Packards roared up to the curb on Fifth Avenue in front of the Arsenal. Out of them stepped Moses and a squad of his top Long Island aides. These men would be running the Park Department from now on, Moses announced. Leading them up the steps of the Arsenal, which he announced would henceforth be departmental headquarters, he assigned them offices.

Moses had given these men their orders. They were to weed out—immediately—those headquarters employees who would not or could not work at the pace he demanded. The weeding out would be accomplished by making all employees work at that pace—immediately.

Unlike the commissioners and their personal secretaries, most head-quarters employees were protected by civil service, but that didn't help them much. Men who lived in the Bronx were told that henceforth they would be working in Staten Island; men who lived in Staten Island were assigned to the Bronx. Or they were given tasks so disagreeable they couldn't stomach them. Women were treated no better. One ancient biddy, accustomed to spending her days at the Arsenal knitting in a rocking chair, refused to admit she was over retirement age and gracefully accept a pension. When a search failed to produce a birth certificate to disprove her story, she was ordered to work overtime—all night. Every time she tried to rest, she was ordered to keep working. She retired at 2 A.M.

Down at his State Parks Council office at 80 Centre Street—Moses was never to have an office at the Arsenal and was to visit the building infrequently during his twenty-six years as Park Commissioner because he didn't want to be accessible to departmental employees—Moses was confronting the CWA. Its officials were worried themselves about the demoralization of the 68,000 relief workers in the parks. Moses told them that the first requirement for

One Year 369

getting those men working on worthwhile projects was to provide them with plans. Blueprints in volume were needed, he said, and they were needed immediately. He must be allowed to hire the best architects and engineers available and he must be allowed to hire them fast. The CWA must forget about its policy of keeping expenditures for plans small to keep as much money as possible for salaries for men in the field. The agency must forget its policy that only unemployed men could be hired so that Moses could hire a good architect even if he was working as a ditch digger or was being kept on by his firm at partial salary. And the agency must drop its rule that no worker could be paid more than thirty dollars per week. The CWA refused: rules were rules, it said. I quit, Moses said. La Guardia hastily intervened. After seven days of haggling, the CWA surrendered. Moses was given permission to hire 600 architects and engineers without regard to present job status, and to pay them up to eighty dollars a week. So that he could hire them as fast as possible, he was even given an emergency allocation to summon them to interviews not by letter but by telegram.

The CWA capitulated on the morning of January 27. By noon, 1,300 telegrams were being delivered to carefully selected architects and engineers all over New York State, telling each of them that if he was interested in a job, he should report to the Arsenal the next day.

No profession had been hit harder than architecture and engineering. Engineers were particularly reluctant to accept relief. "I simply had to murder my pride," one said. "We'd lived on bread and water for three weeks before I could make myself do it." But *The Nation* estimated that fully half of all engineers were out of work—and six out of seven architects.

These men had been hiding out in public libraries to avoid meeting anyone they knew, or tramping the streets carrying their customary attaché cases although those cases contained only a sandwich. Although the Park Department interviews weren't supposed to begin on January 28 until 2 P.M., on that day, with the temperature below freezing, when dawn broke over the city, it disclosed a line of shivering men outside the Arsenal. The line began at the front door. It wound down the steps, out to Fifth Avenue at Sixty-fourth Street, and along the avenue to Seventy-second Street.

The interviewing went on all day; some of the men who had been waiting on line before dawn didn't get into the Arsenal until late afternoon. But for 600 of them the wait was worth it.

"When you got inside, nobody asked you how much money you had in the bank or what was the maiden name of your great-grandmother," one architect recalls. "All they asked you was: 'What are your qualifications?' "Those whose qualifications satisfied Moses' men were hired on the spot, shown to the Arsenal's garage, in which drafting tables had been set up, handed assignments and told to get to work. In the evening, some started to go home. Those whose assignments didn't have to be finished for a few days were allowed to do so; several hundred whose plans were needed faster were told flatly, "If you go home tonight, don't come back tomorrow." Without exception, these men stayed, catching naps on cots Moses had had set up in the Arsenal's corridors.

Out in the parks, the ragtag ranks of the CWA workers were being shaped up.

Moses had found the men to do the shaping. Out of fear of losing them permanently to rivals, idle construction contractors were struggling to keep on salary their "field superintendents," the foremen or "ramrods" whose special gift for whipping tough Irish laborers into line made them an almost irreplaceable asset. Pointing out that the CWA was not a rival and would probably go out of existence when business improved, Moses persuaded contractors throughout New York, New Jersey, Pennsylvania and New England to give him their best ramrods, "the toughest you've got." And when the new men arrived, 300 in the first batch, 450 more within two months, his instructions to them were equally explicit. CWA workers, he was to say later, "were not accustomed to work under people who drove them. I see to it that my men do drive them."

Arriving at Marine Park on January 31, new superintendent Percy H. Kenah ordered the men away from their bonfires, and when some moved too slowly for him, fired sixty-six on the spot. The men refused to leave. They moved threateningly toward him—and then they noticed that patrol cars crammed with policemen had quietly driven up behind them. On the same day, with patrol cars backing them up, new superintendents fired hundreds of other workers in other parks.

If this method disposed of malingerers and malcontents, it nonetheless proved difficult to whip the relief workers who remained into an efficient work force. Most wanted to work at the pace demanded but were unable to do so. The suits, overcoats and fedoras many wore while wielding shovels were testimony not only to their inability to afford warmer work clothes but also to their lack of experience in performing hard physical labor outdoors. Even in mild weather, they would have had difficulty. In winter, they suffered bitterly from exposure. Since their pay was \$13.44 per week, many were still scrimping on their own food so that their children could have more. "I remember guys just keeling over on the job," one laborer recalls, "and you always knew that it was just that they had come to work without anything to eat." And they were scrimping in other ways, too. A worker at Dyker Beach Park at the southern edge of Brooklyn, who had caught a reporter's eye because "the side of his neck is swollen and his breath is from a sick throat," told the reporter that he lived in Manhattan. Shivering in a thin overcoat, he said that to get to work "I walk over four hours. I set the alarm clock for half past two and start walking quarter of four." The reporter asked him why he didn't take a trolley, "Carfare is twenty cents a day," he replied.

Some of the new superintendents quietly handed quarters to laborers whose inability to keep up was due to hunger or frostbite; others fired them. But none of the ramrods stopped driving. If they did, they knew, they would be fired themselves. They were, after all, working for a boss who, when questioned about a new wave of firing that almost touched off riots in several parks, said, "The government and the taxpayers have a right to demand an adequate return in good work, faithfully performed, for the

One Year 371

money that is being spent. . . . We inherited men who were working without plan and without supervision. The plans have now been made, the supervision is being supplied, and we expect the men to work."

The winter of 1934 was the first of five of the most severe in New York's history. The temperature dropped below zero on five different days—on one day it hit fourteen below—and a steady succession of heavy storms dumped a total of fifty-two inches of snow on the city. The mean temperature for the entire month of February was 11.5 degrees. But all through that winter, the residents of the tall apartment houses rimming Central Park could look down into the park and see, in the snow, thousands of men swinging pickaxes and shovels, climbing ladders set against trees, swarming over scaffolding erected around older structures and building new ones. From behind the park's granite-block walls came the pounding of pneumatic drills, the rumble of concrete mixers, the dull roar of steam shovels and the sharp rapping of hammers.

And to the consternation of those apartment-house residents, this clangor did not stop at five o'clock. At dusk, thousands of men filed into Central Park to replace those who had been working during the day, and when the watchers in the apartment houses retired for the night—for nights that they complained were made restless by the noise—they could take a last look out their windows and see the pickaxes still swinging in the harsh glare of hundreds of high-powered carbide lamps. When they awoke in the morning, the pickaxes were still swinging—and they realized that a third shift had filed into the park during the night. The work was going on twentyfour hours a day. And from behind the granite-block walls of Prospect Park, the high wooden fence left around Bryant Park from the George Washington Bi-Centennial Celebration, and a score of others erected that winter by Moses around other parks, came the same clangor-on the same schedule. Late in the afternoon of February 22, heavy snow began to fall. It continued falling all through the 23rd, dumping a total of eighteen inches on the city. But during those days, the rebuilding of New York's parks never stopped.

Sometimes, now, the laborers were even performing the construction phenomenon known as "working ahead of plans." By February, there were more than 800 architects and engineers in the Arsenal and they had become accustomed to working fourteen-hour days. But often, after they had finished a blueprint and it had been approved by Clarke, Embury, Andrews or some other supervisor and they rushed it themselves out to the project site, they would find that the work crews had already begun, or finished, digging ditches for pipes and foundations, or other preliminary work, and they would have to sit down on the spot and draw new plans to fit in with the work that had already been completed. The team of fifteen architects working at the Arsenal under Embury's personal direction to design a new Central Park Zoo—Moses didn't like the name "Menagerie"—were, Latham recalls, "working [while] looking out the window to see what had already been done." These men, Embury wrote in amazement, "had never seen each other before beginning work." They had to work "with little equipment,

crowded together two or three to the table, and moved about from one place to another every few days." They completed the plans for the entire new zoo in sixteen days.

Embury and Clarke themselves, giants of their professions though they were, were caught up in the excitement. Once, going out to lunch together, they stopped at Bryant Park to review the reconstruction work, which was already well under way, and decided they didn't like the plan, already approved by themselves and Moses, on which hundreds of men were already working. Over lunch, they began to discuss new ideas and sketched them out on their tablecloth. When they finished their meal, they asked the headwaiter for permission to take the tablecloth with them, drove straight to 80 Centre Street to show it to Moses and, when he approved, gave it to another team of draftsmen to translate into blueprints.

By March, the economy was beginning to recover and optimism was rising—along with demands from the nation's press, heavily anti-New Deal, that the government begin phasing out the spending of "taxpayers' money" on such "socialistic" practices as work relief. Moses had been led to expect an extension of the act creating CWA, but at the last moment Congress changed its mind, and the agency went out of existence on March 31, on forty-eight hours' notice. With only a limited amount of funds from the Federal Emergency Relief Administration available for park work, half of Moses' men were abruptly dismissed. But he kept the remaining half working.

The harshness of the winter persisted into April, and every weekend was either cold or rainy. But on Saturday, May 1, 1934, the weather turned balmy, and, as they do on the first warm Saturday of every spring, New Yorkers poured into their parks.

Seventeen hundred of the eighteen hundred renovation projects had been completed.

Every structure in every park in the city had been repainted. Every tennis court had been resurfaced. Every lawn had been reseeded. Eight antiquated golf courses had been reshaped, eleven miles of bridle paths rebuilt, thirty-eight miles of walks repaved, 145 comfort stations renovated, 284 statues refurbished, 678 drinking fountains repaired, 7,000 wastepaper baskets replaced, 22,500 benches reslatted, 7,000 dead trees removed, 11,000 new ones planted in their place and 62,000 others pruned, eighty-six miles of fencing, most of it unnecessary, torn down and nineteen miles of new fencing installed in its place. Every playground in the city had been resurfaced, not with cinders but with a new type of asphalt that Moses' engineers assured him would prevent skinned knees, and every playground had been re-equipped with jungle gyms, slides and sandboxes for children and benches for their mothers. And around each playground had been planted trees for shade.

"Generations of New Yorkers," as the *Times* put it, "have grown up in the firm belief that park benches are green by law of nature, like the grass itself." But now, as New Yorkers strolled through their parks, they saw

One Year 373

that the benches had been painted a cool café au lait. Generations of New Yorkers had believed that the six miles of granite walls around Central Park were a grimy blackish gray. Now they saw that sand blasting had restored them to their original color, a handsome dark cream. Rare was the New Yorker who could remember when the Columbus Circle monument to the men who died in the explosion of the U.S.S. Maine in Havana Harbor had not been dingy, or when the boy standing in the prow of the monument's bow had possessed a wreath, or, for that matter, hands to hold it with. As soon as Moses had taken office, he had surrounded the monument with scaffolding and concealed it with drop cloths. Now the scaffolding and drop cloths were removed and the boy had his hands back, and a wreath was in them—and the entire huge monument behind him had been scrubbed clean and white. And a thousand plots in the parks, plots which as long as New Yorkers could remember had contained nothing but dirt and weeds, were gay with spring-blooming flowers.

By midsummer, new construction projects in the parks were being completed. Ten new golf courses, six new golf houses, 240 new tennis courts, three new tennis houses and 51 new baseball diamonds were to be opened to the public before Labor Day. The Prospect Park Zoo was completely rebuilt and a new zoo erected at Barrett Park on Staten Island. Complete reconstruction jobs were done on St. James, Crotona and Macombs Dam parks in the Bronx; Owl's Head, McCarren and Fort Greene parks in Brooklyn; Crocheron, Chisholm and Kissena parks in Queens; and Mount Morris, Manhattan Square and Carl Schurz parks in Manhattan.

On a sunny Saturday, the fence around Bryant Park came down and thousands of spectators in a reviewing stand set up behind the Lowell Fountain saw that the weed-filled lot had been transformed into a magnificent formal garden. Two hundred large plane trees, grown in Moses' Long Island Park Commission nurseries, trucked to the city and then lifted over the fence and lowered into prepared holes by giant cranes, had been planted along its edges, and their broad leaves shaded graceful benches and long flower beds bordered by low, neat hedges. The four acres they surrounded were four acres of lush and neatly trimmed grass, set off by long, low stone balustrades and flower-bordered flagstone walks, that looked all the greener against the grayness of the masses of concrete stores and office buildings around it. As a newly formed sixty-six-piece Park Department band, outfitted in white duck trousers, forest-green jackets with white belts and white caps trimmed with green and gold braid, blew a fanfare, the greatgranddaughter of William Cullen Bryant, the poet and journalist for whom the park had been named, and the sister of Mrs. Josephine S. Lowell, in whose memory the fountain had been built, walked together from the reviewing stand to the fountain, escorted by twenty youthful pages and Park Department attendants in uniform, and flung handfuls of petals into it. At that signal, water gushed from the fountain's five dolphin spouts for the first time in a decade, and a speaker said that Robert Moses had outdone his biblical namesake because while the Moses of the Israelites had smote a rock in the desert and brought forth water, Moses of New York had "smote the city's parks" and brought forth not only water but trees, grass and flowers.

In Central Park, Moses' men restored Olmsted's long-defaced buildings, replanted the Shakespeare garden, placing next to every flower a quotation from the Bard in which it was mentioned, and exterminated herds of rats; 230,000 dead ones were counted in a single week at the zoo site alone. While seven hundred men were working night and day to build a new zoo, another thousand were transforming the dried-up reservoir bed that had been called "Hoover Valley"—Moses had torn down the shanty town there-into a verdant, thirty-acre "Great Lawn," were laying flagstone walks around it and planting along them hundreds of Japanese cherry trees. Then, having satisfied those who objected to use of the reservoir bed entirely for active play, Moses constructed a playground and wading pool in the northeast corner of the bed, outside the lawn's borders, for small children and a game field in the northwest corner for older children. On the North Meadow he built handball courts, wading pools and thirteen baseball diamonds. He deported the deformed sheep and turned the old sheepfold into a "Tavern-on-the-Green," an old English inn-in-a-park complete with doormen wearing riding boots and hunting coats and top hats and cigarette girls in court costumes complete with bustles—and with the added touch of an outdoor flagstone terrace on which couples could dance among tables shaded by gaily colored umbrellas to the music of a twelve-piece orchestra costumed in forest green.

And Moses was not merely beautifying the city's parks. He was doing what generations of reformers had despaired of doing: he was creating new ones—in the areas that needed them.

In his first flush of enthusiasm following La Guardia's offer of the park commissionership, Moses had believed that by forcing landlords to dump real estate on the market at a fraction of its former value, the Depression had given the city at last a chance to acquire and tear down slum tenements and use the space thus gained for play space for the slum children who so badly needed it. But then La Guardia disclosed to him the extent of the city's financial crisis and told him that, because of the Depression, even fractions were beyond the city's ability to pay.

"I remember one time he came back from talking to La Guardia and he told us this," said Bill Latham. "And I remember that he said then—I don't remember the words, really, but the idea was: 'All right, then, goddammit, we'll get land without money."

Moses instructed Latham to set his surveyors to making an "inventory" of every piece of publicly owned land in New York City, every tract or parcel owned by any city department, and to determine, not by asking departmental officials but by personal inspection, whether every piece of that land was actually being used. Within a month, he had learned that on the Lower East Side there were nine long-vacant strips of land along Houston Street that had been acquired by the Board of Transportation to store equipment during subway construction but that had been lying idle ever

One Year 375

since the construction was completed, ten elementary schools so old that they had been abandoned by the Board of Education for years and five vacant lots that were owned by the Park Department itself but that the Park Department had somehow not been aware it owned. Alongside the Williamsburg Bridge piers were pieces of land that had been acquired to store equipment used in the construction of the bridge and had been lying idle during the thirty-one years since the construction had been completed. On the other side of the East River, among other tenements, were more piers -and more pieces of land. In the Red Hook tenement slums, Brooklyn's version of Manhattan's "Hell's Kitchen," thirty-eight acres of land had been purchased for a public housing project, but no such project had yet begun. Among the flimsy shacks on the Gravesend Bay side of Coney Island, eight solid blocks of vacant waterfront property was owned by the Dock Department, but the Dock Department had no interest in it. And throughout all the city's slums were scores of small triangular "gores," where streets angled together or bits of land had been left over from street-widening condemnation proceedings, that were now just unnoticed pieces of dirt or concrete and that were too small to be used for play but that were, if planted with grass and a tree or two, large enough to add a touch of green to the drabness around them. Moses asked La Guardia to direct the city Sinking Fund Commission, the body which, under existing charter provisions, held the actual title to all city-owned land, to turn this land over to the Park Department. Often, the other departments involved objected to such incursions into their jealously guarded empires—the Tenement House Commission hastily began drawing up plans for the Red Hook housing project to prove that construction on it was imminent—and sometimes, as in the Red Hook case, La Guardia sided with them. But generally the new mayor backed Moses. Within four months after taking office, the new Park Commissioner had obtained, in slum areas in which there had been no significant park or playground development for at least half a century, no fewer than sixty-nine separate small park and playground sites.

And one that wasn't small. North from the Manhattan Bridge, through the very heart of the Lower East Side, through an area in which tenements were jammed solidly into every block, stretched a row of seven blocks that were completely empty. The "Chrystie-Forsyth Development," as it was known from the names of the streets which bordered it, was another monument to Tammany Hall and to one of its judges, Joseph Force Crater. Forty years later, Judge Crater's mysterious disappearance would still be unexplained, but contemporary speculation linked it with the judge's unexplained generosity to the owners of the disease-breeding tenements which had occupied those seven blocks before the city took them over in 1929. Jimmy Walker had announced with great fanfare that the city would raze the tenements and resell the land at cost to private developers who would erect on it a "model" housing development. But the astonishingly high condemnation awards Crater bestowed on the owners made the cost so high that the private builders who had previously expressed interest now expressed only dismay, and while the razing had been accomplished, the replacement had not. For more than four years, with the lost taxes and interest on the award (the Depression, of course, prevented the city from paying it) costing the city almost half a million dollars per year, the tract had lain between the red brick walls that lined it solidly on either side as flat and featureless as an urban desert. Moses proposed that it be made an oasis of grass, trees, baseball fields, basketball and tennis courts, wading pools and playgrounds. La Guardia, trumpeting "Page Crater!" when reporters asked why the housing development would not be built, agreed.\*

While studying the state government for the Reconstruction Commission in 1919, Moses had learned about "unappropriated state lands." A century before, to help tide the country over a time of financial uneasiness, the federal government had made loans to the states, which in turn loaned the money to individuals who pledged farms or other, smaller pieces of property in cities, as security. Some loans had not been repaid, and the states thereupon foreclosed. In most instances, the New York State Legislature later passed bills allowing the municipalities in which the land was located to "appropriate" it. But not, Moses had learned, in every instance. Some of the properties involved had seemed too small to bother about in an era in which property was measured in acres rather than feet, and as time passed, these pieces of land had simply been forgotten and had remained "unappropriated." Now Moses sent men to Albany to look up such pieces—and they found several in areas of Brooklyn that were now slums. The city could not afford to buy them, so-hastily, since the Legislature was shortly due to adjourn for the year—he drafted, and got passed, bills turning this land over to New York City.

One day—Sid Shapiro can recall the moment—Moses suddenly remembered that in 1922 the State Division of Canals had filled in swampland near the Gowanus Canal in Red Hook to provide a foundation for a grain elevator it was building there. And he seemed to recall, he said, that there had been some land left over. An investigation proved that he was right: there had, in fact, been eleven acres left over. He had a bill passed in Albany allowing the state to give the land to the city for recreational purposes.

On another occasion, chatting with aides, Moses suddenly asked, "Wasn't there some kind of fund set up about fifteen years ago for a war memorial that was never built?"

There was indeed. In 1918, a public subscription had been held to finance construction of a million-dollar World War Memorial Arch. But the subscription raised only \$210,000 and the drive's sponsors, already squabbling over which borough the arch should be located in, were unable to agree on details of a smaller memorial and in 1922 turned the money over to the City Chamberlain's office for safekeeping until the dispute was resolved. It never was, and during the intervening twelve years the sponsoring committee stopped meeting, and the existence of the money, which the Chamberlain had deposited in banks, was all but forgotten—and when Adolf Berle, appointed Chamberlain by La Guardia, looked for it at Moses'

<sup>\*</sup> This park is now known as "Sara Delano Roosevelt Park."

One Year 377

request, he found that accumulating interest had swelled it to \$338,395.

The people who had contributed the money had intended it to be used for a war memorial. But Moses persuaded Berle that the definition of "war memorial" could be extended to mean "War Memorial Playgrounds" and he persuaded the surviving members of the sponsoring committee not to oppose the use of the money for this purpose, a persuasion made easier by Moses' agreement that each playground would contain a bronze plaque honoring the memory of World War veterans—and that there would be at least one playground in each borough. With the money, Moses purchased in congested areas of the city eight pieces of property big enough for playgrounds.

He seemed to see opportunities everywhere. While being chauffeured around Harlem, he noticed two tennis courts belonging to a Roman Catholic church on 138th Street. Telling his chauffeur to stop, he jumped out, ran into the church, found the pastor and asked if the courts were much used. When the pastor said they were not, Moses asked him to give them to the city for a playground, and when the pastor told him that such a gift could be arranged only through Cardinal Hayes's office, Moses sent a representative to see a representative of the Cardinal, and the gift was arranged. Noticing a two-acre vacant lot on Eleventh Avenue between Fifty-ninth and Sixtieth streets, he learned it was owned by the Consolidated Gas Company, which had no "present plans" for using it, and persuaded the company to give him a temporary permit to put a playground on the site. In "Middle Queens," the dreary belt of cemeteries, small single-family homes and shabby little factories sprawling northeast from the oily waters of Newtown Creek, there was still one large vacant tract, 127 acres formerly owned by murdered gambler Arnold Rothstein. Learning that Rothstein's estate owed the city \$334,000 in back taxes, Moses asked Surrogate James Delehanty if the city could buy the property if it forgave the back taxes and paid \$68,000, the difference between the taxes and the assessed valuation. Delehanty agreed, but La Guardia was not able to find even \$68,000 that the city could spare. Moses recalled that there was usually several hundred thousand dollars kept in a special "emergency account" of one of the more obscure Sinking Funds. City attorneys informed him that legal restrictions prohibited the expenditure of any of this money except on genuine emergencies. Moses informed them that if they restudied the law, they would find there was one exception money could be removed from the fund temporarily for "first instance" appropriations, appropriations to be repaid out of the next city budget, for a single specific purpose: the purchase of undeveloped real estate. But La Guardia, while agreeing that the acquisition of 127 acres for \$68,000 was an unprecedented bargain, was afraid to obligate the city even for that amount. So Moses returned to Surrogate Delehanty and worked out another arrangement under which the city "bought" 74 of the 127 acres for \$334,000 but the estate paid the \$334,000 back to the city to clear the tax deficiency on all 127 acres, leaving the estate with 53 acres free and clear—and the city with a 74-acre "Juniper Valley" park which it had acquired without a cent of cash outlay.

Moses' charm was as powerful a weapon as his mind. Turning it on John D. Rockefeller, Jr., Moses persuaded the billionaire to donate several other pieces of land to the city. He persuaded his old benefactor August Heckscher to donate a playground in Central Park. When he discovered a well-to-do family with philanthropic leanings but insufficient resources to buy and equip a playground completely, he brought it together with another family in similar circumstances—as he did to give the city the Dreier-Offerman Playground in Bensonhurst, Brooklyn. Learning that a small charitable foundation was unable to meet mortgage payments on a piece of property in Queens and was planning to let it go to the bank by default, Moses appeared before its board of trustees, several of whom were directors of the bank, and talked to them so movingly about the need of slum children for recreation that they agreed to use the foundation's few remaining assets to pay off the small balance remaining on the mortgage—and default instead on the taxes, so that the city could take it over rather than the bank.

And as soon as Moses had his hands on the title to these pieces of land, he filled them with workmen. By July, the eight War Memorial Playgrounds had been finished, by Labor Day, there were fifty-two others, including the Chrystie-Forsyth Street complex, which was really a park but which was dubbed "the finest playground in the United States"—and a city which in its entire history had managed to build I 19 playgrounds had seen its stock of that item increased by 50 percent in a single year.

The city cheered. Its thirteen daily newspapers, however divergent their philosophy, united in heaping wreaths of adjectives on his head. The new Park Commissioner was "dynamic" and "brilliant" in the ultra-conservative Sun, "able" and "enterprising" in the then ultra-liberal World-Telegram, "tireless," "fearless" and "incorruptible" in the sometimes conservative, sometimes liberal Hearst Evening Journal.

Headline writers, using topical catch phrases, talked of Moses' NEW DEAL FOR PARKS and the AMAZING ACCOMPLISHMENTS OF MOSES' FIRST 100 DAYS. Editorial writers were more poetic. "Robert Moses has made an urban desert bloom," said an editorial in the World-Telegram. The Herald Tribune, formally recanting the heresies of which it admitted it had been guilty during his Long Island controversy, dubbed him the "Hercules of the Parks." And the Times said:

... Jan. 19 of this year was a red letter day in the history of New York. ... The time, the place, and the man met in Mayor La Guardia's appointment of Robert Moses as Park Commissioner on that date. Measured in park progress and development on the scale to which this city had been accustomed, it seems years ago. . . .

The achievements, tangible as well as intangible of the new Commissioner in his first few months of office . . . seem little short of miraculous. It is almost as if MR. Moses has rubbed a lamp, or murmured some incantation over an old jar, and actually made the jini leap out to do his bidding.

One Year 379

Reporters fought for interviews with him. And when they got them—for he gave them freely—the interviews were very friendly. Murray Davis of the World-Telegram, telling readers that "for ten years he has worked long hours, without pay, to give New Yorkers inexpensive outdoor pleasures," added:

To the suggestion that he was independently wealthy and giving hard work and time to an unremunerative job, he smiled.

"... You can't teach an old dog new tricks and I'm 45 now. Ever since I was a kid I was interested in government. My fancy led me into parks and playgrounds and I have nourished those fancies as a hobby, avocation; take your pick.

"The fact remains that I enjoy this work more than any other, so why not stay with it? I have had only two public offices that paid salaries. Now I have my third. It pays—? I don't know. What do commissioners get? \$13,000? I don't know. I'm satisfied to make just a bare living if I can realize all my plans for these things I enjoy. I'm interested in cutting down the overhead and getting results, not in pay."

During 1934, Moses was in the New York papers even more than J. Edgar Hoover, who spent the year compiling a highly publicized elite hierarchy of "Public Enemies," and then shooting down Number One on the list, John Dillinger, in a blaze of gunfire. Moses was in the New York papers almost as much as La Guardia. The Times editorial on Moses, for example, was only one of 29 praising him in that single newspaper that year. And the Times also carried 346 separate articles on his activities, an average of almost one a day.\* There were days, in fact, on which there were five separate stories in the Times. So many were carried on the "split page," the first page of the second section, devoted in the early 1930's largely to municipal affairs, that there were whole weeks in which this prominent page of the nation's most respected newspaper read like a Park Department press release. There were Sundays on which six separate newspapers were carrying long, uncritically laudatory interviews with Moses or reviews of his accomplishments. His picture stared out from their pages a hundred times during that year.

Each park opening brought forth a new volley of praise. After one, the *Herald Tribune*, under a headline proclaiming: THE PEOPLE OWN THE PARKS, called the event "just another of those triumphs whereby Mr. Moses has almost convinced the public that it really owns the parks. After the long night of Tammany it is an idea difficult to grasp."

The cheers of the press were echoed by the public. While the parks were blossoming with flowers, editorial pages were blossoming with letters from the public praising the man who had planted them. And it was not unusual at park and playground opening ceremonies for children, prodded by their parents, to break into the cheer "Two, four, six, eight—who do we appreciate? Mr. Moses! MR. Moses!! MR. Moses!!"

<sup>\*</sup> The *Times* index lists them not only under his name but under "New York City—Parks, Department of," under the names of the individual parks and under other listings given in the index.

The cheers rose to a crescendo when the Central Park Zoo reopened on December 3, 1934.

Moses had a personal reason for being interested in the zoo. Nineteen thirty-four had been a sad year for Al Smith. The public humiliation to which Jimmy Walker had subjected him at the Inner Circle dinner was only one indication of the fact that there was no longer any place for the old leader in the organization he had led and loved. Only sixty years old, as vigorous as ever, Smith wanted desperately to play a role in the federal government's efforts to end the human misery caused by the Depression. No man was better qualified; Roosevelt himself had told Frances Perkins, "Practically all the things we've done in the federal government are like things Al Smith did as Governor of New York." Roosevelt had asked Smith to campaign for him against Hoover, and Smith had done so. And when Roosevelt had won, Smith had told acquaintances flatly that a man did not feud with the President of his country; he gave him loyalty. He only hoped, he said, that Roosevelt would allow him to work for him. But Roosevelt, another young man of whom Smith had been fond and whom he had helped up the political ladder, refused even to consider him for any federal post. And if Smith considered this the ultimate humiliation, he learned during 1934 that it was not. Worse was to come. When John J. Raskob and the other businessmen who controlled the Empire State Building Corporation had offered him its presidency, they had told him the post was honorary, but, with the skyscraper completed, the Depression made it so difficult to obtain tenants that the corporation was on the verge of bankruptcy, and they told him he would have to do something to earn his \$50,000 a year: he would have to go to Washington and beg Roosevelt to throw some government leases his way. For months, Smith refused, but he was finally persuaded that loyalty to his friends required him to help them. Roosevelt responded generously to his entreaty—federal agencies were moved out of offices as far away as Philadelphia to fill up the New York skyscraper—but now in the late afternoons, when Moses dropped by to see him, he would often find the man who had been called the Happy Warrior sitting staring out the windows of his apartment with new lines of bitterness and disillusionment hardening on his face.

Moses knew how much the old Governor loved animals and he knew he missed the little zoo he had maintained behind the Executive Mansion in Albany. The former Governor and Katie now lived at 820 Fifth Avenue, almost directly across from the Menagerie, and Smith spent a lot of time strolling among the cages, feeding and talking to the animals. Saddened by the unsanitary conditions in which they had to live and the lack of care for their physical ailments, Smith was horrified when he learned that in case of fire the animals might be shot. When Moses was appointed Park Commissioner, Smith told him he would regard it as a special favor if the Menagerie were improved.

Moses gave the job top priority. When materials and equipment ran low—because of the CWA's reluctance to spend money on them, they were

One Year 381

always running low-what was available was diverted there from other projects. The best ramrods were put on the job to drive the thousand men working around the clock in the fenced-off area behind the Arsenal. Most of the animals had been moved out, but not all, and the lions, shunted from one animal house to another as the buildings were torn down and kept awake by the glow of the carbide flares and the pound of the pneumatic drills, roared through the night, while a reporter who visited the site early one morning found the Menagerie's old polar bear pacing "restlessly up and down in bewilderment, pausing occasionally to peer out at the grimy, torchlit laborers." The residents of Fifth Avenue apartment buildings near the site roared, too, but Moses refused even to listen to their complaints. Often, in the evenings, he would suddenly materialize on the scene, joking with the field superintendents and with the men, encouraging them, telling them how important their work was, urging them on. All summer and fall, he spurred the job with a special urgency. And when it was finished, on December 2, he turned the reopening into a surprise party for Al Smith.

It was quite a party. Some observers said New York had never seen anything like it. To emphasize that he was trying to make the zoo not so much a great animal museum like its counterpart in the Bronx but a place of delight for young children, Moses had already dubbed it a "picture-book zoo," and when the twelve hundred invited guests filed into the stands set up in front of the Arsenal for the opening ceremonies—twenty-five thousand other persons lined Fifth Avenue waiting to be admitted—they found that in front of the zoo entrance had been erected a six-foot-high wooden replica of an open picture book, with painted green elephants charging across its bright-yellow pages. Flanking the speakers' platform were two huge boxes wrapped in striped and polka-dotted paper and adorned with satin bows like a child's present. As the ceremonies began, four olive-clad trumpeters blew a flourish, the wrapping paper was pulled away—and inside one box was a cage containing a lion, inside the other a cage with a gorilla. Public Welfare Commissioner William Hodson, called to the microphone to give a speech, startled the audience by breaking instead into several choruses, delivered in a rather wheezy tenor, of "Oh, I went to the animal fair." Thousands of balloons were released at intervals to fill the air with color until they were wafted northward by the prevailing breeze. Uniformed, flag-bearing high-school bands and elementary-school fife-and-drum corps came marching, one after the other, up Fifth Avenue. And clattering around the corner of the Arsenal came a team of white ponies drawing a tiny, gaily colored barouche in which sat a little girl holding a large gold key with which La Guardia could "unlock" a door in the middle of the picture book and thus officially open the new zoo.

But before La Guardia got the key, there was something for Smith. Moses had given the former Governor no hint that he would even participate in the ceremonies, simply telling him that there would be a seat for him on the reviewing stand. But when the old warrior walked out the front door of his apartment house to make his way to the stand, he found three hundred schoolchildren from the Fourth Ward lined up in front of the door, cheering

and waving balloons, waiting to escort him across Fifth Avenue. He found that his seat was in the place of honor next to La Guardia. (Moses, who had been supposed to sit on his other side, was absent; during the past week he had refused to take a day off despite a severe case of influenza, and doctors summoned over his protests by a worried Mary just two hours before the ceremony began found him in a state of complete collapse and ordered him to bed.) Hardly had Smith sat down when he realized that he was being summoned to the microphone himself, and Earle Andrews, substituting for Moses, pinned to his lapel a large, elaborately engraved medal with a lion's head on its face and announced that he was now, and permanently, "Honorary Night Superintendent of the Central Park Zoo." As Andrews finished speaking, a horse-drawn wagon, reminiscent of those Smith had chased through the Fourth Ward in his youth, rolled around the corner of the Arsenal, and it was jammed with boys-from the Fourth Ward-singing, "East Side, West Side." The horses pulled up in front of him and eleven-year-old Eddie McKeon jumped out and presented him with a large Christmas turkey as the whole reviewing stand stood and joined in his old campaign song.

The old Governor's eyes were tearing, from the cold December wind, no doubt, and it took some time for him to clear them, and even after he did he spent a rather long time chewing on his cigar, which was already in shreds, before he began to speak, but when he did, he knew exactly what he wanted to say. "When Mr. Moses was appointed Park Commissioner, I used all the influence I had with him to get him to work on a new zoo," he said. "And now look at him! In less than eight months, we've got a zoo that's one of the finest of its kind in the world." Smith began then to recite the whole list of Moses' achievements, stopping only when he noticed the children on line trying to peer over the park wall at the cages. Cutting himself short, he said with a smile, "I bid you welcome to this new zoo as night superintendent, and I hope you have a good time," and sat down.

Later that week, when he was well enough to tell him himself, Moses informed Smith that the night superintendency carried with it certain privileges. He gave Smith a master key which unlocked the animal houses and told the Governor that the zoo caretakers had been instructed that he was to be allowed to enter them whenever he wanted, day or night. And until the end of his life, Smith would delight in this privilege. The doormen at No. 820 would become accustomed to seeing him walk out the front door in the evenings and across Fifth Avenue under the street lights, a somewhat paunchy figure with a big brown derby set firmly on his head and a big cigar jutting out from his face, and disappear down the steps of the darkened zoo, not to reappear for hours. The former Governor and presidential candidate would walk through the animal houses, switching on the lights as he entered each one, to the surprise of its occupants, and talk softly to them. He would have in his pocket an apple for Rosie, the huge hippo. And if one of the zoo's less dangerous animals was sick or injured, Smith would enter its cage and stand for a while stroking its head and commiserating with it. When he had dinner guests, he would take them along and, since

they were usually Tammany stalwarts unhappy at what La Guardia was doing to the Tammany Tiger, they delighted in a little show he would put on with the zoo's biggest and fiercest tiger, who could be counted upon to respond angrily if anyone growled at him. When Smith and his guests approached, the tiger would be sitting silently staring at them through the bars. Smith would walk up to the cage, thrust his head toward the bars and, in his deepest and harshest voice, roar at the tiger, "La Guardia!" The tiger would snarl, bare its teeth and leap at the bars, growling in what Smith's daughter describes as "obvious disapproval."

While there were cheers aplenty for Smith at the zoo opening, however, there were plenty left over for Moses.

The invited guests on the reviewing stand had been startled by the transformation in the Arsenal. The stucco had been sand-blasted off its walls, revealing handsome dark-red bricks. The cupolas had been torn off its turrets, revealing battlements complete with archer's slits. The newel posts of the banisters on the stairs leading up to its front entrance were now upturned Colonial cannon muzzles, and the banisters themselves were supported by wrought-iron imitations of Colonial flintlock rifles, painted white. Atop the gleaming white doorway, whose lintel had been crenelated to mirror the battlements on the roof above, an eagle glared from between two carved mounds of cannon balls, and on the jambs had been carved crossed swords and Indian spears. The large lamps on either side of the door had been enclosed in wrought-iron replicas of tasseled drums like those carried by Revolutionary War drummer boys. And above the doorway three large flags fluttered colorfully from flagpoles. All in all, the once shabby wreck looked quite like a little fort, a gay little fort that when seen in miniature from the higher floors of Fifth Avenue apartment houses seemed almost to have been set in the park by mistake and really to belong six blocks down the avenue in the windows of F. A. O. Schwarz.

And when La Guardia "unlocked" the door in the bright-yellow picture book, after asking the Honorary Night Superintendent's permission, the crowd followed the two men through the door and through a short corridor erected for the occasion, its walls covered with picture-book inscriptions such as "A is for Ape," "B is for Buffalo." Emerging on the side of the Arsenal, they found there was nothing left of the old Menagerie at all. Where they had been accustomed to see ramshackle wooden animal houses, they found, to their astonishment, neat red brick buildings decorated with murals and carved animal friezes, connected by graceful arcades that framed park vistas beyond—and framing a sea-lion pool set in a handsomely landscaped quadrangle.

Moses had wanted to use distinctive materials as he had used Barbizon brick and Ohio sandstone at Jones Beach, but the CWA's refusal to purchase any but the cheapest materials had forced him to settle for concrete, plain red bricks, and some cheap limestone, and to forgo dozens of imaginative little touches he had planned.

But the eye of the visitor still found plenty to delight it. The sea-lion house in the pool was constructed of unadorned concrete, but it was constructed so that visitors could watch the sea lions even while they were inside. The paths to the pool divided a sunken landscaped quadrangle into four separate, neatly trimmed lawns. Each was surrounded by low hedges. In the center of each was a wonderfully gnarled and twisted Japanese ginkgo tree. The steps leading down to the quadrangle were flanked by fierce-visaged stone eagles big enough to glower eyeball to eyeball at many of the children walking past them. And in its four corners were huge Victorian flying cages from which glowered live eagles.

On the far side of the quadrangle, at the animal-house level, past the cavorting sea lions, the stone eagles, the lawns, the shrubbery and ginkgo trees, the eye was startled by a large lioness proudly holding up for inspection a peacock she had killed, while her two cubs sniffed at the beautiful tail dangling limply to the ground—a bronze statue that had stood in some seldom visited corner of the park for seventy years until Moses rescued it. And behind the statue was a long, low terrace on which little tables topped with gay parasols sat in the shade of a bright, vertically striped awning eighty feet long—an outdoor dining terrace on which diners could sit and be entertained by the sea lions and by the crowds being entertained by the sea lions. And as the eye followed the vertical stripes of the awning upward, it abruptly found itself being stared back at by lions, tigers, elephants and hippopotami gathered under waving palm trees—for the cafeteria's eighty-foot-long clerestory had been covered with a droll animal mural.

Throughout, the zoo was proof piled on proof that Moses had been able, to some extent at least, to make imagination take the place of money.

The CWA had insisted that the animal houses be constructed primarily of common red brick and concrete, but Embury, an architect accustomed to working with the costliest of materials, nevertheless succeeded, under Moses' prodding, in making them attractive. Their proportions were exceptionally well balanced, their lines exceptionally clean. Some of the brick had been used to place charming ornamental chimneys on their roofs. Some more had been used for designs that broke the monotony of the concrete clerestories. Connecting the animal houses with arcades gave the whole scene unity.

And the zoo buildings were adorned with little touches that, as at Jones Beach, scaled down the architecture "to the size of a good time." Tiny, delicate cast-iron birds perched atop the lamps that flanked the doors of the animal houses. Slender rods topped with little white balls held big white globes that cast light over the walk in front of the cafeteria terrace. The lamps hanging in rows in the animal houses were glazed balls, but around each ball was a slanted copper ring that made the fixtures look like a long row of Saturns whirling in the sky.

No one had to wonder what was in each building. Around the top of each wall was a frieze, carved in low relief in limestone panels, depicting its occupants in marvelously lifelike poses; among the figures over the monkey houses, for example, were a monkey chasing butterflies and a gorilla chewing a twig with a wonderfully contemplative expression upon his face. And

the weathervanes atop each building were comic depictions of one of the building's inhabitants, done by the unknown designers who had caused architects from all over the world to exclaim at the weathervanes at Jones Beach; the one over the bird house, for example, showing a spindly-legged heron jutting its long bill under water in search of food, was a miniature masterpiece of angularity silhouetted against the sky.

The purpose of a park, Moses had been telling his designers for years, wasn't to overawe or impress; it was to encourage the having of a good time. Wheeling through the park were mcvable refreshment carts. But these weren't ordinary refreshment carts. They were adorned with painted animals and garlands of flowers in colors that were intentionally gaudy—replicas of gay Sicilian carretinas. Their operators were dressed in costumes that were extravagantly Sicilian. Even their wares were special; in addition to the standard peanuts, sodas and candy bars, each carried, prominently displayed on top, whirling silver-foil windmills, strings of brightly colored balloons, flags, banners, braided whips—and stacks of animal picture and coloring books. And to blow up balloons, the zoo was equipped with the latest in balloon-blowing devices—the "Kelly's Rocket," whose windy woosh delighted children. And the decision to build the zoo around a sea-lion pool was the crowning touch; the boisterous barking and slippery antics of these traditional circus clowns, the raucous enthusiasm with which they played tag under water, dove for the fish thrown to them by keepers and playfully slithered bigbellied and long-necked around their concrete home, insured that the central panorama would be one to delight any child-and any adult who had any child left in him. On a summer day, when the animals were all outside, and the central quadrangle in which the sea lions frolicked was lined with blackand-white-striped zebras, tan lions, furry brown monkeys and red-rumped baboons, the central panorama was, as near as any man could make it, given the CWA's stinginess, exactly what Robert Moses had envisioned—a scene out of a child's picture book.

And the zoo was viewed as the triumph it was. Some zoophiles, ignoring the violet-ray baths Moses had installed so that monkeys would get their necessary quota of sun in winter, the specially designed scratching posts set up for the lions and the replacement of Tammany's rifle-toting keepers with trained animal experts and doctors, criticized the concrete floors of the cages, which they said would give the animals tender feet. But architects, as quoted in Fortune, found the architecture "gay and amusing and occasionally pointedly absurd." Architectural Forum called the view from the cafeteria terrace "the finest eating view in the city." The press cheered, too. And the public gave its own vote of confidence. The crowds that streamed into the zoo behind La Guardia and the Honorary Night Superintendent on opening day numbered 32,000, a figure that Moses found so unbelievable that he ordered the counters he had installed at the entrance double-checked. But the next Sunday, after word of mouth about the new zoo had had a week to spread, attendance was 57,000. By 1935, on an average Sunday, more than 100,000 visitors would come to the picture book in the park.

And the Triborough Bridge was finally being built.

Here was a project to kindle the imagination.

In size, its proportions were heroic. For all Moses' previous construction feats, it dwarfed any other single enterprise he had undertaken. Its approach ramps would be so huge that houses-not only single-family homes but sizable apartment buildings—would have to be demolished by the hundreds to give them footing. Its anchorages, the masses of concrete in which its cables would be embedded, would be as big as any pyramid built by an Egyptian Pharaoh, its roadways wider than the widest roadways built by the Caesars of Rome. To construct those anchorages and to pave those roadways (just the roadways of the bridge proper itself, not the approach roads) would require enough concrete to pave a four-lane highway from New York to Philadelphia, enough to reopen Depression-shuttered cement factories from Maine to the Mississippi. To make the girders on which that concrete would be laid, Depression-banked furnaces would have to be fired up at no fewer than fifty separate Pennsylvania steel mills. To provide enough lumber for the forms into which that concrete would be poured, an entire forest would have to crash on the Pacific Coast on the opposite side of the American continent.

Triborough was really not a bridge at all, but four bridges which, together with 13,500 feet of broad viaducts, would link together three boroughs and two islands.

One of those bridges, the span over the Harlem River that would connect Manhattan with Randall's Island, would be the largest vertical-lift bridge in the world. Its two steel towers would have to be big enough to support the 2,200-ton steel deck—longer than a football field and wide enough to accommodate a six-lane highway, two sidewalks and a broad median safety island—that would hang between them. The towers would have to be big enough to contain drum hoists capable of raising that deck, together with its highway, sidewalks and median islands, eighty feet, keeping it perfectly horizontal all the time, to permit the passage of large ships.

And the Harlem River span would be the largest vertical-lift bridge in the world only on sufferance from another of Triborough's four bridges, the eight-lane, triple-span, steel-truss affair over the Bronx Kills that would connect Randall's Island with the Bronx. Because the Bronx Kills was not navigable, the Navy had ruled that its span could be a fixed structure—but only if it were built so that its central span could be converted into a lift bridge if the Kills was ever made navigable. And the Bronx Kills span would be so large that if it were ever converted into a lift bridge, it would be a lift bridge half again as large as its Harlem River counterpart.

And both the Harlem River and the Bronx Kills spans looked small beside the half-mile-long suspension bridge, one of the largest bridges of that type in the world, that would are 135 feet in the air to carry Triborough's roadway across the turbulent rip tides of Hell Gate, the narrow, twisting, rocklined passage between Ward's Island and Astoria in Queens. The steel towers

of that bridge would each be higher than a football field standing on end, and it was that bridge's anchorages, in whose concrete would be embedded cables made up of enough wire to circle the globe twice around, that were as big as pyramids.

The last of the four bridges—a causeway connecting Randall's and Ward's islands-would have stood alone as an engineering feat of no mean magnitude, but so huge was Triborough that the causeway was a mere incident in its construction, as was the "flying junction" on Randall's Island, the largest batch of traffic-sorting spaghetti ever concocted, a cloverleaf as big as a railroad switchyard and so ingeniously designed that although twentytwo lanes of traffic converge on, and radiate from, its long lines of toll booths, winding around one another on three decks, no one of those lanes meets or crosses another at grade and every driver using any one of them, no matter what his destination or point of origin, must stop at one, but only one, toll booth. Triborough was not a bridge so much as a traffic machine, the largest ever built. The amount of human energy that would be expended in its construction gives some idea of its immensity: more than five thousand men would be working at the site, and these men would only be putting into place the materials furnished by the labor of many times five thousand men; before the Triborough Bridge was completed, its construction would have generated more than 31,000,000 man-hours of work in 134 cities in twenty states. And the size of the bridge is also shown by the amount of money involved. With \$5,400,000 already contributed by the city and \$44,-200,000 promised by the PWA, the amount promised for its construction was almost equal to the combined cost of all the projects Robert Moses had built on Long Island during the previous ten years.

And size was the least of it.

From the air—and Moses spent hours over New York City as a passenger in chartered small planes in 1934 studying the city's contours—one could hardly fail to appreciate more significant implications of the Triborough project. The built-up streets of Manhattan, the Bronx and Queens rushed together at the bridge site but paused there, held apart by the tangle of water surrounding Randall's and Ward's islands. A procession of piers, erected by the old bankrupt Triborough Authority, was scattered at odd intervals across those islands as if to show how easy it would be to bring those massed streets together by building the Triborough Bridge. But until the bridge was built, the streets would remain separated, their inhabitants condemned to countless wasted hours of needless travel. The man who built the Triborough Bridge would be a man who conferred a great boon on the greatest city in the New World. He would be the man who tied that city together. In fact, since each of the three boroughs was as large as a city in its own right, the man who built the Triborough Bridge could be said to be performing a feat equal to tying together three cities. And he would also, of course, be the man who, patching together the rent torn in the earth millennia before by the glaciers rumbling down from Hudson Bay, reunited Long Island with the mainland of the United States.

Other implications of the project were as dramatic as its size and setting.

It would slash at a stroke the immense Gordian knot of the East River traffic problem by creating the first direct link between the Bronx and Queens. For Robert Moses, of course, this implication had special significance. He had built his parkways to make accessible Long Island's "healthy air," its "salty shore and breeze and brine," but millions of residents of northern Manhattan, the Bronx and Westchester—and New Jersey—still had no way of reaching those parkways, no way of reaching Long Island, except by traveling into midtown Manhattan, over the East River bridges and along the congested Queens boulevards. The construction of the Triborough Bridge would enable residents of northern Manhattan to reach Queens simply by traveling crosstown and then over the bridge; residents of the Bronx, Westchester, and New Jersey could reach Long Island without ever entering midtown Manhattan at all.

Furthermore, Moses felt confident that, out of the \$50,000,000 allocated for the bridge, enough would be left over to link it with the Grand Central Parkway, whose western terminus was stalled at Northern Boulevard because

the Legislature would not and the city could not finance its construction any further into the city. Therefore, the Triborough project—and, perhaps, only the Triborough project—could provide the funds to finish the parkway and thereby enable motorists, once they reached the Triborough Bridge, to drive all the way to Jones Beach or the other Long Island state parks on modern parkways on which they would not be delayed by a single traffic light or intersection.

Because the Legislature would not and the city could not extend his Westchester parkways into the city, the Triborough project was the only hope of doing that, also. Moses felt sure that money could be found in the Triborough allocations to link up the bridge at least with the Hutchinson River Parkway. And once *that* link was constructed, the Long Island parkways would be linked with a Westchester parkway. Build Triborough, he felt, and the Long Island parks would at a stroke be made easily accessible from the entire New York metropolitan area.

Randall's and Ward's islands provided large stacks of additional fuel for Moses' imagination.

Throughout the city's history, those islands had been used only as repositories for its refuse, inanimate and human. The site of garbage dumps, potter's fields and almshouses during the eighteenth and nineteenth centuries, in 1934 they held—in addition to a municipal sewage-disposal plant—the City Hospital for the Feeble-Minded and Tubercular, the grim, barracks-like, Civil War-vintage "House of Refuge" of the Society for the Reformation of Juvenile Delinquents, the Manhattan State Hospital for the Insane, complete with black-barred windows, and a military hospital. The rest of the islands' four hundred acres—and an uninhabited fifty-acre sand bar to the east named "Sunken Meadow" that was identified on maps as part of Randall's Island but was actually a separate body of land set apart by a hundred yards of water—was empty and barren marshland.

But Moses didn't care about the condition of the vacant land on the islands. What was important to him was that the land was there—and that there was plenty of it.

Obtaining land anywhere near the center of New York City was extremely difficult. When you talked about new parks in center city, you were talking about tooth-and-claw battles for a vacant lot that might with luck be big enough for half a basketball court. If you found a vacant lot that measured as much as a third of an acre, it was a bonanza. And here, at the city's very heart, were 450 empty acres. Join these islands to the city and you wouldn't have to talk about halves of basketball courts any longer. You could talk about football fields and soccer fields and baseball diamonds. And you could talk about them in the dozens. There could be boat basins and marinas, picnic grounds, tree-shaded esplanades overlooking the river and lined with benches on which people could sit and watch boats passing close by. Join islands to city and you would be creating a moated oasis at the city's core. The building of the bridge would, of course, accomplish the join-

ing automatically. And Moses felt certain that, out of fifty million dollars, he could find enough left over to transform the islands into magnificent parks—especially if the institutional buildings were torn down, as he felt they should be so that they would not interfere with the beauty of the setting. The potentialities of the project, not only for transportation, but for recreation, were awesome.

But the arrangements entered into by the Triborough Bridge Authority during its days of domination by Tammany Hall threatened to make the project as nearly worthless as it was possible for a \$50,000,000 enterprise to be.

Before he had taken over the project himself, Moses had told aides that the Authority's refusal to make any semblance of provision for approach roads in Queens and the Bronx was the most glaring example of poor planning that he had ever seen. But now, studying the project more closely, he realized that he had spoken too hastily. What the Authority had done in Queens and the Bronx, he saw, was as nothing compared to what the Authority had done in Manhattan.

The Queens terminus of the Triborough Bridge was directly across the East River from 100th Street in Manhattan. Therefore, the Manhattan terminus of the bridge should have been placed at 100th Street. It certainly should not have been placed any further uptown; the bulk of the bridge traffic—85 percent by one estimate—would be coming from, and going to, destinations south of 100th Street. Placing the Manhattan terminus at 125th Street condemned most motorists traveling between that borough and Queens to drive twenty-five totally unnecessary blocks north and then, once on the bridge, twenty-five totally unnecessary blocks south—to thus add two and a half totally unnecessary miles to their every journey over the bridge. And the complete lack of provision for any approach road from downtown would make the Manhattan portion of the totally unnecessary journey tortuous.

Then there were the plans for the bridge structure itself.

The plans called for a two-deck, sixteen-lane affair. Such a bridge would have a capacity of approximately 16,000,000 vehicles per year, but traffic studies Moses had commissioned had convinced him that it would be forty years before that capacity would be needed. (Moses was, in fact, worried about attracting even the 7,500,000 vehicles per year required to meet amortization and interest payments on the Authority bonds purchased by the PWA; he was convinced that only a network of excellent approach roads that would make the trip via Triborough clearly superior to the old, toll-free, routes would persuade that number of drivers to pay twenty-five cents per trip.) Moreover, building the bridge on two decks would greatly increase its weight, and therefore would require towers, anchorages and piers of enormous size—and cost. And the weight would, under the old plans, be further increased by the fact that the Authority was planning to cover the Triborough's steelwork with great masses of enormously costly ornamental granite. Moses' engineers told him that the two-deck bridge would cost at least \$51,000,000 instead of the \$44,200,000 the PWA had allocated.

His engineers had another surprise for Moses. They informed him that the Authority's engineers had made Triborough's lanes the same width as the lanes on the Queensborough Bridge which had proved too narrow for cars and had had to be closed while the curbstones were chipped away. Triborough's "eight-lane" decks would hold only six adequate lanes.

After taking over the Authority, Moses took almost no time to find out why the Manhattan terminus had been placed at 125th Street: William Randolph Hearst had owned deteriorating real estate there and he had wanted the city to buy it. And it took Moses little time to learn why the bridge was supposed to be bedecked with costly granite: the quarries that were supposed to furnish the granite were owned by Tammany interests.

Moses had learned how to get things done and one way not to get things done in New York was to pick a fight with Hearst and his three newspapers. He left the Manhattan terminus at 125th Street.

But that was about all Moses left. With George V. McLaughlin admiringly letting him run the Authority as he wished, Moses controlled two of its three votes. The third, he soon learned, was in his pocket, too; its possessor, the chairman and lone remaining member of the original Authority, was an attorney, Nathan Burkan, whose only interest was in protecting Hearst's, and once Moses indicated that he would not interfere with those interests—the publisher received a \$782,000 award for his 125th Street holdings—Burkan showed little further concern about the operations of the body of which he was the nominal head and never attempted to contest Moses' assumption of its executive functions. Two years earlier, Moses had called on the Authority's chief engineer, Edwin A. Byrne, the old Tammany man who had entered city service in 1886 as an axeman, and had pleaded with him to strip the granite from the bridge design and to use the money saved for approach roads, and Byrne had refused. Now Moses was Byrne's boss. In his own words: "I sent for the chief engineer and asked him which he thought was more important—adequate approaches or ornamental granite. He unhesitatingly replied, 'Granite.' This ended the conference and I told him to resign and get his pension." And Moses gave similar instructions, after conferences of similar length, to almost all of Byrne's aides.

To head Triborough's new engineering staff, Moses hired the austere, no-nonsense Swiss aristocrat who had designed the graniteless George Washington Bridge: Othmar Hermann Ammann. To head Triborough's new administrative staff, Moses hired a male version of Amelia Clanton, a stern disciplinarian he had met at Hog Island and had hired to shape up the Long Island Park Commission: retired army brigadier general Paul J. Loeser. Loeser had a gift for rubbing almost anyone the wrong way—La Guardia called him "a Prussian and a Nazi"—but Moses had seen in brief encounters with the General qualities that could be useful to him. "He was, no doubt, a martinet," Moses was to recall. "He was tough. . . . He was not popular."

Then Moses set about giving Ammann and Loeser staffs to shape up: a team of the country's most experienced bridge builders. Within weeks, this team had come up with the kind of plans Moses wanted. The granite was eliminated. The two decks were reduced to one, the sixteen lanes were slashed to six on the Manhattan arm of the bridge and to eight on the rest—and the cost of the bridge was cut by 40 percent, from \$51,000,000 to about \$30,000,000. The Authority was now going to have a surplus of about \$14,000,000 from its \$44,200,000 PWA allocation.

Moses' plans for using the money to build the roads that would link the great bridge with his Westchester and Long Island parkways raised legal problems: the PWA allocation was for building a bridge, not roads, and while the allocation did permit expenditures for bridge "approaches," that word had traditionally referred only to the ramps leading directly up to the bridge. But Moses persuaded PWA Administrator Harold L. Ickes that "approaches" could be defined as "approach roads." He told him that without such roads the number of motorists who would use the new bridge would be too small to enable the Authority to meet the payments on the bonds the PWA had purchased—an argument that weighed heavily with the thrifty Ickes. In fact, he persuaded him not only to let him use the \$14,000,000 for approach roads but to give him an additional \$2,000,000 as well.

Sixteen million dollars was an impressive sum, but it wasn't nearly enough for the approach roads Moses had in mind. He persuaded La Guardia to search the corners of the city treasury for additional right-of-way contributions. He persuaded Civil Works Administration officials to permit him to list some of the road-building work as "park" projects—and thereby obtain hundreds of CWA laborers. Then he obtained hundreds more by diverting CWA-paid laborers on other Park Department projects to the Triborough project without CWA permission. (It always took a few days for CWA officials to find out what their laborers were doing, and by then Moses could tell them that since the work had been started, it would be silly not to allow it to be completed. After all, he pointed out, if the laborers were now reassigned, the jobs would be left unfinished—unsightly scars, offending residents of the neighborhoods in which they were located. And if the newspapers got wind of such an example of governmental inefficiency . . . The argument never failed.) And by the autumn of 1934, thanks to the success of his tactics with CWA's successor agencies, work had been begun to widen Whitlock Avenue, the Bronx thoroughfare with which the bridge connected, and Eastern Boulevard, the thoroughfare with which Whitlock Avenue connected, all the way to the Hutchinson River Parkway.

The building of Triborough's Queens approach was a triumph of imagination over seemingly insoluble problems. The four-mile gap between the bridge and the Grand Central Parkway was four miles of Jackson Heights and Astoria, and in those two communities neat one-family homes, garden apartments, stores and small factories were jammed tightly together. Condemning the number of buildings involved would be impossibly expensive, but there was no vacant land left for a parkway right-of-way.

So Moses made land. A hundred yards out from the shoreline of Jackson Heights, giant pile drivers, mounted on giant barges, pounded steel bulk-

heads into the muck at the bottom of Flushing Bay. Then long strings of barges piled high with sand from the Rockaways made their broad-beamed way up the East River, through Hell Gate and into the bay to dump the sand behind the bulkheads. Long convoys of dump trucks loaded with shale and stone and gravel rumbled across Queens to heave up their backs and slide the shale and stone in with the sand. And the mixture became a mass solid enough to hold concrete, specifically the six concrete lanes that would allow the Grand Central Parkway to circle Jackson Heights for more than two miles and wait until the last possible minute before plunging into Astoria Boulevard for the final run to the Triborough Bridge ramp.

The building of Triborough's Manhattan approach was another triumph of imagination.

Since the Manhattan terminus was to be located at 125th Street, Moses told his aides, there had to be some way of getting up to 125th Street. York Avenue, which presently ended at Ninety-second Street, would have to be extended along the riverfront.

If Charles Dickens had been looking for an illustration for an American edition of *Hard Times*, he could have stopped looking when he got to that riverfront. The stretch between Ninety-second and 125th streets was a catalogue of the unlovely by-products of industrialism; scented by the raw filth pouring from open sewers into the river below was a long row of small, grimy factories, used-car lots, auto-repair shops, junkyards, coal pockets and oil-storage depots. Hogarth could have found a whole gallery of models in the occupants of the bars, whorehouses and tenements that mingled with them. To Moses, however, the panorama possessed less appeal. Unlovely as was the scenery, it would not be cheap to condemn it. On a single factory, the Washburn Wire Works, a large, grimy building that occupied three solid blocks of riverfront, from 116th to 119th streets, the price asked was \$3,000,000.

A riverfront highway had been proposed before, but an early Corporation Counsel had announced that he had searched the deeds to the land involved and found that there was no loophole that would allow the city to take title by any procedure other than the unfeasibly expensive one of condemnation. Succeeding city administrations had assumed for decades that that finding was correct. But Moses told his bloodhounds to forget about assumptions and search the deeds again—and to find something, goddammit. And the bloodhounds found something. The title to some of the lots contained a covenant more than a century old, dating back to a time when the lots had been owned by the city itself, they told Moses. And in the covenant the city reserved the right to reclaim a sixty-foot strip along the waterfront in case it ever wanted to build a street there. Moses could have sixty feet of right-of-way along a considerable stretch of his riverfront highway for nothing.

Moses' problems were still far from solved. At least six lanes were required, he figured, and the minimum width for six lanes was not sixty feet

but one hundred. And Moses did not intend to waste the waterfront in a parkstarved section of the city on a highway. He wanted the river side of that highway to be not a guardrail for the highway but a park from which residents of the area could enjoy the waterfront. There should, he decided, be a treeshaded esplanade along the waterfront, complete with benches and play areas. And for such a park at least another thirty or forty feet in width were needed, thirty or forty feet that would, if condemnation was required to obtain it, be terribly expensive.

There were other complications. The Washburn company told La Guardia that, if it was forced to move, it would move out of the city altogether and find a cheaper location somewhere else—and the Washburn company employed 1,200 men. The Mayor told Moses that the city could not afford to lose 1,200 jobs—and therefore could not take the chance that the company was bluffing. The Consolidated Edison Company owned large portions of property that were set back from the river and would not have to be condemned. But Con Ed needed access to the waterfront, and that access was now provided by overhead conveyors which crossed the property on which the East River Drive Extension would have to run. If those conveyors were eliminated, Con Ed would be hurt, and the city would have to pay the utility substantial damages.

To keep the amount of land required for the improvement as small as possible, Moses decided to build the park out over the river on a reinforced concrete platform ten feet wide—because a ten-foot-wide platform was the maximum width that could be supported without the construction of expensive pilings. He wouldn't condemn the Washburn Wire Works, he decided. He would chop off its front, run the Drive through the land thus obtained, build additions atop the factory so that its floor space would not be reduced and an underground tunnel beneath the Drive so that it would still have access to the waterfront—and reface the entire shabby edifice with neat brick. This solution would cost a million dollars—two million less than condemnation would have cost. And it saved the city 1,200 jobs.

Moses decided to tear down Con Ed's overhead conveyors and build more underground tunnels to the river so that the company could not claim consequential damages. While he was negotiating with the company about this, he horsetraded—Con Ed's citywide operations required an endless stream of concessions from the city, so, with La Guardia behind him, Moses had plenty of ammunition to horsetrade with—and obtained portions of Con Ed's property along the right-of-way without having to pay for it. Then he made another trip to Washington and asked the PWA to contribute an additional \$6,000,000 to acquire land for the Drive so that the bridge would be made more accessible to motorists and more of them would be persuaded to pay tolls to use it. The PWA wouldn't give \$6,000,000—but it would give \$2,000,000. Moses took La Guardia on a tour of the proposed improvement. La Guardia, who lived in an apartment at 106th Street and Fifth Avenue, was keenly aware of the park needs of the neighborhood. And he was fascinated by the engineering aspects of the work. Moses persuaded him that men paid by CWA and its successor agencies could be reassigned

from other city departments to provide the labor needed for the job. This reduced the cost, for land acquisition and materials mainly, to \$1,878,500. Scour the city treasury as he would, La Guardia could find no more than about \$1,300,000 that could be made available—but this contribution brought the balance down to about \$578,000, and Moses said the Authority could afford to pay that itself. And by the end of 1934, the Board of Estimate, under La Guardia's goading, was rushing through the resolutions necessary to obtain title to the area.

Then Moses turned to the question of transforming Randall's and Ward's islands into parks. His Authority had no authorization from the PWA to build parks, it was true, but he convinced PWA officials that the parks would attract to the islands—and to the bridge—enough toll-paying motorists to justify a modest investment. And a modest investment was all he had in mind, he told the officials. The Authority would have to pay for the materials needed to construct baseball diamonds, tennis courts and bench-lined esplanades, but the total cost should not be more than \$225,000. The big cost involved, that of labor, would be paid for by the CWA, for he would make the reclamation of the islands a Park Department project.

The old Authority had planned, and had received PWA authorization to build, a Randall's Island municipal stadium with a seating capacity of 10,000. "Wholly inadequate," Moses said. He wanted a stadium seating "at least" 70,000, big enough to hold an annual interborough athletic competition—the competitors to be champions selected in track meets and other athletic events held in each borough—and the big crowds that he was sure would attend. And he wanted it big enough to be the site of Olympic try-outs and great outdoor spectacles. "The stadium must be adequate for big events or it is a failure," he said. "There is ample room on the island for a big stadium." Its components must be of commensurate size, he said. For example, it should have the largest movable outdoor stage in the world. Construction of such a stadium would cost the city millions in ordinary times. But now, the labor, the biggest single item, would be paid for by the federal government. He persuaded the CWA to list the stadium as a Park Department project. A million dollars in materials would be needed for these men to work with, but he persuaded the PWA that the stadium would help attract toll payers to the bridge, and the agency allowed the Authority to increase its previously authorized contribution by \$300,000.

There was still an obstacle to the creation of parks and a stadium on Randall's and Ward's islands: the institutional buildings already there. The military hospital was only partly filled and Moses had little difficulty persuading U. S. Army and Navy officials to move the patients to other hospitals and vacate the buildings. But the House of Refuge, the Hospital for the Feeble-Minded and Manhattan State Hospital presented a more difficult problem; city and state reformatories and asylums were already overcrowded. La Guardia's hospital commissioner, Dr. Sigismund S. Goldwater, flatly refused to move patients out of the city buildings on the two islands,

and state officials said any moves would have to wait until new state institutions were constructed. But Moses persuaded Lehman to overrule the state officials and La Guardia to overrule Goldwater, and by the end of 1934, with the patients crammed into overcrowded institutions, the House of Refuge had been vacated and demolished and the razing of the Hospital for the Feeble-Minded was under way.

Meanwhile, Moses' eyes had focused on the Sunken Meadow, the fifty-acre sand bar east of Randall's Island. The hundred-yard strip of East River that separated it from the island concealed land that lay only a few feet below the surface. Moses ordered the strip filled in—and Sunken Meadow was thereby made a part of Randall's Island, and another fifty acres was acquired for park space.

The residents of the high-rent apartment houses that lined the Manhattan side of the East River had never gotten much of a view for their money. Opposite them—to the east and dragging off to the south—was scenery done in Early Industrial Era Midlands, the grimy warehouses, factories, tenements, oil tanks and open storage depots of Astoria and Long Island City. Its dreariness broken only by the gaudiness of occasional monster billboards painted large enough so that their messages could be seen clearly across the river, that vista stretched away without a break (there were no housing developments or parks there then) beneath a pall (the word "smog" had not yet gained currency) cast over it by belching smokestacks. And the scene to the north where Ward's Island lay, low in the water with Randall's behind it, had not been any prettier. Dull-colored and lifeless in the distance even when fog didn't shroud them, the two islands had been adorned only by the squat red and gray institutional buildings that failed to block out the scenery behind the islands: the South Bronx, Long Island City's spiritual descendant. Since 1932, the piers erected for the first, abortive attempt to build the Triborough Bridge had been part of the scene, but, dun-colored, featureless and, without a bridge on top of them, seeming in the distance like a succession of walls to play handball against, they did little to relieve its drabness. The view had not been inspiring.

By the end of 1934, that was no longer true.

By the end of that year, the residents of the East River apartments, looking north, could see giant cranes moving about on the islands like long-necked dinosaurs prowling far-off marshes. Around the cranes were stirring masses of men. Over the water came the pound of pile drivers, a sound that was dull and far away, but that never seemed to stop. And rising from behind the little buildings on the left of Ward's Island and curving off to the right across the island in a gigantic curve, a highway was being bolted into place in the sky.

The highway, carried across Ward's Island on the piers, climbed in a long, slow, powerful line. Across the river—to the right as the watchers looked north—they could see its steel roadbed slanting unhurriedly down behind the first line of factories. There was a great gap in the center, but it took

little imagination to see how the roadbed would continue to rise there until it was flung across the Hell Gate, for the hulking concrete anchorages that would hold the cables for the Hell Gate suspension bridge were already in place ("Immense things they are," wrote an observer; "beside the Nile they would pass for pyramids"), and so were the bridge's steel towers, which loomed over the river like the façades of twin cathedrals. And even as the watchers watched, new portions of the roadbed paraded past them. Pushing aside the sullen gray of the East River would come a squad of barges, lashed together side by side to bear a weight measured in thousands of tons and pushed along by a whole covey of panting tugboats, bearing to the waiting cranes the specially fabricated steel girders that would hold the bridge roadbed girders—some of which were as big as a ten-room ranch house.

Enormous as the Triborough Bridge seemed to watchers along the East River, moreover, they were seeing only a small portion of the whole project.

Engineers and journalists felt that it was only from a plane that one could get a feel of the project in its three-borough entirety. From the air, one journalist said, "you could see the avenues being widened as if a giant chisel was being rammed between them."

And from the air, more than one journalist said, the project seemed almost too big to grasp.

Robert Moses erected the complex of buildings that was the Central Park Zoo at least partly because of his devotion to Alfred E. Smith. He tore down another building in the park wholly because of that devotion.

He tore down Jimmy Walker's Casino.

Everyone who was interested in the cause of parks in New York City disapproved of the use to which Calvert Vaux's Ladies Refreshment Salon was being put, of course. But none of them wanted the building torn down. As a structure designed by one of the creators of Central Park, it held a special place in the city's history. And for many of the reformers, it was associated with pleasant memories; they could remember accompanying their parents on Sunday bicycle or horseback rides through the park that ended with lunch there in the quieter days before the World War. Moreover, the building possessed a Victorian charm precious in its own right. As a practical matter, although Solomon and his backers had poured almost \$400,-000 into improvements in the building's interior, he was nonetheless only renting it from the city. The city still owned it. The Park Department could ask him to lower his prices and thereby make the magnificent dining rooms and pavilions more accessible to the general public. If Solomon refused, the city could attempt to cancel his lease and install in his place a more amenable concessionaire. And even if the attempt failed, the lease had only five more years to run; after that, the building, and the improvements, would revert to the city forever. The Park Association had been campaigning for the Casino's conversion into a moderate-priced restaurant, but when the Association's members heard that Moses was planning to raze the building-announcing that it was structurally unsound, that it would cost too much to repair and that luxury restaurants had no place in parks anyway, he said that a play-ground, complete with wading pool, would be constructed on its site—they were aghast. Such an act, they said, would be wanton destruction. Financially, it made even less sense; a group of restaurant owners had already asked for permission to operate the Casino as a moderate-priced restaurant, abiding by any rules that Moses wished to establish—and pay the city \$25,000 annual rental plus a liberal share of the receipts. And finally, as the Casino's chef, Henri Charpontier, put it in a plaintive letter to the *Times*: "Why choose the site of the Casino . . . when there are broad expanses as far as the eye can reach on either side of the Casino, where as fine a swimming [sic] pool as the Commissioner's kind heart urges him to provide could easily be located?"

But Moses refused to compromise. The considerations which motivated him were not historical, aesthetic or financial. To a large extent, they were hardly rational. "It was a case of revenge, pure and simple," says Paul Windels, La Guardia's Corporation Counsel who advised Moses on the case before turning it over, "in disgust," to Assistant Corporation Counsel William C. Chanler. "He never said so straight out, but everyone around him knew why he was doing it—he wanted to get back at Walker for what Walker had done to Governor Smith. God, he wanted to get Walker!" (And the oddest part about the affair, Windels says, was that, "to the best of my knowledge," Moses never spoke to Governor Smith about it—and if he had, Governor Smith "would have told him not to do it.")

Solomon, panicking over his investment, offered to confer with Moses and revise his price list. "I am not going to confer with Mr. Solomon," Moses replied. With La Guardia, advised by Windels against supporting an establishment as notorious as the Casino, refusing to intervene, Chanler served Solomon with an eviction notice that charged the Casino Corporation with a number of technical violations of its lease; a typical charge was that, by allowing fashion shows to be held there, the Casino had violated a regulation prohibiting advertising on park property.

Solomon took the case to court. The trial turned out to be embarrassing for both him and Moses.

Solomon was forced to admit that, during the five years of its existence, the Casino had grossed more than three million dollars and he himself had drawn more than a quarter of a million in salary—while paying the city a total of \$42,500 in rent. He had to admit that Park Department officials had been allowed to consume tens of thousands of dollars of free food and liquor. And he had to manage to keep a straight face while maintaining under cross-examination that he couldn't remember the name of a single one of those officials, or of a single one of the Casino's stockholders.

But Moses had some bad moments on the stand, too.

One was reminiscent of the way he had been trapped in an apparent lie the only other time he had found himself under oath. In the Taylor Estate trial, he had testified that he had never been advised that appropriation without funds was illegal, and W. Kingsland Macy's attorney, Charles H. Tuttle, had thereupon produced the paper which had given him that very

advice and waved it in front of him. Now, sitting in the witness chair in State Supreme Court in Foley Square, Moses said that he would allow in city parks only restaurants that charged "reasonable" prices, and when pressed for his definition of "reasonable," he said that luncheon should be one dollar or less, coffee no more than a dime—and that "the à la carte system" is a luxury which should not be permitted to exist in a park restaurant. Whereupon Solomon's attorney, the same Charles H. Tuttle, produced a paper, waved it in front of Moses and asked if he recognized it. It was a luncheon menu, approved by Moses, from the Tavern-on-the-Green, the restaurant Moses had installed in the sheepfold after renovating it and turning it over to a favorite concessionaire for a nominal rental, and the attorney read from it a long list of à la carte entrees for luncheon, all priced over a dollar, and concluded by reading the Tavern's price for coffee—twenty-five cents.

The press, which had long used the Casino as a convenient symbol of the abuses of the corrupt "Walkerian Court," treated the trial as an attempt to end those abuses. If there was a principle involved, the press ignored it. But some reformers did not. The Casino case marked the first significant defections from the solid ranks the city's Good Government movement had previously formed behind Moses in every encounter. Not all reformers disapproved of his attempt to demolish the building, of course. Most still believed that anything he did was right-apparently, judging from their comments, because they believed his motives were pure; when he said the building was structurally unsound and repairs were unfeasible, they believed him. And most of those who, having seen the Casino, found his contention difficult to believe, felt sure that he had simply made a mistake, one to which, in view of his past record, he was more than entitled. But some reformers, and among them some of the men and women who had played the most vital roles in persuading the Legislature to allow Moses to assume the city park commissionership, found it difficult to reconcile their idealized image of him with the fact that he was now contemplating "destroying property . . . in Central Park which did not belong to him but to the entire city." And they were certain, they said, that he did not have the power to do so.

But this last group of reformers was in for an awakening, the same kind of awakening that had been undergone ten years before by Trubee Davison, who had introduced a bill Moses had drafted without thoroughly studying it, and by upstate reformers like Ansley Wilcox and Alphonse Clearwater, who had been tricked by Moses into supporting the Davison bill. In outlining the powers of the New York City Park Commissioner, as in outlining the powers of the chairman of the State Council of Parks, Moses had proved again that he was the best bill drafter in Albany.

The city reformers had supported the bill that had allowed Moses to become Commissioner despite reservations about some of its broader provisions. Now they looked at the bill more closely—and found that it was not only its broader provisions that they should have been worried about.

Chanler startled them by arguing in court that the bill granted the City Park Commissioner absolute power "to raze or remove . . . buildings which had been erected as incidental to park uses, such as restaurants, boat houses

and similar structures," and that it further provided, as additional insurance against any check on his actions, that "such changes will not be supervised by the judicial power unless palpably . . . abusive of the grant." The inclusion of such language in the bill, they realized, meant that not even the courts could stop Moses from tearing down any structure in the parks that he wanted to tear down. As Trubee Davison had done ten years before, they hurriedly began reading the law—and they found that the language was, buried within a mass of other legalese, indeed in it. And they found that some other language was not in it, language that had previously been included in city park laws at their request to insure against willful changes in the parks at the whim of a Park Commissioner. Under the old statute, the approval of a landscape architect, "skilled and expert," had been required for any major alteration in a park. Now there was no longer any such requirement. Moses had skillfully amended it out of the new law. Chanler said in court that the new law gave Moses the right to do whatever he wanted in parks as long as it was for a "proper park use" and that Moses was the only man who could determine what was, and was not, a proper use. And Chanler was right. As the reformers read the law, the law that they had helped pass, they realized that they had helped turn over the parks that were the priceless heritage of the city to the whim of one man.

Before the issue was finally decided, a number of requests for injunctions against the demolition were argued before several different Supreme Court Justices. One, John F. Carew, allowed his emotions to boil over on the bench. Moses' contention that the Casino was in an irreparably bad state of disrepair, Carew said, was "obviously preposterous and contrary to the facts." Having thus called Moses a liar in legalese, Carew went on.

The Casino, he said, "has long been an honorable, useful, beloved, admired, valuable and even historic monument. . . . The Park Commissioner has no more power to destroy the Casino than he has to destroy the Obelisk, to fill in the reservoir, or the lake, to tear down City Hall, the Arsenal [or] the many historic buildings, monuments, structures, statues in the many other parks of the City, the treasured relics of generations here. He is only to hold office for a brief term. He is the passing creature of a day. He will in time, and that not long, be superseded. He may not 'waste' the heritage of New York. In the meantime . . . he must restrain his extravagant, excessive energy and zeal or he must be restrained." He issued the injunction.

But Moses wasn't worried. He knew what was in the law. "I think the higher court will take care of Justice Carew," he told a reporter airily. And he was right. When Chanler appealed Carew's decision to the Appellate Division in Albany, the five justices of that court, sitting together in their high-backed chairs, said that the powers the Legislature had granted to Moses were far too broad and indicated that they wished the Legislature would revoke some of them. But for the present, they said, the law was passed, and it was unfortunately clear; they had no choice but to overrule Carew's decision. If Moses had the power to destroy the Casino, Carew had said, he had the power to destroy the Obelisk, the Arsenal, City Hall or any other structure, no matter how historic, no matter how beautiful, no matter

how treasured, in any park in New York City. Carew was wrong about City Hall; it lies just outside the northern boundary of City Hall Park; Moses couldn't tear it down. But Carew was right about everything else.

Moving quickly to forestall any further appeals, Moses had crews of workmen tearing down the Casino within twenty-four hours after he received a copy of the Appellate Court decision. Within two months, the building was gone and its site was covered with a playground. Except for its stained-glass windows, which were used in the new police station being constructed on the Eighty-sixth Street Transverse Road, Robert Moses had succeeded in eradicating every trace of the spiritual home of the man who had publicly humiliated Alfred E. Smith.

THERE HAD BEEN A DAY in 1934 on which the cheering had stopped. It was the day Robert Moses started running for Governor.

Moses was later to maintain that he had not wanted to run. The Republican nomination "was more or less forced on me," he was to say. He had accepted it only "to hold the party together." Such loyalty to the Grand Old Party is difficult to reconcile with the fact that Moses had spent ten years of his life, the decade during which he worked for Al Smith, fighting it. Such loyalty is difficult to reconcile with the fact that in 1928, when Moses had believed he had a chance to win the Democratic gubernatorial nomination, he had enrolled as a Democrat—he had not re-enrolled as a Republican until 1933, when he needed GOP support for the Fusion mayoral nomination. And in fact no reconciliation is necessary. For if Moses' description of his attitude is based on his memory, his memory played him false. No forcing was necessary at all, says F. Trubee Davison, who first offered him the nomination: "I had a talk with Bob and asked him if he'd be willing to go. He didn't say yes, but he encouraged me." Says another source: "Bob told me Trubee had offered him the nomination and he asked my advice. My advice was not to take it, but I could see he was going to take it no matter what I said. He was hungry for it."

The identity of the man who offered Moses the nomination is perhaps the clearest proof of the inaccuracy of the portrait Moses had painted of himself as the foe of the forces of influence, privilege and wealth. For Trubee Davison was the acknowledged representative of those forces. Son of J. P. Morgan's late partner, Henry P. Davison, heir to Henry P.'s estate, which, behind massive iron gates and thick walls of stone, occupied all 4,000 acres of Long Island's Peacock Point, no longer the naïve young assemblyman who a decade earlier had been tricked by Moses into introducing the bills giving the Long Island Park Commission the right of condemnation by appropriation, Davison was a key figure in the ranks of the Long Island robber barons. And Davison was taking an active interest in the selection of the gubernatorial nominee precisely because the barons felt that their influence and privilege and, to some extent, their wealth, were threatened.

The barons—together with the upstate gas and water-power utility interests—had dominated the state's Republican Party from time immem-

orial; to a large extent, in fact, the GOP was the barons and the "Interests," a fact made clear when H. Edmund Machold, stepping down as Assembly Speaker in 1925, became, simultaneously, state GOP chairman and president of the gigantic utility holding company Niagara-Hudson, and by the fact that among the downstate GOP congressmen were Robert Low Bacon, stipendiary of the House of Morgan, Ogden Livingston Mills, son of Darius Ogden Mills of the San Francisco "bank ring," and willowy millionairess Ruth Baker Pratt, widow of one of the six sons for whom Rockefeller partner Charles Pratt had built manor houses on the Glen Cove peninsula.

It was important to the Interests that they control the state GOP. It was important for business reasons—the party was the Interests' traditional protector in Albany—and it was important for reasons that went beyond business: the conservatism of these men of property, to whom property rights were sacred, was not only financial but ideological, and they viewed their party as a bulwark against heresy, against the increasing emphasis on human as opposed to property rights that characterized the philosophy of the three Democrats—Smith, Roosevelt and Lehman—who had usurped the Executive Chamber. Public reverence for their beliefs might be dying, but they would never surrender them. Not for nothing had journalists dubbed them "the Old Guard."

From the standpoint of both philosophy and pocketbook, in 1934 control of the state GOP was more important to the Old Guard than ever. Their fury at the New Deal—"the purpose of the Roosevelt administration is the imposition of a Russianized form of government," snarled upstater Bertrand H. Snell, House minority leader\*—had led them to resolve that the presidential election of 1936 would be a Holy Crusade to oust "that man" from the White House, and they intended to make New York, with its forty-five electoral votes, the crusade's embarkation point. Moreover, most of the Old Guard—"anybody who amounted to anything in the GOP," Warren Moscow said-owned Niagara-Hudson stock, whose value would be immensely increased by the finalization of the scheme that had been the party's grail for almost four decades: the turning over to private utilities such as Niagara-Hudson of the immense water-power resources of the St. Lawrence and Niagara rivers. Smith had established a State Power Authority to keep those resources in the hands of the state's people. Roosevelt had pointed out dramatically that only two heartbeats, his and that of Lieutenant Governor Lehman, separated the "Power Trust" from the state's water power -and millions of New York families from higher monthly electric-light bills. Lehman, as Governor, had proved even more effective, undramatically but stubbornly shoving down the Legislature's throat bills giving the State Public Service Commission authority over utility rates, forbidding the use of

<sup>\*</sup> Snell was only one of a group of reactionary congressmen from upstate which included Hamilton Fish, Jr., John Taber and James W. Wadsworth, who became a congressman after losing his United States Senate seat to Robert F. Wagner, Sr., in 1926 despite his successful mediation in the Taylor Estate fight. (Key reason for Wadsworth's loss: his refusal to temper his opposition to the radical notion of women's suffrage.)

utility funds for political lobbying and—in a step the utilities viewed as particularly ominous—allowing municipalities to construct their own plants and distribute power at low rates. Only the Legislature stood between Lehman and still more radical anti-utilities measures he was proposing; it was vital to the Old Guard, more vital than ever, that the GOP control the Legislature—and that they control the GOP.

But control of the party had been snatched away from the Old Guard—by the former amateur in politics they had once betrayed but who had acquired from his bitter fight with Robert Moses a professionalism that made him their equal: W. Kingsland Macy.

Macy had lost the Taylor Estate fight, his first political battle; he had not lost another one. Having learned the hard way the importance of public opinion, he purchased a string of weekly newspapers that blanketed Suffolk County and by 1927 had ousted the county GOP chairman, installed himself in his place and purged the county organization with a ruthlessness so complete that his control of it would not be seriously challenged for a quarter of a century. Then he turned his attention to wider spheres. Before the barons quite realized what was happening, he had seized the Republican state chairmanship.

Once in power, Macy proved that pince-nez, starched high round collars and blue suits with vests-the outfit he was to affect until he died in 1960—were no guarantee of conservatism. Attempting to reverse his party's blind obstructionism to progressive policies that had been largely responsible for the repeated victories of Smith, Roosevelt and Lehman in a state in which voter registration was heavily Republican, Macy excoriated GOP legislators who opposed Roosevelt's attempt to blunt the effects of the Depression through increased spending and embarrassed enough of them into supporting the state's Temporary Emergency Relief Administration to give the measure the votes it needed to pass. Dismissing the fear of the Old Guard leaders that, if they authorized an investigation of corruption in New York City, Roosevelt would authorize investigations of corruption upstate, Macy called GOP legislators into closed-door caucuses in Albany and, using every ounce of patronage at his command, broke the power of grim old William Ward and forced the tyrant of Westchester to release his legislators to vote as they wished, thereby allowing the passage of the bills initiating the Seabury investigation. And it was pressure from Macy that persuaded Republican fusionists to bow to Seabury's demand and, over Old Guard objections, give the nomination for mayor to the dangerous rabble-rouser La Guardia.

Astounded and antagonized by the course on which Macy was leading their party, the Old Guard was thrown into panic by his next announcement: pointing out—accurately—that the GOP's identification with the Power Trust was a political liability, Macy proposed to end the Trust's domination of the party by making Seabury, who had long attacked utilities as "monopolists and exploiters of the people," its next gubernatorial nominee.

"Well, that was all we had to hear," Trubee Davison would growl three decades later, sitting with one gouty leg propped on a foot stool in the thirty-foot-high study of his mansion on Peacock Point, topping off with cherries

jubilee a light lunch served by a white-coated butler and staring out across the Davison compound's half-mile-long terraced croquet court. "Seabury was a Democrat for one thing—that was enough. And he was full of this honesty-in-government thing that was so teeing these guys [Davison's Old Guard colleagues] off. He was calling everybody crooks, just like Macy."

The Old Guard hastily began looking for a candidate of its own to run against the implacable old idealist.

The qualifications required (in addition to respect for the sanctity of holding companies) were quite explicit: What was needed, said an Old Guard-sponsored magazine, was "a candidate who symbolizes the spirit of uncompromising courageous opposition to the whole Roosevelt socialistic program." There was a catch, however. While the Old Guard was determined to have a candidate who shared its views, 1934 was no year to have a candidate who was publicly identified with those views; what was wanted, in short, was a candidate who was actually a reactionary conservative—but who the public believed was a radical liberal. What was wanted was a front man, someone whose reputation would give protective coloration to their attempt. They turned to Robert Moses.

Moses may have antagonized them once, when he threatened to run the Northern State Parkway right past their manor houses. But in the intervening years, they had come to know him better. His aggressiveness had, after all, turned out to be not the hostility of the radical, idealistic reformer to property and power but something quite the opposite, an expression of his regard for power, an acknowledgment of the fact that he had on his side, in the person of that uneducated, practically illiterate demagogue from the Fulton Fish Market, the one man in the state with power equal to theirs and therefore did not have to compromise with them. As soon as he no longer had this power behind him, he had changed, suddenly, dramatically and, to them, satisfyingly. He had proven understanding—sympathetic, in fact—to their desire to keep the rabble away from their estates; he had proven his sympathy, in their view, by his agreement to make the parkway not an accessway to parks on the North Shore but a "traffic bridge," a chute, similar in principle to a cattle chute, on which the public would be shunted across the Gold Coast without being allowed to get off and contaminate it. His receptivity to their demands for private parkway entrances and bridges had proven him to be what they called a "practical man," a man willing to make accommodation with power. His deal with Otto Kahn had been further testimony to this (after all, a man who would turn a highway aside to save a private golf course couldn't be all bad)—as had his relationship with the politician who most directly represented them in state affairs. J. Russel Sprague, G. Wilbur Doughty's nephew, had succeeded the Last of the Mohicans as head of the Nassau County Republican organization and by 1934 had displayed all of his uncle's ability to obtain wampum for his braves. And Sprague told the barons that Moses was a man "you can get along with." Moses had cemented his relationship with the barons by entertaining them in reserved portions of Jones Beach and by displaying during dinner parties at their mansions a hatred for the President equal to

theirs. Reported *The North Shore Almanack*, a weekly newspaper that echoed the political views of the Gold Coast: "He is not a New Deal radical. He doesn't believe that the New Deal is working or can work. Finally, his friends say that he doesn't like Mr. Roosevelt at all." Moses' view of the "people," they found, was, in fact, as strikingly similar to theirs as was his view of the people's President.

Just as important to the Old Guard as this facet of Moses' personality was the fact that the public didn't know about it. Thanks to his genius for public relations, to the people he was still the fighter for parks and against privilege. And therefore if he was the Old Guard candidate against Seabury, the press would not be able to charge that the Old Guard—and the scandal-scarred utilities—were trying to keep control of the GOP. No one would believe Macy if he charged that Robert Moses was a front for the "power lobby." Asked three decades later why he had wanted Moses to run, Davison would admit to the author: "No one questioned Moses' honesty. Macy had been calling everybody crooks and he certainly couldn't say this about Moses. My thought was if we could get somebody like Moses they couldn't say that."

There were still some obstacles between Moses and the nomination. A number of Republican leaders simply couldn't stomach the thought of giving it to a man who had spent so many years humiliating them. But the Old Guard knew how to handle such scruples. Relentless economic pressure was applied. When the opposition had been whittled down to a few diehards, Davison called a Sunday-afternoon meeting of party leaders in the Fifth Avenue apartment of his mother, Mrs. Henry P. Davison.

"Well, this meeting was just like an 'Of Thee I Sing,' " Davison would recall. "It was the kind of thing you put on the stage. We had all the leaders there, but some of them—that fellow from Queens [Queens leader Warren Ashmead] and the Syracuse bunch—wanted to run out on us, and I had to tell them they had better come back, and they did, but I knew we had to get this thing wrapped up or the agreement would fall apart. I sent out to the Links Club for sandwiches and I gave the elevator man five dollars not to stop at our floor so nobody could go down, and we wrapped the thing up. Then I wanted Bob up there, so the whole thing would be made final and he was out fishing on the Great South Bay. We got the State Police and they got him off the Great South Bay and brought him to New York. Then Bob and Russ Sprague and I went down to the other end of the apartment to a bedroom and we said, 'Now the fellows are willing to support you and we've got the votes.' He said, 'Well, this is like swimming up Niagara Falls in a coonskin coat,' meaning this was a very hard election to win, but he agreed to accept the nomination."

Davison's strategy worked. Moses' acceptance of the nomination made him the reactionaries' ally but most newspapers responded as did the *Buffalo Evening News*, which said: "None can say that Robert Moses is a . . . tory . . . His every act since entering public life has been dedicated to the best

interests of the many." Even Baron Warn of the Times could only express puzzlement at the alliance; "one of the odd turns of politics," he mused. Macy was robbed of the chance to portray the nomination struggle as one between an honest liberal and a candidate of the Power Trust. The battle at the GOP convention, held in Rochester in September, was bitter-"The convention will go down in history as one of the most hectic the GOP has ever held," commented the Rochester Times-Union—but the result was foreordained and Moses' nomination was cheered by both press and public. "At last! An idealist in politics!" said one typical letter-to-the-editor. Under cover of the cheering, the state committee was able to meet immediately after the nomination and oust Macy as state chairman. (The depth of the misunderstanding of Moses' philosophy was exemplified by an editorial in the World-Telegram. Noting that the platform adopted by the convention was "an uncompromising denunciation of the New Deal," the World-Telegram said: "Mr. Moses may be able to fit himself to such a platform. We doubt it. With the reputation and record Mr. Moses has as a liberal we don't see how he can." The World-Telegram didn't know that Moses had written much of the platform himself.)

If the press was puzzled by Moses' nomination, it was to be dumbfounded by his campaign. For Robert Moses as a candidate was a phenomenon of a type not seen very often on the American political scene.

"It seemed as if he was trying to set some kind of record for antagonizing people," Windels recalls. The time at Moses' disposal was limited—in keeping with the custom of the era the campaign ran for only five weeks—but he didn't waste a day of it. The element of the GOP most enthusiastic about his nomination was the Young Republicans. The very evening after the convention, Davison hosted a cocktail party for them so that Moses could convert their enthusiasm into active support. But things didn't work out quite as Davison expected. "They got into this argument and he started calling them names, and they started calling him names," Davison recalls. "My God, it ended up in a fearful row!"

Having thus rallied young Republicans to his standard, Moses turned his charm on their elders. Davison raised a massive war chest for the campaign—but, he recalls, "Moses wouldn't consult with me. I must have been the most inactive campaign chairman in history as a result. Once the campaign started, we never saw him. He locked himself up in an ivory tower someplace and we never saw his speeches until he gave them. And then he put Ray McNulty in our office [the state committee office]—to keep an eye on us, I think. Well, didn't that just sit well with the boys!"

With his own party taken care of, Moses turned to the opposition. The fact that he was running as a Republican and against Lehman meant that he had to forfeit the support of the men and women he had worked with in government. Most of them, veterans of the Smith, Roosevelt and Lehman administrations, were Democrats. All of them were believers in increased government activity to promote social welfare—precisely the cause most

hated by the Old Guard with which Moses had allied himself. Moses should not have expected their backing. But he did. And the way in which he asked for it—or, rather, demanded it—and his reaction when it was not forthcoming, were not particularly gracious.

There were a succession of unpleasant endings to pleasant dinner parties at which Bob and Mary were guests. One occurred at the Manhattan townhouse of Aaron Rabinowitz. Rabinowitz, a fabulously successful realtor turned philanthropist, was Lehman's partner in the state's first limiteddividend housing corporation, which the two men had formed, at a cost to each of them of about \$375,000, in an attempt to attract private capital to low-income housing. "I was Moses' friend, too," Rabinowitz recalls. "We were very close. Until one day he was at the house for dinner. He had just been nominated for Governor." As the two men chatted outside the dining room after dessert, Moses asked, "You're going to help me become Governor, aren't you?" Rabinowitz recalls: "I said, 'I can't!' I was Lehman's partner. I was a Democrat. He turned and walked out without a word and for fifteen years, whenever we met, he wouldn't talk to me." Henry Moskowitz, Belle's husband and Moses' old boss on the Municipal Civil Service Commission, traditionally "handled" the foreign-language press for the Democratic Party. Now Moses asked Moskowitz to do the same job for him—the Republican candidate. "Henry said what I said: 'I can't,' "Rabinowitz recalls. "Moses never talked to him again. He owed that man a lot, but the lousy no-good wouldn't even go to his funeral." The friendship of Moses' old associates-men like Joseph Proskauer and Bernard Shientagmight have kept them from taking an active role in the campaign. But after one visit apiece from Moses, all of them were out working for, and lending their powerful names to, Lehman's re-election bid, and thereby emphasizing that Moses was opposing the liberal causes with which he had so long been identified.

Then there was the press.

Most candidates attempt to woo reporters covering the campaign. It took Moses exactly one press conference to turn them icily frigid toward his candidacy.

This might have been surprising to those who had observed his long love affair with the press. But that love affair had endured only because he had never been exposed to the probing questioning to which reporters subject most public officials. His aides, who knew his sensitivity to even the most discreetly implied criticism, could have predicted what would happen when he was.

Moses entered his first press conference smiling broadly and clasping the hands of old acquaintances in the press corps as he strode into the room. But practically the first question asked was the natural one, considering the confusion over how a "liberal" could be nominated by the most conservative elements of the Republican Party: "Mr. Moses, are you a protégé of the Old Guard?"

Said the World-Telegram that afternoon: "The gubernatorial candidate drew his breath sharply, and there was a glitter in his eyes." Jumping to his

feet, jabbing his finger at the reporter who had asked the question, he "heatedly" declared, "Nobody has any strings on me!" and demanded, "Have you asked the same question of Governor Lehman? Did you ask him if he is a protégé of Tammany Hall?" In what the World-Telegram called a "display of temper," he began lecturing the reporters on how to do their job and then "announced belligerently that he would 'not take laying down' anything that was said against him . . . by newspapers." Moses carried out this threat with a vengeance; by the end of the campaign he was spending a substantial part of his press conferences berating the press—and he had completely forfeited the sympathy with which most reporters had been prepared to view his candidacy.

If there was a blunder that could be made, Moses made it. He wanted La Guardia's support and assumed he would have it; after all, he was a member of La Guardia's administration and the Mayor was a Republican. So Moses told the press he had it—and announced a City Hall meeting with La Guardia at which, he told reporters, the Mayor would announce it.

Unfortunately, Moses hadn't bothered to check with La Guardia. The Mayor had been under pressure from President Roosevelt, with whom he was negotiating for federal relief funds, to stay out of the gubernatorial campaign but had indicated to Corporation Counsel Windels that he would campaign for Moses nonetheless. But Moses' taking his support for granted infuriated him. After the City Hall meeting, which lasted almost an hour, La Guardia said blandly, "He'd make a good Governor, gosh, yes," but refused to say he would make a better Governor than Lehman—and he remained seated firmly on the sidelines throughout the campaign. Moses had quietly ducked out of City Hall while reporters were questioning the Mayor, but they cornered him later at 80 Centre Street and he could do nothing but admit that, as the Sun put it, "he did not expect Mayor La Guardia to make any campaign speeches in his behalf as the Mayor probably would be too busy with city affairs."

Moses chose a tour of the upstate Republican heartland, where voters were bitterly opposed to any increase in governmental spending or power, to advocate the imposition of a state sales tax. And he didn't make the suggestion in just any upstate city; he did it in Binghamton, where the Chamber of Commerce had just finished collecting tens of thousands of names on anti-sales-tax petitions. He chose Syracuse, center of Onondaga County farm country, as the place to attack Macy, a hero to farmers because of his battle against the utilities that forced them to pay exorbitant rates for hookups to power lines. Then Moses moved on to Rochester. Reported the World-Telegram: "Upstate audiences were surprised by the advocacy by Mr. Moses of a sales tax, and startled when he struck at Mr. Macy, but they were left speechless last night at Convention Hall in Rochester, when he casually gave his opinion that . . . Herbert Hoover, still technically the party's national leader, failed to realize the need for action in fighting the Depression and had lost his strength of war days." As Moses moved on to Buffalo, fifth city on his itinerary, the World-Telegram reported that he "left behind him a trail of bewildered and frightened party leaders. In four days,

the upstate leaders say, he has alienated four large blocs of Republican voters." Senate majority leader George R. Fearon of Syracuse had warned Davison not to nominate Moses. "Don't do it," Fearon had said. "I know Moses." Now he told Davison, "Well, you've done it. Now we're going to lose the Legislature." (Trubee scoffed; the Republicans hadn't done that since 1912.)

When he did deign to discuss campaign plans with the men who had expected to help plan his campaign, Moses was firm. There was going to be no eating of bagels in Jewish neighborhoods or of sausages in Italian while photographers clicked away, he told them—he was determined to eschew the side shows which were a traditional part of political campaigns in the state that possessed the largest collection of ethnic blocs in America.

There was, of course, something admirable in this determination—just as there was something admirable in Moses' enunciation of controversial views before groups hostile to those views. Moses' refusal to take the culinary road to the Statehouse could be interpreted as an indication that he was going to take the high road instead, that he was one candidate who would not pander to the people but who would instead discuss important issues with them freely, frankly and fully, and who would say what he believed—even if what he believed was that the state needed a sales tax.

But such an interpretation turned out to be an inadequate explanation of Moses' campaign tactics. For the candidate, it turned out, was declining not only to pander to the people but, as much as possible, even to talk to them. And while the road he took in the campaign may not have been the culinary, it was certainly not the high, either.

Because Moses was less well known upstate than in and around New York City, his campaign managers suggested a heavier-than-usual "crossroads campaign," the traditional gubernatorial candidate's automobile tour of upstate towns and villages. Moses replied that there wasn't going to be any crossroads campaign; he was not going to visit upstate towns and villages; he was not going to appear upstate at all except in large cities such as Buffalo, Rochester and Syracuse—and even in the cities there would be no cocktail receptions, no coffee-and-cake receptions, no walking tours of shopping districts, no attempts at all to meet the public. His only appearances would be formal speeches. Then he to'd his campaign managers that he was going to follow the same policy in and around New York City; his only public appearances anywhere would be for formal speeches. And there would not be many of them. When he finished cutting down the schedule of speeches they had planned, his campaign managers realized that he was going to appear in public exactly twelve times. With the exception of those twelve occasions, his only communication with the voters he wanted to elect him to office would come through press releases.

And if the campaign managers were at first dejected at Moses' insistence on keeping the number of his speeches small, they were soon to count it a

blessing. For, as Windels put it, "every time he opened his mouth, he lost ten thousand votes."

Moses' first speech—delivered at the Kismet Temple, a huge auditorium in Brooklyn, after he was escorted to the podium by a steel-helmeted American Legion band and a cadre of the Old Guard, who had dined with him before the rally at their spiritual home, the Union League Club—started the campaign off on the wrong foot.

Moses had always been as much a fanatic on the subject of religion as his grandmother and mother. He had always insisted that he was not Jewish.\* He did everything he could to make his feelings clear: he sent his daughters to an Episcopalian school, made disparaging remarks about qualities he felt characterized Jews and, when he learned that the editors of the Jewish Encyclopedia were planning to include his biography in its pages, threatened to sue them for libel if they did. To a people that had suffered because of their religion and that was suffering still—in 1934, thousands of New York Jews were agonizing over the fate of relatives trapped in Germany-Moses' attempt to deny it was contemptible. Jews who knew of his feelings regarded him with bitterness; members of Temple Emanu-El, the congregation that included most of the leaders of the Jewish community and therefore most of the men who were familiar with Moses' beliefs, laughed bitterly at the fact that he was seen at many funerals of Catholic Tammany politicians at St. Patrick's Cathedral, but almost never at funerals at Emanu-El.† City Comptroller Joseph D. McGoldrick, discussing Moses with a group of Jewish leaders, was shocked at the intensity of their feelings. "To them," McGoldrick says, "he was a Jew who had renounced his religion and that was worse than anything. He was an apostate to his faith."

But not many Jews were privy to Moses' feelings. Because of his name, they simply assumed he was of their faith. Assumed it, that is, until his first speech, in which, apparently stung by a similar assumption by the press, he brought up the subject of religion himself, and brought it up in a way deeply offensive to Jews. "Moses didn't say, 'I'm a Jew and I'm proud

<sup>\*</sup> He based his assertion on the fact that he had been neither circumcised nor barmitzvah, ignoring the fact that, at the time, Jewish theologians generally agreed that Jewishness was a matter of birth rather than conviction, that a Jew is anyone whose mother was a Jew-a definition that meant that Moses' grandmother could not escape being a Jew no matter how hard she tried, that Moses' mother could not avoid it either and that neither could he. ("Af al pi shechoteh jehudi hu," the Talmud says-"Even though he has sinned [converted to another faith], he is a Jew.") By 1974, there would be more controversy on the point. Orthodox and Conservative rabbis still held to the strict traditional view, but the Reform rabbinate allowed considerable discretion to its members. Some Reform rabbis held to the traditional view, but others felt that Jewishness was not a matter of birth but of conviction; in the words of Rabbi Daniel Davis of the Union of American Hebrew Congregations, "My standard is whether or not he wants to be a Jew." Said Davis, therefore: "All you can say about Mr. Moses is that he had Jewish forebears but he did not consider himself Jewish." † "Jim Farley would come, but not Robert Moses," says Emanu-El's funeral director, Samuel Berliner.

of it,' as he should have," recalls Paul Windels. "Instead, he said, 'It's nobody's business what my religion is.' And that got a lot of people very angry." Soon, in shabby shuls in the Bronx as well as at Temple Emanu-El, Robert Moses was being called by a term which comes close to being the ultimate insult among pious Jews. Moses, they said, was an apicoris, "a man who says he isn't what he is."

Succeeding speeches were worse.

Moses insisted on beginning many of them with an attempt to "dispose of" a "false issue" that he maintained the press was raising: the fact that his candidacy was part of an attempt by the "Power Trust" or "Old Guard" to recapture control of the state.

Actually, the press had scarcely mentioned the issue. It was Moses, unable to endure even a hint of criticism, who kept bringing it up. There were press conferences—at least in the early stages of the campaign, while he was still holding press conferences—at which he was the only person who mentioned the phrase "Old Guard." His method of issue disposal, moreover, was not particularly convincing. It consisted of flat assertions: he was not the Old Guard or Power Trust candidate, he said on one occasion; "neither one of these stuffed shirts has any place in my life or acquaintance"; on another, he stated without qualification, "I am a liberal." Not only were these assertions false-both before and after the election, Moses repeatedly declared without qualification, "I am a conservative"—but they sounded false, since Moses was of course unable to explain who had obtained him the nomination if it was not the Old Guard. His assertion that he would regulate utilities as strictly as Lehman had an equally hollow ring, since he did not offer a single specific regulatory proposal. The only result of Moses' insistence on "disposing of" the utilities issue was to keep it fresh in voters' mindsand to keep himself on the defensive about it.

And Moses on the defensive was a more attractive sight than Moses on the attack.

He had decided that the way to defeat Lehman was to destroy the Governor's image. Unfortunately for this strategy, Lehman's case was that rarity: one in which the image was the man. The Governor's intimates knew him as an individual somewhat less than brilliant and aware he was less than brilliant, but determined to make up for this shortcoming by hard work and dedication, and ambitious not for himself—he had not even wanted to be Governor, accepting the post only when Smith and Roosevelt, admiring his integrity and his dedication to liberal principles, insisted that he succeed them—but for the people. And the voters knew him the same way.

After the campaign, Moses himself would say that Lehman "was essentially a cautious, dependable citizen of the old school" who "carried on the work of Smith and Roosevelt without basic innovation" but who was "enormously conscientious and hard-working. . . . I would classify him as a distinguished Governor." Herbert Lehman, Robert Moses would say after the campaign, was a man of "fine character."

Moses knew even better than most of Lehman's intimates that the only thing that mattered with Lehman was principle; it was Lehman who, running the state while Roosevelt was on vacation, had appointed Moses Moreland Commissioner to head a politically sensitive investigation into the bankrupt City Trust Company without bothering to clear it with the Governor—because he thought Moses was the right man for the job. In a score of quarrels between Roosevelt and Moses, Lehman had stood up—quietly, nervously but unshakably—for Moses, for no other reason than that he thought Moses was right. And Moses knew something that even most of Lehman's intimates didn't know—because Lehman never publicized it; he knew that Lehman, touched by the plight of the small depositors who had lost their savings in the City Trust debacle, had donated a million dollars of his own money in an attempt to save the bank. There were no points at which the image could be attacked—truthfully—and Moses knew it, as his statements after the campaign reveal.

But this was not after the campaign. This was the campaign, a campaign in which, at least for Moses, the prize was power. And the voters were soon reading headlines that said "MOSES CALLS LEHMAN WEAK"; "MOSES CALLS LEHMAN STUPID"; "MOSES CALLS LEHMAN PUPPET FORCED TO SPEAK FOR TAMMANY." And the headlines didn't exaggerate the viciousness of Moses' attacks. In the speech in which he called Lehman "weak," he also said that the Governor had "no guts" and that he "applies to every act the test of personal and political expediency." "Puppet" was one of the more polite terms that Moses employed in his accusations about Lehman and Tammany Hall. The Governor is "the respectable front" for the Hall's crooked politicians, Moses said, "the instrument of consolidating their power and furthering their ends." The Governor, he said, is "a miserable, sniveling type of man . . . contemptible." Repeatedly, Moses challenged Lehman to debate him. Moses was, after all, a past president of the Oxford Union. Just let him get slow, plodding Herbert Lehman on the platform and he would tear him apart, he told aides.

Lehman, advised by men who knew Moses well—Proskauer, Shientag and Moskowitz, for example—handled Moses just right. The Governor ignored the invitation to debate—and, to a large extent, he ignored Moses' charges. In fact, to a large extent, he ignored Moses, sticking strictly to a discussion of the issues and his record as he campaigned earnestly—nine speeches in a single day—through the upstate towns and villages and the streets of New York City in which Moses would not deign to appear. The Governor mentioned Moses just three times in the first three weeks of the campaign—and every mention was devastating. In answer to Moses' charges that he was a puppet of Tammany Hall, the Governor pointed out that he had left Moses in charge of the state park system and had increased his powers in other fields—against the advice of Tammany leaders. Weak? He had fought for Moses' park policies—against the Republican legislative leaders who were now backing Moses. The third time Lehman mentioned Moses was in a speech in Binghamton, whose householders paid monthly

electric bills to the Associated Gas and Electric System, a utility which had recently been publicly disclosed to have paid State Senator Warren Thayer \$21,600 to kill measures that might have lowered its rates:

"The Republican candidate for Governor undertook . . . to eliminate certain . . . issues from this campaign," Lehman said mildly. "He attempts to dispose of the public utility problem by claiming it is not [an] issue. Surely we can understand his desire to avoid the public utility issue. We can appreciate his anxiety to divert attention from the weakness of the record of his party. . . . Unfortunately . . . however, candidates do not make issues. The people make the issues. It is the people themselves who determine those matters upon which they are entitled to honest report. . . . no candidate can tell the people of the State of New York that it is not important to furnish electricity, gas and telephone service to consumers at low rates."

Newspapers throughout the state agreed. Even the Brooklyn Eagle, whose editor, Cleveland Rodgers, was one of Moses' most enthusiastic admirers, had to admit, "He cannot dispose of the so-called 'power issue' by oversimplifying it, as he tried to do."

Moses' response was to increase the violence of his attacks and the wildness of his accusations. He accused Lehman of being responsible for corruption in the Court of Claims—an accusation which ignored the fact that the Court was not under the Governor's control and which was not strengthened by the fact that to document the Court's incompetence, Moses accused of drunkenness a judge who actually had been dead for more than a year. He accused Lehman of discussing the City Trust report with him in advance of its publication in 1929 because he was "anxious to avoid an extension of the . . . investigation," a charge that Moses later admitted in private was not true. Some of his charges had no logic at all. He said flatly that Lehman "created most of the state deficit"—although, as Moses well knew and the press pointed out, when Lehman took office, the deficit had been \$114,000,000, and the Governor had since reduced it practically to zero. He implied that Lehman had made an alliance with the O'Connell brothers, Dan and Ed, the Democratic bosses of Albany, because he was "afraid" of them-not only afraid in political terms but physically afraid, because the Governor of the State of New York was worried that the two O'Connell boys might beat him up. Incredible as the statement was, there is no other way to interpret Moses' exact words: "He wants O'Connell votes and he is physically afraid of crossing or antagonizing people who, if they have nothing else, have boldness and physical courage."

Even the Governor's financial integrity was not safe from Moses' tongue and pen. In the campaign's most astonishing charge, he startled dozing reporters at a sleepy Republican Women's Club luncheon in Syracuse by accusing Lehman, who had done more to break the utilities' power than any Governor in the state's history, of being the utilities' secret ally. Waving a sheaf of papers that he claimed documented his charges, Moses stated flatly that the Governor had financial "ties with the utility field." And, as the reporters goggled with amazement, he added that the corrupt "Senator Thayer is a very . . . small factor in public utilities in New York State

politics. Why, Governor Lehman is much more a factor than Thayer ever thought of being."

When Moses' "documentation" was examined closely, the "ties" he mentioned with such sinister implication turned out to be nothing more than the underwriting of a utility company bond issue—underwriting that had not even been done by Herbert Lehman but by Lehman Brothers, the family banking firm, in which Herbert Lehman had never played much of a role, and from which he had severed every tie years before. (Such scrupulousness was by no means common among public officials of the day, but, as Lehman biographer Allan Nevins put it, "He was scrupulous about everything. If some decision of his might affect a company in which he owned stock, he whipped off a sale of the stock." During Lehman's long public career, there never had been, and never would be again, even the faintest hint of impropriety.) But Moses did not let these facts deter him. Nor did he let deter him the fact that, hard as he tried, he could not find a single direct link in Lehman's life with any utility company. Lehman's banker brothers had such links—so Moses talked about the brothers ("Robert Lehman is on the board of directors of the American International Corporation. Arthur Lehman is a director in the American International, a holding company really, a surprising list of utilities stocks and bonds: 77,000 Columbia Gas and Electric; 50,000 American Electric Power and Light. . . . There's a lot of this stuff") and then, attempting to establish the Governor's guilt by association, said, "Now, I have got a lot of other stuff with me along these lines. There isn't time to read it, but it is a very interesting record and I am going to refer to it at length to show you how false the Governor is."

It was on October 23 that Moses really went too far. In a speech in Utica's Majestic Theater before two thousand dairy farmers from the surrounding countryside, he called Lehman a "liar."

"That was a word that was just never used then in campaigns for high office," Paul Windels recalls—veteran political observers could not recall it ever having been used in a New York gubernatorial campaign—"and it really sent a wave of shock through everybody. People had been becoming quite angry at the things he was saying about Lehman—you had to know Lehman to understand why—and this was the last straw."

Moses' use of the word was particularly indefensible. It came in the course of his attempt to link Lehman to inflated milk prices, despite the fact that the Governor had no control over such prices. In the Utica speech, Moses told the audience of dairy farmers, angry over the fact that while the price of milk kept rising, the percentage of the price they received from the middleman dairy interests remained small, that Lehman was also responsible for that. The Governor, he said, was linked to dairy interests—because, he said, Lehman Brothers had "traded in the stock of companies interested in the milk business"—and had "simply lied to the people of the state" when he claimed that he did not control the State Milk Control Board, which set both milk prices and the percentage of those prices paid to farmers. "That was a deliberate, cold-blooded evasion," Moses said. "In fact, it was just a lie. . . . He had the authority himself, but lacked the guts to exercise it."

Moses' accusation was a lie: he said that Lehman controlled two members of the board when in fact the Governor controlled only one, the other two being Republicans removable only by the Legislature. But when Lehman pointed this out, Moses' only answer was to repeat the charge the next evening, saying, "I said that Governor Lehman lied about the milk administration; he did lie about it."

Lehman's advisers gathered in a hasty strategy conference to decide what to do about the insult. As it turned out, they didn't have to do a thing. Moses' own supporters did it for them.

General John F. O'Ryan, the respected reformer who, along with Moses, had been blackballed out of the 1933 Fusion nomination for mayor by Seabury, had been backing Moses for Governor. Now the General announced that he wasn't backing Moses any longer. "Mr. Moses," he said, "has indicated by his own acts and words his unfitness for the office he seeks." Even the campaign manager for Moses' own running mate, GOP United States senatorial candidate E. Harold Cluett, publicly announced that he would not vote for the head of the GOP ticket. "He is not the type of man qualified for the leadership of the Republican Party," he said. Running mate McGoldrick, Republican and Fusion Party nominee for Comptroller, kept silent publicly but let anyone who asked privately know how he felt. "The thing was terrible," McGoldrick was to say later. "Those savage attacks on Lehman, personal stuff, just wouldn't wash." Upstate newspapers that for generations had supported every Republican candidate for statewide office announced that they couldn't support this one. Most New York City newspapers rushed into print with editorials like one in the World-Telegram which said: "Robert Moses, as was to be expected, has proved a far more aggressive and agile campaigner than the Governor. But aggressiveness cannot in itself inspire confidence. . . . Realities are realities—not to be concealed by curtains of words or by calling Governor Lehman 'weakling' and 'liar.'"

Moses' only response was to keep calling Lehman a liar, to flail out at the Governor more savagely than ever, and to broaden the arc of his wild swings until he was attacking not only the Governor's advisers but men connected only peripherally or not at all with his administration. Within a matter of days, he had attained a novel—and perhaps unique—distinction: he was the first—and perhaps the only—candidate in the history of New York State on whom a radio network demanded nonstop libel insurance; the Mutual Broadcasting System refused to broadcast any of his speeches unless the Republican campaign committee purchased a policy that covered every word that Moses said on the air.

Some of Moses' sallies were reminders of the brilliance of the political invective he had displayed in the La Guardia mayoral campaign of 1933—when he himself had not been personally involved. Jim Farley, still bleeding from his dissection by Moses in the mayoral campaign, wandered into the gubernatorial contest with a quiet little statement of support for Lehman and promptly found himself back on Moses' operating table. Noting that Farley was president of a firm which supplied sand and other building materials to contractors, including some who received government contracts, as well as

being Postmaster General and chief patronage dispenser for the New Deal, Moses dubbed him the "sand, mail and bag man of the national administration" and then shortened the description to: "Jim Farley, the big 'bag man.'"

But in most of Moses' attacks, brilliance was made the slave of rage. The scalpel was discarded in favor of the bludgeon—and the swings Moses took with the latter weapon were wild indeed. During its final two weeks, his campaign was almost entirely a campaign ad homines, an exercise in wholesale insinuation and vituperation. Seeing his hopes for elective office vanishing, he spewed venom over his opponents—all his opponents, former friends as well as long-time foes, men who were motivated by principle as well as men motivated by politics.

In speeches broadcast across the state by the libel-insured Mutual network, Moses called Roosevelt's former law partner, Basil O'Connor, a "fixer and a chiseler," Seabury a demagogue with a "messianic complex" and the state's senior United States Senator, Dr. Royal S. Copeland, a former eye surgeon, a "professional mountebank."

The closest of former friends—men such as Joseph Proskauer and Morris S. Tremaine, State Comptroller under Smith, Roosevelt and Lehman, with whom Moses had worked closely for years—were not immune. Tremaine, he implied, was senile. "I like Morris Tremaine personally," he said. "He is an old chum of mine, but I think he is getting stale at Albany. . . . Morris ought to get away from statistics for a while. I can guarantee to take care of him in one of our steamer chairs at Jones Beach." He accused Nathan Straus, whose integrity was held in almost as much awe as Lehman's, of using his position as head of the State Housing Board to persuade a low-income housing development to purchase his own property for \$200,000 more than it was worth. "If Senator Straus made no claim to be anything more than a very slick trader . . . I should have a good deal more respect for him. When, however, he pretends to be a philanthropist, civic champion and uplifter, it becomes a little disgusting," Moses said.\*

If he could not find anything about Lehman's associates to attack, he attacked them for alleged misdeeds of their fathers—even if the fathers were dead. "What is Jack Murray doing at the head of Governor Lehman's campaign committee if power connections are taboo in politics?" Moses demanded in one such charge. As the *Herald Tribune* pointed out, "Mr. Moses did not explain his reference, but it was understood to infer that Mr. Murray's *father*, the late Thomas E. Murray, was connected with the [Consolidated] Edison Company."

If there happened to be any truth in this onslaught of innuendo, Moses did not provide any convincing proof of it. Not one of his more serious charges was documented. Their subjects began treating them almost as jokes. When reporters asked Straus for his reply, he would only say: "Bob Moses

<sup>\*</sup> Straus's friends, who knew that the "slick trader" was so anxious to help provide decent houses for impoverished families that he had once sold a valuable property to the Housing Board for exactly seventy cents per square foot, felt a little disgust themselves.

will be in the limelight for another ten days and is entitled to all the fun he can get out of it. As one of his oldest friends and the man who sponsored his entire park program in the State Senate, I wish him all the luck in the world."

The one victim of Moses' attacks who did reply at length did so in telling fashion. The day after a particularly far-ranging Moses speech, Ed Flynn issued a statement saying, "The emotional instability of this candidate was never better demonstrated than last night, when, without rhyme or reason, he denounced in wholesale lots men who need no defense at my hands. If the campaign were to continue much longer it would reach the point where this candidate would completely satisfy at least himself, if no one else, that he is the only honest and efficient public servant that this state has ever known. Why does he not state publicly the opinion so often privately expressed by him, of his Republican confreres that he now so affectionately takes to his bosom? . . . Because he is now beholden to these members of the 'Old Guard' for his nomination, he does not dare to publicly repeat his real opinion of them."

Only one of Lehman's key supporters was spared the lash of Moses' tongue or pen. He was Alfred E. Smith.

Thirty years after the election, in the midst of a discussion about the former Governor with a luncheon guest, a distinguished historian, Moses suddenly began talking about the day he asked Smith to support him against Lehman. The historian relates that Moses said, "I went to see the Governor and I said, 'Governor, you owe this to me. With your backing, I'm going to go ahead and win this thing. You owe it to me.' And you know what he said to me—after I had worked with him all those years? He said, 'Bob, you know I play this game like a regular.'

"Well, the pain in that man's [Moses'] eyes!" the historian recalls. "Here was a man, the most powerful man in New York State, telling about something that happened thirty years before. And it still really hurt him."

According to Smith's daughter and confidante, Emily, the former Governor had wanted desperately not to hurt Moses. But he had no choice. Moses might deny in public that he was the candidate of the Old Guard, but Smith knew he was. And the "Old Guard" was not just a phrase to Smith—they were the men who had fought against his efforts to cement into place above the heads of the state's defenseless poor a roof of social welfare legislation that would give them some protection against the cold winds of illness, injury, old age and unemployment. He knew that if not held in check by a Democratic Governor, they would begin tearing down that structure brick by brick. No matter how deep his personal affection for Moses, he couldn't let them do that. And if Smith felt he owed Moses a lot—and he did feel that way—he owed Lehman a lot, too, not only for Lehman's cash backing of his own campaigns but for Lehman's vigilant maintenance of, and attempts to add to, the social welfare structure, for Lehman's continual gracious public reminders that he was only continuing Smith's work, and for the

The Candidate 419

considerate requests for advice that had made Smith feel a part of state government again. Smith's personal feelings for Moses were something special, of course, but the former Governor respected Lehman. And he had, after all, played a key role, perhaps the key role, in making Lehman Governor; he couldn't try now, without any good reason, to oust Lehman from the post in which he had helped place him. Most important, as he said to Moses, "I play this game like a regular"; he had done so for forty years—his rage and bitterness at Roosevelt had not yet driven him to the point at which he would later, for the first time in his life, break with the party to which he had given so much of it.

When Lehman asked Smith to campaign for him, Smith did. But he campaigned only for the Governor, not against Moses, avoiding any personal attack on him. The press, antagonized by Moses, made capital of Smith's presence in Lehman's camp, but Raymond Ingersoll, one of the few old Smith supporters on Moses' side, was able to reply that "Governor Smith has never said a word against Bob Moses and he never will."

And Moses didn't attack Smith, either. When, moreover, the two men met at a dinner party soon after the end of the campaign, friends who had been apprehensively watching out of the corners of their eyes saw that within minutes they were talking together in as complete a rapport as ever, Moses as respectful and Smith as friendly as in the days before the campaign. "Nothing could disturb that friendship," says the host at that dinner party. "Nothing!" And the proof of how right he was, of course, came with the opening of the Central Park Zoo less than a month after the end of the campaign.

It wasn't what Moses said that most antagonized voters; it was how he said it. He let his contempt for the public show.

"As bad as his speeches read," one observer recalls, "they read a lot better than he read them." The problem was not, observers agreed, that Moses was an unimpressive figure on a podium. On the contrary, he was very impressive. Describing one Moses speech, a reporter wrote: "He stepped up to the 'reading desk' a great bulk of a man, leant comfortably forward and began to speak with the clearest voice and the easiest manner in the world." His broad shoulders, heavy chest, jaw and eyebrows, combined with the physical presence, the sense of poise and self-assurance, he emitted, made him exude strength and power. His voice fit in: it was deep and resonant, just nasal enough to sting.

But if Moses was a powerful figure, he was not a pleasant one. When he was introduced, his smiles as the audience applauded were brief and the look on his face was more one of barely concealed disdain than appreciation. (There was no acknowledgment of the applause.) He generally cut the applause short by stepping abruptly to the "reading desk" and preparing to begin his speech, as if anxious to be done with it so he could depart for some worthwhile activity. As he read his text, he seldom bothered to look up, sometimes going five minutes without a single glance to acknowledge his listeners'

presence. When the audience interrupted him with applause, he stepped back with a look that indicated nothing so much as boredom—and resumed reading as quickly as possible. "He made no gestures, he did not vary the note of his voice," wrote one reporter. "He gave no hint of oratory or of rhetorical periods. His only emphasis was a loudening of his voice to drive his points home." "He gave the impression that he was way above them," recalls running mate McGoldrick. "He was alienating them all the way through." He looked like nothing so much as a man dining at a poor relation's home, feeling strongly that it was an act of great condescension and kindness on his part to be there—and determined to let all the people present know he felt that way. The only time that pose was modified was when he got caught up in what he was saying. Then the steady loudening of his voice continued until it was very loud indeed. Loud and harsh. His right hand, which had been resolutely kept in his pocket up until then, would come out-and it would begin to make the pounding gesture his aides had learned to dread. Because there was a microphone on the lectern on which he was pounding, the smack of the palm, thudding down to emphasize each point, would be magnified, and as it rang out over the audience harder and harder, faster and faster, an observer could almost begin to see them squirm, not out of boredom but out of uneasiness, in their seats. As Moses stood before them shouting at them and pounding the podium while not bothering to look at them, he was, all too obviously, not appealing to them for their support but lecturing them, telling them in no uncertain terms what he wanted them to do-and letting them know they had better do it.

The reaction of audiences showed how Moses affected them. Invariably there was more applause at the beginning of a speech than at the end. With each succeeding appearance, the enthusiasm of his audience waned. The number of people who came to hear him fell further and further below the number that had been expected. At a rally in Queens on November I that had been expected to be a high spot of the campaign, only one of every five seats in the Jamaica High School auditorium was occupied.

Moses' last appearance showed how little remained of the public enthusiasm that had greeted his nomination. That enthusiasm had persuaded his campaign managers to rent the state's largest auditorium, Madison Square Garden, for a climactic rally on the Saturday night before Election Day. So certain had they been of an overflow crowd that to avoid unseemly jams at the entrance they had printed tickets, to be distributed in advance by local GOP organizations, and had announced that no one would be admitted without a ticket, and that the doors would be closed a half hour before the speeches began.

On the night before the rally, stacks of tickets remained untouched in GOP clubhouses. Despite a frantic last-day effort to persuade loyal Republicans to take them and agree to show up, despite a decision to leave the doors of the Garden open even during the speeches themselves in hopes that passers-by might wander in, far less than half of the Garden's 25,000 seats were filled. The people who were present were so dispirited that when George Everett, a professional cheer and song leader, took the microphone

The Candidate 421

at a few minutes past eight to "warm up" the crowd, he asked them why they were so "downhearted."

When the candidate rose to speak, he saw, looming down on him from the balcony, thousands of empty seats. The arrangements committee had placed a small American flag on each seat on the Garden floor below him to be waved by its occupant and he saw staring at him a sea of flags rather than a sea of faces.

And there, in front of the empty seats, spotlighted in the center of the cavernous, half-empty arena, the candidate stood—pounding his palm hard on the lectern, lashing out in a voice loud and angry, almost ranting, the featured performer of a program that, the *Times* reported, "was marked by more attacks on personalities than any similar meeting in recent political history."

At the polls, the verdict of the people was even clearer. It was Lehman 2,201,729, Moses 1,393,638. Robert Moses, the candidate of the party favored by an overwhelming majority of the state's voters, a candidate for whom, the Herald Tribune reported, the GOP waged "the hardest campaign that party has waged for a state ticket in a half dozen years," a candidate who had entered the campaign on the very crest of a wave of favorable publicity that had been ten solid years in building, lost by more than 800,000 votes. His percentage of the votes cast-35 percent-was the smallest percentage polled by a gubernatorial candidate of any major party in the 157year history of New York State. As George Fearon had predicted, he dragged his party to defeat with him: for the first time in twenty-one years, the GOP lost both houses of the State Legislature. (The GOP won back the Assembly the next year and didn't lose it again for another twenty-nine years;\* the year in which Robert Moses headed the Republican ticket was, in other words, the only election in a fifty-year span in which the GOP lost both houses.) He lost upstate communities that no Republican candidate for any office had ever lost before; he even ran behind Lehman in the total upstate vote. (This fact so astonished veteran political reporters that they refused to believe the unofficial Election Night tallies that first revealed it.)

The Old Guard which had foisted Moses' candidacy upon the GOP was adequately punished. Its influence would remain strong in the party, but county leaders who couldn't afford to let their local candidates be caught in the undertow of the sinking of a poor candidate and who were determined that one as poor as Moses should never again head the ticket, would never let the Old Guard hand-pick another candidate. His candidacy was its Waterloo.

Moses was in later years to attempt to alibi away his defeat by saying that he had simply been one of many candidates caught in the landslide vote by which the nation in 1934 expressed its approval of Franklin D. Roosevelt. On the day after the election he told an interviewer, "I said when I went into

<sup>\*</sup> Until the Lyndon Johnson landslide of 1964.

this campaign that I did so knowing it was an attempt to swim up Niagara"; no one, he said, could have beaten a New Deal supporter in New York State in 1934.

This is true in part. The New Deal landslide of 1934 swept right-wingers to defeat all across the country. But Moses' explanation does not account for the size of his defeat. His previous popularity; the top-heavy GOP registration in the state; the lavish financing of his campaign—all these factors had led keen political observers like Baron Warn to predict at the time of his nomination a campaign that would be close no matter what the national trend. It was, these observers concluded after Election Day, the reaction of voters to personal, not party, philosophy, as well as to Moses' personality that had eroded the support with which he entered the campaign. Swimming up Niagara was one way of looking at Moses' campaign. In brilliance of strategy and execution, it was perhaps more comparable to the charge of the Light Brigade.

The definitive word comes from Joseph McGoldrick. McGoldrick was running on Moses' ticket—but since he was running for a city office, Comptroller, only in the city. At the beginning of the campaign, he was approached by a pollster named Harry Gordon Lynn whom politicians, including Al Smith, regarded as amazingly accurate.

"Lynn was doing the polling—secretly—for Lehman, but he came to me and said for \$2,000, as long as he was doing it for Lehman, he would do it for me at the same time," McGoldrick recalls. "Lynn's first report to me was that Moses would lose the city by 550,000, but I would win it by 75,000. He said, 'Moses is going to be defeated, but don't worry, you'll win.' The second week, he said Moses would lose by 600,000, but I'll still win by 50,000. The third week it was 700,000 and 25,000. And on the Friday before election, he came in and said, 'Boss, you can't make it. Moses is going to lose the city by 800,000 and you can't overcome that: you're going to lose by about 25,000.' And that's approximately what happened. I lost by 23,000." Moses needn't have lost by nearly as great a margin as he did, McGoldrick says; in fact, if Moses had held his deficit in the city to the 550,000 figure at which it stood at the beginning of the campaign and had retained the normal GOP support upstate, he might well have won the election, for GOP candidates normally "came down to the city line" -- compiled a margin above the northern boundary of the Bronx-with an edge of more than 600,000 votes. It was his tactics and personality, not national attitudes toward the New Deal, that persuaded tens of thousands of potential supporters to vote against him. "He booted that campaign himself," Mc-Goldrick would say flatly. "If it was a disaster, he made it one."

On Election Night, Moses was careful to show an elaborate disregard of the vote. Reporters ushered into his apartment at 7 Gracie Square saw him poring over a map of the city, "outlining park and playground projects, while he whistled softly" and "giving only perfunctory attention, apparently, to the election returns relayed to him." "I haven't the slightest regrets in any way,

The Candidate 423

shape or manner," he said. "I've done the best I could. I've conducted an honorable campaign and adhered to my convictions. That's all there is to it." And he said that he was planning to return to his park work the next morning.

There was no question about his returning to his city job, of course, but the fact that he included in the statement his state park work showed that he knew Herbert Lehman much better than his campaign attacks on the Governor would have made it appear. For Lehman's treatment of Moses after the campaign was the definitive word on the Governor's character.

No sooner had the landslide aspects of his defeat of Moses become apparent than the *Daily News*, whose publisher was temporarily feuding with Moses, called on Lehman to oust his disloyal subordinate, and so did key legislators and a number of the Governor's most influential supporters—including Farley and Flynn and, according to some sources, President Roosevelt. Now—with Moses' prestige, his previously invulnerable armor against ouster moves, riddled with holes—was the time to bring pressure on the members of the State Parks Council to elect another chairman, they said.

Al Smith heard what was going on and hurried over to Lehman's apartment at 820 Park Avenue to urge the Governor not to move against Moses. He needn't have bothered. Lehman was bitterly hurt by Moses' charges, but he would not allow personal feelings to interfere with his duty. "We have differed in the past and probably will in the future, but in the planning and administration of parks, parkways and recreational facilities, Bob Moses has no superior on the face of the world," the Governor announced. Moses could continue to head the state park system as long as he was Governor, he said. "He was terribly sensitive because he said I called him a liar in the campaign," Moses would recall, but "I found him a very nice fellow to deal with. A very decent, honorable, honest fellow. He always supported me when he was Governor."

Moses should have known that Lehman would support him. After all, the "cowardly, sniveling, lying weakling" had always supported him before.

Why did Robert Moses, previously so talented at public relations, antagonize the public during the episode in his career in which he most needed its support?

In part, because his success in public relations had been due primarily to his masterful utilization of a single public relations technique: identifying himself with a popular cause. This technique was especially advantageous to him because his philosophy—that accomplishment, Getting Things Done, is the only thing that matters, that the end justifies any means, however ruthless—might not be universally popular. By keeping the public eye focused on the cause, the end, the ultimate benefit to be obtained, the technique kept the public eye from focusing on the methods by which the benefit was to be obtained. The technique was also especially advantageous to him because its focus on the cause kept his personality safely blurred.

Moses' use of the technique was a totally conscious one. Knowing pre-

cisely what he was doing-"the first rule is to stay on the side of the angels" —he continually urged reporters, under the guise of modesty, to "stick to the parks and playgrounds and bridges, and don't write about me." And he had consistently made sure that his instructions were followed by furnishing only bare, carefully selected facts about himself. From the moment in 1925 when he dramatically propelled himself into the public consciousness by announcing that he was fighting for parks against a "little group of selfish millionaires," he had identified himself so thoroughly with the glowing cause of parks that for nine years the public had seen him always through that glow. Everything he did, he said, was in the name of parks (and, of course, of parkways and bridges that helped people reach parks), and the public believed this. After a while he began-also consciously-to identify himself with related battles against crooked politicians and red-taping bureaucrats and so cleverly did he make this additional identification that the public accepted it, too. During those years, the public never saw Robert Moses the man.

But in a race for public office, the public focus is more on the individuals involved. Causes championed by a candidate are important to voters, but mainly as they help illuminate his personality and philosophy. It was a man they were voting for, not a constitutional amendment. They wanted to see the man.

And they did. Robert Moses' only campaign for elective office tore away from him the protective coloration in which he had always appeared before the public, and stripped him naked to its gaze. As a candidate for elective office he was no longer only Robert Moses the fighter-for-parks. For the first time, the public got a good look at Robert Moses the man—and it didn't like what it saw.

This explanation, of course, does not answer another question: Why couldn't a man as skilled as Moses at manipulating and charming people he needed, charm the voters now that he needed them, conceal from them his philosophy and personality, persuade them—at least for a period of a few weeks—that he understood and sympathized with their aims and aspirations and wanted to help them achieve those aims? Why couldn't he keep the voters from knowing—at least for a period of a few weeks—what he thought of them?

The answer to this question lies somewhere deep in Robert Moses' nature.

In part, it lies in the arrogance that was that nature's most striking manifestation. Robert Moses' arrogance was first of all intellectual; he had consciously compared his mental capacity with other men's and had concluded that its superiority was so great that it was a waste of time for him to discuss, to try to understand or even to listen to their opinions. But there was more to his arrogance than that. Had it been merely a product of a consciously reasoned comparison, it would have been governable by reason, reason that must have informed him that if he hoped to win the prize he so desperately wanted he must for a period of a few weeks conceal his contempt for the public. Had his arrogance been merely intellectual, he could have

The Candidate 425

disciplined himself—this man with a will strong enough to discipline himself to a life of unending toil—for the few weeks necessary to give him a chance at the Governorship. But his arrogance was emotional, visceral, a driving force created by heredity and hardened by living, a force too strong to be tamed by intellect, a force that drove him to do things for which there is no wholly rational explanation. It wasn't just that Robert Moses didn't want to listen to the public. It was that he *couldn't* listen, couldn't—even for the sake of the power he coveted—try to make people feel that he understood and sympathized with them.

And there was something else behind Robert Moses' arrogance, a strange, flickering shadow. For not only could Robert Moses not help showing his contempt for others, he seemed actually to take pleasure in showing this contempt—a deep, genuine pleasure, a pleasure whose intensity leads to the suspicion that, in a way, he needed to display his superiority, with a need so great that he simply could not dissemble it. How else to explain the fact that, even when he was appearing before the public to ask for its support, he could not help ostentatiously flaunting condescension and boredom—boredom even at its applause? Robert Moses may, moreover, have understood that he had this need. He may have understood that he would not be able to appear before the voters without having to show them —so clearly that there could be no mistake about it—how much he despised them. For such self-knowledge would explain—and it is difficult to find another explanation—his decision to shun, to so perhaps unprecedented an extent, all public appearances save for a few formal speeches.

Such an explanation also helps to illuminate Moses' otherwise almost inexplicable treatment of the press.

Nobody understood the press and how to manipulate it better than he. And therefore he must have known, intellectually, that he would forfeit its support—support he both needed and wanted—if he attacked reporters personally and directly. Something far stronger than intellect, something stronger than considerations of strategy, stronger even than a chance for the Governorship, was driving him, something that made it simply impossible for him to accept criticism, even the discreetly implied criticism of the reporters' questions at his first press conference.

As for the vilification that he spewed over his opponent and everyone connected with him—former friends as well as enemies—it is difficult to escape the conclusion that the explanation for this, too, lay in character rather than campaign tactics. Since his earliest days in power, Moses had tried not just to defeat but to destroy anyone who stood in his way—by any means possible. The definitive word on Robert Moses' gubernatorial campaign may be an unconsciously revealing remark that Moses made years later to his friendly biographer, Cleveland Rodgers: "I made the only kind of campaign I knew how to make."

## 22. Order Number 129

To the extent that Robert Moses had lost his popularity, however, it was to be restored to him almost immediately—by his most powerful enemy.

Franklin Roosevelt had said of Moses: "I don't trust him. I don't like him." As Governor, Roosevelt had been forced to ration himself to occasional sips of revenge on the man who had frustrated his dreams for a Taconic parkway, humiliated him and viciously ridiculed not only himself but his wife. But now Roosevelt was President. And he evidently felt it was time to indulge himself.

The President's move against Moses had actually begun in February 1934, months before Moses' gubernatorial race. But it had been kept completely secret from the public for that entire year. Corporation Counsel Paul Windels, one of the handful of men aware of it during 1934, recalls vividly how he first heard about it.

"On February 22—I'll never forget it—I was sitting home reading the Sunday papers in my home on Pineapple Street when La Guardia called. He said, 'What are you doing?' I told him. He said, 'Well, I'm down in Bay Ridge making a talk and I'll be by in about twenty minutes to pick you up.'

"I got in the car and no sooner did I sit down than he cut loose. 'Jesus Christ, of all the people in the City of New York I had to pick the one man who Roosevelt won't stand for and he won't give me any more money unless I get rid of him. Jesus Christ, I had to pick the one that he hated. Jesus Christ!' He was shaking his fists in the air and shouting. 'Jesus Christ! Jesus Christ! Seven million people in the city and I had to pick the one Roosevelt can't stand!'

La Guardia, unfamiliar with state politics, had been unaware when he brought Moses into his administration—at least partly because he thought Moses could help him obtain New Deal public works funds—of the hatred between Moses and the man who was the New Deal. And Moses hadn't bothered to tell him.

But La Guardia hadn't been allowed to remain in ignorance for long. On February 21, Harold Ickes, Secretary of the Interior and Administrator of the Public Works Administration, having summoned the Mayor to Washington on direct orders from the President, informed the Mayor, on direct orders from the President, of the President's feelings, and demanded that La Guardia dismiss Moses from the board of the PWA-financed Triborough Bridge Authority. In Ickes' Secret Diary, he wrote that "La Guardia regretted the situation and said that if he had known it existed he wouldn't have thought for a minute of putting Moses on the board. He expressed the highest regard for the President and asked me to give him a few days to see what he might work out."

But in the next few days, La Guardia was able to work out nothing. For Moses did not prove et all cooperative.

The Mayor may have expected Moses to quietly resign. After all, Moses was his appointee and it is traditional in American politics for an appointee to resign when the appointer wishes him to. Moreover, there was so much at stake here: a vital project for the city which could be built only if the federal government was willing to pay for it. One man surely could not think of standing in the way just so he could be in charge of it. And while Moses could not be forced to resign from the Triborough post—he had drawn the Triborough law so that Authority commissioners could be removed only on stated charges after a formal hearing—he held his park commissionership, a post both men then considered much more important, only at the pleasure of the Mayor, and the Mayor therefore possessed a powerful weapon: he could threaten to remove Moses from the more important post unless he resigned from the less important.

But Moses had learned—from his dealings with Roosevelt when FDR was Governor—that he could force a Governor to back down by threatening to publicize certain matters, such as requests for patronage. He had learned that he could force a Governor to back down on more complex issues by simplifying them through a threat to resign over them, a threat which reduced the issue to the question of whether or not the public wanted him to continue in office. And now Moses employed the same technique on a mayor. He told La Guardia that if the Mayor insisted on his resignation, he would resign, all right—but he would resign not just from the Triborough post but from the park commissionership as well, and would issue a public statement disclosing why he was resigning, a statement making clear that the Mayor had bowed to outside pressure to remove a city official who had done nothing to justify such treatment.

La Guardia had picked up Windels on the day after his conference with Ickes to ask the Sage of Pineapple Street for advice. Recalls Windels: "I said, 'Now, look, you've been elected mayor on the theory that you are going to run an absolutely independent administration. . . You can't start off by knuckling under to outside dictation. If you do, your name is going to be mud.' I told him that if he ousted Moses, the public would believe that he could be pressured in a situation like this and throw out a man who the public thinks is wonderful, and I told him, 'If you do that, you'll never be able to erase that from the public's mind.' "From others—including City Chamberlain and New Deal Brain Truster Adolf A. Berle, Jr., the link

between the city and federal administrations—La Guardia received the same advice.\*

La Guardia stalled. Repeatedly he promised Ickes that Moses' resignation was imminent—and repeatedly he came up with excuses for new delays. But Roosevelt was, Ickes wrote in his diary, "implacable." The President was determined to have his revenge, and in case that determination flaggedand there is no reason to believe it ever did-little Louis Howe and big Jim Farley were there to keep it fresh, both of them urging him on. He instructed Ickes to take a more forceful tone. The PWA chief, who hardly knew Moses, was to confess later that "from the beginning I had had no stomach for this whole affair. . . . I was in the unhappy position of having to admit to myself that Moses was an efficient administrator and a public-spirited citizen." But, he said, "my loyalty ran to the President and I was determined to work it out to his satisfaction if I could." He told La Guardia that he would not approve new Triborough requisitions until the Mayor had obtained Moses' resignation from the Triborough board. La Guardia stalled. Then Ickes said that he would not approve a single new PWA project of any type in New York City—not hospital, school or subway—until Moses resigned. Still La Guardia stalled. "He would make promises and then he would break his promises," Ickes wrote. "It was 'Give me this payment and I'll get rid of him next week'-that kind of thing," Windels recalled. And the stalling succeeded in keeping payments coming for Triborough and the other projects.

Then came the gubernatorial campaign, with Moses running as a Republican. "Naturally I had to declare a truce during that period in order to avoid a charge that I was playing politics," Ickes said. More requisitions were approved.

But as soon as the votes were counted, the truce was off. On November 7, the day after the election, Moses sent to Washington new Triborough requisitions totaling \$8,100,000. The requisitions reached Ickes' desk on November 8, and on that date the PWA Administrator telephoned La Guardia and told the Mayor that they would stay on his desk, unsigned, until Moses' resignation lay there beside them. Furthermore, Ickes said, no new PWA projects would be approved for New York City. And the Administrator apparently made a further threat. In his Secret Diary he wrote: "I am considering refusing to honor requisitions for funds" for projects already under way in the city—an action that would throw out of work the tens of thousands of men now employed on them.

<sup>\*</sup> Berle telegraphed: The president: personal: Moses matter probably will become a national incident within a few days.... I think this is one of the things you cannot do unless there are reasons other than personal giving ground for public defense. Moses will certainly resign not merely from tri-borough but from city administration stating his position of which our opposition friends are prepared to make the most. I hardly know moses but suggest there might be more real devils to fight. Remember the execution of the duke [sic] d'enghien broke napoleon.

All through November and December, the drama of revenge and power played on. Its cast included some of the most colorful characters in American politics. On one side, jaw jaunty, cigarette holder cocked, face open and friendly, the Master Politician in the White House. Beside him the Old Curmudgeon of Interior, the scarred, doughty reformer from Chicago ("almost the incarnation of lonely, righteous and inexhaustible pugnacity," one reviewer was to call him) who in less than two years on the national stage had proven himself a character actor of the first magnitude, winning the public's heart with the dour, skeptical but kindly glare that he flashed at it over the top of the rimless spectacles that were forever slipping down along his nose, and with his flawless performance as the tart-tongued, terribletempered but invincibly honest defender of the public interest. On the other side—"a modern Horatius on another unfinished bridge," one reviewer was to call him-Robert Moses, seriously ill and confined for most of the drama to his home with an influenza which had deepened into an illness variously described as "pneumonia" or "nervous exhaustion." In the middle, glowering out from under his big black Stetson, the prickly Little Flower of City Hall. Circling around these stars, spear carriers perfectly type-cast: the burly, bald, gregarious Postmaster General; the lean, sharp-eyed, sardonic City Chamberlain; and the wizened little gnome whose proposed appointment to a minor state park post a decade before had been the drama's prologue. Any audience would have been delighted at the show. But no audience got to see it. It played day after day and week after week behind closed curtains. Not a word of the dispute, not a hint that there was one, was uttered over the airwaves or printed in a newspaper. Moses' grim fight went on in absolute secrecy.

On November 21, the PWA board was scheduled to meet at two o'clock to approve a long list of projects. Shortly before the meeting began, Ickes slashed off the list every one located in New York City. Then he telephoned La Guardia to tell him what he had done. There are indications that Moses' loss of popularity in the gubernatorial campaign was weighing heavily in the scales on which the Mayor was weighing the alternatives; Windels had told him he couldn't oust a man "who the public thinks is wonderful"—but apparently much of the public no longer thought Moses was wonderful. In conversations with him, the Mayor, if he did not ask him to resign in so many words, apparently pressed more forcefully the suggestion that the whole city should not be made to pay for his seat on the Triborough board. In reply, Moses apparently pointed out that there was no way he could be removed from Triborough except on charges. Telephoning Ickes, La Guardia pointed this out. As Ickes recalled in his Secret Diary: "I told him that was his funeral not mine."

La Guardia huddled daily with Windels now, and with C. C. Burlingham, the grand old man of the reform movement whose opinion the Mayor valued so highly that "from him and from no one else would he take a scolding." Both men argued—Windels on political grounds, Burlingham on grounds of principle—that he should not knuckle under to Roosevelt. The Mayor was torn. On the one hand, Windels believes, "he realized that it would have painted an indelible picture of him in an unfavorable light." On the other hand, there were his dreams for remaking New York, dreams which would be impossible of realization without the federal funds which Roosevelt alone could provide. Shrewdly calculating politician that he was, Fiorello La Guardia was weighing the alternatives, always weighing.

Then, on December 26, 1934, Roosevelt and Ickes threw on those delicate scales something that weighted them to the President's side. It was an official general PWA order—Administrative Order Number 129 was its title—and it stated flatly: "Hereafter no funds shall be advanced to any authority, board or commission constituting an independent corporation or entity created for a specific project wholly within the confines of a municipality, any of the members of the governing body of which authority, board or commission holds any public office under said municipality."

The order obviously applied to Triborough and to Moses. (By coincidence, it also applied to another New York City official, Tenement House Commissioner Langdon W. Post, who was a member of the Municipal Housing Authority, which was also receiving federal funds, but Ickes privately assured La Guardia that the order would not be enforced in Post's case. Post stayed out of the controversy because he was away on an ocean cruise.) It had almost the full force of law. It had the full force of an official regulation of the agency financing Triborough—and, Ickes told La Guardia, it embodied in those official regulations what he had previously said privately: that no more money would be given to Triborough until Moses was off the Triborough board. Most important, it gave La Guardia a public excuse for ousting Moses: an official PWA rule forbade Moses to serve. Its issuance was the move of a fox. "The President helped me draft this order," Ickes diaried.

But the fox was growing reckless. Previously, the President had been careful, always letting Ickes do the talking with La Guardia, not letting himself become directly involved. Now "he discussed it [the order] personally with La Guardia," Ickes wrote. And Roosevelt made another move; either he himself or Ickes—and probably both—told La Guardia that if he felt he could not force Moses to resign, they would be satisfied if the Mayor promised Ickes—in writing—not to reappoint Moses when his term expired on June 30, 1935, well before the bridge would be finished.

This combination of moves stripped La Guardia of excuses that he could make to the President—if in fact he still wanted any. It gave him the public rationale he would need to justify ousting Moses, and it gave him a private rationale to make to Moses. When he received a copy of the order—it had not been released publicly, of course—he showed it to Moses, apparently to prove to him that he had no choice but to give in. Then the Mayor headed for Washington, where he met Ickes, and, on Thursday, January 3, 1935, secretly swore to the PWA Administrator that he would put the promise in writing as soon as he got back to New York.

But the Mayor had miscalculated, as had Roosevelt and Ickes. They may have believed that Moses' loss of popularity had stripped him of his armor, and that Order Number 129 had left him weaponless, but they were wrong. For Moses still possessed a weapon more valuable even than his popularity: his mind. He conceived a masterstroke that simultaneously won him back his popularity and turned the tables on his great enemy. While La Guardia was in Washington, he did the one thing that no one involved in the closed-curtain drama had expected. He leaked the order to the press—and thereby pulled the curtain up.

There, suddenly spotlighted before the public, stood the President of the United States of America—caught in a most unbecoming posture. And the President was only one figure in a tableau that might have been lifted intact out of that traditional melodrama "The Old Homestead." In that melodrama, a villain used the power of money, the mortgage he held on the old homestead, to force the proud beauty to yield to his dishonorable advances. In the drama that Moses suddenly revealed to the public there was also a villain (the President) using the power of money (federal relief funds) to force the Mayor to perform a dishonorable act (ousting from his job a faithful public servant). And this drama had a hero, too-for now that La Guardia had agreed to side with the President, the faithful public servant was seen by the audience as a man standing alone without a single ally and fearlessly fighting for his rights against the two most powerful men in the country. Since, moreover, the critics and the audience didn't knowand never were to learn—the long background of the Roosevelt-Moses feud, their imagination supplied the traditional motive: press and public assumed that the President was attempting to force Moses out of his job simply because he was a Republican and had criticized the New Deal in his election campaign. And just in case anyone missed the point of the drama, Moses supplied a narration—written with the brilliance that characterized his efforts when he had a legitimate point to make.

"There are certain facts which should be known to the public," he said. The sole purpose of Order Number 129 was to force him out of his job; Ickes had admitted as much to La Guardia. And Ickes had also admitted "that I was honest and competent," and that the sole reason for the order was that "I was . . . not sufficiently friendly to the administration."

He had refused to leave quietly, Moses said. "When the Mayor explained this situation to me I told him that I should be glad to retire from his administration entirely if he wanted me to, but that I would not take a back door out of the Triborough Authority merely because there was pressure to get me out for personal or political reasons." He had refused, he said, because he wanted the American people to know what was happening—because there was a principle involved that was more important than himself. "The Federal appropriations for public works and work relief are the funds of all the people of the country. . . . If personal or political considerations are to govern the expenditure of public works and relief funds by the Federal Government, this fact should be known to the public."

Reaction proved as violent as Moses had gambled it would be. Un-

luckily for Ickes, the PWA Administrator held a press conference every Thursday, and, not knowing that Moses had leaked the story, he held one as usual this Thursday shortly after La Guardia had left his office. To the Administrator's shock, reporters began questioning him about Order Number 129, which he had believed was secret. As he later wrote in his diary: "I was asked whether Farley had ever spoken to me about Moses. To that question I could honestly say No. Then I was asked whether the President had ever done so. There I had to lie, but again I said No." The lie was to force the press to link Roosevelt with the order only in hints for a day or two-although the hints were broad indeed-but it did nothing to cool its ardor for the story. La Guardia had boarded his train back to New York confidently believing that the affair was still secret. Sealed off from the world in a private compartment, he made the trip with that confidence unimpaired. But when he swung off his train at Pennsylvania Station at 9:30 P.M., he saw a pack of reporters running toward him along the platform. Luckily for the Mayor, an aide, Lester B. Stone, had been telephoned by a reporter for a statement, had thus learned that the story had broken and had hurried to the station. Stone reached the Mayor a few steps ahead of the reporters, pulled him aside and told him what had happened, giving him a moment to think. No one ever accused Fiorello La Guardia of needing more than a moment. When the reporters engulfed him, he did not admit that he had agreed to dismiss Moses. Instead, when he was asked, "What are you going to do?" he replied, "I'll think it over." And he decided that night to postpone writing Ickes the letter he had promised.

That proved to be a wise move. For the next day, as one of his advisers was to put it, "the shit hit the fan." The public, that most fickle of lovers, embraced Robert Moses in January as fervently as it had pushed him away in November.

With the exception of the Daily News, there wasn't a newspaper in New York that didn't carry an editorial message to the Mayor on Order Number 129 on Friday, January 4, or Saturday, January 5. The ones in the Herald Tribune were a fair sample. Friday's said: "If Mayor La Guardia allows one of the ablest of his public servants to be dismissed by a Washington official, without shadow of cause, through a secret ukase so extraordinary and so contemptible that the official himself is ashamed publicly to admit it, then it seems to us that Mr. La Guardia might as well resign his Mayoralty right now." That was Friday's editorial. Saturday's said: "If Mr. La Guardia gives in, he will find that he has sold his soul, sold his administration and sold the people of New York. It is not worth it." Let the federal politicians cancel the city's contracts; show them "who's charged with the conduct of the public business of the people of New York City." Was the Herald Tribune a Republican paper? The American, the Brooklyn Eagle, and the World-Telegram were Democratic. "Bureaucracy! Patronage! Politics!" the American raged. "If the order stands it will be a lasting stain on the record of the Administration," the Eagle said. "Secretary Ickes is jeopardizing public confidence in the nonpartisan honesty of the national Public Works Administration," the World-Telegram said. And the independent New York Times, normally so dispassionate and restrained, chimed in: "If he [La Guardia] has the backbone of a lamprey, he will stand by Bob Moses, right through to that Judgment Day which he is himself so fond of invoking."

And outrage was not confined to the press. The public was reacting to the press interpretation of the drama—bureaucrats and "patronage politicians" playing politics with its money—as the American public always reacts to bureaucrats and patronage politicians. Before his gubernatorial campaign, Robert Moses had been a hero because the public had seen him less as an individual than as a symbol of resistance to politicians and bureaucrats. His conduct during the campaign had, by forcing the public to see him as an individual, stripped him of that cause. But now he was once again basking in its aura—and he was once again a hero. In a display of indignation that proved how completely the Moses masterstroke had restored its author to public favor, on Friday, the day after the storm broke, the Long Island Chamber of Commerce, the Conference on Port Development of the City of New York, the Park Association of New York City, the City Club, the Bronx Board of Trade, the New York Board of Trade and the Merchants' Association of Sheepshead Bay all held separate meetings and passed resolutions backing Moses and denouncing Ickes. On Saturday, it was the Elmhurst Manor Community Council, the Jackson Heights Taxpayers Association, the North Woodside Community Association, the Astoria Property Owners' Association, the Madison Manor Civic Association, the Atlantic Avenue Business Men's and Taxpayers' Association, the Automobile Club of New York, the Corona Community Council and the New York Chapter of the American Institute of Architecture.

The language of the resolutions was indignant, and so was the language of the letters-to-the-editor that flooded into the city's newspapers—the *Herald Tribune* running nine in a single day under the headline "Politicians vs. Public Servant," the Brooklyn *Eagle* running eleven. New York's parks are "the sign and signet of Robert Moses, a man I do not know but whose hand I should be proud to shake," said one. "Our Mayor has repeatedly crawled on his belly before Washington in abject supplication. Are we, as citizens of the sovereign State of New York, to have a political mongrel from the Middle West instruct us as to who shall build our bridges and who shall plant our gardens?"

Confiding in his diary, Ickes blamed the uproar on La Guardia. "La Guardia has followed a crooked course in the whole proceeding," he raged a week after the storm broke. "He let Moses see the letter that I had written him, in which was incorporated my order. . . . I called La Guardia on the telephone on Monday and before I got through with him I told him very clearly and distinctly just how accomplished a double-crosser he in fact is. He equivocated and evaded, but I know that I had him dead to rights. This was a great disappointment to me. I had felt that La Guardia was a man of real courage and substance, but in this matter he has acted like the cheapest kind of double-crossing politician."

The Mayor was frantically steering between the Scylla of losing federal

funds and the Charybdis of losing the confidence of his constituency. And he had to steer small indeed. He attempted to make reporters see his predicament; when one asked how Ickes could hold back Triborough Authority funds he had signed a contract to furnish, La Guardia replied, "That's like a lawyer telling his client that he can't be put in jail for something and the client answering that he is in jail. I can't build on litigation. I need steel girders and brick, mortar and labor to build." But these attempts only made the storm in his city rage more fiercely. Then the Mayor tried alternately to ignore the controversy and to deny one existed. He avoided reporters as much as possible—once, finding a crowd of them outside his office door when he left one afternoon after a day of refusing their requests for an interview, he shouldered violently through them-and when, on another occasion, they cornered him, he said blandly, "Everything is susceptible of being straightened out by reasonable men. There is complete harmony between City Hall and Washington." But Moses kept the controversy alive with such devices as weekly accountings of the steadily dwindling balances in Triborough bank accounts and tours of the bridge site for platoons of civic leaders—much to La Guardia's displeasure; when a reporter asked "How would Ickes' order affect Commissioner Post?" the Mayor snapped back, "At least Post is on the high seas and he can't issue any statements." The Mayor was stalling; in the face of such a gale of public opinion, he apparently felt, either Moses or Roosevelt would have to turn and run for harbor. Ickes felt the same way, although he felt the man who would have to retreat would be the President. "This enterprise . . . is a great mistake on the President's part," the PWA Administrator diaried. "By making a martyr out of [Moses] we are only serving to build him up."

But it wasn't La Guardia's or Ickes' feelings that counted. It was Roosevelt's and Moses'. And when these two men were dealing with one another, they were not "reasonable men" at all. Not normal political considerations but personal animosity, "real hatred," hatred that had been boiling between them for years, governed their actions. Neither one would give an inch. Chauffeured in from Babylon on January 9 for a two-hour meeting with La Guardia and Windels behind closed doors at City Hall, Moses emerged, noticeably pale and tired, to find reporters waiting. "Are you going to leave the bridge authority?" one asked. "No," Moses snarled. Without another word or a backward glance, he strode out of the building. When Ickes, after a week of trying and, as he put it, "taking it on the chin" on behalf of the President, finally secured an appointment with Roosevelt on January 10, he half expected that, in view of "all the turmoil," the President would try to work out a face-saving compromise. But, the Administrator wrote in his diary the next day, "he told me very firmly that he wanted me to go through along the lines of the order that I have issued." No Triborough requisitions were to be honored "unless the Moses matter is settled to the President's satisfaction."

Apparently confident that he could break La Guardia down and force him to agree not to reappoint Moses in June, FDR told Ickes pontifically

that "the thing to do was just to go along, say as little as possible, and let it work out." For a while it seemed that the President was correct. On January 16, he summoned La Guardia to Washington for a private conversation. Returning to New York, the Mayor told reporters, "Nothing is going to happen that will disturb the pleasant relations between the city and Washington. We simply cannot afford to let a break happen. We have too many public projects being financed by federal funds to let such a thing happen." A Herald Tribune Washington staffer reported that "at PWA headquarters, Mr. Moses' resignation was confidently expected as a result of Mayor La Guardia's public remark."

But if the President felt he was holding all the cards, he was overlooking the trump: public opinion. And Moses' trump suit was even longer than had previously been apparent.

Roosevelt was forced to admit at a press conference that he had been kept informed of the controversy by Ickes. The President declined to discuss the matter further but even the limited admission made news—PRESIDENT AWARE OF ORDER ON MOSES, the *Times* headlined—and with this opening, newspapers finally told their readers that FDR was not only aware of the order but had directed Ickes to issue it. The public protest rose to hurricane levels, as delegations from 147 civic, business and social organizations met in the auditorium of the State Chamber of Commerce Building at 65 Liberty Street.

The diversity of those delegations—there was one from the Fortnightly Library Club of Brooklyn as well as one from the Manufacturers Association of Bush Terminal-indicated the extent to which the support for Moses extended through every segment of the city. There were delegations from the city's most prestigious civic organizations: the Citizens Union, the City Club, the Women's City Club, the Civic Council of Brooklyn, the Alliance of Women's Clubs, the Civitas Club of Brooklyn and the United Neighborhood Houses-a central body which itself represented forty-nine separate settlement houses and other social work organizations such as the New York Urban League and the Educational Alliance. Sitting on the stage or in the audience at the State Chamber of Commerce auditorium were many of the most respected and influential individuals in the New York City reform movement: Burlingham, Price, McAneny, Schieffelin and other old giants of reform who had been idols at the Bureau of Municipal Research when Bob Moses had been a young staffer there; leaders of the "middle generation" of the movement, contemporaries of Moses like Childs, Stanley Isaacs and Morris Ernst; and leaders of reform's younger generation such as Newbold Morris. Once these men had all been friends and admirers of Moses. Many of them had been alienated from him by his display of vindictiveness and disregard for the truth during the gubernatorial campaign. But now there was a principle at stake and these were men to whom principle was more important than personality; forgetting past differences, they took him again into the shelter of their names and reputations and lent to his fight with the President the ringing phrases of reform. The Triborough Bridge, they said in a letter sent to Ickes on behalf of all 147 organizations, is "an urgently necessary public facility" but "if the price to be paid for the loan of Federal funds is the surrender of control over local government, then we, being unwilling to sacrifice this great principle, would rather wait until such time as some other method of financing will permit its completion."

And just as important in determining La Guardia's attitude as the public expressions of protest were the private expressions. For the men making them possessed not only personal entrée to La Guardia but his respect. As always, the definitive word was Burlingham's:

## Dear F.H.

You know my views on the subject; but I think I will put them in writing as my considered opinion, for my own clarification, if not for yours.

You have told me that you do not think one man should be permitted to obstruct or imperil the relief of hundreds of thousands.

That one man, however, has become a symbol. Washington has taken the position the English Kings took toward the American Colonies. The question, therefore, is whether you, as representative not of New York City alone but of every municipality and every state in the Union, will submit to an unreasonable and tyrannical order from Washington.

If you have already committed yourself expressly or by implication, I think you should make it plain to the Secretary and the President that the sentiment of New York is so strong that as its representative you must respect it, and that unless good reason is shown to the contrary you intend to reappoint Moses as Triborough Bridge Commissioner on the expiration of his term.

I have tested public sentiment at all points possible for me, and it is unanimous. Even those who dislike Moses for his bad manners and rough stuff agree that it would be far better to let work on the Triborough cease than to yield to Order Number 129.

Yours, Burlingham

The flood waters of protest were beginning to creep higher in Washington, too. "Morris L. Ernst, a fine young liberal lawyer from New York, came in to see me today very much worried over the situation and its effect on my reputation," Ickes had told his diary on January 9. "He justly pointed out the fact that my action in the Moses case is at utter variance with any other act of mine. He says I am being criticized by all the liberals of New York. He told me frankly that everybody realized that I was acting for the President but apparently that isn't saving my face or helping my reputation." And Ernst was not the only influential liberal to sit under the stuffed buffalo heads at one end of Ickes' vast walnut-paneled office at Interior, waiting for an audience with the Secretary. Already uneasy in his conscience over what he was doing, Ickes became uneasier still.

Roosevelt tried to ignore the flood—when Joseph Price, an old friend, wrote on January 30 for an interview, the President refused to see him—but by mid-February the waters were beginning to lick at the steps of the

White House. The mail tally that was sent daily to FDR's desk included, day after day, scores of protests from individuals and organizations. On most of them, a presidential aide, probably Colonel Marvin H. McIntyre, scribbled "The usual" and out went a letter, signed by Louis Howe, saying only: "Your letter has been received and will be brought to the President's attention. I want to thank you on his behalf for your interest in sending your views regarding the matter referred to." But some of the mail required more than form replies. For Ernst, Price and Burlingham-and a score of other reform leaders from New York-were personal friends of the President and his wife from Roosevelt's days in New York, and these men were among the writers, Burlingham wiring the President on February 22, a year to the day since FDR had begun the ouster move: "Never have seen such unanimity of feeling. Issue far transcends Moses or New York. . . . Way out can and must be found." And while the protest had at first been confined to New York, with the revelation of the President's direct involvement, it spread. Soon newspapers all over the country, many of which had been looking for proof that federal relief money was being used for political purposes, were finding that proof in Order Number 129 and were treating it accordingly. "I would not have supposed that the country outside of New York would be very interested in this matter," Ickes wrote, "but the newspapers have made it almost a national issue." Arthur Krock, syndicated national political columnist of the Times, analyzed the controversy from a political standpoint. Walter Lippmann analyzed it from a philosophical standpoint, concluding that surrender by La Guardia would mean that he has "bartered away not only his independence but the independence of all other local officials" to a centralized bureaucracy in Washington.

There were other developments that Roosevelt could only have viewed as ominous. Conservative elements in the House, led by upstate reactionary Bertrand Snell, began to move for a congressional investigation of Order Number 129. Such an investigation was not likely to redound to Roosevelt's credit—as became evident in a speech by Huey Long. The Louisiana rabblerouser, already a national figure in early 1935 and intent on becoming more of one, had been bitterly attacking Postmaster General Farley and demanding a Senate investigation of his activities. On March 6, before packed galleries in the Senate Chamber, the Kingfish charged that the "Big Bag Man's" New York-based General Builders Supply Corporation was transacting "matters with which the United States government is identified for the purpose of making private profit." And the Kingfish said that, to prove his charge, "the testimony of Commissioner Robert Moses of New York, and the data which he has assembled will be called. . . ." Whether or not, as was later to be reported, Moses was leaking Long his "data" on Farley as a hint to Roosevelt of the revelations he might make during a congressional investigation, the threat of such revelations was another reason for the President to dread the possibility that another branch of the federal government might intrude into his personal vendetta.

It was not only the legislative branch that might intrude, moreover.

Emphasizing as always their belief that democracy must be a government of laws and not of men, the New York reformers commissioned a legal analysis of Order Number 129. Their attorney concluded in a sixteen-page brief that the order was clearly illegal, "an arbitrary and capricious fiat without any authority in law," that it was a breach not only of express contractual obligations of the government but of "governmental morality," that the records in the case clearly proved that Ickes had issued the order to force from office a single municipal official for no other reason than that that official was not "deemed friendly to the Federal Administration," that Ickes had abused the power given him by Congress and the President and that he had therefore committed an impeachable offense. The attorney said he was prepared to undertake, as a public service for which no fee would be required, an attempt to obtain from the courts a writ of mandamus requiring Ickes to honor his contract with Triborough. And the identity of the attorney made the threat one that could not be laughed off; he was the noted constitutional lawyer William D. Guthrie, senior partner of the celebrated law firm of Cravath, Swaine and Moore, who forty years before had carried a fight against the imposition of a federal income tax all the way to the United States Supreme Court—and had won. (The tax was not reinstituted until 1913, when it was legalized by the passage of the Sixteenth Amendment.\*) Roosevelt decided to grant Joseph Price the interview Price had requested, and the reformer returned to New York to report to intimates that he had found the President conciliatory. He told them that Roosevelt had asked him plaintively, "Isn't the President of the United States entitled to one personal grudge?" ("No," Price said he had replied.) Ickes wrote in his diary: "The President, I know, would welcome a way out of this cul-de-sac." But, the Secretary added, "no way offers itself."

Trying to find a way, the President summoned La Guardia to a secret meeting. It was held on February 24 aboard a Pennsylvania Railroad train carrying the President from Washington to a speech in Cambridge, Massachusetts. Although the train stopped in New York, La Guardia drove to Philadelphia and boarded it there to lessen the possibility that he would be spotted by a reporter. When the train stopped in New York, the city's mayor stayed hidden in a compartment behind lowered window shades.

President and Mayor were trying to find a way to retreat and still save face, and La Guardia had brought with him a draft of a letter he thought might do the job. In the letter, which was addressed to Ickes, La Guardia agreed that he would always obey Order Number 129 in the future and would never again appoint a city official to an authority receiving federal funds. But, he said, applying Order Number 129 retroactively to city officials already on authorities created a problem in the case of one particular individual—Housing Authority member Post.

Langdon Post is familiar with the entire city housing program, La

<sup>\*</sup> The main reason for the verdict was the constitutional provision that direct taxes had to be apportioned among the states in proportion to population, a provision struck out by the amendment.

Guardia wrote. "What is more, he is enthusiastic, zealous and energetic in his work. It would be a pity to displace him at this time." Therefore, the Mayor said, could I possibly ask for a "modification" of Order Number 129 that would permit "officials of existing commissions or authorities to continue their work until completion"?

There was also a postscript to the letter. "P.S.," the Mayor wrote. There is one other official who would be affected by the modification. His name is Robert Moses. "I assume the ruling on one will be applicable to the other."

The attempt to cover the retreat on Moses by pretending that the battle was really over Post was so transparent a smoke screen that Roosevelt may have been reluctant to employ it. He did nothing on February 25, 26 or 27. The requisition slips that Moses had sent to Washington on November 8, almost four months before, remained on Ickes' desk, unsigned. The contracts for the next stages of work on the Triborough Bridge remained unlet. Considerations of revenge and politics appear to have been balancing themselves almost evenly in the President's mind.

But on February 27, something happened that tipped the balance.

For weeks, Alfred E. Smith's friends had been urging him to issue a statement on Moses' behalf. Time and again they had told him that he must delay no longer, that Moses could not hold out without help. But while the old warrior was unhappy now and terribly bitter, he had lost none of his wiliness. Wait, he told his friends. The time wasn't right yet. Moses didn't need him to hold out. The newspaper editorials and civic association resolutions would enable him to do that. Moses needed him to win. The moment when he should step in was the moment at which the President and the Mayor had been driven to the edge of a decision to give in to Moses and a single push could plunge them over the edge into surrender—if the push was delivered by someone with more influence than a newspaper or a civic association, someone whose name was still a potent force throughout the United States and particularly potent as an influence with La Guardia, who knew that if Smith ever became angry enough to go after his job, he would probably be unable to keep it. Now, Smith judged, the moment had arrived. On February 26, he called reporters to his office on the thirty-second floor of the Empire State Building and said he wanted to make a statement. As usual, he went right to the heart. "Over ten years ago," he said, "Bob was talking to me about a single unified plan for park and parkway development for the state." He has been carrying out that plan ever since. "The Triborough Bridge is the key to the success of the whole system." It was "ridiculous" not to let him finish it. Ickes' order was "narrow, political and vindictive." He could not believe, he said, that President Roosevelt would be a party to it.

As Smith had known it would, his statement made the front pages of newspapers across the country on February 27. The very next day, the President, in Ickes' words, "came to a conclusion that a retreat was in order."

Summoning Ickes to the White House, he called in stenographer Grace Tully and dictated a draft of a reply to La Guardia's letter for Ickes to sign. "Ickes'" reply agreed to solve "the problem created as the result of the expiration of the term of Commissioner Langdon Post" by ruling that Order Number 129 should not apply retroactively and that therefore since Post had been appointed to both his city and authority posts before the order was issued, he could keep them. "Since a like situation exists with reference to Mr. Moses, of the Triborough Bridge Authority, this interpretation shall also apply to him," the letter added. Ickes predated the La Guardia letter to him February 23 and he predated "his" letter to La Guardia February 26—"so as to antedate by one day the blast let out . . . by Al Smith," he noted in his diary. Regardless of the date at its top, however, the letter was a document of unconditional surrender. Moses' great friend had rendered him one last great service.

All but ignoring Langdon Post, the press correctly interpreted the Ickes letter as a personal triumph for the Triborough Commissioner. ICKES BACKS DOWN ON MOSES was the *Herald Tribune*'s three-column lead headline; its editorial noted that Ickes' letter left some questions about the controversy's origin unanswered but said, "No one, we think, will wish to disturb the grandeur of that handsome, outsized white flag now floating above the offices of the PWA by hurling irrelevant questions at it." La Guardia's parting growl—"As I have insisted all along, relations between Washington and City Hall are most cordial and friendly. . . . There was no need for all this 'pro bono publico' business"—was lost in the cheering.

Ickes, who hadn't wanted to become involved in the first place, had suffered not only pangs of conscience but a public humiliation of monumental proportions. "Moses did me more damage than any other one person during my years with Roosevelt," he was to write. But even Ickes could not forbear to cheer the episode's victor. Reminiscing in a letter to Burlingham years later, he said, "There can be no doubt of the porcupinish disposition of Moses. And is he clever! . . . He put it all over President Roosevelt and me in that squabble." Cleveland Rodgers summed up the dimensions of the triumph when he wrote: "The battle of the Triborough Bridge was over. Moses won against the most powerful opponent he ever encountered."

And Moses won more than a battle. For in it, as Rodgers wrote, he "received the most impressive demonstration of public confidence in his career." That was the battle's most significant development. At the conclusion of his gubernatorial campaign, Moses' stock of public confidence had never been lower. But at the conclusion of the Triborough Bridge fight, just four months later, it had never been higher. By placing Moses in a position where he was in fact the opponent of bureaucrats and politicians that he had for so long claimed to be, Franklin Roosevelt had allowed him to screw his halo back on. And so firmly did Moses screw it back on—without ever again making the mistake of running for public office—that in the public's eyes the last of the glow would not fade for almost thirty years. "After

that Triborough controversy," Windels was to say, "he couldn't do anything that was wrong in the public's eyes. If you disagreed with him, why you were a public enemy. He was back firmly in the saddle."

The ceremony opening the Triborough Bridge—held on its central span on July 11, 1936—was to add a tinkling little grace note, an inspiration of pure wit, to the resounding triumph Moses had won eighteen months before in forcing Roosevelt and Ickes to allow him to complete the project.

When the invitations were mailed on May 12, one went to the White House. No reply was immediately forthcoming, and the reasons were certainly understandable. Moses, as master of ceremonies at the sumptuous opening, would be introducing the dignitaries present—would, in other words, say a few things about each of them. And Roosevelt, familiar with Moses' gift for invective, could hardly have helped worrying what Moses might decide to say about him. A recent incident had provided him with fresh proof of the depth of his foe's animosity: before the opening of the Chrystie-Forsyth park complex, La Guardia, trying to cultivate the President, had suggested naming the park after his mother. Moses had flatly refused. (The name "Sara Delano Roosevelt Park" had been bestowed only after the Mayor outsmarted the Park Commissioner by suggesting the name publicly; Moses did not dare to publicly oppose a chivalrous gesture to an elderly woman.) The President had been forced to eat one large slice of humble pie on the Triborough Bridge issue; he was understandably reluctant to be forced to choke down another helping on the bridge's center span. The Triborough Authority mailroom, alerted to keep an eye out for a response from the White House, reported day after day that none had appeared.

On June 23, Ickes, although himself piqued because the only invitation he had received was one as a "general spectator" ("It is very small indeed. . . . Naturally, I ought to have a place in the program"), advised the President to attend. "I understand that there will be a national hookup and the bridge itself will be featured in newspaper articles and pictures throughout the land. If you go to this affair, credit for the building of the bridge will go to your administration, where it belongs. Otherwise, Mr. Moses can be depended upon to glorify himself. . . ." The dedication, free of political overtones in an election year, "will be of more value to you at this time than a score of campaign speeches," the Administrator said. He added a piece of encouragement: "Mayor La Guardia told me in New York on Saturday that you are the only one who can take this show away from Robert Moses. And you can do it." And he added a warning: ". . . you will be in Hyde Park on the 11th. If you are to be near New York on the 11th, won't your failure to take part in the program be subject to misinterpretation?" But Roosevelt's response was a memo, only two paragraphs long but quite revealing:

I wish much that I could go to the Triborough Bridge opening on July eleventh. It is impossible for me to come down from Hyde Park that day—incidentally, it would be an all day trip to New York and back.

I really think that if you and La Guardia take hold of the ceremony, you will so greatly outshine Brother Moses that we will be able to sing, "Where was Moses when the lights went out?"

F.D.R.

Press speculation over whether the President would attend was mounting, however, and other presidential advisers joined Ickes in pointing out that the bridge was the largest PWA project in the East, that it was in the President's own state, that its location in the country's media capital would insure its dedication nationwide publicity, that credit for it should go to the President's administration—and that the President's absence would arouse press "misinterpretation" that he was afraid to confront Moses again. La Guardia apparently elicited from Moses a promise that he would be on his best behavior. He also elicited a specific promise, insisted on by Roosevelt, that although Moses would introduce all the other speakers, he would not introduce the President but would let the Mayor do it. The Mayor bore the guarantees to Hyde Park, and at the last minute was able to announce that the President was coming after all. Ickes received a "special invitation" to be one of the speakers and at another press conference La Guardia announced that the PWA Administrator was coming, too.

(Leaving the Mayor's office after the announcement about Ickes, Moses was surrounded by reporters. He declined to answer any of their questions, but he could hardly keep from laughing, and he finally said, with a broad grin, "You can say that I'm going to introduce him.")

(In a conference in La Guardia's office, at which Windels was present, Moses had shown the Mayor the timetable for the program, which limited the President's speaking time to five minutes. Don't be ridiculous, the Mayor said. Moses gave the President six minutes.)

It was extremely hot on the day of the dedication, ninety-seven degrees on the temporary speaker's platform on the bridge center span, and that may have been the reason why three of the speakers—Roosevelt, Ickes and La Guardia—were sweating. But reporters noticed that Moses was strikingly cool in his white suit.

He was a gracious host when the President's party arrived, letting his charm wash over Ickes in such a great wave that the Old Curmudgeon later confessed to his diary that he had been overwhelmed. Introducing all the speakers—all the speakers except the President—over a nationwide radio hookup while he looked out at the gleaming white bridge roadway stretching out from Randall's Island toward the three boroughs it joined together, and down at the just-completed Triborough Stadium below him, he was expansive and complimentary. And reporters who had hoped for some malice on the center span, a little bloodying of the virgin concrete, were disappointed. All the speeches were standard opening-ceremony inconsequentialities (it was probably an oversight that neither FDR nor Ickes mentioned by name the man who had built the project they were dedicating) and Moses never mentioned the President at all and, in his introduction of

Ickes, was ostensibly all let-bygones-be-bygones, moving the audience to applaud—and the reporters to write that "the feud came to a graceful end yesterday"—when he said that "the Public Works Administrator and I have met face to face and found that neither one of us has horns, hoofs and a tail. . . . At this junction, where traffic from all directions meets, where there are no left-hand turns, no head-on collisions and no sideswipes, it's a genuine pleasure to meet the Secretary of the Interior. . . . I trust that this meeting will be the beginning of a real friendship and regard."

There was, of course, one somewhat unusual note in Moses' introduction of Ickes. "There have been times," Moses said, "when in contemplating our Washington partner, I have been tempted to go back for inspiration to the letter which Dr. Samuel Johnson wrote to Lord Chesterfield about the famous dictionary which the great scholar announced that he had finished with comparatively little assistance. I have always considered this letter to be one of the finest pieces of polite vituperation in the annals of English literature." But no reporter thought to analyze the letter and see its application to Roosevelt and Ickes. Ickes even wrote in his diary that he was quite pleased by the introduction.

If the Old Curmudgeon had attended Yale and had taken Chauncey Brewster Tinker's course on "Johnson and His Circle," his pleasure might have been somewhat diluted.

Professor Tinker had delighted in telling his students—including Robert Moses, president of Yale's version of Samuel Johnson's Kit Cat Club—the story behind the scholar's letter. Setting out on the task of compiling his great dictionary, the scholar had appealed for the financial assistance he desperately needed to Lord Chesterfield, who had encouraged him to expect it, but had then rudely rebuffed him. When, however, after seven years of privation and hardship, the work was completed and acclaimed, Chesterfield had attempted to represent himself as Dr. Johnson's "patron" and thus take some of the credit for it. It was then that Dr. Johnson wrote to him: "Is not a Patron, my Lord, one who looks with unconcern on a man struggling for life in the water, and when he has reached ground, encumbers him with help?" He added: "I hope it is no very cynical asperity to be unwilling that the Publick should consider me as owing that to a Patron, which Providence has enabled me to do for myself."

## 23. In the Saddle

THE LITTLE FLOWER was mastering New York City as no mayor since Peter Stuyvesant had mastered it. Roaming his domain in person like Haroun-al-Raschid, he suddenly appeared on lines in front of municipal lodging houses, checking on the treatment of the luckless, or in police precinct houses, employing the mayoralty's hitherto-unused magisterial powers to mete out swift punishment to arrested gamblers, or at the Bronx Terminal Market before daylight one freezing December morning, assembling an audience of shivering market concessionaires by having two police buglers blow a fanfare and then, clambering up on the tailboard of a truck, announcing an assault on racketeers in the artichoke business by reading a formal proclamation banning the inoffensive vegetable from the premises. Doffing his big Stetson for a big fire chief's helmet, he dashed to fires to make "personal inspections" from which he emerged covered with soot, and he groped through smoke and flames to the side of two firemen pinned under a collapsed wall and knelt by them whispering encouragement until they were freed. He raced to train wrecks in the sidecar of a police motorcycle, battered down doors at the head of police raiding parties, snatched the baton from an orchestra conductor to lead a bravura performance of "The Stars and Stripes Forever" and conducted the Sanitation Department band at a special performance in Carnegie Hall (after instructing a stage manager, "Just treat me like Toscanini"). He gave a city hungering for leadership the impression that there was no part of his domain that he did not dominate.

The Little Flower mastered even the city's most unmasterable element: its government. When Big Tim Sullivan of Tammany Hall, which during most of La Guardia's first term controlled the Boards of Estimate and Aldermen, said, "It is the business of the majority to advance a constructive program," La Guardia replied, with a grim smile: "In this administration, I am the majority." Bounding up the front steps of City Hall early on the morning of his Inauguration Day, he had stopped, a roly-poly figure in a ridiculous black hat and a rumpled black suit, and had shaken his little fist at its white Georgian elegance and shouted, "E finita la cuccagna!" ("No more free lunch!"), a phrase which, a friend explained, the Mayor was using to promise "The party is over! No more graft!" And to the amazement of reporters who had smiled skeptically at the time, La Guardia kept his promise, slashing thousands of nonessential jobs from city payrolls, slashing

In the Saddle 445

the salaries of the employees who remained, balancing the city's budget—and raising the moral tone of government in New York to new heights. Sitting under the portraits of bewigged Colonial Governors with his unruly black forelock down over his forehead, his horn-rimmed glasses pushed up on top of his head, his feet dangling off the floor, sorting through a stack of mail as rapidly as if he were dealing a deck of cards, tossing the letters at three secretaries and shouting, "Say yes, say no, throw it away, tell him to go to hell," the Little Flower made City Hall shake with the pounding of his fists on his desk and echo with the rasp of the six buzzers he had installed there.

But the Little Flower wasn't mastering Robert Moses. The relationship of the two men was the talk, or rather the whisper, of City Hall.

The relationship was kept secret—even, to a large extent, from the newspapermen who prowled the Hall uncovering secrets—because it was known to only a few of the Mayor's intimates and because those intimates, anxious to preserve the Mayor's image as a commander capable of command, a Mayor master of his city, were careful to disclose nothing that would mar this image.\* And public knowledge of the Mayor's relationship with Robert Moses would certainly have marred it.

La Guardia was a bullying petty tyrant to subordinates—not only to his secretaries, who came to dread the rasp of his buzzers summoning them into his office, and would sit sobbing at their desks when they came out, but also to his commissioners, the nonpartisan, nonpolitical experts of whose presence in his administration he was constantly bragging. Rexford G. Tugwell, who joined that administration as Planning Commission chairman, recalls bitterly, "He boasted to newspapers [of] his appointees. . . . He did not say that he often treated his commissioners like dogs. . . . We soon discovered that we were expected to do a good deal of humiliating kowtowing, to give many of La Guardia's favorites jobs, and to respect without question whatever capricious notions the Mayor might have about our work." The Mayor moved his desk to the far end of his thirty-two-foot-long office (the Blue Room, formerly used for ceremonial functions because of its size) so that visitors would have a longer walk to reach him, and when a commissioner entered—usually after a long heel-cooling period outside the Mayor would often further unnerve him by covering his face with his fingers and peering between them so that, as the commissioner approached, all he could see of his boss's face was a pair of button-bright little eyes staring at him. A commissioner who displeased La Guardia by inefficiency—or by showing even a hint of independence—would be abused as if he were a wayward child. And the abuse was not delivered only in private: in his desk the Mayor kept a large bronze bone and at intervals he would call his commissioners together so that in front of them all he could "award" it to

<sup>\*</sup> As they were careful to disclose nothing that would hint at the excesses of La Guardia's "colorful" personality. "Everybody talks about the Mayor's temperament—which doesn't exist!" Reuben A. Lazarus blandly assured John Gunther, and the author duly stated in his chapter on the Mayor in *Inside U.S.A.*: "Temperament? There's no time for it—unless it happens to serve a useful purpose."

the one who had pulled the biggest recent boner; once, with a commissioner in his office, the Mayor summoned a secretary and berated her viciously for an imaginary mistake—just so that he could have the pleasure of concluding the tirade by shouting, "If you were any dumber, I'd make you a commissioner." Many commissioners resigned; the turnover in the La Guardia administration, Tugwell says, "must have been unprecedented in municipal history" (although it was later surpassed by the turnover in the administration of New York's next Fusion mayor, John Vliet Lindsay, who succeeded in having seven sanitation commissioners resign on him in four years). Many didn't get a chance to resign, for La Guardia delighted in firing people—he once dismissed a secretary who had worked for him faithfully for years when, for the first time, she showed up at her desk after lunch tipsy—and a La Guardia dismissal was a thorough job: the mayoral pink slip was hand-delivered without any previous warning-by aides bearing also written authorization to seal the hapless commissioner's files on the spot so that he could not remove even personal letters.

La Guardia's relationship with his Park Commissioner was slightly different. Other commissioners might be made to cool their heels outside his office after answering a mayoral summons; when Moses was summoned, he would keep the Mayor waiting, showing up late (if he showed up at all; often he sent Earle Andrews in his place). Sometimes the enraged Mayor would accept the proffered excuse that Moses was busy; on other occasions he would refuse to see Andrews and would order an aide to telephone Moses and demand his presence—and while sometimes this demand would produce him, often Hazel Tappan would inform the aide curtly that "Mr. Moses is out in the field" and "can't be reached." Other commissioners might be browbeaten in La Guardia's office, his secretaries hastily jumping up when the furious high-pitched voice began to rise from behind his closed door and scurrying to slam another door to the waiting room outside so that visitors could not hear; when the commissioner behind the door to the Mayor's office was Moses, the secretary knew that if the high-pitched voice began to pierce the door, it would soon be joined, if not drowned out, by another, nasal and resonant.

Men who happened to be sitting behind that door—in La Guardia's office—during confrontations between the Mayor and Moses would speak of those confrontations thirty years later in voices that still contained a tone of awe. "There would be scenes in the Mayor's office that I could hardly believe," recalls Paul J. Kern, La Guardia's law secretary. Another La Guardia aide says, "There were moments when you would have sworn they were going to come to blows—that was how high the feeling ran." The aide who was perhaps present most often was Reuben A. Lazarus, whose expertise in bill drafting, second only to Moses', had earned him the nickname "the walking library" and a reputation for knowing "where the bodies are buried" and who was considered so indispensable that La Guardia had retained him in the same sensitive post in which he had served Jimmy Walker—official city representative in Albany—and had given

In the Saddle 447

him extraordinary access to his private office. Lazarus recalls that Moses and La Guardia "used to walk around each other in that office sometimes like a couple of stiff-legged bulldogs. One time Moses was threatening to do something—I don't recall what exactly—to some other commissioner. La Guardia was pleading and pleading with him not to do it. He kept saying, 'Jesus, Bob, look at the trouble you're going to cause me.' Finally Moses said, 'Okay, Major, I won't.' He left and La Guardia turned to me and said, 'Someday I'm going to hit that son of a bitch and knock him through that door!' "Moses would come out wild—just absolutely wild," says Moses aide Jack Madigan, who was often waiting outside City Hall in Moses' limousine. "He used to say to me, 'Do you know what that dago son of a bitch told me this morning?' "

("That dago son of a bitch," "that wop son of a bitch" and "that guinea son of a bitch" were three of Moses' favorite private descriptions of La Guardia during the Mayor's first term—in letters and to his face, Moses addressed him as "Major," his World War I Army Air Force rank. During his second term, La Guardia, sensitive about his Italian immigrant ancestry and unable to forget that during his youth playmates, seeing an organ grinder, had jeered, "A dago with a monkey! Hey, Fiorello, you're a dago, too. Where's your monkey?," banned organ grinders from the streets. Moses thereupon began referring to La Guardia in private as "the little organ grinder." Later, he took to calling the Mayor "Rigoletto." La Guardia, feeling that Moses' insistence on his own infallibility was comparable at least to an Archbishop's, referred to him in private as "His Grace.")

While La Guardia was constantly severing other commissioners' ties with his administration or threatening to sever those ties, when the Mayor dealt with Moses the shoe was on the other foot. The resignation ultimatum, perfected by Moses during the Roosevelt Governorship, was a heavily utilized weapon in his running battle with the Mayor, a weapon used to win even small points: "I must insist that . . . approval of filling the position be granted forthwith. Otherwise I cannot assume further responsibility for this work." The ultimatum might be delivered in writing by Andrews or orally by Moses himself in face-to-face confrontations—just before he whirled on his heel and slammed out of the Mayor's office. And it invariably worked. When Moses slammed out with the threat hanging in the air, Windels recalls, "La Guardia used to go over to the window [the one in the southwest corner of his office, from which both the front steps of City Hall and Moses' limousine parked there would be visible] and wait to see if Moses really left the building-sometimes he would come back himself, you see. And if Moses did [leave], La Guardia would quickly send someone from the office—a secretary or whoever was with him—after him to try and stop him before he drove away—as if it was the secretary's idea and not his [La Guardia's], see—and get him to come back, or he'd telephone the police booth at the front entrance to get the patrolman on duty there to try to do it. Then he'd stand by the window waiting to see what happened. After a while, it occurred to him that Moses could see him

standing there and could see how anxious he was, so he had the lower panes of the window filled with one-way glass so he could look out but Moses couldn't see in."

Baffled by the resignation tactic, which humiliated him by making him back down on the spot, La Guardia at first tried to handle it with mock disdain; once he sent Moses a note saying, "Enclosed are your last five or six resignations; I'm starting a new file." This strategy didn't blunt the weapon, but the wily Windels finally devised one that did: refusing to treat the resignations as anything but a joke. Recalls the Corporation Counsel: "One day I came in and La Guardia was sitting there and he said, 'What the hell am I going to do? Here's another resignation. And Earle Andrews is outside waiting for an answer.' I said, 'What you want to do is kid him.'" Windels suggested that La Guardia print a pad of forms reading: "I, Robert Moses, do hereby resign as \_\_\_\_\_ effective \_\_\_\_\_ " and simply hand one to Moses whenever the commissioner threatened to resign. The technique worked; the next time Moses made the threat in person, La Guardia simply whipped out the pad, tore off the top form with a flourish and a broad—if forced—grin and handed it to him. Moses snatched the pad off the Mayor's desk, hurled it across the room, stamped out the door—and used the threat more infrequently thereafter. But it remained nonetheless implicit in confrontations between the two men, and while La Guardia won some of those clashes, more often it was the Mayor, rather than his commissioner, who gave way. In one typical episode, La Guardia ordered an investigation of two construction contractors he suspected of defrauding the city. Their attorney, the brilliant Jackson Dykman, recalls that while he was conferring with his clients in Moses' office, "I heard Moses give La Guardia the devil over the telephone." Describing that telephone conversation, Moses gives a wonderful imitation of the La Guardia snarl: "He said, "Yeahhhh, I hear you got a fancy lawyer.' I said, 'Yeahhhh, and he's gonna kick the shit out of you. You better leave him alone." And, as it turned out, La Guardia never had the investigation pursued.

On July 23, 1936, readers of *The New York Times* were served with their morning coffee a headline reading MAYOR CALLS POLICE TO HALT RAZING OF FERRY BY MOSES. And as they read on, they found that the headline had not exaggerated. The Mayor of the City of New York had indeed called out the armed constabulary against his own Park Commissioner.

At the beginning of his mayoralty, at the time of the renegotiation of the contract between the Triborough Authority and the PWA, La Guardia had agreed to mothball the ancient city-operated ferry, the Rockaway, which for sixteen years had been crossing the East River every twenty minutes between Astoria and the old green municipal ferryhouse at Ninety-second Street in Manhattan, so that the land on which the terminal stood could be used for the East River Drive approach to the bridge and so that the motorists who had been using the ferry would be forced to drive over the bridge instead and pay tolls to the Authority. For months, Moses had

In the Saddle 449

been pressing the city's Department of Plants and Structures, which operated the ferry, to discontinue the service so he could begin demolishing the ferryhouse.

But some of the ferry's 1,700 daily riders felt sentimental about the old tub, its fog bell clanging away and its whistle sounding lugubriously to warn off other ships on mist-shrouded early-morning trips. They felt a genuine camaraderie for the men who ran it, contributing seeds to the small garden, divided into tiny plots by fences made of old bedsprings, that the captains and ticket takers cultivated next to the Manhattan ferryhouse, petting and fawning over Red, an Airedale who had wandered into the ferryhouse as a pup ten years before and had lived there ever since. And passengers not given to sentimentality and camaraderie hated to see the ferry go because a round trip cost only a nickel and a round trip on the bridge would cost fifty cents-and those who didn't own automobiles would have no convenient way to get to and from Manhattan. The passengers had petitioned Astoria political leaders to let the ferry remain, and the political leaders had called on the Plants and Structures Commissioner, Frederick J. H. Kracke, an old-line Republican leader and La Guardia supporter-and Kracke had delayed discontinuing the service. Then a new element was added to the picture when the city decided to construct a large low-income housing project on the Astoria waterfront; with the ferry, Housing Authority Commissioner Langdon Post pointed out, residents of the project would have convenient transportation to and from their jobs in Manhattan; without it, since most of them were too poor to possess automobiles, it would be torturous to commute back and forth across the river every day. Kracke had continued to procrastinate. On July 15, La Guardia had personally telephoned and had requested the Sinking Fund Commission to formally turn the ferryhouse property over to the Authority—although the Mayor said that the ferry service should not be stopped for sixty days so that the ferry riders would have time to find other means of transportation. The Sinking Fund Commission concurred.

Moses was not willing to wait sixty days. Defying the Mayor, he decided to stop the service immediately—by tearing down the ferry terminal.

He ordered the contractor building the East River Drive approach, A. N. Hazell, to procure two barges and install a pile driver on one and a wrecking crane on the other. When they were ready, on July 21, he waited until the *Rockaway* had unsuspectingly pulled away from Manhattan for one of its early-afternoon trips to Astoria and then, without warning, ordered the barges towed into the ferry slip and lashed together there so that the *Rockaway* would have no place to dock when it returned. And he ordered the pile driver and the crane to pound and pull the slip to pieces. Attacking simultaneously from the land side, he dispatched crews of workmen to tear up York Avenue's cobblestones in front of the ferryhouse to cut off all access to the terminal by land.

By coincidence, Jack Madigan was in Kracke's office, discussing another matter, when the commissioner received a telephone call about what was happening. "He threw me out," Madigan recalls with a grin, telephoned

City Hall and, while he was trying to contact the Mayor, sent an aide, Deputy Commissioner Andrew Hudson, to the terminal to intercede with the contractors.

Hudson could hardly believe what was happening. The fact that the boat was heading across the river while its dock was being destroyed behind it was the least of it; the ferry could dock at another pier—which, in fact, was what it did when its amazed captain, returning from Astoria, saw what was happening. (Its passengers disembarked at a downtown fireboat landing.) What was more important was that hundreds of regular ferry commuters, who had come to Manhattan by boat that morning, would be left stranded there—with their cars and homes on the other side of the river. But when, assuming there had been some mistake, he pointed this out to the contractors and asked them to stop work until matters could be straightened out, they told him that they had orders from Moses to continue working no matter who tried to stop them—and even while Hudson was arguing with them, the pile driver continued to smash away at the dock.

La Guardia meanwhile contacted Moses and pleaded with him to call the contractors off. If the demolition stopped, he promised the Park Commissioner, he would call the Sinking Fund Commission back into session to shorten the sixty-day waiting period. Moses refused. Telephoning Police Commissioner Lewis J. Valentine, the Mayor—in a voice so choked with fury that it was barely coherent—ordered him to send a squad of patrolmen to the scene.

Expecting the contractors to yield to a direct police order, the Mayor and Valentine had instructed the officer in charge at the scene, Deputy Chief Inspector Edward A. Bracken, not to use force. But the contractors knew whose orders they would have to follow if they wanted to keep working for Triborough. When the Inspector ordered contractor Hazell to quit, Hazell said, "I'm not going to." Moses had told him not to, he said. And the pile driver continued to smash away. By this time, much of the dock had been destroyed and the hundreds of rush-hour ferry passengers standing on York Avenue were watching the workmen on the barges pry away heavy boards that had been loosened on the rest of it. Only force would stop Moses and La Guardia finally realized it. Put through to Bracken on the telephone, the Mayor ordered the Inspector to "drag those men off the boats if they don't quit." Those of the workmen who didn't drop their tools when a fifteen-man police boarding party swarmed over the side had them struck from their hands and were shoved, along with the rest, onto what was left of the dock. Within minutes, a police launch was standing alongside the barges and when a launch carrying the night shift of contractors' men appeared, it was warned away. A city tugboat pushed the contractors' barges away downriver. As night was falling, a procession of barges bearing piles and lumber to repair the slip arrived and workmen worked all night under floodlights to rebuild the terminal and repave York Avenue. By morning, the Rockaway was back in service—under the protection of a squad of patrolmen—and La Guardia could tell reporters, with a smile of satisfaction, "All is quiet on the eastern front."

In the Saddle 451

But the last smile was Moses'. La Guardia waited a week for the story to fade from the front pages and then quietly had the Sinking Fund Commission transfer the terminal to Moses in another forty-eight hours. At 11:25 P.M., July 31, with Red gone from the ferryhouse—a night watchman had taken the Airedale home with him—fifty-two Astoria residents who had come down to the Astoria pier for old times' sake (plus twelve other persons who just wanted to get to Manhattan) boarded the Rockaway for its last round trip across the river. Mrs. Hattie Arnez of Astoria Boulevard played the accordion and they all sang the plaintive "Where Do We Go from Here?" As the Rockaway, having completed the round trip, bumped into the Astoria slip for the last time, they sang "Auld Lang Syne." Then, as the old tub left for the Brooklyn pier where she was to be laid up, her captain blew three long, dolorous whistle blasts of farewell. Hardly had the last note faded when it was succeeded by dull heavy thuds—the pound of Moses' pile driver, tearing the ferryhouse down again.

Within a year—in May 1937—the Mayor would again be forced to call out the cops against his commissioner, in another battle in which the commissioner eventually defeated him anyway. Advised that 2,000 WPA laborers assigned to Park Department projects would be reassigned at the beginning of the month so that work could begin on new nonpark projects (including three ultramodern firehouses for La Guardia's beloved Fire Department) and that 3,000 more men per month would be reassigned thereafter, Moses rumbled that if he had to lay off men, some among them would be playground supervisors; some playgrounds would therefore have to be closed, a step sure to touch off a furious public reaction. About to leave by train for a national conference of mayors in Los Angeles, La Guardia flatly ordered him not to do so, threatening to fire him if he did. Moses defied him. While the Union Pacific Streamliner was speeding the Mayor across country, the Park Commissioner struck: he didn't take some of the 2,000 men from playground duty; he took them all, and with them every piece of movable playground equipment, even the seats of the swings. And then he ordered 142 playgrounds padlocked. Telephoning frantically from pay phones at each Union Pacific stop, La Guardia ordered Police Commissioner Valentine to open the playgrounds—by force if necessary. The police were forced to cut the locks when Moses refused to surrender the keys to Valentine, and though the play areas were technically open, the Park Department was empowered by city regulations to hold on to the equipment it had removed, and the city's mothers, confronted by pistol-toting policemen instead of the familiar supervisory personnel—as well as by firmly locked toilets that were usually available to their youngsters-rallied behind the Park Commissioner. By the time the Mayor came home, he was confronted by a hostile public, to whom Moses had already taken his case. "We, mothers of the Chelsea District, want the 17th Street playground reopened and the WPA workers rehired," said one of the countless, hastily drawn petitions delivered to the Mayor. Said one of the letters that poured into his office: "As a mother of three small children, I ask you to take your petty squabble out of the parks and give Mr. Moses enough money to run the playgrounds." Lost in the tumult was the fact that it was the Park Commissioner, not the Mayor, who had designated playground personnel instead of construction workers to be dropped from the Park Department payroll. The public outcry, fanned by the pro-Moses press, forced the Mayor to ask the Board of Aldermen for an extra two and a half million dollars, so that the playgrounds could be properly supervised—and the Park Commissioner's construction projects could go on unabated.

The explanation for Moses' independence of La Guardia was as complex as the Little Flower's many-petaled character and as simple—and ineluctable—as the basic realities of the political game at which the Mayor excelled.

In a way, their vicious confrontations made La Guardia respect and admire Moses. The Mayor's intimates noticed that while he liked to push people around, he only respected those he couldn't push. "I think he put on a great deal of his brutalities to test people out," C. C. Burlingham observed. "If they could stand up against him it was all right, but if they couldn't they were in bad luck." And Moses could stand up against him better than anyone else.

Moreover, if there was much in the characters of the two strong-willed, hot-tempered men to fan antipathy between them, there was also much to produce affection, and if intimates can remember moments when the air between the Little Flower and the Master Builder crackled with anger, they can also remember moments when it glowed with the mutual affection and admiration of two great warriors who felt they were fighting in the same cause.

For, after all, in many respects they were indeed, at least for a while, fighting in the same cause. Against a panorama of politicians interested only in themselves, they stood out as two politicians who were also interested in accomplishments that they believed would benefit others. Robert Moses was, after all, not the only one of the two men who was spending his evenings and his weekends—the time that other men called spare and devoted to private interests—driving endlessly around New York City trying to think of ways to make it more beautiful. Robert Moses was not the only one of the two men to whom the realization of dreams in concrete was desperately important. (When "Fiorello . . . started to build La Guardia Airport," says his wife, "I think he spent every Saturday and Sunday out there watching every bit of sand that was put in. Just nurtured that like a plant.") And because accomplishment was desperately important to both men, while their disagreements may have been made fierce by personal characteristics—their blazing tempers, their arrogance, their dogmatism and their insistence on having their own way—the roots of those disagreements lay not in personal hostilities so much as in differences of opinion about what should be accomplished and how, and therefore their disagreements could always be resolved. So intensely interested were both men in their work, moreover, that often no resolution was necessary. "You'd see the two of them in the goddamnedest argument and then five hours later they could go and have a drink together

In the Saddle 453

and you'd never know they had fought," Jack Madigan says. Finally, he says, he came to understand why this was possible: "Other people dealt with personal feelings and emotions, got emotional about personal feelings, see, but these two fellows here, they dealt with subject matter—that was what they got emotional about-and when the subject was over, they could be friends again—unless one of them brought up the subject matter again." Because accomplishment was so important to both of them, when one flew into a fury over opposition, must not the other have understood how infuriating opposition could be? In a posed, formal picture of the top officials of the La Guardia administration, there are thirty-one neatly dressed men-and two, the Mayor and his Park Commissioner, with ties askew and collar points jabbing out beyond their lapels. And their habitual lack of neatness was symbolic, for neither of the two men was at all interested in clothes or other material trappings of life. At times they had exchanges which indicated that although neither would ever admit it, they knew there were respects in which their spirits were kindred. City Court Judge Florence Shientag heard La Guardia shout at Moses, "You can't get away riding roughshod over things!" and Moses shouting back, "That's the way you get things done!"

Other aspects of La Guardia's character also made the friendly drinks with Moses as inevitable as the wild altercations. There was the little Mayor's romantic streak, the side of him that was the dreamer, dreaming of making his city beautiful. His dreams for the beautification were vast but vague, and no one appreciated better than he the enormous difficulty in filling in the vague outline of a magnificent metropolis with specific plans and then in obtaining the money—the chisel and the brush—that would allow him to turn the plans into reality. And it was Moses who was enabling him to obtain the plans and the money. An astonishing number of La Guardia's dreams were being realized—by 1936, New York City was receiving one-seventh of the WPA allotment for the entire country—and the Mayor knew who was responsible. He must have known every time he went down to Washington for one of the frequent mayors' conferences called by the WPA. There would be hundreds of mayors there, and most of them would have come with grandiose plans—but when they were confronted with the blunt questions of the Army engineers WPA chief Harry Hopkins had brought in to screen proposed projects, they had to confess that the blueprints weren't ready, or the specifications weren't ready, or the topographical surveys weren't ready. La Guardia watched many of them walk out of the conferences humiliated and without the money they were asking for. But he had blueprints. He had specifications. He had topographical surveys. He had every piece of paper that even the hardest-eyed Army engineer could desire. And he had them because of Moses. Other municipalities were so unequal to the task of planning public works programs of size that in October 1938 the WPA would cancel more than one hundred major grants approved for eleven northeastern cities three years before—because the blueprints for those projects were still not ready. But Moses' engineers would come walking up the front steps of City Hall with blueprints piled high in their arms. President Roosevelt's friendship was indispensable to La Guardia's dreams, but no more indispensable than the tools Moses gave him to make use of it.

And Moses, the skillful manipulator of men, found plenty in La Guardia to manipulate.

There was, for example, the Mayor's boundless enthusiasm for engineering and engineers.

Moses played on this feeling. He was constantly pressing La Guardia to accompany him on inspection tours of construction sites, and, with his great gift for words, his sense of drama, and his squads of engineers who would follow the mayoral limousine in a second car so that they could leap out at a project site, elaborate artists' renderings in hand, and show the Mayor what the project would look like when completed, he made these tours wonderfully exciting to a man who "stood like a child in front of the simplest engineering feat." Once the little Mayor was so anxious to see the work on the Thomas Jefferson Park swimming pool that when he found the gate locked and no one around to open it, he chinned himself on the fence like a little boy so that he could see over the top. "I could always tell when Moses had been taking him around," Windels recalls. "He would be absolutely bubbling over with enthusiasm—he was just thrilled."

If Moses was putting on one of the greatest engineering shows in the history of civilization, moreover, he made sure La Guardia had a ringside seat. For example, on the day that the 2,200-ton vertical-lift span that comprised the Harlem River arm of the Triborough Bridge was to be set into place, the Mayor was standing on Randall's Island in the very shadow of the tower that, along with its twin on the Manhattan shore, would hold the span. And when the span was finally set in place, he said breathlessly, "This is the most thrilling moment I have had since I became mayor. . . . I congratulate the Authority, the engineers, the contractors and every man who has had a part in this magnificent piece of work. Moments like this make up for many heartaches and disappointments." The fact—which astonished him when he learned it—that Moses had never gone to engineering school did not prevent him from gushing on several occasions: "Robert Moses is the greatest engineer in the world."

He wanted Moses' admiration. He was jealous of the only man who really had it. Moses recalls that "when the Mayor was mad at me, which was not infrequent, he would say, 'The only boss you ever had whom you really respected was Al Smith. What's he got that I don't have?' " (Moses recalls that "I always answered that I admired both of them, but thought Smith a better executive" because he always stood behind his subordinates.)

La Guardia's predilection for pageantry, preferably with himself at its center, was obvious to anyone who noticed the yards of gold braid with which the Major outfitted his policeman bodyguard or his penchant for holding full-

In the Saddle 455

dress military-type inspections of anything that could conceivably be inspected—police or firemen with motorized equipment, snow plows, new garbage trucks, old garbage trucks—and for preening and strutting as he marched in front of them, literally swelling out his barrel chest as he bounced by at the salute. Moses played on this predilection. He gave the Major pageantry such as no mayor had ever enjoyed in democratic America.

Moses was opening playgrounds at a fantastic rate: 60 in 1934, 71 in 1935, 72 in 1936, 52 in 1937. La Guardia was present at most opening ceremonies. And these were ceremonies with the Moses touch.

For the opening of a small playground on Seventeenth Street between Eighth and Ninth avenues, for example, nearby tenements were draped in red, white and blue-not crepe-paper streamers but immense triangular pennons. Flowerpots containing 25,000 chrysanthemums made a bright ring around the playground fence. Flags were everywhere. The whole scene gleamed with the reflection of the hot summer sunlight off the polished bridles and curried satiny flanks of mounted policemen's horses, the polished brass and buttons of platoons of green-clad Park Department guards, the trumpets and tubas of Park Department and American Legion bands. As the Mayor's limousine pulled up to the curb between rows of rigidly erect policemen at the salute, a smartly uniformed Park Department guard swung open its door and as the Mayor bounced out—followed by the gold braid of his bodyguard—the bands broke into a tune: incredibly, "Hail to the Chief." And when he reached the white-painted, bunting-draped speakers' platform he found he was the only speaker, except for Moses, who confined himself to a very brief recitation of playground statistics and then said, "I now introduce the Mayor of the City of New York"—a performance that led La Guardia to comment later that Moses was the ideal master of ceremonies. At the precise instant at which the applause passed its crescendo and began to fade away after La Guardia's speech, which had been delivered at a lectern custom-built by Park Department carpenters so that the little Mayor wouldn't be forced to stretch to reach the microphone, it was punctuated by a hiss as the center fountain in the wading pool was turned on full blast, dramatically filling the air with sprays of water and eliciting a gratifying "ooooh" from hundreds of children waiting behind a ribbon. And when the Mayor advanced to cut the ribbon and allow the children to rush into the spray, he found that it was no ordinary ribbon but a braided and tasseled strand colored red, white and blue, and the shears held out to him by a little girl from the neighborhood were sterling silver shears resting on a cushion of royal purple velvet.

Then the Mayor jumped back into his limousine for a trip that was an adventure in itself—Fiorello La Guardia's dashes across his city, limousine siren wailing, police on motorcycles clearing the path, were not trips for the fainthearted. And when the Mayor arrived at the other playgrounds, he found again chrysanthemums, flags, men on horseback, polished brass and buttons, bands, "Hail to the Chief"—every detail that had made the first opening so exciting—plus, often, new inspirations: at a playground being opened in Brooklyn's Red Hook section, whose most famous landmark

was the "Gowanus House," around which a Revolutionary War battle had been fought, a large painting of the Gowanus House had been placed as a backdrop behind the speakers' platform; the neighborhood was predominantly Italian, and as the Mayor walked onto the platform two aerial bombs were shot into the air, releasing parachutes that floated above the playground site—and attached to one parachute was an American flag, to the other the tricolor of the House of Savoy.

On some days, La Guardia would open as many as fifteen playgrounds scattered across the face of the great city, turning the occasion into a triumphal tour of his domain, speeding behind his helmeted outriders across the reaches of the bridge-connected boroughs and then leaping into a launch to bring his presence even to the colony on Staten Island. Each ceremony would be perfect in every detail. (Or almost every detail: at one dedication in an Italian neighborhood, held before Moses was acquainted with La Guardia's views on organ grinders, Moses had several, along with their hurdy-gurdies and monkeys, on hand to entertain the children, and La Guardia sat on the platform glowering out from under the brim of his big hat.) And the pageantry Moses arranged for the Little Flower was not limited to playground openings. It included the annual Christmas tree-lighting ceremony in City Hall Park, complete with a program of instrumental music and carol singing and a switch that the Mayor threw to light up a sixty-foot spruce. It included the dedication of the baseball diamond complex in Alley Pond Park at which La Guardia, after a series of fantastic contortions on the pitcher's mound, got to throw the first pitch—to a batter who happened to be Babe Ruth. (The Bambino, swinging with something less than his usual gusto, possibly because he was almost doubled over with laughter, hit a pop fly that dropped to the ground in the vicinity of second base.) Moses made a place for La Guardia in every major Park Department event.

Nineteen thirty-six, Fortune magazine said in an article on Moses, was "the swimming pool year." The ten giant neighborhood swimming pools were completed that summer, and Moses opened one a week for ten weeks. Of a size previously unimagined in swimming pools—one was 330 feet long and 165 feet wide—they brought the joys of swimming to citybound children—and parents—by the tens of thousands. Moses' passion for swimming led him to take a special interest in these pools, and he drove the engineers responsible for their design to invent filtering plants of new efficiency and underwater lighting that made them revolutionary developments in recreation—Harry Hopkins called the Astoria Pool "the finest pool in all the world." And Moses exerted all his genius as a showman to make each opening the most memorable event in the history of the neighborhood in which it was located: a parade led by local political leaders and local American Legion, high-school and Knights of Columbus bands would wind through the neighborhood beforehand—generally in the early evening, since the openings were held at night so that the underwater lighting would be more spectacular—attracting tens of thousands of residents. After neighborhood priests had blessed the clear waters-chlorinated-of the pools, there would be swimming races and diving competitions by neighborhood youngsters and by Olympic stars imported from all over the United States, as well as exhibitions by a team of "swimming clowns." Each opening, moreover, would be tailored to the neighborhood in which the pool was located: believing that what Negroes liked to do most was dance and sing, Moses arranged that the opening ceremonies for the Colonial Park Pool in Harlem include an exhibition by Bojangles Bill Robinson (identified by the *Times* as a "negro tap dancer"); a rendition of the Battle Hymn of the Republic by "negro tenor" Roland Hayes, accompanied by the 369th Regiment band; and community singing. But center stage at each opening was reserved for Fiorello H. La Guardia. It was he who pulled the switch that turned on the underwater lighting, an event that never failed to bring a murmur of "oooohs" from the crowd, it was he who gave the word to raise the flag and it was he who got to cut the ribbon and shout to the waiting children: "Okay, kids, it's all yours!"

Moses saw to it that one playground, at the Williamsburg Bridge Plaza, was named the "Fiorello H. La Guardia Playground." ("The best thing about this playground is its name," he wrote the Mayor.)

If there were personal reasons why the Mayor wanted to allow Moses his independence, there were political reasons why he had to.

The most important, of course, was public opinion and Moses' hold on it.

Already predisposed to be friendly toward Moses because he was creator and defender of parks, the city's thirteen daily newspapers had that friendship cultivated with customary Moses thoroughness.

As always, he went directly to the top, giving newspaper owners preopening tours of new bridges and free passes to them thereafter, inviting them to sail on the Long Island Park Commission's yacht, bathe in the reserved section of Jones Beach and dine in the private section of the Marine Dining Room—where he served them lavish helpings of his inimitable charm; Iphigene and Arthur Sulzberger of the *Times*, Helen and Ogden Mills Reid of the *Herald Tribune* (who never found out about Moses' plan to deceive him into making a contribution to the Yale University Minor Sports Association) and Roy W. Howard of the *World-Telegram* regarded him as a personal friend. He spent many weekends at their summer homes.

Moses also lavished attention on top editors. He had easy access to the Herald Tribune's because his Yale classmate Harold Phelps Stokes was one of them, and he used that access; one of the Tribune editors was a dyed-in-the-wool reactionary who saw Bolsheviks in every bush, and Moses helped his vision, filling the editor's mail with leaflets mimeographed by left-wingers in the WPA to prove that any dissension among WPA workers in the Park Department was fomented by Communists. The chief editorial writer of the Times was Charles Merz, a Yale graduate who lived in the apartment building next to Moses'. "Just by happenstance," remarks Joseph C. Ingraham, a

Times reporter (and later its transportation editor) who became friendly with Moses, "Moses would be waiting in the lobby [of Merz's apartment house] many mornings to ask him if he wanted a lift downtown—so he could plant an editorial."

And while Moses went to the top, he did not stop there, wining and dining reporters as well as publishers, inviting key ones to his elaborate opening-ceremony luncheons, to an annual swimming and dinner outing at Jones Beach, to more intimate, and elaborate, luncheons at Belmont Lake State Park, to the Park Department's Christmas party at the Arsenal and to day-long yacht trips, which often ended with clam and lobster bakes on Fire Island. At all these events the food was superb, the liquor flowed freely and so did the charm.

The most important newspaper in the city—and in the country—was *The New York Times*, and Moses had an especially strong hold over the *Times*: the devotion to parks of the woman who owned approximately two-thirds of its voting stock.

Iphigene Ochs Sulzberger, only living child of the imperious little patriarch of the Times, who during the 1920's had purchased key parcels in Saratoga and reserved them for Moses' state park there, had been fighting for years for the expansion and improvement of New York City's inadequate and decaying park system, a fight whose frustration was summed up in one conversation with Tammany Manhattan Park Commissioner Sheehy, who unabashedly told her to her face that until he became commissioner he had never been in Central Park in his life. When La Guardia told her that he was giving Robert Moses power over parks, she had been "happy"—and the adjective had proved inadequate to describe her feelings about what Moses was accomplishing with that power. Elected president of the city's Park Association in January 1935, Iphigene Sulzberger's first official act was to present Moses with the association's annual testimonial award and, as she handed him the illuminated scroll, she said earnestly, "Commissioner Moses, you have made us feel that the projects for which we have striven can be realized." She would serve as president until 1963, heading the Park Association, therefore, for twenty-five of the twenty-six years that Moses served as City Park Commissioner, and during all that time her admiration for him would only increase. In 1963, the association would present him with another illuminated scroll; it closed with the words: "How wondrous are his works; how deep our gratitude."

In private, moreover, Mrs. Sulzberger was, if possible, even more adulatory: in 1967, standing by a window in her Fifth Avenue apartment, looking out over Central Park, the gray-haired, dignified woman would tell the author: "There has never been as great a public servant. . . . He was a man of vision . . . a giant. . . . He saw Nature as a whole. . . . I had a feeling that he liked to fight, that if someone just agreed with him he was disappointed. He liked to beat them. He was a hero of old, always rushing into battle with Excalibur waving above his head. I thought of the Park Association as Aaron and Hur. Do you know who Aaron and Hur were? They were the soldiers in the Bible who stood behind Moses

In the Saddle 459

and held up his arms when he got tired [at the battle of Rephidim, at which 'Israel prevailed' so long as Moses held up his hands]. Well, that's how I thought of the Park Association, as upholding the arms of Bob Moses."

Not that she always agreed with him. Mrs. Sulzberger possessed—years earlier than most urban planners—a very acute understanding that the values of engineers were not compatible with the values for which parks were created; "Engineers are straight-line crazy," she would tell the interviewer. She didn't want the unspoiled wilderness of Inwood Hill Park destroyed by the running of a road on a straight line along its crest. A believer in the old theory that the purpose of parks was primarily conservation, not recreation —although she might not have stated the theory in precisely those terms she didn't like the idea that Moses' plans required the covering over of so many green spaces with concrete for playgrounds, basketball courts and other active play facilities, not to mention roads and parking fields. In particular, believing in the preservation of Central Park as a restful retreat from the abrasions of city life, she didn't want so many active play facilities there. "Iphigene gave us many arguments," Jack Madigan said. "And," he added, "some we walked away from"—a euphemism meaning they surrendered. Moses probably turned the abandoned reservoir site in Central Park into a "great lawn" instead of into the playgrounds and ball fields that he originally wanted there solely because of Mrs. Sulzberger's feelings.

But while Moses may have walked away from some fights with Mrs. Sulzberger, he did not walk away from many; he would not allow-because of his nature, he could not allow—anybody, even an individual whose support was so important to him, to criticize his plans. His usual technique with Mrs. Sulzberger was not to walk away but to walk with—to take her himself, or have Madigan or Andrews take her—on a tour of the area in dispute to try to sell her on his idea of how it should be developed. These walks were planned with care; Madigan took her to Inwood Hill on a weekday when the park was deserted and told her that the public wasn't getting any use out of it—guessing, correctly, that she had never hiked up the steep hill on a weekend and hence had not seen the happy picnickers who crowded it then. (Madigan also played shrewdly on her sensibilities, which were firmly Victorian: "I told Iphigene if you walked up there at night you were likely to step on a couple and it might be a good idea to have lights—the headlights from cars, you know-up there.") And the walks usually workedparticularly since Moses' opponents did not know her well enough to take her on walks themselves and show her their side of the argument and did not have the facilities or manpower to compile the facts and figures that might have disproved Moses' facts and figures. Moses persuaded Mrs. Sulzberger to persuade the Park Association to elect Andrews, a native Virginian who could be as courtly with women as he could be curt with men (Mrs. Sulzberger says he was "a remarkable man"), to its board of directors, and thereafter there was someone working for association support of his policies from within.

Mrs. Sulzberger's dedication to the cause of parks was so complete, moreover, that she didn't want to do anything that would interfere drastically

with what Moses was doing—even if she felt he was sometimes wrong. This man was rejuvenating parks at a rate she would never have believed possible; she didn't want him hampered by her disagreement with what she regarded as details: "I never did like the concrete floors on the playgrounds," she would tell the interviewer, but, she would note, before Moses came along, there were no real playgrounds at all, "no swings and no jungle gyms . . . hardly anything for children to play on, really."

So sincere was Mrs. Sulzberger's dedication to parks and the new Park Commissioner that this proud and dignified woman even submitted to a public insult—quite possibly the only one she ever received—at his hands.

The quarrel was based on Moses' plan to turn the site of the demolished Central Park Casino into a playground. Mrs. Sulzberger had allowed herself to be reconciled to the creation of "perimeter" playgrounds in Central Park by Moses' argument that small children could not be kept out of the park anyway and the strategic placing of playgrounds next to park entrances would "intercept" them and confine their destructive energy to the park's edge. She had never thought that Moses would begin to lay concrete in the park's interior. Hearing of the plan for the Casino site, she protested publicly on behalf of the Park Association in a letter released to the press on December 23, 1935, in which she stated, "It seems to me that in our desire to establish playgrounds, which are sadly needed in the city, we are completely overlooking the rights and needs of the adult population. Central Park will fail to fulfill its purpose if . . . there is no longer space where men and women can have quiet and relaxation."

Moses' letter of reply, which he released to the press on December 24, closed with the words "Merry Christmas." But the rest of the letter was couched in the tone Moses customarily employed with protesters. Your arguments, he informed Mrs. Sulzberger, are "preposterous" and "irresponsible generalizations. . . . It is difficult for me to believe that you seriously contend that the needs of the adult population are being completely overlooked in our parks . . ." The letter even closed with a threat. "This particular question does not seem to me to be important enough to quarrel about, unless you insist on proving your generalizations, in which case I am prepared to refute them by a public exhibition of plans, photographs, maps and supporting figures."

It would have been interesting to see how the *Times*, which buried the exchange of letters on page 25, would have covered such an exhibition. But there was to be no need for one. Mary Moses saw to that. A week later, the Sulzbergers and the Moseses were among the guests at the dance given every New Year's Eve by the "Jewish Gatsby," Adolph Lewisohn, in the great gold-and-white ballroom of his Fifth Avenue mansion. Mrs. Sulzberger recalls that "Mary came over leading Bob by the hand like a little boy and she said, 'You know Iphigene's a good friend. You had no business writing her a letter like that. Now you tell her you're sorry and you kiss her.'" Moses told her he was sorry and kissed her—and at 2 A.M., when the Sulzbergers, as was their custom every New Year's Eve, served friends a scrambled-egg breakfast at their apartment, the Moseses were there as usual.

Mrs. Sulzberger had too deep a sense of her responsibility to the public to take the insulting letter personally, anyway; Robert Moses was too valuable to the city to quarrel with, she felt. And, she was to tell the interviewer, it was "unappreciative" to quarrel with a man who had done so much for New York. On the day after the New Year's breakfast, in an act of selflessness made all the more noble by the fact that her power made it unnecessary for her to perform it, Iphigene Ochs Sulzberger, sacrificing her pride on the altar of what she believed to be the public interest, wrote a public apology to Moses—and ordered it printed in her own newspaper.

... I owe you an apology for having said that "... we are completely overlooking the rights and needs of the adult population." No such sweeping generalization is warranted. I do, however, believe that we are in danger of paying too little attention to those rights and needs.

You close your characteristically vigorous defense of the Park Department's plans with the remark that the issues raised in this particular controversy do not seem to you to be "important enough to quarrel about." I and other members of the Park Association would dislike greatly any occasion for quarrel with you. You come close to our ideal of what a Park Commissioner should be and we have no desire to be associated, even for a moment, with those who have attempted from time to time to hinder you in your plans for the rehabilitation and development of the parks.

Mrs. Sulzberger's influence on the newspaper of which her father had been, and her husband was, publisher was not overt. Intrusiveness was not her style, which was so reasonable, dignified and soft-spoken that people sometimes mistook her gentleness for timidity. But, as the *Times*'s historian, Gay Talese, has pointed out, "no perceptive editor . . . made this mistake." "Her most casual remark," wrote Turner Catledge, later managing editor, "would be treated as a command."

Mrs. Sulzberger believed that Moses came "close to our ideal of what a Park Commissioner should be"; the *Times* evidently believed so, too. Its reporters and editors may never have been directly ordered to give Moses special treatment but, during the Thirties as during the Twenties, they were not so insensitive as not to know what was expected of them. Moses' press releases were treated with respect, being given prominent treatment and often being printed in full. There was no investigating of the "facts" presented in those press releases, no attempt at detailed analysis of his theories of recreation and transportation, no probing of the assumptions on which the city was building and maintaining recreational facilities and roads. The *Times* ran more than one hundred editorials on Moses and his programs during the twelve-year La Guardia administration—overwhelmingly favorable editorials.

Once, trying in desperation to make sure that Mrs. Sulzberger got to hear both sides of an issue, La Guardia invited her to visit his office to hear Moses argue with the official with whom he was currently feuding, city WPA administrator Victor Ridder. (She was not the only female present; the Mayor for some reason—possibly to create a homey atmosphere—had his adopted daughter, Jean, then eight years old, in the office, too, and she sat

on his knee during the ensuing discussion.) La Guardia's ploy worked. At the end of a shouting match between Moses and Ridder—"They really went at it for a while," Mrs. Sulzberger would recall—the Mayor ruled against Moses, and for once there was no *Times* editorial disagreeing with the decision the next day. But such a ploy could obviously not be repeated in every dispute. And in most disputes Moses could count on the *Times*'s support.

Dramatic proof of how popular the press had made Moses was, moreover, available to the Mayor every time he spoke in public. Just as audiences reacted with Pavlovian predictability to every mention of Brooklyn -with laughs-so they reacted with Pavlovian predictability to every mention of Robert Moses—with cheers. At the end of a playground opening, there was almost invariably a "Two, four, six, eight-Who do we appreciate?" for Moses. "La Guardia wanted to fire him often, but he didn't dare," says mayoral law secretary Kern. "The press-The New York Times in particular—had babied him like a spoiled child. He couldn't do anything wrong in their eyes. They made him a myth. And a man who had to go to the electorate couldn't fire a myth. He [Moses] was too big to fire." Occasionally Windels would try to brace the Mayor to stand up to Moses. But on those occasions, the Little Flower would wail, "What'll the Times say?" If from a personal viewpoint it is not too much to say that La Guardia liked Moses, from a political viewpoint it is not too much to say that he feared him.

At the beginning of his mayoralty, La Guardia attempted to take an interest in the Park Department. When he received protests about Moses' plans for a local playground from a local organization, he would grant its representatives an interview, and if he felt their arguments had merit, he would ask Moses to reconsider. When some individual protested about a Park Department policy or about alleged mistreatment by a Park Department employee, he would send the protest to Moses with a pink slip attached—a slip that in the color code set up by La Guardia to govern his relationship with his commissioners meant the Mayor wanted an immediate reply.

But Moses would either ignore the pink slip or would reply by saying that the Mayor must learn to stop interfering in the "internal affairs of the Park Department." "My policies can't be carried out if the Mayor is going to listen to appeals from individuals," he would write. And if La Guardia sought to press an inquiry, Moses would threaten to resign or to take the issue to the public. "If you disagreed with [Moses], why, you were a public enemy," Windels said. The Mayor had no choice but to let Moses have his way.

By the end of his first term, La Guardia was letting Moses have it. The Astoria Ferry and playground closing fights, which became public knowledge, were exceptions. Most of the disagreements between the Mayor and the commissioner were kept secret—because La Guardia did not press them. When one threatened to become public, the Mayor quickly backed down. He and Moses had been arguing over a twenty-five-acre tract of land in Coney Island owned by the Dock Department but unused. Moses wanted all the land for a park; the Mayor was in favor of a Board of Education

In the Saddle 463

plan to use a few of the acres for a school. When he imprudently mentioned to reporters that "the location of a school on the border of a park is ideal," the reporters went to Moses for comment. "I thought this administration wanted playgrounds. Either they do or they don't," he said. And he added what the *Herald Tribune* called "some even more uncomplimentary remarks" about the Mayor. La Guardia hastily scrambled for cover. "I can't believe my Park Commissioner made any such statements," the Mayor said. "No controversy exists and none can be made out of it." And the school idea was dropped. "He didn't want to fight with Moses no matter what." Lazarus says. As long as he didn't fight, La Guardia had learned, Moses would provide him with a seemingly inexhaustible cornucopia of political benefits. If he did fight, Moses would humiliate and defeat him. The little Mayor had learned—the hard way—that it was better not to interfere.

Other political considerations which deterred the Mayor from interfering with Moses in the fields he had carved out for his own were the same reasons that had deterred a Governor—Roosevelt—from interfering: Moses' ability to complete public works fast enough to provide a record of accomplishment for an elected official to run on in the next election; his ability to build public works without scandal; his willingness to serve as a lightning rod to draw off opposition from the elected official-most of all, perhaps, his matchless knowledge of government. Says Judge Jacob Lutsky, who not only served in the La Guardia administration but was a top adviser to Mayors O'Dwyer, Impellitteri and Wagner: "You've got to understand-every morning when a mayor comes to work, there are a hundred problems that must be solved. And a lot of them are so big and complex that they just don't seem susceptible to solution. And when he asks guys for solutions, what happens? Most of them can't give him any. And those that do come up with solutions, the solutions are unrealistic or impractical—or just plain stupid. And those that do make sense—there's no money to finance them. But you give a problem to Moses and overnight he's back in front of you—with a solution, all worked out down to the last detail, drafts of speeches you can give to explain it to the public, drafts of press releases for the newspapers, drafts of the state laws you'll need to get passed, advice as to who should introduce the bills in the Legislature and what committees they should go to, drafts of any City Council and Board of Estimate resolutions you'll need; if there are constitutional questions involved, a list of the relevant precedents—and a complete method of financing it all spelled out. He had solutions when no one else had solutions. A mayor needs a Robert Moses." But there were new reasons, too, why La Guardia found it politically unfeasible to interfere with Moses. And these reasons had the deepest—and most ominous—significance for the city.

Some revolved around the federal government's newly expanded role in the city's affairs.

Always before, the city and the city alone had had the power to determine the priority, location and design of public works—because the city

and the city alone had been paying for them. Every step in the construction of a school or a bridge or a park—from the initial preliminary study of the project's engineering feasibility to the final use of the power of eminent domain to evict citizens to make way for it—had to be authorized by the city government, by officials elected by the city's people. Therefore, those people retained ultimate control over the public works that did so much to shape their lives. The correspondence between their will and public works was, of course, not at all exact; innumerable factors—chief among them, perhaps, the corruption that under Tammany Hall interposed private gain as an integral factor in the governmental equation—bent off its bias the great drive shaft of the engine of city government, the drive shaft that according to the blueprint for that engine, the City Charter, was supposed to be turnable only by the public will. But there was a correspondence. A mayor strong enough to dominate the Boards of Estimate and Aldermen would disturb the balance of the drive shaft, which was meant to rest equally on executive and legislative action, but because the mayor was an official elected by and ultimately responsible to the people, the crucial correspondence still existed.

But although the city's new mayor was dominating the city's government, that mayor was not controlling the construction of public works in the city to a similar extent. Not the city but the federal government was paying for the bulk of those public works, and the federal government was much more interested in speed, in getting something to show for its expenditure, than in the considerations that would at least partially motivate a mayor priorities, location and design, for example. And, because speed of construction depended upon the existence of detailed plans, the federal authorities were therefore primarily interested in such plans. Because the Mayor needed plans and needed them fast, he had no choice but to give priority not to those projects which were most urgently needed, but to those projects for which plans were available—and to a considerable extent not he but Robert Moses decided which projects those would be. Because not he but Moses had the "large, stable planning force" of engineers trained to design urban public works on the new, huge scale made necessary by the growth of the city and made financially feasible by the new federal involvement, to a considerable extent he could not even evaluate those plans. He could not argue intelligently for changes in the location or the design Moses was proposing. Continually La Guardia sought to overcome this handicap. "He was always prodding other departments to come up with plans," Windels recalls. "But it took them so long." And when the plans were available, the labor often was not; Moses' stake-driving tactics had tied it up on Park Department projects. Moses' popularity, moreover, made it all but impossible for the Mayor to snatch the labor back. The convenient symbol of La Guardia's frustration was the firehouses the Mayor had wanted to build with the 5,000 men he had authorized the WPA to detach from Park Department projects in 1937, the 5,000 men he was unable to detach after Moses forced him to back down by locking the playgrounds: the Mayor had twenty new firehouses in mind; he was able to build three. But firehouses were only a symbol;

In the Saddle 465

schoolhouses, jailhouses and police station houses were also involved—as were hospitals, sewage disposal plants, sewers and subways. La Guardia was forced to cut back his planned programs of construction of almost every type of municipal institution except parks—Robert Moses' parks—and bridges—Robert Moses' bridges—and roads—Robert Moses' roads. The lion's share of the billion-plus dollars poured into New York City by the New Deal was spent on Moses' projects. To a considerable extent, in the planning of large-scale public works in New York City during the 1930's, Robert Moses operated independently of the elected official who had appointed him—and therefore independently of the people's will.

The significance of this fact for the development of New York is heightened by the amount of federal money involved.

Even during the flush years of the Jimmy Walker era, New York's expenditures for capital improvements had run only slightly above \$100,000,000 per year. That figure represented, in dollars, the annual alteration—hopefully, for the better—to the civic estate.

But during the first five years of the La Guardia era, the federal government, through CWA, WPA and PWA, contributed more than \$1,150,000,000 for public works in the city, a figure which, when combined with the city's own expenditures (which La Guardia was, by 1936, able to restore to the Walkerian level), meant that during those five years the civic estate was altered more than it had been altered in the preceding fifteen, that New York was able to effect a far greater and more rapid alteration in its physical public structure than had ever before been possible. And this magnified Moses' influence on the city's destiny. The portion of its remaking carried out independently of the people's will was relatively immense.

Then there were other political deterrents to any interference with Moses by La Guardia.

Some were a result of the continuation—and acceleration—of Moses' evolution from scorner of politicians.

The Legislature hadn't changed much since the days when Robert Moses had been denouncing its corruption and avarice. But Robert Moses had changed.

No longer did he respond to a legislator's patronage request by telling him to "stick it up your ass." The state park system was a vast reservoir of jobs—both year-round jobs and, because of the seasonal nature of park work, summer jobs particularly coveted by politicians who wanted their teenage children to earn good money in the open air during school vacations. And, because the reservoir had outlets (parks) in every corner of the state, Moses had jobs to distribute not only on Long Island but in the undeveloped, job-poor upstate counties in which the leaders of the Republican legislative majority lived. There was a line, firmly drawn, above which patronage was not allowed to intrude into the state park system; top administrators, the elite cadre known as "Moses Men," still had to work their way up from the ranks, still were promoted strictly on the basis of ability and willingness to work killing hours—and still owed their allegiance solely to Robert Moses. But Moses had proved more and more willing to fill lower-echelon jobs with

people recommended by key legislators. As for lucrative construction contracts, the one-time idealist had become known in Albany, according to Saul Kaplan, counsel to Assembly minority leader Irwin Steingut, as "a practical fellow who understands the facts of life and what makes things tick, a fellow who is prepared to cooperate with anybody." There was a point at which "cooperation" stopped: the point at which it would interfere with the completion of a project as Moses had originally envisioned it. He employed practical politics only to further his dreams; he did not allow it to interfere with them. "Sometimes someone would ask him for something and it would interfere with what he wanted to do, and in that case, he'd say it couldn't be done," Kaplan says. "But as long as you weren't a pig—okay. If you put a gun to his head and said 'either-or,' he'd tell you to go to hell. But if you laid the cards on the table and didn't try to kid him, he'd help if he could. And if he said you could help him in solving a couple of problems—you helped."

This influence was increased by Moses' ideological compatibility with the key upstate or Old Guard Republican legislators. "He was a conservative and they were conservatives," Windels says simply. They distrusted La Guardia, whom they considered a "wild man" and a traitor to their party, a liberal using its label to get elected; they were infuriated by the Mayor's allout support of FDR and by his general disloyalty: although he would be elected mayor three times on the Republican ticket, not once during his twelve years in that office would La Guardia ever support a Republican candidate for a state or national office. But because of the Legislature's broad control over the city, La Guardia constantly needed favors from it. Moses' influence with it could therefore be an asset to him-if Moses wanted to use that influence on his behalf. Conversely, the possibility that Moses would use that influence against him was a very real threat; at least once an inoffensive bill that La Guardia had thought would be passed routinely was inexplicably held up in committee while he was embroiled in one of his disputes with Moses, and, although he never received any proof that his Park Commissioner was behind the holdup, the Mayor received hints that he was -and saw it as Moses' way of letting him know what Moses could do to him in Albany if he wanted to. Whether or not Moses actually used his power with the Legislature for or against La Guardia, he made himself in many instances the broker between the Mayor and the legislative leaders, often acting as middleman in closed-door bargaining sessions.

Moses' power in state government therefore increased his power over the city government to which he, alone among state officials, also belonged—to a point where it drastically eroded the ability of the city's highest elected official, technically his superior, to control him. This, of course, was precisely what the framers of the state's constitution—and many reformers—had feared when they sought to prohibit the simultaneous holding of state and city jobs by the same individual. But the reformers had sacrificed the principle because they believed that Moses' unique abilities should exempt him from normal considerations and because La Guardia had assured them that his power as mayor made such a prohibition unnecessary. An appointed

In the Saddle 467

official not directly responsible to the electorate could never obtain power to defy the official who was responsible for his appointment, the Mayor had said. But Moses had nonetheless obtained a large measure of such power. Coupled with the power he had obtained from his use within the city of federal money, it gave him considerable independence of the city's mayor. He was using forces outside the city to bend its highest elected official to his will. By employing forces outside the city's control, he was remaking the city in certain crucial areas without allowing the city any say in that remaking.

## 24. Driving

ALWAYS TIME HAD PURSUED Moses hotly; now it panted at his very heels. His dream now was to remake a city, but the city itself would obviously never be able to finance its own remaking. Only the federal government possessed sufficient resources, and there was no guarantee that those resources would continue to be made available for the purpose; in fact, there was more reason to suppose they would not, for every upswing in the economy brought a corresponding rise in the outcry for a cutback in work relief from the predominantly conservative press and from conservatives in Congress. The President, whose belief in the balanced budget was dying hard, continually wavered himself—in 1936, during another upswing, he ordered a stretch-out in the spending of already allocated work relief funds. Good news for the nation was therefore bad news for Moses; every upswing in the economy spelled a downswing in his hopes. And the disappearance of CWA on forty-eight hours' notice in 1934 had taught him how quickly those hopes could be dashed altogether. Moses knew that the opportunity presented by the \$4.8 billion WPA program might disappear at almost any time, and a similar opportunity might never present itself again; he couldn't allow anything or anybody in the city to stand in his way or to slow him down. And he used the same forces that were so effective in dealing with the city's mayor—influence with state and federal governments, immense personal popularity, tactics he had perfected on Long Island—to make sure that no one would.

The rest of the city's government might have slowed him down. Obeying and following the complex laws and procedures set forth in the city's 3,000-page Charter and Administrative Code would have slowed the pace of Moses' building. But the special powers he had written into the Park Department Unification Act exempted him from many of the Charter's restrictions, and he ignored or circumvented most of the others. (Under the Charter, for example, the design of every public structure had to be submitted to and approved by the Municipal Art Commission. Moses submitted the designs for his structures—on the very day that their construction was beginning, so that by the time the commission got around to considering them, they were finished.)

That government's appointed officials, sworn to uphold a law that

Moses was violating in spirit or letter and determined to live up to their oath, might have slowed him down. But he didn't let them.

His usual technique with an insufficiently compliant departmental official was to demand that he be fired. Moses would attempt to convince the department's commissioner to do so by "confidentially" revealing to him damaging personal information dug up by his "bloodhounds." And if they hadn't been able to dig up any, Moses invented some. He insinuated, for example, that an Assistant Corporation Counsel who had angered him with his refusal to proceed with a legal case against residents of land adjoining a park site, was a drunk.

On more than one occasion, this technique worked. If it did not, Moses simply stepped up the pressure another notch. He refused to deal with the official involved or to allow any of his aides to deal with him. This tactic brought the relationship between the Park Department and the other department involved to a halt until the commissioner agreed to shift his offending subordinate to a post in which he did not deal with the Park Department and to replace him with a more amenable individual. It was a tactic that brought weak-spined commissioners to their knees in short order, and it even worked with Windels. The Corporation Counsel at first refused to fire or shift his "drunk" assistant, but Moses sent him a telegram stating: I HAVE GIVEN ORDERS THAT NO ONE IS TO DISCUSS ANY . . . MATTER . . . UNDER MY JURISDICTION WITH HIM. Windels sent back a telegram of his own: THE MAN-NER IN WHICH LEGAL MATTERS ARISING FROM THE WORK OF YOUR DEPART-MENT ARE TO BE HANDLED BY MY DEPARTMENT WILL BE DETERMINED BY ME. But Moses refused to relent, and the Corporation Counsel realized that he could not allow park development to be stalled by a dispute over one individual. He shifted the assistant to another assignment.

If a commissioner still resisted, Moses used the public rather than the private smear. "Mr. Moses told me . . . that he was able to control the press of New York City, so as to hold me up to such obloquy that I would not be able to stand it," W. Kingsland Macy had testified a decade before. The smear technique that had been used then was used now—frequently.

In the hands of a man for whom the press acted as a gigantic sounding board, repeating and amplifying his words, the smear was a terrible weapon—particularly when those words were as caustic and cutting as Moses'. At Yale, his poetry had revealed an undeniable gift for language. During the decades since Yale, Moses had turned this gift from imagery to invective, and that invective had been honed by years of use to an edge as cruelly sharp as that of a razor with a jagged edge. And he used that razor to strike straight for the jugular: not an opponent's issues or arguments but his reputation. For most public men, prominent on the list of hurts that pierce the heart, that sear the soul, is the hurt of coming to the breakfast table one morning and seeing harsh black headlines call them fools or liars or hack bureaucrats or crooks—headlines based on charges by a man regarded as a genius who was always right and followed by an article that made the charges seem true, even if they were false.

Herbert Lehman's advisers had been able to laugh off Moses' smears

because they were famous men, with established reputations, and because Moses' accusations against them had been specific—and therefore refutable by publication of the facts. But the minor officials on whom Moses now employed the smear technique were more vulnerable—particularly since Moses, having learned, perhaps, from the gubernatorial campaign, usually smeared now not with specific charges but with generalizations, with labels, such as "politician" or "bureaucrat," that conjured up vague but unpleasant connotations in readers' minds—and which, being vague, were difficult to disprove, so difficult, in fact, that his victims were effectively denied recourse even to libel suits.

Deputy Comptroller Douglas Matthewson, for example, was only doing his duty as legal adviser to the Sinking Fund Commission when he informed it in a memorandum that Moses' demand that it transfer to the Park Department a tract of land in Coney Island belonging to the Board of Education was illegal; the Charter, Matthewson pointed out, clearly provided that the commission could make permanent transfers only subject to approval of the Board of Estimate and that even the Board could act only after formally asking all other city departments if they needed the property so that it could be guided in assigning land by an over-all view of departmental needs. Unfortunately for Matthewson, however, while he believed that his memorandum was routine, it struck at the heart of Moses' method of operation. The Park Commissioner didn't want the Board of Estimate, or anyone else, taking an over-all view of departmental needs, because if they did they would realize that the Park Department was obtaining a wholly disproportionate share of city-owned land and, more important, was obtaining land for which other departments were even then planning uses-as was, in fact, the case with the tract in question: the Board of Education was planning a badly needed school on the Coney Island site. Moses wanted to work-too fast for other departments to defend against his land raids-only through the malleable Sinking Fund Commission.

When, as the result of Matthewson's memo, the commission delayed action on Moses' request, and when Matthewson's boss, Comptroller McGoldrick, refused to obey Moses' demand that he fire his subordinate, Moses called in reporters. Telling them that the only questions involved were procedural, he said: "If Matthewson's theory is to prevail, politics would come in. . . . Can you imagine when the public would have parks if they had to wait for all this red tape. . . . Are the old hacks or red-tape boys going to hold things up?" At the commission's next meeting, the transfers Moses wanted were quickly approved, with McGoldrick voting for them—and thereby against his subordinate. Matthewson sat through the meeting without a word. Shortly thereafter, the "old hack" and "red-tape boy" quietly resigned, one of a score of minor officials publicly ridiculed and humiliated by Moses—and driven out of public service—for no other reason than that they had tried to make him obey the law.

If an official refused to resign and his boss refused to fire him even after Moses' smear tactics had made him a political liability, there was still another notch on the Moses pressure gauge: the liability could be escalated.

By 1935 this was easy, for 1935 marked the height of nationwide hysteria over the "red peril." William Randolph Hearst was hoarsely alerting America to the infiltration of the White House by liberal professors who had made the New Deal "more communistic than the Communists," operatives of the demagogue publisher's Journal-American were posing as Columbia University students to entrap professors into radical remarks, the House Un-American Activities Committee was probing WPA theater projects ("Now this [Christopher] Marlowe," demanded the Hon. Joe Starnes of Alabama, "is he a Communist type, too?") and when Diego Rivera refused to remove from his mural in the gleaming new lobby of Rockefeller Center a likeness of Lenin glaring down on a scene of American police clubbing strikers, young Nelson Rockefeller ordered the artist down off his scaffold, handed him a check to wind up his contract and had the half-finished work covered with tar paper. And the nation's hysteria provided Moses with a new set of labels—"Commie," "Bolshie," "pinko," "left-winger"—more damning in the American public consciousness than even "hack politician" or "red-tape boy" and therefore, in the arsenal of the smear, perhaps the ultimate weapon.

Moses applied these labels generously, branding them not only onto labor leaders ("radical, left-wing") and New Deal Brain Trusters (Rexford Tugwell he assailed as a "Planning Red") and urban planners who dared to offer suggestions for the future of New York City ("regarded in Russia as our greatest builder," was how he characterized Frank Lloyd Wright; he called Lewis Mumford "an outspoken revolutionary"; Walter Gropius, he said, was seeking to change the American system by advocating "a philosophy which doesn't belong here"; planners in general, he said, are "socialists," "revolutionaries" who "do not reach the masses directly but through familiar subsurface activity. They teach the teachers. They reach people in high places, who in turn influence the press, universities, societies learned and otherwise, radio networks, the stage, the screen . . .") but onto youthful city officials who dared to stand up to him and who had, his bloodhounds discovered, once allowed enthusiasm and naïveté to lead them into membership in some organization that they later learned was a Communist front. His enthusiasm for these labels was based in part on his conservative belief in the necessity for class distinctions; to a man who had believed the trade unions of "Mr. Walling and his socialist brethren" to be blasphemy, the liberalism of the Thirties was heresy. But he also saw the effectiveness of the labels in wrecking opponents' reputations; he branded with those labels not only opponents whom he may sincerely have believed, no matter how mistakenly, to be Communists, but also opponents he was well aware were not Communists and had never been, men like gentle Stanley Isaacs, the Republican reformer who became Manhattan borough president in 1937, whom Moses had known for twenty years and whose only crime was that he once had been ill-advised enough to appoint brilliant young Simon Gerson to a minor position on his staff without bothering to investigate him and learn that he was an avowed Communist. He branded with the labels young city officials whose dossiers, compiled by his bloodhounds, clearly revealed that while

they may once, years before, have belonged to Communist-front organizations, they had long since renounced their membership in those organizations—in applying the labels to them, he simply never bothered to mention the renunciation. If Robert Moses was a pioneer in the fields of parks and highways, he was also a pioneer in McCarthyism, twenty years before McCarthy. And his estimate of the effectiveness of his new weapon was not an overestimation—not even the deep affection of a strong-minded and independent mayor for a young man he seemed to regard almost as a son could stand before it.

The young man—tall, handsome and brilliant—was Paul J. Kern, La Guardia's law secretary and, of all his youthful aides, perhaps the one closest to the Mayor, his companion on his Sunday tours of the city and so frequent a guest at his apartment that he seemed almost a member of the family. Ironically, Kern admired Moses; "I was a Moses fanatic," he was to recall ruefully. But when, early in 1936, La Guardia appointed him, at the age of twenty-seven, to the Municipal Civil Service Commission, he refused—as young, brilliant Robert Moses would have refused during his days with the Municipal Civil Service Commission—to allow the older, changed Robert Moses to continue circumventing civil service regulations by firing Park Department employees on whim and paying favorites two salaries at once. And he insisted that employees of Moses' public authorities be brought under civil service regulations.

First, Moses destroyed the source of Kern's power, his friendship with the Mayor. He did so, Kern charges, with a tactic that would have been familiar to Ansley Wilcox and Judge Clearwater, who felt Moses had used it to discredit them with Al Smith. "He lied," Kern says. "He lied about me to La Guardia."

There was, Kern says, a "whole series" of lies that gradually "poisoned" his friendship with the Mayor; once, for example, Moses told La Guardia that Kern had disobeyed La Guardia's specific order to certify a disputed civil service list of authority employees although Kern had in fact done so, and La Guardia, without bothering to check the facts, flew into a towering rage and wrote Kern a letter that stung him deeply. Years later, Kern could recall even the salutation—"My dear Mr. Kern"; "He had never called me 'Mr. Kern' before," he would say.

Proud and angry and hurt—"It was almost like his father disowning him," said Professor Wallace Sayre, a Civil Service Commission member at the time—Kern would not attempt to explain. And, months later, just as the rift between the two men was beginning to heal, Moses widened it beyond any possibility of healing—with a public smear that made Kern a political liability that the Mayor could not afford to keep in his administration.

The commission, with Kern reinforced by the appointment of Dr. Frank A. Schaeffer, a Fordham University Latin professor he had persuaded to take a leave of absence to accept the post of commission secretary (the same post to which Dr. Robert Moses had once aspired), began in 1939 to press harder and harder for complete civil service reform (the same type of reform for which Dr. Moses had once pressed), and, to enforce it,

suggested encouraging city employees to report venality and civil service violations by awarding promotion credits for verifiable tips. Terming the commission's actions "un-American," Moses suggested that Dr. Schaeffer "send this communication to the OGPU [secret police] in Russia, whose American representative you seem to be." And when Kern defended Schaeffer—"He was a good Roman Catholic and being called a Communist upset him tremendously; we doubt very much if you would recruit OGPU agents at Fordham"—Moses called Kern an OGPU agent.

Kern was vulnerable to such attack. Addicted to overenthusiasm in his liberalism (he wryly describes himself as a "sucker for causes"), years before, while still in his teens, he had joined a number of organizations that later turned out to be Communist fronts. And though by 1939 he had seen through them and resigned in disgust, Moses' attacks on him as a Communist were echoed by the Red- and Jew-baiting Detroit demagogue Father Coughlin, who "revealed" that Kern's insistence on reforming the Police Department's promotion system was really a plot to place over "the cops of New York . . . 90 per cent of them good Christians, a group of Reds, an OGPU! . . . who could not tell a night stick from a streak of salami." The Hearst papers were soon yowling for the young man's scalp and a committee of the Tammany-dominated City Council began investigating the commission.

Kern believes that Moses inspired and helped direct from behind the scenes not only the investigation, one of the viler chapters in New York political history (the committee took advantage of the association in the public mind of godless Communism with free love to drag into the hearing insinuations about Kern's love life), but also the public smear campaign against him of which the investigation was the centerpiece—and that the Park Commissioner's bloodhounds kept the investigators supplied with fresh ammunition. This belief was concurred in by Windels and at least one other key La Guardia official, who points out that new revelations about Kern's background were generally aired first by Murray Davis, the World-Telegram's senior political writer, who had been used before, and would be used again, by Moses as a conduit to get before the public "facts" Moses wanted the public to know without letting it know that the facts came from him.

And if there is no evidence to document Moses' continued participation in the public smear campaign against Kern—the key investigators are all dead and Davis, who later became Moses' personal public relations man, isn't talking—there is plenty of evidence to document his continued participation in a private campaign, a campaign to make La Guardia suspect his young friend. Moses reminded the Mayor continually of Kern's "Communist" leanings; once, for example, he wrote him a personal letter that concluded, "Don't let Kern try to set up an OGPU in New York."

The tactic worked with a Mayor who was constantly terrified that his liberal administration would be tarred as "Communist," a charge he felt would alienate irreparably the city's huge block of Catholic voters (in 1941, despite his respect for Stanley Isaacs, the Mayor dumped the reformer from his ticket because of the outcry, which Moses kept alive, over Isaacs' hiring of the young Communist Gerson). By the end of the investigation, he was

hardly speaking to Kern, and not long thereafter, in the midst of another dispute, he fired him.

Kern says he understood why Moses wanted him fired. "His hatred of me was not based on the fact that he thought I was a Communist—I'm sure he didn't—but that I represented interference with the way he wanted to run the Park Department," he says.

And from that standpoint, Moses' tactics were wholly successful. Until the end of his park commissionership in 1960, no civil service commissioner ever interfered with the department again.

Moses' fellow commissioners, anxious for a fairer share of WPA funds or a more equitable relationship between their departments and his, might have slowed him down. But he didn't let them.

Moses' normal technique with other commissioners was to bully them. Often this approach worked, for they were well aware that if they attempted to challenge him, he would be backed by the press—and by their mutual boss, the Mayor.

One commissioner with whom this approach did not work, of course, was Windels.

"Paul knew how to handle him, all right," says William C. Chanler, Windels' chief assistant (and, in 1938, his successor as Corporation Counsel). "We'd been in office about six weeks and Paul went up to Albany and left me in charge of the office and while he was up there, Moses called me on the phone. He said he was being held up because we were working too slow on condemnation proceedings in which he was interested. He was really yelling at me. He got ruder and ruder about our not getting his title cleared - You didn't get this done, you didn't get that done, you haven't got the certiorari. What the hell's the matter with you?' I told him we had only been in office six weeks. He said, 'Goddammit, I got my office organized in fortyeight hours. If you fellows don't get going, I'm going to call up the press and tell them what a bunch of incompetents you are.' I called up Paul Windels in Albany and he said, 'I'll tell you what you do. There are a lot of cases in which we're being held up by something we need from the Park Department. You get a list of those cases and you have it right on your desk. When Moses calls up the next time, don't take any abuse from him. Just say exactly this-'Listen here, Moses, goddammit, what the hell's the matter with your office? We've got this and this and you're holding us up.' Well, he did call up again and he started being rude and I said even more than Windels had told me to. I said, 'And if you ever come over here I'll kick your ass out of the office!' Well, as soon as I did that, his whole tone of voice changed. He said, 'Well, perhaps'—his whole tone of voice changed he said, 'well, perhaps you and I'd better talk this over. How about coming over for lunch?' I went over and the door was opened by the most charming, gracious, smiling man. He gave me a very sumptuous lunch-I think we had a bottle of wine, I don't remember—and he said, 'Oh, we're going to get on fine.' A short time later, he called up again on something he was mad

about and started to yell again. But by this time I knew how to handle him. I yelled back and immediately it was 'Oh, all right, oh, all right,' and he calmed down."

The lesson wasn't lost on Chanler. "If you stood right up to him, he backed right down," he says. "He was just a natural bully. So whenever he tried something, I'd pretend to lose my temper. And after a while, he didn't try any more." But the other commissioners didn't know Moses as well as Windels and they didn't have the benefit of his advice-and when Moses' harsh voice rasped over the telephone into their offices threatening to take them to the press and the Mayor, they thought the only way to avoid such a fate was to do what he wanted. Many of the other commissioners despised and resented Moses. When they attempted to establish an esprit by meeting for weekly "commissioners' luncheons," Moses refused to attend—a gesture that they interpreted, correctly, as an attempt by Moses to show them that he considered himself above them. They considered the plant from a Park Department greenhouse that Moses sent in his place each week a gratuitous insult. But while they might despise and resent Moses, they also feared him. And they generally did what he wanted. Even the more independent among them, moreover, were outwitted by his brilliance in the bureaucratic arts. Pointing out to a recalcitrant commissioner that because of the Park Department's unprecedented activity, its demands on the commissioner's own department were undoubtedly disrupting its normal procedures, Moses would suggest that the commissioner designate one of his aides to do nothing but handle Park Department liaison, perhaps even allowing him to work in the Arsenal. Then Moses, by bullying or by charm, would take the aide into camp-making him an ally of the Park Department and thereby practically freeing himself of the necessity of winning the other department's approval of his actions. Soon Moses had his "own man" in the office of many other commissioners—men loyal to him rather than to their own commissioners and useful to Moses not only as liaison with other departments but as spies within their ranks.

The city's elected officials, motivated by a hundred political considerations, might have slowed his building. But he didn't let them.

The broad powers possessed by the Board of Estimate, the upper house of the city's bicameral legislature, would normally have made ignoring it impossible. But many of those powers rested on the power of the purse and the purse that was financing most of Moses' projects was not the Board's but the federal government's. And the power that remained to the Board he offset with the techniques—stake driving, whipsawing, wedge driving, deception—that he had learned and mastered during a decade of building public works on Long Island.

Because the Charter gave the Board authority over all street closings and Moses wanted to build Chrystie-Forsyth Park across four Lower East Side streets, he submitted his plans for the street closings to the Board for approval. Manhattan Borough President Levy noted that crosstown traffic

would be crammed into the two streets Moses was willing to leave open through the park, Grand and Delancey. Although Moses said those two streets were adequate to handle the traffic, Board members said it would overcrowd them, and refused to approve the street closings without further discussion and a full-scale on-site inspection. But when they arrived at the site a few days later, they found the streets already closed—with concrete, hastily laid during those few days by Moses' workers, in which the footings of fences, benches, swings, seesaws and even handball courts were rapidly hardening into immovable reality.

When Board approval of a project was absolutely essential—because he needed city funds to acquire the site, say—he would whipsaw it by stating that the WPA had agreed to finance the project and urging them to grab the money while it was available. (At the same time he would be assuring the WPA that city approval was assured and the land was therefore available, an argument that persuaded the WPA, anxious for fast results, to give its approval.) If they did, he would say, the city would get the improvement—and desperately needed jobs—without any city expenditure. If the Board said it wanted time to study the project, Moses would tell them that the delay would cost the city the WPA funds—and this argument, backed by the threat (which was frequently implemented) to tell the press about the threatened loss, was one which almost invariably brought the Board to its knees.

He drove wedges, too. In his 1935 budget request, he asked the Board to allocate \$3,600,000 for construction projects in Jacob Riis, Fort Tryon, Pelham Bay and the two Marine parks. The Board did, and the thin edge of the wedge was in. Year after year, thereafter, he returned to the Board for new allocations which he said were necessary to make the improvements built with the previous allocations "usable"; unless the money was given, he would say, the previous allocations would be wasted. Jacob Riis Park would be completed by 1938, after an additional city allocation of \$3,500,000, but the others were not. Year after year, the Board would allocate new funds—and then would learn that still more were needed. Marine Park in Brooklyn could be completed for \$6,000,000, he assured the Board. When \$6,000,000 had been spent on the park, Moses informed the Board that an additional \$6,000,000 would be necessary. And when that was spent, the park would still be far from completed.

He deceived the Board constantly. To obtain permission to construct a stadium on Randall's Island, he had assured the Board that the "PWA" project would cost the city "not a penny." Then, with permission obtained and work under way, he announced that he would need \$250,000 additional for materials the PWA would not buy, but assured the Board that this was the only contribution the city would have to make for the "whole Triborough Bridge project," in return for which the federal government was making a contribution of \$46,200,000. The Board allocated the money. Within a month, he was back again, asking for a special bond issue of \$8,000,000 to pay for the right-of-way for the bridge approaches. He blandly told the Board that when he had spoken of the "whole Triborough Bridge

project," he naturally hadn't meant the land for the project. He hardly bothered to conceal the technique—one of his press releases on the Central Park Zoo contained two different estimates of the cost—but because the Board had left itself open to political blackmail by approving earlier fund requests without adequately checking them, it was helpless to deny him later requests and thereby allow him to charge that it had wasted the public's money by building only part of a project. Moreover, since the Board's membership was continually changing, just as one borough president or Comptroller learned never to trust Moses' figures, he would lose an election and the man who took over his seat would have to begin the learning process anew. And, most important, while the Board may have distrusted Moses' figures, its lack of adequate engineering assistance prevented it from coming up with any of its own.

Those on the Board who tried to bring him to heel soon wished they hadn't. When they dueled with him, they did so from the dignity of their seats behind the massive raised mahogany horseshoe in the Board chamber, backed by fluted Corinthian columns and wine-red draperies. But their setting couldn't save them from his tongue.

"He would enter the chamber hearty, very hearty, with this broad grin," recalls McGoldrick, who, as Comptroller, sat in one of the seats on the horseshoe. "He was very impressive, tall, handsome, and he'd always come in with a team of his aides behind him—a different team for each project. And he knew his stuff inside and out. He wasn't like [some of] the other commissioners, who had aides with them and every time you asked them a question, they had to turn to them and whisper to get the answer. And this was very impressive. His men didn't seem to have any purpose there, except that one or two always stood behind him to hand him papers when he needed them. When the matter in which he was interested was called he would walk to the railing at which officials stood to address the Board—there was no public-address system or microphone then—with the same grin. He was very breezy and self-confident. I remember his coming up very genially, with his head thrown back and a grin on his face."

But let one of the Board members venture to criticize—or even to question—one of his projects, and the grin could fade in an instant. "[He was] very intolerant of any criticism of anything he wanted to do," McGoldrick recalls. "He wanted to do it. He was going to do it. And withering with his adjectives anyone who opposed him." Says one observer: "When someone else was speaking, he'd begin to pace up and down. He'd turn his back—total boredom. Off to one side a little. Then he'd suddenly whip around without asking permission, walk up and make some sharp remark . . . often out of the side of his mouth, you know, throwing his shoulders around. There was no indication of respect—he seemed to emanate an air of arrogance, of contempt, for the men sitting up there." If he felt called upon to make extended reply, he would do so while rocking slightly on his heels, his large head thrown back and to one side, and the words that rasped out of the handsome, sensual mouth were devastating. "Time and again," said one magazine writer, "he transfixes his opponent with graceful malice."

As for the Board of Aldermen and its successor under the new Charter, the City Council—he treated those worthies, many of whom he told Lazarus he could buy "with a couple of jobs," like men who could be bought with a couple of jobs. Or he simply ignored them. In 1939, he urged the Park Department's 3,000 employees to vote against councilmen who had slashed the Department's budget requests, and when the Council, after hearing a committee report calling Moses' action "one of the most brazen attempts at political intimidation in the history of the city," ordered him to appear before it to explain the action, he simply didn't bother to show up, sending a letter saying he hadn't received "adequate notice."

The complexities of life in a city might have slowed him down. But he didn't let them.

There was a difference between building parks and parkways in the country-on sparsely populated Long Island, where most of Moses' previous projects had been concentrated, or in rural upstate counties—and building them in a city, and the difference was people. When you built a park on a deserted sand bar such as Jones Beach, you didn't have to worry about removing people from the site and relocating them somewhere else because there weren't any people. You were building parks and parkways for people, of course, and therefore you had to take people's needs into consideration in planning them, but only in a broad, impersonal sense, for you were planning for people in the tens of thousands, humanity in the mass, and the needs of humanity in the mass could be deduced as well from a general knowledge of people as from a specific knowledge of the human beings who made up the mass. When you built public works in a countryside you were painting on a clean and empty canvas—and you could use brush strokes as broad as you chose. If there was a formula for building public works, for Getting Things Done, on Long Island, it was not a simple one—no formula that had to include cooperation with as powerful an oligarchy as the North Shore Robber Barons, as greedy a political machine as the Nassau County GOP and as shortsighted a collection of public officials as the New York State Legislature could be simple—but many factors that would have made the formula vastly more complicated did not have to be included in it. Moses could determine by himself-by his own unaided foresight and insight, his strictly private conception of the public need—what types of projects were needed, where they should be located and how they should be designed.

Things were different in the city. The crucial factor in the building of public works on Long Island was space, vast, endless tracts of uncluttered openness; in the city the crucial factor was lack of space and the fact that space was not merely filled but filled with people, people with their endlessly intertwined, hopelessly snarled tangles of aspirations and antagonisms, hopes and fears, dreams and dreads. People on the site would have to be removed—evicted, dispossessed, thrown out, relocated—and removal would rend the fabric of their lives. The lives of those near the site might not be rent but they would certainly be altered, for the physical environment which did so

much to shape their daily existence would be altered, not only in dramatic ways such as the razing of a block of tenements for a bridge anchorage, but in ways subtle and endlessly various: the construction of almost any public work inevitably added to or subtracted from that delicate balance of humanity that was a city neighborhood ingredients that would change that balance forever, change the neighborhood's economic or ethnic composition, make it quieter or noisier, cleaner or dirtier, cut one part of it off from the rest, fill it with new life or drain it of its vitality, turn it into something different—possibly better but also possibly worse—than it was before.

Therefore, unlike a public work on Long Island, a public work in the city had to be planned not only in terms of itself but in terms of its environment, the neighborhood in which it was located. It had to be judged not only in physical terms—highway as highway, park as park but also in social terms: in terms of its effect on the human beings who had to live around it. If in creating public works on Long Island, one could paint on a clean and empty canvas, in creating public works in New York City one had to paint over an already existing mural, a mural whose brush strokes were tiny and intricate and often, when one looked closely, quite wonderful, lending to the vast urban panorama subtle shadings and delicate tints and an endless variety, so that if it was crowded and confused and ugly it was also full of life and very human, so much so, in fact, that while the painting as a whole might lack beauty, order, balance, perspective, a unifying principle and an over-all effect commensurate with its size, it nonetheless possessed many charming little touches and an over-all vitality, a brio, that made it unique and should not be lost. If Moses attempted to employ on the canvas of New York City the same broad brush strokes that he had used on the canvas of Long Island, he would be obliterating the city's intricacies indiscriminately instead of working around those that were worth keeping and preserving them—and while this method might result in the creation of something beautiful and good, adding to the mural new values, it would also almost certainly destroy many existing values. A public work in the city might in terms of itself-Moses' terms-be an excellent public work while in broader terms being a poor public work: a highway, for example, that, however magnificently designed, was damaging either to the adjacent neighborhood—shattering its essential unity, cutting its homes off from its playground or from its churches and shopping areas, filling its quiet residential areas with noise and gasoline fumes that made them no longer nice places to live and to bring up children-or to the city as a whole: a highway, for example, through a hitherto sparsely inhabited area that initiated a sudden influx of subdivisions and apartment houses, loading it with people, before the city had provided the sewers and subways and schools those people needed, and that by boosting land costs made it immensely difficult for a financially hard-pressed city to provide such services—services which could, if installed before the highway was built, have been installed at a price within the city's means.

If one tried to plan public works in New York City by the same simplistic formula by which the public works of Long Island had been

planned, the public works thus created might well destroy what was good in New York even while it was supposed to be improving the city.

Part of Moses' Long Island formula—the vision and the viciousness, the imagination and the ruthlessness, the drive, the urgent, savage thrust, the instinct for the magnificent and the jugular that overrode purely selfish opposition, shortsightedness and red tape to turn vision into reality—was needed in the city, needed desperately, for without it the city would never be able to build parks and roads and bridges—or, for that matter, housing or hospitals, sewers or schools—on the scale its citizens needed. But Moses' formula could be successful in the city only as the basis of a new, vastly more complicated and subtle and sophisticated formula, one that would turn public works into a far truer reflection of the subtle and complicated human needs they had to serve in the city. A whole new input—a factor of humanity—would have to be added.

And Moses would not allow it to be added.

Moses had a genius for grasping the needs of people in the mass, of people in the tens and hundreds of thousands, of a city and a state as a whole, and for devising ways to meet those needs. But that genius could not help him grasp the needs of a specific city neighborhood in which he was building a small park or playground, for those needs might be shared by no other neighborhood in the world.

In the first place, the people in the mass that he understood were people of particular social strata that his own background enabled him to understand: the classes he called "upper" and "comfortable middle." He had never had any interest in-and therefore had little understanding of-classes he considered beneath his own, the classes who made up so many of New York City's neighborhoods. Moreover, even a genius couldn't deduce the needs of a neighborhood—any neighborhood—until he knew and understood it. And the only way of knowing and understanding it was to study and learn about it, to find out how many children lived in it and how old they were, what games they liked to play, what games their parents liked to play with them on weekends, what games their parents liked to play among themselves, to find out whether the parents liked to play games at all or simply to sit quietly and talk, whether the neighborhood's teen-age boys wanted a place to walk after dinner and watch the neighborhood's teen-age girls walk or whether they wanted to spend their time after dinner playing basketball, to find out which streets the neighborhood's mothers considered safe enough so that their children could cross them alone and thus use a playground on the far side whenever they wanted and which streets the mothers considered too dangerous, to find out exactly how far the children were willing to walk to get to a playground in the first place. And there was only one way to learn about a neighborhood: listen to its people, discuss their problems with them. Unless Moses did that—not Moses himself necessarily; his lieutenants or the architect designing the specific playground in question—he simply wouldn't, couldn't, know enough about the neighborhood to satisfy its needs.

On a broader scale, that was also the only way to study and learn how

to plan larger public works for New York City. It was the only way to plan even those large parks-Central, Prospect, Van Cortlandt, Kissena, Alley Pond—that contained plenty of space in which there lived no people at all. Even these parks could not be developed successfully by a formula as simplistic as that on which the Long Island parks had been developed. For these parks were not just open space but open space within a citywithin a city in which open space was becoming terribly scarce—and the space within them was therefore precious and must be utilized not just to advantage but to fullest advantage. And what was that advantage? What was it most important for those big parks to give the city? The city's facilities for active recreation were laughably inadequate. Therefore the park must provide them. They must be filled with baseball diamonds and football fields, tennis and handball and basketball courts, skating rinks and swimming pools. But the city was also growing—growing and spreading; in 1934, most of Staten Island, the entire central portion of Queens and much of southern Brooklyn were still free of intensive development, but real estate developers were already eyeing those areas too. Open space-quiet open space, natural settings in which city dwellers could find relief from gray concrete and congestion and noise—was precious in New York now. Parks must provide that, too. If they did not, there would soon be no place within the great city in which these values could be found. It was particularly vital that these values be preserved within the city because Moses' restrictive policies had made it difficult for the city's poor, who did not have access to private automobiles, to reach his Long Island parks; if these values were not preserved in the city's own parks there would soon be no place at all in which a poor family could find them. The city's parks had to serve both recreational and conservational functions, but designing the parks so that they could provide both functions would be immensely difficult. For the two functions were not compatible. Peace and quiet and solitude were in general obtainable only at a far remove from the shouts and frantic activity of the playing field. And while parks like Kissena in Queens were considered large, Kissena contained exactly 219 acres; 219 acres sounded big, but it sounded a lot smaller when one realized that a single baseball diamond took up two and a half acres and even a small parking field twenty-five. There was room in parks like Kissena either for peace or for parking fields—but not for both. With the exception of the two Marine Parks, which were not really parks at all but only undeveloped marshland, the only park of a thousand acres in the whole city was Van Cortlandt, and even in Van Cortlandt, you could have both active play facilities and natural, peaceful areas only if you exercised the greatest ingenuity and delicacy in laying them out.

Therefore, choices had to be made—hard choices. And they could not be made intelligently without determining, in the case of each park, whether it was going to serve the neighborhood around it or the city as a whole, and which functions were most needed in that park by the people it was going to serve.

There had been so much space on the Island that there had been no need

to ask such questions in planning parks. Even after Moses had built all the baseball diamonds and tennis courts and bathhouses and parking fields that he wanted in Heckscher State Park, for example, more than 1,200 of the park's 1,657 acres remained in their natural wooded state, enough for green, quiet woods away from crowds. Moses himself had been uninterested in a park's "natural" functions. His mind saw people in the mass, running, jumping, swinging tennis rackets or baseball bats; one reason he wanted Triborough Stadium so big was that he wanted it large enough for mass calisthenics on the Third Reich scale. His vision never focused on the individual wandering alone through a forest or on the family sprawling in solitude in a meadow; in thinking of parks he did not, except incidentally, think of them as places of forests or meadows or solitude. And if the very breadth of his vision thus made it hard for him to think of parks as untouched nature, so did the very force of his creativity; he was a builder, a molder, a man who yearns to put his hand to and reshape-"improve"-whatever he sees. Therefore to him a park was not open space. The open space was already there. The "park" was that portion of the open space that he had filled with his own creations. (He referred to the portions of the Long Island parks without active play facilities as "undeveloped for park use.") His lack of interest in untouched nature had not mattered on Long Island. But it was to matter greatly in New York.

And how small could a park be? What was the smallest number of square feet it was feasible to supervise and maintain as a public place of recreation? Five acres, the area of a standard city block? Three acres? Two? One? The 100 by 20 feet that was the size of the standard building lot in tenement sections—and that was often the only piece of vacant land anywhere around?

This was a question of desperate importance. The recreational needs of city families that couldn't afford to own a car-and those families comprised a full two-thirds of the city's population—had to be satisfied within their immediate neighborhoods, and because it was too expensive to condemn buildings in these neighborhoods and the only land still vacant was small plots, the only parks that could be built in these neighborhoods were small parks. But even small plots were enormously expensive to maintain and supervise, far more expensive per square foot than large parks. Given the hard fact that the city would never be able to create nearly enough parks for its people, was there any sense in developing a large number of small parks? Where did you sink those resources that were available—into large parks that could be developed relatively economically or into small parks that alone could provide recreation for that portion of the city's people that most needed recreation? The needs of providing recreation for the city's poor must be weighed against the cost of that provision. What a later generation would come to call "priorities" must be established, and it would not be easy to establish them. The hard choices would have to be made. Only by the most intense analysis and discussion—discussion with the people most directly involved, the city's poor—could these choices be made intelligently. And,

again, because the success of a neighborhood park depended so largely on intimate knowledge of that neighborhood, once the decision to establish a park in a neighborhood was taken, even more intense discussion with the residents of that neighborhood would be necessary.

Then there was the question of roads in parks. Should there even be roads in parks and, if so, where within the parks should they be located?

Once, in the days—a decade or even two decades before—in which the young Robert Moses had been planning parks and roads, the answer to that question had been quite clear. Driving in automobiles had then still been thought of primarily as pleasure, a pursuit for comfortable middle-class or wealthy fathers (the only fathers who could afford automobiles) taking their families for an outing, just as driving horse-drawn carriages had been a pursuit for pleasure. And it had therefore been important to insure that these families had the most pleasant surroundings possible to drive through, and within the city's limits the most pleasant surroundings were those provided by parks. The provision of pleasant scenery for drivers to enjoy was, in fact, a primary function of parks; that was why every great city in Europe had its great driving park, Paris its Bois de Boulogne, Rome its Pincian Hill, Florence its Cascine and London its Hyde Park. Roads had belonged in parks in the nineteenth century—so much so that, if necessary, other values of a park had to be sacrificed to provide the roads with the best of the park's scenery.

But this was the twentieth century now. And the answer to the question—do roads belong in parks?—was no longer clear. For the nature of driving had largely changed. The automobile age, still in its infancy when Robert Moses had stood on Riverside Drive and planned his "great highway going uptown along the water" in 1914, still only in its adolescence when Moses had been planning his Long Island parkways in 1924, had come to full maturity by the time he came to power in New York City in 1934. There had been 273,435 motor vehicles in New York City in 1924; there were 804,620 now. And people no longer used their cars primarily for weekend pleasure trips but, increasingly, to get to and from work and to shop. Cars were part of people's daily lives. And they drove faster now; they had less time for scenery. What implications did these facts have for parkways?

What was a parkway anyway?

Was it still mainly a source of beauty and pleasure, or had it changed into a source of convenience—or at least intended convenience? Were people still interested in parkways primarily because of the scenery they could see along them or were they interested in them primarily as a means of getting from one place to another? And if the latter, what was the significance of that fact? Should the best of scenery still be reserved for the driver?

But Robert Moses wouldn't allow any discussion.

He wouldn't allow discussion because discussion would have slowed down his building programs, and he felt that he couldn't allow them to be slowed down. And he wouldn't allow discussion because he had no respect for the opinions of the public that he would have had to admit to the discussions. And even if he limited discussion to the experts who were interested in the various fields, he had no respect for their opinions, either. Robert Moses had no respect for anyone's opinion but his own.

Once Moses had at least listened to his own aides, allowed them to argue with him, tested his opinions against theirs. But now that had changed, too. In the first days of his power, he had hired aides whose opinions were worth listening to. He had selected men for ability, engineering ability, legal ability. The aides he was hiring now had also to possess an additional ability: the ability to say, "Yes, sir."

"Lunches at Moses' office were really starting to get pretty sickening," recalls one top La Guardia official. "Even if he only had one guest, he would always have six or eight of his 'Moses Men'—'my muchachos,' he used to call them—at the table and it was all 'Yes, sir, RM,' 'No, sir, RM,' 'Right as usual, RM!' When he laughed, they laughed, only louder—you know what I mean. Christ, when he made a statement, you could look around the table and see eight heads nodding practically in unison. It was like a goddamned Greek chorus."

Reuben Lazarus, invited by Moses to become chief counsel for the Triborough Bridge Authority, refused—"I didn't want to be a doormat for any man"—and when Moses asked him to recommend one of his assistants, Lazarus selected the one who, he had noticed, "doesn't answer back," and in the taxi taking William Lebwohl to lunch with Moses, told him what was going to be expected of him: "You're going to have to be able to bend over and take a kick in the ass and say 'Thank you, sir,' with a smile." At the luncheon, Lazarus recalls, "Lebwohl did not answer back." Moses hired him—and kept him on as Triborough counsel for more than thirty years.

The effect of such a hiring policy was predictable. The aides he had hired in the 1920's, the Art Howlands, Sid Shapiros, Bill Lathams, Bill Chapins and George Spargos, became legendary throughout state and city government for their ability, drive and indefatigability. The aides he hired in the 1930's were quite another story. "The older guys—tops!" says William Zeckendorf, who had a keen eye for men himself. "But some of the others he had working for him—I wouldn't have hired them to sweep my lobbies!"

Moses' sensitivity to criticism had impressed itself on such men. They didn't criticize anything he said. They saw he was less than receptive to suggestions—and they didn't make suggestions.

If Moses refused to accept ideas from public, experts or aides—from, in general, anyone at all—the source of his ideas, his concept of public works for New York City, could be only his own mind. The mind was brilliant, but even a brilliant mind is only as good as the material—the input—fed into it. It was at about this time that Lazarus, planning to write a book about

government and public figures and keeping a card file of impressions, wrote on a card he filed under the name "Robert Moses":

Bob Moses has climbed so high on his own ego, has become so hidebound in his own arbitrariness, that he has removed himself almost entirely from reality and has insulated himself within his own individuality.

This difficulty could to some degree have been overcome by sheer mental ability. Robert Moses' mind was supple, resourceful. Even without input of social and human considerations, it could have deduced some of these considerations simply by thinking about the problems involved.

But Robert Moses no longer had much time to think.

Building a state park system had been an immense job, but he had brought to it not only immense energy but immense ability to discipline that energy. He had found time—made time, to be more precise, made it by devoting to his work the hours when other men play or relax or sleep, or lunch, made it by working fourteen, sixteen, eighteen, twenty hours a day, seven days a week, fifty-two weeks a year—he had found time to oversee every detail of design, to present his architects and engineers with the basic concepts he wanted followed, to insist during the fleshing out of those concepts on a standard of excellence, of boldness and daring far above that common for public works and to inspire the architects and engineers ("I know you can do drawbridges. Can you do beautiful drawbridges?") to raise their work to that standard. And besides furnishing inspiration, he furnished ideas; many of the most brilliant touches at Jones Beach had been his ideas. He had found time—made time—to infuse the brick and concrete and sandstone of that park, and of other Long Island parks from Valley Stream to Montauk—and of other state parks from Palisades to Niagara—with his personal genius.

But when Moses expanded his sphere of activity into New York City he did not stop his work on Long Island or in the rest of the state—in 1934, on Long Island alone, he built Bethpage State Park and Bethpage State Parkway; in 1935, he built the Meadowbrook Causeway; in 1936, he built great new bathhouses at Sunken Meadow and Heckscher state parks as well as the Heckscher State Parkway Spur, and during all these years he was extending the Northern and Southern state parkways and building literally scores of smaller park structures. Instead he simply added to his state park work, itself enough to tax the strength of even the strongest of men, work in the city that was not limited to the direction of 80,000 men in the rebuilding of a huge park system but that also included the building of four parkways and three bridges, with each of the bridgebuilding jobs in itself a job that would have been considered a full-time job for any other man. It was not possible for him to make for himself any more time than he had already made. There were no more days in a week than seven or weeks in a year than fifty-two, and he was working all those days and weeks already. He had already sloughed off all social life and most family life; there was nothing more in his life that could be sloughed off. He was already, with his use of his limousine as an office and conference room,

making use of every available minute; there were no more minutes to be found unless he drove himself beyond the limit of his physical and mental and emotional strength—and the "almost nervous breakdown" of December 1934 had shown how close he was crowding that limit.

It was lack of time more than any other single reason that accounted for an astonishing fact about many New York City park projects: they were banal.

Richard Spencer Childs recalls visiting Moses at his office one day and having their conversation interrupted by the arrival of Aymar Embury. "Embury had a bunch of drawings of some buildings for the parks," Childs recalls. "He had brought them to show Moses. Moses went right through them—'Nope.' 'Okay.' 'Nope.' Throwing them to one side or the other if he approved them or not. . . . There were no hard feelings. Moses and Embury were good friends. There was lots of respect between them. Put here perhaps \$100,000 worth of public business was settled on Moses' offhand taste." And, recalls Childs, when Moses finished with the drawings, Embury pointed to one he had rejected and said, "That one you threw away was the best of the lot."

Embury may well have been correct: the offhand taste even of a genius is offhand taste. Working incredibly fast, Moses had managed to make the Long Island projects public works of genius. Now he was trying to work even faster—and he was working too fast to do even a good job.

When there is no time for the thinking required for original creation, the tendency is to repeat what has proven successful in the past. Many of Moses' New York projects (not all; those in which he was particularly interested—and on which he spent substantial time—would be magnificent additions to the civic estate) began to reveal a conscious effort to duplicate aspects of his acclaimed Long Island parks. In this tendency lies the explanation for the otherwise inexplicable failure to make provision for baby carriages at so many New York parks: no provision for baby carriages had been necessary at the entrances to the Long Island parks because people got to them by automobiles. If there was a difference that should have been obvious to Moses—that the parks he was building now would be used by mothers who walked to them instead of drove—Moses was simply too busy to see it.

At Embury's drawings, Moses at least had time to glance. For more and more small park projects, even a glance could not be spared. Moses found himself forced to delegate all authority for them to subordinates. Authority is delegatable; genius is not. Some of the men to whom the work was delegated were first-rank architects or engineers—many of them, in fact, for the Depression had driven into the Arsenal many brilliant young professionals who in ordinary times would have been making names for themselves in private commissions. But they were not Robert Moses. The further Moses' presence receded from individual small park projects, the less dis-

tinguished these projects emerged. In designing the Central Park Zoo, the Seventy-ninth Street boat basin, Jacob Riis Park, Orchard Beach, the ten big neighborhood swimming pools, problems were solved with ingenuity and thoughtfulness. Perhaps if he had been able to take the same interest in all park problems—the problems involved, say, in the location and design of a neighborhood playground—all park problems would have been solved with ingenuity and thoughtfulness. But Moses was not taking the same interest in all park problems—and, in fact, as the number of park projects multiplied, spread by the hundreds across the face of the great city, he was able to take a substantial interest in only a very small percentage of themin, for example, only a handful of the hundreds of neighborhood playgrounds. The inevitable result was made more striking by the need for haste building hundreds of playgrounds as fast as possible is easier if a single basic design is used—and by the need for design approval by the WPA, an Army-engineer-staffed agency in which simple designs and cheap materials, rather than architectural excellence, were the order of the day. (Moses had to fight for every amenity, no matter how small; every improvement on the basic blocky comfort station design represented a victory, hard-won; because two-story structures required more expensive structural steel than one-story, Moses had to plead with the WPA for weeks for approval of Aymar Embury's masterful classic, colonnaded interpretation of his insistence that the Orchard Beach bathhouse blend in with the hilly, wooded landscape behind it. And when the structure was almost finished, at a cost of a million dollars, the WPA flatly refused to spend \$2,500 more for two clocks that Embury had envisioned as grace notes on its towers; Moses obtained that money only by begging La Guardia for it. There was to be no Barbizon brick and Ohio sandstone in New York City parks; concreteplain, unadorned concrete—and brick—plain, red brick, the cheapest made —were what the WPA had in mind; Moses was able to relieve the blankness of the concrete Orchard Beach bathhouse only by finding a mysterious source of terra cotta tiles, which, while cheap, at least added some necessary color, a chaste blue, to the unrelieved grayness. While Moses was willing to fight-endlessly and ingeniously-to make his big projects as perfect as possible, it was obviously unfeasible to battle over the details of every playground when one was building hundreds, especially since arguing about every design would have cost him his great advantage over other city departments with the WPA: the fact that when new funds became available, his plans were "ready to go.")

A standard Park Department playground design was evolved and architects were given little leeway to deviate from it. If there was to be an indoor playhouse in the playground, there was a standard design for that, too, and if the architect wanted to make variations in it they had better be small ones.

These designs were banal, containing for the most part nothing but benches for mothers and standard "active play" equipment—swings, seesaws, jungle gyms, wading pools, slides—for children. The equipment was surrounded by fences that only a mother could love: either dreary chain-link

or high, black bars that made the playgrounds look like animal cages. And they were set in a surface that even a mother had to hate—a surface cheap to lay down and easy to maintain (that was why Moses' engineers had selected it) but hard on the knees and elbows of little boys and girls who fell on it. Comfort stations, squat and unadorned, looked like nothing so much as concrete or brick pillboxes. A neighborhood committee might request some particularly desired facility—a bocci court, for example, for an Italian neighborhood—but few substitutions were permitted.

Then there was the difference in usage accorded parks in the city, a difference complicated by vandalism. Designing for hard usage was not always compatible with designing for beauty—as was demonstrated by the evolution of the marginal playgrounds in Central Park. At first, the playgrounds were equipped, in addition to the swings, slides and jungle gyms, with sandboxes, tunnel segments that children loved to crawl through, and with striped, turreted little toy guardhouses that served as "play booths"and their peripheries were only a ring of benches backed by trees and shrubs that provided shade for mothers and that screened the noise of playing children from the apartment houses across the street. Dogs wandered into the playgrounds and urinated and defecated in the sandboxes and the sandboxes had to be removed. Drunks crept into the tunnel segments at night and fell asleep, to be discovered by children the next morning sleeping in their own vomit. The tunnel segments had to be removed. Drunks wandered into the striped guardhouse "play booths" during the day and urinated in them. Perverts used them as hiding places from which they could watch the playing little girls and boys at close range and masturbate. Vandals pried loose the light lumber out of which the play booths were constructed. The play booths had to be removed. Then the drunks slept and the perverts hid in the trees and shrubbery behind the benches, so this landscaping had to be removed. Still drunks kept wandering into the playgrounds at night; Moses tried to keep them out first by putting up bars between the bench groupings, and little gates at the playground entrance as a warning to stay out, but the drunks ignored the warning—and finally Moses felt he had no choice but to surround the playgrounds, now reduced to amenity-bare patches of asphalt, with high fences whose high gates could be locked at night; critics might rage that the playgrounds now resembled animal cages; Moses saw that resemblance himself; he just felt that there was nothing he could do about it.

Young architects like Robert Weinberg argued among themselves—their Park Department superiors wouldn't listen to them—that solutions to the difficulties inherent in intensive usage could be compatible with good design. All that was needed, they felt, was imagination, and an understanding of the basic needs of the neighborhoods in which the playgrounds were located. Including a bocci court in a playground instead of a row of swings was not, after all, a task requiring immense creativity. Weinberg was particularly incensed at one design defect that reduced the usefulness of many playgrounds and that could have been cured very easily indeed. Some playgrounds were situated atop hills and their entrances were set with flights of steps despite the fact that the most frequent users of these parks were mothers with

baby carriages, which were difficult to maneuver up steps, and entrance to these playgrounds could have been made easier for them by simply making the entrances ramps instead of steps.

But Moses no longer had much time for detail.

His imagination was as vigorous as ever; the big projects in which he took a personal interest were innovative, ingenious, daring and bold, to a considerable extent as carefully thought out in both over-all conception and minute details as his Long Island parks; smaller projects which happened to fall under his gaze, Carl Schurz Park on the East River at Eighty-sixth Street, which he passed on his evening walks from his Gracie Terrace apartment, were just as carefully thought out; there are throughout the New York City park system small touches of beauty—comfort stations, for example, that are proof that even a bathroom can bring beauty to a cityscape—but inquiry reveals that most of these structures are the rare ones in which, for one reason or another, Moses took a personal interest.

In building his state parks, Moses had been uninterested in building for the "lower classes." He was still uninterested—although now he was building parks in the city, where those classes lived.

Moses had begun his park commissionership by enthusiastically gobbling up vacant city-owned lots in the slums with the intention of turning them into tiny parks. But this enthusiasm soon waned.

The effort involved in creating such "vest-pocket" parks was immense. The land acquisition alone involved the approval of countless agencies and officials and, therefore, endless red tape. Designing something that would make a tiny lot attractive or useful was difficult. Because you couldn't afford to keep a full-time supervisor on duty in every vest-pocket park, those small parks located in slums quickly became filled with rubbish and winos.

The rewards involved in creating vest-pocket parks were, moreover, not at all commensurate with the effort required. If the reward was a sense of achievement, what—to the creator of Jones Beach—was the achievement in creating a tiny bit of green space or a few benches or a seesaw or two? Moses had always thought on the grand scale—that was his genius: the ability to grasp the needs of a whole city or state and devise a means of satisfying them—and this quality of mind made it difficult for him to take much interest in something small. There was something inherently good in size itself, he seemed to feel. If the reward was public applause, the size of the reward for building a vest-pocket park was small indeed; editorial writers didn't get nearly as excited about a tiny park as they did about a Randall's Island or Orchard Beach; it was the great projects that awed them: size seemed to signify significance to them, too. Whatever the reasons, "RM," an aide would say, "just wasn't interested in anything small. He used to say, 'That's a little job. Give it to so-and-so.' And that attitude filtered down, so that the fellows weren't interested in small things either." Coupled with his feelings about the people for whom the effort would have to be made—the lower classes who didn't "respect" or "appreciate" what was done for them, in

particular the Negroes who were "dirty" and wouldn't keep his beautiful creations clean—his lack of interest in "anything small" made him uninterested in small parks in slums.

Within a year, the vest-pocket park program was all but dead and he was determined that it wouldn't be revived; he flatly refused a 1936 offer of small, abandoned Transportation Board plots, calling them "of no use to this Department . . . because they are all too small." The program never really got off the ground except in two areas—the Irish-Catholic slums of the Lower East Side in which Al Smith, and hence Moses, still took an interest, and La Guardia's old "Little League of Nations" East Harlem congressional district. In other slum areas there was almost no park development at all after 1935, and the lack was particularly marked in Negro Harlem and in the South Jamaica and Stuyvesant Heights tenement districts in Queens and Brooklyn into which a steadily mounting overflow from Harlem had begun to creep.

The protests about this policy from the slums themselves were faint and few: slum dwellers—particularly slum dwellers with black skins—weren't making many protests in the 1930's. But some reformers raised their voices on their behalf.

These reformers were in the main those associated with settlement houses; Stanley Isaacs, president of United Neighborhood Houses, was notable among them. Working in the slums, they knew the needs of their people, and, knowing, they knew that those people, forced to depend for beauty and recreation on what they could find in their neighborhoods, were particularly desperate for precisely those things that parks provided. Trees, a small plot of grass, a few flowers, anything that would provide a contrast to the concrete and red brick that surrounded the slums' people with bleakness, that trapped them in stone—these people hungered for them; one had to do no more than walk along a block of tenements and look up and suddenly notice that fire escapes and window sills were sprouting rusty cans filled with vines and flowers to realize that, as one observer was to put it, "The poor have every bit as much interest in green growing things as the well-to-do, . . . [in] open space or natural beauty." Mothers and fathers in the slums hungered for play space for their children. They couldn't afford to send the children to summer camps; they couldn't afford to take them on weekend or vacation trips: because they didn't have cars, they couldn't take them to the parks Robert Moses had built on Long Island; because they seldom left the slums, they were only vaguely aware that there were large parks in other sections of the city which the children could reach by subway; children who went to these parks often returned to say that the white people there had made them feel unwelcome or that gangs of white teen-agers had chased them away—and they did not go again. Any playing that the children of the slums did would have to be done in the slums; kids have to play: that is what being a kid is—and if there were no parks in the slums for them to play in, they would have to play in the streets; if there were no jungle gyms, they would have to swing on rusty fire escapes; if there were no indoor playhouses in which they could play on rainy days, they would have to find Driving 491

shelter somewhere else, and that meant deserted or burnt-out tenements, the lair of the winos and the junkies and the perverts.

And parks meant more in the slums than even beauty or play space; they had other values more intangible but also more important.

They were a sign to the urban poor, the reformers said, that society cared for them, that the city in which they had been trampled so brutally low was holding out a hand to help them to their feet. In a way they were a symbol of what Alfred E. Smith, who had understood the urban poor because he was one of them, had been talking about when, fighting for widows' pensions, he had stood in the well of the Assembly Chamber, a trumpet in his voice, and asked the legislators to consider the penniless widow whose children were taken away from her-"What must be her feelings? What must be her idea of the State's policy? . . . What can be the feelings in the hearts of the children themselves . . . when they must in after years learn to know what the State's policy was with respect to their unfortunate condition? . . . What new policy does this bill inaugurate? The State of New York reaches out to them, 'We recognize in you a resource of the State and we propose to take care of you, not as a matter of charity, but as a government and public duty." If the city didn't provide parks, the reformers understood, that was a sign that society didn't care; the people who lived in the slums might not verbalize that concept, but they would feel it even if they didn't put it into words; and therefore the lack of parks could only increase their bitterness toward society.

This last intangible was even more important in terms of the Negroes, whose influx into New York was beginning to assume the proportions of the previous Jewish, Irish and Italian waves of immigration. (There had been only 60,000 Negroes in the city in 1900, but there were 327,706 in 1930 and by 1940 there would be 458,000.) The society from which the Negro was alienated was the one that kept the black man confined so low on the economic ladder that in 1939 half of all Negro wage earners in New York were receiving less than \$850 per year. It was the society that forced black women to line up every morning in the "slave market" in the East 160's in the Bronx so that white housewives could bid for their services (the pay was between ten and fifteen cents an hour, with the cost of lunch deducted). It was the society that made sure that Negroes would have to work for such slave wages by closing to them its trade unions, thus adding to their handicap in competing with white men for better jobs, and by denying them the capital necessary to go into business for themselves (there was not a single bank in Harlem north of 125th Street). And as for that embodiment of society that was government, the city government that was supposed to represent them as well as the white man, the attitude of that government was symbolized by public works. When La Guardia came to office in 1934, there hadn't been a new school built in Harlem in twenty-five years (La Guardia's administration didn't get around to building one for four more years), and in all Harlem the city provided, to serve 300,000 people, exactly one clinic, built—with WPA funds—in 1937, equipped with substantial facilities for child care, and exactly one hospital (on whose executive staff there was

exactly one Negro). Mothers and their babies died in Harlem at a rate more than double that in the city as a whole; more than one out of every ten babies born in Harlem died at birth.

Isaacs and other reformers saw that the swelling Negro population was not being assimilated into the city. Such assimilation was necessary, they said; if the influx continued and there was no base—no solid community that was part of the larger society around it—on which it could build, what would happen? "The question of what will happen to the Negro in New York . . . is overlaid with shadows of tragic premonition," one wrote. Isaacs and others begged the city to make an intensified effort to meet the needs of these new immigrants. These people needed help, they said, and the city must give it to them. It was a civic duty to do so, they said. It was a matter of conscience. And if you weren't interested in duty or conscience, well, it was a matter of expediency, too. For neglecting Harlem's needs in the future as they had been neglected in the past could only lead to havoc in the city.

Knowing how important small parks were to the city's poor, the reformers could hardly believe the implications of Moses' policies when they began to discern them. By banning public transportation, he had barred the poor from the state parks. In the same way, he was barring the poor from the best of the city parks, the big parks on the city's outskirts such as Jacob Riis and Alley Pond. And now he was saying that he would not provide the poor even with small parks. He was pouring tens of millions of dollars into creating new parks in New York—but he was creating almost none for the people who needed parks most. The philosophy that parks were only for the "comfortable middle class" had been outdated for at least ten years. But, they began to see, that was the philosophy Moses was following.

The reformers were still influential in the city (although they were becoming less so as La Guardia gathered power unto himself), and, unlike other Moses opponents, they received a hearing for their views from the city's press; Good Government organization resolutions calling for small parks in the slums were at least printed, even if primarily on inside pages.

But Moses simply shouted the reformers down. He replied—in replies that received better newspaper "play" than the statements he was replying to —that he was giving the slums parks—great parks. What, he demanded, was the great recreational complex he was building on Randall's Island? The great recreational complex he was building in Riverside Park? They were "easily accessible" to Harlem. As for small parks within the slums themselves, his "experience," he said, had taught him that they were just "too expensive" to be considered. Three acres, he said, was the smallest area that could be "controlled and managed" as a park. And since three acres is 130,680 square feet and land bearing profitable slum tenements was going in the 1930's for about \$30 per square foot and a single park would thus cost the city about \$4,000,000 for land acquisition costs alone, and since as many as 2,500 people might be displaced by the razing of the tenements involved and would have to be relocated, this was an unanswerable argument—if you accepted it.

Driving 493

Many reformers—far more than had ever disagreed with Moses before —did not accept it. A park did not have to be three acres to help a slum, they said. It could be the smallest crevice in the grim wall of tenements; even a space the size of a single 100-foot-by-20-foot building lot-or smallercould if planted with grass and a few trees or if equipped with a few benches mean so much to the people of the block on which it was located. Something doesn't have to be big to brighten something that is drab, to bring pride to a place without any pride. Because they have nothing else to do, the people of the slums spend a lot of time looking out their windows; if there was a small park, even a tiny park, in the neighborhood, there would be a pleasant little scene to look at, something affirmative; even if there was no grass in the park there could be a few benches—and all at once the neighborhood would have a better place to rest than the fenders of parked cars; a vestpocket park could be an elegant little plaza, but it could also be just a place for a kid to play or the elderly to relax—or for a pregnant mother to sit down for a minute on a walk home from the grocery store that suddenly seemed longer than it ever had before. The reformers, experts in parks, knew there were good small parks in other cities; they knew that Moses' argument was wrong.

Furthermore, these reformers said, Randall's Island and Riverside Park were not "easily accessible" to the slums. The Triborough Bridge would make the island accessible by car, but the people of the slums didn't have cars. There would, by Moses' edict, be no bus service to the island; the only way to get there would be to walk-from the nearest point in Harlem or the South Bronx a good three-quarters of a mile.\* And that was from the nearest point of the slums, the edge on the river. From most of the slums, you would have to walk much farther; from the center of Harlem, then 145th Street, say, more than two miles. Riverside Park along the Hudson River was a hike up a long, achingly steep hill from the nearest point in Harlem. People didn't want to hike long distances to parks; they wanted recreational facilities close at hand, so that every trip to sit under a tree or shoot some baskets didn't have to be an expedition. The people of the slums wouldn't use these parks, they said. Morningside, St. Nicholas and Colonial parks, the three parks which formed the western border of Harlem, were fine, they said, but there was no other park between them and the East River. In the entire three square miles of Harlem, an area which contained 300,000 people, there wasn't a single patch of green.†

But while newspapers printed the reformers' resolutions, they did not support them editorially. And the reform front on the issue was not solid. The prestigious Park Association of New York City was dominated by elderly park fighters who clung to the old view of parks; its insistence that

<sup>\*</sup>Distance figured from the point in Harlem at which a pedestrian would mount the Triborough Bridge pedestrian walk to the nearest park facility on Randall's Island. The Ward's Island Pedestrian Footbridge would not be built for another twenty years. †Mount Morris Park, between 120th and 124th streets, would become part of the Negro slums of Harlem later—when the slums expanded south. In the mid-1930's, their southern border was still 125th Street.

Central Park be kept for passive contemplation was the proof of the way it really felt. And while its president, Mrs. Sulzberger, was more liberal on the point than many of her colleagues, Mrs. Sulzberger was not criticizing Robert Moses.

And Moses was not listening to criticism, anyway. When an alderman from Harlem wrote to Moses appealing for more playgrounds, Moses replied that he was, of course, "in entire sympathy with what you have in mind" but that "the sites you suggest are too expensive. We shall provide one playground in Harlem. . . ." When the alderman ventured to write him again on the subject, Moses declined to continue the correspondence.

In 1930, Moses, as head of the Metropolitan Park Conference, had led the fight to persuade the city to preserve parts of its fast-disappearing woodland in Queens and Staten Island by purchasing huge tracts for park land. Reformers had cheered him for that accomplishment; it had preserved open space—beautiful, wooded open space—for the city forever. But now Moses was filling that space with baseball diamonds and football fields and tennis courts—and the land for them could be cleared only by cutting down trees. And Moses was filling other parks with playgrounds and stadia and parking fields and handball courts. Throughout the city's park system, the reformers suddenly realized, grass was giving way to concrete.

The reformers knew that grass had to be supplanted by recreational facilities and parking lots in many of the city's parks. But not, they were sure, in *all* the city's parks.

But Moses' plans for parks did not include keeping them—any of them—in their natural state. His plans were not limited to repairing the ravages made in them by Tammany park commissioners so as to restore them to their natural state. His plans were to cram them—cram all of them—with bathhouses and tennis houses, baseball diamonds and tennis courts, restaurants and bicycle paths, zoos and asphalted playgrounds with ugly black iron fences around them, as well as with that essence of the city, concrete—the concrete of access roads, through roads and parking lots—concrete instead of precious grass.

It took a while for the reformers to realize what Moses was doing—first, because he kept his plans so secret that it was difficult for them to discern the over-all pattern beneath them until they had begun unfolding; second, because they had been so thoroughly convinced that he was a fighter for parks that they did not easily accept the realization that his definition of parks was much narrower than theirs, and perhaps not at all compatible with it, that where they saw in a towering stand of oak and elms and white pine a priceless bounty to a beauty-starved city, Moses saw a baseball diamond. Many of them, in fact, never came during the 1930's to realize this because they never took the time to study his over-all park plans and while they were distressed by what he was doing to a particular park in which they were interested, they accepted his assurances that he was preserving nature in the rest of the park system.

Driving 495

But some of the reformers did come to realize the implications of Moses' park philosophy rather quickly, and were anxious to discuss it with him. They were anxious that room be found in the park system—which, after all, was a huge one and included thousands of acres of still undeveloped woods and fields and streams-for their values as well as his. They were sure that in a discussion they would have no difficulty explaining to himfor, they all agreed, he was brilliant; the most brilliant public servant, many of them said, that they had ever met—the crucial difference, which apparently he had not yet grasped, between the implications of his philosophy when applied to Long Island parks and parks within the city. On no point, in fact, were they more anxious for discussion. For the destruction of the natural values of a park was not a remediable mistake; it was one that could never be rectified. Destroy the delicate natural balance of a marshland to make a concrete-lined lagoon and it did not lie with the power of man to restore that balance. Before any changes were made in the parks, therefore, there must be sufficient discussion to insure that the changes made were the right ones.

But Moses no longer had to discuss. He had long had great dreams for the city, and now he had learned how to make dreams come true. He had learned the technique of stake driving and of whipsawing. He had learned how to mislead and conceal and deceive, how to lie to men and bully them, how to ruin their reputations. And he used all these methods to bring the dream to reality.

Or was it all for the dream?

## THELOVE OF POWER

~ · ·

## 25. Changing

Because of the arrogance that was so basic to his nature—and to his mother's and grandmother's—Moses' susceptibility to the addiction of power was unusually strong. After he was given substantial power of his own by his appointment in 1924 to the presidency of the Long Island State Park Commission, the doses available to him were massive—but they did not satisfy him, as was noted by Judge Clearwater and Ansley Wilcox, who, charting his symptoms, observed a "sense of dominating authority and a desire to have [his] own way in all matters, large and small." Once Robert Moses had sought power only for the sake of his dreams, only as a means to an end; even then, however, there were signs that he was beginning to seek it for its own sake, as an end in itself. And the avidity with which he sought power—and the lengths to which he went to get it—revealed the depth of his need for it. The need was strong—and it was growing.

And now it had been growing for ten years.

Power is being able to laugh at people who oppose you and to laugh at them with impunity, to antagonize them without fear of reprisal. Now Robert Moses seemed to be going out of his way to laugh at people.

The Community Councils of the City of New York, Inc., and their executive secretary, minister Frank P. Beal, were disturbed by his plan to raze a reproduction of George Washington's Mount Vernon in Prospect Park, but they were not pressing the point particularly hard—or attempting to make a large public issue of it. The Councils had no power; Moses could easily have ignored them and simply have gone ahead with the work. Instead, he gave the opposition publicity—calling in reporters to tell them about it—apparently for no other reason than to be also able to tell them that "the work is going ahead in spite of the Community Council" and so that he could deliver himself of a remark that he wanted to make and have published. He set up the remark by saying, "It's a strange thing, but nothing has been heard from any responsible person on the Community Council." A reporter asked, as Moses had undoubtedly expected a reporter to ask, "What about Mr. Beal?" And Moses could thereupon say, "That's what I mean." On other occasions, he similarly volunteered information about opposition, only so that he could loftily dismiss it; once he volunteered, unsolicited, the information that a group of distinguished architects had presented him with a plan for reconstruction of Bryant Park apparently just so that he could add, with a smile: "Such a plan is not to be carried out."

He seemed to be going out of his way to antagonize people. He could have simply ignored William Exton and Robert Weinberg when they began proposing changes in his West Side Improvement plan; the two young reformers had no chance of making him even consider the changes. But he agreed to the interview with Exton—and Exton recalls that when he arrived at Moses' office, "he said, 'Well, as [city] Park Commissioner, maybe I can see you have a case, but the state park commission says so and so and the Authority says so and so.' Well, he was the state park commission, and he was the Authority, and I knew it, and he knew I knew it. It wasn't particularly subtle. It was just thumbing his nose at you"—and, Exton says, he had the feeling that Moses had given him the interview just so he could have the pleasure of thumbing it.

Once he apparently went all the way to the Rockaways just to antagonize a local civic association which had invited him to speak because they were concerned about the effect his proposed Marine Parkway Bridge might have on Floyd Bennett Field, the airport that was the Rockaways' pride. He could have declined the invitation—he seldom spoke before civic groups—but he accepted and made the long trip across Jamaica Bay, mounted the stage and informed the audience, "That airport of yours isn't so hot. It never should have been built in the first place." And then, as the *Times* reported, "he smacked his hand down [and] glanced up at the ceiling" to indicate that he was through discussing the topic. If Moses had any motive for the trip—to enlighten the audience, educate them, persuade them, convince them, conciliate them, listen to them or answer their questions—other than his enjoyment at insulting them, and showing them that he could thumb his nose in their faces and there was nothing they could do about it, that motive eluded the audience.

Power is being able to ruin people, to ruin their careers and their reputations and their personal relationships. Moses had this power, and he seemed to use it even when there was no need to, going out of his way to use it, so that it is difficult to escape the conclusion that he enjoyed using it.

He may have felt it was necessary to turn the power of his vituperation on men whom he felt posed a threat to his dreams, but he turned it also on individuals who posed no such threat.

Pearl Bernstein, for example, was a young Barnard College graduate whom La Guardia, for some inexplicable reason, had had appointed secretary to the Board of Estimate. "She was a naïve girl and the job was utterly beyond her," Kern recalls; it was common knowledge that she made no decisions on her own but simply carried out La Guardia's orders, relayed through Kern.

Moses must have known this, but when, in 1934, La Guardia, infuriated by the Park Commissioner's cooperation with Democratic members of the Board, issued an order that no matter was to be placed on its calendar at the instance of any commissioner until he had personally approved it, and Miss Bernstein, who was in charge of the calendar, therefore refused to place on it some of Moses' unapproved requests, Moses attacked her, writing Kern a letter—with copies sent simultaneously to Miss Bernstein's

associates and to officials throughout City Hall—attacking her "amateurishness, delay and pettiness" and "complete absence of willingness to cooperate with people who are trying to get something accomplished."

Kern, who was at this point still a "Moses fanatic," was startled because he knew that the Mayor, not Miss Bernstein, was the source of the order; Kern had, in fact, heard Moses arguing with La Guardia about it. Just in case the Park Commissioner had forgotten, Kern reminded him of this fact—but to his surprise the attacks continued, escalating in viciousness; one, also circulated throughout City Hall, referred to the order as "one of Pearl Bernstein's new wrinkles" and added, "If it were merely a question of casting swine before Pearl, I should be glad to have a standing order at any slaughter house—but these are really important construction matters with which she is interfering." Kern began to realize—reluctantly—that his idol, angry at the order and unwilling to argue further with its originator, had decided to vent his spleen on Miss Bernstein instead—apparently for no other reason than that she was handy and too small to fight back. Moses' attacks, Kern was to conclude, were "an example of his irresponsible brutality, a wantonness almost, a sadistic joy in hurting other people," as well as of his "willingness to beat little people" on occasions when he was reluctant to "go to the mat with big people" like the Mayor.

The number of defenseless minor officials on whom Moses unleashed his vituperation was legion. The officials least able to fight back were those on his own staff, and to those he was, if possible, even more viciously abusive. Once, when one of his aides, at a luncheon meeting attended by a dozen men, ventured to offer a suggestion which he hadn't cleared with Moses first, Moses whirled on him and said, "Now, you're just a swabbie on this ship—do you understand?" And while the others present squirmed in embarrassment for the man being humiliated, Moses repeated to him, "Do you understand?" "To you understand?"—refusing to be satisfied with a nod, making the aide say out loud, "Yes, sir."

And the bullying was not just verbal. City Hall was whispering about Moses' physical encounters with other men.

The two-hundred-pound Park Commissioner had had at least two such encounters during his governmental career prior to entering the city administration, and, as in the case of scrawny little "Slat" Johnson, the roommate he knocked down at Yale, neither of them was his physical equal. Raymond Torrey, whom he tried to strangle at a State Council of Parks meeting and at whom he then hurled a heavy smoking stand, was a pudgy little bird watcher. Moses had also staged a fist fight with WPA administrator Hugh Johnson in Bernard Baruch's apartment, and Johnson, at the time, was fifty-two—eight years older than Moses—and exceedingly drunk. Now Moses had additional physical encounters—and the pattern continued.

"This was at the opening of a section of the West Side Highway," Joseph Ingraham of the *Times* recalls. "It was raining and we had to go into some kind of tent. Some little old character—just a minor functionary in government—was there and Moses said to me, 'Wait'll you see what I do to this guy.' He went over and grabbed him and almost literally picked

him up by the scruff of the neck and shook him. It was very embarrassing. I said, 'What did he do?' He said, 'He hasn't done anything yet, but I just wanted to head him off.' "Other City Hall observers recall other Moses fist fights but not one with a man to whom he had a chance of losing.

Once, in an executive session of the Board of Estimate, Moses presented the Board with a proposal for a project whose cost, he promised, would be borne almost entirely by the federal government and would cost the city practically nothing. He presented the Board with a set of extremely detailed "facts" to "prove" his point.

Most of the members of the Board were thinking the same thing, one of them recalls, but only Stanley Isaacs had the courage to give the thoughts voice. He said mildly:

"When Mr. Moses says something will cost 3.4 percent, he adds the .4 only to make you think it's accurate. It's really 6.2 percent." Moses' response was to take a violent swing with his fist in Isaacs' direction and say, "I'd like to punch you in the nose!"

"He wasn't close enough to hit him with a baseball bat," says Isaacs' borough works commissioner, Walter D. Binger. "It was just a motion of passion. But Moses was tall and athletic" and the mild-mannered Isaacs was fifty-seven years old. "Everyone in the room was shocked," Binger says.

He wasn't satisfied merely to defeat people who opposed his wishes. He had to try to destroy them, too. He wasn't content with ignoring Exton and Weinberg and he wasn't content with thumbing his nose at them, either; he had to attempt to damage their reputations beyond repair by charging—falsely—that the two young reformers wanted the location of the Henry Hudson Bridge changed because a change would increase the value of Weinberg's property. For years he had been stung by the caustic voice of the "Old Judge," James B. Cooper, whose Babylon Leader continued to remind the residents of Moses' summer hometown that Moses had broken his promise never to charge tolls on the Wantagh Causeway—and who in the 1930's was leading the opposition to Moses' proposal to build a highway on Fire Island, although, with scrupulous fairness, he always allowed plenty of room in the Leader for Moses' replies. Now Moses did everything he could to silence that voice.

"We had always carried 'legals' [the advertising—of contracts and new ordinances, for example—that governmental bodies are required by law to do in newspapers, and that is often the difference between profit and loss for small-town weeklies] from the state," recalls Cooper's son. "And then they just suddenly disappeared from the paper—he had some and then he had none. They never said anything directly—they'd be far too subtle for that"; the *Leader* was simply no longer included on the list of Suffolk County publications which shared in the legal advertising connected with state projects which were located in Suffolk and had to be advertised in that county. Says Cooper's son: "I grew up in a house where we knew that we weren't going to get any printing from the state because of the way my father fought editorially for what he believed in." There were hints from Long Island State Park Commission executives that Cooper could get the legals back—and lucrative state

printing contracts besides. "The inference was 'Behave yourself and you'll be taken care of,' "the son says. "But that sort of thing never appealed to my father. He had on his masthead 'I Have Never Known a Master and I've Never Worn a Muzzle' and he would rather be broke than lose his soul." Soon he was broke—the legals had been very important in the touch-and-go financing of the little newspaper (its circulation never reached 4,000 during Judge Cooper's thirty years as publisher), and the paper almost died before he did on May 30, 1940. But "what mattered more than the money involved in the legals," his widow says, "was the principle of the thing. His feelings were hurt that anyone would do such a thing."

A streak of maliciousness and spitefulness seemed to run through Moses' character, and he gave that full play, too.

The sole oasis in muddy and barren Riverside Park was the Columbia Yacht Club, which since 1888 had been occupying an acre at the foot of Eighty-sixth Street, paying only a nominal rental of \$300 per year because it had created most of the acre itself by barging in landfill, had spent \$50,000 building its own marina and three-story clubhouse, and because it maintained those buildings, and surrounding lawns, hedges and flower beds it had planted, at its own expense. The club's six hundred members had succeeded in making themselves semi-official city hosts to visiting royalty (the club's proudest boast was that the Prince of Wales had made it his headquarters on not one but two visits aboard the *Renown*) and club members seemed to regard themselves as the city's link with maritime glory; naval officers of all nations were always welcome and the club was "official host" for the squadrons of the U.S. Navy which anchored off Manhattan each summer.

In March 1934, three months after he had been sworn in as City Park Commissioner, Moses announced that the Columbia Yacht Club was in the way of his West Side Improvement and would be torn down.

Shocked as the members were, they didn't try to fight the eviction; they understood that the park belonged to the city. Their only request was that they be allowed to remain in the clubhouse through September, so they could fulfill their pledge to entertain the U.S. Navy's Pacific Fleet, which was arriving in July for the summer.

At first, Moses agreed to this request without reservation; he certainly had no reason not to, for there was no prospect that work on the Improvement would have progressed far enough by September so that the presence of a single building in the six miles of park would interfere with it; in March 1934, he wasn't even sure where the Henry Hudson Parkway was going to run, no plans had yet been drawn for any substantial part of it, and money for the job was not yet in hand—or indeed in sight. But then Moses saw an opportunity of obtaining a valuable addition to the Improvement for nothing. He evidently decided to turn the clubhouse into a public restaurant on the waterfront, and he sent Ray McNulty back to the club officials with the message that he would allow the club to remain through September only if it then donated its clubhouse and marina to the Park Department. On April

18, club commodore John A. Harriss telephoned Moses to tell him that the board was agreeable and wanted only enough time to submit the proposition to the entire membership, which he expected would also approve it.

Unfortunately, in talking to Moses, Harriss somehow—he was never to be sure how—managed to irritate him. The next day the commodore received a letter from the commissioner, a letter he later characterized as "brutal," accusing the club of "stalling," ordering it to vacate its site by May I, in exactly twelve days—and warning that "if your property is not removed by that date, it will be treated as abandoned property" and confiscated.

Anticipating that the matter would become public knowledge, Moses went to the press-and he did so with his usual blend of demagoguery and deception: breaking the story himself to get his side of it before the public first; oversimplifying the basic issue to one of public vs. private interest; identifying the "private interests" with the sinister forces of "influence" and "privilege"; concealing any facts that might damage his own image. "The whole question," he said, "is whether public interest is going to yield to private," whether parks are going to be "for the people." The public needed the land occupied by the yacht club and it needed it immediately so that a great public improvement could be gotten under way, he said; he had advanced the date of eviction because the West Side Improvement was progressing faster than he had thought it would, and any delay in evicting the yacht club would slow the Improvement down. Moreover, the use of the public's property by the club was "a social racket," an "exclusive privilege," successful in the past only because of "the influence of certain members." The club had not the slightest legal right to be on the property in the first place; it has, he stated flatly, "no lease, no permit, no anything." He did not neglect to add a touch of class antagonism: "It is an interesting fact," he said, "that the yacht club in their talk of entertaining yachtsmen and officers say nothing about the entertainment of enlisted men." The tactics worked as successfully as usual. The headline on the Times article reporting one of his press releases was PARKS COME FIRST, MOSES DECLARES, while the Herald Tribune headlined COLUMBIA YACHT CLUB IS "RACKET," MOSES REPEATS.

The club applied to the State Supreme Court for a temporary injunction restraining Moses from ousting it so quickly. And in that more impartial arena there emerged, as usual, some facts that Moses had somehow neglected to mention. The Park Commissioner had contended that the club had "no lease, no permit, no anything" for the use of the park land. The attorney for the club said that the club had had a permit since 1888, that the permit had been renewed by the Park Department annually each of the forty-six years since, including 1934—and that Moses knew it. And to prove his contentions the attorney presented the court with a photostat of a check for \$150 for the first half of the 1934 rent, made out to and deposited and accepted by the Park Department.

Moses had also contended that the club had never done anything but occupy the public's property. Obviously, the attorney pointed out, the club

had done far more. It had improved the public's property, building \$50,000 worth of structures on it. And now it was probably willing to give all those improvements to the public in return for only five more months of occupancy; the board of trustees was agreeable to such an arrangement; it was asking only for enough time to poll the membership. Moreover, even if the schedule for the West Side Improvement required the club to vacate in a hurry, its members, some of whom were in Europe, should be given more than twelve days to remove their property from the clubhouse, or have it confiscated as "abandoned." And the schedule did *not* require the club to vacate in a hurry; it was quite obvious that the Improvement was barely under way, and that even if money was made available, Moses had more than six miles of Riverside Park to work in and did not have to start immediately on the single acre that the club occupied.

Supreme Court Justice Aaron J. Levy found the attorney's statements accurate, noting dryly in the opinion he handed down that "the Commissioner was in error in asserting that the club was occupying the premises without a permit." And the judge went further. Even if Moses' motives were honorable, he said, he had allowed himself to be carried away:

I must observe that a burning zeal for the public interest should not dazzle a public official—no matter how well intentioned—so as to blind him to individual amenities. Even where the public authority is entirely correct in his legal position, he should maintain it without inflicting undue hardship or injury. Tyranny, whether it consists of oppressive measures or brutal severity, is never necessary.

And, the Justice said, he was not at all sure Moses' motives were honorable. His examination of the commissioner's plans for the West Side Improvement left no doubt that the club's land would not be needed that summer at all:

The precipitate notice gives the appearance of having been prompted by the Commissioner's pique at plaintiff's refusal to accept [his] terms. . . .

He issued a temporary injunction restraining Moses from ousting the club until a trial on the matter could be held.

But Moses was not to be restrained by a judge. Even as the club's attorney had been applying for the temporary injunction, two huge steam shovels were rumbling into Riverside Park and taking up positions north and south of the clubhouse. As club members watched in amazement, they began scooping out trenches all the way from the New York Central Railroad tracks in the middle of the park to the edge of the river. Their operators said they were "testing the fill," but the yacht clubbers realized with a shock that once the trenches were completed, the dirt roads from north and south would be cut, there would be no way for members' automobiles or delivery trucks to reach the clubhouse and the only means of access by foot would be along a narrow footbridge across the railroad tracks. Shouting to make himself heard above the thunderous chug-chug of the shovels, a club official told a reporter he had called to the scene, "They will have us dug out of here before the court can render its decision."

This occurred on a Friday. The next day, with the clubhouse crowded with men and women preparing for some weekend yachting or sipping drinks in the pleasantly shadowy clubhouse bar, the shadows suddenly grew deeper. The club's electricity had been turned off. Hurriedly telephoning the New York Consolidated Edison Company to find out what had happened, the club superintendent was informed by an official there that "someone from the club" had asked that the current be shut off. The superintendent said he was sure there had been some mistake, and when the Con Ed officials checked, he found out that there had indeed. The man who had identified himself as being from the club was actually from the Park Department.

As the club's electricity was being turned on, its water was almost being turned off. Ten men drove up in a Park Department automobile and began digging near the clubhouse. When the club superintendent demanded to know what they were doing, they said they wanted to "repair" a leak in the water main. Only their inability to locate the main kept the club liquid.

"Sheer spite work," the club secretary termed Moses' actions, but reporters who telephoned the commissioner found him unabashed. As the *Herald Tribune* put it:

Mr. Moses said he knew nothing of this, but that it might easily be true. "I instructed my men," he said, "to go ahead with the construction work for the improvement of that part of the park and not to let anything get in the way. It is perfectly possible they did this."

Some of the city's elected officials attempted to restrain him, the Board of Aldermen passing a resolution demanding that Moses rescind his eviction order. One of the aldermen, Fusionist Lambert Fairchild, called the Park Commissioner's methods "steam-shovel government." But Moses was not to be restrained by elected officials. The Board's action, he said, was "just cheap politics. . . . I don't take their actions seriously. I'm sure they didn't." He filled the press with his side of the story—"The whole question is whether private interest should yield to public interest"—and if the press saw that some other questions were involved, it didn't mention them. And by the time the temporary injunction halted his steam shovels, they had completed the trench to the north of the clubhouse, cutting off all access from that direction, and had completed all of the trench to the south except for a narrow gap described as "perilously close to the river"-and as a final touch Moses had stationed a guard at that gap to charge all vehicles using it a quarter toll. Club members felt that their continued occupancy of a clubhouse that seemed to be under siege was untenable and that they might as well stop fighting. In a stipulation entered into before the trial for a permanent injunction, they agreed to get out if Moses would just give them enough time to remove their property—until June 18. When the fleet docked in July, they were not there to welcome it.

And neither was their clubhouse. Moses had razed it to the ground, as he had the Central Park Casino, the physical structure on which he had vented his malevolence against Jimmy Walker. By destroying the Columbia

Yacht Club clubhouse, he deprived the city of a \$50,000 structure which could have been turned into a waterfront restaurant with only the most minor alterations—or, if he didn't want to leave it on the waterfront, could have been moved to any other park in the city and used for any purpose he chose.

And while Moses had maintained that he had harried the club out of existence so mercilessly because its existence conflicted with the public interest, those close to the affair knew differently, knew that his actions were, as the club secretary had said, "sheer spite work." Recalls Assistant Corporation Counsel Chanler, who handled the case for Moses and drew up the final stipulation: "I spoke to Moses about it. He said they had to be evicted at once. I said, 'Why?"

"He said, 'Because they were rude to me.'"

If Moses was indulging his enjoyment at hurting people not in order to help him with his aims but simply because he liked hurting, the indulgence nonetheless helped him achieve his aims. As Judge Jacob Lutsky puts it, "If you know that every time you get in a guy's way, he's going to kick you in the balls, you make pretty damn sure you don't get in his way-right?" Within a remarkably brief time after Moses entered the city administration, word had spread through City Hall and the Municipal Building that any time someone got in Moses' way, Moses kicked him in the balls. So the men who worked in those two buildings were in general exceedingly careful not to get in his way. They went to great lengths to do exactly what he wanted-when he wanted. The great spongy mass of the city's bureaucracy, a mass of inertia and red tape and obfuscation and confusion, had absorbed and smothered the energy and the dreams of a thousand commissioners—but Commissioner Robert Moses sliced through the bureaucracy as if it were soft butter and he were a knife. And when at public meetings of the Board of Estimate, he would stride up to the little lectern reserved for city officials appearing before the Board and extend his hand behind him without looking, like a surgeon extending his hand for a scalpel, and an aide smacked a file folder into the hand, and Moses opened it and began, with the precision of a great surgeon, to dissect a man's character, the members of the Board, watching the reporters' pens and pencils avidly scribbling down his words, knew that those words would be appearing in headlines.

"He was terribly unfair to people," McGoldrick says. But, the Comptroller admits, the attacks served their purpose. Moses' methods "did intimidate people from debating with him. And it intimidated us, too, most likely." Soon, in the whole city government, from bureaucracy to Board of Estimate to mayor, there was no one to stand in the way of his dream, no one who would dare to tell the public the truth about the methods that were being used to make it come true, no one who would venture to examine—or to proclaim—its flaws.

And the dream unrolled.

During the 1930's, Robert Moses reshaped the face of the greatest city in the New World.

He gouged great gashes across it, gashes that once had contained houses by the hundreds and apartment houses by the score. He laid great swaths of concrete across it. He made it grayer, not only with his highways but with parking fields, like the one on Randall's Island that held 4,000 cars, the one at Orchard Beach that held 8,000 and the one at Jacob Riis Park that held 9,000, that together covered with asphalt a full square mile of the 319 in the city. And he made it greener, planting within its borders two and a half million trees, shrubs and vines, bringing a million others back to bloom, reseeding lawns whose area totaled four square miles and creating a full square mile more of new ones. He filled in its marshes and made them parks. He yanked railroad trestles off its avenues, clearing an even dozen from Brooklyn's Atlantic Avenue alone as part of a grade-crossing elimination program he considered so minor that he seldom mentioned it. He brought the stars down to it, arranging, in a brief interval crammed in between more important projects, for the financing of Hayden Planetarium. He changed its very shape: the millions of cubic feet of rock and shale and sand and stone that the long convoys of his barges and the endless caravans of his trucks dumped behind the steel bulkheads that he rammed out away from its shoreline into the muck beneath rivers and harbors hardened into new land, more than 5,000 acres of new land, and thus expanded and transformed its physical contours, adding to Manhattan Island alone an area as large as the island from river to river between Fifty-ninth and Eighty-sixth streets. He joined together small islands within its borders with earth, blending Ward's Island into Randall's and Hunters and Twin Islands into Rodman Neck. He soldered together the larger islands that were its boroughs with steel, linking three of them together at once with the Triborough Bridge, tying the West Bronx to Manhattan with the Henry Hudson, drawing the far-flung Rockaways closer to the rest of metropolis with the Marine Parkway span. In the five years after he became Park Commissioner, in a city in which the parks had been barren for decades, he made the parks bloom. In a city in which there had been only 119 playgrounds, he built 255 new ones. In a city in which not a mile of new arterial highway had been built in fifteen years, he built fifty miles of arterial highway. In a city in which a new bridge had not been built in a quarter of a century he built not only the three new big bridges—Triborough, Henry Hudson and Marine Parkway—but 110 smaller ones to carry local streets across his parkways. Si monumentum requiris, circumspice, reads the inscription on the tomb of Sir Christopher Wren. If you would see his monument, look around. By 1939, the same advice could have been given to a New Yorker asking to see the monuments of Robert Moses. They were everywhere in the great city.

With his showman's flair for the spectacular, Moses made the opening

of each of his creations an event, a colorful civic celebration, and if the celebrations sometimes seemed more like morality plays (for Moses was careful to point out at each one that the creation had been possible because of the victory of the altruistic public servant over "old hack" Tammany politicians and "red tape" bureaucrats) the public was so enthusiastic that it didn't mind the moralizing. New York City cheered what Robert Moses was doing to it—cheered so loudly, in fact, that the thin cries of disagreement, of disagreement and despair, were all but completely drowned out.

Robert Moses built 255 neighborhood playgrounds in New York City during the 1930's.

The adults and children who attended playground dedication ceremonies cheered when, at the end of the speeches, the fountain showers in the wading pools were turned on. And the cheers were echoed and amplified by the press. "Nothing Robert Moses has done is as great as what he has done with playgrounds," the *World-Telegram* said. "He has bestowed an unqualified boon on the neighborhoods of this city."

To dramatize the size of the achievement, Moses gave each playground a number, and the press counted along with him: PLAYGROUND NUMBER 189 OPENS, the headlines said. PLAYGROUND NUMBER 194 DEDICATED . . . PLAYGROUND 204 . . . PLAYGROUND 240 . . . And he had his mapmakers prepare pairs of outline maps of the city, blank except for dots representing playgrounds. The map on the left would be labeled simply "1933," the year before he had become Park Commissioner, the one on the right simply "1937" (or "1938" or "1939"). And the contrast between the two maps was certainly spectacular, the one on the left almost empty, the one on the right covered thickly with dots. And public and press drew from the maps the conclusion that Moses wanted drawn from them: that his playground-building program was an unqualified improvement, an absolutely unalloyed benefit, to all the people of New York City.

A close inspection of the maps would have revealed some rather puzzling characteristics about the pattern formed by the dots.

Their distribution, for example, was not at all even. The areas of the maps on which the dots were clustered most thickly corresponded in the main to those areas inhabited by families that were well-to-do or at least "comfortable." The areas of the maps on which the dots were sprinkled most thinly corresponded in part to undeveloped outlying areas of the city that did not really need playgrounds, but they corresponded also to some of the city's most congested areas, to the tenement neighborhoods and slums inhabited by families that were poor—to areas that needed playgrounds

desperately. Most of Robert Moses' neighborhood playgrounds had, in other words, been built in the neighborhoods that needed playgrounds least. Few of the playgrounds had been built in the neighborhoods that needed playgrounds most.

The areas of the maps on which the dots were sprinkled most thinly of all corresponded to those areas of the city inhabited by its 400,000 Negroes.

Robert Moses built 255 playgrounds in New York City during the 1930's. He built one playground in Harlem.

An overspill from Harlem had created Negro ghettos in two other areas of the city: Brooklyn's Stuyvesant Heights, the nucleus of the great slum that would become known as Bedford-Stuyvesant, and South Jamaica. Robert Moses built one playground in Stuyvesant Heights. He built no playgrounds in South Jamaica.

"We have to work all day and we have no place to send the children," one Harlem mother had written before Robert Moses became Park Commissioner. "There are kids here who have never played anyplace but in the gutter." She could have written the same words after he had been Park Commissioner for five years. After a building program that had tripled the city's supply of playgrounds, there was still almost no place for approximately 200,000 of the city's children—the 200,000 with black skin—to play in their own neighborhoods except the streets or abandoned, crumbling, filthy, looted tenements stinking of urine and vomit; or vacant lots carpeted with rusty tin cans, jagged pieces of metal, dog feces and the leavings, spilling out of rotting paper shopping bags, of human meals. Children with white skin had been given swings and seesaws and sliding ponds. Children with black skin had been left with the old broomsticks that served them as baseball bats. Children with white skin had been given wading pools to splash in in summer. If children with black skin wanted to escape the heat of the slums, they could remove the covers from fire hydrants and wade through their outwash, as they had always waded, in gutters that were sometimes so crammed with broken glass that they glistened in the sun.

Negroes begged for playgrounds.

The children begged silently. Recalls Father C. Edward Harrison, who during the 1930's served as assistant to Father Shelton Hale Bishop, rector of St. Philip's Protestant-Episcopal Church on 134th Street: "They wouldn't say they had no place to go. The need was unexpressed, inarticulate. But you knew that in their own way they were begging for somewhere to go, something to do. There weren't even basketball courts then, except at the 'Y' or in the big parks. There was nothing in the neighborhood. And you would see kids improvising basketball baskets, hanging a fruit basket against a lamppost or against a wall—you know, hanging it up on something, playing on the sidewalks or in the streets." In 1944, Father Bishop would persuade his parishioners to convert the old four-story parish house, which contained a gymnasium, into a community center with recreational facilities, and, Father Harrison recalls, "you should have seen the kids come in here, just because we

had a gym. The very fact that they came here in such numbers and were so happy to have something to do showed us how much they needed recreational facilities."

Not just because of the gym, of course. There were recreation supervisors there who cared about the children—"It's not just recreation that we're talking about, you know," Father Harrison says. "I guess you could call it an involvement of ourselves; they felt they belonged here and that they were wanted here, that someone cared about them; recreation has to go along with other things, you know"—but that was precisely what playgrounds were providing in other areas of the city. "In the Thirties," recalls Park Department official Melvin Daus, the Park Department playground supervisors were "young guys, bright young guys, all college-educated. There were no other jobs available then. We were trained in working with young people, supervising them, giving them leadership, giving them help. And what with WPA and all, there were so many supervisors—there were two or three at even the smallest playground—that we could really get involved with the kids, not just supervise their games but be around so that if one of them needed someone to talk to, he had someone. I mean a kid would never come around and say right out, 'I need some advice,' but kids were saying that in their own way. They were saying it silently, but they were saying it all right. They were begging for it."

Adults begged aloud-in letters-to-the-editor and resolutions to the mayor-and their voices sometimes grew shrill and desperate. "The police just keep the kids moving and there is no place to send them," one Stuyvesant Heights mother said. "Harlem is a poor section," one civic organization wrote La Guardia. "Each day from morning to night those people who are trying to give their children a decent living and make them something in the world to be proud of, are . . . out at work trying to earn a living." It was impossible for them to stay home and care for their children at the same time. Therefore, they wanted to send them to playgrounds. Since there weren't any, the children had little choice but to "roam the streets while their parents are worried half to death wondering where they are. . . . Please realize and understand the conditions of Harlem in order that you might see what the children there have to contend with." Ministers and settlement-house workers attempting to alleviate the problem through their own efforts found a particular poignance in their inability to make any real dent in it—the crowds of children who tried to jam into Reverend Bishop's little parish house only impressed him the more with the fact that only the city could do the job on the scale required. "We knew the need," Father Bishop's assistant, Father Harrison, says. "We couldn't understand why the city didn't. When you have to turn kids away, the feeling is one of anger, frustration—of Why? Why?" And sometimes the anger and frustration would spill over in angry speeches. Reverend Bishop, who was to try for ten years to persuade Robert Moses to build one playground in his neighborhood—reading, almost every time he picked up a newspaper, it seemed, of another new playground being opened in some other neighborhood-addressed himself to the problem of Harlem crime by

telling an audience: "The children have no place to go. Day and night they must use the block on which they live for recreation. No wonder they are like caged tigers and, once loose, want to wreak havoc."

But the adults might as well have been silent, too. La Guardia, who was doing so much in other areas for the city's Negroes, was not interfering with his Park Commissioner, and he referred the resolutions to him. And his Park Commissioner flatly denied their contentions. "The fact is that Harlem and its adjacent neighborhoods have not been overlooked and neglected or discriminated against," Robert Moses said. "The tendency has been in just the other direction, that is to give more attention to Harlem than to other sections which are in just as great need of recreation." He had done this with all the Negro slums, he said. And he bolstered his arguments with floods of facts and figures compiled by his corps of statisticians. The facts and figures were misleading, but no one did the work necessary to disprove them; the first full-scale survey of recreational facilities by any organization other than the Park Department—a United Parents Association study which found "plenty of playground space" only "where the rentals are high"—was not conducted until 1941, and it was not until 1943, when a grand jury investigating the causes of the high crime rate in Bedford-Stuyvesant found lack of recreational facilities to be a contributing factor, that any even quasiofficial body went on record about the effect of Moses' park policies on the Negro slums. (Moses' reply was the issuance of an eight-page release that termed the jury's report "without the slightest foundation.") The press, the instrument best equipped to investigate the situation and come up with independent facts and figures, never made any such investigation. It buried or ignored the recreation reports of the United Parents Association and the grand jury and the resolutions passed by the Negro community organizations, and reprinted only the barest handful of letters-to-the-editor (it took Reverend Bishop fourteen years to get one printed). In 1950, the Times would send a reporter to Harlem to make his own, independent tour, and he would report that playgrounds for many Harlem children were vacant lots, in which "bare-legged children" played "on dumps of broken glass, rusty cans and refuse. . . ." But during the 1930's the press was taking Robert Moses' word for what was being done for the slums. A day-by-day review of the Times, Herald Tribune and Brooklyn Eagle-and a more cursory review of the city's other major dailies-for the entire 1934-39 period did not turn up a single editorial even hinting that Moses' playground-building program might be neglecting the slums. A typical editorial was the one in the Times that said that Moses was sowing "playgrounds over the congested areas of the city . . . as a sower might sow magic seed, bidden to flower in the slums."

Robert Moses built ten new community swimming-pool complexes in New York City during the 1930's.

Because of his fascination with water in general and swimming in par-

ticular, Moses gave each of the pools, for which he had obtained a special WPA grant of \$10,000,000, his personal attention. Under his prodding, his architects adorned them with masterful little touches; over the entrance which divided men from women as they entered the bathhouse at the Corona Pool complex sat a stork wearing an expression that made him look as if he were puzzling over the physical differences in the creatures he had brought into the world. Under his prodding, his architects produced dozens of innovations that would set a new standard for swimming-pool construction, public and private, from pool bottoms of wood-float rough enough to prevent slipping and smooth enough to permit games during the off season, when the pool was drained, to a totally new type of scum gutter wide enough to let in sunlight that would kill the bacteria whose formation had been a problem in older public pools. He himself solved a problem that had always baffled designers—how to force swimmers to wash their feet before entering the pool—by building what the Architectural Forum called "tactful depressions"—hollows too wide to be jumped—clear across each corridor leading from the locker room to the pool so that swimmers had no choice but to walk through them and through the special foot-cleansing solution with which they had been filled. Despite the WPA requirements that only the cheapest materials be used, each pool turned out to be a municipal marvel of the first magnitude.

And they were hailed as such. "Simple materials simply disposed" in designs that were "always sound and sometimes brilliant," the *Forum* said. As for their size (the main pool at the three-pool Corona complex is 365 feet long), the *Forum* said, "The openings were marked by the publication of statistics which seemed to the reading public all but incredible. The Astoria Pool, for instance, was reported to have accommodations for 6,200 bathers. Nobody had heard anything like that before, but it turned out to be literally true. The ten new pools erected last year plus two old ones that had been remodeled, now have a combined capacity—as measured by their locker-room facilities—of 49,000!"

The ingenuity that Robert Moses displayed in building swimming pools was not restricted to their design.

Moses built one pool in Harlem, in Colonial Park, at 146th Street, and he was determined that that was going to be the only pool that Negroes—or Puerto Ricans, whom he classed with Negroes as "colored people"—were going to use. He didn't want them "mixing" with white people in other pools, in part because he was afraid, probably with cause, that "trouble"—fights and riots—would result; in part because, as one of his aides puts it, "Well, you know how RM felt about colored people."

The pool at which the danger of mixing was greatest was the one in Thomas Jefferson Park in La Guardia's old East Harlem congressional district. This district was white, but the pool, one block in from the East River, was located between 111th and 114th streets. Not only was it close to Negro Harlem, but the city's Puerto Rican population, while still small,

was already beginning to outgrow the traditional boundaries of "Spanish Harlem" just north of Central Park and to expand toward the east—toward the pool. By the mid-Thirties, Puerto Ricans had reached Lexington Avenue, only four blocks away, and some had begun moving onto Third Avenue, only three blocks away.

To discourage "colored" people from using the Thomas Jefferson Pool, Moses, as he had done so successfully at Jones Beach, employed only white lifeguards and attendants. But he was afraid that such "flagging" might not be a sufficient deterrent to mothers and fathers from the teeming Spanish Harlem tenements who would be aware on a stifling August Sunday that cool water in which their children could play was only a few blocks away. So he took another precaution.

Corporation Counsel Windels was astonished at its simplicity. "We [Moses and I] were driving around Harlem one afternoon—he was showing me something or other—and I said, 'Don't you have this problem with the Negroes overrunning you?' He said, 'Well, they don't like cold water and we've found that that helps.'" And then, Windels says, Moses told him confidentially that while heating plants at the other swimming pools kept the water at a comfortable seventy degrees, at the Thomas Jefferson Pool, the water was left unheated, so that its temperature, while not cold enough to bother white swimmers, would deter any "colored" people who happened to enter it once from returning.

Whether it was the temperature or the flagging—or the glowering looks flung at Negroes by the Park Department attendants and lifeguards—one could go to the pool on the hottest summer days, when the slums of Negro and Spanish Harlem a few blocks away sweltered in the heat, and not see a single non-Caucasian face. Negroes who lived only half a mile away, Puerto Ricans who lived three blocks away, would travel instead to Colonial Park, three miles away—even though many of them could not afford the bus fare for their families and had to walk all the way.

The fact that they didn't use their neighborhood pool—and the explanation for this fact—was never once mentioned by any newspaper or public speaker, or at least not by any public speaker prominent enough to have his speech reported in a newspaper.

Moses built an immense park complex on Randall's Island, one equipped with baseball fields, tennis courts and soccer fields. Only one item was needed to make it a great park: people. But this ingredient was not provided. Moses had said that the island was "easily accessible" to the slums. Trekking the two miles to the island once was evidently enough to convince most slum families differently. Even on weekends, the vast new facilities sat almost empty. As for the Randall's Island Stadium, Moses had demanded

70,000 seats. The WPA had allowed him 22,000. Even this number was, during the stadium's first five years of operation, not sold out once. At most events, the attendance was not in the thousands but the hundreds.

The Grand Central, Interborough and Laurelton parkways opened early in the summer of 1936, bringing to an even one hundred the number of miles of parkway constructed by Moses on Long Island and in New York City since he had conceived his great parkway plan in 1924.

At the opening of one stretch of parkway, Fiorello La Guardia lavished praise on everyone connected with its construction except Moses, and then, reaching up and placing his hand on his Park Commissioner's shoulder, said earnestly: "I don't have to say anything to you, Bob. Those who came to cheer have stayed to cheer."

The city's press had stayed. One editorial opined that the new parkways would, by relieving the traffic load on the Southern and Northern State parkways, solve the problem of access to Moses' Long Island parks "for generations."

The new parkways solved the problem for about three weeks. "It wasn't more than three weeks after they opened that I decided to go out to Jones Beach on a Sunday," Paul Windels recalls. "I got on the Interborough and by God it was as jammed as the Southern State ever was."

Moses announced that he had the solution: build forty-five miles of new parkways, including a great "Circumferential Parkway" around Brooklyn and Queens that would provide motorists of these boroughs (and of Manhattan if the proposed Brooklyn-Battery Tunnel was built and linked up with the parkway) with an easier way to reach the Island—and, since the parkway would run for twenty miles along the edge of the Brooklyn waterfront, with a wonderful view.

Some city planners noticed that the traffic pattern on Long Island had fallen into a set pattern: every time a new parkway was built, it quickly became jammed with traffic, but the load on the old parkways was not significantly relieved. If this had been the pattern for the first hundred miles of parkways, they wondered, might it not be the pattern for the next forty-five also? Perhaps consideration should be given to trying to ease Long Island's traffic problem by other means, specifically the improved mass transit that the Regional Plan Association and other reformer-backed groups had been proposing for a decade. The RPA ventured to raise this suggestion again, and it was backed by other planners and by some reformers. But their voices were drowned out by the flood of praise

for Moses' idea. Said the Sun of the Circumferential proposal: "When it's done, you South Brooklynites can hitch up the old buggy and be in the Bronx before a Harvard man could say Greenpernt."

The Triborough Bridge opened on July 11, 1936.

Even men familiar with large-scale public works were awed by this one. "From the engineering point of view, it is one of the greatest in the world as it is one of the biggest," PWA Administrator Ickes wrote in his diary. General Hugh Johnson wrote in his syndicated column, "The Triborough Bridge in New York City is one of the greatest accomplishments of man in the most fascinating department of civil engineering—bridge building." Harry Hopkins said that "of 70,000 WPA projects in the United States . . . there is none of which we are prouder."

The awe—and the pride—was shared by the city. "The imagination with which the whole project was conceived, and the integrity with which it has been carried out, reaffirms our faith in the ways of democratic government," the *Times* editorialized. City officialdom and press assured the public that the project would, as Moses had promised, provide at a single stroke a solution to most of the traffic problems between Long Island and New York. "A tour over the Triborough Bridge yesterday by two newspaper reporters revealed that the huge structure . . . is up to the expectations of the public and the promises of its builders both in beauty and in usefulness," the *Times* said. Trips from northern Queens to 125th Street in Manhattan, which previously had required "in the best of conditions" forty-five minutes via the Queensborough Bridge, would henceforth be negotiated in as little as sixteen minutes, reporters reported. Police Commissioner Valentine said that the opening of the bridge would sharply reduce traffic on all the East River spans, on the Queensborough "by from 40 to 50 percent."

On August 17, 1936, a little more than a month after the Triborough Bridge opened, Long Island's parkways were the scene of what some observers called the greatest traffic tie-up in the history of the metropolitan area.

Referring to it as a "cross-country traffic jam," the *Herald Tribune* was forced to conclude that the bridge had, at least indirectly, caused it. Apparently, a Monday-morning editorial quarterbacked, the "motoring residents of the Bronx" had all discovered at the same moment that the Triborough "brought them within easy time of Jones Beach and other cool and pleasant resorts on the south shore of Long Island" and had decided "at the same moment to head for the ocean by way of the new bridge and the Grand Central Parkway. And nearly all of them got stuck—as did countless other motorists going to and from . . . Long Island."

Public officials responded with alarm. "The Interborough Parkway, barely opened, was already impossible," Brooklyn Borough President Ingersoll noted.

Moses said he knew what to do: build more parkways in the Bronx and Westchester ("It's time we gave Westchester a break"), including the Hutchinson River Parkway Extension, and on Long Island not only rush the construction of the parkways he had already proposed but also build new roads that would not be restricted, as parkways were, to private automobiles, but would also carry commercial traffic. In particular, he proposed a road down the center of Long Island—the road that would, when finally built, be known as the "Long Island Expressway."

Yes, agreed Ingersoll, that was what was needed. Yes, indeed, said the *Herald Tribune*—and the rest of New York's press.

The Wantagh State Parkway Extension was opened on December 17, 1938, three months ahead of schedule. Reminiscing in the brochure distributed at the ribbon-cutting ceremony, Moses noted that in the nearly fifteen years since he had planned a metropolitan area transportation system, 110 miles of parkway, including 191 grade-eliminating bridges, had been completed in New York City and on Long Island, and so had the Henry Hudson, Triborough and Marine Parkway bridges. The "arterial system" he had created, he said, was "unparalleled"—and it had had to be, for so was the metropolitan area's traffic problem. And, he said, his program had been successful. "Today," he said, "we are well on our way toward a sensible solution of this problem in the metropolitan area." In his speech at a luncheon held afterward at Jones Beach, Moses repeated this theme. A thousand guests applauded enthusiastically.

The Wantagh State Parkway Extension did not receive its first real test of traffic-easing capacity until the first warm weekend morning of 1939. On that morning, it was jammed bumper to bumper for more than three miles. Traffic experts could not understand where those cars had come from. The other Long Island parkways, after all, were just as jammed as ever.

Four months after the Triborough Bridge opened, Othmar Ammann gave a speech on its operation to the American Society of Civil Engineers. In it, Triborough's chief engineer announced that traffic on the span was running considerably ahead of estimates.

The opening of a bridge was big news, but its operation was not. Most newspapers did not even bother to send a reporter to cover the speech. The *Times* did, and Ammann spoke with him after the meeting, and provided him with a further bit of information. Despite the heavy volume on the Triborough Bridge, Ammann said, "the relief of the traffic load on the Queensborough Bridge has not been as great as expected." But the

Times editors evidently did not consider this fact particularly noteworthy. They devoted only four paragraphs to the story and buried it at the bottom of page 26.

But Ammann's statement was a hint, the only published hint New Yorkers were given during all of 1936, of certain developments that were puzzling—and beginning to worry—the city's traffic experts. Traffic on Triborough was indeed running ahead of estimates—far ahead. Before its opening, Moses, on the basis of Jack Madigan's figures, had estimated that eight million vehicles would use the bridge during its first year of operation. Within four months the estimate was increased to nine million. Three months later, it was ten million—and the counts at the Randall's Island toll complex showed that traffic was rising more sharply every month. There began to be reports of traffic tie-ups on the huge new structure.

But traffic on the four other East River bridges was not falling off at anything near a comparable rate. The eight million cars and trucks that Moses had forecast would use Triborough each year were supposed to be cars and trucks that had previously used the other bridges, particularly the Queensborough. Not only Moses but all traffic experts who had studied the problem had agreed on that. Otherwise, where would these cars and trucks come from? Yet traffic on the other bridges, down about 15 percent immediately following Triborough's opening, was creeping higher again month by month—back, within two years, almost to the pre-Triborough level. Traffic between Long Island and New York had, before Triborough's opening, flooded the twenty-two lanes available on the four old bridges; suddenly the traffic between Long Island and New York had become so heavy that it was also flooding eight new lanes, the new lanes of the Triborough Bridge and it was hardly any lighter than before on the old bridges. Traffic between the Island and the city had been increasing before, of course, increasing steadily. But never had it increased at this rate. If traffic between the Island and the city was a stream, something had suddenly opened the sluice gates much wider than they had ever been before—and the more the traffic experts studied the problem, the more difficult it was for them to avoid the conclusion that the something was the only new element in the situation—nothing other than the Triborough Bridge itself. Somehow, in ways they did not even pretend to understand, the construction of this bridge, the most gigantic and modern traffic-sorting and conveying machine in the world, had not only failed to cure the traffic problem it was supposed to solve—but had actually made it worse.

Moses was convinced he knew the solution to the problem: build another bridge. Within a year after Triborough had opened, he was proposing the construction, a mile to the east, of the Bronx-Whitestone that would, by tying directly into the Hutchinson River Parkway to the north, enable motorists from the East Bronx, Westchester, Connecticut and New England to get to Long Island without using Triborough.

For the first time, one of Moses' transportation proposals met with less than unanimous support from Good Government groups. The Regional

Plan Association said that such a bridge should not be built unless provision was made on it for railroad trains as well as cars—so that a rapid transit tie-in between Long Island and the Bronx, Westchester and Connecticut could be established. The tie-in did not have to be immediate, the RPA said. Construction of the rapid transit system could wait until the need for it had been proven and financing was available. But provision for it should be made immediately. All that was required was to make the bridge wide enough for two lanes of tracks as well as for automobiles or to build a second deck for the tracks-or, if Moses did not want to adopt either of these courses at the present time, to make the bridge foundations and towers strong enough so that, should at some later date the rapid transit link be desired, the bridge could support a second deck that would be built at that time. If provision was made now, while the bridge was being planned, the RPA said, it could be made cheaply, at a minor increase in the cost of the bridge. If it was not made, a whole new bridge would have to be constructed from scratch when the rapid transit link proved necessary, and the cost would be tremendous. It might even prove prohibitive, preventing construction of such a link entirely. Failure to make provision for a rapid transit link as part of the Bronx-Whitestone Bridge, the RPA said, could therefore condemn Long Island forever to be linked to the north only through roads -which would mean that no matter how much population increased in the metropolitan area, the only means of reaching the Island from the north would still be by automobile. And this would condemn Long Island to future inundation by larger and larger numbers of automobiles.

But Moses refused even to consider its proposal, and the RPA received no editorial support. Without opposition from a single city official, he built the Bronx-Whitestone Bridge without any provision for a rail link, opening it three full months ahead of schedule, on April 29, 1939.

During 1940, its first full year of operation, 6,317,489 vehicles passed through the Bronx-Whitestone's toll booths, cramming its four lanes to capacity and causing massive tie-ups on it. Traffic on the Triborough was reduced by 122,519 vehicles. Traffic on the other four East River bridges was reduced not at all. In fact, it rose slightly. Somehow, the new bridge had generated, in a single year, more than 6,000,000 new on-and-off-Island motor trips. It had not improved the traffic situation on the old bridges at all. What had been the net effect of its \$17,785,000 construction—or, in fact, of the construction of both it and the Triborough Bridge—on the traffic problem these bridges were built to solve? Before they existed, four bridges had connected Long Island with the rest of the world, and they had all been jammed. Now six bridges connected Long Island with the rest of the world. And they were all jammed.

By dumping a tremendous new load on the Long Island parkways, the Bronx-Whitestone Bridge made the traffic tie-ups on them noticeably worse.

Shortly after the bridge opened, Moses completed the road linking the bridge with Westchester County, the Hutchinson River Parkway. Soon, that was jammed too.

The Gowanus Parkway, the elevated highway Moses placed atop the pillars of the old BMT Elevated Line on Brooklyn's Third Avenue, was opened on November 1, 1941, just in time for another mayoral election.

"When Commissioner Moses finds the surface of the earth too congested for one of his parkways, he lifts the road into the air and continues it on its way," the *Times* editorialized. "A busy, crowded, region lay in Mr. Moses' path, too heavily built up for a leisurely, landscaped parkway. The problem was solved successfully. . . . Beginning today . . . Brooklyn reaps a new, incalculable highway benefit." Brooklyn's borough president called Moses an artist who, in his own field, ranked with Leonardo da Vinci.

The canvas on which Moses had drawn the Gowanus creation was a neighborhood known as "Sunset Park." Its residents had pleaded with Moses to build the parkway not along Third Avenue but along Second, one block to the west, near the waterfront; Second Avenue ran not through a neighborhood but through the middle of Bush Terminal, a 200-acre agglomeration of piers, railroad sidings, lofts and factories that was already so noisy with the clatter of trucks and freight cars that the noise generated by a few more lanes of traffic would hardly be noticed. Comptroller McGoldrick, a resident of Sunset Park, had agreed with them; he pointed out that the city had been planning to tear down the elevated line because a new parallel subway had recently been built under Fourth Avenue, and "the elevated at least let some light in. The parkway would be solid and it would be wider than the El. It would come right up to the windows of the buildings." The Comptrolleralong with non-Moses engineers-doubted Moses' contention that using the El pillars would be much cheaper than building a whole new parkway, particularly since it would have to swing back to the shore after only one mile —a distance long enough to "permanently blight" a neighborhood but not to make a substantial difference in cost. Moses had replied by telling the Board of Estimate that Sunset Park wasn't particularly worth saving because it was a "slum."

"A slum! That wasn't a slum!" says Cathy Cadorine, who lived in Sunset Park. "That was a very nice neighborhood. It was poor, but clean poor."

Actually, part of the area was dirty poor. Blight spawned in the dirt and noise of the Bush Terminal piers, warehouses, factories and railroad sidings along the waterfront had oozed inland along the side streets, forcing

"clean poor" families to flee before it and leaving the old brownstone and red brickfront houses to derelicts, winos and whores.

But that was just part of the area. And it wasn't what families like the Cadorines thought of as "the neighborhood" at all. What they thought of as "Sunset Park"—the area extending from west of Third Avenue all the way to Eighth and from Thirty-sixth Street south to Sixty-third and containing some 70,000 people, half of them Norwegians, the rest Finns, Danes, Irish and Germans—had been menaced by that blight for at least thirty years. But they had always stood it off: although it had spread inland as far as Second Avenue by the time of World War I, that was where it stopped; in 1940 it had not gotten even a foothold on the side streets between Second and Third. And despite the Depression, which hit especially hard at a neighborhood of skilled carpenters and housepainters and plumbers (60 percent of Sunset Park men were members of trade unions), they had made a world of their own.

It was indeed, as Cathy Cadorine said, a "clean" world. The brickfronts and brownstones were immaculate; one could walk by them any morning and see the housewives sanding and scrubbing their stoops; even the sidewalks were swept; the little plots of grass that their owners proudly called "lawns" may have been tiny but they were lush green and neatly trimmed. But it was more than clean. It was quiet and peaceful—there were many trees lining the streets, but few cars; "Not many people around there had cars then," recalls Hertha Smalgo; "when people wanted to go to work or to the city, they took the elevated"—and warm and friendly: every summer brought a round of block parties, street lamps festooned with streamers, women and girls in gay peasant blouses from their native lands, folk singers with their accordions singing the old songs, long tables covered with tablecloths washed and washed again until they gleamed snowy under the lamps, and with heaping bowls of kalalatikko and hernierokka. In "Finn Town," the section of Sunset Park east of Fifth Avenue and south of Thirty-sixth Street that contained half a dozen public saunas, there were also half a dozen cooperative apartment houses, and many of the same families had been living in them for a quarter of a century. In the evening, families walked together to the bluff of Sunset Park to look out over ship-filled New York Harbor. Girls like Cathy Cadorine who grew up there, married boys from the neighborhood and raised their own families there because "we wouldn't want to live anywhere else."

The heart of the neighborhood—the focal point that gave it unity and a sense of community—was Third Avenue. Lining it, along with newsstands off which 9,000 Nordisk Tidendes were sold every day, were seven movie theaters, dozens of tiny restaurants run by couples and featuring recipes from the old countries ("little restaurants, but good and so many you wouldn't know where to go for lunch," recalls Harold Benson, whose hardware store was on Third Avenue at Fifty-fourth Street), and scores of small, friendly "Mama and Papa" stores (the Northland Gift Shop, the Finnish Book Store, a hardware store that looked like a general store out of the Old West, a butcher shop that raffled off twenty-five big turkeys every Christmas)

that occupied the ground floor of three- and four-story brickfronts in which Mama and Papa lived upstairs with the children. "The avenue was always busy, people shopping or window shopping or just walking," Benson recalls.

The El overhead was noisy, but, the shopkeepers say, "you got used to the trains and anyway when they built the new subway [under Fourth Avenue] we thought it was going to be torn down." The soot and cinders that wafted down from the El were annoying, but the shopkeepers kept the sidewalks clean—by sweeping them morning, noon and night. "Clean?" Cathy Cadorine recalls. "Those were the cleanest stores you ever saw!" And the El made Third Avenue even more of a focal point for a neighborhood in which "not many people had cars." "The husbands all took it to work," says Cathy Wylde. "So there were always people coming to Third Avenue to take it." This made the avenue even busier. Neighborhood girls didn't hesitate to walk down to the movies at night in pairs or to go shopping in the evening alone. "You would think the El would have been a divider [of the neighborhood], but it wasn't really," says Miss Wylde. "In a way, because everybody used it, it brought it closer together. Third Avenue was never an esthetic avenue. But it was a nice avenue."

If Third Avenue was the heart of the neighborhood, Moses tore it out. Relocation began the procedure.

The Board of Estimate had approved the Third Avenue route under the impression that because Moses was using an already-existing facility, the old El structure, no new right-of-way would be required—and hence no families would have to be evicted from their homes. But after the approval was given, the Board found that that impression was not quite accurate. It was off, in fact, by some one hundred stores—and 1,300 families.

Some buildings had to be torn down because, while an El did not need entrance and exit ramps, a highway did, and a single entrance ramp took half a block of homes. But this need accounted for only a minor percentage of the relocations. Most of the buildings that were torn down—and every building on one side of Third Avenue between Thirty-ninth and Sixty-third streets was torn down—had to go because Moses would not allow trucks on his parkways, and so that he would build it instead of the city, he classified this elevated highway through a densely packed urban area, a highway unadorned by a single tree, as a "parkway." Since Moses' Brooklyn-Battery Tunnel would pour trucks as well as cars into Brooklyn just north of Sunset Park, and since trucks as well as cars would need a route south, he decided to make Third Avenue that route—by making that four-lane street under the parkway into a ten-lane highway.

The El had cast a shadow over Third Avenue, but the El had been forty feet wide. The Gowanus was ninety-four feet wide. Its shadow was more than twice as broad.

And more than twice as dark. The gaps between railroad ties had made the El's shadow a Venetian-blind shadow; sunlight had come through as if through the slats of an opened blind. A highway was a concrete slab, without gaps. The construction of the Gowanus Parkway, laying a concrete slab on top of lively, bustling Third Avenue, buried the avenue in shadow, and when

the parkway was completed, the avenue was cast forever into darkness and gloom, and its bustle and life were forever gone.

And through that shadow, down on the ten-lane surface road beneath the parkway, rumbled (from before dawn until after dark after the opening of the Brooklyn-Battery Tunnel flooded the area with freight traffic) regiments, brigades, divisions of huge tractor-trailer trucks, engines gunning and backfiring, horns blasting, brakes screeching, so that a tape recording of Third Avenue at midday could have been used as the soundtrack for a movie of a George Patton tank column. And from above, from the parkway itself, came the continual surging, dull, surf-like roar, punctuated, of course, by more backfires and blasts and screeches, of the cars passing overhead. Once Third Avenue had been friendly. Now it was frightening.

It was made more frightening by the absence of people.

Stores, restaurants and theaters had brought people to Third Avenue. Now half the stores, restaurants and theaters were gone.

The El had brought people through Third Avenue on their way to and from its stations. The parkway did not. Moreover, although the El had been a huge, gloomy structure, it was, as Cathy Wylde puts it, "one that people from the neighborhood related to; they traveled on it, they were familiar with it." The parkway was something unfamiliar and strange. There were no lights underneath it and it always seemed damp there-condensation on the tubular steel supporting pillars caused a constant dripping on the street. "The highway was something different," Miss Wylde says. "It was noise, dirt, accidents, not lighted, a garbage dump, drag races along it in the night, wild kids, something totally negative. It was a tremendous psychological barrier. In a way you could say the people feared the highway." It was something to stay away from. It was a physical barrier, too. Elderly persons and mothers with small children found Third Avenue frightening not only because it was negative but because it was wide. Crossing the ten-lane truck road, wider than a football field, was even more of a problem because the traffic lights never seemed to allow enough time for anyone not in the best of health to get across. Sunset Park families began to do their shopping in stores that were not on Third Avenue. Once the avenue had been a place for people; Robert Moses had made it a place for cars. And as the avenue's roadway became more crowded, its sidewalks began to empty.

The vicious gyre of urban decay began—and widened. Because there weren't as many people shopping on Third Avenue, there weren't enough to support the avenue's stores and restaurants—not even the half of the stores and restaurants that remained after the widening. One by one they began to close. Because there weren't as many stores and restaurants, people began doing their shopping and dining out elsewhere, and then there were even fewer people on Third Avenue. Because the streets in the evening were no longer filled with people, more people who might have gone to Third Avenue in the evening stayed away. Fewer people meant even less business. One by one the shops and restaurants closed. The shop that had raffled off twenty-five turkeys raffled off ten now and then one—and then it was gone. And since the owners of many of the stores had lived in the apartments over

them, when they were forced to move their businesses out of the neighborhood, they were forced to move their families out, too, and those families had provided customers for other stores.

Not only Third Avenue was wrecked by the road; so were the side streets between it and the waterfront. With Moses' road and tunnel making Sunset Park more accessible to trucks, industries requiring truck traffic—including two large new plants, one a division of Bethlehem Steel, the other a division of American Machine & Foundry-moved onto Sunset Park's waterfront, already crowded with industrial activity. And the truck traffic for all these factories had no way to get to and from them from Third Avenue except through those narrow streets, between whose parked cars the children of the neighborhood had always played. "There was just so much traffic on those little streets that you wouldn't believe it," Cathy Cadorine recalls. The death of one little boy-hit by a huge tractor-trailer in the street right in front of his house—was enough. Faster and faster, the residents of the side streets began to move out. "The whole area died with the road," a resident would marvel. "And it died so quick." Soon it was, in his words, "a ghost town." Along the avenue and on adjacent side streets, rows of brownstone and brickfront buildings that had held stores and apartments, the stores and apartments that had stood as a bulwark between Sunset Park and the slum to the west, began to be vacated. Their rooms, the rooms that had been kept so clean and neat, stood empty.

And into them came what the neighborhood had always feared.

"Third Avenue became the place you could get sex," Cathy Cadorine recalls. "Everybody knew about it." Drunks as well as whores roamed the avenue, cadging drinks until they fell asleep in doorways. Cheap saloons opened in some of the abandoned stores. Soon there were street gangs, fighting gangs, Irish and Puerto Rican teen-agers, seeping down from the notorious Red Hook section to continue their racial warfare and prey on passersby. The side streets off Third Avenue—streets whose apartments were now filled with families on welfare, families without fathers, and with poor Spanish-speaking families without clothes adequate for the cold New York winters—became places to dump and strip stolen cars; the streets began to be filled with their ravaged hulks. Rotting litter, rain-sodden mattresses and broken glass filled the sidewalks and gutters. Rats began to grow bold in the rubbish in vacant lots. There were even, to the horror of those residents who remained, drug addicts.

With its heart gone, the neighborhood had no will to resist the invasion. There was nothing to hold its people—and as they saw the blight creeping closer, they simply moved away. For more than thirty years, the blight in South Brooklyn had been confined to the waterfront area. Now, thanks to Robert Moses and his parkway, it was on the loose, spreading across Sunset Park. The world of neat little houses and block parties vanished beneath it along the entire twenty-six-block length of the Gowanus Parkway, as far east as Fourth Avenue and, except for a few isolated blocks, as far west as Sixth—where the parkway was far enough away so that the community

put up a stand, and won. Moses' steel and concrete, "lifted into the air" above a neighborhood for the convenience of motorists driving through the neighborhood to get somewhere else, had destroyed the neighborhood.

Convenience? No sooner would Moses open the Brooklyn-Battery Tunnel at one end of the Gowanus Parkway and the Belt Parkway at the other than the Gowanus would be jammed solid with traffic. At rush hours, the traffic trying to get up onto it would be backed up solid, spilling off the ramps and back into the neighborhood for blocks. Because there were no shoulders on the elevated road on which a disabled car could pull off, one disabled car could tie up a whole lane for hours.

Moses knew what to do about that, he said: widen the Gowanus Parkway, creating six lanes instead of four, although there would still be no shoulders. That would bring the road right up to the windows of the apartments that were left along it. The cars would be so close to the buildings that on wet days the spray they kicked up would splatter the apartment windows. No matter, Moses said, the Gowanus would have to be widened.

And he widened it.

Residents of Sunset Park had pleaded with Moses to build the road along Second Avenue instead of Third. After it was built, and they saw what it had done to their neighborhood, they knew their suggestion had been correct. "That was an industrial area anyway. Building it over there wouldn't have changed anything in the area at all," Cathy Cadorine said.

But no newspaper mentioned that fact.

Of all the hundreds of public works that Robert Moses was building in New York City during the 1930's, the one whose creation most clearly manifested the same extraordinary capacities he had displayed on Long Island was the project that arose from the first and longest-held of his dreams, the dream of the "great highway that went uptown along the water" and of the great park alongside that had made him exclaim to Frances Perkins in 1914, staring from the deck of a Hudson River ferryboat at the muddy wasteland below Riverside Drive: "Couldn't this waterfront be the most beautiful thing in the world?"

All the qualities that made Robert Moses a genius of public works were needed for the realization of this dream. Its scope was all but unprecedented in urban America—the "West Side Improvement," as he named it, included not only the completion of the long-stalled, five-mile elevated express highway from the southern tip of Manhattan Island to Seventy-second Street; but also the design and construction of the extension of that highway six and a half miles north to the northern tip of Manhattan Island; the transformation

of six and a half miles of muddy wasteland into a park that would make beautiful the city's western waterfront; the throwing of a "Henry Hudson Bridge" across the Harlem River that separated Manhattan from the Bronx; the continuation of the highway through the Bronx to the city line and, beyond the line, to the Saw Mill River Parkway, so that the city would have at last a true outlet to the north. And the problems in the way of its realization were unprecedented as well. At last, twenty years after he had dreamed the dream, he had the power in the city that was half of the elixir needed to transfer the dream into reality. But he still didn't have the other half of the elixir—money.

The amount needed was staggering. The work below Seventy-second Street had been carried out under a 1927 agreement between New York City and the New York Central Railroad, which was anxious for an enlarged freight yard at Thirtieth Street and longer covered train-assembling tracks further uptown because of the introduction of diesel locomotives, which could pull longer trains than steam locomotives. Under the agreement, the city gave the railroad land for an enlarged yard and for depressed tracks leading to it, the railroad in return surrendered its permanent right-of-way through Riverside Park and down Eleventh Avenue, and the railroad and city, under an incredibly complicated arrangement, were to share the cost of constructing a West Side Elevated Highway from the Battery north to Seventysecond Street, the southern border of Riverside Park, as well as the cost of covering the railroad's tracks through the park and through its northerly extension, Fort Washington Park, which ran to 192nd Street.\* By 1929, the city, proceeding with the highway in typical Tammany fashion, down to its adornment with millions of dollars' worth of granite, had spent \$25,000,000 as its share of the job, and the railroad had spent \$84,000,000, for a total of \$109,000,000. And when the Depression brought both railroad and city to the brink of bankruptcy and forced the halt of work, the job was not nearly done; out of 120 blocks in the park, for example, the tracks had been covered for only the first seven, between Seventy-second and Seventy-ninth streets. Twenty million dollars might be needed to complete the highway and track-depressing operations below Riverside Park alone, and Moses' preliminary estimates of the rest of the work indicated that the amount of money needed to finish the whole "West Side Improvement" might well equal the \$109,000,000 already spent.

And the immensity of this amount was only part of the problem. From a political point of view, what seemed to make obtaining it almost impossible was the 1927 agreement, which provided that a substantial part of the cost of the Improvement was to be borne by the New York Central. The city's taxpayers had been aroused by decades of questionable dealings between the railroad and complaisant city officials, dealings such as the one that

<sup>\*</sup> The public used the name "Riverside Park" to refer to both parks and so, for the sake of simplicity, will this book.

had given the railroad the permanent right-of-way through a city park and down a city avenue in the first place. They obviously would view any attempt to use their money to relieve the railroad of its obligation as another "giveaway." No sensible politician would dare to suggest such an arrangement. The railroad's share of the West Side Improvement was going to have to be paid by the railroad—or there wasn't going to be any Improvement. But the railroad was in no position to pay—and obviously wasn't going to be for years to come.

One hundred and nine million dollars was a terrible obstacle to place between a man and his dream. Since the turn of the century other men had been attempting to obtain just a small portion of that sum—enough to build the bridge over the Harlem River and short approach roads; no one but Moses had come up with a fully-thought-out plan for the reclamation of Riverside Park—and had never come close to obtaining funds for even those limited improvements. On five separate occasions since 1904, the city had drawn up plans for a "Henry Hudson Bridge," and when Moses drove up to the Harlem in 1934, the only trace of the plans he could find was the hundred-foot-high column without a statue on top of it and a number of faded billboards, one, it seemed, for every city administration of those thirty years, proclaiming the imminent start of construction. Couple the amount needed with the fact that a substantial part of it had to be provided by a near-bankrupt railroad, and, even to Moses' aides, who had watched RM work fiscal magic before, the obstacle looked insurmountable.

They watched RM set out to surmount it.

Under one part of the 1927 agreement, the New York Central had agreed to pay the city \$5,000,000—and the city had agreed that it would spend that money only on the West Side Improvement. Under another part of the agreement, the railroad had agreed to pay outright part of the cost of roofing its tracks in Riverside Park; \$3,200,000 of the track-roofing cost was still outstanding—which meant that the railroad owed the city a total of \$8,200,000.

If Moses could get this money from the railroad, he would have taken at least a first step toward the realization of his \$109,000,000 dream. But the railroad didn't have it. In order for him to get the money from the railroad, the railroad would have to get it from somewhere else first. Since the Central's own sources of credit were exhausted, Moses would have to obtain the money for the railroad himself—and he would have to give the money to the railroad's hard-eyed directors under conditions that would force them to spend it not on such urgent obligations as weekly payrolls (which the railroad, desperately short of cash, was finding it increasingly difficult to meet) but on obligations that in time of financial crisis the directors might well consider eminently deferrable: the beautification of a city park.

There were, Moses saw immediately, reasons for the railroad directors to want beautification. For one, they, as well as the city, wanted the tracks in Riverside Park covered; that was the only way the long diesel-pulled trains

could be assembled without interference from weather. For another, on part of its debt to the city, the \$5,000,000 part, the railroad was paying 6 percent interest, compounded annually. The railroad had not been able to meet the interest payments since 1929 and they had therefore been added to the principal. By 1934, the principal—the amount on which the railroad was paying interest—was no longer \$5,000,000 but \$6,500,000. Its over-all debt was therefore no longer \$8,200,000 but \$9,700,000. And its 1934 interest payment on the \$6,500,000 would be \$390,000 for that year alone. Since the Depression had forced the cost of money—interest rates—down to well below 6 percent, the railroad was paying the city much more for its money than it should have been.

Now, in the free moments of many days, Moses began to cover pages of yellow legal note pads with little clumps of figures. When aides looked over his shoulder, they saw that he was multiplying numbers together. The numbers being multiplied were millions of dollars; those he was multiplying by were percentages—the aides realized that they were interest rates. And one day the figures fit together into a pattern—a pattern that enabled him to obtain from the New York Central Railroad not \$9,700,000 but \$13,500,000.

The key was obtaining new cash for the Central at an interest rate that would make it possible for the railroad to accept it, use part of it to pay off the \$6,500,000 debt to the city, use another part of it to pay off its \$3,200,000 debt to the city, have enough left over to give the city an additional, new contribution for the West Side Improvement, a contribution it was not required to make under the previous agreement—and still be paying an annual interest less than the \$390,000 it was now being forced to pay. Such an arrangement would give the railroad the track covering it needed while at the same time saving it money.

Moses needed a source that not only would loan money to a private business in precarious financial condition but would loan it money at a very low rate of interest. There was, he knew, such a source. It was the State of New York.

At first, this source did not look like a promising one. The Depression had made the state's own financial position shaky; even if it were steady, Governor Lehman and the Legislature would shy away from spending money to bail out a railroad whose shadowy hold over public officials was legendary.

But Moses knew that there was one source of state money that had been lying untapped ever since the Depression began: the sizable balance in the \$300,000,000 Grade-Crossing Elimination Fund that had been created in 1926. No one had ever thought of using the fund to finance the West Side Improvement—Moses did not think of it himself at first—because "grade crossings" traditionally referred to the lifting of a highway over a railroad track at a single point, and the West Side Improvement, besides being as much a park as a highway project, consisted of building a highway beside or on top of a railroad track—for six and a half miles. But both a railroad track and a highway were involved in the West Side Improvement, and the best

bill drafter in Albany found that there were provisions in the legislation establishing the Grade-Crossing Elimination Fund that would, by a broad interpretation, allow use of the fund for at least part of the Improvement. The interest rate on monies from the fund was, he realized, only 2 percent. Two percent of \$9,700,000 was only \$194,000 per year, almost \$200,000 less than the interest the New York Central was now paying on its debt to the city. The railroad could accept far more than \$9,700,000 from the state, give the balance to the city—and still be saving money. He suggested this course to the railroad and persuaded it to agree to accept \$13,500,000 -an amount on which the annual interest would be \$270,000, representing a saving to the railroad of \$120,000 per year at the same time it obtained its track covering. Then, to reconcile Lehman and the Legislature to the loan by making it apparent to the public that it was no "giveaway," Moses conceived a complicated device which required the railroad to place all interest payments in escrow six months in advance, while making the loan what amounted to a tax lien against all the railroad's properties in the state, properties worth many times the amount of the loan. On a yellow legal note pad, he drafted legislation authorizing the loan and told Jack Madigan to take it up to Albany. If the legislation became law, the city would be getting \$13,500,000 in improvements at no cost to itself. And Robert Moses would see his longest-held dream a long step closer to becoming reality.

The legislative session was rapidly drawing to a close. Madigan painstakingly explained the bill's complexities to those legislators who had difficulty understanding them. Others—well, the railroad wanted the bill and the railroad could help persuade some of those others. When some legislators still yelled "giveaway," Moses toughened the tax-lien provision. The bill passed three days before the end of the session.

Then there was the Governor. Moses received word that Lehman didn't want to sign. The Governor, he was informed, was leery about its legality and about the "giveaway" implications. And to make matters stickier, Lehman and Moses were in the midst of a bitter battle over another Moses maneuver. Since the bill was passed during the last three days of the session, it was a "thirty-day" bill. The Governor had to sign it within thirty days of the session's end or the bill was dead. And on the twenty-ninth day after the session's end, Lehman still had not signed it.

"Moses sent me up to see him because he knew he liked me," Madigan recalls. "I was up in the Capitol at nine o'clock in the morning. And the Governor let me sit out in his outer office on my fanny from nine o'clock in the morning until five-ten in the afternoon. Twice I ran out and called Moses because I knew how worried he was. I told him, 'He's letting me sit.' Moses said something like 'Stubborn bastard!'

"Finally I got in to see him. He jumped all over me. I told him how much the city was going to get out of this.

"He says, 'Moses'll get all the credit for this.' I said, thinking fast, 'Governor, you should be able to share the credit.' He said, 'He's not the kind who likes to share much.'

"I said, 'Governor, nobody in the world knows if you're going to veto this bill or not.' His PR man was Joe Canavan,\* who was one of the very best. I said, 'Have Canavan write up your own release and give it to the Sunday papers. I have glossies right here that you can use.' I said, 'Governor, tomorrow's the last day!'"

Madigan was offering to let Lehman instead of Moses announce that he would sign the bill and reveal the benefits it would give to the city, thereby gaining identification with the project and basking in the praise that newspapers would undoubtedly bestow on everybody connected with it. Madigan was reminding the Governor that the story would undoubtedly get a good play because Saturdays are generally slow news days. He was even offering to let the Governor distribute the glossy, ready-for-newspaper-reproduction photographs of the improvements the \$13,500,000 would buy.

"The Governor said, 'That'd make Bob so goddamned mad.' He smiled. But then he said, 'I need a memorandum from the Comptroller' [a written opinion, which Lehman could use to justify his signing, that the bill was constitutional]. Bob had briefed Charlie Mullins in the Comptroller's office about the bill because he knew Lehman trusted him. I said, 'Governor, Charlie Mullins is over there right now and he knows all about this.' Lehman called over there and Mullins agreed that the bill was legal. So everything worked out all right."

Of the approximately \$109,000,000 that had stood between Robert Moses' dream and reality, \$13,500,000 had been acquired.

There was \$95,500,000 to go.

The arrangement with the New York Central soon gave Moses \$4,000,000 more. As part of his plan to expand Riverside Park, he wanted to sink bulkheads out from the shoreline and fill the water behind them with rock and earth. Such fill was expensive—more than two and a half dollars per cubic foot. But Moses suddenly realized that the excavations that the Central would now be able to finish below Seventy-second Street would provide vast amounts of fill. Inquiring as to what was being done with it, he was told that it was simply being transported "somewhere on Long Island" and dumped there. He pointed out to railroad officials that if they let him send trucks to the excavations and haul it away and use it in Riverside Park, they would save the cost of transporting it. They agreed, and in this fashion he obtained 1,500,000 cubic yards of fill—\$4,000,000 worth.

There was \$91,500,000 to go.

"RM has this mind—he can read a piece of legislation and remember every darn thing in it," Sid Shapiro recalls. "He seemed to know the wording of every darn bill in Washington and in Albany that had ever been passed relating to public works. We were talking about the Seventy-ninth Street boat

<sup>\*</sup> Joseph J. Canavan, former editor of the World.

basin and he said, 'Let's build a real boat basin,' " the façade of the marina decorated with stone gargoyles and behind it a fountain with jets of water arching from the mouths of brass turtles. "Have you ever heard of a boat basin with gargoyles? Well, I hadn't either. But he remembered some obscure federal statute that had been passed—oh, years before—to encourage the use of artwork on public works." If we put on gargoyles, Moses said, not only would the boat basin be beautified, but the money from the fund could be used to build it. "One day, RM said, 'What happened to some fund I remember that was set up [by a private philanthropist] so that it could only be used to decorate a public project with ornamental friezes? Is there any money left in that?' Well, we looked it up and there was. So RM said, 'Well, then, let's have a frieze.' We told our boat basin guy about this. These guys are usually hard-boiled fellows, think in terms of jetties, groins, sheet metal, riprap. When you tell one of them gargoyles and friezes, he almost falls off his designer's stool." But the two funds contained a total of almost \$100,000 for which the boat-basin phase of Robert Moses' dream would be eligible.

And there was \$91,400,000 to go.

The Seventy-ninth Street boat basin was, of course, the magnificent structure Moses had envisioned for Riverside Park years before—a combination marina, riverside restaurant and pedestrian promenade. In the plans that Moses finally approved, throwing his arms around chief architectural engineer Clinton Lloyd in joy, the top level was a large traffic circle that allowed cars coming from the city's interior access to the "great highway along the water." The center of the circle was hollow. Down inside it, on the middle level, was a cool, shadowy interior courtyard. The center of the courtyard was the fountain, its murmur just loud enough to drown out the noise of cars and city above it. Around the fountain was a low marble bench for passers-by to sit on. On the river side of the courtyard were three high, wide arches. Beyond them was a broad outdoor terrace, overlooking the marina below it and the river beyond; designed to hold both the gaily canopied tables of the riverside restaurant and the broad, tree-shaded pedestrian promenade. And the bottom level of the structure, completely concealed inside it and reached by access roads circling down around its outside from the traffic circle above, was a two-hundred-car garage for the owners of boats docked in the marina. The structure did not resemble a railroad gradecrossing elimination at all, but by coincidence Harold Ickes, the PWA Administrator, perturbed that PWA expenditures were not generating enough immediate employment, had recently promised quick approval for projects for which plans were ready—and when a reporter had asked what kind of projects the administration had in mind, Ickes "said he thought that elimination of highway grade crossings over railroad tracks offered one means . . . that could be undertaken immediately." There were no highways over the otracks around Seventy-ninth Street to be eliminated, but there were tracks to be covered and roads to be built—and Ickes sounded anxious for plans.

Working night and day, Lloyd and a team of engineers from Madigan's consulting firm completed them in a week, and Madigan headed down to Washington with the blueprints under his arm. The first thing that PWA officials there noticed when they unrolled them was their new, very prominently displayed title: "Seventy-ninth Street Grade Elimination Structure." If the officials noticed that it didn't resemble any other grade-crossing elimination structure ever built, they didn't mention the fact, the only demurrer coming from one narrow-minded bureaucrat who commented that "the brass turtles and comfort stations were a little too much to be tacked on to a grade crossing" and slashed off the \$154,000 cost of those items, and Madigan returned with a promise that the PWA would chip in the \$1,766,000 that the materials for the rest of the structure would cost. Then Moses told La Guardia that for just \$154,000 more the city could have not just a boat basin but a beautiful boat basin—and the Mayor scrounged up that money. Then Moses told the CWA that the materials for the project were paid for and he could put men to work immediately, and the CWA contributed more than \$3,000,000 for wages on work on the boat basin, bringing the total money raised for the structure to more than \$5,000,000.

And there was \$86,400,000 to go.

"RM never seemed to run out of ideas," Shapiro would recall. "He said to us, 'We'll build the highway part of the way along the New York Central tracks, so we'll be eligible for state aid to railroads.' Because there were boat basins along a river involved, he found clauses in the [federal] Rivers and Harbors Act under which we could get money. There was federal highway money available, of course, so he said, 'We'll tie it in with the George Washington Bridge, so it'll be an interstate highway and we can get funds that way.' Because he had to demolish some buildings ["You'd have to tear down a few buildings at Seventy-second Street and bring the highway around a curve," he had told Frances Perkins twenty years before, and that was just how it worked out], he even found a way we were eligible for federal housing funds. On that one project, we had housing, interstate highway, rivers and harbors, and railroads." Moses obtained a total of more than \$12,000,000 from such sources.

And there was \$74,000,000 to go.

Still \$74,000,000 to go. And much of this money was needed for materials and equipment which could be obtained in no other way than by putting up hard cash, cash that Moses didn't have. He had to economize.

And he knew where to do it. The cost of the Riverside Park he had envisioned as a young man, a park in which the ugly railroad tracks were covered—covered with lush lawns and trees, a park crammed lavishly with marinas and waterfront promenades and tennis courts and playgrounds—was running about \$8,000,000 per mile. He continued to develop the park lavishly for the first two of its 6.7 miles, the two miles bordered by a neighborhood inhabited by the upper and "comfortable middle" classes he

liked to develop parks for. But for the rest of its length—from about 110th Street, where the neighborhood was becoming perceptibly poorer—he scrimped, putting in few improvements and doing those in a cheap, slapdash style. One Hundred and Twenty-fifth Street was the southern border of Negro Harlem. Already, in 1934, black faces were appearing on many of the side streets behind Riverside Drive. From 125th Street north, Robert Moses put almost no improvements into Riverside Park, designing its northern 3.3 miles with one aim in mind: to do them as cheaply as possible.

The aim was accomplished. The development of the southern two miles of Riverside Park—the stretch south of 110th Street—cost \$16,300,000, or about \$8,000,000 per mile. The development of the northern 4.7 miles of Riverside Park—the stretch north of 110th Street that included Negro Harlem—cost \$7,900,000, or about \$1,700,000 per mile, and thus saved Moses about \$6,300,000 per mile, or a total of \$29,000,000 less than it it would have cost if he had built it to the same standards as the southern section.

And there was \$45,000,000 to go.

Of this \$45,000,000, about \$15,000,000 represented the cost Moses was figuring for the section of the Improvement above 192nd Street, so that only about \$30,000,000 stood between him and the completion of his dream the length of Riverside Park. He informed the Board of Estimate that \$20,000,000 of this amount would be for labor, and he could get the labor free from the CWA if only he had the \$10,000,000 for the rest of the materials and equipment. Were they going to let the money be wasted for want of \$10,000,000? The Board caved in and gave it to him-or, rather, since it didn't have the money to give, it authorized a \$10,000,000 assessment on Riverside Drive property owners. At the same time that he was telling the Board that he could get the \$20,000,000 worth of labor from the CWA if only they gave him \$10,000,000 worth of materials, he was telling the CWA that he could get \$10,000,000 worth of materials from the Board if only they gave him \$20,000,000 worth of labor. The CWA authorized the rehabilitation of Riverside Park. It authorized the building of the Henry Hudson Parkway through the park; since the CWA was not allowed to build highways or parkways, it called the parkway "a park access road" on the report it submitted to Washington.

And he had the \$30,000,000.

He had all the money needed to complete Riverside Park. He had 6.7 miles of the dream, enough to get it all the way up to 192nd Street, in the bag.

There were three miles—and \$15,000,000—to go.

North of 192nd Street the shoreline of Manhattan Island climbed steeply away from the Hudson River into the high bluffs of Fort Tryon and Inwood Hill parks. There was a sharp, quick break in the bluffs where the Harlem River sliced through to meet the Hudson and then the bluffs were part of the

Bronx, and perched atop them and on the slopes leading down to the two rivers was the residential community of Spuyten Duyvil, somewhat more thickly settled than Riverdale, which lay between it and 263rd Street, the city's northern border.

All previous plans for a through highway to the north envisioned the highway swinging sharply inland when it got to Fort Tryon Park so as not to disturb the wooded beauty of its hills, which formed a serene setting for the Cloisters that John D. Rockefeller, Jr., was building atop them, or those of Inwood Hill Park beyond, which constituted Manhattan's last piece of unspoiled forest. Under these plans the highway would run along the easternmost edge of the two parks, taking a thin slice from the edge at the point where it sloped down to meet the rest of the city, and obtaining the rest of its right-of-way from the city streets adjoining the parks and from condemning the relatively few single-family houses that had been built along them. Besides leaving the two forest parks unspoiled, this route had the further advantage of allowing the Henry Hudson Bridge to cross the Harlem River not by leaping from high bluff to high bluff, which would require an expensive high-level bridge, but by crossing from the low land east of Inwood Hill Park to a low-lying section of the Bronx opposite it called Marble Hill that was the site of nothing except a filthy shanty town and some boxcars that had somehow been left on the site for years—no one was sure how they had gotten there—and were now serving as the home for about a hundred homeless men. Marble Hill could use a good cleaning up anyway. Once in the Bronx, the highway would run through Marble Hill and a corner of Riverdale until it reached Van Cortlandt Park, where it would take right-of-way from the park's westernmost edge so as not to disturb it any more than necessary.

Moses found that using this route would cause him problems—financial problems.

Avoiding Fort Tryon and Inwood Hill parks meant that Moses would not be able to use the "free" labor provided for him on "park access roads" by the CWA. The parkway would have to run alongside the parks, on city streets. Under existing federal legislation, it would therefore fall under the jurisdiction of the Bureau of Public Roads—and the legislation establishing the Bureau specifically prohibited it from extending any aid, for laborers' pay or any other expenses, on any road leading to a toll facility. Since Moses was planning to finance the construction of the Henry Hudson Bridge through the sale of bonds of the Henry Hudson Parkway Authority he had had the Legislature create, he would have to have tolls on the bridge to pay off the bonds. The city would therefore have to pay for the parkway north of Riverside Park. Furthermore, there was the cost of condemning buildings needed for the right-of-way. Even if a state or federal agency had been willing to pay for the buildings, it could not legally do so; under one of the most fundamental provisions of the City Charter, only the city had the power to condemn property within its borders. Paying for both labor and land north of Riverside Park would cost the city about \$5,000,000 more.

Robert Moses decided not to swing inland when he got to Fort Tryon Park.

Running the parkway straight through that park and Inwood Hill solved many of his financial problems at a single stroke. The land acquisition problem was solved instantly and completely; since park land was already owned by the city, no land would have to be acquired. As for CWA-paid labor, it couldn't be used on a road without approval from the Bureau of Public Roads, but it could be used on "park access drives"; in fact, the CWA looked favorably upon the building of such drives because they made parks more accessible to the public. The sections of parkway running into Fort Tryon and Inwood Hill parks certainly met the definition of "park access drives" and who was to say where they stopped; why could not the drive continue into the park itself-and, perhaps, across it? Moses had learned from his previous dealings with the CWA that once he got a project in a park started, once he got the first stake driven for it, it was almost impossible for the CWA to refuse to let him complete it. Run the parkway through Fort Tryon and Inwood Hill parks and the cost of the northern section of the West Side Improvement would be not \$15,000,000 but no more than \$10,000,000—which happened to be the amount that the Henry Hudson Parkway Authority—Robert Moses, sole member—was authorized to raise by the sale of its toll-revenue-secured bonds. Using the direct route through the parks would, moreover, have other financial advantages as well: Moses' preliminary discussions with bankers had demonstrated to him that they had no great enthusiasm for buying bonds for a toll bridge that would be located only a few hundred yards from a free bridge—the present Harlem River drawbridge on Broadway. They believed that drivers would not pay a toll if a free alternative was so close by, particularly if the parkway's drawbridge also had to be raised—if only occasionally—when a ship came through. Moses didn't feel their argument was correct—he was sure drivers would be willing to pay to get off jammed Broadway and onto a modern parkwaybut placing the Henry Hudson Bridge on the high bluff a mile to the west of the Broadway bridge would make the bridge high enough to allow ships to pass underneath it. He was sure that the bankers would then have no possible reason for a lack of enthusiasm for the project. Amortizing the forty-year bonds he wanted to issue could be done if only 2,000,000 of the 14,250,000 cars that came into and out of Manhattan each year over the Broadway bridge used the Henry Hudson instead and paid a ten-cent toll on it-and he was sure that one out of every seven drivers would pay ten cents per trip for the added convenience.

But Moses found that vision was not in plentiful supply on Wall Street. He had felt sure that this \$10,000,000, the last \$10,000,000, all that was left between him and the realization of his dream, would be the easiest part of the cost of the West Side Improvement to obtain. Instead, it proved to be the hardest.

The Depression had ended the myth that the bonds of public authorities, even public authorities whose credit was backed by a municipality, were

risk-free investments. Since Black Thursday, more than two hundred municipalities across the United States had defaulted on their own bonds, turning them into worthless pieces of paper. And if the bankers needed an example closer to home—and bankers didn't—they knew how close New York City had come to default. Michael J. (Jack) Madigan, who was trying to persuade investment bankers to agree to purchase the bonds if the Authority put them on the market, had to report back to Moses that the bankers were afraid to make the investment.

The son of an impoverished bartender, Jack Madigan had come out of the Pennsylvania hard-coal country in 1907 at the age of thirteen to enter the construction industry as a waterboy lugging buckets for thirsty work gangs, and by the time, in 1928, he was promoted to supervisor for one of the Jones Beach contractors, he had spent his whole life with the gangs. With his ruddy, square face and grizzled hair he looked like one of them, and he was as boisterous as they as he crowded with them into South Shore taverns after work to wash the sand of the barrier beach out of his throat. His "dese, dose and dem" speech revealed his lack of formal education; he was addicted to awesome malapropisms: "From the standing point of finances," he would say of Tammany's handling of the Triborough Bridge project, "what a terrible finesco!"

But during the tension of the Jones Beach construction—the firm Madigan worked for was the one that went broke on the job—Moses came to know a different Jack Madigan, a deliberate, mild-mannered man who, when his opinion was solicited, would stand very still, his feet close together, his eyes staring into the distance for a long time before he was ready to give it—and who, when he was ready, gave it in a voice that was quiet, firm and precise. When he quit his job and with a friend, Richard V. Hyland, formed Madigan-Hyland, Inc., Consulting Engineers, with "offices" in the furnished room they shared over a Rockville Centre restaurant and files stored in the back seat of Hyland's car, Moses gave them Long Island Park Commission contracts, contracts that made Madigan a millionaire.

And the uneducated Irishman filled an abandoned cigar factory in Long Island City with expensive, college-trained talent—among his employees, whom he called "my Phi Beta Kappa keys," was the brilliant Emil F. Praeger, who during World War II, as chief engineer of the U.S. Navy, would design the floating dry docks that were used in the Normandy landings.

Moses found, moreover, that Madigan was talented with money as well as men—a fact the author learned during a series of three-hour private Madigan lectures on the financing of public works. (One lecture began and ended with the words "Money means all: unless you get it, you're going nowhere, brother.") "He had an extraordinary native shrewdness," Moses said, and when Moses had to select a representative for his first attempt to tap the sources of private funds that Wall Street bankers controlled—the sale of Henry Hudson Parkway Authority bonds—he selected the bartender's son. He selected right. A banker was later to say, "He can tailor a bond issue as neatly as an artisan assembles a stained-glass window."

But bankers, burned by the losses they had taken on municipal bonds

during the Depression, would not even try on the Henry Hudson bond issue for size. In the preceding twenty-four months, not a single new issue of such bonds had been successfully floated in the United States. The bankers informed Madigan that they were not interested in the Authority's bonds unless the "coverage" of those bonds (the earnings that would enable the Authority to pay interest on and amortize them) was at least 1.75 and preferably 2.00 (twice as much as would be needed for that interest paying and amortization). "They were scared, that's all," Madigan would recall.

Moses' own surveys had convinced him that not merely one out of every seven but one out of every three cars using the Broadway bridge would pay ten cents for an easier trip over the Henry Hudson Bridge. He did not have the slightest doubt of it; in fact, he considered that figure ridiculously conservative. And one-third of the Broadway bridge traffic was 3,560,000 cars per year—or, at ten cents per car, \$356,000 in toll revenues. You could subtract the \$70,500 annual cost of paying toll collectors and keeping the bridge painted and in repair and still have left over almost twice as much as would be required to pay the yearly interest and amortization on the \$10,000,000 bond issue which would provide the funds needed to build a six-lane Henry Hudson Bridge across the Ship Canal, and to continue the parkway north to link up at the city line with the Saw Mill River Parkway.

But Moses' figures were not conservative enough for the bankers. "We were trying to sell them the idea that people would pay ten cents to avoid that terrible route up Broadway," Madigan recalls. "They couldn't see why you would pay ten cents when you could go the other way for nothing. The idea that people would pay for convenience hadn't yet been established."

All through the summer of 1934, Madigan-Hyland counted the cars traveling north and south on Broadway and Riverside Drive to show the bankers the tremendous volume on which the new bridge would be able to draw. But the bankers still balked. "They wanted illustrations of previous situations where a free—if less convenient—bridge was competing with a toll bridge and the toll bridge had been successful, and there weren't many," Madigan recalls. "Most toll bridges were built to give access to a place where there wasn't any other access. We finally found one in Miami [where the toll Venetian Causeway was highly successful although in competition with a free County Causeway]." But the bankers still balked.

Madigan finally had to report to Moses that their final decision was that they would purchase no more than \$3,100,000 in Authority bonds, an amount for which the traffic *they* estimated would use the Henry Hudson Bridge would provide 1.75 coverage.

Moses worked frantically to get the cost down to that level. By persuading the CWA that the construction of the parkway through Fort Tryon and Inwood Hill parks could be called in its entirety a "park project," he got the labor for that section of parkway free. When he persuaded La Guardia to pick up the tab for hire of the construction equipment needed, the entire cost of that section—\$700,000—could be knocked off the amount of bonds that had to be sold, reducing that amount from \$10,000,000 to \$9,300,000. On the northern, or Riverdale, side of the bridge, he had already planned

the parkway to run along Spuyten Duyvil Parkway for almost two miles, so that only limited condemnation would be needed. Now the Authority could no longer pay for even that condemnation. La Guardia said the city couldn't do it, either; an estimated \$2,500,000 was required and there was no money around for it. The only solution was to run as much of the parkway as possible through the only city-owned land in Riverdale: Van Cortlandt Park.

Doing this reduced the cost of the right-of-way to \$1,260,000. The Authority had been supposed to pay for the engineering plans for the northern and southern sections of the parkway. Moses persuaded State Highway Commissioner Arthur W. Brandt, one of his admirers, to have state engineers draw the plans. This saved about \$200,000 more, and reduced the amount to be raised to \$9,100,000. Then Moses got a break. In December 1934, Madigan returned from Washington with word that as soon as the new Congress convened, it would make a new appropriation to the PWA of \$400,000,000—on which the agency would be allowed to waive the past requirement that grants for road-related projects had to be matched by state contributions. Rushing to Albany, Moses persuaded Lehman to use part of the new money the state would receive to construct the Riverdale portion of the parkway. Since this section had been expected to cost \$2,750,000, the amount to be raised could be reduced to \$6,350,000. Moses went back to La Guardia. Was the Mayor going to deny the city this \$10,000,000 project for want of \$1,260,000 worth of right-of-way? he asked. The Mayor agreed that he could not let that happen. He agreed that the city would purchase the right-of-way needed to widen Spuyten Duyvil Parkway, although at the moment he didn't know where he would find the money. The amount needed to be raised by the bond sale was reduced to \$5,090,000.

Try as he would, however, Moses seemed unable to reduce the amount any further. He had already sliced from the Authority's obligation every cost except that of the bridge itself. Federal funds could not be used for the bridge because it was a toll facility; state funds could not be used because the Legislature would never authorize another highway expenditure in the city; the city had no money to help. Time and again, Moses sent Madigan back to his engineers; time and again, Praeger, whom Madigan had assigned to head the team working on the project, gave him the same answer: six lanes of traffic were needed on the bridge; a bridge with six lanes on a single level or deck was so wide that three arches running from one side of the river to the other were needed to support it; and a three-arch bridge could not be built for a penny less than \$5,000,000. It certainly could not be built for \$3,100,-000. Praeger had costed out a narrower, two-deck bridge built on two arches. But the weight of such a bridge was virtually the same as that of the wider bridge; since that weight had to be carried by two arches instead of three arches, the arches had to be made much stronger; the cost of the two-deck bridge was actually a little higher than the single-decker.

"He [Moses] was really totally discouraged," Madigan recalls. "I had never seen him so low." The two men had agreed that Madigan would hold one final meeting with the bankers, and on the Friday morning in December

on which that meeting was held, Moses kept looking up from his work in his 80 Centre Street office to ask his secretaries if there was any word from the Irishman.

Madigan arrived at Centre Street shortly before noon and told Moses that the last-ditch attempt had failed and that "we might just as well give up the idea that they would change their minds. Three-million-one was as high as they would go." The engineer recalls that he had been scheduled to have lunch with Moses, but that "we didn't feel much like eating. I went out and got into my car to go back to my office."

But then, Madigan recalls, as "I was driving along, I happened to think of a bridge I had once heard about in Havergrass [Haverstraw], Pennsylvania, across the Schuylkill River. It had been built by the Pennsylvania Railroad, but then the railroad didn't need it any more and gave it to the community, see? It was a narrow two-lane bridge because there was just enough room on it for a couple of railroad tracks. The community put a floor on it and used it for cars. But then, see, they decided they needed more capacity so they just strengthened up the steel and put a second deck on it.

"Well, it came to me just like that. I remember I leaned forward and I said to the chauffeur, 'Step on it, goddammit!' We hurried up to the office and I had a great chief engineer—Emil Praeger—and he was there and I said to him, 'Suppose we left out one of our archways [arches], strengthened up the other two of them and made the bridge only four lanes wide—how much could we possibly reduce the cost?' So the office worked all day Saturday and all day Sunday, and all night, too, see, and by Monday noon we knew that everything was working for us. There was rock on both sides of the river, see, so you could put the weight we had been going to put three arches on on two and the rock would hold it. And we knew that we could build what you know as the lower deck of the Henry Hudson Bridge for \$3,-100,000, and we were able to show that if the traffic was to be up to our estimates, and we needed more lanes, we would be able to strengthen up the steel on the archways and build a second deck on top of the lower deck at a future date when more money was available.

"When I brought it in to Moses, he studied it a little bit before he said anything. And then he looked up and said, 'Now we have a chance!' "

By the end of that week, the bankers had agreed to purchase \$3,-100,000 of Henry Hudson Parkway Authority bonds, the money to be used to construct a one-deck, four-lane bridge. And they had agreed to incorporate in the purchase agreement a provision that if traffic on the bridge lived up to Moses' estimates and warranted further expansion, they would, as soon as the traffic reached that point, purchase an additional \$2,000,000 of Authority bonds, which would enable the Authority to reinforce the two arches and the steelwork on the bridge and build a second deck on it. Although the lawyers for the Authority and the bankers would not finish dotting the i's and crossing the t's in the agreement until March 1935, Moses and Madigan knew the money was in the bag. The financing of the West Side Improvement was complete.

In later years, as he grew steadily richer, Jack Madigan would become addicted to the way of life of the rich. The living room of his Fifth Avenue apartment would be furnished in shades of gold—golden carpet, golden loveseats, golden armchairs. But over the long golden sofa, in the place of honor in the room, hung a simple engineer's sketch in black and white: a rendering of the arches—two arches, not three—that support the Henry Hudson Bridge.

Robert Moses had envisioned the West Side Improvement with the eyes of a visionary. He had discerned a way to finance it with the eyes of a banker, a very astute banker. The financing of the West Side Improvement was a supreme example, perhaps the supreme example, of the practical side of Robert Moses' genius. For more than half a century, New York City had strained to find a way to build the West Side Improvement and had been unable to find sufficient funds to build it on even the most limited scale. In slightly more than one year, Robert Moses had found the funds to build it—on a grand scale. True, one source of his financing, the federal relief program, had not been available before in the dimensions it was available under CWA and WPA. But that was only one source out of more than a score that he pulled together. The catalyst that finally brought the West Side Improvement to fruition wasn't Washington's largesse but Moses' genius for turning a dream into reality, for accomplishment, for Getting It Done.

But Robert Moses was in the city now, not on the Island. While on the Island his proposals had been opposed most vigorously by selfish interests, in the city his West Side Improvement proposal was being opposed vigorously by people whose interests were not selfish at all, who cared very deeply about the city and who felt that while an Improvement was needed, the form in which Moses was proposing to build it was not the best form—was in fact a form that might even bring the city harm, harm that might outweigh the good—and who also felt that it was not necessary to build it in that form at all.

Among these men were two young reformers, Bill Exton and Bob Weinberg.

Robert C. Weinberg was the Park Department architect whose early admiration for Moses had already been tempered by his refusal to take neighborhood preferences into account in the designing of neighborhood playgrounds. William Exton, Jr., was a witty young man-about-town whose tireless pursuit of romance (his list of girlfriends was legendary among his friends) was constantly being interrupted by his penchant for working night and day for reform causes that caught his eye.

Although Exton and Weinberg were both still in their twenties, both Harvard graduates (the brilliant Exton had graduated at nineteen) and both active members of the Citizens Union, the City Club and the Park Association, they had never been close friends. But the West Side Improvement was to make them close. For Exton loved Inwood Hill Park and Weinberg loved

Spuyten Duyvil. And each of the two young men felt that the "Improvement" would destroy the thing that he loved.

Inwood Hill Park was not a park at all, but a wilderness, a wonderful wilderness, a last reminder, crowded into the craggy hills in the northwesternmost corner of Manhattan Island by the relentless spread of concrete, that once almost all of the island had been covered with lush green forests. To the east, the hills sloped down into a valley that opened on a beautiful, peaceful cove formed by a U-curve in the Harlem River. In the valley, the site of the old Algonquin village of Shora-Kap-Kock\* ("in between the hills"), was a little museum operated by an Indian woman and a pottery studio, complete with kilns capable of the most delicate ceramics. In the cove, the last bit of natural waterfront on Manhattan Island and the reputed site of the landing of a longboat from Henry Hudson's Half Moon three hundred years before and of a battle between the longboat crew and the Algonquins, stood a giant tulip tree under which Hudson had held a powwow with the Indians. On the opposite, or Hudson River, side of the park's hills, two hundred feet below the steep escarpment that formed their western edge, was a narrow strip of landfill that held a New York Central roadbed. But in the three hundred acres covered by the hills themselves, there was hardly a sign of the hand of man. The Lords of Lord & Taylor had once lived in two mansions on the escarpment, but these had burned to the ground decades before. When Exton turned off the city's asphalt streets and wandered up the steep slopes—it was their steepness that had saved them from development—he found himself in a different world, a world of wild underbrush and towering trees. Hiking up to their crest, under foliage so thick that it all but blotted out the sun, he could pick wild hackberries and blueberries or, in spring and early summer, could stop and look for a while at the fragrant purple- or white-blossomed lilac bushes, some of them three times as tall as he. At the crest, out on the escarpment, was a view that guidebooks marveled over-"perhaps the finest Manhattan offers," said one: the broad sweep of the Hudson below and, looming above the river on its far shore, the endless miles of the Palisades, unmarred north of the George Washington Bridge by a single man-made structure. If Exton sat so that he couldn't see the bridge, there was nothing to remind him of what he had left behind at the foot of the hills except for the occasional passage, far below him, of a little toy New York Central train.

Exton loved that world. "On the top, there was a big outcropping of granite on the north end, and I used to go up there in April and just lie on it in the sun and look down at the water. I was no great outdoorsman, I'm not trying to say that. But when I went into Inwood Hill, I really felt that I had gotten away from the city. And sometimes I needed that feeling."

The idea of altering that world horrified him. "It was the only real woodland left on Manhattan," he would recall years later. "It was the last hunk of primeval forest in the whole metropolitan area. It was unique. It was irreplaceable."

<sup>\*</sup> Origin of the name of Spuyten Duyvil's Kappock Street.

And to alter it with a highway! "When you were up on top there, you were away from the roar of cars and the smell of gasoline. It was the only place on Manhattan where you could still say that." Moses' proposed Henry Hudson Parkway would bring the roar and the smell right into that beautiful spot. In fact, it would, to a large extent, eradicate it, bury it under six lanes—140 feet in width—of concrete, since Moses' plan was to run the highway right along the escarpment. Moses was saying that running the road through the park would destroy "only a few trees." Exton knew that couldn't be true: so thick were the towering elms, maples and oriental pines that no road 140 feet wide could be picked through them without cutting down hundreds. A highway would have values—Exton, having served on City Club committees studying the traffic problem, was aware of the need for a northern outlet—but this unique, irreplaceable forest offered the city other values that a highway would destroy, and "it just didn't make sense" to destroy them if there was any alternate route available.

Weinberg saw other values in Spuyten Duyvil, the residential community located atop the bluffs that faced Inwood Hill across the Harlem River. The community was not a "prestige" area like Fieldston directly to the north; but it was proof that even within a large city even families without wealth could find peacefulness, seclusion and beauty. Its modest singlefamily homes—there were only three small apartment houses in Spuyten Duyvil then-were built on small plots. But they were built along ravines that led down to the Hudson and along lanes that rambled among flower gardens and picturesque rock formations and were shaded by lordly oaks and elms. A reporter who visited Spuyten Duyvil in 1935 wrote in surprise that it was a "village," a village in the midst of a city, a village straight out of "some remote part of rural England," complete to its four big, fieldstoneand ivy-covered English country churches. It was a village that possessed a beautiful view-many of its homes enjoyed a magnificent prospect of the Hudson and the Palisades—and an asset that was even more valuable in the city: quiet. Tucked into a corner of the Bronx as it was, it had no through traffic; the only thoroughfare wider than a country lane in all Spuyten Duyvil was "Spuyten Duyvil Parkway," a two-lane road whose right-of-way, lined by trees so big that their branches met over it umbrella fashion, was barely thirty feet. Moses' proposal to turn it into a 140-foot-wide Henry Hudson Parkway by tearing down hundreds of the trees and condemning lawns of the bordering houses horrified the community. The road would split the community in half, make it difficult to get from one side to the other, and would funnel through it a great stream of traffic. "It will be the end of beautiful Spuyten Duyvil," wailed one resident. Weinberg-whose work in city planning at Harvard and, after graduation, with the pioneering urbanologist Werner Hegeman had taught him the importance of human values in a city—was interested in Spuyten Duyvil both because his family owned real estate there and because the community embodied so many human values. He began to study Moses' plan, and his conclusions were the same as Exton's: that "it made no sense" if there was any alternate route available.

And as the two young men began to study Moses' West Side Improve-

ment plan together, they realized immediately that there was an alternate route—the one that had been proposed before Moses, a route that, upon reaching the southern border of Inwood Hill Park, swung inland so that it would run not through the most beautiful portion of the park but along its eastern edge and adjoining city streets, that would cross the Harlem River on a low-level bridge, inland from the Hudson, whose northern terminus would not be Spuyten Duyvil but the Marble Hill shanty town in the hollow below it, and that would continue north not through Spuyten Duyvil but through largely uninhabited areas of Marble Hill until it reached Van Cortlandt Park, where it could run just inside the park's edges, taking just a thin slice from it, until it reached the Saw Mill River Parkway.

There were, as Exton and Weinberg saw it, certain obvious advantages to this alternative: it would spare Inwood Hill and Spuyten Duyvil, eliminate the Marble Hill shanty town, and, because a low-level bridge costs less than a high-level, be less expensive than Moses' plan. (Condemnation costs would still be minimal because most of the right-of-way would be taken from the park edge and adjoining streetbeds; only a few single-family homes would have to be condemned.) Their route was only three-quarters of a mile longer, an inconsequential factor when weighed against the preservation of the city's last virgin woodland and a uniquely peaceful residential community.

As Exton and Weinberg had been thinking about the alternatives, moreover, they had come to realize that their route had certain other advantages, not so obvious but, perhaps, even more important. It was difficult for them to define these advantages, because in the early 1930's there was almost no literature to draw upon; it would not be for more than a decade, in fact, that terms to explain what they were thinking would come into common coinage—like "ecology" and "environment" and "human scale." Moreover, the defining might well not bring them much popularity, they knew, because a nation that worshipped the engineer was not yet ready to be told that the engineer's values might not be the last word in highway design. But they struggled to define them nonetheless.

"I remember realizing that he [Moses] was thinking in terms of the view of the river, the view that the motorist would have—he was thinking in terms of the motoring public, of automobiles," Exton says. "Well, a motorist spends a few seconds at a spot and maybe he can't even look at it; maybe he has to be looking at the car ahead of him. But the pedestrian spends a long time at a spot. He can sit down and look at it. So it's the pedestrian we should be thinking of. And then there was the damage to the park itself. Cutting down the trees would probably interfere with the natural drainage system, and then you'd have to start building drains and God knows what else." Weinberg, putting his thoughts in writing, wrote Exton that building a parkway through Spuyten Duyvil would, simply by making Spuyten Duyvil more accessible, bring many new residents—and many apartment buildings—to the area and to all Riverdale. Therefore, before the parkway was built, plans to accommodate the new residents should be made. If apartment houses were simply plumped down helter-skelter onto Riverdale's narrow country lanes, their residents' cars would jam them, turning Riverdale

into just another extension of the noisy, traffic-jammed city. If a few of the streets were widened, and if apartment-house building was restricted to those streets by zoning, and if areas near them were zoned for stores, the apartment residents would be able to walk to stores and would therefore not have to do so much driving within Riverdale, and the quiet, country serenity of the nonapartment areas could be preserved. But Moses refused to do any advance planning himself—he would not even allow Riverdale civic leaders to tell him where overpasses across the parkway should be built to be most convenient for the community-or to allow anyone else to do any: to minimize community antagonism, he kept the exact route of the parkway secret as long as possible, which made advance zoning changes impracticable. "These are not competition projects, but units in the living life of the people" that will "affect the daily life of the thousands of individuals and families who live within the adjacent neighborhoods," Weinberg wrote. "Before the West Side Improvement is built, its effect on those neighborhoods should receive greater study. . . ."

Analyzing the rest of the West Side Improvement, Exton and Weinberg did what no one else in the city was doing: took a close look at Moses' plans. Moses had stated that the Henry Hudson Parkway would run through only "a corner" of Van Cortlandt Park. Actually, the two young reformers found, it would run through its center. And the location of a giant cloverleaf planned in the center to provide an interconnection with another parkway Moses was proposing—the Mosholu—was near the only fresh-water marsh of any size left in all New York. When biology teachers had protested to one of Moses' aides about the destruction of part of the marsh, the last spot in the city at which students could study marsh plants, birds and animals, the Moses Man had assured them that "destruction" was an inexact term; "beautification" was more suitable, for Commissioner Moses planned to "landscape" the marsh by dredging it to create a series of "lagoons" with formal shrubbery along their edges. And, the aide went on, they needn't worry that the job would be only half done; the Commissioner was always thorough: the marsh was going to be landscaped not only near the cloverleaf but along its entire length. One of the teachers begged Exton to fight for "one of the most beautiful spots, with a riot of plant life and birds. . . . I wondered how shortsighted officials could expect any 'planted shrubs' would equal that dense thicket." The primeval wilderness of Inwood Hill Park was not the only priceless and irreplaceable natural asset that would be lost to the city and its people forever if Moses was allowed to carry out his plan, Exton realized.

And as Exton and Weinberg proceeded with their study, they realized that there was yet another, vastly more important, natural asset that was going to be lost to the city: its waterfront.

"It didn't require much brains to see that running the highway in Riverside Park along the water would have the effect of making sure the waterfront itself could never be used for a park," Weinberg was to recall. It "would forever eliminate for recreational purposes several miles of the most beautiful waterfront in the world." Except at scattered, difficult-to-reach locations, people would no longer be able to stroll beside the broad river,

play beside it, fish in it or picnic beside it. They would no longer be able even to look at it in peace; there would be a massive barrier of steel and concrete—and the roar of the motors of countless cars—between the watcher and the water. There should be a highway through Riverside Park—agreed. But why could the highway not run where every other planner wanted it to run—atop the New York Central tracks that ran either up the center of the park or close to the slopes leading up to Riverside Drive? That would leave the rest of the park free for recreation—all the way down to the waterfront—as well as free from automobiles, and overpasses or underpasses could easily allow pedestrians to cross the highway to get to it.

What lay between the two young reformers and Moses was partly a question of values.

Moses' had been formed in a different age, the age, twenty years and more in the past, when he had been a young reformer. To understand his dream for the West Side Improvement, one had to understand the age in which he had dreamed it.

In that age, parks had been for the upper and "comfortable middle" classes and one of the things those classes wanted most to do in parks was to drive through them—at the slow, leisurely speeds of the era—and enjoy their scenery. In that age, therefore, it made sense for a road through a park to be placed at its most scenic location—in the case of Riverside Park, at the river's edge.

But things had changed. There had been 125,101 motor vehicles in New York City in 1914; there were 804,620 in New York City in 1934—and additional hundreds of thousands in the Westchester and New Jersey suburbs that would also pour cars onto the Henry Hudson Parkway. Heavy traffic on Moses' Long Island parkways was already beginning to make driving on them less and less a source of pleasure and more and more a source of pain—or at least irritation; their value as a source of beauty and pleasure in themselves was already clearly diminishing.

At the same time, moreover, the need for providing and preserving other values was becoming more important. Cities were growing. Their people were being cut off more and more from nature. They needed every chance they could be given to see it and feel it around them. "Recreation" had been the key word among park enthusiasts when Moses had started building parks; now, "conservation" was being heard more and more. In a New York in which concrete was devouring green grass and trees more hungrily every year, nothing was more necessary of conservation than the last piece of natural woodland on Manhattan, or a beautiful and unique swamp in Van Cortlandt Park—and its waterfront.

Moreover, as Weinberg had pointed out, the highway was going to be, inevitably, a part of neighborhoods. The West Side Improvement could give adjoining neighborhoods a priceless bounty—a great waterfront on which they could, without expense or travel, "walk abroad and recreate" themselves and their families. And if the river were ever cleansed of pollution—and this possibility should be considered, no matter how remote, for a public improvement such as Moses was proposing might well last for centuries and anything

could happen in centuries—they could swim in it, swim almost at their very doorstep. Build a highway along that waterfront, erect huge viaducts of steel and pavements of concrete at the water's edge, and that waterfront would be gone, possibly forever, lost to the hungry city until the end of time. Build the West Side Improvement to Robert Moses' specifications and the city would undoubtedly gain in many ways, but it would lose in many ways, too—and it would lose in ways that could never be remedied.

Moses might have seen these truths if he had been willing to listen to those who saw them so clearly. But he refused to listen, granting Exton only one interview, the one in which "he was just sitting there laughing at you."

Other city officials who listened to Exton and Weinberg didn't laugh. From the edge of the high bluff in Fort Tryon Park on the north side of the Cloisters, Comptroller McGoldrick could see Inwood Hill Park and the community of Spuyten Duyvil spread out below to the north as clearly as if they had been parts of a diorama. With his eyes following Exton's pointing finger, McGoldrick could see at a glance how much lay in the path of Moses' route—thickly forested slopes in the park, quiet residential streets in the community—and how little in the path of Exton's. He could see how little harm would be done to the park if a narrow band was sliced off its eastern edge for part of the right-of-way, and how the city street alongside the park would provide most of the rest. Across the river, beyond the northern terminus for the low-level bridge Exton wanted, below the built-up slopes of Spuyten Duyvil to the left, there stretched dramatically straight north a valley occupied only by flimsy tar-paper shacks, a valley which might have been placed there as an ideal parkway right-of-way. "Their route would have added maybe three-quarters of a mile," McGoldrick was to recall, "but what's three-quarters of a mile to a motorist? A flick of the eye, that's all. And it would have saved the park and Riverdale and Fieldston from having a trench run through it."

Some officials found flaws in Moses' plan that Exton and Weinberg hadn't thought of. Moses' ingeniously restrictive laws and ingeniously lowclearance parkway bridges had insured that buses would never be able to ruin the beauty of his Long Island parkways or carry poor people along them to his state parks. The Board of Estimate's Chief Engineer, Philip P. Farley, noticed that Moses was planning to low-bridge the city, too; enough of his Henry Hudson Parkway bridges were going to have a maximum headroom of thirteen feet and a headroom at the curb of eleven feet so that usage of the parkway by buses-which were exactly thirteen feet highwould be impractical. "One-third of the families in the City have automobiles," Farley reported to the Board. "The other two-thirds depend on buses. If they are to get any benefit from this improvement, buses must use [it]." Moreover, while the principal function of Moses' Long Island parkways had been to enable drivers to reach state parks, the principal function of the Henry Hudson Parkway would be to enable drivers from the Bronx and Westchester to commute to their jobs in Manhattan; his earlier roads had been roads for pleasure, but this would be a road for business.

Without buses, commuting on it could be only by car. This might well prove impractical; not only would the parkway increase the flow of cars into traffic-clogged Manhattan, but, with the inevitable increase in the population of Spuyten Duyvil, Riverdale and Westchester, car traffic might well overwhelm the parkway. In some future generation, opening it to buses each able to carry forty or more car drivers might well become imperative. But, as Farley said, "the normal life of the parkway bridges is estimated at 100 years." Rebuilding them after the parkway itself had been completed would be enormously expensive. One of the thirteen-foot bridges, the one at 239th Street, was, by design, the centerpiece of a large traffic interchange, all of which would have to be rebuilt—at a cost of millions of dollars. If Moses was allowed to build low bridges, even if the city might in some future generation want to allow buses on the Henry Hudson Parkway, it might simply be financially impractical to do so.

But Moses wouldn't listen to the city's officials. When McGoldrick tried to talk to him about the alternate route, he cut the Comptroller short. "He would brook no change," McGoldrick recalls. "It had to be straight." When Farley recommended that the Board disapprove the bridge designs, Moses called the recommendation "absurd in the light of the law [the parkway law he had written, of course]" and told the Board flatly that if the bridges weren't built his way, they would not be built at all.

The old reformers who headed the city's Good Government organizations were products of an earlier era—many of them, of the same era as Moses—but they were willing to listen to the two young reformers, and, listening, they were convinced. "Once the Board of the Municipal Art Society had a debate," Exton recalls. "It took a view that Moses was ruining Inwood Hill. Old Electus D. Litchfield, a great and good architect, said what a beautiful view there was from the road. I said that from the road there is a beautiful view, but to the road there is a lousy view. And I still remember some of the old-time architects and beaux arts boys who were on that board saying, 'Hear, hear!' "Soon the Citizens Union, the City Club and the Regional Plan Association were all asking for a detailed examination of Moses' proposal. Moses stopped laughing. He wrote a letter to the trustees of the City Club charging that the two men were pushing the alternate route because it would increase the value of Weinberg's Spuyten Duyvil real estate.

"There was no truth in what he said, none at all," Exton recalls. "Bob did own some real estate in Spuyten Duyvil. But it was a small property he had inherited from his parents, really insignificant when compared to other property he had inherited—he was quite wealthy, you know. And the property was undeveloped and near the route Moses wanted. If the parkway was put along Moses' route, it [the property] would have become quite valuable. Our route would have left it just as it was. Its value would have been increased by Moses' route, not ours. And Moses must have known that the alternate route wouldn't have done what he was saying it would [increase the value of Weinberg's property]. It was obvious. But he said it anyway. His only reply to everything we had proposed was an ad hominem attack on us, and it was all a lie, a goddamned lie."

City Club president Eustace Seligman called Exton in, questioned him about the charge and then told the trustees that he was completely satisfied as to the young men's integrity. The City Club's park committee thereupon accompanied Exton to the high bluff at the Cloisters, and saw, as McGoldrick had seen, the advantages of the alternate route. And when Moses refused even to grant the committee an interview, it issued a report—notable in that it was the first formal censure of Moses by any of the Good Government organizations that had long supported him—that called his plan a "violation of the principles of good planning." "While we are for Mr. Moses as a man, having bent over backward in our efforts to get the order [Order Number 129] of Secretary Ickes rescinded, his treatment here is high-handed and not in the best interests of the public," the report said. Other Good Government groups that investigated the West Side Improvement also agreed with Exton and Weinberg; the RPA even commissioned engineers to map out the alternate route.

But the reformers' front was far from solid. The logical group to lead a protest about park plans was the Park Association and the president of the Park Association was Mrs. Sulzberger, and Jack Madigan was telling Mrs. Sulzberger that Inwood Hill was used only for necking. And in the middle of the fight, Mrs. Sulzberger sent Moses a letter which while not specifically mentioning the West Side Improvement said that the association had reviewed "the many developments which are taking place in the parks under your energetic leadership" and "decided that we ought to express to you officially our approval and delight in what you are doing." Even the City Club's board of directors ended up disowning its park committee's report—despite a statement by Director Nathan Straus: noting that "every organization that has studied the project has agreed that the lower route is the only practical one," he accused Moses of treating city parks "as if they were his own private property."

Those reformers who still objected found that the powers they had been so instrumental in persuading La Guardia and the Legislature to give Moses were now turned against them. They appealed to the Board of Estimate to stop the Park Commissioner from chopping down the trees in Inwood Hill Park, but then remembered with a shock that under the Park Department Consolidation Act which they had supported, in violation of their own stated principles, the Board had no authority over the details of work within parks. Since Moses was not using city money for the work, moreover, he did not need Board approval for any work in Inwood Hill.

Then they demanded that Moses hold a public hearing on his plans, and threatened to file a taxpayers' suit to obtain an injunction if he did not agree to hold one. Moses agreed. He set a date two weeks away. And then, during those two weeks, he cut down hundreds of trees for the right-of-way. "He knew how to handle them," Madigan would laugh years later, recalling the reformers' shock when they realized that the park they had wanted so much to save had been ruined. Moses himself regarded his move as a masterstroke; he devoted space in his memoirs to relating how his men invented "a new

ingenious tree-pulling device equipped with a sort of electric donkey engine" that cut down trees even faster than he had hoped.

The Board of Estimate did have power over the Riverside Park section of the project—because, despite the federal and state contributions, the city would have to furnish much of the money itself. Borough President Samuel Levy of Manhattan proposed preserving the waterfront for pedestrians by building the Henry Hudson Parkway not along the water but over the New York Central tracks. Moses replied by driving stakes: starting work in Riverside Park on the recreational facilities the public wanted, he asked the Board if they wanted the work wasted. He whipsawed the Board: he announced publicly that his plans were not only ready but approved by the federal government, which was prepared to give the city millions of dollars for them; if the Board accepted Levy's proposal, he said, new plans would have to be drawn up-that would take months; then the plans might or might not gain federal approval; even if they did, federal money might no longer be available; the city should not risk losing the chance of a century to get the job done. He misinformed the Board: he told it at one point that Levy's plan would cost \$34,000,000 while his would cost only \$6,000,000 (it actually was to cost the city four times that amount). He deluged the Board with attractively printed brochures showing the beauty of his plan. He invoked experience and past successes: when Levy tried to argue for an impartial engineering survey of the two plans, Moses said, "The problem is primarily for park, parkway and landscape experts, and not one of simple engineering"—and he reminded the Board that his men were park, parkway and landscape experts who had built Jones Beach.

Levy was certain that his plan would not cost \$34,000,000. And he was certain that Moses' would cost far more than \$6,000,000. But without enough technically proficient engineers to cost out Moses' plans, without press support (not only did the press accept Moses' figures as truth, it did not even discuss at length such issues as waterfront preservation), with La Guardia against him (because the Mayor wanted the West Side Improvement built before November 1937, when he would be running for re-election) and exerting pressure on the Board members, the borough president was helpless. Hardly had he completed an acerbic exchange with Moses (Moses: "Do you think you know more about building parkways than I do?" Levy: "I didn't say so." Moses: "Well, this is a parkway") when the Board approved Moses' plan.

If there was any desire for second thoughts, there wasn't time for them. The very day after approval was given, huge pile drivers were hammering bulkheads into the Hudson River off the shore of Riverside Park. Within a week, convoys of dump trucks—five hundred a day—were rumbling over the dirt roads leading into the park. Six thousand WPA-paid laborers were shoveling into place the rock and earth the trucks were delivering, and pouring over them cement that would harden into a new shoreline for Manhattan Island. Progress on the Henry Hudson Bridge was just as rapid. By the time the Board got around to considering whether the Bronx route should go

through Spuyten Duyvil (its approval was required for that because its money was required for the condemnation necessary there) the northern bridgeheads were fixed in place, in Spuyten Duyvil. There was no choice but to approve the Spuyten Duyvil route. And Moses did not let the pace slacken; the speed with which the West Side Improvement was driven to completion was symbolized by the construction of the bridge that carried the Henry Hudson Parkway over Broadway at 253rd Street in Riverdale, a job that would normally have taken at least a year to complete. The legislation authorizing construction of the bridge (by the State Council of Parks) was signed at I P.M., May I, 1935. At 5 P.M. that same day, Moses opened bids on the job and let the contract; at 7 A.M. the next morning, laborers were working on the site; one midnight a few weeks later, while most Riverdalians were asleep, the six seven-foot-wide steel spans that would hold the roadbed of the bridge rumbled up Broadway on huge flat floats pulled by tractors and at 5:55 A.M. the last rivet securing them in place over Broadway was set; when Riverdalians went to work in the morning there before them was a bridge where none had existed the night before.

Moses' reluctance to discuss his plans for the northern section of the West Side Improvement was understandable. He could not, after all, tell Exton and Weinberg the real reasons he wanted the approach to the Henry Hudson Bridge to be through Inwood Hill Park instead of along the street at its edge: if word ever leaked out that a six-lane highway was being classified as a "park access road," the CWA and WPA would have to reclassify the project. Moses could not explain to Exton and Weinberg that while it might be better to build the bridge on a lower level near the existing drawbridge and therefore avoid Inwood Hill Park and Spuyten Duyvil, his idea of the proper location didn't matter; only the bankers' ideas mattered because it was the bankers who had to put up the money for the bridge. Moses could not, in fact, allow any discussion of the bridge location at all, because discussion generates controversy, and controversy frightens away the timid, and no one is more timid than a banker where his money is concerned. "The market was so skittish that any little thing could have gotten them to back out," Jack Madigan recalls. "A lesser fellow wouldn't have understood the importance of killing off this agitation right at the start before it began raising up some publicity and getting people arguing," but Moses understood perfectly. The financing of the northern section of the West Side Improvement had been made possible only by remarkable ingenuity on Moses' part, an ingenuity that bent rules and regulations—twisted them, in fact, until they were all but unrecognizable-into a shape that permitted the participation in the financing of the project of bankers and twenty-two separate city, state and federal agencies. Exposure of that ingenuity to the public would tumble in an instant the house of cards he had so laboriously erected. He could not allow it.

And what good would discussion do anyway? The city had been trying to build the West Side Improvement for decades—generations, in fact. It had never, even in the free-spending Walkerian era, been able to find the funds to do the job. It could only be done now because of the federal relief pro-

gram—and that program might be curtailed at any time. If the job was ever to be done, it had to be done at once, without delay. Discussion meant delay, and therefore discussion could not be permitted. "There was no alternative, see—no alternative," Madigan says.

Madigan's statement was not accurate. There was an alternative—it just was not an alternative that he, or Robert Moses, would even consider. There might be no alternative if the bridge had to be built immediately, but why did it have to be built immediately? If the bankers refused to finance its construction unless it was located on the escarpment, a location which required the destruction of Inwood Hill Park and Spuyten Duyvil, why was it necessary to accept their terms? The city could simply refuse them, and wait until it could build the bridge itself—in the place where it should be built.

And it might not have too long to wait. The situation now was significantly different from the past. Construction of the approach roads wasthanks to Moses-well under way at last, to the south from the Battery to 193rd Street, just a mile from the Harlem River, to the north all the way down through Westchester and into the city down to 249th Street, a point only about a mile from the river. More than sixteen miles of the through route was under construction; only two miles, including the bridge, remained to be built. This was no longer a project not begun. It was a project largely completed. With La Guardia in City Hall, the city's government had the will to complete it. With more than 90 percent of the cost already paid, moreover, this was no longer a project whose cost was \$109,000,000. It was a project whose cost—the cost of its uncompleted two miles including bridge—was less than \$10,000,000. The city might not have \$10,000,000 to spare at the moment, but it was not unrealistic to suspect that, with La Guardia running city finances with an iron hand, it might have it someday—someday soon (as, in fact, was going to be the case; by 1936 the city had sufficient leeway in its capital budget to build the bridge itself).

Such an alternative might well have appealed to Exton and Weinberg. There was an immediate need for the bridge, of course, and there was a risk in delaying its construction, the risk that the city's financial position might worsen, or its will to do the job might fade, and the bridge would never be built. But such risks had to be weighed against the certainties entailed in construction of the bridge at the point the bankers wanted: the destruction of Manhattan's priceless last forest, and of Riverdale's priceless serenity. Weighing the risks, Exton and Weinberg might well have decided on delay. The city, represented by its elected officials, might have so decided, too. But such considerations did not weigh more than a feather on Robert Moses' private scales, unbalanced as they were by his desire for accomplishment, for achievement—for the tangible, physical realization of his dreams. For such dreams, as the man who echoed his thoughts, Jack Madigan, put it, "Money is all." Now, at last, after two decades of dreaming of the West Side Improvement, he had the money for it, and he was not about to let that money slip away. "Yeah, I remember that," Madigan would say thirty years later when asked about the Exton-Weinberg proposal, and the hard, quiet voice would be filled with contempt and disgust. "I remember that as an asinine idea, brother." Robert Moses did not give the city a chance to decide.

The Henry Hudson Bridge opened on December 12, 1936.

The opening ceremony, which Moses combined with a birthday party for La Guardia, was not one of the Park Commissioner's more successful productions. A sudden wild rainstorm forced the celebrants to crowd into the tiny administrative building on the bridge toll plaza into which the bar had hastily been moved, and fierce gusts of wind kept blowing open the windows and dampening the spirits. King Edward VIII picked the same day for his announcement that he was giving up his throne for "the woman I love," and the Mayor insisted, to Moses' rage, on interrupting the ceremonies to listen to a rebroadcast of the abdication speech. In the evening the rain stopped, the skies cleared and Moses, taking Jack Madigan along, drove down to the shoreline below the bridge to view his handiwork by moonlight. Staring up at the slender arch flung across the gap between the two high bluffs, he was struck by its grace, but even this moment was spoiled for him, for the blunt Irishman was not the ideal moonlight companion. When Moses started rhapsodizing about the beauty of the scene, Cleveland Rodgers relates, "Madigan said that all he could think about was the dimes rattling in the toll boxes."

Nothing, however, could dim Moses' pride in the fulfillment of the great dream of his youth. When, on October 12, 1937—in time for Election Day the whole West Side Improvement was completed, he commandeered Madigan's yacht and ordered its captain to stand out into the Hudson so that he could view his creation in its full sweep. From the deck of a ferryboat in the middle of the river twenty years before, the six miles of Riverside Park had been six miles of garbage dumps and mud, of tar-paper shacks and stacks of rotting timbers, all shrouded in the dirty gray smoke spewed up by the trains that clanked everlastingly through it. Yet he had exclaimed to the woman beside him: "Isn't this a temptation to you? Couldn't this be the most beautiful thing in the world?" Now he felt that it very nearly was. The tracks were gone from the whole lower stretch of the park. So were the mud and the shacks and the garbage. In their place were the things he had seen only in his mind then, "the great highway that went uptown along the water" and the lush park beside it. From the river, the massive retaining walls trimmed with granite and marble, set with loopholes and embrasures, stretching for miles along the water, rising one behind the other up to Riverside Drive, were battlements, a fortification protecting the great city behind it. The loom from Riverside Drive behind the battlements not only of the sheer brick wall of apartment houses but of the turrets and watchtowers of mansions that resembled medieval castles (the central façade of Charles M. Schwab's, which occupied the square block between Seventy-third and Seventy-fourth streets, was reminiscent of the chateau of Chenonceaux, the wings of the castles of Blois and Azay-le-Rideau); the presence behind the battlements of the

columns and cannons of the Soldiers' and Sailors' Monument, erected to honor warriors of a civil war, and, farther north, of the massive granite sepulcher of the great general who had led them; the image, life-sized in the distance, of a girl warrior out of the fifteenth century, the bronze mount of the Maid of Orléans rearing at Ninety-third Street from a pedestal set with fragments from Rheims Cathedral, where she waited trial and death; the upthrust of spires out of the thirteenth century, the spires of Riverside Church that were modeled on the Cathedral at Chartres; the stark outline atop a bluff to the north of the simple square watchtower of the medieval monastery of St. Michel de Cuxa that was now called the Cloisters—these only made more complete the effect for which Moses had been striving: that of a wall built to guard a city as walls had guarded cities during the Middle Ages, specifically the German cities whose walls, along with those of the medieval fortress-castles of the Raubritter, or "robber barons," had lined the Rhine and fired Moses' imagination when, as a romantic young student, he had so often cruised that river.

Not that the West Side Improvement was just a fortification, of course. It was far more than that. Along its lowest level, at the edge of the water, were lines of moving vehicles and, once one realized they were part of the Improvement, one saw that to call it medieval was to slight it. The towering battlements were combined with an entranceway to the city, an entranceway whose Riverside Park portion alone was six miles long, an entranceway framed in marble and granite and flanked by the tombs of dead heroes—an entranceway of a size and grandeur that could only be Roman, a Via Triumphalis like those along which had ridden the conquering Generals of the Empire, on their way to receive the laurel wreath from the Caesar.

A fortification? An entranceway? The West Side Improvement was also a park—a lovely park. The retaining walls formed a series of terraces rising from the water, and the terraces were lush, green, tree-shaded lawns. Through the shadows of the arches of the Seventy-ninth Street boat basin one could see a fountain splashing coolly. If the West Side Improvement was grandeur, it was also beauty. The scene was just as Robert Moses had envisioned it twenty years before, even to the bright white sails of the boats tied up in the gracefully curving marinas.

Moses was more than satisfied with his handiwork. The sheer cliffs of the forest-topped Palisades, opposite the sheer cliffs of Manhattan's apartment houses, were "the most magnificent river wall anywhere," he felt, and the wall he had created was its match. Now that it was completed, the Hudson vista was the greatest river vista in the world. The Rhine? The Rhine with its "silly, quaint, Wagnerian castles"? Thanks to the West Side Improvement, the Hudson absolutely dwarfed the Rhine. Penning an introduction to a brochure describing the Improvement, he sounded like the Bob Moses of his youth.

This, then, is the Hudson waterfront celebrated by Masefield and O'Neill, where the fabled liners and cargo vessels thrust their prows into the very vitals of the city. . . . Tycoons overlook the upper and lower bays and the Jersey piers. Droves of cars zoom or crawl through Riverside Park and down the West Side Highway and view

the matchless, unspoiled Palisades. By comparison, the castled Rhine with its Lorelei is a mere trickle between vineclad slopes. I wonder sometimes whether our people, so obsessed with the seamy interior of Manhattan, deserve the Hudson. What a waterfront! What an island to buy for \$24!

The city's pride matched Moses'. The reporters chauffeured over the Improvement before its opening to the public were all too familiar with the previous route into New York from the north, the wearisome stop-and-go gear shifting over the narrow, bumpy streets of Yonkers, a traffic light on every corner to increase the irritation, the trip through the Bronx down a Broadway made dismal and dingy by the small stores and grimy tenements that lined it and by the shadows and harsh rumbles of the IRT elevated tracks overhead. They, like other drivers, had had to wonder as they approached the Broadway drawbridge whether they would be in for an interminable delay there. And when they crossed the bridge, they had to resume the crawl downtown on Riverside Drive or Broadway in endless lines of traffic. The approaches to New York had been agonizingly slow, and ugly as well, a mean and meager entrance to a great city.

Now they skimmed down to New York along the broad Saw Mill River Parkway, all sweeping curves and spacious straightaways, lined with woods, underbrushy and shadowy and deep, that drenched them in autumn colors, and with clearings in which black boulders sat dramatically in the center of sun-dappled grass. The bridges that carried intersecting traffic over the parkway so that its users should not be disturbed were little Moses masterpieces, each faced with stone carefully selected to blend in with nearby rock formations, each subtly different in design from any other, mere hints in the midst of a natural setting of the shaping hand of man, mere hints of what the parkway was carrying them towards. Yonkers was just something off beyond the trees; slopes shielded motorists from even a glimpse of that unlovely municipality until the parkway had almost reached the Bronx line, where its name changed from Saw Mill River to Henry Hudson (the signs announcing the change were made gay by cartoon silhouettes, done in wrought iron, of Hudson's Half Moon), and while at that point there was an unavoidable minute or two of small houses visible atop the slope, the parkway ducked quickly into the shelter of Van Cortlandt Park and was back among trees and grass again. It was not until Van Cortlandt was behind the reporters that houses became a permanent part of the scenery, and then they were at first only on one—the right, or river—side of the road and they were at first just small, private homes, fieldstone-covered, for this was Riverdale, no more than another hint, just slightly broader than the bridges, of what was to come.

Flashing through Riverdale toward the steep cliffs of the Harlem River, the hints became broader still, the private homes flanking the parkway on both sides now, crowding closer to it and closer together, three low apartment houses becoming part of the scene in Spuyten Duyvil, but there were still plenty of trees and grass. Leaping the Harlem on the Henry Hudson Bridge, the reporters saw the Broadway bridge far below them to the left, and, beyond it, a glimpse of the city, but the glimpse, cut short by the approaching bluffs of Inwood Hill, was fleeting and the city was hazy in the

distance and hundreds of feet below them, and the bluffs were towering and filled with trees, and while the parkway might be in the city now, it was not yet of the city. Leaving the bridge toll booths, the parkway curved abruptly to the right, down and around a great craggy bluff that towered above it, and even that fleeting glimpse was gone and what was in front of the reporters as their car passed through the bluff's deep shadow was only trees and, seen through the trees, a bright river and beyond the river the Palisades.

And then they were around the curve and there was New York.

First there was steelwork and concrete in the sky, immense towers, thick cables, a roadbed above the water—the George Washington Bridge, looming above the leaves, casting a dark shadow over the parkway so that the reporters' limousine rolled across it as if it were a gigantic welcome mat to a gigantic city. Then, above the parkway to the left, there were apartment houses behind the leaves. And suddenly the city was beside the reporters, looming over them; atop the great cliffs of rock were cliffs of brick, the massed apartment houses of Riverside Drive. Far away to the left, there were the spires of the Empire State Building and the Chrysler Building, their very visibility at such a distance an evocation of the immensity of the canyons of skyscrapers toward which the limousine was headed. Ahead of the reporters was the panorama of the harbor, serene water turned busy, churned by the giant screws of giant ships, dented by piers jutting out from shore.

If there was drama in this entrance to the city, there was, even within the city's confines, beauty, too, and dignity. As the limousine headed downtown toward the reporters' offices, the parkway hugged the river's edge and the water was broad on the road's right hand. The Palisades across the river stayed largely unspoiled for precious minutes. Between the parkway and the apartment houses to the left were the terraces Moses had built and planted with trees and lawn, and the retaining walls of the terraces, the walls that flanked the parkway, were masonry and marble, and their copings were of granite, and above on Riverside Drive were Grant's Tomb and the Soldiers' and Sailors' Monument, friezes and colonnades. And even when there was no more beauty or dignity, there was still convenience. When the Henry Hudson Parkway became the West Side Elevated Highway and there were no more trees or terraces, and the Jersey shore, what could be seen of it through a dense industrial haze, was a panorama of all that was wrong with the Industrial Era, and the view to the left, toward the city, was of railroad yards and warehouses and traffic-jammed streets, the reporters could still realize that they were not on those streets, that they were speeding downtown without having even to pause.

The reporters rhapsodized. "The most beautiful drive in the world," wrote one from the *Daily News*. "Always the man in the car has the river in full view," marveled one from the *Times*. Simeon Strunsky said in "Topics of the Times": "The West Side Highway as a name . . . utterly fails to do justice to the . . . new masterpiece out of Robert Moses' atelier. . . . The traveler comes and goes in a setting of beauty which [it] is not too much to call intoxicating." (Strunsky was also to write: "The poet Wordsworth stood

on Waterloo Bridge and said about the Thames view that earth had no finer sight; but Wordsworth should have stood at the north end of the Henry Hudson Bridge and looked south and west.")

Moses had promised that the new road would "eliminate" the West Side's north-south traffic jams. He announced that the trip from Canal Street to the city line, which had previously required sixty-eight minutes, would henceforth take only twenty-six. And none of the journalists had the slightest doubt that Moses was correct. "It is a veritable motorist's dream," said the Journal-American. The Times marveled that "the gleaming new concrete ribbon" would not only "afford immediate and measurable relief to traffic congestion on Riverside Drive" but would enable motorists to drive all the way from Canal Street "nearly to Poughkeepsie without having to stop for a traffic light or slow up for an intersection."

And journalists understood that Moses' project was not just a view or a road. "The West Side Improvement is much more than that," the Sun editorialized. "It gives the island not only a new major highway and a new shore line along part of its length but park land and . . . playgrounds." The Journal-American said it provided "a fountain of health and pleasure from which New York's people and their children and guests will be drinking long years to come." The Brooklyn Eagle emphasized that "after decades of fruitless effort, the railroad tracks are covered at last." In fact, said the Times, "all that has been unsightly along the Hudson—the railroad, the ash dumps, the coal yards—has been swept away or completely disguised."

The statistics in the thick packets of press releases that Moses' men handed to the reporters were, even to men accustomed to press releases filled with statistics, almost too big to grasp. To create the Riverside Park portion of his dream alone, Robert Moses had poured into the six miles of muddy wasteland 1,250,000 cubic yards of stone riprap, 3,000,000 cubic yards of hydraulic fill, 296,400 linear feet of steel and concrete piling, 6,800,000 pounds of reinforcing steel, 1,912,000 bags of cement, 120,000 pounds of lead, 12,500 cubic yards of stone masonry, 1,600 cubic yards of granite and 220,000 cubic yards of topsoil and humus.

But the reporters did their best to make the city grasp them. They pointed out that, as the *Times* put it, Moses had, in "the most extensive alteration of Manhattan's topography in recent history, put . . . a highway . . . through an already overcrowded park with a substantial gain, instead of a loss, of recreational space"—a gain that amounted to the incredible total of 132 acres, an addition to the land area of crowded Manhattan Island worth, at current land values, \$23,760,000. They pointed out that he had filled that space with fifteen tennis courts, seventeen playgrounds, twenty-three softball fields, thirty-eight basketball courts, forty handball courts, 13,000 trees, 140,000 feet of footpaths and 350,000 shrubs.

The most incredible statistic of all was not included in the press release. That was the cost of Moses' dream. His press releases stated that the cost was \$24,000,000, but this figure bears no discernible relationship to reality, since even the most cursory examination of the cost—all that is possible, since Moses took care never to reveal it and its components are concealed in such

a multitude of appropriations, citywide property assessments, borough property assessments, special Board of Estimate appropriations and federal contributions from twenty-two separate sources that thirty-seven years later it is unfeasible to attempt to compute them—reveals that the total cost of the West Side Improvement (including the elevated highway) was at least \$180,000,000 and perhaps as high as \$218,000,000, an immense figure in Depression dollars. (The famous Boulder Dam, always cited as an example of spectacular New Deal expenditures, cost \$76,000,000.) But New York's press did not attempt to analyze the cost, accepting, instead, Moses' \$24,000,000 figure—and coupling it with the comment that for this expenditure the city had received in return land worth \$23,760,000. Out of thirteen daily newspapers, not one had the slightest doubt that the West Side Improvement was anything but an "improvement," an unalloyed improvement, an absolutely unmitigated blessing, to New York City.

Not a dissenting voice could be heard. One can search in vain through the city's newspapers during the weeks in 1937 in which articles on the Improvement were appearing daily looking for a single hint—even a buried quote in a story or a lone letter-to-the-editor—suggesting that there was the slightest imperfection in the project.

"The railroad tracks are covered at last," an editorial said.

Not exactly.

The railroad tracks were covered until they reached 125th Street—the beginning of Harlem.

Moses had decided to economize on the section of the West Side Improvement, between 125th and 155th streets, that bordered the city's Negro community, and one of the economies was dispensing with the track covering in that section. Uncovered tracks meant a never-ending clanking, from the couplings of railroad cars, and periodic bawling, from the cows and other animals being transported south to the slaughterhouses, unless the people who lived in the apartments above kept their windows closed. And in the summer, when it was too hot to keep windows closed, uncovered tracks meant not only noise but odors, the stench of the animals, and they meant soot and smoke that spread a coat of gritty grime, confined to windowsills in winter, over walls and furniture. Now, thanks to the genius of Robert Moses, the white people who lived along Riverside Drive were freed from these annoyances.

But the black people weren't.

Robert Moses spent millions of dollars enlarging Riverside Park through landfill, but he did not spend a dime for that purpose between 125th and 155th streets. He added 132 acres to the parts of the park most likely to be used by white people—but not one acre to the part of the park most likely to be used by black people.

Robert Moses ruthlessly removed all commercial enterprises from the water-front along the entire six-mile length of Riverside Park—except for those commercial enterprises (wharves, small warehouses, coal pockets, junkyards and the like) that were located in the Harlem section of Riverside Park. Those he allowed to remain—to occupy what otherwise would have been park land for Harlem.

Because he did not enlarge Riverside Park in the Harlem section, there was, really, for two-thirds of the Harlem section, the stretch between 125th and 145th streets, no Riverside Park at all. The green of lawns and trees that he laid out with such a lavish hand south of Harlem ends abruptly at 125th Street and the only green that remains is a very narrow, very steep treed slope, too steep for anything except slipping and sliding down it, that, for some of those twenty blocks, climbs from the uncovered tracks to Riverside Drive above. Except for that little ribbon of trees, pathetic when compared to the lush lawns and lavish plantings downtown, the "park" is, for these twenty blocks, only the grim steel of the tracks and the gray concrete of the parkway.

Robert Moses devoted endless ingenuity to making the Henry Hudson Parkway beautiful in and of itself. From Seventy-second to 125th Street, for example, he lined the roadway with trees and shrubs and faced the walls along its sides with granite and marble and expensive masonry. But between 125th and 145th streets, he lifted the roadway into the air—on a gaunt steel viaduct. There is not a tree or shrub on the viaduct. There is not a foot of granite or marble or masonry. The only ornamentation whatsoever on the starkly ugly steel is the starkly ugly cheap concrete aggregate with which it is paved.

And the viaduct is not only unlovely in and of itself. It makes the water-front over which it runs even uglier than it was before, filling its streets with its shadows and the never-ending rumble of the cars that travel along it. And its presence insures that even should New York City one day decide to give those twenty blocks of Harlem what it has given most of the other residential neighborhoods along the Hudson River, a park below Riverside Drive, the park will have to be one filled with shadow and noise.

There is at least one spot in this twenty-block stretch at which it would have been easy to create a park even without landfill operations.

At the foot of 125th and 126th streets, these mean and narrow thoroughfares slope down and, after running under Moses' viaduct, run right out into a broad wharf that juts out into the river, so that turning it into

a park would have made the riverfront a part of Harlem. Of the whole Hudson River waterfront, no area was more intimately a part of the adjoining community and more suitable to be a park for it.

Moses might not have wanted to spend much money on the Harlem section of the West Side Improvement but a park here would not have cost much money. Condemning the wharf would have been cheap, as would also have been placing playground facilities on it to give the children of the neighborhood a chance to play right on the river or laying earth and sod on it to bring a touch of brightness to a neighborhood without brightness. And seeing the park possibilities of the wharf was easy; in fact, it would have been hard not to, for on every sunny day it was crowded with people fishing, staring out over the water or washing their cars in the sun.

But somehow Moses didn't see. He never made a move to turn the 125th Street wharf into a park, and in 1974 it would still be standing vacant, a monument to a city's indifference to the needs of its poorest people.

Harlem does, of course, have a section of Riverside Park, the section between 145th Street, where the Henry Hudson Parkway swings down off the viaduct, and 155th Street—a stretch of land ten blocks long, plenty long enough to provide the playgrounds, ballfields and other facilities that a recreation-starved community so desperately needed.

Robert Moses built seventeen playgrounds as part of the West Side Improvement. He built one playground in the Harlem section of the Improvement. He built five football fields as part of the Improvement. He built one in the Harlem section. He built eighteen horseshoe courts, twenty-two tennis courts, half a mile of roller-skating paths and a mile of bicycle paths in the rest of the Improvement. He did not build a single horseshoe or tennis court or a foot of roller-skating or bicycle path in the Harlem portion.

When the Improvement first opened, in fact, there was not a single recreational facility of any type in the entire "Harlem section"—not so much as a stanchion with a basketball hoop attached. The initial plans Moses had distributed to newspapers when he was persuading La Guardia to approve the Improvement had shown a recreational area between 146th and 148th streets on the river side of the parkway, but while most of the recreational areas above and below Harlem were completed when the Improvement opened, the 146th Street-148th Street area was not even begun. He did move thereafter to build it—hurriedly, because, according to one report, La Guardia suddenly realized the omission and insisted it be rectified and Moses was afraid the Mayor would make it public. But its pitifully inadequate and cheaply built facilities proved remarkably difficult to reach from the community it was supposed to serve. The only way to reach it on foot from Harlem, in fact, was by walking to Riverside Drive, walking down an incredibly long flight of steps to the New York Central tracks, crossing the tracks on a footbridge (which meant climbing up another flight of steps to get on it and climbing down a flight to get off) and then walking down another flight of steps to an underpass under the parkway which led to the

recreational area. And reaching it was downhill. Getting back up to Riverside Drive was uphill. On even pleasant summer afternoons, the recreational area Moses had so generously bestowed upon Harlem would be almost empty—except for motorists from other areas who found it remarkably accessible (just pull off the parkway and there you were) by car.

Robert Moses had always displayed a genius for adorning his creations with little details that made them fit in with their setting, that made the people who used them feel at home in them. There was a little detail on the playhouse—comfort station in the Harlem section of Riverside Park that is found nowhere else in the park. The wrought-iron trellises of the park's other playhouses and comfort stations are decorated with designs like curling waves.

The wrought-iron trellises of the Harlem playhouse-comfort station are decorated with monkeys.

Robert Moses had "reclaimed the city's waterfront for its people," an editorial said.

Not exactly.

Robert Moses had indeed built a huge, beautiful Riverside Park. But the park was not on the riverside. The parkway was on the riverside. For much of the six miles of Riverside Park, the road, not the park, occupied the land nearest to the river. And that meant that the park, and the people who used it, were separated from the river by six lanes of concrete filled with rushing automobiles.

If Moses had built the road where other planners and young reformers like Bill Exton and Robert Weinberg had wanted it built—atop the New York Central tracks, at the edge of Riverside Park close to the steep slope below Riverside Drive—the city's people would, after strolling down from the Drive and crossing the road on easy overpasses, have found themselves in a park whose tree-shaded lawns, playing fields and esplanades swept hundreds of yards down to the river's edge unbroken by the concrete of a highway or the rush and smells of automobiles. Because the park would have extended to the Hudson's edge, they would have been able to picnic or play, or simply sit on benches and think, at the very edge of a broad and beautiful river. They would have been able, on the very rim of the city, to escape the city—and to escape it completely.

But Moses had chosen, in much of Riverside Park, to build the road at the water's edge. And therefore, in much of the park, its users were hardly conscious that there was any river there at all. From much of Riverside Park, in fact, they could hardly see the water. Robert Moses placed in Riverside Park 5,500 benches offering, he said, "fine views of the river." But from most of those benches the river is hardly visible. They are placed at the same level as the highway and above the highway barrier wall only a thin sliver of water can be seen. Near Ninety-sixth Street, for example, there are hundreds of benches, in long, neat rows, facing the river, but all you can

see from the benches is the barrier wall, the tops of cars speeding past behind it, and the very edge of the Hudson on the New Jersey side.

From some of the 5,500 benches, you can see all of the river, but always there are cars, a fierce, never-ending rush of them, long lines of them, cars with their hurry and noise and smell, in front of that river. There are always cars in front of the river in Riverside Park. "In place of great parks and terraces and promenades," Peter Blake was to write in the 1960's, "we have built, along almost every single foot of the coastline of this city, gigantic viaducts of steel and concrete that carry streams of automobiles and effectively block our views of the water, a passing steamer, a seagull or, possibly, a sunrise."

"Always the man in the car has the river in full view," wrote a newspaperman. That was true. But to give the man in the car that view, fleeting at best and harried, to let him enjoy a brief glimpse of beauty as he passed by it, hurriedly and with his mind on other things, Moses had taken it away from the man not in the car, the pedestrian walking beside the river or sitting beside it, picnicking or just looking at it, soaking it in for long minutes and hours, the man who would have had time to enjoy and savor the view, the man whose life could have been enriched by it. He had thought that by building a road along the waterfront he was giving the beauty and openness of the waterfront—as he had given the beauty and openness of Long Island—to both the city's cars and the city's people. But he was wrong. It was no longer possible to do both. In building the West Side "Improvement," he had, although he did not realize it, the choice of giving the city's precious Hudson waterfront to either cars or people. And he had chosen to give it to cars. Cars were part of the essence of the city. He had brought cars to the city's very edge. Concrete was part of the essence of the city. He had laid concrete at the city's very edge. With a chance, a wonderful chance, to give the city's people a way of escaping the city, he had, instead, sealed them within it.

Riverside Park was a beautiful park. But it was not a "riverside park." For all the use it made of the six miles of adjoining water, it might, except for a very few points, have been located in the middle of Brooklyn. Robert Moses reclaimed the city's waterfront, all right. By turning six miles of wasteland into the parkway and park he had envisioned, he had added an immense asset to the city. But he had deprived the city of another asset: its waterfront. And alongside the loss of this asset, the gains that did accrue from Moses' development of Riverside Park, from his spending of more than \$100,000,000,000, were, while immense, very tiny indeed.

And the loss may not be replaceable. With his usual thoroughness, Robert Moses had done the job too well. When he finished with the city's Hudson River waterfront, the waterfront was gone. And it was quite possibly gone forever.

Jack Madigan was keeping an ear on the rattle of dimes in the toll boxes on the Henry Hudson Bridge. In an astonishingly short time, the melody had reached a pleasurable volume.

The cautious bankers who had been willing to finance only a single deck had said they would purchase more bonds only when traffic reached approximately 6,000 cars per day.

On the first day on which tolls were collected on the bridge after the Henry Hudson Parkway giving access to it was completed—Monday, December 14, 1937—9,086 cars used it. Madigan was careful not to let himself get too optimistic. The first figure would, of course, include people who merely wanted to say that they had used it on the first day and who might not use it again. His caution seemed confirmed when, on Tuesday, the volume dropped to 8,100. But on Wednesday, it was 9,278; Thursday, 8,504; and Friday, 8,760. And then came the first weekend. On Saturday, 10,215 cars crossed the bridge; on Sunday, 15,644.

Every Monday morning, when Moses arrived at 80 Centre Street, on top of the pile of papers awaiting him was a thermometer-type chart showing traffic—southbound in green, northbound in red. And each Monday the red and green together climbed higher on that thermometer. On the first charts, the peak daily volume allowed for, the top number on the thermometer, was 20,000. If that was the average daily rate, 7,300,000 cars—double what even Moses had calculated—would be using the bridge during a year. But soon the red and green were nearing the top of the thermometer, and then they passed it. Soon traffic on the bridge was running at a rate that made the annual figure not 7,300,000 but 10,322,002.

The bankers were watching charts, too. Three months after the bridge opened, Moses asked for additional financing, not the \$1,400,000 originally agreed on but \$2,000,000, and they were only too happy to give it to him. Selling the first issue of Henry Hudson Parkway Authority bonds had taken months. The new issue of Authority bonds was oversubscribed within minutes after it was offered. Less than seven months after the bridge opened, a second deck, which would hold three northbound lanes, was being placed atop it, thereby freeing the old deck for three southbound lanes.

"The success of the project," Moses announced, "is established."

With the additional financing, Moses was able to put a statue of Henry Hudson atop the hundred-foot-high column that had been standing in Spuyten Duyvil waiting for it since 1909, and to turn the small plot around it, named "Henry Hudson Memorial Park" in 1909, into a real park, with "a completely equipped small children's play area" and "permanent benches." "These improvements," Moses announced, "carry out the principle we have adopted of establishing increased local park and recreational facilities along a free-flowing traffic artery."

Moses intended the park for "small children" accompanied by their mothers. But it was hard for mothers with small children to get them there. The park was situated on the crest of a little hill and Moses had built up the hill not paths but flights of steps. Moreover, at the time the park was built, the bulk of the population that would use it lay on the

Changing 563

opposite, or eastern, side of the Henry Hudson Parkway, and the only way across the parkway in the vicinity was the Kappock Street underpass, which was also set with steps. Unless she walked on the narrow pavement of the underpass roadway, in danger from every car that suddenly swung around its corner, "there is," as Bob Weinberg put it, "no way . . . whereby a mother with a baby carriage or go-cart can use this underpass"—or the park. Residents of the area noted that the park had been used by more mothers with small children before Moses had built the facilities for them than after. And, despite pleas by the Riverdale community for elimination of the steps to Henry Hudson Memorial Park, it would be twenty years before they were removed.

"Motorists launching gaily into the lovely new parkway have been appalled to find that not all traffic problems have been solved," The New York Times said. "Because everyone wants to see it, on certain days and at certain hours there [is] a long procession of these eager citizens, enjoying the scenery but not getting anywhere."

"But," the *Times* added, "the public should be of good cheer. . . . When Mr. Moses has got his parkway hooked up firmly to the remainder of the parkway and has double-decked his Spuyten Duyvil Bridge, we may look to see the arterial tension in our traffic arteries diminishing considerably."

By July 1938, the parkway was all hooked up and the double-decking of the bridge was completed. But the hardening of the arteries continued. Traffic on the bridge had been 10,300,000 cars in 1937. By 1939, it rose to 12,700,000; by 1941, 14,300,000; it would finally top out at 26,000,000. In the face of such increases, double-decking a bridge hardly seemed to make any difference at all. Motorists pulling up to pay their tolls found themselves at the end of lines that seemed little, if any, shorter than the lines had been at the old Broadway bridge, whose congestion New York had considered intolerable. And there was another puzzling fact. Although the new bridge had been built to relieve the congestion on the old bridge, congestion on the old bridge had not been noticeably relieved. The lines of cars waiting to cross it were, in fact, almost as long as ever.

And traffic jams were not restricted to the bridge toll booths—or to certain days and certain hours. They extended the length of the West Side Improvement that led to and from the bridge, so that sometimes the three lanes of the Henry Hudson Parkway and West Side Elevated Highway that carried traffic in the direction of the rush—the southbound lanes into the city in the morning, the northbound lanes out of the city in the evening—were three lanes of bumper-to-bumper cars all the way from Canal Street to the city line. The rush-hour jams were just as bad as the rush-hour jams had been on Riverside Drive before the West Side Improvement was built; reporters escorted over the West Side Improvement before it opened had found it reduced the time required for the nine-mile trip from sixty-eight minutes to twenty-six; now one of those reporters made the trip over the

West Side Improvement at two rush hours—admittedly very bad ones—and found that on one trip it took fifty-eight minutes, on the other seventy-three. And looking at the situation that way, the total effect on traffic congestion of the West Side Improvement had been to move the congestion one block west—and yet there was still congestion on Riverside Drive, congestion that had been eased only slightly by the construction of a parallel route. The Improvement had simply provided New York with two congested thoroughfares where only one had existed before—and, of course, had given the motorists using the new congested thoroughfare a nicer view. And, in fact, the drivers on the new thoroughfare were hardly in a position to enjoy the view. Following another car bumper-to-bumper required the focusing of a driver's eyes not on "the Hudson waterfront celebrated by Masefield and O'Neill" or "the matchless, unspoiled Palisades," but on a bumper.

How about drivers using the Henry Hudson Parkway during off hours? Year by year—the situation would not change until 1956, when the opening of the parallel Major Deegan Expressway and the southward extension of the parallel Bronx River Parkway cut traffic on the Henry Hudson Parkway in half—the number of "off hours" on the Henry Hudson Parkway grew smaller and smaller. During daylight, in fact, there was hardly an hour in which traffic on that parkway was not generally heavy. Passengers could enjoy the view, of course. But Saturday and Sunday traffic was heaviest of all. And there must be some doubt whether many passengers were prepared to enjoy the view for as long as it took, stopping and starting, braking and accelerating, sweating under their car's hot tin roof, to negotiate the parkway on those days.

The West Side Improvement had had two purposes: to reclaim Manhattan's waterfront for its people, and to alleviate Manhattan's traffic congestion. It was to achieve these purposes that Robert Moses spent an incredibly large sum of money.

But despite that expenditure—all but inconceivable in terms of urban spending of that era—the first of the two purposes was achieved only in part. The West Side Improvement did create a park, but while it was a great park, it was not nearly as great as it could have been; instead of reclaiming the waterfront for Manhattan's people, the West Side Improvement deprived them of it.

And the second of the two purposes was not achieved at all.

The effect of the West Side Improvement on New York City was not limited to its effect on traffic or on Riverside Park, of course. The Improvement extended through several areas north of Riverside Park.

North of Riverside Park was Inwood Hill Park. On the afternoon on which the opening ceremonies for the West Side Improvement were held, Bill Exton went back to Inwood Hill Park.

"Or what was left of Inwood Hill Park," the young reformer was to recall. "Even before I got up to the top, it was all changed. There were

Changing 565

concrete staircases where there used to be dirt paths, and drinking fountains and a whole drainage system—cutting down the trees on top had destroyed the natural drainage, you see, so now they were laying a new one."

At the top, there had once been the wonderful view of the river and the Palisades, and there had been peace in which to enjoy it. "Now," he was to recall, and his voice would turn bitter, "there was a view all right, a view of the road, a great roaring concrete gut through the forest. They still called it Inwood Hill but it wasn't Inwood Hill any more."

Suddenly, Exton recalls, "I don't know, I just wanted to get out of there, I wanted to get out of there as fast as I could." Turning, he walked back down Inwood Hill—and he never went back again.

Years later Exton would recall that "I wished that day that there was a reporter up there with me, someone who would listen to me. I would have given him a little footnote about the great West Side Improvement."

But there were no reporters up on Inwood Hill that day. They were all down at the Seventy-ninth Street Grade-Elimination Structure, listening to the speeches.

As for Spuyten Duyvil and all Riverdale to the north of Inwood Hill, Weinberg had predicted that if the parkway were run through it without planning and zoning for community growth first, it would be turned from a peaceful, quiet place to live, one that could have absorbed a degree of apartment development while still remaining a quiet place to live, into a formless, shapeless mass of high-rise apartment houses with neither adequate nor convenient shopping, jobs or recreational facilities for its residents. World War II staved off this outcome for five years, but after the war, that is precisely what once-beautiful Riverdale became.

North of Spuyten Duyvil, at the north end of Riverdale, was Van Cortlandt Park, where once there had been the only fresh-water marsh left in New York City. When the Henry Hudson Parkway was finished, the marsh was, too. Once botany and biology students by the thousands had come every year to study salamanders and polliwogs and flowers and shrubs and insects—and a dozen species of birds who would nest only in a fresh-water marsh—in their natural habitat. Henceforth, as long as New York City might exist, its botany and biology students would be able to study them only by looking at their pictures in books.

Biology and botany teachers wrote letters-to-the-editor. A few were printed. Aside from them, no public notice was taken of the city's loss.

Robert Moses had spent \$109,000,000 of the public's money on the West Side Improvement. Counting the money expended on his advice by other city agencies on the portion of the Improvement south of Seventy-second Street, the Improvement had cost the public more than \$200,000,000.

But the total cost of the Improvement cannot be reckoned merely in dollars. The West Side Improvement also cost the people of New York City their most majestic waterfront, their most majestic forest, a unique residential community, and their last fresh-water marsh.

When the Improvement was finished, all these things were gone forever.

Adding them to the cost of the West Side Improvement, one might wonder if the Improvement had not cost New York City more than it was worth. Adding them into the cost, one might wonder if the West Side Improvement was really, on its total balance sheet, an "improvement" at all. One might wonder if it was not, on balance, a tragic and irremediable loss.

But, with a few lonely and unheard exceptions, at the time the Improvement was built, no one was adding.

"Two, Four, Six, Eight—Who Do We Appreciate? Robert Moses! ROBERT MOSES!! ROBERT MOSES!!!"

Little children in New York City during the 1930's cheered the Park Commissioner that way—and by parading to 80 Centre Street to present him with tokens of their esteem, such as two scrapbooks containing the names of "thousands" of boys and girls from the summer day camps run in his parks by the WPA and the Board of Education. Older children, many of whose high-school civics and social studies classrooms were decorated with pictures of his bridges and parks distributed broadscale by the Park Department, cheered him at "special assemblies" at which he received their tributes; the president of the Richmond High School Arista, awarding "Commissioner Moses" the honor society's annual medal, called him "the ideal civic leader" because he possessed "the following qualities: Intelligence, efficiency, conviction, personality, culture, incorruptibility, sense of humor, perseverance, foresight, tolerance, knowledgeable unselfishness, idealism and modesty." Children off to college took their enthusiasm along. He was voted "America's most useful public servant" at Manhattan College, "the ideal public servant" at Fordham University.

And the city's children weren't cheering any louder than its adults. Some neighborhoods may have gotten no playgrounds and others may not have liked the ones they did get, but many neighborhoods were thrilled with theirs—and grateful to the man responsible for their creation. The ceremonies opening Greenpoint's McCarren Park were preceded by a mammoth parade during which bluff old Pete McGuiness, a long-time Sheriff of Brooklyn and Boss of his beloved "Greenpernt," insisted that Moses, dressed in the white suit he invariably wore at daytime ceremonies, march at its head. And when, on the speakers' platform afterward, McGuiness pulled Moses out of his seat, raised both of his hands over his head like a boxer's second raising his hands in a victory gesture, and boomed, "Bob Moses—the Champeen Park Commissioner of the world," the crowd was so eager

Changing 567

to touch the Commissioner that it surged forward against the park's brandnew wrought-iron fences and knocked them over.

Some young reformers who had had the opportunity to observe Moses' work firsthand had become disturbed by both his policies and practices, but the city's most prestigious Good Government groups were still dominated by the old-line idealists like Richard S. Childs, George McAneny, William J. Schieffelin and Joseph M. Price, whose first impression of Moses had been of a young idealist and who felt, in Childs' words, that "basically he hadn't changed"; during the 1930's Moses received many tokens of their tribute-even the gold medal of the American Scenic and Historic Preservation Society, whose leadership had passed out of the hands of the upstaters who had seen Moses trick them out of their control of their beloved state parks, force them to stop printing their annual report and try to strangle their secretary. So highly did the old-line reformers idolize Moses that they were willing to suffer snubs to be able to present him with an award in person: when he informed the Park Association that he was "too busy" to take time off for a luncheon at which Mrs. Sulzberger was supposed to present him with the association's Testimonial Award for "most outstanding service to parks," Mrs. Sulzberger and fifty other members of the association trooped off to his office with their illuminated scroll (to be rewarded with what one of the fifty recalls as "an attitude that I can only describe as utter contempt"). Joseph M. Price, who had fought so hard for Moses' mayoral candidacy, was reduced to coming to Moses' apartment one evening to present him with the City Club's annual award, a leather-bound handilluminated parchment stating that Moses' achievements "constitute the major contribution of our generation to the improvement of the conditions of life in our city." As for businessmen, their admiration for the man whose parkways had boosted real estate values and whose efficiency was giving New York big improvements at small cost, was cast in bronze and silver medallions from real estate organizations and Chambers of Commerce and from the One Hundred Year Association, a group of firms in business in the city that long. Three officers of the Irving Trust Company organized a Committee for Deserved Recognition whose "sole object is to name the West Side Highway the Robert Moses Highway"—an object that failed, as attempts to name Jones Beach after its creator had failed, because politicians were afraid that the public would shorten the name "Robert Moses Highway" to "Moses Highway" in usage and would thereby offend the sensibilities of the city's non-Jewish residents.

If Moses' days were white-suit days, his evenings were black-tie. The city's hotels should have been grateful during those lean Depression years for his popularity; if it would have been difficult selling tickets for a block party honoring Robert Moses in Sunset Park or Harlem or Spuyten Duyvil, there was no difficulty in selling tickets to members of those organizations that honored their heroes in the Grand Ballroom of the Waldorf-Astoria or the Baroque Suite at the Plaza; in fact, when the guest of honor at a formal dinner was the city's Park Commissioner, a full house could always be expected. (His biting "ad hominisms" were worth the price of

any ticket, even if they were delivered in a harsh, bored tone by a man who seldom bothered to glance up at his audience; at a dinner celebrating the opening of the \$800,000 Hayden Planetarium, whose construction was financed by an RFC loan arranged by Moses with great difficulty and whose star-reproducing, dumbbell-shaped projector was purchased with a \$160,000 gift from Charles Hayden, who made it, to Moses' scorn, only on condition that the entire building be named after him, the financier was preening himself on the dais when Moses, rising to speak, turned to him and said: "Charlie, never in the history of philanthropy has anyone earned immortality so cheaply.") On one evening, Moses, in black tie, might be at the Waldorf to be handed a gold medal from the Citizens Union; on another, at the Plaza in black tie to be handed a gold medal from the St. Nicholas Society; on still another, at the St. Regis to have a gold medallion-fourteencarat, this time-hung around his neck on a blue-and-gold moiré ribbon by the New York Rotary Club; then on to the Pennsylvania, where the plaque awaiting him was only bronze but inscribed with a description that Moses thought apt—"Dreamer-Planner-Doer"—and where the praise heaped on him in front of a thousand diners was so syrupy that Moses, rising to speak, said he was getting up to try and escape from a "Niagara of Molasses." He varied the béarnaise sauce circuit with trips to Carnegie Hall, also in black tie, to pick up medals, medallions, plaques and illuminated scrolls before audiences too large to be crammed into even Grand Ballrooms. So many organizations wanted to hold dinners in his honor that sixteen of them finally decided to combine. (The affair, held in the Rainbow Room at Rockefeller Center by the City Club, Park Association, Regional Plan Association, Architectural League of New York, Art Commission Associates, Central Park West and Columbus Avenue Association, Garden Club of America, Municipal Art Society, National Academy of Design, National Sculpture Society, New York chapters of the American Society of Architects and the American Society of Landscape Architects, New York Society of Architects, Outdoor Cleanliness Association of New York and the Fine Arts Federation of New York, was notable for the fact that the guest of honor did not show up; he was in the midst of a particularly heated battle with La Guardia at the time and when he learned that the Mayor had been invited to speak, refused to come; La Guardia did, and devoted his speech to reminding the audience that "the Park Department . . . could not have accomplished anything if it had not been for the sympathetic understanding and aid of the federal government; never in the history of the world did a Park Commissioner have the amount of funds that have been made available to Mr. Moses . . . ") If, with his deceptions and innuendoes and breached promises, Robert Moses was seducing New York City into compliance with his desires, New York was loving every minute of the seduction—and begging for more.

The media, whose amplification of his statements without analysis or correction played so vital a role in making the public susceptible to the blandishments of his policies, carried out the same effective if unintentional propaganda for his personality. Continually, in five- or six-part series or

Changing 569

Sunday-supplement feature stories or long interviews, it said he was totally honest and incorruptible, tireless in working sixteen- and eighteen-hour days for the public, and it allowed him to repeat or repeated itself the myths with which he had surrounded himself—that he was absolutely free of personal ambition or any desire for money or power, that he was motivated solely by the desire to serve the public, that, despite unavoidable daily contact with politicians, he kept himself free from any contamination by the principles of politics. His flaws reporters and editorialists made into virtues: his vituperation and personal attacks on anyone who dared to oppose him were "outspokenness"; his refusal to obey the rules and regulations of the WPA or laws he had sworn to uphold was "independence" and a refusal to let the public interest be hampered by "red tape" and "bureaucrats"; his disregard of the rights of individuals or groups who stood in the way of completion of his projects was refusal to let anything stand in the way of accomplishment for the public interest. If he insisted that he knew best what that interest was, they assured the public that was indeed the case. If there were larger, disturbing implications in these flaws—they implied that he was above the law, that the end justifies the means, and that only he should determine the end—they ignored these implications or joked about them; columnist Westbrook Pegler dubbed Moses' technique of driving stakes without legal authorization and then defying anyone to do anything about them, the "Oops, Sorry" technique.

By the end of the Thirties, praise of Moses was spreading across the country-fostered by the nationally circulated magazines published in New York. If it was possible to be more one-sidedly favorable to the Park Commissioner than the New York newspapers had been, the national magazines, whose readers were not interested in the details of local issues and who therefore provided those readers with only a broad outline of his career, without any close examination of his methods, accomplished the trick. An article in Harper's began: "This is the story of . . . the pride of a city in a man who brings beauty to a herded people," and ended: "New York presents an impressive exhibit of one citizen's building for the common good." In the fourteen intervening pages, the reader was assured that Moses was interested only in the people's welfare and that those who opposed him were "obstructionists" and "politicians" and that his temper should therefore be excused—"His rages are against those who would cheat the public interest" -and that he was so absolutely honest and incorruptible that the laws which governed other public officials should not be applied to him in any case:

Moses knows his way through the mazes of the law. On Flushing Meadow he moved so swiftly that the 600-odd owners, the city, and the State never caught up with him. . . . By May 15th [1936] Moses was in possession of the property, leaving it for the courts to decide later how much would be paid.

... The city charter provides that contracts shall go to the lowest bidder ... It takes a hardy commissioner in New York to reject the low bidder, a commis-

sioner against whom the charge of graft would not stick. . . . The Board of Estimate swallowed hard and approved Moses' plan.

The work of filling and grading was begun on schedule—and finished on schedule.... And at any hour of the day or night Moses would appear to make sure that there was no delay. His only heartbreak was the fact that once every twenty-four hours the machinery was stopped twenty minutes for oiling....

Did Moses feel that accomplishment was all that mattered, that the end justified the means? Apparently Harper's agreed. "Those familiar with New York's ways would have prophesied that these [600-odd condemnation] cases would keep the courts busy for years; but they would have reckoned without Moses." the article said. "The docket was all cleared within . . . six months." The article did not ask how the docket was cleared, or whether the rights of the 600-odd families being evicted from their homes were trampled in the rush.

There was an overblown, romanticized quality to *Harper's* recounting of the Commissioner's life story:

At Yale they remember Robert Moses for his victory over Coach Walter Camp and the football enthusiasts who thought to monopolize the athletic money. . . . At Oxford they still speak of the avid vigor with which he studied the ways of government. . . . "Take a salary," said Smith. "No," said Moses. . . . Moses looked upon the grass, and it was moth-eaten. He brought fertilizer and the soured acres turned green. He turned to the trees. With his own hands multiplied seventy thousand times, he trimmed away the dead branches, cut out the rotted sides, fed the abused roots, watered and tended . . . and brought shade to a dusty people. . . . He saw the streets filled with children, frantically seeking to make ballparks out of thoroughfares. We must bring the playground within reach of the baby-carriage pushers, said Moses. He searched the city for bits of land. . . . It never occurs to him that he is noble. . . . What are the mainsprings of this man's single-mindedness? Why does he drive himself, and others, in the public interest? Why does he forswear private gain for the public weal? . . . Is it human sympathy which drives him? Is it a sense of the misery of the millions who breathe tenement house air? He knows that men must live and that their children should see the grass and sky. And he fights for the grass and sky with the devotion of an Amos.

And there was an overblown, romanticized quality to the prose in which that life story, with its great battles—the Taylor Estate fight against the "selfish interests," the Triborough Bridge fight against the "politicians"—was recounted in *Time* and *The Saturday Evening Post* and *Current History* ("Moses: Idealist in Action") as well as in the *Architectural Forum*, which, naming him its "Man of the Month," confessed that conferring another title on the man who "probably holds as many important jobs as any other living American" was "preposterous" and that its title was particularly inappropriate: "What month? It is a lean thirty days on the Commissioner's calendar when he doesn't pop up with a new bridge or a flock of playgrounds or forty miles of parkways or a zoo or a proposed tunnel from New York to Brooklyn or a plan to reshape the Atlantic Ocean," and in *Fortune*, which said, "Other men have built parks and roads and bridges in states and cities other than New York, and there were all of these things in New York before

Changing 571

Robert Moses was born. But it is doubtful if any other man ever built so many of these things and on such a grand scale," and which added, after calculating that he had spent \$552,000,000 in public funds, that his success in defeating opponents was due to "his scrupulous and unquestioned honesty" in money matters and "Thus, not only like a boy scout is Bob Moses always prepared; like Galahad, his strength is as the strength of ten because his heart is pure." It was in the national magazines that Robert Moses was first dubbed "the master builder" and "the master planner." If the city's press had made him a hero, the nation's magazines made him a folk hero, a figure larger than life, almost mythical, shrouded in the mist of his own legends, a Paul Bunyan of Public Works, a John Henry of Highways, the man who, in the phrase dreamed up during his gubernatorial campaign by some obscure GOP phrase maker and now spread, complete with capitalization, across the country, Gets Things Done.

As the publicity spread beyond New York, so did the cheering. Life was not all white suits and black ties; it was also academic gowns and mortarboards; it was during the Thirties that Moses began to spend his Junes traveling to out-of-town colleges to receive honorary degrees; he would eventually be a Doctor of Laws eleven times over, a Doctor of Engineering six times over, a Doctor of Humane Letters twice ("I never wrote a humane letter in my life," he protested), as well as Bachelor and Master of Arts (twice each) and a Doctor of Fine Arts and of Public Administration as well as Philosophy. Park and horticultural associations all up and down the eastern seaboard began to give him awards; the Boston-based Trustees of Public Reservations, for example, commended him for "distinguished service in conservation." So fast did the awards flow in, in fact, that he found that if he traveled to each out-of-town event at which he was to receive one he would have little time for work; he therefore made a practice of not attending, and of reading his acceptance speech over the telephone on his desk, which was hooked up at the dais at the event to an amplifying device that enabled the audience to hear it. For a time his wife and secretaries mounted the medals, medallions, plaques and illuminated scrolls on the walls of his office-along with one memento that Moses insisted be placed in a prominent position, a memento that Fortune described as "a letter of restrained commendation" dated 1930 and signed Franklin D. Roosevelt. The office walls were soon filled, and Mary Moses covered a long wall in the living room of their apartment with them. But they continued to pour in so fast that his secretaries finally just began storing them in packing cases.

Other cities began to send their planners and engineers to New York to see what all the fuss was about. Buses chartered by the park associations of Boston and Philadelphia brought matrons by the score to see the new playground design. And the response was invariably that of the hundred members of the American Shore and Beach Preservation Society whose reaction following a day-long tour of Moses' works was summed up by a Herald Tribune reporter as "amazed." Arriving back at City Hall after a

similar tour, Mayor William B. Hartsfield of Atlanta asked a reporter, "Where does New York get all the millions to do this?"\* Urban improvements on such a scale had never been seen—had, perhaps, never been dreamed of—in America before; there were, for example, more miles of divided through highways uninterrupted by intersections at grade in the New York metropolitan area in 1940 than in the next five largest cities in the United States—Chicago, Philadelphia, Detroit, Los Angeles and Cleveland—combined.

The Architectural Forum advised America's urban planners: "If you are thinking of designing a system of parks (and parkways) for your own cities, you might well go to New York for a few pointers." And, the Forum concluded, "while you are in New York, for best results kidnap Robert Moses." A score of American cities tried to take the advice, at least on a part-time basis; week after week requests to lay out, as a highly paid consultant if he would not accept a full-time job, highway and park plans for cities large and small poured into 80 Centre Street. During the Thirties, he accepted one such commission, to review plans for arterial highways for the Pittsburgh Regional Planning Association. He dispatched a team of aides to spend two months in Pittsburgh, reviewed their findings himself, and on the basis of their reports, submitted a plan laying out a comprehensive arterial highway program for the city. He had to refuse the others, but his mark was left on them, too, for their engineers came to New York and spent weeks-in some cases, months-watching Moses' men in action and, when they returned to their own cities, applied the principles Moses had taught them in building their own parks and roads.

Nor was the cheering limited to America. Teams of park experts came to New York from countries all over Europe, even from Scandinavia, traditional leader in park design, and went home vastly impressed. As for roads, a survey of public works in America made for the British government by a team of British urban planners said:

The most important development in American city planning has in recent years been the building of express highways on a large scale. New York City has led the way in the development of an outstanding system of express highways and parkways. These are so good that it would seem almost essential that England should study them. . . . It is probably the outstanding example of democratic city planning in the world.

In the years during which Americans wondered if Roosevelt would run for a third term, there were many media suggestions that Moses be the Republican nominee for the presidency. Life selected him as the Republican to write "The Case Against Roosevelt"; The Saturday Evening Post commissioned him to give "Advice to My Party." Moses never had any real

<sup>\*</sup> Another reaction was voiced by a Latin American diplomat taken on a tour by La Guardia himself. At each bridge and highway that the Mayor pointed out to him, the visitor asked, "And who was in charge of giving the contracts?" Each time La Guardia replied, "I was." "Ah, La Guardia," the diplomat said at last, with real admiration in his voice. "Ah, La Guardia. You must be a very rich man."

Changing 573

chance of obtaining the presidential nomination, of course. But the frequent suggestions were a further indication of the extent of his popularity.

Such popularity left little room for dissent. The press which was turning him into a legend in his own time had scant space to spare for critics. At the Hotel Pennsylvania dinner at which he was deluged with a Molasses-Niagara of sweet praise, a hundred pickets were marching outside the hotel protesting his treatment of WPA workers, but most of the city's newspapers never even mentioned them.

The attitude of the press was reflected in the attitude of the public. At one Kiwanis Club luncheon, held in March 1934, the assembled Kiwanians applauded his speech, but during the question-and-answer period that, under Kiwanian tradition, followed the speech, one member of the audience said that he was disturbed by newspaper reports that Moses was intending to revoke all camping privileges at Orchard Beach immediately. "As one of the campers at Orchard Beach," he said, "will you grant us the privilege for a committee to interview you and put before you our story about the beach?"

"No, sir," Moses replied—"calmly and finally," according to the Herald Tribune. "The camps are coming down." The camper tried to protest the arbitrariness of the decision, but he was drowned out—by the strains of the song sung by the rest of the audience to usher Moses out: "For He's a Jolly Good Fellow."

Moses basked in his popularity. He wallowed in it. He boasted to his friends about it.

And he felt it was no more than his due. He understood fully the importance of the press in creating it. In the introduction to the Park Department's 1940 brochure—Six Years of Park Progress—he wrote, "We owe much to the press, without whose constant interest and publicity it would be impossible to explain our program and to obtain public support for it." But he had not the slightest doubt that the press's support for his policies would continue. Once, explaining his feeling that a controversial project could be pushed through the Board of Estimate, he ended a conversation with an objecting McGoldrick by saying dryly, "We'll undoubtedly have the cooperation of the press, you know."

No matter how busy he was, Moses always tried to find time in the late afternoon to drop in on Al Smith.

The former Governor was a sad and bitter man now, old long before his time. Retired from public life at the age of fifty-six—too early for retirement for a man accustomed to action and applause and still healthy and strong—he had found in business only humiliation: he felt that all New York must know that he had had to beg Frank Roosevelt for help to rescue the Empire State Building—and that even after Roosevelt had moved federal agencies into the skyscraper, it was still not earning enough to meet the mortgage payments and they were being picked up almost as charity by John J. Raskob and the Du Ponts.

And Al Smith wasn't interested in business anyway. He was interested in helping people. With the Depression, people needed help, needed it desperately. And he wanted—wanted desperately—to have a hand in bringing it to them. He was no businessman. He was the Happy Warrior of the political battlefield. And he yearned desperately, with all the desperation of a man who sees the sands of his life running low, to be part of that battlefield again before it was too late. As realization grew in him that Roosevelt would never allow him to play a part in his administration, that he was to be forever excluded from the public service in which he had spent his life by a man Smith felt owed him his career, he came to hate Roosevelt, with a hatred so unreasoning and blind that it was all too easy for him to hate the things Roosevelt stood for.

The old friends, the friends who would have made him see that the social welfare programs Roosevelt was espousing were only extensions of the social welfare programs he had espoused as Governor, were gone. Mrs. Moskowitz was dead. Others were alive, but he didn't see much of them any more. Their field was politics, and he was no longer part of politics. In their places had come new friends—the ultrareactionary Raskob and William T. Kenny—who hated "that man in the White House." Al Smith had always been loyal to those who helped him, and these were the men helping him now. He had gotten his ideas from interaction with the ideas of associates, and these were the only associates left to him—these and Moses, who spent so much time with him, whom he respected so deeply, and who was as bitter about Roosevelt and the New Deal as any of them. There was no Mrs. M. to counterbalance their arguments. It was easy for Raskob and right-wing financier Jouett Shouse to use his bitterness for their own ends, to help him convince himself, as they were convinced, that the New Deal was "Communistic" and "Bolshevistic," that a spreading red-tinged bureaucracy was taking over America and destroying the principles that had made the country great. By 1936, the man who had once made being "regular" his First Commandment was ready to try to split the Democratic Party by lending his name to the right-wing Raskob-and-Du Pont-financed "Liberty League," and by giving a speech—Moses played a key role in its drafting—assailing Roosevelt and warning that "there can be only one capital, Washington or Moscow."

As soon as he had given the speech, Smith knew that he had made a terrible mistake. But what hurt worse was the attitude of the public, the public of whose support he had once been so confident. The speech had caused a flurry in the press, but the flurry had been brief; Roosevelt had been able to laugh it off. To laugh him off! The old Governor knew he was still an immensely popular figure among New Yorkers. The drivers of the Fifth Avenue buses he took to get home every day recognized him, and on rainy days they would make a special stop in front of the awning at No. 820 so that he could get out without getting wet—and often other riders on the bus would stand and applaud the figure in the brown derby as he walked, somewhat stooped and stiff now, down the steps. But he was afraid that popularity no longer meant respect.

Changing 575

When he got upstairs, his daughter Emily Smith Warner, his confidante and friend, would be there—her devotion to her father brightens the gloomy last pages of his life—and often so would other members of his family. But a family's devotion was no substitute for the roar of a cheering crowd or for a late afternoon in the Executive Chamber, with a dozen associates helping him veto bills or waiting to see what the Republican legislative leaders up on the Third Floor were going to come up with so that he could draft the strategy that would confound them. He was a natural genius in the art of leading multitudes of men toward great goals—and he was being given no chance to use that genius. In the late afternoons, when Moses came to Al Smith's apartment, he would often find the old Governor sitting, alone except for Emily, in the darkened living room, sunk deep in an easy chair, a glass of whiskey in his hand, staring in silence out at the sunset behind Central Park.

One afternoon in 1938 or 1939, Moses came in and began discussing some project—Emily cannot recall which one—that he was planning to propose, and Smith pointed out that there would be opposition. Emily recalls vividly Moses' reply. He would "undoubtedly" have the support of the press and of the public, he said, just as he always did. And Emily recalls vividly what her father said then.

"That's a slender reed to lean on, Bob," Alfred E. Smith said. "A slender reed."

"He meant that it could break at any time, that you could lose the public support," Emily explains. "Bob didn't say anything but you could tell by looking at him that he was sure that he never would."

OFTEN, AT THE REAR of a cheering audience, there would be standing one figure who wasn't cheering, who amid a roomful of men and women gathered to honor Robert Moses stood watching Robert Moses with a face twisted with bitterness and hatred and contempt.

He was Robert Moses' brother.

Paul Moses had a strange story to tell about this hero who appeared particularly heroic because, so the legend went, he had absolutely no interest in money. Robert Moses, Paul Moses said, had cut him out of part of his inheritance.

And, Paul said, his brother had done more: to minimize the possibility of mutual acquaintances finding out what he had done, he had used his influence to keep Paul away from those acquaintances as much as possible—by keeping him out of city posts for which he was eminently well qualified and to which he would have otherwise been appointed.

The truth of Paul Moses' charge about the inheritance will never be determined. His mother, who left it, is, of course, dead, and so, to the last man or woman, are all but one of her friends and relatives who might be in a position to verify or deny his story. The single exception, of course, is his brother. Robert Moses refuses—and has refused for forty years—to allow the subject of his mother's will (a will, signed on her deathbed in his presence, that invalidated an earlier will that Paul says divided her estate equally among the two brothers and their sister, Edna) to be raised in his presence. The truth of Paul's charge is, moreover, clouded further by the personality of the man who made it and by the shadows which surround certain periods of his life. Paul could have dispelled those shadows. For months, the author asked him to do so. He refused, saying it was no one's business but his own. Finally, he said he would, at their next interview. On the day before that interview, he was stricken with his final illness. From the hospital, he telephoned the author and began the story. Before he could get more than a few sentences into it, he collapsed. Several days later, he died, leaving the shadows forever undispelled.

Paul's personality was, to a striking degree, Robert's personality, the mixture of brilliance, idealism and arrogance that flowed in so rich a strain from the two fierce women who dominated their family, their grandmother

and their mother. If the strain was clear in Robert, it was just as clear in his brother, born, in 1887, a year before him. If the two "Moses boys" were in their youth a matched pair, a stunning matched pair, physically—both tall, both slim, both graceful, both haughty, their olive-skinned, high-cheekboned faces not only remarkably handsome but so similar they might almost have been twins; two quick-minded, quick-tempered, passionate young Spanish grandees—the passing years, in which, while his brother stayed slim, Robert's neck, and the face above it, became bulky, made clear that the resemblance was more than physical.

Robert Moses was charming. So was his brother. Inquire about Paul Moses of a dozen women who are old now and who have not seen him since they were young, and a dozen wrinkled faces light up with almost involuntary smiles as they remember him. "Paul was a very good-looking man," says Mrs. Carl Proper, widow of an official in Ed Flynn's Democratic machine. "He was tall and very elegant and very bright—he had a mind. But the big thing about him was that Moses charm—it just washed over you like a wave." His life was to be filled with beautiful, sophisticated women, because, Mrs. Proper says, "they absolutely threw themselves at him. From the moment he walked in the door at a party, you could see women—the most beautiful, elegant women—watching him out of the corner of their eye. . . . He was scintillating."

Robert Moses was arrogant, equipped not only with the "Moses charm" but with a spigot that could turn off charm at the mere hint of disagreement. So was his brother. Each of the two Moses boys was totally convinced that he was intellectually superior to others, each was totally contemptuous of the products of others' intelligence. From his youth, Robert Moses seemed driven, moreover, by some need—some compulsion, almost—to demonstrate this contempt to those for whom he held it. With Paul Moses, this compulsion came later, the product perhaps of the tragic circumstances of his life. But it came. Says Mrs. Proper, who knew both the brothers: "[Paul] was opinionated-my God! When someone disagreed with him, you have no idea! He could argue you right back against the wall. And just as often he couldn't even be bothered arguing. There was this disregard of someone else's point of view, this brushing aside. This was from the mother, of course. I never saw this thing so strongly in any other individual as I did in Bob Moses except maybe for Paul Moses." The brothers' arrogance was, moreover, more than intellectual. Not only Robert but Paul was to reveal throughout his life a feeling that the laws that governed other men were not meant to govern him. The drive to dominate, to relate to others from a commanding position, was strong in both, as a minor but significant characteristic they shared made obvious: even as a youth, Robert insisted on picking up checks for friends, even wealthy friends—he displayed a real need to be not a member of a gathering but the host. So did Paul.

Robert Moses was brilliant and more than brilliant, possessed of a mind not only quick and supple but broad enough in reach to encompass a great metropolitan region and see its thousand diverse parts in a single, unified relationship.

So was his brother, who was fluent in Greek and Latin (he loved to spend evenings with a massive Greek lexicon, leafing through it as if it were a popular novel), and, an electrical engineer by profession, was considered the most knowledgeable man in New York in the complex field of utility property assessments. While interviewing Paul about his brother—who at the time had rejected requests for an interview himself—the author was, by coincidence, simultaneously researching a series of articles on regional planning. He had been searching for a unifying concept of the metropolitan region as a whole, some sort of overview that would bring at least a measure of coherence to its development, that would suggest some vision of the past and present that could contain clues to—and suggestions about—the future. The search had been in vain. He could spend days, he found, interviewing the region's highest elected public officials-mayors, county executives, freeholders and presiding supervisors—and scores of urban planners without ever obtaining even a glimpse of such a vision. In talking with Paul Moses, the reporter wanted to talk about Robert Moses' boyhood; Paul was constantly lapsing into discussions of housing and recreation and transportation. The reporter was irritated by the digressions until, one day, caught despite himself by his companion's eloquence, he started listening. And then he suddenly realized that he was hearing at last what he had been seeking for so long—a shaping vision of how to plan the most heavily populated and densely congested metropolitan region in the world—hearing it pouring out of a man who had never in his life held any official or unofficial planning position. The author continued interviewing planners and public officials. Eventually he was to hear such a vision—conflicting, of course, but of similar grand scale and scope-from two men: elderly Lewis Mumford and young Lee Koppelman, a brilliant planner from Long Island. He was never—in a hundred interviews—to hear it again.

Except when, months later, he finally got to interview Paul Moses' brother.

During his young manhood Robert Moses was the uncompromising idealist, specifically anxious to "help" the "lower classes." So was Paulalthough there were differences between his idealism and his brother's. Robert's concept of help was that of the mother he imitated, the patronizing "Lady Bountiful" who never forgot that the lower classes were lower. It was the concept of rigid class distinction and separation that would later be set in concrete by Robert Moses' public works. Paul, doted on by Grannie Cohen (and by her husband, Bernhard; on Saturdays, the gentle old man and the bright-eyed, handsome little boy would walk from the Moses brownstone on Forty-sixth Street down to the tip of Manhattan Island, where the grandfather would reward him with a nickel), understood exactly what the nickname "Lady Bountiful" implied. "Don't you see that settlement-house attitude of hers in everything Mr. Robert does?" he would demand. "This 'You're my children and I'll tell you what's good for you'?" It was not his attitude. His brother wanted class distinctions made more rigid; Paul wanted them eliminated. His brother despised "people of color"; Paul's attitude, in Mrs. Proper's words, was "a genuine feeling of real indignation over the way Negroes were

treated, and don't forget, this was at a time when it wasn't fashionable to have such feelings." His brother's attitude toward members of the classes Bella called "lower" was, like Bella's, markedly patronizing; perhaps in reaction, Paul, says a friend, "was a person who would talk to some menial and be on fine terms with him. He could be impossible—opinionated, arrogant—with people on his own social plane. But he would never, never, act like that with anyone who couldn't talk back to him. He was very much aware of the moral responsibility to the lower classes—he was like Robert in that. But his attitude towards these classes was genuinely friendly." He had the abilitywhich Robert did not-to see people not as members of classes but as individuals. When they were well into their seventies, the two brothers would be asked about the maids, cooks and laundresses who had worked in the Fortysixth Street brownstone. Robert could remember exactly one: "old Annie." Asked to "tell me something about her," he responded by listing her dutiesand stopped. About this woman whom he saw almost every day of his boyhood, he knew nothing more—not even whether or not she was married. Paul remembered an even dozen who passed through the Moses household at one time or another—and, fifty years after he had last seen most of them, he could relate details of their personal lives to an extent that revealed he had talked to them as a friendly equal.

Looking back on the youth of these two remarkable brothers, one difference looms large. Robert Moses would bend to his mother's fierce will. Paul Moses would not. Paul says—and relatives agree—that on many issues he and his younger brother shared views that were opposed to Bella's ("She was very conservative, and neither of us was, not in the terms of that time") but that in the face of her displeasure Robert would draw back, hastening to agree with the plain little woman with the steely eyes behind the steel-rimmed spectacles, while Paul would continue to disagree. And Bella Moses, daughter of a woman who bullied underlings, herself a woman who bullied her husband to a point where, to accommodate her own wishes, she forced him to leave the city and the career in which he was happy, was not a woman who brooked disagreement—not even from her own son. Says Mrs. Proper, who saw them together: "It was no joke to that mother that she was a Republican and her son was a Democrat. That was apostasy to her." There was, moreover, Paul's romance at Princeton with a Philadelphia girl who was not only beautiful but first in her class at the University of Pennsylvania, who also had a habit of saying what she thought-and with whom Bella did not get along at all. Relatives say Paul and his mother had a violent falling out over her. Also at Princeton, Paul became leader of a 1910 version of a Reform Democratic club. Whether or not it was because of the romance and/or the political squabble, Paul left Princeton for four years, four years about which he never talked—these episodes are some of those obscured by shadows —and returned to major no longer in classics and literature but in electrical engineering. The conflict between Paul and his mother was more basic than specific issues: it was as fundamental as the fact that when the family discussions grew especially lively, Robert knew where to stop, and his older brother didn't-or, if he did, refused to act on the knowledge. "Paul was always the same—a maverick, a dissenter, based on this sense of social injustice," Mrs. Proper says. "And you only had to meet that mother once to know that that was a house in which very little dissent was tolerated." "She never did succeed in running me—that's what made her mad," Paul says.

Paul paid a high price for his independence. He wanted to go into public service as much as his younger brother did, but instead, in 1913, the year in which Bella secured for Robert a coveted place in the Bureau of Municipal Research, it was announced to Paul one evening that a partnership had been arranged for him with Kuhn, Loeb & Co., the investment banking firm in which Bella's brother-in-law was a partner. Paul declined to follow the pattern his mother had laid down for his life. "What?" he recalls saying. "You don't expect me to go downtown and spend the rest of my life juggling pieces of paper, do you? Well, that's what the banking business is, isn't it? Juggling pieces of paper?" He says his father wanted to help him get started in public service, but did not. "Why?" he would say bitterly. "Because Father did whatever Mother directed, that's why."

Shadows cover the next few years of Paul's life. According to several vague accounts, he spent them in South America, returning only when America followed the President he idolized into the war to make the world safe for democracy. At any rate, at a time at which his brother was declining to serve in the war, Paul enlisted in the Navy. Mustered out in November 1918, he was in no worse shape than his brother, who in November 1918, almost thirty years old, dreams of civil service reforms crushed, was working at a humiliating job as little more than a clerk, with no place to turn for work in his chosen field.

Looking back at this crucial point in the lives of these two remarkable brothers, another difference—an extension perhaps of Robert's willingness and Paul's unwillingness to bend to the woman they could not face downlooms larger. Robert may have previously refused to compromise with the practical politicians he scorned, but when, at the age of thirty, Belle Moskowitz gave him one last chance, he compromised. Having learned he could not beat the Tammany politicians who had crushed him, he was not only willing but eager to join them; he had learned very well indeed the need to compromise. Paul never learned that lesson. Propelled up the Consolidated Edison executive ladder by his engineering brilliance (he was soon assigned, at a salary of \$18,000, to find ways of harnessing the vast power of the St. Lawrence River, a plan that would later be thwarted by Al Smith's determination to have the harnessing done by a State Power Authority), he was hobbled by his refusal to tailor his liberalism to the ultraconservatism of the utility's executive suite; once, a top executive asked him if he didn't agree that Woodrow Wilson was a fool; Paul lashed out at him angrily. Robert Moses may have been the idealist who compromised his ideals; Paul Moses was the idealist who didn't.

Looking back on the lives of the two Moses boys, one difference looms largest of all. Robert went into public service, a field big enough to allow his unique vision and drive full range; a field in which funds were available on the same scale as his immense dreams, in which his arrogance was in part

excused by the public need he was serving, and in part protected by the public powers that devolved on him, so that when he went beyond the law, the power of the state protected him from retaliation. Paul did not go into public service. Eager to do so, he thought he was going to have his chance in 1925, the year after his brother was appointed president of the Long Island State Park Commission, when, he says, his close friend Colonel Frederick Stuart Greene, the erudite, urbane head of the State Department of Public Works, offered him a top DPW engineering job. But, Paul says, at the last minute, "after everything was set," Greene told him that Al Smith had vetoed the appointment without explanation. (At the time, Paul told the author with his bitter smile, he did not even suspect that the explanation might have something to do with his brother, whom at the time he considered his friend.)

Either through a quirk of fate or because of a spirit of competition with his brother—who was so quickly making a name for himself creating places to swim for the public—Paul purchased a large swimming club in Upper Darby, Pennsylvania. At the same time that his brother was making grandiose plans for Jones Beach, Paul was making grandiose plans for his "Llanerch Pool," planning to turn it into a huge recreational complex by adding additional swimming pools, a huge dance hall, and different restaurants for different pocketbooks. "It would," recalls a friend to whom he enthusiastically broached his ideas, "have been something really unique for the time. He had *some* imagination, I'll tell you."

But imagination on the Moses scale was feasible only on a public scale. Attempting to carry out his plans, Paul spent the pool's revenues as fast as they came in. Robert's grandiose plans cost far more than he had expected, but because his money came from the state treasury, though he spent on an unprecedented scale, overspent his budget, poured funds allocated for an entire bathhouse into its foundations alone, there was always more where that came from. For Paul there wasn't-particularly after his father died. Emanuel had helped with his ambitious project, but when, in 1925, he died he left all his money to his wife. This money was readily available to the younger of her two sons. Although Bella never gave Robert as much as he needed and he was habitually short on cash, she did support him and his wife and daughters for more than ten years; when, in 1927, at the age of thirty-eight, he was named Secretary of State, it was the first job at which he had ever earned more than a token salary. When, desperate for funds to complete the Jones Beach Causeway, he asked her for a loan of \$20,000, she gave it gladly. But for her older son, help was limited and grudging, and he was not a man who could beg. Soon, in the midst of a divorce that ended an unhappy marriage, he was being humiliated by the hounding of his Llanerch Pool creditors. He was unable even to pay his lawyer, and was sued by him, too.

In 1929, there was a reconciliation between Paul and his mother. She asked him to handle her business affairs. Con Ed hired him back on a part-time basis as a consultant, the swimming pool began to earn money, and, appearing nightly in winter at the theater or the opera and at New York's most fashionable restaurants, he was again an elegant, cheerful man-about-town.

Between two men as opinionated as Paul and his brother, there were bound to be frequent arguments, but in the past they had always been friendly; Paul had been a frequent visitor at Robert's home. But since his brother had become a powerful man in state government, Paul felt, his attitude had changed. He no longer, Paul felt, would tolerate anyone—even his brother—disagreeing with him. Looking over the aides his brother had selected, Paul recalled thinking: "Why, he's surrounded himself entirely with behind-kissers." During one heated discussion, his brother adopted an attitude that there was no sense discussing the matter any further since he knew best. "By God," Paul said, "I believe you're beginning to believe what these behind-kissers tell you." But, Paul says, there was never any particularly momentous clash with his brother; he believed they were still friends.

Then, in January or February 1930, Paul and his mother had another falling out. He left in a huff for Philadelphia, staying there for several months. The reason for the falling out is not known; but Paul said that it was no more serious than the other fights he had had with his mother, fights after which they had become reconciled.

But this time, something new happened, something he would never be able to understand—although he would spend the rest of his life trying to understand it. When he came home to make up with his mother this time, she refused even to see him. The other relatives on whom he dropped in, always so happy to see him in the past, were suddenly cold and distant. "They all seemed to think I had done something awful, you could tell from the way they were acting," Paul would say. "But I didn't know what the hell it was supposed to be." Much too proud to ask, Paul reacted by avoiding these people who had suddenly turned against him.

In March 1930, Bella Moses learned that she had cancer. Paul did not know at first. Whether he ever knew can no longer be determined. According to one story prevalent in the family, Paul never went to see his mother at Mount Sinai Hospital until the last few days before she died. According to another, he had gone earlier, but she had refused to see him. And when, on May 22, 1930, after weeks in which she lay semi-comatose in intense pain, she died of cancer, her will divided her estate between two of her children, Robert and Edna (although Robert's share was bigger than Edna's because to it was added, in effect, \$50,000 for the education of his children). To Paul Moses, her eldest son, Bella Moses left only \$100,000, and she left it in trust, so that he would receive only the interest from it, never the principal. He had to receive that income through his brother, who was named a trustee of the trust fund as well as an executor of the will. And there was an additional clause: if Paul ever contested the will, he would automatically lose even the trust fund, whose principal would then be divided between his brother and sister.\*

<sup>\*</sup> Upon Paul's death, half the principal was to go to Edna's children, half to Paul's—should he have children. If he did not, that half would go to Robert's children, Barbara and Jane.

Paul Moses was to be tortured by his mother's will for the rest of his life.

Financially, it changed his life, of course. Previously his earnings had always been supplemented by gifts from wealthy parents. Now he would have only the interest—so meager compared to those gifts—on his trust fund. More, he had always had security, the assurance of protection against any real hardships, as well as the assurance that one day a share of his family's wealth would be his. He had been raised among servants and tutors, in an atmosphere of snug luxury. He had spent his later life in variations of that atmosphere, and he had never had any reason to doubt that he would be able to live out his life against such a background. Now, suddenly, with a single blow, that security had been stripped from him-irrevocably and forever. It was the Depression: consulting engineers were a luxury companies could no longer afford; at the time he learned the contents of his mother's will, he had just learned that his retainer from Con Ed would soon be terminated. The swimming pool had not been doing badly, but its income would never be anything near a substitute for that security, even if it, too, was not affected by the Depression. He had saved nothing; there had never been any reason to save. He had always been a man who had much and the prospect of more. Now, all in an instant, at the age of forty-three, he had nothing.

But it was not financial considerations that hurt Paul most deeply. What his mother's will did to him cannot be computed on any tally sheet. He was to have to live for the rest of his life not only in straitened circumstances but with the question of why his mother had forced him into them. Thirty-seven years later, a man of eighty, he told the author, "I'm trying all this time to divine what was in my mother's mind. What kind of performance was this? Why did she do this thing?"

He was to have to live also with alienation from the rest of his family, an alienation that hurt him the more because he could not understand the reason for it. "I don't know what was in their minds," he would say. "What was I supposed to have done that was so terrible? Nothing that I know of. But they seemed to think I had." He was to spend the rest of his life tormented by these questions. And the conclusion that, after years of wondering, he finally reached was one that would not have been illogical to Ansley Wilcox or Judge Clearwater or Paul Kern-or any one of a score of men who had, in one way or another, stood between Robert Moses and something he wanted. His brother, Paul Moses felt, had lied about him when he was not around to defend himself, had poisoned his mother's mind and the minds of other members of his family against him, had exaggerated the details of his divorce and his financial difficulties until they seemed like vicious, unforgivable misdeeds. Paul even had a specific explanation for his mother's decision to virtually cut him out of her estate. "I wasn't present, but I know that Mr. Robert must have had something to do with that," he would tell the author. There had been another will, Paul would say, one that had divided his mother's estate equally among her three children. "How do I know?" he would say. "Because I saw it. I saw it several times. I was handling my mother's affairs, you know. It was just a simple thing—divided into three parts after charitable deductions." But Robert Moses had gone to the hospital where his mother lay dying, in a drugged state, Paul said, awaiting an emergency operation that was to be performed that night at ten o'clock, with a new will in hand, and, at six o'clock, had persuaded her to sign it. Paul could even advance a reason for his brother to do such a thing: Robert needed money badly, Paul said. And it was also his brother, Paul said, who was responsible for his difficulty thereafter in obtaining either public or private employment in his profession.

One of Paul's charges is demonstrably false. Bella did sign her final will during her last illness in Mount Sinai Hospital, but, according to the date on the will, she signed it on April 4, 1930, seven weeks before she died. The truth of his charge that his brother lied about him to their mother and their relatives cannot be determined—although it is clear, from a series of interviews with surviving relatives, that although they regard Paul almost as a criminal, not one of them has any clear idea of what his crime—if there was one—was supposed to be. Cousin Hilda Hellman, for example, says, "He was bad. I think he must have done something pretty awful." What exactly did he do? "I really don't have any idea at all," she says. Well, then, why does she think he did anything? Mrs. Hellman says it was just "an impression" she had. Asked the source of the impression, she was unable to remember. But at least one other relative, searching her memory, believes it was Robert.

Paul insisted that the will be read in the light of Robert's financial situation at the time his mother died—1930.

It was certainly serious. Having been ousted as Secretary of State by Governor Roosevelt in 1929, in 1930, Robert Moses was not earning any salary at all from his remaining jobs. Aside from expenses for which he was entitled to reimbursement. Robert Moses, at the age of forty-one, had no income at all except what his mother gave him. Now, with their two girls growing up-Barbara was thirteen in 1929. Jane eleven-Robert Moses' financial situation was complicated by the fact that for him it was unthinkable that his children attend public school, and he therefore had to pay tuition at St. Agnes'. The family had a nice place to live—Bella had bought him not only the Babylon summer house but a brownstone at 261 West Seventieth Street—but he was so strapped that in 1929 he did not have sufficient funds to pay the next term's tuition, or to make necessary repairs on the Babylon house. Moses had always made a point—both publicly and privately—of insisting that he be a public servant working without pay, refusing Smith's offer of a salary for his Long Island Park Commission job. His disregard for money was a vital part of the public image he had so assiduously cultivated, and the maintenance of this pose in private was no less important to him. But in September 1929, he took what for him was an unprecedented step-in the light of his previous actions, almost a desperate step. On completion of the City

Trust report he had written as Moreland Commissioner, he submitted a bill for his services of ten thousand dollars plus expenses. This was an unprecedented amount to ask for about two months' work, and Roosevelt, of course, would not have been disposed to grant Moses even a reasonable request. He turned Moses down flat. Moses was constantly being offered high-salaried jobs in industry, but that would mean leaving his public career and his public power. In early 1930, with the mother on whom he had always depended for money dying, he needed money desperately.

His mother's own resources, moreover, had been shrinking—largely because she had the same extravagant, prodigal attitude toward money as her two sons. Following her husband's death in 1925, she picked up more checks for Madison House. She made generous contributions to other charities, largely ones that produced some sign of physical accomplishment. How Robert Moses felt about this would be revealed later by a remark he made to La Guardia in a memo about the Children's Aid Society: "Every year my mother contributed more than she could afford to this organization because of her interest in playgrounds."\* Although about \$1,200,000 of her husband's money had been added to her own substantial inheritance, at the beginning of 1929 her net worth was down to little more than \$1,000,000. Sometime during this period, moreover, she told Paul to begin entering future gifts to her children on her books as "advances." This, Paul says, was proof of a growing awareness that her resources, while great, were not inexhaustible—and of her determination to be "fair" in dividing up her estate; the purpose of this method of entering "advances," he said, was to make clear that they were advances against her estate, and that, to keep the total amount each child received from her the same, they would be deducted from each one's share of her estate. (At the time she died, the advances to Robert Moses on her books totaled \$37,200.†) Half of her assets were in stocks; the 1929 crash further slashed her assets. In mid-1929, the worth of her stocks was about \$500,000; when her estate was appraised after her death the next year, the value of those stocks was found to have shrunk to \$293,649. Her total net worth was down to \$690,422. She made no secret of her intention to leave about \$50,000 to charity. In Paul's analysis, there no longer existed a fund of family capital large enough so that there was, as the Moses children had always supposed, plenty for everyone. A "fair"-one-third-share of Bella Moses' estate would, after the charitable deduction and inheritance taxes and the subtraction of \$37,200, give Robert Moses about \$170,000. The income from \$170,000 would certainly never amount to enough to support in any decent style a man, without a cent of other income, with two houses and two children in private school. In Paul's analysis, Robert Moses realized that if he was to continue his precious career and protect his precious image, he needed for himself every cent of his mother's estate that he could get.

<sup>\*</sup> Italics added.

<sup>†</sup> If there were any advances to Paul, the author could find no record of them.

This, of course, is Paul's analysis. Robert will not discuss it, and there is living no one else who is able to. It is not possible, therefore, for anyone ever to know whether or not Paul's analysis is true—although one part of it seems indisputable: apart from what he could get from his mother's estate, Robert Moses, forty-one years old, had no money to speak of at all.

But it is possible to ascertain the truth of Paul Moses' other charge. It is possible to determine whether or not it is true that Robert Moses secretly employed his behind-the-scenes influence in city government to keep his brother from getting jobs he deserved.

It is true.

Six high officials in that government—six in a position to know—say so. They are Fiorello La Guardia's Corporation Counsel, Paul Windels; his Comptroller, Joseph D. McGoldrick; his legislative representative, Reuben A. Lazarus; the chairman of his Civil Service Commission, Paul J. Kern; commission member Professor Wallace S. Sayre; and one other official who would talk only on the guarantee of anonymity.\*

Paul, the liberal idealist who had always wanted to work for the public instead of for the giant utilities he felt were defrauding the public, was eager to work for a mayor who felt the same way. He certainly had the qualifications for the work. Anxious to regulate utilities more strictly and to probe the assessment and easement concessions they had obtained from Tammany, the new mayor was having difficulty finding electrical engineers with both expertise and the willingness to antagonize the major employers in their field. Paul possessed both. Highly regarded as an engineer, he was also, McGoldrick adds. "kind of an engineer with a cause—he was very suspicious of utilities . . . like La Guardia, who was also willing to believe that Con Ed was overcharging the city. . . . And there weren't too many engineers on the liberal side because there was . . . much money to be made working for the utility." Just after La Guardia's inauguration, Paul had an interview with Windels, who was at the moment looking, on the Mayor's behalf, for a Commissioner of Water Supply, Gas and Electricity. Windels was impressed. Recalls Kern: "Paul Windels called me and said, 'I want you to show this guy to the Mayor. He seems like just what La Guardia needs.'" Kern was impressed himself. "Paul Moses came in and talked about himself, not too modestly but impressively, and he left his résumé with me. His record looked good." Whether as a commissioner or in some other high-level post, Kern recommended to the Mayor that Paul be brought into the administration.

But there was something standing in Paul's way.

Precisely what his brother was saying to La Guardia about him is not known, although the one reference by Robert to Paul in writing in the Mayor's private files consists mainly of a paragraph that could hardly have helped raise questions in the mind of so sharp a lawyer:

While it is nobody's business and purely a family matter, I have not seen my brother for a long time and I am hardly on speaking terms with him. My only

<sup>\*</sup> No official could be found who said differently.

contact with him is in my capacity as a trustee of a fund of which he is the beneficiary.\*

But that he was saying something was obvious. "That was quite clear to me—oh, just from little things [La Guardia] dropped," Windels says. "And it also became quite clear to me that for whatever reason—whether Robert made it a condition of his continuation in the administration that his brother not be hired or whether Robert simply made La Guardia believe it would be unwise to hire him—he wasn't going to be hired." Shortly, it also became clear to Kern. Having received no reply to his first recommendation that Paul be hired, he decided to press a bit. "At one of my half-hour sessions with La Guardia," he recalls, "I took a chance and brought this up, saying, 'With the shortage of good engineers, what's wrong with this guy?' La Guardia's reply was:

"'Don't bother me. I can't have him around as long as Bob is here."

The more Windels and Kern saw of Paul, the more their respect for him grew. "Remarkable mind, remarkable," Windels says. "Like the brother. Reaching out for a whole problem and pulling the whole thing in at once." Kern, who frequently ate dinner with him, found in him another quality that characterized his brother. "He was very good at sizing up people," Kern says. "When I was on the Civil Service Commission, I'd often ask him about some guy and he'd tell me he's no damn good for such-and-such a reason. And we'd hire him, and sure enough he'd turn out just that way." Windels saw to it that Paul did get some work, hiring him as an expert witness in condemnation cases involving utilities, and as a consultant to a committee studying transit unification, and later putting him in charge of a thirty-threeman staff reassessing utility properties—at the fee he asked, fifty dollars per day. "Listen," Windels says, "I checked his qualifications. He was a top engineering consultant. He was worth fifty dollars a day of anybody's money." In fact, during several years in which Paul held this last job, the utilities' assessments were raised more than \$200,000,000 per year.

But these were temporary jobs, and Paul's repeated attempts to obtain a permanent one met with rebuff. He was earning over \$12,000 per year from his consulting work for the city, but the Depression was cutting deeper and deeper into the profits from the swimming pool. He needed a job—and he became very bitter over his inability to get one. He did not know, or even suspect, the real reason. (Ironically, he thought it was Windels who was keeping him from getting one.) "Listen, I wasn't asking for a handout," he would say years later. "I was recommended by the engineering societies. I knew more about this stuff than anyone else around. I was entitled to at least one of all those jobs. Windels, Lazarus—all those fellows: they were pretty shabby to me. I wanted to get something in public life, and no one would

<sup>\*</sup> The paragraph is contained in a brief note Moses wrote in the first months after La Guardia's inauguration. It is a reply to a letter about Paul that the Mayor sent to Moses. The letter is not in the files, and its contents could not be learned.

say a word for me." After Windels resigned in 1938, he could not obtain even consulting work. At first, that did not worry him; his services had always been sought by many engineering firms. But now, for some reason he could not understand, even the firms which once sought them most eagerly were totally unwilling to even consider employing him. All through 1939 he hunted for a job in the profession in which he was an acknowledged expert—and could not find one.

His financial difficulties were compounded because he possessed the Moses prodigality toward money. Remarried—to a divorcée with two children-he had undertaken to send them to private school and college. He had moved his new family into an expensive lower Fifth Avenue apartment. Although between 1934 and 1938 he had been earning a substantial income, he had lived to its limit, saving nothing. And he had refused to-perhaps because of his upbringing had been unable to-put financial limits on the Upper Darby recreational complex that may have been his pitiful attempt to rival Jones Beach. He kept pouring money into the Llanerch Pool-for modern locker rooms, a dance hall, another restaurant. In 1938, with finances flush, he had put a \$33,000 mortgage on the property to finance the construction of an "amusement building." As his plans for the building grew larger and larger, so did its cost. In 1939, with the \$33,000 spent and the building still not finished, he encumbered the property with a second mortgage. The building was still uncompleted, no receipts were yet being earned by itand suddenly the receipts earned by the pool and restaurant were being gobbled up by interest payments. One morning, the morning on which the last dreams of Paul Moses' life turned to ashes, there arrived at his office a real estate tax bill that he had no money to pay. The banks, learning of the situation, initiated foreclosure proceedings. He was reduced to borrowing from his wife's aunt, and then from her mother, securing a \$12,500 loan from the latter by giving her another mortgage. He desperately needed a good summer—instead there was a polio scare in Philadelphia; few people dared to swim in public pools. The \$12,500 melted away. Presented with a \$7,500 bill from his attorney, he was unable to pay it; the attorney sued him. His wife's mother had died; in desperation, he had his wife assign the mortgage she had inherited from her to the attorney; he fell behind on federal income tax payments, and interest on them was mounting by the day-drawing tighter and tighter around this once gay, elegant free spirit was a net of debts too snarled to permit escape.

The marriage melted away with the money. Moving into a cheaper apartment was too agonizing for a man of Paul's pride to contemplate; by the end of 1938, however, he had no choice but to move; he had no money to pay the rent. He had to move in with his in-laws. Using every cent he could lay his hands on to try to save his pool—for a while he moved with some of his elegant suits into a tiny, bare room behind the pool office so that he wouldn't have the expense of commuting costs to Philadelphia—he let other bills slide. He and his wife were being dunned by the butcher, the grocer, by a department store, and even, for a hundred dollars, by a maid they had let go.

He lived on twenty-five dollars a week, using every other cent the pool earned to pay off its debts, and in some weeks in which a bill or a demand for taxes became too pressing, he was unable to take even the twenty-five. When he had to come to New York in 1939, the year in which his brother moved into the expensive apartment on Gracie Terrace, he slept in a Salvation Army lodging house. Pride made him conceal his poverty—so well that acquaintances who, meeting him on the street, noticed that the cuffs on his expensive suits and shirts were ragged, thought this was an affectation on the part of this man who had always cared so much about his appearance. To those who invited him to their homes for dinner, however, it was more difficult to conceal the truth. He might forget and cross his legs, and then friends such as the Propers—who were so kind to him that he would often "drop in" on them when he "happened to be in the neighborhood"—saw that there were holes in his socks and in the soles of his shoes. They saw from the way he ate dinner that he hadn't been eating many. Not only did he not have enough money to buy clothes or shoes, they realized, this man, whose brother was host daily at lavish luncheons, did not have enough to buy food. "He got thinner and thinner," Mrs. Proper says. "He was really not getting enough food. We kept him overnight a number of times. I really don't think he had a place to sleep. We offered to lend him some money. He wouldn't take any, not from us at any rate. I used to wish he had. Poor Paul."

Genuine friends such as the Propers, moreover, saw changes in Paul that saddened them more than the changes in his appearance. For, to people who remembered his wit and gaiety, the holes that gaped most glaringly now were not the holes in his shoes but the holes in his spirit. Paul Moses, they realized, was being eaten away by a terrible bitterness. "We had him to some dinner parties, but he was very difficult to handle," Mrs. Proper says. "Bitter, frustrated possibly, opinionated. This was when this Moses side came to the fore—this brushing aside, this arrogance. He was impossible. Paul was his own worst enemy."

At the heart of Paul Moses' bitterness was hatred for his brother.

Its spark was what Paul felt was injustice in the administration of the \$100,000 trust fund of which his brother was a trustee. Their mother had intended that Paul get from that fund an annual income of several thousand dollars per year.

But he wasn't getting a cent.

The fund's trustees—Robert, Edna, cousin Wilfred Openhym and a bank—had invested Paul's money in "guaranteed mortgages," a device, common before the Depression, under which a title company, for a fee, "guaranteed" principal and interest payments and undertook the responsibility of seeing to it that the owner paid his real estate taxes. But two of the three mortgages involved were caught in the crash of the real

estate market in New York, during which thousands of owners defaulted on payments, and title companies, unable to meet them all, collapsed. In normal times, the bank, which was managing the trust fund for the trustees, would have received notification of the default in taxes and interest payments from the title companies and would have foreclosed, saving the principal. But in the general confusion, the bank somehow did not check on the tax situation until the owners of the two properties had been in default on taxes and other city charges for more than two years. To keep from losing the entire \$24,000 investment they had made in one building, the trustees, foreclosing on it, had to sell it for what they could get: \$7,500. To keep from losing the \$65,000 they had invested in the other, a loft building at 168 The Bowery, they had to pay off \$8,000 in taxes, and make repairs costing \$7,000—which they did by putting a \$15,000 second mortgage on it. During the five years in which they were paying off this mortgage, the trustees deducted the payments from what Paul would have received. There was nothing left for him. Between October 3, 1935, and August 3, 1939—almost four years—he received nothing from his trust fund. By the time the mortgage was paid off, real estate values on the Bowery had plummeted—permanently. The rents earned by the building into which most of his inheritance had been sunk barely met mortgage payments and taxes. His income from the trust was henceforth going to be barely a thousand dollars a year.

If there was negligence involved in the disappearance of his assets, it was on the part of the bank, which had had the responsibility of managing the properties for the trust, not on the part of his brother, who had in fact lost part of his inheritance because he had invested it in guaranteed mortgages. Not even the most prudent investors had foreseen the general collapse of the title companies which had turned tens of thousands of guaranteed mortgages into all but worthless paper. Paul would probably have understood this if his brother had sat down and explained the situation to him.

But his brother wouldn't even talk to him. Once, the few thousand dollars a year that the trust fund was supposed to have provided would have seemed like an insignificant sum to Paul Moses. Now it looked as large as a meal to fill his stomach. It might be the means—the only means—of saving his swimming pool. In an attempt to realize something from the dilapidated Bowery loft that now represented almost his entire inheritance, he thought of two ideas. The bank, he learned, was paying a rental agent about \$1,000 per year to collect the rents: why, he wondered, could the bank not hire him to do the collecting instead, and pay him the thousand dollars? Or, he wondered, why could not the building be sold? He asked its largest tenant if he would be interested in buying. The man said yes, and made an offer on the spot: \$40,000. Paul was sure he would go higher, and even \$40,000, placed in a bank, would return him more than the few hundred dollars the building was netting him annually now. Paul telephoned his brother to present these ideas to him—and heard with astonishment a

secretary say that his brother wouldn't talk to him. When he telephoned his brother's home, Mary gave him the same message. When he contacted his sister, Edna said she would do whatever Robert wanted. So did Openhym, who, Paul says, "seemed to feel I was some sort of criminal or something." So did the bank. Much as he needed the money involved, it wasn't its loss that hurt Paul the most. It was the attitude of his brother. At about this same time, by coincidence, he asked Edna for some pictures or mementos of their parents; she said she did not have anything to spare—not so much as a single photograph. "Oh, I never blamed Edna," Paul was to say. "Whenever something comes up, she asks Mr. Robert what he wants done and then accedes to it." Now he tried to telephone his brother to ask him for a photograph— "You'd think they'd let me have a picture, wouldn't you? You'd think they'd let me have something, the oldest one in the family and all"—and he still would not come to the phone. He had always been fond of his brother's two daughters, Jane and Barbara. Now, he realized, he was not going to see them at all. And he couldn't imagine why his brother and sister and cousin were treating him this way. For a while he thought it must be because of his marital difficulties. "What right have they to sit in moral judgment on me, an older brother?" he said. But that explanation could not account for their attitude. He simply could not imagine what was behind it.

In January 1941, Paul received a letter that fanned smoldering hatred into flame, convincing him that the motive behind all his brother's actions had been the desire to wring for himself out of their mother's estate every last dollar he possibly could—even if those dollars had to come out of the pitifully few that Paul was receiving. For the letter, a copy of one from the trustees to the Surrogate's Court, informed him that Robert Moses was asking that he be paid—out of the trust fund—for his work as trustee.

For almost four years—from October 3, 1935, to August 3, 1939—Paul Moses had received nothing from the trust fund his mother had left for him. During the remaining months of 1939, he had received \$1,144.54, in 1940, \$444.18. In five years, then, he had received a total of \$1,588.72. The letter informed him that the fund's trustees were asking the Surrogate's Court to approve the payment to them—out of the fund—of commissions for their work as trustees at standard trustee commission rates. Each trustee was asking for \$750.90. Together, therefore, they were asking for \$3,003.60. At the same time, Openhym asked an additional \$750 for himself as "attorney for the trustees."

The wealthy lawyer's request enraged Paul. If it was granted, he would obtain from the trust fund Paul's mother had intended for Paul's support \$1,500—just about as much as Paul had received from the fund for the previous five years. And Openhym was only a cousin. Robert and Edna were his brother and sister. They lived comfortably. He often literally did not have enough to eat. But they were attempting to obtain from his trust fund as much money as he had obtained during the previous five years. Together, in fact, the trustees were asking for almost \$4,000—more than twice as much as Paul had received during those years.

And that was not all the information his brother's letter contained. The trustees now felt, it stated, that money Paul had been given in 1933 and 1934—some \$3.484—had been given to him by mistake; it should have been applied instead to the bills for repairs and back taxes, and it must now be returned to the trust to build up the principal. Since he did not have any money to return, it would be returned for him; the trustees would add \$3.484 to the principal by adding to it payments that would have been made to Paul until that amount was arrived at. Paul realized that his brother and the other trustees were proposing that, after a four-year period in which he should receive not a cent for another three years.

Paul could take no more. He could not contest the will—the provision that had been placed in it made it too risky for him to do that—but he could contest what the trustees had done with the money left to him in it. Hiring an attorney, he asked the Surrogate's Court to order the trustees to pay him the thousands of dollars of income from the trust that they had put back to build up the principal, thereby, in his view, throwing good money after bad by pouring funds for repairs into the Bowery property whose value was deteriorating yearly, while at the same time insuring that he would get no income from the trust.

In describing what happened, Paul would tell the author: "It was shifted from a judge who would have been fair to me—a judge who had ruled favorably in a case practically four-square with mine—to a judge my brother knew."

Court records show that the case was originally scheduled to be heard before James Delehanty, one of the two judges in Manhattan Surrogate's Court, who had indeed in another case, similar to Paul's, held the trustees responsible for the dwindling away of a fund's assets caused by a failure to monitor taxes and mortgage payments. On July 17, 1941, however, Paul's attorney received a notice stating, without explanation: "The issues in this proceeding . . . will be heard before Hon. James A. Foley." James A. Foley, the other Manhattan Surrogate, was a key Tammany figure and one of Alfred E. Smith's closest friends. Whether the switch was a matter of court routine or whether Paul was correct in seeing his brother's hand in it cannot be determined. All that is known is what happened at the hearing: while Foley upheld Paul on several minor points, he ruled against him on the key issues, approved payment of the trustees' commissions—and gave Paul a tongue-lashing, saying, in words that caused the blood to rush to Paul's face when he recalled them years later: "You got the whipped cream, now you want the milk." ("Now what the hell did that mean?" Paul would say. "What sense was there in that? I don't know to this day.") To add a further soupçon of bitterness to Paul's whipped cream, Openhym, as a result of "extra work" he had had to do because of the hearing, increased his fee request from \$750 to \$1.000—and added on, to be deducted from the meager remainder of his cousin's trust, \$38.47 in expenses.

Robert Moses had been entrusted by his mother with doling out a pittance to his penniless brother. He took part of that pittance for himself.

He took away from a brother who was poor while he was well off, who was walking the streets with holes in his shoes and sleeping in a Salvation Army lodging house, who was almost literally starving for want of a few dollars, \$750.90.

Legally, he had a right to that commission. But the morality behind the request for it was the morality of Robert Moses.

Foley's decision—all the circumstances surrounding the will—was unjust, Paul felt. Most of his mother's money had come to her from her mother, his grandmother, and her husband, his father. His grandmother and father would certainly have wanted him to have a fair share of their money: was it not unjust that he was not being allowed to have it? And why had she acted so unfairly? "I wasn't present, but I know Mr. Robert must have had something to do with that." Preying on him constantly, moreover, was the feeling that even if his brother had had nothing to do with his mother's injustice, he had compounded that injustice by his later actions. "What right have they to sit in moral judgment on me?" To refuse him even a photograph of his parents? Right or wrong, the feeling deepened into an obsession. Festering within him constantly now was the conviction that he had been the victim of a monstrous injustice—at the hands of his own brother. A single talk with his brother might have lanced that infection, but his brother would not grant him the favor of such a talk. The poison from the infection began to soak into his whole personality.

He never spoke about the will to friends. He had too much of the need his brother had, to relate to others from a commanding position; he needed to pretend that he was set off from others by the fact that he still had money. Few of his friends and acquaintances knew his true circumstances. Windels and Kern and Lazarus would be shocked when they were told after his death of his poverty. "No, I'm sure you must be mistaken about that," says one acquaintance. "I remember quite clearly him telling me he had some sort of independent income, didn't have to work like the rest of us, you know. He said he had bonds, clipped coupons so he didn't have to pay taxes. And, oh yes, I recall quite clearly that he said he owned some real estate." But Paul talked incessantly about his brother: criticizing his policies and his reatment of the public. "Can't you see the settlement-house attitude in everyhing he does—this attitude of: 'You're my children and I know what's best or you'?" In hindsight, many of his criticisms would turn out to be percepive ("You know who it was who first made me realize what this overdependence on highways was going to do to New York?" Lazarus asks. "Paul Moses, that's who") but he put forth the criticisms in a manner so harsh, became so enraged at disagreement, and, when the talk turned to his brother, acted so bitter as to seem almost irrational. (It is his way of talking about is brother that makes even more than the usual caution necessary in weighng his charges.) Acquaintances who saw him at wide intervals saw a man changing. Lazarus, who had once thought so highly of him, says: "He nad a fixation. He hated Bob. Paul . . . was a good engineer, but to get him off balance all you had to do was mention Bob." As the symptoms of this ixation deepened, it was no longer necessary for someone to bring up Bob's

name; Paul seemed to turn every conversation to his brother. Lazarus says Paul became "unstable"; Kern calls him "quite neurotic," capable of "violent hatred." Men sitting at a banquet at which his brother was speaking or being honored might notice him standing in the rear of the hall—he was standing in the rear, although they didn't know it, because he could not afford to buy a ticket for a seat—staring up at his brother on the dais with that look of contempt and hatred on his face, and they would nudge their friends and point out the lone, bitter figure standing back in the shadows. This too contributed to the impression of an unstable personality, and, ironically, made it easier for the crowd around City Hall to believe those rumors—the rumors whose source was never identified—that Robert Moses' brother was guilty of some heinous, if unspecified, crime.

Fighting to hold on to the Llanerch Pool, needing every cent he could scrape up, Paul Moses was trying desperately to find a job now. But he couldn't. As, day after day, a man in his fifties, turning gray, he made the long, humiliating rounds of the job hunter, he found that although he had for years been a high-salaried, highly respected consulting engineer, now not one of the city's engineering consultant firms would offer him any job at all.

Perhaps the explanation lay in his altered personality, or in the rumors that followed him. But there were those—engineers who had learned for themselves the hard lesson of what it meant to an engineer in New York to incur the displeasure of Robert Moses—who felt that that was not the real explanation. "You don't really think it was, do you?" asks Ole Singstad, a world-famous engineer who defied Robert Moses once and could not get another job in the city or state for thirty years.

Paul did not ask his brother for a job. He would not. But, without his knowledge, friends tried to.

They tried only once. Carl Proper knew Robert Moses well enough to get an interview without having to say in advance what he wanted to talk about. "Carl only went because it was so obvious that Paul wasn't getting enough to eat—we were worried about his health," Mrs. Proper says. But when Robert realized why Proper had come, Mrs. Proper says, "he was just fit to be tied. He was adamant and uninterested. It was a brush-off." And Paul not only was offered no job by his brother but did not find it any easier to find work for a private engineering firm, so many of which were supported by the contracts Robert Moses controlled. In 1942, unable to meet the real estate taxes, Paul lost the Llanerch Pool.

During World War II, Paul obtained a wartime post as superintendent of construction at the U.S. Navy base in Bayonne, New Jersey, dedicated himself to the work so completely that for months he slept on a cot in his office—and became, to a large extent, his old competent, incisive self again.

But when the war ended, so did the Bayonne job-and Paul, upon his

return to New York, couldn't find another one in even the most minor consulting or executive capacity in his field.\*

Paul's brother would, after the war, be placing with the private consulting engineering firms he controlled scores of engineers, often on the basis of personal or political considerations. His control of public engineering contracts was a byword in the profession. His brother was an engineer. But his brother could not find a job. "It was damned strange that a guy with his ability, a guy who had held really top jobs, couldn't find anything at all," says one engineer. In 1954, Robert Moses would become chairman of the State Power Authority, the body charged with creating hydroelectric power from the St. Lawrence River. This was the field of Paul's particular expertise; he had, in fact, spent months drawing up a St. Lawrence plan years before, as his brother was well aware—they had frequently discussed it at the time. Robert Moses would experience great difficulty finding engineers with expertise in the field, and he could hardly have approached the professional engineering societies involved without getting a recommendation for his brother. Paul Moses expected his brother to contact him about a job this time. But he heard not a word. And, year after year, for ten years, fifteen years, in a city in which his brother was handing out so many engineering jobs, Paul Moses couldn't get one.

Paul Moses did not ask his brother for a job; Paul Moses could not d that. But he did want to ask him again to sell 168 The Bowery, a move that Paul felt would give him more of an income from the trust fund than the \$550 he was receiving. (His second wife was, as a result of their separation agreement, receiving the same amount.) But his brother's secretaries told him they had been instructed not to put him through. At one point, he tried for a year and a half without getting him to come to the phone even once. And when his brother finally did consent to talk to him, it was to curtly refuse even to consider Paul's ideas. Then he cut off communications again. In his seventies, Paul had to eke out a living as a salesman. Finally, this gay, gallant man whose natural habitat was the opera and Delmonico's went to ground in an \$86.50-per-month "apartment" that was not an apartment at all but a single large room, converted from what had been a storage space, with an area in a corner of the room that served as a kitchen, on the top floor of a five-story walk-up loft building at 105 South Broad Street that could be reached only by climbing long, steep flights of stairs. And there, in the city in which his brother lived in luxury, Paul Moses lived out the last ten years of his life in a terrible poverty brightened only by the last of his women, a small, pleasant, gray-haired lady about his own age whose devotion to Paul impressed everyone who knew them. Paul's friends—she appears to have had none of her own-knew her only as "Millie." Not one person could be

<sup>\*</sup> Why Paul returned to New York, the city in which his brother was in power, instead of trying to make a new life somewhere else, may be explained in part by his age: in 1945, Paul was fifty-eight. There may have been another reason also. When the author asked him why, Paul replied: "What! Let him drive me away?"

found in New York who knew her last name—she and Paul, although they lived together, could not, because of his wife's refusal to give him a divorce, ever get married. But there are indications that she may have been the same woman with whom, decades before, Princeton freshman Paul Moses, in defiance of his mother, had fallen in love during his glittering youth.

The building in which Paul Moses lived out his life, located at the last stop on the subway, was almost at the very end of South Broad Street, almost the very end of Manhattan Island—as if he had almost, but not quite, been driven off it. In the evenings the area was all but deserted, the streets empty. Millie put curtains on the windows of the top-floor loft that was their home, and curtained off the little kitchen, but there wasn't much that could be done to make the big bare space pleasant—particularly without money. (Of all the things that were missing from it, Paul felt most the absence of books. "I had had all sorts of reference books," he told the author. "Now I have no books.") And it wasn't the bareness of the room that was the worst thing about it; it was its location at the top of those steep stairs. The few visitors he invited up there-"It was the kind of place you wouldn't want to invite a lot of company, I'll tell you that," one says—all remarked on those stairs; "it was technically only four flights but they were so long it was like seven or eight, and they were very steep, old wooden stairs," says a friend, Louis Schulman. And Paul Moses, while remarkably vigorous, had his seventieth birthday in 1957. Those stairs were very hard for Paul, particularly at the end of a long day trudging around Manhattan as a salesman. In his late seventies, he would be stricken by a serious illness. Thereafter climbing those stairs would be very hard indeed. Any apartment in an elevator building would have been a blessing to him. His brother was creating tens of thousands of such apartments: low-income, middle-income. He gave out such apartments as favors to innumerable persons. Any politician with a relative who wanted one had only to ask; Robert Moses would provide. But he wouldn't provide one for his own brother. Paul Moses was to struggle up those stairs until 1967, when, at the age of eighty, he died.

Paul's room was within walking distance of City Hall and the Municipal Building, and he seemed irresistibly drawn to those buildings, perhaps because he was drawn to see in public the brother he could not see in private, perhaps because it was the only way he could obtain even an outsider's glimpse of the public life of which, with its concern for great problems, he had always wanted so much to be a part. He not only attended public hearings of the City Planning Commission, but was continually dropping in uninvited to the offices of its staff members, an elderly but erect man still with traces in his bearing of the old arrogance, still dressed, because he carefully preserved the couple of good suits he still possessed and saved them for such visits, with an elegance out of another age, still with a crisp, biting

way of talking and an air of impatience when, as so often happened, a commission staffer turned out to know less about a problem under discussion than he did. It was quite obvious that he came because he wanted—needed desperately—to have someone to talk to about these problems that had fascinated him all his life.

Staffers who took the trouble to be courteous to the elderly man found it well worth their while. Schulman, one of the most knowledgeable of all civil servants in the arcane mysteries of municipal finance—he was at the time director of the Planning Commission's Division of Capital Budgetand a kindly man as well, met Paul one evening at an engineering society meeting and realized immediately that he was in the presence of a remarkable intellect. "You don't often get an opportunity to talk to someone like that, so well-versed, so fluent," he says. Thereafter, when Paul dropped in to his office ("He was lonely, you see"), Schulman would find time to talk to him; at lunchtime, they would often walk together in City Hall Park. Schulman found Paul "off his rocker" whenever he talked about his brother. But about any other subject, Schulman found him "a wonderful conversationalist, very bright, brilliant, refreshing. My wife found him that way, too. My wife won't invite anyone to the house for dinner, but she insisted on inviting him. My wife was very fond of him." Another official who was always glad to see him was Charles Hand, the canny old New York World editor and later PR man for Jimmy Walker, who in the early 1950's was an adviser to young Robert Wagner, Jr., then Manhattan borough president. "Paul used to hang around City Hall in the corridors," Wagner recalls. "If Hand saw him, we'd say, 'Come along to lunch.'"

But with every passing year, there were fewer men in City Hall who had known Paul when he had been regarded as a brilliant engineer. Busy young planners considered the old man just another one of the "nuts" who hung around the Hall, particularly if he began talking about his brother. "He'd go into other offices and start to yak away and talk and people wouldn't put up with it," Schulman says. "They would throw him out."

Nonetheless, he continued to hang around. He became a familiar, funny, almost pathetic figure around City Hall, an elderly man with an arrogant air and a sharp tongue, wandering the corridors, talking to strangers.

Telling this story about his brother—the hero of New York, the public servant who didn't care about money—that no one believed.

In 1962, Robert Moses got his brother, then seventy-five, a job.

Climbing the stairs to his apartment one day, Paul collapsed. Taken to the Veterans Administration Hospital in the Bronx, he was believed dying, and in some way word was conveyed to his brother, who came to visit him. It was the first time Robert Moses had seen him in about twenty years. He brought Paul, who had been so anxious to work on the St. Lawrence Power Project but whom he had given no chance to do so, two gifts: a recording of the opening ceremonies of the Robert Moses Power Dam on the St. Lawrence and a copy of his memoirs.

When he emerged from the hospital, Paul had two hundred dollars in the world. He had thought he was dying, and he had become terribly frightened that Millie would be left not only alone but penniless. In the most gallant of all his gallant gestures, he did for her what he would never do for himself: he wrote a letter to his brother—who, once he knew Paul was recovering, would not favor him with his presence again—asking him for a job. His brother arranged with the engineering firm of Andrews & Clark to give him one—as little more than an errand boy, at \$96.16 a week.

Whether or not his brother had given Robert Moses cause to treat him the way he did no one will ever know for certain. But his sister certainly never gave him cause to treat her the way he did.

The plain, quiet, serious, withdrawn girl grew into a plain, quiet, serious, withdrawn woman—utterly cowed by her mother, with whom she lived until, late in her thirties, she married the purser on a British ocean liner on which she was taking a cruise, and by the brother she idolized. According to the testimony of all who knew Edna Marion Moses, she would do whatever Robert Moses wanted.

Yet, when she and her husband, neither of whom had offered the slightest protest when Robert received the lion's share of their mother's estate, moved to Coconut Grove, Florida, in about 1940, she found to her surprise that her brother never telephoned her, not even on her birthday, and was noticeably unenthusiastic about talking to her when she phoned. Years passed in which they hardly talked at all. Once, after she had not seen him for years, she asked if they could not get together. Moses' reply was to say that he would shortly be vacationing in Key West and would be setting down, very briefly, at Miami Airport, to change to a smaller plane. If Edna wanted to see him, he said, she could drive out to the airport and see him for a few minutes there. Edna at last got the message. She did not show up.

Paul Moses, in his bitterness, felt that he understood the reason for his brother's behavior toward his sister. "He had no use for human beings," Paul said. "He would just use them up, and then when he had no more use for them, he would throw them away." His brother had needed Edna when their mother's will had first been probated as an ally to insure that the trustees would maintain a solid front against Paul. But thereafter he did not need her any more. And he "threw her away."

Paul may or may not have been correct, but it is difficult to avoid wondering if there is not another reason—one hinted at in a Windels remark: "Robert never discussed Paul with me. He was quite reticent about him. You would almost have thought that Paul didn't exist."

It is difficult to avoid wondering whether that was not what Robert Moses wanted the world to think. To any mention of his brother, Robert reacted with rage sufficient to insure that the brother was not mentioned

Two Brothers 599

again. In the circle around Robert Moses, "Paul Moses" was so proscribed a name that in 1956 the *Post*, in a six-part series on the Park Commissioner, could report that "many of his associates do not know that he has a brother . . ."

The Post series was almost unique in mentioning Paul at all. It is possible to read through hundreds of magazine and newspaper stories without finding another mention. The reason was Moses' attitude. By never mentioning the brother's existence, he led writers to ignore the possibility that there might be one. If—as happened only rarely—a reporter learned of Paul's existence on his own and mentioned it himself, Moses' reaction was striking. As the Post reported, he refused even to say whether he was an older brother or a younger. "I'd prefer not to say," he said—"firmly." And of course a man who did not want the world to know he had a brother, and was avoiding the topic by not mentioning him, would steer away also from mentioning that he had a sister, for the mention of her might make it more difficult to avoid mentioning him. He would not even tell the Post if she was older than he or younger—and he would not say where she could be located.

In a book about his life, necessarily more detailed than newspaper articles, mention of a brother's existence—and perhaps of other details of their relationship-would be more difficult to avoid. For a man so eager for publicity—a man, moreover, who geared his entire life toward insuring himself immortality—Robert Moses' attitude toward books that might help insure that immortality was surprising. A dozen publishers offered substantial sums for his autobiography. The offers were refused. Dozens of writers made preliminary inquiries about writing his biography. Moses informed each one that he would not cooperate—and that none of his records and documents would be made available. That attitude discouraged all but a handful; with those, Moses took a firmer stand, using his influence with publishers to have the idea killed. In 1960, the Harvard-MIT joint School of Urban Studies asked author and former New Deal Brain Truster Rexford Tugwell to write one and offered him a substantial grant—by one report \$50,-000—for the job. Tugwell says that Moses promised cooperation. The former New Deal Brain Truster hired a research assistant and with him had spent more than six months on what Tugwell considered the first step-drawing up a detailed chronology of his subject's life, including his boyhood. At that point, however, Tugwell says, "I went to Moses and asked him to look it over. . . . I left it with him, and he called me up in a couple of days and, boy, he blew his top. I went out to [his office] and, boy, did he give me hell. I said, 'I don't think I can write this thing without cooperation from you, so I withdraw." Tugwell was never able to understand what had so dramatically changed Moses' attitude.

Only one biography of Robert Moses was in existence before this one. Entitled Robert Moses: Builder for Democracy, it was written, in 1952, by Cleveland Rodgers, a profound admirer, as his title suggests, of the Park Commissioner, under the closest supervision from Moses and his aides. There is a chapter on Moses' youth, and it does provide a few details, includ-

ing brief biographical sketches of his father and mother. There are photographs of his father and mother—and of the house in New Haven in which he was raised, with the Park Commissioner posing in front of it. There is no photograph of Robert Moses' brother or sister—and there is no mention of them, not even a reference by name. In this 339-page book on the life of Robert Moses, there is not the faintest hint that he had a brother and sister.

He had a father and mother, too, and the picture he painted of them in the public mind is also striking.

He subtly denigrated his father at every opportunity. When one of the *Post* reporters said in 1956 that he had heard Moses' father had been a successful businessman, Moses replied: "Actually, whatever money there was in the family my mother had."

This attitude—while unfair to the prosperous merchant who had in reality left Bella Moses the bulk of her wealth—was, of course, in keeping with the patronizing attitude Moses had always displayed toward his quiet, gentle father. But the attitude he displayed—after her death—toward the mother he imitated so thoroughly was not. When he spoke about his mother publicly at all—which was almost never—it was to downgrade her reputation as well. Here, for example, in a letter he wrote to "correct" a 1946 PM biographical series, is his published description—perhaps his only published description—of his parents:

Thanks particularly for endowing me with a million dollars. The next thing to real wealth is, I suppose, the reputation of having it. My father did not give me a million. He never had it. My mother left me something, which was not much to begin with, and shrank through neglect while I was plugging at unpaid jobs. My father was, in fact, genuinely distressed because respectable friends deplored my antagonizing our Long Island park opponents, and my mother, probably rightly, thought I could take better care of my family if I got out of dangerous and thankless public service and into a big respectable corporation.

The woman thus described was quite unrecognizable to a score of friends and relatives, who recall her great pride that her favorite son had followed the career in "public service" into which she had urged him; who recall that whenever another relative inquired whether it wasn't about time he started supporting his family, she had defended what he was doing, saying public service was much more important than any private job—and that she had backed up her belief not only by lending him \$20,000 to help him create Jones Beach but by making it possible for him to stay in public service by supporting him and his family as long as she lived.

Robert Moses' attitude toward his whole family was striking.

The Moses and Cohen clans were numerous; New York City was well stocked with his aunts, uncles, cousins, nieces and nephews. During his youth, it had been a rather close family. After he came to power, it was still a rather close family. But he wasn't part of it. With the notable exception of

Two Brothers 601

the cousin involved in the matter of his mother's will, Wilfred Openhym, he generally saw them only on his own terms, in settings he controlled absolutely—at ground breakings and ribbon cuttings at which he was both host and star. He rejected invitations to their homes. Gradually he cut off relations with most of them; almost invariably they ended in acrimony. One of his cousins, Angie Fink, said that she was practically the only member of his extensive family with whom he was still on speaking terms, and that even she spoke with him seldom. It was, Mrs. Fink said, "as if he had tried to deny his father, his mother, and his whole youth."

As for his wife, on those Saturday evenings at the Belmont Mansion, where Robert Moses sat hour after hour at the big table with no apparent intention of leaving, it was, of course, Mary Moses "who was the most welcome person because she was the only one who could drag him out"—a feat she sometimes accomplished by taking him "firmly by the ear" and leading "him away from the table as if he were a little boy."

For years, in all domestic matters, Robert Moses was led by his wife. If, outside, he gave orders, at home, with Mary and their two daughters, Barbara and Jane, he took them. "He was a different man there," says Joe Ingraham. "So different that if you only knew the public Moses, you'd hardly believe this was the same man."

The Moses homes—the big, rambling old Thompson Avenue house and a Gracie Square apartment that he rented after coming into Bella's inheritance in 1930—were both sunny and cheerful (the apartment looked out on the busy East River and the towers of the Triborough Bridge) and casual, with deep, gaily slip-covered chairs and sofas; bright oil paintings; warm, russet drapes; books piled all around; and, in the foyer at Thompson Avenue, rolled-up sails for Jane's sailboats. The atmosphere was as relaxed and casual as the atmosphere in his offices was intense. And the contrast extended to the man who lived in them.

Moses was not home much—he was generally out of the house by nine, usually returned after eight and worked every Saturday—and when he was, a friend recalls, "he always had that yellow pad on his lap." But the friend says, "he never acted busy or rushed at all; he was easy and utterly gracious." When Jane and Barbara were young, he would make up stories to tell them, sit on the floor with them for hours, making animals out of clay, carry them around on his shoulders, teach them to swim and sail, take them on wonderful Sunday clambakes on Fire Island. When they got older, he and Barbara—Jane early developed an anti-intellectual bias—followed the family tradition established by Grannie Cohen by doing crossword puzzles together, including the difficult Double Crostic in the Saturday Review. He was always delighted to have their friends in—the house was always filled with children—and Jane says, "I cannot remember him losing his temper at us." It was he who

walked the dog, generally took out the garbage—and, often after working until long past midnight, arose at six or six-thirty to make breakfast. "He loved to cook," Mary's sister, Emily Sims Marconnier, says. "No matter how early I got up, Robert would be in the kitchen and he'd like to know what I'd have—bacon or eggs or whatever." He dressed in the shabbiest of old khakis, a plaid shirt hanging out of his pants, sneakers and one of the incredible hats he loved (the battered old fedora was often replaced now by a transparent rain hat which he cherished); there was, as a friend puts it, "absolutely no side to the man at all. He might have been a powerful man, but if you only saw him around his house, you would never have guessed it."

His wife ran his home, and his life, to such an extent that, describing their relationship, many friends use the phrase: "she mothered him."

Mary bought his clothes—even his underwear and socks—bringing home suits until he found some he liked and then calling a tailor over to fit them, gave him pocket money (says one of her friends: "Before he had the limousine she had to see he had carfare every time he went out. She had to make sure he had change for a telephone call and a few dollars for restaurants and whatever. In a restaurant, she would slip him the money for the check under the table"), paid all the bills, even, until he began to use Triborough accountants, handled the income-tax returns, tried to keep his weight down (she would dish out her husband's portion with a crisp: "No gravy"), ordered him home from the office when he was working too hard and protected him from intrusive telephone calls with an acerbity that reminded visitors that she had once been called "the power behind the Governor" in Wisconsin. And she never complained about the financial privations that for years left her constantly worrying about grocery bills or the lack of ordinary social life. (Moses went to no movies, saw no plays, had no hobbies except those connected with the water-swimming, sailing, clamming—although she, as her sister puts it, "did not particularly like the water." Her only concern—deep enough so that some of her friends refer to it as "a real guilt feeling"—was that Robert had badly wanted a son and she had not given him one.) "Mary was the boss in that household," her sister says. "She ran their lives."

She shared more than Moses' home life. In the years before he installed private dining rooms at his offices, she was hostess for his luncheons, a brilliant and witty one. She knew how to handle politicians and reporters. At receptions, she would whisper the names of oncoming politicians in his ear because she was as good at recalling individuals as he was bad. She brought a touch of humanity to his hard-driven men, asking them about their wives and children, arranging for doctors and hospitals when they were ill, and, when her husband's empire burgeoned in resources, seeing that those resources were put at their service. When, for example, the seven-year-old daughter of the captain of the Park Commission's yacht Sea-Ef died, Mary saw to it that the grieving parents "didn't," as the captain's sister puts it, "even have to buy a piece of bread. A chauffeured car came over

Two Brothers 603

and stood at the door all the time in case they wanted anything. She sent over food-enough to feed an army. And the car stayed there the whole four days the body stayed in the funeral parlor. And later, every now and then a big bouquet of roses would come, with a card, From Mary and Robert Moses, for the cemetery." One thing she did that was especially appreciated by Moses' men was to call his office and say, "Bob's on one of his rampages, everybody watch out." Says one of his men: "That would give us just enough time to get out of there before he arrived." For some of the young architects and engineers, she was a matchmaker, and a sympathetic shoulder to cry on. Arnold Vollmer, a young architect introduced to his wife, Becky, a Moses research assistant, through Mary, says: "She was the sharpest, the most wonderful, brightest woman you ever met." She could be devastatingly caustic. Once egoistic Lester Markel, Sunday editor of the Times, perturbed because he had been invited as Moses' guest to the Jones Beach Marine Stadium but had not been seated in Moses' box, made some remark that she overheard. Addressing some people around her -in a voice just loud enough for Markel to hear-she said: "The trouble with Lester is that he thinks he's as smart as Robert. But he's not." She knew just what to say to help her husband; when La Guardia asked her, quite seriously, why Moses respected Smith more than him, she replied: "Because he stood behind his commissioners." When her husband publicly insulted Iphigene Sulzberger, it was Mary who healed the breach. And she was awed by no one. Proskauer recalls that the first time she met Smith after he had refused to endorse Moses for Governor, Mary "absolutely withered him" with a cold stare when Smith tried to embrace her as usual, "turned on her heel, and walked out of the room." She was a confidante and adviser, a respected one. "RM never went anywhere without Mary, and he consulted her on everything," Sid Shapiro says. "And boy was she sharp!" Attorney Morris Ernst, who with his wife saw a lot of the Moseses when the two couples were young, says: "Mary gave Bob an awful lot when he was first starting out. Don't forget, she had been the confidential secretary to a Governor. Her political know-how was really quite significant in helping him accomplish his early objectives." Moses himself told Mrs. Marconnier that "every time he pulled a boner it was on something he hadn't consulted Mary about." Says radio commentator H. V. Kaltenborn, who knew the Moseses for years: "Those of us who are privileged to know something about the home life of Robert and Mary Moses realize how much a wife's unfailing patience and unselfish devotion have meant during years of strife and struggle."

But as strife and struggle yielded success, the relationship between Robert and Mary Moses changed. The change was evident at parties. As Mrs. Morse, the friend who admired both of them, put it, "Well, as a young man he didn't dominate the conversation at parties so much. But it grew worse later . . ."

As he grew louder, she grew quieter. Talk to old acquaintances and the adjectives used to describe Mary Moses are "gay," "charming," "warm," "witty," "vivacious." Talk to acquaintances who first met her during the 1930's and the adjective most heard is "quiet." Attorney Monroe Goldwater,

who didn't meet her until about 1936, says she was "a nice person but not very briiliant." One woman, who first met her about that year, calls her "a mouse." By the late 1930's, New York hostesses anxious for the presence of Robert Moses at their dinner parties were wondering what on earth to do about Robert Moses' wife. According to elegant Florence Shientag, the bright, brittle wife of key Smith adviser Bernard Shientag and herself an attorney and judge: "When they visited us, we always had to worry about who would sit next to her. She needed bringing out. . . . She never spoke very much. She had nothing to say, I assume. She was a moon whose light was growing less and less. He was going on, a sun, getting brighter and brighter."

Not that Mary seemed to mind. "Mary was a darling and she never got over her wonder that anyone like Bob should want to marry her," Iphigene Sulzberger says. "She never thought that anyone so handsome, so brilliant, would marry anyone but the Queen of England or someone like that. He was absolute perfection in her eyes." If the submersion of her identity in his was causing her conflict, signs of that conflict emerged only obliquely, as in one interview she gave during the only period in which she consented to talk for publication, his campaign for Governor in 1934. (During this campaign, despite her wit and political insight and experience, she delivered exactly one speech, a talk at a small tea.) The reporter who interviewed her wrote that Mary Moses "suddenly inquired": "But why bother talking to the wife of a candidate? I don't think I'm a very interesting person to interview. I'm not spectacular. And, on the other hand, you can't just do me as the home and mother woman, shelling the peas, mending. I can do all those things. I can cook, and I like to. But I don't. What can you say about a person like me? I know government, because Mr. Moses has been a part of it always, but that makes me like a shadow of him-and that's not correct either."

And then, of course, there was another factor, one at which Florence Shientag hints by saying: "Mary became too old, physically, for him, I think. He continued to be so vibrant, so vital . . ."

Mary had what Hilda Hellman, Moses' cousin and a perceptive confidante, describes as "an awful horror of growing old." But she was four years older than Robert, and the difference seemed to increase each year between her and the husband who seemed as impervious to time as the grandmother he so strikingly resembled in other respects (and who remained youthful and vital until her death at ninety-three), still working his incredible daily schedule tirelessly, still swimming far out to sea in all weather, still energetic and dynamic in appearance at forty and fifty, his added weight making him look more powerful only, not older. Mary, on the other hand, aged hard—in the opinion of some friends because of the strain of not only bringing up two daughters and running two households, for years without maids, when money was always tight, but also managing every detail of her husband's life ("I think it drained her," Becky Vollmer says); in the opinion of other friends because of what Mrs. Hellman describes as "the strain of trying to live up to someone like Robert," who was "almost larger than life."

Her husband was, of course, fascinating to women. In part this was

Two Brothers 605

because of his charm. Joan Ganz Cooney, later producer of Sesame Street, met him in 1954 at the scintillating Sunday talkfests at the Herbert Bayard Swopes mansion at Sands Point. At the time, she was twenty-four and he was sixty-five, but, she says, "after I had spent the evening with him I was in love with him." "It crossed all generational lines—that charm of his," Joan Cooney says. "What he has is this fantastic recall. He'd tell me what he thought of Tom Dewey and FDR... He has that ability to tell you a story so you can just see the people in the room... And he's just got that magnetism. Everybody in that room was interesting. He was probably the least rich man in these gatherings because he was a public servant and something about that came through that he had spent his life in public service. I saw him mostly with his contemporaries—when their careers were on the wane. And they had changed in physical appearance. But his appearance hadn't changed at all." (His wife? Oh, says Joan Cooney, she didn't talk at all: "she was just like a little bird who tried to worship him.")

In part, Moses' appeal was based on his power and fame. In part, it may have also been based on other considerations. Justice Florence Shientag, talking about Moses in general, stopped in the midst of a thought, sat thinking for a few minutes and then said, musingly, "He must have been a wonderful lover. He's so direct. No underlying doubts . . ." As a young man, he had been in love only once—with the fresh, clean-looking girl, as passionately idealistic as he, whom he met among the books of the Municipal Research Bureau library and whom he loved with an intensity so vivid that his Yale classmates would remark about it decades later. By the 1930's, Robert Moses' affairs were openly gossiped about in New York political and society circles -particularly his friendship with one of the city's most remarkable women, a North Shore baroness with whom his name became linked at the time he was subordinating his idealism to an accommodation with the power of the North Shore barons. She was the witty and sophisticated Ruth Baker Pratt, widow of one of the Standard Oil Pratts of Glen Cove, who was not only an accomplished violinist, golfer and tennis player but a behind-thescenes power in Republican politics, the first woman ever to sit on New York City's Board of Aldermen, the first woman ever to represent New York in Congress—and possibly the only politician of either sex ever to best Jimmy Walker in repartee. Recalls Paul Windels: "They were rather affectionate in their attitude toward one another in public—to an extent that was rather shocking to me when I saw it. She was quite taken with him. It was well known in those circles that if they didn't get married it wouldn't be Ruth's fault."

Moses still spent as much time with Mary as possible under the circumstances: his scrupulous courtesy toward her was as noticeable as ever. He never went on vacation without her. But the glow from the man she had made her "sun" grew more and more dim. She began to drink—and the drinking rapidly became very heavy, so heavy that people began to refer to her as "an alcoholic." After several embarrassing incidents at parties she had to be forbidden to drink anything but Dubonnet. At one Park Department Christmas party at the Arsenal, obsequious Moses Men, anxious to

ingratiate themselves with the boss's wife, kept coming up to her and asking if she'd like one, and she had so many glasses of the light cordial that when Mrs. Hellman arrived and asked where she was, she was told, with a sneer, "Oh, she had to be taken home." She was hospitalized several times—in an attempt to cure either her drinking or the increasingly serious attacks of what Moses aide General Harry L. Meyers refers to as "nervous trouble"—at the Payne Whitney Psychiatric Clinic, once for what Meyers says was "quite a long time."

## 27. Changing

Power and personality. Interplay.

The young Robert Moses, immersed in his dreams, had been totally uninterested in power. And if he had, later, sought it, he had for years sought it only for his dreams. The seeking had been solely on behalf of the vision. If, at last, monumental power had been sought—and used—it had been sought and used as a means to a monumental end.

But Moses' personality made him particularly susceptible to the addiction of power. And now he had been a mainliner for years. And while he had always before sought power only for the sake of his dreams, now, for the first time, he began to seek power for power's own sake, as an end in and for itself.

That a turning point had been reached became apparent in 1936—when the New York City Tunnel Authority was created.

No sooner had Moses learned that Mayor La Guardia was considering establishing an authority to build a \$58,000,000 Queens-Midtown Tunnel than he began hinting, none too subtly, that he would like to be on it, if not in charge of it.

But the tunnel could be financed only with federal funds, and La Guardia, only recently recovered from the Order Number 129 imbroglio, was not about to put himself again in the position of asking for federal money for a man who was personally obnoxious in the extreme to the head of the federal government. Nor did the Mayor see any reason to. The tunnel was not intended to link up with any Moses projects. There were engineers available outside Moses' organization—most notably Ole Singstad, a cocky, hard-driving, table-pounding Norwegian who had designed the then-novel ventilation system that had made the Holland Tunnel feasible, who, after tunnel designer Clifford M. Holland collapsed and died from overwork, had rammed the job through to completion, and who was regarded as the world's leading authority on underwater vehicular tunnels. Directing city legislative representative Reuben A. Lazarus to draft the legislation creating the new authority, La Guardia ordered him: "Leave the son of a bitch off."

That was easy. Lazarus simply left out the phrase that Moses had included in the legislation setting up the other authorities to which he wanted to be appointed—the phrase stating that "an unsalaried state official shall not be ineligible" for appointment—and thereby left Moses, as a state official, ineligible for appointment to the city body.

Recalls Lazarus: "I had a helluva row with Moses over that. It started off very temperate, with Moses asking me why I did it and couldn't it be changed so he could be on it. I said, 'I had direction on it.' He said, 'That guinea son of a bitch asked you to do this, didn't he?' I said, 'Bob, he's my client. You're not.'"

Moses then attempted to have his upstate Republican friends in the Legislature kill the bill, but Lehman, who knew how badly the tunnel was needed, added his support to La Guardia's, and the measure passed. And La Guardia named as Authority commissioners three businessmen—two personal friends, William H. Friedman and Albert T. Johnston; and Alfred B. Jones, a mild-mannered Quaker who not coincidentally was a cousin of RFC chairman Jesse Jones—whom Moses had never even met.

Unable to obtain control of the new authority directly, Moses tried indirection, sending aides to discreetly ask Singstad, who had been appointed the Authority's chief engineer, if he would "cooperate" with Triborough. But Moses was trying his wiles on the wrong man. Singstad, fiercely independent, despised Moses' aides, who he felt violated engineering ethics every time they subordinated their own objective views of an engineering problem to tell the Triborough chairman what he wanted to hear. One morning, after other approaches had failed, millionaire Jack Madigan himself dropped by Singstad's office and invited Ole to the Downtown Athletic Club for lunch. On the way, Madigan said: "Ole, I want to be helpful. You and the Tunnel Authority would both be better off with a strong man like Moses in charge." "I figured Moses was trying to get me on his side as a talking point to La Guardia for a takeover," Singstad says; Moses, he felt, wanted to be able to tell the Mayor that the chief engineer had said his commissioners were not competent to run the job. "I said I was sticking with my commissioners and I was happy with them."

Unable to control the new authority directly or indirectly, Moses set out to destroy it.

It was under tremendous pressure to produce results fast. Nineteen thirty-six was a presidential election year and Harold Ickes, whose PWA was financing the tunnel, wanted the President to be able to break ground well before November. "They didn't want to have \$58,000,000 lying idle in an election year," Singstad says. Assembling an engineering and administrative staff from scratch and producing in a matter of a few months plans for a huge and complicated engineering job—Singstad had to draw more than 125 separate studies before he hit on a feasible plan for the Manhattan entrance—was immensely difficult. And Ickes was adamant. If work was not under way well before Election Day, he said, the grant would be rescinded and there would be no tunnel. The PWA Administrator was demanding weekly progress reports, and every week his impatience grew more noticeable. Any delay might kill the project.

And Moses sought delay.

His legislative allies introduced a bill that would have rescinded the Authority's authorization to construct the tunnel and provided instead for a year-long, state-financed study of whether the crossing should be a tunnel

Changing 609

—or a bridge, which, under the terms of the act creating the Triborough Authority, only Triborough could build. Enactment of the new bill into law would have meant the end of the tunnel no matter what the study's result. "Ickes was constantly threatening to take the money away from us if we didn't get started," Singstad says. "Moses knew damn well that if another year was spent [on the state-financed study], the money [the PWA grant] would be gone to some other state."

There was no real chance of enactment, of course, since Lehman would veto the bill if it passed the Republican-controlled Legislature. But Moses didn't need enactment to accomplish his purpose. He needed only delay. And he used all his vast influence in Albany to obtain it, keeping the bill bottled up in committee—and off Lehman's desk, where it could finally be disposed of—week after week. "And all the time," Singstad says, "Ickes was hammering: 'If you don't do it now, I'm going to withdraw the money.'"

But La Guardia understood that he was in a power struggle now, and while the Mayor may have deferred to Moses on questions of park administration, he deferred to no one on questions of power. Traveling to Washington week after week, he kept the grant alive until the last day of the legislative session, when the bill was finally brought to the floor and defeated, and on October 2, 1936, President Roosevelt was able to break ground for the tunnel.

"Why did Moses try to wreck [the Tunnel Authority]?" Singstad says. "Because he couldn't take it over, that's why, dammit. He couldn't take it over so he wanted to wreck the whole damned project." Lazarus and Corporation Counsel Paul Windels, who were on the inside of the battle from beginning to end, thinking it over independently came to the same conclusion. "I kept trying to understand what his reason was [for trying to take over the Authority]," Lazarus says, "and I just couldn't make sense out of it—unless he wanted to take over every construction job in the city."

And in fact Moses' actions in his fight with the Tunnel Authority in 1936—particularly when coupled with his actions in the struggle with the Authority over the next decade—make it difficult to ascribe to them any other motivation. Search as one may through the record—not only the public record, which is scanty indeed, because the fight was carried on largely in secrecy, but through confidential memoranda and letters culled from La Guardia's files and files of other principals involved—one is unable to identify a single real difference of opinion between Moses and the Authority on any point of substance relevant to the planning, construction or administration of the Queens-Midtown Tunnel. Moses agreed that a crossing was needed. His argument that the crossing should be not a tunnel but a bridge was never presented with any of the thoroughness that marked his serious proposals; it was never really presented seriously at all-possibly, in the view of at least one of his aides, because it couldn't be presented seriously, since building a bridge at Thirty-seventh Street would have meant condemning so many office buildings and apartment houses that the condemnation cost alone would have been ridiculously high. Moses never even commissioned a preliminary engineering survey of the bridge proposal. His onleast difference of opinion with the Tunnel Authority was over who should control it.

And this difference made the 1936 Tunnel Authority fight a watershed in Robert Moses' life. Always before, Moses had conceived a public work, and then had sought the power to bring it into reality. In the Tunne Authority fight, someone else conceived the public work. Moses sought the power to take it over. Before, his motivation had always been the work—the project, the achievement, the dream. Now the motivation was power

And the Tunnel Authority fight also revealed the lengths to which Robert Moses was now prepared to go to gain power. Wrecking the Authorit would have cost the city not only \$58,000,000, money which would provid a lot of jobs in Depression-wracked New York, but also the tunnel, a publiwork badly needed in terms of Moses' own aims—the elimination of trafficongestion in New York City. But these considerations did not deter him If he couldn't build the tunnel, his actions said, no one was going to build it. If he couldn't take it over, he would destroy it.

Thwarted by La Guardia in one attempt to grab more power, Moses made another—only to have the Mayor thwart him again.

Money, as Moses was well aware, was a key to power, but, by 1938 the great wellspring of federal work relief money at which he had been drinking for five years was almost dry. A new spring had begun welling out of Washington and Albany, however. Moses set out to bottle it right under La Guardia's nose.

Its sources were the United States Housing Act of 1937 (co-sponsored by Representative Henry B. Steagall of Alabama and Al Smith's old Albany buddy, U. S. Senator Robert F. Wagner) and a New York State constitutional amendment approved in 1938.

Prior to passage of the Wagner-Steagall Act, Moses had never had much interest in public housing. "Public housing" meant, in the terms of the day, housing exclusively for the poor. Moses had never had the slightest interest in building anything for the poor. But the amount given by the Wagner-Steagall Act\* to the newly created United States Housing Authority for loans to local municipal authorities was \$800,000,000. The amount the state constitutional amendment authorized the Legislature to make available to local housing authorities was \$300,000,000. Obviously public housing was going to be a great new—perhaps the great new—source of outside money for the city. Hastily recruiting architects from the State Housing Board, Moses set them to work secretly drawing up a public housing program for New York and himself secretly drew up a proposal for "reorganization" of the City Housing Authority, under which the Authority would be reorganized right out of existence and replaced with a board

<sup>\*</sup> Together with a subsequent Congressional amendment in 1938.

Changing 611

consisting of himself and six other members, four of whom he believed he, rather than the Mayor, could control.

The Mayor possessed an intense private interest in public housing. Fiorello La Guardia believed that it had been the dampness and congestion of the tenements in which she had been raised that had given his beloved irst wife the tuberculosis that had killed her and their baby; he had vowed o friends that one thing he was going to do "personally" as mayor was to make sure that the city started at last to give poor people in the city a lecent, healthy place to live. The vast amounts of money and power that were obviously going to be involved made him even more determined to keep the program firmly in his own hands. So Moses drew up his proposal n absolute secrecy—and presented it not to the Mayor but, in a bold attempt to circumvent him, to influential private citizens; the very day after voters approved the constitutional amendment, he persuaded several real estate and reform organizations to jointly rent the auditorium in the Museum of Natural History for an evening ten days later and to invite several hundred key realtors and reformers to hear him give a speech. And he arranged to bring the program dramatically to the public at the same time by persuading WNYC, the city-owned radio station (which, at the time, boasted a considerable audience), to carry the speech live.

All Moses' previous public works had been basically concerned with recreation and parks and with the means—roads and bridges—of getting people to parks. He may have realized that without protective coloration his attempt to move into a new, unrelated field would look like the barefaced power grab it was. So he gave it protective coloration; he titled his speech "Housing and Recreation," and in asking realtors and reformers to sponsor the speech and WNYC to broadcast it, he told them it was merely a discussion of coordination of public housing and parks. No one in the audience suspected the truth; even such intimates of the Mayor as Adolf Berle and Paul Windels, applauding with the rest of the audience as the Park Commissioner strode briskly onstage, had no inkling of what was coming until Moses' aides began passing out attractive, four-color brochures and, opening them, they saw in amazement that Moses was proposing in detail—ten projects were proposed, sites specific down to precise boundary lines, costs of land and construction for each already figured—a complete new housing program. The unifying principle behind the proposal was spelled out: only "genuine slum clearance" on the "large scale" would make a real dent in the city's housing problem, so La Guardia's efforts to rehabilitate old tenements should be scrapped; whole blocks of slum tenements should be razed to the ground and replaced with new housing; only genuine slum dwellers should be allowed in the projects, and, to insure this, tenants should be selected by the Welfare Commissioner. The financing was worked out: the program would cost \$245,000,000 and it should be financed by "large-scale government subsidy" (\$200,000,000 from state and federal funds and a sales tax on cigarettes to raise the balance); it should not be financed, as had been proposed, by an increase in the city's real estate tax, for the real estate tax was too high in the city already. Staring at each other

in disbelief, the two officials realized that they were witnessing a public relations blitzkrieg—a lightning-like move by Moses to mobilize the opinion of the public in general and of the influentials in the audience in particular (his opposition to a real estate tax increase was a clever move to insure the support of the city's powerful real estate lobby) behind his plan so that the Mayor would not be able to overrule it.

But a copy of the brochure had, that afternoon, somehow fallen into La Guardia's hands, and the Mayor had summoned WNYC director Morris S. Novick to his office.

Unaware of this, Moses had no reason to suspect that anything was amiss when he began speaking. As he spoke, there right in front of him, attached to the lectern, was a WNYC microphone and, looking down below the stage, Moses could see two WNYC technicians sitting at a table full of broadcasting paraphernalia busily twiddling dials and going through all the motions of technicians making a broadcast. When they saw him glancing down at them, in fact, they made him a thumbs-up signal to indicate that all was going well.

One of Moses' secretaries, however, was attempting to pick up the program at home. Unable to do so, or to locate WNYC at all, she finally realized that the station was off the air. She managed to telephone Allyn Jennings backstage at the Museum. Rushing over to the technicians, the Moses aide asked what was going on. They assured him with straight faces that the program was on the air. Running outside to his car, Jennings turned on the radio, dialed WNYC, got only silence and realized that the technicians must be deliberately fooling him. Running back into the auditorium, he handed up a note to his boss, just as he was coming to the end of his speech. The Park Commissioner, who had believed that he had been speaking for the past forty-five minutes to tens of thousands of New Yorkers, learned that he had been speaking to only two hundred—the two hundred right in front of him. The WNYC microphone in front of him was dead. Someone must have ordered WNYC to cut his program off the airand must have ordered the technicians to go through all the motions necessary to conceal this fact from him. And glaring down at them as they made still another thumbs-up gesture, he realized that only one man would have thought of that touch. That guinea son of a bitch had outsmarted him again.

La Guardia may have been able to keep Moses from reaching the public's ears, but the Mayor could do nothing about the public's eyes. The next day his Park Commissioner's plan was on page one of every newspaper in the city, with support for that plan on virtually every editorial page. But the Mayor, using all of his power and all of his cunning, cut Moses out of the public housing picture as completely as he had cut him off the air.

The arena in which the initial confrontation took place was an elevenmember committee the Mayor had formed some months before—and to which, not suspecting Moses' designs, he had appointed him—to advise him Changing 613

on public housing. Moses attempted to persuade the committee members to endorse at least some of his proposals, but La Guardia, working through Windels, the committee's chairman, made sure they didn't—by employing relentless pressure. Windels would decline, years later, to furnish any details of the in-fighting. "But I'll tell you this," he said. "When it came to things like that, La Guardia was as hard and as shrewd as they come. Whatever it was necessary to do, he did." The committee declined to recommend a single one of Moses' proposed sites or any diminution whatever in the powers of the La Guardia-appointed and -dominated City Housing Authority.

La Guardia handled all negotiations with Federal Housing Authority chairman Nathan Straus personally. He made all announcements of new projects from his own office, and in general made sure that Moses never knew what new public housing project was being planned until the planning was completed and the necessary federal funds allocated. Moses raged, publicly assailing the "secret, surreptitious" program, but he could not budge the Mayor. By the end of 1941, thirteen separate public housing projects containing a total of more than 17,000 apartments had been constructed in New York, far more than in any other city in America, and Moses had had nothing to do with any of them. The Mayor was even able to indulge himself in an additional soupçon of personal satisfaction. The printing bill for the four-color brochure Moses had distributed at the Museum of Natural History was more than a thousand dollars; when Moses submitted the bill to Comptroller McGoldrick, the Mayor smilingly told the Comptroller, "A beautiful printing job"—and ordered him not to pay it.

The tunnel and housing fights convinced La Guardia, according to Windels, Kern, Berle and other top mayoral assistants, that his Park Commissioner was intent on increasing his personal power. And La Guardia, determined to concentrate power in the city in his own hands, acted as he would have acted toward any rival. The unifying motive behind Moses' actions in both fights was his desire to expand his power—in the tunnel fight to attain power to build not just bridges but all interborough crossings; in the housing fight to extend his power, hitherto limited to the fields of parks and transportation, into a wholly new field of governmental endeavor. La Guardia kept Moses' power confined within its traditional spheres.

Following the tunnel and housing fights, moreover, the Mayor began to re-examine the implications of the virtually unlimited power he had given Moses within those traditional spheres—and to conclude that his power should be curbed in those spheres, too.

This was not, according to the Mayor's top aides, a wholly new feeling. For some time, they say, he had been becoming worried about aspects of Moses' park policy, the same aspects, in general, that were worrying reformers like Exton and Weinberg. If he had not discerned before precisely what those policies meant for those of the city's people who most needed parks, he was beginning to discern it now; Windels recalls the Mayor raging

when he realized that the prices Moses' concessionaires were charging at such new city-built or -refurbished park restaurants as the Tavern-on-the-Green and the Claremont Inn were so high that they could not be used regularly by poor or even middle-class families. In transportation, La Guardia had had a vague feeling ever since the beginning of his mayoralty that great road-building projects must be accompanied by corresponding improvements in mass transportation, but because he admired Moses' parkways and bridges, he had not pressed the Commissioner to include provision for mass transportation on them. But as new parkways and bridges became jammed as quickly as they opened, the vague feelings hardened; by 1939, La Guardia would be pressing Moses hard indeed as to why he was not paying more attention to the suggestions of the Regional Plan Association. And beyond questions of parks and transportation, the Mayor had for some time been becoming progressively more aware of the question that a later generation would call "priorities." By 1938, he was acutely aware that the great strides made in parks and parkways were not being matched in any other areas of public works—not even in areas like schools and hospitals in which the need was desperate. "His feelings about Moses had subtly and gradually but substantially changed by the time I resigned as Corporation Counsel [in 1937]," Windels says. "He still felt he had matchless abilities and energies, but he also felt now that those abilities and energies must be channeled in the right direction if the city was to benefit from them."

Now, with the Mayor's feelings intensified by the tunnel and housing fights, "he was worried about how much power Moses had in the city," Kern says. "I know because he kept talking about it. He felt [Moses'] power must be reduced. These feelings really became very strong." And this analysis of the Mayor's feelings was documented by the Mayor's actions: in November 1938, shortly after Moses' Museum speech, he cut from the list of WPA projects at least two large park projects he had earlier promised Moses he would include; in December, La Guardia stood up to him, and to *The New York Times*, with a new firmness in cutting the Park Department's budget request; early in 1939, the Mayor made it clear to Newbold Morris and Joseph McGoldrick, his Board of Estimate allies, that they were to take a harder line on Moses' requests to the Board.

But by 1939 the Mayor's feelings were not to be nearly as crucial to Moses as they had been in the past. To a large extent, in fact, he no longer had to concern himself with such feelings. To a large extent, it no longer mattered to him what the Mayor thought.

Of all the remarkable qualities of Robert Moses' matchless mind, one of the most striking was its ability to take an institution with little or no power, and, seemingly, with little or no potential for more power (at Yale, an unprestigious literary magazine; in state government, the Long Island State Park Commission) and to transform it into an institution with immense power, power insulated from and hence on a par with the power of the forces that had originally created it. And now the mind of Robert Moses had begun focusing on the institution known as the "public authority."

## 28. The Warp on the Loom

No State shall . . . pass any . . . law impairing the obligation of contracts . . .

—THE CONSTITUTION OF THE UNITED STATES
OF AMERICA, ARTICLE I, SECTION 10

The authority shall have power . . . to make contracts. . . .

—CONSOLIDATED LAWS OF THE STATE OF NEW YORK, CHAPTER 43-A, ARTICLE III, TITLE 3:
"TRIBOROUGH BRIDGE AUTHORITY"

THE PUBLIC AUTHORITY was not a new device. The first of these entities that resembled private corporations but were given powers hitherto reserved for governments—powers to construct public improvements and, in order to pay off the bonds they sold to finance the construction, to charge the public for the use of the improvements—had been created in England during the reign of Queen Elizabeth. By the time Robert Moses went to Oxford three hundred years later, there were 1,800 such part-public, part-private bodies in England, including the huge Port of London Authority (named "Authority" because the clauses in the Act of Parliament that spelled out its powers began with the words Authority is hereby given) and highway-building boards whose roads were named "turnpikes" because they were blocked with horizontal bars (or "pikes") set into revolving pillars that would be turned aside to let a carriage pass only after the toll was paid.

But the public authority concept was new in the United States. There may (or may not—there exists no reliable history of authorities) have been a few collecting tolls on rural roads (hearing rumors of one in North Carolina, Jimmy Walker contemplated setting one up in New York to enrich his friends), but at the time Moses went to Oxford the only urban authorities in existence on the western side of the Atlantic were a bare handful set up to build small water-supply systems. The Port of New York Authority, the first large authority in America, modeled on its London counterpart and

created by an interstate compact between New York and New Jersey, would not be created until 1921, would not float its first bond issue until 1926 and would not become financially successful until 1931, when, after five years of near fiscal disaster, it would persuade the two states to let it take over the highly successful Holland Tunnel, which had been constructed by an independent commission.\* It was not until the New Deal, when Depression-strapped municipalities, unable to finance major public works themselves, suddenly realized that RFC and PWA grants were available for self-liquidating projects, that urban authorities began to be established in any number. In 1933 and 1934, when Moses was playing the crucial role in setting up the Triborough, Bethpage, Jones Beach, Henry Hudson, Marine Parkway and Hayden Planetarium authorities—and a lesser but still key role in the creation of seven other authorities—there were only a few handfuls of other authorities in the entire country.

With the lone exception of the Port Authority, moreover, every public authority created in the United States had been created in a single pattern: each had been established to construct and operate one, and only one, public improvement, a single isolated bridge or tunnel or sewer system, to issue only enough bonds to pay for the construction of that improvement, and only bonds with a fixed expiration date, and, when that date arrived or sooner, if revenue was collected faster than expected—to pay off the bonds, eliminate all tolls or fees, turn the improvement over to the city and go out of existence. The Port Authority, empowered to operate several improvements, had become America's first "multi-purpose" public authority, but each of its projects fit the traditional pattern since each was financed by a separate bond issue and both Authority members and public officials expected that as soon as each issue was paid off, the tolls on the facility financed by that issue would be eliminated.† Motivated by the failure of several Port Authority projects to earn enough to meet the interest and amortization payments on their bonds, the Authority's brilliant general counsel, Julius Henry Cohen, was attempting in 1934 to break new ground

<sup>\*</sup> Moses had played a small but significant role in the tunnel's construction. One of his first assignments for Al Smith was to analyze two conflicting construction proposals, the commission's plan to build the tunnel by conventional methods at a cost it estimated at \$28 million and General George W. Goethals' plan to build it by a new method at a cost Goethals estimated at \$12 million. The young reformer, unequipped with the slightest practical experience in construction, interviewed the famed builder of the Panama Canal, and gave Smith his verdict: "a great personality, a go-getter, but neither a great engineer nor a financier." Equally unimpressed with the commission's engineers, he talked with independent experts and concluded—and told the Governor—that the Goethals plan "would not work" and that while the commission's would, the cost would be not \$28 but \$48 million. Smith's reaction, Moses was to recall, "introduced me to his extraordinary head for facts and figures and his immense loyalty to his assistants, no matter how green, young and new at the game." Ignoring protests, the Governor threw out the Goethals plan and accepted the commission's, but allocated for it the \$48 million that Moses had suggested. The actual cost turned out to be \$49 million.

<sup>†</sup> Because the facilities would thereafter belong to not one but two states, there were plans to have them run by bistate commissions with members appointed by both legislatures.

by devising a new kind of bond and persuading bankers who held the Authority's outstanding bonds to accept the new one in their place. Under the plan Cohen had in mind, the individual bond issues would be combined into a single general issue supported by the revenues from all Port Authority enterprises, a move which would allow use of the Holland Tunnel surpluses to bail out such money losers as its two bridges connecting Staten Island with New Jersey. And since the new issue would be "open-ended," the Authority could use any over-all surplus to finance new projects. The bankers refused to consider "open-end" bonds for unspecified new projects but, in 1935, did agree to a consolidation of outstanding bonds in a "General and Refunding Bond" that could be used for *one* new project—the proposed Lincoln Tunnel—and it was this bond, rather than any devised by Moses, that was the first bond issue in the United States secured not by a single public improvement but by an authority's general revenues.

But Moses went much further. Originally, he had conceived of his authorities in the traditional mold: the legislation he had drafted establishing the Triborough, Henry Hudson and Marine Parkway bodies, for example, had explicitly authorized each to construct only a single, specific project and to issue bonds only for that project; the bonds were to be paid off as soon as possible, and not only was a time limit (forty years) set on their expiration but that time limit also limited the authority's life-as soon as its bonds were paid off, it was to go out of existence and turn over its bridge to the city government. The legislators who had created Robert Moses' authorities and the mayor who under the State Constitution had had to ask the legislators to create them had conceived of them as mere creatures of the sovereign city. Legislators and mayor, as well as the city's citizens, continually reminded by the press of the long tradition that all its bridges be toll-free, had been assured that the tolls would be removed forever as soon as their cost had been paid for. And there had been no deliberate attempt to mislead them: Robert Moses had thought of public authorities as men had always thought of public authorities.

But Robert Moses' thinking was changing.

The primary factor behind the change was money.

The carrying charges—interest and amortization—on the \$5,100,000 in bonds that had been sold to pay for the Henry Hudson Bridge were about \$370,000 per year, a sum that could be collected, at ten cents per car, from 3,700,000 cars. But the number of drivers handing their dimes to the bridge toll collectors was not 3,700,000. In 1938, it was 10,300,000; in 1939, 12,700,000. And maintenance costs on bridges were, Moses was learning, gratifyingly minimal. Painting the entire Henry Hudson, for example, cost only \$18,000, and painting was needed only once in four years. The salaries of toll collectors, the only operating personnel required, totaled less than \$50,000 per year: "Our bridge was fabulously successful," Jack Madigan would say. "We were earning—after the carrying charges—\$600,000 per year NET!!!" And that was just one bridge! The Triborough, on which the annual carrying charges were about \$1,800,000, but on which the toll was twenty-five cents for cars and more for trucks, was by 1938

earning per year NET!!! \$1,300,000. More significantly still, on all Moses' bridges, the traffic volume for each month was higher than the volume for the corresponding month the previous year; clearly, volume—and revenue—was going to be far higher than even those fabulous figures.

Under the laws creating the authorities—the bills that Robert Moses himself had drafted on his yellow legal note pads—unexpectedly high revenues could be used in only one way: to retire an authority's bonds faster than scheduled, to speed the date when the authority would go out of existence and turn its bridge back to the city.

With surpluses of such unprecedented size, the bonds of Moses' authorities would be retired very fast indeed. At the rate the Henry Hudson Bridge was making money, for example, its cost would be amortized not in forty years but in ten years, perhaps, or nine, or eight. In a decade or less, the bridge that the city had never been able to finance would have been built by Robert Moses—built and paid for, to stand for centuries as a great free public improvement for its citizens.

Using the surpluses in the way required by law would therefore make the Henry Hudson Bridge—and the Triborough—spectacular successes, all the more spectacular in a city in which public works always seemed to cost the public more, not less, than anticipated.

But this was not the kind of success in which Moses, obsessed by accomplishment and power, was interested. Money—revenue, surpluses—was the key to accomplishment and power—but only if he could keep it and use it. It was of no use to him if he had to give it to bankers as fast as he got it. It was of no use to him if, as soon as he had paid off the bankers, he had to surrender control of his bridges. Money was of use to him only if, in other words, he was able to use the bridge surpluses for other purposes than bond paying and if he was able to keep control of the bridges instead of turning them over to the city. And under the law this was impossible.

But what if the law was changed?

What if, in some way, he was able to keep the money?

Madigan and others close to Robert Moses saw his supple mind coiling around the possibilities. The actuality of the money, he began to realize, was not its most significant aspect. Its potential was what mattered. The total annual income of his authorities was, by 1938, \$4,500,000. This amount was not insignificant to him; it was as large as his total annual Park Department budget. But it was not as significant as \$81,000,000. And \$81,000,000 was the amount of forty-year, 4 percent, revenue bonds that could be floated—"capitalized" was the word in the bankers' vocabulary that Moses was learning—with an income of \$4,500,000. If he was able to keep the authorities' revenues and use them to float bonds, he would be able to float \$81,000,000, or \$35,000,000 more than the total \$46,000,000 in bonds that the three New York City bridge authorities currently had outstanding. He would have \$81,000,000 to use to create dreams and power.

Much more than \$81,000,000, in fact.

The multiplier factor would be increased by the proven success of his

bridges. When he and Jack Madigan had originally been attempting to persuade bankers to invest in the authorities, the ability of toll bridges to attract substantial amounts of traffic had been in doubt, and the bankers had therefore demanded a coverage of 1.75 or 2.00 (anticipated earnings double that required to cover interest and amortization) and a return of 4 percent on their investment. Now toll bridges were a proven commodity. Bankers might settle for a coverage of 1.5 or even 1.4 and an investment return of 3 percent or even 2.75, and any reduction in coverage or interest rates meant an increase in the amount of bonds that the authority income could capitalize. More important, if some of the money raised by the floating of new bonds was used to build new bridges on which tolls could be charged, the authorities' income would be more than \$4,500,000. Since each dollar of tolls could capitalize roughly eighteen dollars in bonds, there was therefore an additional built-in multiplier factor at work: the more public works he built, the more money he would have to build still more public works. And this factor would work indefinitely—forever, possibly.

Robert Moses had built public works on a scale unmatched by any other individual in the history of America. But all the highways and parks and bridges he had built were little more than nothing next to the highways and parks and bridges that Robert Moses wanted to build. He had turned into reality his dream of a great parkway along Manhattan's shoreline, but there was still the Brooklyn shoreline, and the Staten Island. He wanted parkways there, too-a "Circumferential" or "Belt" for Brooklyn, a "Shore" for Staten Island-and he had wanted them, and been arguing for their creation, for more than ten years. He had built fifty miles of highways in the city, but there were a hundred more miles that he wanted to build. He had reshaped to his own vision an urban park system that absolutely dwarfed any other urban park system in the United States, but the parks he had created in New York were in their turn dwarfed by the parks that he dreamed of creating; it had been 1930 when he had proposed a Soundview Park and a Flushing Meadows Park and two Marine Parks and a parkthe greatest of all urban waterfront parks-in Jamaica Bay, and now it was 1938 and these parks were still only proposals. Where was the Rockaway Improvement? Even those parks that he had been able to create in the city, moreover, had not been created as he wanted; he had been forced to scale them down, to use inferior materials, to compromise. As for bridges, he had built in the city three, including one that was the greatest traffic-moving machine in the history of civilization, but he wanted to build at least four more including one even larger than Triborough.

And that was just in the city. What about the areas around it? There were parkways on Long Island, all right, but not his greatest parkway—the ocean- and bay-bordered Fire Island masterpiece. There were parks—II,000 acres of parks, the greatest state park system in the country—on Long Island but he could foresee all too clearly the day there would be so many people living in the metropolitan area that II,000 acres would not be nearly enough. After a decade and a half of building public works, the public works he had not yet built loomed before him larger than ever.

Moreover, the chances of building them seemed to be growing steadily more remote. Only the New Deal had enabled him to make even as much of a start as he had on his plans for New York City. Now, in 1938, the New Deal well was running dry, and La Guardia was insisting with a new firmness that he stop trying to lap up the city's share all by himself. Albany was drying up, too; each year Herbert Lehman was finding it more difficult to obey the law that required him to balance the state's budget. As for the city, La Guardia may have pulled it back from the door of fiscal death. but not even La Guardia could restore it to fiscal health; the corruption that had preceded him had weakened the body politic far too seriously. Political realities, moreover, made it unlikely that health could ever be restored. Existing taxes could support an annual budget—the budget out of which the debt service for new bonds for new public works would have to be paid -of about \$575,000,000, and the debt service and salaries loaded on by Tammany ate up \$500,000,000 of that even before other necessary expenses were figured in. As for the so-called "capital budget," there was no leeway in that, either: the city was constantly bumping up against the state-imposed ceiling that limited its borrowing capacity to 10 percent of the total assessed valuation of real property; the city's fiscal inability to construct public works was so pronounced that by 1940 La Guardia, who had dreamed of carving out a beautiful new metropolis, would have no choice but to limit new capital spending for the year to a symbolic one dollar. Because the city was a creature of the state, city taxes could be increased and the city budget ceiling raised only by the State Legislature, and not only the Legislature's conservatism but the influence wielded within it by the city's own propertied interests, which wanted the key property taxes kept down and, to protect the bonds they held, as few new bonds as possible issued, made the Legislature as reluctant to take those steps as La Guardia was to ask it to do so; desperately anxious to reshape his city La Guardia might be, but he was not anxious enough to court political disaster by asking for new taxes. Surveying such realities, Moses could see no reasonable possibility, in any foreseeable future, of the city being able to finance his dreams. If he wanted to remake the city, it was clear, he was going to have to do the job without its money.

But if he was able to keep the authorities' revenues, keep them indefinitely, he would have the money.

He would, moreover, have money he would be free to use as he chose.

Tens of millions of dollars had been placed in his hands already, of course—by Governors and Legislatures, by Mayor and Board of Estimate, by federal alphabet-agency administrators. But these had been millions hedged about by all the safeguards—the rules and regulations and established procedures, the technicalities—that had been established by generations of legislators and bureaucrats and that made it so difficult to Get Things Done.

Tens of millions of dollars had been given him to hire men, but he had been required to hire them according to civil service regulations which

made it difficult for him-in most cases made it impossible for him-to hire the kind of men he wanted: the best men, the best engineers, the best administrators, the best ramrods, the best laborers. Under those regulations, he couldn't pay them enough to attract them to his service. He couldn't even hire whom he wanted of the men available at the salaries he could pay; he had to hire off civil service lists. These regulations could sometimes be circumvented, of course—no one circumvented them as cleverly as he, as was proven by the quality of his "Moses Men"—but they could be circumvented only with difficulty and delay, the delay he hated. And they could not be circumvented wholesale: the "Moses Men" were a prize cadre, but a cadre was not an army, and he was constantly raging at the quality of the main body of his troops, noncommissioned officers as well as enlisted men; once the Depression eased, civil service salary limits had made it impossible to keep loyal to his colors more than a handful of the prized seven hundred and fifty ramrods he had recruited during its depth. Civil service regulations made it impossible for him even to drive men as he wished to drive them: to drive men mercilessly you have to have threats to hold over their heads; the ultimate threat—dismissal—was all but denied him by the regulations; and dismissal for even a legitimate cause was a cumbersome and tedious procedure that had none of the efficacious effect on other workers of a snappy "Pick up your time and get out" from Art Howland or Earle Andrews. Civil service regulations had prevented him from using his men flexibly and efficiently; because he had to hire men out of allocations for a specific upstate or Long Island park commission or the New York City Park Department, and civil service regulations required him to use an employee of a public agency only on that agency's work, it was illegal for him to assign an upstater to a city job even if he was best qualified for it. Most important, civil service regulations required him to hire men only for specific purposes approved by Legislature or Board of Estimate, and these purposes had never included the one most vital to his aims: long-range planning. For more than ten years he had been scheming, scraping and saving to build up a "stable planning force"—without success.

But changing the law would give him one. The Legislature had placed public authorities under civil service, of course, but the power of Civil Service Commissions to enforce their edicts rested, as Moses had learned from the bitter experience of his youth, on the power to disapprove salary payments—on the commission's control of the purses out of which municipal and state agencies drew their "personal service" funds. It rested on the power of money. Let him have the money—let him keep control of the authorities' revenues—and he, this man who had mastered the intricacies of civil service as well as any man who ever lived, would be able to devise a hundred ways to manipulate Civil Service Commission rulings to his own ends. He would be able to attract to his service the men his sharp eyes had picked out of the herd, to hire and fire them as he pleased, to provide them with material rewards huge enough to make them endure his driving and his demands and to guarantee their absolute loyalty. And he would be able to hire men not only for specific but for general

purposes. He would be able to have, at last, his stable planning force. Let him keep the control of the authorities' revenues and he would be able to study transportation needs before elected local officials studied them. He would be able to determine by his own criteria which transportation facilities should be built and in which order. He would be able to determine by his own criteria how these facilities should be built-what their design, size and precise location should be. He would be able to translate these general plans into detailed blueprints and specifications. And then, when the time was right —when a large new state or federal grant became available, or when the public was demanding a solution to the transportation problem—he could present these plans to elected officials as the solution, a solution already engineered, already designed, already costed out, a solution feasible engineeringly and economically, a solution whose planning was already a fait accompli, a solution that awaited only their approval for implementation, a solution for which, in many cases, money—the money of his public authorities was already available. What official would then be willing to risk public antagonism by withholding that approval?

And if an official did dare to suggest an alternative, what good would it do him? The city possessed neither an engineering corps capable of planning large-scale public works nor money to hire in sufficient numbers engineers who did possess such capability. For that matter, the city had no money to build an alternate large-scale public work if it wanted to. It would be dependent upon the federal government or upon Moses' authorities to provide the cash. Federal money might well be lost by the delay additional studies would entail; as for the authorities' money, cross the man who was offering it and he might (bearing in mind that the man was Robert Moses, he probably would) withdraw the offer, and the official then could be accused of having cost the city a great public improvement. Let Moses keep control of the authorities' revenues and there would be no more nonsense about the Mayor or the Board of Estimate studying alternate routes for a highway or alternate locations for a bridgehead or alternate methods-mass transportation instead of highways, for example—of solving transportation problems. In the fields he had chosen for his own, the city would have to build public works where and how he chose.

Additional tens of millions of dollars had been given to him for non-salary items—construction costs, mainly—but he had been allowed little leeway in the spending of that money either. Much of it he had had to give to contractors—under strict regulations which not only required him to award contracts to the lowest qualified bidders, thereby preventing him from making awards to firms he personally favored, but also set many conditions designed for economy, a saving of taxpayers' money, rather than for the speed he wanted; strict restrictions on overtime had been especially irritating to this supreme ramrod, this archetypal top sergeant, who wanted his projects driven forward around the clock.

Allocations directly to his agencies allowed him even less leeway; such

appropriations were made "line by line" for specific items. And members of the Legislature or Board of Estimate—accountable to the voters and therefore anxious not to make any appropriations that appeared to waste their money (and anxious as well not to let Moses further expand his empire)—resisted especially making any appropriations to him for the PR items which would seem blatantly wasteful to taxpayers but which Moses knew were vital to Getting Things Done: the printing of impressive, persuasive brochures and pamphlets; the creation of large-scale dioramas and scale models ("It never ceases to amaze me how you can talk and talk and talk to some guy about something you've got in mind, and he isn't very impressed, and then you bring in a beautiful picture of it or, better yet, a scale model with the bridge all in white and the water nice and blue, see, and you can see his eyes light up," Jack Madigan says); the hiring of public relations men to visit publishers, editors, reporters and radio commentators as well as nonmedia influentials, sell them on a project in advance, escort them on pre-opening limousine or yacht tours, leak them information that would place Moses' views in a favorable light (and his opponents' views in an unfavorable light); the rental of the necessary limousines; the hiring of the "bloodhounds" to dig up facts about an opponent that could induce him to cease his opposition, or, should he prove stubborn, could be leaked into print to discredit him; and, especially important to Moses because it gave him a chance to exercise his matchless charm as host, the laying on of hospitality—intimate luncheons for key individuals or lavish buffet luncheons for influentials by the hundreds— at which he could drape a big arm over a recalcitrant borough president's shoulders and use the glow induced by good food and fine wine to win him to his cause. He had, of course, used his ingenuity, and his skill at circumvention of the spirit if not the letter of the law, to publish brochures, hire public relations men, purchase limousines and host luncheons in the past. But he had never had enough money to do all this as lavishly and effectively as he wanted. But let him keep the authorities' revenues and he would have enough.

Changing the law might give him more than money. Changing the law might give him power, more power than he had ever attained before. Money itself is power, of course, but the power he was thinking about now was power of far greater dimensions.

A public authority, he had learned, possessed not only the powers of a large private corporation but some of the powers of a sovereign state: the power of eminent domain that permitted the seizure of private property, for example, and the power to establish and enforce rules and regulations for the use of its facilities that was in reality nothing less than the power to govern its domain by its own laws. The powers of a public authority were vested in the board of that authority. If there was only one member of that board in fact (as in the case of the Henry Hudson Parkway Authority: Robert Moses, Sole Member) or in practice (as in the case of the Triborough Authority, whose other members would routinely rubber-stamp Moses' ac-

tions), the powers of the authority would be vested in that member—in him, Robert Moses.

And there was another dimension to his thinking, too. Keen as always in discerning the potentialities for vast power in humble institutions, he had glimpsed in the institution called "public authority" a potentiality for power whose implications no one else—no one in City Hall or the Albany Statehouse for certain and, so far as research can determine, no one anywhere in the United States—had noticed, but that were exciting and frightening and immense.

Authorities could issue bonds. A bond was simply a legal agreement between its seller and its buyer. A legal agreement was, by definition, a contract. And under the Constitution of the United States, a contract was sacred. No state—and no creature of a state such as a city—could impair its obligations. No one-not Governor, not Mayor, not State Legislature, not City Board of Estimate—could interfere with its provisions. If Robert Moses could write the powers which had been vested in him into the bond contracts of his authorities, make those powers part of the agreements under which investors purchased the bonds, those powers would be his for as long as the authorities should remain in existence and he should control them. If he could keep the authorities in existence indefinitely and could keep his place at their head, he would hold those powers indefinitely-quite conceivably, until he died. The powers might have been given him by the Legislature and the Governor at the request of the Mayor and City Council, but if he embodied those powers in bonds, neither Legislature, Governor, Mayor nor City Council would ever be able to take them back.

Giving public authorities indefinite existence and such vastly expanded powers would not be easy. In proposing to give the institution substantial governmental powers and a lifespan at least of decades, possibly of centuries —in proposing to make it an institution that might endure as long as the Republic endured—Moses was in effect, whether or not he thought in such terms, proposing to create, within a democratic society based on a division of powers among three branches of government, a new, fourth branch, a branch that would, moreover, in significant respects, be independent of the other three.

The public officials whose approval was necessary would never give it. Those who were thinking men would realize that if they gave it they would be adding, without sufficient thought and consideration by themselves or by the public which should have the final say on matters of such significance, a whole new layer to urban government in America. The rest of them, concerned with power and patronage, would realize that to the extent they gave away power, they would be diminishing their own power. The key body whose approval was necessary—the Legislature that under the State Constitution alone had the power to create new authorities—had been fighting for years to keep Moses from gaining more power, from building his own

empire within the state government. The Legislature would never approve the bills Moses was drafting if they understood them.

So Moses would have to keep them—and all the other officials involved—from understanding. He would have to persuade Mayor, City Council, Legislature and Governor to approve his bills before they realized what was in them.

In 1924, he had faced a similar problem—and had solved it successfully, persuading a naïve assemblyman to introduce, and hostile Republican legislative leaders to accept, bills that appeared innocuous but gave the Long Island State Park Commission vast new powers. This time, however, the job would be harder. His aims now were far more ambitious, the powers which he wanted now were far broader than those he had wanted then. And in 1924, he had had the Governor on his side. Now he had no one on his side. If a single person in Albany or New York—Democrat, Republican, Governor, Mayor, assemblyman, councilman, any one of the thousand sharp-eyed lawyers who prowled the Capitol and City Hall—caught even a glimpse of his true aims, and sounded the alarm, he would never be able to accomplish those aims. He had to conceal his purposes from everyone.

The safeguards included in all previous New York State legislation on authorities to limit their lifespan were the provisions setting a time limit on their bonds, a date by which each authority must redeem all its bonds, surrender control of all its facilities and go out of existence. Moses, drafting amendments to the Triborough Bridge Authority Act, knew that the Legislature would never agree to the elimination of these safeguards.

So he didn't eliminate them.

He just made them meaningless.

Right at the beginning of the original Triborough Act—in Section One, in the portion labeled "Existence"—the act said explicitly that the Triborough "board and its corporate existence shall continue only for a period of five years and thereafter until all its . . . bonds have been paid in full . . . ," a provision which when coupled with a provision setting the maximum life of the bonds at forty years, was intended to limit the maximum life of the Authority to that span. The amended Triborough Act which Moses was proposing said the same thing—in the same place, right at its beginning, in Section One.

But it also said something else. Not at its beginning and not in the portion labeled "Existence," but long, legalistic pages later, buried deep within the act, in a subdivision of Section Nine, a subdivision and a section that ostensibly had nothing to do with "Existence," there was a new sentence:

The authority shall have power from time to time to refund any bonds by the issuance of new bonds, whether the bonds to be refunded have or have not matured, and may issue bonds partly to refund bonds then outstanding and partly for any other corporate purpose.

"He had figured out a gimmick," says Reuben A. Lazarus, drafter of the original Triborough Act and himself a master of the gimmick—and as Lazarus spoke a smile broke over his old, wrinkled face despite his attempts to conceal it, and his voice was filled with admiration, the admiration of a master of a difficult craft for a man who was more than a master. "That sentence looked so innocuous. But it changed my whole act completely. With that sentence in there, he had power to issue forty-year bonds and every thirty-nine years he could call them in and issue new bonds, for another forty years. La Guardia had thought that authorities . . . would be temporary creations that would build something and then turn it over to the city and go out of existence as soon as it was paid off. But with that gimmick in there, it would never be paid off."

Never. The existence of the Triborough Authority "shall continue only until all its bonds have been paid in full," the act said. But, because of Moses' amendments, the Authority no longer had to pay its bonds in full. Every time it had enough money to pay them in full, it could instead use the money to issue new bonds in their place. The amendments meant that unless it wanted to, the Authority wouldn't ever have to turn its bridges over to the city. It might, if it so desired, be able to keep the bridges—and stay in existence—as long as the city stayed in existence.

The safeguards included in all previous New York State legislation on authorities to limit their scope were the provisions setting a limit on the amount of bonds each could have outstanding, a limit sufficient to pay only for the specific project or projects the Legislature wished it to build and nothing more. The Triborough Act contained such a provision, a clause stating that the Authority could not have outstanding more than \$53,-000,000—an amount sufficient only to cover its \$35,000,000 share of the cost of the Triborough Bridge and the \$18,000,000 cost of the Bronx-Whitestone Bridge. But Moses' gimmick made that restriction meaningless, too. For by authorizing the Authority to issue new bonds not only to pay off old ones but also for "any other corporate purpose," it was authorizing it to keep its indebtedness at \$53,000,000 even though it had money available to pay off part, or even most, of that figure. If, for example, the income was high enough to pay all its carrying charges and also accumulate a surplus, which after five or ten years amounted to \$20,000,000, the Authority could then call in \$20,000,000 of its outstanding bonds, pay them off and therefore have only \$33,000,000 outstanding. Its legislatively authorized borrowing capacity would still be \$53,000,000. Its revenues would support that amount of bonds. So the Authority would have \$20,000,000 of borrowing capacity. It could issue \$20,000,000 in new bonds and use the proceeds of the sale for "any corporate purpose."

And what were such purposes?

The original Triborough Act had given the Authority power to build only the two bridges and their "approaches." Moses' success in persuading the PWA that approaches could mean roads leading to the bridges had greatly expanded the Authority's power.

Now he proceeded to expand it further.

The new, amended, Triborough Bridge Authority Act that Moses was proposing still said first that the Authority's powers were to build bridges and their approaches. But, in later sections, it also said some other things.

The act empowered the Authority to acquire land for and construct not only approaches but "new roads, streets, parkways or avenues connecting with the approaches," and to widen existing roads, streets, parkways or avenues connecting with those approaches. The word "connecting" was innocuous-unless one began to think closely about what it would mean if Moses expanded its definition as he had expanded the definition of "approaches." If an approach was miles long—the Queens "approach" to the Triborough Bridge, for example, was six miles long—scores of roads, streets, parkways or avenues intersected ("connected") with it. Under the amended act he was proposing, the Triborough Authority would have the right to widen any or all of them. It would have the right to build a new thoroughfare that would connect with the approaches anywhere along their length. And how long could that thoroughfare be? A block? A mile? Five miles? Ten? Could it be a highway that ran clear across the city? Under the amended act he was proposing, it certainly could. And suppose he wanted to build another—third—highway, to intersect with the one he had built to intersect with the approaches? Since this new, third, road would connect with the second, and the second would connect with the approaches, why could not the third be said to connect with the first? Under a liberal definition—a definition such as Moses had long since proven himself adept at making—quite possibly it could. Quite possibly, in fact, one could say that any major thoroughfare in the city "connected" with any other. And if one could say that, one could say that the act that Moses was so carefully drafting would mean that the Triborough Authority would have the right to construct highways throughout the city, in many respects exactly as if it were the city government itself.

And not just highways. Another clause in the act gave the Authority power "to construct and develop for the purpose of public parks" lands acquired "in connection with the Whitestone Bridge project and with new or existing roads, streets, parkways and avenues connecting with such project." Under the act Moses was drafting, the Authority would be able to build parks along any highway it might construct. Since the Authority would be able to build highways throughout the city, it would be able to build parks throughout the city, too.

And not just highways and parks. Buried still deeper within the act Moses was drafting was a clause giving the Authority the right to build and operate any "facilities for the public not inconsistent with the use of the project." Not with the project. With the use of the project. Since the project consisted of bridges, roads and parks, why, under that clause, would it be inconsistent for the Authority to build housing nearby that would allow more members of the public the convenient use of those bridges, roads and parks? Why, for that matter, would the construction of any public facility be inconsistent with the use of the project? An aggressive Authority chairman, anxious to stretch the powers in the act to the limit, could well find in that

phrase legal authorization to build any type of public facility he chose anywhere along the Authority's bridges, roads, streets, parkways, avenues and parks—anywhere, in fact, in the city.

And the best bill drafter in Albany set to work to make sure that, in building and operating its projects, the Authority, despite the limitations on its power by the State Legislature, would nevertheless possess powers equal to those possessed by the state—or by the city of which, in theory, the Authority was merely a creature.

Legislature and Mayor had sought to insure that the Authority would be subordinate to the city by including in the old act the provision that the City Comptroller should be the Authority's "fiscal agent." The new act included the same provision. In drafting the section entitled "Moneys of the Authority," Moses began it, in fact, with the flat statement: "All moneys of the authority from whatever source derived shall be paid to the comptroller as agent of the authority." The meaning of this sentence must have scemed clear to any legislator who read it. The definition of "fiscal agent" was well established; he was the individual empowered to receive and pay out a corporation's moneys. But later in the section, Moses added another sentence: "The moneys . . . shall be paid out on check of the Comptroller on requisition of the chairman of the authority. . . . " With that sentence added, the Comptroller, while still authorized to receive the Authority's moneys, would be able to pay them out only on Moses' requisition-would, in other words, be able to do with them only what Moses wanted him to do. He was still required to take Moses' money to the bank and deposit it there, but he was now forbidden to take the money out again without Moses' signature on the withdrawal slip. The sentence that Moses had slipped into the act meant that although the Comptroller of the City of New York would be called the Authority's agent, he would really be no more than its errand boy.

Legislature and Mayor had sought to insure that the Authority would be subordinate to the city by including in the old act the provision that the city would "own" all Triborough projects. The new act said that it did—flatly and clearly. But it also said that "the authority shall retain full jurisdiction and control over all its projects. . . ." The city might own the Triborough Bridge, but only the Triborough Bridge Authority could run it.

By the time Moses had finished drafting his amended acts, his authorities had not only all the powers of "bodies corporate" but many of the powers of "bodies politic"—including bodies politic that were sovereign states. His authorities had the right to "do all things... that a business corporation can do"—to sue, for example, to make contracts and bylaws, to acquire real estate and use it or lease it or dispose of it, and, of course, to issue bonds—and they had the right to do many things that private corporations could not do. They had the power to own public facilities, to require the public to pay tolls for their use and to prevent the construction of competing facilities so that the public had no choice but to pay those tolls. They had the right to

govern their domain by making their own laws ("rules and regulations for the protection of" their property which "shall have the force and effect of law," with violations "triable by a city magistrate and punishable by not more than thirty days imprisonment, or by a fine of not more than fifty dollars, or both") and to maintain their own police force (hundreds of Authority "Bridge and Tunnel Officers") to enforce those laws. They could have their own great seals ("and alter the same at pleasure") and set their own statute of limitations (a private citizen suffering damages by negligence of a private corporation had three years to sue; a private citizen suffering damages by negligence of the Jones Beach State Park Authority had six months to sue). They had the sovereign power of eminent domain, and more—not only could they take a private citizen's property, they could enter the land before it was taken to make the surveys necessary to decide if they wanted to take it (never again would some Long Island farmer be able to ram a shotgun against Sidney Shapiro's chest and keep him off his land). They had, in fact, some powers that sovereign states—at least the sovereign state of New York-did not. They could let contracts without competitive bidding. Their officials could be removed only for cause; they were immune from the pleasure of the Governor.

And Moses made sure that these powers, these powers corporate and politic and, in some respects, greater than both, would be embodied, ultimately, not in the authorities but in him personally. In the case of the single-member authorities, of course, the authority was Robert Moses. The Triborough, Jones Beach and Bethpage authorities had three-member boards, but while their enabling acts said, "The power of such corporation shall be vested in and exercised by a majority of the members," it also said, "The board may delegate to one or more of its members . . . such powers and duties as it may deem proper."

Then Moses set to work to make sure that no one would ever be able to take those powers away.

He did it in Section Nine, Paragraphs 2 and 4, Clauses a through i. Paragraph 2 authorized the Authority to pass resolutions governing the sale of its bonds. The various clauses of Paragraph 4 said, when taken together, that the resolutions could contain provisions dealing with toll rates, Authority rules and regulations and "any other matters, of like or different character, which in any way affect the security or protection of the bonds." And Paragraph 4 also said that any such resolution "shall be a part of the contract with the holders of the bonds."

Legislation can be amended or repealed. If legislators were in some future year to come to feel that they had been deceived into granting Robert Moses wider powers than they had intended—the right to keep tolls on a bridge even after the bridge was paid for, for example—they could simply revoke those powers. But a contract cannot be amended or repealed by anyone except the parties to it. Its obligations could not be impaired by anyone—not even the governing legislature of a sovereign state. Section Nine, Paragraphs 2 and 4, Clauses a through i, gave Robert Moses the right

to embody in Triborough's bonds all the powers he had been given in the legislation creating Triborough. Therefore, from the moment the bonds were sold (thereby putting into effect the contract they represented), the powers he had been given in the legislation could be revoked only by the mutual crassent of both Moses and the bondholders. They could not be revoked by the state that had created the Authority or by the city whose mere instrumentality it was supposed to be. If he copied into the bond resolutions the legislation giving him the right to charge whatever tolks he wished, for as long as he wished, from the moment the bonds were sold that power could never be revoked without his consent. If he copied into the bond resolutions the legislation giving him his other new, broad powers, those powers could never be revoked. The elected representatives of the state and city might have given Robert Moses those powers. But the elected representatives of the state and city would never be able to take them back.

Previously, Robert Moses had always needed what he termed "executive support." He had learned during his first great effort in public life—his attempt to reform the municipal civil service, an attempt brought to naught by his betrayal by John Purroy Mitchel—that as long as he was an appointed official, he could not accomplish great dreams without the backing of the elected official who had appointed him, and he had never allowed himself to forget that fact. His skill at bill drafting and his hold on the public imagination had gained him a unique insulation from Mayors and Governors in his daily operations, but it had still been only a chief executive who could give him the money and power necessary for the creation of giant public works.

But now he needed executive support no longer. In the fields which he had carved out for his own—transportation and recreation—the passage of his "amendments" to the authority enabling acts had given him resources of money and power independent of Governors and Mayors. Their approval was no longer required. Before Moses, the public authority had been a mere instrument of the city, a body established by the city's duly constituted, elected officials to carry out one of their decisions. His public authorities had been set up to do what they wanted done. Now his authorities would do what he wanted done.

For years, Robert Moses had sought executive power himself, hastily switching his party allegiance in 1928 when he thought he had a chance for the Democratic nomination for Governor, switching back to Republican in 1933 when he thought he had a chance for the Republican-Fusion nomination for Mayor, finally obtaining a nomination and running for Governor in 1934.

Each such clutch at executive office had been an attempt to obtain more power through normal democratic processes. After the 1934 debacle, however, it was obvious that this path to power was forever barred to him. His voter-antagonizing personality meant that he was never going to be able to obtain that supreme power which, in a democratic society, only the people can, through their votes, confer.

But now he needed that power no longer. In many ways, the amendments to the authority acts had given him, in his fields of operation, more power than he would have possessed as chief executive of state or city.

And Moses knew it. Prior to passage of the authority amendments, he had scrounged for elective office. After the passage of those amendments, he disdained it. For the next twenty years he would with regularity be approached by men prepared to back him for a gubernatorial or mayoral nomination, and he would firmly discourage them. Robert Moses was interested in money and power, and he no longer needed elective office to obtain those prizes. After the passage of his authority amendments, he had them already. With the institution he defined as "a body corporate and politic," Robert Moses had, on a broader scale, simply repeated the formula successful for him at Yale and with the Long Island State Park Commission, carving out within the state and city governments but outside those governments' traditional, formal framework a unique, independent niche. Now, thanks to his penchant—his genius—for seeing potentialities for power where no one else saw them, in the future his public authorities as well as city officials would be making vital, city-shaping decisions.

He didn't even need public opinion any more.

"That's a slender reed to lean on," Al Smith had said. Now Robert Moses had something more solid: the firm, precise, unbreakable covenants of the bond resolutions.

Robert Moses still had all his old, immense, popularity. But were he, one day, to lose that popularity, the loss would no longer be nearly as disastrous as it would have been in the past. For no one—not the people, not the people's elected representatives, not the people's courts—could change those covenants.

The institution over which Robert Moses had waved his magic wand was one uniquely suited to be the fairy princess that would bring his dreams to life. It dovetailed neatly with his philosophy and personality.

Moses was driven by the need for tangible, indisputable evidence of accomplishment and achievement—evidence such as a public improvement. He was driven by a need to build. Building—building a public improvement—was an authority's primary function; apart from operating and maintaining that improvement, its *only* function.

Moses had what amounted almost to a horror of ceasing to build; of finishing a bridge, say, and then having nothing to do thereafter but keep it clean and collect tolls on it, of being forced, as he put it, "to be a caretaker, to have nothing to do but sit around and collect nickels and dimes for the rest of my life." If an authority ceased to build, it would die; if all it did was collect tolls, the tolls would pay off its bonds and when the bonds were paid off it would have no choice but to go out of existence. Only by continually embarking on new projects—which would require new bond issues—could an authority remain viable.

Moses' vision was on a scale so grand that it transcended the tangled network of boundary lines of the 1,400 cities, boroughs, counties, townships, villages, sewer districts, fire districts, police districts, water districts in the New York metropolitan area. As he had once seen Long Island entire, now he saw the metropolitan region as a single whole, and as he had once wanted to shape the whole Island, now he wanted to shape the whole region. Of all the region's governmental institutions, only an authority could transcend those boundary lines. The jurisdiction of every one of the 1,400 governmental units ended at that unit's borders, and any attempt by one of them to initiate a development which crossed its borders was jealously-and, invariably, successfully-resisted by its neighbor. The sacred right to "home rule" could not be tampered with even by a county; only by obtaining the consent of every incorporated hamlet that would be crossed by a proposed highway could the Board of Supervisors of Nassau or Suffolk or Westchester County build one. Even the state government violated "home rule" only at its peril. Only an authority could with impunity build a project across or through several jurisdictions.

Moses' methods of Getting Things Done were dictatorial, peremptory, arbitrary, arrogant—"authoritarian," an observer addicted to puns might conclude. An official of a conventional governmental agency had difficulty in employing such methods. An official of an authority did not. Many of the restrictions which gave the public recourse from the decisions of old-line agencies did not even exist for public authorities. The symbol was the public hearing, the exemplification of everything Moses detested about normal democratic processes. Under law and custom, conventional governmental agencies could not embark on any large-scale public improvement without holding public hearings. An authority could.

Moses' methods—the methods with which he swayed politicians to his side—required secrecy. An authority gave him secrecy, for unlike the records of conventional governmental agencies, which were public, subject always to inspection, an authority's records were corporate records, as private as those of a private corporation.

Moses' image—the image he had so painstakingly cultivated—was precious to him, not only because it helped him achieve and accomplish, but because of reasons rooted in the murky depths of his personality. The image could not help being reinforced by his identification with public authorities, for public authorities had the same image.

The image was of the totally unselfish and altruistic public servant who wanted nothing for himself but the chance to serve. A key element in it was his disdain for money—a disdain which he made certain was well publicized and which was symbolized by his refusal to accept a salary for his services. Authority officials were traditionally unsalaried (the tradition had begun in England, where it had been believed that authorities would get better officials—men above politics—if they were not paid), and Moses had eagerly followed the tradition with his authorities—and had made certain that the public knew he was serving as authority chairman "without compensation."

The image was of the fearless independent above politics. The public

believed authorities—entities outside the normal governmental setup, entities whose members were unsalaried and appointed to terms long enough in theory to insure their independence from politicians—to be "nonpolitical."

The image was of the relentless foe of bureaucrats, the dynamic slasher of red tape. A key rationale for the creation of authorities was their freedom from the red tape involved in old-line governmental agencies and their ability to function freely and efficiently because they were established outside the governmental bureaucracies.

The image was of the man who Got Things Done, who produced for the public tangible, visible, dramatic achievements. The great bridges, tunnels and piers created by authorities were tangible, highly visible monuments to their achievements.

In short, Moses had discovered a governmental institution that was not only uniquely suited to his purposes but was, in institutional terms, an embodiment of his personality, an extension of himself. "An institution," said Ralph Waldo Emerson, "is the lengthened shadow of one man." The institution named "the public authority" was, in the form it took after Moses' eyes focused on it in 1937 and 1938, the lengthened shadow of Robert Moses.

He himself seemed to understand this. His remarks and, sometimes, his published statements, reveal a striking identification of himself with authorities, which he defined as "nonpolitical" organizations headed by "unsalaried" trustees in which "the *speed*, *flexibility* and absence of red tape, traditionally associated with private industry," could be used for public purposes. Composing the introduction to a brochure—expensively bound, wide-margined, printed in full color on paper of a weight and sheen suitable for an invitation to a royal wedding—that he issued in 1941 to mark the fifth anniversary of the opening of the Triborough Bridge, he wrote:

If I may be permitted a personal note, I would say that it has long been a cherished ambition of mine to weave together the loose strands and frayed edges of the New York metropolitan arterial tapestry. . . . The Triborough Bridge Authority has provided the warp on the metropolitan loom, the heavier threads across which the lighter ones are woven.

"The warp on the loom": the public authority, this new institution—new at least to America—at whose birth he had been present, to which he had served as prescient nursemaid and which he, more than any other individual, had raised to a maturity consonant with a major role on America's urban scene, would be the vehicle which would make his dreams come true.

A series of decisions Robert Moses took in 1937 symbolized his realization of this fact.

Two were financial. Previously, realizing that his dreams would never be funded by state and city governments, he had, through intricate and ingenious financial devices, arranged wherever possible to have revenues collected by the state commission and city department he headed paid not into state and city treasuries but into special "revolving funds" that in effect let him add them to the regular commission and department budgets. Now, in another series of maneuvers, he circumvented his circumventions—and when he had finished, the revenues of the Jones Beach parking fields no longer went to the Long Island State Park Commission but to the Jones Beach State Parkway Authority, and the revenues of the Jacob Riis Park parking field went not to the City Park Department but to the Marine Parkway Authority. He still had the money to spend—but now he could spend it through the authorities.

One was physical. Previously, he had had four offices: the State Council of Parks office at 80 Centre Street; the Long Island State Park Commission's offices at Belmont Lake State Park; 270 Broadway (the New York State Office Building), selected for its proximity to City Hall; and his nominal office in the headquarters of the New York City Park Department in the Arsenal in Central Park.

Four might have seemed adequate, but now he built a fifth, and told his aides it would be "the main office from now on." And this office was located on Randall's Island.

Geographically, Randall's Island was near the center of New York, but the water which surrounded it was a moat which separated it from the rest of the city. Moses' "amendments" to the Triborough Act made that separation more than physical. No inhabitant of the city could use the lawns or stadium or other facilities on Randall's Island—could even drive across it—without paying the Triborough Bridge Authority a tribute in coin, a tribute which Moses exacted from even the highest city officials, generally refusing to give free bridge passes even to borough presidents and sometimes, angry at La Guardia, withholding them from the Mayor. Once on the island, visitors were subject not to the city's laws but to Triborough's—Authority rules and regulations enforced by Triborough's Bridge and Tunnel Officers. Moses' decision to build his main office there was, intentionally or not, symbolic of his independence of the city.

If, moreover, Moses' authorities were becoming an independent empire, the heart's blood of that empire was money: tolls. The bulk of those tolls were collected at the huge Triborough Bridge toll plaza. If the empire had a heart, that was it. Moses built his new office in the very shadow of that toll plaza.

Not only the location of Moses' headquarters but its height was symbolic. Although the squat, gray three-story structure was built directly adjacent to the Triborough toll plaza, its roof was just enough below that plaza so that the building could not be seen by drivers on the plaza or on the bridge roadway. Although tens of thousands of drivers used the bridge day after day, year after year, none but a handful ever realized that there was an office building there. Moses' headquarters was concealed almost completely from public view.

He no longer needed the support of the city's mayor—and he wasted little time letting him know it. Exactly one month after La Guardia, on the

strength of his trust in Moses' earnest representations, had assured Governor Lehman that the city was retaining ample control over Moses' authorities, thereby persuading the Governor to sign one of Moses' new authority bills, a dispute arose over the Authority's hiring practices, and Moses wrote the Mayor, "It is silly to force a court test of such a matter, but I shall have to take this up with attorneys for the bondholders and with the trustees unless the matter is adjusted."

The Mayor thought he knew how to handle so outrageous an attempt at intimidation. "Now, there is one matter I want to make absolutely clear," he replied.

The Authority bondholders have absolutely nothing to say and have no control over purely administrative matters of the City of New York. So, don't talk about a court test on such matters or taking up anything of this nature with the Authority's attorneys or the stockholders. The Mayor establishes the policy for the City as well as the selection of the commissioners of the Authorities, and the Authority bondholders have absolutely nothing to say from the Commissioner down to the last line of attendants. You are a city official and will take matters up with the Corporation Counsel of the City of New York and not with "attorneys for the bondholders."

Moses' reply was more succinct. "I think you had better read the agreements and contracts," he wrote.

As poor Trubee Davison had done years before, Fiorello La Guardia sat down, too late, to study documents drawn up by Robert Moses which he had approved because he had relied on Moses' word as to what was in them. Then he called in his legal advisers to read them.

"Well, that was the day of the great awakening," recalls Windels, who, having resigned as Corporation Counsel, had not previously seen Moses' "amendments." He and Reuben Lazarus told the Mayor that, as Windels was to put it, "of course, under the bond resolution, the Authority did have the power to employ its own counsel, and it had all these enormous other powers as well." The Mayor, of course, had powers, too. On some of his authorities Moses served ex officio because he was the City Park Commissioner. The Mayor could fire Moses as Park Commissioner, and thereby divest him simultaneously of his membership on those authorities. But this power existed in theory only; political realities made it meaningless. Remove him from the authority undertaking the Rockaway Improvement and he might use his influence with the State Legislature to have state funds cut off from the state-financed part of the project, the Atlantic Avenue grade elimination; the Legislature had agreed to finance the elimination in the first place only because he was heading both city and state agencies involved. The city had no funds to further the work itself; it would have to remain uncompleted; Atlantic Avenue, already torn up, would remain a three-mile-long stretch of rubble. La Guardia would find himself in the same untenable position in which President Roosevelt had found himself when he had attempted to oust Moses as head of another authority—that of sacrificing a great public improvement for the sake of personal revenge on a faithful and immensely popular public servant. La Guardia might, of course, attempt to make clear the fact that the issue was not personal. le might attempt to make the public understand that public authorities to been given too much power. But the Mayor was only too well aware of the futility of attempting to explain the technicalities of bond resolution contracts to an electorate that idolized the Man Who Got Things Done.

More important, while the Mayor could remove Moses from some 1-thorities, he could not remove him from the Triborough Authority—he ad no charges of specific wrongdoing to bring against him—until his term expired in three years. During those three years, Moses would still have immese powers in the city. He would still be in charge of huge public works being constructed within the city's borders. Making an open enemy of Mose would lead to an immensely embarrassing situation, a situation, whin, moreover, would continue to be embarrassing for what was, in polital terms, a lifetime.

And these considerations combined with the others that always harstrung La Guardia in his dealings with Moses: Moses' immense populary; Moses' immense influence with a Governor and State Legislature from whom the Mayor constantly needed favors; Moses' ability to ram through the great public works the Mayor, as sculptor of metropolis, desperally wanted rammed through. La Guardia knew that Moses could ram though—scandal-free and in time for the next election. With good rease, he doubted if anyone else could. The powers that the Mayor possessed our Moses' authorities in theory he did not possess in practice. Political realies gave him no choice but to allow Moses to remain at their head. And the knew it.

Moses knew it, too. After reading the bond agreements and contras, La Guardia dropped all further discussion of the authorities' powers. Moss never raised the matter again. But thereafter he treated La Guardia nots his superior but as an equal. In the areas of transportation and recreation, Robert Moses, who had never been elected by the people of the city to my office, was henceforth to have at least as much of a voice in determining the city's future as any official the people had elected—including the Mayr.

## VI

LUST FOR
POWER

 $\Gamma H E$ 

## 29. "And When the Last Law Was Down . . ."

The weather being fine and spring-like, I walked for an hour before dinner with my wife in the Battery. . . . What a beautiful spot it is! The grounds are in fine order; the noble bay, with the opposite shores of New Jersey, Staten and Long Islands, vessels of every description, from the noble, well appointed Liverpool packet to the little market craft, and steamers arriving from every point, give life and animation to a prospect unexcelled by any city view in the world. It would be worth traveling one hundred miles out of one's way in a foreign country to get a sight of it.

-DIARY OF PHILIP HONE, APRIL 10, 1835

Anxious as he was to paint onto the great canvas of New York Moses' long-proposed "circumferential" bypass route around the city to the northeast for traffic from both Lower Manhattan and Brooklyn-a Brooklyn-Battery Tunnel, an elevated highway to carry traffic from the tunnel across Brooklyn's congested downtown and, to carry traffic from the highway around the edge of Brooklyn and Queens to the Bronx-Whitestone Bridge, where it could link up with the Westchester parkways beyond, a "Circumferential Parkway" (Moses had not yet been forced by the unwieldiness of the name to call it the "Belt")-La Guardia could see no way of obtaining the money that the Mayor-artist called the "brush": tunnel would cost \$65,000,000, elevated highway \$12,000,000, parkway \$28,000,000—a total of \$105,000,000. This was approximately \$105,000,000 more than the city could afford, and the city's Tunnel Authority, which had the legislative authority to build the tunnel, could provide little help: with its first tunnel, the Queens-Midtown, not due to open for another two years, it had no revenues to help capitalize new projects, and investors were so leery of buying bonds for another tunnel before the first had proven successful that they were demanding interest rates that would add additional millions to the cost. When La Guardia tried to sell the bonds in Washington, the

reception was chilling; RFC Chairman Jesse Jones said that, cousin on the Tunnel Authority or no, he would not consider sinking a cent more than \$39,000,000 in another New York tunnel; Ickes, from whom the Mayor attempted to raise the balance as an outright PWA grant, said that New York's share of PWA funds was already so disproportionate that he would not give the city more than \$5,000,000 for any purpose. And when La Guardia raised the subject of money with the only other source he could think of-Robert Moses-the chill over the whole situation turned to ice. For while Moses told the Mayor that the Triborough Bridge Authority did indeed have money to spare—to the Mayor's utter astonishment, Triborough's chairman revealed that the Authority could, by capitalizing its surpluses, raise immediately more than \$30,000,000—and was willing to use that money for the circumferential project, he also told the Mayor there would be a price for its use: the Mayor would have to allow him to do what two years earlier he had prevented him from doing. He would have to allow him to take over the Tunnel Authority.

To a man who valued power as highly as did La Guardia, the price—which would give Moses a monopoly over all new intracity water crossings, tunnels as well as bridges—was outrageously steep. In his files can be found a memorandum from Moses giving details. Across it is scrawled, in huge letters in the Mayor's handwriting, a single word: LOUSY!

But the Mayor found that, if he wanted to build the great project, he had no choice but to pay that price. Repeated pleas to Ickes won from the Old Curmudgeon one concession—the PWA had previously approved grants for \$7,000,000 for New York schools and hospitals on which construction had not yet begun; if La Guardia so desired, Ickes said, he was welcome to use that money for the tunnel instead. But the limit on new PWA contributions remained firm at \$5,000,000, so the PWA's contribution would total only an inadequate \$12,000,000. Trekking back and forth to Washington, Stetson in hand, La Guardia told the RFC the city would somehow scrape up a few millions to provide a greater margin of safety for tunnel bonds, but this persuaded the RFC to raise the amount it would buy only from \$39,000,000 to \$43,000,000. With the total federal contribution thus frozen at \$55,000,000, the Mayor could see no way to a thaw. He appears for a time to have contemplated building only the tunnel and highway, hoping that when Moses saw the rest of the bypass going ahead, his passion to complete it would persuade him to build the parkway with Triborough money, but the tunnel and highway alone cost \$77,000,000, \$19,000,000 more than he could raise. La Guardia then contemplated delaying the project until the Queens-Midtown was open and earning, but that opening was two years away-by that time, the way things were going in Washington, the PWA might no longer have any money to give. The Mayor explored the possibility of making Moses—through legislative or some other action contribute the Triborough surpluses, but found that plan balked by the unalterable bond covenants. Trapped between his dreams for the city and the city's utter inability to pay for them, he had no choice. If he wanted New York to have the great belt system, he would have to hand over to

Moses, already far too powerful, more power still. In a formal "Memorandum of Understanding" and an exchange of letters on September 7 and 8, 1938, Moses agreed to use Triborough's surplus to build the \$12,000,000 elevated highway and to add \$22,000,000 to the RFC contribution to build the tunnel. In return La Guardia agreed that the city would use the PWA's \$12,000,000 for the Belt Parkway and would, over the next three years, complete the parkway with \$16,000,000 of its own funds. And the Mayor further agreed to ask the Legislature to allow Triborough to take over the Tunnel Authority's Queens-Midtown Tunnel, the Tunnel Authority's authorization to build the Brooklyn-Battery Tunnel—and the Tunnel Authority itself.

With the Brooklyn-Battery Tunnel firmly in his grasp, Moses made a slight modification in its design: It became the Brooklyn-Battery Bridge.

The change reflected the importance Moses had come to place on bankers' values—a bridge could be built slightly more cheaply than a tunnel, would cost slightly less to operate and could, per dollar spent, carry slightly more traffic—and his eagerness to build impressive monuments to himself; a bridge was, after all, the most impressive of monuments ("the finest architecture made by man") as well as one whose life was "measureless"; a tunnel, he said in public, "is merely a tiled, vehicular bathroom smelling faintly of monoxide"; in private, an aide recalls, "he used to say, 'What's a tunnel but a hole in the ground?'—and RM wasn't interested in holes in the ground." And the change had the additional value of tying La Guardia even more closely to his agreement with Moses because it appealed to the Mayor's romantic, artistic conception of himself as a "painter" of New York -as well as to his own not inconsiderable interest in monuments. "RM took the Mayor out on Jack's [Madigan's] yacht into the harbor off Wall Street at sunset one day—and you know how beautiful it is there at sunset and told him that he was going to use this setting for the biggest, most beautiful bridge in the world, and the Little Flower really ate it up," the aide recalls. And Moses soon found that he needed every tie on the Mayor that he could get. For the Brooklyn-Battery project aroused more opposition than any previous Moses proposal.

The opposition came first from Joseph D. McGoldrick, the reformer-professor whom La Guardia had drafted out of his Columbia classroom to become City Comptroller, and who had previously been the unquestioning ally of the Mayor he idolized.

"If you don't watch [Moses] he's going to bankrupt the city," McGoldrick's predecessor had warned him. By 1938 the Comptroller felt that that prophecy had been just about fulfilled, at least in terms of the city's ability to finance new large-scale public works or maintain old ones. Increases in the city's obligations for debt service to pay for such construction and maintenance—obligations made necessary to a large extent by Moses—had boosted the city's annual expenses to a level at which its annual revenues barely covered them. The capital budget situation was even more ominous.

Not only was there little margin left under the constitutional debt limit, but commitments made for future public works projects—mostly Moses' projects—had insured that there would be hardly any money available in 1939 or 1940 either. The city would be able to pay its \$16,000,000 share of Moses' tunnel-highway-parkway proposal only by eliminating most non-Moses public works and all large-scale maintenance jobs for both years; the canceling of the public works would be bad enough; the cancellation of the maintenance would inevitably saddle the city in later years with even larger bills for major repair work that preventive maintenance would have made unnecessary. McGoldrick felt that such a course did not make sense.

During his interim appointment, in 1934, the Comptroller had listened to local delegations pleading for better hospitals, better schools, better libraries, and for the creation of desperately needed child health care centers in the slums. Now, back on the Board of Estimate after three years, he was listening to the same groups plead for the same things-and it was glaringly apparent to him that the city's progress in building roads and parks had not been matched in other areas in which physical construction was needed. Hospitals, he felt, were "a disgrace." "Many schools were fairly ancient; we had some that had been built right after the Civil War and were still in use. We had schools ninety years old. We had one school-PS 35that was a hundred years old." In the wealthiest city of the wealthiest nation in the world, 290 schools were not even fireproof. Despite his admiration for La Guardia, he could not help noticing that, despite the Mayor's annual promises, in four years not a single child care center had been built. As for mass transportation facilities, the city's failure to build new subways to service rapidly developing outlying areas was only part of the problem. The subways already in existence were beginning to require extensive preventive maintenance. Without it, their deterioration would accelerate. The imbalance in the spending of city funds must be corrected, he felt, to meet other needs besides roads and parks. Taking \$7,000,000 allocated for schools and hospitals and allocating it to a highway was not the way to do it.

La Guardia had told McGoldrick that he agreed with the need for more balance, and that he was planning to act on it. Now, however, when Moses suddenly requested Board of Estimate approval for the Circumferential Parkway, La Guardia supported him. And McGoldrick, who had suppressed previous doubts about Moses' proposals on "an assumption that he was almost always right," found himself, during "some long nights of soul searching," re-examining that assumption. At first he suppressed his doubts; he gave the PWA the certification required from the city's chief financial officer of the city's willingness to pay any unexpected costs on the project. But late on the evening of October 11, less than thirty-six hours before the Board vote, the pudgy, bespectacled, mild-mannered little Irishman issued a public statement that was the closest thing to a cri de conscience uttered by a top city official since Moses had come to power within its borders:

Reluctant as I am to suggest that we consider postponement of the Circumferential Parkway . . . it is my duty to point out that [if it is built] the city will be brought to

the virtual exhaustion of its debt-incurring capacity, with no margin remaining for normal capital growth of its existing facilities. . . . No one can dispute the vital need for keeping the city's plant in efficient condition. We have a stupendous investment in public buildings, bridges and equipment which must be protected. Unless this plant is properly maintained we will undergo a repetition of the era when broken-down equipment and neglected buildings cost the taxpayers many needless millions in increased costs of operation and maintenance.

## As for new construction:

Not a single new school, not a single new hospital, not a new police station or firehouse, not even a baby health station, would be provided [in either 1939 or 1940].... These are essentials, and in my considered judgment, we cannot embark upon new ideas until we have met these basic needs.

McGoldrick could cast only three of the sixteen votes on the Board of Estimate. The next day, however, La Guardia's two other Fusion allies on the Board, City Council President Newbold Morris and Manhattan Borough President Stanley M. Isaacs, announced they would vote with the Comptroller. Together the trio could cast eight votes—enough to keep the parkway from being approved.

Employing his usual strategy, Moses attacked not McGoldrick's arguments but McGoldrick. "What has happened since the application [certification] was signed, sealed and delivered by the Comptroller himself?" he demanded the next day. "What is behind the Comptroller's move and his swift change of front?"

It was the kind of attack that McGoldrick was later to admit "did intimidate people from debating with him—and intimidated me, too, quite likely." Moses knew perfectly well why he had changed his mind, the Comptroller was to tell the author. He had explained his feelings to the Park Commissioner at length. Moses knew there was no corrupt or sinister motive. But, he says, Moses certainly made it sound as if there was.

Nevertheless, McGoldrick refused to back down. So the next morning, as City Hall bustled with preparations for the crucial Board of Estimate session, cars crammed with Park Department and Triborough Authority employees began pulling up outside. A rumor suddenly swept the Hall: Moses himself was in the building—closeted with the Mayor in secret conference. The Mayor had not attended a Board session in months, always sending a deputy in his place, but now, as McGoldrick, waiting nervously for the meeting to begin, sat in his high-backed, burgundy leather chair near the center of the Board's raised horseshoe, watching Moses' claque pack onto the benches below him, the figure that dropped into the empty chair right beside him at precisely 10:30 A.M., with a fierce sideways glower, and opened the meeting with a pound of the gavel that to McGoldrick's ears sounded like the crash of fate, was that of the Little Flower himself.

Moses had not overestimated the need for the Mayor's presence. With his supporters—overflowing the Board chamber and jamming the corridors outside all the way back to the "hanging staircase"—cheering his every point, he pulled out all the old arguments, telling the Board—falsely—that

the \$12,000,000 would not be made available by the PWA for any other purpose and that therefore the "real issue" was whether or not the city was going to lose \$12,000,000 in federal money. When McGoldrick, his voice almost lost in vicious booing, tried to explain that he was suggesting postponing the project, not killing it, the Park Commissioner, pounding his fist down on the lectern, shot back:

If this thing goes down now, it is dead, and it is dead for a long, long time. I don't know who will revive it. Don't kid yourself about this. You are not putting this off. You are settling it one way or another. No member of this board will see this project started if it is not done now. That is because the federal government has given its promise for a \$12,000,000 grant, because the engineering staffs of the city, state and federal government have been sitting up day and night working on the plans and because those plans, approved and in official form, are lying on the Mayor's desk right now.

But McGoldrick refused to yield—and neither would Morris or Isaacs. La Guardia had to call the Board into executive session behind closed doors.

The doors remained closed for more than four hours. When they opened, and the Board filed back onto the horseshoe dais, it approved unanimously the expenditure of \$16,000,000 for the Circumferential Parkway—and, to enable the city to spend the money, eliminated from the list of previously approved projects \$8,000,000 worth of schools and hospital improvements, \$5,000,000 in subway extensions and \$3,000,000 in other projects.

What had happened behind the closed doors? Asked years later, McGoldrick said that La Guardia had placed the issue on a personal basis, telling the three Fusion officials flatly: "You've got to go along with me on this." Refusing such an appeal would, McGoldrick said, have meant a complete split with the Mayor, after the new Fusion administration had been in office only ten months. And that, McGoldrick felt, was something New York could afford even less than a Belt Parkway, for such a split would make impossible the truly sweeping reforms which a united Fusion administration might accomplish.

"We changed because—you know, La Guardia was very intolerant of differences. We knew him well enough to know this would blow things right up. [We] knew that we couldn't at that early stage have a break with the Mayor—it would have thrown the whole administration into chaos."

And, McGoldrick admitted with a quiet candor, there was also "the personal factor." "Both the Mayor and Moses were really angry that day," he recalled. Standing up to Moses in a rage was intimidating enough. Standing up to Moses and La Guardia simultaneously—in a room outside whose doors hundreds of their cheering supporters were waiting—was, when coupled with the other considerations involved, a lot to ask of any man.

Moses' disclosure that the Brooklyn-Battery Crossing was going to be not a tunnel but a bridge came on January 22, 1939, three months after the Board of Estimate's approval of the parkway. (More precisely, according to

the announcement, there were to be two bridges, a pair of giant suspension spans in tandem, linked in the middle of mile-wide Upper New York Bay by a joint anchorage pier near Governor's Island, descending to street level in Brooklyn on Hamilton Avenue, near the terminus of the planned Elevated Highway, sloping down in Manhattan into Battery Park, where a series of giant piers planted in the park would carry a low-level causeway above the park to meet a planned southward extension of the West Side Highway.) For three days after the disclosure there was silence; not a word of comment was uttered for publication by any citizen or public official.

And then, on January 25, the storm broke.

This was no protest that was going to go unheard. This was no circulating of petitions by a group of housewives out in Flushing, no attempt by some neighborhood chamber of commerce in the Rockaways to persuade their local assemblyman to use all his influence to induce one of Moses' lower-ranking aides to grant them the boon of a ten-minute hearing. This was a cry, first of disbelief and then of sheer outrage, from New York's most prestigious and influential private citizens, from "Gotham's gentry," the aristocracy-of wealth and talent both-of the greatest city in the New World. This was a cry of outrage, moreover, from that segment of the city's aristocracy which held the city in deepest affection, from those individuals who formed the backbone of New York's legendary Good Government movement, who had proven in long days attending Board of Estimate sessions and long evenings studying statistics or writing reports for the Citizens Union or the City Club that "men are moved by things other than just narrow self-interest," whose influence in city affairs was therefore not only practical but moral—and political, too, since their very names symbolized reform and were, therefore, valuable not only on checks for campaign contributions but in headlines. This was a cry of outrage from men whose influence on New York's affairs could be measured by the fact that, four times since the turn of the century alone, they had, through the "fusion" movements that were the political embodiment of the reforming ethos, defeated an awesomely powerful political machine and had seated a candidate of their own choosing (most relevantly, in the present context, Fiorello Henry La Guardia) in the Mayor's chair; these were men who, in the affairs of the great city, had for decades held power such that they could regard it as no more than a footnote in their story that they had played a vital role, perhaps the decisive role, in making one Robert Moses Park Commissioner.

Exton and Weinberg and other young reformers had attempted to explain to these men that Moses' projects were destroying many of the values that made life in the city livable, but these old generals of reform had, as a rule, not been familiar with many of the locales in question and therefore had not been able to appreciate the objections to projects that were certainly worthwhile according to the theories in which they had been schooled. But many of these leaders—most of them, in fact—worked near the Battery. Many of them had real estate interests in the area. Some lived across the bay in Brooklyn Heights. They were very familiar indeed with the locale of the Battery Crossing—with Battery Park, the Wall Street and Lower Man-

hattan office-skyscraper complex and the bay—and they were therefore able to see what this Moses project would destroy.

Some of the reasons behind their protest were setfish.

Moses' announcement had been accompanied by an "artist's rendering" of the bridge that created the impression that the mammoth suspension span would have about as much impact on the Lower Manhattan landscape as an extra lamppost. This impression had been created by "rendering" the bridge from directly overhead—way overhead—as it might be seen by a high-flying and myopic pigeon. From this bird's-eye view, the bridge and its approaches, their height minimized and only their flat roadways really visible, blended inconspicuously into the landscape. But in asking for Board of Estimate approval, Moses had to submit to the Board the actual plans for the bridge. Isaacs gave copies to Ole Singstad and to Walter D. Binger, an engineer and reformer whom Isaacs had brought into city government as Manhattan Commissioner of Borough Works. And after they had analyzed the plans, Isaacs called in reporters and told them what the bridge would look like not to a bird but to a human being.

The public might be interested to know, Isaacs said, that the proposed bridge anchorage in Battery Park, barely visible on Moses' rendering, would be a solid mass of stone and concrete equal in size to a ten-story office building. The approach ramp linking the bridge to the West Side Highway, a ramp depicted on the rendering as a narrow path through Battery Park, would actually be a road wider than Fifth Avenue, a road supported on immense concrete piers, and it would cross the entire park—the entire lower tip of Manhattan Island-and curve around the west side of the island almost to Rector Street at heights ranging up to a hundred feet in the air. Not only would anchorage and piers obliterate a considerable portion of Battery Park, they—and the approach road—would block off much of the light not only from what was left of the park but also from the lower floors of every large office building they passed; because the approach ramp was really an elevated highway that would dominate the entire tip of Manhattan, it would depress real estate values throughout the entire area. Many Good Government leaders owned some of that real estate, and they saw Isaacs' prophecy confirmed almost immediately when a corporation broke off negotiations for leasing an entire floor at 21 West Street when it suddenly realized that the view from the windows would no longer be of the harbor but of the underside of a highway.

But even private considerations had public implications. Lower Manhattan real estate, quite possibly the most valuable in the world, was valuable not only to its owners, but to the city. According to some estimates, the portion of the city's total real estate tax paid by Lower Manhattan was as high as 10 percent; large office buildings contributed hundreds of thousands of dollars annually to the city in real estate taxes. Reduce their light and air and they would be entitled to a substantial reduction in taxes. And Moses' bridge would reduce the taxes for dozens of such buildings. Computing the depreciation in real estate values conservatively, Singstad found that,

luring the next twenty years alone, building the Battery Crossing as a bridge nstead of as a tunnel would cost the city more than \$29,000,000 in real estate taxes.

And many of the reasons behind the objections were not selfish at all. To these men who loved New York, the locale in which Robert Moses was planning to build his bridge—New York Harbor and Battery Park—contained many of the reasons they loved it.

From the sea New York Harbor was a sight to make authors strain for adjectives. Writers had described the colossal staired and serried mass of towering skyscrapers, which seemed to be rising out of the water, as a giant ship (Melville had been reminded that the very name "skyscraper" had once been used by sailors to describe a sailing ship's topmost canvas); as a "structure of tiered decks," pointing at the watcher and "growing taller and taller" like the prow of a furiously onrushing vessel; as a medieval fortress, whose towers, rising out of swirling tides, at night were "blocked by darkness into a sentinelled medieval keep of enormous height and unscalable defense" that might have been inhabited more fittingly by dead kings than recent bankers; as a mesa, a petrified forest, a "giant's cromlech." And the very number of the metaphors proved the power of the scene to excite the imagination, proved, in fact, the truth of the one image used most frequently to describe it: that the view of New York from its harbor was one of the wonders of the world.

The unique importance of Battery Park to New York City was obvious not from the sea but from the air-from a plane or from the observation platform of the Empire State Building a thousand feet in the sky over Manhattan Island. To the observer looking out over what has been called "the most significant panorama that modern civilization offers," the buildings in which 12,000,000 persons lived and worked in 1939 seemed to stretch out endlessly to the horizon. But from such vantage points it could be seen that they were not only stretching out but closing in, building up, pressing inward, crowding closer and closer together, until, as if the concentrating inward surge of humanity constituted a geologic force, in the epicenter of that surge the buildings of Manhattan were thrust upward and toward the sky. And it was near the island's southern tip, the tip jutting into the harbor, that the colossal upthrust had been greatest. In the upper part of Manhattan the masses of concrete were mostly sixty feet high, or seventy; in the center of the island, they were a hundred and fifty or two hundred. But as the island narrowed toward its southern tip, they were four hundred feet high, five hundred, cramming closer and closer together, bulking up higher and higher as they loomed southward pressing inexorably toward the island's tip—until at the very tip, at the very end of the most crowded island in the world, at the very spot in the entire world in which buildings should have been crowded most closely together, there were suddenly, with the exception of a tiny old fort converted into an aquarium, no buildings at all. At a point at which a single square foot of land was worth thousands of dollars, at which the value of an acre was computed not in the millions of dollars but in the

tens of millions, there sat 967,032 square feet of land—22.2 acres—vacant except for grass and trees, pathways between them, benches, and a broad, breezy waterfront promenade.

And it wasn't from either sea or air that the value of park and harbor was most apparent. It was from the ground, from the nearby streets of the city, from the bleak narrow concrete canyons of Lower Manhattan from which towering masses of concrete and steel had crushed sunlight and sky and green grass and trees and, by hemming between them the swirling concentration of humanity (half a million human beings worked in Manhattan's single southernmost mile), peace. If there was ever a place in which a man occasionally needed to be alone for a while, to sit in the open, in the sun, among grass and trees, for a minute or two, to escape from crowds and noise, that place was Lower Manhattan. And in all the streets of Lower Manhattan, there was no place to do so.

There should, moreover, have been a sense of the sea in Lower Manhattan, which was, after all, the tip, the seamost tip, of the island that was the world's largest seaport. But there was no sense of the sea in Lower Manhattan; skyscraper walls blocked that out, too.

There was no sense of history, either.

Of all the qualities that the skyscrapers had crushed out of Lower Manhattan's streets, it was perhaps history whose disappearance was most poignant to New York's reformer-aristocrats. For, familiar as they were with the city's early history, and with the early history of the fledgling nation of which the city had been a part—especially familiar because many of them were direct descendants of the men who had made it-they were well aware how much of it had been made in those streets when those streets were the city. It was, for example, in Fort James at the foot of the island that Jacob Leisler in 1689 persuaded his fellow militia captains to sign, on the head of a drum, a document ousting the latest Royal Governor, thereby giving New York two years of self-government, and it was in that fort, with drums rattling, that, two years later, a new Governor hanged Leisler from a gallows. It was in a courthouse in Lower Manhattan that, in 1735, in a case from which the best New York defense attorneys had been barred, the famous lawyer Andrew Hamilton, smuggled in from Philadelphia, rose to startle the court by announcing that he would represent a printer charged with libel, told the jury that their verdict would determine whether men had the right to oppose tyrants by writing the truth, and persuaded them to acquit John Peter Zenger. Those streets echoed to the shouts of throngs led by the Sons of Liberty carrying the "liberty poles" that were erected on the Commons (later City Hall Park) as fast as British soldiers could cut them down; to the tramp of marching men-five duststained regiments George Washington had led south from Boston; and to the first public reading—on the Commons, to troops formed into a great hollow square around their general—of the Declaration of Independence.

Those streets had seen despair. One morning the harbor that had been empty the night before was a forest of masts: the British fleet had arrived—130 ships bearing 31,000 redcoat and Hessian soldiers, veterans of a

hundred battles; soon the hills of Staten Island were white with their tents. After the raw and ragged Continentals had been routed at the Battle of Long Island, and driven off Manhattan Island (Washington, watching from across the river, wept as the Hessians bayoneted the wounded at the last outpost at Fort Washington), the only troops that walked those streets until the end of the war seven years later were troops wearing the red coats of the oppressor. But those streets had seen triumph, too. At the end of the war, Washington returned. "The troops just leaving us were equipped as if for show, and with their scarlet uniforms and burnished arms, made a brilliant display," wrote one woman. "The troops that marched in, on the contrary, were ill-clad and weather-beaten, and made a forlorn appearance. But then they were our troops." It was in those streets—at Fraunces Tavern at Pearl and Broad-that their leader, having just refused a crown, took farewell of his weeping officers, weeping himself as he did so and then walking silently to the barge waiting at Whitehall Ferry. And it was to those streets that George Washington returned six years later—in a barge rowed by thirteen ships' captains clad in white uniforms—to step ashore at Murray's Wharf at the foot of Wall Street as women threw flowers at him (he "read his history in a nation's eyes," wrote one) and be sworn in on the balcony of Federal Hall at the corner of Wall and Broad. And it was through those streets—the streets of the first capital of the new Republic -that there walked the three men-Hamilton, Jay and Madison-who together were "Publius," author of the eighty-five great essays urging ratification of the controversial new Constitution.

To many of the reformer-aristocrats, the history of those streets was family history. The rolls of Citizens Union and City Club-and of groups such as the American Scenic and Historic Preservation Society—were filled with names like Morris and Bayard and de Peyster and Van Rensselaer and Gerry and Hamilton. But as the Age of Skyscrapers had made land so valuable that history could no longer find a place on it, they had had to watch as cobbled slips and lanes had been paved over with asphalt, and as row after row of beautiful, sober, red-faced Federal residences, of buildings that housed sailmakers' shops and ship's chandleries behind Greek lintels and steeply pitched dormers redolent of the harbor's historic sailing age, had crumbled beneath the wreckers' iron balls. Before their eyes, the elegant townhouses that had stood on State Street in a neat, graceful row had been torn down one by one-even No. 9, where Lafayette had lived -until only one remained, the delicate ironwork of its balconies and the slimness of its tall white columns an ironic grace note in a cityscape without grace. By 1939 Fraunces Tavern was the only structure left associated with the hundred moments of triumphs and glory Washington had played out in those streets. In an area dedicated to commerce, in which men spoke in what Henry James called "the vocabulary of thrift," there was no interest in a more epic vocabulary. Once Lower Manhattan had been steeped in history. Now that sense of history was gone, vanished, crushed out of those streets as completely as the sense of the sea.

But turn a corner and there was history and sunlight and sky and, stretching before you, the sea. For turn a corner—the corner at the bottom

of Pearl or Front Street, for example, or the bend at the foot of Broadway—and there was Battery Park.

Step into Battery Park and suddenly—remarkably suddenly—the city was all behind you. Walk down one of its winding paths (for its paths were winding then) under the leaves of the big old trees that lined them (for they were lined with big old trees then) and the clamor of the traffic-jammed streets of Lower Manhattan faded away so quickly that within a hundred paces only an occasional particularly strident car horn remained as a reminder of what you had just escaped.

Sit down on one of the benches under the trees and what you heard first was mostly quiet, as if your ears had become so attuned to the din you had left that for a minute or two they couldn't register more subtle sounds. But then you began to hear the sparrows and the orioles, and the harsh faraway scream of some sea bird. You began to notice the flutter of a waxwing from tree to tree, the soft swoop of gulls across the high sky.

If, sitting there, you looked back at the tall buildings behind you, you saw them through leaves, and they didn't look so tall. They seemed, in fact, rather far away. Only a few steps out of the sunless streets, you had found sunlight. Only a few steps out of their colorless walls, you had found green lawns. Only a few steps out of their tumult, you had found peace.

And if you got up and walked a little deeper into the park, suddenly, before you, there through the trees was the heavy blue-green swell of the sea, and that rhythmic, restless sound, at once peaceful and intense, was the lapping of waves against the shore, and all at once, only steps from the dead gray walls of Lower Manhattan, you were standing at the edge of a broad and busy harbor: crisscrossing the waves were stubby tugboats, freighters with derricks and masts a tall forest on their decks, speedy motorboats skimming from crest to crest, gaily painted ferries, private steam yachts, white-painted and glistening, giant gleaming ocean liners, so big that their sides were moving cliffs. Everywhere there were bright flags—the pennons and burgees of the yachts, the tricolor of the Normandie and the Union Jack of the Queens, the colors of a dozen other foreign nations—and all fluttering against the blue of the sky. It was a panorama of vastness and beauty in the sun, of drama in storms, when the tossing whitecaps that stretched to the horizon, the howling of the wind that filled your ears and the smash of the waves against the piers at your feet made you remember with a start that Manhattan was only an island and that you were standing at its very tip. And at night, with the towering statue of Liberty Enlightening the World floodlit from pedestal to torch, and the rows of lamps on the ferryboats gliding across the dark waters, the view from the Battery was, as one of the reformers put it, "a thing of beauty never to be forgotten."

Sunlight, serenity, a sense of the sea—and something more. For walk into Battery Park at its Broadway entrance and staring at you, at the end of a long, broad grande allée, was an odd-looking building.

If you knew the history of New York City, you could read it in

layers on that building. Architects remodeling it to make its appearance harmonize with its present purpose—for the last half century it had been the city Aquarium—had given it a three-story-high façade that made it look like a toy fort, with rounded turrets at each end, a cornice crenelated to resemble battlements and flags along the top, and a white stucco finish that, shining in the sun, would have made it a perfect target. In that gay façade, the massive bolt-studded and iron-reinforced doors, set in an immense stone portal twenty feet high, loomed with an inappropriate grimness. But if you knew the history of New York, you knew why those doors were there—and you knew that if you stripped that layer of stucco away from the lower story, you would find behind it huge, rugged walls of weatherbeaten sandstone, walls twenty feet high and eight feet thick, walls thick enough to withstand the bombardment of a fleet, walls through whose barred embrasures had glinted black thirty-two-pounders capable of sweeping the harbor from shore to shore. You knew that if the top two stories of that odd building were a fake fort, the bottom story, behind the façade, was a real fort-Fort Clinton, constructed during the War of 1812 to repel an expected British invasion.

Fort Clinton, named after Erie Canal builder De Witt-the fort that in 1939 stood in Battery Park under a coat of white stucco and two stories of fish tanks-had never fired a shot in anger. The expected British invasion never came (probably, historians believed, because the British were deterred by the presence of Fort Clinton and its sister fort on Governor's Island, Castle William), and no enemy fleet was ever again to threaten New York. The only ships ever sunk by its twenty-eight thirty-two-pounders were hulks sunk for target practice. But the broad circle—a full two hundred feet in diameter—of its massive walls was an evocation in weathered red sandstone of the nearly two centuries when men ran for forts at the news of Indians or the French. Walk down beside it, stand beside one of its embrasures and see where its cannon bore, then look out across the harbor and see, across a mile of water, the massive hulk-unstuccoed, grim, cannon still mounted, so that through its embrasures the sun still glinted off black metal-of its sister fort, and you were back in another, more heroic age. Walk down beside it, and that city behind you, that city without history, had a history again.

And in that building there was the history of still another era to read. For behind that stucco façade was also a domed roof that, built in 1824, transformed Fort Clinton, its guns still in place, into "Castle Clinton," or "Castle Garden," circular auditorium and theater.

If Fort Clinton was heroism, Castle Garden was the glory heroism earned.

It was at Castle Garden on August 16, 1824, that, in the words of one historian, "it was proved that republics are not always ungrateful," for it was at Castle Garden on that date that Gilbert du Motier, Marquis de Lafayette, who as a rich young nobleman had defied his King and fought for America, returned to it, sixty-seven years old and penniless.

"Many of the spectators doubtless had in mind a gallant, boyish figure

in the buff and blue of the American Revolution, with powdered hair tied in a queue," the historian wrote. "What they saw was an old civilian, in a short-haired brown wig." But when the old civilian stepped onto the Castle Garden landing stage—after a trip up the harbor on which his ship was escorted by a huge flotilla—to begin a visit on which he was to receive from the government and citizens of the United States gifts of bonds and land worth almost half a million dollars, the Castle's cannon roared out a hundred times. When the old man walked slowly into Battery Park, "to the incessant huzzas of the multitude that packed the waterfront," he walked between the weeping ranks of the Lafayette Guards. When he rode up Broadway, men and women on rooftops threw flowers in his path. A month later, a tall spar was raised in the center of the fort, a vast awning of sailcloth was spread across its entire ceiling, "the white banner of France was entwined with the Stars and Stripes, trophies of arms glittered from the walls"—and when Lafayette appeared at the ball, "the gay sets dissolved" and the dancers formed a long lane, and as the old man walked along it, he saw that each man and woman was wearing a medallion bearing his likeness, the women's entwined with roses.

And it was at Castle Clinton that, ten years later, the handful of Lafayette Guards still alive drew up in a hollow square, in the center of which was a riderless black horse—spurred boots, reversed, slung across its empty saddle—to hear the funeral oration for their dead hero.

Lafayette was only one of a hundred heroes for whom the old fort and Battery Park were the setting for the spectacles honoring them in triumph or in death. Troops were drawn up in the park by the thousands to greet Dewey after he defeated the Spaniards at Manila (the astrakhan busbies of cavalry hussars shook in the sea breeze), Pershing after he defeated the Germans in France, and TR after he returned from safari (conspicuous among the regiments out in full dress to greet the ex-President were a handful of men in khaki and campaign hats: the Rough Riders). Most of New York's great triumphal processions began there; it was at the Battery that Wiley Post came ashore, and Admiral Byrd, and Gertrude Ederle, and Amelia Earhart, and Coste and Bellonte—and, of course, Lindbergh, slim, bareheaded Lindbergh—to be greeted by Grover Whalen and to ride in an open car between mounted policemen "the short, glorious mile" up a Broadway whose canyons were swirling with confetti. The fort's cannon boomed at solemn one-minute intervals as the body of young Captain James Lawrence, who had earned immortality by crying "Don't give up the ship!" as he lay dying on the deck of the Chesapeake, was carried ashore and as Washington's riderless horse-and Hamilton's and those of a score of other heroes of the Revolution—were led out from it up Broadway. In New York in which the old was ruthlessly demolished to make way for the new, the fort was pricelessly rich in ghosts of the city's great past.

In 1855, Castle Clinton was transformed into the landing station for the flood tide of immigrants from Europe; for thirty-five years, it would be "the Nation's Gateway," the place at which almost eight million human beings, in flight from persecution or poverty or famine in the Old Country, came ashore in the Land of Opportunity.

Most important, though the old fort was, in 1939, well into the second century of its existence, part of the city's past, it was also, as the Aquarium, part of the city's present, very much part. Its walls were filled with history, but they were also filled with life.

Some idea of the popularity of the Aquarium may be gleaned from its average annual attendance: 2,500,000. It was by far the most heavily attended public institution in New York. It was free, easily accessible to all the city, and with its giant turtles, spear-shaped, hideously spotted morays, grotesque toadfish, mammoth groupers, rainbow-hued tropical fish and sleek, barking seals swimming in its gloomy depths, it had delighted generations of New York children.

Sunshine, serenity, a sense of sea, a sense of history—build the bridge that Robert Moses wanted to build and they would be accessible to the streets of Lower Manhattan no longer. Build that bridge and the vista of New York Harbor would be destroyed, the majestic harbor sweep thrown into shadow, the sheer-rising skyscraper mass slashed in half and blocked, one of the wonders of the world turned into mere, rather unimportant backdrop for just another East River bridge not very different from the three others just behind it. And plunk down in Battery Park a half dozen or more solid masses of concrete each as big as an office building, and set on top of them, on top of the park, a roadbed eight lanes wide (two lanes wider than the bridge), and there wouldn't really be a park any more. What had been a place of sunlight and grass would become a place of concrete and steel and shadows. Instead of quiet there would be, directly overhead, the roar of traffic. Instead of vistas of water there would be only glimpses snatched between pillars. There wouldn't even be a sense of history. The old fort would be partially hidden by giant road piers—one would, under Moses' plan, be placed smack in front of it—and thoroughly dwarfed, no longer a monument bulking impressively at the end of a broad mall, filling the park with its presence, but a tiny ornament, cute but unimportant, cowering beside the immense pillar, lost in the shadow of the giant roadway above, its silence not majestic but meaningless among the noises of a new age thundering down from the big highway above.

Build the bridge that Robert Moses wanted to build and "a prospect unexcelled by any city view in the world," would become little more than an extension of the mean streets of Lower Manhattan. The park had once been an escape from those streets—the only escape; now there would be no escape from them at all. Only someone thoroughly familiar with Lower Manhattan could appreciate fully what would be done to the area—and to the half million people who spent their days in it—by the bridge that Robert Moses wanted to build. But New York's reformer-aristocrats possessed that familiarity, and they determined to stop him from building it.

Because they did, the fight over the Brooklyn-Battery Crossing marked

the end of Moses' long alliance with New York's Good Government movement, with the reformers in whose ranks he had, as a young man, once marched himself.

The identity of the two men who led the opposition to the bridge spotlighted this aspect of the confrontation.

George McAneny was one of the heroes of Moses' young manhood. the early crusader for civil service reform who in 1909 had risked his hard-won business success (not one of the wealthy reformers, he was a poor boy from Jersey City who had left school at the age of fifteen to become a reporter on the old World) to lend the weight of his reputation and that of the City Club of which he was president to a Bureau of Municipal Research exposé, and thus persuaded Governor Charles Evans Hughes to oust corrupt Tammany officials. Borough president himself thereafter, a peppery, tart public official, he, rather than John Purroy Mitchel, could have had the Fusion mayoral nomination in 1917, but declined it because he felt Mitchel, as an incumbent, had a better chance of defeating Tammany. Lack of funds later forced him to retire from public office, but he never retired from public service: an early believer in city planning, he was the moving force behind the city's adoption of the first comprehensive zoning plan in the United States. Some indication of the respect in which he was held was his appointment in 1916 as "executive manager" of The New York Times: the title was meaningless, and during the five years he held the job he never had a specific function; Times patriarch Adolph S. Ochs hired him, Ochs told friends, to act as "a sort of moral background" for the paper. He aged fast physically—in his sixties, he was strikingly wrinkled and shrunken; he had to hobble on a cane when he came to meetings. But he came. It was he who, in 1935, decided the city should have a World's Fair, and it was he who told Moses the location should be Flushing Meadows Park. ("Bob Moses was very amicable in those days. . . . I said to him, 'We have a great idea and we want your help.' Then I told him what it was, and he thumped the desk, and said, 'By God, that is a great idea!" ) And in 1939, at the age of seventy, McAneny was president of the Regional Plan Association and a key member of a dozen other organizations.

Stanley Myer Isaacs, a contemporary of Robert Moses, was born of the same stock: wealthy, Jewish, and dedicated to public service—what Moses' parents were to Madison House, Isaacs' father, a pious Orthodox Jew, was to the Educational Alliance and the Citizens Union. Like Robert Moses, Stanley Isaacs was a hiker, a mountain climber and a brilliant student (top man in his class at Columbia). And, like Moses, he was a leader of men. "I can talk my head off to a roomful of people, and when Stanley walks in, they melt away from me and surround him," a cousin said.

In his youth, moreover, Isaacs apprenticed himself to the same principles to which Moses had apprenticed himself in his youth. As a young real estate lawyer, he spent evenings and weekends working for reform, doing legwork not only for his local Republican organization—he was elected district leader at twenty-two—but for a succession of Fusion tickets,

as Moses had, in 1921, served as secretary of a Fusion campaign committee. As Moses concentrated on a particular field—civil service—and made himself an expert in it, Isaacs concentrated in his youth on public housing, and made himself an expert in it. And as Moses spent four years of his youth trying to accomplish something significant in his field, only to suffer bitter disappointment, Isaacs spent four years of his youth trying to accomplish something significant in his field—with the same results. From 1925 to 1929, as chairman of the Housing Committee of the United Neighborhood Houses, he led the campaign for a law that would require slum landlords to provide their tenants with such amenities as windows and toilets. When, in 1929, his pleading finally embarrassed the Legislature into passing a new Multiple Dwelling Law, the statute was so watered down that it was virtually meaningless.

But Stanley Isaacs remained true to his stock and his principles. His loyalty to friends and family was legendary; when his brother Julian was desperately ill with tuberculosis, Isaacs spent months in Saranac, cooking his meals and nursing him. Proud of being Jewish, he was active in Jewish philanthropies for forty years. What social worker Helen M. Harris called "his passion for social justice" never burned low; neither private nor political career ever prevented him from working for the causes of his youth; he served as president of United Neighborhood Houses for twenty-five years. By carrying a workload of Mosaic proportions ("He has daily habits that would assassinate another man," a profiler wrote), he was active most of his life in twenty-three separate Good Government or charitable organizations. And he didn't abandon his fight for his first cause as Moses had abandoned the fight for his; Stanley Isaacs would be a leader in the fight for better housing for more than thirty years after his 1929 defeat. And although the techniques of the reformer—free and open discussion, persuasion, education—had caused him only disappointment (and were, over and over, to cause him disappointment again), he never abandoned them for the techniques of the politician. Robert Moses may no longer have believed that "the principle is the important thing," but Stanley Isaacs did.

In 1937, after Isaacs had been working for the public for thirty years without ever holding public office, he was nominated—against his wishes—on the La Guardia ticket for Manhattan borough president, McAneny's old post. And when Isaacs was elected, by more than 40,000 votes (after one quietly spellbinding campaign speech, La Guardia, hugging him, exclaimed, "I don't know where you've been so long, Stanley!"), he demonstrated that neither position nor power would change his belief in what was important. He refused—to the point where his feelings became a family joke—to use his official limousine except on official business. He fired scores of political hacks and replaced them with a team of crack engineers. And he proved that there might occasionally be other ways of Getting Things Done than Moses': it was Borough President Isaacs who built—without antagonizing the neighborhood—the East River Drive. Refusing to use his office for patronage himself, he refused to let anyone else use it for patronage, either. He faithfully cleared his appointments with La Guardia—

but rejected the Mayor's suggestions if they were based on political considerations. Declining to fill positions he did not consider necessary, he reduced the borough president's staff by ninety positions, and his budget by more than 25 percent. (To avoid embarrassing the other borough presidents, the Board of Estimate each year gave him more money than he asked for; at the end of each year, he returned the surplus.) George McAneny was a man whom Robert Moses had once admired; Stanley Isaacs was the man whom Robert Moses had once been.

Throughout Moses' career, McAneny and Isaacs had supported him, as had most of the other leaders of New York's Good Government movementin 1919, when he had needed their money and the prestige of their great names to accomplish his reorganization of the state government; in 1924, when they gave him statewide power by electing him chairman of the State Council of Parks; in 1933, when, after their attempt to make him mayor had failed, they had helped persuade the man who did become mayor to bring him to power in the city; in 1935, when they had supported him against the President. In every great crisis of Robert Moses' twenty-year-long public career, in the face of every threat to his plans or to his power, the reformers had given him their support. They had done so because they had believed that Moses, who had been one of them once, was one of them still, because they believed that his aims were still their aims, that the Things he wanted to Get Done were still the Things they wanted to Get Done. They thought of him, in fact, as their champion, as the young recruit who had risen from their ranks to become the one among them capable of leading to victory the causes for which they all marched. They had refused to listen to the handful among them who had tried to tell them what Moses was doing to the city. The American Scenic and Historic Preservation Society had, in fact, just awarded Moses its highest honor, the Society Gold Medal. But the Battle of the Battery Crossing, staged on terrain familiar—and dear—to them, was to give them a close look at Moses' values and thus to show them that those values were no longer their values, that they were, in fact, utterly incompatible with the values they knew must be preserved in the city they loved.

The Battle of the Battery Crossing was, moreover, to show them that the means Robert Moses employed were as incompatible with their principles as his ends.

New York's reformers had never gotten a firsthand look at his methods. Before 1934, he had operated only outside the city; in the five years he had been operating inside, his projects had never directly affected more than a few of them at a time. When those few had tried to tell the others about their experiences, they had not generally been believed. "Maybe," one of the reform leaders was to say, "idolizing him like we did, we didn't want to believe."

But they were going to have to believe now. For now Moses' methods were going to be used against them.

Throughout his career, Moses had charmed people he needed—and then, as soon as he didn't need them any longer, had turned on them.

He had always needed the reformers because he had always relied on public upport, and they were in many ways the key to that support. But now, hanks to his discovery of the possibilities of the public authority, he didn't need public support any longer, and therefore he didn't need them.

And now, when they decided to fight his bridge proposal, he turned on them.

At first, not yet realizing with what they were dealing, believing that Moses had made an incorrect decision but that he could be made to see hat the decision was wrong and would therefore correct it—feeling, in other vords, that he would be amenable to reason—they tried to reason with him, requesting meetings at which they could explain their objections.

He did not even reply.

The reformers were disturbed, but not yet worried. The government of their city was, after all, a government of laws, not of men, and there were ample laws to insure against the construction of a public work on he whim of any one man, even if that man was supported by the Mayor. There were laws—procedures and public bodies—established to insure hat the will of the public would determine whether a public work was to be built and, if it was, what its design would be. The will of the public might not be heard if the public most directly concerned was some local housewives' group or chamber of commerce, they admitted, but, they believed, their will would always receive the fullest of hearings. They had at their command the echnical expertise to examine Moses' proposal in detail and determine the acts for themselves, and they had influence enough to insure that these facts would be published.

The facts certainly deserved publication. According to Moses' attractively printed brochure, the Brooklyn-Battery Crossing should be a bridge primarily because a bridge, "with all necessary approaches," would cost less han half as much as a tunnel—\$41,200,000 compared to \$84,000,000. Thus, the brochure stated, "the bridge with necessary approaches can be inanced by the sale of bonds to the public without the contribution of a nickel of City or Federal money." And, according to the brochure, these igures were indisputable because the estimate for the bridge had been prepared by its designer, Othmar Ammann, the estimate for the tunnel by ts designer, Ole Singstad.

Singstad had found that last statement interesting. No estimate he had ever prepared showed the cost of the tunnel to be \$84,000,000. His estimate—an estimate he had given to Moses when Moses asked for it—showed the cost to be \$65,000,000.

The reformers had found Moses' statement incredible. He said the pridge—including "all necessary approaches"—would cost \$41,200,000. One approach alone, the Elevated Highway in Brooklyn, was, they knew, yoing to cost \$12,000,000. Even without figuring in the cost of the Manhattan approaches, that left only \$29,000,000 for construction of the bridge proper. That figure was ridiculous on its face: the Bronx-Whitestone Bridge, half as long, and four lanes instead of six, had cost \$39,000,000. Moses stated the had gotten the bridge estimates from Ammann, designer of the Bronx-

Whitestone. Knowing the famed Swiss engineer's reputation for integrity, the Citizens Union decided to find out if Moses' statement was accurate. Two representatives called on Ammann in his office. The engineer, normally so terse and positive, met their questions with finger-twisting silence. Finally, he told them that while, as one of them put it, "he didn't want to be involved," he would "give us some guidance"—"guidance" which enabled them to report to the Citizens Union's board of directors that the \$41,200,000 figure was not accurate at all. (The board asked Paul Windels, a personal friend of Ammann's, to ask him if he would confirm the report. The report was confirmed.)

Moses' brochure had stated that the bridge and "all necessary approaches" could be built without "a nickel" of city money. Stanley Isaacs had read the brochure with care, and, as a result, he was not worrying about a nickel of city money. He was worrying about 430,000,000 nickels—\$21,500,000. Isaacs had noticed that while the attractively drawn map in the attractively drawn brochure showed the indispensable connections between the bridge and the West Side Highway, whose southern terminus at the time was Duane Street, more than a mile away, and with the East River Drive, the cost of these connections was not included in the estimates. Walter Binger estimated the cost of the West Side extension at \$11,000,000, that of the East River Drive at \$7,500,000. Moses had stated that he would rebuild Battery Park after it had been torn up for the bridge approaches, but had not included the cost of the rebuilding in his estimates, either. Binger said it would be \$3,000,000.

The reformers also realized that there were other costs involved, such as the \$29,000,000 loss in real estate taxes, that Moses had never mentioned. The land in Battery Park on which Moses was planning to place anchorages and pillars didn't have to be paid for, of course, because the city already owned it, but its worth—in an area in which each square foot of land was worth hundreds of dollars—ran into the millions. "On the basis of real cost," Singstad wrote, "it is obvious that the bridge would be by far the more costly of the two projects when all of the economic factors which should be included are considered." Add economic factors to the noneconomic involved—the destruction of the park and the values it represented, the destruction of the once-bustling Syrian Quarter at the foot of Washington Street and the neighborhood values it represented, the destruction of the harbor vistas and the old fort—and there was a powerful case to be made for Singstad's tunnel, and against Moses' bridge. The reformers did not say they were unalterably opposed to the bridge. Possibly a full-scale impartial study of all the factors involved would prove that it was a better solution than the tunnel. But, they said, such a study should be made before a project of such magnitude was embarked upon-and such a study had obviously not yet been made, by Moses or anyone else.

The reformers' influence guaranteed that the city's officials—and tax-payers—would hear their side. In the crusty Singstad, they possessed an ally expert not only in engineering but in public relations, and he demonstrated that Moses had no monopoly on misleading drawings. Moses', to minimize

the impact of the bridge, portrayed it from directly overhead; Singstad's, to dramatize that impact to the maximum, portrayed it from ground level—possibly, judging from some of the angles, from below ground—thus making the structure seem even higher than it was. (There was something funny about the perspective, too. Moses wasn't sure exactly what it was; the best he could do was to rage that the drawings were "completely phony.") By the time the controversy came before the City Planning Commission, in the first step of the process through which the reformers believed the public will was to be expressed, they had the facts and figures—and pictures—ready to go.

The day before the process began, however, the reformers' morning newspapers informed them that at Moses' request bills had been introduced in Albany that would rescind the Tunnel Authority's authorization to build the Battery Crossing and transfer that authorization to the Triborough Bridge Authority. Such bills would, of course, be necessary if the city approved Moses' plans. But by introducing them before the approval had been given, Moses was acting as if it were a mere formality, as if the city had no choice but to give it.

And, the reformers learned the next day, such was in fact the case. At the Planning Commission hearing, the reformers presented their painstakingly prepared facts and figures, maps and drawings. The Regional Plan Association said that if a tunnel proved too expensive the alternative should not be a new bridge that would destroy the harbor and park but a rebuilding of the three old East River bridges and the construction of a link between them, and between the Belt Parkway to the south and the Triborough Bridge to the north (along the lines of the future Brooklyn-Queens Expressway), a solution which the RPA pointed out would detour traffic around Manhattan instead of pouring more of it into its most congested area. The RPA had prepared preliminary plans and cost estimates for its proposal, but the commission did not make even a pretense of giving them serious study. Two weeks later, by a 4-2 vote, it approved the Brooklyn-Battery Bridge. The two dissenting commissioners said that the bridge would destroy values that the city would never be able to replace. The majority opinion did not disagree. The harbor would "undoubtedly be altered" by the bridge, it said. The park would "undoubtedly" be damaged. "There are . . . valid objections to a bridge"; in fact, they too favored a tunnel. But, the majority pointed out, "the commission is not at this time called upon to choose between a tunnel and a bridge." No one was offering to finance a tunnel. Someone was offering to finance a bridge. A Brooklyn-Battery Crossing was urgently—desperately—needed. If the only type of crossing available was a bridge, a bridge it would have to be. One of the commissioners who voted for the bridge, Lawrence M. Orton, a former RPA member himself, would spell it out even more plainly to the author years later: "The city didn't have the money for a crossing. Neither did the Tunnel Authority. Only one person had the money-Moses. And Moses wasn't giving us any choice. He just wouldn't build a tunnel. It was the bridge or nothing. Take it or leave it. We didn't have any choice."

In Albany, meanwhile, Moses' bills—sponsored in the Assembly by Robert J. Crews, brother of Triborough insurance co-broker John R. Crews, and backed by Assembly minority leader Irwin Steingut ("Irwin considered Moses a practical fellow") and by the Republican leadership of both houses—were eating up the legislative track, ordinarily so slow, like thoroughbreds among a pack of Percherons. Passed by the Assembly one afternoon, they were rushed that same afternoon to a Senate committee—and were released that same afternoon to the floor of the Senate for a vote. One upstate senator innocently requested time to consider the measures; he was handed a message asking him to take an urgent telephone call; when he returned to the floor, he dropped the request.

But back in New York, Stanley Isaacs, studying the bills in his quiet way, noticed a point that everyone else had apparently overlooked: there was no home-rule message from the City Council attached to them as the law required. And the arena in which the Battery Crossing fight was being staged was thereupon switched from the State Capitol to the Council Chamber on the second floor of City Hall.
