In this arena the reformers had hope of success. Three councilmen were, after all, reformers themselves, nominees of the Fusion Party. Five were members of the American Labor Party, and organized labor favored a tunnel because it would furnish 2,600,000 man-hours of work as against 600,000 for a bridge. And all twenty-six councilmen were susceptible to pressure from civil service organizations angry as always at Moses because of his refusal to use civil service engineers on his authority jobs (he had recently stated it cost twice as much to do so), who wanted the more compliant Tunnel Authority to build the Crossing. Isaacs had, moreover, noticed in the bills a buried clause everyone else had overlooked: a clause specifically prohibiting Triborough from paying for the \$11,000,000 West Side Highway link. Surely, the reformers felt, now that this had been pointed out to the councilmen, they would not ask the Legislature to approve the measures and thereby obligate the city, recently obligated to a \$16,000,000 expenditure it could not afford for one Moses project, to spend \$11,000,000 more.

The reformers were also encouraged by the attitude of the Mayor, whose reaction to Isaacs' discovery of the buried clause was foot-stamping fury; Moses had won his support for the bridge by promising him in so many words that it would cost the city nothing; knowing how Moses worked, the Mayor was sure that the clause was not in the bills by accident but was rather an attempt by Moses to sneak out of his promise—and cost the city \$11,000,000. A faint ray of hope was, moreover, beginning to appear on La Guardia's horizon from the direction of Washington. Sentiment was building up in Congress for increased appropriations to the PWA; if the Mayor could grab off a \$30,000,000 piece of that action for a tunnel, the cooperative Tunnel Authority instead of arrogant Triborough could build the Crossing. The Mayor considered that "if" big—sounding out

Ickes, he was informed that \$30,000,000 more for New York was absolutely out of the question—but La Guardia evidently felt that as long as there was any option at all, he should keep it open. He told key legislators privately that he had had second thoughts about authorizing Moses to build the Crossing; he favored the bill authorizing Triborough to build a Crossing, he said, but not the bill stripping such authorization from the Tunnel Authority, because he wanted both bridge and tunnel options kept alive; if PWA money came through, he could have the Crossing built by the Tunnel Authority; if it did not, Triborough could build it.

The reformers were also hopeful because their aim was modest. They were not, after all, insisting that the bridge proposal be defeated. They were only asking that it be studied. With three competing plans for a solution to Lower Manhattan's traffic problem—and wildly conflicting estimates of the cost and effects of each plan—surely an impartial study was needed to determine the true costs and effects before a decision was made. Moses was insisting on the need for haste, they said, but wasn't the need really for delay, a delay which would provide time for mature consideration? The decision the city took on the proposals would vitally affect it for decades—centuries perhaps. Was it not only rational to take a few more weeks or months to make sure the decision taken was the right one?

Finally the reformers were hopeful because they knew their own strength. United, they felt they could defeat any politician; in the last citywide election, in fact, their victory had been nearly total; Fusion had taken all three citywide offices-Mayor, Comptroller and Council President-as well as the presidencies of the two most populous boroughs in 1937. And never had they been more united. Four years before, the leaders of New York's Good Government organizations had formed a "Central Committee" of civic organizations to support Robert Moses in his fight against Franklin Roosevelt's attempt to oust him from the Triborough chairmanship. Now they formed another "Central Committee," a "Central Committee of Organizations Opposing the Battery Toll Bridge," to oppose Moses. Within a week after its formation, its chairman, eighty-three-year-old Albert S. Bard, had assigned speakers to address every civic-minded body in the city, and every organization concerned with the preservation of beauty and architectural excellence within it; within a week a score of such groups had joined the committee. Under the direction of Eric Gugler, a group of the city's most respected architects were visiting and enrolling other architects in the cause. Famous artists who had held aloof from the issue were contacted by artists of equal stature and persuaded that their participation was needed to preserve a beautiful and majestic scene. Bard was making sure that every reformer who had entree to a politician in City Hall, Albany or Washington was using that entree; a sextet of septuagenarians, for example, spent a week in Washington explaining the situation to New York congressmen. And the most difficult of politicians—Fiorello Henry La Guardia—Bard left to the most respected reformer of them all: the legendary Burlingham, Charles Culp Burlingham, eighty-one years old, almost deaf, but still "the only man from whom La Guardia would take a scolding." "CC" hobbled,

gaunt and stooped, up the steps of City Hall one morning, and was ushered in to see the Mayor—as La Guardia hastily shooed a group out of his office, so that the old man would not have to wait a minute. Burlingham emerged to relay to intimates a promise from La Guardia that while he would support a home-rule message for the bill authorizing Triborough to build a Crossing, he would not support—or sign—one for the bill stripping the Tunnel Authority of its authorization. The Mayor told Burlingham that he would wait until the War Department, which had jurisdiction over all structures built in or across navigable waters and which had scheduled a hearing on the bridge in April, had formally given approval to build it. The approval was only a formality, La Guardia said, but at least it would give him an excuse to offer Moses for delaying. If, he promised, at any time until the War Department approval was received, money became available for a tunnel, he would see that it, rather than a bridge, was built. And the Mayor promptly proved that he meant what he said by giving the Tunnel Authority permission to lobby in Albany against the bill—and by letting key legislators know that the lobbying had his sanction.

The "Central Committee" did not neglect the public at large. Unlike the usual run of Moses' opponents, the prestigious reformers had entree both to letters-to-the-editor columns and to editors, who usually heard in person only Moses' side of the controversy. Soon, even the *Times* was pointing out that "a brief delay wouldn't hurt the plan. . . . The bridge, if built, will be there a long time. It is worth while taking the time to get it right." The *Herald Tribune* demanded that Moses make public all the facts about the bridge and, urging the Council not to take action until he had done so, and until those facts had been studied, said:

It seems clear now that a major alteration in the city's design and appearance is involved. No conceivable need for hurry has been suggested. The need is therefore for the carefulest consideration and full public discussion, with every opportunity for alternatives to be reviewed impartially and thoroughly. No possible risk should be run of building in haste and repenting for generations to come.

With the organized construction trades and the civil service organizations backing a tunnel, and with the letters-to-the-editor showing support of the need for further discussion, it was clear that the tide of public opinion was running against Moses' proposal—to an extent it had never run against him before.

Public opinion was the crucial factor in the reformers' philosophy and strategy. Public opinion was democratic government, the government they believed in. If it was not listened to, government was not democratic. "A decent respect for public opinion" had been a key ground for their demand that Roosevelt back down from his attempt to oust Moses. And they repeated that phrase in demanding that Moses back down now, and in insisting that, if he didn't back down voluntarily, the Mayor and councilmen make him.

The reformers felt certain that the Mayor and councilmen would.

They were, after all, politicians, and thus necessarily responsive to public opinion.

But all the reformers' hopefulness proved was that they didn't understand how much power—power over politicians—Moses had been given, or how independent of public opinion he now was. Moses understood. So unconcerned was he about the reformers' efforts that he spent the three weeks before the Council hearing vacationing in Key West, Florida. And the accuracy of his assessment of the situation was proven when, returning from a day fishing among the Keys (he caught two flounders), he received a telephone call informing him of La Guardia's statement that he would delay signing a home-rule message on the Tunnel Authority bill even if the Council passed one. Strolling down to the Key West Western Union office, he wrote out a telegram to the Mayor, addressed to him at his apartment so that the Mayor would receive it that same evening: NO POSSIBLE WAY OF KEEPING BOTH PROJECTS ALIVE UNTIL AFTER WAR DEPARTMENT HEARING STOP THEREFORE REQUEST YOU SIGN BOTH MESSAGES STOP OTHERWISE BRIDGE PROJECT MUST BE ABANDONED AND ALBANY NOTIFIED TO THIS EFFECT.

If the Mayor did not immediately guarantee that there would be no Battery tunnel, Moses was saying, he, Moses, would never give him the money for a Battery bridge. Either guarantee immediately that Moses could build the Crossing—and build the kind of Crossing he wanted—or there wouldn't be any Crossing. The telegram was not a request but an ultimatum, not an appeal from a subordinate to a superior, not a plea from a commissioner appointed by the Mayor that the Mayor change a decision, but a demand from someone who had the money to give the Mayor something he wanted.

La Guardia understood. After all his stalling, Moses' money was still the only money available. If he wanted the Battery Crossing, he would have to do what Moses wanted. The Mayor had no more choice than the City Planning Commission had had. Summoning the Council leaders to his office, he let them know that his feelings in the matter to be discussed at the upcoming hearing had changed.

Robert Moses returned from Florida on the night before the Council committee hearing. The Fine Arts Federation of New York, representing eighteen leading art societies, had that day issued a statement warning that the bridge would "disfigure perhaps the most thrillingly beautiful and world-renowned feature of this great city." A reporter asked Moses about the statement.

"The same old tripe," he said. "We'll take care of it all tomorrow."

Tomorrow was the City Council Chamber.

City Hall filled a gap in the blank-eyed skyscraper wall with the dignity and grace and elegance of another age, and of all its rooms, its

Council Chamber best evoked the values that the reformers had come to see were the real issues in the Battle of the Battery Crossing: respect for the institutions and the law through which, in a democratic society, the will of the people found expression and realization. And that room evoked as well the manner that, in the age which had produced those institutions and laws (and many of those reformers), had been so much more important—the dignity, grace and elegance in speech as well as appearance, the courtliness, the courtesy, the gentlemanliness; before its mahogany panels, beneath its delicate wainscoting, the people's elected representatives deliberated under a delicately curving little gallery with an intricately detailed railing, at slanting-topped eighteenth-century desks arranged in a semicircle, before a presidential dais flanked by flags of city and nation, under a ceiling, its details picked out in gold, featuring a huge mural of "New York Receiving the Tribute of the Nations."

If the setting for the drama was apt, so was the casting.

The audience that day was not the typical City Council audience. In the memory of participants, there wasn't even a lone housewife present, not a single claque from a neighborhood civic association to bounce boos and hisses, cheers and the noise of foot stamping off the mahogany-paneled walls and make Jefferson, observing bronze from the back wall, wonder if perhaps Hamilton had been right after all. Instead, sitting rank on rank in the gallery or on chairs set up to handle the overflow, was the very flower of the city's civic leadership, men of wealth and talent devoted to the rule of law and the institutions of democracy that City Hall symbolized, men who had proven that devotion by spending their talent and their time in a dozen great civic battles. For the audience included not only young reformers but elderly men whose first hero had been not La Guardia but Police Board President Theodore Roosevelt-the Burlinghams and Seaburys, Schieffelins and McAnenys, the men who had formed the heart of the Committee of One Hundred and Seven and the Committee of One Thousand—who had been fighting for generations against every threat to the institutions which they felt made their city great. There were starched wing collars in that audience, and vests crossed with heavy gold watch chains, and pince-nez, and walking sticks-and a spirit of reform that went back half a century and more. If New York had an aristocracy of civic leadership, it was assembled in the Council Chamber that day when the long fleet of black limousines screeched up in front of City Hall, and the man whom they had once believed to be the living embodiment of their ideals, dressed in a double-breasted dark-blue suit that only emphasized his burliness and with a close-clipped haircut that emphasized the massiveness of his face and his bull neck, impatiently flung open the door of the first of the limousines without waiting for the chauffeur to come around and, with a full score of aides half running behind him to keep up, stalked into City Hall, pounded up the delicate curve of the hanging staircase, strode past the slender fluted columns on the Rotunda, and burst through the Chamber door.

The opening presentation by Moses' architects and engineers took two hours but, to the reformers' surprise, provided none of the facts for which they had been asking. Aymar Embury described the bridge with the help of a large-scale model—the same large-scale model Embury had already privately all but admitted to the reformers was misleading. Othmar Ammann, noticeably ill at ease, repeated that the bridge would cost \$41,200,000 and the tunnel \$84,000,000—but again did not break down the figures, so that the reformers could not determine on what, if anything, they were based (although, with Ole Singstad present, Ammann did not this time attempt to maintain that some of the figures came from Singstad).

Moses' opponents provided facts—in abundance. Stanley Isaacs, directing the opposition presentation, told the councilmen, who goggled over this unprecedented passing up of a chance for personal publicity (didn't he realize that it was only one o'clock, the perfect time for a speech to make the late editions of the PM's?), that he would not speak himself but would simply introduce a series of experts who would prove, through specific facts and figures, that, on almost every point of the bridge-tunnel controversy, a tunnel would provide greater benefits—and cause less harm—to the city.

Major Henry J. Amy, executive director of the Citizens Budget Commission, analyzed Moses' contention that the bridge and its approaches "wouldn't cost the city a nickel," and then simply read the clause of Moses' proposed state legislation that would cost the city \$11,000,000. A battery of municipal finance and real estate experts documented-block by block, building by building—Singstad's conclusion that a bridge would cost the city at least \$1,500,000 per year in real estate taxes. Regional Plan Association experts testified that everything Moses hoped to achieve by building a new bridge could be achieved—at a small fraction of the construction cost and real estate tax loss-by their alternate plan. Isaacs had even commissioned an analysis of Moses' argument—never before analyzed during the decade Moses had been making it—that civil service architects and engineers were less efficient and therefore cost "twice as much" as the private consultants he employed. The analysis documented that one group did cost "twice as much" as the other-Moses' group. Even Moses' claim that a bridge would have "twice the capacity" of a tunnel was disprovenby Triborough's own traffic counts for its two suspension bridges, which showed that inclement weather (and inclemency for a Brooklyn-Battery Bridge would include not only rain, snow, ice and high winds but the fog which is frequently heavy over the Lower Bay), while not affecting a tunnel's capacity, significantly reduced that of a bridge. As to the relative cost of the two types of crossing, Isaacs' experts gave the detailed breakdowns Moses' had not, proving Singstad's claim that a tunnel would cost \$65,000,-000, and disproving all Moses' claims; Moses had said that the total cost of the bridge, including approach roads, would be \$41,200,000; RPA

engineers found that the cost of the bridge proper—without approach roads—would be \$56,625,000. Isaacs had insisted that all the figures used be conservative. But even conservative figures were devastating. When Isaacs' parade of witnesses, a parade that lasted more than four hours, was over, every Moses contention subject to factual analysis had been utterly demolished. And as for the side of the controversy not subject to mathematical analysis—the aesthetic side, the effect of the bridge on the beauty of Battery Park and New York Harbor—the old reformers felt the demolition job had been even more devastating. There was a pounding of canes on the Council Chamber's oaken floor and a chorus of "Hear! Hear!" out of another age when George McAneny said of Moses' proposal:

What all this would do to the values of real estate, some of it the most valuable in the world, I leave to others. But that the city would permit its famous Battery to be dealt with in such fashion seems to me an incredible thing. I am in fact of the opinion that if the plans under discussion are seriously pressed, there will be an uprising of public opinion the like of which has not been known since, forty years ago, some well-intentioned gentlemen in office proposed that City Hall be torn down to make way for something more modern in the skyscraping line.

Wrinkled, stooped old McAneny had lost none of his eloquence. And when he had finished summing up the reformers' arguments and pointed out to the Council that all they were requesting was a study—by impartial experts appointed by the Council itself—to determine the true facts in the case, to study the various alternatives and determine which one would really be best for the city, it was difficult for the reformers, wise though they were in the ways of politicians, to believe that the request would not be granted.

And then, in the seventh hour of the hearing, Robert Moses stood up to speak.

Reading from a yellow legal pad on which he had been scribbling furiously during the opposition speeches, he turned his attention first to the analysis of the relative efficiency of civil service architects and private consultants.

"I want to warn my friends in the civil service that civil service can become a racket," he said. "It's getting to be so that nothing will please them but a Communist state, which we know is so pleasing to Mr. Isaacs. . . ."

There was a moment of shocked silence in the Council Chamber. Then came a storm of boos and hisses, which Moses' lieutenants tried ineffectually to drown out with cheers and applause. But Moses was not to be deterred by boos. He directed his next remarks to the Regional Plan Association proposal.

The RPA had always opposed progress, he said. It had sided with the "fox hunters and estate owners" to oppose the Northern State Parkway, Heckscher State Park and Jones Beach, and many of his other Long Island projects. In New York City, RPA planners "were in a dither about the Henry Hudson Bridge—they asked delay, and advocated

a low-level bridge. They said the Henry Hudson Bridge would ruin the finest spot in Manhattan. . . . We built the bridge and a week after it opened the bankers confessed that they had been wrong. We said it would average 16,000 cars, they said 6,000—and we were . . . right." The RPA "has been wrong about all these things," he said, and therefore, "why should we suppose that it is right about this one?" Its current proposal is, in fact, "nonsense"; "every argument applicable to the Battery Bridge is applicable tenfold against the Brooklyn Bridge."

The reformers sat hardly believing what they were hearing. Although the RPA had opposed the Northern State Parkway, it was just not true that the RPA had opposed Heckscher State Park and Jones Beach; it had supported them, as it had supported almost all Moses' Long Island projects; moreover, the parkway fight had taken place fifteen years before—what did it have to do with a discussion about the Battery Crossing? The RPA had thought the Henry Hudson Bridge would ruin the finest spot in Manhattan—and the bridge had ruined the finest spot in Manhattan; the bridge might be a success in financial terms, but it was a failure in any other terms; the heavy traffic and the resultant congestion proved that, not disproved it; how could "every argument applicable to the Battery Bridge be applicable" to the Brooklyn Bridge?—when the whole point was that the Brooklyn Bridge already existed, and therefore could be rebuilt cheaply and without further destroying real estate values or the harbor view. And then Moses turned his attention to the RPA's president.

Only a man who wasn't going to run for public office would propose "slapping a toll on the Brooklyn Bridge," Moses said. "No man in his right mind would do that." It was, he said, "all right for Mr. McAneny" to make such a proposal. "He's not going to run for public office again." He turned and glanced at the wrinkled old man sitting behind him.

"He's an extinct volcano," Moses said. "He's an exhumed mummy."
This time there were neither boos nor cheers in the Council Chamber.
There was only silence, unbroken until Moses began to speak again.

"If there was an argument raised that he answered directly, I don't remember it," says one of the reformers present that day. "We had raised a lot of issues. He hardly mentioned them. All he did was lash out at individuals, at respected, public-spirited men, with a spitefulness, a viciousness, that was almost unbelievable to see." There was no attempt to meet the RPA proposal logically. It was simply "nonsense," Moses said. Or to discuss the effect of a gigantic suspension bridge on the view of the harbor. "The most beautiful architecture wrought by man is a bridge, especially a suspension bridge, and the finest view in Manhattan is the view you get walking across the Triborough Bridge to the Bronx or Queens," he said, and that, apparently, was all that had to be said on that point. As for the argument that the bridge would ruin Battery Park, the park was "no beauty spot" anyway, he said. If McAneny was so interested in it, why hadn't he done "something for it when he was in office"?

Those arguments that he did answer, he answered with lies. The proposal that the Tunnel Authority build the Crossing? Moses said that

"the Tunnel Authority" had built the Queens-Midtown Tunnel so incompetently that "the Tunnel Authority will be busted when it is finished. Washington knows that and I know it." The city was going to have to "step in and rescue the tunnel." (The Tunnel Authority was actually bringing in the tunnel far under cost. When it was finished, the Authority would, far from being busted, have a surplus of more than \$4,000,000. And Moses, who had been doing detailed analyses of its financing, must have known this.) The need for a city contribution for the West Side Highway and East River Drive extensions? "Colossal effrontery. . . . The Citizens Budget Commission fellow's figures are just beyond me. I don't know where he got them." But Moses must have known precisely where he had gotten them.

The key arguments Moses didn't answer at all. He gave no explanation of where he obtained the disputed figures for the tunnel, and as for the bridge, all he would say was, "I have built many bridges, both over water and over land, and I know what the costs are. We are letting contracts every day for the same kind of work, and when we give you an estimate, it is accurate and our reputation is behind it." The councilmen could take his figures or leave them, he seemed to say.

The councilmen—and the city they represented—could take or leave his whole proposal, he made clear. When one ventured to ask him why he objected to a delay to give time for the alternatives to be studied, he put it to them straight:

"This is a showdown project. Either you want it or you don't want it. And either you want it now or you don't get it at all." He was giving the city an ultimatum. The city could either take his proposal or leave it. He wasn't going to waste his time discussing it.

And the councilmen took it. Without leaving the Council Chamber, hastily putting their heads together, the men who had been contacted the night before by La Guardia or by Steingut or by Crews voted unanimously to release the home-rule message from the committee immediately, without even an hour's study, and to send it to the full Council for a vote the following morning.

Moses snatched his yellow legal pad off the desk and stalked out of the room, his aides scampering behind him. There was a broad smile on his face.

The rest of the audience left the Council Chamber more slowly. As they filed out, many of them came over to McAneny and touched his shoulder consolingly. Burlingham, hobbling over on a cane, put his arm around him and whispered something in his ear.

But consolation was not easy. Years later, Comptroller Joseph D. McGoldrick, explaining why he was "afraid" of Robert Moses, would tell the author, "I was there that day, you know, sitting in the audience, when he said that to George McAneny. Mr. McAneny was old and wrinkled and very shrunken by that time, you know. And when Moses called him an 'exhumed mummy,' I saw the expression on his face. I saw it, you know. So I was afraid of him."

Other reformers would later describe their overriding emotion at Moses' philosophy and tactics as "shock."

They had no justification for such an emotion. There was nothing new about that philosophy or those tactics. The insistence that his proposals be viewed only in isolation, that each be viewed strictly as an attempt to solve a particular, limited problem by creating a particular structure of concrete and steel, that it not be evaluated in terms of the needs of the city as a whole (the need for a bridge, for example, weighed against the need for schools and hospitals) or even as part of the larger problem of which the specific problem was only a part (a traffic-moving machine like a bridge evaluated in terms of the city's over-all traffic-moving problem) and especially not in terms of its impact on the surrounding neighborhood—was the same insistence that had underlain the public works he had been building in their city for five years. Moses had used these same arguments in arguing for a dozen other projects-most of which the reformers had enthusiastically supported. If they had ever taken a close look at those projects, had ever examined them with the same care with which they examined the Brooklyn-Battery Bridge, they would have seen that this philosophy lay behind them. They were shocked now only because they had never bothered to take such a look.

As for the vicious personal attacks, Moses had been making vicious personal attacks for years. The only difference was that this time the target was them—and they therefore saw how unfair the attacks were. Previously they had laughed indulgently at Moses' propensity for personal vituperation, regarding it as a harmless idiosyncrasy; perhaps, when one took into account all the crooked politicians, hack bureaucrats and selfish private individuals with whom Moses had to deal, even admirable. In that laughter and that indulgence was a feeling that Moses' methods, however distasteful, however antithetical to their principles, were justified by the difficulties he had to surmount to Get Things Done.

But in the Battery Crossing fight, the reformers could not avoid taking a good look at one of Robert Moses' controversies—and at Robert Moses. They could no longer avoid seeing precisely what kind of man they had for so long believed in. The Battery Crossing fight was the moment of truth in their relationship with Moses. After supporting him for years in a score of battles, after sacrificing, over and over again, the principles so dear to them in his support, after helping to raise him to power and helping to keep him in power, they saw him at last for what he was—and they realized that he was not the embodiment of everything they believed in but its antithesis. If, for the twenty years before the fight, the Good Government organizations of New York City had supported him, for the twenty years after the fight, those organizations would oppose him.

The Battery Crossing fight was also the moment of truth for the reformers in another respect. It made them see that their opposition no longer mattered to Moses. They had played a vital role in his acquisition of power in the city. Quite possibly, in fact, he could not have acquired that power without their help. But he had taken that power and used it to acquire more and more of it—and now, they suddenly realized, he had enough of it so that they could not take it back from him, could not, in fact, stop him from the absolutely untrammeled use of it. He no longer had to be concerned with their opinions—and he wasn't concerned with their opinions. They were the city's aristocracy. They had always had a voice—an important voice—in decisions vital to the city, a voice that was important to them because they cared about and loved the city. But in the areas that Robert Moses had carved out for his own, they would have a voice no longer.

And neither would the city. For if the Battle of the Battery Crossing was a moment of truth for the reformers, it was also, although no one recognized it as such, a moment of truth for New York.

It was not, of course, only the reformers who opposed Moses' proposal—or at least the haste with which he was trying to ram it through. Also in the opposition were most of the city's most important elected officials—right up to the Mayor—and, speaking with a virtually unanimous voice, the city's press. Always before, elected officials, backed by the press, would have possessed more than sufficient power at least to get a few weeks' time to study a proposal if they wanted to study it. But they possessed such power no longer. The city had a problem that desperately needed solution. It had no money to solve the problem itself. Moses had the money. And if the city wanted a solution, it would have to accept his solution—or none at all. That was the narrow limit of its choices—which was really no choice at all. The ultimatum that Moses had delivered first to the Mayor and then to the City Council symbolized this reality—and so did the reaction of the Mayor and the City Council to that ultimatum.

Less than twenty-four hours after the Council committee hearing, the full Council voted, 19-6, to endorse the Mayor's home-rule request to the Legislature for passage of the bills that would foreclose any possibility of study. (Moses watched the proceeding with what a reporter described as a "happy smile.") Less than twenty-four hours after that (with Steingut "wielding the bull whip") the bills were passed, 106-6 by the Assembly, 41-1 by the Senate. ("I'm not surprised," Moses told reporters with a smile.) And less than twenty-four hours after that, Governor Lehman announced he would sign the bill (not because he approved the bridge, he was careful to state—"I have no means of forming a sound judgment" on the project but because it was a city affair and the city's elected officials had asked him to sign it). When the issue—in the form of a Triborough Authority request for Board of Estimate approval of a contract covering the relative city and Authority contributions to the project, a request worded in such a way that Isaacs said it constituted a "blank check" to Triborough—came before the Board, La Guardia ran the meeting with an iron hand, McGoldrick and Morris, despite their preference for a tunnel, voted for the bridge and

Isaacs' two votes were the only ones cast against Moses' project. Only one more step was required before Moses could begin sinking the bridge pilings -War Department approval—and this was regarded as no more than a formality; in fact, Moses had been privately assured by the Army Corps of Engineers that the approval would be forthcoming shortly. "The tunnel is dead," Moses said, and the reformers saw no hope that he was wrong. In A Man for All Seasons, Sir Thomas More warns young Roper about the consequences of letting ends justify means. When the young man says he would "cut down every law in England" to "get after the Devil," More replies: "Oh? And when the last law was down, and the Devil turned round on you—where would you hide, Roper, the laws all being flat?" The reformers could have benefited from More's warning. Robert Moses was of course not a Devil, but to give Moses power in the city, they had cut down the "laws" in which they believed. Now those laws no longer existed to protect the city from him. For the reformers and the city they loved, there was no place to hide. There was nothing the city, opposed to the bridge, could do to keep Moses from building it.

When the reformers were in deepest trouble, they always seemed to turn to the same man. Now they delegated Paul Windels to go see him. Windels walked over to 27 William Street and into the office of the senior partner of Burlingham, Veeder, Clark and Hupper, and "CC," after thinking for several long minutes, suddenly smiled ("that wonderful smile," Windels would say. "When you saw that smile you felt everything was going to be all right") and said: "Call Eleanor."

In the April 5, 1939, edition of her newspaper column, "My Day," Mrs. Eleanor Roosevelt was enthusiastically discussing her grandchildren when she switched abruptly to one paragraph on a different topic.

I have a plea from a man who is deeply interested in Manhattan Island, particularly in the beauty of the approach from the ocean at Battery Park. He tells me that a New York official, who is without doubt always efficient, is proposing a bridge one hundred feet high at the river, which will go across to the Whitehall Building over Battery Park. This, he says, will mean a screen of elevated roadways, pillars, etc., at that particular point. I haven't a question that this will be done in the name of progress, and something undoubtedly needs to be done. But isn't there room for some consideration of the preservation of the few beautiful spots that still remain to us on an overcrowded island?

A single, small paragraph, on a subject she would not raise again. But revealing nonetheless, as the smallest ripple in a pond's still water reveals the hidden trout below. For that paragraph was the ripple, the only ripple, that revealed that far below the surface of the public controversy over Robert Moses' huge bridge, down in the quiet, murky depths, impenetrable to the public gaze, in which real power lurks, private passions were beginning

to roi! the water—and Robert Moses' great enemy was beginning to move against him.

Ignoring the apparent hopelessness of their cause, the reformers' "Central Committee of Organizations" opposed to Moses' bridge kept filling letters-to-the-editor columns with phrases out of another age. The best, as always, were Burlingham's. "At the risk of being called an extinct firecracker, I venture to say that the planning and art commissions have been faithless servants. What justification can there be for men whom we have trusted to preserve the beauty of New York . . . to destroy or risk the destruction of any feature of [that] beauty?" There must be more public hearings and Moses must be made to furnish more information for them, for "a public hearing without specific detailed figures furnished in advance will only darken counsel." Burlingham's were the only letters Moses answered directly: "I see that Mr. Burlingham is back in the papers again. . . . [His] reference to the depressing effect of bridges on surrounding real property . . . is wholly inaccurate. . . . I am sending Mr. Burlingham some pictures of the Bronx-Whitestone Bridge, which most of us think is one of the finest things built by man in New York"; it "will enormously improve" surrounding property. (Burlingham, saying, "It is an honor even to be noticed by Mr. Moses," replied, "To compare the effect of the Whitestone Bridge on the vast swampy regions of the Bronx with that of the Brooklyn-Battery Bridge on lower Manhattan seems a little far-fetched. . . . I'd still like to see a breakdown of his final estimates"-and Moses hastily broke off the exchange.) But it was not written public communications that were to be decisive, but private—and communications too private to be entrusted to writing. Burlingham had told Windels to call Eleanor-and CC himself had written to Eleanor's husband. In a letter across whose top the great attorney, then eighty-one years old, scrawled in longhand, "In graveyard confidence," he wrote:

#### Dear Franklin:

Now please *stop* and read my letter to the *Herald Tribune*... Nobody fit to have an opinion wants the Battery Bridge except Bob Moses.

... The War Department can stop it. ... verb. suf. sap., especially when the sapient being is a lover of New York, as well as President of the United States and Commander in Chief of the Army.

The Commander in Chief apparently took the hint. The War Department hearing was held under the direction of the Army Corps of Engineers in New York, and Moses was assured by Colonel C. L. Hall, the chief district engineer, that a favorable report would be issued shortly. But the day after the hearing, the colonel's superior, Major General J. L. Schley, chief of the Army Corps of Engineers, received a note from presidential aide Edwin M. Watson asking him to "speak to the President before you make any report on the subject." The report was not issued on schedule, and when Moses asked when it would be, the engineers were suddenly evasive. And Secretary of War Harry H. Woodring suddenly began to take a personal interest in New York Harbor.

Ickes brought up the bridge in a Cabinet meeting one day, saying that he recommended its construction. Frances Perkins recalled what happened then.

The President pulled down his lip—a sign by which I always knew that something phony was going on inside of him. He'd pull his mouth down over his teeth and say, "Oh, yes" or "Oh, no" as the case might be. It was a curious facial expression. He said, "Well, I don't know. I want to think about that and look into it, Harold."

Some weeks later, the Secretary of the Interior, who hadn't known the President as long as had the Secretary of Labor, brought up the bridge again and, in Miss Perkins' words, "was insistent about its being approved." According to Miss Perkins, "The President said, 'Well, we'll have to consult the military. That's a very important channel.' "Ickes said, "That's all right, Mr. President. We figured out everything. It will not interfere with the operation of ships." But all the President would say was: "Well, I'd like to think about it."

Ickes finally caught on. Miss Perkins relates:

Ickes said to me, "The President is going to kill this. He's going to kill this wonderful project. I wish you'd speak to him. I wish you'd argue it out with him."

I said, "Well, how is he going to kill it?"

"He's getting the military to condemn it."

I said, "Are you sure?"

"Yes," he said. "I know. I have evidence. He's telling the military to say that it interferes with the navigable streams and it doesn't—not at all. It's all been thought out. It's just that he so hates that Moses. God knows Moses hates him. But I should think that we could build a bridge without regard to that."

Miss Perkins did speak to the President, who, she says, replied, "'Well, it's no good, Frances. It's just a no-good idea.' Listing the reformers' objections to the bridge, he added, 'Besides, I am reliably informed that though the engineers haven't finished with this, they think it's a very great hazard to navigation. In case of war, we can't have any bridges around there. They'll drop bombs and so forth.'

"I came back and told Harold that I guessed he was right, the President was not going to do it," Miss Perkins recalled. "There was nothing more I could do. There were plenty of other public works projects that were available, and didn't have Moses' name on them." On May 18, 1939, Watson sent the President a memo—which the presidential staff filed in the "Personal and Confidential" file—stating that "the Secretary of War phoned me this morning to please let you know that the War Department had rejected the proposition to build a bridge from the Battery to Brooklyn. . . . He wanted you to have this confidential information, as it has not yet been announced to the public."

The "confidential information" was not announced to the public—or to Moses or even to La Guardia—for two more months. So tight was the lid of secrecy clamped down that Moses, usually so astute, feeling the only reason for the delay was bureaucratic red tape, did not for some weeks realize what

was happening, kept his engineers drawing plans for the bridge and, until suspicion began to dawn, spent the two months firing off angry telegrams to the Corps of Engineers demanding a decision on the request for a permit, convinced that the decision could only be favorable. It was not until July 17, 1939, that Secretary of War Woodring announced in Washington that he had decided not to approve the project because "the proposed bridge is seaward of a vital Navy establishment . . . the U.S. Navy Yard at Brooklyn," and if knocked down during a war might block access to the yard from the sea.

The Herald Tribune reported that Moses reacted to the decision with "rage and ridicule," and both reactions were understandable. There were already two other bridges, the Brooklyn and Manhattan spans, seaward of the Brooklyn Navy Yard—and other bridges seaward of other naval installations all over the United States. The only way a suspension bridge could be "knocked down," moreover, would be by hitting one of a handful of key cables—if a bomb hit the bridge span itself it would go right through—and Air Force experts queried by Moses prior to the decision had estimated the chances of this happening at 100,000 to 1.

Attempting to repeat his 1935 strategy of bringing Roosevelt's behind-the-scenes maneuvering into the open, Moses issued a statement hinting that the President was behind the decision. When reporters failed to catch the hint, Moses made it broader at another press conference, reminding reporters that Ickes had taken the "blame" for the 1935 ouster attempt and saying, "Why don't you fellows find out if the Secretary of War is willing to take the blame for this?"

But Roosevelt had learned from the 1935 controversy. Then, during a press conference, he had incautiously allowed himself to be identified with "Ickes'" decision. Now, when, at another press conference, reporters questioned him about the "Woodring" decision, the President said firmly that the decision had been that of Woodring and the War Department alone. Pressed to say whether or not he agreed with the decision, he said he had no opinion on it at all. Try as Moses would to link him with it, he could not do so. The fox had left no tracks. And he had planned more cleverly than he had in 1935—as Moses admitted in a formal statement brimming with frustration.

No doubt this squares up accounts so far as the Triborough Bridge Authority is concerned. The effort to . . . force the resignation of its chief executive officer failed because the public opinion would not stand for it. In the present case the procedure has been a great deal shrewder, because it is assumed that the average person is in no position to argue with military boards of strategy, and must accept their conclusion no matter how silly.

Moses attempted to enlist La Guardia in an attack on Woodring's decision, but the Mayor seemed rather uninterested—and the reason suddenly became clear to Moses when the RFC abruptly decided that it was willing to lend the Tunnel Authority not the \$39,000,000 that had previously been its limit, but \$59,000,000, and to make the loan at an interest rate so reduced

that the cost of the tunnel (which, it now turned out, would in fact have been not Moses' \$84,000,000 but Singstad's \$65,000,000) could be reduced to \$59,000,000. La Guardia's gratification was intense. "This administration is never daunted by anything," he gloated. "We just go on to the next thing."

Moses' rage over what he regarded as his greatest defeat never cooled, not even after the tunnel, years later, was incorporated into his Triborough empire. Any mention of the tunnel—even the most casual reference by a luncheon guest trying to make conversation—would cause the big jaw to jut angrily and the voice of Robert Moses to recite verbatim, as automatically as if the mention had triggered a tape recorder inside his head, the old slogans: "A bridge would have cost half as much as a tunnel, you know, carry twice the amount of traffic, could be built in half the time . . ."

What made his defeat all the more bitter was his belief that Eleanor Roosevelt had engineered it. She denied this, writing (in the only other mention ever made in "My Day" of the Battery Crossing): "Needless to say I have never spoken to anyone in the War Department on this subject. . . . I would like to add that I did not know that Mr. Moses had an interest in this bridge. Which shows how dumb I am!" But Moses, discussing the Crossing controversy years later, would snarl, "Oh, she was in the middle of it, all right—it was her more than anyone else. So now they've got a tunnel, costs twice as much, handles one half of the capacity, took twice as long to build . . ." For years, Mrs. Roosevelt's popularity restrained him from attacking her publicly, although in private his descriptions of her were, in Lazarus' words, "increasingly unprintable." But in the memoirs he wrote long after Eleanor Roosevelt was dead, he said, as if determined to get his feelings on the record for posterity:

A review of "My Day" discloses an endless succession of noble impulses unsupported by thought or evidence, of naïveté and sophistication, modesty and assurance, the product of confused early education, a cloistered girlhood, and sudden precipitation into world affairs. "My Day" spread the dubious gospel that all problems yield to good intentions. Converting a bridge into a tunnel was a trivial incident in such a record.

There was one more pill for Moses to swallow—a \$12,000,000 pill. The RFC's \$59,000,000 was enough to build the tunnel and part of the Manhattan approaches, but none of Brooklyn's. La Guardia said the city would pay for the rest of the Manhattan approaches—since it would take four years to build the tunnel, the money would not have to be appropriated until 1943—but he made no announcement about any Brooklyn approaches. When Moses went to the Mayor, with considerably more humility than was his wont, to inquire about the five-mile, \$12,000,000 Elevated Highway to Owl's Head Park that had been planned to link the Battery Crossing with his Circumferential Parkway, the Mayor said blandly that the city didn't

have the money and that he didn't feel he could ask Washington for it. Perhaps sometime in the future . . .

Without that highway, the "Belt System," the great circle bypass around the city of which Moses had been dreaming since 1927, would still have a five-mile gap. Reluctantly he told the Mayor that Triborough would build the highway if he could charge a ten-cent toll to finance its cost. Blandly the Mayor replied that he didn't think tolls on highways were a good idea. Besides, he went on, hadn't Moses already said-while arguing for Triborough's right to build the bridge—that Triborough had more than \$12,-000,000 available? Whether or not Roosevelt, working with La Guardia, both men aware how driven Moses was to realize his dreams, had set the RFC loan at a figure exactly enough for a tunnel and nothing else in order to force Moses to cough up the money for the highway is not known, but that is the way it worked out. The Tunnel Authority rather than Moses' Triborough Authority was given the right to build the Battery Crossing and the revenues from it. But Triborough was forced to build the road to get to the Crossing. Obtaining even a soupçon of revenge on Robert Moses—promising to sign a minor bill he wanted and then reneging on the promise—had, Reuben Lazarus said, made Roosevelt, as Governor, look as fresh and happy "as though he had just come out of the bath after a clean shave in the morning." After the Battery Crossing fight, Roosevelt must have looked as if he had just spent a week at a health resort.

On July 20, 1939, the Central Committee of Organizations Opposing the Battery Toll Bridge held a "Victory Luncheon" at the Architectural League.

The taste of victory must have been sweet, for the luncheon did not end until after three. "Rising votes of thanks" were tendered to the heroes of the Goo Goo uprising from McAneny on down. The reformers laughed when Albert Bard recounted details of an Architectural League luncheon that had been held in the same building on the previous day. Aymar Embury had given a speech, and after it, "persistent questioning" by a member of the audience "finally," as the minutes of the Victory Luncheon put it, "elicited the fact that Mr. Embury regarded as approximately accurate the . . . drawing that Commissioner Moses called 'completely phony.'" And when Ole Singstad rose to announce that he had just modified the tunnel plans to remove even the tunnel ventilation shaft from Battery Park—he had found a way to place it north of Battery Place—they cheered in a scene of triumph and jubilation.

If the reformers had looked at the Battle of the Battery Crossing in a broader perspective, however, they would have been holding not a "Victory Luncheon" but a wake. For in such a perspective—the significance of the battle in the history of New York City—the key point about the fight and its significance for the city's future was not that the President had stepped in and stopped Robert Moses from building a project that might have irreparably damaged the city. The key point was that it had taken the President to stop him.

The city's own mayor, the elected representative of the city's people, the personification of the city's will, hadn't been able to stop him. Neither had the city's other elected officials—or its most wealthy, prestigious and influential private citizens, the "in group" or "establishment" that could, when united, usually count on carrying the day on any issue about which it was particularly concerned.

In the governmental institutions—Board of Estimate and City Council -established to insure that the voice of the city's people would be heard and obeyed, their voice had been drowned out by his voice. There were other governmental institutions-Planning Commission, Art Commission-set up to insure that physical changes to the city would be governed by rational, logical planning considerations and that their specific form would be determined by informed and educated aesthetic taste, not by capricious whim and passing fancy, and certainly not by the whim and fancy and personal taste of a single individual. But rational, logical planning considerations and informed and educated aesthetic taste had crumbled before his will. The explanation for the denouement of the Battle of the Battery Crossing was simply personal pique, the fact that a man who for years had hated Robert Moses had finally been given a chance to give that hatred a little venting. The battle had proven that the powers he had obtained as head of a new partprivate, part-public entity, a "body corporate and politic," were vast enough so that in his spheres of activity he, not the formal democratic institutions of New York, would henceforth shape New York's destiny.

## 30. Revenge

A man that studieth revenge keeps his own wounds green.

-SIR FRANCIS BACON

IN VICTORY, Robert Moses had proven himself savage. In defeat, he was to prove himself more savage still. He couldn't hurt Franklin Roosevelt or his wife, but the reformers who had brought Eleanor and Franklin into the Battle of the Battery Crossing and had thus engineered his defeat were vulnerable because they loved the old fort in Battery Park and the Aquarium it housed. He set out to tear the fort down, to raze it to the ground, to destroy every trace that it had ever existed. The fort and the Aquarium were located in a park, and in a park, thanks to the powers they had helped give him, he was sure that not even a President could prevent him from doing exactly what he wanted.

As soon as Moses announced, on February 6, 1941, that the Aquarium was "obsolete" and "unsuitable," that its ventilation and lighting were poor and its roof in need of repair, that the construction of the Brooklyn-Battery Tunnel would require its demolition anyway, and that therefore he was going to demolish it immediately and turn over part of the Bronx Zoological Park to the New York Zoological Society, the Aquarium's administrator, for a new, ultramodern \$2,000,000 Aquarium, some reformers who had bumped heads with Moses in the past—notably Bill Exton—suspected that revenge, pure and simple, was one of the primary reasons, if not in fact the only reason, behind the announcement. But most of the older reformers at the Citizens Union and City Club refused at first to believe Exton—until, as they delved into the reasons for the proposed demolition, it became more and more difficult for even the most generous-minded of them to find any reason for it other than the satisfaction of a personal grudge.

Moses said the Aquarium was obsolete and unsuitable. The 2,500,000 visits to the museum each year, the fact that many of these visits were made by men and women who had been taken to it years before by their own parents and who were now bringing their own children to see its wonders, and the almost universal affection for the dark and musty old building in the hearts of New Yorkers made this a rather difficult argument to accept, but even if it was accepted, the answer need not be demolition. As a letter

Revenge 679

published in the *Herald Tribune* inquired: "If the roof leaks, then it can be repaired; if the ventilation is poor, then it can be corrected, but why remove [the Aquarium] entirely?" The cost of such alterations might be expensive, but they certainly would not approach \$2,000,000—even if \$2,000,000 was an accurate cost estimate for the new Aquarium, and the reformers' friends in the Zoological Society soon let them know that the figure bore little relation to reality. Moses never attempted to answer this inquiry. Moses said that moving the Aquarium to the Bronx Zoo would "make it attractive to increasing numbers of people." The greatest attraction of the Aquarium was its accessibility; in comparison, the Bronx Zoo was rather inaccessible—what, the reformers asked, was Moses talking about? Moses never bothered to reply.

When a storm of protest arose not only from the reformers but from the public—there were whole columns of letters-to-the-editor day after day; editors trying to "balance out" the selection they printed found it difficult to do so, so scarce were letters favoring Moses' proposal—Moses attempted to give additional reasons. But, upon the reformers' examination of these reasons, each turned out to be invalid.

Moses stated that tunneling under Battery Park would "undermine" the Aquarium and cause its walls to crumble. Bill Exton checked with the two engineers who were doing the tunneling—Ole Singstad, in charge of the construction of the tunnel proper, and Walter Binger, in charge of the underpass approach from the West Side Highway—and Singstad and Binger just laughed at this argument; no tunneling—no construction work of any type on either the tunnel proper or the underpass approach—would come within 170 feet of the Aquarium.

Then Moses declared that, whether or not there was any tunneling under the old fort, it was going to fall down. His engineers, he said, had discovered that some of its walls were tilted and in imminent danger of collapse, and that a massive reconstruction job, whose cost he put at \$200,000, would be necessary to make it safe. This couldn't be true, could it? asked reformers. The walls of that fort, eight feet thick and solid sandstone, seemed as sturdy a structure as they had ever seen. Of course it wasn't true, said engineers who weren't on Moses' staff. "A joke. I thought it was a joke when he first said that," Binger snorts. "How could it fall down? What was it but an open ring of walls eight feet thick, six hundred feet around and two hundred feet in diameter? An annular [open] ring with a center that's been standing for two, three hundred years [sic—actually for 139 years] isn't going to just fall down. Fall down! Ridiculous! Absurd! ... And suppose one piece showed signs of falling? You'd just brace it up! ... A joke, that's what it was, young man! A joke!"

Moses had an aesthetic as well as an engineering rationale for his decision; the fort was not beautiful, he said, but an ugly "large red wart." And as for its historic interest, he said flatly that it "has no history worth writing about." The only people who wanted to retain the Aquarium, he said, were "stuffed shirts." After he announced his plans, "there was not a dry eye at the Knickerbocker Club, all the shades were drawn at the Century

Association and heart-rending sobs issued from the dusty diggings of the American Scenic and Historic Preservation Society. . . . but somehow the great popular uprising against the razing of this structure hasn't materialized."

The proof of the falseness of Moses' statement was on record day after day in the letters-to-the-editor columns; it wasn't only Goo Goos who were writing but men and women who could not possibly be classified as aristocrats but who wanted Fort Clinton saved because, as one put it, he had visited it so often that it seemed "an old friend," because, as another wrote, "without it Battery Park will be lonesome," because it was, in a word found in many of the letters, "beautiful" or because it was the place where they, or their parents or grandparents—where millions—had first stepped onto the soil of the United States. An elderly woman said that there must be many other Americans who, like her, were reminded every time they went to the old fort of how they had, years before, "felt their eyes fill with tears, and their hearts fill with thankfulness as they passed through the doorway of Castle Garden, the doorway to Liberty, a new life, a new world."

All the reasons Moses advanced to justify his decision—engineering, aesthetic, historic—were misleading, not reasons at all but rationales, and transparently false rationales at that. And if the reasons Moses advanced were invalid, what then was the true reason? If, as Exton wrote to the *Times* in one of a series of eloquent letters, the very engineers building the tunnel said that they could build it without disturbing the old fort, "why, then, must this ancient and familiar thing be torn from us?"

More to the point, why did it have to be torn from us now? Perhaps Moses did want to build a more modern Aquarium in the Bronx. But the plans were not ready, and the money for construction, as the Zoological Society readily confessed, was nowhere in sight. (As a matter of fact, although the reformers did not know this, Moses was not even certain where he wanted the new Aquarium to be located; he had simply thrown out the Bronx Zoo as the most likely location he could think of without study.) Even if the reformers accepted the argument that there was not room in a city of 7,000,000 for two aquariums, why was it necessary to demolish the existing Aquarium years before the new one could possibly be ready, thereby leaving the city for years without any aquarium at all? What was going to happen to the Aquarium's matchless collection of sea life, amassed over decades at fabulous cost in effort and ingenuity? What was the reason for Moses' insistence that this "ancient and familiar thing" not only be destroyed but be destroyed immediately? If the Aquarium was torn down, moreover, why did the fort beneath it also have to be torn down? Reluctant as the old Goo Goos had been to believe Exton's charge that Moses was motivated by nothing but a mean desire for revenge, many of them eventually concluded that the young man must be right. Years later, the few still alive would be asked about Moses' motivation. "If you knew Bob Moses, you wouldn't have to ask that," Paul Windels would say. "Bob Moses could hate. If you stood up to him, he would hate you forever. If you defeated him, he would try to destroy you. Here were guys he couldn't destroy. So he decided to do the next best thing: destroy something they loved." George McAneny

Revenge 681

would point out that Moses' claim that tearing down the Aquarium and fort had been made necessary "because of the tunnel" which they themselves had advocated was a particularly apt means of revenge.

To destroy the Aquarium and fort on the spur of a base impulse would be a crime against the city, against history, the reformers felt. They determined to prevent it.

But they couldn't. Moses' possession of unlimited powers over park administrative decisions made it possible for him simply to announce an "administrative decision" on Battery Park and the Aquarium: for the "safety of the public" they would be closed as soon as intensive tunnel work began, on October 1, 1941, the park for the duration of such work, the Aquarium forever. The reformers would have had no opportunity to protest Moses' plans to demolish the Aquarium and the old fort to any official body if the Park Commissioner hadn't needed money—a \$20,000 appropriation from the Board of Estimate-for tanks to house the fish in their new home in the Bronx. (The Zoological Society, which Moses had claimed had resources of \$2,000,000, proved unable to raise \$20,000.) His need for a Board appropriation meant that there would have to be a public hearing and, in theory, a Board decision. But, in reality, what choice did the Board have? The park around the Aquarium was going to be closed shortly, fenced off from the public. Disapproving the appropriation wouldn't keep the Aquarium open; it would only keep Moses from moving the fish to the Bronx Zoo, which would mean either that the fish would stay in the Aquarium for years with the public unable to see them or that Moses would carry out a threat to dump the fish into the sea. When the reformers attempted to raise the demolition question, Moses replied blandly that that wasn't the issue at all; he wasn't asking for approval of the demolition of the structure, he said, but only for moving the fish out of it (he himself had no objection to keeping the fort if the Board wanted to provide for its rehabilitation, he said; and anyway the Board would have a chance to decide the demolition question at some later date, after the completion of a study by Consultant Gilmore Clarke which he had commissioned). The choices open to the Board and the Mayor were further limited by Moses' popularity. In less than two months, the politicians' futures would be in the hands of the voters, and Moses' personal popularity with the voters was far too great to be appreciably damaged by an unpopular stand on a single issue—particularly since the city's press, as if to atone for its heresy in opposing him in the Crossing and Aquarium fights, was laying on the personal adulation in even heavier doses than usual. (It was during this pre-election period that the Times commented, on the occasion of the opening of the Gowanus Parkway: "When Commissioner Moses finds the surface of the earth too congested with his parkways, he lifts the road into the air . . .") No politician wanted to make himself the target of the Commissioner's public wrath. Joseph A. Palma, up for re-election as borough president of Richmond County, had stated in May that the Aquarium should not be torn down. "It's a landmark," he had said forthrightly. "We've been destroying too many of our landmarks recently." In Septem-

ber, Palma said not a word-but voted for Moses' proposal. Newbold Morris, up for re-election as Council President, had stated in May that "if two million dollars has to be spent . . . I favor putting it into a tuberculosis hospital in Brooklyn." In September, Morris did not mention any tuberculosis hospital-and he voted for Moses' proposal. As for Fiorello H. La Guardia, who had supposedly mastered the city, he could have swayed Morris and the others if he had wanted to, and for a while he apparently wanted to. The Mayor agreed that the Aquarium's accessibility was a great civic asset, and friends saw that he had more than a little affection for the old building himself. In May, he and Moses had both been speakers at the opening of a new waterhole at the Bronx Zoo; Moses had cockily predicted that the Zoological Society could schedule a "fish chowder" at the Aquarium on October 1, for the valuable specimens would be up at the Zoo by that time; but La Guardia had stunned Moses by stating flatly, "He won't bring the fish to the Bronx." Whether political considerations were influencing the Mayor's thinking on the Aquarium in September is unknown, but the following sequence of events occurred: the right-wingers who dominated the Bronx and Queens Republican organizations—along with some key Republicans in other boroughs also determined to deny the Mayor a third term offered Moses the nomination. Moses didn't want the nomination—he knew it was worthless without Fusion backing, which only La Guardia could obtain, and his understanding of the power of his public authorities made him uninterested in elective office—but he did not turn down the GOP nod out of hand, telling the leaders he was taking it under consideration. La Guardia felt he could not win without the nomination. Moses turned the nomination down. The old-line leaders then nominated John R. Davies, who would run against La Guardia in the primary election September 16. When the Moses proposal came before the Board, the Mayor's three votes were cast for it. Four days later, Moses announced his support of La Guardia, who won the primary by only 20,000. And a whole wave of park openings, at each of which Moses took pains to praise La Guardia, was then scheduled before the election, in which the Mayor narrowly defeated Democratic candidate William O'Dwyer. (There is no clearer proof of Moses' aura of invincibility than O'Dwyer's reaction to his loud support of the Mayor. Far from attacking the Park Commissioner, O'Dwyer assured the voters that he would continue him in office if he were elected.)

By October 1, after a September in which parents by the tens of thousands had brought their children to the Aquarium one last time, Moses could tell the Board of Estimate, "The fish are gone. . . . The Aquarium, therefore, as such, is a tale that has been told. We don't have to talk about that any more. The only question is . . . Fort Clinton." And, he said, consultant Clarke had found that demolition of the old fort was necessary for the complete reconstruction of Battery Park that he had in mind. The Board approved the demolition by an II-5 vote. As in the bridge-tunnel con-

Revenge 683

troversy, no force in the city had been powerful enough to stand between Moses and his aims. There would, within a matter of months, have been—except for a plaque—no trace of the old fort had it not been for another force outside the city and beyond Moses' control: the Second World War.

To Moses' rage, the war stripped the city of manpower and heavy construction equipment so completely that no demolition company would bid on the job of leveling those massive solid stone walls. He let a smaller contract for the less difficult demolition of the circular sheet-iron roof that covered the fort, and by the fall of 1942 the roof was gone, and the interior of the fort, as well as the ground in front of it, was littered with debris. He was attempting again to get the rest of the job finished when the war gave the reformers another opportunity by halting work on the Brooklyn-Battery Tunnel. The reformers, realizing that neither the executive nor the legislative branch of the city government could stop Moses, made a last, desperate try to persuade the judicial branch to do the job, bringing suit to enjoin him from demolishing the rest of the building on the grounds that he had induced the Board to grant him permission through "false and fradulent representation"—namely, that the demolition was required by work on the tunnel. The judiciary could not restrain Moses—the reformers pressed the appeal to the Court of Appeals, but each court found, in effect, that Moses had virtually absolute power in city parks. But the last appeal was not heard until April 1943, and by that time the equipment and manpower shortage had reached a stage where even Moses realized it was useless to attempt any further demolition until the war was over.

It would be more than five years before work on the Brooklyn-Battery Tunnel was resumed. There was no reason why Battery Park should have been closed during those five years. But closed it was. The gates in the high wooden fences that Moses had erected around it, fences too high for passers-by to see over, remained locked.

The city's press had assumed that the fight over the old fort was ended -had been over, in fact, from the moment Moses had made his decision about it. Commenting on one of his fierce attacks on the reformers, the Herald Tribune had said, "With the unleashing of that dread artillery, it is clear that Castle Clinton, along with the traditionalists, are done for." But the writer of that editorial must have been a young man; he must never have seen the "traditionalists"—in particular George McAneny—fighting for something they believed in. The old fort had become even dearer to the old man since Moses had proposed tearing it down. Shortly before his death in 1953, at the age of 84, McAneny was invited to contribute a memoir to the Oral History Research Collection at Columbia University. Most memoirs deal largely with the speaker's own life, and many display a desire for personal immortality. McAneny devoted the bulk of his memoir to a painstakingly detailed history of Fort Clinton; the immortality he desired was not for himself. "If I can save [the fort]," he said, "I'll feel I haven't lived in vain." Time and again during the war, the old man led groups of old men down to Washington to try to persuade the city's congressmen to persuade the National Park Service—skeptical of the fort's historic value because

Moses had gotten to them first—to designate the fort a national monument. He laid out the facts of the fort's history to literally scores of federal officials. all the way up to Harold Ickes (and possibly higher: whether Roosevelt personally intervened is unknown, although there are indications that the President may have taken a moment out from the war effort to do so), and the facts were irrefutable. No sooner had the war ended than Ickes told La Guardia that the National Park Service would take over the fort, restore it and maintain it forever if the city allowed it to do so. Moses could no longer argue that the structure would be too expensive to restore and maintain. But. thanks to the high fence, he had a new argument ready. The demolition already accomplished, he said, had left nothing of the fort except two walls, which were caving in. The question of restoring the fort was now academic, he said; there was too little of the fort left to restore. The public could not, of course, determine for itself if this was true; those occasional reporters whom Moses had his aides escort over the site saw no reason to doubt his story--the sheet-iron roof of the Aquarium was gone and so was much of the two-story stucco façade, the pillars that had held up the façade had been torn down, the only remnants of the fish tanks were piles of broken glass, and the debris from the roof and façade had been heaped all around the site (with a particularly large pile in front, blocking it off even more effectively from anyone trying to see it). The scene looked like the site of a typical—and almost completed—demolition job.

But McAneny persuaded Walter Binger to make a personal inspection. A day or two later, Binger was present at a mayoral reception at Gracie Mansion and noticed Moses talking earnestly to C. C. Burlingham. Later, Binger recalls, Burlingham said: "Bob Moses tells me that the fort is already largely demolished. He told me that so much of the fort has already been demolished that it can't be saved any more."

"That's a goddamned lie," Binger said.

Burlingham replied, "That is very strong language for you to use, Walter. I'll have to see it myself."

"I got the key [to the fence around the park] and I took him out there the next day," Binger says. "It looked like a battlefield. There were great piles of debris. He must have been all of ninety-five [actually eighty-eight]; he had a walking stick to help him along, but he jumped around like a goat. He was an amazing man. The fort was blocked from view by this pile of debris. He had to climb this high mound, and he looked down and there was the whole damn fort below him! I said to him, 'All that was demolished was the Aquarium.'

"CC was normally a great talker, but he didn't say anything for a while. He had had great faith in Moses; he had believed in him. He was terribly sad." Finally, the old man turned away with a single sentence: "Well, that's not what I was told." And the letter Burlingham wrote Moses the next day also consisted of one sentence:

"Dear Bob: M'avez trompé."

"Two days later," Binger says, "CC gets back a letter: 'Dear CC: Why pull this Anatole France stuff on me? It doesn't make it any better to be

Revenge 685

called a liar in French.' But he never attempted to deny it or anything." And he couldn't. To conceal his lie, Robert Moses had barred the city from its park for almost five years, but the lie had at last been uncovered. The fort stood—and McAneny's next trip was to the *Herald Tribune*, which sent an airplane over the site and published on its front page a photograph showing the fort intact.

McAneny resumed his trips to Washington. One audience with President Truman was enough to enlist him on the side of the fort, and pressure on the new mayor, Democrat William O'Dwyer, was increased until he agreed to ask the State Legislature for an act enabling the city to deed the fort to the federal government. The Legislature refused. McAneny went to Albany every week for months.

(He recalls: "Everyone up there would say when we approached them, 'Mr. Moses doesn't want this.'

"'Well, of course he doesn't want it."

"'Well, we're going to stick to him,' etcetera and so on. 'He's a great man: he must know what he's talking about.'")

In 1946, Congress was ready to pass the bill designating Fort Clinton a national monument. But, recalls Binger, "this would take six or eight months." Moses moved faster. At four o'clock one Friday afternoon, he got a new demolition authorization from the Board of Estimate. (O'Dwyer betrayed the reformers; McAneny confided, "He's not a very solid sort of person.") Leaving City Hall, the reformers huddled desperately. Binger had been toying with the idea of bringing a new suit—on the grounds that the fort was a monument and hence permission was required from the Municipal Art Commission for its destruction.

Says Binger: "I went to Paul Windels and I said, 'I have got to have some money right away to get a suit [started].' Paul suggested I call Robert [Dowling, president of the City Trust Company]. I said, 'I need money right away.' He said, 'How much do you need?' I said, 'How do I know? I need money for a top lawyer to take it through two or three courts. It'll cost a couple of thousand dollars.' He said, 'Okay, go ahead.'"

Binger hired Frederick Van Pelt Bryan, who "called Windels and said, 'I'm going to court Monday on this.' And that's when Paul Windels saved the fort. He said, 'Are you crazy? There won't be anything left of this fort Monday morning. He'll demolish it over the weekend.' This was all on a Friday, remember. 'You bring this to court in half an hour.' " Bryan did, and persuaded a Supreme Court Justice to sign an injunction, which was handed to Moses that evening.

How right Windels had been was proven when the reformers rushed to Battery Park the next morning to see if any damage had been done. In the brief hours before the injunction had been served on Moses, Binger recalls, he "had already burned those great doors." But McAneny showed again—year after year, in Washington and in Albany and in City Hall (and in one meeting with O'Dwyer in Gracie Mansion in which, upbraiding the Mayor for breaking his word on the fort, he spoke to him in words so eloquent that, Windels states, "if anything could have recalled that man to

a sense of honor, George McAneny would have done it that day")—why young reformers had once stared at him with awe as he strode through the Bureau of Municipal Research. All Moses' lawyers couldn't outfox the old man; the purpose of the suit was delay—delay to stall demolition until Congress could pass a bill ordering the preservation of the fort as a "National Historic Monument"—and McAneny delayed, until, on July 18, 1950, almost ten years after Moses had announced that he was going to demolish Fort Clinton, the bill was passed, along with a \$166,750 appropriation sufficient to restore it, including the doors Moses had burned. The old fort was saved.

The successful conclusion of the effort to save Castle Clinton was a victory of wide importance and interest in the cause of historical preservation [said Secretary of the Interior Oscar L. Chapman]. After . . . years of struggle and debate in New York City, in the courts, in the State Legislature and in Congress, the saving of Castle Clinton evidences a new and deeper recognition of the need of preserving the diminishing landmarks of our history as an essential part of our national heritage.

If those words were bitter to Moses, they were sweet to George Mc-Aneny. Gentlemen of his school, however, did not forget their manners even in moments of triumph. To a reporter who telephoned him with the news and asked for comment, McAneny gave two words, "Most gratifying"—and a long list, which he asked the reporter to print, of the names of all the men who deserved credit for the victory.

McAneny didn't list himself, but his friends rectified the omission. Stanley Isaacs said it most simply: "McAneny beat Moses."

If the reformers had scored a victory over Robert Moses, however, its dimensions were rather narrow.

Fort Clinton had been saved, but not the Aquarium. And the city therefore had to pay dearly for Robert Moses' revenge.

It had to pay dearly even in dollars and cents. To persuade the Board of Estimate to let him demolish the old Aquarium, Moses had guaranteed that a new one could be built for \$2,000,000, and that the New York Zoological Society could and would foot the entire bill. In truth, however, there was never any real chance that the Zoological Society could raise \$2,000,000—not that \$2,000,000 was the amount that really had to be raised, anyway; the Zoological Society would later disclose that the real figure was \$6,500,000. After La Guardia had vetoed the Bronx Zoo site, Moses picked one at Coney Island—and persuaded the Mayor to spend \$1,000,000 additional in public funds to acquire it. The Zoological Society still could not raise the cash. When a new Aquarium was finally built, the cost of its construction had risen to \$10,000,000—and every cent was paid by the city, so that satisfying Moses' private grudge with the reformers cost the city's taxpayers \$11,000,000. Since he placed high admission fees on

Revenge 687

the new Aquarium—the old one was free, of course—and there seemed no prospect that these would ever be removed, the people of the city would actually be paying for Moses' revenge forever—or at least for as much of forever as the eye could, in 1974, reasonably foresee.

As for costs that could not be measured in money, the people of the city might be paying those forever, too. The Coney Island Aquarium wasn't opened until 1955, fourteen years after the Battery Aquarium was closed, so that an entire generation of New York children grew up without an opportunity of visiting any aquarium at all. As important as the exhibits in the old Aquarium, moreover, had been its ambience—a pungent and warm blend of age and familiarity and long affection and human scale, of busts of old singers and the flash of bright fish, of gloomy corners where one could neck with one's date, of being easy to get to and free, so that people could simply walk in as if it belonged to them. One might admire the new Aquarium; one could never love it.

For many New Yorkers, of course, the atmosphere in the new Aquarium wasn't going to matter very much. For the high admission fees Moses set for it insured that many New Yorkers were going to be able to visit it infrequently if at all. The poignance of this situation was accentuated by the location of the Aquarium at Coney Island, the lone bathing beach reachable by public transportation and therefore the one to which, because of Moses' class-separating policies, the city's poor were herded.

The city's middle and upper classes found it easy to use the Aquarium, of course. Moses had built a large parking field next to it so that they could come without using the subway.

But they didn't come. On weekdays and on non-beach weekends—on days when attendance at the old Aquarium had run, day after day, 7,000 per day—one can walk through bleak echoing halls and see only a handful of other human beings. Out of Robert Moses' grudge, the city got a new Aquarium, for which it paid \$11,000,000. It did not, however, get an Aquarium it could use.

The reformers' victory was not even complete in the case of the fort they had saved.

The popular Aquarium within its walls had made the fort a busy, bustling place. Without the Aquarium, it was a circle of walls. As one perceptive observer put it, "Now it is [a monument]: to be looked at, but not used. Having achieved the status of Art (Architectural division), it is to be revered as a saintly relic, not involved in the life of the city." It is still history as it sits there in Battery Park, but it is dead history.

In his "Moses-approved" biography of Robert Moses, Cleveland Rodgers wrote that "the ten-year battle was ended, as in the Battery Bridge vs. Tunnel fight, by the intervention of the federal government with its long-range guns and superior financial resources." That analysis was correct. No weapon the city possessed—not executive, legislative or judicial—had been powerful enough to stand off Moses' attacks on one of its most beloved

institutions. The Aquarium fight only reinforced the conclusion to which some of the most perceptive reformers had come after the Crossing fight: that, in Moses' chosen spheres of activity, the city no longer had much control over its own destiny.

This conclusion was made all the more bitter to the reformers because of their new insight into the character of this creature they believed they had played so large a role in creating.

Some of the old reformers still admired Moses, mainly because they felt that corruption, politics and red tape were so thick in the city that only a man of Moses' almost incredible energy, drive and strength of will could hack his way through it. "Bob Moses is an extremely capable man," Stanley Isaacs, always scrupulously evenhanded, would say in the same oral history in which he detailed so many of Moses' injustices and mistakes. "Properly controlled, he is a great asset to the city."

But these reformers were now in a very small minority. The verdict of other members of the city's Good Government movement on Moses was more harsh. "He is the most unethical man I have ever met," Walter Binger said. "He is a brilliant guy with a highly defective character." "He is the original smear artist," Lawrence Orton said. "Like Hitler," Albert Bard had said of him because of his technique of making one demand, and, as soon as it was met, making another, and, in years in which the name of the dread dictator glared blackly at every American from the front pages of the daily newspaper, this harsh comparison was drawn over and over again. "He is a liar," Walter Binger said. "And he is a liar the way Hitler was a liar. He doesn't lie because he can't help it. He lies as a matter of policy." The very overstatement in such remarks from men generally given to understatement reveals the intensity of revulsion many reformers felt for the man they had once idolized. William Chanler had used a word out of an earlier age-"bullyrag" ("He was just a natural bully")—to describe one of his tactics, and many reformers, men out of an earlier age, now used that expression in talking about Moses. They understood at last the fallacy of believing that his lack of interest in money automatically signified interest in serving the public-and that that was his only interest. They had come to see his other interest, and to understand that in the long run that interest might, when present in a public official with immense, all but uncontrollable power, turn out to be more inimical to the city than financial greed. Al Smith's close friend John A. Coleman, the multimillionaire "Pope of Wall Street" who came out of the Lower East Side with limited education but unlimited shrewdness, said: "Some men aren't satisfied unless they have caviar. Moses would have been happy with a ham sandwich—and power."

# 31. Monopoly

THE SECOND WORLD WAR gave Robert Moses a second chance to destroy the New York City Tunnel Authority and thus obtain the monopoly he had previously been denied over all revenue-producing water crossings within the city.

He didn't pass it up.

With the Tunnel Authority's continued existence and expansion apparently insured by its victory in the Battery Crossing battle, its twin tubes had hardly begun pushing out toward each other from the Battery and Brooklyn when Ole Singstad was drawing plans for a third Authority project, a seven-story, 1,050-space Battery Parking Garage which would provide a half million dollars' additional annual revenue, and for a fourth, the Narrows Crossing, which would be the largest single public work ever constructed in New York (and which Moses had long wanted to build himself).

Shortly after the war began, however, Moses was appointed director of the "industrial phase" of the city's scrap-metal drive, and before he resigned from the post in just seven weeks (most of his scrapping was done with federal officials), he publicly recommended that the federal War Production Board (WPB) requisition 28,000 tons of "steel" tunnel-lining segments from the Authority, melt them down for scrap and order all work on the tunnel halted for the duration because it would "take four years to build [and] can serve no possible war service."

Not only was that a statement made by a man who was continually arguing that traffic projects were vital for defense; it was as misleading as those he had made in 1939 in his attempt to keep the tunnel from being started. The tunnel would, indeed, take four years to build—but not, as Moses implied, four *more* years. Work had already been under way for two years; two more would finish it. And the tunnel lining was not steel at all but cast iron with a phosphorus content too high to allow its effective use in war production.

In 1942's wartime atmosphere, however, his statement accomplished his purpose. While canceling most large construction projects, the WPB had quietly let the tunnel proceed because there was no other work in their field for the 1,200 sandhogs, most of them too old for military service, employed on the job, because the tunnel tubes on which \$15,000,000 had already been invested might be ruined by water seepage if left unlined—

and because the lining segments were not suitable for war production. But the WPB was understandably skittish about public reaction if the continuation of work on the tunnel was spotlighted. After Moses switched on the spotlight, a furious La Guardia declared that his recommendation "does not represent the policy of this administration. . . . In the first place, that 'available steel' is not steel. It is cast iron." But Moses reiterated his recommendation, the press reprinted it and the WPB accepted it. "I'm glad to see that they're doing the right thing," Moses crowed.

All through the war, the tunnel lay empty and unused, a vast, hollow, echoing cavern beneath the waters of the Upper Bay, and its toll booths stood silent, earning no revenue.

And the Tunnel Authority needed revenue. If the war-caused traffic drought could bring even Triborough, with five years of profitable operations behind it and the combined income of six toll-producing facilities to draw upon, to the verge of economic collapse, its impact was even more damaging on an authority whose single usable facility had been completed barely a year before Pearl Harbor. The Tunnel Authority's income did not cover the interest on its bonds. Because the Authority had \$4,000,000 (the \$4,000,000 Singstad had saved on the cost of the Queens-Midtown Tunnel) in the bank to help pay the interest until the war ended, and because the Reconstruction Finance Corporation, which had purchased the bonds, was willing to wait for the balance ("This is a forty- or fifty-year project," RFC officials told Authority general manager Fearson Shortridge), the interest shortfall would not have been significant—had it not been for Moses. He used it as an opening to employ with La Guardia the technique he had so often been accused of employing against anyone who stood in his way. His own experts' analyses, Moses said, showed that the Queens-Midtown bonds, purchased by the RFC for \$48,000,000, would never be resalable at face value. Even after the war, no one would pay more than \$20,000,000 for them. And when the Brooklyn-Battery Tunnel opened, he told the Mayor, the situation would be even worse; that tunnel, he said flatly, "cannot sustain \$57,000,000 in bonds." "Someone, presumably the federal government, will have to stand a loss on the two projects of close to \$50,000,000," if, indeed, the second project could ever be finished at all without tremendous new financing, a prospect about which he had serious doubts. And, Moses told the Mayor, he had ascertained that the reason for this impending disaster was Singstad's lack of engineering ability, combined with management so inept that its disclosure would cause a scandal. The Tunnel Authority, he said—hammering home the word repeatedly in confidential memos to the Mayor—was in a real "mess." And by 1944 he was beginning to hint strongly that there was only one way out of the mess: to "rescue" the Tunnel Authority by letting Triborough take it over.

"Mess? What mess?" Ole Singstad demanded when the author used the word during an interview. "I didn't know we were in any mess at all. I didn't hear anything about it." Told about Moses' memos—he had never known of their existence before—he shouted, pounding his desk, "There was no mess! We didn't have to be rescued at all. We were not in financial

Monopoly 691

difficulties! Certainly not!" Though Singstad's statement is an exaggeration, so was Moses'; the Tunnel Authority's difficulties were no worse than Triborough's, were due not to mismanagement—its operations were actually far more economical than Moses'—but to war, and were obviously curable by the same medicine that would cure Triborough's: peace. Letters from RFC Chairman Jesse Jones to Singstad, moreover, indicate that Jones had no doubts about this.

Even had he known about Moses' innuendos, however, Singstad did not possess the entrée to La Guardia that would have enabled him to disprove them, and the Mayor, racing around the country as national civil defense head, had no time to spend learning the truth for himself. Mayoral memos began to display marked irritation with the Tunnel Authority.

And then Moses was presented with even juicier grist for his mill.

Try as they would, his bloodhounds had not been able to come up with even a hint of wrongdoing by Singstad. But in 1941 someone did bring to Moses a hint of wrongdoing by Singstad's brother-in-law—and that was all Moses needed.

Twelve years before, while the Port Authority, for which Singstad was then chief consulting engineer, was considering plans for the Manhattan entrance plaza of the Lincoln Tunnel, the brother-in-law had purchased eight tenements in the area finally selected. Singstad swore that he had no financial interest in the purchase, that he had never heard of the purchase until after it was completed, that when he had learned about it-during a casual conversation—he had violently disapproved, and in fact had forced his brother-in-law to reduce his asking price from \$365,000 to \$165,000. The conclusive piece of evidence, to an impartial observer, may have been the fact that Singstad did not want the plaza located in the area in which his brother-in-law's tenements were located; his recommendation, for which he fought for two years, would have left them uncondemned—and his brotherin-law with no profit at all. The tenements were condemned only because the Authority overruled Singstad and decided to locate the plaza where its chief engineer, Othmar H. Ammann, wanted it. Two intensive investigations -one by the Port Authority, one by the Tunnel Authority-turned up not a single piece of evidence to prove that the peppery little Norwegian's statements were anything less than completely true. The single damaging fact was his failure to tell the Port Authority when he learned his brotherin-law owned the property, and, says Windels, his attorney, the engineer had a reason for not telling: "He was afraid that someone like Moses would find out and smear him with it."

This fear turned out to be justified. The Port Authority found Singstad innocent of every charge except failing to report his brother-in-law's holdings, for which offense, in light of the other exonerating evidence, it gave the engineer only a mild censure. At least one board member expressed "great regret" that the Authority had dignified the accusations even to that extent. The Tunnel Authority's official report not only also absolved Singstad of any wrongdoing but stated that the innuendos which started the investigation were "unjust, unfair and untrue." But Moses, after apparently giving La

Guardia an oral version of the affair, obtained and passed along to the Mayor, "for your confidential information," a transcript of the Port Authority hearings—along with a covering letter of his own that bore the Moses stamp. "This will tell you the Singstad story," Moses wrote. "You will see that in the end, Singstad and his family did not succeed in getting the high price they demanded in condemnation."

No one but Moses, of course, had even suggested that Singstad had demanded a high condemnation price. Two investigations, in fact, had concluded that, whatever price was paid, Singstad was not going to get a penny of it. But to find out how misleading Moses' letter was, La Guardia would have had to wade through the lengthy, complicated hearing transcript. And Moses' letter went further. To undercut the Port Authority's exoneration of Singstad, he quoted his old friend Authority vice chairman Howard S. Cullman as telling him in private: "It is my understanding that [Singstad] more than told untruths throughout the whole situation, and it was finally ferreted out that he himself had approximately \$50,000 invested therein."

Whether Cullman actually said this to Moses cannot be determined— Cullman refuses to discuss the investigation—but if he did, his charge is disproven by two separate investigations. Moreover, the best proof of whether Moses himself really believed what he was telling the Mayor is the Park Commissioner's own subsequent actions: in 1944, Jack Madigan, attempting again on Moses' behalf to persuade Singstad to undermine his own commissioners, assured the engineer that if he did so and thereby helped Moses take over the Authority, he could remain its chief engineer as long as he wished. (Singstad refused the offer.) But Moses' letter had the desired effect. The Mayor, who at the time believed that his long campaign for national office was about to be capped with success, was desperate to avoid a scandal. He knew that Moses was capable of creating such a scandal if he was not given his way. "Moses kept wearing him down, talking about a 'mess,' always pressing him, wearing him down, wearing him down," Windels says. And when, in 1945, Moses was presented with an opportunity to take over the Tunnel Authority without public fuss, La Guardia, who had been holding out against such a takeover for nine years—ever since the day in 1936 when he had instructed Reuben Lazarus, "Leave the son of a bitch off" -held out no longer.

The opportunity arose because the Tunnel Authority commissioners—novices in the political arena and unaware of the potentialities for power in their Authority—had not grasped the fact that someone was trying to take it over. Thinking of the Authority only as a builder of public works, they believed that as long as they were building public works competently and honestly, the Mayor would continue them in office. Not seeing the threat posed to them by Moses' ambition, they gave Moses the opening he needed.

Their error was not one of commission but only of omission. It occurred after one of the three members of the Tunnel Authority, Albert T. Johnston, died, in 1943.

Monopoly 693

With the Authority unable to proceed with any projects during the war, the other two members, Alfred B. Jones and William H. Friedman, saw no necessity for the vacancy to be immediately filled. "I think that if Jones and Friedman had recommended another man, La Guardia would have followed the recommendation," Singstad says. "But they didn't think there was any pressing haste." The only name submitted was submitted—secretly—by Moses: Howard S. Cullman. La Guardia, his defenses not yet weakened to the point of caving in, rejected that recommendation, but no one gave him another, and, in the rush of more pressing affairs, Johnston's seat remained unfilled. And as a result, when, on July I, 1945, Friedman's term expired, there would be vacant not one but two seats—a majority, enough for a takeover and, moreover, for a quiet takeover that could be accomplished simply by the apparently routine filling of two vacancies and that therefore would not lead, as a more dramatic change in management might lead, to press curiosity that carried the threat of scandal.

Friedman and Jones had no inkling of what was happening until it had happened. With the expiration of his first term on the Authority drawing near six years earlier, Friedman had sent a brief note reminding the Mayor of that fact, and the Mayor had promptly reappointed him. Now, expecting a similar sequence, Friedman on June 15, 1945, sent La Guardia a similar note. But when he received the Mayor's reply this time, the key phrases that jumped out at him were, to his shock: "My dear Bill . . . splendid services . . . You were one of the pioneers. . . . For some time I have been considering the reorganization of the Tunnel Authority and believe that great economies may be effectuated. Therefore I will be able to relieve you of your duties when your term expires. . . ."

"Friedman had been a good friend of the Mayor's," Singstad recalls. "He was the most surprised man in the world." Understanding of the reason behind La Guardia's decision came only when he read (in brief, insidepage articles) that the Mayor had announced that, in the interest of undefined "economies," he had decided to merge the Tunnel and Triborough authorities, and, while the details of the major refinancing and new bond issue required were being worked out, to "interlock" the two bodies by placing them under the same management—Triborough's management, as it turned out, for he appointed to the two Tunnel Authority vacancies Robert Moses and his Triborough sidekick, banker George V. (the Fifth) McLaughlin.

To try to gain the third vote on the board—required on all major contracts—Moses shouted at Jones, a quiet, meek Quaker, at board meetings, and insulted him to his face. When Jones tried to counter this tactic by refusing to attend meetings, Moses wrote him: "There are just two courses open to you." One is resignation, "the sensible thing for you to do. . . . If you decline to do this . . . we shall have to ask the Mayor to remove you . . . on the basis of charges which we shall prefer." And these charges, he said, "will necessarily include reference to . . . the various messes which the Authority was in when the Mayor decided to reorganize it." Jones, no

politician—he had accepted the Authority post only because it would give him the opportunity to render a public service—suddenly found that continuing to hold the job would involve his name in scandal; even though no "messes" existed, the Authority's war-caused financial difficulties would make it easy to convince the public that they did, particularly if they were made public in the context of "charges" lodged against him. With his choices narrowed down to two—resignation or dishonor—on April 24, 1946, he resigned, to be replaced by Charles G. Meyer, the other member of Moses' Triborough Board.

Fearson Shortridge, who for years had been meeting Moses on the Gracie Terrace promenade while the two men were walking their dogs in the evening, had believed "we were very friendly personally." Now he found that either he had been mistaken or friendship did not count for much with Moses: Moses fired him, appointing George Spargo in his place, without a word of warning; I "found out about it by reading *The New York Times*," Shortridge recalls. Moses also fired Ole Singstad, of course, replacing him as the Authority's chief engineer with a Yale classmate, Ralph Smillie, and he fired men who had been no more than innocent bystanders in his long feud with the Norwegian—the engineers whom Singstad had recruited from all over the United States.

For nine years, Robert Moses had been seeking control of the Tunnel Authority. Now he had control. He had been unable to prevent the construction of the Authority's Queens-Midtown and Brooklyn-Battery tunnels, but now those tunnels—and their revenues—were his. New York was a city divided by water, split by rivers and bays. Every modern water crossing within the city's borders, not only those above the water but those beneath it, not only every bridge but every tunnel constructed within the city's borders for the use of motor vehicles since 1909, was now under the control of authorities that he controlled. More important, all new water crossings would also be under his control.

The city was obviously not in the foreseeable future going to be able to build new water crossings itself. Only the authorities—his authorities—would be able to build them. He and he alone would be able to decide which crossings would be built and when, what their shape and design would be and where their approach roads would run.

He and he alone, moreover, would decide what tolls would be charged on these crossings. For with his takeover of the Tunnel Authority, he now possessed a monopoly over those public facilities for motor transportation within the city which produced revenue.

America's nineteenth-century robber barons had understood the importance of monopoly, absolute monopoly. They had not been satisfied until they had eliminated all competitors.

Robert Moses, whose aim was not economic but political power but whose power would have to rest not on political but on economic factors, had understood that competition was a threat to his aims. He had schemed for ten years to remove that threat, to obtain over all modern water crossings

Monopoly 695

within New York—the water crossings that were a key to all automobile transportation within the city—an absolute monopoly.

And now he had that monopoly. Henceforth, for the remaining quarter of a century in which he would be in power, no motorist would be able to use a modern bridge or tunnel in New York City without paying his authorities tribute.

The struggles by which the industrial robber barons had built up their empires broke into public view infrequently. For the most part, only the results were announced. The battles which decided the results took place in secret.

So did the battle which cemented Robert Moses' economic power. His public battle against the Tunnel Authority—his campaign of thundering press releases and barrages of statistics designed to persuade the city and its officials that the Battery Crossing should be a bridge and not a tunnel had failed. The battle in which he destroyed the Tunnel Authority was one shrouded from beginning to end in secrecy. The stakes involved were vast. They included not only control of two of the largest public works projects in America but also the right to build and control a public work that would be far larger than either: the Narrows Crossing. They included the right to award contracts for the completion of the Brooklyn-Battery Tunnel, the Battery Parking Garage and the Narrows Crossing, contracts that would total more than half a billion dollars, with all the immense patronage and power that such a right conferred, and also the right to dispose of the immense annual revenues these three projects and the Queens-Midtown Tunnel would generate, revenues that by 1968 would be running more than \$30,000,000 per year. They included the capitalization power of this annual \$30,000,000—to build more public works that would generate more cash: capitalization power that by 1968 would amount to half a billion dollars more. And cash—even half a billion dollars in cash—was only a small part of the stakes involved. The significance of the battle went far beyond economics. For at stake also was the issue of whether control of revenueproducing water crossings in the city would in effect be turned over to a single individual, of whether one man would be given a monopoly over all toll receipts paid by motor vehicles in a great city largely dependent upon motor transportation. For concentrating economic power in motor transportation within the city in one man would give that man a voice in all transportation policies within the city at least equal to that of the city itself. But the city itself never was given an opportunity to learn the battle's significance, or to watch it unfold. All during 1942, 1943 and 1944, while Moses and Singstad were maneuvering with RFC officials or La Guardia, while Moses was smearing Singstad and the Tunnel Authority was clearing him, not a single story on the maneuvering appeared in any newspaper. Not a word even hinting at the existence of a behind-the-scenes conflict between the two public authorities was printed.

Moses had repeatedly ridiculed not only Singstad's honesty but his engineering ability.

He had written La Guardia: "We do not trust Mr. Singstad. We have another man, much more competent and much more reliable, to take his place." Whether he himself believed what he was saying may be judged by his actions. Singstad's plans for the Brooklyn-Battery Tunnel were used with only one modification of any substance. (And this modification—the use of a different method of waterproofing—caused the one engineering flaw in the tunnel, a persistent seepage that eventually had to be corrected—by reverting to Singstad's method.) Moreover, Moses' emissaries asked Singstad to continue with his plans for the Battery Parking Garage, down to the most detailed blueprints and contract specifications. Moses never discussed Singstad's plans with him. He went out of his way to avoid having to meet Singstad face to face. Singstad worked on them alone in his own office. But as each set was completed, Moses' engineers came to the Norwegian and took them, and used them—as drawn.

Singstad took an office—at 17 Battery Place—whose windows looked down on Battery Park, on the portals of the tunnel that was his greatest creation and on Fort Clinton, whose sight he treasured for another reason: "Mr. Moses said it was going to fall down," the fiery Norwegian would laugh to visitors, pointing down at the red walls that looked solid indeed. "Well, it's still standing, isn't it? Its foundations are carried down to solid rock, you know." And then, one palm pounding his desk, he would laugh, a short, harsh laugh that was more like a snort, and say, "Solid rock! I knew that. And Moses' engineers knew it, too."

If Singstad could still laugh twenty-four years later at the recollection of his fight with Moses, the laughs came noticeably hard—and this was understandable. For Moses' revenge on him was thorough.

While Moses was completing the Brooklyn-Battery Tunnel, he and Spargo took care to leave with reporters chronicling its construction the impression that Singstad had had little to do with its final form. Most of the reporters' stories scarcely mentioned him. When preparations for the opening ceremonies—elaborate preparations; not only the gleaming new parking garage and the white tunnel portals and access roads but the façades of adjacent office buildings, including 17 Battery Place, were draped with bunting, flags and mammoth pennons in a display of pageantry that transformed gray Lower Manhattan into a panorama of red, white and blue—were going forward, Singstad had to watch them from his window and know that he had not even been invited to the opening of the tunnel he had designed. (He was invited, on the day before the opening, apparently only because a Herald Tribune reporter raised the matter with one of Moses' lieutenants, and Moses did not want any stories on the injustice.) And when he read the brochure,

Monopoly 697

twenty-eight glossy pages, printed in four colors, distributed in the thousands to the distinguished guests who were to ride through the tunnel in a long cavalcade led by the Mayor and Francis Cardinal Spellman, his cup of bitterness must have spilled over. The brochure listed twenty-one separate engineers as designers of facets of the project. The name of its true designer was not among them.

Robert Moses could hate a long time. Ole Singstad was to continue practicing engineering until he died, at the age of eighty-seven, in 1969, twenty-four years after Robert Moses forced him out of the Tunnel Authority. During those twenty-four years, Singstad was to cement his reputation as the world's master tunnel builder, and exhibit a genius for highway design as well. He was to build tunnels and huge highways all over the United States, and all over Europe and South America, receiving knighthoods and medals for his work in Norway and Belgium and Chile. But he was never—during all those twenty-four years—to design or build a mile of highway in New York City or New York State, the city and state in which he lived.

Shortly before his death, he was asked about this anomaly by the author, who mentioned that "at one time you were the most highly regarded tunnel authority in the world." Singstad's head snapped up and the palm of his unusually large right hand smacked down, and he glanced at the interviewer with a look that made it all too easy to see why Ole Singstad had been so dangerous an opponent. "Yeah," he said. "And I still am. And I'll tell you this. In spite of my reputation, since I retired as chief engineer of the Tunnel Authority—I told his Mr. Gumshoer Boy that I wouldn't be happy working with Moses when he tried to talk me into giving up my commissioners since I retired after thirty-three years in the service of some subdivision of the state government, thirty-three years! Since that time, the state has spent hundreds and hundreds of millions of dollars on work that I have done and could do, but I haven't had a single job from the State of New York. Not one! Just the other day, we were turned down for a highway job on Long Island. And I have been told by a friend in Albany, 'You are wasting your time trying to get jobs there as long as Robert Moses is living.' Ever since I retired, he has been hurting me in the pocketbook. And he has been hurting me in the pride. Ever since!"

Singstad stood up, with astonishing violence for a man in his eighties, walked over to the window and looked down. It was a bleak January day and the wind whipping against the glass from off the Upper Bay was cold and bitter. It had piled snow against the red sandstone walls of the old fort.

But the walls looked mighty solid all the same, and Singstad muttered, half under his breath, "All lies and fabrications. Lies and fabrications." And then, after a while, he said, aloud, "I'm not sorry. A. B. Jones was a Quaker, and Quakers don't fight, but he was a wonderful man. He was a very wonderful man. All my commissioners were wonderful men. I'm not sorry at all."

But then the old man fell silent again, looking out over the Battery and

across the Bay toward Brooklyn, and when he finally spoke again, after a long time, he spoke in a very low voice and what he said was: "Ever since."

Even after the war, no one would pay more than \$20,000,000 for the \$48,000,000 in Queens-Midtown Tunnel bonds, Moses had said. As for the Brooklyn-Battery Tunnel, he had said it would "never sustain" the \$57,000,000 in bonds it had cost.

Such predictions of financial disaster unless the Tunnel Authority was "rescued" by using the revenues from his profitable bridges to "bail out" its bankrupt tunnels had helped Moses take it over. During the rest of his life, he would, at every opportunity, attempt to prove that this was in fact what had happened.

In reality, the Queens-Midtown Tunnel began earning almost enough to pay all expenses, including the interest on its bonds, practically from the day the war ended; by 1949, it was earning a tidy annual surplus as well. As long as he didn't control that tunnel, Moses had argued that improved access from Queens was unnecessary; as soon as he took it over, he said improved access was imperative—with the opening of his Horace Harding Expressway, forerunner of the Long Island Expressway, tunnel traffic soared, as Singstad had predicted it would, to levels at which its annual surpluses became huge.

Moses had said that the Brooklyn-Battery Tunnel would be lucky to carry 9,000,000 cars per year. In its first full year of operation, the tunnel carried more than 15,000,000 cars. Singstad's tunnel earned Moses \$5,485,000 in tolls that year—more than was earned by the Bronx-Whitestone Bridge, more, in fact, than was earned by the Henry Hudson, Marine Parkway and Cross Bay bridges combined. In its first year of operation, in fact, the tunnel earned more than 20 percent of Triborough's total revenues—enough to "sustain" not \$57,000,000 but \$133,000,000 in bonds.

The two tunnels took off from there. By 1965 they would be providing close to a third of Triborough's total revenue. Moses had predicted financial disaster for them. Instead there was financial triumph. He had said they would have to be "salvaged" by the rest of Triborough's projects. In fact, if there was any salvaging to be done, it was not of but by Singstad's tunnels; their huge surpluses helped Moses' profitable bridges—the Henry Hudson and Triborough and the Bronx-Whitestone—"salvage" ones like the Cross Bay and Marine Parkway which did not earn enough to amortize their bonds.

Not that those facts deterred Moses, of course. In 1969, he wrote in *Public Works: A Dangerous Trade*: "The [Triborough] Authority . . . salvaged the two tunnnel bond issues . . . In effect, this meant pledging bridge tolls after all present bridge bonds were retired . . ."

## 32. Quid Pro Quo

No Tammany man can rise above the local machine. Governor Smith achieved that distinction, but Albany is a long way from the Bowery.

A return to the city of Tammany would be a counsel of despair. People elsewhere would say that water cannot rise above its own level and that the level in New York is contemptibly and irretrievably low.

-ROBERT MOSES, 1941

ON THE BIG DESK in the far corner of the big room in City Hall, among the litter of maps and letters, corncob pipes and spare eyeglasses and the narrow rack holding the six buzzers, there sat now, always, a small bottle of white pills. And more and more frequently now, the little man behind the desk would press both hands hard against his back and hold them there for long minutes, his swarthy face turned gray.

Whether or not Fiorello La Guardia knew in 1945 that he was dying of cancer-and no associate would be able to say for sure later whether he did or not—he was learning that pain could drain even his once-limitless energy (once, talking with a reporter at the end of a long day, he suddenly said, with real surprise in his voice, "Well, I guess I'm tired, too"), and perhaps the sixty-two-year-old Mayor wondered whether he would be physically able to win another victory in the ruthless political arena, where weakness is not pitied but exploited. The odds against victory had never been longer. His frantic grasping for higher office and ludicrous posturing in his wartime jobs had eroded his popularity so deeply that in early 1945 a Daily News straw poll showed that only one out of every four New Yorkers favored his re-election. Roosevelt was dead, Truman antagonized by his antics; if he sallied forth again against a Democratic candidate, in a city in which seven out of every nine registered voters were Democrats, he would no longer be able to count on "benevolent neutrality" from the White House. And the candidate would be Tammany-backed William O'Dwyer, who had given him such a tough fight in 1941, who would be able to ride into the arena this time with a brigadier general's stars, bestowed for wartime service that looked good at least on paper, glittering on his shoulders—and who had led him in the *News* poll. The old coalition which he had led out against the Democrats before had dissolved behind him. Republican leaders, incensed because, in his drive for personal power, he had refused them patronage, were determined, once and for all, to deny him their party's nomination. Reform leaders—men interested in principles rather than patronage—felt that he had, in maneuvers such as downgrading the City Planning Commission and ousting Kern and Sayre and Stanley Isaacs, betrayed those principles; the Citizens Union wanted another Fusion campaign, but one with a new knight at its head. And when, in the spring of 1945, the Mayor appealed secretly first to the City Fusion Party and then to GOP leaders for their endorsement and was humiliatingly rebuffed, he announced publicly that he had decided that twelve years as Mayor was enough for any man, that he would not run again and that he would support instead an independent "No Deal" ticket headed by reformer Newbold Morris.

The events that followed that announcement brought the career of Robert Moses full circle. For Moses, who had so long and so violently despised Tammany Hall and all that it stood for, who had called Tammany "a rotten political machine," who had spent the first years of his career fighting it, who had understood so well that the essence of the machine, the motivation of its leaders, men he said were interested only in "dough," in "obscurely making a living out of politics," never changed, who had asked so eloquently in 1933, "Do you think that the Currys, McCooeys, Farleys and Flynns are in any essential respect different from the Murphys, Mc-Cooeys, McCabes and McCalls of the cartoons of a generation ago?," who had warned voters in three separate mayoral campaigns that they must never let Tammany return to power, who had said during the 1941 campaign that "a return to the city of Tammany would be a counsel of despair," who had said of Tammany's 1941 candidate, the same William O'Dwyer who was its candidate now, "No Tammany man can rise above the local machine"this same Robert Moses, during the entire campaign, never once criticized Tammany or its candidate. His lone public statement ostensibly supported Newbold Morris but also mentioned O'Dwyer favorably. And he supported O'Dwyer's running mate, Lazarus Joseph, whom La Guardia called "Flynn's messenger boy."

Men who knew Moses were waiting for the quid commensurate with the invaluable quo he had bestowed on Tammany Hall. They did not even have to wait until the campaign ended. In a paid announcement over WJZ four days before the election—a date selected to maximize Election Day impact while still allowing ample time for press reaction—O'Dwyer disclosed that "shortly" after his nomination in August, he had conferred with "this valuable public servant" and had asked him to be a part of his administration if he was elected—and not merely as Park Commissioner and Triborough Authority chairman. He had told Moses, O'Dwyer said, that if he was elected he would immediately create a new post to handle a vast program of postwar public works construction, a "Coordinator of Construction" with sweeping powers not only over parks, parkways, bridges and tunnels, but over the construction of public housing, the field from which Moses had

been barred by La Guardia—over, indeed, the construction of all major public works of any type in the City of New York. He had asked Moses, O'Dwyer said, if he would be willing to accept that post.

"I am happy to announce," O'Dwyer said, "that he has agreed to render this important public service."

Disbelieving reporters telephoned Moses at his apartment. "It's true," he said.

Not that O'Dwyer needed any help—he won in a landslide—but Moses' agreement provided the Tammany candidate with valuable protective coloration. Press reaction was precisely what O'Dwyer's advisers had foreseen it would be. His announcement "was seen today as answering charges of waste should the Democratic-ALP candidate win Tuesday's election," the *Post* reported. "We like . . . the announcement better than any news we've heard yet in connection with the mayoralty campaign," said the *News*. "Big Bob the Builder Moses is one of the ablest public servants in this or any other city. It would be tough to see him step out of the public service picture."

There was, however, puzzlement among the editorial writers: how could Robert Moses—the foe of corrupt machine politicians, the man who would never compromise his principles or make "deals," who would not give politicians inside information or patronage or award contracts to political favorites—manage to run construction in an administration which would be dominated by elements to which construction deals, inside information, patronage and contract favoritism were a way of life. The Herald Tribune, which was supporting Jonah J. Goldstein, the Republican-Liberal candidate, and was careful to note that Goldstein had also promised to keep Moses on, said that while "the O'Dwyer statement is good politics and even better, it is good common sense . . . a question still remains: How long? How long would Mr. Moses last under an administration that was dominated by the more raffish and corrupt elements of Tammany Hall? At a good guess we would give him about six weeks."

The guess, off by approximately fifteen years, was about as good as the assumption that underlay it, an assumption revealing only the depth of the misapprehension about Moses' true character. For the Robert Moses about whom the *Herald Tribune* was editorializing hadn't existed for a long time. The Robert Moses of 1945 was not the foe of the practical politician but the essence of that peculiar animal. He was the complete realist. Willing, in order to accomplish his purposes—purposes which in 1945 revolved around the retention and acquisition of power—to throw onto the table any chip he held, he had, in the election of 1945, with a chance to obtain more power than he had ever possessed before, thrown onto the table the most valuable of all his chips: his name.

The drama that was the relationship between Fiorello Henry La Guardia and Robert Moses had been played out for twelve years in the brightest of spotlights. Its last scene was played out in semi-darkness: the gloom of an upstairs bedroom in the small, heavily mortgaged house in Riverdale, the

only thing La Guardia owned besides \$8,000 in United States War Bonds, in which, nineteen months after he had left office, the wasted little bundle of a man that had once been the Little Flower lay behind drawn shades, waiting to die.

"When the Mayor sent for me late in the summer of 1947," Moses has related, "I was shocked at the change in him. He was in bed, so shrunken, so chapfallen and yet so spunky, and so obviously on the way out. To tell the truth, I felt like crying."

Long after La Guardia died, Walter Binger recalled for the author a conversation he had had with the ex-Mayor in 1946, when La Guardia had still been able to get downtown to his beloved Engineers Club for lunch.

"La Guardia was eating alone in the corner," Binger says. "I was eating at the center table, and I noticed that he was looking very gloomy, and after lunch I went up to him and I said, 'How's things, Major?'

"He said he had just been thinking about the city, and then he said, 'Moses has got too much power up here now.'"

Binger, who hated Moses for what he had done to Isaacs, and who had hoped in vain for years that La Guardia would take a firm stand against Moses at last, says that La Guardia looked so unhappy while he was saying this that he was moved to put his arm around the little Mayor's shoulders. But he couldn't resist asking as he did so, "Well, Major, who gave it to him?"

At that, Binger recalls, La Guardia looked even sadder. Finally, he said, "Yes, but I could control him. Now no one will be able to control him."

The first part of the ex-Mayor's statement was not completely accurate. The second part was.

# 33. Leading Out the Regiment

The papers and some people are always ready to find wrong motives in what us statesmen do. If we bring about some big improvement that benefits the city and it just happens, as a sort of coincidence, that we make a few dollars out of the improvement, they say we are grafters. But we are used to this kind of ingratitude. It falls to the lot of all statesmen, especially Tammany statesmen. All we can do is to bow our heads in silence and wait till time has cleared our memories.

Just think of mentionin' dishonest graft in connection with the name of George Washington Plunkitt, the man who gave the city its magnificent chain of parks, its Washington Bridge, its Speedway, its Museum of Natural History, its One Hundred and Fifty-fifth Street Viaduct and its West Side Courthouse! I was the father of the bills that provided for all these; yet . . . some people have questioned my honest motives. If that's the case, how can you expect legislators to fare who are not the fathers of the parks, the Washington Bridge, the Speedway and the Viaduct?

—STATE SENATOR GEORGE WASHINGTON PLUNKITT (COMMANDER IN CHIEF OF THE BLACK HORSE CAVALRY), 1905

BEFORE THE WAR, Robert Moses had employed his leverage with a force not responsible to New York City's voters but possessed of considerable influence over the city's government—New York State—to compel the city to give him a free hand in certain areas of public works. Hardly had the war ended when another outside force, the federal government, began to loom larger and larger over the city. And Moses, with his aims for the city

now enlarged—enlarged to a point at which they involved in effect the reshaping of its entire public estate—employed that force too to compel the city to accept his aims as its own.

The scale of the new federal involvement in urban America was unprecedentedly massive. Before the war—during the entire Depression—the federal government had financed a total of 200,000 low-income apartments. Within the first four years after the war, the federal government authorized the financing of 810,000 low-income apartments. In 1949, Title I of a new Federal Housing Act codified a new concept—urban renewal—that insured that Washington's role would henceforth be as crucial as City Hall's not only on low-income housing but in most major urban reshapings. Before the war federal aid built mainly highways in the open countryside. The Federal-Aid Highway Act of 1944 authorized arterial routes within city limits as well, and with each postwar federal highway act the proposed urban mileage soared; the Interstate Highway Act of 1956 empowered the government in Washington to trowel down 6,700 miles of roads within the cities of America.

Most Depression-era federal aid had, moreover, been funneled into the cities through the cities' governments or through new agencies such as housing "authorities" set up and controlled by the cities' governments. Nowhere had this been truer than in New York, where La Guardia's alliance with Roosevelt had insured that WPA and PWA grants would be funneled through the city's highest elected official. (Moses had been able to obtain a disproportionate share of such grants, but only by working with and on that official.) As federal grants to cities increased after the war, however, so did the authority of the federal bureaucracy—at the expense of the cities' authority.

In New York, as the city's control over federal grants decreased, Moses' increased.

It increased partly because of Moses' bill-drafting genius, and what that genius enabled him to make out of the new post he had obtained from O'Dwyer.

The post lay outside the established structure of the city's government. Nowhere in the forty-nine chapters of the City Charter was there a single mention of a "City Construction Coordinator." To some men, this might have represented an obstacle. To Moses, it represented an opportunity. For since there was no definition of the position's powers, he could write the definition himself.

As O'Dwyer had conceived the powers, they would be substantial—the Coordinator, while an appointed official, would, in the construction field, possess authority over all other appointed officials, even department heads—but bounded by a strict upper as well as outer and time limit; the Coordinator's authority, limited to construction and temporary—to last only as long as the postwar adjustment period—would be subordinate always to that of the elected officials to whom the voters had entrusted the power to make decisions for the city: he would be merely an instrument to carry out their decisions. The amendment to the city's Administrative Code drafted by Moses to create the position—and delivered to the incoming

administration in the midst of the inaugural confusion-ostensibly was faithful to O'Dwyer's conception, providing that "the Coordinator shall schedule and . . . expedite the work of all agencies of the city" but only "upon approval of projects by the Mayor and governing bodies of the city." Not one of the Assistant Corporation Counsels interrupted in the midst of settling into their new offices by a request from O'Dwyer to "take a look" at the draft, saw that it was anything more. When the Citizens Union protested that it "gives too much power to one person and supersedes the Charter," "sources close to O'Dwyer" assured reporters that the Coordinator's job would be "purely administrative and not policy-making." City Council and Board of Estimate passed it unanimously after the most cursory discussion, and O'Dwyer quickly signed it into law as Local Law Number I of 1946, the first legislative act of his administration. (Reporters accepted O'Dwyer's assurance; the press paid as little attention to the code amendment as it had to Moses' stealthy, subtle takeover of the Tunnel Authority a year earlier; its approval by the Board rated exactly one paragraph in the *Times*.)

But, buried within the lines of convoluted legalisms, the amendment also contained an innocuous phrase—concealed, as was the custom of the man who had been the best bill drafter in Albany, at the end of a long sentence whose other clauses all purportedly limited his powers—allowing the Coordinator to "represent the city in its relations with cooperating state and federal agencies." Moses used this phrase, so innocent in appearance, as authorization to write into contracts between the city and these agencies provisions designating himself as the city representative with whom they agreed to deal, thereby making certain that it would be he and he alone who was presenting the city's position—or his representation of the city's position —on the design and relative desirability of construction projects to the two "outside" governments which would be largely funding them. The phrase also empowered Moses to negotiate with federal and state officials, learn their position and present that position—or his representation of that position -to city officials, to be, in other words, the sole broker between the city and the governments on which the city was relying for desperately needed funds. Moses' representations were not always strictly accurate. For twenty years, for example, he falsely told successive mayors that the Federal Bureau of Public Roads was unalterably opposed to building the Lower Manhattan Expressway as a tunnel. But for twenty years—until, in 1964, Mayor Robert F. Wagner, Jr., went to Washington to find out about the expressway for himself—no mayor or other city official investigated any Moses representations. During those years, city officials heard only Moses' version of what the federal government was "insisting" on.

Most of the time, moreover, no misrepresentation was necessary. Moses' relationship with federal bureaucrats helped insure that what they were insisting on was what he was insisting on. Their philosophy, of course, was in many ways his philosophy—the road builders in Washington were animated by the same "engineering mentality" that played so important a part in his make-up—and there was a personal factor involved as well: by 1946 he

had been dealing intimately with the officials of the Bureau of Public Roads for close to twenty years, wining them, dining them, charming them, persuading them to approve his state parkways and then, when the parkways were finished, thrilling them on elaborate tours that showed them what he had done with their money; Bureau director F. V. Du Pont once wrote Moses: "I know of nothing comparable in the United States, and, I think I can safely say, the world. More power to you!" Du Pont's successor, de facto head of the Interstate Highway System, was Bertram D. Tallamy, former superintendent of the New York State Department of Public Works, the same Bertram D. Tallamy who in 1926 had come down from Niagara to sit at Moses' feet for private lectures on the art of Getting Things Doneand who told the author that the Interstate Highway System was built by principles he had learned at those lectures. Moses was not merely the friend of the federal road builders, he was their idol. Lastly, of course, the information on which they based their decisions on what was best for New York was the information that Moses saw fit to give them. If there were other views in the city on proposed highways—as to where they should be located so as to minimize neighborhood disruption, for example—the Bureau of Public Roads didn't get to hear them. The roads that the Bureau approved, roads that would play so large a role in determining the city's destiny, therefore, were Moses' roads; the city officials supposedly responsible for the city's destiny had only two alternatives: to accept the roads offered to them or to turn them down-along with the tens of millions of dollars involved.

It was a position ideal for the whipsaw—and Moses used that technique unmercifully. Says Judge Jacob Lutsky, the gruff, hard-boiled genius of municipal administration who was to be a key behind-the-scenes adviser to all three of the postwar Democratic mayors, O'Dwyer, Impellitteri and Wagner:

Under federal law, a commitment from the Mayor wasn't enough; you also needed a commitment from the Board of Estimate. But [Moses] would go to Washington and Washington would say, "Okay, as long as you've got Mayor and Board of Estimate approval." Then he would get an "Okay" from the Mayor, with the Mayor saying, "Don't forget you need both Washington and Board of Estimate approval." Then he'd run to Washington and say, "Look, I've got a commitment from the Mayor." They'd firm it up some more, say, "Okay, as long as you've got an approval from the Board of Estimate." And he'd come and say to the Board of Estimate, "If you don't give me a commitment, I'll lose the money." And lots of times we had to give him the commitment because we didn't want to lose it.

Housing, Moses took over by indirection. Faced, as soon as he took office, with an immediate need for competent housing administrators, the harried new Mayor found Moses ready with recommendations. Before the Mayor realized what he was doing, he had filled three of the five places on the City Housing Authority board—and many top Authority staff positions—with men loyal not to him but to his Construction Coordinator. Despite his lack of the slightest formal connection with the Housing Authority, Moses controlled it absolutely for a decade. As late as 1955, Warren Moscow,

appointed its executive director by Mayor Wagner, reported to Wagner that its chief engineer regarded Moses, not the Mayor, "as his boss."

In 1948, Moses had a visit from a Yale classmate who wanted to discuss details of a new type of federal slum clearance program—"urban renewal"—that he was considering sponsoring. It was United States Senator Robert A. Taft. Months before Congress approved the Federal Housing Act of 1949—months before the public had even heard the phrase "urban renewal"—Moses had persuaded O'Dwyer to appoint a Mayor's Slum Clearance Committee (Robert Moses, chairman). Through that committee he controlled urban renewal in New York—by far the largest program in any city in America—for a decade, controlled it absolutely. The Mayor and the Board of Estimate, Lutsky says, "never even knew what was going on in that committee until a project was presented to us for approval." Before the war, Moses had used a force outside the city to help him bend the city to his will. Now there was a new outside force. He used that force, too.

And he was to go on using it for some time. O'Dwyer, in creating the position of Construction Coordinator, had envisioned it as a temporary, "postwar adjustment period" job. But temporary is a relative term, particularly when applied to a job Robert Moses was holding. And postwar is a time limit with a certain elasticity. O'Dwyer would remain in his job for less than five years. Moses would remain in his job—signing his letters "Robert Moses, Coordinator"; he preferred that Orwellian title to "Commissioner"—for more than twenty years.

While using the new force, moreover, he did not neglect the old.

His control of the Legislature, cemented by patronage and favors, remained as solid during the postwar as the prewar era. As for the Governor's chair, that was occupied for the first twelve postwar years by Thomas E. Dewey and W. Averell Harriman. Dewey liked to boast that "Bob discovered rather quickly that he couldn't push me around," but the words rang rather hollow to men like the GOP politician who once heard Moses on the phone with the Governor. "I walked in and he was cursing and shouting—'You goddamned son of a bitch! Don't you tell me what to do, you stupid son of a bitch!' Then he hung up and I said, 'Bob, was that the Governor?' And he said, with that big grin, 'Yeahhhh.'" Harriman, a crusty aristocrat with a legendary lack of awe even for Presidents, stood in awe of Robert Moses, in part because he had, during the 1920's, been one of the men anxious to create parks for the public but utterly unable to do so until Moses had come along and accomplished what he had begun to think was all but impossible, in part because of sheer force of personality: the Governor was one of the regular guests at the Sunday brunches at Herbert Bayard Swope's Sands Point mansion, and guests recall him sitting silently, not venturing to interject a word, while Moses, another regular, discoursed. But Harriman had some ideas, rather novel in public officials of the time, on the need for increased concern for individuals and for community participation in the planning of public works; noticing on a trip to Monticello early in his Governorship that highway guardrails had been put up within three feet of service stations and restaurants, isolating them from the road that should have brought them business, he issued on the spot an order that they be torn down. Convinced that Moses was not as final a word on the construction of urban expressways as he had been on suburban parkways, he installed a new superintendent of the Department of Public Works, John W. Johnson of Buffalo, gave him several "liberal" young aides, and told them to "get tough" with Moses. But Moses got tough with them—and with Harriman—instead.

Harriman aide James E. Truex describes the Governor's education in the facts of political life. "If you began to fight with Moses," Truex says, "you'd have to fight with him on so many fronts. You'd have to fight with him on parkways and on parks . . . He had so much potential for trouble because of the many directorships he had. And the main threat he had was [to issue press releases]. He could always cause you so much trouble by calling you 'a dirty politician'—he was above politics, of course . . . Governors were always nervous about this. You knew that if he said something, the newspapers would pick it up big." Moses disciplined Harriman not only by using publicity but by withholding it: by not inviting the Governor to speak at ground breakings and ribbon cuttings. In 1957, for example, Moses staged a day-long series of ribbon cuttings to celebrate the completion of a string of grade-crossing elimination projects for which Nassau County communities had long been clamoring. The Democratic Governor, who had authorized the projects and provided the funds for them, didn't even know the ceremonies were being held until he read newspaper stories about them -stories and pictures of Moses and the other official participants, all Republicans. Furious, Harriman ordered that a loyal public relations man be assigned to DPW's metropolitan area headquarters to alert him to future ceremonies—as Truex puts it, "to try to get us some PR." But Harriman found that gubernatorial participation in ribbon cuttings was no guarantee of a gubernatorial share of the publicity. "Moses would put out the announcements, and Moses would put out the summaries of what guys said," Truex explains. Truex put out summaries of the Governor's speeches, of course, but, he says, "the press recognized that Moses' office was running [the ceremony], and they would call his office and not me" for summaries and other information—such as who deserved the credit for the public improvement.

Almost despite himself, moreover, Harriman found himself being influenced by prevailing professional opinion.

When conflicts arose over a Moses project, the old-line DPW engineers would present studies to prove that Moses was right—and it was difficult to find any engineers who felt that Moses was wrong. ("One of the problems," Truex would note, "is that engineers tend to agree on these things.") Harriman, after all, was not an engineer. "When engineers came in and said they agree with Moses and this was the way it had to be done, a Governor had to respect that opinion," Truex says.

Soon the Governor was suing for peace. Harriman had called in Truex and another young liberal aide and, in Truex's words, "said he was getting

reports from the local people up on the St. Lawrence that Moses was going to tear out lots of the homes of little people along the St. Lawrence for his parkways, and the little people had to be protected, and we should get right up there [to ascertain if the reports were true]." The two aides found out they were—"there were cottages lining the shore near Massena," Truex says, "nice-looking cottages, too, not luxurious but nice, cottages into which you could tell loving care had gone. Moses was just obliterating them"-but "about ten minutes after we got back [to Albany], there was a letter from Moses [to Harriman]: These people—us—had been up in his territory and we had been talking to people we shouldn't have been talking to, etc. And that was the last we heard of the little people. It was never brought up again." The Governor had backed down. Shortly thereafter, he suggested that the huge centerpiece of the St. Lawrence project be named the "Robert Moses Power Dam." Soon he was being afforded star billing at ribbon cuttingsnext to Moses', of course. Truex's tardiness in perceiving the change in the Moses-Harriman relationship cost him a humiliating tongue-lashing. For a Brooklyn-Queens Expressway ribbon cutting in 1958—at which Harriman was to be the main speaker—"I had written a speech kidding Moses," Truex recalls. "We were in the car going toward the ceremony and the Governor looked at [the speech] and he blew up and accused me of seeking to undermine his relationship with Robert Moses." Truex started to argue that "you can score points" by attacking Moses, but Harriman flew into a rage, violently upbraided his aide and told him: "I want you to know Robert Moses is coming out for me in the campaign." (It was small consolation for Truex that Moses' keen eye for political realities saw early on the popularity of Harriman's opponent, Nelson A. Rockefeller, and that the hoped-for endorsement never occurred.)

As important as Moses' relationship with the state's Governor was his relationship with its administrative machinery.

It was, of course, largely his machinery, the governmental apparatus his State Reconstruction Commission had designed in 1919. He, more than any other individual, knew which of the tens of thousands of administrative positions in that government were crucial to his purposes, and after a quarter of a century of power in the state, he had "Moses Men" in most of these posts. He had taken measures to minimize the threat to his purposes posed by key officials who were not Moses Men: some of these officials would have been astonished to learn—most of them never did—that their secretaries were on Moses' payroll as well as the state's, and that in transcribing confidential memoranda and minutes of secret meetings devoted to blocking a Moses project or to curbing Moses' power, these secretaries made an extra carbon, which was delivered nightly to Moses' representatives in Albany.

More than twenty years before—while Bill O'Dwyer was still a cop pounding the beat—Robert Moses had laid the groundwork for control of the state machinery that would directly affect his road building, dividing the State Department of Public Works into ten geographical districts, placing the entire New York City—Long Island area, in which most of his road building was concentrated, in a single (and hence easily controllable) district, District

Ten, and writing into state law a unique provision that gave his Long Island State Park Commission a unique veto power over all parkway plans. Moses cemented his control of District Ten's engineers, already firm through identity of interest and philosophy, with stronger mortars. His favor was, for many engineers, the only road out of the tedious progression of the life of a civil service engineer, a life that offered little in the way of either money or power. Cultivate his favor and you could go on luxurious jaunts and be well paid for the privilege—as District Ten chief engineer J. J. Darcy was in being awarded lucrative "consultantships" in Moses' highway studies of other cities. Cultivate that favor and you could be placed in command of great enterprises, as Arthur B. Williams was when Moses plucked him out of a routine middleechelon engineering civil service job and handed him authority over a hundred middle-echelon civil service engineers by appointing him general manager of the Niagara State Park Commission. Cultivate that favor and when you had had enough of civil service, you might receive a partnership in the consulting engineer firms that received Moses' immensely lucrative contracts: Darcy's successor, Milton E. Goul, became Milton E. Goul of Buckley, Shumavon and Goul. Lose that favor and you would find yourself mired for decades in the same job, or transferred to some other district—as a recalcitrant patrolman is transferred from the Broadway beat to Staten Island—and you would wait out the long years to your retirement sitting in a drab office in Hornell supervising the grading of graveled farm roads in Chemung County. Even during the few months when Johnson was heading DPW, he and the other Harriman appointees teetering precariously atop the huge DPW bureaucracy proved unable to deflect it even momentarily from the course on which it had been gathering momentum for long decades. "The DPW is a tremendous hierarchy," Truex would say years later. "When we got there, it was his hierarchy. When we left, it was still all basically his." Under Tallamy, DPW had given Moses a veto power over all highway projects in the New York metropolitan area. Except for a few months, he retained that veto during Johnson's superintendency, too.

The returns electing Rockefeller Governor had hardly landed on Rockefeller's desk in November 1958 when a hand-delivered letter from Moses arrived there recommending the appointment to the DPW superintendency of J. Burch McMorran, chief engineer of Moses' State Power Authority.

A prototype second-generation Moses Man, McMorran was not as brilliant an engineer as originals like Art Howland or Earle Andrews, but he was competent in his profession and possessed the qualities that Moses now considered more important than brilliance. (The qualities Moses mentions first in his evaluation of McMorran reveal what he was looking for: "McMorran... was not an innovator. He was a good soldier, always loyal...") Rockefeller accepted the recommendation—and for at least the first term of Rockefeller's Governorship, Moses still had his veto power. In an arrangement at least tacitly approved by three Governors—an arrangement lasting for at least seventeen years after the war—"Moses had the say," McMorran says, "over who got the contracts on all New York City [area] jobs." And not just on contracts. Moses had the say—absolute authority—

to decide not only who should design and build all highways in the metropolitan area, but which highways would be built, when they would be built and where they would be built. The state had in effect turned over to him—intact and complete—all its authority over the construction of arterial highways in and around New York City.

This authority was extensive. The Interstate Highway System was described by its creators as a "partnership between the state highway departments and the federal government," and that description was accurate. No city was a partner. Federal funds for an arterial highway within a city were handed not to the city but to the state in which it was located. The state—not the city—had the power to spend those funds. The state had the final say on every detail of the plans and specifications, down to the selection of the specific city streets and lots along which the roads would run. They supervised every detail of the actual construction.

And since New York State had turned that power over to Robert Moses, that power was vested in him. His possession of it therefore strengthened the control he already possessed over highways by virtue of his influence with the federal government. Strong already, his power was now stronger still.

Over the planning and building of arterial highways in and around the City of New York—arterial highways which would do so much to shape the future of that city—the federal and state governments had a stranglehold. The hands that implemented that stranglehold were the hands of Robert Moses.

It was not only forces outside the city's government that Robert Moses used in bending the city to his will. He used forces inside that government as well.

He used, for example, the force of greed.

Greed had always been the force that drove the city's five-county Democratic political machine. But Moses' twelve previous years in office in the city had been La Guardia's twelve years, too, and during those years the machine's influence in the city's government had been all but eliminated. Moses, in Getting Things Done, had been able to deal almost entirely with the Little Flower, and only occasionally with the spiritual descendants of Red Mike Hylan.

Now, however, the machine was back in power. It was not, at first, dominated as it had been before La Guardia by the Manhattan Democratic organization housed in Tammany Hall, the Great Wigwam at Union Square. Weakened in relation to its allies by the population exodus from Manhattan, the Manhattan organization had been cut off from patronage and contracts at City Hall by La Guardia, from the Statehouse by Lehman and from the White House by Roosevelt, who, taking revenge for its defiant support of Alfred E. Smith at the 1932 presidential convention, had funneled federal largesse instead through the Boss of the Bronx, Edward J. Flynn, with enough going to Brooklyn to make its Democratic organization as well as Flynn's stronger than Manhattan's. By 1945, the Great Wigwam itself no longer belonged to the Manhattan organization, which, unable to meet

the mortgage payments, had had the building sold out from under it,\* and neither did control of the city's five-borough Democracy. But journalists, rhetorical traditionalists, were still referring to that Democracy as a whole as "Tammany Hall," and if that catch phrase was misleading in political terms, it was accurate in moral ones, for if the controlling structure of the postwar Democratic machine was different from the pre-La Guardia model, the ethics of the machine were not. As the Herald Tribune editorialized in 1945, "A vast, corrupt organization, starved through twelve long years, is panting for its revenge." To the men of the machine, the end of the La Guardia administration, cleanest in the city's history, meant only one thing: the twelve lean years were over. Now was the time for the fat. E finita la cuccagna! the Little Flower had promised—and he had kept his promise. But now he was gone. The party was on again. New York was again a city in which SCANDAL and GRAFT and FRAUD glared bold and black out of the headlines stacked on newsstands, in which the newspapers were filled with reports of petty peculation—and in which the reports, no matter how lurid, were no more than a hint of the extent to which the city was again a place in which the badges of governmental authority, the badges of fire inspectors and health inspectors and plumbing inspectors and building inspectors, had become again silver- and gold-plated licenses to extort money from the city's citizens. New York was a city in which the police, every day, sold the law in the streets—sometimes it almost seemed as if being on the force was synonymous with being on the take-and in which sacred justice was sold in the very temples of justice (which was not too surprising, of course, since many of justice's black-robed priests, who presided in those temples, had purchased the right to do so), in which the only law that really counted was the law of the jungle. New York was a city in which public office was, increasingly, a means to private profit. New York was a city in which it sometimes seemed as if there was scarcely an officeholder who didn't demand a slice of the pie—and in which the pie was big enough so that it sometimes seemed as if a slice was available for every officeholder no matter what his party, the Democrats shrewdly making enough key Republicans a part of the arrangements by which the city was governed—putting them on the public payroll, giving them a share of judgeships and a cut of lucrative city contracts, taking them in as business partners—so that the GOP wouldn't try too hard to disrupt those arrangements, and so that when a private citizen, or the Citizens Union, or a newspaper, demanded an investigation of official corruption, no one with the power to conduct a real one was interested in doing so. New York was the city of the Fix, of "protection," of the shakedown. The twelve years of La Guardia had been only an interlude. New York was again what it had been before the Little Flower bounced into City Hall: a city in which everything had its price.

<sup>\* &</sup>quot;I never thought I'd live to see the tiger get skinned," Jimmy Walker remarked. The sale was symbolic not only of the loss of power by Tammany but of the rise in power of the city's labor unions: the purchaser was the children's dress unit of the ILGWU.

The price was highest in Moses' fields.

Ever since the post-Civil War years in which the Tweed Ring, authorizing municipal building on a scale that gave New York its own Reconstruction Era, took fixed percentages—5 percent for the Mayor, 20 percent for the Comptroller, 25 percent for William Marcy Tweed, who, with his choice of any post, chose the public works commissionership—of the padding in contractors' padded bills, public works had been the main ingredient in the rich swill of graft on which Tammany battened.

Now the techniques were different: subtler, smoother. Charlie Murphy had taught his sachems that it was stupid to take cash, too easy for some prying reporter or rebel district attorney to trace it, too easy to prove that it had been taken in exchange for a favor, too easy to subpoena a contractor's books and haul the contractor's timid little bookkeeper before a grand jury and frighten him into telling what the items listed as "cash disbursements" really represented. By precept, if not by preachment (for Silent Charlie had not received his nickname for nothing), for example, by having his Board of Aldermen hold up street-closing permits for the construction of Pennsylvania Station until the railroad awarded the excavation contract to a firm in which he had a hidden financial interest, he showed Tammany that there were safer ways of making money from public works. By 1905, Sachem George Washington Plunkitt, who, as a state senator, had ridden at the head of the "Black Horse Cavalry," was sitting, resplendent in handle-bar mustache and gleaming stovepipe hat, on Graziano's bootblack stand in the old courthouse off Foley Square at noon hours expansively explaining how cavalry were obsolete and how he was coining millions out of the "coincidences" surrounding "big improvements," coincidences which he called, in a phrase he may also have coined, "honest graft." (Silent Charlie, who, if he didn't invent "honest graft," refined it to meet the needs of a modern political organization, coined no phrases; he had not received his nickname for nothing.)

Murphy and Plunkitt were uneducated men; they had never been to law school. If they had, they would have found the making of "honest graft" safer and easier still. Al Smith, as always, phrased it best. Strolling through a lawschool library one day, the Governor noticed a student poring intently over his books. "There," he said with a smile, "is a young man studying how to take a bribe and call it a fee." By the Twenties, most honest graft was being worked through "fees," mostly through legal fees (more politicians belong to the legal than any other profession), but also through the real estate brokers' fees called "commissions," the insurance brokers' fees called "premiums" and the public relations fees called "retainers." Jimmy Walker's crew, overconfident and careless, forgot Murphy's precepts, but Samuel Seabury, finding the cash in their tin boxes, drummed the teachings of the master into Tammany again strongly enough so that the braves would never forget them again. In the post-La Guardia era, there was no more "Tin Box" Brigade. It was the Retainer Regiment now. Corrupt public officials who were lawyers would support or oppose a bill according to the wishes of a business

firm, and later the firm would retain the official in his private capacity as an attorney, paying him a fee for "services"—legal services, of course—"rendered." Corrupt public officials who were insurance brokers would be allowed to write a firm's policies, and thereby to obtain the premiums attached. In the interaction of politics and public works, cash was now the medium of exchange only on the lowest levels. Now if some investigator found that a contractor's books included a \$10,000 payment to a city councilman, next to the payment would be the notation "legal fee," and who could prove that the services the councilman had rendered to earn the fee were anything other than legal, that the councilman's vote in favor of a bill the firm also happened to favor was anything but coincidence? The presence of a councilman's name in a contractor's books would, moreover, be unusual, an indication that either the contractor or the councilman was still ignorant of the higher refinements of honest graft, one of which was to have the contractor pay the fee not to the councilman but to another law firm, which would then, taking out a small handling charge for itself, pass it along.

The profit in public works in New York had long been huge; with the postwar building boom, it reached new dimensions. "It's a king's ransom in a city this size," Reuben Lazarus said. And if there was subtlety now in the making of this profit, the making was still, for the machine, the motive. The greed was only refined, not eliminated. The Tiger, starved for so long, was more voracious than ever. Every large-scale public work, it sometimes seemed, had to have its arrangements, its payoffs, its deals—its "coincidences." Until the coincidences were arranged, there would be no public work. If Board of Estimate or City Council approval was required, that approval would not be forthcoming. If implementation of announced policy by a city agency was necessary, that implementation would be endlessly delayed. The great Mayor was dying—almost penniless—in a little house in Riverdale; in the City Hall he left behind him, everything had a price. And to Get Things Done in the city, one had to pay it.

Once Robert Moses would have scorned to pay it. Once he had scorned to pay it, refusing for four bitter years to make even the minor compromise over patronage that might have made possible passage of at least some of his proposed civil service reform measures; later, while attempting to realize his Long Island park plan, refusing for more bitter years—refusing even though he saw the possibility that his refusal would doom his great dream forever—to make deals with the Nassau County Republican machine that alone could give him the right to create Jones Beach.

But that Robert Moses no longer existed. The Robert Moses who had taken his place paid the price. And he paid it in full.

He had the money to pay it.

He had the money partly because his control of the City Housing Authority gave him control over close to a billion and a quarter dollars in federal and state funds dispensed through that agency, partly because his control of the State Department of Public Works gave him control over another billion and a quarter dollars in federal and state funds dispensed through that agency, and partly because his control of the Mayor's Slum Clearance Committee gave him control of a billion dollars more dispensed through that agency—a total, during the first fifteen years after World War II, of close to three and a half billion dollars which he dispensed in the city on behalf of federal and state agencies largely beyond the control of the city's government.

But mainly he had the money to pay it because of his control of an agency that was largely beyond the control of any government, federal, state or city: the Triborough Bridge and Tunnel Authority.

With the war, and gasoline and tire rationing ended and automobiles pouring off the assembly lines again, the volume of automobile traffic in New York soared.

In 1941, the Triborough Bridge had carried 11,000,000 vehicles. In 1946, it carried 13,000,000; in 1947, 16,000,000; in 1948, 19,000,000; in 1949, 23,000,000; in 1950, 27,000,000; in 1951, 32,000,000—in 1960, fifteen years after the war ended, it was carrying 46,000,000 vehicles per year. And that was just one bridge. Traffic on all Triborough Authority toll facilities had been 43,000,000 in 1941; it was 112,000,000 in 1951 and 154,000,000 in 1960. The Authority's annual income had been \$8,000,000 in 1941; in 1951, with the Brooklyn-Battery Tunnel's thirty-five-cent-per-car charge swelling the toll receipts, the Authority's annual income was \$26,000,-000; in 1960, it was \$37,000,000 (in 1962 with the Throgs Neck Bridge open and operating, it would be \$43,000,000; in 1967, with the Verrazano-Narrows Bridge open and operating at fifty cents per car, it would be \$75,000,000, almost ten times higher than it had been before the war). These receipts were, of course, capitalized through the issuance of revenue bonds. The income he received from bond sales, combined with other Authority income, meant that Robert Moses had available to spend on public works within New York City during the first fifteen years after World War II, more than three quarters of a billion dollars additional.

Part of the significance of that figure emerges when it is combined with the federal and state money Robert Moses spent on public works within the city during those fifteen years, and the total is then compared with what the financially strapped city itself spent. During that period, agencies controlled by Moses and largely independent of any supervision by the city's government spent on public works within the city close to four and a half billion dollars. The city's government—Mayor, Board of Estimate, City Council—was able during that period to spend, through all its separate departments, a total of less than three and three quarter billion dollars. Robert Moses spent on public works within the City of New York more—far more—than the city spent.

But a greater part of the significance of Triborough Bridge and Tunnel Authority revenue—vast in itself—was the secrecy in which its spending could be cloaked.

Federal and state expenditures were public records, subject to public disclosure. But because Triborough was a public authority—unlike the City

Housing Authority, a genuine public authority—its expenditures were not.

Therefore it was safer to take money from Moses than from the city. A politician or public official could accept a legal fee or an insurance premium from Triborough with assurance that no reporter or reformer would ever be able to discover that he had done so. The State or City Comptroller could, in theory, make the discovery; the legislation creating Triborough authorized in-depth audits of its books by these two officials. But there was no precedent for such an audit; none had ever been undertaken. And there were reasons both practical and political to doubt that one ever would. One was the very size of Triborough: auditing the Authority would require a huge staff working for a long time (one estimate was fifty accountants working for a year) and no Comptroller had that kind of manpower to spare, so the job would require a sizable appropriation from either Board of Estimate or State Legislature, a highly unlikely eventuality since any Comptroller seeking to pry open Triborough's books would be asking for the money to do so from the very men whose names were in those books. (The Comptroller's party designation was irrelevant; because members of both parties were in those books, his audit would inevitably embarrass members of his own party.)

The secrecy cloaking Triborough's largesse also protected its recipients because the secrecy protected the man who proffered that largesse.

Since 1924, newspapers had, practically unanimously, been describing Robert Moses as a man above politics and deals, a man whose name it would be ridiculous to mention in the same article with any hint of "payoff" or "scandal." After the war, the New York *Post*, with publisher Dorothy Schiff taking a more active interest in her paper, began to question not only Moses' ends but his means, asked to inspect Triborough's records—and, when Moses refused to open them, took him to court.

But the courts upheld Moses' refusal, and without those records, the *Post* could not document its suspicions about the flaws in the Moses image. And for a solid decade after the war, despite the wishes of an occasional reporter or editor, no other newspaper attempted seriously to dig behind that image.

Moses' personal reputation was reinforced by that of the institution with which, increasingly, it became blended. After as before the war, the public was being informed by Moses and by the press—in a single six-year period, 1946 through 1951, there were more than 1,400 editorials in metropolitan-area newspapers on this theme—that public authorities were not only "prudent," "practical," "businesslike" and "efficient" but "nonpolitical," "outside of politics" and therefore "honest." "Authorities are free from political considerations," the *Times* said. "They are free from the dead hand of partisanship and bureaucracy," the *Herald Tribune* said.

Moses' reputation and that of the institution he did so much to bring to maturity was the final guarantee that the secrecy of its books would remain inviolate. A politician considering accepting a Triborough fee could be assured that should some neophyte legislator ever attempt to open Triborough's books, Moses would assail the attempt as an attempt by a politician to interfere with an agency whose independence he didn't like and to get his

hands on some of its funds—that the press would back up that argument, and that the public would be conditioned by years of praise for Moses and for public authorities to accept it. Politicians could be sure that no public official solicitous of his political future would lay that future on the line in a fight with a living legend.\* No one could disprove Moses' reputation without first opening Triborough's books, and no one could open Triborough's books without first disproving Moses' reputation. Any public official thinking about accepting a Triborough retainer could feel certain that his own reputation would be safe in the shadow of Moses'. Robert Moses had \$750,000,000 of Authority money to spend. In the ultimate analysis, it was the public's money. But Robert Moses was not accountable to the public. He was not accountable to anyone. He had \$750,000,000 to give away. And no one would ever know to whom he gave it. And this made politicians and public officials—at least those politicians and public officials interested in retainers—all the more anxious to make sure that he gave some of it to them.

Such politicians and public officials noted another fact about Moses' money which, in their eyes, made it even more attractive than the city's: Moses could give it to whomever he wished.

Expenditure of most federal and state money (slum clearance money was a notable exception) may have been largely free from city control, but it was subject to control by federal and state bureaucrats. Expenditures for highways and low-income public housing, for example, were subject to requirements for competitive bidding and to rigid standards, minimum and maximum, on the work involved, and to constant auditing to insure that those requirements were met. To a certain extent, it was possible to circumvent those requirements—and to the extent it was possible Moses did circumvent them—but the extent was extremely limited; the bureaucrats in Washington, in particular, were grimly stubborn about sticking to the letter of the laws they were charged with administering, and the threat of audits to discover violations of federal regulations was a constant inhibiting factor to potential violators. But over the spending of Triborough money Moses enjoyed absolute discretion.

Edward N. Costikyan was a keenly observant reform Democrat who suddenly found himself able to observe the machine as no other reformer had ever observed it: as its leader. New York's political convulsions of the 1960's catapulted him—to his own amazement and that of Tammany Hall—into the Hall's chairmanship and kept him there for more than two years. And Costikyan, upon descending from his unique vantage point, was to report: "The magnet which attracts corrupters . . . the natural locus of corruption is always where the discretionary power resides." In New York

<sup>\*</sup> Only a Comptroller who held his duty above his career would conduct the first audit of Triborough—and that Comptroller, Arthur Levitt, would not come along, in either city or state, for almost twenty years. When he did and, unable to secure the necessary appropriations from the Legislature, in 1966 scraped together a skeleton crew of his regular staffers to make at least a limited study, the first in the history of Triborough, of the Authority's books, the findings would, if publicized as widely as the Moses legend, have disproved that legend. But the findings were hardly publicized at all.

City, in the postwar era, the discretionary power resided principally in Robert Moses, and like filings to a magnet—or, more precisely, like flies to a sugar bowl—the corrupters, the men who possessed influence over the city's political or governmental apparatus and who were willing to sell that influence for money, were attracted to Moses, and to the seemingly bottom-less sugar bowl for which he possessed the only spoon. And Moses did not send them away disappointed. "Free from political considerations"? Political considerations were in fact the basis—often the *only* basis—on which Moses spooned out his millions. With the power to distribute those millions according to any criteria he chose, during the entire postwar era he chose mainly a single criterion: how much influence an individual had, and how willing that individual was to use that influence on his behalf.

The distribution of the insurance premiums on a single Moses slum clearance project demonstrates the use of this criterion. During the mayoralty of Vincent R. Impellitteri, the insurance was handled by one of Impellitteri's backers, Robert Blaikie. No sooner had Impellitteri lost his bid for reelection (to Robert F. Wagner, Jr., the hand-picked candidate of Tammany boss Carmine De Sapio) than Blaikie lost the insurance account—to a broker associated with De Sapio. And the over-all pattern of the distribution of the Triborough Authority's insurance, a pattern revealed by secret records which the public has never seen, demonstrates the criterion even more strikingly.

The Authority's policies carried premiums of more than \$500,000 per year, or a yearly profit to brokers of more than \$100,000. And the brokers who received this profit had to do almost no work for it; Spargo was to note in a secret internal Triborough memo that once "the big insurance"—the policies insuring Triborough's bridges and tunnels against collapse or destruction—had been placed with insurance companies, "little if any work on the part of the broker" was required. In 1954, almost twenty years after some of these policies had been written, Spargo could say, "To my knowledge the Authority has spent millions of dollars on premiums and has never filed or collected a claim."

During the La Guardia era, there was little political profit to be reaped through the sowing of such policies. What there was would be reaped through the Democratic machine, and some of Triborough's insurance therefore was given to C. J. Reid & Co., a firm whose office was on Vanderbilt Avenue but whose connections were on Fourteenth Street, and Reid's general practice was to parcel out its commissions to key Tammany figures—but another major hunk of the insurance was given to the State Insurance Fund, without any broker at all being involved, and still another was given to a broker with no political connections, for no other reason than that he had been an old army buddy of Spargo's predecessor, General Loeser.

With the machine back in power, however, all this changed. The Triborough policies formerly held by General Loeser's army buddy and the State Insurance Fund were snatched away and given to a new broker. In a frank—frank because he believed it would remain secret forever—internal Triborough memo, Spargo was candid in explaining a key reason for the

choice of the new broker: "because he was a friend of Tom Shanahan's." Shanahan was Tammany's chief behind-the-scenes financial manipulator for close to a decade, until the mid-1950's. For a decade, the policies were left with Shanahan's friend. The Reid company was allowed to keep its policies, but a closer watch was instituted to insure that its farming out of commissions resulted in the maximum political influence for Triborough.

By 1954, Carmine De Sapio had solidified his control of Tammany, centralizing in himself more power than had been enjoyed by any boss since Charlie Murphy. He and he alone called the shots for the machine, and, it sometimes seemed, for Wagner. Sometime in 1954 or 1955, De Sapio was invited for luncheon at Randall's Island. On returning to his office later that afternoon, he told a friend that he had found only two men present when he arrived: Moses and Spargo. And, De Sapio told a friend, after mentioning that they knew he was connected with a certain insurance firm, they had offered that firm all Triborough's insurance—the entire \$500,000 per year in premiums and \$100,000 per year in commissions.

De Sapio told the friend that he had turned the offer down. "He told

me," the friend recalls, "that he was not prepared to exert the degree of influence over the administration and the Mayor that he felt would be required of him in return." That he was not unprepared to exert a lesser degree of influence is indicated by the fact that some Triborough insurance began to be given to a new broker, one whom key Democrats considered close to the leader. But De Sapio's refusal to accept it all left a lot of commissions to be disposed of. Steingut, son of Steingut, spiritual heir to McCooey and boss of the Brooklyn organization that the one-time butcher had carved into shape, received some (and, because a "public authority" was not by customary definition a part of "government," could piously tell an inquiring reporter that he never accepted "government business"). So did the Democratic leader of Queens, the Honorable James A. Roe. In 1953, the year in which the Herald Tribune was stating that authorities "are free from politics," three of the five county leaders of the machine that dominated the city's politics were therefore on Moses' payroll. There were enough insurance premiums left over for Republicans, and at least one of the GOP county leaders, John R. Crews of Brooklyn, received some of them. As for the Legislature, Moses used insurance premiums to insure that his influence there would be exerted not only indirectly through the influence of Roe, Steingut and De Sapio over the legislators they controlled, but more directly through at least one of the small group of "leaders" who really ran the Legislature, D. Mallory Stephens, a poor farm boy from Putnam County who in 1942 became chairman of the Assembly's key Ways and Means Committee, which controls the flow of legislation to the floor-and in 1943 began receiving Triborough insurance business. Stephens continually pressed Moses and Spargo for more business, telling them frankly that the influence he was using on their behalf entitled him to it, and no matter how much he was given he was never satisfied. So insistent became his demands that in a secret memo in 1953 Spargo told Moses: "The only way you can satisfy Mallory Stephens is to give him the business now handled by [Shanahan's

friend]"—the dilemma was resolved by Stephens' decision to leave the Legislature (for a bank presidency).\*

A charting of the legal fees and other emoluments that Moses distributed to lawyers during the postwar era—a year-by-year analysis of who got the fees, when they started getting them and when they stopped getting them—provides almost a year-by-year chart of the fluctuations in the political influence of certain key Democratic lawyers.

The influence of two lawyers did not fluctuate. During the entire postwar era, no matter which Democratic factions were in power, it remained, year after year, steady and immense. And, year after year, these two lawyers received a steady flow of legal fees-immense legal fees-from Mosescontrolled enterprises. One was Samuel I. Rosenman, who, as a hustling young lawyer a quarter of a century before, had needed a boost from Moses just to stay in public service, but who had then begun drafting speeches for gubernatorial candidate Franklin D. Roosevelt and who in the decades since had become an adviser to Presidents, a small but crucial part of history (in 1970, a political advertisement, seeking to capitalize on Rosenman's endorsement in an election, told voters: "When Sam Rosenman talks, you should listen. Roosevelt did. Truman did. Lehman did"), a judge, a president of the Association of the Bar of the City of New York, a figure of prestige so awesome that it seemed to blot from the memory of even old acquaintances the fact that he had once been "Sammy the Rose, Jimmy Hines' assemblyman," a representative in Albany of one of the most notorious of all the old-line Tammany leaders. The other was a less public figure. Monroe Goldwater was a playmate of Ed Flynn's boyhood. When, in 1922, Flynn became Boss of the Bronx, Goldwater, a skilled attorney, became the Boss's law partner.† During the decades in which Flynn made the power, Goldwater

<sup>\*</sup> Anyone wondering why Moses' fellow Triborough Authority commissioners proved so complaisant might perhaps find a clue to part of the answer by looking at Triborough's insurance premiums. The family of Charles G. Meyer, Triborough commissioner from 1945 to 1950, was the largest stockholder in the Home Insurance Company, a major recipient of premiums from the Moses empire. George V. (the Fifth) McLaughlin, Triborough commissioner from 1934 to 1965, was a director and major stockholder of the Equitable Life Assurance Society, another major recipient. For the first twenty-eight years of his commissionership, McLaughlin invariably rubberstamped Moses' decisions. In 1963, for personal reasons, McLaughlin took the stamp away, showing signs of increased independence. Moses took the premiums away; in 1963, he transferred the policies involved to Hartford Life. (In Triborough's secret records, Moses stated that the reason for the transfer was that Equitable had requested a 15 percent increase in premiums. An indication as to whether or not this was actually the reason may perhaps be found in Moses' reaction to similar Equitable requests in previous years. On March 1, 1959, for example, Equitable was given a long-term Triborough insurance contract for \$20,863. Exactly one year later, Equitable requested and received a 35 percent increase in this premium.)

<sup>† &</sup>quot;Political" law firms traditionally took only a cut of politically connected "fees"—
"farming out" most of the work and most of the money, taking \$10,000 of a \$50,000
fee for their "in" while giving the other \$40,000 to a firm that drew the briefs and
pleadings, for example—but Goldwater was too sharp for that. A brilliant, shrewd
attorney, he did the legal work as well—and Goldwater & Flynn collected the whole
\$50,000.

made the money—millions, perhaps tens of millions—for both of them. During Roosevelt's presidency, Flynn was forced to spend considerable time on delicate presidential missions. While Flynn was at Yalta or in Moscow, Goldwater kept Flynn's machine in line. Flynn's death in 1953 seemed almost to increase rather than diminish Goldwater's influence, freeing it to spread beyond the Bronx until it permeated every center of power in the New York Democracy. A courteous man with a gentle, benign manner, Goldwater was nevertheless master of any political situation, no matter how rough—a fact that could be ascertained with remarkable speed by a contractor whose campaign contribution did not meet Goldwater's expectations. Wagner selected the quiet, elderly lawyer to manage all three of his mayoral campaigns.

Moses was not interested in Rosenman's prestige or Goldwater's skill with a brief. He was interested in their behind-the-scenes political clout, and he knew that in postwar New York they possessed more of that commodity than any other Democratic attorneys ("enormous," he would say of Rosenman's influence; he never talked about Goldwater publicly if he could help it). And both of them were consistently on his team. Rosenman was his personal attorney—a job for which he may or may not have received a fee—and "Special Counsel" to his Authority (a title Moses modeled on the one, "Special Counsel to the President," under which Rosenman had served Roosevelt and Truman), on a retainer described as "very substantial." And a retainer was only one of the emoluments Rosenman received from public works with which Moses was connected: a single Title I developer, for example, gave his law firm a legal fee of \$250,000. Other attorneys—possessed of lesser amounts of political influence—received Triborough legal fees, but smaller fees, handed out in precise ratio to the amount of influence over the city's governmental structure that they possessed. As Charles J. Preusse became closer and closer to Mayor Wagner, for example, he received larger and larger portions of Moses' largesse. If many of the key Democratic politicians in New York City seemed organized now into a Retainer Regiment, it was Robert Moses who was leading the regiment out.

In lockstep. Moses' fees did not come free. There was a price attached. He was buying men's influence—and for each dollar he spent, he made sure he received in return full value.

The price was not demanded outright. Moses did not directly ask recipients of his fees to return the favor by voting in Legislature or City Council for one of his proposals—or by persuading legislators or councilmen to vote for the proposal. He did not ask them directly for support of any kind. Asking would have placed both him and them in violation of the law and of various codes of ethics. And he neither performed himself—nor asked anyone else to perform—any illegal act. Few of the recipients of Moses' fees were as blunt about the services they were expected to render in return as Mallory Stephens, who, asked late one night by his Albany suitemate, Reuben Lazarus, why he invariably supported Moses' legislation while opposing that backed by Austin Tobin, replied, "Because Tobin doesn't give me anything." The exercise of influence was seldom as dramatic as Samuel

Rosenman's hasty plane trip to Albany in 1957 after Harriman announced that he would veto Moses' St. Lawrence power project because of the preferential contract terms it offered big aluminum producers. (On Moses' instructions, Rosenman flew to the Capitol, went to see the Governor—and that same day persuaded him not to veto Moses' proposal.)

Moreover, no evidence has been found of specific fees being given for specific favors. Moses did not operate by demanding direct quid pro quo's. Rather, it was a case of being on his team or not being on his team. Politicians and officeholders who consistently supported his proposals were considered "on the team"—and men who were on the team were generally also on the payroll. And the over-all record is very clear. When a Mayor or a Governor turned to a man on Moses' payroll for advice, often not knowing that the man was on that payroll, the advice given was invariably the advice that Moses wanted given. When a Moses proposal was before city or state legislative body, legislators secretly on Moses' payroll, or controlled by men secretly on Moses' payroll, were generally the legislators pushing hardest for adoption of Moses' proposal. If Moses was purchasing influence, these men were peddling influence.

In terms of money, the terms in which corruption is usually measured, Robert Moses was not himself corrupt. He was, in fact, as uninterested in obtaining payoffs for himself as any public servant who ever lived. In the politicians' phrase, he was "money honest."

But in terms of power, Robert Moses was corrupt. Coveting it, he used money to get it.

And because he had so much money (in his fields, far more than the city) and so much freedom (in his fields, far more than the city) in spending it, within the city he became the locus of corruption: money corruption.

Consider his relationship with Tom Shanahan.

Shanahan's nostrils twitched to a single aroma: the smell of money. Even as a boy at the turn of the century, one of seven children of a poor Irish boilermaker, he had followed that scent to its source: the noses of his Waterbury, Connecticut, playmates may have been flattened against candystore windows; Tom Shanahan's nose was pressed against the glass front door of Waterbury's Colonial Trust Company; reminiscing forty years later, he would recall vividly passing that building almost every day of his youth and staring inside almost every time he passed; it had been, he would say, a place of "august halls"; from as far back as he could remember, he would say, he had wanted to be a banker.

He followed the scent down to the great city after high school, but for long years he seemed to have followed it into a trap: the tall, strong young man spent seven years behind the barred windows of tellers' cages. He went to NYU at night, in 1926 earned a degree, but five years later still had a job only slightly better—assistant cashier—at one of the smallest and shakiest banks in the city, the eight-year-old Federation Bank and Trust Company. But when, in 1931, the Depression forced the infant institution to shut its

doors, it was the assistant cashier who, with Federation's despairing officers ready to liquidate, thought up a complex refinancing plan that reduced the bank's obligations, personally talked a financier into loaning it the money to pay them off, and saved the bank. When it reopened, Shanahan, at twentynine, was its vice president and treasurer.

With authority, Shanahan was able to move Federation into a field from which more conservative bankers shied: loans to construction contractors. The age of huge construction companies was still in the future; during the Depression, most of New York's contractors were small and broke. "Tom would take a contractor who didn't have the salary to pay his workers that week, and back him," an associate recalls. "He went on face value, and he very seldom went wrong." He backed Pete Di Napoli (the story around Federation in later years was that when Di Napoli first came in to see Shanahan he had to borrow a nickel for carfare home to Queens) and the Slattery Contracting Company (which was better off, but barely) and a half dozen others, who were to make immense profits-and who deposited those profits with Federation. He proposed giving junior officers of the bank greater responsibility. More cautious elements protested; the bank, after all, had only one office. Shanahan told them not to worry. He'd bring in the business, he said. He just wanted to make sure that there would be people around trained to handle it. He was as good as his word: by 1944, Federation had \$30,000,000 in assets. And, increasingly, Federation's assets were his assets. For years, he had been quietly buying up the bank's stock. When, in 1944, the one-time bank teller was elected bank president, he owned shares worth millions of dollars.

Shanahan's rise may have been as dramatic as one of Horatio Alger's heroes', but it was less publicized; he shunned fame with the same diligence with which he had sought wealth. Not a single newspaper or magazine story provides more than the most cursory details of his life. And he had reason to shun fame: since 1941, his activities had involved politics as well as banking, and his political activities were not ones that would appear attractive in the spotlight.

It was not for principle but for profit that he had entered politics. His political philosophy seems to have begun and ended with a violent hatred of "Commies"; the expression on the big Irishman's face would contort into a snarl and the eyes behind the steel-rimmed glasses would glitter with rage when he discussed the "left-wing conspiracy" that he felt was trying to "take over" the city; planning to name him a delegate to the 1952 Democratic National Convention, friends would be embarrassed to learn that he was not eligible because he had not bothered to register to vote. But his dealings with contractors had shown him that their dependence on governmental contracts could be turned to personal financial advantage.

The contractors owed Shanahan much; he transferred part of that debt to the Democratic Party, raising so much money from them for the party's 1941 mayoral candidate, William O'Dwyer, that when O'Dwyer decided to run again in 1945, he made Shanahan his campaign manager. And soon after O'Dwyer was sworn in, a pattern—a pattern in which politics and

profit were intertwined—began to emerge on Shanahan's loom: the contractors he had persuaded to contribute to the Democratic Party were being handed lucrative construction contracts by Democratic governmental officials, and were depositing the profits from those contracts in his bank.

In 1948, when Shanahan was forty-six, O'Dwyer appointed him-with an absolute minimum of publicity—to the City Housing Authority. Housing Authority memberships were "nonpaying," but in Shanahan's case that adjective may have applied only to salary. Within a remarkably short time after he was sworn in, the word was out around town, not only among contractors but among architects, landscape architects, engineers, insurance brokers, real estate appraisers—among, in fact, every profession whose members wanted work from the Authority: You had "to do business with Tom Shanahan"do your banking at Shanahan's bank and kick back a portion of your profits to Shanahan, presumably for the Democratic Party-or forget about your chances. And even after you had obtained an Authority contract, the word went, your business with Shanahan was not finished; when you submitted the bill for your work, further payoffs would be required—or somehow the bill would keep getting lost in the Authority's files, and you would not get paid. The banker quickly became, in the words of one reform Democrat, "one of the most notorious boodle boys around town." Warren Moscow, who was able to do his perceiving from an excellent vantage point—he was executive director of the Housing Authority for two years—could say of the banker:

He was a very personable guy, but I would say that ethically Tom left something to be desired all the way down the line. . . . It was common knowledge—no, I won't say common knowledge, it was common gossip—that an architect who wanted to get an assignment from the Housing Authority had to turn \$15,000 over to Tom Shanahan, theoretically for the Democratic Party.

"Theoretically," Moscow said—and the meaning behind that word was echoed by others who came into contact with Tom Shanahan, for even insiders who took the relationship of money and politics as a matter of course were taken aback by Shanahan's greed; "we all knew what Shanahan was," Monroe Goldwater says, the wrinkles of his aged face forming a pattern of disgust at the recollection.

If little publicity attended Shanahan's rise in banking, less attended his rise in politics. For years, there was scarcely a mention of his name in political stories in New York newspapers; there is no mention at all in the supposedly definitive history of Tammany Hall. But Shanahan was, for more than a decade, Tammany's money man, the individual who, more than any other, greased the wheels of the machine. He was the hub of political payoffs and influence peddling in New York, the center of all those elements in the city's government that lay hidden and festering beneath its façade.

And for most of that time, he was Robert Moses' closest associate in that government.

In a machine oiled by money, the influence of the money man was, of course, enormous. In a machine that danced to the jingle of coins, Shanahan had a large say in calling the tune.

And Moses made sure that the tune was his tune.

The insurance premiums to the broker "friend of Tom Shanahan's" were \$27,978 per year. But they were a minor item in the list of Triborough fees parceled out to Shanahan. The fees to Shanahan's bank for banking services—fees as paying agent for Triborough bonds, for example, which required little work and which other banks would have liked to have but which other banks were not allowed to bid for-amounted to tens of thousands of dollars on a single issue of Triborough bonds. But these were minor items, too. For the payoffs that really mattered in the Moses-Shanahan relationship were figured not in thousands of dollars but in millions. On Moses' order, in 1948 the Triborough Bridge and Tunnel Authority deposited in the Federation Bank and Trust Company-which at the time had deposits of only \$35,000,000—\$15,000,000, thereby increasing the bank's capital assets by 40 percent at a single stroke. This money was placed in accounts on which Federation paid no interest, so that the bank had its use—to lend out and earn interest—without paying a cent for it. And it was left in those accounts for the entire decade that Shanahan remained in power, so that the bank had its use for ten years. During the Fifties, on Moses' order, Triborough shipped to Federation \$48,963,000 in Authority-owned investment securities—in violation of every prudent business principle because, at the time he did so, the bank did not have enough total resources sufficient to cover that amount if the securities were lost—and left them there, allowing the bank the advantages that accrued from their possession, for years.

Moses placed at Shanahan's disposal not only his money but his power—which Shanahan used to make more money.

During his first five years as Housing Authority vice chairman, Shanahan, with the help of the two Moses Men on the five-member Authority—Chairman Philip J. Cruise and architect William Wilson—dispensed Authority contracts as he wished. When Wagner became Mayor in 1954, however, he wanted the Authority under his control. Naming Moscow executive director, he directed him to inform Cruise, whose term was expiring, that he would be reappointed only on his solemn promise to give his loyalties henceforth to the Mayor instead of Moses—and, Moscow dryly relates, "Cruise made his divorce."

Knowing Shanahan, the Wagner high command, while friendly to the banker, was far from confident that all the kickbacks he accepted as contributions to the Democratic Party were actually reaching the party's coffers. "That was one of the things they put me in to do—quite simply, to take control of the assigning of architects away from Shanahan," Moscow says. Before he could act, however, the banker made a request that would increase rather than decrease his power: for a personal "executive assistant."

Suspicious that Shanahan wanted such a personal representative primarily as a "bag man," an intermediary who could collect the kickbacks and keep the banker's hands clean, Moscow objected to the appointment, and was backed by Cruise and the Authority's two non-Moses members. Shanahan, even more florid than usual, his eyes glaring coldly from behind the steel-rimmed glasses, stalked out of the board room and said he would not re-

turn until his request was granted, but for months the Authority stood

Authority members had long dreaded the possibility of an "exposé" by some Red-hunting newspaper of the fact that some Authority social workers had once, during the idealistic Thirties, belonged, even if only briefly, to some organization later labeled as a "Communist front." Early in 1957, with Shanahan's boycott still a failure, Moses Man Wilson raised the question of the vice chairman's "executive assistant" again.

Recalls Moscow: "It was in a meeting of the Authority: the five members of the Authority were there, and me and the assistant to the chairman, and [Wilson] said in so many words: 'I have a message for you from Mr. Moses. You give Tom what he wants or we'll turn the Daily News loose on you. You have ten days.' "Tom got what he wanted, and for another two years continued to exercise considerable control over the Authority—and to collect "campaign contributions" from its contractors.

Naming Shanahan vice chairman of the Mayor's Slum Clearance Committee, Moses virtually delegated him absolute power over certain of its projects. Monroe Goldwater found this out when he was retained as attorney by a group of real estate men who wanted to sponsor one. Moses "put it on Shanahan," the attorney recalls. "He said, 'You know I can't do everything myself. I have to let Tom have some of the jobs. This is Tom's job. Go to see him.'"

When Goldwater approached the banker, however, Shanahan reacted as the attorney had suspected he would.

"Shanahan said, 'Well, I don't know about this."

"I said, 'Don't you think it's your job to take the low bidder, to consider the rate of return they want and the rate of interest they will have to pay, and the quality of the men involved?"

"He said, 'Well, there can be a slight variation."

"I said, 'Look, cut out the crap with me, Tom—are you committed to somebody?' He said. 'Yes.'

"I said, 'Well, I'm going to make an issue of this with Moses. I'll tell you this right now. Without even knowing what rate of return the other people want, my people will give it to you at half a percent less.' I went to see Moses. [But] he said, 'I can't do this with Tom. Tom is committed to these people' "—and he refused to intervene.

Thus supported by Moses, Shanahan used his vice chairmanship as a lever to force prospective slum clearance sponsors to do business with him. "A part of my deal was that I had to do my banking at Shanahan's bank," one was to relate. Federation's assets, already on the climb, began to climb faster: in 1948, the year in which its president was appointed to the Slum Clearance Committee, they were \$35,000,000; in 1959, the year in which he resigned from the post, they were almost \$200,000,000—and Shanahan's personal holdings in Federation stock were worth \$20,000,000.

Moses put his vast reserves of money and power at Shanahan's disposal; Shanahan put his vast reserves of influence at Moses'. The banker was interested in who got Housing Authority and urban renewal contracts;

unconcerned with the aims and principles of government, he wasn't interested in where Housing Authority and urban renewal projects were located, why they were located there or how they were built: the factors that Moses was interested in. The banker ran the Housing Authority for Moses. The Housing Authority projects built were the projects Moses wanted built—on the sites where Moses wanted them built, to the specifications Moses desired. In 1953, when Shanahan's term expired, Moses wrote Impellitteri: "It is of the utmost importance" that "Tom" be reappointed. It was—to him.

The influence Shanahan exercised for Moses was not limited to housing or urban renewal. Time and time again, on highway proposals by Moses on which the city's officials were divided, the banker's power helped tip the scales in Moses' favor.

In dealing with De Sapio and Shanahan and Goldwater and Rosenman and Steingut and Roe and Preusse, Moses was, as always, going straight to the top.

Charles F. Rodriguez, representing vacationing Bronx borough president James J. Lyons on the Board of Estimate during the controversy over Moses' proposal to construct Shea Stadium, had received no instructions on the matter and, believing that the city had more pressing uses for the \$21,000,000 involved, was considering voting against it, when the telephone in his office rang. And the voice on the other end of the line wasn't that of his boss but of his boss's boss. "I think if Jim was here, he'd go along," Charles A. Buckley said gently. "You do it, and if there's any question, ask Jim to see me." Rodriguez did it—and there was never any question. As a state senator would admit privately, describing Moses' methods in Albany, "he wouldn't bother with us at all; he went right to the leaders."

As old-time Tammany ward bosses had distributed Christmas baskets filled with turkeys and sugar plums in decades past, Robert Moses distributed Christmas baskets now. But he distributed them not to voters, and not—at east not primarily—to the men the voters had elected to office, but to the nen who controlled the men the voters had elected to office—many of the nost powerful men in the city and state. His "ward," his "district," was the appermost precincts of politics. "There's only one way to hold a district," explained George Washington Plunkitt, who held his for thirty years. "You must study human nature and act accordin'." Moses studied human nature in his district, and acted accordin'. His constituents—the De Sapios and Shanahans and Steinguts—wanted the rich Christmas baskets of "honest graft." Moses handed them baskets. Using the vast wealth of his public authorities, he made himself the ward boss of the highest precincts, bankfoller of the inner circle, dancing master of the Four Hundred of politics. And he held his district for thirty years.

Doling out sugar plums to such men gave him power over them in another way, too—as Wagner, in a very private talk in 1961 (referred to in he Introduction), tried to explain to Paul R. Screvane. The Mayor was personally fond of Screvane, a younger man he had taken under his wing tears before and guided through the political thickets and, just a year arlier, into the City Council presidency. Informing him that he would be

city liaison to Moses' World's Fair, the Mayor leaned toward him and said earnestly: "Paul, my experience with Moses has taught me one lesson, and I'll tell it to you. I would never let him do anything for me in any way, shape or form. I'd never ask him-or permit him-to do anything of a personal nature for me because—and I've seen it time and time again—a day will come when Bob will reach back in his file and throw this in your face. quietly if that will make you go along with him, publicly otherwise. And if he has to, he will destroy you with it." Screvane admired—"idolized" would scarcely be too strong a word-Moses. He was loath to believe Wagner's warning. "But," he recalls, during a series of battles in the Fair Executive Committee, "I saw it happen time and time again . . . Bob Moses has these files. On at least twenty separate occasions when we were on the same side, I would say about someone, 'I don't think he'll go along,' and Bob would say, 'Well, goddammit, he'd better go along! If he doesn't go along, I'll destroy the son of a bitch!' And he'd call for a file, and he would begin to quote chapter and verse. And sure enough [when the vote came], the fellow would go along."

No one could dwell long in the inner circles of New York politics without knowing about Moses' files, the dossiers he had compiled on the men with whom he had to deal. Their existence was so open a secret that Times reporter Joseph C. Ingraham, a particular friend of Moses', assigned by an editor to investigate the financial affairs of a Tammany borough president, knew exactly where to start looking. He telephoned Moses and asked for the file on the borough president—and there inside it, documented and photostated, complete down to deeds and incorporation certificates, the reporter found the records of real estate transactions in which the borough president had engaged, transactions based on his foreknowledge, acquired through his official position, of the routes of certain Moses-built highways. Politicians who had accepted favors from Moses knew that the documentation of those favors was in his dossiers—and they knew that Moses would use that documentation to destroy them if they ever refused to go along with his wishes. They had accepted a favor from him perhaps once; he had a hold over them forever.

A politician who had never accepted a favor from Moses knew that this did not grant him immunity from such attack. He knew that Moses' bloodhounds were sniffing, always sniffing, around City Hall and the files in the Municipal Building, and he could be sure that up at Randall's Island there was a file with his name on it—and who knew what might be in it? "Man," as Willie Stark put it in All the King's Men, "is born in sin and dies in corruption." Or, in the words of Jack Lutsky, who during his quarter of a century in City Hall earned a reputation as a fearless and honest man: "Is there anyone who, sometime in his life, hasn't done something he is ashamed of? Well, you always had the feeling that Moses knew about that something, and that he had the proof of it in those files of his. And that if he needed to, he would use it." Politicians knew what use Moses could make of his dossiers. They had seen him give newspapers leaks—or issue statements—that dredged up for public view and turned into blaring headlines

the dark secrets of men's pasts. It was not just the force of greed that Robert Moses used in bending men to his will; in some cases, it was also the force of fear.

If you stayed on his team, moreover, he would take care of you even after you were too old to play-for his own purposes, of course. He would take care of you until you died. William Wilson was, to Warren Moscow, only "Moses' stooge," but he was a well-paid stooge; Wagner kicked him off the Housing Authority in 1954, when he was seventy-three years old; Moses promptly supplemented his city retirement benefits with a \$10,000-per-year authority consultantship. When Edwin Salmon was forced out of the \$15,000 City Planning Commission chairmanship that Moses had obtained for him, Moses asked Brooklyn borough president John Cashmore to give him a job—and a \$15,000 salary—on his personal staff. There was no job open, Cashmore said. Then make a new job, was Moses' reply. (A new job was made.) Paul Screvane remembers running for the 1965 Democratic nomination for mayor after Wagner retired, and losing, and waking up on the morning after the primary wondering what he was going to do with the rest of his life. "Bob had three jobs lined up for me," he says. And these were not just ordinary jobs; Moses offered Screvane his choice of the presidency of a consulting engineering firm whose president had just died, a full, lucrative partnership in another engineering firm, and "he had another authority in mind and I could be chairman and write my own ticket." Says Screvane: "Bob always took care of people who cooperated with him."

If you cooperated.

If you tried, even occasionally, not to cooperate, if you dropped off "the team," if—ever—you exercised your responsibility to the public rather than your responsibility to Robert Moses, you were out in the cold until you died. There would be no consulting jobs, no authority make-work—and, if the rumors were true, when the State Retirement Board met to certify your pension, it would somehow turn out to be less, far less, than you had believed you were entitled to. As Lazarus puts it, "He didn't want anyone who had been on the inside with him to talk about the way he operated. This way, ne was buying their silence to the grave." Moses demanded allegiance only in the areas he had staked out for his own, but that allegiance had, in those areas, to be total. And, with most of his constituents, it was. He not only neld his district, he controlled it absolutely. He was, in his fields, the boss of the bosses.

He did not extend his field of force only over individuals, of course.

One cannot dip a toe into the water of New York politics without sensing, moving somewhere deep beneath the surface, the presence of an enormous force, a power unseen but immense: the power of banks.

Banks control the dispensing of huge amounts of insurance and they can dispense it to politicians. Their activities generate immense amounts of legal work and they can dispense the least onerous and most lucrative aspects of that work—local real estate closings, for example—to politicians.

They can give politicians access to the inside financial information on which fortunes are made by electing them to their boards of directors, and they can give them fortunes more directly by giving them blocks of their own stocat favorable prices or, more directly still, by giving them unsecured load which allow them to make investments without the inconvenience or risof using their own money, and by giving them those loans at interest rates of favorable that the investments can hardly help resulting in a profit. The can give politicians loans of a size that make them rich beyond their dream

The acceptance of these—and other—favors puts politicians in the banks' debt. Banks are very good at collecting debts. They collect them wis interest. And they collect politicians' debts with interest: the public interest Decade after decade, what banks wanted from Albany or City Ha

banks got.

Some political analysts speak of the influence of New York's banks a influence exerted almost entirely on the Republican Party, but it is not on Republicans who are interested in money. The power of the great banks a New York crosses party as well as county lines. Within the over-all political structure of New York—city and state—it is all-pervasive and immens And Moses enlisted it behind his aims.

Banks have one aim: making money. Moses made sure their aim and h coincided. He made sure that banks would make money—quick money, eas money, safe money—from his public works.

Revenue bonds—the key to his authorities' existence and power—wer the key to the alliance.

Banks needed authority bonds. Forbidden by federal law from puttin the money deposited with them by the public into any but the very safe: investments, the very best of what bankers call "good, high-grade paper"barred specifically from purchasing corporate stock and by inference, in ference reinforced by continuous evaluation of their investment portfolio by government regulatory overseers, from purchasing any bonds and note except those of the most "solid" corporations, of governments and of publi authorities-four years of investment-stifling war had left them "loaded with cash," impatient to put it to work earning more cash, and with drastically insufficient supply of "good, high-grade paper" into which to put it. Jack Madigan, who had spent weeks trying to peddle Henry Hudson Bridge bonds around Wall Street in 1936, was astonished when previously aloof bank presidents began inviting him to lunch in their private dining rooms in 1946—until one, Stewart Becker, president of the Bank o Manhattan, casually remarked over dessert, "You know, Jack, we've go more money than good uses for it." Then he understood. Returning from Becker's table, he told Moses that the banker was asking to be allowed to buy as much as possible of the next Triborough bond issue—and the bartender's son added that he would never have to go hat in hand to bankers again; from now on, bankers would come to him. "It's just supply and demand," he would explain simply. The demand for Triborough's bonds was far greater than the supply.

Of all possible investments legal for banks, moreover, public authority

Inds were the most desirable. In selecting investments, bankers had three ans: to keep their money safe, to make as much money as possible with it and to keep the money they made. Keeping money meant, in postwar anerica, tax exemption.

Corporate bonds were dependent upon corporate profits, so much more 1 ky than bridge tolls. Their yield was higher—in 1968, 8 percent to 2 out 5 percent—but banks had to pay half of their profits (52 percent, leer 48 percent) to the government in taxes, so their yield from a corporate bind would, in terms of money kept, be only 4 percent. So tax-exempt athority bonds had both greater safety and a higher return than corporate onds.

United States government bonds were as safe as authority bonds, their eld as high, but that yield was subject to state and local taxes; their net yield as lower. State and municipal bonds, exempt from taxes, had net elds about the same as authority bonds. But, in Wall Street's view, they ere not as safe since states and municipalities always seemed to be in nancial difficulties, and were continually being forced to go to the voters for ermission to raise taxes. And who could predict what voters would do? uthorities, on the other hand, grew continually more prosperous, from evenues guaranteed by covenants that were sacred contracts, safe from ublic whim or will. During the first postwar quarter century, New York ity's bonds fluctuated fairly substantially in the ratings they were given for ifety. Triborough's held steady, year after year—at AAA, the highest iting given. Ask New York bankers why they are so eager to buy public athority bonds and they begin, as does Dwayne Saunders, vice president of ne investment division of the Chemical Bank, by speaking sanctimoniously f "our feeling of responsibility to the community" by financing projects that ill benefit it. But the longer one talks to bankers, the less the talk is of esponsibility and the more it dwells on more mundane considerations. A riborough bond "is a very, very high-quality instrument, you know," aunders says. "And they are paying, say, 5.40, which is [almost] 11 percent. here are corporates out there, but no government stuff. You're always natching yield against safety in this business. Any portfolio manager will try vithin his limits to maximize his yields—he becomes very, very interested a yield . . . And [authority bonds] are the highest-yielding of any investmentrade security after tax." Higher-yielding than any other safe investment, igher-yielding in fact than most risky investments, higher-yielding even han those riskiest of investments, personal loans—a public authority bond s simply the best investment a bank can make. By far.

Of all public authority bonds, moreover, none were more desirable to panks than Triborough's: by design.

Moses wanted banks to be so anxious to purchase Triborough bonds that they would use all of their immense power to force elected officials to give his public works proposals the approval that would result in their ssuance. So although the safety of the banks' money was already amply assured by Triborough's current earnings (so great that each year the Authority collected far more money than it spent), by the irrevocable

covenants guaranteeing that tolls could never be removed without the bondholders' consent, and by Triborough's monopoly, also irrevocable, that guaranteed them that if any future intracity water crossing were built, they would share in its tolls, too, Moses provided them with additional assurances. He maintained huge cash reserves—"Fantastic," says Jackson Phillips, director of municipal research for Dun and Bradstreet; "the last time I looked they had ten years' interest on reserve"—and when he floated the Verrazano bonds he agreed to lay aside—in addition to the existing reserves!—15 percent (\$45,000,000) of the cash he received for the new bond issue, and not touch it until the bridge was open and operating five years later. Purchasers of the Verrazano bonds could be all but certain that they could collect their interest every year even if the bridge never collected a single toll. Small wonder that Phillips says, "Triborough's are just about the best bonds there are." Wall Streeters may believe that "any investment is a bet," but Robert Moses was certainly running the safest game in town.

An additional margin of safety, moreover, was provided by Moses' reputation. "Moses never hesitated to give Wall Street the impression that he would go all out to protect their interests," Phillips says. "We all knew," says a banker, "that Moses would fight for his bondholders." During the previous twenty-two years of its existence, the State Power Authority had never been able to interest the Street in even small proposed bond offerings. In 1954, Moses was named its chairman, and he offered for sale an issue of more than a billion dollars, the largest revenue bond offering in history. "There was some caution." Phillips recalls, "but there was the feeling, 'Look, Moses is doing this!" The issue sold out in four days. Holders of Port Authority bonds were perturbed—although without cause—when, in 1960, New York and New Jersey legislatures teamed up to force it to use its surplus revenues to take over the deficit-ridden Hudson and Manhattan Tubes, but holders of Triborough bonds had no such worries; Triborough's annual surpluses may have been huge-more than \$20,000,000 per year and climbing—but Moses made sure that every cent was "committed" to future revenue-, not deficit-, producing projects. "Wall Street loved him for this," Phillips says. And, Wall Street knew, Moses had the power to make these commitments stick. The Municipal Forum of New York is a group of extremely conservative municipal finance and bond analysts who generally accord guests no more than perfunctory applause. Whenever Robert Moses appeared before the Forum, its members, those hard-eyed men of finance, stood as one for an evation.

Moses offered bankers more than safety.

A high return on their money was already assured—in abundance—by the bonds' tax-exempt status. But Moses provided bankers with a still higher return. The interest rates on his bonds were higher than they needed to be to attract buyers—so much higher that, over the life of a single bond issue, the one floated to finance the Verrazano-Narrows Bridge, bondholders would receive the almost incredible amount of \$40,000,000 more than they would gladly have settled for

And favored bankers didn't have to wait for years to make money on Moses' bonds. He made it possible for them to make money in a single day.

Banks make quick profits on bonds through underwriting, a procedure in which they agree to purchase bonds from the issuing agency in the hope of reselling at a profit those they can't afford to keep themselves.

In the case of Triborough's bonds, of course, "hope" was an inaccurate term. No matter what the "state of the market," every postwar Triborough bond issue was sold out—with many buyers still clamoring for them—within twenty-four hours after the underwriting banks offered them for sale. In the case of Triborough's bonds, therefore, the underwriters' "risk"—the possibility that they may not be able to sell the bonds which is the rationale for the profits underwriters are allowed to make—was negligible. And Moses made sure that the underwriters' profits would be huge. He allowed the Verrazano underwriting syndicate, for example, to purchase \$300,000,000 worth of bonds from Triborough for \$295,760,851. Since these bonds were sold—on the same day they were issued—for \$300,570,851, the syndicate reaped a one-day profit of almost five million dollars.

Then there were the smaller morsels.

There were, for example, the "service fees" that Triborough paid banks for authenticating and delivering the bonds; for acting as "paying agents" for the semiannual interest payments; or for acting as "trustee" for the bonds, a job which involved "studying the resolution," collecting an annual "administrative fee" for routine duties connected with it, collecting and cremating the coupons amassed by the paying agents and collecting the bonds when the issue was redeemed. These fees—four cents per coupon for paying agents, for example—seemed small, although Moses' fees were higher than others paid for similar work. But, paid out twice a year, year after year for the forty-year life of the bonds, they mounted up.

Selection as a repository of Triborough deposits was similarly profitable. Moses' agreement to set aside \$45,000,000 as a five-year "interest reserve" was in effect an agreement to leave on deposit in banks \$45,000,000 on which the banks would not have to pay any interest—but on which they could, by lending it out, collect interest.

Moses' generosity to banks had to be paid for out of the pockets of motorists, of course. If bondholders received tens of millions of dollars extra in interest, drivers would have to pay tens of millions of dollars extra in tolls. The state's Public Authorities Law supposedly keeps the cost to the public of public works as low as possible by prescribing the use of open, competitive bidding on bond sales and all other details of authority operation. But Moses wasn't concerned with the cost to the public. His concern was to enlist in his cause the banks who could use their power to push behind-the-scenes political leaders, as well as state legislators, city councilmen, borough presidents—and Mayors and Governors—into approving a public work that they might otherwise not have approved. Open bidding would have defeated this purpose. Banks would not push hard for a public work if they knew that

after it was approved they would have to bid against other banks for its bonds—and might not get them at all. Banks would only push hard if they knew before the work was approved that they would profit from it.

So Moses let them know. He inserted in the Public Authorities Law a section—561—that permitted the Triborough Authority to sell its bonds at either open sales or through "private placement," and, of course, he invariably selected "private placement"—with the banks that had been working with Madigan on the issue since its earliest stages.

And since the aim of the use of private placement was to place power behind his proposals, he selected as the favored banks those that had the most power to place there.

"Chase"—mighty Chase—had the most. The Chase Manhattan Bank, and the Rockefeller family that controlled it. Chase—the principal twentieth-century repository and instrument of the wealth and power of the nineteenth-century Standard Oil robber baron—traditionally, as Theodore H. White notes, "raised the big New York money for Republicans." William O'Dwyer, who tried to buck its power once, found out just how much it had, and later commented bitterly: "There's a dictator in New York City, and I'll tell you who it is. It's the Chase Manhattan Bank." Not that Chase's power was confined to state or city. During the postwar quarter century, the Chase Manhattan Bank was very probably the single most powerful financial institution on the face of the earth. And the Chase Manhattan Bank was selected by Moses as the trustee of Triborough's bonds and hence was the single largest recipient of the lucrative service fees connected with them.

The Chemical Bank began wheeling and dealing behind the political scenes increasingly during the postwar era, executing an end run around the Federal Corrupt Practices Act by having various officers and directors establish, and contribute heavily to, a "Fund for Good Government" that in its turn made heavy political contributions, notably to the Nassau GOP machine and the Bronx Democratic organization headed by House Public Works chairman Charles A. Buckley. The Chemical Bank was the second-largest recipient of Triborough service fees. A Chemical officer, asked if the bank had ever purchased Triborough bonds, replied: "We bought a ton of them." The remaining service fees—and the lucrative underwriting profits and the right to purchase Triborough bonds direct from the source—were divided up among the Morgan Guaranty Trust, the Marine Midland Bank, the Manufacturers Hanover Trust and the United States Trust, a quartet of banks each of which possessed considerable political clout.

The assets of such banks dwarfed the \$200,000,000 of which Tom Shanahan at Federation Bank and Trust was so proud; Chase's assets in 1974 were thirty billion dollars. And so did their power. And now this power—the power of the greatest pool of liquid capital in the civilized world—was at the service of Robert Moses. He had a friend at Chase Manhattan, and the friend was its president; "No one will ever be able to thank you adequately for the contributions you have made to the city," David Rockefeller wrote him. He had a friend at virtually every major financial institution

in New York. Says one observer of the New York political scene: "Whenever Moses made a proposal—and I mean over a period of years and years and years—you could invariably be sure that behind the scenes, the banks would be pushing for that proposal. Pushing hard."

It wasn't just bankers' grays that Robert Moses had marching behind him; it was blue collars and hard hats, too.

Despising working men and their organizations and desiring to drive men, to hire and fire them as he pleased, to hold their economic fate at his mercy, he had naturally despised labor unions; let her invoke whatever laws she chose, he had told Frances Perkins during the Thirties, no union bricklayer would ever work at Jones Beach.

But by the postwar Forties, labor unions had acquired immense power in New York. Their million-plus members formed the base of the Democratic Party's popular support, and their campaign contributions-contributions not only of money from their seemingly bottomless war chests but of services such as sound trucks and campaign-brochure printing and of manpower to perform the vital doorbell-ringing and Election Day transportation functions once performed by ward heelers-were indispensable. If the banks hid their power, the unions flaunted theirs; thanks to a special legislative privilege granted to no other organization, there was slapped down on the desk of every senator and assemblyman each morning, right next to the official calendar of pending bills, another, "marked," calendar, for his "guidance," a calendar on which was stamped, beside every bill in which organized labor had an interest: "THIS BILL APPROVED (OR DISAPPROVED) BY THE NEW YORK STATE A.F.L.-C.I.O." And they had it to flaunt. No Democratic candidate ran for office without intoning some version of Robert F. Wagner, Jr.'s, oft-repeated incantation: "This is a good, fine union town, and as long as I'm Mayor I intend to keep it that way."

In Moses' fields of operation, the key union figures, Harry Van Arsdale and Peter J. Brennan (later President Nixon's Secretary of Labor), had substantial power to influence government; Moses' contempt for working men and the unions that represented them had not changed, but emotions such as contempt had long since been subordinated to his desire for power; invited to lunch at Randall's Island, "Van" and "Pete," as their host was soon calling them, found themselves the object of all Moses' easy, flattering, gracious charm. Of his earlier hatred for all they represented, they could detect not a trace. "Bob . . . used to have a lot of fights with my predecessor," Pete Brennan says. "But he got to know us and we got to know him." And Van Arsdale and Brennan liked what they got to know. Their background was in the predominantly Irish-Catholic, conservative building trades-Van Arsdale, who ran the city's Central Labor Council, representative of 550 different unions, like a construction foreman ramrodding a gang of laborers, had been a member of the Electricians Union at seventeen; Brennan had worked his way up to president of the 255,000-member Building and Construction Trades Council—and the trades' hard hats were no harder than the prejudices of the men who were them. There therefore existed areas of ideological agreement with Moses that went beyond his liking for the Irish—including their feelings about Negroes and Puerto Ricans and the necessity of keeping them "in their place"; if there was a labor force in New York with a lower percentage of nonwhites than the building trades locals, it was, after all, the work force at Jones Beach. Van Arsdale and Brennan soon discovered that on Moses' contracts there would be none of the tiresome insistence on "opening up the locals" that eventually became a condition of employment—usually circumventable to be sure, but irritating nonetheless—on city contracts. Moreover, there was another, far more fundamental, identity of interest. The hunger that drove the construction workers could be satisfied only by the satisfaction of the hunger that drove Moses.

Postwar pay in the construction industry was good. But construction workers are paid only when they work. And it takes a lot of construction to keep 255,000 men working. When there is no work, construction workers blame their union officials. When there is no work for too long—and it is remarkable how short a period of time an out-of-work hard-hat can consider too long—they get themselves new union officials. So incumbent leaders are constantly worrying about where next year's work, and the next year's, and the following year's, is going to be coming from. Thinking as they must in terms of employment for tens of thousands of men, they think only peripherally of private construction projects. Even the erection of the largest private office building will require the labor of perhaps a hundred men for a year or so. And, most important, union leaders have little if any influence over private construction.

But the construction of a large public work—a suspension bridge or a highway-will require workers in the hundreds, for substantial periods of time; the Verrazano-Narrows Bridge—just the bridge proper, aside from its access roads—employed a daily average of 1,200 men for five years.\* And, thanks to their political muscle, union leaders have vast influence over public construction. Union leaders are therefore constantly pressing for the scheduling of new public works. When employment is low, they are pressing for immediate ground breaking for new projects. When employment is high, even when employment is full-even, in fact, when employment appears likely to be full for some years to come—they are pressing, having learned how long a "lead time" a large-scale public work requires, for the scheduling, planning and contract letting for future public works. Of one thing a public official in New York can be sure: the building trades are always pressing for public works; in 1959, they were worrying that New York might not get the World's Fair, which, with planned Fair access highways, would employ tens of thousands of men. No sooner had the Fair been awarded to New York than they were worrying about what would happen when, five years hence, the Fair was over; on the very day that the full five-year schedule of Fair-connected highway construction contracts—the biggest, most lucrative

<sup>\*</sup> A total of 10,000 men worked on the bridge at one time or another.

schedule in the history of New York or any other metropolis—was released, a building trades official happened to be talking about another matter to a reporter, who confessed himself puzzled about his lack of glee. "Jesus," the union official said, "just think when this is over—what's going to take up the slack then?" It was just as important to the union leaders as to Moses that government accomplish, build, Get Things Done—on a big scale.

The city government *couldn't* build on that scale. It couldn't afford it. Neither, in general, could the state. And those projects that the city or state *did* decide to build were constantly being delayed by the red tape of bureaucrats and by what the Van Arsdales and Brennans regarded as the timidity of public officials so "scared" of offending voters that they listened to "the nuts, the protesters" instead of "pushing ahead" with the laying of concrete and the erection of steel that meant "progress."

Only Moses—and the Port Authority and the federal government—possessed the financial resources to build on the desired scale. And the Van Arsdales and Brennans knew that Moses, as City Construction Coordinator, controlled the flow of federal funds into the city, and, for almost a decade after the war, possessed enough power so that the Port Authority needed his okay on most major projects within the city. And the Van Arsdales and Brennans were impressed not only by his money but by his will. In Robert Moses, they found a man who understood what was really important. Ask Pete Brennan what he thinks of him and out tumbles the clearest revelation of what he meant to New York's quarter of a million hard-hats.

I wish he was seventy years younger! We need him! You need guys like him and they're not coming along. Look at his record! It's a very good record in the building field. And the relation with our industry is very good. He always thinks big—I mean, everything he does, nothing's done in a small potatoes way.

Some people might say he's just a coarse old man, but it's just a question of getting things done. Moses always had the opposition—picketing and people lying down in the street and all that garbage—but Moses went ahead and did it. That's the trouble with all those politicians today: they worry about things like that.

Sometimes people have to be tough with you. How the hell else you gonna get it done? Today they have fights over every park, every road, every play-ground—you say who the hell can be against a playground for kids, but the nuts, the protesters—they're against them. Playgrounds used to be like motherhood, but today they even attack motherhood. The thing about Moses is he's a guy who gets things done. [With him] things are getting done, and we're getting some benefit out of it.

Benefit. On a Moses job it wasn't just fringe. There was little or no double- and triple-pay overtime to be made on city-, state- or federal-financed projects, but Moses not only liked overtime as an institution, since to this driven man the paying of overtime meant that his projects were being built faster, but, wanting all the political help the unions could give, he wanted to maximize their eagerness for his proposals to be approved. With plenty of money to spend and no necessity to account for how he spent it, he loaded his workers down with overtime.

The power of Van Arsdale and Brennan and the construction unions was therefore at his command. And he used this power with his customary astuteness. "He wouldn't call me on something I didn't have any influence with," Brennan says. "He'd call me to exert some influence at the right spot where I could do it. And you knew he was calling other people to put influence on their right spots."

"A construction worker would pave over his grandmother if the job paid \$3.50 an hour," Murray Kempton once wrote. The primary concern to the hard-hats—and their leaders—was jobs, and Moses provided jobs. And, in postwar New York, any public official—borough president, Mayor or Governor—who dared to oppose "progress" could be sure that it would not be long before the telephone in his office rang and the voice of the secretary on the other end said, "This is Peter Brennan of Building Trades."

Whether or not, as legend has it, Pete Di Napoli had been forced to borrow a nickel for carfare during the 1930's, by the 1940's, he and his firm, Tully and Di Napoli, Inc., Contractors, were making money by the carload, and so were the cartel of other huge contracting firms—Turner Construction, Mackay Construction, Slattery Contracting, Thomas Crimmins Contracting, Corbetta Construction, Gull Contracting, Sicilian Asphalt Paving, Poirier and McLane—which monopolized mammoth construction projects in and around New York.

The relationship between contractors and politicians was not as blatant in New York as on Long Island, where, whether or not it was true that Nassau Republican boss J. Russel Sprague indeed, as rumor had it, had a personal financial interest in the Hendrickson Brothers Contracting Company, it was a fact that key Republican committeemen were Hendrickson employees, and that their employer threatened to fire them if they did not support Sprague. But the relationship was, nonetheless, crucial in the city, too. There were two organizations to which the Irishmen who ran almost all the giant city contracting firms were the major financial contributors: Cardinal Spellman's Committee for the Laity (Thomas J. Shanahan, chairman, 1945–1960) and the Democratic Party (Thomas J. Shanahan, financial chairman, mayoral elections, 1945–1953).

The hard eyes of these contractors grew starry when they talked of Robert Moses. They thought of themselves as builders, and they thought of him as the greatest builder of all. One had only to sit once under the great chandelier of the Grand Ballroom of the Waldorf-Astoria at the annual dinner of the Building Trades Employers Association, a dinner at which, even in mod 1968, it was difficult to find a single dress shirt that wasn't white (or a single face), to see that to these men he was a hero—as well as to see the frame of reference that, to them, made him a hero. One had only to watch the packed ballroom, previously stirred to enthusiasm only by the rendition of the National Anthem, rise, table by table of burly, white-haired, red-faced men, standing and applauding furiously, after short, squat Roger Corbetta, a bull in a black tie, introducing him as the guest of honor, said: "This

great master builder . . . Hundreds of millions of dollars have been poured into the construction business by this great dirt mover as he likes to be called . . . Two power projects . . . one billion three hundred million dollars . . . a great man, a great builder, a man of history . . . serving the public for years: the Honorable Robert Moses." One had only to watch them rise, cheering again, time after time, as the guest of honor, graceful and poised and easy in his tux, his presence filling the dais even at seventy-nine, delivered, in a monotonous, hard, harsh, nasal monotone, his diatribe against "crack-pots" who oppose "progress."

They admired—idolized—him, and they also needed him: urgently and continually. They had built up big organizations, and big organizations mean big overhead. Their towering cranes and mammoth earth-moving machines were so expensive that the purchase price was often borrowed from banks, using the equipment itself as collateral, so that in effect there was on each earth mover and crane a mortgage, on which payments had to be met every month. New York's big contracting combines needed to keep working and they needed to keep working on big projects. Moses controlled such projects, so he controlled the contractors. And he controlled their political contributions.

As for the big architects, engineers, supply companies, bonding and insurance companies and a dozen other services used by contractors on big jobs, Edward N. Costikyan says:

I didn't know much about Triborough. That was a pretty closely guarded operation. I did know that when I needed to raise money for the county [organization] I could count on them. At one dinner, before I knew this, I was having trouble selling tickets, and I called [a key Triborough official] and asked if he could help, not hoping for too much. The next thing I knew, people were calling me because of him—saying, "Put me down for two tables" or three or four. These were people like contractors, architects and engineers. You suddenly realized that here was a guy who had access to the people who were used to making contributions.

Fees, retainers and commissions—the goodies of honest graft. Jobs and the endorsements, campaign labor and campaign contributions of organized labor. The contributions, untraceable and untaxable, of banks and contractors. These were the prizes that the individuals in the machine coveted and that the machine itself needed. And Moses controlled those prizes. Asked the secret of Moses' success, Lehman and Wagner adviser Julius Caius Caesar Edelstein replied: "My own theory? He was single-minded in his purpose, undeviating, merciless to those who opposed him-and he bought off everyone who might trip him up. He believed in buying, acquiring, by paying the most . . ." "Moses happened to be in the philosophy of replacing graft," says machine insider Charles Rodriguez. So little understood was Moses' importance to Tammany Hall that a 364-page history of the organization published in 1967 mentioned his name only twice, and then only in passing. But he had centralized in his person and his projects most of the sources of money on which Tammany depended for its very existence. Personally "money honest," he was interested rather in power and accomplishment. But power and accomplishment meant Getting Things Done—and Getting Things Done in New York meant playing ball, paying the price, the money price. He played—and he paid. He gave the machine—the greedy, voracious machine—everything it wanted.

He even gave patronage, the patronage that, as a young man, he had called "the worst form of bribery." Tammany didn't have to ask him for patronage. He offered it himself.

Every spring, the word went out from the Park Department to the Democratic machine's district leaders: "Get the names in." The "names" were those of ward heelers whom the leaders wanted to reward with "temporary" Park Department summer jobs, jobs that numbered in the thousands for which neither civil service examination nor training was necessary; only the district leader's recommendation counted. Costikyan, once a district leader himself, says: "Despite Moses' bullshit about politics, the summer jobs were handled right through the district clubs. We'd get application forms for them, we'd get them filled out and we'd process them through the party, through the county leader. We had some guys who had a lifetime summer job. They were seventy years old."

Honest graft, endorsements, campaign contributions—even patronage. Robert Moses provided the machine with everything it wanted. And as a result, he bent the machine to his ends, mobilized its power and influence behind his plans. For twenty postwar years, almost all the city's elected officials were products of that machine, owing their election to its support and depending on that support for their re-election. Twice during that period, a mayor—O'Dwyer in 1948, Wagner in 1960—attempted to break away from its hold on him and create his own machine. But each found that any new political organization in New York must, if it were to acquire and hold political power, depend upon the same forces as the old machine had depended upon, the forces that Moses controlled.

Moses made allies of other forces which exerted powerful influence on the city's elected officials.

His alliance with the Archdiocese of New York, which spoke so effectively for and to the Irish-Catholic voters who were, for decades, Tammany's most steadfast supporters, was ideologically snug, natural, even had he not come to power through Al Smith. ("I have no more sympathy with Communism than you have and regard your church as our greatest bulwark against it," Moses told the Catholic Youth Organization at the height of the McCarthy era.) There was only one difference between Moses' opinion of Eleanor Roosevelt and that of Francis Cardinal Spellman: the Cardinal's, except for occasional brief outbursts, was secret. The relationship between Church, Irish-Catholic contractors and the Irish-Catholic building trades unions had traditionally been close and directed toward pressuring the city for more public works, which provided simultaneously jobs for Catholic

parishioners and, through the contractors' religious contributions, funds for Catholic parishes and charities. Moreover, the Archdiocese, perhaps the largest owner of real estate in the city, constantly needed favors from its government. Moses saw that it got these favors. Moses, in his rebuilding of the city, was continually needing its cooperation. The Archdiocese gave it to him. Sometimes he and the Church swapped pieces of land as casually as if they were playing Monopoly.

Moses' favors to the Church were sometimes immense. In 1955, Fordham University, anxious to relocate and expand its "in-town" college, was unable to afford a big enough piece of land; Moses used his sweeping powers as Slum Clearance Committee chairman to oust hundreds of tenants from six prime acres of real estate adjacent to his Lincoln Center Title I development and turn them over, virtually as a gift, to the university (grateful Fordham named the central square of the Lincoln Center campus "Robert Moses Plaza"). The city's liberals, observing such favors and inferring from them that he would do anything to curry favor with the Cardinal, called him "Spellman's Pet Jew." But they failed to understand that Moses was interested not in favor but in accomplishment and power. His close alliance, cemented by their adoration of Al Smith, with men such as John Aloysius Coleman, William J. Tracy of Tracy Tugboats, Eugene Moran, Sr., of Moran Shipping, George V. (the Fifth) McLaughlin, industrialist John A. Mulcahy, the founding father, Joseph P. Kennedy—and, of course, Tom Shanahan—meant much to New York (one of them alone, John S. Burke, president of B. Altman & Co. and the Altman Foundation, gave Moses hundreds of thousands of dollars for such park improvements as the Central and Prospect Park carousels and the chimes in the Highbridge Park tower) and much to Moses. Time and time again, when a project he was sponsoring was stalled, the Catholic hierarchy—religious or secular—interceded with the politicians, providing the push that was needed to get it rolling again. And when it was completed, and the long line of official limousines rolled across the bridge or through the tunnel, in the first car, along with Moses and the mayor of the moment, would be the tiny, red-robed figure of the chief representative of His Holiness in the greatest city in the New World, gracing the event with his presence at the ribbon cutting, bestowing on Moses' latest work the blessing of Almighty God.

Not only the Prince of the Church but the city's merchant princes, the royalty of retailing, were in Moses' camp—up to and including the inheritors of the great Herald Square rivalry, Bernard F. Gimbel, Jr., of Gimbels and Jack Straus of R. H. Macy & Co. "Growth, development, progress"—the words which meant so much to Moses in terms of his interests, power and accomplishment—meant just as much to these businessmen in business terms. And, again, Moses made certain that this identity of interest was bonded by firmer cement.

Merchandising requires locations and, if successful, expansion, and, in New York, locations and expansion mean zoning changes, and big retailers needed approval from the Moses-controlled City Planning Commission to get them. Zoning considerations aside, locations were not easy to come by, but Moses could be of assistance there, too, as, quite by accident, Traffic Commissioner Henry Barnes learned shortly after coming to New York in 1962. Since one of the worst traffic bottlenecks existed at the Manhattan end of the Queensborough Bridge, he was staggered when he learned confidentially that the Triborough Authority was planning to condemn close to a square block of buildings at the bridgehead, evict their tenants and build a 2,000-car parking garage there. "I couldn't quite figure out why Triborough wanted to do it," Barnes was to recall with a grin several years later. "The traffic would be backed up for miles." But at lunch with Triborough general manager Peter Reidy and Straus on another matter one day, the Traffic Commissioner heard Reidy—according to Barnes, under the influence of one martini too many—mention to Straus "this garage that we're working on with you people."

Warned by a sharp glance from Straus, Reidy stopped talking, but Barnes had heard. "What are you talking about?" he asked. "They both squirmed around," he says, "and finally [Straus] said, 'Well, Bloomingdale's and Alexander's are up there. We feel we ought to have a branch up there, too.' "And then they revealed that atop the garage was to be built a seven-story department store which would be leased to Macy's. To his astonishment, Barnes realized that Moses was planning to use powers and funds of a public authority ostensibly set up to aid transportation to condemn a score of buildings, evict the tenants, and turn it over, complete with Authority-financed parking facilities right in the store, to a private business. And he further realized, as the conversation unfolded, that the planning had advanced to the point at which even the details of the lease—its term was to be fifty years—had been finalized, and that Moses had persuaded Mayor Robert F. Wagner, Jr., to approve.

"I stopped that one," Barnes recalls. Understanding the reason for the secrecy in which the deal had been surrounded—it might arouse even the dulled sense of outrage of the New York public—he returned to his office after lunch, telephoned Wagner and threatened to reveal it to the press unless the Mayor called it off. "I said, 'I'll blow that one right open,' " Barnes recalls. And, within minutes after he had hung up, he recalls, "Wagner called me back and said, 'All right, it's dead.'"

As for Gimbels, Moses pushed through a number of projects that Bernard F. Gimbel, Jr., felt would help business. He was a frequent guest at Bernie Gimbel's Greenwich estate. When the support of the proprietors of Macy's and Gimbels was needed for one of Moses' projects, Moses told them what to do, and they did it.

Several astute observers were to comment that it was through the telephone that power is exercised in New York. Men who felt the impact of Robert Moses' power often described it in terms of the telephone. "Shortly after I arrived in New York, I got into some big hassle with him," Barnes recalled.

"And no sooner had it hit the papers than my phone started ringing. There must have been a half dozen calls stacked up. I remember that two of the first were from Straus of Macy's and David Rockefeller. They called me up and they said to me, 'Don't fight Bob Moses. You can't win. And we need you around this town.'

The dispute with Barnes was a minor one. That was why there were only a half dozen calls. When an official—commissioner, borough president, mayor—attempted to stand in the way of a major Moses public works proposal, the calls would pour in by the dozen, from contractors, architects, engineers, lawyers, bank presidents, presidents of bonding, title-insurance and building-material-supply companies, union leaders—from all those supporters of the official or leaders of his county organization in the best position to influence him. "It got so all Moses had to do was push that button," says one official. "Each of these groups—bankers, union people, whatever—all had their own interests at heart, but Moses succeeded in combining all these interests behind his own aims. He gave everybody involved in the political setup in this city whatever it was that they wanted. Therefore they all had their own interest in seeing him succeed. The pressure that interest all added up to was a pressure that no one in the system could stand against, because it came from the system itself."

The proof of the irresistibility of this pressure was Moses' relationship with the officials through whom the city's five Democratic county organizations had for decades exercised much of their political influence—the city's five borough presidents—and with the body on which they sat and which was supposed to be the heart of its legislative system: the Board of Estimate.

The borough presidents were, for decades, the keystone of the system by which the county machines held power; the five Borough Halls over which they presided were storehouses crammed with the public works contracts and individual jobs which during those decades could be translated into political clout. With the exception of the parks and parkways which were turned over to Moses by the Legislature in 1934, each borough president controlled virtually every public work in his borough, from bridge to catch basin. In addition to being able to tell contractors whom to hire, borough presidents' control of municipal services, such as snow removal and street cleaning and repair, gave them direct appointive power over thousands of laborers' jobs, as well as additional thousands of administrative and bureaucratic positions. The county machines were embedded in the community. On primary day, Democratic voters would find on the ballot the names of neighbors, for four or five county committeemen would be elected from each election district, and a district might be no larger than a single heavily populated city block: there were, in Tammany's heyday, more than 30,000 Democratic county committeemen in the City of New York. One of the committeemen from the district would be named district captain. At a meeting in the local clubhouse, he and other captains would elect a district leader. The district leaders would in turn elect the county leader, an Ed Flynn or Irwin Steingut or Jim Roe. This pyramid was, of course, democratic only ostensibly. The county boss at its top could, for example, employ his power to force the district captains to elect the district leader he wanted. Power ran downhill as well as up. The democratic shape of the pyramid was further distorted by the fact that a principal ingredient in the mortar that held it together was graft; public considerations, of which the will of the people was the principal, that should have been the only voice heard at its different levels, were filtered through a host of private considerations. But there was a pyramid, and its base was the people. And, through the county committeeman-district captain-district leader-county leader-borough president system, the people's voice was heard—even on public works. The district captain had to produce votes in his district to keep his job, so he not only had to do small favors for voters—obtaining them jobs or small loans, interceding with a grocer who had cut off credit—but also had to be his district's champion at City Hall, to be able to obtain a neighborhood playground and to see that it was located where the neighborhood wanted it or to kill a plan to run a highway through the neighborhood. The district leader who wanted to remain a district leader had to be responsible to his people and to be willing to fight for them—and he had to be able to win. As Fred J. Cook points out:

The machine might be totally corrupt, but it had its fingers on the pulse of block and ward and, when the pulse beat stepped up to angry tempo, it heeded the warning—or ignored it at its peril. It is hardly possible to overemphasize the importance of this old, basic relationship. If the people of a ward were aroused about a local injustice, the district leader carried their complaints to the halls of the mighty, and often enough something was done to pacify his constituents.

The borough presidents, the titular heads of the Democratic county machines, had been placed in their jobs by the county bosses—Cashmore, who sat on the Board of Estimate for twenty-one years, by Kelly and Steingut; Lyons, who sat on the Board for twenty-eight years, by Flynn; Jim Lundy by Roe; Hulan Jack by De Sapio; and relying for their support on those bosses and on the district leaders, they had to be just as responsive to the people. Other pressures—private, subtle and strong—were, of course, always working upon them. But the pressure of public opinion was at least as strong as any of the others—and far stronger than most. And in the field of public works, the city's highest legislative body, formed to represent the will of the people of the city, was, to a surprisingly considerable extent, responsive to that will.

For two reasons—a desire for increased governmental efficiency (which backfired) and a desire to curb the powers of the corrupt machines—the reformer-drafted Charter of 1938 shifted the responsibility for many municipal services, notably street cleaning and repairing, from the borough presidents to centralized city departments reporting to the mayor. This shift dealt a body blow to the small contractors who had played so vital a role in providing the jobs and campaign contributions the machine needed. As for large-scale public works, the borough presidents' authority was eroded by the

Charter and by the new scale of construction made possible by the entrance into the field of the federal government, as, under the WPA and PWA, the emphasis shifted continually away from the block to the neighborhood, from the neighborhood to the borough, from the borough to the city. Because the federal programs were so big, they were administered on a citywide basis, so federal officials were predisposed to select as the local administrators of such programs officials who represented the whole city rather than one of its segments. In New York, this predisposition was reinforced by the Roosevelt-La Guardia alliance that resulted in the funneling of all federal public works contracts through City Hall instead of the borough presidents' offices. Handling the new scale of construction required a new scale of contractors, industrial giants with enough financial resources to fulfill cities' bonding requirements, and enough technical expertise to handle previously unprecedented engineering, architectural and construction problems. And since such corporations received their contracts through City, not Borough, Hall, they gave their campaign contributions to City, not Borough, Hall and hired outside architects, engineers and bonding firms that City Hall recommended. The 1961 Charter transferred most of what remained of Borough Hall's power over public works to the mayor, and Charter revisions step by step pared away to a relative handful the number of administrative jobs over which they had direct appointive power. The borough presidents found it increasingly difficult—in the postwar era impossible—to give satisfaction to their constituencies. They could not provide jobs for individuals, could not give work to local architects or engineers, could not oversee the dispensing of orders to local construction-materials suppliers or of policies to local insurance brokers and bonding firms. The imposing façades of the Borough Halls became empty husks behind which dwelt no real power.

The borough presidents' constituents, uninterested in the complexities of Charter revisions, didn't understand that. They thought that a borough president was still what a borough president had always been. They approached him for jobs, contracts and insurance policies as they had always approached him. And when he couldn't provide them, they viewed the failure as that of an individual, not of a system. They resented the failure, so much so that it would have had to be an insensitive borough president indeed not to recognize the danger to his chances for re-election. "They were indicted for a failure," a failure for which they were not at fault, Rodriguez says. There was a gap—a huge gap—between what people expected of them and what they could do.

In theory—the theories about government in New York that were believed, judging by their writings, by political scientists—the borough presidents, by sitting ex officio on the Board of Estimate, possessed (at least until the Charter revisions of 1961) substantial legislative as well as administrative powers: the power to control the city's departments and agencies by approving—or disapproving—every single agency expenditure; the power to control city employees by authorizing—or refusing to authorize—their hiring and their individual salaries; the power to make any changes they wished in the mayor's executive budget; as well as all "residual powers" not specifically delegated to mayor, City Council or Planning Commission. The most detailed

and comprehensive analysis of the city's government ever written, Governing New York City, by Professors Wallace S. Sayre of Columbia and Herbert Kaufman of Yale, concludes that "on the chessboard of the city's politics, the Mayor may be King, but the Board of Estimate is Queen. . . . the Board [is] the single most powerful participant in the distribution of the stakes of city politics."

Over public works, the works which did so much to permanently shape a city and mold the lives of its inhabitants, the Board's powers were, on paper, particularly strong. "The Board of Estimate shall have the control of the streets of the city," the Charter states, and specifically the control—the "exclusive" control—of the street-opening permits for relocation of understreet "conduits or ways" without which, in a city whose underground was laced with a tangled network of sewers and utility mains, no major public work could be built. Moreover, under the theory on which the Charter was framed, a theory which did not take into account public authorities, the Board and the Board alone had control—exclusive control—over all real property owned by the city. It alone could authorize its acquisition; it alone could approve its use; it alone—through its power to draw up the capital budget—could decide what would be built on it. And, because it had the power to regulate the letting of all city contracts, it alone could determine how and when public works would be built.

The votes on the Board jointly controlled by the borough presidents\* enabled them, if they stuck together and cast them as a block, to prevent the Board from acting without their consent on the many public works decisions which required a two-thirds or three-fourths majority.

And they did stick together, under an informal agreement by which none of them would vote for a public work unless the president of the borough in which it was to be located approved. So absolutely did they honor this agreement, year after year and decade after decade, that the pledge, which the borough presidents themselves called "borough courtesy," became known to frustrated agency administrators as "the unwritten law." Through both the formal and informal powers of their positions on the Board of Estimate, then, the borough presidents, in theory, enjoyed what Sayre and Kaufman call a "commanding position" in the field of public works.

But new realities in public works made the borough presidents' legislative powers as meaningless as their administrative powers.

One new reality was the wealth of Moses' public authorities and the Board of Estimate's lack of control over that wealth.

The Board's authority over conventional city agencies rested ultimately on the fact that these agencies had no money except what the Board chose to

<sup>\*</sup> From 1938 to 1957, there were sixteen votes on the Board. The three "citywide" officials—Mayor, Comptroller, Council President—cast three each, for a total of nine, and the borough presidents cast a total of seven, two each by the presidents of Manhattan and Brooklyn and one each by the other three. A 1957 Charter amendment raised the number of votes on the Board to twenty-two, twelve of which—four each—were cast by the citywide officials, ten of which—two apiece—by the five borough presidents.

give them, that the Board could dole it out to them item by item, scrutinizing every line in an agency's budget request, and the agency therefore had to obtain Board approval for every expenditure, no matter how small. But Moses' authorities had an independent income. They didn't need the city's money—and therefore they didn't need the city's approval in spending money.

Another new reality was the poverty of the city's government, poverty both absolute (La Guardia's worst nightmares paled before the realities of New York's postwar finances) and relative—relative to the new needs created by its growth and by the fact that the growth consisted of an inpouring of impoverished immigrants in need of more help than the city was accustomed to give, and relative to the new needs of the county Democratic organizations that controlled its politics. The city simply did not have the money to build public works on the new scale required by the public-or by the greed of the political machines. But Moses' authorities—the authorities and the state and federal governments whose expenditures in the city he controlled—had the money. Through their seats on the Board of Estimate, the borough presidents had power—power to withhold street-opening permits, for example—to stop authorities from building. But the borough presidents did not have the power to build themselves. Their power was, therefore, negative only. They could deny, but they could not initiate. They could not provide what the people—and the county machines on which their own careers depended—were demanding. They became, in Rodriguez's words, "incapable of giving political satisfaction to their clientele." The old system by which they had lived was dead. In its place was a vacuum.

And it was into this vacuum that Robert Moses stepped. To a borough president agonizing because he could see no way of providing the action to solve his borough's traffic or housing problem that his constituents were demanding or the jobs that his local unions wanted or the contracts, insurance premiums and "coincidences" of honest graft that his county organization wanted, the Coordinator would suddenly appear bearing wondrous gifts. He would present to him a proposal for a highway or an urban renewal development that would "solve" the problems. He could assure him that the financing was all arranged, that the BPR or FHA or DPW had agreed to provide it as soon as he asked them to. When the borough president asked how long it would take to draw up the plans, Moses could tell him that they were already drawn up, that the project was awaiting only one thing: his okay. The borough president would be able to see that the proposal would provide, at one swoop, jobs, contracts, architectural and engineering fees. Knowing Moses' reputation as a man above politics, he might wonder whom the contracts, jobs and premiums would be going to. But he would soon become aware—if not from Moses himself then from Stuart ("Mustache") Constable or sly little George Spargo-that, reputation or not, the jobs, contracts and premiums would go where he wanted them to go. And if he inquired among politicians who had previously worked with Moses, he would also be told that Moses was, as J. Russel Sprague had commented so many years before, "a practical guy, a guy you can talk to," a guy who, in other words, would have no objection if friends of the borough president began buying up

quickly, before even a word of the proposal had leaked to the papers, the land that would have to be condemned, a guy who would accept the borough president's recommendations on who should get the contracts. "What he was doing was giving them a package," Rodriguez says. "He was giving them a finished product. If a borough president accepted the proposal, there would be a resolution of every demand." And when the county organization gave its annual dinner, the borough president would be able to look down from the dais and see that all the tables were filled, and the dinner program lying beside his plate would be satisfyingly thick with ads. What Moses was doing, of course, was creating a new system—one that revolved around him, that substituted his public works for the traditional means by which political machines existed and grew fat. Whether the politicians with whom he was dealing understood this or not is doubtful. "But," Rodriguez says, "they knew it was an advantage." They may have simply seen it as a "package." But they knew it was an attractive package.

It was even more attractive because it would be popular with the public. "There was nothing in the public mind that was unpopular about Moses' performance then," Rodriguez says. "He was a giant." There would be a resolution not only of the demands by the unions for jobs and by the contractors for contracts but of the demands by the press and the public for action. The borough president "would be able to go back to his community as an accomplisher, an accomplisher of really big things." And, perhaps just as important to some men as any of this, they would know that when the time came, during a campaign or at the end of a career, or over a Thanksgiving dinner table, perhaps, with one's grandchildren sitting listening, for summing up one's accomplishments in life, for saying what one had done for his borough, one could say that during his administration had been built this great road.

There was, of course, a price on the package: if you wanted it, you had to take it as is. You couldn't ask for alterations. The borough president knew his borough better than did Moses or Moses' engineers. He knew its people, and where they went to shop, and to worship, and to play and walk in the evenings. He knew the communities in which they lived. Therefore he might know that putting a highway where Moses wanted it would isolate a neighborhood from its shopping area or its churches, while a route just two blocks away would neatly divide two neighborhoods, which had little social intercourse anyhow. Moses didn't know-and he didn't care to learn. He would not even discuss such considerations. He would allow no analysis of community feelings, of planning considerations—no discussion of alternate routes based on such considerations. Moreover, there could be no discussion -although the Board of Estimate on which the borough presidents sat was the key body in which such discussion was supposed to take place—of the worth of the citywide program as a whole or of whether your borough might not need other projects-schools, perhaps, or babies' health clinics, or neighborhood public libraries—and whether those should not be built first. What happened when a borough president sought to raise such considerations is described by an official who spent many years working for one who

occasionally did. "All Moses had to do was push a button and the phone calls and telegrams would pour in: You were holding up work, you were holding up progress. 'We need jobs—do you have any other jobs to offer us? Have you got a better idea for solving the transportation problem? Where is the money gonna come from? You're holding up progress.' Let me tell you—until you've sat on the other end of those phone calls for a while, you have no idea how hard it is to stand in the way of 'progress.'"

When, as occasionally happened, a borough president persisted in raising such considerations, Moses used the power of his money to discipline him-so effectively that he was not likely to try it again. In 1953, for example, Moses proposed an elevated expressway along sixteen miles of Bruckner Boulevard. It would cost \$23,000,000. Triborough would pay. Bruckner Boulevard, drawing customers from the residents of pleasant residential neighborhoods nearby, was one of the most thriving commercial areas in the Bronx. Businessmen who owned stores along it were aghast. It had been proven that elevated structures brought ineradicable blight to the streets along which they ran; the city had only recently finished tearing down the elevated Third Avenue subway line for that very reason. Could not the expressway be built below the surface of the boulevard, in a tunnel preferably, but, if this were to be shown by engineering studies to be too expensive, in an open cut? There might be some additional cost, but surely it would be worth some to avoid the destruction of one of the borough's most thriving areas. At least, should not the below-surface solution be considered?

Under intense pressure from the merchants, who together comprised a formidable lobbying bloc, particularly in an election year, Bronx Borough President Lyons made the mistake of insisting that Moses consider the alternative plan. Moses' response was to call in reporters and announce that he was reallocating \$3,000,000 of the \$23,000,000 for a highway project in Manhattan, \$10,000,000 for a highway project in Prooklyn (the Brooklyn project, ironically, was the widening of Third Avenue beneath another Moses elevated highway, the Gowanus Expressway, which had destroyed another pleasant neighborhood without alleviating any traffic problems; Moses wanted to widen Third Avenue now because traffic along it was worse than ever). "Borough President Lyons lost some \$23,000,000" for the Bronx, Moses said. And, he added, "precisely the same thing will happen with" other Bronx highway projects "if Mr. Lyons does not change his tactics."

Lyons, red-faced and sweating beneath his plastered-down shiny black hair, changed them in the very next Board of Estimate executive session. Although he had been delaying approval of the other highways because of local protests, promising consideration of alternate routes, he approved every route Moses wanted—and he never again, during his remaining eight years on the Board, seriously questioned any Moses proposal.

And what if a borough president, despite the advantages that would accrue to him from a Moses proposal, decided to fight it? What would he fight with? His borough had no money to build highways. The city had no

money to build highways. The city couldn't get state or federal money without Moses' approval. In effect, only Moses had the money to build highways. Without sufficient engineering expertise on his own staff or sufficient money to hire outside expertise—even if any outside highway expert of stature could have been persuaded to defy Moses—not only couldn't a borough president finance a highway, he couldn't even plan an alternate route. He couldn't even examine Moses' proposal to ascertain its accuracy. He had no realistic choice but to accept it.

Political scientists read the Charter, and they believed what it said. Public authorities, they said—it was not until the late 1960's, more than thirty years after Triborough had been created, that they began significantly modifying their statements—were mere instruments to carry out policy created by the cities' elected representatives. The existence of public authorities growing larger and larger did not in any substantial way lessen the city's control over its own destiny. Governing New York City, published in 1960, went far beyond most analyses by admitting that authorities are "insulated" from many of the pressures that influence "line" departments. But the book nonetheless states that "the Board of Estimate occupies the center of gravity in the city's political process" and adds:

Land use in the City of New York is under the control of the Board of Estimate. The City Planning Commission plays a large part in zoning and land-use regulation, and Borough Presidents individually have important roles also. But the ultimate decisions, the "last say," rest with the Board as an entity.

All the authorities are engaged in construction affected by land-use regulations—particularly the Port and Triborough Authorities, whose bridges and tunnels require elaborate networks of approaches as well as the erection of the central facilities themselves. The Board of Estimate is in a position to obstruct their proposed projects. . . . The Board, a body composed entirely of elected officials, thus possesses a stout stick for its dealings with all the authorities. . . .

The Board of Estimate must approve the acquisition (as well as the use) of property in connection with a large-scale arterial highway program . . . and it is empowered by state legislation to require redemption of Triborough bonds . . . prior to maturity. (The Board promptly used this power to force Triborough reconsideration of some of the approach routes to the contemplated Narrows Bridge.) . . .

There is a chapter in the consolidated laws of New York State called Public Authorities Law. . . . While the legislature may be under some restraints because it is bound by the Constitution of the United States not to violate the obligations of contracts (and bonds are contracts), the authorities are quite vulnerable through their legislation. And legislators, as elected officials, are responsive to the insistent demands of their constituents.

The city's politicians, however, understood the realities of the situation—and acted accordingly (one result of which was that, even as Governing New York City was being printed, Moses was refusing, despite protests from large sections of Brooklyn, every city planner who took a position on the issue—and members of the Board of Estimate—to reconsider "some of the approach roads to the contemplated Narrows Bridge," and was

forcing the Board to approve the approach routes exactly as he had planned them).

The single most powerful participant in the distribution of the stakes of city politics? In relation to stakes of the size that their constituencies and county machines were demanding, the Board hardly had any to participate in without Moses' generosity.

Require redemption of Triborough bonds? Certainly! All the Board had to do was to raise the money necessary to, in effect, purchase all the Authority's bridges and tunnels, a feat which, by the mid-1960's, would have cost roughly—no precise figure is available—\$2,000,000,000, or about \$2,000,000,000 more than the city had available, or was likely to have available in this century—or the next.\*

The Board of Estimate shall have the control of the streets of the city. An unequivocal statement. But in practice that control ended where Moses' ambitions began.

On paper—the paper on which the Charter was written, the paper on which the press reported the activities of the government established by that Charter, the paper on which professors' theories were enshrined in the form of books—the Board of Estimate possessed many powers over public authorities. But in reality a single power—the power of money—could render all those powers meaningless. And thanks to his public authorities, Robert Moses had the money. A borough president, searching desperately for a means of obtaining large-scale public works for his borough, could find only one way: to cooperate with Moses. He had no choice in the matter. Supposedly the servant of these elected representatives of the sovereign people of the city, Robert Moses was in reality their master.

The proof was in the way he treated them—and in the way they accepted that treatment.

When he attended Board meetings, Moses "was always threatening to resign," Paul R. Screvane recalls. "He used to say, 'I don't need this job.' And then he'd go and stand off in a corner with his arms folded and sort of sulk. And people would say, 'Come on back, Bob,' and it'd be worked around."

When he attended Board meetings. Frequently Moses took the easiest

<sup>\*</sup> The chances of the city finding \$2,000,000,000 within its perennially exhausted debt limit were so remote as not to be worth considering. So were its chances of obtaining a sizable raise in that debt limit, for a raise of that size would have toppled the city's already shaky credit edifice. And permission to raise the limit to redeem the bonds would have had to come from a State Legislature that had its own, compelling, reasons for not wanting those bonds redeemed. If by some strange concatenation of circumstances—so unlikely as to be unforeseeable—the city had obtained permission to sell so unprecedented an amount of bonds—and had been able to find buyers for them, it would have had to pay in interest, not the 4 percent that Triborough was paying, but 5½ percent, which meant that the city would have to raise \$110,000,000 per year just to pay the interest costs.

way of showing his contempt for the authority of the city's dominant legislative body. When it asked him to come to City Hall, he refused.

His refusals with the Board were not as absolute as with the Council—the invitations of whose president he often declined even to acknowledge. In the first years after the war, in fact, while Moses was still testing the limits of his new-found strength, he did, while refusing to appear at public hearings of the Board, attend many of its closed-door executive sessions. But once he had ascertained the extent of his power, he began to make even his closed-door appearances more and more infrequent, notifying the Board that the press of time made it necessary for him to send "delegates" to represent him: Spargo if the matter under discussion concerned the Triborough Authority, William Lebwohl or Samuel Brooks if it concerned urban renewal, Stuart Constable if it concerned parks, Arthur Hodgkiss or Harry Taylor if it concerned arterial highways. By 1950, one Board staffer recalls, "he wouldn't come down to City Hall except on rare occasions. He would communicate by written communication or by telephone, or by sending ambassadors instead—like he was a foreign, sovereign state."

About some of Moses' programs, the Board was vouchsafed no information at all until the planning of the programs had been completed beyond any realistic possibility of alteration. "The Board of Estimate never knew what was going on in the Slum Clearance Committee," Judge Lutsky recalls. "He wouldn't come in there with [a Title I project] until it was all wrapped up"—the site selected, the replacement projects chosen, mapped and blueprinted, the "sponsors" who would be given the projects lined up, the federal financing assured, everything ready to go, in fact, except for their okay. And they had no choice but to give their okay. During the decade and more that Robert Moses ran the Slum Clearance Committee, drawing up without consultation with the Board projects that would throw tens of thousands of the city's people out of their homes and that would transform a substantial portion of the city's face, not one Moses slum clearance proposal was turned down-or even modified in any significant way-by the city's elected officials. In 1954, the Board became aware that Moses was presenting to the Federal Bureau of Public Roads a vast new program calling for the construction of the Verrazano-Narrows Bridge near the southern end of the city, the Throgs Neck Bridge at the northern end, and miles of connecting arterial highways in between-exactly where, the borough presidents did not know and, despite repeated requests to Moses, were not able to find out. And when Moses, having completed the program, slapped it down on the table in front of the Board, they made no attempt to disapprove—or even modify—it. The city's arterial highway program was, in all essential respects, the program drawn up in the privacy of Moses' Randall's Island offices.

Imperfect as New York's old political system may have been, the public will was never insignificant within it. The borough presidents and other elected officials who had exercised power under it were kept in power only by the public's votes, and they were therefore responsible and responsive to the public. Such responsiveness was built into the old system's innermost core.

But Robert Moses was not responsible to the public. Its votes had not put him in office, and its votes could not remove him from office. He despised its opinion. The considerations that he took into account were the considerations that mattered to him personally: the project, in and for itself; the engineering considerations that would Get It Done the fastest and cheapest way; and the considerations—economic considerations, whether the economics of honest graft, or of bonds, or of paychecks to union men—that mattered to the forces he was using to impose his will on the city. By giving the leaders of these economic forces—the bankers, the union leaders, the politicians—what they wanted, he did not have to give the people what they wanted. The old system, imperfect as it was, was responsive to the public. The new system—Moses' system—was not. Robert Moses, who replaced corruption in New York City, was worse than corruption for the democratic processes. In the postwar era many forces were coming together to destroy those processes in New York.

But he was the most important force of all.

The building of a public work shapes a city perhaps more permanently than any other action of government. Large-scale public works shape a city for generations. Some public works—most notably the great bridges and highways that open new areas to development and insure that these areas will be developed on the low-density pattern fostered by highways as opposed to the high-density pattern fostered by mass transportation facilities—shape it for centuries if not, indeed, forever.

During Moses' reign over public works in New York—a thirty-four-year reign that not only was significantly long in a city that had, after all, existed as a consolidated entity in its present governmental form only since 1898, but also occurred at the most crucial point of time in the city's history, the decades during which its vast open spaces were filling up and being shaped on a significant scale—it was not the shouts of the people but the whispers of banks, labor unions, insurance companies, big construction combines, big business and, of course, the Retainer Regiment that determined what public works would be built in New York. He centralized in his person and in his projects all those forces in the city that in theory have little to do with the decision-making process in the city's government but in reality have everything to do with it, and by such centralization he made them strong.

What were all these forces? Economic forces. Money—whether in the form of bond-underwriting fees, overtime-loaded jobs, rents from huge apartment developments, contracts, increased department-store grosses or any of the hundred forms of the payoffs called "fees." Under the system as it had existed before Robert Moses, these forces had been present in the decision-making process but had been to a degree subordinated to the force supposedly supreme in a democratic system of government. Moses mobilized these forces—whipped or enticed them into line behind his banner—so effectively that they and they alone were the forces that mattered, the forces that determined how the city would be shaped. He mobilized

economic interests into a unified, irresistible force and with that force warped the city off its democratic bias. During his decades of power, the public works decisions that determined the city's shape were made on the basis not of democratic but of economic considerations. During most of his reign—the post-La Guardia portion of it—the city's people had no real voice at all in determining the city's future. He and he alone—not the city's people, not the government officials the people elected to represent them, not the power brokers who dominated some of these officials—decided what public works would be built, when they would be built and to what design they would be built. He was the supreme power broker.

## 34. Moses and the Mayors

## = O'DWYER =

THE BEST PROOF THAT, in the fields Robert Moses had carved out for his own, he and he alone had the final say in New York City, is his relationship with the postwar Mayors of New York under whom he served.

William O'Dwyer, brawny, blue-eyed and from Bohola, County Mayo, had an Irishman's brogue, an Irishman's gift for blarney, an open, friendly, bluff Irish manner, a wonderful Irish grin and what seemed like a typical, bright Irish success story-born in 1890 one of eleven children of two impoverished schoolteachers, he went to the Jesuits in Spain as a lad to study for the priesthood, then, deciding he didn't have the calling after all, took passage to New York and worked his way up: handyman, deckhand on ocean freighter, stoker and fireman on river boats plying the Hudson, longshoreman, hod carrier (hod carrier who at lunchtime would read novels to the other hod carriers; "Little did the boys know that I was practicing my pronunciation"), plasterer's apprentice, bartender at the Plaza Hotel, cop (dissatisfied cop: "When a guy gets along in his twenties he begins to get uneasy; people stare at themselves; and know that they'll be sore as hell at life at sixty if they don't do something to improve themselves"), cop who studied law at night for seven years; then, finally, at the age of thirty-five, a lawyer, then Magistrate, County Court Judge, District Attorney, Brigadier General and President Roosevelt's personal representative to the Allied Control Commission in Italy.

But flickering beneath that brightness were strange shadows. There was O'Dwyer's connection with James F. Moran, a florid, ham-fisted giant with underworld connections, an association that went far back in O'Dwyer's past, how far no one was ever to learn. When O'Dwyer became District Attorney, he made Moran his chief clerk, put him in charge of key investigations and of policemen assigned to the DA's office—and there were people who, overhearing Moran and O'Dwyer talking together, sometimes came away with the funny feeling that the DA's clerk was giving orders to the DA. There was the fact that although O'Dwyer made his reputation as a DA crusading against Murder, Incorporated, he never even called in its kingpin, the notorious Albert Anastasia, for questioning. There was the mysterious disappearance from police files of certain "wanted" cards and arrest sheets, a

disappearance that forced detectives to release a waterfront hoodlum who was reportedly willing to testify that Anastasia had murdered a dockworker who had dared to speak up against him at a union meeting, and there was the discovery of the hoodlum's body in a river shortly thereafter—and there was the sworn testimony of a police sergeant that the files had been removed on Moran's orders. There was the mysterious death of Abe (Kid Twist) Reles, another mobster reportedly willing to testify against Anastasia, who was killed when he hit the sidewalk six stories below the window of a hotel room in which he was being held in "protective custody" by six policemen under O'Dwyer's orders. There was the fact that before O'Dwyer received the 1945 mayoral nomination, he paid visits to fifty-two-year-old philanthropist Frank Costello, born Francisco Costiglia, ruler of the eastern underworld, at the Mafia Don's apartment, and there was the fact that contributions for O'Dwyer's mayoral campaign were solicited by a Costello henchman. And there was a fact even more puzzling, a fact known only to a handful of intimates. Under New York election law, a man nominated for office in a primary election cannot thereafter decline the nomination unless he is subsequently nominated for a judgeship. On the very day in 1945 on which O'Dwyer received the mayoral nomination for which he had been working for four years, he suddenly begged Democratic leaders to allow him to decline it by nominating him for a judgeship instead, an appeal that the leaders thought was a joke until he repeated it almost frantically and they realized, to their astonishment, that he was in dead earnest-an appeal that even intimates could not explain, for apparently not one of them conceived at the time of one possible explanation: that the glib, smiling Irishman was being torn inside by the conflicting claims of ambition and fear; that, driven by the ambition to seek the mayoralty, he might at the same time be desperately afraid of what the spotlight in which a mayor must walk might reveal when it shone on those shadowy places in his past.

As mayor, O'Dwyer impressed even the most cynical of observers as anxious to be a good one. He had a real love for New York. Years later, living in Mexico City in what he defiantly insisted was not exile, he would sit for hours listening to Broadway show tunes, talking endlessly of the city he had left behind ("Lovely, dirty, naughty New York . . . Oh, that great big New York up there! Thank God, I've got those memories . . . most of the time I can't get New York out of my head").\* He had the qualities to be a great one: powers of intellect and decision, intimate knowledge of the city, capacity for hard work, sophistication about the powers of the office and their use, and an immense popularity, fueled by an instinct for public relations. During and after the election campaign, many of the rumors about

<sup>\*</sup> In the bedroom of O'Dwyer's luxurious Mexico City penthouse was an old trunk which contained a faded photograph of a young, handsome patrolman on the beat at Bush Terminal in 1917; Magistrate O'Dwyer's black robe; and a glittering golden badge embossed with the seal of the city, the word "Chief" and five silver stars. Once, with a visitor present, O'Dwyer opened the trunk, put on the black robe and sat staring in silence at the shield. "The badge of the Mayor of the City of New York," he said at last, softly.

O'Dwyer's past were repeated publicly by his opponent, Judge Jonah J. Goldstein, and confirmed by a Brooklyn grand jury, but O'Dwyer shrugged off the charges as "political," and neither press nor public took them seriously. He wanted to be a great mayor, to do things for the city he loved—and Moses, dazzling him with his plans, slapping down on his desk solutions to the city's problems, convinced him that it was only through Moses that those things could be done.

O'Dwyer's relationship with Moses started out as a close alliance. Hardly had he been elected when the city's Pandora's Box of troubles—held shut during La Guardia's last term only by a world war-sprang open. The civic leaders who obtained pre-inaugural audiences impressed on him the need for new schools, hospitals, libraries, sewers and subways whose construction had been deferred by the war and by the prewar Moses monopolization of the city's resources. Idlewild Airport was barely a quarter finished. La Guardia's runways were sinking rapidly back into Flushing Bay, necessitating a mammoth reconstruction job. There existed, of course, a postwar construction program completely outlined and, to a large extent, planned in detail by the Moses-controlled City Planning Commission-it was deposited with O'Dwyer by a Triborough messenger the morning after the election. But the program carried a price tag: \$1,565,000,000. O'Dwyer asked Budget Bureau experts to find out how much money he would have available to build public works, and disbelievingly heard the answer: none. Thanks to the wartime moratorium on construction, the city could borrow about \$150,000,000 before bumping up against the state-imposed debt limit, but the interest and amortization on such borrowing would have to be paid out of the expense budget, and under the current budget—an austerity wartime budget at that—the city's revenues were already \$6,000,000 short of its \$763,000,000 of expenditures. There was no sign of any immediate substantial increase in revenues, and expenditures could not be reduced: almost \$500,000,000 represented salary paid to city employees, almost \$200,000,000 service on already-existing debt piled up layer by layer not only by Tammany crooks but by Moses' vast public works-which he had said repeatedly were not costing the city a cent. Approximately \$700,-000,000 was, therefore, as good as already spent. The budget requests already submitted by city departments would raise the budget by \$153,000,-000 if they were granted. When O'Dwyer first heard these figures, he was to say, he sat stunned. And, Budget Bureau experts told him, they hadn't yet talked about subways: in the current fiscal year, every ride a man, woman or child took-for a charge of a nickel-cost the city 6.3 cents, and the subway deficit was more than \$50,000,000. Next year, thanks to rising expenses, every ride would cost the city 6.7 cents, which would raise the deficit to \$78,000,000. At that very moment, moreover, the militant Transportation Workers Union, whose president, Mike Quill, had hired the Mayor's brother Paul as counsel, was demanding a huge salary increase. If O'Dwyer was not to be branded as the mayor during whose administration New York City went officially bankrupt, new taxes were needed—and they were needed fast. But the city could not impose new taxes without permission from the state—and the state's Governor and legislative leaders, Republicans and up for re-election in 1946, were more interested in embarrassing than assisting him.

The situation had wilted even the hardy Little Flower. It staggered O'Dwyer, who had limited administrative experience, none in dealing with citywide problems and with Albany. Talking to a visitor in Mexico City years later, he would say, "I tell you, there were times when, as mayor, I truly wanted to jump. You would look out over the city from some place high above it, and you would say to yourself, 'Good Jesus, it's too much for me!"

Then, even before O'Dwyer's inauguration, Moses appeared with a proposal. It listed public works projects which could be deferred—and it spelled out methods of paying for those which could not.

The city didn't have any money for new housing, but the state did: a left-over \$80,000,000 from a prewar \$300,000,000 housing bond issue. It would be simple to persuade the upstate Republicans who dominated the Legislature to release that money to the City Housing Authority: just remove the "liberals" who now dominated the Authority and who wanted to "give away" housing to the poor, loading it down with "frills" that they would not appreciate, and turn the Authority over to Right-thinking conservatives who could be counted upon to see that housing dollars provided what housing dollars were supposed to provide and nothing more: a roof over the head of people too lazy or ignorant to provide one for themselves.\*

The current capital budget included \$41,000,000 for Idlewild Airport, a Moses-planned project whose construction he had been directing. It would be simple to free the city from that expense, and from the additional \$200,000,000 it might take to complete Idlewild: turn it over to a new public authority that could raise the money by selling its own bonds.

Most important, \$425,000,000 of the city's debt limit had been incurred for the subway. In calculating the city's debt, the state did not include self-supporting projects. Therefore, if the subways could be made self-supporting, the \$425,000,000 could be lifted out of the constitutional debt limit, and the city would have \$425,000,000 more to spend on public works. And the way to make the subways self-supporting was simple: raise the five-cent fare to ten cents.

The last two of these measures would give the city additional borrowing capacity to raise funds for public works. And, Moses said, it would be simple to finance the amortization and interest on such borrowing in the expense budget: just raise taxes. He had a list of proposed new taxes, and the resultant revenues, already worked out. And when O'Dwyer asked him whether or not Albany would approve such new taxes, Moses told him not to worry—that if he accepted the proposal, and gave him authority to negotiate on the city's behalf, he would take care of Albany.

Moses' proposal was a fiscal codification of his philosophy and his lust for personal power. Since a greater proportion of the poorer classes rather than upper rode the subways, doubling the fare was a financial burden that

<sup>\*</sup> Among "frills" Moses specifically objected to: covers on toilet bowls, doors on closets.

would fall heaviest on those of the city's people least able to bear it. Moses' taxing proposals left real estate taxes unraised and income taxes unmentioned, these being taxes that would adversely affect big real estate holders and the city's wealthier citizens, whose welfare Moses equated with the welfare of society. Instead he proposed doubling the I percent sales tax and imposing a 5 percent tax on all monthly telephone, gas, electric and other utility bills as well as on admissions to all places of amusement in the city—three regressive taxes that would fall heaviest on the city's poorest inhabitants.

And the new projects that could be financed as a result of this income would be *his* projects. The projects he told O'Dwyer could be "deferred" included scores of schools, public libraries, hospitals and health centers (not to mention firehouses). The "nondeferrable" list included his proposed new highways. Every one of those huge roads would go ahead on schedule.

And there would, at least by some accounts, be a more direct increment to his power, too. According to these accounts, Moses had an associate hint to O'Dwyer that the easiest way to get state money for the Housing Authority would be to appoint as its chairman an official with close ties to the Legislature: namely Robert Moses. Equally important, a threat to his power would be removed. The Port Authority, whose surge for power he had stemmed for a decade at the city's western shore, had seen in the city's inability to finance airport construction a chance to breach his defenses at last—by taking over the city's airports. But, O'Dwyer was to recall, "Bob Moses represented to me that under no circumstances could I go along with the Port Authority"; and under Moses' proposal for a new airport authority, he wouldn't have to.

Liberals were outraged by Moses' tax proposals—"municipal extortion from those who are not in a position to carry such a burden," one called them—and by his proposed fare increase, because it would be regressive, because the five-cent fare, low enough to allow even the city's poor to use subways not only to get to work but to travel to cultural institutions and amusements, was, as Stanley Isaacs put it, the city's "greatest single unifying influence," and because the break in the previously sacred five-cent barrier would establish a dangerous precedent. Operating and maintenance costs were obviously going to keep rising as already-old equipment grew older and TWU salary demands rose. Were the subway riders to pay for every rise? If they were, they would soon find themselves spending a totally disproportionate amount of already tight budgets just for the privilege of traveling around their city.

Not only would Moses' proposal dump a new burden on the poor; the burden would be heavy indeed.

"More than half of those living here have a family income of less than \$3,000 per year; many less than \$2,000 per year," Isaacs pointed out. If two members of the family were working, it would cost them sixty dollars a year more just to get to work. Isaacs—a wealthy, educated Jewish aristocrat but a product of a home in which the feelings of those less fortunate were considered nightly at the dinner table—understood, as Moses did not,

what sixty dollars a year meant. "This is a heavy load," Isaacs wrote the *Herald Tribune*. "It just cannot be met in many cases without cutting the food budget, without providing less milk for the children, depriving them of needed clothing."

Isaacs, moreover, understood the real motive behind Moses' proposal. The Coordinator was claiming that he simply wanted to make the subways self-sufficient, the councilman said. But this was not the truth.

Commissioner Moses really gave the case away when he . . . explained that he wanted the subways made self-liquidating . . . so as to release \$425,000,000 from the debt limit; so that the city can spend a very substantial part of this huge sum on new express highways, throughways and bridges for the motorist, who will not be asked to pay a penny toward the capital cost. These highways are furnished him free of charge. The unfairness of this seems obvious to me.

More important, who would benefit from highways, throughways and bridges? The same upper and middle classes—suburbanites, and the two thirds of a city that could afford to own an automobile—the same classes which, under Moses' proposal, would be freed from supporting the subways through their real estate taxes. The city's wealthier classes—its car-owning classes—would be subsidized at the expense of the poorer classes. If you insisted on increasing the subway fare, at least spend the money from the increase on subways. With \$425,000,000 you could, in 1946, have modernized all moving equipment on New York's subways and made possible the construction of comfortable, modern stations—and could, in addition, have sufficient left over to build the more urgently needed new lines. Spending the money from the subway fare on highways would compound the inequities already existing in the city's transportation setup. It was neither fair nor just.

Isaacs and other liberals were also distressed by Moses' airport-financing scheme. Noting that, to offset the lack of other revenues, Moses had suggested that the proposed Airport Authority be allowed to pay interest rates almost 50 percent higher than the Port Authority—or the city—would have to pay, they assailed his scheme as a "giveaway" to bankers. And they knew whose money it was that was being given away: the city's people's. The rates Moses was proposing would raise the interest costs—the bankers' profit—close to \$70,000,000 above what the Port Authority or city would have to pay. As it happened, the city had sunk almost precisely that amount into preliminary work on Idlewild and would therefore be subsidizing by that amount any authority that took it over. Why, they demanded, could not the Port Authority be allowed to take it over—on condition that it pay the city back, over the years, the \$70,000,000?

The liberals' objections were echoed by La Guardia, who had resisted similar Moses proposals for years. (The sales tax had been imposed only as an emergency measure to finance Depression relief; La Guardia had been determined to remove it as soon as the war ended.) Realizing that Moses' airport plan would turn over even his beloved La Guardia Airport to a public authority, La Guardia attempted in his first radio broadcast after O'Dwyer's inauguration to teach his successor what he had learned—too late—about

authorities. You'll find that each is a "super-government," "a wart on your neck," he warned O'Dwyer. "The investment bankers get to be greedy on authority bonds," he said. "Bankers were in control when I took office in this city. They can come back a little at a time. Don't do it!"

The liberals' fears were echoed by at least one high city official: Comptroller Lazarus Joseph. And Joseph added a point that Moses, in his detailed analyses of city finances, had somehow failed to mention: the state, which at that time took from the city each year far more in taxes than it returned to it, had a surplus, due to the wartime moratorium on construction, of \$570,000,000. Why could not Governor Dewey and the Legislature ease the city's financial bind by simply giving some of that surplus back? Democratic legislators repeated the question. Pointing out to O'Dwyer that while he didn't have to run for re-election in 1946, they did, and therefore did not want to be identified with a tax and fare increase, they demanded that the Mayor throw his prestige behind the demand for more state aid for the city.

Moses' answer was, reportedly, to the point. He threatened, as one reporter put it, to "reveal some facts that would greatly embarrass" the Democratic legislative leaders. The leaders' response was prompt. They swung into line—and, in a naked display of power during a closed-door party caucus in Albany, they whipped other Democratic legislators into line. O'Dwyer did not throw his weight behind the demand for state aid. As for Comptroller Joseph, he had no influence with the men who mattered in Albany—Dewey and the Republican legislative leaders—and Moses did. O'Dwyer gave Moses the authority he had requested, the authority to represent him—to represent the city—in the financial negotiations in Albany. And although the Comptroller had been elected by the city's people as the city's chief fiscal officer, at the very moment at which he was appearing before Senate and Assembly fiscal committees on the third floor of the State Capitol, Moses was closeted secretly on the second floor, working out his program with Dewey and State Comptroller Frank C. Moore and the legislative leaders who, with Dewey, controlled the Senate and Assembly. O'Dwyer himself never went to Albany. There are those close to him who believe that during the negotiations—which took weeks—he never spoke to Dewey even over the telephone. The city's mayor transacted the city's business entirely through a broker: Robert Moses. Moses was the broker—the middleman—between the Mayor and the Governor, between the city and the state, between Democrats and Republicans.

The deal worked out was the deal the broker wanted. The program that resulted from the negotiations—a program announced, in February 1946, only after an appropriate public show of efforts to find other solutions and to psychologically prepare the public for the load of new taxes that was to be dropped upon it—was, by and large, Moses' program, although the stories on the maneuverings leading up to final adoption that ran day after day in the city's newspapers scarcely mentioned his name.

Moses even played the traditional broker's role of concealing from his principal facts which might have made him pull back from the deal the broker had arranged. Many astute political observers were sure that electionyear public reminders from O'Dwyer of the obvious dichotomy of the huge state surplus, obtained from city taxes, and a huge city deficit, would have forced Dewey and the Legislature to make the contribution to the city that Joseph wanted. Some of these observers even believed that Dewey and the legislative leaders were prepared to make such a contribution when Moses arrived in Albany. But Moses did not represent their position to O'Dwyer in this way. He informed the Mayor that his conversations with Dewey and the leaders had convinced him that they would never make such a contribution, and that if O'Dwyer tried to apply public pressure to get it, the only result would be to make them refuse to accept the over-all city program. O'Dwyer had no way of checking Moses' information. He never applied that pressure, never backed his Comptroller's campaign.

In the interests of his deal, Moses misrepresented it not only to his principal but to the public. Fearing public reaction to the fare increase, Dewey apparently entered into an agreement to delay its announcement until after the election—and Moses lulled the public into a false sense of security by stating flatly that if the sales tax was increased, the fare increase would no longer be necessary. On other issues, too, he beclouded and misrepresented the facts—so successfully that, despite reams of press analysis, the full details of the concealed arrangement were never revealed. He may not have been an honest broker, but he was certainly a discreet one.

And, like any broker, he collected a commission—paid in the coinage, power, that he coveted.

A huge commission. During 1946, Albany gave Moses—in addition to the new city taxes whose revenue he could spend, and in addition to the promise that the transit debt would be permanently removed from the constitutional debt limit, so that he would have \$425,000,000 more to spend—the necessary approval for his takeover of Ole Singstad's Tunnel Authority; for an increase in Triborough's bond-issuing powers to \$360,000,000; for the right to pay interest on those bonds to bankers at the rate he wanted; and for the creation of a New York City Airport Authority. Concerned about the power he was amassing, the Legislature drew the line at allowing him to become chairman of the City Housing Authority, but it authorized the Authority's reorganization along the lines he wanted, lines that would eliminate his "liberal" enemies on it. And it gave the reorganized Authority \$80,000,000.

There was even a bonus on top of the commission. On February 19, the same day on which the city-state deal was finalized, Moses, who was not even mentioned in the news stories about that deal, announced, in an apparently unrelated development (it was to keep reporters from spotting the relationship that Moses, not Dewey, made the announcement, and that the announcement was released not in Albany or New York City but at Moses' Long Island headquarters), that the state had authorized \$22,000,000 worth of state park and parkway projects on the Island—including an 8,200-seat Jones Beach Marine Theater for huge outdoor stage extravaganzas that Dewey had earlier dismissed as an attempt at grandiose empire building.

Moses got what he wanted, Dewey what he wanted: enabled to hold

on to the state surplus, he was able to cut state taxes; as part of the deal that Moses engineered, O'Dwyer even praised Dewey's fiscal policies publicly —Dewey won re-election by 687,000 votes. What the city's people got was four new taxes on their heads, plus, although they didn't know it at the time, a subway-fare increase—and their resentment was reflected in the unprecedented meagerness of the Democratic vote in the city in November; even Herbert H. Lehman, running for United States Senator, was defeated in the Republican landslide. But their resentment couldn't touch the men at whom it should have been aimed. O'Dwyer would not be running for another three years; as for the man really responsible—middleman Moses his fate was beyond the people's control. Even if they had known his role, they would have had no recourse against him. Following his re-election, Dewey gloated that his majority was the largest in the history of the state. The boast was not true. The largest majority had been rolled up, in 1934, against the man who had engineered the deal, on the single occasion in his long career on which that man had submitted himself to the people's verdict.

Their smiling new mayor had gotten what he wanted, of course, and he was grateful. "Mr. Moses has been very helpful in this matter, and has gone to a lot of trouble to do things for me he need not have done," O'Dwyer said. "He's done that because he's recognized my plight." The depth of his gratitude was demonstrated at his inauguration (at which Moses, being sworn in as the Park Commissioner and member of the Planning Commission, drew the heartiest applause from the audience). The first official to be sworn in, as O'Dwyer's deputy mayor, was Moses Man George E. Spargo. O'Dwyer let Moses know that when the Housing Authority was reorganized, its new chairman would be the man Moses had recommended, Major General Thomas F. Farrell, a former State DPW engineer who during the war had directed all army construction in the China Theater, including the famed Burma Road. And when the Airport Authority was formed, O'Dwyer's gratitude was demonstrated even more convincingly. "I've put it all in your hands," O'Dwyer told Moses. "Pick your members." Moses picked them without consulting the Mayor; when he telephoned O'Dwyer and told him he was ready to bring them down to City Hall, the Mayor told him to come ahead; he didn't even ask who they were. He didn't know their identity until Moses ushered into his office Harry F. Guggenheim, Laurance S. Rockefeller and Lieutenant General James H. Doolittle. (Guggenheim had been selected because Newsday, the newspaper his wife had founded, was becoming a potent political force on Long Island and Moses wanted him drawn into his orbit; Rockefeller was selected because he was a Rockefeller; Doolittle, a hero of the Tokyo air raid, was selected for window dressing.) And then the Mayor simply offered his best wishes, ordered his secretary to bring a Bible, told his press secretary to call the photographers and reporters—and swore the three men in on the spot. After the swearing in, moreover, he kept Moses in command. "I never spoke to Rockefeller, I never spoke to Doolittle, and I never spoke to Guggenheim," the Mayor would recall. "All conversations were had away from the office, between them and Bob Moses. I never talked to them." As for the renamed Triborough Bridge and Tunnel

Authority, here is the transcript of O'Dwyer's conversation with a researcher for the Columbia Oral History Research Project about the Mayor's appointment of George V. (the Fifth) McLaughlin and Queens realtor Charles E. Meyer to serve with Moses on the board:

Q: ... Could you tell me how you determined that these two men should be selected?

O'D: On the recommendations of Mr. Moses, who knew more about it than any man in the State of New York.

Q: Why did these men want these posts?

O'D: I don't know.

Q: You don't know, but that's how you determined the filling of the posts?

O'D: Yes.

Policy-making posts in other key agencies, ostensibly unconnected with Moses, began filling up with Moses Men.

Q: [There are so many positions to be filled. How do you find qualified men?] Who presents their names?

O'D: I don't know, except that the names would come in. Moses did a lot of it . . .

The new mayor's gratitude was demonstrated more convincingly still when he not only named Moses chairman of the Mayor's Emergency Committee on Housing, but allowed him to name almost all the other members. "We . . . give him about six weeks" in a Tammany administration, the Herald Tribune had said. Within six weeks after that administration had taken office, Moses possessed not only more titles than he had ever held before—the construction coordinatorship and the chairmanship of the Emergency Housing Committee, added to his chairmanship of the Triborough, Jones Beach and Bethpage authorities and the State Council of Parks, his presidency of the Long Island State Park Commission, his membership on the City Planning Commission and his city park commissionership, brought the number to nine -but more power. And it was demonstrated most convincingly by O'Dwyer's acceptance of Moses' philosophy. Listening to the Mayor's first annual message to the City Council on January 9, 1946, Jack Lutsky was convinced that while the voice might have been the voice of Bill-O, the hand was the hand of Bob, particularly when O'Dwyer said:

It is impossible to satisfy everyone in a city as big as this. I welcome suggestions and help from all sources, groups and individuals. But I do not intend to be swayed from the course which has been laid out simply because it does not have unanimous support, or because some toes are trodden on, or some vested interest of one kind or another disturbed. I hope I can proceed with a minimum of disturbance, but progress sometimes involves some temporary hardships.

MOSES EMERGES AS "STRONG MAN" OF THE O'DWYER ADMINISTRATION, the *Times* headlined. ("Mr. Moses, nominally a Republican, is thus viewed as enjoying greater prestige in the O'Dwyer administration than he ever encountered in his long and varied political career," the Warren Moscow article stated. "It has not caused much concern among the patronage-minded

in political circles, because Mr. Moses is known to be definitely a policy man, without concern in building up a personal political organization" and because he is "an independent, with a personal fortune that eliminated gain as a possible motive.") La Guardia, raging impotently over the airwaves, said that Moses had been made an "Oberbürgermeister," a "super-Mayor."

Moses agreed with the Moscow and La Guardia assessments. So confident was he of his hold over O'Dwyer, in fact, that he was unable to resist boasting about it—publicly.

"Sure, I'm a conservative. . . . I believe in doing things the conservative way," he told a *Christian Science Monitor* reporter in May 1946. "The dreamers can't get things done. They can't begin to cope with the problems we have. The big prize here, of course, is O'Dwyer. But the Mayor is able to take the pressure. I believe we have won. Last February . . . the radical side tried to get control . . . tried to use the Mayor's brother, Paul, as a lever to swing the Mayor. That force is still at work and is the main avenue through which the radicals would try to swing the city. It was a tough decision for the Mayor. He had that family tie. It was a big temptation for him to waver toward the Left. . . . But after this initial indecision, he swung around." So euphoric was Moses that when a *Post* reporter told him that the interview "made him look like the leader of a city-wide right-wing movement," Moses only laughed and said: "You take the left wing and I'll take the right wing."

Believing he held the Mayor in his palm, he tried to squeeze him. On May 29, a memo from a mayoral aide listing "matters pending" for O'Dwyer's decision included: "Should the housing program be put under Moses as coordinator?"

But Moses had badly underestimated the hardness under the easy Irish smile. Publicly, O'Dwyer laughed off the interview. But Moses' remarks had brought to a boil an Irish temper that had been simmering quietly for weeks. No dummy about bureaucratic maneuverings, he had begun to realize how cleverly he had been hemmed in with men whose first loyalty was not to him. Intellectually capable of grasping citywide problems on the broad scale, he had listened to Citizens Union and City Club deputations explain that the city was heading for disaster unless the burgeoning, surging growth now sweeping across the empty spaces of middle Queens and the upper Bronx and what was left of Brooklyn was shaped by a Master Plan-and the reports that were pouring daily onto his desk brought daily proof that men like Luther Gulick and Lawrence Orton were right. Moreover, no immense intellectual capacity was necessary to see that the problems Moses had promised him would be solved so quickly were not being solved at all; always before, when Moses had stepped into a field, results had been quickly forthcoming; now, months after Moses had accepted responsibility for the emergency housing of veterans, tens of thousands of veterans, more every week, were being forced to live with in-laws, to leave the city entirely—even to bivouac on the streets -because there was no place for them to live; each weekend's traffic tie-up seemed longer than that of the week before. Stating in a speech that "progress sometimes involves some temporary hardships" was well and good; but some of the "temporary hardships" Moses was proposing to inflict were political suicide; thousands—tens of thousands—of families had to be evicted to create the right-of-way for Moses' giant expressways and Moses was proposing to go ahead with the evictions immediately, to tear down tens of thousands of apartments during a desperate apartment shortage. Each Board of Estimate meeting was jammed with hundreds of protesters begging the Board to stop the evictions, and these protesters spoke with a desperation new even to hardened BPs like Jimmy Lyons. Week after week, at these Board meetings, O'Dwyer was forced into the position of defending policies about which—for political if not humanitarian reasons—he was beginning to have doubts.

Spargo, trying as always to out-Moses Moses, began treating O'Dwyer as if he, too, had him in his palm. O'Dwyer fired him on the spot.\* Soon City Hall was buzzing with reports that O'Dwyer was creating a "trouble-shooting" squad—with broad authority—of men he knew to be loyal to him. Months earlier, Orton had asked the Mayor for \$250,000 to begin work on the Master Plan and a related revision of the zoning code. There had been no reply. Now, in late June or early July, O'Dwyer called back. The Board of Estimate, composed of men who had been listening to Moses' views for years, would not okay a large expenditure for the Plan, he said. But, he added, "I think I can get the money for zoning. Go ahead and make your arrangement." With Edwin Salmon replaced as chairman of the City Planning Commission by Robert F. Wagner, Jr., a rising young star in the Democratic Party, the zoning maps were formulated in a way in which they could form a detailed basis for a Master Plan. As soon as Moses realized what was going on, he fought every move to advance the zoning study, but he lost every vote, the first time he had been on the losing side of an issue since he had joined the commission. (Burlingham and McAneny and Windels and Binger and Isaacs and other old giants of the city's reform movement called on O'Dwyer to express their appreciation—and to raise again the question of the old fort at the Battery and to assure the Mayor that Moses was lying when he said that it could not be restored. They could stop worrying, O'Dwyer told them; they had asked him to stop Moses by ceding the fort to the Department of the Interiorwell, he was prepared to do just that.)

It was on Idlewild that the Mayor's boiling temper boiled over. Of all Moses' suggestions, that one had backfired most badly—and, for the Mayor, most embarrassingly. Lulled by Moses' assurances that creation of an authority would end airport-financing problems, O'Dwyer had publicly announced that he had saved New York from the Port Authority and "Jersey politics." But Moses had planned to make the bonds attractive to investors by raising—by as much as 600 percent!—the airlines' rentals for hangar and terminal space, and the airlines, still struggling financially to get off the ground, said they could not afford to pay what Moses asked—and pointed out that they saw no reason why they should, since the old rentals were guaranteed them by contracts they had previously signed with the city. They were willing to re-

<sup>\*</sup> O'Dwyer allowed him to save face by announcing that he was resigning for "reasons of health."

negotiate the rentals, they said, but not to levels anywhere near those Moses was demanding. Over lunch at Randall's Island, Moses, threatening that the city would sue to break the contracts, and pointing out that the suits could drag on for years, depriving the airlines of any landing area in the country's greatest metropolis except for old and antiquated Newark Airport, alternately cajoled and bullied the executives—until Eddie Rickenbacker, the World War II air hero who had become president of Eastern Airlines, said curtly, "I'm going to Newark," grabbed his coat and hat and walked out. Moses had to report to O'Dwyer that the bonds could not be sold. And at this crucial point the Port Authority exerted a crucial bit of pressure, announcing that it would begin immediately a \$75,000,000 enlargement that would make Newark Airport the finest in the world. The city's press, already attacking O'Dwyer for the "giveaway" to the bankers, accused him of having surrendered the supremacy in aviation "essential" to the city's future. Removing the city's airport program from Moses' hands, the Mayor turned over Idlewild and La Guardia to the Port Authority. (The Authority promptly canceled an Idlewild design contract that would have given an architectural firm selected by Moses a fee of \$1,178,250.)

While Moses' popularity was still overwhelming, it had developed significant gaps on the left; during the same week in which he suffered the Idlewild defeat, and was watching the City Planning Commission slip out of his hands, a committee of liberal organizations was formed with the avowed purpose of forcing O'Dwyer to remove him from office, and 300 delegates representing 28,000 city and state employees supported that demand in a resolution calling him an "anti-Democratic . . . reactionary," and assailing him for cutting the school-building program and for favoring "discrimination in low-cost housing" and in employment. On July 28, PM could report that "the biggest story in the City Government today is the apparent decline of Robert Moses as the power behind the throne." And on August 12, the capstone was put on the pyramid of Moses' defeats when President Truman, after checking with O'Dwyer and being told flatly by the Mayor that Fort Clinton should be preserved and restored as a national monument, signed a bill passed by Congress authorizing the Department of the Interior to do so. There were several pointed private developments. Moses heard no more about his suggestion—which O'Dwyer had seemed on the verge of accepting—that General Farrell be appointed chairman of the Housing Authority. He did hear that O'Dwyer was considering enlarging the membership of the City Planning Commission to reduce Moses' influence over it. Most significantly of all, Moses' access to O'Dwyer was restricted—if not in fact all but eliminated. The days of the two-hour chats in which he could "swing" the Mayor were over. Soon City Hall was abuzz with rumors that he was having difficulty even getting in to see the Mayor. Once, attempting to arrange a personal interview with O'Dwyer, Moses used the ploy of asking a deputy mayor to remind his boss that a city program should be agreed upon before the 1947 legislative session and to ask him to appoint—and to meet with—a committee of key city officials—including the City Construction Coordinator -to do so. There was no reply. Moses was reduced to inviting a lowerechelon mayoral assistant, legal aide Harold L. Herzstein, to lunch in an attempt to win the Mayor's ear for the proposal. And the reply from Herzstein, when it came, came in writing and reflected the Mayor's coldness, as well as a desire to return power in the city to the traditional repositories of power. "The Mayor is aware of the necessity for the city's formulation of a program . . . He has a program in mind which he will submit informally to the members of the Board of Estimate for their approval. When he obtains such approval, he will consider the selection of the personnel to effectuate his program in Albany." During this period, even Moses' ultimate weapon failed him—for the first time in decades. A Triborough messenger showed up at Gracie Mansion one day with a letter of resignation from Moses. The Mayor handed it back to the messenger and told him: "Tell the gentleman who sent this that if he wants me to accept it, just send it back again." The messenger did not return.

But Moses used the power of money to bring the Mayor to heel.

O'Dwyer was desperate for money. The city's crises were worsening. Press and public wanted action. He was, moreover, in the midst of a struggle to take over Tammany Hall, a struggle which revolved around his attempts to oust Manhattan borough president Hugo E. Rogers, whose office was a particularly lucrative source of contracts for the machine. He was not unaware, moreover, of the fact that any major public works projects which were not started almost at once would not be finished when he ran for re-election in 1949. His city, his grasp for party power, his personal career—all these required money. And he didn't have any.

Action in the housing crisis was conceived of by press and public as construction of new housing. New housing projects had been planned with the state money Moses had obtained, but the very crisis that made construction imperative—the lack of vacant livable apartments in the city—made construction difficult, because there were no apartments into which to relocate families living on the sites on which planned housing was to be built. The state had agreed to pay \$3,000,000 to rehabilitate vacant, boarded-up tenements for the temporary use of such families if the City Housing Authority would also contribute \$3,000,000. But while the clamor of the citizenry for housing "action" mounted daily, the city was unable, month after month, to come up with its \$3,000,000.

Whether or not—after O'Dwyer's attempt to discipline him, an attempt which included barring him from housing decisions—Moses quietly used his influence with state officials to discipline O'Dwyer instead and force the Mayor to put him into the housing picture, cannot be documented, but during the month of September 1946 the following sequence of events occurred:

- O'Dwyer agreed not to bring to a secret meeting with state housing officials any members of the City Housing Authority—but to bring Robert Moses instead.
- At the secret meeting, the state officials agreed to do what they previously refused to do—to pay the whole \$6,000,000 themselves.
- The official announcement of the agreement put out by the state officials said that the agreement had been accepted on behalf of the city by

Robert Moses and Mayor William O'Dwyer—and some informed insiders believed it was no accident at all whose name came first.

Action in the traffic crisis was conceived of by press and public as construction of highways and giant off-street parking garages. The city had no money for garages; the only possible source of funds was Triborough—Robert Moses' Triborough. (In the first flush of his friendliness, O'Dwyer had appointed him for another six-year term.) At O'Dwyer's request he had agreed to spend \$40,000,000 building sixteen of them, getting back the money from fees paid by garage users. State and federal money was available for highways-but Moses' hand was on the valves that regulated the flow of state and federal money into the city. State and federal governments, moreover, were forbidden by law to acquire the right-of-way without which the construction of highways could not start. Available city funds for right-of-way were clearly insufficient. A Triborough contribution was necessary. (Moses had promised O'Dwyer such a contribution—of at least \$11,000,000 during the next three years—as well as additional contributions, amounting to perhaps another \$20,000,000, for planning and, on some stretches, actual construction, to further speed his highway program.) Whether or not Moses told O'Dwyer after the Mayor's attempt to discipline him that he was no longer prepared to make contributions for highway right-of-way, planning and construction—and whether or not he quietly used his influence with the State DPW to delay the awarding of construction contracts—cannot be documented, but during the last six months of 1946, the months of antagonism between Moses and O'Dwyer, there was a noticeable falling off in such awards —and a noticeable slowing down in the construction of highways in the city, to a point where press and public began to complain bitterly about the lack of "action." More pointed were the developments in relation to the giant expressways which Moses had long been planning to construct across Manhattan Island itself. Even before the war, Moses had planned at least three such expressways-all elevated: an "Upper Manhattan Expressway" at approximately 125th Street; a "Mid-Manhattan Elevated Expressway" across either 30th or 36th Street; and a "Lower Manhattan Expressway" that would run across Broome Street and connect the Holland Tunnel with the Williamsburg and Manhattan bridges. Of the three expressways, the Mid-Manhattan would be by far the most spectacular—planned to run at a height of about 100 feet above the busiest streets in the world, through a forest of skyscrapersand it had captured O'Dwyer's fancy completely; hardly had Moses explained it to him when he was talking enthusiastically (in private, so as not to offend sooner than necessary the powerful real estate interests involved) about "a highway from the Hudson to the East River—through the sixth or seventh floor of the Empire State Building." Such a highway would, of course, be almost incredibly expensive; Moses' public estimate was \$43,000,000-at least half of which would be for the condemnation of land occupied by skyscrapers. But Moses had told the Mayor that if it could be a toll road Triborough would build it for him. O'Dwyer had agreed, and, although funds were not immediately available, planning was already under way on Randall's Island and at the giant engineering firms that operated on Moses'

orders. Certainly the Mayor had expected that, of the three cross-Manhattan expressways, the Mid-Manhattan would be built first. And he had expected that, when it was built, he would be identified with its building. But on October 14, to O'Dwyer's surprise, Moses and Borough President Rogers issued a joint announcement that studies had been under way for months on the Lower Manhattan Expressway, that a route had been finalized, that "it had been incorporated in the federal and state highway systems as eligible for future state and federal highway funds," that preliminary plans—"directed by the Office of the President of the Borough of Manhattan"—"are already under way" by engineering firms, including Madigan-Hyland, that "final plans will follow as soon as all those whose approval is required have given it" and that "it is intended that land shall be acquired and construction started in 1948, and that this crossing shall be completed in 1949."

The announcement was more a pressure tactic aimed at O'Dwyer than a detailed highway plan—the Moses-produced brochure that accompanied the announcement bore uncharacteristic marks of haste—but the pressure involved was heavy indeed. O'Dwyer could hardly miss the hints contained in the fact that Rogers' name and not his was attached to the announcement, and that it was not the Mayor but the borough president who was "directing" the preliminary planning. Completion of the expressway in 1949, he must have realized, would make it the only major highway completed during his term—and it would be a highway identified with one of his opponents, a highway for which the contracts—with all the millions of dollars in patronage and political contributions such contracts entailed—would be distributed not by him but by the organization he was fighting. And given the public demand for traffic "action"—a demand emphasized by the instantaneous press enthusiasm for a proposal that could be "completed in 1949"—opposing the highway was politically unfeasible.

More pressure was applied on December 2. Prodded by O'Dwyer and Lazarus Joseph—and by the protests of school-conscious parents' organizations—the Board of Estimate on that date was meeting in executive session on the second floor of City Hall; Moses was present, but the Board nonetheless shifted more than \$21,000,000 in the Moses-dominated Planning Commission's proposed 1947 capital budget from highways to schools. "No details of the five-hour session were available," the *Herald Tribune* reported, "but there were clews to give color to reports that Mr. Moses . . . found the going pretty rough. These hints came from the Mayor. . . ." The Citizens Union rejoiced that "the capital of the city, so far, is still in City Hall."

Reformers who had expected a characteristic Moses explosion were surprised, however. "Taking his defeat gracefully, Moses had no comment to make on the day's proceedings when he left City Hall just before seven o'clock," the *Times* reported. They would have understood the reason for his equanimity—and they would have been less certain of the capital's location—if they had understood the significance of a scene that had taken place on the first floor of City Hall while the Board of Estimate was meeting on the second. At the foot of the graceful hanging staircase a Moses aide had stood handing out copies of a Moses letter stating that a new study of parking

garages indicated that such garages would, as the *Herald Tribune* put it, be "losing propositions, too dubious for bondholders' money" and that the Triborough Authority had therefore reconsidered and decided not to finance them. No reporter—or, so far as can be determined, reformer—grasped the relationship between the Board's action and the Authority's, either at the time or later. But O'Dwyer must have—and he must therefore have realized that during his re-election campaign thirty-three months off, he would have no garages to point to with pride.

Moses' most effective use of the power of money came during O'Dwyer's campaign to persuade the United Nations to locate in New York.

The money involved was not so much Moses' own as that of other people. But, of all the city's officials, only Moses had quick access to it—and he used that access so effectively that he not only played the leading role in the Mayor's campaign but made the Mayor like it. And him.

Bringing the newly formed world federation to his city captured O'Dwyer's imagination as did no other project. Reminiscing, he would say, "I felt that this was the one great thing that would make New York the center of the world."

Unfortunately, other cities were also anxious to be the world's center -and they had the money that New York lacked. Before his inauguration, O'Dwyer had appointed Moses chairman of a blue-ribbon committee to grab the prize. Moses had selected the members with an eye to their proven willingness to bow to his leadership (Triborough board member Meyer, Bronx Borough President Lyons, Big "Bag" Man Farley, Al Smith disciple John S. Burke of B. Altman's, old friend Grover Whalen, Arthur Hays Sulzberger) and with an eye also to the wealth they could command (Meyer, Burke, Thomas J. Watson of IBM, Frederick H. Ecker of Metropolitan Life, and not one but two members of the Rockefeller clan, Winthrop W. Aldrich and one of John D. Rockefeller, Jr.'s, sons who had caught Moses' keen eye —the handsome young man had a lively interest in construction—and toward whom he felt almost fatherly, Nelson). As a result, not only the necessary land but the money to produce the items that "sold" projects—architectural and engineering plans, scale models, lavish brochures—were available to "sell" the UNO's Headquarters Committee, and they were available fast, fast enough for New York to steal a march on the other cities: when the UNO's temporary headquarters had opened in October 1946, it had opened in New York—on the site Moses had selected, Flushing Meadows Park, in which the City Building left over (and, since it was located in a park, under Moses' jurisdiction) from the 1939 World's Fair had been transformed at a cityborne cost of \$2,200,000 from a skating rink into a General Assembly Building. And Moses and O'Dwyer were prepared to turn over 350 acres of the park to the UNO for its permanent headquarters. But UNO delegates didn't like the site, preferring one in Manhattan. There was no vacant site of sufficient size available there, and acquiring one would therefore require not only an immense expenditure for land acquisition and construction, and not only additional expenditures for the related access and parking improvements for the big "DPL" limousines, but also, the delegates made clear, absolute and

permanent exemption from city real estate taxes. The delegates were also insistent on the provision of housing in the housing-short city, not only for themselves but for their staffs and the staff of the UNO Secretariat, which numbered in the hundreds. O'Dwyer felt that asking the Board of Estimate. which was being forced every two weeks to explain that the city had no money to build desperately needed schools, hospitals, libraries and sewers, would be futile—unless he had a "gesture," "something he could show the Board": some sort of private contribution to defray the cost and get the project started. But with the UNO pressuring him almost daily for an answer, he had to confess he had neither the center-city site for a permanent headquarters -nor the money to build one. Meanwhile, San Francisco's mayor was in New York incognito, offering a huge site; Boston had dispatched a team, including its mayor, the Governor and Lieutenant Governor of Massachusetts, and Christian Science Monitor editor Erwin D. Canham, to offer not only a site but a guarantee of city funds to build headquarters and housing on it; Philadelphia, many delegates' choice, was offering the world organization its choice of sites. UNO Secretary-General Trygve Lie, himself once a municipal official in Norway, had been personally awed by Moses in their many conferences and was holding out for New York, but on November 9, the General Assembly directed its Headquarters Committee to concentrate on sites in other cities and on December 6, a Friday, with Philadelphia so confident that it was already condemning land for the headquarters, Lie emerged from a committee meeting to telephone O'Dwyer and Moses and tell them "that unless they came up with a new and better proposal the whole thing would be over as far as New York was concerned. I had done all I could." A final decision in favor of Philadelphia was expected the following Wednesday.

O'Dwyer had received another telephone call that Friday—from William Zeckendorf. Zeckendorf, real estate wheeler-dealer on the grand scale, informed the Mayor that for some months his confidential agents had been secretly buying up property in Turtle Bay, an area on midtown Manhattan's eastern shore—occupied since Civil War days by slaughterhouses, packing plants and cattle pens—in which land was cheap. He had succeeded in acquiring an option to purchase the heart of the area, a seventeen-acre tract bounded by Forty-second and Forty-ninth streets and the East River Drive and First Avenue, for only \$6,500,000, or seventeen dollars per square foot—a mere fraction of the price of most midtown real estate. He had planned to create a series of huge superblocks there, but plans and financing weren't finalized, the option was running out—and he was willing to sell the tract, the largest land parcel to become available in central New York in twenty-five years, to the UNO.

When O'Dwyer reported the offer to Lie, the Secretary-General said, "Turtle Bay . . . even now, could turn the tide." His remarks, however, did nothing to solve O'Dwyer's cash problem. Zeckendorf recalls that the Mayor "fervently said" that, to keep the UNO in New York, "he'd give an arm, a leg and various other parts of his body . . . but that none of them was particularly salable." The name Rockefeller was suggested as a source of the cash, perhaps because the family had given the UNO's predecessor, the League

of Nations, a huge donation. But O'Dwyer had no entree to the Rockefeller from whom, at that time, a gift of the necessary dimensions would have to come-John D. Rockefeller, Jr., John D. Rockefeller who had spent long days riding over the route of the Palisades Interstate Parkway with Robert Moses, John D. Rockefeller who had worked closely with Robert Moses in the construction of the Cloisters and children's playgrounds in Fort Tryon Park, John D. Rockefeller who had, with Moses' cooperation, worked out a land exchange with the city to help along the building of additions to Rockefeller Institute, John D. Rockefeller whose admiration for Robert Moses was well known. In the midst of his feud with Moses, O'Dwyer turned to the Coordinator as a last resort. "This is where Moses came in with Nelson Rockefeller, working on Mr. Rockefeller, his father," the Mayor recalls. There were endless details to be worked out: acquisition of the land that Zeckendorf didn't control, widening of Forty-seventh Street to provide access to the site, city property that had to be included or excluded, a federal gift for construction. And there was only a little over four days-ninety-six hours -to work them out in. When the gavel slammed down to call the UNO Headquarters Committee into session on Wednesday morning, it would be too late.

Saturday and Sunday were among the most tense and exciting that I can recall as Secretary-General [Lie wrote]. Momentous conversations were taking place backstage: steps were being taken that might snatch victory from defeat and crown these fifteen months of effort with success. Ambassador Austin [was] now involved . . . There were secret consultations with the Rockefeller brothers and with their father, John D. Rockefeller, Jr. But what was happening then was known only to a selected few. . . . There was much to be done before so extensive a real estate transaction as this could be assured. Normally it would have taken months of business negotiations with batteries of lawyers.

But in ninety-six hours, it was done. For every snag that arose, Moses had a knife. Teams of lawyers were prepared to research for days the details of city surrender of East River bulkheads; Moses called in a secretary and dictated on the spot without reference to a single law book a memorandum setting out the method—a memorandum lawyers later found to be correct down to the last comma. Legislative permission was needed for the city to close certain streets within the site and give the UNO the land—a few phone calls from Moses to Albany secured a guarantee of the permission. Late Tuesday night -about twelve hours before the Headquarters Committee convened-Zeckendorf, who had taken no part in the discussions following his offer and did not know if there was any chance of its being accepted, was celebrating his birthday in a private dining room at the Monte Carlo when Wallace K. Harrison, the distinguished architect and intimate of the Rockefeller family, walked in with a block-by-block map of the site bulging out of a jacket pocket, sat down at the table, tried to assume an air of nonchalance, failed and blurted out, "Would you sell it for eight and a half million?" Zeckendorf said yes, and the next morning at ten-thirty, as he sat in his office nursing a hangover, the phone rang and he heard Nelson Rockefeller say, "We've been up all night patching up the details, but it's going to work. The old man is going to give that 8.5 million dollars to the UN, and they're going to take your property. See you soon. . . . Good-bye." When, minutes later, the Head-quarters Committee convened, Austin arose and announced the gift—which also included, on Rockefeller's insistence, a city commitment of \$2,500,000 for property to round out the site and of additional city funds to ease traffic problems by widening Forty-seventh Street and building a half-mile-long north-south tunnel under First Avenue. And within three days, the General Assembly accepted it. A key factor in the acceptance had been O'Dwyer's promise of housing, and, thanks to Moses, O'Dwyer was able to keep that promise, through Metropolitan Life Insurance at Peter Cooper Village, through New York Life at Fresh Meadows Golf Course, through a Moses-conceived "Savings Bank Trust Company" formed to build Parkway Village in Jamaica—all housing projects arranged by Moses in which Moses was now able to reserve whole buildings for UNO personnel.

Some elements in the city—Stanley Isaacs and other "radicals"—objected to a city unable to provide the necessities of modern life for its people spending millions on the UNO and giving tax exemptions on real estate that could bring the city millions more. Some members of the Board of Estimate, notably Lazarus Joseph, seconded those objections.

But O'Dwyer could handle the radicals. He could handle the Board of Estimate, not that much handling of that body was necessary, since they were highly susceptible, as the Mayor had known they would be, to the argument that \$8,500,000—and, as journalists were putting it, the chance to be "the permanent capital of the world"—was being given to the city for what was represented as insignificant city contributions. No one on the Board guessed that over the next ten years those contributions would total more than \$32,000,000. He could handle the Board because he had the money—and Moses had given him that money.

Letters from key figures in the negotiations revealed deep appreciation of the role Moses had played—and of the personal qualities that had made him perhaps uniquely qualified to play it. "My deepest thanks," wrote Trygve Lie, who was later to say—in the midst of a hot dispute with Moses over construction details: "I understand him and I understand what he has done for New York. . . . It is marvelous. I regard him as one of the greatest men of our time." "My profound thanks," wrote John D. Rockefeller. "Your instantaneous approval of the offer, your broad vision as to the future possibilities, your quick appreciation of the necessary immediate steps, and your prompt action looking toward the city's cooperation, all played a vital role in bringing about the ultimate outcome. It has been a pleasure for me to be associated with you in this matter, so far-reaching in its implications, and I would have you know of my deep gratitude to you. . . . " But Lie and Rockefeller were no more appreciative than the Mayor, and a letter from him expressed gratitude in the way that, to Moses, was most important: the letter, dated January 13, 1947, gave Moses complete power over all details-including those normally handled by other city agencies—relating to the construction of the UNO headquarters. His fall from grace had occurred in

July 1946. By January 13, 1947, it was over. The power of money had not only brought the Mayor to heel, but had made him like it.

Moses not only came back, but came back bigger than ever. Moses Man Farrell was appointed chairman of the Housing Authority, another Moses Man, Philip J. Cruise, was appointed Authority secretary—at double his previous salary. There was no more talk about enlarging the City Planning Commission. A confidential Moses memo told the Mayor which highway sections "we can complete . . . by the Summer of 1949"—in time for O'Dwyer's reelection campaign—"if we . . . tolerate no further delays." O'Dwyer tolerated no further delays. Within weeks, families in the rights-of-way were being evicted and the State DPW was awarding construction contracts—to firms that did their banking with Federation (and that could be expected, through Federation's president, to contribute to O'Dwyer's re-election campaign). Moses was cocky enough to put his dominance over the Mayor who was supposedly his boss on public display. At one Board of Estimate session, Comptroller Joseph refused to approve \$144,000 in design contracts for Andrews & Clark, engineers, and Eggers & Higgins, architects, for work on Ferry Point Park, contending that engineers already employed by the city could do the work for \$41,000. Turning to O'Dwyer, Moses said, "If I don't have the sufficient confidence of this administration in a matter of this kind I don't want to be Parks Commissioner and I don't want to be Construction Coordinator. I'm tired of this sort of thing, and I mean what I say." O'Dwyer responded to this open threat by angrily lecturing Joseph. When the Comptroller protested, "I'm sorry, General, but it was not my fault," O'Dwyer replied, "It was your fault," and ordered the Comptroller to "patch things up" with Moses. (Joseph did.)

Most important, Moses now had his entrée to the Mayor back—on a regular basis. Every week at least two leisurely Gracie Mansion breakfast conferences were reserved for Robert Moses, who would come over from his apartment a block away. "Tuesdays," O'Dwyer would recall, "it was . . . all United Nations business"—transacted by Moses and whomever he wanted to bring along, Trygve Lie perhaps. On Fridays, Moses would bring along guests who, to O'Dwyer, may have been more important than the Secretary-General of the world organization. "Every Friday morning," John A. Coleman recalls, "he'd set aside for Moses and whatever construction people Moses wanted to bring." There were, in fact, few mornings on which, appointment or not, when O'Dwyer descended the Gracie Mansion staircase at about ten o'clock, Moses wasn't waiting for him.

Moses knew how to make the most of such entrée. Says Lutsky: "He'd see [O'Dwyer] alone, without the Mayor having had an opportunity to hear the other side, and get him committed. And he had another device." By the time O'Dwyer came downstairs at ten, Moses would have been up working for three hours, if not longer. "He would have the papers ready, and if the Mayor said okay, he could get them signed right there." Despite his admiration for Moses, Lutsky saw the danger in this, a danger intensified by the fact that O'Dwyer, naturally friendly, "would always agree with the last man in"—the person right there.

Moses got his commitments from the Mayor now without ever again arousing his ire. Moses' smiling, hearty, arm-around-the-shoulders charmcharm that could disarm a roomful of listeners—was simply overwhelming to an individual who was sequestered alone with him morning after morning, particularly when combined with his intellect and vision and governmental ability. "You know the city's too big. It's too big for one government," O'Dwyer was to recall. "It's a tough battle, and everything falls on your head when you're Mayor. I remember the lonely nights and the snowy nights and the stormy nights up there at Gracie Mansion, and I would walk up and down the porch and look over at Astoria . . . and I would say, 'Good Lord, I'm Mayor of this town!' . . . It was something. The job frightened me at times like that." But Moses, who, despite the bigness of the city, had built the great bridge to Astoria that dominated the view from that porch, would be there to lift the load, with answers, solutions, courses of action for which financing was available, courses of action that could be implemented if only the Mayor would sign right here.

And the Mayor was now increasingly glad to get help from him. "If the two of them were together, it would be Moses doing most of the talking," Paul O'Dwyer recalls. "Bill was a good listener. Moses would be selling, as it were. The scene would be Bill sitting and Moses pacing and talking. My brother was essentially a reader of books, of plays, of history. Bill was essentially an artist. Bill was the dreamer in the larger sense. And Moses was the very practical—the antithesis of that. So from the standpoint of the Mayor and the Coordinator of Construction, they complemented each other very well." However Paul may have felt about Moses, moreover, he had to admit that his brother's feelings for his Coordinator went beyond professional complementation. "He liked Moses, maybe more than Moses liked him, because I don't think Moses liked anybody," he says. Soon, one of Moses' opponents recalls, "all decisions that mattered in the city were being made up at Gracie Mansion, with Moses alone with the Mayor." In December 1947, the Herald Tribune, for so long a Moses supporter, felt constrained to comment: "Plans for a future New York are being drawn up on Mr. Moses' personal drafting table and nowhere else. In the absence of adequate planning measures, without up-to-date zoning, without a Master Plan, the city is being re-planned in camera . . . A dangerous measure of discretionary power has now been amassed in the hands of a single individual." But O'Dwyer's feelings—the only feelings that mattered—were spelled out in 1962 in his Oral History Reminiscences with a vividness that belied the passage of years.

On contracts, I'd rely 100,000 percent on Moses, and sometimes on the question of art, the question of repairs to museums and the building of the Aquarium, for instance, and things of that kind—highways, the UN Building... that was all well within the Coordinator's job, and that was Bob Moses. Sometimes I didn't agree with him... but in the main, I took—paid great attention to the recommendations of Mr. Moses.... One sure thing, there are very few people in this town that I think more highly of than Bob Moses. In fact, I don't think there is anyone.... He gets the job done, efficiently and without extra cost.... I made him the coordinator of all city contracts. I knew that would

keep them clean. I also knew that it would be done with a view to giving the right kind of selection of what to do, you know . . . The thing is, what were the necessary things, and in what order should they be built . . . You have to have the very best brains on selecting what is good—what's the first thing that must be done, and the second and third, in an orderly way. That is where Moses came in. He was wonderful.

And when the interviewer inquired, "Was it his brains? His influence?" O'Dwyer replied:

"He has the brains and he has the influence. He has both."

Early in 1948, Moses apprised O'Dwyer about Senator Taft's plans for a new slum clearance or "urban renewal" program. In December, while Congress was still working out the details, O'Dwyer appointed him to the chairmanship of a new "Mayor's Committee on Slum Clearance"—his tenth post—and allowed him to name most of the other members.

Newspapers, slow to grasp the significance of the pending federal "Title I" slum clearance legislation, were slow to grasp the significance of Moses' appointment. The Times buried the story—four paragraphs long—on page nine. But on the landscape of New York's history, that appointment stands out like a mountain. Moses had been campaigning to take over federally funded housing in New York for ten years, to the virtually unanimous dismay of those who believed in the social philosophy which underlay the government's decision to provide shelter for the impoverished among its people, and who feared that Moses' philosophy-so antithetical-would, even while he was in the process of building such housing, undermine the aims for which it was being built. By cutting Moses off the air in 1938, La Guardia had defeated Moses in the first battle of the campaign. A new mayor had, by appointing him Construction Coordinator and naming his aides to the City Housing Authority, given him a measure of the control he coveted, but the control had been indirect and hence incomplete. But now—as of December 17, 1948—his control was complete at last.

Behind the control, moreover, was power of a new immensity. Title I of the Housing Act of 1949 extended the power of eminent domain, traditionally used in America only for government-built projects, so drastically that governments could now condemn land and turn it over to individuals for them to build on it projects agreeable to government. Under Title I, whole sections of cities could be condemned, their residents evicted, the buildings in which those residents had lived demolished-and the land turned over to private individuals. Here was power new in the annals of democracy. And in New York, that power would be exercised by Robert Moses. "In my opinion," urban expert Charles Abrams was to say, "under present redevelopment laws, Macy's could condemn Gimbels-if Robert Moses gave the word . . ." Once, a quarter of a century before, Moses had, by deceiving the Legislature into giving him the power of condemnation by appropriation, obtained immense power-W. Kingsland Macy had testified, "Mr. Moses told me personally that his power was such that he could seize my house, put me out of it and arrest me for trespassing if I tried to get into it again"-and had obtained an extension of that power, hitherto exercised only in remote mountain forest fastnesses, to Long Island. Now, he had that power not only over farms and private estates but over the massed edifices, crammed with human beings, of a huge city.

A Moses speech in May 1949—"If we can find a man who has a firstrate program\* half-completed and is willing to go through the grueling business for a second term, let us . . . keep him on"—touched off a draft movement headed by John A. Coleman and including Robert Blaikie, John McCarthy, president of the Fifth Avenue Coach Company, William Mac-Cormack, president of the Transit-Mix Concrete Corporation, and Carmine De Sapio, who had just ousted Hugo Rogers as leader of Tammany Hall. Fusion was again in the field—the candidacy of Moses' admirer Newbold Morris was backed by men who had been Moses' allies and who were dedicated to the principles in which Moses had once believed. Moses threw the full power of his name into the scales on Tammany's side—with undisguised eagerness and enthusiasm. He appeared with O'Dwyer on campaign platforms to make campaign speeches, wrote newspaper ads "To Young Voters," issued statements and reports on park, traffic and housing "progress" under O'Dwyer's administration and predicted that the remaining problems in these areas were well on the way to solution. (An angry Paul Windels replied that "perhaps the quickest way to get action would be to take the limousines and chauffeurs away from them and make them go through the subway wringer twice a day like the rest of us.")

The enormous strength of Moses' name and reputation as political weapons had been demonstrated by the prominence given his endorsements of La Guardia in 1933, 1937 and 1941. In 1949, there were a greater number of discordant notes in the chorus that greeted his statements. There were letters-to-the-editor complaining about aspects of his park or highway policies. One candidate, a young reformer named Oren Root running for Manhattan borough president, attacked Moses directly for continuing to build beaches while working against allocations for municipal sewage plants that would keep the water at the beaches fit to swim in; the city's Liberal Party, at the insistence of state chairman Adolf A. Berle, Jr., publicly declared that his power should be "restricted" on planning matters.

But even those few discordant notes were muted by the chorus of praise (the twentieth anniversary of Jones Beach was celebrated in July, with appropriate pageantry). Interrupting a diatribe on water wastage in New York—"For every pint saved by a good citizen, a Communist will waste a dozen bathtubs and there are hordes of Communists"—Westbrook Pegler bemoaned the fact that the two nominees were "inferior men" and then turned to one who he felt wasn't: "There is available in New York one of the greatest administrators of public office that we have ever had who can't get nominated. That is Robert Moses. . . . He would even make a good President of the United States. But there is no sense to labor the point, because the conspiracies and rivalries of sinister men and stupid, paltry hacks will deny us the benefit of Moses' ability, integrity and honesty. He has

<sup>\*</sup> Italics added.

been ruled out for years on the ground that he can't 'get along' with people. He can get along with honest and competent men all right, but not with parasites and grafters and fumbling slobs." Then there were the editorials. Most treated Moses' endorsement of O'Dwyer as proof of the Mayor's integrity and progressiveness. The Herald Tribune, supporting Morris, hastened to assure readers that Morris would also keep Moses in office. "If there is anything certain in the Mayoralty scrambles, it is this: no candidate on any ticket will risk announcing before election that he has plans to oust Robert Moses."

Moses' support was probably not needed by O'Dwyer. The Mayor was immensely popular, and as had been the case in 1929, when La Guardia accused Jimmy Walker's administration of underworld ties, no one was listening when Morris made the same charges about O'Dwyer. But it was helpful. The Mayor's answer to these charges was to point to his programs—Moses' programs—as he did once when a reporter questioned him about Morris' latest attack and he replied scornfully, "While we are talking about housing . . . he's talking about bookmakers."

Moses' help to the machine was, moreover, not limited to statements. The New York City campaign of 1949 was the quintessential ribbon-cutting campaign—with the ribbon cut by the Mayor and by the borough president candidates on his ticket. When Moses ran out of expressways at which opening ceremonies could be staged, he opened sections of expressways. There were frequent announcements of future public works that would "solve" the city's problems. Morris criticized the lack of recreational facilities in Harlem; Moses announced that the Triborough Authority would construct a footbridge across the East River to Ward's Island, thereby opening that island's recreational facilities to Harlem residents. Moses regarded O'Dwyer's re-election almost as a personal triumph. He had plenty of obvious reasonsand one known only to himself, O'Dwyer, Spargo and, at most, one or two others. Shortly after the election, Spargo had written to remind the Mayor that "during your first term in office, we stayed away from the projects and sections of projects where the tenant relocation problem was most difficult" -and to ask the Mayor if, with the election safely out of the way, those relocations could now begin. And the Mayor had said they could. Even as the inaugural ceremonies were under way, they were being carried out-with typical Moses dispatch. Many tenants were already out, their buildings already demolished. Once you get that first stake driven, Moses was fond of saying, no one could stop you. Now, with the evictions and demolitions, the first stake was driven—and driven deep—for the system of mighty highways he planned to lay across the face of the city. No one could stop them any more.

There was one source of irritation at the inaugural.

O'Dwyer had a thirty-three-year-old friend, a young, fast-talking reformer on the make named Jerry Finkelstein. Finkelstein understood that O'Dwyer's natural friendliness, his tendency "to go along with the last guy

in to see him," made the Mayor a man easily swayed, or, as Finkelstein put it, "played"—and, as he says, "I knew how to play Bill O'Dwyer"; he had already played the Mayor into the vending machine concession for the city's subway stations.

Now the Mayor promised that at his inauguration he would appoint Finkelstein to succeed Robert F. Wagner, Jr., just elected Manhattan bor-

ough president, as chairman of the City Planning Commission.

When Finkelstein arrived for the swearing in, however, "a newspaperman who was a friend of mine showed me the list—and my name wasn't on it." Finkelstein rushed in to see O'Dwyer and learned that Moses, wanting the commission under the gavel of a chairman he controlled, had had a chance to play him after Finkelstein.

"I walked in to see Bill O'Dwyer," Finkelstein recalls. "My wife and

family were outside . . ."

"He said, 'Jerry, Bob thinks it ought to be a great engineer or a great architect and I'll get you the biggest job . . .'

"I said, 'The only job I want is the chairmanship of the City Planning Commission.'

"He said, 'Oh, you want that?"

"I said, 'That's right.'

"He said, 'You have it.'" He took out a pencil and wrote in Finkelstein's name at the bottom of the typed list, and Moses, confident that everything at the ceremony was going his way, saw with a shock the dark, balding, bespectacled young Jew he hardly knew walking up to take the oath.

Within days, Finkelstein was proving much more than an irritation.

Finkelstein knew little about city planning, but his first move—after redecorating his new office: "it looked cheap; it wasn't at all commensurate with the chairman of the City Planning Commission"—was to follow the advice of friends at the Citizens Union and call in Lawrence Orton to ask him about the Master Plan. Out came the huge maps that had been lying rolled up and out of sight behind Orton's desk for seventeen years, and out came the explanations of interim developments in the city's growth that proved so clearly the need for the Plan.

It didn't take much intelligence to see that Orton was right, and no one ever accused Jerry Finkelstein of being stupid. And if he needed more proof, it flooded across his desk daily. One city department was planning for an eventual city population of 8,000,000; another for a population of 15,000,000. One department was spending hundreds of thousands of dollars drawing plans for a sewage-treatment plant on a city-owned lot; another was planning to build a public library on the same lot; a third was planning a school—each in ignorance of what the others were doing. While schools in older areas of the city were half empty, schools in newly developed areas, due to lack of planning, were terribly overcrowded: forty or even fifty students being crammed into classrooms designed to hold twenty-five or thirty, and double and even triple sessions for hundreds of thousands of students. Many newly developed areas didn't have any schools—because no one had planned schools. Children from these areas had to spend part of each school day

being bused—on crowded buses—to the nearest schools available, often already overcrowded themselves. Studying the reports which crossed his desk, Finkelstein could see all too easily how simple and cheap it would have been to acquire vacant land for schools in these areas before they had been built up—and how hard and expensive, perhaps prohibitively expensive, it would be to acquire school sites there now. And he could also see—one could hardly help seeing—how, as the tide of development continued to flow outward toward the city's outskirts, the same mistakes which were costing the city so dearly were being repeated, day by day.

Taking up Orton's ideas, Finkelstein fought for them. A month after he had taken office, he asked for a 350 percent increase in the Planning Commission budget from \$328,000 to \$1,149,000—the bulk of the increase for an expansion in the commission staff to begin work on the Master Plan.

Finkelstein accompanied his request with a statement that revealed that Moses wasn't the only public official who understood that public statements must be simple to be effective. The few figures it contained stood out all the more starkly: Detroit spent 18 cents per capita on city planning, Los Angeles 24 cents, Philadelphia 25 cents, San Antonio 39 cents, New York 4 cents; even with his proposed increase, New York would be spending less than 12 cents—about .001 of the city budget. Its brief summary argued the need for a Master Plan—the preparation of which, Finkelstein pointedly noted, was a duty specifically placed on the commission over ten years before but never carried out—as cogently as anyone ever had, both on economic grounds (duplication of planning by city departments was costing the city far more each year than the \$800,000 increase that would provide a Master Plan and end the duplication) and on grounds that went beyond economy:

New York is at present in a critical stage of its development. The precipitous increase in population since the beginning of the war, the rapid spread of development in the outlying areas, the demand for schools, traffic relief, slum clearance, housing, hospitals and transportation, all argue for effective planning now. . . .

There is need for competent review of the work of all agencies by the one. . . . A city cannot be built economically without coordination . . .

Without a Master Plan, there is no real hope left for the city. . . .

We cannot go on hauling more and more people greater and greater distances to work and back again, each morning and evening. If the city is ever to catch up with these problems, and have any money left for other purposes, some more fundamental solutions must be found. . . .

With a plan, there was hope—thanks to Title I urban renewal funds so unprecedentedly generous that with them a city could make a good start on reshaping itself—"if we take the fullest possible advantage of them" by planning the reshaping under a comprehensive, citywide development plan rather than on a haphazard, project-by-project basis. But the opportunity was fleeting. "In default of action now, the golden opportunity will be lost."

Moses attempted to fight—using his customary tactics. "He invited me up to one lunch," Finkelstein recalls. "I didn't go along with him, and I was never invited again. If I was a part of his team, I could have had anything. But I wasn't on his team." (Orton, who at a recent Moses lunch had rejected a

lucrative Moses "consultantship," would have been proud of him.) Moses tried to work behind the scenes, first sending Hodgkiss to try to persuade the Mayor's budget advisers to eliminate some of the proposed additional personnel, then going directly to the Mayor: "I want to make a last protest against not only a waste of City funds but an accumulation of crackpot planners... whose appointment lends color to the stories which have been put out that we have no intelligent planning at present, that all our improvements are hastily and ill conceived, located at the wrong places, and therefore prodigiously stupid and wasteful." Then he went public, writing, mimeographing and distributing to his vast mailing list, and to the press, a letter charging that Finkelstein's statement "that he would save a great deal of money if his budget were trebled, belongs in the funny papers." Finkelstein's suggestion that he "needs a new staff to advise him on arterial improvements is a piece of impudence... What is needed is to get some work out of the present staff," the Coordinator said.

A lot of old men around New York, however, still remembered the Master Plan and what it was supposed to do, and the days when the Charter in which the Master Plan was embodied had been the banner behind which they marched toward their dreams for the city they loved. A traitor from their own ranks, a traitor they had helped to raise to power, had knocked the banner from their hands and, for ten years and more, had been trampling it into the dust. But now a young Lochinvar-or at least Finkelstein-had appeared and had snatched it up. They fell into rank behind him. Finkelstein's supporters represented a cross-section of Moses' past-and an index of individuals who had helped raise him to power in the city, and to keep him there. They included Burlingham, ninety-one, with the exception of the senile Scabury the last of the old giants of the reform movement; Isaacs, who embodied in his courtliness and integrity and devotion to principle everything that was fine in the movement; Bruère, the "B" of the "ABC's" of the Bureau of Municipal Research in which Moses had begun his career; Proskauer, the "Proskie" of "Proskie and Moskie," who had been one of Al Smith's inner circle along with Moses; Nathan Straus, who had fought for many bills giving Moses power; McGoldrick, who had entered the Fusion administration with him during the days when Fusion thought Robert Moses was a Fusionist; and, of course, George McAneny. These men had once believed that Moses was New York's great hope. Now they believed that he was the greatest threat to the city's future—and they formed a committee, "A Committee for an Adequate City Plan," to save New York from the power they had helped to give him. Within a week, letters from them were pouring in to the press, including one with Burlingham's old clarity of logic and succinctness of phrase: "Much as we may admire great buildings and engineering works as monuments to the ingenuity and ability of man, we can now recognize that they cannot perform their functions properly unless they are related to their developments."

Planning was, moreover, rapidly becoming almost as much a "mother-hood" issue as parks; prestigious civic organizations and the press lined up behind the proposed budget increase; the logic behind it was so clear that

even the Times managed to grasp it; while managing to avoid criticizing Moses, a Times editorial stated: "The noble purpose set forth in the Charter of 1938 . . . has never been realized. The 'primary duty' of preparing a Master Plan for the city has never been performed, although more than a decade has passed. We support without reservation the principle involved. . . . City Hall just cannot allow itself to accept without investigation conflicting demands of various departments." Finkelstein was constantly at pains to identify O'Dwyer with every favorable planning development, and to flatter the Mayor; introducing O'Dwyer at a public hearing on the completed zoning study, he gushed, "The final result will be a tribute to Mayor O'Dwyer. . . . Mayor O'Dwyer's legacy to the City. Time will prove that it is the richest legacy any mayor could have bestowed on the people." O'Dwyer pushed the Board of Estimate into giving Finkelstein a hefty chunk of the additional funds he had requested to hire scores of talented young planners, and publicly went on record in support of the Master Plan, promising that "everything will be integrated within it."

Finkelstein made the most of his opportunity.

"O'Dwyer loved Moses," Finkelstein would recall. "He respected Moses. But I knew how to play Bill O'Dwyer. Moses would go to see him on something and win him around to his way of thinking, but after he left, I went up there. I'd say, 'Bill, the Citizens Union is behind me on this, the papers are behind me. I know how you feel about Bob Moses, but on this, Bill, I'm right.'" O'Dwyer would agree. And Finkelstein would race straight back to his office, and write and distribute a release announcing O'Dwyer's approval—so that before Moses had heard about the Mayor's switch, and could get him to switch back, O'Dwyer's pro-Finkelstein stand would be on the record, and therefore almost impossible for Moses to change.

Time and again, Finkelstein took on Moses in this way—and won. In a series of clashes in the Planning Commission the vote was 6-I, with Moses, who no longer showed up at any commission meetings, casting his lone vote through Hodgkiss. Orton proposed a study of proposed developments around the UN site. "Irresponsible . . . ill-conceived," said Hodgkiss, reading his master's words. "Mr. Moses is not the Planning Commission but only one member," Finkelstein replied, and the 6-I vote proved him right. Soon, to Moses' rage, the commission was even embarking on a study of criteria for playgrounds to insure that they were built where they were most needed.

But, with one exception, these were only studies—no immediate threat to Moses' plans. And in the exception—the single study which posed such a threat, the only confrontation of immediate, practical significance between Moses and Finkelstein and the forces Finkelstein represented—Moses used the power of money on O'Dwyer again.

The crunch came over the Mid-Manhattan Elevated Expressway.

On December 30, 1949, the Board of Estimate authorized Triborough to apply in the name of the city for federal funds to study the "most feasible plan" for an express crossing of the middle of the most crowded island in the world. On June 2, 1950, O'Dwyer announced that Triborough's study had been completed, that it had "proven" the most feasible plan to be the

highway among the skyscrapers proposed by Triborough's chairman, that the chairman had already persuaded the federal government to pay the cost—the first installment alone would be \$900,000—of plans for the 160-foot-wide road, which would run in the air along Thirtieth Street, using the 60-foot street width and 100 feet created by tearing down the buildings lining the south side of the street, that the chairman had persuaded the Port Authority to pay the cost of planning and building a linkup with the Lincoln Tunnel, that Triborough had agreed to pay \$26,000,000 for the rest of its construction—and that the preparation of detailed blueprints would begin at once.

There was ecstasy in the editorial columns—the Herald Tribune: "New York shows again the capacity of doing things in a big way . . . Those big builders, Bob Moses and Howard Cullman, sat down with Mayor O'Dwyer in staff session at Gracie Mansion, and the result is that New York is moving ahead at once. . . . Big men got together and made a big decision for the common good." But there was agony among trade and civic associations; they charged that the Board of Estimate had directed Triborough to study all proposals—including one for a tunnel less destructive to Manhattan real estate and aesthetics—but that Triborough had studied only its chairman's. Representatives of twenty associations, along with Finkelstein and Manhattan Borough President Wagner, visited O'Dwyer to ask that the tunnel study be made—by Finkelstein's Planning Commission.

O'Dwyer's response was frank. He himself would prefer a tunnel, the Mayor said; "I don't like overhead structures." But his preferences were not important. "I'm sure you can draw me a satisfactory plan for a tunnel, but all the talk in the world is no good if there isn't anyone to build it... You've got to show me someone who'll put up the money to build it." There was only one man who had that kind of money—and he would put it up only for an overhead crossing, not for one underground.

Pressed hard by his visitors, the Mayor finally said that he would permit the Planning Commission to make its own study, but, he said, such a study would be a useless waste of money—and he wasn't going to provide any city money for it. Finkelstein pointed out that the Mayor's "permission" was therefore meaningless, since the commission had neither personnel capable of making such a study nor the funds to hire such personnel. He and his allies were not saying that an overhead crossing should not be built, Finkelstein said. They all agreed that some solution to the mid-Manhattan traffic problem was necessary. All they were asking was a chance to find out which solution would really be best for the city. Could not he have even \$50,000? The Mayor simply threw up his hands without even replying.

No reply was necessary, of course. He was mayor of a city which couldn't afford to build a crossing. Moses could. Moses would have to be allowed to build whatever type of crossing he wanted.

The Mayor's stand certainly seemed pro-Moses—much too pro-Moses—to Moses' opponents. But it wasn't pro-Moses enough for Moses. Angered that O'Dwyer had dared to give "permission"—even meaningless permission—for an independent study, he decided to teach the Mayor a lesson. The Triborough board approved a resolution stating that the Authority was no

longer willing to build a mid-Manhattan crossing of any type and formally withdrawing the Authority's request for federal planning funds.

O'Dwyer pleaded with Moses to reconsider. Moses refused. He had made the lesson all the harsher by communicating Triborough's change of plans to O'Dwyer privately. It was the humiliated Mayor who had to make the announcement that the expressway he had announced with such pride just three weeks before was now dead. It was all very well for Jerry Finkelstein to call Moses a spoiled "cry-baby" who, if other boys wouldn't let him play by his own rules, would take his money and go home. It was the Mayor who was still faced with the mid-Manhattan traffic crisis—and with the realization that he had absolutely no way to solve it. All he could do was try -angrily but lamely-to pin the blame on others, saying: "I do hope that the actions of the opponents of the elevated highway study will be a lesson to them that they can't push Bob Moses around. Thirtieth Street and the surrounding area will have the same traffic congestion for a long time to come. The next time a tried-and-true outfit proposes a \$40,000,000 traffic improvement, without expense to the city or cost to the taxpayers, I hope the Hate Moses Club will keep away from City Hall. I shall have very little welcome for them." Summoning Finkelstein to his office, he gave him an hour-long tongue-lashing so violent that when reporters crowded around Finkelstein as he left the Mayor's office, the normally ebullient young man pushed past them without a word.

Finkelstein still had O'Dwyer's support on the Master Plan, however, and the rezoning study that was to be its basis pushed ahead, with each step approved by the Planning Commission—by a 6–1 vote. By August, the zoning was completed—two years of work and \$325,000 embodied in a 290-page study and ready for public hearings scheduled to begin in September.

They would be *real* hearings, Finkelstein promised. Some would be held in outlying sections of the city—bringing City Hall to the people instead of making the people come to City Hall. And, Finkelstein promised, the hearings would continue "until everyone has been heard who has something to say."

Finkelstein had already provided convincing proof that public participation could be constructive. The main source of opposition to rezoning had been expected to be the real estate industry, which had been Moses' main ally in killing the Tugwell-Orton-spearheaded 1939 Planning Commission try for a Master Plan. Finkelstein had invited some of the industry's more publicspirited leaders to meet quietly with the commission, their objections had been taken into account, some compromises—which Orton and other Planning Commission members felt on balance had actually improved the zoning plan —had been made and the realtors' support for the Plan obtained. Finkelstein had demonstrated that public participation could be constructive on small as well as large issues. Residents of Washington Square had been alarmed by builder Sam Rudin's plan to tear down the old Rhinelander houses on its north border and construct a twelve-story apartment house that would destroy the scale of the square, with its park and arch bordered by low, gracious brownstones. Broad Finkelstein hints about commission zoning powers persuaded Rudin to meet with the residents, and a solution—almost unique in New

York history—was worked out under which both sides got what they wanted: Rudin was allowed to build higher in the rear of the plot—away from the square—than he would otherwise have been allowed to do, and in exchange kept the front of the building lower than the cornices of the private homes.

Other work on the Master Plan was also progressing. By August, the commission was well on its way to a division of the city into smaller areas which would each have a voice in planning its own local improvements—an extension of Isaacs' "arrondissement" proposal of 1939 to keep the city livable by preserving its neighborhood fabric. O'Dwyer, increasingly unhappy with the growing seriousness of the housing and traffic crises that Moses was supposed to be alleviating, convinced that part of the reason for the crises was past lack of planning, was impressed with the commission's progress, so impressed, in fact, that City Hall began to speculate about another split between the Mayor and his Coordinator.

But O'Dwyer had not been able to escape his past. Press and public focus on his administration may have centered on appointees like Robert Moses, but the Mayor had also appointed to public office other men, less visible perhaps, but just as much a part of that administration: friends of Frank Costello and Thomas (Three Fingers Brown) Luchese and other racketeers. And he had appointed to public office Big Jim Moran, who had been using his new job in the Fire Department to extort \$500,000 a year from businessmen needing departmental permits, and who had also acted as the conduit for huge contributions to O'Dwyer's 1949 re-election campaign; the president of the United Firemen's Association was later to testify (this testimony was, admittedly, never substantiated) that to assure the Mayor's support of legislation benefiting firemen he had handed Big Jim an envelope containing \$55,000 in cash. (The president also testified that in 1949 he had given the Mayor himself a \$10,000 "campaign contribution.")

And now the spotlight of which Bill O'Dwyer had so long been afraid was swinging inexorably in his direction. Hardly had he been sworn in for his second term when a pudgy, flashily dressed bookmaker named Harry Gross, arrested in Brooklyn, said that he was ready to testify that he had also been a big O'Dwyer "contributor," that since the Mayor's first inauguration he had been paying a cool million dollars a year in "ice," part to high-level police officials who were close personal friends of the Mayor—and that Moran had once invited him, along with seven other top bookmakers, to attend a meeting with the Mayor himself, a meeting Gross said he had not attended because of illness but which Moran subsequently assured him had indeed taken place.

O'Dwyer's efforts to escape the spotlight had been becoming more and more desperate. During the summer of 1949, he had insisted almost frantically that he would not run for a second term, an insistence from which he could not be budged until, at a last-minute conference at midnight in Gracie Mansion, Ed Flynn brought what one observer was later to describe as "real pressure." Not a month after his election victory, before he had even been sworn in for the new term he had won, he had tried quietly to file his retirement papers, an attempt which failed when Moran found out

about it, retrieved the supposedly irrevocable documents from the retirement board, took them to the hospital room in which O'Dwyer was recuperating from "exhaustion"—and burned them before the Mayor's eyes.

In the first years of his administration, New York had loved Bill-O and believed his blarney. With the city's Good Government organizations giving him dinners honoring him for, among other things, keeping corruption out of city government, those years had been years for speeches.

The last year of Bill-O's administration was a year for whispers, whispers that the Mayor was trying to find a graceful way to retire, whispers about why he was trying to retire. To still them, eight separate times he denied that he was thinking of leaving office—once, on vacation in Florida, personally telephoning a New York Times editor to do so. But by August, every swing of the spotlight brought it closer and closer to those shadowy places in his past. There was a grand jury in Brooklyn investigating racketeering in that borough, and there were all sorts of rumors flooding City Hall about what that grand jury was learning—and preparing to reveal -about the man who had once been the borough's crusading District Attorney. United States Senator Estes Kefauver's Senate committee investigating organized crime was preparing to hold hearings in New York, hearings that would concentrate on the links between the city's underworld and the city's politicians—and television cameras were preparing to focus on the nervously twitching fingers of key witness Frank Costello. The time for denials was past; now was time for flight. On the eve of a mass Police Department trial for bribery, more than one hundred policemen resigned, so did the Police Commissioner and his two top aides—and so, as the spotlight swung at last full force on his handsome, charming face, did William O'Dwyer. Ed Flynn dropped in on Harry Truman to pass the time of day, Bill-O was appointed Ambassador to Mexico and on August 31, 1950, almost eighteen years to the day after Tammany's most popular mayor had fled the country, Tammany's second most popular mayor crossed the border into Mexico.

## IMPY

All during August, Moses had been in South America, drawing up a Rockefeller-financed plan of improvements for São Paulo, utterly unaware of the events crushing in on O'Dwyer. But O'Dwyer's resignation was to place the city in his power more completely than ever before.

By law, the successor to a retiring mayor is the President of the City Council. By fate, the Council presidency was held in 1950 by an individual who, during the entire forty-five utterly undistinguished years of his life prior to his nomination to that \$25,000-per-year post, had never been deemed worthy of holding any job more responsible than that of secretary, at \$6,500 per year, to a judge named Schmuck.

The nomination of this totally unknown minor Tammany ward heeler to the city's second-highest elective office, the position of succession to the

mayoralty, had "staggered," in Warren Moscow's words, "even the most imaginative among political reporters." And so had the explanation of how he had obtained the nomination. At a last-minute reshuffling of the 1945 Democratic ticket, the leaders finally agreed on Lazarus Joseph for Comptroller, and then realized that since O'Dwyer was Irish and from Brooklyn, while Joseph was Jewish and from the Bronx, the slate could have ethnic and geographic balance only if its third member was an Italian from Manhattan-and were unable to think of a single Manhattan Italian official they could trust. After hours of impasse, one leader reasoned that since legal secretaryships to State Supreme Court justices carried a respectable salary for which little or no work was required, they would have been given only to the "safest" of Democratic workers. Pulling out a little "Green Book," the official directory of city employees, he turned to the list of legal secretaries, ran his finger down it looking for a name that even the dumbest voter would be able to tell was Italian—and came to Vincent R. Impellitteri. "No one knew who the hell he was," Reuben Lazarus was to recall, but, looking up Impellitteri's address, the leaders determined that he lived in Manhattan, telephoned his district leader and were assured: "You don't have to worry about him. He's a good boy."

Although attested to privately by members of Tammany's hierarchy (and by Moses, whose presence at the crucial ticket-making session—he was the only "outsider" there—reveals his standing with that hierarchy), this explanation seemed almost unbelievable—until one met Impellitteri. If he had a single qualification for the job other than the length of his name and the fact that it ended in a vowel, he kept it carefully hidden during his five-year tenure (he was re-elected with O'Dwyer in 1949) as Council President. "The perfect Throttlebottom," Moscow called him. "He voted as the mayor told him to, on matters he did not necessarily understand, and spent most of his waking hours shaking hands at public dinners, political clambakes, and cornerstone layings too unimportant to merit the mayor's presence." Amiable but slow-witted, he was a joke among political insiders. But now he was mayor—and the joke was on the city.

Impellitteri's wits may have been slow, but he had two fast wits—ex-O'Dwyer aide Bill Donoghue and a young sharpie named Sydney S. Baron—as PR men. Impellitteri had to run in a special election in November if he wanted to hold the office he had fallen into, which meant that he had less than ten weeks in which to create an image and a record, and his PR men quickly hit on two ways to do it: first, take advantage of the fact that no one knew him, that he was therefore not identified with any political bosses, that his opponent, Ferdinand Pecora, was backed by Tammany boss De Sapio and that, unable to get Impellitteri the Democratic nomination, the clique in Tammany that pulled his strings had him running as an independent, and portray him as the "anti-boss," "anti-politician," "anti-corrupttion" candidate (one of Baron's better lines: "If Pecora is elected, Frank Costello will be your mayor. But the voice will be that of Pecora"); second, identify him with Robert Moses.

The price of that identification came high, both in specifics—Moses

made Impellitteri pledge publicly that if he was elected, he would not reappoint Finkelstein-and in generalities: Impellitteri privately promised Moses even more of a free hand than he had enjoyed under O'Dwyer in setting all city construction policies. But Impellitteri paid it. He got full value in return. Refusing an offer of the Republican nomination (time had dimmed at least some GOP leaders' memories of 1934), Moses gave him his endorsement. "Even I, who thought that by this time I knew Bob and the lengths to which he would go, never thought he would go that far," says Lazarus. Remonstrating, he said, "But, Bob, he hasn't any capacity for the job at all!" Moses' response? "He laughed at that." Publicly, the Coordinator declared that Impellitteri "has shown extraordinary courage and independence." And, as always, a Moses endorsement made almost every front page in town. (The Herald Tribune article stated: "It was not a political endorsement, Mr. Moses basing his support on his opinion that the [Impellitteri] administration was carrying out the city construction program as planned.") Moses led Impellitteri around to officiate at openings of-and share in the credit and front-page pictures for-highways and housing projects with which he had had nothing to do except to affix his signature as Council President to documents his aides say he often had not even bothered to read. Most observers, noting that the campaign consisted mainly of charges and countercharges of bossism and corruption, felt that the endorsement from an official characterized as "independent" and believed above corruption was an important factor—almost as important as the decision by newspaper headline writers to call him "Impy" and thus give him a lovable public image—in Impellitteri's victory, the first in the city's history by a candidate running on an independent line without the support of either major party. And after his election, Impellitteri continued to pay the price-eagerly.

Thanks to his PR men and his physical appearance—his addiction to the blue suit and the boutonniere, combined with his iron-gray hair, deeply earnest mien and stolidity that during the campaign was mistaken for dignity, made him the very model of a modern mayor; at the approach of a camera his brow would furrow, his lips would purse, his jaw would jut and his eyes would focus on whatever piece of paper happened to be handy just as intently as if he understood the words written on it—Impy had run a great race, but once in possession of the prize he had won, he proved to have not the slightest idea of what to do with it.

He disclaimed any influence over the Board of Estimate, telling reporters, "All I have is three votes on it, you know." Mayors were always telling reporters that—but City Hall insiders soon realized, to their astonishment, that this mayor believed it. Says one of his aides, Victor F. Condello: "Impy never understood that he had any power at all." Once Condello suggested that the Mayor call the five borough presidents to an executive session to discuss a thorny issue. "Yeah," the Mayor said, "that's a good idea." Pause. "You think they'll come?"

He was too timid to confront even his own subordinates. Once, a newspaper leveled detailed charges against one. The next time they met, the Mayor asked him if the charges were true. Of course not, the appointee said

firmly. Impellitteri never mentioned the matter again. He would take orders from whoever happened to be talking to him at the moment.

Even his enemies had to confess that Impellitteri "personally" was "a very nice man." No one could watch him, childless himself, chatting warmly with the groups of children who visited City Hall, and doubt that; the warmth of his greeting for all delegations, in fact, was beyond affectation, if occasionally a cause for snickers: once, hearing the sound of singing from behind Impy's office door, an aide walked in to find a choir in action—and the Mayor standing with them, wearing a contented if somewhat vacant expression, humming merrily away. But he was a man simply unequal to meeting the duties that had been thrust upon him. The responsibilities he was charged with carrying out utterly bewildered him. At times, he presented an almost pathetic figure as he groped his way through the intricacies of government. Says Warren Moscow: "My God, at Board of Estimate executive sessions, he'd sit there and some problem would come up, and the poor bastard would say, 'I got no answer on this, boys. You got any ideas?" And if no one had any, the 101st Mayor of the City of New York would sit there with his gavel before him, literally wringing his hands in agitation while long minutes passed in painful silence. He was desperate for someone to turn to, almost frantically anxious to drop his enormous powers—and responsibilities -into someone else's hands.

And the biggest hands around were those of Robert Moses.

Within weeks of Impellitteri's inauguration, Lazarus was noting in his diary that "Robert Moses is actually running this town today. There's no important act Impellitteri takes or does that he doesn't consult Mr. Moses." Soon the town's other top political insiders were saying the same thing. The consultations were held at Gracie Mansion—almost every morning, with Moses dropping by at about nine or nine-thirty, or even earlier. And these were private consultations: when Moses was closeted with Impellitteri in the Gracie Mansion drawing room, no one else was allowed to be present. (Asked why years later, Impy would say, "I considered those very important sessions for me and the city, and I didn't want them interrupted.") Sometimes the Mayor saw no one else until eleven. "He would always come with a big envelope," Impellitteri would recall, and the envelope would be filled with papers Moses wanted him to sign—and invariably by the time Moses drove away in his big limousine, they would be signed. One top official says that Impellitteri never left the Mansion in the morning until Moses had given him "his marching orders for the day." Papers that were prepared for signature later in the day were delivered by messenger to the Mayor's office at City Hall-with peremptory Moses covering notes ("There is no use boring you with figures"). And the papers were invariably signed—and the marching orders were invariably obeyed. "Moses' word was law with him," Condello says. "All Impy wanted was to keep him happy. I had written a letter to several" department heads. "Moses got pissed off about it-I never did figure out why-and he wrote to the Mayor: 'Dear Vincent: What is this all about?' And the Mayor called me up and said, 'For God's sake straighten

nis out with Moses!' I tried to explain to him that there was nothing for Joses to get angry about, but he didn't even want to listen to what it was. Ie was in a real panic. He just didn't want to do anything to irritate Moses. Joses' word was law in the city."

One proof that Moses' word was law was in the appointments Imbellitteri made—and in those he didn't make.

Tammany kingpin Frank J. Sampson, Impellitteri's old district leader, listributed the bulk of the administration's routine patronage, but for highevel jobs in departments whose responsibilities in any way touched on Moses', Impellitteri almost invariably asked Moses for a recommendation—and should Impellitteri neglect to ask, Moses gave a recommendation anyway, submitting so many that the Mayor's files were crammed with them. They were dutifully followed. By the end of Impellitteri's term, there existed within the upper echelons of the city government an extensive network of men whose first loyalty was not to that government but to the man who ran the independent government on Randall's Island.

Off Randall's Island flowed, moreover, not only recommendations but disapprovals. Time and again, men being considered for key city posts were quietly blackballed by Moses—in most cases without their ever knowing about it—in cutting phrases ("Is there any evidence that he is worth \$25,-000?" "Not heavy enough for the job." "Would certainly not impress . . . the Albany educational authorities . . . to whom the city looks for additional aid") that concealed the real reason for his disapproval: that they had not proven themselves sufficiently ready to swallow their pride and their independence, abandon their own theories and beliefs and unquestionably accept his. And Moses' negative counsel was followed by Impellitteri as slavishly as his positive.

Another proof was in the policies to which Impellitteri put his signature.

They were Moses' policies. During the Impellitteri administration, through a secret "understanding" with Governor Dewey largely engineered by Moses, the city was allowed to adopt a series of financial measures whose common denominator was the fact that they fell hardest on those least able to afford them. The city sales tax, earlier raised from I to 2 percent with Moses' backing, was now raised from 2 percent to 3; the subway and bus fare, earlier raised from five cents to ten cents with Moses' backing, was now raised from ten cents to fifteen—by a Transit Authority, created to bear the public's blame for the increase and thereby insulate politicians, whose creation, combined with a legislative mandate to run mass transit on a "self-supporting" basis, removed from the city's constitutional debt limit the \$425,000,000 in transit debt service Moses had so long wanted removed so that the borrowing capacity could be freed for his own projects.

And proof lay in the speeches the Mayor made. The voice was the voice of Impy, but the words were the words of Moses. By the time Impellitteri was running in the Democratic primary in 1953, Moses was giving

point-by-point "suggestions" for his major television talks (one list was headed by the suggestion that the Mayor make "reference to records of heads of several important departments"—including, prominently, the head of the Department of Parks).

Moses liked to keep the strings on his puppet short. During the summer, which he spent in Babylon, he kept the Mayor convenient to hand, inviting him to vacation in the handsomely furnished Shelter Cottage at Fire Island State Park just across the bay.

More proof that "Moses' word was law in the city" was in what happened to the City Planning Commission and its Master Plan.

When O'Dwyer retired, Jerry Finkelstein had four months remaining before his term expired. During those months, the young commission chairman fought for the Master Plan, pushing the consultants to finish the crucial rezoning proposal, issuing press releases trying to explain the value of establishing local neighborhoods as the basis for studying planning needs. But he was fighting against a master.

The rezoning study—290 pages long, profusely illustrated, crammed with detailed maps and charts—was completed in September, ready for detailed study by city officials and the public, and for public hearings leading to its adoption. But, Orton says, "like dopes, we hadn't gotten enough money to publish the darn thing when we got our appropriation, and we had to go back to the Board of Estimate" with a new mayor sitting at its head. Trying to force Impellitteri's hand before the election, Finkelstein wrote the Mayor in October appealing for his support. There was no reply—and when, after he had written again, an answer did come, it came in the words of Moses. A letter over Impellitteri's signature said that the Mayor would "have no objection" to having the \$9,750 printing item brought up for consideration at the next Board meeting-if copies were sent to him and other members of the Board "immediately" to give them time to study them. "Well, of course, we couldn't do that," Orton was to recall. "We didn't have copies. It was to make copies that we were asking for the money." Finkelstein, in a hospital suffering from exhaustion, attempted to take his case to the public by issuing a release stating that the failure to appropriate \$9,750 for printing the report would mean that the \$325,000 already spent preparing it would be completely wasted. Orton appeared before the Board in executive session to press the point. But when Orton finished, Moses got up and, Orton recalls, "argued that the whole thing was a bunch of tripe, nonsense, what a lousy job it was, waste of money, all the things that lawyers say-incompetent, irrelevant"-and the Board, with Impellitteri nodding placidly at its head (when Finkelstein had sent the Mayor a copy of the "local neighborhoods" proposal, he had sent it to Moses for an explanation, and Moses had sent it back with a note stating, "Dear Vince: Here's the answer—the attached is a silly idea"), refused to vote the additional funds,

and the report for which Finkelstein had fought so hard had still not been seen by anyone outside the commission when, while still in the hospital, his term ran out on December 31.

At Moses' request, Impellitteri moved into Finkelstein's job—and into the office Finkelstein had so optimistically redecorated only a year before—Colonel John J. Bennett, who was shortly to be in the process of organizing, with Moses' approval, a Title I project that was to reap its organizers enormous profits. Orton hoped against hope that the new chairman, who certainly had a distinguished career résumé (former State Attorney General, Democratic candidate for Governor, judge, noted attorney), would carry out the duties of his job. But he saw at the very first meeting that such hopes were useless. "Bennett was totally subservient to Moses."

The two members of the commission who had strayed briefly from Moses' fold at the enticement of O'Dwyer and Finkelstein soon were back among the flock. Why cannot be said, but it was at about this time that Moses gave Cleveland Rodgers permission to do his biography and it was also at this time that Moses had Impy give John Reidel, chief engineer of the Board of Estimate, a hefty salary increase. Reidel and Rodgers, who had supported the Master Plan before, now switched their votes, combining with Bennett—and the caster of the decisive fourth vote: Robert Moses—to overrule the commission's three liberals, Orton, Francis J. Bloustein and Goodhue Livingston, and defeat all proposals to advance it.

Under Bennett, the Planning Commission was in Moses' hands as firmly as it had been in the days when \$15,000-per-year Edwin Ashley Salmon wielded its gavel. Many of the eager young planners Finkelstein had brought in were forced out. Work on the Master Plan all but stopped. Eventually, the consultants' zoning report was printed, but the four-man majority on the commission saw to it that the public hearings Finkelstein had dreamed of were never held—and that the commission never adopted the report as its own, so that it remained without official status.

The \$325,000 spent on the rezoning was wasted completely. But \$325,000 was an almost infinitesimal item compared to the real cost to the city of the return of Moses' control of its Planning Commission. In his one year as chairman, Finkelstein had-in compromises like that at Washington Square—subtly employed the commission's inferential powers to persuade large real estate developers to sit down with local residents and work out plans that would, while allowing the developers their projects, save the fabric of the neighborhoods in which they would be built. He had moved to preserve neighborhoods from city as well as private "improvements" by establishing the principle that "local neighborhoods" must be the basis around which planning works. He had gotten the commission to work on a study of the UN area that might save the city from the enormous costs of having to expand the site if it were found too small, and that would have insured that surrounding private development would be not haphazard but based on some rational guidelines. He had started the commission developing playground criteria that might save the city the immense wastage of

building and maintaining playgrounds that no one used. He had personally saved the city—even if accidentally—from the Mid-Manhattan Elevated Expressway. Most important, in that one year he had started the commission down the road—an astonishingly long way down the road—to the formulation of a rational plan for the development of the city as a whole. Manhattan might be largely lost—as O'Dwyer was to say: "Now the city's built up around the mistakes that were made . . . it's too late to tear down skyscrapers to put in things that you would have, if properly planned"—but there was plenty of almost empty canvas (most of Staten Island, the great central belt of Queens, huge expanses of Brooklyn, even bits of the Bronx) on which to draw from scratch, to insure that the people who moved into these areas would have schools, colleges, public libraries, parks, playgrounds -and shopping areas and jobs-close enough so that they would not have to waste a substantial portion of their lives getting to and from them. In all those areas of the city, the rule of reason could have been allowed to operate substantially unfettered—and Jerry Finkelstein had, by recruiting a master planning staff, organizing it and assuring it of his support, inaugurated a program that would have done just that. But now Finkelstein's year was over. Robert Moses was back in control. The rule of reason was over. The rest of the city was going to be built by the law which had governed the building of the earlier parts: the law of the jungle.

And proof lay in Moses' relationship with the city's legislative bodies—the City Council and the Board of Estimate—already so effectively dominated by him through his use of the power of money. Council President Rudolph Halley, a liberal concerned with the social implications of governmental policies, began to question some of Moses' proposals; Moses' attitude—expressed at a lunch at Randall's Island to which Mrs. Halley was also invited—was, she says, "Oh, little boy, sit down. Father knows best."

Halley did not believe so, but he found that most of his fellow councilmen were reluctant to challenge Moses, and that he could do little to influence them. "It was a terribly frustrating period for Rudy," Mrs. Halley says. "He felt so strongly about things—the same things that people feel strongly about today. But then he was ahead of his time, and he couldn't get anything done." The Council President has no real power. When Halley persisted in closely questioning Moses, or, more usually, since Moses himself seldom deigned to appear, Moses' deputies, during their appearances before the Council, Moses adopted a simple solution: he not only refused to discuss his programs with the Council himself but would not allow his aides to discuss them. And to Halley's frustration, the Council's Tammany majority approved those programs anyway.

Halley and Wagner, busy trying to ingratiate himself with the city's liberals in preparation for his own upcoming try for the mayoralty, offered opposition on the Board of Estimate. Moses adopted the same tactics there. Bronx Borough President Lyons, raging publicly, said: "We've seen very little of Mr. Moses at Board meetings, either open or executive. He does all

his business at Gracie Mansion." Says Moscow: "Under Impellitteri, it was taken for granted that Moses was Mayor. There was no question about it." If Impellitteri didn't know how to exercise a mayor's powers to whip Board members into line, Moses did—and the Board members knew it, well enough so that none of them dared with any seriousness or regularity to challenge him.

During the forty months of the Impellitteri administration, the trends Moses had caused during the last forty-four months of the O'Dwyer administration—the forty-four months beginning in January 1947 in which Moses exercised near-absolute power over the construction of all public works—intensified. During the O'Dwyer administration, the city spent \$3,102,000 on the construction of colleges, \$1,169,000 on the construction of libraries—and \$80,826,000 on the construction of highways. Before the war, the city's hospital situation had been desperate; \$80,000,000 was more than twice as much as the city spent on hospitals during the O'Dwyer administration. It was more even than it spent on elementary and high schools.

During the Impellitteri administration, the city spent \$16,176,000 on colleges, \$4,118,000 on libraries, \$70,314,000 on hospitals, \$137,290,000 on schools—and \$172,294,000 on highways.\* It built eighty-eight miles of new highways, but not one mile of new subways. Near the end of the Impellitteri administration, more than eight full years after the city had announced the start of a "crash program to replace all non-fireproof schools," there were still 182 non-fireproof schools in use. Some 38,777 elementary-school pupils were failing to get a full day's schooling because lack of new construction had caused such severe overcrowding that double or triple sessions were necessary. One out of every three of the city's schoolchildren sat in classrooms that were overcrowded by any educational standard. The four free municipal colleges—City, Hunter, Brooklyn and Queens—had a combined capacity so inadequate that a study showed that 46,000 students per year who would have gone to college had a municipal institution been available were unable to do so.

Taylor had warned McGoldrick and McGoldrick had warned Joseph that Moses would "bankrupt" the city. One way in which the Comptrollers were afraid Moses would do this was by forcing the city to issue long-term revenue bonds to pay for the "negligible" city share of the costs of his public works, costs which, he assured the press and public and city officials not as familiar with city finances as the Comptrollers, were being almost entirely borne by state and federal government. Since most of these facilities were not revenue-producing—those that produced revenue he built under the auspices of his authorities so that they, rather than the city, would get that revenue—the only method of paying the interest on

<sup>\*</sup> The highway construction figures represent, of course, only the city's expenditures—not expenditures on highways by the federal or state governments or the public authorities.

those bonds was to take the money out of the city's current revenues, to include debt service in the expense budget. Thanks to the wartime curtailment on construction and hence on new bond floatings, at the beginning of the O'Dwyer administration the city's debt was down to \$2,194,000,000 on which the annual debt service charges were \$118,000,000. By 1952 annual service charges were \$211,000,000—up 78 percent in seven years. Another, more subtle but, in the long run, more damaging way, was in draining away for new construction so much of the city's resources that it could not pay to keep up maintenance on its existing \$12,000,000,000 physical plant. Not only subways but highways fell into this category; even Moses' own roads could not be kept up. And the cost of neglected maintenance is astonishingly high: the West Side Highway, for example, could have been kept in perfect repair during the 1950's for about \$75,000 per year; because virtually no repairing was done, by the 1960's, the cost of annual maintenance would be more than \$1,000,000 per year; and in 1974 the highway had begun literally to fall apart—a condition that would take tens of millions of dollars to repair. By the time Moses left power in 1968, the city would be utterly unable to make even a pretense of keeping its physical plant in repair.

There was a skewing of expenditures away from service functions and toward public works construction. This was especially unfortunate because the nature of the city's population was changing; each year, more of the comfortable middle class, which required a minimum of services, left the city to be replaced by families from underprivileged Puerto Rico and from underprivileged southern states who required more services if they were to become truly part of the city and not just live within its borders as unassimilated, hostile, bitter aliens.

Instead, here is what happened.

Just to make the most minimal repairs on the outmoded school plants required between \$15,000,000 and \$20,000,000 per year. During the O'Dwyer administration less than \$5,000,000 per year had been allocated for this purpose, with the result that by the end of that administration, the backlog in minimal repairs, a staggering \$30,000,000 at the beginning of that administration, had mounted to \$75,000,000. During the Impellitteri administration, thanks largely to the real possibility of disasters in the schools, the amount for maintenance was increased—but only slightly. By the end of that administration, the backlog of minimal repairs to the city's schools was about \$100,000,000.

Bridges were painted every three years. Rare was the school that was painted that often. Rare was the school that was painted every five years. At the end of the Impellitteri administration, there were five schools in the city that had not been painted in twenty years.

More important than what the city's own government spent on shaping its future was what the state and federal governments spent, for their resources dwarfed the city's.

During the Impellitteri administration, \$408,000,000 was poured into the city for highway and housing construction by the state and federal

governments. Every cent of this money was spent under Moses' command. What was built was what he wanted built. There were, for example, twenty-four huge public housing projects constructed during the Impellitteri era by the City Housing Authority whose members and staff were subservient to him. Not a brick of one of those housing projects was laid without his approval. Eleven huge superhighways were begun during this era. Not a mile was laid out without his express O.K.

The public never knew the extent of Moses' influence. One can search through the daily issues of the city's nine remaining daily newspapers—issues crammed, day after day, with "inside dope" on City Hall—without finding a single accurate analysis of that influence. There were, for example, hundreds of stories about the Housing Authority's construction plans and over-all policies. But because he had no direct connection with the Authority, in all these stories there is hardly a mention of Robert Moses, the man whose approval was needed for every plan and who personally set most of its policies and approved the others. The forty months that Vincent R. Impellitteri sat in the mayor's chair were a crucial forty months for the city. It was during them that—with the exception of those on Staten Island—the city's last vast open spaces disappeared. New York filled up, assumed a new shape. The shape Moses dictated.

And Moses' forty months of absolute power enabled him to shape the city for far longer than forty months. The appointments Impellitteri made at his recommendation would extend his influence for years after Impellitteri was no longer mayor. Protected in general by civil service, the appointees would remain in their key, sensitive posts as new mayors sat in City Hall, knowing that mayors come and go, but that Moses remained—and that, therefore, in conflicts between Moses and a mayor, it was in their interest to give their loyalty to the former.

There was, moreover, the momentum effect. Qualified administrators were scarce. Mayors were constantly engaged in a search for men with real experience in handling large-scale problems. The only way to get experience was to handle such problems, and since it was Moses' men who had been placed in positions to handle them, it was Moses' men—and sometimes only Moses' men—who were qualified.

More important than the men he installed, of course, were the stakes he drove. Once you get the first stake driven for a project, he had learned, no one would be able to stop it. During those forty months of Impy, he drove a lot of stakes. He selected the routes for a dozen expressways, had thousands of families evicted from them and demolished their residences. What public official—even if he did not like the route of one of the expressways, even if he did not want any expressway built in the area at all—could thereafter say it would not be constructed, that the evictions made and money spent had been made and spent for no purpose? He selected the sites—and evicted the tenants from—a dozen Title I projects. What public official could then cancel a project—and simply say that the blocks of debris would remain untouched?

No political observer was in any doubt why Impellitteri was defeated

by a resounding 2-1 majority in the Democratic primary when he ran against Robert F. Wagner, Jr., in 1953. "Wagner did not merely have one issue, he had all of them—the rent, tax and fare increases to which Impellitteri had been a party, plus continued overcrowding in the schools," says Warren Moscow, at the time Wagner's Borough Works Commissioner. With the exception of the rent increase, the policies that led to Impellitteri's defeat were Moses' policies.

But the people couldn't strike back against Moses—even if they had wanted to, which they didn't since they didn't know that he was responsible for those policies. His state positions, and his authority chairmanships, put him beyond their reach. The result of Moses' policies was, for Impellitteri, defeat. The result of Moses' policies was, for Moses, more power.

To a man to whom power is all-important, other men are judged by how much they give to him. So it was with Robert Moses and Vincent R. Impellitteri. Moses' final evaluation of the bumbling little man who had presented such a pathetic figure in his high office: "He was a good mayor."

To a man to whom power is all-important, other men matter only as long as they possess power.

So it was with Robert Moses and Vincent R. Impellitteri. Years after his retirement, the one-time mayor would sit for an interview in the law offices where he was kept, with little work to do, as window dressing by a much younger man who liked window dressing around him: Joseph F. Carlino, the best-tailored Speaker in the history of the New York State Assembly.

The one-time mayor was almost pathetically glad to have someone to talk to about his days as mayor. And he was very glad indeed to talk about Bob Moses, once he had taken care to make sure the interviewer understood that it had always been he, not Moses, who had given the orders during the old days. ("He would get to Gracie Mansion early in the morning. He had what he called an agenda." Pause. "And sometimes I had an agenda.") "Let me put it this way—I think Mr. Moses will go down in history as the most brilliant, the most imaginative and certainly the most er, er, certainly a man whose integrity is always beyond question . . . the leading public figure in America, not only in New York City but in America. He spent billions of dollars of public funds without anyone ever putting a question mark."

He went on for some time reminiscing about how close he and Moses had been. Then, however, he was asked when he had last seen Moses. And the sincere, friendly face turned sad as he tried, in vain, to recall the last time he had seen the big, charming, brilliant man who had once been so friendly to him.

"I haven't seen him recently," he said at last.

## WAGNER ==

On those unforgettable evenings so long ago on which Al Smith's "Court of Appeals" had convened over cracked clams and cold beer, Moses, singing at the piano with the Governor's big arm around his shoulders while Jimmy Walker played, had often seen, sitting silent and wide-eyed in that room filled with loud, boisterous men, as close to his father as he could get, a shy little boy, for Robert Ferdinand Wagner, Sr., who had been the Governor's roommate when they had both been young legislators in Albany, made a point, ever since young Robert's mother had died when he was nine, of taking the boy with him whenever he could. Moses had given the Senator's son a helpful boost onto the first rung of the political ladder; in his first race for political office—for an Assembly seat from his father's old Yorkville district in 1937—he had enabled him to promise a swimming pool for John Jay Park on Seventy-eighth Street. "Bob Moses was very nice to me," he would recall. "He was going to build it anyway, I'm sure, but he gave me an opportunity to tell my constituents that I had gotten it there. And I was always very grateful to him for that." In his climb up the ladder, however, young Wagner, while strikingly "regular" in all other respects, had displayed what Moses regarded as an infatuation—especially disappointing in one from so sturdy a background—with the "radical" notion of city planning. As chairman of the City Planning Commission, he had pushed the Master Plan, and had even supported Stanley Isaacs' "silly" notion that the plan should preserve and protect the city's neighborhoods. Moses' relationship with the younger man had worsened during his Manhattan borough presidency, in part, perhaps, because Wagner, aware as was his patron, Carmine De Sapio, of the importance of contractors in the new political scheme of things, insisted on using his own, not Moses'; once, in fact (after Wagner Senior was safely in retirement), Moses had written a letter, distributed as usual to a mailing list of hundreds, calling Wagner Junior a "bubblehead." Wagner, for his part, had kept his own counsel (Wagner always kept his own counsel), but while he never attacked Moses directly, publicly or privately ("Wagner never makes derogatory remarks about people," Lutsky says. "Nobody ever heard him say a bad word about anybody: maybe he learned that from his father"), he left with intimates such as Lutsky the impression that "he didn't like Moses." During his campaign for the Democratic nomination for mayor—in which, of course, he was opposing the man Moses was supporting—and in the course of wooing the Good Government groups embraced by De Sapio, who had hand-picked him for the job and was directing his campaign, he led them to believe that he would curb the Coordinator's power. And after his election, he had brave words to the same effect. "I'm not going to let Moses come over to Gracie Mansion and give me my marching orders, like he did Impy," he told Warren Moscow, whom he had drafted from the Times to be a mayoral

assistant. Shortly after the election, "a source close to the Mayor-elect" was leaking to reporters the information that "Robert Moses will continue to serve in the Wagner city administration, but his powers are likely to be severely restricted," probably to those of Park Commissioner.

Another leak soon followed, however: there was no longer any thought of removing Moses as Coordinator. The Good Government strategists thereupon decided to try to hold the line on the sole remaining post to which he needed reappointment at Wagner's inauguration: his Planning Commission membership, which expired on December 31, 1953.

The site of battle seemed choice. There were stronger arguments against his holding the Planning Commission post than the other two: as Park Commissioner and Construction Coordinator, he proposed public works projects and the Charter had surely never intended the proposer of projects to sit on the body which passed on their merits. Moreover, the Mayor-elect, as a former commission chairman himself, should be able to understand the logic of such arguments.

At first, Wagner did in fact seem to understand that logic. Meeting with the reformers before his inauguration, he told them he understood their views and agreed with them. The reformers left the interview believing that there would be only two jobs waiting for Moses.

On inauguration day, their efforts seemed for a while to have been crowned with victory. As they sat among the hundreds of spectators crowded into the City Council Chamber at City Hall, watching the new mayor summon his appointees forward one after another, administer their oath of office and hand them their official "oath blanks," which he had signed before the ceremonies, they saw him call up Robert Moses, swear him in as Park Commissioner and Construction Coordinator and then, with Moses still standing beside him waiting expectantly for the third oath and blank, beckon the next appointee forward. Watching Moses' face pale, the swarthy skin turning almost white, and then seeing the telltale reddish, almost purple, flush rising out of his collar up along his neck, they whispered happily—in some cases, gloatingly—among themselves.

As each commissioner was sworn in, he walked out of the Council Chamber and into an adjoining room, where he was supposed to leave the "oath blank" as proof—required under the city's Administrative Code—that he had sworn the required oath of loyalty to the Constitution, and where he was supposed to sign the city's massive, gray-bound "Oath Book," the official record of appointments, which was resting on a small table in front of Lutsky and an aide, Philip Shumsky. (City appointments are not official until "certificates of appointment" are issued, but in practice they become official as soon as both the mayor's signature and that of the appointee are on the oath blank, and the appointee's is in the Oath Book.) As Lutsky and Shumsky recall it, Moses stalked in and demanded, "How about City Planning?"

Lutsky, who knew the Mayor had decided not to make the third appointment, shrugged his shoulders as if he knew nothing, saying, "These are the only titles on the list. I just do as I'm instructed."

Without another word, the two men recall, Moses stalked into the Mayor's private office, to which Wagner had repaired alone before the official reception that was to follow. Neither Moses nor Wagner, the only two persons present, will discuss the confrontation in detail. But Moses was to tell aides—and Wagner, asked about the confrontation many years later, was, with an extremely pained expression, to indirectly confirm Moses' account\*—that he had put it to the Mayor "straight"; either he got the third job, or he'd quit the other two. On the spot. He'd march right outside and tell the press. As the aides relate it, Wagner tried frantically to stall, saying that there must have been some oversight, that some clerk must have forgotten to fill out the appointment blank, that there was nothing for Moses to worry about, that he'd see to it in a few days.

Returning to the room where Shumsky and Lutsky were sitting, Moses snatched an unused blank off a sheaf Shumsky had placed on the table in case some appointee lost a blank and needed another. Sitting down at a typewriter that had been placed on another small table nearby, he typed in the date, his name, in the space marked "length of term"—eight years—and, in the space marked "position"—"Member, City Planning Commission." Then, carrying the blank, he stalked out of the room and back into the Mayor's private office and—without a word, according to his aides' recollection of the story—laid the paper on Wagner's desk. Without a word, Wagner pulled the paper toward himself and signed it. And, relates Warren Moscow, "Moses increased the dimensions of his victory by relating the story of the hand-typed oath to only fifty or so of his most intimate friends, all in city government."

Four days later, there was another victory, quieter but more significant. Because the powers of the City Construction Coordinator had never been spelled out by law, they were what each mayor chose to make them. Reappointment to that post by Wagner did not mean much to Moses—unless he could obtain from Wagner what he had obtained from O'Dwyer and Impellitteri: authority to "represent" the city in negotiations with state and federal governments. On January 5, he wrote Wagner asking if the Mayor wanted him to do so. "Certainly," the Mayor wrote back.

Moscow got a very close view indeed of Moses' next victory. Abrasive but clever, the former newspaperman decided, even before Wagner's inauguration, "to create for the incoming administration some of the atmosphere of the First Hundred Days—you know: action."

In no field was that commodity needed more than housing: the city's crisis was entering its ninth year. "I asked [Wagner] if we had a housing

<sup>\*</sup> Before the author had had an opportunity to ask Moses about the confrontation, Moses had stopped talking to him. When, in 1972, the author asked Wagner about it, the pained expression came over the ex-Mayor's face and he refused to meet the author's eyes as he said, "I don't remember. I know there was one reason I might not [have wanted to reappoint him]—he was never there. He always sent a substitute [to Planning Commission meetings]." Pressed for a more definite answer—the version Moses had given his aides was read to him—Wagner finally said: "I think that may have happened. I probably thought, 'Let's not get into a big row to start out with.'"

program, if anyone had been assigned to do a housing program, and he said No and I said, 'Would you like me to take it on?' and he said, 'Okay, but make sure you keep in touch with Moses.'"

That stricture should have been a warning, but Moscow was as short on an understanding of people as he was long on an understanding of public relations. In two or three work-crammed weeks during December 1953, he drew up the program for state-assisted middle-income housing that would, with only minor changes, later be named "Mitchell-Lama" after the two legislators who would be permitted to introduce it in Albany. He discussed it not only with Cruise and other Moses Men on the Housing Authority but with Moses, who said he liked it—"He said, 'Good, that'll bring the union treasuries in.'" But then, shortly after the inauguration, Moscow, in a secret memo, presented it to the Board of Estimate himself instead of letting Moses do it.

"Moses blew his top," Moscow recalls. "He wrote a memo to the Mayor—one of those mimeographed things that goes around to 205 people—pretty much denouncing me" and denouncing the program that he had privately told Moscow he liked.

At the same time as the denunciations were flying, however, Spargo and Lebwohl kept telling Moscow to ignore them. "They kept coming to me and saying [here Moscow would whisper to show how the two Moses Men talked], 'Don't answer him. Don't blow your top. It's going to be all right. He's not really angry at you.' "Moscow was understandably puzzled—until he figured out that he was just a substitute target. Their boss, he realized, was angry at Wagner for what he thought was the Mayor's authorization to Moscow to interfere with his control of housing, but, not wanting to alienate a mayor who had otherwise proved so agreeable, had decided to make his views known to him by attacking one of his assistants instead.

And the strategy worked. Despite Wagner's previously professed enthusiasm for the proposal, the Mayor allowed it to languish in the Board of Estimate. Then, three weeks later, Moses dropped in on a Board executive session. He presented his "own" housing program. It bore an amazing resemblance to Moscow's, except that now it was identified with Moses instead. Wagner quickly obtained the Board approval that allowed it to be sent to Albany.

On February 23, 1954, a black-tie dinner in the Grand Ballroom of the Waldorf-Astoria brought to a climax the year-long celebration of New York City's three-hundredth anniversary. The principal speakers were the Mayor and Robert Moses. And Moses, in his speech, went out of his way to praise "My friend, Bob Wagner."

Moses' relationship with Wagner would not always be so friendly. He was still a frequent early-morning visitor at Gracie Mansion, and he still arrived with the large manila envelope filled with documents, but now he often went away without the Mayor's signature on them. One observer reported:

He has been heard to say that he looks back with particular wistfulness upon the term of William O'Dwyer, having found him to be a mayor who would sign almost anything placed before him on the breakfast table, provided that it was accompanied by a reasonably persuasive argument. . . . Wagner is more likely to say, "Splendid, Bob, splendid. Before I sign this, though, let me take it along to the office and think the thing over."

The Port Authority found city approval of its projects obtainable again, more easily obtainable, in fact, than ever before. During Wagner's entire twelve years in office, its power grew. As for the Housing Authority, Moscow's conversations with Cruise and Authority staffers had opened his eyes to the completeness-hitherto unguessed at, keen though those eyes were—of Moses' control of a body to which he ostensibly had no direct relationship. "Theoretically, he had no connection with [public] housing, except in his capacity as Construction Coordinator, which gave him the over-all right to stick his nose into anything," Moscow says, "but, Christ, Cruise wouldn't go to the bathroom unless he asked Moses first." Wagner "became a little worried about the Authority," Moscow says-presumably about the possibility that its activities would result in a full-scale scandal which would reflect on his administration—and seriously considered ousting Cruise (unlike the other four members of the board, who were appointed for fixed five-year terms, Housing Authority chairmen served at the mayor's pleasure), a possibility which delighted liberals who felt Cruise was handicapped by "an inability to stand up to Moses when property rights interfere with human rights." But Moses pressed the buttons, and the callscalls that no mayor could refuse to take—flooded in. "I want to publicly thank Commissioner Moses, Thomas Shanahan, David Rockefeller and others who said a good word for me," said Cruise, as he was sworn in at a ceremony attended by Moses and Big "Bag" Man Jim Farley; when newspaper photographers sought to pose him with the Mayor, Cruise asked Moses to get in the picture, too. Wagner told Deputy Mayor Paul O'Keefe, "Well, I made my deal. I'm putting my man in to keep an eye on things." The Mayor created a new executive directorship over the Authority's staff and appointed to it Joseph P. McMurray, his father's former administrative assistant. But McMurray turned out to be more friendly to Tom Shanahan than to the Mayor. During 1954, Wagner's worries increased, and by the spring of 1955, he decided that more direct action was necessary. McMurray was replaced by Moscow—"quite simply, to take control of the assigning of architects away from Shanahan"—and Cruise was called in for a very confidential chat.

The former \$9,000-per-year Park Department clerk loved his \$22,500-per-year chairmanship. He was informed that if he wanted to keep it, some small adjustments in his loyalties would be necessary. "Cruise had a switch," Moscow would say privately years later with a faint, mocking smile. "He, of course, had grown up in the Park Department and was very close to Moses. He was Moses' protégé. But Cruise made his divorce. Thereafter, in matters of controversy, Cruise took his views from the Mayor."

All this maneuvering went on backstage, without any direct confronta-

tion between Moses and the Mayor. It—and other subtle tests of will and strength between the two men—led, however, to constant tension between them, as did more trivial incidents.

"Bob [Wagner] was no less jealous of his prerogatives than any other mayor," Paul R. Screvane says. "And [Moses] didn't come to Bob enough and consult him." Wagner occasionally attempted to assert his authority over his commissioner by asking him to come down to City Hall. Generally, Moses made some excuse, but occasionally Wagner insisted and Moses, needing something from the Mayor, had no choice but to go. When he was forced to make the trip, however, he invariably disciplined Wagner by showing up late. At receptions at Gracie Mansion, Wagner, moving quietly from one guest to another—"He does a lot of his work in whispers at parties," one observer wrote—was remarkably inconspicuous. When Moses entered the room, generally trailed by enough aides to make his entrance conspicuous, women patted their hair to make sure it was in place and discreetly took out pocket mirrors to check their lipstick, and men watched him out of the corners of their eyes. His physical presence and vitality as he stood, head thrown back, teeth gleaming in his dark face, handsome, charming, physically overpowering his listeners, perhaps with a big arm around the shoulders of one, recounting fascinating anecdotes about Smith or Roosevelt or La Guardia, made him, as always, the focal point of the room, and sometimes Wagner, seeing his guests' attention slipping away from him just a bit, could be observed watching the Coordinator from across the room with an expression on his face that could only be described as enigmatic.

But if there was strain, most of the tension on the line was put there—or relaxed—by Moses. It was he—not the man who was supposedly his superior—who dominated the relationship. And in policy he proved as dominant as in personality. If there were points of contention, they were almost always resolved in his favor.

Wagner wanted Moses' dominance in public housing eliminated, but Moscow, assigned to the task, found it somewhat more difficult than he had believed. Charging onto the scene with visions of new brooms sweeping clean, the ex-reporter was encumbered by the fact that he was genuinely affected by the plight of the city's poor—and by his painful realization that Moses' near-monopoly of the engineering and architectural talent experienced in tenant relocation, slum clearing and construction on the immense scale required (and in dealing with state and federal bureaucracies) made it difficult to find qualified replacements—or even to keep from adding new Moses Men to the staff. "We needed a new chief engineer in charge of construction," he recalls. "The best qualified man around was Jim Dawson, who had been in charge of the UN job for Moses. Well, you're not going to turn him down just because Moses recommended him." (Analyzing in later years the sources of Moses' power, Moscow would say that one "stemmed simply from the fact that his enterprises developed people.")

Even with Cruise's conversion, Wagner's control of the Authority board was not assured. The antipathy of its only Negro member, Frank R. Cross-

waith, to Moses' philosophies and methods, assured the Mayor of another vote, but Shanahan and "Moses' stooge," William Wilson, gave Moses two, so that the vote of the fifth member would be decisive.

Wagner's first attempt to gain that vote—the appointment of a loyal supporter—had backfired when the appointee died. Then, Moscow says, "I arranged for James Felt to be appointed. I thought he would be ours. Instead, he was Moses'." (Moscow might have been alerted to this possibility had he been aware of the identity of the real estate company that had been handed the lucrative site-assemblage contract for Stuyvesant Town and Peter Cooper Village: James Felt & Co.) In 1956, Felt was eased over to the chairmanship of the Planning Commission and replaced by builder Abraham Lindenbaum, who, Moscow says, "we knew was 100 percent for what the Mayor or I wanted." Shanahan and Wilson were finally a minority.

But even a minority—when maneuvered by a master—can have considerable strength. His 1957 threat, delivered through Wilson, to "sic the Daily News on the Authority," was only the most dramatic method Moses employed to bend that body to his will. And while Cruise, after his conversion, might take "his views from the Mayor," most of the Authority business did not involve controversy, and in those matters Moses' wishes frequently prevailed. The day-to-day activities of the Authority, moreover, were run by the staff, still so largely Moses-dominated. It was not until 1958, when Wagner reorganized it completely, that Moses' domination of the New York City Housing Authority—then in its thirteenth year—was really ended.

And while Moses' domination of the Authority may have ended in 1958, he still possessed considerable influence, if not over its day-to-day operations, then over its larger planning and construction proposals. The money for the Authority's construction came, of course, largely from the state—specifically from the Legislature and the body that administered the Legislature's wishes, the State Division of Housing, headed by the State Commissioner of Housing. And Governors generally followed Moses' recommendations in appointing the commissioner. As late as 1968, during the administration of John V. Lindsay, liberals like Julius Edelstein would still be complaining about Moses' "influence with State Housing."

And public—low-income—housing was the only area in the vast housing field in which Moses' power was reduced at all. During the first six years of Wagner's administration, the Title I program was to grow to a point at which it was larger than public housing. Wagner never made the slightest attempt to interfere with his control, exercised through his chairmanship of the group misnomered "The Mayor's Slum Clearance Committee."

If Moses' power was reduced only slightly in housing, moreover, it was reduced not at all in parks or transportation. For the first six years of Wagner's administration, his word was as much "law" in those fields as it had been in Impellitteri's. The Coordinator didn't get his way with Wagner as routinely as he had gotten it with Impy—there were more confrontations—but he got it. There were many times when the Mayor announced to

friends that he was going to refuse a Moses demand, but the pattern following the announcement was always the same. William F. R. Ballard, a chairman of the City Planning Commission, recalls vividly Wagner "agreeing to back me—told me he would—and then he ended up backing Moses." And some version of Ballard's words are repeated by dozens of officials caught in tugs of war between the two men. "I saw it over and over," Condello says. "Wagner would tell me he was really going to lay down the law this time, show this guy Moses who's mayor. And then they'd meet, and afterwards, Wagner would say, 'Well, I guess I showed that guy.' And I'd have to laugh. [Moses] would go out with about 98 percent of what he wanted—every time."

When Wagner proved especially recalcitrant, the resignation threat would be used. Since there had been little need of it, Moses' ultimate weapon had fallen into disuse during the Impellitteri administration, but he worked it hard indeed during Wagner's. "Sometimes it seemed like he was resigning about one thing or another about twice a day," one high Wagner aide says.

Wagner had no Windels to show him how to defuse the weapon by turning it into a joke, and so when he had to surrender to it, he had to make the surrender a straightforward one, which must have been humiliating to him. But surrender he did—over and over again. Under Wagner, as under O'Dwyer and Impellitteri, not the Mayor but Moses shaped the city.

## 35. "RM"

THE MAN WHO RULED the empire called "Triborough" ruled it absolutely. There were other members on the boards of its four constituent public authorities but the decisions were all his. Visiting Moses on Randall's Island one day, Cleveland Rodgers rose to leave when two men came into his office, but Moses said not to bother. "There was an exchange of questions and answers"—a very brief exchange—after which the two men quickly departed. Asking who they were, Rodgers "learned that he had been sitting through a monthly meeting of the Triborough Bridge Authority."

The passion that fired that man—who in 1948 celebrated his sixtieth birthday—was the passion that had fired that man at thirty: the passion for tangible, physical accomplishment, and for the power which that accomplishment produced. And if age had not slaked his appetite for power and achievement, neither had it slaked his appetite for the means to power and achievement: work.

No strictly rational explanation could account for the voraciousness of that appetite. In his early days of power, he had sloughed off all hobbies and relaxations save swimming. Now, twenty-five years later, he still had no other hobbies or relaxations. He still did not golf, did not play bridge, did not attend sporting events or the theater—in 1960, Ernie Clark gave him tickets to the musical comedy Fiorello!; because of its subject, Moses went, and in thanking Clark mentioned to him that it had been the first Broadway play he had seen in years. Guests at his home can recall no single day that he spent with his family—with the two daughters he loved and the grandchildren on whom he doted-on which he did not disappear for hours into his study and shut the door behind him. He still refused to allow any of the chores that consume chunks of other men's lives—buying clothes and getting haircuts, for example—to consume chunks of his. As she had been doing since the day she married him, Mary still ordered his socks and underwear, bought his suits, carried them home, if they weren't the correct size took them back and brought home others, and when she got one that fit, arranged for a tailor to come to his office and make minimum alterations, when she saw he needed a haircut, had a barber brought in, and, if he was going out to dine, placed money in his pocket. (If she forgot, he would have to ask his companion for a dollar or two for the waiter.) He still invited "friends" for weekends at the rambling old house on Thompson Avenue in Babylon, went clamming with them and his family on Fire Island, was the most charming and gracious of hosts—but the more perceptive among them knew always that they were there not because of friendship but for a purpose, and that before the weekend was over, Moses would be putting his big arm around their shoulders and working for the vote, or the administrative decision, that he needed from them. A quarter of a century before, he had sloughed off the last remaining amenities of living and set before himself a life that would be a feast of work. In 1958, at the age of seventy, he would be still sitting before that feast—with undiminished appetite.

During the 1920's, Moses had established a routine under which, whenever he was living in Babylon, the chief engineer of the Long Island State Park Commission, Arthur Howland, called every morning at 7:30 at Thompson Avenue to pick up a big manila envelope bulging with the memos, letters, press releases and directives to his executives that Moses had written since leaving the office the night before. Now, after twenty-five years of picking up that envelope, Howland was gone. But the envelope was still there. Every morning, without fail, Howland's successor, Sid Shapiro, would call at Thompson Avenue—and every morning, without fail, he would find it sitting there on the newel post at the bottom of the banister. "My God!" says one of his secretaries. "He was a dynamo! Every morning there would be a manila envelope this thick, and six girls would be working all day to do the things he had done overnight." Working, that is, after Hazel Tappan had deciphered his handwriting—unintelligible except to his Junoesque chief secretary.

The mail, a huge stack of it, would be waiting for him on the desk of whichever one of his four offices he was using that day. Summoning three secretaries to ring his desk, he would plow through the letters so rapidly—scribbling instructions on some, snapping off orders about others, dictating replies, tossing the letters to the three women in rotation—that within thirty minutes the huge stack of paper would have melted down to the bare desk top.

During the 1920's, Moses had turned the big black Packard in which he had to spend so much time into an office, holding conferences in it with aides whose own limousines trailed behind, waiting to take them off when the conferences were finished, carrying with him always a supply of legal note pads and sharpened pencils and using the time in the limousine for work. Now the limousine was a Cadillac instead of a Packard. But it was still an office.

Age withers the output of most men, but as decade succeeded decade in the career of Robert Moses, his output seemed only to increase. The flow of broadsides delivered daily to a thousand desks never slackened. "Every morning when you came in, there on your desk would be [the mimeographed] memos that Moses had sent to someone and circulated to everyone else," Lawrence Orton says. They had been on Orton's desk from the day of his appointment to the City Planning Commission in 1938; they were on his desk in 1948 and 1958—and there seemed to be more of them than ever. Orton, who read the memos—out of a fearful fascination—says, "It took the first

"*RM*" 809

half to three quarters of an hour every day to catch up on your Moses correspondence." Says Latham: "During the time I knew him—and I knew him for forty-five years—hours didn't mean anything to him. Days of the week didn't mean anything to him. When there was work to be done, you did it. That was the way he was then and that's the way he is now."

If age could not wither his passion for work, sun—even tropical sun—could not bleach it. For years he had not taken vacations; now he did, if infrequently (generally in winter to the Caribbean), although it is notable that most of these vacations were to the luxurious island retreats of Bernard Gimbel or Robert Blum of Abraham and Straus or of other powerful men whose support he needed. But as his male secretary, Harold Blake, sorted through each day's mail during his boss's "vacation," out would tumble envelope after envelope addressed in his boss's scrawl and crammed with memos and orders.

Wind could not cool that passion. Tearing himself away from his desk, he would on some afternoons head for the Sea-Ef and his beloved Great South Bay. In the afternoons, the breeze on the bay would be fresh and crisp. Beneath the big cruiser the flounder might be running. But on more days than not his only catch would be another full manila envelope. The captain would cruise back and forth over the bay hour after hour; hour after hour the figure sitting silently in the deck chair at the stern would be hunched over memos and maps and blueprints. Late in the afternoon, he might take the wheel himself, but the charts his mind would be seeing would not be charts of the bay; once Captain Pearsall forgot to keep watch for a few minutes and Moses ran the boat straight onto a clearly visible sand bar.

Illness could not sap it. His were few and far between, and even the most serious of them—an eye operation in 1955, when he was sixty-six—did not slow him down; on the morning after the operation, he was dictating in his hospital room at seven o'clock. The colds and flus and viruses that deflect other men from their work did not deflect him from his. Meeting Moses at home after Shapiro had told him that "RM" was running a 104-degree fever, Tallamy found him propped up in bed surrounded by mounds of documents. "He was writing a speech," Tallamy recalls. "He put it down and plunged right into the subject of my visit" without a minute's break.

He had lost none of the furious urge that made him work. It was too strong to allow him to keep seated for long. "He would drive me crazy with his pacing," says Joe Ingraham of the *Times*. "I have a back condition and I'd be sitting there and all of a sudden Moses wouldn't be there in front of me any more; he'd be pacing around the room as he talked. I'd have to keep twisting around to follow him, and he'd keep pacing and pacing, and I'd have to keep twisting and twisting." Sometimes Tallamy, major supplier of the money for Moses' dreams, would arrive at Randall's Island to find Moses waiting for him outside the front door as if he had been unable to wait the extra minute until Tallamy reached his office on the second floor. As soon as the federal highway administrator stepped out of his car, Moses

would begin talking about some project. "Once, I remember, he grabbed my lapels and put his face right up to mine, he was so anxious and so impatient."

And Tallamy not only was a man from whom Moses needed something but, as a federal employee, was not dependent on him for his salary. With men who were—the "Moses Men" who were his top executives and who were now virtually the only part of his empire with which he now dealt personally—Moses' impatience took other forms.

"If your answer wasn't fast enough for him, he'd get up and pace," Ernie Clark says. "If you told him you didn't know [the answer], he might say, 'Well, why don't you?' " And he didn't want to be bored with statistics; "he wanted conclusions and how you had gotten them." Once, a new engineering consultant began reading off page after page of statistics. Clark recalls that "Mr. Moses started pacing, almost like a caged tiger. And then he turned around and said: 'I never heard so much horseshit in my life.'" More and more frequently now, when he heard a report of some delay or obstacle, the big powerful face would turn pale, almost white, and a wave of purple, rising up the thick neck, would sweep across it. More and more frequently, the palm of the big right hand would begin to smack down on the table as he talked, and his secretaries, sitting in their office outside trying to smile at each other, would hear his voice begin to rise. Whirling on Triborough chief engineer Joseph A. Vermaelen one day in front of a roomful of Vermaelen's associates and outsiders, after Vermaelen had made a suggestion dealing with a matter that Moses did not regard as his province, he snarled: "You're just a swabbie on this ship. Now get out of here!" And Vermaelen was lucky. For the voice could cut as well as bellow, slashing at a man with an aim that seemed to find unerringly that vulnerable point at which the man could most be hurt. More and more frequently, he would lunge out of his chair and begin to pace the room, pounding his clenched fist into the walls hard enough to scrape the skin off them, in a rage beyond the perception of pain. Retired Army General Harry L. Meyers, director of the Long Island State Park Commission police force, who says, "My admiration for Mr. Moses is without limit; it's beyond anything," admits: "I've seen him when he wouldn't be himself—waving his arms, just wild." Says Peter J. Brennan: "When he got mad, he was a raving maniac. I've seen him say to an employee of his-'Now, dammit, you get this done or don't come back!' Steel-eyes-like, he'd stare at you and he'd raise the arms . . ." If there was a sudden crash of shattering glass from behind his door, the secretaries knew what it was; he had snatched up his old-fashioned glass inkwell and hurled it at an underling whose report had displeased him.

Tircless at thirty, he was tircless at seventy.

Up in the morning at six or seven, he often made breakfast for his wife and brought it to her in bed. In the evenings, at the far side of twelve or fourteen hours of unbroken toil, he would head not for home but for the swimming pool. One weekend, he invited Ingraham to Babylon and told the reporter to come up to Randall's Island Friday evening and drive out with him. Arriving at five o'clock, Ingraham found Moses in

"*RM*" 811

conference, and settled down in the Commissioner's waiting room. An hour later, he was still waiting; the conference was still on. When it broke up around six-thirty, Ingraham was invited in, and Moses told him he still had a few things to attend to. He was still attending to them at seven o'clock and eight o'clock, and nine o'clock and ten. Rising finally, he said, "Let's stop off at Earle Andrews' place on the way out." The "place" turned out to be Andrews' glass-enclosed swimming pool in Huntington. Letting himself in with his own key, Moses changed, plunged into the water and began swimming. Watching the muscular arms windmilling endlessly up and down the pool, the drowsy reporter dozed off. Some time later, he awoke. The windmill was still turning; if anything, Ingraham realized with a start, Moses was swimming faster than before. It was, he says, "late" when the Commissioner clambered out of the water, looking as fresh as a youth, and very late indeed when the two men finally arrived at Thompson Avenue. As Ingraham climbed the stairs to the guest room, he saw the Commissioner's broad back disappearing not into his bedroom but into his study, yellow legal note pad in hand. When Ingraham fell asleep, he knew his host was still working. And what awakened the reporter the next morning—"at some ungodly early hour" was the smell of bacon and eggs. Hearing him stirring, Mary called up the stairs: "Come on down. Bob's cooking breakfast."

His physical strength was awesome to his associates. Concerned as he grew older for his safety during the swims he took far out into the ocean off Jones Beach or Gilgo, they agreed among themselves that, whenever possible, as Latham puts it, "as long as he was in the water, one of us was with him . . . without making it obvious." But they had to perform this chore in relays; in his sixties and seventies, Robert Moses could tumble around in the surf, diving through and riding the South Shore's big breakers, far longer even than the tall, broad-shouldered Latham, twenty years his junior and himself an exceptionally strong swimmer.

The racing pen seemingly could not brake itself. For money or to get his views into print, he was constantly indulging in the "fugitive scribbling" of commissioned magazine articles; he was the author of a total of 51 articles for The Atlantic, Harper's, Saturday Review and other national magazines; of 32 more for The New York Times Magazine; of an additional 19 for the Herald Tribune Sunday Magazine-and of several score more for other newspaper Sunday supplements. It had "always been his ambition to write cheap pulp stuff," Moses Man Arnold Vollmer recalls; in the mid-1950's, short on cash as usual, he announced to aides that he was going to write "a trashy piece of pulp" that he was sure would sell. Ironically, when he finished it—a reportedly sex-filled novel titled From Palms to Pines and sent it to various publishing houses under a pseudonym, not one would publish it. He had, however, managed to write a full-length novel while simultaneously holding down eight full-time executive jobs. Letters-not only the mimeographed daily broadsides but graceful personal notes of condolence or congratulations—poured from his pen in the thousands, each to be delivered by hand by one of a battalion of liveried Triborough messengers, and they were letters graceful enough to be treasured by their recipients. One to Newbold Morris, delivered on the death of his father-inlaw, Judge Learned Hand, said:

... To millions who knew little of his profession but had become familiar with his leonine head and brow of Jove, he was the embodiment of righteousness in a mad world. Today beyond the Straight Gate and along the aisle on the other side are massed thousands of cheering lovers of justice as this great exemplar of Law comes marching in.

He giveth His beloved sleep.

(Anyone who thought it strange that the condolence note was addressed not to Mrs. Morris, the late judge's daughter, whom Moses also knew, but to her husband, didn't understand Moses; Moses didn't need the daughter.) Said one man who didn't meet Moses until he was sixty years old and who worked with him frequently for twenty years thereafter: "He never got tired. Never that I saw. He seemed to relax when he was working the hardest. He'd come out of a meeting or conference that had high tension and be completely relaxed, where the ordinary person would be exhausted. Work seemed to make him stronger."

In 1950, Hetty Green, an eccentric millionairess who had long felt grateful to Moses for building the Hutchinson River Parkway, which gave her "such pleasure" driving to and from her homes in Manhattan and Greenwich, Connecticut, died, and, on the reading of her will, it was discovered that her gratitude had taken practical form: a \$10,000 bequest to Robert Moses. Not a year later, however, one of the large, unexpected expenses that were continually bedeviling Moses arose—this time a needed re-roofing of his Babylon house—and he discovered that he again had no money in the bank. It had all been spent, and, Moses confessed to Jack Madigan, he didn't know on what.

It wasn't that Moses didn't want money, of course. He wanted it desperately, as is proven by the commissions he continually accepted from magazines for articles he loathed writing, and by the eagerness with which he accepted \$100,000 fees for arterial highway plans for other cities. But he had the Moses prodigality with money, the prodigality that had helped make his brother a pauper. He always accepted the \$100,000 commissions with an idea of keeping a substantial portion for himself, but he always ended up using the money to buy other men who could help him in his New York work. Detractors who knew the amounts of these commissions and who judged Moses by the standards they applied to other public officials, assumed—understandably—that he was becoming a rich man from them. This conclusion was natural—but it was wrong.

If he created an empire, he roamed it in imperial style.

His car, the most luxurious Detroit could provide (the richness of its leather upholstery gave one guest the feeling that he was not in a motor vehicle but the library of a fine men's club, an illusion reinforced by the

"*RM*" 813

placement of the limousine's side windows so far forward that occupants of its deep rear seat could see out only by leaning forward—"There was a feeling of isolation; normally when you ride in the back of a car people are able to look in and you're able to look out, but here it was as if you were insulated from the outside world"), rushed to him by Detroit at his command ("I remember when air-conditioned cars were first coming out and it was a big thing to get one," says an O'Dwyer aide. "The Mayor couldn't get one. But Moses had one"), stood at his call day and night; to insure that it would, he had not one but three personal chauffeurs. Of the tens of thousands of cars that passed daily through the empire's toll booths, that car alone did not stop. (When a new Director of Public Safety was appointed for the empire, he was briefed by Sid Shapiro: everyone else granted free passage—Governor, Mayor, even police cars and the cars of Moses' top aides—was required to swerve out of line and outside the booths so as not to complicate the treadle count; "only one car goes through.") And when the big black limousine with the row of shields on its bumper and the license plate "2000" roared through a booth, not even slowing down, the uniformed officer inside jumping to salute and then staring after it, straining vainly to catch a glimpse of the living legend riding in the rear seat, the lieutenant or captain in charge at the toll plaza would hastily pick up his telephone—as hastily as the commission trooper, miles down the road, seeing the long black limousine looming out of the distance, would reach for his radio microphone—to keep the empire's capital on Randall's Island apprised, minute by minute and mile by mile, of its ruler's progress, so that urgent messages could be delivered to him at the next toll plaza. If, in reply, he wanted to make a call—he would not allow a telephone in his car so that he could work in it uninterrupted—his chauffeur would pull in to the next police barracks, troopers springing up to escort him to a phone.

The empire's gleaming white flagship—and one of its captains—stood at his call. Even on days on which there was no real possibility that he would be able to get out on the bay, the Sea-Ef, kept constantly gassed and provisioned, would be held ready at the dock near his Babylon house, just on the off chance that his schedule might change. The captain on duty on Sunday could not relax just because there had been no call for his services in the morning or afternoon or early evening. He was under orders never to be out of earshot of his telephone—just in case RM should call until 10 P.M. Was it RM's wish to swim? There was a network of swimming pools at his disposal. Keys to Earle Andrews' pool in Huntington, and to the luxuriously decorated, glass-enclosed pleasure dome of commission member and millionaire Landon Thorne in Bay Shore-among others-had been pressed upon him so that he could use these facilities at any time without even having to greet their owners. Did an emperor employ generals and admirals? Moses did, too; Farrell of the Burma Road was not the only one who upon retirement took up service under the flag of Triborough. And Moses could promote men over generals. In the United States Army, Farrell had been William Chapin's commanding officer; in Triborough's, Chapin was Farrell's.

Even as a youth, he had been anxious—eager—to entertain, insistent on picking up checks even for wealthy friends. Now, as the silver stream pouring into the empire's coffers swelled, and swelled, and swelled again, he diverted enough of it to entertain on a truly imperial scale.

At three of his offices—Randall's Island, Belmont Lake State Park and 270 Broadway—complete, separate staffs of chefs and waiters were on hand daily so that, wherever he might be, he could serve lunch to invited guests.

There was a ceremonial to even the smallest lunches.

Waiting to lunch with Robert Moses, a guest would be ushered at Randall's Island into an anteroom lined with pictures of Robert Moses' bridges, Robert Moses' parks, Robert Moses' parkways, of Robert Moses posing with Hoover, of Robert Moses posing with Roosevelt, of Robert Moses posing with Truman, with Eisenhower (and, later, with Kennedy and Johnson-and Pope John); at Belmont Lake into an anteroom with walls covered, literally from wall to ceiling, with Robert Moses' plaques and trophies. There might be a gleaming white scale model or two, of past or future achievements, lying carelessly about. And to insure against the guest's not being sufficiently reminded of his host's achievements, as he was being served drinks by a white-coated waiter, he would probably be joined -by design-by one of Moses' aides who would regale him with anecdotes about RM's triumphs. Finally, RM himself would appear—at the head of a procession of eight or ten aides, for if emperors had courts, so, of course, did he. (If by chance he was called out of the room to take a telephone call, when he returned his aides would jump to their feet, and would not sit down until he sat down.) The doors to the dining room—Randall's Island's lined with more pictures of Moses achievements; Belmont Lake's, a sunfilled, airy room fifty feet long atop a wing of the new Belmont Mansion Moses had built, lined, on all sides, with windows overlooking the lake and stands of magnificent trees-would be thrown open, and Moses would lead the guest inside, with his aides filing after them. Moses sat at the head, his aides—after Moses had sat down—on his right, in seats preassigned in order of rank and favor in his eyes, so that an observer who attended several meals could judge, by how far away from Moses Shapiro or Chapin or Latham was sitting that day, their current standing in Moses' organization. The food at lunches at Randall's Island—not special luncheons, just the typical lunch served by white-coated waiters to groups ranging in size from half a dozen to half a hundred perhaps 150 times a year—was spoken of by guests in tones of awe. At Belmont Lake, they were more informalbut culinary standards were just as high.

No aspect of lunch with Moses was more imperial than the attitude of the host. There was little conversation at these lunches; there was, instead, a dramatic monologue, anecdotes about his struggles, about political infighting in which he had engaged, about the Mayors and Governors and Presidents he had known, about his plans for the future. And these were usually not brief monologues. Once, when Moses was attempting to persuade Newsday to investigate another state agency with whose cooperation he was not pleased, he invited to lunch reporter Bob Greene and the paper's bull-

voiced managing editor, Alan Hathway, possessor of considerable raconteurial ability in his own right and a man accustomed to holding the center of whatever stage he happened to find himself on. During the appetizer, Moses began relating anecdotes about himself. ("He told us that one of the favorite ones that had ever been written about him was: 'Nothing he has ever done has been tainted by legality.' He chortled at that. He obviously relished it.") Greene was an investigative reporter who never lost his presence of mind; when the main course arrived and Moses was still going strong, Greene glanced at his watch, and, upon returning to the city room, was able to report that Moses had talked nonstop for an hour and twenty minutes. "Alan," he told unbelieving colleagues, "couldn't get a word in edgewise."

Moses' court completed the aura. No emperor's was more simpering. When the calls from the toll booths and the troopers out on the parkways indicated that Moses was heading toward one of his offices, that office would erupt into frenzied excitement. Grown men-men who were themselves in positions of authority over hundreds of men, men who were making forty or fifty or sixty thousand dollars a year-would shout to each other: "RM is twenty-four minutes away!" "He's twelve minutes away!" "The boss will be here in one minute!" They would hurriedly recheck one last time to make sure that any map or blueprint for which he might ask was ready for his perusal. Scurrying back and forth, secretaries would put a dozen freshly sharpened pencils in the pencil holder on his desk, straighten the pile of letters there, dust his office one last time. "Worst of all," says one, was when he headed first from his Babylon home to Belmont Lake, for that trip took only about five minutes. "Everyone would start shouting: 'The boss is coming! The boss is coming! He's on his way over from Thompson Avenue!' And everyone would start rushing around in little circles as if they were crazy." A reporter who arrived early at an auditorium in which Moses was to give a speech listened to his aides "refer to him as if he was God. 'I hope RM likes the podium.' 'I hope RM likes the lighting.' 'How do you think RM will be feeling this morning?" At luncheons, their role was limited to laughing at his bons mots, scowling along with him when he mentioned his enemies, and occasionally uttering an affirmative "Yes" or "Definitely." Generally they uttered a complete sentence only in answer to a direct question he put to them—and generally that question was only to elicit their confirmation of some point he was making. If some guest was not sufficiently reverent, they quietly took him aside. Henry Barnes' first face-to-face encounter with Moses on coming to New York as Traffic Commissioner in 1962 was at a lunch in Moses' new office at the World's Fair site. "He was telling a story about Grover Whalen and the first fair, how Grover had always had a bunch of cuties around him and how one would say, 'Grover, we ought to have a dress shop' and there'd be a dress shop at the fair, and another would say, 'We ought to have . . .' Moses said something about how he didn't want 'no goddamn babes around me.' Just as a joke I said, 'I think that's a very narrow-minded viewpoint.' He looked very startled. His head jerked around in complete amazement. All the others sort of gasped. After the meeting, Stuart Constable [Park

Department executive officer] came up to me and he said, 'You know, Mr. Moses is a very busy and a very important person and it isn't proper to be facetious with him.' "Says reporter Joe Kahn: "He used to crack jokes; he had a great pride in his sense of humor, and these guys would watch him, waiting for their cue, and laugh. It was a regular Greek chorus, like a choral group—they nodded when he wanted them to nod, they laughed when he wanted them to laugh. Watching them, you got disgusted with your fellow man."

It was not at Randall's Island that Moses entertained most lavishly. For his empire had a summer capital.

At Jones Beach, on that sand bar he had filled with bathing pavilions and deck games and solariums and boat basins and dance floors and restaurants (restaurants operated by concessionaires to whom he had granted franchises so lucrative that their liquor cabinets and wine closets and larders, and their chefs and waiters and bartenders, were at his command); that sand bar operated by a consortium of agencies and authorities with a budget of \$12,000,000 for whose spending he did not have to account, and with more than 3,000 employees he could allocate to whatever duties he chose; on that sand bar governed by laws he had written himself, policed by troopers in his pay and responsible only to him, Robert Moses could entertain as Robert Moses had always wanted to entertain.

At Jones Beach, Robert Moses could offer his guests cruising or fishing from his yacht, swimming at his private beach (the section then reserved for his use), and not only paddle tennis and shuffleboard and archery and roller skating but horseback riding, tennis and golf—the livery stables, rows of tennis courts and magnificently groomed golf courses of Bethpage State Park were only twelve minutes away by chauffeured Park Commission limousines. He could offer them the finest food and liquor; having built a \$300,000 Boardwalk Restaurant, he turned it over, without competitive bidding, to a young concessionaire who had caught his eye—on terms so liberal that the people of the state might as well have given it to the young concessionaire as a gift.\* In return, the concessionaire gave Moses one: he entertained Moses' guests, so many guests and so lavishly that the annual cost can only be guessed at; no complete tabulation has ever been made, but one incomplete tabulation (discovered in the concessionaire's files) shows that during one six-year period, at least \$179,215—and probably considerably more—was spent on such entertainment.†

<sup>\*</sup> During the 1960's, the Boardwalk Restaurant burned down. Moses built a new one, at a cost of \$1,500,000, and, without competitive bidding, turned it over to the same concessionaire—at a rental of \$18,000 per year, an amount which, an auditor noted, was "not even enough to amortize the construction cost."

<sup>†</sup> Each year, the concessionaire made \$80,000 available to be mingled with \$75,000 from the Park Commission in a separate bank account for "Alterations" and "Special Events"—which included meals for Moses' guests. During the six years between July 1, 1961, and September 30, 1967, \$930,000 was spent from this account. The \$179,215

At Jones Beach, he could entertain in what was, in effect, his own theater, built with the \$4,200,000 in state cash he had collected as broker in the 1950 deal between New York State and New York City that produced the New York Thruway. Erected on a lagoon he carved out of the bay side of the barrier beach, the "Jones Beach Marine Stadium" was built to peculiarly Mosaic specifications, displaying both his delight in the grandiose (it was designed for the presentation not of plays but of spectacles, for the stage was located on a man-made island separated from the nearest seats by a broad moat, so that only the biggest, most lavish productions were feasible) and his belief in the separation of the aristocracy from the common herd (the front rim of the semicircular amphitheater consisted of a row of twelve-person boxes—separated from the rest of the stadium's 8,200 seats by an exceptionally wide and deep aisle; those boxes were offered for sale—on a season-long basis—only to banks and large corporations for the entertainment of their clients; those that were not purchased were kept empty; the boxes, Shapiro told the author blandly, were "not for the general public"). In some ways, in fact, the stadium seemed designed for Moses' personal use. Several boxes were reserved—permanently —for the use of his guests, the big center box for himself and the most favored among them. The aisle behind those boxes was deep enough so that men could stand in it without blocking the view of those behind, and in it, at every performance, stood commission staffers ready to supply his guests with drinks, snacks, warm blankets if the breeze blowing off the bay became uncomfortably chilly, and any other comforts they might wish. These functionaries referred to the center box as "The Royal Box," a fitting name because, as an emperor entertains visiting foreign potentates and their ministers, Moses, close to the world of the United Nations, did the same; on one typical evening, its occupants, in addition to Moses and Governor Dewey, included Prime Minister Menzies of Australia, and the heads of the UN missions of three European nations. (Moses of course paid special attention to the ministers of the nation he reverenced; British Ambassador Sir Michael Dixon Hoare was an especially frequent guest.) Would an emperor, sitting in his royal box, be introduced to the audience? Moses would, too-with drum roll and trumpet fanfare; whenever he was in attendance, the pre-show rendition of "The Star-Spangled Banner" would be preceded by such an introduction by Guy Lombardo, standing in the orchestra pit, as a spotlight played on the royal box. (Moses would act ostentatiously bored during these introductions, often continuing to talk to his guests and glancing up at the applauding crowd above him with only the briefest nod, rising from his seat at last as if it were almost too much trouble to do so, indicating with every gesture the fact that public acclaim interested him not in the least; how difficult, then, to reconcile this attitude with the fact that on many evenings when he was too busy to attend the

includes only expenditures specifically marked for "meals"; according to one source, other meal expenditures were concealed as expenditures for "publicity," "recreational activities," etc.

play, when, in fact, he had appointments elsewhere, he would arrange his schedule so he could stop by the theater just long enough for the introduction.) Not public taste but Moses' alone (which considered suitable for public consumption only bland musical comedies with an absolute minimum of sex) determined what plays would be presented—one per season on that huge stage; once, trying to hypo meager attendance by creating the illusion of public selection of the following year's production, Lombardo had the audience "vote" by applauding for its favorite as he read off the names of several, carefully pre-selected, popular Broadway shows of years past. The vote was clearly in favor of The Unsinkable Molly Brown. Moses preferred Song of Norway. Watching the vote from a darkened alcove at the side of the amphitheater, Shapiro smiled slyly, snickered and said: "Well, maybe we won't be guided by the results of the poll after all." (The following year's production was Song of Norway.) The productions mounted in the stadium by the three Lombardo brothers, Guy, Carmen and Lebert, were as vast as even Moses could have wished, distinguished by immense casts and trappings big enough to be seen from the seats of the hoi polloi some hundreds of feet away. But there was no public enthusiasm. In only two of the theater's first fifteen years of operation were even half the seats filled over the course of a season; in some years, fewer than one out of three was filled. But public enthusiasm was not the primary aim, as was proven by the fact that every production was presented two years running—and attendance in the second year always fell to about half that in the first year.\* Unlike other, more centrally located, theaters, the one at Jones Beach drew its audience not from the whole metropolitan area population but, primarily, from Jones Beach-goers. Since few people want to see a show twice, showing only one every two years helped insure that most beachgoing families would go to the theater only once every two years. Such a policy makes sense only if the primary purpose of the show was to provide entertainment for a relatively small, constantly changing audience—an audience such as was provided by Robert Moses' personally invited guests. On many weekday nights, no more than a few hundred of the 8,200 seats were filled —and most of these were the box seats filled with guests invited by Moses

<sup>\*</sup> It has been possible to obtain attendance figures for only seven years of the theater's operation. Here are those figures:

and by his banker allies. On those nights, the grandstand of the big amphitheater was practically empty. Endless rows of empty seats glared blankly down—on a vast, expensive production and a small select audience. The crowds of actors, sometimes seemingly outnumbering the audience, seemed to be performing almost exclusively for the guests of the man on whose stage they were performing.

He even had his own court musicians, an orchestra whose banal, rigidly traditional arrangements complemented his personal philosophy—Guy Lombardo's red-coated Royal Canadians, who had, fittingly, first become famous the year Jones Beach opened and who still adhered faithfully to the musical style of those prewar decades in which Moses had been so popular and in which he sometimes seemed still to be trying to live. All summer—every summer—"The Sweetest Music This Side of Heaven" was his to command.

Lombardo, the sweetness of whose music was matched by the shrewdness of his business sense, put a high price on his services. But Moses paid it, not only paying the orchestra leader, through a complicated method of cash "advances," more than \$100,000 a year to produce the Marine Theater shows (when other producers, not allowed to bid for the right, would have paid him to produce them, had they been allowed to produce a new show every year), but also turning the whole theater, a theater built with public funds, over to the three Lombardo brothers virtually as a private concession to be operated for their private profit, allowing them to keep most of the ticket receipts, as well as the revenue from the advertising billboards in the theater and from advertising in the theater programs, even from the rental of seat cushions. To make sure the profit was not diluted, Moses even maintained the theater for them, paying the bills for cleaning, repairing and staffing it right down to the ushers. He even paid the salaries of some of Lombardo's personnel. He even paid for most of the advertising for the show from which Lombardo was reaping most of the profit. He even allowed the Lombardos to use the theater to lure patrons to the family restaurant in nearby Freeport; for \$29.90, a couple was offered dinner at the East Point House followed by an after-dinner cruise ("On Guy Lombardo's Yacht") right into the theater, where they could disembark and take their

The \$4,200,000 state subsidy for the theater had been a "first-instance" legislative appropriation, an appropriation the Legislature had expected would be paid back out of theater revenues. Moses never paid it back. To all inquiries, he replied that he couldn't afford to; the theater, he said, was losing money. Mentioning the "vicissitudes of outdoor theater productions . . . the gambles . . . ," he implied that the Lombardo brothers had undertaken the productions only as a public service and were also losing money. Guy took care to reinforce this impression, moaning loudly about the sacrifices his Jones Beach productions entailed. In only one year, he says in his biography, did he and his brothers break even, and in that year, to celebrate, they used up the profit buying three bottles of Scotch. "We pay ourselves no salary, we give ourselves no Cadillacs; why, even when we take a taxi to the show, we pay for it out of our own pocket. So the most we've gotten out of ten years of

putting on shows at Jones Beach is one bottle of Scotch apiece." Actually, the three Lombardo brothers reaped from their Jones Beach shows hundreds of thousands of dollars in profit. And in return, of course, in addition to putting on the shows that were so largely for the entertainment of Robert Moses' guests, their Royal Canadians were available night after night to play so that Moses' guests could dance afterwards.

Not only did the state—the state's taxpayers—not get back the \$4,200,000; the additional costs of theater operation that Moses made them bear so that the Lombardos' profit would not be diluted had, by 1967, passed the \$5,000,000 mark.

At Jones Beach, Robert Moses could offer his guests not only a royal box but royal treatment.

Chauffeured limousines could be placed at their disposal; he had so many that on a typical day big black cars and liveried men would be stacked up in the car pool at Belmont Lake waiting for something to do; coming to the Park Commission, Perry Duryea would learn in astonishment that one executive did nothing but handle logistics—"who's riding in what car; it was almost a military-like operation." Human beings could be placed at their disposal; he had so many available to him that he could deploy them in force; any of his guests above a certain minimum level of importance would be met at the entrance to a reserved parking lot; executives dressed in mufti or staffers dressed in the navy-blue and white seahorse-emblazoned uniforms of Jones Beach would escort them on a tour of the park, show them to private dressing rooms, wait while they undressed, escort them to the reserved beach, wait for them while they swam and dressed, escort them to dinner and then to the Marine Theater—where they, or fresh men who took their place, would stand hidden in the dimness of the wide, deep aisle behind their boxes during the entire play to bring them blankets if they were cold, coffee or hot chocolate if they were thirsty, and to escort them backstage during intermission to see the sets-or simply to baby-sit with their children; needing the cooperation of Representative Stuyvesant Wainwright one weekend, Moses was distressed to learn that he was out cruising off Montauk with his two small children; when the Congressman neared shore that evening, there waiting on the pier beside his own car was Sid Shapiro, accompanied by two limousines, three chauffeurs and a secretary. One chauffeur was to drive Wainwright's car home, in order, Shapiro explained, that he and the Congressman could follow behind in one of the limousines and confer; the other limousine was to follow behind with Wainwright's children so that the conference would not be disturbed by childish chatter; the secretary had been brought along as baby-sitter.

"And when there's some big event," Duryea says—a visit to the New York area, for example, by visiting park enthusiasts or planners from another city or Europe or the Orient (Japanese urban planners displayed an endless capacity for viewing and reviewing Moses' works)—"My God!" Duryea says. "The planning that went into it!" Buses or limousines would meet the tourists at their hotel; in each would be one or more of Moses' executives; as the tour unrolled, a tour planned down to the minute (a typical one, given

for ten visiting German journalists in 1951, picked them up at 9:20 A.M. at Columbia University, took them over or gave them a view of the following brief sampling of Moses creations: the Henry Hudson Parkway, Fifty-ninth Street Powerhouse, United Nations, Bellevue Medical Center, Peter Cooper Village and Stuyvesant Town, Jacob Riis, Lillian Wald and Governor Smith Houses, Battery Park Underpass, Battery Parking Garage and Brooklyn-Battery Tunnel, Brooklyn-Queens Expressway, Gowanus Parkway, Owl's Head Sewage Disposal Plant, Shore Parkway, Ullmer Park Veterans Emergency Houses, Van Wyck Expressway, Idlewild Airport, the Southern State Parkway and Meadowbrook Parkway, Wantagh State, Northern State, Grand Central and Cross Island parkways, the Triborough Bridge, Ward's Island Sewage Disposal Plant, Ward's Island Pedestrian Bridge, Ward's Island Park, and Abraham Lincoln and Riverton Houses on their way back to Columbia University), the executives would supplement elaborate mimeographed fact sheets with descriptive anecdotes. And at the end of these tours, the guests would arrive at Jones Beach for food, drink, entertainment and perhaps a brief word with the creator of all they had seen.

A day as Robert Moses' guest at Jones Beach was a day to remember.

The chauffeured limousine to take you there would be waiting for you and your family at your door. (If you were an especially important guest, waiting for you where the parkways crossed the city line and Moses' jurisdiction began would be an escort of commission troopers.) When the limousine pulled up to the side door of the West Bathhouse, there would be a respectful, uniformed guide waiting to take you to lunch in a reserved section of the Marine Dining Room, where a waitress would be assigned exclusively to your table. After lunch, the guide would show you around, take you to the dressing room—"Commissioner Moses' private dressing room"—take you to the beach—a private beach—be standing at the water's edge waiting to hand you a towel when you emerged. Then there would be an afternoon of sun and servant; your guide would discreetly drop by every now and then to inquire if there were any refreshments you would like brought to your blanket.

Dressed again, and dinner. Red-coated Royal Canadians making music under a bright red-and-white-striped pavilion. Whole roast beefs and turkeys and hams, cold lobsters in stacks, shrimps pilaf and plain, stacked in great heaps, shrimp and crabmeat salad piled high on huge trays. Sid Shapiro or one of his suave aides coming over to say hello and make conversation and see if you had everything you wanted. After dinner, if you had a small boy or girl, Shapiro would explain to you that Guy Lombardo entered the theater every night by speeding up to the stage in his famed, trophy-winning powerboat, *Tempo*, and getting out to lead the orchestra in "The Star-Spangled Banner" from that spot. Would your little boy or girl like to ride in *Tempo* with Guy as he entered the theater?

The theater. These seats that were so conspicuously the best in the house. Tempo roaring in and your son or daughter stepping out into the spotlight, and Guy Lombardo himself leading your child, dazzled, over to

you, dazzled, in your seat. Glancing back during the first act and seeing your escort in the dimness of the aisle below you—and the guide darting forward just in case your glance meant that you desired something. Is your wife chilly? Would she like a blanket? Would anyone like a drink? A soda? How about the young man? At intermission, a boat waiting to take the whole family across the lagoon onto the stage and behind it to see the actors and the sets. And after the performance, dancing—under the stars or to a Lombardo band in the pavilion—or a drink with the orchestra leader and the stars of the show and beautiful showgirls in his suite under the theater.

And, most especially, the host.

Unless you were at least a Governor, you would probably see him only for a few minutes at dinner and after the show; he had had a small office, little more than a cubicle, built into the stadium, below the stage, so that he could work without leaving: as soon as the lights dimmed after he had been introduced to the audience, he would slip out, back to his blueprints and his maps and his progress charts; while his guests relaxed for three hours above, he would be toiling for three hours below. But a few minutes were enough. "He was the most gracious host in the world," says one ex-legislator. "He'd put his arm around you, give you that great smile of his, talk to your kids-just put you right at your ease." At the informal nightly buffets in the pavilion, he was regal but charming. At more formal dinners at Jones Beach, he was more regal-but still charming. "You liked him, he liked you." And if he had time to spend with you, a whole extra, unforgettable dimension was added to an already memorable day. For he would probably talk about his accomplishments, telling the "inside story" behind them, about how he had found out the secrets of the ownership of the bay bottoms, for example, and thus wrested the ownership of this marvelous beach from the Babylon baymen. Robert Moses telling the story of his successes was a minstrel spinning a saga so heroic, so filled with vivid personalities and fierce duels, that listeners hearing it for the first time (admittedly they lost some of the savor on the fourteenth—or fortieth -go-round) were left entranced as well as charmed.

And when you were ready to go, the limousine would be waiting again, ready to whisk you back through the darkness, along the causeways and parkways and expressways and bridges that this man had built. He wanted to awe—and he succeeded. "Carol and I and the two kids were overwhelmed by our treatment last night and are most sincerely grateful," wrote Staten Island Borough President Bob Connor. "Sometimes I am not quite sure why you built the Verrazano-Narrows Bridge since there are a number of us who believe that you could have walked across."\* Thousands

Dear Bob:

Walking on water is a solitary business.

Cordially, Robert Moses Chairman

<sup>\*</sup> The full text of Moses' reply:

-perhaps over the decades tens of thousands-of persons remembered these days at Jones Beach and the Marine Theater provided by the man who had built Jones Beach and the Marine Theater as among the most memorable days of their lives. Moses' Yale class came every year for twenty years, in a fleet of limousines leaving from the Yale Club in the morning. Says class secretary Ralph Clark: "There was a beach reserved for the day-no one else could use it; we had the pavilion—like a clubhouse—to ourselves. Lunch, a seafood buffet, generally would be on the patio. Everything was very well organized. There would be a piano, and one of the class would play things like 'Auld Lang Syne' and Yale songs and the Whiffenpoof, which was written by a member of '09. Carolus Clark used to bring his guitar until he died, and he would accompany or play by himself. There would be a photographer there to take class pictures. That was how thoughtful he was. In the middle of the afternoon-or later-sometimes, not until five—Bob would come. He would stop, talk to everyone, moving around, and then would say, 'I'm going to have my swim.' He used to swim out farther than anybody else . . . with a nice crawl stroke . . . nice, easy shoulders and powerful and shake his head, he'd be so happy in the water. We'd have dinner—a formal (sit-down) dinner—in a section of the big Jones Beach dining room. There might be two hundred other people in the dining room, but they always made it seem like a family affair. If he was late, we'd wait dinner. But when he came, the party always sparked up. He kidded everyone, and there were nice discussions. He had this sense of putting people at ease. Mr. and Mrs. Moses would make a point of seeing everyone. They wouldn't sit at the same table at dinner, and they'd get up and move around, leaning over people, asking if everything was okay, if they'd had everything they wanted. . . . After supper, we could go to the show. They'd hustle us into blankets, and we always sat in the first row. Bob would disappear, usually as we were being hustled into the blankets, but there were cars going back at different times so you never had to worry about anything."

Moses liked to pick up checks, to be host, in order to dominate. He certainly succeeded with his class. At Yale, he had been an outsider. Now, says Clark, "the class revolved around him."

His guest list was by no means exclusive, for Moses wanted to impress as many influential people as possible. So many limousines and guides and hostesses had been laid on for guests that Shapiro had trouble finding enough guests to keep them busy—to fill up those theater and restaurant seats. The Park Commission general manager had to lie in wait for every passing covey of visiting municipal officials or urban planners. In 1967, for example, the International Federation of Housing and Planning was holding its annual convention in Philadelphia. Lee Koppelman, executive director of the Nassau-Suffolk Regional Planning Board, thought it would be a good idea for the planners to take a post-convention bus tour around New York and asked Shapiro if it would be possible for them to stop at Jones Beach and have a Park Commission official show them the principal features of the park. "Well," Shapiro said, "wouldn't it be nicer if . . ." The next thing Koppelman knew, the planners were being given not the brief

tour he had had in mind but a full-dress presentation, complete with wall charts and elaborate maps, of the history of Jones Beach, followed by a swim. cocktails at the Boardwalk Restaurant, and a buffet dinner so lavish that Koppelman described it as "a setup like you'd expect to find at the Waldorf. Sid circulated at the tables, introduced Guy Lombardo—they were very gracious. He invited some to sit in his box. Seats were waiting for us at the box office-marked 'Paid.'" And at the conclusion of the evening, Shapiro asked Koppelman if there were any other planning groups he could think of to invite out; if there were, Shapiro said, all Koppelman had to do was askany time would be all right, any number. Every state or municipal official, newspaper publisher, key corporate executive, key columnist or reporter or other influential with whom Moses was not currently actively feuding was invited annually to some version—its elaborateness depending on which of Moses' hospitality lists the guest was on at the moment-of this tour. And these guests could bring along as many other guests as they wanted. The engraved invitations that went out to groups such as his Yale class for its annual reunion, for example, always said, "And family." "Oh, 'family' could mean anyone, you know," one of the class says. "Quite a few of the class brought quite a few guests down. One fellow from Boston used to come down every year with his wife, two daughters and a whole carload of people."

A host on an imperial scale, Robert Moses was also a host with an imperial style. Formal luncheons for organizations he headed were held in a suite of two rooms at the west end of the second floor of the West Bathhouse. One of those rooms was a comfortably furnished sitting room in which a large dining table could be placed, and it was in that room that the rest of the organization dined. Next to the large room was a small one. Often it was in that room that Robert Moses dined—behind a closed door and alone except for a waiter and an aide who would summon into his presence whatever member of the group outside he wanted to talk to at the moment. At State Council of Parks meetings, for example, the council members would eat outside, waiting to be summoned, one by one, behind that door.

Most lavish of all Moses' entertainments, of course, were those celebrating the completion of new public works.

Even a minor work merited major celebration. The emperor of Triborough could invest with imperial lavishness the opening of even a row of toll booths: Newsday reporter Bernie Bookbinder, assigned to cover the 1953 opening of the Southern State Parkway booths in Valley Stream, suddenly found himself standing before a buffet table forty feet long piled high from end to end with platters heaped with magnificent food while waiters carrying hors d'oeuvres and glasses of champagne bore down on him in platoons. (Moses lost no time in putting those booths on the previously free parkway to use. Within minutes after the politicians had moved out of them, his toll collectors had moved in; by the time the party was over late

that afternoon, enough dimes had probably been collected to pay for it—if, of course, payment was required; many concessionaires were only too eager to cater the affair for nothing.)

For the large public works—the Brooklyn-Battery Tunnel or the Throgs Neck or Verrazano-Narrows bridges or Captree Causeway, or the Robert Moses Power Dams at Niagara and Massena, for example—the celebrations were on a scale seldom witnessed in a democracy. The invited guests numbered not in the hundreds but in the thousands; the official limousines of the more important among them, lined up at the ramp to a bridge waiting for the ribbon to be cut so they could proceed across it, might stretch for a mile or more. Every detail had been worked out, of course, from the huge, heavy silver-plated ribbon-cutting shears or cornerstone-laying trowels resting on royal purple cushions to the intricate bronze replicas of bridge or dam that would be distributed in the hundreds-even the types of hors d'oeuvres to be served. The interest Moses took in every detail of these celebrations is revealed—as is the still acrid pungency of even his most casual prose—by a memo he wrote to Constable after one concessionaire, Arnold Schleiffer of the Tavern-on-the-Green, anxious to keep in Moses' good graces by making the buffet more elaborate than ever, had gone too far in the matter of hors d'oeuvres.

Last night's Schleiffer version of Balshazzar's feast was contrary to all instructions. The catering crew was all right, the hat chicks were Belles Amies and the barkeepers upheld the finest traditions of the craft, but the hors d'oeuvres were disgusting—tray after tray of indigestible insides, cows eyes on mushrooms, squid in its own ink, pastry costume jewelry, mounted dog food, mayonnaise rococo and gaudy gook.

Hit Schleiffer over the head for me. We are not celebrating a gangster wedding. . . . Mr. Schleiffer can't seem to get through his noggin that nothing exceeds like excess. We don't want this vulgarity at cocktail parties or buffet lunches. We want a few simple appetizing things, not a pastry competition to be judged by Pretzel Varnishers Union Number 3. . . . If Schleiffer can't grasp this, we can't use him.

And there was so much food. "At the Verrazano opening," one guest recalls, "half of Brooklyn and Staten Island wandered in and there were still mounds left over." At most ribbon cuttings, no provision is made for officials' chauffeurs. At Moses', a whole tent, with its own elaborate buffet, was set aside for their use.

When the openings took place in the empire's more remote reaches, the distant provinces at Massena and Niagara on the far-flung Northern Frontier from which his legions had cleared the savage Tuscaroras, Moses flew north with his whole court from courtiers to chroniclers (PR men and reporters like Ingraham of the *Times* and Murray Davis of the *World-Telegram*)—"fellow" authority commissioners, consultants, engineers, administrators down to the seventh level, even secretaries—to see the new dam or road or park named after him, as Peter the Great had taken his court on an "excursion" to see the new capital he was building on piles in the Baltic marshes at the mouth of the Neva River that was to be named after him.

Officials of a dozen governments, Vice President Richard Nixon and other representatives of the federal administration, state officials, county officials, relatives, acquaintances, acquaintances of acquaintances, were flown north, too (and the Canadian Prime Minister flew south), as were scribes to send word of the new wonders back to metropolis. The excursion marking the opening of the Robert Moses Power Dam at Niagara in 1961, for example, lasted three full days. It became a legend among the reporters lucky enough to go along. Says Harvey Aronson of *Newsday*:

It was the plushest junket I was ever on. We flew up on a chartered plane. There were about forty people on it, and most of them were celebrities. I heard this voice behind me extolling the virtues of Robert Moses, and you couldn't help but recognize it: it was H. V. Kaltenborn himself. The pilot made special passes over Niagara Falls for us so that the guests could see the panorama of the dam, and the adjacent Robert Moses Parkway and Robert Moses State Park from the air. For three days, there were all kinds of free trips and excursions in and around Niagara Falls. The receptions—at one, I remember, there was a fountain of martinis. I just couldn't believe it. You just held up your glass, and it was filled up with a martini. If you didn't like martinis, there was a fountain of Manhattans. I never saw anything like it.

Hospitality has always been a potent political weapon. Moses used it like a master. Coupled with his overpowering personality, a buffet often did as much for a proposal as a bribe. "Christ, you'd be standing there eating the guy's food and drinking his liquor and getting ready to go for a ride on his boat, and he'd come up to you and take both your hands in his or put his arm around your shoulders and look into your eye and begin pouring out the arguments in that charming way of his and making you feel like there was no one in the whole world he'd rather be talking to-how could you turn the guy down?" Ingraham knew what it meant when he was invited to a weekend in Babylon or a night at the Marine Theater: "He wanted to plant a story." To other reporters, too, his hospitality was used as a subtle reward, and its withdrawal as a subtle punishment. Write a story that he liked and you would find yourself on one of his lists-and, even on the "C" list, suddenly the need for paying causeway tolls would disappear and you would be able to bring your wife or girlfriend to lavish parties. Continue the good work and you might make the "B" list-or even the "A." Cross him once, and you were off all lists. Every summer, Bookbinder received in the mail, unsolicited, a pass to Jones Beach. One spring, he was assigned to do a story on the fact that the Long Island State Park Commission insisted on planting grass under its highways' steel center dividers, where lawnmowers couldn't get to it. That summer, his pass did not arrive.

Beyond such considerations, moreover, the whole aura that Moses created at his entertainments—in particular at his "working" lunches—was designed to help his work.

The setting at such luncheons was relentlessly social: friendly, easy, gracious. For most men, this setting made disagreement difficult. It is more difficult to challenge a man's facts over cocktails than over a conference

table, more difficult to flatly give the lie to a statement over a gleaming white tablecloth, filet mignon and fine wine than it would have been to do so over a hard-polished board-room table and legal pads. It was more difficult still to disagree when most if not all of the other guests agreed: there was strategy as well as ego in Moses' stacking his luncheons with a claque of yesing assistants; he may have felt that their presence heightened his stature but he also knew that their presence created an atmosphere in which the dissenter felt acutely that he was representing a distinctly minority view. To crack an especially tough opponent, Moses might invite him to a lunch at which he would be the only person present besides the Coordinator and his aides: then, if the guest tried to argue, he would be in the position of trying to argue alone against a whole platoon of "informed opinion." It was even more difficult to disagree when the man with whom you were disagreeing was your host. Manners set limits on such disagreement; even if convention was disregarded, the host had the not inconsiderable psychological advantage of fighting on his home grounds, grounds to which, in fact, the guest might even have been transported by his limousine, which he needed to take him home again. It was especially difficult to disagree when disagreement would touch off an argument, possibly a violent argument, with that host—and most guests were well aware of the fact that the slightest disagreement with the host at Triborough was sure to start such an argument. If a guest still ventured to hold his opinion, there would be impatience. The attitude was: "Well, well-informed opinion doesn't agree with you, does it? Does it, Sid? Does it, Earle? How about that, Stuart?" If the guest still did not back down, there would be not the uncontrolled, wall-pounding, inkwell-throwing rage that could fill a room, but a mordant scorn that could slash across a dinner table like a carving knife. "He had a way about him, even strong men stayed away from him-he was the great intimidator," Joe Kahn says. Nowhere was he more intimidating than over his luncheon table. In such a setting, surrounded by pictures of his past successes, scale models of his future successes, by a retinue of supporters and all the trappings of achievement and power, his scorn and anger were at their most awesome. An Austin Tobin might get up from his host's table, say, "I don't have to sit here and be insulted like this," and stalk out. Not many men had Tobin's courage, presence of mind—or the support of a board powerful enough to make courage and presence of mind feasible. In the setting Moses created at his luncheons, most men allowed themselves to be bullied, even if only by not openly disagreeing with some Moses proposal in the hope that they could disagree later in the friendlier confines of their office—only to find that before they could get out of his, Moses was virtually forcing them to ratify their acquiescence by presenting for their signature the necessary document, which an aide just happened to have with him, or to find out by the time they got back to their own office that Moses had already notified the Mayor or other department heads of their acquiescence and that the project in question had already been moved ahead to the next step, making an attempt to call it back awkward if not unfeasible. Casual, friendly, social occasions were not the best arenas in which to confront Robert Moses.

And Moses carefully kept the atmosphere social, even while using it for business ends. He would present a problem and his proposed solution to it, and then call on various of his engineers to present facts and figures supporting his arguments. Then he would say, with an easy, charming smile, "Well, since we're all agreed about this . . . ," and move on to the next item. "Well, maybe everyone there didn't agree," Orton says. "But in that setting, who could get up and start arguing? This was an exercise of power by assumption or inference. And it was damned effective." "So much got done at those lunches," says one of his aides. "He'd have a whole agenda -a whole list of items-and he'd go right through it. You might have two or three disparate groups there—each there about another item of business. And he would move from one to the other so easily, never letting one group know something that another group wanted kept secret. And at the end there would have been a dozen decisions [made]"—made as he wanted. "The city was supposed to be run from City Hall," Orton says, "but let me tell you I watched it year after year and I know: for years the big decisions that shaped New York were made in that dining room on Randall's Island." Hospitality—hospitality on an imperial scale—was one of Moses' most effective tools.

The working lifespan of the elemental force that was Robert Moses defied comparison with the working lifespan of other men. Robert Moses had been in power, shaping Long Island, in 1924. He was in power, tirelessly shaping not only Long Island but the great city stretching out toward it, in 1934, and 1944, and 1954, as he would be in 1964—until 1968, in fact. Other men hold real power—shaping power, executive authority—for four years, or eight, or twelve. Robert Moses held shaping power over the New York metropolitan region for forty-four years.

Was the tirelessness of his work and its duration comparable to a natural force? So was the result of that work—the sum total of the accomplishment, the Things he Got Done. As natural forces shaped the city and its suburbs east of the Hudson, the 2,100-square mile region on which by 1974 dwelt more than 12,000,000 human beings, so did he.

He changed the course of rivers, filling in the beds of the Harlem and the Bronx and cutting new channels for them, shoving to one side the mighty St. Lawrence, making new curves in the swift Niagara. He filled in the city's frayed edges, transforming into solid earth Great Kills on Staten Island, the Flushing Meadows in Queens, a dozen other vast marshes. Nature gave the region one shoreline; he gave it another, closing inlets in the barrier beaches, cutting new inlets, reshaping miles of beach dunes. For mile after mile, the earth and rock that constitute the shoreline of Brooklyn and Queens, and of Manhattan's Hudson shore, are his, the cement and steel that hold them in place are his, the grass and shrubs and trees that adorn them are his—as are the concrete and steel of the marinas, the shoreline overlooks, the parking fields, the bicycle paths, the runways and airport terminals, and, of course, the shoreline parkways. Not nature

but he put them there. His bridges bound together Long Island and the mainland of the continent, torn apart by glaciers eons before. His causeways reunited the Island with its barrier beach. He hacked out lagoons, filled lakes, made beaches, welded islands together, cut, at Inwood Hill, through a primeval forest substantially unaltered by the hand of man since the dawn of time. He altered the region's skyline, leveling great areas of the low, regular tenement foothills and replacing them with slim, tall spires two hundred, three hundred feet high—civic and cultural edifices, great groves of apartment houses. By the close of the Age of Moses, for example, the skyline along much of the eastern shore of Manhattan Island that was the heart of metropolis—a skyline that was, to a great extent, Governor Smith Houses, La Guardia Houses, Corlears Hook Houses, Baruch Houses, Lillian Wald Houses, Jacob Riis Houses, Stuyvesant Town, Peter Cooper Village, Bellevue Hospital, NYU-Bellevue Medical Center, the United Nations, Rockefeller Institute, New York Hospital, East River Houses, Woodrow Wilson Houses, Senator Robert F. Wagner, Sr., Houses, Abraham Lincoln Houses, Riverton Houses, North Harlem Houses, Harlem River Houses, Colonial Park Houses-was, for miles at a time, a Robert Moses creation. Do forces of nature-volcanoes, earthquakes, avalanches-destroy whole towns and villages, forcing populations to flee? What force destroyed Spuyten Duyvil, Sunset Park, the Syrian Quarter near the Battery, a dozen other neighborhoods as big as towns?

Robert Moses believed his works would make his name immortal, and he may well have been right—and not just because some of them were named after him. "What will people see in the year 1999?" he predicted. "The long arteries of travel will stand out [and the parks]." Fly over New York in 1974, and the prediction seems likely to be true, not only for the year 1999 but, if New York endures in anything like its present shape, far, far beyond. For so many of the dominant features of the landscape are hisand those features seem likely to endure indefinitely. Some of his highways will probably be covered with housing—the sale of air rights above them, just beginning in the 1970's, seems an innovation likely to gain favor—and thus invisible, no longer part of the landscape. Some may be rerouted or widened beyond recognition, although, given the cost and complexities of condemnation, the length of time it would take to cover or to reroute or reshape even some substantial fraction of the 627 miles of these arteries would have to be calculated not in decades but in generations and perhaps centuries. The roads of Rome stood for two thousand years and more; who would predict less for the roads of Moses? Who would predict less for his Shea Stadium, a structure consciously shaped to resemble Rome's Colosseum because he was afraid that his convention center-office tower "Coliseum" didn't make the comparison clear enough? As for the parks he created, fly over New York in the year 1999, and the two thousand acres of Brookhaven Park and the four thousand acres of Connetquot on Long Island, and the 21,000 other acres of park that Robert Moses wrested away from the developer's bulldozer to insure that the people of New York would always have green space will still be green, a tribute to his foresight. For how long will the great bridges that he built—the Verrazano, the Triborough, the Whitestone, the Throgs Neck, the Henry Hudson, the Cross Bay, the Marine—endure? The life of a suspension bridge, engineers tell us, is measureless. Atomic attack or natural catastrophe could render all New York shapeless. Barring such monumental calamity in centuries to come discerning historians will, if they look for it, be able to see writ plain throughout the great city and its suburbs evidence of the shaping hand of Robert Moses.

Other great builders left their mark on physical New York. But the achievement of even the greatest—a Zeckendorf or a Helmsley or a Winston or a Lefrak, the Rockefellers of Rockefeller Center—is dwarfed by the achievement of Robert Moses. Not even the greatest of the public officials who, while not builders themselves, shaped the growth of the city—the almost forgotten "father of New York," Andrew H. Green, and "the greatest mayor New York ever had," Fiorello H. La Guardia—had a fraction of Moses' influence on the shape of New York. The shapers closest to him in total influence are probably the robber barons who built the railroads into the city and out through its suburbs and who erected monuments to themselves in great skyscrapers and terminals, but the influence of any one of them is dwarfed by his.

To compare the works of Robert Moses to the works of man, one has to compare them not to the works of individual men but to the combined total work of an era. The yardstick by which his public housing and Title I feats can best be measured, for example, is the Age of Skyscrapers, which reared up the great masses of stone and steel and concrete over Manhattan in quantity comparable to his. The yardstick by which the influence of his highways can be gauged is the Age of Railroads. But Robert Moses did not build only housing projects and highways. Robert Moses built parks and playgrounds and beaches and parking lots and cultural centers and civic centers and a United Nations Building and a Shea Stadium and a Coliseum and swept away neighborhoods to clear the way for a Lincoln Center and the mid-city campuses of four separate universities. He was a shaper not of sections of a city but of a city. He was, for the greatest city in the Western world, the city shaper, the only city shaper. In sheer physical impact on New York and the entire New York metropolitan region, he is comparable not to the works of any man or group of men or even generations of men. In the shaping of New York, Robert Moses was comparable only to some elemental force of nature.

But if in the shaping of New York Robert Moses was an elemental force, he was also a blind force: blind and deaf, blind and deaf to reason, to argument, to new ideas, to any ideas except his own.

He made himself blind. He possessed vision in a measure possessed by few men. But he wouldn't use it. The arrogance which had been his characteristic from youth, the arrogance which was a most striking characteristic of his mother and grandmother, the arrogance that had led relatives to call

him "Bella Moses' son," the arrogance that had gorged on power, swelling with each increase, had, now that his power in his chosen fields of activity was so absolute, become absolute itself.

No rules, not even the most innocuous, could apply to him. Making one of his rare appearances at a public hearing on one of his projects—this one, in City Hall, before the Board of Estimate, on his proposed Verrazano Bridge—he declined to identify himself for the record by name and address as all other speakers had been required to do.

"Make him give his name," a woman shouted, and then several men picked up the shout, and then the audience, which had filled the Board chamber to overflowing and had crammed the corridor outside full, turned it into a chant: "Make him give his name! Make him give his name!" Wagner, presiding, looked at Moses appealingly, but the Coordinator crossed his arms, locked his hands around his biceps, tilted back his head and, with his prognathous jaw jutted out, stood in the face of that chant like some haughty Rameses, finally saying to the Mayor, who was, Shapiro was to recall, "shrinking down behind his microphone so you could hardly see him": "Well, what are you going to do about it?"

"Now if you people can't be quiet, I'll have the room cleared," Wagner said. "You people know who this is; this is Robert Moses."

With the name in the record, Wagner motioned for Moses to proceed, but when the Coordinator began his presentation, the crowd began to chant: "Make him give his address! Make him give his address!" Again Wagner looked at Moses, again Moses stared him down, and again Wagner had to intercede: "You all know where he lives; he lives across the street from me." And Moses was so furious that the Mayor had not ousted from the room this rabble trying to make him abide by the same rules that governed other men that despite a previous promise to the Mayor that he would this once give at least the appearance of participating in a public hearing—it was only because of that promise that he was present in the first place—he talked only briefly, describing a \$365,000,000 project, for which an hour-and-a-half presentation had been prepared, in about ten minutes, snatched up his papers and stalked from the room, leaving the Mayor to sit alone listening to protests until four o'clock the next morning.

As he was above rules, he was above the law. He had always felt himself above it, ignored its spirit whenever possible, but now there was a new depth to this feeling, a new intensity to this particular manifestation of arrogance.

Confronted in building up the base for Idlewild Airport by the same problem by which he had been confronted in building up the base for Jones Beach—the sand he imported blew away because it was not anchored, as were Long Island's natural dunes, by the horizontally growing roots of beach grass—Moses, without bothering to obtain anyone's permission, dispatched teams to obtain the grass from public beaches owned by Suffolk County and from the beaches of summer homes owned by private families. W. Kingsland Macy, an ardent conservationist who knew the value of beach grass—and what would happen to dunes suddenly denuded of it—was enraged when he learned that scores of Long Island State Park Commission employees were

out on their hands and knees illegally yanking it out of beaches that Macy wanted preserved in perpetuity for the people of his county. He ordered County Attorney Edgar L. Hazleton to order Moses to desist, on pain of arrest and imprisonment of any commission employee caught—and of Moses himself. Moses' reply was not long in coming. The next weekend, when the Hazletons arrived at their summer home at Westhampton, they discovered Moses' men yanking out the grass on their beach. (The practice was finally ended when Macy ordered local police to arrest thirteen of Moses' grass pullers.)

The measure of his arrogance was taken by a dictator. Rafael Leonidas Trujillo Molina was considering commissioning Moses to propose public works for his Dominican Republic when, after one long afternoon's discussion with Moses, he abruptly told him he had decided not to hire him after all. According to Moses, the dictator told him: "You'd want my job."

His ego had become as titanic as his imagination. How did he think of his works? Let him answer in his own words. Jones Beach is "the finest public beach in the world," the Bronx-Whitestone Bridge "the most beautiful suspension bridge in the world." On "the saga of city waterfront reclamation . . . I think it may be stated without fanfare or frantic boasting that no other city, faced with anything like our problems, has set about with so much boldness and determination to meet and down them." How did he think of himself? Let him answer in his own words. "The City Builder must have an odd mixture of qualities. He must have a basic affection for his community, he must hate what is ugly, barren and useless. He must have an instinctive dislike of things which are built or run wrong. He must have a healthy contempt for the parasite, the grafter, the carpetbagger, the itinerant expert, the ivory tower planner, the academic reformer and the revolutionary. He must have the barge captain's knowledge of the waterfront, the engineer's itch to build, the architect's flair for design, the merchant's knowledge of the market, the local acquaintance of a political district leader." He was fond of proclaiming, as he did in 1948, "the ancient truth that it is not knowledge but action which is the great end and objective in life, and that for every dozen men with bright ideas there is at most one who can execute them." Did detractors liken him to Hitler? He had another comparison in mind. Sometime around 1949, visitors first noticed in his office a bust of Abraham Lincoln, and talks with his aides soon made it apparent why he had selected it. "To me," Sid Shapiro would say at every opportunity, "Mr. Moses is a lot like Abraham Lincoln-a philosopher and a doer."

Moses' body expressed his feelings about himself more eloquently than his words. With his first taste of power, he had begun to strike poses. Now, with more power, the poses were more striking. When the Sea-Ef was heading back into the Babylon dock, for example, he was given to standing at the very point of its prow, arms folded across his chest and jaw outthrust. A Bay Shore history teacher, seeing him one day, thought he looked "very impressive"—strikingly similar to pictures the teacher had seen in history books, pictures of Napoleon Bonaparte. His most frequent pose, of course,

was the one he had first adopted during the 1930's and now used on every public occasion to express his lofty indifference to public acclaim; while introducing public officials at one of his ribbon cuttings, watching them cut a ribbon, or before speaking himself at such a ceremony or at a luncheon or dinner at which he was being honored, he would stand, while waiting for the applause to die down, with his arms folded across his chest, each hand grasping the opposite biceps, with his head tilted back. Taking a particularly important guest on a tour himself, he would speak in the imperial "we," but it was his gestures, sweepingly expansive, as, perhaps from a yacht offshore, he indicated the Belt Parkway sweeping off to the right and left, the park areas alongside, and then pointed upward to the Verrazano Bridge towering over the boat ("And then we built . . ."), that most strikingly suggested an emperor who looked on all he saw as his creation; standing on the deck of that yacht, he might have been Claudius looking proudly at Ostia.

The most definitive measure of his egotism, of course, was the men with whom he had chosen to surround himself. The last of those who dared even occasionally to voice even a faintly independent opinion were gone now; perhaps the last had been Allyn Jennings, who, serving in the Coast Guard during the war, had dared to put his country ahead of his public authority. Regarding the war as he did, as no more than an irritating interruption to his plans, Moses was infuriated by Coast Guard orders which were designed to protect the Atlantic Coast from the threat of German attack but which Moses considered meddling in the beaches in whose control he had always allowed no meddling—he was, for example, enraged when the Coast Guard ordered the Jones Beach boardwalk lights dimmed; whether or not he ever complied with this order is a question to which Moses' aides reply only with chuckles—and Jennings reportedly remarked to another Moses Man who had chosen to remain in RM's service during the war: "Doesn't RM know there's a war on?" The remark was eagerly repeated to RM; "that," chuckles Shapiro, "was the end of Allyn Jennings." In the postwar years, Moses was surrounded by a solid wall of sycophancy—the only opinions voiced were his opinions, the only facts and figures presented those that would confirm those opinions.

This, of course, need not in itself have been an insurmountable handicap. Genius—the innovative, creative, shaping impulse that was Robert Moses' form of genius—is to a great extent personal, internal, intuitive, subjective. The inspiration that led Moses to envision in an instant the great Long Island park and parkway system was not the facts and figures that he had to listen to at the endless reform conferences, but the creative flash.

But genius—in particular, public works genius—must have *some* roots in reality. The purpose of public works is to meet public needs; the first requirement of public works genius—an inescapable requirement for which even vision, foresight and drive are no substitute—is a knowledge, an understanding of those needs, of, in fact, the public, of the realities of the life led by the public for which the works are being built. Moses had had that knowledge when he created his great park and parkway system; he had had no choice but to have it; the role of liaison with reformer groups to which

Al Smith had assigned him required him to sit through reform meetings; he could not have helped grasping the nature of the problem, the needs of the metropolitan area public. But Moses' position now in the center of a palace guard that walled him off from all contact with new opinions and facts meant that he did not have that knowledge any more. Reality had changed; the reality of the 1920's was not the reality of the 1950's. The metropolitan area that Moses was now attempting to shape was not the metropolitan area that he had begun shaping; there were more people in it, so many more that the very fact of their numbers alone changed all the dimensions of life in the area; they covered so much more of its land surface with their homes; they were, moreover, a different people: the population of the area had been transformed; to mention just one change, there had been fewer than 200,000 nonwhites in the area when Moses had begun his public career, there were more than 2,000,000 now; embarking on a recreational policy that deliberately excluded nonwhites from most parks may have had in Moses' mind some sort of rationale in 1923; it is difficult to believe that that mind would formulate the same policy in 1953; Moses was nothing if not realistic, and excluding so large a part of an area's population from parks was not realistic. Quality, Hegel said, changes with quantity. Automobiles had meant weekend excursions to the country, leisurely drives, pleasure, freedom, in the 1920's, when there had been relatively few automobiles. Automobiles meant something very different now.

But Robert Moses did not see these changes. He did not see that reality had changed. Not only the sycophancy with which he had surrounded himself but also three hard physical facts of his existence insured this.

Robert Moses had never, aside from a few driving lessons thirty years before, driven a car. He didn't know what driving was. His chauffeured limousine was an office, to him a peculiarly pleasant office, in fact, since in it he was away from secretaries and the telephone and in its upholstered confines he could bury himself in work without interruption. Traveling by car had been pleasant for him in the 1920's; it was still pleasant for him in the 1950's. The nature of driving might have changed immensely for the people of the metropolitan area; it had changed not at all for him.

Robert Moses had never, since he had first come to power, allowed himself any time for reflection, for thought. Reflection, thought, is in a sense no more than the putting to use of a mind, and the unique instrument that was Robert Moses' mind could conceive wonders when it was put to work in that way. As a youth, he had never had enough to do; frustrated at the Bureau of Municipal Research, he had spent his evenings walking the city and thinking—and gradually his steps had led him more and more frequently to Riverside Park, and he had conceived a solution for problems for which no other man had been able to conceive a solution. As only a part-time aide to Al Smith, he had a lot to do—but not nearly enough to use up all his restless energy, and he had had time to sail and walk around the South Shore of Long Island. Living in Babylon and working in New York, he had had to ride the Long Island Rail Road for two hours and more a day; attempting an overview of Moses' career, it is difficult not to ascribe some

of the credit for the stroke of genius that led him to see the potential for parks in the New York City watershed properties to the fact that the railroad not only carried him past those properties but trapped him on it for two hours and more a day so that he had to think about them. The following year, Robert Moses had come to power. In the years since, he had had piled upon him, and had grasped for, more and more power with each succeeding decade; the workload of executive responsibility he was carrying in the 1930's was too great to allow time for reflection—a fact he mentioned worriedly to his aides. But in the 1940's he had far greater executive responsibilities than in the 1930's, and in 1954, with his assumption of the chairmanship of the State Power Authority, he undertook in that one job, piled atop all his others, so much work that quiet, reflective thought was a luxury in which he could quite literally indulge almost never. Given a chance to work, Moses' mind might, despite all the handicaps, have come to grips with the new realities and fashioned a shaping vision to deal with them. But now it had no time to deal with the reality at all.

Robert Moses was going deaf.

His lieutenants first noticed about 1950 that the boss was having difficulty understanding what people were saying to him. His hearing deteriorated rapidly thereafter, and doctors apparently told him there was nothing to be done for the condition, a simple result of age—Moses was, after all, in his sixties—except for him to wear a hearing aid.

Robert Moses wear a hearing aid?!? He refused even to consider the suggestion. The condition grew worse. More and more frequently, if he was asked a question at his big conference table, his reply would not be responsive—he would be answering the question he thought had been asked. In discussions over lunch with public officials he would misunderstand the thrust of their arguments, sometimes grasp only fragments of what they said. Several times, driving away with Shapiro from conferences with Wagner or Dewey or Harriman, Moses began exulting over some promise he believed he had wrung from Mayor or Governor-and Shapiro, who had been sitting in on the conferences, was certain, heartsick, that no such promise had been made. When it became unfeasible for him to talk over the telephone at all, he consented to have a powerful amplifier placed in the instrument. General Meyers took inspiration and attempted to install an amplifying system in Moses' offices—in such a way as to conceal it from visitors and thereby leave the precious legend of indestructibility intact. On the desk-conference table were placed two small microphones, which would pick up everything said in the room; the amplifier to which the microphones were attached was concealed in a small box and placed on a small table near his left ear, which was slightly better than his right. Any visitor who inquired about the microphones was told that they were there so that if the office was crowded for large conferences, the man speaking could use one and be heard more clearly. Ingenious as the device was, however, its utility lessened, for Moses' hearing degenerated to a level at which even the amplifier was of little use to him.

In a way, of course, Moses' deafness was symbolic. He had, in a way,

been deaf all his life—unwilling to listen to anyone, public, Mayor, Governor, deaf to all opinion save his own. But this new, physical deafness contributed in a nonsymbolic, very real way to his divorce from reality. As always, he would not attend public hearings or in any other way place himself in a situation in which he could hear the public's views. His insulation inside a circle of men who would offer no views that were not echoes of his own further insured that no outside voices would become a part of his considerations. Now, thanks to the deafness, he was unable to hear the views, get the thinking of those administrators and public officials who were invited to lunch with him or who sat with him in conferences. Surrounded by men who would not give him the new facts and figures he needed, with no time left to rethink solutions to changing problems—most important, with no feeling that there was any reason for him to rethink—the deafness made it impossible for him to learn about the new realities even if he had wanted to.

The proof is a statement he made about golf. If there was any area in which the Robert Moses of the 1920's had been truly expert it was in the area of recreation, in the active games which adults liked to play. But now he mentioned offhandedly that golf was not a game in which the masses were interested; it was, he said, played only by the "privileged few." Golf was now a game played by millions in all walks of life. But Moses didn't know this. His statement would have been true in the Twenties and he thought it was still true in the Fifties.

Because he didn't know anything had changed.

It was in transportation, the area in which Robert Moses was most active after the war, that his isolation from reality was most complete: because he never participated in the activity for which he was creating his highways—driving—at all. Insulated in the comfortable rear seat of his limousine, unable to experience even once the frustration of a traffic jam, unable, unless he made an effort and put his work aside and leaned forward to look out the window, even to look at a traffic jam, Robert Moses did not know what driving in the modern era was. He did not know that the sheer weight of numbers of new cars had changed the very nature of the activity for which he was creating facilities, had introduced—or, to be more specific, re-emphasized, since even before the war planners had seen the first signs of the change—new realities into the outlook for metropolitan transportation. He was making transportation plans based on beliefs that were not true any more. He was making plans that had no basis in reality.

But because of the enormous power he controlled, power that was close to absolute in fields he had carved out for his own, such as transportation, he could impose these plans on the metropolitan region, and on its 12,000,000 residents.

## 36. The Meat Ax

THE TREMENDOUS EXTENT of Robert Moses' power, and the extent to which, with that power, he shaped the greatest city in the New World and the great suburbs stretching out from it, is demonstrated by the roads he built during the quarter of a century following World War II.

These were roads like no other roads in history, for these were roads through a city.

Most of the great roads of antiquity—the 1,500-mile Royal Road of Persia, laid across three mountain ranges and lined with artificial oases at which relays of horses were kept shaded and fresh so that the royal couriers of Darius could cross Asia Minor in nine days instead of three months ("There is nothing in the world that could be faster than these couriers," Herodotus exclaimed); the three "silk roads," the longest roads ever built, laid out centuries before the birth of Christ so that caravans emerging from a gate in the Great Wall of China could carry bales of the material all the way to Europe, where it was valued so highly that it was weighed against gold; the post roads with which Genghis Khan tied together the vast Mongol empire; the twenty-nine military highways of Rome which, built by "the greatest men of the republic" ("None but those of the highest rank were even eligible to the office of superintending them") and radiating from Rome to which all roads led, ran with Roman directness (to avoid curves, mountains were cut through at enormous expense, marshes were bridged or simply filled up with solid masses of concrete) to the most remote provinces ("Even seas did not stop their progress, for the roads were built up to the water's edge and then continued upon the opposite shore") to speed the marches of the legions and engines of war which kept Rome mistress of the known earth—were roads through open country. Their builders may have had to contend with mountains and marshes, with the snow of the Alps and the heat of deserts, but they did not have to evict from their homes tens of thousands of protesting voters, demolish those homes, tunnel under or cut across subways and elevated railroads, sewers and water mains and gas mains and telephone and electric conduits and cables, all of which, providing a city with essential services, had to be kept in operation during construction. They did not have to solve these problems in space almost unbearably constricted because to obtain a single extra foot of width would require additional thousands of evictions. A few major roads were built

within ancient cities (some of the Roman highways ran right up to the golden milestone in the Forum, for example), but ancient cities did not have subways and gas mains. These were, moreover, cities on a different scale from modern cities-imperial Rome was one-eighth the size of New York; Athens at the height of its glory was never larger than Yonkersso the problem of eviction was on a different scale. And since the traffic for which these roads were designed was different from modern trafficnot only in volume but in size and speed—they were constructed on a different scale. The major roads in Rome, the widest paved highways in any ancient city, were, even including their "service roads," the margines to which carriages were restricted to keep the central portion free for infantry and pedestrians, only sixty-five and a half feet wide at their widest point; the highways Moses was proposing to build were two hundred feet wide. A horse-drawn carriage can turn fairly sharply; the monster tractor-trailers of the twentieth century require a turning radius so great that a single interchange connecting one highway to another can cover eighty acres. Not only did these roads of antiquity have no underpasses or overpasses to carry intersecting roads across them—access to these roads was not controlled; they could be entered from any intersecting thoroughfare their very dimensions were so much smaller than those of modern highways that they were really comparable not to those highways at all but only to modern streets or avenues. Nor were the roads even of modern times—of the swollen cities of the nineteenth century and the Industrial Revolution. The greatest intracity road development of modern times before Robert Moses was the boulevarding of Paris envisioned by Emperor Napoleon III and carried out by his Prefect of the Seine, the "brawny Alsatian" Georges-Eugène Haussmann, between 1852 and 1870. But the roads of Haussmann, impressive though they were, were nonetheless still roads designed for the carriage rather than the car.

The automobile age created in the twentieth century a need for roads of a new dimension, roads a hundred feet or more across, roads with underpasses and overpasses and with interchanges so immense that to create them hundreds of acres of earth must be covered over with concrete—gigantic roads, not highways but superhighways. But the greatest of these roads-Mussolini's autostrade and Hitler's Autobahnen and the Long Island parkways (which predated autostrade and Autobahnen), Belt Parkway and West Side Highway of Robert Moses-had been built around the edges of cities and between cities. Except for rare instances and short stretches, no superhighways had been built within cities. And even those short stretches of superhighways that had been built within cities had almost invariably followed open paths within them—undeveloped river banks, for example, or sparsely populated corridors—as if their creators had shied away from pushing huge roads through the city's dense fabric. The most noticeable exception had been the Triborough Bridge approach highways Moses had built through Astoria and the East Bronx-but the total length of these highways had been no more than eight miles. Now Moses was proposing to

The Meat Ax 839

build through the heart of the city more than a hundred miles. No one had dared lay superhighways through a heavily populated modern city on anything like such a scale: lump together all the superhighways in existence in all the cities on earth in 1945, and their mileage would not add up to as many miles as Robert Moses was planning in 1945 to build in one city.

The immensity of the physical difficulties in Moses' path could be grasped only "on the ground," and on the ground they made even engineers accustomed to immense difficulties quail.

One of his proposed superhighways, for example, was the "Cross-Bronx Expressway," a seven-mile-long road that would run straight across that densely populated borough. The Cross-Bronx Expressway would be a huge trench gouged across a city. And it would have to be gouged across the city without disturbing the city's lifelines, the water and gas mains, electric cables and telephone wires, sewers and steam pipes, streets and subways, that supplied hundreds of thousands of residents of the Bronx with services too essential to be interrupted for the long months it would take to build each section of the expressway. General Thomas F. Farrell, builder of World War II's legendary Burma Road, did not fully comprehend what that meant until, now a Moses consultant, he was sent out to look over the proposed route.

Standing on a bluff in Highbridge Park in Manhattan looking across the Harlem River at the Bronx, Farrell saw staring back at him from the top of the bluffs across the river a wall, a wall sixty and eighty and a hundred feet high, a wall of apartment houses. And crossing the river, entering the Bronx, Farrell saw that the wall was seven miles deep. Athwart the route Moses had chosen for his road stood literally hundreds of buildings, close to half of them apartment houses.

And an engineer like Farrell, accustomed to grasping at a glance the essentials of even the largest engineering problems, could see on his first tour of the route that apartment houses were the least of those problems.

Stepping out of his limousine at a high spot on Jesup Avenue to look out over a half-mile valley to the east, the general saw that apartment houses crammed that valley solid—a staggering panorama of massed brick and mortar and iron and steel. Looking down at the map Moses had given him, he saw that the Coordinator was preparing to gouge the huge trench of the expressway straight across the valley's heart. But what staggered Farrell most was not what was in the valley but what was on the other side of it, glaring down at him from the high ridge on its far side, a ridge even higher than the one on which he was standing.

On top of that ridge was not only a wall of apartment houses, big, luxurious buildings of a notable sturdiness, for on top of that ridge was the Grand Boulevard and Concourse, the "Park Avenue of the Bronx," but, running along the top of the ridge, a steady stream of automobiles, toy-sized in the distance. For the Concourse—built at the turn of the century in

imitation of Haussmann's boulevards with separate, tree-shaded lanes for pedestrians, bicyclists and horse-drawn carriages—was now a major automobile thoroughfare. Construction of an expressway would take years, Farrell knew; the stream atop the ridge could not possibly be dammed for that long: the Cross-Bronx Expressway could not cross the Grand Concourse at grade. A glance told the general that carrying the expressway over the Concourse on a gigantic viaduct was unfeasible; the ascent up from the valley floor would be almost three hundred feet, far too steep for the big trucks that would be using the expressway. The expressway would have to avoid the Concourse by diving beneath it, by diving down through the ridge, tunneling through with dynamite while not disturbing the apartment houses and road above. And, from a cross-section map he had been given, Farrell knew what was inside that ridge—not merely a huge storm sewer and a maze of smaller utility mains, but another utility somewhat more formidable. What was inside that ridge was a railroad, the Concourse line of the Independent Subway. Tens of thousands of persons rode that subway every day; it, too, would have to be kept in operation. And its triple tracks lay sixty feet below the top of the ridge; to get beneath them while going through the ridge, the expressway would have to dive deep indeed. And "deep" in the Bronx, Farrell knew, as all New York engineers knew, meant Fordham gneiss, a rock that combined layers of unusual hardness, requiring intensive and prolonged blasting, with frightening instability that caused sliding and slipping of the rocks on even the simplest engineering jobs. The engineers building the expressway would have to blast it through the ridge while holding up above it-holding absolutely steady even while igniting dynamite blasts that would shake a mountain—not only a tangle of sewers and mains but a boulevard, a subway and a row of apartment houses. And they would have to hold boulevard, buildings and subway steady while trying to find a footing for the necessary massive supports in unstable rock.

Because the expressway had to dive under the subway, it couldn't go over the valley on a viaduct; that would make the dive beneath the subway too steep. It couldn't cross the valley at grade; that would mean closing the north-south streets in it that cut across the expressway's path, and among those streets in the valley were no fewer than five major thoroughfares that couldn't be closed for long. It would have to burrow across the valley, and that meant holding up those streets while struggling through another maze of mains. And atop one of those streets, Farrell saw a distant skeleton of steel, the girders and tracks of the Jerome Avenue elevated rapid transit line, that would have to be kept running. While building the expressway under Jerome Avenue, Farrell realized, Moses would somehow have to hold up, for months if not for years, not only the broad, heavy avenue but the spindly elevated structure above it—and hold it steady enough for the trains to run along it in safety.

The ridge and valley, in fact, were only a microcosm of the physical difficulties in the way of the Cross-Bronx Expressway. The path of the great road lay across 113 streets, avenues and boulevards; sewers and water and

The Meat Ax 841

utility mains numbering in the hundreds; one subway and three railroads;\* five elevated rapid transit lines,† and seven other expressways or parkways, some of which were being built by Moses simultaneously.‡ All had to be kept in operation while the expressway ran below or above them. This would be a difficult enough engineering task if the engineers had sufficient space in which to work. But on the Cross-Bronx Expressway, there was, Farrell could see, never going to be enough room. Blasting a tunnel and building a road while holding up above it a major street that itself is holding up a transit line is difficult enough. But holding it up when the girders which held up the transit line turned out to be resting on the spots—seemingly the only spots—capable of holding the weight of the tunnel required the fastening to those girders of "needle beams" of immense strength, beams built with legs stretching out to either side that could be sunk into the next available firm rock to hold the weight. The rock was blasted and chiseled out from under the girders so carefully that the road's designer, Ernie Clark, would recall years later that "we took the stuff out with a teaspoon." In one 466-foot section, the expressway ran under four major avenues and an elevated rapid transit line. Working with girders some of which were a hundred feet long and weighed nineteen tons, the engineers were constantly hemmed in on either side by the foundations of apartment buildings that could not be condemned because the condemnation would add additional millions to the cost and that were in constant danger of being damaged—some of them were damaged—by the blasting. Blasting a tunnel under a rapid transit line is difficult enough. Building a viaduct over the street and under the rapid transit line is less difficult—if there is thirty feet, the required clearance for streets and expressway, between the top of the asphalt of the street and the bottom of the steel of the transit line. When there isn't, the room can be created only by lifting the rapid transit line into the air-so delicately that its operation is not disturbed—by jacking it into the air, three-tenths of an inch at a time, with immense hydraulic jacks and holding it solid, until new girders of the right height can be installed, with timbers so huge that one man who lived near the Third Avenue jacking operation said, "I never knew there were trees like that in the world before." Throughout the construction of the massive superhighway, Ernie Clark says, "we were always figuring in inches and tenths of inches." In the face of such difficulties, moving a river five hundred feet, a job required where the expressway crossed the Bronx River, was a feat so insignificant that in the speeches Clark made to the delegations of engineers who came from all over the United States and Europe to hear him describe the expressway's engineering, he hardly bothered to mention it.

<sup>\*</sup> The subway, of course, is the Concourse line of the IND under the Grand Concourse. The railroads are two branches of the New York Central and one of the New York, New Haven and Hartford.

<sup>†</sup> The Pelham, Lenox-White Plains Road, Dyre Avenue, Third Avenue and Jerome Avenue rapid transit lines.

<sup>‡</sup> The Harlem River Drive, the Major Deegan, Bruckner, Sheridan and Throgs Neck expressways, the Hutchinson River Parkway Extension and the New England Thruway.

If building the huge new highways was tough, tying them together was tougher—for the knots, the interchanges between them, required so much space that even what looked like immense amounts turned out to be insufficient.

So immense was the mass of swirling, intertwined lanes of links between great roads that had to be built between and up the sides of those rocky 170-foot-high cliffs along the Harlem River that the unassuming Clark once ventured to suggest to an engineering convention, in his quiet way, that a new word would have to be invented to describe it: "interchange' does not adequately describe the construction in this area."

Two great north-south roads—the Major Deegan Expressway and the Harlem River Drive-were being built by Moses along the two banks of the Harlem. They would have to be linked up with the Alexander Hamilton Bridge, which Moses was building 170 feet above them to carry the expressway across the river valley—and both the bridge and the two river-bank highways would have to be linked as well to local streets on both sides of the river, as well as to the old Washington Bridge which crossed the river a few hundred feet to the north of the Hamilton. A total of twenty-two separate ramps and eighteen separate viaduct structures would be required to carry the thirty-one lanes of roadway necessary for the links. Making the rise in the links shallow enough so that huge tractor-trailers could negotiate them would have been simple if there had been sufficient room to work in: just start the climb far enough away so that the rise in grade could be gradual. But there wasn't nearly enough room. Two thousand feet south of the Washington Bridge was another nineteenth-century structure, the Highbridge Aqueduct, and the massive steel and stone piers of both these structures plunged down to the river banks, so the Hamilton Bridge—and its connecting links—would have to be built between those piers, and two thousand feet was a pittance in terms of the size required. On the Manhattan side of the river, moreover, was an existing roadway resembling an ancient Roman aqueduct, rising from the river to a tunnel cut beneath 178th Street as a connection under Manhattan to the George Washington Bridge. That roadway was supported on columns one hundred feet high. Knock out one of those columns and the roadway might collapse. The Cross-Bronx Expressway would have to be fitted between them, and the expressway's width was only five feet less than the space between the columns; there was practically no room for maneuver at all in the placing of those twenty-two ramps with their thirty-one lanes. The grades could not be kept shallow; to keep them from being impossibly steep, they would have to wind around and around each other; visualizing it in his mind's eye, Clark knew that the interchanges with which Moses would be filling the air on both sides of the deep valley would be the largest bowl of concrete "spaghetti" cooked up to that time by any highway builder in history. Some of the strands in the bowl would have to be almost incredibly thin and long. Because of the space limitations, normal-sized columns could not be used; the diameter of some, in fact, could be no more than 781/2 inches. And some of these slender columns, needed to support immense weights, would have to be 100

The Meat Ax 843

feet high! Radically new column designs would have to be evolved, Moses' engineers saw. The ingredients in the sauce, moreover, would have to be varied, indeed; as it turned out, no two strands of spaghetti curved exactly alike, so that each piece of steel for the dozens of columns involved, for the girders supporting the roadbeds which sat atop the columns, for the beams which formed the floor of those roadbeds, for the brackets which held those beams and girders in place, had to be fabricated individually.

The Cross-Bronx was one of thirteen expressways Robert Moses rammed across New York City. Its seven miles were seven out of 130. The physical problems presented by its construction were by no means unique. Even for the "easiest" of those monster roads, those traversing relatively "open" areas of the city, there were always private homes, small apartment houses—and whole factories—which had to be picked up and moved bodily to new locations. For most of these roads, Moses had to hack paths through jungles of tenements and apartment houses, to slash aqueducts in two and push sewers aside, to lift railroads into the air or shove them underground. For one expressway, the Van Wyck, he had to hold up in the air the busiest stretch of railroad in the world, the switching yard through which thirteen tracks and sidings of the Long Island Rail Road pass over Atlantic Avenue in Jamaica—hold it up and hold it steady enough so that during the seven months it took to slide the huge expressway underneath, the 1,100 train movements which took place daily in that yard could continue uninterrupted.

None of Moses' previous feats of urban construction—immense though they had been—compared with the roads he was planning now; as is demonstrated by the cost. Highways had always cost millions of dollars. In the whole world, only a handful had cost as much as \$10,000,000. These new highways would cost \$10,000,000 per mile. One mile, the most expensive mile of road ever built, cost \$40,000,000. Their total cost would be computed not in tens but hundreds of millions of dollars. The total cost of the roads Robert Moses built within the borders of New York City after World War II was over two billion dollars.

The roads, of course, were not the largest elements in his transportation program. They were, in fact, in one sense only links between the water crossings he was planning to carry their users over or under the water that divided the city into boroughs.

The scale of these crossings made the mind boggle. No suspension bridge anywhere in the world would be as long (or expensive) as the Verrazano-Narrows Bridge; it would be the longest such bridge ever built, its towers so far apart that in designing them allowance had to be made for the curvature of the earth: their tops are one and five eighths inches further apart than their bases. There would be enough wire in the Verrazano's cables to circle the earth five times around at the equator or to reach halfway to the moon, enough concrete in its anchorages to pave a single-lane highway reaching

all the way from New York to Washington, and more steel in its towerstaller than seventy-story skyscrapers—and girders than was used in the construction of the Empire State Building. No underwater vehicular tunnel in the Western Hemisphere—and only one underwater vehicular tunnel anywhere in the world-would be as long as the Brooklyn-Battery Tunnel. The tile used to line it would have tiled 4,500 bathrooms; to ventilate it adequately against the fumes of 60,000 cars and trucks per day, air would have to be driven through huge ducts at the velocity of a Force Twelve hurricane, and the fans which drove that air would consume daily as much electricity as is used daily by a small city. Among such marvels even a huge suspension bridge like the \$92,000,000 Throgs Neck—itself an engineering feat that would make most cities proud-would hardly be noticed by New York. Comparisons among public works of different types are difficult. In terms of size, however, Moses' road-building program was certainly comparable to any public works feat in history. In terms of physical difficulty, his program would dwarf them all.

Immense as were the physical obstacles in Moses' path, however, the Coordinator was equal to them.

A technological system—engineering and construction techniques and equipment—capable of solving those physical problems was already in existence. The methods and machines required to build mammoth highways even within a congested city had been perfected, even if they had never been used to the capacity Moses was planning to use them.

As for the tangle of red tape in his way—every main and cable and sewer relocation, for example, required approval by several city departments —that was sliced through with his customary directness. Moses' aides were under standing orders to go straight to the department head at the first sign of resistance from any underling. Most city agencies closed up tight at five o'clock-or earlier. Working weekends was unheard of. But hours and weekends meant nothing to men who knew that when their boss wanted something done, "he wanted it done-period-he didn't care how it was done." Commissioners were routed out of bed at midnight—and long after midnight—by their telephone calls. Watching a Broadway play, a commissioner would feel a tap on the shoulder, and, in the flickering darkness of the theater, would see the tall form of Arthur Hodgkiss or Bill Chapin beckoning him peremptorily to the rear of the theater. One refused to leave his seat; he found himself signing forms on his lap in the third row of a darkened theater. And if some commissioner balked at overruling an underling who had refused, say, to O.K. a Chapin-proposed sewer relocation, his secretary would soon be telling him: "Commissioner Moses is on the line-himself!" And if-as almost never happened—some commissioner remained recalcitrant, the next call his secretary would announce would probably be from the Mayor. Frustration might be piled on frustration; Moses faced them all down. After he had whipped into line behind the vast over-all expressway program—after years of effort that can only be guessed at-Mayor, Governor, Legislature, Board of Estimate, City Council, Federal Bureau of Public Roads, State DPW and The Meat Ax 845

an army of city bureaucrats, after all agreements were signed and the bidding for contracts under way, inflation of unforeseen dimensions raised the bids to levels beyond the state's ability to pay its share. Painstakingly, he worked out and obtained legislative and voter approval for a \$500,000,000 bond issue which allowed him to get many of the expressways under way and even to finish a few. But costs continued to soar. He had underestimated the city's share so drastically that it could not even assume those minor costs that, by law, neither state nor federal government could assume. For years the expressways lay stalled—until the Federal Interstate Highway Act of 1956 allowed the feds to pick up 90 instead of 50 percent. Working through his banking allies, Moses persuaded Congress to include in the Act—despite the fact that it would circumvent its drafters' original intent of creating a tollfree system—clauses allowing roads linked to toll bridges to be included in the system, thus making his expressways eligible. Then, through a dozen ingenious subterfuges, he persuaded the state to use some of its own highway building funds, freed by the reduction in the share of the costs it was to assume, to pick up some of the city costs. There were other minor—but irritating—inconveniences: wars, for example. The Korean conflict was a source of real irritation. Steel was the precious metal to the highway builder, and the National Production Administration was obstinately insisting that available steel should go first to the war effort. Other cities accepted the situation without protest; Moses fired off telegrams to and pulled strings in Washington. Federal officials believed they would placate him by allocating his highways well over 10 percent of all steel available for civilian use, but they didn't know their man. Moses fired his next shot on the front page of The New York Times, charging that the officials were turning civilian defense efforts into a "monstrous joke" by sabotaging construction of arterials needed "to prepare for bombing evacuation, troop and supply movements." When federal officials tried to counter his charges with facts, Moses termed their statements "gobbledygook," the Times editorialized that roads are "essential in wartime . . . [the federal decision] mustn't be the last word"—and New York's allocation was quickly increased by another 10,000 tons. Next it was copper. Another attack, another victory. Then a strike kept the copper he had been allocated in the warehouses. But he intervened—and the warehouse doors opened.

To obtain his precious rights-of-way, Moses dealt with other giant city real estate holders—insurance companies, railroads, banks, the Catholic Church—as if the city were a giant Monopoly board, shuffling properties as casually as if they were playing cards, giving the Catholic Church, for example, space for an addition to a Fordham campus in the Bronx in exchange for an easement in Queens, handing Con Ed half a square block for a new gas storage tank (complete with guarantees of Board of Estimate easements for the concomitant underground pipeline) in exchange for two hundred feet of right-of-way through a Con Ed open storage area. At Randall's Island luncheons he made himself the broker between a dozen disparate interests, reaping, always, the commission in right-of-way that he wanted. At one location

near Fordham Road, for example, the path of the Major Deegan Expressway was blocked by both a housing development being built by the Equitable Life Assurance Society and a 217-foot-tall Con Ed gas storage tank. Negotiations were stalled—until a luncheon. By dessert, in a complicated land exchange, Equitable had been served up even more land for its development, Con Ed had agreed to "rearrange its distribution facilities" to "eliminate the necessity of the tank," and Moses was savoring the taste not only of the necessary right-of-way but of sufficient additional land adjoining it to create a park and playground for the residents of the Equitable development.

Robert Moses didn't merely solve these "physical" problems. He gloried in solving them. A reporter who was permitted to drive around with him on one highway inspection tour saw Moses "mentally readjusting houses as though they were so many toy building blocks." One of the blocks was a three-story factory-Moses turned it around and reset it on the same plot at a different angle. Another was a church—he turned it sideways. Another was an apartment house six stories high, which—with highway officials who had flown in from all over the country watching in awe, most of them expecting the structure to collapse—was inched a hundred yards out of the Van Wyck Expressway right-of-way with the possessions of thirty-five families still inside it. It cost at least as much—and possibly more—to move the building than it would have cost to demolish it, and in later years, Moses was quite frank about why he had decided to move it. "I moved it because everybody said you couldn't do it," he would tell the author. "I'll never do that again, broke a lot of gas mains . . . That was an absolutely crazy stunt, you know." But at the recollection, a broad, genuine grin spread across Moses' face, a grin of achievement and pride. He was overflowing with pride at his construction feats. The reporter painted a picture of a man happy as he played with his toy blocks. When the limousine reached Van Cortlandt Park, the reporter wrote, Moses began chuckling over reminiscences of the attempt by "the bird lovers" to stop him from running the Major Deegan Expressway through a swamp in the park that they had wanted preserved as a bird sanctuary. They had tried to obtain an injunction, he said, "but we just filled in a little faster." During construction of the Brooklyn-Queens Expressway, Moses rented the penthouse floor of the Marguerite Hotel—an old, sedate establishment right next to the expressway's route—and used it as an office. It had two advantages: only a very few people knew of its existence, so he was interrupted by few telephone calls, and he could look down on the construction as he worked. And he spent a lot of time looking down at it, watching the cranes and derricks and earthmoving machines that looked like toys far below him moving about in the giant trench being cut through mile after mile of densely packed houses, a big black figure against the sunset in the late afternoon, like a giant gazing down on the giant road he was molding. "And I'll tell you," says one of the men who spent a lot of time at the old hotel with him, "I never saw RM look happier than he did when he was looking down out of that window."

The Meat Ax 847

It was not the physical problems that were the most difficult to solve, however, but the political.

A technology for solving the physical problems had been perfected, but not the methods and machinery for the creation of large-scale urban public works in a democratic society; the American system of government almost seemed designed to make such creation as difficult as possible.

It is no coincidence that, as Raymond Moley puts it, "from the pyramids of Egypt, the rebuilding of Rome after Nero's fire, to the creation of the great medieval cathedrals . . . all great public works have been somehow associated with autocratic power." It was no accident that most of the world's great roads-ancient and modern alike-had been associated with totalitarian regimes, that it took a great Khan to build the great roads of Asia, a Darius to build the Royal Road across Asia Minor, a Hitler and a Mussolini to build the Autobahnen and autostrade of Europe, that during the four hundred years in which Rome was a republic it built relatively few major roads, its broad highways beginning to march across the known earth only after the decrees calling for their construction began to be sent forth from the Capitol by a Caesar rather than a Senate. Whether or not it is true, as Moley claims, that "pure democracy has neither the imagination, nor the energy, nor the disciplined mentality to create major improvements," it is indisputably true that it is far easier for a totalitarian regime to take the probably unpopular decision to allocate a disproportionate share of its resources to such improvements, far easier for it to mobilize the men necessary to plan and build them; the great highways of antiquity awaited the formation of regimes capable of assigning to their construction great masses of men (Rome's were built in large part by the legions who were to tramp along them); at times, the great highways of the modern age seemed to be awaiting some force capable of assigning to their planning the hundreds of engineers, architects and technicians necessary to plan them. And most important, it is far easier for a totalitarian regime to ignore the wishes of its people, for its power does not derive from the people. Under such a regime it is not necessary for masses of people to be persuaded of an improvement's worth; the persuasion of a single mind is sufficient.

This last point has especial significance for the construction of public works in a city. For in a city such construction requires the eviction of people from their homes. Even when the public agrees in theory that a work is needed, no members of the public want to lose their homes for it. People never want their neighborhood disturbed by it. If it is to be built, they inevitably feel, let it be built somewhere else. A totalitarian regime can ignore such feelings, which is why the great city rebuildings of history—not only Haussmann's of Paris but St. Peterburg's by Peter the Great, and Rome's first by Nero and later by Augustus—have almost invariably been carried out by such regimes, the notable exceptions being cases (such as the great London fire of 1666 or the saturation bombings of the German cities in 1944) in which a monumental catastrophe destroyed so much of a city

that it had no choice but to rebuild—and in which the catastrophe had removed from the scene the people who might have objected.

But Moses was not building under a totalitarian regime. Moses was building under a system in which permission to build could be granted only by officials who derived their power from the people. And, in that light, what was most significant about the Cross-Bronx Expressway was not that seven miles of brick and mortar and steel and iron had to be removed from its path but that seven miles of people had to be removed, removed from homes which in a time of terrible housing crisis in New York were simply irreplaceable. "People said that [the route] was so built up that you'd never get the politicians to say okay," Ernie Clark would later recall, and engineers who had built bigger roads even than Ernie Clark agreed. Farrell and Chapin's legendary Burma Road would symbolize to history the epitome of difficulty in construction. But Chapin understood political as well as engineering problems. Years later, he would recall the feeling that had swept over him when he had stood on Jesup Avenue staring down at that valley in the Bronx packed edge to edge with voters' homes. "I said to myself: 'The [Burma] Road was tough. But that was nothing compared to this son of a bitch." People—the people whose homes stood in the path of all Moses' urban expressways—were the most difficult problem of all.

But Moses solved this problem, too.

Democracy had not solved the problem of building large-scale urban public works, so Moses solved it by ignoring democracy.

Critics who said the Coordinator simply ignored the people in his path oversimplified; he may have wanted to, but political considerations, the considerations that mattered to other public officials, made it impossible for him to do so-at least until after Bill-O had been safely returned to office in 1949, Moses tried to take the people into account—tried hard. It was he who, to persuade apartment dwellers (hitherto uncompensated for eviction since they did not own the land involved) to move, persuaded the Legislature to provide for their reimbursement: \$100 per room and \$100 for moving expenses. Finding that they still balked—for middle- and lowerclass families in New York, no few hundreds of dollars could compensate for the loss of a comfortable apartment they could afford—he even moved a few apartment houses smaller than the one on the Van Wyck. He moved entire blocks of private homes—263 homes on the Van Wyck Expressway alone—where there was room to move them. But along most of his routes, there was no room. And, as even his admirer Jacob Lutsky puts it: "He thought about people. But if it came to a project or people, he'd take the project."

He had the power to do so—to ignore or override the procedures democratic government establishes to govern the planning of public works. Was it mostly dictators who had built great urban public works of the past? In road-building in and around New York, he had a dictator's powers. And he used them.

He enjoyed using them—for using them gave him what was his greatest pleasure: the imposition of his will on other people. One evening, he was

The Meat Ax 849

sitting with Sid Shapiro and several other aides in his limousine parked on a side street in Queens, studying possible locations for the Clearview Expressway. Suddenly there appeared at the end of the street hundreds of citizens bearing torches and a scarecrow effigy labeled, in large letters, ROBERT MOSES. The aides realized that they had happened upon an anti-expressway torchlight rally. The big black car sat at the end of the street unnoticed in the dusk by anyone in the crowd as the effigy was hoisted to a lamppost and set afire. "I didn't dare look at RM," Shapiro recalls. But to his surprise, his boss threw back his head and roared with laughter. And when someone suggested they drive away, RM said no. He wanted to stay for a while. He didn't want to miss a thing. He sat there all through the speeches comparing him to a "dictator," "a Hitler," "a Stalin." And, says Shapiro, "he laughed and laughed. RM really got a kick out of it."

When he replied to protests about the hardships caused by his road-building programs, he generally replied that succeeding generations would be grateful. It was the end that counted, not the means. "You can't make an omelet without breaking eggs." Once, in a speech, he said:

You can draw any kind of picture you like on a clean slate and indulge your every whim in the wilderness in laying out a New Delhi, Canberra or Brasília, but when you operate in an overbuilt metropolis, you have to hack your way with a meat ax.

The metaphor, like most Moses metaphors, was vivid. But it was incomplete. It expressed his philosophy, but it was not philosophy but feelings that dictated Moses' actions. He didn't just feel that he had to swing a meat ax. He loved to swing it.

## 37. One Mile

ROBERT Moses built 627 miles of roads in and around New York City. This is the story of one of those miles.

There is something strange about that mile. It is one of seven that make up the great highway known as the Cross-Bronx Expressway, but the other six, like most of the other miles of Moses' expressways, are—roughly—straight, on a road map a heavy red line slashing inexorably across the delicate crosshatch of streets in the borough's central expanse. There is logic—the ruthless, single-minded logic of the engineer, perhaps, but logic—in that line. When it curves, the curves are shallow, the road hastening to resume its former course. But during that one mile, the road swerves, bulging abruptly and substantially toward the north.

A closer look does not explain that bulge. It makes it not less puzzling but more. Detailed maps show the entire area blanketed with rectangles that represent city blocks—except for one open space, running east-west, parallel to the expressway, that represents an unusually wide avenue, and, directly adjacent to and below that open space, another, colored green, that represents a 148-acre park. And these empty spaces lie directly in the path that the expressway would have followed had it just continued on its former straight course. All it had to do to take advantage of that corridor—to utilize for right-of-way the avenue roadbed, together with a very narrow strip at the very top edge of the park—was to keep on the way it had been going.

If the location of that one mile of expressway was puzzling on maps when Moses first proposed it in 1946, it was more puzzling in reality. For while the maps showed rectangles, reality was what was on those rectangles: apartment houses lined up rank upon rank, a solid mile of apartment houses, fifty-four of them, fifty-four structures of brick and steel and mortar piled fifty, sixty and seventy feet high and each housing thirty or forty or fifty families. Walk through the area, the proposed route of the expressway and the blocks around it, and it was impossible not to see that keeping the road straight would hurt little. Only six small buildings—dilapidated brownstone tenements—would have to be torn down. Most of the right-of-way—the park and the avenue—was already in the city's possession. While turning the road to the north would destroy hundreds upon hundreds of homes, homes in which lived thousands of men, women and children.\* And

<sup>\*</sup> The only figures available are Moses'. He said his route would, during the one-mile stretch, require the demolition of 1,530 apartments housing 5,000 persons. These figures are almost certainly far too low.

it would cost millions upon millions of dollars—in condemnation costs for fifty-four apartment houses, in demolition costs for the tearing down of those buildings, in tax revenue that would otherwise be paid, year after year for generations, into city coffers by the buildings' owners.

If the bulge in the expressway was puzzling to anyone studying it, it was tragic to those who didn't have to study it, to the people who lived in or near that right-of-way. For to these people, the fifty-four apartment buildings that would have to be destroyed were not just buildings but homes. That mile of buildings was the very heart of the neighborhood in which they lived, a section of the Bronx known as "East Tremont."

The people of East Tremont did not have much. Refugees or the children of refugees from the little shtetls in the Pale of Settlement and from the ghettos of Eastern Europe, the Jews who at the turn of the century had fled the pogroms and the wrath of the Tsars, they had first settled in America on the Lower East Side. The Lower East Side had become a place to which they were tied by family and friends and language and religion and a sense of belonging-but from whose damp and squalid tenements they had ached to escape, if not for their own sake then for the sake of their children, whose every cough brought dread to parents who knew all too well why the streets in which they lived were called "lung blocks." Jews from the Lower East Side who made enough money to escape in style escaped to "the Jewish half-mile" of Central Park West, "the Golden Ghetto." Jews who made enough money to escape—but not that much—escaped to the Grand Concourse. The Jews of East Tremont were luckier than those who had to stay behind on the Lower East Side, but not so lucky as the Grand Concourse Jews. They were not the milliners or the cloak-and-suiters but the pressers, finishers and cutters who worked in the bare workrooms behind the ornate showrooms of the garment district. They were a long way from being rich, and their neighborhood proved it. There were no elevators in most of the five- and six-story buildings into which they began to flood (stopping at 182nd Street, southern border of an Italian neighborhood, as abruptly as if a fence had stood there) after the extension of the IRT elevated line just before World War I linked East Tremont to the downtown garment district. By the end of World War II, the buildings' galvanized iron pipes were corroding, causing leaks and drops in water pressure; a few still had bathtubs that sat up on legs. With some 60,000 persons living along its narrow streets, its "population density"—441 persons "per residential acre"—was considered "undesirable" by social scientists. "In moving through East Tremont one senses a feeling of crowdedness brought on by the lack of open space and close location of buildings," one wrote.

But the neighborhood provided its residents with things that were important to them.

Transportation was important to the fathers who worked downtown, and the neighborhood had good transportation. With the Third Avenue El and the IRT White Plains Road line running right through it, it was only a few easy blocks from anywhere in East Tremont to a subway that took you right down to the garment district.

Jobs were important to the fathers who didn't work downtown, and the neighborhood had jobs available—good jobs by East Tremont standards—in a miniature garment and upholstery manufacturing district that had sprung up around Park Avenue, just ten minutes away.

Shopping was important to the mothers who stayed home and took care of the kids, and the neighborhood had good shopping. East Tremont Avenue, which ran conveniently right across its center, was a bright, bustling mile of bakeries which didn't bother advertising that they baked only with butter because all of them did, of groceries where your order was sliced and measured out and weighed ("You didn't get everything in packages like you do now"), of kosher butcher shops ("We weren't, but I bought kosher for my mother's sake. And it's the kind of meat you know in the pot"), of mamaand-papa candy stores, of delicatessens, filled always with the pungent aroma from the pickel barrels, whose owners got up before dawn to mix olives and pimentos and chives—or dates or caviar—into manufactured cream cheese to create individualized loaves they named "Paradise" or "Dark Jewel." You might go to Alexander's on the Concourse for clothes, but you didn't have to; Janowitz's on Tremont was just as good. You didn't even have to leave the neighborhood for a dress for a real "fancy" affair; "they had high-priced stores on Tremont, too; Held's [at the intersection of Southern Boulevard] was very expensive—as good as any store on the Concourse." If you didn't feel like going out, the "better" stores on Marmion delivered, and the stuff they delivered was just as good as if you had been there to feel it yourself, and for many items you didn't even have to pick up the telephone: a few pushcart peddlers still roamed the streets of East Tremont as if to remind the residents of where they had come from.

Parks were important to the mothers, too. There were no playgrounds in the neighborhood—mothers' delegations had attempted in the past to talk to the Park Department about the situation but Moses' aides had never even deigned to grant them an appointment—but running down its length was Southern Boulevard, whose broad center mall had grass plots plenty big enough for little children to play on, and surrounded by benches so mothers could keep their eyes on them to make sure they didn't run into the street. And the southwestern border of the neighborhood was Crotona Park. "Beautiful. Lovely. Playgrounds. There was a lake—Indian Lake. Nice. We used to sit there—under the trees. We raised our children in Crotona Park." Social scientists, who had never lived on the Lower East Side, might consider East Tremont "crowded." The people of East Tremont, who had, considered it open and airy, wonderfully open and airy.

Thanks to Crotona Park, young adults as well as children didn't have to leave the neighborhood for recreation. "It was a great park. Twenty tennis courts right there. Where you could walk to them. Baseball diamonds, magnificent playgrounds with baskets—three-man games would be going on all weekend, you know. A big swimming pool that Moses had built during the Depression. Indian Lake. And kept really clean then, you know. And safe. Sure people walked there at night. You never worried then. A great park!" And thanks to Tremont Avenue, you didn't have to leave the neighborhood

for entertainment. On the avenue's one mile in the neighborhood were seven movie houses. The Bronx Zoo—with its animals roaming behind moats instead of bars—was one stop away on the White Plains El, the New York Botanical Garden was three; you could walk with your children to those two perfect places to spend a Sunday with the kids.

The neighborhood provided the things that were important to its old people. "The benches over on Southern Boulevard were beautiful, gorgeous. On sunny days, you could always find the girls over there, just chatting, you know, and having a good time. On weekends, they'd be so crowded, you couldn't sit down." Old men would sit there in the sun playing chess with men with whom they had been playing chess for thirty years. (Kibitzers had to stand.) There was a place to play chess—or cards—or just sit and talk over a cup of coffee in cold weather, too. The "Y"—the East Tremont Young Men's Hebrew Association—listed more than four hundred "senior citizens" on its active membership roles. "There was no reason for an older person to be lonely in that neighborhood," says one who lived there.

"You knew where your kids were at night, too," says one mother. They were at the Y, which had 1,700 families as members. "There were so many programs out of the Y for kids. At night—before—you never used to know where they were, what they were doing. You always used to hear about gangs—you had to worry, was he with a gang? Now you always knew where your kids were at night." Children who lived on Central Park West might be sent to expensive day camps and, when they got older, to sleep-away camps in the Adirondacks; the Y provided inexpensive day-camp and sleep-away programs—the largest run by any single institution in New York City—for children who lived on Crotona Park North.

Schools were terribly important to the people of East Tremont (a quarter of a century after their kids had graduated, some parents could still remember the precise student-teacher ratio in their classes), and East Tremont had good schools. They were old—PS 44, at 176th and Prospect, the neighborhood's junior high school, had been built in 1901, and the city said there was simply no money to replace it—but there were no double sessions and standards were high. PS 67, off Southern Boulevard, was the first elementary school in New York to offer lessons—and supply instruments—for any child who wanted to learn to play the violin. And all the schools were close, close enough for kids to walk to.

To the people of East Tremont, East Tremont was family. In its bricks were generations. Raised in the neighborhood, Lillian Roberts married a boy from the neighborhood. They made their first apartment in a supposedly "nicer" section over on Fordham Road. When their first child was born, they moved back. "Why? Because my husband had—oh, we both had, I guess—nostalgic feelings. The reason we moved back to that area was that we loved it so much." Lillian and her husband moved into an apartment on the third floor of a walkup at 845 West 176th Street. On the first floor of that building, Lillian's mother, Ida Rozofsky, born in Russia, was living—with Lillian's grandmother. East Tremont was friends—real friends, not just acquaintances you happened to meet because they took their children to the

same playground to which you took your children, or because they belonged to the same PTA as you, but friends whom you had grown up with and were going to grow old with, boys and girls-turned men and women-who knew and understood you and whom you knew and understood. Says Mrs. Helen Lazarcheck: "Everyone seemed to help one another. If there was trouble, everyone would do something for you if they could. They were always coming in and sharing what they had. If they were going away, they would give you food that you could use and they couldn't." East Tremont was a feeling of being known—in the streets and in the stores, where shopkeepers like big gruff Saul Janowitz, "the Mayor of East Tremont," had been selling to neighborhood families for decades. (The owner of one Crotona Avenue vegetable stand had been selling vegetables in Tremont when it still largely consisted of the three large "mount" farming estates-Mount Hope, Mount Eden and Fairmount-that had given "Tremont" its name; he had gone from house to house with a horse and wagon then.) East Tremont was a sense of continuity, of warmth, of the security that comes—and only comes with a sense of belonging. Even families that could afford to have their "simchas"—weddings and bar mitzvahs—in the Concourse Plaza, generally had them instead in the neighborhood's little, somewhat shabby, social halls. No one would have called East Tremont a united community. It possessed, one study observed, a "myriad of social systems covering religious Landsmannschaft groups, fraternal, educational, political and fund-raising groups" engaged in "a constant and shrill competition for loyalty," a competition which was not even resolved in the two areas where East Tremont might have been expected to be solid: politics and religion. FDR's hold was absolute—but only so far as FDR was concerned; in nonpresidential elections, men who once, long ago, had preached from soapboxes were loyal to an older faith: Socialist, Communist, American Labor and Progressive parties could all count on substantial votes in East Tremont. "In East Tremont," the study noted, "the Yiddishist and Hebraist each had his following with a supporting system of cultural clubs, bookstores, debating societies, etc." The neighborhood's seven synagogues were constantly competing for members and prestige. East Tremont may have been a loud community, a shrill community, a materialistic, money-conscious community. But it was a community.

Robert Moses didn't think much of the apartments of East Tremont. The buildings were old, the plumbing was bad, most of them didn't even have elevators—he referred to them as "tenements," as "walkups" or, if those nouns didn't seem to be eliciting the desired horror from his listeners, as "slums." But Moses had never lived on the Lower East Side.

"Tenements?" says Mrs. Silverman. "Listen, I lived in tenements. These were not tenements at all." If the apartments' plumbing was not modern, neither—happily—was the size of their rooms, large—huge by postwar standards—and high-ceilinged. They had foyers—real foyers, L-shaped some of them—as big as rooms themselves. "I served dinner for eighteen in my foyer, that's how big it was," Mrs. Silverman says. They had dining rooms, not dining areas. The apartment houses might not have had elevators, but

they had—almost all of them—courtyards, and there were enough small frame houses interspersed among them to let sunlight in. "Those apartments were light and airy and cheerful," Mrs. Roberts says. Sunken living rooms were not uncommon, the sills on the windows were broad and wood, the walls were not postwar plasterboard but thick and solid, the lines where walls met ceiling were softened with ornamental moldings. "I had what they called four rooms," says Mrs. Silverman. "Besides that big foyer, we had a kitchen with a dining area, two bedrooms—of course, they each had a bathroom, what else?—and a living room; I don't know how big the living room was, but it was a real nice size. When my girlfriend's daughter was engaged, I served dinner for sixty in the living room and foyer, and it wasn't even crowded, that's how big it was. We all loved our apartments."

They loved them—and they could afford them. If the water pressure was low, so was the rent, scaled originally to their ability to pay by landlords who could afford to do so because they had bought land in East Tremont for as little as two dollars per square foot, and kept at that scale by city-instituted rent control. Mrs. Silverman was paying \$100 per month for her four rooms, and that was high. Lillian Roberts was paying \$62 for her four rooms. Cele Sherman had a six-room apartment—three bedrooms, a living room, kitchen with large dining area, and a foyer with a recess large enough to be a full-scale dining room—and for that apartment Mrs. Sherman was paying \$69.

The rents had to be reasonable for these people to afford them. Weekly take-home pay in the garment industry—the pay on which most of these people lived—averaged well under a hundred dollars. And while the generally accepted rule of thumb held that a family could afford to pay a monthly rent equal to about a week's income, this was not a rule accepted by the families of East Tremont, who had their own rule of thumb: that when you had children, you sent them to college, no matter how much scrimping and saving you had to do. The rents they were paying—low as they were—were, in all too many cases, the absolute maximum they could afford. They lived—many of them—on the thin edge of disaster. "Clara Wertel—her husband got sick so they had to move out," recalls Mrs. Sherman. "And Mrs. Aronofsky—her husband died. Same thing. One thing could do it, and so fast. Boom, and you were gone. Your friends never saw you again."

Happy therefore to have those apartments, the people of East Tremont were made desperate to keep them by the harsh realities of New York's housing crisis. Finding an apartment at any price was difficult in a city whose postwar vacancy rate was an habitual I percent. Finding an apartment at a rent they could afford to pay, in a neighborhood they felt they could live in, was all but impossible. They knew how difficult it was to obtain an apartment in East Tremont; one could wait for years even after one had promised a "schmear" to any super who let you know about an upcoming vacancy. Similar "middle-class" Jewish neighborhoods with low rents in which they would be comfortable—Washington Heights, for example—were rented up just as solidly. Public housing, overwhelmingly inhabited by Negroes and Puerto Ricans, was unthinkable even for those relatively few East Tremont

families whose income was low enough to qualify; no one, moreover, wanted "the stigma" involved in having everyone know you qualified. Huge as was the low-income housing program, moreover, the waiting list was huger still. They had no hope of ever being able to afford the apartments in the new buildings being built in the Jewish neighborhoods around Pelham Parkway, where a "two-bedroom" might rent for \$350 per month. As for living in one's own home on Long Island or in Westchester, that was a dream reserved for the children they were sending to college. The apartments generally available in New York for the \$75 or \$80 per month they could afford were apartments in the black or Puerto Rican slums—or back on the Lower East Side.

If it was desperately important for the people who lived in East Tremont that their neighborhood be saved, it was also desperately important for the city of which that neighborhood was a part. For a hundred years, East Tremont had been performing a vital function for New York, as an "urbanizing" area, a place in which families from European farms or small villages could become accustomed to living in a city, where a common consciousness began to evolve, a man from County Cork learning that the families next door from County Mayo weren't really such a bad sort, a housewife from a Latvian shtetl learning that the woman she met at the market who came from the Kiev ghetto was someone she could talk with-a consciousness that translated itself into a feeling of belonging in the city, and (more quickly in the case of the Irish and Italians than the Jews, who were always arguing among themselves) into political organizations that gave them a share of power in the city. It had been a "staging area," a place where newcomers who had lived previously in America only in slums, successful at last in their struggle to find a decent place to live, could regroup, and begin to devote their energies to consolidating their small gains and giving their children the education that would enable them to move onward and upward —to better, more "fashionable" areas. In 1848, it was Rhineland farmers fleeing revolutionary chaos; during the 1870's, it was the Irish, fleeing famine or the Lower East Side. Just after the turn of the century, with the more prosperous among the Irish moving on to Fordham or University Heights or Riverdale, it was the Italians, many of them just off the boat, who followed the new IRT subway to what was then the end of the line and seeped westward to fill up all of the "Belmont" area north of 182nd Street. Then it was the Jews, filling up the area between Belmont and Crotona Park. And East Tremont—with the exception of Belmont, which the Italians held for their own—had been an integrated urbanizing and staging area. All the Germans didn't move out when the Irish arrived, all the Irish didn't move out when the Jews arrived—in 1950, there may have been 44,000 Jews in the area south of Belmont, but there were also about 5,000 Irishmen and about 5,000 Germans and Slavs.

There was ample proof in 1950 that East Tremont was serving just as

efficiently as an urbanizing and staging area—an integrated urbanizing staging area—for the city's newest immigrants.

In some other areas of the city, the approach of Negroes and Puerto Ricans—part of the great wave of dark-skinned immigrants who had begun flooding into the city just before World War II, a flood that had mounted every year since—had meant flight. But not in East Tremont.

Morrisania, just on the other—south—side of Crotona Park, had become a predominantly Negro slum about 1930. But the people of East Tremont had not fled.

Since about 1940, the less desirable tenements in the shadow of the noisy El along Third Avenue—right on the neighborhood's western edge—had been filled with Negroes. But the neighborhood had held.

The same spur that had roweled the Jews into East Tremont—the hope of a better life for their children—had roweled Negroes there, right into the neighborhood itself. The first was Charles Smith, traffic manager for a fabric company, whose wife, a white Jewish girl who kept a strictly kosher home in Harlem, said to him in 1929, when their son turned six: "Over my dead body my son is going to the 135th Street School." "Negroes in '30 or '31 who came up to the Bronx, they stopped at Prospect [in Morrisania]," Smith recalls. "We didn't want no Prospect. We came all the way up to Tremont." For a while, Smith's son was the only Negro child in PS 44 (then an elementary school), but soon more Negroes-doctors, lawyers, working men whose wives also worked to help make their families a better life—were following them into the neighborhood, some purchasing private homes, some moving into apartments. By 1933, there were seven Negro families in Elsmere Gardens, one of the neighborhood's "best" buildings. There were quite a few along Crotona Park North, the avenue facing the park that was considered East Tremont's most desirable location. But East Tremont took into its bosom the newcomers with black faces as it had taken in newcomers with white faces.

"People here were good with us," Smith says. And they were good with the pioneers who followed Smith. There were Negro women on the executive committee of neighborhood organizations. "My daughter used to walk to school with two Negro boys," says Cele Cohen. "We used to have Negro children over for dinner, and they used to have my daughter over. To tell the truth, we didn't think that way—you know, the way it is now—then."

After the war, the influx of Negroes into East Tremont increased. An influx of Puerto Ricans began. But the influx stayed slow and no whites left because of it. By 1950, there were approximately 11,000 nonwhites in East Tremont, 18 percent of the neighborhood's 60,000 population. And the neighborhood was still holding just fine. Standing astride its whole southern border, Crotona Park provided East Tremont with a natural shield, a comfortably wide—and, at that time, heavily policed—dike against the decay flooding up from the south. Its brunt broken on the park's slopes, the decay oozed around its sides, searching for an opening into the clean streets beyond, but against it the park flung upward, at both its northern

corners, extensions that were protecting arms. And there were social, perhaps even moral, reasons as well as physical for the neighborhood to hold. The Jews of East Tremont—liberals, utopianists, socialists, fiery radical labor unionists, men and women who had held on to their ideals even under the lash and the knout, and the children of those men and women—said they believed in the equality of men, including those with darker skins than they. One could argue about how deep that belief really ran, but in 1952 they certainly acted as if they meant it. The neighborhood was still the neighborhood. No one felt the need to move out of it just because a few more Negroes were moving in.

But the strongest reasons were economic. Even if they had wanted to move out, the people of East Tremont couldn't afford to. In the 1970's, it would become a cliché to say that a neighborhood like East Tremont couldn't hold. But that cliché ignored the reality of rents that people could afford, and their inability to find such rents anywhere else. The influx of impoverished Negroes and Puerto Ricans might have been steadily increasing in 1952. The pressures on the neighborhood might have been growing stronger and stronger. But so were the economic realities that had kept it solid. Decent housing at affordable rents was becoming steadily scarcer. The income of East Tremont's older residents, now beginning to retire on inadequate pensions and social security, was falling.

In 1951, with the nonwhite population of East Tremont already substantial and clearly going to increase further, the Association of Young Men's and Young Women's Hebrew Associations of New York—considering building a new Y to replace the Clinton Avenue building—had decided to determine whether or not the investment would be worthwhile, and had conducted the most detailed survey of East Tremont residents ever made. Its conclusions were clear. Negroes might come. The Jews would stay. For more than twenty years, the pressure of urban decay and blight had been pressing on the neighborhood, but for twenty years, the neighborhood had held.

Leave it alone, and it would continue to hold.

By 1952 there were 775,516 Negroes and nonwhite Spanish-speaking people—a full 10 percent of New York's residents—in the city. And, as the Irish had done a century before and the Italians and Eastern European Jews half a century before, these immigrants from the South and from the Caribbean were continuing to pour into the city by the thousands and tens of thousands. For its own sake as well as theirs—if the city was to prosper or if it was even to endure as a place in which people, white or nonwhite, would want to live-it would have to offer the newcomers the same chance it had offered their forerunners: would have to absorb them by providing neighborhoods in which they could learn to cope with urban life, in which they could consolidate the gains that had enabled them to move out of the real slums in the first place and prepare for an assault on even better places to live, neighborhoods which would serve as urbanizing and staging areas. And it would have to provide urbanizing and staging areas that were integrated. If it did not, if these newcomers to New York were forced to live in ghettos, compounded with their resentment at their inability

to provide a decent place for their children to live would be an alienation from the society which had isolated them. These people—who were making up more and more of the city—would be an alienated, hostile, hating force within it.

If the city was going to endure, neighborhoods like East Tremont were going to have to endure.

And if it was left alone, this neighborhood would.

The letters came on December 4, 1952.

For years, East Tremont had been vaguely aware that one of Robert Moses' highways was going to run through the neighborhood, that part of it was already under construction over in the East Bronx somewhere. But there had been no hard facts available, and, as Mrs. Lillian Edelstein says, "it had gone on so long, and you keep hearing and hearing and nothing happens, and after a while it doesn't mean anything to you." When they thought about it—if they thought about it—they were sure it would run along the edge of Crotona Park; "I mean, it was so obvious—you just figured it was going to go there," Mrs. Edelstein says. "It was in the wind for a long time that he was going to come through the apartment houses. But we just didn't believe it."

But on December 4, a Tuesday, the letters were there—in hundreds of mailboxes, letters signed by "Robert Moses, City Construction Coordinator," informing each recipient that the building in which he or she lived was in the right-of-way of the Cross-Bronx Expressway, that it would be condemned by the city and torn down—and that they had ninety days to move.

"It was like the floor opened up underneath your feet," Mrs. Edelstein says. "There was no warning. We just got it in the mail. Everybody on the street got it the same day. A notice. We had ninety days to get out. I remember it was a nice day, too, for that time of year. We all stood outside—'Did you get the letter?' 'Did you get the letter?' And 'What does it mean?' Three months to get out! Some people had gone out early and hadn't heard. We told them. And then we all waited for our husbands to come home. And my husband said, 'You can't do anything.'"

The ninety-day figure was meaningless, of course. At the time Moses sent out his letter the money to build the East Tremont stretch of the expressway was nowhere in sight; months, if not years, would be required to obtain it. The city had not even acquired title to the property yet, and there were months of procedures necessary before it could do so—and before demolition could begin. Privately, Moses was figuring not on three but eighteen months to clear the area. The use of the ninety-day figure was a scare tactic—"to shake 'em up a little and get 'em moving," a Moses aide explains.

The tactic accomplished its purpose. As the full implication of their position began to dawn on the tenants, they became very scared indeed.

"The first thing you do, naturally, you look to see what else is available," says Mrs. Roberts. "My husband and I looked in the papers and asked

around. And when we first found out the type of rents!" Says another East Tremont housewife: "We had been thinking before—for years—about moving to Pelham Parkway—you know, not really seriously, but just talking about it from time to time. Pelham Parkway was a very, very nice area. But now we went over there. My God! On Pelham Parkway they wanted a hundred dollars a room."

Priced out of other "decent" neighborhoods, they turned to a task they knew before they started was almost hopeless: finding a new apartment in their own. The Y was inundated with requests for information about local vacancies. "Occasionally we'd hear about one," says Y director Barney Lambert. "But this was fifteen hundred families that needed them."

A subsequent notice from Moses said that "tenant relocation operations" were already planned, and promised that "we shall cooperate in every possible way so as to avoid hardships and inconveniences." On the "completed," easterly "Section 3" of the expressway, he stated, tenant relocation had "proceeded in an orderly manner."

This notice proclaimed that its purpose was reassurance: "We are issuing this . . . honest schedule for acquisition," because "most Americans prefer to be told just what is in store for them. They dislike uncertainty." Its result was panic. For East Tremont had formed a tenants' committee and, heading over to Section 3, it found out what "orderly tenant relocation operations" meant when carried out under the direction of Robert Moses.

The expressway had been completed over part of Section 3. A great swath of concrete, 225 feet wide, grayish white, unmarked by the treads of a single car, had been laid neatly to within about two and a half miles of East Tremont. But those two and a half miles were a scene of desolation and destruction such as the committee members had never seen. Some of the right-of-way had been cleared: where once apartment buildings or private homes had stood were now hills of rubble, decorated with ripped-open bags of rotting garbage that had been flung atop them. Some of the right-ofway was being cleared; giant wreckers' balls thudded into walls; mammoth cranes snarled and grumbled over the ruins, picking out their insides. Huge bulldozers and earth-moving machines rumbled over the rubble; a small army of grime-covered demolition workers pounded and pried and shoveled. A thick layer of gritty soot made the very air feel dirty. ("I took out a handkerchief and wiped my forehead, and it came away black-absolutely black," Mrs. Edelstein says.) Over the rumble of the bulldozers came the staccato, machine-gun-like banging of jackhammers and, occasionally, the dull concussion of an exploding dynamite charge. And in the midst of this landscape of destruction, a handful of apartment buildings still stood. From the outside, the East Tremont committee saw that most of their windows were boarded up. Going inside, they found the lobbies littered with shards of broken glass that once had been big ornamental mirrors and with the stuffings from the armchairs and sofas that had once been their decoration, and smeared with excrement not only animal but human, from winos and junkies who slept in them at night. Stumbling upstairs, the committee found the doors to many apartments ajar; through them, they could see empty rooms,

walls ripped open by vandals who had torn the plumbing pipes out of them. Other doors, however, were closed and locked; on them, especially around the keyholes, were scratches and gouges that showed where someone had tried to break through them. And behind these doors the committee found people, not winos but respectable Irish or Jewish families like themselves.

Some of the apartments were furnished, nicely, for the families living in them were the families who had always lived in them. In others, the families were living out of suitcases, and the only decorations were cheap curtains placed on the windows in the hope that proof that someone was living behind them would deter vandals from breaking them as they broke the windows of unoccupied apartments. And the horrified East Tremont housewives heard the housewives in these apartments inform them that they were living there only temporarily, that they had been moved into them "by the city" when their old homes were demolished and that they expected to be moved out of them-into other temporary quarters-when it came time for the city to demolish them. The expressway had pushed up to the very wall of one apartment building, concrete bellying right up to the brick. Going inside, the committee found one family—a middle-aged couple with two children—who had been moved into the building only a few weeks before, and who were obviously going to have to be moved out of it in another few weeks. Standing shivering in cold rooms—for in most of the remaining apartment buildings in Section 3 there was of course no heat—the committee from East Tremont heard women-respectable housewives like themselves, women who had always been proud of the homes they made for their families-state that they had been shunted ahead of the path of the expressway over and over again, forced to move—"like gypsies," one said—from one condenined building to another, each one further along the expressway's route, for years. Disbelieving, the committee heard the topper: these dispossessed families were forced to pay rent for their heatless hovels, and each time they were moved they were hit with a 15 percent rent increase.

Section 3 had received the same assurances that Moses was now making to Section 2, they said—back in 1946, when the city had taken title to that section. "The city" had even set up a Tenant Relocation Bureau-supposedly to find them new, comparable living quarters. They were still living in Section 3 because the Tenant Relocation Bureau (an agency closely allied with Moses) had not found them such quarters. The only apartments she had been shown were apartments "not fit for rats," one bitter, middleaged housewife said. And the rents asked for those apartments had been double what she had been paying for a nice, two-bedroom apartmentdouble what she could afford. One elderly widow, one of three tenants left in a twenty-family apartment house, had been ordered to put her furniture in storage and move into a single furnished room. She was desperately holding on to the apartment in the hope of something better because her son, an Air Force flier in Korea, was expected home soon. When he had left her, he had had a home, she said. "He has a right to expect a home" when he gets back, too.

The Post had inquired about tenant relocation in Section 3. Moses had

replied: "None of the families living in the path of the Cross-Bronx Express-way has been turned into the street. The city, through its Real Estate Bureau, has treated every family involved in a considerate, humane manner." From the tenants still living in Section 3—and from families who had moved out—the East Tremont committee heard about the Real Estate Bureau (another agency closely allied with Moses).

When you first went to the office the Bureau had set up at 1 Hugh Grant Circle, the committee learned, you were told that you had better try to get an apartment yourself. As an inducement to do so—and thus save the Bureau any work at all—you were offered \$200 per room, little more than enough to cover moving expenses.

When you returned to the office and said you had been unable to find one that you were willing to live in and that you could afford, the Bureau's first reaction was to tell you that there was nothing more it could do, implying it had washed its hands of your case entirely, and leaving you with a feeling that there was no help available for you from anyone in the city government. If you persisted, and insisted on being shown other apartments, you would be taken—eventually—to inspect, along with other people who had insisted, "comparable" apartments. Apartments that were indeed comparable—and you had to be one of a lucky few to be shown any of those, anyway—bore rents three and four times those you were currently paying. And there were hardly any of those available, anyway. Most of the apartments you were shown were ancient, filthy, cold, dark tenement and slum warrens.

When, in desperation, driven to willingness to accept the "stigma," you asked if "the city" which was destroying your home could not give you another one in one of its public housing projects, you were told that there were tens of thousands of people ahead of you on the waiting list; one resident of the condemned buildings in Section 3 said she had been on the list for six years.

And what if you tried to hold out, to insist on the comparable apartment that the city had promised you? When the time came, the city's Bureau had methods for discouraging you. It would set a deadline, and inform you that the \$200 per room they were offering for moving expenses would be reduced to \$100 if you did not get out by that date. Then, if you still had not moved, they might set another deadline—on which the amount would be reduced to \$50, or to nothing. Then there was the barrage of threatening notices and directives, designed to make you feel that you might return home one day to find your belongings out on the street. One, sent out in 1949, told the recipients that the city required their premises "for the immediate purpose of demolishing. . . . You will please take further notice that upon your failure to remove from the premises within the time specified legal processes will be instituted to recover possession of the premises." When you protested -when you formed a committee to protest; yes, the DP's of Section 3 said, they had formed committees, too-all protests were referred to Moses, and Moses would never even reply to them. Insisting did no good. After interviewing the tenants left in Section 3, Mrs. Edelstein reported that "they knew of no one who was relocated by Mr. Moses." Some 325 tenants had

moved out—been forced out—of the area by his tactics. But when the committee from East Tremont arrived in 1952—six years after "orderly tenant relocation operations" had begun—there were still living in those doomed, half-empty hulks in the expressway's path no fewer than 250. It was no wonder that when Mrs. Edelstein reported the results of the committee's investigation at a neighborhood mass meeting, they "were received as a nightmare."

But East Tremont's panic was soon replaced by hope.

The hope was based on faith in Robert Moses, or, more accurately, in the Moses mystique. East Tremont's pious Jews still held the campaign of 1934 against him—"I hated him since the time he said he wasn't Jewish," one says—but they still believed in his image as a man above politics and bureaucrats. Believing in that image, the people of East Tremont were sure that if they could only present Moses with an alternate route through their neighborhood that was truly better than the route he had chosen, he would accept it. And it did not take them very long to find out that such a route was indeed available.

Bronx Borough President James J. Lyons; Lyons' chief engineer, Moses' old Planning Commission ally Arthur V. Sheridan; and Sheridan's veteran aides had all been in on the laying out of the route Moses had chosen. But when the East Tremont committee asked for an appointment with Lyons, Lyons aide Charles F. Rodriguez recalls, "Lyons fobbed them off to Sheridan, and Sheridan fobbed them off to someone else"—and the someone else happened to be a recent addition to the staff named Edward J. Flanagan, who was, Rodriguez admits, "a capable engineer" but who had never, during a long engineering career, been associated with Moses and who was "very cocksure of himself" (by which Rodriguez apparently means he was not afraid to say what he thought). And when the housewives mentioned the possibility of an alternate route, Flanagan, without letting them finish, said of course there was, took out a pen, said, "There's no reason the route couldn't go this way," and sketched on a map before him the route through Crotona Park that was precisely what they had had in mind.

Flanagan was silenced—no one from East Tremont ever got an appointment with him again—but he had given the housewives conviction that the alternate route was feasible. The Bronx County Chapter of the New York State Society of Professional Engineers agreed to make a formal study of it. And one member of the society had enough experience with large-scale highway construction to do so—experience garnered working, indirectly, for Robert Moses. Bernard Weiner, a refugee with a heavy accent, was the brilliant engineer who, after working during the 1920's on the Westchester parkway system, had gone to work for Madigan-Hyland and designed, among other Moses projects, all the concrete bridges on the Circumferential Parkway—although he could not pronounce "Circumferential"—and the revolutionary three-span skew frame interchange that carries the Whitestone Expressway and Grand Central Parkway across each other in Queens.

Then his independent outlook—he kept insisting that if Moses did not increase the grades on the Circumferential, it was going to flood in heavy rains—got him dropped from the team. Weiner, who had found it impossible, despite his experience and acknowledged brilliance, to get a good job since, had learned the price of opposing Moses, and he was not willing to pay it in full any more, but he was willing to pay part of it. When the Bronx Chapter asked him to do studies of the alternate route, he agreed only "on condition that I would be anonymous" (another engineer's name was signed to them), but he did do them—with his usual thoroughness, drawing up not just a sketch but a complete engineering study that demonstrated that the route through the park was not only feasible but met every federal and state standard for expressway design.

The arguments in favor of the park route were clear. By making only a gentle alteration in the road's route—swinging it just two blocks (one block in some places) to the south, 1,530 apartments would be saved at no cost to anyone: the road would not be made longer, its curves would not be made sharper—its efficiency as a traffic-moving device would not be harmed in the least. "We were happy then," recalls Lillian Edelstein. "We had been worried, but when we found there was a feasible alternate route, we figured we were in business." The arguments in favor of the alternate route were so clear. Believing in the myth of Moses, the housewives of East Tremont were sure he would accept them. And it wasn't until they tried to present them to him that panic set in again. For neither he nor any of his aides would even listen to those arguments. There would be no point in any meeting, Moses' office told Mrs. Edelstein when she telephoned after letters and telegrams had gone unanswered. The Coordinator had already decided on the route. It would not be changed.

Even then, East Tremont felt it had recourse. "I mean, we felt that Robert Moses might be powerful, but he wasn't the final say, was he?" says Mrs. Edelstein. Most of the money for the expressway was coming from the federal government. In some vague way they didn't understand, the state was

involved, too. They had elected officials in the city to represent their views. The informal tenants' committee had by now become a formal group: ETNA, the East Tremont Neighborhood Association. And ETNA had found a leader.

Sam Edelstein's wife Lillian had never led anything. Ask her to describe herself and she says, "I was just a housewife"—and that was what she was, at thirty-nine a strikingly handsome one. But Lillian Edelstein had a big stake in the fight. Not only would she lose her apartment—which she loved and whose \$56 rent she could afford even on the \$75 per week Sam brought home from his job as a blocker of women's hats-if Moses' route was chosen, but her mother and her sister would lose their apartments, too: they all lived at 867 East 176th Street, Lillian in 2F, her sister in 3F, her mother in 3G. It was important to Lillian Edelstein that she be close to her mother. Her father had died just a little more than a year before, leaving Anna Cohen, born in Russia and able to speak English only haltingly, alone. It was all right as long as her children were close by. "But what if we were separated? What would Mom do?" And it was wonderful that she could be close to her sister-and to all the East Tremont girls with whom she had grown up. Her younger daughter, Janet, was only five, but her older girl, Carol, was fifteen and a junior at Roosevelt High School, and when she heard she might have to leave all her friends, she began to cry. "I was fighting for my home," Lillian Edelstein says. "And my mother. And sister. And daughter. I had a lot to fight for." In fighting she displayed not only energy and determination but an indefinable quality of command. Soon ETNA was turning to her for leadership, and she was providing it. She organized mass meetings and rallies and invited East Tremont's elected officials to them, and, refusing to be turned away by secretaries and assistants, secured appointments to talk to them in person.

And their reaction was encouraging. East Tremont's congressman, Isidore Dollinger, pledged his support. East Tremont's legislators, State Senator Jacob H. Gilbert and Assemblyman Walter H. Gladwin, pledged theirs. Most encouraging of all was the reaction of the city officials who would play the most direct role, not only of East Tremont's councilman, Bertha Schwartz, but of higher-ups, men who to these housewives had been only names in the newspapers—names they associated with enormous power. When ETNA's executive committee went down to City Hall for the first time, more than a little in awe of their surroundings, Comptroller Lazarus Joseph put them at their ease, told them that Moses' new highways "are making a jigsaw out the Bronx," said that their alternate route was certainly worthy of a full study, promised to vote against condemnation of their homes until such a study was made and said that if the study showed the alternate route to be feasible, he would vote for it. Borough President Lyons received the delegation "cordially and warmly," one member wrote. He promised that his engineering staff would make a formal study of the alternate route. "The delegation left feeling that he was very much on their side." Two weeks later, those feelings were seemingly confirmed. Lyons

told the Post that his engineers had decided that the tenants' route was not only "humane" but "feasible," that it would "save the city money, and that he was in favor of it." Noting that Lyons had previously approved his route, Moses angrily charged that the borough president was raising objections now only because it was an election year and there was "local opposition." Any local hardship will be "mitigated," if not entirely removed, "by the elaborate steps which we have taken to move tenants in an orderly way into public, quasi-public and other housing," and should be disregarded anyway, he said. "This route will be the backbone of traffic for centuries after a few objecting tenants have disappeared from the scene. . . You have from time to time remarked that I do not have to be elected to office. Perhaps that is why I am in a position to protect the really long-range public interest." He used his old threat—"Only recently you lost a substantial amount of . . . money in the Bronx" by "blocking the Bruckner Expressway"; the Cross-Bronx "will cost more than thirty million dollars additional. . . . Would you like to see the project, now half completed, abandoned and remaining state and federal monies spent elsewhere?"—and then escalated it by threatening to resign as Construction Coordinator ("I should not care to carry this responsibility any further if borough politics are to be injected into it"), but Lyons replied that any insinuation that he would allow himself to be influenced by the imminence of an election was "a damnable lie." "This is not Russia. Here we have democracy, and the people should be able to speak out in order to save their homes." Councilman Schwartz had told the tenants about the "Borough Presidents' Union," and they understood that, if Lyons stood firm, Moses' route would not be approved. And so it was with a sense of victory in a righteous cause that, on Thursday, April 23, 1953, more than two hundred East Tremont housewives—East Tremont husbands could not afford to lose a day's pay by skipping work—traveled by chartered buses down to City Hall, to hear the Board of Estimate decide whether to give Moses' draft damage maps the approval that would be the first step toward condemnation, and saw the Board members file out of a door on the raised platform—and then saw, striding out among them, right behind Mayor Impellitteri, the legendary Coordinator.

"He came in and everybody hushed," says Lillian Roberts, "even the men around the Board of Estimate. He wielded power, you could see, a powerful man and you could see it. Arrogant. The big 'I am. Me!' Chest out. He came out of the private room and stood behind the Mayor, and behind him were two of his men. And the way he talked to the Mayor! He practically ordered him around. And when it came time for him to talk" (Mrs. Roberts wrinkles up her face to indicate the disdain and scorn on Moses'): "'This is going through, and this is going through, and that's all there is to that!'—that's the way he talked." Says Barney Lambert: "He dominated—it was like he had inherited a crown. This sense of superiority was there." It took Lillian Edelstein only a few moments to start losing the hopes with which she had come to City Hall. "Handsome, tall, dark—a distinguished-looking man he is. But a mean face. A mean person. When you looked at him, you saw he was a sour person. He looked right at us—like we were little people. He

made you feel you were little. And then he looked away. A horrible man. He was talking to each one of the borough presidents. He had Lyons first. He had each one of them separately. And the horrible thing was they were all listening to him. Whispering. No one was listening to us when we talked. When we were up there [speaking], they talked among themselves or with their assistants. They're having a ball. You're talking and presenting your case, and they're laughing about something else. They didn't even have the courtesy to show an interest." She had pinned her hopes on her borough president, and his promise. Therefore, Lyons' statement surprised her. He favored Moses' route, the borough president said. He had always favored it.

Mrs. Edelstein was sitting beside Councilman Schwartz in the first row: "Everybody's poking me in the back and saying, 'Hey, Lil, what's going on here?' I said, 'I don't know.' I had reassured them—that was why they came down the way they did, because we had a possibility of winning. We had a meeting on Tuesday, and I said, 'Come down. He's with us. Show him we're behind him.' So I said to Bertha, I said, 'I think he's pulling a double-cross. Blast him.' She said, 'I can't, I'm a public official. But when you go up there, you blast him.' "

She did. At the conclusion of her short, carefully prepared speech at the lectern at which speakers stood, the housewife looked up, pointed at Lyons and said, "As for you, Mr. Lyons, I have this to say: You've double-crossed the people."

What happened then? "Flashbulbs. Impellitteri starts yelling, demanding that I apologize. I said I'm not apologizing." Jumping to his feet, red face redder than usual, Lyons bellowed that all he had promised the tenants was "a right to their day in court"; he had never, he said, given them any reason to believe he was on their side. Rudolph Halley then disclosed that the Board had held an executive session the day before at which Moses had been present—and that at that session Lyons had attempted to have the Board approve Moses' route secretly, so that the day in court would be meaningless. Whirling on the borough president, the Liberal Council President shouted: "Stop putting on a show!" "Demagogue!" Lyons shouted back.

The uproar changed nothing, of course. Halley and Joseph stuck by their promise to the tenants, and their six votes kept Moses from mustering the twelve necessary to approve the maps on initial submission, but at the Board's next meeting, a simple majority of its sixteen votes would suffice. Three hundred housewives showed up at that meeting, bringing a new nickname for Moses' route—"Heartbreak Highway"—and a copy of the Bronx engineering society's detail map of the alternative. Impellitteri announced that the Board's chief engineer, Robert G. McCullough, would "study" the map. McCullough must have been a quick studier indeed. Within a few minutes, he announced that the alternate route was "unfeasible." William Chapin pointed out to the Board that great sections of the Bronx had already been torn up for other sections of the expressway and for other highways, which, the Moses Man said, had been approved by federal and state governments on the premise that they were all part of a single system—of which the Cross-Bronx Expressway, with the route drawn by Moses, was a vital

part. If the Board refused to approve the route, he said, Washington and Albany would refuse to put any more money into the expressway—or, possibly, into the other Bronx highways. State DPW chief Tallamy had already sent Moses a letter threatening to do just that. If there was no money, the highways would remain unbuilt, and "somebody will have to put the Bronx back together." Halley accused Chapin of trying, on Moses' behalf, to "blackmail" the Board. "Demagogue!" Lyons shouted again. By a vote of 10–6, Moses' route was approved.

"It was a farce," Lillian Roberts says. "It was like Mr. Moses runs the city."

Understanding this, when the housewives of East Tremont fought now, it was with a sense of desperation. The poverty of their community made fighting all the harder. Years later, an acquaintance casually remarked to Lillian Edelstein that another group of housewives, Central Park West housewives, had, in a battle over expansion of the Tavern-on-the-Green parking lot in 1956, won a victory over Robert Moses—and was startled to see the eyes of the tall, dignified woman filling with tears of remembered frustration. "Do you know why?" she said bitterly. "Because they had the money for an injunction, that's why."

Mrs. Edelstein had been informed at the very beginning of her fight that there were ample grounds for a full-scale legal, court battle, a battle which would, even if not successful in changing the expressway route, force the city to give tenants comparable new apartments. But, she was also informed, the legal fees could run to ten thousand dollars. Had a single one of the threatened tenants been a lawyer, with a personal interest in the case, legal help might have been available free, but not one was. In the Bronx of Ed Flynn and Charlie Buckley, there were no political dividends—and quite a few political disadvantages—to be reaped from opposing a project that Ed Flynn and Charlie Buckley favored. Several young attorneys did come forward with offers of legal assistance, but invariably their interest waned quickly.

Ten thousand dollars? Lillian Edelstein had difficulty raising amounts far smaller than that. "The feeling among people was, what's the use," explains Arthur Katz. "You can't lick City Hall. And even if you could, you certainly can't lick Robert Moses. We were told by the politicians we saw that when Robert Moses wanted his way, that was it. For a while at the start—with Lyons, when he promised—they had hope. But now . . ." "You'd think people would fight for their homes," says Saul Janowitz. But Mrs. Edelstein had to beg and plead to persuade families to chip in a dollar bill at a time, and each time the dollar bills were harder to come by.

Nonetheless, a small band fought. Most of its members were businessmen who knew the mass evictions of their customers would destroy their businesses, but it was more than businessmen. Among the men and women of East Tremont were the sons and daughters of the revolutionaries who had preached socialism and Zionism in the Pale of Settlement, and on the Lower East Side, and some of them hadn't lost their faith in justice. "At that time there were a lot of lefts around here," recalls Saul Janowitz.

But mostly, it was Lillian Edelstein who fought.

Finding engineers willing to defy Moses, the housewife put them to work drawing maps detailed enough to prove from every engineering standpoint that their route was technically feasible. Then she put them to work obtaining hard figures: exactly how much more Moses' mile would cost than theirs. When they came up with those figures—Moses' route would require the demolition of fifty-four apartment houses, ninety one- or two-family homes and fifteen one-story "taxpayers" housing sixty stores, for a total of 159 separate buildings; condemning and demolishing them would cost more than \$10,000,000 more than would be required if the road ran where they wanted it to, even without the cost of relocating 1,530 families and the loss of the real estate taxes (close to \$200,000 per year at current rates) from the demolished buildings, income the city would be losing year after year forever—she undertook the harder fight of bringing those maps and figures to the attention of the public and of public officials.

The press didn't help much. She took the maps to every daily newspaper in the city; exactly two—the World-Telegram and, of course, the Post printed them. Only the Post displayed the figures with any prominence. She always found a sympathetic ear at the Post; Joe Kahn and Abel Silver dramatically documented the conditions in Section 3. But no other paper portrayed those conditions in any detail. The three papers that counted most in the city—the Times, the Herald Tribune and the Daily News—never mentioned them, and gave the whole Cross-Bronx Expressway fight scanty —and slanted—coverage. In attempting to enlist the support of other sections in the fight her own was making, she ran into the selfishness that Tallamy knew was one of Moses' greatest assets in New York (and that Moses of course fostered by releasing details of his projects only one section at a time). The East Tremont section of the Cross-Bronx Expressway—Section 2 -was the expressway's middle section. The eastern section-Section 3had already been almost cleared. But there was a western section, Section 1. Another 1,413 families were scheduled to be displaced there for the expressway. But Section I might have been in South America for all the interest it showed in her pleas for support.

But she fought anyway. Teaching herself to type, she typed onto stencils and cranked out on the Y's mimeograph machine tens of thousands of handbills, as well as postcards and form letters to public officials. She persuaded the seven neighborhood movie theaters to show slides advertising the next rally or City Hall hearing. "They let us stand outside their lobbies for days with petitions and trying to raise money—we were grateful for that." She organized card parties—"Subscription \$1." Learning that local radio stations such as WBNX were habitually in need of programs to fill up air time, she filled up that time with programs whose scripts she wrote herself.

It was Lillian Edelstein who arranged the rallies and mass meetings to pressure public officials, who chartered buses to take East Tremont housewives down to City Hall for every official hearing on the expressway. Most difficult of all, it was she who persuaded the housewives to take those buses. The people of East Tremont, who believed as gospel that "you can't fight

City Hall," had made one trip down to City Hall on the assurance that, if they went, they would win—and their loss had convinced them that the gospel was gospel. Trying to keep up enthusiasm, Lillian Edelstein scheduled weekly meetings at the Y but found that now, "if you got twelve tenants coming every week, you were lucky." As for spending more days traveling down to City Hall and sitting there for hours waiting for the Board of Estimate to get to the Cross-Bronx Expressway item, "that was torture," she says. "If the bus left at ten o'clock, at nine-thirty you had to go around and kick in the doors," Janowitz says. But, time after time, she kicked them. In an era in which picket lines in front of City Hall were not yet commonplace she even managed to have picket lines of middle-aged Jewish housewives marching outside City Hall, carrying signs she lettered herself at night.

And after a while, it appeared that Lillian Edelstein's efforts were paying off. For one key public official seemed to be listening.

During the committee's earlier interviews with members of the Board of Estimate, Robert F. Wagner, Jr., had appeared receptive; to their argument that motorists' convenience should not be put ahead of people's homes, the plump young Manhattan borough president had responded with a nod that seemed to indicate agreement, saying sincerely, "So they'll get to the Catskills twenty minutes faster." He had left the stormy public hearing early, leaving his two votes, two votes that, if added to Joseph's and Halley's, would have killed Moses' route, to be cast by his Borough Works Commissioner and key strategist, Warren Moscow. Although he had voted in favor of Moses' route, Moscow had stated before voting that although Wagner was voting for the first step toward condemnation, he would not vote for the last-authorization for the city actually to take title-until "every one" of the 1,530 families was properly relocated. Now, running hard for mayor, Wagner had Moscow put that promise in writing in several letters to ETNA and, on August 5, himself put in writing an even stronger promise. In a letter to ETNA signed by Wagner and released to the press, Wagner wrote:

As you know, I have consistently taken the position that I would not vote for the acquisition of the property for the Cross-Bronx Expressway. I want to assure you that I will vote against any resolution before the Board of Estimate seeking to authorize acquisition of that property.

On October 14, he made the promise in person, repeating it in essentially the same words—"I will vote against any resolution"—to more than a thousand cheering and applauding East Tremont residents packed into the assembly room at PS 44 for one of Lillian Edelstein's rallies.

October 14, 1953, was quite a night for East Tremont. Lazarus Joseph, retiring as Comptroller, was present, and said movingly that "human values" were more important than a highway. The Democratic candidate for Joseph's position, the Bronx's own Lawrence Gerosa, agreed. Bertha Schwartz, running not for the Council this time but for a Municipal Court judgeship, moved the audience to cheers and delighted nods by reminding them of Moses' threat to resign and then slyly adding: "Well, no one is indispensable,

you know." When Halley, Wagner's Liberal Party-backed opponent, vowed his determination to continue the "fight to save the homes," both of the two favorites for the mayoralty were firmly on record against Moses' route. "Wagner promised," Katz would recall. "There was nothing vague about that." It was no wonder that Lillian Edelstein was confident. Writing to thank Wagner, she said the tenants would like him to get together with the engineers who had drawn up the alternate route so he could see it was truly feasible. Why, certainly, Wagner replied—just as soon as the hubbub of the campaign was over. There seemed little reason to worry about a remark one of Joseph's aides had made to her as he stood beside her listening to the speeches: "Will they love you in December as they do in October?"

Wagner may have intended to keep his promise. According to at least one of the aides familiar with his thinking at the time, he did. Meeting with a few ETNA representatives shortly after the election, he repeated it—along with his crack about the Catskills. But Wagner was a politician who dealt in realities, and as mayor he was to have a better look than as borough president at the over-all realities governing politics in New York City. No mayor who wanted to continue his political career could buck Robert Moses, and Robert Wagner badly wanted to continue his political career. Just as Moses hadn't bothered bargaining with the new mayor on his Inauguration Day over the question of reappointment to the City Planning Commission, so Moses didn't bother bargaining with him now. He gave him a direct order. In his memoirs, Moses recalls what happened when Wagner protested that he had promised East Tremont that he would move the expressway.

... I said, "I am sorry, Bob, but you will have to tell them you can't move it. The city is not going to make that decision. The city pays only half the cost of land. It is federal and state money that's involved and I represent these officials. If you try to move this Expressway you'll never get another nickel from us. You will have to explain that it was all a mistake."

Wagner was not a man to move quickly. It took him almost a year to come around. But he came around.

When, now, ETNA asked for the interview he had promised them, he was suddenly evasive. And when, finally, the housewives and store-keepers, awed, were ushered into the Mayor's office at City Hall and reminded him of his promise, Wagner, in Katz's words, "said he didn't remember saying exactly that, and he turned to someone and asked him to look it up." Recalls Lillian Edelstein: "He tried to tell me Robert Moses knows what he's doing because he's an engineer. We argued, and his aide said, 'Excuse me, Your Honor—he's not an engineer.' He was always the same —friendly, very polite, a good listener, he said he would look into it and let you know." But, says Katz, "we knew by the time we had left the office that he was not going to be supporting us." Halley and Joseph, East Tremont's allies, were gone from the Board of Estimate. Halley's replacement, Abe Stark of Brooklyn, indicated he would go along with whatever Moses and the Mayor wanted. Gerosa, of the Bronx Chamber of Commerce, "as a public official seemed less dynamic than Gerosa as a businessman," Katz was to

write. "As far as the . . . Tenants Committee was concerned, he seemed never to have heard of them." Bertha Schwartz, a Municipal Court judge now, was no longer active in politics. Lyons would not grant them another audience. They had no one to whom they could turn.

Proceedings dragged, however. Possibly because Wagner, in his anxiety for election, had made a rare, flat promise and Joe Kahn persisted in reminding the Post's readers of it—once reprinting prominently the letter stating "I will vote against any resolution . . . seeking to authorize acquisition of that property," in other stories conceding that while Wagner had sometimes modified that promise by stating only that he would not vote for acquisition until all tenants had been relocated, so far no tenants had been relocated. Possibly because Wagner, taking even a cursory look at the problem now, could not understand what the tenants could not understand: why the route couldn't be changed—at one hearing before the Board of Estimate, when Moses Man Hodgkiss was answering all questions about the possible route change by saying flatly and arrogantly, "It's impossible," the Mayor, with an unusual overtone of irritation in his normally placid tones, demanded curtly: "Why is it impossible?" (Hodgkiss replied that Moses felt "it's just impossible"; Wagner did not press the point.) Possibly because the state had temporarily run out of highway funds, so that no new contracts could be let-and Wagner therefore had both an excuse to offer the Coordinator for not speeding relocation proceedings as well as an opportunity to allow the exact wording of promises to grow a little vague in the public's mind. A key element was the attitude of the aide the Mayor had delegated to deal with the tenants, Deputy Mayor Henry Epstein, a distinguished attorney and older man whom the Mayor respected. Epstein—a former Moses ally for philosophical, not financial, reasons—now, moved by the tenants' plight, made the mistake of making his own survey of the two proposed routes. There was, he told Wagner, not the slightest rational reason why the expressway could not be moved over two blocks.

The City Planning Commission gave the tenants the type of public hearing that might have been expected from a body controlled by a man who, if given his way, would have abolished public hearings. A large delegation had taken the day to ask the commission not to approve the Moses route—a long day. Commission chairman John J. Bennett, at that moment secretly negotiating a Title I transaction for which he needed that man's approval, refused to let even one tenant speak, saying that no public hearing was required. But there was a whole series of hearings before the Board of Estimate. Sometimes Moses was present himself. "He always looked surprisingly young and vigorous," Katz recalls. "He was very cool and detached. He didn't say anything. He had his assistants to do the talking for him. He sat and listened. He made some notes. My greatest anger at him was that he didn't seem to be affected by all this—people were getting up and telling these stories of hardship." But, despite Moses' presence, the Board kept postponing a final vote on his request to have the city authorize condemnation proceedings. After an emotional meeting with the ETNA group and several Bronx councilmen in Wagner's office at which the Mayor was visibly moved

(and at which he said, "Every member of the Board will want to know the difficulties facing each family in the path of the expressway"), the Mayor interrupted one Board session—at which Moses had confidently expected the issue to be resolved—to order McCullough, who had done a "study" of the tenants' alternate route for Impellitteri in a matter of minutes, to give it a little more consideration. The engineer returned a month later with a report stating that while the alternate route would spare the protesters' homes, it would require the condemnation of almost as many homes belonging to other people. You see, Moses told the Board, it was just as he was always trying to explain to them: changing a route would just "trade in" one group of protesters for another; no matter where you tried to build a highway in the city, there would be protests, so the only way to handle them was to ignore them. ETNA's leaders, who had been certain that not a single home would have to be touched for the alternate route they had proposed, were shocked by McCullough's findings—until they realized the trick that the engineer had played. He had studied an alternate route, all right, but not their alternate route. Instead, he had selected a route that would require large-scale condemnation and studied that instead. Epstein explained this to Wagner. Over Hodgkiss' violent objections, the Mayor ordered McCullough to study the right alternate route this time, to let Epstein oversee the study to make sure it was fair, and to complete the study before the Board's next meeting when a final decision would be made.

"A defeat for Moses," the *Post* reported. The tenants felt it was. "We felt we had won," Lillian Edelstein recalls. Epstein, trying to reassure her, had told her, in her words, "It's like a jury trial. If they stay out long enough, they won't convict you. Because it was dragging so—month after month, I figured something is happening to hold him and his crew."

On the day of the final hearing before McCullough, assembled in his office in the Municipal Building was a full panoply of Moses Men: Arthur S. Hodgkiss, assistant general manager of the Triborough Bridge and Tunnel Authority; Stuart Constable, acting executive officer of the New York City Department of Parks; W. Earle Andrews and Ernest J. Clark of Andrews, Clark and Buckley, consulting engineers; Milton Goul, district engineer, State Department of Public Works District Number 10, designated to represent the State Department of Public Works by Bertram Tallamy, Superintendent; Arthur B. Williams, liaison engineer, New York State Department of Public Works—and, representing Lyons, Edward J. Flanagan, who, during the entire proceedings, would utter not one word. These engineers and a dozen assistants had been assembled for the occasion on the orders of Robert Moses.

Moses had been active in other ways, too. He had no doubt that Wagner would fall into line—years later, asked if there had been no chance at all that the Mayor would overrule him, he would, with a touch of surprise in his voice that it should be necessary to ask such a question, say flatly, "Not the slightest"—but Epstein was delaying the Mayor's compliance with his marching orders. The Deputy Mayor had to be whipped into line. During the week before the McCullough hearing, he was.

Arriving at 10:30 A.M., the time they had been told the meeting would

start, the five engineers representing the tenants were surprised to find a already under way. McCullough, they noted, seemed "very uncomfortable." Although there were fifteen Moses engineers in his office, the city engineer said that he would allow in only two of theirs, backing down only after an angry protest.

Having learned something about Moses' methods, the tenants had hired a court reporter to make a verbatim transcript. Convinced that any reasons given for turning down their alternate route could easily be disproved, they wanted once and for all not only to find out what those reasons were but to get them on the record. McCullough ordered the reporter out of the room. Angrily the ETNA engineers demanded to know why, pointing out that the city engineer had his own stenotypist present, and that they were entitled to their own record. McCullough refused to give a reason. (Later, in his official report of the proceedings, he said, "We were holding an engineering conference and not a public meeting"; his own stenotypist, he said, would record any "pertinent facts which might develop.") "We said, 'If you're telling the truth, you should have no objection to its being recorded," one IITNA engineer recalls. They refused to participate in the meeting unless their reporter was allowed to be present; McCullough said flatly that there would be no meeting as long as the reporter remained in the room. The ETNA engineers asked him to get a ruling from Epstein. Certainly, McCullough said. He telephoned the Deputy Mayor—and to their shock Epstein ruled that they had no right to have a reporter present.

The ETNA engineers held a hasty huddle.

"We were afraid to go on the record without a stenographer," one, Leonard Swarthe, would say. "It seemed peculiar that [the] others seemed to be afraid of" having what they said set down in black and white; "it was obvious the cards were stacked," said Daniel J. O'Connell. They decided to walk out. Once they were safely gone, the meeting was held—"as scheduled," McCullough blandly stated in his report to Wagner—and its participants arrived at the conclusion that "the original plan was the only acceptable one" and that it would be "impossible to accept the alternate route," a conclusion which may possibly be explained by the fact that the Moses Men again managed to avoid discussing the true—ETNA—alternate route by discussing again the phony "alternate" Moses had put out as a smoke screen.

(Fpstein was soon to give the tenants who had trusted him another shock. Repeatedly, month after month, after carefully examining the two routes, the Deputy Mayor had said theirs was the better. Now, he suddenly changed his mind and he put his new opinion in writing in a letter to Wagner.)

The tenants sent a telegram to Wagner appealing for an engineering discussion under "proper circumstances." There was no reply—and of the showdown Board of Estimate meeting, Katz was to write:

Dr. Swarthe reported the results of the fiasco in the City Engineer's office. The Board was silent. They made no comment. They permitted all to talk. They made no interruptions or comments, asked no questions. The Mayor set a

time limit for public debate and, at the end of it, called for the question . . . for acquisition of funds to acquire property and for building demolition.

Lyons moved the question, saying, "This is an engineer's problem, not a layman's problem, and all the engineers unanimously support this route." One by one the Board members voted—in the affirmative. The last man to vote was Robert F. Wagner, Jr. He voted in the affirmative, too.

"It was so fast," Lillian Edelstein would recall years later. "I was positive at that last hearing that we would win. Because of Wagner. He had said so straight out that he would never let them do it. He had promised." Lillian Edelstein wanted to ask the Mayor what care had been taken for the families, what the relocation plans were. But she couldn't. She was crying. Katz asked instead. Lyons tried to stop him from speaking, but he went ahead anyway. Quoting Wagner's words that he would not vote for acquisition until he had been satisfied as to the relocation plans, he asked the Mayor what those plans were. The Mayor said he did not know.

Turning to Hodgkiss, Wagner asked about the plans. Hodgkiss said a new approach had been decided on: instead of the city's own Real Estate Bureau handling the job, it had been decided to let the job to a private firm, the "highly efficient" Nassau Management Company, Inc. As Katz was to write: "The Mayor was assured that there would be few problems and that all families would be well provided for."

Mayor Wagner asked [Katz] if this was satisfactory. [He] said no. [Katz] asked the Coordinator's representative if that office would publicly agree to meet with the tenants' committee as a group and instruct the Relocation Bureau to do the same, if the need arose to resolve problems. The Coordinator's representative pledged to do so. Wagner, at any time of difficulty in resolving problems around relocation, wanted the tenants' committee to know that they could personally call upon the Mayor's office to help. He made this last statement for the record.

And why did Henry Epstein change his mind, and, at the very last moment, betray the neighborhood which had counted on him for support?

Years later—Epstein long dead now, his widow not even knowing what the author was talking about when he raised the subject of her late husband's change of mind—Robert Moses, sitting in a cottage he had rented at Oak Beach, staring out the big window from which one could see the Robert Moses Causeway and Robert Moses State Park, would be asked that question.

Charm flooded away from that window. Dressed in the L. L. Bean corduroys, a larger size now to cover the ample paunch, and an old button-down plaid shirt, the papers that signified completed work already piled high by his armchair although it was only 9:30 A.M., a big cabin cruiser waiting down the Ocean Parkway at the Captree Basin for an afternoon's fishing, he was the easy and gracious host. The powerful face—still so young at eighty—was relaxed. Oh, that's not important, he said easily. Let's talk about something else.

The author said he had come to talk about Henry Epstein. The expression changed only slightly, the head swung just a little, but all of a sudden the author saw not the paunch but the big shoulders and the big jaw and, beneath the big eyebrows, the eyes. Then he could see Robert Moses remember that the author was a guest in his home. Moses began to talk, seemingly at a tangent, at first choosing his words, with pauses, and then, warming up, as fast and fluid as usual.

"It happened to be a very, very complicated thing. . . . A lot of personal stuff got into it. . . . They had a couple of agitators up there . . . including a woman who was running for judge . . . and Epstein got personal and nasty about it and he finally got licked. . . . I said, 'This woman, this chum of yours.' He said, 'She's not my chum.' I said, 'Oh, yes she is. She's your chum all right.' I said, 'What's going to happen if we change the route—which we'll never do as long as I'm alive—we'll just be turning in these objectors for another set.' And you know what he said? He said, 'Well, that's in the next district [not Miss Schwartz's].' He made an issue of it with the Mayor to see who had more influence. . . ."

He stopped as if that was all there was to say. The author prodded him. "Epstein was a very able lawyer," Moses said. "Outstanding lawyer.

I had known him a long time."

Well, the author said, prodding some more, he did write that letter saying your route was best.

"Sure," Moses said. "After he was hit over the head with an ax."

What kind of an ax? the author asked. What exactly did you do to him? But there are limits to even a host's obligations. "I won't tell you what we did to him," Robert Moses said.

Reviewing the conversation carefully, however, it is possible to wonder if—without meaning to—Robert Moses had.

About the Cross-Bronx Expressway as a whole, Moses was more expansive. Asked if he had not felt a sense of awe—of difficulties of a new immensity—when, beginning active planning of the great road during the war, he had first seen the miles of apartment houses in his way, he said he had not. "There are more houses in the way [than on Long Island]," he said, "there are more people in the way—that's all. There's very little real hardship in the thing. There's a little discomfort and even that is greatly exaggerated. The scale was new, that was all that was new about it. And by this time there was the prospect of enough money to do things on this scale." Asked if he had ever feared that the tenants might defeat him, he said, "Nah, nobody could have stopped it." As a matter of fact, the East Tremont opposition hadn't really been much trouble at all.

"I don't think they were too bad," Robert Moses said. "It was a political thing that stirred up the animals there. Jim Lyons didn't know which way to turn. But I just stood pat, that's all."

New York's press also didn't see much significance in the East Tremont fight. The *Post* gave it complete coverage, of course, and the *World-Telegram* 

occasionally devoted a fairly detailed story to it, but, aside from Moses' single personal appearance before the Board of Estimate (on the occasion of which the *Times* put his picture on page one), the rest of the city's big dailies all but ignored it. When they did devote space to it—a paragraph or two at the bottom of a round-up of Board activities—the attitude they displayed is of interest. This, for example, was the *Times*'s description of the final, climactic hearing at which Lillian Edelstein sat crying in City Hall.

Five years of opposition and delay to the Cross-Bronx Expressway came to an end when the Board of Estimate unanimously voted to acquire land for a one-quarter [sic] mile segment of the middle section. The fight put up by the tenants resulted in a virtual stalling of the overall Cross-Bronx Expressway project, since the two ends of the artery are now finished.

Why wouldn't Moses shift the route of the Cross-Bronx Expressway slightly, thereby saving 1,530 apartments, millions in state and city money, months of aggravation and delay—and making his expressway straighter as well?

"I asked George Spargo that," says Joseph Ingraham, the *Times* reporter who was occasionally on Moses' payroll and who spent so much time socializing with the Moses team that he sometimes seemed to be one of its members. "On the day of the ribbon cutting they were opening a whole bunch of sections of different expressways, and it was raining, really pouring. George said, 'Let's sit this out, and we'll catch up to them at the next stop.' We went into a small bar in the Bronx and I asked him there. He said, 'Oh, one of Jimmy Lyons' relatives owns a piece of property up there and we would have had to take it if we used that other route, and Jimmy didn't want it taken, and RM had promised him we wouldn't.' At the time, George even told me the piece of property involved, but I've forgotten."

The people of East Tremont also wondered why Moses wouldn't shift the route. "I mean, we heard lots of rumors about the bus terminal," Lillian Edelstein recalls. "The politicians were always trying to tell us that was the reason. But we could never find out anything about it. And, I mean, I never believed that. I could never believe that even Robert Moses would take fifteen hundred homes just to save a bus terminal."

Spargo's statement may have been untrue. So may the rumors. If any relative of Bronx Borough President James J. Lyons owned property along either the alternate or actual expressway route, the author was unable to find evidence of that fact—although, since, in the Bronx, politicians' ownership of property was habitually concealed through a many-layered network of intermediaries and bag men, a network baffling even to contemporary investigators and all but impenetrable twenty years later, his failure is not conclusive. Moses' refusal to alter the route—unexplainable on the basis of his given reasons, all of which are demonstrably false—may have had nothing to do with the fact that the "bus terminal" of which Lillian Edelstein speaks—actually the "Tremont Depot" of the Third Avenue Transit Company, at the northeast corner of Crotona Park—lies in the path of the alternate

route and would have had to be condemned if that route was adopted. It is possible that Moses' selection of the original route—it was he, not any engineer, who selected it—was based on no more than whim, and that his subsequent refusal to alter it was due to nothing more than stubbornness, although if so it was a whim quite inconsistent with Moses' customary whims: almost invariably over a period of forty years, whenever he had a choice of routes, he selected the one that would keep his road straight, not the one that would make the road curve.

However, in attempting to find an explanation for Moses' refusal to change the route, the Third Avenue Transit depot stands out. With the exception of six old, small, dilapidated brownstone tenements, housing a total of nineteen families, it was the only structure of any type that would have had to be condemned if the alternate route was used. (See map, page 864.) In effect, for whatever reason, Robert Moses elected to tear down 159 buildings housing 1,530 families instead of tearing down six buildings housing nineteen families—and the terminal. It is a fact that the Third Avenue Transit Company secretly told Moses it was very anxious not to have the terminal condemned, for its location was strategic for its buses. And it is also a fact that for twenty years it was considered an open secret in Bronx political circles that key borough politicians held large but carefully hidden interests in Third Avenue Transit. And it is also a fact that, in Bronx politics of the period, what Third Avenue Transit wanted, Third Avenue Transit got.

But the unfortunate element in searching for the explanation of Moses' refusal is that in the perspective of the history of New York City it is unimportant. Whether Moses refused to change the route for a personal or political reason, the point is that his reason was the only one that counted. Neighborhood feelings, urban planning considerations, cost, aesthetics, common humanity, common sense—none of these mattered in laying out the routes of New York's great roads. The only consideration that mattered was Robert Moses' will. He had the power to impose it on New York.

"Highly efficient" was the only description of the Nassau Management Company given at the Board of Estimate hearing. A more detailed description would have been instructive.

Nassau Management had been founded three years before on a shoestring with virtually no financial resources behind it. But it was almost immediately to obtain immense tenant relocation contracts for several Robert Moses highway and housing projects. One contract alone netted the firm more than two million dollars.

The men who owned stock in Nassau Management thus made fortunes without risking more than a token investment. The ostensible key men behind the company—its founders of record—were two low-echelon City Housing Authority employees who quit the Authority to form the firm. But they were only front men. The key figures behind Nassau Management, men who would profit from the relocation of the East Tremont tenants,

were William S. Lebwohl, counsel of the Triborough Bridge and Tunnel Authority; Samuel Brooks, assistant director of the Mayor's Slum Clearance Committee; and Housing Authority chairman Philip J. Cruise—three of Moses' key aides.

FIRST MAN: After a lifetime, a piece of paper, an edict

from the authorities, and we must all leave

our homes.

MENDEL: Rabbi, we've been waiting for the Messiah

all our lives. Wouldn't this be a good time

for him to come?

RABBI: We'll have to wait for him someplace else.

Meanwhile, let's start packing.

-FIDDLER ON THE ROOF

It must have been an accident that the "East Tremont" office opened by the "highly efficient" Nassau Management Company was located not in East Tremont but in West Farms, another neighborhood, inconveniently far away for the 1,530 families the office was supposed to serve. It must have been an accident that the office was open only a few hours a day, that those hours were constantly changing, that no notice was ever given of what those hours were going to be, and that inquiring about them by telephone was almost impossible since the single phone number listed for the office seemed to be always busy—so that often East Tremont housewives, having made the long trek over to West Farms, found waiting for them only a locked door. It must have been an accident that there were never enough company representatives in the office, so that the housewives waiting for help had to wait on long lines.

But East Tremont's housewives soon found, as one put it: "They didn't want to help you, they just wanted you out. And they wanted you out fast." A series of incentives was placed before the tenants to accomplish this end. On her first trip to the office, a housewife was not offered any help in finding a new home. Instead, she was told that if Nassau Management had to find her one, she would receive only a hundred dollars for moving expenses, far less than would be needed to cover those expenses. If she found one herself, she was told, she would receive a hundred dollars for each room in her present apartment. If she found one fast, she was told, she would receive a flat "fee" of eight hundred dollars. And if she found one real fast, she would get not only eight hundred dollars but reimbursement for moving expenses—actual moving expenses. It was only if you refused to accept these incentives and insisted on the help that had been promised that you were

given two cards, each bearing an address of an "available" apartment—"comparable" to the one you now occupied.

"I went to one," a housewife recalls. "This was in the West Bronx. It was a walkup—four flights of stairs. The apartment was on the top floor. And there was already a line there of women that had been sent over. People were standing on the staircase—all down the four flights—and outside. What was the sense of standing on line? If the apartment was decent at all, someone else would have taken it. What was the sense of sending hundreds of women to look at one darn apartment? I went home."

Lillian Roberts waited on such a line. "When I finally got to the apartment, it wasn't comparable at all. It was so dark and crummy. It was only three rooms, and I had told them I had four. And they wanted twice as much rent as I was paying. For that filthy thing! I still remember it. Horrible. I wouldn't go back to that office again." Some housewives were so desperate that they did go back. Women who would never have believed that they would ever be in such a position found themselves standing around a bare storefront office, hour after hour, day after day—"like beggars," one says bitterly—hoping that someone would give them a home.

Sometimes, when a woman got to the address Nassau Management had given her, there was no one around to let her in. If she was lucky enough to find a superintendent or a janitor, he sometimes told her that the apartment was not vacant—hadn't been for months. Back they went, day after day, from the apartments they had been sent to see in the West Bronx or Riverdale or Throgs Neck, back to the Nassau Management office and then out again in a search of something they knew now they were never going to find. "I remember that winter," says one of those women. "I got old that winter."

If you still refused to accept either the apartments that were offered or the cash, other incentives were applied.

"As soon as the city took over, the superintendents moved out," Lillian Edelstein recalls. "They got other jobs. You couldn't blame them. But you couldn't get any kind of services. The halls got dirty. There was garbage to take out. . . . I went to fight," Mrs. Edelstein says, but Nassau Management said the city Real Estate Bureau was responsible for maintaining the buildings. The tenants protested to the Real Estate Bureau, but the only result, as Mrs. Edelstein recalls it, "was that they assigned one man to take care of six or eight buildings, and soon he was gone, too." And always the final answer was that on all matters pertaining to the Cross-Bronx Expressway the "final say" had to come from Robert Moses. Katz had asked Moses' representative "if that office would publicly agree to meet with the tenants' committee . . . if the need arose to resolve problems," and Hodgkiss had made that agreement. Now they called Moses and Hodgkiss. "We never even got a reply." They telephoned Wagner's office. Wagner had "wanted the tenants' committee to know they could personally call upon the Mayor's office to help." "Ah, we never got him on the phone, or anyone else but a secretary," one ETNA member says. "They started bouncing us back and forth to the agencies again."

The city formally took title to the 159 buildings in Section 2 on

January 1, 1954. Almost simultaneously, the heat and hot water in many of the buildings was mysteriously cut off. Eleven days later—cleven days of getting the same run-around from the city, and the same lack of response from Moses' office—they told their story to the *Post*. The *Post* got an answer from Benjamin Cymrot, executive officer of the Real Estate Bureau ("Repairs take time, and we are working as quickly as we can. . . . Essential services" will be maintained), but Cymrot's definition of "essential services" was evidently different from the tenants'. For many of them—for much of the winter—the only warmth in their apartments was provided by the little, inadequate electric heaters they purchased themselves, or by gas ranges they kept turned on all the time, and the only hot water was the water they heated in pots. There were a few desultory attempts at repairs, but many of the buildings had no heat or hot water for weeks at a time. One had none for three straight months.

Incentive to get out was provided also by mortification of the mind. "[Nassau Management] said they were only obligated to show you two apartments," Mrs. Edelstein recalls. "If you turned down two apartments that they offered you, they said they were through with you. They said either you get out on your own, or they dispossess you. They said they'd put you out in the street." The threat was backed up by dispossess notices, all designed to look like court orders although they were not, each couched in language more urgent and ominous than the last. On May I, a Friday, every tenant remaining in the area received one ordering him to vacate or be evicted by the end of the month. After a weekend of hysteria, a tenants' committee accompanied by Councilman Louis Peck was able to see Percy Gale, director of the city Real Estate Bureau. Luckily for them they had brought a *Post* reporter along; Gale hastily explained that the notices were only "a necessary legal prerequisite" (to what he didn't say) and that "no one will be evicted if they do not vacate at the end of thirty days."

The escalation of incentives produced the desired results. More than a thousand of the 1,530 families had stuck it out through the terrible winter because the alternatives were so shattering. "What choices did most of them have?" Lillian Edelstein asks. "Either to move to apartments for the same rent they were paying—which meant for most of them moving to the slums—or to move above their means, which would be a great, great hardship for these people." In the spring, however, they began to move out faster and faster.

The old people clung hardest. "They were the ones I really felt sorry for," Lillian Roberts says. These were very poor old people—Social Security had come too late for many of them—and many of them were alone in their little apartments, the parents or wives or husbands who had come with them from the little *shtetls* of their youth gone now. "There were a lot of widows in East Tremont." But as long as they could stay in their tiny apartments—on the first or second floor, mostly, because stairs are hard on old people—they had something: the Senior Citizens program at the Y, familiar places to sit and stroll in the sun and, most important, companionship. If they had to move, they would have nothing. Impoverished elderly couples were

eligible for apartments in City Housing Authority projects. But although there were at the time a number of Authority projects under construction, the Authority's Moses-dominated board was deaf to these couples' pleas that a substantial number of them be allowed to move into the same project, so that they could stay together. Couples eligible for apartments in projects had no choice but to take them; they could not afford decent living accommodations anywhere else. Impoverished elderly men and women who were alone in the world were not eligible for Authority projects; the Mosescontrolled Authority made no provision for single people. Such men and women had no chance at all to stay together. "Do you know how poor they were?" Lillian Roberts says. "They didn't have the carfare to visit each other." The old people of East Tremont were terribly frightened of moving. But Robert Moses had made certain they would be more frightened of staying. One by one, faster and faster, the old people moved out, too. By June, half the 1,530 apartments were vacant.

Their emptiness made possible the application of new incentives.

"As soon as the top floor of a building was empty, they'd start tearing off the roof and the top stories, even," says Mrs. Edelstein. "While people were still living in it, they were tearing it down around their heads!" As soon as an apartment was vacated, moreover, its windows were boarded up, which advertised to vandals defenseless premises available for the plundering. Watchmen were apparently a luxury neither the city nor Nassau Management could afford. The other tenants could hear the vandals at night, tearing the plumbing out of the walls for money, ripping the boards off the windows and breaking the glass for sheer malice, throwing bricks and other debris off the roofs to hear the crash when they hit the ground. "Then," Mrs. Lucille Silverstein says, "started the muggings." Soon the people living in those half-empty buildings—lonely, scared, many of them old and alone—weren't safe in their own lobbies or on the flights of stairs which suddenly seemed terribly long and dark. Terror, that most efficient of eviction agents, stalked through that boarded-up, half-empty neighborhood.

Along that mile, now, most of the one- and two-family frame houses had been demolished. As the demolition crews worked, they had piled the lumber they were tearing apart in the back yards of those houses, and when they left, they had left the lumber there in piles twenty-five and thirty feet high, stacked as if for a bonfire. Soon, thanks to vandals, the bonfires blazed and the remaining apartment houses stood not only among these heaps of lumber but among gaping, debris-filled pits, some thirty feet deep—the basements of what had once been other apartment houses. Into one, someone had driven an automobile, and it lay there, stripped and abandoned, for months. To mark the site of other apartment houses there were jagged-topped brick walls, ten or twelve feet high, and the space between those walls was filled with bricks, sharp-edged shafts of steel and shards of broken glass. "The rats were running like dogs and cats in the street," Lillian Edelstein says. So thick was the grime hurled in clouds into the air by the demolition

that Dominick Tesone, hanging desperately on to his three-family frame house, spoke of living in "dust storms."

Unsupervised children walked single-file along the tops of those brick walls, trying, as children do, to see who could keep longest from falling—but if they fell, it was onto those shafts and shards. There were no fences around those gaping pits; parents lived in fear that their kids would fall into them. One mother, who normally picked her two little boys up at school every day, was late one day, and, hurrying along the route they took home, saw them jumping back and forth across a hole in the street. Rushing up to them, she saw that the hole was perhaps twenty feet deep.

The people still left along the mile were the last holdouts against what they regarded as injustice. Tesone was informed that he could receive only \$11,000 for his three-family frame house because Moses had established that as the price for all the frame buildings along that mile. "They gave \$11,000 for a one-family shack, they gave the same to all the houses along the way," Tesone says. "Mine was a good house. It wasn't fair." The appraisal he commissioned set its value at \$18,000; the city representative said that appraisal might well be fair, but that didn't matter; \$11,000 was the price. Tesone had hired a lawyer and was going to fight on. Other people were still left along the mile because they had no place else to go. The family with eleven children, for example, had been unable to find any landlord—at any price—who would give them an apartment. The City Housing Authority had promised them one, but kept saying that no apartment large enough was yet available. The people who were left were still hoping that the city, and Robert Moses, would keep the promises they had made.

They tried to protest. They called the city agencies pleading that watchmen be assigned to the area, and that fences be erected to keep children from falling into the pits. Surely, they said, with hundreds of workmen in the area, a few could be spared to put up fences. But always, after being shunted from one agency to another, they were eventually told that the State Department of Public Works was in charge of all physical arrangements in the area, and when they called the State DPW, the answer was that while the DPW was technically in charge, the actual work was being carried out under the direction of the City Construction Coordinator, and he was the only one who could help them. And when they called the Coordinator's office, they were never able to speak to anyone except secretaries who told them that someone would call back, and no one ever did. Water and electricity were suddenly and mysteriously cut off and when, after protests to city agencies were publicized by the Post, they were restored, they were suddenly and mysteriously cut off again. Tesone's home shared a fire wall with the adjoining building. One day, while Tesone was still living on one side of that wall, demolition began on the house on the other side of that wall. He could see his wall being weakened by vibrations. "One day, it'll come right down on us," he said. Telling his lawyer to drop his appeal, he moved out.

And always, there were the threats. Speed was essential, the Nassau Management Company kept saying. Work on the expressway itself was

going to begin any day. And as soon as it did, anyone left in the area would be put out in the street with no further warning. "That was all I heard," one holdout remembers. "If you don't get out, we'll put you out in the street." Out in the street! As the Tsar had harried them—or their fathers or their grandfathers—out of the *shtetls* of the Pale, the Coordinator harried them out of East Tremont. By November, the Nassau Management Company could proudly announce: "In less than ten months, we have relocated 90 percent of the 1,530 occupants of Section 2."

## 38. One Mile (Afterward)

AFTER THE TENANTS had been rushed out of their homes, it turned out that there had been no real need to rush after all.

To obtain the initial state consent to build the Cross-Bronx Expressway, Moses had, as usual, drastically underestimated its cost-which inflation was pushing higher by the month, anyway. By the time-November 1955—that Nassau Management boasted that almost all the tenants were gone, so was almost all the state's highway construction fund, which had to bear half the expressway's cost. Passage of a referendum authorizing a new bond issue for highways would, in 1956, give the state another \$400,000,000, but the state was not anxious to spend this new money on the Cross-Bronx: with congestion on Moses' Bronx-Whitestone Bridge worsening, by 1955 he was allocating Triborough funds for another, Throgs Neck, span on the east and the expressway would have to be extended eastward to reach it; with congestion on the George Washington Bridge at the expressway's western end also worsening, and with two intersecting Moses expressways already under construction (the Sheridan, named after engineer Arthur Sheridan, and the Bruckner, named after long-time Bronx borough president Henry Bruckner) obviously going to dump even more traffic onto the Cross-Bronx, it was apparent even before its tragic mile through East Tremont had been cleared that traffic on the Cross-Bronx was going to be immensely heavier than expected—too heavy to possibly be accommodated on the old Washington (not the George) Bridge (constructed in 1888 under the sponsorship of George Washington Plunkitt), on which the road had been expected to cross the Harlem River. Moses decided to build a new bridge—the Alexander Hamilton—right next to the Washington. Designing the expressway extension and the Hamilton Bridge—particularly the bridge, for immense curls of cloverleaf spaghetti would be required to link it to the Deegan and Harlem River highways flanking the river more than a hundred feet below-would take an estimated eighteen months. Obviously, the Cross-Bronx Expressway was not going to be finished—or anywhere near finished -for years. There were other highways around the state that could be finished sooner—in time, say, for the 1958 gubernatorial election for which Averell Harriman was so anxious to be able to cut ribbons—and the money might better be spent on them. Moreover, the colossal true cost of the Cross-Bronx could no longer be concealed; before it was finished, the highway, including its interchanges with other highways and the bridge carrying it over the Harlem, would be the most expensive road constructed in all history, would cost not the \$47,000,000 that Moses had originally "estimated" but \$250,000,000. Now that Moses had cleared the right-of-way for the expressway, he had no money to build it—and, in fact, was not able to get it under way again except on a token construction scale until 1957, after the Federal Interstate Highway Act of 1956 had authorized an increase in the federal contribution from 50 to 90 percent. Even then, moreover, there would be continual delays. Bids came in far over contract estimates; new estimates would have to be prepared and new rounds of bidding held. Construction of the final segment of the Cross-Bronx Expressway—the Bruckner traffic circle near its eastern end—would not be completed until 1973. The rest of the Cross-Bronx Expressway would not be completed until 1963. And the one mile of the expressway in East Tremont would not be completed until 1960—five years after Moses had removed from that mile the people who lived in it.

Five thousand people had been removed from East Tremont, but that was 5,000 out of 60,000. There were still 55,000 left. Chance, moreover, had spared East Tremont the fate of other communities disemboweled by a Moses highway operation—the heart of this community, bustling East Tremont Avenue, had escaped the Coordinator's scalpel.

But the thuds of the "skullcracker," the huge swinging wrecking ball, the crash of crumbling walls and the rumble of trucks carrying the walls away had been merely a prelude, the rattle of rifle fire from a skirmishers' picket line before the battle is fully joined and the big guns come into play. For Moses' Cross-Bronx Expressway had been designed by a single criterion: its efficiency as a traffic-moving device. This meant keeping the expressway as level as possible, and East Tremont was a neighborhood of hills. "To keep the grade down, we had to go down," Ernie Clark explains. Going down meant going under the surface of East Tremont. And under that surface was solid rock, and there is only one way to get rid of solid rock.

"First you heard the sound, and then, a few seconds later, you felt the tremor, like a rumbling in the earth, a shaking under your feet," recalls Barney Lambert, whose office was seven blocks away. The sound of the explosions of the huge masses of dynamite required "was a boom, a real boom—like a bomb." Says Mrs. Silverstein: "The whole neighborhood seemed to be shaking."

It was shaking. The blasting found out every flaw in the earth under East Tremont. It caused the bed of a subterranean river beneath Southern Boulevard to shift. Mortar and brick were jarred loose from one end of the neighborhood to the other. As apartment houses settled or were pushed up as the earth beneath them heaved, huge gaping fissures began to appear in their walls and ceilings. Tenants were hastily evacuated—some in the middle of the night.

Lambert and Mrs. Silverstein lived blocks away from the blasting. People who lived closer felt as if they were at ground zero in an air raid.

The scene in the great excavation—a deep gash in the earth 120 and more feet wide and a mile long—was fantastic. Looming through the clouds

of dust were a mile of tall cranes, huge earth-moving machines, batteries of bulldozers, battalions of trucks—and an army of men, their helmets glinting through the dust stretching away as far as the eye could see.

At intervals, red flags would be unfurled and men in pairs would carry them up to the streets crossing the excavation and, standing well away from the excavation, wave traffic to a halt. Then, at some signal that could not be discerned from above, the men down in the pit would all run to take shelter behind their equipment. There would be a pause and then the explosion would come, and the giant steel-mesh mats that had been placed over the explosion areas would rise in the air and fly several feet away as if they were bits of carpet. Sometimes long black limousines would pull up to the edge of the embankment, and men carrying rolls of maps and blueprints under their arms would clamber out and scramble down the embankments with their aides, and even if the residents did not know that these were the general staff of the campaign-Colonel Chapin and General Farrell, who had built highways through jungles; Captain Praeger, who had built the Normandy invasion drydocks-there was no mistaking the commander in chief, for sometimes, in the late afternoon, the longest black limousine of them all would pull up, generally at one end of the mile, and out, to see the job "on the ground," he would jump and, barking orders and questions at mapcarrying aides, he would stride through the dust and the grime, seemingly oblivious to it, until he reached the other end of the mile, where the limousine, having crept around the side streets, would be waiting for him.

The blasting was only intermittent, and it went on no more than a year. But from the huge pit came also the harsh, staccato, machine-gun-like yammer of the jackhammers, the deep rat-tat-tat of the drills cutting holes for the dynamite, the clank and grind of the treads of the bulldozers, the hoarse bellow of the huge earth-moving equipment, and the heavy, jarring pound of the pile drivers driving down the shafts of steel called "long rock anchors" to strengthen unstable formations and, where the ground was soft, piles that would last for centuries—all combining in a roar that made the air shudder. The blasting was bad enough but the roar was unbearable. "It was the drilling, the constant drilling. You just heard it constantly through the day hours. You never got used to it."

Worst of all, to these people for whom cleanliness was so important, was not the noise or the danger but the dirt. One of the by-products of blasting or drilling in solid bedrock is rock dust, an extremely fine-grained, abrasive grit. The grit—East Tremonters called it "fallout"—arose from the excavation in a continual fine mist. "It just filled the air," Lambert recalls. "If you closed your windows and put towels in to seal them up, it was there anyway. I don't know how. You got up in the morning, and you felt like you had slept in dust. When you came home from work, you couldn't sit down without sweeping it out of the chair. It was impossible to live cleanly—you felt like you were covered with silt. All the time."

Many of the stores nearest the area around the excavation—those on Southern Boulevard and Marmion—had been torn down. Reaching the others was difficult because they had been fenced for the duration of the con-

struction work. Getting to East Tremont Avenue from the area on the south side of the expressway was difficult. When the expressway was completed, there would be overpasses to get across it, but the overpasses would not be built until it was finished. And many of the streets that would be left across it were closed for weeks at a time during various stages of construction. "To go shopping and come back with bundles was like going to Brooklyn," one housewife recalls. Families on the north side found it difficult to get across to the amenity on the south that was also an important part of their lives: Crotona Park. And, worst of all, there was the uncertainty about when the construction work would be over. "It went on year after year, you know," explains Lambert. "Sometimes it would stop for a month or two or three months without any explanation being given, and then it would start up again. After a while, it seemed to have been going on forever." There were perhaps 10,000 people living right next to the excavation. They began to move out.

Some of East Tremont's landlords, trapped for years in the squeeze between rising costs and rents that could be raised only when a tenant moved out, and cursed with tenants who seemed never to move out, welcomed the opportunity of replacing them with tenants whose poverty and lack of family stability insured a higher turnover and more 15 percent increases, and whose lack of big-city sophistication in dealing with landlords made it easier for landlords to skimp on services. The people moving into the vacated apartments were mostly Negroes—not the middle-class or lower-middle-class Negroes with whom East Tremont's middle-class and lower-middle-class Jews had found it easy to be compatible, but impoverished Negroes—many on welfare, many newly fled to New York from the rural slums of the Deep South—to whom the Jews found it impossible to relate, even had they wanted to. Frightened because the newcomers seemed the advance guard of the ravaging army that had previously been kept at bay on the far side of Crotona Park, they didn't want to.

"The vandalism started then all over the neighborhood," one housewife recalls. Furniture in apartment-house lobbies was slashed, urinated on and finally simply lugged boldly out, to be replaced perhaps once, perhaps twice, but finally not to be replaced, so that the lobbies stood empty and bare. The walls of the elevators were marked by things sharp, were painted, were marked again—and finally not painted any more. Break-ins began. New, stronger locks appeared in apartment doors, and then strips of steel to keep intruders from prying under the door jamb. The break-ins increased. Then there began to be the first, terrifying, reports of muggings.

Still, most of East Tremont's people stayed; their apartments were simply too precious to them for even fear to scare them away. In 1960, the year the expressway's East Tremont section opened, there were still—four years after demolition in the area had begun—an estimated 25,000 Jews in that neighborhood.

Because most of the East Tremont section of the expressway runs through a deep cut, all one sees of the great road from adjoining streets is a gap in the ground. There is nothing visible rising out of that gap. But sit

next to that gap—in one of the playgrounds that Moses built on "excess condemnation" parcels—or open the window in one of the apartments—approximately 3,000 apartments—whose windows face the gap during rush hour, when, down below, the expressway is packed solid with cars and trucks six lanes across, and one soon realizes that something is rising from that gap, filling the air above and around it, filling it with something that, if one touched a match to it, would make it burn with a pale-blue flame—the flame emitted by burning carbon monoxide.

The human constitution apparently adapts itself to such fumes. One can sit next to the expressway for five days, observing it, and notice that by the fifth day, the nausea and headache and dizziness one felt at first are gone. But no one knows what the inhalation of carbon monoxide—and assorted hydrocarbons emitted by automobile motors—in diluted form produces, for no study has ever been done on the effect of prolonged exposure to such gases.

Rising out of that gap in the ground also—concentrated by its high walls—is the noise of herds of cars and trucks. And that noise is much harder to get used to than the fumes. Talk to people who live in the 3,000 apartments next to the Cross-Bronx Expressway and one hears applied to that noise, over and over again, a single adjective: "unbearable."

At rush hours, the sound of a great expressway on the flat is the sound of the sea, a steady, surging roar. But the Cross-Bronx Expressway in East Tremont is not flat. As the huge diesel tractor-trailers, the monsters of the highways, come to each incline, they are forced, having been unable to maintain speed because of the creeping rush-hour traffic, to shift gears and inch their way up the hill, accelerator pedal jammed hard to the floor. So the sound of the Cross-Bronx Expressway at rush hour is a roar, punctuated by the snarl and grind of shifting gears and the snort and growl of acceleration, and, of course, the sudden, loud harsh backfires—and all of this sound, magnified by the underpasses and the high brick walls that line the sides of the expressway cut, comes out of that cut and over the neighborhood as if out of a gigantic echo chamber. "At nights, you should hear those trucks," says a man who lives a full block from the expressway. "You should hear those trucks at four o'clock in the morning. It's noisy all the time, but you usually wake at about that time, and you can't get back to sleep."

More people moved out of the buildings bordering the expressway. Some of the vacancies were filled by the type of family that would have filled them in the days before there was an expressway, for there were still tens of thousands of Jewish families in New York struggling to get out of the Lower East Side and other slums. But, with the noise, most moved out again—as fast as they could. And the families that replaced them were the families from the other side of the park. Muggings increased, and there began to be reports of robberies, thieves breaking right into your home. Before long, the old residents of the 3,000 apartments bordering the expressway were gone, moved away. Then the residents of the apartments next to those began to move, and then the residents of the apartments next to those.

The demolition for the expressway had taken 5,000 of East Tremont's

60,000 residents. Now the expressway had forced out 10,000 more. The new predominantly nonwhite residents. Saul Janowitz says, "shopped to the south in Morrisania, where they had always shopped. They didn't patronize East Tremont's stores. As break-ins increased, insurance premiums began to sour. Merchants who had barely been making a living before weren't making one any more. Storekeepers who had been in East Tremont for decades began to look for a way out. Many could find no buyers; when they moved out, their stores were simply boarded up. Each year, reports of mueeines increased. Sometime in 1962 or 1963, exactly when isn't clear, a young, pretty teacher took her third-grade class to the park for the "nature trip" that East Tremont youngsters had been taking for generations. Details of the crime vary—it was never reported in the newspapers—but the neighborhood believes that a man with a knife forced her away from her class, took her to a deserted area of the park and raped her. If there was a last straw, that was it. When word of the crime circulated, undoubtedly exaggerated in the telling, the people of East Tremont stopped using the park, and the young families that had always been attracted to East Tremont, moving into its big roomy apartments when the older people who had lived in them died, moved in no longer. The people of East Tremont-particularly the young families whose breadwinners were not "in cloaks and suits" but in the professions, and who could afford to live in the suburbs or at least in Riverdale-moved out. Faster and faster they left, and faster and faster, wider and wider, spread the urban decay.

Still, what was left of the people of East Tremout tried to fight. They attempted to regroup in the community's northern reaches, a natural defensive position possessed of the strategic asset—a big and beautiful park, Bronx Park-from which they had been driven in the south, and to which the forces of decay had not yet penetrated. There was one major weakness in the position. This northern section, immediately adjacent to the 180th Street station of the White Plains elevated, had filled up about fifteen years earlier than the southern. Its apartment houses were even older. And, since at the time they had been constructed, landlords had not been convinced that families moving up to the Bronx could afford significantly higher rents than they had been paying on the Lower East Side, those apartment houses were of cheaper construction. By 1960 they were in far worse condition than those in the southern Section 2 that Moses had destroyed. Couples already living there were used to it, but it would not attract younger couples—a consideration important to East Tremont, which felt, as Barney Lambert put it, "that if young people want to move into the same area in which they grew up, they ought to be able to do it." But, the community felt, this weakness could be remedied: the papers were full of new programs for the city-"Title I," "Mitchell-Lama"—which, the papers said, were designed to provide housing at rents that people could afford to pay.

Lillian Edelstein was gone—as were most of ETNA's old leaders, who, having lived in the destroyed southern section of the community, were no longer part of it. But the community found new leaders, including Lambert and Vivian Dee, an eager, vivacious young housewife. Under the auspices

of the East Tremont Neighborhood House, they worked up a plan for a Title I development called "Bronx Park South," brought Lyons and every other politician who seemed interested in on the planning from the beginning, and one day in 1959 found themselves—to their shock—accompanying the borough president to Randall's Island for an appointment—a personal appointment—with the Mayor's Committee on Slum Clearance, Robert Moses, chairman. "In a smaller room, his personality was even more overwhelming [than in the Board of Estimate chamber]," Lambert recalls. But this time, he was cordial. With a grin that filled the room, he began the meeting by saying to Lyons: "Well, Jim, what can I do for you?"—and when Lyons told him, he said he would do it. Knowing his power, Lambert and the rest of the committee were optimistic. "It was refreshing to have him on our side," he would recall.

But Moses' concept of the project soon expanded. While ETNA had conceived of it as one of limited size, limited to an area of run-down tenements so as not to hurt sound housing in the area, under Moses it was, to their dismay, expanded into a huge concept of 5,400 units—that would destroy no fewer than twenty-four of the best remaining apartment houses in the area. Moses' concept of middle-income rents, moreover, proved to be higher than ETNA's—so much higher that the people of East Tremont, who had proposed the project, realized that they were not going to be able to afford to live in it. One resident vividly recalls the ETNA meeting at which the Moses-proposed scale of rents was announced: "A groan of despair went up from the room."

ETNA tried Mitchell-Lama, over which, by 1959, Moses had little control. After weeks of effort-Janowitz, taking time away from his store, personally canvassed every vacant site of any size in the neighborhood—they came up with one that seemed perfect: a vacant tract next to the Bronx River, large enough for a 200-unit development. Officials of the Housing Redevelopment Board told them the tract was already owned by the city, so that there would be no problems with acquisition. In innumerable meetings with city departments, they plowed their way through masses of red tape. They found a developer who would build the project at a cost that would keep rents down to the level they wanted, and the developer's plans were approved by the Housing Redevelopment Board. And then it turned out that the board's original description of the ownership of the tract was not complete. The city did, indeed, own it-but only in the technical sense that it owned all land under the control of the Triborough Bridge and Tunnel Authority. Moses had acquired the tract some years before for another of his highways, the proposed Sheridan Expressway. "We found out who had title, and we were in despair when we heard it was Moses," Mrs. Dee says.

Mrs. Dee learned that only part of the land was needed for the expressway, and that if its route was shifted from the center of the tract to the side, plenty would be available for the housing project. Even if it wasn't moved, there would be enough land available for a smaller, but still feasible, project. "I asked [Triborough] for an appointment," Mrs. Dee says. "They said it would take time and they would be in touch with us. They

weren't." When she pressed for an answer about moving the expressway, "they just said 'impossible.' "

Then how about the rest of the tract, the part not needed for the expressway? she asked. "I mean, this was something we could have gone ahead and done ourselves. Everything was ready. Triborough said that the Park Department had jurisdiction over anything left over. So I spoke to [Park Department executive officer John Mulcahy]. He said it would be okay if Triborough would say okay. Triborough said the Park Department had to decide. This went on for about a year." What happened at the end of the year, basically, was that the community gave up the fight. "You know, there wasn't one hell of a lot of fight left in it any more," Ed Korn says. "They had taken our best housing. Our best people were gone." And Moses "had taken the heart out of" those who were left. "The manner, the style, in which he operated affected them. The way he changed Bronx Park South. It was the same way he had operated with the expressway. Waking up Monday morning and finding out that he had announced something, and there was nothing you could do about it. It wasn't just that this [the 159 structures torn down for the Cross-Bronx Expressway] was very good housing stock. And that it was just torn down. It was the manner in which this was done. The manner had a major impact on how the community reacted to change thereafter. He left them with feelings of being isolated, left alone—that no one cared, no one listened to them. When they tried to protest, they were powerless. No one seemed to be interested in their problem. This does generate a feeling of helplessness, of resentment. We're abandoned! The manner, the implementation, of the highway affected the area as much as the highway. They had had their licks [on the expressway]. They had had their big community thing. And they had found out you couldn't do anything against him. There was a feeling of letdown, of discouragement, that nobody cared about them. Certainly he didn't care, and nobody else in the city interfered with him. The city just wouldn't listen. Downtown wasn't interested. People threw up their hands. What was the use?" Mrs. Dee and her associates had been begging the young couples who wanted to stay in the community to hold on "for another year or two," until the new housing was available. "We got them to stay on for a while," she says, "but after a while we just couldn't keep telling them to wait-or, if we told them that it wouldn't be long now, they didn't believe it. To tell you the truth, we didn't believe it, either." With each month that passed, of course, the young couples could see the blight creeping closer to them. They began to move out, faster and faster, and into the apartments they vacated moved the tenants East Tremont feared. Some of the older people in the area began to leave.

As they left, the chief reason for staying in the neighborhood left with them. "To me, East Tremont was friends," Cele Sherman says. "When there was a Jewish holiday, you met your neighbors on the street, walking. Well, one Rosh Hashanah, I walked down from my house down Clinton Avenue to Southern Boulevard, crossed over and walked back, and didn't meet one person I could say 'Hello' to. What was the sense of staying?" Thanks to the middle-income housing programs of the mid-1960's, there were now at

least apartments—rentals and low-priced cooperatives—in "decent areas" that couples such as the Shermans could afford to rent or buy. Says Cele Sherman: "We left, too."

The one mile of the Cross-Bronx Expressway through East Tremont was completed in 1960. By 1965, the community's "very good, solid housing stock," the apartment buildings that had been so precious to the people who had lived in them, were ravaged hulks. Windows, glassless except for the jagged edges around their frames, stared out on the street like sightless eyes. The entrances to those buildings were carpeted with shards of glass from what had been the doors to their lobbies. In those lobbies, what remained of the walls was covered with obscenities. And not much remained. Plaster from the walls lay in heaps in corners; the bare wood which had been exposed was shattered and broken. The pipes which had been behind the wood were gone, ripped out, melted down and sold for the few dollars that would buy the next fix. Elevators no longer worked. Staircases were broken and shattered. Banisters had been ripped from their sockets, for scrap and a fix if they were iron, for malice, an expression of hatred and revenge on an uncaring world, if they were wood. Raw garbage spilled out of broken bags across the floor. The stench of stale urine and vomit filled the nostrils. One tried to look down only enough to avoid stepping on the piles of feces, whether mercifully dried or reeking fresh-animal and human. There was no heat in those buildings; if they were homes, they were homes as the cave of the savage was a home. And yet they were homes—homes for tens of thousands of people. They were homes for welfare tenants and for the poorest of the working poor, for families that drift from one apartment to another without, seemingly, ever paying a month's rent in full—urban gypsies—for mothers who say desperately to the stranger, when they can be induced to talk to the stranger: "I got to get my kids out of here," and for children who come to the door long after the knock is heard and peer around and ask the stranger, with fear in eyes and voice: "Are you the man from the welfare?"

After seven o'clock, the residential streets of East Tremont are deserted, roamed by narcotics addicts in gangs like packs of wolves. Even on East Tremont Avenue, by nine o'clock most of the stores are closed, the lights out, huddled behind steel gates and iron bars.

The streets of East Tremont are carpeted so thickly with pieces of shattered glass that they shine in the sun. Garbage, soaked mattresses, bits of broken furniture and, everywhere, small pieces of jagged steel fill the gutters. The sidewalks are full of holes, the streets—particularly the streets overlooking the expressway, for the expressway has made them dead-end, reducing traffic on them to a minimum—with the hulks of stripped automobiles. Once East Tremont, while the expressway was being built, had had the look of blitzkrieged London; now it looked as London might have looked if, after the bombs, troops had fought their way through it from house to house. It had the look of a jungle.

Of the people who had lived in East Tremont, who had found in that neighborhood security, roots, friendship, a community that provided an anchor—friends and synagogue and Y—a place where you knew the people

## THE LUST FOR POWER

and they knew you, where you could make a stand against the swirling, fear-some tides of the sea of life, only the very old, too poor to move, still lived, almost barricaded in their freezing apartments. As for the rest of the people who had lived there, they were gone.

## 39. The Highwayman

ON JULY 3, 1945, with the end of the war obviously near, flashbulbs popped as a gray two-door sedan, the first civilian passenger car to be produced in the United States since February 1942, was driven off the assembly line at the Ford Motor Company's River Rouge plant to signal the resumption of automobile production. Within the month, River Rouge and a dozen other giant assembly lines were debouching 25,000 cars per day onto the nation's highways. And on the very first weekend after V-J Day, gasoline rationing ended and America took to the road, with editorial writers cheering "the seemingly endless procession of automobiles" as a welcome return to normalcy.

It took just two weeks for the cheers to turn to groans. Streets and highways, so empty for forty-four months, filled up with astonishing speed; mounting day by day, by the end of those two weeks traffic was back practically to its December 1941 levels. Nowhere did it mount faster than in New York, and New Yorkers who may have forgotten that in December 1941 traffic jams had ceased to be a joke had their memories harshly jogged. The city's consternation was echoed by its press, which detailed the jams in the type of page-one scare headlines that for forty-four months had been reserved for war bulletins (AVENUE TRAFFIC IS TIED UP BY CROSS-STREET CONGESTION, read one *Times* headline. "North-South Arteries Jammed 3 Times in 2 Hours as Lines of East-West Vehicles Extend Across the Intersections"). By August 23, the *Herald Tribune* was demanding to know why the city had not, during the long breathing space afforded by the war, come up with congestion "remedies."

Moses' response—a letter, four times longer than the editorial, sped to the *Tribune* by limousined secretary—accused the newspaper of "ignoring and playing down what in other less busy and sophisticated communities would be hailed as great achievements."

What has New York done about street congestion? Bless your little journalistic hearts—a hell of a lot. And why sit we idly by without further plans for the big jam singing "Who Threw the Whiskey in the Well?" while up in the Roaring Forties editors are cutting up tires into rubber heels? Tush, tush! The blue-prints are oozing from our files and spilling over the floors. Every day sees visiting firemen in New York not only from the hinterland of America but from the four corners of the emancipated globe, examining our work and asking for copies of our plans. Why are they here if there is nothing to see?

Let's see. We have built and are building wide parkways and expressways, bridges and tunnels, without crossings and lights, with service roads for local use and parking, belt and crosstown systems which take through traffic off ordinary streets and enormously cut down congestion. . . . Then we have great new parking spaces in parks, at beaches and along parkways. . . . We have eliminated railroad grade crossings which blocked traffic for miles on Atlantic Avenue and Rockaway, and substituted boulevards for tracks. Trolley tracks are being ripped up all over town to promote the flow of traffic. . . .

Stick around, Mr. Editor, and continue to give us your support. Traffic will run pretty smoothly here within three years, the time needed to carry out

our plans.

Soon Moses was documenting the extent of those plans. Blueprints were ready, he said, for widening the city's old boulevards-Horace Harding, Queens, Conduit, Northern, Eastern-and his old parkwaysthe Belt, the Gowanus, the Cross Island, the Laurelton-and for building close to a hundred miles of new, broader roads, "expressways" to carry not only automobiles but trucks and buses. Soon New York's newspapers began to be filled with names like "Bruckner," "Van Wyck," "Major Deegan," "Cross-Bronx," "Brooklyn-Queens," "Harlem River," "New England," "Richmond," "Willowbrook," "Clove Lakes." Also on the agenda, he disclosed, were three monumental "crossings" of Manhattan Island: "Lower Manhattan," "Mid-Manhattan" and "Upper Manhattan" elevated expressways. And that was just within the city. On Long Island, the old parkways whose names were synonymous with his-the Southern State, the Northern State, the Wantagh, the Ocean-were to be widened and extended, the Northern State deep into Suffolk County, and new parkways-the Meadowbrook, the Captree-were to be built. In Westchester, the Cross County and Sprain Brook parkways were to be built, the Taconic, Bronx River and Saw Mill widened. The blueprints may, indeed, have been spilling over the floors. What Robert Moses was proposing was the widening or construction from scratch of no less than two hundred miles of roads. And the agenda did not include merely roads. There were also the facilities to carry traffic under and over the waters that divided the city. While completing Ole Singstad's huge Brooklyn-Battery Tunnel, he had begun preliminary planning for two huge bridges, a "Throgs Neck" span two miles east of the Bronx-Whitestone, and a "Narrows Crossing" to Staten Island.

During the 1920's, Robert Moses had announced a program—his statewide state park and parkway program—that had dwarfed any plan for the recreation of vast urban masses conceived anywhere in the world in recorded history.

During the 1930's, Robert Moses had announced a program—of New York City bridge and arterial highway construction and park reconstruction—which, taken as a whole, as the single, coordinated system it was, dwarfed

<sup>\*</sup> Major William F. Deegan was City Tenement House Commissioner and a former state commander of the American Legion. He died in 1932.

any public work or coordinated system of public works built in any modern city, and, perhaps, in any ancient city as well.

The program Robert Moses was announcing now—during the 1940's —would, if completed, dwarf those earlier programs. And, he said, there was no reason why it shouldn't be completed; it was, he said, no mere visionary dream; not only blueprints but money—mostly state and federal money, reserved during the war years through his efforts in Albany and Washington—were largely in hand; "the postwar highway era is here."

But, strangely, the troops did not respond to this ringing trumpet call as they had to his trumpet calls of the past.

Even before the war, of course, some urban planners had begun to see—largely because of the effects of Moses' creations—that building more traffic facilities would not in itself cure traffic congestion.

These planners had said—the Regional Plan Association had been saying it since 1929 and, after the opening of Moses' creations during the 1930's, with increasing urgency—that the movement of people and goods in a great metropolitan region required a balanced transportation system, one in which the construction of mass rapid transit facilities kept pace with the construction of roads. During the last two or three years before the war, a few planners had even begun to understand that, without a balanced system, roads not only would not alleviate transportation congestion but would aggravate it. Watching Moses open the Triborough Bridge to ease congestion on the Queensborough Bridge, open the Bronx-Whitestone Bridge to ease congestion on the Triborough Bridge and then watching traffic counts on all three bridges mount until all three were as congested as one had been before, planners could hardly avoid the conclusion that "traffic generation" was no longer a theory but a proven fact: the more highways were built to alleviate congestion, the more automobiles would pour onto them and congest them and thus force the building of more highways-which would generate more traffic and become congested in their turn in an inexorably widening spiral that contained the most awesome implications for the future of New York and of all urban areas. The only remedy that could check that vicious spiral was the coordination of new highways with new mass transit facilities—and not only was New York's Coordinator not planning any such facilities himself; his monopolization of construction funds and his hold over the city's government were making it impossible for anyone else to plan them either. He was, in fact, destroying some of the old facilities, not only the trolley tracks which he was boasting about "ripping up all over town" but the Third Avenue elevated mass transit line, which he was moving to have torn down. Viewed in this light, tearing tracks up and elevateds down was not an achievement but a disaster. And tearing them down was only one method of destroying mass transportation facilities. Moses-whether by design or out of ignorance of the effect of his policies—was employing other methods with equal effect. Highways competed with parallel mass transit lines, luring away their customers. Pour public investment into the improvement of highways while doing nothing to improve mass transit lines, and there could be only one outcome: those lines would lose more and more passengers; those losses would make it more and more difficult for their owners to sustain service and maintenance; service and maintenance would decline; the decline would cost the lines more passengers; the loss in passengers would further accelerate the rate of decline; the rate of passenger loss would correspondingly accelerate -and the passengers lost would do their traveling instead by private car, further increasing highway congestion. No crystal ball was needed to foretell such a result; it had already been proven, most dramatically perhaps in New Jersey, where the Susquehanna Railroad had lost over two-thirds of its passengers in the ten years following the opening of the George Washington Bridge, but also in New York, where the New York Central had been hit hard by the Triborough Bridge, and the Long Island Rail Road had watched more passengers drift away each time a new Moses parkway opened. No crystal ball was needed, therefore, to foretell the end result of Moses' immense new highway construction proposal, coupled as it was with lack of any provision whatsoever for mass transit: it could not possibly accomplish its aim, the alleviation of congestion. It could only make congestion, already intolerable, progressively worse. His program was selfdefeating. It was doomed to failure before it began. It just didn't make sense.

It made less sense still, these planners felt, because of certain implications peculiar to the Moses style of highway building.

Roads opened new areas to development. (Moses' prewar parkways had caused a vast upsurge in population on Long Island before the war, both in Brooklyn and Queens, and in the suburban counties of Nassau and Suffolk.) Subways opened areas to development, too, but development in a different pattern. Because people arrived home from the subway on foot and didn't want to walk too far after they reached their stop, subway-inspired development was development close to subway stations: high-density, predominantly apartment-house development. There were suburban-type, singlefamily-home communities in New York City served by the subway-Sunset Park was one—but the single-family homes in these communities had been placed on small plots by developers who knew that to make these homes attractive to prospective purchasers, they would have to keep the radii of the communities, and the required walking distance within them, reasonable. People arriving home on parkways arrived home in automobiles. It was relatively easy for them to travel far longer distances from their "stops," the parkway exits. Realizing this, developers were able to take advantage of people's growing desire for open space to build on larger plots of land, to spread out the communities in which people lived. Even in Queens and southern Brooklyn, communities created by the opening of Moses' Cross Island and Belt parkways were characterized by larger lot sizes and lower population densities than those created by the opening of subways. Development beyond the city line, freed from the inhibition against large lots inherent in the city's rigid gridiron block pattern, spread more loosely-and widely -still, and as the open spaces of Nassau began to fill up and developers looked for fresh stretches of land to subdivide, they found themselves looking

—and building new communities—much farther away from the center of the city than would have been the case if the impetus to such development had been not roads but railroads. Once, growth in the New York metropolitan region had been, to a great extent, upwards—people being piled on top of people in apartment houses. Now the growth was outwards. Not only was the population of the region growing rapidly (9,000,000 in 1920, it was 11,000,000 in 1930, and, despite the braking effects of the Depression, 12,000,000 in 1940), but it was spreading away from the traditional center of the region even more rapidly.

Had jobs followed the people out into the suburbs, the implications of this spread might not have been so serious. Given the advantages of "open space," they might in fact have been desirable. And normally, because land was relatively so cheap on Long Island, businesses and industries would have followed the people out.

But Moses' policies made it impossible for them to do so. Most roads foster commercial as well as residential development, but his parkways were barred to commercial traffic. His behind-the-scenes persuasion of Long Island politicians to zone residential almost all the adjacent land may have kept the parkways pristine and beautiful, but it also kept the land most desirable for commercial development on Long Island closed to such development. Industries and businesses which could have imported raw materials and shipped out finished products by rail instead of truck shied away from Long Island because the Long Island Rail Road, whose lines should have formed the hub of industrial development, was a rickety "Toonerville Trolley" line, and because without a rail connection to New Jersey the rail lines which brought the goods and commerce of the nation into New Jersey could transport it to Long Island only by expensive lightering. So industry and business stayed back in New York City.

In the decade after Moses opened the Southern State Parkway in Nassau County, 200,000 new residents—about 50,000 families—moved into the county, but only 12,000 new jobs were created in the county. This meant that about 38,000 family breadwinners plus tens of thousands of others from the parkway-opened areas of Brooklyn and Queens had to come back into the city to win that bread. Hardly had the war ended when the surge to the suburbs resumed its prewar pace, leaped beyond it and soared to hitherto undreamed-of proportions, spilling beyond Nassau into rural Suffolk. Every projection made by planners showed that hundreds of thousands of families would be moving to Long Island within the next few years. The vast majority of the family breadwinners were going to have to travel into the center city every day to work. To the drivers who had already crammed to capacity and beyond capacity all Moses' roads would be added tens of thousands of additional drivers. How could you possibly build enough roads to accommodate them?

And what about city streets? Once these tens of thousands of additional cars reached the center city, how were they supposed to move around in it? Above the streets? The blighting effect of elevated structures had long since been documented; "We did not tear down the . . . elevated [mass transit]

lines to have them replaced with a maze of overhead motor highways which would rob the city of light and air," said Manhattan Borough President Edgar J. Nathan, Jr., a reformer. Below the streets? The maze of underground subways and utility lines made underground construction prohibitively expensive. On the streets? The streets were already crammed with all the vehicles they could possibly hold.

And where were these cars supposed to park? To Moses' highway trumpet call Nathan quickly added a low-key but penetrating counterpoint: "Mr. Moses explains everything beautifully but not where the motorists are going to put their cars." Planners and reformers picked up the theme. Curbs in the city's central business district were already crammed bumper to bumper—and so were off-street private parking garages. Long Island, of course, was not going to be the only source of additional cars. What about the cars that would be attracted into the city by the new roads Moses wanted built in Westchester County—and by the new roads being built in New Jersey, roads leading to the Lincoln Tunnel, to which the Port Authority was planning to add a third tube, and the George Washington Bridge, to which it was planning to add a second deck? Moses' answer was municipal construction of off-street, multistory parking garages; the answer caught the fancy of headline writers, but planners, costing them out, saw at a glance that no expenditure the city—or even a new public parking authority—could possibly afford could build enough garages to accommodate more than a small fraction of the load Moses was planning to dump on them.

Planners and reformers were raising other questions about Moses' policies.

The Coordinator's proposed highways and garages were designed to help automobile-owning families. But in 1945 two out of three residents of New York City belonged to families that did not own automobiles. Many of these families did not own them because they could not afford to. The Coordinator's subway-fare-increase proposals being advanced at that very moment in Albany would force poor New Yorkers to devote more in many cases, more than they could afford-of their slender resources to getting around the city. The Coordinator's grabbing of the lion's share of public funds for highways and garages meant that public resources would be poured with a lavish hand into improving the transportation system used by people who could afford cars. Only a dribble of public resources would go into the transportation system used by people who could not-and who therefore rode subways and buses. While the city and state were providing car users with the most modern highways, they would be condemning subway users to continue to travel on an antiquated system utterly inadequate to the city's needs. While highways were being extended into "suburban" areas of the city in which highways were needed—and, in fact, into areas of the city in which highways were not needed, in which the need for highways would be created by the highways—subways would not be extended into areas of the city in which subways were needed. There were subway plans, too, just as there were highway plans; some, such as the proposals for a Second Avenue subway (for Manhattan's far east side and the Bronx) and the Hillside

Avenue subway extension (for northeastern Queens), were advanced enough so that construction could have been begun immediately if funds were provided. But the Coordinator's monopolization of public funds made subway construction impossible. By building transportation facilities for the suburbs, he was insuring that no transportation facilities would be built for the ghettos. Therefore, planners saw, in the transportation field, the portion of the public helped by the use of public resources would not be the portion of the public that needed help most.

For the well-to-do residents of the "suburban" areas of northeastern Queens, not having a subway nearby meant having to take a bus or drive a car to the end of the line in closer to Manhattan or having to drive all the way into Manhattan and back every working day. This was a hardship. But for the impoverished residents of the southeastern Bronx, not having a subway nearby and not owning a car meant taking a bus to the subway and that meant paying a double fare each way—twice a day, five days a week—and that meant paying money that many of these residents simply could not afford. And that meant that often these residents walked to the subway, walked a mile or more, in the morning and home in the evening when they were tired. And it meant that on weekends, families that would have liked to take their children on trips—to a museum or a movie downtown or Coney Island or some other park (particularly to a park, since Moses had built few in "lower-class" neighborhoods) or to visit a friend who lived in another neighborhood—stayed home instead. The Coordinator's policies were doing more than simply not helping these people. They were hurting them.

They were even limiting their freedom to choose a place to live. His denial of funds for the extension of mass transit lines into outlying sections of the city and into the suburbs meant that the new homes and apartments there would be occupied only by car-owning families. Whether by design or not, the ultimate effect of Moses' transportation policies would be to help keep the city's poor trapped in their slums. They were in effect policies not only of transportation but of ghettoization, policies with immense social implications. "We knew we had to do something to halt this trend," reformer Leigh Denniston said in a letter-to-the-editor. "And we were asking how best to do it."

The answer to all the questions raised about Moses' transportation policies was, of course, mass transportation. The problems involved in moving tens of thousands of commuters into and out of the center city in a couple of peak hours every weekday—problems so unmanageable in terms of highway lanes whose peak capacity was 1,500 cars per hour—were reduced to manageable size by rapid transit lines, a single track of which could carry between 40,000 and 50,000 persons per hour, and could bring them into the city without their cars, so that they wouldn't require parking spaces.

Mass transportation was, moreover, the *only* answer. New highways had a vital function to fulfill: the transportation of people and goods that, for whatever reason, had no choice but to use highways, at a reasonable rate of

speed. If you had a viable mass transit system in the region—fast, clean, reasonably inexpensive, modern subways and suburban commuter railroads—you would attract to it a substantial share of the traffic that did have a choice, and by removing it from the highways, you would free the highways so that they would be able to fulfill this function. If residents of the region, particularly commuters, did not have a choice, if they were forced by the inefficiencies, inadequacies of service and high fares of mass transit to use highways whether they wanted to use them or not, the highways would never be able to fulfill their function. Build railroads at the same time that you were building roads, and solving the metropolitan transportation problem would be greatly simplified. Pour all available funds into roads without building railroads, and that problem would never be solved.

Public exposure to this point of view was limited. Editorials such as the one in the *Herald Tribune* that so aroused Moses' ire were rare—nonexistent in the two newspapers most decisive in shaping public opinion in New York, the *Times* and *Daily News*; the *News* cheered Big Bob the Builder's "greatest highway plan." Watching traffic pile up in the city, New York's press was screaming for action—and Moses' plan promised plenty of what it considered action.

The public, conditioned by prewar decades of acclaim for road building, accustomed to equating the value of a public work with its size, unaccustomed to critical analysis of public works programs, desperate for action, showed no greater understanding, no comprehension that there might be drawbacks to the biggest road-building plan ever. Writing in *PM* in May 1946, Lewis Mumford tried to explain some of the social implications of building without planning. "A large part of the money we are spending on highways right now is wasted because we don't know whether we want people where the highways are going," he said. But Mumford confessed to despair that the public would understand. "Highways are an impressive, flashy thing to build. No one is against highways."

One did not have to be a Mumford, however, to grasp the fact that Moses' policies might be self-defeating. All one had to do was think about those policies for a while. And, sitting in their cars day after day in everlengthening traffic jams, New Yorkers were finding themselves forced to indulge occasionally in that activity. While Moses' plans enjoyed public support through the 1940's, there were signs that it was not as unanimous after the war as it had been before. Denniston's letter was only one of many in which people were trying to articulate new, disturbing thoughts. Within two months after the war's end, editorial pages—not the editorial columns but the letters-to-the-editor columns, in a number which strongly suggests that on this issue the public was ahead of the press—began to contain suggestions like that published on October 22, 1945, in the *Times*: "Why not bar all private cars from Manhattan?" By 1946, such letters were common.

The more informed sections of the public—businessmen exposed at their weekly Rotary or Kiwanis or Chamber of Commerce luncheons to guest speakers familiar with the problem, for example—were even better

exposed to analyses of Moses' policies. It was no longer unusual to find in the back pages of the *Times* or *Tribune* articles like the one reporting that on January 23, 1947, Leslie Williams, of the American Transit Association, had, in an address to the New York City Safety Council, expressed the view that "it would be a whole lot cheaper for a community to subsidize public transit than to spend enormous sums for downtown expressways with no assurance even then that these expressways will relieve congestion."

Rebuffed by O'Dwyer, who summarily referred their inquiries and suggestions to Moses, and forced to admit to themselves that they could suggest no immediate method of financing new mass transit lines, these planners pleaded for the city to take at least one simple, inexpensive step that would make construction of new lines possible in the future.

Building transit lines underground was wildly expensive. Building them at ground level was cheap, so far as construction costs were concerned. It was only when the ground was filled with people that the cost of acquiring it became financially and politically prohibitive. And, planners said, there existed at that very moment an opportunity for obtaining the right-of-way for train tracks quickly, cheaply and with an absolute minimum of public hostility.

The city was about to begin acquiring close to a hundred miles of strips of land between 150 and 250 feet wide, the right-of-way for the Coordinator's new highways. Some of these highways were to run through areas either empty or containing only single-family homes, in which land was relatively inexpensive; in 1945, 21 percent of the city was still undeveloped. Simply obtain another fifty feet of right-of-way, add it to the center malls of Moses' highways, and there would be enough room on those malls for a double-track surface mass transit line, a subway running at ground level. Build the six-lane highways just as you had been planning to do, they urged Moses, but make the center mall wide enough to accommodate those tracks. Then when, sometime in the future, the city was ready to build the subway lines, there would be no problem in acquiring the right-of-way. It would be already available, just sitting there waiting for the tracks to be laid atop it.

Seizing this opportunity would slash at a stroke the Gordian knot of difficulties in the way of providing mass transportation in New York.

Residents of adjacent buildings naturally opposed the construction of noisy, dirty rapid transit lines, often in numbers sufficient to make construction a political impossibility. Build rapid transit lines in the middle of highways, and there wouldn't be any adjacent buildings. The nearest buildings would be cushioned from the trains' impact by a good hundred feet of space—and in the case of expressways depressed in open cuts, by their location below ground level as well. Highways caused noise and dirt and objections, too, of course, but the highways were going to be built anyway; trains on their center malls would add to such inconveniences only minimally. As long as the city must be provided with new mass transportation facilities, and as long

as these facilities could not be built underground, building them on highway center malls was surely not only the cheapest way to build them but the easiest way to minimize political and aesthetic fallout.

If there was any long-range prediction that could be made with any certainty about a city as volatile as New York, these planners felt, it was that such an opportunity would never come again. Expressways spawned intensive development—apartment houses, factories, office buildings—where there had been before only open fields or private homes. The city could afford to acquire open fields or private homes, even the long miles of fields and homes required for Moses' highways. It would probably never be able to afford to acquire long miles of apartment houses, factories and office buildings. And even if it were in some future decade to find the cash to do so, would it be able to find the will? Would not the protests of thousands of voters make the acquisition politically unfeasible? Acquisition of rapid transit right-of-way, so easy in conjunction with the current expressway program, would never be easy again. It might, in fact, be impossible. Fail to grasp the present opportunity and the city might never be able to build sufficient mass transit to significantly improve transportation.

There were no logical reasons not to grasp this opportunity. No federal approval was necessary; the cost of land acquisition was split by state and city. The state was leaving absolute discretion over the design of Robert Moses highways to Robert Moses. The city's share would be so small that even impoverished New York would be able to afford it. The suggestion was not even revolutionary: plans were already under way for the placing of a mass transit route down the center mall of the proposed Congress Street Expressway in Chicago. The suggestion was so logical that it did not even require much imagination to grasp it. All that was required was common sense.

F. (for Francis) Dodd McHugh asked Moses to grasp it in planning the Van Wyck Expressway.

McHugh, a little, bright-eyed Scotsman, had, as chief of the Office of Master Planning of the City Planning Commission, previously aroused Moses' hostility by objecting to his refusal to make provision for schools, libraries and transportation facilities for the residents of his huge housing projects. Call ing McHugh a "smart aleck," and his objections "stupid, long-winded, contentious and impractical," Moses told his boss, Edwin Ashley Salmon, "We had better get rid of staff work of this kind." But McHugh had declined to take this subtle hint. Assigned to draw up a pro forma "Master Plan of New York City Airports," he ventured beyond the assignment and asked himself how people were going to get to these airports—and came up with some rather striking figures.

By the most conservative estimates, when the immense new airport under construction on the marshes at Idlewild Point in southeastern Queens was in full operation, 40,000 persons would be employed there, and 30,000 passengers would pass through it every day—most of them during morning and

evening "peak period" rush hours. If traffic patterns conformed to those at other major airports, during peak periods 10,000 persons would be trying to get to Idlewild every hour, some of them in multi-passenger buses but enough of them in taxis and private automobiles so that they would be traveling in 3,220 separate vehicles. And heading for Idlewild at the same time would be hundreds of trucks carrying air mail, express and freight.

Most of these vehicles would undoubtedly be using the Van Wyck Expressway; Moses' stated purpose in proposing it was to provide a direct route to the airport from mid-Manhattan. But the Van Wyck Expressway was designed to carry—under "optimum" conditions (good weather, no accidents or other delays)—2,630 vehicles per hour. Even if the only traffic using the Van Wyck was Idlewild traffic, the expressway's capacity would not be sufficient to handle it.

And Idlewild traffic was going to be only a fraction—a small fraction—of traffic using the Van Wyck. The new expressway would be the most direct route not only to the airport but to all southeastern Queens and to the Southern State Parkway leading to fast-growing Long Island. During highway rush hours—which coincided with airport rush hours—the Van Wyck was going to be flooded with thousands of cars heading for these destinations. The new road Moses was building could not—even under optimum conditions—possibly come anywhere near fulfilling the purpose for which Moses was building it. And McHugh, who estimated all this traffic conservatively, could not help knowing that his conservatism was not realistic. The air age was just beginning: air traffic was obviously going to boom to immense dimensions. If the Van Wyck Expressway could not come anywhere near handling Idlewild's traffic when that traffic was 10,000 persons per hour, what was going to happen when that traffic increased to 15,000 persons per hour? To 20,000?

Moses' answer was that he was going to widen two other routes to south-eastern Queens, the Belt Parkway and Conduit Boulevard. But parkway and boulevard were already jammed far beyond capacity; widen the two roads and they would still be jammed—even without Idlewild traffic. Widening roads could not possibly solve the Idlewild access problem. You'd have to pave over most of southeastern Queens to do that. Building the Van Wyck Expressway was going to cost \$30,000,000. The principal result of the expenditure of that staggering sum would be the condemnation of most of the drivers using the Van Wyck—of generation after generation of drivers using it—to the frustration of being trapped, some of them twice a day for every working day of their lives, in staggering traffic jams.

Building the Van Wyck would raise other questions. Once the cars using the expressway got to the airport, how were they supposed to get around in it? An internal road network of enormous cost and size would be required—and even then congestion inside Idlewild might be even worse than the congestion outside. Where were they supposed to park? Parking lots covering hundreds of acres, thousands of acres, expanses of concrete stretching endlessly over the marshland, would be required. Since the marshland would have to be filled in before it could be paved, the construction of such lots would be enormously

expensive. If the lots stretched for miles, parts of them would be miles from the airline terminals. How were the drivers—and their luggage—supposed to get to the terminals after they parked?

Only by building the Van Wyck with rapid transit could all these questions be answered. Three lanes of this particular expressway (not engineered up to later design standards) could, under optimum conditions, carry each hour 2,630 vehicles, most of them bearing a single passenger. One lane of rapid transit could, under optimum conditions, carry 40,000 persons per hour. And with rapid transit, conditions would be optimum far more often than on a highway, whose capacity was reduced far more severely by rain or snow or fog or by blockage by an accident or breakdown. Build the Van Wyck with rapid transit, and you would be insuring that, for generations, persons traveling to Idlewild would be able to get there with speed—an express trip from Pennsylvania Station in mid-Manhattan to the airport would take exactly sixteen minutes—and comfort. And, since the long lines of cars would melt off the expressway, those drivers who still wanted to get to Idlewild by car would also be able to get there with speed.

Building the Van Wyck with rapid transit would, moreover, be easy. The north-south expressway was going to cross Queens Boulevard in Kew Gardens. A subway—the IND east-west line running out from mid-Manhattan eight miles away-crossed that very intersection. When it reached the intersection, moreover, it slanted south-by coincidence, toward Idlewild-for about a mile before heading east again. During that mile, its tracks lay almost precisely beneath the right-of-way that Moses was even then acquiring for the Van Wyck. For a mile of its four-mile length, therefore, the expressway would be running almost right on top of the subway. All that was needed to complete a rapid transit link between mid-Manhattan and Idlewild was to bring that subway up to the expressway's center mall and extend it for another three miles. Nine miles—nine expensive miles—of rapid transit link between mid-Manhattan and Idlewild were already completed. All that was needed to complete the link were three miles—three inexpensive miles more. Moreover, another subway—the IND's Fulton Avenue line, coming out from lower Manhattan through downtown Brooklyn-ran close to Idlewild's western edge. Build a branch of that line into the airport, a simple, inexpensive job, and travelers from lower Manhattan-including the Wall Street business district from which would come so large a proportion of the airport's users—would also be able to reach it by train.

Within the airport, McHugh noticed, the two subways would be running within a few hundred feet of each other—in fact, might even intersect. This, he saw, would enable the city to solve a problem which had plagued it for generations: providing a subway link between downtown Brooklyn and central and northern Queens, two areas connected only by automobile. Link up the two subways within the airport, and the connection between the two areas, so long sought but so long despaired of because of the large expense, would be accomplished at small expense. Rapid transit on the Van Wyck Expressway would solve not only the Idlewild access problem but a host of other transportation problems.

And it would be so easy to make provision for that rapid transit.

Building rapid transit on the Van Wyck would provide advantages not only for New York City but for all Long Island.

The expressway ran right underneath the Jamaica Terminal of the Long Island Rail Road; it was that terminal that Moses was planning to hold aloft while he slid the highway beneath it. Put rapid transit on the Van Wyck and Long Island residents would be able to get to Idlewild simply by taking the Long Island Rail Road to Jamaica and transferring to the rapid transit line below.

Perhaps the city could not afford at the present time even the relatively small cost of the construction of three miles of surface rapid transit. McHugh doubted that this was true: the cost would be no more than \$9,000,000; it made no sense to say that a city that was planning a \$280,000,000 expressway program—of its own money, not counting federal and state contributions—could not afford \$9,000,000 for an improvement that would make the expressways so much more pleasant to use. But even if it was true, he said, even if the city did not construct the rapid transit lines now, at least make provision for their future construction.

The cost of providing the additional fifty feet of right-of-way would be less than two million dollars—about \$1,875,000, McHugh estimated. The Van Wyck Expressway, whose function was to provide reasonably fast, convenient access to Idlewild Airport, was going to cost \$30,000,000, anyway. For that amount, that road would probably never be able to fulfill its function properly. For less than two million dollars more, it would.

Spend the two million now, McHugh saw, and the right-of-way would be available whenever the city wanted to use it. Don't spend it now, and if the city should want to acquire the necessary right-of-way for rapid transit in the future, after the expressway opened, the land would be many times more expensive than it was now. Nor would the cost be limited to the price of the land needed for the right-of-way. Because the land the city would have to acquire would no longer be within the expressway, it would abut three miles of buildings. Their owners would be entitled to substantial damages to compensate them for the noise and dirt of the trains. And land would have to be acquired not only for the tracks but for stations. If provision was not made now for right-of-way along the expressway center mall, the cost of that right-of-way would be not two, but tens of millions of dollars—so high that even if the city were to resolve to bear the enmity of thousands of protesting voters and build a rapid transit line, it might be financially unfeasible for it to do so. Reserve those three miles of right-of-way now, and it would be possible in future years for the city to solve the enormous problem of congestion on the Van Wyck Expressway—and a host of other transportation problems—quickly, simply and cheaply. Fail to reserve it now, and those problems might never be solved.

McHugh was planning to include his suggestion in the airport "Master Plan," but he made the mistake of mentioning it first to his boss, Planning Commis-

sion chief of staff Colonel William J. Shea, from whom Moses always received close cooperation.

"I was called into [Shea's] office, and Spargo was there raising hell, that I was impeding progress, that this thing had to go through and stop this crap, that I was going to cost the city millions in federal money. The whole effect was, 'Why don't you shut up?' I was asked not to write any memo."

Declining to accept that recommendation, McHugh wrote that rapid transit access should be provided for Idlewild and predicted what would happen if it wasn't. But his statements had been deleted when the commission approved the "Master Plan of New York City Airports." The only future on which his memo had any effect was his own. Although he was under civil service protection, there was a salary range to his position, and he had been at its upper limit. When the next city budget was adopted, he found he was at its lower limit: his salary—previously, he says, "just about enough to get by on"—had been reduced. He had, moreover, been fighting Moses for eight years now, and he was well aware he wasn't getting anywhere. His report on the rapid transit reservation might as well have not been written. He resigned.

As for the Mumfords and other farseeing planners, Moses treated their predictions of disaster with the disdain he felt they deserved. Opponents who charged that he was unaware of the social implications of his transportation policies—that the ghettoization they caused and the commercial development they prevented on Long Island, for example, was inadvertent—underestimated him. He knew precisely what he was doing. He had formed his own vision of Long Island long ago, and all he was doing now was holding true to it—and that vision did not include poor people or jobs. In a 1945 speech before the Nassau Bar Association, which included most of the county's political leaders, he said:

There seems to have been a good deal of sentiment in Nassau in favor of attracting more industry and business into the county. Let me warn you against too much enthusiasm for commercializing what nature has given you. Nassau should always be largely residential and recreational. Your land lies between the Bay and the Ocean. [These] are your greatest natural assets. Figure out what sort of people you want to attract into Nassau County. By that I mean people of what standards, what income levels and what capacity to contribute to the source of government.

He did not give the slightest indication of understanding that his transportation policies were doomed to failure.

His thinking had been shaped in an era in which a highway was an unqualified boon to the public, in which roads were, like automobiles, sources of relaxation and pleasure. Changing realities could have changed his thinking, but he was utterly insulated from reality by the sycophancy of his yes men; by his power, which, independent as it was of official or public opinion—of, in fact, any opinion but his own—made it unnecessary for him to take any opinion but his own into account; by, most of all, his personality, the personality that made it not only unnecessary but impossible for him to

conceive that he might have been wrong; the personality that needed applause, thereby reinforcing the tendency to repeat the simplistic formula that had won him applause before; the personality that made it possible for him to relate to the class of people that owned automobiles and that was repelled by the class of people that did not own automobiles; the personality whose vast creative energies were fired by the vision of cleanliness, order, openness, sweep—such as the clean, open sweep of a highway—and were repelled by dirt and noise, such as the dirt and noise he associated with trains; the personality that made him not only want but need monuments and that saw in highways-and their adjunct, suspension bridges ("the most permanent structures built by man")—the structures that would have a clean, clear ineradicable mark on history; the personality that, driven now by the lust for power, made him anxious to build more revenue- (and power-) producing bridges and parking lots (and highways to encourage their use) and that made him either indifferent or antagonistic to subways and railroads which would compete with his toll facilities not only for users but for city construction funds. He was insulated from experience. Most of the millions who used his roads were now using them primarily not for weekend pleasure trips but back and forth to work twice a day, five days a week, and driving was therefore no longer a pleasure but a chore; but for Moses, comfortable in the richly upholstered, air-conditioned, soundproofed rear seat of his big limousine, driving was still as pleasurable as it had always been. Robert Moses, who had never had to drive in a single traffic jam, really believed that his transportation policies would work. "Traffic will run pretty smoothly within three years," he had said in 1945. During those three years—and afterward he repeated that prediction often, repeated it without hedging or qualification, spread it on the public record with the assurance of a man sure that he was right. He was confident that his roads would earn him applause now as they had always earned him applause before. Writing on "traffic relief" in a New York Times Magazine article, he said, "If we give this to our people, we shall deserve their gratitude." Applause not just of the age but of the ages; he was confident that his roads would bring him immortality. He had read Statius. He knew that, "in gratitude for the benefits bestowed upon them by" the construction of the Domitian Way, the Senate and the people of Rome had raised a triumphal arch to Domitian. He knew that the Via Appia had brought immortality to its builder, the blind Censor Appius Claudius, who, when public funds to build the road ran out, had advanced the difference from his private fortune. Democracies raised no triumphal arches to road builders. The Wantagh Causeway was still named the Wantagh Causeway, despite the fact that its builder had also advanced funds from his private fortune, or at least from his mother's. But he was confident history would remedy such oversights. In 1949, Times Sunday Editor Lester Markel commissioned him to forecast the city in the year 1999. "The great arteries . . . will stand out," he wrote.\* On another occasion, he wrote: "Those who aim and plug away

<sup>\*</sup> The 1949 article was brief—1,140 words—but it provided ample evidence of the extent to which Moses identified his own works with the city as a whole. To the

at limited, near-by objectives and reach them, may in fact build better than they know. Their works may even last longer than those fashioned by more ambitious geniuses for immortality." If he was capable any longer of rethinking his policies, he gave no evidence of it. And because of his power, of course, there was nothing that could force him to rethink.

Within weeks of the opening of the Van Wyck Expressway-at which Moses proudly boasted that "no network of major urban vehicular arteries comparable to the one on which we are busily working here in New York City ... will be found anywhere else on this or any other continent"—the road was as jammed as F. Dodd McHugh had predicted. At rush hours, whenas McHugh had predicted-10,000 travelers trying to get to Idlewild were forced to share the road space with tens of thousands of commuters trying to get home, the four miles of roadway which Moses had hacked across Queens looked like a four-mile-long parking lot, so closely were the vehicles on it packed together and so slowly were they moving. "Traffic will flow freely," Moses had promised. Inappropriate adverb. Drivers were chained to the Van Wyck; men who, commuting daily to jobs at the airport or in New York, had taken twenty minutes to cover the four miles paralleling the Van Wyck, had looked forward to the opening of the publicized new road; now, clocking their first trips on it, they could hardly believe their watches; where it had taken twenty minutes to cover the four miles on local streets, it took thirty minutes on the expressway—if conditions were good. And, so often, they were bad. The new road had not freed them from the trap of daily travel; it had closed the trap on them more firmly than ever, for new traffic, generated by the new road, was also jamming the local streets. With every passing year, congestion on the expressway worsened. Mc-

by listing his own works, writing: "Nature, not man, will still be predominant, and the air photographer in his blimp or helicopter will still see the rolling ocean, the relatively unspoiled ocean beaches, Jamaica Bay, the Long Island Sound, the lordly Hudson, and their tributaries, and Liberty guarding the magnificent harbor. The great arteries of travel will stand out. The hills of Revolutionary fame will still boast their monuments and citadels; the parks, large and small, will still be conserved for all the people. The great Palisades reservation will still be five times as large as all of Manhattan Island; Jamaica Bay and its shores, reclaimed and dedicated to recreation and air travel, will constitute one-third of Brooklyn; a fourth of the Bronx will remain field, forest and stream. Queens will still be suburban, and Staten Island largely rural.

. . . In ten years, one person out of ten will be living in public or other subsidized housing. In fifty years, it may be one out of six or seven—not an altogether pleasant

question "What Will New York City Look Like in the Year 1999?" he replied mainly

and suburbs...."

The article also provided ample proof that Moses was failing utterly to comprehend that his policies might not be working for the city. "As to the spirit, the enterprise, the magnetism which made the metropolis great," he wrote, "there is not a shred of evidence that their force will lessen. There is no sign of decrepitude, decay or resignation."

prospect for those who must pay not only their own way but that of their less fortunate or hard-working brothers. Traffic will flow freely in 95 per cent of the city

Hugh had calculated that during "peak periods" 10,000 persons would be trying to reach Idlewild every hour. As air traffic burgeoned, that figure became 15,000, and then 20,000. New parking fields were built within the airport at a frantic rate: 500 acres of marshland were paved over, then 1,000, then 2,000, then 4,000, then 8,000. And still there was never enough room to park. At peak periods, the paved space within Idlewild—parking fields and internal roadways—was often so jammed that the torrent of vehicles oozing down the Van Wyck could enter the airport only at a trickle; sometimes, the airport had to be closed to new traffic—it was not infrequent for vehicles waiting to get into Idlewild to be backed up on the expressway for a solid mile.

Inside the airport, of course, the scene was chaos. Drivers searching for parking spaces milled around and around on the roadways, mingling with drivers trying to get to the airline terminals. By one estimate, at a normal weekday rush hour, a traveler arriving at Idlewild by private car had to allow a full thirty minutes for travel *after* arriving at the airport.

Other roads were jammed, and created by their opening more traffic than had existed before. The Brooklyn-Battery Tunnel opened on May 25, 1950, with blessings from Cardinal Spellman ("one of man's greatest achievements!"), what may have been the longest cavalcade of official limousines ever assembled outside Washington (338 long black Cadillacs), the highest toll ever charged on a Moses project (thirty-five cents)—and a traffic count almost twice as high as Madigan-Hyland had predicted. Moses' engineers had forecast that the tunnel would carry 8,400,000 cars during its first year of operation. By the end of a month, it was carrying traffic at a 13,000,000vehicle-per-year rate, 64 percent above their predictions. George Spargo explained that the count had been swelled by an influx of tourists who had come from all over the eastern seaboard to see this new wonder of the world, and that the influx was over now. By the end of three months, the tunnel was carrying traffic at a 14,000,000-vehicle-per-year rate. At the end of six months, it was carrying traffic at a 15,000,000-vehicle-per-year rate, and not only the increase but the rate of increase was increasing every month. "Another pleasant surprise," Spargo said. But the tunnel was engineered for a capacity, rush hour, load of 2,000 vehicles; by 1952, it was being asked during rush hours to handle 5,000, even 6,000 vehicles per hour. Traffic backed up for blocks at its entrances. Moses had expected it to draw off traffic from the parallel Queens-Midtown Tunnel and three free East River bridges. But traffic on the bridges remained "normal," which meant jammed. And traffic through the Queens-Midtown Tunnel, fed now by the widened Queens-Midtown Expressway, increased instead of decreasing. In 1951, while the Brooklyn-Battery Tunnel was carrying cars at a rate of 79.3 percent above estimates, traffic through the Queens-Midtown Tunnel was 26.3 percent higher than ever before. Previously, 10,967,000 cars per year had been trying to use one tunnel. Now there were two tunnels—and 28,445,668 cars were trying to use them. The situation at the southern portion of the East River was duplicated at the northern. In Triborough's annual report for 1951, Spargo wrote

happily, "The Triborough Bridge had its fifteenth birthday on July 11th. There were no birthday cakes, presents or ceremonies, just more automobiles." In 1946, the first postwar year, the bridge had carried 13,000,000 vehicles. In 1947, it had carried 16,000,000 vehicles; in 1948, 19,000,000; in 1949, 23,000,000; in 1950, 27,000,000. The count in 1951 had been 32,000,000. And the trend was more striking than the figures. The increase had been two million in 1946, three million in 1947 and 1948, four million in 1949 and 1950, five million in 1951. And this situation was being duplicated on the Bronx-Whitestone Bridge, which Moses had built to drain off traffic from the Triborough. While traffic was increasing 138 percent on the Triborough between 1946 and 1951, it was increasing 129 percent on the Bronx-Whitestone. And traffic volume on the free Queensborough Bridge was also increasing. In the last prewar year, cars had been crossing the East River into Manhattan at the colossal rate of 122,500 per day; in 1951, they were pouring across the river into Manhattan at the rate of 135,000 per day. And what of the roads leading to and from these facilities? Four lanes of Belt Parkway had been jammed before the war. Now six lanes of Belt Parkway were jammed. Prewar congestion on old Atlantic Avenue had been intolerable. Postwar congestion on a new—widened, modernized—Atlantic Avenue was more intolerable. And it wasn't only bridges and highways that were jammed. As seen from the air, at rush hours, every street in neighborhoods near the approaches to the East River crossings was a crawling mass of cars. (On the other side of Manhattan, where, since 1930, the Port Authority's George Washington Bridge and Holland and Lincoln tunnels had been opened to vehicular traffic while New Jersey railroads had been allowed to deteriorate, this situation was being duplicated. Since 1930, railroad commutation from Jersey had declined slightly; commutation by motor vehicle had quadrupled. In the evenings, when 80,000 daily commuters were heading home to Jersey, all of Manhattan between 175th and 181st streets was solid with cars, trucks and buses moving toward the George Washington Bridge. Downtown, the typical line of cars waiting to enter the Holland Tunnel plaza was, at 5 P.M., eight blocks long. The Times, clocking travel time to the Lincoln Tunnel, found on one evening that it took a truck twenty-seven minutes to make a one-block-square circuit to the entrance plaza.) Within the city, it seemed that there was not a crevice into which cars did not cram; traffic was piling up everywhere; on the crosstown side streets in midtown Manhattan, the Times found, motorists frequently spent forty minutes traversing the two and a half miles from one side of the island to the other.

The clockings themselves were of less significance than the fact that the *Times* was making them. "We learn to tolerate intolerable conditions": press and public reaction to motor-traffic congestion in New York City documents the truth of Barbara Ward's statement. It was during the early 1920's that such traffic first overwhelmed New York; in 1924 and 1925 and 1926, the public reacted with indignation and protest against the jams in which—seated in the vehicles that had promised them new freedom—they found themselves imprisoned instead. Traffic was news, big news; clockings were a

front-page staple. By the late 1920's, however, a kind of numbnessmeasurable by a slackening in angry letters-to-the-editor and campaign statements by both-ears-to-the-ground politicians—was setting in. Psychologists know what happens to rats motivated by mild electric shocks or the promise of a food reward to get out of a maze when the maze is made excessively difficult to get out of; for a while, their efforts to find an escape become more and more frantic, and then they cease, the creatures becoming sullen, then listless, suffering apathetically through shock or hunger rather than making further efforts that they believe will be useless. People caught in intolerable traffic jams twice a day, day after day, week after week, month after month, began after some months to accept traffic jams as part of their lives, to become hardened to them, to suffer through them in dull and listless apathy. The press, responding to its readers' attitude, ran fewer hysterical congestion stories, gave fewer clockings. A city editor seeing a couple of reporters with their feet up on their desks on a slow Friday afternoon found other makework than sending them out to discover how long it took to get from the Queens-Midtown Tunnel to the Lincoln Tunnel. Only in editorial columnswritten, it sometimes seems, by men selected through a Darwinian process in which the vital element for survival is an instant and constant capacity for indignation and urgency—did the indignation and urgency endure. Traffic was still news, but it was no longer big news.

The same process was repeated during the middle and late 1930's, not because a new wound had been inflicted but because the scab on the old one had been ripped off. Moses' unprecedentedly ambitious traffic devices, together with his highly publicized promises that they would solve the traffic problem (and the easing in that problem that occurred for a few months every time a new facility was opened), raised hopes; with hope, motorists dared to look again at what they were being subjected to. And when, a few months after each new facility opened, the jams began to build up again, their consciousness, newly reopened, was rubbed all the more raw. In the last two or three years of that decade, with the Triborough Bridge and the West Side Highway and the Interborough and Grand Central parkways open and congestion worse than ever, there was another howl of public anguish.

In contrast to the Twenties, however, in the Thirties the anguish was beginning to be coupled with awareness. As new bridges jammed up without easing the jams on the old, as every lane of gleaming white concrete was filled with cars as soon as it was opened to traffic, Lewis Mumford and the Regional Plan Association were no longer lone voices crying that no number of bridges and highways could alone solve the traffic problem. Before World War II, the numbness set in again. The howls died down. Motorists sank back into apathy. But before they did, letters-to-the-editor, speeches and articles by urban planners and resolutions of civic associations revealed a greatly increased understanding that something more—something different—was needed.

The war kept people off the roads. It made them forget the pain. And when, after gasoline and rubber rationing ended, New Yorkers took to the

highways again, the numbness had worn off. When the pain returned, it seemed sharper than ever. Even in late 1945 and early 1946, when it was no worse than it had been in 1941, people were complaining, and editorial writers calling for "action," far louder than they had in 1941.

After a short while, they had, in fact, more to complain about. The pain didn't only seem worse; it was worse. Postwar traffic congestion was congestion escalated to an entirely new level. The problem was so immense now that it was difficult even to comprehend its dimensions. How come to grips in one's imagination with a situation in which a mighty expressway, a gigantic superhighway of dimensions literally almost unknown to history, could be opened one month—and be filled to absolute capacity the next, in which expressways opened in 1952 were by 1955 carrying the traffic load that had been forecast for 1985, in which, in this city and metropolitan area already congested to the breaking point, every indicator of trafficauto registrations, commuting trips per day-was increasing in more than arithmetical, in almost geometrical, progression? The press did not in general come to grips with it, at least not in its deeper implications, but it did report thoroughly on its more superficial-and more dramatic-manifestations. Traffic was news again. The Times, which had once sent its reporters over the West Side Highway so that it could tell its readers how incredibly fast it made travel, now sent its reporters onto it to report that "at a peak period of evening travel, northbound vehicles took thirty-four minutes to cover four-and-a-half miles." Editorials argued in the Times and Tribune and screamed in the News and Mirror for "Action!"-now! As for the individuals caught in this colossal traffic trap twice a day, any psychologist knows that if he turns up the voltage of the electric shock enough, the rats will be shocked out of their apathy and begin frantically scurrying back and forth through the maze again, searching desperately for a way out; newspaper stories of this period document an almost frantic search by drivers for a way out of their trap; grim U-turns in the face of oncoming traffic to avoid huge jams seen ahead (reporting on one at the Third Avenue Bridge on a hot summer Sunday, in which "hundreds of cars were backed up over a two-mile radius," the Times reported that "the snarls were intensified as motorists tried to make U-turns to get out of the jam"); frantic lane switching that drove up accident rates on all major routes; attempts to find new ways through the maze (reported The New Yorker, never one of Moses' favorite publications, anyway:

We've become increasingly aware that the best way to avoid highway congestion is to duck the proud network of parkways in Westchester and Long Island and take to the traffic-lighted, non-cloverleaf-intersected roads of our youth. . . . What have man and Moses wrought? Answer? A boomerang).

With the numbness not yet having had a chance to set in again and the pain, still fresh, more intense than ever, there was an upsurge in the question of how best to alleviate it. Awareness was escalating, too. Now there was general awareness among urban planners and some segments of the public that something else might be just as important as roads—might, in fact, be

more important. By 1952, there was in at least three New York newspapers. the Times, the Tribune and the Post, at least the beginning of emphasis on the need to improve and add mass transit facilities as well as roads. There was even a beginning of the realization that the construction of highways alone might be "boomeranging," defeating its own ends, a realization Lewis Mumford was later to summarize in a 1955 series of articles in The New Yorker, "The Roaring Traffic's Boom": "The prevalent conception" is that "the main purpose of traffic is to enable a maximum number of citizens to derive all possible benefits from the use of automobiles," Mumford said. But that isn't the purpose of transportation at all. "Transportation—I blush to utter a truism now so frequently ignored—is a means and not an end. . . . Like any other tool, it must be used for some human purpose beyond the employment of the tool itself. . . ." He said that "before we cut any more chunks out of our parks to make room for more automobiles or let another highway cloverleaf unfold, we should look at the transformation that has taken place during the last thirty years in Manhattan."

Ever since the nineteen-twenties the municipal and state authorities have been plunging blindly from one grandiose traffic scheme to another, without showing any striking understanding of the problems they were trying to solve. . . .

For a whole generation, New York has become steadily more frustrating and tedious to move around in, more expensive to do business in, more unsatisfactory to raise children in, and more difficult to escape from for a holiday in the country. (The subway rides grow longer and the commuting trains carry their passengers from more distant suburbs, until as much time is spent in transporting the human carcass as is gained by diminishing the work week . . . the distant dormitory areas of New York describe ever wider arcs.) By 1975 . . . it will be impossible to build enough highways to accommodate the weekend exodus, just as it is already impossible to provide enough internal traffic arteries to handle Manhattan's present congestion. . . .

But your one-eyed specialists continue to conduct grandiose plans for highway development, as if motor transportation existed in a social vacuum, and as if New York were a mere passageway or terminal for vehicles, with no good reasons of its own for existence. To these experts, a successful solution of the traffic problem consists of building more roads, bridges and tunnels so that more motorcars may travel more quickly to more remote destinations in more chaotic communities, from which more roads will be built so that more motorists may escape from these newly soiled and clotted environments. . . . Instead of curing congestion, they widen chaos.

... the private motorcar [is] a method that happens to be, on the basis of the number of people it transports, by far the most wasteful of urban space. Because we have apparently decided that the private motorcar has a sacred right to go anywhere, halt anywhere, and remain anywhere as long as its owner chooses, we have neglected other means of transportation. . . The major corrective for this crippling overspecialization is to redevelop now despised modes of circulation—public vehicles and private feet. . . . An effective modern city plan would use each kind in its proper place and to its proper extent.

Mr. Robert Moses . . . uses the word "regional planning" as a swearword, to indicate his abiding hatred of . . . comprehensive and forward-looking

policies, just as he invokes the term "long-haired planner" to designate anyone who turns up with a proposal that does not fit into his own set of assumptions, most of them by now manifestly inadequate and badly out of date. . . . Think!

A handful of thinkers like Mumford were even beginning to venture a revolutionary opinion: that automobiles—and highways—should be barred from certain central areas of the city, that some congested avenues and streets should, instead of having their roadways widened for cars, be closed to cars and turned into "pedestrian malls." Some, in fact, were beginning to postulate a more revolutionary opinion still: that major arterial through highways had no place in the interior of a city at all, that a city could not endure as a good place to live if they were built in any number within its borders.

This awareness was by no means pervasive. If the *Times*, the *Tribune* and the *Post* were beginning to emphasize the importance of mass transit vis-à-vis highways, little of the same emphasis could be found in the city's other daily newspapers. For several of these, in fact, a frequent practice when the need for a transportation analysis was felt was to ask Moses to write it, his articles appearing in the *News* and *Journal-American*, for example. (The *Journal-American* was, of course, part of the Hearst chain, and in 1952 Hearst newspapers were conducting a nationwide campaign for "new and better roads.")

But the awareness was spreading. After July 1951, when the Regional Plan Association published the results of "investigations . . . to determine the amount, extent and trends of commuting . . . to central New York," facts and figures were available to document the effect of two decades of neglecting mass transit facilities in favor of highways. A few months earlier, Moses, issuing a lavish four-color brochure, had boasted that in "our reports in milestones of progress . . . issued on important occasions . . . when something has happened which is worth telling about," "we rely on illustration rather than technical explanations" which "are bound to be dull, statistical [and] boring." The RPA's "Bulletin Number 77," black-and-white, was statisticcrammed—but to anyone interested in why New York's congestion was really increasing so rapidly, it was not boring but startling. The common assumption—previously held not only by Moses but by press, politicians and many urban planners—was that congestion was increasing because the population around New York was increasing at a tremendous rate, and therefore commuting into New York must be increasing at a tremendous rate. Estimates of the number of commuters had ranged from 500,000 to 1,500,000. The fact—a fact documented for the first time in Bulletin 77—was that although the population was increasing just as fast as people thought it was (the number of families in the counties surrounding New York had increased by 50 percent between 1930 and 1950), the commuting wasn't. There had been 301,000 commuters coming into the city daily in 1930; in 1950, there were 357,000—an increase of only 19 percent. The difference was not in the number of people coming into and out of New York every day, but in how they were coming. The number of rail commuters had actually declined, from 263,000 in 1930 to 239,000 in 1950; 38,050 persons had commuted by automobile in 1930, 118,400 persons commuted by automobile in 1950. While the number of commuters was up 19 percent, the number of automobile commuters was up 321 percent. And, the RPA statistics showed, the trend was continuing—and accelerating. The gap between use of rail and road was widening month by month. The failure to maintain existing railroad lines in a condition that would persuade even their present riders to keep using them, much less to attract new ones, the failure to construct new lines into newly developed areas, while building new highways into those areas, was driving more and more commuters off the railroad and onto the highway. The effect on the city of the widening gap could only be disastrous.

The automobiles required to transport the equivalent of one trainload of commuters use about four acres of parking space in Manhattan, eight times the area of the Grand Central main concourse.

Every trainload of commuters shifting to automobiles requires automobile parking space about equal to the effective parking capacity of one side of Fifth Avenue from Washington Square to Sixty-eighth Street [3 miles].

The lesson to be gleaned from the statistics was clear even though they did not include statistics on the intracity shift in subway to automobile use, statistics that would have made the lesson even more dramatic. The trend must be reversed. Emphasis must be shifted from road building to railroad building. The lesson was scanted by most of the press-the RPA report received one-day play in most of New York's papers—but in 1954 it was repeated in more popular form by a Times series, and thereafter there was at least a general awareness of it in most of the more detailed transportation stories in the New York press. And, as in the previous decade, it sometimes seemed—from the sharp tone of letters-to-the-editor compared to editorials —that awareness was growing faster among the public than in the media supposed to educate the public or among the politicians supposed to lead the public: almost as if the people of New York and its suburbs—forced to spend hours daily being exposed to the harsh lessons of urban transportation, trapped daily in a classroom on the realities of urban transportation, a classroom in which the reality of what was being taught was worsening so fast that numbness had not yet caught up to it-were learning the lessons for themselves. Mumford was not the only person pleading with public officials to Think! Many men and women who had never opened a planning textbook in their lives were, by the early 1950's, repeating in their own words the great planner's plea. People were learning for themselves. By 1940, most urban planners had come to understand that roads were not good per se, that a highway was not an unqualified boon for mankind. By the early 1950's, much of the general public appeared to understand this, too, even if the press did not. There was general awareness of the need for a dramatic change in the region's transportation policies. Mumford, unsatisfied though he was at the rate of mobilization of public opinion ("The majority of the American people . . . remain strangely quiet and passive about the matters that should concern them most"), saw hope now that Moses' "irrational" plans could be changed. Pointing out that "the things that spoil life in New York and its environs were all made by men, and can be changed by men as soon as they are willing to change their minds," he now saw hope that men would do so.

But for New York, only one mind mattered, and that mind would not change.

As Moses' first postwar mileage had been opening, he had been as confident of the wisdom of his policies as he had been when he announced them in 1945. "Today we are well underway to a solution of the traffic problem," he had boasted in 1948. Now, in 1954, with considerable new mileage open, the problems were worse than ever, but the confidence was diminished not a whit. All that was necessary, he said—and believed—was more of the same.

The roads he had been building had all been conceived by him in 1930. Now, for the first time, he expanded his highway plan. New arterials should be built paralleling old arterials already built, he announced—a Sheridan paralleling the Major Deegan and Bronx River and Harlem River and Hutchinson River and Henry Hudson that already ran down through the Bronx, a Nassau paralleling the Van Wyck southeast through Queens. Arterials should be built into sections of the city into which no arterials now ran, a Prospect and Cross-Brooklyn Expressway into the teeming heart of that borough, for example. And arterials should reach out from the city into its suburbs, a Long Island Expressway all the way out deep into stillrural Suffolk, for example. And, of course, the "series of east and west crossings in Manhattan" which he had so long advocated should be begun; it was during this period that he was forcing the Port Authority to start the Lincoln Tunnel link that would give him a wedge on the Mid-Manhattan Crossing along Thirtieth Street. As to what to do with the cars when they got to the city, he had no doubt that his proposed multistory, "offstreet" parking garages—"two, three, four stories or whatever height they have to be"—would solve that problem; the "success" of the first "publicly financed" off-street garage in the city's history, Triborough's seven-story Battery Park Garage—it was filled to capacity almost from the day it opened -proved that. "When we get the expressways . . . you will see how they will take care of most of this through or cross-town traffic," he said in a lengthy 1952 question-and-answer session with U. S. News & World Report, which identified him as the "recognized authority" on the future of America's cities. ("Q. But in city streets . . . are off-street garages the answer? A. Yes . . .") As for the use of city money for mass transit construction, he fought such proposals to their death, and when, in 1952, some state legislators suggested that Triborough take over the city's subways and use its surplus to improve them, Moses rushed back from a Virgin Islands vacation to declare that there was no surplus because "all our future revenues are pledged to our bondholders"-who, he said, would never permit the Authority to become involved in deficit-producing operations. (In that same year, the General Electric Company announced that its Urban Traffic Division had "costed out" rapid transit on auto-highway center malls and that if provision for tracks was made in the original highway design their cost would be one-tenth of providing them later. Moses' reply? "The cost of acquiring additional width and building for rapid transit would be prohibitive and hundreds of families would be dislocated.")

Not all planners fully understood yet that if Moses' proposals were carried out, New York would become a place not for people but for cars, spread out by the hundreds of acres on monstrous parking fields, cars piled up seven stories high or more—to "whatever height they have to be"—cars that would bring their roar and the fumes of their "foul exhausts" into its every corner. But they did understand fully—by 1952 there was a general understanding among urban planners, an informed consensus—that Moses' plans made no sense unless they were supplemented by mass transportation.

There was some applause in the press for Moses' proposals—these were the years in which he was enjoying general editorial support for a proposal to create a City Parking Authority with unprecedented power over the city's streets—and a rather remarkable lack of understanding of some of the subtleties of transportation politics. A *Herald Tribune* editorial said that Triborough's 1951 annual report

ought to give every citizen of New York a bit of a thrill. Business is booming. . . . Traffic is everywhere exceeding the experts' predictions. . . . If the present volume keeps up, all the bridge bonds will be retired by 1957 and all tunnel bonds by 1963. When that happens, every bridge and tunnel so successfully built and operated by the Triborough Authority will become the free and unencumbered property of the people of New York City. . . . Good work, gentlemen.

Only the *Post* gave more than scant attention to the problems of the thousands of tenants being evicted for Moses' highways. While press applause was by no means as enthusiastic as it would once have been, and editorials more and more frequently expressed doubt about the city's transportation policies, they never linked those policies with the man responsible for them. There was no direct attack on Moses, no threat of any real seriousness to his power. And with that power, he laid out the new routes, obtained the state and federal commitments for them, had the blueprints drawn—started them down the road to completion.

And in 1954 he took a further step—one that sealed the city's future.

## 40. Point of No Return

THE SILVER STREAM of quarters and dimes and nickels on which Moses' power was based was flowing faster and faster. By 1952, with 120,000,000 vehicles per year using Triborough's facilities, the Authority's annual revenues stood at \$28,300,000—an increase of 453 percent over prewar levels. And since operating and maintaining its bridges and tunnels cost little, and not even Moses could spend enough on parties, luncheons, brochures, ribbon cuttings and advance planning to make a dent in such income, most of the revenue was surplus: after paying all bills and interest, the Authority's surplus for 1953 alone was \$21,000,000. Capitalized—multiplied in terms of the amount of revenue bonds that could be sold because of it-its total surplus was worth, at 1953 interest rates and bond-market conditions, close to half a billion dollars. The man who had once had to beg bankers to give him three million dollars for the Henry Hudson Bridge (one deck at a time) now could obtain from bankers five hundred million—and the bankers would fight for the chance to give it to him. Moses now had available to spend on public works in the city far more money than the city had available to spend.

The very size of that surplus, however, made it a source of danger as well as opportunity. Were the attention of public and politicians to be focused upon it, they might demand that it be used, in the spirit of the law creating the Authority, to retire its outstanding bonds and remove its tolls (the Herald Tribune editorial demonstrated how easily such a demand could spring up-especially if it was ever realized that all the bonds could be retired, and toll booths torn down, not in some distant future but within six years) or to ease the subway deficit and the need to raise subway fares (the alarming speed with which the legislators' demand that Triborough bail out the subways had caught fire-before Moses had rushed back from the Virgin Islands to stamp it out with the statement that there was no surplus—was an indication of its appeal). Either course—bond retirement or subway bail-out-would strip Moses of his accumulating millions. He had realized back in the Thirties that authorities could be a means to immense achievement and a source of immense personal power-but only if their revenues were spent on new public works as fast as they were earned, only if, in other words, he kept building as fast as possible. The editorials and resolutions of the Fifties only demonstrated again the correctness of that insight. Triborough's money had to be spent-and it had to be spent fast.

There was, however, a problem, a problem that could be solved only by rapprochement with his old foe, the Port of New York Authority. Vast as his resources might be, they were nowhere near as vast as his dreams. Ground was already broken for the Coliseum; he was going to have to pour \$43,000,000 into that gaping hole at Columbus Circle. The Throgs Neck Bridge must get under way as soon as possible; for that span he would need \$92,000,000. He had already allocated \$90,000,000 to get work under way on the Long Island and Prospect expressways and the East River Drive extension up to the Triborough Bridge. Almost half the half billion was already committed. Then there were the other roads, envisioned decades before and still unbuilt. Their cost was measured now in the hundreds of millions of dollars. And the bridge which he had conceived of as the crowning glory of his career, the supreme monument to the life of Robert Moses, a bridge whose construction would take close to five years, was not yet even begun and Moses was, after all, already sixty-five years old; who knew when time, so long on his side, might turn on him with the Narrows Crossing not yet begun? And the Narrows Crossing would (without approaches, just for the bridge structure alone) cost \$345,000,000. And how about the new parks he wanted to create, the old parks he wanted to reshape? Jamaica Bay, which was to be his park masterpiece, Jamaica Bay, which was to be his creation, not merely his reworking of an Olmsted creation, Jamaica Bay, which was to be the greatest urban waterfront park in the world, was not even begun. There was so much yet to do! Even the monumental wealth of Triborough was nowhere near enough to do it. Wealth far greater was almost within his grasp. The proposal—even then in preparation in Washington for a Federal Interstate Highway System, for which the federal government would pay 90 percent of the cost, a state only 10 percent, would make \$50 billion available to construct 41,000 miles of such highways during the next ten years. Moses had been working quietly with top Eisenhower aide Sherman Adams and with General Lucius D. Clay, chairman of a key presidential committee studying highway needs, on details of the program—the scope of it, in fact, was his: \$50 billion over ten years were his figures—and had succeeded in obtaining a key revision in the program: although Eisenhower was adamant that the new highways were not to be toll roads, Moses had obtained the inclusion of a clause saying they could link up with toll facilities; if he could build the bridges, the federal government would pay for the highways connecting with them. But to be eligible for inclusion in the interstate system, highways had to be interstate; they had not only to connect with highways in another state but to form with those highways a highway system interstate rather than local in character. Given the geographical location of New York City, that state could only be New Jersey-and in the portion of New Jersey closest to New York, the highway-building power was the Port Authority.

There were additional incentives for rapprochement. Since O'Dwyer had handed it Idlewild in 1946, every ensuing confrontation between the two giant "public benefit corporations" had resulted in a Moses victory; during the reign of Impy, in fact, he had forced the Port Authority to agree

to reserve \$13,000,000 for his Mid-Manhattan Expressway as the price for permission to enlarge the Lincoln Tunnel. But the situation had changed. Wagner Junior ("For a man who's been a friend of your father's, you have ... a sense of humility, of respect") had just become mayor, and the Port Authority's chairman had been one of his father's closest friends, campaign treasurer for his 1926 senatorial race, in fact. Howard S. Cullman was as adroit as Moses at playing on the Mayor's feelings. Wagner, astute judge of men that he was, was fully aware of what Cullman was doing. "I always knew when he wanted something," the Mayor would recall years later of his fellow Yale graduate. "He'd take me to lunch at the Players Club and he'd talk about the '26 campaign and about Yale." But Wagner let him do it anyway; nothing-not even an awareness of how men used it to play on him-could lessen the "respect," and Wagner was not the man in any case to offend, or even confront, a Port Authority board that included, besides tobacco tycoon Cullman and tugboat tycoon Eugene F. Moran, banking barons S. Sloan Colt of Bankers Trust and Bayard F. Pope of Marine Midland Trust. For Austin Tobin, Wagner had little use; the Mayor's keen eye saw through his attempt to act as arrogant as Moses. ("Moses and Tobin? Oh, Moses is tougher. And smarter. Once you get away from standing at the bridge and taking in quarters, what Tobin has is that board. When I first came in, Austin used to go around calling me 'stupid.' Then I ran in to him at a party, and I said-with a smile-'Austin, you wanna get anything through, you better stop calling me "stupid." 'He never called me 'stupid' again, and Howard apologized to me for his behavior.") But the board—coupled with the "respect"—was enough. Cullman's hold over the Mayor was quickly apparent to City Hall insiders—and to Moses. Without the Mayor in his corner, the Port Authority was too big and too powerful to fight. Fighting such a foe could be not only bloody but unprofitable. Cooperation might be profitable. With Port Authority help, he would be able to get there first for the federal cash in the 1950's as he had in the 1930's. Immediately upon passage of the Interstate Highway Act, he would be able to present to Washington a proposal for a complete, unified system of highways joining, across authority bridges and tunnels, New York and New Jersey and, through New Jersey, linking up with other highways and other states, a proposal ready to go, planned, blueprinted, costed out, approved, ready for ground breaking, while the proposals of other cities were still in the talking stage, years away from even a possibility of implementation.

Cooperation might, moreover, allow him to tap not only the federal but the Port Authority cashbox.

That cashbox, so long empty, was full now, thanks to the postwar traffic boom, fuller even than Triborough's; its 1953 surplus—its real surplus, not the one reported to the public—was \$29,000,000; Triborough's surplus was worth \$500,000,000 in new bonds; the Port Authority's was worth \$700,000,000. Long on cash, moreover, the Port Authority was short on dreams. The visionaries who had created it were long gone from its councils; Julius Henry Cohen had been replaced by money men like Cullman and Colt and Pope whose eyes were brightened by the balances in

the Authority's ledgers, not by the potentialities for improving the common weal that those balances represented. The purpose for which the Authority had been created—the development of an over-all transportation system to knit together a great port—had been lost sight of for years. Plans the Authority had aplenty, of course, but unrelated plans, plans for individual projects, joined by no link other than the fact that their construction would return the agency profit. It had more money than Moses but no more than a fraction of his creative vision. As Wagner put it, "Once you get away from ... taking in quarters, what Tobin has is that board"—and the board's first concern was that Tobin take in more quarters each year than the year before. What Moses had after the quarters was dreams. Moses may have seen—his actions suggest he saw—an opportunity to put the Port Authority surpluses at the service of those dreams, to persuade his erstwhile rival to build first those of its planned projects that would help to realize his vision. The stakes were too high—the chance for profit in both accomplishment and power too big-not to cooperate with his old enemy.

Sometime late in 1953 or early 1954, over luncheon at Randall's Island, he broached to the Port Authority board a plan of staggering scope. At succeeding luncheons at which Tobin represented the board, all did not go smoothly. The plan was Moses' plan—what he was proposing they build would turn out to be the bypass route around New York which he had conceived in 1930 and which he had been building in bits and pieces ever since—and he lost no opportunity to make clear that it was his plan, and that anyone who questioned any of its details didn't know what he was talking about. At one luncheon, Tobin jumped up from the table, said, "I don't have to sit here and be insulted like this," and stalked out. But, as it turned out, Tobin did have to sit still and be insulted; his boss, Cullman, persuaded by a super helping of Moses' charm that they were again the close friends they had been in the Al Smith era, ordered him to. For, if Moses had reasons to be anxious to cooperate, so did the Port Authority's businessman board.

Having plumbed, in a ten-year series of disputes, the depths of Moses' power in Albany, the Port Authority knew that, deep though theirs ran, his ran deeper. Having attempted to get a string on Hulan Jack, the puppet borough president of Manhattan, the key borough in their plans, they had learned that all the strings were firmly in Moses' hands. Wherever they wanted to go in Manhattan, moreover, they found running along its shore, like a barricade in their path, the Henry Hudson Parkway, over which, as Park Commissioner, Moses had absolute control. They wanted to build a new bridge across the Hudson at 125th Street—such a bridge required connections with the parkway, and, for maximum effectiveness, with Moses' proposed Upper Manhattan Expressway across 125th Street and, via that expressway, with Moses' Triborough Bridge on the other side of Harlem. They wanted to double-deck the George Washington Bridge-double-decking required new connections to the parkway. Moreover, with bridge traffic already cramming the streets of Upper Manhattan near the bridge, the 75 percent increase double-decking would generate could be handled only by construction of a Trans-Manhattan Expressway to the Bronxwith, at its far end, a bridge link to the Cross-Bronx, and with links to the Major Deegan and Harlem River expressways running along the banks of the river far below. City and state had given Moses a veto power over all such bridges and expressways. A power struggle would be bloody. Asked years later who would have won, Wagner would tell the author with a slow smile, "It would have been a hell of a struggle-with that board." And what businessman wants blood when he can have profit? What businessman wants blood when he can end loss? Three Port Authority bridgesthe Goethals, Bayonne and Outerbridge spans connecting Staten Island and New Jersey-had been losing money every year for twenty years, earning, in 1953 alone, half a million dollars less than the interest on the bonds that had been floated to build them. Only the construction of the Narrows Crossing that would connect Staten Island to the rest of the city and open it up to large-scale traffic would turn those money losers into money makers. And Moses, thanks to his takeover of the Tunnel Authority, held sole legislative authorization to build the crossing.

Triborough's surpluses were, moreover, not the only surpluses being eyed by politicians. The pressure on the Port Authority to aid mass transit was, in fact, even greater than the pressure on Moses, because the five near-bankrupt railroads whose lines ended at the Hudson were pleading for rail connections across the river, and because the Port Authority's refusal to spend money on such connections was weakened by its original legislative mandate, which clearly envisioned it doing so. The New Jersey Legislature was, in fact, even then in the process of establishing a Metropolitan Rapid Transit Commission, with a prestigious board of its own, and the Legislature had pointedly given the MRTC the responsibility of producing an "over-all coordinated plan for transportation." The Port Authority had to get its surpluses committed—and it had to get them committed fast. Doing so was difficult on the basis of individual projects. A far-reaching road and bridge program would obviously be easier.

Lastly, the Port Authority saw, as Moses saw, that, in the broadest view, they had an identity of interest. In the terms used by Dun and Bradstreet-the terms in which the Port Authority board and Austin Tobin thought---"the success of toll facilities . . . is largely dependent upon the adequacy and convenience of the approaches and connecting highways. Thus, like the ever widening ripples from a stone dropped in the water, every improvement in this system of highways, even at some distance from the . . . facilities, is likely to increase to some extent the traffic on those facilities." A huge new metropolitan region highway network would increase traffic on all bridges and tunnels, theirs as well as Moses'. And such a network could be obtained most easily by-probably, given the immensity of its cost, only by-making it part of the Interstate Highway System, and it could most easily—perhaps only—become part of that system through cooperation. In February 1954, the Port Authority agreed to work with Triborough on a "Joint Study of Arterial Facilities," and on January 16, 1955, the resultssixty-two pages long, hard-bound, four-color, glossy paper, summed up

by Moses, who wrote its introduction and whose name, not by coincidence, was listed first among its sponsors—were released to the press.

The "Joint Study" announced that the two authorities "recommend and are prepared to proceed" immediately with three "bridge projects": building the Throgs Neck and Verrazano and double-decking the George Washington. It laid out a system of new arterial highways extending to and from these bridges: a "Bergen County Expressway" on the New Jersey side of the George Washington Bridge and a depressed "Trans-Manhattan Expressway" (really a westward extension of the Cross-Bronx Expressway) on the New York side; a "Clearview Expressway" on the south or Queens side of the Throgs Neck Bridge and a "Throgs Neck Expressway" and "Cross-Bronx Expressway [Eastern] Extension" on the north or Bronx side; a "Clove Lakes Expressway" on the Staten Island side of the Narrows Bridge to link it up with the Goethals and Bayonne spans, and a "Seventh Avenue Expressway," really an extension of the Gowanus Parkway (which was itself now incorporated into the Brooklyn-Queens Expressway), on the Brooklyn side. It recommended that these roads be built immediately with federal and state funds, along with the long-discussed "Mid-Manhattan Elevated Expressway" linking the Lincoln and Queens-Midtown tunnels and the longdiscussed "Lower Manhattan Expressway" linking the Holland Tunnel with the Williamsburg and Manhattan bridges. And it recommended for "future construction" a vast new system of expressways across every borough of the city and stretching out into the suburbs, some that Moses had advocated previously and some that he had only recently envisioned: in Queens, a "Long Island," "Ridgewood-Maspeth" and "Nassau"; in the Bronx, a "Sheridan" and "Bruckner"; in Brooklyn, a "Bushwick," "Prospect" and "Cross-Brooklyn"; in Staten Island, a "West Shore," "Richmond" and "Willowbrook"; and, finally, an "Upper Manhattan Expressway" that would cross the island "in the vicinity of 125th Street" to link the Triborough Bridge on the island's east shore with another bridge, a "Hudson River Bridge," which would touch down at 125th Street on the island's west shore, consideration of which should be "deferred until the George Washington Bridge, Narrows Bridge and Throgs Neck Bridge projects have been completed and the traffic patterns at that time can be studied."

The "Joint Program" was nothing more nor less than a business arrangement, with the businessman who could bring to the new partnership the most of the crucial material—power—getting the most out of it. The arrangements for the Narrows Bridge are one proof of this. Moses did not have the money to build the bridge that he envisioned as his supreme monument. But he had the power to build it. The Port Authority was as anxious as Moses to see the Narrows Bridge built, and the Port Authority had the money to build it. But it did not have the power. So under the "Joint Program," the Port Authority agreed to pay for the construction of the bridge—under a contract which said that although the Port Authority would pay for it, the Authority would have nothing else to say about it. The Triborough Authority would lease the great span from the Port Authority, operate it, maintain it and control it absolutely—and would have the right to buy it as

soon as it had accumulated enough cash to do so. Moses would, in other words, be building the bridge with his erstwhile rival's money—which would leave him with the money to build another bridge, the Throgs Neck. To get the Narrows Bridge built, moreover, the Port Authority had to give up another bridge that it had been anxious to build; it had to allocate for the Narrows span the money it had been planning to spend on the 125th Street span, and formally agree to "defer" that span indefinitely.

The "business" basis for the Joint Program is demonstrated more forcefully still by the program as a whole. As a result of the construction of the Narrows Bridge, use of the Port Authority's three Staten Island spans increased 172 percent—an increase that in terms of tolls collected came, in 1970, to about \$5,500,000 per year. As a result of the double-decking of the George Washington Bridge, use of that bridge increased 75 percent—an increase that in terms of tolls collected came, in 1970, to about \$11,000,000 per year. The Port Authority's profit from the Joint Program in hard cash was thus about \$16,500,000 per year. By 1970, Triborough was collecting \$11,000,000 annually in tolls on the Verrazano Bridge, \$7,500,000 on the Throgs Neck Bridge—a hard cash profit of \$18,500,000 per year. Given the added assets of power that Moses put into the partnership, both parties came out just about even. The two giant authorities were dividing the potential profits from the city's traffic as if congestion were a large and succulent pie. And Moses, who got the slice he wanted, was ecstatic. Talking to a reporter about the Narrows Bridge just before the Joint Program was released, he was again the young man "burning with ideas," unable to contain his enthusiasm. Unable to sit still, striding around his office with smiles breaking through the studiedly aloof mask he habitually wore now, forgetting to fold his arms and gesturing enthusiastically, he told the reporter that at last, after so many years, the Narrows Crossing is no longer "an academic dream."

"There's going to be a bridge pretty soon—the bridge of my dreams," he said. "It's going to be the most important single piece of arterial construction in the world. It will be the longest suspension bridge in the world, and the tallest. . . . It will be the biggest bridge, the highest bridge, and the bridge with the greatest clearance. It's all superlatives when you talk about this bridge . . ."

Although he didn't talk to reporters about them, Moses had additional reasons for elation. The 1955 deal between the Port and Triborough authorities sealed, perhaps for centuries, the future of New York and its suburbs. And it sealed the future on his terms.

In the background behind Moses marched a mighty division: the giant automobile manufacturers out of Detroit, the giant aluminum combines, the steel producers, the rubber producers, fifty oil companies, trucking firms in the hundreds, highway contractors in the thousands, consulting engineers, labor union leaders, auto dealers, tire dealers, petroleum dealers, rank upon rank of state highway department officials, Bureau of Public Roads bureaucrats,

congressmen, senators—all the selfish interests whom author Helen Leavitt was to label "The Highwaymen." That coalition was always behind him; it was no accident that he was the recipient in 1953 of a \$25,000 award from the General Motors Corporation for the best essay in a nationwide contest on "How to Plan and Pay for Better Highways," that some of Triborough's most lucrative franchises were held by oil companies, that the three automotive giants would later plow tens of millions of dollars into his World's Fair at a time when other major companies were shying away from it. In the sense that he was America's, and probably the world's, most vocal, effective and prestigious apologist for the automobile, that he designed highway networks not only for New York but for a dozen cities, that by his success in building expressways in the city he did more than any other single urban official to encourage more hesitant officials to launch major highway-building programs in their cities, and that, by building them to new, high standards, he did more than any other single urban official to set the early standards for urban expressway design—he was the spearhead, the cutting edge, of this Panzer division of public works. But thanks to the Joint Program, he was not forced to rely on any distant division. He was the spearhead of—he marched at the head of—his own elite local regiment. The Joint Program represented profit—profit from bonds, deposits, contracts, premiums, retainers, jobs, payoffs, bribes, grease. It enlisted behind him all those forces in the city-banks, unions, contractors, venal politicians, venal or shortsighted public officials—who put profit from public works above the public interest or the public trust. And in the New York of the mid-twentieth century, those forces could bend the city's government to their will. The Joint Program represented profit on a scale hitherto undreamed of by even the greediest among them. The highways and bridges recommended in the Joint Program represented not millions of dollars but hundreds of millions—in 1968, with some of the most expensive items in the program not yet underway, \$1,817,701,607 had been spent on it.\* Moses did not have to urge these men on. The Retainer Regiment followed him eagerly.

And the regiment marched in lockstep. The incentives offered to it by the Joint Program insured against the slightest break in its ranks. With the release of the over-all program for the metropolitan region, protests from the ranks no longer concerned him. He could simply threaten, as he did again and again in the years to come, that if any part of the program was eliminated or even altered in any way whatsoever, he would see to it—by withdrawing from the program his Triborough Authority funds or his influence in Albany and Washington—that the entire program would be discarded. A borough president might be allowed to oppose a neighborhood-wrecking highway in public but in private, where it counted, he could

<sup>\*</sup> Moses and Triborough PR men referred to the study recommendations as a "\$600,000,000 program"—although the cost of the major projects listed came alone to \$740,000,000. The \$740,000,000 figure may be discarded as safely as the \$600,000,000 figure, however; none of the individual cost estimates bore more than a passing relationship to reality.

not take the action that would have meant genuine opposition: the invocation in Board of Estimate executive session of his veto power over projects in his own borough. John Cashmore might publicly assail Moses' plan to run a twelve-lane approach to the Narrows Bridge through the heart of Bay Ridge instead of on a more logical route along the shore, but he had to privately okay Moses' route to the other members of the "Borough Presidents' Union." If he did not do so, Moses made clear, there would be no Narrows Bridge—and no \$345,000,000 in bonds and contracts. Moses' technique may have been a bluff, but officials who remembered how he had once canceled \$23,000,000 worth of projects in the Bronx because Jimmy Lyons balked at the Bruckner Expressway had too much at stake to call it. Occasionally-very occasionally-a public official might shy away from a politically dangerous proposal, but whether he was a borough president, a Mayor or a Governor, he was quickly reined back into line. Into his office would pour the phone calls from the other members of the regiment, the phone calls that symbolized the behind-thescenes, subtle, selfish pressure that spelled power in New York City. After the release of the Joint Program, the city didn't have a chance of rejecting the deal that had been arranged. And that deal, worked out by this lover of the bridge and the highway, meant that the city would, for long years to come, build bridges and highways—and nothing else.

In January 1955, the two authorities had a combined immediate fundraising capacity of about a billion and a quarter dollars.

A billion and a quarter dollars could have built a wonderful mass transportation system for New York and its suburbs. Triborough's share alone—the close to \$500,000,000 that could have been raised from the sale of revenue bonds backed by its annual surpluses—would in 1955 have been more than enough to completely modernize the desperate Long Island Rail Road, giving it sleek, gleaming cars, new, powerful modern locomotives much faster than the old ones—and straighter tracks so that those locomotives could attain the speeds they were capable of. Triborough's share would, in 1955, also have been more than enough to build atop the tracks at central locations in Queens and Nassau County multilevel parking garages so that thousands of commuters could drive to them, park and simply take an elevator down to their trains, and in still sparsely developed Suffolk County to acquire sufficient land for, and to build at a number of central locations, entire huge modern commuter parking terminals. Triborough's share would have been more than enough to build not only new modern switching yards so that passengers would no longer be forced to change trains at Jamaica, but a new East Side LIRR terminal in Manhattan. It would have been enough also-especially if right-of-way was obtained along the median strip of the Long Island Expressway-to build a whole new rapid transit line to supplement the three existing Long Island Rail Road lines, a line with tracks so straight that trains could speed passengers

into and out of the city at eighty miles per hour. It would have been more than enough, in short, to build what would in effect have been a whole new Long Island Rail Road, a modern railroad capable of meeting the mass transportation needs of a modern metropolitan area, and of attracting to mass transportation enough highway users to go a long way to solving the area's highway needs as well. The cost of such a system—impossibly expensive in 1974—would, in 1955, have been not \$500,000,000 but \$200,000,000.

The Port Authority's share alone—more than \$700,000,000—would have been more than enough to build a modern trans-Hudson rail loop that would connect New Jersey and Manhattan via two new under-river tunnels, one at the Battery and one at Fifty-ninth Street, and would provide transfer stations to all the New Jersey railroads and all major New Jersey highways in the area, speeding 140,000 commuters, shoppers and theater-goers per day not just into Manhattan but to wherever in those Manhattan business and commercial districts they wanted to go—there would be stops at Cedar, Canal, Houston, Eighth, Fourteenth and other streets all the way north to Columbus Circle—and removing tens of thousands of cars from New Jersey highways, the trans-Hudson vehicular tunnels, the West Side Highway and Manhattan streets, so that those commuters who still used them would have easier trips also. The cost of such a system would, in 1955, have been about \$300,000,000.

If what was left over after the completion of the Long Island Rail Road modernization and the trans-Hudson tubes-about \$700,000,000was used on the city's subway system, it would have been more than enough to build the long-proposed and desperately needed Second Avenue Subway, and to build a tunnel across the East River through which a branch of the Second Avenue line would extend out to Queens to provide adequate subway service there, and to build extensions of the existing subway lines in Queens to provide service to the hundreds of thousands of residents of eastern Queens who were miles from the nearest subway, and to extend the Nostrand Avenue Subway in Brooklyn three miles along Flatbush Avenue to a new, modern terminal that would serve the growing Mill Basin area that possessed no rapid transit facilities at all, and to construct a new plaza and gradecrossing elimination project at DeKalb Avenue that would eliminate switching delays which caused the most severe bottleneck in train service between Brooklyn and Manhattan—the total cost of these improvements in 1955 came to \$600,000,000. And there were other alternatives. If, instead of spending part of it in the suburbs, the two authorities devoted their total revenue-raising capacity—\$1,200,000,000—to the subways instead of commuter facilities, it would have been sufficient to give the city a completely modern subway system—the total cost of a complete modernization was estimated by the Transit Authority in that year as \$1,187,000,-000. (Even if only that portion of the capacity left after commuter improvements was used for subways, it might still have been sufficient to give New York a modern subway system, for during the decade following the

Joint Proposal, the two authorities' annual revenues from tolls rose so much faster than expected—for their forecasters never understood, and therefore never took fully into account, the phenomenon of traffic generation—that their wealth far outstripped even their most optimistic expectations, and the amount available for mass transit facilities, if their total resources had been devoted to such facilities, might well have been not a billion and a quarter dollars but more than two billion dollars.) The two authorities had it in their power in 1955 to make it possible for the people of the New York metropolitan region to travel around that region quickly, cheaply and pleasantly. They had it in their power in January 1955 to change the way the region's millions lived.

Instead, as a result of Robert Moses' Joint Program, the two authorities, with three major exceptions—Triborough's Coliseum; the Port Authority's substantial expenditures for airports, and for a 1960 takeover of the Hudson and Manhattan Railroad—spent their money on facilities for the automobile. Triborough spent, once the Coliseum expenditures were subtracted, 100 percent of its resources on the automobile. During the decade following the formulation of the Joint Program, Triborough spent \$755,000,000 on the bridges, tunnels and highways advocated in that study—and not a cent on anything else.

The authority funds that the Joint Program committed to facilities for motor vehicles widened more indirectly the disparity between public investment in such facilities and public investment in mass transit that was fostered by the Program. During the following decade—1955 to 1965—federal and state governments spent on new highways in the metropolitan area the new highways recommended in the Joint Program-about \$1,200,000,-000. They spent not a cent on mass transportation. New York City's own contribution to Moses' new highways is more difficult to calculate, hidden as so much of it is-owing to Moses' wiles-under hundreds of "sewer," "street opening," "gas" and "lighting" items that bear no indication that they would not have been necessary had it not been for highway construction -but the city's expenditure for new facilities for motor vehicles almost certainly tops \$500,000,000. During the decade following presentation of the Joint Program, therefore, public investment in new highways in and around New York was about \$2,700,000,000. The public investment in new mass transportation facilities was a small fraction of this amount. During this decade, 439 miles of new highways were built-and not one mile of new railroad or subway. In 1974, people using subways and railroads in and around New York were still riding on tracks laid between 1904 and 1933, the last year before Robert Moses came to power in the city. Not a single mile had been built since.

Because there were no subways or railroads into many newly developed areas, their residents could use mass transit only by first making their way to the old rail lines—often a journey in itself. More than half of all suburban "rail commuters" and "subway riders" from outlying areas of the city

had to take a bus or car ride—often of considerable length—to the nearest subway or railroad station.

At rush hours, the scenes at subway stations in the greatest city in history's richest and technologically most advanced civilization were incredible. At a hundred stations, the traveler arrived each morning at the head of the stairs leading down onto the loading platforms to see beneath him, overflowing them, lapping precariously full to their very edges, a sea of humanity—a sea into which the traveler had no choice but to hurl himself.

To get inside the trains, men and women pushed and shoved like irritable animals, rushing for seats as animals rush for a food trough, for without a seat they would have to stand—body crushed against body, strangers' smells in their nostrils, strangers' breath in their faces—in a press so dense that there could exist in it neither comfort nor dignity nor manners. Writers called subway cars "cattle cars"; they said people were crammed into them "like sardines"; and such nonhuman images were apt. For the crowding in New York's subways—crowding to which hundreds of thousands of human beings were subjected day after day, year after year, for all the years of their working lives-was inhuman. Although most office workers were not due at work until nine o'clock, on any weekday morning one could see around the subway stations in the outlying areas of the city—past the chainlink fences of the giant parking lots on Woodhaven Boulevard near the giant new Lefrak City housing development in Queens, for example—long lines of men and women, during fall and winter huddling in their coats against the too early morning chill, hurrying for the stations at seven forty-five or even seventhirty, willing to forgo a half hour or more of sleep, willing to gulp down a coffee and danish at the office instead of breakfasting at home, to avoid the worst of that degrading ordeal. By eight, it was already too late. As one observer described the scene at that hour:

... the parking lots around the Woodhaven Boulevard station are filling up rapidly as cars stream from the expressway. Buses filled to capacity pull up and disgorge their passengers. Now the subway platform is packed six deep with people waiting impassively. As the local arrives, they surge forward, merging, pushing, straining. Some clutch newspapers, but they cannot move, much less read. At Roosevelt Avenue, the express trains arriving from Jamaica, Kew Gardens and Forest Hills are jammed to the doors, but somehow more bodies squeeze inside. By eight-thirty the crowd at Woodhaven Boulevard backs up the stairs. Those in the rear files must wait for one and perhaps two locals before they can wedge themselves aboard.

Crowded though they were, the Queens subway lines were not as crowded as the lines running down from the Bronx along the east side of Manhattan. Since shortly after World War I, the city had been promising to build a Second Avenue Subway to service those areas. Lying in the bottom drawer of the desk of a city engineer whose job dealt with subway design was a set of plans. "My father [a civil servant in the same department] gave me these plans when I came into the business" in 1929, he would tell friends. They would unroll the plans—and the friends would laugh at seeing

they were plans for "The Second Avenue Subway." After World War II, the city, having torn down the old Second Avenue El, which serviced a portion of the same area, repeated its promise. In 1955 (in the process of tearing down the Third Avenue El, which serviced part of the same area), the city promised that construction was imminent. But in 1965, the subway would still not be built—or even begun. And the thousands of passengers who had used the two old elevated lines had to pack into the already crammed Lexington Avenue IRT line. By 1965, the average car in the southbound express, designed for an "absolute maximum" capacity of 120 passengers, was jammed during the morning rush hour with some 170 passengers, which, as one study indicated, "is just about the maximum short of suffocation."

There were available in 1955, the year of the authorities' Joint Program, technological innovations which could have increased not only subway capacity but subway speed. Not one of any significance was instituted. The rides were as long as ever—longer, for the lack of available operating funds forced continual cutbacks in express service.

The cars into which subway riders were crammed were cars thirty and forty years old in 1955, and due for replacement. Such replacement would have been possible with the authorities' surplus. They were not replaced—and in 1965, almost 20 percent of New York's subway cars had been in use for more than half a century. In winter, because of their ancient, malfunctioning heating systems, subway cars were cold; in the summer—particularly on the IRT, built in 1904, because in 1904, construction techniques to ventilate subway tunnels had not yet been invented—they were so swelteringly hot that one writer compared a ride on them to incarceration in the Black Hole of Calcutta.

Not only were new cars not purchased; the old ones were not repaired. It was about 1956 that there was instituted on the New York City subway system, because of lack of funds, a policy of "deferred maintenance"—a phrase which, translated into practice, meant that brakes and signals and switches were inspected less frequently, that wheels were ground round to keep rides smooth less frequently, that electrical relays which should have been replaced every five years were replaced every thirty years, that the vast system was sometimes completely "out" of light bulbs to replace burntout signals, alcohol to keep switches from freezing, and other basic supplies.

So superbly engineered and maintained had the system been previously (New York had once been enormously proud of its subways) that it took years for this systematic neglect to take its toll, but, every year after 1956, every criterion of subway performance—on-time runs, individual car breakdowns—disclosed that the toll was steadily mounting. By the late 1960's, the day of full reckoning had arrived: 17,070 runs had to be halted during a single eight-month period; forty-five cars were breaking down on an average day; forty trains were derailed in a single year.

By the time Robert Moses left power, the *Times* could report that on a system that had for decades been called—accurately—"the safest subway in the world,"

there have been more serious accidents . . . in the last ten years than on any other major subway system in the world; in the last year, there have been more accident injuries than on any other system.

During a single seven-month period, there were four major accidents; in one, an empty IND local—being operated from the third car because the brakes in the first two cars no longer worked-smashed into a crowded local near Roosevelt Avenue, killing two persons and injuring seventy others; in another, a clogged South Bronx catch basin-cleaning machines had not been replaced as they wore out-turned IRT tunnels into gigantic storm sewers as water cascaded down air shafts and stairways, trapping 30,000 passengers for up to three hours in subway tunnels where the temperature reached 100 degrees in a disaster in which one woman died and 150 passengers suffered heat prostration. During this same seven-month period, four separate fires in subway tunnels under the city-caused at least in part by equipment that an investigating grand jury was to call "inherently dangerous and defective"-sent thousands of "terrified, smoke-blinded passengers stumbling out into the subterranean murk to grope their way to emergency exits and reach the street above via manholes." One blaze—toll: one dead, fifty felled by smoke poisoning-went unreported for long minutes: the motorman's radio was out of order.

Less dramatic than the injury toll—but wearing on the tens of thousands of subway riders who were never involved in a major disaster—was the daily toll imposed by calculated neglect. The floors of New York's subways were filthy, and the grime was mixed with scattered pages of newspapers, candy and gum wrappers and, for emphasis, an occasional blob of spittle or a smear of vomit that no one had yet wiped up. Subway walls were covered with verbal filth; the scenery amid which the New Yorker traveled around his city was a vast mosaic of FUCK and SUCK and COCK and CUNT.

Knowing that they could no longer rely for safety on brakes and signals, the operating authorities responsible for the subways responded to each major disaster by placing more and more of their reliance on caution; trains crept where once they could have safely speeded, and ground to a halt at the slightest possibility of danger ahead. Consequently, the time New Yorkers were forced to spend daily, shivering or sweltering on those bumpy, jolting, filthy trains, grew longer and longer. Where once the average trip from the city's outskirts to its center had been forty or forty-five minutes, now it was an hour or more. When Robert Moses came to power in New York in 1934, the city's mass transportation system was probably the best in the world. When he left power in 1968, it was quite possibly the worst.

With money, you could buy almost anything in mid-twentieth-century New York. But you couldn't buy a decent trip to and from work. Wealthier families might move to the suburbs, but Moses' Joint Proposal of 1955 had sealed the fate of the metropolitan region's nine suburban commuter railroads. In 1955, some of those railroads were still healthy—the New Haven, profitable, clean and punctual, had just purchased scores of gleaming new

cars; the Penn Central's Harlem and Hudson divisions were, one commentator said, "a model of how to keep 42,000 daily commuters happy"—but others were teetering precariously on the brink of financial disaster; the Long Island, the commuter line most directly in Moses' line of fire, had, in fact, been shoved over the brink; it had plunged into bankruptcy in 1949 and had been kept alive—barely alive—thereafter only by a series of state tax concessions.

Moses' Joint Program expressways siphoned off the railroads' customers precisely as the planners had predicted. The railroads were private corporations, in existence for the sole purpose of showing a profit. To show one, they would have had to compete successfully with the public authorities that were their competitors. But while the authorities' toll-charging facilities were subsidized by hundreds of millions of dollars of connecting highways, by freedom from taxes on their hundreds of millions of dollars of real estate and on their income, the railroads enjoyed no such subsidies, and were trapped as well by mounting labor costs, minimal to authorities operating only low-maintenance bridges and tunnels. Every railroad attempt during this decade to obtain meaningful subsidies was defeated by New York's local "highwaymen," the banks, construction unions, contractors, engineering and bonding and building-supply firms and politicians who reaped profit from Moses' highways, a coalition led by Triborough's chairman, who, as its prestigious public spokesman, on one occasion assured Congress that no subsidy was needed because "there is little need for an expansion of railroad commuter facilities in the New York metropolitan area," and, on another, when an impartial private study called a subsidy imperative, dynamited it by assuring the public that the major problem was simply that the railroads were not as efficient, prudent, practical and businesslike as the public authorities—stating: "These railroads have got to be more ingenious. . . . bailing out busted, lazy and backward private enterprises is [not] the business of government." (Moses added that mass transportation needs could be met on highways as well as on railroads. "A great deal of passenger traffic today consists of carpools," an "immeasurably more convenient" and less expensive system, he said.)

Unable to compete with the authorities, the railroads grew poorer as their rivals grew richer. Even those which in 1955 had been showing profits, by 1959 or 1960 were showing losses—bigger losses every year. By the early 1960's, those who still possessed any money in the bank were living off it just to stay alive—and were rapidly consuming the last of it. They had no alternative but to raise fares and cut back service, moves that touched off a self-defeating cycle: each fare increase and service cutback drove railroad passengers to the highways. (The Long Island Rail Road increased fares five times during ten years; after each increase, the railroad collected a million fewer fares per year.) A decade after the Joint Proposal, with millions of new potential customers, the commuter railroads were providing substantially less service: the Long Island Rail Road, which during the 1920's had run between fifty and sixty trains per hour into Manhattan, in

1965, with Long Island's commuter population up more than 200 percent, ran between twenty and thirty.

The service that was provided in 1965—or 1968, the year Robert Moses left power—should be chronicled in depth. Otherwise, future urban historians will dismiss oral and daily press descriptions of that service as exaggeration.

The Long Island Rail Road, for example, was, in the words of one reporter, "the kind of train that, if smaller, would make your little boy cry if he found it under his Christmas tree." With its creaking, rickety 1900-vintage coaches, it resembled the comic strip "Toonerville Trolley." Humorist Russell Baker, naming it "The Looneyville Trolley," said that it

was nationally recognized as the worst railroad of any kind in the entire country. Railroad buffs from all over the world came to New York to look at it. A few would even have ridden on it in spite of the warnings of medical science, except that they made the mistake of going to the station when the time-table said the Long Island would be there and, therefore, could never find it.

But if the Long Island was a joke, it was a bitter joke. Its riders laughed because, as one of them, Al Cassuto of Woodmere, put it, "What else can you do but laugh? If you don't you'll go crazy."

Living standards on affluent Long Island were high even for America. The homes of many Long Island Rail Road commuters were large, luxurious, thickly carpeted, richly draperied, crammed with the most modern appliances for cleanliness and cooking. The vicissitudes of climate were eliminated for them not only in their homes—no county in America had so many centrally air-conditioned homes as Nassau—but in their automobiles, all of them heated, most of them air-conditioned. These automobiles—the automobiles out of which Long Islanders stepped every weekday morning to board the Long Island Rail Road—symbolized the degree to which the affluence and technological genius of America had given its people a life cushioned against physical discomfort.

Then the train arrived, and the Long Islanders climbed aboard.

The linoleum on the floors of the coaches into which they stepped was cracked and split, impacted with layers of grime. Paint was flaking off grimy walls. The windows, so thickly smeared with grime that you could hardly see through some of them, were filled with spider webs, and with the lacy spread of thin cracks radiating out from holes smashed in them and never repaired. Some of the holes were covered with bits of cardboard held on with tape; others gaped jaggedly.

The seats were ripped and humped. Their springs were sprung. Their backs sagged limply backwards. Sitting in those seats meant sitting in dirt. If you rested your arm on a windowsill, your coat sleeve came away covered with dust. You sat with your feet among wads of chewed-up gum on which the spittle had long since dried, among gum and candy wrappers, sheets of newspapers, fragments of ice-cream cones and, occasionally, discarded hunks of food. It was a good idea not to let your eyes focus on the floor. You might

see drobs of spittle, or fat bugs scuttling by your bright and shiny shoes. Yet men pushed and shoved for those seats, for those who didn't get them had to stand, and standing on the Long Island's swaying, lurching coaches wasn't easy.

Particularly because one might have to stand for quite a long time. Even when it was running on time, the Long Island Rail Road was slow—incredibly slow. And the railroad seemed almost never to be running on time. There were days, in fact, on which, because of equipment malfunction in the LIRR's main Pennsylvania Station terminal, every Long Island train was late. There were days on which every Long Island train was hours late; some commuters couldn't remember when last they had been on time. In tabulating the number of delayed trains, the LIRR did not even bother counting those delayed less than ten minutes. Even so, the daily figures were not unremarkable. Here is one day's record:

Trains canceled yesterday—one; commuters affected—1,000. Trains more than ten minutes late—187; total time lost—74 hours, 15 minutes; commuters affected—140,250.

Getting a seat was not total victory. Getting an end seat was what counted. Many of the LIRR seats had been designed for three people—but they had been designed half a century before, when people were smaller. There wasn't enough room for three people. Sitting in even an end seat was indignity; it was sitting with your shoulder and thigh tight against a stranger's shoulder and thigh, pressing into him at every lurch, pushing against him while opening a newspaper or reaching into a pocket for your train ticket, surreptitiously taking advantage of shifts in his position to gain an extra quarter inch of room for your leg or arm. But sitting in the middle was indignity doubled. The person sitting there was crushed from both sides, leaned into from both sides, without room to make an unrestricted movement of any kind. "Of all the things I hated about the Long Island Rail Road," says one woman, "the worst was sitting in the middle on those seats. You'd have men pressing against you on both sides. They didn't mean anything by it. Some of them were sleeping and lying all over you. But it made me feel dirty. Standing at rush hour-it was the same thing. There'd be men leaning all over you. But being stuck in the middle on those seats was worse. There was never a time it happened that I didn't get off the train feeling dirty." It was no wonder that the first two persons to reach the three-man seats took the two end positions, and that when a third arrived, invariably the one sitting on the outside, closest to the aisle, would, instead of politely sliding over to make room for the new man on the outside, stand up and let him by to take the middle seat, careful not to look him in the eye.

In winter, the trips were cold. Heating equipment half a century old and haphazardly maintained could not be expected to work well. Not that even modern, well-maintained equipment could have kept heated a coach in which it seemed that every other window either had a hole in it or could not be shut tightly. A reporter who took a thermometer onto an LIRR train one

winter day—not by any means the coldest day of the winter—found that the temperature aboard was 29 degrees. Men who in home and office enjoyed temperature controlled to the precise degree, had to travel between home and office huddled shivering in their coats.

And winter was, perhaps, better than summer. The crush in the cars kept the temperature up, and in winter that was a help. In summer, it was not, and help was needed, since 70 percent of the LIRR's ancient rolling stock did not have air-conditioning equipment. Men who tried frantically to open windows—one could watch them tug on them furiously every few minutes on a long summer ride home—found them stuck fast. A reporter who took a thermometer onto a jam-packed LIRR train one summer day—not by any means the hottest day of the summer—found that the temperature aboard was 98 degrees. Men who would not have dreamed of living in a home or working in an office that was not air-conditioned, rode each day between home and office sweltering, the sweat forming in their armpits and crotches and running down their backs and legs.

Long Island Rail Road trains did not always run late. Sometimes they did not run at all. Year by year, as already old equipment grew older, the number of trains that simply broke down on the track increased. It was no longer unusual to see a train arrive in Jamaica being pushed along by another train. The number of trains that didn't even make it out onto a track increased. By 1964, it was not unusual for the railroad to cancel ten trains per day. One train, the 7:45 A.M. from Babylon to Brooklyn, did not appear for 102 consecutive days; would-be passengers named it "the Phantom."

Long Islanders' lives were cushioned—approximately twenty-two hours out of every twenty-four—by all the material wonders the twentieth century could provide. For those other two hours—two hours that could with accuracy have been called "Robert Moses' Two Hours," for he had made them what they were—they lived like nineteenth-century Russian peasants.

There comes a time, H. L. Mencken said, when every normal man is tempted "to spit on his hands, haul up the black flag and begin slitting throats." The LIRR's conductors were not responsible for conditions on the railroad. The commuters knew that-rationally. But the conductors were a visible symbol of the railroad's management on which the commuters could vent their frustration. Men normally rational found themselves snarling and cursing conductors, refusing to show them their tickets; as a result, men who would not have been able to conceive of themselves being arrested suddenly found themselves in that state. "Arrested!" as one reporter put it: "Portly, balding, mild-mannered, 53-year-old Seymour Cummins, district sales manager, commuter, family man. Seymour Cummins, of all people, being led off the train by two policemen, one on each arm, as his wife watched in disbelief." By 1968, the year Robert Moses left power, commuters were, as one writer put it, "so . . . surly that the conductors occasionally choose, like prudent lion tamers, not to enter the cage." One freezing evening, at Jamaica, while commuters huddled in downstairs waiting rooms because the waiting rooms near the tracks upstairs were unheated, a malfunctioning publicaddress system prevented them from hearing announcements of incoming trains. Storming upstairs in sudden senseless fury, 250 commuters began pounding on the glass walls of the announcer's booth, trying to get at the terrified occupant—they had broken the glass when police arrived to pull them away. On another freezing night, a train broke down some miles from the nearest station. Its passengers got off and began throwing rocks at it. Similar incidents occurred again and again. One evening in Penn Station with 150 rush-hour trains running late—a fifty-eight-year-old bank employee from Bayside, enraged because a conductor would not open the doors to let him on a train that had loaded but had been standing for close to half an hour on the platform, reached through the window to the engineer's booth, grabbed something and refused to let go. And when the railroad police rushed up to pull him away, suddenly, as one police sergeant put it, "this place was wall-to-wall people, thousands of people"—pulling at the policemen, punching them. "It was a riot down there," the sergeant said. "It was actually a riot." And it was testimony to the rage to which conditions on New York's railroads could drive men.

Actual physical violence was, of course, unusual, and therefore it is not in violence that the true toll of commuting on the Long Island Rail Road should be computed. It is in the norm—to which the violence is only occasional, violent punctuation—the norm that endures day after day, week after week, year after year, for tens of thousands of commuters (the LIRR carried 80,000 daily), that the toll of commuting should be computed.

The true extent of this toll can perhaps be described in psychiatric terms. The chairman of the Nassau County Mental Health Board, in one of the first detailed studies of the subject, discovered a "commuter syndrome," "a mild state of chronic stress resulting from internalized rage and frustration due to the uncertainty of disrupted schedules." It was most serious in commuters who were "business executives, overly worrying, driving, ambitious and aggressive types. . . . Such a person, who preserves his valuable time by living to a tight schedule, is tremendously vulnerable, psychologically speaking, to transportation failures." But the commuter syndrome, the study found, was not present only in executives. Three out of every four commuters tested suffered from its symptoms.

Chronically.

But it did not take a psychiatrist to compute the toll. A layman could do it—by asking commuters in a relaxed setting—a cocktail party, perhaps—about commuting and then taking note of the contrast between the answers he gets from young men—or men recently moved to a new home on Long Island—and those he gets from older men.

A young man might say, as twenty-six-year-old Michael Liberman of Dix Hills did one evening, "People's lives revolve around the railroad. You can spend five hours a day on it, and then you're just too tired to work." He might say, as thirty-six-year-old Allen Siegal of Roslyn did one evening, "I think we're out of our minds to do this. The trip home is worse than eight or nine hours at the office." Men who have been commuting for years, however, generally do not go into detail. Nor do they complain much. Their standard reply—one so standard that the questioner can hear it a dozen

times in a dozen conversations—apparently sincere, is: "Oh, you get used to it after a while."

The implications of that reply should be considered.

"Get used to it!" Accept as part of your daily existence two or three—or more—hours sitting amid dirt, crammed against strangers, breathing foul air, sweating in summer, shivering in winter. Accept that you will be doing this for a substantial portion of every working day of your life, until you are old. "Get used to it!" One has to think about what those words, so casually uttered, really mean. One has to realize that the man uttering those words has accepted discomfort and exhaustion as a part—a substantial part—of the fabric of his life. Accepted them so completely that he no longer really thinks about them—or about the amount of his life of which they are, day by day, robbing him. We learn to tolerate intolerable conditions. The numbness that is the defense against intolerable pain has set in—so firmly that many of the victims no longer even realize that the pain is pain.

One should listen to the wives of these men—to be more precise, the younger wives—say, as Mrs. Mary Severine of Huntington, whose husband, Louis, was general manager of advertising for the American Broadcasting Company, says: "We never plan anything during the week. There's got to be something more in life than Saturday night." Older wives do not talk much about it. After enough years, they don't complain that "there's got to be something more in life than Saturday night." They just forget that there ever was.

And then, to comprehend the full toll of commuting, one should try to imagine—for no one has yet arrived at an objective method of measuring it—the total human cost, individual cost times 80,000, of commuting under such conditions. It may be that the cost—the total toll in human terms—is too large to be imagined. But if one makes the effort nonetheless, and obtains even a glimpse of its dimensions, one can get a glimpse of the true cost of Robert Moses' transportation policies on Long Island.

And Long Island was not the only New York suburban railroad on the track toward chaos. It was only the first of many making that journey. When Moses had first come to power in the suburbs—in 1924—New York's suburban railroads had been in good shape. As late as 1955, when he formulated his Joint Program, most of them had still been in fair shape. By the time he left power in 1968, they were all as much of a bitter joke as the Long Island. The New Haven Railroad had in 1955 been a model of punctuality, cleanliness and profitability. In 1968, as one headline put it, ON THE NEW HAVEN, L.I.R.R. LOOKS GOOD. By 1968, moreover, with the annual surplus of Moses' Triborough Bridge and Tunnel Authority running more than \$30,000,000 per year, every suburban railroad in the New York metropolitan area was either bankrupt or teetering on the brink.

The massive migration to the city's outlying precincts and to the suburbs beyond had created hundreds of thousands of new commuters. Had the subways and railroads been extended into these regions and improved with the Authority funds available in 1954, they would have been used by many

of these commuters. Had they been merely maintained at even their old levels, with their old fares—not improved, just maintained—they would at least have kept those riders they already had. But, disintegrating, they did not. After the Joint Program, the number of rides taken annually on New York's subways and commuter railroads declined by almost two million per year. Commuters by the tens and hundreds of thousands had been forced onto the highways and bridges Robert Moses had laid out under the Joint Program and had been building ever since. And it was on those highways and bridges—the creations of a single individual, public works sprung from that individual's private creative vision, financed and approved as a result of his unique political genius, driven to completion by his savage drive and unswerving will—that the effect of that single individual's policies on the 12,000,000 individuals who lived in the New York metropolitan region was most clear.

Those highways and bridges were awesome. The transportation network built by Robert Moses after World War II ranks with the greatest feats of urban construction in recorded history. Possibly it outranks them all. Possibly it is history's greatest feat of urban construction. The longest tunnel in the Western Hemisphere, the longest suspension bridge in the world, the largest and most complex traffic interchanges ever built—these were all merely segments of that achievement. Its over-all scale can perhaps best be grasped by a single statistic: mileage. The "urban" highways—controlled-access through roads within cities and the heavily populated surrounding suburbs -built in America during the quarter century following the Second World War dwarfed any urban highway or system of highways built in any country in the world any time in recorded history. In 1964, when Robert Moses completed his major highway building, there were completed or well under way in the New York metropolitan region 899 miles of such highways—627 built by him, many of the rest, most of which were in New Jersey, built as a result of the Joint Program he worked out with the Port Authority. No other metropolitan region in America possessed 700 miles of such highways. No other metropolitan region possessed 600 miles—or 500. Even Los Angeles, which presented itself to history as the most highway-oriented of cities which was, in fact, not a city in the older sense in which New York was a city but a collection of suburbs whose very existence was due to highways possessed in 1964 only 459 miles of such highways. No city in America had more than half as many miles of such highways as New York. But nothing about his roads was as awesome as the congestion on them.

Nineteen fifty-five was also a turning point for New York and its suburbs because that was the year construction started on the Long Island Expressway.

Long Island, that vast, empty, beautiful open area beyond the city line that Moses had looked upon in 1923, had since been covered—thanks largely to his parkways, his starving of its railroads, his initiation and encouragement of industry-excluding zoning—with a formless, unfocused

sprawl of subdivisions, mile upon endless mile of land-gobbling, single-family, large-lot developments that were not only destroying the very assets that he prized—its openness, its spaciousness, its beautiful North Shore hills and South Shore marshes and wetlands, its ocean and bay and sound—but were replacing it with communities that were not communities, that had no "downtowns," none of the focal points that alone make meaningful community development possible and that were so spread out that a trip to anywhere—store, church, school, movie, business—generally required a car, so that the lives of its residents were eaten up by the difficulties in getting from one place to another. The construction of the expressway offered a chance to reshape the Island, to free its people from the tyranny of the automobile.

Just laying two rapid transit tracks down the expressway's center mall would have done the job. Without them, expressway-fostered development would follow the same pattern as the development fostered previously by Moses' parkways, and for the same reasons: its users would be arriving at their exits in the evenings in cars; it would not make that much difference to them if their homes were located miles from an exit; having been driving for an hour or more, it wouldn't matter much to them if they had to drive for another fifteen or twenty minutes. They would be accustomed to driving, oriented to cars—and their homes would therefore spread out widely over the land. But men arriving on high-speed rapid transit would feel as men arriving home on the subways felt. Many would want to be able to walk home; more important, they would not be car-oriented in general; they would want to live in neighborhoods rather than subdivisions you would therefore have, as you had in New York City, high-density development—apartment houses, private homes on small plots—in the central corridor up which the expressway was to run. (As was proven by Long Island's existing apartment-house development: concentrated almost exclusively within a block or two of major LIRR stations in communities such as Great Neck, Roslyn, Mineola, Hempstead, Rockville Centre, Freeport and Baldwin.) Higher population densities make feasible the construction of theaters and large department stores, of museums and reference libraries, and people living in or near the central corridor would therefore be able to reach these facilities—and their churches, doctors, dentists and their son's Boy Scout troop meetings—on foot or in buses (for high densities support convenient local bus service). For people living in the central corridor, it would not be necessary to get into cars every time they left the house. Automobile usage for the Island as a whole would, at a stroke, be dramatically slashed. In terms of transportation alone, building rapid transit on the Long Island Expressway would immensely improve the lives of millions of people.

And there were other terms of improvement as well. Long Island's central corridor also contained both the Northern State Parkway and the LIRR's central line. Building the expressway would lure industry to that corridor; industry was already attracted to it because of the LIRR line. (Planners had long been urging that that lure be strengthened by improving

the LIRR and linking its Brooklyn terminal to the New Jersey railroads, a move that would make it immensely more attractive to freight shippers; their hopes would finally be dashed by Moses' refusal to consider an alternative location for the Verrazano Bridge that would have made such a link feasible.) As industry moved to Long Island's spine, so would its workers, and there would be enough of them who wanted to live close to their jobs to further increase those densities—and the apartment houses and variety of services those densities would support. The Island, now without a focus, would be given one. Its over-all development would, at a stroke, be made more orderly: people who wanted to live in apartments or near stores or jobs or rapid transit to New York would live in the center of the Island instead of having to live like everyone else in sprawling subdivisions. People who preferred larger homesites to convenience would live farther away from the center. Densities would therefore get lower and lower the farther one moved from the center. People who wanted open space would have been able to find more of it-larger lots for their houses, more parks and woods preserved, for they would no longer be so valuable to developers; people who wanted open space, in other words, would be able to find more of it on Long Island at the same time that people who wanted a more urban type of life could have found that, too. The concentration of population down the center of the Island would preserve at least some of the Island's beauty away from the center.

Building rapid transit on the Long Island Expressway was not only the best way to rescue Long Islanders from the automobile but the only way. The Island's transportation problem was complicated by one unblinkable geographical fact: Long Island was an island, connected by Moses to the mainland at only one end. Its other end stuck out into the Atlantic Ocean, connected to nothing. It was a cul-de-sac, a dead end. It might be a gigantic dead end—116 miles long, an average of 12 miles wide, it contained 1,404 square miles-but it was a dead end nonetheless. Manufacturers wanting to import raw materials or ship out finished products had only one way to go, and so did commuters heading for the great corporate headquarters lumped together on Manhattan Island, housewives heading for Manhattan's museums, art galleries and theaters—anyone who wanted to leave the Island for any purpose whatever. As an industrial mortgage broker put it: "You can't think east; it's got to be west. Your raw materials have to come in from the west; your finished products have to go out to the west. And the west is New York, and New York is congestion." In 1955, Long Island's population was already 6,200,000, greater than that of forty-one states. But forecasters were predicting that by 1985 the population would be at least 8,500,000. Forecasters agreed, moreover, that little of this increase would come in Brooklyn and Queens, the part of the Island within the city limits, and relatively little in western or central Nassau County-most of the land on Long Island for a distance of thirty miles out was already substantially covered with homes. The increase was going to come in the rest of Long Island—the eighty additional miles stretching out to the east, eighty miles that were in 1955 still to surprising extent the scrub-oak and pine barrens

and far-stretching potato fields they had been in 1923 but into which Moses was planning to lay, not only for the expressway but for extensions of the Northern and Southern State parkways, broad swaths of concrete, giant cloverleafs among the potato fields. The Regional Plan Association was predicting conservatively that the population of Nassau and Suffolk—less than a million and a half in 1955—would be more than four million in 1985. Onto Long Island's potato fields was going to be dumped a population the size of Philadelphia. Without local jobs, this population was still going to be largely dependent on Manhattan, on the west. There would not only be many more people living on Long Island; these people would have to travel much farther to their jobs. The intracounty roads—local roads, mainly north-south roads—of Long Island's two suburban counties were already clogged with their present traffic. How were they supposed to handle the traffic generated by two and a half million more people?

And it wasn't on the north-south roads that the most serious problems were going to occur but on the roads to the great city to the west. In 1955, there were an estimated 600,000 individual car trips across the city line eastward or westward every twenty-four hours. In 1960, the RPA was predicting, there would be an estimated 800,000; in 1970, an estimated 1,000,000; in 1985, the last year for which projections were made, an estimated 1,400,000. How were roads ever going to handle such traffic?

In particular, how were they going to handle the traffic during morning and evening rush hours?

Employment-location forecasts showed that in 1985 about half of all Nassau and Suffolk wage earners were still going to be commuting daily to New York because that was where the jobs were going to be. The only difference in the situation was going to be that, because of the deterioration of the Long Island Rail Road and the diffusion of population away from its lines, a far greater proportion of commuters was going to be commuting by car. In 1955, out of 250,000 wage earners living in Nassau and Suffolk, 115,000 commuted to New York, 40,000 by automobile (joining 50,000 from Queens-see footnote, page 946). In 1960, according to the most conservative forecasts, there were going to be about 125,000 commuters crossing the city line heading west in the morning rush hour and crossing it heading east in the evening rush hour—about 50,000 in cars; in 1970, there were going to be 160,000 commuting—70,000 in cars; in 1985, 215,000 commuting-90,000 in cars. And these were just the commuters from beyond the city line. How about the commuters from Queens—an estimated 90,000 car commuters by 1985 piling onto the same east-west roads at the same time as the 90,000 from the suburban counties?

Attempting to handle traffic in such volume by building highways just didn't make sense. In 1955, there were 90,000 drivers commuting from Nassau, Suffolk and Queens, and existing highways couldn't come near handling them. Now you were talking about adding another 90,000 drivers. The capacity of an expressway lane, under optimum conditions, was only 1,500 cars per hour. You would have to build sixty lanes of new highway just to keep up with the increase in traffic, not to catch up with the deficit in lanes

already existing. The Long Island Expressway would be six lanes, three in each direction. Its maximum rush-hour capacity would therefore be 4,500 cars. Forty-five hundred cars out of 90,000! Building the Long Island Expressway, expending on it hundreds of millions of dollars of public money, would hardly make even a noticeable dent in the Long Island commuting problem. Building a dozen Long Island Expressways wouldn't make a noticeable dent. And how about when that traffic reached the central city? The streets of Manhattan and downtown Brooklyn were already jammed, filled to overflowing with cars and trucks. Now you would be piling into them 90,000 additional cars. Congestion in city streets had already reached intolerable levels. To what levels was it going to be escalated? You couldn't possibly solve Long Island's transportation problems—or the city's—by building roads. You couldn't possibly even come near solving those problems by building roads. Trying to solve them by building roads just didn't make sense. Building the Long Island Expressway didn't make sense.

But building the Long Island Expressway with rapid transit on the center mall—rapid transit that could carry 40,000 passengers per hour, 40,000 passengers who would arrive in Manhattan without cars to be parked—made sense. Says Lee Koppelman, executive director of the Nassau-Suffolk Regional Planning Board: "By the time the Long Island Expressway was planned, we planners had been screaming for years about the need for mass transportation. By this time, the suburbanization—the urbanization in parts—of Long Island had already occurred. We saw the forces, we saw the problems, and we were talking about the problems, and we all knew we had to have mass transit on that road. It was obvious. In terms of commutation, you have to say, 'How can you make this road work so I don't have to build six more Long Island Expressways?' and there was only one answer. We all knew that if there was no mass transit on that road, it would be a disaster. Without mass transit, the road was guaranteed—guaranteed—to fail before it was built."

"Mass transit doesn't only mean trains, you know," Koppelman says. "It can mean buses."

Buses do not have the capacity of trains. But they have enough to make a difference. "Every bus," as Koppelman puts it, "can be the equivalent of fifty automobiles." And if an expressway is designed for buses as well as automobiles—if one lane, slightly wider than the normal lanes, is reserved exclusively for buses by separating it from the others by a divider and if the width and turning radii of entrance and exit ramps are made big enough to facilitate their use by the big vehicles—hundreds of buses can use that lane in an hour, theoretically as many as 800, conservatively 400. The capacity of that lane becomes 20,000 people per hour, about thirteen times greater than it was before. Designing and reserving for buses two of the Long Island Expressway's six lanes—one in each direction—would be the equivalent of building a new eight-lane expressway right next to it.

But such capacity can be attained from buses only if a lane is designed

and reserved exclusively for them. If it is not, if buses are forced to creep along in the general traffic flow, they no longer offer the faster trip that, along with the comfort of letting someone else drive, would overcome for substantial numbers of commuters the disadvantages represented by the higher immediate, out-of-pocket expense of a bus trip and the fact that the nearest bus stop might be inconveniently far from their offices. Too few commuters would be lured out of their cars onto the buses to significantly alleviate expressway congestion. If Moses wouldn't build rapid transit on the Long Island Expressway, planners pleaded, at least let him build it with lanes for buses. Moses refused even to consider the suggestion.

Making provision for mass transportation on the Long Island Expressway was in many ways not only Long Island's chance but its last chance.

Mass transportation systems work only if they are able to transport masses—people in numbers sufficient to pay the system's cost, to justify the immense public investment that created it. Such systems work only if there is high-density development around them. They do not work in an exclusively low-density subdivision landscape. Low-density subdivision had already inundated two-thirds of Nassau County. But the rest of Nassau and most of vast Suffolk still lay largely unsubdivided—unshaped; great chunks of Long Island were in 1955 still a tabula rasa on which a design for the future could be etched with the lessons of the past in mind. For these areas—close to a thousand square miles of land—there was still time to insure a different, better, type of development—a different, better, life for the millions of people who would one day be living on that land. But there wasn't much time. With the population of the two counties increasing at the rate of almost 100,000 per year, each year the tide covered almost five miles more of the Island. If a change was to be made in the development pattern, it must be made at once.

Once the Long Island Expressway was built, no change would be possible. Construction of the great road would open the entire Island to development. As it pushed through new farm country-even before it pushed through the country, as soon as the announcement was made that the push was imminent—that country would fill up with subdivisions. The pattern of development—a pattern too low in density to support rapid transit—would be fixed. (And, of course, the land would become too expensive for the creation of the huge commuter parking terminals.) The time was now, before the expressway was built, to insure not only that rapid transit would be provided but that it would be used by enough people to ease the transportation burden from the backs of all the people on Long Island. It would not be possible once the expressway was built. Build the Long Island Expressway with mass transit—or at least with provision for the future installation of mass transit—and Long Island might remain a good place to live and play. Build the Long Island Expressway without mass transit and Long Island would be lost-certainly for decades, probably for centuries, possibly forever.

When planners proposed rapid transit on the expressway, Moses replied by saying it was "impossible"—and by refusing to discuss the matter. The chairman of the newly formed Metropolitan Rapid Transit Commission knew from personal experience—twice, after all. Charles H. Tuttle had had Robert Moses on the witness stand before him under oath—the value of independent investigation of Moses' assertions. Going outside the Moses sphere of influence—over the New Jersey border to Philadelphia and the firm of Day & Zimmerman, Inc.—he found consulting engineers who didn't depend on Moses for a living and commissioned them to find out if this Moses assertion was true.

The MRTC could not afford a complete study. Day & Zimmerman therefore analyzed the cost and effect of placing rapid transit not on the entire eighty-five miles of the expressway but only on a seven-mile stretch in Queens, from Marathon Parkway near the city line running west to Corona, where the tracks could link up with one of several existing subway lines and follow its tracks into Manhattan. This limitation placed the rapid transit proposal in the worst possible light, maximizing its right-of-way cost, for Queens was built up far more heavily than the less heavily populated suburbs, and minimizing its effect, since while in the suburbs development could still be influenced by rapid transit, with higher densities near the line so that traffic on it would be increased, in Queens the pattern of development was already set.

Even in the worst possible light, however, the proposal looked good. One Day & Zimmerman alternative, for example, was to lay tracks down the expressway center mall from Marathon Parkway into Corona, leave the expressway at Flushing Meadows Park, cut across its northeastern corner to link up with the IRT Flushing subway near its 111th Street station and follow that line (which "has ample capacity to accommodate" the added traffic) to Times Square. The total cost of building such a line—the total cost of the additional forty feet of expressway right-of-way, of bridges at grade separations, of electric substations, of eleven large, modern passenger stations with parking garages at the eleven major avenues intersecting with the expressway within that seven-mile stretch, of every piece of moden rapid transit equipment desirable—would be only \$20,830,000.

Benefits to the public would be as large as costs to the public would be small. Day & Zimmerman calculated these benefits only for the small section of northeastern Queens directly involved and for adjacent northern Nassau County. But even for this limited area, the figures were staggering. From it, in 1955, 158,500 persons traveled into Manhattan and back on an average weekday, 85,000 by automobile, 59,500 by bus and 14,000 on the Port Washington branch of the Long Island Rail Road.\* The vast majority of these commuters would be able to save significant amounts of money

<sup>\*</sup> The Day & Zimmerman figures do not fit in with figures for over-all commuting from Queens, Nassau and Suffolk furnished by the Regional Plan Association and the Nassau and Suffolk Planning Boards (the two counties them each had its own planning

and time—in Queens up to twenty-five minutes, in Nassau up to forty minutes—by using the proposed rapid transit system instead. Based on surveys of the commuters, on analyses of traffic patterns and on other surveys done in similar situations in other cities, "initially about 17 percent of general commuter traffic from the area would use the proposed rapid transit line in the initial year of operation." And 17 percent of 158,500 is 27,000. Twenty-seven thousand commuters who now jammed available means of transportation to New York twice a day would be removed from those means of transportation, freeing them for other users—and their own trips would be made vastly cheaper and faster, as much as forty minutes each way faster.

The effect on the jam-packed buses from the area would be dramatic. Some 19,000 of the 27,000 passengers diverted to the new rapid transit would be bus passengers. The effect on the jammed Long Island Rail Road would be less dramatic but still meaningful. Some 1,500 passengers of the 27,000 passengers diverted would be LIRR passengers. And as for the highways—most notably the Long Island Expressway, which the vast majority of commuters from this area would use once it was opened—close to 6,500 of the 27,000 persons diverted would be persons who drove their cars into and out of Manhattan every weekday.

These figures were conservative—far too conservative, most planners felt. The figures would, moreover, increase year by year, as the area's population increased and as the percentage of the population using the rapid transit line increased as more commuters became aware of its advantages.

But even the initial, ultraconservative figures had remarkable implications. Robert Moses was planning to spend \$500,000,000 for an expressway that would increase the one-way automobile-carrying capacity of Long Island by a maximum of 4,500 automobiles or buses per hour—during the two-hour peak period, by a total of 9,000 automobiles or buses. For \$20,000,000—one twenty-fifth of that cost—he could reduce the automobile-carrying capacity needed by 6,500 automobiles and 400 buses. He could do as much for Long Island by spending \$20,000,000 as by spending \$500,000,000—if he spent it on rapid transit.

And these figures represented the advantages of building rapid transit on only seven miles of the Long Island Expressway, seven miles out of eighty-five.

No study was ever done of the cost of building such a line on the other seventy-eight miles of expressway, so much of it is 1955 still open farm country, but the best-informed estimate is that the cost—including large terminals in key locations—would, if the job had best done in 1955, have

board). For example, while the figure for the over-all number of commuters by car from those three counties was given at the time as 90,000, the Day & Zimmerman figures show 85,000 commuters from northeastern Queens and northern Nassau County flone. The reason for the discrepancy is that the over-all figures are not based on deailed studies, while the Day & Zimmerman figures are—and that the figures for autonobile commuting from Queens, Nassau and Suffolk should actually be higher than 10,000.

been no more than half a million dollars per mile. Building a rapid transit line the length of the Long Island Expressway would almost certainly have cost less than \$100,000,000—one fifth of the cost of the expressway without rapid transit.

To save Long Island, it was not absolutely necessary for rapid transit to be built into the Long Island Expressway in 1955. But it was absolutely necessary for provision for rapid transit to be built in. The right-of-way for the tracks had to be acquired and the necessary heavier foundations had to be sunk beneath the center mall. As long as those two steps were taken, tracks could be installed on the expressway with a minimum of expense and inconvenience in the future. Fail to take those steps and, as with the Van Wyck Expressway ten years before, the expense of acquiring the landnow so cheap-would be enormous, so enormous, in fact, that it would probably be prohibitive financially-by Day & Zimmerman's estimate \$15,000,000 per mile—and politically: not only would building rapid transit on the shoulders of the road require the acquisition of additional right-of-way and cause public outcry from the owners of that land and from thousands of others whose adjacent homes would be blighted by a nearby roalroad, but rebuilding the expressway's foundations would require the closing of several lanes for years, causing immense public inconvenience. The cost of making provision for rapid transit would, in 1955, be minimal in terms of the expressway's over-all cost: acquiring 240 feet of land instead of 200 feet and building heavier foundations would cost, for the whole eighty-five-mile length of the expressway, perhaps an extra \$20,000,000. The expressway was going to cost \$500,000,000 anyway. For \$20,000,000 more—for an increase in the cost of only 4 percent—you could take the step that would insure that the expressway would one day be able to fulfill the function for which it was built. Fail to spend that 4 percent, and the expressway would never be able to fulfill the function for which it was being built. And that money was available: if Moses couldn't persuade the city or state to put it up, he could put it up himself—Triborough had the \$20,000,000 readily available.

The Day & Zimmerman study, the first independent analysis of the long-term effects of a Moses highway proposal during the thirty years that Moses had been building highways, represented a serious threat to Moses. His opponents were usually unable to refute his facts and figures with figures of their own. When he told press and public a proposal was "impossible," there was no choice but to accept that statement. Now there would be. And if editorial writers learned how simple it would be to provide rapid transit on the expressway, there might well be a public outcry for that provision.

Moses knew how to handle threats.

While Day & Zimmerman were studying, he started building—getting the expressway under way with \$20,000,000 in Triborough funds so that he wouldn't have to wait for state or city allocations. Even while the MRTC consultants were attempting to determine the advisability of making provision for rapid transit on the expressway, Moses was building the expressway with-

out any such provision. By the time the firm reported its findings to the MRTC, it had to report also that the findings no longer mattered. Because of "actual construction work" done on the expressway "since the conception of the rapid transit study plans," the firm stated, placing rapid transit on the expressway would now "require complete revision of the expressway plans and the economic waste of the substantial construction work completed. . . . Construction of a rapid transit line on this highway" is no longer "practicable." Discussion of the question no longer served any useful purpose. Not surprisingly, there wasn't any—at least not any of significance. The Day & Zimmerman report was one of the best-kept secrets in New York planning history. The city's newspapers carried scarcely a word on it. Newsday, the Long Island daily, never mentioned it. The public never knew of the ease with which rapid transit could be built on the Long Island Expressway. Long Island never found out about the report that spelled out a way by which Long Island could have been saved. The Long Island Expressway was built without rapid transit—and without provision for rapid transit in the future. And as each section of the superhighway opened, it was jammed-with traffic jams of immense dimensions. One man's dream became a nightmare an enduring, year-after-year nightmare—for tens of thousands of other men. Year by year, the huge road bulled its way eastward, through Queens, across Nassau County, deeper and deeper into Suffolk; it would take fifteen years to build it out to Riverhead. And as each section opened, as each piece of Moses' largest road-building achievement fell into place, the congestion grew worse. The Long Island Expressway's designed daily capacity was 80,000 vehicles. By 1963, it was carrying 132,000 vehicles per day, a load that jammed the expressway even at "off" hours—during rush hours, the expressway was solid with cars, congealed with them, chaos solidified. The drivers trapped on it nicknamed Moses' longest road "the world's longest parking lot.'

Part of Moses' solution to congestion on his biggest road was to make it bigger. By 1962, while he was presiding over opening ceremonies on stretches of the expressway in Nassau County, Andrews & Clark were frantically redesigning stretches of the expressway that had been opened in Queens just a few years before. Even before its eastern stretches were laid down, its western stretches were being hacked up. In 1966, while state highway crews were building it deep into Suffolk County at its eastern end, other crews were rebuilding it at its western end: construction of a single, monster interchange—its cost \$75,000,000, more than all the highways Moses had built before the war-at the most congested spot on the expressway, its intersection with the Brooklyn-Queens Expressway, got under way in that year. "My God," Lee Koppelman told a friend one night in 1966, "they shouldn't be doing that. If they've got \$75,000,000, they should be spending that \$75,000,-000 on bus service—building a bus lane and parking areas where commuters could pick up the buses. Building that interchange isn't going to change a damn thing. If you eliminate one interchange problem, all you're going to be doing is shifting the bottleneck east of the interchange, further out in Queens. So then they'll probably decide to widen it east of the interchange in Queens. And all that'll do is shift the bottleneck east to where the widening stops." Koppelman was right. By 1970, on a five-mile stretch directly to the east of the Brooklyn-Queens Expressway interchange, work had begun on carving four additional lanes of expressway out of the grass slopes bordering the expressway. Final blueprints were being prepared for a similar "widening" for the next five-mile stretch to the east—and for providing still more capacity by cantilevering service roads out over the highway.

The continual construction made the traffic jams even worse while it was going on. And, the men planning the highway knew, it would be going on for decades. Not only was the expressway going to have to be widened deep into Suffolk; at every point where it intersects with another major road—Moses' Van Wyck and Clearview expressways or Grand Central, Cross Island and Northern State parkways, for example—giant new interchanges are going to have to be built. Although the public didn't know it, "improvements" under design in 1974 would not be completed until the end of the century "at the earliest." Men who had been suffering for years on Moses' road, who had been trapped every working day of their lives in those terrible, life-eroding traffic jams, would be freed from that trap only by growing too old to work.

Long Island planners could tell when the Throgs Neck Bridge opened by their charts of traffic volume on the Island's highways: with the opening, the volume, climbing steadily month by month anyway, made a sudden, sharp jump. The bridge itself was jammed, and the traffic using it did not mean less traffic on the Bronx-Whitestone Bridge paralleling it across Long Island Sound two miles to the west. For two years, there was a substantial decrease in Bronx-Whitestone traffic, and then, inexorably, it began, even while traffic on the new bridge to the east kept climbing, to creep back to its former levels. Moses' solution: build another bridge across Long Island Sound to the east, a huge "Sound Crossing" between Oyster Bay and Rye. Presumably, when that bridge was completed, there would be another bridge to its east—and then another, and another. Moses would, if he had his way, cover the Sound with bridges as the Tiber was covered with bridges in Rome.

(The Throgs Neck Bridge at least was two miles away from the Bronx-Whitestone. On the other, south, side of Long Island, Moses was building a "Captree Causeway"—a name later changed to "Robert Moses Causeway"—connecting Captree, the easternmost end of the Jones Beach barrier beach, with the Fire Island State Park—whose name would later be changed to "Robert Moses State Park." Traffic on that bridge was, immediately upon its opening, so intolerable that within two years Moses had begun building another bridge parallel and next to it—and exactly sixty-eight feet away.)

With the opening of the Verrazano-Narrows Bridge, which within two years of its opening in 1964 was carrying 21,000,000 cars per year, a traffic level Moses had not believed it would attain until 1980, traffic vol-

ume on Long Island experienced not a jump but a huge surge. With congestion reaching new levels, Moses said the solution was to build a huge new Cross-Brooklyn Expressway, starting near the point where the bridge touched down on Long Island. For that, of course, he needed state, city and federal approval. But no one's approval was needed to enable him to do what he wanted on the bridge itself. He built on it a second deck that would almost double its capacity.

Robert Moses was, after all, mortal, Lee Koppelman kept reminding himself—"even if sometimes it didn't seem that way"—and, one day, either death or old age would end Moses' decades of power. And, Koppelman believed, it would not take long after that day for bus service to be instituted on all Long Island's major highways, not only on its expressways but on 200 miles of parkways.

The young planner cherished that belief until, driving along the old Wantagh Parkway one day, he happened to notice something he had never noticed before.

"I was coming up to one bridge across the parkway," he would recall, "and just as I was about to go under it, I noticed how low it seemed to be. I took a good look at the next bridge, and goddammit, it was low! I pulled over and measured it with my arm at the curb, and I could see that it wasn't any fourteen feet high. At the next exit, I got off and found a store and bought a yardstick and got back on the parkway and measured the next bridge. At the curb it was eleven feet high. And I didn't have to go and measure all the other bridges. I knew right then what I was going to find. I knew right then what the old son of a gun had done. He had built the bridges so low that buses couldn't use the parkways!"

The Wantagh Parkway had, of course, never been rebuilt since it had opened in 1929. Most of Moses' other parkways were being rebuilt to handle the greatly increased traffic loads on them. As he drove back to his office, Koppelman was hoping that the rebuilt bridges, the overpasses that carried intersecting local roads over the parkways, would be higher. But, at the office, when he pulled out the design drawings he had been sent by the Long Island State Park Commission, he saw at a glance that his hopes had been false. The new bridges were several feet higher in the center—over the two "fast" lanes, one in each direction, of the expanded six-lane parkways—than the original bridges, because, as Koppelman was later to realize, Moses didn't want unadorned straight overpasses over his beautiful early roads, and curving an overpass over a wider expanse necessitated greater clearance beneath it. But the clearance at the curb was precisely the same beneath the new overpasses as beneath the old: eleven feet.

Most buses were about twelve feet high. They could not use the curb lane or, because the design of many overpasses kept the rise in clearance

toward the center of the road very gradual, the lane next to it. They could in theory use the center lane, the "fast" lane in each direction, but not in practice: no practical bus-fleet operator would dare take the risk of hours of delay that would be involved in routing his buses down a road in which only one lane was available for their use. If an accident or an overheated car or repaving—or any of the hundred other causes that blocked lanes—blocked that one lane, any buses on the road would be trapped at the next overpass until it was opened again. In practice, no practical bus operator would run his buses on any road on which the clearance at the curb wasn't at least fourteen feet. "I sat there looking at that goddamned drawing—I'll never forget it," Koppelman says. "And I realized that the old son of a gun had made sure that buses would never be able to use his goddamned parkways."

"The building of the bridges is an example of his foresight and vision," Sid Shapiro says in his quiet way. "I've often been astonished myself that he was so right in those days, and not only so right but so indispensably right. Mr. Moses had an instinctive feeling that someday politicians would try to put buses on the parkways, and that would break down the whole parkway concept—and he used to say to us fellows, 'Let's design the bridges so the clearance is all right for passenger cars but not for anything else.' All the original bridges were designed with nine feet of clearance at the curb. Later we went up to eleven feet, but that has the same effect. Well, yes, buses could use the center lane, but that's an impractical thing. No bus would do that. Mr. Moses did this because he knew that something might happen after he was dead and gone. He wrote legislation [clauses prohibiting the use of parkways by "buses or other commercial vehicles"] but he knew you could change the legislation. You can't change a bridge after it's up. And the result of this is that a bus from New York couldn't use the parkways if we wanted it to." A quiet smile broke across Shapiro's seamed face, and he almost laughed as a pleasant recollection crossed his mind. "You know," he said, "we've had cases where buses mistakenly got on a parkway—we had this on the Grand Central Parkway several times, I remember—buses from a foreign state, I suppose, and the first bridge stopped them dead. One had its roof rolled up like the top of a sardine can."

"Foresight and vision." Apt, if the vision was one man's private vision. Building parkway bridges low was indeed an example of Moses' foresight in trying to keep intact his original concept, the bright and shining dream he had dreamed in 1924—of roads that would be not just roads but works of art, that would be "ribbon parks" for "pleasure driving." Building the parkway bridges low was indeed an example of Moses' foresight in trying to keep intact his original concept of the area through which those roads ran—lovely Long Island—as a serene and sparsely populated suburban setting, a home for the relatively small number of people wealthy enough to live there, a playground for the larger but still restricted number of people wealthy enough to drive there and play in the parks he had built there.

The vision was no longer relevant. It no longer bore any relation to reality. Reality was no longer a Long Island that was a sparsely populated playground, but the residence of millions of people. Moses' parkways now had to perform a function, getting tens of thousands of commuters to and from work. The Southern State Parkway-4,000,000 cars in 1940, 20,000,-000 in 1950, 26,000,000 in 1955, 30,000,000 in 1957—was the most heavily traveled highway in the entire world—and probably the most congested: engineers clocking traffic in 1967 found that on the first five-mile stretch of road, from the toll booths in Valley Stream out to Lynbrook, the "speed range" at which traffic moved during a rush hour never, for more than the briefest of periods, got above sixteen miles per hour—and often was as low as three miles per hour, about as fast as the people driving could have walked. The parkways had a different function now from that of the great open road on which Moses had envisioned cars breezing along. But Moses still had absolute control over parkways. And whether or not that vision had any relation to reality, he used that control to insure that it would endure far beyond his own lifetime, long "after he was dead and gone." Thanks to his foresight, it was—as late as 1974, decades after the reality had changed—his vision and not reality that governed the shaping of the parkways, and that therefore prevailed over that portion of the lives of its users that they spent on it.

For how long would it continue to do so?

Well, Sid Shapiro had been overstating the case, of course, when he said, "You can't change a bridge after it's up" and that therefore buses would never be able to use the Long Island parkways. A bridge can be rebuilt. When, in 1969, a five-mile stretch of the Northern State Parkway was rebuilt, in fact, it was rebuilt with bridges with a fourteen-foot clearance because doing so would make the job eligible for federal funds, and, as Shapiro put it, "on that section, you have the Long Island Expressway right next to it, and buses wouldn't want to use a parkway where they have an expressway, so it doesn't really matter."

But that was one stretch of parkway out of 200 miles of parkway on Long Island. And on the rest of those 200 miles, it would not be true that "it doesn't really matter"—and Shapiro said, sitting there complacently on the terrace in the bright sun, there were no plans in existence to rebuild bridges along the rest of those 200 miles, and he felt that probably they would never be rebuilt. Asked what would happen if bus operators did decide that they wanted to use the Northern State instead of the expressway, he said, "Well, they can use it for a five-mile section. But then they'll have to get off."

Never? Shapiro was probably overstating the case. Sometime in the future, surely, the Long Island State Park Commission would be in the hands of men with a different philosophy from that of Robert Moses and Sid Shapiro, and they would want the bridges rebuilt. Maybe not in the near future, for Shapiro's successors as the commission's top administrators were

already hand-picked and groomed, but sometime in the future. Well, Sid Shapiro said, you see, those bridges cost about \$750,000 per bridge. "And," Sid Shapiro said slowly, in his quiet, sly voice, "there are 204 bridges on those parkways, you know." Robert Moses had condemned to monstrous traffic jams not merely the present generation of users of his parkways but generations to come.

He had condemned all Long Islanders—for generations to come.

In the 1970's, after the fall of Robert Moses, public officials would be talking about modernizing the existing mass transportation facilities on Long Island and building new ones. Handsome four-color brochures—designed to win voter approval for the bond issues in the billions that would be required to finance these improvements—assured voters that the expense would, if not end, at least substantially alleviate traffic congestion on Long Island.

But building them wasn't going to be that easy.

Moses had been asked to reserve space on the Van Wyck Expressway. Reserving it would, at the time, have cost only \$1,750,000. And if Moses had spent that money, it would now, in the 1970's, be possible to construct all the high-speed rail links involved for less than \$10,000,000.

In 1968, with congestion on the Van Wyck and at Idlewild (now John F. Kennedy) Airport even more intolerable than F. Dodd McHugh had predicted, no sooner was Moses out of power than the decision was taken to build a rapid transit line to the airport. But because Moses had not reserved space, that line would now cost—not in official estimates but in truth—\$300,000,000. And even for that amount, it would not be possible to obtain many of the advantages McHugh had envisioned. The cost could be kept down to \$300,000,000 only by eliminating from the plans the subway linkup between downtown Brooklyn and central and northern Queens, as well as all local service that would have increased the rapid transit capacity of the Queens-to-Manhattan line; the astronomical cost of local stations made it impossible even to contemplate including them. Moses' refusal to listen to McHugh had probably deprived New York of those advantages forever.

The cost of the airport link even in its stripped-down version was so high that no man could say with any certainty when it would be built. The official charged with building it announced in 1968 that construction would be completed by 1971. In 1969, he announced that construction would be completed by 1972. In 1970, he admitted that, as the *Times* put it, "his agency had no funds available" to build it. "When asked when the line would be completed, he said that he hoped it would be built in 1973, but that it would be safer to say 1974." It would have been safer—and more accurate—to say that he didn't have any idea when it would be built, for that was in fact the case. The money to begin construction was still not in hand.

It was possible to predict with some certainty that the airport rapid transit line would, eventually, be built—if for no other reason than that the cost

was within the ability of the Port Authority to pay, and the Port Authority, losing money because of traffic congestion (travelers' eagerness to avoid the airport was considered the primary reason for a year-by-year decline in patronage beginning in 1969), could be expected to come up with the money if no one else would. It was not possible to make such a prediction about the other desperately needed Long Island mass transportation improvements, projects that could have been built with such relative ease years before, if, at that time, Moses had consented to reserve space for them or to allow Triborough Authority funds to be spent on them.

The increase in the cost of the land needed for parking areas and terminals of new dimensions had added tens of millions of dollars to the cost of modernizing the Long Island Rail Road. The further improvements made necessary in the intervening years if the railroad was to attract new passengers from the mass of automobile users on Long Island had added tens of millions of dollars more. And inflation had caused these additional costs to multiply. In 1954, when, before the imposition of the Joint Program, Triborough funds for the modernization had been available, the modernization would have cost \$200,000,000. In 1970, after Moses' fall, the cost was \$1,500,000,000. While public officials talked vaguely about that sum being raised by a combination of bond issues and contributions from new mass transit allocations that would hopefully be made someday by the federal government, in fact money that would allow expenditures of that dimension on a single rail line was nowhere in sight on Capitol Hill-and even while local officials were trying to find it, inflation and further land development were causing that cost to rise by more than \$50,000,000 per year. Home construction on the land around the LIRR lines meant that certain of the changes indispensable for a true modernization program—straightening and elevating the tracks to permit high-speed train operation—were, politically, immensely difficult. No man could predict with any real certainty that improvements of significant scope—not the patchwork supplying of new cars and improvement of repair and maintenance facilities that was going on in the early 1970's, but the transformation of the LIRR into a truly modern eighty-mile-per-hour carrier-would be carried out during his lifetime. No man could predict that they could be carried out within his children's lifetime.

As for building a *new* rapid transit line on Long Island, no man could predict with any certainty that it would *ever* be built. Most planners who had studied the prospects felt, as Lee Koppelman felt, "they'll never do it."

And even if the mass transit lines were built, they weren't going to help the transportation situation on Long Island nearly as much as the public officials believed—or, to be more precise, nearly as much as they told the public they believed.

Four-color brochures may have been assuring voters that if the mass transit improvements they had planned were built, they would, if not end, at least substantially alleviate traffic congestion on Long Island.

But stark, unadorned black-and-white charts, graphs and computer print-outs stacked on tables or taped to the otherwise bare walls in a small cinder-block room, hardly more than a cubicle, in a red-brick building set back off the Veterans Memorial Highway in Hauppauge, Suffolk County, Long Island, told a very different story.

The building contained the executive offices of the Nassau-Suffolk Regional Planning Board, and the little room, down a hall from Koppelman's, was the office of John F. (Jack) Sheridan, Koppelman's transportation analyst. And the charts, graphs and print-outs, thick stacks of numbers and lines, represented the first analysis of transportation on Long Island—how the 2,500,000 residents of Nassau and Suffolk counties got to work, to the supermarket, to school, to wherever they went when they left their homes; when they went there; how frequently they went there; why they went there by the transportation means they used instead of by some other means—ever done in meaningful depth.

One of the charts, a map really, showed traffic levels on the nine major east-west routes in Nassau and Suffolk counties: from top to bottom (north to south) Route 25-A, the Long Island Expressway, Northern State Parkway, Hillside Avenue, Jericho Turnpike, Hempstead Turnpike, Southern State Parkway, Merrick Road and Sunrise Highway. Various levels were made graphic by different colors—purple for congestion. On the right-hand side of the map—the side showing eastern and central Suffolk County—the map was a blaze of different colors, but in the center of the map, western Suffolk and eastern Nassau, one—purple—was beginning to dominate. And in the left-hand section of the map—central and western Nassau County—there were eight purple lines. Only Jericho Turnpike was operating with any leeway at all. The other eight roads had no capacity at all left for additional traffic.

Another chart showed—by means of curves representing the relationship between time and distance traveled during that time—the delays on those east-west roads at those levels of traffic. The curves rose terribly steeply on Long Island's pre-Moses roads—25-A, Hillside, Jericho, Hempstead Turnpike, Merrick Road, Sunrise Highway—on which traffic is slowed by traffic lights and intersecting streets. But they rose almost as steeply on Moses' roads, the roads built—at a colossal public investment—to free the public from traffic lights and intersecting streets. Moses' "modern" rebuilt Southern State Parkway, for example, paralleled the "obsolete" Merrick Road and Sunrise Highway. The curves showing time and distance covered in that time for each of those roads ran almost parallel, rising and falling together. "Until you get out to Wantagh," Jack Sheridan says, "there's no advantage to the Southern State Parkway over the Sunrise Highway [or Merrick Road]. Which is a pretty horrible thought."

But those charts, graphic displays of the present, were not the most disturbing things in that cinder-block room. That distinction is reserved for computer print-outs giving projections of the future. Their figures were not transposed onto the charts and graphs. For in order to contain them, the charts and graphs would have to be too big. Some 560,000 cars a day went "through the Long Island corridor"—crossed the city line from Nassau into Queens—in 1968. By 1985, 1,400,000 cars a day will be trying to go through that corridor. The roads available to handle them were jammed to

capacity and far beyond capacity. And the load they will be asked to handle will, just seventeen years later, be twice as big.

There were print-outs more disturbing still. Some, for example, dealt with "modal split": planners' jargon for the percentage of travelers which can be persuaded to change, or split off from, their present mode of travel to another—in Long Island's case, from highways to mass transit. The print-outs show that, on Long Island, optimistic predictions to the contrary, there is little possibility of any significant modal split at all.

If travel on the Long Island Rail Road was revolutionized—if the rail-road was given modern rolling stock; if travel time was cut in half; if new, more convenient stations were strategically located throughout Manhattan—if all these improvements were accomplished, a highly unlikely feat because it would cost two and a half billion dollars—the modal split induced would be no more than 10 percent. Sixty-five percent of commuters from Nassau and Suffolk counties used the LIRR in 1968; spend two and a half billion dollars and you could increase that percentage only to 75 percent.

The numbers are more depressing than the percentages. Some 85,890 Long Island-Manhattan commuters used the LIRR in 1960; revolutionizing the railroad would increase that number to 156,700 by 1985, an increase of 70,810 riders. The Island's population was going to increase by 1,548,000 between 1960 and 1985. The number of commuters to Manhattan was going to increase not by 70,810 per day but by 81,000 per day. The LIRR's additional riders would not be riders diverted from the highways. The expenditure of two and a half billion dollars would reduce the load of commuters the highways would have to carry not at all. The load would be increased—by more than 10,000 per day. Even after that expenditure, those nine eastwest roads, already jammed so far beyond capacity, would be asked to carry daily almost 10,000 more cars.

And far more than 10,000 more cars. For the above figures were only for Manhattan-bound commuters. Hundreds of thousands of other Nassau and Suffolk residents were going to be commuting to jobs on Long Island by 1985, hundreds of thousands more than in 1960. The daily average of all "work trips by all travel modes" by residents of Long Island in 1960—work trips to Manhattan or anyplace else—was 680,020. By 1985, it would be 1,225,500. And the modal split induced among the non-Manhattan trips by the modernization of the Long Island Rail Road would be infinitesimal. The number of daily work trips to non-Manhattan locations would be rising by 549,780. The number of those trips by rail would be increasing by 1,420. Long Island's east-west roads, already jammed so far beyond capacity, would —even if two and a half billion dollars were spent revolutionizing the Long Island Rail Road—be asked by 1985 to carry every day not only 10,000 more cars bound for Manhattan but tens of thousands of additional cars bound for jobs in Brooklyn, Queens, the Bronx, and within Nassau and Suffolk counties. Spending even the immense sum of two and a half billion dollars on mass transportation on Long Island would not help the highway problem on Long Island to any significant degree.

No mass transportation improvement could help that problem to any

significant degree. In 1963, for example, Nassau County undertook an indepth study of the possibilities of fast and frequent bus service. The expense would be immense, the county found. And the over-all modal split accomplished in journeys to work—the proportion of transportation to and from jobs now accomplished by car that could be turned into bus trips—would be no more than 5 percent and perhaps as low as 2 percent. Nassau County could beggar itself to provide mass transportation—and still manage to lure off the roads perhaps no more than one car out of every fifty.

And all the trips above represent only work trips. How about nonwork trips—all the other journeys (to supermarket, to bowling alley, to tennis or swimming or golf or bridge club, to school, to friends', to movies, to restaurants, to dinner, to doctor, to dentist) that when added together come to a total that dwarfs even the immense total of work trips and that are, on Long Island, to an overwhelming extent trips made by car? In Sheridan's office are maps covered by incredible masses of lines representing the total of such trips on highways and streets on Long Island, and computer print-outs totaling such trips for towns and villages and unincorporated areas. The complexity of such figures is immense, but the bottom line is clear: the modal split that would be effected by improvements in mass transportation on Long Island is infinitesimal. Highways and local streets in Nassau and Suffolk were handling a heavy load of traffic in 1960. By 1985, the load those highways and streets would have to handle would be more than twice as heavy. And no improvements that could be made in mass transportation at any expense that could conceivably be borne by state, city, counties or public authorities could lighten that load much. "You see," Jack Sheridan says, "if we had had subway lines, or rapid transit lines, we would have had high density along those lines. But since there was no mass transit, the development took place according to the way the automobile dictated it. And that meant low density, very low density. To have feasible mass transit routes, you have to have sufficient density. And we don't. And, except perhaps in central Nassau, we're not going to for any foreseeable future. Because of the highway, because of the pattern of high highway use developed by the lack of mass transit before, we're faced with this problem now, and right now we just can't get around it." And it is a problem to which a solutionif there is a solution—lies only in a future distant enough so that sufficiently large areas of Long Island will have density high enough so that putting mass transit lines through them will make a difference in the Island's transportation picture. That day, in 1974, seems decades—generations—away.

## VII

THE

LOSS OF

POWER

## 41. Rumors and the Report of Rumors

HIGHWAYS WERE, of course, only one field of Robert Moses' activity. There was also housing—most notably the vast amount of housing he was building as director of the Mayor's Slum Clearance Committee. And a few isolated but perceptive observers were beginning to notice clues to something very disturbing about slum clearance.

For Hortense Gabel, it was rumors.

Mrs. Gabel, a small, painfully nearsighted lawyer, was a reformer with a healthy helping of the reformer's penchant for idealism and the worship of such liberal heroes as Franklin D. Roosevelt ("My father's chief rival") and Stephen S. Wise, the crusading rabbi who had founded the American Jewish Congress, for which, at the age of thirty-fc\_ir, she was working as a volunteer. Her involvement with housing had begun—in 1948—at a dinner party at the home of the rabbi's daughter at which, to Mrs. Gabel's surprise, the rabbi was the only person present besides the daughter's husband and her own.

"I had thought it was a purely social evening," she recalls, "but they told me that there was about to be organized a 'New York State Committee on Discrimination in Housing'—we didn't even have the courage to say 'against'; it wasn't until later that this got changed—which was an outgrowth of the fight on Stuyvesant Town. They told me that the American Jewish Congress was contributing space and had been persuaded to do some funding. And I said, 'Oh, you mean against discrimination in *public* housing.' And—I'll never forget it—he smiled, and he said, 'No, Hortense. Housing.' And I sat there in a kind of stunned silence. It was such a breathtaking thing that you could dream that someday Negroes might have the chance to live wherever they wanted to. It was like getting drunk—that there was a world leader like Rabbi Wise who could even dream of thinking that we would have a ghetto-less country."

But "Horty" Gabel was a reformer with a difference: she *listened* to the people she was supposed to be helping (later, a city housing official, she would be described as the only one "who really has a close relationship with the Negro community"). And during 1951 and 1952, when Robert Moses and the press were cheering Moses' gigantic new Title I slum clearance or

"urban renewal" program, the director of the Committee Against Discrimination in Housing, leaving her office—a tiny ten-foot-by-fourteen-foot cubby-hole on the top floor of an ancient loft building—attended meetings of Negro and Puerto Rican organizations in the evenings, and her ears picked up the first whispered rumors about what was going on on the Title I sites—rumors so terrible that she went up to visit the sites for herself, on a trip that would lead her to say years later:

"I've visited a lot of bad slums, but I never saw any worse than the Title I slums when the developers started milking them. I remember I went into a building on the Godfrey Nurse site,\* and, as any woman instinctively does, when I went into a bathroom, I glanced into a mirror to see if my hair was straight. And when I looked at the mirror, or where the mirror ought to be, I found myself looking straight into the next apartment."

For Lawrence Orton, it was statistics.

During his decades on the City Planning Commission, Orton had learned to cast a wary eye on Moses'. And he had a sense that there was something wrong—very wrong—with the statistics that the Coordinator was issuing (and that the press was reprinting without the slightest attempt at verification) to demonstrate that every consideration was being shown to families being relocated from Title I sites, that he was not only obeying but going beyond the federal requirement that these families be relocated in "decent, safe, and sanitary dwellings." "In order to set at rest any fears," Moses had announced in his brochure on the Manhattantown† project that would require the razing of six square blocks of tenements and old apartment houses on the Upper West Side, "families are assured that relocation help will be readily available and there is a frank desire to be of maximum assistance in carrying out the individual wishes of each family." If they wanted to move into the new, modern apartments being erected on the site, they would be given "preferential status" in applying, he promised. If they preferred to find their own new apartments, they would be assisted by "personal counseling" from a trained relocation firm, which, he said, was compiling a citywide listing of vacancies, and by "financial assistance" from the developers—at the minimum, "moving expenses plus the first month's rent in new quarters." And families still unable to find new apartments did not have to worry; they-all relocated Title I site families, in fact—could always move into low-income public housing projects, which would represent an improvement in their living quarters anyway; their applications would be given "first priority." Each of Moses' statements was backed up by columns of statistics in the stylish brochures issued in a steady stream by the Mayor's Slum Clearance Committee which the Coordinator headed. For example, the statistics on family income, family size and a

<sup>\*</sup> From 132nd to 135th streets, between Fifth and Lenox avenues. The name of the project was later changed to "Harlem."

<sup>†</sup> Later renamed "West Park."

half dozen other indices proved, he said, that more than a quarter of the families presently living on the site-998 out of 3,628-would be able to afford to live in the proposed Manhattantown development at anticipated rentals. Orton's years of dealing with housing problems told him that that statistic was false. No tenement tenants he had ever met could afford Moses' anticipated Title I rentals. Orton could not prove that statistic false without a detailed analysis of the financial situation of the Manhattantown site tenants. But what bothered him even more were the statistics on public housing. Orton knew all too well that existing public housing was already fully occupied. Familiar with city building plans, he had been under the general impression that there was little new low-income housing scheduled for imminent construction, and checking, he found that his impression was all too correct: the total number of public housing units scheduled for construction during the next year or two was a mere fraction of the number of tenants Moses was telling the world that he was going to move into those units. Analyzing Moses' soothing statistics, Orton was able to see-all too well-how the Coordinator had arrived at them. "With every project—Title I or some expressway or whatever—he would say, 'Don't worry about the people living there. If they don't want to go anywhere else, we've always got room for them in public housing.' But what he was doing was using the same public housing vacancies for many projects. The same vacancies that were alleged to be available for one project had already been allocated for a previous project—or perhaps ten previous projects." Orton began to wonder exactly what Moses was planning. Tens of thousands of persons were now living on urban renewal sites. Where was the Coordinator planning to put them?

For Walter Fried, it was garbage cans.

Strolling the brownstone-lined side streets of his neighborhood—the neat, solid, stolid, middle-class West Side around Ninety-fourth Street and West End Avenue, where he lived—during the winter of 1952 and the spring of 1953, the regional counsel of the Federal Housing and Home Finance Agency had had a sense that it was changing somehow. "Some of the buildings began to seem a little seedy, a little run-down," he recalls. But it was a vague sense. "There wasn't anything really dramatic that you could put your finger on. You had a feeling that the whole neighborhood was beginning to show signs of disrepair, but there was nothing specific."

And then one day, Fried suddenly realized that, without taking note of it, he had, for some time, been seeing something quite specific indeed: in front of some of the brownstones "there were more garbage cans than there should have been." And Fried's housing expertise told him the significance of that fact.

"You'd walk past a four-story brownstone," Fried says. "Those brownstones had always been inhabited by—at most—four families. But in front of that brownstone now there might be four large garbage cans. The garbage for four families is not anywhere near four large cans, not when the garbage was being picked up every day, as it was at the time. So you knew that there were many more people living there now than there had been before. And you knew what that meant: the landlords were breaking up the apartments inside into smaller apartments, so the same space that had been occupied by a family of five might now be occupied by twelve people. When you saw that many garbage cans you knew that this building was being run now as a tenement for very poor families, or even as a rooming house."

When the heat of the New York summer arrived, expertise was no longer required to tell what was happening. The evidence of change was out in the open: leaning on the windowsills of the brownstones-turned-tenements, sitting on their stoops, crowding the benches on the islands in the middle of Broadway, people, poor people, Negro and Puerto Rican people, people in such numbers that the Broadway benches, long crowded anyway with Jewish grandmothers and grandfathers, were now crowded as never before. It wasn't just the fact that these people didn't have white skin that disturbed the older residents of the West Side; it was that they obviously didn't have money either; it was that so many were obviously drunk or on drugs. And it was that there were so many of them. With the first hot day of 1953, the West Side was-all at once-not just a racially mixed neighborhood, but a much poorer neighborhood, and a much more crowded one. And, month by month, its deterioration accelerated. "Ninety-fourth and Ninety-fifth streets between West End and [Riverside] Drive-nice, quiet blocks before-became a shambles," Fried recalls. "It had been happening for months, probably, but in the heat it was intolerable to stay inside those places, so now it began to spill out into the streets. You began to notice the hopheads, the alcoholics. Every night, the city ambulance was out. The cops would come screaming down the streets . . ."

Trying to think back and determine what major change on the West Side had caused so drastic a crumbling of a neighborhood that for decades had stood so solid, Fried could think of only one: the \$54,000,000 Manhattantown urban renewal project between Central Park West and Amsterdam Avenue and between Ninety-seventh and 100th streets. And recalling dates, he realized that the deterioration of his neighborhood, some blocks away from Manhattantown though it was, had begun not long after Moses had turned over the six-square-block site to the developers. Fried began to direct his walks toward the site, and with every block that he drew nearer, conditions worsened. Blight was obviously spreading out from Manhattantown. In little more than a year, the streets immediately adjacent to the developmentalways poor and predominantly Negro but, previously, with well-maintained buildings—had become a slum, a teeming, seething hive of humanity—a place of squalid, run-down, dilapidated tenements so overcrowded that children had to sleep in shifts, of doorways filled with drunks and narcotics addicts and gutters filled with garbage. Obviously, Fried saw, the area had been inundated with a flood of new residents. And there was no place these residents could have come from so suddenly and in such numbers but Manhattantown. A project designed—at immense cost—to clear up a localized, six-block-square slum infection was instead causing that infection to spread over many more than six other blocks.

Trying to figure out why, Fried began to have suspicions disturbing to this long-time admirer of Robert Moses. Federal law required families on urban renewal sites to be relocated in a considerate, humane manner. Every block of the area through which Fried was walking brimmed over with indications that the families on the Manhattantown site were simply fleeing from their homes into the nearest available shelter, no matter how inadequate. What was Moses doing on that site anyway?

Fried's job required frequent tours of the city. Now, his eyes sharpened by the West Side experience, he began to realize that he had been seeing, in different settings, similar symptoms. Traveling through the Rockaway Peninsula one cold winter day, he had happened to pass the sprawling colonies of summer bungalows in Arverne. He had passed those bungalows before in winter, and they had always been vacant, for the flimsy little structures, each barely big enough to accommodate a single family, provided little protection from the cold and damp. This time, to his shock, he had found all the bungalows filled—there were several shivering Negro and Puerto Rican families in each. He had heard disturbing rumors about tenants from other Title I sites being dumped by the hundreds into vacant tenements in a section of Brooklyn called "Brownsville." What was Moses doing on all his Title I sites?

By 1953, many New York liberals concerned with housing were asking that question, and some—such as Hortense Gabel and Stanley Isaacs began going to the sites to see the answer for themselves. They returned horrified. "Stanley came back sick, just sick," an associate recalls. "He said, 'They're hounding those people out like cattle.'" These liberals began to understand that something terrible was going on on some of the Title I sites, not the sites turned over by Moses to organizations such as the Rockefeller-backed Morningside Corporation\* or the ILGWU, but the sites he had turned over to corporations hastily set up by Democratic clubhouse politicians allegedly fronting for bigger politicians—something whose shape they were only beginning to dimly glimpse through the curtain of Moses' assurances, but something whose shape was huge and frightening in its implications not only for New York's poor but for the city as a whole. If Moses simply hounded the people living on those sites out of their homes without finding them new homes, these liberals realized, they would have no choice but to flee to other slums, to further crowd tenements already horribly overcrowded, to live in their cellars, their basements, in apartments without kitchens or bathrooms, in tiny rooms carved out of rooms that had been tiny before they had been made tinier to receive them. That would make conditions in the city's existing slums—conditions already bestial, inhuman

<sup>\*</sup> The Morningside Corporation had enlisted Orton's help to create a humane and compassionate relocation program.

—even worse. And the residents of Title I sites numbered not in the thousands but in the tens of thousands. Crowd as they would into slums, there would not be enough room in the slums for them. So they would move into areas adjacent to the slums, into areas in which landlords, without incentive to keep up their property anyway because of the slums' proximity, would see an opportunity for financial profit and take it by breaking up large apartments into small and by cutting down on maintenance and repairs. The slums would spill over their boundaries, spreading into blocks as yet untouched by blight. Moreover, some slum dwellers hounded from their homes would flee into "soft" areas of the city such as Brownsville, neighborhoods in which there were a large number of vacancies. These vacancies would now be filled in a rush by the dispossessed of the ghetto. The policy Moses might be pursuing would create new slums. The city must be alerted to what was happening, these liberals felt; the public must be educated to the facts about what was really happening; the people must be aroused.

But the public was not educated or aroused, because the only medium through which it could be educated or aroused—its press—was not interested. The liberals wanted the press to get the facts behind Title I, but the press made no move to get them.

It was the *Times* that counted, and Isaacs and other reformers with entree to its editors repeated the attempts made by reformers like Mc-Aneny and Windels in other generations: they attempted to persuade the *Times* to send out reporters to ascertain if the statements Moses was making—and that the *Times* was printing as if they were fact—were actually factual. And the results were the same that McAneny and Windels had achieved: a single entry in a log on Title I developments kept by a reformer with entree, Elinor G. Black, tells the story:

Called N.Y. Times. Illson [reporter Murray Illson] called back Sat. Said it would be better if we made a "statement." Times not a "crusading paper. . . ."

The *Tribune* or the *Daily News* would have helped. But when reformers talked to *Tribune* editors, they found that the paper's refusal to attack Moses, while, as Orton says, "not anything like the open secret it was at the *Times*," was just as firm. As for the *News*, it was to fulfill its responsibility to the public by exposing "Communists" in the Housing Authority; says Orton, "If you came in with any information that might be derogatory to Moses, the *News* wouldn't give you the time of day." Among the city's other dailies, only Dorothy Schiff's *Post* told readers there might be another side to the Title I story besides Moses'.

All right, these liberals said. If the press refused to go out and get the facts for itself, they would get the facts for it.

They were able to do so, in large part, because Orton had "gone underground" with the City Planning Commission's "Master Plan unit" when Moses had eased Bennett in as the commission's chairman two years before. The unit's offices on the fifteenth floor of a Park Row office building

were only just across City Hall Park from commission headquarters in the Municipal Building, but the distance was, apparently, sufficient for security; "Bennett never once set foot in the place," Orton says, smiling. More important, the chairman hardly ever inquired as to what the unit was doing, and never pressed Orton to expand on his uncharacteristically evasive answers. As a result, Orton says, "my boys just vanished so far as the rest of the city government was concerned. This was a subversive activity—a real, authentic, fifteenth-story job. No one gave us anything to do. So we could do whatever we wanted." And now they began doing what no one had ever done during the twenty years during which Robert Moses had been building public works in New York City: finding out how many people were being evicted from their homes to make way for them, what was happening to those people—and what was happening to the city as a result.

The difficulties were immense. Moses' relocation statistics had always been accepted. No city agency or newspaper had ever computed them even roughly for itself. There were probably over-all statistics in existence, of course, and brought together in one place—but the place was Randall's Island, and Randall's ruler kept the long rows of filing cabinets there locked. Many of the statistics were kept in the City Bureau of Real Estate, but the Bureau was under Moses' thumb; it was after attempts to obtain its statistics—supposedly public records—that Orton, ordinarily so punctilious in speech, said with real passion one evening: "The Real Estate Bureau was a stench in my nostrils." What statistics were available—often in obscure files, in other city agencies, of whose existence the unit would never have known were it not for Orton's encyclopedic knowledge of every corner of city government—were patently too low; Moses kept them low by refusing to count the actual number of people being evicted (instead he multiplied each "dwelling unit" by an "average" family size so small as to bear no discernible relation to reality), and by simply ignoring the existence of "doubledup" families and boarders (of whom there are always a significant number in low-income areas) as well as of people living in rooming houses or hotels. (There is considerable evidence to suggest that the counts thus arrived at even after these omissions were arbitrarily reduced still further when Moses felt they sounded too high.)

Orton's unit could not repair these deficiencies. With the buildings in which these uncounted tenants had lived demolished and the tenants moved away, there was no longer any way of obtaining a record of their existence. Yet the unit did come up with a rough compilation: during the seven years since the end of World War II, there had been evicted from their homes in New York City for public works—mainly Robert Moses' public works—some 170,000 persons.

This total was almost certainly far too low. Orton, leaning over backwards as always to be fair and to make sure that the figures would "stand up" no matter what devices Moses employed to discredit them, leaned too far. He permitted his unit to make some adjustment in "official" figures, but not nearly enough to make them accurate. And he permitted his boys to include as "public works" only projects public *in toto*. He did not permit

them to include projects such as Stuyvesant Town, Peter Cooper Village, Riverton and Concord Village although he should have, for though the money that built them was supposedly private money, the tax abatement that Moses arranged for them would, when totaled over the years, insure that the public investment in them would dwarf the private, and the powers that Moses utilized to make possible not only their construction but the assemblage of their sites—eminent domain, street closings, utility easements—were all public. (The number of persons relocated for Stuyvesant Town alone was, by Moses' own figures, 12,000.) But the 170,000 figure was eye-opening enough. Robert Moses had, in just slightly more than seven years, moved from their homes more people than lived in Albany, Phoenix, Little Rock, Sacramento, Tallahassee, Topeka, Baton Rouge, Trenton, Santa Fe, etc. In terms even of huge New York, the unit was to report, this was "an enforced population displacement completely unlike any previous population movement in the City's history."

If the number of persons evicted for public works was eye-opening, so were certain of their characteristics.

Their color, for example. A remarkably high percentage of them were Negro or Puerto Rican. Remarkably few of them were white. Although the 1950 census had found that only 12 percent of the city's population was nonwhite, at least 37 percent of the evictees (Moses' own figures) and probably far more were nonwhite.

And their income. The income of evictees not only for slum clearance projects but for all Moses' public works including expressways was far below the citywide average. In 1951, the Federal Bureau of Labor Statistics found that \$4,083 was needed for a family of four to maintain a minimum standard of living for a year. Only one out of every four of the evicted families earned \$4,083 per year; 20 percent earned less than \$2,000 per year.

Liberals had long suspected that most of the people evicted by Moses were poor people, and particularly poor Negroes and Puerto Ricans, hampered in apartment hunting not only by poverty but by discrimination. The "Orton Survey" confirmed these suspicions. Moses was throwing out of their homes precisely those people who were least able to find new homes.

And the manner in which he was throwing them out was worth noting, too.

Because it was so difficult for these people to find decent homes on their own, the government of their city—the government which had authorized their eviction from their old homes—had solemnly promised them help. Its highest legislative body had pledged that "tenants will not be evicted from the site of a public improvement unless and until quarters equivalent to those occupied are available." Moses, ostensibly the instrument of that government, had, for seven years, created the impression that he was honoring that pledge; he had stated that a "minimum of inconvenience" was involved in relocation. Orton's staffers found that a substantial number of families had been moved "two or more times" to other buildings "within the site"—had been shuttled from one building about to be demolished to

another, and then to another, and perhaps yet another. For seven years, Moses had been giving the impression that the bulk of the low-income families displaced by his public works had been accommodated in public housing projects. In reality, the unit found, the percentage of displaced families that had been admitted to public housing was pathetically small. Moses had been giving the impression that he had taken great pains to insure every evictee "decent, safe, and sanitary" living quarters. When the Planning Commission staffers obtained access to files on tenants for whom relocation responsibility had been "discharged," they found that more than a third of the files—for some projects, more than half—were marked: "Disappeared—whereabouts unknown." Disappeared! Moses couldn't know that the living quarters into which his projects had forced tens of thousands of persons were "decent, safe, and sanitary." He couldn't know what the new living quarters were like. He didn't even know where those living quarters were.

Orton's handful of staffers, without sufficient time to trace the individual families involved in relocation, were unable to locate those missing families. But it was all too obvious that they had moved either to other sections of the ghettos, doubling up with other families, causing further overcrowding in those already intolerably overcrowded slums, or to adjoining areas, creating slums out of once decent neighborhoods. Robert Moses' slum clearance program might be creating new slums as fast as it was clearing the old.

If this picture of the past was disturbing, it paled before the picture of the future. Orton's staffers had assembled—for the first time—"statistics on the volume of tenant displacement we may expect in the foreseeable future." During the previous seven years, 170,000 persons had been evicted: a rate of about 24,000 per year. But Moses' slum clearance program was only now moving into high gear. During the next three years, 150,000 persons were scheduled for eviction: 50,000 per year. These people were mostly low-income Negroes and Puerto Ricans. If future relocation was carried out as past relocation had been carried out, it would increase overcrowding in existing slums, and create new ones faster than before. The city's relocation practices should be changed—taken out of the hands of the Moses-dominated Slum Clearance Committee and Housing and Triborough authorities—in the name of common humanity, Orton's report said. And these practices should be changed in the name of the city's own interest. If they were not, the vast urban renewal programs, the unprecedented expenditure of public funds, which the city was undertaking to improve its future, would wreck that future instead. Orton's statistics proved that without a doubt.

The Women's City Club went beyond statistics.

Even Moses could hardly call these civics in skirts "radicals." Charter members could recall that during the national debate on women's suffrage, opinion within the club had by no means been unanimous. In 1953, the club's "liberalism" was still the narrow-gauged, less militant liberalism of the 1930's. But its membership rolls included women who had been campaigning for better housing for decades, and they were worried because, under Moses' procedure, relocation was being handled not by the city but by a

private real estate firm. The club decided to do what no newspaper, government agency or other civic group had done before: study relocation on a Title I site (they selected Manhattantown) in detail—on the site.

No whispers prepared the club's young women for what they found. As one observer was later to describe it:

Manhattantown looked like a cross section of bombed-out Berlin right after World War II. Some of the tenements were still standing, broken windows gaping sightlessly at the sky, basement doors yawning uncovered on the sidewalks; and surrounding them were acres strewn with brick and mortar and rubble where wreckers and bulldozers had been at work.

And in the buildings—the ruins of buildings, the shells of buildings—people still lived. Visiting those people—entering those shells of buildings, shrinking perhaps past the huddled wreckage of a man that lay in the doorway, stepping into a dim hallway filled with the stench of urine and vomit and, in its shadows, a vague menace, stumbling up unlit flights of stairs that had steps missing, grasping for a banister that wasn't there—was an unnerving experience for these women. Mrs. Elinor Black recalls a man on the street shouting earnestly as she opened the door to one tenement: "Don't go in there, lady! It's not safe to go in there!"

But it was an educational experience. For the people living in the ruins of Manhattantown taught the good ladies of the Women's City Club something about slums that they hadn't learned in their textbooks. In the textbooks, "slums" were synonymous with "dirt" and "blight." But, recalls Mrs. Black, "the thing that hit me was that most of the apartments you went into were well kept, clean." Time after time, City Club volunteers would walk off the filthy street, up the filthy stairs, down a filthy hall, and knock on the door of an apartment—and when the door to that apartment was opened, behind the frightened face peering out ("Oh, they were always frightened," one of the volunteers said. "They always thought you were from the developer or the city") was a room neat and clean. "What hurt the most," Mrs. Black says, "was just the feeling of people trying to make a decent place for their family to live in these conditions." It is possible to read through scores of textbooks and tracts on housing conditions written in the 1940's and early 1950's without finding even a hint of the fact that many of these women volunteers, who had read the textbooks, now learned for the first time: to the people who lived in them, slums were home.

The people who lived in those buildings Robert Moses was tearing down were not just passing through. The Puerto Ricans, a small fraction of the area's population, were relative newcomers, of course (although by 1953 13 percent of its Puerto Ricans had lived there for more than ten years), but among the Negro and white families, more than half had lived in their apartments for several decades. Women's City Club members who had been taught that "slum" connoted "transients" sat and listened as one family after another informed them that they had lived in their building "since it was built"—thirty or forty (or, in one case, fifty-four) years before. The people of the area knew each other. Shopkeepers said hello to their customers

when they happened to pass them on the street. The Manhattantown area was a slum area. Its people were poor; the average weekly income was sixty dollars per family. Its buildings were old; there hadn't been a new building constructed in it in twenty-five years. Most of them were overcrowded with families of five or six members jammed into apartments that should have held no more than three or four, and many were dilapidated. But the area also was stable, settled, friendly. Its people had a sense of community, of neighborhood, that some of the members of the Women's City Club realized, driving home at night to their luxurious homes in the sterile suburbs, they wished they had. The textbooks didn't speak of "advantages" in talking about slums, but, the more perceptive of these women realized, the Manhattantown "slum" had advantages. There were no playgrounds in it, of course, but there was Central Park. "Most families," the club's report would conclude, "seemed to be well satisfied with the neighborhood facilities—with the good bus and subway transportation, the good shopping facilities and nearness to the heart of the city." It was a racially integrated area—a fact very important to the Negro families, not only because they wanted their children to grow up with white children but because they knew, as the City Club was to report, that "services such as garbage and snow removal, schools and shopping were far better in nonsegregated areas." And the area didn't have some of the disadvantages associated with slums. Drugs, for example, were already a scourge in slums like Harlem; the junkie was a rarity here. The buildings in which they lived might be dilapidated and overcrowded, but they were palaces compared to buildings in Harlem. Most important—to the families who lived here and were trying to bring up their children "decently"-rents were low, low enough so that they could do so. Three-quarters of the 400 families interviewed were paying less than \$50 per month. The average rent per room was \$10 per month. In other areas of the city-including most slum areas -rents were much higher, so high that low-income families had to skimp on clothes and food for their children in order to pay them. The more perceptive of the women learned that, while the people who lived in the Manhattantown area did not have much in life, what they did have their neighborhood gave them,

And they learned about the helplessness of the poor in the city, a helplessness so much greater than even the helplessness of the lower-middle-class people of East Tremont.

The old people—the old people alone—dreaded "the room," the single furnished box, four walls and no more, in which they might have to live out their days if they lost the tiny apartments with their own toilet and cooking facilities for which they now managed to scrape up the rent each month. "I would die if they put me in a room," one old man told the nice young woman in the well-tailored dress who had come to ask him questions. Parents of young children dreaded "Harlem," the name by which they referred not only to Manhattan's great black slum but to black slums not yet identified by names such as "Brownsville" or "Bed-Stuy"—the "Harlem" in which their children would have to sleep with them in the same room, the

"Harlem" in which they would have to live with cockroaches and rats, the "Harlem" in whose schools their kids wouldn't learn, and in which the drug pushers would be waiting for them, the "Harlem" in whose streets the garbage lay piling day after day, the "Harlem" whose landlords would squeeze them dry. One question on the Women's City Club questionnaire was where the family being interviewed would like to live. Mother after mother, seeing the abyss before her and her children, answered with a reply that was a cry for help out of the depths of fear: Anywhere. But not Harlem. But, the club's volunteers knew, unless someone helped these people, unless someone kept the city's promise to find them "decent, safe, and sanitary dwellings . . . within [their] financial means," "the room" and "Harlem" were where they were going to have to go.

For, the volunteers came to realize, these people had no choice.

Color barred the Negroes and Puerto Ricans among them from most nonslum neighborhoods. Poverty barred the whites among them from most nonslum neighborhoods. Stated the Women's City Club report: "One tenant reported visiting real estate offices almost daily for the past year but whatever listings appeared were always prohibitive in price." The size of many of the area's families—25 percent contained five or more persons—cemented the bars in place. Said one tenant: "We have six children. I looked and looked everywhere, but apartments don't want so many children." Many landlords, able to pick and choose among tenants because of the housing crisis, didn't want any children. Asked one mother bitterly: "Am I supposed to drown them?" Most of the families interviewed—not all; a number which the interviewers found surprisingly large expressed real affection for their neighborhood—did not fool themselves into thinking that their neighborhood was ideal. They were living there because they had no place else to go. Their only alternative was the abyss.

And it was because the volunteers realized this that they were filled with indignation when they found out how Moses was "helping" these people.

Moses had stated that evicted families who wanted to move into the new apartments to be built on the site would be given "preferential status" in applying. In reality, Mrs. Black learned, they were being discouraged from applying at all. No applications were being accepted for Manhattantown and none would be until most of the families now on the site were gone.

Not that Moses' precaution was really necessary. The evicted families had been paying an average of \$10 rent per room per month. The rent in Manhattantown was going to be—if Moses' figures could be believed—\$34 per room per month, about \$100 for even a small three-room apartment. Out of 400 families interviewed, exactly one said it could afford to pay \$100 per month rent. The families being displaced "cannot even consider the possibility of applying for the new project displacing them. Where will [they] go?"

Not, in any numbers, into public housing. Moses had stated that Title I-displaced families would be given "first priority" in applying for such housing. Priorities meant little, however, because the public housing Moses

was building had, with its lack of apartments for large families or single people ("Build, build, build! There was never any thought as to what he was building!") little relationship to the needs of the displaced people. As to whether any priority was in fact given to these people, almost 300 of the 400 families interviewed wanted to get into public housing—a check by the Women's City Club three years later would show that only fifty had made it.

Promising "personal counseling," the compilation of a citywide list of available "decent, safe, and sanitary dwellings . . . within the financial means" of the families to be displaced—and "financial assistance," at least moving expenses plus a month's rent, to enable them to move into them—Moses had stated that "in order to set at rest any fears, families are assured that relocation help will be readily available and there is a frank desire to be of maximum assistance in carrying out the individual wishes of each family." The notice to move that the families actually got was a little more curt. Not even mailed to the individual families but tacked up in the entrances to their homes, it said:

DEMOLITION OF THIS BUILDING WILL BE STARTED AT ONCE.

## TENANTS MUST VACATE.

FOR INFORMATION, CALL RELOCATION OFFICE, COR. OF WEST 100TH STREET.

When they called, or went in person, there were no "personal interviews," no "counseling." There was no information on finding apartments. The citywide listing of vacancies? No listing of any vacancies was available. There was no help in finding apartments. "I looked everywhere and couldn't find anything," one man told an interviewer. "Now, I don't know where else to look. And when I ask them for help, they just say they can't help me." Maximum assistance? In that relocation office, there was not even minimum mercy. "I'm 74 and too sick to look and no one helps you," one woman said. The Women's City Club interviewer's report on the "T Family" reads:

Mr. T was injured in accident and is now unable to walk stairs. He must attend the rehabilitation clinic daily. Mrs. T is disabled and has difficulty getting around. The son is recovering from polio and the boarder who lives with them is blind. They cannot look for other quarters. No one is helping them.

Financial assistance? The assistance for which the developers were being given a million dollars by the city? Except in rare instances, these impoverished people could not even obtain reimbursement for the moving expenses which they were being forced to incur through no choice of their own. Not only were they forced to move out of their homes, they were forced to pay for the moving. What was available—for most of the people who had lived on the site—was a single piece of advice: Get out—and get out fast. Returning stunned from the "cor. of West 100th Street," one man said he had been told to "be out in ten days." The inducement offered them to move—not in ten days, of course; that was just a scare tactic, to soften them up and make sure they wouldn't be too insistent on their rights—was somewhat more subtle than those mentioned in Moses' glowing brochures.

The developers owned the tenements now—and they simply stopped maintaining them. Said the report:

Typical of the statements made by . . . tenants were the following comments: "No repairs are ever made." "There are large holes in the walls and floors where rats come through." "The toilet bowl has been broken for a long time but they won't fix it." "The plaster is coming down over the stove. If I bake a pie, the plaster comes right down into it!" One interview carried the terse report: "Baby screamed. Rat in crib."

Reading the filled-in questionnaires piled in her office, Elinor Black wrote "The bewilderment of people being forced out of their homes and their inability to cope with problems beyond their control was most evident." Also evident, recorded in the handwriting on those questionnaires, was apathy: "I have no money to move, so why should I waste time looking. I'll just wait-God and faith will find something for me." Despair: "I walked from 109th Street to 23rd Street and couldn't find a thing for us. The rents are too high. There's nothing to do." And, most of all, hatred and bitterness, hatred and bitterness at the vague, unseen force that was doing this to them, a force they identified only as "the city": "The city doesn't care about us. We're just nothing as far as they're concerned." Bitterness and hatred that would have been understood so well by Alfred E. Smith, who once, standing in the well of the Assembly Chamber in Albany, had asked, "What must be" the "feelings" of the widowed mother "when she sees these children separated from her by due process of law . . . ? What can be the feelings in the hearts of the children themselves . . . to know what the State's policy was with respect to their unfortunate condition?"

Now those feelings were understood by the Women's City Club. "God and faith will find something for me," an old Negro woman had said. God and faith would have to, realized the trim young matron who had interviewed her. The city wasn't going to. Robert Moses wasn't going to. And if any of the volunteer interviewers had any doubts as to whether the hatred and bitterness were justified, those doubts vanished when they moved on to the next step: finding out what had actually happened to the residents of buildings already demolished, people whose Title I-caused future was no longer a matter of conjecture but of reality.

Finding out wasn't easy. The developer—Moses' "reliable bidder"—refused to talk to them, as did the Relocation Office, as did, for weeks, the director of the city's Real Estate Bureau, the official charged on behalf of the city with the responsibility for seeing that the developer and the relocation firm gave the evicted tenants the "decent, safe, and sanitary dwellings" that the city had promised them. And when he finally consented to see them and they asked him where the tenants had moved to, he said he didn't know. He had never checked, he said.

They checked. Fifty of the 400 families, of course, had been placed in public housing, although they found that many of these "lucky" evictees, desperately lonely for their friends from the old neighborhood, felt as did one aged woman who said, "If they put the old house back, I'd move in again,

even though I had to make my own hot water and heat." The others were more difficult to trace. Some had left no forwarding address deliberately, "to avoid creditors or payment of rent, or because of fear of the law or governmental agencies," as the Women's City Club report put it; others because, unable to speak English and inexperienced in even the basics of city life, they had left one not with the Post Office but with a neighbor or with the building superintendent—who had later also moved. The club's volunteers tried to trace them. They walked the streets of the bombed-out Manhattantown site trying to find someone who knew the family for whom they were searching, combed school registration records throughout the city, hunting for the names of the family's children. But "after all feasible tracing methods had been exploited," the club said in a follow-up report, new addresses could be obtained for only 167 of the original 400 families.

These were probably the people among the 400 who were best off. But even among them, the circumstances in which they were found were illuminating.

The volunteers found some of them on the West Side, in the area around Manhattantown, in the brownstones-turned-tenements. Wrote one volunteer:

Some places were much worse than what the family had left. For example, a family of two moved from a four-room standard apartment with all utilities, central heating and hot water, private bath and toilet into a three-room apartment in poor condition, with no central heating, no refrigeration, tiny bath in kitchen and a hall toilet. Another family of three moved from four standard rooms to a six-room "railroad flat" with not a single enclosed room, holes in the floor and ceiling plaster falling.

The volunteers found many of these families in the cellars of these tenements—in dark and dampness. "It's all right," one woman said when asked about her "present quarters," "but I have arthritis now, which is not good, living in a basement." The volunteers found many of the old people in the furnished rooms of these tenements—the "rooms" that the old people had dreaded; some of them had been living with their children and grandchildren when the volunteers had met them before, but they were living alone now because the "new quarters" their family could find were too small.

For such apartments, moreover, the tenants were almost invariably forced to pay more rent than they had been paying before—often much more, often enough more to "seriously affect" the family's "standard of living."

These people were the lucky ones among the evictees that the club's volunteers could locate. They had managed to stay out of Harlem. Others had not. It was "Harlem" these families had dreaded. But it was in Harlem that the volunteers found them.

Seeing these people, perhaps the best off among the evicted families, the volunteers could picture the others. They could picture the basements in which they must be huddled, the railroad flats into which they must be crammed, the loneliness in which they must be living, deprived of the friends

of years. During their visits to these families, they had gotten to know some of their children—and the fears their mothers had harbored for their future if they had to bring them up in Harlem. They could picture the lives of the children now.

And, the volunteers found, it was not the evictees who had moved to Harlem who were worst off. It was those who had moved— who had, utterly unable to find apartments, been moved—to new apartments "on-site," to the shells of buildings in the bombed-out Manhattantown site to which the developer would not send a painter or plumber, much less an exterminator; one volunteer recalls glancing into a kitchen and recoiling in disgust from the sight of a ceiling literally alive with vermin. Moses' "reliable" developer had moved some of these families not once but several times, shoved them from one building that was about to be torn down into another whose demolition was still a while off, and then, when it came time for that building to be demolished, moved them again—hitting them with a rent increase each time. The Women's City Club volunteers saw very clearly the implications for the city of such relocation tactics. After months of research, they knew with absolute certainty that the Title I program as being administered by Robert Moses was creating new slums as fast or faster than it was clearing old ones. But, after the exposure to concentrated human misery which they had undergone, it was the implications not for the city but for individual human beings that tore at their hearts. In writing the report, Elinor Black leaned over backwards to keep it fair and understated—leaned over backwards so far that at times the stance of the report was almost ludicrously tilted. But, despite the understatement, at times the emotion these women felt seeped through. The Moses-approved relocation policy, Mrs. Black wrote, "does not adequately meet" the demands either of the law or "of human decency." The City Planning Commission's Master Plan unit had uncovered the statistics that disproved Moses' claims. The Women's City Club volunteers had gone beyond the statistics to document the falseness of the claims in terms of human misery. The misery was now documented, quantified, broken down into individual cases and, with the issuance of the first Women's City Club report in March 1954, printed in black and white, as was the draft of the Master Plan unit report. A complete picture of what was really happening in Title I was ready for presentation to the city at large.

But the city did not see that picture.

In part, it did not see that picture because of Moses.

With the Master Plan unit's relocation report completed, Orton's chief aide, Henry Cohen, and Hortense Gabel, two liberals with a taste for political stratagem, began to plot ways to get the report before the public. They drafted a resolution requesting the Planning Commission to study "the relocation problem created by . . . public improvements"—"ordering us," in Orton's words, "to do what we had already been doing." Introduced, in March 1953, by Isaacs in the City Council and Wagner and Halley in the Board of Estimate, it was adopted with little discussion; it was not the kind of measure

to which a politician could easily object in an election year and Moses did not get excited about studies that would take months, if not years, to complete—if indeed, thanks to his monopoly of available statistics, it could ever be completed at all. It may even have been his plan to see that the Commission deferred taking any action on the request until it was forgotten. But when the study was mentioned at the next commission meeting, Orton blandly said—while Stuart Constable, jolted out of the ostentatiously non-chalant slouch he habitually affected in imitation of "RM," bounced abruptly upright in his chair—that it was already completed and ready for adoption.

Cohen and Mrs. Gabel were convinced that a study bearing the official imprimatur of the City Planning Commission would receive prominent play in the press. Moses may have feared so, too. For six months, every attempt by Orton or his two allies on the commission, Bloustein and Livingston, to make the study official was defeated, 4–3, by Moses and his three allies, engineer Robert G. McCullough (of the Cross-Bronx Expressway), Queens real estate operator Charles Sturla and chairman Bennett (who was, of course, secretly organizing one profitable Title I syndicate himself). A series of 4–3 votes even defeated every attempt to place the study on the commission's calendar for formal consideration.

And while Moses was stalling the study, he was rewriting it. Some key statements were removed entirely. Others were modified subtly—just enough to change their meaning. "In some cases," the study had read, "the tenants were obliged to find their own new quarters." Now the study read: "In some cases, the tenants voluntarily found new quarters." Others were modified less subtly. New, false statistics were inserted; one set "showed" that the living conditions of an overwhelming majority of relocated tenants had been improved by relocation. And in the "Introduction" and "Recommendations" chapters of the report, the chapters from which Moses knew the press generally selects its material, the whole tenor of the document was changed. Relocation procedures in the past, it now said, had been "a noteworthy achievement for which credit is due." And "the outlook for the next four years . . . to be brighter than in the past." Those who had been in charge in the past should be left in charge in the future. The major recommendation of the report was a smoke screen added by Moses to draw attention away from the tenant relocation that was its ostensible subject—a proposal to finance public housing by a two-dollar-per-year tax on every telephone in the city. When, after sixteen major civic organizations joined in demanding the report's release and after the Post had been telling its readers for weeks about THE REPORT MOSES SUPPRESSES and the Times and Herald Tribune had finally begun to report the conflict on the commission (and after Impellitteri's defeat by Wagner had made it obvious that the report could not be bottled up indefinitely), the commission in December 1953-more than nine months after it had been written-adopted a "Tenant Relocation Report," it was not the report as originally presented but the report as rewritten by Moses, although so furious were Orton, Bloustein and Livingston that Bennett found it politic to allow them to append a minority report including most of the original points.

The smoke screen on the Women's City Club report was thrown up by Samuel I. Rosenman, Moses' lawyer, who was also, for \$250,000, Manhattantown's, and who now proved that he was worth the money, putting at the service of his "developer" client not only his immense prestige that made his name a byword for integrity in New York but also the talent for words that had made him a valued speech writer for two Presidents. Rosenman's statement defending Manhattantown, Inc., possessed rhythm, punch -everything but truth. "The Women's City Club report, based upon an erroneous premise, does not reflect the situation as it existed at the time of the survey. It also does not reflect the situation as it exists today. . . . Relocation has not progressed at as rapid a rate as we had hoped. Although it has been slow, it has been successful. We consider it successful, because without imposing unnecessary hardships on tenants, a larger number of slum, substandard and insanitary buildings have been cleared and have been demolished. Within the near future, new, safe, sanitary buildings will rise on the land thus cleared." And if it did not possess truth, it was so intricately woven a tissue of half-truths and misleading statistics that sorting out fact from fiction would be an almost impossible chore for anyone without firsthand knowledge of the situation.

A reporter trying to find out the facts would now have to choose between two conflicting sets. He could not know that one of the sets—the one bearing the imprimatur of an adviser to Presidents and president of the Association of the Bar of the City of New York—was false.

And reporters were not trying to find out the facts. Their publishers and the editors who carried out the publishers' wishes made sure of that. If one reason the city did not get to see the true picture of what was going on on the Title I sites was Moses' strategy, another—more important—reason was that the press was not trying to see behind that strategy.

Mrs. Gabel feels that the draft relocation report she helped write the draft that ended up as the Planning Commission's minority report—was a significant document in the history of urban renewal in New York City because it was "the first major relocation exposé," "the first public report, the first official report by any governmental agency, that even hinted obliquely that Moses wasn't God." But Mrs. Gabel was wrong. The facts presented in the minority report—and their implications for the future of the city—were as significant as she felt. But the report's impact on the city was not. It was an exposé without exposure. The public at large hardly knew about it-because it was hardly told about it. Although reporters, told by Orton that Moses' telephone-tax proposal was a strictly diversionary tactic, had his statement confirmed by Bennett's confession, when they questioned him closely, that "details . . . had not yet been worked out" (they never would be, either), the Times, Herald Tribune and Daily News all led with this proposal. The Times did not even bother to mention the relocation controversy until the seventh paragraph, and then quoted, at greater length than it devoted to any other quote in the report, a "reply" to the minority report inserted in the report by Moses that implied—falsely—that the real purpose behind their report was to move "about 20 percent of the entire City population"; and said, "No wonder the radicals would like to get hold of tenant relocation." (The first that "the radicals" knew of Moses' "reply" was when they read about it in the newspapers the next day. Bennett, they charged, had locked up all the commissioners' copies of the report so that they couldn't get to see it—and hence couldn't answer it.) Of the city's daily newspapers, only the Post devoted any substantial space to the relocation facts so laboriously uncovered. The reformers had provided the city's press with facts that disproved the statements by Moses and other city officials from the Mayor on down that the press had been printing for months. If the city's press was unable—or unwilling—to obtain for itself ammunition to shoot holes in the curtain of secrecy surrounding the relocation of tenants on the vast Title I sites, it no longer had to do so. The ammunition had been stacked up, ready for its use, by others. But the press did not use it. The fate of poor people had never been news in New York City; it still was not news. Housing had always been a field whose complications discouraged the press from delving beneath its surface; thanks to Moses' strategy, moreover, the official report, the report the press was almost obligated to carry, now said that there was nothing wrong, or even worth discussing, with the relocation program—there seemed no reason to delve beneath the surface. The suspicions of the press, which would normally have been aroused by the rumors of "deals" and involvement by high-level politicians in a program calling for a vast write-down by the taxpayers, were lulled by the fact that this program was being run by apolitical Robert Moses; his legend draped over Title I a comforting, concealing cloak. The relocation report was never, except in passing, to be referred to in print again. Title I coverage continued to be predominantly a reprinting of Moses' statements and of "facts" from his brochures. As for city policy, just one week after the report's release, Hortense Gabel appeared before the Board of Estimate as a representative of seventeen civic groups protesting Moses' plans for his Washington Square Southeast Title I project. She appealed to the Board not to approve the project until it had at least studied the report. "Sheer, unadulterated bunk," Moses said. The Board approved the project.

On October 1, 1954, an event occurred that should, by all normal standards of newsworthiness, have been eminently newsworthy.

For months, investigators of the Banking and Currency Committee of the United States Senate had been looking into Manhattantown's books and, despite the frantic juggling which those books had undergone, had been able to come up with a detailed picture of the "reliable bidder's" financial operations—and on October I, in a public hearing held in New York, it placed that picture on public exhibition.

The hearing was marked by remarkable lapses of memory on the part of Manhattantown's ostensible founder, Samuel Caspert, a Democratic clubhouse figure to whom Moses had seen fit to hand over, on behalf of the City of New York, 338 apartment houses and tenements housing thousands

of human beings. Under questioning by committee general counsel William Simon, Caspert was unable to recall even whether there had ever been a written document-any kind of prospectus, formal or informaltelling prospective stockholders the financial details of the project in which they were investing. And whenever it seemed that Simon had Caspert firmly on the hook at last, there were deft interventions to get him off—by his counsel, Judge Samuel I. Rosenman-interventions that were made easier by the deference with which Simon treated this prestigious public figure. But despite the evasions, denials and interventions, by the time Senator Prescott Bush, a Republican from Connecticut, gaveled the hearing to a close late in the afternoon, it was a matter of public record—because it was a record of an official Senate committee hearing, privileged public record, so that any newspaper could print it without worrying about the possibility of libel damages—that more than two years before, the Mayor's Slum Clearance Committee had handed over to Caspert and Company six square blocks of Manhattan real estate, worth \$15,000,000, for \$1,000,000. It was a matter of public record that as of October 1954, the month of the hearing, Caspert and Company were required to have all 338 buildings demolished—but that about 280 buildings were still standing, their tenants still paying rents. It was a matter of public record that not one brick had been laid for any new buildings—and that not one piece of financing for new construction had been obtained. It was a matter of public record that, in the more than two years since Moses' committee had turned over the slum clearance project to his "reliable bidder," that bidder's major activity had been not to clear those slums but to milk them. And so were the replies of Simon and Senator Bush—made near the end of the hearing, when the transcript indicates that they had come to the conclusion that Rosenman had pushed them around enough-when, after Simon had hinted that perhaps that was all Caspert and Company had ever intended to do, that the developers of the slum clearance project were trying to clear those slums as slowly as possible so as to continue making money from them as long as possible, Rosenman denied there was "any intention not to go ahead with this project":

Mr. Simon.

... the contract required that the new buildings be completed in four years [and more than two years] have gone by, and only one-sixth of the demolition has been done, and none of the new construction has been done, which is a fact that speaks for itself.

Senator Bush. The thing the committee is curious about, Judge, is whether the attractiveness of the operation that these people have been engaged in hasn't perhaps delayed the construction of these buildings, which is what the Federal Government is interested in.

And although Rosenman replied to those statements by protesting that "there is no such attractiveness... it is far from attractive," the truth of the judge's protests was also a matter of public record, a record based on Simon's questions, the evasions of Caspert and his partners—and the stark facts entered into that record by committee investigators. That record showed that the profits made off the hapless human beings in the buildings still

standing on the Manhattantown site were so huge that Manhattantown's thirteen stockholders had been able to receive from the company—in addition to regular "partners' drawings"-special payments made under a variety of devices apparently designed to conceal the "attractiveness" from investigators: one partner, for example, receiving through a "construction company" that had no office of its own and only two employees, himself and his secretary, \$42,000 (although no construction had been done), and through a "management company" another \$38,000; another partner, for example, receiving \$26,000 in "legal fees"; another partner receiving \$48,000 for accounting and auditing work; a group of partners receiving profits of \$153,-000 paid to a dummy "management firm" they had set up-as Simon put it, "different people got cut in for a piece of different things but when it was all over everybody got a ride on one of the horses." And the record also showed that the profits the partners had already reaped, large as they were, were small compared to the profits the partners were planning to reap in the future. One partner, a close friend of Moses' ally, Bronx Boss Charlie Buckley, was in line for \$375,000 for architectural services. So huge were Manhattantown's profits that they had been spread around—among stockholders' fathers, stockholders' sons, stockholders' daughters, as well as stockholders' uncles, aunts, nieces, nephews and assorted in-laws. And spread around liberally. The brother of the stockholder who had received \$42,000 for "construction" and \$38,000 for "management" himself received \$30,000 as Manhattantown's "comptroller." In one transaction—just one of many spread on the record by the committee to demonstrate how money was siphoned off from the parent corporation into the pockets of its partners and their relatives—Caspert had skimmed off for himself and his family \$115,000 in less than a year. He set up a separate corporation headed by his son-in-law. Manhattantown sold the son-in-law's corporation all the gas stoves and refrigerators in the tenements for \$33,000—and then rented them right back from the corporation, paying it in effect for the privilege of using what had been its own appliances. And Manhattantown paid so well—paid rental fees so high that in less than a year the son-in-law's corporation earned, after all expenses, \$115,326.37. At the end of the year, Manhattantown bought back the stoves and refrigerators for the same amount it had sold them: \$33,000. Financially, Manhattantown had wound up right where it had started-but the son-inlaw's firm had pocketed \$115,326.37. By the end of the hearing, it was a matter of public record not only that in more than two years the slum clearance project had cleared hardly any slums, not only that no progress was being made in providing the new housing that the project was designed to provide—but that everyone involved in the project was getting rich.

Here, by any customary newspaper definition, was SCANDAL. A major city administration program in which, it was now revealed, a \$15,-000,000 slum had been turned over, for a mere fraction of its worth, to promoters who were milking it of hundreds of thousands of dollars, profits documented, down to the dollar, by federal probers—here was scandal of the first magnitude in a town in which allegations of twenty-dollar bribes to a few building inspectors were found worthy of big black headlines. More-

over, juicy as had been the revelations of the Senate hearing, the hearing held the promise of far juicier revelations to be uncovered. There was the clear scent of far bigger scandal in the air. Manhattantown was one Title I project; there were ten others then under way in the city—one of them, in fact, also run by Samuel Caspert and friends. To reap that harvest of headlines, newspapers would normally have sent into the fertile fields of Title I their best gleaners, their ace investigative reporters.

By customary practice, moreover, New York's papers would have brought into the picture an element the Senate hearing had not—the name of the city official responsible for the turning over of the slum to the promoters: the chairman of New York's Slum Clearance Committee. Rosenman let slip the name of that official only once-in the hearing's fifth and last hour—when he could not avoid using it in identifying for the record a report addressed to that official. In all the sixty-six pages of the hearing transcript that is the only time his name appears. In referring to the authorities responsible for turning over the slum to Manhattantown, it was always "the city." The city's press would customarily not have been so vague. They would have identified the official, printed his name in big, black headlines, used his photograph, questioned him, examined his answers to their questions with printed suspicion. By the time a normal press investigation of Title I had been completed, his name would have appeared in a hundred headlines, his picture would have stared from a hundred front pages, the public would have been reminded a hundred times that he was the man responsible for Title I, in the public mind his name would have been ineradicably linked with its failures, its abuses—and with "SCANDAL," the noun which had spelled the doom of so many officials' careers.

But the Manhattantown revelations hardly touched Robert Moses at all. The fear and awe in which he was held by reporters, rewritemen, copy editors and city editors was never more evident than on the day following the Senate hearing on Manhattantown and in the days that followed. Robert Moses had conceived the Manhattantown project. He had directed its planning. He had selected the cast of characters who ran it. He had shifted the cast around when the political winds in the city shifted. It was a Robert Moses project from beginning to end. The *Times* story on Manhattantown did not mention Robert Moses once. The other papers followed suit. His name was hardly mentioned; no editorials called for his removal. There might have been scandal in Manhattantown, but Manhattantown's creator was unscathed by it.

And because he was, Manhattantown and the Title I program of which Manhattantown was a part were largely unscathed, too.

The *Times* did not do another story on Manhattantown in the months that followed, but that might have been expected: the *Times* was not a paper of inquiry, and inquiry would have been necessary for follow-up stories. But what was not to be expected—from the customary behavior of the press in New York—was that no other papers would undertake any inquiry either. Not one investigative reporter was assigned to probe further into Manhattantown or Title I. Some reporters wanted to, but were refused permission,

in some cases probably because of their publishers' admiration for Moses, in most cases simply because it seemed to editors a waste of time: where Moses was involved, they felt, there would be no scandal to be found; trying to find it would be a misuse of manpower that could be more profitably employed investigating politicians or bureaucrats. The creators of the Moses myth believed in what they had created. The myth still glowed, as strong as ever—with a glow that blinded New York to the shabby reality of what was going on on the Title I sites.

During the following eighteen months—the rest of 1954, and all of 1955, and the spring of 1956—there were, as there had been since 1952, continual rumors about Title I, continual protests about individual Title I projects, continual questions about the whole shape and scope and direction of Title I and about the individuals to whom Moses had handed over so much of this program that was going to reshape the city. More and more people and groups were hearing these rumors, making these protests, asking these questions. The Women's City Club made a new, follow-up survey of relocation practices at Manhattantown, and other investigations were made by at least five other public and civic agencies: the 108-year-old Community Service Society, the one-year-old City Wide Committee on Relocation Problems, the Mayor's Committee on Housing, the City Administrator's office and Walter Fried's Federal Housing and Home Finance Agency. The results of all received only cursory treatment from the press. By the end of 1955, Stanley Isaacs was being joined in his repeated pleas for an investigation of Title I by several maverick city councilmen. All of those pleas were buried in Council committee, and in the newspapers. The myth that shielded Title I-and other Moses public works projects; 1953 and 1954 were, after all, the years in which he was ousting from their homes the 1,530 families of East Tremont who could find a voice for their cries only in the New York Post-from public view stayed firmly in place. The movement to reveal the truth about Moses' projects had been an underground movement, a movement led not by the City Planning Commission's majority but by the rebel commissioner Orton and his "fifteenth-story undercover" band of researchers, not by the city's reform housing "establishment" but by the new, boat-rocking Hortense Gabel. As late as April 1956, it was still an underground movement. "We were still voices crying in the wilderness," Orton recalls. "We couldn't get anyone to listen to us." A World-Telegram and Sun reporter managed to write a two-part series on relocation—a pallid, surface description that left the impression that all was generally well-without mentioning, even once, the man most responsible for relocation. Before the city could begin to see the truth about Moses' programs, his legend would have to be exposed for the lie it was. Before the people would be willing to look at Moses' programs straight on, they would have to look at Moses straight on, and before the public could do that, there would have to be an issue that would show him so clearly for what he was that there could be no mistake.

## 42. Tavern in the Town

THAT ISSUE might never have arisen if some engineer hadn't left his blueprints lying around during lunch hour.

He left them in a little glen in Central Park, a grassy, tree-shaded hollow between Sixty-seventh and Sixty-eighth streets about three hundred feet in from the stone wall along Central Park West that Frederick Law Olmsted had built to mark the line where the city would end and serenity begin, where, among "country roads and scenery," the city dweller could "forget for a time the rattle of the pavements and the glare of brick walls."

Robert Moses had made forgetting more difficult. Before 1934, the glen, shielded from Central Park West to the west by higher ground, had faced, across bridle path and West Drive (kept curved and narrow by Olmsted to discourage auto traffic and shielded from the glen by heavy shrubbery), Jacob Wrey Mould's classic little sheepfold and, beyond it, the broad "Green" or "Sheep Meadow" on which the wooly white Southdowns grazed placidly under the eye of sheepdog and crook-carrying shepherd. After 1934, the new Park Commissioner threw out sheep and sheepdog and shepherd, converted the sheepfold into the "Tavern-on-the-Green," built a parking lot behind it, and, to provide "more convenient access" to the restaurant, cut a new road, an extension of Sixty-seventh Street, into the park past its front door, where he widened the pavement into a large parking circle; thereafter, the view to the south from the glen was asphalt and automobiles. He straightened and widened the West Drive, decimating the shrubbery shield in the process, and thereafter the herds to the east were not meandering sheep but thundering cars. On the high ground to the west, there were now swings and slides, and asphalt and a tall black iron fence one of the perimeter playgrounds the Park Commissioner had built to "intercept" children who wanted to use the park.

Yet, within its sheltering border of trees and bushes, behind its shield of high ground, the glen still offered at least a measure of refuge from the city, particularly for mothers with small children. Its big trees, huge boulders and expanses of grass made it a perfect place for kids to play. On a typical day, the glen was a picture—an urban version of a pastoral landscape—of kids throwing baseballs or footballs, kids scrambling up boulders, kids climbing trees or lying behind them in coonskin caps (1956 was television's Davy Crockett era) bang-banging their six-shooters or Texas long rifles at each other or ambushing the automobiles heading past along the West Drive. And

as the kids played, their mothers sat chatting on a row of benches situated between glen and playground so that they could keep an eye on both at the same time—sat among trees and grass and quiet. "You know, at that time in your life, your life centers around your children," says one. "We lived in that little spot in the park. We took our kids twice a day—once wasn't enough, for God's sake! I remember once being in that playground in the snow—freezing! That little spot in the park was really the center of our neighborhood. And it was beautiful, tranquil. You know, in a city like New York, a spot like that is really precious."

Then, on April 9, 1956, a sunny spring Monday, one of the mothers, Roselle Davis, sitting on a bench watching her four-year-old son, Earl, play in the playground, noticed below her in the glen a group of men with surveying equipment and blueprints. The sight didn't disturb her. "I thought they were planning some sort of improvement for the playground," she recalls. But walking home at lunchtime, she noticed that although the men had gone for lunch, the blueprints were still spread out on the grass. Out of curiosity, she bent down to read them—and saw their title: "Detail Map of Parking Lot."

Returning to the playground after lunch, Mrs. Davis related her discovery to other mothers—among them Augusta Newman, wife of Arnold Newman, a world-famous photographer who possessed a healthy sense of moral indignation. "I wasn't sure that anything could be done about it, and I sort of forgot about it," Mrs. Newman recalls. "But that evening we went to a party or something, and in the cab coming home, I said to my husband, 'You know, Roselle told me today that they're building a new parking lot for the Tavern-on-the-Green in that spot in the park where the boys play,' and he-unlike me-said: 'They can't do that!'" Although it was after midnight, he telephoned Mrs. Davis for more details and then telephoned Sixty-seventh Street's most famous resident, the elderly novelist Fannie Hurst, to solicit her help in writing a petition. In addition to his eye for social injustice, Newman had one for public relations. He was aware that because Sixty-seventh Street contained the literarily oriented residence hotel, the Hotel des Artistes, and a row of studio duplexes designed for artists, complete to two-story windows letting in north light, it was the home of a quota of "names" from the artistic, literary and show-business world high even for the West Side. Two of the most famous illustrators of the Thirties, Floyd Davis and Gladys Rockmore, lived in No. 1 West 67th Street, along with oceanographer William Beebe. Roselle Davis and her husband, painter Stuart Davis, lived in No. 15, as did dancer Pearl Lang. No. 33 housed, in addition to the Newmans, newscaster Raymond Gram Swing, publisher Jason Epstein, photographer Philippe Halsman, sculptor George Lober and illustrator Dean Cornwell. Ludwig Bemelmans lived in No. 39, the Yiddish actor Joseph Buloff and playwright Samuel Raphaelson in No. 40, violinist William Kroll in No. 50. Around the corner on Central Park West lived composer Harold Rome. The hotel's residents included Howard Chandler Christie, who had painted the nude-filled murals in its Café des Artistes (he took the sun every morning on a park bench near the glen, nodding politely to the mothers

walking by), and Mae Murray, the Merry Widow herself: the woman who had once been Hollywood's most glamorous star lived in the hotel in an attic formerly a chambermaid's room. When the petition was written, Newman got a healthy number of high-caliber names on it—and then sent his wife and Mrs. Davis out soliciting signatures from mothers at the playground. Trying to telephone the Park Commissioner, he received a customary Moses brushoff, but he mailed him the petition, signed with twenty-three names, with a copy to Mayor Wagner. The newly appointed deputy mayor, educator John J. Theobald, just recently recruited from his Queens College presidency by Wagner, to whom the Mayor referred the matter, did nothing about it on Wednesday-and gave no indication that he was contemplating doing anything about it ever. But another one of the mothers happened to be the wife of a Herald Tribune reporter, Richard C. Wald. By Thursday, Wald had realized that the story he had been told by his wife might be of interest to a wider audience, and even though Stuart Constable, the pompous Park Department executive officer whose bushy walrus soup-strainer had earned him the nickname "Mustache," tried to make him understand that this parking lot he was making such a fuss about would be less than an acre, a meaningless fraction of I percent of 843-acre Central Park, it was printed in Friday morning's edition. By eleven o'clock, Theobald had decided that the thing to do was to hold a meeting between representatives of the mothers and of Moses that afternoon, and, unable to reach Moses, asked one of the Commissioner's secretaries to have him call back and tell him what time would be convenient for him or one of his "top people."

Local protest over a park "improvement" may have been a new story to Theobald, but it was an old one to Moses-old and boring. Ever since he had become Park Commissioner he had kept such protest to a minimum by keeping the "improvements" secret, so that, often, before the neighborhood concerned knew there was an improvement planned it was already under way, and by ignoring protest and going ahead with the "improvement" as if it didn't exist. Scores—hundreds—of mothers' committees and chambers of commerce and civic associations and taxpayers' associations and merchants associations and block associations had objected to one plan or another for a parking field or a baseball diamond or a playground or a highway in some city park, and Moses' method had almost invariably proven effective. Not a week before, in fact, Flushing mothers had begged him not to destroy "the only spot of green" anywhere near their neighborhood by cutting down about forty "fine old trees" to turn little Weeping Beech Park just south of Northern Boulevard into a paved playground. He had simply ignored the plea: the trees were down now and the paving machines complacently at work. On the seismograph on which Moses recorded public tremors, in fact, the Tavern-on-the-Green protest had barely registered. Twenty-three mothers? He had just finished evicting hundreds of mothers rather than shift a section of his Cross-Bronx Expressway a single block! He was at that very moment in the process of displacing five thousand mothers for Manhattantown, four thousand for Lincoln Center! A parking lot, and a tiny parking lot at that! He had just finished building a

Coliseum! The only aspect of a protest that concerned him at all was the play it might receive in the press, and there seemed no reason for concern on that score. The city's big dailies seldom gave more than token coverage to local protest, anyway. Not one had carried so much as a line on Weeping Beech Park. His rapport with the press—the Post excepted, of course—was at one of its all-time peaks, now that the Coliseum Title I project in which publishers were so interested was completed: the editorial board of the one paper that had printed the story on the Tavern-on-the-Green protest was that very morning deciding to run the next day an editorial lauding the Coliseum as "stimulating evidence" of his "tremendous progress" in Title I. Most of the dailies were preparing to take the occasion of the Coliseum's formal opening in two weeks to heap encomiums on its creator; the Times, in fact, was going to publish a special 72-page "New York: Coliseum City" magazine section on opening day, with Moses commissioned to write an article on "What the City Means." Writers of letters-to-the-editor might be more and more critical, but as for editorial writers, the writers who counted, after thirty years of lionization by their pens, he was still their lion; just a month before, two key ones had taken time out from their ordinary duties to review his just-published Working for the People, and, perhaps because of the difficulty of finding favorable things to say about that nonbook, had devoted most of their reviews to its "author," the Trib's L. L. Engelking calling him "the selfless servant of the people," William Ogden of the Times calling him "one of the great public servants of our time." The only element of the protest worth noting at all was that Theobald had dared to suggest that it be given a hearing; this refugee from the campus needed a lesson. Not Moses but one of Moses' secretaries returned Theobald's call by reading him a memo from her boss. Picking up his telephone expecting to find Moses on the other end, the startled deputy mayor heard a woman's voice saying: "We are not prepared to attend any conferences. I do not think the deputy mayor should get into matters of this kind which are the concern of commissioners until the commissioners have answered letters." The mothers' would be answered next Tuesday; until then, let them wait; "we would suggest to Dr. Theobald that he not see these people until after we have answered their letter." Even as Moses' secretary was reading his memo promising an answer, moreover, Moses was issuing an order that would make the answer—and the protest—meaningless. Early Tuesday morning before the mothers would have received their mail—a bulldozer was to tear up the glen. His letter would not placate the mothers, of course, but that would no longer matter. By the time they read his explanation of why it was necessary to destroy the glen they were fighting for, there would no longer be any point in fighting for it. It wouldn't be there. This protest would be disposed of as he had been disposing of protests for thirty years.

But this protest was different.

It was different partly because the protesters were well educated and heeled, possessed of both the sophistication to know the best methods of

fighting Moses and the money to implement those methods. There hadn't been a single lawyer among the 1,530 East Tremont families in the path of the Cross-Bronx Expressway near Crotona Park, but there were plenty of lawyers—good ones—among the hundred or so families near Central Park West and Sixty-seventh Street whose children played in the little glen, and many of them were willing to take the case for nothing. And those families could afford to raise the money for the substantial other legal expenses for a full-scale fight against the city.

This protest was different because the issue behind it was unusually clear-cut. Protests on housing invariably involved arguments based on differing and involved philosophies to which there were always two—and often twenty—sides. Protests on highways were complicated by a myriad of arcane engineering considerations. Protests involving parks were generally simpler, but usually when Moses tore up part of a park for a nonpark purpose, the purpose was clearly a public one—a highway, for example—so that the issue was complicated, and in presenting it the press was also hampered by its necessary reliance on "expert opinion," most of which was controlled by Moses. But there was nothing complicated about this issue. No expert opinion was necessary to decide the rights and wrongs of tearing up a park for a parking lot that would benefit only a private restaurant—an expensive restaurant at that. New York's press was enthusiastic only on clear-cut issues—and here was one that was very clear-cut.

This protest was different because Moses' responsibility was unusually clear-cut. Because of the nontraditional role, a role outside the normal democratic processes, that he played in Title I and highways, his responsibility was difficult for the public to understand—particularly because the press, which did not appear to fully grasp it either, never explained it adequately. But his responsibility here was clear and direct; no newspaper had to make the connection.

But the primary difference in this protest had nothing to do with philosophy or governmental roles; it was due to the simple physical fact of the parking lot's location: the park in which it was located was Central Park.

Central Park was something very special to New York. It was special because it sat, spacious and green and beautiful, at the very heart of the concrete city, because more New Yorkers used it than any other park, because it was practically the back yard for an astoundingly high proportion of the city's wealthiest and most influential individuals, because for most of these users—and for hundreds of thousands of others, inhabitants of the otherwise all but greenless center of the most densely inhabited island in the world—it was their only park. It was special to New Yorkers interested in park history because of its beauty and historic significance as the first and most influential of American landscaped parks. It seemed little less than a miracle to them that in this greediest of cities 843 acres of the most valuable real estate had somehow been set aside—and preserved for a hundred years—as a public resource.

It was special, also, because journalists had made it special. For a hundred years, newspapers had paid more attention to Central Park than

to all the city's 710 other parks, large and small, combined. Central Park had, like a President, become news in itself. Central Park had become a symbol, a symbol that evoked universal and positive emotions in New Yorkers; it had become the symbol of beauty, open space, peace, fun of everything parks meant to a city. "Of all the city's wonders," the city's historians said, "Central Park ranks first in the affection of New Yorkers." If all parks were holy to New Yorkers, Central Park was the holy of holies—a thing that must be preserved. Every attempted "invasion" of Central Park for a nonpark purpose, no matter how small, was a cause to which an editorial writer's response was almost Pavlovian; in the hundred years since its creation, a thousand editorials had proclaimed that every foot of it was "sacred." Even during the 1930's, when it had been all adulation for Moses in the press, protests over Moses' remaking of parts of Central Park had been treated with seriousness. That they hadn't been more serious was due to Moses' success, because of his ability to use great forces of WPA workers without going through normal city governmental channels, in rushing through his remaking in secrecy; to the fact that Tammany-induced decay in the park had reached a point at which any change could hardly help being an "improvement"; to the fact that his baseball diamonds and playgrounds were, after all, "park purposes," even if not the purpose for which Central Park had been intended. But these conditions no longer existed. There was no WPA and no Tammany-and not even Robert Moses could make the city believe that the Tavern-on-the-Green parking lot was a "park purpose." Moses' reputation as a defender of parks, the keystone of his whole image, had endured because what he was doing to parks—like paving over the beautiful Van Cortlandt Park marshes for the Major Deegan Expressway-had been carried out largely in secrecy because the press had never focused public attention on it. Only a year or so earlier, a group of Sutton Place mothers, every bit as well educated and quite a bit richer than the Central Park West mothers, had been unable to get any publicity for a baby-carriage picket line they threw up to protest his rape of their East River Drive playground at Forty-ninth Street. But there could be no secrecy about anything he did in Central Park, a half acre of which meant more to the city's press than 150 acres of Van Cortlandt. Moses' image as park defender was still intact only because the public had never been given a close look at his park controversies. But at any substantial controversy in Central Park, the press would give the people a very close look indeed.

And there was going to be a very substantial controversy in Central Park.

In April, the leaves over the little glen were still only a pale-green haze, not yet thick enough to obscure the view of the ground from Elliott and Elinor Sanger's twelfth-floor apartment directly across from the glen at 75 Central Park West. And when, at about seven o'clock Tuesday morning, April 17, 1956, Elinor Sanger awoke and went into the bathroom and glanced out

her large bathroom window, she saw a large bulldozer ripping at the ground to tear out the roots of the trees.

The Sangers were friendly with Stanley Isaacs, so Mrs. Sanger did what people who knew Stanley Isaacs always seemed to do when they were confronted with injustice: she called him for help. "Get the women out there, and call the newspapers and television," Isaacs said. "I'll be right over." "What are you going to do?" Mrs. Sanger asked. "I don't know," said the dignified, white-haired attorney, then in his seventies. "But if I have to, I'll lie down in front of the bulldozer."

As it turned out, he didn't have to. Mrs. Sanger telephoned Augusta Newman, who began frantically calling other mothers, and telling them to call others. Within minutes, astonished doormen saw thirty or forty women running down Sixty-seventh Street and along Central Park West, yanking along dogs and little children and wheeling baby carriages. ("The baby carriages were my idea," Augusta Newman says. "I thought they would make a good picture. After all, we are in the business, you know. And anyway, most of the mothers had to bring their children. They didn't have maids. Their husbands were going to work. Who were they going to leave them with?") Running into the glen, where the bulldozer was snorting and grinding away, they began somewhat hesitantly—leaving plenty of room between it and them-to move to a position that would later be somewhat loosely described as "in front of it." The driver, an employee of a small private contractor to whom Moses had given the parking lot construction job, cut his engine. "He was a very nice man," Mrs. Newman recalls. "He told a policeman [who had just come running up to see what was going on], 'I'm not going to do a thing as long as those ladies are standing here.' "When Isaacs arrived, he saw, beneath the trees, the earth-moving machine stopped, its driver standing beside it, a line of mothers and baby carriages, and, moving up close to them, policemen who, summoned by the first, had sped up in several patrol cars.

It was a tableau that—complete to Isaacs' presence—might have been lifted intact from a score of earlier Moses battles. But within a few minutes a new element had been added to it, an element that had been conspicuously missing from the earlier tableaus—and that was to make April 17, 1956, the watershed of Moses' career. Following Isaacs' instructions, Elliott Sanger had telephoned more than a score of newspapers, radio stations and television stations to ask them to send men to the scene. And they did.

A hundred neighborhood representatives had asked radio stations, television stations and the big citywide daily newspapers to cover their protests against Robert Moses projects. If they were lucky, two or three sent a man; often only the *Post* did; often even the *Post* didn't bother. Lillian Edelstein had managed to get three mayoral candidates and an audience of four hundred people to the rally in JHS 44 in East Tremont; in that audience there had been not a single reporter or photographer. But on this Tuesday morning there came, driving into the Tavern-on-the-Green's parking circle, jumping out and running over to the little glen, shoving microphones and

triple-folded copy paper into the faces of the mothers and the bulldozer driver, reporters and photographers from the Post—and from the Herald Tribune, the World-Telegram and Sun, the Journal-American, the Daily Mirror, from the Times, the newspaper with the greatest prestige in the country, and from the Daily News, the newspaper with the largest circulation in the world, even from the Brooklyn Eagle, from WMCA, WOR, WABC, WNBC, WHN, WINS, WNEW, from WCBS-TV, WNBC-TV, WABC-TV, WOR-TV and WPIX-TV. A hundred local protests against some plan or other of Robert Moses' had been carried out, so far as the public was concerned, in secrecy, the secrecy so necessary to Moses' success. This local protest against this Robert Moses plan would be carried out in a spotlight, the brightest spotlight on earth—the spotlight thrown by the massed mass media of the city that was the communications center of the civilized world.

Within hours, every major radio station in New York was telling its listeners the story of the mothers, the baby carriages and the bulldozer. That evening, the story was on every major television newscast. The next day, a picture of mothers and children lined up defiantly between the menacing machine and a large tree was displayed prominently in every newspaper in town.

By the weekend—with Moses trying to trick the protesters by taking no action on Wednesday, giving reporters the impression that he would await the results of a Thursday conference between Theobald and the mothers, and then ordering the bulldozer back into action Thursday morning, only to have it turned back again by sentries because the mothers had set up a rotating schedule that kept the glen guarded from 7 A.M. to dark, trying vainly again on Friday with a new bulldozer operator bearing assurances that all he wanted to do was "move some topsoil around"—the story was on page one. It would stay there for weeks.

For this story had everything.

It had "names." Lillian Edelstein couldn't get one quote in the News; the News begged Fannie Hurst for a quote ("Central Park stands 'as a heartbeat of the asphalt city.' Yet 'we see trees sacrificed to a restaurant and a night club'"). And it had more than "names." It had trees, tooespecially since the week in which Moses had chosen to cut down the ones in the glen happened to be National Arbor Week. Said a front-page World-Telegram box: "School children have been memorizing 'Woodman, spare that tree/Touch not a single bough . . .' And up in Central Park, Park Commissioner Robert Moses observed the week in his own unique way by sending ax-wielding workmen . . . to chop down a stand of maples to make way for a parking lot." And it had more than "names" and trees-it had Central Park. By the second week, several papers had found the catch phrase they were looking for: "The Battle of Central Park." It had more than just names and trees and Central Park. It had bulldozers, a word that by the mid-1950's carried enough emotion-laden and unpleasant overtones to keep a story going all by itself. And it had more—much more. It had mothers. Parks and trees might be "motherhood issues," but this was more

than a motherhood issue: this was MOTHERHOOD! The press saw thisand made the most of it. It was "Moms-vs.-Moses" in the News, and "The Brigade of Mothers" in the World-Telegram, and "Park Moms" in the Post. and "Fighting Park Moms" in the Journal-American and "the embattled mothers of Central Park" in the Herald Tribune; as the headlines blasted out at New York five and six a day, day after day, the words that leaped from them, bold and black, were not only magic words like "parks" and "trees" and "bulldozer" but the most magic word of all. And the stories under the headlines were stories about mothers engaged in that most holy of mothers' wars, a battle to protect a place for their children (their "tots," their "kiddies") to play, a "mothers' battle to keep the grassy, wooded section a haven for their children away from the concrete and clatter of the city streets," as the World-Telegram put it. There was nothing unique or even unusual in the "Battle of Central Park." But because the site of this battle was Central Park, the press had begun looking at it—and had seen elements so sensational that it couldn't, even if it wanted to, tear its fascinated eyes away. The tactics Moses was using were the tactics he had been using for thirty years-but now the press was reporting them, and a whole city was watching them. The things Stanley Isaacs was saying now were the same things he had been saying for thirty years. The only difference was that now people were listening to them. Now, when he spoke, a dozen microphones were held up before his face, amplifying his words, as Moses' had been amplified for thirty years, until they were loud enough for a whole city to hear them. This time, his tightly reasoned letters-to-the-editor were quoted in editorials and in news articles, front-page news articles. When Moses replied with the argument he had been using against Isaacs ever since he had helped drive him out of his borough presidency with it in 1938, the Daily Mirror picked up the attack as usual ("the claque complaining about Robert Moses is headed by Stanley Isaacs, who, when he was president of the Borough of Manhattan, gave employment to Simon Gerson, who was a Communist . . . "), but for once—the first time—the Mirror's voice was a lone voice. For once, when Isaacs tried to explain to the press the philosophy behind Moses' projects and what was wrong with that philosophy, the press paid heed to the explanation—even on the editorial page of the newspaper that had been Moses' staunchest defender for thirty years and whose principal stockholder believed "there has never been as great a public servant." Exactly what happened in the editorial conferences of The New York Times is not known, although certainly Mrs. Sulzberger's love for Central Park—the original concept of pastoral, serene Central Park -the love which she had previously subordinated to her admiration for Moses, had something to do with it, and possibly so, too, did the fact that by 1956 the brilliant conservationist John Oakes was taking a more active role on the editorial page; on April 20, the Times carried an editorial that, while it perpetuated the Moses myth, also contained statements that were, coming from the Times, especially remarkable, as remarkable as the editorial's title: ONLY A HALF ACRE—BUT.

If this were land somewhere else there would be nothing to get excited about. But Central Park is different. To New Yorkers, and especially those who live near the park, it is sacred land. To use it for anything but park is like insulting the flag.

After fighting all these years against all the causes that were offered to invade it, why should New York at this late date give up a half acre for the personal convenience of eighty carloads of people having chicken dinner in the Tayern?

Those who protest do so belatedly. We plead guilty, like the rest, to tardiness. This is regrettable. But the principle on which protest is based is no less valid, and ordinarily Mr. Moses would be its chief defender against those who would destroy a blade of park grass. Let the diners at the Tavern ride there in taxicabs. . . .

Things had gone far enough. When the Coordinator struck again, he struck with picked troops, not some contractor's hired hands but uniformed Park Department veterans, men loyal to the Sycamore Flag (and to the promise of overtime pay for the unusual mission on which he was dispatching them), and he sent them into the field under the personal command of an aide whose enthusiasm for such missions was a legend in the Department: the hard-bitten commander whom other men called "Mustache."

He struck in secrecy—in after-midnight darkness, when the enemy's sentries had been withdrawn for the night. At 0130 hours on April 24, when only a few scattered lampposts and a three-quarter moon broke the gloom of the battlefield—Constable had prohibited the use of any other lights—a hand-picked Park Department platoon headed by a gardener first class moved into the glen, hammered steel stakes into the ground around its perimeter and wired to them a "snow fence" of wooden slats, about four feet high, strung on wires. It was not until the fence was in place-and painted, to make it look all the more official—that the more easily spotted mechanized equipment was brought up, and then the bulldozer was moved into position inside the fence on a flat-bed truck so that its noisy treads would not have to be activated until the moment it went into action. To insure against leaks, not even the Police Department had been told what was going on; it was not until about 3 A.M., when a patrolman, summoned by a stroller on Central Park West who had heard a mysterious hammering coming from the park, arrived and saw—to his shock—shadowy figures moving about in the darkness, that a call was made by Constable to police higher-ups-and then it was made to request the immediate dispatch of reinforcements in sufficient force to repel any counterattack and of both sexes, so that newspaper photographers would not be able to take pictures of any mothers who had to be hauled away being hauled away by men. When, shortly before six, an early-morning horseman came cantering along the bridle path, he suddenly saw, through a mist that shrouded what had always been an empty glen-a bulldozer, a truck and a platoon of greenuniformed "parkies" inside a fence, and, in a ring around the fence, thirtyone policemen and policewomen under the command of an inspector and two captains. (The sight so startled his horse that it reared and almost threw him.) By the time daylight revealed the scene to the apartments above, and the first of the mothers came running into the park, the bull-dozer had pushed over a big maple tree and Park Department axmen were chopping it into small pieces. And when the mothers tried to reach the machine, the policemen joined hands and politely but firmly stopped them at the fence. These were not mothers to whom more violent protest would have been even a possibility; they did not even consider fighting the policemen; there was nothing they could do except stand outside the fence and cry as the trees came down.

And the media went wild.

"It was a dirty, lousy stab in the back," Mrs. Sanger said—and that was how the media played it. "The Brigade of Mothers lost their battle at the Tavern-on-the-Green in Central Park today after the city mounted a sneak attack under cover of darkness," said the lead in the World-Telegram. Other papers painted the Park Commissioner as a bully as well as a sneak; the lead in the Post said sarcastically that he "routed a small band of women and children. . . . It was a brilliant victory." Rewritemen rose to what for them was almost poesy in describing the "sylvan victims" felled on the "hillside on which he plans to build a beautiful asphalt-surfaced parking lot." "Sweet-smelling sticky sap ran as the chips flew," mourned the World-Telegram.

On its editorial page, the *Post* raged ("Who else but Bob Moses would have been audacious enough to proceed in this fashion before the issue could even be debated before the City Council? . . . Who other than Moses would have been capable of so arrogantly saying, "The public be damned"?") and added a prediction: "Politicians live in awe of him and journalists treat him with . . . nervous reverence. . . . But we think the man has finally overreached himself. Before this is over, at least a few more city dignitaries (and editorial writers) may finally say out loud that Robert Moses can be wrong." And the *Post* was right. For the first time, its outrage was echoed in other editorial voices.

And the words didn't hurt nearly as much as the pictures.

As the trees had begun tumbling before the bulldozer, a well-dressed, elderly woman, the hair beneath her stylish little cloche white, had run up to the fence and the policemen and stood there crying, trying to wipe the tears from her face with a handkerchief balled up in her white-gloved hand. Beside her stood a much younger woman, one of the young mothers, with the hands in her white gloves clenched and on her face an expression in which was mingled sadness and indignation. As the two women stood there, oblivious to everything but the trees falling in front of them, a dozen photographers snapped their picture—and the next day those women were weeping on the front page of every newspaper in town except the Herald Tribune, in which they were weeping on the split page, and the Times,

which limited itself to views of the over-all scene. As the Newmans had run out the door that morning with their four-year-old son, David, Arnold Newman had, at the last moment turned back, snatched up the boy's toy rifle and carried it to the park, where he had handed it to him. ("We were in the business, you know," Augusta Newman explains, grinning.) Other men in the business also knew a great prop when they saw one—and the next day the "little soldier in the park war" was sitting pointing his gun, which seemed longer than he was, through the fence at the bulldozer while, beside the small, pathetic figure, a burly policeman stood looking studiously away from him with genuine shame on his face, across five full columns of the front page of the Journal-American.

And these were only two pictures—two out of a dozen with drama and pathos. The News alone used seven the next morning, one on page one, three on page three, three in the centerfold. Out at New York leapt scenes of a workman raising his ax next to a tree while three big policemen restrained one diminutive mother stretching her hands out toward the tree as if to protect it from the blade, of mothers turning away from the line of policemen in tears, of little boys peering through the fence slats at the bulldozer rooting at a tree while beside them a policeman stood sad-faced guard, of one dismembered tree, a sawn-through cross-section of its trunk very white in the picture, being loaded in sections onto a truck, of Stuart Constable striding past mothers and baby carriages with a self-satisfied little smirk on his face that, combined with the walrus mustache, made him look like nothing so much as the villain come to foreclose the mortgage in The Old Homestead—pictures worth not a thousand words but a million. And these pictures were flashed before the public not only in still life but in motion—on evening television newscasts on which they were, if possible, even more dramatic.

The outrage the press expressed was echoed by the public. Letters not by the hundreds but by the thousands poured into newspapers and the offices of public officials; on a single day, Mayor Wagner received close to four thousand. And if the public was outraged, they knew precisely whom they were outraged at. A single day's selection from a single newspaper shows the tone: in the *Journal-American* of April 26:

I have always admired Commissioner Moses, but he certainly pulled a boo-boo on that Central Park deal.

—Ex-Moses Fan

So the great Moses had to stoop to pulling a sneak attack at night to out-maneuver the embattled Central Park mothers! What's the matter, didn't he have the courage to face them in the daylight? Of all the low-down tricks, that's just about the lowest in my book.

—Mrs. C. Brown, Bronx

Those pictures of mothers weeping as they watched bulldozers tearing down beautiful trees and destroying a children's playground for, of all things, a parking lot for restaurant patrons, made me want to weep, too. Shame on you, Commissioner Moses!

-Disgusted

"Sneak!" "Shame!" "EX-Moses Fan!" Thirty years before, Robert Moses had leapt onto the front pages in a single bound—in stories that portrayed him as a fighter for parks, as a faithful, selfless public servant, a servant whose only interest lay in serving, as a hero. This portrait, painted in an instant, had survived for thirty years and had hardened into an image that had withstood, without so much as a crack, a dozen explosions that would have shattered the image of the ordinary public figure. Now, in a single day, over a single dispute -a dispute over a hollow in the ground and a few trees-that image had cracked. Not wide-open, of course. Large parts of it remained untouched; it was still an image untarnished by scandal, untainted by compromise; Robert Moses was still the public official uninterested in money, unwilling to truck with bureaucrats or truckle to politicians. But for the first time he had been portrayed to the public at large not as a defender but as a destroyer of parks and as an official interested not in serving the people but in imposing his wishes upon them. The image would never be whole again. Tuesday, April 24, 1956, the day that Robert Moses sent his troops into Central Park, was Robert Moses' Black Tuesday. For on it, he lost his most cherished asset: his reputation. The Moses Boom had lasted for thirty years. Now it was over.

Surveying the battlefield on Tuesday night, Moses may have had at least one consolation. In one respect, at least, the Battle of Central Park appeared to have ended as his battles usually ended. However Pyrrhic his victory, it was still victory: press and public might yell, but the trees were coming down; his bulldozers were in operation, and no one in the city government was going to stop them, a fact that became clear on Thursday when Wagner's press secretary said, "Commissioner Moses has the right to do what he is doing. We have the right to stand behind the Park Commissioner," and the City Council shunted a Stanley Isaacs resolution demanding action off to a committee which scheduled a hearing for the following week-by which time the trees would all be down and the grass would be covered with concrete. (Moses declined the committee's invitation to attend. No councilman but Isaacs seemed to feel there was anything wrong with that.) On the judicial front, there was a development on Thursday that may have been of interest to students of the law concerned with the influence of public opinion on the judicial process. In 1934, with Moses at the peak of his popularity and the voice of the press a chorus in his praise, the five justices of the Appellate Division had heard an appeal for an injunction in a case (Moses' move against Jimmy Walker's Casino) turning on precisely the same basic question, the extent of Moses' authority over physical changes in Central Park, and had held, quickly and unanimously, that that authority was absolute. In 1956, with the voice of the press a chorus against him, State Supreme Court Justice Benjamin J. Hecht granted the mothers' request for an injunction halting work pending a full hearing the next morning. Justice Samuel H. Hofstadter, who presided over this hearing (and who could hardly have been unfamiliar with the Casino case, since as a state

senator he had chaired the "Seabury Committee" that broke up the "Walkerian Court"), quoted poetry ("'The tree depicts divinest plan.' That is why I am taking cognizance of the trees") and paid a personal visit to the site—accompanied by half a hundred reporters, photographers and TV cameramen. And when he completed the visit, he continued the temporary injunction pending a hearing on whether or not to make it permanent—a hearing that would be held before another judge. But Moses knew what the law said; he had, after all, written it. He was confident that this setback was only temporary and would soon be ended. He told Corporation Counsel Peter Campbell Brown that he wanted the hearing scheduled immediately; if by any chance he lost, he said, he wanted the case appealed at once. To a newsman who asked if there was any possibility of a compromise, he replied: "No, no, nothing of that sort."

But even this consolation of victory was to be denied him. There were two points in the Tavern-on-the-Green battle on which the Commissioner was extremely vulnerable—and now Stanley Isaacs remembered one and discovered the other.

One was the resemblance between this fight and the one over the Casino. The mothers' attorney, Louis N. Field-probably at Isaacs' suggestionlooked up the Casino fight in the Times and found Moses' statements justifying his decision to tear down that old park landmark—that only restaurants with "reasonable" prices "within the reach of persons of average means" belong in public parks. The fact that Moses had never believed this argument—that he had used it because it was the only one available—did not matter. What mattered was that he had used it, and his words could be quoted against him. And when Field pointed out that at the Tavern a "simple hamburger and a glass of beer would cost \$4.50," the press took up his point eagerly: soon stories were informing the public about the Tavern's alternating "society" orchestras, about the fashion shows "attended by women in fur capes" while "several chauffeur-driven Cadillacs waited" at the door, and about the "non-economy prices" that only "well-to-do residents . . . could afford"; as one story put it: "Dinner and tip for two came to nearly \$23. There was another \$5 at the bar for two drinks each. It's not a place to go the day before pay day." And the press coverage produced the fallout that could be expected. Soon, for example, the Rev. Dr. Ralph Curry Walker, of the Madison Avenue Baptist Church, was inveighing against the Tavern in sermons, and announcing that he would ask the Protestant Council of the Five Baptist Associations to adopt a resolution opposing the parking lot, because it would tend to encourage the sale of intoxicating liquor in a park.

The second issue—discovered by Isaacs—was the nature of the financial arrangement between Moses' Park Department and the restaurant's owner, old Moses favorite Arnold Schleiffer. Schleiffer paid the city only 5 percent of his gross income to operate a restaurant in the renovated sheepfold. This was a pittance compared to the rent most restaurant owners paid their landlords—even if Schleiffer had paid it all.

And, Isaacs discovered, he hadn't.

Studying Schleiffer's contract, the councilman found a provision that

allowed the restaurateur to "improve" (repair and renovate) his restaurant and deduct the cost of the improvements from his rent payments. Checking with the Comptroller's office, he found that the restaurateur had made full use of that provision. In one four-year period, for example, the gross income of the Tavern-on-the-Green had been \$1,786,000. On that income, Schleiffer should have paid the city about \$90,000—a low enough figure. Instead, he spent more than \$80,000 on "improvements." On a gross income of \$1,786,000, he had paid the city only \$9,000—half of 1 percent. Out of every thousand dollars that he collected, he handed the city a lone five-dollar bill. Isaacs had heard rumors that Schleiffer, who had been operating on a shoestring when he was first taken into the Moses empire, was now a man of considerable wealth. After he saw those figures, the councilman had no trouble believing those rumors. Moses had made the concessionaire rich. And he had made him rich at the city's expense.

The arrangement with Schleiffer was a typical Moses arrangement, no different from scores in effect for more than twenty years with the favored concessionaires who were so integral a part of his empire—no different, in fact, from the others in effect with Schleiffer, who, unknown to Isaacs, operated half a dozen other park concessions. There was nothing illegal about it. Moses certainly was not making a dime from it; he even insisted, to Schleiffer's voluble dismay, on paying for every meal he ate there. He favored it partly because it allowed him to circumvent the city's budgetary requirements for capital improvements—and mainly because by giving the concessionaires huge profits he was in a position to ask them to throw huge parties, the lavish dinners and receptions that were an integral part of his way of power. At many of his most elaborate receptionsreceptions for guests in the hundreds or thousands—the Tavern-on-the-Green had provided not only plates, glasses, silverware, tablecloths, napkins and the finest of food and liquor but waiters and busboys and bartenders and chefs. The Board of Estimate would never have approved the expenditures for such parties, of course. It would have felt the city had more pressing needs that might be met with the thousands—tens of thousands—of dollars involved. But under this arrangement, the Board had nothing to say about them.

For more than twenty years, Moses had been boasting that he had ended all favoritism to concessionaires, and for more than twenty years, the press had been repeating and amplifying that boast, and ignoring Isaacs' attempts to present them with the facts that would have disproved it. But this time, when Isaacs talked, the press was listening. And when he provided facts on the Tavern-on-the-Green concession arrangement, reporters gobbled them up.

Suddenly there were editorials in a tone that had never been used in relation to Moses before. "At issue now is the Park Commissioner's latitude in dealing with concessionaires," the World-Telegram said. "The financial arrangements between the Tavern-on-the-Green and the city coffers need a lot more explaining than anyone has been willing to provide so far." PARK WINDFALL: TAVERN PAYS ONLY 1/3 RENT, headlines blared. PARK TAVERN

YIELDS CITY ONLY 2%; MOSES DUCKS COUNCIL HEARING. MOSES DROPS CURTAIN ON TAVERN PARK DEAL. "Windfall!" "Ducks!" "Deal!"—words that spelled scandal. The editorials, headlines—and stories—were oversimplified, so oversimplified as to be misleading. But whereas Moses had always used his image to make the press's bent for oversimplification work for him, now that bent was working against him. In the sense in which the public understood words like "windfall" and "deal"—illegalities, payoffs, bribes—there was no scandal in the Tavern-on-the-Green affair. But the press made it appear that there was. During more than thirty years of public service, the name of Robert Moses had never even been brushed by so much as the hint of scandal. But the hint of scandal was brushing it now.

He apparently did not realize at first the threat to his name in the controversy over the insignificant parking lot. He saw no need to change plans for a vacation; on the very morning on which Hofstadter issued his injunction, Moses was boarding the Italian luxury liner *Cristoforo Colombo* with Mary for a twenty-four-day trip to Spain. Reporters rushing to the dock to get his reaction found him smiling and relaxed. "We're just going to go right through with the action," he said. "We will pursue this to the last court." And those had, in fact, been his private instructions to Corporation Counsel Peter Campbell Brown.

But he realized it at last. His crossing was sunny, but, behind him, the storm he had expected to blow itself out raged harder than ever. For the press was being given a continuing supply of fresh meat on which to feed. Constable, trying as usual to out-Moses Moses, refused outright to provide reporters with detailed figures on the Tavern modernization program of which the parking lot was a part—a mistake that Moses would never have made, for not only were the figures public record, but they were available to the reporters in the City Comptroller's office. Reporters demanded that Wagner order the Park Department executive officer to release them—and a flustered Mayor did, telling his press secretary to deliver the order to Constable personally. The figures revealed nothing new, but the fact that the Mayor had ordered them released made a front-page story in the Times ("Mayor Wagner directed the Park Department yesterday to produce detailed figures . . ."). When they were produced, Wagner pointed out that "there was nothing to hide." But the press didn't concentrate on that statement. Reporters had pressed the Mayor as to whether the Board of Estimate would investigate the concession arrangement. Only after he had run out of evasions did he reply at all, and then he did so as circumspectly as possible: "I think we will discuss it. No doubt we will discuss it." But the press blew his words up into far more than they meant: a six-column headline across page one of the World-Telegram blared: MAYOR DEMANDS AIRING OF PARK TAVERN FINANCE. Such press coverage, and the continuing public response -letters poured in and were printed by editors day after day-coupled, possibly, with Moses' absence, encouraged politicians to make statements on the issue. And each statement made another meal for the press. One can almost see, day by day, the realization dawning among reporters and headline writers that even though the public official involved was Robert Moses, this story could be handled like any other story. Day by day, their pens grew sharper. Appearing on WCBS-TV's "Let's Find Out," Wagner was asked about the financial arrangement. "There is nothing illegal about it," the Mayor said: Moses had "clearly" been acting within his powers under the City Charter. He went out of his way to defend the Park Commissioner; the controversy had been "rather amusing," he said, because "he has been the toughest one, if you remember, about holding on to park space and trying to acquire more." When reporters pressed him as to the possibility of Board action on the arrangement, he gave the minimal response possible; the Board would "review" the possibility of requiring bidding on all city concession contracts. But what the headlines said the next day was: Moses' WINGS DUE FOR A CLIP and WAGNER AND CITY WEIGH CURB ON MOSES. Corporation Counsel Brown had asked Wagner if he should go ahead with the appeal of Hofstadter's decision as Moses had asked. Do whatever Moses wants, the Mayor told him-and the ensuing appeal provided still more fresh meat—as well as fresh evidence of the interaction of public and judicial opinion. In 1934, when another Corporation Counsel had appealed the decision of a lower-court judge, the five justices of the Appellate Division had agreed unanimously that while the powers that the law granted to Moses were far too broad, the law as it stood was perfectly clear: they had no choice but to overrule the lower court's decision. In all relevant respects, the law was the same—but this time the five justices unanimously upheld the lower court. (When Brown argued that the restaurant was open to anyone, one of the justices said: "You mean anyone who can afford it. I'm not complaining about my salary, but I can't afford \$5.85 steaks"-"MORE THAN I PAY," SAYS JUDGE.) The criticism began to spread from the one isolated Tavern incident to the legend as a whole: "What I have not seen commented on," said one letter writer in the World-Telegram, pointing out that in Van Cortlandt Park alone more than 150 acres had been devoted to traffic use, "is the general policy of the commissioner. . . . He seems to feel that as long as money can be saved by the use of park property, instead of condemning private land, any invasion of the parks is justified." Federal officials, long silent, released statements critical of the handling of Title I in New York. "The Battle of the Tavern-on-the-Green has already had a salutary effect on the city," the Post commented. "Men have begun to feel that it is safe to question Robert Moses." Moses had been receiving daily reports of the controversy in Spain. Returning—the circles under his eyes bigger and darker than when he had left three weeks before-he tried to smile for the photographers who had boarded a pilot's boat and crowded onto the Cristoforo Colombo as it was still steaming up the harbor toward its berth, posing him at the rail of the big liner, but the pictures showed a smile so forced that it was more of a grimace. Twenty-four days alone with the wife whose advice had helped him out of tight spots before had had some effect: he made an obvious effort to contain himself, greeting reporters genially and telling them, "I don't intend to get excited about this matter. There is an enormous acreage in Central Park and this discussion is all over one-half an acre and the taking down of four [sic] trees." When reporters asked him about the price of a steak at the Tavern, he said, "I don't know anything about the price of steaks at the Tavern," and, still containing himself, added, "I'm not going to let them get my goat or get disturbed about it. I have other things to do. I don't propose to get excited about it. I know something about New York and its people, and I'm sure they all appreciate what we have done in the city." Turning to the skyline the liner was moving past, he said, the face creaking into a smile again: "Isn't this a wonderful city?" But the questions continued, questions of the kind that no reporter had asked Robert Moses since the gubernatorial campaign of 1934. And the outcome now was the same as the outcome then. For twentyfour days, bile had been rising in his gorge. Now, in a rush, it spilled over. "Oh, who are these critics anyway?" he demanded. "Troublemakers. A small, noisy minority. You have Mr. Isaacs and the Citizens Union and these childless women howling about their non-existent children. Take a woman like Fannie Hurst. Where are all her children? I've never heard of her having any children." He had been making similar attacks for years, but never had they been handled as these were handled. Not only the Post -"It had not previously occurred to most Americans that they had to give birth before disputing Robert Moses"—but other newspapers treated his words as the outburst of a cranky old man, almost as a joke not worth taking seriously. His victims even got what so many past victims had been denied: a chance to reply. Watching Moses on television, the Newmans suffered over the insult to the elderly woman they had persuaded to join the fight. "I don't know how Fannie Hurst took it, but I took it very badly," Augusta Newman would say. "Perhaps she had always wanted children and couldn't have any . . ." When reporters called for comments, Arnold Newman called Moses' statement "a proper greeting from a man with a concrete mind and a non-existent heart," and his wife invited the Park Commissioner up to "visit my non-existent children . . . aged four and six"—and these rebuttals were played high, as was the fact that the request for an injunction had been brought in the name of Mrs. Norma Rosen, "mother of two." On reaching his office that afternoon, moreover, Moses must have known that worse was to come. Waiting on his desk was a copy of a memo from Brown to Wagner summarizing a private conference the Corporation Counsel had held with Field. According to the memorandum, at that conference the mothers' attorney had noted that he had not yet revealed in court many of Moses' more damaging statements made under oath in the Casino case, or the full details of Moses' arrangements with many park concessionaires. "In the event of a trial," Field had said, "he would be compelled to amend his complaint to raise these issues and to present data 'that would undoubtedly tend to perpetuate the publicity received in the press and might prompt challenge to other activities of Commissioner Moses.'" Moses knew what his statements, and those arrangements, were. For one thing, he had authorized Schleiffer to spend \$48,000 for a separate corridor for guests at plush private wedding parties. He must have known how his statements and arrangements would look in print. He did what he had never done—at least publicly—before. He backed down. Brown was anxious to drop the case. "Moses in the dock-that would be the number-one show in town no matter what else was playing," the Corporation Counsel would say years later. "What was number one in 1956 -My Fair Lady? My Fair Lady would be the number-two ticket if Moses was in the dock. And he was going to look bad. Everybody loves moms. You can't beat that. I had great respect for him, the greatest respect, for him and for his accomplishments. My regard for him was really without limits. And I didn't want to see that." To avoid that, Brown had worked out an arrangement under which Moses might save at least a little face, and by June 7 he had privately obtained Field's consent to it. The city would use a series of delaying tactics to keep the case from coming to trial, without announcing that it was being dropped, which would have been a formal admission of defeat. Then, after a suitable period of delay-long enough, hopefully, for the furor to die down a bit-Moses would announce that he had decided to give the mothers the play space they wanted by building another playground—on the site on which he had wanted to build the parking lot. This would enable Moses to avoid announcing that he was

of what was going on so that he would not press the case.

Walking over to Moses' office in the State Office Building at 270 Broadway, across City Hall Park from his own in the Municipal Building, Brown stopped by Wagner's for last-minute orders, but received only one: keep him out of it; the Mayor was almost frantically anxious to avoid any confrontation with his Park Commissioner. At 270 Broadway, Brown found that Wagner was not the only key figure in the dispute who wanted to keep involvement limited; Brown was accustomed to finding Moses surrounded by his retinue whenever he arrived at the Coordinator's office. This time, when he was ushered in, Moses was alone.

dropping the parking lot plan and simply leaving the park the way the mothers wanted it—and it would also enable him to avoid the charge that he had destroyed trees for no purpose at all. Field would be privately notified

"I just told him that a trial would be the kind of thing that wasn't going to do anyone any good," Brown recalls. "And I said if you do this [build the playground], it will show you're even a bigger man than people know you are." Then, according to a memo Brown sent Wagner the next day,

Commissioner Moses agreed that if the litigation should continue, a trial would be held and unfavorable publicity would result. . . . Commissioner Moses was agreeable to an adjournment to avoid an early trial, with the possibility of ultimately disposing of the case without further litigation.

Attempting to save face, Moses allowed no hint that the case was being dropped to sneak into the press. Instead, the Corporation Counsel's office kept requesting delays—none of which Field objected to. Then, six weeks later, on July 17, after an unannounced meeting in which Brown signed on behalf of the city a stipulation that the city would build the playground, and Field signed one that in that event the suit would be dropped,

Moses' aides distributed a press release announcing that he had decided to build a playground rather than a parking lot. The Tavern-on-the-Green fight—"the Battle of Central Park"—was over. The man who never retreated had retreated at last.

But he had not retreated in time.

The amount of face saved was infinitesimal. The press treated his announcement as the barely conditional surrender it was: MOSES SURRENDERS TO MOTHERS; MOSES LOSES HIS PARK BATTLE; MOSES YIELDS... MOTHERS WIN—over a *Post* editorial, ONE FOR OUR SIDE. The aura of invincibility, the aura that had been so important to him in the past, the aura that had lasted for thirty years, was gone, destroyed in a day just as the aura of infallibility had been destroyed.

And this was the least of what the Battle of Central Park cost Robert Moses.

He had allowed himself to remain too long in the glare of a spotlight strong enough to show him as he was. The city had finally gotten a good look at the man behind the legend. Part of the legend still remained unilluminated. Even after the Battle, Robert Moses was still, in the public consciousness, a man uninterested in money, a man who ignored bureaucrats and politicians, who was above political considerations. He was still the Man Who Got Things Done. Those elements of the Moses myth remained untouched.

But other elements had been destroyed. No one who had followed the Battle closely could believe any longer that Robert Moses was in public life solely to serve the public. It had been all too obvious that what he wanted was to be not the public's servant, but its master, to be able to impose his will on it.

That was one crack in the image. There were others. Moses' public appeal had always been based largely on his identification with the magic word "parks." In the public mind, he had always, first and foremost, been the Robert Moses of Sunken Meadow and Jones Beach, the fighter for and defender of open space and grass and trees and sun and surf and brine for urban masses. The halo placed on his head by the Timber Point fight thirty years before had now been knocked off.

He was, moreover, identified by the Tavern-on-the-Green fight with the bulldozer. By the mid-1950's, the bulldozer had quite specific connotations in the public mind. Now the name of Moses had those connotations, too.

The aura of infallibility was gone also. If Moses was the Man Who Got Things Done, implicit was the assumption that the things that he got done were things that *should* be gotten done. He had always been portrayed as a man who was right. Now, in a single, dramatic tableau, he had been shown to be utterly, unmistakably wrong.

Most important, the aura of incorruptibility was gone. It was gone unfairly, for nothing he had done for the Tavern-on-the-Green was illegal, and by the standards by which the public judges morality in politics, what he had done for the restaurant was only faintly immoral. But it was gone

nonetheless. The breath of scandal had tarnished this incorruptible public figure only slightly. But slightly was enough. His image had once dazzled even most of the reporters and editors hardest to dazzle. Now it no longer shone quite so brightly. The press could look at Robert Moses and at his operations and methods as they would look at the operations and methods of an ordinary public official.

And they looked.

"That Tavern-on-the-Green thing, that was such an insignificant thing," Sid Shapiro would say, years later, looking back on his idol's career. "It was such a meaningless little thing. I don't know to this day what the hell those people got so excited about.

"But it was-I don't know-it was just never the same after that."

The Great Statesman McKee is a synthetic character which never actually existed on sea or land, puffed up by the press... and now in the process of deflation. There is a large amount of unfairness to the individual in this process, but in the end it arrives at the truth.

-ROBERT MOSES, 1933

At about the time that the "Battle of Central Park" was ending, investigative reporter Gene Gleason of the World-Telegram and Sun was winding up his latest assignment. His editors, trying to think up a new one, asked him if he had anything in mind. Yes, he said, he had.

Robert Moses.

The Tavern-on-the-Green concession contract spelled immense profits for someone, Gleason explained. And that was just one contract; Moses in his many different governmental roles was the author of scores—hundreds, probably—of contracts. *World-Telegram* rewriteman Fred J. Cook recalls the reporter saying: "This is the most powerful SOB in the city. If this is so bad at the tip of the iceberg, there must be more."

The World-Telegram was not one of the New York dailies aggressively dedicated—from the publisher's office on down—to the idealization of the Coordinator. Moses' relationship with publisher Roy W. Howard was more cordial than close; his overwhelmingly favorable coverage in Howard's newspaper was more a function of his secret, favor-cemented relationship with the paper's veteran chief political reporter, Murray Davis. Still, because of the image of Moses the Incorruptible, prior to the Battle of Central Park, Gleason would have been told to go hunt up another idea. Now city editor Norton Mockridge told him to go ahead, and asked him in what field of Moses' far-flung operations he would like to begin looking.

A number of considerations motivated Gleason's reply: he would have liked to begin with the power of the public authorities, "but," Cook recalls, "it was recognized that that would be a terribly tough nut to crack," both because no one had done any groundwork on the authorities' place in government and society on which a reporter could draw and because "the records

were super-secret" and the ultimate documentation necessary for exposésthe records that confirm an investigator's hunches in black and white-would therefore be unattainable. Some groundwork had been done on Moses' Title I Slum Clearance Committee, however; Gleason's interest had been piqued some months before by a series on Manhattantown by the Post's Joe Kahn, who, happening to pass the renewal site, had seen in the middle of it a large parking lot, had begun wondering, "Why should they have a parking lot if they were going to build housing?," had dug out the clips on the 1954 Senate "Caspert hearings" and had written a series pointing up the fact that almost two years after those hearings—and more than four years after Moses had turned over the site to Caspert's "reliable" developers, who had been milking it ever since—the only development was the parking lot. Reading the two-year-old transcript of the Senate hearings, the hearings all but ignored by the New York press, Gleason realized, as Cook put it, that "it had the makings of a scandal; it was obvious." The investigator told Mockridge that he wanted to look into Title I.

His first look was not particularly searching or perceptive. He uncovered few facts not already in print somewhere else—in Kahn's series or in individual "human interest" features on the eviction of some impoverished tenant, in one-shot articles on the protests of the residents of Moses-threatened neighborhoods, in the relocation studies made by the Women's City Club and Lawrence Orton's "undercover" City Planning Commission unit.

But new facts were not necessary. Plenty to document the true shape of the Moses version of urban renewal were already available—had been available for years—in hearing transcripts or in club or commission pamphlets, rich nuggets of news just lying around waiting for someone to pick them up, put them together—show them not as isolated incidents but as part of a pattern—and print them.

And on July 30, 1956, just a month after the conclusion of the Battle of Central Park, the World-Telegram and Sun began printing them.

For all its omissions, this first series on Title I—researched by Gene Gleason and written by Fred J. Cook—painted a disturbing picture of the way New York City was being reshaped. It showed, as no one had previously shown, the relationship between the fact (previously written about in any real depth only by Kahn) that on many Title I sites no development had taken place in the four years since the city had handed them over to private interests and the fact (brought out in the Caspert hearings but never before documented in all its shocking details by anyone) that Moses' system financially encouraged failure to develop. It showed that the "slum clearance" program was clearing not just slums but healthy, pleasant residential and business sections—and was not building anything to replace them. If it did not contain the real "dynamite" that a little digging would have uncovered—the fact that Robert Moses, the man who allegedly refused to deal with politicians, had turned over a billion-dollar program to shady

politicians—it contained ample documentation of Cook's disturbing conclusion:

It is a system under which neighborhoods actually have deteriorated; it is a system under which the number of apartments, already inadequate, has been reduced for years to come. It is a system . . . beginning again the cycle of overcrowding and bad housing that creates slums.

Most importantly, while previous media coverage had almost invariably referred to Title I as the "city's" program, Cook made sure that readers understood it was the city's Slum Clearance Committee, Robert Moses, chairman. If Gleason and Cook did not disclose—because they did not understand—that Moses was not only the official in charge of Title I but the official in sole charge, that neither Mayor nor any other elected official of the city but he and he alone made all final decisions in regard to this program that was supposed to reshape the city—they nonetheless nailed the responsibility for Title I's failures to his door more firmly than it had ever been nailed before. Moses' name may still not have been in headlines about the failures, but at least—at last—it was in print.

If the editors of the World-Telegram and Sun realized the significance of the series, they concealed that realization well. Only one of its parts even made page one. And there were other indications that while the Moses image may have been tarnished, it still retained enough glitter to intimidate, that the editors were regretting having given Gleason the go-ahead on Robert Moses, that, having taken the plunge at last, they were trying to make an about-face in mid-air. Apprising Moses of the series' contents in advance, they gave the Coordinator space each day to attack—in a separate article—their own newspaper's stories. Moses' name was, moreover, conspicuous by its absence from the headlines over the Gleason-Cook revelations of faults in his program; it appeared only in the headlines over his own articles praising that program. Not only did the Telly's editorial writers not praise the series, they didn't even mention it.

But still, the most significant fact about the series was that it ran at all. Investigative reporters quickly become aware of a phenomenon of their profession: information so hard to come by when they are preparing to write their first story in a new field suddenly becomes plentiful as soon as that first story has appeared in print. Every city agency has its malcontents and its idealists and its malcontent-idealists—officials and aides and clerks and secretaries unhappy with the philosophy by which it is being run or the payoffs that are being made within it—who have been just waiting, for years, for the appearance of some forum in which their feelings can be expressed. When they realize that there is one at last—when they see that first story—they cannot get their information to its writer fast enough. Scores of city employees—men and women angry for personal or philosophical reasons at the inside workings of the Moses empire—and hundreds if not thousands of city residents whose homes or neighborhoods had been destroyed for his

Title I projects, and who then had watched vainly for years for the projects to be built, had been looking for such a forum. They had been desperate for one. They had almost given up their hopes of finding one. With the exception of the Post, they had never had one, and the Post had exposed his philosophy rather than his payoffs, the "scandals" on which so many officials and residents were convinced they had information. Now, with the appearance of the first Gleason-Cook series, these people were convinced that at last such a forum had appeared. And the two journalists' telephones began humming with calls—some anonymous, some not, some from private individuals, many from officials up to and including a liberal Bronx congressman—revealing the secrets of the Moses operation: the politicians who were the real interests behind his "front men" developers, the deals that had been made with city agencies to immunize those developers from health laws. Along with the calls came letters; out of one envelope fell a clipped-out newspaper ad for Pratt Institute Housing in Brooklyn with a name circled: "rental agent-Samuel Caspert." As soon as Gleason picked up the clipping, he realized what its sender was trying to tell him: Manhattantown was not the only development that Moses had turned over to that phony developer. On the day the series ended, Cook summarized future leads that should be dug into; Mockridge, passing the rewriteman's memo along to managing editor Richard Starnes, scribbled on it: "RS-Seems we've got some material for more stories—Shall we go ahead?" RS said yes, and Gleason was soon holding conferences with city officials.

With virtually only one exception—Hortense Gabel—even the most cooperative of these officials were wary of Moses' power. All interviews had to be completely off the record, of course; Gleason could not find a single official willing to be quoted. Because most were afraid to have the reporter seen in their offices and many, believing their phones were tapped, refused to talk to him over the telephone, Gleason met them, after dark, in their automobiles or in out-of-the-way bars. One was so terrified that a key memo might find its way into print and thereby reveal his cooperation that he read the document to the reporter-but refused to let him touch it. Without access to the records of the Slum Clearance Committee, information about the involvement of key politicians could not be documented, and therefore could not be printed. But there was plenty of other material that could be checked. Finding that the newspaper clipping tip on Pratt checked out, Gleason reported on August 28, 1956, that the key figures in that operation were also Caspert and Company, and that instead of developing the site they were milking it as they had Manhattantown. Returning to the "bombed-out" Brooklyn neighborhood in January 1957, Gleason came back with notes from which Cook wrote a story about a ninety-two-year-old woman huddling in blankets and an overcoat in an apartment in which a thermometer registered 40.5 degrees and about a mother who hadn't been able to give her two little boys a bath all winter because there hadn't been any hot water, about complaints being ignored not only by the developers but by the City Health Department: "We have yet to see an inspector around here." Some of the anonymous phone calls were coming from an aide in the City

Comptroller's office; in April, one call from this source informed Gleason that the Pratt "developers" weren't paying their real estate taxes to the city, hadn't been for almost three years and, now that they had milked the project for "millions," were planning to pull out and turn it back to the city. When Gleason ran this story, he had to include in it denials by Spargo and Lebwohl, speaking for Moses, but it was soon confirmed by an announcement from the developers. Then Gleason's informant told him that other Title I developers were also not paying taxes. Presenting himself in the Comptroller's office, Gleason demanded to see the tax records, and on April 24, 1957, working from Gleason's notes, Cook revealed that while developers had reaped fortunes from Title I projects, "the city is holding the bag... to the tune of nearly \$1 million in delinquent taxes and interest."

The play of these stories was still not big. To Gleason's and Cook's disgust, the articles on Pratt ran only in the Brooklyn edition. And a giant must still be treated as a giant: there had been headlines for almost a year now in the World-Telegram on Title I exposés but Moses' name was seldom in those headlines. His name was seldom in the stories, in fact, partly because of his success in letting Spargo, Lebwohl and Brooks speak for him; it was not until the fourteenth paragraph of the April 24 revelations on the tax delinquencies of the developers selected by the Slum Clearance Committee that the name of the chairman of that committee was mentioned. The city's other dailies were in general picking up the Gleason-Cook stories only to allow Wagner to deny them, the Mayor soothingly reassuring the public that everything was going along fine in Title I. Even in the Post, Title I revelations were few and far between. And as for the Times, bellwether and fashion setter for the city's press, in January 1957, the day after Gleason had revealed that tenants on the Pratt site were freezing in their apartments, and that the Health Department was doing nothing about it because of a secret agreement with the Slum Clearance Committee, the Times, practically apologizing for running the story at all ("It became an issue yesterday because of allegations in a newspaper"), stated straight-facedly that "the Department of Health reported yesterday that tenants awaiting relocation from slum-clearance sites had been getting more heat and better sanitary services as a result of its crackdown on five developers"; and repeated without qualification the following lie:

Robert Moses, chairman of the slum clearance committee, said his agency, which is in charge of Title I development, had made no deal with the Health Department. He said he had told all developers they must obey all city regulations

The *Times* did, on May 26, run one long story on Title I; the headline read: CITY LEADS NATION IN SLUM CLEARING.

Then there ensued a development more difficult for editors to play small. In June, Moses was informed by Spargo and Lebwohl that Manhattantown, Inc., whose tax arrears had now topped \$600,000 and were rising every day, had, because its officers had been siphoning out the money as fast as it came in, none available to pay the taxes any time in the foreseeable future; that there was also no money in sight to pay the interest on the \$2,000,000 mortgage Moses had persuaded the city to give them, let alone the amortization; that there was no money in sight to build any of the buildings the corporation had, more than five years before, contracted to build on the six-block site Moses had turned over to it—that, in short, there was no possibility at all that his "reliable bidders" could go ahead with the project. Moses had no choice. On June 11, the Slum Clearance Committee asked the Board of Estimate to institute foreclosure proceedings and take back the property in the name of the city so that it could be turned over to a new sponsor.

The move was made, through Corporation Counsel Peter Campbell Brown's office, as quietly as possible. The Times's initial play of the story was not designed to make any noise, either; the revelation that a corporation to which the city had turned over 338 buildings worth \$15,000,000 for only \$1,000,000, a corporation which didn't even bother to pay its city taxes, a corporation which had for five years been collecting rents on those buildings, was now saying that it could not develop the site after all, was found worthy by the Times's editors of five paragraphs on page fourteen. But the rest of the press was less discreet. Every charge Gleason and Cook had been making for so many months had turned out to be true, and most newspapers played it that way. As Cook was later to write: "The scandal that Moses and Wagner had kept denying for a year was there at last for everyone to see, confirmed in eight-column headlines." Gleason was even allowed a very personal moment of triumph. For months he had been trying in vain to obtain an interview with Wagner. Now Wagner had no choice but to hold a press conference on Title I, and Gene Gleason was there.

Every time the Mayor attempted to excuse the fiasco by blaming it all on the promoters, saying they had misled the city, Gleason would remind him that the facts had been in print—over and over again—for almost a full year; as Cook put it, "it had all been there in black and white for city officials to read, and they had done nothing except to deride the revelations. How did the Mayor explain that?" In the climactic moment:

"We were misled," Mayor Wagner confessed, unhappily.

"You mean to say you were conned for five years?" Gleason asked.

"Well, if you want to put it that way—yes, I guess you could say we were conned for five years," the Mayor acknowledged.

For a few days, the press focused on Title I—even the *Times* moved the story onto its front page—although in no newspaper was Moses linked directly and repeatedly with the scandal being unfolded. The *Times* article announcing that new sponsors were replacing the original "reliable bidders" of five years before on several Title I projects said: "The changing ownership . . . is regarded in building circles as the squeezing out from the slum

clearance program of some of the early promoters who had little construction know-how." Neither the Times nor any other paper asked why these "promoters" had been allowed into the program in the first place or who had allowed them in. Nonetheless, Gleason and Cook were confident that there would be at least curtailment of Moses' powers and quite possibly the Mayor's acceptance of the resignation that Moses was continually offering him. Deep as they had probed into corruption in city government, they had not probed deep enough; they still did not understand the fundamental reality of Moses' relations with that government and the venal machine of which that government was in crucial respects no more than an extension. They did not understand the extent to which the machine depended on Robert Moses, the extent to which he was its feeder, the supplier of the raw meat of patronage and contracts, of premiums and fees, of the whole stew of "honest graft" on which it battened. They did not understand that he was the only feeder possessed of enough food to satisfy its ravenous appetite. They did not understand that the machine needed Robert Moses, needed him at least as much as he needed it, that the county organizations of which the borough presidents (and in 1957, the Mayor) were only representatives could not do without him. The two reporters' expectation was not unreasonable. Ordinarily, the tainting of a city program with scandal and failure—scandal of immense proportions, failure five years in duration would result in at least curtailment of the powers of the mayoral subordinate heading that program, lest the public outcry turn against the Mayor. Their expectation was just based on a false premise: that Robert Moses was really the Mayor's subordinate. They did not understand that, as a matter of practical politics, the Mayor could not discipline, demote or remove Title I's administrator.

And so they were surprised at ensuing developments.

Moses—or, rather, Moses' spokesmen, Spargo, Lebwohl and Brooks; the Coordinator was keeping his lowest profile ever-announced that a new sponsor, William Zeckendorf's Webb & Knapp, Inc., was willing to take over all Manhattantown's debts, including its liabilities to the city, and build the project. Gleason and Cook realized that by changing owners without foreclosing on the old ones first, Moses was allowing Manhattantown, Inc., to escape from the project, which they had been milking for five years, with no financial penalties whatsoever. But the advantages for the city were undeniable, not only because of the avoidance of lengthy foreclosure proceedings but because, in obtaining Zeckendorf, the city was trading in a promoter for a genuine developer. And letting Manhattantown go scot free was something that was only to be expected; whatever the nature of the political muscle that had allowed the corporation to milk a sizable slum for five years while the city turned a blind eye to tax arrears, that muscle was certainly strong enough to keep the city from taking any genuine punitive action against it.

But then some of the details of the takeover arrangement to which Moses had agreed—and on which he had apparently sold the Mayor and the Board of Estimate—were leaked to light, not by Moses' tight-sealed Slum Clearance Committee, of course (as usual, that group deliberated in secret), but by City Hall.

Under the arrangement, Webb & Knapp would not merely insure Manhattantown's principals against any liability to the city. It would buy out the two principal stockholders—Seymour Millstein and Jack Ferman (Caspert having prudently sold out before the company's collapse)—for \$533,250, and put them on Webb & Knapp's payroll as "consultants" for five years at a fee of \$30,000 per year, a total of \$150,000 more. These two men, key figures in Manhattantown since its inception, were not merely being allowed, after five years of delay—five years during which they had made fortunes to slip quietly into the night without punishment. They were being paid hundreds of thousands of dollars to do so. And this money was not for all their stock. Under the Moses-approved arrangements, Ferman and Millstein would be given sizable stockholdings—between them a total of 32 percent—in Webb & Knapp's Manhattantown subsidiary. "The developers who hadn't developed," Cook wrote, "would be entitled in the future to nearly one-third of the profits" of the developer who did develop.\* The cast of characters in the Manhattantown story was, moreover, getting a significant addition. The Moses-approved contract did not, of course, contemplate any reduction in Democrat Samuel Rosenman's \$250,000 retainer. But it added another \$75,000 legal fee-to Daniel J. Riesner, president of the National Republican Club.

Outcry in the press—the afternoon press, primarily—apparently panicked the administration. During the executive session of the Board of Estimate at which the new contract was scheduled to be approved (Moses was not present; he was presiding at a Long Island ribbon cutting at which Herbert Bayard Swope "conferred" on him the title of "Doctor of Human Betterment"), reporters waiting outside the closed doors heard voices raised in argument for three and a half hours after Spargo, Lebwohl and Brooks went in. Emerging harried, Wagner said the Board had refused to okay the contract—and when, in several days, it was resubmitted, Riesner's fee had been cut in half and Ferman's consultantship had been eliminated entirely. Gleason and Cook were not impressed by the fact that Ferman was now going to be paid "only" \$300,000 and Riesner "only" \$37,500, particularly after Gleason drew from a perspiring Wagner an admission that he did not know what legal services—if any—Riesner had ever performed for Manhattantown. "This was plain trafficking . . . in huge square-block chunks of city real estate that had been made available to [favored insiders] at knock-down prices by the taxpayers' millions," Cook wrote. Attempting to put a better face on the arrangement, Wagner then declared with firm and earnest mien that Ferman and Millstein "will be out as sponsors of Title I projects"; they would, he said, never be allowed to benefit from the program in the future. "It sounded good if you didn't think," Cook was to recall, "but it seemed to reporters who did that the words, even as the Mayor uttered them, had a hollow ring. Weren't Ferman and Millstein going to benefit in the future?" Of course they were, to the tune

<sup>\*</sup> Ferman said he actually lost money.

of 32 percent.\* The developers who hadn't developed were still being rewarded for not developing; they were just not being rewarded as much.

And as the various arms of the city government quick-marched through the various steps necessary to the formalization of this arrangement, Gleason and Cook realized that the arrangement was a fait accompli, no matter how diligently they and their fellow journalists alerted the public to its injustices. The total result of their torturously obtained exposés would be to give to the milkers of Manhattantown a substantial extra helping of pure cream. As for Robert Moses, as the revelations faded away it became apparent that his powers over slum clearance were to be curtailed not a whit. Their exposés—and the resultant action—had, really, changed nothing, Cook was to write. "It disturbed no fundamental realities. Robert Moses still ran the show. Projects still reeked of political influence."

And if anyone had any doubt of the truth of Cook's observation, proof was not long in coming.

On the basis of its previous behavior, New York's press could not be expected to take much interest in the relocation details of Lincoln Center, the Title I project that best revealed the vast breadth of Moses' creative, cityshaping imagination. (With his first realization of the possibilities in Title I had come what he was later to describe as a "vision of a reborn West Side, marching north from Columbus Circle, and eventually spreading over the entire dismal and decayed West Side.") The Coliseum at the Circle had been the first encampment in that march, and no sooner had he built it than three coincidences had combined to show him the next leg. Sitting beside him on a dozen daises, Fordham president Father Laurence J. McGinley was repeatedly mentioning to him that the university desperately needed a midtown campus but was unable to afford midtown real estate prices; Ruth Baker Pratt and other opera lovers kept mentioning to him at dinner parties that forcing the Metropolitan Opera to perform in its ancient, inadequate building on Thirty-ninth Street was scandalous; and then he read in the papers one morning that Carnegie Hall had just formally notified the New York Philharmonic that its lease would not be renewed after 1958. From the three coincidences, his mind leapt to a grand conception: razing eighteen square blocks of slums stretching north from the Coliseum and rearing on their ruins a huge, glittering cultural center that would house—in grandeur-not only university, opera and Philharmonic but a dozen other related institutions. By 1957, his plan for the Lincoln Center for the Performing Arts included not only a four-square-block Fordham campus, a Philharmonic Hall and a new Metropolitan Opera House but a ballet center, a repertory theater, a high school of the performing arts, a library and museum of the performing arts, a new home for the famed Juilliard School

<sup>\*</sup> Wrote Cook: "Asked how he squared this indubitable fact with his new [statement], Mayor Wagner showed a little irritation and answered a bit peevishly: 'Well, I think Webb & Knapp was lucky to get that much interest [a 68 percent stockholding] in it. They have control.'"

of Music, and such related facilities as 4,400 units of housing, a public school and playground, an underground parking garage, a firehouse, a park with bandshell for outdoor concerts, a headquarters for the American Red Cross and the Fiorello H. La Guardia High School, "not to speak," as Moses put it, "of the neighboring offices of The New York Times." Newspapers were filled with artists' renderings of the magnificent cultural institutions to be erected where, for the most part, shabby tenements now stood; by its traditional standards, the press could not be expected to be very interested in the fact that 7,000 low-income families and 800 businesses were going to have to be displaced from the site—or in the charges being made that despite the fact that, as reformer I. D. Robbins put it, "there . . . are plenty of funds available" under various housing acts "to enable the planner to establish the first truly balanced neighborhood in New York," Moses was not making even a pretense of creating new homes for the families displaced; to replace the 7,000 lowincome apartments being destroyed, 4,400 new ones were being planned-4,000 of them luxury apartments.

By its traditional standards, however, the press might be expected to be interested in several financial facts about Lincoln Center: although Moses had received an offer from certain reputable housing developers of \$9.58 per square foot for land, he was selling the land to other, favored, developers for \$7.00 per square foot; while the city was acquiring the rest of the huge site by blanket condemnation proceedings, it had for some unexplained reason found it advisable to take the building at 70 Columbus Avenue, owned (under a trust established by Democratic moneyman and Charles Buckley intimate Joseph P. Kennedy) by Robert F. Kennedy and three of his sisters, Jean Kennedy Smith, Eunice Kennedy Shriver and Patricia Kennedy Lawford, not by condemnation but by purchase—for \$2,500,000, a price so high that while the land under the buildings adjacent to the one owned by the Kennedys was worth \$9.58 per square foot, the land under theirs became worth \$62.88 per square foot.

And those facts were to be brought to the press's attention—by public statements by a public official. For Housing and Home Finance Agency Administrator Albert M. Cole, over-all federal administrator of Title I, who had been chafing for years over Moses' administration of Title I in New York, Lincoln Center was the last straw. In April, Cole had attempted to go over Moses' head, refusing to provide funds for the giant cultural complex until the city's Mayor and Board of Estimate met with him to decide "broad policy questions" about Title I's future in New York. Wagner let him know who would decide that future: "Would suggest your representatives meet with Slum Clearance Committee," the Mayor telegrammed. The press had backed Moses, and Cole had been forced to back down. Now, with the Manhattantown mess spread on the record, Cole, believing that some of the glitter might have rubbed off the Moses legend, and that the time might be ripe to curtail his powers, decided to try again. He demanded new appraisals of the Lincoln Center real estate, by "independent" appraisers. And when Moses refused, Cole charged publicly that during the HHFA's ten-year existence "the agency has had more trouble with Mr. Robert Moses

than with any other single individual in all the cities of the United States." Title I's "many difficulties" in New York, he stated, were due to Moses' "unique method" for selecting housing sponsors, and his refusal to consider changing it. "It has been our documented and arduous experience that Mr. Moses misrepresents what the housing agency is doing or trying to do; he will not take the trouble to ascertain the facts; his obscurities are misleading, and he is inflexibly bent on following his own course whatever may be the outcome." Threatening to cut off all Title I aid to the city unless the method was changed, Cole again asked Wagner and the Board to intercede.

Moses' response was his usual offer to resign. "Any further statements on this subject will of course have to come from the Mayor," he said.

Wagner could not make his statement fast enough. Within an hour after Moses' offer to resign, the Mayor rejected it—in a late-afternoon press release which contained a political version of a Freudian slip as to his reasoning. "I have every confidence in Bob Moses. . . . Mr. Moses has made great contributions to the City of New York, and the people are well aware of this" (italics added). And proof of the political wisdom of the Mayor's course arrived with the morning papers, so much more important to a politician than the PM's. Wagner, by rushing, had just barely beaten them to the punch. Said the Herald Tribune:

True enough, the course of Title I slum clearance has been far from smooth. But such deficiencies ought to be a challenge to renewed effort at getting things done.

... New York has been committed from the beginning to the Bob Moses way of getting things done. . . . Washington should take notice that this city will not drop its construction pilot.

The New York Times responded to Cole's challenge with perhaps its clearest statement ever of its principal owner's feelings about Robert Moses.

Mr. Cole had better face the fact, as F.D.R. had to, that New York City is not going to drop Bob Moses as a public servant as long as he is willing to keep working for the city. La Guardia, O'Dwyer, Impellitteri, Wagner—none of them, as Mayor, could get along without him. To be sure, it's possible to find a mistake and a failure here and there. But look at the long, long record of successes. You don't bench a Babe Ruth because he strikes out once in a while. You consider the home runs and the batting average.

Maybe some other system would have worked better here, on urban renewal, than the "unique" New York system. That can only be a matter of speculation. What we do know is that, in general, New York's slum clearance progress has been unequalled and that, in the memory of living man on the New York scene, there has never been the equal of Bob Moses for getting things done. The Federal Government is not going to change Mr. Moses. It had better try to get along with him, for that is the way we will travel farthest fastest for the public good.

"Moses could push a button and the calls would pour in . . . ," Lutsky says. "Calls from the people who really mattered." Now Moses pushed that button. People in New York who had access directly to the White House used that access. Father McGinley and other key figures in the Catholic Arch-

diocese, key union leaders, key bankers, John D. Rockefeller 3d himself—all were on the phone to Washington. "The amount of pressure he put on was just unbelievable," Cole says. "He just murdered me in there." A "compromise" was hastily announced: the HHFA would accept a new appraisal—by Moses' own appraisers, the same men who had made the original appraisals. Meanwhile, the HHFA was "reserving" for Lincoln Center the \$27,000,000 for which Moses had asked.

It was a striking display of power. After the Lincoln Center episode, Gleason and Cook realized bitterly that Moses still had too much power to be touched by the federal government just as he had too much power to be touched by the city government. Even more bitter was their realization that, despite their attempts to shatter his image, it still endured, looming over New York almost as brightly as ever.

Part of the Moses myth—the part that portrayed the Park Commissioner as the park defender—had been cracked away by the Battle of Central Park. But the heart of the myth—the part that portrayed Moses as a man above politics and corruption—had not. Thirty years—and thousands upon thousands of newspaper articles—had gone into the creation of that myth. No single series of exposés in a single newspaper was going to destroy it, particularly not when that series, while revealing corruption in a Moses-run program, shied away from connecting that corruption with Moses personally. Gleason and Cook had hoped that other papers would pick up their revelations, repeat them, launch full-scale investigations of their own. Instead, when it came to the crunch, editorials had likened Robert Moses not to Boss Tweed but to Babe Ruth. Gleason and Cook knew that reporters on every paper in town wanted to dig into the Moses empire; they knew therefore that the decision not to dig-and to support Moses against the federal government-had been made at higher levels. Gleason and Cook could see that Moses' relationship with publishers and top editors was as close as ever. Not only had they been the recipients of his charm and his favors, they had been the key figures in making the Moses myth; they had a psychological vested interest in it. To dispatch investigators to dig into it would be an admission on their part that they had been wrong-had been wrong for years. That was not an admission that, in the absence of evidence a lot stronger than Gleason had been able to uncover, they were prepared to make. Some of them would permit their papers to print derogatory items about Moses if such items were breaking news; they would not allow their reporters to dig up such items and make them news. And without such digging beneath the surface of that image, the image would endure.

They may have chipped it, they realized, but it was still there.

Still they kept working—despite new obstacles.

been able to talk previously flew into rages at the sight of us—and later let us know, privately, that they had had to put on an act either because spies had been planted at their elbows or because they felt their offices were bugged, their phones tapped. The reporting half of this team sometimes found strange men

trailing after him when he made his rounds of the municipal offices; and the little guys in the scandal-packed bureaus—the men who had fed us with tips—asked us never to try to get in touch with them again, even at their homes at midnight. They all felt that their phones were tapped, that they were being watched.

They were working almost alone. "There was a time (and it lasted for almost three years) when we were virtually the only writers in New York focusing a critical spotlight on the [Title I] program," Cook was to write. And while he may have exaggerated the length of time involved, the rest of his statement was accurate. Only stripmining before, Gleason was digging deep now, his way lighted by a long line of anonymous tips, and he was beginning to unearth evidence that the city's whole political structure was tied in to Title I; photostats of canceled checks for Manhattantown's insurance premiums were placed in his hands, and Cook was thereupon able to write: "Manhattantown began with Sam Caspert in a political clubhouse. Caspert was a vice president of Robert Blaikie's Democratic Club on the Upper West Side. . . . Blaikie handled the insurance.\* . . . Many of the original investors, officers and employees of Manhattantown came out of Blaikie's political club." Residents of Gramercy Park protested that their neighborhood wasn't a slum; they couldn't understand why it had been designated for slum clearance—Gleason and Cook informed them that their own assemblyman, who in public was opposing the project, was in private the organizer of the real estate syndicate to whom Moses had awarded it, the revelation marking "the first time that an elected public official had been closely identified with Title I operations." And each tip about politics and corruption established more clearly the link between them and the living legend who was supposedly above them; by March 1958 the circle had tightened to a point at which Gleason and Cook were able to print that "Moses Man" William S. Lebwohl, the director of Moses' Slum Clearance Committee, was a stockholder in the Nassau Management Company, a real estate firm that had been set up on a shoestring just three years before and that during those three years it had collected, largely for tenant relocation on Moses' slum clearance and highway projects, fees totaling \$2,250,-000. They were able to print that a brochure published by the firm to lure potential investors into purchasing its stock contained endorsements not only by Lebwohl but by two other "Moses Men," Slum Clearance Committee assistant director Samuel Brooks and Housing Authority chairman Philip J. Cruise. And they were even able to reveal the ties between this corporate recipient of Moses' largesse and Tammany Hall: the firm was so generous a contributor to the Hall that its president had been invited by the Democratic State Committee to serve as vice chairman of the annual party dinner; all relocation contracts had been funneled through the City Real Estate Bureau, and that bureau was headed by a boutonniered front man for Carmine De Sapio, Percy Gale, Jr. And the two reporters acquired—and

<sup>\* &</sup>quot;But only, Blaikie says, because Caspert came to him in desperation after four other brokers had refused to help him."

printed—evidence of an even closer link between the man supposedly above politics and the archetypal politician: De Sapio representative Gale was a member of Moses' Slum Clearance Committee. But Gleason and Cook were the only reporters investigating Title I now. The *Post* faithfully reported the controversy—mostly tenant protests—over the various Title I sites, but was doing no original investigative work of its own. Gleason and Cook needed the prestigious AM's; having recanted their apostasy, however, these papers were showing no inclination whatsoever to repeat it. "All through this time," Cook says, "we were shooting our shots practically alone."

Enthusiasm for their work was not exactly rampant even on their own city desk. Their editors, unenthusiastic about making the World-Telegram a voice of dissent amid a chorus of praise, kept downplaying Moses' connection with the revelations of political influence, the connection that had to be made, clearly and strongly, if the public was, amid the complexities of Title I, to grasp it. In the Gleason-Cook article revealing that the Gramercy Park slum clearance project had been given to an assemblyman, for example, there was not a mention of who had given the assemblyman the project; Moses' name never appeared. Cook's paragraphs making what the rewriteman considered the key point of the Nassau Management scandals—that a Robert Moses aide had received immensely lucrative contracts from Robert Moses without competitive bidding-were edited out of his copy day after day. Lebwohl and Brooks were identified as "city officials" although what they really were were Moses officials. The contracts involved in the stories were described as "city contracts" although not the city but Moses had awarded them. "The guts were cut out of those stories," Cook says. Moreover, as Cook puts it, "the paper began to get more and more weary of this. There was no real pressure from [publisher] Howard. It was just 'Who the hell understands this stuff?' 'It's too goddamn complicated for the public to understand.' 'The public doesn't care.' In essence it was 'When are you guys gonna start doing something else?' I'd write a great story and I'd come in the next day and it'd be on page twenty-seven." The myth that surrounded Moses had been created on page one. It was on page one that the myth would have to be destroyed. Stories on page twenty-seven would never

Knowing this as they did, the two years following the Manhattantown exposé was a time of terrible frustration for Gene Gleason and Fred Cook. Moses' manipulations may have been on page twenty-seven; his triumphs were on page one. Despite revelations that would have destroyed the career of the typical public official, during these two years this public official rammed through, over the opposition of protesting neighborhoods, approval for new expressways, for two great new bridges, the Throgs Neck and the Verrazano, together with the neighborhood-destroying bridge approach routes he wanted; killed, over the efforts of Brooklyn Dodgers owner Walter O'Malley, plans for a City Sports Authority that might have kept the Dodgers and Giants in New York, and began happily to plan the housing projects that he had wanted on the sites of the Polo Grounds and Ebbets Field

all along; presided with a grim smile of triumph at ribbon cuttings marking the opening of the Harlem River Drive and a dozen other public works projects and sat in his limousine laughing at protesters burning him in effigy. It was during these years, in fact, that there were named after him two dams, two parkways, two parks and a bridge. While those two "guttersnipes" had been trying to blacken his name, it had, instead, been enshrined, forever, in concrete and steel and imperishable pieces of the public domain. "You know, once you get headlines, you get people coming to you," Cook says. "But when the paper itself begins to lose interest, doesn't play these things, the well sort of dries up, you know." It was drying up now. There were fewer and fewer tips. And Gleason and Cook were finding it harder and harder to check into what tips there were. "The desk was just tired and bored with it, and it wasn't making a public impact. The paper couldn't afford this investment in time indefinitely. Other things'd come up that they'd want us on. They couldn't spare us for Title I any more. By the time 1959 came around—the early winter of '59—we were pretty much dead."

To understand what Gleason and Cook did then, it is necessary to understand Gleason and Cook.

Gleason was Front Page. Big, brawny and boisterous, with a crooked Irish grin and a nose that must have been broken at least once in his thirty-two years, he looked the part—complete to the collar of his trench coat, which was invariably turned up. And he acted it. Hard-drinking, he talked loudly in barrooms about the big stories he was working on, the big men he was going to unmask; the sacred profession of journalism was to him the newspaper game, and he played it with a swagger. Cook could always tell when Gleason had dug up a good item. "He'd be licking his chops. He'd come in with a bounce and a grin and turn down the aisle and—'Hey, we got a good one today!'"

But Gene Gleason was driven by more than an urge for self-dramatization. Injustice, the little guy being trampled on by powers too big for him to fight—those were the stories that interested him. And in trying to pin them down and get them into print, as fellow World-Telegram staffer John Ferris wrote, "nothing halts him. Time is of no consequence: he will work 24 hours without thought of rest. Weather never daunts him: he has sloshed through rain, crawled through snow, braved bitter cold and sweated through oppressive heat. He is tough physically . . . and tough mentally." Covering a revolt by Transit Authority motormen against powerful TA union boss Mike Quill, he sensed that the motormen's headquarters was being bugged and warned them. Following his advice, they found a hidden microphone from which a wire led out the window; police summoned to the scene were conspicuously uninterested in discovering where the wire led; Gleason climbed out the window into a freezing, windy winter night to follow it over treacherous, ice-covered roofs himself. The ice forced him to give up that night, but the next day, when no one expected him, he was back, found policemen rolling up the wire and uncovered the fact that the Transit Authority had planted the bug with apparent police connivance. Wrote Ferris: "No one awes him. The story comes first." And when he couldn't get that story, when he had to watch injustice and do nothing about it, Gene Gleason took it personally. Wrote Murray Kempton: "He seemed to me out of another time, and I must confess that with him I was never sorry that I was so middle-aged. If I took things the way Gene Gleason did, I wouldn't sleep at night. He is a big fellow and a young one, but, when I first met him, the first thing I thought was here is a man who doesn't sleep at night."

Fred J. Cook kept his coat collars flat and his voice low. He was not a reporter but a rewriteman—the quintessential rewriteman, so accustomed to seeing the world through the earpiece of a telephone headset and notes taken by other men that he felt no need to see it for himself; not once during the more than three years during which he was writing about Manhattantown did he get into a subway and take the twenty-minute ride that would have enabled him to see Manhattantown; he never once visited the site of that development. "I was tied to the desk all the time . . . one story after another . . . the grind in there was such that at the end of the day I just wanted to get out of there." But he had the gift of turning notes into prose; during the fifteen years he had sat at a desk in the World-Telegram's rewrite bank—in 1959 he was forty-eight—Fred Cook had earned a reputation as a fast man with a good word. "Fred Cook was a master writer," Joe Kahn says. No reporter who saw Manhattantown described it nearly as well as Cook did without seeing it.

And you could be quiet and tied to a desk and still care. During the 1950's few journalists—even the most liberal—criticized the FBI; in a brilliant article for The Nation, Cook criticized the FBI. At the very height of the storm of invective against Alger Hiss, Cook wrote a book defending Alger Hiss. And by 1959, Cook had gotten to care quite deeply about Title I. Years later, questioned about his reasons for pursuing a story his editors would have been happy to see him drop, Cook, speaking in a low, calm voice, would tick off reasons founded in intellect—that he felt he had failed to make the public understand the importance of the issues involved, that other newspapers had failed in their responsibility by refusing to pick up their stories, that "we were sure there was a bigger scandal there, and we hated to see it die without further effort being made on the thing." "You mean there was no feeling of injustice involved on your part?" an interviewer would ask. "Yeah," Cook said, his voice betraying surprise that the other man should have not understood that. "I used to get these phone calls. I remember there was this druggist . . . He had a little store in the Washington Square area for twenty-five years, and all they were offering him was \$750 for his fixtures, and he had just paid \$15,000 for them, and when he tried to get to see someone about them, they wouldn't even listen to him. . . . There were dozens of calls like that. Dozens. They were too small fry for anyone to listen to them. I had this deep sense of injustice. I felt I knew Moses. The son of a bitch doesn't give a good goddamn about people, and he never did. The power brokers only care about power and who the hell

the little human beings are who get trampled in their game doesn't mean a hoot in hell to them." The measure of Cook's caring was the stories he had been writing. "The Telly had a real skeleton staff compared to the Times or the Trib," he would recall. "There were never enough guys on the rewrite bank, and you were always writing too much every day anyway. There were always other stories to do—breaking stories. They never wanted to give me any time for these. So I had to just keep them going myself, as a side effort so to speak."

Gleason and Cook possessed a full share of journalistic competitiveness. They had won awards for their stories, the "exclusives" they had dug up or written themselves, and they wanted more awards—and therefore more exclusives. Their paper, hitting the newsstands each afternoon within minutes of the *Post* and *Journal-American*, was part of a fierce three-way competition. But now, frustrated, knowing that, unless they did something drastic, "we were dead" as far as further exposures of Title I and Robert Moses were concerned, Gleason and Cook decided that the only way to keep it going was to share their hard-dug material—to give it to a competitor.

The choice of whom to give it to was an obvious one. Only the *Post* would give Gleason's information the play it deserved and invest the time and energy necessary to dig out its own, and there was a *Post* reporter, thirty-one-year-old William J. Haddad, who had already proven, in sensational exposés of City Building Department malpractice, that he possessed all Gleason's toughness and tenacity—in addition to the rare ability to discern patterns in seemingly unrelated facts, to identify the locus, not just the symptoms, of corruption.

Luckily, Haddad and Gleason were already friends. Gleason gave him information, and Haddad was soon writing stories based on it. The Post's stories had the effect on Gleason's city desk that he had known it would; his editors got interested in Title I again-even more so because Gleason was able to provide them with new leads, given him by Haddad. For Haddad quickly arrived at the same realization as Cook and Gleason. "We found out very early that it had to be a joint effort," he says. "It would never goit would rise and die in one paper—unless another paper picked it up. Then the TV would pick it up and then the political authorities would start to react—that was the carbohydrate that made it work." Soon, like two flamenco dancers spurring each other to wilder and wilder efforts, Haddad and Gleason were both helping and striving to outdo each other, their stories picking up and taking off from each other's and hitting harder and harder. As the tempo accelerated, moreover, the tipsters joined in again, a whole chorus of disgruntled bureaucrats who realized that this time there was a real chance that someone would print their information.

With its two competitors playing a scandal in banner headlines day after day, the third afternoon daily couldn't ignore it even if its top executives would have liked to: soon the *Journal-American* was printing Title I stories. Then, tentatively at first, then more and more boldly, readers were given a chance to read about Title I in the morning as well: the *Trib* was in.

But the pooling continued. In fact, there soon sprang up a circle at

whose heart were Haddad and Gleason but which included also Woody Klein of the Telly, the Journal-American's Marty Steadman, Peter Braestrup of the Herald Tribune—and a reporter from the underground, thirty-one-year-old Mary Perot Nichols; born a Philadelphia Main Line Wasp, she had moved to the East Village, begun crusading against Moses' proposed road through Washington Square Park, and had seen at a glance truths about Moses' whole method of operation that no one, seemingly, had understood before; her only journalistic connection was The Village Voice, but her observations in it were in many ways the most penetrating printed up to that time. These reporters would meet almost daily with Hortense Gabel, the one city official willing to openly help them. There was no one "important" at that table. "We were chipmunks," Hortense Gabel would recall. "[Moses] wouldn't even know who we were. There was no one important even in journalism." But they met daily, an underground movement, to force the city's journalistic establishment to do what they wanted.

In any assessment of their motivations, their age is important. Everyone in the circle was in his late twenties or early thirties. Recalling those days, years later, Haddad would say with a rueful smile: "Our motives? It was us against the world, us against them—the city, corruption, unmovable forces. We were young enough to breathe that kind of air then." Moreover, these young idealists hadn't even been born when Robert Moses had been on the front pages battling the robber barons to open Long Island to the masses. They had been only infants when Jones Beach was dedicated. In 1934, when Robert Moses had revitalized New York City's park system, to the city's cheers, Gleason had been only seven years old, Haddad six. The Robert Moses they knew was not the Robert Moses of the beautiful parks and the beautiful parkways—the parkways that were going to solve traffic problems. The Robert Moses they knew was the Robert Moses of the Tavern-on-the-Green and Manhattantown and those damned expressways he insisted on building even though everybody knew the city should be building subways instead, and for which he evicted thousands of helpless families; their impression of him was of an arrogant, dictatorial old man who, if not corrupt himself, had certainly managed to surround himself with a lot of corrupt people; like the Newmans, they were too young to have seen him as great; they saw him only as crotchety, old—and wrong; their perception of the Coordinator was unclouded by the preconceptions that had clouded reporters' eyes in the Twenties and Thirties, that he was the selfless, incorruptible, apolitical public servant sans peur et sans reproche. They saw him as he was.

The members of this journalistic cabal were also too young to be afraid. Those rare reporters of the Thirties and Forties who might have contemplated investigating the Moses empire had been very conscious of what had happened to reporters who had tried it before. But it had been a long time now since Robert Moses had broken a reporter, so long that Haddad and Gleason didn't even know that he ever had. Haddad, the spiritual heir of Milton Racusin, a *Herald Tribune* reporter who a decade earlier had investigated the Moses empire and written a series on it but had seen the series killed (and had been forced to personally apologize to Moses to boot), had never

even heard Racusin's name, much less the story of how his career had been wrecked.

If the age explanation was simple, the psychological was not. The motives that inspired these young reporters to take on "the most powerful SOB" in the city were as mixed as are the motives of all investigative reporters. One cannot talk to some of them for long without knowing that competitiveness was a spur, and in varying degrees there was present also at that table the desire for personal self-glorification, as well as the simple desire to drag down someone bigger than they. But, with most of them at least, so was a spur of a purer metal. "Can't somebody do something about the son of a bitch?" Gleason had shouted to Cook in frustration one day, and behind that shout was the outrage, the "sense of injustice," that had built up in him and in his partner over what Moses and the city's other power brokers were doing to "the little human beings . . . who get trampled in their game." "To me," Kahn says, "he was the personification of a certain arrogance against the average man. I don't think he ever cared about how many hearts he had to break to Get Things Done. And so I felt he had to be stopped. And there wasn't anyone else to stop him but us." If most young men of intelligence and drive are ambitious, not all of them put that intelligence and drive at the service of justice as had a Gene Gleason or a Bill Haddad. And they kept chipping away at the image of Robert Moses. After thirty years of building up that image, the press had begun chopping it down.

It was triumph as usual for Moses as 1959 opened. Having celebrated his seventieth birthday on a Christmas vacation in Barbados, he was greeted upon his return after New Year's by reporters trooping into his office to commemorate the occasion with interviews and stories reporting, as stories had reported on his sixtieth birthday and his sixty-fifth, that time had left no visible mark upon the man who the Long Island Press reiterated in 48-point Bodoni was still "Public Friend No. 1"—and by news that the success of the largest bond issue in history had been assured by a syndicate of the biggest investment bankers on Wall Street and that the three-quarters of a billion dollars that would bring his Niagara dream to fruition was therefore in hand. The submission of his reappointment as State Power Authority chairman touched off anger in the State Senate Chamber. "He has held every public official who has ever disagreed with him up to ridicule and scorn," one senator said. "I don't call that greatness, but a desire to do away with the democratic processes." Another said he had "never encountered an arrogance that could even approach that of the man we are asked to approve." But the lopsidedness of the margin by which the nomination was approved after such denunciation-50 to 6, with several of the senators who had joined in the denunciation casting their votes for confirmation—was proof that his power in Albany was as great as ever. And when, shortly after his return, he announced a series of huge new Title I projects, the announcements were greeted by the press with customary uncritical acclaim. All was as it had always been.

But by the beginning of February, Haddad was poking holes in those announcements ("Only twenty families out of 1,420 now living on the site of the Title I Gramercy Park slum clearance project will be able to afford the rents for the new housing units") and by the middle of February, Haddad had one of his own to make.

It had a hard-hitting lead ("Sidney J. Ungar is a man of position and property. . . . His property, a *Post* investigation revealed today, includes some of the city's worst slums") and a hard-hitting headline (THE SLUM PROPERTIES OF AN ANTI-SLUM LEADER) and plenty of facts to back them up. Ungar, Moses' choice for sponsor of the Riverside-Amsterdam urban renewal project, had indignantly and volubly denied the tip Haddad had gotten that he was a slumlord. "As a native New Yorker whose entire life has been devoted to the welfare of the people of the city, assuming leadership in philanthropic, religious and communal activities, I have for many years been fighting the real battle for improvement of housing," said his press release. He had threatened to sue for "several million dollars" if the *Post* said different; if Haddad didn't believe him, he said, the reporter could just go and look at his buildings. But Haddad had done what Ungar had evidently not expected him to do: he went and looked.

The quotes from Ungar's tenants ("My son Stephen-he's six-is in the hospital. A rat bit him between the eyes. I tried to fix the rat holes here, but the rats cut right through. I complained but no one did anything to fix them." "I have no water, hot or cold . . . the bathroom ceiling is falling down . . . rats all over the building . . . sewers backing up . . . dumbwaiter packed with garbage . . . cellar flooded") made great copy, and the pictures that confirmed the quotes made great pictures, and the fact that Robert Moses was giving a lucrative slum clearance project to a slumlord, and a politically well-connected slumlord at that (Haddad discovered, and printed, Ungar's financial backing of campaigns of both Wagner and Hulan Jack), made a great story, and the Post not only played it to the hilt but emphasized that it was a Post exclusive. And after that story had appeared, the World-Telegram's editors, afraid of falling behind in a story that had once been (exclusively) theirs, hastily reassigned Gleason to Title I, and he began coming up with revelations of his own. And soon the Post was picking up the Telly's stories and the Telly the Post's—and the editors of each paper, afraid that when the rival paper hit the stand that afternoon they would find themselves outplayed, were playing these revelations as editors had so seldom played revelations about Robert Moses' mistakes: big. And just in case their interest might slacken, Haddad and Gleason, while ostensibly for the benefit of their bosses—fiercely competing for new exclusives, were actually dividing them up, one and one. And by March, Joe Kahn was on the story, too, and Kahn was writing it as it should be written: in his leads, for the first time consistently in any paper, it was no longer "The Mayor's Slum Clearance Committee" but "Robert Moses' Slum Clearance Committee." Anxiously leafing through the paper every day to see where his latest story had been played, Haddad no longer had to leaf far; it was a rare day on which the latest Title I exposé was not the lead on page seven or five or

three. Day by day, the reporter watched Title I march off the inside pages of the Telly and the Journal and the Trib and onto the split pages and then onto page one. For generations, people thrown out of their homes by Robert Moses had been complaining about his ruthlessness. Now, at last, their complaints were in headlines: NOWHERE TO GO AND 30 DAYS TO GET THERE; "TO GET US OUT, THEY MOVE VERY QUICKLY." In 1953 the Women's City Club had issued reports disclosing that Moses had been shifting tenants in "slum clearance" sites to other buildings on the site like gypsies. The reports had been ignored. In 1954, a minority report of the City Planning Commission had made similar revelations. That report had been ignored. But now, in 1959, when J. Clarence Davies, Jr., new, independent head of the city's Real Estate Bureau, made the same report, it was CITY ADMITS SHIFTS FROM SLUMS TO SLUMS. "The press of the city, awake at last!" Fred Cook exulted, and he was right. The press had not been awakened by its owners (with the exception of Mrs. Schiff, of course) or by its top editors (with the exception of the Post's James Wechsler, of course). It had been awakened by its reporters, not by its famous reporters but by young unknown staff writers scheming together to force publishers and editors to do what the young men felt was their duty. But it was awake.

And then came an issue that required no reportorial scheming to become a big story, for it was too much of a natural—as much a natural as the Tavern-on-the-Green fight that had begun the deflation of the Moses image. This story had the same key setting as that fight (its locale was, in fact, just a short stroll away)—the sacred turf of Central Park; some headline writers were, in fact, to dub it "the Second Battle of Central Park." It had issues as simple and clear-cut, black and white, starkly dramatic. And if it did not have mothers and baby carriages, it had something almost as good.

W. Shakespeare.

## 44. Mustache and the Bard

MR. MOULDER. In connection with the work that you are doing at the present time, do you have the opportunity to inject into your plays or into the acting or the entertainment supervision which you have, any propaganda in any way which would influence others to be sympathetic with the Communist philosophy or the beliefs of communism?

MR. PAPIROFSKY. Sir, the plays we do are Shakespeare's plays. Shakespeare said, "To thine own self be true," and various other lines from Shakespeare can hardly be said to be subversive or influencing minds. I cannot control the writings of Shakespeare. . . .

MR. AHRENS. We are not concerned with the plays and you know we are not, and there is no suggestion here by this chairman or anyone else that Shakespeare was a Communist. That is ludicrous and absurd. That is the Commie line.

—HEARINGS OF THE HOUSE COMMITTEE ON UN-AMERICAN ACTIVITIES, JUNE 19, 1958, TESTIMONY OF JOSEPH PAPIROFSKY (PAPP)

WHAT PRESS AND PUBLIC were never told about the Second Battle of Central Park—and, because of the viciousness of the tactics Moses employed in his campaign to win it, would probably not have believed if they had been told—was that he did not want it and had no part in bringing it about. Of all the battles the old lion had fought, this was the one for which he had least stomach.

Robert Moses loved Shakespeare—he could recite whole scenes—and he loved the idea of presenting Shakespeare in Central Park. He had never met Joseph Papp, but he liked his style. When, in 1956, the boyish-looking CBS stage manager had asked for permission to present free productions of Shakespeare in the little amphitheater Moses had built in 1936 at Corlears Hook on the waterfront on the Lower East Side, Moses had asked around about him, and had been impressed with what he was told: slight, dark-haired Joe Papirofsky had grown up in Brooklyn's brawling

Williamsburg "surrounded by terror . . . I got beat up regularly . . ." and by poverty. To help his trunkmaker father pay the rent, he hauled garbage, hawked newspapers, sold pretzels, plucked chicken feathers and shined shoes ("I never thought I'd get the black out of my fingers"); his mother stuffed cardboard in the holes in his own. Then, at the age of twelve, he discovered the public library and Shakespeare, memorizing "vast tracts" of the plays. In the Navy during the war, he produced shows on the decks of aircraft carriers. Mustered out, he used the GI Bill to attend not college but the Actors Laboratory. While working in 1953 as a television stage manager (CBS-TV changed his name because Papirofsky was inconveniently long for the credits), he finally implemented an idea he had cherished for years: his life had been changed by books—free books, the only kind he could afford; poor people were as entitled to free theater as free books. Begging pittances from foundations to rent the basement of a church on the Lower East Side and pay the salaries of promising young actors, he began to put on Shakespearean plays, productions that, critics began to notice, were not only free but good. Moses had been suspicious that Papp might be trying to use the amphitheater as a money-making device, but from all reports Papp was genuine; when theater critic Walter Kerr advised him to charge admission because people appreciate more what they pay for, he had replied that "if I had had to pay . . . it is doubtful that I would have read the plays of Shakespeare," adding that it was because people had to pay for theater tickets that most New Yorkers had never seen a live professional production. "I believe," he said, "that it is of the utmost importance to have a public theater—a theater for everybody —yes, everybody; for those who can afford it and those who cannot." Moses would ordinarily have agreed with Kerr, but he had built the amphitheater because Al Smith had told him that, as a youth on the Lower East Side anxious to become an actor, he could never afford a theater ticket, and in the intervening twenty years no one had ever evinced the slightest interest in producing plays in it. No one, in fact, had ever evinced much interest in producing anything in it; the amphitheater generally stood empty and unused. Papp's proposal would put the structure at last to use—the use for which Moses had intended it. When Park Department executive officer Stuart Constable argued that poor people wouldn't appreciate Shakespeare and that the tough kids in the neighborhood would break up the show, Moses told Mustache: "Oh, let him have it." It was in fact Moses who gave Papp his first big boost; the big foundations would not consider even modest grants without an "expression of interest" from the Park Commissioner; Papp wrote the Commissioner asking for one and got it.

During that first season in that little amphitheater on the East River, two things had become apparent—one, the moment the lights went up and the spectators saw the façades of an Italian Renaissance town and, through an ingenious series of arches and doorways, an entire cast made an entrance in full regalia, and from the audience came a single, thrilled, breathless "Ahhh!"; the other when the reviews came in—one, Papp was right, the city's poor would appreciate Shakespeare; two, Papp's productions were good, considering the youth of his actors and the paucity of his budget,

amazingly good. Moses liked audacity—and, as the more perceptive of his aides had previously noticed, this man who had never had the son he so badly wanted often revealed a certain tenderness toward audacious young men. When, the following year, Papp had shown up at the Arsenal with a plan to bring the Bard to the whole city, via a mobile stage that would be transported from park to park on a truck scrounged from a boyhood chum, Moses' reaction to Constable's doubts had been a gruff: "Oh, let him do it." He had placed at Papp's disposal Park Department equipment and employees, a car and chauffeur. And when, in 1957, Papp had asked to present plays in Central Park, Moses had said okay, as long as he didn't charge admission and try to make money out of his shows.

If the Commissioner had doubts as to the wisdom of his decision, the reviews for the first Central Park season must have come down heavily on Papp's side. While holding down a full-time job as CBS stage manager, he had managed to produce, on a shoestring so frayed that he was sometimes opening productions without money on hand to pay for more than two performances (a gamble that always seemed to pay off in sufficient contributions for a full run), productions that were hailed as not just good but great; Papp's Central Park Romeo and Juliet, Kerr said, was "in many respects the best Romeo and Juliet I have ever seen." Papp was continually asking Moses to allow him to solicit voluntary contributions from the stage. Moses, through Constable, was continually refusing; Papp was continually making the solicitation anyway. Before one performance, a police sergeant told Papp, in a friendly way, "If you go on tonight, I'll have to pull you in." "Well, then, we'll go out on the street [Central Park West]," Papp said. "That's Park Department property, too," the sergeant said. "Across the street?" Papp asked. "And," the producer recalls, "he said that was all Park Department property, too, except the northwest corner." So Papp stationed men on that corner with big baskets. Watching Moses carefully to gauge the depth of his outrage at this defiance, Sid Shapiro was astonished to see a grin of delight sneak across RM's face. The Park Commissioner always politely refused Papp's invitations to attend—what was he supposed to do? Sit on a blanket?!?—but he had had himself driven past the scene and had been pleased with the spectators' orderliness. He had been very pleased with published reaction to the plays. After two years, New York was having a love affair with its Shakespeare Festival. A queue began to form three hours before the distribution of tickets began at 6:15 each evening; for every performance, it seemed, the lawn was filled, hundreds of standees crowded up to the fences in the back, and hundreds of other persons had to be turned away from what Horizon magazine called "This Blessed Plot, This Shakespeare in the Park." Observers noted that, as Horizon put it, "drawn from all classes and income groups, the Central Park spectators have an almost Elizabethan buoyancy and verve which are a startling contrast to the spiritual vacuity of Broadway's mink matrons and expense account aristocrats. . . . [They] come not out of duty but out of desire." And the spectators included people whose opinions Moses listened to; theatrical people like his neighbor Cornelia Otis Skinner and Port Authority chairman Howard S. Cullman were

telling him excitedly about the brilliance of the productions and of the unknown young actors and actresses whom Papp was discovering and persuading to work for forty dollars a week; Cullman was particularly impressed by a young fellow who had gotten his first big role in Papp's production of The Merchant of Venice, George C. Scott. Moses' favorite magazine, Saturday Review, pointed out that "because the . . . Festival performance drew 2,100 persons into the park each evening, a whole section of Central Park was transformed from a threatening jungle into a tranquil gathering place for healthy entertainment." At a party thrown for Papp and his cast by the Tavern-on-the-Green ("Schleiffer had gotten quite a business out of it," Papp notes), "Constable came over to me and said, 'Don't worry about next season. I talked to Mr. Moses about it and he's going to raise the money himself." And Moses fully intended to do so; shortly thereafter, Papp received a letter from the Commissioner whom he had never met saying that he had already contacted Cullman about forming a committee to raise the \$50,000 needed for another season, and that Papp could stop worrying. In March 1959, when Moses left for a three-week Barbados vacation, the producer believed that everything was set.

Papp and Constable had never gotten along well, however. Two men could hardly have been more dissimilar than the intense, idealistic, informal young producer and the paunchy, mustache-tugging executive so pompous that even mild Bob Wagner cursed when he mentioned his name. "Look at that title," Papp says. "Executive Officer. The whole thing was a military operation." Constable, for his part, had found Papp suspiciously liberal; he was unable to rid himself of the sneaking suspicion, based largely on the fact that Papp was Jewish, that the young producer was making money out of the Festival somehow. During Moses' vacation, the friction between their personalities produced sparks, and someone finally brought to Constable's attention a fact of which the Moses organization had not previously been aware: that the year before, testifying before the House Committee on Un-American Activities, Papp, while denying that he was presently a Communist, had refused to say whether he had ever been one, and had refused to identify friends who had. (He had been fired by CBS-TV for this stand, winning reinstatement only after a fight by the Radio and Television Directors Guild.)

To as passionate a Red hater as Stuart Constable, this revelation was enough to confirm all his suspicions—and he was sure it would have the same effect on RM. So sure was he, in fact, that, without checking with his absent boss, he took a step designed to drive Papp out of the park: in March—just three months before the Festival was to begin—he informed the producer that the Park Department could not afford the extra maintenance expense caused by the Shakespeare Festival, that the Festival would have to reimburse the Department for that expense and that, since the Festival had no funds with which it could guarantee reimbursement, it would be allowed to put on plays only if it charged admission. There would, Mustache said, be no more free Shakespeare in any city park.

None of the political commandments ingrained in Robert Moses by his Gamaliel had been ingrained more deeply than the rule stating that an

executive gives subordinates absolute loyalty and support, and Moses' belief in this particular commandment was reinforced by the iron bands of his personality. He had, to a remarkable degree, consciously made his "muchachos" extensions of himself: admitting to outsiders that one of them was wrong would be almost like admitting that he himself was wrong. Moreover, Moses' loyalty to the Moses Men—his refusal, no matter how harshly he might abuse them in private or in front of other members of his clique, to let anyone else criticize them at all-had become within the circles in which he moved an integral part of the Moses legend. Wagner aide Warren Moscow was to verbalize what everyone in city and state government believed: "Every [Moses] deputy could count on the absolute support of his boss, if his position was ever challenged by any outsider." That legend was terribly important to Moses. He could not bear to have it defaced. He was its prisoner. Just three months earlier, in the seventieth-birthday interviews of which he had taken advantage to refurbish it, he had made a point of saying that his men "know I'll always stand up and take the public beating for them." He could not now publicly overrule one of them.

On Moses' return from Barbados, Papp attempted to contact him to persuade him to overrule Constable. He would not come to the phone. Then Papp wrote him, asking about the \$50,000 he had promised to raise, money which would, Papp believed, enable him to reimburse the Park Department and make the season possible even under Constable's conditions. "I didn't hear from him and I didn't know about the money, and I began pressing," Papp recalls. "And finally I got a letter from him. Very terse. Very cavalier. No money. And we were planning a whole damn season on his word." A Papp letter pleading for a personal interview drew only a reply setting out for the record the "reasons" for the Park Department ruling: that fencing was necessary "for control" of crowds, that "adequate sanitary and dressing facilities" for the actors were needed and, most important, that the lawn on which the audience had sat must be paved over and seats provided because "we can't maintain grass, and serious erosion problems would soon face us unless the area is paved." Fifty thousand dollars wouldn't begin to meet the cost, Moses wrote; \$100,000 to \$150,000 would be needed. Certain that he could reason with Moses if he could only talk to him, Papp wrote again pleading for a face-to-face meeting. He had just read a Moses article on Irish playwright Sean O'Casey, Papp said, and "I feel certain that a genuine rapport can be established because I know that a man who can write with such depth of feeling about O'Casey will certainly understand the dilemma of our organization. I appeal to you to make it possible for this meeting to materialize." Moses replied that "this matter is entirely in the hands of Stuart Constable. . . ." Constable had mentioned an admission charge of a dollar; Papp said he would consider that price scale;\* Constable immediately replied that he had changed his mind: two dollars would be necessary. Only

<sup>\*</sup> Whether Papp would actually have charged admission will never be known; he and his board of directors were themselves reconsidering, and, during the period in which his letters and Constable's were crossing, the board went on record against any admission at all.

then did Papp grasp the fact that the real issue was not price but political philosophy—Constable was determined that no plays produced by a Red like Joe Papp would be allowed in the parks—and that there was no hope of intervention from Constable's boss.

If Constable's bloodhounds had been thorough, they would have told him that he was dealing with a fighter, one not ashamed of his past and not afraid to go to the public with a cause. Winning reinstatement at CBS hadn't been easy, after all; Papp had in fact been the first television figure fired as a result of the Un-American Activities Committee hearings ever to do so. Mustache was, moreover, dealing—as would become apparent in later years —with an opponent who knew exactly how to go to the public, with a public relations genius of the first magnitude, of Moses magnitude, in fact. Closing down his Shakespeare Festival for a full year would mean that the foundations which had been supporting it would lose the habit, and that the company of actors and production personnel he had so painfully brought and held together would fall apart. Even the meager momentum so tortuously built up in four years of effort would be lost; the New York Shakespeare Festival that was his dream might have to close forever. With his back against the wall, the young producer did what a young state park official with his dream menaced and his back against the wall had done thirty-five years before: he went to the press. And Joseph Papp went as Robert Moses had gone -not with a defense but with an attack.

"Erosion?" he told reporters. "Do people sitting and watching a play create more of an erosion problem than football, softball, soccer and similar sports encouraged in the parks at no cost to the players?" Perhaps, he said, "the park situation would be improved by more 'soil erosion' caused by the gathering of 2,000 people each night in an area where three years ago only squirrels dared to congregate." Papp spiced his attack—and emphasized what it was that Moses was depriving the city of—with a device that couldn't miss: quotes from the Bard. He won the heart of one reporter who asked why he had decided to fight Moses' ban instead of giving in, by asking her in return "Whether 'tis nobler in the mind to suffer the slings and arrows of outrageous fortune, or to take arms against a sea of troubles, and by opposing end them." Moses himself smiled when he read that—"He had never met him, but you could tell he was getting to like the guy," Shapiro says—but he stood up for Constable, although there was a decidedly unwonted gentleness in the press release in which he replied:

I have considerable respect for Mr. Papp's singleness of purpose, but can't adopt it as a principle and shall certainly not direct Mr. Constable to do so.

While the present park administration is in charge, Mr. Papp will have to put his enterprise on a workable basis or go elsewhere. I believe I have the Mayor's confidence. Mr. Constable has mine.

And when the young producer replied to this by attacking again—"To abandon our policy of free admissions would result in disenfranchising the very people we are anxious to serve"—he obtained the results the young Moses had once obtained: unanimously favorable reviews, the *Herald* 

Tribune calling Moses "short-sighted," the World-Telegram saying he was being "not merely inconsistent but capriciously unreasonable."

That did it. Moses may have been pulled into the fight reluctantly, but he knew he was in one now. And he fought with his customary enthusiasm—and methods. There was behind-the-scenes pressure put on officials whose support Moses needed by the men who he knew could put it on best (former Police Commissioner George V. McLaughlin was in a position to put it on Police Commissioner Stephen P. Kennedy; McLaughlin to Kennedy: "I am . . . taking the liberty of suggesting that you cooperate . . ."). There was the behind-the-scenes innuendo of the type that Jack Madigan believed had worked so well with Mrs. Sulzberger in the matter of Inwood Hill Park (Moses to Corporation Counsel Charles Tenney: "The place is dark and impossible to police adequately. How many couples on the grass came for Shakespeare and how many for other purposes I don't know"). And there was behind-the-scenes innuendo of the type that had worked so well on opponents during the 1940's.

Constable had never revealed the real reason for his hostility toward Papp, but Moses did. On April 23, 1959, a personal message from the Park Commissioner was delivered to Wagner and other key city officials by a Triborough messenger who had been instructed to place it in no one's hands but theirs: "As a result of recent experiences we have looked him up more carefully. He turns out to be a typical of the breed. He took the Fifth Amendment twelve times in June, 1958, before the House Un-American Activities Committee." And when behind-the-scenes innuendo did not achieve the desired result—several borough presidents were hinting at support for Papp—Moses moved it onto center stage.

It wasn't really erosion he was concerned about, he told reporters; it was "muggers, degenerates and pickpockets" preying on the audience. "This was a disorderly type of performance," impossible to police properly, he said. In his mail one morning he had found a three-page letter attacking Papp's "Communist" background and questioning his "probity" in accounting for the donations he collected. The letter contained no proof of these charges, and after Moses was through with it, it contained no signature either. He cut the signature off, turning it into an anonymous communication. Then he had copies made and mailed them to anyone—editors, officials, politicians—he thought might be interested, along with either a covering note stating ominously: "What he [the anonymous writer] says is true and there is a lot more to it," or a longer letter, such as another one to Corporation Counsel Tenney, stating: "Papp . . . adopts the old left wing technique of the agitator among artistic and so-called liberal groups, the big lie, etc. He was a communist of long-standing, affiliated with all the radicals, took the Fifth Amendment again and again, etc."

But it wasn't the 1940's any more. It was not even the early 1950's; the Senate hearings that had put an end to the McCarthy era had occurred in 1954. The tactics that had driven Stanley Isaacs out of his borough presidency and Rex Tugwell out of New York City backfired when the press learned about them now, especially after Constable, asked by Bill

Haddad if the letter did not smack of McCarthyism, replied: "What's wrong with McCarthy?" The letter produced the desired effect in the *Daily Mirror* and *Daily News* ("Back Big Bob, Mr. Mayor. Papp . . . has used the smear tactics you'd expect from one who took the Fifth Amendment") but nowhere else; the *Post*'s anger ("The letter . . . was the kind of reckless assault no man with any claim to decency would utilize") was echoed even by *Newsday* ("Perhaps . . . Jove has nodded").\*

And Papp kept attacking-eloquently.

## Dear Commissioner Moses:

... Perhaps in politics you have learned that by standing the truth on its head you can get enough people to believe a lie. . . You were responsible for circulating a letter questioning . . . my political background, and my probity in handling festival funds. . . .

The letter represented your second position for denying the Festival the use of Central Park. Your first was soil erosion. . . . In position number three, you called the operation a disorderly type of performance.

May I bring to your attention the remarks of a prominent critic who described the Central Park audiences this way, "the long patient line of people hoping to get into an amphitheatre that seats 2,300 is a humbling sight for anyone who believes in the theater. The alert attention of the people who do succeed in getting in chastens anyone familiar with sophisticated audiences." . . .

Every civic minded organization has . . . expressed the opinion that Shake-speare in the Parks has had a civilizing effect rather than a disorderly one. One letter writer said "Thank you for making the park safe again." To keep Shake-speare out of the park because certain elements "might prey on the audience" is to say that we discontinue all gatherings of people in the park and leave it as a haven for crime. It is my conviction that the more activity in the parks, the less lawlessness.

I think everyone is growing tired of the distortions, outright fabrications and anonymous allegations put out by your office. No new excuse you can conjure up will stop us from pressing for the right to continue the free presentation of Shakespeare in Central Park.

In the court that mattered most to Moses—the court of public opinion—the Second Battle of Central Park, like the first, was a battle he couldn't win. Like the first battle, the second leapt onto the front pages with the initial exchange of salvos, and stayed there, getting the full New York media spotlight, for weeks. And in that spotlight Moses was again portrayed as villain. Media oversimplification had made that first fight "Moses Against Mothers." It made this fight "Moses Against Shakespeare"—free Shakespeare at that. Free Festival dies—moses chases shakespeare off Park Grass; the Bard vs. the commissioner—those were the headlines. Papp

<sup>\*</sup> A Post editorial writer also contributed the following ditty, which ran as an editorial: My name is Robert Moses, I'm Commissioner of Parks;/On the subject of free Shakespeare I have a few remarks:/If the people of this city want this theater on my grass,/They'll have to pay two bucks a head to get a Moses pass./Now it is clearly logical that those who disagree/Are probably subversive, or at least a threat to me./ That's why I took it on myself to McCarthyize Joe Papp;/ Who questions my sagacity gets purged right off the map.

even borrowed a pose from Arnold Newman: during the Tavern-on-the-Green fight, the photographer had posed his son leaning sadly against a symbolic Central Park snow fence; Papp posed leaning sadly against one, too.

The press was questioning Moses' statements now—and Moses could not endure questioning. When he said the Festival had harbored crime, reporters checked, and wrote stories like the one that said, "You can't prove it by the police records," which showed that there had, during two summerlong Festival seasons, been only two crimes on or near its site. Not only editorial writers but theater critics attacked him, as did columnists from Hedda Hopper and Leonard Lyons to Eleanor Roosevelt, his ancient and bitter enemy writing, "I cannot help wishing that his decision might be changed." The erosion really involved in the fight now was the erosion of Moses' most priceless property, his name—the continuation and acceleration of the decay that the Tavern-on-the-Green fight had begun three years before; newspapers were filled with letters like the one that said: "As a child I could visualize poor Mr. Moses working valiantly with pick and shovel, long after everyone else had gone home to bed, just so that I could have a place to play. Today we have to be practical and make it pay." During the 1930's and 1940's, schoolchildren had attached thousands of signatures to memorials praising Moses; now a delegation from Lafayette High School, unable to get in to see Wagner, handed Warren Moscow a petition with 1,500 signatures asking the Mayor to overrule the Park Commissioner. During the 1930's and 1940's, high schools had voted Moses "the most admired New Yorker"; now, when Helen Hayes, appearing at a high school as a member of a panel on "Commissioner Moses' move to abolish free Shakespeare," said, "Abolish Mr. Moses!" the students cheered. There was a telling indication of how much he feared what was happening. During the most severe crises of Robert Moses' career—the period in the Order Number 129 fight when it seemed likely that he would lose, for example —his iron constitution had suddenly betrayed him; each time he had been hospitalized during his adult life, it had been during such a crisis. Now he was hospitalized again, for eleven days, with an illness whose precise nature was carefully concealed, but which was variously described as "a bad cold," "a respiratory infection," "viral pneumonia," "pleurisy" and "nervous exhaustion." Pictures of him leaving the hospital for further rest in Babylon show a man gaunt, hollow-cheeked, with sunken eyes and, under them, circles so dark they seemed almost bruises—a man who suddenly looked, for the first time, old.

Although it would still not reveal completely the true nature of the relative power positions of Robert Moses and Robert Wagner, the spotlight focused on the Second Battle of Central Park by the massed New York media would make that relationship clearer than it had ever been before, for the press, able at last to look critically at Robert Moses, now wanted his decision

reversed, and looked to the Mayor to do so—as was only natural, since it still conceived of Moses as the Mayor's subordinate.

Aiding in this development was a strategic decision of Papp's. "I made the Mayor responsible, really," the producer would recall, partly because "I think he would have liked to help us, he had been helpful to us before," primarily because "I felt that if only I could push the confrontation [between the Mayor and Moses], make the Mayor take responsibility," he would, because of the public opinion on the issue, have no choice but to overrule Moses. "Moses has had his say," he declared publicly. "The public has had theirs. It's now up to you, Mr. Mayor, to . . . insist that the Festival be permitted to operate free in Central Park . . ." Papp's plea was picked up by the press. "Is Bob Wagner or Bob Moses the Mayor of New York?" the Post demanded.

Luckily for Wagner, city hospital workers were on strike, and he was able to keep very busy trying to arrange a settlement. "He would rather be in the hospital strike twenty-four hours a day than this," Warren Moscow would recall. But the strike could not last forever, alas, and eventually the Mayor could no longer avoid reporters' queries.

Papp's intuition about Wagner was correct: the Mayor liked the idea of free Shakespeare in the park; he thought Moses' stand wholly unreasonable; he knew that the real source of the "Moses-Papp" feud was Constable, and, detesting Constable, he would have loved to overrule him. Moscow, always antagonistic to Moses, saw in this fight a chance to achieve a break between him and Wagner. But, Moscow came to realize, "Wagner was seriously handicapped" by his fear of the political power of the Catholic Church; if there was one man in the city sure to be influenced by Moses' innuendoes that Papp was a "left-winger," it was Francis Cardinal Spellman. And, of course, for both political and personal reasons it was wholly unfeasible for Wagner to fire Moses—and Moses made it clear that if the Mayor wanted to let Papp use Central Park, that was what he would have to do.

Infuriated that the Mayor would dare even contemplate intervening, Moses refused even to accept his telephone calls. Every time the Mayor's secretaries called Moses' office, they were told that the Park Commissioner was "in the field" and couldn't be reached.

Moses' stance subjected the Mayor to the largest doses of humiliation he had had to swallow since he had been caught between the press and Moses on Manhattantown three years before; not understanding that the Mayor couldn't fire his Park Commissioner, the press made it seem that he was afraid to. After the first day on which he had to confess that he had been unable to reach his appointee, Wagner promised reporters he would reach him the next day. When he was unable to, the *Post* addressed some advice to him: HOW TO FIND THE PARK COMMISSIONER. When he was still unable to the next day, the headlines began to read: MAYOR STILL SEEKS TO REACH MOSES. Even the *Times* found the spectacle worthy of a front-page story that began: "Mayor Wagner continued to search for Park Commis-

sioner Robert Moses yesterday. . . . At the end of the day, the Mayor's quest was still unrewarded." At a press conference the following morning, Wagner "appeared irritated when asked if he had got in touch with Mr. Moses. 'I have many more important things to worry about,' he said, adding on a note of impatience: 'I'll get in touch with Mr. Moses.'" He didn't, however, and the heat was taken off only by Moses' hospitalization, which for eleven days made the Mayor's dilemma less obvious. Leaving the hospital, however, Moses was asked if he intended to confer with Wagner about Papp. His reply consisted of one word: "No." It was not until more than a week later that Wagner was able to announce that Moses had agreed to meet him for lunch and to promise, in response to reporters' questioning, that he would certainly bring up the anonymous letter. At the lunch, held at a neutral site-ironically, the Players Club, founded by the great Shakespearean actor Edwin Booth-the two men dined alone (Moscow was told to wait outside in the Mayor's limousine) and the precise details of the conversation are unknown. But, says Moscow, "when he came back [to the limousine], it was perfectly obvious that he had never had a chance to open his mouth." (The Mayor would himself later admit that the anonymous letter had never been mentioned.) "Riding back in the car with him, I said, 'What are you going to do?'

"He said, 'I don't know.'

"I said, 'Well, you're not going to fire him, are you?"

"He said, 'No, I'm not.'

"I said, 'Then you have to support him.'

"He said, 'You say that?"

"I said he had no choice if he wasn't to look very weak indeed. So I drafted the statement. . . ." Released as fast as the Mayor could have it mimeographed, it said: "Although I can't approve of all the ways this has been handled, the only alternative would be to get a new Park Commissioner. I wouldn't consider that for a moment. He's too valuable a public servant."

The Mayor had surrendered, and that was the way the press played the story. MAYOR GIVES IN TO MOSES ULTIMATUM was the *Herald Tribune* headline. And the press did not minimize the loss to the city. Said the *News*: BILL SHAKESPEARE LOSES OUT AS WAGNER SUPPORTS MOSES. The Shakespeare Festival was eventually to be saved—and, as Moscow puts it, "we [the Wagner administration] were rescued"—only by the courts, and by certain of Moses' actions puzzling to those who believed he really wanted the Festival killed.

Turning from City Hall to the courthouse, Papp was rebuffed by a lower court, which reaffirmed the unconditionality of the Park Commissioner's power over parks, but the Appellate Division said he could not exercise it in "arbitrary and capricious" fashion, and ruled he had done so in the Papp case; the court declined to order Moses to issue a permit to the Festival but, in a somewhat ambiguous decision, said he must set "reasonable conditions" under which the Festival could reimburse the city for any expenses.

The Appellate Division ruling was a long way short of signaling defeat

for Moses, of course. He could have appealed, and precedent suggests he would have won an appeal: every time similar cases had climbed the judicial ladder past Supreme and Appellate courts to the Court of Appeals rung, where the clamor of popular opinion grew faint, that tribunal had ruled that the law—his law—was clear: his power in parks was absolute. Even had his appeal been denied, moreover, its filing alone would have insured that there would be no Festival in 1959 at least. It was, in fact, within Moses' power to kill the Festival for the year even without an appeal. The Appellate Division had left the definition of "reasonable conditions" up to him; it would have been simple for him to justify conditions—a cash bond to guarantee reimbursement of the \$100,000 to \$150,000 he had estimated the Festival cost the city, for example—impossible for a shoestring producer to meet.

Instead, Moses said he would "of course abide by the court's decision," and said \$20,000 would enable the performances to go on under "makeshift arrangements"—which, it turned out, would be almost precisely the same arrangements as had prevailed in the past. He himself asked the Board of Estimate to provide the funds so that Papp wouldn't have to raise them. The Board members, caught between Shakespeare and Spellman, tried to placate both sides, assailing Papp ("I want it clearly understood that in my vote for this item there is no approval of a creature named Papp," Jimmy Lyons said. "I hope that in the future Mr. Moses will find someone whose Americanism is unquestioned") but voting him the money, which, as it turned out, wasn't needed after all. Two philanthropists had previously offered Wagner donations of \$10,000 apiece, and the Mayor announced that this money would be used instead. Although rehearsals began immediately, there was time remaining for only one production instead of three, but that production, Julius Caesar, was hailed as a triumph, with theater critics taking care to remind their readers whom it was a triumph over. With several broad avenues of legal action still wide open before Moses, this man, who never overlooked even the narrowest legal byway, declined to pursue them and consigned himself to the humiliation of defeat.

One explanation is that Moses realized that his previous position was disastrous for his public image, and wanted the fight ended as soon as possible—at any cost. Another, advanced by Moscow, always quick to see the basest motives behind Moses' every action, is that Moses believed the \$20,000 figure was high enough to kill the Festival. According to this theory, Moses thought that Papp couldn't raise the money himself and believed that the Board of Estimate, afraid of Catholic reaction, wouldn't give it to him.

Not only the smallness of the figure Moses set but subsequent events do not support these theories, however. For Moses, who never forgave and never helped someone he considered his enemy, did not act that way with Joseph Papp. Needing trucks, lights and other heavy equipment for his production and unable to afford to buy or rent it, Papp asked the Park Department for it. Constable would have refused the request, but felt he'd better ask RM about it. "Oh, give it to him!" was the order. Moses would

not see Papp in person—fifteen years later he would still never have met him—but after the season closed, Papp got a letter from him. The young producer had always wanted a theater for his production; the letter said that the Park Department was going to build one for him.

Raising the money for that theater took three years—it might never have gotten built at all if publisher George Delacorte had not contributed \$150,000 of the necessary \$400,000—and Papp was never consulted to the extent he wished on design, but for Moses to allow someone outside his organization a say in design was too much to expect. The crucial point was that Robert Moses built a showcase for the talents of the young man whom he had publicly been fighting so viciously. Papp would not agree with this interpretation. Warren Moscow, who saw the fight from Wagner's angle, would not agree. But Sid Shapiro, the aide closest to Robert Moses, found it difficult to avoid the sneaking suspicion that the fight, into which, Shapiro knew, Moses had been dragged only by the hysteria of a subordinate, was one fight that RM was not at all sorry to lose. There were times, in fact, when Shapiro found himself wondering if RM had not wanted to lose it.

Whatever the reason it ended the way it did, his fight with Robert Moses was one of the best things that ever happened to Joe Papp. By making him the hero of the city's wealthy liberals, it gave him the money—both from private contributions and, after the Fifth Amendment flurry had faded from public consciousness, from a Wagner-prodded city government—to make free plays a major element of the city's cultural life. By 1965, when Wagner left office, the city was giving Papp \$420,000 a year, to add to \$1,900,000 he had received since the Moses fight from private sources, and Papp's troupes were playing the Bard not only in the Delacorte Amphitheater but in the schools and, from ingenious theaters-on-wheels, in streets and parks all over New York. Papp was to become so big that when, in 1972, Newsweek did a cover story on him, his fight with Moses thirteen years before was worth no more than a few lines. But that fight had been the turning point in Papp's career. "It was the greatest publicity the Festival could have had," he himself says. The Park Commissioner whom Joe Papp never met, who was identified in the public mind as his enemy, was also his greatest benefactor.

But the Second Battle of Central Park was not one of the best things that ever happened to Robert Moses.

Occurring at a time when Moses' reputation was trembling in the balance, it helped tip that balance against him, not only by again demonstrating his contempt for the public but by demonstrating, even more clearly than the First Battle of Central Park, his dominance over the Mayor who was supposedly his superior, his exemption from the normal democratic processes. Stanley Isaacs had been asked on television, "Do you feel that the Mayor allows Moses to have his own way?" "Does anyone doubt it?" the elderly councilman had replied. The public had never understood before which one of the two men was really boss. But after the daily barrage of

headlines dramatizing the Mayor's inability even to persuade his Park Commissioner to return a telephone call, the public understood now.

Moreover, the fight over Shakespeare in the Park made Moses a villain not only to the public but to the press. Constable's arrogance toward reporters, an arrogance they assumed had been ordered by Constable's boss, and in particular his ousting them bodily one day from the Arsenal—a public building—had infuriated not only the reporters involved but their editors, and it had given their publishers a new insight into the man who was so charming to them at dinner parties.

Before the Papp fight, press scrutiny of Robert Moses had been the work of Hortense Gabel's "chipmunks," a handful of young, mostly unknown reporters. There had still been many editors and reporters unwilling to face the falseness of the image they had helped create. There had still been newspapers—most notably, of course, the *Times*—that had shrunk back from the investigations into Title I. Those newspapers concerned with circulation and the headlines that could boost it understood better now that probing Moses' operations would yield headlines. Those newspapers concerned with their responsibility in a free society understood better now that Moses' operations not only could but should—must!—be scrutinized. It was during the Papp fight that the *Times* decided to do its own investigation of Title I, assigning hardworking Wayne Phillips to the task. The fight documented to the newspaper establishment what rebel reporters like Gleason and Cook and Haddad and Kahn had been trying to explain for years.

The media's new awareness was particularly significant because it is so strongly influenced by the images that are its own creation. For years, articles about Robert Moses had been researched, written and played in the light of the image of Robert Moses as hero. Now Robert Moses was a villain. If the press was to obtain information of the kind it had previously downplayed, now it would upplay it—mercilessly.

And a vast new store of that information quickly became available.

## 45. Off to the Fair

IN MAY 1959, New York's Citizens Union, the most prestigious organization of the civic reformers from whose ranks Robert Moses had sprung but who had long since disowned him, sent his Slum Clearance Committee a list of questions about Title I sponsors. And the press not only demanded answers but, when Moses supplied them, played them as no Moses statement had ever been played.

The tone of Moses' reply to the Union was one of indignation that such questions should be asked of him, and of assurance that his answers would lay all doubts to rest. But that was not the way it worked out. To a question asking who had proposed the Manhattantown and Pratt developments, for example, Moses replied by naming Congressman Franklin D. Roosevelt, Jr., and various civic organizations. In previous years, the press would have printed that statement at face value. Now several papers pointed out that, as the *Post* put it, the reply "makes no mention of the fact that Samuel Caspert, a Tammany politician, was the prime mover in" both "sponsoring groups." Moses' admission that the sponsors had been selected without competitive bidding, and that Caspert and Company had been given Pratt despite years of failure to produce at Manhattantown, was emphasized, not buried.

Such admissions sounded sinister enough, but it was Questions 5 and 6—or, rather, Moses' answers to those questions—that were to prove most damaging. Question 5 was: "Were written reports made to the Mayor's Slum Clearance Committee, reviewing the qualifications of the various bidders?" Question 6 was: "If written reports were made, are they in the files of the Slum Clearance Committee, and may they be inspected by responsible persons or groups"—in particular the press? Of course written reports were made, Moses replied indignantly. Of course they were in the committee's files. And of course they "may be inspected by responsible groups or persons." The Post's Haddad and Kahn and the Telly's Gleason promptly said they wanted to inspect them. They could hardly believe it; they were going at last to get a look at Robert Moses' files—the files no outsider had ever looked at before. "It was a great day, the day he said we could look at those files, I'll tell you that," Haddad says. "A great day!"

About the reasons for Moses' reply—one of his greatest tactical blunders—it is possible only to speculate.

He may simply have felt he had no choice. A mayoral-appointed com-

mittee was no public authority whose records could be concealed behind the excuse that they were the records of a private corporation: they were clearly public records, open to the public by law. The people demanding them were, moreover, people who would hold him to that law: the reformers had never hesitated to take him to court, and against their money and free legal talent his customary stalling and expense-incurring legal maneuvers would not work; eventually, no matter how many appeals were instituted, there would be a final legal decision that the records must be opened. If he fought, he would lose. Losing—and losing to the men he hated above all others—would, for this man who hated to lose, be bad enough. And a refusal to open his books would make it seem as if he had something to hide. For this man to whom his public image was so dear, such a stance would be intolerable.

He may simply not have known what was in those files. His preoccupation for almost five years with the massive power dams at Massena and Niagara had forced him to delegate authority for Title I far more than for any other enterprise; perhaps he was simply unaware of the extent to which Shanahan, Spargo and Lebwohl had made political pull or financial tie the main qualification for Title I sponsorships. And even if he did know—and he must have been aware of at least some of his aides' manipulations, he must have had *some* idea of what was in those files—he appears not to have fully realized how those manipulations would look to the public. Insulated from the public for decades, insulated moreover by a coterie to whom such manipulations were standard procedure, he appears not to have understood how deeply revelation of Title I's secret scorecard would shock the other, larger, world outside.

Had he time to think about the situation, this realization might have come to him, but he had less time to think than ever. With barely six weeks before the opening of the great Massena dam, which Queen Elizabeth II and Vice President Richard M. Nixon were scheduled to attend, the dam was far from completed; the contractors had to be driven, and a thousand last-minute details had to be overseen, and, with the pages of that huge calendar on the wall over his head falling inexorably one by one, Moses was working fourteen, sixteen, eighteen hours a day. Bill Chapin was to remember the last months before the Massena opening, with the telephone awakening him and his boss's voice rasping over it sometimes at midnight and sometimes at 5 A.M. and sometimes during the hours between, as months of unmitigated exhaustion, and Bill Chapin was fifty-five. Robert Moses was seventy. Incredibly, he showed not a sign of fatigue—he seemed as tireless at seventy as he had been at thirty. But there was little time to spare for administration of the city park system, where the Papp episode was a time-consuming irritant, for the eleven major state park expansion projects he was undertaking on Long Island, the four major expressways he was ramming through the city, the two great suspension bridges, one under way, the other in the final stages of planning—and certainly not for consideration of the best way to handle the impudent Citizens Union request.

He may simply have felt that he could conceal most of the scorecard.

Whether with or without his knowledge, the files would, when reporters got to see them, be stripped virtually clean of revealing material; he may have believed that it was possible for his aides to remove all of it. Moreover, reporters had investigated his operations before. In almost every case, his reputation had insured that editors had not given the reporters the time necessary to investigate in the necessary depth. In the rare cases in which reporters—such as Milton Racusin—had nonetheless uncovered some of his secrets, his influence with publishers had been sufficient to get the stories killed or toned down. He may have heard so much about investigations that he no longer worried about them. And, as would later become apparent, he had not realized the crucial change that had occurred: the tarnishing of his reputation to a point at which reporters would now be given the time to make their investigations thorough, and at which the facts they uncovered would now be examined and played by the same standards as facts revealed about other public officials, standards which placed a premium on sensationalism. For years every fact he fed the press had been grist for a mill whose end product was something sweet to him. He appears not to have realized until he saw the play of his replies to the Citizens Union that now any facts the press uncovered were going to be grist for a mill that could grind out only bitterness. And that realization came too late. He had already put himself on record publicly. He tried to draw back, stalling for two weeks while Triborough counsel Lebwohl told the reporters who telephoned every day that the records were still being "assembled." But with editorials reminding the public of his promise to make them available, he could not stall indefinitely. On May 29, 1959, Haddad and Kahn (Gleason apparently did not call that day), telephoning Lebwohl, were sullenly told to come ahead.

"Christ, we were just dying to get to see that stuff," Haddad recalls. "And of course there was nothing there."

After he and Kahn had arrived at the Triborough Authority's Randall's Island headquarters, Lebwohl kept them waiting "for hours" before sending a secretary to escort them into a small narrow room, walls painted institutional green, in the middle of which was a narrow conference table on which had been piled stacks of file folders. The moment when the two reporters flipped open the first one was historic; Robert Moses had been in public office for thirty-five years, and this was the first time that any reporter had gotten a look at his files. Historic but not significant. The folders were bulging with papers, but these papers turned out to be building plans, brochures, formal memoranda written for the record—in Haddad's words, "all pro forma stuff." They could find no information of significance—particularly not about the individuals in whom they were most interested: the sponsors. The next day, after being kept waiting for hours again, the two reporters asked Lebwohl where this information was, and were referred to Spargo. Haddad recalls their meeting with Triborough's general manager vividly—"that little shit sitting in that big office eating a bowl of soup" while feeding them only evasive answers. "What qualified a sponsor to become a sponsor—that was

all we were asking," Kahn recalls. "We didn't even suspect that a sponsor might be someone who had never built something and had no money or financial backing to build anything." But they could get no answers to their questions and the files yielded none and seemed likely to yield none. "They had stripped them completely," Haddad recalls.

"But for some reason," Kahn says, "we kept looking. It was just like police work. You write down every name you come across, and that night when you get back to the office, you check it in the clips, just in case you'll find something."

"We were tilting at windmills," Haddad says, and the accuracy of the image seems demonstrated by their mount. The giants they were trying to pull down from their castles—Moses, Shanahan, Rosenman, Goldwater—had big black Cadillacs; so did Haddad—a Cadillac he had bought for twenty-two dollars.

"It was ancient," the young reporter would recall. The windows rolled up and down-sometimes; generally they remained firmly in whichever position they happened to be. The Post copy girls whom Haddad squired became accustomed to getting very wet in the rain. The window problem was, however, insignificant compared to the overheating problem; recalling the Title I investigation years later, Joe Kahn recalls more vividly than the stories he wrote the difficulty in keeping the engine cool while researching them. The trip back downtown to the Post office from Randall's Island was too far for the vehicle, which "just managed to make it to Sixty-fourth Street," where there was a gas station at which they could obtain enough water to keep the engine cool as far as the Downtown Athletic Club, whose friendly doorman would run inside for water whenever he saw them coming. The overheating problem was complicated by the hood problem, which resembled the window problem: it frequently wouldn't go up. Once, carried away by enthusiasm, they tried to make it all the way back to their office without stopping for water. The car boiled over in the Battery Park underpass, and the hood stuck fast. Passing motorists gaped as the two reporters tried to cool off the car by throwing pails of water on the closed hood. Every morning they would pull up to Triborough headquarters in that sputtering car-apprehensive; "it looked like a military fortress, and they had guards all around"—and alight, looking in their shabby sports jackets like the \$140-a-week reporters they were (in deference to their surroundings, Haddad wore a tie, but this attempt at respectability was somewhat undermined by his inability to button his collars; he had bought the wrong size shirts), and walk inside, to sit waiting for hours for Lebwohl's pleasure and then be shown into the narrow little room by a flunky who made no attempt to conceal his contempt, to begin hours of plowing through meaningless documents, hoping that somewhere in those files they would find information enabling them to prove that the Moses image was a false image.

And then one day they found it.

It was in one of the file folders relating to a Title I project which had received almost no publicity at all: one called "Mid-Harlem." In that

folder, apparently overlooked by whoever had stripped it, was a letter ("just this long," Kahn would recall, holding up his fingers an inch or two apart) from a man applying to be one of the sponsors, together with a note indicating that his application had been approved. The man's name was Louis I. Pokrass. Haddad seemed to recall hearing that name during his days with the Kefauver Crime Committee, but he couldn't recall in what connection. Back in the office that night, however, he pulled Pokrass' clip file—and "as soon as I saw those clips, I said, 'Holy Christ! Joe! Look at this!' "'This" was clips on Kefauver Committee hearings in which it had been disclosed that in his previous business dealings Louis I. Pokrass had had as secret partners underworld kingpins Frank Costello, Meyer Lansky and Joe Adonis.

"That was the one that did it," Kahn says. "Pokrass was the guy that crumbled him. When organized crime got into the picture, that blew the lid off." Frank Costello was a name that, to the average newspaper reader, threw off reverberations as powerful in one context as Robert Moses did in another. And the story in which this Costello associate figured was as simple and dramatic as most previous slum clearance stories had been complicated and obscure. With the first Post headline on June 30, 1959, on the new revelation -- COSTELLO PAL GOT TITLE I DEAL-Moses' urban renewal program was scandal in a way in which, despite three years of previous exposés, it had never been scandal before. Overlooked by Moses' file strippers among the bland minutes and reassuring brochures in the "Mid-Harlem" file folders had been another single sheet of paper—not even a full-size sheet of paper but a handwritten note-containing dynamite enough not merely to chip but to blast a substantial hole in the Moses image. The handwriting on the note was Tom Shanahan's, and what the note said was that he had been made aware of a "delicate situation" involving Pokrass-and the date on the note was several weeks before the Slum Clearance Committee had approved Pokrass' application. Gleason either came across that piece of note paper himself or was fed it by Haddad, and with the first World-Telegram headline the following day—BANKER HAD WARNING ON COSTELLO PAL—the scandal had an added, significant dimension: not only had Robert Moses' committee approved an associate of racketeers as a slum clearance sponsor, it had done so although Moses' key colleague on the committee had known he was an associate of racketeers.

Of all the charges that might have "crumbled" the image of Robert Moses, none could have been more unfair. He had never met Pokrass; if he had ever heard his name, he did not recall it. He certainly had no idea that one of his sponsors had had underworld connections. To him, the Mid-Harlem sponsors were "Colonel Bennett's group"; it was represented by the former judge, State Attorney General, Democratic gubernatorial candidate and, as chairman of the City Planning Commission, his obedient lackey, Colonel John J. Bennett. Moses had left the investigation of the syndicate behind Bennett entirely to Shanahan—Mid-Harlem was one of the projects over which he had delegated the banker complete authority. But

Kahn was right. By giving the Title I program underworld overtones, the Pokrass story was the one that crumbled him.

Not only reporters but other persons hostile to the Coordinator suddenly, for the first time, began trying to find other evidences of underworld "infiltration" of Title I, and an aide in the Comptroller's office soon found one: in the payroll records filed in the office by the Washington Square Village Corporation, he told Gleason, there appeared, as a temporary night watchman, the name of Vincent (the Chin) Gigante, a former boxer who had been accused—and then acquitted—of being the "hit man" in a "contract" put out on Costello by other Mafia figures; he had, a year before, ambushed the underworld overlord in his apartment-house lobby, but had only grazed him with a pistol shot. REVEAL THUG HELD TITLE I VILLAGE JOB, the World-Telegram blared.

"Could any charge be more grotesque?" Moses demanded. Hardly. The Chin had not been hired by the Title I committee. He had not been hired by the sponsor to whom the committee had awarded the "Village job." He had not even been hired by the contractor to whom the sponsor had awarded the construction work on the job—not that the identity of men on the contractor's payroll would have been scrutinized by the sponsor anyway, much less by the committee. He had been hired by one of the contractor's subcontractors. "The inference is that this committee should not have permitted his employment and, having stood idly by while this atrocity went on, is guilty of association with mysterious gangsters," Moses said. "This committee has no responsibility for the help employed by contractors for sponsors and could not conceivably have . . . And in any event, as a matter of fairness and decency, is Mr. Gigante, who was acquitted of failure to take good aim at Mr. Costello, when out of jail not entitled to find work of some sort to keep him out of further mischief?" Such witty ridicule would once have turned back any charge; the reporter responsible would have been hastily reassigned. Now, he was reinforced. A whole platoon of investigative reporters rode out on the slum clearance trail.

The trail was marked by anonymous tips and by other scattered pieces of information overlooked in Moses' files—marked clearly enough so that these reporters could see now where it was really leading. Abandoning side trips like the search for underworld connections, they stuck now on the main road that led them at last to the truly significant secret behind Title I, the secret that would destroy the heart of the Moses legend.

Haddad led the pack, for he had the gift of seeing patterns, and he saw them in the seemingly innocuous material—minutes, memos, letters, notes—scattered before him on the narrow table in the little room. One, for example, was woven around press agents. Reading through endless reams of documents, Haddad noticed that two names kept reappearing in files relating to different projects: William J. Donoghue and Sydney S. Baron. He didn't know who Donoghue was, but Kahn, with his encyclopedic knowledge of city politics, did: a press secretary for both O'Dwyer and Impellitteri and a key Tammany insider. And everyone knew who Baron was, of course:

Carmine De Sapio's personal publicist. Pulling up his tie as far as it would go to conceal his opened shirt collar, Haddad walked with Kahn onto the ankle-deep carpets of the silken-draperied, sliding-paneled room—adorned with just one photograph: that of a man with dark-tinted glasses—that was Sydney Baron's office, and wrung from him an admission that he had formed an "association" of Title I sponsors that paid him \$1,500 a month. He swore that he had "never received a fee" from individual sponsors, but federal audits—leaked to Haddad now by Walter Fried, who had chafed so long at his inability to curb Moses—revealed that he lied. And one sponsor told the reporters: "It would be fantastic to tell you we hired Baron for any other reason than his influence." And Kahn and Haddad made clear where that influence came from, identifying Baron as "Tammany's and Carmine De Sapio's press chief." The same story was repeated with Donoghue.

Gleason, thundering hard at Haddad's heels, had received a tip about a ninety-two-acre tract at Clason Point on Long Island Sound in the Bronx that had been selected for a slum clearance project to be called "Soundview" even though it was not a slum at all but a community of 245 neat, well-tended bungalows: the tipster said that Moses' Slum Clearance Committee had agreed to purchase the tract for a million dollars although its present owners had recently purchased it for half a million—thereby giving those owners a quick half-million-dollar profit before they even began to build the "high-rent" apartments that the committee had approved for the site. According to the tipster, the land was held in the name of a "dummy" owner, and it would be worth Gleason's while to find out who the real owner was. The deeds on file in the Bronx County Courthouse showed the owner to be a Miss Helen Nugent, who Gleason guessed at once was a secretary in some lawyer's office.

But whose office? Who was Miss Nugent a dummy for? Who was making the half million—and the millions more that were to come? Gleason learned that her employer was the law firm of Goldwater & Flynn. Goldwater denied that he had any financial interest in the project, maintaining he was only the attorney for the real owners. But he refused to reveal their identity, and the *Telly*'s head (played above a picture of neat bungalows captioned "This Is a Slum?") noted that the "MYSTERY WOMAN'S" BOSS was "DEM BIGWIG" Goldwater, and under that head, Fred Cook, writing the hell out of the story, said that the Soundview "deal" represented "a clear \$500,000 windfall to political insiders," and soon he and other newspapers were noting that Ed Flynn's old partner was still a power in Bronx politics under Flynn successor Charles Buckley—and that he and his son represented not only Soundview but two other controversial Title I projects.

"Influence." "Dem Bigwig." "Tammany." "Political Insiders." De Sapio. Buckley. The Boss of Manhattan and the Boss of the Bronx were somehow involved—deeply involved—in a Moses program. Following the trail left by those overlooked documents in Moses' files, the hard-riding reporters had come at last upon the secret that would destroy the heart of the Moses

legend: the fact that this man who supposedly scorned politicians had allowed the top echelon of New York's politicians to reap fortunes from his Title I program. And they led their readers to the secret—with storics that, linking Moses to politicians, were as accurate as earlier stories linking him to the underworld had been unfair. A letter to the *Times* showed that at least one reader was grasping the significance of these revelations. It was a letter such as had never before been printed about Robert Moses. "Robert Moses," the letter said, "is a boss like De Sapio himself."

And of course the deeper the reporters delved, the more there began to come into focus the shadowy figure of the man who formed the key connection between Moses and the machine, and the clearer that connection became.

Haddad had been hearing about Shanahan for years, of course. During his earlier investigations into the Building Department and Housing Authority, he had learned that, as he puts it, "the word was out that if you wanted to do any kind of work with the city you had to put your money in Federation—I mean, it was no secret. Everyone you talked to seemed to know it." And hardly had a surly Moses aide dumped the first batch of Slum Clearance Committee minutes in front of him when he noticed that the committee was taking many decisions "on report and recommendation of vice chairman." Among these decisions, he noticed, were many of those on the selection of sponsors. What, he asked Lebwohl, was the vice chairman's role in the selection process? Well, Lebwohl replied, he "qualifies" them. And what, Haddad asked, did that mean? He "uses his bank to check the financial responsibility of potential sponsors, at no cost to the committee," Lebwohl replied. "He determines who is the most qualified." And, Haddad asked, did the committee always accept Shanahan's recommendation? Usually, Lebwohl replied.

The discerner of patterns saw the pattern then. "Moses was up in the clouds as far as Title I was concerned," he says. "He was the grey eminence. Shanahan was the administrative force. Gradually we began to find out that Shanahan was making all the decisions." For weeks, however, the vice chairman's approval of the Pokrass designation was the only newsworthy decision he and Kahn could directly lay at his door. Then, one day one of the anonymous calls-"You answer every one; you're always hoping that this is the one that will blow the whole thing open"-told Kahn that one sponsor approved by Shanahan not only had deposited huge sums of money in Shanahan's bank but had also, when he received his first commitment from the FHA for a \$3,000,000 loan, borrowed the money from Shanahan's bank, and was currently negotiating with the FHA for a \$10,000,000 loan, which he was also planning to make from Shanahan's bank. The caller told Kahn that the FHA guarantee made these loans prime, risk-free business on which the bank would make more than a million dollars in interest-and that, since the guarantee applications had been made to the FHA, his tip could be verified. Getting the hint, Haddad went to the FHA-and verified it, and began at last to break the Shanahan story.

Shanahan flatly refused to talk to reporters, or to let them see any of

Federation's records, but with the story breaking, Haddad's phone was hot with tips—that Moses had deposited millions of Triborough funds in Shanahan's bank; that slumlord Ungar's sponsorship had been approved by Shanahan after he offered to deposit \$700,000; that Shanahan was a director of at least one Title I company. Checking these tips, Haddad found they checked out. And his stories identified Shanahan to the public, not as the "banker" or "philanthropist" that newspapers had called him in the past but in the role that made him important to Moses: "a fund-raiser and campaign treasurer for the Democratic Party . . . and a close friend of Tammany leader De Sapio."

The band of eager young reporters was meeting at the corner table in Bleeck's Artists and Writers Bar almost every evening now. They had it down to a system. "The only way to keep it going was to keep the papers goosing each other," Haddad would reminisce years later. "If nobody picked it up, we were dead. So we'd leave a little piece out of a story, and give that piece to Gene or Woody so they'd have a new lead, and they'd do the same for us. Sometimes, I'd even give them carbons of my stories, so they'd have it right in their desk. Their editor would say, 'Check this out,' and they'd have it right there."

Each day now they could see their strategy working. The Post, of course, had always played Title I revelations as they should be played. James Wechsler "helped you in the same way that a magazine editor or a book editor helps you—a real kind of involvement, of suggestion, of criticism, of rewriting," Haddad recalls. "The editorial support-you couldn't ask for better placement in the paper, you couldn't ask for better editorials." As for Wechsler's boss, "There was constant pressure on Mrs. Schiff," Haddad would say. "But she never buckled." Years later, he could still recall sitting with Kahn in the city room one night, hour after hour, while, upstairs, in Mrs. Schiff's office, she and Wechsler were, the reporter knew, receiving telephone calls from her good friend Sam Rosenman and from other friends she respected assailing her for printing their previous stories and asking her not to print any more—while in front of them was the story he had just written for the next day, even more hard-hitting than the previous stories had beenwaiting for the decision on whether the paper would run it, and Wechsler coming down finally and saying: "Just be sure you're thorough. We're not going to stop anything you write."

And now, thanks to the "chipmunks'" strategy, the editors of the World-Telegram were—at last—enthusiastic, too, even if their enthusiasm was based less on principle than on concern that they not be beaten by a competitor. Gleason and Cook and Woody Klein didn't have to sell editors on new material now; the editors were begging for it. Title I was page one now, not only in the Post but in the Telly—and, more and more, in the Journal-American. "First they started picking up our stuff, and then Marty Steadman, a good, tough reporter, started developing some of his own. And one day, they had an eight-banner. They were in, too!"

"We knew, to really break it open, the Times and the Trib had to start

picking it up," Haddad says. Now Peter Braestrup rejoined Haddad, Gleason, Klein and Steadman (Kahn, too competitive to share, would never come and Cook had no time to) at the corner table: the *Trib* was in.

Of all the factors that had kept Moses' popularity intact for thirty-five years, none was more important than the support of the newspaper whose principal stockholder felt "there has never been as great a public servant." During the first months of 1959, despite all the Title I exposés by other papers, he had continued to enjoy that support. "There was a time . . . ," Cook would write, "when . . . we could practically guarantee that any critical article of ours in the afternoon would bring a featured, official denial in The New York Times in the morning." While the Times may not have been a crusading newspaper, however, it was a newspaper of record—proud of being the newspaper of record. And now the records were open. Formal press conferences were being held-not only by the Mayor but by Monroe Goldwater and Sidney Ungar. If the Times had wanted to ignore the Goldwater and Ungar revelations, it would have been difficult for it to do so. After the Papp incident, moreover, there seemed to be less of a desire on the part of the paper's editors to do so-Charlie Grutzner, who had some years earlier been pulled off the housing beat because his articles angered Moses, was put back on it, and Wayne Phillips was assigned to an in-depth investigation. Haddad knew a new era was dawning when he picked up the Times on the morning of June 1, 1959, and read—on page one—"The redevelopment plan proposed by Robert Moses for the Soundview slum-clearance project calls for the payment of nearly \$400,000 [sic] for land that the owners had offered for nothing."

The entrance of the *Times*, with its ample space, immediately gave the Title I exposés a new dimension and depth. The daily running stories in the PM's averaged about 800 words; a four-part series that the *Times* began on June 26 ran 8,000; although the impression would later exist that that series had contained many new revelations, it contained hardly any that Haddad or Gleason hadn't uncovered before; all that had happened was that, by bringing them all together in a unified form, Phillips had shown the city the over-all picture of its slum clearance program, and by so doing had shown it in all its shocking dimensions.

The entrance of the *Times* also gave the Title I exposés a new respectability, the cachet conferred by the newspaper's reputation for accuracy. Political officials suddenly became willing to comment. Stanley Isaacs and a young, movie-star-handsome congressman named John V. Lindsay had been assailing Moses' practices for months, but now politicians joined the parade in force—and each comment made a new article, kept the story rolling, kept momentum building.

In every city room in New York, now, the phones were, in Haddad's words, "jumping off the hook." Many of the tips coming over them were checking out into stories. "The thing was feeding on itself now, getting bigger and bigger," Kahn says. "It was the greatest time of my life," Haddad recalls. "We were making 140 bucks a week—and it was just great."

For months—years, really—all the months and years in which the Title I exposés had been building up, it had been a young man's war, a guerrilla action carried out by what Kahn called "newspapermen who weren't part of the newspaper establishment," and an action that had, moreover, been ridiculed by older, cynical, tired reporters. Haddad and Gleason first noticed the change when they stopped by Room 9, the City Hall Press Room. The older reporters were noticeably more friendly now. Then they became more helpful. Looking up from the Room 9 desk at which he was sitting one day, Haddad found one standing over him, waiting to fill him in on details of political alliances of New York. When Gleason had first been interrupting Wagner's staid, friendly, gentlemanly press conferences with embarrassing questions—and refusing to let evasions go unchallenged—many of the older reporters had been openly hostile to him, believing he was disturbing their "rapport" with the Mayor, some of them going so far as to ask other questions on less controversial topics so as to change the subject. Now, when Gleason-joined by Haddad-began pressing the Mayor for answers, there were no interruptions—and even some follow-up questions from the older men. Pressing particularly hard about Goldwater's conduct in Title I, Gleason roused Wagner to anger. "You can just get out of this room," he said. From the other reporters, there came a low murmur of disapproval. "You can't do that, Mayor," a voice said clearly. Gleason stayed. The next day World-Telegram city editor Norton Mockridge ordered up John Ferris' admiring story on Gleason, and the story included the line: "No one awes him." Haddad knew for sure that the times were changing in the city rooms on that long night when he sat waiting for hours for Mrs. Schiff's decision on whether to run the story he had written for the next day. He noticed that an elderly former photo editor, who had advanced to a more exalted editorship and now considered laying out pictures beneath him, was waiting around, too, hours past his time to go home. Finally, Haddad asked him why he was staying. Oh, the old newspaperman said embarrassedly, as offhand as if he did such things all the time, I might as well stick around to do the picture layout on it if it goes.

Bigger and bigger now, the stories were also closer and closer—to Robert Moses.

Haddad and Kahn had noticed Donoghue's name on the payrolls of Title I sponsors. Now they learned that it was also on the payrolls of Moses' public authorities. Showing up on the payrolls of shady sponsors, they told the public, was "Robert Moses' personal publicist."

Many of the anonymous tips concerned Lebwohl, the Moses aide whose Moses-enriched "relocation" firm had hounded from their homes thousands of families in the way of the Cross-Bronx Expressway and other Moses projects.

"We had good information that Lebwohl was chummy with an architect close to Charlie Buckley" who had been given many Title I contracts, Kahn recalls. They interviewed him.

After we had hammered away at [Lebwohl] for about an hour, he finally admitted that he and the sponsor patronized the same health club. "If you pass a man going across the gym, is that a crime?" he asked. "I can't control the membership of a private health club."

"But isn't it true that you eat with him later and he picks up the check?" Lebwohl was asked.

"Not all the time," was the answer—the one we had been waiting for.

Leaving Lebwohl's office, Kahn noticed that Haddad, usually so "fiery and tough," looked pensive. Finally the younger reporter asked him if he felt they should use the interview. "Why not?" Kahn said. "You're not suddenly getting soft, are you?"

"No, it's not that," Haddad said sadly. "It's just that all during the time you were throwing the questions, I couldn't take my eyes off the photograph of his wife and kids on the desk."

Kahn had noticed the photos himself—and he had known Lebwohl for a long time. "A reporter," he was to write, "is human and he is moved by what he sees and hears as much as other people." But, he was to add, "in the end he must live with himself. . . . I'm sorry, I told Bill. I felt for the Lebwohl family as much as he did, but—it had to be done. And it was." And Kahn's stories about Lebwohl identified him not as a "city official" but as he should have been identified all along: "Robert Moses' right arm." The circle of scandal was drawing closer around the man who had never been linked with scandal.

And then it drew tighter still, with what Cook termed "the first peep that has been obtained into the workings of the private consultant's roleone that Mr. Spargo frequently fills." Item by item now, the investigators were finding out about the supreme bloodhound, the man "who always kept notes"—that his salary as Triborough general manager was \$40,000, as high as the Mayor's; that in addition to that salary he had received "on the recommendation of Mr. Robert Moses" \$35,000 in consultant's fees from the Nassau County Bridge Authority, and, from Moses' own State Power and Jones Beach authorities, a total of \$243,000 in additional fees; that, while serving as director of the Slum Clearance Committee, he was a director of Shanahan's Federation bank, which had made secret profits on slum clearance deals. Moses' identification with Lebwohl had gotten his name out of the back paragraphs of these "scandal" stories and into the leads; his identification with Spargo got it into headlines—headlines over profiles identifying Spargo as MR. MOSES' MAN, eight banners in the Telly and Journal, big screamers in the Post—TIE MOSES AIDE TO BOND FEE; FEES PAID TO MOSES OFFICIALS FOR BRIDGE BONDS; the \$243,000 revelation put Moses' name-in a story that reeked of scandal-on the front page of The New York Times. Shanahan wasn't just a "banker" any more; he was MOSES' BANKER AIDE. After decades of building up an empire based on the raw material out of which newspapers produced scandal, Robert Moses' name was in eight banners of scandal at last.

He kept it there himself. Unable to endure even the hint of criticism, he simply could not ignore attacks aimed at his associates. He had to respond,

and he did so almost frantically, trying to answer each charge, his messengers rushing replies marked "For Immediate Release" to newspaper offices sometimes within an angry hour of the time those newspapers hit the stands.

But response was a self-defeating tactic now. Its primary effect was to bring himself, hitherto only a figure behind the Shanahans, Spargos and Lebwohls, front and center, thereby accomplishing what the reporters, despite all their efforts, had not previously been able to accomplish: to make himself, rather than them, the primary target.

Moreover, to Moses response meant attack. Since it was primarily the press making the charges he was opposing, he attacked the press. As usual, he attacked on all fronts. Haddad soon became aware that investigators were checking into his whole life history, trying, the reporter believed, to find some "handle" that could be used against him. Reporters were trying to cover the meetings of the Slum Clearance Committee in Triborough headquarters now. Moses saw to it that they were not told what time the meetings would be over, so they had to wait in the lobby downstairs—his guards would not permit them up to the second floor, where the meetings were held—for hours so that they would not miss the participants emerging. Previously, reporters up at Randall's Island would be invited to the sumptuous lunches at which Moses would charm them; now not only were they not invited, but when Moses learned that, afraid to leave the island and travel all the way back to Manhattan for lunch, they had been making do with Cokes and candy bars from the vending machines in a corridor off the lobby, he had the door to the corridor locked. Wagner may have been bullied at his press conferences; Moses was not. The Coordinator, fresh from his lunch, strode into the room in which reporters were waiting, hungry and thirsty, after one four-hour committee meeting. ("He was," Gleason reported in a memo to his office, "licking his chops-literally.") Would it perhaps help if the reporters were allowed to see the committee's agenda so they could know what topics the committee had discussed? "No," Moses said. The reporters waited for him to say something else. He said nothing. Finally, the reporters began asking other questions. Gleason asked one in his bullying style. "Jesus, [Moses] seemed to tower when he came out of his seat," Haddad recalls. Moses had two words for Gleason: "Get out." The other reporters tried the technique that had worked with Wagner, saying unless Gleason stayed they would all go. Without another word, Moses rose and strode from the room. The press conference was over. Moses' main fire was directed over reporters' heads, of course. Triborough's messengers were deluging publishers and their top editors with personal complaints. Moses was soon taking the fight to the press on a dozen different fronts.

But fighting the press is a battle that no public official can win, for the battleground is not just of the press's choosing—it is the press. His attacks would be played as the media wanted them played. Moreover, attacking a particular newspaper—and because the articles were to a great extent exposés that were breaking in one paper at a time, his attacks were often against a specific newspaper—was practically the surest guarantee that that newspaper would attack him again in its turn. The story that had enraged

Moses may have been written by an individual reporter, but it was not the reporter alone who would have to bear responsibility for it and defend it to the publisher or chief editor. Lower-ranking editors—with stories of such significance, editors on several levels—would have had to approve it. Therefore, when Moses attacked a newspaper publicly or in a private letter to its publisher, a lot of people on that newspaper had to justify themselves. And the most effective method of justification was to find other things wrong with the Title I program—and to write more stories. Many key newspapermen in New York had previously had a vested interest in preserving Moses' image; now many of these same journalists had a vested interest in destroying it. What was needed was discreet silence—the wait until the storm was over—and silence was one commodity it had never been within Moses' power to deliver.

The self-defeating nature of Moses' tactics was demonstrated in developments on the *Times* front.

Even after Grutzner and Phillips had begun breaking—and receiving good play on—Title I revelations, the paper's attitude toward its long-time hero was decidedly schizophrenic. Moses attacked the reporters personally—to one Phillips piece he replied on June 22, "The *Times* reporter is either very befuddled or deliberately malicious"—and the *Times*'s handling of his replies embittered other reporters, one of whom, Gay Talese, was to write in his history of the paper:

... his letters of objection did not appear in the "Letters to the Editor" space, where they belonged; instead they were published on various days within the news columns as news, being prefaced by an explanatory paragraph, appearing under a news headline, and being given immediate and serious play. This not only raised readers' doubts about the credibility of the series, but it also to k some of the edge off the series, which the reporter had carefully researched for months—and which was accurate and objective, if not totally satisfactory to Moses in all of its detail and interpretation.

When, on June 25, Moses used his familiar resignation gambit on Wagner, the *Times*'s editorial response was its traditional one: "Our confidence in Mr. Moses as an honest, incomparably able public servant is unshaken. His resignation from any office would be an irreparable loss. Where is his equal?"

But as Moses continued to attack—criticizing even straight running news stories on breaking developments—the *Times*'s ardor began almost visibly to cool. When Grutzner helped break the Gigante story, Moses replied, "This is one of those 'startling disclosures' promised by the *Times* over the radio in the morning to solicit new readers." Grutzner's city-room editors responded by okaying his submission of a list of written questions to Moses. Moses tried to go over their heads. "I immediately protested to Orvil Dryfoos, president of the *Times*, about innuendoes in those questions," he says. The result, in Moses' own words:

In spite of a placating reply by Managing Editor Turner Catledge, the *Times* continued in this vein, printing slanted, inaccurate and misleading stories. . . . a

reporter needled a Federal housing official into declaring that prior approval of the Bellevue South project had not been obtained. I wrote to Dryfoos again, pointing out that . . . "this is not the kind of journalism we have been led to expect from a great newspaper." Additional reporters were assigned, and I was soon presented with the fruit of their labor—a new questionnaire of the kind ordinarily addressed to Appalachian thugs, dope peddlers, etc. Since, as I wrote Dryfoos, they were "directed only at baiting me in the hope that your staff can cash in on some more sensationalism," I decided not to answer them.

He tried to go over everyone's head—reporters', editors', president's—in July, following an incident that occurred during a vacation, an incident that, were he susceptible to humiliation, would have been deeply humiliating. He described it in a letter to his old and close friend Arthur Hays Sulzberger, the *Times*'s publisher.

Yesterday afternoon, following a series of similar phone calls from the *Times* addressed directly and indirectly to officials in Puerto Rico and the Virgin Islands, a reporter from *El Mundo* interrupted Mary and me at the San Juan airport to ask grossly insulting questions, one of which was what I had to say about relations with the "underworld" in connection with Title One housing in New York. I was able to glance at some of the questions on a yellow sheet which this reporter said were telephoned from the *Times*. The word "underworld" was definitely and unmistakably on this sheet. There were several people around who heard this. Officials in the area told me of similar phone questions aimed to embarrass me. Fortunately, the only effect of these questions on the people who invited me down was to lower the prestige of the *Times*.

This response worked for a while. Sulzberger apologized, and shortly thereafter invited Moses, as he did every summer, to visit Iphigene and himself at their country home. "A lot of water has gone under the bridge . . . ," the publisher wrote, "but I hope it hasn't washed the bridge away." "The bridge is pretty damn rickety, what with the flood of abuse and bilge we have been subjected to, but we shall drop in," Moses replied. For some weeks thereafter, the *Times*'s Title I play, while substantial, appeared considerably toned down.

But what he had done could no longer be undone. The *Times*'s coverage of Title I had been balanced on a razor's edge. His efforts had tipped the balance—against himself. As the revelations in other papers continued, the *Times* began to pick them up again, and to play them bigger and bigger. Not only Phillips and Grutzner but their immediate superiors, and some not so immediate, were now in the same boat as their counterparts on the *Herald Tribune* and the *Journal-American* and the *World-Telegram*: once they had had a vested interest in building Moses up, now they had one in tearing him down, in finding new material that would support earlier articles. If new material was to be available to these newspapers now, they would do their best to join the *Post* in giving it proper play. And as the telephone tips, and the anonymous letters, and the public statements, and the federal and city audits poured in to all these different city rooms, these reporters and editors had all the material they needed. They were not chipping away any longer at the towering Moses image, they were chopping

away at it—with great roundhouse swings of the media ax—chopping away day after day, week after week, month after month. First, it had been Moses' programs that had been under attack. Then it had been his aides. And now, finally, it was he himself.

"The Great Statesman McKee is a synthetic character which never actually existed on sea or land, puffed up by the press . . . and now in the process of deflation," Robert Moses had written once. "There is a large amount of unfairness to the individual in this process, but in the end it arrives at the truth."

His observation had been accurate—and it was never better proven than by his own case.

The Incorruptible, Uncorrupting, Apolitical, Utterly Selfless Public Servant Moses had been a synthetic character, largely puffed up by the press. That character had endured for thirty-five years. But in 1959 the process of deflation by the press—a process that had been going on intermittently for several years—had begun in earnest. In that process there had been a large amount of unfairness. But that process had in the end arrived at the truth. At the beginning of 1959, the Moses image had stood in most of its glory, intact except for a few small chips. At the end of 1959, it lay in unsalvageable ruins. Popularity, Al Smith had warned him, was a slender reed. Now the reed was broken.

But popularity was no longer a significant factor in Moses' power equation. His power rested not on a reed but on a rock.

Unaware of the full extent of the power of the public authority, the press did not understand this. It assumed that he could be fired or forced to resign like any other mayoral appointee. But Wagner couldn't do that. Personality made it difficult, both because of the Mayor's respect for men of his father's generation ("You don't fire your father," he was to tell a young anti-Moses aide, Tim Cooney. "Never forget that, Tim. You don't fire your father") and because of other Wagnerian traits. Paul Screvane, asked if the Mayor might not have done it, just laughs. "Do you know Wagner?" he says. "Wagner never fired anyone in his life unless the fellow was convicted of a crime. And when you think of him firing a giant like Moses, it's just inconceivable. . . . Moses might have been a thorn in his side. Wagner may have wanted him out. He may have wanted to get the press off his neck. But Wagner would never have fired Moses." Politics made it impossible. Whether or not the calmly canny Mayor was already contemplating snatching the reins of party power out of De Sapio's hands, or whether he was only concerned with keeping Tammany's horses in line, he needed what Moses—and to a large extent Moses alone—could give him: the contracts and fees on which lived the machine and the other economic forces—banks, unions—which conferred political power in New York. In 1959 this provender was stacked higher than ever in the larders of Moses' authorities: with \$92,000,000 worth of contracts for the Throgs Neck Bridge about to be let, \$345,000,000 worth of bond issues for the VerrazanoNarrows Bridge firmed up and ready to be sold, and \$100,000,000 worth of new bridge-connecting expressways ready to be approved as soon as Moses gave the word to the federal highway officials under his thumb, the Mayor had half a billion reasons to keep him friendly. Firing Moses would cut his—the Mayor's—tie to the source of funds which kept men loyal to a mayor. And to such men no rationale would excuse such an action. What was he supposed to do? Tell Pete Brennan and Van Arsdale that, because of a little heat from the press, they would have to get along without \$100,000,000 worth of expressway jobs?

Firing Moses would not, moreover, remove Moses from power. Far from it. Moses' power was largely beyond a mayor's reach. Wagner could fire him as Slum Clearance Committee chairman, Park Commissioner and Construction Coordinator. He couldn't fire him from his five state posts, which gave Moses so much power in a city dependent on Albany, or from his Triborough Authority chairmanship, which gave him so much of his money; he had handed Moses a fresh six-year term just a year before. Moses would still have those posts no matter what Wagner did.

He dare not even antagonize Moses, lest Moses, in anger, throw his money and power on the side of the Mayor's enemies; he could not risk hinting, even in private, that he might not object if Moses resigned just one—the Slum Clearance Committee chairmanship—of his many posts, lest the hint ignite Moses' always smoldering anger. Despite innumerable provocations, Wagner, in dealing with Moses, had been swallowing his pride for years. He would have to go on swallowing it.

Had the press access to records more revealing than those of the Slum Clearance Committee—Triborough's records—they might have understood this; it would have been difficult not to had they known that the whole Democratic machine, the leaders of all five county organizations, on which Wagner depended, were on Moses' payroll-and that they were all in line for pay boosts: that not only Shanahan and, through Shanahan, De Sapio, the Manhattan leader; but Steingut, the Brooklyn leader, and Roe, the Queens leader, and Buckley, the Bronx leader, had, in one form of fee or contract or another, made money out of Triborough's projects in the past and were expecting to make more money out of Triborough's projects in the future. Even without those records, there were plenty of symbols around that should have made the press understand the extent to which Wagner's power rested on Moses' money. Two men involved in the Title I picture were Shanahan and Goldwater. Were Shanahan and Goldwater friends of Moses' only? Hardly. They were friends also of Wagner's. In his last three campaigns for public office, they had been his two key fund raisers. In the case of Shanahan, the press had discovered a fact even more blatantly symbolic: it was not just Moses who had been depositing huge sums in Shanahan's bank; Wagner had, too.

But the press, without access to Triborough's records or understanding of Triborough's power, portrayed to the public a misleading picture of ensuing developments.

In part, too, the press's misunderstanding was merely the wish's pre-

dilection to be father to the thought. Having exposed wrongdoing, the crusading reporters wanted it stopped-stopped, moreover, by some official action that would have the effect of placing the imprimatur of official verification on the revelations they had made. While editorial writers demanded action, reporters kept asking Wagner what action he was planning to take. Wagner had no choice but to say he was certainly going to take some, but he kept his statements as low-key and vague as possible, and, when pressed for specifics, never gave any. All the Mayor was doing was trying to ride out the storm; he had no intention of doing anything that might arouse Moses' ire. But the press read into Wagner's remarks hints that action was imminent. And when none occurred, they misinterpreted the reason, portraying for their readers a Mayor who wanted Moses out but was constantly—and inexplicably -being faced down by him; they portrayed conflict where none existed, created a drama of confrontation between two men who were actually conspirators. The depth of the misunderstanding was shown in a remark by one of them: "You could only push Bob Wagner so far. When it came to protection of the political body, he could be very tough indeed. And protection of the political body was what it had come to here." This observer was right about Wagner's toughness, but wrong about what it required. He thought protection of the Mayor's "political body" required Moses to go. Actually, it required him to stay. There was never any real chance that Wagner would force Moses out-as, years after the fact, himself long retired from office, he told the author quite frankly (although he was less frank about the reasons). After circling warily about the issue for hours, finally obviously weary of answering the same questions over and over, Wagner said in exasperation: "Look, I didn't push it. . . . Never in any way did I ever induce anyone to intercede with him or to him [that he should resign]. And I never would have." Wagner would probably have liked Moses to resign, so long as he did so on a friendly basis. But if Moses didn't want to go, he would not have had to.

Reading what they wanted into Wagner's every innocuous remark, reporters continually assured their readers that the Mayor was going to "crack down" on Moses, "pull up the reins," "cut his power." And therefore the reporters—and those readers who wanted Moses' power cut—were to be repeatedly disappointed.

Misunderstanding and consequent disappointment can be read clearly between the lines of the Cook-Gleason recapitulation, in "The Shame of New York," of the events that followed their Soundview revelations.

. . . the Mayor authorized a deputy to tell the press [that] the Soundview project was as good as dead. It had been up before the Board of Estimate, and the board hadn't liked the looks of that \$500,000 markup in land value. The Mayor was positive that the board wouldn't think any better of it now.

Taking the Mayor at his word, residents in the bungalow colony danced in the streets that night—a celebration that, as the sequel was to show, was decidedly premature. For, though Mayor Wagner had begun to announce, in his City Hall press conferences, that "I am the Mayor," there is now rather abundant evidence that the statement isn't to be taken as literally as the late Frank Hague's "I am

the law." The project may have been dead in the mind of Robert (I am the Mayor) Wagner, but it definitely wasn't dead in the mind of Robert (The Great Doer) Moses. A few weeks after the Mayor had announced Soundview's demise, Moses gave out a list of eight projects for which he wanted the City Planning Commission to put up \$10 million for advance planning. The list included Soundview. Moses was questioned at once: Wasn't Soundview, on the Mayor's own admission, supposed to be dead? The reply: "You can bet your life it's alive."

(And so it proved to be. Checking quietly with the Mayor to find out if he wanted the project or not, HHFA administrator Fried was told flatly that he did.)

The "showdowns" repeatedly predicted by the press somehow never occurred. Once, anti-Moses Wagner aides, desperate to force the Mayor's hand, leaked a Moses resignation ultimatum. Moses READY TO QUIT, the headlines read. MAYOR WEIGHS FULL INQUIRY. At his next press conference, Wagner tried to laugh off the threat: pressed to the wall, he finally said he would have a "long talk" with Moses at the Massena opening the next day. (Would he give Moses' resignation offer "serious consideration"? a reporter asked. Certainly, the Mayor said.) WAGNER AND MOSES WILL CONFER ON TITLE I DISCLOSURES TODAY, the Times headlined, telling its readers that the "talk may affect the administration of New York City's slum clearance." Actual developments at Massena hardly merited headlines, however. Moses took the Mayor's wife and two sons to meet Queen Elizabeth, the Moseses and Wagners had dinner together, the next day the two men toured the Robert Moses Power Dam and then went for a swim together. On Wagner's return to the city, he said blandly that Moses had given "no indication" that he wanted to resign. What about the "serious consideration"? Wagner replied with a single sentence: "Bob Moses is a good public servant." Had the two men really discussed Title I at all? Wagner said they had but when asked about the discussion replied, "Nothing . . . specific."

When Moses said that the controversy about Title I had made the program a "dead duck" in New York, Citizens Union, City Club—and a dozen editorials—demanded Wagner fire him. "It is no longer a question whether anyone should be asked to resign," a Citizens Union statement said. There was no sense having a vital program headed by someone who didn't believe it could accomplish anything more. Reporters told their readers that there was a serious possibility that Moses might leave, that "officials around City Hall" were already speculating on "who will take his place." Wagner said he was sure Moses wasn't serious; of course Title I had a great future in New York. Moses, informed of Wagner's statement by reporters, said, "I don't care what the Mayor says. . . . I still say Title I is a dead duck." Shanahan issued a statement agreeing with Moses.

Publicly humiliated, Wagner displayed an anger new to reporters. Face flushed, pounding his desk, the Mayor said, "If people can't implement the policies of this administration, they have lost their usefulness. If they feel Title I is a dead duck, then they can't be helpful. I'm the Mayor, and . . . I will not have anyone on any committee if they cannot be helpful. I'm

going to . . . stop a lot of this nonsense." The Mayor "indicated he might put the axe to both Moses and Shanahan," the *Daily News* reported. But the *News* summed up Wagner's next press conference in the headline: FIRE MOSES? WAGNER DUCKS.

A single incident should have illuminated the true nature of the relationship among Moses, Shanahan and Wagner. After a new series of revelations about the banker's manipulations, the Mayor had his press secretary tell reporters that he was spending the day at his summer home in Islip but was certainly "dissatisfied" with Shanahan and would question him personally as soon as possible. Returning to City Hall the next day, Wagner implied that he had not yet spoken with the vice chairman. But reporters discovered that Wagner had not really been spending the previous day at his home but at the Deepdale Golf Club in Manhasset, golfing and having a long, convivial dinner with Shanahan. Even after this discovery, however, the press kept playing events as if Wagner really wanted Moses to resign.

Press coverage was misleading in its interpretation not only of Wagner's attitude but of Moses'. It portrayed the Mayor as wanting to get rid of Moses as head of Title I, and that portrayal was false. But it also portrayed Moses as wanting to remain as head of Title I.

And that portrayal was also false.

Acting as intermediary between the two men, Deputy Mayor Paul O'Keefe was speaking to Moses frequently now, and he was suddenly startled, he recalls, to find himself with the clear impression that, despite the fact that Moses had never said anything directly, "the housing job wasn't life and death to him." Months earlier, two very astute judges of human nature had come to an even stronger conclusion. "Moses called a meeting when all the shit was hitting the fan," Peter J. Brennan says. "Van and I went up to the island." On the surface, the meeting was one of Moses' customary mobilization-of-forces lunches. "Jack Straus [of Macy's] was there, and a lot of other guys who counted," Brennan says. "[Moses] indicated that too many cry-babies were being listened to, and he reviewed his program to show he was doing it right." Over dessert, Brennan recalls, "he indicated that if there wasn't the proper kind of support, he wanted out." The two labor leaders grinned at the familiar Moses ultimatum, but, reviewing during their return trip downtown other statements Moses had made during lunch, they came to a startling conclusion: "This time he really meant it. He wanted out." They were right. For the first time in his life, Robert Moses was willing to surrender some of his power.

Moses would never, of course, have allowed himself to be forced out under fire. But during the summer of 1959, a graceful exit had materialized: the proposed New York World's Fair.

The World's Fair presidency held several attractions.

Some were personal—poignantly personal. His daughter Jane had cancer. She needed two major operations and long, expensive, recuperative periods. The circumstances of her divorce had, moreover, left partly on her

father the burden of her support. Jane's daughter, Caroline, had reached college age as a brilliant, arrogant girl in whom he saw much resemblance to himself; his granddaughter must have the best schooling, and tuition costs were rising—and after college he wanted her to go to Oxford as he had gone. Jane's son, Christopher, would be ready for college soon. And now Mary's arteriosclerosis and arthritis had advanced to a point where the seventy-four-year-old woman was increasingly unable to care for herself. Doctors told Moses that she must either be placed in a nursing home or given around-the-clock nursing care: it was a depressed Robert Moses—as depressed as Sid Shapiro had ever seen him—who told his loyal aide one day that such care, combined with the cost of the extensive medication his wife would require for the rest of her life, would cost \$24,000 a year.

To meet these harrowing bills, Robert Moses had, in cash reserves, practically nothing. For all the years of his adult life, he had been short of money. During the last five years, for the first time, his salary from his numerous public offices had risen above a pittance, with his pay as Park Commissioner having been raised to \$25,000 and his appointment as State Power Authority chairman giving him an additional \$10,000 annually. After taxes, however, the \$35,000 total shrunk to about \$22,000—little enough for a man maintaining an apartment on expensive Gracie Terrace as well as a summer home in Babylon, especially when combined with the Moses prodigality with money, and with his absolute refusal to leave himself open, by using his expense accounts for personal needs, to the type of pressure he exerted on others. That prodigality had exhausted most of his inheritance and even that relatively small portion of the \$100,000 consultants' fees from other cities that he had kept for himself. Seventy-one years old, Robert Moses, the Robert Moses whom the press persisted in describing as "independently wealthy," was, so far as cash was concerned, all but penniless.

Accepting the World's Fair presidency would change that. The Rocke-fellers were prepared to participate in the Fair quite actively, and in pre-liminary discussions with his counsel, Samuel Rosenman, the salary of \$100,000 per year plus \$10,000 in expenses had been mentioned—as had a seven-year contract. (The contract finally worked out between Moses and the Fair Corporation gave him \$75,000 per year plus \$25,000 per year in expenses for seven years, mid-1960 through mid-1967, and thereafter an annuity of \$27,500 per year for an additional seven years, 1967 through 1974. The money to guarantee the payment of this sum—a total of \$892,500—was to be taken off the top of the Fair Corporation's receipts and placed in a special escrow account. Smaller—but still lucrative—salary and annuity arrangements were made for many Moses Men.) He would, at a stroke, be assured of freedom from the financial problems with which he had been living for so long.

Some of the Fair's attractions were philosophical. Try as he might to get away from that fact by using urban renewal funds for universities and cultural centers, "Title I" meant primarily housing, and housing had never engaged his enthusiasm as had parks and highways—which may have been why he had delegated it so completely to someone else. It was a cluttered, complicated

field—one in which the grand conceptions of which he was capable never emerged as cleanly as in the uncluttered beauty of a bridge or beach.

But, as always with Robert Moses, neither personal finances nor philosophy but power and reputation were apparently the determining factors. Although he never spelled out his feelings in detail even to his top subordinates, he did drop enough hints to show them at least vague outlines of his thinking.

In his view—and, as always where power was concerned, his view was to prove perceptive—soon there wasn't going to be that much power in Title I in New York any more. He had meant what he said when he called the city's program "a dead duck"; HHFA officials had been trying for years to slash drastically the city's disproportionate share of funds; now, with his reputation so badly smeared, he believed they would do so with a vengeance; what new projects were built, moreover, would be built by genuine real estate builders like Zeckendorf, not by the type of promoters whose projects could give him political power.

There was going to be power in the World's Fair—immense power. Sitting in on preliminary meetings of the Fair Committee, he had seen that Fair spending—for pavilions, for example—would be on a national and international scale. To ease access to Flushing Meadows Park—he had determined that the Fair was going to be held in that park—a vast network of new Queens highways, \$120,000,000 worth of new highways, would be needed. As his keen eye for power had seen in 1945 that housing was the field to enter, now it saw that the World's Fair was the field to enter; the Fair grounds were going to be the prime locale of power in New York.

He could not keep his Title I job and take the Fair job. He could not in

fact keep any of his formal city jobs. The city's Code of Ethics was quite specific about that; the spectacle of a paid official simultaneously holding a paid job with a private corporation might be too grotesque to surmount, even for his oft-proven ability to get laws or codes changed, and he was not in as strong a position as he had been in the past to get laws changed. But there was little power in his formal city jobs, anyway. Power was not derived from a park commissionership whose annual budget was so small that no new park development of any real size could even be contemplated; it certainly was not derived from his membership on the City Planning Commission, which he no longer dominated. His informal city job as Construction Coordinator, in which he measured his resources in tens of millions of dollars, gave him power, but, thanks to the vagueness with which that job was defined, he had thought of a way in which he could keep that job. Power was derived from his Triborough Authority job, in which he measured his resources in hundreds of millions of dollars. He would be able to take the Fair job and still keep that. Power was derived from his chairmanship of the State Power Authority, in which his resources were also measured in the hundreds of millions, and he could take the Fair job and still keep that—as well as his other state posts: the Long Island State Park Commission presidency, the Jones Beach and Bethpage State Park authorities and State Council of Parks chairmanships. His appetite for power was undiminished. Shortly he would be seeking to take over the development of atomic energy in the state because he saw that this was the new field into which money might be poured—his method would be the advocacy of laws placing all such development under his State Power Authority—but by trading in his city jobs for the Fair presidency, he would be giving that appetite more, not less, on which to feed.

As for his precious reputation, Title I was wrecking it—and would continue to wreck it as long as he stayed connected with that operation. Unjustified though it may have been, there had been too much scandal attached to it. There was always going to be massive relocation involved, and the media's bleeding hearts made anyone in charge of massive relocation look bad.

The World's Fair would be a chance to start in a new field with a clean slate—in a field which needed no clearing for there wasn't a single protesting tenant in all Flushing Meadows' 1,400 acres. The Meadows were a blank slate, almost as rasa a tabula as Jones Beach had been—Jones Beach that had brought him glory. The Fair was, moreover, a chance to write something glamorous, spectacular on that slate. For how could a World's Fair not be glamorous and spectacular? Even that incompetent clotheshorse Grover Whalen had reaped wonderful publicity before his mismanagement had turned the 1939 Fair into a source of ridicule. There would be no mismanagement under him; the Fair would give his name back all its old luster. With its intonations of international amity and good will, it was a cause that would put its leader again firmly "on the side of the angels."

A World's Fair was, moreover, no local event. It was big news nationally, to some extent all over the Western world. That was no small consideration to a man to whom fame was a spur. Moses' fame had been in general limited to New York and nearby states. His sips of national fame had been few and far between. Here was a chance to get himself a real swallow.

In his last consideration, he was motivated by a more obscure consideration. He had long seen the parallels between his own career and that of the man who, in the modern world, ranked closest to him as a city-builder, Baron Georges-Eugène Haussmann (whom Moses was fond of referring to as "the brawny Alsatian"), and he knew that it was not the Bois de Boulogne but the great Universal Exposition held in Paris in 1867 that had given Haussmann his greatest contemporary glory. "I think Bob thought the World's Fair would be the crowning achievement of a long career," Paul Screvane says.

Informed of Moses' oblique hints, the Mayor got the message. In a series of meetings during the week of August 10, meetings at which Wagner had a representative, final arrangements were made for Moses to take the Fair post. On August 20, the Mayor announced that he was appointing a management consultant, J. Anthony Panuch, to "reorganize the city's housing picture." Moses could not take the Fair post until the Legislature approved a law he had drafted exempting officers of the Fair Corporation from the city's Code of Ethics, and the Legislature did not meet until January, and so Panuch had to keep studying the situation for months. When op-

position developed in the Legislature, he had to delay his report until it was crushed. On February 20, with all the details ironed out, Moses wrote Panuch that he wanted to leave the housing field because he was going to be heading the Fair, and on March 9, Panuch issued a report recommending that all agencies involved in the city's housing program—including the Mayor's Committee on Slum Clearance—be combined into a single, new agency. And Moses announced that he would resign as committee chairman and as Park Commissioner, member of the City Planning Commission and member of the City Youth Board on May 23. He recommended that the office of City Construction Coordinator, which he said was "no longer necessary," be abolished. Official liaison with the state and federal highway agencies should be carried on by the chairman of the Triborough Bridge and Tunnel Authority, and the Mayor should officially designate him as that representative.

Moses' enemies never understood what was going on. They believed that the appointment of Panuch was a desperation move by a Mayor determined to force Moses out by reorganization if he couldn't get him out in any other way—Haddad and Kahn called the appointment "pushing the Panuch button," but the conclusive proof that Moses left voluntarily was the way he did it.

He left in triumph. There were the editorials of praise, of course, and the letters. Wagner's said:

For well over a quarter of a century in city service, and for nearly forty years in state service, you have . . . come closer to being the irreplaceable man than any other in the history of our city government.

Our consolation in your leaving lies in the fact that we have had you so long. The city will long remember your work in its behalf. . . .

You helped give to our city excitement and color, as well as concrete highways. Your severest critics of yesterday will say in years to come, "He may have been a headache but he never was a bore." I, for myself, would rather quote the title of that song, "Thanks for the Memory."

An even more revealing index of the depth of that triumph was the crowd in the grand ballroom of the Hotel Commodore on May 3, and the identity of the people who made up that crowd. In April, business, political and union leaders—a cross-section of the elite among New York's power establishment—had received invitations to a testimonial banquet (proceeds to charity) in honor of Robert Moses. The price for the tickets was a hundred dollars a plate, and the invitations had been sent not to corporations, which might purchase whole tables and give away the tickets, but to individuals, who would have to bear the cost of their loyalty themselves. Moreover, they would, if they bought tickets, be honoring an individual who had for months—almost a year, in fact—been linked by headlines with "scandal." Yet the invitations bore the names of a sponsoring committee that included not only Tom Shanahan, Carmine De Sapio and Sydney Baron but a score of other prominent politicians, businessmen and union leaders. None of

them had asked for anonymity. Not one of them was in any way ashamed to be connected with a ceremony honoring the headlines' target. In fact, they were proud of it; many of them asked Shanahan for a chance to speak. And no one invited wanted to be left out. No matter what other plans the recipients of the invitations may have had for the evening-and most of these men had schedules booked far longer in advance than the three weeks before the dinner—they dropped those plans, and came. Expecting a normal number of turn-downs, the committee was astonished to find that all but a handful of invitations had been accepted; on the evening of May 3, the Commodore ballroom was jammed to the doors with 1,044 guests. More than a thousand persons had been willing-eager-to pay a hundred dollars for the privilege of honoring a man whom the press had been attacking mercilessly for months. And when, speaker after speaker having praised him, Robert Moses arose to accept a gift of gold cuff links from Shanahan, those men jumped to their feet and cheered. Sid Shapiro says he will never forget that moment. "Everybody was there," he says. "Everybody. And you should have seen them. They were standing there applauding and yelling like a bunch of schoolboys." And the men standing and yelling for Shapiro's idolized "RM" were the men RM would have wanted standing and yelling for him, not the establishment of the political, banking, union and construction fields in which he moved, but the elite of that establishment, the crème de la crème of New York's influentials.

And more important than leaving in triumph, he left with power. Wagner announced that Newbold Morris would be Moses' successor as Park Commissioner, the second citywide Park Commissioner in the city's history. The press hailed Morris—or, to be more precise, Morris' image, which, created in the La Guardia era, had been that of a young, independent reformer. But it wasn't his independence that had gotten Morris-now fiftyeight, still goodhearted but bumbling, ineffectual and so nervous that rumors were adrift about his drinking habits (and very anxious indeed to return to city employment)—the job; rather the qualification was his awe— 1 hero worship that amounted to utter subservience—of Robert Moses. A subject of City Hall jokes even in the La Guardia days, those feelings had dimmed not at all—as some spectators at the dedication in 1963 of a bust of Fiorello La Guardia at La Guardia Airport would see. Recalls Henry Barnes: "Morris made a speech and at the end of it he gave an Italian phrase which he had obviously studied very hard to get just right. Moses was the next speaker. He got up and said, 'I had no idea that Newbold was smart enough to speak Italian,' and then he starts off into a whole run of Italian, very fluent, shrugging his shoulders and everything. Just deliberately to humiliate Newbold like that, and Newbold wasn't in too good shape at the time-it was just vicious." But what astounded Barnes was that after the ceremony Morris came up to Moses and "tried to talk to him-just groveling for a word from the master." At his swearing in as Park Commissionerwhich Moses did not bother to attend—he called his predecessor: "A giant in public works who will be remembered long after we are gone." With

almost the entire Park Department hierarchy of Moses Men left intact under him, Morris was Park Commissioner only in name. Robert Moses was still running the Department exactly as he had run it before—as anyone having much business with the Department soon found out. Whenever Joe Ingraham called Morris in the evening with a question, the new commissioner would—no matter what the subject—say, "I want to think about it. I'll call you back in a few minutes." Ingraham would wait a minute or two and then telephone Moses' private number. Almost invariably that number would be busy—and when Morris called back, he would give Ingraham a statement that Moses' old reporter confidant could tell came direct from Moses, as verbatim as if the new commissioner had copied down and repeated what the old commissioner had told him to say word for word. "He just wouldn't move unless Bob Moses told him to move and when," Barnes says. "I argued with him one time about something and he said, 'Well, Bob Moses feels this way about it.' I said, 'Who's the Park Commissioner?' He said, 'Well, Bob Moses built the parks . . . " Once he dared to make a statement on his own -and accepted (almost eagerly) a public spanking. He said that unless Westchester County stopped barring New Yorkers from its parks, the city might have to obtain entrance for its residents by legislative fiat. Upon reading his successor's quote, Moses said, "I am afraid Newbold was a bit impulsive. His demand that all parks everywhere must be open to everybody has a superficial charm which won't stand analysis." Reporters telephoned Morris for a comment, which was: "Mr. Moses is absolutely correct. I am impulsive." As Screvane says, by naming Morris as Moses' successor, "[Wagner] knew he was keeping [the Department] in Moses' hands."\*

At first, reporters, not understanding the conditions under which Moses was resigning his city jobs, assumed that Moses was losing his power over roads, but soon Ed Katcher of the *Post* was writing that "Commissioner Moses, New York's longest-running municipal feature, is not, after all, vanishing entirely from the local administrative scene. . . . He will continue to represent the city on the federal and state arterial highway programs." On the day he resigned, Peter Kihss of the *Times* took the trouble to do a little figuring of the cost of the arterial program and such other Moses projects under way as the Verrazano and Throgs Neck bridges and the Niagara power, park and parkway project and wrote that "a rough check indicated that Mr. Moses . . . still retained other jobs by which he was presiding over \$2,800,000,000,000 in projects to make over the city and state."

The only power Moses lost by his multiple "resignations" was in housing—a power he was glad to give up anyway. In parks and roads he was still in charge. And to replace the power he had lost in housing, he had been given command of a new project loaded with power.

He left in triumph—because he wasn't really leaving at all. Furthermore, no one could ever make him leave. Thanks to his control of one city and

<sup>\*</sup> Wagner confirms Screvane's statement, even if he does so in more tactful terms. "Bob wanted Morris," the Mayor says. Why? "Frankly, I think Bob knew he would have an influence on him."

three state public authorities, he had anchored himself in a position so secure that no one could take his power away from him. Only he could lose it for himself; his career, booming to new heights in the eighth decade of his life, could be checked only by his own personality. Only Robert Moses could lose Robert Moses his power.

And he did.

## 46. Nelson

THERE WERE DIFFERENCES between the sixth Governor under whom Robert Moses was serving and the previous five.

The key difference could be defined in dollar signs. His ranch in Venezuela, five times as large as the combined boroughs of New York City; the Rockefeller family estate in Pocantico Hills, six times as large as the principality of Monaco and containing, for the family's private use, seventy separate structures—these were only symbols, two among innumerable, of the fact that Nelson Aldrich Rockefeller and his sister and four brothers were probably the richest family on earth. Lehman and Harriman had been rich men. Harriman sometimes gave the impression of possessing almost unimaginable wealth, and he did: perhaps as much as fifty million dollars. But the riches of Rockefeller dwarfed those of Harriman. Those of Nelson Rockefeller alone were perhaps five times greater than Harriman's, but because the Rockefeller family holdings are unified, interlocking, and because the Rockefeller brothers work closely together, he had at his command a fortune whose size has never been publicly calculated but whose visible portions alone have been estimated\* as high as five billion dollars—one hundred times larger than Harriman's.

"The very rich are different from you and me," Fitzgerald wrote. Rockefeller was different from the very rich—and the difference extended to politics. In financial terms, Lehman and Harriman might be major contributors to their state party; the Rockefellers were their party, to such an extent that Theodore H. White called it "almost a dependency of the Rockefeller family, like the Rockefeller Foundation or the Rockefeller University. . . . the family and its friends had picked up every deficit of the statewide Republican Party in every campaign; and, on occasion, Nelson Rockefeller could pull out of his inside pocket a little folded paper, typed in blue, which reminded him precisely of the total the Party had cost their family over the years, a very large figure indeed . . ." Are banks key in political financing? There is scarcely a bank in New York State with which the Rockefellers do not have some link, direct or hidden. As for the state's largest bank, the Chase Manhattan Bank that is probably the most powerful financial institution anywhere on earth, Chase is, as White notes, "the last great bank controlled by an individual family—the Rockefellers." Are utilities key in

<sup>\*</sup> By Ferdinand Lundberg, whose estimate seems the most thorough.

political financing? So large are the Rockefeller shareholdings in the state's largest utility, the Consolidated Edison Company, that White says they are "probably the controlling shareholdings." The dominance of the Rockefellers over the whole politically powerful Wall Street financial community was symbolized by the fact that former Governor Dewey, powerful in that community in his own right, was David Rockefeller's lawyer (to be more precise, in fact, he was one of David Rockefeller's lawyers) and by the ease with which, deciding in 1958 to enter New York politics at the top, Nelson Rockefeller took the gubernatorial nomination away from the previous Wall Street favorite for the job, former GOP national chairman Leonard W. Hall. "I bet on money—not just any kind of money but old money," one veteran New York politician says. "New money buys things; old money calls notes." In politics in the Empire State, the Rockefellers held enough notes to achieve any aim; their power was as close to an absolute as had ever existed in New York.

But the difference could not be defined strictly in dollar signs. Harriman used wealth to obtain the prize, but, having won it, he did not know what to do with it. Nelson Rockefeller knew exactly what to do with it. He may have bought his way into the game; once in it he played it like a master—as if he had been raised in the Fourth Ward instead of Pocantico Hills—played it with zest and verve in public and, in private, with a ruthlessness that was a reminder that his bloodline ran direct from the grandfather who had created the greatest monopoly the world had ever seen by mercilessly crushing every competitor—played it, in fact, with a ruthlessness that reminded some politicians of Robert Moses. Of the men who had been Governor over Moses, only Smith and Roosevelt had possessed such onstage and backstage capabilities in combination.

Nelson Rockefeller possessed, moreover, a particular type of imagination possessed neither by Smith nor by Roosevelt. It was not the original, creative, shaping imagination of a Robert Moses. But Rockefeller did possess an appreciative imagination of a high order, an ability (rare in itself) to grasp and judge the inspirations of other men—to see them as their creators saw them while they still existed only in their creators' minds. He could see—not only visualize but judge and assess the value of, and determine to bring to reality—proposed physical developments. He had always been the Rockefeller most interested in art and architecture and housing. Bored by a routine executive job as a young man, a biographer reports, his imagination was fired by Rockefeller Center, the complex of office buildings his father was building in midtown Manhattan. At the age of thirty, he became its president: "Nelson . . . enjoyed his job—especially when it allowed him to don a hard hat and preside over ceremonies celebrating construction progress." He had the imagination of the builder.

On the grand scale. Hardly had he become Governor when he was undertaking a vast expansion of the state's educational plant—large, beautiful new campuses all across the state. Soon his architects were planning a "State Mall," a complex whose four mammoth office buildings would tower

Nelson 1069

over a rebuilt Albany. Money was no consideration. To finance such immense physical improvements, he resorted to a variety of "backdoor" financing plans (most of them modeled on Moses' public authority concept) that allowed the state's voters no say over them and that preserved the illusion of a "balanced budget"—and even so, during Rockefeller's Governorship, the state budget would increase by more than 300 percent and the state debt would quadruple. He was a builder on a scale on which no previous Governor had been a builder. He was, in fact, a builder on Moses' scale.

His arrogance was also on the Moses scale.

Behind it lay what White calls "a strange, pietistic sense of responsibility," a serene sense that because his motives are pure, his decisions are right. "He was rough," White writes. "His enemies called him, quite simply, the most ruthless man in politics. But what in other men would be simple arrogance was in Rockefeller the direct and abrupt expression of motives which, since he knew them to be good, he expected all other men to accept as good also." Behind it lay principles: in the midst of his run for the presidency in 1964, a run that needed Southern support, he insisted on giving substantial donations to activist Negro civil rights groups. Behind it lay sheer stubbornness: once his mind was made up, he would not change it. And behind it lay the assurance, based on a lifetime as a member of America's closest counterpart to a royal family, that what he wants he will get.

His arrogance was easy, charming, gracious—the arrogance of a man handed at birth the power to enforce his will. It was not the hard, glittering, abrasive arrogance of a Robert Moses who had had to fight and scheme for that power. But it was equally unshatterable. Nelson Rockefeller was rough, all right. He was a threat to Robert Moses far more dangerous than any that had previously existed in Albany. Moses had defied and overawed all Al Smith's successors in the Executive Chamber. The threat to resign—his ultimate ultimatum—had brought them all to heel. But the man in the Executive Chamber now was not a man who would be willing to heel. And, perhaps most important so far as Moses was concerned, Rockefeller would, moreover, be an opponent—the only opponent Moses had met, since he conceived and gained the powers of the public authority—on whom there was no handhold. Governor Dewey had deeply resented both his power and his arrogance, and Dewey had been ruthless and shrewd. But Russ Sprague and King Macy and the banks had been the way to exert pressure on Dewey, and Moses had been in a position to make Sprague and Macy and the banks exert that pressure. Governor Harriman had sought at first to curb him. But De Sapio and Rosenman and the unions had been the way to exert pressure on Harriman, and Moses had been in a position to make De Sapio and Rosenman and the unions exert that pressure. But when Rockefeller had come to the Governorship, there had been no way to exert pressure on him except through the unions, and the Governor had early struck up his own alliances with them to make himself exempt even from that pressure. "In the Empire State," Theodore White writes, "Nelson Rockefeller was beholden to no one; no crevice of weakness or obligation could be found. . . . " "Moses could push a button," Lutsky says, "and in would come the calls"—from men who wielded immense power. But there was no power that Nelson Rockefeller could not deny.

There were so many avenues that Moses could use to get to someone. But not one of them led to Nelson Rockefeller. Survey the whole vast cast of characters on the New York political scene and there was only one man who could with impunity confront—and defeat—Robert Moses.

The man who was now Governor.

It is not so difficult to see the arrogance and strength in Nelson Rockefeller. One has only to see that big jaw set once to know it. Penetrate the slightest bit beneath that charm and the tough stubbornness is there, not the surface crustiness of a Harriman but the real iron. Robert Moses, once the keenest reader of personalities, should have been able to read that of his new Governor like a book.

But Moses had long since ceased being interested in personalities. He believed that even a Governor's had no significance for him. If this newest Governor disliked him, so what? Dewey had disliked him. And anyway, he didn't think Nelson disliked him. In fact, he was sure Nelson liked him—liked him and admired him.

He had been an ally of Nelson's father in many projects; the two men had laid out the Palisades Interstate Parkway together during his long days driving through John D. Rockefeller, Jr.'s, vast tract along the Hudson. He had been an ally of Nelson's brothers. He had envisioned and obtained the land for Lincoln Center, for whose construction John D. Rockefeller 3d had raised a large share of the money. David Rockefeller, whose Chase Manhattan Bank presidency gave him a vast stake in Lower Manhattan, had always been one of the strongest supporters of his Lower Manhattan Expressway. Laurance Rockefeller had drawn often on his beachfront expertise in developing his Dorado Beach resort in Puerto Rico. He had been an ally of Nelson himself; not only had they worked together in bringing the United Nations to New York, but in 1948 Nelson's International Basic Economy Corporation, building housing projects, factories and supermarkets in Venezuela, had retained him, at a fantastic fee (which, of course, he distributed to his "muchachos"), to lay out a highway program for Caracas. (So pleased had Nelson been with the Caracas-La Guaira toll highway and other arterials that were a monument to that consultantship that in 1950, with IBEC expanding into Brazil, Moses and muchachos had been retained to lay out a comprehensive city plan for São Paulo, and year after year Nelson asked him to return there to check on its implementation.) A long history of alliances counted for a lot in Moses' world. The admiration of the younger man-fifty when he became Governor to Moses' seventy-who wanted to get things done for the older man who had got so many things done, was well known. When the incoming Governor accepted his recommendations on several appointments-including that of Burch McMorran as Superintendent of Public Works-and vetoed the bill that would have forced Moses to shift

Nelson 1071

his Verrazano Bridge approach out of Bay Ridge, Moses began to speak of "Nelson" (he would never address him as Governor, as he had never addressed Roosevelt, Lehman, Dewey or Harriman as Governor; for Robert Moses, there would always be only one Governor) with an affection that was almost paternalistic.

In the early months of Rockefeller's Governorship there had been one area of friction. William J. Ronan, a former professor of government at NYU who had begun working for Rockefeller in 1956 as executive director of a temporary state commission Rockefeller was heading, and had thereafterthanks, in the opinion of some observers, to a remarkable capacity for obsequiousness to the Governor—advanced to become a steadily more important member of his inner circle of advisers. In 1957, as staff director of another temporary state commission, Ronan had recommended curbing the "potentially dangerous" power of public authorities. Moses had told reporters, "I don't take this seriously," and his power in Albany had insured that he didn't have to. But Ronan had irritated him. A tall, bespectacled, jowly, smoothspoken man, he seemed typical of the "impractical" academics, men who were afraid to do anything except by committee, whom Moses despised. While demolishing the commission's recommendations, he had taken time out to deliver Ronan a gratuitous public spanking, charging that the recommendations had "emanated from an ambitious professorial mind." With his patron in the Governor's chair, Ronan had evidently been emboldened to try for a small measure of revenge; shortly after taking office, Rockefeller had appointed him chairman of a "task force" to reorganize the state government, and one of the recommendations of the task force was that Moses' State Council of Parks be abolished and authority over state parks be given in fact as well as theory to the Department of Conservation. Moses blasted the "Ronan Report"—and Rockefeller had evidenced a distinct unwillingness to get into any conflict with him; nothing further was heard of the parks recommendation.

Nonetheless, tension began to build between Moses and the Governor. Observers who saw them both frequently believe it could not be avoided. Two men so arrogant, so accustomed to getting their own way in everything, could not long be in contact without friction—particularly when both men were grand-scale builders. So acute an observer as Perry Duryea says he "could just see Rocky thinking that there wasn't enough room in one state for a Robert Moses and a Nelson Rockefeller both clicking on all six." Rockefeller's first great programs of public improvements, moreover, had concerned—perhaps deliberately—areas outside Moses': education, for example. But they were beginning now to intrude more and more on Moses' turf-turf that had been his, and his alone, for close to forty years. Rockefellers had always been interested in parks; their creation was part of the family's heritage. Understanding the need to acquire as much as possible of the state's remaining open space before it was swallowed up by the developers' bulldozers, by 1960 the Governor was discussing the matter in depth with his brother Laurance, a dedicated conservationist who had established the Virgin Islands National Park and a foundation to coordinate conservation efforts, and had chaired a presidential Outdoor Recreation Resources Review Commission. This did not cause too much friction with Moses; when Laurance mapped out a state park-land acquisition program and Rockefeller adopted it, Moses campaigned for the \$100,000,000 bond issue referendum that made it possible. But no such harmony was possible with the Governor's feelings about mass transportation. With an insight still rare among government officials in 1960, the Governor had seen that if congestion was ever to be eased in and around urban areas, the emphasis on building more and more highways must be replaced by a balanced transportation system—in which emphasis must be shifted, gradually but steadily, to mass transportation.

Dinner with Nelson Rockefeller sometimes had a new feature now, Theodore White relates:

... he might, immediately after coffee, haul out the red cardboard folders in which he carries his papers, and spread out on the floor the state's master program for parks—explaining in detail his plan for Troy, Syracuse, Utica, as if he were rearranging the furniture in his living room... Lounging by a pool-side, he might suddenly set off on a gorgeous imaginary tour of New York City, Long Island and the lower Hudson Valley as they would be twenty years hence when his transportation program was finished: in his imagination, high-speed trains darted from Riverhead, Long Island, seventy-five miles away, to downtown Manhattan in less than an hour. Subways served the great airports.

For almost forty years, public physical development in New York State had been shaped pre-eminently by the vision of one man. Now there were two.

"Transportation was becoming one of Nelson Rockefeller's crusades—you know, like health became one of his crusades and housing became one of his crusades," says one long-time political observer. "And when Nelson Rockefeller had a crusade, it was Nelson Rockefeller's crusade. He was going to get credit for it. And Moses, being the way he was, could never be part of a transportation setup identified with Rockefeller."

Moreover, Rockefeller had delegated authority for explorations into transportation needs to Ronan, who was rapidly becoming his closest adviser. And while in Moses' presence the ex-professor was always, Moses' aides say, "sucking up" to Moses (Moses would scarcely deign to speak to him), Moses' men began to hear reports that Ronan was constantly working to "poison" the Governor's mind against Moses. A confrontation was inevitable. And when it occurred, Moses' personality led him—forced him—to make a mistake.

The confrontation came over age, and was caused in part by another aspect of Moses' personality—the overriding vanity which kept him from wearing a hearing aid although his deafness had worsened until he could no longer discern clearly the words of a man only a desk-width away.

His age had become the sorest of subjects with Moses, who disregarded it utterly himself, still working the endless schedule he had been working for half a century, still swimming far out into the ocean on the roughest days, and who expected others to disregard it as well—to such an extent that he seemed to regard every reference to it as a personal affront.

The heart of the soreness was the relationship of age to his power. All

Nelson 1073

state employees were required by law to retire at the age of sixty-five. The Governor was empowered to request the board of the State Retirement System (which, of course, invariably honored his requests) for a one- or two-year extension in exceptional cases, and Moses had been receiving such extensions since he had turned seventy. But whereas Harriman had gone out of his way to offer two-year extensions well before his birthday and without being asked, Rockefeller had been less gracious. "Each [extension] was to the annoyance of Bob Moses because the Governor would keep him waiting until just before his birthday," Sid Shapiro recalls. "RM had consulted his attorneys, but they told him there was no way of getting around this. And every week, he'd say, 'Did that thing come yet?' You'd call the Governor's office and ask about it and the answer would be, 'It's in the works. Don't worry.' But legally, if the thing didn't come through by the day his birthday arrived, he'd have to retire." Equally disturbing, each extension was for one year, not two, so that Moses had to go through the whole humiliating experience every December. Worse still, during the last two years, the Governor had become more and more insistent on discussing an "orderly transition" which he felt had been made necessary in the overall direction of the state park program because the acquiring and developing of parks under the \$100,000,000 program would take probably two decades. "Rockefeller had had discussions with Moses about Laurance taking over" moving up from vice chairman to chairman of the State Council of Parks-Shapiro recalls. The Governor had even made a public statement about it -with Moses sitting right behind him on the speakers' platform. In a speech opening Lake Welch Beach in Harriman State Park on June 15, 1962, Rockefeller had said that his brother was "Bob Moses' greatest disciple" in recreation. "New York State is fortunate to have Laurance Rockefeller following in the footsteps of Robert Moses." And observers glancing quickly at Moses to gauge his reaction had seen him smiling pleasantly.

"Here," Shapiro says, "maybe Mr. Moses' hearing difficulties enter into the picture—lots of times in the last few years, he'd come back and say, 'I had a good talk with So-and-so,' and he'd even write a letter confirming it [the details of the agreement he thought had been reached] and then the guy would write back saying, 'We never agreed to that!' "On public occasions, Moses was often unable to hear what speakers were saying. He may have been smiling pleasantly after Rockefeller's remark at Lake Welch Beach because he hadn't heard it. "They had agreed that Laurance would be Mr. Moses' successor," Shapiro says. "RM had agreed to do this." But, Shapiro says, Moses was evidently under the impression that the changeover would take place in some vague, indefinite—and certainly long-distant—future, while the Governor thought they were talking about an imminent change-

over, and was becoming increasingly impatient at the delay.\*

<sup>\*</sup> Shapiro's impression that the two men were talking at cross purposes is confirmed by several insiders. Peter J. Brennan, for example, says that "we knew it was coming—the Governor said that Moses had . . . agreed to surrender" the chairmanship—and were puzzled by conversations with Moses in which he seemed to envision holding on to it for many years to come.

In 1962, the weeks before Moses' seventy-fourth birthday on December 18 dwindled down, and there was still no extension from Rockefeller. The two men were scheduled to meet on the morning of Tuesday, November 27, at the Governor's brownstone office at 22 East Fifty-fifth Street to cover a wide-ranging agenda of public works problems, and Moses decided that he would have to bring up the subject at that meeting. He prepared with his usual tactical wizardry, arranging to have lunch that day with Jack Flynn, publisher of the *Daily News*, and his top editors, who could be counted on to support him in any controversy—and making sure that the Governor knew about the lunch.

What happened at that meeting is not known. Only the two men were present, and neither one will go beyond the official statements they were later to issue in discussing it. But there was a witness, albeit a biased one, to its conclusion, for that conclusion took place not in the Rockefeller brownstone but outside on Fifty-fifth Street. That witness was Sid Shapiro.

"We drove in to Fifty-fifth Street, just the Boss and I and the chauffeur," Shapiro says. "We had an appointment for lunch with Jack Flynn of the *News*, so he asked us to drive around and come back in an hour and pick him up. Then he gets out of the car and goes inside.

"When we came back, I witnessed an astonishing scene. The Boss comes out of the building and there's the Governor coming out after him and tugging at his arm, really pulling at him, trying to get him to come back inside and let's discuss it. Moses pulls his arm away from him and gets inside, saying, 'Come on, let's go,' and we pull away, leaving the Governor of the State of New York just standing there on the sidewalk, and there are members of the public standing around and staring at this scene."

Driving downtown, Moses, Shapiro says, "tells me this story of what happened inside, and he made me promise not to tell a single soul." When he had brought up the matter of the extension, he said, Nelson Rockefeller had, in his charming, gracious, assured manner, picked up a paper lying on his desk, let Moses see that it was the extension for his presidency of the Long Island State Park Commission and held it up in his hand—his left hand, Moses said, dramatizing the scene with his customary vividnesswhile saying, referring to the chairmanship of the State Council of Parks, "Now, Bob, don't you think now is the time for Laurance to take over?" Moses reacted to what he viewed as a naked threat—the Governor would not sign the paper he was holding aloft and thus allow him to retain the Long Island post unless he surrendered the statewide chairmanship—with hot rage. Keeping one post without the other, he said, was "out of the question"; if the Governor wanted him to resign one, he would-but he would resign the other, too. In fact, he would resign all posts connected with parks, the Bethpage and Jones Beach authorities chairmanships, too. In fact, perhaps the Governor would also like him to resign his other state job—the Power Authority chairmanship—since he seemed to feel he had too much to do. Of course not, the Governor said, all he was talking about was the Parks Council chairmanship. He would be happy to sign extensions allowing Moses to keep the other posts. "Out of the question," Moses said. The Power Nelson 1075

Authority was a different field, but all state park work was interconnected; the only way he would resign one of the park posts was to resign them all.

Suddenly, he told Shapiro with a grim smile, Nelson had seemed a lot less sure of himself. Let's not make any final decision on anything now, the Governor had said. Let's meet again—for lunch—before the December 18 deadline. How about December 14?

Then, perhaps thinking of the luncheon to which Moses would be heading as soon as he left, the Governor, Moses was to write, "asked, I might say ordered, that I should not inform anyone of our conversation."

"I told him," Moses was to write, "I would accept no such order and make no such agreement . . . since I would have to make a public explanation." He told Shapiro that he had said, "Give me my coat and hat and let me get out of here"—and, snatching them up, had stalked out of the room and out of the house and onto the street, before the startled passers-by, the Governor hurrying after him and tugging his arm all the while.

This description of the conversation—coupled with Rockefeller's anxiety during the scene Shapiro had just witnessed—made Shapiro sure that RM had won. The Governor, he felt, would react as Governors—and Mayors—had always reacted to Moses' threat of resignation with "public explanation"; he would back down and let Moses keep all his posts. Moses' demeanor at the Daily News made the Moses Man more certain still. RM was gleeful, almost gloating over his victory—and he and Reuben Maury, the paper's chief editorial writer, concocted a ploy that they felt would make that victory more certain still: at Rockefeller's next press conference, the News's Albany reporter James Desmond would ask the Governor if he planned to keep Moses in his posts. The question would take Rockefeller by surprise, they figured; he would certainly not want to announce without preliminaries that he had asked for Moses' resignation; he would have no choice but to say of course he planned to keep Moses in all his posts.

After he and RM returned to Randall's Island, Shapiro was more certain of victory than ever. The Governor's office had been calling and calling, one of Moses' secretaries said as soon as he walked in the door of his office. Moses was supposed to call back the minute he got in. While Shapiro was sitting there, Rockefeller's office telephoned three more times. "Mr. Moses wouldn't come to the phone. He figured if the Governor was calling him, he must have won, and he wouldn't talk to him. The last time his [Moses'] secretary says, 'The Governor is on the phone himself!' and Mr. Moses wouldn't take it. He had figured he had won."

And he might have, too. Rockefeller certainly had given no indication of wanting a full-scale showdown. The Governor himself was to say that during their brownstone confrontation "I urged him not to resign" his other posts "but simply to allow a transition to take place in connection with the State Council . . ." He had several times previously asked Moses to allow that "transition" to take place, and every time that Moses had refused, he had backed down. From the demeanor that Moses and Shapiro describe, there is certainly reason to believe he would, at the December 14 luncheon he had suggested, back down again. But Moses' arrogance led him to push

the Governor too far. He sought to make him surrender, not gracefully but unconditionally—by using his ultimate weapon, the ultimatum that had never failed him before. Still refusing to take telephone calls from the Governor, he replied to him by firming up his threat, putting it in writing—and extending it. If the Governor wanted him to resign one state post, he wrote in a letter delivered to Rockefeller the next morning, Wednesday, November 28, he would resign all—not only the park posts but the chairmanship of the State Power Authority. He was, he said, already making arrangements to do so. And he made clear that there was no room for compromise at all.

"I shall of course meet you at lunch on December 14, but you have made your position abundantly clear. Meanwhile I am making tentative arrangements . . . to resign from the Long Island State Park Commission . . . Perhaps the simplest thing would be to resign as head of Power also so that you can make other arrangements to meet your program in this field."

There are indications in Moses' letter that even as he was writing it, he may have realized that he was going too far. He modified it several times, and as it emerged, Shapiro points out, "it wasn't exactly a resignation, if you look at the wording"—notably the words "tentative" and "perhaps." Still, it was in all essential respects the typical Moses ultimatum.

This time, however, the ultimate weapon misfired. After thirty years of issuing that defiant challenge, he had issued it to a man who would take him up on it. On the day after he received Robert Moses' resignation, Nelson Rockefeller accepted it. "I hope you will continue" in the Power Authority post, Rockefeller said. As for the others, "I note that you are making arrangements to resign from the Long Island State Park Commission. This is a decision which I accept with regret."

And now the events which Moses had set in motion conspired against him.

Neither his nor Rockefeller's letter had yet been released to the press (a circumstance which, incidentally, led Shapiro to hope that the Governor's, as well as Moses', was a bluff). Rockefeller had not held a press conference since Moses had arranged his Desmond ploy. But with one newspaper privy to the impending crunch between the state's Governor and its most famous official, the media rumor mill had begun to grind, and Moses' secretaries were reporting enough inquiries from other reporters so that he knew that it was only a matter of a short time before it hit the press. John Wingate broadly hinted at the situation in his WOR-TV newscast on Thursday evening. According to Shapiro, Moses realized now that the planted question designed to make the Governor retreat might well have the effect of forcing him to make his decision public, and thus irrevocable. But it was no longer feasible to have Desmond not ask the question. If he didn't, some other reporter would. And then, on Friday afternoon, Moses learned that Rockefeller had scheduled a press conference for that very night. Shapiro says that Moses realized that if Rockefeller was asked about the rumors, the Governor would have to reveal the resignations—and the acceptance. If it was the Governor who revealed them, it would appear to the public that the Governor Nelson 1077

had initiated them—that the Governor had asked him, Robert Moses, to resign. The Governor might even be pinned down by the reporters and have to say so directly. It would look as if he, Robert Moses, had been fired! To Moses—to whom public image was so terribly important—such loss of face would be intolerable. He had to get himself out of that position, had to make clear that, in the case of most of the resignations anyway, he had offered them, not been asked for them. The Governor had said he could keep the Power Authority chairmanship. He would resign that job, too! And he would have to make clear that he was in the right. He would reveal to the public what he felt was the reason the Governor had wanted him to resign—not his vigor or competence but out-and-out nepotism—although, for good measure, he would also intimate that there might be a hint of politics involved as well. And he would reveal the humiliating way in which, after decades as a faithful public servant, the Governor had been treating him for the past two years.

Hastily, almost frantically, drafting a statement, he got it into the hands of the press before the Rockefeller press conference. And if the mere fact of his making the resignations public was not enough to make his split with Rockefeller, and his loss of all state power, irrevocable, the text of the statement was.

Last Tuesday morning . . . Governor Rockefeller . . . asked me flatly and with no preliminaries to resign immediately as chairman of the State Council of Parks so that he could put his brother Laurance . . . in my place. . . .

I... told him that I would resign as president of the Long Island State Park Commission, also an unpaid position, since it is in that capacity that I sit on the Council. The Governor asked me to remain... I told him this was out of the question...

I asked the Governor whether he wanted me to retire as head of the Power Authority, since he seemed to think I had too much to do. He said no. . . .

Under the circumstances, I shall retire from all state park work on January I and from the Power Authority. . . . There has been a vacant trustee position for some time on the Power Authority. With my retirement, there will be two, and the term of the only Democratic member expires in the spring. I may add that on two previous occasions there was a long humiliating period of delay in signing extensions of my trusteeship and that the last two extensions were reduced from two years to one.

In a statement issued by his office, Rockefeller paid the required obeisance to Moses' "long and brilliant career and leadership." "There is no one who has done more to develop parks, not only in this state but anywhere in the nation, than has Commissioner Moses, and the people of this state will forever be indebted to him," he said. The Governor tried—at great length—to make the voters understand that he had not sought to end Moses' career but only to insure an "orderly transition of leadership" in one phase of it, a phase that "will take years to fully develop." He pointed out at length that Moses was giving up the other posts voluntarily. But contained in the statement was cold Rockefeller anger: "It is regrettable that in his statement of resignation to the press, Mr. Moses has made an

invidious reference to my brother Laurance. Laurance Rockefeller . . . has been associated with the state park system since his appointment by Gov. Herbert H. Lehman in 1939 as a member of the Palisades Interstate Commission." The resignations were regretted. But they were accepted. All of them.

"I don't think Mr. Moses realized what he was doing in the rush that day," Sid Shapiro says. "I don't think he really expected the Governor to let him resign [from all the park posts] and I don't think he ever expected him to let him resign from the Power Authority. When he did realize it, I think it broke his heart." Moses' statement had gotten him the kind of headlines he wanted—the *Times*, for example, gave his nepotism charge a big page-one headline—but at a terrible cost.

At one stroke, he had cost himself five jobs—five on top of the four city jobs he had lost two years before. Once, he had held twelve separate posts. Now he was down to two—the chairmanship of the Triborough Bridge and Tunnel Authority and the presidency of the World's Fair—three if one counted his informal (and, of course, still enormously powerful) designation as city representative on arterial highways.

And it wasn't the number of jobs he had lost so much as what jobs they were. "The Long Island parks—well, they were the thing he had done first, you know," Shapiro says. "He loved Long Island more than any other place. And Jones Beach and the rest of those parks—well, they were his baby. It mattered so much to him that they be kept beautiful—just as he wanted them—and that he be able to expand them the way they should be expanded. Nothing else mattered as much to him as those parks. And now he had lost them."

And not only had he lost control of his first great dream, he had lost a huge hunk of his power. His power had been derived partly from popularity and mostly from money—money that he had sole discretion to spend. The popularity had vanished some years back, but its loss had not mattered much so long as he didn't lose the money. But the money came from his network of four public authorities. Now, at a stroke, three of them were gone—including the biggest of them all, the State Power Authority that, with both Robert Moses Power Dams completed at last, was beginning to generate tens of millions of dollars in annual revenue.

To reporters, he said firmly that the matter was closed. "There is nothing I am doing about it," he said with a broad smile, announcing that he was leaving for a previously planned vacation in Puerto Rico—ironically, at Laurance's Dorado Beach Hotel. (Moses takes ouster calmly, headlines said.) But behind the scenes he was maneuvering almost frantically to attempt to retrieve his mistake. His emissaries were working on anyone who had Rockefeller's ear; Van Arsdale and Brennan were soon asking the Governor to let Moses withdraw his resignations, even if that withdrawal meant that Moses would have to eat public crow.

A man closer to the Governor, however, had guessed the futility of

Nelson 1079

such attempts. "[Moses] got friends of mine to come to me and ask me to try to persuade Rockefeller to let him take it back," recalls Thomas E. Dewey. "I must have had a dozen phone calls from people I knew. But I had made a discreet inquiry, an indirect inquiry; Rockefeller wasn't going to let him take it back. I felt sorry for him." For what might have been the one reason for Rockefeller to let Moses withdraw his resignations—not his Parks Council resignation, perhaps, but his others—did not, to his surprise and that of political insiders, exist. The expected storm of protest had not materialized. Robert Moses had been fired. And hardly anyone had really cared.

Citing "nepotism" as its cause, the Daily News reacted to the ouster with outrage, as did the Journal-American (WE NEED HIM!) and conservative columnists. "No public official in any part of the country is comparable to Robert Moses in his devoted and unending and mostly uncompensated public service for nearly half a century," George E. Sokolsky declared. "No man can be trusted with major affairs who asks such a man as Robert Moses to resign. . . ." But in the rest of the media there was only a brief flurry of editorials, and the editorial that mattered never came. Moses must have known he had lost when, on December 2, he turned at his breakfast table to the editorial page of The New York Times (which only three years before had said: "You don't bench Babe Ruth") and read: "The most incredible of all the prodigious qualities of Robert Moses has been his ability to sustain, long after most other men retire, a superhuman burden of responsibilities. . . . He has conquered every obstacle in four decades of public service, except the ability to make himself immortal. . . . We hope that, after the verbal skyrockets sputter out, he will recognize the wisdom of the Governor's suggestion that it was time-indeed, past time-to begin planning for an orderly transition of authority. . . . No government function can be made so dependent on a single individual that he becomes the indispensable man."

The young reporter assigned to cover the otherwise vacant Newsday city desk Saturday afternoon and Sunday morning—the paper had no Sunday edition then-found waiting for him a memo from an editor telling him to compile a summary of all the statements that the editor was sure would be pouring in for a big story on reaction in governmental circles to be written by state political editor Stan Hinden Sunday night for Monday's paper. But all Saturday there was exactly one such statement—a brief one from Democratic state chairman William H. McKeon charging the Governor with "cavalier treatment." Telephoning around for comment Sunday evening, Hinden found politicians rather reluctant to make any, and those they did make were carefully hedged. Aside from a few Democratic county chairmen backing McKeon, of a score of public officials telephoned, only Newbold Morris ("I can't believe it") was willing to go on record with the type of public statement the editor had expected. Pragmatists all, politicians had grasped at once the basic reality of the situation: the Governor, the man with the power, was the man they didn't want to offend. As for the public at large, aside from a spate—a brief spate—of letters-to-the-editor, there was hardly any reaction at all.

In political circles the illusion of Moses' popularity with the voters had lingered long after the reality was gone, partly because in those circles, many of whose members were making money off him, that popularity was undimmed, partly because politicians were close enough to him to be overawed by his personality so completely that they could hardly conceive of his falling into public disrepute. For decades, Governors had dreaded what would happen if they had to be the one to fire Bob Moses. Now one Governor had fired Bob Moses.

And nothing had happened.

The next meeting of the State Council of Parks was the first in thirty-eight years over which Robert Moses had not presided. It was the first meeting of the State Council of Parks *ever* over which Moses had not presided.

At that meeting, his successor read a eulogy with, observers say, obvious feeling. Then resolutions were adopted unanimously to change the names of not one, but three separate state parks, one at Niagara, one at Massena and one on Fire Island, to "Robert Moses State Park."

At a time at which the naming of public works after individuals had not reached the floodtide it was later to assume, this was an almost unprecedented honor. It is doubtful that any individual below the rank of President had ever had three separate major public works named after him at the same time. Coupled with the eulogy, it made the January 22, 1963, meeting of the State Council of Parks one of unparalleled tribute to Robert Moses. But Robert Moses had not presided over that meeting.

More important, he had not been present. For only the heads of the various regional park commissions could attend, and he was no longer the head of the regional park commission he had headed for thirty-eight years, the park commission that represented his youthful, and cherished, and most nearly perfect dreams.

During the following years, Robert Moses never admitted even once—not even to his closest friends; not even to Shapiro—how much the loss of the presidency of the Long Island State Park Commission meant to him. But people who knew him saw through his assumed indifference.

His successor as commission president, Perry Duryea, Jr., son of an old associate and an admirer himself, speaks of the "great emotional strain" that the seventy-four-year-old commissioner went through when discussing the parks with him. "He always considered the Long Island State Park Commission as his base," Duryea says. "Long Island was, after all, the place he knew best. This was really the Moses baby above everything else." Says Joe Ingraham: "He would never let on, but you could see it in everything he said—they broke his heart when they took that away from him."

Not only pride but politics prevented Moses thereafter from displaying open resentment. Having had a taste of Nelson Rockefeller once, he was not anxious for another one. He was, shortly, to swallow his pride and make up

1081 with the man who had so grievously injured him. At the dedication of the

Alexander Hamilton Bridge two weeks after the firing, reporters were watching to see Moses' reaction when Rockefeller appeared. Moses' reaction was to throw his arms around Rockefeller and to go out of his way to praise him during his speech. (Rockefeller threw his arms around Moses, and praised him, too.)

Nelson

## 47. The Great Fair

THE NEW YORK WORLD'S FAIR of 1964-65, huge and spectacular though it was, could not capture the imagination of the man who was in charge of it. To him—preoccupied with immortality, creator of public works that would endure for centuries—two years, the total duration of the Fair, was but a watch in the night. He saw the Fair only as a means to other ends.

One of these ends was a dream, a dream out of his youth that had remained bright in his old age—a dream of a great park, the greatest in New York City, the greatest within the limits of any city in the world, the ultimate urban park, rus in urbe supreme, a park worthy of being named "Robert Moses Park." He had been fighting for that dream close to forty years, using first one expedient and then another to inch it, step by painstaking step, closer to reality, and after forty years it was still nowhere close. The Fair, he realized at once, might at last be the means to achieve it. For the site of the Fair, like the site of the dream, was the Flushing Meadows.

Nature had presented the meadows as a gift to the city—three miles of marshland too low-lying and waterlogged for any developer to fill in, so that as the ugly man-made tide called "slurb" swept eastward across Queens, engulfing in cheap subdivisions the fields and woods on the higher land bordering the meadows, it broke and ebbed around that marsh, leaving the meadows undivided, whole, still available for the common weal.

Man, in the person of Tammany Hall and a character named Fishhooks McCarthy, had done his best to squander that gift. Although the meadows were city-owned "park land," for years the Forty Thieves on the city's old Board of Aldermen had allowed Fishhooks' Brooklyn Ash Removal Company to use them as a gigantic dump for the burning of the garbage of all Brooklyn; by the 1920's, 110 railroad carloads of the offscourings of the Borough of Churches, transported on private railroad tracks used exclusively by Fishhooks' firm, were being dumped daily onto the meadows, and a once beautiful marshland was covered with foothills of filth (one, nicknamed "Mount Corona," towered nearly a hundred feet in the air) infested by rats that, Moses was to say, were "big enough to wear saddles," and by swarms of fur-bearing creatures so numerous that nearby shanty dwellers eked out livings trapping them and selling them to fur dealers. The once lovely Flushing River had become an open sewer. At night, burning refuse from the Flushing Meadows dumps, and from those

on Riker's Island just beyond, glowed and flamed dramatically; during the day, the scene was ugly enough to inspire the creative mind. It inspired F. Scott Fitzgerald, who in *The Great Gatsby* described it as

a valley of ashes—a fantastic farm where ashes grow like wheat into ridges and hills and grotesque gardens, where ashes take the forms of houses and chimneys and rising smoke, and finally, with a transcendent effort, of ash-gray men, who move dimly and already crumbling through the powdery air. Occasionally a line of gray cars crawls along an invisible track, gives out a ghastly creak, and comes to rest, and immediately the ash-gray men swarm up with leaden spades and stir up an impenetrable cloud . . .

## And it inspired Robert Moses.

From the 1920's, the Flushing Meadows had fired Moses' imagination. Part of the inspiration had been their size, of course: they were 1,346 acres, a Central Park and a half. Part had been their location: they lay almost precisely at the geographic center of New York; as the city's population shifted, moving steadily eastward, its population center was moving steadily closer to those meadows, too—a park there, Moses felt, would be a true "Central Park" to the whole city. For a man with a vision so broad that it required vast open spaces for realization, here was a vast open space—at the city's geographic and population center. And in some way the very ugliness of the meadows seemed to furnish inspiration, too. They, and the Riker's dump beyond, were "a cloud of smoke by day and a pillar of fire by night," he was to write. Rereading Isaiah, he came across "Give unto them beauty for ashes"—after that, his dream had a slogan. He would turn what may well have been the ugliest part of New York City into its most beautiful.

As with all Moses' dreams, this one kept expanding. By 1930, on the maps he prepared for the Metropolitan Park Conference, there was green—the green that symbolized future park land—not only over the Flushing Meadows but, extending eastward from the meadows in a continuous corridor right along the spine of Queens all the way out to the city line, not just a park but a string of three parks (Kissena, Cunningham and Alley Pond) connected by strips of greenery—parks designed to serve not only the single-family-home Queens of the present generation but the high-rise Queens he foresaw for future generations.

But it was to be a tough dream to realize. No project on which Robert Moses had ever embarked was to document more definitively his statement: "It takes more than a good idea to make a great public improvement. The fact is that such things happen when there are leaders available, ready and eager to take advantage of the logic of events. Even then the whole result is accomplished only by a series of limited objectives, over a surprisingly long period of years." No project was to demonstrate more dramatically that of all the qualities which enabled him to build public works of the first magnitude, none was more important than the simple fact that he endured, that he stayed in power not for years, but for decades.

Because it took decades.

He began trudging through the park, actively planning it in detail, in 1934, walking through the valley of ashes, trudging, as he put it, over "thirty years of the offscourings, the cans, cast-off baby carriages and umbrellas of Brooklyn," among the ash-gray men carrying spades, followed by a group of men without spades-Madigan, Howland, Andrews, Latham, Shapiro, Chapin. Soon there were transoms and plumb lines among the spades, and then blueprints, for, searching for a way to extend the Grand Central Parkway to the Triborough Bridge, he had determined—and the engineers had confirmed—that the way could be along the western edge of the meadows. For a while thereafter he hoped that the parkway could lead to the park, that the road might prove the key to unlocking the monumental expenditure of public funds necessary for the realization of so monumental a vision. With La Guardia in, Tammany was out—and so, too, was Fishhooks; state funds were available to build the parkway, and, cynical as he had become about the ability of the legislative leaders in Albany to see the public interest, he could not believe that even they would allow him to build a road along which motorists would have to drive through hills of garbage; he was sure that once he got the parkway built he could get state money to build a park around it. But he had underestimated Albany; the Legislature would give funds for a road and nothing else; the Grand Central Parkway and a narrow right-of-way on either side of it was all he was able to build on the meadows. He moved 50,000,000 cubic yards of rubbish, but they made in Mount Corona only a narrow pass; recalls Rodgers, "Motorists still had to pass through the dark wall of refuse before coming out on the broad prospects of meadow and bay." "For a while," Moses would recall ruefully, "we fondly hoped to cover" the garbage "with a thin layer of topsoil and to plant, at a price which would not subject us to indictment," but obtaining even the topsoil strained his ingenuity to the limit; planting was out of the question. As for the great park, "We studied every possible means of acquiring the whole meadow, but this dream seemed too big for the vision and means of the City in the face of competition of so many other urgent enterprises."

Then, he says, in words that reveal that inside Robert Moses the Power Broker there was still a Robert Moses the Dreamer, "the miracle happened—the idea of a World's Fair."

Not the 1964-65 World's Fair, the 1939-40. The mind that could grasp an idea in an instant, expand it, fill in its details, see its relation to other ideas, lunged at that idea of the Fair as it fell from George McAneny's lips. "By God that's a great idea!" he had said, pounding the table; he would sell it to La Guardia, and he himself "would stop at nothing to help"—if the Fair was held on Flushing Meadows, and if "from the beginning the project was planned so as to insure a great park" on the meadows after the Fair closed.

Moses thought he had taken out every possible form of insurance. His park commissionership made him in effect the Fair Corporation's landlord; the lease he drew up—and, as additional insurance, embodied in legislation he had passed in Albany—provided that the improvements necessary to make the meadows usable be permanent, not temporary, improvements, and that they be installed in conformance with his plan for the park—right down

to the creation of a boat basin at the north end of the site and two lakes at the south: thousands of trees were planted and thousands of yards of underground utility lines laid according to the landscape design for the park, not the Fair. The first \$4,000,000 of Fair profits, moreover, were to be used -as a spark to kindle further state and city contributions-to create a park. Making the meadows usable proved to be immensely more difficult than even the most pessimistic of his engineers had foreseen-it was at the Flushing Meadows, for example, that there were encountered, for the first time on such a large scale in the metropolitan area, "mud waves" of a force that ripped loose foundations and pilings. A new drainage system for the entire Flushing area—which included placing a branch of the Flushing River in a conduit as large as a tube of the Holland Tunnel—had to be created; cleaning up pollution in Flushing Bay required two giant sewage treatment plants. Even for Moses, the list of other basic improvements required was "endless"; even he had to call their total cost—\$59,000,000—"staggering." But Moses got the money from Albany and, with La Guardia's help, from Washington. He even got an additional million dollars—which La Guardia found somewhere in the city budget after Moses promised him that the building would have plenty of the Mayor's favorite architectural element, glass bricks-for an Aymar Embury-designed permanent, pillared New York City Building housing an ice- and roller-skating rink ("You could get a lot of building for a million then," Moses would recall ruefully). And then he saw all his precautions made meaningless by Grover Whalen's inefficiency; the \$4,000,000 was supposed to come out of the Fair's profits, and there were no profits; the 1939-40 New York World's Fair ended with a deficit so large that it could repay its backers only thirty-three cents on the dollar. By 1940, federal funds had dried up; the city was broke; all during the five years of World War II the Flushing Meadows remained a park mostly in name only, littered with debris from the buildings of exhibitors who had had enough money to dismantle their structures but not enough to truck the remains away, grass and trees dying, rats starting to reappear all that was left was a skating rink and, underground, invisible, tens of millions of dollars' worth of utilities that would provide a foundation for a park—if ever there should come another chance to build it.

One "event" in which Moses saw the "logic of using it to progress a park" had been a highway, another had been a World's Fair. It took a leader with his single-mindedness to see such logic in the third, which occurred five years after the Fair; other men might see the formation of the United Nations in 1945 as a chance for peace, he saw it as a chance for a park. Persuading Secretary-General Trygve Lie to use the City Building until UN headquarters in Manhattan could be completed, he got \$2,000,000 from the enthusiastic Board of Estimate to "remodel" it—and enough of that money found its way into remodeling around, rather than in, that building to develop scores of acres near it according to the park plans he had stored away for so many years now.

Another five years, and another event—and the same Park Commissioner still around to take advantage of its "logic." With the population of

Queens burgeoning in 1951, the Board of Estimate approved a huge new storm sewer for the borough. When Moses had finished taking a hand in its planning, it was running along a route linking Alley Pond, Cunningham and Kissena parks, enough land along it had been condemned so there could be at least a strip of park land all the way from Flushing Meadows to the city line, arrangements had been made to fill the gash made for the sewer with Sanitation Department fill according to plans drawn up by the Park Department—and after decades of dreaming about a Queens park corridor, the land for it was at last in his hands.

And when, in 1959, he had first heard that men were planning another World's Fair, he believed that the chance had come to turn the great Queens dream—Flushing Meadows Park, the corridor, the three other parks along it—into reality at last. That was the key attraction for him in assuming the Fair presidency. He admitted this fairly frankly in public. "Visitors to such an exposition," he wrote, "carry away indelible impressions, lively lessons, enduring satisfactions and pleasant memories, but what finally remains in the ground when the pageant has faded, the brickbats have been removed by the wreckers and scavengers, and the park planners have gone to work is of more concern to the next generation than any spectacle, however gorgeous." In private, he was more frank. "I don't think RM really ever cared about the Fair—not in the sense he cared about Jones Beach, say," Sid Shapiro declares. "What he cared about—what he was always talking about—was what the Fair could do for parks."

The Fair could do what he had wanted to do for so long. The "chain of urban parks," he said, would be "the ultimate residuary legatee of the Fair." And he was sure the legacy would be large enough. Hardly had he assumed the presidency when the engineering firms of his two most trusted park consultants-W. Earle Andrews of Andrews & Clark and Gilmore Clarke of Clarke & Rapuano—were costing out the full-scale development of the chain. The figure came to about \$56,000,000, and his financial consultant, Jack Madigan of Madigan-Hyland, assured him the Fair's surplus would be far higher. He went on record with a confident promise: "The Fair will . . . finish the Flushing Meadow and Corridor program without cost to the city. . . . The Fair management is committed without reservation to . . . presenting to the City an integrated chain of urban parks which will serve as a model to rapidly growing municipalities everywhere. . . . We [will] build a heritage for all time." There was even a timetable, laid out park by park, and guaranteeing—unconditionally—completion by "the summer of 1967," less than two years after the Fair was to close. The Fair would be the instrument by which the dream he had cherished for almost forty years would be transformed into reality-reality grand enough and beautiful enough to bear his name.\*

<sup>\*</sup> There was a further piece of evidence to prove that Moses' interest was not in the Fair but in the parks that would follow it. Mass transportation was desirable—crucially important, in fact—for a fair to which people would come by the tens of thousands each day. And Moses was expecting to draw heavily on the city's poorer families, many of which did not have automobiles. But it was not desirable—

The Great Fair 1087

As he expected to be identified with it. One of the bankers he appointed to its finance committee would soon be suggesting that "the new park must be called Robert Moses Park." Moses did not demur. It was an open secret among his aides that the suggestion was just what RM had in mind.

The realization of a dream was one end to which the World's Fair represented a means; there were two others—power and popularity.

On the single square mile of former garbage dump that would be the actual Fair grounds, a single mile over which Robert Moses possessed sole jurisdiction, there would be spent—by state and federal governments on highways, by city government on other improvements, by state, federal and city governments and private corporate grants on exhibits—well over a billion dollars. A single item in the first estimate prepared by his office of the money that would be poured into the site gave some idea of the dimension of spending he had in mind. That item was: "Miscellaneous—\$55,000,000." He made sure that that billion wasn't wasted. He distributed it where it could bring the greatest return in power.

Maintenance—cleaning, repairs, garbage collection and disposal—was obviously going to be a huge item at the Fair. Of all maintenance companies in New York, none was better connected politically than the Allied Maintenance Corporation. On March 9, 1964, there went out from Fair headquarters a memo: "Constable to All Participants: Allied . . . has been designated by the Fair Corporation as the only refuse and garbage collectors at the Fair." Exhibitors would no longer be allowed to pick and choose among maintenance firms to get the best rates; Allied had been given a monopoly. (Allied used that monopoly to the hilt, charging rates so inflated that during the Fair's first season alone the company was to collect from helpless exhibitors more than \$10,000,000.)

Commissions on the insurance that would be required of exhibitors would come to more than \$3,000,000. Carmine De Sapio, despite his break with Wagner, still possessed considerable behind-the-scenes political power,\* particularly, through his ally state Democratic chairman Michael J. Prendergast, in the State Capitol, where Moses now needed power more urgently than he had in decades. De Sapio was known to look fondly on an insurance agency named Campo & Roberts. And Article XVII of the Fair's General Regulations for Exhibition—with which all exhibitors were bound by con-

in Moses' view—for a great park, because he did not want his great parks to be open to low-income people, particularly the Negro and Puerto Rican people who made up so large a percentage of the city's lower-income families. So Moses vetoed the Transit Authority's proposed new subway extensions to the Fair.

<sup>\*</sup> Writes Warren Moscow: De Sapio "kept the loyalty of a substantial bloc within the Tammany executive committee, although other members had gone down to defeat with him. He had many friends in the business community whom he had helped in their dealings with the city, and who did not choose to run away from him now that he had been defeated." And one of those friends, of course, was Thomas J. Shanahan.

tract to comply—required that ". . . insurance must be procured from insurance companies approved by the Fair Corporation," and only one company, Campo & Roberts, was approved.

Mayor Wagner protested. But in a competition with De Sapio, Wagner was handicapped: he was honest. Commissions wouldn't buy him. The Mayor could have asked Moses to give Fair-oriented insurance to firms operated by his supporters but for another handicap: his unshakable resolution never to give Moses something the Coordinator could hold over his head by asking him directly for a favor. He had Deputy Mayor Paul Screvane, the key liaison between the Mayor and Moses on the Fair, raise the subject, and Screvane recalls: "Moses would say—as he said on other things that came up during the Fair—'Well, for Christ's sake, let him ask for it. I can't do anything for him if he doesn't ask.' I used to go back and tell Wagner to name the guy he wanted to get the insurance, but he wouldn't do it." Finally, "there was a meeting at Gracie Mansion, just the three of us," Screvane recalls. Previously, the Deputy Mayor says, Wagner had been "incensed. If, when he had the confrontation with him, he had spoken the way he spoke in private, Moses would have changed the insurance." But Wagner wouldn't. Finally, "[Moses] asked Bob if Bob had someone—'Give me a name!' But Bob wouldn't tell him."\*

Insurance commissions were only one of a thousand fees created by the Fair, and it sometimes seemed as if every one of them was distributed according to a single criterion: the amount of power it could purchase for Robert Moses. Others might see the Fair as a chance to foster "peace through understanding," or to boost the occupancy rate of New York hotels, or to increase sales in New York department stores; Moses appears to have seen the Fair as a gigantic gravy train on which he could ride back to the power he had left behind. In those early days, the Fair's future appeared as golden as the statue of the Moroni angel atop the Mormon Pavilion; ticket sales were going even better than expected; money was flowing in at a rate exceeding Madigan's most optimistic estimates; Moses was soon boasting that there might be even more money available than he had thought.

Soon everyone was scrambling to get on board. One Fair Corporation executive, speaking of an "attitude of affluence" at Flushing Meadows, says, "There was Moses talking about all those millions of dollars in advance sales. And the unions and Allied said, 'Why should we try to hold costs down? If a guy's making so much dough, why shouldn't we get some of it?'"

And Moses helped them on. Lavish spending had always been part of

<sup>\*</sup> Here is Wagner's recollection of this issue: "I didn't see after my battle of 1961 why De Sapio should have the insurance. I said, 'Bob, I hear De Sapio's got an interest in the insurance.' I never got a straight answer. I know from other sources that he did, but I never got a straight answer."

Asked why Moses felt an alliance with De Sapio would be more profitable than an alliance with him, the Mayor replied by recalling a song once sung by reporters at an Inner Circle dinner, whose key lines, Wagner says, were: "Mayors Come and Mayors Go/But Old Man Moses, He Just Keeps Rolling Along."

his life style; he certainly wasn't going to change that style now. Unions were allowed-encouraged-to charge exhibitors rates unusual even for New York; carpenters, for example, received—not as overtime but as normal pay-\$23 an hour. The \$10,000,000 that Allied was to reap from individual exhibitors during the Fair's first season alone might have seemed sufficient for even so politically well-connected a firm, but the contract Moses signed with Allied on behalf of the Fair Corporation was, in that year alone, to hand the company an additional \$12,000,000. The Fair Corporation's original budget for security had been a lavish \$5,000,000 a year. But Moses wanted security laid on with an eye not just for safety but for show. A whole platoon of Pinkerton guards, dressed in elaborate uniforms with white gloves and white ascots, was assigned as an honor guard at Fair headquarters so that when foreign ambassadors or heads of state drove up, Moses could greet them with suitable panoply. During the Fair's first year of operation alone, Moses spent almost \$10,000,000 for "security." He liked to reward his allies on an imperial scale. Politically well-connected PR man Tom Deegan, with his statement that "I . . . expect to continue to serve without any fees or expenses of any kind" still warm on the record, was given an annual fee of \$100,000 and expenses that included a \$1,000-a-month suite at the Waldorf and a \$572 monthly salary for a chauffeur. And that was just Tom Deegan personally. The Thomas J. Deegan Co., Inc., received from the Fair an additional \$350,000 per year. Not that the Deegan firm was responsible for the whole Fair public relations effort. The firm owned by Bill O'Dwyer's canny PR man-and still well-connected political insider-Bill Donoghue received \$400,000 per year. Then there was Ed O'Brien and Murray Davis—and a list of former newspapermen that ran to the dozens. The listed Fair Corporation expenses for public relations for its first season alone ran to \$2,772,542.49. Moses had always liked to pick up checks in the grand style. This predilection was indulged. So that VIP visitors—every politician, it seemed, from New York State or City, their relatives, influential businessmen, architects, engineers, contractors and their relatives, Moses' whole Yale class of 1909, dozens of neighbors from Babylon, scores of his acquaintances, and of Constable's, Spargo's, Shapiro's, of everyone connected in any way with the Fair administration—would not be forced to tour the Fair grounds on foot with the hoi polloi, the Fair Corporation purchased a fleet of white sedans, and set up a chauffeurs' pool in which there were often scores of men sitting around waiting for their next assignment. The chefs and waiters necessary for Moses to host at luncheons in his accustomed style were laid on. As for the scores of cocktail parties and other receptions he hosted, "'economize' was a dirty word," one Fair Corporation executive recalls. During the Fair's first season, the bill for "Reception, travel and subsistence [italics added] expenses" was \$706,053.51. During its first year, the Fair Corporation spent on operating expenses alone \$33,299,000—double the original budget. And those expenses do not include the helping hand Moses offered to allies in trouble: one of his Triborough concessionaires had bitten off, in a concession called "The Belgian Village," more than he could

financially chew; he needed \$750,000 in cash, and he needed it fast. Although there was very little chance that it would ever be seen again—and in fact it never was—the Fair Corporation lent him the money.

Moses wanted a full passenger list aboard this most luxurious of all gravy trains not only so that he could have the largest possible audience for his hospitality but because, more important, a passenger's acceptance of his ticket would couple his fortunes to Moses', make him his ally, help him retain and increase the power he had begun to lose. He wanted power—and to get it he selected his passenger list with care. "Why don't you come aboard?" O'Brien and Donoghue were asking, and Joe Kahn says, "Sometimes it seemed as if everyone who mattered was." The unions, thanks to the exclusive, padded contracts, were already snug in their berths. The banks, thanks to \$29,000,000 in Fair Corporation bonds were snug in theirs. And now, in response to Moses' invitations, a substantial portion of the city's power elite scrambled aboard—contractors (the names on the big signs beside the excavations on the Fair site—Tully & Di Napoli, Hendrickson Bros., Corbetta, Slattery, Johnson, Drake & Piper, De Lillo, Gull-were a roster of political clout); engineers (Shumavon & Buckley; Parsons, Brinkerhoff; Tibbetts, Abbott, McCarthy, Stratton—and one new name: Blauvelt Engineering, a firm with a new partner, George E. Spargo); architects; suppliers. The legal fees—immense legal fees—went to Sam Rosenman and, with the help of Moses-authored legislation exempting the Fair from the city's Code of Ethics, the law firm that former city administrator Charlie Preusse had just resigned to join. The vice president in charge of international affairs was Charles Poletti, called "Governor" because he had once served a twentynine-day term in that post as Lehman's interim successor; the head of the United States Pavilion was Triborough commissioner and powerful realtor and political insider Norman K. Winston; lucrative concessions were handed out to men like Howard Cullman and George P. Monaghan, who had been replaced as State Harness Racing Commissioner when the State Investigation Commission revealed that contractors who, on his recommendation, had been given contracts by the harness tracks had repaired his home—for free. The lucrative contract for the Fair's souvenir program went to Henry Luce's Time, Inc.; other benefits from the Fair went to a subsidiary of John Hay Whitney's Whitney Communication Corporation Holding Company.

The World's Fair gave Robert Moses a billion dollars to spend on power, and he got his money's worth.

Proof of that was forthcoming within a very short period of time after he became Fair president. Some bankers, remembering the 1939-40 fiasco at Flushing, were reluctant to purchase Fair bonds unless the Fair could show some operating capital of its own first. Moses asked the city to come up with some. There were plenty of objections—from liberals, including city councilmen (Stanley Isaacs was, of course, among them) who said that the city had more urgent needs on which to spend money—but not from the people who counted. The Council and the Board of Estimate and Mayor hastily approved an allocation of \$24,000,000 to the Fair whose purpose

The Great Fair

1091

had supposedly been to earn the city money, and the \$24,000,000 was only the visible portion of the city's contribution. Whenever Moses needed more money—and he needed it often—he went back to the city for quiet contributions. The total city contribution to the Fair is hidden under scores of innocuous items, but one estimate, possibly conservative, was that it topped \$60,000,000.

The Fair got him power; popularity was something else again. The universal exposition should have restored much of the universal affection in which he had once been held, both because its loudly proclaimed end as a great park should have reminded that portion of the public old enough to remember that Robert Moses was primarily a "park man," and because a "fair" was a cause almost as much on the side of the angels as parks, an event the press would normally cover in a blithe, carefree, favorable vein. It should, in fact, have in a way broadened his popularity, making it national in scope, giving him coast-to-coast publicity. The Fair should have rehabilitated Robert Moses' reputation and expanded it. Instead, the Fair destroyed it.

It was his own fault. In love with power, he could not give it up. To accept this new, bigger, construction post, it had been necessary for him to trade in a smaller—Title I—but he would not even consider giving up anything else. At the same time that he was undertaking to build the largest exposition the world had ever seen, therefore, he was simultaneously building the world's largest hydroelectric facility, the world's largest suspension bridge and the world's largest metropolitan arterial highway system—as well as building another huge suspension bridge, acquiring thousands of acres of new Long Island parks,\* battling on a dozen fronts to win approval of one new highway down Fire Island and two across Manhattan, giving general direction to city and state park programs, and administering a \$60,000,000-a-year corporation: six-bridge, two-tunnel Triborough; and a \$65,000,000-a-year corporation: the State Power Authority. Title I had been his first failure, and part of the reason had been the fact that he had simply had too much else to do. Now, thanks to his reluctance to relinquish power, he was stepping into the same trap. He was moving into a new field, one in which he possessed no expertise—and he was allowing himself no time to acquire any.

Nor would he hire himself any. His "muchachos" had built and administered highways, bridges, tunnels and parks; they had never built or administered a World's Fair. Yet he would not allow outsiders into his operation; long-time Moses Men comprised the Fair's entire upper echelon, its top-level executive staff included not a single person with exposition experience. The man he assigned to sell space in the industrial area was J. Anthony Panuch, whose sole qualification appears to have been the fact that his housing reorganization report praised Moses; Panuch, as one critic was to

<sup>\*</sup> It was not until 1962—after he had been running the Fair for two years—that Rockefeller would blast him free of some of these responsibilities.

note, "had never sold anything in his life." (Two years later, Moses was to fire him; he "couldn't do the job," he was to say. "A nice fellow, but he couldn't do the job.") The emissary to foreign governments was not the diplomat needed but Governor Poletti.

Most important, perhaps, he simply was not especially interested in this mammoth enterprise he had undertaken to create and direct.

In all his public life, only one field he had entered—public housing had failed to ignite the imagination that, when ignited, could blaze so fiercely. Now there were two. The Fair would catch his imagination later, but not at the beginning—and it was at the beginning that he made a mistake that would later be ineradicable. He was not at that time interested in the Fair itself, so he was not interested in Fair pavilions, and they were temporary structures, anyway; this man who built for the centuries could not be interested in structures that would last two years. The great end he had in mind—a great park—would in fact be endangered by any construction the Fair Corporation undertook itself: most financial analyses of the 1939-40 World's Fair agreed that a prime cause of its fiscal disaster had been Grover Whalen's willingness to build pavilions because there was an exciting idea behind them—and then find that he couldn't recoup the Fair's investment through rentals. Moses was determined not to repeat that mistake. Practically the first major decision made about the Fair by this master builder was that he was going to build as little of it as possible; he would, of course, build its interior roadway system and do the landscaping (because they would later become part of the park), but of the more than 200 exhibition pavilions, the Fair Corporation would build exactly three—a small administration building, one small Fair Corporation-operated pavilion and an 18,000-seat auditorium for athletic events and outdoor attractions—to be constructed to the cheapest possible specifications.

Uninvolved emotionally in the pavilions as he was, he had an additional financial reason to remain aloof: because rents from his exhibitors would go to his park, he wanted them set as high as possible, and exhibitors weighing high rents would want complete control over their own architecture. He decided therefore to give it to them; each exhibitor would have virtual carte blanche in his pavilion's design and construction. "A fair begins with its buildings," a critic wrote, stating that by his decision Moses had in effect "taken himself out of the fair business." Soon he was to take another step in that direction. Prior to Moses' installation as its president the Fair Corporation had appointed a "Design Committee" of five distinguished architects-Wallace K. Harrison, Edward Durrell Stone, Gordon Bunshaft, Henry Dreyfuss and Emil Praeger -to develop a central theme and plan. To give the Fair unity, they proposed housing all its exhibits in a single doughnut-shaped pavilion a mile around and 1,800 feet in diameter, which would be constructed by the Fair Corporation and in which exhibitors would rent slices. Moses knew something about the design that none of its supporters-including, apparently, the Design Committee—knew: since he had studied the life of Haussmann, he knew that

the doughnut-shaped building had been used at a previous World's Fair, Haussmann's Universal Exposition of 1867. He turned the proposal down, reiterating that there would, by design, be no central plan of any type.

So uninterested was he that he wasn't even interested in the layout of the Fair. Hardly had he accepted the Fair presidency when he commissioned the Port Authority as the Fair's agent in selling the 2,000,000 square feet of rentable space set aside in the transportation area; the only instructions given to the Port Authority executive to whom this responsibility was delegated were: "Here are eighty acres. You develop a master plan and sell them." Another commission—a lucrative one—for selling space in the "industrial area" was given to an agent of John Hay Whitney.

Even his critics had always had to admit that organization was Robert Moses' strong point. The Fair would be disorganized, its 200 pavilions a disorganized hodgepodge of 200 different sizes and shapes. Lack of a theme, a sense of unity, was a weakness of the first magnitude. All great expositions of the past "seem," as one critic was to put it, "to have some reason behind them." Uninterested in a great exposition—interested only in a great park—Moses seemed to feel he could have one without the other.

The Fair destroyed Moses' reputation also because he had to have his own way about everything, even in a field to which he was the newest of newcomers. He could have his own way in New York, but in putting on a World's Fair, he had to deal with other states and countries—and his arrogance antagonized them.

Dealing with scores of foreign nations would have been difficult enough in any circumstances. Governments were constantly falling, Cabinets changing—no sooner had one agreed to join the Fair than a new one was in power. Sukarno would participate only if Indonesia's pavilion was placed precisely midway between the United States' and Russia's to symbolize its neutrality. West Berlin wanted its exhibit symbolically situated on a traffic island beside that of the United States. (Poletti finally persuaded it to accept a less isolated site—one that was still right across from its protectors'.) Moses made such dealings impossible.

Most European nations were members of the Bureau of International Expositions, a Paris-based body set up in 1928 to regulate their number and nature. The B.I.E. had at least two rules incompatible with Moses' desire for a huge profit: Fairs could not run for more than six months, and could not ask foreign exhibitors to pay ground rents. "None of [these] obstacles was insuperable," as one observer wrote; there was, in fact, a plethora of precedent for the quiet bending of such rules with tacit B.I.E. approval—some of it established by the 1939–40 World's Fair, which had obtained B.I.E. sanction despite its duration and ground rent. While Robert Kopple, the originator of the idea for the Fair (forced out by Moses when he took over), had been running the Fair, several countries had begun planning "informal" but lavish exhibits ostensibly sponsored by national Chambers of Commerce but actually financed by government funds.

But Moses had made these obstacles insuperable. Arriving at B.I.E. headquarters in Paris to find them unimpressively modest and B.I.E. officials

unwilling to pay immediate and formal obeisance to his demands, he departed muttering audibly about "three people living obscurely in a dumpy apartment in Paris." To the press he bluntly announced, "We . . . are not subject to any rulings." He must have thought he was talking to the New York State Legislature. The B.I.E. directors, however, were not on his payroll; they responded not only by refusing the Fair its official sanction—a step which need not have hurt—but by taking the highly unusual step of formally requesting its members not to participate—which hurt plenty. Within weeks, Britain, which had been planning to participate, announced it wouldn't-and so did three-fourths of the British Commonwealth, along with France and Italy. Of all the major European countries outside the Iron Curtain, only one—Spain—defied the B.I.E. and accepted a Moses invitation; with one press conference, he had made his World's Fair a fair without Europe.\* Out of all the world's more important nations, in fact, the Fair obtained exactly six government-sponsored pavilions: Indonesia, Egypt, India, Japan, Mexico and Pakistan. And as Poletti was indiscreetly to put it, "It's pretty hard to have a World's Fair without a lot of international participation."

His loss of reputation was his own fault primarily because the image he created for the Fair was one of controversy.

A World's Fair was not a bridge that the public had no choice but to pay to use, it was a show to which the public had to be persuaded to purchase tickets. The key to the Fair's success was, therefore, public relations. It had to be portrayed to the public in attractive colors, as something gay, glowing, exciting. Moses understood this—intellectually. The hard-sell public relations effort he launched was perhaps one of the most extensive ever undertaken on behalf of any enterprise except a presidential election. Movies were made, speakers sent out, equipped with elaborate slide presentations, to urge Kiwanis, Rotary and Elks clubs from coast to coast to "Come to the Fair"; television, radio, magazine and newspaper ads were laid on so lavishly that Moses' Fair Corporation would eventually spend a total of \$3,260,963 on public relations. And this was no more than a drop in the promotional bucket; the Fair would be featured in tens of millions of dollars of paid advertising by such giant corporate exhibitors as Ford, General Motors and IBM. The Travelers Insurance Co. alone staged elaborate "Come to the Fair" presentations in eighty-three cities.

But Moses' PR men, aware of his desire for national publicity, did everything they could to influence the press to play the Fair in terms of its boss. The Fair Corporation's own publicity was built around Moses, of course; the *Time* and *Newsweek* and *Look* cover stories had not only the Unisphere but RM on their covers; *Life*'s story was entitled "Everything Coming up Moses." The hour-long CBS network show on the Fair was largely devoted to Moses' career; the local CBS-TV show was "The Man Who Built

<sup>\*</sup> There would be pavilions named for European countries, but they would be cheapjack jobs financed by private promoters.

New York." And because Fair publicity was built around Moses, it was wasted; the Fair's over-all image was not of a scene of gaiety but of a scene of strife and uneasiness and rage.

Moses' decades-long honeymoon with the press of New York City was over, of course. Criticism in Dorothy Schiff's Post was harsher than ever. Even Newsday publisher Alicia Patterson, her admiration for the man unstinted, could not go on supporting the man's transportation policies. Newsday revealed her ambivalence; even as Jack Altshul was being relieved of his duties as city editor for two weeks to enable him to research thoroughly an admiring three-part series entitled "Wizard of the Fair," its editorial page was saying: "The commissioner's arguments lack the good old Moses logic." The editorial was incorrect: the logic of Moses' arguments was the same old Moses logic-it was the editorial understanding of that logic that had been altered. The Times it was a-changing. Iphigene Sulzberger's opinion of this "man of vision," this "giant," had not changed, but she was as scrupulous as ever in her determination not to interfere too overtly in the paper's news coverage and editorial policy, and with Moses' old friend Arthur Hays Sulzberger crippled and increasingly out of touch with the paper now and Moses' relationship with Orvil Dryfoos friendly but not nearly as close, her scrupulousness hurt now, as an incident in 1961 revealed. A review of Lewis Mumford's latest book referred to Moses as an example of city planners whose concentration on highways was destroying needed open space around cities. Mrs. Sulzberger wrote a letter to the editor of the Book Review taking "exception" to that sentence and noting that "I have worked very closely with Mr. Moses for almost thirty years and I would like to testify that he has never considered a roadway merely as a means of transportation, but he has always made them into parkways using every bit of acreage possible for parks and playgrounds." But the significant point about the letter was not that Mrs. Sulzberger wrote it, but that writing ita mild letter at that—was all she had done. Similar criticism of Moses would soon be running in the Times again, in book reviews and in the paper's news sections. With the accession to the publishership of Arthur Ochs (Punch) Sulzberger in 1963, such remarks increased in number. "Moses would complain to poor old Sulzberger on his sickbed, and Sulzberger would call in Punch, and the editors closed ranks and they started looking for other things to prove that Moses was not worthy of the praise, over-all," Shapiro says. Most important, the editorial-page editor of the Times was no longer Charley Merz of I Gracie Square and the morning rides downtown but John Oakes. Even while Dryfoos was publisher, Oakes had been attacking Moses' emphasis on highways at the expense of mass transit and parks. After the publisher's death on May 25, 1963, Oakes went further than he ever had before, spelling out the paper's change of heart in an editorial on Moses' 1963 push for the Lower and Mid-Manhattan expressways: "As a newspaper we have previously endorsed those crosstown expressways, and we stand by that earlier endorsement. But we must admit to a growing disenchantment with great urban highway and expressway schemes." Particularly irritating to Moses was the new refusal of the *Times* to print every letter he wrote it. "That really infuriated him," Ingraham recalls. "He really thought everything he wrote should be printed."

But there was a powerful predisposition in the press toward a favorable, cooperative attitude toward the Fair, a predisposition based greatly on financial considerations. Most of the New York papers were desperate for revenue—it would not be long after the Fair's close that the Herald Tribune, World-Telegram and Journal-American died-and the Fair was a source of substantial revenue, both through special Fair "supplements" crammed with advertising from Fair exhibitors and contractors, and through increased advertising, aimed at Fair-bound tourists, by hotels and restaurants. There was, moreover, civic pride: the press was part of the city's establishment; in the circles in which the publishers moved, the New York World's Fair was not an event to be derided. And a fair was a fair. "There was nothing to be against," as Joe Kahn says. "What was there to be against? Did you ever hear of a fair or a circus that people were against?" No editor or publisher wanted to be the one to cast the first knock. All Moses had to do was ignore or roll with the criticism of his other activities, and as the Fair began to dominate headlines and editorials, that criticism would fade before a tide of praise. The honeymoon may have been over, but a divorce was by no means inevitable—particularly on the grounds of a World's Fair.

But Moses made it inevitable. He did not ignore the press or roll with its punches. He did not forgive it.

Rationally, logically, he knew that, for a public figure, fighting the media is a battle he can only lose; he was, in fact, constantly expounding this axiom to his aides. But it had long since ceased to be reason or logic that dictated his actions. It was emotions, feelings, passion—the complex, fierce personality to which, for decades, he had become accustomed to giving free rein. That personality made it impossible for him to ignore criticism. During 1961 and 1962, he was embroiled in battle on several non-Fair fronts—Henry Barnes, the Fire Island road, the Lower Manhattan Expressway. Press coverage was noticeably restrained, editorial criticism rather light. But no matter how glancing the attack, Moses seemed impelled to retaliate massively—by public attack on the paper involved and the press as a whole, and by private complaint to editors about reporters, and to publishers about editors.

And his attitude carried over to the Fair.

He scheduled press conferences because he realized, intellectually, that the Fair needed the publicity, and because, rationally, he felt sure he could charm the reporters into friendliness. But when he found himself in the same room with these men and women who had attacked him, reason fled before rage. He went out of his way to show his contempt for them; the face he turned on them was one of disdain; his answers were sarcasm and scorn. He lectured them—and he antagonized them. It would have been easy to make them allies; he made them enemies instead.

Any real chance of a reconciliation vanished on August 5, 1962, when he began lecturing the press in public as well as private.

The first lecture might, according to Sid Shapiro's post-mortem analysis of why the *Times*'s old-line Sunday editor decided to sponsor it, have been called "The Lester Markel Lecture to Show Mrs. Sulzberger That She Was Making a Mistake in Allowing New Editors to Be Brought In." For whatever reason, Markel invited Moses to write an article for his Sunday magazine giving his view of the press.

Moses accepted.

The power of the press, radio and television to make or break any man in public life . . . is awesome and often grossly unfair [he wrote]. The press, for the ostensible purpose of keeping it honest, has done much to make public employment dangerous and unattractive. . . .

Many a good official has been frightened or flattered by idle gossip, random criticism or attack. . . . Aaron and Hur do not hold up his arms so that his side may gain the victory. . . .

There is a type, fortunately rare, which is indifferent to the ordinary decencies and proprieties, skilled in eavesdropping, glued to keyholes, willing to embarrass families and friends, a species to whom nothing is sacred. Such reporters, if they could, would wire and violate the confessional. . . . I sometimes wish we had a few Gorgases to keep yellow journalists off our necks so that we would be free to do our work. . . .

Perceptive journalists sense that the public has tired of hearing Aristides called "The Just," and therefore yell for his ostracism. . . .

There is a notable tendency in the press to cut officials to one size in a sort of bed of Procrustes, to put on spiked shoes and cleats and to jump on victims when they are down, like a mob at the fights shouting with such glee when an aging champion is beaten up and dethroned. There is also a potent minority of jackals and vultures who hang around the outskirts and hover over trouble spots to discover a wound or blood and then close in or swoop down for the kill. . . .

Cleverly and dramatically reflecting public opinion is one thing. Planting suspicion, poisoning minds, rousing the mob spirit, quoting out of context—these are cute tricks far removed from straight honest reporting. . . . Critics build nothing. The only excuse for a critic is to toughen the hides of his victims. . . .

Jackals. Vultures. Yellow journalists. "There is only one way to get the press united and that is to attack it," Joe Kahn says. Now Moses had attacked it. The reporters who had to cover the Fair every day, the reporters he had insulted at first to their editors, then to their publishers, then to their faces, then to the public, were now his enemies. If he gave them material with which to tear him down now, they would use it for all it was worth.

And he gave it to them by lying.

He had been twisting facts for years, shielded by the secrecy which the courts had erected around his public authorities. But the World's Fair was a private corporation whose records were open, one, moreover, which was, because of its need for public support, forced to operate in the public eye. The press could look at the World's Fair—and he had made it willing and determined to look.

Joe Kahn looked first.

Moses was deluging city desks with Fair brochures and "Progress Re-

ports." The Post reporter began to read them with care. "I don't like to say it was a natural antagonism against the man and the men around him," he says. "But I guess it was. And it was natural, being the kind of reporter I am, to be suspicious—particularly when you have these suspicious characters around, guys like Rosenman—I mean he was the lawyer for all these guys who tried to fuck everyone—you had to be suspicious when you saw he was involved. And you know, you started reading those brochures, and you could see he [Moses] had the same old crew in." Kahn began to look "for tie-ins and conflicts of interest and that kind of thing"—and soon he was telling Post readers about the \$10,000,000-a-year restaurant business that Moses had handed to two Fair directors for a pittance rental without competitive bidding, and was feeding Stan Opotowsky, writing a series titled "Who-Do-You-Have-to-Know Or: How to Do Business with the City," information about the lucrative arrangements with Deegan and Donoghue and Preusse and Constable and Spargo and Shanahan and Rosenman.

From Moses' public relations offices was coming a steady stream of announcements of states, foreign countries and prestigious private exhibitors who had "agreed" to sponsor pavilions. Kahn began to check into those announcements. "I couldn't call Panama, for Christ's sake—the Post would have gone out of its mind. So what I did was I called the embassies here. And I wrote to every Governor whose state was supposed to be in. I was never assigned to the World's Fair. Nobody in his right mind would assign me to a thing like this—it took too much time. So I was doing it all on my own, at the same time that I was doing my regular assignments. I was doing it all myself. God, I remember now. I never told anyone what I was doing. A terrible, awful job." But it began to produce results. Moses had announced a huge Hall of Medicine and Health, to be sponsored by the American Museum of Health. When Kahn telephoned the Museum's chairman, he said the Museum had decided not to sponsor the exhibit. Moses had said that California was sponsoring an exhibit; Kahn checked, and Governor Pat Brown said California was not. Soon there were other stories: PUERTO RICO DROPS OUT OF '64 FAIR; VIRGIN IS. DROPS PLAN FOR PAVILION.

The city's other papers were reluctant to pick up this new theme at first. As late as the spring of 1963, the general play given to the World's Fair in New York's press was still upbeat. But Moses took care of that.

The first of a new series of press conferences on "the Fair's progress" was held on June 27, 1963. The prepared statement with which Moses opened it had evidently started out to be a plea for cooperation: "We are not shrinking violets or sensitive plants and constructive questions won't irritate us," he said. "Let's be working partners in bringing the world to New York." But it turned into a statement with the Moses touch: "We at the Fair build. The Press in its many manifestations reports. Who am I to explain our respective missions and to acknowledge our dependence upon you? . . . We are entitled to the support of all decent citizens. . . . Error is the besetting sin of journalism, perhaps occasionally acknowledged in the Confessional but almost never publicly."

The reporters found, moreover, that their questions were not considered constructive. He had planned the main news of the day to be the fact that ground was being broken for a Sudanese Pavilion, and the fact that the Fair was coming along on schedule. "Do not, we ask, overemphasize the absentees," he had said in his statement. The reporters persisted in asking about the empty spaces on the map behind him and how much missing rental they represented. He began to get angry. The reporters asked him about the fees paid to Preusse. "That is not a subject that comes under the category of the Fair's progress," Moses said. The reporters walked out fuming, and the *Herald Tribune*'s lead the next day was that the Fair's "economic prospects . . . were trimmed yesterday." Its article enumerated every unoccupied plot. The Sudanese Pavilion barely made the last paragraph.

To attack, there was for Robert Moses only one response: counterattack. A few days later, a group of Queens civic leaders were touring the Fair. Greeting them, Moses noticed reporters nearby. "This is a highly critical community," he rasped. "I think we have more critics than we are entitled to for our size. They foul the city's nest and are always more interested in what is going wrong than in what is going right."

A luncheon that had been planned to "clear the air" with the new editors who were taking over the places once held by his friends at the *Times* did little to convince them of his reasonableness.

Public officials lunching with *Times* editors almost invariably do so at the *Times*; even Presidents come to them. Not Moses; if they wanted to see him, he told Ingraham, who was arranging the luncheon, they would have to come to him. They agreed to do so, and eight or nine—"the very top, Daniel and Salisbury were there," recalls Ingraham—journeyed out to Flushing Meadows one day. Ingraham says he was brought along "to explain things to them," but explanations were to prove superfluous. Moses made things perfectly clear.

"Moses started sounding off and made some reference to his job as City Construction Coordinator and the power it gave him," Ingraham says. "So Frank Adams [Times city editor] asked, 'How far does your jurisdiction as Construction Coordinator extend—the way you put it, it would seem that if a road starts in Florida, you have jurisdiction over it as long as it ends up here."

"I consider that an insulting question," Moses said. Leaping out of his seat, he stalked out of the room—"leaving nine top executives of *The New York Times* absolutely flabbergasted." For a while they sat there, stunned, waiting for their host to return. Gradually they began to realize that he wasn't going to. Says Ingraham: "After a while, we just got up and went home."

Moses paid the price for the pleasure of giving his emotions rein.

In every announcement, the press found something to carp at. When the Administration Building opened, they emphasized not that the first structure for the Fair had been completed, but that it had cost a million dollars instead of the expected \$600,000. When landscaping on the site began, they noted that it began "well after the promised Spring of '62." Did

Moses proudly announce that the city had agreed to construct a \$3,500,000 Science Museum? "A far cry from the multimillion-dollar Federal Science Pavilion erected by the United States at the Seattle Fair."

Press conferences were the stage for the most overt encounters, of course. At every press conference there would be mounted behind Moses a huge map of the Fair. He wanted to talk about the exhibits that had filled in spaces since the last press conference—the new exhibits that had been signed up. They insisted on asking him about the spaces that remained empty. Why was the Fair having so much difficulty persuading states and nations to exhibit? He would get angry, and blast the press for making an issue out of something he considered unimportant; the blast would be the biggest news of the day.

He couldn't let anything alone. He had to fight with everybody, and fight publicly.

Negotiations with H. L. Hunt, the eccentric Texas oil magnate who had offered to rent 152,000 square feet and erect a complex of thrill rides and the other amusement attractions the Fair so badly needed, together with several restaurants, were probably doomed from the start, since Hunt was as accustomed as Moses to having his own way. But since the negotiations had never been a matter of press interest, their termination did not have to make the front page of The New York Times. Moses put it there-after disagreements over the "standards" of the rides, which Moses felt might be too "gaudy," had reached the point where Moses ordered Hunt's check for more than a million dollars returned-with a full-scale statement to the press that arrangements had been "mutually terminated." Hunt, who had previously been happy to go quietly, felt called upon to make his owneight-page—statement denying that there would have been any gaudiness and that there had been anything mutual at all about the termination, saying that he would have been happy to be part of the Fair despite Moses' "vacillating and capricious moods and . . . emotionally-arrived-at decisions" until Moses had flatly declared he was "out." All of which not only increased the air of controversy around the Fair, but emphasized the difficulty Moses was having in providing traditional amusements for the Fair. Moses wanted a \$25,000,000 Federal Pavilion at the Fair, but his reaction—in public statements, press releases and testimony before congressional committees—was one of such outrage that anyone, even a United States senator, should raise any questions at all about a Robert Moses demand, that Senator Paul Douglas of Illinois called him "one of the most competent and irritating men in the history of the United States." Before Moses arrived in Washington, the request, with President Kennedy solidly behind it, had been regarded as assured of passage. By the time Moses left, it was all but dead, and only White House intervention saved it in scaled-down dimensions. Not satisfied with what he had thus wrought, Moses proceeded to make new public attacks on congressional stinginess.

In a dozen such incidents, Moses created controversy where none was necessary, handing reporters fuel, fuel he had made them anxious to use.

And when they used it, turning it into stories, he attacked them for using it—thereby making more stories. It was attack and counterattack, and attack and counterattack, in a war of words that escalated and escalated and escalated again. As opening day grew closer, the Fair, thanks to its president, was surrounded by furor. There was the racial controversy—there was, of course, not a single Negro or Puerto Rican on the Fair's 200-person administrative staff, and not many more even in menial posts around the Fair Administration Building until Screvane managed to ease some in, and the protests of Negro civil rights groups were met by Moses with scant courtesy. And there was the religious controversy: every one of the major religions in America was represented at the Fair, save one, and Jewish leaders were increasingly perturbed by the absence of any representation of their faith (some of them seeming to feel that the Fair was not especially anxious to have any); their feelings were not especially assuaged by the fact that when Israel decided it could not afford a national pavilion (after learning that the cost of its pavilion was more likely to be \$3,000,000 than the \$1,250,000 Moses had promised), Moses attacked Premier David Ben-Gurion. There was the controversy over unions—the press dubbed it "The Great Garbage Controversy"; foreign exhibitors were shocked by \$17-an-hour-per-man garbagecollector rates; after enraged Spanish Pavilion officials refused to hire Allied Maintenance crews and tried to hire their own, teamsters refused to pick up the pavilion's garbage, and the Spaniards threatened to dump it into the Unisphere pool. And then the controversy over art; Moses turned down repeated requests by artists' societies for a pavilion to display American art because no one came up with the high rental he demanded. Then there was the opening-on-time controversy. Instead of simply admitting that a few exhibits and some landscaping would not be ready on Opening Day, which would have made this a not-very-newsworthy item, Moses kept insistingalthough he knew differently-that everything would, which allowed the press to do daily stories on the items which were behind schedule.

Moses was raging at the press now. If these jackals and hyenas thought they could attack with impunity, he'd show them how wrong they were. Blasting the "assorted dyspeptics, grouches, grumblers, hit-and-run writers and talkers who hint broadly that our fair will be artless, boycotted, funless, foodless, constipated, strangled and tasteless," he told 1,400 members of the Fifth Avenue Association gathered to honor him in October 1963 that he had decided that "if your natural weapon is the broadax, you should not affect the rapier"—and, dropping the more delicate weapon, he swung the ax more and more frequently; by the start of 1964, it seemed that every speech on whatever occasion—the opening of a new pavilion, the dedication of the Unisphere, welcoming a delegation of New England Governors to the Fair—was an occasion for a vicious denunciation of the news media. Some of the controversies he won and some he lost, but all had the same result: more publicity about strife and disunity at an event whose slogan was "Peace Through Understanding." He had turned a skirmish with the press into a full-scale war—and he had been its leading casualty.

Out of the Flushing Meadows-an expanse of flat, barren, almost unadorned land not two years before—there took shape now a square mile of forms out of the past like the thatched replicas of African tribal huts housing tree-house restaurants, of forms out of the future like the hulking massiveness of the United States Pavilion and of traditional fairground adornments such as the curving, looming dark walls of the Hall of Science, the little, brightly colored cable cars swinging in procession overhead and the clusters of white balloons that marked the Brass Rail hot-dog stands scattered throughout the grounds—a flag-lined, fountained scene that may have been disorganized and hodgepodge but that was also somehow vital and vivid, not trend-setting certainly but gay and alive, a scene certainly not boring, a scene that may not have titillated the sophisticated taste of New York intelligentsia but that would have thrilled the general public. But in the public perception of the Fair—the perception created by the media—this scene was not foreground but background. There loomed before it the figure of its creator, dominating the scene, muting its gaiety, casting a dark shadow across its brightness, a figure not inviting but hostile, a figure of arrogance and controversy and rage. With the opening—on time—of the Fair, the wind of controversy died away for a while. But the whirlwind was still for the reaping.

The first hint of the great storm to come was the daily attendance figures. Every day that the Fair was open, its expenses were \$300,000—on top of the \$30,000,000 it had spent prior to Opening Day. To pay these expenses—and to fulfill his promise to repay the city its \$24,000,000 loan, and to have the necessary \$29,000,000 left over for his great chain of parks—the daily attendance had to average 220,000. Moses had confidently predicted it would. There would, he boasted, be many "quarter million days." But the controversies he had spawned had come home to roost. Attendance on Opening Day, April 22, 1964, was 49,642. Moses ascribed that to overdramatization of a civil rights protest auto stall-in and to chill, drizzly weather. But attendance the next day, clear and warm, was 88,130. On the first weekend there were crowds each day of 170,000. But during the following week, the fatal figures read: 45,000; 53,000; 38,000.

Wait until May, when the weather turns warm, Moses said. During the entire month of May, there was not a day on which attendance reached the break-even 220,000. On only seven days did it reach 200,000. On five days it did not even reach 100,000. Attendance for June was scarcely higher.

Wait until July, when the schools let out, and parents can bring their kids, Moses said. All through July, the Fair waited—in fair weather—for its first quarter-million day. It never came. On only five days did attendance reach 200,000. By the end of July, according to Moses' "conservative" forecasts, 25,000,000 persons should have paid their way into the Fair. The actual number was 15,000,000. With attendance thus off by 40 percent, so was revenue from admissions and parking fees, and from the Fair's percentage of concessions and restaurant income. The Fair was not earning the profit Moses had expected. It was not earning enough even to pay its bills.

It took Moses a long time to realize the implications of those attendance

figures, partly because for a long time no one told him about them. His shrewd money men, Spargo and Madigan, were not part of the team handling the Fair's day-by-day financial administration. That team had been brought over from Triborough; its head, Erwin Witt, the Fair's Comptroller, had been Triborough's comptroller. Comptrolling for Triborough had been a notably undemanding job. The monopoly enjoyed by the Authority made its revenues easily predictable and inevitably increasing; during Witt's years as comptroller, the Authority had never once been in serious financial straits. The extravagance and wastefulness of its spending—extravagance not only condoned but encouraged by its chairman—had bred within the Authority an attitude toward money of carelessness and disregard.

And it showed.

At the Fair, Witt had made a mistake worthy of a first-year accounting student. He had credited all the advance discount sales to the first year's income, thereby making the Fair's balance sheet look far better than it should, for the balance sheet did not reflect a fact that would become apparent during the second season—that 15,000,000 persons who would be attending during the second season would not be paying to do so. Had attendance been as high as predicted, there would have been so much money that the mistake would not have been fatal. But it was fatal now: the money had been spent, and no more was coming in.

And after Moses' aides finally did realize the implications of the attendance figures, they still took a long time to tell RM about them. For they were afraid to tell him. Knowing the blind, punishing rages—and, in some cases, the ostracism, the severance from power and prestige and money—with which RM greeted bad news, not only Witt but the executives to whom Witt reported, the Constables and Shapiros, stalled for weeks before breaking the news. The only one of Moses' aides with enough guts (and money) to tell the Boss the unpleasant truths was George Spargo, then chairman of the Fair's finance committee. Spargo had been working for Moses for thirty years and was closer to Moses than any other aide. Unlike the other Moses Men, he was close to the Boss personally as well as professionally; they double-dated together; Spargo had introduced him to the woman who was to become his second wife. By any standard—including the one that, in the Triborough empire, really mattered: the money that Moses had let him make—Spargo was Moses' favorite. When Spargo told Moses the truth about the Fair's finances, Moses fired him on the spot. "We don't want any negative thinking around here," he said in an explanatory memo to the staff. Then he summoned Witt to his office. The comptroller was a short, mild-mannered, white-haired man of sixty-five with a history of heart trouble whose wife had recently died. His session with Moses lasted for almost three hours and he returned from it pale and trembling. "He was never the same again," one of his secretaries says. Within days, he had suffered a heart attack-from which he never recuperated. He underwent open-heart surgery, did not recover from it and died.

When—sometime in late August or early September, it appears from

his memos—Moses at last began to realize the seriousness of the situation, it was too late to remedy it. The money had been spent-\$30,000,000 before the Fair opened and perhaps \$30,000,000 more since April 22, a total of perhaps \$60,000,000. He had expected the Fair to have earned \$90,000,000 by this point. It had earned perhaps \$35,000,000. He had been able to spend the extra money because he had also had in the till about \$25,000,000 worth of tickets sold but not used. But because these would be used during the Fair's second season, income during that season would be very small. There would be very little new money coming in-and so much had already gone out. Frantically, he tried to cut back expenses, but what could he cut? The contracts with the insurance companies, with Deegan and the engineering firms, were already signed, and had to be paid by the month. So did the annuity contracts. Interest on the notes was mounting daily. He took some measures, issuing a memo-perhaps the first of its kind ever sent out of Robert Moses' office—ordering a "drastically reduced budget" for maintenance and security, and an effort to reduce expenses in all areas. The Allied and Pinkerton forces were cut back to levels at which they should have been all along—about half of what they had been. But other areas resisted economy; as Peter Brennan puts it, "The unions had been built up to this high level. They resisted cutbacks." And the economies were, simply, too late. He had paid out \$60,000,000. He couldn't get it back.

Attempting to conceal the truth from the press, Moses' aides consistently inflated daily attendance figures. A special handsomely—expensively—printed Interim Report announced that the Fair had been a "financial success" and as of August 31 had a balance of \$12,700,000 cash on hand. But when he tried to sneak an \$8,600,000 appropriation through the Board of Estimate, Mary Perot Nichols of *The Village Voice* spotted it, and began to speculate publicly that the Fair might be in financial difficulties. Following her lead, other reporters spotted other clues, although the conclusion drawn was only that the Fair was not making as much money as Moses had predicted; no one, all through 1964, guessed the truth in its full extent.

Moses appears not to have known its full extent himself. Certainly his aides, having seen what happened to Spargo and Witt, were not going out of their way to tell him about it. "You've got to remember," says one city official, "that everyone out there was scared to death. Moses *made* all those people and he can destroy them. He doesn't want to hear that his Fair is going badly. He's always regarded criticism, however constructive or well meant, as a personal attack. All he wants to hear is, 'Yes, RM.' The result was that his own people allowed him to live for months in a fool's paradise."

It had to end, however. The Fair was not a public authority. When its money ran out, there would be no legislative appropriation to put more in its till. When its money ran out, it would be out of money. There was going to have to be a day of reckoning.

It came in December.

The bank presidents who, with Spargo gone, made up the Fair's finance committee had become increasingly worried over the vague rumors they were hearing and over Moses' evasions when they asked for hard facts and figures, and he had finally agreed to appoint an outside auditor. The expert named—Henry J. MacTavish, a retired vice president of the Chase Manhattan Bank and trusted aide to David Rockefeller—was met on his first day on the job in November by a typical Moses attempt to bring him into camp: a full serving of charm and the promises of future financial rewards—if, the implication was clear, he behaved himself. Moses escorted him around the Fair Administration Building to meet the other officers, gave him a spacious office near his own, promised him all the secretarial help he could use and escorted him into a meeting of the Fair executive committee, where it was moved that he would be appointed the Fair's financial vice president—on January 1, after his study was completed.

But MacTavish was not a Moses man but a Rockefeller man. A tall, tough Scotsman, he was, moreover, a hard-nosed analyst of balance sheets who understood all too well what he found in the Fair's. By standard accounting methods, he found, the Fair, as of October 31, 1964, had, not a surplus of \$12,700,000, but a deficit of \$14,000,000.

Charm having failed, Moses essayed intimidation, summoning Mac-Tavish to a meeting at which, according to a non-Moses Fair official, he hoped to make the Rockefeller man back down. In the midst of receiving estimates and projections from his department heads, Moses turned to the Scotsman and said—"almost casually," this official recalls—"By the way, Mr. MacTavish, do you want to say anything?" The official recalls that "MacTavish shifted his legs, looked Moses in the eye and said: 'Are you sure you want me to speak now?" Certainly, Moses replied. He had no secrets from his boys. But again MacTavish hesitated, asking: "Do you want me to say what I have to say before this group?" Perhaps lulled by MacTavish's hesitancy into believing he had won, Moses said firmly: "I do." And then, the official recalls: "MacTavish let him have it. He ripped all the estimates and projections to shreds, and when he was all through he leaned back, smiled and said, 'As of today, Mr. Moses, we're insolvent.'"

Reality, which Moses had been attempting for months to dodge, had struck him full in the face.

MacTavish's secretary was fired (according to one report, she was later rehired), the executive committee voted to revoke his nomination as financial vice president and he received a handwritten memo from Constable instructing him that, in accordance with Moses' wishes, "under no circumstances" was he to attend the Fair employees' Christmas party. Even this ultimate proscription, however, failed to break his spirit. Moses said flatly that "under no circumstances" was he to make any copies of his formal report or to show it to anyone before Moses had approved it, but MacTavish defied the order and on December 10 sent a copy to George Moore, president of the First National City Bank and Spargo's replacement as finance committee chairman. Moses was frantic to keep the bad news from the press, but the bankers who had lent their names and reputations to the Fair were growing worried about what would happen to their own prestige if the Fair went

down. This was particularly true of Moore, whose bank, unlike most of the others, had never been a leading beneficiary of past Moses bond issues. One conversation between Moore and Moses was described this way:

Moore: Bob, we've found bills of six and seven figures that weren't booked. We just can't continue without reliable information.

Moses: George, your figures are wrong. You don't know what you're talking about.

Moore: Bob, I've been in the banking business all my life and if there's one thing I know it's a column of figures.

At an executive committee meeting on January 12, 1965, Moore demanded specific, audited, information. "Moses said to wait until next month. Moore said he couldn't continue this way. Moses accused Moore of trying to sabotage the Fair. 'If you don't like it,' Moses shouted, 'you can get the hell out.'"

Moore did, taking a majority of the finance committee with him. Moreover, he did so publicly, informing reporters that he was resigning "because of the way finances are being handled." "You know," he said, "back in June they said they would have a \$50,000,000 surplus. What has happened to that surplus? What? I don't know."

Reporters had been writing for months that the Fair was in financial difficulties. Moses had publicly branded them hyenas, jackals, yellow journalists—in effect, liars—for saying so. Now the truth—that the Fair was in financial difficulties far worse than any reporter had imagined—was out in the open. The meat eaters of the media fell upon the feast with a will—and tore the already bleeding carcass of the "greatest single event in the history of the world" to bits.

Moses was flying frantically around the world trying to round up new exhibits that would enable his Fair to break previous fairs' second-year fall-off pattern—and he was spectacularly successful, obtaining from the Vatican a \$600,000 Gutenberg Bible, the Pope's bejeweled coronation tiara, and Michelangelo's statue of St. John; winging on to Madrid to present a Fair medal to Franco and obtain new major Spanish works of art for the Spanish Pavilion; arranging for a Churchill Pavilion containing a film of Sir Winston's life, thirty of his paintings and a comprehensive collection of Churchill memorabilia. Disaster was staring him in the face now; to stave it off, even navels must be enlisted: no longer were he and Constable screening out "tawdry" shows and auditioning the ones allowed in to make certain that female dancers did not display belly buttons or cleavage; in 1965, there would be nine discotheques featuring go-go dancers, and their bras were creeping further down nightly; in 1964, Moses had insisted that bras be put on "Les Poupées de Paris" and that sexy posters be taken off the front doors of that show; in 1965, the girl taking tickets outside was spilling out of her bikini—"to make the show's point perfectly clear," its promoter explained. Moses would not admit he had surrendered but, as one reporter put it, "everywhere there is evidence of the Moses compromise-more scantily-clad girls, carnivalstyle booths and games . . . 69 new bars, gorillas Toto and Gargantua II." For opening day of the second season, spectacular pageantry was arranged—a parade with eighteen bands, four thousand marchers and thirty-one floats, speeches by Vice President Humphrey and West German Chancellor Willy Brandt, an eight-mile run from Central Park Arsenal to the Singer Bowl by Olympic marathon champion Abebe Bikila. Over and over Moses repeated that 1965 would be "a new Fair, a new show"; when he said "Come to the Fair" now, he was almost pleading.

But what the press was emphasizing now were the juicy quotes Moore was giving out (a photo of the bank president clapping his hand to his forehead in an ostentatious gesture of dismay accompanied a national magazine's story on the Fair), while the financial revelations from the first outside audits and Abe Beame's investigation made the financial picture look worse and worse: on January 26, in receipt of preliminary audit figures, Moses announced that the Fair would be unable to repay the city its \$24,000,000 "loan" but that the \$23,000,000 in investor-held notes would be paid in full. But two weeks later, the final audit revealed the full extent of the gap between Moses' \$12,700,000 "surplus" and reality—some \$30,000,-000; the Fair had actually finished the first season with a deficit of \$17,540,-000. It was obvious to Beame's auditors that the Fair was not going to be able to repay its notes in full—and the press headlined that fact. The memos waiting for Moses every morning on his desk showed the situation to be even more desperate than that. Now that the auditors had finally discovered all the unpaid bills, the Fair did not have enough money to pay them; on December 31, the exposition, which had taken in \$80,000,000, had \$639,000 in cash, unpaid bills of \$3,000,000, and \$4,000,000 more in bills due before opening day, with no revenue expected until that day. Moses sent aides to ask the major exhibitors to prepay rents not due until after the opening, and some did; he threw into the pot \$400,000 being held in escrow to guarantee his salary and ordered other aides with escrow accounts to do the same. But there was still a shortfall and the press found out about it, and about another development in relation to it that made it a bigger story still-not only was the Fair not going to be able to reopen without a new loan, but it was having difficulty obtaining one. An executive of one of the banks approached—holder of millions of dollars' worth of notes that might now become worthless, in danger of losing still more money on the Fair because loans to marginal exhibitors were going bad-intimated to Fred Ferretti of the Herald Tribune that the reason his bank would not make the loan was that Moses was still in charge; the intimation was false to begin with, and Ferretti played intimation as fact with a Herald Tribune exclusive, played under the most damaging headlines yet-LOAN TO FAIR: NOT IF MOSES IS KEPT ON—and the rest of the press jumped on that story in headlines such as FAIR'S CHOICE: MOSES OR MONEY. Even on the day the Fair got the loan it needed, Newsday could, truthfully, say: "Few days at the Fair contain good news only. The bad news yesterday was that one of the most popular foreign buildings, the Indonesian Pavilion, is being shut down by President Sukarno because of increasing bitterness in U.S.-Indonesian relationships." Exhibitors

insisted on pleading for a reduction in the admission price, at least during evening hours; when they could not obtain an audience with Moses, they went to the press. Day after day the headlines about the Fair were not about new exhibits but about prices and deficits and money.

The general aura of financial difficulties that now surrounded the Fair, moreover, made it feasible for reporters to dredge up all the rumors they had been hearing for three years—the incredible contracts with Allied and Pinkerton and the unions, the huge salaries paid to the consultants. Beame, working with reporters and hunting for publicity, demanded the Fair books so he could audit them; Moses refused to produce them, but the courts ordered him to. And as, over a period of months, Beame's auditors delved deeper and deeper into them, new facts came out—to surround the Fair not only with an aura of inefficiency and financial difficulties, but with an aura of scandal, an aura linked with Moses himself.

Soon Moses himself was at the center of these charges, for reporters had discovered the escrow account set up to insure his salary (the account had been replenished by gate receipts after the Fair opened for the second season). Headlines told the public that Moses had been guaranteed a salary of \$100,000 per year.\* That salary was then near-incredible for a public servant; the Mayor's was only \$40,000 per year. There was, moreover, the "escrow account"; the public may not have understood it, but there was something sinister about the way the press played it. It made him seem greedy, moneyhungry, taking a huge personal profit out of an institution that had been supposed to provide the city with parks and educational money but was not doing so. The last surviving portion of the Moses image was destroyed. No one had ever said he was personally interested in money. Now they had. Of the image of Robert Moses, that had stood glittering and pure for thirty years, there was now not a single part left untarnished.

He became an object of derision, almost of scorn, to the reporters he had derided and scorned for so long.

Every desperate move he made to try to save the Fair was ridiculed. When he raised the admission price, *Newsday*'s lead said: "Visitors to the World's Fair in 1965 will have to pay an additional fifty cents to reach 'Peace Through Understanding.'" When he asked for an end to "controversy" and more expressions of confidence in the Fair by Wagner, while simultaneously criticizing the Mayor for withholding them in the past, *Newsday*'s headline said: PEACE-MAKER MOSES OPENS NEW FRONT.

The Herald-Tribune had a whole stable of brilliant young columnists. At times, they almost seemed to be taking turns taking potshots at the sitting target that the old man had become. Dick Schaap wrote a whole—hilarious—column on the impossibility of reaching him on the phone, and when he visited Franco wrote: "Moses' mission to Madrid is another indication of his keen public relations sense. Franco is practically an American folk hero. His firm democratic stance cannot be questioned. No one could be more deserv-

<sup>\*</sup> Actually, of course, it was \$75,000 per year, plus \$25,000 in expenses—plus the seven-year \$27,500-per-year annuity.

ing of the World's Fair's Gold Medal, unless, of course, it is Robert Moses himself."

He tried to roar back at his critics. "Those who can, build. Those who can't, criticize," he said. But his invective, once so feared, was now ridiculed. "There was a time when the verbal jousting of Robert Moses enlivened and sharpened civic controversy," said a *Times* editorial. "In defending his handling of the World's Fair, however, Mr. Moses' sorties suffer from petulance, and what is worse, they are ineffective. He would be wise to pack in his rusty lance."

When the suggestion came that he resign as president of the Fair, the press was confident it would be adopted.

The suggestion came from the top. Mayor Wagner was increasingly worried about the situation at the Fair and afraid that its failures might tar his administration. He believed the solution was for Moses to resign and be replaced by an administrator not tied to the unsuccessful policies of the past and thus more amenable to changing them. Other officials besides the Mayor were afflicted with the same worries. Between the two seasons, Governor Rockefeller and Senator Javits were also working quietly to persuade Moses to resign. For years he had been threatening to resign from one post or another, confident that no one would take him up on the threat. Now people were asking him to resign.

He would have liked to. Knowing the true financial picture, he knew that, bad as the publicity had been, it was going to get worse. And there was a more serious threat—one that was never to receive any publicity at all. Unknown to press and public, the Internal Revenue Service had begun an intensive, in-depth audit of the Fair to determine if it had adhered to the restrictions that went with the various tax exemptions it had been accorded. The investigation would not be completed for months—there is some question whether it was in fact pressed to a conclusion, there was never any public report of its findings, and Moses was, years later, to write in his memoirs that it "resulted in a clean bill of health"-but it would have been a man supremely unconcerned about his reputation who would not be concerned about the results of such an investigation, and Moses was not such a man. He thought he saw one way to leave so that no one could say he had been forced out: to accept a call to a higher duty, a bigger job. With the United States preparing to surrender all control of the Panama Canal, there was increasing talk in Washington of building a new canal in Colombia. Moses asked Bernard Gimbel to take steps to bring him the assignment. "Moses thought he could do a cheaper, higher-quality job with less political pressures than anyone else," Gimbel says. Gimbel contacted New York Democratic committeeman Edwin Weisl, an intimate of President Johnson, and Weisl contacted the White House. But although no formal word was passed back, it became apparent that Moses wasn't going to get the job. "It's a sad thing," one of the Moses Men would say. "Bob is old and tired. He feels he can't resign, but he can't get out any other way."

And no one could make him. Wagner sent emissaries in relays, beginning with Screvane, who made breakfast overtures. The first was discreet. "I

told him that I thought he should resign because he had built this thing that everyone had said couldn't be done, and now he should let the day-to-day handling of it be done by someone else," that mere management was not a job worthy of Robert Moses. The second was more to the point. "I told Bob, 'You know damn well I'm fond of you and I think you've done a great job, but here we are—things aren't going well and we're going to be deeper in the hole next year. We need a fresh start.'" The second emissary was financier John A. Coleman, Al Smith's old breakfast companion, whom Wagner selected in the hope that their shared love for the dead Governor might give Coleman a unique leverage. The third was a committee of bankers, the men who had \$23,000,000 in notes, and millions more in loans to individual pavilions, at stake in the Fair. There were further discreet hints from Rockefeller and Javits.

But when Screvane made his first suggestion, Moses "said something to the effect of 'I never expected you to say a thing like that—it smacks of disloyalty." When he made his second, "he started smacking the table. The words just poured out. I don't remember exactly what he said but there was no way he was going to be forced out." With Coleman, he was friendly but firm. With the bankers, he was firm. "They're all very courageous—until they face him," Wagner says with his quiet smile. "They would be so brave—'We will do this, we will tell him'—and then. . . . It's his personality. He overawed them."

Then there were attempts to force him out. "We tried every way short of going to court to get him out of there," Screvane says. The Fair board of directors or its executive committee had the power to oust him, and the members of that board, once his allies, were all falling away from him now. Additional pressure was brought. Recalls Wagner: "The banks had a big investment. I said, 'Well, you bankers—you're the ones that have to . . . get the committee on your side.' Oh, 'We can do it. We can do it.' Well, they found out they couldn't do it."

Now was the time for the dossiers. Screvane knew what was going on. "On at least twenty occasions when we were on the same side, Bob would say, 'Well, goddammit, if he doesn't go along, I'll destroy the son of a bitch!' And sure enough, when the vote came, the fellow would go along." Other members of the executive committee were making money from the Fair concessions he had given them, and didn't want to chance upsetting the arrangements. Others may have recalled that, when the Fair was over, Moses would still be head of Triborough and the arterial program. They went along, too. Others supported Moses out of loyalty, or conviction that he was still the best man for the job—any job. Whatever the reason, Screvane says, "we wouldn't have the votes." The same reality that the press had failed to grasp about Title I was still at work here. Not public opinion—not even the opinion of a Mayor and Governor-but raw power would determine whether Moses stayed on as president of the Fair, and of power he still had more than enough. On the Fair board were dozens of the most powerful men in the city and state. Moses handled them like unruly children. At one meeting,

Senate minority leader Joseph Zaretzki tried to interrupt the Moses-dictated agenda by rising to a point of order. Moses smashed the gavel down. "You're out of order." "You can't do that," Zaretzki said. "I'm speaking to a point of order." Moses curtly nodded to the next-scheduled speaker, Fair executive vice president General William Potter, who began reading his report while Zaretzki was still speaking, drowning him out because he had a microphone while Zaretzki did not. Not one member of the board raised a voice in protest. On February 24, there were more than seventy-five reporters and photographers on hand for a meeting of the Fair executive committee, but there were also on hand scores of nightstick-wielding Pinkertons to herd them away from the Fair Administration Building and into the Press Building, where, it was announced, a briefing would be held later. At the briefing, Potter announced that the twenty-one-member executive committee had given Moses a "unanimous" vote of confidence. One reporter who checked found out later that only nine committee members had actually voted; five had not shown up and seven had abstained. But the nine votes had been for Moses; when the Fair's second season was opened, he was still in charge.

But holding on to the Fair did Moses little good. The second season was worse than the first. There was the continuing drumfire of audit revelations, and when the press managed to tear its attention away from those, it focused not on attractions but on attendance, and it was all too clear that in that area this Fair was to be no different from its predecessors; day after day, the gate count ran below that of corresponding days the previous year. The press headlined the attendance and wrote crisis stories about it and its consequences—failing exhibitors, increasing lack of maintenance—which further discouraged people from attending, and, blaming it on Moses' decision to increase prices, laughed at it, a *Newsday* column saying: "In truth, Moses must be credited with a striking improvement over last year's World Fair. He has . . . done away with the Fair's most unpleasant feature—people."

He twisted and turned, seeking a way out of the nightmare that kept looming closer every day as the end of the Fair grew closer, cutting maintenance and security forces to the bone, firing employees by the hundreds, slashing salaries, eliminating expense accounts. He began arranging quiet Park Department allocations for Flushing Meadows Park, set Triborough executives to work figuring out how much of the Authority's money could be spent on the Fair site. But the damage had been done long beforewhen he had authorized the spending of the tens of millions collected before the Fair opened. It could not be corrected now. His worst fears were becoming reality. His auditors told him there would be no money to repay the city the \$24,000,000 it had advanced, no money to create the great new chain of parks that had been the main reason he had taken the Fair job in the first place, no money even to create the "Robert Moses Park" on Flushing Meadows of which he had dreamed—he was, he realized, going to be in the same humiliating position in which that wastrel skirt chaser Grover Whalen had found himself: unable to repay more than a few cents on the dollar of the notes the Fair had floated, perhaps unable even to demolish the buildings of exhibitors who had gone bankrupt and could not demolish them themselves, so that the principal monument to this enterprise which he had believed would resurrect his reputation and reburnish his name would be heaps of moldering wreckage and debris.

Absolute disaster was staved off by the last three weeks.

Going into those weeks, the total attendance for the second season had not been the 37,500,000 that would have enabled the Fair Corporation at least to break even for the season, but only 17,000,000. The Fair Corporation, practically penniless, was paying its bills from week to week. With schools back in session and the weather turning chilly, there was no logical reason to expect any dramatic change in the lack of public interest that had prevailed for two years.

But as October began and the press began reminding the public that the Fair was in its last month, crowds suddenly began pouring in as if the populace of New York had suddenly realized that, despite all the adverse publicity, they wanted to see the exposition, and take their children to see it and as if, having seen it once not through Fred Ferretti's eyes but their own, they liked it, loved it in fact, and came back during the short time remaining as many times as possible. For two years, Moses had been waiting-practically in vain-for "quarter million days." Now, suddenly, there was one such day after another, and then-for the weekends of three weeks-half million days, as on six triumphant Saturdays or Sundays, 500,000 persons paid their \$2.50 and pushed through the turnstiles. During its final three weeks, 7,000,000 persons came to the Fair, pouring into the Fair Corporation's barren exchequers, through admission and parking fees and concession percentages, more than \$13,000,000. If attendance had continued at its pre-October pace, the corporation would have had a deficit of more than \$24,000,000; as it was, its deficit was reduced to only about \$10,000,000. On closing day, his auditors informed Moses that there was \$11,580,000 in the bank to be used either to repay the \$23,000,000 in notes or for the restoration of Flushing Meadows Park.

The bankers and other noteholders expected that he would use this money to repay his debts. But Moses had other priorities—and he announced them with his usual flourish. At a post-Fair executive committee meeting attended by several bankers who were among the largest noteholders, a Fair official announced that the corporation had a surplus of \$11,600,000. The committee applauded, the bankers looking rather relieved. But then Moses stood up. There was just one thing, he said. He wasn't going to use any of the \$11,600,000 to pay them. The money was going to restore the Fair site and create the park. At least two of the investment bankers, W. H. Morton of W. H. Morton & Co. and Frederic H. Brandi, president of Dillon, Read & Co., leaped to their feet to protest. Moses favored them with one of his prize glares; the big head tilted back, and it was down his nose that he was looking at the bankers when he replied that he did not feel

any particular sense of responsibility to noteholders "who ride around in big limousines with telephones in the back."

By the bankers' code, Moses was committing the original sin: losing them money. They instituted legal action to compel him to use the money to pay his debts. But they were helpless. Eventually they were, in a compromise, to receive a total of \$3,000,000—bringing the total return on their \$30,000,000 investment (\$7,000,000 had, of course, been prepaid) to \$10,000,000—or about thirty-three cents on the dollar, ironically just about the same as Grover Whalen had repaid his investors.

The money left—\$8,600,000—wasn't enough for the \$29,000,000 chain of parks, of course, just as it wasn't enough to repay the city's \$24,000,000. But it was enough—together with \$6,576,000 from Triborough coffers, various quiet Park Department allocations, and enough money from the Heckscher Foundation to create a zoo—to enable the Fair Corporation to demolish the pavilions of bankrupt or impoverished exhibitors, to clean up the Fair site and to do at least a little park work on Flushing Meadows. The park he was able to build there may not have been the great park he had envisioned, but at least it was a park—with a Hall of Science, the Federal and New York State pavilions, the columned skating rink—and a Unisphere to remind future generations of Robert Moses' World's Fair.

Looming over the whole park from beyond its northern end was the Shea Stadium that was his answer to the Colosseum of the Caesars. And the park was of course surrounded by his great roads, the cloverleafs and broad ribbons of concrete that to him represented beauty and that were his trademark; they tied up the park with neat, clean, sweeping borders, delineating the outskirts so sharply that from the air the green was sliced off by gray as sharply as by a knife, nothing left over on the edges, nothing frayed, making it a landscape by Moses, bearing his signature as plainly as if he had scrawled it into the concrete in giant letters. And he considered the landscape beautiful. On the day, filled with pageantry, he gave the Flushing Meadows back to New York, he said in a statement entitled "Beauty for Ashes": "The Fair cannot entirely complete this great work so that nothing further will be required. Every step, however, follows an ultimate plan which is realizable in the not distant future. . . . We believe it is no exaggeration to say that two World's Fairs have ushered in, at the very geographical and population center of New York, on the scene of a notorious ash dump, one of the very great municipal parks of our country."

Public monies spent under Robert Moses' direction during preparations for the 1939-40 World's Fair to make the Flushing Meadows a feasible park site came to \$58,842,000. For the 1964-65 World's Fair, Robert Moses' Fair Corporation spent on permanent park improvements \$22,256,000. Robert Moses' Triborough Bridge and Tunnel Authority spent on

permanent park improvements \$6,576,000. The City of New York spent \$31,000,000. The State of New York spent at least \$12,000,000 (and probably far more). The federal government spent \$12,000,000. The public monies spent during this Fair on permanent improvements to make Flushing Meadows a park thus came to a total of at least \$83,832,000. For the two Fairs, the total was at least \$142,674,000. And no one even suggested it be named after him.

In computing the balance sheet for the 1964-65 World's Fair in relation to what its president had hoped to get out of it, its effect on his popularity must weigh heavily indeed on the debit side.

The methods he had employed in building and running the World's Fair were not new. He had been using them for forty years. The only thing different was that this time the world had seen them. Formerly he had employed these methods behind the cloak of public authorities which kept the public from seeing these methods. The Fair had given the world a look at his methods.

And by so doing, the Fair had destroyed what was left of the legend of Robert Moses. The great universal exposition that had been supposed to rehabilitate his popularity had instead destroyed the last of it—and destroyed it beyond repair. When the Fair came to a close on October 17, 1965, Robert Moses was revealed to the public in all his egotism, arrogance and ruthlessness. He was, in fact, portrayed, in the press's emphasis on the \$100,000 a year in salary and expenses and the escrow account, as something worse than he was—greedy for money. He was in public disrepute so great that his name had become a symbol for things the public hated.

For the ordinary public official in a democracy, such a state of affairs would have meant loss of power. If he had been an elected official, he would have been ousted from office by the public at the next election. If he had been an appointed official, he would have been ousted from office by the official who had appointed him—probably not in a matter of months but in a matter of weeks if not days.

But Robert Moses was an official of a public authority. The public had no voice in whether or not he stayed in office. The power he wielded in the position to which the Mayor had appointed him made him, once in power, virtually immune to the Mayor's authority—as the new Mayor entering office shortly after the Fair drew to a close was soon to find out.

Mary Moses' worship of the husband who was her hero and her obsessiveness with public recognition of his greatness had grown more noticeable. Once an architect, meeting her at a party, mentioned casually to her that he

had been one of the young architects who had worked for the Park Department under WPA. "Anybody who is of any importance in the city has worked for Mr. Moses at one time or another," she replied haughtily. Her response to the increasing criticism of her husband during the 1950's was violent, so violent that friends felt it helped worsen her fast-failing health. Says Becky Vollmer: "Her whole life was Robert. Once they went to dinner at the Sulzbergers—this was during the Fifties, when there first started to be criticism—and Iphigene got Mary to one side and said, 'Mary, why does Robert antagonize people so terribly?' Mary was wild! As if Iphigene Sulzberger thought Robert deliberately antagonized people! It was just that some people refused to understand!" Mrs. Moses was, in her early sixties, an old woman. Her "nervous troubles" had not been solved, leading to further hospitalizations in the Payne Whitney Psychiatric Clinic, and she developed severe arthritis, which led to her increasing confinement in a wheelchair.

"Someone had to order his shirts, see that he had money, take care of him," his daughter Jane says. For a while, Jane herself did so. She was now divorced and living at her parents' Babylon home. Moses, so youthful and vital, showed little sign of advancing age. One could mark the developments in Moses' career by the women he selected as companions. During his reforming, idealistic period he had been in love with Mary, an idealistic reformer. During his alliance-with-the-North-Shore-robber-barons period, he had been publicly affectionate with a North Shore robber baroness. As a politician involved with Tammany Hall, the relationship most subject to gossip among his aides and acquaintances was a canny, tough female city commissioner. Within the tight little Triborough empire, social affairs were commonplace; now, one of Moses' secretaries recalls, they began "getting Mary II to go along with the Boss." Mary Grady—Mary II as she became known in the empire-was a secretary twenty-eight years younger than Moses. Soon their friendship was an open secret. Joe Ingraham became aware that "at every party Moses attended, Mary Grady would be there in the background." Moses had never taken a vacation without Mary I, but in 1952 she was too ill to accompany him to Florida; after that he began taking Mary II instead.

His wife was affected with heart trouble and what a friend calls "all the ailments of old age." She was confined more and more to the Thompson Avenue house in Babylon now; he lived more and more in the Gracie Terrace apartment in the city. It wasn't, emphasize the Vollmers who had known them for years, that he was "mean" to her—whenever he saw her he was as courteous and friendly as ever; he would often drive out to Babylon on a Sunday to have lunch with her. And it was for her that he made what for him was a supreme sacrifice: his reputation for being above money; it was, after all, at least partly to pay for her round-the-clock nursing care that he had subjected himself to public criticism by accepting the "\$100,000 a year" World's Fair post. The Vollmers feel that there was a reason why Mary entered her final decline in 1959: "it was quite noticeable that she got worse when the real criticism of him began," Becky says. "I don't think she could

stand it. . . . It was just that he turned his back on her. He was able to withdraw, to turn his back, on personal problems. . . . He withdrew from Mary—she could be at a hospital and he would be at a party someplace at the same time acting the same as ever, as if nothing was wrong."

Mary Sims Moses was virtually completely bedridden after 1962. She lived in Babylon, her husband mostly in New York. She died on September 5, 1966, at the age of eighty-one. Her obituary in the *Times* said—accurately—"From the day she exchanged a reformer's role for that of a housewife 51 years ago, Mrs. Moses was content to remain in the shadow of her husband..."

Less than a month later, her husband, seventy-seven, married Mary Grady, forty-nine.

## 48. Old Lion, Young Mayor

He paweth in the valley, and rejoiceth in his strength; he goeth on to meet the armed men. . . . He saith among the trumpets, Ha, ha; and he smelleth the battle afar off, the thunder of the captains, and the shouting.

—ЈОВ, 39:25

For twenty years, mayoral candidates had been vying for Moses' support. In the 1965 campaign, none of the three candidates had. On the contrary, they had all criticized him. The conservative candidate, an admirer, had been muted in his criticism, but the two major candidates had attacked his park, transportation and housing policies—everything, it seemed, that he had done or was planning to do for New York. And the one who had been elected was the one who had meant it. Hardly had he been elected when John V. Lindsay appointed as Park Commissioner Thomas P. F. Hoving, author of a White Paper on Parks that had attacked Moses' policies.

But there was no real power left in the Park Department, hadn't been for years. The real power was in highways, and the two posts Robert Moses held were in that area, the only two posts he had left—chairmanship of the Triborough Bridge and Tunnel Authority (his term did not expire until June 30, 1970, eighteen months after Lindsay's was to expire) and city arterial highways representative. Lindsay said he could take those posts away, too. Well, that was all right. Moses didn't mind him saying that. That was of a piece with his rhetoric during the campaign, and a new Mayor had to pay at least lip service to that rhetoric after his election.

But the funny thing was that John Lindsay really believed he could. Robert Moses knew different. He had lost enough power so that a tough, canny Mayor, skilled in the ways of New York politics, could have given him a hard fight, but his shrewd old eyes had taken their measure of John Lindsay the first time the two men had ever sat down and talked, and he knew that Lindsay wasn't the Mayor to do it. Shortly after his election, the handsome young Mayor-elect had invited him down to his pre-inaugural headquarters at the Hotel Roosevelt for a discussion. Leaving for the meeting, Moses had been tense—a barometer of his feelings had been the fact that he had accepted Lindsay's invitation instead of mak-

ing Lindsay come to him—but returning he was smiling and relaxed. "If you elect a matinee-idol Mayor," he told aides, "you're going to get a musical-comedy administration."

Lindsay had talked about "the power brokers in our city" but, when pressed by reporters, had never identified them ("Who are the power brokers? They know who they are" was his reply)—possibly because, as he was to demonstrate during his mishandling of the first crisis to confront him, a transit strike, he didn't really know who they were. He was going to find out though—the hard way. During the pre-inaugural period, his bright, eager young aides had been working out the transportation merger that his Transportation White Paper had so blithely proposed during the campaign. It sounded so easy to these articulate, cocky young men. The Transit Authority had a deficit which was imposing an intolerable burden on the city's financial structure, the Triborough Bridge Authority had a surpluswhat could be more logical than to use the one to offset the other? The philosophy of the new administration was, at the time, militantly pro-mass transit, anti-automobile-taking away Triborough's funds with which the Authority would otherwise build new automobile facilities and using them to improve the subways dovetailed with that philosophy, particularly if the new agency were to raise tolls on Triborough's bridges and place them for the first time on non-Authority bridges so as to further discourage automobile traffic into the city, a proposal toward which the new administration was leaning. All they were doing, Lindsay's aides could feel, was finally putting into force the proposals reformers such as Citizens Union and City Budget Commission study groups had been advocating for years. What was hard about it? Both authorities, Transit and Triborough, were controlled by the city, weren't they? And John Lindsay was the city now. The ignorance of some of these men concerning the true nature and powers of public authorities would have been ludicrous if it had not been the city's future that that ignorance was jeopardizing. Lindsay was, moreover, full of confidence overconfidence—and optimism about his ability to run the city; he was going to be another La Guardia, with one exception-La Guardia had never gone on to be President as he was sure he was going to; lest anyone miss the comparison with the Greatest Mayor New York Had Ever Had, Lindsay had hardly been inaugurated when he had La Guardia's portrait moved out of another spot in City Hall and into his office, along with La Guardia's desk,\* and was, in an interview with A. M. Rosenthal of the Times, making "it clear that he doesn't intend to be the chairman of the board. He intends to run the city. 'I would call it a style not of tight control but of total supervision . . . " Lindsay was going to be in complete charge. A man who stood in their way, who was a dinosaur out of another age—how old was

<sup>\*</sup> It was not the desk of the Little Flower but what happened to it that was the more descriptive symbol of the Lindsay administration; during La Guardia press conferences the man behind it had dominated the room; so unable was Lindsay to control the photographers he was constantly summoning to his office that during one picture session, less than a week after the desk had been moved in, several climbed onto it and it caved in.

the old bastard, for God's sake? Seventy-seven? Christ!--a cranky, cantankerous, ludicrous figure, they did not consider an obstacle at all; because they laughed at him, they thought everyone laughed at him, or at least anyone whose laughter was worth anything. They mistook his deafness for senility, seemed to think they were dealing with an old man, but they were reformers themselves or men parroting the phraseology of the reformers. And Robert Moses had been taking care of reformers for forty years. It wasn't rhetoric that was going to determine control of the transportation program in New York City, it was resolutions—the bond resolutions, the contract covenants of the Triborough Bridge and Tunnel Authority. It wasn't polemics that were going to count in any confrontation; it was power. John Lindsay and his glib young aides had the polemics; the grim old ruler of Randall's Island had the power. More, he knew how to use power. There was a phrase he employed in discussing Lindsay's merger proposal that had a certain significance. It was, he said, "ripper legislation." "Ripper legislation" -a phrase denoting legislation passed to remove an official from power indirectly when it is impossible to do so directly—was a phrase out of another age; it had not been in general use since the 1920's. The significance lay not in the phrase but in the fact that the man using it was still around in power-forty years later. He was still around because he had managed to hold on to power for decades. These men with their first taste of power laughed at him; he had not only tasted power but held it longer than many of these men had been alive. Did Lindsay think he had the ability to outsmart Robert Moses? Robert Moses had outsmarted La Guardia. From the very same post from which Lindsay was trying to remove him, a President of the United States, at the peak of his popularity and power, dedicated to his destruction, had tried to remove him-and that President had failed. These rash young men thought he was only Robert Moses of the World's Fair and Title I; he was also Robert Moses of Timber Point and Jones Beach and Hither Hills, of the Northern State Parkway and the Triborough Bridge and the Cross-Bronx Expressway and the Bay Ridge Approach. He was Moses of Massena, Moses of the Niagara Frontier. This was their first real battle; he came to it scarred with the wounds of a hundred battles—battles he had won. LINDSAY MAPS PLANS TO SLASH MOSES' POWER, the headlines read. Moses sat in his lair up on Randall's Island and grinned—the grin of the old lion.

On January 13, 1966, Lindsay announced that legislation creating a new, centralized transportation authority that would merge Triborough with the Transit Authority and make its surplus available for subway operation, and empowering him to name the chairman of the new agency, would shortly be sent to Albany. A reporter asked him if he foresaw any difficulty getting the Legislature to pass it. No, he said with a confident smile, he didn't. At another press conference several days later, he said he had "no reason to believe" that Moses "will not go along" with the plans. Did the Mayor have any reason for his opinion? a reporter asked. No, he said with his boyish,

winning grin, he had "not seen anything definitive from Mr. Moses" but "I have not seen any signs of hostility from Mr. Moses" either. "Don't start fights where there aren't any." Lindsay's aides—including legal aides—were just as confident in private. Moses was beaten, they told reporters, and he must know it; his era was over; whether he liked it or not, he was going to go. Not one of the brigade of lawyers striding so confidently through the corridors of City Hall appeared ever to have heard of bond covenants.

They were to hear of them shortly, however. On January 20, there was delivered to all newspapers and radio and television stations in New York a "memorandum in opposition" to the Lindsay proposal signed by Moses and his two Triborough co-commissioners. The memorandum included a legal opinion by former Corporation Counsel Preusse, Triborough counsel Lebwohl and one of the nation's most respected experts on municipal bonds, Franklin S. Wood, of Hawkins, Delafield & Wood: "The holders of bonds are . . . the beneficiaries of independent contractual obligations by . . . the Authority. Any attempt to alter these contractual rights by legislation designed, perhaps, to divert pledged revenues would be plainly invalid. Article 1, Section 10, of the United States Constitution forbids any state to 'pass any . . . Law impairing the obligation of Contracts.' . . . The appropriation of Authority moneys to such a purpose would contravene . . . provisions of the New York State and United States Constitutions." Such legalisms were not meat for the media; it all but ignored them, playing up the accompanying Moses broadside, which said merger proposals "are poorly advised, spring from panic and not logic, solve no problems and create additional ones." (The indifference of the media was a shame; emphasis on and explanation of this point could have begun at last the education about the political realities behind the powers of public authorities that the public had been needing for thirty years.)

Incredibly, the new administration still didn't get the point—as it didn't get the point of some other hints in Moses' statement, such as his comment that "Triborough is the only agency with the personnel or funds to perform [highway] planning and coordination. If Triborough is destroyed, the city is likely to lose, at least in the next five years while alternative planning and administrative forces are developed, hundreds of millions of dollars of federal and state highway aid. The effect of such loss upon the city, its construction industry and its labor forces, will be catastrophic." That statement was a rallying call to the forces that exerted so large a degree of control over the Legislature, which alone could effect the merger Lindsay was so blithely predicting, but the new administration appeared not to understand this. It was through not only his Triborough chairmanship but his informal post as city arterial highways representative that Moses represented to the "construction industry" and "labor forces" hundreds of millions of dollars of federal and state highway aid. Remove him from the arterial post and half of his remaining power, already so drastically reduced, would be gone and removing him from that post would not require legislative action; removal could be accomplished merely by sending him a letter. But, incredibly, while Lindsay wanted Moses out of the arterial post, he did not

understand its importance; believing the Triborough chairmanship to be all that mattered, he thought the letter could wait—and it waited, all through the ensuing fight. Joining a walk-in against a Moses highway, the Richmond Parkway through the Staten Island Greenbelt, Lindsay aides made a pretty picture, particularly "briskly striding Commissioner Hoving," who explained to reporters that his multicolored hiking outfit was "multinational," with the red ski cap from Austria, the white turtleneck sweater from Ireland, the purple scarf from Iceland, etc. "This [parkway fight] is a classic case of conservation versus modern times," he said—and he, like the other aides along, had not the slightest doubt that modern times would win. Shortly before the final draft of the merger proposal was completed, Lindsay made the gesture of sending transportation aide Arthur E. Palmer to see Moses and ask him personally to resign, but the tone in which Palmer couched the request was as condescending as his attitude-Palmer was told to make it clear to Moses that he was being given an opportunity to resign to save the face he would lose by being forced out—and it was only a gesture anyway; the new Mayor all too obviously felt he was being charitable, that Moses had no choice but to go. Palmer was to recall that "from the beginning and during all this," Lindsay never had "the slightest" respect for Moses or comprehension of Moses' powers. "[Lindsay's] attitude was-what he used to say was 'For Christ's sake, throw the old bastard out on his ear!' "

Interestingly enough, it was Palmer, an older, quieter man despised by Lindsay's glib young men because he didn't talk as fast or (they thought) think as fast as they, who first grasped the facts in the situation—possibly because he had had the face-to-face meetings with Lindsay's opponent which the new Mayor's other aides had not.

There were three meetings. One was at Randall's Island, one was at Moses' Gracie Terrace apartment and one was at Moses' favorite booth in the Oak Room at the Plaza. None was at Palmer's office, or at any place he suggested-because Moses made it quite clear that if the Mayor's new man in transportation wanted to meet him, he would have to do so at Moses' convenience. Moses' utter indifference to whether or not the meeting ever took place was hardly like the attitude of a desperate old man. Palmer found it, in fact, rather unsettling. Further unsettling was Moses' reaction to Lindsay's generous offer to let him save face. He wasn't in the least interested even in discussing it. Instead, he gave Palmer lectures. "The conversations consisted of monologues during which he was giving me messages-some of which I got at the time, some of which I got later, some of which I don't think I've ever gotten"-messages about power in the city and how he controlled it, that "the Mayor didn't have the power to unhorse him, that he wasn't going to be intimidated, that he didn't propose to change his program, which included the Bushwick Expressway, the Lower Manhattan Expressway, etc., that others had tried that scheme before, that there were a dozen other devices he could use, that he was prepared to cooperate with the Mayor, but only on his own terms." Palmer, who was by no means as dense as Lindsay's aides considered him, may not have gotten all the messages, but he got enough. When he reported Moses' refusal to resign to Lindsay, the Mayor

asked him, "Well, do I fire him or not?" Palmer replied, he recalls, that "according to the [Triborough] statute, you haven't got the power to fire him." Palmer's honesty apparently ended his rapport with the Mayor; Lindsay appeared, Palmer was to recall, to cool toward him from that moment on. But Moses' message was apparently beginning to sink in-accompanied by other unpleasant facts of political life which Lindsay was beginning to learn. At a subsequent meeting, Palmer recalls, he received indications of a diminution in Lindsay's confidence, including one conversation in which the Mayor enunciated, as though he had learned it for the first time, a virtual playback of Palmer's own words: "Don't forget, Moses has a lot of credit cards outstanding, and he's not going to be an easy guy to get out." Soon there were stronger indications. Someone in the administration had apparently read the bond covenants; the legislation as submitted to Albany no longer made any mention of the Triborough surpluses; all that was now proposed was a merger of the two authorities. And before the news of this Lindsay concession was released to the press, Palmer was dispatched again to Moses-not this time as an act of charity but to try to make a deal based on their assumption that Moses still thought Lindsay would try to appropriate the surplus as well as merge the authorities: since Moses was always stressing the sacredness of the bond covenants, and saying that they revolved around the surplus, Palmer was to offer to do what Lindsay now knew he had no choice but to do anyway-leave the surplus intact-if Moses would agree to cease his opposition.

Nothing revealed the inability of the new administration to comprehend Moses' power or his motives more clearly than did this offer, for it failed to take into account either the fact that Moses was really interested in keeping not surpluses but power or the fact that he had the political clout to keep power without making any concessions at all. Moses' reaction—delivered in the Oak Room—was, in Palmer's recollection, to make his previous messages plainer, as if he had just realized that, in the person of John Lindsay, he was dealing with a pupil even slower than he had thought.

"You keep asking me to cooperate with your Mayor," he said. "How can I cooperate with anyone who's proposing to break" the bond covenants? Palmer said, "Mr. Moses, if you would cooperate, I don't think any breaking of the covenants would be necessary."

Leaning across the table at Palmer, Moses said: "I wouldn't cooperate with that goddamned whippersnapper no matter what he did! He'll come and go; Triborough is going to be around for a long time!" Palmer, after a pause, replied: "What you're really saying, Mr. Moses, is that these talks are really fruitless."

At last, someone had gotten the idea. Moses leaned back with a smile. "Yes," he said, "that's about what I'm saying." On February 26, John Lindsay had to make a trip to Canossa. He had telephoned Moses for a meeting; certainly, Moses replied, he would be glad to meet the Mayor—at Randall's Island or Gracie Terrace. If the Mayor wanted to see him, the Mayor would have to come to him. And when, on February 26, Lindsay came to Moses' apartment, Moses replied to his attempts to negotiate the

issue by grabbing up a yellow legal pad and scribbling out on it a "revision" of the legislation Lindsay was proposing. The details of the "revision" are unknown, but both Moses and Palmer, to whom Lindsay gave the yellow piece of paper, are agreed on its purport: while it would create the "Transportation Administration" about which Lindsay had been talking, it would leave not only Triborough's surpluses but its independence untouched—along with the powers of its chairman and Moses' continuation in that post. It would leave Moses in power as firmly as before. And when Lindsay attempted to discuss the proposal, Moses wasn't interested in discussing it. The Mayor could take it or leave it. At last, Palmer recalls, the Mayor seemed to understand that Moses was sure he could win any showdown.

Lindsay thought Moses was wrong. As the Legislature moved closer to taking up his proposal, he and his aides were aggressively, boastfully confident that the old bastard's day was about over.

In part, their optimism was based on the outcome of a meeting with

Governor Rockefeller. At the meeting, held over dinner in the Governor's Fifth Avenue apartment, the merger plan had been presented to Rockefeller and several of his aides, including his counsel, Sol Corbin, and a tall, burly man dressed in evening clothes whom Richard M. Rosen, Lindsay's legislative aide, thought at first was one of the butlers but who was introduced to him as Bill Ronan (he left early to attend a formal dinner elsewhere). So naïve was the team representing the city that it wasn't until, after they left Rockefeller's apartment, they decided to go to Sardi's for a drink to discuss what had happened—the handsome young celebrities were very big at Sardi's—that they realized, as Rosen puts it, "that we had been talking to Dr. Ronan about a plan that would have deeply affected the area he was interested in," that we had been "giving a proposal that would compete with the things he was doing. We had felt, we admitted to one another, a little silly saying when you get your state things together, it'll fit right in with what we're doing. As if we were trying to pull the wool over his eyes. . . . No one's pulling the wool over Bill Ronan's eyes." Nonetheless, they were lulled by the Governor's attitude. One member of the Lindsay team, who would discuss the meeting only on condition not only that he not be quoted about it but that the author never reveal to anyone, anytime, that he had ever agreed to talk to him about anything, says: "The Governor was very favorable. My recollection is that the Governor said he would support [the Lindsay merger proposal]. My recollection is that the Governor said he could put it through quickly." Palmer says, "[Rockefeller] went over the legislation and he undertook to get it passed. We all had dinner together and parted great friends." Rosen says, "There was never-at any time-a pledge of support, but we thought the Governor liked the proposal conceptually, as an idea." (Neither Rockefeller, Ronan nor any of the Governor's other aides would discuss the meeting.) Lindsay certainly appears to have believed he had the Governor's support. And even if he had doubts about the Governor's word, the doubts would not have worried him overly; "to tell the truth," one of Lindsay's aides recalls, "we thought we could win up in Albany without it; to tell you the truth, we had no doubts about it." Interviewed by newsmen, mayoral legislative aide Rosen allowed himself to be just a little pontifical. "The way you handle legislators is with power," he said. And, he made clear, there was no doubt that the Mayor of New York had the power in any matter so vital to the city's future.

Everyone in Albany seemed to know what was going on with regard to John Lindsay's transportation legislation. Everyone but Lindsay's man in Albany, city legislative representative Rosen. The three leaders who made the decisions for the Legislature were Assembly Speaker Anthony Travia, Assembly Minority Leader Perry B. Duryea, Jr., and Senate Majority Leader Earl Brydges. (Senate Minority Leader Joseph Zaretzki had little real power.) Moses "came to me personally-and through friends-and said, 'Look, you don't want this to happen to me, do you?' "Duryea recalls. "And I said, 'No'-look, you don't have a Bob Moses come along in a state every day, and you don't just kick him out. Jim Evans [one of Moses' men in Albany] came to me and asked what could be done. I said, 'I don't like removing a guy by legislation. If [Lindsay] wants him out, let him be ballsy enough to do his own dirty work.' And I convinced Brydges. But I also told Evans that I was of the minority party and that he'd better get to Travia if he wanted to save Moses." By the time the proposed legislation came up for a public hearing, Travia had been gotten to-perhaps by Wagner (whose support had made him Speaker), perhaps by a promise by Moses to eliminate from his highway plans a proposed Cross-Brooklyn Expressway through Travia's district, perhaps by Travia's county leader, Stanley Steingut of the City Title Insurance Co., perhaps by a simpler reason: Travia's contempt (shared by Duryea, Brydges and other legislators) for Lindsay as an intellectual lightweight who combined a truly astonishing ignorance of how things got done in Albany with an arrogance that led him to lecture them, privately and publicly, on how to do their jobs. Travia, Duryea and Brydges could have swung the entire Legislature to their side if they had needed to do so, but the Legislature was on their side already—and if there were any recalcitrants, the leaders had allies. "Christ," one senator was to say years later, "I still remember that one: that was the first time I ever got a call from Harry Van Arsdale himself. Himself! Not his lobbyist. Harry Van Arsdale! Christ, everyone was calling—the banks, the leaders, you name it. There was enough muscle against that thing to have beaten anything." (This is the quote of Lindsay's man Rosen on the subject: "I discussed the bill with the legislative leaders and their reaction was generally favorable, a good response to the ideas that were presented.")

"They were playing games with Lindsay that year," says one reporter, a good one, covering Albany in 1966. "They kept saying, 'Amend it, amend it.' He'd make the amendments they asked. Then they'd ask him to make some more. I mean everyone knew what was going on. I myself heard some guy

[legislator] say to Rosen in the corridor, 'You're forgetting about that bill for this year, aren't you?' The guy was trying to hint to him, you know? But Rosen didn't even understand what the guy was trying to tell him. He started to seriously discuss with the guy why it wasn't really dead, why the Mayor—'THE MAYOR!'—was determined—'DETERMINED!'—to have it passed."

The contract out on the bill was executed with finesse. Travia told Rosen one day that a joint session of the Senate and Assembly Rules Committees would hold a public hearing on the proposed legislation. Recalls Rosen: "Travia . . . said to me, 'All we want up there is the Mayor and one other person—there'll be one or two people there from the other side. It'll be a friendly little thing, casual.' The only reason we're having it at all, I was told, was that it was required by law." Rosen passed the message along to Big John, who appears to have seriously believed that a joint session of the two most powerful committees of the Legislature, a session on a proposal to remove Robert Moses from power, would indeed be little more than a formality. On the morning it was scheduled to be held, the Mayor flew up from New York, accompanied by only two aides, Corporation Counsel J. Lee Rankin and Executive Assistant Corporation Counsel Norman Redlich neither of whom had even done much research into the matter to be discussed. Rosen met the three men at the airport, drove them straight to the Capitol and, before leaving in the press room transcripts of the statement the Mayor was going to make at the hearing, escorted the three men into the Assembly Parlor, in which the hearing was to be held—so that the Mayor was already in the Parlor when Rosen, in the press room, had his moment of truth.

It came in the form of a handout, lying on the big table opposite the press-room door on which public relations men for the various legislative committees leave stacks of handouts for reporters' use. As Rosen put his stack down, he saw it lying there, and picked it up and read it. It was a handout announcing the public hearing, and the names of the speakers who were to appear at it. "A friendly little thing, casual?" It was billed as the biggest event of the day-and, Rosen saw as his eyes followed the type down, the billing was justified. Appearing for the Mayor's proposal would be one person, the unknown Redlich. Appearing for the other side would be, in addition to Moses, two former Governors, Dewey and Poletti; one former Mayor, Wagner; one former counsel to Presidents and possibly the most prestigious Democratic attorney in the state, Rosenman; Brennan of the construction workers, Guinan of the transport workers and others of the state's most powerful labor leaders; a representative of its most powerful bank (although David Rockefeller had sent a spokesman rather than appearing himself); its most powerful investment bankers; its largest stock brokerage firm; its leading and most powerful bond attorneys—and a platoon of representatives of other power groups ranging all the way from the Transit Authority to the Automobile Club of America. It was a lineup of most of the most powerful forces in the state—and it was a lineup arrayed against his boss. It was at that moment, all in a flash, Rosen recalls, that he realized that Lindsay had been led into a carefully concealed trap—one from which there was no escape. "I didn't realize what had happened until I saw the handout. Then I said, 'Travia's fucked us.' "

Running back to the Assembly Parlor, Rosen whispered these tidings to his boss. Even without this news flash, however, Lindsay was getting the message for himself. For as he stood in the Assembly Parlor, ready for the friendly, casual little get-together, jamming through the doors came television cameramen, radio and newspaper reporters and photographers—by the dozen. And mixed among them, in addition to Travia, whom the Mayor had expected to see, were Duryea, Brydges—and a half dozen other key legislative leaders.

Then the old lion came into the room.

The crowd, which had been milling around, parted to let him through, and he was suddenly face to face with his enemy.

Lindsay half turned away, almost as if to pretend he hadn't seen Moses, but as the photographers rushed up, the Mayor plunged his hands into his pockets and his face creased in a forced smile. A broad, wide grin broke across Moses' face, and for a moment the two men stood there, one young, handsome, dressed in a gold-buttoned blue blazer, precisely knotted striped rep, nervousness showing through the mask on his face; the other old, lined, bald, tough, wearing a dark suit with jacket unbuttoned and plain dark tie pulled askew—and utterly relaxed. The photographers asked for a handshake; Lindsay hesitated; sure, Moses said, and as Lindsay took his hand and Moses looked into his handsome face, the grin broadened into a smile of real delight. Then, abruptly, while Lindsay was still standing straight and still and keeping the smile glued on, Moses yanked his hand loose and whirled to walk away. There was command in that gesture; the circle around them parted-followed by his entourage, he strode through it and slouched down casually on a red leather sofa against a wall. The sofa seated four, but no one took the other seats; "at least three [aides] were standing behind him -standing!—as he sat alone on that long sofa," says reporter Sidney Schanberg of the Times. When Schanberg approached him, "he answered a couple of questions and then he got churlish and turned to Ed O'Brien and he said, 'Ed, I want to hear this testimony.' Meaning, 'Get rid of this shit!'" Then he looked up inquiringly, and another aide hurriedly ran over and whispered in Travia's ear. The Speaker had been chatting with his own aides. He stopped abruptly, caught Duryea's eye, walked with him over to the hearing table and, even before sitting down, began pounding the gavel.

Lindsay was the first at the lectern set up at the left end of the long table. Normally so poised, the Mayor stared down with almost painfully obvious nervousness at the full battery of microphones before which he had been lured. "He read [like] a schoolboy reciting his graduation speech," Schanberg says. Slouched on the couch, leaning on one hand, the other, big and still powerful, gripping his knee, Moses listened intently for a few minutes, even putting on the glasses with the concealed hearing aid so

that he could be sure he heard. For a few minutes he was impassive, his lips pressed tightly together. But as he heard what Lindsay was saying, they turned up in a small smile. As the Mayor continued and it became apparent that he had no new cards to play, the smile widened a bit. And when the Mayor got to his attack on Moses' proposed new highways, and said, "Under my administration, these proposals will never be accepted," Moses began to laugh, hastily putting a hand up to his face to hide the laughter when he saw a photographer lifting a camera in his direction. On receipt of Rosen's message, Lindsay, Rankin and Redlich had hastily decided that the best thing to do was to "get the Mayor out of there" as fast as possible; recalls one of those men, "The Mayor testified and said he had to go and 'If there are any questions, Mr. Redlich will answer them." Then he headed out the door. Moses was obviously having real difficulty keeping from laughing out loud. If Albany was a jungle, with many of the principal beasts of prey gathered in the Assembly Parlor that day, an observer could, just by watching Robert Moses, have known that it was his jungle. He may have been an old lion, but John Lindsay wasn't the young lion to take his jungle away from him.

"And then," as one observer recalls, "there followed the parade of the power brokers."

Moses led off, as was fitting—relaxed, at home, reading his speech without looking up, speaking in bored tones, making his points effortlessly. When some of the rank-and-file assemblymen present asked him a few mild questions, he answered—in Schanberg's phrase—"like you're peasants." After a short while, he had had enough of it; he swung away from the lectern.

The other power brokers followed. All the points necessary to be made were made, by the people best suited to make them—the lawyers that the proposed merger was illegal; the investment bankers that it would destroy the "businesslike" nature of public authorities and would thereby make it impossible for them to raise money for needed public improvements ("No one will buy a long-term revenue bond if the management of the project operates at the beck and call and whim of elected officials"); former government officials that the man proposing it didn't know anything about government (John J. Gilhooley, not only a Transit Commissioner but a former Assistant Secretary of Labor, calling it "a political power grab . . . inanely conceived and ineptly drafted" legislation by "rank amateurs" in City Hall); politicians that the man proposing it was power hungry (it was, said Wagner, who had refused all previous overtures to attack his successor, but had trotted out his prestige at Moses' command, nothing more than "a reach for power"); the AAA that it would unfairly penalize motorists who had paid for highway facilities "through the tolls and taxes they have paid"; the union leaders that it was just plain bad. Worst of all, speaker after speaker emphasized, Lindsay's plan would deprive the public of the services of Robert Moses. "Make no mistake," Poletti said, "this arrogant and shameless ripper legislation . . . sponsored by Mayor Lindsay is intended primarily to get rid of Bob Moses." "I have not, nor shall I ever join the pack that is currently snapping at the heels of Robert Moses," Gilhooley said. "His achievements are beyond the reach of the peashooters now attacking him . . . he will be honored by anyone who reads or writes the Twentieth Century history of the State of New York." But it wasn't what the speakers said that mattered, but what they represented. They represented power, enough power to defeat anyone in the state—even a Mayor of New York City—and to defeat him easily. As the perceptive Schanberg was to put it, "The hearing was a pro forma charade. It was like the Green Bay Packers playing a high-school team. Lindsay never had a chance." Moses didn't stay around to review the parade of power brokers he had marshaled—and there was no reason why he should. Lindsay should have—he might have lost face, but he would have learned something—he would have learned the identity of those "power brokers" he was always talking about. His foe had lined them up and paraded them before him.

With his customary attention to detail, Moses had even arranged for a series of mopping-up actions to follow the hearings. On the following day, Brennan launched a new, all-out attack on Lindsay, charging the new Mayor with "sitting on \$3 billion worth of construction projects" by putting "politics ahead of people." The construction projects listed, of course, were almost all Robert Moses projects. And the day after that, the Chase Manhattan Bank supplemented its previous opposition to the merger proposal by announcing that if the Legislature should adopt it, it would, as trustee of \$379,300,000 worth of Triborough bonds, sue to invalidate the legislation; a legal brief designed to demonstrate the illegality of such a contract-breaking move was being filed with the Legislature's Rules Committees by the bank's law firm—Dewey, Ballantine, Bushby, Palmer and Wood. (The Times carried this story on page seventy-three; in terms of political realities in New York State, it was the story, above all the merger stories, that should have been on page one.) All bases were covered; when the Times editorialized that it was sure the merger would be legal, Franklin S. Wood wrote the editors a letter concluding dryly: "Your . . . opinion . . . will not, we think, be shared by most lawyers." But Moses' precautions were superfluous, a case of overkill. The Lindsay merger proposal had been dead long before—as soon as it was made, in fact. The actual murder had been delayed until the public hearing only to add to his humiliation.

(By the way, Travia told reporters during a mid-afternoon recess, the legislation should never have been sent up to Albany in the first place without a home-rule message from the City Council; he didn't see how that had happened: the Legislature could not consider it without such a message.

(That was rubbing it in, some listening legislators said, unable quite to hide their smiles. Travia had, of course, known all along that a home-rule message was required. Everyone had known. He could have mentioned the fact to Rosen previously. He must have forgotten to do so.)

The bill was dead—although Lindsay did not have the sense to let it die quietly. He telephoned Rockefeller for support, instructed Rosen to "get to work" on the legislators. But the support from the Governor was some-

how never forthcoming. The Mayor announced to reporters that it had "never occurred to anyone that it would be necessary to have a home-rule resolution" but that "now" the Legislature was trying to "buck-pass" the matter back to the City Council. When he asked the Council for the home-rule message, the request never even got out of committee.

The Parade of the Power Brokers had, to anyone interested in the nuances of true power in New York State, been a good show. It was to be the last Robert Moses ever produced. The imperial guard would never charge for him again.

On July 11, 1966, he had arranged a celebration to mark the thirtieth anniversary of the opening of the Triborough Bridge. There were crowds-3,500 children rounded up from housing projects and by the Police Athletic League and bused to Randall's Island for the occasion—and pageantry officials used silver shears to snip a ribbon at the Queens end of the span and then rode in a twelve-car motorcade (eleven limousines led by Moses in a 1936 Ford touring car driven by Omero C. Catan of Teaneck, New Jersey, who on July 11, 1936, when the great bridge first opened, had been the first driver to cross) to Randall's Island, where bands played and speeches were given-and a sumptuous luncheon in Triborough's state dining room (3,500 box lunches were there for the children)—and brochures -a magnificently printed, boxed volume recording the Authority's achievements entitled Thirty Years of Accomplishment. In his speech, Moses effectively disposed of the Triborough surpluses Lindsay was always talking about, announcing that he had "committed" \$40,000,000 in Authority funds for improvements to Authority-owned bridges (no city approval needed), such as a new toll plaza for the Triborough and a complete reconstruction of the Cross Bay, and \$8,000,000 to the Park Department for new playgrounds. With Austin Tobin of the Port Authority taking the opportunity to tell reporters present that he was planning to open bids for the World Trade Center shortly despite the fact that Lindsay had not yet approved the project, the ceremony was turned into a demonstration by the city's two great rump governments that they were planning to proceed in future as they had in past —without being bound by the wishes of City Hall.

To keep the bridge clear for the motorcade, all other traffic had been barred from the Queens span, and as the officials cut ribbons, thousands of Manhattan-bound motorists were kept waiting for half an hour behind them in broiling heat while Triborough Bridge and Tunnel Officers ignored the angry protest, not allowing them on the bridge until the motorcade had completed a markedly leisurely trip to Randall's Island. And there was praise enough even for Moses, Austin Tobin lauding his "great gifts of intellect, imagination, courage and dynamic energy—as well as his instinct for the jugular," Queens Borough President Mario Cariello telling the children that "New York City would never be what it is today" had Moses been born in South America, Australia or at the North Pole. But the celebration ended on a distinctly sour note: while Moses was still bidding his guests farewell, a

messenger from the Mayor's office handed an aide a letter for Moses, and the aide gave it to Moses, and Moses, ripping it open, saw that it was a letter dismissing him as arterial highways representative.

The Mayor had taken this step—which he should have taken before the merger fight—after it was over, too late to help him in it—but he had taken it. Once Robert Moses had held twelve government jobs simultaneously; now he was reduced to one, the chairmanship of the Triborough Authority. And within the week, Lindsay had moved to give himself a toehold even in Moses' last stronghold; Commissioner Tracy's term had expired on June 30; the Mayor appointed Transportation Administrator Palmer in his place.

The Palmer appointment had no effect on Moses' power. The primary purpose of putting him on the board, Lindsay had told him, was to "protect the city's interest by saving as much of the surplus as possible." But Palmer proved unable to accomplish anything. "The first time I voted 'No' on a proposal, Moses got up and walked around and gave me a halfhour speech, how I didn't understand how these things were done. . . . It was probably the first 'No' vote in the history of Triborough. And the staff . . . was also appalled—they had never seen Moses confronted before." But the vote on the issue was 2-1, with the other Commissioner, realtor and Democratic financier Norman K. Winston, voting with Moses. Palmer says he had been told that Winston might be ready to be wooed away from Moses, but their first talk indicated that that was wrong; Winston was ready to follow the chairman unquestioningly on every decision. And that, of course, made Palmer's opposition academic. He consistently voted against Moses proposals —and always lost, 2-1. He was not even able to stop Moses' "commitment" of an additional \$20,000,000 of surplus to the building of a second deck on the Verrazano Bridge, a project to which Lindsay was adamantly opposed.

As for Lindsay's other move—the ending of Moses' designation as arterial highways representative—that would have slashed Moses' power greatly if it had stuck, but whether it would have or not is by no means certain.

By the end of the year, Lindsay was beginning to display signs of an awareness of the need for accommodation with the labor power brokers he had scorned, and they were determined to keep at least some of Moses' highways alive and well and driving toward inauguration—and the best way to do that, they were convinced, was to keep Moses in charge of them. Moreover, if the Mayor wanted to build any highways at all, he had little choice. Only Moses had the plans for major expressways, and only Moses had the money for further plans; an astonished and dismayed Lindsay was informed that to plan a completely different arterial program would take five years, and would cost, in either fees to consultant engineering firms or salaries for a sufficient number of civil service engineers, \$7,000,000 a year—an amount there was absolutely no chance of the financially strapped city ever raising. Moses, moreover, had far more leverage even than those contained in the rolls of blueprints piled on Triborough's shelves; he had Triborough's money—for of course the Authority would, in the next year or two, have millions—

tens of millions—of dollars of capitalizable income that had not been committed for specific projects.

One estimate of the money available for this purpose over the next three years was \$250,000,000. This money could be used to pay part of the costs of highway projects; in fact, many highway projects would not be feasible without sizable Triborough contributions. No man with \$250,000,000 to spend on public works in a financially strapped city desperate to build public works could possibly be frozen out of public works negotiations with federal and state governments; in reality he would, whether designated as arterial representative or not, still be that representative in fact if not in name, until he could be replaced as Triborough chairman. He could not be replaced as chairman until June 30, 1970, and by that time there might well be a new Mayor, one who wouldn't want to replace him. While Moses' removal was headlined by the press—which speculated, week after week, that he might soon be removed from power entirely by the Mayor—Lindsay's latest gestures were in many ways as futile as the others the Mayor had made against Moses.

By this time, however, it didn't matter to Moses what Lindsay did. Someone much smarter than the Mayor—the Governor who had already stripped so much of his power away from him—was moving against him now, trying to remove him, once and for all, from the last of the power he had held for forty years.

## 49. The Last Stand

ROCKEFELLER HAD BEEN laying his transportation plans out for eight years. Now they were ready. Ronan had filled in the details. Lindsay's attempt to take over the transportation setup had been the final factor in determining the Governor to move to implement them. If there was going to be a takeover, it was going to be his takeover. And therefore, the Governor seemed to feel, it was time for Moses to go.

To implement his grand conception, the Governor needed money, a particular kind of money—seed money.

It was, of course, impossible, in so inflationary an era, to calculate with precision the cost of the network of highways, mass transit facilities and airports of which he was dreaming. If he had even a rough estimate, moreover, he made sure it was never revealed honestly to the public-for a very sound political reason when dealing with a Legislature in which upstate conservatives played a prominent role: it was almost unimaginably huge. One estimate, probably far too low, was that, if begun in 1968, it would cost \$6.4 billion in the next five years alone. Much of this money Rockefeller had to obtain from the federal government, but federal contributions were determined in some cases by state and local participation in the funding. That meant local money. In almost all cases federal contributions were dependent on state and local planning-Nelson Rockefeller had learned what Moses knew: that it was the state with plans, not vague proposals but detailed blueprints, ready when new federal appropriations became available, that got the federal money. And certain pieces of the grand conception could not be built by the federal government at all, because the only way to make their building feasible was to make them toll or revenue-producing facilities, for which federal expenditures were prohibited.

But state and local money on the scale the Governor needed was simply unavailable: eight years of his massive spending had reduced the state to a condition in which it was all but impossible for him to meet the constitutional requirement that he balance its budget annually; costs were outrunning revenues even for current programs; state revenues could simply not support a major new one. A \$500,000,000 highway bond issue passed some years before was all but exhausted in 1966; if a new one wasn't approved, highways would have to be built out of current revenues—which meant that, in effect, no major new highways would be built. As for local money—New York City money—deficits stared him in the face everywhere: Transit

The Last Stand

Authority deficits, Long Island Rail Road deficits, Penn Central Railroad deficits, the city itself so broke that it had to borrow money each year just to pay current bills—everywhere, that is, but in the accounts of the two giant public authorities, Port and Triborough. Port, armored by the fact that he had to win approval from the New Jersey Governor and Legislature for anything he wanted that agency to do, was, for the immediate future at least, beyond his reach. And that left just one place to turn.

The Triborough Bridge and Tunnel Authority had \$110,000,000 in cash and securities on hand—a surplus that was growing at the rate of almost \$30,000,000 a year. A surplus that would grow much faster if Triborough's tolls were raised—and Rockefeller was already secretly considering raising the tolls. A capitalizable surplus—worth, over the next five years, even if current tolls were not raised perhaps half a billion dollars. He needed that money. He wanted it. And Moses, adamant that he and he alone would decide how it was to be used, stood in his way.

And more important than money was personality. There were Ronan's and Moses', of course—the personality of the cool, cautious, bankerly corporation man versus that of the bold, slashing, imaginative creator; an exceptionally perceptive politician and reader of men who had plenty of time to read those two (and who was to have a ringside seat during the ensuing struggle), Assembly Speaker Perry Duryea, says, "They were too antagonistic to work together in any setup." And there were Rockefeller's and Moses'. When Moses was in a picture, he dominated it; any transportation improvement in which he played any sort of a key role would, in the public's eye, be his improvement, not the Governor's.

"So," as Duryea says, "Rocky wasn't satisfied with what happened in '62. He really had to knock him out of the box."

And Moses had so little left to fight back with.

Once he had had so much. With income from the State Power, Jones Beach and Bethpage authorities as well as from a State Park Commission and Parks Council as well as the City Park Department, Triborough's annual surplus had been only one piece of a very large pie. More important than the size of the pie had been the fact that it was divided into so many pieces. More important than the amount of money at his command was the fact that this money came from so many different and varied sources, that he had held simultaneously twelve different government jobs-some state and some city. A Governor contemplating removing him from those under his control would have to reckon with the fact that, because Moses' authority chairmanships had staggered six-year terms, he could do even that only over a period of years. And he had to reckon with the fact that, not only during those years but thereafter, Moses would still be holding many powerful city posts, that "you'd have to fight him on so many different fronts." Moses had been able to prop up each post with others, to use each as leverage to make the others more powerful than they would otherwise have been. The position in which he had once stood had been all but unassailable. But he had, by resigning in anger from his state posts, knocked out many of the props himself. Now all the props were gone. His single remaining post stood alone. And he now had only \$30,000,000 a year left to fight with—a significant sum but not when measured against the resources of the state that were the resources at his foe's command, and a sum even less significant because it was derived from only one post, his last post, so that men who choose up sides on the basis of money could see clearly that if he lost that post, he would have nothing left to give them—a factor which made them reluctant to take his side. If Robert Moses had still possessed twelve jobs—if "Triborough" had still consisted of twelve arms—Nelson Rockefeller might have found, as Harriman and Dewey and Roosevelt had found, that it was unfeasible to cut off one of them. But now "Triborough" consisted only of Triborough. A Governor could lop off that arm with the assurance that if he did so. Moses would have none left at all.

Moses' lone position might still have been secure, for it rested on the solid rock of the Triborough bond covenants, the contracts sacred under law. Not even a Governor, backed by the Legislature and armed with the full authority of the state, could break those covenants, for if he tried, bond-holders could sue, and the courts would surely uphold them.

Except for one consideration. While in theory even a single injured bondholder could sue, in practice no individual bondholder would. In the first place, the legal costs of so complicated a suit would, even in the preliminary steps, be enormous—far beyond any injury the bondholder might have suffered or any damages he could realistically claim. More important, a bondholder contemplating an individual suit would be faced with a legal reality: suing as an individual would be viewed by a court as an admission that only he was hurt—why weren't other bondholders suing?—so that the bondholders, or a substantial number of them, would have to sue as a group. To cover such a possibility, an agent had been appointed, in the contracts, to protect the bondholders' rights—to, if necessary, sue on their behalf. The contracts had appointed a bondholders' trustee.

And the trustee was the Chase Manhattan Bank, and the Chase Manhattan was the only large bank in the United States still controlled by a single family.

The Governor's.

"After the 1966 Legislature had wound up its business without passing our bill and had gone home, we began to get straws in the wind that the Governor and Ronan had plans of their own for taking over transportation," Arthur Palmer says. Lindsay was in no position to object, desperate as he was for a way out of the continual financial crisis posed by the subways (and for a way to avoid a second fare increase—Lindsay had already raised it from fifteen to twenty cents—before he had to run for re-election in 1969). Moreover, neither the Mayor nor his aides seem to have grasped the extent of the power Ronan was negotiating away from the city. By January 4, 1967, Rockefeller was confident enough of city cooperation to ask Legislature and voters to approve a \$2,000,000,000 bond issue for highways, mass transit facilities and airports throughout the state and to begin planning a "co-

The Last Stand 1135

ordinated," "balanced," "regional approach"—with far greater emphasis than ever before on mass transit—to transportation in the metropolitan region, merging and incorporating in Ronan's Metropolitan Commuter Transportation Authority all the region's public transportation agencies: the New York City Transit Authority, the Manhattan and Bronx Surface Transit Operating Authority (MABSTOA), the Long Island, Penn Central and New Haven railroads, the Staten Island Rapid Transit Service—and the Triborough Bridge and Tunnel Authority.

Rockefeller had a lot riding on approval—not only the plan itself, which had fully captured his imagination, but a consideration considerably more mundane: driven to the wall by the state's worsening financial crisis, the Governor had, through various budgetary devices, discharged his legal obligation to balance the budget by including in anticipated "revenues" a substantial amount—according to some sources \$49,000,000, according to others \$51,000,000, according to still others \$89,000,000—in money from the bond issue for which he was still asking approval. If it were not approved, the resultant deficit would prove highly embarrassing. The Governor was, moreover, planning to use bond issue monies to help in future budgets. If it were not approved, the state would be in for a truly hair-raising tax increase, one that would reinforce his image as a wildly spending liberal among the Republican conservatives across the country whose support he needed for his planned 1968 presidential bid.

The emphasis on mass transit insured media support for the plan in the metropolitan area, and, with leading politicians, Democratic and Republican, endorsing it, legislative approval was assured. Approval in the November referendum, however, was more doubtful. Widespread voter resentment against higher taxes had in recent years caused the rejection of many bond issues; the Governor was worried about the so-called silent vote. Resentment on the part of upstate conservative voters against the Governor's free-spending, high-taxing policies was flooding toward a crest that would spill over in the conservative legislative revolt two years later. In an off-year election, with most voters apathetic and the turnout small, passage of controversial bond issues is traditionally difficult when the only voters who turn out in force are those opposed to specific transportation projects. Results of Rockefeller-commissioned polls were highly discouraging. With the issue in the balance, Rockefeller was afraid that Moses would tip it against him.

The powerful construction labor unions were still solidly behind Moses, for Van Arsdale and Brennan knew that vast allocations were of little use in creating jobs unless the crushing of local opposition and the planning and blueprinting that had to take place before men could actually be put to work was ramrodded through, and their meetings with Ronan had convinced them that he was not a ramrod—if indeed he was even competent, which the two union leaders doubted. "You need a man who knows how to put a show on the road," Brennan was to say. "We had to keep Moses in there." More important, Moses still possessed his name—which, while a symbol around Washington Square of all that was hated, was a symbol of

something quite different in Queens and Staten Island. Moses would continue to have the voters' ears, the Governor knew, because he still had the *News* and *Newsday*, the papers with the largest circulation in New York City and on Long Island; in its editorial on the Governor's proposal, for example, the latter had said: "Essential is the participation of Bob Moses in the new agency. His experience will be invaluable." Most important of all, Moses still possessed, unimpaired by his seventy-eight years, the instrument that had gotten him power in the first place: his powerful, supple intelligence. Alone now, Robert Moses began doing what he had done when he had been trying to find a way out of the West Side Improvement financial impasse, when he had conceived the possibilities of the public authority—at so many crises during his career: jotting down figures on a yellow legal note pad.

Ronan's public relations men had been feeding the press figures showing that the unification would end the city's traditional subway deficit crisis. Several years later, Duryea, no friend of Ronan's, could still recall them with a wry grin: "The surplus from Triborough would be \$30 [million] a year, the surplus from MABSTOA would be about \$5 [million], the Long Island [Rail Road] would either break even or have a surplus of about \$1 [million], and these surpluses would be just enough to make up the Transit Authority deficit."

But Moses found that the merger wouldn't come close to making up the transit deficit. Calculating the present and future cost of union contracts then being negotiated and union contracts that would have to be negotiated within the next year or two, increasing maintenance costs and future debt service, he concluded that MABSTOA and LIRR would have not small surpluses but tremendous deficits, and that the Transit Authority's deficit was growing so fast that no conceivable combination of contributions from other agencies could make it up. The primary rationale that the Governor was using to sell the plan to the conservative upstate voters—that it would free the state once and for all from the annual worries about New York's subway problem—wasn't true at all.

And that was only one small point proved by Moses' figures.

Since he had become Governor, Rockefeller had created several giant "public authorities" that were bastards of the genre because their revenue bonds would be paid off not out of their own revenues but out of the general revenues of the state.

No one outside the Governor's confidential staff had ever figured out what the total debt service on all these bond issues was going to be when they were all sold and paying interest simultaneously. Only one other state official, the quietly independent Democratic Comptroller, Arthur Levitt, was interested in doing so—teams of his auditors had just begun calculating that very point.

Moses did it alone. He would never discuss what he found. But Duryea—his last friend in power and the one he took most fully into his confidence at this stage in his career—did, in an interview in 1969: "Three years ago, the state had budgeted for debt service 25–30 million. Last year, it was 40 million and this year 47. Well, Moses had a projection that if all the authori-

The Last Stand

ties Rocky was proposing went through, the debt service in 1972—this was the year of total sale—would be 500 million." Rockefeller's proposals would load down present and future taxpayers of the state with a staggering debt. In addition, Moses had done the simple multiplication necessary to figure out something all the reporters and editorial writers who had written about the \$2,500,000,000 Metropolitan Transportation Authority bond issue had apparently never bothered to figure out—at least not one of them had mentioned the point: how much that bond issue was going to cost the taxpayers in interest. The answer was more than \$1,000,000,000. A billion dollars in interest! By the time Moses finished figuring, Duryea says, "he had some numbers that were devastating."

The implications were enormous. "If he had ever gone screaming to the public . . . ," Duryea says. Moses not only possessed devastating numbers; he could devastate with them. While other opponents of the bond issue had no money to put their case before the public, Moses, with the resources of Triborough still behind him, did, and his prestige alone guaranteed him a full hearing in the media; let him take those numbers to the public with his vast and efficient public relations apparatus, and he could well wreck Rockefeller's grand conception.

And he was prepared to do so. "Only two or three of us knew of these figures," Duryea says. "But we knew that Moses was ready to blow the Governor's transportation" referendum with them. "They had to get him on board so that he wouldn't scream and holler."

Before delivering his "State of the State" message, the Governor and Ronan had had at least one conference with Moses at which they attempted to enlist his support. They failed; he flew off to a vacation in the Bahamas still an opponent. While he was there, Ronan drafted, and airmailed to the old warrior honing his rapier down there in the warm sun, some modifications designed to mollify. They did not; during the three weeks he stayed away following the Governor's speech, reporters checked with Triborough daily to try to talk to him, and as soon as he returned, he had a statement for them. He was too smart to play his trump on the first hand; it was not empty victory but power in the new transportation setup that he wanted. He did not reveal his figures. But he gave the Governor an inkling of the intensity of the opposition he was prepared to provide. It was uncompromising. The merger proposal was "absurd," he said. "Grotesque. It just won't work. . . . They don't know what they are driving at." And the opposition made major stories in every metropolitan area newspaper. On March 9, 1967, Moses met with Rockefeller in Rockefeller's Fifty-fifth Street townhouse. And two days later he announced that the Governor's plan—the "absurd," "grotesque" plan-was "indispensable" and that he was supporting it. "We believe the Governor is on the right track, that only a bold approach can succeed, and for our part shall cooperate to this end." (Said Ronan: "This is welcome news.")

The reason Moses gave for his 180-degree change of heart was that "after considerable discussion, the Governor included in his proposal a paragraph on protecting the rights of Triborough bondholders." Actually,

however, nothing new of any major significance to the bondholders had been added to the proposal. Levitt and Duryea knew the real reason: the Governor had bought Moses' support with the only coin in which Moses was interested -power, a promise that he would have it under the revised transportation setup. "I know for a fact that Rockefeller felt he had bought Moses' support," Duryea says. "How [do I know]? I know because one Monday in Albany—it was at one of those Monday-morning so-called leadership conferences-Rockefeller announced that Moses would support his transportation unification program. I said, 'What'd you give him?' And Rockefeller said, 'A promise that he wouldn't be thrown in the ashcan,' that he would be given something substantial in the MTA reorganization." Levitt had even more conclusive proof. To gain maximum impact for his "figures," Moses knew they should be released by someone other than himself, someone who could not be accused of having a personal stake in the defeat of the transportation proposal. On March 8, the day before his conference with the Governor, he had telephoned Levitt, who recalls: "He called me up and said, 'I want to see you. I have figures . . . and I want you to use them and blast Rockefeller.' The very next day, I had to go to Fifty-fifth Street for a meeting of the state pension fund. I didn't know what room to go in, and I was wandering around from room to room, trying doors, and I opened one, and there, to my surprise, was Moses and his whole coterie. I said, 'What are you doing here?' He said, 'Oh, waiting to see the Governor.' I said, 'Where are those figures?' He said, 'Oh, I'll send them to you,' in a hedging tone of voice. And the next day he comes out for MTA. I never got the figures."

Van Arsdale and Brennan knew the reason, too. Rockefeller had also told it to them. The day after Moses' announcement of support, Brennanpreviously conspicuously silent on the Governor's proposal—chimed in with his. The Times story announcing the arrival on board of the powerful unionist contained a sentence whose source was apparently Brennan himself: "It was learned . . . that Governor Rockefeller had offered Robert Moses a seat [on the MTA board] . . . as well as continued direction" of Triborough. Brennan himself confirms that Rockefeller had given "Van and I" that impression: "The Governor said he would have an important part [for Moses]." Not satisfied with that vague statement, the two unionists asked Rockefeller precisely what that meant. He told them he had given Moses what Moses wanted: "He told us Moses wanted a part of the construction." "Will he have a part?" Brennan asked. "And the Governor said, 'Oh, absolutely. We know his talents, his ability, and we want to use them.'" Rockefeller was careful to leave the same impression with the public. The Governor told reporters that each of the authorities, while being merged, would "retain [its] identity and be under the administrative direction of an executive head in charge of operations," who, the Times reported, "would possibly have the title of president of the agency." President of Triborough that sounded even better than "Chairman."

Moses appears to have had no doubt that the Governor would keep

his promise. His statement announcing his support of the referendum had stated: "If the verdict is favorable, all the talent and goodwill available must be recruited to realize the exceedingly complex, long-term improvements." He had no doubt that that talent would, in the fields of highways and bridges, continue to be his own. And with that assurance in hand, he proceeded during the seven months prior to the referendum to prove that he would violate any principle—even that most sacred one to which he had always sworn allegiance, the sacredness of the bondholders' covenantsto keep power. He outdid himself in support of the referendum; when Rockefeller didn't contact him, he called the Governor's office to ask for an appointment so that he could learn how he could best be of assistance in persuading voters, and following that meeting, he lied for the referendum (although he knew that bond revenues were slated for approach roads to his proposed Long Island Sound Crossing, he told the press: "Statements . . . that the pending transportation proposition is to be tapped to pay in whole or in part for the Long Island Sound Crossing . . . are wholly irresponsible and malicious. Not a cent of state subvention, aid or credit is required. . . . "); poured money behind it, using Triborough funds to pay for a full-scale advertising campaign ("Traffic-Commuter-Transit Delays Got Your Goat? Don't Sit And Grumble. Get Out And VOTE!"), plastering Triborough's toll booths with huge "VOTE YES!" signs—and repeatedly flattered the Governor so enthusiastically and obsequiously ("Governor Rockefeller has . . . guts"; "It takes a lot of courage and faith to ask the voters to approve a \$2.5 billion . . . ") that at times he seemed to be almost desperately trying to reassure Rockefeller that the Governor wouldn't have to worry about his loyalty after the reorganization, that he could be a loyal member of his team.

After an almost equally frantic statewide campaign by Rockefeller, the referendum passed, but there remained another, equally important reason to keep Moses on board. There was still the possibility of a legal fight over whether the Triborough bond covenants would be violated by the merger of the Authority into a larger authority—a question which, it seemed likely, could, if pressed, be resolved only one way: in the bondholders' favor.

Any party to a contract can bring suit if he feels it has been violated. There were two parties to the contracts that were the Triborough bonds—the Authority and the bondholders, represented by the trustee Chase Manhattan Bank.

Prior to his March 9 meeting with Rockefeller, Moses had prepared to have the Authority bring suit; he had instructed Sam Rosenman to gear up for a full-scale, no-holds-barred legal battle. But after his March 9 meeting with Rockefeller, he had Rosenman stand down, at least in part; the attorney, on behalf of Triborough, joined Dewey, representing Chase Manhattan, in attacking the proposal to use the Authority's surpluses, but let the former Governor carry the load, following through only pro forma, and he dropped opposition to the merger, the part that would have deprived Moses of power—because, of course, Moses believed Rockefeller had

promised him power after the merger as well. "I understand that he had a promise that he would be part of the MTA board," Dewey was to recall. "I don't think Rosenman would have been so cooperative with the MTA if Moses hadn't thought that he'd have a place."

Of the circumstances surrounding the final removal of Robert Moses from power, the key one—the resolution of the suit against the merger that, if successful, could have kept him in power—remains shrouded in mystery.

Two things are clear. One: that, in the opinion of almost every legal expert on municipal and public authority bonds, if the suit had been prosecuted vigorously, it would have been successful—the merger would have been voided. Until all its \$367,200,000 bonds had been redeemed, the Triborough Bridge and Tunnel Authority would have remained an independent, autonomous agency, and if the Authority chose not to redeem its bonds, it would have remained independent and autonomous indefinitely. Two: that the suit was not prosecuted vigorously is not known.

Chase Manhattan had certainly given the impression that it intended to press the suit to the limit when it was filed in June 1967. The retaining of Dewey as counsel seemed proof enough of that, and the bank's initial sixteen-page, thirty-six-count complaint instituting the action seemed determined. Transfer of the Authority's surpluses or income to the Metropolitan Transportation Authority would, the bank's complaint stated, cause the bondholders the bank represented "irreparable injury, for which they have no remedy at law." Both state statute—the New York public authorities law —and the Authority's contract with its bondholders forbade such a financial merger until all bonds were paid off and the contract thus voided, the complaint stated. An administrative merger was similarly illegal, the brief stated, forbidden by Federal and State Constitutions and state law as well as bond covenants, and was injurious to bondholders because the aims and interests of the TBTA and those of the MTA contained a basic, irreconcilable conflict: "Triborough must facilitate the use of its projects by motor vehicles whereas the MTA and the TA must facilitate the use of their respective train and subway service systems, thereby diverting traffic from Triborough bridge and tunnel projects."

Following passage of the referendum, the suit was resumed, but all through December and January, intensive negotiations were being carried out between representatives of Governor Nelson Rockefeller and those of his brother David, Chase Manhattan's president and absolute boss. And the suit was finally settled not in court, open or closed, but in the Governor's Fifty-fifth Street townhouse, shortly after 9 A.M., February 9, 1968, at a fifty-minute meeting attended by the two brothers, each attended by one aide, Dewey for David and Ronan for Nelson. At this meeting, a three-page stipulation previously drawn up by attorneys for both sides was signed by Nelson Rockefeller on behalf of the State of New York and David Rocke-

feller on behalf of the Chase Manhattan Bank. Following the meeting, the stipulation was taken to the chambers of the judge who would have been sitting on the case had there been a case—State Supreme Court Justice William C. Hecht, Jr.—and sealed, not to be seen by any outsider or newspaperman. Under the stipulation, the Governor's family's bank dropped all opposition to the Governor's transportation merger, the merger under which the Triborough board—Robert Moses, chairman—was supplanted by the MTA board—Dr. William J. Ronan, chairman. The point that Moses had always believed would keep him in power, therefore, was not contested—even by Moses. On his instructions, Rosenman agreed on behalf of Triborough that the merger was constitutional and legal. The crucial point was not contested by anyone.

What Chase got in exchange is not known, although it continued to head syndicates—as it had in the past—that underwrote and purchased tens of millions of dollars in state bonds, immensely profitable to banks.

Even such a bonus would probably not have persuaded the normal bank—run by a board of directors responsible to a multitude of stockholders—to abrogate its legal obligations, thereby leaving itself open to stockholder action. A bank controlled by a single family could do so, however. In the entire United States, only one bank large enough to be a trustee for \$367,200,000 in bonds is still family controlled. What was necessary to remove Moses from power was a unique, singular concatenation of circumstances: that the Governor of New York be the one man uniquely beyond the reach of normal political influences, and that the trustee for Triborough's bonds be a bank run by the Governor's brother.

Why did Moses choose to rest his future on Rockefeller's word? At least part of the answer is probably understood by the perceptive Duryea, who says he had little choice but to do so. "He didn't have much left to fight with any more," the Speaker says. And probably another part is provided by Shapiro, who, asked why his boss had not exacted a promise in writing, says: "I suppose because he couldn't really believe that they wouldn't want him in the picture at all. I mean, they wanted the bridge [Sound Crossing] built, didn't they? They wanted the program pushed, didn't they? And he was the only one who could push it like it should be pushed. He just couldn't understand that they might not feel like that, I suppose. I mean, it had always been like that before . . ."

Rockefeller's promise to Moses had served its purpose well. It had kept Moses quiet for almost a year, persuaded him not to oppose Rockefeller's transportation merger or the referendum which had funded it. The Governor's promise had, moreover, persuaded Moses to withdraw the lawsuit which might have invalidated Rockefeller's transportation merger. It had enabled Rockefeller to use his name.

And now, having used his name, having gotten everything out of him that he could, the Governor threw him away.

Up until the very day on which the crucial stipulation was signed and sealed, all was honey between the Governor and the old man, now seventy-nine. On February 9, the day it was signed, Moses still believed he had a firm promise that he would have a substantial role in the new setup, possibly as president or executive head of Triborough, certainly as a member of the MTA board. Then, with less than three weeks before the merger was to take effect, the mask dropped away.

Immediately following the stipulation signing, Moses telephoned the Governor for an appointment. He got one—and when they met, Rockefeller apparently repeated his promise. Moses says that the Governor "told me I would be appointed to the MTA and would have the title of president or something of the sort at the head of Triborough under the general supervision of the MTA." But, Moses says, "Dr. Ronan did not like this." Perry Duryea says that "Moses asked me-really to intercede-with the Governor and Ronan to attempt to guarantee that he would get a meaningful position. He didn't ask me himself; he had someone else [Shapiro says it was he] ask me if we could get together and I went to his apartment in New York. He had met with Ronan and Rockefeller the week before and he left that meeting with a very bad taste in his mouth. He felt the Governor hadn't given him the time he deserved. The Governor was in and out of the room, the conference was interrupted. It was left that Ronan would call him in a week. And he hadn't heard from Ronan. And the deadline . . ." The deadline—the date for the merger-was midnight, February 29. At 12:01 A.M., March 1, the Triborough board would go out of existence. He would be out of a jobout of power completely.

Duryea felt sorry for Moses. "It was his dream to be part of the new transportation setup," the Speaker says. "He still felt the drive and the involvement, the old fire horse when the bell clangs. Here was this great new thing going forward—he wanted to be part of it." Duryea agreed to intercede on the old man's behalf, and thereafter, no more than a day or two at most before the merger took effect, Ronan contacted Moses.

He offered Moses a post as "consultant" to the Triborough Bridge and Tunnel Authority. The post, he said, carried with it a salary of \$25,000 a year and continued use of his limousine, his chauffeurs and his secretaries. Moses would be in charge of "coordinating" Triborough's present construction program, and his "primary responsibility" would be the Long Island Sound Crossing.

Whether Moses could bring himself to question Ronan further about the "details" of this offer himself, or whether he had an intermediary do it, is not known, but with each answer he received, his humiliation must have deepened. For there were no further "details." That offer was all there was. He had thought he had been promised a seat on the MTA board; there was no mention of such a seat now; during the next day or two, in fact, Ronan announced the names of the nine members of the board of the agency that would be responsible for all intrastate public transportation in the New

The Last Stand

York metropolitan region—the name of Robert Moses was not among them. Moses had thought he had had a promise of Triborough's "presidency," or at least its chief executive officer, whatever the precise title might be; Ronan did not make any mention of such a promise now; in fact, when Moses or his intermediary asked Ronan directly about it, Ronan replied that there would be a chief executive officer—but it would be Joseph F. Vermaelen, Moses' chief engineer. Vermaelen, and Lebwohl, and the rest of Moses' team, would report directly to the MTA staff.

Analyzing the offer only deepened the humiliation. "Coordinating" Triborough's current construction program was a meaningless phrase: that program consisted only of a relatively minor reconstruction of the Cross Bay Bridge and the adding of a second deck on the Verrazano—and those projects were already under way. The Sound Crossing would be a great project, but no one knew when it would start—and it would probably not start soon. And that was only one project—one for a man accustomed to directing dozens. "Don't take all Bob's toys away," Moses' wife had begged the Governor. Well, the Governor hadn't. He had left him one-or, to be more precise, the promise of one. When the implications of what Ronan was saying sank in, Moses realized that he was being allowed, almost as a gesture of charity, to keep the perquisites of office—the car, the chauffeurs, the secretaries—but not so much as a shred of power. He could if he wished stay on at the Authority he had created and made strong and great, but not only would he no longer be in charge of it, he would no longer have any say in its affairs. Even the men around him, his muchachos, the men who had looked to him for leadership for so many years, would now be reporting to someone else.

The offer was a slap in the face. But there was no other offer. The fatal deadline of March I was upon him; he had no choice but to accept it; on the very last day before the merger was to take effect, he did so. His statement to the press, issued the following day, the day the Triborough Bridge and Tunnel Authority, the last remaining arm of once twelve-armed "Triborough," became a unit of the Metropolitan Transportation Authority, was one sentence long:

"The Metropolitan Transportation Authority has offered me an advisory post in the metropolitan transportation enterprise, and I have accepted."

More poignant than his statement on the day of the merger was his attitude.

Ronan had scheduled for that day a ceremonial tour of some of the Transit Authority and Triborough facilities by the members of the MTA board. Believing he would be one of them, Moses had invited Ronan and the board to lunch with him at Randall's Island, and Ronan had accepted. Now, though he sat at the head of the big table in the big dining room as he had sat there at a thousand lunches during the thirty-four years he had been head of Triborough, he had to know that he was sitting there only by sufferance, that he, who so loved to be the gracious host, was in reality not

the host of that luncheon at all, that he was only a guest himself. The very cost of the lunch would have to be approved by someone else—by this college professor whom he had once derided as "sophomoric" but who had, he felt, weaseled his way into power, not by accomplishment, not by achievement, not by the honorable means by which he felt he had attained power, but by, he felt, "ass kissing" his way around Nelson Rockefeller.

Worse—much worse for him who had always delighted, gloried, in giving free rein to his feelings—he could not let his feelings show. If he were ever to have any power at all again—if he were ever to actually get to build even the Sound Crossing they had held out to him as a pittance—he would have to get on the good side of this man who had stripped him of power. Ronan, he felt—at least his aides say so—had defeated him not in a fair fight but by lying to him and betraying him. But he would have to make friends with Ronan. Reporter Richard Witkin, who covered the changeover for the *Times*, noted that: "Mr. Moses . . . seemed to go out of his way yesterday to take a back seat to Dr. Ronan. . . ."

The Newsday story, which noted that "Moses, who once held fourteen [sic] public positions simultaneously, appeared to defer yesterday to Dr. William J. Ronan," noted also that the Authority adopted a new emblem, a two-tone blue "M" that would appear shortly on all its trains and other facilities, and said, "During the last four decades the same capital letter might have been used as a symbol of domination of the area's planning scene." But it couldn't any longer. The age of Moses was over. Begun on April 23, 1924, it had ended on March 1, 1968. After forty-four years of power, the power was gone at last.

## 50. Old

It wasn't the spring and summer just ahead that worried the men who loved Robert Moses, but the months beyond.

"He had just as much energy as ever," Harold Blake said. "And what was he going to do with it now?" Said Arnold Vollmer: "The idea of this great mind having nothing to do now-that's the most awful thing." Said Vollmer's wife, who had also worked for Robert Moses: "It's horrible. For him, that would be hell." Spring and summer would cloak horror in sun and breezes and the chance to do in full measure the things he had always been pressed for time in doing, not only to swim (yes, he still hurled himself headfirst into big Atlantic breakers at seventy-nine, still swam far out to sea, still stayed in so long that his men, determined that there should always be someone in the water with him, were forced to perform this safety precaution in relays, young steers unable to keep up with the old bull) but to fish and sail his beloved Great South Bay and to tramp for hours along its beaches and wetlands, to steer the Sea-Ef himself instead of hunching over papers in the stern while Captain Pearsall steered, to cruise the bay in the late afternoon watching the gulls soar up from the marshes as the fouro'clock breeze stirred the reeds-to be the "South Shore Boy" he liked to call himself. But the fall and winter beyond, the months when the bay froze, the months when there was nothing Robert Moses wanted to do except work, the months when that "great mind" would be churning restlessly, searching insatiably for material on which to feed, those months loomed bleak and terrible. What, Blake and Vollmer and Sid Shapiro asked each other, was RM going to do then? If they could just get the Boss through the winter, they told each other, perhaps by that time the Governor would give the go-ahead for the Sound Crossing. Ronan might become panicked by demonstrations of his incompetence as administrator and builder-demonstrations which, in their view and that of labor leaders, engineers and contractors who had to deal with him, had already begun to pile up-into realizing that he needed Moses if he was to get the Governor's construction programs rolling.

It was not, however, necessary to wait until cold weather for the effect of powerlessness upon Robert Moses to become apparent. That year, winter came in spring. Near the end of April, less than two months after the chairman had become consultant, he was visited by the author at the summer

cottage he was renting at Oak Beach. Because he did not then know the details of Triborough's absorption into MTA, and because there had been no official announcement that Moses had been utterly removed from power, the visitor did not know there had been so dramatic a change in the status of his host. But he saw at once that there had been a dramatic change in the host. He wrote on his note pad: "The eyes are definitely more rheumy today. He seems somehow just more shrunken, too." During the interview, Moses had sent his chauffeur on an errand, and the chauffeur had not returned when the interview was completed. Moses asked the visitor to drive him down to Captree, where a boat—a big cabin cruiser belonging to Adam Carp, a consulting engineer who had grown rich on Moses fees—was standing ready to take him out for blues. And as they walked down the steps of the cottage to the author's car, Moses did something that made him feel for an instant that the man walking behind him was not Robert Moses but Paul. The author had, unknown to Robert Moses, spent time with his dead brother. Paul Moses had managed to keep his chin up even in discussing the misfortunes of his life, but sometimes, drifting into reveries during lulls in the conversation, he had—unconsciously, it seemed—uttered a phrase, a sigh, almost a moan, that hinted at the depths of the melancholy within him: a painful, reflective sighing: "Oh ho ho ho. Oh ho ho." The author had speculated that so unusual an expression might be inherited from their father. But in all the times he had previously talked with Robert Moses, the author had never heard him make that sound of discouragement and something close to despair.

But he made it now.

For Robert Moses had lost none of his ability to look into other men, and he had apparently looked into William J. Ronan. RM's aides were sure he would shortly get the assignments he had been promised. Shortly after the author talked to Moses at Oak Beach, Harold Blake, Moses' male secretary, assured him, "They want him to get done with the current TBTA program as fast as possible so he can help expedite the over-all MTA program. I think Ronan wants him to help cut the red tape." But Moses appears from the first to have known what was really in store for him. According to Blake, Ronan almost never telephoned his predecessor, who was still sitting in his office up at Triborough—hoping to hear from him. Moses sent him memos on matters he felt needed Ronan's attention. Some Ronan passed to lower-level aides for replies. Others were simply ignored. The new MTA chairman did not bother even to acknowledge their receipt. Moses' aides understood that they were no longer to report to him. They had not, however, fully understood that they were not to talk to him—at least not about Triborough matters. But, following the takeover, this was quickly made clear to them. Says one: "A couple of times, I mentioned to RM some things that [Ronan's aides] had told me to do, and he didn't like [the instructions] at all, and he telephoned Ronan to complain. And word came back to me that [Ronan] didn't like that at all. And I mean, what could I do? You couldn't say to Mr. Moses: 'Now don't talk to anyone about this.' It was easier just

not to tell him what was going on." Soon his former aides were avoiding his office. Said Blake: "It's sad to see a guy who used to be in charge of a place still there but not in charge any more."

And there was to be no start on the Sound Crossing in 1969—or 1970 or 1971 or 1972.

There were various excuses from Rockefeller's office—in 1969, the bond market was soft and the issue couldn't be floated at feasible rates; in 1970, there was a gubernatorial campaign, and, with the affected sections of Long Island and Westchester up in arms against the bridge, the Governor didn't want to be put on the spot; in 1971, it was financing problems again; in 1972, a legislative campaign and the Governor didn't want to damage Republican chances to hold control of the Legislature—with each delay, Moses was assured that next year would be the year the big project got under way.

Moses was fooled by the fact that Rockefeller himself wanted the great bridge built. He was fooled by the fact that the Governor had promised publicly as well as privately that Moses would be the one to build it: once, as a sort of test, Moses leaked to a reporter the fact that he had been promised the job, the reporter contacted Ronan's office and Ronan himself said that that was indeed the case. He was fooled most of all by the fact that it was simply inconceivable to him that he would not be allowed to build it: he had conceived it, chosen its precise location and the routes of its approach highways, he had directed the planning and blueprinting, he had, in a sense, since it was Triborough's money that would back the bonds that would pay for it, raised the money for it; it was no more than one more link in the chain of bridges linking the island with mainland-Triborough, Whitestone, Throgs Neck-that he had planned decades before and had been building ever since. It was his bridge! To let someone else build it and take credit for it would be an injustice of an enormity he seemed unable to grasp. It took a long time for realization to sink in.

But, as the years passed, it sank in, all right. It gradually became clear to him that they weren't going to give him the job. The Governor wanted the bridge built, he came to understand, but he would not let Moses build it; it might, considering the public and private promises, be too raw to assign the direction of the huge task to anyone else, so he would simply wait to get the five-year job started until Moses, aging, was no longer able to embark on it. It gradually became clear to Moses that the Governor and Ronan weren't going to give him any job—that, despite all their promises, they were not, ever, going to give him anything to do, that they were just waiting for him to grow old and die or go quietly away somewhere.

Then the old man grew desperate. He had almost no leverage left, except for the fact that Ronan couldn't get things done, and there were people around who, for their own purposes, wanted things to be gotten done. He used this leverage frantically. Recalls Brennan:

"I've had other people—professional architects, the engineers—come to me and say, 'Gee couldn't you do something? . . . Bob is going crazy

that they're shelving him!' They don't say they were asked to talk to me, but . . . they were."

He talked to Brennan and Van Arsdale himself. He tried to put on a good front, but the two hard-eyed unionists saw through it. "He tells us he could have been on the [MTA] board, [that he turned it down himself because] he wanted to be free to do construction. But maybe that's just his pride. He's nothing; he's a consultant. And he's not even being consulted with." What Robert Moses, once so arrogant and powerful, was doing was begging, begging them to help him get a little of his power back. He had been reduced to pleading—and he was, to these men who had known him when, almost pathetic in his pleas.

He's getting edgy [Brennan says]. He tells you that he knows he's being kept out of things. He's mad at dragging things out like they're doing. He tells us that things should be under way now. And meanwhile costs are going up. He complains that these people have no guts. He talks about the program, about his frustrations that things aren't moving—how they should be doing this or that on the bridge, taking borings or whatever. He never talks in terms of getting him back in; it's in terms of the program . . . It wasn't on the basis of him but getting the job done. . . . He's taking this very hard. He's a hard, crusty old guy, but he's sensitive.

Brennan and Van Arsdale responded as Moses had hoped they would, and so did various contractors, engineers and architects who had entree to Rockefeller or Ronan. For they were afraid that without Moses, public works would never again be constructed in the New York area on the scale that had made some of them rich and others of them powerful. "As far as the MTA is concerned, there's nothing moving—no doubt about it," Brennan said in 1970, more than two years after Ronan had taken over. "There's no roads being built. There's nothing being built." Speaking of Ronan, the red-faced, white-haired, blunt unionist tries to keep the contempt out of his voice, but it keeps seeping in. "Ronan tells us that the planning on the Second Avenue Subway and tunnel is in the hands of the city and that it's being held up by the Mayor and the City Planning Commission. He says the MTA is ready to move on it as soon as the city lets them. As soon as the city lets them! Jeez! And that would be a billion two. Or Ronan tells us it's a billion two."

So they fought for him. Said Brennan late in 1968: "We—I say we, people in the industry, those of us who know Moses and have been trying to keep his hand in these things, feel there is no question there's people trying to sidetrack him. We're hoping they'll realize he's needed. It's silly to take him and put him on a shelf. We've been talking to the Governor and Ronan . . . The architects, the engineers, the contractors have been talking. . . . We're going to try hard.

"But," Brennan said, "it's going to be tough. He's not in the power position he used to be in. . . . The Governor says that he put Ronan in there, and Ronan is boss. Bill Ronan says, 'Oh, we want to use Bob once we get going.' We say, 'What do you mean "once you get going"? You need

to plan now, assign guys to things.' When we press him, [the] answer is then very vague. So I can see that it's just a snow job. They want him to get tired and to go away and get lost.

"But I say: 'Forget it! This guy don't blow away!'

"And the sad thing is that a lot of people who like Bob Moses are saying he's too old and it's not a bad idea to ease him out because of that. But he's not too old. He's got fantastic ideas on housing!"

The old man was reduced to publicly praising Ronan and his boss-in 1969, at a time at which Moses and his aides were privately ridiculing Ronan's failures to get the MTA program moving, and the deterioration of the Long Island and other commuter railroads under his direction, Moses said publicly, "As to Nelson Rockefeller, he's no cautious Calvin Coolidge. . . . He has put his reputation on the line. The people voted for his two and a half billion program. They could not have expected instant results. . . . So put away your flying bottles and slingshots and give Bill Ronan a break." He tried to take advantage of every opportunity to see them in person—at dinners or dedication ceremonies, for example—to engage them in conversation and try to make friends with them. The Governor was always charming in return-often these two men would stand chatting in public with their arms around each other. Ronan's manners with the old man left something to be desired. He let the boredom he felt show. Watching Moses try to curry Ronan's favor once, Harold Blake muttered bitterly about the MTA chairman's "smug, college-professor look," but then added with resignation in his voice, "He [Moses] wants to stay in public life, so what do you do? Swallow your pride."

But nothing he could do helped. Rockefeller and Ronan stayed bland, and the bridge stayed unbuilt, and Moses' memos still went unanswered.

He had to suffer also what was for him perhaps the ultimate humiliation. He had to know that people knew that he no longer had power.

Because his power had never come from anything as clear-cut and publicly understandable as an election, it took a long time for even many political insiders to realize that he had lost not only some power but all. More than a year after the MTA reorganization, Jack Lutsky, now a judge, was told that Moses was out of power completely, and he refused to believe it. He telephoned Lebwohl to check and, hanging up, said with a wondering sigh: "You're right." But eventually they all realized it. He could see pity in the eyes of those of them who, like Lutsky or Wagner, were capable of pity. "I feel sorry for him," the former Mayor said one day after sitting next to him on a luncheon dais. "He enjoyed power so much. He should have become a private citizen. At least then he could have spoken out." He could see contempt in the eyes of others. When, at a dinner party, he would launch into one of the interminable monologues about past accomplishments to which people had once listened with respect, people grew bored. There were a thousand little hurts. Once he invited Bronx Borough President Herman Badillo, whom he had never met, to lunch on Randall's Island. Badillo called him "Bob." For just an instant, the big head went back in the old haughty gesture with which he would once have withered any guest who dared to use that familiarity without invitation. Then one could almost see him remembering that he needed any ally he could get. The head came down, and he went on with the conversation.

Piled on humiliation, frustration.

Age was not a consideration in Moses' thinking. "He absolutely refused to talk about the birthday," reported a Daily News reporter interviewing him on the occasion of his eighty-first. "Birthdays are a nuisance,' he said. Birthdays are to forget." "He was always talking about De Gaulle and Adenauer and how they were older than him, and age wasn't affecting them," Shapiro recalls. And Moses had an example closer to home if he wished to use it; his grandmother, Rosalie Silverman Cohen—the "Granny Cohen" of family legend whom he so closely resembled in manner—had been intellectually alert until the very day she died at the age of ninety-three.

Physically, the years had left their mark: the deafness was very bad indeed; he now required eyeglasses for reading although he whipped them off whenever a visitor came into the room; liver spots had mottled the olive skin; he had a paunch now. But it was not a large mark; above the paunch, the shoulders were still broad, the chest deep, the arms muscular—incredibly muscular for a man in his eighties. His physical presence was still dominating; wrote the *Daily News* reporter:

He's a big man, not so much in height and weight as in presence, and even now, on the eve of his eighty-first birthday, he's got enough vitality and power to become the instant center of attention when he walks into a room. . . . Even now, it's easy to see why they called Robert Moses a giant.

Mentally, there was no mark at all. Aside from his deafness, said a former associate who hadn't seen him for twenty years, "he hasn't changed at all." His mind had lost little of its monumental capacity, its voraciousness for knowledge-all knowledge. Books were piled in heaps around the Oak Beach cottage, and in a single pile a visitor saw the latest Simenon, Rattay's History of Long Island Hurricanes, O'Casey's The Plough and the Stars and an old, worn Boswell's Johnson, so old and worn that it might have been the very volume through which the young Bob Moses had first begun to idolize Dr. Johnson at Yale. One afternoon, Moses' chauffeur delivered to the door Mary I's sister, Emily Sims Marconnier, carrying three books for him. None was particularly good, she said, although Mary Renault's The Mask of Apollo wasn't bad. ("Well," he said, with his warm, charming grin, "let's see how bad they are.") The following evening, the chauffeur returned the three books to Mrs. Marconnier-all read. More and more of his Newsday columns were columns of literary criticism, some of it very perceptive indeed.

His intelligence was still a creative, shaping intelligence. Still roaming vigorously the length and breadth of the metropolitan region, it still saw in everything, as it had seen on the walks with Frances Perkins almost sixty years before, "ways to make it better." Moreover, freed at last of the crush-

ing day-to-day political and administrative responsibilities, that intelligence was free to contemplate, to reflect. Moses' imagination—in shackles so long to responsibility and ambition—was loosed again to dream and plan in leisure as it had dreamed and planned half a century before, when, with all other planners baffled by the urban recreation problem, it had, looking at Long Island, conceived a revolutionary solution. Within one year after his ouster from power, Robert Moses possessed what he had not possessed during the years in which he had been building housing: a unified, comprehensive housing program.

It would be simple in concept. Because the principal barrier to urban renewal programs was tenant relocation, new housing should be built where there were no tenants: in vacant areas of the city. After it was built, tenants from slum areas should be moved out of the slums—out of whole slums at once-into the new development. The areas they had vacated, now empty, should be razed, and new housing should be built there. Then residents of another slum area should be moved into that new housing, their area razed and rebuilt, tenants from still another slum moved in-until all the city's slums had thus been replaced with modern housing. Dedicating Co-Op City, the 15,382-apartment community, largest apartment development in the United States and largest cooperative apartment community in the world, that he had played a key role in conceiving and organizing, he offered, as a "visible, palpable, large-scale demonstration of the efficacy" of his plan, a proposal for an "Atlantic Village" at Breezy Point that would dwarf even Co-Op City, providing schools, shopping centers, playgrounds and a three-mile-long public beach, as well as 50,000 modern apartments looking out over the ocean, while, incidentally, solving the city's dilemma over what to do with that valuable long piece of beachfront, hitherto fought over by park and housing advocates as if the building of one would preclude the building of the other. Financing? "Ingenuity and boldness" would solve that problem, as it had on the West Side Improvement, he said; he had several alternate methods already worked out. And after the buildings were opened, into them should be moved 50,000 Bedford-Stuyvesant families, then that "ghetto area should be rebuilt and, by repeating this process, in ten years there will be no more ghettos."

Moses had a citywide program worked out—right down to specific sites (among them, Welfare Island, air rights over the Sunnyside Yards of the Long Island Rail Road and a vast, unused tract of Bronx park land near the Whitestone Bridge) and costs: five billion dollars could clean up every slum in the city in ten years. It was a typical Moses plan: no consideration of the city investment required to provide facilities for these new, isolated communities, or of whether the city could afford such investment, no concern that by isolating low-income people by the tens of thousands he would be creating new ghettos. But he did not see these flaws. His plan was large enough in scope to deal with the immense slum problem, the only plan that was. He was sure it would work—he was as enthusiastic as a boy about it. And he could not restrain his impatience with those who criticized it: the "Lindsay people" have "had their chance to solve this problem with their

scattered sites and vest-pocket things. None of these fancy words are going to solve the housing crisis—only lots of new houses will solve it, and this is the way to get lots of new houses . . ." He was so anxious to be given a chance to prove he was right.

Housing was not the only area in which he had plans. In every conversation now, as Vollmer put it, "there is this concern growing for so many things left undone, so many things to be done." What people didn't understand was that everything he had done was part of a plan, a dream-a plan planned and a dream dreamed decades before. Large parts of the plan were realized, but larger parts were not-including some of the most beautiful, some of the ones he most wanted to realize, some of the public works he had been trying to build for decades. His cottage might face the Robert Moses Causeway and Robert Moses State Park; these were two achievements that should have been enough to content any man. But what he saw when he stood on the porch of the cottage and stared out was not the bridge and the park but the road, the great Fire Island highway, that the bridge and the park had been supposed to bring closer to reality, the road still unbuilt. His dream had not been merely of an Ocean Parkway and a Belt Parkway that ran along the water for forty miles; his dream, dreamed so clearly in 1924, had been of a great Shorefront Drive all the way from Staten Island to Montauk Point-160 miles. A drive whose heart would be the Fire Island Road bordered on the one hand by bay and on the other by ocean, a highway along which people could drive almost literally among boats and waves—the most beautiful drive in the world. That road would be built one day; he had no doubt about it—and he wanted it to come while he could see it, he wanted to build it himself so that he could be sure it was built right. He had built parks in the city, but the greatest waterfront park—the Jamaica Bay Development that he had conceived of in 1924—was still not built. He had reserved for future generations so many great tracts of Long Island land—the Marshall Field Estate that had been renamed Caumsett State Park, the Southside Sportsman's Club that had been renamed Connetquot State Park-but it wasn't enough. There were so many more country clubs and big estates that must be saved from the developer's bulldozer and preserved for the public. And despite his pleas to his successor on the State Council of Parks, Laurance Rockefeller; to Duryea's successor as head of the Long Island Commission, A. Holly Patterson; to county officials of Nassau and Suffolk; to philanthropists-to anyone who would listen—no one was doing anything to preserve them. He had built great urban highways-more great urban highways than any man in history-but where were the greatest of the highways, the expressways across Manhattan Island, that would complete the expressway net and alone make it workable? There were a hundred big things left to do, and a thousand small: he had put Lincoln Center together for the Rockefellers and then they had goofed up by not providing ramps and wider roadways from the West Side Highway; "they don't grasp [the problem], they don't even remotely grasp it," he said one day; he could take care of it in a couple of months—and if it

wasn't taken care of, you were always going to have an access problem there. The walls of his office on Randall's Island were covered with pictures of his achievements-pictures of bridges and dams illuminated at nightand through the window behind him could be seen the solid concrete and steel of the Triborough Bridge. But the office was dominated by a huge map of New York City. And while that map was crisscrossed with the solid lines that represented achievements built-highways, bridges, tunnels-on it also were lines, many lines, that were not solid but broken: lines representing achievements not yet built, dreams yet to be turned into reality. As he sat at his desk, that map, its width wider than his armspread, its height taller than a man, stared back at him, reminding this man to whom accomplishment was so important that there was so much yet to accomplish. There was visible behind his urge to keep building an element almost of desperation; the public was doubting the wisdom of his creations—the way to convince them was to complete the system, to build more highways, more bridges, more housing—to build, build in a frantic attempt to rescue his reputation. But there was behind the urge also genuine creative drive, a drive undimmed by eighty years of life, the shaping impulse of the shaping man—and a drive supported by the arrogance which since his youth had told him in a voice that would not be denied that he had the answer to the problem, that he knew what to do. If only he were to be allowed to do it.

What made his situation more frustrating still was that the problems that needed solving were not being solved. His city, the city that he thought of as a product he had created, was, he felt, being destroyed by the men who had succeeded him in power. Hoving and August Heckscher, grandson of his early benefactor and Hoving's successor as Park Commissioner, had had their opportunity to institute their park policies designed to "return the parks to the people"; after five years of such a return, the parks were ruined, in as bad shape as he had found them when he took over from Tammany Hall. Little new housing was being built, the slums were getting worse. No highways were being built; supposedly this was because the money was being spent on mass transportation, but at the rate mass transit facilities were being built, they would never solve any transportation problems-if indeed most of them were built at all. Democracy had not solved the fatal dichotomy; he did not see the problem as a dichotomy but only as a failure on the part of public officials to understand the realities of the situation—that the public say on public works must be limited, and, in general, ignored, that critics must be ignored, that public works must be pushed ruthlessly to completion.

Understanding this, convinced that he had the plan for the salvation of New York, he schemed and twisted and turned to get the power to do it: ass-kissing pompous double-chinned Ronan and his arrogant boss, asking allies—fewer each year as more and more architects, engineers and contractors were pulled into the Rockefeller-Ronan orbit—to "intercede" for him. Frantically he tried to get the United Housing Foundation interested in the "Atlantic Village" project—and to put him in charge. In one desperate ploy to do this, he planted an interview with the Daily News which appeared

—under the hopeful headline GREATEST URBAN RENEWAL EVER: REENTER BOB MOSES—in a story favorable to the plan and closed with a broad hint of who should run it.

Moses, whose only job at present is that of consultant, . . . was asked during the interview whether he might consider himself just the nonpolitical man for the job.

"Will you take any direct part in this project?" he was asked.

"Nobody has asked me," he replied.

Nobody did. His agile mind, always so quick to find avenues to power, twisted and turned and darted at every one that he felt might open up—and, with the city's Mayor and the state's Governor unalterably opposed to him, found them all closed. Rockefeller and Ronan kept him firmly on the shelf; his impatience, the same terrible impatience he had had as a young man, turned into frustration, a deep gnawing, terrible bitterness. As this man, who had measured off his life in days each of which was vital, looked back on weeks in which nothing had occurred to advance his plans—as weeks turned into months—as he realized that he had been seventy-nine when he lost power and that he was now eighty-two (or eighty-three or eighty-four), he fell into violent rages. His conversation revealed, more and more, fore-boding of the ultimate. He had thought Oak Beach would be his Elba. Was it to be instead his St. Helena? Was he to die without ever getting the chance to build another bridge, to redeem his name?

He could have used the time to write, and publishers approached him with substantial offers for an autobiography. But he had not the patience to write, nor the desire—and, it may be, other considerations militated against it as well: a key to Moses' ability to buy men had been his ability to keep the purchase secret, and the sellers' confidence that he would do so. He could hardly write a story of his life without going at least to some extent into the machinations by which he had obtained power, and were he to reveal them, men whom he would need to get power back might shy away from him. He did come up with a book, published in 1970 by McGraw-Hill: Public Works: A Dangerous Trade. But this was not really a book at all, and it was certainly not by Robert Moses. A vast volume—952 pages—90 percent of it consisted of documents already in the public record: reprints of speeches, press releases, brochures, reports, newspaper and magazine articles on his triumphs, letters to and from prominent persons. And most of the remainder was written not by Moses but by members of his staff. There was no triumph in its publication; it was extensively reviewed, but reviewers treated it for what it was-a nonbook.

He could not sit still. Reading in the afternoon, he would jump up from his chair, yank on his old corduroy jacket and stride out onto the long wooden porch outside the Oak Beach cottage, pacing back and forth, sometimes for an hour and more, grim and restless. Urged on by desperate secretaries and associates and wife, he took vacations, but he didn't enjoy them. He was always anxious to get back—lest some chance for power pass him by. But upon his return, no chance would come. Things he had once

enjoyed doing were less and less solace to him now. For no matter what he did, he could not get away from himself. To this man who had consecrated his life to Getting Things Done, to the getting and exercising of power, hell was the continued urgent, desperate, insatiable need for accomplishment and power—combined with the inability to satisfy even a little part of that need.

His muchachos did all they could to make life pleasant for him—most of his muchachos; most of them loved Robert Moses. Some of them loved Robert Moses only for what Robert Moses could do for them, and he couldn't do anything for them any more—he had made up with George Spargo after the World's Fair and given his engineering firm contracts, but the loyal Harold Blake was to comment bitterly one day that "Mr. Moses doesn't see much of George Spargo any more. And Spargo was closer to Mr. Moses than anybody."

Thanks to Sid Shapiro, who was still general manager and chief engineer of the Long Island State Park Commission, the big corner table in the Marine Dining Room at Jones Beach was reserved for Moses and his party every Saturday and Sunday, and the chef would cook up something special (whatever Moses wanted; if it wasn't in stock at the restaurant, a patrol car would be sent screaming up to the mainland to get it), and whenever Moses went to the Marine Theater—which was frequently—there would be the introduction by Guy Lombardo and the spotlight and the unfailingly generous applause from the crowd above, and the opportunity for him to look unutterably bored by it all. The Sea-Ef was kept always ready for him, gassed, manned and stocked by the commission.

Driving around the parks and parkways was still pleasant, for the senior officers at every facility were men who had served with RM when he had been the commission's president, and they treated him with the respect he remembered. Everybody connected with the commission, in fact, treated him with respect. When the author drove him down to meet Adam Carp, Moses told him to park in an area marked "No Thoroughfare." After he left, the author was sitting there jotting down notes when a Long Island State Park Commission patrolman loomed in his window. "Don't you see the sign?" he asked with the usual LISPC arrogance. "Well, you see, I drove Mr. Moses down . . . ," the author began. "Oh," the cop said, straightening, and started to walk away without a word. Then he returned. "Thanks for telling me," he said. "I'd be out of work and my children would be starving."

There were bright spots in his life. On July 3, 1970, a handsome monument in a large plaza on the Lincoln Center campus of Fordham University was unveiled—a bronze bas-relief of Moses, executed by sculptor Albino Manca, mounted on a handsome three-sided slab of green marble over the words, chiseled and gilded in gold:

ROBERT MOSES

MASTERBUILDER

FRIEND OF FORDHAM

Terence Cardinal Cooke blessed the monument, Nelson Rockefeller gave the principal address, calling Moses a man who "built his own greatness," and as the Reverend Michael P. Walsh, president of Fordham, announced that the plaza would be named after him, long lines of state officials, Fordham priests and old Moses Men stood applauding with warm smiles on their faces until Moses had to bow his head to hide tears.

To a man whose sensitivities had been rubbed as raw as Moses', however, there were unfortunate ironies even in this honor. In praising Moses, Rockefeller had, perhaps indelicately, alluded to the fact that up to now in the city "no public work has borne his name." Despite Fordham's touching and appreciated gesture, of course, that was still the case. This gesture wasn't an honor from the public, the public he had served so long and so selflessly at such great self-sacrifice, but from a private institution. His name was immortalized in concrete and steel and park land from one end of the state to the other. But it was on no public work in the city in which his efforts had been concentrated.

It had been supposed to be on one, but it wasn't.

And a plaza on a college campus wasn't quite the same thing as Flushing Meadows Park.

There were other bright spots. He was Man of the Year for the Salvation Army and the Masons and the Society of Civil Engineers-for a dozen organizations—between 1968 and 1972. A junior high school in Babylon was named after him—the tenth structure to bear his name. There were the ceremonies attendant on the completion of the public works that had been launched before the end of his Triborough chairmanship—in 1968 the huge new park on the landfill he had added to Randall's Island, in 1969 the lower level of the Verrazano Bridge, in 1970 the reconstruction of the Cross Bay Bridge—ceremonies that gave him the opportunity to make speeches, and, now able to devote the necessary time to them, he delighted in writing them, so that their phrases had again the felicity and force of his speeches as a younger man. There were moments of triumph, such as his speech at the annual dinner of the Building Trades Employers Association in the Grand Ballroom of the Waldorf-Astoria Hotel in 1969, when, after Roger Corbetta of Corbetta Construction introduced him ("a great man, a great builder, a man of history . . . this great dirt mover . . . this master builder"), the hundreds of men in the audience rose to their feet and cheered and cheered for long minutes. The Daily News gave good play to his pronouncements; when, in 1969, former Secretary of the Interior Stewart Udall, urging the infusion of "young blood" into city planning, criticized "the jaded planning of Robert Moses" and said it had made New York an example of how not to conduct urban planning, the News replied, "We'd just like to observe that when Udall can show a list of accomplishments—in power, transportation and conservation—one tenth as long as Moses', it will be time enough for him to shoot off his yap." During the mayoral election of 1969, he backed the ultraconservative Democratic candidate, Mario Procaccino (he preferred

the more intellectual Republican candidate, John J. Marchi, also a conservative, but his endorsement, as always, was dictated by practicalities; he wanted a winner—someone who could return him to power—and he felt no Republican candidate could win in New York), jeering at Lindsay as "the glass of fashion and the mould of form"—and an utterly incompetent Mayor—and declaring, "We are sick of amateurs who are not dry behind the ears." And the endorsement was in headlines on page one of the *Times* as it had been in elections past.

But the bright spots became fewer and fewer.

The Cross Bay Bridge rebuilding was Robert Moses' last major construction project, the last with which he could occupy even a little of his time; and its opening celebration was the last at which he would be a leading figure. The requests to have him speak slowed from a torrent to a trickle, and by 1972 had dried up almost entirely. The mail, once so huge a bundle three times a day, fell off to almost nothing. There were continual discourtesies and humiliations. On May 22, 1969, the city dedicated Damrosch Park at the Guggenheim Band Shell at Lincoln Center. Damrosch Park had been conceived by Robert Moses. He had battled for the inclusion of the 2.34-acre open space in the Lincoln Center project when everyone else involved had opposed such "waste" of land. He had persuaded the Guggenheim and Damrosch families to donate the necessary funds. But he received only a form invitation to the opening ceremonies. Not only was there no invitation to speak, there was no place for him on the platform. He watched the ceremonies (presided over by Park Commissioner August Heckscher, whose primary contribution to Damrosch Park had been the approval of plans calling for lampposts on which the bulbs would be set thirty feet above the ground, too high for any of the Department's bulb-changing equipment to reach) from a bench near the rear of the audience. (Noticing him sitting there, Heckscher asked him to come up and sit in a chair that happened to be vacant on the platform; no thanks, Moses replied.) He was preoccupied with immortality now; in one Newsday column, he said he was convinced that "the finest short story ever written" was Anatole France's "The Procurator of Judea," which ends with Pontius Pilate saying, "Jesus? Jesus? Of Nazareth? I do not believe I can recall the name." And what roused him most to fury was the attempt of Lindsay and his bright young men to paint him as responsible for all the city's ills. Some of that criticism was unfair-predicated upon the ignorance of the new administration about the city it was supposed to be governing. Once, for example, the Mayor criticized Moses for laying concrete through Alley Pond Park, which he implied had been a wonderful rustic nature spot before Moses came along and ruined it. Moses had ruined a hundred rustic nature spots in New York City, but Alley Pond Park wasn't one of them. There hadn't been an Alley Pond Park until Moses came along and built it up out of an inaccessible, reeking marsh; the concrete Lindsay was talking about, the Cross Island Parkway, had been put through it at the same time. On another occasion, Lindsay said, "The Moses approach, where you take a bulldozer and mow people's houses down, just doesn't work in this city any more. We get more done by working on smaller sites in cooperation with the community." Get more done! In his first four years in office, the total housing production of the Lindsay administration consisted of fewer units than Moses had been accustomed to produce every single year! But it was the reason Lindsay kept using his name that hurt Moses most; in some way he was totally unable to comprehend, his name, which had once been a symbol of the good in urban life, had become a symbol of the bad; when Lindsay's Housing Administrator, Jason R. Nathan, wanted to blast some new housing proposal, he simply said it was an example of "The Moses Approach." Of all things, his reputation was now dearest to him—and it was his reputation that this incompetent Mayor was destroying.

And after a while, he couldn't even fight back.

Always he had broadcast his views through mass mailings—of his letters, his memos, his press releases, his brochures—to hundreds if not thouands of influentials in city and state, mailings mimeographed by Triborough personnel or printed with Triborough funds, mailed with Triborough stamps.

Whether or not it was "made clear" to him—as so many humiliating new restrictions on his activities were "made clear" to him by Ronan's men in the months after the MTA takeover—that Triborough printing and stamping privileges were no longer to be available to him in quantity, or whether it was simply that he was too proud to go on using resources that had not been offered to him, the fact remained that shortly after the MTA takeover, Moses' mailings were being addressed by hand and stamped with stamps purchased by him.

Doing it that way was too much of a load even for three secretaries and his wife, who chipped in to help. The evidence was not on the front of the envelopes, which were typed as cleanly and neatly as ever. But on the back, the return address was printed on roughly by a stamp. Even that did not help enough. The mailings were reduced in size and then reduced again.

Then, however, after another while, the work load was no longer such a problem, for there was almost nothing to mail. The principal ingredient of the mailings had been reprints of Moses' speeches and the column he wrote once a week for *Newsday* and syndication. Requests for him to speak were fewer in 1969 than they had been in 1968 and fewer still in 1970. By 1972, they were down to a handful. When his friend Harry Guggenheim sold *Newsday* to the Los Angeles Times Mirror Company in 1970, the column was discontinued. Now he had no public platform at all from which to voice his views, or to reply to the criticism continually being heaped upon him.

The column had, moreover, given him something to do. Now he had absolutely nothing to do. He grew terribly nervous; his big hands kept playing around his head, his fingers moving restlessly over his forehead; he kept putting his glasses on and taking them off. His fingers drummed on the table; sitting, he would squirm nervously; he would jump up every few

minutes and pace for a minute or two, sit down, jump up and pace again; he was almost desperate for something to do.

It was principally for this reason that when the Daily News asked him to host a new television interview series, "New York Closeup," on its WPIX-TV station, he agreed. He was not quite attuned to the blandness required in the medium—as he demonstrated conclusively even before his first program, at a press conference called by WPIX-TV at the Overseas Press Club to announce the new show. Asked why Moses, who had no experience on TV, had been selected as host, the station's president, Fred M. Thrower, intoned: "There is no one in New York better suited to make an important contribution to New York and to television in the public affairs field." When reporters turned to Moses, he said, with a grin, as the Times reported, "'To tell the unvarnished truth' he was being hired because the various networks have decided to devote more time to public affairs in response 'to a demand on the part of Congress, the F.C.C. and others' "a remark which prompted the Times reporter to remember that WPIX's license was being challenged by a rival group, and that the F.C.C. was scheduled to hold hearings on the two applications shortly.

The programs were a fiasco, partly because Moses refused (except for a brief, embarrassing attempt) to wear a hearing aid, and as a result could not hear his guests' replies to his questions, partly because he was not interested in the replies anyway and took up most of the program lecturing at the camera. After some twenty programs, he and the station jointly agreed to discontinue the series.

His mind was as active as ever. Ideas still churned out of it. To occupy his days, he agreed now to see people he had never seen before because he had felt they just wanted to pick his brains, use his ideas themselves and "get a fee out of it"—consultants from other countries and cities with specific problems on which they wanted his advice. And his imagination leaped as nimbly at these problems as the mind of the young Robert Moses had leaped at problems half a century and more before. "The other day," Blake recalls, "some man called who had been hired to do a study of what uses to make of Alcatraz Island. I mentioned it to him, and he starts to think, hmmm, 'Alcatraz—the problems are very similar to Ellis Island, very interesting . . .' And boy he was off to the races. He must have talked for an hour." One day a delegation of sixteen Japanese urban planners showed up to discuss a plan for, as Blake recalls it, "linking up some little island to the mainland." Moses began asking questions. Then the yellow legal pad was pulled across his desk and a pencil was in his hand. For more than two hours, the sixteen Japanese sat transfixed as that pencil flew, and the big hand pounded the desk, and the big man jumped up and paced as the ideas took hold. On their way out, one of the Japanese said almost reverently: "A great man. A great man." There were so many ideas about things closer to home that needed doing-new parks for Long Island, new highways, his planned bridge. But now not only could he do nothing about his ideas, he couldn't even tell anyone about them.

He lived on slim hopes—that Procaccino would defeat Lindsay and that Brennan and Van Arsdale could persuade Procaccino to return him to power, that Rockefeller would at last see through Ronan's obsequious flattery to what Moses felt was the incompetence beneath, that Rockefeller would win the presidency in 1968 and go to Washington, leaving Lieutenant Governor Malcolm Wilson in the Governor's chair (Malcolm Wilson is a great admirer of Mr. Moses', you know, Harold Blake, would say), that Rockefeller would be given a Cabinet position by Nixon in 1972, and thus place Wilson in the Governor's chair. But in 1974, when Rockefeller resigned and Wilson did become Governor, the only post offered to Moses was a meaningless one as a housing "adviser" to the Governor; Rockefeller apparently still had enough influence to keep him out of any significant assignment.

The Moses Men were growing old. "He had so many people serving with him, and I see in my mind all these faces, dim now, like ghosts, and his face vivid, outlasting all of them," Sid Shapiro had said. RM had outlived one generation of aides. Now he was starting to outlive another. One after the other, they died. His bankers died: the younger one had gone first—Shanahan had been dead for years; in 1969, George McLaughlin died, too. When an interviewer asked about the remaining aides, Shapiro said to him sadly: "You're talking about a bunch of white-haired old men now, you know. I remember when we were all young, out there at Belmont Lake . . ."

As long as Shapiro himself was still around and in administrative charge of the Long Island State Park Commission, of course, the other deaths did not matter too much. Shapiro could still provide Moses with all the amenities that gave his life what happiness it had. This most loyal of men held on to the end, past the age when he might have retired, to make things easier for RM. He held on even after he was told he had cancer. He held on until his pain and weakness made it impossible for him to work even occasionally any longer, and then, on April 12, 1972, he retired. Hoping for a while he might recover, he moved into a house on Oak Beach, right near that of the man he had served and worshipped for fifty years—his companionship was undoubtedly welcome, but the commissioners of the Long Island State Park Commission were by now all men whom Moses knew only slightly, and as Shapiro's replacement they selected not the Moses Man next in line, Frank Champ, but an official of the National Park Service, and now there was no longer the deference to Moses in the parks he had created, or the introductions at the Marine Theater; even the corner table at Jones Beach was no longer waiting. And after July 20, 1972, when Shapiro died, even the companionship of his oldest and most loyal aide was gone.

Robert Moses, preoccupied with immortality, had no sons. He had three grandsons, two by his daughter Barbara, one by his daughter Jane. The one Barbara had named after him was mentally retarded. For her other son, John Olds, a Princeton graduate who married an heiress and became a banker, he had no use.

Jane's son, Christopher Collins, was a tall, handsome youth with a broad, engaging grin and an easygoing nature. Unlike Jane's daughter, Caroline, a tall, brilliant girl who won honors at Oxford before getting married, from the time he began school, his grades were a problem, and he displayed no marked interests except in girls and surfing; he loved to spend the summers on the beach at Gilgo. "He's too good-looking for his own good," Jane said.

But Robert Moses loved Chris. He doted on him, taking him with him everywhere. He taught him to fish and sail. With her husband long since "out of the picture," he was supporting Jane, of course, and he saw that the boy always had plenty of pocket money. When Jane lost her temper with Chris over his grades, Chris would reply, "Gramps never says anything." Instead of an Ivy League university, he wanted to go to little Chapel Hill College in North Carolina; Jane was appalled, but Moses told her, "Oh, let the boy go where he wants." When his first report card came back with straight C's, he said, with a grin, "Well, at least he's consistent."

In 1967, as a senior at college, Christopher Collins' attitude changed. His report card came back all A's. "I don't think RM was any prouder of the Verrazano Bridge than he was of that report card," Sid Shapiro says. When Chris said that he wanted to study law at Stanford, Moses helped him get in.

On December 11, 1968, driving home to Long Island from California as a passenger in a car driven by a Stanford friend, Christopher Collins, twenty-one, was killed when the car veered off the road and smashed into a concrete culvert.

Once he had had battalions to boss and on which to demonstrate his administrative ability; now he had only his secretaries and chauffeur, so he did so on them. He was harsh and abrupt and arrogant in talking to them, and about them; explaining how he had gotten caught the day before in a traffic jam, he said: "The chauffeur took the wrong route—he always takes the wrong route if he's left alone, and I never interfere: that's his business; he's the chauffeur; if you don't like it, you get another chauffeur . . ." He became a name dropper, trying consciously to lard his conversation with the names of great men he had known.

Still he lived on—year after year, vital and alert, imaginative and energetic, but with nothing to do with his vitality, his imagination and his energy except to bottle them up, feeding on himself.

His name had faded from the headlines in New York City long before. For a while after *Newsday* no longer published his column, its reporters still telephoned him for comment on stories involving public works on Long Island, and played his statements prominently, as did the *Long Island Press*. But as time went on that all but stopped, too. This man who for decades had read the newspapers first thing every morning no longer found his name in them except on rare occasions—and on those occasions almost invariably in a derogatory context, as a man who had been responsible for housing and

highway mistakes. He had built Jones Beach and Sunken Meadow State Park, and Heckscher, and the Massena and St. Lawrence power projects—but no one remembered those. He was forgotten—to live out his years in bitterness and rage.

In private, his conversation dwelt more and more on a single theme—the ingratitude of the public toward great men. And once, invited by the Church to speak at the dedication in Flushing Meadows Park of the Excedra, a huge, marble bench for reflection donated by the Roman Catholic Diocese of New York, he gave vent to his feeling in public. Turning to a high church official who was also an old friend, his voice booming out over the public address system, he said:

"Someday, let us sit on this bench and reflect on the gratitude of man."

Down in the audience, the ministers of the empire of Moses glanced at one another and nodded their heads. RM was right as usual, they whispered. Couldn't people see what he had done?

Why weren't they grateful?

# NOTES

The main trouble with clichés is that their constant reiteration has worn them out, so that they no longer possess their force and meaning. Every author, it seems, thanks his wife and his editor. How then to express adequately the thanks I owe to mine?

Ina Joan Caro provided support and encouragement and many keen critical insights, and took care of our home and son while I wrote—and she did so for seven years. She typed the massive manuscript—typed some chapters over and over-without one single word of complaint. But she also tracked down and interviewed the farmers dispossessed for the Northern State Parkway during the 1920's and the residents of Sunset Park displaced for the Gowanus Parkway during the 1930's-no small task. Searching through scores of libraries, the morgues of a dozen deceased newspapers and endless rows of filing cabinets of ancient, crumbling city records, she found a hundred pieces of information that enriched this book. For some months during which I was physically unable to do my own research, she did it for me. I believe there are few if any persons in this city who possess her knowledge of where to find information about it, and this knowledge was of immense help to me. If there is a way to express adequately thanks for such long years of such gracious selflessness, I do not know it. Only I will ever know how much it meant to me.

In an era during which perceptive editorial criticism seems to be harder and harder for an author to come by—and in which detailed editing of even short manuscripts is rapidly becoming a lost art—my editor, Robert Gottlieb, not only gave this terribly long manuscript detailed editing but improved it with brilliant perceptions. Despite the grinding pressures of his responsibilities as president of Knopf, he lavished on it, week after week and month after month, his time, his energy and his genius as an editor. No one who is not an author can understand what this has meant to me, and not all authors can, either—only those who have Bob Gottlieb for their editor.

On a book of this size, the difficulties of production loom ominously large. A hundred problems fell on Katherine Hourigan of Knopf, who solved every one—and who furnished much perceptive editorial criticism of her own.

NOTES 1166

Among the many other people at Knopf to whom I am indebted, I must thank especially Martha Kaplan, Nina Bourne, Fran Lipton and Betty Anderson. Others who contributed in large measure were Priscilla Worland Burton, my research assistant; Lynn Nesbit, my agent; and Andrew L. Hughes, who provided literary as well as legal advice. Two institutions were helpful: the Carnegie Corporation, which provided a grant that helped me get started, and the New York Public Library, which, by providing working space in its Frederick Lewis Allen Memorial Room, helped me get finished.

It is unfeasible for me to thank individually every person I interviewed; there are hundreds of them—a total of 522 interviews were conducted (some persons were interviewed several times); the names of those especially helpful are listed in the "Selected Interviews" section. Some, however, gave particularly generously of their time and knowledge.

First among them are Lawrence M. Orton and Lee Koppelman. Larry Orton, a member of the City Planning Commission for thirty years, possesses an incredible store of knowledge about New York City—he put it at my service. Lee, executive secretary of the Nassau-Suffolk Regional Planning Board, did the same for my chapters on Long Island.

Lillian Edelstein, leader of East Tremont's valiant fight against the Cross-Bronx Expressway, was endlessly helpful in my attempt to describe what a modern highway can mean to a city neighborhood; William Exton and Robert C. Weinberg were helpful in describing a dozen fights against a dozen Moses projects; Augusta Newman was the definitive source for the Tavernon-the-Green battle.

Four reporters who during the 1950's brought to light for the first time many of the facts about the Moses empire turned over to me their insights and, where possible, their files. These trailblazers were Fred J. Cook, William Haddad, Joseph Kahn and Mary Perot Nichols—who also, as a Park Department official during the Hoving era, secured me access to Department files that helped illuminate the Moses era.

The Oral History Project of Columbia University was a source of immensely helpful material.

R.A.C. New York City January 31, 1974

### A NOTE ON SOURCES

From its inception, Robert Moses did his best to try to keep this book from being written—as he had done, successfully, with so many previous, stillborn, biographies.

After I had been researching it for more than a year, however, he apparently realized that it would be written despite him. He agreed to sit for a series of interviews with me, and, over a period of some months, seven interviews—long hours in length; one lasted from 9:30 A.M. until evening-took place in his summer cottage at Oak Beach, on the far end of the "Jones Beach" portion of the Long Island barrier beach, where Robert Moses sat talking, framed, through a picture window, by the Robert Moses Causeway and Robert Moses State Park. "Interviews" is a less appropriate term than "monologues," for Moses permitted few questions, none on sensitive subjects, and when the time came that I had no choice but to ask some (for, having interviewed others involved in the subjects in question and having examined the records-many of them secret-dealing with them, it was necessary to reconcile the sometimes striking disparity between what he told me and what they told me), the series of interviews was abruptly terminated. Nonetheless, the long hours alone with Robert Moses have enriched the book immensely, not only in the many incidents and anecdotes he related that turned out to be accurate, and in the masterful word pictures he drew of all but forgotten eras (to hear Robert Moses talk about the Legislature's "Black Horse Cavalry" of the 1920's is to see the Black Horse Cavalry), but because, as is always the case when a reporter can spend enough time with a subject, the subject reveals more of himself than he knows. All unknowing, Moses told me, I believe, much that he didn't realize he was telling me. The subject of this book is, therefore, the first source that I must cite.

I must thank him as well. If his monologues, shying from the sensitive as they did, were in a sense lectures on the philosophy and art of Getting Things Done in a democratic society, they were nonetheless the lectures of a genius. Having been an investigative and political reporter for some years, I have naïvely believed that I knew something about the innermost fabric of decision-making in New York City and New York State, and not a little about government and politics in general. All that I knew was as nothing besides what I learned from this unique Gamaliel.

During the era of cooperation, moreover, Moses relaxed the rule, hitherto rigid throughout his empire, that no one was to talk to me, and allowed certain of his aides to do so. Most importantly, he allowed Michael J. (Jack) Madigan and Sidney M. Shapiro to do so. Madigan worked hand in glove with Moses for thirty-five years. Although an engineer who headed the engineering firm most closely identified with Moses in the public mind, his real importance to Moses was in his secret role as architect of the intricately crafted bond issues that made Moses' public works possible. If the Moses empire had a treasurer, Madigan was the man. Shapiro was even more important to me. If the empire had a prime minister, it was he. General manager and chief engineer of the Long Island State Park Commission, he worked for Moses for more than forty years, the last twenty or so as his closest and most trusted aide. With Shapiro, I spent more than a hundred hours. Besides showing me what the "royal tour" for a Moses guest meant-and I am grateful for, if still somewhat incredulous at, that experience—he talked to me freely, having obtained my promise not to quote him directly or indirectly. He agreed, however, that his death would void that promise, and he died on July 20, 1972. It is thanks to Shapiro more than to any Notes 1168

other single source that I came to understand Moses' attitude toward Negroes, toward "that scum floating up from Puerto Rico" that was befouling his parks, toward what "RM" called the "lower classes"—as well as Moses' reasoning on such questions as mass transit vs. highways. As to why Shapiro spoke so openly, promise or no promise, I have, after much speculation over intriguing possibilities, concluded that perhaps the primary reason was that he did so simply because he believed what Moses believed—believed it so fervently that he could see nothing wrong with it, and could not understand how anyone of "real intelligence" could see anything wrong with it. Forty years in the insulation of the Moses inner circle had taken its toll.

One further note of detailed explanation on a particular source may be of interest to some readers. When, in the Notes that follow, I cite the "Secret TBTA Files," I refer to the secret files of the Triborough Bridge and Tunnel Authority, kept under lock and key to this day on Randall's Island, barred for forty years to inspection by public or press, none of whose contents has, to the best of my knowledge, ever been revealed. It was some of those files, made available to me, that became the primary source of the information in this book on such political payoffs as insurance premium commissions to selected legislators. In those files—the legendary Moses dossiers—are the frankest of memos on who's getting what, and why.

Several other collections of documents which, so far as I can determine, have never been consulted before by any writer, have been of use in my research.

The voluminous personal files of W. Kingsland Macy, State Republican Chairman from 1930 to 1934, Suffolk County Republican Chairman from 1927 to 1960, and a power in New York State politics for thirty years, were discovered by the author in the cellar of the Macy mansion in West Islip, Long Island. They are referred to in the Notes that follow as the "Macy Papers."

Other perhaps virgin collections of documents consulted include the internal memoranda of the New York City Park Department during the twenty-six years of Robert Moses' commissionership. These files, made available to the author through the cooperation of Mary Perot Nichols, are stored in the dank recesses below the Seventy-ninth Street boat basin near the West Side Highway. They are referred to as the "Park Department Files." Other collections include the letters, memos and informal diaries of reformer William Exton, which detail his battles during the 1930's against the West Side Highway and such other Moses projects as the remodeling of Washington Square Park. The "Exton Papers" are kept at his family's home in Millbrook, Dutchess County. The internal memoranda and draft reports of the State Reconstruction Commission, of which Moses was chief of staff in 1919, were preserved for half a century by commission staffer John M. Gaus at his home in Utica, together with a vast collection of forty years of unpublished reports on Moses projects by planning and reform organizations. This huge compilation—the result of Gaus's enduring fascination with his first boss long after he himself became a Harvard professor and respected political scientist—is referred to as the "Gaus Papers."

The memos on the Title I scandals of the 1950's written by Gene Gleason and other New York World-Telegram reporters to rewriteman Fred J. Cook and various editors and kept by Cook in his home in Interlaken, New Jersey, were given to the author by Cook. These are referred to as the "Cook Papers." Various other documents relating to Title I given to the author by Stephen G. Thompson, then on the staff of the New York Herald Tribune, are referred to as the "Thompson Papers." Letters, memos and secret internal documents relating to Moses' 1964-65 World's Fair—obtained, and painstakingly filed and cross-referenced, by New York Post reporter Joseph Kahn—were given to the author by Kahn. These are referred to as the "Kahn Files."

In 1966, 1967 and 1968 audits were made of the Triborough Authority and of Moses' Long Island State Park Commission, Bethpage State Park Authority and Jones Beach State Park Authority by auditors on the staff of State Comptroller Arthur Levitt. In addition to the published "audit reports," there were made available to the

author some of the unpublished—and, since the published reports were heavily edited at Moses' insistence, far more revealing—work sheets of the auditors. These are referred to as the "Levitt TBTA Audit" and the "Levitt LISPC Audit."

Of the manuscript collections cited, the following mayoral papers are at the Municipal Archives and Reference Center, 23 Park Row, New York City: La Guardia Papers, O'Dwyer Papers, Impellitteri Papers and Wagner Papers. The Alfred E. Smith Papers are at the New York State Library in Albany. The Franklin D. Roosevelt Papers and the Henry Morgenthau, Jr., Diary are at the Roosevelt Library in New Hyde Park. The Henry L. Stimson Papers are at the Sterling Library, Yale University.

The "Black Papers" refer to the vast collection of questionnaires and reports on displaced tenants on Moses' Title I sites compiled by Mrs. Elinor Black in her capacity as chairman of the housing committee of the Women's City Club. The "Edelstein Papers" refer to the documents collected by Mrs. Lillian Edelstein during her fight against the Cross-Bronx Expressway. They are now back in her possession at her new home near Boston. The "Gabel Papers" refer to a few documents Hortense Gabel gave the author from her tenure as Deputy State Housing Rent Administrator, the "Kopple Papers" to a collection of memoranda and files given the author by Robert Kopple, the true creator of the 1964-65 World's Fair, the "Zeckendorf Papers" to copies of letters and memos relating to the creation of the United Nations Headquarters given the author by William Zeckendorf.

The Joseph M. Price Papers are at Butler Library, Columbia University. The Maurice P. Davidson Papers are in the possession of the Davidson family.

The Oral History Project is at Columbia University.

More than one hundred brochures written or edited during a period of more than forty years by Robert Moses and published by one of his public authorities or the Mayor's Slum Clearance Committee or the New York City Park Department were given to the author by Sidney M. Shapiro. There is no one location in which the numerous other Moses brochures can be found, but most are located in the New York Public Library or the La Guardia, O'Dwyer, Impellitteri or Wagner Mayoral Papers.

#### SELECTED INTERVIEWS

There were 522 interviews conducted for this book. The list below identifies persons interviewed who are cited frequently in the Notes that follow. Persons cited infrequently are identified in the chapters in which the citations occur.

The persons on this list are described not by their most well-known position but by the role they played in their relationship to Robert Moses. Adolf A. Berle, Jr., for example, is described not as a Roosevelt Brain Truster but as Fiorello La Guardia's first City Chamberlain, the role in which Moses dealt with him.

The dates in parentheses are the dates of the interviews. While dates are not given in the chapter notes for interviews with persons cited infrequently, all these interviews took place between March 1, 1967, and February 3, 1972.

- ADAMS, DOLIE MCWHINNEY: Assemblyman Thomas McWhinney's daughter (Mar. 23, 1967)
- BARNES, HENRY: City Traffic Commissioner, Wagner era (Feb. 14, 15, 1968) BEN SCHEIBER, ISRAEL: vice president of Madison House (July 13, 20, 1967)
- BERLE, ADOLF A., JR.: City Chamberlain, La Guardia era (Nov. 22, 23, 1967)
- BINGER, WALTER D.: Stanley Isaacs' Borough Works Commissioner, La Guardia era (Dec. 22, 1967; Jan. 15, 1968)
- BLAKE, HAROLD: Moses secretary (1969, 1970)
- CARR, MARY: secretary to Al Smith and Belle Moskowitz (Feb. 16, 1967)
- CHANLER, WILLIAM C.: La Guardia Corporation Counsel (Dec. 14, 1967)
- CHAPIN, WILLIAM S.: Moses aide (Apr. 24, May 8, 1968)
- CHILDS, RICHARD S.: president of the New York State Association; chairman of the Citizens Union (Feb. 21, Mar. 3, 10, 1967)
- CLARK, ERNEST J.: long-time Moses engineering consultant; president, Andrews & Clark (May 10, 17, 1968)
- CLARKE, GILMORE: long-time Moses architectural consultant; president, Clarke & Rapuano (Apr. 5, 1967)
- COLEMAN, JOHN A.: financier, key adviser to O'Dwyer and Wagner (Feb. 7, 1967)

- Collins, Jane Moses: Moses' daughter (1968, 1969, 1970)
- CONDELLO, VICTOR F.: city legislative representative, O'Dwyer, Impellitteri eras (1969)
- COONEY, JOAN GANZ: Sesame Street producer (July 10, 1968)
- COONEY, TIMOTHY J.: Wagner aide (Aug. 14, 1968)
- COSTIKYAN, EDWARD N.: Democratic district leader, reform leader of Tammany Hall, Wagner era (July 16, 1968)
- CULLMAN, HOWARD S.: Port Authority chairman (Feb. 7, 8, 1967)
- DAVISON, F. TRUBEE: assemblyman, campaign chairman for Moses' gubernatorial campaign (May 1, 1967)
- Dewey, Thomas E.: Governor (Apr. 25, May 7, 1968)
- DURYEA, PERRY B., JR.: State Assembly Speaker, president of Long Island State Park Commission, Rockefeller era (Apr. 27, 1968)
- DYKMAN, JACKSON A.: Moses' Yale classmate and attorney for contractors, La Guardia era (July 22, 1967)
- ERNST, MORRIS L.: noted attorney, reformer, social acquaintance of Moses (Nov. 7, 1967)
- EVARTS, JEREMIAH: Assistant Corporation Counsel, La Guardia era (1968)
- Exton, WILLIAM, Jr.: reformer (Jan. 25, Feb. 11, 12, 1968; May 1969)

- FEARON, GEORGE R.: State Senate majority leader, Lehman era (May 5, 1967)
- FINKELSTEIN, JERRY: City Planning Commission chairman, O'Dwyer era (May I, 1968)
- GAUS, JOHN M.: noted political scientist, staffer on Moses' Reconstruction Commission (Apr. 14, 19, 26, 27, 1967)
  GOLDWATER, MONROE: partner, Gold-

water & Flynn, behind-the-scenes Democratic power, La Guardia, O'Dwyer, Impellitteri, Wagner, Lindsay eras (Dec. 20, 27, 1967)

GREENBERG, NETTIE: Moses secretary

- (1969)
  GULICK, LUTHER H.: staffer, later official at the Bureau of Municipal Research (Mar. 2, 27, 1967)
- HALL, LEONARD W.: assemblyman, chairman of Republican National Committee (May 9, 1967)
- HALLETT, GEORGE: secretary, Citizens Union, La Guardia, O'Dwyer, Impellitteri, Wagner, Lindsay eras (Oct. 30, Nov. 4, 1967)
- HELLMAN, MRS. HILDA E.: Moses' cousin (Jan. 23, 1968)
- HIGGINS, RITA: Belle Moskowitz's secretary (Apr. 1, 1967)
- HOGAN, ANN: Al Smith's secretary (Apr. 10, 1967)
- HOVING, THOMAS P. F.: City Park Commissioner, Lindsay era (1969)
- Howells, Mrs. Elmer B.: friend of Moseses (Apr. 15, 1967)
- IMPELLITTERI, VINCENT R., Mayor (Apr. 22, 1968)
- INGRAHAM, JOSEPH T.: New York Times reporter, transportation editor (Apr. 18, 24, 25, 26, 1968)
- ISRAELS, CARLOS: Belle Moskowitz's son (Feb. 20, 21, 1967)
- Johnson, Elias A.: Moses' Yale roommate (July 21, 22, 1967)
- KAPLAN, H. ELLIOT: head of State Retirement System and civil service expert (July 7, Aug. 16, 19, 1967)
- pert (July 7, Aug. 16, 19, 1967)
  KAPLAN, SAUL: counsel to Assembly
  minority leader Irwin Steingut, Leh-
- man, Dewey, Harriman eras (1969) KERN, PAUL J.: La Guardia law secretary and later President of the Municipal Civil Service Commission, La Guardia era (Jan. 19, 23, 1968)

- Latham, William: Moses aide (Nov. 1, 2, 1967; Jan. 1968)
- LAZARUS, REUBEN A.: New York (ity legislative representative, Smith, Roosevelt, La Guardia eras; counsel and municipal affairs consultant to Senate majority leader and other Albany posts thereafter (Feb. 6, Oct. 20, Nov. 7, 8, 1967; Apr. 21, 1968)

LEVITT, ARTHUR: State Comptroller, Rockefeller era (1968, 1970)

- LUTSKY, JACOB: Assistant Corporation Counsel, La Guardia era; legal aide to the Mayor, O'Dwyer, Impellitteri, Wagner eras (May 8, 15, June 25, 1968)
- MADIGAN, MICHAEL J. (JACK): long-time Moses engineering consultant; president, Madigan-Hyland (May 2, 9, 16, 1968)

MARCONNIER, EMILY SIMS: Moses' sisterin-law (June 29, 1967)

MAYES, RICHARD: Democratic leader of Oyster Bay Town (June 2, 1967)

McGoldrick, Joseph D.: City Comptroller, La Guardia era (May 2, Dec. 17, 18, 20, 1967; Jan. 19, 20, 1968)

McMorran, J. Burch: superintendent, State Department of Public Works (Apr. 29, 1968)

MEYERS, GENERAL HARRY L.: Moses aide (Sept. 25, 1968)

MILBANK, JEREMIAH: Moses' Yale classmate, GOP financier (July 21, 1967) MOLONEY, EDWARD J.: State Depart-

ment of Public Works official, Dewey era, later a Moses consultant (July 2, 5, 1968)

Morse, Mrs. Harold: Mary Moses' friend (Feb. 21, Aug. 11, 1967)

- Moscow, Warren: New York Times reporter, La Guardia, O'Dwyer, Impellitteri eras; Wagner aide, executive director, City Housing Authority, Wagner era (Dec. 3, 1967; Jan. 14, 15, 1968; Mar. 15, 1970)
- Moses, Paul Emanuel: Robert Moses' brother (Dec. 30, 31, 1966; Jan. 16, Feb. 4, 5, 9, 10, 11, Mar. 16, 29, 30, 1967)
- Moses, Robert (May 26, June 11, 16, July 25, Sept. 21, 1967; Apr. 20, 27, 1968)
- O'KEEFE, PAUL: Deputy Mayor, Wagner era (1969)
- ORTON, LAWRENCE M.: City Planning Commission member and vice chairman, Smith, La Guardia, O'Dwyer, Impellitteri, Wagner, Lindsay eras (Apr. 21, Dec. 22, 1967; Oct. 3, 8,

- 1968; Mar. 15, 1971; Nov. 17, 18, 19, Dec. 27, 1972; Mar. 8, Apr. 17, June 3, 1973)
- PALMER, ARTHUR E., JR.: Lindsay transportation administrator, Lindsay appointee to Triborough board (June 23, 27, 1968)
- PRICE, ROBERT: Lindsay strategist and Deputy Mayor (June 25, 1968)
  PROSKAUER, JOSEPH M.: member of
- PROSKAUER, JOSEPH M.: member of Smith's "Kitchen Cabinet" (Feb. 24, 1967)
- RABINOWITZ, AARON: realtor, State Housing Board member, Al Smith era; Democratic financier (Feb. 27, 1967)
  REID, LLOYD B.: City Traffic Commissioner, O'Dwyer era (June 16, 1968)
- RODRIGUEZ, CHARLES F.: various positions under James J. Lyons in Bronx borough president's office, La Guardia, O'Dwyer, Impellitteri, Wagner eras (May 1, 20, 1968)
- ROSEN, RICHARD M.: city legislative representative, Lindsay era (June 25, 1968)
- SCREVANE, PAUL R.: Deputy Mayor, City Council President, Wagner era (Oct. 21, 1968)
- SHAPIRO, SIDNEY M.: Moses aide (nineteen interviews, 1968-69)
- SINGSTAD, OLE: general manager, New York City Tunnel Authority (Jan. 10, 17, 1968)

- SULZBERGER, IPHIGENE OCHS: New York Times (Dec. 11, 1967)
- Tallamy, Bertram D.: superintendent, State Department of Public Works, Dewey era; federal highway administrator, Harriman, Rockefeller eras (May 14, 1968; 1970)
- TAPPAN, HAZEL: Moses secretary (1969, 1970)
- TRUEX, JAMES: Harriman aide (July 7, 1968)
- TUGWELL, REXFORD G.: City Planning Commission chairman, La Guardia era; would-be Moses biographer (Jan. 16, 1968)
- VOLLMER, ARNOLD AND REBECCA: Moses aides (July 6, 1968)
- WAGNER, ROBERT F., JR.: Mayor (Jan. 26, Feb. 2, 3, 1972)
- WARNER, ALBERT L.: Albany correspondent for Brooklyn Eagle, New York Times, Smith era (May 9, 1967)
- WARNER, EMILY SMITH: Al Smith's daughter (Mar. 25, 26, 1967)
- WEEKS, GEORGE L., JR.: Islip Town Historian (Apr. 14, May 2, 1968)
- Weinberg, Robert C.: reformer, urban planner (May 2, 1968)
- WILLIAMS, ARTHUR B., SR.: Moses aide (Oct. 3, 1967)
- WINDELS, PAUL: La Guardia Corporation Counsel (Nov. 8, 9, 10, 1967)

#### SELECTED BIBLIOGRAPHY

A bibliography for this book would be another book in itself, and an exercise in pedantry to boot. The following list includes only those books specifically cited in the Notes that follow, and I include this list for one purpose alone: so that in the Notes I can use abbreviations.

- Allen, Frederick Lewis: The Big Change. New York: Harper & Row; 1952.
- Allen, Robert S.: Our Sovereign State. New York: Vanguard; 1949.
- ALLEN, WILLIAM H.: Al Smith's Tammany Hall. New York: The Institute for Public Service; 1958.
- \_\_\_\_\_ AND EDA AMBERG: Civic Lessons from Mayor Mitchel's Defeat. New York: The Institute for Public Service; 1921.
- AMORY, CLEVELAND: The Last Resorts. New York: Harper & Brothers; 1948.
- Anderson, Martin: The Federal Bull-dozer. Cambridge, Mass.: MIT Press; 1964.
- Andrews, William Loring: The Iconography of the Battery and Castle Garden. New York: Scribner's; 1901.
- It. New York As Washington Knew It. New York: Scribner's; 1905.
- BACON, LEONARD: Semi-Centennial. New York: Harper & Brothers; 1939.
- BARD, ERWIN W.: The Port of New York Authority. New York: Columbia University Press; 1942.
- BARUCH, BERNARD: My Own Story. New York: Holt, Rinehart & Winston; 1957.

  The Public Years. New York: Holt, Rinehart & Winston; 1960.
- BELLUSH, BERNARD: Franklin D. Roosevelt as Governor of New York. New York: Columbia University Press; 1955.
- BIRD, FREDERICK L.: A Study of the Port of New York Authority. New York: Dun and Bradstreet; 1949.
- BIRMINGHAM, STEPHEN: Our Crowd. New York: Harper & Row; 1967.
- BLAKELOCK, CHESTER R.: History of the Long Island State Parks. West Islip, N.Y.: The Long Island Forum Press; 1959.

- BOLT, ROBERT: A Man for All Seasons. New York: Random House; 1962.
- Brandt, Lillian: An Impressionistic View of the Winter of 1930-31 in New York City. New York: New York Welfare Council; 1932.
- BUREAU OF PUBLIC ROADS: When All Roads Led to Rome. Washington, D.C.: Bureau of Public Roads; undated.
- CARO, INA JOAN: "Building a Public Works Project in a Democracy: The Verrazano-Narrows Bridge" (Unpublished Master's thesis, 1973).
- CATLEDGE, TURNER: My Life and the Times. New York: Harper & Row; 1971.
- CLARK, RALPH H.: Four Years' Journey with Yale 1909. Privately published; 1967.
- COHEN, JULES HENRY: They Builded Better Than They Knew. New York: J. Messner; 1946.
- CONNABLE, ALFRED, AND EDWARD SILBER-FARB: Tigers of Tammany. New York: Holt, Rinehart & Winston; 1967.
- COSTIKYAN, EDWARD N.: Behind Closed Doors. New York: Harcourt, Brace & World; 1966.
- CUNEO, ERNEST: Life with Fiorello. New York: Macmillan; 1955.
- Dahlberg, Jane S.: The New York Bureau of Municipal Research: Pioneers in Government Administration. New York: New York University Press; 1966.
- Doig, Jameson W.: Metropolitan Transportation Politics and the New York Region. New York: Columbia University Press; 1966.

- EAST, JOHN BENTON: Council-Manager Government: The Political Thought of Its Founder, Richard S. Childs. Chapel Hill, N.C.: University of North Carolina Press; 1965.
- EBERLEIN, HAROLD B.: Manor Houses and Historic Homes of Long Island and Staten Island. Port Washington, N.Y.: Ira J. Friedman; 1928.
- ELLIS, DAVID M., JAMES A. FROST, HAR-OLD S. SYRETT, AND HARRY F. CARMAN: A Short History of New York State. Ithaca, N.Y.: Cornell University Press; 1957.
- ELLIS, EDWARD ROBB: The Epic of New York City. New York: Coward-Mc-Cann; 1966.
- FARLEY, JAMES A.: Behind the Ballots. New York: Harcourt, Brace; 1938.

# INTRODUCTION:

# Wait Until the Evening

#### NOTES

Swimming team episode: Author's interviews with E. C. M. Richards; although no other person was present at the Moses-Richards poolside confrontation, Richards' over-all story of the dispute over the approach to Ogden Reid is confirmed by three other members of the team: George Gordon Hyde and two others who agreed to discuss the matter only after a guarantee of anonymity.

Moses' idealism at Yale: Author's interviews with eleven of Moses' surviving Yale classmates, including Johnson. (See "Sources," Chapter 2.)

Swearing-in episode: Moscow, What Have You Done for Me Lately?, p. 196; author's interviews with Moscow, with Robert F. Wagner, Jr., with the Deputy Mayor in the little room down the hall, Jacob Lutsky, and Lutsky's assistant, Philip Shumsky, both of whom saw RM fill out the blank himself. Among those whom Wagner, prior to his inauguration, had told he was going to "rein in" RM, the author interviewed John A. Coleman, Howard S. Cullman, Hortense Gabel, Monroe

Goldwater and Luther H. Gulick. They, former city legislative representative Reuben A. Lazarus and Moses aide Sidney M. Shapiro, saw the scene at the public swearing in. For further details, see "Notes," Chapter 34.

Mumford quote: Interview with author. 250,000: City Planning Commission, Tenant Relocation "Sources," (see

Chapter 41).

# 1. Line of Succession

# SOURCES

# Books and newspapers:

Birmingham, Our Crowd; Rodgers, Robert Moses; Silver, Jews in the Political History of New York City, 1865-1892; issues of The Jewish Messenger and The Jewish Times, 1897.

# Author's interviews:

The description of RM's home life and of his parents and grandparents has been drawn from interviews with his cousin Mrs. Hilda E. Hellman; with two of his sisters-in-law, Emily Sims Marconnier and Louise Benjamin Moses; with another of his relatives who wishes to remain anonymous and shall be identified as "confidential source"; from eleven interviews with his brother, Paul Emanuel Moses; as well as from interviews with Madison House trustees and staffers who worked with Bella and Emanuel Moses and who knew the "Moses boys," including Israel Ben Scheiber, Ruth Larned, Georges Friedlander and Ann and Louis Lubin; from interviews with RM's Yale classmates who spent considerable time at the Moses home, including Edward O. Proctor, Malcolm T. Dougherty and Elias ("Five A") Johnson.

## NOTES

No middle name: Birth certificate, Connecticut State Department of Health. Reason for its omission: PEM, confidential source.

Bernhard Cohen: Mrs. Hellman, PEM; obituary, NYT, May 17, 1897; The Jewish Messenger, May 21, 1897. Jewish Times editorial, Sept. 24, 1875, quoted in Silver, p. 64.

Rosalie Silverman Cohen: Hellman, PEM, confidential source. Bella and Emanuel Moses: Rodgers, pp. 1-2; Mrs. Hellman, PEM, Louise Moses, Emily Marconnier, Ben Scheiber, Larned, Fried-

lander, the Lubins. Proctor, Johnson. Quote is from Ben Scheiber.

Life on Dwight Street: RM, PEM, and two of the children who played with the Moses boys there, Edward F. Andrews and Mrs. Paul Sperry.

"I didn't like New York": RM quoted in Rodgers, p. 2.

Settlement House movement: I am indebted to Birmingham, pp. Quotes are from his book. Madison House: Forty Years of the House on Madison Street, a privately printed pamphlet; Larned, the Lubins, Friedlander. Bella at Madison House: Ben Scheiber, the Lubins, Friedlander, Larned. First staffer quoted is Ben Scheiber, second Larned. The head worker in the story is Ben Scheiber.

The Moseses' financial situation: PEM, confirmed by confidential source.

"Oh, Dad": Dougherty, who also re-

members the "solace" quote.
"Robert Moses is Bella Moses' son": This statement, repeated so often it is part of the family tradition, was made to the author by Mrs. Hellman, PEM, Louise Moses and confidential source.

# 2. Robert Moses at Yale

## SOURCES

# Books, newspapers and pamphlets:

Rodgers, Robert Moses. A picture of Yale in that era is furnished in George W. Pierson, Yale College: An Educational History, 1871-1921; and in such memoirs written by Yale men as Semi-Centennial by RM's classmate Leonard Bacon; as well as in the Yale Daily News and the Yale Courant, various issues, 1905-09; and in pamphlets published by the class, including Who's Who in 1909 (the Freshman Blue Book) and the "Class Histories" published at graduation and at ten-year intervals thereafter, down to 1959. (RM contributed articles of personal reminiscence to the 1949 and 1959 Class Histories.) In addition, classmate Ralph H. Clark wrote, and privately published, an instructive reminiscence: Four Years' Journey with Yale 1909 (1967).

#### Author's interviews:

With thirteen of RM's surviving classmates: William R. Babcock, Alexander C. Campbell, Ralph H. Clark, Malcolm T. Dougherty, Jackson A. Dykman, Elias ("Five A") Johnson, Robert L. Levy, Paul G. Merrow, Jeremiah Milbank, Edward O. Proctor, E. C. M. Richards and two who prefer to remain anonymous, as well as with George Gordon Hyde '10 and two other members of the swimming team who prefer to remain anonymous.

#### NOTES

A tightly sealed society: Figures from Who's Who in 1909; the classmate is Dougherty. The fact that no Jew had ever made a Senior Society was a piece of common knowledge mentioned by several of RM's classmates. Bacon, p. 47.

Age: The 1909 Class History shows the average age at graduation to have been twenty-two years, nine months. RM was twenty years, six months. "Regarded as a young boy": Campbell.

"Almost a recluse": Dykman.

Closing his door: Rodgers, p. 9. The Mohegan Lake alumnus is Campbell.

Never won a race: RM himself, Richards, Hyde, examination of Yale Daily News. He lost one race, the fifty-yard crawl in a meet against CCNY, "by a few inches" in the "excellent time of 27 and 1/5 seconds" (Daily News, Dec. 7, 1908).

Poetry: "Song of the Arctic Nereid," Courant, Dec. 1907, p. 12; "Fragments," Nov. 1908, p. 34.

Idealism deep, reading for its own sake: Johnson, his roommate, in particular. "Durstig Geist": Dougherty.

Europe: Dougherty was his companion. "Mona Lisa" quoted in full in Rodgers, p. 8.

Samuel Johnson; Tinker's "fire": Pierson, p. 427. RM credits Tinker with doing more than anyone else to, as Rodgers puts it, "arouse and stimulate his interest in literature and writing."

Officers chosen on merit: Johnson, Proctor. Social recognition for academics: RM editorial in Courant, Feb. 1909.

Walter Camp episode: "He regarded [it]": Bacon, quoted in Rodgers, p. 5. Bacon feels that RM's courage was "really magnificent." RM's version of the episode, given to the author, in an interview July 25, 1967, is confirmed by classmates' recollections, and Courant and Daily News articles. RM's editorials: Courant, Jan. 1908, pp. 294–99 (italics added), Jan. 1909, p. 219; Daily News, Nov. 23, 1907.

"Made the threat public": Courant,

Jan. 1909, pp. 219-20. "Quite a thing": Hyde.

Swimming-team episode: See "Notes," Introduction.

Yale Verse: The classmate was Carl H. P. Thurston, editor of the Yale Literary Magazine. A front-page review in the Yale Daily News, of Feb. 10, 1909, praised the volume, which was sold in New Haven bookstores for \$1.25, saying: "The . . . selections are complete and represent painstaking efforts on the part of the editors."

**Professor:** Emerson D. Fite, quoted in Rodgers, p. 6.

Bull sessions: Johnson, Dougherty, Proctor, private sources.
Senior Council: Yale Daily News, Feb.

Class Day Committees: History of the Class of 1909, Yale College (1909). "Frankly": Dykman. The Class History sneered at the Courant also, saying (p. 9): "Six men entered the competition for places on the Lit and five of them were elected. The other one did not get anything accepted. . . . He made the Courant."

"In our little world": Bacon, p. 47. He said: "That the imbecile antisemitism of half-grown boys should have cramped his form in any respect is no compliment to our respective intelligence." The attitude of RM's coterie is expressed by Proctor, who says: "He was outstanding, one of the better members of the class. He would certainly have been in a fraternity if he had not been a Jew." Another member of the coterie, James McConaughy, is quoted by Rogers (p. 6) as saying: "In an undergraduate group where fraternity membership counted largely, he gained a position of acknowledged leadership . . . although himself not a fraternity man. . . . He was known for his brilliance and his independence. He was a great arguer and a fine conversationalist." The last, poignant word on his college career was spoken by RM at his class's fiftieth reunion in 1959, at which he was the principal speaker, and said, as if in passing: "Nor shall I stress at this late date the minor tragedies of college life, now muted, and shall merely suggest that those who were not the fortunate, whose doors the social forces of the time passed by, forget these childish tragedies and reflect how trivial they now seem in perspective. I would assume that on our fiftieth anniversary there are no outsiders."

# 3. Home Away from Home

## SOURCES

The principal sources for this chapter are Rodgers, Robert Moses; the author's interviews with PEM and with Malcolm T. Dougherty; and Moses, The Civil Service of Great Britain.

## NOTES

American Club: The Oxford Times, Dec. 1909 (no more precise date available). The two speakers are identified only as "S. C. Custer" and a "Dr. Smyth."

Yale Alumni Weekly: Mar. 3, 1911, Vol. 20, p. 583. "Universally loved": RM's Oxford classmate Hugh R. Norton to Sandra G. Turner (author's research assistant), Nov. 10, 1967.

Swimming and water polo: The Oxford Year Book, 1911, 1912. How bad the water-polo team was is indicated by the score by which it lost to Cambridge under RM's captaincy: 211/2 to 1/2. The players admired RM, however. Not only was RM the first American ever to captain the team, he was the first American ever to play on it, and when the second, Wilburt Davison, tried out for it in 1913, several players told him: "You're the second American ever to play on the team, and if you're as good as the first one, you'll be all right." Davison to author, Apr. 11, 1967.

Yale Alumni Weekly: Mar. 3, 1911,

Vol. 20, p. 584.

Affectations and letters to mother: PEM.

Congress on Race Problems: Dougherty; Rodgers has a toned-down version (p. 10). RM himself, in an interview with the author, told the story with glee.

Thesis: "excremental eloquence"; p. 47; "masterly vindication": p. 53; civil service as instrument for social reform: pp. 260-61; patronage "intolerable": p. 44; "far-sighted": p. 212; admires class differentiation: pp. 241–45 (interestingly, RM entitled the chapter in which he discussed this point "The Question of Intellectual Aristocracy"); "false democracy": p. 266; "this difficult question": p. 243; "The writer believes": p. 202; "remorseless exercise": p. 269; plea to his own country: pp. 246-70; "We must decide": p. 266 (his decision had already been made; "We must discriminate at the start on the basis of education": p. 264); faith in Wilson: p. 269.

# 4. Burning

#### SOURCES

# Books, pamphlets and articles:

Dahlberg, The New York Bureau of Municipal Research; Graham, Education for Public Administration; Gulick, The National Institute of Public Administration; Lewinson, John Purroy Mitchel; Rodgers, Robert Moses.

Of dozens of articles on the BMR the most useful were: William H. Allen, "Training Men and Women for Public Service," Annals, May 1912; John M. Gaus, "The Present Status of the Study of Public Administration in the United States," The American Political Science Review, Feb. 1931.

Among the many pamphlets published by the BMR that give the flavor of the Bureau, the Training School and the reform sentiment of the era are: Training School for Public Service, Annual Report (1913); Training School for Public Service, Program of Courses and Field Work (1916-17); Announcement of the Training School for Public Service (1918).

# Author's interviews:

The description of the attitude of the students at the Training School and of RM's activities and attitudes at the school and at the BMR is drawn from interviews with him-and from interviews with the following men who were at the BMR at the same time he was: Charles Beavers, Arthur E. Buck, Philip H. Cornick, Luther Gulick, Arch Mandel, Lewis Mayers, L. E. Meador, Chester E. Rightor. Other information derives from interviews with PEM, Emily Sims Marconnier and RM's Yale classmate Edward Proctor.

# Oral History Reminiscences:

William H. Allen, Mrs. Genevieve B. Earle, Luther Gulick, Frances Perkins, William Jay Schieffelin, Laurence A. Tanzer, Leonard M. Wallstein.

#### NOTES

Beard quote: In Dahlberg, p. 39. History of BMR: Dahlberg (discussion of budget, pp. 149-200). Bruère quote: Dahlberg, pp. 4, 37; Gulick.

Ahearn investigation: Dahlberg, pp.

17-19, 27; Lewinson, pp. 34-44. A sense of mission: Graham, p. 136;

Gulick, pp. 12-13.

"A new literature": Gulick. "A place was waiting": RM. "The system of the future": RM Ph.D.

thesis, p. 263.

Atmosphere at Training School and attitude of other students toward RM: Gulick, Beavers, Buck, Cornick, Mandel, Mayers, Meador, Rightor; Perkins OHR, Vol. III, pp. 360-61.

"You couldn't walk in": Gulick. "The man best educated": Elias Johnson. Unfortunately RM's report cards cannot be

found.

RM and Riverside Park: RM; Perkins OHR, Vol. III, pp. 362-63.

Lashing advisees: Gulick.

Might be fired shortly: Buck, Cornick; Perkins OHR, Vol. III, p. 360.

Mary Louise Sims: Her sister, Mrs. Marconnier; Rodgers, p. 20. "Very much in love": PEM and various social friends; the quote is from Edward O. Proctor. Meeting in the library: They were there so much several BMR students told the author she was the librarian.

"Mitchel took fire": Allen OHR.

RM appointment to Civil Service Commission: Allen OHR.

# 5. Age of Optimism

SOURCES

The situation in the NYC civil service in 1914 is described in RM's Detailed Report to the commission, July 8, 1915, a copy of which the author located by chance in the library of the Institute for Public Administration; the situation is also described in the Annual Reports of the Executive Committee of the New York Civil Service Reform Association, 1914-23 (1918 and 1920 are missing); it was also described by H. Elliot Kaplan in a series of interviews with the author. RM's fight to implement his reorganization plan is detailed in newspapers in 1915, 1916 and 1917, although in detail only in the World and the Brooklyn Eagle, and in Allen and Amberg, Civic Lessons from Mayor Mitchel's Defeat. A transcript of one of the meetings at which Moskowitz, James and RM attempted to persuade municipal employees to support the plan, including RM's earnest pleas, is found in "Discussion of Employees' Service Rating," The Municipal Engineers Journal, May 1917. Kaplan, Lewis Mayers, Arthur E. Buck and Mrs. Luther Steward are among those who watched RM speak at those meetings. RM's feelings over his defeat show

clearly in a paper, "Standardization of Salaries and Grades in Civil Service," read on Dec. 29, 1916, to the American Political Science Association convention in Washington, D.C., reprinted in The American Political Science Review, 1916, pp. 296–314. Lewinson, John Purroy Mitchel, Graham, Education for Public Administration, and Kaplan, The Law of the Civil Service, as well as Rodgers, Robert Moses, were also helpful, as was Francis E. Leupp, "Civil Service Reform and Common Sense," Atlantic Monthly, Jan. 1914, and Raymond Moley, in an interview.

Other interviews with: Charles Beavers, Moses' friend George Gove, Mary Moses' friend Mrs. Harold Morse, PEM, Edward O. Proctor.

## NOTES

"We expect great things": Ordway quoted in NYT, May 16, 1914.

Attempt to fire Spencer: NYT, July 1,

1914.

Steward and Kaplan quotes: Mrs. Steward, Kaplan.

RM's first advice to commission: "Discussion of Employees' Service Rating."

Newspaper leak: The article is in Brooklyn Eagle. Details of leak: Apr. 7,

1914. RM's feelings: RM.

Working under RM: The feeling of the older men expressed by, among others, Buck. "He worked all of us hard": Beavers. Buck, among others, gives details of RM at work on this report.

Detailed Report: Quotes from pp. 5-11 (italics added). RM's aide is Mayers, who recalls RM disagreeing violently with the conventional theory that appointees to higher-level policy-making positions should be exempt from competitive examinations. RM told Mayers: "The higher up you get, the more need there is for working out rules."

RM's view on need to "eliminate" po-

sitions: Kaplan.

RM on the human element and public discussion: His "standardization" paper, The American Political Science Review, 1916, pp. 312 and 306, respectively.

"Clearly discernible": Mayers. "No

reason why it cannot": PEM.

RM's confidence in Mitchel: Mayers, Buck, PEM.

"Pioneer work": Annual Report of the Executive Committee, 1916. Moskowitz and James quotes: "Discussion," p. 157. Mitchel's promise: NYT, Sept. 14, 1915.

RM and Mary: Yale classmate Proctor; Rodgers, p. 20. A friend, Mrs. Lorraine Fishel, who was visiting RM's sister, Edna, at Lake Placid, recalls that his campaign to get her interested in mountain climbing suffered a setback when, halfway up a heavily wooded mountain one morning, miles away from the path down, the couple became confused by an unexpected heavy fog. Realizing they were lost, RM told Mary to sit down and wait while he located the path. But by the time he found the path, he had forgotten the way back to Mary, and she stayed lost until, late in the day, the fog lifted.

The couple's poverty and idealism:

Mrs. Harold Morse.

Walking with Gove: Gove.

Mocking BMR: Mayers. "Very little doubt": Private source. "Here was this tall, handsome character": Buck.

Tammany waiting: Kaplan. Moses volunteering: Mayers. "Reclassification became Moses": Kaplan. NYT articles, 1915-16, detail the circulating of petitions and the building up of anti-reorganization sentiment.

Moskowitz compromising: Moskowitz, "Old and New Problems of Civil Service," The Annals of the American Academy, 1915, pp. 153-67 (italics added). RM's refusal to consider compromise is related by Kaplan, Mayers and others.

The defeat of RM's plan: NYT, Brooklyn Eagle, Sept. 1915-Oct. 1917; Kaplan, Mayers; RM's paper to the American Political Science Association (this paper, nineteen pages in length, is a step-by-step description of the fight over the planand, in its frankness, provides a remarkably clear picture of its author's feelings at the time).

"Nothing . . . more ridiculous": RM's

paper, p. 312.

Cleveland's shift: Graham, p. 138;

World, Oct. 14, 1917.

"Feet in the trough": Allen and Amberg, p. 62. The Kingsbury story: Lewinson, p. 171. Allen and Amberg detail Mitchel's cooperation with ward leaders. "His concern was for the city": Lewinson, p. 117.

New York Central giveaway: Allen

and Amberg, pp. 20ff.

Not "dry and dull": RM's paper, pp. 297-98. Still confident: p. 313. Mass meetings: An article describing one is NYT, Jan. 21, 1917.

Hylan quote: Brooklyn Eagle, Jan. 23, 1918. His destruction of civil service: Annual Report of the Executive Com-

mittee, 1921.

"Need for executive support": RM's paper, p. 310. "It is futile": p. 313.

Declining army commission: The reason he did so is not known. Asked about it by the author, RM replied that he "really wanted" to accept, "but I couldn't afford it-I had a wife and two children . . ." The Hog Island episode and being forced to return to the Bureau are from this interview.

Contemporaries had moved on: Announcement of the Training School for Public Service (1918). RM on line in Cleveland: Moley interview.

Commission: Announcement. RM's domestic problems: Mrs. Harold Morse; confidential source. Confused and worried: PEM was struck by the change in his brother's demeanor.

"A typical Tammany politician": Ernest Willvonseder, quoted in Rodgers, p. 23.

# 6. Curriculum Changes

## SOURCES

Chapters 6 through 15 take place during Alfred E. Smith's Governorship. The general background of this Governorship and the biographies of Smith and Belle Moskowitz-are drawn from:

# **Books and articles:**

Allen, Al Smith's Tammany Hall; Baruch, My Own Story and The Public Years; Bellush, Franklin D. Roosevelt as Governor of New York; Cohen, They Builded Better Than They Knew; Ellis, Frost, Syrett and Carman, A Short History of New York State; Farley, Jim Farley's Story and Behind the Ballots; Freidel, Franklin D. Roosevelt: The Triumph; Handlin, Al Smith and His America; Hapgood and Moskowitz, Up from the City Streets; Josephson and Josephson, Smith; Lynch, Alfred E. Smith; Moley, 27 Masters of Politics; Moses, A Tribute to Governor Smith and Working for the People; Pringle, Alfred E. Smith; Proskauer, A Segment of My Times; Warner, The Happy Warrior. Other sources are Rodgers, Robert Moses, and Dahlberg, The New York Bureau of Municipal Research.

Out of innumerable magazine articles, especially informative were Christian Gauss, "How Governor Smith Educated Himself," The Saturday Evening Post, Aug. 30, 1930; Dennis Lynch, "Friends of the Governor," North American Review, Oct. 1928; Ann O'Hagan Shinn,

"Alfred E. Smith: A Personal Impression," The New York Times Magazine, Oct. 22, 1922, and "Belle Lindner Moskowitz," The Survey, Feb. 1933.

# Author's interviews:

With Smith's daughter, Emily Smith Warner, and Mrs. Moskowitz's son, Carlos Israels; with the three surviving highlevel members of his administration: RM, Joseph M. Proskauer and Reuben A. Lazarus; with his three surviving secretaries: Mary Carr, Rita Higgins and Ann Hogan; with intimates, associates and/or friends: Dolie McWhinney Adams, Howard S. Cullman, John A. Coleman, Mrs. Eva Garson (Newman) Levy, Aaron Rabinowitz and Lindsay Rogers; with the widows of two associates: Justice Florence Shientag and Mrs. Raymond Ingersoll; with legislators who dealt with Smith: George R. Fearon, Leonard W. Hall, Ellwood M. Rabenold and three who declined to be identified; with reporters who covered Albany: Albert L. Warner, Leo O'Brien and Ernest K. Lindley; with two reformers who observed the Albany scene closely: George Hallett and Robert S. Binkerd; as well as with Reconstruction Commission staffers Arthur E. Buck and John M. Gaus and with RM's daughter Jane Moses Collins and Luther Gulick.

# **Documents:**

Smith, FDR, Gaus and Macy Papers.

## Oral History Reminiscences:

William H. Allen; Mrs. Genevieve B. Earle, between 1908 and 1913 a BMR staffer; State Senator Martin Saxe; William Jay Schieffelin; reformer John Lord O'Brien; Frances Perkins; Lewis H. Pink, chairman of the State Housing Board; Lawson Purdy, civic leader and first board chairman of the RPA; Frederick C. Tanner; Laurence A. Tanzer, counsel for the Factory Investigating Commission; Norman Thomas; reformer Leonard M. Wallstein.

#### NOTES

No one had studied her career: No one has studied it yet. This remarkable woman has been all but forgotten. An evaluation of the significance of the closing of the dance halls is in NYT, Nov. 23, 1914. For a description of typical halls, NYT, May 28, 1915. "She understood . . . perfectly": Cohen, pp. 246-47. (Cohen was the employers' attorney.)

Dr. Moses said he would; first meeting with Smith: RM; Israels.

"Bob Moses was never to learn why":

Belle believing Smith best hope; the University Club incident: Israels.

Belle suggesting a "Reconstruction Commission": Smith often told this story to intimates, two of whom, Proskauer and Cullman, repeated it to the author.

1915 BMR study: Best is Dahlberg, pp. 93-122.

Reconstruction Commission: The basic source is the Report of the Reconstruction Commission to Governor Alfred E. Smith on Retrenchment and Reorganization in the State Government, submitted Oct. 10, 1919. Three commission staffers who worked for Moses interviewed in the spring of 1967: Arthur E. Buck, John M. Gaus and one who prefers to remain unidentified. Gaus saved many internal commission memos, including many from RM.

RM and Mrs. Moskowitz: RM. Phrase struck out: In fact, Reconstruction Commission Report, p. 42: "Adjustments will not be made by cutting of salaries or by the wholesale elimination of positions. "The council will remain": Reconstruction Commission Report, p. 23. "A real divergence": Buck. "She was the boss": Gaus. Calling her names: Gaus; confidential source.

RM memos: RM to Channing Schweitzer, May 2, 1919, Gaus Papers; Gaus. Leaving commission in his hands: RM.

Smith's speech: Hapgood and Moskowitz, p. 220. "You had to like him":

RM's corrections: The report quoted is one of Gaus's on the State Labor Department, Gaus Papers. RM at work: Gaus, Buck, confidential source.

Gaus to Schweitzer: May 13, June 13, 1919, Gaus Papers.

RM to the chart maker: RM to Sedley H. Phinney, Apr. 3, 1919, Gaus Papers. RM on weekends: Perkins OHR, Vol.

III, p. 365. Jane Moses Collins (RM's daughter).

BMR report: Quoted in Dahlberg, p.

"The only serious argument": Reconstruction Commission Report, p. 12. "No other way": pp. 7, 8 (italics added). "One of the possible benefits": pp. 34-35. Various recommendations: pp. 3-12, 36-316-19.

"I wrote the report": RM. Rough-drafts comparison: Gaus Papers. Beard episode: Gulick, Buck, confidential source; Dahlberg says (p. 105), in an overstatement of her own that reveals the bitterness BMR alumni feel over RM's attitude: "Dr. Beard contributed in large part to the writing of the Commission's final report." "He was so angry": Gulick.

Stimson: Henry L. Stimson to George

Wharton Pepper, Nov. 26, 1919, Stimson Papers.

Smith's speeches: Hapgood and Mosko-

witz, pp. 224–25.

RM's letter: To Stimson, Mar. 7, 1920. "He thought fast": Gaus.

Smith inviting RM home: Emily Smith Warner.

"Al Smith listens to me": Ernest Will-vonseder, quoted in Rodgers, p. 23.

# 7. Change in Major

## SOURCES

For Al Smith's biography, see "Sources" for Chapter 6. Biographical details about Richard Spencer Childs are from East, Council-Manager Government.

# Author's interviews:

Robert S. Binkerd, Richard S. Childs, John A. Coleman, Howard S. Cullman, PEM, Emily Smith Warner.

# NOTES

Friendship between Smith and RM; barbershopping: Coleman, Cullman, Emily Smith Warner. "They were opposites": Coleman.

Change in RM: The author's interviews with Childs, PEM and Binkerd; Perkins OHR. RM's growing pro-Smith partisanship is, of course, documented in newspaper articles. But the basic source is the author's examination of the nineteen issues of the State Bulletin of the New York State Association, which RM wrote and edited in 1921, 1922 and 1923. These issues were kindly given to the author by Childs.

Childs biography: East, passim. Childs offering job to RM: Childs, RM. "The embodiment": Childs, confidential source. Davenport: State Bulletin, Mar. 30, 1922. "The principle is the important thing": State Bulletin, Aug. 1921. Seemed the very model: Perkins OHR. "Cheap political trick": Confidential source.

RM's attacks on Miller: State Bulletin, Jan. 4, 1922, p. 5; July 22, 1922, p. 5; Miller replies: NYT, Feb. 15, 1922; New York Herald, July 27, 1922; Herald editorial, July 28, 1922. Laughing at reformers: Childs, Binkerd, confidential source.

# 8. The Taste of Power

# SOURCES

See "Sources" Chapter 6. Some material on Jimmy Walker is from Fowler, Beau James.

# NOTES

Jimmy Walker in Albany: Fowler, passim; RM interviews with author; Rabenold; RM, "Cinderella Man in City Hail" (review of Beau James), NYT, Apr. 10, 1949. Al Smith in Albany: See "Sources," Chapter 6.

**Prisons:** RM. Best summary of Smith's prison reforms: Hapgood and Mos-

kowitz, p. 300.

Grade crossings: RM; RM to Smith, Feb. 20, 1924, Smith Papers. RM's forms: RM to Smith, Jan. 30, 1924, Smith Papers.

He liked the taste: Lazarus, Israels; even the secretaries in Smith's office, while charmed by the Governor's handsome young aide, noticed it: Carr, Higgins and Hogan.

"The best bill drafter": Proskauer, Is-

raels.

"What do you want?": RM; Proskauer and Lazarus heard the Governor pressing RM to accept various jobs, and RM refusing.

# 9. A Dream

# SOURCES

Books, pamphlets, articles and documents:

Moses, Dangerous Trade, pp. 75-153; Rodgers, Robert Moses, pp. 31-57. The increased public need for parks and roads, and the lack of them, is detailed in newspapers and magazines during the 1920's (particularly valuable are an article in the NYT, Dec. 19, 1926, by Raymond Torrey, and "A Plea for Parks and Park Trails," a speech he delivered to the American Institute of Park Executives, Oct. 31, 1926); in reports and minutes of one of the leading reform organizations struggling with the problem, collected in Annual Reports and Minutes of the American Scenic and Historic Preservation Society, Jan. 7, 1921–Feb. 14, 1927; in Progress Report of the Highway Bureau of the Long Island Chamber of Commerce, Feb. 2, 1928. By far the most detailed and vivid descriptions are by RM himself: A State Park Plan for New York, Dec. 1922; The State Park Plan for New York—Revised to Show Progress to Date, Jan. 1924; "State Regulation of Private Forests in the Adirondack Park," State Bulletin, Mar. 5, 1932; "State Lands for Municipal Parks and Playgrounds," State Bulletin, Sept. 15, 1932; and Annual Reports of the Long Island State Park Commission to the Governor and Legislature of the State of New York, 1924—1930.

# Other sources consulted:

Allen, The Big Change; Amory, The Last Resorts; Birmingham, Our Crowd; Blakelock, History of the Long Island State Parks; Eberlein, Manor Houses; Fitzgerald, The Great Gatsby; Jones, The Jones Family; Josephson, The Robber Barons; Lundberg, America's Sixty Families; Manley, Long Island Discovery; Matz, The Many Lives of Otto Kahn; Moger, Roslyn; Sayre and Kaufman, Governing New York City; Sobin, Dynamics of Community Change; Thompson, History of Long Island; and Weeks, Isle of Shells.

Smith Papers.

## Author's interviews:

As noted under specific topics.

NOTES

Population: Sayre and Kaufman, p. 18. Westchester and Palisades situation: RM, A State Park Plan for New York,

esp. pp. 18-26.

Long Island: The population of Nassau County was 126,120 according to the 1920 federal census, of Suffolk County 110,246. Geological history: Manley, pp. 15-27; Weeks, pp. 1-14; Some of Town of Islip's Early History (Bay Shore, N.Y.); RM, Annual Report of the LISPC, 1926, pp. 9-10; Fitzgerald, p. 301.

The baymen: Manley, pp. 1-14. Cholera episode: Manley, p. 202; author's interviews with bay families. Ku Klux Klan: Author's interviews with RM; his aide Sidney M. Shapiro; Islip Town Historian George L. Weeks, Jr.; old LI newspaperman Lloyd Record; and Gladys Vunck, W. Kingsland Macy's private sec-

retary.

The robber barons: Books by Joseph-

son and Lundberg.

Life on the Gold Coast: Books by Eberlein, Sobin, Moger and Amory (mainly for Mrs. Belmont, pp. 203-12); "Long Island in the Year of Our Lord 1932,"

Fortune, June 1932; Harvey Aronson, "Once upon a Gold Coast," Newsday, Apr. 6, 1968; author's interviews with Mrs. Etienne Phipps Boegner, Leonard W. Hall, F. Trubee Davison, LI newspaperman C. H. MacLachlan, Oyster Bay Democratic leader Richard Mayes; 1920's Oyster Bay Town Clerk Charles Ransom, long-time LI restaurateur Paul Reinhardt, Winthrop heir Robert Payne. The best picture of the day-to-day life on the Gold Coast is found in The North Shore Almanack, the area's weekly newspaper. Phipps Estate: "Old Westbury Gardens" (tour brochure); interviews with Mrs. Boegner. Kahn Estate: Josephson, p. 333 (for information about the creation of the mountain). Other descriptions of Kahn estate are found in Matz, pp. 20, 150, 233-34; Birmingham, p. 320. The barons' selfishness; allowing public roads to fall into disuse: Sobin, p. 98. Pratt and LIRR: Sobin, p. 99. Sands Point: Harold M. Morse to RM, Apr. 16, 1923; Smith Secretary of Commerce Herbert Hoover, Apr. 23, 1923; George Gordon Battle to Smith, May 1, 1923; Hoover to Smith, May 8, 1923; Graves to RM, June 20, 1923; RM to Smith, Morse to Smith, Aug. 30, 1923. All in Smith Papers. Interview with Mrs. Morse. Glen Cove: Ransom, Reinhardt. Cold Spring Harbor: Sobin, p. 99; MacLachlan. Lloyd Neck and Eatons Neck: Hall. Huntington: MacLachlan, who obtained the precise figures during a survey he did for a local newspaper of which he was editor. The barons' political power; 49 members: Hall. No state roads: Hall.

Four hours: Transcript of joint hearing before Senate Finance and Assembly Ways and Means Committee, at Albany, Feb. 11, 1925; testimony by Assemblyman John Boyle, Jr. Cemetery acreage: A private survey prepared for W. Kingsland Macy by his secretary, Gladys Vunck, Dec. 19, 1925.

The South Shore: Allen, pp. 29-30; "Idle Hour," tour brochure of Vanderbilt Estate in Islip. Timber Point Club: "The Timber Point Club," club introductory brochure; author's interviews with Gladys Vunck, and with TPC members Horace Havemeyer, Jr., Robert Livingston Hollins and Buell Hollister, Jr. Population: New York Telephone Co. estimate, 1922.

RM's inspiration: RM. Exploring the parks: Also Israels. Getting lost on the bay: Also Mrs. Lorraine Fishel. Tramping the barrier beach with him: Also Mrs. Harold Morse, confidential sources. Major Jones: Jones, passim; Blakelock, p. 39.

Statewide situation: Moses, A State Park Plan; ASHPS, minutes of various meetings. The Forest Preserve, not a park in the true sense of the word, and Palisades Interstate Park, an interstate park and privately funded, are not included in this tabulation.

Revolutionary: The largest previous bond issue for parks floated anywhere had probably been \$10,000,000, and that had been, in New York, for the Forest Preserve, not a true park. "To provide for permanent improvements" and for "parkways": Moses, A State Park Plan, pp. 6-7. "Hailed by park planners": See, for instance, "Summary, Third National Conference on State Parks, Turkey Run State Park, Indiana, 1923," printed by the conference.

Smith: "lacked TR's zest," "red flannel underwear": Rodgers, p. 33. Responded to graphic presentations: Perkins OHR. Sinking in chair and "Bob, you win": Rodgers, pp. 33-34; Childs.

Mail pouring in: His secretaries, Carr, Higgins, Hogan; Ingersoll and Hunt letters and scores of others, Smith Papers. If there was an editorial opposing the message, it is not in Smith's files. Chairman of the National Conference: John Barton Payne to Smith, Jan. 18, 1924, Smith Papers. Albany reporter: Warner.

RM tramping around LI again: RM. The friend was Israels, Townsend Scudder, Jr., heard about the walks from his father, a great walker who could keep up with RM—for a couple of hours. Whitman: "Paumanok." RM on Montauk: Annual Report of the LISPC, 1926, pp. 9-10. Knew his plans too small: Moses, The State Park Plan for New York—Revised to Show Progress to Date.

Smith offer of commission presidency: RM.

# 10. The Best Bill Drafter in Albany

# SOURCES

This chapter is based on the author's interviews with F. Trubee Davison and on detailed analyses by W. Kingsland Macy's lawyers of the bills Davison introduced for RM (see Chapter 11) and by Marvin Shiebler, secretary of the Suffolk County Taxpayers Association, in a memo to Macy found in Macy Papers and in Committee of Citizens of Suffolk County, "State Parks," undated but apparently Feb.

1925. The author's interviews with RM were helpful on some points.

## NOTES

"The more spigots": Reconstruction Commission Report (see "Notes," Chapter 6), p. 8.

Parks no exception: Reconstruction

Commission Report, pp. 8-9, 21.

"Appropriation" method had been used: Shiebler, "The Long Island Park Program," Jan. 30, 1926, p. 2; "Important Notice," Apr. 12, 1926 (two broadsides put out by the Committee of Citizens of Suffolk County).

RM impatient: RM to Graves, Apr.

12, 1924, Smith Papers.

# 11. The Majesty of the Law

# SOURCES

#### Books:

Talese, The Kingdom and the Power; Warner, The Happy Warrior; see also "Sources," Chapter 6.

# Author's interviews:

Leonard W. Hall, William Latham, Richard Mayes, Robert Payne, Joseph M. Proskauer, P. G. Rasweiler, Sidney M. Shapiro, Iphigene Ochs Sulzberger, Albert L. Warner.

#### NOTES

RM's overhead expenses: Attorney General Albert Ottinger, press release, reprinted in NYT, May 18, 1925. Exempting friends: Graves to RM, May 5, 1924, Smith Papers.

Fire Island State Park: Blakelock, The

Long Island State Parks.

Smith calling Hayes: RM. Drinking

beer: RM, Shapiro.

One day's hunting: Deer Range stockholder Percy R. Pyne II statement in

NYT, Jan. 9, 1925.

Threatening the farmers: Author's interview with P. G. Rasweiler, confirmed by RM to Graves Oct. 29, 1926, Smith Papers, and by Shapiro, who boasted about taking the surveys from the adjoining farm. Also Robert A. Hug neighbors" to Smith, Oct. 25, 1926, Smith Papers. Threatening the Timber Pointers: Havemeyer quote from newspaperman Lloyd Record, who heard him. "Mr. Moses told me": Macy's testimony under oath in examination before trial in Brooklyn Supreme Court, related in NYT, Oct. 27, 1925. Threatening the North Shore robber barons; seeing the surveyors and being threatened with appropriation: Davison, Hall, Mayes, Payne, Latham. Stimson to Smith: May 18, 1925, Smith Papers. "Teach a lesson": Incident recounted in Old Westbury landowner Henry M. Earle to Smith, June 23, 1926, Smith Papers. "I felt awful": Davison. Lawyer's opinion: Marvin Shiebler to Robert P. Griffing, Nov. 13, 1925, Macy Papers.

Taylor Estate fight: Timber Pointers' contentions in court briefs—for example, "Pauchogue Land Corporation, Plaintiff, against Long Island State Park Commission, and Robert Moses, Townsend Scudder and Clifford L. Jackson, individually and as Commissioners of the Long Island State Park Commission, Defendants"—"Brief on Behalf of Plaintiff-Appellant"; "Appellant's Reply Brief"; and "Record on Preliminary Injunction for Submission to the Finance Committee of the Senate and the Ways and Means Committee of the Assembly." Smith's advisers believe he won't sign: Tone of Graves to RM, Oct. 9, 1924, and of RM to Smith, Oct. 10, 1924, Smith Papers. The closed hearing: Virtually all Smith biographers give accounts of this hearing, which became a legend in New York State, but all these accounts have Smith treating Havemeyer's remark as a joke. The account the author believes to be accurate comes from RM, in interview with author, and is confirmed by Carlos Israels' and Joseph Proskauer's recollections of what Belle Moskowitz and Smith, respectively, told them the next day.

W. Kingsland Macy: The "observer" was Alva Johnston, who profiled Macy for *The New Yorker*, Sept. 12, 1931; quotes are from pp. 26 and 25. Of many newspaper profiles of Macy, the most detailed are S. J. Woolf, *NYT Magazine*, May 17, 1931, and Brooklyn Eagle, Sunday Magazine Section, Jan. 4, 1931.

Troopers on property: Pyne in NYT, Jan. 9, 1925. \$25,000 limit and Macy's refusal to view the fight in purely business terms: Havemeyer to Macy, Apr. 28, 1925; Jan. 5, 1926; Macy to Havemeyer, Apr. 28, May 5, 6, 1925; Jan. 5, Dec. 23, 1926, Macy Papers.

Furman finds illegal: "Order to show cause," issued by Mr. Justice George H. Furman, Judge of the County Court of Suffolk County, Dec. 30, 1924. Macy refusing to show reporter around: Macy note to Miss Vunck, undated, Macy Papers. "The amateur in politics": RM.

"The defendants have proceeded . . . illegally": Van Siclen, "Injunction Order," quoted in NYT, Feb. 18, 1925. Van Siclen, "Order of Preliminary Injunction," Feb. 17, 1925, p. 2.

Senate Finance Committee hearings: NYT and HT, Feb. 12, 1925. RM's edited transcript: Copy found in Macy

Papers.

Smith veto message and legislative fight: From three newspapers, NYT, HT and Brooklyn Eagle, various issues, Apr. 2-June 27, 1925.

Macy-RM face-to-face confrontation: Macy statement issued May 5, 1925; Pauchogue Land Corporation "Complaint" in "Record on Preliminary Injunction," p. 13.

RM stalling: Among those who said so were Justices Van Siclen and Dike. Van Siclen commented, "The suit should have been tried long ago" (NYT, May 28, 1925). Dike was to blast the "dilatory tactics of the Commission," adding that RM's actions seem to show "a studied effort to affront the court" (Brooklyn Eagle, Oct. 19, 1925).

Macy's confidence: Macy to Havemeyer, May 5, 1925, Jan. 5, 1926, and others, Macy Papers. Wait, Smith said: Proskauer.

NYT editorial: Feb. 17, 1925. "The bible": Talese, p. 7. NYT slanting Van Siclen story: Handling of Ottinger story, May 18, 1925; editorial on Ottinger charge, May 18; the paper stated as a fact that the Governor was "willing to make any reasonable compromise . . . " (June 5, 1925); a June 14 article contains such phrases as "The Governor believes in parks. He loves them. . . . Not long ago he motored over Long Island, where [park] plans have precipitated bitter opposition by certain wealthy residents." Another article (Jan. 12, 1925) began: "Whatever may be the outcome of the controversy between the Long Island State Park Commission and the group of men opposing purchase of the George C. Taylor property on the Great South Bay, an examination on the ground indicates that the property in many respects is ideal for a public park . . ." Not only does the article make no mention of the opponents' contentions that the park was too far from New York City, too inaccessible to public transportation, etc., for a park; it ignores their contention, later proved true, that developing it would take, in terms of public expenditures of the time, an enormous expenditure: "seemingly it could be developed at no very great expense," the article states, and it is obvious from the article, although it never says so, that that statement is based entirely on RM's estimate of that expense.

Adolph S. Ochs: Helping RM preserve the Saratoga Battlefield: RM to State Comptroller Morris S. Tremaine, Aug. 8, 1928, Smith papers. His interest in parks: Talese, pp. 79, 96-97. The publisher's intense interest in parks occasionally proved an embarrassment to RM; once, while the Governor was visiting Sulzberger at the publisher's Lake George home, RM wrote Smith a letter about new park plans, delicately hinting to Smith that he not tell Ochs about them lest they find their way into the pages of the Times before they were finalized; RM to Smith, Aug. 8, 1924, Smith Papers. Iphigene "thrilled": Iphigene Ochs Sulzberger interview with author. Warner: Interview. Ochs's Park Association award: NYT, Dec. 25, 1931.

RM's secret visit to Ward and Mastick:

RM.

Citizens Union statement: NYT, June 23, 1925. Price: Smith telegram to Price, June 25, 1925, Smith Papers. Roulstone's tour: NYT, June 21, 1925.

Record speed of veto; Knight and Walker quotes: NYT, June 27, 1925. "Sealed orders": Smith quoted in NYT, June 26. "Too much pressure": Mastick, NYT, June 26. "My career would end": World, June 27.

Bitter facts; options lost: Annual Report of the LISPC, 1925, p. 47. Deciding to call Heckscher: RM. Smith-Heckscher conversation: Related in numerous biographies of Smith, including Josephson, p. 333.

Court fight: Tuttle, HT, Sept. 13, 1925. Smith tried privately to persuade Macy: Macy to Smith, Sept. 12, 1925, Macy to Heckscher, Oct. 11, 1925, Macy Papers.

RM under oath: NYT, HT and Brooklyn Eagle; court transcripts. Goldsmith memorandum in NYT, Sept. 12, 1925.

Jones Beach: Babylon Leader, issues of July 18, 25, Aug. 15, 1924; Amityville Sun, Aug. 8, 1924; Long Island Sun, Nov. 20, 1924. RM's feelings: RM.

# 12. Robert Moses and the Creature of the Machine

SOURCES

The general picture of corruption on Long Island is drawn from interviews

with Richard Mayes, Nassau County Democratic leader in the 1920's and 1930's; Eugene Hurley, a shrewd attorney who opposed RM in court continually during the 1930's; James B. Cooper, Jr., editor of the Babylon Leader; Leonard W. Hall, a GOP assemblyman at the time; Dolie McWhinney Adams, Thomas McWhinney's daughter; Paul Reinhardt, an Oyster Bay restaurateur and intimate of politicians; three of RM's key aides at the time, Sidney M. Shapiro, William Latham and one who prefers to remain unidentified; the author's casual conversations with old-time Long Island politicians during several years as a reporter for Newsday, the Long Island newspaper. There are various newspaper articles on one aspect or another that came to light. But the most graphic over-all picture is probably that provided by RM's own articles in the State Bulletin, 1921, 1922 and 1923.

The on-the-record court fight is contained not only in numerous newspaper articles but in the court records cited in the "Notes" for Chapter 11. The behind-the-scenes maneuvering is detailed in the Macy Papers, in the Smith Papers, in an interview with Gladys Vunck, Macy's personal secretary, and in a confidential interview with one of Moses' aides.

Other information was supplied in interviews with Israel Ben Scheiber, William S. Chapin, Gilmore Clarke, Mrs. W. Kingsland Macy and Mrs. Harold Morse.

The compromise reached in Albany is discussed in newspapers and explained in the Macy Papers, in the Smith Papers and in interviews with Miss Vunck and RM.

# NOTES

Hewitt offering to sell: Hewitt to RM, Dec. 31, 1924, Smith Papers. RM's refusal: Lutz to Smith, June 24, 1925, Smith Papers. RM refused to give inside information on highway routes to Smith's friends: Francis Pettit, one of them, to Smith, complaining, Mar. 21, 1925, Smith Papers.

**Doughty and Booth & Weston:** Hurley, Shapiro; confirmed by confidential sources.

Giving Hempstead Town politicians access to LISPC plans: Smith to Gen. George W. Goethals, Mar. 30, 1926, Smith Papers; NYT, Dec. 12, 1925, gives details of formation of the joint commission to plan Jones Beach. Moses be-

coming friendly with McWhinney: Adams.

Lawyer forming corporation: Nassau County Clerk's Office, Certificate of Incorporation, Index No. 5415, Year 1926. The only land it ever purchased and sold: Nassau County Clerk's Office, Records of Purchases of Real Property—Onslow Estates (microfiche). The specific purchases and sales involved can be found in the County Book of Deeds-Liber No. 1075, p. 48; 1086, p. 5; 1101, p. 355; 1118, p. 251; 1128, p. 37; 1168, p. 247; 1181, p. 163; 1197, p. 160; 1235, p. 443; 1227, p. 379; 1517, p. 89. Also helpful were interviews with Hurley and confidential source. Contracts to Weston and Hendrickson: Hurley, Mayes, confidential source; various newspapers, various issues, 1927-29.

Doughty's friendship: Hall, Hurley, confidential interviews. The alliance between Moses and Doughty—and with Doughty's nephew and successor, J. Russel Sprague—was to be an open secret of Long Island politics for the next forty

years.

Compromise in Albany: Wadsworth's orders: RM. The maneuvering is detailed in RM's interviews and the Smith Papers, the attempt to stop it in the Macy Papers. Macy got his first hint: Macy to Charles D. Hillies, Republican national committeeman, Apr. 4, 5, 1926, Macy Papers. (In one letter Macy raged: "The entire program of the Long Island State Park Commission is moving forward through a number of small and apparently unimportant bills in spite of ... promises to the contrary.") He might have known earlier that he had been betrayed had he read, in a Brooklyn Daily Times, Feb. 19, 1926, account of one of his trips to Albany, an article evidently leaked to the paper by RM: "The joke is said to be that while the Long Islanders were in secret session at some hotel here [in Albany] on the best methods to block the Taylor estate park development, Governor Smith was fixing his signature to the appropriation bill, included in which is an appropriation for the park at East Islip." Macy-Hutchinson confrontation recounted in Macy to Hutchinson, Feb. 20, 1926.

Hidden appropriations for development of LI parks: It is impossible to locate all of them in state budgetary bills, or in the 1926 LISPC Annual Report or anything else RM wrote in this period—or in any newspaper. But they are detailed in a memorandum prepared by the Suffolk County Taxpayers Association,

Apr. 4, 1926, entitled: "Long Island State Park Commission Program by Piece-meal Legislation," Smith Papers.

Smith inviting Hewitt and Hutchinson to LI: RM.

Trial before Strong: NYT and HT, May 18, 26, June 4, 8, 1926.

Bella and Emanuel: Israel Ben Scheiber, who was the social worker.

For both sides weren't equal: "A business affair": Havemeyer to Macy, Apr. 28, 1925. "Ramifications": Macy to Havemeyer, Jan. 5, 1926. Printing bill: Macy to Havemeyer, Apr. 23, 1928. Stenographic bill: Macy to Havemeyer, Dec. 23, 1926. \$10,000 bill: Havemeyer to Macy, Apr. 28, 1925. "My limit": Havemeyer to Macy, Jan. 5, 1926. Macy's determination to carry on alone: Macy to Havemeyer, Jan. 5, 1926. \$43,192.61: Havemeyer handwritten memo attached to letter to Macy, May 1, 1928. Macy being dunned: Martin A. Schenck, for Davies, Auerbach & Cornell, to Robbins (Macy's personal attorney), Apr. 22, 1929. The author cannot locate any definitive final total of Macy's court costs, but they appear to have been about \$74,-000. All of the documents cited above are in the Macy Papers.

Macy: See note, Chapter 11. RM the only person he wanted to see: Mrs. W.

Kingsland Macy.

The lessons RM learned: Interviews with RM, Shapiro, Latham, Chapin and other RM aides.

Planning Jones Beach: RM, Shapiro, Gilmore Clarke, Mrs. Harold Morse.

# 13. Driving

## SOURCES

## Books:

Moses, Dangerous Trade; Working for the People; and The State Park Plan for New York—Revised to Show Progress to Date; Rodgers, Robert Moses. See also "Sources" for Chapter 6.

# Author's interviews:

Dolie McWhinney Adams, Richard Boyce, Gilmore Clarke, Morris Ernst, James J. Flynn, Mrs. Elmer B. Howells, William J. Junkamen, William Latham, Michael J. Madigan, Mrs. Harold Morse, Sidney M. Shapiro, Mae Smisek.

#### NOTES

The need for haste: RM. RM in action: Junkamen, Clarke, Flynn, Latham; con-

fidential sources; Mrs. Morse. Outings: Dolie McWhinney Adams, Mae Smisek. "No side": Morris Ernst.

Inspiring designers: Shapiro, Clarke, Latham, LISPC official Richard Boyce.

Jones Beach: Rodgers, pp. 50-56; Shapiro. \$20,000: Rodgers, pp. 54, 55; confirmed by Michael J. (Jack) Madigan, one of the firm's foremen. Guggenheim: Rodgers, pp. 52-53.

Babylon election: RM's feelings: RM, Shapiro, confidential source. Coolness toward Mary in town: Mrs. Howells. RM threats: LISPC press release, Apr. 12, 1928. Finding the weak spot: RM, confirmed by confidential source and Babylon Town Supervisor Joseph Warta. Without warning, "Judases!": Babylon Leader, Mar. 16, 1928; confidential sources. No tolls: RM letter to Leader, published Mar. 3, 1928. Cooper's feelings: His editorials in Leader. State employees voting: Leader, Apr. 16, 1928; Suffolk County Taxpayers Association press release, Apr. 17, 1928. The release states: "The State Park Commission . . . had at least ten automobiles in operation at this election. . . . It was further reported by the inspectors of election that many young men, unknown to them, had been brought in these cars and demanded the right to vote." Strangely, the release states, the registers customarily provided by the Town Board for poll inspectors to check the qualifications of voters were not provided this time. "There were no challengers at the polls and no one to decide upon the qualifications to vote of the young men brought to the polls in state automobiles, upon this occasion."

"Scandalous": Leader, Apr. 6, 1928.

"A vote of confidence": LISPC press release, Apr. 4, 1928, Macy Papers.

9,700 acres: NYT, Nov. 3, 1928. Overall progress from newspaper stories, spring and summer, 1928; Annual Report of the LISPC, 1928.

Editorials: NYT, World, Dec. 20, 1928.
State parks: Moses, Dangerous Trade, pp. 119-31; Moses, Working for the People, pp. 149, 167-80; Moses, The State Park Plan for New York—Revised to Show Progress to Date (1924). Attendance soared in the upstate parks as well as on Long Island: during the summer of 1928, 3,000,000 persons visited the new state parks in the Niagara and Allegheny regions, a million more than had visited them in 1925.

# 14. Changing

## SOURCES

#### Books:

Graham, Al Smith; Moses, A Tribute to Governor Smith; see also "Sources," Chapter 6.

# Author's interviews:

Howard S. Cullman, Leonard W. Hall, Carlos Israels, Joseph M. Proskauer, Ellwood M. Rabenold, Emily Smith Warner.

#### NOTES

No one bother to reply: On July 6, 1925, RM to Graves, he made one such suggestion, calling the writer a "crack-pot"; on Oct. 2, 1924, he called another a "nut"; the increasing frequency of the suggestion that no reply be made is documented by letters in the Smith Papers.

Twomey story: Related by Hall; it was also related to the author by two other legislators of the era, who prefer to remain anonymous.

Park philanthropists' philosophy: Annual Reports and Minutes of the ASHPS, Jan. 7, 1921–Feb. 14, 1927.

Moses had let them believe: RM's statements and press releases of this period continually reiterate that the State Council of Parks would be only an "advisory body." The fact that the old men believed him is shown not only in their speeches and general support of his bills, but, specifically, in *Minutes* of society meetings, p. 460, for example.

"The height of impertinence": Staley to Kunz, quoted in society Minutes, p. 1431. The Minutes also show their growing realization of the significance of his bylaws.

Letchworth State Park: Society Minutes, Apr. 26, 1926, p. 1716; one trustee says there that the park should be kept as "a shrine" to nature. Another, p. 1487, quotes Wordsworth's "one impulse from a vernal wood . . ." Through a series of manipulations and behind-thescenes bureaucratic ploys, backed in the crunch by Smith's power, RM eventually succeeded in ousting the defiant society trustees and in transforming Letchworth Park along the lines he envisioned.

Niagara and Clearwater: Obituary, Kingston Leader and Kingston Daily Freeman, Sept. 23, 1933; NYT, Sept. 24, 1933. "Your views are just": RM to Smith, Dec. 17, 1924, Clearwater to RM, Dec. 12, 1924, Smith Papers. Wilcox: Obituary, Buffalo Evening News

and NYT, Jan. 27, 1930. Knew he was dying: De Forest to Smith, June 22, 1926, Smith Papers. Schoellkopf's cooperation: "Transcript" cited below, p. 163. Clearwater swaying Treman: Society Minutes. RM embarrassed: "Transcript" cited below, p. 21; on p. 45, RM says, "We have made ourselves ridiculous at Albany." Dispute over parkway: "Transcript," pp. 16-32: RM's real worry, although he never states it in so many words, is revealed by a statement he makes on p. 25. Doctors gave him no chance: Wilcox to Smith, June 22, 1926, Smith Papers.

RM moving against the old men: Three are central—a 210-page "Transcript, Joint Conference, Special Committee of State Council of Parks and State Reservation at Niagara, July 15, 1926" (hereafter referred to as "Transcript"); "Report of Special Committee Appointed by the State Council of Parks to Examine and Report on the Matter of a Connecting Parkway from the State Reservation at Niagara across Grand Island, and Upon the Matters Referred to in the Letter of His Excellency, Hon. Alfred E. Smith, Governor of the State of New York, dated June 3rd, 1924, Adopted by the State Council of Parks at a Meeting Held on July 24th, 1926, at Binghamton" (hereafter referred to as "Report"); Wilcox's last letter to RM, Aug. 5, 1926 (hereafter referred to as "Wilcox Letter"). These documents were found in a sealed manila folder in the Smith Papers that had apparently never been opened. The folder is identified only as "200-276-2."

Wilcox believes RM wrote "Smith" letter: "Wilcox Letter," pp. 5, 6; the original draft cannot be found in the Smith Papers, but if RM did not actually write it, and Smith send it out substantially unchanged, over his signature, it would be the only such letter from Smith on the subject of parks, out of hundreds the author examined in the Smith Papers.

June 26 Parks Council meeting: The Niagara Commission's resolutions are contained in "Minutes, State Reservation at Niagara," attached to Wilcox to Smith, June 22, 1926, Smith Papers. Moses never even told the council of their existence: Wilcox to Lutz, Aug. 21, 1926, Smith Papers. "The stenographer was told to omit things": "Wilcox Letter," p. 7. In the "Transcript," there are "discussions off the record," on pp. 93 and 164; the unreported "argument" is on p. 132.

Not an investigation: "Transcript," p.

7. RM's interruption: p. 11. "Just one minute": p. 153. Downer's "I have no fault to find": p. 155, repeated on p. 166. "What if it was, Mr. Moses?": p. 164.

"The opportunity is slipping": Wilcox to Smith, Aug. 4, 1926, Smith Papers. Sure Downer would be fair: "Wilcox Letter," p. 8. Downer's exoneration. "Report," pp. 4-5. Report not distributed: "Wilcox Letter," pp. 3-9.

Letter to Lutz: Wilcox's innocuous letter is in Smith Papers; RM to Wilcox Aug. 4, 1926, Smith Papers. "In Wilcox's view": "Wilcox Letter."

"Commission not functioning": RM to Smith, May 25, 1927, Smith Papers. De Forest to Smith: No date visible, Smith Papers. Clearwater's letter: Clearwater to Smith, Mar. 28, 1927, Smith Papers. RM convinces Smith: RM to Smith, May 25, 1927, Smith Papers. (Smith sent the letter embodying the changes, a letter written by RM, same date.)

Al Smith stuck: "I am very sure": De Forest to Smith, no date visible, Smith Papers. "You idiot!": Graham, p. 139. Smith on Mills and the barons: NYT, Oct. 26, 28, 1926. Emily's analysis: Interview with author. Parks were an improvement he could see: Perkins OHR and several interviewees made this comment. Smith didn't realize how drastic...: Emily Smith Warner.

"We could have done nothing without him": Moses, A Tribute to Governor Smith, pp. 17-18; Israels, Proskauer. "I wonder what Bob's doing tonight": Cullman. "A tie": Cullman. "You could tell": Rabenold.

# 15. Curator of Cauliflowers

SOURCES

#### Books:

Dahlberg, The New York Bureau of Municipal Research; Freidel, Franklin Delano Roosevelt: The Ordeal and Franklin Delano Roosevelt: The Triumph; Handlin, Al Smith and His America; Hapgood and Moskowitz, Up from the City Streets; Lipson, The American Governor; Moscow: What Have You Done for Me Lately?; Pringle, Alfred E. Smith; Rodgers, Robert Moses; Schlesinger, The Age of Roosevelt, Vol. I: The Crisis of the Old Order and Vol. III: The Politics of Upheaval; Warner, The Happy Warrior. See also "Sources" for Chapter 6.

# Author's interviews:

Israel Ben Scheiber, William S. Chapin, Richard S. Childs, Ernest J. Clark, Jane Moses Collins, John A. Coleman, Perry B. Duryea, Jr., Mrs. Hilda E. Hellman, Mrs. Elmer B. Howells, Carlos Israels, John Krumenacker, William Latham, Richard Mayes, Robert Payne, Joseph M. Proskauer, Mrs. Helen Roth, Jimmy Roth, Sidney M. Shapiro, Bertram D. Tallamy, Hazel Tappan, Emily Smith Warner.

# NOTES

State reorganization: Three books—Dahlberg, pp. 93-112, Hapgood and Moskowitz, and Lipson—describe it in detail, as did Richard S. Childs in interviews with the author.

Al Smith said so: Quoted in Warner, p. 173. His daughter herself says, "In his own belief the work he did in reorganizing the state government stood first" among all his achievements, p. 173. "Against the tide of the Twenties": Freidel, Triumph, p. 11; Handlin, p. 186. Roosevelt was to say: Schlesinger, Politics, p. 520. Lippmann: To Smith, Nov. 6, 1925, Smith Papers. Wagner: Hapgood and Moskowitz, p. 218. "The great classic": Lipson, p. 90.

Secretary of State: RM to be a "Deputy Governor": Brooklyn Eagle, Jan. 25, 1927. An unidentified GOP senator is quoted as saying: "We were given to understand by the Governor that the new Secretary of State job is to be the most important of them all." Politicians raged: Pringle, p. 258. "The most hated man in Albany": Israels. Wanted to formalize the arrangement: Hapgood and Moskowitz, p. 186. "None of the objectors": Eagle, Jan. 21, 1927; see also Feb. 2, 1927. Brown postcard and Thompson reply: Quoted in Eagle, Jan. 24, 1927. Relatives commenting: Hellman. Bella's comment: Ben Scheiber, the Madison House head worker to whom she made the comment when he brought her the news.

Boxing: W. O. McGeehan's "Down the Line" columns in the *Tribune* in 1927 furnish many humorous anecdotes about the Annie Oakley controversy. Quote is from his column of Mar. 24, 1927. Farley: NYT, Feb. 19, 1927. "Any decision should be unanimous": RM quoted in Rodgers, p. 65. "Frankly admitting": *Tribune*, Jan. 20, 1928.

Put RM in charge of Cabinet; made RM personally responsible: RM, Proskauer, Coleman.

He set his life into a hard mold: Shapiro, Latham, Jane Moses Collins, Mrs. Howells, Miss Tappan, Lazarus, Israels, Childs, confidential sources. Duryea: In terview with author. A woman: Confi dential source. One executive: Latham Secretaries: Confidential sources. "Loved that bay": Mrs. Howells. "He wasn't so tense then": Latham. Picking men, chain of command: Shapiro. Chapin afraid to leave desk: Chapin. Observer: Moscow, p. 205. Tallamy: Tallamy. Overcoming Shapiro's shyness: Shapiro. Suicide: The name of the aide involved, a young assistant counsel of the LISPC, is withheld at the request of a friend because, forty years later, his mother still suffers from the recollection. Executives' homes: One row of homes is on a secluded, difficult-to-reach street in Belmont Lake State Park, south of the Southern State

Parkway. The satisfaction of working for him: Although this was a theme repeated to the author by many architects and engineers, it was stated especially forcefully and perceptively by Ernie Clark, president of Andrews & Clark, in an interview with the author. Summary of achievements under Smith: Rodgers, pp. 58-64. Firing the engineer: Coleman. The two speeches: Transcripts made by stenographer Lloyd Record on commission for W. Kingsland Macy (found in Macy Papers) of speeches by RM before the Eastern Long Island Real Estate Board at the Canoe Place Inn, Hampton Bays, June 16, 1927; and before the Long Island Real Estate Board at the Montauk Manor, Montauk, Sept. 9, 1927.

"Whether the commissioners . . .": RM quoted in Tribune, Feb. 4, 1927.

Bathhouses: Perkins OHR, Vol. III, p. 367. Speeding motorcade: RM denied the charges of speeding, but residents of the villages still remember the incident, and articles in the Babylon *Leader* (for example, Aug. 12, 1927) and the Brooklyn *Daily Times* quote people who saw it. Cooper editorial: Aug. 5, 1927.

Compromising with the barons: Latham, Richard Mayes, Robert Payne; FDR to Francis P. Garvan, Apr. 9, 1929,

FDR Papers.

The Roths: The author's interviews with Mrs. James J. (Helen) Roth and Jimmy Roth. The feelings of other farmers were obtained by Ina Joan Caro from John Krumenacker, who owned an adjoining farm. The author also interviewed RM's aide William Latham, who handled the engineering under which the route was shifted. Latham recalled vividly

the negotiations with De Forest. He couldn't remember the farmers at all.

"Bob, it's over": Warner, p. 205; Handlin, pp. 112-36. RM ran the state for Smith: Proskauer, Cullman, Warner. Screened out hate mail: Warner.

# 16. The Featherduster

## SOURCES

The relationship of the three men-Smith, Roosevelt and Moses—before and during FDR's Governorship is described -from widely varying points of view but never in sufficient depth—in Bellush, Roosevelt as Governor; Farley, Behind the Ballots and Jim Farley's Story; Handlin, Al Smith and His America; Proskauer, A Segment of My Times; Rodgers, Robert Moses; Warner, The Happy Warrior; as well as in Flynn, You're the Boss; Freidel, Franklin D. Roosevelt: The Ordeal and Franklin D. Roosevelt: The Triumph; Ickes, The Secret Diary of Harold L. Ickes, Vol. I: The First Thousand Days; Perkins, The Roosevelt I Knew; Rosenman, Working with Roosevelt; Schlesinger, The Crisis of the Old Order; Stiles, The Man Behind Roosevelt; Moley, 27 Masters of Politics; Sherwood, Roosevelt and Hopkins. But the primary sources used for these chapters are the Smith, FDR and Morgenthau Papers; the Reuben A. Lazarus, George Van Schaick and Frances Perkins OHR's (Miss Perkins is franker in her OHR than in her book); interviews with observers of the Albany scene at the time, including Adolph A. Berle, Jr., Carlos Israels, Michael J. Madigan, Lazarus, Proskauer and Albert L. Warner—and RM himself, who discussed Roosevelt with some tact in Dangerous Trade but whose hatred spilled over in "Why I Oppose the Fourth Term," The Saturday Evening Post, Oct. 17, 1944, and in interviews with the author. These sources -taken all in all—present a picture of the Smith-Roosevelt conflict that suggests more strongly than do any of the Roosevelt biographers, except, possibly, Freidel, a picture of the older Governor as wronged.

## NOTES

FDR's relationship with Smith circle: Schlesinger; Freidel, The Triumph; Handlin, pp. 138-40. Eleanor and the teapot: Freidel, The Ordeal, p. 200. FDR telephoning RM: RM, Israels. "Pissroom":

Albert Warner. "Featherduster," "a harmless bust": Schlesinger, pp. 323, 331. Haughtiness in Albany: Schlesinger, p. 338. "Happy Warrior" speech: This story was related to the author by Proskauer and RM in interviews. Carlos Israels says that Belle Moskowitz had told it to him, and Emily Smith Warner says she was told it by her father. "Showy but harmless"; Mrs. M worried: Proskauer.

"Secretary and valet": Rodgers, p. 39; RM, Madigan; the incident, although not the exact wording of what RM said to FDR, is confirmed in Smith Papers. FDR "cared deeply about nature": Schlesinger, pp. 334-35. 1922 proposal: Freidel, The Ordeal, p. 149. FDR's plans for the Taconic region: In great detail and with great enthusiasm, in various letters to Smith, most notably Dec. 3, 1926, Smith Papers, "Splendid project": FDR Smith, Dec. 3, 1926, Smith Papers. RM's feelings: Confidential source. "Absurd and humiliating": FDR to Smith, Dec. 3, 1926, Smith Papers. "I suggest you write him": RM to Smith, Dec. 23, 1926, Smith Papers; Smith did so, sending the letter out, over his signature, exactly as written, Jan. 10, 1927. "No function left": FDR to Smith, Dec. 30, 1927, Smith Papers. Revealing letter: FDR to Smith, Jan. 30, 1928, Smith Papers. "I know of no man": Smith to FDR, Feb. 3, 1928, Smith Papers.

Roosevelt nominating Smith: Freidel, The Ordeal, p. 243. "It's a pity": Perkins OHR Vol. III, pp. 40-41. Decision to urge FDR to run: Freidel, The Ordeal, pp. 250-56; Emily Smith Warner; RM. RM to Emily at the convention: Warner, p. 239. Rosenman: Schlesinger, pp. 283-85; Freidel, The Ordeal, pp. 261-62. RM to Perkins: Perkins OHR Vol. I, p. 422; Vol. III, p. 40. "Vicious": Confidential source. Berle told the author RM "always talked badly about Eleanor Roosevelt. Roosevelt to Perkins: Perkins OHR, Vol. III, pp. 11, 372. "Real hatred": Lazarus,

He meant it: Most of Roosevelt's biographers take Smith's post-1928 disclaimers of presidential ambitions at less than face value, but the author's interviews with such Smith intimates and observers of both men as, among others, Smith's daughter, Proskauer, Lazarus, Cullman, John A. Coleman and RM, have led him to conclude that this assessment is unfair. He feels the definitive word on the subject is provided by the recollections of Edward J. Flynn (in You're the Boss) and James A. Farley (in Behind the Ballots, written while

Farley was still friendly with Roosevelt). "Same team": Proskauer, p. 64. Roosevelt had pledged to continue Smith's work: Freidel, The Ordeal, pp. 261-63. He "forgot": Schlesinger (pp. 386-87) gives a different, more pro-FDR interpretation of this period.

"Generally, for that is what we said":

Freidel, The Triumph, p. 12.

Roosevelt's character: Moley, pp. 36-44; Sherwood, p. 9; Handlin, p. 144.

Conflict over RM: "That was the way it was set up": RM. RM meeting with Roosevelt: RM.

Letter of resignation: RM to Roosevelt, Dec. 18, 1928, printed in NYT, Dec. 19. FDR reply: NYT, Dec. 20, 1928. Editorials: World, NYT, Dec. 20, 1928.

Roosevelt pursuing Flynn: Flynn, pp. 74-77. The fact that Flynn never devoted much time to the job rankled RM, who had wanted it to be one of continuing importance, and he told the author that one day, at least a year after his appointment, Flynn arrived at the building in which the Secretary of State's office was located, and didn't know what floor it was on.

FDR's "wistful smile": Quoted in Freidel, The Triumph, p. 20. RM stalking out: RM, confirmed by Albert Warner, who was covering the inauguration

for the NYT, and by Lazarus.

# 17. The Mother of Accommodation

## SOURCES

# Books:

Farley, Behind the Ballots; Flynn, You're the Boss; Handlin, Al Smith and His America; Josephson and Josephson, Al Smith: Hero of the Cities; Rodgers, Robert Moses; Sobin, Dynamics of Community Change. See also "Sources" for Chapter 16.

#### Author's interviews:

Howard S. Cullman, Eugene Hurley, Reuben A. Lazarus, Ann and Louis Lubin, Sidney M. Shapiro, Emily Smith Warner.

# Oral History Reminiscence:

Frances Perkins.

# NOTES

Northern State Parkway fight: The author's understanding of the veiled phrases

in the correspondence from the FDR Papers was aided by Sidney M. Shapiro, who offered the assistance with the stipulation that he not be named unless he died (which he has since done), and by two confidential sources, one on RM's staff. It was when the author attempted to question RM about the \$10,000 Kahn "gift" that RM broke off the interviews and refused further cooperation with this book. Clark and RM writing to FDR at Warm Springs: FDR refers to Clark telegram in FDR to RM, Nov. 23, 1928, FDR Papers.

FDR backing RM at first: Conversations referred to in Clark to FDR, Mar. 29, 1929, FDR Papers.

Hutchinson and Hewitt telegram to RM: Mar. 21, 1929. RM defiant: RM to FDR, Mar. 21, 1929, FDR Papers. (The crucial sentence: "Mr. Kahn generously offered to buy three of four small pieces of land owned by farmers who could not afford to dedicate.") "Will not make a creditable chapter": Clark to FDR, Mar. 29, 1929, FDR Papers.

Clark ultimatum: "... while we are ready and anxious to arrive at some adjustment and agreement, in the event that this cannot be done, there seems to be nothing to do but to fight the matter out to a conclusion by presenting the matter carefully on its merits. It would be too bad if we have to go through a long controversy on this subject. But what is there to do ...," Clark to FDR, Oct. 23, 1929, FDR Papers. Actual cost \$2,250,000: Sobin, p. 105. RM has to promise no parks: Shapiro, Hurley, confidential source.

"A bond on your signature": Lazarus. A new routine: RM, Emily Smith Warner. Begging Lutz: FDR to Lutz, Jan 17, 1931, FDR Papers. LI Democrats: Nassau Democratic leader Krug to FDR,

Sept. 14, 1930, FDR Papers.

"An old school boyfriend": FDR to RM, Apr. 23, 1930, FDR Papers. Among other humiliations the Governor had to suffer over the question of patronage was one that occurred when he began running for the presidency in 1932. A key Massachusetts supporter wrote him asking for a promotion for a relative on the LISPC staff, FDR wrote RM, and RM replied, in a letter to FDR's secretary, James J. Mahoney, "I think the efforts of this young man to get himself some sort of special preference through political channels in Massachusetts is wholly improper. . . . The best thing this young man can do is to take his medicine and be glad that he has a job of any kind." Buckley to FDR, Apr. 9, 1932; FDR to RM, Apr. 12, 1932; RM to Mahoney, Apr. 19, 1932, FDR Papers.

Fort Schuyler: A long series of letters from FDR to the Army and from influentials to FDR in "Fort Schuyler" folder, FDR Papers. Straus speech: NYT, June 24, 1932.

Executive budget fight: The definitive discussion is in Freidel, The Triumph, Chapter 4. RM's advice: RM to Mark Graves, State Budget Director, Oct. 15, 1931, FDR Papers.

Jones Beach: Attendance: Newspapers and Annual Report of the LISPC, 1929. Biehl: NYT, Aug. 18, 1931. Englishman: Rodgers, p. 56. "You will feel like a heel": Shell Progress. "Magical": Rodgers, pp. 188-89. "No concessions"; attendance: Relevant Annual Reports of the LISPC. "More than doubled": Annual Report of the LISPC, 1930, p. 6.

\$75,000: RM. Ocean highway: RM quoted in NYT, June 25, 1930. The Smith sisters: RM to FDR, Aug. 17, 1931; Waldridge, another Fire Island landowner, to RM, Aug. 21, 1931, FDR Papers. Typical RM threat to resign: RM to FDR, Nov. 10, 1930, FDR Papers. Typical FDR backing away: FDR to RM, May 9, 1933, FDR Papers.

Inviting Lehman and not FDR: Shapiro. FDR tour: HT, Aug. 4, 1930. "Best money ever spent": FDR quoted in NYT,

July 27, 1931.

Valley Stream grade-crossing elimination: Worst one on LI: NYT, Apr. 15, 1931. FDR signing the petition: NYT, July 27, 1931. RM's work on the problem detailed in correspondence with FDR, Aug. 1, 1931-May 2, 1932, FDR Papers. "I must ask to be relieved" and FDR's

reply: May 9, 1932 FDR Papers.

Torrey incident: Torrey's account of

it in Torrey to FDR, Oct. 5, 1929, FDR Papers. RM's statement, issued Oct. 16, 1929, said, "There is a good deal of picturesque exaggeration in Torrey's reference to my language and conduct," but does not deny any specific point in Torrey's account. Newspaper accounts, which quote witnesses of the incident and contain the RM and FDR quotes, in NYT and HT, Oct. 7, 1929. Among his closest friends: Ann and Louis Lubin. Reducing Torrey's salary, ASHPS position. ASHPS Minutes, p. 1784.

Distaste for public: Perkins OHR. Bridges low: Shapiro. "Dirty": Shapiro, Windels. Permits, "flagging," pool temperature: Windels, Kern. FDR investigation: Mills to FDR, Aug. 24, 1932; Gorton to Cross, Sept. 2, 1932, FDR Papers.

"Badge of poverty": Daniel Mitchell of Enfield Falls to FDR, no date, FDR Papers. "Legitimate kick": FDR to RM, Aug. 19, 1930, FDR Papers. "I do not care to be associated": RM to FDR, Aug. 22, 1930, FDR Papers. FDR's veto: NYT, Mar. 22, 1932.

Special assignments: Among them was bulldozing through a bridge bypass to carry Northern Boulevard around Roslyn that had been stalled for years by the opposition of Roslynites to State DPW plans; thinking up a solution for frequent brush fires in Suffolk County pine barrens (RM's solution was the building of watchtowers staffed by an augmented state forest ranger force); and investigating a series of rapes at Girl Scout camps in Palisades Interstate Park.

"Do you know, by God": Josephson and Josephson, p. 435. Walker humiliating Smith: Cullman, confidential source. Farley and Flynn: Farley, Behind the Ballots, passim; Flynn, passim. "He felt...hurt": Perkins OHR. RM's recollections: In interview with author. "A fight to the death": Josephson and Josephson, p. 440; best account of Smith's defeat in Farley, Behind the Ballots, pp. 78-79, 80-95.

# 18. New York City Before Robert Moses

# SOURCES

# Books:

Lillian Brandt, An Impressionistic View of the Winter of 1930-31 in New York City; Ellis, The Epic of New York City; Garrett, The La Guardia Years; Mann, La Guardia Comes to Power; Mitgang, The Man Who Rode the Tiger; Rankin, New York Advancing, 1934-1935; Rodgers, Robert Moses; Schlesinger, The Age of Roosevelt, Vol. II: The Coming of the New Deal.

## Author's interviews:

With two La Guardia officials, Paul J. Kern and Joseph D. McGoldrick; Iphigene Ochs Sulzberger; and Park Department officials John Mulcahy and Samuel White.

# NOTES

New York during the Depression: Ellis, pp. 532-33; Brandt, p. v. Schoolteacher and nurse: Quoted in Brandt, pp. 6, 8, 18. Clinics: Brandt, p. 10. "Everywhere

there seemed": Gellhorn, quoted in Schlesinger, p. 272.

Seabury investigation: Ellis, Mann, Mitgang books. "This is how we make Democrats": Ellis, p. 540.

City's debt: Harold Phelps Stokes, article in NYT, May 28, 1933; Rankin, p. 39.

"Engineers" without diplomas: Kern. "The city did not get"; subway: Mc-Goldrick. Schools: Garrett, p. 57.

Strangling: NYT, HT, various issues, 1931-33. West Side Highway: See RM brochures, quoted, Chapter 25. Also Stephen G. Bick to NYT, Oct. 24, 1933. Conditions on Queensborough Bridge: NYT, Aug. 8, 1930, July 18, 1933. Henry Hudson Bridge: RM's brochures. Narrows tube: Ina Joan Caro, "Building a Public Work in a Democracy: The Verrazano-Narrows Bridge (unpublished M.A. thesis), pp. 13-28. Triborough history: Many articles; for example NYT, Aug. 15, 1934. A dozen accidents a day: NYT, Dec. 25, 1933.

Parks: Brooklyn Park Department: HT, Apr. 11, 1934; June 26, 1934. Beach front rented out: HT, Jan. 11, 1931; NYT, Feb. 28, 1934; Mrs. Sulzberger, PD official John Mulcahy. Not a single structure, statues: Park Association survey quoted in NYT, June 6, 1934; also NYT Magazine, July 15, 1934. Bryant Park: NYT, Feb. 3, 1932; July 23, 1932; Nov. 26, 1932; HT, Feb. 17, 1934. Central Park: Eugene Kinkead and Russell Maloney, "Profiles-Central Park," The New Yorker, Sept. 13, 20, 27, 1941. Zoo: The New Yorker, Dec. 1, 1934. "A player standing on line": HT, Jan. 26, 1934. "You couldn't tell the difference": Mulcahy. Curtaining off toilets: PD official Samuel H. White. Chopin nocturne: New Yorker, Sept. 20, Hoovervilles: Various newspaper articles, 1932-33; HT, Apr. 27, 1934. Lack of park land: Architectural Forum, Dec. 1936, p. 503. No parks in slums: Author's study of borough park department maps, pre-Moses. One reformer: Allen Jacobs to NYT, printed Mar. 8, 1931. "The wistful faces": Dorothy Bromley in NYT, May 6, 1934.

Casino: The New Yorker, Sept. 20, 1941; various newspaper articles, 1932–1933.

Pleading with officials for roads: RM. Triborough Bridge: RM quoted in Rodgers, p. 98.

RM's plan: Metropolitan Conference on Parks, "Program for Extension of Parks and Parkways in the Metropolitan Region," Feb. 25, 1930. Among those watching in the audience who recall details of his appearance are Paul Windels (La Guardia's Corporation Counsel), Shapiro, Madigan and Childs. Lack of cooperation from city officials. RM.

Lehman's admiration for RM: Confidential sources. State Emergency Public Works Commission: Rodgers, pp. 76-77. City wasting Triborough funds: Rodgers, p. 98.

City's financial situation worsening: Garrett, pp. 142-50.

# 19. To Power in the City

# SOURCES

# **Books and documents:**

Garrett, The La Guardia Years; Mann, La Guardia Comes to Power; Mitgang The Man Who Rode the Tiger; Moscow, What Have You Done for Me Lately?; Rodgers, Robert Moses; and the collections of personal papers of three key Fusion figures—Maurice P. Davidson, W. Kingsland Macy and Joseph M. Price.

# Oral History Reminiscences:

Joseph M. Price, Paul Windels.

# Author's interviews:

Adolf A. Berle, Jr., Richard S. Childs, Paul J. Kern, William Latham, Reuben A. Lazarus, Michael J. Madigan, Joseph D. McGoldrick, Sidney M. Shapiro, Iphigene Ochs Sulzberger, Paul Windels.

## NOTES

Seabury hearings: Mitgang, pp. 158-310. O'Brien's gaffes: Mann, p. 90. Reformers viewing RM paternally: Tone of letters and memos in Price and Davidson Papers; Childs, Windels.

"Only partially valid": Garrett, p. 20. McGahen: Quoted in Mann, p. 81.

Wald: Lillian Wald to RM, Oct. 30, 1936, Price Papers. Didn't know details of those triumphs: The author's conclusion from his interviews with Childs, McGoldrick and other reformers and from his study of Price and Davidson Papers. "High purpose": Childs. "Starryeyed": Windels. Favorable publicity: "No man has gotten more praise recently," the Brooklyn Eagle noted on Jan. 14, 1933. "If Moses ran, they believed": New York Evening Post, July 15, 1933. RM contacted by Price, assures him he will accept nomination; an almost unani-

mously favorable response: Draft of proposed Price press release (never released), undated but probably May 18, 1933, Price Paper. See also WT, July 6, 1933.

Seabury's opinion of RM: RM; Garrett, p. 101; Mann, p. 83; Mitgang, pp. 316–18; Price press release: "Statement of Reason for Joseph M. Price's Withdrawal from Fusion Conference: Judge Seabury's Objections to Robert Moses's Availability as Mayoral Candidate" (unreleased and undated but probably July 1933), Price Papers; Price to reformer Richard Welling, July 18, 1933, RM to Price, July 29, 1933, Price Papers.

Seabury biography: Mitgang book; Mann, pp. 38-46.

"Reserve all personal liberty": RM. "I am not a candidate": RM quoted in NYT, July 12, 1933. RM feels Seabury will back him: RM. Five reformers: The judges were John C. Knox and Clarence J. Shearn, the business executive Richard C. Patterson, Jr., vice president of NBC. Davidson on Straus: Davidson Papers, memo entitled: "Wanted: A Mayor," pp. 54-59. LaG "standing in the wings": Davidson Papers, quoted in Mann, p. 79. LaG biography: See "Sources" for Chapter 23. Reformers' attitude toward him: Mann, pp. 67-72. Seabury's attitude: Mann, pp. 72-75, 80. 18 for RM, 5 for LaG: Price Papers.

Seabury-Davidson lunch: Seabury quoted in Davidson, "Interview as Recorded," p. 26, Davidson Papers. RM tells Price not to nominate him: RM. O'Ryan episode: Mann, pp. 84-85. "Sit down, Sam": Mann, p. 86.

RM's participation in campaign: Windels. His statements: NYT, Oct. 26, 28,

Nov. 3, 1933.

WT editorial: Nov. 4, 1933. "Sidewalks of New York": Windels gave the order to play it; Windels.

"It was like he owned the United States": Marie La Guardia quoted in Mann, p. 20. Driving around on Sundays: Kern. Hated lawyers: Kern, Lazarus. LaG feared Smith: Windels. "I told the Mayor": RM in NYT Magazine, Aug. 16, 1936.

"I'm appointing the best man": Mrs. Sulzberger. Drafting his own bill: Raymond P. McNulty to LaG, Dec. 27, 1933. Letter obtained from confidential

source.

Neither man considered the Triborough appointment particularly significant: Windels, Lazarus, RM, Madigan. "No man is big enough": Senator Thomas F. Burchill, quoted in NYT, Jan. 16, 1934. RM tells LaG not to worry: Lazarus.

"The finger": Moscow, p. 199. Reformers influencing legislators: NYT, Jan. 10; HT, Jan. 17, 1934. "No possible conflict of interest": LaG quoted in NYT, Jan. 7, 1934. "Nothing to get excited about": RM quoted in WT, Jan. 6, 1934.

CWA was ruining the parks: Summary, Rodgers, p. 83. Marine Park: HT,

Feb. 1, 1934.

Orchard Beach: NYT and HT, Feb. 28, 1934; Shapiro, Latham. The note-book: "Pattern for Parks," Architectural Forum, Dec. 1936. "His orders just poured out": Shapiro. RM standing at Orchard Beach: Latham, confidential source.

# 20. One Year

# SOURCES

# Books, articles and documents:

The basic source for this chapter is the hundreds of articles on Robert Moses, his rebuilding of New York City's parks and his building of parkways and the Triborough Bridge that appeared on almost a daily basis, month after month, in New York's newspapers during 1934.

Rodgers, Robert Moses; Moses, Dangerous Trade; Phillips, From the Crash to the Blitz; Rankin, New York Advanc-1934-35, pp. 127-36; Moscow, What Have You Done for Me Lately?; Talese, The Bridge; Reed, Central Park; WPA, New York Panorama; PWA, Moses, "Report on Accomplishments of Park Department in First Two Years of Fusion Administration," 1936 (hereafter referred to as "Two Years"); Moses, Four Years of Park Progress, 1937 (hereafter referred to as Four Years). Triborough Bridge Authority, "The Triborough Bridge, a Modern Metropolitan Traffic Artery, July 11, 1936"; "Fifth Anniversary of the Opening of the Tri-borough Bridge," July 11, 1941. "Pattern for Parks," Architectural

"Pattern for Parks," Architectural Forum, Dec. 1936; "Robert (Or-I'll-Resign) Moses," Fortune, June 1938; Hubert Herring, "Robert Moses and His Parks," Harper's, Dec. 1937; Moses, "Municipal Recreation," American Architect and Architecture, Nov. 1936; Moses, "The Changing City," Architectural Forum, Mar. 1940; The New Yorker's 1941 series on Central Park.

Park Department Files; La Guardia and Davidson Papers.

## Author's interviews:

With ten of RM's top aides—William S. Chapin, Ernest J. Clark, Gilmore

James A. Dawson, Richard Guthridge, William Latham, Michael J. Madigan, Sidney M. Shapiro and two who cannot be identified; three of his personal secretaries-Hazel Tappan, Nettie Greenberg and one who cannot be identified; nineteen architects who worked for the Park Department—Simon Brines, Isaiah Ehrlich, Harry Gould, Richard Korchien, David Levine, Irving Levine, George Levy, Joshua Lowenfish, Janet Patt, Bernie Rosen, Allen Saalberg, Carl Schilling, Clarence Stein, Robert Weinberg, Henry Wright, Michael Zimmer and three who prefer not to be identified (most of the interviews with these architects were conducted by Mrs. Priscilla Worland Burton); Mrs. Lidia Nelson, executive secretary of the Architects Emergency Committee; also Adolf A. Berle, Jr., John A. Coleman, Howard S. Cullman, Emily Smith Warner, Paul Windels.

## NOTES

The weeding out: Dawson, Latham, Madigan, confidential source. Confronting CWA: PD Files, LaG Papers, Latham.

Proportion of architects and engineers out of work: W. A. Shoudy, "The Engineer and the Depression," The Nation, Sept. 13, 1933; Talbot Faulkner Hamlin, "The Architect and the Depression," The Nation, Aug. 9, 1933. "When you got inside": Clark. Scene at Arsenal: Interviews cited above.

"I see to it": RM quoted in Brooklyn Eagle, May 9, 1935. The firings: NYT and HT, Feb. 1, 1934. Scenes among laborers: Interviews cited above. "We expect the men to work": RM quoted in NYT, Feb. 1, 1934 (italics added). The winter of '34: Phillips, pp. 317-18, says: "For brutish, man-killing, soul-destroying weather the years between 1934 and 1938 probably cannot be matched in the climatological annals of the United States." Embury: article in NYT, Feb. 27, 1934. Tablecloth: Clarke.

Every structure: Rankin, pp. 127-136; "Two Years"; Four Years. Park benches: "Topics of the Times" in NYT, May 18, 1934. Bryant Park opening: HT, Sept. 9, 1934. The speaker was John Finley, a leading conservationist. Central Park: The New Yorker, Sept. 13, 20, 27, 1941; Dorothy Dunbar Bromley, "New Vistas Open for Manhattan's Oasis," NYT Magazine, Apr. 15, 1934. Creating new parks: Latham, Shapiro. RM asked LaG: PD Files, LaG Papers. Chrystie-

Forsyth: NYT, Feb. 1, 1934; cost tabulation: Architectural Forum, Dec. 1936. Unappropriated state lands: Moses, Dangerous Trade, p. 3; Shapiro. RM's awareness of their potentiality as city parks is documented in Smith Papers as far back as 1927 (RM to Smith, Apr. 23, 1927). Red Hook swampland: RM to LaG. Mar. 26, 1934, LaG Papers. War Memorial Playgrounds: HT and NYT, Mar. 2; NYT, Mar. 20, 23; Berle, in interview with author, contended that he conceived the switch from monument to playgrounds, but this contention is not supported by evidence in the LaG Papers. Two tennis courts: RM to LaG, Mar. 26. Consolidated Gas: NYT, Dec. 1. Rothstein estate: RM to Delehanty, July 23; Delehanty to RM, July 25; RM to LaG, July 27; LaG to RM, Aug. 5; Earle Andrews to La Guardia aide Lester Stone, Sept. 27; Stone to Andrews, Oct. 1; LaG Papers. Rockefeller: NYT, June 23, 1935. Dreier-Offerman: "Two Years," p. 2.

The city cheered: "New Years," p. 2.

The city cheered: "New Deal": NYT,
Feb. 11, 1934. "100 Days": Brooklyn
Eagle, May 6. "An urban desert bloom":
WT, Dec. 14. "Hercules": NYT, Mar.
20. NYT editorial: Sept. 13. Murray
Davis interview: WT, Jan. 30. "The
people own the parks": HT, May 26. "2,
4, 6, 8": HT, Dec. 3.

Smith begging FDR for leases: RM. Central Park Zoo: Smith asking RM to improve Zoo: RM, Emily Smith Warner. Bear pacing: HT, Apr. 22, 1934. Smith had had no hint: Warner. Smith visiting the Zoo at nights: Coleman, Cullman, Warner. CWA cramping RM's style: PD Files. "Gay and amusing": Fortune, June 1938. "The finest eating view": Architectural Forum, Dec. 1936. Attendance: PD Files.

Triborough Bridge: Statistics (dwarfed any other single enterprise he had undertaken; the ultimate cost would be \$60,-300,000, more than the combined total he had spent during the previous ten years on the construction of all his Long Island projects; comparison of anchorages with pyramids, etc.; "to make the girders," etc.): Public Works Administration, "Case No. 1: New York— Bridge," pp. 226-31. Enough concrete for four-lane highway: 1936 TBA brochure, p. 21. "Largest vertical-lift bridge": HT, July 12, 1936. "Largest batch," 5,000 men working at site, etc.: "Case No. I," pp. 226–31; *HT*, July 12, 1936. **Descrip**tion of islands: WPA, New York Panorama, pp. 77, 421; NYT, Apr. 21, 1946; HT, Feb. 6, 1935. Scene from air in 1934: The author is indebted to H. I. Brock, who described it in NYT Magazine, Apr. 28, 1935. The image of the streets rushing together is his. The only hope: RM. 85%: Windels. Moses' traffic studies: Madigan. Lanes too narrow: RM in NYT, Apr. 12, 1934, interview. Hearst deal: RM's contention that this is the reason for placing the Manhattan approach at 125th Street is supported in Moscow, p. 197, and by Windels, first Triborough counsel under RM. Burkan's only interest: RM, Windels, confidential source. "I sent for the chief engineer": RM quoted in Rodgers, p. 98. Othmar Ammann: For a biographical sketch, see Talese, pp. 31ff. Loeser "a Prussian and a Nazi": RM quoting LaG in Dangerous Trade, p. 164. The most experienced bridge builders: NYT, Feb. 28, 1934.

Cost reduced from \$51,000,000 to \$30,000,000: Burkan in NYT, Apr. 4, 1934. Moses' plans for using the money: RM, Shapiro, Windels. The forgotten lease: HT, July 26. Washburn Co.: HT,

Oct. 12; NYT, Oct. 30.

\$6,000,000 loan: NYT, July 7. Con Ed.: Confidential source. Another trip to Washington; LaG finding another \$1,-300,000; LaG Papers.

Wanting a huge stadium: RM interview in the New York American, Apr. 22,

Central Park Casino: Restaurant owners' offers: NYT, Mar. 19, 1936. Charpontier: NYT, Dec. 26, 1935. "Not going to confer": NYT, Feb. 21, 1934. Advised by Windels: Windels. Court fight: Various newspapers, Mar. 12, 13, 27, 1936. "The right to do": HT, Mar. 25, 1936. Carew's decision: NYT, Mar. 27, 1936. RM's answer; Appellate Court's reversal: NYT, May 2, 1936.

# 21. The Candidate

# SOURCES

# Books:

Freidel, Franklin D. Roosevelt: The Triumph; Mitgang, The Man Who Rode the Tiger; Moscow, Politics in the Empire State; Moses, Dangerous Trade; Nevins, Herbert H. Lehman and His Era; Schlesinger, The Age of Roosevelt, Vol. II: The Coming of the New Deal.

# Author's interviews:

With RM's campaign chairman, F. Trubee Davison, and Long Island Democratic leader Richard Mayes, and with Senate Majority Leader George R. Fearon, Joseph D. McGoldrick, reporter Warren Moscow, Joseph M. Proskauer,

Aaron Rabinowitz, Emily Smith Warner and Paul Windels.

## NOTES

"More or less forced on me": Moses, Dangerous Trade, p. 882. "He encouraged me": Davison. "He was hungry for it": Windels. The barons' domination of the Republican Party: Davison, Windels; Freidel and Moscow books. Snell: Schlesinger, p. 480. A picture of the Old Guard's thinking was obtained from interviews with Davison and Mayes, and from the Macy Papers. "Anybody who amounted to anything": Moscow, p. 71, W. Kingsland Macy: Freidel.

"That was all we had to hear": Davison. What was wanted was a front man:

Davison, Mayes; Macy Papers.

North Shore Almanack: Sept. 27, 1934. "No one questioned" and crucial meeting: Davison. "None can say": Buffalo Evening News, Sept. 29, 1929. "One of the most hectic": Rochester Times-Union, Sept. 20, 1934. "At last!": WT, Sept. 29, 1934. RM had written most of the platform himself: Davison.

"Some kind of a record": Windels. "A fearful row": Davison. Rabinowitz dinner party: Rabinowitz. Feeling of RM's old associates: Rabinowitz, Proskauer, McGoldrick.

First press conference: WT, Oct. 2, 1934; HT, Oct. 3, 1934, is best. LaG "support": One typical headline, in NYT, Oct. 2, 1934, said: "Moses Confident of La Guardia Aid." He also said, when cornered, "The Mayor doesn't talk much politics. He doesn't to me."

Upstate tour disaster: WT, Oct. 25, 27, 1934; Fearon, Davison. Campaign plans: Davison.

First speech: Best in Brooklyn Eagle, Oct. 5, 1934. The Union League Club had recently called for a "justifiable war upon the New Deal theorists" (Mitgang, p. 332). Disparaging remarks about Jews: Windels heard them.

Threatened to sue Jewish Encyclopedia: Confidential source. McGoldrick's shock: McGoldrick. Shuls in the Bronx: When the author—thirty-five years after the gubernatorial campaign—interviewed Bronx Jews for the "One Mile" chapter, many vividly recalled Moses "trying to say he wasn't Jewish."

"These stuffed shirts": WT, Oct. 5, 1934. "I am a liberal": RM at press conference reported in HT, Oct. 3, 1934.

RM on Lehman: Dangerous Trade, p. 878; RM interview. Donating million to depositors: RM.

"Moses Calls Lehman Weak": HT, Oct. 10, 1934. "Stupid": American, Oct. 14. "Puppet": Post, Oct. 16. "Respectable front": NYT, Oct. 24.

Lehman handled Moses just right: Proskauer, Davison. And Moses knew it: "I made an honest campaign and pulled no punches, which meant little in view of Governor Lehman's strategy, dictated by clever campaign managers, to keep out of range and avoid any real infighting," he wrote in Dangerous Trade, p. 883. Speech in Binghamton: Text in HT, Oct. 25, 1934. "Cannot dispose of": Brooklyn Eagle, Oct. 5, 1934.

Court of Claims corruption: NYT, Oct. 26, 1934. City Trust report: HT, Oct. 14. In an interview with the author, RM admitted this charge was false. O'Connells: RM quoted in WT, Nov. I. Accusing Lehman of being utilities' ally: Full text of charge in HT, Oct. 25. "Scrupulous": Nevins, p. 153. O'Ryan: NYT, Oct. 28. Cluett's campaign manager Charles E. Cole: WT, Nov. 2; McGoldrick. WT editorial: Nov. 3. Libel insurance: Davison.

RM on Farley: HT, Oct. 31, 1934. On O'Connor: HT, Oct. 30; NYT, Nov. 3. On Seabury: HT, Nov. 4. On Copeland: HT, Oct. 24. On Tremaine: HT, Oct. 24. On Straus: HT, Oct. 27. Straus's friends: Rabinowitz. On Murray: HT, Oct. 16 (italics added). Flynn reply: HT, Nov. 3.

RM and Smith: The source has asked that he not be identified. Smith's feelings: Emily Smith Warner. Dinner party: Proskauer, who was the host. One observer: McGoldrick. Reporter: Julian Grey Mason in The North Shore Almanack, Oct. 11, 1934. "He made no gestures": WT, Oct. 28. How he affected audiences: McGoldrick, who sat behind him on the platform during speeches. "More attacks on personalities": NYT, Nov. 4.

Election results: HT called it: "The greatest defeat the Republican Party has ever suffered in this state... Mr. Moses ... suffered the worst defeat of all Republicans who ever ran for Governor in this state." Political reporters astonished: Moscow interview.

"An attempt to swim up Niagara": RM interview in HT, Nov. 7, 1934. Lehman on RM: Rodgers, p. 224. "He was terribly sensitive": RM.

# 22. Order Number 129

SOURCES

Books, articles and documents: Ickes, The Secret Diary of Harold L. Ickes, Vol. I: The First Thousand Days, 1933-1936 (Ickes furnishes more details, however, in "My Twelve Years with F.D.R.," The Saturday Evening Post, June 26, 1948): Moses, Dangerous Trade; Rodgers, Robert Moses; Schlesinger, The Age of Roosevelt, Vol. II: The Coming of the New Deal.

La Guardia, Price and FDR Papers. William D. Guthrie, "Opinion of Counsel as to the Legality of Order No. 129 issued under date of December 26, 1934, by Hon. Harold L. Ickes, Secretary of the Interior, as Administrator of the Federal Emergency Administration of Public Works, if intended or held to be applicable to the pending Loan Agreement dated September 1, 1933, between The United States of America and the Triborough Bridge Authority"... March 11, 1935.

# Oral History Reminiscences:

Frances Perkins, Joseph M. Price.

# Author's interviews:

Howard S. Cullman, Reuben A. Lazarus, Sidney M. Shapiro, Paul Windels.

## NOTES

"I don't trust him": FDR quoted in Frances Perkins OHR, Vol. III, p. 372. LaG's thinking: Windels, Lazarus.

"LaG regretted the situation": Ickes, pp. 148-49. RM threatens to resign from both positions: RM later revealed he had said this to LaG; NYT, Jan. 4, 1935.

Berle telegram: Mar. 1, 1934. FDR replied the next day: "I love your suggestion that Bob Moses' real name is the duc d'Enghien. Also, though I do not mind your calling me Caesar, I hate your suggestion about Napoleon! As a matter of fact, the case of your friend, the duc, is in no sense a personal one . . . FDR Papers. Roosevelt "implacable": Ickes to Burlingham, Aug. 13, 1948, quoted in Moses, Dangerous Trade, pp. 181-82. Farley and Howe urging FDR on: Ickes, p. 148. LaG stalling, Ickes threatening: Ickes, p. 229. "It seems that Moses is a bitterly persistent enemy of the President's, and the President has a feeling of dislike of him that I haven't seen him express with respect to any other person," he diaried. "He would make promises": Ickes, p. 267; Windels. "Naturally I had to declare a truce": Ickes, p. 229. A further threat. He wrote this in his diary on Nov. 23, 1934 (p. 229).

"Almost the incarnation": Schlesinger,

p. 282. "A modern Horatius": Rodgers, p. 100. Ickes telephoning LaG: Ickes, p. 229.

Order Number 129; assurance it would not apply to Post: Windels. "The President helped me draft this order," and discussed it personally with LaG: Ickes, p. 268. LaG shows order to RM: RM, Windels, Lazarus. RM's narration: Statement issued Jan. 3, 1935, printed in newspapers the following day.

"I had to lie": Ickes, p. 268. One of his advisers: Lazarus. Resolutions: LaG Papers; various newspapers. "Our Mayor has . . . crawled": Edward M. Chase, Mar. 4, 1935, printed in HT, Mar. 5. "A

crooked course": Ickes, p. 268.

"I need steel": LaG quoted in HT, Jan. 5, 1935. Shouldering through reporters: NYT, Jan. 9, 1935. Reasonable men; "at least Post is on the high seas": LaG in, for example, HT, Jan. 5. "Making a martyr out of him": Ickes, "My Twelve Years with F.D.R.," p. 83. "At PWA headquarters": HT, Jan 17, 1935.

The definitive word: Burlingham to LaG, Feb. 15, 1935, Price Papers. Price and FDR: Price to FDR, Jan. 30, 1935; FDR to Price, Feb. 2, 1935; Price Papers; FDR Papers. The mail tally: FDR Papers. Burlingham to FDR: Feb. 22, 1935, Price Papers. "Almost a national issue": Ickes, "My Twelve Years with F.D.R.," p. 82. Krock: NYT, Jan. 25, 1935. Lippmann: HT, Jan. 24, 1935.

Huey Long: HT, Mar. 7, 1935. An indepth series on RM in PM, by John K. Weiss, says that one reason FDR backed down is that Long threatened to release

RM's figures on Farley.

"An arbitrary and capricious fiat": Guthrie brief, p. 13. Price: Quoted in Rodgers, p. 102. Price also related the conversation he said he had with the President to Windels and Lazarus. "The President, I know": Ickes, p. 291. Secret meeting between FDR and LaG: No account of this can be found in the Secret Diary, but Ickes states that it took place in "My Twelve Years with F.D.R.," p. 83. Hiding behind the shades: Windels. The letter stratagem: Ickes, "My Twelve Years with F.D.R.," p. 83. The letters made public are quoted in the press, Mar. 12, 1935. Smith stepping in: RM, Cullman; Ickes, p. 317. Ickes reminiscing to Burlingham: "A dozen years after the dedication of the Triborough Bridge," RM wrote in Dangerous Trade (p. 181), "I received [from Burlingham] a letter which threw some additional light on the impact of Mr. Ickes' curious character." RM then quotes the Ickes-Burlingham letter, dated Aug. 13, 1948. Rodgers: p. 105. "In the saddle": Windels.

Sara Delano Roosevelt Park: Windels,

Shapiro.

Triborough Bridge opening ceremony: "It is very small indeed": Ickes, p. 623. "I understand that there will be a national hookup": Ickes to FDR, June 23, 1936, FDR Papers. Handwriting on the letter, probably that of Marvin McIntyre, mentions that RM had previously invited FDR. FDR's memo: FDR to Ickes, June 25, 1936, FDR Papers. RM promises not to introduce the President, gives him six minutes: Windels. Ickes overwhelmed by RM's charm: Ickes, pp. 636-37.

# Oral History Reminiscences:

Charles C. Burlingham, Stanley M. Isaacs, Marie Fischer La Guardia, Reuben A. Lazarus, Newbold Morris, Paul Windels.

# Author's interviews:

Adolf A. Berle, Jr., Walter D. Binger, William C. Chanler, Ernest J. Clark, Gilmore Clarke, Jackson Dykman, William Exton, Jr., George R. Fearon, William McD. Griffin, Joseph T. Ingraham, Saul Kaplan, Paul J. Kern, Jacob Lutsky, Michael J. Madigan, Joseph D. McGoldrick, F. Dodd McHugh, John Mulcahy, Lawrence M. Orton, Wallace Sayre, Sidney M. Shapiro, Florence Shientag, P. Fearson Shortridge, Ole Singstad, Iphigene Ochs Sulzberger, Rexford G. Tugwell, Robert C. Weinberg, Samuel White, Paul Windels.

Author's correspondence: William Fellowes Morgan, Nov. 18, 1967.

# NOTES

"Treated his commissioners like dogs": Tugwell, pp. 96-97. Peering between fingers: Lazarus, Windels. "Boners": Garrett, p. 130; Lazarus. "If you were any dumber": Moses, La Guardia, p. 30. Turnover unprecedented: Tugwell, p. 97. Firing secretary: Lazarus. Sealing commissioners' files: McGoldrick, confidential source.

LaG-RM relationship: General picture from interviews with Berle, Binger, Chanler, Kern, Lazarus, Madigan, McGoldrick, Orton, Sayre, Shientag, Tugwell, confidential sources. Sending Andrews: Lazarus, Windels. "Come to blows": Confidential source. RM's nicknames for LaG: Madigan, Lazarus, Windels. "His Grace": McGoldrick, Windels. Resignation threats: Kern, Lazarus, McGoldrick, Windels. LaG dropping investigation: Dykman.

Astoria ferry: By coincidence, The New Yorker had a writer on the very ferry which found its slip being destroyed when it returned, and Madigan was in Kracke's office when the first call to Kracke came in: The New Yorker, Aug. 1, 1936; Madigan. Other descriptions of event: NYT, HT, July 23, 1936. Later developments: NYT, July 30, 1936; HT, Aug. 1. RM's earlier attempts to force action: RM to Kracke, Feb. 4, 1936; Kracke to RM, Feb. 10; RM to

Kracke, Feb. 11; Kracke to RM, Feb. 14; RM to Kracke, Feb. 18, June 9, RM to Wharton Greene, resident project to gineer, Triborough Bridge Authority, July 23; all in PD Files.

Burlingham on "brutalities": Quoted in Mann, La Guardia Comes to Power, p. 30. "Nurtured that like a plant": Mrs. LaG OHR. "You'd see the two of them": Madigan. "That's the way you get things

done": Shientag.

Playing on LaG's enthusiasm for engineering; constantly pressing him to go on tours: The LaG Papers are filled with RM invitations; Madigan states that RM realized—and deliberately played on—LaG's enthusiasm. "Stood like a child": Kern. Chinning himself on the fence: Picture in PD Files. Watching lift span hoisted: HT, May 4, 1936. "The greatest engineer in the world": HT, July 26, 1936, for example.

Playground openings: The LaG Papers contain sheafs of photographs taken by RM's photographers to remind the Mayor of the scenes of which he had been the centerpiece. RM even had the photographers take pictures, from directly in front of the platform, of the faces of listeners staring up at the Mayor and sent those to LaG, too, to heighten the effect. John Mulcahy and Samuel White, two Park Department officials, outlined for the author the elaborate preparations that went into these openings; White was in charge of the chrysanthemums, which he would have loaded onto trucks the minute a ceremony was over and rushed to another ceremony that the Mayor was scheduled to attend later that day. Of innumerable newspaper accounts of these events, those in NYT, July 27, 1935 (the "Babe Ruth opening"), and July 21, 1937, and in HT, July 16 and Aug. 12, 1934, are particularly detailed. LaG's unmitigated delight in the pageantry was related to the author by, among others, Kern. Glowering at the organ grinders: Shapiro.

Swimming pools: "Moses," Fortune, June 1938. Hopkins quote: NYT, July 3, 1936. "The best thing": RM to LaG,

May 26, 1936, LaG Papers.

RM and the press: The author, as a reporter for Newsday during the 1960's, observed personally the lengths RM went to in order to charm and entertain Newsday's publishers and key editors and reporters. Left-wing leaflets: Shapiro. Merz: Ingraham. Ingraham believes—and Shapiro's reply when the author questioned him about the statement was a wordless, sly smile—that RM selected the building

next to Merz's deliberately, wanting one where he could casually "drop in" on Merz, but feeling that moving into the very same building would be too obvious. Emphasis on reporters: Shapiro explained how RM learned this from Mrs. Moskowitz.

NYT; Ochs: See "Notes," Chapter 11. Sheehy had never been in Central Park: Mrs. Sulzberger. Giving him the scroll: NYT and  $H\overline{T}$ , Jan. 19, 1935. Her view of RM: Mrs. Sulzberger. Not that she always agreed: Mrs. Sulzberger. "Iphigene gave us many arguments": Madigan. Great lawn: DN charged, on Feb. 7, 1935, that "he did knuckle under to Iphigene Ochs Sulzberger (daughter of Adolph Ochs), the landscape architects and wealthy residents in the matter of the lower reservoir site in Central Park. . . . Moses resurrected the 'Great Lawn for Play' scheme at [their] behest. These people were acting in good faith. They honestly believed that the parks should be for trees, shrubs and rich or middle class people, just as we honestly believe that they should be for children and poor people primarily." Shapiro confirms that it was Mrs. Sulzberger's feelings that were decisive.

Taking her to Inwood Hill: Madigan. The quarrel: Mrs. Sulzberger to RM, Dec. 23, 1935; RM to Mrs. Sulzberger, Dec. 24, 1935—both printed in NYT, Dec. 25, 1935. "Now you tell her you're sorry": Mrs. Sulzberger. Public apology: Mrs. Sulzberger to RM, Jan. 2, 1936, printed in NYT, Jan. 4.

Influence on NYT: Talese, pp. 15-16; Catledge, p. 222. NYT's special treatment of RM: Author's analysis of articles and editorials. Mrs. Sulzberger visiting LaG's office: Mrs. Sulzberger.

LaG "didn't dare" fire him: Kern. "What'll the Times say?": Windels, Lazarus. "Stop interfering": Numerous letters from RM to LaG aides, mostly to Deputy Mayor Henry H. Curran, who had been assigned as liaison with various departments, in LaG Papers, particularly in folders marked "Parks, Department of-1934" and "Parks, Department of -1935." Threats to resign: For example, RM to LaG, June 9, 1934, LaG Papers. Let him have his way: Numerous letters in LaG Papers, PD Files. Coney Island tract: Brooklyn Eagle, date missing; HT, June 22, 1934. Other reasons why it was unfeasible for LaG to crack down on RM: Analysis by Windels, Lazarus, Berle, Jacob Lutsky, Kern, McGoldrick. "You've got to understand": Lutsky.

Size of federal contribution: Deputy

Comptroller William E. Wilson to LaG, Oct. 17, 1937, LaG Papers (a complete tabulation requested by the Mayor).

RM's relationship with State Legislature: Interviews with Fearon, Kaplan, Lazarus, Windels and various legislators who wish to remain anonymous. Patronage; "a practical fellow": Kaplan, confirmed by various confidential sources. Upstaters distrusted LaG: Windels, Lazarus. RM making himself the broker: Typical letter showing this—one of many in LaG Papers—are RM to LaG and RM to Fearon, Jan. 12, 1934. An inoffensive bill: Lazarus.

# 24. Driving

## SOURCES

See "Sources" for Chapter 23. Also, author's interviews with Richard S. Childs and Jeremiah Evarts.

## NOTES

Municipal Art Commission: Charter, Section 637. Submitted on very day: Childs; HT, Jan. 2, 1937.

Insinuations about Corporation Counsel: RM to Windels, May 8, 1936, LaG Papers.

Stepping up the pressure: Telegrams between Windels and RM, May 7, 1936, LaG Papers. Not only Windels but McGoldrick, Lazarus, Sayre and several confidential sources described RM's use of this technique to the author.

Matthewson episode: NYT, June 21, 1934; HT, June 22, 24, 28; NYT, Dec. 22.

Kern episode: Almost a member of the family: Windels. "I was a Moses fanatic": Kern. Refusing to allow RM to regulations: circumvent Kern, Among many conflicts documented in the LaG Papers, one specific issue—RM's attempt to have the WPA pay several employees \$90 per month as "electrician foremen" at the same time that the city was paying them \$150 per month as civil service "public address operators" —is unfolded in Nov. 10, 1938, George Spargo memo (recipient not indicated); RM to LaG, Nov. 11, 1938; LaG to RM, Nov. 16, 1938; Dayton to LaG, Nov. 29, 1938; LaG Papers. Lying to LaG about Kern: The lie is documented in RM to LaG, Feb. 1 and Apr. 7, 1938; LaG to RM, Apr. 12, 1938; RM to LaG Apr. 29, 1938; LaG to Kern, Kern to LaG, Apr. 29, 1938. The last was furnished to the author by Kern; the others are in the

"Disowning him": Sayre. LaG Papers. "Communist" investigation; "OGPU": RM quoted in NYT and HT, Nov. 21, 1939. "A good Roman Catholic": Kern. Father Coughlin: Social Justice, Sept. 11, 1939. William O'Dwyer joined in the attack; during his first campaign for mayor—against LaG—in 1941, he pointed to Kern as proof that LaG had filled his administration with "leftwingers." Council investigation: S. Burton Heath, "Investigation by Innuendo," Survey Graphic, Oct. 1941. "Don't let Kern set up an OGPU in New York": RM to LaG, Oct. 14, 1939, LaG Papers. LaG's fear of being called "Communist": Windels, Lazarus, McGoldrick, Kern, among others. Fired him: Sayre is also convinced that the "Communist" charge was the underlying reason. "His hatred of me": Kern. No more interference: O'D, Impy, Wagner Papers.

Bullying commissioners: Chanler. Refusing to attend luncheons: McGoldrick. Having one aide in each department designated: One with whom RM did this was Jeremiah Evarts, an Assistant Corporation Counsel; Chanler, Evarts, Lazarus.

Chrystie-Forsyth: Windels; WT, Dec. 14, 1934. Driving wedges: First—\$3,600,000—estimate is NYT, Sept. 12, 1934. Others come from various articles and RM brochures over the years. Deceptions: "Not a penny": New York American, Mar. 22, 1935; \$250,000: Apr. 11, 1935; \$8,000,000: July 7, 1935. Single press release on Zoo has two estimates: And NYT, Mar. 9, 1934, included them both in the same story without mentioning or attempting to explain the discrepancy.

Just as one borough president learned never to trust: McGoldrick, sitting on the Board as Comptroller, saw this happening again and again; McGoldrick. "Graceful malice": "Moses," Fortune, June 1938. "A couple of jobs": Lazarus. "Brazen attempt": NYT, June 9, 1939.

No provision for baby carriages: Weinberg, interview and various memos to Exton, 1936, 1937, Exton Papers.

RM pleading with WPA: RM to WPA Regional Administrator Brehon Somervell, July 3, 1937, is only one of a hundred such letters in PD Files. \$2,500 for clocks: Somervell to RM, July 23, 1937; RM to Somervell, July 27; RM to LaG, Aug. 7; LaG to RM, Aug. 9; all in LaG Papers.

A standard playground design: Weinberg was one WPA-paid Park Depart-

ment architect who was always trying to make innovations, and was invariably rebuffed by his superiors, who told him frankly that their superiors, top "Moses Men" such as Andrews, Latham and Stuart Constable, would not even consider irritating RM by deviating from the standard design.

Playgrounds into animal cages: Latham, Shapiro, various correspondence in PD Files.

Vest-pocket parks: "That's a little job": Confidential source. Refuses 1936 Transportation Board offer: RM to Kern, July 7, 1936, LaG Papers. No parks in slums: The Park Department's own maps, in PD Files, show this, as does "New York Youth Tells Its Story" (for which, see "Sources," Chapter 25). Reformers' views: Exton, Orton, Weinberg. Negro immigration: Description, and of Harlem during the 1930's, in WPA, New York City Guide, pp. 52, 132-40, and WPA, New York Panorama, pp. 257-64, and in "Harlem," *Fortune*, July 1939. \$850 per year; "slave market": "Harlem," Fortune. Not a single bank, not a new school: New York Panorama, p. 147. One clinic, one hospital: New York Panorama, pp. 147, 262, 263. Maternity death rate: New York Panorama, p. 258. "The question of what will happen": New York Panorama,

p. 151.

"Easily accessible": RM, "Parks and Recreation in Harlem," Oct. 6, 1944, LaG Papers. Three acres the smallest: RM, NYT, Mar. 11, 1934. The definitive statement from him that he built parks in slums—that he had, in fact, given them more attention than other areas of the city—was the Oct. 6, 1944, statement, after a grand jury investigating slum conditions criticized the city's failure to provide adequate recreational facilities in slums

"We shall provide one playground": RM to Alderman Conrad A. Johnson, Mar. 21, 1934, LaG Papers.

Reformers and the implications of his park policies: Exton, Orton, Weinberg; Minutes, City Club Park and Recreation Committee, 1934–36.

# 25. Changing

## SOURCES

# Books, articles and documents:

Moses, Dangerous Trade and Six Years of Park Progress; Rodgers, Robert Moses; Ickes, The Secret Diary of Harold L. Ickes, Vol. I: The First Thousand Days,

1933-1936; Strunsky, No Mean City. See also "Sources" for Chapter 23.

The basic sources for the history and financing of the West Side Improvement are three long brochures edited and to large extent written by RM and published by the Henry Hudson Parkway Authority: "Opening of the Henry Hudson Parkway and Progress on the West Side Improvement," Dec. 12, 1936; "Opening of the West Side Improvement," Oct. 12, 1937; and "Completion of the Henry Hudson Bridge and Henry Hudson Memorial Park," May 7, 1938.

The basic sources for the effect of the Improvement on Inwood Hill Park, Spuyten Duyvil and Riverdale—and the differences in the effect on these locales of the proposed alternate route—are James E. Briggs, Sproul Braden, William S. Ladd and Lawrence M. Orton, "Planning Northern Riverdale," Sept. 23, 1930; Regional Plan Association, "Proposed Parkway Connecting a Drive with Van Cortlandt Park—to Mr. Weinberg, fidential," June 1934; The Rev. William A. Tieck, Riverdale, Kingsbridge, Spuyten Duyvil-A Historical Epitome of the Northwest Bronx; Robert C. Weinberg to William Exton, chairman, Parks and Recreation Committee, City Club, "Report to the Committee in regard to design of portions of the Henry Hudson Parkway and other matters of Park design of recent date," Dec. 4, 1939.

For the recreation needs of the poor and the effect of RM's policies, "New York Youth Tells Its Story," transcript of the testimony given at hearings held by the City Council's Committee on Youth Welfare, May 13, 17, 31, 1938; American Youth Congress, "The Case for the Use of Schools as Recreation Centers," 1938; Shirley Jenkins, Comparative Recreation Needs and Services in New York Neighborhoods.

# 8

Author's interviews:

Walter D. Binger, William C. Chanler, William Exton, Jr., William Latham, Michael J. Madigan, Joseph D. McGoldrick, Lawrence M. Orton, Sidney M. Shapiro, Robert C. Weinberg and confidential sources.

Interviews on matters other than the West Side Improvement with Israel Ben Scheiber, John A. Coleman, Mrs. James B. Cooper, James B. Cooper, Jr.. Howard S. Cullman, Melvin Daus, F. Trubee Davison, Rev. C. Edward Harrison, Joseph T. Ingraham, Nettie Greenberg, F. Dodd McHugh, Emily Smith Warner.

#### NOTES

Antagonizing people: Beal: NYT, Mar. 3, 1934. Architects: HT, Feb 18. 1934. Exton.

Pearl Bernstein: Her biography, NYT, Dec. 27, 1933. RM to Kern: Apr. 25, 1934, and Oct. 1, 1935, LaG Papers; Kern.

"You're just a swabbie": Ingraham and Ben Scheiber, both present, were among those squirming. Fist fights: Ingraham. Swinging at Isaacs: Binger, McGoldrick.

False charges against Weinberg: Exton, Orton, Weinberg. Wrecking the Leader: Mrs. James B. Cooper, James B. Cooper, Jr.; confirmed, with a sly smile at this proof of the unwisdom of getting in RM's way, by Shapiro—and by a check of the Leader's legals.

Columbia Yacht Club: History: HT, Mar. 27, 1934. Their only request: Chanler, as Assistant Corporation Counsel, handled most of the negotiations for RM. Says Chanler: "One fellow, a former Tammany surrogate, an old fellow, called me and said, 'They're trying to take our club in May or June and we know they're not going to start building until October. The fleet is coming in July. Let us stay 'through then and we'll be glad to go after that.' I spoke to Moses about it. He said they had to be evicted at once. I said, 'Why?' He said, 'Because they were rude to me.' Well, he was the client and we didn't have much choice. We did kick them out, but I didn't like it much." Parks "for the people": RM quoted in NYT, Apr. 20, 1934. "A social racket": HT, Apr. 24. "Influence," "interesting fact":  $\hat{N}YT$ , Apr. 21. "No lease": HT, Apr. 27. Check photostat and club's side: NYT, Apr. 27. Levy ruling: NYT and HT, May 3. Steam shovels: HT, Apr. 29. Electricity: HT, Apr. 30. "Steam-shovel government": NYT, May 1. "The whole question": NYT, May 4. Charging a quarter: HT, June 13. "Because they were rude to me": Chanler.

And the dream unrolled: An over-all description of RM's accomplishments during this period is found in his biannual Park Progress reports; in Moses, Dangerous Trade, pp. 1-74, 161-90; in Rodgers, pp. 82-95, and in the magazine articles cited in the "Sources" for Chapter 23. 5,000 acres: Six Years of Park Progress, pp. 12-15. Adding to Manhattan: Six Years, p. 14.

**Distribution of playgrounds uneven:** Author's analysis of a huge map, labeled "Playgrounds—Present and Future," pre-

pared by RM for LaG, dated Oct. 1939, LaG Papers; Shirley Jenkins, Comparative Recreation Needs.

"We have to work all day": "They were begging": Harrison interview with author. Feb. 17, 1969. Playground supervisors: Daus. "The police just keep the kids moving"; "Harlem is a poor section": "Junior City Government of New York to Hon. Fiorello H. La Guardia," Aug. 31, 1937, LaG Papers. "Caged tigers": Father Bishop. "The fact is that": RM. "Parks and Recreation in Harlem, Past, Present, and Future," Oct. 6, 1944. United Parents Association: Its study quoted in NYT, Brooklyn Eagle, Mar. 2, 1941. Grand jury: HT, Nov. 28, 1943. Took fourteen years: Bishop's letters-to-theeditor, to the NYT, none of which the NYT printed, were found in the Stanley Isaacs Papers, 1950 NYT article: May 6. RM sowing playgrounds: NYT, Apr. 24, 1935.

Swimming pools: Under his prodding: Latham; "Patterns for Parks," Architectural Forum, Dec. 1936. "You know how RM felt": Confidential source. "They don't like cold water": Windels told the author that RM said this to him. That this was RM's view is confirmed by confidential source. Shapiro, who echoed RM's views, told the author confidentially that "you can pretty well keep them out of any pool if you keep the water cold enough." Never once mentioned: Author's survey of NYT, HT and Brooklyn Eagle, 1934-39.

Stadium empty: Attendance figures nowhere to be found, but McGoldrick, who, as Comptroller, had to study the stadium's finances, recalls its emptiness.

"Three weeks": Windels. RM's solution: Moses, "New Parkways in New York City," Summer, 1936. Planners' doubts: Orton, Planning Commission staffer F. Dodd McHugh; doubts find a voice in HT editorials such as Aug. 18, 1936, and articles such as Nov. 22, 1936, and NYT, Jan. 2, 1938.

Triborough: Ickes, p. 637; Hugh Johnson column in WT, July 15, 1936; LaG and Hopkins, HT, July 12, 1936; NYT editorial July 11, 1936; NYT article, July 10, 1936; Valentine, HT, Aug. 12, 1936.

"Cross-country traffic jam": HT, Aug. 18, 1936. Ingersoll: NYT, Sept. 19, 1937. RM said he knew what to do: "Moses Is Building a City of the Future," New York Sun, Jan. 8, 1938.

"Today we are well on our way": RM, introduction to "Northern and Wantagh State Parkway Extension," published Dec. 17, 1938, by the LISPC and the New York State DPW, pp. 2, 3. Enthusiastic applause: Brooklyn Eagle, Dec. 18, 1938. Ammann speech: NYT, Nov. 19, 1936. Traffic counts: All traffic counts on Triborough facilities from TBA, "Fifth Anniversary." The counts on other bridges from various newspaper articles. Orton recalls the experts' puzzlement. RPA's plea for transit on Bronx-Whitestone: NYT, June 28, 1936.

Gowanus Parkway: The picture of the Sunset Park neighborhood and of the effect on it of the parkway is drawn from interviews with a score of residents of the neighborhood conducted by Ina Joan Caro; and from WPA, New York Panorama, pp. 68, 87, 115-16, and WPA New York City Guide, p. 468. NYT editorial: Nov. 1, 1941. Brooklyn borough president: John Cashmore, quoted in Eagle, Nov. 2, 1941. Board of Estimate had been under the impression: McGoldrick. 1,300 families: NYT, July 9, 1940. RM frightened many of them away by sending them an initial notice which gave them ten days to move.

West Side Improvement: The three brochures cited in the "Sources" provide the basic information on RM's plans. They do not provide information on the cost of those plans. That information can be found in no public document, nor in any newspaper or magazine. Because he feared that his plans would not be approved if their true cost was known or even hinted at-he never let even a hint get out. The highest figure he ever put on them was \$24,000,000—a fraction of their true cost. The total—\$109,000,ooo—which the author uses is to be found nowhere. The author has compiled this figure by adding together and analyzing a multitude of figures in letters, confidential memoranda obtained from PD Files, from the LaG Papers and a confidential source, and from interpretation of these data by Jack Madigan and Sidney M. Shapiro. The brochures will be identified by the dates on which they were published.

\$109,000,000 already spent: Various newspapers, 1932-33. Railroad in no position to pay: Railroad bonds in general were in so precarious a position during the Depression that in July 1938 the Banking Department would remove more than \$3 billion of them from the list of legal investments for savings banks. They watched RM: Madigan, Shapiro. New York Central financing: NYT, Mar. 30, Apr. 16, 1934; explanation of the facts

behind the stories, and maneuvering with Lehman: Madigan.

Using railroad's landfill: Shapiro. "RM has this mind": Shapiro.

Seventy-ninth Street boat basin: Shapiro, Madigan. Ickes suggesting grade crossings: Quoted in NYT, Nov. 17, 1934. RM whipsawing LaG and CWA: RM; various memos, PD Files.

State aid for railroads, etc.: Shapiro.

Whipsawing the Board of Estimate for \$10,000,000: NYT, Apr. 27, 1934; J-A, NYT, HT, June 19-21, 1934, contain misleading RM figures. Whipsawing the CWA for \$20,000,000: Madigan.

Selecting the new route through Fort Tryon and Inwood Hill; bankers' caution: RM, Madigan. Not a single new issue: Brochure, Dec. 12, 1936. Madigan biography: Madigan; Moses, Dangerous Trade, pp. 919-20. Madigan's inspiration:

Inwood Hill Park: WPA, New York Panorama, p. 28 ("perhaps the finest," p. 28); Exton. "Only a few trees": RM in NYT, Mar. 23, 1935.

Spuyten Duyvil: Tieck, A Historical Epitome. A "village": HT, June 23, 1935. "It will be the end": Francis C. Williams to HT, July 11, 1935.

The alternate route: Exton, Weinberg, Orton, and McGoldrick, whom Exton escorted along it. Weinberg to Exton: Dec. 4, 1939, Exton Papers. RM would not allow anyone else to do any planning: An "Ad Hoc Committee for Planning Northern Riverdale" conceived a plan for running the parkway through the Marble Hill shanty town and for accommodating the increased residential development that would be brought to Riverdale anyway by careful zoning. The plan was printed as "Planning Northern Riverdale." But RM would not discuss it with the community group, and the City Planning Commission he dominated would not take it up seriously: Orton.

Van Cortlandt Park: The biology teachers' protest and the response from RM's aide is described in Jeanne Morse to Exton, Apr. 6 and June 15, 1939, Exton Papers.

"It didn't require much brains to see": Weinberg. RM's values: They emerged clearly during his interviews with the author. "Laughing at you": Exton. McGoldrick was convinced: McGoldrick.

Building the bridges too low for buses: Why he did so on LI: Shapiro. Doing so on the Henry Hudson Parkway: Farley report paraphrased in Chapin to RM, Feb. 2, 1936 (given to author by Shapiro). RM reply in memo to Board of Esti-

mate, Feb. 27, 1936, LaG Papers. "He would brook no change": McGoldrick.

RM's charge against Weinberg; Seligman called Exton in: Weinberg, Exton, McGoldrick. City Club committee report: Sun, Mar. 22, 1935. Mrs. Sulzberger to RM: May 24, 1935; printed in NYT—in a story on the West Side Improvement—May 28, 1935. City Club disowning report: NYT, Mar. 23, 1935.

Cutting down trees before public hearing: NYT, Sun, Mar. 17, 22, 1935. "He knew how to handle them": Madigan. RM's boast about "ingenious device": Moses, Dangerous Trade, p. 187.

\$34,000,000 vs. \$6,000,000: NYT, HT, Sun, various issues between Apr. 27 and June 20, 1935. LaG wanted it built before election: Madigan.

The overnight bridge: WT, July 12, 1935.

Reasons for RM's reluctance to talk to Exton: Madigan.

Henry Hudson Bridge opening: RM, Madigan. In the moonlight: Rodgers, p. 88. On Madigan's yacht: Madigan. "This, then, is the Hudson waterfront": Quoted in Moses, Dangerous Trade, p. 188.

"The most beautiful drive in the world": DN, Oct. 12, 1937. "Always the man in the car": NYT, Oct. 10, 1937. Strunsky: NYT, Oct. 9, 1937. "The poet Wordsworth": Strunsky, No Mean City, p. 165. RM promises it will eliminate jams: For example, in Bronxboro (a local newspaper), Dec. 1936. Only twenty-six minutes: RM, brochure, May 7, 1938, pp. 10–11. "A veritable motorist's dream": J-A, Oct. 12, 1937. "Much more": Sun, Oct. 12, 1937. "A fountain": J-A, Oct. 13, 1937.

Statistics: Primarily the three brochures. "The most extensive alteration": NYT, Oct. 10, 1937. Cost: NYT, June 26, 1941.

Built Harlem recreational area only because LaG insisted: Windels.

Gigantic viaducts: Peter Blake, "How to Destroy a City," HT, Mar. 13, 1964. "Monstrous misstatements," RM called Blake's opinions, in the brochure he issued in reply, The Expanding New York Waterfront, Aug. 1964.

Traffic on the Henry Hudson Bridge: A chart detailing it day by day—prepared for RM by one of his aides—was sent by RM to LaG and was found in the LaG Papers.

"Motorists launching gaily": NYT editorial, Nov. 2, 1937. 1938, 1939, 1941 traffic counts: "Fifth Anniversary." 26,000,000; traffic cut in half in 1956: TBTA Annual Report, 1956.

Scrapbooks: NYT, Oct. 3, 1936. Richmond HS Arista: HT, Nov. 14, 1936. McCarren Park opening: Brooklyn Eagle, Aug. 1, 1936. Park Association comes to him: HT, Jan. 19, 1936. Price comes to his apartment: NYT, May 22, 1937. Rename West Side Highway: HT, July 3, 1935. Dinners: Descriptions of two typical affairs at which RM was honored are NYT, Apr. 4 and Dec. 7, 1937. "Never in the history of philanthropy": Moses, Dangerous Trade, p. 50; confirmed by F. Trubee Davison interview. Jesse Jones later confided confidentially that one member of the RFC had voted to give the money for the planetarium thinking it was a cafeteria. Award from 16 organizations: NYT, May 26, 1935. Typical newspaper supplements or series: William P. Vogel, PM's Weekly, Aug. 3, 1941, for example, or Floyd Taylor, "Danger! Man at Work," WT, Jan. 3-8, 1938.

Harper's: Herring, "Robert Moses and His Parks," Dec. 1937. Time: Oct. 17, 1938. The Saturday Evening Post: "From Dump to Glory," Jan. 15, 1938. Architectural Forum: "Pattern for Parks," Dec. 1936. Fortune: "Robert (Or-I'll-Resign) Moses," June 1938.

Boston award: NYT, Feb. 5, 1942. Reading speeches over telephone: A description of him doing so in NYT, Feb. 5, 1942. Stored in packing cases: Nettie Greenberg. Shore and Beach Preservation Society: HT, Sept. 12, 1939. Hartsfield: Brooklyn Eagle, May 26, 1939. More miles of through highways than in next five largest cities combined: Statistics furnished by BPR Library.

"Kidnap Robert Moses": "Pattern for Parks," Architectural Forum, Dec. 1936. Engineers from other cities applying his principles: Among those who told the author that highways in their cities were laid out on RM's principles were Lloyd Reid, then chief engineer of the Michigan Highway Department, and Bertram D. Tallamy of Buffalo. British urban planners: HT, Apr. 17, 1943.

Suggested as Republican nominee: Among many articles mentioning the possibility—and suggesting that he would be a good choice for 1940—Harper's, Dec. 1937, "Robert Moses and His Parks." The Saturday Evening Post commissioned him in 1936 to write two articles as a spokesman for the national GOP—"To My Party," Jan. 25, and "End of Santa Claus," June 27.

No room for dissent: Hotel Pennsylvania dinner: Apr. 4, 1937. Kiwanis luncheon: NYT and HT, Mar. 18, 1934.

"We owe much": Moses, Six Years of Park Progress, p. 56. "We'll undoubtedly": McGoldrick.

Al Smith: Interviews with Coleman, Cullman, Emily Smith Warner, confidential sources. "A slender reed": Warner.

# 26. Two Brothers

# SOURCES

# Author's interviews:

With Dolie McWhinney Adams, Jane Moses Collins, Joan Ganz Cooney, Mrs. Hilda E. Hellman, Mrs. Elmer B. Howells, Joseph T. Ingraham, William Latham, Michael J. Madigan, Emily Sims Marconnier, General Harry L. Meyers, Mrs. Harold Morse, Lawrence M. Orton, Elwood Rabenold, Sidney M. Shapiro, Florence Shientag, Mae Smisek, Iphigene Ochs Sulzberger, Rexford G. Tugwell, Rebecca Vollmer. Interviews in connection with Paul E. Moses are noted below.

## NOTES

Paul's personality: A composite drawn from the author's interviews with Mrs. Hilda E. Hellman, Emily Sims Marconnier and two other members of the Moses family who prefer to remain anonymous; Paul's wife, Louise Benjamin Moses; with his stepdaughter, Dr. Patricia Kendall Lazarsfeld; with four of his friends: Joseph Lewin, Mrs. Carl Proper, Louis Schulman and one who prefers to remain anonymous; with six officials of the La Guardia administration who knew him: Paul J. Kern, Reuben A. Lazarus, Joseph D. McGoldrick, Paul Windels, Wallace S. Sayre, and one who insists on remaining anonymous; with one of Robert Moses' aides, who insists on remaining anonymous; and with Mayor Robert F. Wagner, Jr., Jan. 26, 1972. The author got to know Paul Moses during eleven long interviews, Dec. 1966-Mar. 1967.

Lexicon: Lazarsfeld. Most knowledgeable: Windels. "Genuinely friendly": Confidential source. RM knew servants only as servants: RM. Paul knew them as people: PEM. Romance at Princeton: PEM, confidential source. Con Ed: PEM.

Llanerch Pool: PEM, but he didn't want to talk about it much. The most complete account comes from Dr. Lazarsfeld, who, as a teen-ager, spent several summers working there. The most complete account of its finances comes

from an affidavit by PEM filed Oct. 24, 1941, in "In the matter of Louise B. Moses, Plaintiff, against Paul E. Moses, Defendant," Supreme Court, County of New York. Hounded by creditors, sued by own lawyer: PEM affidavit, March 8, 1943.

Reconciliation with mother: PEM, Lazarsfeld, Mrs. Proper. Con Ed: PEM, Windels. Believed they were still friends: PEM.

Never went to see his mother: Mrs. Hellman. She refused to see him: Confidential family source.

Her will: File 1463, Liber 1446, p. 93, Surrogate's Court, County of New York.

"I'm trying all this time": PEM. Explanation for mother's decision: PEM.

RM unable to pay tuition: confidential sources. Bill for \$10,000: RM to FDR, date missing, FDR Papers. "More than she could afford": RM to LaG, Mar. 31, 1936, LaG Papers.

Down to \$1,000,000: PEM, confirmed by NYT, June 4, 1930. "Advances": PEM. Net worth down to \$690,422: PEM, confirmed by NYT, May 15, 1931. \$50,000 to charity: In fact, she left \$40,000 (including \$20,000 to Madison House) and \$10,000 to a friend.

LaG administration officials: Interviews with author. "While it is nobody's business": RM to LaG, Mar. 19, 1934, LaG Papers. In charge of 33-man staff: HT, Apr. 29, 1936. No firm would hire him: PEM.

The Moses prodigality toward money: Account of his free-spending habits from Lazarsfeld. Llanerch Pool finances, living on \$25 a week: Depositions by Davidson Sommers, Oct. 22, 1941; by Louise Benjamin Moses, Oct. 22, 1941; by PEM, Oct. 24, 1941; Supreme Court, County of New York, "In the Matter of Louise B. Moses, Plaintiff, against Paul E. Moses, Defendant."

He wasn't getting a cent: PEM, confidential source. These accounts are confirmed by various documents submitted to Surrogate's Court, County of New York, "In the Matter of the Judicial Settlement of the Account of Proceedings of ROBERT MOSES, EDNA M. HURT, WILFRED A. OPENHYM . . . as Trustees for Paul E. Moses, under Paragraph Sixth of the Last Will and Testament of Bella Moses, Deceased." These documents include "Affidavit of Services of Attorney-Trustee under Section 285 of the Surrogate's Court Act" (affidavit filed by Openhym, July 16, 1941); "Memoran-

dum in Support of Objections Filed by Paul E. Moses, Life Tenant" (Oct. 27, 1941); and "Memorandum on Behalf of Accounting Trustee" (filed by Openhym, Sept. 5, 1941). Also "Schedule K—Statement of Commissions Due Upon This Accounting" and "Schedule F-I—Statement of Distribution of Income to Paul E. Moses, the Life Beneficiary of the Trust" (filed by Robert Moses, Edna M. Hurt and Wilfred A. Openhym, Mar. 11, 1941).

"He had some sort of independent income": Schulman. "Damned strange": Confidential source.

Visitors to his apartment: Schulman, Lewin, confidential sources.

Hanging around City Hall: Mayor Wagner, Schulman, Orton.

The two gifts from RM: PEM; confirmed—as are the subsequent events—by a confidential source in RM's office.

RM's treatment of his sister: PEM; confirmed by confidential source.

Tugwell biography: Tugwell, Shapiro. "Thanks particularly": RM to PM, Sept. 4, 1946.

Attitude toward relatives: Confidential sources.

RM at home: Jane Moses Collins, Mrs. Marconnier, Ingraham, Shapiro, Madigan, Mrs. Howells, among others. "He never acted busy": Mrs. Howells. "No side": Adams.

Robert and Mary: Above interviews, but particularly interviews with Mary's close friend Mrs. Harold Morse. Her sister: Mrs. Marconnier. The captain's sister: Mrs. Mae Smisek.

"Bob's on one of his rampages": Latham. Markel incident: Mrs. Vollmer. "Those of us who are privileged": Kaltenborn, "Introduction" to Rodgers, Robert Moses, p. xvi.

"A mouse": Confidential source. Florence Shientag: Interview with author. "Mary was a darling": Mrs. Sulzberger. The one interview: WT, Nov. 2, 1934. Joan Ganz Cooney: Interview with author. "An alcoholic": Arsenal party: Mrs. Hellman. Hospitalized: Shapiro, General Meyers.

# 27. Changing

# SOURCES

# Books and documents:

Mann, La Guardia: A Fighter Against His Times. La Guardia Papers.

## Author's interviews:

For Tunnel Authority fight, with the Authority's chief engineer, Ole Singstad. deputy chief engineer William McD. Griffin, general manager P. Fearson Shortridge, and with Reuben A. Lazarus and Walter D. Binger. (All three Authority commissioners are dead.)

For Housing Authority fight, with Adolf A. Berle, Jr., Paul J. Kern, Reuben A. Lazarus, Joseph D. McGoldrick and Paul Windels.

#### NOTES

"Leave the son of a bitch off": Lazarus. RM attempted to have bill killed: Lazarus, Singstad. Overtures to Singstad: Singstad. Ickes adamant: Singstad, Windels. RM sought delay: Singstad, Windels, Lazarus; NYT, Apr. 15, 19, 20, 21, 30, May 6, 8, 12, 1936.

RM interested in housing because that was where the money was: Windels had a private luncheon with him at this time at which, he says, RM's thinking was obvious. RM had made almost no public statements on housing up to this time. LaG's personal interest in Mann, p. 140.

No one suspected the truth: Windels, Berle. RM's housing proposal was detailed the next morning in NYT, and

HT, Nov. 23, 1938.

Cutting him off the air: When questioned about it, LaG at first said blandly (NYT, Nov. 24, 1938) that it had been due to a "misunderstanding": WNYC, the Mayor said, was prohibited by law from incurring expense in broadcasting "private" functions; the station had set up the equipment under the impression that the speech was a Park Department function; when it discovered that was not the case, it had no choice but to cancel it. "It's a pity," the Mayor said. "If some responsible person had only telephoned me at my home I would have been glad to arrange for the broadcast." Reported the Times: "Mr. Moses has no comment to make." On June 24, 1939, LaG indirectly admitted having ordered the cutoff (HT).

Maneuvering on the committee: Windels. Orders McGoldrick not to pay the bill: McGoldrick.

LaG convinced RM seeking personal power: Windels, Kern, Lazarus, McGoldrick. With McGoldrick, in particular, LaG made his feelings about "priorities" clear. Cuts off two park projects: They were RM's plans for a huge new "Sound-

view" park in the Bronx and for a complete renovation of City Hall Park. For a feeling of the real acrimony developing between LaG and RM at this time, see LaG to RM, Oct. 27, Nov. 30, 1938, LaG Papers. In a development whose outcome was significantly different from the past, personally insulted Corporation counsel Chanler (RM to Chanler, Nov. 2, 1938), Chanler protested to LaG (same date), LaG demanded that RM apologize (Nov. 26), RM refused (Dec. 1, 1938)—and LaG cut off the Soundview appropriation. All in LaG Papers. Tells McGoldrick and Morris to take harder line: McGoldrick.

## 28. The Warp on the Loom

#### SOURCES

## Books, articles and documents:

Bard, The Port of New York Authority; Bird, A Study of the Port of New York Authority; Cohen, They Builded Better Than They Knew; Garrett, The La Guardia Years; Nevins, Herbert H. Lehman and His Era.

Temporary State Commission on Coordination of State Activities (William J. Ronan, Director of Studies), "Staff Report on Public Authorities under New York State," hereafter referred to as "Ronan Report."

1953.

Charles Haydock, "Municipal Authori-Their Backgrounds and Postwar Possibilities," an address before the Pennsylvania Municipal Association, Harrisburg, Nov. 1943.

Reuben A. Lazarus, "Public Authori-

ties," 1965 or 1966 (unpublished).

William S. Lebwohl (TBTA counsel), "Memorandum-Power of Port Authority to Construct Third Tube of Lincoln Tunnel," Mar. 23, 1951.

## Author's interviews:

Reuben A. Lazarus, Michael J. Madigan, Joseph D. McGoldrick, Lawrence M. Orton, Sidney M. Shapiro, Paul Windels.

## NOTES

History of authorities: Primarily Haydock, Bird and Lazarus. Named "Authority": Cohen, p. 290. Jimmy Walker: Lazarus, who was asked by Walker to draft the legislation for it. Port Authority: Cohen, pp. 289-90. All authorities created in a single pattern: Haydock, Bird, Bard. Port Authority members expect its tolls to be eliminated: Cohen, pp. 262-63. First "general bond": Bird, pp. 17-19; Bard, p. 248.

But RM's thinking was changing: The entire following discussion of RM's thinking is based primarily on the observations of two men who were privy to it-Paul Windels, first counsel of the Triborough Bridge Authority under RM, and Jack Madigan, RM's most trusted financial confidant—and one man who was not: Reuben A. Lazarus, who had to analyze RM's handiwork for LaG and whose bill-drafting genius made him perhaps the man best able to do it. The author is indebted to these three men for the substantial amounts of time they gave him in helping him to follow the intricacies of the authorities' enabling legislation.

Carrying and maintenance charges on Henry Hudson: Madigan. Traffic counts: TBTA Annual Reports. Revenues could be used in only one way: Lazarus, "Public Authorities." Bankers willing to settle for lower coverage: Madigan. LaG's new firmness: See last note, Chapter 27. Albany drying up: Nevins, pp. 172-74. Early in 1938, in fact, the Governor, showing a new firmness toward RM, vetoed bills that would have authorized state contributions for construction of RM's proposed Cross County, Southern, Pelham, Hutchinson River and Marine parkways, stating, "It is clear that the state in its present financial condition cannot possibly, with safety, assume [such] large financial operations." NYT, Apr. 12, 1938. Legislative leaders said they could see no time in the foreseeable future when these parkways could be started. Brooklyn Eagle, Apr. 17, 1938. City's financial difficulties: Garrett, pp. 142-51. RM in interview with author summed up this view of the difficulties, and the fact that there was no reasonable possibility of the city's being able to finance his dreams.

Money he would be free to use: Windels, Madigan, Lazarus, Shapiro. Author's analysis of the Triborough acts RM wrote, plus interviews. City had no alternatives: The above interviews, plus McGoldrick, Orton.

Powers of a different type: Interviews and analysis cited above. The Lebwohl

memo, although written in 1951, shows RM's thinking at work.

State cannot interfere with bonds: Best statement, Lazarus, "Public Authorities," p. 4.

He had to conceal his purposes from everyone: Lazarus, Windels. The various devices he used are shown in sections of bond resolutions of RM's various authorities. While Lazarus, Windels and Madigan assisted the author in understanding them, the following section is the author's own interpretation of the enabling legislation creating the various Moses authorities, and he assumes full responsibility for its conclusions. Fiscal agent: Ronan Report, pp. 466-72, 478.

"To be a caretaker": RM. Authority officials traditionally unsalaried: Cohen, p. 289; Ronan Report, p. 116. "If I may be permitted": TBTA, "Fifth Anniversary of the Opening of the Triborough Bridge," June 11, 1941, p. 6. Jones Beach, Jacob Riis: Ronan Report, p. 462.

LaG's awakening: RM to LaG, Apr. 7, 1938; LaG to RM, Apr. 11, 1938; RM to LaG, Apr. 12, 1938; LaG Papers. Description of LaG's thinking: Windels, Lazarus, McGoldrick.

Walter D. Binger, Richard S. Childs, William Exton, Jr., William McD. Griffin, Reuben A. Lazarus, Joseph D. Mc-Goldrick, Lawrence M. Orton, Sidney M. Shapiro, P. Fearson Shortridge, Ole Singstad, Rexford G. Tugwell, Paul Windels.

## NOTES

Bypass route costs: True costs, different from newspaper figures, in RM to LaG, Sept. 3, 7, 1938, and in suggested draft by RM of LaG to Ickes, undated, LaG Papers. The Mayor would have to allow him to take over the Tunnel Authority: RM to LaG, Sept. 8, 1938, LaG Papers. \$39,000,000 to \$43,000,000 and various LaG maneuverings: McGoldrick.

Tunnel becomes bridge: TBTA, "The Brooklyn-Battery Bridge," Jan. 22, 1939. "The finest architecture": RM introduction to TBTA, "Three Decades of Progress," 1966. "A vehicular bathroom": Moses, Dangerous Trade, p. 220. "A hole in the ground," taking LaG out on yacht: Shapiro.

"He's going to bankrupt the city": Mc-Goldrick quotes Frank Taylor, the last pre-Fusion Comptroller, as telling him this upon McGoldrick's appointment to

the post in 1934.

The capital budget situation was even more ominous: McGoldrick's feelings were based on these figures: In Oct. 1938, the money left to the city under the state ceiling was only \$70,943,125 and \$55,568,056 of this amount was already committed for future expenditures

on projects, mostly Moses', already under construction. The Comptroller believed that the city's assessed valuation the base which determined the debt limitwould increase in 1939 to a point at which the margin left under the limit would rise to \$126,683,125, but this was only a prediction, not a certainty and he and the Mayor had, moreover, agreed, when he first took office, that a reserve of at least \$45,000,000 must be left in the debt limit at all times to pay for preventive maintenance to the city's physical plant, for unexpected major repair work and for other emergencies. If this principle was adhered to, the total amount available to the city for new expenditures in 1939 would, McGoldrick estimated, be \$26,583,125. And the forecast for 1940 was even gloomier; obligations already assumed by the city for payment in that year assured that the total available for capital outlays would be under—well under—\$20,000,000.

McGoldrick's feelings, LaG's agreement with him: McGoldrick. "Reluctant as I am": NYT, Oct. 12, 1938. RM's attack: NYT, Oct. 13, 1938. Board of Estimate session: NYT, HT, Brooklyn Eagle, Oct. 14, 1938; McGoldrick.

A ten-story building: NYT, Jan. 26, 1939. Almost to Rector Street: HT, Mar. 19, 1939. Corporation breaking off negotiations: Tom Brown, manager of downtown office of Cushman & Wakefield, Inc., to LaG, June 5, 1939, LaG Papers.

History of Lower Manhattan: Books by Gilder, Nevins and Krout, Stokes, Ulmann. They had had to watch as cobbled slips . . . : WPA, New York Panorama, pp. 204-18. "The vocabulary of thrift": Henry James, quoted in Pritchett,

History of the Aquarium: Books by Stokes and Ulmann; WPA, New York Panorama, pp. 21, 24, 39, 53, 92, and New York City Guide, pp. 49 ff. The most complete history is Gilder book and Mc-Aneny OHR. Gilder's book contains pictures of the fort in each of its incarnations. Lafayette: Gilder, pp. 148ff. Attendance at Aquarium: Gilder, pp. 233–36; *HT*, Feb. 7, 1941; McAneny OHR. Reformers' feelings of effect of the bridge on the park: Letters-to-theeditor, HT, throughout 1939; McAneny OHR; Binger, McGoldrick, Windels.

McAneny biography: Lewinson, pp. 85-88; obituaries, NYT, HT, July 1953; Garrett, pp. 92-93; McAneny OHR. Could have had Fusion nomination: Various newspapers, 1917. "A sort of

background": Talese, p. 174. Wrinkled: Binger, Childs. World's Fair: McAneny OHR.

Isaacs biography: Isaacs' book; J. M. Flagler, "The Public Be Served," The New Yorker, Dec. 12, 19, 1959; obituaries, NYT and HT, July 13, 1962; Binger.

"Maybe, idolizing him": Confidential

Isaacs sent him letters; he didn't reply: Isaacs to LaG, enclosing copies of letters to RM, Jan. 25, 26, 1939, LaG Papers. Disturbed but not worried: Binger, Win-

Costs: TBTA, May 24, 1939, brochure "Without brochure. Singstad nickel": RM, introduction to TBTA brochure. Ammann's "guidance": Exton, one of the two representatives (the other is dead); Windels. \$21,500,000: Isaacs to LaG, Jan. 26, 1939; to RM, Jan. 28, 1939; RM to Isaacs, Feb. 1, 1939; LaG Papers. Binger. "On the basis of real cost": Singstad brochure.

The two drawings: Both were printed in HT, Feb. 6, 1939. Morning newspapers: NYT, HT, Feb. 14, 1939. Planning Commission hearing: NYT, HT, Brooklyn Eagle, Feb. 16, 17, 1939. Decision: Mar. 2, 1939. The commission did not make even a pretense: Orton. Eating up the track in Albany: Brooklyn Eagle, Mar. 1, 8, 9, 1939; HT, NYT, Mar. 1. Isaacs noticed a point: Binger; Isaacs demanded a ruling from State Attorney General John J. Bennett on whether a home-rule message was required—Bennett said it was.

Foot-stamping fury: McGoldrick. When LaG learned about the buried clause from Isaacs, he called in the Comptroller and Reuben Lazarus and had McGoldrick produce from his files a copy of RM's letter of Sept. 8, 1938, promising it wouldn't cost the city "a nickel" and then exploded. McGoldrick, Lazarus. A copy of RM's letter is in the LaG Papers, together with this prescient attached memo from the Mayor to McGoldrick, dated Sept. 28, 1938: "Please keep this copy in your permanent files. As we are in agreement that no part of this cost could be absorbed by the city, I think the time will come when we may need this letter for useful reference." A ray of hope: McGoldrick, Singstad, Windels.

"Central Committee's" activities: Description in "Minutes of Victory Luncheon, Central Committee of Organizations Opposing the Battery Toll Bridge, Held at Architectural League, 15 E. 40th St., New York, N.Y., July 20, 1939,"

LaG Papers. Burlingham's conversation with LaG: Singstad and Windels are among those to whom "CC" related it. Gave Tunnel Authority permission to lobby: Lazarus, Singstad; Robert F. Wagner, Sr., to LaG, Mar. 13, 1939, LaG

"A brief delay": NYT, Mar. 11, 1939. "It seems clear now": HT, Mar. 20, 1939.

Telegram from Key West: RM to LaG, Mar. 9, 1939, LaG Papers. "The same old tripe": NYT, Mar. 27, 1939.

City Council hearing: NYT, HTBrooklyn Eagle, Mar. 28, 29, 1939. Feelings of reformers: Binger, Exton, Mc-Goldrick, Windels. Civil service architects vs. consultants: The analysis, by George Curran, showed that on major public works designed by civil service employees, design costs were 3.2 percent of the total, while on public works designed by consultants, such costs were between 6 and 7.5 percent. "If there was an argument raised": Exton. A surplus of \$4,-000,000: See Chapter 31. "I was afraid": McGoldrick. "Shock": That word was used by, among others, Childs, Exton and Windels.

"A happy smile": NYT, Mar. 29, 1939. "The tunnel is dead": RM quoted in Brooklyn Eagle, Apr. 5, 1939. "And when the last law was down": Bolt, p.

"Call Eleanor": Windels. "My Day": WT, Apr. 5, 1939. Burlingham's lettersto-the-editor: HT, Apr. 6, June 2, 1939. RM's answer: HT, June 5.

"In graveyard confidence": Burlingham to FDR, Apr. 10, 1939, FDR Papers. RM assured of favorable report: RM; also RM quoted in NYT, July 19, 1939. "Speak to the President": Watson to Schley, Apr. 26, 1939. On the same day, moreover, Woodring memoed FDR: "I have checked into the proposed Battery Bridge project, New York City, without disclosing the fact C. C. Burlingham had written you. If you desire, I shall be glad to discuss this project with you after the Chief Engineer has received the field report and before any final action is taken thereon by the War Department." FDR Papers. The engineers suddenly evasive: Hall to RM, May 2, 1939, quoted in Dangerous Trade, p. 204. RM's whole side of this controversy, pp. 202-07, in section titled "Enter Mrs. Roosevelt.

"The President pulled down his lip": Frances Perkins OHR, Vol. III, p. 371. "Personal and Confidential": Watson to FDR, May 18, 1939, FDR Papers. **Woodring announcement:** NYT, July 18, 1939."Rage and ridicule": HT, July 18.

Air Force experts: RM. RM's hint that FDR was behind it: NYT, July 18, 19. The President said firmly: NYT, July 19. "No doubt this squares up accounts": RM quoted in NYT, July 18. LaG's gratification: Lazarus.

"Any mention": The author mentioned it in an interview with RM and drew this reaction. Eleanor Roosevelt's denial: "My Day," WT, May 13, 1939. "Oh, she was in the middle of it": RM. "Increasingly unprintable": Lazarus. "A review of 'My Day'": Moses, Dangerous Trade, p. 202.

\$12,000,000 pill: The complicated financing that went into the final arrangements-so different from newspaper accounts—is detailed in RM to LaG, Nov. 6, 1939 (which contains RM's plea to charge tolls); Singstad to LaG, Nov. 21, 1939; RM to LaG, Nov. 30, 1939; unsigned and unaddressed memo dated Jan. 18, 1940; Jesse Jones to Alfred B. Jones, Mar. 9, 1940; Fearson Shortridge to LaG, Mar. 12, 1940; Morton McCartney (chief, self-liquidating projects division of RFC) to RM, Nov. 20, 1940. All in LaG Papers.

Victory Luncheon: See "Minutes" cited above.

## 30. Revenge

## SOURCES

## Books:

Rodgers, Robert Moses; White and Willensky, AIA Guide to New York City.

See also "Sources" for Chapter 29.

#### NOTES

"If the roof leaks": Robert Forman to HT, Mar. 1, 1941. Reformers' feelings: From interviews with many, and from their OHR's, particularly McAneny. Among those interviewed who consented to be quoted are Binger, Exton, McGoldrick, Orton, Weinberg and Windels.

Whole columns of letters-to-the-editor: HT, for example, printed nine on Mar.

1, 1941.

RM states tunneling will undermine: For example, NYT, May 13, 1941. Exton checks: Exton, confirmed by Singstad and Binger, and by Singstad to Exton, Feb. 15, 1941, Exton Papers. 170 feet: Isaacs' successor as Manhattan borough president, Edgar J. Nathan, Jr., in letter to NYT, Mar. 16, 1943. It was going

to fall down; "a joke": Binger. "No history worth writing about": RM in HT. Feb. 25, 1941. "Why must this ancient thing be torn from us?": Exton to NYI Feb. 17, 1941. Not even certain of new location: Confidential source. In fact, LaG shortly thereafter announced he had decided the new location would not be in the Bronx; HT, May 2, 1941. Demolition not the issue: NYT, HT, Sept. 12, 1941.

Palma switch: NYT, May, Sept. 12, 1941; Morris switch: May, Sept. 12, 1941.

No construction company would bid: Actually one bid was submitted in 1942, but it was a false bid, submitted to save embarrassment. Suit: McAneny OHR; Binger, Windels. "With the unleashing": HT, Feb. 25, 1941. Burlingham visiting the Aquarium: Binger. McAneny's fight: McAneny, Isaacs OHR's; Binger, Exton, Windels. "The successful conclusion," "most gratifying": NYT, Oct. 8, 1949. "McAneny beat Moses": Isaacs OHR. "Now it is a monument": White and Willensky, p. 10. "The ten-year battle": Rodgers, p. 94.

## 31. Monopoly

## SOURCES

## **Documents:**

"Excerpt from Minutes of a Meeting of the Port of New York Authority held Thursday, Sept. 25, 1941"; "Special Report of the Staff to the Construction Committee on Mr. Ole Singstad and the Acquisition of the Properties of Anjou Realty Corporation and Nord Holding Corporation"-both these documents attached to RM to LaG, Nov. 10, 1941, LaG Papers.

"Re: Ole Singstad" (this is the title of a letter from Alfred B. Jones to LaG, Mar. 20, 1942, which constitutes the Tunnel Authority investigation of the

Anjou and Nord companies).

## Author's interviews:

Howard S. Cullman, William McD. Griffin, P. Fearson Shortridge, Ole Singstad, Paul Windels, confidential sources.

#### NOTES

RM recommends halt in tunnel work: HT, Oct. 6, 1942. Not steel at all: William H. Friedman in HT, Oct. 6. LaG's furious statement: HT, Oct. 7. WPB stopping production: NYT, Oct. 13, 1942. "Doing the right thing": RM quoted in HT, Oct. 18, 1942.

Tunnel Authority financial situation: Various "Tunnel Authority" folders in LaG Papers; Shortridge, Singstad. RM's analysis of that situation: Various letters in LaG Papers; typical is RM to LaG, June 7, 1945. "Mess": For example, RM to LaG, Dec. 4, 1940, and RM to Jones, Sept. 29, 1945; LaG Papers.

Singstad's brother-in-law's real estate transactions: Minutes of Port Authority meeting of Sept. 25, 1941, and staff report that was presented to that meeting. Power struggle: Singstad, Windels. "He was afraid": Windels. "Great regret": Alfred B. Jones reported this to RM, July 16, 1943, LaG Papers. "The Singstad story": RM to LaG, Nov. 10, 1941. LaG Papers. This and subsequent communications indicate that RM had given the Mayor an oral version of the affair. RM quoted Cullman about the alleged \$50,-000 in Nov. 10, 1941, letter. Madigan's overture to Singstad: Singstad, Windels. Madigan would not discuss it, but Lazarus says he knew about the overture.

RM recommends Cullman: The recommendation was made secretly, and cannot be found, but a green slip dated Feb. 10, 1943, and filled out by one of LaG's secretaries to indicate the nature of the document for filing purposes can be found in LaG Papers, Box 710, folder marked "Parks—Feb., 1943."

Friedman to LaG: June 15, 1945. LaG reply: June 18, 1945. Buried newspaper articles: For example, HT, July 26, 1945.

RM firing Shortridge: Shortridge.

## 32. Quid Pro Quo

## SOURCES

Books:

Garrett. The La Guardia Years; Gunther, Inside U.S.A.; Morris, Let the Chips Fall; Moses, La Guardia: A Salute and a Memoir; Moscow, Politics in the Empire State.

## Author's interviews:

Walter D. Binger, Joseph D. McGoldrick, Paul Windels.

## NOTES

LaG's desk: Gunther, p. 580. Pressing his back: Morris, p. 204. "I guess I'm tired": To Gunther (p. 588).

DN straw poll: Garrett, p. 285. Analysis of his problems: McGoldrick, Windels;

Garrett, pp. 275-99; Morris, pp. 202-03; Moscow, p. 28.

RM's one public statement: HT, Oct. 22, 1945. Men who knew Moses: McGoldrick, Windels. WJZ announcement: Various newspapers, Nov. 2, 1945. O'D describes his first conference with RM—at the Links Club—in his OHR, pp. 246–247: "I . . . asked [Moses] if he'd be winning . . [Moses] said, 'Well, of course, I might tell you that I'm bound to make two speeches for one of your opponents . . .'"

<sup>1</sup>iIt's true": HT, Nov. 2, 1945. Press reaction: Post, Nov. 2; DN, Nov. 3; HT, Nov. 3.

"So shrunken": Moses, La Guardia, p. 44. Engineers Club scene: Binger.

tors' work sheets (all hereafter referred to as "Levitt TBTA Audit").

Office of the State Comptroller, Division of Audits and Accounts, "Draft Report" on LISPC, Jones Beach and Bethpage authorities; also auditors' work sheets (all hereafter referred to as "Levitt LISPC Audit").

Certain files of the TBTA made available to the author on a confidential basis (hereafter referred to as "Secret TBTA Files").

TBTA Annual Reports, 1946-67.

## **Oral History Reminiscences:**

Stanley M. Isaacs, Reuben A. Lazarus, George McAneny, William O'Dwyer.

## Author's interviews:

Henry Barnes, Harold Blake, Peter J. Brennan, Peter Campbell Brown, William Chapin, Ernest J. Clark, Ernest Cohen, Albert M. Cole, John A. Coleman, Victor F. Condello, Fred J. Cook, Joan Ganz Cooney, Timothy J. Cooney, Edward N. Costikyan, Howard S. Cullman, Thomas E. Dewey, Perry B. Duryea, Jr., Julius C. C. Edelstein, Jerry Finkelstein, Walter S. Fried, Hortense Gabel, Monroe Goldwater, Nettie Greenberg, William J. Haddad, Mrs. Rudolph Halley, Vincent R. Impellitteri, Joseph Kahn, Saul Kaplan, Edna F. Kelly, William Latham, Reuben A. Lazarus, Arthur Levitt, Jacob Lutsky, Michael J. Madigan, Michael J. Merkin, J. Burch Mc-Morran, Edward F. Moloney, Warren Moscow, John Mulcahy, Mary Perot Nichols, Paul O'Dwyer, Paul O'Keefe, Lawrence M. Orton, Jackson Phillips, Charles F. Rodriguez, Dwayne Saunders, Louis Schulman, Paul R. Screvane, Sidney M. Shapiro, Philip Shumsky, Charles Stark, Bertram D. Tallamy, James Truex, Robert F. Wagner, Jr., Arthur B. Williams, William J. Zeckendorf.

More than a score other interviewees -Moses men, Wagner men, city officials, state officials, federal officials—

have requested anonymity.

## NOTES

Construction Coordinator: Not one of the Assistant Corporation Counsels: Con-Citizens Union protest: NYT (Feb. 6, 1946) noted that, at a Board of Estimate session, "a letter from . . . the Citizens Union protesting that the bill gave too much power to one person and superseded the Charter, went unheeded." O'D's belief that it would be "purely administrative": Post, May 2, 1946. The one paragraph which the Times devoted to the Board's approval of the bill was the next to last in a story on Feb. 5 Using innocent phrase as authorization: Rodriguez, Lutsky. Lying for twenty years: Edelstein.

RM's relationship with Burcau of Public Roads: Du Pont to RM, Jan. 25, 1954, Wagner Papers; Tallamy. Their idol: Author's interviews with Tallamy and various BPR officials who declined to be identified. "Under federal law": I utsky.

Taking over housing: Although its membership changed from time to time. the Moses Men who gave him control of the Housing Authority board for most of the 1946-58 period were Thomas F. Farrell, its chairman from 1946 to 1950; Philip J. Cruise, its chairman from 1950 to 1958; Thomas J. Shanahan, its vice chairman from 1948 to 1958; and William Wilson, a long-time Moses consultant who was a board member from 1952 to 1957. Among top Authority officials who were loyal "Moses Men" were Assistant to the Chairman Gerald J. Carey, Director of Development James A. Dawson, Director of Planning Samuel Ratensky and Director of Personnel Joseph Rechetnick. Controlled it absolutely for a decade: Moscow, its executive director for two years, Orton, Lazarus, confidential sources; the author's analysis communications between RM, the Authority and O'D, Impy and Wagner, from the respective Mayoral Papers. One of the few public attempts to reveal the extent of RM's influence was made by former Authority Chairman Langdon Post in 1947, when he said, "The City Housing Authority, by law, has five members. But the sixth and really important member seems to be Bob Moses." Post, Sept. 5, 1947.

Dewey liked to boast: Interview with author. RM cursing him: State DPW official Arthur B. Williams, confidential sources.

Harriman sitting silently: Joan Ganz Cooney, among others. "Get tough with Moses": Truex; confirmed by several confidential sources. Suggesting dam be named for RM: Chapin, Latham, Sha-

The extra carbons: Shapiro, confirmed

by confidential sources.

Control of District Ten: Most of the DPW engineers who spoke with the author declined to be identified. Among those who agreed were McMorran, Maloney, Tallamy and Williams and their stories are confirmed by, among others, Barnes, Clark, Latham and Shapiro. Macy, in Macy to Dewey, Oct. 30, 1947, Macy Papers, complains about RM's domination of the District.

RM recommending McMorran: Mc-Morran. RM's evaluation of McMorran: Dangerous Trade, p. 298. RM's absolute veto power: Tallamy, McMorran, Maloney. States had final say: Leavitt, pp. 166–167.

The machine: Moscow, What Have You Done for Me Lately? and Last of the Big-Time Bosses; Connable and Silberfarb, pp. 292ff.; Garrett, pp. 303-36; Cook and Gleason, "The Shame of New York." "A vast, corrupt organization": HT, quoted in Gunther, p. 561. Judgeships sold: Garrett, p. 307. Democrats bringing in Republicans: "Shame"; Morris, p. 220; Moscow, Politics in the Empire State, p. 136; What Have You Done for Me Lately?, pp. 56-57. How this device stymied investigations: "Shame," p. 289.

The Tweed Ring: Penn Station: Moscow, What Have You Done for Me Lately?, p. 147. Plunkitt: Connable and Silberfarb, pp. 158-59. "Honest graft": Moscow, Politics in the Empire State, pp. 213-15; The Last of the Big-Time Bosses, esp. p. 51. Al Smith quote: Allen, p. 89. "A king's ransom": Lazarus OHR.

He had the money to pay it: These figures come primarily from the author's analysis of Comptroller's Reports, 1946-The housing figures come from various confidential sources in the City Comptroller's office and in RM's hierarchy, and from City Planning Commission, "Public Works Prog-Report," 1949, and "Planning Progress, 1940-50," Mar. 15, and from analysis of Authority figures by Orton and confidential sources in Comptroller's office; and from the Housing Authority's "Project Data -Dec. 31, 1972." DPW funds come from various DPW reports, 1946–63, from RM's "Arterial and Progress Reports," particularly Nov. 8, 1965, pp. 2-31. Slum Clearance funds from various Slum Clearance Committee "Title I Progress" reports, particularly July 15, 1957, and Oct. 26, 1959. Three and a half billion dollars dispensed in the city: According to "Comptroller's Reports," see above, \$3,684,114,-923 between 1946 and 1960. Triborough traffic and income figures: TBTA Annual Reports, 1946-68.

Difficulty in auditing TBTA: Confidential sources. 1,400 editorials: Tobin, "Public Relations," p. 8. Feelings of politicians: None willing to be quoted;

among those who observed their feelings are Lazarus, Lutsky, Orton, Rodriguez. "The natural locus of corruption": Costikyan, p. 297. He said: "It is not a particular group of people that is the magnet which attracts corrupters. Power, and power alone, attracts. The natural locus of corruption is always where the discretionary power resides. It follows that in an era when political leaders exercised basic power over the government officials whom they controlled, the locus of corruption was in the offices of the political bosses-Tweed, Croker, Kelly, and the rest. But as power has shifted from the political leader to the civil servant and the public officeholder, so the locus of corruptibility and of corruption has shifted." Rodriguez, in an interview, gave a very perceptive view of this situation to the author, as did Haddad, Kahn, Lazarus, Lutsky and others.

Triborough insurance: On slum clearance project: Blaikie had it first: "Shame," p. 290. Lost it to De Sapio broker: Lazarus. Over-all pattern: Secret TBTA Files, including RM to Spargo, Dec. 4, 1953; Spargo to RM, Dec. 8, 1953. \$500,000 per year: Moscow, in interview, said he was told this by De Sapio. The figure is confirmed by those figures available in the TBTA files. Brokers had to do no work for it: Spargo to C. J. Reid, Dec. 1954. Shifting policies to broker "friend of Tom Shanahan's": Spargo to RM, Dec. 8, 1953, Secret TBTA Files. For a decade: Levitt TBTA Audit, pp. 113-31. De Sapio: The friend was Moscow, and Moscow related this to author in an interview. Some to a broker close to the leader: The broker was Timothy W. Foley, Inc., and Levitt TBTA Audit, p. 114, shows that the Foley company received premiums totaling \$121,000. Later De Sapio was believed to be close to Campo & Roberts, Inc. Levitt TBTA Audit shows that that firm received premiums on Verrazano-Narrows Bridge insurance beginning Nov. 9, 1959; a very incomplete early total of the premiums it received from this one project is \$57,-000. Campo & Roberts received hundreds of thousands of dollars in premiums on other Moses projects. Screvane interview and see "Notes" for Chapter 45. Steingut: Levitt TBTA Audit, p. 116. No "government business": NYT, June 17, 1968. Roe: Spargo to Roe, June 2, 1968, Secret TBTA Files. Crews: Spargo to RM, Dec. 28, 1953, Secret TBTA Files. Stephens: RM to Spargo, Dec. 4, 1953; Spargo to RM, Dec. 8, Secret TBTA Files; Lazarus.

Triborough legal fees: Rosenman's boost from RM: Moses, Dangerous Trade, p. 705. Jimmy Hines' assembly-man: Lazarus. \$250,000 fee: Transcript, "Hearings, U. S. Congress, Senate Banking and Currency Committee," Vol. 49, p. 3131 (New York City, Oct. 1, 1954). Rosenman also represented a syndicate to which RM was planning to hand an immensely valuable Title I site adjacent to the Lincoln Center development for "a group of theaters" (Dangerous Trade, p. 520). Why this plan fell through is unclear. Rosenman was also to reap a small fortune from RM's 1964-65 World's Fair (see Chapter 45). Preusse: See Chapter 45.

"Because Tobin doesn't give me anything": Lazarus. Rosenman's trip: NYT, Feb. 25, 1957. The *Times*'s profile of Rosenman on this occasion called him, in an unintended double-entendre, "Proconsul of Power."

Shanahan: Biography: J-A, Aug. 3, 1954; NYT, Sept. 2, 1956; July 3, 1959; Post, Aug. 26, 1959; "Shame," pp. 294-305. Interviews with Cook, Finkelstein, Goldwater, Haddad, Kahn, Lazarus, Merkin, Moscow, Screvane, Wagner and numerous confidential sources. "He went on face value": Merkin. Hatred of "Commies": Moscow. "One of the most notorious": Edelstein. "Ethically . . . left something to be desired": Moscow. "We all knew": Goldwater. No mention: Connable and Silberfarb book. \$27,978: Levitt TBTA Audit, p. 114. Fees for banking services: Levitt TBTA Audit, pp. 148, 150. \$15,000,000 deposit: Work sheets for Levitt TBTA Audit, undated unnumbered. \$48,963,000: Levitt TBTA Audit, p. 149. Bank couldn't cover it: Confidential source. Shanahan and Housing Authority: Moscow. RM delegated him slum clearance power: Goldwater, Haddad, Kahn. "A part of my deal": Unidentified sponsor quoted in "Shame," p. 294. \$20,000,000: Number of shares given by Merkin. Housing Authority projects were the projects Moses wanted: Author's analysis of TBTA files, O'D, Impy and Wagner Papers; interviews with RM, Chapin, Coleman, Gabel, Goldwater, Impellitteri, Lazarus, Lutsky, Moscow, Mulcahy, Orton, Rodriguez and numerous confidential sources. "Utmost importance": RM to Impy, Feb. 11, 1953, Impy Papers. Buckley phone call: Rodriguez. State senator: Confidential source.

"Only one way to hold a district":
Quoted in Riordon, p. 25. Wagner to
Screvane: Wagner, Screvane. Dossiers:
Ingraham, Lutsky. Getting Salmon a job:

RM to Cashmore, date lost, Wagner Papers.

"Silence to the grave": Confidential source.

Banks: The best analysis of banks' relationship to New York politicians is the HT's "Our Sideline Legislators" series by Richard L. Madden and Martin J. Steadman, Aug. 1963. The best analysis of banks' relationships with one politician is a series of articles on State Senator Edward J. Speno in Newsday by an investigating team headed by Bob Greene, 1969. The best analysis of banks' power in general is Lundberg, The Rich and the Super-Rich. This section—as well as the following sections on unions and contractors—is drawn in large part from the author's own observations as a political and investigative reporter for Newsday. Banks needed authority bonds: Interviews with Jackson Phillips, director of municipal research, Dun and Bradstreet; Dwayne Saunders, vice president, Bank Investment Division, Chemical Ernest Cohen, director of research, State Banking Department; Madigan; confidential sources. "Supply and demand": Madigan. RM's feelings: Madigan; they remained unstated but were obvious in the author's interviews with RM. 15% reserve: Levitt TBTA Audit, p. 22. "We all knew": Confidential source. RM offered bankers more than safety: The additional incentives he offered by such devices as unnecessarily high interest rates were explained by Phillips and other bankers, and confirmed by Levitt TBTA Audit, pp. 18-37, 147-50, and by comments deleted from the audit at RM's demand but made available to the author.

Private placement: Madigan.
Chase had the most: White, p. 83.
"There's a dictator": O'Dwyer OHR.
Largest single recipient: Levitt TBTA
Audit, p. 32. Chemical Bank: NYT, Oct.
25, 1968. "We bought a ton": Saunders.
Remaining divided up: Levitt TBTA
Audit, pp. 32ff. Rockefeller to RM: May
25, 1960, quoted in Moses, Dangerous
Trade, p. 73. "Pushing hard": Rodriguez.
"There's graft": Podriguez History

"Replacing graft": Rodriguez. History of the organization: Connable and Silberfarb book.

"Get the names in": Costikyan. Saul Kaplan says legislators who wanted summer jobs for children or relatives in state parks had only to ask.

Cardinal Spellman's opinion of Eleanor Roosevelt: Moscow, Last of the Big-Time Bosses, p. 122, relates the Cardinal attacking Mrs. Roosevelt personally and being ordered to call on her at Hyde

Park and "make up"—an order delivered by Pope Pius XII after Ed Flynn had flown to Rome to see him. Swapping pieces of land: RM. Fordham: See Chapter 36. Church interceding for him: Numerous interviews.

The store for Macy's: Barnes.

"All Moses had to do was push that button": Rodriguez; virtually the same words were used by Lutsky—and by many other politicians in interviews.

Borough presidents: Moscow, "Political Machines Have Lost Their Grip," The Saturday Evening Post, Apr. 12, 1947; What Have You Done for Me Lately?, pp. 57ff. Tammany's 30,000: Moscow, What Have You Done for Me Lately?, p. 57. Power running both ways: Connable and Silberfarb, pp. 182ff. Cook: "Shame," p. 262. For an over-all analysis of the shifts in their power, see Sayre and Kaufman, pp. 638-39. Effect of the new scale of construction: The most incisive analysis the author has heard was given by Rodriguez, who worked for both an "old" BP-Jimmy Lyons-and a "new," Herman Badillo. "On the chessboard": Sayre and Kaufman, p. 652. Control of the streets: Sayre and Kaufman, pp. 629-30. "Unwritten law": Moscow, Rodriguez, among others. "Commanding position": Sayre and Kaufman, p. 631. New realities: Costikyan, Moscow, Rodriguez, Lazarus, Wagner, among others; confirmed by the author's analysis of major public works proposals—and their ultimate disposal—between 1946 and 1960. Stepping into the vacuum: Rodriguez described how RM's offers looked from Lyons' angle. Moscow, who dealt with all the BP's on Wagner's behalf, saw it happening, too. Also interviews with Barnes, Chapin, Cullman, Latham, Lazarus, Madigan, Screvane, Shapiro, Tallamy, Wagner. "Push a button": Confidential source. RM disciplining Lyons: Moscow, What Have You Done for Me Lately?, pp. 201-02; NYT, Mar. 12, 1953. "Center of gravity": Sayre and Kaufman, p. 626. Forcing Board to approve Narrows Bridge approaches: Moscow; Ina Joan Caro, "The Bridge" (unpublished M.A. thesis). Require redemption: The total value of Triborough facilities was set at that figure by Dun and Bradstreet.

"A foreign, sovereign state": Confidential source. Lutsky: Interview. No attempt to modify it: Author's analysis of program.

Stanley M. Isaacs, Reuben A. Lazarus, George McAneny, William O'Dwyer.

### NOTES

## -O'DWYER

#### Author's interviews:

For the O'Dwyer period: Charles Abrams, William S. Chapin, John A. Coleman, Victor F. Condello, Howard S. Cullman, Thomas E. Dewey, Jerry Finkelstein, Monroe Goldwater, Saul Kaplan, Jacob Lutsky, Michael J. Madigan, Joseph D. McGoldrick, Warren Mos-

cow, Paul O'Dwyer, Lawrence M. Orton, Sidney M. Shapiro, Paul Windels, William J. Zeckendorf, confidential sources.

O'D biography: Gunther, pp. 559-65; Hamburger, pp. 84-114; Moscow, What Have You Done for Me Lately?, pp. 31-34, and Last of the Big-Time Bosses, pp. 64-65, 85-89; Nevins and Krout, pp. 115-24. "Little did the boys know": Hamburger, p. 108. O'D and Moran: NYT, May 2, 1951; Dec. 19, 1952; "Shame," pp. 266-69; Fulton Oursler, "The Remarkable Story of William O'D," Reader's Digest, May 12, 1952; Morris, pp. 215-23. Trying to withdraw: Moscow, What Have You Done for Me Lately?, p. 32. In Mexico: Hamburger, p. 99. Grand-jury charges: NYT, Oct. 30, 1945.

O'D's relationship with RM: \$1,-565,000,000 price tag: Moses, "Report . . . by the City Construction Coordinator on . . . Postwar Public Improvements." The report given to the Mayorelect was a draft of the one published the following April.

No money available: Moses, "Report," p. 5; McGoldrick; various newspapers, Dec. 1945-Feb. 1946. "I tell you": O'D quoted in Hamburger, pp. 96-97. Then Moses appeared: Moses, "Construction Schedule for Arterial Highways and Parkways," Nov. 26, 1945. Housing: NYT, Mar. 6, June 2, 1946; Post, Nov. 7, 14, 15, 1945; HT, Dec. 20, Dec. 21, 1945. Airports: Spivack in Post, Jan. 29, 1946.

"Deferred" and "nondeferrable" lists: Codified in Apr. 15, 1946, "Report."

RM wants to be named to Housing Authority: His boldest attempt was to come some months later in a series of leaks to the DN, climaxed in DN, Oct. 25, 1946.

"Bob Moses represented to me": O'D OHR, p. 87.

"Municipal extortion": NYC Consumer Council statement, quoted in NYT, Feb. 20, 1946. Isaacs pointed out: In letter printed in HT, Feb. 24, 1947. "Giveaway": McGoldrick interview with author; McGoldrick quoted in Post, Mar. 22, 1946. La Guardia radio broadcast: NYT, Jan. 7, 1946. Lazarus Joseph: HT, Feb. 20, 1946. Democrats demand O'D ask for more state aid: For example, NYT and Brooklyn Eagle, Feb. 24, 28.

RM threatens to "reveal some facts": Post, Mar. 22, 1946. Naked display of power: Moscow. O'D empowers RM to represent him: NYT, Feb. 18. Joseph on third floor, RM on second: HT, Feb. 18. City's business entirely through RM: Condello, the city's legislative representa-

tive; a confidential source who represented Dewey in the negotiations: Keplan, Assembly minority leader Steingut's counsel; Lazarus on the scene in an unofficial technical capacity; Moscow, covering City Halt for the *Times*. See also HT, Mar. 29. The deal: Interviews cited directly above. NYT, HT, and Brooklyn Eagle, various issues, Feb. Mar. 1946, have the details although they did not know the significance of RM's role. RM did not represent their position: NYT, Feb. 19. O'D did not apply pressure: NYT, Feb. 20.

RM's commission: Approval of Tunnel Authority takeover: NYT, Apr. 24, 1946; of increase in bonds and new bond interest rates: HT, Mar. 5; of Airport Authority: Various newspapers, Mar. 27; of housing: NYT, June 2; \$22,000,000 bonus: NYT, Feb. 20.

Analysis of deal results: Isaacs OHR, pp. 248-60; interviews cited above. The few public analyses came only much after the fact—for example, *Post*, Mar. 16, 1950.

"Pick your members": O'D OHR, p. 871. Why members selected: Shapiro. "I never spoke": O'D OHR, p. 871. McLaughlin, Meyer appointments: O'D OHR, p. 583. Appointments in other key agencies: O'D OHR, p. 546.

"Strong man": NYT, Jan. 8, 1946. "Oberbürgermeister": LaG radio speech quoted in NYT, Dec. 29, 1945. RM boasts: Christian Science Monitor article quoted in Post, May 21, 1946. "Matters pending": Corcoran to O'D, May 29, 1946, O'D Papers. Laughing it off: O'D interview in Post, May 22, 1946.

O'D getting angry: Post, May 2, 1946; Lutsky, Moscow, Orton. Spargo: Moscow. "Trouble-shooting" squad: NYT, May 27, 1946. O'D calls Orton: Orton. RM losing on Planning Commission: Orton. Stop worrying: McAneny OHR; Windels.

Idlewild: RM planning 600 percent rise: PM, Mar. 19, 1946. Lunch at Randall's Island: HT, July 10, 20. The bonds could not be sold: NYT, July 22. Port Authority announcement: HT, Dec. 19. Press accuses O'D: Various newspapers, July 1946. O'D gives Port Authority airports: NYT, Aug. 3. Cancellation of \$1,178,250 contract: O'D Papers.

Liberal organizations: Post, June 24. 28,000: NYT, June 24, 1946. "The biggest story": PM, July 28. O'D considering enlarging Planning Commission: Acting Corporation Counsel John J. Bennett to O'D, Dec. 28, 1946, O'D Papers. RM's

access to O'D restricted: Confidential source. RM asks deputy mayor: RM to Corcoran, Nov. 22, 1946, O'D Papers. Herzstein reply: Herzstein to RM, Nov. 25, 1946, O'D Papers. "Tell the gentleman"; Coleman, who was present, in interview with author.

O'D desperate for money, trying to oust Rogers: Moscow. \$3,000,000: Abrams. Parking garages: O'D Papers; various newspapers, Dec. 3, 1946.

State awards falling off: Author's analyses of newspaper articles and editorials, July-Dec. 1946. Mid-Manhattan captures O'D's fancy: Hamburger, p. 101. RM-Rogers joint announcement: NYT, Oct. 15, 1946. "Capital . . . still in City Hall": Citizens Union quoted in NYT, Dec. 16. RM no comment: NYT, Dec. 3. Scene on ground floor: HT, Dec. 3. O'D's thinking during this period: Some clues from Coleman, Cullman, Lutsky, Madigan, Moscow, confidential sources.

United Nations: "The one great thing": O'D OHR, p. 191. Appointed RM chairman: HT, Dec. 3, 1945. RM fatherly toward Nelson Rockefeller: RM, Shapiro. UNO opened on site RM had selected: Moses, Dangerous Trade, p. 485. Maneuvering among different cities: Lie, pp. 107-14; Dangerous Trade, pp. 485-91; Zeckendorf, p. 68; O'D OHR, p. 192. Needed a "gesture": O'D OHR. Lie personally awed by RM: See next paragraph of Notes. "Unless they came up": Lie, p. 112. "Fervently": Zeckendorf, p. 69. "Working on Mr. Rockefeller": O'D OHR, p. 191. "Tense and exciting": Lie, p. 113. For every snag, a knife: Zeckendorf interview. "Would you sell it?": Zeckendorf, p. 70. Arranging the housing: Dangerous Trade, pp. 435, 485. Housing: NYT, HT, Apr. 28, 1946. \$32,000,000: O'D OHR, pp. 191–93.

"My deepest thanks": Lie to RM, Dec. 14, 1946, quoted in Dangerous Trade, p. 490. "One of the greatest men of our time": Lie quoted in NYT, Dec. 17, 1949. On the occasion of his retirement as Secretary-General, Lie wrote RM, "Day by day, the United Nations Plaza acquires the appearance which you must have had in mind all along. . . . New York City is indeed fortunate that it has in you so imaginative and dynamic a planner and builder." Lie to RM, Apr. 14, 1953, quoted in Dangerous Trade, p. 500. Rockefeller letter: Dangerous Trade, p. 490. O'D letter: Dangerous Trade, p. 495.

RM memo on highways: RM to O'D, July 21, 1947, O'D Papers. O'D tolerated

no further delays: NYT, July 17, 1947, was the first sign. Contracts to Federation-linked firms: Author's analysis of contract awards, through confidential sources. Joseph dispute: HT, Sun, Nov. 21, 1947. "Tuesdays": O'D quoted in Hamburger, p. 101. Few mornings: Coleman. Use of entree: Lutsky.

"The city's too big": Hamburger, pp. 91, 110. "The scene": Paul O'Dwyer. "All decisions that mattered": Orton. HT editorial: Dec. 26, 1947. "On contracts, I'd rely": O'D OHR, pp. 546-57. "He has both": O'D OHR, pp. 182-83.

RM apprised O'D: He knew because Senator Taft was consulting him at every step, RM interview with author; Rodgers, p. 154. Allowed him to name most committee members: It included, besides RM, three long-time RM allies—his former aide, Philip J. Cruise; John C. Reidel, chief engineer of the Board of Estimate; and Corporation Counsel John P. McGrath—and one opponent: Lazarus Joseph.

Power of a new immensity: Anderson book. May 1949 speech: Rodgers, p. 234. RM instrumental in draft movement: Coleman and confidential sources. Supporting O'D: For example, a "Battle Page" he wrote for DN, Oct. 24, 1949. Predicted solutions: NYT, Oct. 15. Windels quote: NYT, Oct. 13. "If there is anything certain": HT, Sept. 13. "We're talking about housing": HT, Oct. 19. RM's support helpful: Moscow. Quintessential ribbon-cutting campaign: For example, NYT, HT, Oct. 15, 19, 20, 25, Nov. 3, 8. Spargo to O'D: Nov. 22, 1949, O'D Papers.

Finkelstein: Finkelstein interview, confirmed by Orton. Proof that Orton was right: "Request of the City Planning Department for 1950-51," Feb. 1, 1950. pp. 1, 8, 13, 115. Per capita: "Request," p. 7. Duplication: "Request," p. 4. Lunch with RM: Finkelstein. Sent Hodgkiss: Handwritten notes in ink on Hodgkiss to RM, Mar. 28, 1950, O'D Papers. "A last protest": RM to O'D, Mar. 29, 1950, O'D Papers. Went public: NYT, Feb. 8, 1950.

A lot of old men: McGoldrick, Orton; NYT, Feb. 2, 1950; Nathan Straus to NYT, Mar. 2, 1950; George Hallett to O'D, Mar. 10, 1950, O'D Papers. NYT editorial: Feb. 8, 1950. O'D pushed the Board: Orton.

"O'D loved Moses": Finkelstein. Other commission members support Finkelstein: Orton. UN site: NYT, May 11, 1950. Playgrounds: Deputy Mayor William

Reid to Finkelstein, Apr. 1, 1950, O'D Papers.

Real public hearings: HT, Aug. 8, 1950. Realtors' support obtained: Finkelstein, Orton.

Washington Square: NYT, May 11, 1950; HT, Apr. 12, 1950; Rodgers, pp. 274-75.

O'D's campaign contributions: NYT, various issues, 1951-52. "Real pressure," Moran burning retirement papers: Moscow, What Have You Done for Me Lately?, pp. 32-33.

## —IMPY

## Author's interviews:

For the Impellitteri period: Victor F. Condello, Howard S. Cullman, Jerry Finkelstein, Monroe Goldwater, Mrs. Rudolph Halley, Vincent R. Impellitteri, Reuben A. Lazarus, Jacob Lutsky, Michael J. Madigan, Warren Moscow, Lawrence M. Orton, Charles F. Rodriguez, Sidney M. Shapiro.

## NOTES

RM in South America unaware: RM, Madigan, Shapiro; during this period his private memos to aides and in the O'D Papers show him utterly unaware that the Mayor might be planning to resign.

How Impy was chosen: Moscow, Last of the Big-Time Bosses, p. 63, says that the "Green Book" story was actually one devised to cover up the fact that Thomas (Three Fingers Brown) Luchese had ordered the ticket shifted around to make room for Impy, but three participants present at the last-minute reshuffling-RM, Lazarus and one confidential source —confirm that, improbable as it sounds, the "Green Book" version has it precisely the way it happened. Impy possessed, in fact, the ninth-longest name in the entire "Green Book," NYT, Aug. 27, 1950. "The perfect Throttlebottom": Moscow, Last of the Big-Time Bosses, p. 97.

RM's endorsement: NYT, Oct. 25, 1950; Moscow calls Impy's obtaining of that endorsement a "coup," in Last of the Big-Time Bosses, p. 97. "Even 1"; leading Impy around by the hand: Lazarus OHR, pp. 405-06. Campaign analysis: Moscow, What Have You Done for Me Lately?, pp. 34-35.

"All I have is three votes": For example, NYT, Oct. 10, 1953. "You think they'll come?": Condello. Too timid: Lazarus. Humming with the choir: NYT, Oct. 10, 1953. "You got any ideas?": Moscow interview. Wringing his hands:

A vivid picture of the Mayor at Board of Estimate executive sessions is painted by Condello, Lutsky Moscow and various other members of the Impy administration who wish to remain unidentified.

"RM is actually running this town": Lazarus showed the author this entry in his diary. RM dropping by at nine: Impy's daily schedules, many of which were found in his papers, show that he generally left ninety minutes for his sessions with RM. "I didn't want them interrupted": Impy interview with author. "Marching orders": Wagner, Moscow. An example of the peremptory tone Moses used with Impy is a letter he wrote him on Nov. 2, 1951: "My suggestion therefore is that you call Bob Wagner [then Manhattan borough president] and tell him that the hearing should be held by the Committee and not independently by him, and, of course, he should be present. This hearing should be held at City Hall in the room in which the Board of Estimate executive meetings are held, on Thursday, Nov. 8th, at 3 P.M." Impy Papers. "No use boring you": RM to Impy, Dec. 7, 1950, Impy Papers. "Moses' word was law": Condello. Moscow (Last of the Big-Time Bosses, p. 97) says Impy left "policymaking in the hands of Moses and the city's Bureau of the Budget," but Impy Papers clearly reveal that whenever the two disagreed, RM won by threatening to resign unless Impy ordered the Budget Bureau to do what he wanted. For example, memo, "Telephoned by Office of Commissioner Moses for Mayor Impellitteri," Aug. 14, 1951; and RM to Impy, Sept. 13, 1951, states: "The Budget director had withheld from the calendar . . . items [for] related repairs agreed upon with the United Nations. . . . If this item is to be deleted or is to be the subject of debate and controversy I should like to be relieved of all future responsibility for completing the UN Program." Recommendations and blackballings: RM to Impy, Mar. 28, June 13, Dec. 6, 1951, on over-all reorganization of the Board of Education, with which RM ostensibly had no connection, and May 4, Sept. 16, 1952, Impy Papers.

Secret "understanding": Condello, confidential sources.

Point-by-point "suggestions": RM to Impy, June 27, 1953, Impy Papers.

Shelter Cottage: RM to Impy, Mar. 9, 1951, Impy Papers.

Rezoning study: Finkelstein, Orton. Finkelstein and Impy letters: NYT, Oct. 5, 1950. "Dear Vince": RM to Impy,

handwritten note, Dec. 4, 1950, Impy Papers. RM recommends Bennett-and has Impy give Reidel a salary increase: RM to Impy, Dec. 20, 1950, Impy Papers; confidential sources. Rodgers: Shapiro. Forcing out the young planners: Orton, confidential sources; memos in "City Planning Commission" folder in Impy Papers; for example, Jan. 29, 1953. Fate of rezoning report: Orton. "Now the city's built up": O'D OHR, p. 580. RM was back in control: So sure of Bennett was he that he didn't even object when-after eleven years—the commission finally published an annual report. The reason for his lack of objection becomes clear in the opening paragraph of Bennett's introduction: the report will deal, the chairman says, with "the steady progress of planning in New York City and the translation of the plans into public betterment. . . . One measure of this progress was presented in the report of . . . the City Construction Coordinator." "Planning Progress," p. 5.

Halley: Mrs. Halley. Lyons: NYT, Mar. 13, 1953. "Taken for granted": Moscow interview.

Summary of trends in Impy administration: Peter Kihss, NYT, Aug. 10-14, 1953; Moscow, Last of the Big-Time Bosses.

## ---WAGNER

#### Author's interviews:

For the Wagner period: Robert F. Wagner, Jr.

Wagner appointees, advisers or friends: William F. R. Ballard, Henry Barnes, Peter J. Brennan, Peter Campbell Brown, John A. Coleman, Victor F. Condello, Timothy J. Cooney, Edward N. Costikyan. Howard S. Cullman, Perry B. Duryea, Jr., Julius C. C. Edelstein, Hortense Gabel, Monroe Goldwater, Luther Gulick, Saul Kahn, Reuben A. Lazarus, Jacob Lutsky, Warren Moscow, Paul O'Keefe, Lawrence M. Orton, Charles F. Rodriguez, Philip Shumsky, Paul R. Screvane. Eleven Wagner appointees, advisers or friends preferred to remain unidentified.

RM aides or associates: William S. Chapin, Ernest J. Clark, William Latham, Michael J. Madigan, Sidney M. Shapiro, Arnold Vollmer, Arthur B. Williams. Four RM aides or associates preferred to remain unidentified.

Reporters: Fred J. Cook, William J. Haddad, Joseph Kahn, Mary Perot Nichols.

#### NOTES

Unforgettable evenings: Wagner, RM, Cullman. His interest in city planning: Hamburger, The New Yorker, Jan. 26, 1957. Insisted on using his own contractors: One on whom Wagner insisted, to RM's displeasure, was Del Balso, whom RM, in a 1950 letter to Wagner, calls "your contractor" (O'D Papers). "Bubblehead": The author has unable to locate a copy of the letter, but many people around City Hall, including Lutsky, recall reading it. "I'm not going to let Moses": Among those whom he told he was going to "rein in" Moses were Coleman, Cullman, Goldwater, Gulick, Lutsky, Moscow. "A source close": Post, Nov. 6, 1953. The second leak: Post,

Nov. 18, 1953.

Good Government strategy: Gabel,
Orton. Left the interview believing:
Orton.

The swearing in: Among those watching who noted RM's anger were Coleman, Cullman, Lazarus and Shapiro. Typing up own form: Lutsky, Shumsky. Moscow: What Have You Done for Me Lately?, p. 196. The NYT article on the swearing in, attempting to account for the fact that RM was sworn in publicly for only two posts but was later listed as having been sworn in for three, quotes Wagner as saying, "There is one more coming up but the necessary papers are not ready," but none of the persons the author interviewed recall the Mayor making such a statement, none of the other newspapers mentions it (all, in fact, say the announcement of RM's third appointment following the ceremony came as a complete surprise), and several other liberals, listening to the ceremonies over the radio-such as City Planning Commissioner Lawrence M. Orton—told the author that Wagner "passed right on" to the next appointee and that they began cheering because they thought they had

Authority to "represent" the city: RM to Wagner, Jan. 5, 1954; F. V. Du Pont, Federal Commissioner of Public Roads, to RM, Jan. 25, 1954; Wagner Papers.

Mitchell-Lama fight: Moscow, What Have You Done for Me Lately?, pp. 203-04; Moscow, Orton. RM's "own" housing program: Orton to RM, Oct. 11, 1955, Wagner Papers; NYT, HT, various dates, 1954.

"My friend, Bob Wagner": HT, Feb. 24, 1954. "He has been heard to say": Hamburger, The New Yorker, Feb. 2, 1957.

Port Authority: Cullman, Wagner.

Housing Authority: NYT, Jan. 9, 1954; Moscow, confirmed by Wagner. Cruise's swearing in: Post, Jan. 10, Feb. 11, 1954. "Well, I made my deal": Wagner quoted by O'Keefe, in interview. Mc-Murray friendly to Shanahan: Moscow, O'Keefe, confidential sources. Cruise making his divorce: Moscow, Shapiro, confidential sources.

Screvane: Interview with author. RM showing up late: Costikyan. Gracie Mansion receptions: Confidential sources. "He does a lot of his work": Unidentified source quoted in Hamburger, p. 82. RM dominated the relationship: Among many, Barnes, Brown, Chapin, Cooney, Moscow, Screvane.

Wagner's attempt to gain fifth Housing Authority vote: Moscow. Day-to-day Authority affairs still dominated by RM: Confidential sources on Authority staff. Edelstein: In interview with author. Wagner never interfered with Title I: Lutsky, who was supposedly the Mayor's "watchdog" on the committee; confidential sources.

Wagner surrendering to resignation threat: Goldwater, for example, told the author that the Mayor agitatedly telephoned him for advice after many threats; each time, Goldwater says, he told Wagner that Moses' popularity made it necessary to give him his way—and each time, Goldwater says, Wagner took his advice. For a typical threat—and Wagner surrendering to it—see RM to Wagner, Sept. 1, 1954, and Epstein to RM, Sept. 3, 1954, Wagner Papers.

35. "RM"

SOURCES

## **Books and documents:**

Herndon, The Sweetest Music This Side of Heaven; Lewis, The Day They Shook the Plum Tree; Rodgers, Robert Moses.

Office of the State Comptroller, Division of Audits and Accounts, "Draft Report" on LISPC, Jones Beach and Bethpage authorities. This report was compiled by auditors in the office of State Comptroller Arthur Levitt and never publicly released. It is referred to in the Notes as "Levitt LISPC Audit."

## Author's interviews:

Harvey Aronson, Bernie Bookbinder, Henry Barnes, Ernest J. Clark, Ralph Clark, Jane Moses Collins, Perry B Duryea, Jr., Nettie Greenberg, Edgar L. Hazleton, Joseph T Ingraham, Joseph Kahn, Lee Koppelman, William Latham, Reuben A. Lazarus, Jacob Lutsky, Michael J. Madigan, General Harry L. Meyers, Lawrence Orton, Sidney M. Shapiro, Mae Smisek, Hazel Tappan, Bertram D. Tallamy, Arnold Vollmer.

## NOTES

Authority meeting: Rodgers, p. 179. First play in years: Ernest Clark. Mary's chores: Jane Moses Collins, Shapiro. Asking for a dollar: Ingraham. The manila envelope: Shapiro. "A dynamo": Greenberg. The letters: Tappan, Greenberg.

RM on the Sea-Ef: Mae Smisek, daughter of the captain. Dictating at 7 A.M. Madigan. Propped up in bed: Tallamy.

"You're just a swabbie": Shapiro.
Throwing the inkwell: Confidential sources.

Bringing breakfast to Mary: Jane Moses Collins. "Protecting" him in relays: Latham. From Palms to Pines: Vollmer.

Learned Hand letter: A copy given to author by Shapiro. "He never got tired": Confidential source.

Hetty Green bequest: Lewis, p. 311, says he "merely endorsed his \$10,000 check and turned it over to charity the day he received it!" This recollection does not conform with that of Shapiro, Madigan or several confidential sources. Used commissions to buy other men: Madigan; confidential sources.

"A feeling of isolation": Bookbinder. Air-conditioned car: Lazarus. Three personal chauffeurs: Shapiro. That car alone: Meyers. Telephoning Randall's Island; captains on call; network of pools: Meyers, Smisek, Ingraham.

Frenzy in the offices: Author's observations. Subservience: Barnes, Kahn.

RM's hospitality: The author was a recipient, and part of the following section is drawn from his personal observations. The scope and the cost to the public of this hospitality RM dispensed is found in Levitt LISPC Audit. Boardwalk Restaurant: Levitt LISPC Audit, Sec. A, pp. 8ff. New Boardwalk Restaurant: Levitt LISPC Audit, Sec. D, p. 6.

Marine Stadium: Not for general public: Shapiro. Rearranging his schedule: Author's observation. Phony "vote": Author was standing with Shapiro when he made the comment. Attendance figures: Levitt LISPC Audit, Part II, unnumbered

pages. The audit also states that, between 1967 and 1971 alone, "it cost the Authority almost \$1,600,000 more than the revenues it received to present entertainment. . . . This does not include our estimate of \$574,000 for the amortization of the cost of the facilities. . . . We believe these subsidies would be better expended on entertainment which would be more attractive to a larger segment of the public."

Guy Lombardo: Levitt LISPC Audit, Part II. Other producers would have paid: Shapiro, Ingraham. "One bottle of Scotch": Herndon, p. 220. However, to cite one item out of many found by the auditors, Guy personally received a "producer's fee" which, in 1964 for example, was \$51,000 and a fee "paid . . . for use of his band for dancing in excess of the amounts paid to band," which, for 1966 alone, was \$70,000. Costs to taxpayers: Levitt LISPC Audit, Part II, unnumbered pages; Sec. D, p. 6.

Limousines, etc.: See "RM's hospitality" above. Wainwright: Confidential source. Typical tour: Schedule provided to author. Yale class: Ralph Clark. Planners' tour: Koppelman. Niagara excursion: Aronson. "How could you turn the guy down?": Lutsky. Bookbinder's pass:

Bookbinder.

Made disagreement difficult: Many of his guests—most perceptively, Orton—noted this.

"In the year 1999": RM, "What will New York Be Like in 1999—Not so Different" NYT Magazine, Feb. 6, 1949.

"Make him give his name": HT, NYT, Sept. 27, 1958; Shapiro. Left because furious: Shapiro. Beach grass: Hazleton; confirmed by Shapiro. Trujillo: RM related this story—with pride—to John Lord O'Brien and others.

Jones Beach: RM, "From the Bridge" column, Newsday. Bronx-Whitestone: RM, "From the Bridge" column, Newsday. Waterfront: RM, "The Expanding New York Waterfront" (brochure), Aug. 1964. "The City Builder must have": RM, quoted in NYT Magazine, Jan. 19, 1941. "The ancient truth": RM quoted in NYT, Mar. 7, 1948.

Compares himself to Lincoln: HT, Nov. 21, 1943; HT, May 15, 1946. And in the Rodgers biography of RM on which RM worked so closely: "Moses believes, like Lincoln, that government should do those things which the people cannot do for themselves" (p. xxvi); Shapiro.

Bay Shore teacher: Ralph Housrath said this to Aronson.

Refuses to consider hearing aid: Meyers; author's observations.

Golf: RM to NYT, Apr. 22, 1944.

"Toy building blocks": The reporter was Walter Lister, Jr., HT, Jan. 22, 1950. "Absolutely crazy": RM. Marguerite Hotel: Shapiro.

Moley: Foreword to Dangerous Trade,

"Can't make an omelet": RM flaunted this slogan for more than two years on signs posted over the Long Island Fxpressway at the site of the 1964-65 World's Fair. "Meat ax": Dangerous Trade.

## 37. One Mile

SOURCES

Books, brochures, reports, engineering studies and documents:

Moses, Dangerous Trade.

Edelstein, Impellitteri and O'Dwyer Papers.

Bronx Borough President, "Route Study for Development Plan—Cross-Bronx Thruway," Jan. 1944.

Bronx Thruway," Jan. 1944.

Arthur Katz, "A Neighborhood Organizes to Fight City Hall—A Case Study in Community Organization," circa 1960 (a report written, apparently for his own pleasure, by the executive director of the East Tremont Neighborhood Center).

Moses, "Construction Schedule for Arterial Highways and Parkways," Nov. 26, 1945; "Construction Schedule for Arterial Highways and Parkways" (Report to Hon. William O'Dwyer), June 10, 1946; "City of New York Public Works Program Progress Report," Jan. 1, 1949; "Openings—Federal State City Arterial Construction Program" (Report to Hon. Vincent R. Impellitteri), Oct. 14, 1950; "George Washington Bridge Approach-Highbridge Expressway Interchange, May 5, 1952; "Deegan Expressway-Cross-Bronx Expressway—Long Island Expressway," Nov. 4, 1955; "Cross-Bronx Expressway—Alexander Hamilton Bridge-George Washington Bridge Bus Station—Opening," Jan. 17, 1963.

New York City Board of Estimate, Minutes, "Hearing in the Matter of Authorizing a Proceeding for Acquiring Title to Cross-Bronx Expressway, Section 2, from Anthony Avenue to Longfellow Avenue," Nov. 18, 1954, pp. 14176-79; Dec. 2, 1954, pp. 15354-60.

New York City Community Planning Board No. 6, "The East Tremont Story," 1962.

## Author's interviews:

With 127 past and present residents of East Tremont.

Lillian Edelstein provided the most detailed account of the fight against the expressway. Especially helpful in describing the pre-expressway neighborhood were Mrs. Dorothy Beltzer, Mrs. Nora Brown, Samuel and Katherine Coe, Arthur Clark, Mrs. Esther Gassel, Saul Janowitz, Sol Kleinman, Lee Koppelman, Edward J. Korn, Mrs. Helen Lazarcheck, Isidore Malek, Louis Meltzer, Lillian Roberts, Cele Sherman, Fannie Silverstein, Charles Smith, Dominick Tesone and Mrs. Frances Twersky.

Especially helpful in describing the changes wrought in the neighborhood by the expressway were Mrs. Vivian Dee, Bert Gumpert, Arthur Katz, Harry Keifetz and Bernard Lambert.

Among politicians, engineers and others involved in expressway decisions: Ernest J. Clark, Joseph T. Ingraham, Warren Moscow, Lawrence M. Orton, Charles Rodriguez, Robert F. Wagner, Jr., Bernard Weiner and many who would talk only on condition that they remain unidentified.

### NOTES

The neighborhood: The picture of it is drawn from the 127 interviews and from the Community Planning Board's "East Tremont Story." 60,000: This is an estimate. The population of the entire area covered in the "East Tremont Story" is 129,000 but 49,500 are Italians to the north in the Belmont neighborhood, so Tremont's population would be 79,500. East Tremont is 75 percent of the land area; 75 percent of 79,500 is 60,000. According to the "East Tremont Story," 44,000 of the 60,000 are Jews. "A feeling of crowdedness": "Story," p. 22. "Simchas" in the neighborhood," "myriad of social systems," "each had his following": "Story," pp. 11–13.

RM calls them "slums": Moscow recalls RM persuading the Board of Estimate by calling the neighborhood that.

An urban staging area: "Story," pp. 3-22, which includes "a chronological picture of the in and out movement of the various cultural and ethnic groups." Negroes being integrated into neighborhood: Smith. 7 in Elsmere Gardens: Katz. Population figures on nonwhites: "Story," p. 18.

Survey for new Y: Lambert, its executive director.

Money nowhere in sight, privately figuring on 18 months: Analysis of memos and letters in Impy, Wagner Papers. "To shake 'em up a little": Shapiro. Subsequent notice: RM, "Memorandum to Owners and Tenants on Cross-Bronx Ex-

pressway between Longfellow Avenue and University Avenue," Dec. 15, 1952.

Section 3: Mrs. Edelstein; Post, various articles, Feb. 7, 1949—June 6, 1953. "Not fit for rats": Post, Feb. 7, 1949. "A right": Post, Nov. 16, 1952. "None of the families . . . has been turned into the street": RM, quoted in Post, July 17, 1951. Waiting six years: Post, Nov. 16, 1952. "Knew of no one": Edelstein quoted in Post, June 6, 1953 (italics added). "A nightmare": Post, June 6, 1953.

Weiner study: Weiner; see map, p. 864.

Mrs. Edelstein's telephone call: Edelstein.

Lyons in favor of their route: Lyons quoted in Post, Bronx edition, Feb. 23, 1953. "You have from time to time remarked": RM to Lyons, Feb. 21, 1953, Impy Papers. Resignation threat: RM to Impy, Mar. 10, 1953, Impy Papers. "A damnable lie": Lyons quoted in Post, Bronx edition, Mar. 13, 1953. Board of Estimate hearings: Various newspapers, Apr. 24-May 14, 1953. Tallamy letter: Tallamy to RM, May 5, 1953, Impy Papers.

How much more Moses' mile would cost: Robert G. McCullough, Report to Board of Estimate, Apr. 15, 1953 (Board Calendar, pp. E687-I-4). Maps printed

in WT, Post, Sept. 7, 1954.

Wagner had appeared receptive: Edelstein, Janowitz, Katz. Moscow's Board of Estimate statement. Transcript, Board of Estimate, Calendar, in No. 48, May 14, 1953; Katz, p. 19. Letter to ETNA; promise in writing: Moscow to William Cohen, May 18, 1953, copy from Mrs. Edelstein; Moscow to ETNA, Katz, p. 20. "I will vote against any resolution": Katz, p. 20. (The press did not cover the rally.) Oct. 14 rally: Katz, p. 20. Why, certainly, Wagner replied: Wagner to Edelstein, Oct. 27, 1953, in reply to Oct. 26. "In December?": Edelstein.

Wagner intended to keep promise: Confidential source. Repeated it: Janowitz

A direct order: Moses, Dangerous Trade, pp. 210-11.

Gerosa switch: Katz, p. 21.

Kahn's articles: Post, May 9, 1954, reprints Wagner's letter of Aug. 5, 1953; also Post, May 12, 1954, July 21, 1954, Nov. 28, 1954.

Hodgkiss-Wagner exchange: Katz, p. 22. Epstein: Katz, p. 23.

Planning Commission hearing: Post, July 15, 1954.

Wagner visibly moved: Edelstein; Katz, p. 23. "Every member": Wagner quoted in *Post*, Sept. 22, 1954. McCullough's trick: Katz, p. 22; Katz, Edelstein, confidential source. Wagner orders Epstein to oversee: *Post*, WT, Nov. 19, 1954; Edelstein.

Final hearing before McCullough: Katz, pp. 22–23; Edelstein; Post, Nov. 28, 1954. McCullough's report, dated Nov. 12, 1954, attached to Board of Estimate, Calendar No. 4, "Hearing in the Matter of Authorizing a Proceeding . . . ," Nov. 18, 1954. "Not the slightest": RM. Epstein: See below. "Very uncomfortable": Katz. Epstein's switch: Edelstein, Katz.

Showdown Board meeting: Katz, p. 23; Lyons: Quoted in *Post*, Nov. 21, 1954. "So fast": Edelstein.

Why did Epstein switch?: RM. "Very little real hardship": RM. NYT one paragraph: Nov. 2, 1954.

What Spargo told Ingraham: Ingraham.

Nassau Management: Fred J. Cook and Gene Gleason, "The Shame of New York," The Nation, Oct. 31, 1959, pp. 300-01. Its East Tremont office: Interviews with residents cited in "Sources." Cymrot: Post, Jan. 12, 1955. Dispossess notices: Post, May 6, 1955. The residents' description of the deterioration of East Tremont during relocation is supported by many articles by Joe Kahn and Abel Silver in the Post, by articles in the WT and the Bronx Press-Review. Tesone: Quoted in Post, May 17, 1956, and interview with author. 11 children: Post, Sept. 22, 1955.

## 38. One Mile (Afterward)

SOURCES

See "Sources" for Chapter 37.

## NOTES

Underestimated cost: Comparison of figures in various RM brochures cited in "Sources" for Chapter 37. Traffic too heavy for Washington Bridge: Madigan, Clark. \$250,000,000: RM, various brochures.

It was shaking: Clark, the engineer in

charge.

Landlords: Lambert, Katz. In 1960 still 25,000: "East Tremont Story," p. 5.

Bronx Park South: Lambert, Dee, Korn. "I got to get my kids out of here"; "Are you the man from the welfare?": Present residents of East Tremont to author.

## 39. The Highwayman

SOURCES

Books, articles, brochures, reports and documents:

Bureau of Public Roads (BPR), When All Roads Led to Rome; Doig, Metropolitan Transportation Politics; Jacobs, The Death and Life of Great American Cities; Mumford, The Highway and the City; Wood, 1400 Governments.

F. Dodd McHugh, "Draft of 'Master Plan for New York City Airports," and the City Planning Commission's final report, issued Dec. 19, 1945.

Regional Plan Association: "New York's Commuters—Trends of Commuter Transportation in the New York Metropolitan Region 1930–1950," July 1951; "Spread City," 1962; "The Future of Westchester County," Mar. 1971.

RM brochures listed in "Sources" for Chapter 37, identified by date, and "Arterial Progress," Nov. 8, 1965.

## Author's interviews:

Planners Lee Koppelman, Joseph McC. Lieper, F. Dodd McHugh, Lawrence M. Orton, John Sheridan, Stanley G. Tankel, Robert C. Weinberg, Paul Windels.

#### NOTES

Gray two-door sedan: NYT, July 4, 1945.

RM's response: HT, Sept. 6, 1945.

"The postwar highway era is here": RM, "Construction Schedule," Nov. 26, 1945.

Planners' feelings: Koppelman, Lieper, McHugh, Orton, Tankel, Weinberg, Windels; numerous Mumford articles in PM, The New Yorker; for example, PM, May 12, 1946; The New Yorker, Mar. 19-June 16, 1955. RPA, "Spread City," "The Future of Westchester County." Susquehanna: Wood, p. 12. Nathan: Sept. 3, 1945. 2 out of 3 residents: Leigh Denniston, HT, Sept. 12, 1945. 1,500 per hour; 40,000 per hour: Out of many varying figures on the capacity of expressway and rapid transit, the author has selected those derived from a careful study made by the Nassau-Suffolk Regional Planning Board in 1968; various documents made available to him by Koppelman.

Press screaming for action and liked RM's plans: For example, HT editorial, Jan. I, 1951; HT editorial, Aug. 27, 1947;

NYT, Feb. 20, 1946; HT, Nov. 26, 1945; NYT, Nov. 4, 11, 1945.

Mumford: PM, May 12, 1946. "Why not bar?": Letter from Lester E. Waterbury to NYT, Oct. 22, 1945. Williams: Quoted in NYT, Jan. 24, 1947.

Take one simple step: Among the many planners arguing—at the time—for the city to do this were McHugh, Orton and Windels.

"Smart aleck": RM to Salmon, Aug. 12, 1942.

Van Wyck Expressway: This section drawn from McHugh and Orton interviews; from McHugh's draft version of "Master Plan for New York City Airports," written Oct. 10, 1945 (pp. 10-14 deal with mass transit to Van Wyck); and from the "Master Plan" actually adopted by the City Planning Commission on Dec. 19, 1945 (the watered-down Van Wyck discussion is on p. 7). McHugh arrived at the 3,220 figure by taking the average load per vehicle arriving at other airports at peak periods—3.1—and dividing 10,000 by that figure. Widen Belt and Conduit: "Master Plan." \$30,000,000: Figures in various Moses brochures vary from \$28,600,000 (RM brochure, Oct. 1950) to \$36,785,000 (Nov. 8, 1965). \$30,000,000 was the figure Mc-Hugh was given at the time. McHugh's resignation: McHugh, confirmed by Orton.

Vision of LI: "The Future of Nassau County," address by RM before members of the Nassau Bar Association, Mineola, L.I., June 30, 1945. "Traffic will run pretty smoothly": RM to HT, Sept. 6, 1945, among others. Typical RM prediction: In 1950, for example, he said: "When this [his current arterial] program is fully realized—say, five years from now—we shall have reduced congestion and produced a free flow of traffic except at peak periods everywhere in the " (RM brochure, Oct. 14, 1950, p. 6.) "We shall deserve": RM, NYT Magazine, Apr. 29, 1951. Statius, Claudius: Leger, quoted in BPR, Fig. V. 1949 article: RM, NYT Magazine, Feb. 6, 1949. "No network": RM, Oct. 14, 1950, brochure, p. 6.

Van Wyck jams: NYT, HT, Newsday, various articles, 1950-72.

"One of man's greatest": Cardinal Spellman, quoted in Dangerous Trade, p. 219; NYT and HT, May 26, 1950. BBT traffic prediction and actuality: TBTA Annual Reports. "Another pleasant surprise": TBTA Annual Report, 1951. No drain-off on other bridges: NYT, May 29, 1950. Queens-Midtown

worse: TBTA Annual Report, 1951. Triborough, Whitestone Bridge figures: TBTA Annual Reports. New Jersey figures: RPA, "New York's Commuters," pp. 3, 5, 6, 7, 11. Lincoln Tunnel, crosstown clockings: NYT, Aug. 11, 1951.

town clockings: NYT, Aug. 11, 1951.

Protests in 1920's: NYT and Tribune, various issues, 1924, 1925, 1926. Howl during 1930's: NYT and HT, various issues, 1938, 1938, 1939.

Geometrical: RPA, various bulletins. NYT clocking on West Side Highway: July 26, 1948. U-turns: NYT, Sept. 17, 1951. "Boomerang": The New Yorker, Mar. 10, 1951. Awareness escalating: NYT, HT, Post, various issues, 1952, 1953. The Post was ahead of the other two; it was the only New York newspaper, during this period, which was giving its readers a glimpse of the "costs" to the public involved in the eviction for highways of thousands of families. Other papers were ignoring this aspect of highways all but completely. "Transportation . . . a means and not an end": Mumford, "The Roaring Traffic's Boom," The New Yorker, Mar. 19, Apr. 2, 16 and June 16, 1955.

RM brochure: Oct. 14, 1950, p. 3. RPA bulletin: "New York's Commuters." People were learning for themselves: Author's analysis of scores of letters-to-theeditor in NYT, HT, Brooklyn Eagle, Post, WT, J-A and DN, various issues, 1952-55.

"Today we are well underway": RM, Post, July 28, 1948. He had no doubt: U. S. News & World Report, Aug. 8, 1952. General Electric: NYT, Jan. 23, 1952. RM's reply: RM to NYT, Feb. 11, 1952.

"Good work, gentlemen": HT editorial, Mar. 16, 1951. Never linked policies with the man: Articles in every NYC newspaper during this period lamented over the traffic problem without linking it to RM's policies.

Jackson Phillips, director of municipal research for Dun and Bradstreet, "Postwar Default Experience of Municipal Bonds," testimony prepared for the Joint Economic Committee of the House of Representatives, Dec. 1966. Port of New York Authority and TBTA, "Joint Study of Arterial Facilities, New York-New Jersey Metropolitan Area," Jan. 1955. TBTA, various prospectuses for bond issues, of which the most illuminating is "\$100,000,000—Narrows Bridge Revenue Bonds, Third Series," Feb. 14, 1963.

#### Author's interviews:

Henry Barnes, Ernest J. Clark, Howard S. Cullman, Lee Koppelman, Joseph McC. Lieper, Jacob Lutsky, Michael J. Madigan, J. Burch McMorran, Edward Moloney, Warren Moscow, Lawrence M. Orton, Jackson Phillips, Charles F. Rodriguez, Paul R. Screvane, Sidney M. Shapiro, Walter Sheridan, Bertram D. Tallamy, Robert F. Wagner, Jr., Paul Windels.

## NOTES

Faster and faster: The number of cars and trucks passing through Triborough's toll booths had reached 39,000,000 in 1941. In 1946, the first full postwar year, the number was 49,000,000. In 1947, the number passed 50,000,000; in 1948, 60,000,000; in 1949, 70,000,000. In 1950, the Brooklyn-Battery Tunnel opened; in that

year, the Authority's traffic count was 90,000,000. In 1951, it was 110,000,000; in 1952, 120,000,000. From TBTA Annual Reports. Most of revenue was surplus: In 1952, TBTA's annual expenses were only about \$4,000,000, about the same as the annual interest on its bonds. TBTA, Annual Report, 1952. Surplus worth half a billion: Surveys of TBTA by D&B listed in "Sources;" Madigan, Phillips.

Bonds could be paid off within six years: In 1953, TBTA had \$215,000,000 in outstanding bonds, but \$27,000,000 in cash in its General Fund could be applied to them, leaving a balance of \$188,000,000. Its surplus in that year was \$21,760,000; it was rising every year, but even if it stayed the same, \$25,000,000 a year would pay off the bonds in seven years. (D&B,)

Dreams greater than resources: TBTA, Annual Reports, 1952-54. RM's thinking: Shapiro, but, without being stated specifically, it also comes through in many articles and brochures he wrote at this time.

Interstate Highway System; working with Adams and Clay: RM, Madigan, Shapiro; Leavitt, p. 30. \$50 billion over ten years his figure: RM, "How to Plan and Pay for Better Highways," Aug. 1953, quoted in Dangerous Trade, p. 281, when, as RM notes on p. 280, "the recommendations since adopted were novel, disturbing and controversial." See also his testimony before the Clay Committee, Oct. 7, 1954, largely a restatement of the 1953 essay. Although historians of the Interstate System such as Leavitt do not credit RM with a formative role in planning the administration of this system, such a role emerges from discussions with such BPR administrators as Francis Turner and Bertram D. Tallamy and from RM's correspondence with Clay, such as RM to Clay, 1955, quoted in *Dangerous Trade*, p. 294. Madigan and Shapiro, who spent months in Washington in 1954, 1955 and 1956—along with Hodgkiss and other Moses Menworking with congressional proponents of the System and with staffers of Clay's Advisory Committee in a National Highway Program, confirm the Turner and Tallamy impression of RM's crucial role. Key revision: Madigan; a discussion of negotiations on the point contained in numerous internal TBTA memos made available to the author, including Hodgkiss to RM, Aug. 20 (or 26—date unclear), 1955.

Rapprochement with Port Authority: RM, Cullman, Wagner and numerous TBTA, Port Authority and Wagner administration officials who prefer to remain unidentified. Also Lieper, Madigan, Orton, Phillips, Tallamy, Windels. Wagner on Cullman and Tobin: Wagner.

Port Authority finances: Port Authority Annual Report, 1954. Worth \$700,000,000: Cullman, quoted in NYT, Mar. 12, 1954, as saying the Authority would be able to finance this much worth of new projects in the next ten years. Short on dreams: Orton.

RM broaching his plan: Cullman, Orton. Port Authority thinking: Cullman, Madigan, Orton, Shapiro, Wagner, confidential sources. Pressure on Port Authority: Doig, pp. 80–139. "Ever widening ripples": D&B, Apr. 30, 1959, p. 30. Port Authority profit from "Joint Program": Port Authority Annual Reports, 1966–70. TBTA profit: TBTA Annual Reports, 1956–70.

"The bridge of my dreams": RM,

quoted in J-A, Dec. 10, 1954.

In lockstep: Observers behind the closed doors of Board of Estimate executive sessions such as Lutsky, Moscow, Rodriguez, Screvane and numerous confidential sources. Cashmore: Moscow.

Triborough's share would have modernized LIRR: The cost of doing everything necessary to modernize the LIRR except buying the land for the new terminals and parking garages and building a new line down the LIE—of buying new cars and high-speed locomotives and rebuilding the trackage; of building the new switching yards—was set at \$60,-000,000 in 1954 by a special state commission. The cost of building an 80-mileper-hour rapid transit line down the center of the LIE was estimated at \$85,000,000 by the State DPW. The cost of the land for the new terminals and garages was not estimated at any time during the 1950's, but it would have been relatively minor, considering the relative cheapness of land in Suffolk and western Nassau counties. In 1965, a state Special Committee on the LIRR (the so-called Ronan Committee) estimated the cost of a full-scale modernization program—with, as far as can be determined from its hazy wording, provision for only a few terminals—at \$200,-000,000: Special Committee, A New Long Island Rail Road, Feb. 1965. A full fifteen years after 1955—on July 6, 1970 —Newsday could report that "the Metropolitan Transportation Authority . . .

sees the full program of LIRR modernization as a 20-year, \$500,000,000 project" (italics added). It is of interest—although many factors clouded the picture—that when the state purchased the LIRR from the Pennsylvania Railroad in 1965, the total cost of its rolling stock and all other physical facilities amounted to only \$65,000,000.

Port Authority's share would have built trans-Hudson loop, etc.: Metropolitan Rapid Transit Survey, Report of the Project Director, sets the "capital requirements" figure at \$345,000,000 (p. 39). Several sources involved, in fact, believe this figure was set at its upper limits and that the loop could have been built for less.

Subway system: Various newspaper articles, 1953, 1954, 1955. A figure of \$587,000,000 was given in NYC Transit Authority, Report, 1953-54, p. 25.

\$1,187,000,000: NYC Transit Authority, Report, 1953-54, pp. 10-36; also see Reports for 1957-58. NYT, July 14, 1955. East River tunnel and extension into Queens: "The proposed subway tunnels from 76th Street to Astoria [in connection with the Second Avenue Trunk Line Plan] provide the key to the solution [of additional transit service to Queens and LI]. The Astoria extension has been proposed to run to the LIRR at Woodside and thence along the LIRR to Rego Park and a connection to the subway line at the Rockaways. The cost of the branch from mid-Manhattan Woodside has been estimated at \$110 million" (italics added). (MRTC, "Staff Report," pp. 20, 21.) The cost of modernizing the Port Washington branch of the LIRR and linking it up with the city subway at Woodside or Long Island City —the total capital cost, including new cars—would have been \$47,000,000. (Day & Zimmerman report cited below under "Long Island Expressway.")

Expenditures under Joint Program: All figures from "Arterial Progress," Nov. 8, 1965, pp. 26-31. (See Appendix "A.")
"The parking lots": Whelan, p. 82.

Plans from father: Robert Olmsted, quoted in DN, Aug. 29, 1969.

Black Hole: Solarz in NYT, Feb. 7, 1970.

Ancient cars; deferred maintenance; toll mounting: NYT, DN, Post, various articles, 1964-72. 45 cars break down per day: NYT, Feb. 6, 1970. "There have been more serious accidents": NYT, July 29, 1970. "Terrified, smoke-blinded": DN, "Our Staggering Subways."

"There is little need": RM quoted in Hoover and Vernon, p. 130. "Busted, lazy": RM, quoted in Doig, p. 151.

Baker: NYT, Feb. 5, 1970. LIRR lateness record: "Track Record," Newsday, various issues, 1970.

Long Island Expressway: A chance to reshape LI: Koppelman, Barnes; Nassau-Suffolk Regional Planning Board, various publications; the following discussion is based on extensive interviewing of locational consultants, trucking and bus company and business firm presidents, Nassau and Suffolk County public officials and staffers of the Nassau-Suffolk Regional Planning Board and the Regional Plan Association that the author conducted in 1965 for a Newsday series he wrote entitled "Suffolk the Sick Giant." Car trips: MCTA, "LIRR Modernization Program—Technical Memo-3." Buses: Koppelman, randum No. Barnes, bus company executives. The seven-mile stretch: Day & Zimmerman, "Report No. 5849-C." The other 78 miles: Barnes, Ingraham, confidential sources. \$15,000,000 per mile: Day & Zimmerman, "Report No. 5849-C." They had to report: Day & Zimmerman, p. 47; Lieper. Traffic load: Newsday, various articles. Solution-make it bigger: Clark: confidential sources in DPW. Koppelman told a friend: The friend was the author.

# 41. Rumors and the Report of Rumors

SOURCES

Books, articles, brochures and documents:
Lowe, Cities in a Race with Time;
Moses, Dangerous Trade; Talese, The
Kingdom and the Power.

Real I. Oak and Care Classon "The

Fred J. Cook and Gene Gleason, "The Shame of New York," The Nation, Oct.

31, 1959.

City Planning Commission, Tenant Relocation Report, Jan. 20, 1954. Mayor's Slum Clearance Committee, "Manhattantown Slum Clearance Plan," Sept. 1951. Women's City Club of New York, Tenant Relocation at West Park, Mar. 1954; Manhattantown Two Years Later, Apr. 1956 (Manhattantown was the original name for "West Park"). "Hearings, U. S. Congress, Senate Banking and Currency Committee," Vol. 49 (New York City, Oct. 1, 1954).

Elinor Black Papers, including the "Relocation Questionnaires" filled out by displaced residents of the Manhattantown site, and the "Black Log," an informal record of her activities on their behalf.

## Author's interviews:

Algernon and Elinor Black, Fred J. Cook, Walter S. Fried, Hortense Gabel, William J. Haddad, Joseph Kahn, Lawrence M. Orton, Robert C. Weinberg.

#### NOTES

Rumors: Gabel. The only one: NYT, Apr. 3, 1962.

Statistics: Orton. Federal requirement: "Contracts for financial aid shall be made only with a duly authorized local public agency and shall require that . . . there are or are being provided . . . at rents or prices within the financial means of the families displaced from the project area, decent, safe, and sanitary dwellings equal in number of and available to . . . displaced families and reasonably accessible to their places of employment..." Sec. 105c, Title I: Slum Clearance and Community Development and Redevelopment, National Housing Act of 1949.
"To set at rest": RM, "Manhattantown
Slum Clearance Plan," p. 17. Columns of statistics: "Plan," p. 18. RM's statistics false: See below.

Garbage cans: Fried.

"Like cattle": Isaacs quoted in Lowe, p. 83.

Liberals' feelings: Liberals Elinor and Algernon Black, Gabel, Orton, Weinberg. "Not a crusading paper": Black Log.

HT, DN: Orton.

"Going underground": Orton. The Bureau was under RM's thumb: "Shame," pp. 300-06. RM kept count too low: Author's comparison of City Planning Commission Report figures with RM's figures. 170,000 evicted: CPC Report, p. 40. Orton leaned too far: Author's analysis of figures in CPC Report for Manhattantown, pp. 46-47, compared with figures from on-site investigation by Women's City Club members, in the club's two brochures. 12,000 for Stuyvesant Town: Moses, Dangerous Trade, p. 433.

Their color: CPC Report, p. 42. Their income: Report, p. 47. Evicting people least able to afford new homes: The 1950 census reported that 29 percent of the city's nonwhite families—almost one out of every three—were living in accommodations listed as "substandard."

The city's pledge: Summarized in CPC Report, p. 1. Shuttled within site: Report, pp. 50-51. Few into public housing: Report, pp. 48-49. The actual percentage

was 27.1, Report, p. 47. Disappeared: Report, p. 37; "43% of all relocatees moved to an unknown address." Were doubling up or moving into border areas: Gabel, Orton.

50,000 per year: CPC Report, p. 43. Practices should be changed: Report, pp. 31-34.

Veteran women campaigners for better housing: The club's board of directors, for example, included Mrs. Elinor Black, Stanley Isaacs' wife and daughter and Mrs. Nathan Straus, wife of the federal housing administrator.

"Bombed-out Berlin": "Shame," p. 286. Experiences of Women's City Club volunteers: As they recorded them for Mrs. Black on the "Relocation Questionnaires"

preserved in the club's files.

Length of Puerto Ricans' tenancy: Tenant Relocation at West Park, p. 8. "Since it was built": A phrase repeated on relocation questionnaires. Average income: Tenant Relocation, p. 6. Buildings old, overcrowded: Tenant Relocation, pp. 1, 7. But area friendly: Interview forms; Mrs. Black. Volunteers envious of sense of neighborhood: This emerges clearly in some of the interviews. "Well satisfied": Tenant Relocation, p. 8. Average rent: Tenant Relocation, p. 7.

"I would die": Unnamed resident, quoted in *Tenant Relocation*, p. 5. Anywhere. But not Harlem: Questionnaires.

Color and poverty barred them from most areas: Tenant Relocation, pp. 5, 8-10; quotes, p. 10, p. 5.

No applications being accepted: "Interview, Nov. 25, 1952. Dr. Wortis, Mrs. Black at the Bureau of Real Estate, 10 to 11:15 A.M.," Mrs. Black's notes, Black Papers. 300 of 400 wanted public housing: Tenant Relocation, p. 9. Only fifty: Two Years Later, p. 19.

The notice: Tenant Relocation, p. 2. No help available: pp. 10-11; questionnaires. Typical: p. 7.

Finding out wasn't easy: Mrs. Black's Log records her efforts. Difficulty in tracing tenants: Two Years Later, pp. 7-8. Only 167: Two Years Later, p. 8. Probably the best off: Isaacs to Black, Feb. 21, 1956, Black Papers. Quotes from relocatees: Questionnaires.

"Seriously affected": Two Years Later, p. 27. Could picture: Mrs. Black. From one building to another: Tenant Relocation, p. 10; "Shame," p. 263. Leaned over backwards: After reading her report, Isaacs wrote her, "You are too much of a lady and far too gentle to make the emphatic comments that some of the

facts that you have uncovered really deserve. . . . I am really tired of the way that what has been done so badly has been covered up so effectively," Isaacs to Black, Feb. 21, 1956, Black Papers. "Human decency": Tenant Relocation, p. 13.

City Planning Commission report: Infighting: Gabel, Orton, confidential source. Resolution: Board of Estimate calendar, No. 363, Mar. 12, 1953. Constable's shock: Orton. Bennett reaping profit: See "Notes" for Chapter 43. RM's rewriting: The "Minority Report" gives some examples, p. 33. "The outlook": "Minority Report;" pp. 4-5. Civics demand: Lowe, pp. 83-84. The report RM suppresses: Post, Dec. 11, 1953; Post, NYT, HT, Dec. 14, 1953.

Rosenman's statement: "Hearings"

transcript, p. 3151.

"Moses wasn't God": Gabel. Bennett's confession: NYT, Jan. 21, 1954. Papers led: NYT, HT, DN, Jan. 21, 1954. Bennett locked up copies: Orton, confidential source. Only the Post: Post, Jan. 21, 1954. Why press didn't cover: Cook, Gabel, Haddad, Kahn, Orton; Talese, pp. 99—101, gives the Times's general handling of RM. Gabel before Board: NYT, 1958. "Bunk": RM, quoted in Post, Jan. 28, 1954.

Senate hearings: Caspert testimony: "Hearings" transcript, Vol. 49, pp. 3097, 3133. Example of Rosenman's interventions: p. 3103. Rosenman-Simon-Bush exchange: pp. 3139-40. Profits huge: pp. 3118-43; passim. For individual profits, see charts pp. 3144, 3146. "Different people": Simon, on p. 3129. \$375,000: p. 3129. Comptroller renting appliances: pp. 3123-24, but best summing up is done by Cook in "Shame," p. 287.

Didn't mention Moses once: NYT,

Oct. 2, 1954.

Reporters refused permission: Cook, Kahn tell of them.

Six agencies investigating: Lowe, p. 82. Pallid series: WT&S, May 9-10, 1955.

## 42. Tavern in the Town

## SOURCES

## Books, pamphlets and documents:

Isaacs, Love Affair with a City; Kieley, Moses on the Green; Reed and Duckworth, Central Park.

Moses, "Statements by Mr. Arnold Newman et Al., Concerning Reconstruction of the Tavern on the Green," Apr. 17, 1956.

Wagner Papers, esp. various files in Box 1943—"Community Activities," and Box 1944—"Tavern on the Green."

## Author's interviews:

Peter Campbell Brown, Jacob Lutsky, Warren Moscow, Arnold Newman, Augusta Newman, Elliott Sanger, Elinor Sanger, Arnold Schleiffer, Sidney M. Shapiro, Robert F. Wagner, Jr., and the two auditors in the City Comptroller's office, Alfred A. Fried and Samuel Shafran. Also several confidential sources.

#### NOTES

(All dates 1956)

"Country roads . . . rattle of pavements": Andrew Jackson Downing, quoted in Reed and Duckworth, p. 15.

"Beautiful, tranquil": Augusta Newman. Mrs. Davis' discovery: HT, May 6. "They can't do that!": Augusta Newman. Brush-off: Arnold Newman. Wald story: *HT*, Apr. 13.

"Working for the People" reviews: NYT, Mar 11; HT, Mar. 18. Giving Theobald a lesson: "Telephone Message from Commissioner Moses, 11:04 A.M., Friday, April 13," Wagner Papers.

RM's thinking: Author's analysis of his interviews with RM, Shapiro.

"Of all the city's wonders": Reed and Duckworth, p. 1.

Calling Isaacs: Sangers. Mothers and baby carriages: Augusta Newman. "In front of it": HT, Apr. 18. Tableau: Pictures in various newspapers, Apr. 17, 18.

RM trying to trick the protesters: Kieley, p. 4; NYT, DN, Apr. 21.

"Move some topsoil": NYT, Apr. 21.

"A heartbeat": Hurst quoted in DN, Apr. 23. Front-page box: WT&S, Apr. 24. Newspaper coverage: NYT, HT, Post, DN, Daily Mirror, J-A, WT&S, various issues, Apr. "The claque": Daily Mirror, May 29. Isaacs' letters: NYT, Apr. 26 for example.

The April 24 raid: All papers. Best is Post, Apr. 24, by William H. Rudy. "Stab in the back": Elliott Sanger, quoted in HT, Apr. 24. "Sylvan victims": J-A, Apr. 25. "Who else?": Post, Apr. 25. The pictures: Various newspapers, Apr. 24, 25. "Little soldier": J-A, Daily Mirror, Apr. 25. Constable's smirk: DN, Apr. 25.

"Moses has the right": William Peer, quoted in NYT, Apr. 2. Council: Kieley, p. 4; NYT, Apr. 27, 28. Hecht: NYT, Apr. 27. Hofstadter: Various papers, Apr. 28-May 3. Quoting poetry: Post, Apr. 22. RM to Brown: Brown. "No, no": DN, Apr. 27.

Probably at Isaacs' suggestion: Isaacs was suggesting the move to everyone who would listen. For example, Isaacs to Wagner, Apr. 17, 1956, p. 2: "I remember well the time when he closed and razed the Casino in the Park. I wish someone could extract from the newspapers of that day all that he then said to justify his act—which, incidentally, I approved." Wagner Papers. "Society" orchestras, etc.: Post, Apr. 25, 30, HT, DN,

May 23.

"Schleiffer arrangement: Isaacs quoted in HT, May 2. Paid only \$9,000: "Statement," Office of the Comptroller, undated, Wagner Papers; Shafran. No different from other arrangements: Unsigned memo "To: Leo Larkin, Asst. Corp. Counsel," from "Office of Comptroller, June 20, 1956," which lists other concessionaires and their rental arrangements with city. Wagner Papers. Paid meal: Schleiffer, every Tavern waiters. Why RM favored this arrangement: What he said publicly was that he favored it because under it the concessionaire pays for improvements to property that "the city owns . . . in the end" (HT, May 2).

"At issue now": WT&S, Apr. 30. "Park Windfall": J-A, May 1. "Only 2%": Post, May 1. "Drops Curtain": Post, Apr. 26.

Didn't realize the threat: Shapiro, confidential sources. "We're just going": HT, May 3. Private instructions: Brown.

Constable's refusal, Wagner's order: Post, May 1, 2; NYT, May 2. "Nothing to hide": Wagner quoted in NYT, May 5. "Mayor Demands Airing": WT&S, May 4. "Let's Find Out": NYT, May 21. "Moses' Wings": DN, May 21. "Wagner and City": Post, May 21. Wagner conversation with Brown: Brown. Wagner told the author he did not recall the conversation. "What I have not seen": L. O. Rothschild to WT&S, May 9. Federal officials: Post, Apr. 14; NYT, Apr. 16. "Salutary effect": Post, May 8. Circles, grimace: Pictures in Daily Mirror, WT&S, May 27. Shipboard interview: Various papers, May 27. Newmans' feelings: Newmans. "A proper greeting": Newman quoted in Post, May 27. "Mother of two": WT&S, May 28. Memo: Brown to Wagner, May 14, Wagner Papers.

\$48,000: "Statement," Office of the

Comptroller; HT, May 5.

"Moses in the dock": Brown. Facesaving arrangement: Brown, confirmed by memos, Brown to Wagner, May 9, 14. Field agreed to let Moses save face. Reported the *Post* (July 18): "Asked what caused Moses to change his mind, Field says: 'I did not ask him and he did not tell me. . . . It's all closed and on a friendly basis.' "Brown's conferences with Wagner, RM: Brown. "Commissioner Moses agreed": Brown to Wagner, June 8, Wagner Papers.

Surrender headlines: Various papers,

July 18.

Destruction of the myth: It was striking to the author that in interviews with persons who dealt with RM primarily after the Tavern fight, these persons spoke of him in terms emerging from that fight—in contrast to persons who dealt with him only before the fight. "Never the same": Shapiro.

## 43. Late Arrival

## SOURCES

Books, articles, brochures and documents:
Anderson, The Federal Bulldozer;
Lowe, Cities in a Race with Time; Moscow, The Last of the Big-Time Bosses
and What Have You Done for Me

Lately?; Moses, Dangerous Trade.
Fred J. Cook and Gene Gleason, "The Shame of New York," The Nation, Oct.

31, 1959.

Cook, Gabel and Thompson Papers.

## Author's interviews:

Albert M. Cole, Fred J. Cook, Walter S. Fried, Hortense Gabel, William J. Haddad, Joseph Kahn, Jacob Lutsky, Mary Perot Nichols, Lawrence M. Orton, Stephen C. Thompson, Robert F. Wagner, Jr.; numerous federal, city and state housing officials, Moses aides and journalists who declined to be identified.

#### NOTES

Gleason's thinking: Cook. Kahn series: Post, May 23-25, 1956. First Gleason-Cook series: WT&S, July 30-Aug. 4, 1956. Editors intimidated: Cook. RM's articles appeared Aug. 1, 2, 3. Phone tips pouring in: Cook, "Memo for Nort," Aug. 3, 1956, Cook Papers. Clipped-out ad: Attached to undated, untitled memo, Gleason to Cook, Cook Papers. Future leads: Cook to Mockridge, Aug. 4, Cook Papers.

Interviews with city officials: Cook, Gabel, Thompson; Haddad would later have similar experiences. 92-year-old wo-

man: WT&S, Brooklyn edition, Jan. 17, 1957. Comptroller's aide: Gleason, "Memo re Title I," Apr. (date unclear), 1957. "The Department of Health reported yesterday": NYT, Jan. 24. Manhattantown foreclosure: "Shame," p. 291. Five paragraphs: NYT, June 13. "We were conned": WT&S, June 13, and editorial, same date. In no newspaper: Various papers, June 14-21. "The changing ownership": NYT, June 19.

Gleason and Cook confident: Cook; "Shame," p. 291. Zeckendorf: "Shame," pp. 291-92; Cook. Board of Estimate session: Various papers, June 21, 22, 26, 27, 1957. "Human Betterment": Swope quoted in NYT, June 22. "Plain trafficking," "It sounded good," "disturbed no . . . realities": "Shame," pp. 291-92.

Lincoln Center: RM's grand conception: Dangerous Trade, pp. 516-33; author's interviews with RM. "Not to speak": p. 528. \$9.58 vs. \$7.00: Architectural Forum, Oct. 1957. Kennedy property: WT&S, Oct. 9, 1957; RM's reply (Dangerous Trade, p. 525): "Ambassador Kennedy was not interested in selling the building, preferred to keep it, and was induced to agree upon a very reasonable option price primarily as a matter of public service. . . . Far from representing a handout . . . this was getting for the City and Federal government far more than the usual writtendown price for the area. . . . The story that the city lost or will lose money because of overpayment . . . is malicious and wholly without basis in fact."

Cole attempting to go over RM's head: HT, Apr. 8, 14, 18, 1957. Wagner's telegram: HT, Apr. 19. RM's offer to resign, Wagner rejects it: NYT, July 27. Editorials: HT, NYT, July 29. McGinley, Rockefeller, etc.: Cole, Fried. "Compromise": NYT, Aug. 9. Gleason and Cook realization: Cook.

"The heat was really on"; "There was a time": "Shame," p. 292. Photostats: Cook Papers. "Manhattantown began": "Shame," pp. 289, 290. Gramercy Park: WT&S, Oct. 8, 1958, which produced a flyer circulated in the neighborhood: "It's Our Own Assemblyman Who Wants to Kick Us Out of Our Homes." Nassau Management: Many WT&S articles, summarized in "Shame," pp. 300-01. "Alone," "guts cut out": Cook, confirmed by author's comparison of Cook's rough drafts with articles actually printed: Cook Papers.

Gleason: Cook, Haddad, Kahn, Thompson, but the definitive word was Murray Kempton's, Post, Nov. 25, 1959. "Nothing

halts him": WT&S, June 23, 1959. See also Time, Dec. 7, 1959. Hidden mike: "Shame," pp. 280-84. Cook: Haddad, Kahn, Thompson. "Sense of injustice":

Giving it to Haddad: Cook. Helping each other: Cook, Haddad, Kahn. "Chipmunks": Gabel. "Our motives?": Haddad. The RM they knew was not the RM of the beautiful parks: This fact emerged quite clearly from the author's interviews with Cook, Haddad, Nichols and Thompson. "He had to be stopped": Kahn.

Public Friend No. 1: Long Island Press, Jan. 4, 1959; interviews: NYT, Jan. 7, 1959. Senate confirmation: HT, Mar. 21, 1959. The two senators quoted were John Cooke of Buffalo and Robert C. McEwen of Ogdensburg.

"Only 20 families": Post, Feb. 16, 1959. See also Mar. 31. Ungar: Post, Feb. 14, 1959. "Nowhere to Go": Post, Mar. 20. 1959. "City Admits Shifts": Post, Apr. 11, 1959. "Awake at last": "Shame," p. 292.

## 44. Mustache and the Bard

## SOURCES

Books, articles, transcripts, documents:

Moscow, What Have You Done for Me Lately?

Wagner Papers, primarily Box 1944--

"Jan.-June, 1959."

## Author's interviews:

Howard S. Cullman, Warren Moscow, John Mulcahy, Paul O'Keefe, Joseph Papp, Sidney M. Shapiro, Robert F. Wag ner, Jr. Also one Moses aide who de clined to be identified.

## NOTES

(All dates 1959 unless otherwise noted)

Could recite whole scenes: Author heard him do so. Liked his style: Cullman, one of those he asked, recalls RM questioning Cornelia Otis Skinner at length about Papp at a dinner party, and being impressed; also Shapiro, confidential source.

Papp biography: Magazine cited above, but mostly Papp interview with author. "If I had to pay": Papp in HT, Mar. 16, 1958. Why RM built amphitheater: RM. "Oh, let him have it": Shapiro recalls the incident. Gives Papp "expression of interest": Papp.

A certain tenderness: Shapiro; the author noticed this quality of RM's in discussions about Thomas P. F. Hoving, among others. Gave Papp car, etc.: Papp. Kerr: Quoted in The New Yorker, Aug. 31, 1957, p. 56. Papp and the sergeant: Papp. Sit on a blanket: RM's feelings described by Cullman, Shapiro, confidential source. Horizon articles: Nov. 1960. Saturday Review: Mar. 8, 1958. Constable assurance: Papp, confirmed by tone of later RM-Papp correspondence, Wagner Papers.

Didn't get along with Constable: Papp, Shapiro, confidential source. Papp's testimony: "Testimony of Joseph Papirofsky (Papp)," pp. 2549-58.

Without checking: Moscow, pp. 205o6. No more free Shakespeare: Papp to "Members of the Fact Finding Committee of the Entertainment Unions," Mar. Wagner Papers.

"Every deputy": Moscow, p. 205. Birthday interview: NYT, Jan. 7. Papp trying to contact RM: Papp. "Very cavalier": RM to Papp, Mar. 18, Wagner Papers. "Erosion problems": RM to Papp, Mar. 1959, Wagner Papers.

"I feel certain": Papp to RM, Mar. 25, Wagner Papers. "Entirely in the hands": RM to Papp, Mar. 26, Wagner Papers. Papp says he will consider: Papp to Constable, Mar. 30, Wagner Papers, but Papp to Constable, Apr. 7: "We regret that it is impossible. . . . The whole idea of charging came up for re-examination yesterday by . . . our Board of Directors."

Papp's desperation: Papp. Press conference: HT, Apr. 16. RM's reply: Park Department press release, Apr. 15. Papp attacks again: Papp to RM, May 4, Wagner Papers. Editorials: HT, WT&S,

Apr. 30.

McLaughlin: McLaughlin to Kennedy, May I, attached to Constable to Wagner, May 6, Wagner Papers. Tenney: RM to Tenney, Apr. 28, Wagner Papers, in which RM also states: "The artistic quality of the performers may be left to the judgment of others. Certainly they don't represent professional standards."

"A typical of the breed": RM to Wagner, Apr. 23, Wagner Papers. He circulated copies of Papp's testimony before the House Un-American Activities Committee to some key city officials; turned over to the author was a transcript with the following note to Bronx Borough President Lyons attached: "Dear Jim: Here's the lad who has been putting on the heat in Central Park." Unsigned letter: Post, Apr. 29.

"Muggers," etc.: DN, May 2. "What's wrong with McCarthy?": Constable, quoted by Haddad, Post, Apr. 29. Editorials: Daily Mirror, May 21; DN, May 8; Post, Apr. 29; Newsday, May 1. Papp's eloquent letter: Papp to RM, May 4,

Wagner Papers.

"You can't prove it": Post, May 6. Hopper: Post, Apr. 27. Lyons: Post, May 13. Eleanor: "My Day," in WT&S, Apr. 21. "As a child": Roger West to Post, May 7. 1,500 signatures: Post, May. 7. "Abolish Mr. Moses!": Post, May. 20. Pictures leaving hospital: DN, May. 2.

Papp's strategy: Papp. "It's now up to you": Papp to Wagner, May 5, Wagner Papers. Post editorial: May 6. "He would rather be": Moscow.

Wagner detested Constable: Wagner told the author, "He was a pompous ass. . . . He antagonized a lot of people. He thought he came down with the word from Olympus." Wagner's feelings: Moscow.

Wagner's humiliation: Various papers, Apr. 17-May 2. Here is an example of the newspaper play by Judith Crist on p. 1 of the Apr. 21 HT: "For the fifth consecutive day yesterday Mayor Wagner reported that he was unable to get in touch with Park Commissioner Robert Moses. . . Undaunted, the Mayor indicated that he hopes to reach Mr. Moses eventually." NYT story: Apr. 21. "Appeared irritated": WT&S, Apr. 21. "No": DN, May 2. Players Club lunch: Moscow. Statement in press, May 12.

Lower Court: NYT, May 19, June 3. Appellate Division: NYT, June 18. "Of course abide": NYT, June 19. Two philanthropists: Florence Sutro Anspacher

and the Edward L. Bernays Foundation. "Julius Caesar" hailed: Judith Crist in HT, Aug. 4, for example, said: "Moses . . . missed a good show."

"Oh, give it to him": Shapiro and confidential source, who agree on what RM's true feelings were. A one-sentence letter agreeing to put Park Department equipment at Papp's disposal was sent to him by RM, July 6, Wagner Papers. One of the best things: Newsweek, July 3, 1972, p. 54

"Does anybody doubt it?": Isaacs quoted in NYT, Apr. 27. The public understood now: Among the many editorials pointing this out: Post, Apr. 16; NYT, Apr. 18; HT, Apr. 16; WT&S, Apr. 17.

## 45. Off to the Fair

## SOURCES

## Books and articles:

Lowe, Cities in a Race with Time; Moscow, What Have You Done for Me Lately?; Moses, Dangerous Trade; Talese, The Kingdom and the Power.

Fred J. Cook and Gene Gleason, "The Shame of New York," The Nation, Oct.

31, 1959.

Cook and Wagner Papers.

Moses, "The Fair and the Building Congress" (a speech delivered to the New York Building Trades Congress), May 4, 1961.

#### Author's interviews:

Henry Barnes, Peter J. Brennan, Albert H. Cole, John A. Coleman, Jane Moses Collins, Fred J. Cook, Timothy J. Cooney, Thomas E. Dewey, Walter S. Fried, Monroe Goldwater, William J. Haddad, Joseph T. Ingraham, Joseph Kahn, Robert Kopple, Jacob Lutsky, Michael J. Madigan, Warren Moscow, John Mulcahy, Mary Perot Nichols, Paul O'Keefe, Joseph Papp, Paul R. Screvane, Sidney M. Shapiro, Robert F. Wagner, Jr.

## NOTES

## (All dates 1959)

Citizens Union questions and answers: Various papers, May II, 2I. "A great day!": Haddad.

Haddad, Kahn and the files: Haddad, Kahn. "Delicate situation": Shanahan memo, Feb. 24, 1957, copied by Gleason; Cook Papers. To RM, sponsors were Colonel Bennett's group: RM, press release, July 3; Moses, Dangerous Trade,

pp. 456-57. Had left investigation to Shanahan: Confidential source. Gigante: "Benson Memo to City Desk—Subject: Vincent Gigante," undated, Cook Papers. "Grotesque": NYT, July 4.

Donoghue and Baron: Haddad, Kahn; Post, June 26; Gleason, "Memo—Re: Hall developers, et al.," Jan. 21, 1956.

Soundview tip: Cook.

Shanahan: Haddad. "Answer every one": Kahn. FHA loans, Ungar's \$700,000: Post, various articles. "A fundraiser": Post, June 16; WT&S, July 11.

Wechsler and Mrs. Schiff: Haddad, Kahn. "There was a time": "Shame," p. 292. Change in older reporters: Cook, Haddad, Kahn, confidential sources. "You can't do that, Mayor": Haddad, confidential source.

"Personal publicist": Post, June 26. Interview with Lebwohl: Kahn, "Some Stories I Didn't Write," Page One of 1972, pp. 41-42.

Spargo: WT&S, July 22, Aug. 24; Post, June 18, July 22, 27, 28, Aug. 24; HT, Aug. 24; NYT, June 30. "Mr. Moses' Man": Post, Aug. 26. Front page: NYT, Aug. 23. RM's response: On June 21, for example, he issued two separate statements, rushing the first to city desks and telegraphing the second: NYT, June 22.

Investigators checking Haddad: Haddad, Kahn, confidential source. Locking off the vending machines: Kahn. "Licking his chops": "To Fred Cook from Gene Gleason," undated memo, Cook Papers. "Get out": Haddad.

"Befuddled": NYT, June 23. news": Talese, pp. 99-101. "Our confidence": NYT editorial, June 25. "Startling disclosures": NYT, July 1, 4. Editors okayed submission: Confidential source. "I . . . protested": Moses, Dangerous Trade, pp. 460-61. RM to Sulzberger: Letter quoted in Dangerous Trade, p. 461. Sulzberger's invitation: Quoted in Dangerous Trade, p. 461. Play toned down: For example, when, on July 29, Wagner responded to another Moses resignation ultimatum with another concession, the Times editorialized: "We need, occasionally and more often, to turn away from fault-finding and examine with appreciation the extent to which New York is being rebuilt. . . . Among the good news . . . is the word that Mr. Moses—hard to live with but impossible to do without-will still be in there pitching."

Fire RM?: Cooney, Screvane; confirmed by Coleman, Goldwater, Lutsky,

Moscow, O'Keefe, confidential sone Needed RM: Author's analysis, RM's estimates: Moses, "The Fair and the Boding Congress." Press misunderstanding. Various papers, uly Aug., Sept., but best summarized in "Shame," pp. 297-300. Quote is p. 298. "And I never would have": Wagner. "Checking quietly": Fried. "Moses Ready to Quit" and then Massena: NYT, June 27, 28. Citizens Union statement: NYT, July 10. "Who will take his place?": DN, July 12. Wagner sure RM not serious: Lutsky. "A dead duck": NYT, July 4. Pounding his desk: WT&S, July 9. "Indicated . . . the axe": DN, July 9. "Wagner Ducks": DN, July 10. Golf Club incident: HT, July 3.

Not life and death: O'Keefe, Brennan, RM's thinking: Interviews with Brennan, Jane Moses Collins, Cullman, Dewey, Ingraham, Madigan, O'Keefe, Screvane, Shapiro, Wagner and others with whom he consulted or who were attempting to analyze his thinking at the time—plus the author's interpretation of remarks RM made to him. Atomic power: Moses, Dangerous Trade, pp. 407-10. Haussmann: RM's recognition of the importance of the Fair in Haussmann's career emerges clearly from speeches he made in 1959-60.

Resignation announcement: Long Island Press, May 22, 1960. Wagner's letter: NYT, May 10, 1960. Grand-ballroom dinner: NYT, Apr. 22, 1960.

Morris' hero worship: Barnes, Ingraham, Mulcahy. Also Papp, who says: "He hero-worshipped Moses. You could just tell it from the things that he said. He was a poor, sad man, like a little boy." Humiliating Newbold: Barnes. "A giant": Post, May 19, 1960. Phone episodes: Ingraham, confirmed confidentially by another reporter. The public spanking: NYT, July 15, 1960.

Katcher's article: Post, May 9, 1960. Kihss's article: NYT, May 24, 1960.

## 46. Nelson

#### SOURCES

## Books, articles and documents:

Gervasi, The Real Rockefeller; Lundberg, America's Sixty Families and The Rich and the Super-Rich; Morris, Nelson Rockefeller: A Biography and Those Rockefeller Brothers; Moses, Dangerous Trade; Poling, The Rockefeller Record; Rodgers, Rockefeller's Follies, White, The Making of the President—1960, 1964 and 1968.

Frank Lynn, "The Rockefeller Years," Newsday, Apr. 14–18, 1969; David Nevin, "Rockefeller: The Old Avidity Is Gone," Life, Mar. 29, 1968.

Nelson A. Rockefeller, "The Story of Rockefeller Center," address at the luncheon of the New York Building Congress, Nov. 10, 1937.

La Guardia and Wagner Papers.

## Author's interviews:

Harold Blake, Peter J. Brennan, William S. Chapin, Ernest J. Clark, John A. Coleman, Thomas E. Dewey, Perry Duryea, Jr., Jerry Finkelstein, Leonard W. Hall, Joseph T. Ingraham, H. Elliot Kaplan, Arthur Levitt, Jacob Lutsky, Michael J. Madigan, J. Burch McMorran, Paul R. Screvane, Sidney M. Shapiro, Bertram D. Tallamy, Hazel Tappan, Robert F. Wagner, Jr., William J. Zeckendorf and various sources who would talk only on guarantees of anonymity.

## NOTES

Rockefeller's wealth: Lundberg, Sixty Families, pp. 6, 424–28; The Rich, pp. 592–631; White, 1960, pp. 79, 87, 217; 1964, p. 65. Vs. Harriman: Lundberg, The Rich, p. 136. \$5 billion: Lundberg, The Rich, p. 158.

"Almost a dependency": White, 1968, p. 226. "The last great bank": White, 1964, p. 65. "I bet on money": Quoted

in White, 1964, p. 68.

Ruthlessness similar to RM's: This comparison was made, over and over, to the author by men who are afraid to be quoted. Among those willing: Shapiro (if he was dead), Dewey, Zeckendorf.

"Enjoyed his job": Rodgers, p. 25. The imagination of the builder: Duryea. Backdoor financing: Lynn series; Levitt in

NYT, Jan. 30, Aug. 18, 1970.

"Strange, pietistic": White, 1960, p. 182. "Rough": White, 1964, p. 77. Civil rights donations: White, 1964, p. 74. "No crevice": White, 1968, pp. 224-28. "Button":

Lutsky

RM sure Nelson liked him: RM, Dewey, Shapiro. Palisades Parkway: Moses, Dangerous Trade, p. 137. The closeness of the relationship between RM and John D. Rockefeller, Jr., is documented in LaG to RM and RM to LaG, Nov. 15, 1934, LaG Papers. Dorado Beach: Dangerous Trade, pp. 819-20. South America: Brochure, Dangerous Trade, pp. 791-806; Clark. Fantastic fee: \$100,000, Madigan says.

Spanking Ronan: He called the report: "Impractical ideas edged with malice

which emanated from an ambitious professorial mind." HT, Feb. 22, 1957. "Task Force" recommendations: Recommendation 19: "The Department of Conservation should be assigned the responsibility for the management of state parks now delegated to the regional state park commissions and the State Council of Parks. The commissions should be reconstituted as advisory councils to regional park directors appointed by the Commissioner of Conservation."

Discussing parks with Laurance: Nelson Rockefeller quoted in NYT, Dec. 2, 1962. Red cardboard folders: White, 1968, p. 225. Becoming a crusade: Confidential source. "Sucking up": Shapiro, Blake. Poisoning: Stan Hinden, Newsday, Dec. 1, 1962.

Tension over retirement extensions: Shapiro, Blake; confirmed by H. Elliot Kaplan, head of the State Retirement System. Lake Welch speech: HT, June 16, 1962; Shapiro, Chapin.

The meeting at the brownstone: Shapiro. "Asked, I might say ordered": RM statement, Nov. 30, 1962. RM at DN: Confidential sources. Ploy: Shapiro, confidential sources. Rockefeller trying to call him: Shapiro, Tappan. "I urged him not to resign": Rockefeller statement, Nov. 29, 1962.

Firming up his threat: RM to Rockefeller, Nov. 28, 1962. Modifying it: Shapiro. Rockefeller accepted it: Rockefeller to RM, Nov. 29.

The events conspiring, RM's feelings: Shapiro, confidential sources. RM's statement: Nov. 29, 1962. Rockefeller's statement: Nov. 30.

"It broke his heart": In his memoirs, RM says, in the only such admission he ever made on any subject, so far as the author could find, that his resignation was offered "perhaps impetuously, as I look at it now." Dangerous Trade, p. 154.

"There is nothing": RM quoted in DN, Dec. 2, 1962.

"Calmly": DN, Dec. 2, 1962. Maneuvering: Brennan, Dewey.

"Nepotism": DN, Dec. 1, 1962. Sokolsky: In "These Days," Long Island Press, Dec. 6. No statements: The new reporter was the author. Hardly any public reaction: Various newspapers, Nov. 30-Dec. 7.

State Council of Parks meeting: Newsday, Jan. 23, 1963. "Emotional strain": Duryea. "They broke his heart": Ingraham. Bridge dedication: Various newspapers, Jan. 18, 1963.

Speeches: Moses, 'The Fair and the Building Congress," May 4, 1961; "Statement by RM," May 4, 1961.

Oral History Reminiscence: George McAneny.

## Author's interviews:

Robert Alden, Henry Barnes, Harold Blake, Peter J. Brennan, Ernest J. Clark, Gilmore Clark, John A. Coleman, Timothy J. Cooney, Howard S. Cullman, Thomas E. Dewey, Perry B. Duryea, Jr., Fred Ferretti, Joseph T. Ingraham, Joseph Kahn, Robert Kopple, Jacob Lutsky, Michael J. Madigan, J. Burch Mc-Morran, Harry L. Meyers, Mary Perot Nichols, Paul O'Keefe, John Sattler, Paul R. Screvane, Sidney M. Shapiro, Robert F. Wagner, Jr., Bernard Weiner.

#### NOTES

(The author covered the Fair and investigated its finances during 1965 as a reporter for Newsday. Many of the observations in this chapter are those made by him at that time.)

Wanted it named after him: Madigan,

Shapiro.

History of FM Park and RM's dreams for it: Moses, "The Saga of FM," FM-Corona Park, pp. 7-24; Metropolitan Park Conference, "Program," pp. 10, 12. "A cloud of smoke": Moses, Dangerous Trade, p. 541. 1930 maps: Metropolitan Park Conference, "Program," p. 16. Rereading Isaiah: RM interview with author; he used the slogan in numerous speeches. "It takes more than a good idea": RM, quoted in Rodgers, p. 110. "Dark wall": Rodgers, p. 112. "For a while," "the miracle": Moses, "The Saga," p. 8. "By God": McAneny OHR. "Stop at nothing": Moses, "The Saga," pp. 8-9.

Every form of insurance: RM; RM to La Guardia, memos, letters, Jan. 4, 1936– Sept. 18, 1939, La Guardia Papers; Park Department, Report to the World's Fair Committee of the Board of Estimate, 1935. Mud waves: Weiner. \$59,000,000; "staggering": Moses, "The Saga," p. 11. "A lot of building": RM.

"Of more concern": "residuary legatee"; "a heritage": Moses, Introduction, FM and Beyond, p.5. \$56,000,000: FM and Beyond, p. 4. The applicable items

"Demolition—\$2,000,000; Restoration of Park-\$5,000,000"; "Reimbursement to the City for Construction-\$24,-000,000"; "Balance available for Flushing Meadows and Corridor Improvements, of which \$23,000,000 is required to complete the program, leaving a possible balance of \$2,725,000-\$25,-725,000." Timetable: W. Earle Andrews, Gilmore Clarke, "Report of Consultants," FM and Beyond, pp. 7-9. In private: Shapiro, Madigan, private sources. After an interview with Moses, Martin Mayer wrote that "Moses says that the thing that interests him most is the park, which will remain in perpetuity" (Esquire, p. 183). Banker's suggestion: George S. Moore to RM, Feb. 24, 1963, quoted in

Moses, Dangerous Trade, p. 605.

A billion: Moses, "The Fair and the Building Congress." "Miscellaneous—\$55,000,000": WF Progress Report No. 1, Jan. 16, 1961, p. 5. Constable memo: "To: All Participants," Mar. 9, 1964, Kahn Files. \$10,000,000: Peat, Marwick audit, Schedules 1, 2, 3. \$3,000,000 insurance premiums: Audit, Schedules 2 and 3 for WF Corp. through end of 1964—\$2,280,710. Campo & Roberts: Screvane, confidential sources; Moscow, p. 195. Discussion leading up to the approval was not extensive. Recalls one Fair official: "Moses just said it would be Campo & Roberts and that was that." Wagner: Interview with author. Screvane: Interview with author.

"Attitude of affluence": Confidential source; Wells, Life, pp. 142, 144. Unions encouraged: Brennan, Screvane, confidential sources. \$12,000,000 more for maintenance: Peat, Marwick Schedules I, 2, 3. \$10,000,000 for security: Audit, Schedule 3. Deegan's statement: Post, Nov. 27, 1963. His fees and expenses: Audit, Schedules 1, 2, 3; HT, Feb. 7, 1965. Donoghue and other PR costs: Audit; NYT, Sept. 3, 1965. Entertainment: Author's observations. "A dirty word": Confidential source. \$706,053: Peat, Marwick audit. \$33,299,000: Audit has \$35,508,822. Belgian Village loan: NYT, May 8, 1964. "Why don't you come aboard?": Among the people asked was the author, whose articles were angering RM, and Kahn. Legal fees to Rosenman and Preusse: In 1965 alone, the WF Corporation paid \$47,297.11 to Rosenman's firm, \$299,525.73 to Preusse's, Whitman, Ransom and Coulson. (Comptroller, "Third Supplemental Report," p. 40.) The Fair's total legal fees came to \$2,243,128.65. Of this amount, the bulk went to the Rosenman and Preusse firms.

Preusse to RM, Apr. 27, 1960; RM to Preusse, Apr. 28, Wagner Papers. Post Nov. 27, 1963. Some size of the figures involved is indicated by a single bill from Preusse's firm, Whitman, Ransom and Coulson—\$116,996,31. HT, Feb. 7, 1965.

Lucrative concessions: To Monaghan: Post, Nov. 27, 1963. To Cullman: He was given a slice of the Terrace Club at the Fair. Luce and Whitney: Mayer, Esquire, p. 180; Post, Nov. 27. \$24,000,000 allocation: Nichols, Voice, Dec. 17, 1964. Actual figure \$60,000,000: Comptroller's Report; also worksheets of Comptroller's auditors.

No outsiders: A roster of upper-echelon Fair officials can be found in WF Progress Report No. 1, pp. 53-55. The list of "Administration" and "Consultants" includes such long-time Moses Men as Constable, Witt, Andrews, Clarke, Farrell, Edward C. Maguire, Robert G. McCullough (of the Cross-Bronx Expressway), A. K. Morgan, Shapiro. Panuch "never sold," "couldn't do the job": Mayer, Esquire, p. 180.

Determined not to repeat Whelan's mistake: RM; Potter, quoted in Mayer, Esquire, pp. 179, 180. The critic is Walter McQuade, The Nation, p. 357. Design Committee proposal and RM's turndown: Summary in Mayer, p. 180. The clearest statement of the reason RM was determined not to have a single building is in a confidential letter to Wagner, Dec. 17, 1959, Wagner Papers: "We need a park there." Haussmann: Moses, Dangerous Trade, p. 549. Commissioning Port Authority: Mayer, p. 180.

Disorganization: Among the critics who commented on this. The one quoted is NYT, May 3, 1964.

Sukarno: Brooks, The New Yorker, p. 56. West Berlin: Brooks, p. 48.

BIE: Obstacles not insuperable: Kopple; Deegan to Wagner, Nov. 5, 1959, Wagner Papers. Brooks, The New Yorker, p. 42. Precedent: Brooks, p. 42. "Informal" exhibits being planned: Kopple. "Three people living obscurely": NYT, Sept. 11, 1963. "Not subject": Kopple. BIE's retaliation: Summary in Mayer, Esquire, p. 179. "It's pretty hard": Poletti quoted in Mayer, p. 182.

Extensive public relations effort: Detailed in *Post*, Nov. 14, 1963. Fair publicity deliberately built around RM: PR men O'Brien and Davis discussed this in author's presence during the Fair.

Newsday's ambivalence: Altschul series, editorial May 11, 1962.

Mrs. Sulzberger's letter: NYT, May 7, 1961. "Mr. Moses would complain":

Shapiro. Expressways editorial: NYT, June 15, 1963. "Infuriated": Ingraham.

Predisposition to be favorable: Kahn. RM's attitude at press conferences: Alden, Ferretti; author was present at some. "The Lester Markel Lecture": Moses, "Moses Meets the Press—Head On," NYT Magazine, Aug. 5, 1962. "Only one way": Kahn.

Kahn's crusade: Kahn. Opotowsky article: Post, Nov. 27, 1963. California: Lucien C. Haas (Brown's press secretary) to Kahn, Mar. 29, 1963, Kahn Files. Post, July 30, 1963. Puerto Rico, Virgin Is.: Post, Mar. 18, 29, 1963.

"Foul the nest": RM quoted in NYT, July 24, 1963. See also his speech "The Fair, the City and the Critics," Oct. 13, 1964, on "avant-garde critics and leftwing commentators, . . . jaded publishers [who] befoul everything."

NYT editors' luncheon: Ingraham, confidential source. Carping on Administration Building opening: Various newspapers, Jan. 12, 1961. On landscaping: NYT, Aug. 28, 1963. On Science Museum: NYT, Apr. 10, 1963; Oct. 9, 1963. Press conferences: NYT, Sept. 15, 1964.

Fighting with H. L. Hunt: NYT, Oct. 10, 19, 25, 1963. RM's version in Dangerous Trade, pp. 587-91. Douglas: HT, Sept. 13, 1961. Request had been assured of passage: HT, Mar. 14, 1962. NYT, Apr. 18, 1962. RM all but killed it: HT, Sept. 13, 1961. Attacks Congress: NYT, Sept. 21, 1961, Mar. 11, 1962.

Racial controversy: NYT, Mar. 12, 1962, June 19, 1963, Apr. 10, 1964; Screvane. Religious controversy: Moses, Dangerous Trade, pp. 579-87. In 1965, RM was awarded the Jordanian Kawkob (Star of Jordan) decoration of the First Order, for "contribution to understanding and friendship of nations." Garbage controversy: Welles, Life, p. 138. Art controversy: NYT, Nov. 18, 1963. Opening-on-time controversy: NYT, Feb. 28, 1964.

Daily expenses \$300,000; \$30,000,000 spent before opening day: Peat, Marwick audit, p. 3, Schedules 2 and 3. Needed 220,000 per day: Author's calculation based on internal Fair memos. Daily attendance figures: "Daily Turnstile Count," internal WF Corp. memo.

Witt's mistake: Peat, Marwick audit, p. 3. In Dangerous Trade, RM wrote: "It is clear that I relied too much on . . . the late Erwin Witt, who proved honest but timid and weak" (p. 606). Afraid to tell him, firing Spargo: Welles, Life, p. 144. "Never the same again": Confidential source.

"Drastically reduced budget": Welles Life, p. 146. His dilemma: Brenna: Willed, Pinkerton cut back: Newsday: (1) 2, 1965.

Inflating attendance figures: The action, as a reporter covering the Fair, was given the "official" figures by Fair PR men, but the true figures by a bank president with whom RM was negotiating for a loan to keep the Fair afloat and who had insisted on being given RM's personal "Daily Turnstile Count" "Financial success": NYT, Oct. 14 1964. Mary Nichols spotted it: Voice, Dec. 17, 1964. "A fool's paradise": Welles, Life. p. 146.

MacTavish episode: Welles, Life, pp. 146-48; confirmed by Spargo to RM, Feb. 1, 1965, and Witt to RM, Jan. 20, 1965 (given to author by confidential source). Moore-RM conversation: Welles, p. 148. Moore resignation: NYT, Jan. 19, 1965.

RM rounding up new exhibits: NYT, Feb. 5, Feb 18, Mar. 10, Apr. 21, 1965. Almost pleading: For example, Moses, "The Fair, the City and the Critics," Oct. 13, 1964, spends nine pages cataloguing "slanted headlines," etc., but ends: "We badly need the press. . . With . . . agreement on main objectives, differences in detail will be entirely consistent with mutual respect, and there will be a new dawn when the Fair reopens next April. Why not try this formula?"

Moore photo: Life, May 14, 1965, p. 13. Can't repay loan: RM, in NYT, Jan. 27, 1965. \$17,540,000 deficit: Peat, Marwick audit. Can't repay notes: NYT, Feb. 6, 1965. Dec. 31 financial situation: Peat, Marwick audit; HT, Jan. 24, 1965; Witt memo, Feb. 15, 1965, Schedule II, WF Corp. internal document. Threw in escrow account and other desperate measures: Newsday, various articles, Dec. 1964. Loan difficulties: Nichols, Voice, Dec. 17, 1964; Newsday, Feb. 20, 23, 1965. Ferretti's overplay: HT, Feb. 22, 1965. Newsday article; Mar. 13, 1965. Beame: NYT, Nov. 24, 1964; HT, Feb. 1, 3, Sept. 10, 1965. Escrow stories: HT, Jan. 21, 1965.

Newsday ridicule: Jan. 13, 1965. Schap: HT, Jan. 14, 1965.

NYT editorial: Feb. 7, 1965.

Wagner's feelings and resignation moves: Wagner, Screvane, Coleman; the author's interviews at the time with city and state officials who demanded anonymity. IRS investigation: Moses, Dangerous Trade, p. 606. Panama Canal: Gimbel, quoted in Welles, Life, p. 150. "A sad thing": McMorran.

Screvane's overtures: Screvane. Coleman's: Coleman. Bankers': Wagner, confidential sources. Executive committee maneuvering: Screvane, Wagner, Shapiro, confidential sources. Gaveling Zaretzki: HT, June 23, 1964. Feb. 24 meeting: Newsday, Feb. 24, 25, 1965. One reporter: The author.

Newsday column: Mike McGrady, May 11, 1965. His auditors told him: One Fair official, not a Moses Man, was feeding the author the daily memos on the situation being circulated within the Fair Administration Building; see, for example, Newsday, Mar. 15, 1965.

Last-minute attendance boom: Various newspapers, NYT, Oct. 14, 1965. \$13,-000,000: Internal WF Corp. memos.

RM meeting with bankers: NYT, Oct. 18, 1965. Legal action and compromise: NYT, Nov. 17, 1965. Triborough funds made available: NYT, Sept. 1, 1965. Quiet Park Department appropriations: Nichols, Voice, Dec. 17, 1964; Morris to Felt, Mar. 8, 1962, Wagner Papers (\$675,000 for trees). "One of the very great municipal parks": Moses, Dangerous Trade, p. 543. He also called it "the city's finest park": Newsday, Oct. 18, 1965. \$142,674,000: Moses, FM-Corona Park, p. 33.

## 48. Old Lion, Young Mayor

#### SOURCES

## **Books and documents:**

Klein, Lindsay's Promise; Moses, Dangerous Trade.

Levitt TBTA Audit (see "Sources," Chapter 33).

TBTA, "Memorandum in Opposition to Legislation Providing for the Merger of TBTA with the New York City Transit Authority and Other Transportation Facilities," Jan. 21, 1966.

## Author's interviews:

Henry Barnes, Harold Blake, Peter J. Brennan, Thomas E. Dewey, Perry B. Duryea, Jr., Thomas P. F. Hoving, Joseph McC. Lieper, J. Burch McMorran, Edward J. Maloney, Arthur E. Palmer, Jr., Robert Price, Richard M. Rosen, Sidney Schanberg, Sidney M. Shapiro, Bertram D. Tallamy, Robert F. Wagner, Jr., Norman K. Winston.

## NOTES

(All dates 1966 unless otherwise noted)

"Matinee idol": RM was to repeat this in print later; the first time he said it

was to his aides that day: Blake, Shapiro, confidential source.

"The power brokers": Klein, p. 95.

It sounded so easy: NYT, Jan. 14, 15. Moving LaG's portrait: NYT, Feb. 19. Their feelings about RM: Hoving, Price, Rosen, confidential sources. RM's feelings about them: RM. "Lindsay Maps Plans": Post, Dec. 10, 1965. One RM aide remembers RM grinning grimly when he read that headline.

Lindsay confident: NYT, Newsday, Jan. 14, 18. Lawyers ignorant of bond covenants: The author spoke to several administration officials, including some in the Corporation Counsel's office, who were attorneys. Their ignorance of the covenants and their significance was striking. All would talk to the author only on guarantees of anonymity.

"The holders": Wood, Preusse and Lebwohl, Memorandum of Law, "Memorandum in Opposition," p. 9. "Poorly advised": RM quoted in NYT, Jan. 21. Media all but ignored: All area news-

papers, Jan.-Feb.

Rallying call; and they saw it as such: Brennan, Tallamy. Didn't understand importance of arterial post: Price; interviews with anonymous Lindsay confidants. "Briskly striding Commissioner Hoving": NYT, Jan. 30. Palmer being sent to RM: Palmer. Their three meetings: RM, Palmer concur fully on their details. "You haven't got the power": Palmer, Price. Legislation no longer mentioned surpluses: Senate Intro. 795, Print 798 by Mr. Conklin compared with Senate Intro. 419, Print 419 by Mr. Mackell. "That goddamned whippersnapper": Palmer.

Lindsay-RM meeting: RM, Palmer.

Boastfully confident: Various newspapers, Feb. 22-Mar. 10. The Rockefeller apartment meeting: Palmer, Rosen, confidential sources who also were present. Lindsay believed he had Rockefeller's support: Palmer, Price, Rosen. "The way you handle legislators": Rosen quoted in NYT.

"Harry Van Arsdale": Confidential source. Rosen's quote: To author, in interview, June 25, 1968. Playing games: Schanberg. Seriously believed: Palmer, Price, Rosen, confidential sources.

The hearing: Brennan, Dewey, Palmer, Rosen, Schanberg, Shapiro, confidential sources who were present; Newsday, DN, NYT, Long Island Press, HT, Mar. 11, 12. The handshake: Photos in Newsday, HT. "No one will buy": Robert Christie, vice president of Dillon, Read & Co.,

principal manager for all TBTA bonds. "Pro forma charade": Schanberg.

arranging mopping-up actions: Shapiro, Brennan; HT, Mar. 13. Chase: NYT, Mar. 13. Editorial: NYT, Mar. 12. Wood reply: Wood to NYT, Mar. 18. By the way: Newsday, Mar. 12; confidential sources. Lindsay telephoning Rockefeller, instructing Rosen: Rosen. "Never occurred": Lindsay quoted in NYT, May 14, Rockefeller support not forthcoming: Reported NYT on Mar. 16: "Over and over at the news conference the Governor praised Lindsay's courage and forthrightness in stepping up to meet the city's problems.' But just as many times, he counseled the Mayor on the wisdom of compromise in the face of opposition."

Thirtieth-anniversary pageantry: NYT, Newsday, July 12. The letter: NYT, July 13.

Lindsay's instructions to Palmer: Palmer. Unable to accomplish anything: Palmer, Winston. Winston for RM on everything: RM, Winston.

Signs of awareness: NYT, June 18, July 14; Brennan, Palmer, confidential sources. Would take five years: Lieper. Lindsay's astonishment: McMorran, Moloney, Palmer, Price, confidential sources. \$250,000,000: Levitt TBTA Audit (pp. 2-3) shows surplus running about \$29,-000,000 per year. TBTA Annual Report, 1966, p. 13, shows cash, investments and receivables as \$142,000,000. The combination of the two figures would, by the end of 1969, at then current interest rates, have enabled Triborough, by refinancing its outstanding bond issues, to raise an additional \$250,000,000 for construction.

## 49. The Last Stand

## SOURCES

(Certain crucial details of this chapter were supplied to the author by banking sources who would, out of fear of Gov. Rockefeller, agree to talk only on guarantees of anonymity.)

## Books, articles and documents:

Moses, Dangerous Trade. Frank Lynn, "The Rockefeller Years," Newsday, Apr. 14-18, 1969.

Levitt TBTA Audit (see "Sources," Chapter 33).

Author's interviews:

Harold Blake, Peter J. Barrell Thomas E. Dewey, Perry B. Duryea, Joseph T. Ingraham, Lee Koppelman, Arthur Levitt, Joseph McC. Lieper, Michael J. Madigan, Arthur E. Palmer, Jr., Jackson Phillipp, Richard M. Rosen, Sidney M. Shapiro, Asthur V. Sheridan, Robert F. Wagner, Jr., Franklin S. Wood.

## NOTES

\$6.4 billion: NYT, Mar. 8, 1967. State's financial condition: Lynn, "The Rockefeller Years." \$110,000,000 on hand, \$30,000,000-per-year surplus: Levitt TBTA Audit, pp. 2-3. Rockefeller's thinking: Brennan, Dewey, Duryea, Levitt, Shapiro, confidential sources.

So little to fight back with: Ingraham,

Shapiro, Madigan, Wagner.

"Straw in the wind": Palmer, Rosen, confidential sources. Didn't grasp extent of power: Author's impression from interviews with Lindsay aides, most of whom insist on anonymity. Driven to the wall, planning to use bond monies in budget: Levitt; Newsday, Mar. 21, Oct. 22, 23, Nov. 8, 1967. Tax increase: NYT, May 2, Nov. 7, 1967. Voter resentment: NYT, Nov. 7, 1967. Afraid RM would tip it: Brennan, Duryea. "Essential is the participation": Newsday, Mar. 14, 1967.

RM's figures: Duryea, Levitt, Shapiro,

confidential sources.

First Rockefeller-Ronan conference with RM: Jan. 5, 1967. Letter to the Bahamas: World-Journal-Tribune, Mar. 12, 1967; Shapiro. Statement on return: NYT, Jan. 22, 1967. RM and Rockefeller meet: NYT, Mar. 11, 1967. Nothing new: Ingraham, Shapiro. Rockefeller had promised RM power: Duryea, confirmed by another leader present; Levitt, confirmed by Shapiro, who was one of the coterie; Brennan. "It was learned": NYT, DN, Mar. 12, 1967.

No doubt: Blake, Madigan, Shapiro. Asks for appointment; "not a cent"; "guts," "a lot of courage and faith": RM, "Why New York Needs That Transportation Bond Issue," Newsday, May 26, 1967, quoted in Dangerous Trade. Rosenman: Confidential source. "He had a promise": Dewey.

Suit would have been successful: Phillips, Wood, confidential sources. Chase brief: NYT, July 1, 1967.

Meeting of the two brothers: NYT, Feb. 10, 1968. The author has been unable to obtain a copy of the stipulation. He did, however, hold detailed discussions with two individuals who did—

Ingraham, who obtained a copy only by promising he would never quote from it directly but would use it only for background (and who, in fact, never used it for anything at all), and a confidential source. The author's discussion of the stipulation is based on what they told him. On his instructions, Rosenman agreed: Confidential source; World-Journal-Telegram, Mar. 12, 1967; NYT, Mar. 20, 1967.

All was honey: Shapiro. The Governor "told me": Moses, Dangerous Trade, p. 257. Duryea's intercession: Duryea, Shapiro. Ronan's offer: NYT, Feb. 29, 1968. RM's salary was later raised to \$35,000. RM's feelings: Shapiro, Wagner. Articles: Witkin, NYT, and Newsday, Mar. 2, 1968.

## 50. Old

## SOURCES

## Books and articles:

Moses, Dangerous Trade.

Moses, "From the Bridge," Newsday column.

## Author's interviews:

Harold Blake, Peter J. Brennan, Jane Moses Collins, Perry B. Duryea, Jr., Jacob Lutsky, Michael J. Madigan, Charles F. Rodriguez, Sidney M. Shapiro, Arnold Vollmer, Robert F. Wagner, Jr.

### NOTES

Still swam: Author saw him do it. Ronan's incompetence: Brennan, Shapiro, confidential sources,

"A couple of times": Confidential source.

RM fooled by Governor on Sound Crossing: RM's desire for it to be built—and his rationalizations as to why it wasn't—are summed up in Dangerous Trade, pp. 262-75; also "From the Bridge," Dec. 23, 1967, and Jan. 4, 1969.

Desperate: Brennan, Duryea, Shapiro. "No Calvin Coolidge": RM, speech to "Fall Guy" luncheon, Garden City Hotel, Jan. 24, 1969, quoted in Dangerous Trade, pp. 258-59. Governor charming, Ronan not: The author saw this on several occasions. Blake's muttered comment was to the author on one occasion at which Ronan all but snubbed RM, the opening of the "Sunken Meadow" addition to Randall's Island, July 11, 1967.

Lutsky: Telephoned Lebwohl during interview with author. "Sorry for him": Wagner. Badillo incident: Rodriguez.

"Birthdays are to forget": DN, Dec. 16, 1969. "Hasn't changed": Confidential source.

Housing program: DN, Apr. 30, 1969. "Atlantic Village" proposal: Dangerous Trade, pp. 478-80. Citywide program: Discussed it with author.

So much left to do: RM to author in interviews.

"Dangerous Trade" written by staff: Author saw the drafts submitted by various staffers.

Fordham dedication: NYT, July 4, 1970. Building Trades dinner: Author present. "We'd just like to observe": DN editorial, 1969. "The glass of fashion": RM, quoted in NYT, Oct. 13, 1969.

Damrosch dedication: NYT, May 23, 1969; Moses, Dangerous Trade, pp. 532-33. "The finest short story": Moses, "From the Bridge" column, Newsday, 1969. Alley Pond Park: NYT, Sept. 8, 1969. Lindsay's accomplishments in housing: For example, NYT, July 5, 1969, Jan. 11, 1971.

Slim hopes: RM to author; Blake, Shapiro.

RM's attitude toward John Olds, Christopher Collins: Jane Moses Collins, Madigan, Shapiro. It was apparent in RM's interviews with author; he referred to John scornfully as "the banker," waving his hand disdainfully. Christopher's death: Newsday, Dec. 13, 1968.

Chauffeur, name dropping: To author. Why weren't they grateful?: The author was present at the Excedra ceremony.

Cartography by Jean-Paul Tremblay Design by Philip Grushkin Robert A. Caro was born and lives in New York City. A graduate of Princeton University, later a Nieman Fellow at Harvard, where he studied urban planning, he was an award-winning investigative reporter for Newsday for six years. To create The Power Broker, he spent seven years tracing and talking with hundreds of men and women who worked with, for or against Robert Moses, and examining mountains of files never opened to the public gaze. It was a sustained feat of investigative reporting and superb writing that has resulted in a triumph of biography, of history and of insight into the very essence of politics, and into the effect of power on personality.

Al Smith at the Central Park Zoo.

Belle Moskowitz

Fiorello La Guardia, Al Smith and Robert Moses at the opening of the Belt Parkway, 1938. Behind Moses is Smith's wife, Katie.

PAGEANTRY: The dedication of Moses' seven-block-long Chrystie-Forsyth Park, 1934.

PRESENTATION of award by Park Association president, Iphigene Ochs Sulzberger, and Association official Gustavus Kirby, 1935.

La Guardia speaking—with Moses behind him—at the Chrystie-Forsyth dedication.

## THE CANDIDATE: Above: 1934 GOP gubernatorial nominee Moses arriving at Madison Square Garden for a campaign speech; left: with his wife, Mary, voting on Election Day.

Herbert Lehman, Al Smith and August Heckscher dedicating Heckscher State Park, 1929. The two girls are Moses' daughters, Jane (left) and Barbara.

Franklin Roosevelt dedicating Jones Beach State Park, 1929, as Smith and Moses sit listening.

Al Smith speaking at the Heckscher dedication on the porch of the old Taylor Mansion. Moses is framed in pillars at left.

Rockefeller applauding, Moses crying, at the dedication of Robert Moses Plaza at the Lincoln Center campus of Fordham University, 1970.

Verrazano-Narrows Bridge

LANDSCAPE BY MOSES: Robert Moses' three-armed Triborough Bridge is the center of a cityscape in which the following are other Moses additions: In Manhattan (left) the East River Drive Extension along the waterfront south of the bridge, and the Harlem River Drive, to the north, and behind these roads. every one of the high-rise low-income housing and Title I urban renewal projects rising out of Harlem. In the Bronx (top right) the Major Deegan Expressway running northwest from the Triborough's Bronx bridgehead, and the Bruckner Expressway running northeast; the housing project just north of the bridgehead; Van Cortlandt and Bronx parks at the top. In Queens (bottom) Astoria Park, with the giant Astoria pool. Randall's and Ward's islands (center) were almost entirely shaped by Moses.

Bronx-Whitestone Bridge

Throgs Neck Bridge

Alexander Hamilton Bridg

Henry Hudson Bridge (before the second deck was added)

Marine Parkway Bridge

THE BROOKLYN-BATTERY BRIDGE: A Difference in Perspectives. Moses attempted to persuade the public that the impact of his bridge on Lower Manhattan would be minimal, and had his artists draw the top rendering; others saw the bridge as a "Chinese Wall" that would block the view and blight the area (center); Ole Singstad dramatized these effects in the bottom rendering.

THREE MOSES BEACHES: Orchard Beach (top left), Jacob Riis Park (bottom left), Jones Beach (above).

Stone carvings (the State Seal on the Water Tower), ships' funnels to conceal garbage cans, directional signs complete with wrought-iron figures, and the architectural elegance of the East (below) and West (right) bathhouses and of the famous Water Tower show the effect of Moses' imagination at Jones Beach.

Robert Moses Power Dam at Massena

Robert Moses Power Dam at Niagara

Part of the St. Lawrence Power Project: in the foreground, Robert Moses State Park; in the rear, the Moses-built Long Sault Control Dam.

THE WEST SIDE IMPROVEMENT—AND AN ALTERNATIVE. Below: The Henry Hudson Parkway (left) and Seventy-ninth Street boat basin in Riverside Park (right). Above: The Henry Hudson Bridge and Parkway as Moses built them through Inwood Hill Park and Spuyten Duyvil in Riverdale. The dotted line indicates the route that urban planners suggested to avoid harming the park and Riverdale: along the open corridor next to Inwood Hill, across the Harlem River on a less-expensive, low-level span, through Marble Hill Valley (uninhabited at the time except for a shantytown) to Van Cortlandt Park, where it could also have run along the edge. (The Harlem River now follows an essentially straight path to the Hudson because Moses in effect moved the light-colored land jutting into the river to the left, joining it to Inwood Hill Park.)

### LANDSCAPES BY MOSES:

Above: Moses' 1964-65 World's Fair and the Grand Central Parkway, Van Wyck, Whitestone and Long Island expressways. Below: Moses' housing projects in Harlem, East River Drive Extension, Manhattan arm of the Triborough Bridge, Ward's Island Pedestrian Bridge, Downing Stadium, Bruckner Expressway.

United Nations Headquarters

New York Coliseum

# THE POWER BROKER

"In the future, the scholar who writes the history of American cities in the twentieth century will doubtless begin with this extraordinary effort."

—-Richard C. Wade, The New York Times Book Review

"A ripe yarn of intrigue and of powerful figures in collision, from Al Smith to Nelson Rockefeller."
—William Greider, Washington Post Book World

"A study of municipal power that will change the way any reader of the book hereafter peruses his newspaper." —Philip Herrera, *Time* 

"Required reading for all those who hope to make their way in urban politics; for the reformer, the planner, the politician and even the ward heeler."

—Jules L. Wagman, Cleveland Press

One of the most acclaimed books of the decade, the winner of both the Pulitzer and the Francis Parkman Prizes, THE POWER BROKER tells the hidden story behind the shaping (and mis-shaping) of twentieth-century New York (city and state) and makes public what few have known: that Robert Moses has been, for almost half a century, the single most powerful man of our time in New York, the shaper not only of the city's politics but of its physical structure and the problems of urban decline that plague us today.

In revealing how Moses did it—how he developed his public authorities into a political machine that was virtually a fourth branch of government, one that could bring to their knees Governors and Mayors (from La Guardia to Lindsay) by mobilizing banks, contractors, labor unions, insurance firms, even the press and the Church, into an irresistible economic force—Robert Caro reveals how power works in all the cities of the United States. Moses built an empire and lived like an emperor. He personally conceived and completed public works costing 27 billion dollars—the greatest builder America (and probably the world) has ever known. Without ever having been elected to office, he dominated the men who were—even his most bitter enemy, Franklin D. Roosevelt, could not control him—until he finally encountered, in Nelson Rockefeller, the only man whose power (and ruthlessness in wielding it) equalled his own.
