In 1948, Dr. Fredric Wertham, a respected New York psychiatrist, began a campaign against comic books. Wertham, the author of two books on the causes of violence, argued in *Collier’s* and the *Saturday Review of Literature* that comic books, particularly crime comics, corrupted young minds and contributed to juvenile delinquency. His conclusions were based on his work with juvenile delinquents, who reported that comics showed them how to commit crimes, and on his examination of the violence and sex depicted in comics. Wertham’s work on the subject culminated in his 1954 book, *Seduction of the Innocent*. The campaign he spearheaded led to the formation of many committees against comics—mass burnings of comics, Senate hearings, and the formation of the Comics Code Authority (CCA). Wertham and his book would remain for decades after notorious among comic-book fans and professionals, and the word “Werthamite” would come to mean “censor.”

In the 1940s, comic books were a popular form of entertainment for both children and adults. The adult readership was particularly important after World War II since many men took up reading comics in the service, largely because the slim magazines could be read quickly and carried easily rolled-up in a pocket. Perhaps to appeal to these older readers, comic-book publishers introduced dozens of crime and horror titles after the war, which often depicted gruesome acts of cruelty.

In *Seduction of the Innocent*, Wertham wrote, “the most subtle and pervading effect of crime comics on children can be summarized in a single phrase: moral disarmament.” In crime comics, he argued, the reader is often asked to identify with a criminal on the run from the law. Even though the criminal is usually captured or killed at the story’s end, the stories romanticize a violent and immoral life outside the law. The outlaw protagonist “lives like a hero until the very end, and even then he often dies like a hero, in a burst of gun fire and violence.”

Wertham did not find the “good guys” of comic books to be any more wholesome. Superman, for example, seemed to embody the fascist idea of a master race that got its way by force: “The superman conceit gives boys and girls the feeling that ruthless go-getting based on physical strength or the power of weapons or machines is the desirable way to behave.” Batman and Wonder Woman, Wertham argued, promoted homosexuality because they had child sidekicks of the same gender. He described the home-life of Batman and Robin as “a wish dream of two homosexuals living together.” Wonder Woman represented “the cruel, ‘phallic’ woman,” a poor role model for girls because she emphasized power and independence rather than nurturance. Wertham also discovered sadomasochism and other variant sexualities in crime and adventure comics. He titled one of his chapters after a young patient’s exclamation, “I want to be a sex maniac!”

Stirred by the outcry against comics that Wertham’s charges created, the U. S. Senate put the comics industry on trial. In 1950, a Senate subcommittee chaired by Estes Kefauver found no evidence that linked crime comics to juvenile delinquency. Undaunted, Wertham and others continued to agitate for further government inquiry. In 1954 the Senate Judiciary Subcommittee on Juvenile Delinquency investigated comics again. The committee’s verdict was that comics needed to be cleaned up and that the comic-book industry should police itself. Publishers were already moving in that direction. Fearing government censorship, many of the leading comic-book publishers formed the Association of Comics Magazine Publishers in 1948 to establish standards of decency for their publications. Because their efforts at self-censorship were ineffective and failed to convince their critics, these publishers created the Comics Code Authority, an independent board, to evaluate every story before publication. For decades after, most comic books sold in the United States bore a CCA stamp of approval on their covers.

One lasting effect of this era is that by the end of the twentieth century comics were still considered by most Americans to be children’s entertainment and to be incapable of conveying substantial artistic content. While countries such as Italy, France, and Japan have developed sophisticated varieties of comics for adult readers, American comics have remained marginalized. The attitude that comics are “bad for you,” the intellectual equivalent of junk food, has continued to linger.

Seeger, Pete (1919—)

The American singer and composer Pete Seeger was quite simply the foremost popularizer of American folk music of the twentieth century. While others engaged in field work or labored in dusty archives, Seeger recorded over 100 albums in a half a century of performing. An evangelizer with an inborn sensitivity to crowd techniques, Seeger excelled in concert and had few musical peers in working a crowd. An intimate, casual, and charming performer, he often successfully invited his audience to sing along with him. The stringbean performer, bent over his long-necked five-string banjo, dressed in an old work shirt and denims, completely reshaped American musical taste in folk, topical, and protest music. Seeger's banjo read, "This machine surrounds hate and forces it to surrender," and if some segments of America reviled him as a Communist sympathizer, others perceived him as standing for peace, equality,

Pete Seeger

and decency in a troubled world. Seeger formed a bridge from the folk song revival of the 1940s, across the political repression of the 1950s, to the folk/protest scene of the 1960s. A gifted storyteller and musical historian, his influence on American music was incalculable.

Seeger was born in New York City in 1919, the son of a violinist mother and musicologist father, both on the faculty of the Juilliard School of Music. His uncle was the war poet Alan Seeger (who wrote "Rendezvous With Death,"), his sister Peggy became an accomplished singer and songwriter and married British folk-legend Ewan MacColl, and his brother Mike made a career as one of the foremost proponents of banjo music. Pete Seeger learned banjo, ukelele, and guitar by his teens. He received a scholarship to Harvard in 1936 (same class as John Kennedy) but left in 1938 due to disinterest and poor grades. He then journeyed through the United States, collecting songs, meeting Woody Guthrie and Huddy Ledbetter (Leadbelly), and working with noted folk archivist and field recorder Alan Lomax.

In 1940, Seeger organized the Almanac Singers with Guthrie, Lee Hays, and Mill Lampell, and they recorded an album the next year. Seeger's zeal for labor organizing was nearly religious ("Talking Union"), and the group often performed anti-war songs for left-wing audiences and organizations. After Pearl Harbor, the Almanac Singers emphasized their patriotism ("Reuben James"), and Seeger served in World War II entertaining American troops by singing folk songs. In 1944, he helped create People's Songs Inc. (PSI), which formed a national network of folk music that eventually boasted over 2,000 members. In 1948, he toured with the anti-Cold War presidential candidate Henry Wallace, but PSI drew more interest from the FBI (Federal Bureau of Investigation) than labor unions, and it eventually went bankrupt in 1949.

At the low point of his fortunes in 1948, Seeger joined with Hays, Ronnie Gilbert, and Fred Hellerman to form The Weavers. Despite their unpopular leftward leanings (they were present at the Peekskill "anti-Communist" riot of September 1949), The Weavers not only helped to revive national interest in folk music, but also enjoyed astonishing commercial success. Their second single, "Good-night Irene" backed with Leadbelly's "Tzena, Tzena, Tzena," went to the top of the pop charts and sold over two million copies, a phenomenal amount for 1950. They followed with other hits that became (re)established in the American folk tradition, including "On Top of Old Smokey," "So Long Its Been Good to Know You," "Wimoweh (The Lion Sleeps Tonight)," "Rock Island Line," and "Kisses Sweeter Than Wine." Concert promoters and the media blacklisted the group in 1952 because of their political views and associations, and The Weavers all but disappeared; Seeger left the group to go solo in 1958 after opposing their participation in a cigarette commercial. Always active in left-wing politics, Seeger refused to answer questions when investigated by the House Un-American Activities Committee (HUAC) in 1955, although he never invoked the Fifth Amendment. He was indicted in 1956, convicted in 1961 on ten counts of contempt of Congress, and sentenced to an astounding ten years in jail. The United States Court of Appeals dismissed all charges against Seeger on a technicality, the very same week in 1962 that the cover version of his song "Where Have All the Flowers Gone" hit the Top 40.

In 1958, the success of the Kingston Trio touched off an enormous five-year folk music revival. Seeger's music was "rediscovered" and his career once again ascended. In 1962, Peter, Paul, and Mary made a hit out of "If I Had a Hammer," a song Seeger co-wrote in his Weavers' days. The Byrds covered "The Bells of

Rhymney,” and eventually had a huge number one hit with “Turn! Turn! Turn!” (1966), a biblical passage from Ecclesiastes that Seeger had set to music. In 1964, commercial radio listeners heard Seeger’s voice for the first time in 12 years when his version of Malvina Reynolds’ “Little Boxes” became a minor hit. Since the 1940s, Seeger had been one of the guiding lights of folk magazine *Sing Out!* (20,000 subscribers in 1965; bankrupt in 1967); in 1961 he helped Sis and Gordon Friese found *Broadside*, a bulletin of topical songs which helped stimulate the careers of singer/songwriters such as Bob Dylan, Phil Ochs, Tom Paxton, and Eric Anderson.

Paradoxically, Seeger had become a semi-popular success despite being one of the most picketed and blacklisted singers in American history. In 1962, the refusal of the ABC television folk music show, *Hootenanny*, to allow Seeger to perform resulted in a boycott that tore the folk community in half. The incident hurt him commercially, but only served to reinforce his standing as a martyr for freedom of speech. By the mid-1960s, Seeger had become a cultural hero through his outspoken commitment to the anti-war and civil rights struggle. He was involved in several civil rights campaigns in 1962-1965, and helped popularize the anthemic “We Shall Overcome” with mainstream audiences. Even supporters had felt that Seeger’s belief that music could transform society was hopelessly naive, but for a moment, it all seemed to be coming true. This period of his greatest influence is wonderfully captured on the recording of his concert at Carnegie Hall in June 1963.

Then it all fell apart. The folk-topical song revival came to a crashing halt at the Newport Folk Festival in 1965, when Bob Dylan appeared with electric accompaniment. Seeger, who distrusted electric music as unauthentic, was crestfallen, and literally tried to pull the plug on the amplifiers. He fought on, however, despite Dylan’s defection, the crumbling of the civil rights movement, and the escalation of the war in Asia. His anti-Vietnam War ballad, “Waist Deep in the Big Muddy,” became a classic of the 1960s, and he dusted off a series of anti-war ballads he had performed with the Almanac Singers a generation before. His disdain for wealth and worldly vanities seemed hopelessly outdated in an indulgent age, but his moral rectitude still inspired, or infuriated, vast numbers of Americans.

In the 1970s, Seeger mirrored the movement away from mass politics to localism and community control. He became particularly interested in ecology, co-founding the organization Clearwater, dedicated to the cleanup and revival of the Hudson river. Through sheer tenacity, he had become a living legend, more frequently parodied than banned. Critics from all over the spectrum praised his life’s work, and the grandchildren of his original listeners attended his concerts.

Seeger widely influenced countless performers, and his instructional books and records inspired generations of self-taught musicians and folksingers. He always believed there was something in the best music to inform, stir, rally, direct, or cause social and personal interaction. His moral earnestness often overflowed into self-righteousness, but both friends and foes conceded his indomibility. Perhaps his optimism was often naive, but his music helped unionize workers, inspired Americans to revere their own musical traditions, encouraged civil rights and anti-war activists, and helped clean up a river. In his case, at least, one person could make a difference, and the United States was a better place for his having lived in it.

Seinfeld

The weekly situation comedy *Seinfeld*, which aired on NBC from 1990 to 1998, was the most highly-rated show on American television during much of its production run. The show marked the revival of a comic subgenre that had originated on radio and then was adapted for early television by such stars as Jack Benny and the team of George Burns and Gracie Allen. Jerry Seinfeld plays himself, a standup comedian starring in a sitcom about the life of a standup comedian. Like Benny and Burns, Seinfeld retained the privilege of walking back and forth across a metaphoric proscenium, speaking to the audience presentationally (i.e., in the second person) as a standup comic in a nightclub, and representationally (in the actions of a third person). The TV Jerry is a well-to-do New Yorker with a Manhattan

The cast of *Seinfeld*: (from left) Jason Alexander, Michael Richards, Julia Louis-Dreyfus, and Jerry Seinfeld (center).

apartment, a small group of “off-beat” friends, a career, an active sex life, and several other recognizable trappings of a contemporary successful American.

Seinfeld however adds an element that neither Benny nor Burns ever dared venture. As a bridge in his physical movement between the nightclub stage and the apartment, he walks a balancing act of personal identities. He is, to most appearances, Jerry the American, one of TV’s “us,” a televisually acceptable, conventionally well-dressed single white male. But Jerry is also, by turns of emphasis, one of “them,” a New York Jew, a sarcastic wisecracking cynic with an overbite, living on the margin of the American middle class. He can be funny, weird, exotic, lively, obnoxious, or any of the other qualities American ethnic mythology has tagged on to Jewishness.

In this way, *Seinfeld* shares more with the early fiction of Phillip Roth (especially *Good-bye, Columbus*, and *Portnoy’s Complaint*) than with the Jewish-American characters that can be found in such sitcoms as *The Goldbergs*, *Bridget Loves Bernie*, and *Rhoda*. Like Alexander Portnoy, Jerry lives out a dilemma that is simultaneously his deepest source of anxiety and the richest resource of his strength. He can easily “pass” for an American. Militantly bourgeois in attitude and taste, apparently freed of the burdens of millennial suffering, he is ready and willing to take on the high-end problems of sexual gratification and unchecked consumerism. But somehow, like the early Roth characters (especially the title character “Eli the Fanatic”), Jerry cannot help but be heir to the legacy of the Diaspora. His sense of humor, the very asset that has allowed him entrée to an advantaged hedonistic secular life among the gentiles, remains rooted in a marginalized point of view that grows out of exclusion—and he is unexcludable without his Jewishness.

Seventy years after Al Jolson opened up the age of talking pictures with *The Jazz Singer*, the theme of Jewish assimilation remains insistent in American popular culture. Like Woody Allen, Jerry Seinfeld is no Yeshiva boy, but he is also under no illusions about transcending his Jewishness. Like Jolson and Allen, he enjoys the money and the small-nosed girls. But no matter how American his show business success makes him, he takes it for granted that he will always carry a second psychological passport. He is neither embarrassed by his Jewishness (like Walter Lippman) nor enamored of it (like Norman Podhoretz). He accepts the cards that were dealt him and makes the most of his hand, moving seamlessly between two spheres of consciousness with as much grace and refinement as he can muster.

His best friend George (Jason Alexander) would like to enjoy the American garden of gentile delights the way that Jerry does, but he cannot. He remains a prisoner of the Bronx. Round, balding, and bespectacled, he is not only physically removed from ideals of gentile televisual masculinity, but he is psychologically mired in a tangle of neuroses that he has inherited wholesale from his parents (played by Jerry Stiller and Estelle Harris). “Next to George,” the critic Joshua Ozersky has written, “Jerry seems like Lee Marvin.” And this is exactly what Jerry wants. The flexible Jerry is more successful than George at the two most important pursuits in Unmarried-American culture: making money and getting dates.

George embodies all three of the traditional Yiddish comic archetypes. George is a *schlemiel*. He meets a comely WASP woman, and goes away with her for a romantic weekend; however, while trying to build a cozy fire he burns down her father’s vacation house. George is a *schlimazel*. When he is accused of racism for telling an African American co-worker that he resembles Sugar Ray Leonard, he finds himself compelled to stop black people on the street to try to

befriend them. George is a *nebbish*. All the principal characters on the show, we learn, masturbate frequently. But only George gets caught by his parents while doing it in their home.

What does a man with successful figures at both the bank and in the mirror see in a friendship with such a broadly defined American failure? Jerry the American needs George around to remind him of his Jewishness, which, despite any problems it might still present, is after all the secret engine of his professional success as a joke-teller. He takes George as his collaborator in creating a new television sitcom. George’s surname, Constanza, is not Jewish. To suggest that George is not Jewish, is itself a kind of Jewish joke.

Elaine Benes (Julia Louis-Dreyfus), an outwardly graceful but internally haggard New Yorker, enhances the suggestion of Jerry as a cosmopolitan, enlightened contemporary. A former lover, she is now a member of his small circle of best friends. Elaine’s chief identity is that of Unmarried-Gyno-American Worker. Like Mary Richards and Murphy Brown, she has yet to find a man worth slowing down for. Unlike them (or Jerry), however, Elaine lacks a lucrative position in the entertainment-industrial complex. Murphy and Mary both work in TV; when we meet Elaine, she works for a book publisher. Over the course of the series she works at a succession of jobs for neurotic and borderline psychotic men who derive much of their pleasure in life from being her boss. Elaine lacks a traditional ethnic identity, but instead is principally hyphenated by her sex and marital status. This stands in contrast to George’s ethnic hyperbole, leaving Jerry just where he likes to be: in perfect balance at the American middle. He has girlfriends and girls as friends. He has money and power enough to play philosopher-king among the working stiffs (a group which includes the other members of the cast as well as the television audience).

Jerry’s balance in the order of things is emphasized yet again by his physical positioning between tall, ectomorphic, manic Kramer (Michael Richards) and short, endomorphic, mono-polar George. Kramer functions in the sitcom as a kind of postmodern Ed Norton, entering and leaving Jerry’s unlocked apartment at will. (The unlocked door of the inner city apartment somehow endured from *The Honeymooners* to *Seinfeld* as a teledramatic convention in defiance of rational convention.) Kramer’s susceptibility to every identity that passes him by—entrepreneur, gambler, chef, playboy, hot-tub owner—puts him in a state of eternal self-image chaos, a sharp contrast to Jerry’s elegantly constructed balance of American, Jew and Jewish-American. Jerry, the least marginal of the four characters, is the only one who is specifically and repeatedly identified as a Jew.

Jerry seems to be mocking himself when he refers to the sitcom that he and George pitch to NBC as “a TV show about nothing” (the idea is originally George’s). But if *Seinfeld* is “a TV show about nothing,” as the magazines liked to hail it, then it would have achieved what Samuel Beckett just fell short of in stageplays such as *Waiting for Godot* and *Endgame*. But real life Jerry Seinfeld and his producer, Larry David, learn the lesson of Beckett’s struggle: narrative cannot be stamped out. Like God, where it does not exist it will be created.

Jerry is a man committed to only one thing: detachment. He can make fun of fascists when George is mistaken for a neo-Nazi leader. He can make fun of communists when Elaine starts dating one. Jerry makes fun of Elaine when she stops going out with an attractive man “just because” he is an opponent of abortion rights. But positing no political beliefs of his own, and glad to take pot shots at anyone who does, he leaves the viewer with the implication that anyone stupid enough to be committed to political causes (or anything, as opposed to nothing) deserves ridicule. The metamorphosis of alienation into

detachment is a signal achievement of the sitcom, the most popular of all commercial narrative genres.

Selena (1971-1995)

Singer Selena Quintanilla-Perez's life was short but dynamic. She began her career at the age of five, and was murdered just a month short of her twenty-fourth birthday. Raised in the bicultural world of

Selena

south Texas, she brought a flamboyant new face to Tejano, the Tex-Mex fusion music she performed, and, more significantly, she brought a new kind of pride and ambition to the young Latina women who were her fans. Though her future as an entertainer and businesswoman will forever remain a question mark, her death itself gave Anglo-American society a new perspective on the 28 million of their fellow citizens who comprise the Latino community of the United States.

Selena was born on April 16, 1971, in Corpus Christi, Texas. Her father, Abraham, a musician and restaurateur, put together a family band, playing the traditional Tejano music of the Texas borderland. By the time she was five, Selena was performing regularly with “Los Dinos” (“The Guys”), playing parties, weddings, and bars throughout Texas. Her strong, clear voice and personable interpretations captivated audiences, and by the time she was 15 the band had been renamed “Selena y los Dinos” and she had been chosen as the Tejano Music Awards “Female Entertainer of the Year.” She would claim that award for the next eight years.

Once discovered by a major Latin music record label at the Tejano Music Awards, Selena was soon on her way to becoming a star. She was wildly popular with Latino audiences, especially young women, who looked to her as a role model. Raised a strict Jehovah's Witness, she embodied a “clean” moral lifestyle, while at the same time exuding vitality and sexuality on stage, wearing her trademark revealing costumes such as rhinestone-studded brassieres. In fact, the fusion of different cultures is what Selena was all about, and it was her unabashed expression of all of her differing selves that allowed so many Latinos to identify with her.

To understand Selena's contribution to American culture, it is necessary to know a little about the Tejano music tradition. In the early 1900s, Czech and German immigrants brought their accordions and polka beats to the south Texas border towns where they settled. That music blended with traditional Mexican music to form a distinctive music called “conjunto.” In the 1930s and 1940s, migrant workers returned from fields in the north bringing with them the big band sounds that were then blended with the conjunto of la frontera (the border). The new music thus created was called Tejano, which is Spanish for Texan, and is the same word used to describe the Mexican-American people of Texas. Like the Latino people, Tejano music has continued to grow and change as it is exposed to new influences. By the time Selena brought her own voice to Tejano, it carried flavors of rap, rhythm and blues, country, and rock, as well as the traditional Mexican songs and the polka beat.

Like Tejano music, Selena herself was that uniquely American product—the fusion of cultures. Raised speaking only English, she learned Spanish songs phonetically and had only begun to learn the Spanish language months before her death. Though in part the obedient and submissive Latina daughter, she had definite plans for herself. In at least two important instances she defied her controlling father, first by marrying fellow band member Chris Perez, then by using her skills at costume design to open a clothing boutique, Selena, Etc. She had ambitions to become a crossover artist, and many critics, comparing her to Madonna and Marilyn Monroe, believe she could have made it.

Before these ambitions could be put to the test, Selena was shot by a trusted friend and employee. Yolanda Saldivar had been president of Selena's fan club when the two met and became friends. When Selena's clothing boutique required more time than she had to spare, she hired Saldivar to manage it for her. In March of 1995, however, Selena began to suspect Saldivar of stealing money and when she confronted her, Saldivar shot and killed her in the parking lot of a

motel in Corpus Christi. Though Saldivar always insisted the shooting was an accident, she was convicted of murder and sentenced to life imprisonment. The Latino community across the southwest, reeling with pain and outrage, followed “El Juicio de Selena” (“The Selena Trial”) closely, demanding punishment for the woman who had killed the golden girl.

Whether or not Selena would have achieved her crossover goal in life, she certainly achieved it in death. Before her murder, she had won the Grammy Award for Best Mexican-American Performance. Her album *Amor Prohibida* had sold 500,000 copies, and she had performed in Houston’s Astrodome to a crowd of 62,000. Just months after her death, her posthumous album, *Dreaming of You*, debuted at number one on the Billboard Top 200 and sold over three million copies. Her songs received play on anglo radio stations, and a feature film and a television movie were made about her life and death. The former, titled *Selena* (1997), was released in two versions—one with Spanish subtitles—and starred Jennifer Lopez; the latter, *True Hollywood Stories: The Selena Murder Trial*, aired in 1996.

Perhaps Selena’s greatest achievement, however, was in making Anglo-America take notice of its Latino counterpart. Though there are close to 30 million American Latinos, with over \$300 billion in purchasing power, media and corporations often ignore them. After Selena’s death, she became something of a folk hero in the United States Latino community, with her face appearing everywhere from street murals to bank checks, and hundreds of babies in Texas and California named after her. Business and the media responded to this surge of grief in unprecedented ways. *People Magazine* not only released a special southwest edition with Selena’s death as the cover story, but followed up with a tribute issue, only the third such in the magazine’s history, and continued to reach out to Latino readers with *People en Espanol*. During Yolanda Saldivar’s trial, *TV Guide* provided bilingual coverage for the first time in its history, with English and Spanish versions of an article about the movie version of “The Selena Trial.”

Perhaps in life Selena would not have been able to achieve the crossover she desired. Certainly it would not have come without conflict and controversy. Few Latin music performers have been welcomed into the anglo music scene, and those who have often alienate their Latin audiences by leaving too much of their roots behind them. Though her life was cut tragically short, Selena Quintanilla-Perez remains “una de nosotros” (one of us) to her Latino community, and she unquestionably opened the door for a wider awareness and appreciation of the Latin pop music she loved.

Seles, Monica (1973—)

Yugoslavian-born Monica Seles burst onto the women’s professional tennis scene in 1988 at the tender age of fifteen, and made it all

the way to number one in the world in just two years. Easily recognizable because of her powerful two-handed groundstrokes and her loud grunting during points, Seles relished in her role as a young female sports celebrity and role model. In April, 1993, well on her way to becoming the most dominant women’s tennis player of all time, a deranged Steffi Graf supporter stabbed her in the back during a match in Germany. This life-threatening incident focused public attention on the danger obsessed fans pose to pro athletes. Seles made a comeback in 1995, after an arduous twenty-seven month recuperation period. To the delight of her fans and the astonishment of her peers, she was a winner in her very first tournament back. An eighth Grand Slam victory soon followed.

Sellers, Peter (1925-1980)

Born in London to parents who were professional performers in the music halls, Peter Sellers became one of Britain’s foremost comic

Peter Sellers

actors of radio, film, and television in the 1950s and 1960s. Famous for his impeccable comic timing, his improvisation skills, and his ability to switch from one character to another, Sellers appeared in films as diverse as *The Ladykillers* (1958), *Lolita* (1962), and *Dr. Strangelove* (1964). But it was the Pink Panther series that both confirmed his versatility as an actor and raised him to an international superstar. Since his death in 1980, four biographies of Sellers have been published, and the actor has gained notoriety for his unpredictable behavior and the excesses of his life as a movie star.

Sellers spent the last couple of years of World War II in the Royal Air Force, where he infuriated high-ranking senior officers by impersonating their voices. After the war he tried to build a career as a drummer, but after an audition at the Windmill theatre in London, he became a comedian. In the late 1940s, Sellers established himself as a comedian and impressionist on BBC radio, working first on *Showtime*, a program that encouraged new talent. Later, he became a regular BBC "voice man," impersonating well-known personalities on a show called *Ray's a Laugh*. In 1951, when he began working with Michael Bentine, Spike Milligan, and Harry Secombe on a radio show called *Crazy People*, later to become known as *The Goon Show*, Sellers's comic talent began to blossom. The anarchic, surrealistic humor of "The Goons" marked a significant break with the comedy that had gone before, and paved the way for the comic style of *Monty Python's Flying Circus* and the "alternative" comedy of the 1980s and 1990s. It was from working with "The Goons" that Sellers was able to move into films, having his first major success with the British-made *The Ladykillers* (1958), in which he worked alongside Alec Guinness and Margaret Rutherford. It was inevitable that he would eventually move to Hollywood, where he made the Pink Panther series of films for which he is, arguably, best known.

Five original Pink Panther movies were made, featuring Sellers as Inspector Clouseau, the endearingly clumsy and incompetent French detective. The first film, *The Pink Panther*, appeared in 1963, followed by *A Shot in the Dark* (1964), *The Return of the Pink Panther* (1975), *The Pink Panther Strikes Again* (1976), and *Revenge of the Pink Panther* in 1978. All the films focus on Clouseau's earnest efforts to solve bizarre, trivial, even non-existent mysteries with a maximum of fuss and melodramatic intrigue. The humor, as with much of Sellers's work, is based on language and voices. Clouseau's comic accent, his inability to understand or pronounce English words, and his attempts to cover up his mistakes with elaborate explanations, satirize our often misplaced respect for authorities of all kinds. A sixth Pink Panther film, *The Trail of the Pink Panther*, appeared in 1982, after Sellers's death. This final, ill-advised outing for Sellers's bumbling detective contains no original material involving him, being constructed from outtakes from the five earlier films. Sellers made over fifty feature films in his relatively short career in Hollywood and in Britain.

After a major heart attack in 1964, his performances, though occasionally brilliant, were no longer as consistent as they had been, and the films to which he contributed in the late 1960s and the 1970s are variable in their quality and their success at the box office. Roger Lewis's 1994 biography of Sellers, *The Life and Death of Peter Sellers*, points to his chaotic private life and dramatic mood swings as part of the reason for the inconsistency of his later work. Throughout the 1960s and 1970s, Sellers's behavior became increasingly unpredictable; he was a drug abuser, became self-destructively obsessed with people, and could be generous and dangerously violent by turns. He married four times, to Ann Hayes, Britt Ekland, Miranda Quarry, and Lynne Frederick, respectively, and was known to be sexually

promiscuous. While he was a comic actor of extraordinary abilities, Sellers was also a vain, self-centered man, who enjoyed, and was ultimately let down by, his fame.

Lewis's biography draws loose connections between Sellers's on-screen persona and the private man, suggesting that the megalomania that made his performances so exacting spilled over into his private life. Peter Evans, an earlier, more reserved, biographer, confirms this when he suggests that such was his immersion in whatever role he was playing, Sellers had practically no personality of his own. However difficult or unpleasant he could be as a man, most of those who worked with him agree that as an actor, Sellers has left us a legacy of comic performance and innovation that is among the most rewarding of his generation.

Selznick, David O. (1902-1965)

David Selznick's production of *Gone with the Wind* is enough to secure his place in history. While this landmark film was his most successful, his influence on movie production in the 1930s and 1940s also marks his career with greatness. He was a very successful producer and writer with other films to his credit, such as *David Copperfield* (1935), *A Star Is Born* (1937), and *Rebecca* (1940).

Selznick worked for his father's motion picture company, Lewis J. Selznick Productions, until it was forced into bankruptcy in 1923. His first produced feature was *Roulette* in 1924. Selznick joined Metro-Goldwyn-Mayer (MGM) in 1926 as a script reader and assistant story editor. After rapidly rising to supervisor of production he was fired because of disagreements with head of production Irving Thalberg.

Paramount made him their head of production in 1927, but after the depression forced salary cuts he moved to RKO Studios in 1931 as studio boss. While he was there, Selznick personally oversaw such productions as *A Bill of Divorcement* (1932) and *Little Women* (1933), both starring Katharine Hepburn.

When MGM decided that Thalberg's ill health made it sensible to spread some of his production duties around, Louis B. Mayer was able to lure Selznick back to MGM. Since Selznick had married Mayer's daughter Irene in 1929, his return to MGM sparked the saying, "the son-in-law also rises." Intent on bringing more prestigious pictures to the screen, Selznick produced hits such as *Dinner at Eight* (1933) and *Anna Karenina* (1935). In the former picture, Selznick defied conventional wisdom and cast the film with big stars in every role, instead of just one star. By using such performers as Marie Dressler, Jean Harlow, and John Barrymore he produced a blockbuster hit.

David O. Selznick

In 1936 Selznick again left MGM to become an independent producer and founded Selznick International Pictures. His first film was the highly successful *A Star Is Born* (1937). His most memorable is, of course, *Gone with the Wind*. The film was fraught with problems, such as having a total of six directors and having to give up the distribution rights to MGM to get Clark Gable for the male lead. However, Selznick's search for an actress to play Scarlett O'Hara caused a national sensation, as young women everywhere, not just in Hollywood, auditioned for the role. This ultimate triumph won 10 Academy Awards and remains extremely popular. He followed this box office hit with the classic *Rebecca* (1940), directed by Alfred Hitchcock, which won a best picture Oscar.

After a massive tax debt forced his company onto the auction block Selznick formed a new company, David Selznick Productions. In this venue he became more of a talent scout than a producer. One of his biggest personal discoveries was Jennifer Jones, who had won an Oscar for *Song of Bernadette* (1943). While he was not responsible for discovering her, he fell in love with her and did his best to make her a superstar. He produced many films starring her, the most successful of which was 1946's *Duel in the Sun*.

When Selznick and Jones were married in 1949 he virtually gave up his independent producer status and became more of a Svengali to her. Pictures such as *Portrait of Jennie* (1949) and *A Farewell to Arms*

(1957) starring Jones were moderately successful, but Selznick became something of a joke for his obsession with his wife. He continued to work in Hollywood, but his preoccupation with his wife's career relegated him more and more to the background until his death. Nevertheless, David O. Selznick is a name that is firmly planted in motion picture history. He was the biggest of the independent producers at a time when such a thing was rare.

Sennett, Mack (1880-1960)

In February of 1914, Mack Sennett's Keystone company released a comedy called *Kid Auto Races at Venice*, in which a young English vaudevillian who had recently joined Sennett's company of comedians appeared briefly in a battered suit of morning clothes and top hat. His name was Charlie Chaplin and the cameo gave birth to the most famous comedic creation in cinema history, "The Tramp." The very name Mack Sennett resonates with images of early pioneering Hollywood, when rickety, makeshift "studios" sprang up in dusty streets and directors in plus-fours and caps cranked out one and two-reel silent movies with primitive equipment. It was an era both rough and romantic, the earliest days of the Dream Factory when maids and chauffeurs, waitresses, shopgirls, and street sweepers flocked to find fortune, and when fame too often fell victim to scandal in the hothouse atmosphere of the closed film community. It was a time, too, when comedy, brilliantly suited to the technical limitations of the early silent screen, reached a peak of public popularity with stars such as "Madcap" Mabel Normand, Roscoe "Fatty" Arbuckle, Ford Sterling, Chester Conklin, and a host of others. It was to the acumen, imagination, and energy of Mack Sennett, who entered legend and history as the "King of Comedy," that they owed their rise.

Born Michael Sinnott in Danville, Quebec, the son of an Irish Catholic innkeeper, Sennett harbored unfulfilled ambitions to become an opera singer. At age 22 he was working as a laborer in Massachusetts when a chance meeting with actress Marie Dressler led him to New York and an introduction to producer David Belasco. Ignoring Belasco's advice to go home, he embarked on a minor stage career in burlesque and musicals until 1908 when he talked himself into film work at the Biograph studios in Manhattan. He graduated from supporting roles to leads, co-starring with many top leading ladies of the day from Florence Lawrence (the "Biograph Girl") to Mary Pickford and the irrepressible Mabel Normand, who played a profound role in both his professional and personal life for many years. Significantly for his education in the filmmaking process, many of Sennett's films at Biograph were directed by D.W. Griffith, for whom he also wrote some scripts. Driven by curiosity and a desire to learn, by 1910 he was directing shorts at the studio.

In 1912, Mack Sennett, now an experienced director with a pronounced facility for comedy and, with former bookies Charles Bauman and Adam Kessel as his business partners, formed his Keystone company in California. Several of his Biograph colleagues joined him, notably Mabel Normand, the most gifted comedienne of her time. The first ever Keystone program, released in September, 1912, consisted of two split-reel comedies, *Cohen Collects a Debt* and *The Water Nymph*, prototypes for the unrestrained style that became the keystone trademark. Thereafter, Sennett, something of a slave driver, worked at a furious pace, turning out a reel of comedy per week, and rapidly became the foremost purveyor of filmed comedy in America. The earliest Keystone movies were crude, haphazard affairs, largely improvised from the flimsiest of scripts, but they had enormous physical gusto and hilarious sight gags, a stable of major comic acting talents, and Sennett's impeccable sense of timing and skillful editing to control the finished product. Gradually, as the company expanded both its roster of actors, the length of its films and its prodigious output, the frenzied, freewheeling custard-pie-in-the-face-slapstick farce that was its trademark gave way to more carefully considered and controlled material, and the general chaos that prevailed was subjected to better organization.

Within two years, Sennett's Keystone Kops (or "Cops"), a bunch of inept, accident-prone policemen, were a national American institution in films that poked irreverent fun at the guardians of law and order; a little later they were joined by the famous Mack Sennett Bathing Beauties, a line-up of dizzy "sexpots" from whom several successful early female stars emerged in due course. In January 1914, Chaplin arrived, a total newcomer to film, at the invitation of Sennett, who had seen him on stage in Fred Karno's traveling vaudeville company. He stayed almost a year before being lured to Essanay by big money and more artistic freedom, but he made 35 films at Keystone, establishing himself not only as a star actor and creator of the Tramp, but also as a writer and director. He made several with Mabel Normand, and their partnership and his tenure with Sennett concluded with the six-reel *Tillie's Punctured Romance* (1914). Directed by Sennett, the film was unusual in that Chaplin and Normand played second fiddle to a star (Marie Dressler), and historically important in being the first feature-length comedy (90 minutes) to have been made anywhere in the world, exceeding the running time of any previous comic film by two-thirds.

Sennett, dedicated to an ever-increasing production schedule and to the editing process, and retaining final say over each and every film, hired several other directors to come in and make them. To the Kops and the Bathing beauties, he added the Kid Komedies series for children, pre-dating Hal Roach's famous Our Gang series by nearly ten years. In 1915, however, Keystone was absorbed into the new Triangle Film Corporation, which, with Sennett joining directors Griffith and Thomas Ince, could now boast a triumvirate of the American silent screen's most famous filmmaking names. Keystone retained autonomy within Triangle and benefited from larger budgets. Their productions became more polished, and their material more varied, with slapstick no longer the sole product. Humor was broadened to include what would now be called situation comedy, and a series of romantic comedies were made that provided star vehicles for the young Gloria Swanson. For all its seeming advantages, however, Triangle failed to live up to expectation and in 1917—at the cost of relinquishing the Keystone title—Sennett (following the example of Griffith and Ince) broke away and formed Mack Sennett Comedies, his own company releasing first through Paramount, and later Associate Producers and First National.

Living up to its name, the company continued to make two-reel comedies, but also produced several features, some showcasing Mabel Normand and comic Ben Turpin. Then, in 1923, he entered an association with Pathe that saw out the silent era. It was here that, continuing his gift for recognizing and nurturing talent, Sennett launched the career of the great comedian, Harry Langdon in a series of shorts. Throughout his career, Sennett adhered to assembly-line discipline and prodigious working hours (up to 18 a day), but to work for him as a writer or director was tantamount to attending a graduate school in how to make films. He hired Frank Capra to write gags for Langdon, and when the comedian left Sennett he took Capra with him.

The coming of sound toppled Mack Sennett from his throne as the King of Comedy, although he continued producing and directing for some years. He made low-budget shorts for the Educational studio, and produced some comedy shorts with W.C. Fields and a series of musical shorts with Bing Crosby for Paramount in 1932. At Educational in 1935, he directed *The Timid Young Man*, a short starring Buster Keaton (the only time they worked together), before retiring back to Canada, broke and alone. Mabel Normand, dogged by scandal and disillusioned in her long and stormy affair with Sennett that failed to lead to marriage, married actor Lew Cody in 1926 and had died of drug abuse and TB in 1930, aged 35. Their relationship is the subject of Jerry Herman's nostalgic musical, *Mack and Mabel*, first performed on Broadway in 1974 with Robert Preston and Bernadette Peters.

In 1937 Sennett received a special Academy Award "to the master of fun, discoverer of stars, sympathetic, kindly, understanding comedy genius . . . for his lasting contribution to the comedy technique of the screen, the basic principles of which are as important today as when they were first put into practice." Mack Sennett, the self-proclaimed King of Comedy, wrote his autobiography under that title in 1954 and died on November 5, 1960 in Woodland Hills, California.

Serial Killers

During the late 1970s and early 1980s, the threat of serial and mass murder became a topic of great popular and academic interest in America. While there is no murder "epidemic," as hyperbolic writers and law-enforcement officials claimed in the mid-1980s, the apprehension of high-profile serial killers (such as David Berkowitz, Ted Bundy, John Wayne Gacy, and Henry Lee Lucas) and an apparent upswing in mass shootings in schoolyards, post offices, etc., served to bring the problem to public attention. In a capitalistic mass-media age where sensational news stories increase ratings and sell advertising time, the "random" killer (especially the serial murderer) provides good source material. He also inspires generations of fiction writers,

Serial killer David Berkowitz, the “Son of Sam,” being arrested by New York police.

who simultaneously view him not only as an artistic metaphor for any number of social ills but a guaranteed moneymaker. Literally thousands of fiction and nonfiction (“true crime”) novels and films centered on multiple killers have grossed hundreds of millions of dollars during the past twenty years in America alone. One of the most recognizable of these is the Oscar-winning film *The Silence of the Lambs*, which is based on a best-selling novel by Thomas Harris. Harris, in turn, was inspired to create his memorable work of fiction by his research into the lives of real-life serial killers and the law-enforcement agents (“profilers”) who pursue them. Most of the well-known fictional stories that feature serial and/or mass murder, then, are contemporary morality plays in which evil, murdering villains threaten the social fabric but are eventually brought to bay by the heroic profilers. The reality of serial and mass murder, however, is much more complicated.

Multiple homicide, whether called serial or mass murder, has always been a part of human history. Gilles de Rais, Countess Elizabeth Bathory, Jack the Ripper, Belle Gunness, Carl Panzram, Albert Fish, Earle Nelson, Peter Kurten, Ed Gein, Albert DeSalvo, Ian Brady and Myra Hindley, Edmund Kemper, Juan Corona, David Berkowitz, Ted Bundy, John Wayne Gacy, Peter Sutcliffe, Angelo Buono, Kenneth Bianchi, Dean Corll, Wayne Henley, Henry Lucas, Ottis Toole, Richard Ramirez, Joel Rifkin, Danny Rolling, Dennis

Nilsen, Jeffrey Dahmer, Andrei Chikatilo, and Aileen Wuornos are only some of the most notorious practitioners of multicide. However, “serial murder” has existed only, in the strictest sense, since FBI Agent Robert Ressler coined the term and the American mass media disseminated it throughout the culture during the 1980s. Before “serial murder” as a sobriquet came into vogue, the phenomenon in question was usually called “lust murder” or “mass murder” and included a variety of multiple-homicide crimes. Now, in criminological jargon, serial and mass murder usually refer to two disparate concepts. Complicating matters further, there are many “subspecies” of serial and mass murderer. All of them must be distinguished from other varieties of multiple killers, such as paid hit-men or state-sanctioned assassins, executioners, torturers, etc.

Serial murder is most commonly defined as the commission of three or more murders over a period of time, with a “cooling off” period or hiatus between each murder. The victims may or may not be known to the killer, but more often than not the social class any one victim represents to the killer is more important than the victim’s identity. The fact that victims are often unknown to the killer prior to the murder episode leads many to call serial murder “irrational” or “evil.” In most cases, no comprehensible motive exists for the crimes, and the murders do not seem to provide the killer with any clearly understood, tangible benefits. According to Elliott Leyton, the

serial-killer category most definitely does not encompass those who kill repeatedly for profit or for governments. These killers are performing more of a public "job" than a privately significant act; the motive is basically rational and readily apparent. By contrast, the serial killer, while not without certain "professional" aspirations of his own, works according to a more esoteric agenda which observers often find inscrutable. This leads them to call him insane, psychotic, or schizophrenic: psychiatric terms that all denote a severe and socially crippling disjunction between reality and perception. The terms do not fit most serial killers. The serial killer only appears nonrational because he operates from, as R. M. Holmes and J. De Burger have it, "intrinsic motive systems . . . that originate within the individual; they govern and structure the serial killer's behavior."

The vast majority of known serial killers are males, and the vast majority of their victims females (a fact which understandably leads many to conclude that serial murder is synonymous with sexual murder; however, this is not strictly the case). In August of 1985, the *FBI Law Enforcement Bulletin* published a series of articles (later expanded to a book-length study entitled *Sexual Homicide* in 1988) in which primary offender characteristics were listed. This data was compiled from lengthy interviews with thirty-six incarcerated serial murderers, all of them male. Most writers on the fact and fiction of serial murder, even those critical of law enforcement claims and methods, have been drawing on this specific set of FBI conclusions ever since, so the study is crucial to any analysis of the popular culture's portrayal of the "typical" serial murderer. He is usually a white male between twenty-five and thirty-five years old, though of course there are teen-aged and elderly serial killers as well. Generally, the male serial killer is at the height of his physical powers, a fact which not only serves him in the practical matter of overpowering victims but also empowers him in the public arena: his strength and apparent potency (and of course, choice of innocent victims) render him an effective media monster. He is also likely to be an eldest son or an only child and of average or above-average intelligence. His childhood may have been marked by incidents of sexual or physical abuse, and his parents may be divorced or flagrantly unfaithful to one another. He usually possesses a strong belief that he is more intelligent and privileged than ordinary people (a belief that only grows stronger when confronted by evidence to the contrary) and thus exempted from the social restrictions that govern the masses. No safe predictions can be made about his economic origins, but as Leyton notes, serial murder in our era is more a crime of the middle classes than of the lower or upper ranges of the socioeconomic hierarchy. Also, it should be noted that while males are overwhelmingly responsible for most serial/mass murders, there are more female multicides than commonly believed. A partial list of female American multiple killers alone includes Susan Denise Atkins, Patricia Krenwinkel, Charlene Gallego, Belle Gunness, Nannie Doss, Martha Beck, Carol Bundy, Dorothea Puente, Priscilla Ford, Amy Archer-Gilligan, Anna Hahn, Mary Elanor Smith, Jane Toppan, Genevieve Jones, Judy Neeley, and Debra Brown. The most famous female multicide of all is Hungarian Countess Elizabeth Bathory, who with a coterie of female disciples imprisoned and murdered hundreds of women in her castle in the early 1600s.

Not all privately conceived acts of multiple homicide qualify as serial murders. Scholars now generally agree that mass murder forms a separate category. James Alan Fox and Jack Levin point out that mass murderers are generally caught at or near the crime scene, and that the crime is of horrific proportions but relatively short duration.

Unlike serial killers, who typically target strangers and traumatize a community over an extended period of time, the mass murderer plans one ultraviolent assault upon victims who, more often than not, are known to him. The mass murderer category can include depressed people who kill their entire families before committing suicide, but more commonly refers to those who violently retaliate against a specific group or class of people because of a real or imagined grievance; for example, disgruntled employees gunning down supervisors and coworkers. Racism or sexism also often motivates this kind of killer, as was the case with James Huberty, who killed twenty-one people in California because of an obsessive hatred of Hispanics; or Marc Lepine, who killed fourteen women at the University of Montreal because he blamed "feminists" for his romantic and professional difficulties. Massacres in public places (restaurants, schoolyards, classrooms, the work place, the post office, commuter trains, campuses, etc.) typically involve one heavily armed killer who racks up a high death toll. However, the massacre is a one-time-only event that often ends in the death of the killer by the police. Charles Whitman, who opened fire on students from a clock tower on the University of Texas campus in 1966, is probably the best-known example of this kind of mass murderer.

The spree killer occupies an intermediate position between the mass murderer and the serial murderer, although it should be noted that some authorities see no real distinction between spree killing, mass murder, and serial murder. The spree killer does not operate in secret like the serial killer, but neither does he lay siege to one specific locale until a SWAT team cuts him down. Instead, he often drives cross-country, with a companion or two (what R. M. Holmes and S. T. Holmes call "disciple killers"), murdering randomly and noisily as he goes until he is captured or killed. His weapon of choice is the gun, as opposed to the serial killer's more intimate knife. He makes little or no effort to cover his tracks; instead, he exults in the sheer nihilism of destruction and relies on brute mobility to keep him free as long as possible. His crimes are very visible but generally of short duration *because* of their high profile. During the 1950s, for example, embittered garbageman Charles Starkweather and his young girlfriend Caril Fugate rampaged across the Midwest, killing eleven people before they were captured and arousing the nation to new heights of paranoia concerning the dangers of juvenile delinquency. The conspicuousness of the spree killer contrasts significantly with the serial killer, who wishes to remain undetected for a period of time, at least in identity if not in deed.

It is undeniable that during the past half-century the United States has been producing more of these sensational criminals than the other Western industrialized nations. Sociologists point to many possible explanations. One of the most compelling is that the American cult of individuality has always prized violence (particularly for males) as a quick response to frustration. The simple outlaw (Jesse James, Billy the Kid) on the lam from the maddening complexities of communal, multicultural existence remains a heroic American icon. For many (if not most), violence is more attractive as a form of immediate gratification than the intangible results of long-term, peaceful political activism. In spite of the public rhetoric condemning violence, Americans have traditionally accepted even extreme levels of group and individual violence alike as appropriate responses to conditions perceived as intolerable. Marvin Wolfgang and Franco Ferracuti's hugely influential study, *The Subculture of Violence*, analyzes how it is possible for people within a culture to embrace some of its general values while denying, de-emphasizing, or inverting others, and yet remain within that culture. For many segments of the

American public, violence is regarded as a perfectly legitimate form of social expression and problem solving, dependent upon and framed in terms of prevailing local conditions even as it is decried by the supposedly overriding social discourse.

The serial killers and mass murderers of America are no exception or aberration in this sense. Their fantasies of murder and revenge are constructed from accessible cultural symbols recognizable to others. If such killers were truly alien to us, as facile notions of evil and deviance insist, then their motives would not be comprehensible. Indeed, many insist that serial murder *is* incomprehensible. While such exclusionary approaches are undeniably comforting, the unsettling observation must be made that serial murder is clearly rooted in our consensual reality and discourse. Its manifestation and shape obviously relies on the contemporary values, norms, and beliefs it seeks to overturn or, perversely enough, to uphold. In medieval Europe, multiple killers were perceived as, and often believed themselves to be, vampires (Gilles de Rais) or werewolves (Peter Stubb); in modern America, as demonically possessed monsters or formerly abused children, depending on the observer's sociopolitical orientation. The only commonality one can easily discern about multiple murderers from century to century and country to country is their monstrous, outcast status. In ancient legend and contemporary fiction, they lurk on the fringes of civilization, raid us in our vulnerability, then retreat back into the wilderness until a hero (usually an amateur or professional detective) can find them and destroy them. After this ritual expurgation of the murderous exile, the people can reassume their complacency until the next time. In the interval, however, narrative myths keep alive the awareness that somewhere out there, the monsters (be they Grendel or Norman Bates) grow hungry. The names and details may change from one generation's folklore to the next, but the basic plot remains.

—Philip Simpson

Serling, Rod (1924-1975)

Best known as the host of television's *The Twilight Zone*, Rod Serling was a prolific author of live teleplays and television scripts who did much to raise the artistic bar of a fledgling medium in the 1950s and 1960s. With contemporaries such as Paddy Chayefsky and

Rod Serling

Reginald Rose, Serling found television a reprobate cousin to film and theater, and left it a respected forum for expression.

Born Rodman Edward Serling on Christmas Day 1924, he grew up in the sleepy university town of Binghamton in upstate New York. He served in the army during World War II, seeing combat action in the Philippines. Hospitalized with multiple shrapnel wounds, Serling sought an outlet for his pent-up emotions. "I was bitter about everything and at loose ends when I got out of the service," he later recalled. "I think I turned to writing to get it off my chest."

When he returned from the war, Serling began selling radio scripts to programs in New York City. When television's growing popularity created a demand for writers, he moved on to that medium. In four years of freelancing, Serling saw 71 of his teleplays produced, but none of them approached the quality of his 72nd. "Patterns," a powerful drama about internecine warfare within the halls of a major corporation, aired on *Kraft Television Theatre* on January 12, 1955. It earned Serling the first of six Emmy Awards and provided his big break.

The glowing reviews of "Patterns" made Serling one of the hottest commodities in the entertainment industry. "I found I could sell everything I had—and I did," he said later. Some of his scripts were brilliant. The harrowing boxing drama "Requiem for a Heavyweight" became a live television classic, for example. Others should have remained buried in the author's desk drawer. All of them bore the trademark Serling attributes of moral probity and social concern.

Those social concerns occasionally got Serling into trouble with jittery advertisers and network censors, however, and as a defiant defender of free expression, he bristled at every change to his work. In one instance, the word "lucky" was stricken from one of Serling's scripts because the sponsor, a tobacco company, did not want viewers to be reminded of Lucky Strike cigarettes. That was harmless compared to what CBS did to his drama "A Town Has Turned to Dust." An outspoken progressive on civil rights issues, Serling had penned a script based on the case of Emmett Till, a black teenager who was lynched for allegedly whistling at a white woman. The network, afraid that the show would outrage viewers in the South, changed the setting from present-day Mississippi to Mexico in the 1870s. Other racially charged story elements were likewise toned down. Of his original script, the author lamented, "They chopped it up like a roomful of butchers at work on a steer."

In part because of his desire to make an end run around the censors, Serling turned his creative energies in 1959 away from live drama. He envisioned a weekly half-hour fantasy anthology series that could address philosophical and political topics in an oblique way. Intrigued at the prospect of signing up one of television's most respected writers, CBS green-lighted the project, which Serling christened *The Twilight Zone*. He was given total artistic control along with the title of executive producer.

Twilight Zone debuted on October 2, 1959, to generally positive reviews. Literate and highly entertaining, the show raised the science fiction/fantasy genre to a new level of artistic quality. True to Serling's concept, many of the stories used sci-fi trappings to speak to contemporary social issues like racism, cultural conformity, and Cold War paranoia. For actors, the series relied on a dizzying repertory company of seasoned character players and up-and-comers. Serling himself joined their ranks by serving as on-camera host/narrator. His bizarre persona—clenched teeth and gravelly monotone, crisp Kuppenheimer suits and the eternally cupped cigarette—made him seem like some kind of celestial undertaker beamed in to viewers' homes once a week for their edification and enjoyment.

In addition to hosting and serving as executive producer, Serling wrote 92 of *Twilight Zone*'s 156 episodes over the course of five seasons. He contributed some of the show's most memorable teleplays, including "Eye of the Beholder," which explored relative perceptions of beauty through the eyes of a "disfigured" young woman. Unfortunately, the demands on Serling's time and concentration also forced him to write quickly and sloppily. Many of the show's worst installments—and its often preachy and moralizing tone—bore his imprimatur as well.

With the occasional critical brickbat, however, came the fame and recognition due to the unmistakable face and voice of a successful network television series. Serling collected numerous awards for his work on *Twilight Zone*, including another Emmy. After the series was canceled in 1964, he went back to writing dramatic teleplays for anthology shows. In 1968, he wrote the first three drafts of the screenplay for *Planet of the Apes*. His verbose, purple style still can be heard in the finished film, voiced with delicious pomposity by the perfectly cast Charlton Heston.

Lured back to series television in 1970, Serling lent his name and visage to *Night Gallery*, a *Twilight Zone*-esque anthology that ran for two seasons on NBC, but while he penned some exceptional episodes, Serling became frustrated with the network's vision of the show as, in his words, was "Mannix in a cemetery." He even suffered the indignity of having several of his own scripts rejected for insufficiently frightening content. Contractually bound to serve as host, the humiliated fantasist desultorily went through his paces until the show's cancellation. Three years later, he died following complications of heart bypass surgery. To the end, he remained committed to the integrity of his work and the vision of a higher standard of televised entertainment.

—Robert E. Schnakenberg

Sesame Street

Broadcast on more than 300 Public Broadcasting Service (PBS) stations and in more than 140 countries around the world, this widely acclaimed children's television program celebrated its 30th anniversary in 1998. It has won more than 100 of the top awards in its field, including 71 Emmys, two Peabodys, eight Grammys, four Parent's Choice Awards, and the Action for Children's Television Special Achievement Award. Created by Joan Ganz Cooney for the Children's Television Network to provide educational material to inner-city kids, *Sesame Street* has endured by remaining true to its initial goals while changing with the times. It survived the deaths of Will Lee, who played Mr. Hooper, one of its major characters, and of Jim Henson, its creative force, who made his Muppet characters like Kermit the Frog, Big Bird, and Cookie Monster some of the most familiar faces in American popular culture. Other characters have come and gone, and actors have been replaced over the years, but *Sesame Street* remained an important program by the end of the century.

Joan Ganz Cooney, the creator of *Sesame Street*, standing with Big Bird and other *Sesame Street* characters.

The originators of *Sesame Street* spent several years culling the expertise from relevant fields to present a show that would educate and entertain at the same time. It was geared toward a viewing culture in which the typical child will have spent over 5000 hours watching television before entering first grade, and 19,000 hours by high-school graduation. According to Cooney, none of those involved in the beginning realized that *Sesame Street* would become an icon of popular culture and a family to which generations of children would belong. From the beginning *Sesame Street* employed techniques that had been successful in commercials by presenting educational material in the form of fast-paced, highly visual, and oft-repeated commercials. Children who watched the show quickly learned the alphabet, numbers, concepts, and relationships through repetition. The songs sung daily on *Sesame Street* became part of the repertoire of preschoolers and parents alike for the same reason. Over the years, the producers of the show developed a specific curriculum for each season aimed at imparting key information and concepts. For example, in Season 29 the show sought to teach social concepts such as acceptance, cooperation, tolerance, conflict resolution, birth, love, and marriage; practical skills such as addition, computers, drawing, geography, and history; and social awareness of such issues as cultural diversity, handicaps, Native Americans, Hispanic, and Chinese Americans.

The adults who appeared on the show at its outset won their roles by auditioning before real kids who chose only those with whom they felt comfortable; many of them have remained with the show for many years. Over the years, the adults have been chosen to represent specific role models for young children. Maria, played by Sonia Manzano, joined *Sesame Street* in 1974 as a young teenager who worked at the lending library. She grew up on the show, married Luis (Emilio Delgado) and had a baby, teaching children about love, marriage, and birth at the same time. Bob McGrath, one of the original cast, has continued to provide stability as children grew up and watched the show with their own children. Gordon, played by Roscoe Orman since 1973, was already married to Susan (Loretta Long) when the show began. Later they adopted a son and taught children about adoption. In response to concerns of the National Organization for Women (NOW) that the character of Susan had become a negative role model for young girls, Susan became a public-health nurse. From the show's inception to his death in 1982, Mr. Hooper (Will Lee) ran the neighborhood store, representing the ideal grandfather as he served up love, comfort, and cookies. *Sesame Street* used his death to help children recognize the importance of memories when someone they love dies and to understand that death is real and final. Other adults have been added to the show, including Buffy St. Marie, a Native American folksinger, comedienne Ruth Buzzi, who uses magical objects in her thrift shop to tell stories to children in the studio and at home, and singer Savion Glover, who entertains and teaches with music.

It was the creative genius of Jim Henson, however, that gave birth to the Muppets, some of the best loved children's characters of all time. Henson had brought the Muppet named Rowlf to national attention on *The Jimmy Dean Show* and was hired to do a series of commercials with his appealing inventions that were a combination of marionettes and puppets. The first Muppets were simple pieces of cloth that came alive under his hand, and the secret of how the Muppets are made is still closely guarded. Originally, the Muppets were not meant to interact with the adults, but tests revealed that young children paid more attention when their favorites were on screen. This allowed the show's producers to use the Muppets as surrogate children. For example, Big Bird, operated by Carol Spinney, is the epitome of a child who with the best of intentions is often confused and who constantly makes mistakes. One of the best loved plots on *Sesame Street* concerned the friendship of Big Bird and Mr. Snuffleupagus, who was thought by the whole neighborhood to be invisible for over a decade. One of the best loved Muppets, Kermit the Frog, appeared on the show only for a short time. In the early days, Kermit served as a roving reporter, attempting to discover the truth behind various tales and usually becoming an unwitting part of the story. Henson chose to remove the frog from *Sesame Street* because he had appeared in commercials before the show aired. Kermit went on to star in *The Muppet Show* and a series of movies.

Bert and Ernie, the Odd Couple of *Sesame Street*, have demonstrated the give and take of friendship through three decades of manipulation on the part of Ernie and gullibility on the part of Bert. Grover, on the other hand, is bright and patient and always ready to share his wisdom by teaching concepts and relationships. Oscar the Grouch, with his irascible personality, teaches children that some people use gruffness to hide a heart of gold. Cookie Monster allows children to laugh at the selfishness that they sense is part of their own personalities. Perhaps the favorite of the newer Muppets has been Elmo, who represents the sweet, gentle, and trusting child. Elmo frequently visits *The Rosie O'Donnell Show* as a welcomed guest,

saying whatever comes to mind and expressing his affection through frequent kisses, just as many small children do. Indeed, with some help from O'Donnell, the Tickle Me Elmo doll became the top-selling toy of 1996. It is impossible to say whether or not *Sesame Street* would have succeeded without the Muppets, but no one would argue that the show has endured in great part because of their charm and originality and because of the hard work of those who manipulate them. In addition to Carol Spinney (Big Bird), Frank Oz continues to operate Bert, Grover, and the Cookie Monster.

Guest stars have been a staple of *Sesame Street* since its inception. Actor Noah Wylie noted that the most exciting thing about being a guest star was being able to meet his idol Big Bird. One of the classic moments in television occurred when a plethora of guest stars, including Willie Nelson, Jane Curtain, and Danny DeVito, implored Ernie to "put down the duckie if you want to play the saxophone." They referred, of course, to Ernie's tendency to clutch his rubber duckie the way that Linus clutches his blanket.

Over 30 years, *Sesame Street* has not escaped criticism, however. Some studies have demonstrated that television stunts imagination, turns out restless and ill-informed students, and that kids who grow up watching *Sesame Street* expect school to be like the show: colorful, fast-paced, and entertaining. In the 1980s, right-wing critics demanded that the show should be removed from the air because the close relationship of Muppets Ernie and Bert suggested that they were gay. Conservatives who deplored the use of tax money to fund public television used this alleged relationship as support for cutting out all funds to public television stations and to the National Endowment for the Arts (NEA). On the other hand, many teachers and parents agreed with a 1988 report that found that watching television may nurture attention-focusing capabilities and self control, while promoting teacher-student responses. Students who watched *Sesame Street* and its sister show for older children, *The Electric Company*, were found to be more proficient in basic skills.

Seven Days in May

Released in 1964, director John Frankenheimer's political thriller is based on the 1962 Fletcher Knebel and Charles W. Bailey II novel of the same title. Addressing the issue of nuclear disarmament treaties at the height of the Cold War, *Seven Days in May* tells of a coup by U.S. military leaders in response to American participation in such a disarmament treaty. Fueled by a combination of patriotism and megalomania, Chairman of the Joint Chiefs of Staff General James Mattoon Scott plots to "save" the United States from a President who

is willing to trust a nation "who has never honored" a single treaty in their existence. Black and white cinematography adds to the film's tense dialogue provided by screenplay writer Rod Sterling.

The Seven Year Itch

Released in 1955, *The Seven Year Itch* represents the epitome of Marilyn Monroe's popular screen persona as the naive and sexually appealing blond. Directed by Billy Wilder and based on the play of the same name by George Axelrod, the film centers around the supposed tendency of men married for seven years to seek extramarital affairs. One hot New York summer, while his wife is vacationing in Maine, a middle-aged publisher (Tom Ewell) considers just such an affair with his pretty, young neighbor (Monroe). In the end, however, he chooses to remain faithful and leaves to join his wife. The film features several humorous sexual fantasy sequences and the famous image of Monroe exposing her shapely legs as she stands over a subway vent in a billowy white dress.

Seventeen

Seventeen magazine first appeared on newsstands in September, 1944, and it forever changed the media and consumer market for teenage girls. It was not the first publication to notice teenage girls, but it was the first that successfully reached a large teenage audience by devoting an entire magazine to them. Physically larger than today's magazine, *Seventeen* was initially 10 3/8-by-13 1/8 inches, printed on quality, thirty-five pound paper. The reader was first attracted to the colorful cover that promised "Young fashions and beauty, movies and music, ideas and people," as well as the section headings dividing the entire magazine into well-defined categories; "What You Wear," "How You Look and Feel," "Getting Along in the World," "Your Mind," and "Having Fun." Inside its covers, *Seventeen* offered a world of advertising, shopping, responsibility, and advice in the voice of a big sister or aunt, older and experienced, yet friendly and concerned. From the beginning, *Seventeen* was remarkably popular with teenage girls—all 400,000 copies of the first issue sold out in six days. By February, 1947, circulation exceeded one million, and over two-and-a-half million copies sold monthly by July, 1949. This success has continued for over 50 years, and despite stiff competition in the 1980s and 1990s, *Seventeen* is still the most widely read magazine for teenage girls.

In 1944, publisher Walter Annenberg of Triangle Publications decided to overhaul a dying movie screen magazine called *Stardom*. Helen Valentine, promotional director at *Mademoiselle*, agreed to become editor-in-chief of the new magazine if she could design it as a service magazine for teenage girls. She borrowed the name from Booth Tarkington's novel, *Seventeen*, because she thought it fit the thirteen- to eighteen-year-old age group she wanted to reach. While the bulk of the new magazine was designed to focus on fashion and beauty, Valentine insisted that it treat teenage girls seriously and respect what she perceived to be their emotional and intellectual needs. In addition to helping teenage girls choose their first lipstick and survive their first dates, Valentine wanted to teach them about the world and their place in it as responsible citizens.

At a time when advertisers, manufacturers, and media producers were beginning to recognize the economic importance of teenagers, the magazine's editors and publishers invested substantial resources in interpreting and promoting their definition of a prototypical teenage girl, whom they dubbed "Teena." In an effort to help develop the image of the teenage girl as a consumer of the magazine and the products advertised within its covers, *Seventeen's* promotional staff created an advertising advisory board to encourage age-appropriate advertisements and unite advertising and editorial content into a seamless product. Rejecting ads for dark red nail polish or shoes with spiked heels, and discouraging ad copy with heavy slang, *Seventeen* preferred to advertise a "wholesome" teenage girl who dressed neatly and conservatively for high school and dates. Triangle Publications initially invested over \$500,000 in a lavish promotional campaign to create and distribute these images, attract advertising, and strengthen the teenage market.

The content balance of *Seventeen* shifted over the years in response to internal institutional changes as well as external social and political changes. During *Seventeen's* early years, articles addressed serious issues such as the political system, preparing to vote, development of the new United Nations, postwar inflation, and atomic energy. Book reviews further encouraged teenagers to read about community forums, the World Youth Conference, and college and career options for young women. These messages were always embedded in a magazine primarily devoted to fashion and beauty that encouraged girls to spend endless hours learning to fix their hair, shape or enhance their body types, pick the right clothes, read up on sports to be interesting for their dates, and learn to cook, decorate, and prepare the perfect party. But reader letters confirm that many of the magazine's consumers read the political articles seriously, could articulate their opinions intelligently, and wanted more coverage of these issues.

As the median age of marriage dropped during the postwar years and more women married in their teens, *Seventeen's* editorial message—not to marry young—was increasingly in conflict with its proliferation of wedding-related advertising for engagement rings, hope chests, silver, linen, china, and carpets. Advertisements pictured dreamy-eyed young women in their new homes with their new, handsome husbands, or sitting in their bedrooms happily collecting china or silver in anticipation of their wedding day. The magazine sought to present a variety of options and to continue to reach its readers who were marrying right out of high school as well as those going on to college and work.

In 1951, Helen Valentine was fired as editor-in-chief due to conflicts within the corporation. The woman who brought the original

vision and inspiration to the magazine and her supporters moved on to create other magazines. *Seventeen* retained its basic structure but entered a period of transition toward closer ties with advertisers and away from encouraging responsible citizenship. Categories like "Your Mind" disappeared and "Getting Along in the World" became "You and Others." The sections entitled "What You Wear," "How You Look and Feel," "Home Food and Doings," and "Having Fun" became noticeably longer, encompassing most of the magazine by the mid-1950s.

Seventeen responded to the feminist movement of the 1960s and 1970s with a shift towards self-development and independence. Articles on the Peace Corps, new careers in science, teen democrats and republicans, and prejudice joined the preponderance of articles on clothes, looks, and domestic talents. The thirtieth anniversary edition in September, 1974, heralded the new opportunities that had opened for teenage girls since the 1940s, when their futures were centered around home and family. In the 1970s, the article claimed, discrimination based on sex no longer existed in the workplace. Girls could be anything they wanted to be and could successfully combine their careers with family life. The conservative 1980s, however, marked a return to more domestic and traditionally feminine content, and a decline in articles encouraging self-development. The more serious content, therefore has changed with the years, but the magazine never regained its initial commitment to politics, current events, and civic consumerism.

For over 50 years *Seventeen* has remained a fashion and beauty magazine that addresses teenage girls' interpersonal concerns with boys, family, and friends above all else. Other magazines have tried to copy this formula, but it wasn't until *Sassy* entered the market in the late 1980s that *Seventeen* faced serious competition. *Sassy* was more outrageous and tried harder to imitate the language that readers spoke. Magazines like *Young Miss* also began put more emphasis on boys and sex. While *Seventeen* responded in kind, it tried to remain balanced—to continue to cover fashion, beauty, relationships, school, and entertainment as well as boys.

Seventeen emerged amid economic, social, cultural, and institutional changes that provided the basis for the emerging "teenage girl." The decreasing presence of teenagers in the full-time work force along with growing high school attendance enhanced the separation of teenagers from the adult world and increased the potential for a distinct, age-specific identity. Teenagers began to rely more heavily on their peers and on commercial popular culture, such as movies and music, for guidance and entertainment. With their growing access to disposable income, especially in the years following World War II, they created an opportunity for a magazine that spoke to them directly about issues that were important to them. It is clear that *Seventeen's* messages were significant for the millions of teenage girls who continued to read the magazine and praise its efforts. The magazine played a central role in identifying and constructing teenage girls as a distinct group and in establishing their economic viability as a distinct market.

In the 50th anniversary edition, September 1994, the editorial staff reflected on half a century of *Seventeen*, concluding that it is undoubtedly a different magazine in the 1990s because teens are growing up in a different world. Teenagers today no longer look to adults for information, guidance, and taste. They are more focused on their peers and more likely to reject direct advice. Today's issues, such as gun violence, AIDS, and homelessness, personally affect

teenagers who have been exposed to adult topics, violence, and sexuality, whether in their own lives, on talk shows, news, or in movies, far more than their counterparts in the 1940s. Though they may be more knowledgeable and jaded on one level, this veneer of sophistication does not necessarily make teenage girls more mature than they were in the 1940s. Regardless of how much a teenage girl knows about the range of sexual preferences and acts, infidelity, and relationship problems, her first date is still scary and her first kiss still exciting. Although “Teena” in the 1990s is more likely to be Black, Latina, or Asian American, consumer culture for teenage girls is permanently established and continues to thrive. *Seventeen* still interprets teenage girls for advertisers, manufacturers, and society at large, but it is no longer the only voice doing so.

—Kelly Schrum

Sex and the Single Girl

When Helen Gurley Brown’s candid primer *Sex and the Single Girl* was published in 1962, both its provocative title and spirited tips on men, money, and morals caused a sensation. It became one of the bestselling books of the year and went on to international success in translation as well. Overnight its author became a media sensation, and Brown just a few years later would be practically handed a magazine of her own—*Cosmopolitan*—to remake according to the *Sex and the Single Girl* principles.

Sex and the Single Girl was published only two years after the oral contraceptive pill appeared on the market in the United States. Though there were tens of millions of unmarried women in the country, conventional attitudes in the media—with the exception of *Playboy*—largely assumed that women did not engage in premarital

Helen Gurley Brown, author of *Sex and the Single Girl*.

sexual relations; if they did, they were usually shown to suffer degradation, unwanted pregnancy, or social ostracism as a result of it. Magazines for young women featured articles that recommended “saying no” as a strategy to avoid a man’s pressures for them to have sex while on a date. Brides were then still generally expected to be virgins, and abortion was still illegal in most states.

Belying her glamour-girl persona, Brown was actually of humble origins. A native of the Ozarks, she could not afford college, and so learned how to type and got a job as a secretary. Eventually she became an advertising copywriter, and by 1959 (also the year of her marriage to film producer David Brown) she was the highest-paid woman in advertising on the West Coast. Wishing to write a book, Brown heeded the advice of her husband: “Write what you know.” And so Brown began pounding out chapters for a primer on the single life for young women.

Sex and the Single Girl offered tips on decorating, on making one’s way through more affluent social circles, and suggestions for looking stylish on a budget. Throughout its pages was the constant message: being single is fun, and there’s a whole world of men out there ready to flatter their dates. Never interrupt one when he is telling a story, she cautioned; conveniently “forget” to wear some of your lingerie on a date; or wow guests at your chic little dinner parties with “champagne peach”—a peeled peach in a pilsner glass with bubbly

poured over. In the book's recipe for stuffed lobster tails, Brown begins the preliminaries with the helpful hint to "ask that nice gentleman behind the counter to scoop out the lobster meat and then put it back in the tail." She even gave tips for investing in the stock market.

But most significantly, Brown wrote both frankly and coyly about sex. She claimed that single women probably enjoyed far more exciting and satisfying sex lives than married women. Throughout its pages, the text treats married people and their attitudes toward single women rather scathingly. A modern unmarried woman, declared Brown, "is so driven by herself and her well-meaning but addepleted friends to become married that her whole existence seems to be an apology for *not* being married." Elsewhere, Brown theorized that "... the single woman, far from being a creature to be pitied and patronized, is emerging as the newest glamour girl of our times." In one of the last chapters, "The Affair: From Beginning to End," Brown wrote of several different reasons a woman might engage in an affair—even with a married man.

The book was an immediate bestseller. Not surprisingly, there was a huge outcry from conservatives against it—it was an era when U.S. courts were still battling over Henry Miller's *Tropic of Cancer*, a novel that had been legally banned for explicit sexual content since the 1930s. Later, Brown would also become an easy target of feminist ire, who accused her of objectifying women and encouraging them to see themselves only as sexual creatures.

But *Sex and the Single Girl* was also a similar hit in translation in numerous other countries, and at one point was selling nearly five thousand copies a week. Brown began to appear often on television and radio, and she did a cross-country lecture tour. She also wrote three other books, including *Sex and the Office*, which actually caused even more of a stir. In it she set forth explicit guidelines for how to make yourself indispensable to a boss. Some newspapers refused to run advertisements for it. Warner Brothers bought the rights to her first book for \$200,000, then the highest amount ever paid for a nonfiction title. The film (1964) was less a documentary than a comic tale, starring Natalie Wood as a marriage counselor with a Ph.D. who was the author of a bestselling book for single women.

Brown and her husband came up with the idea for a magazine, *Femme*, which would bring the *Single Girl* attitude to readers on a monthly basis. They were unable to secure funding for a launch, but in early 1965 Brown was hired by the Hearst Corporation to revitalize *Cosmopolitan*, a moribund magazine that was trying to target single, fun-loving women as its readership. By the time of Brown's retirement in 1997, it had become one of the most successful mass-market magazines for women in publishing history.

Sex Scandals

Like the world's oldest profession, scandals motivated by human sexuality have always been with us. From the Old Testament and those scandalous Greek deities, to modern tabloids which obsessively monitor the erotic misadventures of the modern gods and goddesses of today, the sexual Achilles' heels of the human race has provided hot copy through the ages. Scandal has been defined as "grave loss of or injury to reputation" resulting from actual (or suspected) violation of morality, ethics, propriety, or law. Sex, deceit, bribery, power, excess, and fame are the key elements of most scandals. And of course, it all has to be exposed in some publicized, often lurid fashion, for as George C. Kohn notes: "There has to be some extra element as well—something untoward, shocking, and reprehensible to the public." Kohn might also add, something infinitely fascinating.

Artists and entertainers have always been considered innately scandalous, but at the turn of the twentieth century movies and sex became inextricably linked. In 1921 Roscoe "Fatty" Arbuckle, Hollywood's most popular silent-era comedian, threw a party to celebrate his new \$3 million contract. The three day affair resulted in the death of starlet, Virginia Rappe, who suffered a ruptured bladder and died as a result of a questionable sexual encounter with the 266 pound comedian. Arbuckle was charged with Rappe's rape and murder, and became a symbol of all that appeared morally offensive in early Hollywood. Though acquitted, public opinion remained against him. His contract was canceled, his films banned, and he was no longer cast in Hollywood. By 1933 both Hollywood and the public had either forgiven or forgotten, and Arbuckle managed a comeback. But just hours after completing his first film in over a decade, the once beloved comedian died in his sleep of a heart attack in a New York hotel room.

William Randolph Hearst and actress Marion Davies indulged in a long-standing affair which was only partially shielded by the newspaper mogul's wealth and power. The married Hearst became infatuated with Davies in the early 1920s. She became his mistress, and he relentlessly promoted her movie career. Hearst and Davies became the subject of an unresolved scandal when director Thomas Harper Ince died on the Hearst/Davies yacht in 1924. Though the final verdict was death by "heart attack due to acute indigestion," rumors of foul play persisted, including one that Ince had been accidentally shot in a fit of Hearst jealousy aimed at Charlie Chaplin. After the incident the Hearst/Davies relationship continued much as before, and was later fictionalized by Orson Welles in *Citizen Kane*, a 1941 film which enraged Hearst, but which even his vast media empire was unable to suppress.

Sinclair Lewis explored the relationship between sex and evangelism in his famous novel, *Elmer Gantry*, as did Reverend Jim Bakker, mogul of the 1980s "Praise The Lord" Christian TV network. With wife Tammy Faye, Bakker became embroiled in a lurid affair encompassing everything from embezzlement to wife swapping and homosexuality. The scandal was motivated by Bakker's brief extramarital liaison with Jessica Hahn, and his ensuing attempt to bribe her into silence. Bakker was eventually forced to yield control

of his lucrative empire to Jerry Falwell, and in 1987 was dismissed from serving as a minister in the Assemblies of God church. But even his ensuing prison term could not quell the controversy, with the tabloids gleefully continuing to report on his alleged affair with another male inmate.

Political sex scandals are among the most venerable, dating back nearly to the creation of the highest office itself: i.e., the recent DNA verification of relations between Thomas Jefferson and his quadroon slave, Sally Hemings. And even well-loved modern presidents, such as Roosevelt and Eisenhower, have not been immune to romantic/erotic controversy.

John Fitzgerald Kennedy (JFK) was informally known as the “playboy” president, but his extracurricular sex life was carefully suppressed to maintain his well-hyped family image. His erotic exploits commenced while still a Senator, but the first affair to endanger his presidency was with a 26-year-old playgirl, Judy Campbell. Campbell, also known as Judith Exner, was also involved with Chicago Mafia boss, Salvatore “Sam” Giancana. Campbell eventually asserted that Kennedy had encouraged her sexual relationship with Giancana, and used her as a courier to pass intelligence and money to the mob boss, with some of the funds used to buy votes for Kennedy in the 1960 election. In 1962 Federal Bureau of Investigation Chief J. Edgar Hoover, noted for his knowledge of the sexual habits of influential people in all walks of life, lunched with Kennedy, and the affair with Campbell came to an end shortly thereafter.

An explosive relationship that has continued to elicit speculation about both JFK and Bobby Kennedy, was the affair the brothers shared with Marilyn Monroe. The Kennedy/Monroe affairs were blown into history by Monroe’s sudden death in 1962, officially a suicide, but still giving rise to persistent rumors that she had been murdered, either by Mafia hit men or by United States intelligence operatives. One investigator claimed that Bobby Kennedy and Monroe shared angry words shortly before her death when Kennedy, fearing public scandal, attempted to end the affair.

John Kennedy’s assassination in 1963 threw a sanctified shroud over any scandalous revelations for over a decade. Thus, the American public was considerably jolted when in 1975 word first leaked out concerning Campbell, and Kennedy’s other affairs. Kennedy’s final involvement was with a Washington socialite, Mrs. Mary Pinchot Meyer. The long term affair may have remained a secret, except for the bizarre fact that Meyer was murdered only 11 months after Kennedy’s assassination, and during the investigation their relationship was revealed.

Speculations on Marilyn Monroe’s death have continued to the present day, though due to the fact that key data mysteriously vanished shortly afterwards, the truth about the actress’ demise may never be known. The ongoing suspicions that she was killed to protect the Kennedy reputation, however, hint at the extremes to which those in high power may have gone to protect themselves from the destructive breath of scandal during the still conservative early 1960s.

Of the later Kennedy controversies, the most publicized was the 1969 incident in which Senator Edward Kennedy’s secretary, Mary Jo Kopechne, was killed when the car Kennedy was driving careened off a bridge on Chappaquiddick, a small island near Martha’s Vineyard. Kennedy did not report the fatal accident until the following morning, arousing suspicion of an illicit affair between the two. Kennedy pleaded guilty to leaving the scene of an accident, and after suspending his driver’s license and a two month suspended jail sentence, local authorities closed the case. It was, however, reopened by the Massachusetts federal district attorney. No one was indicted in

the closed inquest in October, 1969, and while Edward Kennedy won re-election to the Senate in 1970, he declined to seek the presidency in 1972.

Not long after Chappaquiddick another senator, Gary Hart, was a leading contender for the 1988 Democratic presidential nomination. But accusations of an extra-marital affair with actress/model, Donna Rice, thwarted his chances, and became an overriding campaign issue. The Hart affair also included reactions against the scandal mongering of the press, particularly the *Miami Herald*, which launched an aggressive investigation that included a secret stakeout of Hart’s Washington townhouse. But though no proof of adultery was unearthed, the press rumors persisted, and it was accusations of adultery, rather than any conclusive evidence, that actually cost Hart the candidacy. Before withdrawing Hart made the startling (but prophetic) comment that, if elected he would not “be the first adulterer in the White House.”

And certainly not the last. The end of the millennium climaxed with the most graphically documented sex scandal in American history; the 1998/1999 President William Jefferson Clinton/Monica Lewinsky/Paula Jones/Ken Starr/Henry Hyde et al affair. This was state-of-the-art, high-tech scandal, integrating DNA testing, the Internet, new buzzwords such as “censure-plus,” and reams of copy from both the legitimate and tabloid media (not to mention a voluminous outpouring of letters to various editors from a passionately divided American public). In contrast to the aggressively guarded Kennedy affairs, the public was spared no detail of the Clinton incident, and articles counseling parents on how to deal with the explicit details of certain highly accessible news stories were a frequent aspect of the scandal.

After the inundation of words, a terse, matter-of-fact item appeared in the “Milestones” column of *Time* magazine’s February 22, 1999 issue: “Acquitted, William Jefferson Clinton, 52, of perjury and obstruction-of-justice charges, by the U.S. Senate; in Washington (see cover story).” The cover story: “How the Scandal Was Good For America.” After the official verdict, a public consensus seemed to emerge that indicated while many remained disapproving of Clinton’s morals, most were satisfied with his performance as president and happy with the state of the American economy.

In a statement on actual character, and a comment on scandal mongering everywhere, Ethan Canin drew a parallel between morality and popular culture in the “Talk of the Town” column of the October 5, 1998 *New Yorker*: “In a novel, I am interested in complex personality, in ranging intelligence, in moral originality - what in fiction is called rounded character. This is also what I want in the President of my country. Ken Starr’s zealous and chillingly unambiguous morality suggests to me none of the fullness, none of the complex interplay and recognition of opposing forces that interest the intelligent mind. And this, in fiction, is called flat character. If Bill Clinton and Ken Starr were characters in one of my students’ stories, the class could agree that it is Mr. Starr, not Mr. Clinton, who lacks character.”

In the wake of the Clinton affair, one might well ask: Is scandal still a decisive issue in modern life, or merely a titillating, rather tiresome diversion? If we define scandal as “a grave loss or injury to reputation resulting from actual or apparent violation of morality, ethics, propriety, or law,” we might conclude the latter. In the tabloid age scandal now promotes, rather than ends, careers—the Los Angeles *New Times* comments only half-jokingly that “There is no bad publicity . . .”—and with the O. J. Simpson case, even children seem to comprehend that certain individuals are now above the law; terms

such as “ethics” and “propriety” echoing with a decidedly antiquated ring. As in Bertolt Brecht’s mythical American city, *Mahagonny*, when everything is permitted (or accepted), nothing is sacred (or shocking). Where there is no apparent overriding morality left, there can be no scandal, only media buzzwords and cheap, hot copy.

Sex Symbol

The “sex symbol” in twentieth-century American culture is, for the most part, a product of the movies, which over the decades has offered a dizzying variety of male and female images to American audiences: the Vamp, the Red-Hot-Mama, the Golddigger, the Exotic Other, the Girl (and Guy) Next Door, the Femme Fatale, the Strong, Silent Type, the Sex Bomb, the Sex Kitten, the Latin Lover, the Matinee Idol, the Punk, and the Hunk, among many others. Before films became popular entertainment in the 1910s, attractive models having particular standards of “desirability” were only beginning to be seen in the new mass culture, as with the Gibson Girl and Gibson Guy images found in mass-circulation magazines. But once Americans were able to attend films, it was possible for millions to see the same kinds of women and men being held up as models of beauty and sensuality on the silver screen. Over the years, practically the only thread of commonality to be found throughout the various manifestations of the movie sex symbol have been racial and ethnic—the Hollywood sex symbol is almost always white, almost always of northern or western European heritage, and almost always American, though “exotic” examples from Asian, Latino, and African cultures have had their place in film as well as print media. Indeed, two of the earliest sex symbols, Theda Bara and Rudolph Valentino, did not fit

these stereotypes. In general, what defines a person as a “sex symbol” has little or nothing to do with who that person is off the movie or television screen. Instead, sex-symbol status places the emphasis on the “symbol,” on the performer’s ability to fit into a role that offers, either overtly or covertly, a model for and release of sexual tension. These roles have shaped the development of women’s and men’s sexual consciousness and confidence during the twentieth century.

One of the earliest sex symbols was Theda Bara (born Theodosia Goodman) who appeared as a vampire woman in the 1915 film *A Fool There Was*. In contrast to the prevailing and desexualized image of wholesome European-American womanhood embodied by Mary Pickford, Bara’s Vamp embodied a dark, exotic, and foreign sensuality, a kind of open sexuality not permitted to white American women until much later in the century—though it is precisely this kind of sexuality that was appropriated by some of the black blues divas of the 1920s such as Bessie Smith, Sippie Wallace, and Ma Rainey. In later films, such as *The Vixen* and *The She-Devil*, Bara’s Vamp would entrap men with her sexual wiles, only to be punished in the end for transgressing gender roles. Though Bara’s career in film was short-lived, the figure of the Vamp as an important sex symbol has marked American film ever since.

As Americans moved into the 1920s, when the androgynous flapper look was in vogue, Mae West, with her unfashionably zaftig figure and unapologetic bawdiness, offered the Red-Hot-Mama as a counterpoint to the more popular ingenue or girl-next-door image of stars like Clara Bow. Known for her humorous quips and innuendo (“Come up and see me some time”; “What’re you doin’, honey? Makin’ love or takin’ inventory?”); for styling one of her characters as “Lady Lou, one of the finest women who ever walked the streets”; and even for being jailed in 1926 for obscenity, Mae West both exuded sexuality and contained it through humor, offering a sexual gratification that she never got a chance to deliver, though she played the Red-Hot-Mama role well into her 80s. Sexual transgressiveness has also been a part of Mae West’s camp appeal to gay men, especially with her role in the 1970 film adaptation of Gore Vidal’s *Myra Breckinridge*, a romp in polymorphous sexuality.

In the 1930s, Hollywood crafted the Golddigger in the person of Jean Harlow. Harlow’s platinum-blond hair and wisecracking persona set her in the tradition of Mae West, but her brassy, open sensuality seemed disconcerting from the mouth of a sweet-looking young woman who was “out to make a killing” in more ways than one. “Would you be shocked if I changed into something more comfortable?” she asked in *Hell’s Angels* (1930). The Hays Production Code, which set rules for the depiction of sexuality in the movies in the 1930s, is often seen in part as a response to Harlow’s unabashed sensuality.

The other major sex symbol archetype of the 1930s was Swedish actress Greta Garbo, the Exotic Other. Garbo’s passions seemed to stem not from erotic desire, but from some unspeakable internal suffering, and the interest in Garbo seemed to stem mainly from the fact that she was foreign, different, and could, therefore, be made to symbolize whatever the viewer desired. Always carefully made up and glamorous, Garbo exuded a melancholy persona that seemed designed to draw viewers in to her personal torment, creating a sense of intimacy between actor and audience. When, in *Grand Hotel* (1932), she uttered her famous line about wanting to be left alone, audiences responded to her faintly mysterious Swedish accent and swooned over her noble, classy, and discreet suffering. Male characters wanted her, but she always wanted the wrong men, almost never

achieving on-screen bliss. Her allure for American audiences was so great that, when she left the acting world in 1941, her disappearance excited years of cultish obsession. Don McPherson and Louise Brody fueled this myth in their profile of Garbo, claiming that she “remained an enigmatic and unreachable phenomenon. . . . She seems to wish she were invisible: it is not so much a face as a shadow of one, suggested by isolated glimpses and memories, inscrutable and austere.”

World War II ushered in the era of the sex symbol as pinup, the suggestive photos that graced lockers and military barracks in all theaters of war. Actresses that had made their reputations prior to the start of the War—Betty Grable, Rita Hayworth, Jane Russell, Veronica Lake, and Lana Turner—were suddenly in great demand in “pinup” form, usually as images of the sex roles for which they were known. The two most popular wartime versions were the wholesome Girl-Next-Door (personified by Grable) and the Femmes Fatales (Hayworth, Russell, Lake, Turner). The stylized poses taken by these actresses, the most famous being that of Grable, in shorts and high heels, showing off her cleavage and million-dollar gams, offered an image of femininity that seemed to be missing at home, where wives and girlfriends were working and emulating the decidedly unsexy Rosie the Riveter. They offered a reminder of peacetime normality, where women were women, i.e., filled traditional roles. If Grable’s look was that of the “good girl,” the pinups of Rita Hayworth, Jane Russell, and Lana Turner smoldered openly. These women’s provocative poses promised a sexuality just out of reach, and a vision of American womanhood worth fighting for.

World War II had a profound effect on the representation and symbolization of sexuality in general. The term “bombshell” entered American vocabularies as a reference to the openly sexual woman, pointing not only to their power over men but also to their potential for destroying those same men and themselves. Women’s sexuality, according to this logic, was dangerous, in need of containment, lest the hapless male end up obliterated by the sex bomb. Coming partly from the portrayals of hardboiled Femmes Fatales in the popular 1940s *film noir* genre, and partly from an anxiety over gender roles destabilized during wartime, the association of women’s sexuality with danger continued to linger in American popular culture. (It is this same threatening sexuality that led to the naming of the “bikini” bathing suit after the Bikini Atoll on which nuclear weapons were tested, and the voguish slang word “atomic” to mean splendidly desirable.)

The most popular sex symbol of the 1950s was that great Ingenue-cum-Sex Bomb, Marilyn Monroe. Oozing sexuality but seeming never to recognize it, Monroe offered a soothing sensuality for America’s frazzled sensibilities. Monroe’s on-screen persona, that of the breathy, innocent girl, provided a welcome return to clear gender roles, to a kind of idyllic sexual past. Monroe was not attired in a sexless overall like the wartime Rosies, nor did she even want to work: She preferred to marry a millionaire, as in the title of one of her films. But once married, she had no intentions of chewing him up and spitting him out like a Golddigger or a Femme Fatale: Monroe wanted true love, too, in a reassuring return to “lost” femininity. Donald Spoto explained that she represented “the post-war ideal of the American girl, soft, transparently needy, worshipful of men, naïve, offering sex without demands.” Though Monroe often sought to transcend her role as symbol (trying to be “taken seriously,” marrying the American dramatist Arthur Miller, seeking more challenging film roles), she never managed to separate herself from her Sex Bomb image, eventually becoming almost a parody of herself as in her famous birthday serenade to President John F. Kennedy.

Latching on to Monroe’s huge popularity, other studios tried to create their own Sex Bombs, casting American actresses like Mamie Van Doren, Jayne Mansfield, and Kim Novak, or foreigners like Brigitte Bardot, Sophia Loren, and Gina Lollobrigida, in roles that seemed to emphasize a kind of trashy, even sluttish, glamour—women to be played with, not to settle down with. While these women were quite popular in their own right, they never quite reached the stratospheric heights that Monroe did in popular consciousness. Monroe and the other Sex Bombs stood at one end of the continuum of 1950s women’s roles, promising a kind of power in sensuality, an ability to control men (though always kindly, always with good intentions); at the other end stood Doris Day, smart, sporty, and perpetual virgin. If Monroe was the archetypal dumb blonde, the kind of girl men wanted to have fun with, the girl they wanted to scratch their *Seven-Year Itch*, Doris Day was the not-so-dumb blonde, the kind of girl men married.

The 1950s ushered in a more “permanent” way to display the sex symbol—as pinup in the form of the *Playboy* magazine centerfold. Created in 1953, Hugh Hefner’s risqué magazine catered to the newly developing sex symbol of the Sex Toy, and particularly to the display of the Sex Toy’s greatest assets—her breasts. For the unhappy male, caught in what was being portrayed in popular culture as a web of asexual domesticity (June Cleaver and Donna Reed were at the other end of the spectrum), Hefner’s magazine offered an escape to a trendy, sophisticated world where men never quite grew up, never had to take on responsibilities, and always had curvaceous women at their sides. If a hapless man couldn’t afford to have his own Sex Toy, *Playboy*’s centerfolds offered the next-best thing. Both Jayne Mansfield and Kim Novak appeared in *Playboy*—Mansfield numerous times—and pictures of a younger Monroe eventually did as well, harkening back to Mae West’s laughing claim that the only thing she had on during her calendar shoot was “the radio.”

With Monroe’s death of a drug overdose in 1962, the sex symbol became a symbol of the perils of female sexuality. No longer dangerous to men—magazines like *Playboy* promised that women’s eroticism could be tamed and packaged for male consumption—the sexual woman was a danger to herself, a sign that the sexually liberated woman was, after all, desperately unhappy. Thus the 1960s offered up a range of sex symbols that seemed designed to counter the overkill of the 1950s Sex Bomb. These 1960s Icons—Julie Christie, Twiggy, Jean Shrimpton—were sexy, but in attainable ways. Pretty in a healthy kind of way (Christie), or in a waifish way (Twiggy and Shrimpton), these actresses and models were, as Sheila Rowbotham described them: “[d]escendants of Doris Day . . . adapted to an era when virginity was no longer feasible or fashionable.” Even stars who seemed closer to the Sex Bomb role—Jane Fonda, Raquel Welch, Faye Dunaway—were, in the end, very much a part of the youthful, no-nonsense image of the Icon.

After the 1960s, it becomes quite difficult to track a specific genealogy of the female sex symbol, and most of the women in subsequent decades seem to be reworkings of aforementioned roles. The 1970s favored sex symbols that combined the Girl-Next-Door qualities of the Icon, the overtness of the Red-Hot-Mama, and the naivete of the Sex Bomb. The walls of many teenaged boys’ rooms were decorated with posters of Farrah Fawcett [Majors], Cheryl Tiegs, and other “all-American” women (blond, blue-eyed, fair-skinned) posing semi-provocatively in swimsuits. Television shows like *Charlie’s Angels*, *Three’s Company*, and *Wonder Woman* promoted various (re)visions of the sex symbols of decades past. The stars of the former series, Fawcett, Cheryl Ladd, and Jaclyn Smith in

particular, seemed to be throwbacks to the Betty Grable-Girl-Next-Door model—women who are smart and resourceful but who also happen to look lovely in the revealing outfits their crime-fighting efforts seemed to require in every episode of *Charlie's Angels*. In *Three's Company* (1977-1984), Suzanne Somers offered a return to the Ingenue-Sex Bomb: blonde, sweet, and not too bright, her antics, comic misunderstandings, tight blouses, and short shorts were one of the show's main attractions. Lynda Carter's Wonder Woman was a street-savvy superhero who just so happened to fight crime wearing a strapless, red, white, and blue bathing suit and go-go boots. The 1960s and 1970s also marked the introduction of non-white sex symbols into American popular culture, such as Pam Grier, the African-American star of the early 1970s "blaxploitation" films. Perhaps the only "new" sex symbol to come out of this era is the Bimbo, a woman who is all about sex appeal (pneumatic breasts, easy virtue, slow wits) but not about much else.

Changing standards in film, particularly the introduction of more female nudity and explicit sexual content, may have contributed to the shift away from sex symbols as such. The female sex symbol's mystique is, after all, predicated in part on her mystery, on the audience's desire to know more about her. Viewers are captivated by her because they are left to imagine what she would be like; viewers today can find out more or less first-hand. Most of the sex symbols of the 1980s and 1990s seem to have been reinventions of past models. Elvira, Mistress of the Dark, capitalized on the Vamp with her dark clothing, ample cleavage, and promises of gothic intrigue. The Red Hot Mama was reborn in Bette Midler, whose stage performances as "the Divine Miss M" depicted her as the reincarnation of Mae West's brassy, wisecracking dame who knew a thing or two about sex and wasn't afraid to say so. The Femme Fatale was personified by Kathleen Turner and Sharon Stone, among others—women who used their sexual wiles to manipulate and even destroy the men they claimed to love. Cindy Crawford and Claudia Schiffer seemed to combine their roles as exotic fashion models with that of the down-to-earth gal to play the role of the Girl Next Door; no-nonsense talk-show pals one minute, and hot and sultry catwalk models the next, they offered both public and supposedly private visions of what that Girl would be like. Kate Moss, particularly in her Calvin Klein advertisements, has assumed the role of the Waifish Icon, seeming vulnerable and desirable at once. And Madonna, the ever-shifting symbol, has tried on all these roles and more.

Though the female sex symbol has dominated American popular culture, there are male sex symbols as well, and theorists have begun to expand the concept by deconstructing sex symbols outside of traditional heterosexual modes, acknowledging the repressed same-sex eroticism that might have informed sex-symbol interactions in the past. Silent-film actors like Rudolph Valentino offered early visions of the Perfect Lover, effortlessly sweeping his female co-stars off their feet and, presumably, into his bed, and some males have also reported being drawn by his magnetic personality. The Matinee Idol has been the primary manifestation of the male sex symbol during the twentieth century: Actors like Cary Grant, Clark Gable, and Rock Hudson captivated moviegoers during their heydays with their suave masculinity, their classic good looks, and promises of economic security. The 1950s also saw the introduction of the male sex symbol as Bad Boy. Both Elvis Presley and James Dean played this role to the hilt when their shaking hips, brooding looks, and sullen demeanors sent young fans into swoons and parents into paroxysms of worry. Good-looking stars of the 1960s like Paul Newman, Robert Redford, and Warren Beatty combined the Matinee Idol with the Bad Boy,

often manifest in the parts of criminals or outsiders with "hearts of gold" like Butch Cassidy and the Sundance Kid, or Clyde Barrow.

The 1970s saw the introduction of the Sex Machine. Burt Reynolds posed nude in *Cosmopolitan*, a women's magazine. Around this time, *Playgirl* magazine, featuring nude men, was introduced as a "counterpoint" to *Playboy*, attracting a readership of women as well as men with an erotic interest in their own gender. As with female sex symbols, the first non-white male sex symbols appeared during the 1970s, particularly as a result of "blaxploitation" films such as *Shaft*, whose theme song promised that its star, Richard Roundtree, was a "sex machine with all the chicks," and *Dolemite*, starring Rudy Ray Moore. These stars embodied the Sex Machine role, turning women on screen into putty with their sexual prowess and doing the same to fans in the audience. This particular vision also partook of cultural folklore and stereotype about black males' virility. Other male sex symbols of the 1970s assumed the James Bond image of a man as suave, debonaire, and sexually irresistible. In the 1980s and 1990s, male sex symbols included Richard Gere, Harrison Ford, Tom Cruise, Johnny Depp, Leonardo DiCaprio, and Marky Mark. Like their female counterparts, they combined elements of various manifestations of the sex symbols of generations past to create their screen personae.

Despite the introduction of non-white figures into the sex symbol mythos, the majority of sex symbols remain white and European-American, though the growing diversification of the American population may alter that situation in the new century. A double standard for male and female sexuality remains: Despite the fact that men are regularly depicted as sexual objects on television and in film, it is still more likely that the female sex symbol will be punished for her sexuality. In American popular culture, it is more common for a sexually active woman to be regarded as a slut, but a sexually active male as a stud.

Sexual Harassment

In the 1990s, sexual harassment became a highly visible part of American pop culture. In 1991, Anita Hill testified in a televised United States Senate hearing that Supreme Court nominee Clarence Thomas sexually harassed her when she worked for him in the early 1980s at the Equal Employment Opportunity Commission. Thomas was confirmed, but by a very close vote of 52-48. Some of the

Senators who voted for confirmation were defeated for re-election in 1992. In 1994, Paul Corbin Jones accused President William Jefferson Clinton of sexually harassing her when he was Governor of Arkansas and she was an Arkansas state employee. In 1998, Jones' lawsuit was dismissed, but a deposition President Clinton gave about his relationship with Monica Lewinsky, a former White House intern, triggered an investigation by Independent Counsel Kenneth Starr that resulted in Starr recommending to the United States Congress that President Clinton be impeached.

Sexual harassment is defined as unwelcome sexual advances and requests for sexual favors. Other verbal or physical conduct of a sexual nature constitutes sexual harassment when submission or rejection of this conduct explicitly or implicitly affects an individual's employment, unreasonably interferes with an individual's work performance, or creates an intimidating, hostile, or offensive work environment. The two types of harassment are *quid pro quo* and hostile environment. *Quid pro quo*, or "this for that," exists when an employee's supervisor or a person of higher employment rank demands sexual favors from a subordinate in exchange for tangible job benefits. Hostile environment, or environmental harassment, is a pattern of intimidating, hostile, or offensive behaviors which affect the person being harassed.

Federal laws on sexual harassment have existed since Congress passed Title VII of the 1964 Civil Rights Act and Title IX of the 1972 Education Amendments. Title VII prohibits sex discrimination in employment; sexual harassment is considered a form of sex discrimination. Title IX prohibits sex discrimination in education. The laws began to have effect when in 1980, and again in 1988, the Equal Employment Opportunity Commission (EEOC) issued guidelines to define sexual harassment.

The courts have defined sexual harassment more precisely, and have been involved in resolving key issues. In 1986, in the *Meritor Savings Bank v. Vinson* case, the Supreme Court ruled that *quid pro quo* sexual harassment was a form of sex discrimination under Title VII. In the *Meritor* case, the Supreme Court made a very important distinction. It affirmed that a victim may comply voluntarily with sexually harassing behavior, but may not welcome it. If it is unwelcome, it is sexual harassment. The *Meritor* case also set a precedent because it established employer liability for acts of sexual harassment committed by its employees. The Court ruled that *quid pro quo* and environmental harassment are two distinct claims, but that they can and often do occur at the same time. It is necessary, however, to distinguish between them when employer liability is being determined; the employer is always liable in *quid pro quo* harassment, but may not always be liable in hostile environment cases.

In education, the United States Supreme Court significantly expanded protection for student victims in *Christine Franklin, Petitioner v. Gwinnett County Public Schools and William Prescott*, on February 26, 1992. For the first time, students had the right to win monetary damages from schools that receive federal funds. This decision provided strong motivation for schools to engage in a proactive strategy to prevent sexual harassment.

On November 9, 1993, the United States Supreme Court ruled, in *Harris v. Forklift Systems*, that harassing conduct need not seriously affect an employee's psychological well-being or cause the plaintiff to suffer injury. On March 4, 1998, the court again ruled, in *Oncale v. Sundancer Offshore Services*, that same-sex harassment in the workplace violates federal law.

The Hill-Thomas hearings led to more legislation. On October 11, 1991, Titles I, II, and III of the 1991 Civil Rights Act were passed.

Title I expands the rights of sexual harassment victims to enable them to collect monetary damages. Title II, commonly referred to as the "Glass Ceiling Act of 1991," encourages corporate practices and policies that promote opportunities for, and eliminate artificial barriers to, the advancement of women and minorities into higher level positions. Title III focuses on fair employment practices and covers employees of the House of Representatives, Senate, and Executive Office of the President.

The military faced the issue of sexual harassment in September 1991, when the "Tailhook" scandal became public. A female Navy helicopter pilot, Lt. Paula Coughlin, complained to Rear Admiral John Snyder, Commander, Naval Air Test Center, that she had been physically and indecently assaulted on September 7, 1991, by a group of naval officers at the 1991 Tailhook Symposium at the Las Vegas Hilton. Commander of the Naval Investigative Service, Rear Admiral Duvall M. "Mac" Williams, was requested to open an investigation. A mammoth investigation was initiated on October 11, 1991. Snyder was relieved of his command for dealing inappropriately with Coughlin's complaint. On February 7, 1994, Coughlin resigned from the Navy and gave as her reason the retaliation she had experienced as a result of her complaint.

Coughlin filed civil law suits against the Tailhook Association and the Las Vegas Hilton. She settled with the Tailhook Association for \$400,000 before the trial began. On October 28, 1994, the jury in Las Vegas decided that the Las Vegas Hilton Hotel was negligent because it failed to provide adequate security during the 1991 Tailhook Convention. The jury awarded Coughlin \$1.7 million in damages. On October 31, 1994, the jury ordered the Las Vegas Hilton and its parent company to pay Coughlin \$5 million in punitive damages for a total award of \$6.7 million, an amount later reduced to \$5.3 million.

In November 1996, the United States Army brought charges of rape and sexual harassment against military trainers at the Army Ordnance Center at Aberdeen Proving Ground, Maryland. According to the Pentagon, there were more than a dozen victims; all of the victims were female soldiers in their second eight weeks of training. The Army charged 12 staff members of Aberdeen with sex crimes, ranging from inappropriate sexual comments to rape. In September 1997, the Army issued a "scathing report" acknowledging that sexual harassment and discrimination were prevalent.

The Paula Jones case broke legal ground when the Supreme Court ruled that a sitting President can be sued for actions that occurred before he took office and that the case can proceed while the President is still in office. The case went forward and depositions were taken, including a deposition from President Clinton in January 1998 that questioned whether the President had sexual relations with Monica Lewinsky. In March 1998, Judge Susan Webber Wright ruled that Monica Lewinsky "is not essential to the core issues" of Jones' case, and ordered all evidence related to Lewinsky be excluded from the proceedings. Judge Wright dismissed the Jones lawsuit on April 1, 1998.

President Clinton's legal troubles, however, did not end with the dismissal of the Jones' lawsuit. While under oath during his deposition in the Jones case, he denied having sexual relations with Monica Lewinsky. Independent Counsel Kenneth Starr requested and received permission to investigate whether the President had lied under oath. After a seven month investigation, Starr reported to Congress that there were possible grounds for impeachment and the President was impeached by the full House, though the Senate chose not to remove the President from office.

Illustrating the pervasiveness of sexual harassment issues in America, the problem itself has evolved from a behavior without a name, to a social behavior, to a defined legal behavior, and by 1998, to a highly visible social problem for the President of the United States and the nation.

Sexual Revolution

Reports of a “sexual revolution” first appeared in the media in the mid-1960s. The reports identified a number of trends and developments taking place throughout American society. Midway through the decade, the popularity of rock music, the increased use of marijuana, LSD, and other drugs among youth, widespread public displays of nudity, and a new openness about sexuality contributed to the awareness of radical cultural change. Public interest in sex had been growing since the late 1940s and the number of novels, magazine articles, and advice books dealing with sexuality grew to epic proportions. Already in the 1950s, a number of famous novels that had previously been banned because of their sexual explicitness, such as D.H. Lawrence’s *Lady Chatterly’s Lover* and Henry Miller’s *Tropic of Cancer*, began to be published in the United States. Advice books like *Sex and the Single Girl* (1962) by *Cosmopolitan* editor Helen Gurley Brown, and *The Sensuous Woman* (1969) by J. poured from the presses. Betty Friedan’s *The Feminine Mystique* (1963) initiated the revival of feminism and stimulated the discussion of sex and gender roles. Popular sociologists like Vance Packard in *The Sexual Wilderness: The Contemporary Upheaval in Male-Female Relationships* (1968) explored the interplay of both feminism and the sexual revolution. In 1966, Drs. William Masters and Virginia Johnson published the first of their scientific studies—*Human Sexual Response* (1966). Sexually explicit pulp novels, like Jacqueline Susann’s *Valley of the Dolls* (1966), and sexually explicit movies, like *I Am Curious (Yellow)* (1967), attempted to satisfy a public’s growing hunger for the vicarious experience of sex. By the 1970s, newspapers with names like *Screw*, offering sexual information, personal ads, and sexually explicit photos and art, were available on street corners in larger American cities. These cultural developments demonstrated an

increased public interest in sex and suggested that sexual behavior was undergoing changes as well.

What “sexual revolution” means, when it began (if it did), to whom it applied, and what changes it wrought are highly contested subjects. According to sociologists there is no doubt that patterns of sexual partnering underwent significant change in the 1960s, and it is this shift away from “monogamous” sexuality that is usually signified by the term “sexual revolution.” However, the revolution that emerged in the 1960s was as much a change in attitudes about sex as it was a significant shift in sexual conduct. Changes in the way that people thought about sexuality and gender roles stimulated new modes of behavior that were not always measured by increased sexual activity. For example, women entered marriage with greater sexual experience and confidence than women in the past. As a result there was an increased demand for sexual satisfaction in marriage. It contributed to the growth of a market for books and magazine articles about how to improve your sex life, a greater demand for marriage manuals and counselors. It may have also led to an increase in divorces, which reinforced the likelihood of those who were divorced having additional sexual partners in their lifetime. These developments also challenged the double standard—which permitted men to engage in sexual activity outside their marriage, but harshly stigmatized women having extra-marital affairs. In the end, all these experiences probably generated both increased frustrations and greater freedom. Betty Friedan’s *The Feminine Mystique* capitalized on precisely these developments—thus the emergence of feminism and women’s rights overlapped with and were intertwined with the developments later labeled “the sexual revolution.”

The sexual revolution as it emerged in the 1960s was the historical culmination of processes begun during World War II, and it produced significant changes in the decades that followed. The term “revolution” usually implies something that occurs rapidly and dramatically. However, the time frame of the sexual revolution is much longer and it resembles the time frame of the Industrial Revolution—the transition from an agricultural society to one built on new technologies and industrial production. It has been an immense and contradictory process, often not very obvious, stretching out over the life span of two generations. This sexual revolution radically altered the sex/gender system, as anthropologist Gayle Rubin has called the system that translates biological capacities—of sex and gender differences—into the cultural and social patterns that constitute our lives as gendered and sexual human beings. The sexual revolution started as a result of three major cultural forces. First of all, of the explosion of youth culture and the thirst for sexual experience before marriage by young men and women; secondly, the emergence of feminism and the women’s movement at the end of the 1960s; and lastly, the gay liberation movement’s dramatic Stonewall rebellion in 1969. But the sexual revolution also provoked a profound and powerful counter-revolution—the Religious Fundamentalist Right—which continues to wage a battle against the forces that originally ignited the revolution.

The mobilization of young men for the Armed Services and the recruitment of female factory workers during World War II initiated a profound shift in the social relations of gender and sexuality in the United States. Young men and women left the haven of their families and lived for four years among other people far from parental guidance. These young women and men in their late teens and early twenties were at the threshold of their most sexually active stage of life and usually, they were unmarried. This generation had grown up during the Great Depression and were heavily influenced by the

exuberant and free-wheeling culture of swing—a cultural explosion roughly analogous to the rock culture of the 1960s. Throughout the war years young men and women—in constant motion and under the uncertainty and stress of combat—engaged in sexual relations with each other outside of marriage and other constraining contexts.

Recognition of sexual revolution dawned slowly after the war. The publication of Alfred Kinsey's two pathbreaking volumes on human sexuality in 1948 (*Sexual Behavior in the Human Male*) and 1953 (*Sexual Behavior in the Human Female*) probably exerted greater influence on modern conceptions of sexuality than any work since Sigmund Freud's. Moral outrage and a great deal of professional hypocrisy greeted the report, but few Americans remained immune to a new awareness of the gap between public attitudes toward sexual behavior and daily sexual activities. Kinsey was so struck by the extraordinary extent of individual variation in sexual behavior that he argued that any attempt to establish uniform standards of sexual conduct was both impracticable and unjust. He believed that his discovery of the widespread deviation from accepted sexual standards showed that attempts to regulate sexual behavior were doomed to failure and "the only proper sexual policy was no policy at all."

Although the research in the Kinsey reports was not based on the generation that experienced the postwar sexual revolution (they had focused on the inter-war generations), the reports did come to symbolize it in the popular consciousness and in the history of American culture. Most of what we mean by sexual revolution refers to non-marital sexual activity. By the early 1960s, shifts had begun to take place along several fronts that consolidated the sexual revolution. One of the most important was that young men and women engaged in their first acts of sexual intercourse at increasingly younger ages. The impact of earlier sexual experimentation was reinforced by the later age of marriage; thus young men and women had more time available to acquire sexual experience with partners before entering into a long-term monogamous relationship. In addition, the growing number of marriages resulting in divorce provided another opportunity for men and women (to a lesser degree) to engage in non-monogamous sexual activity. All three of these developments allowed the generation born between 1935 and 1945 to experience sexual activity with a larger number of sexual partners in their lifetime than most men and women born earlier.

These trends received reinforcement from a number of other developments. Technical improvements and the increased access to birth control methods made it easier for women to engage in sex without the risk of unwanted pregnancy. In 1960, the most popular form of birth control, the oral contraceptive pill, became commercially available. Political developments, such as the emergence of the women's movement, also encouraged women to reject the double standard and to postpone marriage. In the wake of the women's movement, the gay liberation movement emerged in 1969. The gay movement sought to combat the stigma attached to homosexuality. It promoted self-acceptance and a positive evaluation of homosexuality that significantly contributed to the sexual revolution. For example, lesbians and gay men organized dances, coffee houses, and other social activities in order to facilitate sexual and social contacts among men and women with homosexual desires.

If the Kinsey reports represent the first shot fired in the sexual revolution, the research of William Masters and Virginia Johnson represented an ambiguous resolution of some issues raised by the shifts in sexual attitudes and behavior. *Human Sexual Response* (1966) was the first volume published, to be followed four years later by *Human Sexual Inadequacy* (1970); both books were based on

laboratory observations of sexual behavior and became the basis of a therapeutic practice devoted to sexual dysfunction. Nevertheless, their work also exemplified the sexual egalitarianism of the 1960s—not only in their working relationship, but also in the image of sexual relations that they project in their books. Their work stressed the importance of the *quality* of sexual activity—yet they made the couple rather than the unattached individual the preferred unit of analysis and therapy. In the end, Masters and Johnson focused almost exclusively on the quality of sexual experience within committed relationships. They did not discuss improving the quality of sexual experience for those men and women who chose to engage in sex with casual (non-marital) sexual partners, the sex that is essential to the definition of the sexual revolution.

By the late 1960s, social institutions emerged to facilitate non-marital sexual contacts. Singles bars opened so that single men and women could meet and make sexual contacts. Weekly alternative newspapers sprouted in most major cities—all of which carried personal ads of people looking for sexual partners and relationships. Swinging or mate swapping also became the practice among certain social circles where couples swapped partners among themselves. Swingers clubs were started and others took out ads in swinging and alternative publications. Within this context other kinds of sexuality also gained visibility—fetishes, S/M (sado-masochism), and transvestitism. The proportion of the population that participated in the new swinging and singles scene was probably small but the scene was widely publicized in the press and popular culture. The dilemmas of sophisticated sexual experiments like swapping were satirized in movies like *Bob & Carol & Ted & Alice* (1969) and *Shampoo* (1975). Movies like *Looking for Mr. Goodbar* (1977) exploited the vulnerabilities and anxieties of these new trends for young women. The movie *Cruising* (1980) set a police thriller in a gay world of men engaged in an endless and desperate hunt for sex.

Another sign of the sexual revolution was the increased availability of sexually explicit books, magazines, and films. In 1967 the U.S. Congress set up a Commission on Pornography and Obscenity to define pornography and obscenity, provide guidelines for its regulation and to assess its significance in American society. The *Report* of the Commission concluded that its researchers had found no evidence that exposure to explicit sexual materials led to any criminal or delinquent behavior among youth and adults. This report was later criticized by conservatives and some feminists in the 1980s and was countered by a later Commission appointed by the Reagan administration. Nevertheless, the sexual revolution of the 1960s was associated with much greater degrees of sexual explicitness throughout the culture. Mainstream media like Hollywood movies achieved a level of sexual explicitness that receded in the late 1970s and early 1980s.

By the late 1970s, the sexual revolution encountered a number of obstacles. One was the growing opposition of conservative and religious groups to all those new gender roles and forms of sexual conduct that appeared during the peak years (1964—1977) of the sexual revolution: non-marital and youth sexuality, birth control, abortion, and homosexuality. Conservatives established new organizations, elected political representatives, passed legislation, fought to defund sexually progressive programs and to fund sexually conservative programs. These battles continue to take place up until the present. What many call commentators call "the culture wars" are, in part, an extension of the sexual revolution.

However, the sexual revolution also encountered obstacles of another sort—sexually transmitted diseases (STD). The diseases spread by sex are numerous and ancient: gonorrhea, syphilis, genital

warts, genital herpes, and hepatitis B. AIDS is also transmitted sexually but it was discovered only in 1981; it is the most serious and devastating of sexually transmitted diseases. Starting in the late 1970s, there were a growing number of reports about STD—both *Time* and *Newsweek* produced cover stories on herpes, and the gay male communities were swept by waves of gonorrhea, syphilis, and Hepatitis B. The discovery of an AIDS epidemic among gay men in the early 1980s provoked a major crisis in the sexual politics of the gay community. Medical researchers and gay leaders struggled to find ways of stopping the epidemic without completely excluding all sexual activity. Eventually a number of gay activists invented the idea of “safer sex”—in which gay men could engage in sex, using condoms, without transmitting the virus (HIV) that causes AIDS. Soon after, safer sex was adopted by public health educators and AIDS activists as the basis for HIV prevention. Safer sex and traditional public health treatment programs for the older STD have since reduced the spread of these diseases considerably.

The sexual revolution was not only a revolution in sexual behavior per se—measured by sociologists as an increase in the lifetime number of sexual partners—but also a cultural revolution that was intertwined with many other significant social changes. STD had reached epidemic proportions by the early 1980s, but provided another form of evidence of extensive and casual sexual partnering. Women’s sexuality was redefined, and new stress was laid on clitoral orgasm and sexual satisfaction. A culture of sexual experimentation (swinging, S/M clubs, singles bars) emerged that contributed to the evolution of new sexual norms. The women’s movement, the counter-culture, the development of new lifestyles, lesbian and gay liberation, a greater acceptance of pleasure and all kinds of improvements in the quality of life overlap with the sexual revolution. Religious fundamentalists and the New Right represent the conservative response to the sexual revolution. Many of the social changes and the conflicts engendered by them continue on into the present. Cultural and political changes resulting from the sexual revolution are still in the process of forming. However, the sexual revolution of post-World War II America has changed sexual and gender roles permanently.

The Shadow

For 18 years, from 1931 to 1949, The Shadow, an unrelenting defender of justice, appeared as the title character in 325 novel-length adventures in *The Shadow* magazine, making it the first and most important of the character or hero pulps. A prototypical figure named The Shadow had appeared on radio even earlier, on the *Detective Story Hour*, but the fully-evolved character is best remembered for the radio series that ran from 1937 to 1954, with episodes punctuated by such memorable phrases as “Who knows what evil lurks in the hearts of men? The Shadow knows!” and “The weed of crime bears bitter fruit. Crime does not pay. The Shadow knows!”

The creation of the character named The Shadow is appropriately shrouded in mystery. Although no actual link has been established between the two characters, a seeming prototype of The Shadow appeared in the February 1929 issue of Street and Smith’s *Fame and Fortune*. In that story, a character named Compton Moore, with glittering eyes and a mocking laugh, donned a green shroud to fight evil as The Shadow. Whether by imitation or coincidence, when pulp publishers Street and Smith sponsored *Detective Story Hour*, a radio dramatization of stories from their *Detective Story Magazine*, The Shadow was portrayed as the show’s narrator, voiced by James La Curto, complete with that familiar haunting laugh.

To get a copyright on their accidental creation and meet what seemed to be a growing demand, Street and Smith quickly created a new pulp magazine, *The Shadow, a Detective Magazine*. John Nanovic, who would a few years later create the Doc Savage character, served as editor for the first twelve years. Journalist and amateur magician Walter Gibson was hired to turn the name and the laugh into a character. In just a few weeks, Gibson produced *The Living Shadow*, the first of the 325 novels that the magazine would publish over the next eighteen years. The stories were all attributed to the house name of Maxwell Grant, and Walter Gibson did not write all of them. However, he did write an astounding 282 of the novels, including the first 112 stories that firmly established the character. When the magazine went from quarterly to twice-monthly publication, Gibson simply picked up his pace and produced two complete novels a month.

In the first story The Shadow is a mysterious presence who works through Harry Vincent and his other operatives. It took a few issues before The Shadow himself was in the center of the action, but the basic look and ambiance was established early on. On the first page of the first story, The Shadow, an ominous figure in a long black coat, seems to materialize out of the thick fog, with only his hawk nose and piercing eyes visible beneath his broad-brimmed felt hat. When The Shadow does go into action, he does so with an automatic pistol spitting death from each hand.

As Walter Gibson fleshed out the mythos, The Shadow acquired scores of agents in addition to right-hand man Harry Vincent. Chief among them were cab driver Moe Shrevitz, gangster Cliff Marsland, reporter Clyde Burke, and the mysterious Burbank, who coordinates communications between The Shadow and his cadre of agents. Another operative, would-be love interest Margo Lane, originated on the radio program but was eventually added to the pulp stories. The Shadow’s most interesting relationship is with Lamont Cranston, a

wealthy playboy whose guise The Shadow sometimes assumed when Cranston was traveling abroad. The 1937 novel *The Shadow Unmasks* reveals the fact The Shadow is really World War I flying ace and former spy Kent Allard, although some later novels called even this identity into doubt. When The Shadow appeared in other media, his background was simplified—he was Lamont Cranston, though he was not so in the original pulps. The final novel in the series, *The Whispering Eyes*, appeared in 1949.

Within a decade after his creation The Shadow had captured the popular imagination. “As intensely exploited as Tarzan, The Shadow sold wrist watches, coloring books, disguise and fingerprint kits, sheet music, Better Little Books, comic books, and a succession of nearly worthless moving pictures,” recounts Robert Sampson, author of *Deadly Excitements*. In 1937 The Shadow returned to radio, not just as narrator, but as the lead character, voiced for the first year by Orson Welles. The radio series portrayed The Shadow as less dark and deadly, relying more on his new-found hypnotic powers than on his twin automatics. The show was immensely popular, lasting until 1954. The 1937 feature film *The Shadow Strikes* was based on the radio program, and there was a film serial in 1940 that starred Victor Jory. Some of the later Shadow films were almost domestic comedies, in which the hero is beset with more trouble from his jealous wife than from the villain. The 1994 film starring Alec Baldwin returned to the dark pulp roots for inspiration, pitting The Shadow against his greatest pulp nemesis, Shiwan Khan. The opening scene of the film is even reminiscent of the first chapter of “The Living Shadow.”

The Shadow had a long and varied life in comic books. Street and Smith published the first of them. Even though Walter Gibson wrote the scripts for the first six years, The Shadow appeared quite differently in the comic book version than in the pulps. Since the radio show had become more popular than the pulp magazine, Gibson was pressured to conform to the radio concept. From 1938 to 1942, Ledger Syndicate distributed a *Shadow* comic strip by Gibson and Vernon Greene. In the 1960s Archie Comics published a series that portrayed The Shadow as a superhero in green and blue tights. One of the most faithful comic-book adaptations was the series published by DC Comics from 1973 to 1975.

Shaft

Directed by Gordon Parks and starring Richard Roundtree as the itinerant black detective, John Shaft, Metro-Goldwyn-Mayer's hugely successful 1972 feature, helped initiate Hollywood's Blaxploitation

Richard Roundtree in a scene from *Shaft*.

film craze, a series of cheap and sensational, but lucrative productions featuring provocative ethnic protagonists. Although *Shaft* offers a proud and raw revision of the typical Hollywood African-American hero, the tough spectacle of John Shaft's defiance ultimately contributes little to the cause of racial harmony and understanding.

Provoked by the \$10 million in profits of Melvin Van Peebles' independently produced *Sweet Sweetback's Baadasssss Song* in 1971, the aging Hollywood studios observed that Van Peebles had managed to target a widely ignored new box office patronage. Three social factors combined to create a new public taste for successful ethnic “badasses” like Sweetback and Shaft. The rise of the civil rights and Black Power movements fostered a popular appreciation for the intelligent, capable, and righteous black individual who triumphed in his attack on the white establishment. The national white flight to the suburbs also contributed to a shifting racial demographic that revised city centers like Chicago, Detroit, and Atlanta where the cinemas of downtown commercial areas now catered to a predominantly middle- and working-class African-American clientele. Lastly, in the late 1960s, Hollywood's long-standing policy of self-censorship gave way to a more liberal rating system that offered mainstream film a new outlet for what had been previously considered uncomfortably blatant expressions of African-American sexuality and anger.

Never as openly revolutionary as the X-rated *Sweet Sweetback*, whose title character escapes white justice after a virulent spree of fornication and murder, *Shaft* tapped into popular feelings of racial tension as it revised the standard Hollywood hard-boiled detective with an R-rated ghetto flavor that tweaked but never attempted to topple the status quo. *Shaft* did much, in Ed Guerrero's words, to "crystallize Hollywood's formula for the 'new' filmic representation of blacks." The film itself revolves around Private Detective John Shaft's rude, but shrewd negotiation of a triple threat. Hired to free the kidnapped daughter of "Bumpy Jonas," a dubious black mob boss, Shaft tangles with the white racist police who attempt to reduce him to a slavish errand boy, navigates the race-complicated grudges between black and white organized crime, and utilizes the revolutionary fervor of militant, but ultimately doomed black urban youth. Throughout the film, Richard Roundtree's performance as the indefatigable private detective subtly revises many of the best hard-boiled moments of Sam Spade and Philip Marlowe. Like Humphrey Bogart in *The Maltese Falcon*, John Shaft overpowers an attacker in his own office, and taunts both his employers and the police, but Shaft also makes deft use of his ethnic appearance when he masquerades as a servile bartending "boy" in order to foil two white assassins. Finally, *Shaft's* dramatic climactic assault on the hired guns in a seedy inner-city hotel references both the war film and the Western in its calculated, paramilitary strike on a fortified outpost of white evil.

Shaft's sexual escapades, boldly aestheticized by Gordon Park's disco-energized cinematography and Isaac Hayes' funky grooves, further exhibit his prowess as a thoroughly masculine black badass. While Shaft shares his most romantic liaisons with a comely African-American woman, he also asserts his manhood by picking up random white women in a local bar. Shaft's post-coital pillow talk with his regular black partner is tender, but his biracial one night stand ends coldly. As Shaft ignores and insults his nameless white lover the following morning, she labels him decidedly "shitty." This brief exchange between the black hero and his white bedfellow powerfully informs the film's finale, when Shaft mimics the angry white woman's insult as a climactic joke on a white establishment cop. Subtly taunting but never openly attacking the racial hierarchy in which he survives, Shaft ends the film disappearing into the city after having effectively "screwed" all his white antagonists.

Aside from two fair sequels, *Shaft's Big Score* and *Shaft in Africa*, Shaft's popularization of the sexy, truculent black male spawned an often bizarre series of Blaxploitation rip-offs and pretenders. A few of these heroes, like *Superfly's* Youngblood Priest and *The Harder They Come's* Ivan Martin, offer some psychological depth. Most Shaft-inspired Blaxploitation heroes, however, are grotesque, ultraviolent perversions of black sexuality. In films like *Welcome Home, Brother Charles* and *Cotton Comes to Harlem*, black male pride and defiance is reduced to crude arrogance, degrading sexual stunts, and brutal vengeance. Hollywood also marketed the feminine side of Blaxploitation through female Shafts, Pam Grier and Tamara Dobson. Films like *Coffy*, *Foxy Brown*, and *Cleopatra Jones and the Casino of Gold* advertised a shapely, violent black heroine whose arrogant appeal centered around ample doses of ethnic attitude and T&A.

Shaft's new heroic stage in the Hollywood image of the African-American male is clearly limited. Gladstone Yearwood explains, "films such as *Shaft*, *Superfly*, and *Cooley High* attempt to subvert, or at least question, the dominant tradition in the cinema, but they are effectively harnessed by it in their usage of the Hollywood model as the basis for the development of black heroes." Originally conceived

and scripted for a white actor, MGM quickly darkened its Shaft project for an inner-city African-American audience in order to test drive a new narrative formula where the black won and survived for profitable sequels. Richard Roundtree received a mere \$13,000 for his starring role in the first film and the majority of *Shaft's* startling profits were rolled back into MGM's white executive wallets.

Exemplifying the studios' new drive toward customized saturation marketing, *Shaft's* success with the African-American urban audience resulted in a wave of diversified product tie-ins. Aside from more than \$10 million in profits from the film's first year of release and the success of Isaac Hayes' Oscar-winning, platinum soundtrack album, MGM capitalized on the popularity of John Shaft's refusal to bow to the man through a merchandising storm that B.J. Mason detailed in *Ebony* as a plague of *Shaft* "suits, watches, belts and sunglasses, leather coats, decals, sweatshirts and night shirts, beach towels, posters, after shave lotion and cologne." Beginning with *Shaft*, Hollywood's cheap and sly appropriation of the racial tensions in America's metropolitan centers became the basis for a parade of crude fantasies and commercial gimmicks revolving around predominantly brutal and misogynistic black heroes who rule the ghetto, but would never garner Sidney Poitier's invitation to dinner.

Shakur, Tupac (1971-1996)

Rapper, film actor, and poet Tupac "Amaru" Shakur, also known as "2Pac," was one of the most influential and greatest rappers of the 1990s, who launched his rap career when he appeared in the Digital Underground's "Same Song" video in 1991. After the video aired, rap fans across America were asking who the young man was in the African outfit with beads beaming down his chest like an "African King." Critic Armond White has noted that it was after his appearance in the Digital Underground video that Tupac Shakur "first realized the thrill of putting a rhyme on tape and getting it to the public." As a solo artist, Tupac Shakur burst on the rap scene with *2Pacalypse Now* (1991), a 13-rap-song album that was destined to change the face of rap music in America and the world over. Through this album, Tupac Shakur vowed to use his poetic power to tell those stories from the streets and the ghetto that the mainstream media refused to talk about, including the plight of black males and other African Americans in America, police brutality, and poverty. In the rap song "Rebel of the Underground," Shakur foreshadowed the conflict between him and the police/media by arguing that they cannot stand the reign of a man like him "who goes against the

Tupac Shakur

grain.” Furthermore, not only did he characterize himself as “cold as the devil” and “straight out of the underground,” but he called himself “the lyrical lunatic, the maniac MC,” and asserted that “the most dangerous weapon” is “an educated black man.”

Themes of police brutality, black-on-black crimes, the American Dream deferred, black males in America, and the African-American struggle and survival permeate songs like “Trapped,” “Soulja’s Story,” “I Don’t Give a Fuck,” and “Words of Wisdom.” While in “I Don’t Give a Fuck” and “Soulja’s Story” Shakur rapped that he does not give “a fuck” about the police and other American officials and institutions who oppress African Americans, in “Words of Wisdom” he charged America with the “crime of rape, murder, and assault” for “suppressing and punishing” his people. Additionally, he accused America of falsifying black history and of falsely imprisoning black males by keeping them “trapped in the projects.” He concluded the song by warning America that it reaps what it sows and that he is “2Pacalypse, America’s nightmare.” The rough side and revolutionary stance of *2Pacalypse Now* are what later misled music and popular culture critics to label Tupac Shakur a “Gangsta Rapper” and his music “Gangsta Rap,” thus blaming the messenger for the message.

Critics who labeled Tupac Shakur a “gangsta rapper” and called him controversial and confused failed to see that his music always contained two sides: a tough side bristling with the realities of the ghetto life and a didactic side endowed with positive messages. Such was the case with “Brenda’s Got a Baby” from *2Pacalypse Now*, one of Shakur’s best known rap songs. The song described the carelessness of a cousin who impregnates Brenda, the ignorance of Brenda who tries to throw the baby in the garbage can, and the callousness of the community that fails to realize that Brenda’s plight affects the whole community. *Strictly 4 My N.I.G.G.A.Z.* (1993), Tupac Shakur’s second album, contained a song called “Keep Ya Head Up” in which he both debunks some black men for their misogyny, sexism, and irresponsibility, and advises black women to keep their heads up no

matter what the situation is. Furthermore, Tupac Shakur showed his softer side yet again on *Me Against the World* (1995), with “Dear Mama,” a tribute to his mother, Afeni Shakur. Autobiographical in nature, “Dear Mama” chronicles the Black Panther days of Afeni Shakur and how she struggled to keep her family together. Also, Shakur reminisced about the stress he caused a mother trying to raise him while struggling with drugs, and how, in the absence of a father, he turned to the streets in search of love and fame.

In 1996, the music scene changed when Tupac Shakur became the first rapper to release a double album, *All Eyez On Me*; it reached number one on rhythm and blues and Pop charts and was certified seven times platinum within ten months. In the late 1990s, *All Eyez On Me* remained the best selling rap album of all time. The most notable and famous song on the album was “California Love,” Shakur’s single, a song which, according to Armond White, “certifies a level of achievement, of rap triumph, and American commercial bliss.” Both Dr. Dre and Tupac Shakur create “a sense of belonging that neglects rap protest, preferring an affirmation that is vaguely patriotic.” Other work of Tupac’s include two posthumous albums, *Makaveli the Don Killuminati: The 7 Day Theory* (1996) and the double album *R U Still Down? [Remember Me]* (1997).

Shakur influenced the Hollywood film industry by starring in six films in five years: *Juice* (1992), *Poetic Justice* (1993), *Above the Rim* (1994), *Bullet* (1997), *Gridlock’d* (1997), and *Gang Related* (1997). Except for *Poetic Justice*, a film in which he starred beside Janet Jackson and which shows his romantic and soft side, all the other films look like they were written out of Tupac Shakur’s tough lyrics; they exploited and contributed to his “gansta” and “thug-life” image. Though his life was cut short on September 13, 1996, Tupac Shakur has become a legend—some people still think he never died—and his legacy will live forever through his released, and still to be released, records and poems.

Shane

In 1945 Jack Schaefer, an editor and reporter for the *Norfolk Virginian-Pilot*, wrote and published the story “Rider from Nowhere” in *Argosy* magazine. Houghton Mifflin released a revised and expanded version of the story as *Shane* in 1949. Based somewhat on the Johnson Courty War in Wyoming in the early 1890s, it was Schaefer’s attempt to reduce the legend of the West to its basic components, and to elevate it to the level of Homeric mythology. It

Alan Ladd (left) in a scene from the film *Shane*.

remains a simple tale of a mysterious stranger who descends into the valley in the midst of a conflict. Choosing sides, he removes his godly raiment to mingle with the common people. He crosses a body of water to challenge the enemy and then, after donning again his godly clothes, recrosses the body of water to vanquish the enemy, before ascending from the valley into the night. The novel has sold over 6 million copies in over 80 editions in more than 30 languages. The resulting movie rendition remains the ultimate statement of the legend of the American West.

Young Bob Starrett watched the lone rider make his way slowly across the valley toward the cluster of small farms. "Call me Shane," he said. He was from Arkansas. At 15 he had left his Arkansas home to wander. He did not say where. The Starretts, Joe Marion, and Little Bob, invited Shane to stay on with them as a farm hand. There was something about him, something mysterious and terrifying, but Joe Starrett sensed they had nothing to fear. "He's dangerous, all right . . . but not to us."

The West was changing. The frontier was gone. Homesteaders were fencing off the land in 80 and 160 acre lots. But the old ways die hard. The Fletcher Brothers, owners of the biggest ranch in the valley, had recently contracted with the Army to supply them with beef, and

they needed the range land. This precipitated the conflict between the Fletchers and the farmers that led to several confrontations. Joe Starrett, the strongest willed of the farmers, became their leader, and Shane, sensing the danger of the growing tension, supported Starrett and the farmers.

In two preliminary bouts with the Fletcher cowhands, Shane humiliated them. The first was a fist fight with Chris, a man whom he admired, in which he broke the man's arm. In the second, a barroom brawl at Grafton's Saloon, Shane and Starrett soundly defeated a group of cowhands. In the days following the brawl, young Bob noticed a growing restlessness in Shane, a gradual loss of the serenity that had come over him after he hired on. Fletcher's response to the brawl was to call for a hired gun, Stark Wilson, to come to the valley as their enforcer. When Wilson instigated a face-off with Ernie Wright, and then killed him before Ernie could clear his holster, Shane knew that the conflict had gone far beyond what the farmers could manage. He decided that the time had come to act. "You seem to know about that kind of dirty business," said one of the farmers. "I do," responded Shane.

Fletcher arranged for a meeting with Joe Starrett. But Shane, knowing that it was a trap, knocked Joe unconscious and went to

Grafton's alone, followed by Little Bob. Shane killed Wilson and Fletcher in a gun fight. Then he rode out of town, but not out of memory, as the stories of Shane were told and retold for years after in the valley.

The 1953 film version was produced and directed by George Stevens for Paramount. Alan Ladd played Shane, Van Heflin and Jean Arthur played Joe and Marion, and Brandon DeWilde played Little Joey Starrett. Jack Palance played Wilson and Emile Meyer and John Dierkas played the Ryker Brothers, Rube and Morgan.

In this beautifully filmed movie, the basic elements of Schaefer's story are presented as a mythological tale set in the West. The simple American theme of good winning over evil, and the more complex themes of unstated love, the virtue of economic progress, and the inexorable progress of the order of civilization superseding the chaos of the frontier, are unfolded beneath the dominating peaks of the Grand Tetons.

A lone rider descends into the valley. As a stag bends down to drink from a stream and then raises his head, the rider is framed by the antlers as he comes on slowly toward Little Joey, who is watching him. The audience knows that this is no ordinary drifter. Where is he from? "Here and there." Where is he going? "Someplace I've never been." He learns of the conflict between the homesteaders and the Rykers, who own the largest cattle ranch in the valley. The Rykers want the range opened up and the fences torn down. They are standing in the way of progress. The old ways of open range ranching and cattle drives are inefficient in the face of feed lots and fenced off farming. Shane, in a melancholy surrender to changing times, sees his world coming to an end. The open range is gone. The presence of women and children in abundance requires the banishment of guns and the violent way of life in which he flourished. Reluctantly, he sheds the buckskins of the trail and adopts the drab homespun of the farmer and becomes Starrett's farm hand.

Marion, who watched him ride up, is immediately taken by this handsome Apollo who stands in stark contrast to her dull, dependable husband, Joe. Although she is committed to her family and the farm, she is in love with Shane, as he is with her. Their love, however, is unfulfilled passion, chivalric and pure. This upholds Shane's heroic stature and sets him apart from ordinary men. Little Joey is mesmerized by Shane and his obvious proficiency with guns. He loves his parents, seeks their advice and counsel, and obeys their directives. But he worships Shane. He is a fantasy hero, a little boy's dream.

In the confrontations with Ryker's men, Shane at first backs down. This makes some of the farmers question his dependability. To counter this, Shane picks a fight with Chris Calloway, the ranch hand who first challenged him. The fight turns into a brawl in which Joe and Shane defeat a large group of Ryker's men. Ryker, rebuffed angrily when he offers to hire Shane, responds by sending for Wilson, an evil gunfighter. Played by Palance as a morose, quiet spoken, calculating killer, he personifies evil. As he strolls into the darkened saloon, a dog gets up and walks away, adding an exclamation point to this evil presence. Wilson baits and then kills Torrey, one of the farmers. This prompts an attempt at negotiation between Starrett and Ryker, but Shane is worried that the confab is a set up, that Joe will be killed. Shane then knocks Joe unconscious and rides to meet Wilson at the Saloon. In a beautifully choreographed scene underlined by Gordon Willis' point-of-view photography, Shane kills Wilson and both Ryker brothers in a poetic replay of Wilson's murder of Torrey.

In keeping with the innocent-eye narrative of the novel, the film is presented from little Joey's point of view. Many of the scenes were

filmed in low angle camera shots, as if the audience were viewing the action from Joey's level. This technique also solved the problem of photographing the short, 5-foot-5 Ladd in fight scenes with the much taller Heflin and Ben Johnson. The low camera angle makes Ladd look much taller. Joey is presented as an observer in most pivotal scenes, and as such, Ladd is filmed in a manner that depicts Shane as a god-like figure, looming over the action of the story.

Both the novel and the film succeed in transforming the Western legend into a pure and simple tale of the triumph of good over evil. Shane is presented as an incongruous hero, out of his element, in desperate search for a new existence. His world is ending. He tries farming, but he cannot change what is. He appears hopelessly out of place in the family scenes and in the burial scene. He is forced to revert to an existence he realizes cannot exist anymore. He is an ambiguous hero who desires to eliminate violence and killing from the valley, but he must kill to accomplish his objective. Then he must leave the valley. "There is no living with a killing," he tells Joey, "It's like a brand."

Shane's desperate struggle to escape his past thus ends tragically. In order to save the lifestyle he sought to embrace, he was forced to revert to his past life. "I tried it. It didn't work for me," he explains to Joey. As Shane rides off, Joey begs him to come back. "Shane, come back!" he yells into the night. It is a plaintive cry for a return of his lost innocence, of his fantasy hero, and of his hero's way of life. Before civilization came to the West, life was simple and predictable, pure and unambiguous. Personal honor and the law of the gun marked the difference between right and wrong. In the final analysis, *Shane* appeals to that nostalgic longing in urban society for a time long past when life's options remained open, where men were dominant, and where ethical gray areas did not exist. The invocation of a person's moral code was abrupt and final.

This is a towering, landmark Western film. It is the final statement of the legend of the West, reduced to its simplest components and elevated to the status of myth. Yet it is flawed. It is slow and pretentious; it is studied and self-conscious. It lacks spontaneity. At times, the understated dialogue and suggested themes of unfulfilled love, hero worship, male bonding, and the adherence to moral codes seem stagey and lacking in vitality. But these are trivial points. After *Shane*, the Hollywood Western became less and less viable as a genre and, except for *The Searchers* (1957), it remains unmatched in stature or influence by any later Western films.

The Academy of Motion Picture Arts & Sciences nominated *Shane* for Best Picture, Best Director, and Best Writing (screen adaptation by A.B. Guthrie). Brandon DeWilde and Jack Palance were both nominated for the Best Supporting Actor award. Loyal Griggs won an Oscar for his superb color photography. *Shane* was remade by Malpaso Productions in 1985 as *Pale Rider*, starring Clint Eastwood as a lonely preacher riding in to help a group of miners. It is a gritty film and in places almost a frame by frame clone of the original. It marked Eastwood's return to the Western genre after a nine year absence.

Shaw, Artie (1910—)

One of the three great clarinet-playing band leaders of the twentieth century, along with Benny Goodman and Woody Herman, Artie Shaw was also an experimental leader during the big band era. Born Arthur Arshawsky in New York City, he played in dance bands while in high school and turned professional at age 15, eventually free-lancing in recording studios. In 1935, he played jazz backed by a string quartet and formed a big band that included a string section. Two years later, returning to traditional instrumentation, he recorded his first big hit, Cole Porter's "Begin the Beguine." In 1939, he abandoned his band and went to Mexico. After frequent stops and starts in the music business, Shaw published his autobiography in 1952 and played briefly with a new combo called the Grammercy 5 before a final retirement. He was married eight times to a bevy of beauties that included screen stars Ava Gardner and Lana Turner.

Shawn, Ted (1891-1972)

Ted Shawn is regarded as the father of American modern dance. Born Edwin Meyers Shawn, he began dancing as a form of physical therapy for his paralysis. He recovered, and became a partner and later husband to dancer Ruth St. Denis, who had become famous for her religious solo dances. The couple formed a pioneering dance company and training school called Denishawn in 1915, which toured across America and the world. Shawn often explored Christian and other world religion themes, and was the first American choreographer to combine nudity with movement. After leaving Denishawn, he created the first all-male dance troupe in America, called simply Men Dancers, and Jacob's Pillow, an international dance festival and training center in Massachusetts. Shawn was responsible for establishing dance as a legitimate career for men in America, inspiring generations of dancers and choreographers.

She Wore a Yellow Ribbon

Director John Ford's *She Wore a Yellow Ribbon* (1949) is the first color feature film shot in Monument Valley, Arizona, and the second of three films Ford made about the 7th Cavalry—the other two are *Fort Apache* (1948) and *Rio Grande* (1950). Collectively these films are known as the "Cavalry Trilogy." Set in the American southwest in 1876, *She Wore a Yellow Ribbon* revolves around Captain Nathan Brittles (played by John Wayne), an aging officer leading a final patrol before retirement. Due to its gung ho glorification of the concept of Manifest Destiny, the film is best known as a reflection of mainstream America's post-World War II optimism.

Sheldon, Sidney (1917—)

By the time he wrote his first book at age fifty-three, Sidney Sheldon had already had a substantial impact on popular culture via the creation of successful screenplays and television series, but his subsequent career as a novelist has far eclipsed everything that preceded it. Along with such rivals as Irving Wallace, Jacqueline Susann, Harold Robbins, and Judith Krantz, Sheldon has dominated the bestseller lists by producing fast-moving tales of sex and power among the jet set, such as *Bloodline*, *The Other Side of Midnight*, and *A Stranger in the Mirror*. And, like these other authors, Sheldon's popularity with the public has been in inverse proportion to his standing with literary critics. Unfazed by the critics' disapproval of his efforts, Sheldon continues to create tales that enthrall readers and—bringing his career full circle—often find a second life dramatized as feature films or television miniseries.

Born in Chicago in 1917, Sheldon entered Northwestern University on a scholarship in 1935, but was soon forced to drop out by the economic hardships of the Depression. He journeyed to Manhattan in hopes of becoming a songwriter, and when that didn't pan out he tried the other coast, where he had better luck. On the strength of the story-sense displayed in his sample précis of Steinbeck's *Of Mice and Men*, Sheldon was hired as a reader by Universal Studios. He had managed to break into screenwriting on a modest basis when World War II

broke out, but Sheldon's service proved only a brief interruption, as the Army Air Force quickly discharged him for medical reasons. After some ventures into writing musicals and comedies for the New York stage, Sheldon returned to Hollywood. His acclaim as a scriptwriter was capped by the Oscar he won for the screenplay of *The Bachelor and the Bobbysoxer* (RKO, 1947), a romantic comedy starring Cary Grant, Myrna Loy, and Shirley Temple. The following year, Sheldon collaborated with Frances Goodrich and Albert Hackett on the script for the highly successful MGM musical, Irving Berlin's *Easter Parade*, the only film to unite Judy Garland and Fred Astaire. That script earned the ScreenWriters Guild award for best musical of the year, as did Sheldon's adaptation of Berlin's *Annie Get Your Gun* in 1950.

Other frothy Hollywood vehicles in which Sheldon was involved as writer or producer include *You're Never Too Young and Pardners* (1955 and 1956 respectively, both starring Martin and Lewis), Cole Porter's *Anything Goes* (1956, with Bing Crosby), and *Dream Wife* (1953, Sheldon's debut as a director, starring Cary Grant). In the late 1950s, Sheldon made a second assault on Broadway, which proved more successful than his first. He collaborated with Herbert and Dorothy Fields and David Shaw on the 1959 Gwen Verdon vehicle, *Redhead*, which earned four Tony Awards, including best musical.

Following less than stellar work on other shows and movies, Sheldon transferred to the medium of television, where he created and produced two memorable situation comedies for two different networks. ABC premiered Sheldon's *The Patty Duke Show* in 1963. The young actress, most famed for portraying Helen Keller in the serious drama *The Miracle Worker*, played identical cousins, one from America and one from Scotland, who often exchanged identities in Sheldon's frivolous plots. That series ran for three seasons. Even more successful for Sheldon was his NBC series, *I Dream of Jeannie*, starring Barbara Eden as a sweet natured but naive genie and Larry Hagman as the befuddled astronaut for whom she performs her magic. Debuting in 1965, the show ran for five years initially and has been re-running ever since, spawning further *Jeannie* TV movies and commercials. A generation of Americans can probably, if asked, sing the entire lyrics of these two sitcoms' theme songs as readily, if not more so, than they could sing Mr. Berlin's aforementioned "Easter Parade." Sheldon's 1970s ABC series, *Hart to Hart*, was another ratings winner, starring Robert Wagner and Stephanie Powers as wealthy married sleuths in the romantic/comedic tradition of Nick and Nora Charles.

Looking for new worlds to conquer, and anxious to create characterizations with more depth than that afforded by most TV or film scripts, Sheldon tried his hand at writing a novel. His first effort, *The Naked Face* (1970), was a suspense tale about a psychoanalyst who discovers that someone wants him dead. Although it was not a great success in its first printing, *Naked Face* was followed by Sheldon's first blockbuster success, *The Other Side of Midnight* (1974). This rags-to-riches story of a woman's vengeance catapulted Sheldon to the bestseller lists, where he has remained ever since with each successive book. (Thanks to his later volumes, Sheldon's initially moribund *Naked Face* has remained a steady seller in reprints.) *Midnight* brought Sheldon a movie sale, but not, unfortunately, a successful movie. The same pattern was repeated with other Sheldon bestsellers, such as *Bloodline* (1978). Consequently, he elected to write and produce his own adaptation of *Rage of Angels* (1980), among others. Whatever the outcome of these adaptations, however, the hard-working Sheldon takes pride in the success of the

novels themselves. At the age of eighty, on the eve of the publication of his fifteenth novel, *The Best Laid Plans* (1997), the author described his working methods to the *Los Angeles Times*: "I dictate everything to a secretary and she transcribes it. I'll do up to 50 pages a day, but when I get those pages, I'll do a dozen to 15 total rewrites before I ever let my publisher see them." And that, apparently, is when the publisher gets busy: At last count, according to the Guinness Book of World Records, Sheldon is the most translated author in the world, with books in 51 languages in 180 countries.

Shepard, Sam (1943—)

Playwright, actor, and director Sam Shepard is a serious and distinguished playwright whose work is performed by his peers and admired by critics and theatergoers in many countries. He is, however, most widely and popularly known, particularly in the United States, as a movie actor, notably in *The Right Stuff* (1983), writer-director Philip Kaufman's tribute to the Mercury project astronauts which has become ingrained in American popular culture. Shepard played Chuck Yeager and was Oscar-nominated for his fine performance. His stage and screen persona is in the strong and silent mold—tall, slim, cleft-chinned and good looking—and he has made effective appearances in numerous other films, among them *Crimes of the Heart* (1987), *Steel Magnolias* (1989) and *Thunderheart* (1992) that have varied in both quality and success. He co-starred with Jessica Lange, later his off-screen partner and mother of some of his children, in *Francis* (1982) and *Country* (1984).

It is, however, his work as a playwright that has defined Sam Shepard's cultural contribution. The structure of his dramatic language has received close critical attention as directors and scholars, like Stephen J. Bottoms, have striven to discover "how it is that his strange language and stage imagery so often seem to lodge themselves in the spectator's imagination with such peculiar force." Shepard's "peculiar force" of language earned him Obie awards for three early-career one-act plays in the 1960s, the New York Drama Critics Circle Best Play Award for *Lie of the Mind* (1985), and the Pulitzer Prize for Drama for his play *Buried Child* (1978).

Born Samuel Shepard Rogers in Mount Sheridan, Illinois, he endured an "army brat" childhood until his family eventually settled in California. He became interested in theater early, joined a church dramatic group, and later became a playwright-in-residence at the Magic Theatre in San Francisco. He then moved to New York in the 1960s and began working off-off-Broadway as a writer and actor with such experimental groups as the La Mama company. The origin of Shepard's unique dramatic language can be traced to this early period and his subsequent move to London in 1971. The music scene of

Greenwich Village, the fragmented, improvisational nature of jazz, and the driving, electric sound of rock influenced the tone, structure, and characters of his initial theatrical experiments. Shepard's plays did not conform to the established, traditional dramas of Arthur Miller or Tennessee Williams, a rebellion of approach that became a trademark of his work.

Eschewing both realism and conventional exposition, character conflicts and inner meaning in Shepard's plays are expressed through his use of syntax, imagery, and rhythm. In his preface to *Angel City* (1976), Shepard wrote a "Note to the Actors," revealing how music influences characterization. "Instead of the idea of a 'whole character' with logical motives behind his behavior which the actor submerges himself into, he should consider himself a fractured whole with bits and pieces of characters flying off the central theme. In other words, more in terms of collage construction or jazz improvisation." Although New York had witnessed the staging of almost 20 plays by Shepard between 1964 and 1971, drugs and a troubled affair with rock musician Patti Smith prompted a move to England, where he remained until 1974.

Of his major works, only the rock star/status-struggle drama *Tooth of Crime* (1972) was written and first produced in London; however, this distanced perspective on American culture significantly influenced Shepard's writing. In an interview conducted in England in 1974, he explained this creative dichotomy. "It wasn't until I came to England that I found out what it means to be an American. Nothing really makes sense when you're there, but the more distant you are from it, the more implications of what you grew up with start to emerge." What Shepard "grew up with" was to form what many critics have termed a "family tetralogy," created by the plays *Curse of the Starving Class* (1977), *Buried Child* (1978), *True West* (1980), *Fool for Love* (1983), and *Lie of the Mind* (1985). These works represent his major successes, and while all deal with the psychological dysfunction of the American family, he has remained an artist who resists traditional genre classification, mixing comic absurdism with the faintly sinister.

An actor writing for actors, the power of Shepard's language links him to a renowned tradition of American playwrights; yet, it is precisely this language, which is uniquely his own, that also separates his work from that of his predecessors. Actor Joyce Aaron, who originated many of the female roles in Shepard's early plays, concurs, stating: "Sam is a recorder of the authentic American voice. He starts from a certain perception of daily life, and then transforms that into a specific voice—a voice with its own rhythms and shifting consciousness, its unique, particular curve or leap. . . . That is part of the theatrical challenge and wonder of speaking Sam's language."

Sam Shepard wrote the screenplay for Wim Wenders' *Paris, Texas* (1984), adapted *Fool for Love* to the screen in 1985 (and starred in it), and wrote an original screenplay, *Far North* (1988), in which Jessica Lange starred and which marked his none-too-successful film directing debut. In 1994, he wrote and directed *Silent Tongue*, but it was clear by the late 1990s that his natural metier as a dramatist was the live theater.

Sherman, Cindy (1954—)

To some extent, Cindy Sherman has reached cult figure status in the artworld. With her ability to transform herself into various subjects, Sherman uses her photography as a way to confront and explore the representations of women in society; additionally, she challenges ideas about appearance. With the showing of her first series, the black and white photographs in the *Untitled Film Stills* (1977-80), Sherman burst upon the art scene. Immediately recognized for her new way of approaching photography while promoting a feminist viewpoint, Sherman, in her international exhibitions, has generated a large following and prompted much discussion about many issues. Her images cross the boundaries of several genres, yet, essentially, all of her photographs deal with the ideas of exhibitionism, voyeurism, and in many cases, the portrayal of women. Her theatrical works employ both art theories and critical issues from the 1980s and 1990s, and actively engage critics, collectors, museums, and the general public.

For an artist who so quickly became successful with her images of sometimes surreal, horrific, and always fascinating depictions of invented characters, Sherman had a simple upbringing. She was born, the youngest of five children, on January 19, 1954, in Glen Ridge, New Jersey. Not long after her birth, Sherman's father, an engineer, and her mother, a school teacher, moved the family to Huntington Beach, Long Island, where she grew up. For fun, Sherman would dress up in her mother's and grandmother's clothes, but she was not trying to be "pretty." Even at an early age Sherman was trying to create new characters. As an adult, she continued a form of "dress-up," shopping at second-hand stores to find clothing and props to enhance her characters that she would develop in front of a mirror. This element of her personality would directly feed into later images.

While studying painting at the State University College in Buffalo, New York, Sherman often produced self-portraits. She found difficulty expressing some of her ideas in this medium, however, and turned to photography. Failing her first photography class due to troubles with the technical aspects, Sherman began focusing on ideas rather than technology; this finally produced some success. Sherman's friend, artist Robert Longo, suggested that she incorporate her "dress-up" sessions into her artwork. It was then that Sherman found her niche; it provided her with a way to assert her ideas about the roles and depiction of women. Sherman graduated with a B.A. in 1976 and not long after, received a National Endowment for the Arts grant in 1977. The money gave her the resources to move into New York City and helped finance her first project.

Appropriating ideas and images from "film noir" and movies of the 1950s and 1960s, Sherman's black and white *Untitled Film Stills* carry nostalgic overtones. Sherman has used herself as a model to portray and identify stereotypical roles of women—the femme fatale, the housewife, and the innocent office girl, for example. The photographs are not self portraits, but are studies of characters that Sherman has invented. In each image she dresses up and applies make-up to change or obscure some of her facial features, thus creating new

characters. She feels that her face becomes a canvas. The *Untitled Film Stills* are essays influenced by the media. Sherman adapts the messages promoted in the media regarding the universal archetypes of women and holds them up for scrutiny. She questions how the structuring of identity relates to society's visions of womanhood.

Continuing to examine mass media, Sherman began to use her constructed identities exclusively in color images, delving into the emotions and situations of her representations. Her artwork of the early 1980s dealt with portrayals of women in the porn and fashion industries. Commissioned to make fashion images for several designers, boutiques, and magazines, Sherman created unglamorous images that directly contrasted with most fashion photographs. The delineation between commercial photography and fine art becomes blurred with Sherman's work. She has also imbued her works with social commentary, referencing the psychological and emotional toll brought on by conforming to society's ideals. Sherman reveals and highlights internal pathos in her *Fairy Tales* and *Disaster* images (1985-89). These horrific and grotesque images portray the dark side of fairy tales. The subject matter of the photographs becomes less concerned with identities invented by Sherman. She begins to remove herself from the images in a blatant way; yet often found in the photographs are unrecognizable aspects of her body.

In *History Portraits* (1988-1990), Sherman adapted elements from several famous paintings and combined them to create parodies of historical images and icons. She photographed herself with exaggerated make-up, costumes, and props. The characterizations take on specific identities: the Madonna and Bacchus, for example. After this series, Sherman removed her body from the images completely. By manipulating dolls and interchangeable body parts ordered from a medical supply magazine, Sherman created strange still life tableaux in her *Sex Pictures* (1992). This series proved to be controversial; many critics felt this work was pornographic. The work, however, surpasses pornography; the clinical approach that Sherman employed removes any erotic overtones and infuses the images with an artificiality. The images were a reaction to censorship issues caused by the debate in defining obscenity and pornography that the National Endowment for the Arts used in the grant award process in the 1990s. *Horror and Surrealist Pictures* (1994-96) continued to use masks and objects, which become almost undiscernible due to Sherman's use of several photographic processes including double exposures. These color saturated images again refer to the inner psychological and emotional elements that constitute identity.

Sherman's last project, the horror movie *Office Killer* (1997), is a logical extension of her artwork. In all of her images Sherman plays off of existing elements in mass media culture. She finds inspiration in movies, fairy tales, fashion, and books. Using components from these groups in exaggerated forms, Sherman presents her ideas as new representations that attack and transcend universal stereotypes.

The Shirelles

In 1961, four young African American women known as the Shirelles—original members: Doris Kenner Jackson (1941—), Addie "Micki" Harris (1940-1982), Beverly Lee (1941—), and Shirley Alston Reeves (1941—)—ushered in the girl group era with the Gerry Goffin-Carole King composition "Will You Love Me Tomorrow?" Released on Scepter Records, the song reached number one on *Billboard's* pop charts. The first all-female act to reach the number one position, the Shirelles demonstrated that girl groups could be commercially successful, challenging the music industry's prejudice against female rhythm and blues groups. Subsequent hits included "Baby, It's You" (later recorded by the Beatles) and "Soldier Boy." When their final Top Ten single appeared in 1963, they were competing with other girl groups and their label had turned its attention to new artists, including Dionne Warwick. The Shirelles disbanded in the late 1960s; decades later, original members of the group teamed with new singers to play oldies revival shows. In 1996 the Shirelles were inducted into the Rock and Roll Hall of Fame.

Shirer, William L. (1904-1993)

A globe-trotting newspaperman and author of 15 major works of fiction and history, William L. Shirer is best known for his pioneering work as a radio newscaster during Europe's march toward World War II. From Germany's forcible union with Austria and the Czech Crisis of 1938 to the Nuremberg War Crimes Trials in 1945, Shirer spanned the Atlantic and kept Americans informed of the aggressive intentions of Hitler and the dynamics of Nazism in his memorable *European News Round-Up* broadcasts. By the time he left CBS radio in 1947, he had helped lay the foundation for modern international news broadcasting and achieved, with his "Fall of France" report, one of the biggest on-air scoops in history.

Shirer began his career as a foreign correspondent in 1925 when he joined the Paris office of the *Chicago Tribune*. Before moving to the newspaper's Central European Bureau (Vienna) in 1929, he had the opportunity to cover Charles Lindbergh's famous oceanic flight and the sessions of the League of Nations. Shirer regarded 1930-31 his "most interesting years," when he traveled the breadth of India with Gandhi and reported on the activities of his civil disobedience movement. Shirer returned to Paris in January 1934 after a skiing accident robbed him of part of his eyesight, and he secured a position with the *New York Herald*. He was Universal News Service's Berlin correspondent from August 1934 until the organization was disbanded by William Randolph Hearst in 1937.

Shirer did not remain unemployed for long. Recognizing his vast experience covering European affairs and his facility with German and French, Edward R. Murrow (chief of CBS's European staff) asked him to open the network's office in Vienna and arrange for the

The Shirelles

broadcasts of its correspondents there. At first Shirer was to act only in an administrative capacity, and because his voice was considered inadequate for extensive broadcasts, as an announcer for other speakers. But when the German army moved into Austria on March 12, 1938, in an effort to achieve *Anschluss* (union) between the two states, Shirer was given a rare opportunity. As soldiers swarmed through the streets of Vienna, Shirer managed to locate a microphone, but when he tried to deliver his account, he was forced out of the studio at bayonet-point. Undeterred, Shirer hopped the first flight to London and made his uncensored broadcast there over the network's 117-station hookup. The next day, March 13, CBS news director Paul White charged him with making the arrangements for the first international multiple pickup broadcast, in which a succession of correspondents at various strategic points across the continent would go on the air and provide their own perspective on the crisis. Because this type of direct broadcast had never been done before, Shirer was compelled to improvise. In the few hours before airtime, he located the relevant personnel and ensured their access to short-wave facilities. In order that all scheduled sources could be heard within the

fifteen-minute period allotted for the broadcast, and in the absence of any cueing system or feedback device, Shirer instructed his correspondents to time their words precisely and to go on the air "blind." The success achieved with this first *European News Round-Up* guaranteed it a regular spot in the nightly newscasts of the war period. In many ways, it established the pattern for international coverage later found on television.

As a result of his *Anschluss* performance, CBS made Shirer one of its regular newscasters. In September 1938, he was the man-on-the-scene during the Czech Crisis. As Hitler's conflict with the Czech government over the fate of the Sudetenland threatened to precipitate a major European war, millions of Americans anxiously tuned in to Shirer's nightly five-minute broadcasts from Prague. When the Fuehrer set his sights on Poland in September 1939, Shirer covered the impending crisis from the main vantage point of Berlin itself. On the first day of war, September 1, Shirer captivated listeners with his report of an air raid alarm while it was in progress.

Reporting from the Nazi capital offered distinct opportunities but also had significant drawbacks. Shirer's accounts of German life

and strategy during wartime had to pass three rigorous censors prior to airtime, and the approved script could only be read in the presence of official observers from the propaganda office. Shirer used his ingenuity to mitigate the effects of such adulteration. Listeners became sensitive to the way he expressed his true feelings by his “ironic sense of humor,” sarcastic tone, and use of peculiarly American phrasing and slang that academically trained German censors could not comprehend. In May 1940 Shirer became one of a handful of correspondents allowed to accompany the German army during its conquest of France and one of the few to beam reports from occupied Paris. The *Wehrmacht's* (armed forces’) advance was so swift that, by the end of the campaign, CBS had lost all contact with Shirer. When he finally reached a transmitter on June 22, he achieved one of the greatest scoops in the history of American broadcasting. Most correspondents had believed the Franco-German armistice would be signed in Berlin, and they took up positions there. Shirer, learning the actual location would be a railroad car in the Compiègne Forest (where the Germans had been forced to capitulate to the French in 1918), was able to arrive there in time to witness the spectacle and relay his account several hours before any other reporter.

In December 1940, the burden of German censorship became intolerable, and Shirer ceased his “This Is Berlin” broadcasts. He returned to the United States, embarked upon a vigorous lecture tour, and became technical advisor for the wartime film *Passport to Bordeaux*. While continuing to analyze the news for CBS, he published an uncensored account of the story behind his on-the-spot broadcast from Germany in *Berlin Diary: Journal of a Foreign Correspondent, 1934-41*. In 1941 his book became a best-seller, and the Headliner’s Club honored him with an award for “excellence in radio reporting.” In 1945, he returned to Germany as CBS’s chief European correspondent to cover the Nuremberg War Crimes trials and made it back in time to cover the opening of the United Nations in San Francisco. In 1946, Shirer received the Peabody Award for his “outstanding interpretation of the news.” The following year, he resigned from CBS after an “objectivity” dispute with Murrow.

Shirer served briefly as a commentator for the Mutual Broadcasting System in 1947-49 but was blacklisted and forced to retire from broadcasting in the early 1950s because of his links with the Hollywood Ten. Thereafter, Shirer sustained himself through his lectures and prolific writings. He wrote substantial articles for *Life*, *Harper's*, and *Collier's*, and the fictionalized biographies *Traitor* (1950) and *Stranger Go Home* (1954). He produced *End of a Berlin Diary* (1947) as a sequel to his earlier historical work and authored five additional books based on his experience as a correspondent: *Midcentury Journey* (1952), *The Collapse of the Third Republic* (1969), *Twentieth-Century Journey* (1976), *The Nightmare Years* (1984), and *A Native's Return* (1990). His most well-known literary achievement, *The Rise and Fall of the Third Reich*, was published in 1959, after five years of scrutinizing rare Nazi state documents and private memoirs. The work received the National Book Award in 1961. Shirer died in December 1993 in his home state of Massachusetts.

Shock Radio

The bane of the Federal Communications Commission, shock radio exploded on the American scene in the closing decades of the twentieth century. Some hailed this format as a refreshing example of free speech at work—its very outrageousness proof that any message can be disseminated over America’s airwaves if there is an audience willing to receive it. Others decried the success of shock radio as a sign of the coarsening of the nation’s popular culture—and pointed to its origins in broadcast hate speech as evidence of its secretly poisonous nature.

Shock radio has a thousand fathers (all of them illegitimate, its detractors might add). From the mid-1920s to the 1940s, Father Charles Coughlin spewed anti-Semitic, pro-Nazi, and crypto-Fascist venom to an audience of millions via his national radio program. The so-called “father of hate radio” was one of the first broadcasters to divine the nexus between controversial opinions and a large and avid listenership. Coughlin also established a pattern followed by other successful radio hosts of leaping into other media. He established his own newsletter, *Social Justice*, to disseminate his views. When Franklin Roosevelt dared him to run for president in 1936, Coughlin did so, as the head of the xenophobic Union Party. But America’s involvement in World War II dealt a severe blow to the vituperative priest, whose tirades against “international Jewry” began to take on a seditious connotation for a nation committed to the struggle against Fascism.

After Coughlin and his imitators departed the airwaves, American radio largely slept through the serene 1950s. The advent of rock and roll presented the only challenge to the heterodoxy of somnambulant top forty fare being offered up on a local and national basis. That all started to change in the 1960s, when big-city markets began to buzz with the controversial opinions of hosts like Joe Pyne. Working out of KABC in Los Angeles, America’s first all-talk station, Pyne was one of the first radio hosts to fuse conversation, confrontation, and conservatism in an effort to boost ratings. He once famously directed a caller to “go gargle with razor blades.” Pyne’s right-wing rants continued in the political tradition of Father Coughlin, a path many subsequent shock jocks followed as well. Others, by contrast, opted to depoliticize their programs in an effort to move beyond an audience of like-minded adherents while still maintaining a high shock value.

In the late 1970s, WNBC in New York became the proving ground for this latest wave of shock radio hosts. Two deejays in particular, Don Imus and Howard Stern, helped perfect the form that each would later take to an even higher level of popularity. Imus, an ex-Marine and one-time rhythm and blues performer, was one of the first to devote the bulk of his show to outrageous, scatological, and offensive humor. Often he would start a conversation with a female

guest by asking what she was wearing. Inquiries into breast size and sexual history would invariably follow. There was also an abundance of anti-clerical material, as personified by Imus' popular "Rev. Billy Sol Hargus" character, a lapsed minister whose riffs Imus later expanded into a best-selling book and comedy album. All of this chatter was accompanied by a cacophony of quacking noises and sound effects that were to become standard fare for the shock radio genre. A peanut gallery of sidekicks and joke suppliers was on hand to prop up the host when his alcohol and cocaine addictions rendered him unfit to broadcast, which was often.

Playing second fiddle to Imus in those heady days was gangly Long Island native Howard Stern, who at first merely aped the "I-Man's" high-volume shtick but would later outstrip him in influence. Stern's daily program took Imus' audacious sex chatter to its logical extreme. Anchored around a running commentary on the news of the day, *The Howard Stern Show* also featured mock game show segments like "Guess the Jew," in which callers try to pick the Semite from a group of three celebrities. Stern's own sexual obsessions, such as lesbianism and the size of his own sex organ, were also given copious attention. "Conversations" with guests like Jessica Hahn often devolved into simulated sex acts or on-air stripteases. Despite constant scrutiny by the FCC, Stern managed to remain on the air and export his show to markets across the country. By the early 1990s, he was dubbing himself "the King of All Media."

During the 1980s, thanks largely to Stern, "shock" became a hot format among radio programmers. Every city, it seemed, had its "morning zoo" crew dedicated to keeping alive the art of the prank phone call. Some were fairly tame, never straying far from the standard repertoire of "big boob" and dumb politician jokes. Others ventured dangerously far into the minefield of racial and sexual humor. Two St. Louis deejays, Steve Shannon and D.C. Chymes, shocked themselves out of a job in 1993 when they accused a caller to their show of "acting like a nigger." The incident sparked a massive protest by the NAACP and the Urban League and illustrated the perils of on-air confrontation. Most hosts had a better understanding of where their bread was buttered. Even the nascent sports radio format was not immune to the allure of shock. Jim Rome, a host at 690-AM in Los Angeles, was one of the first to bring the arts of insult and confrontation to the task of covering professional athletics. His daily four-hour "smack-talking" session proved highly successful and inspired a slew of imitators.

In the 1990s, shock radio reached the apex of its influence. However, in all but taking over the talk radio airwaves, it became a genre increasingly hard to define. Politically oriented hosts like Rush Limbaugh and New York City's conservative firebrand Bob Grant argued that their purpose was not to shock, but to inform and rally support for their viewpoints. Their critics on the other side of the ideological aisle rejected this claim and dismissed their output as "hate radio." Stern and his many imitators treated politics as a mere lark, subservient to their primary mission to titillate and break taboos. Imus, who had blazed the trail in this arena, largely forsook such adolescent shenanigans altogether. His daily forum *Imus in the Morning*, originating out of WFAN in New York beginning in 1988, took on an increasingly topical tone over the years. Gone were the phone calls to semi-nude women, replaced by conversations with U.S. senators and political commentators like Jeff Greenfield and Tim Russert.

Whatever its format, however, there was no denying shock radio's influence on the American pop cultural landscape. The new-and-improved Don Imus became something of a cult figure with the

C-SPAN crowd after a well-publicized interview with then-presidential candidate Bill Clinton during the New York Democratic primary in 1992. In 1993, *Imus in the Morning* entered national syndication. Within three years, it aired on over eighty stations across the country. The I-Man's daily audience was estimated at 10 million. Not unexpectedly, Imus later squandered much of his newfound political capital in 1996 during a speech at the annual Radio and Television Correspondents dinner in Washington, calling now-President Clinton a "pot-smoking weasel" to his face. Still, his brand of shock continued to sell around the country. A fawning 1999 *Newsweek* cover story on the grizzled shock jock even trumpeted "The Importance of Being Imus."

Howard Stern was even more successful. The era of political correctness gave an additional impetus to his transgressive brand of comedy. His listeners were among the most loyal and dedicated in the medium, often prank calling TV phone-in shows to drop the name of their dear leader. Stern briefly stood for election as governor of New York in 1994, but realized his extreme brand of libertarian politics was too idiosyncratic for even a liberal electorate and quickly withdrew. Instead he published a best-selling autobiography, *Private Parts*, and later starred in a movie adaptation well-received by critics. And by adding a weekly national television show in 1998, he seemed perilously close to fulfilling his prophecy to become "king of all media." Stern's meteoric rise in stature, like that of Imus, cemented shock radio's place in the forefront of American popular culture at the turn of the twenty-first century.

Shore, Dinah (1917-1994)

A sultry-voiced pop singer with Southern charm, Dinah Shore recorded 75 hit records between 1940 and 1955. After a modest career in the movies, Dinah found her niche in television, making her debut in 1951 as the cheery host of a fifteen-minute variety show, which aired twice a week. She became even more popular with *The Dinah Shore Chevy Show* (1956-63), singing the jingle "See the USA in your Chevrolet," and smacking a signature sign-off kiss to the audience. Like another of that era's television singers, Kate Smith, Dinah quickly became a national institution.

Born in Winchester, Tennessee, Dinah graduated from Vanderbilt University with a degree in sociology. Moving to New York City after graduation, she sang on radio with Frank Sinatra—who nicknamed her "Magnolia Blossom"—and tried out unsuccessfully as a vocalist for several top dance bands. Eddie Cantor's daughters heard her singing on WNEW, and she successfully auditioned for Cantor's radio show, which had been a career springboard for singers Deanna Durbin, Margaret Whiting, and Bobby Breen. Within weeks of her debut she had a Columbia recording contract, and Cantor put up \$750 of his own money to buy her the rights to the song, "Yes, My Darling Daughter," which became her first hit. By the end of 1940, she was voted Outstanding New Star of the Year by six hundred radio editors.

Shore made her movie debut in the Eddie Cantor musical, *Thank Your Lucky Stars*, perhaps best remembered for a decision made by

Dinah Shore

Warner Brothers' make-up artists to lighten Shore's dark hair to an off-blond color. Samuel Goldwyn chose Dinah to co-star in Danny Kaye's 1944 debut film, a GI comedy, *Up in Arms*, in which she introduced two Harold Arlen songs, "Now I Know" and "Tess's Torch Song." In the few movies that followed (*Belle of the Yukon*, *Follow the Boys*, *Till the Clouds Roll By*, and *Aaron Slick from Punkin Crick*), Dinah was featured in guest-singing spots or given minor roles. "I bombed as a movie star," she candidly admitted, but she soon became a superstar on television.

Dinah's warm, friendly manner with her top-name guest stars made her one of the few women to achieve a major success as a variety-series host, and the *Chevy Show* ran for seven seasons as a highlight of NBC's Sunday night schedule. The program allowed Dinah to display a variety of talents in skits and production numbers, in addition to singing such perennial favorites as "Blues in the Night," "I'll Walk Alone," and "Buttons and Bows." In 1961 NBC moved Dinah to Friday nights to give a new Western show, *Bonanza*, the Sunday slot, but her popularity continued.

During her years on television, Dinah received ten Emmy Awards and was regularly named to the list of the nation's most admired women. Making the transition from variety show to talk

show host, she continued to win fans with *Dinah's Place* (1970-74), *Dinah and Her Friends* (1979-84), and *A Conversation with Dinah* (1989-91).

In the early 1970s, Dinah's six-year romance with Burt Reynolds, who was 18 years her junior, made big news in the tabloids. A UPI reporter called it "one of the most tastefully handled Hollywood love affairs in recent memory." Both Burt and Dinah openly conversed about it on talk shows and saw no problem with the age difference. They remained good friends after the break-up, and he often appeared on her television shows.

In 1981, at the age of sixty-four, Dinah boldly signed a contract for a series of live stage performances, her first in over thirty years. Although accustomed to television cue cards, she was able, after a few rehearsals, to remember all her new lyrics and arrangements, and the shows went smoothly. During her last years she was an avid tennis player and golfer, also sponsoring a tournament on the Ladies Professional Golf Tour.

Shorter, Frank (1947—)

Often credited with having spurred the running boom of the 1970s, Frank Shorter was one of America's greatest Olympic performers. He is best remembered for his victory in the marathon during the ill-starred games in Munich in 1972, and for his runner-up finish four years later in Montreal. The Munich games were marred by the terrorism meted out against Israeli athletes, but they are also recalled for swimmer Mark Spitz's unprecedented seven gold medals and Shorter's long-distance triumph. On the day of the marathon, September 10, 1972, *Runner's World* later contended, "distance running was changed forever . . . transformed from the cult exercise of an eccentric breed of skinny men into what would become for many a way of life." An international television audience watched as the tousle-haired Shorter, born in Munich in 1947—his father was an American army physician stationed in Germany after the war—and a graduate of Yale University, held the lead from the fifteen-kilometer marker. Days earlier, Shorter had finished fifth in the 10,000 meters race. On entering the stadium near the close of the marathon, he was stunned to encounter jeering and booing, which was intended for a prankster who had landed on the track a short while earlier. Shorter went on to best the Belgian Karel Lismont, who had never lost a marathon previously. "Five seconds beyond the finish line it hit me what I'd done," Shorter, who often ran 140 miles a week, remembered. "I don't have to do it again for a while." The marathon, he reasoned, "is a battle against slowing down."

Four years later in Montreal, Shorter, by then a graduate of the University of Florida School of Law and an associate with French & Stone in Boulder, Colorado, was favored to repeat and thereby

Frank Shorter

duplicate the feat of Ethiopia's Abebe Bikila. Shorter however, was defeated by the little-known East German Waldemar Cierpinski, who established an Olympic record. When he passed the front-running Shorter, Cierpinski later reflected, "I looked right into the eyes of the man who was my idol as a marathon runner. I knew all about him. And yet I could tell by the return glance that he didn't know much, if anything, about me. The psychological advantage was mine."

Shorter's Olympic accomplishments followed earlier victories in the 1969 NCAA six-mile run, the 10,000-meter race in the 1970 U.S.-USSR dual meet in Leningrad, the 1970 AAU outdoor three-mile and six-mile events, the 1971 AAU six-mile run, and the 1971 Pan-American Games 10,000-meter race and the marathon. From 1970-1973, he was also the AAU cross-country champion. Shorter eventually won a record four Fukuoka marathons. In 1972, he received the Sullivan Award, given annually to the nation's top amateur athlete. But by 1979, serious foot and back injuries sorely hampered his track performances.

Shorter is a member of the National Track & Field Hall of Fame and the Olympic Hall of Fame. He has served as a television sports commentator for track-and-field performances and founded Frank Shorter Running Gear, headquartered in Colorado. But among his greatest achievements, Shorter helped to challenge the false separation between amateur and professional track-and-field performers, thus ushering in "a new cooperative climate between athletes, sponsors and federations," according to *Runner's World*.

Shorter's Olympic feats, including the first victory in the marathon by an American in 64 years, helped to trigger a running boom in

the United States. (Instrumental, too, were the early successes and later nearly epochal failures in the 1968 and 1972 Olympic games by world record-holding miler Jim Ryun, Dr. Kenneth Cooper's championing of aerobic conditioning, and James F. Fixx's and Joe Henderson's writings extolling running.) By 1970, two million Americans were jogging regularly, according to a Gallup Poll. Following Shorter's triumph, road racing became more popular in the United States, thanks to favorable media coverage and corporate sponsorships. For a time, under-the-table expense payments were often delivered, as the lines between amateur and professional athletes continued to narrow. By 1980, the United States reportedly boasted 30 million runners, while by 1997, *Runner's World* suggested, a second running boom was occurring. This one tended to be less competitive, "more individual- and family-centered, more health- and fitness-oriented, more 'set your own goals and choose your own pace.'" Frank Shorter's contribution to one of late-twentieth-century America's most ubiquitous fitness crazes renders him a significant figure in U.S. popular culture.

Show Boat

Show Boat (1927), Jerome Kern and Oscar Hammerstein II's immortal tale of life on the Mississippi River from the 1880s to the 1920s, was one of the landmark works of the American musical theater. It not only contained a calvacade of songs that included "Ol' Man River," "Can't Help Lovin' Dat Man," "Make Believe," and "You Are Love," but also helped propel the American musical theater forward with its serious libretto and a musical score that was wedded to the dramatic content.

Howard Keel and Kathryn Grayson in a scene from the film *Show Boat*.

Based on Edna Ferber's 1926 novel of life on the Mississippi River, Hammerstein's libretto focuses on Magnolia (Nola) Hawks, impressionable daughter of Cap'n Andy Hawks—owner of the show boat Cotton Blossom—and his domineering wife, Parthy. Nola falls in love with Gaylord Ravenal, a river gambler, at first sight. They marry and move to Chicago, where their daughter Kim is born. Gaylord loses all his money and deserts his family. The musical ends in 1927, years later, with a reunion of Nola, Gaylord, and Kim on the Cotton Blossom.

Secondary plots and characters are of great importance in the show. Julie, the mulatto actress, is forced to leave the Cotton Blossom when her racial background is exposed. In the second act, Julie sacrifices her career for Nola, who, destitute, auditions to sing at the Trocadero Club. Joe and Queenie, an African-American couple who live on the Cotton Blossom, provide continuity as the personifications of wisdom and the joy of life through numbers such as Joe's "Ol' Man River" and the couple's "Ah Still Suits Me," written for the 1936 film and interpolated into some of the show's subsequent revivals. Frank and Ellie embody the essence of musical comedy with their farcical antics. In Ellie's "Life upon the Wicked Stage," the comic actress describes her profession to her adoring fans.

Show Boat's musical score contained a substantial number of songs that entered the canon of American popular music. Considered the most operatic of Kern's scores, the music in *Show Boat* elevated the standard of popular song. The show's numbers became defining works in the musical theater repertoire. In the music of *Show Boat*, characters were defined through their music. The relationship of Nola

and Gaylord develops from the fantasy world of "Make Believe" to overt expression in "You Are Love" and "Why Do I Love You?" Julie's torch song, "Bill" (written in 1918 for *Oh, Lady, Lady!* but cut from the show), became a classic of the genre, and "Can't Help Lovin' Dat Man," with its opening line "Fish gotta swim, birds gotta fly," emerged as a standard romantic ballad.

Show Boat became an institution in American musical theater because of its skillful integration of operetta, realistic drama, and musical comedy. The fantasy world of the operetta is captured through the show's numerous waltzes. The *credo* of operetta, "Make Believe" (though not a waltz), is the title of one of the musical's early numbers. The fantasy world of the operetta is represented by the show boat and its theatrical escapism. The real world is manifested through the Chicago scenes—the World's Fair, Gaylord's gambling and desertion, and the plights of Julie and Nola. The real world enters the Cotton Blossom in the miscenagation scene, where Julie and her husband Steve are forced to leave the show boat. Musical comedy elements appear in the characters of Ellie and Frank, whose music is decidedly Tin Pan Alley in style. The integration of these diverse musical styles accounts for *Show Boat's* importance and popularity.

The musical score of *Show Boat* is integrated with the show's dramatic narrative. Music did not exist solely for its own sake—its purpose was to enhance the drama. The standard was set and groundwork was laid for a more serious approach to the Broadway musical. Characters could no longer waltz their way out of difficulty as the tragedy of real life entered the popular musical theater. Kern and Hammerstein did give in to the Broadway tradition of a happy ending, however; Ferber's novel does not include the final scene of reconciliation between Nola and Gaylord.

Show Boat, produced by Florenz Ziegfeld, opened at the Ziegfeld Theatre in New York on December 27, 1927. Howard Marsh and Norma Terris played the lead roles of Nola and Gaylord. Helen Morgan created her legendary role of Julie, and Jules Bledsoe was the first Joe. The show ran for 572 performances, making it the second longest running Broadway musical of the 1920s.

Show Boat has continued to be successful on both stage and screen. Numerous revivals included Ziegfeld's in 1932, Kern and Hammerstein's 1946 production, the Musical Theater of Lincoln Center's 1966 version, and Hal Prince's lavish treatment that opened in Toronto in 1993 and in New York the following year. Three film versions of *Show Boat* were created: a 1929 part-talkie, a 1936 adaptation with Irene Dunne and Allan Jones, and the 1951 classic with Kathryn Grayson and Howard Keel.

In 1988, EMI released what it claimed to be "the first ever complete recording" of *Show Boat*. Under the direction of John McGlinn, it featured opera singers Frederica von Stade, Jerry Hadley, Teresa Stratas, and Bruce Hubbard in the principal roles, thus emphasizing the work's operatic qualities. Music which was cut from the show during its pre-Broadway tryout and songs written for film versions and revivals are included on the recording.

Show Boat is a classic American musical. Its memorable score and its integration of plot and music display a high level of craftsmanship on the part of its creators. The combination of realism and fantasy inherent in the story will ensure that *Show Boat* will continue to delight audiences for generations to come.

Shula, Don (1930—)

Don Shula is the winningest coach in National Football League (NFL) history. Born on January 4, 1930, in Grand River, Ohio, Shula started his professional football career as a defensive back with the Cleveland Browns in 1951. He also played for the Baltimore Colts from 1953 to 1956 and the Washington Redskins in 1957. Shula is best known for his thirty-three seasons as a head coach, eight with the Baltimore Colts (1960-1969) and twenty-five with the Miami Dolphins (1970-1995). His teams compiled a record of 347-173-6, and reached the playoffs 20 times. Shula took the Colts to the Super Bowl in 1969, and the Dolphins in 1972, 1973, 1974, 1983, and 1985. He is also the only coach in NFL history to record an undefeated season, capped when his 1972-73 Dolphins beat the Washington Redskins 14-7 in Super Bowl VII. After several disappointing seasons, Shula stepped down as head coach of the Miami Dolphins on January 5, 1996. He was elected in his first year of eligibility to the National Football League Hall of Fame.

Shulman, Max (1919-1988)

A popular humorist, Shulman was best known for *The Many Loves of Dobie Gillis*, a CBS television program he created from a volume of short stories of the same name. The television series, for which Shulman was also a writer, ran from 1959 to 1963 and starred Dwayne Hickman and Bob Denver, and was one of the first television shows to focus on the lives of teenagers.

During World War II, Shulman served in the Army Air Corps. He published comic novels concerning college students, civilians

during the war, and the difficulties of adjusting to peacetime (*Bare-foot Boy with Cheek*, *The Feather Merchants*, and *The Zebra Derby*) in 1943, 1944, and 1946, a very productive period—during the remainder of his life, he wrote only four more novels. The Dobie Gillis stories were collected in 1951. Shulman adapted his first novel into an unsuccessful musical in 1947, and co-authored the Broadway hit *The Tender Trap* seven years later. In 1957 he published a novel about the establishment of a missile base next to a complacent commuter town in Connecticut, *Rally Round the Flag, Boys!*; Paul Newman, Joanne Woodward, and Joan Collins were the stars of a film adaptation. Shulman himself was an MGM (Metro Goldwyn Mayer) screenwriter for a brief period; three comedies he wrote were released in 1953. In later life Shulman was less productive, writing little after the mid-1960s. He co-authored the film *House Calls* (1978) and was co-creator of the television series of the same name a year later.

SIDS (Sudden Infant Death Syndrome)

Of all the fears associated with early parenthood, none is greater than the possibility of an infant's unexplainable and sudden death. Sudden Infant Death Syndrome (SIDS) poses such a threat to seemingly healthy babies of all socio-economic and racial backgrounds under one year old. Officially defined and named at a 1969 international conference on causes of sudden death in infants, SIDS has been a political and medical controversy ever since. Although researchers had linked a lower risk of SIDS to babies sleeping on their backs and a higher risk of SIDS to babies exposed to second-hand smoke, by the late 1990s researchers were still uncertain of SIDS' cause(s). SIDS was the leading cause of post-natal mortality from 1980-1994. Heightening the fears surrounding SIDS, controversy rose in late 1997 as an article in *Pediatrics* stated that some SIDS attributed deaths are caused by child abuse and, in 1998, when a large German study associated SIDS with CMV virus, which is common in AIDS patients. As the millennium came to a close, many unanswered questions and innumerable theories surrounded SIDS, which continued to cause grief.

Bugsy Siegel

Journal of Sudden Infant Death Syndrome and Infant Mortality. New York, Plenum Press, 1996.

Siegel, Bugsy (1906-1947)

Benjamin “Bugsy” Siegel is remembered as the visionary mobster who first recognized the enormous money-making potential of the legalized gambling oasis of Las Vegas, Nevada, and who oversaw the construction of the town’s first lavish casino and hotel, the Flamingo, in the mid-1940s. Like his close associates Meyer Lansky and Lucky Luciano, Siegel began his underworld career as a street hoodlum on New York’s Lower East Side, and with Lansky formed the Bug-Meyer Mob while still in his teens. Specializing in protection rackets, gambling, and auto theft, Siegel also quickly gained a reputation as a brutal hit man and worked alongside Lansky in the formation of Murder Inc., the enforcement arm of the New York syndicate. In the mid-1930s Siegel moved to California, where he worked to expand organized crime operations chiefly in gambling and drug smuggling, and renewed his acquaintance with the movie actor George Raft, a childhood friend. Through Raft, Siegel (who longed for a movie career himself) gained contacts in the film industry and was linked romantically with several actresses, including Wendy Barrie and, most notably, the mob courier Virginia Hill. When the Flamingo failed to bring the promised quick return on their \$5 million investment, Luciano and his syndicate associates demanded Siegel settle his debt. Siegel refused and was subsequently shot and killed while he sat in the living room of his Beverly Hills mansion in June 1947.

During the ensuing decades of the twentieth century, Siegel’s vision was fully realized as Las Vegas became the chief gambling center of the United States and a favorite location for mob investment. While Siegel himself never found success in Hollywood, several films have traced his career, including *Neon Empire*, a cable television movie that aired in 1989, and the star-studded 1991 biographical feature *Bugsy*, directed by Barry Levinson, in which Siegel and Hill were portrayed by Warren Beatty and Annette Bening. However, perhaps the ultimate ironic tribute was announced in June 1998—more than fifty years after Siegel’s murder—when a Las Vegas investment group unveiled plans to construct a \$130 million luxury casino named in honor of Siegel. Scheduled to open in early 2000, Bugsy’s Resort and Casino will reportedly feature a 1940s Las Vegas decor reminiscent of Siegel’s own ill-fated Flamingo.

The Silence of the Lambs

The film *The Silence of the Lambs*, directed by Jonathan Demme and starring Jodie Foster and Anthony Hopkins, was released in the winter of 1991 to substantial financial and critical success. The film is based on a 1988 novel by Thomas Harris, which in turn is a sequel to Harris's 1981 best-seller on similarly themed material, *Red Dragon*. Both novel and film focus on the strange emotional and intellectual connection between a female FBI Academy student, Clarice Starling, and an imprisoned serial killer, Dr. Hannibal "The Cannibal" Lecter. The two work together to apprehend another serial killer, known in the tabloid press as "Buffalo Bill," before he can kill his next female victim. The film version not only introduced Dr. Lecter into the ranks of popular culture villains but garnered the top five Oscars during the 64th annual Academy Awards in 1992. The film won for Best Picture, Best Actor (Hopkins), Best Actress (Foster), and Best Adapted Screenplay (Ted Tally).

Silent Movies

At the advent of the twentieth century, America stood as the most prosperous nation in the world. William S. McKinley was well regarded as President; photographs replaced illustrations in newspapers, and coal was the fuel of choice. There was a strange amalgamation of old and new: horse and buggy and the automobile; covered wagon and locomotive. In Europe, modern art eschewed realism for the abstract, as Sigmund Freud challenged the way people thought about behavior. For those who could indulge in such pleasures, there was the phonograph, the theatre, and vaudeville entertainments. But by 1895, a new curiosity emerged that would slowly but surely inflict profound, controversial, and sometimes curious changes in the moral sensibilities, cultural life, and social order of human society. That new curiosity was the moving picture.

Anthony Hopkins and Jodie Foster in a scene from the film *The Silence of the Lambs*.

The moving picture was never intended to be silent but was envisioned by American inventor Thomas Edison as visual accompaniment to his earlier phonograph. It wasn't until late until the late 1920s, however, that "talkies" would be technologically and economically viable. The first three decades of film, therefore, would be the history of the silent movie.

To the average viewer, the silent movie may appear to represent little more than dusty vestiges of a bygone era, featuring storylines with little in common with current issues, and production values that pale in comparison to the slick look of the contemporary cinema. But the silent film can evoke more than nostalgia. The story of the silent film offers a history of the brand new industry of movie-making, as it struggled to overcome the forces of public opinion and censorship, differentiate its products, and create styles of filmmaking that would survive generations. Beyond industry and economics, it is during the period of the silent movie that we see the first glimpses of the film medium as an art form; the surviving collection of silent pictures, produced both in America and abroad, include some of the finest creative achievements in cinematic history. Far from being primitive, a number of silent pictures are today considered marvels, with high levels of technological innovation achieved by their producers (including color and special effects), long before the advent of computers, portable power tools, and motion picture capture and morphing. Moreover, the era of silent moving pictures has left behind a fascinating record of the biases and prejudices, fads and fixations, taboos and preoccupations of human history during the late nineteenth and early twentieth century, and not just in the documentary or fact film, but in the perhaps thousands of shorts, one and two-reelers, and feature films produced between 1896 and 1927.

The history of the early development of the moving picture, from its origins as 1870s series photography to the American studio system, is long, convoluted, and has no single point of origin. Moreover, the history of the invention of the moving picture is associated with a great deal of myth and lore. Americans commonly attribute the invention of the moving picture to the pioneering efforts of Thomas Edison, the flawed genius noted for his patents for electric light, storage batteries, the phonograph, and the telegraph. Contrary to common belief, the birth of the moving picture was not the genius of a single originator but of a kind of competition between inventors in Britain, France, Germany, and the United States. It was in Edison's West Orange, New Jersey, laboratory, however, that the genesis of the American film industry was nurtured through its embryonic stages. In 1894, Edison patented the Kinetoscope, an early movie camera, and in a makeshift studio called the Black Maria, he and his associates produced the earliest American silent pictures.

Soon after the initial discoveries of Edison and his rivals, the moving picture quickly arose as a phenomenal success. Perhaps thousands of small-time businessmen and women from all backgrounds and ethnic constituencies competed to enjoy the profit-making potential of the newest novelty. Moreover, notes David Cook in his *History of Narrative Film*, the new medium of film moved quickly "toward becoming a mass medium with the then-unimaginable power to communicate without print or speech."

By the turn of the twentieth century, Kinetoscope "shorts" attempted to satisfy a quickly growing audience fascinated with the moving picture. The nickelodeon boom, (a period known as "nickel madness"), saw the growth of film-showing storefronts from a mere handful in 1904 to nearly 10,000 in less than five years. Almost overnight, any available space was converted to a movie theatre. The

moving picture evolved from being a sideshow and filler for vaudeville to an entertainment by itself. Recordings of "entertaining or amusing subjects" as noted in one catalogue, comprised short films such as *The Chinese Laundry*, *Dancing Bears*, and *The Gaiety Girls Dancing*, featuring comedy, skits, and other brief performances. The storytelling possibilities of film were all but lost on early filmmakers. But whether novelty, filler, or short, as the popularity of this new form of entertainment arose, so did the public concern.

Similar to contemporary debates about film content and effects on society, the emergence of the moving picture as a popular form of entertainment caused an increasing measure of public disapproval. Daniel Czitrom documents early public concern about the movies in *Media and the American Mind*, noting that unlike the near "unanimous praise" afforded the introduction of the telegraph, "the motion picture confronted the accepted standards of culture itself." Film emerged during a time when a glimpse of a woman's bare ankle was considered by some to be obscene. To be sure, there were many early film shorts containing material of an "adult" nature. *The Serpentine Dance* (1895), produced by the Edison Co., was banned because the brief film included titillating glimpses of the female performer's undergarments. But content wasn't the only concern. "Indeed," notes Champlin in an article on the film production code for *American Film*, "it was the instant and immense popularity of the movies that stirred the first fears of their corrupting and inciting power." The culture war had begun.

As all and sundry flocked to the local store theatre to take in the latest short, worried cultural traditionalists and moralists debated the effects of motion pictures on society. "At the turn of the century," notes Janet Staiger in her book on sex and the early cinema, "people argued about what should and should not be said or shown during the first years of the American cinema." The people to whom she refers include the upper classes and the cultural and moral elite who felt themselves to be responsible for the maintenance of public culture and morals and for the governance of the middle and working classes.

To a punctilious Gilded Age society with Victorian moral sensibilities, a knowing glance, a leer, a glimpse of a woman's undergarment, and anything resembling burlesque could be considered inappropriate or outright obscene. In 1908, the seconds-long Edison short *The Kiss* created quite a stir. There, in grainy black and white, were stage actors May Erwin and John Rice bound together in a long and loving caress. Many were shocked at the "brazen" lack of morality in this brief exhibition.

It was not only film content that worried moralists, but also the nature of the audiences that flocked to the theatre and the circumstances of exhibition. The patrons of theatre stores included members of all ethnic constituencies as well as the lower and working classes. Some felt that this opportunity for races and classes of people to mingle could have potentially disastrous effects on the social structure. Moreover, the places where store theaters were located were considered indecorous—including amusement parks, penny arcades, dance halls, and pubs. A woman's reputation could suffer were she seen in such questionable establishments. Sanctioned censorship occurred in Chicago in 1907, where the first ordinances preventing the "exhibition of obscene and immoral pictures" were established. The film industry in America would escape its first decade with only a mild scolding and a bit of self-regulation, including the 1909 National Board of Censorship. But the die was cast, and in subsequent decades, the cries for regulation of the pictures would grow more strident.

The very earliest silent motion pictures were not full-fledged stories, notes Cook, but "unmediated glimpses of real action as it

unfolded before the camera.” French film entrepreneur Louis Lumière was said to have wandered the streets and set-up his portable camera before any scene that happened to take his fancy, creating what the French called “actualités.” These brief glimpses of unmanipulated life fascinated viewers because nothing like it had ever been seen before. It is said that during the film screening of a train pulling into a station, panicked audience members rushed from their seats to get out of harm’s way (*The Arrival of a Train at the Station*, 1895). In America, surviving “film-as-record” includes glimpses of San Francisco before and after the earthquake and fire; a peek inside a turn-of-the-century factory; footage of the Spanish-American War; and the inauguration and funeral of President William McKinley. Although mostly “staged” for the camera, silent shorts were produced as fillers and teasers for vaudeville, leaving behind a rare peek at Gilded Age theatrical performance and popular entertainment.

Quickly, the moving picture began to evolve into its next phase: story-telling. Film pioneers such as Georges Méliès, Ferdinand Zecca, Emile Cohl, D.W. Griffith, and countless others contributed to the development and refinement of the film narrative. In America, it is Edwin R. Porter whose name is strongly connected with creation of the true film story and who is often afforded much of the credit for the birth of narrative film.

Porter, a protege of Edison, began his filmmaking career in Edison’s labs turning out actualities and one-shot film shorts. His 1902 *The Life of an American Fireman* and *The Great Train Robbery* (1903) are seen as the earliest true film narratives produced in the United States. The latter was a popular sensation. Though only 12 minutes in length, the building of suspense and the development of the action captivated an audience used to static shots of a single scene. Porter also produced *The Ex-Convict* (1904) and *The Kleptomaniac* (1905). It is interesting to note that these were more than simply stories for entertainment’s sake; they also reflected prevailing “social values.” The message movie was born.

Porter’s 15-minute long *Uncle Tom’s Cabin* (1905?) is considered to be one of the longest and most expensive American movies produced at the time. It would be the first of many adaptations of the 1852 Harriet Beecher Stowe abolitionist classic. Edward Campbell has documented filmdom’s romance with various American myths noting, “Significant was the wedding of film to historical myths that were uniquely American . . . storylines which would grow to be the most beloved, the Western and the Old South romance.” As the length of the silent movie increased, so did the story possibilities. Filmmakers and the writers of scenarios turned to many sources for material including literature, legend, lore, and stereotypes.

A striking element in film shorts and early narratives is America’s painful legacy of racism and bigotry. Early film audiences didn’t need to ask why an Indian craved whiskey or a black man was a thief. “Racial stereotyping,” note Bohn and Stromberg in *Light and Shadows*, “helped trigger conflict without the need of complex explanations as to motivation.” Early filmmakers relied heavily upon rather egregious ethnic typecasting in their depictions of African-American life and culture, of Native Americans and recent immigrants. Contributors to the book *Unspeakable Images: Ethnicity in the Cinema*, document the inclusion of “dumb Irish maids, pilfering, lazy blacks, unscrupulously savvy Jewish storekeepers and naïve Yankee farmers” as the subjects of short subjects and ethnic-based comedies. The racial stereotyping evident in early film didn’t suddenly evolve with the medium but emerged from predominant ideas about race and class communicated through literature, sociological studies, vaudeville, and cultural artifacts such as advertisements.

Ruthless and sinister Asian gangsters, whooping savage Indians, and superstitious “coon” characters were common fare in shorts, popular film series, and later, full-length features. “[T]he Mexican bandits were clearly the most vile,” notes Allen Woll. “They robbed, murdered, plundered, raped, cheated, gambled, lied and displayed virtually every vice that could be shown on the screen.” It took a combination of complaints and the First World War (which provided new villains) to “end the derogatory portrayals.” In 1915, Cecil B. DeMille produced the highly successful *The Cheat*. In this story, a white socialite takes out a loan with a rich but lecherous and evil Asian man who viciously brands her with a hot iron when she can’t pay him back. Black Americans were viciously lampooned and portrayed as ignorant, ridiculous, and animal-like on the covers of sheet music and advertisements. These same depictions quickly found their way into silent pictures. Early titles (often featuring whites in blackface) included the popular *Rastus* series (1910-1913) about an ignorant black thief and the *Sambo* comedies. “The pages of catalogues were thick with chicken thieves and crapshooters,” notes film historian Thomas Cripps, “one catalogue urging its wares because ‘these were darkies of the ‘Old Virginny’ type.’”

The year 1900 saw the largest influx of immigrants to the United States ever, and many native-born Americans were distrustful if not outright hostile, toward foreigners. Wars, revolution in Russia, anarchy, and fear of communism led some Americans to view foreigners as war-mongers and to blame them for the sometimes squalid conditions that were the reality in urban centers with high immigrant populations. Early on, foreigners were often used as the butt of jokes in such titles as *How Bridget Served the Salad Undressed* (1900), *A Bucket of Ale*, and *Murphy’s Wake*, a film that earned the outrage of Irish movie-patrons because of its stereotypes of the Irish as drunkards.

By the early 1910s, films shorts and one-reelers would expand to multiple reels that later came to be known as “features.” The rise of the longer length film was significant in that it helped to make motion pictures respectable for middle-class patrons. Longer films could more resemble legitimate theatre, and classic plays and novels could now be adapted for film.

Silent features expanded to several reels with more defined storylines, creative editing techniques, crosscutting, and innovative use of camera angles (some discovered accidentally). The popularity and success of the feature was in large part caused by the success of Italian-produced spectacles, which transfixed and delighted American audiences. These include Enrico Guazzoni’s 1913 *Quo Vadis?* and Giovanni Pastrone’s 12-reel masterpiece *Cabiria* (1914). *Cabiria*, more than two hours long, featured elaborated constructed sets, intricately designed costumes, and unique camera-work, dazzling the American movie-going public and influencing American directors like D. W. Griffith and Cecil B. DeMille. Soon, “nickel-madness” gave way to “feature madness.”

David Wark Griffith was one of the earliest American filmmakers to realize, perhaps by accident, the dramatic potential of the cinema and its persuasive power over an audience. A failed actor, he turned to directing pictures for Biograph in 1908. As the “master of melodrama,” he refined techniques already in use and created new styles of editing, photography, montage, camera movement, and placement—precursors to the emerging classical Hollywood Style. With his “ensemble” of silent film luminaries (including Mary Pickford, Lillian Gish, Lionel Barrymore, and Blanche Sweet) he all but perfected the potboiler and chase scene story and also adapted the serious work of Shakespeare, Tolstoy, and Edgar Allen Poe. He

approached his work with an energy, style, and innovation that worried investors while it fascinated and delighted audiences.

Though he enjoyed a respectable career in film, Griffith's name will be forever associated with the notoriety surrounding one particular film. When one and two-reelers could no longer contain Griffith's grand ideas, he turned to the feature. He adapted a civil war novel, *The Clansman*, and to much fanfare, released it in 1915 as *The Birth of a Nation*. It was widely hailed by most, including President Woodrow Wilson, who called it a "remarkable artistic achievement." But the film's scenes of racial violence, including sexually depraved black villains and hooded Ku Klux Klan heroes, were not lost on everyone. In 1916, the Boston Branch of the NAACP led the way in organized protest of the film's patently racist message. In a 47-page pamphlet, supported with endorsements by leading public figures, the group was one of many that sought to have the film banned altogether. Black citizens picketed and protested. In some places where the film was shown, race riots broke out. Wilson was forced to recant his earlier praise. The film was banned in some states. Griffith, a Southerner and the son of a Confederate officer, was surprised, perplexed, and insulted by the criticism of the film. As far as he was concerned, the film was based on a true and accurate portrayal of history. Black citizens knew better, realizing that such pejorative propaganda could only cause more lynchings and distrust, and heighten racial tensions. Griffith responded with a 17-page pamphlet on free speech and counter with his epic production, *Intolerance* (1916). Though one could argue the overall effectiveness of the campaign against this highly successful and groundbreaking silent film, the incident was one of many in a long history of organized protests staged by pressure groups against the images in American cinema.

With so much dissension over Hollywood's depiction of black life and culture, it is not surprising that a number of enterprising film entrepreneurs attempted to fill the void with independently produced, all-black feature films. "Race movies" evolved, in large part, as a response to *The Birth of a Nation*. With the means of financing and distribution often out of reach for the average black filmmaker, all-black, independently produced films were sometimes the products of white producers. Yet, with an all-black cast, black themes, black writers, composers, and sometimes black directors, race-movies provided black audiences a meaningful glimpse of how they saw themselves and their world at the time.

Though there were perhaps hundreds of black film companies, of particular mention is the career of black filmmaker Oscar Micheaux. Like Edison, he was only mildly interested in the cinematic possibilities of the film medium. He was a businessman who wrote, produced, directed, and distributed his own pictures from 1919 to 1948. His subject matter varied widely, but he seemed particularly interested in melodramatic interpretations of personal events in his life. His scenarios included interracial romance, race and color consciousness, lynching, failed marriages, the black bourgeoisie, and issues of class. Most of his work was derived from his own novels, and he was known for his penurious approach to filmmaking. Notes Gehr for *American Film*, "[Micheaux] translated standard Western, gangster and melodramatic fare to a black context, but never without adding something unique, if only in the form of his own rough-hewn, self-taught technique." Not surprisingly, his surviving work has an unfinished look—an odd amalgamation of bad acting, thin storylines, and sometimes nonsensical editing. But the significance of Micheaux and his contemporaries is not aesthetic value. Their films provided work for many black artists and filled the void for a race of people desperately seeking an improved image. Though the scripts may not

have always been perfect, and the production values lacking in contrast to today's standards, in the all-black films, blacks could be doctors, lawyers, police officers, entertainers, and otherwise contributing members of society. Micheaux's surviving works include *The Homesteader* (1919); *Body and Soul* (1925; featuring Paul Robeson in his first film role), *Within Our Gates* (1920), and *The Exile* (1931).

In the 1910s, the American film industry evolved from a scientific oddity to an important big business. Notes Douglas Gomery, a scholar of the economic history of the film industry, "the former system of film sales 'by the foot' was soon replaced with the star system, a finely tuned network of national and international distribution, and the 'run-zone-clearance' system of exhibition." Fights over patents and the eventual monopolistic ownership of the means of production, distribution, and exhibition helped to change the structure of the film industry to one that came to be dominated by a handful of very powerful companies, including the Famous Players-Lasky Co. (later Paramount), the Goldwyn Picture Corporation, Universal, and the Fox Film Corporation. Film production shifted to the West Coast to escape patent litigation and unpredictable weather. Early in film's infancy, the names of the performers and directors of a film were not publicized. It didn't take long however, for the newly organized studios to exploit the profit potential of "star power." By 1915, Little Mary Pickford, nicknamed "America's Sweetheart," would earn a staggering \$10,000 weekly and the adoration of millions of fans; Theda Bara became the first screen "vamp," and Clara Bow the "It" Girl. The faces of Lon Chaney, John Barrymore, little Jackie Coogan, Rudolph Valentino, and a young Swedish newcomer named Greta Garbo would grace the covers of fanzines. Striking was the swift development of the new industry. Notes Czitrom, "[o]f all the facets of motion picture history none is so stunning as the extraordinarily rapid growth in the audience during the brief period between 1915 and 1918." As Europeans mobilized for war, the American motion picture industry became an important, legitimate, and powerful facet of American industry.

While film history books have most often chronicled the "great men" of the movies, a number of women managed to carve out respectable filmmaking careers in the new male-dominated industry. Alice Guy Blaché (also known as Alice Guy) was probably the first woman film director, directing nearly 200 films between 1897 and 1920. Born in Paris, by 1912 she used her own money to organize the Solax Film Company. Her mission, notes Alley Acker in *Reel Women*, was to "cater films specific to American tastes and acted in by American artists." Among her American films were *The Vampire* (1915), *The Heart of a Painted Woman* (1917), and *When You and I Were Young* (1917). Former teenage actress Ida May Park was one of several prominent women directors employed at Universal Studios during the late 1910s. Dorothy Arzner began as a script-girl during the silent film era and continued on a respectable career as a director of "women's pictures" well into the 1940s. Similar was the career of Virginia Vann Upp, a former assistant, screenwriter, producer, director, and executive producer and one of few early film women who would later crash the "glass ceiling" of a major film studio. While the current screenwriting industry has endured a reputation as being sexist, most notable are the contributions of women who wrote hundreds of scenarios and screenplays for the early silent pictures. Respected women writers like Grace Cunard, June Mathis, Frances Marion, Julia Crawford Ivers, and Anita Loos created or contributed to the scripts for such films as *Ben Hur* (1907), *The Four Horsemen of Apocalypse* (1914), *The Sheik* (1921), and *Tom Sawyer* (1917).

Although some filmmakers continued the style for years to come, the decade of the 1920s would be the final decade that the silent movie would be a viable, profit-making mode of production. The film industry in United States began to organize itself into what become known as the American Studio System. Though the reasons for this development are many, the evolution of the studio system is often attributed to the success of producer Thomas Ince. Ince's legacy to film history was not the production of a classic film. He was no cinema-auteur, nor did he enjoy a long reign as a mogul of some major studio. His contribution was the institution of "production conventions," including his absolute control over screenplays, shooting script content, and editing. His Inceville Studio served as a model for the efficient and cost-effective running of a motion picture factory. Under his guidance, directors had to adhere to tight budgets and pre-approved schedules. Moreover, he required that scripts not emerge extemporaneously from the muse of a director but be finished products that contained lines of dialogue. The power of the individual would diminish greatly. Variations of Ince's model would soon dominate American film production.

Soon cash would overpower creativity. Film became industry and filmmaking was business. American film studios evolved into factories for the large-scale production of mass entertainment. Filmmakers developed "conventions" and formulas: frequently used devices and techniques that were cheap, economical, easily recognizable, and easy to recreate over and over. Formulas allowed producers to remain within tried and true patterns; they helped keep costs contained since the same sets, props, and costumes could be used more than once. Early mass-produced films quickly began to appear very much alike, with the director's task being to create an "illusion" of variety (keeping well within, of course, the tight economic boundaries that would ensure profit margins). Among other things, producers in the 1920s quickly tried to capitalize on whatever fad, controversy, or preoccupation had caught the imagination of the public: "cycle filmmaking" was born. It is estimated that between 1920 and 1927, nearly 100 films apiece were produced about cars, aviation, and chorus girls, three of the decade's more popular subjects.

Filmmaking strategies in the 1920s also included the development of genres or distinctive categories of films, the continued exploitation of types and stereotypes, the homogenization of cultures, and the creation and propagation of a mythical and filmic view of manners and morals. The process of "standardization" that occurred in silent filmmaking in America had a profound effect on film structure and determined the images and stories audiences would see in the movies for generations to come.

The emerging Hollywood formula film came to include such tried-and-true conventions as: stories with a linear plot (a clearly defined beginning, middle, and "happy" ending); a focus on one or two central characters with clearly defined goals; and in general, a style that didn't call much attention to itself. Moreover, a high premium was placed on the conventions of genre (Western, gangster, women's picture) and the film's entertainment value. It was at this time that many of the more endearing, popular, and successful American film genres would emerge.

With its emphasis on wide open spaces, firearms, exciting action, clear delineation of heroes and villains, and Native American stereotypes, the Western emerged as one of the most popular and endearing genres in American filmmaking. Western formulas included the "myth of the West" stories, Western epics such as *The Iron Horse* (1925), and the Western star vehicle, which included the popular films of William S. Hart including *The Gun Fighter* (1916)

and *The Covered Wagon* (1923), and films featuring Tom Mix, Buck Jones, and Hoot Gibson.

The virile planter bedecked in a white suit; the ever-present mint julep; frail, white womanhood (whose existence never included a day of work!); and happy and contented darkie slaves who profited from the benevolence and care of the overseer—these were some of the conventions of "plantation tales." "The movies of the Antebellum South," notes Campbell, "with their increasingly familiar settings and character types . . . reinforced an image shaped cinematically since 1903."

The suave, dashing, acrobatic, athletic, swashbuckling hero of the action adventure film also found popularity in the silent film, as popularized by screen star Douglas Fairbanks. His films, including *The Three Musketeers* (1921), *Q, Son of Zorro* (1925), *The Black Pirate* (1926), and *Robin Hood* (1922), helped to establish a new kind of filmmaking with a new flow and tempo, dynamic editing, and a building of action scenes still evident in contemporary action adventure films such as the *Indiana Jones* series.

Although film as a visual medium was perfectly suited for physical gags and comic mime, the potential for true comedy went unrecognized by early filmmakers. At first, some directors copied the popular style of trick photography pioneered by Méliès in France, but a true comic style had yet to be identified. By 1913, an amalgamation of foreign and American performers and producers came to create what has been described as American filmmaking's most enduring contribution to the history of film—that of silent screen comedy.

Mack Sennett was a Canadian who became head of the Keystone Co. in 1912. He is the originator of silent slapstick comedy, high-action films signified by their purely visual acrobatic humor including pie-throwing, cliff-hangers, auto-chases, explosions, and last minute rescues. He is notable for his creation of the zany Keystone Cops, and is responsible for "discovering" comedy greats Fatty Arbuckle, Ben Turpin, and Charles Chaplin. Between 1913 and 1935 he produced thousands of one and two-reel films and features, helping to fine-tune a new screen genre in a way that no one ever had done before.

America's favorite comics also included Harry Langdon and Buster Keaton, whose deadpan countenance never changed even as he struggled to hang onto a moving locomotive; Harold Lloyd with his wide-rim glasses, dangling precariously from the hands of a clock suspended over a busy street in a "comedy of thrills"; and Stan Laurel and Oliver Hardy, who continued their successful careers beyond the coming of sound.

By far the most celebrated figure in silent filmmaking was Charles Chaplin, an English vaudevillian who made his first appearance in America in a 1913 film by Keystone Studios producer Mack Sennett. A master of the art of mime, he developed a unique style of humor that exploited the connection between comedy and tragedy—a style that was in sharp contrast to a Sennett picture. He developed his famous persona, the "Little Tramp," while still working for Sennett. In 1919 he formed a partnership with three of the more powerful names in film—Mary Pickford, Douglas Fairbanks, and D.W. Griffith—that they called the United Artists Corporation. There Chaplin produced *A Woman of Paris* (1923) and his signature film, *The Gold Rush* (1925), where in a classic scene he serves up a boiled boot and devours it like a gourmet meal. The success of this film and others caused him to become the most popular, the highest paid, and the most successful figure in film history. "During the silent era," notes Silver for *American Film*, "[Chaplin] was regarded as a indisputable genius by nearly everyone who cared about movies in any remotely serious

matter.” Chaplin continued to produce “silent” pictures well after the evolution of sound in film.

The exigencies of World War I and the launching of the industrial age helped to melt away Victorian-age ideals in American society. Women cut their hair and donned short dresses for a night of dancing to the sultry sounds of black jazz artists like Louis Armstrong and Bessie Smith. Formerly secure taboos like divorce were discussed more freely. For some, it was an exhilarating time when the champagne flowed and the party was endless. It is not surprising that this prevailing mood was depicted on Hollywood film screens. Divorce, adultery, sex, drinking, and drugs were now treated openly in the same medium that once gasped at the sight of a woman’s bare ankle. Rudolph Valentino resonated a smoldering, on-screen sexuality in films like *Blood and Sand* (1922), while a young Greta Garbo made her U.S. film debut with John Gilbert in the erotic *Flesh and the Devil* (1926).

But dark clouds formed on the Hollywood horizon, as a series of scandals rocked the film world. First, there was Chaplin’s highly publicized divorce in 1920. And then Mary Pickford, accused of bigamy for her liaison with Douglas Fairbanks (while still married to Owen Moore). Charles “Fatty” Arbuckle, one of the country’s more cherished comic figures, was falsely implicated in the brutal rape and death of a young starlet during a party that was described as wild, drunken, and orgiastic. The lurid details of the crime were widely exploited in the press and, even though he was cleared of any charges, Arbuckle’s career was over. In 1922, actor Wallace Reid, positioned as an “all-American boy” type, was found dead of a drug overdose. Director William Desmond Taylor was found murdered, and the two women film stars he was involved with (Mabel Normand and Mary Miles Minter) were implicated in the crime that was never solved. Notes Champlin in an article on the Taylor murder for *American Film*, “all were seen as proof that Hollywood, on and off-screen, was an affront to decent men and women everywhere.”

The public outcry was tremendous. *Birth of a Nation*, with its riots and Klan organizing, had shown what damage a film could create. Now this. Some called for government legislation of the film industry. To stave off government regulation, the industry once again turned to self-regulation. They hired a conservative, Presbyterian elder named William Hays to head their trade association, the Motion Picture Producers and Distributors of America (MPPDA). Among other things, a list humorously referred to as *Do’s, Don’t’s and Be Carefuls* was published to serve as a kind of guideline for producers. In truth, the Hays Office was ineffectual, possibly even corrupt. But the die was cast. Censorship of the movies was reality. And as silent pictures evolved into sound, a much more stringent and limiting form of censorship would emerge that would influence filmmaking for decades to come.

Even as American movies were fitted into formulas, shrouded in conventions, and stamped-out in an assembly-line process, the artistic potential of the medium continued to emerge. It was during the era of silent filmmaking that some of the greatest artistic achievements in film were produced. And nowhere was the film-as-art movement more evident than in Europe. Emerging from the rubble of World War I, German Expressionists, Soviet Revolutionaries, and French artists and intellectuals sought freedom from the conventions, behaviors, and structures of the former world order. The roots of the phenomenon can be attributed to artistic movements currently in vogue, and the influence of American directors like D.W. Griffith. European filmmakers were particularly interested in the “visual potential” of

the medium. They experimented freely with makeshift mobile cameras, bold, new editing techniques, and revolutionary optical effects such as masks, supers, and dissolves. Soon, film production in 1920s Europe would pose the strongest competition ever to the growing Hollywood machine.

In Germany, the art movement known as Expressionism first became important in painting around 1910 and was later adapted to theatre and literature. The motto of filmmakers who adapted the expressionist style was, “the film image must become graphic art.” Expressionist artists tended to distort or exaggerate natural appearances in order to create a reflection of an inner world. The stylistic techniques of Schauerfilme (films of fantasy & horror), notes Cook, included extreme stylization—like a “moving expressionist woodcut.” The effect was heavily dependent upon *mise-en-scène*, including geometrically stylized sets and nightmarishly distorted decor, actors with heavy make-up moving in jerky or slow motion, chiaroscuro (or Rembrandt) lighting, and unusual camera work. In addition to the prominent expressionist artists hired to design and paint film sets, important German filmmakers include Carl Meyer, with his *Das Kabinett des Dr. Caligari* (1919); F.W. Murnau, with *Nosferatu, A Symphony of Horrors* (1922); and Fritz Lang, with *Dr. Mabuse, der Spiler* (1922) and *Metropolis* (1926-27). So prominent and striking was the work of these men that Hollywood felt compelled to lure many of them away to produce films for American movie screens.

In Denmark, notes Cook, Carl Dreyer concerned himself with “communicating with the audience’s soul” in his monumental *The Passion of Joan of Arc* (1928), which featured Renee Falconetti, who cropped her hair and wore no make-up for the role. In sharp contrast to America’s straightforward approach, Dreyer’s directing technique emphasized close-ups that could relay Joan’s “spiritual agony.” It was the success of French silent filmmaking that perhaps posed the most competition for America. Between 1919-1929, film artists in France developed a style that offered interesting alternatives to the classical Hollywood style. Film, felt the French, should owe nothing to literature or theatre but be an occasion for the artist to express feelings. After surviving near destruction during World War I, the French film industry rose like a phoenix to produce some of the finest silent motion pictures in the history of film. Of particular mention is the work of Abel Gance and his production of the epic *Napoleon* (1926). Notes Cook, “Cameras were “carried at arms length, attached to swings, strapped to a horse’s back and sent into the air in balloons.” Gance used 18 cameras during the shooting and introduced the earliest use of wide-screen effects.

“Of all arts, for us cinema is the most important,” stated Russian revolutionary Vladimir Lenin. Probably the most striking and influential of all the European styles to emerge during the period is the film editing technique that came to be known as Soviet montage. Sergei Eisenstein is possibly the most famous filmmaker to emerge from the silent period. He was a Marxist intellectual and a veteran of the abortive 1905 revolution who saw film as a mass medium designed to appeal to and educate millions of illiterate Russian peasants. His *The Battleship Potemkin* (1925) is considered by some to be one of the most influential films ever made, and is even today the focus of analysis and marvel. Eisenstein’s stylistic techniques represented a sharp contrast to the style of American pictures. Eisenstein communicated primarily by means of emotion. He highlighted no individual protagonist (large groups could form a collective hero), used non-actor “types,” and promoted a kind of documentary reality in his use of photography. Most significantly, he pioneered a new editing technique, one based on “psychological stimulation”

rather than narrative logic. As opposed to the seamless or “invisible” editing” that signified American films, Eisenstein used a juxtaposition of shots to create a concept and/or emotion. He felt that in order to create the maximum effect (a jolt for the viewer) shots should not fit together perfectly but create a montage of “shock stimuli.”

The reality of a second European war would curtail the short-lived triumph of film production in Europe. A host of European actors, performers, designers, and directors made the transition to the sound stages of Hollywood—with varying degrees of success. While no one style would have a profound effect on the American film industry, the influence of montage editing, crosscutting, wide screen, and mosaic narrative would inspire generations of filmmakers on both continents for generations to come.

More than merely a repository of the past, the era of the silent movie represents nearly three decades of sex and scandal, art and angst, sin and censorship, and crime and comedy. From the Gilded Age to the Jazz Age, the silent picture has left behind striking images of American society as it swelled to include the recently manumitted and the thousands of immigrants from many nations who appeared on its shores. From the Black Maria to motion picture palaces, from seconds-long shorts to feature-length spectacles, from a film-by-the-foot to multinational business, the silent film helped create new and profitable forms of commerce, forms which continued on in the guise of the talking film which has dominated the industry ever since. A combination of myth proffering, image building, and empire construction, the legacy of the silent film still endures, and remains a vital and potent facet of human cultural history.

The Silver Surfer

The Silver Surfer is a superhero appearing in Marvel comic books. Created by Stan Lee and Jack Kirby in 1965, the Silver Surfer is a noble alien endowed with the “power cosmic.” He travels throughout the universe on a surfboard championing good over evil. During the late 1960s the Surfer’s comic book became unusually “adult” in tone as the character became a vehicle for Lee’s existentialist musings and commentary on the failures of human civilization.

The Surfer won a sizable cult following especially among college students. But it was too small to support the series, which was canceled after only a few years. Nevertheless, Lee’s ambitious writing influenced young creators seeking to “make a statement” even in a medium widely dismissed as ephemeral by the mainstream public. And the Surfer’s audience later grew; Marvel revived the character’s series in 1986, and it remained a popular title in the 1990s.

Simon and Garfunkel

Simon and Garfunkel, the extremely popular folk-rock duo of the 1960s, was one of the first groups to emphasize poetry in its lyrics, demonstrating that lyrical complexity and pop music were not mutually exclusive. Simon and Garfunkel were also very influential because, along with the Byrds and a handful of other artists, they were among the first to meld acoustic folk instrumentation with the sounds associated with rock ’n’ roll: electric guitar, bass, and drums. Significantly, and symbolically, Simon and Garfunkel’s songs were featured prominently in the 1967 Mike Nichols film *The Graduate*, a film starring Dustin Hoffman that is very much about the 1960s generation’s coming of age. Taken as a whole, their albums—*Wednesday Morning, 3 A.M.*, *Sounds of Silence*, *Parsley, Sage, Rosemary and*

Paul Simon (right) and Art Garfunkel.

Thyme, *Bookends*, *The Graduate* soundtrack, and *Bridge Over Troubled Water*—also provide an eloquent soundtrack to the turbulent second half of the 1960s.

The duo, comprised of Paul Simon (1941—) and Art Garfunkel (1941—), initially met at their elementary school in Forest Hills, New York, and soon realized that they could harmonize to the Doo-Wop songs that were popular on the radio. Soon the two began singing some of the many songs Simon was writing and, when they were both sixteen, the two recorded the song “Hey Schoolgirl.” This Everly Brothers-inspired song was released as a single on the independent label, Big Records, under the pseudonym Tom & Jerry, and it sold respectably, reaching the *Billboard* Top 50. The two continued to work with each other intermittently throughout the late-1950s and early-1960s, though they primarily remained solo artists during this time. Garfunkel recorded as Artie Garr and Simon had modest chart success as a member of Tico and the Triumphs (“Motorcycle” briefly appeared at number 99 in 1962) and as Jerry Landis (“The Lone Teen Ranger” topped off at 97 in 1963).

The two got back together in 1964, playing in coffee houses in New York’s Greenwich Village and recording the album *Wednesday Morning, 3 A.M.*, which sold poorly. The two split up again, with Simon going to England to eke out a living by performing live and recording his first solo album. While Simon was away, folk-rock

producer Tom Wilson added electric bass, guitar, and drums to an obscure track from *Wednesday Morning, 3 A.M.* named “Sounds of Silence,” which immediately topped the *Billboard* pop singles chart in 1965. Hearing of his unexpected overnight success, Simon promptly returned to the States for a promotional tour and to record the duo’s second album, which was primarily comprised of songs from Simon’s U.K. solo album. That second album, *Sounds of Silence*, contained the popular remixed version of the title track and another Top 40 hit, “I Am a Rock.” The popularity of their subsequent albums made Simon and Garfunkel among the most popular musical artists of the 1960s, and Paul Simon’s complex and occasionally pretentious poetry influenced a number of other imitators.

Because Simon was not a prolific writer (most of the material contained on their first three albums was written between 1962 and 1965), the songs came more slowly near the end of their career together. This, along with the duo’s increasing inability to get along, was one of the major reasons Simon and Garfunkel’s final album, *Bridge Over Troubled Water*, took two years to record. This album, however, was their most popular and contained their most complex and varied material, from the genre dabbling of “Cecilia” and “El Condor Pasa” to the symphonic grandiosity of the title track (all of which were Top Forty hits). Since their breakup in 1970, the duo have only played together at two major concerts, a 1972 fund-raiser for

presidential candidate George McGovern and a 1981 free concert in New York City's Central Park, which yielded the album, *The Concert in Central Park*.

Simon, Neil (1927—)

Since the early 1960s, Broadway has almost never been without a Neil Simon hit play, which has earned the prolific New Yorker the title of the world's most commercially successful playwright. In his

earlier work, with such hits as *The Odd Couple* and *The Sunshine Boys*, Simon garnered a reputation for churning out charming comedies that were virtually guaranteed long Broadway runs. But in his later work, including the 1980s bittersweet autobiographical trilogy composed of *Brighton Beach Memoirs*, *Biloxi Blues*, and *Broadway Bound*, Simon conclusively proved that he was capable of more than light comedy. In the early 1990s, when Simon's *Lost in Yonkers* earned four Tony Awards and the prestigious Pulitzer Prize, the transformation of Neil Simon from Broadway wonder to "serious author" was complete. With plays that both bespeak and laugh at the human condition, Neil Simon is one of the world's best-loved playwrights and a fixture of American popular culture.

Born Marvin Neil Simon in the Bronx, New York on July 4, 1927, America's greatest living comedic playwright was raised in a troubled Depression-era household, which would ultimately provide the inspiration for much of his future work. Growing up with a father who frequently abandoned his family, and a mother for whom young Neil felt a great sense of responsibility, the boy looked up to his older brother, Danny, who would become his most important influence. With eight years difference in their ages, Neil idolized his older brother, who had dropped out of high school to become a comedy writer. Danny Simon, about whom Woody Allen would later say, "Everything I know about comedy I learned from Danny Simon,"

Neil Simon

was a comic genius. But so, as it all turned out, was his younger brother, Neil, whom Danny nicknamed Doc, because of Neil's childhood infatuation with a toy medical set. By the time Doc, as he was always called, was sixteen, the two brothers had begun working together.

During World War II, both Simon brothers joined the armed forces, and when they returned to New York City, they soon found work writing for television, which was in its infancy. During the early 1950s, in what would come to be known as the Golden Age of Television, Danny and Doc Simon were staff writers for such classic programs as Sid Caesar's *Your Show of Shows* and Phil Silvers's *The Sergeant Bilko Show*. However, although the Simon brothers almost exclusively wrote for small screen, one of their sketches did make it to Broadway in the 1956 revue *New Faces*, starring Maggie Smith.

After working with his brother for many years, Neil Simon went out on his own. But as the quality of the shows for which he wrote gradually began to dwindle, Simon began dreaming of writing for the theatre. He began his first play when he was thirty years old. Almost two years and twenty-two drafts later, *Come Blow Your Horn*, based on Simon's family and, specifically, the relationship between Neil and Danny, opened on Broadway in 1961. Although the initial revues were lukewarm, audiences loved it. And when Noel Coward and Groucho Marx were quoted in a Broadway column as finding the play hilarious, *Come Blow Your Horn* took off, playing 677 performances.

Neil Simon's career as a playwright was launched. His next effort was the book for a 1962 Cy Coleman-Carolyn Leigh musical called *Little Me*, a vehicle for Sid Caesar, for whom Simon had previously written. A year later, *Barefoot in the Park*, directed by first-timer Mike Nichols and starring Elizabeth Ashley and Robert Redford, opened at the Biltmore. Although the play would go on to become a huge success, running for over 1,500 performances, Simon was greeted with the dual-edged reviews that would forever plague him. Howard Taubman of *The New York Times* wrote that "Mr. Simon evidently has no aspirations except to be diverting, and he achieves those with the dash of a highly skilled writer."

Two years later, Simon followed up with his second unqualified hit, *The Odd Couple*, starring Walter Matthau and Jack Lemmon, for which he won the Tony Award for Best Author. By 1966, with *Barefoot in the Park* still running, Simon, who had also written the book for the 1966 Bob Fosse musical, *Sweet Charity*, was now earning approximately \$20,000 a week as a playwright. Not yet forty years old, Simon was already the most commercially successful playwright in the world.

Throughout the 1960s, Simon continued to write hit after hit—*Plaza Suite*, *Promises, Promises*, *Star Spangled Girl*, and *The Last of the Red Hot Lovers*. However, despite this string of successes, Simon continued to be attacked by the critics for his glib comedy and commercialism. And so he set out to write his first "serious play." *The Gingerbread Lady* opened in 1971; *The Prisoner of Second Avenue* followed a year later. Both were successful, but still critical recognition continued to elude him. Then tragedy struck in his personal life in 1973 when his wife of twenty years and the mother of his two daughters, Joan Baim Simon, died of cancer. Always a prolific writer, Simon struggled through Joan's illness and death while writing *The Sunshine Boys*, a play about aging vaudevillians, which would open at the end of 1973.

By the early 1970s, Simon had written ten Broadway plays, which had grossed over \$30 million and had run almost 7,000

performances. He also had written three books for musicals, which had run over 2,000 performances, and still he continued to work, rarely going a day without writing.

Just a year after his wife's death, Neil Simon married actress Marsha Mason, an Academy-Award nominated actress and the star of Simon's 1974 play, *The Good Doctor*. Not long thereafter, the couple moved to Hollywood, where they soon became popular members of the film community. Although Simon had written a number of screenplays based on his Broadway hits—*Barefoot in the Park*, *The Odd Couple*, *Plaza Suite*—he soon began to write exclusively for films, usually creating vehicles in which Marsha Mason starred. *The Goodbye Girl*, *Chapter Two*, and *Only When I Laugh* earned Mason three Academy Award nominations for Best Actress. Simon himself was nominated for four Oscars for screenwriting. But Simon's heart was still in the theatre, and so he continued to write for Broadway, where his *California Suite* opened in 1976—a play that the *New York Times*' Clive Barnes called "Plaza Suite gone West."

Throughout his prolific career, much of Simon's material continued to be inspired by the people in his life. He said, "I've written about my brother over and over, my mother and father, my past wife, good friends. I've tried to write about them truthfully; these are all people I care for. I try to show the good and bad parts." In the early 1980s, Simon embarked on a trilogy that would chronicle his younger years. The first play, *Brighton Beach Memoirs*, opened on Broadway in 1982, with Matthew Broderick playing Simon's alter ego, Eugene. Chronicling the trials and tribulations of a Brooklyn family struggling through the Depression, *Brighton Beach Memoirs* was awarded Best Play by the New York Drama Critics Circle. Running for over 1,500 performances at the Alvin, the theatre was renamed the Neil Simon Theatre during the run of the play.

In 1983, Neil Simon and Marsha Mason were divorced. The next year, Simon returned to Broadway with *Biloxi Blues*, the second play in his autobiographical trilogy. This time, Simon was awarded the Tony for Best Play. Matthew Broderick returned to Broadway as Eugene, undergoing Army Basic Training during World War II. It would be two more years before the third play of the trilogy, *Broadway Bound*, would find its way to the New York stage.

Simon followed up his award-winning trilogy with a witty piece about an attempted suicide at a dinner party, called *Rumors*, which ran for 531 performances on Broadway during the 1988-89 season. But his next play, *Jake's Women*, would prove one of Simon's first flops in years, initially not even making it to Broadway after a tryout at the Old Globe in San Diego. Thus, it came as a wonderful kind of redemption when Simon's 1991 play, *Lost in Yonkers*, received not only four Tony Awards, including Best Play, but also the coveted Pulitzer Prize. Because Simon had long been decried as a "popular" playwright, he had never expected to win the prestigious Pulitzer. Finally, after years of commercial success, Simon had been accepted into the pantheon of America's great playwrights.

Throughout the 1990s, Simon continued to write at his usual breakneck pace, although his Broadway hits were fewer and farther between. With plays appearing on the London stage and even off-Broadway, Simon focussed his energies on reworking *Jake's Women*, writing *The Goodbye Girl* for the stage, and even penning the first volume of his memoirs, *Rewrites*. Although Simon is not the prolific playwright he once was, he still remains one of the theatre's most recognizable figures. A Pulitzer Prize, New York Drama Critics

Circle, and Tony Award-winning playwright and an Academy-Award nominated screenwriter, Neil Simon is one of the icons of twentieth-century film and theatre—a man whose comic view of American life has helped to shape popular culture.

Simon, Paul (1941—)

As one half of the 1960s folk-rock team, Simon and Garfunkel, Paul Simon's place in pop music history as a first rate songwriter was

sealed. But after Simon's split with his partner in 1970, this Newark, New Jersey-born musician went on to not only distinguish himself as a veteran songwriter with a substantial body of work, but as a performer who experimented with a variety of musical genres. Throughout his career as a solo artist, Simon has incorporated salsa, jazz, reggae, gospel, doo-wop, Caribbean, South African, and Brazilian music into his finely crafted pop songs. One of his most well-known works, the Grammy-winning album *Graceland*, drew both protest and praise for his use of South African musicians during the height of the Apartheid regime in the 1980s. Paul Simon's music-making method is also interesting for the questions of cultural identity and appropriation that it raises.

Although Simon had experimented with a variety of styles that strayed from Simon and Garfunkel's poetic folk-rock formula when he was part of that duo ("Cecilia" and "El Condor Pasa," for example), Simon's first post-breakup solo record was more eclectic. The Latino music influence was evident on that self-titled album's cut "Me and Julio Down by the Schoolyard," and the Caribbean-flavored song "Mother and Child Reunion," which was recorded in Jamaica. His even more varied second album, *There Goes Rhymin' Simon*, was recorded at the Muscle Shoals studio, where dozens of classic soul records were made. It contained a Dixieland number, "Mardi Gras," mixed in with songs such as "Tenderness" and

Paul Simon

“Loves Me Like a Rock,” which featured the gospel-like vocals of the Dixie Hummingbirds. The rest of his albums followed this precedent (excepting the more sober 1975 album, *Still Crazy After All These Years*), with each one charting new musical paths that Simon explored, culminating in 1986’s Grammy-winning world music fusion album, *Graceland*.

Graceland is an interesting album because not only is it chock full of Simon’s consistently good pop songs, but it has also sparked many debates surrounding the political and cultural implications of a white American working with black South Africans under the Apartheid regime. While the South African vocal group Ladysmith Black Mambazo and other native musicians contributed to the “sound” of the songs, *Graceland*’s songwriting credits were exclusively his. This is significant from an intellectual property vantagepoint, but also from the standpoint of identity politics. Simon could legally “capture” indigenous forms of music and make them his own and, as a famous white American artist, he also had the power to mediate the representation of black South Africans. The critical discourse that surrounds *Graceland* can also apply both to a critique of Simon’s frequent use of “exotic” music throughout his career and to the Western music industry’s and Western consumers’ relationship with World Music.

Throughout his solo career, Simon occasionally rejoined Garfunkel, once for a George McGovern fund-raiser for the 1972 election and later during a free Central Park concert for an estimated half-million fans. Further, Garfunkel intermittently joined Simon on stage as a guest at his concerts and the two worked together on the single “My Little Town,” which was featured both on Simon’s *Still Crazy After All These Years* and Garfunkel’s *Breakaway* albums.

Simpson, O. J. (1947—)

O. J. Simpson was one of America’s top college and professional football players in the late 1960s and 1970s, but by century’s end he was being remembered not for his gridiron exploits but for his role as the defendant in one of the most celebrated murder trials of the 20th century. Accused of the 1994 slayings of his estranged wife, Nicole Brown Simpson, and of her friend Ron Goldman, Simpson was brought to trial in Los Angeles in a case that attracted enormous media attention both because of his earlier sports celebrity status and because of his race. From his arrest until his eventual acquittal, the Simpson case divided Americans along racial lines, with most blacks believing in his innocence and most whites convinced that he was guilty. Yet prior to these sorry events, Orenthal James Simpson was one of America’s most beloved sports heroes. In the late 1960s, he was a college gridiron idol and Heisman Trophy winner. In the 1970s, he starred in the National Football League and earned a reputation as

one of the greatest running backs in the history of college and professional football.

O. J. Simpson, a cousin of Chicago Cubs baseball player Ernie Banks, was born on July 9, 1947 in San Francisco. At age two he suffered from rickets, and wore leg braces for the next three years. In 1960, when he was thirteen, he joined the Persian Warriors, a San Francisco-based street gang. Upon his entry into the Pro Football Hall of Fame in 1985, his mother Eunice observed, “I didn’t really think he’d turn out the way he did, but he always said you’d read about him in the papers someday and my oldest daughter would always say, ‘In the police report.’”

Athletics eventually consumed Simpson’s life, and he realized he had a special talent for carrying a football. He earned national attention during two varsity seasons as star rusher at the University of Southern California. In 1967, he scored 13 touchdowns, and added 21 more the following season. In both years he played a total of 18 games, rushing for 3,187 yards. In his senior year, he was handed the ball 40 times in the USC-UCLA contest, allowing him to set an NCAA record of 334 carries in a season. In that game, he ran for 205 yards; his season total of 1,654 yards gained was another NCAA milestone. Simpson earned All-American honors in 1967 and 1968, and topped off his college career by winning the 1968 Heisman Trophy. In 1985, he was elected to the National Football Foundation and College Hall of Fame. John McKay, his USC coach, once observed, “Simpson was not only the greatest player I ever had—he was the greatest player anyone ever had.”

Simpson became the number one draft pick of the NFL Buffalo Bills. He played for the Bills from 1969 through 1977, during which time he scored 70 touchdowns and rushed for 10,183 yards on 2,123 carries. In 1972, he gained over 1,000 rushing yards for the first time, and was named AFC Player-of-the-Year. The following season, he set a single-game NFL rushing record with 250 yards ground out against the New England Patriots. In the season finale, in which the Bills faced the New York Jets, Simpson ran for 200 yards, allowing him to finish up with 2,003 yards (in 332 attempts) and become the first player in league history to amass 2,000-plus rushing yards in a season. It was Simpson’s greatest year as a pro, and he was named the NFL’s Most Valuable Player. He was to enjoy several other solid years with the Bills, along with one more superior campaign: 1975, in which he rushed for 1,817 yards, set an NFL record for touchdowns in a season with 23, and was again named the AFC’s Most Valuable Player.

While with the Bills, Simpson played in the NFL Pro Bowl on six occasions, in 1969 and between 1972 and 1976. Two years later, the aging runner, disheartened that the Bills had never reached the Super Bowl, requested a trade to a West Coast team. He soon found himself with the San Francisco 49ers, from which he retired the following year. He eventually was elected to the Pro Football Hall of Fame, and named to the NFL’s 75th Anniversary Team.

Simpson’s friendly smile, movie-star looks, and extroverted personality also allowed him to become a media fixture who appealed to a cross-section of Americans. While still starring on the gridiron, he established himself as an actor. In 1967, while at USC, he played a student on TV’s *Dragnet* ‘67; the following year, he appeared as himself in “The Big Game,” an episode of *Here’s Lucy*. In 1974, while playing for the Bills, he debuted on the big screen in *The Klansman* (1974) and *The Towering Inferno* (1974) and went on to appear in *The Cassandra Crossing* (1976), *Capricorn One* (1978),

O. J. Simpson (#32) in a game against the New York Jets.

and three *Naked Gun* comedies as well as additional television series and made-for-TV movies.

In retirement, Simpson remained in the public eye as an actor, a football broadcaster on ABC and NBC and, most famously, a Hertz Rent-a-Car spokesperson who would be seen dashing through airline terminals in TV commercials. Just around the time when Nicole Brown Simpson and Ron Goldman were murdered, Simpson had recently starred in *Frogmen* (1994), a TV series pilot, and the third *Naked Gun* feature had just played in movie theaters.

Simpson Trial

On the night of June 12, 1994, Nicole Brown Simpson and her friend Ronald Lyle Goldman were viciously stabbed to death outside the former's townhouse in Brentwood, California. The murders immediately received an extraordinary amount of media coverage because Nicole Brown was the ex-wife of former football star, minor film star, and celebrity pitchman O. J. Simpson. O. J. Simpson came under immediate suspicion in the murders, was briefly questioned by detectives assigned to the case, and formally notified four days later of his impending arrest on double homicide charges. Rather than surrender, however, Simpson left behind a maudlin note for the media, which some construed to be a suicide note, and took off with his friend A. C. Cowlings in Cowlings's white Bronco. After a few hours of uncertainty and suspense, police cars located the white Bronco on the L.A. freeway and began pursuing it in what the media,

O. J. Simpson's police mug shot.

televising the dramatic event to a spellbound worldwide audience, quickly dubbed a “low-speed chase.” In contrast to the public animosity that would soon make Simpson a social outcast, hundreds of people lined the freeway overpasses above the bizarre procession and waved handwritten signs of support for the “Juice.” The strangest chase in LAPD history ended at Simpson’s estate in Rockingham, where he was quietly placed under arrest, out of camera range of the circling news helicopters, and taken to the L.A. County Jail. Eighteen months later, Simpson, acquitted of all charges, would again be escorted home by the LAPD, but this time to the jeers and contempt of his neighbors and the scorn of much of white America. The reaction to Simpson’s acquittal, as well as belief in his ultimate innocence or guilt, was and still is sharply divided along racial lines, with African Americans tending to support Simpson and white Americans ostracizing him. The process by which Simpson became legally vindicated but socially exiled is indicative of the force of the mass media in late twentieth-century America.

The international spectacle of the Bronco chase was only a hint of the media obsession to come regarding the Simpson case. All of the major figures involved in the investigation and trial procedures would become celebrities in their own right, courted by the media and in

many cases given multi-million dollar book deals. The preliminary hearing and the trial were televised in whole or in part by the major networks, and night after night the cable news stations, such as CNN and MSNBC, devoted hours of often-heated analysis from mostly obscure legal pundits to the day’s legal developments. (Some of these legal pundits, such as Roger Cossack and Greta Van Susteren, soon gained their own regular cable shows, and much later some of the Simpson trial veterans, such as Johnnie Cochran and Marcia Clark, ironically became pundits themselves.) Millions of viewers across the United States followed the television proceedings throughout the day, and millions more watched the nighttime trial summaries, commentary, and analysis. The wall-to-wall coverage and the high ratings ensured that future extended real-life dramas, such as the 1998 national sex scandal involving President Bill Clinton and a young White House former intern Monica Lewinsky, would receive the same exhaustive treatment from the media.

Simpson was formally arraigned on June 20, 1994, entering a plea of “not guilty.” Thus far, public opinion seemed to have more or less reserved judgment on Simpson’s guilt, but all of that began to change on June 22. That was the day that the District Attorney’s office leaked to the media a tape of a frantic 911 call made by Nicole Simpson back in October of 1993. In that tape, Nicole tearfully pleads for help as an enraged Simpson shouts and swears in the background. The contrast between the chilling tape and Simpson’s genial public persona could not have been more striking, and many students of the case point to the release of the tape as the beginning of the public shift of opinion against Simpson. Two other instances of domestic violence in the Simpson household then received widespread media play: a 1985 incident that resulted in no formal charges, and a 1989 incident in which Simpson was charged but eventually pleaded “no contest.” On the basis of such abusive incidents, the District Attorney’s office, under the leadership of D.A. Gil Garcetti, began formulating its theory of the murders: that O. J. Simpson, already a violent wife-batterer, had killed Nicole and her friend Goldman out of jealousy and rage. Thus began a public debate between various experts as to whether Simpson fit the “profile” of an abuser-turned-murderer.

However, contrary to most expectations, the prosecution’s emphasis on domestic violence eventually proved to be a losing strategy. What ultimately carried the day for Simpson was a defense that compellingly argued that a combination of LAPD malfeasance (evidence planting and tampering) and crime lab incompetence (evidence contamination) had conspired to make an innocent man look guilty. Central to this defense strategy was the ambiguous figure of Detective Mark Fuhrman, one of the original investigating detectives at the Bundy crime scene. Fuhrman was in some ways a star witness for the prosecution: movie-star striking in appearance and unwaveringly methodical in crime-scene investigation. However, according to some sources, Fuhrman had a reputation as a racist who allegedly targeted black suspects for brutal treatment. Problematically for Fourth Amendment advocates, Fuhrman also had entered Simpson’s Rockingham estate on the night of the murders without a warrant, ostensibly because he and fellow detectives Tom Lange and Philip Vanatter, having just come from one bloody crime scene, feared for Simpson’s safety and did not consider him a suspect. (Judge Lance Ito later characterized Vanatter’s version of this story as demonstrating “reckless disregard for the truth.”) Fuhrman provided a convenient way for defense lawyers to negate one of the most damning bits of evidence against Simpson: a bloody leather glove found by Fuhrman at Simpson’s Rockingham home that matched one left behind at the

Bundy crime scene. The defense theory, which was formulated early on and never so much explicitly stated in court as implied, was that racist Fuhrman, alone behind Simpson's house, had motive and opportunity to plant the bloody glove, surreptitiously lifted from the Bundy crime scene, and thus make the case against Simpson ironclad. Such a theory had undeniable resonance in racially troubled Los Angeles, which still remembered all too clearly the deadly riots that followed the 1992 acquittal of four LAPD officers charged with beating African-American motorist Rodney King.

However, it would be some months before the defense could square off against Fuhrman and the LAPD in open court. In July of 1994 at the preliminary hearing, Judge Kathleen Kennedy-Powell found that there was enough evidence for Simpson to stand trial. A few weeks later, Judge Lance Ito became the trial judge. Jury selection began in September and continued into November. The jury was predominantly African American, a fact that would later cause much controversy. The attorneys who represented Simpson, some of them nationally famous, became hyperbolically known in the media as "The Dream Team." Simpson's team of lawyers at various times included F. Lee Bailey, Bob Blazier, Shawn Chapman, Johnnie Cochran, Alan Dershowitz, Carl Douglas, Robert Kardashian, Ralph Lotkin, Peter Neufeld, Barry Scheck, Robert Shapiro, Skip Taft, and Bill Thompson. Robert Shapiro first organized Simpson's defense. Later, the locally famous African-American lawyer Johnnie Cochran joined the defense team and eventually became its lead attorney after public disputes between Shapiro and F. Lee Bailey caused a severe rift in strategy. Against this team were arrayed some forty full-time prosecutors, of which Marcia Clark and Chris Darden (an African American) became the most visible advocates for the People's case.

Clark and Darden delivered opening arguments in the case of *The People vs. O. J. Simpson* on January 24, 1995. The trial lasted for nine months, during which the rapt television audiences witnessed many defining moments, some of high drama and others of low comedy, that have since passed into legal lore. A partial list of those moments includes: Nicole's sister Denise crying on the stand as she described Simpson's contemptuous and abusive behavior toward Nicole; the jury field trip to Simpson's elaborately staged Rockingham estate; the cross-examination of Detective Mark Fuhrman by F. Lee Bailey, in which Fuhrman unwisely denied using the word "nigger" in the previous ten years; the befuddled demeanor and tortured vocabulary of Kato Kaelin, a houseguest of Simpson's who had been with Simpson on the night of the murders; the rigorous cross-examination of LAPD criminalist Dennis Fung by Barry Scheck, in which Fung admitted to numerous errors in processing the crime scene; the horrendous decision by prosecutor Darden for Simpson to try on the killer's leather gloves, which apparently did not fit, in front of the jury; the defense team's first courtroom suggestions that evidence may have been planted by the LAPD in order to frame Simpson; the playing to the jury of tapes which conclusively refuted Fuhrman's contention that he had never said "nigger" in the past ten years; Fuhrman's subsequent pleading of the Fifth Amendment as to whether he had planted evidence in the case; the calling of two sinister-looking mob informants to impeach the testimony of one of the case's detectives; Simpson's in-court assertion to Judge Ito that "I did not, could not, and would not commit this crime;" and Clark's impassioned rebuttal to the defense's closing arguments.

But by far the most dramatic days of the trial were October 2 and 3, when the jury deliberated the case for only four hours before reaching a verdict. Judge Ito decided to delay the announcement of

the verdict until the following day, thus allowing one full night of feverish pundit speculation as to the outcome. On the morning of October 3, 1994, as much of the nation halted work to watch the suspenseful reading of the verdict, Simpson was found "not guilty" of the murders of Nicole Brown Simpson and Ronald Lyle Goldman. Television viewers across the nation saw news video of white audiences stunned by the news and black audiences rejoicing. Official reaction was primarily that of disbelief. A visibly stunned Gil Garcetti and his lead prosecutors held a post-verdict press conference, during which Chris Darden was reduced to tears. Public reaction depended very much on the race of those being asked. Polls taken in the days and weeks after the verdict confirmed that people's views of the verdict tended to break down along racial lines. The voices of the white establishment press, including those of highly visible network news anchors, swiftly grew in protest against the African American jury that, it was implied, freed Simpson for reasons of racial solidarity. Subtly racist criticism was also leveled against Asian American Judge Ito for not having kept tighter control of his courtroom.

The white backlash against the jury and its verdict only grew stronger over the coming months, eventually reaching its crescendo in the wrongful-death civil trial that grew out of a suit earlier filed against Simpson by Fred Goldman, the father of Ron. Fred Goldman had been a highly visible spokesman for his slain son during the criminal trial. The lead lawyer for the plaintiff was Daniel Petrocelli; Simpson's lead lawyer in the civil trial was Robert Baker. The civil trial began on September 16, 1996, in Santa Monica. In contrast to the first trial, the civil trial was not televised, and Simpson himself took the stand to testify. On the evening of February 4, 1997, in another media spectacle that threatened to overshadow President Clinton's annual State of the Union address, a predominantly white jury found Simpson liable for the wrongful deaths of Nicole Brown Simpson and Ron Goldman and assessed combined compensatory and punitive damages of \$33 million. Just as the first trial's verdict was roundly condemned by the establishment press, so too was the second verdict hailed as a triumph of justice. O. J. Simpson was forced to sell his Rockingham estate and, as of this writing, stands in jeopardy of losing the custody of his and Nicole's two children, Sydney and Justin. The "Trial of the Century" at which he was acquitted has proved to satisfy no one. Many people remain convinced that Simpson legally, if not financially, got away with murder, while others are equally convinced that institutional racism and police malevolence allowed the real murderer(s) to escape justice.

—Philip Simpson

The Simpsons

The family situation comedy has long been a staple of American entertainment, and no family brings together more of the foibles and saving graces of the family than *The Simpsons*, which has aired on the FOX network since 1989. Part *Honeymooners*, part *All in the Family*, the animated Simpson family, crudely drawn with bright yellow skin and outlandish stylized hair, have represented the flailing attempts of human beings to keep up with twentieth-century life. Far from being a cartoon show for children only, *The Simpsons* deals with adult and teenage issues as well as world events. At the same time, the show is full of enough visual goofiness to keep the attention of young children.

Living in the Anywhere, USA, town of Springfield, these are the Simpsons:

Homer, the dad, works, between doughnut breaks, as a safety inspector at the Springfield nuclear power plant, where he was once replaced during a strike by a brick placed on a lever. Homer has a taste for just about anything remotely edible, washed down with Duff Beer, which he prefers to drink on the sofa in front of the television or at the local tavern, Moe's. Homer is always on the lookout for a free lunch, or at least a piece of lint-covered candy behind the sofa cushion.

Marge, Homer's better half, sports a towering blue beehive and is, in the main, the sensible anchor of the family. She has what Homer lacks in both common sense and moral fiber, and, though she struggles to stay a step ahead of the damage her family wreaks, she loves them all like—well, like a mother.

Bart is the demon spawn of Homer and Marge. From his first word—"Cowabunga!"—Bart has faced the world with an irreverent attitude. There is no scheme too depraved for Bart to consider, no mischief too evil to undertake. He is, however, only in the third grade, so, once in a while, even Bart finds himself in over his head.

Lisa, in second grade, is Bart's sister, and must have received her genes solely from Marge's pool. Lisa is a prodigy, and therefore somewhat of a misfit in the Simpson family. She loves school and learning, and plays saxophone like a pro, using its sweet tones to voice her own angst—a sensitive soul trapped in a crude wasteland. However, her Simpson side does show through now and then, and she always gets a laugh out of *Itchy and Scratchy*, the ultra-violent cartoon show Bart loves.

Maggie, the baby, has only uttered one word, "Daddy." For the most part, she only makes suck-suck noises while nursing her "Neglecto" brand pacifier. But she shows signs of becoming a true Simpson. When her pacifier is taken away by a brutish day-care worker, Maggie organizes the other babies in a *Great Escape*-style caper to retrieve their contraband "binkies." And, despite her tender age, she has already been responsible for a murder attempt on Homer's boss.

The supporting cast of *The Simpsons* represents a colorful assortment of characters, many of whom play against their stereotype to create a commentary on the wide variation among modern U.S. citizenry: Moe, the hard-boiled bartender, who secretly reads to homeless children at the shelter, weeping over *Little Women*; Waylon Smithers, the closet gay administrative assistant, who harbors a not-so-secret yen for his boss, power plant owner, Mr. Burns; Apu, the Quiki-mart owner, who has a Hindu shrine and a shotgun behind the cash register; Krusty the Clown, who had to leave behind his orthodox Jewish family and his career as a cantor to follow his calling to make little children laugh and make a fortune from licensing his name. Though clearly stereotyped, each character contains surprising quirks and changes, which make the audience laugh but are also surprisingly realistic and reassuring in an ever more complex society.

Each week, *The Simpsons* begins with a long opening sequence. The afternoon whistle blows and Homer packs up to leave work. He doesn't notice that one of the glowing radioactive bars he has been handling falls into his jacket and follows him home. At school, Bart finishes his daily punishment: writing 1000 times on the blackboard "I will not..." everything from "waste chalk" to "instigate revolution." Marge finishes shopping; Lisa blows a blues riff on her saxophone as she leaves band practice. The family reunites in the modern archetypal spot—plopped on the sofa in front of the television.

There is much that speaks to American families in the silliness of *The Simpsons*, and the show appeals to all ages. Adult viewers

approaching middle age recognize themselves caricatured in the Simpsons and their friends, from disillusion with dead-end jobs, to children they cannot handle, to fear of nuclear radiation, to the love and warmth they experience in life despite it all. The show functions on several different levels, allowing it to appeal to children as well as adults. The quirky, innovative animation contains visual jokes, some very subtle, that spoof all aspects of American life and culture, from consumerism to baby boomer political values. The light vehicle of animated comedy allows exploration of many normally taboo topics. While network live-action sitcoms still struggle with audience reactions to gay characters, the Simpsons has been a favorite with gay audiences because it has not only had gay storylines, but has a recurring gay character, Smithers, whose crush on the evil Mr. Burns is not always as hopeless as it looks.

Matt Groening is the cartoonist who created the Simpsons, though the television series is produced by an army of writers, animators, and voice actors. Groening, who draws an alternative comic strip called "Life in Hell," first created the Simpsons in 1986, for short spots on *The Tracy Ullman Show*, an innovative variety hour. He named the characters after his own family, except for Bart, who started life as "Matt" but was soon changed to an anagram of "brat." The bright-yellow family soon captured an audience of its own, and, as Groening says, "The phenomenon has gone beyond my wildest dreams—and my wildest nightmares." Their first full-length show was a Christmas special in 1989, called *Simpsons Roasting on an Open Fire*, followed by a half-hour weekly series in January. By the end of 1990, *The Simpsons* was the highest rated show on the FOX network, and was widely syndicated.

"I try not to let anything in our culture be either too high or too low for me," Groening has said, and his work on *The Simpsons* bears this out. With a leftist, alternative point of view, Groening has created a palatable critique of American values, combining sophisticated humor with goofy cartoon slapstick. A husband and father himself, his skewering of the family is incisive, yet loving. Episodes of *The Simpsons* often parody popular movies, movements, and public figures. The perennial mayor of Springfield, for example, speaks with a Kennedy-like Boston accent, and one episode revolves around his attempt to cover up the misdeeds of his spoiled, dissolute nephew. For one vacation, the family goes to a crassly commercial beer theme park, Duff Gardens, which shamelessly promotes alcoholism. Director John Waters guest stars on another episode, as a gay character, Jon, who Homer initially likes until he finds out that Jon is gay. Angriest about being fooled, he sputters, "He should at least have the good taste to mince around and let everyone know he's that way!"

Not to be outdone by Krusty the Clown, Groening is unapologetic about licensing products with the Simpson name. Dozens of products carry pictures of the bright yellow crew. *The Simpsons Comic Extravaganza* put the family in print, along with *Maggie Simpson's Alphabet Book* and *Counting Book*, and there have been Simpsons video games and even a record *The Simpsons Sing the Blues* (1990). In the late 1990s a single cel of Groening's animation sold at Christies' famous art auction house for \$24,200.

The Simpsons appeals to its public because it is hilarious entertainment; it is packed with cultural satire and is full of throw-away visual references. The show pulls the audience into its in-jokes, not requiring too much effort, but rewarding a little mental exertion with hidden layers of meaning. Then, just when the viewer seems to find real depth, *The Simpsons* refuses to be predictable, and dissolves into old-fashioned buffoonery. Its cartoon format gives the show that

touch of fantasy which makes it the perfect vehicle for cataloging the stuff of real life.

—Tina Gianoulis

Sinatra, Frank (1915-1998)

Frank Sinatra was, by most accounts, the greatest entertainer of his time, known to his legions of fans as "The Voice" of the twentieth century. But his life intersected with worlds beyond show business—with politics, both left and right, with the underworld, and with the celebrity culture of postwar America. An exceedingly complex man, Sinatra articulated in his songs the romantic dreams and existential longings of his generation. His music and life had a Shakespearean "ages of man" arc—from the callow youth of "I Fall in Love Too Easily" to the world-weary maturity of "In the Wee Small Hours" and, ultimately, to the triumphant patriarch of "My Way." But above everything, Sinatra will be remembered, in the words of Pete Hamill, as "a genuine artist, and his work will endure as long as men and women can hear, and ponder, and feel."

During a career that spanned more than 60 years, Sinatra exploited the technology of the century to define and transform his public persona. He received major breaks in his early career when he was heard over the radio by bandleaders seeking a vocalist. During the 1940s his voice seemed to caress the microphone in concert, and Sinatra created a sexual awakening, some say mass hypnotism, among adolescent girls. More than anyone else during the 1950s, he conceived the long-playing record as a vehicle of personal expression for a mature artist. His 60 movies yielded a multitude of Sinatras to contemplate: the joyous song-and-dance man of *Anchors Aweigh* and *On the Town*; the brooding, doomed loner of *From Here to Eternity* and *The Manchurian Candidate*; and the suave hipster of *Pal Joey* and *Ocean's 11*. Sinatra's final project, *Duets*, produced by recording wizard Phil Ramone in the early 1990s, utilized digital fiber optics to create electronic pairings with a new generation of performers and resulted in one of his best-selling albums of all time.

Sinatra's upbringing reflected the immigrant world of urban America. He was born in rough-and-tumble Hoboken, New Jersey, on December 12, 1915. The only child of a hard-working Sicilian household, Sinatra had big dreams to cross the Hudson River and discover his fortune in New York City. He dabbled in sportswriting and engineering before finding his calling at a Bing Crosby concert in the mid-1930s. Determined to become a singer, he polished his act at church suppers and firemen's socials. In September 1935 he and several local musicians made their radio debut as the Hoboken Four

Frank Sinatra

on *Major Bowes' Original Amateur Hour*. Bowes took a liking to the boys, and they began to tour with one of his traveling companies. After immediate success proved elusive, Sinatra went solo.

The ambitious Sinatra did everything he could to nurture his talent. He appeared on local radio with little compensation to attract any type of attention. He undertook voice lessons, which he would continue throughout his career. And, most importantly, he sang publicly, notably at the Rustic Cabin, a small North Jersey roadhouse. His persistence achieved what every singer of his era desired, a featured vocalist spot in a big band. Harry James, a former trumpeter for Benny Goodman, heard Sinatra broadcast from the Cabin and signed him to his first contract in June 1939. James's new orchestra spotlighted the confident Sinatra, especially on "All or Nothing at All," one of the first big band recordings to feature a vocalist from start to finish.

After six months, Sinatra was lured away by a more prominent bandleader, Tommy Dorsey. Inspired by Dorsey's trombone playing, Sinatra crafted a distinctive singing style, gliding from note to note without a semblance of breath. Sinatra's apprenticeship with the band lasted three years, and his recordings of "I'll Never Smile Again," "I'll Be Seeing You," and "This Love of Mine" established the boy vocalist as a star in his own right. Sinatra's ascent anticipated the dominance of the singer in postwar popular music.

Beginning in late 1942 Sinatra took control of his destiny, the first of many such moves throughout his mature years. After rancorous negotiations, Sinatra left Dorsey, leading the way for featured vocalists to make it as soloists. His debut performance at the Paramount Theatre on the last day of 1942 created a riotous sensation as thousands of teenage girls, known as the bobbysoxers, swooned (a publicist's description that caught on) at the skinny crooner in a bowtie. Amateur psychologists debated this ardent popularity: did he signify wartime degeneracy or did he bring out the maternal instinct in adolescents? Whatever the reason, Sinatra became a regular on *Your Hit Parade*, network radio's most popular show on Saturday night.

Critics also analyzed the unique communication that Sinatra had with his audience. E. J. Kahn, in one of the first major articles on the Sinatra phenomenon, stated for *The New Yorker* that while singing Sinatra "stares with shattering intensity into the eyes of one trembling disciple after another." His intimacy with the microphone and personalization of the lyrics involved his listeners in a sexual experience. Sinatra learned how to transmit powerful emotions through his songs by studying the haunted textures of Billie Holiday. And in the best jazz tradition, he also liked to come up with innovative ways to treat musical phrases.

Sinatra strove to completely identify with the music in the recording studio. He teamed up with Dorsey arranger Alex Stordahl

to produce introspective ballads for Columbia Records throughout the 1940s. Stordahl's lush strings complemented the soulful rapture of Sinatra's baritone. Between 1943 and 1946 he had 17 top singles, including his first Columbia recording, the tender "Close to You" and more upbeat "Saturday Night (Is the Loneliest Night in the Week)," which had special meaning for women whose lovers were away fighting in Europe.

Sinatra made his first movie appearances as a Dorsey vocalist in *Las Vegas Nights* (1941) and *Ships Ahoy* (1942). The hysteria surrounding Sinatra's personal appearances in the early 1940s led to a contract with MGM in 1944. Gene Kelly became his mentor and teacher, and he was groomed for energetic, splashy musicals. He starred as a nerdy, shy sailor in *Anchors Aweigh* (1944); a show business-crazed New Yorker in *It Happened in Brooklyn* (1947); and a baseball playing, tap dancing vaudevillian in *Take Me Out to the Ball Game* (1949) with Kelly. But Sinatra quickly outgrew this manufactured image of cheerfulness and frivolity.

Since his boyhood, Sinatra was immersed in Democratic politics. His mother was a party ward organizer and her only child became a crusader for racial tolerance. Sinatra and his Hoboken sweetheart Nancy named their son Franklin after President Roosevelt for whom the singer had campaigned vigorously. In 1945 Sinatra had received a special Oscar for the short *The House I Live In*, an outspoken attack on religious and ethnic bigotry. But in the late 1940s, when the political mood of cold-war America was shifting rightward, Sinatra was lambasted as a communist sympathizer and fellow traveler as well as criticized for his trip to Havana to meet syndicate boss Lucky Luciano. Questions about his connection to the underworld, especially as the quintessential nightclub and Las Vegas performer, bedeviled the Italian-American entertainer the rest of his career, begetting a nasty feud with the press over personal privacy.

By 1950, Sinatra's public and personal worlds had collapsed. As America began celebrating economic prosperity and organizational conformity, Sinatra's record sales slumped and MGM dropped him from their galaxy of stars. His private indiscretions had become fodder for the gossip columns, and the singer was scandalized for a tumultuous affair with movie goddess Ava Gardner, which disintegrated his marriage. Sinatra also failed to conquer the new medium of the home, television, in the early 1950s as his first series was widely assailed by the critics. The city girls, who had idolized "The Swoon" during the war years, were now busy raising families in the suburbs; Sinatra appeared to be a relic.

Sinatra's comeback, receiving a 1954 Oscar for his portrayal of the downtrodden Maggio in *From Here to Eternity*, has been the stuff of legend. What was more remarkable was the entire transformation of the Sinatra persona. No longer would he be the sensitive balladeer who spoke directly into a woman's heart. Now, he was a man's man, the one who hoped for swinging times, but was often left anguished at the bar alone. His image in the movies was toughened. He played a psychopathic presidential assassin in *Suddenly* (1954), an agonized heroin addict in *The Man With the Golden Arm* (1955), and a disillusioned writer in *Some Came Running* (1958). He also brought a maturity to his musical roles: as the cynical reporter in *High Society* (1956), performing a rousing "Well Did You Evah?" with his inspiration, Bing Crosby, and as the ultimate heel in *Pal Joey* (1957), taking such delight in his crucial number, "The Lady Is a Tramp."

In 1953 Sinatra signed with Capitol Records and, collaborating with arranger/conductor Nelson Riddle, would orchestrate an entirely new sound for his mature self. They pioneered the concept album, which in a suite of songs looked at one aspect of adult love. Riddle, a

former trombonist, brought a pulsating rhythm to the records, helping to define Sinatra's new swinging style. Sinatra adapted a variety of roles to articulate a deeper understanding of romance: the bold sensualist in *Song for Swingin' Lovers* (1956); the tender, intimate companion of *Close to You*; and the gloomy, introspective loner in *Only the Lonely* (1958). Sinatra also hooked up with arrangers Gordon Jenkins and Billy May to explore other masks: the intense and tortured romantic (Jenkins's *Where are You? And No One Cares*) and the raucous swinger (May's *Come Fly Me* and *Come Dance with Me!*). In the studio, Sinatra incarnated each role; he was the ultimate "method" singer.

From 1953 to 1962 Sinatra recorded 17 albums for Capitol and exploited the dramatic possibilities of the long-playing twelve-inch disc. Sinatra was at his powers as an interpretative artist and these recordings constitute a treasury of American popular song. Many songs were carefully selected from the golden age of the Broadway musical, and Sinatra's readings plumb the emotional depths of the lyrics. A majority of his meticulously-rehearsed versions are considered definitive, including "I've Got a Crush on You" (George and Ira Gershwin); "I've Got You Under My Skin" (Cole Porter); "One for My Baby" (Harold Arlen and Johnny Mercer); and "I Wish I Were in Love Again" (Richard Rodgers and Lorenz Hart). Sinatra always paid tribute to the songwriting art by announcing in concert the name of the composer before each song. During the Capitol years Sinatra also returned to the charts with singles produced for quick recognition and consumption, most notably "Learnin' the Blues," "All the Way," and "Witchcraft." By the end of the 1950s, Sinatra was again America's most prominent performer.

In the early 1960s Sinatra reconfigured his identity once again. He formed his own record company, Reprise, the first major artist-owned label in music history. (He sold the company to Warner Brothers in 1963, retaining a one-third interest.) He became the embodiment of a middle-aged swinging playboy with the release of *Ring-a-Ding Ding!* (1960) and *Swing Along with Me* (1961). He surrounded himself with hard-drinking and high-living friends, called by the press the Rat Pack, whose members included Dean Martin, Sammy Davis Jr., Peter Lawford, and Joey Bishop. The Rats, nicknamed The Summit by the leader, were headquartered in Las Vegas, where Sinatra was established as the premier performer and an owner of the Sands Hotel. Reveling in tuxedo until daybreak, they were, and for some will always be, the epitome of cool.

Sinatra with his pals promulgated a hedonistic philosophy of swagger and style. An outgrowth of Humphrey Bogart's inner circle, they campaigned for the equally fun-loving John F. Kennedy in 1960, with Sinatra supervising the inaugural gala. The Pack made light-hearted slapdash movies, including *Ocean's 11* (1960), *Sergeants 3* (1962), and *Robin and the 7 Hoods* (1964). With the assassination of President Kennedy, who publicly snubbed Sinatra in 1962 because of his mob associations, and the emergence of The Beatles, the Rat Pack seemed tired and out-of-touch by the middle of the decade. And once again, Sinatra reinvented himself.

During his 50th year in 1965, Sinatra contemplated his life and profession. He released *September of My Years*, one of his most personal works, a touching musical reflection on the joys and anguishes of his younger years. Sinatra also compiled and narrated a retrospective album, *A Man and His Music*, which surveyed his career in 31 songs. Both projects received the Grammy Award for album of the year, anointing Sinatra as elder statesman of the industry. Personally, Sinatra was still frisky, marrying actress Mia Farrow, 30 years his junior.

A Man and His Music also inspired a television special, which marked Sinatra's triumphant return to the medium. His two previous weekly series had fizzled, both succumbing to Sinatra's unwillingness to rehearse outside the recording studio. His most noteworthy performances had been one-time only engagements: as the stage manager in a musical adaptation of *Our Town* (which yielded the hit single "Love and Marriage") and as host of a "Welcome Home, Elvis" extravaganza, in which the two former teen idols joined for an incomparable duet. The 1965 special was acclaimed "the television musical of the season," receiving an Emmy Award for outstanding program. Sinatra continued to produce and star in television specials, almost on an annual basis, making sure he remained a force in contemporary music.

During the 1950s Sinatra dismissed rock and roll as music "sung, played, and written for the most part by cretinous goons." By the late 1960s Sinatra had accommodated many diverse sounds in his repertoire. Adapting to changing fashions, he recorded songs composed by Jimmy Webb, Stevie Wonder, Paul Simon, and George Harrison. One of his most advantageous collaborations was with the Brazilian samba stylist, Antonio Carlos Jobim. Sinatra discovered unexpected pleasures in the soft and delicate rhythms of the bossa nova. This embrace of a new beat also provided several popular hits, including "Strangers in the Night," winner of the Grammy Award as record of the year; "That's Life," Sinatra at his bluesiest; and "Something Stupid," a duet with his eldest daughter Nancy. In 1969 he adapted a French ballad, "Mon Habitude," with English lyrics by Paul Anka, and crafted one of his signature songs, "My Way."

Tired of the investigations into his private life, Sinatra announced his retirement from show business in June 1971. He made yet another comeback two years later with the album and TV special, *Ol' Blue Eyes Is Back*, engendering another show business moniker. He was most frequently nicknamed The Chairman of the Board, referring to his pervasive presence in all aspects of the entertainment industry. Although his professional life slowed down, especially after his marriage to Barbara Marx in 1976, Sinatra still made artistic waves. He delivered a classic reading of Stephen Sondheim's innovative "Send in the Clowns," a staple of his concerts during the 1970s. In 1980 he released his most ambitious undertaking, *Trilogy: Past, Present & Future*, three discs that showed off both the swinging and serious facets of his artistry. Sinatra recorded for *Trilogy* yet another defining song, "Theme from New York, New York," which became a showstopper in performance. In movies, he was most comfortable as a hard-boiled, aging sleuth, a role he began in *The Detective* (1968) and further explored in the television movie *Contract on Cherry Street* (1977) and his final starring theatrical role in *The First Deadly Sin* (1980). In 1987 *The Manchurian Candidate*, featuring Sinatra's most complex role as a brainwashed soldier, was re-released, twenty-six years after its premiere. There was a renewed appreciation for Sinatra's acting skills, especially in challenging material.

Like many in his generation, Sinatra's politics drifted rightward as he got older. Becoming an ardent Republican during the Vietnam era (though still a registered Democrat), he campaigned aggressively for Ronald Reagan in 1980. Victorious again, as twenty years before, he produced the presidential inaugural gala. He was appointed to the President's Committee on the Arts and Humanities as well as was awarded the Kennedy Center Honor for Lifetime Achievement (1983) and Presidential Medal of Freedom, America's highest civilian recognition (1985). He still received millions of dollars for concert performances around the world, including a controversial appearance in Sun City, South Africa.

Sinatra's personal life was always riddled with contradictions. His generosity to friends was legendary as was his vicious feuds with targeted members of the press. Back in 1947, he publicly attacked one of his critics, Lee Mortimer, and was ordered to pay a substantial fine. Although his friendship with Chicago mobster Sam Giancana cost him a gambling license in the 1960s, he still associated with the underworld throughout his career, including a 1975 infamous photograph backstage at the Westchester Premier Theater with Mafia boss Carlo Gambino and Jimmy "the Weasel" Frantianno. Many unauthorized biographies focussed on these unsavory aspects of Sinatra's volatile temperament, most significantly the bestselling *His Way* (1986), by Kitty Kelley. Even the 1992 authorized miniseries *Sinatra*, produced by youngest daughter Tina, did not shy away from controversies, portraying Sinatra's relationship with Giancana (played by Rod Steiger).

Sinatra remained a permanent fixture and influence on the American popular culture landscape even in his twilight years. Although his 1988 reunion tour with Sammy Davis Jr. and Dean Martin dissipated when Dino lost interest, the Rat Pack were embraced as the arbiters of hip by the twentysomething generation in the 1990s. At the age of 77, Sinatra made another recording comeback as his *Duets* album unexpectedly sold several million copies. Although his partners were not in the same studio and electronically overdubbed, Sinatra was heard singing with stars from other musical fields, including international personalities Julio Iglesias and Charles Aznavour; from the jazz and soul front, Aretha Franklin, Luther Vandross, and Anita Baker; and from his own genre, Barbra Streisand and Tony Bennett. Rocker Bono of U2, another "duetist," grandiloquently presented Sinatra with the 1994 Grammy Legend Award, enshrining him as "the Big Bang of Pop." Sinatra's 80th-birthday special also featured a wide array of celebrants, including rappers Salt-N-Pepa and rock superstars Bruce Springsteen and Bob Dylan. Sinatra himself toured rigorously well into his 70s, before giving his last concert in February 1995.

Sinatra's death on May 14, 1998 eclipsed one of television's most heavily promoted events, the final episode of *Seinfeld*. Every corner of news, from print to cyberspace, was awash in memorial tributes. As David Hadju of *Entertainment Weekly* pointed out: "No American since JFK (the Sinatra of Presidents) seemed to have received such a grand media memorial, effusive in its praise of his talent and celebratory in its recollection of his life."

The one quality that Sinatra strove for in his nearly 1,300 commercially available recordings and his many different incarnations was honesty. Each song was the personal expression of a deeply felt moment. There was no separating the incomparable singer from the intimate experience of the lyric. Like many other supremely gifted artists, his life did not always live up to the ideals of his art. But, as *New York Times* critic John Rockwell noted, "no singer of our time has better invested the widest range of emotion in his music than Frank Sinatra."

Sinbad (1956—)

A popular African American television comic character of the 1980s and 1990s, Sinbad, whose offstage name is David Adkins, offered wholesome, family-oriented entertainment for children and adults alike. The legitimate heir to Bill Cosby's clean-cut comic style, Adkins, an African American, broke barriers at mainstream studios like Disney by starring in youth-oriented feature films with predominantly white casts, such as *Houseguest* (1995) and *First Kid* (1996).

Sinbad first entered mainstream culture as dorm director, Walter Oakes, on the Cosby-produced NBC sitcom *A Different World* (1987-1991), once the nation's number-three rated show. It was this role that catapulted Sinbad into living rooms across the nation. Following the show's run, Sinbad gained further notoriety as host of *It's Showtime at the Apollo*, where his improvisational storytelling on topics such as hair weaves, parenting, and divorce helped to make him one of America's most widely-recognized funny men.

Born in Benton Harbor, Michigan, on November 18, 1956, David Adkins was the child of Baptist minister Reverend Donald Adkins and his wife, Louise. The second of six children, the future comedian was raised in a household in which a high value was placed on morals, personal responsibility, and God. Rejecting both alcohol

Sinbad

and drugs throughout life, Sinbad takes seriously his job as a role model—challenging the need for vulgar language in his performances with the oft-quoted maxim: “If my kids can’t watch it, I can’t do it.”

Tall in stature—he reached 6'5" in adulthood—the comedian grew up feeling “big and goofy,” and saw himself as something of an outsider. Luckily his size was of use in pursuing his first love: basketball. He won an athletic scholarship to the University of Denver, but found himself particularly isolated on the largely white campus, where he became increasingly militant during the black-power era of the 1970s. Never one to play by the rules, Adkins surprised his peers by quitting college just short of a diploma. After dropping out, Adkins signed up with the Air Force, where he soon discovered his true calling during a talent contest. Arriving at a steadfast decision to pursue comedy, he got himself discharged from the service—as legend has it—by walking off duty in his underwear. “Kick me out,” he told his superiors. “Let’s work as a team.”

In 1983, embarking on what he has called his “Poverty Tour,” the future Sinbad crossed the country by Greyhound bus, performing stand-up routines in small-town clubs and hitching rides with members of his audience. The grueling schedule paid off. By the mid-1980s, the comedian’s first big break came through repeated appearances on *Star Search*. With his brightly-colored hair (dyed every shade from gold to red to platinum blond) and feather earrings in both ears, the budding talent had made an impression. He relocated to Los Angeles, and in 1986 was cast as Redd Foxx’s foster son on ABC’s *The New Red Foxx Show* (1986).

Like his mentor, Bill Cosby, Adkins has consistently challenged stereotypical images in Hollywood film and television productions. On *Houseguest*, for example, he refused to do humor that he termed “very broad and anatomical.” During production on his short-lived sitcom, *The Sinbad Show* (1993), which aired on the Fox network during 1993-94, the star’s arguments with producers and executives were legend, as he struggled to represent his character, a black single father, in a positive light.

In 1997, Sinbad joined the flurry of black-oriented, late-night talk shows when he was asked to take over hosting duties on *Vibe* (1997-1998). It was a time when competition was stiff for the genre: *The Keenen Ivory Wayans Show* (1997-1998) ran neck-and-neck with *Vibe* before being replaced by Magic Johnson's *The Magic Hour* (1998). But Adkins had also co-hosted, with singer Stephen Bishop, another late-night variety show ten years earlier called *Keep on Cruisin'* (1987).

At the close of the 1990s, Sinbad had expanded his influence beyond the world of entertainment, and had become a pioneer advocate for technology, particularly among inner-city youth. A computer buff who has been known to chat online for hours, he served on an advisory council at Howard University, and as a spokesperson for the National Action Council for Minorities in Engineering, lecturing to some 23 million kids about the importance of math and science in a technologically advanced world. Sinbad also participated in the first annual ThinkQuest Internet competition, along with Ron Howard, Nobel-laureate physicist Kenneth Wilson, and Gene Sperling, advisor to President Clinton, in which more than \$1 million in scholarships and cash prizes were awarded to students, teachers, and schools across the country. In 1996, he accompanied first lady Hillary Rodham Clinton to Bosnia to provide comic relief for United States peacekeeping forces stationed there and throughout Europe.

Sinclair, Upton (1878-1968)

American novelist Upton Sinclair is most famous for his 1906 novel *The Jungle* and the reforms to which it gave rise. Sinclair was a muckraker—so dubbed by President Theodore Roosevelt, who regarded them as a nuisance—one of a group of journalists who were relentless in their exposure of corruption in American business and government.

Sinclair intended his book, set in the Chicago meat-packing industry, to arouse support for the plight of immigrant laborers. He exposed the political machinations of the Democratic and Republican parties and put forward the Socialist Party as the only trustworthy organization. Instead, *The Jungle* triggered outrage at the malfeasance of the meat packers, who had little care that much of their processed meat was adulterated with dirt, dung, poisoned rats, and the odd human body part. Roosevelt apparently read the book and dispatched investigators who confirmed the veracity of Sinclair's account. Under threat of releasing the report, Roosevelt forced through the 1906 Meat Packing Act to regulate the industry. Although the act brought the meat packers under the regulatory arm of the government, it had little in the way of enforcement. Moreover, the bigger firms were able to meet the government's requirements, whereas many smaller firms could not, and so the act effectively

increased the strength of big business; certainly not Sinclair's intended outcome. At the time, Sinclair joked, "I aimed at the public's heart and by accident I hit it in the stomach."

The Jungle was Sinclair's sole best-seller, but he went on to publish a series of similarly themed novels. Among them were *Oil!* (1927), about the Teapot Dome Scandal of President Warren Harding's administration, and *Boston* (1928), about the trial and execution of Sacco and Vanzetti, two Italian-American radicals convicted and executed for robbery and murder, a cause celebre of 1927. In 1940 Sinclair began a series of eleven novels with a contemporary setting featuring an antifascist hero, Lanny Budd. Sinclair placed Budd in the action of all major events of his time.

In 1933 Sinclair established and led the End Poverty in California (EPIC) campaign. His solution to Depression-era unemployment was for the state to rent unused land and factories so the unemployed could grow their own food and produce clothing and furniture. In August 1934 he easily won the Democratic primary race for governor. Conservative Democrats then aligned with the anti-New Deal Republican Governor Frank Merriman to defeat Sinclair in the November election. The campaign was marked by the hysterical level of the anti-Sinclair material, which included faked newsreels showing hoboes descending on California and accusations of Communism.

By the end of the twentieth century *The Jungle* was still in print but not included in college anthologies of American literature. EPIC generally is treated as an indication of the sort of political anomalies the Depression produced, and as an aside to Franklin D. Roosevelt's New Deal.

Singer, Isaac Bashevis (1904-1991)

Singer is considered almost by unanimous consent to be the greatest postwar writer of Yiddish literature. Born on July 14, 1904 in Leoncin, Poland, child of a Chasidic rabbi and pious mother, Singer first made his mark in Yiddish literature in Poland, having published his first novel, *Satan in Goray*, in serialized form in 1934. The next year Singer moved to America where he began writing for the Yiddish-language newspaper the *Jewish Daily Forward*. His creativity blocked by his relocation, Singer produced little fiction until 1943, when an explosion of short stories and novels erupted from his pen that continued until his death on July 24, 1991. In 1966, he published his first of several well-received children's books, *Zlateh the Goat*. In 1978, Singer received the Nobel prize for literature. Several of his works were filmed, including his novels *The Magician of Lublin* and *Enemies, A Love Story*, as well as his short story "Yentl, the Yeshiva Boy," which formed the basis of the musical *Yentl*, which starred Barbra Streisand in the lead role.

Singin' in the Rain

Co-directed by dancer Gene Kelly and Stanley Donen, *Singin' in the Rain* epitomizes how the musical works as Hollywood genre, studio (MGM) product, and instrument of American popular culture. Produced in 1952, the movie's narrative, scripted by Broadway writers Betty Comden and Adolph Green, is set in the 1920s, when viable sound synchronization spawned the "talkie," forcing universal adoption of sound and the invention of the musical. *Singin' in the Rain* is a parody of the backstage musical and the biopic; it playfully mocks the trials of the early studio system and the egos of its silent film stars being tutored to speak and perform in sound pictures.

The movie pays homage to the musical's classical form, tracing its roots from vaudeville to its influence on film. Gene Kelly plays Don Lockwood, who rises from variety shows to the silver screen with dance partner Cosmo Brown (Donald O'Connor). Within the musical's formula of narrative-inspired production numbers and romance, Lockwood guides the object of his desire, Kathy Selden (Debbie Reynolds), into the emotional effects of song-and-dance.

It is the Hollywood kiss, that staple of romantic resolution, which seals the attraction between Lockwood and Selden, then prompts Lockwood to begin "singin' in the rain." Critic Jane Feuer, in *Film Genre Reader II*, dubs such outburst into song-and-dance "the myth of spontaneity" common to the musical genre. Kelly's athletic free spirit in the "singin' in the rain" number celebrates the individual male at play within the American neighborhood. In this liberating, public site, Lockwood moves his feet skillfully through rain with umbrella as ballast, gets soaked and loves it, is chided by a local cop and shrugs it off. His "gotta dance" compulsion not only drives *Rain's* theme-song number, as if coming from the streets as well as his heart, it also inspires Lockwood to move instinctively into the full-blown artistry and seduction of Cyd Charisse's enigmatic dance/love object in the "Broadway Melody Ballet" fantasy.

Critic Rick Altman, in *The American Film Musical*, calls this device of courtship through dance the male's "loving lesson." In the film's major dance suite, the "Broadway Melody Ballet," the sexual connotations of Lockwood's earlier loving lesson with the neophyte Selden are projected as a fantasy danced with an "other" woman (Cyd Charisse). In the course of the suite, Charisse's vamp transforms into bride, then ethereal "angel", then back to vamp willingly controlled by gangster "hoods." Only dance itself safely permits this eruption of coded sex and this evocation of American culture's darker forces.

These forces, inflected in *Rain* as fantasy, are made central in Charles Vidor's *Love Me or Leave Me* (1955). A biopic of another order, *Love Me or Leave Me* is based on singer Ruth Etting's successful career and dark personal life in the 1920s and her marriage to a petty gangster whose possessiveness turns into rape on their wedding night. Domestic melodrama delineates the couple's fraught relationship, with musical numbers playing out of, and off, the drama. In *Rain*, Don's loving protection of the amber-voiced Kathy from the wily, tin-eared silent star Lina Lamont (Jean Hagen) is without social threat, while *Love Me or Leave Me's* foregrounding of obsessive male control is made tough by its basis in melodrama. In Stanley Kubrick's *A Clockwork Orange* (1971), the darkly parodic "Singin' In the Rain" song-and-dance by Alec (Malcolm McDowell) in the act of torturing a woman makes a cold ritual of violence, a major ideological reach from the original source, *Rain*, but closer to *Love Me or Leave Me*. But in his television special, *You Must Remember This* (1994), Canadian figure skater Kurt Browning's skilled athletic homage restores to family entertainment *Rain's* 1950s classicism and the nostalgia of Kelly's muscular dancer's persona. Browning's faithful recreation of Kelly's "Singin' In The Rain" number—complete with rain-covered ice surface, look-alike set, and original soundtrack of Kelly's singing and tapping—circulates a memory of the film, specifically a myth of wholesomeness for popular culture of the 1990s. In the 1990s, figure skating's popularity has grown as its imitative performers, tour-shows, and television specials have adopted elements of the production number established and conventionalized by the Hollywood musical, including costuming, lighting, familiar theme songs, dance-step choreography, tributes to screen and pop music stars, and the loving lesson evident in pairs and dance skating.

The impulse to act out in song-and-dance form reveals the gears of social engineering adapted by the Hollywood musical to produce and to promote show-musical culture as a vital ingredient of American popular culture. *Singin' in the Rain* reveals the seams of this process, much as it enfolds audiences into its veiled pleasures.

Singles Bars

Singles bars flourished in the 1970s, reflecting the sweeping changes that followed the Sexual Revolution and the attempted passage of the Equal Rights Movement. Commonly referred to as "meat markets," singles bars acted as an open setting in which men and women felt free to engage one another. Statistics cited by sociologist Nancy Netting revealed that by 1980 the rate of premarital sexual intercourse for American college-age women equaled the rate

for college-age men. This was a significant change, as the rate for women having premarital intercourse between 1930-1965, studies showed, was 30 percent lower than that of men. One change that resulted from all of these factors was that bar patrons were no longer exclusively male.

Singles bars have a popular image as hotbeds of frenzied, sexual activity, but there is some evidence to suggest that this presumption may be somewhat exaggerated. Despite the promiscuous conduct that many assume occurs, the singles scene operates upon some rather traditional gender roles: men initiate contact, and women flirt as passive objects of desire. By pursuing a female in this environment, the male places his self-assessment at risk, since "rejection may signify that he has miscalculated and is less desirable than he had assumed," concluded a 1991 ethnographic study of singles bars. Another study, published by two psychologists in 1978, found that men avoid the most attractive women because they fear rejection. The study also found that attractive women responded just as positively to researchers as unattractive women. In this respect, the study concluded, "men's anxieties about attractive women may be unfounded."

If a conversation is struck, the talk is likely to be about generalities, wrote Jamie James in *Rolling Stone*:

They talk about the weather, football (year-round), the latest big murder trial ("Do you think he's guilty?" "Of course he's guilty. But he'll get off"). They talk about everything but what's on their minds. The clincher comes in its own good time: "This place is so noisy I can hardly hear you. Listen, my place is just a few blocks away. . . ."

The 1991 study showed that the micro-order of the singles bar is a fragile one and can fracture when the male "presses forward, failing to accept (the female's) rejection and the chance to save face." The female's rejection can take the form of a polite refusal, a rejection not final ("maybe some other time"), or an excuse: "I'm married," "I have a boyfriend," or "I can't dance in these shoes." Fracturing occurs when the male insults the female to "even the score," or by ignoring her suggestion and continuing his pursuit. When this occurs, the ethnologists noted changes in the female's demeanor through a stiff posture, or sharper tone: "concern with softening the blow is jettisoned for the overriding concern of extricating oneself from the situation."

Faced with excusing oneself, what could possibly serve as refuge in a noisy singles bar? The study noted:

The most common refuge for escape from unsolicited encounters appeared to be the women's restroom. One of the authors tested this observation by remarking to a queue of women in a restroom that she guessed she wasn't the only one avoiding a man. She was answered by an affirmative nod by a number of women. . . . Women can plan future strategies to avoid male approaches or escape from the necessity of performing these strategies through retreat into an all-female world.

The need to parry male advances is one explanation for findings that show that most women are usually accompanied by at least one other woman at the bars.

An element of danger exists in encountering people who are strangers. This risk was portrayed in the sensational 1975 novel *Looking for Mr. Goodbar*, in which a single woman picks up a stranger in a bar, only to be murdered in her own apartment. "Everybody who hangs out in these places is acutely aware of the intrinsic creepiness of the (singles) scene," explained a woman to James. "It's sort of demeaning, but there has to be some way for us to meet, you know." The one commonly acknowledged taboo among singles is "never go to bed with a stranger."

Although singles bars remained a primary way for singles to meet, other alternatives appeared in the 1980s. Those who desired more control used the screening process of a matchmaking service or did their own screening through newspaper personal ads. More adventurous singles opted for singles cruises, a marketing device that successfully contributed to the boom in cruiseship trips during the 1990s. After AIDS became a serious concern during the 1980s, screening and refraining from risky sexual activity became important for health reasons. In a survey conducted at a college in British Columbia, Canada, the number of students who reported having one-night stands decreased by over 50 percent between the years 1980 and 1990.

Sirk, Douglas (1900-1987)

Born Claus Detlev Sierk in Denmark, Douglas Sirk emigrated first to Germany and then, with the rise of Nazism, to the United States where he directed some of the biggest grossing melodramas of the 1950s such as *All I Desire* (1953), *Magnificent Obsession* (1954), *All That Heaven Allows* (1955), *There's Always Tomorrow* (1955), *Written on the Wind* (1956), and *Imitation of Life* (1959). These movies were clearly marketed as "adult films" whose social concerns such as class and race relations justified the graphic, voyeuristic displays of upper-class lifestyle, psychological malaise, sex (ironically Rock Hudson starred in eight of Sirk's movies as the quintessential

Gene Siskel (left) and Roger Ebert

American heterosexual male), and murder. Considered in turn by critics as subversive critiques of family values and of the 1950s sexual repression or as products celebrating the consumeristic and affluent ideologies of the decade, in the 1980s and 1990s, Sirk's melodramas have come to be regarded, in Barbara Klinger's words, "as 'camp,' as outdated forms that exuded artifice in everything from narrative structure to depiction of romance."

Siskel and Ebert

Gene Siskel (1946-1999) and Roger Ebert (1942—) are to film criticism what Arnold Palmer and Julia Child were to golf and cooking respectively. They popularized a formerly stuffy discipline and made it accessible to masses of people. Long after Bosley Crowther, Pauline Kael, and other highbrow critics made reviewing movies an art form, this Mutt and Jeff duo, through their nationally syndicated television program, made it a spectator sport.

Siskel and Ebert established their critical bona fides writing for rival Chicago tabloids. They began their strange odyssey together in 1975, when producers at PBS station WTTW invited them to co-host a weekly film review program. Though initially reluctant, the two men eventually were persuaded that their mutual hostility might make for good television. The series began its run under the name *Opening Soon at a Theater Near You* and was wisely retitled *Sneak Previews*.

The show's low budget allowed the hosts to do little more than air a succession of clips and bicker about the latest theatrical releases,

which they then rated with a “thumbs up” or “thumbs down” in the old gladiatorial tradition. To everyone’s surprise, *Sneak Previews* became a huge local hit and was broadcast nationally beginning in 1978. It quickly became the highest rated series in PBS history.

On the surface, the show’s appeal lay in the cocktail party simplicity of its premise: two guys sitting around arguing about the merits of the latest crop of movies. But the clash of personalities allowed viewers to feel like they were eavesdropping on a private argument, as the opinionated co-hosts flung invectives at each other. Siskel was arguably the more intellectual of the two. Lean and birdlike, he combed the few thin wisps of hair he had left over the bare crown of his head. Ebert was the people’s favorite, a beefy failed screenwriter who amazingly chose not to expunge his name from the credits of the soft-core porn turkey *Beyond the Valley of the Dolls*. Together they were like oil and water, soon referred to nationwide as “the bald one” and “the fat one.”

In 1982, Siskel and Ebert outgrew PBS and moved their show into commercial syndication, retitling it *At the Movies*. Along the way, the show lost some of the ramshackle charm of the original. The “Dog of the Week,” a feature honoring the week’s worst low-budget film release, was replaced by the “Stinker of the Week” and later scrapped entirely. New segments were created to highlight home video releases, a sop to the program’s new bourgeois commercial audience. *At the Movies* went through a second, tortuous retitling, to *Siskel & Ebert & the Movies* before settling on the prosaic *Siskel & Ebert*.

With increased popularity came greatly enhanced power. Woody Allen and Eddie Murphy were just two of the stars who railed publicly about the pair’s ability to sink a picture with a bad review. On the flipside, the encomium “two thumbs up from Siskel and Ebert” soon became prized by publicists all over Hollywood. When they gave their stamp of approval to more outre film fare (both loved 1994’s *Pulp Fiction*, for example) it gave mainstream America permission to check it out as well. Their critical criteria—they both put a great emphasis on likability of characters—influenced many mainstream reviewers, as did their show’s format (they spawned a host of imitators). Siskel and Ebert became late-night talk show mainstays and frequent targets of parodies like *In Living Color*’s cheeky “Men on Film.”

The pair continued to host a weekly show and to pop up from time to time on the talk show circuit into the late 1990s. Both men continued to write their weekly reviews in the (Chicago) *Tribune* and *Sun-Times*, respectively. Ebert enjoyed a profitable sideline as the nominal writer of an annual movie reference guide. In 1998, the program even survived a leadership crisis when Siskel underwent an emergency brain operation to remove an unspecified growth. He emerged only slightly worse for wear, his hopeless comb-over an apparent casualty of surgery and his cognitive skills only slightly diminished. Ebert seemed barely to notice the changes, taking Siskel’s slowness on the draw as an excuse to lace into his reviews with renewed ferocity. In February of 1999 Siskel died from complications linked to his brain tumor; he was 54.

Sister Souljah (1964—)

Black female rapper Sister Souljah, born Lisa Williamson, made national headlines in 1992 in the wake of the Los Angeles riots when she asked an interviewer, “If black people kill black people everyday why not have a week and kill white people?” The interview, in support of her album *360 Degrees of Power*, gained national attention when 1992 Democratic Presidential Candidate Bill Clinton, in order to attract the conservative white vote, condemned her remarks while addressing Jesse Jackson’s Rainbow Coalition. Political analysts suggested that this criticism of Sister Souljah in front of an all black gathering was responsible for Clinton attracting a sizable number of white southern voters. Although the media attention increased sales of her disappointing album, it was not enough to energize her rap career. The New York City native resurfaced in 1995 with a quasi-autobiography, *No Disrespect*, which focused on black male/female relationships.

Sitcom

“Sitcom” is the abbreviated name for the half-hour television situation comedy. It is a form of television programming, generally 30 minutes in length, and consisting, in writer’s jargon, of an opening teaser, two acts, and a closing tag; in all about 22 minutes of program sandwiched between spots (advertisements), PSAs (public service announcements), and station IDs. The situation comedy derives its name from the fact that, at least initially, each episode involved the antics of a regular character who found him/herself in a particular “situation.”

Like other forms of popular entertainment, commercial television has sometimes suffered from bad press. TV has been derided as a “boob tube”—a place where delinquents and couch potatoes frittered away the bulk of their sorry lives; in 1961, it was described by the Chairman of the FCC as a “vast wasteland.” And what better example of all that was distasteful, moronic, and potentially culturally corrupting than the situation comedy. But the legacy of the television sitcom in popular culture encompasses more than prat falls, canned laughter, and endless reruns in syndication. From the groundbreaking achievements of the *I Love Lucy* show to the phenomenal success of *Seinfeld*, the popularity of the sitcom helped propel American commercial television from its origins as an off-shoot of radio to a multi-billion dollar industry.

Even with images and themes that are often sanitized, circumscribed, and fantasized, the sitcom has provided a compelling portrait of the American landscape throughout periods of plenty, recession, and great societal upheaval. Evolving notions about sex, fashion, urban renewal, child rearing, the government, war, and the changing status of African Americans and women have all been fodder for the

producers and writers of the episodic comedy. Other programming formats have also made an impact. Made-for-television movies have sometimes provided thought-provoking portraits of contemporary issues and the historical past, while realistic police-detective dramas offer striking images of the dangers of life on the street. It is the episodic comedy, however, with its humor, weekly format, and regular characters, that has most soundly featured the taboos, preoccupations, prejudices, obsessions, fads and fixations of twentieth century American society—not only by what was shown on the small screen but also by what was sometimes omitted.

Historically, the evolution of the situation comedy on television is firmly anchored to the history of radio programming. Soon after its invention, the new medium of radio emerged from its beginnings in experimental, often amateur-produced “stunts” to organized formats. Early radio programming consisted mostly of music, drama, and public affairs. Early in the Depression years, however, radio began its 20-year reign, known as the Golden Age of Radio, as the primary medium of entertainment in America. Probably the most significant program of early radio, notes Melvin Ely, was *Amos 'n' Andy*. Originating on WMAQ Radio, Chicago, in 1929, the show went on to become the longest-running and most successful radio program in American broadcast history. The show was conceived by Freeman Gosden and Charles Carroll, two white actors who played the part of “Amos” and “Andy” by mimicking so-called Negro dialect. The success of this comedy led to the creation of similar shows, including *Fibber McGee and Molly*, *The George Burns and Gracie Allen Show*, and *The Jack Benny Show*. All of these, including *Amos n' Andy*, eventually made the transition to the new medium of television.

Very early television programming was largely experimental, consisting of sports (wrestling, baseball, boxing), vaudeville crossovers, and variety shows such as *The Milton Berle Show* (1948-1956) and Ed Sullivan's *Toast of the Town* (1948-1955). But quickly, programming formats that were popular and successful in radio found their way to television, including drama, soap operas, and the situation comedy.

Erik Barnouw has traced the unfolding of two important circumstances that played an important role in the success of the sitcom as a programming format in his book *Tube of Plenty*. During television's infancy in the late 1940s, shows were broadcast live (a throwback from the days of live radio broadcasts). A viable form of videotape recording had not yet been introduced, and film was considered an unnecessary expense. The programs that were preserved for rebroadcast were kinescope reproductions: very bad quality, filmed copies of the video signal. In 1951, Lucille Ball and her husband Desi Arnaz used several thousand dollars of their own money to produce a pilot television program that would be based on their successful radio show, *My Favorite Husband*. *I Love Lucy* (1951-1957) was wildly successful and quickly dominated the ratings. “The premise of *I Love Lucy*,” note Brooks and Marsh in *The Complete Directory to Prime Time TV Shows*, “was not that much different from that of other family situation comedies . . . a wacky wife making life difficult for a loving but perpetually irritated husband. . . .” But beyond the comical antics of the character Lucy Ricardo, the program forged sitcom history.

First, Lucy's show was shot employing a three-camera process and using film, providing high-quality prints that could be broadcast over and over and at previously designated times. In 1953, on the same day that the fictitious Lucy Ricardo character gave birth to her first child (to a captivated 68 percent of the television audience), real person Lucille Ball also gave birth to her son, Desi Arnaz, Jr.

Additionally, Ball shot her show in Hollywood, hastening the migration of television production from the live studios of New York to the motion picture sound stages of Hollywood. The show was filmed before a live audience, an innovation that didn't catch on with other sitcoms until nearly the 1970s. *I Love Lucy*, sponsored by Philip Morris, enjoyed six full seasons as the number one watched program in the nation.

Another important development in the evolution of episodic comedy was the eventual partnership forged between motion pictures and television. At first, the film industry regarded TV as a competitor and refused to allow feature films to be aired on television or for film stars to make television appearances. Eventually, film studios like Paramount and Walt Disney Studios began a dialogue with television. The eventual partnerships that were forged drastically altered the course of prime time television. Motion picture studios began to produce filmed programming for network television, at first mostly Westerns, but soon including the production of sitcoms like *Father Knows Best* (1954-1963), which was produced by Columbia Pictures. By the end of the 1950s, the Golden Age of Television—with its live-broadcast, anthology dramatic series—had begun to fade, to be replaced by more the formulaic fare that is the modern sitcom.

Though the history of television is relatively brief, viewers and critics have already identified distinct periods of television programming. Fifties sitcoms were signified by their vanilla suburbs, their emphasis on hearth and home, and non-threatening humor. Outside of the rare light reference to a social issue like teenage smoking, the characters of *The Aldrich Family* (1949-1953), *Make Room for Daddy* (1953-1965), *Lassie* (1954-1974), and *Father Knows Best* existed in a world that was generally far-removed from the harsh realities of poverty, atomic warfare, and segregated accommodations. In the early 1960s, as America increased its presence in Vietnam, civil rights tensions heightened to the boiling point, and Khrushchev aimed Cuban-based missiles at the U.S., television viewers found solace in the hayseed humor of sitcoms like *The Beverly Hillbillies* (1962-1971), *Petticoat Junction* (1963-1970) and *The Andy Griffith Show* (1960-1968). Moreover, “idiot sitcoms” such as *My Favorite Martian* (1963-1966), *Bewitched* (1964-1972), *The Flying Nun* (1967-1970), and *Gilligan's Island* (1964-1967) occupied spots among the top-ten most watched programs. While news documentaries and variety shows occasionally dotted the program guide, the situation comedy came to dominate the ratings in the 1960s. In less than two decades, television comedy had evolved from transplanted radio shows to fantasy family comedies to scenarios about talking horses. It was the decade of the 1970s, however, that would usher in changes that were at once striking and, at times, controversial.

Leading the changes in the sitcom in the 1970s was Robert D. Wood, who became network president of Columbia Broadcasting System television in 1969. In his chronicle of the CBS network, *This Is . . . CBS*, Robert Slater claims that Wood will be remembered for his “extensive overhaul” of CBS television's programming strategy—a strategy which significantly changed the flavor of prime time American television. Since the 1950s, CBS Television had been the undisputed ratings leader. The network retained its top ranking with a strong line-up of new and old shows, including long-running programs with loyal audiences, such as Western dramas and *The Ed Sullivan Show*. Slater notes, however, that with the great success of programs such as *The Beverly Hillbillies* and *Green Acres* (1965-1971), CBS television was jokingly referred to as “the Hillbilly Network.” But by the late 1960s, bigger threats than stereotyping loomed over CBS.

The business side of television had changed a great deal since the days of General Food's sponsorship of *The Aldrich Family*. Programming had slowly evolved from sponsor-owned, sponsor-controlled shows to the selling of "spots" (30 and 60-second commercial messages) to many sponsors. The findings of program research departments took on major significance. Moreover, a new concept was being addressed by television programming executives in the conference rooms of the major networks: demographics. Now it was no longer enough for a program to attract the widest possible audience; it also had to attract the "right" audience, one with disposable income to spend on advertiser's products. CBS's loyal but aging, "fixed-income" audiences for popular shows like *The Beverly Hillbillies* were not representative of the kind of sophisticated spender that advertisers desired. Not surprisingly, during this age of The Beatles and campus anti-war protest, advertisers were eager to orient their products to youth culture. Notes Barnouw: "Older viewers were not big spenders. . . . Programs now tended to survive to the extent that they served the demographic requirements of sponsors." It was clear to Wood and CBS executive William S. Paley that if the network simply rested on its laurels, it would soon lose rating points and advertising dollars.

Not only had the television industry changed, so had life in America. The 1960s was a period of great social and cultural upheaval. Americans had witnessed the assassination of President John Kennedy, his brother Robert, and civil rights activist Rev. Dr. Martin Luther King Jr. The nightly news brought grim footage of the death and destruction of the Vietnam war to American dinner tables. Civil rights protestors were doused with fire hoses and attacked with dogs to the cheers of southern bigots. Student activists created a new American left. College campuses, draft cards, and cities burned. Television programming, it was felt, needed to in some way reflect the needs and feelings of the current culture. Though the situation comedy and the hour-long drama would remain the primary formulas, both genres would experience a shift away from the "consensual mood" of the early years of television to include social issues and themes more appealing and "relevant" to a young, educated audience.

Upon arriving at CBS, Wood initiated a "clean sweep" of the network's programming. Successful shows like *Green Acres*, *Ed Sullivan*, and *Beverly Hillbillies* were canceled. Banished were old favorites such as *Here's Lucy* (1968-1974), *Gunsmoke* (1955-1975), and *Red Skelton* (1951-1971). Independent producer Norman Lear purchased the rights to a hit British television show called *Till Death Do Us Part*. In the American version, now called *All in the Family* (1971-1979), he cast veteran actor Carroll O'Connor as the "lovable" but bigoted and totally outrageous Archie Bunker. The show included concepts never before approached on television: crude racial epithets, sexual situations, and verbal sparring unheard of around the dinner tables of 1950s sitcom families.

Paley regarded the show as too risky and feared that it might alienate viewers and advertisers alike. But Wood worked hard to allay the fears of censors and advertisers and persuaded Lear to eliminate some of the more risqué language. Notes Barnouw, CBS launched the program "with trepidation" in January 1971. Although *All in the Family* was not an instant hit, within about a year it became the most watched and talked about television sitcom in America.

More importantly, this program's success bred other programs, including more Norman Lear productions. These "spin-offs" of *All in the Family* included *The Jeffersons* (1975-1985), *Maude* (1972-1978), and *Good Times* (1974-1979). In the 1974 comedy *Good Times* (a black-themed show about life in a Chicago tenement),

suburban street crime, muggings, unemployment, evictions, Black Power, and criticism of the government were frequent and resounding themes. Also full of irreverent humor was the show *M*A*S*H* (1972-1983). Set during the Korean War, it was created by veteran writer Larry Gelbart from the successful hit movie. *Sanford and Son* (1972-1977) featured a multi-racial cast and the irreverent and topical humor of black comic Red Foxx as the owner of a junkyard. One of the keys to the success of these sitcoms was that they were "relevant."

The nature of the prime time television sitcom had changed significantly. Now there were interracial marriages, Latino and Asian characters, and scenarios about drag queens and birth control. In one famous and controversial episode of the program *Maude*, the character Maude, a bit past her child-rearing days, agonizes over the idea of having an abortion. At least three sitcoms featured a mostly black cast—the first since the cancellation of *Amos 'n' Andy* nearly 20 years prior. But social realism seemed to end as quickly as it had started. By the 1978-79 season, there was a return to the mythic world of the TV fantasy family. The four top shows included the safe and congenial humor of *Happy Days* (1974-1984), *Laverne & Shirley* (1976-1983), *Three's Company* (1977-1984), and *Mork and Mindy* (1978-1982).

The evolution of *The Doris Day Show* (1968-73) offers an interesting glimpse of the sitcom's portrayal of the changing status of women. When her show appeared in 1968, Day portrayed a recent widower with two sons who returns to her rural roots to live with her father. By the second season, Doris was a secretary working for the editor of a magazine. In the third season, Doris had moved to San Francisco and was not just a secretary, but did independent writing. By the fourth and final season of the comedy, Doris was a single woman and independent writer with her life as a mother, secretary, and daughter all but forgotten.

To the consternation of traditionalists, the Women's Liberation movement in American unfolded right on the small screens of prime time television. The concerns of the "model moms" of early sitcoms were relegated mostly to issues at home. Although *Lucy (I Love Lucy)*, *June Cleaver (Leave It to Beaver)* and *Margaret Anderson (Father Knows Best)* may have occasionally asserted their authority on some issue, it was kept safely within the minor vicissitudes of family life.

Early sitcoms occasionally featured single women with jobs, generally as secretaries, housekeepers, and assistants. In *Comic Visions*, David Marc describes the long-suffering career-women type who "worked for a living in lieu of marriage, which was valorized as the principal or 'real' goal of any woman." Early comedies featuring single, working women include *Our Miss Brooks* (1952-1956), *The Dick Van Dyke Show* (1961-1966) and *Private Secretary* (1953-1957).

By the end of the 1960s, television featured two interesting precursors to the truly liberated woman. In *That Girl* (1966-1971), Marlo Thomas portrayed a young, independent woman trying to make it as an actress in New York. Some regard the Anne Marie character, with her comical antics and zany behavior, as little more than an extension of Lucy. Moreover, she was often rescued by her understanding boyfriend or doting father. But unlike Marc's long-suffering TV career women of earlier television, Anne Marie actually pursued a viable career—she wasn't simply marking time until her wedding day.

The sitcom *Julia* (1968-1971) is interesting in that it also featured a single, working, and professional woman. Moreover, Julia was black. "Respectably widowed" and a nurse, Julia and her incredibly polite young son Corey lived quiet lives in a safe and accepting world, successfully negotiating the minor challenges of

life—far removed it seemed, from the harsh realities that existed in the black community at the time.

The Women's Liberation Movement brought more than bra burning and freedom from Victorian conventions. It shook-up long-held and cherished assumptions about women and sex, gender, marriage, family life, respect, and equal opportunity in jobs and pay. Probably the most celebrated in the vein of liberated women in sitcoms in the highly successful *Mary Tyler Moore Show* (1970-1977). Mary Richards was a career woman employed as an assistant producer at a Minneapolis television station. Her survival did not depend on the support and benevolence of a father figure, steady man, or for that matter, a supportive family. She had a Jewish friend named Rhoda and, in a twist on the typical scenario, together they often joked about—not envied—the life of the married woman on the show. Mary's suitably gruff boss had interpersonal problems and sometimes drank too much, but they developed a unique affection for each other. Moreover, she maintained a close but platonic relationship with a male co-worker. Now, sitcom men and women could be friends without the compulsory romantic relationship. The *Mary Tyler Moore Show* "transcended the model moms" of earlier TV, replaced the widowed career-women role and remade the ambitious, eligible single woman "on-the-make," notes Marc, becoming "a watershed event in American television." Moreover, many of the principle characters of the *Mary Tyler Moore Show* returned in spin-off programs of their own, building the fortunes of the MTM production company.

While Mary Richards, Edith Bunker, and Maude became more liberated and assertive, black women in prime time sitcoms were poorly represented by Florida Evans of *Good Times*, Louise Jefferson of *The Jeffersons*, and occasional characters on shows like *Sanford and Son*. In a 1970s scholarly study of gender and race in television, the authors note that "the black female has become almost invisible."

As a prominent element of American life and culture, race has often been the subject of television programming. But late-century television viewers, raised on a diet of *Family Matters*, *The Hughleys*, *Roc*, *Fresh Prince of Bel Air*, and especially *The Cosby Show* may find it difficult to appreciate the feelings of post-war African Americans about the depictions of black life on network television. For a century or more, African Americans endured vicious lampooning and egregious stereotyping in various forms of popular culture, including sheet music illustrations, advertising, marketing, radio, and motion pictures. Blacks were depicted as ignorant and superstitious, thick-lipped and animal-like; as servants or contented slaves in plantation tales or as dangerous savages in stories rooted in the mythical dark jungles of Africa. For postwar African-Americans, the popularity of television heralded a period of hopeful excitement. The new medium had the potential to forge positive changes in race relations as it nullified decades of pejorative depictions of black life and culture. The frequent appearance on early television of black stars such as Billy Eckstein and Ethel Waters was met with hearty approval. In a 1950 article, *Ebony* magazine endorsed the "liberal exploitation of black talent" as "a sure sign that television is free of racial barriers." However, an untoward amalgamation of economic forces and historical events would soon prove otherwise.

At the same period that television evolved into a viable economic medium, President Harry Truman called for the integration of the U.S. armed services, Jackie Robinson broke the color barrier in professional baseball, and "freedom riders" staged non-violent demonstrations against segregated accommodations. At this time, major sponsors produced much of the network programming that appeared

during prime time. The Southern market was of great concern to advertisers and the agencies that represented them and both were reluctant to have their products too closely associated with the concerns of black people. Media historians Bogel and MacDonald note that the fear of "White economic backlash" and the threat, perceived or real, of "organized consumer resistance" caused advertisers and advertising agencies to steer clear of appearing "pro-Negro rights."

Still, in 1950, film star Ethel Waters became the first black television series "star," capturing the title role in the popular sitcom *Beulah* (1950-1953). The show concerned the life of a black housekeeper working for a white family—a typical role for a black character. After three seasons (and three different dissatisfied actresses in the title role), the *Beulah* show finally succumbed to pressure from the black community regarding its stereotyped images. But the level of black resentment that took *Beulah* off the air hardly approached the clamor of controversy aroused by the appearance of another black-cast, black-themed program.

The sitcom *Amos 'n' Andy* (1951-1953) is probably one of the most protested television programs in broadcast history. After enjoying decades of popularity on radio, television's *Amos 'n' Andy* featured black actors portraying the roles of Amos (a conservative, Uncle Tom-type), the Kingfish (a scheming smoothie), the straight-laced Andy, Lawyer Calhoun (an under-handed crook that no one trusted), Lightnin' (a slow-moving janitor), Sapphire (a nosy, loudmouth shrew), and Mama (a domineering mother-in-law). The *Beulah* character, although an obvious stereotype, was at least well-mannered and spoke intelligible English. But *Amos 'n' Andy*, with its malapropisms, satire, parody, and ethnic humor, stirred up the level of black indignation almost to the boiling point.

As the series appeared in June of 1951, the NAACP appeared in federal court seeking an injunction against its premiere. To white studio executives, the show was harmless, not much different from *The Goldbergs* (1949-1954), *Life with Luigi* (1952-1953), or any other ethnically-oriented sitcom. It was funny, a testament to a remarkably talented cast and good writing. It was a commercial success and was endorsed by some vehicles of the black press and many in the black entertainment community. "[T]hey are undoubtedly funny," notes an August, 1951 editorial in the *Afro-American*. But, the op-ed continues, "Slapstick comedy of this type does not go well in an age where a great mass of disadvantaged humanity is struggling to lift itself to full citizenship in an often unfriendly atmosphere." This and other articles and editorials underscored the major objection of many postwar blacks. Except for the occasional black entertainer in a guest spot on variety show, the *only* blacks on television were the likes of the Kingfish and *Beulah*. CBS removed *Amos 'n' Andy* from the air in 1953 after two years. However, the program remained in syndication well into the 1960s, and is available on videocassette today. Moreover, except for the earlier-mentioned, 1968 sitcom *Julia*, another black-cast or black-themed show would not appear on prime time network television for almost 20 years.

In her book *Prime Time Families*, Ella Taylor describes the TV family as "[h]armonious, well-oiled building blocks of a benignly conceived American society founded in affluence and consensus." From the days of the homogenous suburban family life of *Leave It to Beaver* to the "sitcom social realism" of *Good Times*, many have pondered the supposed effects of TV on the family—the most sacred of American institutions.

In the 1950s, *The Aldrich Family*, the Cleavers (*Leave It to Beaver*), the Andersons (*Father Knows Best*), and the Nelsons (*Ozzie and Harriet*) lived in virtual domestic bliss. By the Kennedy years, single heads of households appeared in the sitcoms *My Three Sons* (1960-1972) and *The Andy Griffith Show*. The 1960s also featured “quirky” families in the form of *The Beverly Hillbillies*, *The Addams Family* (1964-1966), *Bewitched* (1964-1972), and *The Munsters* (1964-1966). Some consider *The Dick Van Dyke Show* as a standout of the era. It, too, was fashioned amongst the ideals of domestic harmony. But the Petries were different, more sophisticated and hip; Laura Petrie sometimes appeared in pants, while Bob Petrie’s co-workers included a Jewish man and a single woman.

In contrast, the 1970s would feature the travails of the Evans, an African-American family eking out an existence in a Chicago slum (*Good Times*), and at the same time present a 1950s fantasy family in the form of the Cunninghams of *Happy Days*. But in the decades since *The Aldrich Family* made the transition from radio to television, the TV family had incurred monumental change. The sitcom would now feature non-traditional families, bi-racial adoption, rebellious teenagers, parent bashing, divorce, twins separated at birth, ghetto families and wealthy ones.

In particular, one unwed mother basked in notoriety that emerged from the most unlikely of places: the American political arena. On the sitcom *Murphy Brown* (1988-1998), the character Murphy was a television journalist and single woman who became pregnant but showed little inclination to marry the father and settle into a life of domesticity. In 1992, former Vice President Dan Quayle led the attack on this highly popular sitcom, condemning the idea of an unmarried woman becoming a mother as being acceptable fare for prime time television. As noted liberally in American newspapers, he regarded the entire affair as “an attack on family values.”

The 1980s saw the emergence of the “boomer” audience, the youngish, upscale professionals favored by advertisers who greedily snatched-up commercial time for programs like *Cheers* (1982-1993). For a brief time, nighttime soaps and realistic crime dramas displaced the popularity of the situation comedy. However, the decade is also noteworthy for one particular family-oriented sitcom featuring a predominantly African-American cast which rose to become one of the most watched programs of the period.

The Cosby Show (1984-1992) made its debut on NBC in 1984 and became one of the biggest successes of the decade. If the ratings figures were correct, if you were breathing and watched television, you watched *Cosby*. The popularity and immense success of this sitcom makes clear how programming, once considered mindless entertainment, had attained major stature. Jack Curry, in an article for *American Film*, explains the significance of a hit comedy to the fortunes of television networks. Not only did a popular show like *Cosby* “deliver its own night,” but it was used as a “promotional base for other series.” It was used to “troubleshoot,” assisting with “ratings battles” wherever needed. No sitcom of the decade “had the impact and the acclaim of NBC’s *The Cosby Show*,” he notes. Moreover, the show became a cash cow. Notes John Lippman in the *Wall Street Journal*, “*The Cosby Show*, for example, has generated nearly \$900 million in revenue since it was sold into syndication in the late 1980s.”

But while *Cosby* may have featured the lives of a professional, educated, upscale black family, another eighties sitcom would forever

shatter the image of the TV sitcom family. Like a 1950s Mom, Roseanne Connor cleaned the house, washed the clothes, and made meatloaf for dinner. But that was the end of any similarity to 1950s-style domestic bliss on the quirky, controversial hit sitcom *Roseanne* (1988-1997).

Roseanne was “she who must be obeyed.” She sparred (verbally and physically) with her younger, occasionally employed, and sometimes promiscuous younger sister. Roseanne’s mother drank too much and at one point thought she was gay. Her boss and later co-worker was indeed gay, as was a female friend who took them for a night of dancing at a gay bar. While Lucy and Desi couldn’t share a bed, Dan and Roseanne Connor openly discussed the particulars of their sex life. Over the years, Roseanne’s daughter eloped with a mechanic; her college-enrolled daughter was discovered living with her boyfriend; their pubescent son D.J. suffered the embarrassment of getting an erection in math class; and in one show the Connors had their electricity turned off for non-payment. They referred to themselves as “white trash.” With so much contention, it is surprising that the show was as funny and successful. It enjoyed top ratings for most of its 10-year run and was probably responsible for the success of other quarrelsome, dysfunctional family scenarios like the Fox Network’s, *Married . . . with Children* (1987-1997) and the animated sitcom, *The Simpsons* (1989—).

A 1997 editorial in *The Columbus Dispatch* noted that “something has changed since the days when today’s parents sat watching Beaver Cleaver, Andy Griffith, and Gilligan. The three networks have given way to a cornucopia of new channels, and much of the fare is coarser and more irreverent.” In the Cleaver household, no one had ever raised their voice, used bad words, or suffered from intestinal gas. There was no sex, ethnic group issues, or alcoholics. Dad was happily, gainfully employed and Mom was always there when you needed her—at home. But sitcom families of the 1990s tended to feature dopey dads, absentee parents, grandparents who had sex, and moms whose behavior sometimes bordered on sadism. The flawless persona of Jim Anderson (*Father Knows Best*) evolved into parents whose flaws are clearly apparent. In an article titled “Father Knows Squat,” Megan Rosenfeld of the *Washington Post* notes, “Parents are one of the few remaining groups that are regularly ridiculed, caricatured and marginalized on television. Ask a typical viewer to describe how parents are portrayed on most shows and the answer is: stupid.”

Though television changed dramatically in the late 1980s and especially in the 1990s, as widespread cable access brought dozens of channels into American homes, the decade of the 1990s will still be remembered for a sitcom: *Seinfeld* (1990-1998). *Seinfeld* was noteworthy for its unique and quirky cast, its irreverent humor, and the fact that it was described as a show about nothing. Set in New York City, the program followed the life of character Jerry Seinfeld (a comedian), his three friends (Elaine, George, and Kramer), their families, and an odd assortment of occasional characters. In an example of art imitating life, the show even parodied itself as several episodes followed Jerry as he attempted to produce a sitcom about himself on the same network where the real *Seinfeld* program was aired. The group explored former TV taboos and “touchy” subject matter: a chef who neglected to wash his hands after using the toilet, sperm counts, and the size of a man’s genitals after a swim. In one episode the group made bets to see who could hold off masturbating the longest. There were ugly babies, cancer scares, bras for men,

black-market cable, scary bar mitzvahs, lesbian weddings, and stolen lobsters.

But *Seinfeld* is noteworthy as more than just another success story for NBC. So successful was the program to NBC and its fortunes that the real Jerry Seinfeld was paid one million dollars per episode to continue the show. The cost of advertising during an episode of *Seinfeld* during the 1997-98 season was \$700,000 for a 30-second spot. Advertising time for the program's final episode was \$1.5 million for 30-seconds, and included big advertisers like Anheuser-Busch, Visa, Mastercard, and the manufacturer of a vegetarian burger. The *Wall Street Journal* noted in 1998 that the one million-per-episode fee that the TBS cable network paid for reruns of *Seinfeld* was "one of the richest rerun deals in cable history." Noted the *Seattle Times*, "The program is poised to become the first television show to generate more than \$1 billion in syndication revenues." Moreover, the success of *Seinfeld* was the catalyst for similar shows about well-heeled young professionals with too-much time on their hands, for example, the program *Friends* (1994—).

Unlike the relevant-issues theme sitcoms of the 1970s, 1990s comedies often featured prosperous young professionals sipping expensive coffee and drowning in self-centered angst. Concerns about "real" issues like poverty, nuclear weapons, and the government appeared to be passé. In the Nelson's neighborhood (*Ozzie and Harriet*), the characters couldn't use the word toilet, let alone broach the subject of sex. Nineties sitcom characters talked candidly about orgasms and their choice of sexual partners. On the show *Ellen* (1994-1998), the character Ellen (played by Ellen DeGeneres) even "came out," announcing to the world that she was indeed gay. Beyond the occasional gay supporting character, however, portraits of gay life would remain a scenario much too risky a venture for networks whose fortunes rested on the success of the prime time line-up.

Just decades after the far-fetched scenarios of *My Favorite Martian*, the 1990s also saw the exploitation of "literate humor." Rife with references to Kant and existentialism, shows like *Frasier* (1993—) were created to appeal to upscale audiences with graduate degrees, people who, like the characters Frasier and Niles, had "advanced" cultural tastes. The format itself has evolved, with the "situation" part playing second fiddle. Notes producer Gary Goldberg, now there are sitcom stories with no beginning, middle, and end, or four stories running simultaneously with sometimes no resolution. Moreover, 1990s sitcoms are not always funny, but have often crossed-over (with comic relief) into drama, exploring broken marriages, alcoholism, and teenage sex. Sitcoms of the 1990s featured lovable nerds, soup Nazis, teenage witches, Korean families, dysfunctional families portrayed by cartoon characters, home improvement scenarios, and shows about nothing.

Between the debut of *I Love Lucy* in 1951 and the demise of *Seinfeld* in 1998 spans a period of nearly 50 years. Given the monumental reformation in the television industry, changing concepts of what is considered funny, and the evolution of American society in general, 50 years may seem more like centuries. What is clear, however, is that the situation comedy has come to signify much more than the good old days of black and white television and nostalgic images of Lucy in a hoop skirt. The episodic comedy has ushered America and its people through recession, boom times, war, civil unrest, and conservative and liberal presidencies. It has challenged ideas about sex, morals, reproduction, and fashion. The sitcom

has survived the Family Hour, Prime Time Access Rules, cable TV competition, mergers and takeovers, deregulation, debates, disputes, controversy, scholarly assessment, atomic warfare, and the building and the annihilation of the Berlin Wall to emerge as one of the more enduring forms of commercial television programming in United States.

Situation Comedy

See Sitcom

The Six Million Dollar Man

First hitting the airwaves as a made-for-TV movie in 1973, *The Six Million Dollar Man* became a weekly hour-long series that aired

from 1974 to 1978 on the American Broadcasting Company (ABC) network. The show starred Lee Majors as Colonel Steve Austin, an astronaut who suffered serious injuries from the crash of an experimental craft and was rebuilt into a bionic man by the government. Austin was given bionic legs, a bionic arm, and bionic eye. His new parts gave him super strength, super speed, and super vision. He worked for the OSI, the Office of Strategic Investigation. His superior was Oscar Goldman, played by Richard Anderson, and his doctor/scientist was Rudy Wells, played by Allan Oppenheimer and later by Martin E. Brooks.

During the regular series, Austin faced a variety of foes, including spies, a rogue bionic man, Bigfoot (a robot created by aliens), and the fembots (robots made in the image of women Austin and his fiancée, Jamie Sommers, the Bionic Woman, knew). During most of the episodes, Austin worked as a secret agent. When the character achieved super hero status among young television viewers, the show's producers imitated comic book hero plots with spinoffs and a “bionic family.” Sommers “died” only to be brought back the next season. Eventually there emerged *The Bionic Women* television

Lee Majors (right) as *The Six Million Dollar Man* with Richard Anderson.

series, involving a bionic boy and Sommers's bionic dog, a German shepherd named Max. The two shows shared a supporting cast and Austin and Sommers crossed over onto each others' shows.

The show lasted longer than several other super spy shows (*The Invisible Man*, *The Gemini Man*) that appeared around the same time. Both shows were in the top ten rated shows, with *The Six Million Dollar Man* even enjoying the spot as the number one rated show in America. It enjoyed a healthy run in syndication at home and abroad as well, appearing on cable television into the late 1990s. Austin and Sommers also appeared in several movie specials that aired in the late 1980s and early 1990s. (These movies also introduced another bionic man—Austin's son—and a bionic girl.)

Based on the novel *Cyborg* (standing for cybernetic organism), by Martin Caidin, the television series made the terms bionics and cybernetics familiar to the general American population, especially America's youth. Caidin served as technical advisor to the show.

The television shows generated other forms of popular culture. Novels, especially young adult novels, were based on episodes and characters from the series. Steve Austin starred in his own comic book series produced by Charlton Comics. There was a Six Million Dollar Man action figure and lunch box. Dusty Springfield recorded a pop single titled after the show. Parodies also appeared: the Bionic Watermelon debuted on the *Captain and Tenille Show*; a children's joke book was titled *The Bionic Banana*.

The show's opening sequence, showing Austin's crash, gave several phrases to American slang. "He's breaking up! He's breaking up!" and "We can rebuild him; we have the technology. We can make him better than he was before." became expressions among children during play. Pretending to be bionic was easy thanks to the show's low-budget special effects. Every bionic act was usually done in slow motion and was accompanied by a distinctive sound effect, easy to imitate in backyards and school playgrounds.

Besides being a fun thing to say on the playground, the show's opening statement about "making him better than he was before" indicated an American attitude toward technology. After putting a man on the moon, most Americans became extremely proud of technology as a remedy to any problem. The show postulated that technology could even fix a broken person. And of course, scientists involved in the actual field of bionics were attempting to do just that. The show tended to highlight the technology, although *The Bionic Woman* tended to highlight the person. However, although technology solved the problems, it could also be faulted as the source of power for the villains on the show. Killer robots and Venus probes were Austin's biggest challenges. What cannot be overlooked, though, is the significance of Austin's humanness in allowing him to triumph against his machine foes.

The show also expressed a view of government agencies as entities protecting the population. The OSI was concerned with doing good and mostly benign in its practices. This perception of government agencies contrasts radically with the way government is portrayed in the 1990s hit science fiction show *The X-Files*.

60 Minutes

Prior to the emergence of prime-time network newsmagazine programs like *20/20*, *Primetime Live*, and *Dateline*, and before the era of round-the-clock cable news on CNN, MS/NBC, and Fox News Channel, the CBS newsmagazine *60 Minutes* was unchallenged as television's premiere news program. From its initial broadcast on September 24, 1968, *60 Minutes* pioneered the "magazine format" of television journalism, which allowed it to run a mixture of hard news, investigative reports, personality profiles, and light feature pieces. Its prominence enabled it to feature candid stories on the most powerful world leaders, distinguished artists, and crafty villains of the last thirty years. Although it was not a ratings sensation during its first several seasons, by the mid-1970s it grew to become the most prestigious, most watched, and most imitated news program on television.

The creation of *60 Minutes* came about after its producer, Don Hewitt, was fired in 1964 from his position as producer of *The CBS Evening News with Walter Cronkite*. Before his dismissal, he had become a key behind-the-scenes player at CBS News. Hewitt had directed Edward R. Murrow's *See It Now* programs in the 1950s, including the first live coast-to-coast hookup in November 1951 which depicted the simultaneously broadcast images of the Brooklyn and Golden Gate bridges. In 1960, he produced and directed the nation's first televised presidential debate between John F. Kennedy and Richard Nixon. Hewitt was also remembered for such technical achievements as the invention of cue cards, the development of subtitles to identify people and places on screen, the creation of the "double projector" system to enable smoother editing, and coining the term "anchor man." After a dispute with Fred Friendly, president of CBS News, he was relegated to the network's lowly documentary division. He describes his attempts to revive the little-watched, moribund format by stating, "Sometime in 1967 it dawned on me that if we split those public affairs hours into three parts to deal with the viewers' short attention span . . . and come up with personal journalism in which a reporter takes the viewer along with him on the story, I was willing to bet that we could take informational programming out of the ratings cellar."

Hewitt presented his newly fashioned documentary program in the guise of a newsmagazine, such as *Time* or *Newsweek*. Each week his chief correspondents would present several stories on a wide variety of topics. A brief concluding segment in the early years, titled "Point Counterpoint," consisted of debates between liberal and conservative columnists Shana Alexander and James Kilpatrick. In 1978, writer Andy Rooney assumed this segment to present his own brand of short, humorous commentary. Each portion of the program was separated by an image of a ticking stopwatch, which became the show's symbol.

By the late 1970s *60 Minutes* became one of television's most popular shows with its concept of stories presented in a "Hollywood style" that emphasized attractively packaged factual events. In 1979,

it was the highest rated television program of the season—a distinction that no other news show had ever attained. Its great popular success made *60 Minutes* one of the most profitable programs in TV history. Costing only about half the price of an hour-long entertainment show while commanding the same commercial rates of such series allowed CBS to earn enormous sums of money from what was once the least-watched network program type. Much of the show's great appeal was based on its increasingly hard-hitting investigative reports. Presented mainly by aggressive correspondents Mike Wallace and Dan Rather, the show exposed a number of frauds and abuses including the sale of phony passports, kickbacks in the Medicaid business, and mislabeling in the meat-packing industry. Reporter Morley Safer commented on the show's ability to get dishonest businessmen and scam artists on camera by saying, "A crook doesn't believe he's made it as a crook until he's been on *60 Minutes*."

The show's greatest strength derives from its correspondents and their choice of stories. Harry Reasoner, Ed Bradley, Diane Sawyer, Steve Kroft, and Leslie Stahl were correspondents at various times and were able to deliver insightful pieces within the show's potpourri format. One week a reporter would be speaking from a war zone and the next speaking to movie stars or pool hustlers. The large number of correspondents freed each one of them from being studio-bound, thus allowing them to report from the field themselves. Hewitt's focus on "personality journalism" allowed the reporter's own characteristics to shine through. Mike Wallace was seen to embody the image of the tough reporter, while Morley Safer projected a more elegant image. All were considered leaders in their field. The reporter's personal team of six producers, a cameraperson, assistant, soundperson, and electrician supports each on-air personality.

Of all the journalists associated with *60 Minutes*, none is as strongly identified with the program as is Mike Wallace. His intense

reporter's image came only after a long and varied career. He was a radio performer in the 1940s and appeared as an actor on many popular shows like *Sky King*, *The Lone Ranger*, *The Green Hornet*, and *Ma Perkins*. After moving to television in 1949, he hosted a variety of talk, interview, and game shows. Following the 1962 death of his son Peter in a climbing accident, Wallace decided to become a straight newsmen. He possesses a direct, often abrasive, style that is well suited for the show's confrontational format. He is generally regarded as the most fearless reporter in the business and is unafraid to ask the most provocative questions even of friends. In the 1990s the nearly eighty-year-old Wallace showed no signs of slowing down. His continued tenacity has caused him to be referred to as the "geriatric *enfant terrible* of television."

Although it has long been considered television's most distinguished news program, *60 Minutes* has not been without its critics or controversies. Some claimed it practiced "ambush journalism" by editing its massive amounts of interview footage to distort the positions of some of its subjects. Others have complained the many off-screen producers do the majority of the reporting while the on-air correspondents merely provide each story's narration. In the 1990s, humorist Andy Rooney was temporarily suspended for a supposedly racist remark. Other low moments in the program's long history include its being duped in 1972 by a forged diary of industrialist Howard Hughes and, most seriously, its being forced to delay an exposé on the tobacco industry due to the network's fears of litigation. Despite these problems, *60 Minutes* remains a respected program that is trusted by viewers in Middle America.

An examination of the personalities, issues, lifestyles, and major events covered on *60 Minutes* provides a remarkable window on America from the late 1960s onward. Don Hewitt created a format that has allowed for a varied presentation of ideas that have shaped the

post-Vietnam era. He and his able correspondents, led by Mike Wallace, revealed to the networks that factual, documentary programming could be highly successful both in terms of journalism and ratings. Their success led to a proliferation of other television newsmagazines in the 1990s. In 1998, it was announced that CBS was planning on expanding the show's franchise by creating *60 Minutes II*.

The \$64,000 Question

During the 1950s, game shows were television's most popular fare, and *The \$64,000 Question* (1955-58) was unquestionably America's favorite game show. Every Sunday night, the country came to a stop as millions of households tuned in to watch. The premise behind the show was brilliant—in addition to a profession or vocation, many people have hobbies or avocations about which they are remarkably well informed. The show featured contestants such as a jockey who was an art expert, or a psychologist—the young Dr. Joyce Brothers—who loved prize fighting. Players entered an isolation booth and answered questions, working their way up each week to the final \$64,000 Question. Unbeknownst to the viewers and, indeed, to some of the contestants, however, the producers of the show were giving answers to the more charismatic players. A few years later, *The \$64,000 Question* came under scrutiny during the investigation by the U.S. Congress known as the Quiz Show Scandal. When the public learned the truth about the “fixed” quiz shows, game shows fell out of favor for years and the American television audience adopted a cynicism that has permeated popular culture ever since.

Skaggs, Ricky (1954—)

A seasoned musical veteran by the time he turned 18, Ricky Skaggs parlayed early bluegrass music prominence and an apprenticeship with Emmylou Harris's country-rock Hot Band into a career

Ricky Skaggs

that put him on top of the country music charts in the early 1980s. While he was capable of brilliance within each genre, it was his creation of a modern sound out of traditional elements from both that earned him widespread acclaim and respect even after the rise of the hot New Country format shut him (and others like him) out of country radio in the early 1990s. Down but not out, he roared back into the limelight in 1997 when the album that signalled a return to his roots, *Bluegrass Rules!*, became the first traditional bluegrass album to break onto the country sales charts.

Born in a small town in the hills of Eastern Kentucky, Skaggs began his career early, playing mandolin and fiddle with his parents' semi-professional band by the time he was five. In 1971, he and partner Keith Whitley were taken under the wing of bluegrass pioneer Ralph Stanley, with whom they toured and recorded for several years. While Whitley continued to work with Stanley through much of the 1970s, Skaggs left to take a short-term job with the Country Gentlemen, and then joined J. D. Crowe and the New South in 1974. Though his tenure with Crowe was brief, it was exceedingly influential; the band toured widely, including a visit to Japan, and made one of the most significant bluegrass albums ever, a self-titled release for Rounder Records in 1975. When Skaggs departed from the New South, he and fellow alumnus Jerry Douglas formed Boone Creek, another influential act that combined traditional bluegrass with a more modern, rock-influenced sound.

Following the breakup of Boone Creek, Skaggs went to work for Emmylou Harris, then an habitual presence at the top of the country music charts. As a member of the Hot Band he both influenced and

was influenced by Harris, bringing bluegrass sounds into her material while honing his skills as an electric guitar picker and developing an appreciation for the application of rock beats and accents to traditional country material. A 1979 solo album, *Sweet Temptation*, made while he was still with Harris, showed Skaggs in the process of turning these lessons into a catchy, distinctive sound that melded his influences and experiences into something new; when a single from the album, "I'll Take the Blame," garnered some airplay on country radio, he plunged into a solo country music career, signing with Epic Records and producing *Waiting For The Sun To Shine* in 1981.

Skaggs's first Epic single, "Don't Get Above Your Raisin'," hit the Top 20, and after his second single reached the Top 10, he had his first number one recording with an updated version of Flatt & Scruggs' "Crying My Heart Out Over You." From then until 1986, he was never absent from the upper end of the country charts, scoring 15 consecutive Top 10 hits, most of which reached the top. The winning formula proved to be a combination of modern-sounding remakes of country and bluegrass classics ("I Don't Care," "I Wouldn't Change You If I Could," "Don't Cheat In Our Hometown," "Uncle Pen") and well-crafted country-rockers ("Heartbroke," "Highway 40 Blues") by younger, sophisticated writers, all delivered by a supremely talented band of musicians, many with bluegrass backgrounds. These achievements brought him acclaim—the legendary guitarist/producer Chet Atkins credited him with "single-handedly" saving country music—as well as a flood of honors, including membership in the Grand Ole Opry (at the time of his induction he was the youngest person ever to join the cast), eight awards from the Country Music Association, and four Grammys. Though he continued to make occasional guest appearances with bluegrass acts in concert and on record, the 1980s saw Skaggs take up what seemed to be a permanent residence in the world of country music.

By the end of the 1980s, though, Skaggs's releases were no longer topping the charts. Some critics attributed the decline to stagnation and a decline in the quality of his material, while others took note of the changing shape of country music radio, then turning toward a variety of broader rock music influences. Whatever the cause, he had only one number one recording after 1986 ("Lovin' Only Me," 1989), and by 1988 most of his singles were failing to reach the Top 20, with his last charting one coming in 1992. Though he continued to maintain a high profile on the Opry and cable television's Nashville Network, hosting a well-received concert series on the latter in the mid-1990s, mutual dissatisfaction between Skaggs and his label found him making a jump to Atlantic Records, for whom he made two strong albums that were favorably received by critics, but not by mainstream country radio.

However, shortly after the release of his second—and, it turned out, final—Atlantic album, Skaggs found a new lease on musical life by returning to his starting point: traditional bluegrass. Turning his country band into a bluegrass one, he recorded an album of standards—*Bluegrass Rules!* (1997)—that startled virtually everyone by selling well enough to earn a place on Billboard's country album chart. Not by coincidence, the shift came at a time when the death of bluegrass's founder, Bill Monroe, had prompted concern about the longevity of the style; Skaggs was as well-positioned as anyone to contribute to its survival, and the album release was followed by broad-ranging tours and televised appearances, as well as savvy use of the Internet to reach listeners directly, bypassing commercial radio. By the end of the

decade, Skaggs was proclaiming his permanent commitment to bluegrass, and hundreds of thousands of fans appeared to greet the news with equal devotion.

—Jon Weisberger

Skateboarding

Invented in the 1950s by southern California surfers who sought a way to surf without waves, skateboarding has itself experienced several waves of popularity. Almost universally outlawed in the 1960s because it was perceived as dangerous, skateboarding enjoyed a revival in the 1970s and another in the 1980s, helped along by Marty McFly, the skateboarding hero of the *Back to the Future* movies. In the 1990s, skateboarding once again flourished, not only as a popular "extreme" sport, but also as a five hundred million dollar a year business. Perhaps because it was spawned by the bohemian surfer culture, skateboarding has always had a rebel image, and it is this that may be responsible for the continuing renewal of its popularity among youth.

In the 1950s bored surfers attached composite roller skate wheels to pivoting axles and put them on the front and back of a wooden plank. The pivoting action helped steer the board, which was maneuvered much like a surfboard on the water, steering by changing the position of the feet and shifting one's weight. In 1973, the old fashioned metal wheels were replaced by newer roller skate wheels made of polyurethane. The new wheels gave the board stability, a smoother ride, and greater traction. Modern boards are made with

Mathias Ringstrom (top) and Max Dufour at the 1997 X-games in San Diego, California.

scientific precision, often at small specialty companies run by skaters, with lighter, more durable decks (the board itself), neoprene wheels, and lightweight tempered trucks (the pivoting axle assembly). Selling at a hundred dollars each or more, skateboards are efficient vehicles both for transportation and for the flamboyant tricks that skaters refer to as “grabbing air.”

Unlike surfers, skateboarders need nothing but the streets and concrete structures of the city to hone their skills, and they have nothing but concrete to break their falls. Thus skateboarding has attracted a tough, independent, and rebellious type of urban youth, who have created their own subculture. Skateboarders, who call themselves “thrashers” or “shredders,” are largely self-taught. They have their own lingo, their own clothing styles, their own competitions, and their own publications. *Thrasher*, a radical “zine,” and *Transworld Skateboarding*, a slightly more clean cut publication, are two of the most successful skateboarding magazines. Each has a circulation of well over 150,000. Skateboarding also spawned its own music genre, with a similarly wild image. Groups with names like Septic Death and Gang Green record their “speed metal” music on small labels devoted to “skate rock.” One skate rock disc jockey, Skatemaster Tate, describes the music vividly: “It’s punk rock and skating rolled up in a ball of confusion and screaming down the alley in a gutter.”

Since skateboarding is often done by groups of teenagers on city streets, parking garages, empty swimming pools and the like, skaters are often subject to hostility from local citizenry and law enforcement officials. Cities have two basic approaches to controlling the thrashers: banning skateboarding or developing special parks devoted to the sport. Banning skating is usually unsuccessful simply because breaking the rules is as much a part of the flashy street sport as wheelies and spins. Skateboard parks offer a compromise that is often at least partially successful. Parks like the Savanna Slamma and Milwaukee’s Turf Skateboard Park attract hundreds of skaters to show off their tricks on ramps and half-pipes constructed especially for safe skating. Some skaters however, feel that skating is by right a street sport and that relegating it to special parks robs it of its rebel cachet. This antipathy between thrashers and the law resulted in the most widely known skateboarding slogan, seen on bumper stickers nationwide, “Skateboarding is not a crime.”

With an estimated twenty million skaters at the end of the 1990s, skateboarding is well entrenched as a flamboyant mode of transportation and expression for urban youth. Competitions such as ESPN’s Extreme Games offer thrashers a chance to win gold, silver, and bronze medals in downhill racing, slalom racing, and freestyle. Though often considered dangerous, skateboarding has far fewer reported injuries than soccer, baseball, or basketball, and many skaters, in addition to the mandatory baggy T-shirt and baggier shorts, now sport kneepads, wrist guards, and helmets. Perhaps those statistics are best kept secret from older generations, however, to avoid ruining a perfectly good rebellious outlet for their offspring.

Skating

From its ninth-century, Northern European origins as a means for hunting and traveling on ice, skating has been explored for its leisure possibilities. By the time that iron skates—or *schaats* as their sixteenth-century Dutch inventors called them—had replaced their wooden or bone predecessors, their transformation to recreational

Jayne Torvill (right) and Christopher Dean perform their ice dancing routine at the Winter Olympics in Sarajevo, 1984.

usage was well under way. This can be seen in some of Pieter Brueghel's sixteenth-century paintings of peasants skating on the canals of Belgium and the Netherlands, activities that were made famous in Hans Christian Andersen's fairy tales of Denmark. Not so long after iron blades were invented, skates that could snap on to the sole and heel of boots were being manufactured by the Acme Skate Company in Halifax, Nova Scotia. These skates were electroplated in nickel or gold for the wealthy to carry around in expensive carrying cases.

It may be the numerous variations on ice skating that explains its growing popularity today. There is short and long-track speedskating, barrel jumping, pairs, and figure skating. Originally a sport for the Dutch common-folk, speedskating was initially made popular in the Winter Olympics as a sport that involved packs of skaters racing in laps over different distances on a track. The current objective of speedskating is to get around an oval track as quickly as possible (although some of speedskating's most popular races are marathons set on the canals of the Netherlands). Barrel jumping, a common variation of speedskating, was especially popular around the turn of the twentieth century. Skaters, set side-by-side on the ice, would skate as fast as they could, and try to jump over as many barrels as possible. Without a doubt however, it is figure skating, and specifically Sonja Henie's white skates and short skirts in the Olympics of 1928, 1932, and 1936, that commanded the world's attention. Henie's jumps and spins so captured the public imagination that ice skating began to evoke images of talented individuals, alone or in pairs, performing highly technical actions in nearly perfect union with music and all towards the goal of "a clean skate."

Sonya Henie was the most successful figure skater ever, maintaining a public skating career for 46 years. Born in Oslo, Norway, on April 8, 1912, she began skating when she was six years old. At the age of 11 she competed in the Olympics. In 1927 she won the world amateur championship for women, holding that title for 10 consecutive years. She won three gold medals in the Winter Olympics of 1928, 1932, and 1936. Trained in ballet, Henie incorporated some of its maneuvers into female figure skating; she was largely responsible for converting a predictable series of colorless exercises into a spectacular and popular exhibition. After having caught the attention of Americans at the 1930 World Championships in New York, she turned professional after her Olympic triumph in 1936, and toured Europe and the Americas as the star of the *Hollywood Ice Revue*, and for a time (1951-52) she acted as producer of her ice shows. In 1936 she signed with Twentieth Century Fox and starred in 11 popular films including *One in a Million* (1936/37), *Thin Ice* (1937), and *Wintertime* (1943). From 1937 to 1945 she was one of the leading box-office attractions in the motion-picture industry and died in 1969 with a fortune estimated at \$47 million dollars.

Since Henie's time, her status as celebrity has been replicated by other female figure skaters. Peggy Fleming, Dorothy Hamill, Katarina Witt, and Kristi Yamaguchi have loomed larger than male figure skaters in the public imagination, paying for this privilege by almost always being cast, as Feuer explains in the anthology *Women on Ice*, as the "wounded bird, a child, or a fairy tale princess." This embodiment of grace has traditionally belied the athleticism necessary to perform the necessary jumps, loops, and spirals that mark elite amateur and professional figure skating careers. The move away from, and reinterpretations of, vestigial images of femaleness and

maleness marked figure skating's skyrocketing popularity in the 1990s. The new figure skating was a media-conscious, entertainment-driven form that thrived in the age of tabloid TV. Although part of the tabloidization of skating is attributable to the death of compulsory figures and endless speculation about who Katarina Witt was dating, the current connection between skating and the tabloids owes much of its origin to the disgraceful but unforgettable Tonya/Nancy scum.

The rivalry between "trailer trash" Tonya Harding and "ice princess" Nancy Kerrigan, the subsequent scandal in which Harding was found complicit in her husband's assault on Kerrigan at the 1994 US National Championships, and the controversial representation of the two women on the U.S. women's team at the 1994 Lillehammer Winter Olympics is integral in the current popularity of figure skating. Why? Almost 50 percent of U.S. homes with television sets were tuned into the primetime telecasts of the women's figure skating competition, making it the sixth most popular television program ever.

From that point, figure skating increased its allure. Figure skating in the 1990s became a form of public spectacle, the extension of skating beyond competitions like the Olympics to a myriad of touring ice shows and pseudo-competitions that appeared regularly on prime time television. The change was most telling in men's skating, where competitors were acclaimed by fans for their masculine rather than artistic qualities—thus world champion Elvis Stojko performed as a motocross bike-driving, karate-fighting, arm-pumping, quadruple toe loop-jumping super male. More telling were the young members of the audience who hooted and hollered like fraternity brothers at a strip bar as Philippe Candeloro took off his shirt amid squeals of pleasure.

Skating's new popularity was revealed in very full arenas in cities where double axles are more traditionally associated with truckers, not skaters. It was revealed on TV, where the airwaves featured Fox Television's *Rock 'n' Roll Skating Championship*, and six professional championships on 9 Sundays on CBS alone. There were also television specials hosted by individual skaters (Kurt Browning's *You Must Remember This* was considered the best). Finally, rock and roll-like touring such as Campbell Soups' *Tour of World Figure Skating Champions* (televised by CBS as *Artistry on Ice*) ensured complete saturation. Or did it?

In the late 1990s, almost 30 million Americans ice skated. The United States Figure Skating Association membership jumped 25 percent since 1994. It is speculated that 35 percent of the audience for figure skating may be male. According to some marketers, figure skating ranks just behind the NFL in U.S. popularity. In other words, figure skating may have merely completed its compulsory and long programs while its more exciting and even more popular short program awaits.

—Robert VanWynsberghe

Skelton, Red (1913-1997)

One of television's most popular comedians, Red Skelton is most fondly remembered for *The Red Skelton Show*, which ran on NBC from 1951-1953, and then on CBS from 1953-1970 (with a brief return to NBC for the 1970-1971 season). A very likeable personality and gifted pantomimist, Skelton also starred in a series of comedy films and had a career filled with contradictions. Noted writer Ross Wetzsteon once commented, Skelton was "a mime whose greatest success was on the radio. A folk humorist in the years when American entertainment was becoming urban. A vulgar knockabout at a time when American comedy was becoming sophisticated and verbal. A naïve ne'er-do-well in the age of the self-conscious schlemiel. Red Skelton's career is a study in how to miss every trend that comes down the pike."

Skelton was born Richard Bernard Skelton in 1913 (few sources list 1910), and was the son of a circus clown with the Haggback and Wallace circus. His father died before he was born, and he grew up in punishing poverty. Active in show business from the age of 10, Skelton trained in stock companies, tent shows, burlesque, and vaudeville. In the 1930s, he stumbled upon a formula for finding humor in people's idiosyncracies and displaying his gift for pantomime, developing his famous routine on the different ways people dunked their doughnuts—he later performed this bit for a two-reel short, *The Broadway Buckaroo*. Skelton developed much of this material with the help of his wife Edna, who served as his manager, writer, and foil for many years.

Red Skelton

Skelton started his film career in 1938 when RKO hired him to perform some of his vaudeville routines for *Having a Wonderful Time*. In the film Skelton plays Itchy Faulkner, the entertainment director of a resort camp in the Catskill Mountains, and performed a routine about the different ways people walk up a flight of stairs. RKO, however, expressed no continued interest in his services. But in 1940, Metro-Goldwyn-Mayer (MGM) assigned Skelton to appear as comedy relief in *Flight Command* and two Dr. Kildare films, but his first starring role and real breakthrough came when he got the lead role of Wally Benton, also known as the radio comic "The Fox," who solves mysteries in a remake of *Whistling in the Dark* (1941). Ace comedy writer Nat Perrin added a bounty of snappy lines for Skelton, and a brief film series of *Whistling* films was launched, which while not wildly funny are unpretentious and diverting, and they represent Skelton's best film work—the other films in the series were *Whistling in Dixie* (1942) and *Whistling in Brooklyn* (1943).

Despite its resources, MGM had difficulty in figuring out how to present their new property, often relegating their new star to more minor comedy relief roles. He was given brief routines in a number of elaborate MGM productions, including *Neptune's Daughter* (1949), *Three Little Words* (1950), *Texas Carnival* (1951), and *Lovely to Look At* (1952), but was most notable in *Bathing Beauty* (1944), where he performed a routine about a woman getting up in the morning, and *Ziegfeld Follies* (1946), where his Guzzler's Gin routine was rechristened "When Television Comes" and represented the comic highlight of this kitchen sink film.

Skelton had his own radio series from 1941 until 1953, where he developed the characters he was most noted for, including Junior (the Mean Widdle Kid), Freddie the Freeloader, Clem Kadiddlehopper, George Appleby, Sheriff Deadeye, Willy Lump Lump, Cauliflower McPugg, Cookie the Sailor, San Fernando Red, Bolivar Shagnasty, and others.

Skelton served for a time in the army, and his return vehicles at MGM proved unfunny flops (*The Show-off* [1946] and *Merton of the Movies* [1947]). One of Skelton's better efforts, Vincent Minelli's *I Dood It* (1943), was loosely based on Buster Keaton's MGM film *Spite Marriage* (1929). Skelton developed a good relationship with the out-of-work and underutilized Keaton who supplied him with advice about comedy and worked with Skelton on some of his better efforts, notably *A Southern Yankee* (1948) and *The Yellow Cab Man* (1950) both of which credited former Keaton director Edward Sedgwick as "comedy consultant" to keep the resistant front office from getting suspicious. Keaton pinpointed a problem with *A Southern Yankee* right away, noting that when the film began, Skelton, who plays a bumbling northern spy down South, acted like an imbecile and alienated the audience, and so the scenes were re-shot to tone down Skelton's nutty behavior. Keaton also contributed the classic gag where Skelton wears a uniform that is half-Union and half-Confederate, strolling between the two sides to cheers until the charade is discovered.

In *The Yellow Cab Man*, Skelton played a would-be inventor of unbreakable glass and other "safety" devices, and featured a classic routine about Skelton's first day at driving a cab. He was also loaned out to Columbia for *The Fuller Brush Man* (1948), where he played a door-to-door salesman who becomes involved in a murder, which was successful enough to spawn a follow-up, *The Fuller Brush Girl* (1950), starring Lucille Ball, in which Skelton made brief appearance.

One of Skelton's most memorable quips occurred on the occasion of Columbia head Harry Cohen's death. When someone remarked on the large number of people who turned out for the hated studio head's funeral, Skelton returned, "Give the people what they want, and they'll come out for it."

Skelton's true medium, however, turned out to be television as his remaining film comedies proved rather lackluster. His final film appearance was in a series of comedy sketches at the beginning of *The Daring Young Men and Their Flying Machines* where Skelton mimed various aviation pioneers and their unsuccessful efforts. It was on television where Skelton was most popular and most beloved.

One of Skelton's earliest writers was legendary television host Johnny Carson, who got his first on-camera big break when Skelton knocked himself unconscious one day during rehearsal and Carson was quickly summoned to fill in—CBS liked his appearance enough to offer him his own show in 1955.

Skelton was an inveterate ad libber, much to the consternation of his guest stars who expected him to follow the script (Tim Burton's movie *Ed Wood* (1994) captures the confusion of Bela Lugosi when he appeared on the show). Skelton delighted in getting his guest stars to break up on camera. The rock band the Rolling Stones made one of their earliest television appearances on Skelton's show.

As his professional life was soaring, however, his personal life turned grim. His nine-year-old son Richard Jr. died of leukemia and his second wife tried to commit suicide. Skelton's work became more maudlin and he began losing his audience. He spent his declining years painting a large series of clown faces which were sold in art galleries across the country. These paintings proved enormously lucrative. He died from pneumonia in 1997 at his home in Rancho Mirage, California.

With his television episodes rarely revived, Skelton is in danger of becoming increasingly forgotten, which is a pity because he was a talented comic with a genuinely inspired gift of mimicry. His gifts put him in the same league as Marcel Marceau. One of the most popular comics of the 1940s and 1950s, he was awarded a Golden Globe for Best Television Series in 1959, and received a Cecil B. DeMille Golden Globe years later, as well as a Governor's award from the Emmys in honor of his contributions.

Skyscrapers

The "skyscraper" is a uniquely American invention that has come to symbolize the cultural and economic predominance of the United States in the twentieth century. With the invention of the elevator in 1859 and the development of new building materials and

Several skyscrapers across a cityscape.

techniques, tall buildings have been occupying the heart of American cities since the late nineteenth century. They are both soaring examples of technological capability and symbols of deeper concerns. As architectural historian Carol Willis wrote in a 1995 book: "Skyscrapers are the ultimate architecture of capitalism. The first blueprint for every tall building is a balance sheet of estimated costs and returns." The modern city, center of economic activity and capital of culture, is unimaginable without skyscrapers.

While the definition of what qualifies as a skyscraper has changed over the years with increasing technological capabilities, the inherent elements remain the same as a century ago—a tall building of stacked, repetitive office spaces (and sometimes retail and/or residential spaces) located in an urban setting. In 1900, the Park Row Building in New York City was the world's tallest at 382 feet and 32 stories. Today, it would be dwarfed in most large cities. In 1997, the twin 1,476-foot Petronas Towers were completed in Kuala Lumpur, Malaysia, surpassing Chicago's Sears Tower as the tallest occupied building in the world. The fact that they were built in Asia demonstrated the emerging economic power of the region in the late twentieth century and the exportation of American cultural symbols and economic models to all parts of the world.

The century-long evolution of the skyscraper from five-story building to 1,000-foot-plus tower was influenced by many factors. Three of the most important influences were the invention of the passenger elevator by Elisha Graves Otis in the 1850s, the development of steel framing by William LeBaron Jenney of Chicago in the 1880s, and the escalation of real estate prices in downtown areas.

Other factors included stylistic trends, legislation in the form of height restrictions, and civic competition (mainly between New York and Chicago). The first identifiable skyscrapers appeared in Chicago in the 1880s. Masonry buildings, where the stone walls actually carry the weight of the building, were approaching the limits of their capacity. The 16-story Monadnock Building (1891) in Chicago remains the world's tallest masonry building; because of the load created by this height, the Monadnock's walls are six feet thick at the base. By the time of its completion, however, a totally new generation of Chicago-style skyscraper construction was in progress, led by Louis Sullivan, who wrote a famous essay in 1896 entitled "The Tall Office Building Artistically Considered." With the invention of the steel-frame building, in which a lightweight steel skeleton is covered by a masonry skin emphasizing their verticality, buildings could rise higher and provide more interior space while more nearly expressing the spirit of the industrial age. Such tall buildings soon appeared in New York and other cities as downtown real estate became more expensive; the only logical solution was to build upward. The steel-frame building and its derivatives proved indispensable in the development of the twentieth-century American city.

Skyscrapers embody many things, including technical achievement, economic prosperity, urban congestion, and civic and corporate pride. The extent to which the skyscraper has become an American icon demonstrates how corporate capitalism has come to represent America to the rest of the world. Tall buildings have become instantly recognizable urban symbols at home as well. They appear in countless movies and television shows, and have been the subject of paintings, poems, and musical compositions. The Empire State Building in New York, the world's tallest building for four midcentury decades (1931-1972) is one of the most famous silhouettes in the world. Skyscrapers provide an instantaneous means of identification in the modern world; they can be used as shorthand for the anonymous twentieth-century city, like the incomparable forest of tall buildings that occupy the tip of lower Manhattan. Individual buildings like the Empire State Building (1931), Chicago's Sears Tower (1974) and San Francisco's Transamerica Pyramid (1972), stand as prominent civic symbols and tourist attractions, as does the RCA Building (now the GE Building) in the modern Rockefeller Center complex whose original core complex was completed in 1940. One of the most daring and atypical skyscraper designs was never realized: Frank Lloyd Wright's visionary 1930s proposal for a mile-high skyscraper rising not in a congested urban downtown but in the midst of a planned rural complex he called Broadacre City.

More important, however, is the manner in which tall buildings have been used as advertising for America's businesses. In the early 1900s, corporate capitalists discovered that the skyscraper was a more effective advertisement than any billboard, newspaper, or magazine ad. Beginning with Cass Gilbert's Woolworth Building (1913) in New York—the world's tallest building at the time, designed in a striking Neo-Gothic style—skyscrapers have become indelibly linked with America's top companies. Prominent examples of the tall building as corporate symbol include the Gothic-style Chicago Tribune Tower (1922); the American Art Deco Chrysler Building (1930, New York); two International Style skyscrapers: the Seagram Building (1958, New York) and the John Hancock Center (1968, Chicago); and the postmodern AT&T Building (1984, New York). The skyscraper form proved so popular that it was also applied outside the

business world. The Nebraska State Capital, designed by Bertram Goodhue and completed in 1932, combined a two-story base with a soaring 400-foot tower that copies the setback style of New York skyscrapers. The United Nations Secretariat (1950) designed by Le Corbusier, and Lakeshore Drive Apartments (1951-52), designed by Mies van der Rohe, are typical examples of a European High Modernist interpretation of an originally American architectural form; these buildings helped pave the way for the International Style "glass boxes" typically seen in mid-Manhattan and elsewhere, a style that would become pervasive in the 1950s and 1960s in many other cities of the West. Such incursions of business imagery into the political realm testify to the growing power of business in what has been called "the American Century."

Among their other functions, skyscrapers are an index to the economic health of a society. Certain "boom" periods have given rise to a proliferation of tall buildings in various cities; Chicago in the 1880s, New York in the 1920s, and Houston in the 1980s are salient examples. By the late 1990s, almost every American city of decent size has at least one tall building—even where real-estate prices do not require them. The skyscraper is a technological and economic solution to an urban problem that has been transformed into a status symbol for cities and developers alike. Because it fulfills so many functions, the skyscraper has proven to be the typical building type for the modern urban world.

Slaney, Mary Decker (1958—)

Mary Decker Slaney, the first woman to win the prestigious Jesse Owens track and field award, is considered to be America's greatest mid-distance runner. Slaney won both the 1,500 and 3,000 meters at the 1983 World Championships in Helsinki, has set 36 American and 17 world records, and still holds four American records, all set between 1983 and 1985. In a career that began at age 11, Slaney, who set her first world record at age 14, has established

herself as a world-class runner despite a series of painful injuries and remarkable recoveries (19 operations) as well as exercise-induced asthma. After four Olympic tries, Slaney has yet to win a medal. After a successful comeback in 1997 at age 39, however, she made plans to run in the year 2000 Sydney Olympics.

Slang

Slang is unconventional, hard-hitting, metaphorical language that is colloquial, sometimes vulgar, and always innovative—nothing registers change in cultural thought faster or more dramatically than slang. Lexicologist Stuart Berg Flexner defines slang more precisely as "the body of words and expressions frequently used by or intelligible to a rather large portion of the general American public, but not accepted as good, formal usage by the majority." Linguists Lars Andersson and Peter Trudgill, on the other hand, claim there is no good definition of slang and quote the poet Carl Sandburg: "Slang is a language that rolls up its sleeves, spits on its hands, and goes to work." Although linguists make no value judgments on levels of language, the general public seldom views slang without passion. It is seen as either a harbinger of hope and change (particularly among the young) or as a threat to what is perceived as "proper" language and society.

Informal and spoken rather than formal and written, slang is not the same as dialect, nor is it equal to swearing, although it may take on a vulgar edge, and it almost always evokes negative attitudes. Characterized by its ability to startle, slang falls below the "neutral register" of daily speech: terms such as "whore," "ho," "tart," and "slagheap" for the neutral "prostitute," for example. Perhaps most importantly, slang changes its identity according to who is speaking. What is slang to one, to another is not, depending on one's educational, economic, or social position, and even according to location and generation. Slang is generated from any number of specific language communities or subgroups: jazz musicians, college students, narcotics addicts, immigrants, the military, show business, street gangs, etc. From each of these sometimes overlapping groups come specific terms which identify practices and behaviors particular to its members. Distinct lifestyle choices fuel the need to find a language to name evolving social behaviors and thought, which often challenge more established cultural codes. "Mallie," a term unthinkable prior to the rise of American shopping malls, refers to persons (usually young) who frequent shopping malls for sociability and entertainment. Although most slang is generated by male speakers, the rise of feminism has spawned a female slang or "girl talk," showing the degree to which ideas about gender are changing. Because slang is spoken rather than written, it lacks the status of standard written English. Once slang terms appear in dictionaries, they are seen as having gained currency and, therefore, fuller entrance into the culture. Until then, slang is fully accessible only to insiders of particular subgroups.

Slang also changes over time, and either disappears quickly or becomes fully integrated into the language. Few, if any, would now recognize the word "knucker," which originated from the criminal world of the mid-1880s, but most would understand its current incarnation, "pickpocket," which originated from late eighteenth-century criminal slang. Drug slang changes quickly, in part so that drug dealers can more easily spot undercover agents. "Phone," "bike," and "bus," once slang versions of the more formal "telephone," "bicycle," and "omnibus," have now all but replaced the original terms. Most slang coinages are local in both time and place; much of it, like other cultural phenomena, originates in such large cities as New York or London and fans out to distant towns and cities.

The exact origin of slang is not known, although given the nature of language as a living, changing entity, it is probably as old as language itself. Andersson and Trudgill identify Aristophanes, the fourth-century-B.C. Greek playwright, as the first writer to use slang. The Roman writers Plautus, Horace, Juvenal, and Petronius also employed slang for stylistic purposes. Shakespeare also used slang in his plays. During the nineteenth and twentieth centuries, underworld criminal societies became rich and potent sources of slang, some of which is reflected in early detective fiction by such writers as Wilkie Collins and Agatha Christie.

What differentiates slang from other categories of speech (such as jargon or argot) is one's reasons for using it. In *Slang, Today and Yesterday*, Eric Partridge identifies several reasons for using slang, including the desire to be different, novel, or picturesque; to enrich the language; to engage in playfulness; to identify one's self with a certain school, trade, or social class; to reduce or disperse the pomposity or excessive seriousness of an occasion; to be secret. Slang is always used self-consciously, with a desire to create a particular identity. One might say (but not write) affectionately, "Sweetheart, you da cat's meow," or "Yo—what's happenin'?"

In the twentieth century, the development of slang has paralleled the rise of dominant cultural movements throughout the decades. The 1920s left its mark with jazz and the rise of the machine, creating such terms as "flapper" (a female dancer in a short skirt) and "percolate" (to run smoothly). The 1930s contributed "dehorn," a hobo word for bootleg whiskey or denatured alcohol, and such railroad slang as "groundhog," meaning a train's brake operator. The 1940s was the decade of the military with such coinages as "pea-shooter," from World War II Army Air Force pilots to denote a fighter pilot or plane, and the word "buddy" (meaning "pal"), which, although created in the 1800s, was heavily used by American GIs and took on a particularly sentimental connotation. This term later evolved into several variations such as "ace boon" or "ace buddy" in the black community. The 1950s' beatnik generation revived 1930s jive talk and used such enduring slang phrases as "cool it" to mean relax, and such colorful phrases as "cool as a Christian with aces wired" to signify someone who is tranquilly confident.

By the 1960s, political unrest resulted in the use of such words as "Dove" and "Hawk," which by the 1980s became accepted terms for antiwar advocates and the military. The youth culture (or "NOW generation") coined such phrases as "where it's at" to signify being up-to-date, and also used the term "groady" (with variations of "grotty" and "groddy") to denote anything that was disgusting, nasty, or repellent. Often this was followed by the phrase "to the max" for emphasis. The 1970s' drug scene left numerous terms:

“crack” for cocaine and “narc” for undercover agent (which actually comes from Romany, “nak” or nose). During the 1990s, computers created not only a whole new way of life, but a language to describe it, although this resulted in a computer jargon rather than a computer slang. Nonetheless, such terms as “PC” (personal computer) and “e-mail” (electronic mail) were not even thought of prior to the development and widespread use of personal computers. By the end of the 1990s, the term “Y2K” had gained widespread usage to signify “the year 2000,” with particular reference to anticipated problems stemming from the inability of existing programs to recognize dates beyond the year 1999.

While slang itself always reflects contemporary trends of thought, the practice of recording slang in Anglo-American dictionaries goes back more than two hundred years. The British antiquarian Francis Grose published *A Classical Dictionary of the Vulgar Tongue* in 1785, the first known lexicon of slang. Grose’s work went through several editions and remained the seminal work in the field until John C. Hotten’s *A Dictionary of Modern Slang, Cant, and Vulgar Words* was published in 1859. From the latter nineteenth century through the early twentieth century, several dictionaries of slang were produced, but it was not until 1937 when Eric Partridge published the landmark *A Dictionary of Slang and Unconventional English*, that slang was bestowed with respectability. This text was enlarged and reprinted several times through the 1980s and remains one of the best resources available. Also significant was Harold Wentworth and Stuart Berg Flexner’s *Dictionary of American Slang*, published in 1960.

Since then, numerous dictionaries of slang have appeared. The titles of these texts alone trace the degree to which slang has become more accepted by the general public; by the late 1990s, slang was viewed with an increasing degree of amusement, as illustrated in such playful titles as *Juba to Jive: A Dictionary of African-American Slang*. As public sentiment moved toward a greater sense of multiculturalism during the 1990s, slang enjoyed increased acceptance, although with a recognition of its lower than standard status in the language.

Slasher Movies

With the possible exception of the hardcore porn flick, no modern film genre has managed to achieve quite the level of commercial success in spite (or because) of its inherent controversiality as has the slasher movie. Otherwise known as the “stalker,” “dead babysitter,” or “teenie-kill” pic, the “slasher” label has been adopted by most fans and critics to designate the entries in a voluminous collection of remarkably similar post-1960 horror films. In these movies, isolated psychotic males, often masked or at least hidden from view, are pitted against one or more young men and women (especially the latter) whose looks, personalities, or promiscuities serve to trigger recollections of some past trauma in the killer’s mind, thereby unleashing his seemingly boundless psychosexual fury.

Although the precise formula of the slasher movie varies depending on one’s initial characterization, the genre’s exploration (at times its exploitation) of some or all of the following themes has remained strikingly consistent through the years: male-upon-female voyeurism, gender confusion and sexual perversion, the spectacle of murder, the efficacy of female self-defense, the substitution of violent killing for sexual gratification, and the utter inability of traditional authority figures to eliminate a communal threat. Vilified by feminists for supposedly promoting misogynistic messages and targeted for censorship by outraged parents and lawmakers, the slasher movie has nevertheless been treated as unworthy of critical discussion by most mainstream academics, presumably because of its “low-culture” status. In recent years, however, the progressive potential of a genre once dismissed as “violent pornography” has been examined by film theorists as well as cultural historians.

The slasher has its roots in two 1960 films, Alfred Hitchcock’s *Psycho* and Michael Powell’s *Peeping Tom*. Although the former movie has since received immeasurably more critical and commercial attention than the latter, together they are responsible for establishing many of the slasher’s primary generic elements. These elements include an “explanation” of the killer’s motive in quasi-psychoanalytic terms, a figuring of the main victim as a sexually transgressive female, and a focus on intimate assault with sharp, phallic, penetrating implements. It is tempting to read the subsequent history of the slasher as little more than elaborations on the themes introduced in these two films.

Like *Psycho* before it, Tobe Hooper’s *The Texas Chainsaw Massacre* (1974) took for inspiration the monstrous crimes of

necrophilic serial killer Ed Gein. Unlike *Psycho*, however, Hooper's film emphasized gore and bodily carnage, thereby situating itself within the tradition of Herschell Gordon Lewis's notorious "splatter" films, *Blood Feast* (1963) and *The Wizard of Gore* (1968). *The Texas Chainsaw Massacre* also contributed two important elements of its own to the slasher movie formula: a group of adolescent victims who are picked off one by one, and a "final girl" who undergoes a lengthy, terrifying ordeal in the film's second half, only to come out alive at the end. Although John Carpenter's *Halloween* (1978) eschewed the gore of *Texas Chainsaw Massacre* in favor of impressively subtle startle effects, it kept the latter film's youthful victims, and made its final girl (Jamie Lee Curtis, daughter of *Psycho* star Janet Leigh) even more aggressive and self-reliant. The unprecedented commercial success of this movie ensured its place at the head of the "Stalker Cycle" class; between 1978 and 1981, no fewer than 11 *Halloween*-inspired slashers were made (including *Friday the 13th*, *Prom Night*, *Terror Train*, and *Graduation Day*), all structural, if not quite stylistic, copies of the original. In these movies, the predator-prey theme takes on unprecedented importance, as does the emphasis on "creative" murders, and a reliance on camera shots taken from the killer's point of view. To what extent this camerawork forces viewer identification with the killer, however, remains an open question.

Despite the final girl's ever-increasing strength and ferocity—as exemplified by "Ripley" (Sigourney Weaver) in the *Alien* series of outer-space slashers—public debate over the genre's antisocial consequences only intensified in the 1980s. Representatives from numerous states, citing hastily acquired and somewhat dubious "empirical evidence" for support, complained of a direct cause-and-effect relationship between the depiction of graphic violence in films such as *Friday the 13th* and the increase in violent crimes perpetrated by youths. In 1984, the "Video Recordings Bill" passed through Britain's Parliament on the heels of an effort to restrict the consumption of arbitrarily designated "video nasties" (the vast majority of which were slashers). By 1989, bills were passed in Colorado, Missouri, Ohio, and Texas granting local prosecutors the power to decide which videos cross the line of "excessive violence" and so cannot be rented to persons under 18 without parental permission.

It is arguable that at least some of this negative attention was unnecessary, even self-defeating. By 1986 the slasher movie was in a state of decline, primarily because of an over-reliance on convention and a glut of predictable entries. But just like its best known psychopaths, Michael Myers and Jason Voorhees, the slasher would rise from the dead. *Fatal Attraction* (1987), *Pacific Heights* (1991), and especially the Oscar Award-winning *Silence of the Lambs* (1996)—the so-called "yuppie slashers"—brought a heretofore unimagined respectability to the genre. And with the appearance of self-consciously reflexive slashers such as *Scream* (1996), *Scream 2* (1997), and *Halloween H20* (1998) came a whole new range of convention-bending possibilities.

One thing is clear: no easy answer to the question why slasher movies have proven so popular exists. Whether they enforce conservative values by demonstrating "the inefficacy of sexual freedom" (Vera Dika), promote tolerance by "constituting a visible adjustment in the terms of gender representations" (Carol Clover), or further a feminist agenda by "articulating the legitimacy of female rage in the face of male aggression" (Isabel Pinedo), it can hardly be denied that these films appeal to different audiences at different times and for

different reasons or that they will continue to engender heated debate in homes, classrooms, and courtrooms.

Slinky

Since its introduction to the public at Gimbels Department Store in Philadelphia in 1945, the Slinky has been one of the best-selling toys in America. This simple, steel spring developed by Richard James, a naval engineer who was trying to produce an anti-vibration device for ship instruments, has become one of the most widely recognized toys, with over 250 million Slinkys sold by the time of its fiftieth anniversary. When James and his wife, Betty, first demonstrated the Slinky's rhythmical step-by-step movement at Gimbels, they sold their entire lot of 400 Slinkys in ninety minutes.

In addition to playing with Slinkys, innovative Americans have used them as pecan-picking devices, envelope holders, light fixtures, and during the Vietnam War as makeshift radio antennae. Since 1962, children watching television have heard the Slinky jingle with its famous lines, "It's Slinky, it's Slinky, for fun it's a wonderful toy/It's Slinky, it's Slinky, it's fun for a girl and a boy." In addition to being featured in television commercials, the Slinky has appeared in the films *Hairspray*, *Ace Ventura: When Nature Calls*, and as a leading, animated character, the Slinky Dog, in *Toy Story*. Slinkys have been manufactured in large-size, brightly colored plastic models for younger children, and the elite retailer Neiman Marcus sells an \$80 gold Slinky. The original steel model sold in 1945 for one dollar. Fifty years later, in 1995, the same model (changed only by having its ends crimped for safety) sold for a mere one dollar and ninety-nine cents. Its low price has allowed for its presence, at one time or another, in nearly every American home.

The Slinky

Sly and the Family Stone

At their apogee, Sly and the Family Stone made music that broke racial and commercial barriers, combining soul, R & B, doo-wop, white rock, and British Invasion influences into an ineluctably delicious package that slithered and grooved and, at times, shouted from radios and turntables across America. For its time, the group's personnel was no less remarkable: an integrated, multi-gender line-up where the musicians switched instruments and roles with a fluidity as

snaky as the band's trademark syncopated backbeat. Emerging in 1968, Sly and the Family Stone filled a vacuum in the musical landscape, presaging a whole new form of music-funk with their musical cross-pollination and incandescent live shows.

Sylvester Stewart, the guiding force behind this musical pot-pourri, was born in Texas and grew up in Vallejo, a tough oil-town across the Bay from San Francisco. As a child, Stewart sang in church choirs, playing music with his siblings and learning guitar, piano, and organ, among other instruments. From all accounts, Stewart was

Sly Stone

already something of a wunderkind by the time he met up with radio personality Tom Donahue and was hired as resident producer for Donahue's Autumn Records label. Sly produced much of the mid-1960s San Francisco rock music, crafting albums for groups like the Beau Brummels, the Mojo Men, and the Vejtables. But Sly was an imperious presence in the studio, a notorious perfectionist, and by the time the acid-rock groups began to beat a path to Autumn Records's doorstep, he decided he had more important things to do besides marshal stoned musicians (he allegedly forced Grace Slick and the Great Society through two hundred takes, resulting in exactly one completed song). Sly took a DJ job at a local black radio station where, always iconoclastic, he interspersed Beatles and Bob Dylan tracks among the regular Stax-Volt and Motown singles fare.

"The pop scene was then at a turning point," writes Dave Marsh, "Both Soul and Rock were trapped—the former by its own conventions, the latter by its increasing solemnity as it pursued High Art. Sensing a gap, Sly moved to fill it with his characteristic mixture of calculation, conviction, and dumb luck." He had formed a bar band and was regularly plying his trade with what would become the nucleus of Sly and the Family Stone while hunting for a record label. His first effort for Columbia, *A Whole New Thing*, being perhaps too

ahead of its time, was an unmitigated failure, but Columbia was interested enough to give him a second chance. Through the rest of the decade, Sly and the Family Stone registered an impressive list of hit singles, music as mold-breaking as it was danceable, with an ideological twist: part populist, part utopian hippie. In songs like "Dance to the Music," "Everyday People," "Everybody Is a Star," and "You Can Make It If You Try," Sly preached a message of total reconciliation, expressing, in the words of Marsh, "the sentiments of the Haight and hopes of the ghetto."

On stage, the band dressed like psychedelic peacocks, sporting fringes, satin shirts, leathers, and bangles. Musically, there were role reversals, epiphanies, unexpected surprises. The woman played instruments, the men sang, the whites grooved, the blacks freaked out. The result was a revelation and a call to arms; when Sly sang "I Want to Take You Higher"—as he did for two million at Woodstock—you believed him.

But being spokesperson for inner-racial unity is a tough act, and like Jimi Hendrix before him, Sly was resistant to becoming swept up in the internecine squabbles between the New Left and the black power groups. And there were other problems. As one of the highest paid performers in the business, excess was not simply a danger, it was almost de rigueur. Sly began missing shows, his behavior became more eccentric, and no new music was forthcoming, although his progeny were filling the charts with their versions of Sly's *Whole New Thing*. When he broke his silence late in 1971, the resultant album, *There's a Riot Goin' On*, took his formula and stood it on its head. It was an abstract, introspective album that shied away from declamations, acknowledging instead the bitter realities of racial inequity—utopia turned dystopic. It was the perfect soundtrack for the end of the 1960s, a brilliant synthesis of despair, and if the album's success was any measure—it rose to number one on the charts and generated three hit singles—Sly had once again hit the mark.

There's a Riot Goin' On was a tour de force, but it was also a blind alley. Apparently Sly was unable to extricate himself from this self-created musical cul-de-sac. As the seventies progressed, albums from Sly grew fewer, with longer gaps in between. A 1976 *Jet* magazine article reported Sly had gone broke. Rumors abounded that he had spiraled into addiction-fueled seclusion, living alone in his mansion without a telephone or much to eat. 1979 saw the release of a new album, *Back on the Right Track*, but apparently it was an aberration. The silence has continued.

In the dialectic of creativity, Sly's career followed a predictable arc from synthesis to innovation to decline, but if he could only go so far, he left in his wake a legion of imitators that kept his vision very much in evidence. Established soul groups let their hair down and started turning out records with a pointed political subtext. The slinky drum beats, slapped bass lines (a technique Stone bassist Larry Graham is credited with inventing), and minimalist keyboard arrangements were responsible for the evolution of funk and disco. And the sartorial splendor—rhinestones, leathers, gold lame—that was the band's trademark was embellished by everyone from George Clinton to Earth, Wind, and Fire. In their music and flamboyance, artists like Rick James and Prince would pay homage, but Sly and the Family Stone remained the template from which these disparate artists sprang. As Dave Marsh wrote, "No one has gone past them."

Smith, Bessie (1894-1937)

Elizabeth “Bessie” Smith was born in Chattanooga, Tennessee, and became known as the “empress of the blues.” She began her career with Chappelle’s Rabbit Foot Minstrels, starring Ma Rainey, who taught Smith the art of blues singing. Smith developed her own style of powerful and theatrical blues with a jazz orientation, which became the accepted classic blues style. Her first recording, “Down Home Blues” (1923), sold 800,000 copies. She recorded until 1933, toured extensively with her troupe, the Liberty Belles, and appeared in the film *St. Louis Blues* (1929). Smith died while touring when her car was hit by a truck and run off the road in Mississippi.

Smith, Dean (1931—)

North Carolina’s Dean Smith retired after the 1997 season as the all-time winningest head coach in college basketball. Smith’s 879 wins over 36 years surpassed legendary Kentucky coach Adolph Rupp by three games. For twenty-seven consecutive years, Smith’s squads won 20 or more games, and they captured two national titles along the way.

Smith coached some of the games best players during years at North Carolina, including Billy Cunningham, James Worthy, Mitch Kupchak, and Michael Jordan. Smith also saw many of his assistant coaches go on to become head coaches, including Roy Williams and Larry Brown. But the achievement of which Smith is most proud is that fact that 97 percent of his players graduated with a degree. In the 1980s and 1990s, as college hoops came to seem ever more glamorous under the bright lights of increasing television coverage, Smith represented the finest values of amateur athleticism.

Smith, Kate (1907-1986)

Long known as the “first lady of radio,” Kate Smith starred on CBS radio from 1931-1947, always opening with her theme song, “When the Moon Comes Over the Mountain.” The lyrics of this song were adapted from a poem Kate had written as a teenager to celebrate her native Shenandoah Mountain area. She was also associated in the public mind with Irving Berlin’s “God Bless America,” which she introduced on Armistice Day in 1938. Berlin was so pleased with her treatment of the song that he granted her exclusive rights to sing it on radio in the late 1930s. Moving to television in later years, Smith’s popularity continued, leading a pop music critic to write: “For at least five decades, Kate Smith ranked close to apple pie, baseball, and the Statue of Liberty among America’s best loved and most instantly recognized symbols.”

Smith became a household name from coast to coast within a month of her radio show’s debut on her 22nd birthday, May 1, 1931. The long-running show, originally called “The A&P Bandwagon,” gave the first radio appearance to such show-business luminaries as Greta Garbo, John Barrymore, Bert Lahr, and Mary Boland. Comedians on their way to the top, including Abbott and Costello and Henny Youngman, were also first brought to national attention on her show.

Kate Smith

The great success of the new show caused NBC to move its popular *Amos 'n' Andy* comedy program to another time slot.

Smith's homey, small-town image flowed naturally out of her upbringing. Her birthplace was the small town of Greenville, Virginia, and she was originally billed on radio as "The Songbird of the South." As a child her singing talents were evident as she began early to sing in church services. During World War I, eight-year-old Kate sang at Liberty Loan rallies, where she was introduced to President Woodrow Wilson.

After the war Smith entered amateur contests in the Washington, DC, area and aspired to a career behind the footlights. Her family, fearing that her increasing girth would make her the target of taunts in a theatrical career, insisted that she study nursing. She found that she was unhappy as a nursing student, however, and 16-year-old Kate tried out some song routines in Washington vaudeville houses and then headed for New York City. While waiting her turn in an amateur contest, she saw a young dancer bring down the house doing the Charleston and became convinced that despite her bulk she could do the vigorous, hip-wiggling dance herself. She worked it into her closing number and won a standing ovation. The show's headliner, Broadway star Eddie Dowling, hired her for a small part in a new musical, *Honeymoon Lane*, singing "Half a Moon" and dancing the Charleston. The *New York Times* review read: "*Honeymoon Lane* is Colorful & Lavish; Kate Smith, 250-pound Blues Singer, a Hit."

Several Broadway shows followed. Made up in blackface, she sang "Hallelujah" in Vincent Youman's *Hit the Deck* (1927). In George White's *Flying High* (1930) she played star Bert Lahr's mail-order bride and suffered his relentless jibes about her size. Every performance she heard him say, "When she sits down, it's like a dirigible coming in for a landing." After the show closed, she made her radio debut on the Rudy Vallee variety show, where she attracted the attention of Columbia Records executive Ted Collins, who offered her a recording contract and became her personal manager. Collins got Kate 11 weeks at the vaudeville pinnacle, New York's Palace, as well as a contract with CBS for a 15-minute network radio show four nights a week, and the show became an instant success that was to grow in popularity for the next 16 years. By 1933, during the Great Depression, Kate was making \$3,000 a week, the highest salary of any woman in radio.

During the years of World War II, Kate traveled over a half-million miles to entertain service men and women, and she sold more than \$600 million in war bonds. Her recording of "God Bless America" sold thousands of copies and, following the lead of Irving Berlin, she gave all her royalties to the Boy Scouts and Girl Scouts of America.

Smith moved to television in 1950, hosting a daytime variety show mainly for housewives. When her popularity lessened in the 1960s, Ted Collins, noting that Judy Garland's career had been rekindled with a famous concert, arranged for Kate to appear at Carnegie Hall in 1963. From this came a new RCA recording contract and numerous guest appearances on television. When Ted Collins died the following year, Kate stopped performing. Her career had another rebirth several years later when the Philadelphia Flyers hockey team discovered that they always won when Kate's record of "God Bless America" preceded the game. The team made her the official team sweetheart, and she was invited for guest appearances on shows hosted by Ed Sullivan, Jackie Gleason, Dean Martin, and the Smothers Brothers.

In the mid-1970s Kate began a major national tour, only to have it interrupted in Lincoln, Nebraska, by an illness that caused the

remainder of the tour to be canceled. Severe diabetes made her a virtual recluse for the next ten years. In 1982 she was awarded the U.S. Medal of Freedom by president Ronald Reagan. George T. Simon, former *Metronome* editor, observed, "From 1931 onward, Kate Smith did indeed seem to personify the country—idealistic, generous, home-spun, sentimental, emotional, and proud."

—Benjamin Griffith

Smith, Patti (1946—)

Poet, performer, and "queen of punk" Patti Smith made her mark in the disparate worlds of punk, rock and roll, and poetry, with seven albums, six books of poetry, and a world-renowned performing

Patti Smith

style. “Three chord rock merged with the power of the word,” Patti Smith’s first album *Horses* described itself in 1975.

Smith was born in Chicago but raised in Woodbury, in rural southern New Jersey, the eldest of Grant and Beverly Smith’s four children. Isolated and sickly as a child, Patti was encouraged to be creative by her mother and lived an intense, imaginary life in games with her siblings and, as she grew older, in her writing, fed by the work of Arthur Rimbaud, Bob Dylan, James Brown, and the Rolling Stones. A literate punk icon in the 1970s, Smith achieved her greatest success with the single “Because the Night,” off her album *Easter* (1978). In 1979, Smith left performing for marriage and children in suburban Detroit with Fred Smith, ex-MC5 guitarist and leader of Detroit’s Sonic Rendevous Band. In 1994 Patti lost her husband, Fred Smith, her brother, Todd Smith, and her longtime friend and former lover, Robert Mapplethorpe, to various early deaths. She slowly returned to performing and publishing with a book of poems, *Early Work* (1994), and an album, *Gone Again* (1996).

Smithsonian Institution

Established by an Act of Congress in 1846 with the bequest of English scientist James Smithson, the Smithsonian Institution is a research center that holds some one hundred million artifacts and specimens in sixteen museums and galleries. The mission of the Institution includes public education, national service, and scholarship in the arts, sciences, and history. Artifacts held by the Smithsonian include the Wright Brothers’ 1903 Flyer, the Hope Diamond (the world’s largest deep blue diamond), the Star Spangled Banner, Judy Garland’s Red Slippers from *The Wizard of Oz*, Harrison Ford’s fedora and leather jacket from *Raiders of the Lost Ark*, and Archie Bunker’s chair and Fonzie’s leather jacket from the television shows *All in the Family* and *Happy Days*, respectively. Duke Ellington’s papers are housed in the Smithsonian and the Institution also owns the Folkways Records back catalog.

Museums and galleries of the Smithsonian include the National Air and Space Museum, the National Museum of American History, the National Museum of African Art, the National Museum of Natural History, the National Museum of American Art, and the National Portrait Gallery, all of which are in Washington, D.C. The Smithsonian-run Cooper-Hewitt National Design Museum and the National

Museum of the American Indian are in New York City. The Smithsonian is also responsible for the National Zoo and a number of scientific research institutes.

Many of the museums are located on the Mall in Washington and a visit to the Capitol seems to require an obligatory visit to at least one of these buildings. From April through October the various Washington locales of the Smithsonian are packed with visitors. One summer highlight is the Festival of Folklife, which explores the diversity of American and world cultures, that takes place on the Mall in late June and early July.

In 1970 the Institution launched its own magazine, *Smithsonian*, which carries general readership articles on the arts, the environment, sciences, and popular culture. The magazine has a readership approaching eight million. Another magazine, *Air & Space/Smithsonian*, was created as an extension of the Smithsonian Institution’s National Air and Space Museum. It examines the culture of aviation and space.

In 1995 the Smithsonian launched its home page (www.si.edu) on the World Wide Web and has since averaged over four million “hits” per month. The site has grown to contain a wealth of information on the various activities and collections of the Smithsonian.

In the 1990s the Smithsonian engendered considerable controversy with its exhibition, *The West as America*, at the National Museum of American Art and its proposed *Enola Gay* exhibition at the National Air and Space Museum to mark the fiftieth anniversary of the atomic bombing of Hiroshima and Nagasaki. These exhibitions questioned received versions of history and the outrage generated broad public debates about history, culture, and the role of academics and museums.

The Smithsonian Institution is a repository of American cultural artifacts. The diversity of its collections and activities place it at the center of public understanding of American history and culture.

Smits, Jimmy (1945—)

Emmy Award-winning television, film, and stage actor Jimmy Smits is one of a very small handful of highly visible Hispanic actors. A co-founder of the National Hispanic Foundation for the Arts, an organization whose mission is to establish opportunities for Hispanic Americans in entertainment, Smits has used his immense popularity and fame—both of which derive in part from his stunning good looks—to publicize the cause of Hispanics and other minority groups in the entertainment industry. An elegant and truthful actor with a persona that combines charm, sex appeal, and vulnerability with a tough and steely inner core, Smits carved a place for himself as an

Jimmy Smits

American cultural icon when he was cast in Steven Bochco's landmark television ensemble drama series, *L. A. Law* (1986-1991) and went on to an even higher profile as detective Bobby Simone in Bochco's hard-hitting cop series, *NYPD Blue* (1994-1998).

Born in Brooklyn, New York, on July 9, 1955 to a Puerto Rican mother and a South American (Suriname) father, Smits was raised mostly in Brooklyn, though he did live in Puerto Rico for a short time between the ages of nine and 11. While attending school at Thomas Jefferson High, he made the championship football team, but quit playing to become the star of the school's drama club. He went to Brooklyn College where he got his B.A. in Education, and worked for a while as a teacher before becoming a student again, earning his Master's degree in Theater Arts from Cornell in 1982. After graduating, he traveled around the country working in repertory theater until 1984, when he made his television debut in the pilot episode of *Miami Vice*. The experience was short-lived: cast as Don Johnson's partner, he was killed in the course of the episode.

Then, in 1986, Smits landed the ongoing part of Victor Sifuentes, Hispanic public defender turned corporate litigator, in Bochco's critically acclaimed and wildly successful *L. A. Law* for NBC. (The number of law school applications in the United States increased dramatically at the height of the show's popularity). The role of Sifuentes catapulted Smits into stardom, and he became a heartthrob and sex symbol much as George Clooney would in *E.R.* a few years later. He was nominated for a Best Supporting Actor Emmy every year, finally winning it in 1990, but left the show in 1991 to pursue opportunities on the big screen. However, with the exception of his co-starring appearance, alongside Jane Fonda and Gregory Peck, as a

smoldering Mexican soldier in *Old Gringo* (1989), and a role in the 1997 Chicano family drama *Mi Familia (My Family)*—both of them critically respected but commercially unspectacular features—he made only a handful of forgettable films.

Bochco and ABC came to the rescue in 1994, when he joined *NYPD Blue* in its second season. For the next five years, he delivered an elegant, understated portrayal of a quietly complex character, in perfect counterpoint to the explosive acting of Dennis Franz as Simone's troubled, sometimes bigoted partner, Andy Sipowicz. The gritty cop drama was controversial from the outset because of its coarse language and explicit sexual content and, during its first season, many network affiliates refused to carry it. Despite (or maybe because of) this, it was an almost immediate ratings success, as were its sometimes ambiguous lead characters, multi-dimensional and complex, following a trend already set in other cop series such as *Homicide: Life on the Streets* and *Law and Order*. Smits was thoroughly convincing as an introspective widower who joins the 15th precinct after months of tending to his dying wife, and who raises homing pigeons as a hobby. However, the fact that Bobby Simone was conceived as being of French-Portuguese rather than Hispanic descent drew some criticism, emphasized by the fact that the only Hispanic officer was played by an actor of Italian heritage (Nicholas Turturro).

In 1998, with his contract up and due for renewal, Jimmy Smits decided to leave *NYPD Blue* in search of fresh challenges. The challenge to the program in finding a way to write him out resulted in a sequence of tense and tearjerking episodes in which Bobby Simone succumbs to previously undetected heart disease. This turn of events in the plot all but dominated the 1998 series and tested Smits' acting abilities to the limit. He passed with flying colors.

The Smothers Brothers

Comedy/singing team the Smothers Brothers has been entertaining audiences on stage, record album, and, most famously, on television for more than 40 years. "Mom always liked you best!" stuttering, slow-witted comic dunce Tom Smothers on guitar would complain to his supercilious, smooth-talking, straight-man brother Dick on bass as they both crooned folk songs and engaged in comic banter, often with pointed political overtones. The Smothers Brothers' penchant for political satire resulted, in the late 1960s, in one of the most celebrated and infamous cases of television censorship as the brothers battled their network, CBS, over the antiwar and countercultural content of their top-rated variety series, *The Smothers Brothers Comedy Hour*—a precursor of later shows such as *Saturday Night Live*. Attempting to bring some of the political and social turmoil of the era into prime time, the Smothers Brothers discovered the limits set by American commercial television in the 1960s for controversial material in entertainment. Their variety show, with its ongoing battles against network censorship, became a flash point of debate about the role of popular entertainment in the process of social change.

Tom (left) and Dick Smothers

Nothing much in the Smothers' background would indicate that they would become rebels against the system. Tom and Dick, born, respectively, in 1937 and 1938, were sons of West Pointer Thomas Bowen Smothers, who died in a POW camp during the Second World War. The boys were raised by their mother and a stepfather in Redondo Beach, California. Their comic career began while students at San Jose State College where they found themselves working the burgeoning folk circuit of college clubs, blending accomplished folksinging with eminently clean-cut comedy. Their first big break into television came in 1961 when Jack Paar introduced them to a national audience on his show. A few years later, CBS gave the Smothers their first television series. Running for only one season, 1965-66, *The Smothers Brothers Show* featured Tom and Dick in a situation comedy. Similar to other contemporary "magical" shows like *My Mother the Car*, *My Favorite Martian*, and *Bewitched*, the Smothers' series had Tom as an apprentice angel who made life difficult for his mortal brother Dick. The series failed, but CBS remained committed to finding a more appropriate vehicle for the Smothers Brothers' talents.

Debuting on Sunday night in February 1967, *The Smothers Brothers Comedy Hour*, a variety show, found itself in an unenviable position scheduled next to the long-standing, top-rated NBC stalwart *Bonanza*. CBS's strategy for the *Comedy Hour* was to attract a younger, more urbane audience than was traditionally drawn to the rival network's horse opera. The gambit worked. *The Smothers Brothers Comedy Hour* cracked the top 20 Nielsen ratings in its first two years on the air, and in its second helped to dislodge *Bonanza* from its three-year run as the number-one-ranked series in the country.

In its first season, the series played things fairly safe. The brothers attempted to appeal both to the burgeoning generation of disaffected and politicized baby boomers as well as to the parents. According to *Time* magazine, the Smothers were "hippies with haircuts." The show featured countercultural bands like Buffalo Springfield singing its anthem of youthful paranoia and alienation, "For What It's Worth," and also middle-of-the-road Jim Nabors singing "The Impossible Dream." Like Ed Sullivan, the Smothers' show balanced the tastes and sensibilities of the increasingly polarized generations.

Controversy and censorship began to plague the series beginning most notably following the *Comedy Hour*'s second season premier, aired on September 10, 1967. The Smothers had invited folk singer Pete Seeger as a special guest. While the network expressed no qualms about having the previously blacklisted performer appear on the airways, CBS balked at a song Seeger proposed to sing: "Waist Deep in the Big Muddy." The song was an allegory about Vietnam and contained the following lyrics that CBS found unacceptable: "Now every time I read the papers / That old feelin' comes on / We're waist deep in the Big Muddy / And the big fool says to push on." The network disapproved of the disrespectful reference to the president as a fool and, further, felt political material such as this had no place on an entertainment show. The performance was summarily censored. The network's action led to an avalanche of public criticism of the network's high-handed action. Eventually, CBS relented and allowed Seeger to pay another visit to the Smothers' show later in the season where he was permitted to sing the song in its entirety.

Emboldened by the show's popularity, Tom Smothers began pushing for more confrontational and cutting-edge material. Despite his slow-witted persona, Tom was both highly intelligent and increasingly aligned with anti-establishment youth politics. He was also the major creative force behind the series. Pushing the envelope of political satire, sexual innuendo, and matters of taste, Tom dared CBS to censor his show. The network responded, and the battle was on. Some of the flaps between the show and the censors involved material that now seems benign. CBS objected to a sketch about sex education: the words "sex" and "sex education" were unacceptable. The network also objected to a sketch about censorship in which Tom and guest star Elaine May played motion picture censors at work objecting to the word "breast" in sequence. Says censor Elaine: "I think the word 'breast' should be cut out of the dinner scene. I think that 'breast' is a relatively tasteless thing to say while you're eating." CBS censors were not amused and blue penciled the entire sketch. The network was also uneasy with a recurring character on the show, Goldie O'Keefe, a kooky hippie whose comedy revolved around celebratory references to hallucinogenics. In a recurring sketch, a parody of advice shows for housewives titled "Share a Little Tea with Goldie," the character proclaimed, "A lot of you ladies have written in asking when I'm on. . . . Ladies, I'm on as often as possible and I highly recommend it." Some of the marijuana and LSD references evaded censorship as the elderly guardians of taste didn't understand that "Goldie," "tea" and "Keefe" were drug code words. Comedian David Steinberg created consternation for the network as well with a series of "sacrilegious" sermonettes. The network began demanding that the Smothers make preview copies of their episodes available for affiliated stations to review—a completely unprecedented move by any network.

The most infamous run-ins with the network involved the Smothers' increasingly unapologetic anti-establishment political material. In their third season premier in September 1968, CBS balked at

letting guest star Harry Belafonte do a song criticizing the police and institutional violence meted out to youthful demonstrators at the Chicago Democratic Convention the previous month. The number included lyrics such as “Tell all the population / We’re havin’ a confrontation / Let it be known freedom’s gone / And the country’s not our own” to images of police rioting against unarmed demonstrators. The network axed the entire number and, to add insult to injury, sold the five minutes worth of air time to the Republican Party for a Nixon/Agnew campaign ad.

The escalating confrontations between Tom Smothers and the network eventually came to a head. On April 3, 1969, with a few weeks yet to go in the television season, Robert D. Wood, president of CBS television, informed Tom Smothers by wire that the brothers were fired. The ostensible reason was that the Smothers had not delivered an acceptable broadcast tape in time for preview by network censors and affiliated stations. The unprecedented forced removal of a television series from a network schedule led to public uproar. Tom Smothers attempted to launch a free speech campaign in Washington, D.C., to force the network to relent, but to no avail. Eventually, the Smothers filed a lawsuit against the network for wrongful dismissal. They won, but it was a Pyrrhic victory as *The Smothers Brothers Comedy Hour* would not be revived for 20 years.

The brothers continued to turn up on the broadcast dial however. A year after being kicked off of CBS, ABC gave the brothers a summer variety series. However, the wind was out of Tom Smothers’s sails, and the series was not picked up in the fall. In January 1975, NBC gave the brothers a try with yet another variety series, but that one also did not last the full season. The brothers continued touring in their highly successful stage concerts and were frequent guests on various television shows. Then, 20 years after being booted off CBS’s airwaves, the network invited the brothers back to do a twentieth-anniversary special of *The Smothers Brothers Comedy Hour* in 1989. The special brought back the familiar stage set and many of the show’s supporting players, such as Leigh French as Goldie O’Keefe, Pat Paulsen, and Bob Einstein as Officer Judy. The special was a big enough hit that CBS agreed to bring *The Smothers Brothers Comedy Hour* back in the regular season. Goldie O’Keefe was now a yuppie, and political commentary tended to focus on American intervention in Central America. Tom also introduced his alter ego, the Zen-like, silent “master of Yo,” the “Yo-Yo Man.” The revived *Comedy Hour* was moderately successful but did not result in a second season.

After more than forty years in show business, the Smothers Brothers continued to tour extensively and very successfully throughout North America in the 1990s. *The Smothers Brothers Comedy Hour* remained their most important popular cultural achievement. The show was enormously influential on future comics and television shows which attempted to bring political satire to the television, *Saturday Night Live* being the most noteworthy legacy of the Smothers’ groundbreaking work. Bill Maher of the late night *Politically Incorrect* talk/comedy series also credited the *Comedy Hour* with inspiring his approach to political satire. *Saturday Night Live* alum Dennis Miller’s show on HBO also owes much to the Smothers’ example. However, all of these shows are either aired outside prime time or on cable and specialty channels: thirty years after *The Smothers Brothers Comedy Hour*, it would appear that sophisticated political satire and comedy is still not ready for prime time.

Snoop Doggy Dogg (1971—)

Perhaps the most recognized performer of the gangsta rap tradition, Snoop Doggy Dogg emerged in 1993 with two commercially successful albums on controversial Death Row/Interscope Records. Notorious for his violent and explicit lyrics, Snoop Doggy Dogg became a central target of political censorship and attack soon after his appearance on the rap scene. Despite his initial commercial success, the rapper’s career began to flounder after gangsta rap fell out of favor in the latter half of the 1990s. By 1998, Snoop Doggy Dogg had changed his name to Snoop Dogg, switched music labels, and toned down his graphic and controversial act in an effort to maintain his status in the industry.

Born Calvin Broadus in 1971, he was nicknamed Snoop as a child and raised in an urban ghetto in California, suffering through a childhood of harsh social realities. One month after his high school graduation, the soon-to-be rap star was arrested on drug charges and spent the next three years in and out of jail on three separate charges related to drug possession.

Following his release from jail, Snoop began to hone his skills as a rapper and shopped a demo tape of his work around his hometown. Soon, he was introduced to Dr. Dre, a key member of the controversial rap group N.W.A. Dre invited the young rapper to make a cameo appearance on his song “Deep Cover,” which soon reached number one on the rap charts. In 1991, Snoop was invited to appear on Dre’s critically acclaimed solo album *The Chronic*, and the young rapper’s performances became legendary in the hip-hop community. Their rapping duet on the song “Nothin’ but a ‘G’ Thang” launched the single into the top five on the pop charts, establishing for the first time hardcore rap as crossover music. Snoop’s unique rap style—aggressive but melodic, nasal and “cool”—created an instant buzz on the streets. After appearing on three major magazine covers, the widespread anticipation for Snoop’s solo project seemed to be unprecedented in the history of rap music.

Nothing could prepare the young rapper for the attention he would receive with his debut 1993 album, *Doggystyle*. The album

Snoop Doggy Dogg

sold eight hundred thousand copies in its first week and debuted at number one on the Billboard charts. With his lanky, six-foot-four-inch frame and his long, braided hair, Snoop presented an image of black masculinity that hadn't been seen before. To his fans, the rapper appeared slightly effeminate but also menacing and hardcore. Through his realistic, graphic lyrics about living in the ghetto, Snoop helped bring to public attention the form of hip-hop known as gangsta rap. In this musical form, rappers portrayed themselves as instruments of menace and terror in order to shed light on the problems of youth living in the harsh social realities of urban ghettos. The success of *Doggystyle* also helped establish the West Coast as a viable center for the production of rap music.

Nonetheless, Snoop's success was a double-edged sword. Along with the Death Row record label and the label's head, Suge Knight, Snoop came under the critical scrutiny of a number of politicians and advocates for his glorification of violence and criminality, his explicit language, and his promotion of hustler and pimp lifestyles. Moreover, Snoop's legal troubles and his portrayal of criminality also seemed to spill into his offstage life. In the month before *Doggystyle* was released, Snoop was charged as an accomplice to the shooting death of a young black man. After receiving the legal services of O. J. Simpson trial lawyer Johnnie Cochran, Snoop was acquitted in 1996. Yet Snoop's brush with the law only boosted his credibility among his

fans, as they witnessed his offstage life blend into his art. As a result, his second album, *Murder Was the Case*, sold more than two million copies. By the mid-1990s, Snoop had also become one of the leading proponents of an escalating and highly publicized war of words between East Coast and West Coast rappers.

Eventually, however, Snoop's career suffered as gangsta rap began to weaken in its cultural power. In 1996, Death Row Records buckled under massive censorship from political conservatives, and as the year wore on, the hip-hop community became revolutionized by the untimely shooting deaths of hip-hop's two biggest stars, Tupac Shakur and the Notorious B.I.G., and by the incarceration of Death Row's Suge Knight. Unprepared to respond to the changing culture, Snoop's third album, *Tha Doggfather* (1997) suffered poor critical reviews and limited commercial attention. To increase his bad fortune, the rapper was then sued by Suge Knight's wife, who also acted as Snoop's manager, for millions of dollars in unpaid management fees. As Time/Warner sold its share of Interscope Records to MCA, Snoop found his musical home of Death Row Records in serious disrepair and public disrepute. Yet the record company continued to claim that the rapper contractually owed them another six albums.

In 1998, Snoop returned to visibility. Louisiana's No Limit Records label, run by emerging hip-hop entrepreneur and rapper Master P, entered into a deal with Death Row Records to release Snoop from future responsibilities. After having sold seven million albums in six years, the rapper released his fourth album, *Da Story Is to Be Sold Not to Be Told* on the No Limit Records label. In the same year, he appeared in bit parts in the straight-to-video movie *The Game of Life* and in the feature film release *Half-Baked*, and he decided to drop the word "Doggy" from his name to distance himself from his association with the gangsta rap idiom which he had helped popularize. In media interviews, Snoop Dogg began to publicize his offstage role as a father to two children. The rapper described his newfound image in 1998 as "more educated, wise, and more of a thinker—more for life."

Snow White and the Seven Dwarfs

Though criticized for the implied message that every girl needs a "prince" to rescue her, Walt Disney's first animated feature remains a classic. Debuting in 1937, the movie had a simple story line. Snow White escapes the murderous Queen and finds refuge with the Seven Dwarfs (Doc, Bashful, Sleepy, Sneezy, Happy, Grumpy, and Dopey). Learning she is alive, the Queen disguises herself and tricks Snow White into eating a poisoned apple. She apparently dies. A handsome prince, however, wakes her with a kiss. Reviewers criticized the human characters for being wooden, but the film broke ground in animation. The illusion of depth in the forest scenes and such details as rain splashing on the ground had never been seen before. The

movie proved animated features could be done and paved the way for later Disney films.

Soap Operas

In the 1930s, advertisers such as Procter & Gamble sought sponsorship of daily radio programming targeted to homemakers, who controlled the household purse strings for cleaning and other household product purchases. Daytime serial dramas soon answered this call, focusing melodramatically on women, multi-generational families, and romantic intrigue in live, 15-minute shows. Although derogatory at first, the term “soap opera” was eventually embraced and is now the genre’s customary designation.

The first soap opera, *Painted Dreams*, was developed in 1931 for WGN radio in Chicago by Irna Phillips, who would go on to become the most prolific creator of soap operas for both radio and television. The program aired without specific product association until content changes were made to accommodate Montgomery Ward & Co., the show’s first sponsor. Phillips employed the same enticements to secure advertisers for her other serial inventions, and the genre’s characteristic sponsor ties were established. Phillips’ *Today’s Children*, sponsored by Pillsbury, evolved into the first network soap opera when NBC began airing it nationwide in 1933.

Understanding that women often performed their domestic chores while listening to radio and were, consequently, all the more inclined to buy and use merchandise that could be casually promoted within a program, Procter & Gamble (P&G) initiated its first soap opera, *Ma Perkins*, in 1933. Other P&G ventures, including *The O’Neills* (1935), *The Guiding Light* (1937), and *Kitty Keene* (1937), soon followed.

Once television became a feature of the domestic landscape after World War II, soap operas gradually faded from the radio airwaves and took up residence on the small screen. *The Guiding Light*, a Phillips creation, ran simultaneously on both media for several years and remained in CBS’s lineup at the end of the twentieth century. While radio soaps shifted to tape before they faded, television soaps were, until the late 1950s, presented live. The decade saw myriad TV soaps begin and end abruptly, but several in addition to *Guiding Light*, including Roy Winsor’s *Search for Tomorrow* and *Love of Life* and Phillips’ *As the World Turns*, exhibited staying power. By the 1960s, soap operas were the only television genre whose production was still owned and managed by sponsors, with P&G dominating the field (other shows had shifted to running “spots” by a variety of advertisers). As a by-product of the shift to television, an extra measure of redundancy and “backstory” exposition was added to the

soap opera formula in order to accommodate viewers’ tendency to turn or step away from the screen momentarily in attending to their household tasks. When added to the genre’s open, serial form, this element further ingrained feminine domesticity into the very fabric of the soap opera.

The tried-and-true ability of soaps to target the preferred audience of women, aged 18-49, was unmatched by any other type of programming. Younger viewers became “hooked” on their shows by watching with their mothers after school, during the summer, and on holidays, and were then counted upon to become loyal viewers for the next three decades. With the lucrative, Baby Boom generation of women coming of age in the late 1950s, 1960s, and 1970s, soap producers geared up to capture a new crop of female consumers.

When *As the World Turns* (CBS) featured the teenaged elopement of Penny Hughes and Jeff Baker in the late 1950s, the strategy of the “summer storyline” was inaugurated. Since that time, soaps have made special efforts to highlight and write for younger characters during the summer months in order to attract high school and college students at home during their breaks. New soaps with new angles also attempted to snare these viewers. ABC’s Gothic soap opera, *Dark Shadows*, emerged in the mid-1960s to beguile a largely cult audience with vampires, witches, and werewolves for half a decade, creating a fandom which has lingered far longer than the program. Additionally, by the end of the decade, most soaps had expanded to a half-hour format.

The summer storyline became more of a year-round prospect in the 1970s, as Agnes Nixon’s *All My Children* (ABC) and William Bell’s *The Young and the Restless* (CBS) were devised with Baby Boomers in mind. Meanwhile, NBC’s *Another World*, a 1964 co-creation of Phillips and Bell, emerged in 1975 as the first soap to make 60 minutes the industry standard.

In the late 1970s, *General Hospital* evolved into a winner for ABC when ratings increased dramatically due to executive producer Gloria Monty’s decision to pair teenaged “soap babe” Laura Baldwin (Genie Francis) with bad boy “soap hunk” Luke Spencer (Anthony Geary)—a courtship that clicked into full gear after the writers realized the enormous popularity of the couple and recontextualized Luke’s previous rape of Laura as a “seduction.” Luke and Laura became soap opera’s first “super couple,” and were promoted in a newfangled fantasy and adventure-oriented “ice princess” story. NBC’s *Days of Our Lives*, a 1960s creation of Irna Phillips, Ted Corday, and Alan Chase, followed suit with super couples such as Bo and Hope and fantasy scenarios of its own. When Luke and Laura finally wed during the November ratings sweeps of 1981, in excess of 30 million viewers tuned in, the largest audience ever to view an episode of any daytime soap opera.

Although Luke’s “rape redemption” fueled controversy, taboo topics were addressed on soaps in the 1970s and 1980s as an integral part of the campaign to lure Baby Boomers. Roger Thorpe’s rape of wife Holly was the groundbreaking issue on *Guiding Light*. The writers who penned it, Jerome and Bridget Dobson, followed with a similar story on *As the World Turns*, where *General Hospital*’s former scribe, Douglas Marland, eventually took the reigns and conceived socially conscious tales about bulimia, incest, and homosexuality. *Another World*, which tackled addiction, abortion, and alcoholism under the leadership of Irna Phillips, William Bell and, later, Harding Lemay, went on to offer the first AIDS story in the late 1980s.

As much as they tried, soaps that were caught behind the curve during the youth boom soon experienced downturns in popularity and

have never completely recovered. Procter & Gamble, the only sponsor to still produce its own soaps in the late 1980s, was especially hard hit, and one of its properties, *Search For Tomorrow*, switched from CBS to NBC before going under in 1986. P&G's *Guiding Light*, *Another World*, and *As the World Turns* also struggled with their aging viewerships. The 1980s saw efforts to reach other specific demographics with NBC's *Generations*, targeted primarily to African-Americans, and Christian Broadcasting Network's *Another Life*, geared to Christian viewers. Neither achieved long-term success.

Another feature of the 1970s and 1980s was the rise of the prime time soap opera. Although *Peyton Place* (ABC) had attempted such a temporal shift in the 1960s, launching the film careers of Ryan O'Neill and Mia Farrow but little else, it was not until the late 1970s and Lorimar's saga of an oil dynasty in *Dallas*, headed by the infamous J.R. Ewing (Larry Hagman), that the idea finally caught on. Unlike *Peyton Place*, which offered two episodes per week, *Dallas*'s once-a-week format proved more palatable to prime time viewers, and the CBS series became immensely popular, enduring for a decade. It's worldwide appeal was even more staggering, and when a 1980 season-ending cliffhanger posed the question, "Who shot J.R.?", massive, global speculation ensued. Elihu Katz and Tamar Liebes' scholarly study of this international phenomenon, published in *The Export of Meaning*, demonstrates how popular texts can be interpreted in numerous ways according to culture, nationality, and other aspects of identity. CBS later added other serial sagas to its lineup, including *Falcon Crest* and *Knot's Landing*—a *Dallas* spin-off. But it was Aaron Spelling's *Dynasty* that answered the challenge for ABC, resonating 1980s' narcissism and opulence and dishing up "soap vixen" Alexis Carrington who, owing to Joan Collins' brazenly camp portrayal, emerged as a cult favorite. Moreover, other nighttime formats began exhibiting seriality and other soap opera conventions as the genre's influence was seen in domestic dramas such as *thirtysomething*, law enforcement, legal, and medical shows such as *Hill Street Blues*, *L. A. Law*, and *St. Elsewhere*, and "dramedies" such as *Moonlighting*.

By the 1980s, academic study of daytime soap operas had evolved from statistical audience surveys and content analyses such as those contained in Mary Cassata and Thomas Skill's *Life on Daytime Television*, to critical analyses of soap opera texts and the potential identifications of viewing subjects such as those found in Tania Modleski's *Loving with a Vengeance* and Robert Allen's *Speaking of Soap Opera*. Despite their denigration in the larger culture, a feature attendant to most any "feminine" genre from romance novels to film melodrama, soaps were found to provide central female characters through whom women in the audience might seek affirmation and empowerment. Although some scholars found many aspects of these representations lacking, the genre's serial form, its emphasis on and elevation of the domestic sphere, and its focus on feminine subjects, were considered by most to be positive and noteworthy traits.

As the 1990s loomed, soaps began to undergo a period of transition, seeking to retain their audience of Baby Boomers while attracting the younger, MTV generation of viewers. Jerome and Bridget Dobson's 1984 creation for NBC, *Santa Barbara*, took its lesson from *Dynasty* and delivered a spirit of camp postmodernism to daytime. While proving a huge success overseas, the soap failed to capture the domestic demographics the network was hoping for and suffered cancellation nine years later. *All My Children*'s devilish "soap diva" Erica Kane and the actress playing her, Susan Lucci,

became household names, as multiple onscreen marriages for Erica and offscreen Emmy losses for Lucci were grist for the publicity mill.

In the late 1980s, another Agnes Nixon soap, *One Life to Live* (ABC), had endeavored to replicate *General Hospital*'s winning fantasy adventures by depicting unconventional journeys to the Old West and to a lost city called "Eterna." Under the management of former movie producer Linda Gottlieb and mystery novelist Michael Malone, the program shifted to hard-hitting realism in the 1990s. Stories involving the town of Llanview's homophobic response to a gay teen, Billy Douglas, and the brutal gang rape of a college student by three fraternity brothers led by Todd Manning (Roger Howarth), emerged from the collaboration. Controversy ensued when Howarth's charisma with fans led creators to orchestrate Todd's redemption, much to the chagrin of Howarth, who found himself braving screams of "rape me, Todd," from overly ardent admirers. *All My Children* followed *One Life to Live*'s homophobia story with its own tale of a popular teacher who nearly loses his job after revealing his homosexuality during a classroom lecture.

General Hospital adopted a similar tone of verisimilitude during this decade, largely as a result of headwriter Claire Labine's heart-wrenching tales of a child's tragic death, her gift of a healthy heart to an ailing cousin, and a middle-aged woman's battle with breast cancer. The most risky and significant decision during Labine's tenure was to have teenager Robin Scorpio (Kimberly McCullough), who had literally grown up on the program, contract the AIDS virus by engaging in unprotected sex with her boyfriend, Stone. Stone subsequently suffered and died of the dread disease before the eyes of both Robin and viewers. These dark stories garnered *General Hospital* critical acclaim but endangered the program's healthy ratings, as the incoming generation of fans seemed more stimulated by fantasy and escape than by tragedy and catharsis.

Meanwhile, it was NBC's long-running *Days of Our Lives*, under the creative leadership of executive producer Ken Corday and innovative writer James Reilly, which appeared to discover the key unlocking the devotion of this new generation. Taking a lead from *Dark Shadows*, Reilly conjured up Gothic fantasy scenarios, camp "supervillains," never-ending "super triangles," and bizarre sagas involving premature burial and demon possession. This latter escapade required the soap's most beloved diva, Marlena Evans (Diedre Hall), to levitate and morph into wild animals. While many longtime fans could not tolerate the program's drastic change in tone and jumped ship, teens gravitated to its postmodern panache and rushed aboard. While *Young and the Restless* gained and retained the number one spot in ratings during the late 1980s and 1990s, warranting the addition of a second Bell soap, *The Bold and the Beautiful*, to CBS's lineup, *Days of Our Lives* mounted a serious challenge to this ratings leader and at one point surpassed it in terms of demographics—the advertisers' target group of younger women. After a few years, ratings and demographics for *Days of Our Lives* dipped a bit, but its producers seemed not to question whether the "formula" they had concocted might prove to be a short term fix rather than a long term remedy.

Days of Our Lives was very influential in the 1990s, with many programs endeavoring to emulate it and refusing to relinquish their future audience to any other soap or network. Even more than during the Baby Boom influx, "youthification" became the order of the day. Multi-generational or Baby Boom-centered soap operas had become scarce in prime time, with only NBC's *Sisters* breaking out as an instance of both. Most remarkable had been Aaron Spelling's

groundbreaking creations for FOX, *Beverly Hills 90210* and *Melrose Place*, which demonstrated that it was possible for soaps to focus almost exclusively on teens and/or twenty-somethings and be successful in prime time. Late in the decade, *Party of Five* (FOX) and *Dawson's Creek* (WB) extended this trend. Despite differences in potential audience and format, some daytime powers hoped they could corner the youth market in similar fashion. With the children of the Baby Boom generation, the Baby Boomlets, lying in wait and nearly as numerous as their parents, there appeared to be no turning back. Although some had predicted that Boomers would dominate the culture well into and even beyond their middle age, the trajectory of soap operas responding to the advertisers' increasing concern with demographics, as opposed to household ratings, portended otherwise.

Most deliberate in its campaign was NBC, making *Days of Our Lives* its standard bearer and pressuring its only other soap, *Another World*, to "backburner" and eventually fire much of its over-forty cast while adopting a decidedly more outrageous tone. The network then picked up Aaron Spelling's first daytime offering, the virtually uni-generational *Sunset Beach*, to complete its menu. After writer James Reilly departed *Days of Our Lives*, the network hired him to develop a new daytime venture. *Another World*, whose ratings continued to spiral downward after the loss of its veteran performers, was the likely candidate for replacement by the new Reilly soap. The fact that Procter & Gamble was a "middle man" for *Another World* did not help its chances, and NBC's contract disputes with *Days of Our Lives*, which was threatening a move to another network, offered the ailing *World* its only glimmer of salvation as the millenium approached. Sadly though, *Another World* was cancelled during the summer of 1999.

Meanwhile, the traditional Procter & Gamble soaps on CBS, *As the World Turns* and *Guiding Light*, were not surviving this period unscathed. The former escorted many of its veterans to the chopping block and was inundated with young, inexperienced performers. The latter bore its own spates of downsizing and had taken to featuring otherworldly stories, including an especially controversial one in which popular diva Reva Shayne (Kim Zimmer) was cloned.

Despite the tenuous success of *Days of Our Lives*, daytime soap operas realized an overall decline in viewership during the 1990s. Competition with the O.J. Simpson trial, more abundant offerings on cable, and the fact that more and more women were in the work force, all had an impact. Although many working women videotaped or "time-shifted" their soaps, advertisers refused to pay for viewers who were apt to fast-forward through ads. Still, avid fans had become more active and, indeed, interactive, establishing communities on the Internet in which they could discuss the latest storylines, root for their favorite "core" characters, families, and/or super couples, or lament some of the genre's more flagrant lapses in logic, including resurrections from the dead, multiple recasts, and the "rapid aging syndrome" in which children are ushered off to boarding school only to return six months later, ten years older, and ripe for romance in a summer teen storyline. Online soap operas such as *The Spot* also sprang up.

Accordingly, during this decade, scholars engaged in cultural studies and other approaches to media analysis turned their attention to soap opera viewers, exploring their interpretations and activities in fan groups, clubs, and Internet forums. In *Soap Opera and Women's Talk*, Mary E. Brown argues that female audiences recognize their subordination through negotiating and celebrating the genre's feminine emphasis, while in a study entitled "'No Politics Here,'" Christine Scodari examines soap opera "cyberfandom" and bemoans

ruptures in the audience attendant to creators' "youthification" efforts and the genre's postmodern turn.

Despite their attempts to enthrall succeeding generations of viewers with controversial and/or outlandish subject matter, some research, such as Mumford's *Love and Ideology in the Afternoon*, maintains that daytime soaps have persisted in their essential conservatism. While many programs welcome African-American and Hispanic characters and viewers, race is still a thorny issue. Soapland's black women and white men have occasionally fallen in love across racial lines, but when *Another World* tried to reverse that equation by developing a flirtation between Caucasian diva Felicia Gallant (Linda Dano) and a handsome black suitor, a backlash apparently prevented the story from moving beyond the initial stages. Similarly, *Soap Opera Digest* received disagreeable letters from fans of *Young and the Restless* in response to a blossoming romance between African-American Neil and Caucasian Victoria. *Another World's* plan to make race an explicit component of a trial in which an African-American cop accused a popular—and white—"hunk" of raping her, was buried under the negative fallout of fans whose sensibilities it violated. And, although soap opera's focus on female viewers would seem to warrant the overturning of double standards, serious romances between older women and younger men remain taboo. Only one—Vanessa and Matt of *Guiding Light*—was evident in the late 1990s. As soaps became more devoted to younger segments of the audience, such stories were apt to be seen as inimical to commercial goals and, therefore, inadvisable. Moreover, while soaps may depict women in career roles, the workplace continues to serve as a stage upon which women are seen "catfighting" with one another for the love of a man rather than seeking professional accomplishment for its own sake.

Still, soap opera's ongoing focus on human relationships and the "feminine" is exceptional and laudable. Adapted to a plethora of international cultures, featured in numerous fan magazines, celebrated at the *Daytime Emmys* and *Soap Opera Digest Awards*, and lampooned in movies (*Soapdish*, *Tootsie*) and television (*Mary Hartman, Mary Hartman, Soap*, *The Carol Burnett Show*), the genre endures as a highly accommodating and exportable staple of American popular culture.

Soccer

Soccer in America is in a strangely paradoxical position. It is the world's most popular sport, yet it has never managed to gain much of a spectator footing in the United States. It may be virtually ignored on television as a spectator sport, but it has become one of the biggest participatory forms of leisure activity in America by the late 1990s. Nonetheless, many Americans are still ignorant not only of the rules of the world's biggest game, but also of their country's own soccer history.

The origins of soccer in America are obscure. Folklore suggests that the Pilgrim Fathers discovered the American Indians playing a form of the game along the Massachusetts coastline. British immigrants, however, imported the game that developed into association football (soccer) around the world in the nineteenth century, into America in the seventeenth century; there is documentation of the game as early as 1609. The game was an early folk pastime played mainly in the streets and open squares, and it remained so until the nineteenth century. By the 1820s, soccer was a violent, unorganized, and casual game almost exclusively played on college campuses. The first intercollegiate soccer match took place in 1869 between Princeton and Rutgers. Schoolboys established the first organized soccer club, the Oneidas of Boston, in 1862. They played on Boston common and were undefeated for several years.

At this point it looked as if soccer would develop in the United States. British expatriates had exported soccer around the world and many immigrants from the British Isles arrived in America bringing the game with them. Harvard, however, had other ideas. In an attempt to distinguish itself from the other Ivy League colleges, Harvard adopted rules similar to those developed by rugby football. Since Harvard was the leader in physical education during the nineteenth century and other colleges did not want to lose such prestigious competition, they adopted rugby rules. This set of rules subsequently became the basis for the innovation of American football. Football was then highlighted as a uniquely American sport while soccer was relegated in significance as the game of immigrants, particularly as it was played by the new arrivals from Southern Europe.

Nonetheless, soccer did not die out in America. In 1884 the American Football Association was organized in Newark, New Jersey. And in 1885 the United States played its first "international" against Canada, one of the first soccer games to be played outside the British Isles. The United States soccer team participated in the 1904 Olympic games in St. Louis and in 1914 the United States Football Association (USFA) was granted full membership in FIFA, the governing body of world soccer. In 1916 the USFA team traveled to Sweden and Norway. It played its first international match on foreign soil on August 20, defeating Sweden 3-0. When the first World Cup

competition was organized in 1930, America was one of 13 nations to compete and its Bert Patenaude was the first player to score three goals in a single World Cup game. The highlight of the USFA's international games, however, was in the 1950 World Cup when it defeated England 1-0. This has been considered the biggest upset ever in international soccer.

Soccer in America has since undergone many incarnations during the twentieth century. In 1923, the world's first indoor soccer league was organized in Boston. In 1958, the International Soccer League was set up. It was composed of top teams from Europe, South America, and the United States, holding its first championship tournament in 1959. The league survived for a decade as a testing ground for soccer as a spectator sport in America. In 1967 two more soccer leagues were established: the United Soccer Association (USA) and the National Professional Soccer League. At the end of the year, these leagues were merged at the request of FIFA, forming the North American Soccer League (NASL). This newly established professional league had 18 teams by 1974 and it achieved a major success by signing the world's greatest footballer, Pelé, in 1975. Professional soccer as a spectator sport finally appeared to have taken root in America when a seven game contract was signed with national television in 1977. The NASL eventually collapsed, however, due to a combination of highly paid foreign stars, a failure to develop the game at grassroots level, the withdrawal of its sponsors, and falling gate receipts.

Soccer was revitalized once again during the early 1990s. In 1994 the United States hosted the World Cup for the first time. Three and a half million fans filled the stadia and broke all previous attendance records. For the first time in 64 years the USA progressed beyond the first round, eventually losing a creditable 1-0 to the team from Brazil. On the back of the World Cup the United States Soccer Federation set up Major League Soccer, promising a blend of home-grown talent, imported foreign stars, and audiences of 14,000 per game. The World Cup had proven that Americans could both play and watch soccer. Major investment in the sport, from companies such as Nike, has also boosted the popularity of soccer amongst Americans. In America, soccer is now played by both sexes and is a major participatory activity. Indeed, the USA's women's team is currently an Olympic champion. The men's team, however, has not fared so well. At the 1998 World Cup in France, they went out during the first round. The lowest point came when they were defeated 3-1 by Iran, a team who had never previously appeared in the World Cup Finals.

Despite the formation of domestic soccer leagues and international successes, soccer is somehow still not recognized as an American sport. Unlike football and baseball, it is not considered an American invention, but rather as the sport of immigrants. Undoubtedly, soccer has suffered from its lack of prime-time television coverage. Television sport schedules are virtually monopolized by the "big three": football, baseball, and basketball. This lack of exposure has continued to hinder soccer's development at the professional level, while overshadowing its thriving grassroots existence at a participatory level. Until soccer's television and earning power match that of the big three it will continue to remain in their shadows.

Social Dancing

Social dancing refers to all those forms of dance that are recreational and public. It is not a professional form of dance, except for exhibition dancing or teaching, nor a form of theatrical dancing, like ballet, modern dance, tap dancing, or flamenco, although such forms of art and entertainment incorporate steps and gestures from social dance. In American society almost everyone has some sort of relationship to social dancing. Many people participate with great intensity in social dance activities for a period of their lives. In pre-industrial societies and working-class communities, social dancing has often been a group activity, but by the end of the twentieth century in many parts of the world, social dancing was primarily a form of couples dancing.

Folk dancing is the earliest form of social dancing. Most folk dancing is a group activity, and often includes only a single sex. A common folk dance form is the European round dance that is for both men and women in which the dancers are linked in a circle by holding hands, or holding the arms and shoulders or the waist belts of the other dancers. The couple dance where a man and woman hold each in their arms is a late development in folk dancing. Couple dances probably originated as courtship or wedding dances. Folk dances have often existed in a dialectical relationship with court dancing. Folk dances were usually codified by "dancing masters" when they were introduced to the aristocratic courts so that the dances could be taught more easily.

English country-dances were exported to France, where they were codified and introduced into French aristocratic circles. Known as the *contredanse*, they were group dances that formed circles and lines of dancing to make an elaborate shape through which members of the court could thread. In the minuet, a related dance form, couples danced as part of the group. These early ballroom dances were grouped together under the title of cotillion and quadrille. Elite ballroom dancing of this sort was destroyed by the French Revolution.

After the French Revolution, the waltz swept across Europe; it was considered a "popular" democratic dance—the dance of the rising middle classes. Social dance moved out of the ballroom of the

aristocratic court into public dance halls and "assembly rooms." Paris had, in the period after the revolution, over 700 dance halls. It was also the first dance of urban life. The waltz was the first example of the "closed couple" dance—the dance partners faced one another and were in intimate physical contact with one another. Because of that and its whirling and the intoxicating effect of its 3/4 time, it was thought to be vulgar and lascivious. The waltz was introduced to the United States in the early nineteenth-century. The waltz remained the dominant form of social dance in Europe—where it culminated in the Viennese waltzes of Johann Strauss—and North America. Other dances that emerged rivaled it for short periods of time, but did not displace it until late in the nineteenth century.

At the end of the twentieth century in the United States, most forms of social dance were hybrid dance forms descended from European and African musical and dance traditions. During the eighteenth and nineteenth centuries, most of the social dances that Americans participated in were imported from Europe, but since the beginning of the twentieth century American popular forms of social dance have originated in or were primarily influenced by African-American music and dance styles. Even the many forms of Latin dancing that have also been popular—from the tango, to the samba, to salsa—are cross acculturations of African and Hispanic musical traditions.

The emergence of ragtime, in the 1890s, revolutionized social dancing in the United States. Composed by Black musicians as piano music to be played in saloons, bars, brothels, and cafes, ragtime was rarely written down or recorded. The first identifiable style of jazz, ragtime comes from *ragged music*, also known as syncopation, where the musical stress is on an unaccented beat and then held over until the next beat. The most famous ragtime composer in the early twentieth century was Scott Joplin. His pieces, "Maple Leaf Rag" and "The Entertainer" were among the most popular compositions of the day. Ragtime radically changed American dance styles. Before ragtime, there was an emphasis on learning complicated steps and the pleasure in movement. After ragtime, the main impetus of social dancing was the music's rhythm and the impulse that it gave to dancing.

The one-step—called so because one step was taken to each beat of the music with a constant tempo—was the first kind of dancing done to ragtime. The one-step spawned a series of other one-step dances accompanied by different arm and body gestures: the turkey-trot involved flapping one's arms like a turkey, the grizzly bear included lurching like a bear, and so on with the bunny hug, the shiver, and the Boston dip. Vernon and Irene Castle, a world famous, husband and wife team, adapted the one-step as the Castle Walk and popularized it across the country, commanding huge fees for performing ballroom dances in exhibitions, cafes, and theaters. The one-step and the other new dances were much simpler—they undercut the social distinction to be gained by ballroom dancing lessons. Anyone could learn them by observation in an evening of dancing. One English observer noted, that "[A]ll you have to do is grab hold of the nearest lady, grasp her very tightly, push her shoulders down a bit, and then wiggle about as much like a slippery slush as you possibly can." Many new dances also allowed much closer physical contact between the couple, in part because they were somewhat slower than the waltz or the polka.

One offshoot from these early one-steps was the two-step—which is basically a marching step with interpolated skips. Neither the one-step nor the two-step had the major impact of later dance styles on American recreational dancing. The two-step was originally danced

to the popular marches of John Philip Sousa. Ragtime, Dixieland jazz, and later swing, offered rhythmically complex musical frameworks for more sophisticated dance forms. With the revival in popularity of country and western music in the late twentieth century, the two-step survived as country and western dancing primarily as a line dance incorporating open couples.

The next dance to sweep the country was the foxtrot; its invention the most significant development in social dancing until the 1960s. Incorporating some aspects of the one-step and other new dances, the foxtrot was more enjoyable to dance because its combination of quick and slow steps allowed greater variety and flexibility than the monotonous one-step. Most ballroom dances that followed—the *shimmy*, Black Bottom, and Charleston—were variations on the foxtrot.

After ragtime, jazz became the dominant idiom of urban dance music and popular song up until the 1950s. The popularity of the foxtrot and its centrality to ballroom dancing was instrumental to the infusion of jazz into mainstream American popular music. The big dance bands of the 1920s and 1930s were the vehicle for the most popular and exciting dance vogue in the era before rock 'n' roll—*swing* and all the dances that grew out of it such as jitterbug, Lindy Hop, and Jive.

Rock 'n' roll, a new style of music that emerged in the late 1950s, and a synthesis of blues, rhythm, and country music—was a popular form of dance music. Songs like “Shake, Rattle and Roll” and “Rock Around the Clock” typified both this new music as well as a dance style. Couples continued to dance the jitterbug to early rock 'n' roll, but in the early 1960s, Chubby Checker recorded a dance song called “The Twist”—a dance in which partners shook their shoulders, swiveled their hips, but did not touch. As a dance it swept across the United States. And although the enthusiasm for it faded within a year or two, popular social dance was decisively changed. Coordinated couple dancing was a thing of the past. After the twist, social dancing was characterized by standing in one place, small foot movements (somewhat resembling the motion of putting out a cigarette), dance partners hardly touching one another, or dancing alone on a crowded dance floor. Partners usually maintained eye contact, but dance fashions no longer focused on footwork so much as the motion of the arms and upper body.

Less influential than the dance forms that emerged from jazz, rock 'n' roll, soul, and hip hop, although still highly visible at times, were Afro-Latin dances, such as the tango, rumba, samba, mambo, cha-cha, and salsa. The tango was the first to arrive—creating a huge dance craze in 1913 and 1914. The tango traveled back and forth throughout the nineteenth century between Europe and Latin America as well as passing through Japan in the 1940s. In the course of these movements the tango was modified by black and Creole influences being transformed once more in the brothels and cafes of Buenos Aires in the 1930s and 1940s. Popular at the end of the twentieth century, the tango had enjoyed several revivals throughout the century.

Rumba music is popular throughout the Caribbean islands of Jamaica, Haiti, and Cuba. The rumba as a dance migrated to the United States from Cuba—where it was a sex pantomime danced extremely fast with exaggerated hip movements and very aggressively led by the male partner. The music is played with a staccato beat. The samba, a Brazilian dance form first performed by blacks at carnival time and other holidays, is a difficult dance because of its speed and because its steps are taken on a quarter of a beat with a rocking motion. It was introduced to the United States by Fred Astaire

and Dolores Del Rio in the 1933 movie *Flying Down to Rio*, where they danced the ballroom version of the samba, the carioca. The “Brazilian Bombshell,” as movie star Carmen Miranda was known, popularized the samba's rhythms in her movies. Mambo is a voodoo term in Haiti, although as a dance it was created among upper-class Cubans for the ballroom. To some extent it evolved from the rumba, although it is more difficult and danced fairly fast with jitterbug-like acrobatics and jerky staccato rhythm. The difficulties of the mambo led to the creation of the cha-cha, a simpler and easier dance, which resembled a much slower version of the mambo. In the United States the cha-cha has been the most popular Latin dance since the 1950s, although in the 1990s the mambo, tango, and salsa have eclipsed the cha-cha. Salsa, a Puerto Rican dance, has steadily gained in popularity in the last decade of the twentieth century.

In the 1970s new forms emerged that revived close couple dancing as well as a greater stress on footwork and coordination than did the post-Twist dances. The hustle and its close cousin, disco, grew up among the black and Puerto Rican bars and dance clubs in New York City. *Saturday Night Fever* (1977), starring John Travolta, had an immense impact on the popularity of disco dancing. Disco spurred an exhibition-style dancing, emphasizing improvisation and individual expression—the dancer becoming almost a soloist or choreographer. The hustle (and disco) closely resembles the Lindy except that disco music does not have the rhythmic swing of big band music. Instead, the hustle consists of dancing three beats against the music's four beats. One variation of the hustle was the “Good Foot” popularized by soul singer James Brown in his 1969 hit song, “Get on the Good Foot” which he performed in an acrobatic style. The “Good Foot” pointed towards breakdancing.

Hip hop as a musical style emerged in opposition to the increasing commercialization of disco, funk, and soul. It came out of New York, Los Angeles, and Chicago. This new style was created by DJs (disk jockeys) in dance clubs who blended, scratched, and inter-cut music from different tracks thus creating a new musical form. Break dancing or breaking emerged as dance form in response to a number of new developments. The DJs melding of percussion breaks from two identical records and playing the breaks over and over again generated opportunities for dancers to perform their gymnastic dance routines. Some break dancing routines were derived from the miming of robot-like actions, inspired by the character of Robot on the popular 1970s TV program, *Soul Train*. It also resulted from the incorporation of moves from martial arts—especially Kung Fu and Capoeira, the Brazilian dance-like martial art. In some cases, this also transformed violent conflict between gangs into dance competitions. Break dancing requires great skill and acrobatic abilities and was popularized by the 1983 movie, *Flashdance*. Hip hop musical culture continued to generate variations on break dancing such as popping, uprock, house, and bebop (a swing-like revival) that continued to influence social dancing at the end of the twentieth century.

Soda Fountains

The classic American soda fountain was defined as much by its atmosphere as by what it served. Light, cool, and airy places furnished with marble-topped counters and tables, shining mirrors, and sparkling glass and chrome serving dishes, soda fountains began springing up in the early nineteenth century, and kept essentially the same formula until the 1950s. The bill of fare was simple: carbonated beverages and, later, ice cream and combinations thereof. In the heyday of the soda fountain (roughly 1890-1940) one could order a tempting variety of dishes, from an ice-cream soda (soda water and ice cream) to an ice-cream sundae (ice cream topped with nuts and a chocolate or fruit sauce) to a plain soda (carbonated water with fruit syrup mixed in).

For millennia, people have partaken of bubbly mineral water that came from natural springs, which was thought to have therapeutic qualities. After chemists figured out how to make artificially carbonated water, apothecaries and later drug stores featured it as one of their

many curatives. In 1770 a Swede named Bergman produced the first artificially carbonated water, and by 1806 Professor Benjamin Silliman of Yale was manufacturing bottled water in Hartford, Connecticut. Early in the nineteenth century druggists began carbonating water in their basements, installing a readily accessible spigot on the first floor to serve customers. Before long the local literati were gathering at the drug store, making it a common meeting place and establishing the soda as a social beverage.

In 1832, John Matthews of New York City invented the first compact soda-water machine and dispenser unit, which popularized the drink and gave tavern owners their first stiff competition. Six years later, Eugene Roussel, a Philadelphia perfume maker, combined fruit syrups with this carbonated water, making the first flavored sodas, including orange, cherry, lemon, teaberry, ginger, peach, and root beer.

The ice-cream soda was not invented until about 1874, at the Franklin Institute Exposition in Philadelphia, when Robert M. Green, a soft drinks vendor, ran out of cream and substituted ice cream in his drinks. This new libation quickly became a national institution. By 1876, helped along by the Centennial Exposition's 30-foot-high fountain, soda fountains replaced ice-cream saloons as the fashionable place for the elite to patronize and see the wonders of technology at work. By 1900 common brand names sold at soda fountains

A soda jerk displaying his skills.

included Hires Rootbeer, Moxie, Dr. Pepper's, and Coca-Cola, the "great national temperance drink."

Prohibition greatly increased the popularity of the soda fountain. By the 1920s the improvement of refrigeration allowed these places to serve meals as well, and soda fountains were incorporated into department stores, luncheonettes, grocery stores, tobacco shops, and five-and-dime stores. While they were popular with all Americans, teenagers frequented soda fountains the most. Soda jerks, named for the way they jerked the handles used to extract fruit syrups from the pumps, worked behind the counter making the sometimes complicated concoctions for the patrons—anything from a Brown Cow to a Bonnie Belle Cream to a Catawba Frappe. Usually good-looking men, soda jerks were a popular attraction to their customers, and even had their own lingo. For example, "shoot (or hang) an honest" meant a cherry coke, "one sweet" or "pull one" referred to milk, "Adam and Eve on a raft" translated as two eggs on toast, a "ninety-five" described someone trying to get away without paying, and "thirteen!" warned that the boss was around.

Such a familiar icon in popular culture, the soda fountain appeared in plays and movies: people drank strawberry sodas at the fountain in *Our Town*, it appears as the place of courtship in the 1919 movie *True Heart Susie*, and Mickey Rooney and Judy Garland flirted over sodas in the 1938 film *Love Finds Andy Hardy*. The legendary soda fountain at Schwab's drugstore in Hollywood was supposedly the place where young hopefuls went to get noticed by the film industry; legend has it that Lana Turner was "discovered" there in 1937.

The "golden days" of the soda fountain were from the end of the nineteenth century to the early 1940s. During the World War II years, soda jerks got drafted, sugar was rationed, manufacturers of soda equipment had to retool for the war effort, and fountain operators saw larger profits in goods like cosmetics and nylon stockings. After the war there was a brief resurgence in soda fountains, but the business was never again as popular as it had been earlier in the century. Americans turned to ready-made food, and began motoring to the new fast-food restaurants sprouting up along the nation's highways, spelling the demise of the time-consuming ice-cream soda and its attendant institution, the soda fountain.

Soldier Field

Dedicated as a memorial to World War I soldiers, the colonnaded stadium known as Soldier Field has served as a cultural mecca for

Chicago residents, hosting professional sports, presidential visits, religious events, and concerts. The architectural firm of Holabird & Roche was awarded the commission for the stadium in 1919. Construction on the \$6,000,000 stadium (which was originally known as Grant Park Stadium) began in 1922 and was dedicated in November 1925. Though a centerpiece of Chicago's waterfront, the stadium fell victim to disuse and poor maintenance. Talks were initiated in the 1950s to bring a professional baseball team to the stadium, but it was not until 1971 that the stadium found a permanent resident in the National Football League's Chicago Bears. Plans for demolishing, revamping, or possibly doming the stadium continued until 1983, when the structure was placed on the National Register of Historic Places. The building—with its classic columns and pre-cast concrete resembling slabs of stone—remains a magnificent sight along the shore of Lake Michigan and an anomaly among professional football stadiums.

Some Like It Hot

Some Like It Hot, a critically acclaimed farcical romp produced by United Artists and directed by Billy Wilder, premiered at Loew's Capitol Theatre on Broadway in 1959. Set in Chicago in the 1920s, the film stars Tony Curtis and Jack Lemmon as hapless musicians who are pursued by gangsters when they witness the Saint Valentine's Day Massacre. Joe and Jerry decide to disguise themselves as "Josephine" and "Geraldine," and join a female band headed for Florida. (Actually, Jerry takes to his new role quickly, spontaneously introducing himself as "Daphne.") On the southbound train, the pair befriend Sugar Kane, played by Marilyn Monroe, and begin competing for her affections. It turns out that Sugar is on the run as well, fleeing the string of saxophone players who have loved her and left her. In Florida, Joe woos Sugar by masquerading as a millionaire, and "Daphne" is courted by Osgood, who is indeed a millionaire.

Wilder was by this time an established auteur. Reviews of *Some Like It Hot* compare his sophisticated comedy to that of Ernst Lubitsch and refer to "the Wilder touch." Wilder enjoyed a great deal of control over the production of the film. For example, although few films were shot in black and white by the end of the 1950s—especially since Hollywood was competing with television for viewers—Wilder felt that Lemmon and Curtis would look too garish in color and got his way.

Some Like It Hot marked Monroe's emergence from semi-retirement. She had made 21 films between 1950 and 1956, only one in 1957, and none in 1958. She was married to Arthur Miller and pregnant with his child during filming, but suffered a miscarriage shortly after. She had long since earned the reputation of being extremely difficult to work with: showing up late, drinking on the set, stumbling over lines, and consulting with her drama coach constantly. Wilder is the only director ever to work with her more than once, and he was extremely critical of her unprofessionalism afterward. According to Carl Rollyson in his *Marilyn Monroe: A Life of the Actress*, "He had been cautious with the press during filming, but shortly

Tony Curtis (left) and Jack Lemmon in a scene from the film *Some Like It Hot*.

afterwards he allowed his disgust with her to show. She had seldom worked a full day on the set, and because of her the production had gone several weeks past its scheduled end and had exceeded its budget by about half a million dollars. He took his revenge in a series of sarcastic statements"; for example, suggesting that the Screen Directors Guild should give him a Purple Heart for casting her in two of his films, and he was too old and too rich to ever go through such an ordeal again. Curtis also spoke of her contemptuously, describing their love scene as "like kissing Hitler." In the final film, however, the ensemble acting of the cast was considered superb.

According to Bernard F. Dick, "It would not be hyperbole to call *Some Like It Hot* a comic masterpiece. It has the classic comic plot of disguise, deception, and intrigue where a single complication generates a series of subplots the way a single pebble creates concentric ripples in a pool. *Some Like It Hot* also possesses a quality found in the best comedies—a sense of humanity and an attitude of compassion for the lunatics and lovers who play the fool for our sake."

Sondheim, Stephen (1930—)

Stephen Sondheim is one of the most important creative personalities in the American musical theater of the late twentieth century. Like George M. Cohan and Cole Porter before him, Sondheim is one of those rare songsters who creates both words and music. Sondheim and his shows have almost a cult following because of their sophistication of topic, music, and approach. Sondheim is a composer who creates something unique and different for each show, yet each work bears his unmistakable imprint. His most popular number, "Send in the Clowns," has been recorded by numerous singers worldwide.

Sondheim was born on March 22, 1930, into an affluent New York family and began his musical studies at very young age. He grew up as a neighbor of Oscar Hammerstein II, who took the young Stephen under his wing. He graduated from Williams College with a music degree and continued his composition studies with Milton Babbitt, a pioneer in computer-generated music. He began his career as a composer of musicals in the 1950s with *Saturday Night* (1955), a show which was not staged until 1997. He also wrote incidental music for the play *Girls of Summer* (1956).

Sondheim's first commercial success was as librettist for *West Side Story* (1957). With music by Leonard Bernstein, Sondheim penned the words to such immortal songs as "Maria," "Tonight," "America," "One Hand, One Heart," "I Feel Pretty," and "Somewhere."

Sondheim's next major project was *Gypsy* (1959). He was to write both words and music before the star of the show, Ethel Merman, demanded a more experienced composer. Jule Styne wrote the music, and Sondheim once again created the lyrics for his second hit show of the late 1950s. Songs in *Gypsy* included "Let Me Entertain You," "Everything's Coming Up Roses," "Wherever We Go," and "Rose's Turn."

The first show to appear on Broadway for which Sondheim penned both words and music was *A Funny Thing Happened on the Way to the Forum* (1962). Based on the plays of Plautus, the fast-moving musical farce included such songs as "Comedy Tonight," and "Everybody Ought to Have a Maid." The plot concerned Pseudolus, a slave who must go through a series of hilarious adventures in order to gain his freedom. Zero Mostel received rave reviews for his performance as Pseudolus in the original production. The show won Tony Awards for Best Musical and Best Producer (Harold Prince). It was revived on Broadway in 1972 with Phil Silvers and again in 1996 with Nathan Lane. A number of original songs were dropped for the 1966 film version with Zero Mostel and Phil Silvers.

Two works followed in the succeeding years: *Anyone Can Whistle* (1964) and *Do I Hear a Waltz?* (1965). *Anyone Can Whistle*, a musical about corrupt city officials, played only one week on Broadway. Its cast album, made after the show closed, gained cult status. Sondheim returned to his single role as lyricist for *Do I Hear a Waltz?* (1965), a show for which Richard Rodgers wrote the music. The plot

Stephen Sondheim (standing) with Richard Rodgers.

centered around the experiences of an American tourist in Venice and, like its immediate predecessor, was a commercial failure.

Sondheim's work during the 1970s began with two concept musicals, *Company* (1970) and *Follies* (1971). A dramatic plot in the traditional narrative sense does not exist in either of these works. Rather, each show revolves around a central theme or concept. *Company* concerned five New York couples and their mutual bachelor friend, while *Follies* centered around four people in their early fifties who attend a reunion and reflect on earlier times. *Company* included the numbers "Being Alive," "You Could Drive a Person Crazy," "Another Hundred People," and "Barcelona." The show won the New York Drama Critics' Circle Award for Best Music and six Tony Awards, including Best Musical, Best Score, and Best Lyrics. *Follies*, with a fifty-member cast and a twenty-two number score, included "Who's That Woman?" "I'm Still Here," and a myriad of pastiche songs in the styles of earlier Broadway composers. Although *Follies* won the Drama Critics' Circle Award for Best Musical and seven Tony Awards, it closed after 522 performances with a loss of its \$800,000 investment. A revival of *Follies* appeared in 1987.

A Little Night Music (1973) was based on the 1955 Ingmar Bergman film *Sommarnattens Leende* (*Smiles of a Summer Night*). Set in Sweden at the turn of the century, the book by Hugh Wheeler dealt with the complicated romantic world of the aging actress Desiree Arnfeldt, her former lover—the lawyer Fredrik Egerman, his child-bride Anne, and their circle of acquaintances. Glynis Jones and Len Cariou starred in the original Broadway production, while Elizabeth Taylor and Cariou appeared in the 1978 film. *A Little Night*

Music is entirely in 3/4 time (or multiples thereof), the meter of a waltz, a musical symbol of nostalgia. The show contained a number of memorable songs, including "A Weekend in the Country," "Night Waltz," and "Remember." But the show's most unforgettable number was "Send in the Clowns," Desiree's nostalgic soliloquy.

The Frogs (1974) was one of Sondheim's most curious experiments. Created as incidental music for a Yale Repertory Theatre production of Burt Shevelove's English adaptation of the Greek play of the same name, Sondheim's score received its first performance in the Yale University swimming pool. The score avoided traditional musical theater idioms and contained fiendishly difficult choral writing. Without the experience of writing *The Frogs*, the innovation which Sondheim demonstrated in *Pacific Overtures* may not have been possible.

Pacific Overtures (1976) is one of the most unique shows in the repertory of the American musical theater. The saga of 120 years of Japanese history, from the arrival of Commodore Perry in 1856 to the late twentieth century, is told in the style of traditional Japanese Kabuki theater. The all-male, all-Asian cast performed numbers such as "Chrysanthemum Tea," "Please Hello," and "The Advantages of Floating in the Middle of the Sea." Despite its striking originality (or perhaps because of it), *Pacific Overtures* closed after 193 performances, losing all of its half million dollar budget.

Always wanting to expand the boundaries of the musical theater, Sondheim chose the macabre tale of a murderous barber as the basis for *Sweeney Todd, The Demon Barber of Fleet Street* (1979). The title character, swearing revenge on a judge for the demise of his family and murdering everyone who sits in his barber chair, enters into a business partnership with Mrs. Lovett, owner of a pie shop who has difficulties finding meat for her pies. The pair find a practical, but macabre, solution to both of their problems. The score contains a very high percentage of music—so many, in fact, that the work has sometimes been called an opera. Among the most memorable numbers are "Not While I'm Around," "Epiphany," "A Little Priest," "God, That's Good," "Pretty Women," and "Johanna." The show, described as "one giant step forward for vegetarianism," garnered eight Tony Awards, including Best Musical, Score, and Book. Angela Lansbury and Len Cariou starred in the original Broadway production.

Merrily We Roll Along (1981) was a pastiche score which, like *Follies*, emulated earlier musical comedies. The show ran for only 16 performances on Broadway. Like *Anyone Can Whistle*, *Merrily We Roll Along* lived beyond its Broadway run through the success of its cast album.

Sunday in the Park with George (1984) revealed yet another approach to Sondheim's efforts to expand the musical theater. Based on characters in Georges Seurat's painting *Sunday Afternoon on the Island of La Grande Jatte*, the book by James Lapine dealt with issues of creativity and the power of art. Mandy Patinkin and Bernadette Peters starred in the original production. The show ran for over a year and a half and won the 1985 Pulitzer Prize for Drama. Among the numbers in its intriguingly intricate score were "Finishing the Hat" and "Move On."

Sondheim, again in collaboration with Lapine, ventured into the world of fairy tales for his next show, *Into the Woods* (1987). The stories of Cinderella, Jack and the Beanstalk, Little Red Riding Hood, Snow White, and Rapunzel were fused around a central tale about a baker and his wife who live under the curse of a witch. In order to break the curse, the baker and his wife must secure an item from each of the other fables. All ends well at the end of the first act. In the second act, the widow of the giant in Jack and the Beanstalk demands

revenge, and the characters must join together in order to defeat her. Songs such as "Into the Woods," "Agony," and "Giants in the Sky" appeared in the score, as did the instructive ballads "No One Is Alone" and "Children Will Listen." Bernadette Peters, Joanna Gleason, and Chip Zien starred in the original Broadway production.

With *Assassins* (1991), Sondheim returned to the darker side of the human experience. All of the major characters are people who tried, either successfully or unsuccessfully, to assassinate American presidents. From the opening chorus, "Everybody's Got the Right to Be Happy," to the final scene at the Texas Book Depository, these "anti-heroes" of American society each present the motives behind their actions.

Passion (1994), based on the French film *Passione d'Amore*, concerned the love triangle between a military officer, his beautiful young lover, and an invalid who captures his soul. The story is presented in a rhapsodic manner with a seamless blend of music and dialogue. Songs included "Happiness," "I Wish I Could Forget You," and "No One Has Ever Loved Me."

In addition to original shows, several stage compilations of Sondheim songs have appeared in London and New York: *Side by Side by Sondheim* (1976), *A Stephen Sondheim Evening* (also known as *You're Gonna Love Tomorrow*, 1983), and *Putting It Together* (1992).

Sondheim has also written for the motion pictures. Among his film credits are *The Seven Per-Cent Solution* (1976), *Reds* (1981), and *Dick Tracy* (1990). The song "Sooner or Later" from *Dick Tracy*, performed by Madonna in the film, earned Sondheim an Oscar for Best Original Song. Sondheim's only television musical, *Evening Primrose* (1966), was featured on ABC's "Stage 67" series and starred Anthony Perkins.

Stephen Sondheim is one of the most original creators for the musical theater at the end of the twentieth century. Each of his shows is unique. Sondheim has expanded the boundaries of the musical theater not only through his choice of subject matter (in which he often challenges the audience to extremes) but also in his handling of musical form and structure. Songs are intrinsically joined together in his shows, and are likewise bound to particular characters. Through live performances, video releases, and recordings, Sondheim's music enjoys world-wide dissemination. For Sondheim's avid fans, his work represents a level of accomplishment and innovation which is difficult to match.

Sonny and Cher

When struggling songwriter and publicist Salvatore Bono met 16-year-old runaway Cher Sarkisian in a Los Angeles Club in 1962, he saw the possibility that he could make her into a performer. What neither of them could have seen was how phenomenal the musical act "Sonny and Cher" would become over the next decade. Sonny and Cher materialized on the pop scene in 1965. Their second radio hit, "I Got You Babe," sold 3 million copies and became their signature song, while their first album, *All I Really Want to Do* (1965), shot to second place on the charts. To a generation of teenagers looking for a more serious message than that found in the pop of the early 1960s, Sonny and Cher represented an exciting new rebellious style. Often pictured with sullen expressions, both had long dark hair and wore clothes that were outlandish even by hippie standards: wide bell-bottomed jeans with fur vests and boots and large peace medallions. The words to their songs were often filled with the resentful pain of

Sonny and Cher

the outsider, and their voices complimented the words perfectly: Cher's, deep and soulful, and Sonny's, nasal and sneering. Adding to the mystique was their relationship; they might be alienated from society, but they had each other, a very appealing concept to their young audience. Though their career as rebel icons lasted only a few years, they were a pivotal part of an important transition in white rock music from 1950s pop to the folk rock of the late 1960s.

Salvatore Bono was born in 1935 in Detroit to working-class Italian immigrant parents. His family eventually moved to Los Angeles where, after dropping out of high school in 1952, "Sonny" drove a delivery van for a butcher shop. Though he had no formal musical training and admitted "I only knew five chords," Bono wanted to become a songwriter. Between meat deliveries, he tried to sell his songs at the music stores on Sunset Boulevard. By 1962, when he met Cher, he was working as a songwriter and publicist.

Cher Sarkisian grew up in Los Angeles. Her Armenian father deserted the family, and though Cher renewed contact with him for short periods during her childhood, she was raised by her mother, whose background was Irish, English, German, and Cherokee. Her mother, Georgia Holt, was an aspiring actress with a transient lifestyle and a long line of boyfriends and ex-husbands, giving Cher's childhood an unstable quality. As the only dark child in a family of blondes, Cher later said she keenly felt the lack of ethnic role models. By age sixteen, she left home for good.

When Bono met Cher, he thought she was a lesbian, since many of her friends were gay. They became friends, but even after they became lovers, neither was compelled by any physical relationship. Eleven years older, and with clear ambitions, Sonny took the role of mentor and promoter in the relationship. Cher was the talent. Sonny wrote songs for Cher and intended that she should sing them alone. When she pleaded shyness, he agreed to sing with her, and Sonny and Cher was created. The immediate success of their first album and several top-ten hits overwhelmed the couple. Luxuriating in their new-found fame, they bought a mansion and treated themselves to nose jobs. However, their second album was a failure, and they began the struggle to stay on top. Though they played themselves in the Beatles-like film entitled *Good Times* (1967), the public had turned away. The new psychedelic music was in vogue, and Sonny and Cher did not fit in.

Sonny's next direction was moviemaking. He wrote the screenplay for *Chastity* (1969), a coming-of-age film about Cher's life. When *Chastity* lost money at the box office, the couple was desperate, since he had invested all their money in making the film. Ever resourceful, Sonny developed a nightclub act for the duo, and they were booked at the Flamingo Hilton in Las Vegas, opening for Pat Boone. The act revolved around Cher's singing and some comedy dialogue, mostly involving put-downs of the gawky Sonny by his glamorous wife. (They had finally been legally married in 1969, shortly after the birth of their daughter, Chastity.) Though the put-down humor was Sonny's idea, and he wrote the jokes, the various strains with his relationship with Cher were beginning to become obvious.

When success finally arrived in the form of a variety show on network television, their relationship was essentially over. From the fall of 1972 until the spring of 1974, Sonny and Cher hosted a weekly show—*The Sonny and Cher Comedy Hour*—that was essentially a recreation of their Vegas act, complete with supposedly good-natured marital carping. The show was widely liked, but by quite a different audience than the one that had loved them in the 1960s. An older, more settled generation watched the show, which was built around

Sonny and Cher as a family. In an era when the Vietnam War and economic problems made society feel insecure, it was reassuring to see that the hippie couple was still together. Though their marriage was famous, it was more a creation of public relations than a reality. They still lived together, but each had a lover living in the household as well. Cher finally divorced Sonny in 1975, citing "involuntary servitude" as the grounds. Though Sonny claimed to be stunned by the charges—he wrote in his diary, "I though I was teaching; she thought I was intimidating"—Cher insisted that he had been controlling and stifling. "I left Sonny for another woman," she has said, "Myself." Their relationship was to remain discordant for years.

Sonny and Cher, who chose to use their one-word names after the divorce, each went on to extraordinary careers separately. Immediately after the cancellation of their television show and the divorce, Cher's career seemed to soar. While continuing to sing, she also starred in several movies, receiving kudos for acting in *Silkwood* (1983) and an Academy award for best actress for *Moonstruck* (1987). Frequently showing up on "worst dressed" lists because of her continued penchant for outrageous and revealing clothes, Cher was a constant figure in the tabloids, which loved to follow her romantic exploits and marriages, often with younger men. With the help of personal trainers, plastic surgery, and cosmetics, she has made her beauty itself a career, creating fitness books and videos and selling a cosmetics line. She was ridiculed by critics when she made a series of infomercials for beauty products, but, always resilient, has continued to make music and movies.

In the meantime, Sonny was reduced to infrequent guest appearances on shows like *Love Boat*, which made a specialty of showcasing forgotten stars. He finally gave up entertainment and opened a restaurant, first in Los Angeles, then in Palm Springs, where he remarried. When he became frustrated with the red tape involved in moving the sign for his restaurant, Sonny decided to run for mayor of Palm Springs, even though he had registered to vote for the first time only in 1987. While some voters thought his candidacy a joke, enough of them agreed with his "less government" message to put him in office in 1988. Discovering a taste for politics, he ran for the U.S. Senate in 1992, suffering a humiliating defeat. Two years later, he made a bid for the U.S. House of Representatives, and won. Many still thought him a joke and called him "Sonny Bonehead" behind his back, but Bono managed to command respect in his new career. Having left his rebellious hippie roots far behind him, Sonny reinvented himself as an uncomplicated conservative with an outsider's fresh viewpoint and a self-deprecating humor that appealed to many constituents. By the time he died, in January, 1998, in a skiing accident, he was a far cry from the sullen hippie in the Eskimo boots and bobcat vest who peered out from under shaggy bangs on his album covers. His colleagues, his ex-wife Cher, and the public who had watched him change along with their own changes, came to eulogize him.

Sonny and Cher's daughter Chastity Bono has made news on her own account. At the age of thirteen, watching a movie kiss between two women, Chastity realized that she was a lesbian. She intended to keep her sexuality a secret, but media scrutiny of her famous parents made it impossible. The tabloids "outed" her in their headlines, and in 1987, Chastity told her parents she was a lesbian and began to work actively on gay-rights issues. Initially horrified, Cher threw her daughter out of their apartment, but they soon reconciled. Her relationship with her father was more problematic. Sonny's conservative politics did not mix well with Chastity's lesbian activism, and at the time of his death they remained estranged.

In retrospect, Sonny and Cher burst on the American scene in an impressionable era. Because they so seemed to capture the spirit of youth—angry, vulnerable, intensely loyal to each other—the young fans who admired them could not forget them. Their resilience continued to give hope to their aging audience, likewise battered by life. Though their musical contributions may not have been exactly classic, they have been enduring, and their signature song, “I Got You Babe,” contains a hope for connection that spans generations.

Sosa, Sammy (1968—)

Born in the Dominican Republic, Chicago Cubs outfielder Sammy Sosa became a baseball sensation almost overnight in 1998, when he was named the National League’s Most Valuable Player after battling St. Louis Cardinals hitter Mark McGwire neck-and-neck for baseball’s home-run championship. In that year, Roger Maris’s 37-year-old record was broken twice, by McGwire who hit 70 homers, and by Sosa, with 66. In June, Sosa had hit 20 home runs, the most ever by one player in a single month. Sosa’s 158 runs batted in (RBIs) in 1998 ranked him fourth in National League history. His impressive statistics helped the Cubs to make the post-season playoffs for only the third time since 1945. Despite being constantly followed by the media during his home-run chase with McGwire, Sosa maintained his good charm and easy-going manner and helped contribute to a renewal of America’s faith in its national pastime, beset by strikes and player scandals in recent years.

Soul Music

Soul music emerged in the late 1950s and early 1960s as one of the most distinctive forms in the history of American popular music. For black Americans especially, soul music defined the 1960s, offering a cultural soundtrack to the civil rights movement and the larger awakening of black consciousness and pride. Soul hits dominated the charts during that decade, but defining exactly what soul was proved no easy task, even for some of its greatest artists. Wilson

Soul singer Sam Cooke.

Pickett defined soul as “nothin’ but a feelin’.” Don Covay said, “For a singer, soul is total vocal freedom.” Aretha Franklin explained, “Soul to me is a feeling, a lot of depth and being able to bring to the surface that which is happening inside. . . . It’s just the emotion, the way it affects other people.” Elements of the genre live on, but the classic period of soul music, from about 1960 to 1975, remains one of the most important contributions to American popular culture for its style, its raw, emotive power, and its depth of feeling. Alongside jazz, it is one of America’s most original contributions to world culture.

If defining soul music proved elusive, its origins were not. Soul music emerged during the 1950s as a cross between rhythm and blues and gospel music. Soul music combined the Saturday-night sinner and the Sunday-morning repentant into one person or one song, just as they existed in real life. In combining the R&B themes with gospel elements (call-and-response singing, close harmonies, and themes of celebration, loss, and longing), early soul artists often secularized gospel tunes by changing key words: the gospel song “Talkin’ Bout Jesus” became “Talkin’ Bout You”; “This Little Light of Mine” became “This Little Girl of Mine”; “I’ve Got a Savior” became “I Got a Woman.” This transition reflected changes occurring in the black community after World War II as more and more black Americans moved from the rural South to the urban North. Early arrivals in the North had created R&B music in the mid-1940s as an expression of the new realities of life in these urban neighborhoods. Later, as more Southern blacks poured into these communities, they brought with them elements of Southern gospel music. Both musical forms coexisted as separate expressions of black life. They soon crossed, however, producing what became soul music.

The acknowledged father of this cross was Ray Charles. All of the secularized gospel songs mentioned above were hits for Charles in the mid-1950s. Born in 1930 in Albany, Georgia, Charles moved to Seattle as a teenager and emerged in the late 1940s as a Nat “King” Cole-style crooner playing local clubs such as the Rocking Chair and the Black and Tan. There he caught the attention of Swingtime

Records, one of the early black-owned R&B recording companies, and he released a number of blues and Cole-inspired tunes, among them “Kissa Me Baby” and “Confession Blues.” Moving to Atlantic Records in 1952, Charles began developing an earthier style that he picked up working with blues musicians Guitar Slim and Lowell Fulson. At Atlantic, he began to combine blues elements with gospel stylings he had picked up as a child in Georgia. That style became the basis for soul music and provided Charles with a string of hits during the 1950s, including “Lonely Avenue,” “I Got a Woman,” “Hallelujah I Love Her So,” and perhaps his biggest hit, “What’d I Say,” which combined a gospel call-and-response segment between Charles and his backup singers, the Raelettes, moans that could easily have come from either the bedroom or the pulpit, and a driving R&B band.

Following close on Charles’s heels was Sam Cooke, who had come to prominence as the lead singer of the gospel group the Soul Stirrers before developing a more pop-oriented soul style which brought him such hits as “You Send Me,” “Twistin’ the Night Away,” and “Bring It on Home to Me.” Jackie Wilson similarly had started out in a vocal group, the Dominoes, before forging a driving pop-soul style with such songs as “Reet Petite,” “Lonely Teardrops,” and “Baby Workout.” While Charles’s music maintained a close connection with the raw elements of R&B music, Wilson and Cooke moved the R&B and gospel marriage closer to the realm of pop.

It took three record companies to bring soul into the mainstream. They were Atlantic Records in New York City, Motown Records in Detroit, and Stax/Volt Records in Memphis. While numerous smaller labels made invaluable contributions to soul music, these three labels were responsible for some of the most explosive soul music of the 1950s and 1960s. Most of the major talents in soul music, with some very notable exceptions, were on these three record labels. And, while there were major individual talents on each label roster, each company managed to build a unique sound that identified each artist with his or her particular label.

Herb Abramson and Ahmet Ertegun formed Atlantic Records in 1947. Their initial releases were in the jazz vein, but they moved into R&B in 1949 and became one of the dominant independent record labels in that field in the 1950s due to their successes with such R&B artists as Ruth Brown, Ray Charles, Joe Turner, LaVern Baker, the Clovers, and others. With the success of Charles’s records in the emerging soul style, Atlantic moved even further into soul music. In the early to mid-1960s, Atlantic had soul hits with The Drifters’ “Up on the Roof,” “This Magic Moment,” and “Save the Last Dance for Me”; Ben E. King’s “Stand by Me” and “Spanish Harlem”; Percy Sledge’s “When a Man Loves a Woman”; Wilson Pickett’s “Land of 1000 Dances,” “Mustang Sally,” and “Funky Broadway”; Don Covay’s “Seesaw”; and Solomon Burke’s “Just out of Reach.” Atlantic’s major sound innovation was to bring soul “uptown” with a more polished, professional sound accomplished by adding string arrangements and by using professional Brill Building songwriters.

Atlantic’s biggest success, however, came in 1967 with the discovery of singer Aretha Franklin. Franklin was the perfect embodiment of soul music, combining a strong background in church music (her father, the Reverend C. L. Franklin, was the well-known minister of the New Bethel Baptist Church in Detroit) with the depth of feeling and style required to take her gospel training to the secular music world. She had first signed with Columbia Records in the early 1960s, where she attempted to become a pop/soul singer in the Sam Cooke style. Her records in this vein fared poorly, and when her contract with Columbia expired in 1967, producer Jerry Wexler signed her to

Atlantic. There, Wexler took Franklin to Rick Hall’s Fame Studios in Muscle Shoals, Alabama, where he had had success remolding Wilson Pickett’s sound. Hall’s Muscle Shoals, with its combination of black and white Southern musicians, was developing a reputation as a hotbed of soul music, a place where the all-important *feeling* necessary in soul music seemed to come out more readily. There, Franklin remade her sound, letting her gospel roots come out. She debuted on Atlantic in 1967 with the album *I Never Loved a Man the Way I Love You*, which went to number two on the album charts that year. Both the title song and Franklin’s cover of Otis Redding’s “Respect” went to number one on the R&B charts that year. The album also contained “Do Right Woman—Do Right Man,” “Baby, Baby, Baby,” and “Save Me,” all of which have become soul classics. Franklin released two more records in the space of a year, unleashing such hits as “Baby I Love You,” “Chain of Fools,” and the smash “(You Make Me Feel Like) A Natural Woman,” a top ten hit on both the pop and R&B charts. These releases earned Franklin the undisputed title of “The Queen of Soul” and cemented Atlantic as the home of some of the most powerful soul music ever produced.

Songwriter, producer, and one-time record shop owner Berry Gordy, Jr. founded Motown Records in 1960 in a simple white bungalow at 2648 West Grand Boulevard in Detroit, Michigan. Gordy had successfully written and produced songs for Jackie Wilson (“Lonely Teardrops”) and Barrett Strong (“Money”) during the late 1950s that drew upon Ray Charles’s innovations in fusing R&B and gospel styles. In 1960, Gordy moved from independent producing (where he would lease songs to other labels) and began his own label, Tamla, which later became part of Motown. In Motown, Gordy put together a songwriting/producing/recording formula that would sell more singles by the end of the 1960s than any other company. He did this with what resembled assembly line production, and Gordy referred to his role as “quality control.” First, he assembled a team of crack songwriters and producers, including Smokey Robinson and the team of Brian Holland, Lamont Dozier, and Eddie Holland, who wrote one hit after another for Gordy. Next, he put together a house band that included Benny Benjamin on drums, Joe Messina on guitar, James Jamerson on bass, Earl Van Dyke on keyboards, and other regulars. Together, the songwriting, production teams, and house band established a signature style that was unmistakable. Then, drawing from the rich local talent of Detroit, Gordy assembled or signed vocal groups or individual singers to record the songs.

Part of Gordy’s gift lay in transforming raw street talent into a polished musical product, which he did using this assembly line process and his eye for promising young talent, calling Motown the “Sound of Young America.” Motown’s roster of stars included the Supremes (“Baby Love,” “You Can’t Hurry Love,” “Love Child”), Marvin Gaye (“I Heard It through the Grapevine,” “Pride and Joy”), the Four Tops (“Standing in the Shadows of Love,” “Bernadette,” “Reach out I’ll Be There”), the Temptations (“My Girl,” “Ain’t Too Proud to Beg”), Mary Wells (“My Guy”), Martha and the Vandellas, Smokey Robinson and the Miracles (“I Second That Emotion,” “The Tracks of My Tears”), the Marvelettes, Jr. Walker and the All-Stars, Stevie Wonder (“Uptight,” “Signed, Sealed, Delivered, I’m Yours,” “For Once in My Life”), and Gladys Knight and the Pips, among many others. Motown’s nationwide success with this formula lay in the ability of its music to resonate in both the black and white communities, and many of the above hits topped both the R&B and Pop charts throughout the 1960s. From the very beginning, for commercial reasons or otherwise, Gordy followed

an integrationist approach, and his success pushed the soul music created at Motown closer and closer to the larger pop realm.

Although Gordy's formula was responsible for most of Motown's success, in the later 1960s and early 1970s, a few of his early artists began to break out of the Motown formula, maturing musically to create very personal, signature styles all their own. The two most prominent and unique were Marvin Gaye and Stevie Wonder. Gaye broke out of the Motown mold in a decisive way with the topical album *What's Going On* in 1971: both its title track and "What's Happening Brother" addressed the war in Vietnam, "Mercy Mercy Me" the environment, and "Inner City Blues" the urban crisis in America's ghetto communities. Wonder became a musical force unto himself with a string of important albums in the early 1970s on which he wrote and sang all of the songs and played most of the instruments. Included in albums such as *Innervisions*, *Talking Book*, *Fulfillingness First Finale*, *Music of My Mind*, and his double-album opus *Songs in the Key of Life*, Wonder scored huge hits with such songs as "You Are the Sunshine of My Life," "Isn't She Lovely," "I Wish," and "Superstition." His songs also often took a topical turn, with such songs as "Living for the City" and "Village Ghetto Land" on urban problems, and "Too High" on drug addiction. "Higher Ground" was an exhortation for black self-empowerment, and "You Haven't Done Nothin'" a larger critique of the white power structure. The classic Motown era ended after 1971 when Gordy moved the company to Los Angeles and gave up direct hands-on control over studio production. With those changes, the trademark sound disintegrated.

If Atlantic and Motown defined soul in the urban North, Memphis's Stax/Volt Records, during its classic period from 1960-1968, virtually defined Southern soul, a sound at once relaxed and easy yet filled with musical tension that left listeners begging for more, which became as easily recognizable as the Motown sound. Jim Stewart and his sister Estelle Axton founded Satellite Records in 1959, changing the name to Stax by 1961 (Volt Records was a later subsidiary), and began to record local black musicians, eventually establishing a studio in an old Memphis movie theater at 926 E. McLemore Avenue. Among their first recording artists were local DJ Rufus Thomas and his daughter Carla. Carla Thomas scored an early hit in 1960 with "Gee Whiz," which reached the top ten on both the R&B and Pop charts. Stax's next hit was "Last Night," an instrumental number by the Mar-Keys that featured a unique combination of organ, guitar, and horns that would become the hallmark of Stax/Volt's sound. Although not quite as tightly run as Motown, Stax/Volt did employ some of the same techniques. The instrumental band Booker T. and the MGs became in essence Stax's house band in addition to scoring numerous hits on its own such as "Green Onions" and "Time Is Tight." Stax also benefited from a core group of songwriters and producers, most prominent among them David Porter and Isaac Hayes, who wrote many of Stax's great hits, including "Hold On! I'm Comin'" and "Soul Man" by Sam and Dave and "B-A-B-Y" by Carla Thomas. A number of Stax/Volt's stars were also writers, including Eddie Floyd, who cowrote his own hits "Knock on Wood" and "Raise Your Hand," among others. Even more prolific was MG guitarist Steve Cropper, who, in addition to playing guitar on many Stax/Volt records, also cowrote many songs with other Stax/Volt artists, including the best selling Stax/Volt single of all time, "(Sittin' on) The Dock of the Bay," with Otis Redding. Like Aretha Franklin at Atlantic, Redding was far and away Stax/Volt's greatest star, and one of the most distinctive soul singers ever, with a powerful, raw, emotional style that seemed to wring every bit of feeling from every

note of a song. A prolific songwriter as well, Redding had some of Stax/Volt's biggest hits, including "Respect," "Try a Little Tenderness," "These Arms of Mine," "Mr. Pitiful," "The Happy Song (Dum-Dum)," and literally dozens of others before his untimely death in a plane crash in December 1967.

Stax/Volt continued after the death of Redding, but things were never quite the same. Despite a number of hits in the 1968-1972 period, Stax declined with the dissolution of Booker T. and the MGs and the loss of its deal with Atlantic Records, which had given Atlantic distribution rights to Stax's recording, since the early 1960s. With the breakup of that deal, Atlantic took Stax's biggest sellers, the Otis Redding and Sam and Dave catalogs, which were in many ways the heart of the Stax/Volt empire. These problems slowly eroded Stax's signature style, and the company folded in bankruptcy in 1975.

While the artists on Atlantic, Motown, and Stax/Volt did much to define soul music in the 1960s, the genre's most distinctive, and perhaps most influential, innovator came not from these three labels but in the person of Augusta, Georgia's James Brown. Born in 1933, Brown emerged as an early R&B/soul singer in the mid-1950s with such hits as "Please, Please, Please," and "Try Me." He scored more hits in the early 1960s, but his heyday came later in the decade when he diverged from more standard soul forms to fashion his own brand of soul/funk, a harder-driving, more intense and powerful sound that came through on such songs as "Cold Sweat," "Papa's Got a Brand New Bag," "Get Up (I Feel Like Being a) Sex Machine," and "I Got You (I Feel Good)." Brown also made powerful statement songs during the heyday of black power, including "Say It Loud—I'm Black and I'm Proud," "I Don't Want Nobody to Give Me Nothing (Open Up the Door I'll Get It Myself)," "Get Up, Get into It, and Get Involved," and "Soul Power." Brown's stylistic innovations in soul music influenced the development of both funk music in the 1970s and rap music in the 1980s.

Although great soul artists such as Al Green, the Staple Singers, Curtis Mayfield, the aforementioned Marvin Gaye and Stevie Wonder, and many others continued to record soul music, the classic soul era ended in the mid-1970s as black music fragmented into such styles as disco and funk, which emphasized dance rhythms over well-crafted singing and songwriting. The great record labels that had acted as important conduits for soul music had moved in other directions as well. Atlantic moved more toward rock acts, Motown left for Los Angeles, and Stax/Volt fell apart in financial trouble. In terms of style, the connection to gospel music that was such a hallmark of soul became less influential in black music generally, and soul evolved into a more homogenous sound known as "urban contemporary" music.

Soul Train

Since 1970, fans have been grooving every week to America's top soul and R&B hits on a televised boogie down called *Soul Train*. Known as "the black *American Bandstand*," the syndicated dance party proved to be more than just a musical showcase: It established

an African American presence on television at a time when such representation was almost nonexistent.

Created and hosted for 23 years by Don Cornelius, a former Chicago disc jockey with a silky, measured baritone, *Soul Train* was conceived around the notion of "soul music going from city to city as a train would." The program relied on a sequence of stock elements that gave it an air of familiarity. The show's distinctive squealing "Soouulll Traaain" opening, devised by a deejay friend of the host, has remained unchanged since 1970. Each week, Cornelius opened the show by promising viewers they could "bet your last money it's gonna be a stone gas, honey." A series of musical performances followed, with the camera alternating between the lip-synching band and the gyrating denizens on the dance floor. Occasionally stopping to banter with his musical guests, Cornelius closed each program by wishing his viewers "love, peace, and soul!"

The show was a first of its kind on mainstream American television, a weekly forum for the best in African-American rhythm and blues. "It was trailblazing," observed J. R. Reynolds, R&B editor of *Billboard Magazine*, "not in terms of being a dance music show, but in terms of R&B being offered a platform on a consistent basis." In its heyday during the 1970s, *Soul Train* was able to attract some of the top names in the entertainment industry. Guests on the first national telecast were Gladys Knight and the Pips; the performers

Chaka Khan performs with the group Rufus on the *Soul Train* television show.

who made regular appearances included Barry White, Marvin Gaye, Aretha Franklin, and James Brown. Several of the dancers went on to show business careers of their own, including Jody Watley, Rosie Perez, and Fred “Rerun” Berry. *Soul Train* shows from the 1970s even became popular staples of Japanese TV in the 1990s.

In the 1980s, with the advent of rap, *Soul Train* began taking on a hip-hop orientation. The appearance of the politically charged rap group Public Enemy was a sure sign that the torch had been passed to a new generation of African-American musicians. Through it all, Cornelius continued to beam beatifically and tout his program as “the hippest trip on television.”

The transition from trailblazing series to revered television institution did not diminish the show’s impact. Young people of all races continued to watch *Soul Train* for tips on dress and personal style. “*Soul Train* showed a generation what it meant to be cool,” declared Todd Boyd, assistant professor of critical studies at the University of Southern California’s School of Cinema-Television. In the 1990s, the show became a cultural touchstone for the African-American artistic community, cropping up in movies like Spike Lee’s *Crooklyn* and the Hughes Brothers’ *Dead Presidents*. But *Soul Train* had a wider pop cultural impact as well, as witnessed by *Soul Trek*, a 1992 comic book parody that placed the affable Cornelius in command of the U.S.S. *Enterprise*.

Cornelius served as host of *Soul Train* until 1993, when he assumed the role of “host emeritus,” introducing a new guest emcee every week. He graduated from independent producer to partner with the Tribune Entertainment Co., the show’s distributor. In 1995, he was inducted into the Broadcasting & Cable Hall of Fame. Despite the show’s success, however, Cornelius continued to have difficulty getting exposure from TV stations. Even in cities with large black populations like Cleveland and St. Louis, *Soul Train* continued to air at irregular times well into the 1990s.

Soul Train is the longest running program in television history originally produced for first-run syndication. While originally created by African Americans for young African American viewers, it has grown to attract a much larger and more diverse audience. “I’ve been a fan for a long time!” gushed President Bill Clinton on the *Soul Train* 25th Anniversary Special in 1995.

The Sound of Music

The longest running Broadway musical of the early 1960s, *The Sound of Music* marked the last collaboration between composer

Richard Rodgers (1902-1979) and lyricist/librettist Oscar Hammerstein II (1895-1960), just before Hammerstein’s death from cancer. Based partially on Maria Von Trapp’s autobiography, *The Trapp Family Singers*, and partially on a German film, *Die Trapp Familie*, the show was written for Mary Martin, who had already appeared as Nellie in Rodgers and Hammerstein’s musical *South Pacific*. Like many other Rodgers and Hammerstein productions, *The Sound of Music* included a remarkable number of popular songs: “The Sound of Music,” “My Favorite Things,” “Climb Ev’ry Mountain,” “Do-Re-Mi,” and “Edelweiss.”

The setting for *The Sound of Music* is Salzburg, Austria, where Maria, a postulant at Nonnberg Abbey, is too free-spirited to accept the discipline of the order easily and frequently escapes to the mountains. Thus, the Mother Abbess arranges for Maria to work as a governess for the wealthy, aristocratic Captain George Von Trapp—a widower with seven children. By adding music and outdoor expeditions to the children’s normally rigorous schedule, Maria wins the children’s hearts. Although Captain Von Trapp is engaged to the elegant socialite, Elsa Schraeder, through the course of the play he falls in love with Maria and eventually marries her. But it is 1938, and the Von Trapp’s married life is quickly disrupted by Nazi Germany’s annexation of Austria. The family has become well known as an amateur singing group, and after a final appearance at a local contest, they manage to escape and cross the mountains on foot to Switzerland. The first romance of Von Trapp’s oldest daughter Liesl, unfortunately with a young Nazi, provides a bittersweet subplot.

The Sound of Music was originally the idea of director Vincent J. Donehue with Mary Martin’s husband, Richard Halliday, and Leland Hayward producing. Howard Lindsay and Russel Crouse adapted Maria Von Trapp’s book. Rodgers and Hammerstein were approached to write only one song, but ended up doing the entire score and lyrics as well as co-producing the show. *The Sound of Music* opened at the Lunt-Fontanne Theatre on November 16, 1959, and ran for 1,443 performances. In 1965 Twentieth Century-Fox released a film version starring Julie Andrews as Maria and Christopher Plummer as Captain Von Trapp. Featuring a young, exuberant Julie Andrews, one of Rodgers and Hammerstein’s most accessible scores, and spectacular views of the Alps and Salzburg, *The Sound of Music* garnered ten Oscar nominations and won five: Best Picture, Best Director (Robert Wise), Best Adapted Score, Best Film Editing, and Best Sound. The film also won awards from the Directors Guild of America, the Golden Globes (Best Actress in a Musical Comedy), and the National Board of Review. It was the top box office draw from 1966 through 1969, and it has remained one of the most popular films ever made.

Sousa, John Philip (1854-1932)

Known as the "March King," John Philip Sousa created more than 100 marches which reflected the optimism, patriotism, and military prowess of late nineteenth and early twentieth century America. Sousa was called the "Dickens of Music" and "Knight of the Baton." He described himself as a "Salesman of Americanism, globetrotter, and musician."

Sousa was born on November 6, 1854, in Washington, D.C., to John Antonio and Maria Elisabeth (Trinkhaus) Sousa. His father played a trombone for the United States Marine Band. Musically gifted at a young age, John Philip Sousa studied at a local conservatory and was inspired by Civil War marches he heard during his boyhood. At age 13, Sousa considered joining a circus band, and his father enlisted him in the United States Marine Band.

By the summer of 1872, Sousa conducted and played in orchestras in Washington, D.C., and began composing music. His first published composition was "Moonlight on the Potomac Waltzes." Sousa's early work revealed his unique style that would gain him international distinction. Touring as orchestra conductor for various companies, Sousa performed as a violinist during the Philadelphia Centennial Exhibition in 1876. He composed his first comic opera, "The Smugglers," for a Philadelphia choir.

On September 30, 1880, Sousa became conductor of the United States Marine Band. During his leadership, the band improved in quality from a mediocre ensemble into a superb group. Sousa's exacting standards enabled the band to achieve fame internationally for its spirited style. The Marine Band became the model for other bands to emulate. Sousa led the band on national and international tours while composing music such as "Semper Fidelis" (1888).

In the spring of 1892, Sousa resigned from the Marines Corps to create a concert band of civilians. Sousa assembled talented musicians and staged his band's first concert on September 26, 1892, at Plainfield, New Jersey. The band's programming was a unique blending of instrumentalists, a soprano vocalist, and violinist. "In

John Philip Sousa

dynamics, I have never heard any orchestra that could touch us,” Sousa told *Music* magazine in 1899. Sousa’s band appeared throughout the United States and traveled to Europe, including an around-the-world trip from 1910 to 1912. Sousa and his band enhanced the image of American culture in Europe, proving that American musicians were not inferior to European performers.

Sousa constantly composed new music for his band, such as “The Stars and Stripes Forever,” which later was designated the United States’s official march. Some critics argue that this composition alone secured Sousa’s acclaimed status as a composer. A patriotic and emotional musician, Sousa sought to create music that was assertive and energetic like the United States was militarily at the turn of the twentieth century. He wanted his music to make people proud to be Americans. During the Spanish-American War, Sousa was musical director of the VI Army Corps and prepared a pageant, *The Trooping of the Colors*.

Nicknamed the “Pied Piper of Patriotism,” Sousa thought a march should “make goose pimples chase each other up and down your spine.” He stressed that marches should be characterized by simplicity with a steady, stimulating rhythm. Sousa’s marches reflected the country’s spirit of optimism, and his driving, pulsating tunes emphasized the strength of the country. Sousa’s martial music standardized the march form and became popular classics. In addition to

his music, Sousa developed a new instrument, the Sousaphone, which resembled a tuba. He also devoted time to protecting composers’ rights. He coined the term “canned music” in 1906 when he protested the phonograph industry recording music without compensating composers.

During World War I, Sousa joined the United States Naval Reserve as a lieutenant, directing the Great Lakes Naval Training Station Band which toured the country to raise millions of dollars in Liberty Loan drives. Sousa was a familiar figure, wearing his uniform and carrying his sword at the head of parades. After the war, he toured with his band, promoted music education, and testified to Congress about composers’ rights. Sousa’s dramatic performances reinforced his reputation as a showman. Choosing entertainment over education, he vowed to present audiences the music that they wanted. His band played in remote parts of the United States where people had never heard a symphony orchestra. Town dignitaries declared “Sousa Day” when the band arrived, and performances were often standing-room-only. Sousa strived to present music that people appreciated while making unfamiliar music, such as early jazz, accessible to them thus influencing Americans’ musical taste. Sousa often invited the audiences to sing along with the band.

Americans’ interest in bands peaked between 1890 and 1910, and Sousa helped to disseminate band music. Before televisions, radios, and movies, instruments provided entertainment in homes, and people played Sousa pieces, especially popular dance songs. The July 4, 1898, *Musical Courier* commented, “go where you may, you hear Sousa, always Sousa. . . . It is Sousa in the band, Sousa in the orchestra, Sousa in the phonograph, Sousa in the hand organ, Sousa in the music box, Sousa everywhere.” The name Sousa became a household term, and at one time he was the best known musician in America. Vaudeville comedians imitated him, and towns hosted public celebrations for his birthday. Sousa also received many honors and medals.

Although he refused to perform on the radio because he preferred interacting with live audiences, Sousa was convinced to broadcast concert series in 1929 and 1931 because of overwhelming public demand. Sousa especially focused on encouraging young musicians. He accepted invitations to help amateur bands and supported the school music movement and the National Music Camp at Interlochen, Michigan. Every year John Philip Sousa awards are given by high school band directors to talented band members. The John Philip Sousa foundation recognizes excellent high school, college, and community bands.

Sousa died on March 6, 1932, after a rehearsal at Reading, Pennsylvania. The last piece he conducted was “The Stars and Stripes Forever.” The Marine Band played “Semper Fidelis” during his funeral procession. Buried at Congressional Cemetery in Washington, D.C., Sousa’s gravestone was carved with a bar from “The Stars and Stripes Forever.” His music library was donated to the University of Illinois. The movie *Stars and Stripes Forever* (also called *Marching Along*) premiered in 1952 with Clifton Webb playing Sousa, and Sousa’s family and band members criticized the movie’s inaccuracies. In 1957, George Balanchine choreographed the ballet *Stars and Stripes*. The Public Broadcasting Corporation televised the documentary *If You Knew Sousa*. The Sousa Stage was dedicated at the John F. Kennedy Center for the Performing Arts in Washington, D.C., and other Sousa memorials include schools and band shells. Sousa’s former band members belonged to chapters of

the Sousa Band Fraternal Society. In 1997, the United States Postal Service issued a 32 cent stamp, "The Stars and Stripes Forever!," to celebrate the centennial of Sousa's most famous march.

South Pacific

With Mary Martin and Ezio Pinza in the lead roles, the musical *South Pacific* opened at the Majestic Theatre in New York on April 7, 1949, and ran for 1,925 performances. It was the fifth collaboration between composer Richard Rodgers (1902-1979) and lyricist/librettist Oscar Hammerstein II (1895-1960), following *Oklahoma!* (1943), *Carousel* and *State Fair* (1945), and *Allegro* (1947). The phenomenal success of *Oklahoma!* and *Carousel* had made Rodgers and Hammerstein the dominant figures in American musical theater; *South Pacific* only added to their stature and reputation. Director Josh Logan suggested that Rodgers and Hammerstein base a musical theater production on one of the short stories from James Michener's *Tales of the South Pacific*, winner of a 1948 Pulitzer Prize. They decided to combine two stories, "Fo' Dolla" and "Our Heroine," and the resulting musical went on to win Rodgers and Hammerstein their second Pulitzer Prize in a decade (the first was for *Oklahoma!* in 1943). *South Pacific* starred Mary Martin, in her first Rodgers and Hammerstein show, and Metropolitan basso Ezio Pinza in his Broadway debut, and was co-produced and directed by Logan. Like *Oklahoma!*, *South Pacific* yielded a remarkable number of songs that became popular apart from the show: "Some Enchanted Evening," "There Is Nothin' Like a Dame," "Bali Ha'i," "I'm Gonna Wash That Man Right Outa My Hair," "A Wonderful Guy," and "Younger Than Springtime." A film version, also directed by Logan, was released by Twentieth Century-Fox in 1958 starring Mitzi Gaynor, Rossano Brazzi, Ray Walston, Juanita Hall, and France Nuyen.

The story takes place in the islands of the South Pacific during World War II, as two very different romantic couples face similar obstacles to their happiness together. First, French plantation owner Emile deBecque and young Navy nurse Nellie Forbush from Arkansas fall in love. When Nellie encounters his children with a deceased Polynesian wife, she reconsiders married life with him. Meanwhile, Lt. Joe Cable from Philadelphia has a brief romance with Liat, a native girl, but like Nellie wonders how he can explain the racial issues to his family back home. DeBecque and Cable go on a secret mission behind the Japanese lines. Cable is killed, but deBecque returns to find Nellie transformed. She has faced her racism and realized that the children are fellow human beings whom she has already begun to love.

Commenting on social issues through music was a pattern in Rodgers and Hammerstein's work from the beginning of their partnership. The issue of racism has rarely been addressed directly on stage in musical theater, with the exception of the revolutionary musical *Show Boat* (1927), which not so coincidentally also had book and lyrics written by Oscar Hammerstein II. However, *South Pacific* meets Caucasian versus Asian racial prejudice head on through the stories of its main characters and through the song "You've Got to Be Carefully Taught to Hate." This approach to social justice continues in later Rodgers and Hammerstein shows; for example, there are gender and racial issues in *The King and I* (1951), conflict between generations and cultures in *Flower Drum Song* (1958), and issues of freedom and patriotism in *The Sound of Music* (1959).

The initial touring company of *South Pacific* traveled for five years. The musical was revived at Lincoln Center in 1967 and staged by the New York City Opera in 1987. The popular film version of 1958 was shot in the Fiji and Hawaiian Islands, but the colored filters that changed lighting effects from scene to scene hinder appreciation of the scenic beauty and the glorious music. Nonetheless, the film has kept the musical before the public, and *South Pacific* remains a perennial favorite with amateur theater groups around the world.

South Park

The animated comedy *South Park*, created by animators Trey Parker and Matt Stone, premiered on Comedy Central in August 1997 to rave reviews and loud criticism. The main characters, four round-headed third graders, have been involved in unlikely adventures with zombies, aliens, and Mr. Hanky the Christmas Poo. Stan, Kyle, Cartman, and Kenny respond to most situations by belching, vomiting, or swearing. Kenny is killed in nearly every episode to the refrain: “They killed Kenny! You bastards!” The show is wildly popular among children, teens, and twenty-somethings. Its unflinching look at how sweet and innocent most children *really* are when left to themselves takes the portrait of childhood offered by such popular comics as *Peanuts* and *Calvin and Hobbes* several steps further. In a town where Jesus has his own cable access show, Parker and Stone

have created an environment where nothing is sacred and everything is fodder for their satire.

Southern, Terry (1924-1995)

Texas-born writer Terry Southern is best remembered for the wildly written satires—usually featuring a Candide-esque heroine—that earned him acclaim in the early 1960s. Southern also cut a wide swathe through the 1960s film world. His writing on *Dr. Strangelove* (1964) and *Easy Rider* (1969) earned him two Academy Award nominations and helped define the rebelliousness and paranoia of that era. But by all accounts, Southern’s exposure to Hollywood had an unwholesome effect. By 1970, his fictional output had slowed to a

trickle. What he did publish belied the promise of his early work. Silent for the next two decades, in 1992 he published *Texas Summer*, a poorly received autobiographical novel. At his death he left behind more than 40 unproduced screenplays and an unpublished spoof of Virgin Records, titled *Virgin*. While many found his writing sophomoric, Southern had a special gift for unmasking hypocrisy, and while he used it, he was among the funniest writers working.

Spacek, Sissy (1949—)

Sissy Spacek is a fine actress who has made an indelible impression, both through her unique quality as an eternal waif, and because of four particular films whose overall quality was matched by her performances. Texas-born Elizabeth Mary Spacek won a singer-songwriter contest, went to New York to pursue a music career, but studied with Lee Strasberg instead. A little modeling and TV, and an extra's job in Warhol's *Trash* (1970) preceded her debut in *Prime Cut* (1972). Then, at twenty-four, she played the first of her dangerously disturbed yet sympathetic teenagers, on a killing spree in *Badlands* (1973); at twenty-seven she was *Carrie* (1976), the tormented teenager with telekinetic powers, which brought her first Oscar nomination; at thirty she essayed thirteen-year-old country singer Loretta Lynn in *Coal Miner's Daughter* (1979) and won the best actress Oscar and, in 1982, playing grown-up but barely looking it, she was Oscar-nominated for Costa-Gavras' *Missing* (also for *The River*, 1985, and *Crimes of the Heart*, 1990). She took a four-year break between 1986 and 1990, and by the late 1990s, although working consistently, was no longer a major box-office draw.

Spaghetti Westerns

Spaghetti westerns were hyper-violent, low-budget genre films made in Europe by European (usually Italian) studios between 1961

and 1977. The more than five hundred of these films, many forgettable, used European crews, writers, directors, and, for the most part, actors. Location shooting often took place in Spain, parts of which resemble the geography of the American Southwest.

The spaghetti western shot its way into mainstream American culture in 1964 with the release of *A Fistful of Dollars*, directed by Sergio Leone and starring a little-known American actor named Clint Eastwood as The Man with No Name, an amoral bounty hunter with a lightning-fast draw. The film was immensely popular in the United States and around the world, and led to the production of two sequels: *For a Few Dollars More* (1965) and *The Good, the Bad, and the Ugly* (1966). Two other Leone films were also successful in the United States: the lavish, sprawling 1969 epic *Once upon a Time in the West*, starring Charles Bronson, Jason Robards, Claudia Cardinale, and a cast-against-type Henry Fonda playing a ruthless killer; and *Duck, You Sucker*, also known as *A Fistful of Dynamite* (1971), which paired James Coburn with Rod Steiger.

Spaghetti westerns had several stylistic elements in common. They were often very violent (for their time) and did not flinch from portraying brutal beatings, rape, and the murder of women and children. The films were usually made cheaply, and their production values showed it (exceptions were *The Good, the Bad, and the Ugly* and *Once upon a Time in the West*, both of which had large budgets for production). Further, since the supporting actors (and sometimes the stars) of spaghetti westerns were usually Italian, most of the speaking parts had to be dubbed for release outside Italy (in some cases, limited budgets made for sloppy dubbing and unintentionally hilarious results). Finally, the films often made use of tight close-up shots, which meant that the actors, even bit players, tended to have interesting (if not always handsome) faces. This photographic technique was especially common in scenes leading to a showdown: the camera would alternate between the two (or more) characters who were preparing to duel, with the close-ups growing increasingly tight until only the eyes could be seen. Then the tension would be broken as the gunmen drew and fired. This trademark motif was labeled by some critics the "squint and shoot" style of cinematography.

The musical scores for spaghetti westerns tended to be moody and atmospheric. The best-known composer to work in the genre was Ennio Morricone, who went on to write music for a variety of other films. Morricone's scores for Leone constitute some of the best-known movie music of the 1960s and early 1970s. In addition to traditional instruments, Morricone made use of bells, jangling spurs, whistling, and a Jew's-harp to create a distinctive, and much-imitated, sound.

An attempt was made to revive the genre in 1998, when Turner Network Television produced and broadcast a made-for-cable homage called *A Dollar for the Dead*, starring Emilio Estevez as yet another Man with No Name.

Spalding, Albert G. (1850-1915)

After fully dedicating his career to baseball in 1871, Albert Goodwill Spalding went on to become pro baseball's first recorded 200 game winner, dividing his time between the Boston Red Stockings and the Chicago White Stockings. As first captain/manager and later as president/owner of the White Stockings, Spalding helped mold Chicago into the baseball dynasty of the 1880s. Yet, it was as an owner that Spalding had his greatest cultural impact. In 1876, he helped found the National League and became its president in 1901. Through such actions, he was key in establishing baseball as a viable and acceptable commercial enterprise. Spalding helped to solidify professional baseball as a business. In addition to his baseball duties, in 1876 he and his brother opened their first sporting goods store in Chicago, the beginning of the Spalding sporting goods chain.

Spartacus

Spartacus represents the pinnacle of the epic film trend which included spectaculars such as *Cleopatra*, *Ben Hur*, and *Fall of the Roman Empire*. It was acclaimed as the first truly intelligent epic, but

its director, the highly acclaimed Stanley Kubrick, has largely disowned it. Kubrick took the assignment, partially as a way of escaping the ill-fated *One-Eyed Jacks* project he was working on with Marlon Brando (Brando himself took over direction and went heavily overbudget with the film).

Kubrick was belatedly brought aboard by producer/star Kirk Douglas, who was impressed with their classic collaboration on *Paths of Glory*. Initial director Anthony Mann resigned after only a week's shooting, only completing the opening scenes at the rock quarry. Kubrick picked up the project from the gladiator school on.

Kubrick objected to the script for *Spartacus* on the grounds that it was dumb and rarely faithful to what is known about the actual Spartacus. The former slave in reality twice led his victorious slave army to the northern borders of Italy and could have easily gotten out of the country, but instead he led his army back to pillage Roman cities. Instead of exploring the question of why he chose to do this or whether the intentions of the rebellion changed, whether Spartacus lost the control of his followers who became more interested in the spoils of war rather than in freedom, Trumbo's script simply has Spartacus prevented from escaping by a silly contrivance in which a pirate leader (played by Herbert Lom) reneges on a deal to take the slave army away in his ships.

Nor did Spartacus die by crucifixion as the film depicts. He was actually killed in battle and hacked into pieces on the battlefield. However, six thousand of his followers were later crucified along the Appian Way. As a director-for-hire, Kubrick discovered he had to bow to the wishes of his producer.

Spartacus happened because producer Eddie Lewis brought the Howard Fast novel to Douglas's attention, and he optioned the book, seeing its potential to become a popular epic. He hoped to interest United Artists in the film, but they were planning their own version of the tale called *The Gladiators* which was to be directed by Martin Ritt

Battle scene from the film *Spartacus*, with Kirk Douglas leading the charge (center).

and star Yul Brynner and Anthony Quinn with a script by Abe Polonsky. Howard Fast was given first crack at adapting the material into a screenplay, but his work had a political axe to grind and was quickly rejected. Douglas needed somebody who could write both well and fast, and so pitched the project to blacklisted writer Dalton Trumbo, who hated Fast but agreed to write the script under the name Sam Jackson.

Douglas needed some high-powered talent to convince a studio to back the film, and so he approached Laurence Olivier, Charles Laughton, and Peter Ustinov. Olivier expressed interest in both starring and directing the film as well, but then committed to appearing in *Coriolanus* in Stratford-on-Avon, and consented to appear as Crassus, provided the part was improved. Laughton did not care for the material but needed the money and so agreed to appear as Gracchus, the rotund Republican senator who opposes Crassus, while Ustinov was eager to play the role of an ingratiating middleman for once (he usually had played kings or peasants) and had suggestions for improving his part. Universal agreed to undertake the film.

Douglas wanted Ingrid Bergman to play his love interest Varinia, but she turned it down as being “too bloody.” Jean Simmons wanted the role, but Douglas preferred a foreigner who was not British. Jeanne Moreau refused to leave a play she was in to take the part. Douglas thought German actress Sabina Bethmann had the right look and hired her for the part, despite her thick accent. She was sent to be coached by blacklist victim Jeff Corey.

Spartacus began with Anthony Mann as director on January 27, 1959, when Mann filmed the mine sequence in Death Valley, but when the production started filming the sequences at the gladiator school, it started to fall apart and Universal pushed for Mann’s replacement, and Douglas paid him off \$75,000 and asked for Kubrick to come in. Universal was against hiring the 30-year-old maverick director, but with the clock already running up large expenses, they capitulated and filming resumed under Kubrick on February 16.

Kubrick immediately realized that the inexpressive Bethmann was not going to work out, and decided to test her powers of improvisation by telling her that she had just lost the part in the movie. Rather than reacting emotionally, the actress froze and thereby ensured her departure from the production. Simmons was quickly summoned to take her place. However, shortly afterwards she had emergency surgery and could not work for over a month, so the production had to shoot around her.

One of Kubrick’s innovations was to film the scene where Varinia serves food to the gladiator trainees without dialogue, using only Alex North’s music to make his point, and thereby improving the scene. Indeed, the scenes in the gladiatorial school are some of the best in the film, especially those where Marcellus (Charles McGraw) uses Spartacus to demonstrate where to maim or kill one’s opponent and the famous scene where because of an idle whim by two Roman ladies, Draba (Woody Strode) is forced to fight Spartacus in the ring, but the Ethiopian chooses to attack Crassus at the cost of his own life rather than kill a fellow slave.

Tony Curtis begged to be put in the film, and so the part of Antoninus was written for him as a sensitive young man who becomes like a son to Spartacus and is forced to fight him to the death at the end of the film. Curtis severed his Achilles tendon and had to spend some time in a wheelchair. Even Douglas became sick, the film went months over schedule, and 250 percent over budget.

Douglas, Lewis, and Kubrick got into a discussion over who should get the writing credit on the film. Lewis did not feel right

taking credit for Trumbo’s work, and Douglas was uneasy about crediting the film to a Sam Jackson who did not really exist. Kubrick put forth the suggestion that he be given credit for the script. Revolted, Douglas decided to break the blacklist by crediting Trumbo and summoning him to the studio. (Soon afterward, Otto Preminger announced that Trumbo would be credited on *Exodus* as well, and soon other blacklisted artists were finding employment again). One of *Spartacus*’s most significant accomplishments was this breaking of the blacklist, considered a risky move at the time.

Kubrick’s rough assemblage of the film was not well-received. Trumbo wrote a critique running over 80 pages, detailing the changes made and what he felt was wrong with them. Douglas agreed and declared that the film would have to be restructured and a battle scene added (originally, the battle was just to have been suggested, much like Kurosawa did in *Kagemusha*). Visual design consultant Saul Bass was hired to design the battle sequence and noted that scenes of preparation for the battle helped build up more excitement than the actual battle itself. The Spanish government loaned their army to play the Roman army, and the scenes were shot in Spain. The budget became \$12 million, or \$750,000 less than MCA paid for Universal Pictures in its contemporaneous takeover.

Finally, *Spartacus* was ready for release. The American Legion sent a letter demanding a boycott of the film because of Trumbo’s involvement to 17,000 local posts. Hedda Hopper joined the fray, attacking the film’s use of “Communist” writers. Still, despite its shortcomings, the film stands up as one of the best of the Roman screen epics, and won Peter Ustinov an Academy Award for best supporting actor for his role as Batiatus, the conniving purveyor of slaves.

In 1988, *Spartacus* was restored and re-released to theaters in all its glory. Kubrick, although he had never expressed a fondness for the film, was involved in carefully re-editing the film, adding numerous small snippets that had been trimmed previously. One of the most significant additions was the scene where the bisexual Crassus attempts to seduce Antoninus while Antoninus is bathing him by asking Antoninus if he eats oysters and snails, explaining that it is a matter of appetites rather than morals. (Crassus then proceeds to compare himself to Rome, expounding, “No nation can withstand Rome. No man can withstand her. And how much less—a boy. There’s only one way to deal with Rome, Antoninus. You must serve her. You must abase yourself before her. You must grovel at her feet. You must love her.”)

The footage for the scene was located, but not the original soundtrack. Tony Curtis agreed to revoice his part, but Olivier was dead, and so Anthony Hopkins imitated Olivier’s vocal inflections in order to restore this scene that had so outraged the censors of the 1960s. The scene does add to the film’s portrait of Crassus as a self-serving manipulator obsessed with demonstrating his power and authority.

—Dennis Fischer

Spawn

Todd McFarlane's *Spawn* comic book changed the dynamics of the comic book industry in the 1990s. *Spawn* set sales records, helped an upstart new company become a major publisher, and enticed the top talents in the industry to leave Marvel and DC to make their fortunes with creator-owned properties.

In the late 1980s, Todd McFarlane gained some notoriety as a comic-book artist for his work on Marvel Comics' *Incredible Hulk* title. At the time, "hot" artists drove comic-book sales, and when McFarlane moved to penciling *Amazing Spider-Man*, it quickly became Marvel's best-selling book. In 1990, Marvel created a new *Spider-Man* title for McFarlane to write, pencil, and ink. It immediately became their top selling monthly, and the first issue sold an incredible two and a half million copies. McFarlane began to wonder why, if he was so popular, he needed to do work-for-hire on a character that someone else owned.

Born of this thinking, McFarlane formed a partnership with a few of Marvel's other popular young artists in 1992. Together they founded Image Comics in order to publish creator-owned comic books and reap the full rewards of their popularity. For the first few years, Image Comics, true to its name, proved to be more flash than substance. However, when McFarlane came up with *Spawn*, it proved to be the backbone of the company. Unlike the majority of Image books, *Spawn* was consistently published on time and, thus, enjoyed consistently high sales. The first issue sold 1,700,000 copies, far outstripping the circulation of any other independent comic book. For decades, Marvel and DC had so dominated the industry that any comic not published by one of the "big two" was considered "independent." By its second year, Image Comics had such volume of sales that the industry press began to suggest the possibility of "the big three," and by 1996 Image, albeit briefly, surpassed DC to become number two in market share.

McFarlane proved to have the best head for business of the young Image artists, and was aggressive in marketing his characters. *Spawn* became a multi-million dollar industry. By 1993, there was a "Spawnmobile" super-competition funny car touring with car shows, and Mattel was selling a "Spawnmobile" Hot Wheel. A comics industry trade magazine, *Hero Illustrated*, named Todd McFarlane the "Most Important Person in Comics," and in 1995, with New Line Cinema's McFarlane-scripted live-action *Spawn* movie in pre-production (it was released in 1997), he signed contracts for a *Spawn* animated series on HBO. Also in 1995, Sony began developing a *Spawn* video game, a *Spawn* board game was in stores, Halloween costumes were licensed, and McFarlane Toys brought out a new line of action figures. Somehow, McFarlane found time to keep producing

a new *Spawn* comic book each month, remaining number one in industry-wide sales for a fourth year in a row. Both the sales and the marketing frenzy then began waning somewhat, but in the space of four years Todd McFarlane had become one of the wealthiest people in the comic book industry.

The name and face of McFarlane's main character were borrowed from his real-life friend Al Simmons, who became somewhat of a minor celebrity on the comic convention circuit. The fictional Al Simmons is a principled but efficient killer for a mysterious branch of the government. When he begins to question the orders of his commander, Jason Wynn, he is burned to death with laser weapons by two of his fellow agents. Sent to Hell for the bloody deeds he has committed, Simmons becomes a pawn of the Dark Lord Malebolgia, who needs just such a soldier to lead Hell's army in the final battle against Heaven. For a chance to return to Earth to see his family again and take revenge on Wynn, Simmons forfeits his soul and agrees to become Malebolgia's general. Simmons's horribly burned body is reanimated, and he returns to Earth as a grotesque but incredibly powerful Hellspawn. *Spawn* is clothed in a symbiotic uniform and wields hell-born energy that is seemingly capable of anything that he can imagine. Yet, once this energy is fully expended, Simmons will have to return to Hell to fulfill the rest of his bargain. As *Spawn* regains memories of his former life, he begins following his own agenda and using his powers against the forces of evil. He lives with homeless people in a Bowery alley and becomes their defender. He watches over his family and his love for his wife begins healing him spiritually. However, he is constantly plagued by his "guardian demon," The Clown, whose task is to keep *Spawn* from straying too far from Hell's path.

Spawn provides savage, gory adolescent fantasy with sexy images; McFarlane has admitted that much of the success of his book is probably due to his ability to draw a "really cool looking cape." As other "hot" artists migrated to Image, or copied the Image style, there was an ascendancy of what comics pioneer Will Eisner refers to as "wallpaper comics," filled with splash pages, double-page spreads, and bravura artwork but not much story. In a medium that already stressed the visual over the verbal, the success of *Spawn* and other "wallpaper" comic books further diminished the role of the writer.

Special Olympics

The first International Special Olympics was held in Chicago's Soldier Park in July of 1968. Before this event, there was no opportunity for mentally disabled children and adults to compete in sporting events. With the help of the Kennedy Foundation, mentally disabled citizens have been given the chance to take part in the kinds of sporting events unavailable to them before the advent of the competition. Under the leadership of Eunice Kennedy Shriver and with the efforts of thousands of volunteers, mentally disabled children

and adults now compete locally, regionally, and internationally in games based on the Greek Olympics.

Traditionally, mentally disabled children did not receive many opportunities to take part in physical activities because popular theory held that they did not need physical activity. As a result, these children were never given the chance to excel in sports or physical activity, and many mentally disabled children were doomed to accept a lifestyle without exercise. As early as 1963, however, a movement was underfoot to change these perceptions. The Joseph P. Kennedy, Jr. Foundation, in conjunction with the American Alliance for Health, Physical Education, and Recreation, began work in providing a physical fitness program for the mentally disabled. In addition, President John Kennedy established the President's Council for Physical Fitness and Sports, and by 1967, after considerable study by different organizations, research indicated that lack of opportunity, not lack of ability, was the major reason for the low physical ability of mentally disabled children.

In 1967, members of the Chicago Park District decided to organize a track and field meet for mentally disabled children based on the Greek Olympics. When letters were sent to the individual states inviting them to join, they received mixed responses. Reasons for not participating included a lack of support or a lack of interest based on the premise that promoting physical activity among the mentally disabled would be a waste of time and effort. These and other reasons kept nearly half the states from participating in the first Special Olympics. Unwilling to give in to negative feedback, several states and Canada pressed on to hold the event. The Kennedy Foundation donated \$20,000, and the games were to be held at Soldier Field as planned.

At a press conference shortly after the success of the first International Special Olympics, Eunice Kennedy Shriver reiterated the mission of the Special Olympics—to provide all mentally disabled children a chance to participate in athletic events—and pledged \$75,000 in monetary support on behalf of the Kennedy Foundation to build the Special Olympics program. This support allowed communities across the United States to take part in the Special Olympics originally planned to be held every two years. Because the response to the first Special Olympics was so positive, Senator Edward Kennedy announced the formation of Special Olympics, Inc., and named Eunice Kennedy Shriver its president. The new foundation's purpose was to provide the means for all mentally disabled citizens to have access to a physical fitness program like the Special Olympics.

The games are modelled after modern-day Olympic competition. They are divided into winter and summer games with both team and individual competitions. Held every two years, they alternate summer and winter games with the same schedule as the modern Olympics. Anyone eight and above, with an IQ of 75 and below, is eligible to compete free of charge. Ranging in age from eight to seventeen years-old, 1,000 children from 26 states and Canada competed in the first International Special Olympics in 1968. By 1970, all 50 states, the District of Columbia, and Canada had Special Olympics organizations and state directors. In 1975, the event had grown to 3,200 participants. In planning for the 1999 Special Olympics, organizers estimated that 7,000 athletes from 150 countries will participate, generating a need for 35,000 volunteers to organize 19 sports.

In the 1980s and 1990s, the Special Olympics came under intense scrutiny by mental health professionals who questioned the games and their benefit. Critics cite such reservations as the value of segregating the mentally retarded from mainstream athletic events

and the theory that the games are becoming overly competitive. In response to criticism, Special Olympics organizers emphasize the positive physical, mental, and emotional achievements of the athletes. The debate remained a controversial one at the end of the 1990s, with professionals on both sides of the question presenting strong arguments to back up their opinions.

Though still controversial, the International Special Olympics continues to grow and over one million athletes take part in local, area, and chapter competitions each year. The motto of the Special Olympics states, "Let me win, but if I cannot win, let me be brave in the attempt." The motto sums up the attitude and accomplishments of both organizers and participants throughout the more than 30 years of the Special Olympics.

Spector, Phil (1940—)

As the developer of a style of production so lush it was dubbed "the wall of sound," Phil Spector was arguably the most influential record producer in the history of popular music. From the late 1950s through the early 1960s, Spector, along with his arranger, Jack Nitzsche, produced a sound characterized by complex arrangements of strings, horns, and percussion. Although that sound is most evident in pop songs by the Ronettes, Crystals, and Righteous Brothers, all of whom recorded for Spector's label, he also produced a variety of other performers. The Beatles enlisted his skills in the studio, and Spector also produced solo efforts by John Lennon and George Harrison. Acts as diverse as the Ramones and Leonard Cohen worked with him, and Bruce Springsteen cited him as a major influence on his own music.

When he was seventeen, Spector wrote "To Know Him Is to Love Him," which became a number one single for his band the Teddy Bears. It was the beginning of an impressive songwriting career, but Spector's real achievements were in the studio. He learned the craft of production under Lee Hazlewood, who had given Duane Eddy his trademark guitar sound by a variety of techniques, including manipulating tape speeds and recording in an empty grain elevator. Spector left California for New York, ostensibly in hopes of securing a position at the United Nations, but within a few months he had cowritten "Spanish Harlem" with Jerry Leiber, half of the songwriting team of Leiber and Stoller. The song would become a hit for Ben E. King.

Spector also began producing prominent performers such as LaVern Baker, Ruth Brown, and Gene Pitney, but his most original and influential work came after he established Philles Records. Although he originally had three partners, Spector was sole owner when he was only twenty-one; he was also a millionaire. The Crystals's "He's a Rebel" was the label's first hit and is generally regarded as the first "wall of sound" song. It's worth noting that the phrase is something of a misnomer: although Spector employed an

extraordinary number of musicians, and although the primitive technology of the time required an extensive use of overdubbing, the instruments remain surprisingly distinct. That is certainly a result of Spector's obsessiveness in the studio. According to one story, Spector once listened to the same note for twelve hours, trying to determine whether it needed to be rerecorded. Although probably apocryphal, it is undeniable that he worked with a vastly higher degree of attention than most other producers of the time. Labels usually worked on a variety of singles simultaneously in an attempt to get a hit single. Spector, on the other hand, focused his energies on one single at a time, and that approach proved extraordinarily successful. Songs such as the Ronettes's "Be My Baby" and the Righteous Brothers's "You've Lost that Lovin' Feeling" are some of the most recognizable hits of the 1960s, and Spector's collection of Christmas songs, *A Christmas Gift for You*, remains an exceptionally popular holiday album.

Spector shut down Philles Records in 1966. Some have claimed that he did so because Ike and Tina Turner's "River Deep, Mountain High" failed to achieve the success he had expected. A more likely explanation is that he recognized the music industry had changed fundamentally. The increasingly corporate nature of record distribution pushed independent labels to the margins; additionally, listeners began to favor full-length albums instead of singles. Spector no doubt understood that those shifts worked against his emphasis on the hit song. Ironically, however, other changes showed just how deeply Spector had influenced contemporary music. Although the Beach Boys had been known for their hit singles, in 1966 they released *Pet Sounds*, an album of complex and highly orchestrated pop songs which showed a clear debt to the wall of sound. The following year, the Beatles issued *Sergeant Pepper's Lonely Hearts Club Band*; in part a response to *Pet Sounds*, it also bore the hallmarks of Spector's work.

Despite his undeniable genius, Spector's megalomania and eccentricities became so infamous that fewer artists sought his talents in the 1980s and 1990s. At the same time, however, Spector became almost reclusive and certainly showed little interest in searching out new acts to produce. In 1998, a short-lived collaboration with Celine Dion ended amid rumors that Spector had been impossible to work with in the studio.

Spelling, Aaron (1928—)

The most successful producer in the history of television, Aaron Spelling began his career with writer/producer credits on such classic early television fare as *Zane Grey Theater* and *Playhouse 90* in the 1950s, and 40 years later has more than 3,000 productions to his credit, including such audience favorites as *The Mod Squad* (1960s); *Charlie's Angels*, *Love Boat*, and *Fantasy Island* (1970s); *Dynasty* and *Family* (1980s); *Beverly Hills 90210*, *Melrose Place*, *Dawson's Creek*, *7th Heaven*, and *Charmed* (1990s). Interspersed with these

series were critically acclaimed television series such as *Day One* and *And the Band Played On*.

Despite his success, Spelling has never been a favorite of the critics. "There is good and there is bad Spelling," a *Washington Post* TV critic stated in a 1996 *Los Angeles Times Magazine* article, "but there is never great Spelling, only degrees of terribleness." Yet, even his severest detractors agree that the producer has an uncanny knack for knowing what the public wants to see. During the 1980s, it was his *Dynasty*, a clone of the popular CBS hit *Dallas*, that propelled ABC to the top of the ratings charts; and during the 1990s his *Beverly Hills 90210* and *Melrose Place* helped transform the FOX network from an also-ran in the ratings into a major player. With *Felicity*, in the late 1990s, he is performing the same feat with the fledgling Warner Brothers network.

Spelling's background is remarkably similar to those of many of the legendary pioneers of both television and motion pictures. He began life as the youngest of five children born to struggling immigrant parents in Dallas during the 1930s. Two decades later, after an acting stint in *Guns Smoke*, he approached the producers of the Western anthology *Zane Grey Theater* with an idea of how to write the host's segments on the show and was given an assignment to write it on a continuing basis for \$100 per week. The spots were so successful that he was approached by producer Martin Manulus who wanted to do a Western story on his *Playhouse 90* and offered Spelling the task of writing it. The resulting program, *The Last Man*, proved so popular that Twentieth Century-Fox optioned it as a feature film project within 48 hours of its airing.

The experience of writing the film version convinced Spelling that his rightful place was on television. Chided by his superiors for writing too fast, he completed the screenplay, which was finally released as *One Foot in Hell*, starring Alan Ladd, and returned to television where he went to work with Four Star productions where his creative speed paid dividends. At one point during the late 1950s, he was producing eight shows at once including *Johmny Ringo*, *Alcoa Presents*, *The June Allyson Show*, *Kaiser Presents Lloyd Bridges*, *The Dick Powell Theater*, and *Honey West*.

As Spelling's TV career began to take off during the 1960s, his forte became his ability to capture the mood of the American public at just the right time: his 1960s series *Burke's Law* coincided with the detective and spy craze incited by the emergence of the James Bond films on the big screen; *Mod Squad*, which premiered at the end of the decade, combined the always popular police genre with a teenage-rebels-seeking-social-justice motif that captured the unrest of a turbulent decade and managed to be entertaining at the same time. Although some shows, particularly *Amos Burke Secret Agent*, the spy-spoof sequel to *Burke's Law*, and, later, *Dynasty* were open to accusations of being less on the cutting edge of public taste and more derivative of existing films and shows such as the James Bond series and *Dallas*, Spelling always managed to imbue his shows with qualities that differentiated them from their predecessors through unpredictable plot devices and eccentric characters (notably Joan Collins's Alexis in *Dynasty*).

It was during the 1960s that Spelling produced his defining vision—one that would be evident in every one of his subsequent shows in one form or another. It was his role, he decided, to present the audience with the vision of itself it most wanted to see. In most cases, this meant putting together a glossy, idealized version of Southern California. The public was fascinated, he reasoned, with the trials and tribulations of the wealthy, particularly problems that could not be solved by money (unrequited love, legal entanglements, and

incurable diseases). During the next three decades, he packaged and exported the Southern California lifestyle.

During the 1970s, he caught the viewers' interest in sex and titillation with *Charlie's Angels*, which combined crime fighting action with glamorous women and lots of skin. Although it was based in Los Angeles, the show's action routinely roamed to Palm Springs and Las Vegas—anywhere sex could be combined with wealth and glamour. During the 1980s, Spelling took it even farther with *Dynasty* and its spin-off, *The Colbys*, which presented life among the wealthy in less "black-and-white" terms. Unlike *Charlie's Angels*, there were no clear-cut heroes; it all depended on where individual viewer's sympathies lay. For those who hated the rich and famous, it was simply fun to watch all of the characters strive to do the others in.

By the end of the 1980s, Spelling's star began to dim. The emergence of the sitcom (*Cosby* and *Cheers*) and the public's growing fascination with the gritty realism of Steven Bochco's *Hill Street Blues* signaled trends that Spelling was slow to pick up on. In 1989, to headlines announcing "Spelling Dynasty Over," ABC canceled the show that had led them to the top of the ratings charts. Two of Spelling's medical dramas, ABC's *HeartBeat* and NBC's *Nightengales*, were also canceled. Suddenly, Spelling was unable to sell any of his one-hour programs, prompting him to admit to the *Los Angeles Times*, "I can honestly say that I don't know what the networks want anymore."

Within a year, however, he was back on top with *Beverly Hills 90210* suddenly putting the fledgling Fox network on the map. He followed it with the successful spin-off *Melrose Place*, which proved once and for all that if there was one thing that Spelling knew, it was how to combine money, glamour, and the Southern California lifestyle into an unforgettable package. His knowledge of the youth market paid big dividends in the mid-1990s with such successful shows as *7th Heaven*, *Dawson's Creek*, and *Felicity* reworking his traditional formula to incorporate more real-to-life people and their problems in other areas of the country besides California.

The Spice Girls

After half a decade of alternative rock authenticity ruling the popular culture landscape, Britain's Spice Girls burst upon the scene in 1996 and—seemingly within five minutes after the release of their debut single, "Wannabe,"—helped change the direction of mainstream pop music for the latter half of the 1990s. While their

explosion happened on a smaller scale than Madonna, Prince, or the nuclear bomb that was Michael Jackson, the Spice Girls nevertheless left a noticeable crater in the pop culture landscape that was still evident by the turn of the century. Just as alternative angst-ridden demigods Nirvana and Pearl Jam wiped away the superficial spectacle that was pop music in the late 1980s, the Spice Girls made being shallow and fun cool again, paving the way for a number of other commercially successful soul/dance-influenced, good-looking boy and girl bands.

The Spice Girls comprised five young women chosen to be in the group after auditioning in 1993, making them similar to many of the "manufactured" girl groups of the early 1960s. But that is where the comparison ends. Writing or cowriting many of their songs, publicly acting fiercely independent, and, importantly, firing their manager before the release of their second album, these women were no mere puppets. Nor were they revolutionaries but, instead, existed very much as sexily dressed commodities who nonetheless brought the fire and brimstone rhetoric of the pro-woman punk rock riot girl movement to pubescent and prepubescent girls—which was either a calculated marketing strategy or a positive, empowering move, depending on one's perspective.

Early on, the girls carved out very specific identities for themselves: Geri Estelle Halliwell (Ginger Spice), Melanine Janine Brown (Scary Spice), Victoria Addams (Posh Spice), Melanie Jayne Chisholm (Sporty Spice) and Emma Lee Bunton (Baby Spice). This made the group more distinctive and, with the help of a number of catchy singles ("Wannabe," "Say You'll Be There" and "2 Become 1"), by the end of 1997 they were one of the top selling acts in the world. Many dismissed them as a passing fad that couldn't last a year and—after a series of Pepsi commercials, Top 40 singles and a feature film—several media watchers believed they would become overexposed and fade from the public's consciousness. Their second album, *Spiceworld*, was considered a flop (even though it went multi-platinum), and in late 1997 it seemed that those predictions might have been true. But the critical and commercial success of their movie, *Spiceworld*, and their subsequent sold-out world tour proved those prophecies to be incorrect. The departure of Geri Halliwell at the beginning of the American leg of their world tour similarly did not keep the group down and certainly did not discourage Spice Girl fans from attending their concerts.

On the surface, the Spice Girls seemed as plastic as Barbie dolls, just as artificial as the numerous dance-pop groups that preceded them before the alternative rock explosion (and those groups that followed in the Spice Girls's wake, such as the popular "boy bands" N-Sync and the Backstreet Boys). While the Spice Girls may be the farthest thing from being "real," debates over their authenticity become moot upon seeing thousands of energized young girls chanting "girl power," the group's slogan. The Spice Girls are certainly not as complex as female-centered artists like Ani DiFranco and Bikini Kill, but at their best they provided a self-esteem boost for thousands of young girls and, at their worst, may have only been "mere" entertainment.

The Spice Girls

Spider-Man

Spider-Man, a character appearing in Marvel comic books from 1962, ranks not only as Marvel's most popular superhero, but as one of the most instantly recognizable comic-book characters of all. Of the many superheroes to appear over the years, only Superman and perhaps Batman have had a greater impact on the history and fortunes of the comic-book industry. And no other comic-book character has more perfectly realized the adolescent angst and male fantasies at the heart of the modern superhero genre.

With innovative characters like the Fantastic Four and the Incredible Hulk, Marvel, in the 1960s, pioneered the formula for superheroes who evinced such human failings as jealousy, insecurity, and alienation. This stood them in sharp contrast to the impossibly noble and stiff superheroes offered by competitors like DC Comics. Marvel's formula would attract an expanding fan base throughout the 1960s and beyond, ultimately making it the preeminent comic-book company. Although he was not the first of the new Marvel superheroes, Spider-Man was the true archetype of the Marvel formula. In a calculated stab at the teenage market, which had dwindled since the institution of the Comics Code in 1954, writer-editor Stan Lee set out to create a superhero who was himself an adolescent—one who had to wrestle with his own insecurities and personal difficulties as often as

he had to fight the bad guys. This superhero, in Lee's words, "would lose out as often as he'd win—in fact, more often." Lee bypassed his chief artist Jack Kirby and chose Steve Ditko to illustrate the concept, feeling that Ditko's own offbeat style was more appropriate for such an odd character as Spider-Man. The premise was so unusual, in fact, that Lee chose to debut Spider-Man in the fifteenth and final issue of *Amazing Fantasy*, a series slated for cancellation.

The August 1962 issue of that title introduced readers to Peter Parker, a shy bespectacled teenager ridiculed by his classmates for his social awkwardness and his love of science. One day when he attends an exhibit on radioactivity, Peter is bitten by a spider that unbeknownst to him has just been irradiated. Later, Peter discovers that somehow the radioactive spider's bite has transferred its power to him. Now possessing superhuman speed and agility, the ability to cling to walls, and the proportionate strength of a spider, Peter designs himself a pair of web-shooters attached to his wrists, tailors a costume to conceal his identity, and becomes Spider-Man.

What came next in the originating story set the character apart from his costumed predecessors. Instead of swearing an altruistic oath to aid humanity, Peter sets out to cash in on his new powers. Why, after all, should he do anything for a society that has done nothing but ostracize him? He cares only for his Aunt May and Uncle Ben, who have raised him since the death of his parents. So selfish is his pursuit

of fortune and glory that Spider-Man refuses to come to the aid of a policeman who fails to apprehend an escaping burglar. Then one night, Peter comes home to discover that his beloved Uncle Ben has been murdered. As Spider-Man, he pursues the killer only to discover that it is the very same criminal whom he had earlier neglected to stop. The shocking revelation that his self-interest has indirectly led to the death of his uncle forces Spider-Man to accept the role that fate has forced upon him. He learns that “with great power must come great responsibility.” It is this painful lesson that would form the guiding principle and tragic quality of his life as a superhero.

It is difficult to conceive of a more perfect origin story for a comic-book superhero. Lee and Ditko created a hero instantly relevant to the many shy, lonely, and disoriented adolescents who read comic books at a time when anxieties over the perils of atomic energy prevailed in the culture. Young people had a new superhero whom they could truly claim as their own. But Spider-Man’s story imparted an important moral message as well. Although inclined to be a loner, Spider-Man was compelled by tragedy to enlist in a cause. This call to commitment proved to be a watchword not only for Spider-Man, but for the discontented baby boomers who mobilized their numbers in the service of political, social, and cultural change. In this important respect, Spider-Man meshed effortlessly with the currents then shaping 1960s youth culture.

Spider-Man immediately became Marvel’s most popular superhero—a distinction that he has held ever since. Responding to overwhelmingly positive reader mail, Stan Lee in 1963 launched the character in his own series, *The Amazing Spider-Man*, which remained in circulation in the late 1990s. Spider-Man’s commercial

success fueled Marvel’s mid-1960s superhero revival and set the company on the course toward becoming the industry leader.

Stan Lee quite ingeniously billed Spider-Man as “the superhero who could be you.” Peter Parker lived at home with his Aunt May, whose motherly doting was a constant source of inconvenience, as Peter had to fabricate explanations for the late nights and extended absences that Spider-Man’s lifestyle demanded. His high school and college life figured prominently into the stories, as did his job as a photographer for the cranky publisher J. Jonah Jameson’s *Daily Bugle*. His perennial money problems and romantic travails with high school sweetheart Liz Allen, co-worker Betty Brant, and college flames Gwen Stacy and Mary-Jane Watson became an integral part of what was arguably the first comic-book soap opera. Spider-Man’s good-natured wise-cracking, irreverence for authority, and self-deprecating humor made him an especially endearing antihero to the young. Although he battled a colorful array of middle-aged villains like Dr. Octopus, the Green Goblin, and the Vulture, Spider-Man was himself branded an outlaw by the press, the police, and other sources of adult authority who always seemed to suspect and misunderstand the hero’s motives and actions.

Spider-Man’s popularity only grew over the following decades with a proliferation of licensed products, several Saturday-morning television cartoon series, and a long-running syndicated newspaper strip. In keeping with industry trends, Spider-Man’s stories became increasingly sophisticated during the 1970s and 1980s. Three notable issues in 1971 defied the Comics Code Authority by dealing explicitly with the subject of drug abuse. The controversy over the anti-drug stories led immediately to the liberalization of the Comics Code. Mindful of the fact that Spider-Man was especially popular among the youngest comic-book readers, Marvel has tended to keep the series rather squarely within the boundaries of mainstream cultural acceptability.

Several new comic-book titles featuring the hero increased his presence in the market to near-saturation point during the late 1980s and 1990s. In 1990 the first issue of *Spider-Man* sold a record two million copies in multiple printings. The proliferation of the *Spider-Man* series and crossover stories prompted a number of fans to charge that Marvel was over-marketing their favorite hero at the expense of coherent stories, but this controversy has done little to diminish his standing among general comic-book readers. The lack of a major movie deal and accompanying hype on par with that of DC’s Superman and Batman has limited Spider-Man’s exposure in American mass culture. But that fact may also help account for his continuing popularity among comic-book fans, a subculture generally resistant to mainstream media trends.

It is Spider-Man who most completely epitomizes the ideal of the comic-book superhero for people raised since the 1960s. As a personification of adolescent anxieties and fantasies, Spider-Man truly deserves his status as the quintessential modern comic-book superhero.

Spielberg, Steven (1946—)

Reviewing Steven Spielberg's first theatrical film, *Sugarland Express*, in 1974, critic Pauline Kael wrote, "The director, Steven Spielberg, is twenty-six; I can't tell if he has any mind, or even a strong personality . . . but he has a sense of composition and movement that almost any director might envy . . . He could be that rarity among directors—a born entertainer." The next year, Spielberg came out with *Jaws*, the blockbuster that helped launch a new era in Hollywood, and put Spielberg on the road to becoming the most successful filmmaker of his time. By the 1990s, not only was he considered by many critics to be one of the most talented filmmakers in history, but he had broken three modern box office records (with *Jaws*, *E.T.*, and *Jurassic Park*), owned his own studio, and was reportedly worth almost \$2 billion.

Steven Allan Spielberg was born on December 18, 1946 (not 1947, as traditionally reported) in Cincinnati, Ohio. His youth—displaced from Ohio to New Jersey to Arizona to California, obsessed

Steven Spielberg

with movies, television, and comic books, bullied by anti-Semites, and culminating in his parents' divorce—seems to form the subtext of many of his films. Crucial to his success has been his ability to invest the horror, science fiction, and other Hollywood genres he has continually recycled with the emotional force of his childhood obsessions. His early family difficulties, for example, seem to have provided raw material for a filmography crammed with broken homes, abandoned children, and wayward, would-be, or substitute fathers.

Spielberg started making amateur films at age ten. He made the amateur 8mm sci-fi feature *Firelight* in 1964, at age 17. Rejected from the prestigious film schools at the University of Southern California and the University of California Los Angeles, he attended California State College at Long Beach. While contemporaries such as George Lucas, Francis Ford Coppola, and Martin Scorsese became the first "Film School Generation," Spielberg was essentially self-taught, spending three days a week during college hanging around the Universal lot, observing and hobnobbing. His last amateur film, the short *Amblin'* (1968), won him a directing contract at Universal, prompting *The Hollywood Reporter* to call him the youngest filmmaker ever contracted to a major studio. For the next two years, he directed television programs like *Night Gallery*, *Marcus Welby, M.D.*, and *Columbo*.

Spielberg's professional feature debut, the made-for-television road thriller *Duel* (1972), made an international splash, prompting *LA Times* television critic Cecil Smith to remark, "Steve Spielberg is really the *wunderkind* of the film business." Spielberg quickly established himself as a leading figure in American mass culture. In nine years, he made five of the highest grossing films of his era, a feat certainly unsurpassed in film history. *Jaws*, essentially a horror film starring a huge mechanical shark, was so successful that it helped transform the whole American film industry from the post-studio dispersion of the 1960s to "the blockbuster mentality" of the 1980s. It also marked Spielberg's debut as an impresario of cutting-edge special effects. In *Close Encounters of the Third Kind* (1977), Spielberg transformed the 1950s movie alien from a monster into a saint. Ray Bradbury called it a religious film; Jean Renoir called it poetry. The more nakedly commercial *Raiders of the Lost Ark* (1981) and its two sequels (1984 and 1989) re-popularized the adventure serial genre with tongue planted firmly in cheek. With *E.T. The Extra-Terrestrial* (1982), a fairy tale about a boy's friendship with an alien stranded on Earth, Spielberg made what is probably the most cherished film of modern times. It made him a celebrity in his own right, and even garnered him a United Nations Peace Medal. Spielberg's influence on American culture in this period cannot be overestimated. Indiana Jones, *E.T.*, and the shark became durable American icons, helping to transform the national Zeitgeist from the turbulence of the 1960s to the high-tech nostalgia of the 1980s.

In 1985, Spielberg began a series of attempts to break away from the kind of genre-dominated filmmaking that had previously defined his career. *The Color Purple* (1985) was his first feature entirely about people (no car chases, sharks, or aliens). He took a huge risk in tackling Alice Walker's historical novel of black female liberation, and the results were ambiguous. While successful with the mainstream of American viewers and critics, *The Color Purple* was the first in a series of "serious" Spielberg films accused by a vocal minority of substituting sentimentality for an honest engagement with historical and political realities. The apparently perfect marriage between art and commerce that Spielberg had attained in his earlier

genre films began to founder. *Empire of the Sun* (1987), *Always* (1989), and *Hook* (1991) met with mixed reviews.

In 1993, Spielberg regained commercial and critical success, though not in the same film. First came another box office smash, *Jurassic Park*, a return to the horror genre, with computer-generated dinosaurs instead of a mechanical shark. Then came *Schindler's List*, a self-consciously European-style Holocaust film in black and white, and winner of seven Academy awards, including Best Picture and Spielberg's first for Best Director. This alternating pattern repeated with two films in 1997: a *Jurassic Park* sequel, and *Amistad*, the true story of a maritime slave revolt. It remains to be seen whether *Saving Private Ryan* (1998) signifies a reunion of Spielberg's commercial and artistic ambitions.

Considering their authorship by a variety of screenwriters and their mass appeal, Spielberg's films display a striking degree of thematic and stylistic unity. In Spielberg's world, the highest ideal is childlike innocence—embodied by children themselves, endangered by monsters and villains, defended by heroes, reclaimed by grown men, and symbolized by flying. Human relationships in the films are based on the model of the family broken and mended. Emotions tend to the extremes of terror and wonder. Stylistically, Spielberg's talent for visual composition is unsurpassed. With his embrace of high technology, his blending of genre and art cinema traditions, his prodigious quotation of other films, and his increasing concern with themes of vision and artifice, Spielberg is a consummate postmodernist. During the 1990s, his thematic and stylistic have tended to become unified under the banner of excessive, if sometimes historically justified, violence.

While Spielberg's directorial career alone would guarantee him a place in the history of mass culture, he has also made his mark as a film producer, studio mogul, and civic personality. He formed the highly successful production company, Amblin Entertainment, in 1984, producing or executive producing such films as *Gremlins* (1984), *Back to the Future* (1985), *An American Tail* (1986), and *Who Framed Roger Rabbit?* (1988), and such television series as *Tiny Toon Adventures* and *ER*.

In 1994, Spielberg launched both DreamWorks and the Survivors of the Shoah Visual History Foundation. DreamWorks SKG, co-founded with film executive Jeffrey Katzenberg and music mogul David Geffen as the first new major Hollywood studio since the 1930s, produces film, television, music, and computer-based entertainment. With *Schindler's List*, Spielberg publicly reclaimed his Jewish heritage and proclaimed his civic ideals. Seeded with \$6 million from his *Schindler's List* earnings, the Shoah Foundation set out to videotape 50,000 testimonies by Holocaust survivors around the world, to catalogue them, and to make them available for research and education via a sophisticated interactive computer system.

Thematically, economically, and ideologically, Spielberg's truest predecessor was Walt Disney. For many, he represents Hollywood at its best. For some, he represents it at its worst. His films have been criticized as both infantile and manipulative—essentially as theme park thrill rides. His adherence to a liberal political agenda has been accused of masking a retrograde paternalism in both his films and his business dealings. The new Hollywood he helped create has been viewed as the embodiment of the most greedy and destructive tendencies of capitalism. Even his Shoah Foundation has been criticized for Hollywood-izing history. A genius without, as Kael put

it, "a mind," Spielberg embodies the contradictions of late twentieth-century American mass culture.

Spillane, Mickey (1918—)

In terms of sales, Mickey Spillane is one of the most popular writers of the twentieth century, and of all time. In terms of the content of the books themselves and the two fictional heroes for which he is best known, he has been widely reviled for his portrayal of extreme violence, sexual excess, and right-wing bigotry. Whatever the opinions of his critics, since the 1940s Spillane has proved himself to be a talented comic book writer, an author of prize-winning books for

Mickey Spillane

children and young adults, and, through his *Mike Hammer* series, a key player in the history of the hard-boiled detective novel.

Frank Michael Morrison Spillane was born in Brooklyn, New York, and brought up by working-class parents during the Great Depression. He began publishing stories in the pulp magazines soon after graduating from High School and, dropping out of college and frustrated with his sales job, eventually ended up working on comic books. In *One Lonely Knight* Max Allan Collins and James L. Traylor suggested that he was particularly successful at this, producing three times the output of other writers and devising a new, more efficient method of composition. When the war intervened, Spillane became a fighter pilot instructor, and afterwards found that comic books were no longer popular enough to provide a reliable source of income. This led him to write his first novel and to create the New York-based detective, Mike Hammer.

The first Mike Hammer novel, *I, the Jury*, was published in 1947 and is a landmark in the development of private-eye fiction. Famously, in *I, The Jury*, Mike Hammer discovers his lover, Charlotte, to be the killer he has been pursuing. When she tries to save herself by seducing him, Hammer shoots her and leaves her to die. The underlying moral logic of this (that the villain must be punished at whatever cost to the hero) is no different from Sam Spade's turning Brigid O'Shaunnessy over to the police in Dashiell Hammett's *The Maltese Falcon* (1930). However, Spillane's novel represents a significant shift from public to private justice. Sam Spade investigates but does not punish crime. Mike Hammer is investigator, judge, jury, and executioner. Spillane's other series hero, the spy Tiger Mann, is also successful in his use of violence to solve problems. *Tiger Mann* differs in very little other than name from Mike Hammer and appears to have been written in response to successful spy stories, including Ian Fleming's *James Bond* novels in the 1950s and 1960s.

After publishing seven novels between 1947 and 1952, Spillane seemed to respond to criticism of his portrayal of sex and violence by producing no more for the next nine years, although he continued to write and publish short stories during this period. When he began publishing novels again in 1961, the violence in them, and particularly the link between sex and violence, was hardly diminished, but over the years since, Spillane's reputation with critics gradually improved. He became respected as one of the most influential mystery writers of the late twentieth century. After producing over 30 adult novels, including 13 Mike Hammer adventures and four in the Tiger Mann spy series, Spillane surprised critics by publishing a novel for children and young adults, *The Day the Sea Rolled Back*, in 1979, which won a Junior Guild Literary Award.

Spillane has always been heavily involved in promoting his work. He has appeared as Mike Hammer on film and on the covers of some of the later novels, as well as reading his work on audio recordings. He made numerous chat show and game show appearances during the 1970s and even appeared as a parody of Mike Hammer in TV commercials for Miller beer. Somewhat notoriously, his second wife, Sherri, posed nude for the dustjackets of *The Erection Set* (1972), and *The Last Cop Out* (1973). Despite this, Spillane remains a rather private man, and his desire for publicity is perhaps summed up in a comment he made, quoted in *One Lonely Knight*: "Hell, I'm not an author, I'm a writer. I've got to make a living, somehow."

Spin

Just as a tennis player puts spin on the ball in order to influence the direction of its bounce, so too do public figures (especially politicians) try to "spin" events so as to favorably influence coverage by the news media. The first uses of the term "spin" in this context date to the U.S. elections of 1984, and the term "spin doctor," meaning a press secretary, publicist, campaign manager, or other surrogate adept at dealing with the press, came into use about 1990. Given the growing plethora of news outlets and the undeniable power of the news media to influence public opinion, the concept of spin control has only become more prevalent by the end of the century.

Political campaigns are prime occasions for the exercise of spin control, because everything that occurs in a campaign, short of the final vote count, is open to interpretation. The candidate who placed second in a primary, for example, may spin the result as a moral victory or as a sign of growing momentum. The candidate in third place may claim that the result is acceptable, considering the very limited time and money that he or she spent in the state. The candidate coming in fourth may claim to have gained valuable experience and name recognition that might bode well for future primary contests.

One aspect of campaigns that is especially amenable to spin is the political debate, which lacks clear criteria for victory, and the television audience is not, in any case, made up of trained debate judges. As a result, the opinions of media pundits can have a great influence on public perceptions of a political debate's outcome. This is well illustrated by Gerald Ford's remark, during a 1976 televised debate with Jimmy Carter, about the status of Poland. In response to an earlier statement by Carter, Ford claimed that Poland was not under the domination of the Soviet Union. Opinion polls conducted immediately after the debate showed that a significant portion of the audience thought Ford had done well. But by the next day, after the news media had made much of Ford's gaffe about Poland, many viewers apparently decided that Carter was the debate's clear winner. Occasions like this, demonstrating the media's power to sway public perceptions, have convinced political professionals of the necessity of effective spin control.

Wartime provides another instance of the usefulness of spin, especially in the post-Vietnam War era. It is virtually doctrine at the highest levels of the U.S. armed forces that the news media "lost" the Vietnam War for America by writing and broadcasting stories that undermined the public's will to win. News stories about human rights abuses by the South Vietnamese government, mistreatment of prisoners and other atrocities allegedly committed by U.S. troops, and the

effects upon civilians of indiscriminate bombing of North Vietnam—along with vivid images of dead, dying, and horribly disfigured American troops—are believed by the Pentagon to have convinced many citizens that the war was unwinnable.

That does not mean that spin control was absent during the Vietnam War. It was, in fact, widely attempted by politicians at home and by the Military Assistance Command in Vietnam. But the official spin on the war lost effectiveness as the conflict dragged on. President Lyndon Johnson, whose Vietnam policies had enjoyed wide support in 1964, was alleged to have developed a “credibility gap” concerning the war by 1967—a euphemism for the belief that Johnson had been caught lying. In Vietnam, military Public Information Officers held daily press briefings in Saigon at 5 p.m. In time, many journalists grew so cynical about the official spin on the war that they began to refer to the briefings as the “Five O’Clock Follies.” Fed up with the official line, many reporters went off on their own, and in the process sometimes uncovered stories embarrassing to both the U.S. military and its commander in chief.

Having learned what it saw as the public relations lesson of Vietnam, the Pentagon has since taken careful and comprehensive steps to ensure that media coverage of military conflict receives the proper spin. The new policy involves the close supervision of reporters in combat zones, restriction of journalists from “sensitive” areas, and frequent official briefings so as to ensure that journalists receive the military’s version of events. This approach was followed successfully by the military in Grenada (1984) and Panama (1990). However, the crowning achievement in military spin control probably came in the Persian Gulf War. In the Saudi Arabia staging area for Coalition forces, correspondents were forbidden to travel on their own; instead, battlefield newsgathering was only permitted by a closely supervised “pool” of reporters, while the others were left behind. Then, the journalists were brought back to the press area to brief their colleagues. Military briefings during the Gulf War were much more effective as spin than the “Five O’Clock Follies”: the carefully scripted briefings created the desired impression of the Coalition Forces’ invincibility.

A more recent spin control campaign began in the spring of 1998, when stories began to surface in Washington alleging that President Bill Clinton had engaged in a sexual relationship with a young White House intern named Monica Lewinsky. The Clinton White House, especially Press Secretary Mike McCurry, tried hard to spin the story into something innocuous. Observing McCurry at work over a long period, writer Howard Kurtz derived some of the press secretary’s “spin strategies,” including: 1) Don’t let television break a scandal. If it’s inevitable, leak it to the print media, which tend to provide more nuance and are seen by considerably fewer people; 2) Do not let Senate committees break scandals, either. Beat them to the punch by informing the media yourself, providing your own “spin” in the process; and 3) Leak favorable but boring stories to one media outlet as an “exclusive”—chances are, they’ll be grateful enough to give the story a positive spin.

Spitz, Mark (1950—)

The first Olympian ever to win seven gold medals in a single Olympics, U.S. swimmer Mark Spitz became part hero and part controversial athlete during his Olympic career. With his black mustache and movie star looks, Spitz dominated his sport in 1972 and retired to find even greater fame as the first athlete to become a commercial success in corporate America. Even the specter of terrorism at the 1972 Munich games did not lessen his extraordinary appeal. With 11 Olympic medals under his belt and a reported \$5 million in endorsements, Spitz enjoyed enormous popularity and success in the 1970s.

Spitz began training at an early age, and by the age of eight he was already swimming in competitions. With his family firmly behind him, the Spitzes relocated to California in search of a better training environment. Spitz received encouragement and training from both his father, Arnold, and three coaches during the course of his career. Coaches Sherm Chavoon, Doc Counsilman, and George Hains, all Hall of Fame members, guided Spitz to success in competition.

Known for his self-confidence, Spitz was not always popular with his teammates but continued to train for both team and individual competitions. By the 1968 Summer Olympics in Mexico City, the outspoken Spitz had already made a name for himself as a cocky, self-assured young man. In the days before the games, he boasted that he would take home six gold medals. Unfortunately, his prediction fell far short; he won only two gold medals, one silver medal, and one bronze medal. Disappointed, but not daunted, Spitz returned home to train with the Indiana University swim team in preparation for the 1972 Summer Olympics in Munich, West Germany.

By the beginning of the 1972 Olympics, Spitz had matured as both an athlete and as a person. His personal appearances lacked the boasting predictions of 1968, and he appeared more focused on his goal of winning as many medals as possible. His determination paid off. By the end of his second Olympiad, Spitz had won seven gold medals and set seven world records in only eight days, a record that remained unbroken throughout the century. Even amid the terrorism during the Munich games, in which nine members of the Israeli team, a West German police officer, and all five Arab terrorists were killed, Spitz’s victories remained a high point for both himself and the U.S. Olympic swim team.

Spitz’s popular appeal did not wane following the 1972 Olympics, and he returned home a hero with seven gold medals, endorsement contracts, and even a popular poster underscoring his achievements as the winner of seven gold medals. With a contract from the William Morris Agency, Spitz promoted a range of items from swimwear and pool accessories to milk, razors, and even hair dryers. In addition to his endorsements, Spitz also made numerous television appearances with such stars as Sonny and Cher and Bob Hope.

However, Spitz never really found success in the advertising world. Lacking the agents and the public relations experts employed by athletes in the 1990s, Spitz did not receive the guidance he needed to succeed in product endorsement. He was considered “too quiet” by some and was criticized for his often stiff appearance on camera.

Mark Spitz

But by the standards of the 1990s, the most surprising criticism Spitz received was that he endorsed too many products. After clearing the way for future athletes to carve out lucrative niches in advertising, Spitz left both his swimming career and his endorsements behind for a life out of the spotlight.

By the time he retired from swimming shortly after his 1972 Olympic victories, Spitz, at age 23, had won 11 Olympic medals and had set 26 individual world records and 24 national records. In 1972, he was named World Swimmer of the Year and was inducted into the International Swimming Hall of Fame as an Honor Swimmer in 1977. In the years following Munich, Spitz led a busy life pursuing a wide variety of interests including real estate investments, sailing, speaking engagements, and appearances at swimming events.

In the 1990s Spitz attempted a comeback at the age of 40. His attempt to qualify in the 100-meter butterfly for the 1992 games fell short, and he retired again. But this setback did not alter his love of the sport or his active participation in it. At the 1998 World Championships in Perth, Australia, Spitz proposed the creation of a position dealing with the problem of performance-enhancing drugs used by swimmers. Though no longer a competitor, Spitz retains his love for and interest in the sport through personal appearances at competitions and the enjoyment he still finds in swimming. Though his outstanding career has been punctuated with disappointments in 1968, tragedy in

1972, and a failed comeback in 1992, Mark Spitz remains a national hero and a shining star in the Olympic firmament.

Spock, Dr. Benjamin (1903-1998)

By introducing new child-rearing techniques that contradicted those practiced for hundreds of years, pediatrician Dr. Benjamin McLane Spock changed the way several generations of parents raised their children. Through his practice, his books, and his articles in numerous child-rearing magazines, he taught parents that their own common sense, their own instincts, their unique bond with their children, were to be trusted more than any theories. He told them to

listen to their children and to respect their unique individual abilities. Dr. Spock gave parents flexible tools to use for child rearing, which he called “a long, hard job.” Without being an ideologue or professing to be a guru, Dr. Spock and his liberal views on child rearing also opened or reinforced new directions in education. From the 1950s education moved away from the force-fed teaching of pre-digested materials toward a nurturing of children’s natural desires for knowledge.

As North America’s foremost pediatrician and parenting authority for over fifty years, Dr. Spock had the privilege of witnessing firsthand the results of his earlier recommendations to parents. His best-known book, *Common Sense Book of Baby and Child Care* (later re-titled *Baby and Child Care*), was published in June 1946 and became the predominant how-to guide for parents in the post-World War II baby boom. In it, Dr. Spock urged parents to trust their instincts and their own parenting abilities. The book became a virtual bible of child rearing, guiding many parents from the 1950s to the 1990s. By the end of the century, virtually all parents with young children in the United States had grown up within the child-rearing and educational framework advised by Dr. Spock. Though parts of the book have been criticized as fostering over-permissiveness, the book remained one of the most influential books on parenting at the end of

Dr. Benjamin Spock

the twentieth century. Dr. Spock embraced the flexibility he asked of parents by adapting his basic volume to changes in society, expanding and revising it several times during his lifetime.

The United States was ripe for change when Dr. Spock first introduced his radical ideas. The end of World War II in 1945 meant the end of many social values inherited from the nineteenth century, and, with the disappearance of those—along with so many millions of human beings the world over—there was a need for new beginnings and different ways of tackling the world. If the atomic bomb created a constant nuclear death threat, the joys of reunion with the homecoming veterans spurred a celebration of life.

Dr. Spock’s optimistic vision of parents was welcomed in this climate. His confidence in parental instincts probably found its source, deep down, in Jean-Jacques Rousseau’s romantic vision of mankind as fundamentally good. Nevertheless, Spock’s optimism found willing readers from veterans who had experienced cruelty, savagery, and crimes against humanity during the war. Parents of children during the 1950s clearly wanted to turn their backs on misery and despair and to believe that the world was good, that life could only get better, that progress was now unlimited, and that the future was wide open. Gone was the rigid discipline and sacrifice used to contribute to the war effort; gone was the rationing of sugar, bananas, meat, cigarettes, butter, chocolate, and gasoline. Americans could rejoice in their lives and their new prosperity. Such optimistic views and indulgence luxuries would last until the “difficult times” of the 1970s and beyond—times that Dr. Spock would address in his further writings.

The generation most influenced by Dr. Spock was the baby-boom generation, which would give the second half of the twentieth century many of its characteristics. The significant increase in the number of babies born in 1946 over those born in 1945 is attributable to the return of veterans of the war to their current or future wives. In 1945 2,873,000 babies were born compared to 3,500,000 in 1946, a 20 percent increase. In 1954 the number increased to 4,000,000 and remained high through 1964, the last year of the baby-boom generation. The sheer number of babies born at the same time gave tremendous importance to Dr. Spock’s writings and teachings. Dr. Spock’s opinions would shape the first generation of children born into a United States that was a dominant world power.

From the Middle Ages, children raised within Western traditions had been considered trainees, who should be taught early on to obey specific rules. Feeding was restricted to specific hours and toilet training had to be done according to specific principles and at precise ages. The rules applied to all children regardless of their individual differences. This approach, still widely practiced in some European contexts and in highly socialized countries in Asia, runs counter to the advice given to the parents of baby boomers by Dr. Spock. “I wanted to be supportive of parents rather than to scold them,” Dr. Spock said. “My book set out very deliberately to counteract some of the rigidities of pediatric tradition, particularly in infant feeding.” He emphasized what may have been obvious to parents with some degree of common sense (especially parents of multiple children), but may not have been obvious to authors of books on parenting: there were enormous differences between individual babies. These differences were important, and had to be taken into account. Parents needed to be flexible and did not need to worry constantly about “spoiling” as a danger. Aside from giving parents permission to make their own decisions, Dr. Spock also needed to dispel many myths about what was good or bad for children. When he began practicing pediatrics, bananas were considered hazardous to a

young child's health and castor oil was praised as a cure-all. Obviously, that first book was needed. In the 52 years since its publication, 50 million copies of *Baby and Child Care* have been sold, and the book has been translated into 39 languages.

This extremely influential man did not live his life in the ivory tower of some academic community. Born on May 2, 1903, in the New England community of New Haven, Connecticut, he had gone to Yale University, and been a member of the crew team that won a gold medal for the United States in the 1924 Olympics. He then went on to receive his medical degree from Columbia University and went to the New York Psychoanalytic Institute for further studies. He was not an advisor who did not practice what he preached either: from his marriage in 1927 with Jane Cheney (that would end in divorce after 48 years) two sons were born, Michael and John.

While maintaining a private practice in New York City, he taught pediatrics at Cornell University from 1933 to 1943. He participated in World War II as a psychiatrist in the U.S. Naval Reserve Medical Corps, and was discharged as a Lieutenant Commander in 1946. He then went on to teach psychiatry at the University of Minnesota, which he left in 1951 to join the University of Pittsburgh as professor of child development. In 1955, he joined the faculty at Case Western Reserve University.

The enormous influence Spock had through his books exemplified the changes in society. The traditional way of handling child-rearing practices had been through confidential, direct information from doctor or nurse to the parent, or from parents to children of parenting age. Such practices continued, of course, but they did not correspond to the needs of a new age, with growing mass media where everything had to be made available to the largest possible number, through paperbacks or newspaper articles, radio broadcasts or cassette tapes. To reach these audiences, he wrote or collaborated on 15 books over the years. With his wife, Mary Morgan, he wrote an autobiography, *Spock on Spock*, published in 1989. He also wrote columns for more than 30 years in mass-market publications such as *Ladies Home Journal* or *Redbook*. He was a contributing editor to *Parenting* magazine (including the Web version for the last year of his life) from 1992 until his death. The editors of *Parenting* magazine mourned his death by saying, "We will miss his common sense approach to parenting and his dedication to raising healthy, happy children. The work he did at *ParentTime* will continue to be available as *Dr. Spock's Perspective* and soon we will publish a number of columns he did for us that have never been seen before. It is our hope that future generations of parents and children will benefit from his beliefs." From his perspective, the Internet was certainly new, but did not modify the basic realities of parenting: "Despite the newness of this setting," Spock said, "parents and children really haven't changed, and I anticipate addressing many of the same concerns and issues I have for the past six decades."

As the baby boomers have aged, Dr. Spock has been criticized for preaching permissiveness and was held responsible for a "Spock-marked" generation of hippies. Such criticism should certainly be put in perspective. There is no doubt that Spock did endorse beliefs held by the younger generation. He certainly was neither a fundamentalist of any kind, nor an arch-conservative. He joined protests against nuclear technology and the Vietnam war. While Vice President Spiro Agnew accused him of corrupting the youth of America, Dr. Spock only took credit, though, for having a "mild influence." His message had not been to substitute the preaching of a "doctor" for sound parental judgment. This included a measure of discipline and parental authority. Respecting and understanding children was not letting

them do anything they wanted. Contrary to the claims of his critics, Dr. Spock was always a firm believer in sound, responsible parental authority. He said: "Respect children because they deserve respect, and they'll grow up to be better people. But I've always said, ask for respect from you children, ask for cooperation, ask for politeness. Give your children firm leadership." He went beyond this statement, though, by saying: "strictness or permissiveness is not the real issue. Good-hearted parents who aren't afraid to be firm when it is necessary can get good results with either moderate strictness or moderate permissiveness. On the other hand, a strictness that comes from harsh feelings or a permissiveness that is timid or vacillating can each lead to poor results."

The basic message Dr. Spock sent to parents remains: "Don't take too seriously all that the neighbors say. Don't be overawed by what the experts say. Trust yourself, you know more than you think you know." It is a message of respect in all possible ways: respect for parents by a health professional, respect for children by parents, respect for parents by children. It is a deeply humanist message, stating that the real values are always individual values, that the only valid judgment is the judgment made by responsible individuals. It is the very opposite of cults and of every theory or system that would diminish, reduce, or even annihilate the fundamental duty that we have to our individual decision-making process, in child rearing or in any other matters. Dr. Spock left a deep impression of wisdom. He died at the age of 94 at his home in San Diego, with his family by his side.

Sport Utility Vehicles (SUVs)

Short for sport utility vehicle, the SUV earned its name by its ability to transport people and their gear to outdoor recreation areas. While the SUV has been available to drivers in the United States since the end of World War II, its immense popularity arose only in the 1980s and 1990s, when baby boomers discovered that the more luxurious models were a sporty and practical alternative to the family sedan, minivan, or station wagon. Even though the majority of SUVs rarely go off road, many owners appreciate the rugged potential of SUV, while safety-conscious drivers value its handling on snow and ice.

The first SUVs in the United States were much more spartan than the Mercedes, Lexus, and Cadillac versions of the 1990s. Surplus military Jeeps converted to meet the needs of the civilian market at the

end of World War II, the first SUVs met the recreational demands of consumers who sought escape from the deprivation of the Great Depression and war-time rationing.

The supply of surplus military Jeeps did not last long, however, and the Willys-Overland Company began to produce models specifically for the civilian market. Ranchers, farmers, hunters, and campers appreciated their affordability and the fact that they were four-wheel drive. These early models did not compete with passenger automobiles because they lacked space for both people and luggage and because they handled like the trucks on which they were based. Although International Harvester manufactured the Travelall and the Scout, and Jeep brought out the Jeep Wagoneer, the first dedicated sport utility from a major manufacturer was the Ford Bronco, introduced in 1966 and followed in 1969 by the Chevy Blazer and GMC Jimmy. These relatively compact SUVs were joined in 1973 by the Suburban, which was marketed by both Chevrolet and GMC and came in a choice of two- or four-wheel drive versions. (An earlier version of the Suburban, which appeared in the 1930s, was a delivery truck, not a true SUV.) Still the largest SUV in the 1990s, the Suburban offered interior spaciousness and towing capacity unknown to earlier models.

The gas shortage of the 1970s created numerous changes in U.S. driving habits. Gasoline shortages, long lines at the pumps, and the encouragement of public figures, including President Jimmy Carter, caused many Americans to abandon their gas-guzzling muscle cars for a more socially responsible alternative. Although many drivers chose either small European or Japanese cars, others discovered the versatility of imported trucks. Still others found that they needed a vehicle that could tow a boat or trailer. In 1983, both General Motors and Ford offered alternatives to the imports, a smaller version of the Blazer and the Jimmy and the Bronco II. Although SUVs in the early 1980s counted for only two percent of all vehicle sales in the United States, drivers were very different from those who had purchased converted military jeeps. Instead of wanting a vehicle for off-road use, the new generation of SUV owners included a high percentage of women who wanted an alternative to the station wagon and later to the minivan.

Attempting to appeal to these diverse drivers, manufacturers offered more amenities, including more horsepower, sophisticated sound systems, better handling, and the ability to "shift on the fly" from two-wheel drive to four-wheel drive. In addition, manufacturers began offering a variety of sizes from the tiny sub-compact Suzuki Sidekick (which weighed under 3,000 pounds and towed a modest 1,500 pounds) to the behemoths of the SUV set, the Chevrolet and GMC Suburbans, weighing over two tons and able to tow 10,000 pounds. In 1998, about one in every eight vehicles sold in the United States was a SUV, and that trend shows no signs of diminishing as the children of baby boomers leave the nest while their still-youthful parents have time and energy for recreational activities.

Enthusiasm for SUVs was dampened briefly in 1997 when Consumers Union, publishers of *Consumer Reports*, petitioned the National Highway Traffic Administration to investigate the Isuzu Trooper (1995/96) and the Acura SLX (1996) for placing occupants at a higher risk for rollovers. Other studies, including those by NHTSA, reported different conclusions, including the fact that the additional size and weight of SUVs made them safer than passenger automobiles. Nonetheless, many manufacturers aggressively addressed the perceived threat by warning consumers to drive SUVs a bit differently.

While SUVs have gained popularity with consumers, they are not popular with everyone. In fact, groups like the Sierra Club and

Friends of the Earth criticize SUVs for their impact on the environment. Classified as light trucks under federal rules, SUVs must meet less stringent fuel and emission standards than are required of passenger automobiles; and because they can also go off road, they can inflict greater damage on the environment. In addition, their higher ground clearance means that they can inflict costly damage on smaller cars. As a result, some insurance companies have raised their liability rates on SUVs.

Sales of SUVs continue to be strong at the end of the 1990s because they provide both a sporty feel and the ability to transport everything from boats and trailers to Labrador Retrievers to a gaggle of school children and their gear. More fun than the sedans and station wagons that baby boomers remember from their childhoods and more versatile than their chief competitor, the minivan, SUVs (many with designer labels, such as the Orvis Edition Jeep Grand Cherokee and the Eddie Bauer Ford Explorer) offer American drivers both more practicality and panache than their ancestors, the Jeep and Land Rover of the post World War II years.

The Sporting News

Known as the "Bible of Baseball," *The Sporting News* helped to expand the popularity of baseball among Americans in the first half of the twentieth century, before coverage of the sport was saturated by daily newspapers, radio, and television. A weekly newspaper, *The Sporting News* provided in-depth coverage of baseball that reflected its close connections to the game's inner circles and thoroughly informed its readers, helping to elevate baseball to its status as the national pastime. For many years, the tagline "The Base Ball Paper of the World" ran on the paper's front-page masthead.

"*The Sporting News*' coverage of baseball issues, ranging from the reserve clause and the farm system to night baseball, radio, and the major leagues' color barrier, represents more than an incidental source of information about baseball," G. Edward White wrote in his book *Creating the National Pastime: Baseball Transforms Itself 1903-1953*. "*The Sporting News* was consistently traditionalist to the point of being reactionary about most innovations in the game, although it made an effort to give a fair-minded presentation of most issues."

The Sporting News was owned and operated by the Spink family from 1886 to 1977. Its founder was Al Spink, a Canadian emigre who became a St. Louis promoter interested not only in baseball but also horse racing and the theater. When Al Spink suffered a financial setback, he enticed his brother Charlie to leave his homestead in the Dakotas and take over the fledgling newspaper. In its early years, the newspaper covered horse racing and the theater, as well as baseball, boxing, hunting, track, and cycling. In the early 1900s, Charlie Spink

set the editorial direction that would distinguish the publication for decades to come—the paper would cover only baseball.

With a circulation of a meager 3,000 readers at the turn of the century, Charlie Spink hoped to capture more readers by establishing editorial positions that stood for the good of the game, not necessarily the position of the baseball team owners. Perhaps the paper's most controversial position was to support Ban Johnson in his 1901 quest to establish the American League as a second major league to the National League. "The success of these crusades, combined with the changing nature of baseball, helped to consolidate the paper's editorial position," Stanley Frank wrote in his 1942 *Saturday Evening Post* article entitled "Bible of Baseball."

Sparse advertising revenue in the early years led Charlie Spink to contract with correspondents rather than hire permanent writers for much of the paper's content. Born out of frugality, the correspondent system became one of the paper's great strengths, giving readers the insight of a local scribe who witnessed the action and conversed with the participants as opposed to the basic details of wire reports. The correspondent system was especially important to the paper's extensive coverage of the minor leagues, a hallmark of its Bible of Baseball reputation. While most readers could get at least an overview of results of major league competition in their local daily newspapers, *The Sporting News* was the only publication that consolidated coverage of the minor leagues, covering the up-and-coming players as well as the big league stars and players. Another hallmark of *The Sporting News* was its printing of box scores from both major and minor league games.

When Charlie Spink died in 1914, his son J. G. Taylor Spink took over as publisher of the newspaper. During his 48-year tenure, he cemented the publication's place in baseball journalism. In his *Saturday Evening Post* article, Frank described Taylor Spink as "the game's unofficial conscience, historian, watchdog and worshipper; and happily, he has made a nice piece of change in these public-spirited roles." Taylor Spink piloted *The Sporting News* as baseball emerged as the nation's favorite spectator sport in the 1920s and 1930s, campaigning for progressive policies to improve baseball and keep it an honest game following the 1919 Black Sox scandal. Two of his innovations had lasting impacts on the game of baseball. In 1925 he introduced *The Sporting News* annual major league all-star team, selecting the best players at each position and best left- and right-handed pitchers. This was the precursor to an actual game among all-stars that began in 1933. In the late 1920s, *The Sporting News* also picked the most valuable players in each major league, filling a void in the abandoned haphazard approaches previously used to select players for this honor. This led to the establishment of today's MVP selection system by vote of the Baseball Writers of America Association.

While Spink was said to have his finger on the pulse of baseball, critics of *The Sporting News* contended that the paper was overly one-sided to the baseball powers, as the paper initially resisted integration (it virtually ignored the Negro Leagues), night baseball, and radio broadcasts. "Despite its traditional bias," White noted in *Creating the National Pastime*, "*The Sporting News* had a sense of when changes were on the verge of taking place in baseball."

In 1942, *The Sporting News* took over from Spaulding the publication of baseball's annual *Official Record Book and Guide*. This furthered its baseball influence and spurred the newspaper into even greater publication pursuits, for which it was best known for in the 1990s. Restricted advertising revenues during World War II also forced Taylor Spink to abandon the newspaper's baseball exclusivity, as it expanded into coverage of football, basketball, and hockey.

When Taylor Spink died in 1962, his son C. C. Johnson Spink assumed the helm of *The Sporting News*. In the 1960s, Johnson Spink further expanded coverage into golf, tennis, and auto racing. With no children to transfer the business to, Johnson Spink sold the newspaper in 1977 for \$18 million to the Times-Mirror Company.

The paper remained an influential force in baseball through the 1950s, but it dissipated thereafter. Daily newspapers had significantly improved the quality and volume of baseball-related material following World War II. Television also offered faster transmission of information. While the paper no longer exerts the influence it once had in baseball, the J. G. Taylor Spink Award established in 1962 honors outstanding writers with a place of high acclaim at the Baseball Hall of Fame.

Sports Heroes

Americans look to their sporting heroes to be models of courage, discipline, strong character, and success; those perceived to be breaking the rules of the game are stereotyped as villains. In the last third of the century, the media has demanded that the hero's off-field conduct matters nearly as much as the onfield performance. In addition to winning the physical contest, the hero must negotiate other conflicts: the technicalities of the game's rules; overcoming physical pain; and negotiating the pitfalls of private self-doubt. This accounts for the American notion that sports, in addition to building physical skills, also builds moral character. Therefore, the sports hero often transcends the athletic arena: "Because their lives helped, in part, to shape our values, habits, and, arguably, the content of our character, no full understanding of America is possible without an understanding of its sports idols," argue Robert Lipsyte and Peter Levine in *Idols of the Game*.

Developments in communications technologies throughout the twentieth century changed the sports they broadcast. The rise of radio transformed local hero athletes into national icons. As television began reaching a wider audience, the expanded broadcasting of events created an insatiable need to find and promote heroes. Televised sports created a shared experience, in which national audiences participated in their heroes' victory or defeat, or bore witness to an athlete's sportsmanship or misconduct. "The most outstanding [athletes]," writes John Izod in "Television Sport and the Sacrificial Hero," "become media personalities, and as such they reveal their hopes and fears as well as their thoughts about the game to the viewer." The proliferation of statistics in modern-day sport has helped create an overabundance of sports heroes. Figures such as "most career home runs" or "career average rushing yards per

carry” help the transfixed fan distinguish a pantheon of great athletes emanating from the television factory.

According to sociologist Orrin Klapp, author of the 1949 study “Hero Worship in America,” the emotional behavior of hero worship encompasses “popular homage, familiarity, possessiveness, curiosity, identification, and imitation.” Fans identify with their heroes by adopting their uniforms, mannerisms, and even their style. As an ad from the 1920s proclaimed: “A Spalding Swimming Suit won’t teach you to swim. But it will make you *feel* like an Olympic champion.” Following his 1969 Super Bowl triumph with the New York Jets, fans began wearing sideburns in emulation of pro quarterback Joe Namath. The veneration bestowed upon the sports hero often creates demigods, as this piece on Namath from *Esquire* demonstrates:

Once in a generation, more or less, a chosen figure detaches himself from the social matrix and swims into mythology, hovering somewhere near the center of the universe, organizing in himself our attention, monopolizing our hopes and fears, intruding on our dreams, compelling our hearts to beat as his.

The sports hero is at once distant, placed in high-esteem, and simultaneously the subject of intense personal interest. This intense curiosity sometimes turns into a possessive need to learn more about the hero. Klapp quotes boxer Jack Dempsey’s description of the fans who forced themselves into his dressing room:

They want to look at your eyes and your ears to see how badly you may have been injured. They want to pick up a word here or a gesture there which, later on, they can relay, magnified, to their own little public. I have always regarded these curious fans in a tolerant, even friendly way.

By the 1990s, superstars such as Michael Jordan could scarcely venture forth in public for fear they would be crushed by the onslaught of fan interest.

The genesis for the American sports hero can be traced back to the the 1920s—often referred to as “The Golden Age of American Sports.” The then-largest paying crowd to witness a sports event was for the 1926 Dempsey-Tunney bout in Philadelphia, which was watched by 120,757. Figures like Babe Ruth, Lou Gehrig, Knute Rockne, Helen Wills, Bobby Jones, and Jack Dempsey enabled each sport to claim its own titan.

The most towering object of hero worship during the 1920s was aviator Charles Lindbergh. Like sports heroes, Lindbergh performed a colorful feat that received tremendous admiration. “Lindbergh,” writes Klapp about the aviator’s overnight recognition following his transatlantic flight, “was literally jerked upward in status and in his vertical ascent became almost a demigod.” Americans’ hero worship of Lindbergh literally set the tone for later fan behavior. A story about Lindbergh in Klapp’s study could be in reference to any celebrity of the twentieth century: “A respectable-looking woman of middle age came up to Lindbergh, at dinner in a New York hotel, and tried to look into his mouth to see whether he was eating ‘green beans or green peas.’”

In a similar fashion, Ruth’s home run-hitting feats captured the popular imagination. Prior to Ruth, the game of baseball was played in a methodical fashion, by stringing together a series of singles in order to achieve runs. Ruth’s powerful swats ignored the assembly line of singles-hitting by producing runs instantly. “Ruth was like the

movie stars of the time who were discovered overnight,” noted sports historian Benjamin Rader. “Their seemingly effortless rise to fame and fortune was so unlike the arduous work of a bureaucrat or an assembly line worker.”

By the 1920s, the subjects of popular biographies shifted from worshipping “idols of production”—politicians, or captains of industry—to the “idols of consumption,” or sporting and entertainment heroes. These new heroic tales, writes Mark Dyreson, were “every bit as didactic as a tale about Horatio Alger,” that describe the triumphs of heroes “who succeeded against the odds, not simply because they got the breaks, but because of their adherence to the traditional values of perseverance, hard work and clean living.”

For decades following the rise of the sports hero, those enshrined in the public spotlight basked in the uncritical admiration of the media and fans alike. It wasn’t that the private exploits of such heroes as baseball’s Mickey Mantle and Ted Williams, basketball’s Bill Russell, and football’s Jim Brown were exempt from scrutiny; rather, it was that they were judged first and foremost on their public acts, and their private lives remained private. As the century wore on, however, a serious debate about what constitutes a true hero emerged among fans, the media, and athletes. Whereas the heroes of the 1920s were lionized for committing a specific feat that captured the public’s imagination, by the 1990s the sports hero was asked to behave as a “role model” whose personal conduct was as important as his or her athletic feats.

Perhaps the figure that best marks this change was New York Yankees great Mickey Mantle. The Oklahoman who broke Ruth’s record for home runs in a World Series in 1964 joined the Yankees during the 1950s. This was a decade of conflicting demands for those who were coming of age, writes Michael Anderson: “their best was never good enough. Only by overachieving could they live up to their parents, those grimly stoic survivors of war and want.” Mantle—as the old athletic cliché goes—lived hard and played hard, and few faulted him for it. Once he left the game of baseball, Mantle was no longer able to outplay others on the field so he seemed to try to outdrink them. In 1994, Mantle publicly admitted his alcoholism and promptly assumed the role of the socially-responsible role model by imploring others to avoid his mistakes. He also underwent a failed liver transplant and urged others to sign organ donor cards. “I have thought about trying to define what a hero is,” wrote Mantle’s son David, shortly after his father’s death. “Dad was one throughout his baseball career, and a different kind at the end of his life.”

In the 1980s and 1990s, as the private lives of all celebrities (even political celebrities) came under increasing scrutiny, it was no longer enough for sports figures to swat a baseball the farthest, or catch a game-winning touchdown pass: they were increasingly sought after to set examples for the young. After sports fans witnessed several player strikes, and watched well-paid athletes land in drug abuse clinics, many yearned for an edenic time when athletes were clean-cut role models. This was a mythic notion: Ruth attained his legendary status alongside his womanizing, and a rather unathletic regimen of beer and hot dogs that showed in his overweight condition. Sociologist Charles Payne in *Newsweek* sums up this mistaken notion of innocence before the advent of big-money sports: “If you were to go through baseball’s or football’s Hall of Fame, you’re not going to come up with a bunch of choirboys.”

Athletes themselves disagree over their obligation to lead exemplary private lives. In a 1993 *Newsweek* article basketball star Charles Barkley, in his typically forthcoming manner, declared “I’m not paid to be a role model. I’m paid to wreak havoc on the basketball

court.” Karl Malone, another basketball great, openly disagreed with Barkley, stating that “We don’t choose to be role models, we are chosen.” Fans, devoted as they may be, had become hardened to the complaints of multimillionaire pro athletes. “Funny,” objects sports columnist Phil Mushnick, speaking for many fans, “how big shots accept all the trappings of role modelhood—especially the residual commercial cash—before they renounce their broader responsibilities to society.”

Although it is true that not every athlete deserves a role model status, critics inflate the debate somewhat by failing to recognize that children have the capacity to distinguish between real-life heroes and daydream ones. As one 12-year-old told *Sports Illustrated for Kids*, if his sports hero were to “mess up” then “he wouldn’t be my favorite player anymore. I would sell all his cards. I have about 65 of them, and I’d give them away.” It is possible that the adults are the ones who have changed, and not the kids. An enduring piece of baseball lore describes Shoeless Joe Jackson, a participant in the 1919 Black Sox Scandal, passing a young boy in public, who plaintively cries to the fallen hero: “Say it ain’t so, Joe!”

Americans learned to look for their heroes’ faults, even while they were in the process of exalting them. In 1993 Michael Jordan, who is generally acknowledged as the greatest basketball player ever, was reported to have lost a substantial amount of money from gambling and was subjected to months of media attention and a brief diminishment of his reputation for his strictly legal activities. A few years later, in the midst of 1998’s home run record chase, record-setter Mark McGwire was spotted with a legal performance enhancement drug sitting in his locker, prompting one editorial from St. Louis to proclaim: “There probably aren’t going to be any heroes anymore. The media won’t let us have them.” Yet it is the media that has helped create the impossible dilemma that confronts the sports hero. On the one hand they feed athletes on a steady diet of adulation beginning in college and increasing exponentially once they reach a professional level. Told for years that he (and, rarely, she) can do no wrong, the hero is then subjected to equally intense scrutiny aimed at uncovering faults and weaknesses. Wrote a St. Louis paper after McGwire’s legal steroid was reported, “In an oftentimes desperate attempt to get the story no one else has, the media look behind closed doors . . . to come up with something that might taint the reputation of an otherwise unblemished character.”

Other instances have caused Americans to examine themselves. In 1994, crowds gathered along a California freeway to witness ex-football star O.J. Simpson engage police in a surreal, televised car chase as a suicidal fugitive. Like fans urging on a self-destructive rock star, the crowd implored O.J. Simpson to run—as if he still carried the football—or made pronouncements like “I can’t believe he did it.” Tom Verducci of *Sports Illustrated* commented that “it sounded as if half of America lived next door to Simpson.”

Not all athletes have a choice about whether to act as a role model or not. Some, by virtue of their gender, race, or ethnicity, have no choice but to perform to higher expectations. Early on, female athletes—like Babe Didrikson, the winner of three track and field medals at the 1932 Los Angeles Olympics—found that their exploits were not viewed with the same legitimacy reserved for their male counterparts. “America has lionized the male athlete to the female athlete’s disadvantage,” write Lipsyte and Levine; “there is a definite misogynist streak in the sensibility of the big-time locker room and its boys-will-be-boys rationale.” By the 1990s, women were still fighting against media images that trivialized female athletic accomplishments. This despite the fact that, in 1991, women outspent men

in the purchase of athletic shoes and apparel, and more women participated in sports and fitness than did men. In 1994, athletic shoemaker Nike used an ad depicting a female volleyball player lying on satin sheets in her underwear. CBS Sports, in 1996, suspended a golf commentator for characterizing professional female golfers as lesbians and opined that women with “big boobs” were less able to play the sport. In the absence of serious, authentic portrayals of female athletes, the focus for young girls upon female athletes is more than just upon skill; the female sports hero is also a model who counteracts a broad social stereotype.

Sports heroes have often been used as an avenue for disenfranchised groups to participate in an American life that was otherwise closed to them—politically, economically, or socially. It is hard for late twentieth-century Americans, who take the achievements of African-American athletes for granted, to appreciate Boxer Joe Louis’s significance. As Lipsyte and Levine reconstruct it: “Louis was out there representing all black people in those bitter days when most colleges admitted few if any blacks, when college-educated blacks were lucky to get jobs as railroad waiters, when even the Army was segregated.” Ethnic athletic heroes bear the similar weight of carrying the hopes of millions. Unlike their parents, second-generation ethnics had the time to devote to leisure and recreation, and sports heroes began serving as important role models.

The best example of a single athlete representing the aspirations of an entire people was Jackie Robinson, the first African-American major league baseball player. On the field, and off, Robinson was subject to racial slurs, hate mail, and death threats; once in Philadelphia, Robinson’s Brooklyn Dodger teammates were refused admittance into a hotel because of his presence on the team. Robinson was an integral symbol of the African-American struggle against discrimination in the pre-civil rights era. Robinson’s enormous burden is palpable in this 1947 passage by sportswriter Jimmy Cannon, as quoted by *Sports Illustrated* in 1997:

In the clubhouse Robinson is a stranger. The Dodgers are polite and courteous with him, but it is obvious he is isolated by those with whom he plays. . . . Robinson never is part of the jovial and aimless banter of the locker room. He is the loneliest man I have ever seen in sports.

Sports heroes often say as much about the larger social milieu as they do about themselves: “Independent of their own intentions and beliefs—sometimes even counter to those intentions and beliefs—idols can be coopted to represent both the dominant culture and the concerns and interests of outsiders,” write Lipsyte and Levine. Every so often, though, a dominant figure emerges in sport to renew the fan’s emotional involvement with sports that, according to historian Benjamin Rader, “encourages a kind of primitive solidarity among the population despite our diverse backgrounds. Our society has many forces that pull it apart . . . (Sports) is a tie that binds.”

—Daryl Umberger

Sports Illustrated

Using a blend of groundbreaking photography and revolutionary writing, *Sports Illustrated* changed the way spectator sports fit into American culture during the 1960s and 1970s. As the first weekly magazine devoted solely to sports, *Sports Illustrated* was a media leader that contributed, along with television, to sports moving from a pleasant diversion into big business, spewing out multi-million-dollar player salaries. The magazine's influence also cast beyond sports, as its annual mid-winter swimsuit issue became a popular phenomenon and created lasting changes in the modeling industry. "*Sports Illustrated* served as a counterbalance to the persistent hype of television, offering a way for new and educated fans to put the endless rounds of games and matches into a meaningful context," Michael MacCambridge observed in his book *The Franchise*. "It made an art out of in-depth reporting on those games, and thereby made the games themselves more important to more Americans."

Henry Luce, founder of Time Inc., the publisher of *Time* and *Life*, conceived the idea for *Sports Illustrated*. Though not much of a sports fan, Luce saw the potential for a weekly sports magazine based on the increased leisure time of the burgeoning post-war middle class, a large percentage of whom were migrating to the suburbs. Against the advice of his aides, who thought the idea folly, Luce launched

Sports Illustrated on August 16, 1954. Initially, the magazine covered an eclectic assortment of sports—big game hunting, yachting, horse racing, dog shows, and fishing, along with cooking, fashion, and travel—in addition to more traditional sports such as baseball, football, and boxing.

The magazine was positioned as a "class" magazine, much like the *New Yorker*, with sophisticated, intelligent, critical writing with no pandering. But it attracted neither readers nor advertisers in large numbers early on. The magazine began to fulfill its promise with the installation of Andre Laguerre as managing editor in 1960. Laguerre, a cosmopolitan and urbane native of France, had a keen appreciation for good writing. He focused the magazine on the four major team sports (baseball, football, basketball, and hockey) plus boxing, golf, and tennis. Fishing, which had ranked fourth among all sports in articles per year in the magazine's third year, ranked number 13 by 1963.

Laguerre hired two writers who would forever change the face of sports journalism: Dan Jenkins and Frank Deford. These two writers gave readers insight and analysis unavailable elsewhere and helped *SI*, as the magazine was often called, to create a new approach to sportswriting. MacCambridge described the *SI* style as "not just reporting or covering an event, but distilling it, capturing its essence and presenting it in a compressed, lyrical image of deadline literature and photojournalism."

SI became a part of the weekly routine as much as the daily sports page. Millions watched the games on the weekend, then waited for *SI* to arrive in their mailboxes on Thursday or Friday to tell them what had really happened behind the scenes. To many sports fans, *SI* was "the final word" and "an event wasn't real until ratified in the pages of *SI*." From its initial 350,000 subscriber base in 1954, circulation grew to 1 million readers in 1960, 2 million in the mid-1970s, 3 million in the mid-1980s, and topped out at nearly 3.5 million in the late 1980s.

As James Michener explained in his book *Sports in America*, "*Sports Illustrated* has become the bible of the industry, and it has done so because it appreciated from the start the facts that faced printed journalism in the age of television: don't give the scores, give the inside stories behind the scenes. And deal openly with those topics which men in saloons talk about in whispers." Besides the ongoing sports seasons, the magazine also took on hard subjects as exemplified by Jack Olsen's 1968 series on the exploitation of the black athlete, "The Black Athlete - A Shameful Story." In the late 1960s, *SI* also published series about the growing threat of drugs in sports, women's rights in athletics, and the electronic revolution in sports.

In addition to great writers, Laguerre also hired two photographers named Neil Leifer and Walter Iooss, who would transform the nature and art of sports photography. Leifer and Iooss shot many of the *SI* cover photos in the 1960s. As *SI* continually pushed the technological limits in color photography printing, Leifer and Iooss captured on film the very essence of a weekend sports event and had it appear within a few days in *SI*. Laguerre thus merged the best color with the latest analysis to expand the *SI* influence. In 1965, Leifer also shot what is considered one of the most famous sports photos of all-time, Muhammad Ali standing over a prostrate Sonny Liston with Ali's fist angrily imploring Liston off the canvas, with three faces—mouths agape—seen between Ali's legs. The image, oddly, was not chosen for the cover shot that week.

An athlete's appearance on the cover of *Sports Illustrated* became a cultural icon, proof of an athlete's legitimacy. People framed *SI* covers for keepsakes, beginning with the cover of its first issue in 1954, Milwaukee Braves' third baseman Eddie Mathews. The

top cover subject in the magazine's first 40 years was Ali, who appeared on 32 covers, followed closely by Michael Jordan with 30. Being on the *SI* cover also became identified as a jinx, a double-edged sword of being on top of the sports world but at risk for malfunctioning in the big game. The first incident occurred shortly after the release of the January 31, 1955 issue, with skier Jill Kinmont on the cover, when Kinmont fell in a ski meet that left her paralyzed below the neck.

Laguerre also pioneered the swimsuit issue in 1964. The original concept was as a "sunshine issue" in the bleak winter days of late January. It was designed to bridge the gap between the New Year's Day college bowl games to the start of baseball spring training in early March, in the years when basketball, either pro or college, had little national following. What might have been just a single issue article blossomed into an annual event, with the commotion about the issue. It brightened some people's winter, but outraged others. The issue went "from moral outrage to hallowed tradition in only one generation," Deford wrote in his 1989 retrospective on the swimsuit issue, "How It All Began."

To take charge of the swimsuit issue, Laguerre tapped Jule Campbell. After fashion model Babette March graced the 1964 initial cover, Campbell used unknown women with "natural" or "healthy" looks instead of the gaunt high fashion look. As the issue gained popularity, Campbell blended known faces with her "healthy" look. She even used the models' names in photo captions, providing a degree of identity that fashion magazines did not at the time. This helped to accelerate the career of Cheryl Tiegs, who appeared on the cover of the 1970 swimsuit issue, and some say, helped to usher in the supermodel era. Other famous models that appeared early in their careers on the cover of the swimsuit issue were Christie Brinkley (1979), Elle MacPherson (1986), and Kathy Ireland (1989).

As the issue's swimsuits became skimpier, the battlefield changed from moral corruption of youth to sexism. "Women should stop screaming about that one issue and start screaming that *SI* doesn't carry enough women's sports. That's sexism," tennis star Billie Jean King said. The debate came to a head with the 1978 issue, when Iooss photographed Tiegs wearing a fishnet swimsuit. When dry, the suit was sensual but not revealing in the upper body area. Tiegs, however, had dipped into the water and the wetness created an exceptionally provocative pose, leaving nothing to the viewer's imagination. The picture caused a furor, eliciting more letters and canceled subscriptions in the history of the swimsuit issue. But it was a defining moment for both the swimsuit issue and the supermodel industry. "If there was any doubt before that modeling was, like everything else, about to lose its virginity (or illusion of virginity) in the 70s, the January 1978 *Sports Illustrated* swimsuit issue put an end to it," Stephen Fried wrote in *Thing of Beauty*. "The uproar caused by one picture of Cheryl Tiegs reinforced the new truth that the way straight men perceived fashion models would determine the future of the business." "It's a sweet little picture, that's it," Tiegs told Michael Gross, author of *Model: The Ugly Business of Beautiful Women*. Gross went on to write, "But in fact, it was a major coup, adding the powerful appeal of the pinup picture to modeling's arsenal of promotional gimmicks."

As the swimsuit issue gained popularity, *SI* stepped up its marketing of the issue in the mid-1980s by introducing the swimsuit calendar and touting the models on the talk show circuit before the issue hit the newsstand. The 1986 issue with MacPherson on the cover sold 1.2 million copies at the newsstand, up from just 300,000 in 1983. The 25th anniversary issue in 1989 sold 2.7 million single

copies. Newsstand sales by 1996 had slumped back to 1986 levels, a reflection of the changing dynamics in sports journalism.

The creation of ESPN and other round-the-clock media in the 1980s made the magazine's original mission less compelling. Its influence began to wane as sports fans no longer depended on the magazine to explain what had happened a few days before, as a plethora of television highlight shows and the Internet had already done so. In the 1989 merger of Time with Warner, *SI* moved away from writing and began to pursue a strategy to "extend the brand." Videos and calendars were hawked in crass television advertisements, as were magazine subscriptions (example: this awesome [item] is free with your one-year subscription to *Sports Illustrated*, which includes the swimsuit issue!). A spin-off magazine was also introduced, *Sports Illustrated for Kids*.

In the 1990s, *Sports Illustrated* was as well known, if perhaps not more so, for its swimsuit issue, free videos, and clothing line as it was for the writing and photography that had made it famous in the first place. And thousands of loyal readers still treasured its arrival every week.

Spring Break

Each year, as the cold and gray of winter gives way to the bright new green of spring, human beings also experience an influx of energy: hopeful, youthful, and, at least partly, sexual. Psychologists explain this phenomenon with a variety of theories, but all agree that "spring fever" is normal and fairly universal. For the past six decades, American college students have celebrated this vernal "rising of the sap" with a unique ritual called "spring break," which involves travel to a sunny beachside resort to participate in drunken revelry and sexual debauchery. Though people of all ages, races, and classes may feel the urge to head somewhere sunny and warm as spring approaches, it is the fairly well-off, mostly white full-time students at four year colleges and universities that have created the famous phenomenon of spring break, celebrated in movies, television, and police blotters.

Traditionally, college spring vacations are scheduled sometime between the first Saturday in March and Easter Sunday in April. Students converge on the most fashionable spot they can afford to go to, often cramming 15 to 20 people in a motel room to limit expenses. Local bars cater to partying students, offering drink specials and rowdy entertainment such as Belly Flop, Hot Bod, and Wet T-shirt contests, designed to appeal to the young and inebriated. Vacationers

Young adults doing “The Twist” during a typical spring break.

sport T-shirts with such spirited slogans as, “I’m too drunk to fuck,” “Party Naked,” and “University of Heineken.” Crowds of tourists become a nightmare for local police, snarling traffic, littering and vandalizing the streets of resort towns. Many spring breaks have turned literally riotous, resulting in destruction of property and arrests. Cleaning up after spring break becomes a major expense for cities that draw large numbers of students, though the money the students pour into a community during those first weeks of spring tends to offset the disadvantages.

In 1936, the swim coach at Colgate University in Hamilton, New York, unwittingly began a tradition when he brought a few members of his swim team to train at the Casino Pool by the beach in Fort Lauderdale, Florida. The experiment was so successful that the entire team returned for Christmas vacation. In 1938, Fort Lauderdale continued to attract students as the Casino Pool hosted the first College Coaches’ Swim Forum, and the famous Elbo Room opened in the Seabreeze Hotel. By 1946, in spite of wartime travel restrictions, Fort Lauderdale had become a regular destination for college students on spring vacation. Fifteen thousand student revelers came in 1953, and in 1954, 20,000 arrived and started another spring break tradition: trouble with the police. That year, eight students were arrested for disorderly conduct and two for public indecency. Two were killed in drunk-driving incidents.

Time magazine reported on the phenomenon in 1959, and in 1960 a new film solidified Fort Lauderdale as spring break capitol of the United States. *Where the Boys Are*, starring Connie Francis, Paula Prentiss, and Yvette Mimieux, was the film version of a 1958 novel by Glendon Swarthout. It describes the adventures of three young college women on spring vacation in Fort Lauderdale, seeking independence, fun, and romance. The film, with its clean-cut adventure and obligatory cautionary tale of the tragic end of the girl who went too far, became an icon of the spring break experience. Along with the “Beach Party” movies of Frankie Avalon and Annette Funicello, *Where the Boys Are* advertised a beach vacation culture

that many students were eager to emulate. By 1961, 50,000 of them flocked to Fort Lauderdale to find it.

In 1963, *Palm Springs Weekend*, starring Connie Stevens and Troy Donahue, advertised Palm Springs, California, as another mecca for students and by the late 1960s Florida’s Daytona Beach was actively promoting itself as a spring break destination, trying to lure students and their dollars away from Fort Lauderdale. One hundred thousand students responded and converged on Daytona Beach.

The self-indulgent 1980s were peak years for the hedonistic spring revels. In 1983, the film *Spring Break* was released, with Tom Cruise and Shelly Long, and *Where the Boys Are* was remade in 1984. In 1985, spring break in Fort Lauderdale reached its height as 350,000 students crammed into the city. Fort Lauderdale had had enough. By erecting barricades between the beach and the streets and enforcing room occupancy rules and alcohol laws, the city managed to reduce its spring break tourism numbers back to 20,000 by 1989. Of those, 2,400 were arrested. Fort Lauderdale, while still a popular destination on a much smaller scale, relinquished its title of “spring break capitol” to Daytona Beach. By the mid-1990s, Daytona too was trying to find ways to manage the rowdy crowds without alienating the tourist dollars.

By the end of the 1990s, spring break vacation spots were much more varied, though there were still “hot spots” that attract hundreds of thousands of visitors. Panama City, Florida, hosted 550,000 student tourists in 1997, and little South Padre Island, Texas, which has a resident population of just over 1,000, welcomed 130,000 visitors in the spring of 1997. California also welcomed its share of visitors, especially in San Diego and Palm Springs. Ski vacations have become more and more popular and destinations like Colorado’s Vail and Steamboat Springs and California’s Lake Tahoe are flooded with students looking for both ski and apres-ski adventures. Foreign travel has an appeal as well, not the least of which is a drinking age of 18 in Mexico, the Bahamas, and Canada. Even in the United States, many resort towns resisted enforcing laws like the drinking age that might drive tourists away.

Many businesses not specifically related to the tourist trade also take advantage of the huge audiences drawn to spring break meccas. Daytona Beach hosts ExpoAmerica, a giant trade show with high-tech exhibits designed to appeal to modern students. Both CBS and MTV offer extensive spring break special telecasts from spots like Daytona and San Diego, to bring the festivities to those who had to stay at home. Some businesses even try to recruit employees among the crowds of student vacationers, though some report difficulties finding sober prospects.

Each generation has added its own personality to the celebration of spring break. Crazy Gregg, manager of venerable Fort Lauderdale institution the Button, explained in 1986, “Basically, we’ve had three different generations here. In the ’50s, the kids were more mellow and conservative, not blatant. In the late ’60s and early ’70s, they weren’t gung ho or rah-rah. They didn’t seem to want to have fun. When we played ‘God Bless America,’ they booed us. But now the pendulum has swung completely around. They enjoy themselves to the hilt. The morality is looser. Golly, I saw a guy walk through the hotel stark naked. They wouldn’t have done that 15 or 20 years ago.” The 1990s has brought its own influences to the spring break phenomenon. A sharpened awareness of the problems of alcoholism has resulted in a marked decrease in the glorification of drink at resort destinations. While there is still a high level of consumption, liquor and beer company advertisements are more likely to advise caution and adherence to drinking age laws, where a decade earlier they might

have focused only on the fun and excitement of drinking. Also evidence of a more serious generation is the “Breakaway” program at Vanderbilt University in Nashville, Tennessee. Started in 1991, Breakaway is a national network that arranges what it terms “alternative spring break” for students who would rather volunteer in soup kitchen, homeless shelters, and other community programs than spend a week getting drunk and having casual sex. In its first year, the Breakaway network served 2,500 students in 40 colleges nationwide. By the late 1990s, it arranged volunteer work for close to 15,000 students in 350 colleges.

Spring break came of age in the 1950s and 1960s when students needed a hedonistic outlet from a repressive society. Perhaps in the pleasure-seeking culture of the 1990s, what young people really seek is an escape from self-indulgence.

Springer, Jerry (1944—)

Jerry Springer has taken the talk show genre to a new level, and placed himself at the helm of a growing public controversy. Banned by placard-carrying ministers who protest outside its Chicago studios, *The Jerry Springer Show* combines drama and sensationalism that borders on the hilarious. Since its debut in 1991, the show’s outrageous style and often perverse topics have either strongly enticed or offended individuals. The show not only allows but encourages brawls between its guests, egged on by Springer’s audience of adoring fans, who repeatedly chant, “Jerry, Jerry, Jerry!” Guests are permitted to vent antagonistic emotions that often result in physical fights, quelled at the last minute by clean-cut, beefy bouncers. In addition to his public defense of his show, Springer has also been in the news as the subject of an alleged sex scandal with a porn star and her stepmother (the romping was supposedly caught on tape), both of whom were guests on his show. Springer has also starred in the 1998 film *Ringmaster* (also the title of his autobiography).

Before becoming a talk show host, Springer, who has a law degree from Northwestern University, had a brief political career as the mayor of Cincinnati in the 1970s and worked as a news anchorman and commentator in Cincinnati in the 1980s, during which time he won seven Emmys. But when a Chicago station in the 1990s hired him, an anchorwoman promptly resigned in disgust, calling him “the poster child for the worst television has to offer.”

Talk shows have served different purposes. They can act as an informal, supportive forum for topics and guests varying in controversy. But with a growing interest people have in hearing titillating, personal, and sometimes shocking details concerning others’ lives, formats have swiftly veered towards the sensational. The trend was first started on the *Rikki Lake Show* (1993), when producers began encouraging confrontations among guests. A success, it spawned

Jerry Springer

imitators, as well as a growing group of those opposed to what has been labeled “trash TV.” *The Jerry Springer Show* took the sensationalism one step further and became the first talk show to include physical confrontation on a regular basis. The show’s swift rise in ratings and the popularity of its host have confirmed for many that people find the show entertaining. Critics say people watch the show for the same reasons they would drive slowly by a traffic accident. Because *The Jerry Springer Show* tends to deal with such outrageous and often hopeless problems, some contend that people viewing it tend to feel better about their own lives.

Guests on the show are often marginalized people who solve their problems through physical conflict. The regularity of the fights on the show have prompted speculation into whether the fights are staged with out-of-work actors. If the fights are genuine, one can imagine the pre-show akin to a cockfight, in which guests are purposely baited against each other. Because of the nature of the show’s topics and the often consistent personality traits of its guests, it has come to be known as a humorous “white trash” sensation. Springer says that he encourages guests to be as outrageous as possible, but defends his show against charges of exploitation, stating that his critics are “elitists” who only want to see beautiful or rich people discussing their problems on television. But poverty should not be an excuse for extreme, inappropriate behavior, like mothers sleeping with their 13-year-old daughter’s ex-boyfriends (a past show topic). Other topics include a family of strippers, and possibly the most perverse in all of talk show history—bestiality.

Not every topic on the show has shock value, however, the appearance of brawling guests has been consistent. Springer has

featured interracial couples facing disapproval from their families, for example. And, at the end of every show, Jerry offers a brief but eloquent epitaph, his “Final Thought,” that functions as the show’s “moral” thermometer. After an episode on cheating lovers, for example, he counseled viewers that it is unhealthy to pursue someone who does not want you, and to work on raising their self-esteem. Delivered with an authentic smile, he manages to convey that although he will quietly observe the antics onstage, he may really want people to be happy.

Jerry Springer is most certainly an enigma, and a man of contradictions. As the “ringmaster” of his exhibitionist show, he maintains a relatively private life. He often takes pride in his work, stating that it gives a platform to people media “snobs” would rather ignore, but he is often surprised at his own success, dismissing his program as a “circus” and saying, “I don’t have any talent.” He has been an active voice and fundraiser for various charities. He also has country music aspirations. “It struck me that the subjects of country songs and talk shows are very similar,” he said. Springer now has a music CD out, and will tour as his schedule permits. He has even impersonated Elvis.

Springsteen, Bruce (1949—)

Bruce Springsteen has placed himself in a lineage of folk and popular musicians, including Woody Guthrie and Bob Dylan, who have sought to effect social change. An acclaimed songwriter and energetic performer, Springsteen spent his early years singing in New Jersey bars, garnered a sizable commercial audience by 1975, and achieved superstar status with the release of *Born in the USA* (1984). His tremendous popularity, combined with his own ambition for success, opened his music to interpretations that seemed to conflict with his populist lyrics. Anxious to ride the bandwagon of his success, politicians and pundits appropriated his image to support their own perspectives. In much of the work that followed *Born in the USA*, however, Springsteen made a self-conscious effort to elucidate a liberal cultural politics.

Born in Freehold, New Jersey, Springsteen grew up in an austere working-class household. Uninterested in school, he was fascinated by Elvis Presley’s 1957 performance on the *Ed Sullivan Show* and began to imagine that rock and roll might provide a ticket out of his socioeconomic situation. After leading several bands in the late 1960s, Springsteen was performing acoustic shows in Greenwich Village when he auditioned for the legendary Columbia Records

Bruce Springsteen

talent scout, John Hammond, in 1972. “The kid absolutely knocked me out,” recalled Hammond, who billed the guitarist as the successor to another of his “discoveries,” Bob Dylan.

Springsteen’s first two albums, *Greetings from Asbury Park, N.J.* (1973) and *The Wild, the Innocent, and the E Street Shuffle* (1973), chronicled the culture of the New York streets and Jersey boardwalks in a familiar Dylanesque style. Despite lackluster sales figures, Springsteen enjoyed a warm critical reception and began to establish a loyal following along the eastern seaboard. Backed by the E Street Band, he was renowned for electrifying performances that often exceeded three hours. His tremendous energy caught the eye of former *Rolling Stone* critic Jon Landau, whose enthusiastic review of a 1974 concert transformed Springsteen’s career. “I saw the rock and roll future,” wrote Landau in *The Real Paper*, “and its name is Bruce Springsteen.” Columbia enlisted this hyperbole to launch a marketing blitz for *Born to Run* (1975), which landed Springsteen on the covers of the October 27, 1975 issues of *Time* and *Newsweek*. The album was both a critical and commercial triumph, attaining platinum status within four months.

Springsteen’s career stalled, however, when he became entangled in a legal battle with manager Mike Appel. In 1976, Springsteen and Appel filed countersuits involving copyrights and royalty payments. Appel won a court injunction that prohibited Springsteen from

recording a new album with Landau, who became the musician's manager when the dispute ended a year later.

The hiatus was intellectually productive for Springsteen. At Landau's urging, he read the works of Flannery O'Connor and John Steinbeck, and watched the films of John Ford and Sergio Leone. Inspired in part by Steinbeck's *Grapes of Wrath* (1939) and Ford's 1940 adaptation of it, *Darkness on the Edge of Town* (1978) marked a turning point in his career. While *Born to Run* expressed a longing to escape the rigors of working-class life, *Darkness* explored the human costs of social and economic injustices.

This change in perspective compelled Springsteen to develop a political consciousness. Following the 1979 Three Mile Island crisis, he headlined several shows for Musicians United for Safe Energy, an anti-nuclear power consortium that included Bonnie Raitt and Jackson Browne. Two years later, he staged a benefit for the Vietnam Veterans' Association, asking the audience to help heal the physical and psychological wounds inflicted on the soldiers who fought the nation's most unpopular war.

Meanwhile, Springsteen's double album, *The River* (1980), soared to number one on the *Billboard* chart and produced "Hungry Heart," his first top ten hit. *The River* treated familiar topics of cars and girls, but also revealed Springsteen's burgeoning interest in both traditional music and social issues. In the late 1970s, he had begun to listen to classic country recordings as well as the Folkways Records *Anthology of American Folk Music* (1952). Based on Hank Williams's "Long Gone Lonesome Blues," the album's title track was a particularly moving ballad about two teenagers who have a child, marry, and watch their dreams evaporate in the face of economic uncertainty. Springsteen later identified this song as a breakthrough in his writing.

In November 1980, Springsteen acquired a copy of Joe Klein's *Woody Guthrie: A Life* (1980). Impressed with Guthrie's artistry and political commitments, he began to cover the folksinger's "This Land Is Your Land" (1940) in his concerts. Guthrie's influence was palpable on *Nebraska* (1982), a largely acoustic and remarkably uncommercial album that Springsteen recorded in his home. Sparse guitars, wailing harmonicas, and somber vocals guided listeners through a desolate, deprived landscape where individuals committed acts of desperation, ranging from petty crimes to mass murders. Greil Marcus described *Nebraska* as "the most convincing statement of resistance and refusal that Ronald Reagan's U.S.A. has yet elicited"; *Rolling Stone*, one of Springsteen's staunchest supporters, called it his "bravest" album, a work that solidified his reputation as a performer who cared more about artistic integrity than commercial success.

The validity of such observations was complicated when Springsteen attained unimagined fame and fortune in 1984. *Born in the USA* sold 20 million copies, generated seven top ten singles, fueled a world-wide stadium tour (1984-1985), and, with the aid of music video, introduced Springsteen to a younger generation. This success, which Springsteen actively cultivated and obviously enjoyed, clouded his politics. Unlike most of the album's songs, which eschewed the bleak realities of *Nebraska*, "Born in the USA" told the story of an unemployed Vietnam veteran who lost his brother in the war. The lyrics clearly questioned the morality of war as well as the country's treatment of its veterans, yet much of Springsteen's audience misconstrued his intentions. The ringing melody and the exuberant chorus of "Born in the USA" led listeners to interpret it as a

jingoistic celebration of American militarism. Moreover, the working-class woes that Springsteen expressed were lost in the celebration of his own success story.

Politicians scrambled to claim Springsteen as their own. Syndicated columnist George Will lauded him for both his optimism and the work ethic he demonstrated in his four-hour shows. Will's enthusiasm convinced Reagan to invoke the musician during a campaign stop in New Jersey. "America's future rests in the message of hope in songs of a man so many young Americans admire: New Jersey's own Bruce Springsteen," remarked the president. "And helping you make those dreams come true is what this job of mine is all about." Springsteen's anti-war song conflicted with Reagan's aggressive military policies, but the president's appropriation confused the musician's intentions. The song was further obscured by Sylvester Stallone's *Rambo: First Blood Part 2* (1985), a film that sought to redeem America's performance in Vietnam. Soon after its release, major newspapers dubbed Springsteen, whose muscle-bound body resembled Stallone's, "The Rambo of Rock."

Springsteen was not an innocent bystander in this process. The Los Angeles Summer Olympic Games and the presidential election made 1984 a year for stars and stripes, a fact he exploited by placing the flag on the album cover and using it as a backdrop to his concert stage. Moreover, as his detested sobriquet "The Boss" suggested, he projected a commanding masculine presence that made it difficult to separate him from the hard-nosed aggression and conservatism that both Reagan and Rambo represented. But if Springsteen capitalized on the resurgence in American patriotism, he made an effort to clarify his politics. At a Pittsburgh concert, he dedicated "Johnny 99," a song about an unemployed autoworker, to the president. Three days after Reagan's remarks, he initiated a \$2 million personal charity campaign by donating \$10,000 to a union-sponsored food bank.

In 1986, Springsteen documented his concert legend with the release *Live/ 1975-1985*, a 40-song compendium that used long introductory speeches to "The River" and a rendition of Edwin Starr's "War" to express his disapproval of American military policy. He continued to articulate liberal viewpoints following the release of *Tunnel of Love* (1987), a collection inspired by his failing marriage to actress Julianne Phillips. In 1988, he underscored his connection to Guthrie by recording ballads about homelessness for the tribute album, *A Vision Shared*. More importantly, he headlined Amnesty International's Human Rights Now! Tour, where he criticized the "economic apartheid" that existed in the United States.

After divorcing Phillips and breaking up the E Street Band in 1989, Springsteen entered a period of depression and took a sojourn from cultural politics. Like *Tunnel*, *Human Touch* and *Lucky Town* (1992) explored the dynamics of gender relationships, celebrating his subsequent marriage to former band member Patti Scialfa and the birth of their children. Disappointing sales prompted many critics to question Springsteen's viability in a changing market, but success returned when he reembraced social issues in "Streets of Philadelphia." Written for Jonathan Demme's motion picture about an AIDS (Acquired Immune Deficiency Syndrome) patient, the composition won an Academy Award in 1994. A year later, Springsteen earned his second Oscar nomination with "Dead Man Walkin'."

Springsteen reconvened the E Street Band to record four new songs for *Greatest Hits* (1995), but promptly returned to solo work. *The Ghost of Tom Joad* (1995) reasserted his connection to Steinbeck,

Ford, and Guthrie: Joad was the protagonist of *Grapes of Wrath* and the subject of a lengthy Guthrie ballad. Following in the footsteps of its cultural predecessors, the folk-styled album explored the plight of the underclass and identified injustices endured by Mexican immigrants. To ensure that his political intentions were understood, Springsteen embarked on an acoustic tour during which he performed his most socially engaged songs and explained the meaning of and inspiration for his lyrics. He reiterated his politics on a 1996 edition of *60 Minutes*, where he criticized the policies of the Reagan-Bush years and urged his audience to promote values of human welfare rather than individualism.

In the late 1990s, Springsteen remains one of the most influential and politically engaged performers in popular music. His historical awareness has led him to become involved in the promotion of the Rock and Roll Hall of Fame, into which he was inducted in 1999.

Sprinkle, Annie (1955—)

American performance artist Annie Sprinkle (born Ellen Steinberg) made her mark as one of the pre-eminent practitioners of the art form in the 1980s with her one-woman show "Post-Porn Modernist." Described in a British broadsheet newspaper in 1999 as "porn-queen-turned-new-age-sex-goddess," Sprinkle's onstage antics invoked the wrath of conservatives, who used her work, along with that of certain others, as a weapon for the argument to cut funding to the National Endowment for the Arts. Although allying her work to the feminist cause, she has also offended mainstream feminists. Her controversial exhibition, which aimed to demystify the female body and encourage sex as a spiritual act, included simulating oral sex, performing masturbation, and inviting audience members to inspect her cervix. Sprinkle began her career as a prostitute in a massage parlor and went on to act in over 200 adult films and videos throughout the 1970s and 1980s, in addition to serving as the editor of a pornographic magazine and contributing to many others.

Sputnik

A thin plume of orange rising into the Soviet sky on October 4, 1957, carried aloft humankind's first artificial satellite. A 22-inch, 184-pound, beeping sphere, Sputnik ("Fellow Traveler") marked the beginning of a new chapter in the Cold War, where national prestige would be measured by a race in space. An incredible technological achievement in which all of humanity should have taken pride, the flight of Sputnik 1 and its successors (launched through 1961), was transformed into propaganda by the intense political posturing of the Cold War. For the Soviets, a supposedly technically backward nation, Sputnik instilled national pride; for the United States, watching their own puny Vanguard rockets fizzle and blow up on the launch pad, it enhanced fears of the growing Red Menace. While the satellite fell from orbit in January 1958, the word Sputnik became embedded in the American lexicon—symbolizing a period in time in which the United States first realized space exploration would not be a wholly American enterprise.

The International Geophysical Year, a period of worldwide scientific study spanning from July 1957 to December 1958, prompted efforts toward the development of satellites. President Dwight

The Soviet satellite Sputnik I.

Eisenhower announced that the United States would orbit a scientific package—Project Vanguard—during the IGY with an anticipated launch date in March 1958. Unlike Soviet Premier Nikita Khrushchev, the administration failed to foresee the propaganda coup of placing the first manmade object into space. Sputnik captured headlines around the world. The Soviet News agency TASS boasted how the people of a Socialist society turned dreams into reality.

Noted atomic weapons pioneer Edward Teller professed, “America has lost a battle more important and greater than Pearl Harbor.” Following the revelations of the Rosenberg trial, McCarthy hearings, the fall of mainland China to a Red Mao, conflict in Korea and the Revolt in Hungary, Sputnik only added to a sense of fear toward the Red Menace by Americans. Eisenhower sought to alleviate anxiety by reminding the nation that U.S. satellite efforts had not been conducted as a race with other nations. Not only was Vanguard on schedule, it would make serious contributions to science, while Sputnik did little more than transmit its location. Such reassurances did little to calm the citizenry as a blanket of paranoia and insecurity unfurled across the nation.

The role of the United States as the leader in science and technology was being directly challenged. Before Sputnik, there was a widespread belief by Americans that the Soviets were far behind the United States in such areas, relying on espionage rather than originality. Had such smugness bred mental stagnation among Americans? Senator Styles Bridges made this case declaring, “The time has clearly come to be less concerned with the depth on the new broadloom rug or the height of the tail fin of the car and to be more prepared to shed blood, sweat and tears if this country and the free world are to survive.”

A second Sputnik launched in less than a month, on November 3, only served to increase the nation’s anxiety. Sputnik II weighed an incredible 1,100 pounds and contained a living passenger, a dog named Laika. Clearly, any booster capable of such feats had to possess a massive thrust capacity. This brought to light fears the Soviets were on the verge of perfecting the first Intercontinental Ballistic Missile and with it nuclear warheads that could rain down upon the United States at any given moment.

Attempting to bolster national pride domestically and the United States image abroad, the White House ordered an acceleration of Vanguard’s timetable by four months to attempt a December 1957 launch. With the nation’s eyes transfixed on Cape Canaveral, the pencil-like Vanguard rose four feet, dropped, and burst into a pyrotechnic display of brilliant orange and white flames. The Soviet United Nations delegation promptly inquired if the United States desired to enlist rocketry aid under their nation’s program of technical assistance to backward nations.

The United States did successfully launch the 31-pound Explorer 1 on January 31, 1958. In May, the Soviets launched Sputnik 3, which carried the first space laboratory and used solar energy to power its instruments and transmitters. Sputniks 5 through 10 (four of which carried dogs) were launched 1960-61; these were working models of the spacecraft that carried Yuri Alekseyevich Gagarin, the first human passenger, into space in 1961.

Politically, the impact of Sputnik within the United States would be far-reaching. In Washington, critics charged that the president’s policy of fiscal responsibility hindered the military’s ability to develop ICBMs. Senate Majority Leader Lyndon Baines Johnson opened a subcommittee of the Senate Armed Services Committee to review the nation’s missile and space programs. Eisenhower succumbed to such pressures, increasing defense dollars allocated for

missiles. To ensure the peaceful exploration of space, the president called for the creation of a civilian space agency. The National Aeronautics and Space Act of 1958 formally established the National Aeronautics and Space Administration. Through NASA the nation set forth to combat the Soviets in this new arena of the Cold War called the space race. Because some critics charged the U.S. educational system with not stressing the same fundamentals in science and mathematics as the Soviet system, the National Defense Education Act allocated nearly \$1 billion to increase science, mathematics, and foreign languages in elementary, secondary, and collegiate education. American school children needed to be as versed in algebra formulas as they were in baseball batting averages if the United States hoped to surpass Sputnik.

While average Americans found themselves terrified by Sputnik, it became a phenomenon filtering into their everyday lives. Sputnik-watching became a popular evening event. Broadcast in a frequency range that amateur short-wave radio operators could receive, the beeps of Sputnik were as familiar to many families as the “Ballad of Davy Crockett.” Toy stores found their shelves lined with Sputnik-inspired toys. David Glover wrote and published the song “Go! Sputnik Boogie.” Bartenders concocted Sputnik cocktails—with vodka as a primary component, naturally.

St. Denis, Ruth (1879?-1968)

Early-twentieth-century American dancer and choreographer Ruth St. Denis is often considered to be the mother of modern dance. Born Ruth Dennis in Newark, New Jersey, she began her dance career as a teenager and took the stage name Ruth St. Denis. St. Denis traveled extensively, performing on the vaudeville circuit in the United States and using her visits abroad to learn about the dances of other countries. She was the first to present Eastern dance forms and themes to American audiences, developing a nationwide acceptance of Eastern art. She performed her first dance work, *Radha*, in New York in 1906 after studying Hindu art and philosophy. With her husband and dance partner, Ted Shawn, she created a dance school and popular performing company known as Denishawn in 1915 in Los Angeles, California. The two profoundly influenced modern dance through their company, the first organized center for dance experiment in the United States; they separated, both professionally and personally, in 1931. St. Denis will be remembered for her

teachings and often religious choreographic works that helped to establish modern dance as a serious artistic genre for later generations. A dancer of considerable power and beauty, St. Denis was a great inspiration to her three most accomplished students: Martha Graham, Doris Humphrey, and Charles Weidman, who each became legendary modern dance figures in their own right. Called the “First Lady of American Dance,” St. Denis performed into the 1960s.

St. Elsewhere

Medical dramas like *Dr. Kildare*, *Medical Center*, *Chicago Hope*, and *ER* have long been one of the most popular television show formats. Of the many programs that presented the issues surrounding major medical institutions, none was more unique, ambitious, and unpredictable than *St. Elsewhere*. The series, which ran on NBC from 1982 to 1988, focused on the lives of the doctors, nurses, and patients at St. Eligius, an inner city Boston teaching hospital. Each episode offered a realistic look at the fallibility of doctors, the stresses of being hospitalized, and the ethical dilemmas inherent in the practice of medicine. Mixed in with the often tragic storylines were oblique jokes, subtle bawdy humor, and countless intertextual references to other works of popular culture. Although the series often struggled with mediocre ratings, its strong appeal to the demographically important baby-boomer and upscale urban professional audiences allowed the idiosyncratic show to remain on the air. After its surreal final episode, *St. Elsewhere* was widely hailed as one of television’s most literate and original programs.

The term “St. Elsewhere” is derived from medical school jargon for a hospital that serves as a dumping ground for patients not wanted by more prestigious medical facilities. Unlike its namesake, however, the series had a distinguished pedigree. Joshua Brand and John Falsey, staff writers on the basketball series *The White Shadow*, were encouraged to create the series after hearing of a friend’s experiences as an intern at the Cleveland Clinic. They assembled a core group of young producers and writers, including Bruce Paltrow, Mark Tinker, John Masius, and Tom Fontana, who crafted a program distinctly different than previous medical dramas featuring noble and perfect physicians. Their stories presented flawed doctors trying, and often failing, to provide the best medical care in less than ideal circumstances. The show’s narrative center was held by three veteran physicians: Daniel Auschlander (Norman Lloyd), a liver specialist faced with liver cancer; Donald Westphall (Ed Flanders), a widowed chief of staff raising an autistic son; and Mark Craig (William Daniels), a brilliant and heartless heart surgeon. Many young residents, who confronted their own problems, surrounded them. That the

series was set in a large, decaying urban institution, featured a large and diverse cast, and continued plots over a number of episodes caused many to initially consider the series as little more than “*Hill Street Blues* in a hospital.”

In 1986, executive producer Bruce Paltrow said of the series: “The original concept was to try to do an ensemble medical drama in a real way, with a kind of spontaneity and snap—and comedy.” The intense realism of the series was evident in its willingness to frankly address such issues as breast cancer, rape, infertility, impotence, and addiction. A 1983 episode contained one of network television’s first dramatic presentations of the AIDS (Acquired Immune Deficiency Syndrome) crisis. To heighten the sense of reality, the writers routinely placed their main characters in life-threatening situations from which they did not always survive. Over the years main characters left the show through such means as committing suicide, being murdered, going to prison, and contracting fatal diseases. Howie Mandel, who played a resident, reflected that the characters were as vulnerable as real people when he said: “I could get hit by a car and killed on my way to work and so could Fiscus (Mandel’s character). You always felt they could’ve killed anybody off. It wasn’t past what they would do on *St. Elsewhere*.”

The harshly realistic tone of the series was tempered by the writers’ willingness to experiment with the show’s form and their frequent use of black humor and pop culture references. The obnoxious patient Mrs. Hufnagel entered St. Eligius for an entire season only to die in a freak accident when her bed folded up on her. Another recurring patient, the amnesiac John Doe number six, became convinced he was “Mary Richards” from the *Mary Tyler Moore Show*. For that episode the writers included dozens of references to the classic series and other MTM productions. A highlight was a scene in a psych ward featuring actor Jack Riley as “Mr. Carlin,” his neurotic character from *The Bob Newhart Show*. Episodes that departed from the show’s usual format included one doctor’s journey to heaven where he met God and another structured like the play *Our Town*. Robert Thompson, director of the Center for the Study of Popular Television at Syracuse University, stated “More than any other series in the history of American television, *St. Elsewhere* rewarded the attentive viewer.”

Careful viewers were aware of the writers’ affinity for placing dirty, but subtle, jokes in many episodes. The most infamous was one of the first references to oral sex on network television. While dictating a novel Dr. Craig stated: “She came in from the garden, cheeks flushed, arms filled with flowers. I sat playing the Wurlitzer. She said ‘Where would you like these?’ I smiled. ‘Put the roses on the piano and the tulips on the organ.’” Such hidden gags were a bonus for active viewers. The series’ final episode itself contained dozens of references to other programs throughout television history. In its final moments the writers offered devoted viewers a great surprise as it was revealed that the hospital was only a model within a snowglobe. The entire series had sprung from the imagination of Westphall’s autistic son.

Few television programs can claim to be as thoroughly dramatic, humorous, and inventive as *St. Elsewhere*. The writers demonstrated respect for their audience’s intelligence on a weekly basis and revealed that network television can provide a level of sophistication beyond mere mindless entertainment. Furthermore, the constant intertextual references demonstrated that television possesses a rich heritage that can be drawn from by capable artists. Although it may

not have been high in the ratings, the series stands as a high point in television history that has rarely been matched by other series.

Stadium Concerts

In the 1970s, stadiums became the main venue for staging concert performances of popular music. From country and rock music stars to more traditional singers like Frank Sinatra and Barbra Streisand, popular performers attracted audience sizes anywhere

from 20,000 to 100,000 people at a time. Rock music—with its mass participation and the sheer volume that was necessary to reach so many people at once—was particularly suited to playing concerts at football stadiums and in sports arenas. Rock musicians looked to the stadium as a way to play in front of the most people, for the most money, as audiences broadened during the seventies. Rock’s dominance on the concert circuit continued into the 1990s. Of the 20 top-grossing North American concert tours between 1985 and 1994, the average tour grossed \$55 million and visited 42 cities; nearly all of them were rock artists.

Rock’s first stadium concert was in 1965, when the Beatles performed in New York’s Shea Stadium to 55,000 screaming fans. Newspaper reports treated the concert as a curious aberration. The *New York Times* referred to the screaming fans’ “immature lungs,” which produced a “magnificent and terrifying voice,” and quoted a policewoman who called the fans “psychos.” The Shea Stadium concert, at which the Beatles earned more than \$160,000 for 28 minutes’ work, prefigured rock’s commercial power. By 1967, outdoor rock festivals began attracting audiences on an even larger scale. The Monterey Pop Festival in 1967 drew more than 50,000 people, while the 1969 Woodstock festival attracted more than 400,000. The festivals accustomed rock fans to attend concerts in large numbers, but they were plagued by major problems. Festival promoters were

Queen guitarist Brian May (left) performing with Slash at the Freddie Mercury Tribute Concert at Wembley Stadium, 1992.

often corrupt or inept, and violence was a looming threat that was realized at Altamont. In ensuing years, concert promoters—by having to coordinate 40-city tours—had no other choice but to improve; violence, as always, remained a threat.

Rock's development toward big business can be partly tracked by the growing professionalism among rock acts. At the beginning of the seventies, rock acts like the Rolling Stones and Led Zeppelin would routinely arrive at concerts an hour or more late; in addition, the Stones would not do encores. Jefferson Airplane's Paul Kantner, in *Bill Graham Presents*, expressed the attitude toward performing in rock's pre-stadium era: "A show was not just a performance. . . . A show was a whole social something-or-other. Bonfire ceremony or something. After we played, we wanted to go out and hustle girls. Get drunk and party, come back and play another set, go out and party again, and pretty soon dawn was there. To break that up was business." The move toward the stadiums was inevitable, however, as rock artists commanded greater receipts. Madison Square Garden and places like it, "could not have had an artist play there unless the artist said they wanted to," said Graham, who added that, at the time, he thought stadiums "should just be for . . . Roller Derby and boxing."

In the 1970s, declared *Rolling Stone* magazine, "there was no unifying presence in rock . . . and no artist whose latest record had to be heard by every fan and musician. By the time the decade began, rock was entertainment; in fact, it was well on its way to being the entertainment industry." Soon, performers were accompanied by special effects, like pyrotechnics or laser light shows. Professionalism had become the norm, as the stadium concert gave birth to one of rock's biggest clichés: the audience ritual of requesting encores by holding lit cigarette lighters into the darkness of the arena. If the outdoor festivals were characterized by their free-form nature, then the stadium concert was defined by its ritualistic showmanship.

Holding the attention of 20,000 (or more) people at a time was a serious challenge to those performing, and the rock star was well-armed. Any given tour might include several buses, a couple of trailer rigs, and a road crew ("roadies") to set up and disassemble increasingly elaborate stages; stacks of speakers became impossibly high towers that could allow performers to reach 120 decibels. The amplifiers were as much an assault on the poor acoustics as they were upon the audiences.

The dark side to such mass gatherings, when part of the audience was drinking, drugging, or both, was security concerns. The "stage rush," where people in front rows pushed forward toward the stage, sometimes threatened performers. At other times, the concert frenzy could produce tragedy, like the December 1979 Who concert at Cincinnati's Riverfront Stadium. A stampede of 7,000 people, through two open banks of doors, resulted in the trampling deaths of 11 people. A later-abandoned practice known as "festival seating," in which concertgoers entered the stadium by dashing to secure the best seat possible, was held to blame.

By the late 1980s, rock and country artists used stadium concerts as a way to voice their social concerns. Stadium-sized benefits of the late 1980s included Farm Aid—relief for America's farmers—and the Conspiracy of Hope Tour for Amnesty International. The biggest benefit concerts were the simultaneous Live Aid shows in Philadelphia and London. On July 13, 1985, between one-and-a-half and two billion people worldwide watched the televised concert. In the process, the event raised more than \$100 million for African famine relief. Tours for individual groups grew to comparable proportions. The top two touring acts of 1994, the Stones and Pink Floyd, grossed

\$121 million and \$103 million, respectively. Stadiums with a 20,000-seat capacity, which were considered to be the big prizes in the 1970s, had become second-tier venues when superstar groups were on the road.

Stagecoach

The critically-acclaimed classic film, *Stagecoach* (1939), not only helped to revive the A-movie Western, which had been out of favor since the advent of the sound era, but it cemented director John Ford's reputation as one of America's greatest filmmakers. And, as if that weren't enough, *Stagecoach* was the movie that catapulted John Wayne into stardom. Based on Ernest Haycox's short story, "Stage to Lordsburg," *Stagecoach* follows eight travelers on a trip through Indian country and explores the tensions and relationships that emerge during times of crisis.

Despite its big-movie pretensions, *Stagecoach* shares many similarities with B-movie Westerns. Its main characters are standard clichés from any number of low-grade cowboy flicks: Ringo (John Wayne), the young outlaw bent on revenge; Dallas (Clare Trevor), the prostitute with a heart of gold; Boone (Thomas Mitchell), the drunken doctor; Gatewood (Benton Churchill), the pompous businessman; Hatfield (John Carradine), the chivalrous gambler; Lucy (Louise Platt), the snobbish rich lady; and Peacock (Donald Meek), the timid whiskey drummer, are hardly unique to this film. Nor is the plot particularly original, with chases and shootouts that are typical Western fare.

What makes the film special is its character development and, more importantly, the clear social vision it presented to movie audiences mired in the Great Depression. Primary to this vision was the idea of community. The coach itself, set adrift in the savage wilderness of Indian country, represents a microcosm of civilized society. The passengers in the stagecoach-society are clearly from

Claire Trevor and John Wayne in a scene from the film *Stagecoach*.

diverse backgrounds. In the course of the film, however, these outlaws, out-of-towners, and snobs work through their differences to form a cohesive unit (with one notable exception). The driving force behind their union is crisis. The premature birth of Lucy's baby forces Dr. Boone to sober up, brings Dallas and Lucy together, and draws sympathy from the others. Similarly, the climactic (if not slightly stereotypical) Indian-coach chase requires these disparate elements to join forces to repel the common foe. The message was clear for contemporary audiences, who themselves faced a different sort of crisis: The best way to persevere through hard times is to band together and fight. Ford was no utopian idealist, however. Once the danger had passed and the stage reached Lordsburg (an ironic name, considering the amount of gambling, prostitution, and gunplay that took place there), the group went their separate ways. Clearly, such a community could only exist in extraordinary times.

But Ford's community is not all-inclusive. Significantly, the banker Gatewood is left out, as if he had no role in society. Depression-era audiences, who largely blamed bankers for the decade's ills, found in Gatewood a figure richly deserving of their scorn. While others try to help Lucy after she gives birth, Gatewood impatiently demands that the coach continue its trip. He is notably absent in the chase scene, remaining invisible inside the moving coach while the others desperately fire at the marauding Indians from its windows.

Gatewood presents an alternative social vision, which is roundly rejected. The other passengers are noticeably bored when he demands that bankers be free from government inspection and proclaims that America needs a "businessman for president." Their disinterest is a swipe at the conservative Republican administrations of the 1920s and is an implicit nod of support for the more liberal Franklin Roosevelt and his New Deal. At the film's end, Gatewood is revealed as a thief and dragged off in handcuffs.

Ford extended his vision beyond this call for community and used *Stagecoach* to present a largely traditionalist idea of the perfect man and woman. *Stagecoach*'s heroic men are tough and rugged problem-solvers who are not afraid to use weapons to defend themselves and their civilization from outside threats. Fainthearted men like Peacock are lampooned and exposed as effeminate. "I've had five children," Peacock notes when Lucy is in labor. "I mean," he notes, "my dear wife has." Throughout the movie, Peacock, doing his best impression of a disapproving nurse, tries to dissuade the alcoholic Dr. Boone from imbibing. Women, conversely, are most sympathetic when acting as mothers. The cold and aloof Lucy becomes a much more likable character once she has her baby, and Ringo first expresses his feelings for Stella after he admires her as she holds Lucy's baby. These ideal types are as important to *Stagecoach*'s message as its presentation of a society in crisis; to weather times of

trouble, a community needed to be made up of the right kind of people.

Stagecoach struck a chord with both critics and audiences. The *New York Times* hailed the film as “a noble horse opera,” and declared the film “a beautiful sight to see.” *Variety* called *Stagecoach* a “sweeping and powerful drama” and enthusiastically lauded its “photographic grandeur.” The film packed movie houses and won Academy Awards for Best Supporting Actor (Thomas Mitchell) and Best Score.

Stagecoach was John Ford’s first Western since 1926’s *3 Bad Men*, and was his first “talkie” Western (he had made forty-three silent Westerns). He would go on to make many more, including *Fort Apache* (1948), *She Wore a Yellow Ribbon* (1949), and *The Man Who Shot Liberty Valance* (1962), all of which starred John Wayne. Many, however, still consider *Stagecoach* to be Ford’s best.

Stagg, Amos Alonzo (1862-1965)

Amos Alonzo Stagg, the charismatic “Grand Old Man” of college football, was one of the sport’s immortal leaders and innovative strategists. Stagg coached on the college level for an astounding 57 seasons. He started out at Springfield College in Massachusetts and, in 1892, became head football coach and associate professor of physical culture at the University of Chicago, where he enjoyed his lengthiest coaching tenure of 40 years. After retiring from the Big Ten school in 1932, he went on to the College of the Pacific in Stockton, California, where he headed up the football program through 1946.

Stagg was born in West Orange, New Jersey, and attended Yale University, where he participated in several sports. In 1886, he pitched Yale to a victory over Harvard to win the college championship. He also played end on the football team, coached by Walter Camp and made the 1889 All-America squad. It was under Camp’s peerless guidance that he became a student of the game. Stagg, who originally wished to become a minister, also developed the conviction that within football there existed the positive force with which to mold men’s characters. This concept, which he adhered to with evangelical zeal, was to become one of the cornerstones of his football philosophy.

At the University of Chicago, Stagg became the nation’s initial tenured football coach, as well as his era’s most imaginative, enterprising, and dominant athletic mentor. His on-field innovations

ranged from the “ends back” flying wedge formation to end-around plays and hidden-ball plays (in which he had his runners hide the pigskin under their jerseys). He instituted the modern T-formation and the flea-flicker pass and was the first coach to spotlight the forward pass in his team’s offense. He also was fabled for devising forceful defenses. The one he employed against the powerful Harold “Red” Grange of Illinois resulted in a 21-21 tie in 1924 and a moral victory for his underdog Maroons.

Stagg was the first to organize scrimmage games. In order to decrease injuries during practice, he devised the tackling dummy. He also was the first to add numbers to the jerseys worn by his players. As a coach, Stagg was noted for his intensity. Occasionally, he would even suit up and illustrate for his players the way he wished them to block and tackle. “No coach ever won a game by what he knows,” he observed. “It’s what his players have learned.”

Stagg coached in the era in which professional football first emerged and was in its infancy. As his University of Chicago football program became renowned nationwide, he seized on the idea to commercialize the sport. In this regard, he and the university’s president, William Rainey Harper, served to transform football from an intercollegiate pastime to a high-profile, moneymaking industry. In their wake, for better or worse, universities came to be defined by the success or failure of their football programs. Stagg also was a crafty recruiter of athletic talent. In 1902, he established the University of Chicago interscholastic, a national track-and-field tournament for high school students—an event which served to acquaint him with the country’s top scholastic athletes, whom he then could entice to enter his athletic program.

At the University of Chicago, Stagg amassed a 268-141 record and earned six Big Ten conference titles, along with a tie for a seventh crown. Upon his retirement in 1932 at age 70—when his football program was in the process of deteriorating—he moved on to coach at the College of the Pacific. At the end of the decade, the University of Chicago decided to close down its varsity football program. However, its unofficial demise came in 1938, when it was blanked 32-0 by a rising football power from California: Stagg’s College of the Pacific team.

Stagg was 84 years old when he retired from the College of the Pacific in 1946. Incredibly, the following year, he became an assistant coach at Susquehanna College in Selinsgrove, Pennsylvania, working under his son, Amos Alonzo Stagg, Jr. The younger Stagg coached at Susquehanna between 1935 and 1954; his father remained at the school for six seasons. Stagg, Sr. did not officially retire until 1960, when he was 98-years old. During his career, he guided his teams to 314 victories, which ranks third among major college coaches (behind Glenn “Pop” Warner’s 319 wins and Paul “Bear” Bryant’s 323; division I-AA Grambling’s Eddie Robinson is the all-time NCAA leader, with 408).

Stagg was the initial individual inducted into the College Football Hall of Fame as both a player and coach and was cited as coach of the all-time Big Ten team. Across the land, high schools and athletic facilities are named for him, including those at the schools in which he coached. Each year, the American Football Coaches Association hands out the Amos Alonzo Stagg Award, honoring “the individual, group or institution whose services have been outstanding in the advancement of the best interests of football.”

—Rob Edelman

Amos Alonzo Stagg (center) amidst prospective University of Chicago football players.

Stallone, Sylvester (1946—)

The most pervasive action star of the 1970s and the 1980s, Sylvester Stallone became renowned for his depictions of inarticulate, larger-than-life heroes, most notably the lovable pugilist Rocky Balboa, and the alienated Vietnam War veteran John Rambo. As a creative force, who wrote/directed/produced many of his movies, he also became a favorite target of critics, who took aim at the overt

sentimentality of the formulaic *Rocky* sequels, and at the revisionist politics of the *Rambo* series. Yet Stallone triumphed with audiences, to become one of the biggest movie stars in the world.

Not coincidentally, the Hollywood anomaly rose to fame in the shadow of the Watergate scandal. Amid the cynicism of the 1970s, moviegoers flocked to *Rocky*, the uplifting 1976 saga of the Philadelphia southpaw, also known as the Italian Stallion, who inadvertently gets a shot at the title. The year's sleeper hit made its screenwriter-star the year's most talked-about talent.

As with the character of Rocky Balboa, whose saga was underscored by the line, "his whole life was a million to one shot," Michael Sylvester Stallone was an unlikely contender for success. A native of Hell's Kitchen, New York, he was born with droopy eyes and slurred speech, the result of a forceps injury. His childhood and adolescence were troubled; growing up in a broken home, he had behavioral problems that resulted in frequent expulsion. By age 15 he had attended a dozen schools. After graduating from a high school for troubled youth, his athletic prowess led to a scholarship to the American College in Switzerland. He went on to study dramatics at the University of Miami. He was just a few credits shy of graduating when he headed to New York.

He once described his earliest efforts in show business as “off the wall.” Indeed, he co-starred in the 1970 soft-core adult movie, *A Party at Kitty and Studs*, which was later rereleased and retitled *The Italian Stallion*, and he appeared nude in several off-off Broadway plays. He made his mainstream movie debut in 1974, with the 1950s-era look at Brooklyn buddies, *The Lords of Flatbush*, and was followed by roles in *Capone*, *Bananas*, and *Death Race 2000*. But his career remained in stasis.

Stallone was 30 years old, with a pregnant wife and \$106 in the bank, when he chanced to see a closed-circuit prize fight between Muhammad Ali and Chuck Wepner, a longshot who thrilled the crowd by going the distance. Over the next three days, Stallone wrote his screenplay about Rocky Balboa, who squares off against the champion, Apollo Creed. By fight’s end, Rocky has not only won respect, but also the love of the shy, bespectacled Adrian, who works in a pet shop. Initially, the producers Irwin Winkler and Robert Chartoff envisioned a vehicle for a leading actor such as Robert Redford or Al Pacino. But Stallone refused to sell the script unless he could also star.

Filed over 28 days for \$960,000, *Rocky* became the year’s top-grossing movie, and won the year’s Best Picture Oscar. Its ten nominations included those for best actor and best screenplay, putting Stallone in prestigious company. At that time, the dual honor had previously been bestowed only on Charles Chaplin for *The Great Dictator* and Orson Welles for *Citizen Kane*. Of his watershed movie, Stallone once said, “It was never a script about boxing. It was always about a man simply fighting for his dignity. People require symbols of humanity and heroism.”

With its prolonged training sequences, and publicity about Stallone’s own body building regimen, *Rocky* also evoked the benefits of health and fitness, foreshadowing the fitness movement of the 1980s. Much of the Stallone oeuvre has celebrated physicality. The five *Rocky* movies have all included a rigorous workout sequence. With their loving close-ups of the title character’s rippling pectorals

Sylvester Stallone

and abs, the three *Rambo* movies are as much a paean to the body beautiful as they are about the adventures of a modern-day warrior. Moreover, it was under Stallone’s supervision that actor John Travolta resculpted his body, to sinewy perfection, for the 1983 movie, *Staying Alive*, which Stallone directed, co-wrote, and co-produced. Stallone has said that as a teenager he was inspired to body build after watching the gladiator movies of Steve Reeves; doubtless, teenagers of the 1970s and 1980s were similarly inspired by Stallone.

His own movies certainly impacted the action-adventure arena—particularly *Rambo: First Blood Part II*, the 1985 sequel to *First Blood*. In fact, *Rambo* redefined the genre, with elements that became genre staples. Among them, the visceral style, minimal dialogue, the ticking time clock that gives Rambo limited time to carry out his covert mission, and scenes of the hero readying for war. Because the plot took the disenchanted veteran back to Vietnam, to rescue forgotten American POWs (Prisoners of War), and because Rambo asked, “Sir, do we get to win this time?,” critics and commentators assailed the movie for rewriting history. They also took personal aim at the star-co-writer, noting that, like John Wayne, another star famed for his patriotic alter egos, Stallone had managed to elude real life military service. But *Rambo* proved critic-proof, touching a responsive chord that transcended language and cultural barriers.

Stallone, or “Sly” as he is called, shrewdly parlayed his 1980s-era power into deals that included creative control, and the highest salaries of the day. His celebrity was further amplified by his colorful personal life, which has included a string of public romances and marital woes. In the 1990s, however, as the action arena sought new direction, his career waned. He tried playing against type in several comedies that failed. More successful was his turn as a paunchy, lonely, sheriff in the 1997 crime drama, *Copland*. At the time it was widely publicized that Stallone had gained 30 pounds for the role. Today, it is the career, not the man, that needs redefinition. But if Stallone is a star in transition, there is no denying his charisma and star quality, or the crowd-pleasing appeal of his most famous creations, Rocky and Rambo.

Stand and Deliver

Stand and Deliver (1987) is a movie about mathematics—yes, mathematics. It also features a most unusual movie hero: an educator. Yet this independently produced 1987 drama is as riveting and satisfying as the most cleverly plotted, edge-of-your-seat thriller. It is the fact-based story of Jaime Escalante, a math teacher in an East Los Angeles barrio high school, brought brilliantly to life by Hispanic actor Edward James Olmos in an Oscar-nominated performance.

Engaging, affecting, and inspirational, the film gave Escalante's philosophy and methods wide popular exposure, exercising a positive influence on American attitudes to education culture among those who saw it.

Jaime Escalante transformed a classroom of potential dropouts into calculus wizards, and *Stand and Deliver* shows how he did it. In so doing, the film's title takes on extra resonance. The phrase "stand and deliver" (originally a military term) has come to define how a person—any person—is capable of succeeding if he or she works hard, stands tall, and presents him or herself positively and intelligently, and thus the film's title takes on a specific resonance. The bespectacled educator's nondescript, slightly paunchy appearance in no way obscures his extreme intensity and his dedication to his job, and he wins the attention of his charges by the sheer force of his enthusiasm for his subject, and his ability to communicate it.

Several of Escalante's students start off as underachievers. A few are nice enough youngsters but destined never to progress beyond serving fast food or stocking shelves in a supermarket. Others are Hispanic Dead End Kids, macho punks with boulder-sized chips on their shoulders. Under Escalante's patient and gifted tutelage, 18 students learn the intricacies of calculus, and take an extremely difficult advanced placement exam. Each and every one passes the test. However, the story of *Stand and Deliver* only begins when this success is tainted by a charge of cheating, leading to an invalidation of the test results.

Stand and Deliver (the pre-release title was *Walking on Water*) is a multi-themed film, at once a tale of institutional racism and false accusation and an allegory of how an individual can accomplish a task through sheer will-power. In its most incisive scenes, director Ramon Menendez, who co-scripted with Tom Muscia, tellingly conveys how youthful minds and spirits can be dulled by parents who quash their children's natural eagerness for knowledge. Ultimately, it is Escalante, always aware of the pressures in their lives, who pushes, manipulates, cajoles, and hustles the kids, and gets results.

At the heart of *Stand and Deliver* is the wonderfully lively and expressive acting of Olmos. His performance is crammed with keenly observed inflections and mannerisms. Without ever having met the real Jaime Escalante, one can be certain that Olmos does not so much act the role as become the man. "When we see a film like *Rocky*," Olmos explained while promoting the film prior to its release, "we see an Anglo in a boxing ring. I'd say about 98 per cent of us, black, white or Hispanic, will never step in a boxing ring. But imagine how people must feel when they see a film set in a classroom—a place where everybody has been. Everyone has at one point or another sat behind a desk, and everyone knows that calculus is hard. But in this movie, you realize that calculus really isn't that hard—if you have an exceptional teacher."

Most of the real-life Escalante's calculus prodigies went on to complete college. When the film was released, several were in graduate school, and one had even joined Escalante as a colleague. "You can get anything you want in this country, as long as you are willing to pay the price and the price is right," Escalante declared, nine years after his story was told on screen. "You don't get anything unless you work for it." He also stressed that schools alone cannot be responsible for educating children, noting that he prescribes the "Three Ts" to parents: Tell your kid, 'I love you'; touch your kid; and time. "It is important to devote time to your kid. The best investment you can make in your kid is time."

Standardized Testing

Standardized testing is so much a part of American culture that almost everyone can recognize its multiple choice format, even young children. It is no wonder; for most Americans, the testing starts in kindergarten. This testing culture seems to be uniquely American. In fact, Europeans refer to these tests as "American tests." A standardized test is called such because everyone takes the same test with the same questions, so one's performance can be compared to everyone else's, in order for a relative score to be obtained. Schools across the country vary greatly, so an A at one school might not be equal to an A from another; standardized tests thus serve to offer an equitable measure of aptitude. Because they are designed to screen applicants and are nearly impossible to finish, many people freeze when taking them. Perhaps their fear would change to anger if they knew the checkered history of these tests.

In 1912, Henry Goddard, who coined the word "moron," ran his version of an intelligence test at Ellis Island, and "proved scientifically" that the majority of Jews, Hungarians, Italians, and Russians were what he considered "feeble-minded." A few years later, the president of Columbia College, disappointed by all the recent Jewish immigrants enrolling after World War I, made Columbia the first school to use an "intelligence" test for admissions; he hoped these tests would limit the number of Jewish students without instituting an overt policy to do so.

World War I provided a perfect opportunity to test large numbers of people. The Army Mental Tests were created in 1917, with the help of Goddard and Carl Campbell Brigham. Results of these tests were to be used in assigning recruits to jobs in the army. Questions had the familiar multiple choice format, but pretty odd subject matter. For example, "Crisco is a (A) patent medicine (B) disinfectant (C) toothpaste (D) food product" and "The forward pass is used in (A) tennis (B) hockey (C) football (D) golf." Few would agree that these questions test not intelligence, but rather an awareness of consumer and leisure culture, things to which impoverished immigrants without American hobbies and with little or no English skills probably would not know the answers to.

Brigham used questions like these to prove his thesis. In analyzing the "data" from the Army tests, Brigham concluded that there are four racial strains in America. In order of their supposed "intelligence," and using his terminology, they are: Nordic; Alpine; Mediterranean; and last, American Negroes. The data gathered from Brigham's army tests was continually invoked in Congress and was instrumental in fostering congressional debates that led to the Immigration Restriction Act of 1924. The act imposed quotas on immigrants entering the United States.

In 1925, the College Board, which had been established in 1900 to standardize the entrance exams that Harvard, Yale, Princeton, and a few other elite colleges had all been administering separately—and today includes more than 2,500 colleges, schools, school systems, and

educational associations—hired Brigham to develop an intelligence test for use in college admissions. That test was called the Scholastic Aptitude Test (SAT). The first SAT, published in 1926 and administered to 8,040 people, included questions about brand names, chicken breeds, and cuts of beef, and had a section on artificial language that included made-up vocabulary and grammar rules, and asked testers to make sentences. There was also an analogy section that gave testers only six minutes to answer 40 questions. The test was—and still is, albeit in dramatically modified form—used to “predict” one’s success in college.

Because so many people were going to college after World War II, there was a huge demand for the SAT. In 1947 the College Board created the non-profit Educational Testing Service (ETS) to take care of the testing demand. The next year, 75,000 students took the SAT. In 1954 the College Board instituted a “test use” requirement, which forced all members of the Board to use at least one of its exams; a monopoly was thus established. Until 1957 neither the testers nor their high schools were even told their scores. Annual administrations of the SAT passed over one million in 1963, and were at 1.8 million by 1994.

Henry Chauncey, ETS’ first president, thought of the SAT as an IQ test. He admired such tests and believed that testing could help define vocational goals of students, especially those whose “talents” lend themselves to stopping education after high school. He suggested that students get tested at the end of the eighth or ninth grade, and then every one or two years thereafter. One does have to pay a fee each time one takes a standardized test. Some estimates of the amount Americans spend on testing in general are as high as \$500 million annually.

Standardized tests are being used more than ever to aid overworked and understaffed admissions departments. The tests come by their nickname “the Gatekeepers” honestly; the score is the first, and often the only thing, an admissions officer looks at on an application. If the prospective student has too low a number, they do not get in, no matter how impressive the rest of the application. And schools sometimes jack up the “average” incoming test scores of students in their admissions material so the school will seem more “selective.” Yet these gatekeepers are not crafted by academicians; writing test questions requires no special academic training. College professors do not write the SAT; lawyers do not write the LSAT, much less the Bar exam.

Most of ETS’ tests contain some combination of math and verbal questions (analogies, sentence completions, and critical reading passages); some throw in “analytic” questions such as logic games. The MCAT (Medical College Admissions Test) contains curriculum based questions on biology, chemistry, and physics; this is more like the non-ETS (and less expensive) ACT (American College Testing) Assessment Test, a curriculum-based test that is also used for college admissions. The GRE (Graduate Record Examination) and GMAT (Graduate Management Admissions Test) were by the 1990s given only on computer, as opposed to pencil and paper, in a format called “computer adaptive” or CAT. The CAT format redefines “standardized,” since each tester gets questions from a pool and the computer “adapts” each time she gets a question right or wrong by giving her a harder one if her last answer was correct and an easier one if her last answer was incorrect. It is therefore possible that no two test takers will take the exact same test.

ETS does seem to be distancing itself from the idea of “aptitude” testing. Until 1982, the GRE General Test was called the GRE

Aptitude Test. And in 1994, the A in SAT began to stand for “Assessment.” ETS now says that native intelligence is not what their tests are designed to detect; the SAT measures “developed ability, not innate intelligence; a test of abilities that are developed slowly over time both through in-school and out-of-school experience.”

The world of standardized testing starts long before high school. Estimates report that 127 million tests a year are being given at the K-12 level alone (including the Iowa Test of Basic Skills, a widely-used achievement test for grade schools). Also at that level, teachers have complained that because their peers are “teaching to the test,” the resulting scores are meaningless. ETS has always maintained that coaching is not effective on its tests; it did not even publish its own practice questions until 1978. But the million-dollar cottage industry of coaching businesses, whose existence depends on these tests, disagrees. Some such coaching programs claim that a student can raise his or her SAT score by up to 300 points after taking a coaching course.

Not only do testing opponents insist that high scores reveal little more than a talent for taking tests and understanding the testing “mentality,” but they also seem to correlate with the income and education of the tester’s parents. College Board data shows that someone taking the SAT can expect to score about 30 points higher for every \$10,000 in her parents’ yearly income. Unfortunately, these tests still seem to do what Brigham meant for them to do. For many years now, the median score for African Americans on the SAT has been 200 points below that for whites; females have been scoring 35 points lower on the math sections than males. ETS has made some changes to answer these charges. The 1996 “recentering” of SAT scores, done technically to create a better distribution of scores around the test’s numerical midpoint, boosted the average scores for groups like African Americans and Hispanics. Additionally, the Preliminary Scholastic Assessment Test (PSAT), a test used to determine who gets the National Merit Scholarship, replaced its old scoring formula, which assigned equal weight to the math and verbal sections, with a formula that doubles the verbal score, usually the higher one for female testers, in the hope that more women might get the scholarship.

School entry might be the most common way people are introduced to the entrenched testing culture, but it is not the only way. A partial list of organizations that buy tests from ETS includes, but is not limited to: the CIA (Central Intelligence Agency), the government of Trinidad and Tobago, The American Society of Plumbing Engineers, and The Institute for Nuclear Power Operations. One might also be required to take an ETS exam to become a golf pro, and in some states, a travel agent, a real estate salesman, and a beautician.

Stand-up Comedy

Born in the smoky halls of turn-of-the-century vaudeville and thrust into mainstream American culture by the advent of radio and television, stand-up comedy is the entertainment industry's most accurate social thermometer. From Milton Berle to Roseanne Barr, comics have used the power of laughter to challenge Americans to face the controversial issues of the day, whether sex, government or

Stand-up comedian Jerry Seinfeld

religion. A good routine can turn the most tragic headlines into a gut-wrenching guffaw. Sometimes comics go too far for a laugh; sometimes they're the only ones brave enough to point out hypocrisy and social injustice.

The profession developed long before the discovery of electricity. Court jesters performed the first stand-up routines in medieval times. Elements of stand-up also pervaded William Shakespeare's work in the form of a fool providing the audience with a dose of comic relief. If the nineteenth-century American humorist did his work on paper, like Mark Twain, the twentieth century ushered in the age of performance. Vaudeville, a pre-cursor to the television variety show, provided a stage for the first generation of stand-up comedians such as Bob Hope, Jack Benny, George Burns and Gracie Allen, Bud Abbott and Lou Costello.

In Oscar Hammerstein's Victoria theatre, opened in Times Square in 1899, or the Palace Theatre, opened on Broadway and 47th Street in 1913, you could find singing women (Sophie Tucker, Nora Bayes, Elsie Janis), monologists (Milton Berle, Julius Tannen), the earliest comedy teams (Burns and Allen) and an assortment of freak acts. This was nothing like the high profile comedy showcases that would come later in the century, filled with Hollywood agents and television scouts. These variety shows were for the masses, which is why the young Berle, the brilliant monologist, might find himself on the same stage as the Armless Lutz Brothers, who could assemble a car with only their feet.

The foundations of stand-up were laid in the age of vaudeville, with terms like the "one-liner" and "straight man" entering the lexicon. Comics also developed different styles, deciding whether to space out laughs, build elaborate routines or just deliver the punch lines. Legendary society columnist Walter Winchell dubbed Henny Youngman, the "King of the One Liner." Youngman relied on vivid imagery in his jokes. "If a joke is too hard to visualize, then what the hell good is it?" he asked in his autobiography, *Take My Life, Please!* "I tell easy jokes where people don't have to think."

His clear and concise one-liners continue to amuse. "I'm so old, that when I order a three-minute egg here, they make me pay up front," went one of those jokes, and another, "A guy came up to me and said he'd bet me fifty dollars that I was dead. I was afraid to take the bet."

George Burns and Gracie Allen became the first great comedy team. Performing for the first time in Newark, New Jersey, Burns cast himself as the joke man, with Allen delivering the straight lines. A funny thing happened: Allen got all the laughs. Burns rewrote the show to refine what he called her "illegal logic." With the new formula, the couple continued to get laughs for years. One example of how Burns' highlighted Allen's humorous logic follows:

GRACIE: Where do you keep your money?

GEORGE: In the bank.

GRACIE: What interest do you get?

GEORGE: Four percent.

GRACIE: Ha! I get eight.

GEORGE: You get eight?

GRACIE: I keep it in two banks.

The vaudeville generation made a natural transition to the next stage of stand-up: radio and television. Burns and Allen debuted on radio in 1932 with *The Adventures of Gracie* show (later renamed *Burns and Allen* (1932-1950)) and then moved to television with *The Burns and Allen Show* in 1950 for another eight years. On the small

screen, Burns would often talk to the viewing audience, dropping all pretenses that the show they were watching was in fact reality. Called “breaking the fourth wall,” this method would be practiced years later by another former stand-up, Garry Shandling, in the 1980s. Berle became known as “Mr. Television” because of his popular variety show, *The Texaco Star Theater*, which ran from 1948 to 1953. Bud Abbott and Lou Costello, before trying television and the big screen, debuted their famous “Who’s On First?” routine on radio in 1938. As the people of vaudeville moved to radio, film, and television, these new media soon eclipsed vaudeville, which disappeared by the 1940s.

Without the vaudeville stage to help hone their acts, stand-up comedians turned to strip clubs and the growing nightclub circuit. The new clubs proved fertile ground for comedians like Bob Newhart, Woody Allen, Bill Cosby, and Lenny Bruce. No longer forced to shout over a rowdy audience riled by dancing girls or fish swallowing Swedes, comics could develop stories for their acts in the more controlled atmosphere of these new venues. While one-liners still ruled many acts, younger comics worked to draw the audience into a “bit” which might run for 20 minutes—about the time it took Henny Youngman to blast through a few dozen punch lines.

At the forefront of the movement stood Lenny Bruce, the comic philosopher. One of the first truly controversial stand-ups, he used vivid, sometimes obscene, language and sexually charged subject matter. Unlike comics who used profanity and went “blue” for cheap laughs, Bruce’s monologues spoke to the simmering social war, the contrast between the emerging hipster cool and the prosperous, conservative, postwar America. At the time, Communists—both in Asia and in Hollywood—were under attack, and Pat Boone, the five-cent hamburger, and nondescript but affordable subdivisions were embraced. Into this cultural milieu came Bruce—a barely concealed heroin addict—with his thirst for controversial talk about race, censorship, and sex. “Show me the average sex maniac, the one who takes your eight-year-old, schtupps her in the parking lot, and then kills her, and I’ll show you a guy who’s had a good religious upbringing,” went one of his routines. “You see, he saw his father or mother always telling his sister to cover up her body when she was only six years old, and so he figured, one day I’m going to find out what it is she’s covering, and if it’s as dirty as my father says I’ll kill it.”

Woody Allen benefited from the nightclub scene as much as Bruce. Though he went on to become one of stand-up’s greatest success stories, Allen would never have made it in the vaudeville era. His quiet, intentional half-stutter delivery would have been drowned out after the first few rows of a burlesque hall. In a nightclub world, he was a headliner, known for his satiric stories and willingness to always poke fun at himself, using his noodly, bookish physique to his advantage. On stage, Allen carved out a niche as the loveable schlemiel, an intellectual comic who referenced philosophers, shrinks, and college. He would tell long stories, presented as autobiographical. But somewhere before the punch line, an absurd twist would let the audience into the tall tale; their comedic confessor was in fact a master yarn spinner.

Not interested in radio, and frustrated by the constraints of television, many among Allen’s generation tapped into the growing comedy album industry. The 1960s and 1970s were a golden age for the comedy record, starting with Bob Newhart’s million-selling 1960 release, *The Button-Down Mind Of*. For racier comics, George Carlin, Richard Pryor, and Eddie Murphy in particular, comedy records would prove invaluable, enabling them to use hot material that would

either not be allowed on television or have to be softened for the viewing audience.

Sparked by the general loosening of social rules brought on by the sexual revolution and youth-oriented civil rights and antiwar movements, stand-up comedy continued to push boundaries in the 1970s. Stuffy network executives were often tested or outright mocked, as in George Carlin’s famous “Seven Words You Can Never Say On Television.” Female comics also began to get more stage time, in particular Lily Tomlin, Gilda Radner and Joan Rivers. It wasn’t until the 1980s, when Roseanne Barr (later Arnold) developed a successful sitcom out of her stage act, that female comics made a true mark in the male-dominated industry. *Saturday Night Live*, a sketch comedy show based largely on stand-up principles, was created in 1975. In addition to a cast that included Dan Aykroyd, John Belushi, Jane Curtin, Chevy Chase, and Bill Murray, *SNL* guest hosts like Carlin, Pryor, and Steve Martin gained exposure.

The 1970s generation included two of the more important comedians in Richard Pryor and Andy Kaufman. Pryor grew up in a poor, black neighborhood; Kaufman was white and from Long Island. But they shared a thirst for original and unpredictable behavior, both on and off stage, leaving audiences and critics wondering where the act ended and reality began.

Kaufman didn’t just tell jokes; he wrestled with women on stage, slipped into a bad toupee to play the lounge lizard, Tony Clifton, and according to legend, read *The Great Gatsby* in its entirety to an audience in Iowa. (On another occasion, after being asked to stop reading, Kaufman agreed and put on a record instead—of him reading *The Great Gatsby*.) He had the talent to succeed with more conventional fare; his “Foreign Man” character was adapted as Latka Gravas for the popular television series, *Taxi*; his Elvis impersonation was so hilarious the pop band, R.E.M., centered its 1992 Kaufman tribute, “Man on the Moon” around it. But Kaufman preferred to push his act into performance art territory. On *Late Night with David Letterman*, he and professional wrestler Jerry Lawler appeared to get into a genuine argument, ending with Lawler slapping the comedian off his chair. The Clifton routine could run for a half-hour, with Kaufman—as Clifton—growing angry at the suggestion that he was simply doing an impression. “Listen, folks, what I’m doing up here—that’s how I make my living,” Clifton would yell. “I don’t have to take this kind of crap!” For several years, he became so consumed by professional wrestling that his friend, comedian Robin Williams, noticed during lunch that Kaufman was wearing trunks under his clothing. When Kaufman died of cancer in 1984, many wondered whether it was the ultimate put-on.

Pryor was equally unpredictable. The most important black comics who preceded him, Bill Cosby and Flip Wilson, tended to be non-confrontational and television-ready. And Dick Gregory’s biting routines were political instead of personal and less effective in the post-activist climate of the 1970s. Pryor was unique in that he based his act on common black experience in America. He grew up poor, in a world of pimps, wife beaters, and poolroom hustlers. Even as he became one of Hollywood’s most bankable comic stars, Pryor remained erratic, cursing, yelling, and storming off the stage when he didn’t feel right. On *The Tonight Show*, Pryor suggested to the studio audience: “If you want to do anything—if you’re black and still here in America—get a gun and go to South Africa and kill some white people.” He also bared his soul. In 1980, after setting himself on fire while free-basing cocaine, Pryor worked it into his routine. Pryor’s red-hot stage show paved the way for the generation of black comics that would include Eddie Murphy, Martin Lawrence, and Chris Rock.

His sexually-oriented material also led to the one-dimensional, smut routine of Andrew Dice Clay.

The success of the late 1970s and early 1980s comics led to a boom in the stand-up business. Clubs opened, comedy specials were produced for cable television, John Belushi and Dan Aykroyd's Blues Brothers toured the country playing rhythm and blues, Sam Kinison's manic re-recording of "Wild Thing" climbed the *Billboard* charts. But the inevitable crash which came in the 1990s, when headliners moved onto television or films, and left behind a glut of second and third-rate comedians. Nearly 5,000 were listed by *Comedy USA*, the bible of stand-up comedy, in the mid-1990s. There were fewer stages, as well: The 450 clubs registered in 1991 had dwindled to 350 by the middle of the decade.

The scene was unforgiving, as described by *The New York Times*' Neil Strauss in 1999: "The bottom rung of the comedy ladder can be uglier, crueler and more demeaning than in any other line of entertainment—be it actor, model, musician, writer or clown. Sexism and racism run rampant, club-owners ask struggling comedians to scrape gum off the bottom of tables to get a booking, competition between comics is fierce, and newcomers have to pay to perform." In a way, stand-up comedy had returned to the days of vaudeville, when Burns and Allen were competing against acrobats or dancing dwarfs. And the sheer volume of comics led to an important development: the rise of the alternative stand-up scene. At places like the Luna Lounge in New York City, the Velveeta Room in Austin, Texas, and the Subterranean Cabaret in Chicago, comics didn't dare trot out stand-up's war horses—jokes about mother-in-laws, terrible airplane flights or the single life. With an audience packed mainly with other comics, the performers retired well-worn bits for fresher, more experimental material. That could be, as Strauss notes, a struggling comic delivering her monologue with her pants at her ankles or a male comic acting out how a cat feels.

If the late 1990s marked the decline of the comedy club, stand-up grew even more pervasive. Bill Maher's *Politically Incorrect*, which featured four different roundtable guests each night, was hailed as one of the freshest talk shows. Books by Dennis Miller, Paul Reiser, and Martin—among others—climbed *The New York Times* bestseller list. And even the veritable CBS news, launching the *60 Minutes II* newsmagazine, chose a Boston stand-up, Jimmy Kimmel, to offer a commentary at the end of each program. Jerry Seinfeld, after deciding to retire his groundbreaking television sitcom, took his stand-up routine back on the road.

Not much had changed on the front lines. In comedy clubs all across America, managers continued to strain to make money on unknowns. Drink minimums kept crowds unruly and joke-hungry. Entertainers exposed themselves, under the glare of the klieg light, defended by only a microphone and every rage, fear, and insecurity that might be cashed in for a laugh. It had been this way since Milton Berle's day, and there was never a shortage of young comics vying for that chance to deliver the perfect punch line. Because, as Steve Allen wrote in his book, *Funny People*: "Without laughter, life on our planet would be intolerable."

The Stanley Brothers

During the late 1940s, the Stanley Brothers (Carter, 1925-1966, and Ralph, 1927—) and their band the Clinch Mountain Boys helped to establish bluegrass—as Bill Monroe's new style came to be known—as a musical genre. According to folklorist Neil Rosenberg, their 1948 recording of "Molly and Tenbrooks"—featuring Darrell "Pee Wee" Lambert, a tenor singer and mandolin player like Monroe—offers the first proof that Monroe's sound was being copied by other groups. Merging the old-time sound of traditional mountain music, haunting vocal harmonies, and bluegrass instrumentation, the early recordings of the Stanley Brothers have become bluegrass classics. When lead singer Carter Stanley died in 1966, Ralph took control of the group. He revitalized the band with new members (including Keith Whitley and Ricky Skaggs during the 1970s), and over the next two decades they developed and maintained a following among bluegrass and traditional folk fans that continued into the late 1990s.

Stanwyck, Barbara (1907-1990)

From her modest beginnings as a Broadway chorus girl named Ruby Stevens, Barbara Stanwyck forged a long and versatile career as one of Hollywood's strongest female stars. Her breakthrough performance occurred in 1930's *Ladies of Leisure*, directed by Frank Capra, who said her emotionally charged acting could "grab your heart and tear it to pieces." In her earliest roles she epitomized the self-sacrificing woman, culminating in her title part in the 1937 woman's picture, *Stella Dallas*. The 1940s transformed her into a sexy, ruthless femme fatale. She played the movies' first woman to murder for no reason nobler than avarice in the 1944 seminal film noir, *Double Indemnity*. Unlike Bette Davis and Joan Crawford, her peers in melodrama, Stanwyck also made an impression as a comedienne in canonical romantic comedies like 1941's *Ball of Fire* and *The*

Lady Eve. Her image, onscreen and off, as a tough, independent woman overcoming a hardscrabble childhood is her legacy.

Star System

With the rise of the Hollywood film industry in the 1920s and thereafter, the world came to recognize that fame, like American automobiles or hot dogs, could also be manufactured and successfully marketed. In a democratic, officially classless culture, where “personality” provided a vehicle for upward mobility, it came to be increasingly understood that personality required manufacturing and regular maintenance. As a mass movie audience, the anonymous public also began to recognize that many of the most notable people in the world were manufactured, like the movies featuring their close-up faces, in a semi-mythic place called Hollywood. Carefully crafted to complement the technical components of the entertainment industry, the “star system” focused attention of the public onto idealized “picture personalities” that simultaneously embodied familiar social types and represented privileged individuality for their fans.

While American show business, exemplified by early impresarios like P. T. Barnum, Florenz Ziegfeld, and “Buffalo Bill” Cody, had relied upon the promotion of featured “players” throughout the nineteenth century, the construction of a regulated system for the production and promotion of Hollywood stars was designed along the industrial model pioneered by Henry Ford and his Detroit assembly lines. Commercial cinema did not have stars in its early years, not until film producers, perhaps goaded by audiences, came to understand the commercial appeal of specific actors. Among the first “stars” so identified were such as Charlie Chaplin, Lillian Gish, Mary Pickford, Douglas Fairbanks, Rudolph Valentino, and Clara Bow. As Hollywood’s financial and cultural power grew, it came to heavily depend upon the distinctive charisma of specific actors to promote its product to an adoring audience. Working behind the scenes from the mid-1920s through the 1950s, the Hollywood star system relied on a coordination of working parts that both imitated and rivaled Ford’s efficient factories: dance and singing lessons; careful decisions about names, makeup, hair, and clothing; the posing of glamour photographs; carefully chosen publicity appearances and constructed gossip. Using these tools, the major film studios groomed and marketed their most visible products, the stars whose weekly secular worship sold millions of tickets, fan magazines, and tie-in consumer goods. Beginning with *Motion Picture* in 1911 and dominated by the long-running *Photoplay*, the fan magazine provided the public’s key link to the “real lives” of their favorite actors; the construction of an offscreen image for its contract players thus became just as important for the studios as the tailoring of a specific star’s screen persona. Fans were hungry for information on the “real” Clark Gable or the “actual” Joan Crawford that supplemented their film roles, and so the star system negotiated a careful balance

of identification and adoration. Stars like Judy Garland and Mickey Rooney were kids “just like us” who we knew we would never really be.

The underlying tension between studio-controlled information about stars and less-regulated gossip occasionally surfaced when major stars were caught in scandals that threatened to create wide gaps between their onscreen and offscreen images. Shocking trials in the 1920s featuring beloved comedians like Charlie Chaplin and Roscoe “Fatty” Arbuckle, and widespread rumors about the sex lives of Clara Bow or Rudolph Valentino, redefined the star system’s promotional work as crisis management until the industry adoption of the Production Code allowed the studios to fully enforce “morality” clauses in actors’ contracts. As far as the film studios were concerned, there was a direct relationship between a star’s public behavior and his or her box-office receipt, so controlling the image of contract players was an economic imperative, even if it appeared under the guise of moral guardianship. Only in later decades would serious ethical questions be raised about, for instance, a film studio’s arranging dates and even a sham marriage for Rock Hudson so that his legions of female fans might not suspect that he was in fact a homosexual.

Of course, as a capitalist structure well aware of the quick gratifications of mass culture, the star system also demanded a regular selection of fresh products, so new names and new faces were constantly put before the public even as the careers of older stars were retooled as long as the public showed interest in them. While some stars, like Mae West, Boris Karloff, or John Wayne, were narrowly defined by their iconic star personas, other stars were transformed in attempts to attract changing audiences and reflect shifting fashions. Popular child stars like Elizabeth Taylor or Shirley Temple were or were not successfully redefined for adult roles as they grew up, and performers once closely associated with one genre were reconceptualized for others: the 1930s boy singer Dick Powell reemerged as a screen tough-guy in the 1940s, and Barbara Stanwyck moved with relative ease from women’s melodramas and screwball comedies in the 1930s into 1950s Westerns.

The Hollywood star system began to weaken as the studio system itself lost prestige and power in the 1950s, especially after a number of major stars, including Burt Lancaster and Kirk Douglas, declared themselves “independent” by forming their own production companies. In other cases, a star’s contracts with studios, once long-term and binding, were redrawn as short-term, profit-sharing deals that linked an actor’s salary directly to the success of a specific film. In 1950, James Stewart received half of the profits of his hit western *Winchester ‘73*, dramatically revising the industry’s understanding of a star’s earning potential. With stars, along with their personal agents and talent agencies, increasingly responsible for their own public images and career choices, the control over performers once secured within the studio hierarchy had clearly shifted. By the 1980s, the old Hollywood concept of the “star vehicle,” a film specifically tailored to the image and talents of its leading player, was again fully active, but only a handful of stars called the shots that determined which major films were produced and promoted. The self-styled moguls of the studio era had been displaced by their former puppets, the “talent” whose survival skills now included, most significantly, a keen business sense.

Certainly a contemporary “celebrity system” remains visible in the small army surrounding any major celebrity: agents, publicists, managers, and personal assistants all work to secure film projects, recording deals, promotional endorsements, talk-show appearances,

and cameo roles for their employers. The earlier star system, however, has merged into a much larger “culture of celebrity” that extends massive fame not only to film stars and professional athletes or pop musicians, but also to the legions of “minor celebrities” necessary to regularly replenish television talk shows, fashion catwalks, award presentations, and “special guest” appearances on weekly sitcoms. The pop artist Andy Warhol’s notorious designation of previously unknown figures as “superstars” and his famous allotment of 15 minutes of fame to everyone in a media-saturated world perhaps signaled the real end of any remaining purpose for a coherent “system” that was once constructed to transform mere mortals into minor gods and goddesses.

Star Trek

A worldwide science-fiction pop culture triumph, Star Trek has become a veritable empire of movies, television shows, novels, comic books, fanzines, clubs, conventions, board games, video games, and memorabilia. Star Trek began as a television series originally conceived by writer-producer Gene Roddenberry (1921-1991) in the early 1960s. Airing on NBC from Fall 1966 through Spring 1969, *Star Trek* episodes chronicled the adventures of the twenty-third century starship Enterprise, serving the interplanetary Federation on a five-year mission to “explore strange new worlds” and “boldly go where no man has gone before.”

Initially assembled at Desilu Studios, the series took shape with significant help from the actors, all of whom had the sense that they were involved with something quite new and important. Captain James T. Kirk (played by William Shatner) was the young, handsome leader of the mission, the youngest captain in the history of Starfleet. Though occasionally headstrong and impetuous, and with a weakness for beautiful women of all races (and all species), Kirk was an inspiring and resourceful leader, often the most popular character of the show. Rivaling and sometimes surpassing Kirk in popularity was Mr. Spock (Leonard Nimoy), a native of the planet Vulcan, where emotions are suppressed in an attempt to achieve complete objective

William Shatner (right) and Leonard Nimoy as they appeared in *Star Trek: The Motion Picture*.

logic. Spock’s tapered eyebrows and pointed ears were at once sinister and fascinating, like a hybrid between a devil and an elf. Spock was particularly interesting because he was half human; though raised as a Vulcan, he was torn between the rigors of logic and the “irrational” pull of friendship and love. The third major character was Dr. “Bones” McCoy (DeForest Kelley), a curmudgeonly and quick-tempered older man. McCoy had little patience for the impossible idealism that often accompanied Kirk’s confidence, and even less patience for the self-importance that often accompanied Spock’s self-restraint.

The other prominent members of the original Enterprise crew were a deliberate mixture of races and nationalities, as Roddenberry felt an accurate vision of the future must depict humanity as having transcended ethnic and political strife. Montgomery Scott—“Scottie”—(played by James Doohan) was the ship’s Scottish engineer; he could push the ship beyond its limits and work miracle repairs. The Japanese Lieutenant Sulu (George Takei) and the Russian Ensign Chekov (Walter Koenig) were the ship’s helmsmen. The African Lieutenant Uhura (Nichelle Nichols) was the communications officer.

Star Trek was originally conceived as a rather dark and serious show, but it quickly became much more than this. There is a great variety in the original *Star Trek* episodes: tragedy, comedy, mystery, romance, action, adventure. Among the most popular humorous episodes is “The Trouble with Tribbles,” during which some members of the Enterprise crew purchase some cute, round, fur-covered creatures known as tribbles from an intergalactic merchant, only to discover that the creatures multiply at a rate fast enough to threaten engulfing the entire ship. Often voted the best all-time episode is “The City on the Edge of Forever,” a time-travel drama written by Harlan Ellison and co-starring Joan Collins. In this heart-wrenching episode, Kirk is forced to choose between saving the life of the woman he loves or forever altering the natural course of history.

Other popular episodes feature the Enterprise in conflict with the Federation's redoubtable alien enemies, the warlike Klingons and the scheming Romulans.

The 1960s *Star Trek* is justly famous for its social commentary. A few episodes, including "A Private Little War," offer thinly veiled criticism of Vietnam by showing the problems of getting involved in other nations' internal struggles. Indeed, Starfleet's "Prime Directive" is that no technologically advanced society may interfere with the normal development of a more primitive society. Other episodes promote racial harmony and equality; the exciting "Last Battlefield" episode shows a planet of racists engaged in a futile and self-destructive war. A few episodes, including "A Way to Eden," critique the communal counterculture: intergalactic hippie types are seen spoiled by drugs or foolishly deluded into thinking they will find a perfect paradise. Overall the show is upbeat, suggesting that many of the problems of twentieth-century Earth will ultimately be solved. The tradition of social commentary in the episodes of the original *Star Trek* series carried into the later *Star Trek* series, which have examined issues such as overpopulation, environmentalism, homelessness, drug abuse, bisexuality, and religious fanaticism.

The original *Star Trek* is also remarkable for its breaking of television taboos. Apparently, the show's being set in the future allowed it to get away with content that would have been unacceptable in a "real life" show. Many episodes feature scantily clad men and women, often in thin and flimsy outfits that seem about to fall off entirely; but as many of these men and women were "robots" or "aliens" the network censors allowed them on the show. *Star Trek* was also historic in condoning interracial (or even inter-species) love. The fine "Plato's Stepchildren" episode (aired 1969) features television's first interracial kiss, between Shatner and Nichols.

Over the years, the original *Star Trek* series has furnished its fans with a multitude of inside jokes. Drinking games have developed during which fans take one drink every time the show's most famous motifs are repeated: the ship's teleporting "Transporter" always breaks down; red-shirted security officers always die at the hands of evil aliens; Kirk always finds a way to talk attractive female aliens into bed; Uhuru always taps the microphone in her ear to get better reception across the light years; Spock and his fellow Vulcans greet each other with mystic hand-signals and with the words, "Live long and prosper"; after McCoy examines a dead body, he always turns sadly to the captain and says, "He's dead, Jim"; after a mission accomplished (and after the ship's Transporter has been conveniently repaired), Kirk radios his engineer and chimes, "Beam me up, Scotty." Yet all these jokes, along with the occasional silly-looking sets and ham-acting, have become a source of endearment rather than derision.

Despite the tremendous efforts of everyone involved with the show, and despite the high cost of close to \$200,000 per episode, media critics considered the show a failure. Worse still, after some initially high Nielsen ratings, the show's popularity began to decline. Although fan mail increased week after week, the number of viewers appeared to be dwindling. NBC came close to canceling the show after the first season but relented after being deluged by letters written during a "save *Star Trek*" campaign organized by prominent science-fiction writers. But the show's second season still failed to capture high ratings. Again the show was nearly canceled, but again a "save *Star Trek*" campaign (this time organized by fans) saved it. The third season was the show's last, but the total of 79 episodes were enough to allow syndication.

In syndication, *Star Trek* became an immediate hit. Fanzines and fan clubs proliferated, enough to inspire the first Star Trek convention in January 1972 in New York City. In response to this burgeoning popularity, NBC revived the show as an animated series, featuring the original actors as the voices of their original characters. Unfortunately, though the animated show featured stories as complex as the live action series, it was aired for young viewers on Saturday mornings and thereby was misplaced. It was canceled after a brief 22-episode run from Fall 1973 into Winter 1974. Plans for a second television series were in the works, but after the spectacular success of *Star Wars* in 1977, Star Trek's new owner Paramount decided to make the show into a movie. *Star Trek: The Motion Picture* (directed by Robert Wise) hit theaters in 1979, and while it was not well-liked by critics or hardcore fans (mostly because of its extravagant special effects and emphasis on concept over character), the picture drew tremendous crowds and was a financial success.

Star Trek movies have since hit theaters regularly every few years. *Star Trek II: The Wrath of Khan* (1982, directed by Nicholas Meyer) was an action-packed adventure co-starring Ricardo Montalban and Kirstie Alley; it became both a critical and popular success despite the death of Mr. Spock in the film's final scenes. *Star Trek III: The Search for Spock* (1984, directed by Leonard Nimoy) was another all-around success; the Enterprise is lost, but Spock is resurrected. *Star Trek IV: The Voyage Home* (1986, directed by Nimoy) time-warped the crew back to 1980s San Francisco in search of a pair of humpback whales; possessing a playful sense of delight, it has become the most successful Star Trek film of all. *Star Trek V: The Final Frontier* (1989, directed by William Shatner) gave the crew a rebuilt Enterprise and sent them in search of an evil alien whom they mistake as God; the movie also purposefully suggested that the characters were perhaps getting too old to be adventuring in outer space. *Star Trek VI: The Undiscovered Country* (1992, directed by Meyer), in which the Klingons and the Federation make peace, was the last film to feature the original cast.

Star Trek: Generations (1994, directed by David Carson) portrayed the death of James T. Kirk, and was also the first film to feature the second generation of Star Trek characters from the already-successful *Next Generation* television show. *Star Trek: First Contact* (1996, directed by Jonathan Frakes) was a multi-layered time-travel film showing Earth's first contact with an alien race. And *Star Trek: Insurrection* (1998, directed by Frakes) portrayed a power-struggle over a beautiful pleasure-planet.

The success of the first Star Trek movies inspired Paramount to produce a second television series, *Star Trek: The Next Generation*, that took place 78 years after the first series. The new show (aired 1987-94) took a more contemplative and peaceful approach to its episodes; there was less action but more science and more diplomacy. Beautiful computer-generated special effects added further breadth. But as with the original series, a prime appeal of the second series was the emphasis on character. With families and couples on board a much larger starship, the show had a balanced "group" feel. Captain Jean-Luc Picard (played by Patrick Stewart) was mature and dignified, while First Officer Riker (Jonathan Frakes) was suave and sturdy. Klingon security officer Worf (Michael Dorn) was often torn between his hereditary codes of honor and his duties serving the Federation, while android Lieutenant Data (Brent Spiner) struggled to compare his thoughts and his "emotions" with those of human beings. Major characters also included the empathetic Counselor Troi (Marina Sirtis), the young engineer Geordi La Forge (LeVar Burton), and the doctor Beverly Crusher (Gates McFadden). Some episodes

featured Dr. Crusher's son Wesley (Wil Wheaton), the Ukrainian security officer Tasha Yar (Denise Crosby), and the 500-year-old Guinan (Whoopi Goldberg). Like the original series, *The Next Generation* offered fans a great variety of shows ranging from the very lighthearted to the very serious. Popular episodes feature the Romulans (now a major enemy of the Federation), the Borg (frightening and hostile aliens who resemble a cross between insects and robots), and the nearly-omnipotent alien "Q" (John DeLancie), who enjoys teasing the earnest but helpless humans.

After seven seasons, it was decided that *The Next Generation* be replaced by a new show, *Star Trek: Deep Space Nine* (created largely by Rick Berman and debuting in 1993), whose characters inhabit a space station rather than ship. The station is precariously situated at the edge of the Federation near an intergalactic "wormhole" through which all manner of alien spaceships frequently pass. Besides accommodating their alien visitors, the Deep Space Nine crew faces the challenge of a conflict raging in their sector between the empire of the Cardassians (reptilian Federation adversaries) and the inhabitants of the planet Bajor. In later shows the crew faces the threat of the hostile Jem'Hadar alien troops and their masters in the "Dominion." The look and mood of the show is darker than in the earlier shows, but the optimistic vision remains. The characters include widower Captain Benjamin Sisko (Avery Brooks) and son Jake (Cirroc Lofton), the Bajoran first officer Kira (Nana Visitor), the unscrupulous merchant Quark (Armin Shimerman), the symbiont-hosting alien Dax (Terry Farrell), and the shapeshifting officer Odo (Rene Auberjonois). As in the earlier shows, the *Deep Space Nine* crew is a harmonious mixture of peoples: Sisko is black, the ship's doctor (Siddig El Fadil) is an Arab, the operations officer (Colm Meany) is Irish, the botanist (Rosalind Chao) is Japanese.

With *Deep Space Nine* still intended to run a full six or seven seasons, in 1994 yet another Star Trek TV series debuted, entitled *Star Trek: Voyager* (also created largely by Rick Berman). As in the first two series, the characters serve on board a space ship, but this ship is lost light years from the Federation and must find its way home. The Voyager crew must also deal with internal Federation rebels known as The Maquis, some of whom serve on the Voyager bridge. Crew members include the scientist-captain Kathryn Janeway (Kate Mulgrew), Native American officer Chakotay (Robert Beltran), ex-convict Lieutenant Paris (Robert Duncan McNeill), youthful Ensign Kim (Garrett Wang), Vulcan Lieutenant Tuvok (Tim Russ), half-Klingon engineer Torres (Roxann Biggs-Dawson), holographic-projection "Doctor" (Robert Picardo), chef Neelix (Ethan Phillips), telekinetic Kes (Jennifer Lien), and part-Borg Seven of Nine (Jeri Ryan). As with the preceding series, there is an underlying sense of optimism about the future, but also a broad variety of episodes that deal with serious subjects such as personal versus professional loyalties, legitimate versus illegitimate forms of authority, foreign (or alien) codes of ethics, and the loss of families and loved ones.

In all its manifestations, Star Trek has made an incalculable impact on American culture. Social critics have viewed Star Trek as something of a modern mythology basing itself on the future rather than the past. Few Americans exist who have not seen at least one Star Trek movie or television show. The stars of the original *Star Trek* series have virtually become national legends, regularly featured on talk shows or as the subjects of biographical articles, books, and documentaries. NASA named one of its space shuttles "Enterprise"

in tribute to the show. World-renowned physicist Stephen Hawking appeared on a *Next Generation* episode, as did Mae Jemison, the first African-American woman in space. In the late 1990s, Star Trek television shows are seen in more than 100 countries worldwide and viewed by an audience of 30 million each week. There are more than 63 million copies of Star Trek books in print, and every newly-released Star Trek novel has been a best-seller—making this the most successful series in publishing history. There have been more than a dozen different Star Trek comic book series since the early 1970s, and there are thousands of Star Trek websites. There have been Star Trek museum exhibits, and there is a permanent "Star Trek: The Experience" museum/spaceship-simulator at the Hilton Hotel in Las Vegas.

There are many reasons for Star Trek's successes—the deep and compelling characters, the charismatic actors, the intelligent themes and plots of individual shows, the consistency of the future technologies and devices, the believability of the future universe. Perhaps one of the most important reasons is Star Trek's positive vision of the future. Star Trek shows and movies are an inspiration and hope for a twentieth-century world dealing with crime, homelessness, ethnic strife, and AIDS. In the twenty-third century, Earth has solved all its biggest problems. Political and racial harmony is so strong that warfare no longer exists. Understanding and altruism are so universal that money is no longer necessary. Sickness and hunger have all but vanished; humans live to age 130 and beyond.

For hardcore fans, Star Trek has truly become a way of life. Costumes from each of the television series are available, as are the tools of the trade—"phaser" weapons, "communicator" radios, and scientific or medical "tricorders." Nearly every science fiction shop in the country carries tribble dolls and Klingon dictionaries. The biggest Star Trek fans—"Trekkies" or "Trekkers"—have become something of a culture of their own, the subject of serious sociological studies as well as condescending satires. Trekkies are occasionally stereotyped as overweight nerds, but are in fact a very diverse bunch, as ethnically mixed as Star Trek characters themselves. Trekkies are the only fans listed in the OED, and they have become so numerous that, by the late 1990s, during every weekend of every year there is a Star Trek convention held somewhere in the world.

—Dave Goldweber

Star Wars

In 1977, George Lucas released a space opera titled *Star Wars: A New Hope* that has become not only one of the most important movies ever made, but one of the largest merchandising enterprises ever. The *Star Wars* phenomenon has led to two sequels (*The Empire Strikes Back* [1980], and *Return of the Jedi* [1983]), a set of prequels set for release at century's end, a score of books, numerous awards, and more toys than was once thought imaginable. *Star Wars* the movie was a

remarkable piece of filmmaking, but *Star Wars* the industry permeated popular culture in an unprecedented fashion—and looks to do so for years to come.

The *Star Wars* trilogy (as it was known before the release of the first *Star Wars* prequel, *Star Wars Episode I: The Phantom Menace*, in May of 1999) was one of the most successful movie endeavors of all time. All three of the movies rank in the top ten of box office revenue and by 1999 it was estimated that the trilogy had earned \$1.5 billion, plus three times that amount in merchandising. Beyond ticket sales the importance of the movies can be seen in the numerous Oscars, Golden Globes, and many other awards it has received. The movies were so popular that on the twentieth anniversary of the original, Lucas re-released the *Star Wars* trilogy with additional new footage (made with special effects that were not technologically possible in the late 1970s and early 1980s) and again drew viewers to theaters by the millions. Lucas stated that *Star Wars* was only 70 percent of what he had imagined and he described the release of the Special Edition not as the director's cut, but as the "director's wish."

The *Star Wars* movies are often described by critics as "corny" or "hokey" and as having a childishly simplistic plot, but these corny plots have taken hold of popular culture in an astounding fashion. The overall story has the simplicity of myth: rebel forces do battle with an evil empire, led by a cruel Emperor and his dark enforcer, Darth

(From left) Mark Hamill, Harrison Ford, Peter Mayhew as Chewbacca, and Carrie Fisher in a scene from *Star Wars*.

Vader. The movies depict the struggle between good (Luke Skywalker, Princess Leia, Han Solo, Obi-Wan Kenobi, etc.) and evil (Darth Vader, Emperor Palpatine, and the Storm Troopers); they are populated with heroes, villains, warrior-wizards, wise mentors, ogres, and princesses. The story tells of the transmission of good and evil from father to son; it is also a story, according to Lucas, about “redemption.” There is little that is new in the movies, much that is familiar. As scholar Andrew Gordon put it, “*Star Wars* is a masterpiece of synthesis, a triumph of American ingenuity and resourcefulness, demonstrating how the old may be made new again: Lucas has raided the junkyard of our popular culture and rigged a working myth out of scrap.”

Prior to *Star Wars*, merchandising was only used to help promote a movie and rarely lasted after the movie had finished its run. But *Star Wars* merchandising became a business unto itself and produced the most important licensing properties in history. The commercialization of *Star Wars* can be seen everywhere, from action figures to comic books to bank checks; there are even *Star Wars*-themed versions of Monopoly, Trivial Pursuit, and Battleship. Kenner toys once estimated that for most of the 1980s they sold in excess of \$1 billion a year in *Star Wars* related toys. In 1996, *Star Wars* action figures were the best selling toy for boys and the second over-all best-seller, after Barbie; in 1999 Legos introduced new models based on space ships from the early movies. Even in the late 1990s, *Star Wars* toys remained incredibly popular.

As time wore on the amazing popularity of *Star Wars* items did not falter. In 1991, Timothy Zahn’s *Heir to the Empire* became the first in a series of books based upon the *Star Wars* universe. It surprised the publishing world by going to No. 1 on the *New York Times* hardcover-fiction list. Marketers quickly discovered a new generation of fans who had never seen the movies in theaters but were nevertheless obsessed with *Star Wars*. This popularity can be easily seen, as a majority of the books published in the 1990s have reached the *New York Times* best seller list. The books have in one respect mirrored the real world; as the first generation of fans, now parents, take their children to see the re-release of *Star Wars* several of the books have focussed on the adventures of the children of Han Solo and Princess Leia.

Other books and movies spun off characters found in the trilogy. One set of books focused on the adventures of Lando Calrissian; two made-for-television movies featured the Ewoks (characters introduced in *Return of the Jedi*). The movies, *The Ewok Adventure: Caravan of Courage* (1984) and *Ewoks: The Battle for Endor* (1985) benefited greatly from the splendid special effects provided by Lucas’s Industrial Light and Magic, providing a rare treat for television movies. Both were considered superior fare for television, and were released theatrically abroad. The popularity of the two Ewok movies among children led to two half-hour animated adventure series. One featuring the Ewoks (1985-86) and the other the Droids R2D2 and C3PO (1985). Not only did the spin-offs demonstrate the appeal of the plethora of characters created by Lucas, but they further ingrained the *Star Wars* story into the cultural consciousness of fans old and new.

Star Wars merchandising kept pace with technology as LucasArts (the division of Lucas Industries tasked with developing computer games) created several games designed for the Nintendo system and for personal computers. Among the most popular of these games are

X-Wing (1993), which was the best-selling personal computer game of the year; Rebel Assault (1993), which sold 1.5 million copies, and the sequel Rebel Assault II: The Hidden Empire (1995); and Dark Forces (1995). In the late 1990s LucasArts became one of the top 5 producers of video games in the United States. As Lucas did in the film industry, LucasArts has pushed the outer limits of what was possible in computer games.

The popularity and long-term interest in *Star Wars* merchandise has given rise to a substantial collectors industry. With the high-level demand for original run *Star Wars* toys the value of many has skyrocketed. A vinyl-caped Jawa, which sold in 1978 for approximately \$3, brought as much as \$1,400 in the late 1990s. This has led to a number of conventions, books, and websites dedicated to collectibles. The demand and hoped for return on investment has led many toy stores to limit the number of any one item that can be purchased by customers.

Star Wars has had other far-reaching influences on American popular culture. The theme music by John Williams, which won both the Oscar and the Golden Globe in 1978, is one of the most identifiable pieces of film music ever created. The sound of Darth Vader’s artificially enhanced breathing is universally connected to dark foreboding danger, in much the same way that the theme music to films like *Psycho* and *Friday the 13th* connote coming horror. “May the force be with you” is just one of the most widely known of the many phrases from the movies that have worked their way into popular terminology. Nearly as well known is Obi-wan Kenobi’s admonition to Luke Skywalker, uttered during the hurtling chase scene in the high-walled metallic canyon of the Death Star, to “trust the force, Luke.”

Perhaps the most obvious influence *Star Wars* had in the political arena was its use as a linguistic device in the debate over the Strategic Defense Initiative (SDI). In an unrehearsed speech that took many foreign policy analysts by surprise, on March 23, 1983 President Ronald Reagan announced a goal of rendering nuclear weapons “impotent and obsolete” by constructing a space-based defensive system. For 30 years, the American defense against nuclear attack had rested on the policy of MAD (Mutual Assured Destruction). MAD assumed that the threat of massive retaliation would deter Soviet attack. SDI would provide an actual defense against the weapons themselves. Opponents of Reagan’s plan bitterly argued that not only would SDI prod the Soviet into developing new nuclear weapons that could penetrate SDI but that it wouldn’t work anyway. Shortly after President Reagan’s March 1983 speech, Senator Ted Kennedy derided SDI as “*Star Wars*” fantasy that was reckless, costly, and technologically unfeasible.

Senator Kennedy’s term of derision stuck. Years after President Reagan’s proposal was made, SDI is still known as “*Star Wars*.” Indeed, the Federation of American Scientists, an interest group opposed to SDI, has on its web site page for SDI issues a moving picture of Darth Vader menacingly waving his lightsaber. And in an academic conference sponsored by Northwestern University, one group of scholars claimed that “*Star Wars*” was worse than simply defensive weapons in space: SDI was in reality a “Death Star,” a potential offensive device in orbit that could destroy Earth just as Princess Leia’s homeworld of Alderaan was destroyed.

Not surprisingly, the *Star Wars* series has directly influenced many subsequent science fiction films, first, in its upbeat and individualist theme and characterizations, and second, (and perhaps

contradictorily) in its “mindless” special effects-induced action and weak plotline. In the first half of the 1970s science fiction films were either themed around gloom and doom messages of imminent environmental catastrophe—as in *The Andromeda Strain* (1971), *The Omega Man* (1971), and *Soylent Green* (1973)—or depicted an oppressive, corporate-controlled future in films such as *Rollerball* (1975) and George Lucas’s own *THX-1138* (1970). These films reflected the public backlash against government corruption in the Watergate-era and government dishonesty during the Vietnam conflict.

Star Wars abruptly changed the previously dispiriting and grim view of the future taken by science fiction films, offering a pro-freedom, anti-tyranny theme where the good guys actually won. (In *The Omega Man* and in *Soylent Green*, the lead characters are killed at the film’s conclusion.) *Star Wars*, with its backdrop of a totalitarian universe, promoted the values of the individual against the state and the “freedom fighter,” foreshadowing and congruent with the decade of the 1980s. The Empire is seen as a synthesis of Nazi Germany and the Soviet Union, a faceless bureaucratic tyranny that disturbs the agrarian, peaceful, trading peoples of the galaxy. Indeed, two of the primary heroes of the *Star Wars* saga, Han Solo and Lando Calrissian, are depicted as entrepreneurial privateers struggling against the oppressive state and avoiding its regulators.

The revival of religious values in the 1980s was also indicated in the *Star Wars* series. The individual-against-state theme of *Star Wars* is qualified by its solemnly spiritual individualism. With the mysticism of The Force, a plot device that Lucas had not originally intended to be a centerpiece of the series, *Star Wars* conveys the values of faith over reason and simplicity over complexity. *Star Wars* may be libertarian, but it is definitely not libertine and as such served as a precursor to the revival of small-town traditional values in the 1980s.

In keeping with its upbeat theme, *Star Wars* also resurrects the role of the unambiguous hero. In the 1960s and 1970s the heroes of many films were dubious heroes at best, and at worst anti-heroes. Among the films in this category are Francis Ford Coppola’s *Godfather* series; Martin Scorsese’s *Taxi Driver* (1976); Sam Peckinpah’s *The Wild Bunch* (1969); and the “Man with No Name” westerns and Dirty Harry cop films of Clint Eastwood. On the other hand, *Star Wars* offers the likes of Luke Skywalker, Han Solo, and Lando Calrissian as genuinely good-hearted, if not faultless, characters. The faults they do possess—Luke leaving his Jedi training too soon to rescue Han and Leia—are faults of judgment that arise out of a love and concern for friends and not of character. In short, *Star Wars* reverses the bleakness, grimness, and unsettling tragedy inherent in many early 1970s films by, in part, offering characters to cheer for. Other science fiction films—indeed Hollywood in general—would come to mimic the heroic characterizations of *Star Wars*. The Indiana Jones series, Chuck Norris’s *Delta Force* series, the *Superman* series, the *Conan* series, and of course the *Rocky* series all revive the heroic archetype central character. Nearly gone were the no-name, angst-ridden, amoral “heroes” of the late 1960s and 1970s.

A second influence of the *Star Wars* series was the way in which it heightened the use of special effects in film, especially science fiction film, to the detriment of plot. *Battlestar Galactica* (1978), for example, was an obvious and cheap *Star Wars* reproduction that was wholly devoid of plot. While other science fiction films succeeding *Star Wars* such as the *Alien* series, *Superman* (1978), *Close Encounters of the Third Kind* (1977), *E.T.* (1982), the *Jurassic Park* series all

possessed passable plots, the emphasis on the effects is clear. One film, *Independence Day* (1996), went so far as to mimic Luke’s attack run through the Death Star’s trench, replacing TIE fighters and X-Wings with F-18s and alien fighters.

Lucas has stated that the next *Star Wars* films are prequels to the released films, taking place approximately 35 years prior to the events of the original *Star Wars* (which is the fourth episode in the saga). The first of the prequels, *Star Wars—Episode 1: The Phantom Menace*, takes place in the last years of the Jedi Republic and deals with the early Jedi training of Luke’s father, Anakin Skywalker, under Obi-Wan Kenobi, his love for a young Queen, and the maneuverings of Senator Palpatine to the throne. The film stars Liam Neeson, Ewan McGregor, Natalie Portman, and Frank Oz as the voice of Yoda. According to David Ansen in *Newsweek*, while the first film took audiences by surprise, the prequel came out “amid a cacophony of media hype, carrying on its shoulders the wildest hopes of several generations of worshipful moviegoers. . . . It’s not hype to say that *Phantom Menace* [was] the most eagerly awaited movie ever made.” The prequel was directed by George Lucas himself (the first film Lucas will have directed since the original *Star Wars*), and was reported to have cost \$115 million to produce, with a 20-minute finalé alone costing a reported \$22 million. The first prequel contains over 1,500 special effects, five times the number in effects-laden *Independence Day*. If one can judge by the hype that preceded the release of the movie on May 19, 1999, the force remains with the *Star Wars* franchise.

Starbucks

The brand recognition of Starbucks coffee, and its elevation to a catchword denoting the ultimate corporate commodification of the anti-corporate, “slacker” lifestyle, is all the more phenomenal for the company’s marked refusal to achieve that status through the medium of advertising. A chain of retail coffee outlets that offer fresh specialty drinks and beans to go, the Seattle-based company expanded across North America at a quick pace during the 1990s, and by early 1998 Starbucks stores could boast a combined foot-traffic count of five million visitors weekly. Because of Starbucks, Americans can now pronounce the foreign terms “latte” and “barista” when discussing complex coffee beverages and the food-service professionals who make them.

Starbucks’ corporate origins date back to 1971, but the company did not really begin its march to massive success until 1986, when a Starbucks executive, Howard Schultz, created a coffeehouse in Seattle to serve upscale espresso drinks. He called it Il Giornale, and modeled it on the coffee-imbibing locales ubiquitous to Italian cities. The following year, Schultz put financing together and bought out Starbucks’ two original founders, who had little faith in his attempt to introduce European-style coffee and coffee culture.

Starbucks was a hit in Seattle, however, and soon began expanding down the Pacific Coast. Exporting the concept to Chicago in the early 1990s was equally successful, and forays into the Northeast and Canada were also lucrative. The trade journal *Restaurants & Institutions*, naming Starbucks as its “Changemaker” for 1995, explained

Starbucks president, Howard Behar, poses in front of the first Starbucks in China.

that “with ethnic influences shaping the American palate, consumers demand more from everything they consume. . . . Along comes Starbucks with a flavor profile stronger than many Americans had ever experienced.” With a featured “coffee of the day” and a variety of espresso, cappuccino, and latte drinks priced from \$1.15 to \$3.15, Starbucks became a morning stop for urban commuters in major American cities, and a hangout for the home-office-bound and stroller-mom brigade of the more affluent suburbs. In some urban spots, Starbucks outlets were so successful that the company simply opened up a second Starbucks across the street.

By 1998, Starbucks was the number-one roaster and retailer of specialty coffee in the United States, closing in on its goal of 2,000 stores by the year 2000, expanding into Asian markets, and introducing bottled beverages and packaged beans in supermarkets. Yet it was the actual Starbucks space that attracted both devotees and disparagers. The stores are carefully designed to look just slightly cutting-edge and modern in their fixtures and fabrics; the lighting is subdued and ambient. Sociologists term it a “third place”—neither work nor home, but a neighborhood spot where it’s okay to sit alone, offering the chance of running into old friends or making new ones. “I don’t think Starbucks’ success has that much to do with coffee,” urban sociologist Peter Katz told *Seattle Weekly*’s Bruce Barcott. “Starbucks is selling community.”

Katz and other academics have contemplated Starbucks’ success and increasing ubiquity, and cite certain elements in North American culture and demographics as key factors. First is the importance of the “private sphere” in American life, and because of it a near-planned lack of designed community spaces, as in Europe. The predominance of suburban living spaces has led, in turn, to too much isolation. Economic considerations have also contributed to Starbucks’ empire: By the 1990s, the workplace no longer offered the security and stabilized socialization of the past and more Americans had opted to work at home. Coupled with the extreme transiency of North America culture in general, these factors engendered this longing for just such a “third place.”

Furthermore, coffeehouse culture allows, to a certain extent, people from different social and belief strata to mix, and fulfills a post-Yuppie era desire to appear sophisticated and European. It also allows more straitlaced personality types to participate in what had been the coffeehouse culture pre-Starbucks, when such places were frequented by artists, college students, and the underemployed. “Square America needs a hangout too,” observed the *Seattle Weekly*’s Barcott. “Starbucks joins the concept of the coffeehouse with mainstream America’s demand for brand-name assurance.” Locating the stores near or even inside mega-bookstores such as Barnes & Noble or Borders creates what Barcott calls the “upscale leisure ghetto.”

Yet anti-Starbucks sentiment is strong, especially among the original slacker coffeehouse crowd. Stores under construction are sometimes vandalized, there are Internet web sites that rail against “McLatte,” and National Public Radio host Ira Glass speaks of the common bond uniting his audience as “a fear of Starbucks.”

Starr, Bart (1934—)

Bart Starr retired from the Green Bay Packers as the winningest quarterback in the history of professional football. From 1956 to 1971 he directed the Packers to six Western Division titles, five World Championships, and two Super Bowl victories. He won the National Football League's (NFL) Most Valuable Player award in 1966, made four Pro Bowl teams, and won the league passing title three times. Even as the talented starting quarterback of the NFL's best team during the decade that saw football become America's number one sport, Starr's humble personality was initially overshadowed by more outspoken Packers like Ray Nitschke, Paul Hornung, and coach Vince Lombardi. But his stature rose among both football fans and the general public as the Packers evolved from a running to a passing team during their championship run. Teammates and outsiders recognized the balance his cool personality offered the intense Packers. Like other American celebrities from Gary Cooper to Dwight Eisenhower, Starr's public persona sprang from a dependable, appealing toughness and self-effacing gentility.

Bart Starr

Born in Montgomery, Alabama on January 9, 1934, Bryan Bartlett Starr struggled through his playing days in high school and college. Although he was not a high school star and was considered too shy to be an effective starting quarterback, his career at the University of Alabama began well. As a freshman he was all-SEC (South Eastern Conference) and started in the 1953 Orange Bowl, which Alabama won 61-6. Due to injuries and a coaching change, however, Starr rode the bench his final two years.

At the urging of his former coach at Alabama, the Green Bay Packers selected Starr in the seventeenth round of the 1956 NFL draft. For his first four seasons, Starr alternated at quarterback and observers echoed concerns at Alabama: Starr's arm was weak and he was too passive and nice to develop the presence necessary for a championship quarterback. When Vince Lombardi became head coach of the Packers in 1959 he too shared in that assessment, and like Starr's previous coaches, badgered the quarterback to assert himself. In time, Lombardi recognized that Starr's future depended upon quiet encouragement instead of public humiliation. Starr responded, embracing Lombardi's single-minded will to succeed and dogged preparation for games. Starr's liabilities—his quiet focus and selflessness—became advantages for the team, which needed a firm but unassuming presence amidst Lombardi's tumultuous personality. By mid-1961, Starr was the starter for good. "Everything I am as a man and a football player I owe to Vince Lombardi," Starr later told *Sport* magazine. "He is the man who taught me everything I know about football, about leadership, about life. He took a kid and made a man out of him, with his example, with his faith."

Starr developed into an inspiring leader and one of the most efficient passers in the history of football. A clever quarterback who expertly read defenses and studied game films year-round, he set NFL records for the lowest percentage of passes intercepted in a season (1.2 percent), fewest interceptions in a full season (3), and lifetime passing completion percentage (57.4 percent). In 1964 and 1965 he threw a record 294 passes without throwing an interception.

Starr came to symbolize the clutch player, creating a model for later NFL quarterbacks like Terry Bradshaw and Joe Montana. His post-season quarterback rating set records as the highest in NFL history. In six NFL championship games he threw 11 touchdowns but only one interception. Starr made big plays, too. Most famously, he engineered "The Drive" in the final moments of the 1967 NFL Championship game against the Dallas Cowboys. One of the most famous series in the history of professional football, The Drive culminated in Starr's quarterback sneak behind Jerry Kramer to give the Packers the victory in the game later known as the "Ice Bowl."

Throughout all his successes and his failures, like his disappointing nine years as head coach of the Packers from 1974 to 1983, Starr retained his likeable, modest, hard-working personality. After coaching, he remained in Green Bay, setting up businesses in Wisconsin and his home state of Alabama, and working for charitable causes. To many, he will always be the sturdy conscience behind the Packer dynasty.

Starr, Kenneth (1946—)

Kenneth Starr will be remembered in the popular imagination as the soft-spoken but tenacious Republican special prosecutor locked in mortal combat with Democratic President William Jefferson Clinton and his White House—a battle which culminated in impeachment proceedings for only the second time in U.S. history. Starr, a former Federal Appeals Court judge and solicitor general under President George Bush, was appointed as Independent Counsel by U.S. Attorney General Janet Reno in 1994 to investigate allegations of wrongdoing by the former Arkansas governor William Jefferson Clinton, his wife Hillary Rodham Clinton, and their various business and personal associates. Starr's investigation, which began as an attempt to ascertain if the President and First Lady had illegally benefited from a land deal in Arkansas, culminated in the referral of a controversial report to the U.S. House of Representatives regarding President Clinton's affair with a 21-year-old White House intern named Monica Lewinsky. The story of the affair, and the legal clash between Starr and Clinton, dominated the media during 1998 and well into 1999.

Kenneth Starr

From the beginning of his investigation, Starr was accused of partisan bias and conflict of interest, particularly in representing tobacco companies for his law firm of Kirkland & Ellis and nearly filing a Supreme Court brief in support of Paula Jones's sexual harassment suit against Bill Clinton. The charges against Starr intensified when the Lewinsky story broke in January of 1998. Though Starr had received permission from a three-judge panel and the Attorney General to expand his Whitewater investigation to include the Lewinsky matter, critics took issue with some of the Office of the Independent Counsel's legal tactics, such as its wiring of a Pentagon employee named Linda Tripp to record Lewinsky, its justification for expanding the investigation, and its subpoenaing of sympathetic witnesses such as Betty Currie (the President's personal secretary) and Monica Lewinsky's mother. Seemingly unheeding of his public relations problems even as the President's approval ratings climbed, Starr pressed forward with his grand jury investigation throughout the first half of 1998. For months, the President stood by his initial denial of having had "sexual relations" with Lewinsky, but before Starr's grand jury on August 17, the President reluctantly admitted to at least some details of what he called an "inappropriate relationship."

The Starr Report, submitted to Congress on September 9, 1998, and quickly released to the American public both on the Internet and through various publishers, was widely criticized not only for its omission of most matters relating to the original Whitewater investigation, but for its explicitness in detailing specific sexual encounters between President Clinton and Ms. Lewinsky. Starr's office and its defenders argued that the detail was unfortunate but necessary in order to prove that the President had obstructed justice and committed perjury first in a deposition in the Paula Jones sexual harassment case against him and later before the grand jury investigating the matter. The referral went to the House Judiciary Committee, charged with the task of debating and drawing up articles of impeachment against the President. Starr himself appeared before the committee in order to defend his office's investigation and the report that resulted. Following often acrimonious debate between Republicans and Democrats in the Judiciary Committee, President Clinton was formally impeached on December 19, 1998, on a mostly party-line vote by the full House on two charges of obstructing justice and committing perjury before a federal grand jury—only the second such presidential impeachment in American history. The Senate declined to remove the President from office. The man singly most responsible for the President's impeachment, Kenneth Starr, remained as Independent Counsel into 1999, though analysts predicted that the case against Clinton would go no further.

Starsky and Hutch

A popular detective show during the 1970s, *Starsky and Hutch* (1975-1979) brought violence on television to the forefront of national debate in that decade. Shot in Los Angeles, but set in a city that was never named, *Starsky and Hutch*—unlike previous detective shows—featured a shootout and a car chase in each episode. The show starred dark haired Paul Michael Glaser as the wisecracking, street smart David Starsky and blue-eyed blonde David Soul as the educated, soft-spoken Ken “Hutch” Hutchinson. Every week, the two undercover

police officers came in contact with big city criminals, drug dealers, prostitutes, mobsters, cultists, and murderers, and managed to catch the bad guys in less than 60 minutes while wearing skin tight bell bottom pants. Drawing inspiration from hit movies like *The French Connection*, the capture of the criminal always required a car chase, which featured Starsky’s prize possession, the “red tomato,” a 1974 Ford Torino with a white racing stripe.

When the show debuted on ABC in 1975, much was written about the chemistry between the two lead actors. *Starsky and Hutch* was one of the first shows where men could be friends and openly care about each other. These two young, hip, bachelor plain clothes detectives were as vulnerable as they were tough. Not afraid to hug each other, they were a far cry from the cardboard Joe Fridays and Mike Stones that preceded them, and the relationship between the two men had sensitive qualities rarely—if ever—seen before on television.

The show also featured blaxploitation film star Antonio Vargas as the flamboyant Huggy Bear, a con man who moonlighted as a police informant, and had the fashion sense of a pimp. *Starsky and Hutch*’s boss was Captain Harold Dobey, played by Bernie Hamilton. Captain Dobey, a member of the old guard, often butted heads with his two new-breed detectives about the manner in which police work should be done. The gruff-but-lovable Dobey was a glimpse of what would later become a staple in many television cop dramas—the

David Soul (left) and Paul Michael Glaser as *Starsky and Hutch*.

almost one dimensional African-American police boss. The use of the African-American actor as a supervisor in these kinds of dramas became very popular in the 1990s, with the likes of *Homicide's* Lieutenant Al Giardello, *NYPD Blue's* Lieutenant Arthur Fancy and *Law and Order's* Lieutenant Anita Van Buren.

William Blinn created the show. Aaron Spelling and Leonard Goldberg acted as executive producers and produced 92 episodes of *Starsky and Hutch*, which ended its television run in 1979. Glaser and Soul directed several episodes of the show themselves, which was unusual for actors at the time. In subsequent decades, the practice of stars performing directing and producing duties would become more common.

Starsky and Hutch's influence can be seen in TV cop shows in which the partners have a very close relationship. But the good looking hipster cops were descendants of television's *The Mod Squad* (1968-1973), and they were part of a post-*Serpico* spate of cop narratives, including *Baretta* and *Toma*, which depicted law enforcement's battle with the dark side of America's crime-ridden urban landscape. The contentious relationship they had with their superior has become a staple in cop dramas. The violence in the show, shocking in 1975, seems tame by later standards.

In the late 1990s, though it had been off the air for a couple of decades and had not been a terribly popular network choice for reruns, *Starsky and Hutch* surfaced in a rather odd way. An August 18, 1997 *New York Times* article by Amy Harmon about fan fiction, an Internet phenomenon in which fans write and post new episodes of their favorite shows, mentions *Starsky and Hutch* as a favorite of the "slash" genre writers and readers. In "slash" fan fiction, the sexual orientation of the main characters has been changed, and in 1999, there were about a dozen web pages devoted to the homoerotic exploits of the two detectives.

—Joyce Linehan

State Fairs

A reflection of American life and its diverse people and interests, state fairs featuring exhibits, rides, shows, and food have been popular since the mid-nineteenth century and became an American tradition in the twentieth. The pride, nostalgia, and entertainment that make up a state fair experience have transcended political, social, and economic changes that America has faced during the twentieth century. By the 1990s state fairs have come to represent a nostalgic, "old-fashioned" form of family entertainment that emphasizes state and national pride, agricultural roots, and good times.

Fairs have existed for centuries and can even be dated back to ancient Mesopotamia in 3000 B.C. Modern American fairs grew out of an 1807 idea by Elkanah Watson, a banker and farmer in Pittsfield, Massachusetts. He decided that the best way to convince other farmers to raise sheep was to show them his own animals. The townspeople were so impressed with Watson's idea that they gathered together to form the first Berkshire Cattle Show in 1810. Although many people were concerned about attending a nonreligious celebration, Watson convinced the people of New England that the show was an acceptable event for upstanding citizens because of its importance

to the business of farming and its educational value. Throughout the next decade the show expanded to include men's and women's manufacturing exhibits, a parade, and a dance. The fair quickly spread throughout the United States, and by the time of the Civil War, agricultural societies in 25 states were holding annual fairs.

With the success of county and local agricultural fairs, state governments quickly realized that fairs could be used to highlight the growth and achievements of their states. New York held the first state fair in September 1841, and several states in the Midwest quickly followed its example. State fairs were among the first places in the nation where people could see electric lights, automobiles, solar homes, and dozens of other modern inventions. Railroads contributed to the popularity of state fairs by allowing people to travel quickly and cheaply. Some railroads even provided discounts for exhibitors and families going to the fair. People attended the early state fairs in overwhelming numbers and still do: more than 900,000 people attended the 1997 Ohio State Fair, the second largest state fair next to Texas.

State fairs attempt to feature the most appealing aspects of their respective state. Each year people who have made a difference, such as sports heroes, celebrities, teachers, and activists are chosen to be recognized at the state fair. In cooperation with the state wildlife bureau, many state fairs offer an area showcasing native birds and animals. Prominent businesses, churches, and social organizations highlight their own achievements. Each organization is given a booth in which it can introduce people to its work. Visitors shopping for certain items are offered a large selection, while those who are just browsing are introduced to many new and exciting people and goods that they may not have known existed. Agriculture continues to be a vital component of state fairs in the twentieth century. Exhibits of farm machinery and tools are common. Competitions for crops and farm animals remain much the same as in the nineteenth century, except that advances in technology have allowed for stronger and healthier crops and livestock.

Young people are an important part of the state fair experience. Their presence allows older people to recall their own experiences at fairs past, and their participation helps to forge a new bond between the young and the old that often does not exist the rest of the year. High school marching bands come from around the state to play at the fair. Youth groups such as the 4-H, Future Farmers of America, and Girl and Boy Scouts hold competitions for raising animals, cooking, sewing, woodworking, citizenship, art, and gardening. In the 1970s, 1980s, and 1990s many young people who participated in state fairs were far removed from the rural farm setting of the traditional fairgoers. Encouraged by their parents' fond memories, young people living in urban areas often will concentrate on home manufacturing areas or raise small animals.

Mechanical rides became common at state fairs in the years following their introduction at the 1893 world's fair in Chicago. The Ferris wheel, first introduced there, became a hit at state fairs around the nation and remained popular throughout the twentieth century. In the 1990s, a state fair would not be complete without a diverse and abundant selection of rides for people of all ages. The Bumper Cars, the Himalaya, and the Scrambler are just a few of the rides that have kept Americans returning to the state fair since the 1950s. State fair rides are popular with teenagers and have been romanticized as the starting place for many first dates.

A State Fair in Louisville.

Sideshows featuring multiheaded people or animals, bearded women, and extra-human contortionists are expected at state fairs and were once part of the novelty of discovery that made up the fair. Since the 1970s, however, sideshows have declined in popularity and presence at state fairs, either because of an effort to provide “wholesome” entertainment for families or simply due to lack of interest. Nonetheless, sideshows remain part of the nostalgic image of state fairs.

Food is an essential part of the state fair experience. French fries, coney dogs, Polish sausage, cotton candy, and apple pie fill the air with a smell that only a state fair can create. State fairs often offer specialty foods that are made of locally grown ingredients, but many foods highlight the ethnic diversity of the state. It is common for a single state fair to have food from dozens of countries around the world—Mexican, Greek, Chinese, Polish, and German are especially popular—creating a common ground where ethnic and racial tensions present in everyday life may be muted.

Since the 1950s, state fairs have offered shows featuring popular musical groups of many different styles—rock, Christian, blues, folk, gospel, and even some classical. Country music is usually the most popular, however. In the 1980s and 1990s, country musicians Alabama, Willie Nelson, and Garth Brooks sold out shows at state fairs

around the country. While big names such as these do attract crowds, other sorts of shows such as rodeos, exhibition sporting events, and magic shows are also popular and can sometimes attract crowds as large as those for concerts.

Staubach, Roger (1942-)

In his eleven-year career with the Dallas Cowboys from 1969 to 1979, quarterback Roger Staubach frequently engaged in last-second heroics to help his team to two Super Bowl victories and four National Football Conference titles.

A native of Cincinnati, Ohio, Staubach played quarterback for the United States Naval Academy, where he won the 1963 Heisman Trophy, awarded to the top player in college football each season. Staubach was drafted by the Cowboys in the tenth round of the 1964 NFL draft, but first served in the navy for four years before beginning his professional career.

After Staubach began his career with the Cowboys in 1969, he played sparingly during his first several seasons, when Dallas Coach Tom Landry was using Craig Morton as the team's starting quarterback. In 1971, Dallas had suffered a disappointing 16-13 loss to the Baltimore Colts in Super Bowl V, and the following season, Landry decided that he would give Staubach the opportunity to compete for the job of starting quarterback. At the end of preseason, Landry decided to alternate Staubach and Morton at the position during 1971-72, a situation which did not seem to work out particularly well, as the

Roger Staubach

team lacked cohesion in the early part of the regular season. However, in mid-season, Landry made Staubach the starting quarterback, and he responded by leading the Cowboys to the Super Bowl. Staubach earned the Most Valuable Player Award in Super Bowl VI in 1972, as his Dallas Cowboys defeated the Miami Dolphins by a score of 24-3. Staubach completed 12 out of the 19 passes that he attempted, for 119 yards and two touchdowns.

Staubach had little chance to savor his success, however, for he badly separated his right shoulder in a game the following preseason, which required surgery and caused him to miss much of the 1972 regular season. Staubach's injury came while he tried to fight through several defenders in an attempt to score, a style unlike that of most other quarterbacks, who generally try as hard as possible to avoid physical contact on the playing field.

Staubach was able to return later that season, however, and in the 1972 playoffs, he delivered a performance that defined much of the rest of his career and earned him the title "Captain Comeback." He entered a first-round game against the San Francisco 49ers with his team trailing at the end of the third quarter and the 49ers already beginning their celebration. Staubach, however, led the Cowboys to two dramatic touchdowns in the last two minutes and an improbable come-from-behind 30-28 victory. Despite Staubach's heroics, the Cowboys lost that season's NFC title game 26-3 against the Washington Redskins.

The Cowboys reached the Super Bowl three times in the late 1970s with Staubach at quarterback. Twice, in Super Bowls X and XIII, they lost to Pittsburgh teams that were considered by many to be among the greatest of all time. However, the Cowboys defeated the Denver Broncos in Super Bowl XII in 1978 by a 27-10 score, giving Staubach his second Super Bowl victory. In that game, Staubach threw a 45-yard touchdown pass in the third quarter to give the Cowboys an insurmountable 20-3 lead. During this period, the Cowboys came to be known as "America's Team."

Staubach retired following the 1979 season, despite the fact that at 37, he was still playing at a very high level. The quarterback, however, cited a desire to spend more time with his family, a declining enthusiasm for football, and concern over the possibility of permanent injuries, as he had already suffered numerous concussions and a variety of other physical problems as a result of his tenacious style of play.

Staubach was enshrined in the Professional Football Hall of Fame in Canton, Ohio in 1985. He was the leading passer in the NFL during four of his 11 seasons, and was an All-NFC selection four times during his career. "Captain Comeback" also managed to lead the Cowboys to 21 come-from-behind victories in the fourth period, living up to his nickname.

Steamboat Willie

Premiering in 1928, *Steamboat Willie* was the first of Disney's Mickey Mouse cartoons to feature sound, which helped to launch the character's phenomenal career. Unlike other cartoons of the time where sound served simply as a background to the action, both music and sound effects were essential to the film's structure and visual rhythm. The clever animal concert (in which Mickey plays a cow's teeth like a xylophone and transforms a nursing sow into a bagpipe) illustrates Disney's ability to successfully blend sight and sound, so that neither element dominates the other. It also anticipates the complex musical sequences, featured in later films like *Fantasia*, which transformed the art of animation and became key to Disney's financial success.

The Steel Curtain

The Steel Curtain was the name given to the defensive line of the Pittsburgh Steelers football team during their glory days in the 1970s. Composed of L. C. Greenwood, Ernie Holmes, "Mean" Joe Greene, and Dwight White, the four members of the Steel Curtain routinely dominated the opposition, crushing opposing running backs and sacking quarterbacks. Although the Steelers defensive unit as a whole was one of the greatest of all time, it was the Steel Curtain that was the focus of public attention. Joe Greene, the leader of the Steel Curtain and two-time Defensive Player of the Year, was also a media celebrity in his own right. Greene appeared in one of the most famous soft-drink advertisements in television history. The advertisement featured Greene trading his football jersey to a small child in exchange for a bottle of Coca-Cola.

Steffens, Lincoln (1866-1936)

At the beginning of the twentieth century, when corruption in city government ran rampant in large American cities, one of the

original muckrakers—so named by Theodore Roosevelt for their aggressive journalistic tactics in investigating controversial stories—was Lincoln Steffens. Steffens hounded corrupt city officials all across the United States. He faced numerous death threats and stood up to local political machines in many cities, including Pittsburgh, New York City, and Minneapolis. His first effort at a story came in Philadelphia, where he compared the local extortionists' control of the city voting to that of the disenfranchisement of African-Americans in the South. He wrote in *McClure's* magazine, "The honest citizens of Philadelphia have no more rights at the polls than the Negroes in the South." Over the course of his career, Steffens' muckraking led to the indictment of eighteen municipal legislators in St. Louis and the ouster of twenty corrupt city councilman in Chicago. Through the journalistic ideology of muckraking, Steffens challenged the way in which city business was done and set a standard many others would follow.

Lincoln Steffens was born in 1866 in San Francisco. He failed his first attempt at the entrance exam to the University of California-Berkeley. On his second try he succeeded and graduated in 1889 with a degree in philosophy. In 1891, Steffens moved to Paris and married Josephine Bontecou. He returned to New York City in 1892 after landing a job with the *New York Evening Post*. He later became managing editor of *McClure's*, joining other muckrakers like Ida Tarbell and Ray Stannard Baker. In a nationwide publication, Steffens exposed corrupt city officials, who often received and gave bribes, and bought and sold privilege at all levels. Steffens published six articles on corruption in local city governments and these articles formed the hallmark on city reform for the next half-century. The six articles were published together in a book in 1904. *Shame of the Cities* quickly became a bestseller and stood out for its prose and style.

Lincoln Steffens' public call for the end of democracy led to a permanent split with *McClure's*. In 1906, he became co-owner of *American* magazine, but sold his shares in 1907, after a little more than a year. By 1910, Steffens had become disillusioned with muckraking and concerned himself with the radical revolutionaries in Mexico. This involvement led him to become even more skeptical of capitalism. In 1917, he traveled to Soviet Union, proclaimed himself a Marxist, and joined the Communist Party. At the conclusion of the Great War, Steffens attended the 1919 Paris Peace Conference at Versailles. After leaving Paris, Steffens returned to the United States and embarked on a cross-country tour promoting the Bolshevik Revolution. By late 1921, Steffens was pressured out of America with the onset of the first Red Scare. He first returned to Paris then later moved to Italy, where he wrote his autobiography in 1931. *The Autobiography of Lincoln Steffens*, and its theme of an intellectual reformer turned revolutionary, appealed to many during the Great Depression. The book, with its witty, charming, and compassionate narrative, sold well in the United States and laid the groundwork for autobiographical style for years to come. Steffens moved back to the United States in 1927 and died in 1936 in Carmel, California. He is buried in San Francisco. Lincoln Steffens' life will be remembered for many achievements in journalism. He helped end city corruption, published two popular books nearly thirty years apart, and became the first truly revolutionary writer. Steffens has left his mark on journalistic history.

Steinbeck, John (1902-1968)

A native Californian, writer John Steinbeck built his career on stories based primarily in Northern and Central California, around his hometown of Salinas, near Monterey. Best known for the novels *Of Mice and Men* (1937), *The Grapes of Wrath* (1939), and *East of Eden* (1952), along with numerous short stories, Steinbeck also published non-fiction, plays, and screenplays. He was awarded the Pulitzer Prize for *The Grapes of Wrath*, and, in 1962, he received the Nobel Prize for Literature. Steinbeck's works have been widely read and have been the subject of many motion pictures.

Born John Ernest Steinbeck in the fertile valley of Salinas, California, inland from Monterey Bay, Steinbeck grew up in an

John Steinbeck

environment caught between the transition from farming and ranching to the “respectable culture” of universities and businessmen. Steinbeck's parents were middle-class citizens of Salinas (his father served as Monterey County Treasurer and his mother was a schoolteacher), but John himself often worked as a laborer on nearby farms. Attending Stanford University as a marine biology major, Steinbeck left without completing his degree, having made the decision to try making his living at writing, first in New York and then back in California. His early works, *Cup of Gold* (1929), *Pastures of Heaven* (1932), and *To A God Unknown* (1933), went largely unnoticed until the publication of *Tortilla Flats* (1935), which described the exploits of a group of *Paisanos* (Mexican-Americans) living in Monterey. Steinbeck's reputation as an advocate for farm labor organization began with the publication of *In Dubious Battle* (1936), which recounts the efforts of farm labor organizers during a fruit pickers strike. His next work, *Of Mice and Men* (1937), was first conceived as a stage play and was produced simultaneously as a play and a novel. The play received the Drama Critics' Circle Award, and the novel, the compelling story of two itinerant farm hands, firmly established Steinbeck as a major California writer.

Steinbeck's most acclaimed work, *The Grapes of Wrath* (1939), has become a classic work of the Depression era. The book was awarded the Pulitzer Prize in 1940 in addition to being made into a classic motion picture by John Ford that same year. Following the success of *The Grapes of Wrath*, Steinbeck concentrated on non-fiction works such as *Sea of Cortez* (with Edward F. Ricketts, 1941) and *Bombs Away: The Story of a Bomber Team* (1942). During World War II, he worked as a war correspondent—his articles were published collectively as *Once There was a War* in 1958. He returned to fiction with *Cannery Row* (1945), *Sweet Thursday* (1954), *The Red Pony* (1945), *The Pearl* (1947), and his most ambitious novel, *East of Eden* (1952), which tells the stories of three generations of the Trask family, focusing on the conflict between two brothers. In the 1960s Steinbeck once again returned to non-fiction with *Travels with Charly in Search of America* (1962) and *America and Americans* (1966). In addition to having many of his works adapted for the screen, including *Of Mice and Men* (1939 and 1992), *The Grapes of Wrath* (1940), *Tortilla Flat* (1942), *The Moon is Down* (1943), *The Pearl* (1947), *The Red Pony* (1949), *East of Eden* (1955), and *Cannery Row* (1982), Steinbeck himself wrote several original screenplays, including Alfred Hitchcock's *Lifeboat* (1944) and Elia Kazan's *Viva Zapata* (1952).

In his acceptance speech for the Nobel Prize, Steinbeck described his belief in the power of literature to improve the condition of humankind: “I hold that a writer who does not passionately believe in the perfectibility of man has no dedication nor any membership in literature.” The realism of his writing, along with the intensity of his belief in the transformative power of literature, has helped develop an American literary style, which influenced the protest writings, both literary and musical, of the late 1950s and 1960s.

Steinberg, Saul (1914-1999)

Best known for the hundreds of enigmatic, captionless drawings and frequent covers he has contributed to the highbrow *New Yorker* magazine since 1941, the Romanian-born, world-traveled Saul Steinberg has employed in his long career an eclectic range of media and styles that are rarely straightforward and frequently attest to his literary and philosophical musings. Steinberg has often incorporated the likes of unintelligible calligraphy, watercolor, rubber stamps, tracings, thumbprints, graph paper, and collage into his pen-and-ink drawings for books and magazines. Recurring themes have included the relationships among abstract concepts, as in “Ship of State” (1959), and places he has known, such as “Bleecker Street” (1971), in which a parade of street characters are rendered in dozens of cartoon styles. Few have so successfully blurred the line between popular and high art as Steinberg.

Steinbrenner, George (1930—)

The word “controversial” has preceded the name George Steinbrenner ever since the multimillionaire shipbuilder from Cleveland became the principal owner of the New York Yankees in 1973. Considered to have been the driving force behind baseball’s escalating salary structure in the late 1970s and 1980s, Steinbrenner was loathed for his frequent criticism of his players and managers while being credited with bringing winning baseball back to New York City. Never one to shy away from the media limelight, Steinbrenner’s brash personality and penchant for grabbing newspaper headlines often overshadowed his team’s play on the field.

With his father’s retirement from the family shipping business in 1963, George M. Steinbrenner III, a former football player for Ohio State University, was called upon to take over the company. With the millions he made in business, Steinbrenner returned to the sports world, attempting in the early 1970s to acquire the Cleveland Indians. When that deal fell through, Steinbrenner’s attention turned to the floundering New York Yankees, then owned by the Columbia Broadcast System. In 1973, CBS sold the team to a syndicate headed by Steinbrenner for \$10 million. Although he had vowed not to take a prominent role in running the club, the new Yankees president soon became one of the most controversial owners in the game.

After a decade of disappointing seasons, under the new ownership the Yankees quickly became competitive again, finishing a close second in 1974, followed by a pennant in 1976, and world championships in 1977 and 1978. Through a series of shrewd trades and large free-agent contracts, “Boss” Steinbrenner had brought winning baseball back to New York. On New Year’s Eve 1974 he signed American League Cy Young Award winner Jim “Catfish” Hunter to a five-year contract worth an estimated (and unprecedented) \$3.75 million, following this up in later years with huge contracts to sluggers Reggie Jackson, Dave Winfield, and many other players.

Although successful on the baseball diamond during his first decade with the Yankees, Steinbrenner’s tenure was marred by legal battles and feuds with managers and players. In 1974, baseball’s commissioner Bowie Kuhn barred Steinbrenner from serving as Yankees president for one season for having made illegal contributions to President Richard Nixon’s campaign two years earlier. Steinbrenner’s tempestuous relationship with his managers began with the resignation of longtime manager Ralph Houk after the 1973 season. Over the next 20 years Steinbrenner made 18 more managerial moves involving 12 different managers. His most turbulent relationship was with former Yankees second baseman Billy Martin, who was first hired as the Yankees’ manager in 1975 and first fired in 1978—a sequence that was repeated four more times before Martin’s last firing in 1988. After being dismissed 16 games into the 1985 season, Yankees manager (and former star catcher and fan favorite) Yogi Berra vowed never to set foot in Yankee stadium again as long as Steinbrenner continued to run the Yankees.

Despite the team’s success on the field, in the late 1970s and early 1980s the Yankee clubhouse was awash in controversy. As Yankee third baseman Graig Nettles recalled, “When I was a little boy, I wanted to be a baseball player and join the circus. With the Yankees, I’ve accomplished both.” Egos clashed in the Yankee clubhouse with the arrival of highly paid free agents. Outfielder Reggie Jackson, signed to a record-setting, free-agent contract in 1977, made himself unwelcome to his Yankee teammates even before his arrival when he announced, “I’m the straw that stirs the drink.” Though dubbed “Mr. October” for his World Series heroics, Jackson’s five years with the Yankees were marked by a love-hate relationship with Steinbrenner and an even more acrimonious relationship with manager Billy Martin, who once said of Jackson and Steinbrenner that “One is a born liar, the other convicted.” The animosity shared by many players toward the team’s owner—despite all the big contracts—was partly fueled by Steinbrenner’s frequent public criticisms of his players, including an apology to the city of New York after the team’s poor performance in the 1981 World Series.

Steinbrenner’s years with the Yankees reached an all-time low in 1990, when after a decade of steady decline the team finished in last place for the first time since 1966. That year Steinbrenner once again found himself embroiled in controversy when Commissioner Fay Vincent learned that the Yankees owner had paid a professional gambler named Howard Spira \$40,000 to dig up damaging information on Dave Winfield, a player with whom Steinbrenner had feuded for nine years (Steinbrenner unfavorably compared the millionaire outfielder to Reggie Jackson by sticking Winfield with the demeaning moniker “Mr. May”). On July 30, 1990, Steinbrenner agreed to resign permanently as general managing partner of the Yankees for his violation of “the best interests of baseball” rule.

Steinbrenner’s campaign to have himself reinstated brought success in July 1992, when the outgoing Vincent lifted the ban,

George Steinbrenner

effective March 1, 1993. The seasons that followed proved to be among the most placid—and successful—in the history of the Steinbrenner era. Steinbrenner now seemed to defer more often to the expertise of his front office staff, and Yankee field managers breathed easier. In the strike-plagued year of 1994 the Yankees finished in first place for the first time since 1981. Under the calm leadership of manager Joe Torre, in 1996 the Yankees staged an unlikely come-from-behind World Series victory over the defending champs (Atlanta Braves). However, Steinbrenner's greatest baseball success came two years later, when the Yankees astounded the baseball world by winning 114 games en route to their second world championship in three years. What made this team different from the rowdy 1970s crew was that these Yankees seemed to actually like each other, and their visibly mellowed owner appeared content to avoid controversy. For once, Steinbrenner remained silent while the accomplishments of the team itself received most of the attention.

Steinem, Gloria (1934—)

American feminist and journalist Gloria Steinem is perhaps the most visible representative of the women's rights movement, an effort that has resulted in immeasurable effects in contemporary society. She is best known for founding the groundbreaking women's magazine *Ms.* in the early 1970s and for being heavily involved in spearheading the drive to ratify the Equal Rights Amendment, which, although it was never adopted, generated a maelstrom of dialogue on the topic and contributed to a new consciousness for women in America. Though more radical feminists have criticized Steinem for having too much of a middle-class approach to the struggle, some have noted that her mainstream persona helped make women's rights accessible to a greater number of women.

Steinem was born March 25, 1934, in Toledo, Ohio, to Leo and Ruth (Nunevillar) Steinem. When she was a youth, her parents divorced, leaving her mother—who had already been prone to nervous breakdown—extremely depressed. Steinem spent much of her youth caring for her incapacitated mother, who enriched her daughter by exposing her to literature and instilling in her a deep respect for others. In high school, Steinem moved to Washington, D.C., to live with her older sister, Suzanne, then went on to attend Smith College. After graduating *magna cum laude* in 1956, Steinem earned a fellowship to study in India, where she learned of the nonviolent philosophy of Mahatma Gandhi.

Steinem returned to the United States and aspired to a career in journalism. In 1960 she began writing for periodicals, and in 1963 went undercover as a Playboy “bunny,” a cocktail waitress in the famous men’s club, in order to write a wry expose detailing the degradation women faced there. By the late 1960s, Steinem began emerging as a serious journalist when she was tapped to produce a weekly political column for the newly launched *New York* magazine. Brimming with advocacy and pleas for activism, her pieces tackled

subjects ranging from the fight to free Angela Davis, to support of Cesar Chavez and the United Farm Workers, to backing author Norman Mailer in his bid for mayor of New York City. She was not considered a leader in the women’s movement until she produced the article “After Black Power, Women’s Liberation” in 1968, following a meeting by a group called the Redstockings that addressed the issue of abortion.

From 1969 to 1972, Steinem rose to acclaim as a figure head of the women’s rights movement. Appearing regularly in the media, she was articulate and humorous, thus endearing many to the cause. She was in stark contrast to the far-left feminists of the day, who quickly earned derision and ridicule by much of the press for their Marxist views and lesbian orientation. In July of 1971, Steinem joined Betty Friedan, Bella Abzug, and Shirley Chisholm to found the National Women’s Political Caucus, which supported women running for public office. Also that year, Steinem founded *Ms.*, a magazine by, for, and about women. The first full issue was published in January of 1972 and sold out its print run of 300,000 in just over a week. By summer of 1972, it had become a monthly magazine, financed by

Gloria Steinem

Warner Communications. Beginning in 1979, it operated as a nonprofit organization.

As she gained prominence, Steinem faced opposition from various radical feminist camps because her views did not always agree with theirs. In addition, men from both the conservative and liberal camps were threatened by her attacks on male power as well as issues like pornography, which she opposes. In addition, the Redstockings began accusing Steinem in the mid-1970s of working for the CIA in the 1950s. She had indeed briefly been employed with a liberal student group after college that was funded by the agency, but maintained that she was not aware of the ties. Meanwhile, the Equal Rights Amendment was introduced and passed Congress in 1972. It was a proposed amendment to the Constitution that guaranteed equal rights to women under the law. Though it was never approved, Steinem was one of its leading advocates, helping to stir up debate that went far in changing the role of women in society. Due to this cultural shift, more and more women began entering the work force, thus empowering themselves economically. It became illegal to discriminate against and harass women, and it is no longer legal for a man to rape or beat his wife. As recently as the 1960s, classified ads for jobs were segregated by sex; that practice is no longer acceptable. Though women still may not have achieved the full status of men in American business and politics, the effects of the women's movement on society has been enormous.

Into the 1980s, Steinem continued to urge for more fairness in the treatment of women. She championed the concept of equal pay for equal work and wanted to see it come to fruition, though studies show that it has not yet happened. She also began shifting her focus from mainly financial and job-related issues to a more humanistic approach, hoping to encourage a world where gender lines will not be so strictly defined. Pushing for men to accept more of the responsibility of child-rearing and domestic duties, she espoused that men and women should be less bound by traditional roles in order to make their lives more well-rounded. In 1983 Steinem published a well-received collection of essays titled *Outrageous Acts and Everyday Rebellions*. She also stayed involved with *Ms.*, but in 1987 Australian company John Fairfax, Ltd. bought the magazine and readership fell drastically. The legendary publication was in dire straits. In 1990, it returned without paid advertising. For the first of the new issues, Steinem wrote a scathing commentary on the control that advertisers have in editorial operations of women's magazines. In 1994 she released a new set of essays, *Moving Beyond Words*, and continued to stand as the leading spokesperson for feminist activism in America.

Stengel, Casey (1890-1975)

Baseball legend Casey Stengel spent fifty-five years in baseball as both player and manager. He is best remembered for managing the highly successful New York Yankees and the highly unsuccessful New York Mets. While his management skills sustained his career, his outrageous use of the English language gained him equal fame.

He was born Charles Dillon Stengel in Kansas City, Kansas, and began playing semiprofessional baseball while in high school, where he was known as "Dutch" because of his German ancestry. An outfielder, he played with different minor league teams before joining the Brooklyn Dodgers in 1912. It was there he acquired the nickname "K.C." because he was from Kansas City, a nickname that soon eased into "Casey," after the poem *Casey at the Bat*. After Brooklyn, he played major league ball for the Pittsburgh Pirates (1918-19, with time out for the U.S. Navy), Philadelphia Phillies (1920-21), New York Giants (1921-23, where in 1923 he batted .339 and won two World Series games with two home runs), and the Boston Braves (1924-25). He ended his playing career as a player-manager for the minor league Toledo (Ohio) Mud Hens.

Stengel was a jokester and a fighter, and was thrown out of many games both as a player and a manager. For one of his early pranks, he stepped back from the plate, doffed his hat, and out flew a sparrow. The fans loved his antics. Stengel was also famous for his "Stengelese," with statements such as "I've always heard it couldn't be done, but sometimes it don't always work." Yet, he could be succinct and telling: when he married his wife in 1924 he said of himself in the third person, "It is the best catch he ever made in his career." He said of Willie Mays, who played in a notoriously windy Candlestick Park in San Francisco: "If a typhoon is blowing, he catches the ball." Sometimes he could describe someone in a phrase: a nervous batter had "jelly leg," bad players were "road apples," rookies were "green peas," and a player who didn't carouse was a "milkshake drinker."

From 1934 to 1948, Stengel managed the Dodgers, Boston Braves, Milwaukee Brewers, Kansas City Blues, and Oakland Oaks. In October of 1948, the Stengel legend began when he was named manager of the Yankees. In Stengel's first year as manager the Yankees beat the Dodgers in the World Series and went on to win six more out of ten appearances under Stengel, thus being the team to beat in the 1950s. Stengel managed such outstanding players as Joe DiMaggio, Billy Martin, Yogi Berra, and Mickey Mantle. Stengel's critics said that anyone with that kind of talent playing for him could win, and many wouldn't give him credit for his knowledge of baseball and players. "Ability," Stengel once said, "is the art of getting credit for all the home runs someone else hits." His ability ran out when the Yankees lost the World Series to the Pirates in 1960 and he was fired, although the public story was that he was stepping aside as part of a youth movement at the Yankees. A bitter seventy-year-old Stengel quipped: "I'll never make the mistake of being seventy again."

He was down, but not out. A year later he was the manager of the expansion National League New York Mets, a team he was to call the "Amazin' Mets." What was amazing was that they ever took the field. In his four seasons as manager, the team never played better than .327. "The only thing worse than a Mets game was a Mets doubleheader," Stengel once said, and "Without losers, where would the winners be?" But because they were bad, they were endearing and they drew a better crowd than their cross-town rivals, the Yankees, viewed by many as an elitist team.

Casey Stengel (right)

A broken hip finished Stengel's managing career. He retired one month after turning seventy-five. He was inducted into the Hall of Fame on a fast-track vote. The honor was obviously important to him, for afterward he signed his letters "Casey Stengel, N.Y. Mets & Hall of Famer." Stengel died the day after the 1975 season ended.

Steppenwolf

With landmark power-chord anthems like "Born to Be Wild," the popular late-1960s band Steppenwolf coined the phrase for the bombastic, fast-paced genre it created: heavy metal, one of the most popular musical styles of the late twentieth century. The group came to prominence in 1969, when "Born to Be Wild" was featured in the opening sequence of the landmark film *Easy Rider* (1969). The song became a call-to-arms for a generation of rebellious youth, and its reference to "heavy metal thunder" became the tagline for the musical style it adopted. "Born to Be Wild" ultimately reached number two on the *Billboard* singles chart that year. By 1999, the song had appeared in more than sixty films and television programs.

Steppenwolf's founder and lead vocalist John Kay was born as Joachim Krauledat in the former East Germany in 1944, where he grew up listening to an Armed Forces Radio playlist that featured American blues-rock artists such as Chuck Berry and Little Richard. Emigrating to Toronto in the early 1960s, Kay joined a local blues

Steppenwolf

band known as The Sparrows. After attempts to record with The Sparrows for Columbia Records, Kay left the group, relocating to New York and later to San Francisco. In 1967, he formed Steppenwolf, named after the novel by Herman Hesse. The band featured guitarist Michael Monarch, keyboard player Goldy McJohn, drummer Jerry Edmonton, and bass player Rushton Moreve, later replaced by John Morgan.

Steppenwolf's eponymous debut album, released in 1968, belied some of Kay's blues influences as well as the group's ties to the Bay Area psychedelia scene. However, it was the fierce power-chord stomp "Born to Be Wild" that captured the counterculture's imagination. Steppenwolf largely forsook its blues influences to hone this tough hard-rock sound on its next two albums, *The Second* (1968) and *At Your Birthday Party* (1969). The albums spawned two Top Ten hits, "Magic Carpet Ride" and "Rock Me," as well as a host of heavy metal classics such as "Move Over" and "Hey Lawdy Mama." The band reached its creative peak in 1970 with the release of *Monster*, a concept album based on Kay's jaundiced view of contemporary America. *Monster* featured newcomers Larry Byrom on guitar and Nick St. Nicholas on bass, both former members of the band called Time.

Constrained by the pressure of making music for bikers and frustrated by continued personnel turnover, Kay disbanded Steppenwolf in 1972. After a less-than-successful solo career, Kay reconstituted the band in 1980 with Ron Hurst on drums and longtime writing partner Michael Wilk on keyboards and bass. This most recent incarnation of Steppenwolf had produced five albums as of 1999, but none had enjoyed the commercial success of the group's 1960s hits.

The success of the heavy metal genre that the group spawned as well as the continued popularity of "Born to Be Wild," has ensured Steppenwolf's legacy in rock history. The band toured well into the 1990s, headlining numerous "oldies" shows and selling out concerts throughout the country. In 1996, John Kay was inducted into the Canadian Academy of Recording Arts and Sciences (CARAS) Hall of Fame.

Stereographs

See Stereoscopes

Stereoscopes

Stereoscopy—creating three-dimensional visual experiences from two-dimensional materials—informed most every visual medium of the Modern age: art, photography, cinema, television, and newspapers. In the nineteenth century the marriage of stereoscopy, photography, and industrial production resulted in the first photographic mass media: the Victorian stereoscope. Popular from 1850-1920, the stereoscope answered desires for greater realism in visual representation while its popular, yet intimate, visual experience prefigured visual media like cinema and television. Eventually overshadowed by cinema and later electronic visual technologies, the optical principles of the stereoscope grounded many popular visual entertainments of the twentieth century: View-Master viewers, 3-D cinema and comic books, and Magic Eye stereograms.

The Victorian stereoscope was part of a general trend in the nineteenth century towards more realistic visual representations, mass-produced for an emergent commodity culture. It has been long known that two-dimensional representations, like drawing and painting, are a poor imitation of human visual experiences. Paintings present but a single image, while in normal binocular vision the two different images received by each eye are synthesized by the brain into a single image, allowing us to perceive depth and spatial relationships. In 1832 British physicist Charles Wheatstone invented a device—the reflecting stereoscope—which induced normal binocular vision using prepared imagery. Wheatstone created two drawings of an object which mimicked the slightly different perspective our two eyes have of a single scene. By using mirrors the reflecting stereoscope channelled vision so that only one of the drawings could be seen by each eye. The viewer's brain combined the two images into a single stereoscopic image with qualities similar to that of unaided vision. It was soon discovered that stereo-photographs could be prepared for Wheatstone's device by simultaneously taking two photographs with a double-lensed camera. If the imagery was properly prepared, the visual effects of solidity, depth, and realism were unparalleled.

Wheatstone's awkward device was merely a scientific curiosity until modified by William Brewster in 1849. Brewster's lenticular stereoscope, a small box outfitted with lenses and a slot to hold stereographic imagery, debuted in 1851 at London's Great International Exhibition. Although the interest of Queen Victoria ensured immediate popularity, early photographic technologies hampered broad circulation. In the 1840s Wheatstone's device used daguerreotypes and calotypes, but only after the 1851 introduction of glass-plate negatives could stereo-photographs be mass-produced. With cheap viewers and abundant imagery, stereoscopic viewing came within reach of a broad middle-class audience, fulfilling the London Stereoscopic Company's motto "A Stereoscope In Every Home."

Popularity depended on a plentiful supply of imagery in the form of stereographs, also called stereocards or stereoviews. Generally, stereographs are four-by-seven inch rectangular cards having two stereo-photographs pasted side-by-side. The photographer's, or more commonly publisher's, imprint and a short caption might be shown on the front, with a longer text on the reverse. Later thematic boxed sets were accompanied by maps and an explanatory guidebook. Since the overall size and shape of the stereograph was dictated by the stereoscope (similar to later standardized mass media like cassette tapes or CDs) stereographic publishers anticipated consumer desire and sought market niches through aesthetic innovation. Collectors attest to the bewildering diversity of stereographs: examples are known with tintype, daguerreotype, ambrotype, and lithographic images; pasted on paper, cardstock, glass, and porcelain mounts. Usually a stereograph can be dated to within a few years based solely on physical details.

Initially, stereographs were produced by lone figures who often took the photograph, processed the film, assembled the stereograph and sold it to tourists. Stereo-photographers included the obscure and the famous; William Henry Jackson, Carleton Watkins, Timothy O'Sullivan, Eadweard Muybridge, and Matthew Brady are better known producers. Historian William Culp Darrah estimated that between 1860 and 1890 as many as 12,000 stereo-photographers took between 3.5 and 4.5 million individual images, which were printed on upwards of 400 million stereographs. In the later nineteenth century large factories churned out thousands of stereographs a day using assembly-line methods. Stereographs were sold at tourist spots, from storefronts, through mail order catalogues, and door to door. Production gradually consolidated until, in 1921, the Keystone View Company was the sole purveyor of stereographs in America.

If the invention and early developments of stereoscopy belong to Europeans, the phenomenon attained its greatest success in America. Stereoscopes were known in America from the early 1850s. In 1854 the Langenheim Brothers of Philadelphia became the first large-scale retailers of stereoscopic equipment. Between 1859-63 noted essayist Oliver Wendell Holmes promoted the stereoscope in three enthusiastic articles in *The Atlantic Monthly*. Holmes also designed a simple hand-held wooden stereoscope, improved and marketed by Boston photographer J.L. Bates. Stereo-photography was central to convincing skeptical Eastern audiences of the wonders of the American West, as well as conveying in realistic detail the horrors of the Civil and Spanish-American Wars.

By delivering news of the world in visual form, stereographs were roughly analogous to cinematic newsreels and television. Stereographs were a way to travel the world and experience its events from the security of one's armchair. Subjects included cities, famous places, tourist destinations, and resorts, portraits of famous people, fine art works, modes of transportation, international expositions,

wars, natural disasters, aftermaths of fires and earthquakes, erotica and pornography, educational and scientific matter. One card showed the full moon, which when viewed through a stereoscope showed every crater and mountain with a degree of detailed relief unattainable even using a telescope. Similar to early narrative silent film, a short series of stereographs could present a comedy or morality play. Subject matter accommodated and anticipated the taste of the white Euro-American middle class, its primary consumer. Racial and social stereotyping was prevalent especially in images of Native and African Americans, urban immigrants, and colonized peoples in Africa and Asia. Collecting, trading, organizing, viewing, and sharing stereocards was a prominent family pastime. Home filing cabinets for stereographs allowed collectors to construct a personal visual cartography of the world, infinite in its variety, endlessly malleable in form.

With the emergence of cinema, and especially after the 1920s, the stereoscope became largely an educational tool and later a children's toy. Tru-View stereoscopic filmstrips (1920s-1950s) and the better-known View-Master system introduced at the 1939 New York World's Fair employed a similar optical apparatus. View-Master reels held ten translucent celluloid stereoscopic images on a thin plastic disk which was inserted into a lightweight View-Master viewer. Translucent celluloid imitated the luminescence of cinematic projections, injecting new life into an old gadget. View-Master contracted with Walt Disney studios to publish its popular animated films as View-Master reels suggesting a growing audience among children. In the 1980s View-Master viewers appeared in the shape of popular children's animated characters like Mickey Mouse, Casper the Ghost, Big Bird, Batman and Tweety Bird.

Three-dimensional cinema of the early 1950s briefly revived adult interest in three-dimensional viewing. Broadcast television reduced theater attendance and to attract viewers Hollywood introduced Natural Vision, or 3-D movies. Between 1952-54 Hollywood produced over 70 3-D movies beginning with *Bwana Devil* (Arch Oboler, 1952), the most famous being Alfred Hitchcock's *Dial M For Murder* (1954). To see a movie in 3-D, moviegoers wore special throwaway glasses with one red and one blue lens which permitted each eye to perceive only certain parts of a color-polarized film. The process had been known since the mid-nineteenth century, and a few monochromatic 3-D films were made in the 1920s and 1930s. Due to technical limitations and the uncomfortable glasses the novelty was short-lived. It was briefly reintroduced in early 1980s horror flicks and television broadcasts, and in panoramic IMAX 3-D movies of the 1990s.

Hollywood's flirtation with 3-D heralded the first comic book in 3-D by Norman Maurer and Joe Kubert: *Three Dimension Comics* featuring Mighty Mouse (1953). Over 50 3-D comics were produced from 1953 to 1954. Three-dimensional comics are viewed with the same glasses as in 3-D cinema. The necessity of hand-drawing limited early 3-D comics to bi-color images but after the 1970s limited polychromy was possible using computer drafting technologies. Three-dimensional comics appeared sporadically into the 1990s engaging some venerable talents of comic arts: Ray Zone, Jack Kirby, and Wally Wood.

In the 1990s, computer-generated Magic Eye stereograms put a new twist on traditional stereoscopic viewing. Based on the theories of Bela Julesz and Christopher Tyler, Magic Eye artists employed a sophisticated computer algorithm which manipulated images at the pixel level, disguising simple stereoscopic images within another unrelated pattern. By free viewing (seeing a stereoscopic image without a stereoscope) the hidden image emerges from the generic

background. Between 1992 and 1995 Magic Eye sold 25 million books in 26 languages worldwide and in 1994 Magic Eye syndicated a weekly image to over 200 newspapers.

By the late 1990s, computerized flight simulators, high-altitude surveillance photography, and weapon targeting systems employed stereoscopic science. Using stereo-photography NASA's Pathfinder Mission (1997) produced interactive topographical maps of Mars. For its report on the Mars mission, *National Geographic* featured some of the 3-D images from the Pathfinder Mission and included a pair of 3-D glasses to view them. Gradually, this technology became available to a broader consumer culture through holographic and virtual reality devices. Amateur and professional interest in stereoscopy was accompanied by intense collecting of antique stereo-viewers and stereoscopic imagery. There were regional, national, and international associations; a magazine devoted to the topic, *Stereo World*; and numerous internet sites. Although Victorian stereographs have become the province of antiquarians and museums, the desire to see in 3-D remains of unflagging interest to a popular audience.

Stern, Howard (1954—)

Howard Stern evokes the kind of controversy that you wouldn't expect from a typical celebrity. Stern, however, is not a typical celebrity. The audience for his nationally broadcast morning show numbers in the millions, and it is comprised mostly of men, aged 25 to 54, who listen religiously. A typical morning on the Howard Stern Show might include discussions on sex, lesbianism, race relations, lawyers, the latest tabloid stories, or flatulence. His radio show

Howard Stern

transcends the bounds of good taste and has tested the limits of radio broadcasting codes and regulations for over 20 years.

Howard Allen Stern was born on January 12, 1954, in the Queens borough of New York City. His father, Ben, was an engineer at a Manhattan radio station and was hard on his only son, frequently calling him a "moron." Stern describes his mother, Ray, as an overprotective woman who thought that her son would grow up sensitive if he played with puppets. The idea backfired, however, when little Howard put on X-rated puppet shows for his friends in his parent's basement.

Stern graduated from high school in 1972 and enrolled at Boston University, where he pursued a degree in broadcasting. Graduating in 1976, he started working for WRNW-AM in Briarcliff, New York, as an afternoon disc jockey (DJ) and eventually took over several other duties, including both program and production directors. It was at WRNW that Stern realized that he would have to be funnier than normal DJs if he wanted to be a success. His first antics on the air included bizarre commercial spots complete with weird sound effects and off-color calls to the business owners. Stern lasted about two years at WRNW before moving to Hartford, Connecticut, to work for WCCC. Further honing his comedic technique, he experimented with

on-air gags such as the “Cadaverathon,” a fundraiser for the Yale University Medical School, which was purported to lack corpses for its students. Another event was his “To Hell With Shell” campaign aimed at gas companies and the long lines at the pumps during the late 1970s fuel shortage. Routines like these got him noticed by WWWW-FM in Detroit, a rock station that took him on in 1979. More irreverent gags and sketches followed, including a bra-burning demonstration in support of the Equal Rights Amendment, and a raunchy daily piece in which a dominatrix would call in and give the weather forecast. Then, literally overnight, WWWW changed its format to country and Stern left.

In 1978 Stern married his college sweetheart, Alison Berns, a social worker. Stern tested the strength of his marriage by making it the subject of frequent on-air conversations. When his wife miscarried their first child Stern did a sketch on it, a call from God himself who denigrated him for not being able to reproduce. The consequences were disastrous, for the gag hurt his wife severely. Reaching a point where nothing was sacred on his show, Stern would even make fun of his wife’s clients and their odd behavioral habits. Stern apologized for such antics in his first book, *Private Parts* (1993), but still jokingly attacks his marriage to Alison on his show. The two have three children, all girls, and Stern does insist that he is a family-oriented man.

In 1981 Stern began working for WWDC-FM in Washington, D.C. Building a base for his morning show, he persuaded his supervisors to hire Fred Norris, a comedy writer with whom he worked in Hartford. Though Stern jokes that Norris does nothing for the show, Norris’s part is a large one, doing voices, sound effects, and bogus recordings of celebrity voices. It was at WWDC that Stern first met Robin Quivers, who has been Stern’s news anchor ever since. Quivers, a Baltimore native, had her reservations about working with Stern at first, but was clearly impressed with his spontaneous, unrehearsed style. In February 1982, Stern pulled what may have been his most outrageous stunt when, in the wake of the crash of Air Florida Flight 90 into the 14th Street Bridge, he called the airline and asked how much a one-way ticket to the bridge would cost. The call offended many listeners, though Stern claimed that he was expressing his own outrage against the flight crew that allowed the plane to take off without the wings being de-iced. Shortly thereafter Stern was fired from DC-101 (though not for the prank call—he was fired for referring to station management as “scumbags”).

Stern was quickly hired to work for WNBC-FM, fulfilling his dream of working in New York City. But Stern found himself in frequent disagreements with his superiors at NBC. In order to control Stern’s antics, his superiors would often write new rules and regulations for him to follow. Stern usually refused and was suspended several times before he was fired in September of 1985. It wasn’t long before a competing New York station, WXRK-FM (K-Rock), picked him up. The station promised Stern no restrictions in running his show. Stern brought along Quivers, Norris, Gary Dell’Abate, a former producer for NBC and the show’s punching bag, and his chief comedy artist, Jackie “The Jokeman” Martling, who did a large part of the show’s writing. One addition to his crew of regulars was “Stuttering” John Melendez, whose own speech impediment was put to use by Stern. Stern believed that no one would turn down an interview with a stutterer, even one that asked rude questions. Only months after starting at K-Rock, Stern was given the chance to move his show to the coveted morning slot, in direct competition with fellow “shock jock” Don Imus. Stern prized the rivalry with Imus, who remained the whipping boy for Stern and his crew into the 1990s.

In 1986 Stern completed his objective, surpassing Imus in the ratings. To celebrate the event, Stern organized a mock funeral at Rockefeller Center.

In 1990 Stern launched the TV version of the *Howard Stern Show* on WWOR-TV in New York. The program was a visual rendition of his radio show but was ultimately canceled because of budget setbacks. *The Howard Stern Interview* followed but also didn’t last. In 1994 the E! network began broadcasting a 30-minute simulcast of his radio show, using several stationary cameras placed in the radio studio. In August 1998, Stern launched yet another talkshow, called *The Howard Stern Radio Show*, which aired directly opposite *Saturday Night Live*.

Private Parts is mostly a memoir of events in Stern’s broadcasting career as well as his childhood, and became the fastest selling item in the history of its publisher, Harper Collins. The book saw a resurgence in sales in 1995 when Stern released his second book, *Miss America*, which featured Stern himself on the cover in drag. *Private Parts* was made into a full-length film in 1997. Stern supposedly rejected 13 scripts before settling on what he thought was the best representation of his book. The film received positive reviews and is mostly a tribute to his relationship with his wife. A very funny and surprisingly touching film, it reenacts many of the sketches that marked his early career. It also gives more insight into his partnership with Robin Quivers and their undying friendship.

Though his radio show has brought him millions of fans, he has had one consistent enemy throughout his career: the Federal Communications Commission (FCC). Stern’s radio station owner, Infinity Broadcasting, was fined \$600,000 in 1992 after Stern boasted about masturbating to pictures of Aunt Jemima and having rough sex with Michelle Pfeiffer. It was not the first but only the most dramatic in a series of inquiries, reprimands, and fines aimed at Stern since 1986. Stern alleged that the FCC had a personal vendetta against him, and told *Rolling Stone* that he’ll never win against the powerful government organization “because they’re bureaucrats . . . they’ve got all the time in the world and they’re going to sit there and just wear me down.”

Howard Stern has been called the “poet laureate of urban American white trash” and the funniest man on radio. He cites as his major influence Lenny Bruce, another comedian with the same disregard for moral standards. In total contrast to the neurotic personality he portrays on the radio, Stern and his wife practice transcendental meditation and lead a very normal life.

Stetson Hat

When Philadelphia hat maker John B. Stetson went west in 1859 to cure his tuberculosis, he worked the Gold Rush at Pike's Peak, Colorado, where he designed a hat for working in the hot sun. Stetson returned to Philadelphia to mass-produce the "Boss of the Plains" hat, made of tan felt with a wide brim and high crown. Worn by Presidents, Buffalo Bill, and the Texas Rangers, the hat became a symbol of the West. Stetson felt hats continued to be popular into the 1990s.

Stevens, Ray (1939—)

Before Ray Stevens, a country humorist was a guy in overalls, chewing on a stalk of straw and telling homespun stories about cow pies and two-seater privies. Stevens changed all that in 1962, when he released "Ahab the Arab," an off-the-wall saga of a Mideastern camel driver, complete with sound effects. Stevens went on to score

Ray Stevens

hit records with a wide range of approaches. He spoofed Tarzan and rock 'n' roll at the same time in "Gitarzan," a 1970s public nakedness fad in "The Streak," and 1980s televangelism with "Would Jesus Wear a Rolex?" He also displayed a talent for sophisticated musical humor when he transformed the jazz standard "Misty" into a bluegrass romp, and had a way with sentimental country in his 1970 chart-topper, "Everything Is Beautiful." But through all that, he maintained his identification as a country artist. Stevens became one of the leaders in music marketing in the 1990s, with his aggressive and successful television mail order promotions of his music videos.

—Tad Richards

Stewart, Jimmy (1908-1997)

One of the most universally recognized and loved movie stars of the twentieth century, the prolific and popular career of iconic actor Jimmy Stewart spanned six decades, from the 1930s to the 1980s, as well as many filmmaking genres, from comedy to serious drama, from the dark Westerns of the 1950s to the brilliant suspense of Alfred Hitchcock. No matter what part Jimmy Stewart played, audiences responded to the gangly, good-looking actor, believing that underneath it all, he was always a good man, as his "aw shucks" personality endeared him to fans around the world.

Born in the small town of Indiana, Pennsylvania, to Elizabeth and Alexander Stewart, James Maitland Stewart was raised in a loving middle class home. His father was the proprietor of the local J.M. Stewart Hardware Store (which would become famous as the home of Stewart's Academy Award, which stayed in the store window for many years), and by all accounts Jimmy had a happy and normal childhood. Upon graduation from high school, he decided, with encouragement from his very practical father, to study civil engineering and architecture at Princeton University, from which he graduated in 1932 with honors. While at college, however, he became involved in the theater group, the Triangle Club, where he met fellow student (and future director), Joshua Logan. After graduation Logan invited Stewart to join the University Players, his summer stock theater company in Massachusetts.

After making his professional debut with the Players, Stewart abandoned architecture forever, much to his parents' displeasure. He eventually moved to Broadway to appear in the production, *Carry Nation*, which was not successful. His next role, however, was in *Goodbye Again*, in which he had appeared in Massachusetts. This production was a hit, earning Stewart excellent notices, and by 1934 he was working steadily, when he was hired by producer/director Guthrie McClintic, husband of stage actress Katharine Cornell, to appear in the play *Yellow Jack*. Stewart received rave reviews. It was during this production that Stewart also appeared in his first motion picture, a small uncredited role in *Art Trouble*.

In 1935, while Stewart was visiting his family, he received an offer from Metro-Goldwyn-Mayer to appear in a small role in *Murder Man* starring Spencer Tracy. MGM signed him to a standard seven-year contract and put him in several productions, but his first real break came when an old friend from his University Player days, actress Margaret Sullavan, insisted on him as her co-star in *Next Time We Love* (1935). A second break came when Stewart played opposite Eleanor Powell in *Born to Dance*, where he introduced the Cole

A young boy wearing a Stetson hat.

Porter song, "Easy to Love." While his singing was unremarkable, *Born to Dance* was one of the biggest hits of 1936. Stewart continued to appear in films such as *After the Thin Man* and *Seventh Heaven*.

It was a film released in 1939 that finally made Stewart a major star. He had worked with director Frank Capra previously on the classic comedy, *You Can't Take it With You*. When Capra needed a leading man for his new picture, *Mr. Smith Goes to Washington*, he wanted no one else for the role of the idealistic young man who is thrust into the corrupt world of Washington politics. The film and

Stewart were a sensation, although many political figures denounced the inference that the government of the United States might contain corrupt elements. For his performance, Stewart won the New York Film Critic's Best Actor Award. He was also nominated for an Academy Award, but was a surprising loser to Robert Donat in *Goodbye, Mr. Chips*. The following year he costarred with Katharine Hepburn and Cary Grant in *The Philadelphia Story* and took home an Oscar for that performance, though many felt it was a consolation prize for *Mr. Smith*.

Jimmy Stewart

In 1941 America entered World War II, which put a temporary hold on Stewart's career. He was one of the very first movie stars to enlist in the military, earning a distinguished record as an Air Force pilot and commander and becoming one of the highest ranking officers in the U.S. Auxiliary Air Force, rising to the rank of colonel.

For his first film project after the war, Stewart chose to work with Frank Capra again. *It's a Wonderful Life* is now considered a classic and a Christmas staple, but when it was originally released the audience and critics alike did not particularly care for it. Capra and Stewart were disappointed with the reception the picture received and both maintained in later years that it was their favorite film.

The late 1940s saw many changes in the life of Jimmy Stewart. First, at the age of 41, Stewart married Gloria McLean and became an instant father to Gloria's children from a previous marriage. He also decided that his career needed to take a different direction. This led to two successful collaborations each with directors Anthony Mann and Alfred Hitchcock. The results were some of Stewart's darkest and most critically acclaimed works—*Winchester 73* and *Broken Arrow* with Mann, and *Rear Window* and *Vertigo* with Hitchcock. The latter is considered by many to be Stewart's finest performance and Hitchcock's masterpiece.

After the 1950s Stewart continued to do film work, although good roles became more infrequent. By the 1970s, he had turned to television, appearing in two shorted-lived television series, *The Jimmy Stewart Show* (1971-1972) and *Hawkins* (1973-1974). He also did several made-for-television movies, such as *Mr. Krueger's Christmas* in 1980 and *Right of Way* with Bette Davis in 1983. In 1980 he received the American Film Institutes Lifetime Achievement Award.

His last film performance was as the voice of the gunfighting dog, Wylie Burp in *An American Tail: Fievel Goes West*. Stewart continued to be active until the death of his wife, Gloria, in 1994. His health began failing soon after and he died in 1997.

Jimmy Stewart will long be remembered as exemplifying the best of America. His heroic roles and his devotion to his family made Americans feel he was a part of their own family, making him one of the best-loved figures of twentieth-century American popular culture.

Stickball

Stickball refers to a form of baseball developed to accommodate play on streets and sidewalks. A janitor's mop handle is the preferred bat, and a pink rubber ball—known as a "Spaulding" or "Spauldeen"—is considered to be the best ball. The ball is pitched or bounced towards the hitter; sewers and chalk markings are used for bases, and a hit may be played off of fire escapes, cars, stoops, or any other urban obstacle.

Stickball traces its origins eighteenth-century English games such as old cat, rounders, and town ball, although some sources trace it back to games played by Plains Indians. As of the 1990s, stickball is still played in its purest form in summer leagues in New York City, and exists in some form in most American cities. Other versions are known as Strikeout, Fast Pitch, Corkball, Bottle Caps, and Fuzzball, and are played with a wide range of bats and balls, sometimes against walls with painted strike zones. Stickball and its variations offer players the chance to use basic baseball skills without requiring full teams of players, expensive gloves or bats, or the rarest of all urban commodities, an open stretch of grass.

Stiller and Meara

For 35 years the comedy team of Stiller and Meara—five-foot-six Jewish actor Jerry Stiller and his five-foot-eight Irish-Catholic wife Anne Meara—have been best known for wringing laughter out of improvisational situations, appearing 36 times on *The Ed Sullivan Show* in the 1950s and 1960s. They have also acted on Broadway—separately and as a team—and have each starred in a number of television sitcoms and motion pictures. Jerry's role as George Costanza's short-fused father on *Seinfeld* in the late 1990s sent his revitalized career to a higher level, leading to further work on Broadway and in network television commercials. In recent years Stiller and Meara have also been known as the parents of talented writer-director-actor Ben Stiller and actress Amy Stiller.

Both born in New York City, Jerry Stiller and Anne Meara were stage-struck in their teens. When they met in the early 1950s at an agent's office in Manhattan, Jerry had already acted in a number of plays, including *Peter Pan* with Veronica Lake. The pair signed with a comedy improv group, the Compass Players in St. Louis, and set out on their own as a “boy-girl” act in comedy clubs. They appeared first in a small Greenwich Village club, then moved to the popular Blue Angel, followed shortly by bookings into other major nightclubs and guest spots on television. The first comedy sketch they wrote was called “Jonah,” with Anne playing a TV news reporter and Jerry an older Miami Beach man who had been swallowed by a whale.

They were married in 1954 at a time when Jewish-Catholic marriages raised eyebrows. Stiller explains: “But when I met Anne, nobody of my own background wanted to marry me. I was an actor, and an actor had no credentials. Anne was an actress, and she had no credentials either. What brought us together was unconditional love.” They were also attracted to each other's comic talent and offbeat humor. Besides performing on stage, the couple wrote and performed radio commercials. The best known of these—a commercial for an obscure wine called Blue Nun—increased the product's sales 500 percent overnight.

Honing her talents by writing comedy routines and commercials, Anne Meara has become a successful playwright. Her comedy, *After-Play*, had a long run on Broadway as well in major cities coast-to-coast. She and Jerry starred in this comedy about two New York couples, the Shredmans and the Gutemans, having dinner, many drinks, and tossing around hundreds of witty one-liners, after seeing a Broadway play they reviewed in total disagreement.

The couple has also enjoyed a varied career in films. Anne has appeared in nine movies, including the recent *Jetters* (1997), *The Search for One-Eye Jimmy* (1996) and *The Daytrippers* (1996). Jerry has appeared in eighteen, ranging from *The Taking of Pelham One Two Three* (1974) and *Airport 75* to the more recent *A Rat's Tale* (1998), as well as three films in 1997: *Camp Stories*, *The Deli*, and *Stag*.

The comedy team has appeared in a variety of television sitcoms, both together and separately. They were regulars on *The Paul Lynde Show* in the 1970s, and made numerous guest appearances as a couple on *Love*, *American Style*, *The Courtship of Eddie's Father*, and *The Love Boat*. Jerry was a regular on two sitcoms in the late 1980s,

Tattinger's and *Nick and Hillary*, and in the 1990s, on *The King of Queens* in addition to *Seinfeld*. Anne was a regular on such popular sitcoms as *Rhoda*, (1976-1977), *Archie Bunker's Place*, (1979-1982), and *ALF* (1987-1990).

Stine, R. L. (1943—)

In just over a decade, R. L. Stine went from being an obscure humor magazine editor to the biggest name in books for youth. Though his achievement is sometimes discounted as a fluke, Stine found a formula and tapped an audience that brought him unprecedented success. Many attribute his success to the great entertainment

his books provide kids. Like Stephen King, to whom Stine is often compared, Stine knows how to tell a story. He knows how to keep readers interested and involved and, most importantly, how to satisfy them. Stine is not creating well-rounded characters; he is not using symbolism, metaphor, or any of the tricks of the trade in his writing. Instead, he practices the tricks of his own trade: that of entertaining people with “cheap thrills.” He uses humor, roller-coaster plots, suspenseful chapter endings, gross-outs, credible kids’ dialogue, recognizable if stereotypical characters, cliffhangers and red herrings, and a bare-bones style that gets to the point: to scare his readers. He is not interested in educating, enlightening, or informing; he is only interested in entertaining kids by terrifying them with gruesome, plot twisting, scary thrillers.

Robert Lawrence Stine had been telling and writing scary stories since he was a kid growing up in Columbus, Ohio. He wrote and illustrated his own magazines throughout his school years, then was the editor of the Ohio State humor magazine, *The Sundial*, during his college years. After a brief stint as a social studies teacher, Stine moved from Ohio to New York to break into the writing business. After a series of short-lived jobs writing for fan magazines and trade industry publications, he landed a job at Scholastic. Within a few years he had moved from a staff writer to editor of the youth humor magazine *Bananas*. While he was editing *Bananas*, he was writing joke books like *How to Be Funny* and *The Beast Handbook*. Soon after *Bananas* folded, Stine was downsized at Scholastic and began freelancing fulltime, turning out more joke books, penning numerous *Choose Your Own Adventure* style multiple storyline books, writing a television show, and even writing bubble gum cards and coloring books. All his work eventually paid off with the success of *Fear Street* and *Goosebumps*.

Stine had learned in childhood that he could entertain by telling stories, like those he shared with his brother as they tried to go to sleep at night. He also learned that he could entertain his peers by writing the stories as well. He so enjoyed entertaining his peers that he decided to make a career of it. Stine told *People* magazine that “I started writing when I was nine. I think I knew then that I wanted to write. I don’t really know why. I just always loved it more than anything else.” As an adult, Stine described himself as a “writing machine” in *USA Today* and continues to effectively use what he learned at age nine about how to entertain nine-year-olds.

Stine’s first financial success came in 1992 with the debut of his *Goosebumps* book series for upper elementary/middle school kids. Edited by his wife Jane and packaged through her company Parachute Press, *Goosebumps* quickly became the most popular children’s book series of all time; by the late 1990s there were 180 *Goosebumps* books in print in over 30 languages. The numbers for *Goosebumps* products were just as impressive. Additionally, since its debut in 1995, the *Goosebumps* television show has been a top-rated show and remains a centerpiece in the Saturday morning schedule of the Fox network in 1999; *Goosebumps* prime-time and after-school specials are rating winners as well. Videos based on the shows have sold over one million copies, while the first CD-ROM based on the books, *Escape from Horrorland*, was a big seller. The World Wide Web overflows with kids’ personal *Goosebumps* pages, not to mention Scholastic’s official site. By 1999, a movie was also in the works with Fox Family Films, while Disney has cashed in with a *Goosebumps* Horror Land at its Metro Goldwyn Mayer Studios site in Florida. It should be of no surprise that the roller coaster plot twister is tied in with an amusement park with an attraction featuring a live *Goosebumps* show

performed five times a day and a *Goosebumps* Fun House with a scary hall of mirrors. Disney also sponsored a *Goosebumps* parade and signed Stine for a *Goosebumps* cruise on the Disney Cruise ships.

Parachute Press had watched Stine’s *Fear Street* series become popular among teens and pre-teens. Parachute and Stine then developed an idea for another scary series, this one to be aimed at younger kids. There still needed to be scares and dangers, but no blood, no guts, no bullets, and no guns. In these books for younger readers Stine played up the humor—another of his strengths—while playing down the violence. In order for the books to be scary, there would still need to be a threat to the character, but the threats would be different—most *Fear Street* stories are not monster stories and therefore contain an edge of realism.

In his autobiography *It Came From Ohio*, Stine writes that he saw an advertisement in *TV Guide* to promote horror films which read, “It’s *GOOSEBUMPS* week.” With that, he was off and running, turning out the first title, *Welcome to Dead House*, in ten days. It was not, however, an instant success. *Welcome to Dead House* sold less than a million copies. Nor did the next book—*Stay Out of the Basement*—set the publishing world afire. Like *Fear Street* before it, *Goosebumps* was a series without a central set of characters, and in this case, not even a central location. *Fear Street* also came out after some seeds had been sown by Stine and other authors in books like *Twisted*. In contrast, there was nothing even remotely like *Goosebumps* on the market: it was a brand new field. It was not until the third book, *Monster Blood*, that the series caught on, mostly due to word of mouth. With their easy availability through Scholastic book clubs, the growing number of mega-bookstores, and discount stores like Wal-Mart, *Goosebumps* soon began selling well. By the sixth title, *Let’s Get Invisible*, *Goosebumps* cracked *Publishers Weekly*’s children’s bestseller chart. The books received a boost in visibility when *USA Today* began its own bestseller list in 1994. Unlike other rankings that do not include paperbacks or children’s books—or if they do include them, they do not compare their sales to adult bestsellers—*USA Today*’s premise was, a book is a book is a book. On *USA Today*’s list, it became obvious that *Goosebumps* was outselling adult authors like Michael Crichton.

But the bubble burst on February 21, 1997, when Scholastic Inc., publishers of Stine’s *Goosebumps* series, saw its stock drop 40 percent after an announcement that its earnings would not meet expectations. Blame for this dramatic drop fell on the decline in sales figures of the *Goosebumps* franchise, in particular their older titles. Five years into the life of the series, it had “simply peaked.” The wide coverage given to this news—which ended up on the front page of most newspaper business sections—demonstrates the impact and importance of R.L. Stine. One writer, it seems, can influence the fate of an entire company. Stine, however, is not just any writer; he is, without a doubt, the most famous of all writers for children. Perhaps only Judy Blume in her heyday rivals Stine in this regard. He has appeared on countless television shows, helped create two successful television series (*Goosebumps* and *Eureka’s Castle*), and has been widely written about in the media. His first adult novel—*Superstitious* (1996)—earned a big advance and a movie deal. Needless to say, in spite of the series’ declining sales, the *Goosebumps* brand name still appears on fast-food drink cups, snack foods, calendars, clothing, and everywhere else in the retail world.

Goosebumps are more than books; they are popular culture products. From the movie tie-ins to the Cheetos bags, *Goosebumps* stopped being just books very soon into the series and Stine went from

hack writer to celebrity in just a few months. Stine told *People* that “No one over 14 has ever heard of me.” By 1998, however, there were few people with any significant contact with kids who had not heard of R.L. Stine.

Stock-Car Racing

From February through November there is a stock-car race somewhere in America, with tracks drawing up to 150,000 racing fans, eager to watch their favorite drivers zoom around the oval tracks in cars much like their own automobiles. From humble beginnings in a farmer’s field in the mid-1930s, the sport has become so popular nationwide that its television ratings are second only to the National Football League, and top drivers make millions of dollars a year from racing and advertising endorsements. When Jeff Gordon won the opening race of the 1999 season at Daytona Beach, Florida, he collected more than \$2.1 million.

The earliest stock-car racers got their training by transporting moonshine whiskey over the dusty roads of Appalachia in the dead of night, outrunning the revenuers by driving flat-out in dangerous conditions. These moonshine runners were a part of a legend, later to be etched in the public mind by a movie, *Thunder Road* (1958), starring Robert Mitchum. In the mid-1930s, the drivers began arguing about who was fastest, and a race was set up in a quarter-mile dirt track carved out of a farmer’s field near Stockbridge, Georgia. Unpublicized, the first race drew about 50 people, but after that thousands began showing up for the race, and the moonshiners began to collect cash prizes that surpassed their pay for nocturnal whiskey runs.

Among these early drivers were the Flock brothers—Tim, Bob, and Fonty—whose uncle owned one of the biggest stills in Georgia, and Junior Johnson, whose father had the largest moonshine operation in Wilkes County, North Carolina. Johnson, a legend in his own time, was featured in 1965 in a famous *Esquire* article by Tom Wolfe—“The Last American Hero is Junior Johnson-Yes!”—that

was made into a movie. Unbeatable on the dirt tracks, Junior had his own special style of accelerating through the turns by cocking his steering wheel hard left and fishtailing the rear end of the car. Other drivers, who slowed their cars on turns and tried catching up on the straightaways, had little chance.

At about the time the Georgia farmer was carving a race track out of a cornfield, an auto mechanic and weekend dirt-track race driver named William Henry “Bill” France was beginning a journey that would eventually make him the pioneer and prime mover of organized stock-car racing. He moved to Daytona Beach, where 25 miles of hard-packed sand, 500 yards wide, had attracted Sir Malcolm Campbell, who made annual visits to attempt new land-speed records with his racing car “Bluebird.” In 1935 France watched as Campbell made his last runs at Daytona before moving his operation to the less windy conditions of the Bonneville Salt Flats in Utah. To continue attracting speed-minded tourists to Daytona Beach, the city fathers organized beach races, with little success.

In 1938 they recruited the personable France, whose gasoline station was a hangout for drivers and mechanics, to organize the races. A natural promoter, France signed up drivers, gathered prizes from local merchants, and set his race for July 4. Over 4,500 spectators showed up, each paying 50 cents a ticket. France and his financial backers split \$200 in profits, and the young promoter started planning a beach race for Labor Day. By the following year, attendance was sharply up and ticket prices had doubled to a dollar. His races were a roaring success, but World War II brought a temporary end to his operation.

When he returned to the Daytona track after the war, France started the National Championship Stock-Car Circuit (NCSCC) to sponsor monthly races, with a winner’s fund and a cumulative point system to reward the circuit’s champion driver. NCSCC’s inaugural year in 1947 was a great success, with Fonty Flock declared national champion. France’s next bold step came in December of that year when he invited the most influential members of the stock car clan to a meeting in Daytona. He addressed 35 of his colleagues, urging them to “unite all stock car racing under one set of rules, with national point standings whereby only one driver could be crowned national champion.” He urged consistent, enforceable rules concerning the modification of cars, insisting that the races admit only standard cars that could be bought at automobile dealerships. After a brief debate, the group supported such an organization and named France president. The National Association for Stock Car Racing (NASCAR) was incorporated on February 15, 1948, and a technical committee wrote rules to promote fair competition and provide for the safety of drivers and spectators.

Another important figure in stock car racing history is Harold Brasington, who brought to reality his dream of building a 1.25 mile paved speedway in his hometown of Darlington, South Carolina, and hosting the first 500 mile race for stock cars, the South’s version of the Indianapolis 500. Bill France, in his second year of sanctioning races with his newly formed NASCAR, was called in to recruit drivers for the inaugural Southern 500 on Labor Day, 1950. Expecting to attract perhaps 5,000 paying customers to his 9,000 seat stadium, Brasington and France were astounded when 25,000 people showed up along with the first traffic jam in Darlington history. Tickets were sold for the infield, and the fans saw Johnny Mantz win the first Southern 500 driving a 1950 Plymouth with an average speed of 76 miles per hour, going the distance without a change of tires. By 1955 the Darlington track, known to racing fans as “the Granddaddy of them all,” was

The Pepsi 400, Daytona International Speedway, October 17, 1998.

attracting a maximum of 75,000 fans to the annual race, and the crowds remain that size every year. Harold Brasington's dream succeeded beyond all expectation.

Another event that boosted NASCAR to national prominence came in 1951 when the Detroit Chamber of Commerce called on Bill France to organize an automobile race as part of the Motor City's 250th anniversary celebration. France chose a one mile dirt racetrack in the Michigan State Fairgrounds and planned a race for stock cars that would run 250 miles, one for each year of the city's age. He also asked all the automobile manufacturers to enter at least one car in the race, and 15 agreed. On August 12, a crowd of 16,500 racing fans filled the track for the Motor City 250, and they saw 59 cars in a close, exciting race, with the lead changing 14 times. The winner was undecided until the last lap, when Tommy Thompson, in a 1951 Chrysler, out-foxed Joe Eubanks in a 1950 Oldsmobile 88.

The Motor City 250 enabled France to make two important breakthroughs: stock car racing, a sport bred in the South, became accepted in the North, and Detroit's auto makers became convinced that this popular sport could be good for a corporation's bottom line. Corporate sponsorships immediately began to bolster NASCAR's profits and winners' purses, and companies like Chevrolet, Ford, Goodyear, and Unocal began partnerships that have enhanced more than 50 years of NASCAR's history. Before these sponsorships, race

drivers could hardly earn enough in prizes to keep their cars in tires; in the Motor City race, the first three cars won \$5,000, \$2,000, and \$1,000, with the next seven making a few hundred dollars, and the other 52 cars only \$25 or \$50. In 1999, winners' purses have escalated so much that the top drivers employ racing teams to build as many as 12 cars a season at a cost of \$70,000 each, all meeting NASCAR's exact specifications and assembled with the hope that the driver will gain 2/10 of a second advantage.

To move NASCAR into the modern era, Bill France risked his entire fortune to build the plush Daytona International Speedway, a 2.5 mile oval designed for high speeds with sweeping turns banked at 31 degrees. Fireball Roberts, a popular 1960s driver, said you could "flat-foot it all the way." Lee Petty, father of Richard and winner of the first Daytona 500, said there was not a driver there who was not "scared" of the steeply banked track. "We never had raced on a track like that before." It all added to the mystique of the race, and the fans came in droves. In 1959, there were 42,000, and today the grandstands at Daytona for the annual opening event of the NASCAR season hold over 140,000. This success led to other major tracks, and construction on super speedways in Atlanta, Charlotte, and Hanford, California, started in 1960. In 1969 France lapped the field again with the building of the spectacular Talladega, Alabama, track—2.66 miles long and a lane wider than Daytona—which took the sport to a new

level, with cars racing three abreast at higher speeds than ever before. It was at Talladega that Bill Elliott drove the fastest lap in the NASCAR books: 212 miles per hour.

One of the reasons for NASCAR's continued success has been the "consistent, enforceable rules" that France had envisioned for governing the sport. He always believed that it was close, side-by-side racing that drew the fans, and to preserve fair competition NASCAR showed no favoritism. Whether the rule violator was a champion or a rising star, the penalty was consistent. Seven-time Winston Cup champion Richard Petty was caught with an illegal engine in 1983 and fined \$35,000. Jeff Gordon was the series leader and eventual Winston Cup champ in 1995 when his team was fined \$65,000 for using an unapproved wheel hub. Such strict inspection had begun in the very first "Strictly Stock Car" race in 1949, when Glenn Dunnaway crossed the finish line first but was disqualified when a post-race inspector discovered a wedge had been placed in the rear suspension to stiffen the springs and improve handling, a trick long known by moonshine runners.

In 1999, NASCAR is sanctioning approximately 2,000 events a year in 12 separate divisions at over 100 race tracks across the United States. More than 16 million people attend these events, which are watched by another 150 million on television. The premier series is the Winston Cup, featuring the top drivers and cars that are factory-supported by Chevrolet, Ford, and Pontiac. Second is the Busch Series, Grand National Division, a training ground for Winston Cup drivers of the future. Also popular is the Winston Racing Series of weekly races at more than 100 short tracks, a grassroots level of racing that produces its own national champion.

On February 7, 1999, a stock-car race driver came in second in the ARCA 200 at Daytona after having taken three years off to give birth to two children and start an interior design business. The driver was Shawna Robinson, who walked away from racing in 1995 after five seasons in the Busch Grand National Series, in which she became the first woman to win a NASCAR national series race. From its beginning, stock car racing has changed with the times while continuing to give its fans thrills and surprises.

Stock Market Crashes

Information concerning the stock market fills American daily newspapers and television reports. With so many Americans belonging to pension plans and other long-term investment programs, stock market shifts touch more people now than ever before. When the stock market is on the rise, everyone views it as a positive signal;

investments are increasing in value and a bullish market must mean the economy is good. But what are the repercussions when the stock market goes sour? What happens to American society and culture when the stock market falters or even crashes? In order to evaluate the full social and cultural implications of market crashes, an understanding of the 1929 crash and subsequent Great Depression is necessary. For it was the 1929 crash that has left a permanent mark on American society. That crash led to important policy changes and basically defined the terminology and standards by which the United States would judge future market shifts.

The 1920s had been very good economic times for most Americans. By 1929, production and employment were high, wages were increasing, and prices were stable; there were more middle-class Americans than ever before. American capitalism was in a lively phase and business was good. But while most of the American public did not understand the nuances of the stock market, they did understand there was a lot of speculation and many "get-rich-quick" schemes. In fact, rich and well-connected investors were buying stocks with little or no money down. And there was a feeling throughout the nation that these speculative designs were immoral and might soon lead to severe economic problems.

Still, by the summer of 1929, the stock market boom was a dominant topic of conversation. The bull market not only dominated the news, it also dominated the culture. At any posh party was an investment broker willing to tell his rich friends what to do. Everybody seemed to be a stock market expert and many regular investors were looking to make a quick fortune. Economist John Kenneth Galbraith wrote of the diversity of people playing the stocks: "The rich man's chauffeur drove with his ears laid back to catch the news of an impending move in Bethlehem Steel; he held fifty shares himself . . . The window cleaner at the broker's office paused to watch the ticker . . . [I was told of] a broker's valet who made nearly a quarter of a million in the market, of a trained nurse who cleaned up thirty-thousand following the tips given her by grateful patients; and of a Wyoming cattleman, thirty miles from the nearest railroad, who bought or sold a thousand shares a day."

Then came the famous Stock Market Crash. At first, it seemed like this might be just another downturn. Most assumed the market would just right itself as it had done on earlier occasions. On October 24, 1929, the day now called "Black Thursday," however, thirteen million shares were traded and many of America's key businesses, including RCA and Westinghouse, lost nearly half of their value. It is a day in which millions lost all of their money, savings, and hope. By 11:00 a.m. there was a wild scramble to sell, but few buyers. Prices continued to drop as crowds began to form around brokerage houses throughout cities all over the nation. That day, suicides had already begun as 11 well-known speculators killed themselves. There was a last-ditch effort by some key bankers to prop up the market but that only worked for several days. Then came October 29, a day in which over 16 million shares were dumped. The holes which the bankers had closed opened wide. One precocious messenger boy at the Stock Exchange decided to bid a dollar for a block of stocks and he actually got them! No bankers were around to bale the market out, for they were all broke too.

The stock market never righted itself and for a variety of reasons, a severe depression ensued. By 1932 unemployment had reached 25 percent—it had been 3 percent in 1929. The Gross National Product (GNP) fell to 67 percent of its 1929 level. Farm prices fell 60 percent from 1929 to 1932, and between 1930 and 1933 more than 5,500

banks closed. In addition, the suicide rate climbed 30 percent between 1929 and 1932. This Great Depression lasted from 1929 to 1941, and ended only when the United States began to prepare for World War II.

The Great Depression had a lasting effect on several generations of Americans. Even when World War II ended, many assumed the depression would resume. The conservative culture of the 1950s, marked by its lack of dissent and need for social acceptance, can be traced back to that 1929 depression. By 1950, many American families feared another economic crash and remained uncomfortable with economic expansion, credit, and cheap loans. It is accurate to say that the generation of Americans who lived through the 1929 crash and the subsequent depression never forgot it. And it has been those Americans who have continued to make the crash and Great Depression part of American culture and lore.

Evidence shows that the American people and its government, from 1945 to about 1973, were indeed influenced by the depression in several ways. First was the belief that both the federal budget and family budgets should be balanced. On the federal level, the budget deficit did not begin in earnest until 1980. On the personal level, families only purchased major household items when they could pay cash. There was little or no credit for most Americans, as debt was considered a poor judgement at best, and even immoral to some. Second, people also saved more money in the post-depression years. Savings reached a peak during the 1950s as the American public still worried about economic downturns. The belief in society was that if families stayed out of debt and saved their money, they could survive another serious economic downturn.

Personal economic paradigms, however, began to change in the United States—along with everything else—during the 1960s. First, the federal government began to spend more than it took in. This started during the Vietnam War and although the deficit never reached 1980 levels, the mere fact deficits existed provided a startling change in economic policy. Second, as the economy boomed during the 1960s, more and more consumer spending was needed to keep the economy vigorous. Because of this, more credit cards and cheap loans were issued and people were actually encouraged to spend more than they earned. Business leaders argued that spending was good for the economy while too much savings were counterproductive—saving too much money would slow economic growth and cost American jobs. Third, going in debt did not seem immoral to the new generation of Americans who did not remember the depression. The youth of the 1960s and 1970s only heard stories about the Great Depression but had not faced the economic challenges of their parents and grandparents. These new consumers wanted to purchase goods and did not want to wait until they had the cash. Consumer credit and personal debt began to soar.

Clearly, since 1929 the effects of stock market dips have changed with generational perceptions. Market downturns in the late 1940s and early 1950s were met by citizens who lived through the depression. Their survival tactics during these periods included increased savings, earning extra income, and in rural areas, growing and selling their own food and produce. Those were all lessons learned from earlier times; the key during an economic downturn was not to borrow or increase your debt.

The new generation of consumers that came of age in the early 1970s, however, viewed the economy in a much different way. When the market dipped in the 1970s, people actually spent more, went into debt, did not save, and assumed they would make up the difference when the economy rebounded. To these Baby Boomers coming of

age, the market would always right itself and debt was not an immoral thing.

There have been crashes since 1929, and each time the stock market falls, the 1929 terminology permeates newspapers and other media outlets. But the crashes that have occurred since 1929 have not had the same economic, social, or cultural effects because the salience of the Great Crash has disappeared. In 1987 there was a stock market crash reminiscent to the 1929 fall. Several brokerage houses collapsed and thousands of investors lost money. The Dow Jones industrial stocks fell 22.6 percent. This time, however, things did right themselves relatively quickly. Fearing the economic repercussions of the 1987 crash, the Federal Reserve Board, the White House, and Congress acted swiftly. Passing legislation to right the economy was not considered in 1929 because politicians believed it more prudent not to tinker with the free market system. A major result of the 1929 crash was that the government began to take an active role in times of economic downturn by enacting fiscal and monetary policy changes.

In 1998, the stock market again fell precipitously. Investment portfolios declined but it seemed to cause little panic and few economic worries. Again, the federal government and Federal Reserve Board offered policy alterations and the market recovered in a short period of time. Those most adversely effected by the 1998 crash were small nations with strong economic ties to the United States. The American economy, with fiscal and monetary policy changes, is able to weather market fluctuations. But many smaller nations are hurt when the American economy goes into a tailspin, even if for a short period of time.

With fewer and fewer people who remember the 1929 crash still living on the eve of the twenty first century, fears about stock market crashes have been blunted. In 1929, many American economic and business structures were still weak and could not handle the crash. But because of the 1929 crash, American banks, businesses, and policy makers are prepared for problems and make the necessary adjustments. In every crash since 1929, the market has rebounded and subsequent recessions or depressions have been avoided. But because the 1929 crash had such dire economic consequences, it remains an important social and cultural event—even if its economic significance has lost salience. Drops in the current market are always compared with 1929 declines. Unemployment rates, productivity figures, and other economic data is generally contrasted with 1929 figures. And post-crash depression stories are still part of American popular culture. There are many tales about those who lived through the depression and in later years refused to put their money in banks, opting instead to place all their savings in mattresses or freezers. While more enlightened economic policies have made it possible to easily survive a stock market crash, the 1929 calamity and its aftermath will forever be the standard against which Americans measure economic and social problems.

Stockton, "Pudgy" (1917—)

The unofficial queen of Muscle Beach, Santa Monica's Abbye "Pudgy" Eville Stockton inspired thousands of women to join gyms and take up weight training in the 1940s and early 1950s in much the same way that John Grimek ushered in the modern era of men's bodybuilding. Before Stockton, there were a few professional strongwomen who trained with weights, but they were generally massively proportioned women who unintentionally helped perpetuate the myth that weight training would make women large, unattractive, and perhaps a trifle coarse. Stockton, with her glowing skin, shining hair, miraculous curves, and amazing strength, changed all that. At the end of the Depression, Stockton became emblematic of the new type of woman needed to win the war. Competent, feminine, strong, yet still traditionally sexy, Stockton became the media darling of Muscle Beach and famous around the world.

Abbye Eville was born August 11, 1917, and moved to Santa Monica in 1924. Called Pudgy as a small child by her father, the name stuck, even though at five feet two inches she normally weighed about 115 pounds. Pudgy began seeing UCLA student Les Stockton during her senior year in high school. Their favorite date was to go to the beach and practice gymnastics. In the early days of Muscle Beach, Pudgy and Les, whom she married in 1941, primarily worked on acrobatic and gymnastic feats. With their friend Bruce Conner, they performed at football game half-time shows and other venues in an acrobatic act known as the Three Aces. Their practice sessions attracted other gymnasts, adagio dancers, and handbalancers, and began drawing audiences to the beach. On weekends following World War II, it was not uncommon for several thousand people to see their performances. To capitalize on the interest, the City of Santa Monica erected an outdoor platform to slightly elevate them above the crowd, and Muscle Beach was born.

The media also gathered at Muscle Beach on the weekends and quickly capitalized on Pudgy's rare combination of strength, physical beauty, and charisma. The main photo pictorials of the era—*Life*, *Pic*, and *Laff*—included her in photo essays, and two newsreels, *Whatta Build* and *Muscle Town USA*, also featured her. She appeared in ads for the Ritamine Vitamin Company and the Universal Camera Company in the late 1930s and, by her own count, was on the cover of forty-two magazines from around the world by the end of the 1940s.

In 1944, Stockton began writing a regular women's training column in *Strength & Health* magazine, a task she did for most of the next decade. Writing in what was then the most influential fitness magazine in the world, Stockton featured the women who trained with her at Muscle Beach as she argued for the benefits of weight training for women. In article after article in her "Barbelles" column, Stockton demonstrated that weights would enhance a woman's figure and make any woman a better athlete; and as proof, she showed her readers photographs of herself and other women who trained with weights. Stockton also helped to organize the first sanctioned weightlifting contests for women and publicized them in *Strength & Health*. The first such meet to carry an Amateur Athletic Union sanction was

held February 28, 1947, at the Southwest Arena in Los Angeles. In that contest Stockton pressed 100 pounds, snatched 105 pounds, and clean and jerked 135 pounds. In 1948, Les and Pudgy opened a women's gym in Los Angeles, and for the next several decades she continued to instruct in her own and others' gyms in the Los Angeles area, preaching her message of the benefits of weight training for women.

Although Pudgy held only one "bodybuilding title" during her career (she was selected by Bernarr Macfadden as Miss Physical Culture Venus for 1948 at the age of thirty-one), her influence on women's bodybuilding and weight training has been enormous. Every woman bodybuilder who puts on a swimsuit and steps up on the posing dais, every woman weight lifter who strains under a clean and jerk, and every woman power lifter who fights through the pull of a heavy deadlift owes a debt of gratitude to Stockton, whose personal example helped make these modern sports possible. Stockton's great and enduring gift to the world of bodybuilding was the living proof that muscles could be feminine, womanly strength could be an asset, and that working out was fun.

Stokowski, Leopold (1882-1977)

A brilliant symphony orchestra conductor and arranger of classical music, Leopold Antoni Stanislaw Stokowski achieved his greatest fame as conductor of the Philadelphia Orchestra, beginning in 1912. His statuesque physique, flowing hair, and theatrical temperament came to symbolize for generations of Americans—and for other conductors—how the musical directors of symphony orchestras should look and behave. Stokowski was especially admired and respected for creating an ensemble with so unique a sound that the Philadelphia Orchestra was considered by many musicians to be the greatest in the world. Eventually, celebrity entered his personal life when he married heiress Gloria Vanderbilt.

In the 1930s, Hollywood beckoned and Stokowski appeared with singer Deanna Durbin in films that were merely vehicles for their talents. The exception was Walt Disney's *Fantasia*, in which animation was blended with Stokowski conducting superb renditions of works by classical composers. The films reinforced Stokowski's image, allowing millions to see him in action.

Leopold Stokowski

Stone, Irving (1903-1989)

A prolific, best-selling author whose entertaining biographical novels and “biohistories” have proved far more popular with readers than with scholars or critics, Irving Stone is best known for works that, in the words of one critic, are pleasing to people who like their history “a little embellished with fiction.” By far his two most memorable works are a pair of books that offer monumental, sweeping accounts of the lives of two world-class artists: *Lust for Life: A Novel of Vincent van Gogh* (1934) and *The Agony and the Ecstasy: A Novel of Michelangelo* (1961). Stone also wrote a series of popular fictionalized histories of the nation’s First Families: *The President’s Lady* (1951), about Andrew and Rachel Robards Jackson; *Love Is Eternal* (1954), about Abraham and Mary Todd Lincoln; and *Those Who Love* (1965), about John and Abigail Smith Adams. American political radicals figured in some of Stone’s other works, such as *Sailor on Horseback: The Biography of Jack London* (1938), a book that, in translation, was immensely popular in the former Soviet Union; *Clarence Darrow for the Defense* (1941), and *Adversary in the House* (1947), an account of Socialist leader Eugene V. Debs.

Irving Stone, who took his family name from his stepfather after his mother’s remarriage, was born Irving Tennenbaum in San Francisco, California, on July 14, 1903 to Charles and Pauline Rosenberg Tennenbaum. As a child, Stone was a self-described “hopeless bookworm,” who was inspired to be a writer after devouring the work of Jack London, Frank Norris, Sherwood Anderson, and Gertrude Atherton. In order to continue his education after graduating from

high school, Stone took a variety of odd jobs to work his way through the University of California, including saxophone player, fruit picker, meat packer, and hotel clerk. He majored in political science, graduating with honors in 1923, and taught economics at the University of Southern California while working toward his Masters degree there. But he soon abandoned his academic career to indulge his passion for writing. With ambitions to be a dramatist, he moved to New York, but few of his scripts made it to the stage. Like many American intellectuals of the period, he spent some time in Paris, where he chanced to see an exhibit of van Gogh’s paintings that forever changed his direction. “It was the single most compelling emotional experience of my life,” he later said, and immediately embarked on extensive research into the life of the nineteenth-century Impressionist painter. After rejection by more than a dozen publishers, during which time Stone supported himself by writing pulp-detective stories, his Van Gogh biography was finally published in 1934, as *Lust for Life*, and quickly became a best-selling book. (It would later be made into a popular film starring Kirk Douglas.)

Stone made one more foray into playwriting, however; but when his Broadway drama, *Truly Valiant*, closed after one performance in 1935, he realized he had no talent for the medium and, from then on, he devoted himself exclusively to biographical subjects with the help of his new bride, Jean Factor, who collaborated with him as an editor or co-writer. Among the works they jointly edited was *Dear Theo* (1937), based on the correspondence between Vincent Van Gogh and his brother. Several of the biographies Stone wrote over the next ten years were favorable portraits of progressive political figures admired by their author, including Jack London, Clarence Darrow, and Eugene V. Debs. Another book, *Earl Warren* (1948), featured the then-California governor and future Chief Justice of the United States. In the 1950s, Stone began using the term “biohistory” to describe his works, such as *Men to Match My Mountains* (1956), written for Doubleday’s Mainstream of America series, a fictionalized narrative of the settling of the American West.

Next turning his attention to the life of Michelangelo Buonarroti, Stone commissioned the first complete translation of the Renaissance artist’s letters into English and spent more than two years living in Italy, near sites significant to his subject. The result, *The Agony and the Ecstasy* (1961), sold several million copies, was made into a motion picture starring Charlton Heston, and earned Stone decorations from the Italian government. Stone and his wife subsequently edited 600 of the letters into *I, Michelangelo, Sculptor* (1962), a first-person portrait. That year also saw the publication of *Lincoln: A Contemporary Portrait*, which Stone edited with historian Allen Nevins. Other subjects for Stone’s works have included Charles Darwin (*The Origin*, 1980); and Sigmund Freud (*The Passions of the Mind*, 1971). In a century in which popular culture appropriated politics, art, literature, and history, Stone was a preeminent purveyor of the accessible mainstream biography. Stone died on August 26, 1989.

Stone, Oliver (1946—)

Since the mid-1970s, Oliver Stone has been involved in writing, directing, and producing over 30 films in a wide range of styles and genres. Most of his work has been critically and commercially successful, but, since the 1980s, it has also been controversial. Films like *Salvador* and *Platoon*, both released in 1986, criticized United States government policy over El Salvador and Vietnam, sidestepping the prevailing confident patriotic mood to deal with the effects of war in a realistic and thoughtful way. In the 1990s, films like *Natural Born Killers* (1994), in which two young lovers travel around New Mexico, killing as they go, have led to further accusations of exploitation and gratuitous violence. Since *Salvador*, the subject matter of Stone's films has ranged from political conspiracy in *JFK* (1991) and *Nixon* (1995), to war and its cultural effects in *Platoon* (1986) and *Born on*

Oliver Stone

the Fourth of July (1989), to rock biopic in *The Doors* (1991). With their roots in the "New Cinema" of Hollywood at the end of the 1960s, Stone's films contain a blend of realism, social documentary, and political enquiry that has made him a difficult but important commentator on American culture in the late twentieth century.

After spells teaching English, and later fighting in Vietnam in the 1960s, Stone returned from the war in 1968 to study film at New York University. Like many other directors of his generation, Stone benefitted from the new graduate programs in film history, theory, and production that appeared in the 1960s. Film schools at the University of California Los Angeles and New York University, among others, produced directors and writers such as Francis Ford Coppola, Brian de Palma, and Martin Scorsese, many of whose films, like Stone's, have been among the most influential of the 1970s, 1980s, and 1990s.

Stone began his filmmaking career as the writer, director, and editor of a horror film, *Seizure* (1974), and won his first academy award, for Best Adapted Screenplay, in 1978, for *Midnight Express*. In the early 1980s, Stone had his most success as a screenwriter, taking writing credits for *Conan the Barbarian* (1981) and *Scarface* (1983). He has also been influential as a producer of many of his own films, as well as the television series, *Wild Palms* (1993), and films such as *The Joy Luck Club* (1993) and *Reversal of Fortune* (1990), among others. Additionally, he has acted, making appearances as a reporter in *Born on the Fourth of July*, as a professor in *The Doors*, and as a financial trader in his 1987 film, *Wall Street*.

Graduates of the film schools have often become known for their technical skill and mastery of visual effects, and Stone is no exception. His best known visual technique is the use of a variety of different types of film stock to present different viewpoints. In films like *JFK* and *Natural Born Killers*, Stone also used news and amateur film, mixed in with "made" footage, to reconstruct events and give them an "authentic" appearance. Since the late 1980s, the mixing of images using digital techniques has become much cheaper and easier, and other directors, such as Stone's contemporary, Steven Spielberg, also a film school graduate, have used the technique to good effect, for example in *Schindler's List* (1993). But while Spielberg tends to blend "real" and "made" footage to create a continuous visual quality, Stone plays on the different textures of formats like Super 8, 35mm, and video to disrupt the flow of the narrative, and make the viewer's position less secure.

Salvador (1986) was Stone's first major success as a film director. Based on the experiences of Richard Boyle, a journalist in El Salvador in 1980-1981, the film portrays the Salvadoran government's violent suppression of opposition, and is deeply critical of American support for the right-wing regime. In the same year, *Platoon* took a similarly realistic approach to representing the war in Vietnam. The film won four Academy awards, including for Best Picture and Best Director, and marks the beginning of Stone's rise as an influential director and producer. Following *Platoon*, several films dealing in a new way with the issue of Vietnam found success for other directors; these included *Full Metal Jacket* (Stanley Kubrick, 1987) and *Good Morning, Vietnam* (Barry Levinson, 1988). As David Cook points out, however, the fashion for films about Vietnam did not only include sensitive treatments of modern warfare; *Platoon* came along at around the same time as more exploitative films, like *Born American* (Renny Harlin, 1986) and *Rambo: First Blood, Part II* (George Pan Cosmatos, 1985).

Stone's second Vietnam film, *Born on the Fourth of July* (1989), contains some combat footage, but concentrates on the cultural issues

of the treatment of war veterans, and in particular those, like Ron Kovic, whose injuries made them an embarrassment to the military authorities and the general public. Having dealt with Vietnam from the point of view of soldiers in combat in *Platoon* and of veterans in *Born on the Fourth of July*, in 1993 Stone considered the experience of war from the other side. *Heaven and Earth* describes the war from the point of view of a Vietnamese peasant woman who experiences the fighting as a child and later marries an American soldier. Besides his efforts to represent war in more realistic ways, and from the point of view of its victims, Stone is also known as a shrewd social and cultural commentator. In the late 1980s, for example, films like *Wall Street* (1987) and *Talk Radio* (1988) dealt with current concerns about the financial markets, greed, and the media's manipulation of celebrities and its audience. In 1991, *The Doors* appeared as a film portrait of the rock band and its charismatic singer, Jim Morrison. While the portrait of Morrison is a fan's account, the film is ruthless in its treatment of drug and rock culture.

Since the early 1990s, Stone's trademark technique of switching between film stocks, as well as using hand-held cameras and natural lighting, has made watching his films a more directly engaging experience. The disorienting effect of the unstable camera involves the viewer in the unfolding scene in ways that are not possible with more formal styles of filmmaking. Perhaps his most important film, *JFK* (1991), relies on such techniques to make telling comments on the creation of myths by the media and government. Dealing with the assassination of President Kennedy in November 1963, the film revives the 1967 theory of New Orleans District Attorney Jim Garrison that Kennedy could not have been shot by Oswald as the Warren Commission had found. Following the release of the film, Stone was attacked for having rewritten the facts about the assassination. Critics pointed to the way in which the famous amateur film of the killing had been enhanced and manipulated to prove Garrison's theory, but Stone also came in for criticism for his speculation about plots against Kennedy in the security forces and government. Despite the opinions of critics, the film was a success with audiences, prompting a run on books about the Kennedy assassination, and eventually putting pressure on Congress to release records of the Warren Commission through a special act in 1992. Perhaps because of the controversy, *JFK* received no Oscars, but Stone did receive a Golden Globe Award for Best Director.

JFK was significant for its technical effects as well as the public response it triggered, and *Natural Born Killers*, perhaps Stone's most vilified film, takes the techniques learned in making *JFK* still further. The movie includes animation and other electronic imaging methods, as well as live action shots on several different film stocks, with the effect that the images themselves, as well as the subject matter, bombard the viewer in a quite relentless way. David Cook speculates that the film is Stone's response to the media's treatment of *JFK*. *Natural Born Killers* exposes the hypocrisy of a media that criticized him for twisting the truth, yet makes fortunes out of goading the public to ever greater voyeuristic excesses. Certainly the murderous couple in Stone's film are presented in such a way as to make their acts of violence fascinating rather than repellent. Manipulating the viewer, even though it admits to doing so, *Natural Born Killers* speculates about how much more manipulative the supposedly objective media might be.

Many of Stone's films look at the way individuals are controlled and used by bigger organizations. As a result, he has often found himself in opposition to current thinking, and has been described as a dissident by his supporters. Like those of many directors who came

through the film schools in the 1960s, Stone's films have a reputation for provoking strong emotional responses in audiences. Perhaps for this reason, films like *JFK* and *Natural Born Killers* have sometimes received harsh treatment at the hands of their critics. Oliver Stone's main achievement as a film director, however, has been his contribution to the valuable tradition of socially challenging independent filmmaking that began in the 1960s with directors such as Arthur Penn, Sam Peckinpah, and Stanley Kubrick.

Stonewall Rebellion

In the early hours of June 28, 1969 patrons of a gay men's bar in Greenwich Village, and their allies in the street, vigorously resisted a routine police raid. The event, which has been described as "the hairpin drop heard around the world," and as one of those "specific sparks that ignites protest," was both timely and inevitable. It came about during an era of cultural and social ferment, and after years of efforts on the part of homosexuals to gain a public voice and legitimate place in U.S. society. The Stonewall Rebellion became a "metaphor for emergence, visibility and pride," one that publicly affirmed the identity of a people burdened with a tradition of invisibility and abuse.

A variety of factors including modernity, changes in cultural and sexual mores, and a politicized environment have been identified as supporting the development of urban homosexual subcultures and subsequently a homosexual movement. In New York City, the geographic and cultural setting for these radical changes was established in the bohemian, avant-garde atmosphere that began developing in Greenwich Village during the 1940s. Significant influences included the Beat Culture, pop art, psychedelics, the New American Cinema, off-Broadway theatre, and the activist folk music scene. In short, the area was an incubator for oppositional attitudes toward convention and traditional authority and these attitudes spread across the country.

Cultural critic Daniel Harris, has also proposed that "diva worship," among male homosexuals, was another factor that unwittingly contributed to gay militancy. Since homosexual males had no other gay positive images, many projected themselves either into the tragic and resilient Judy Garland ("the ultimate bellwether of the docile gay masses"), or the "invincible personas" portrayed by the likes of Joan Crawford and Bette Davis. In short, homosexuals "recycled the refuse of popular culture and reconstituted it into an energizing force."

Homosexual militancy was also nurtured by the politicized atmosphere of the time. Since the 1950s, Mattachine, ONE, and Daughters of Bilitis had publicly advocated for respect and civil rights for homosexuals. In the 1960s, the activities and gains of the Civil Rights Movement and other social movements also promoted a new sense of hope and assertiveness among politicized homosexuals.

For some gay men, the death of Judy Garland a few days before the Stonewall uprising, symbolically transformed the stereotype of the quiet, suffering homosexual. Activist Alkarim Jivani observed that “Garland had been the archetypal gay icon because she represented bravery through adversity, but that bravery was characterized by a passive stoicism. With the death of Judy Garland, that image of the gay man died.”

Meanwhile, for those who identified with the battling, invincible divas, the moment of truth was fast approaching. According to one report, the day of Judy’s funeral was “sweltering and humid, and that night there was a full moon.” Vito Russo, who later wrote a book on homosexual themes in U.S. films (*The Celluloid Closet*), recalled that “I was in a foul mood that night because of the funeral.” Ira Kushner, who was 15 at the time, remembers standing outside the Stonewall as part of a crowd that had gathered to honor Garland. Then the police arrived.

At first the police arrested some of the younger men standing outside and then they went into the bar. As the patrons were roughly hustled out of the bar, it was those most used to confrontations with the police (drag queens, street people, students, and a few butches), who were in the vanguard of the resistance. Drag queen Rey “Sylvia Lee” Rivera recalled that “that night, everything clicked.” Rivera and some of the people he knew were already involved in other social movements. He told himself, “Great, now it’s my time. I’m out there being a revolutionary for everybody else, now it’s time to do my own thing for my own people,” according to E. Marcus’ book, *Making History*. In the midst of the Vietnam War, the civil rights movement, counterculture, student and women’s movements, patrons of the Stonewall bar refused to go quietly into the police van.

There are also reports that, as the tension increased, a well-placed spark was contributed by a butch in drag. She had been visiting a male friend in the bar. When the police pulled her out of the bar and into a police car, she struggled. When she was hit, the audience exploded. Coins (symbolizing the bribes paid to the police by the bars), an uprooted parking meter, bottles, fists, and insults flew. Queens engaged in campy street theatre that included sexual repartee aimed at the police and a chorus line singing “We are the Stonewall girls. . .” The bar was set on fire, the police called for reinforcements, and the melee escalated into a riot. Although this was not the first time that homosexuals had resisted police abuse, this time, there were significant political consequences.

While moderate homosexuals condemned the violence, more radical activists used the event as an organizing opportunity. In New York, the event galvanized those sympathetic to confrontation politics. By July, these activists had coalesced into the co-gender Gay Liberation Front (GLF), a name that suggested solidarity with Third World resistance movements, such as the National Liberation Front in Vietnam. Across the United States, scores of groups with the same name sprang up. GLF was the first of many homosexual activist groups of that era, most of whom were politically at odds with one another. What these groups did have in common was a radical

commitment to the civil rights of homosexuals. The groups were loosely connected into a network known as the Gay Liberation Movement. By 1973 there were over 800 gay and lesbian groups and organizations in the United States.

Main Street U.S.A. took little notice of the Stonewall event. News of the riot was buried in the back pages of the *New York Times*. Other mass market publications such as *Life*, *Newsweek*, *Time*, and *Harper’s*, which had previously published sympathetic articles about homosexuals, also failed to recognize the importance of the event. While the mainstream press missed the significance of Stonewall, the homosexual press which was politically moderate, treated the riot with ambivalence. *The Advocate*, a national gay male publication, published several reports, and one writer wondered if “the spark” set off by Stonewall, would endure. *The Ladder*, a national lesbian publication gave the event two pages of coverage, but the article did not appear until October of 1969.

After Stonewall, coverage of homosexual issues in the mainstream media increased significantly. In October of 1969, *Time* magazine featured the “Homosexual Movement” as a main story. *The Reader’s Guide to Periodical Literature*, an index to popular magazines, listed nine entries on “sex perversion” in 1950, the year in which the first Homophile Organization (Mattachine) was founded. By 1970, *The Reader’s Guide* listed thirty items under “homosexuality” and one under “lesbianism.”

Gradually, the story of Stonewall came to occupy a central position in the folklore and chronology of U.S. gay and lesbian history. It remains so even in the face of claims that it was but one significant event in a long history of individual and collective resistance that spans 400 years of U.S. history. According to Martin Duberman, the event simply “gave meaning and coherence to a struggle that was already underway.” However, to many, the special appeal of the Stonewall Rebellion is based on it being a defiant and defining moment that took place during an era filled with similar moments. As in the Boston Tea Party, the use of confrontation radicalized a movement that had, up to that time, relied on documents and discourse.

Since 1970, lesbians and gays in cities across the United States have held annual Gay Pride parades and rallies to commemorate the event. There have been significant turnouts in San Francisco, New York, Los Angeles, and Chicago. San Francisco’s event attracts between 350,000 and 500,000 participants and onlookers. Unlike the celebrations of other marginalized groups, Gay Pride memorializes the public emergence of a people and a movement that are still outside the equal protection of the law and are widely unwelcome at the diverse cultural table of this nation.

Stonewall signifies a dividing line between the brave but understandably more conservative efforts of homophile groups founded during the McCarthy Era; those of liminal 1960s groups like the Society for Individual Rights in San Francisco and the Homosexual Action League in Philadelphia; and radical homosexual activists, many of whom had gained organizing skills and new political perspectives in other civil rights movements. The title of a well-known documentary film on gay and lesbian history, *Before Stonewall* (1979), suggests that the event was a radical departure from the homophile era. For those who subscribed to the new liberation ethos, assimilation and dissimulation were out. Instead, they were inspired by slogans like “gay is good” and “out of the closets and into the

streets.” For these lesbians, gay men, and other “sexual outlaws,” Stonewall was a watershed event, one that galvanized them into radical activism on behalf of an historically despised group. For a specific generation of activists, the event “became the symbol of an oppressed and invisible minority at last demanding its place in the sun,” according to Wayne Dynes in the *Encyclopedia of Homosexuality*.

Stout, Rex (1886-1975)

U.S. detective-story writer Rex Stout is best remembered for having created the characters of eccentric crime-solver Nero Wolfe and his assistant Archie Goodwin, a memorable duo who appeared in more than 50 books over four decades beginning in the mid-1930s. Wolfe and Goodwin quickly endeared themselves to readers not only for their adeptness at solving crimes but for their trenchant comments on American life, war, big business, and politics. Nero Wolfe, the puffing, grunting, Montenegrin-born heavyweight gumshoe with a

Rex Stout

fondness for food and orchid-growing, made his appearance in 1934 with the publication of *Fer de Lance*. A steady stream of Nero Wolfe books followed, to the point where the character became more well-known than its creator. Often compared by literary critics to Sherlock Holmes and Dr. Watson, Wolfe and Archie played complementary roles in Stout’s fiction. Detective work for Wolfe was a business, and his clients were charged handsomely for his services, allowing the investigator to indulge his penchant for orchids and food. Goodwin, like Watson, is the legman, the hardboiled detective who satirically narrates the events in the story. He is dispatched to do all the detecting that Wolfe, the consummate detective, refuses to do. Wolfe is portrayed by his partner as partly human, partly godlike, with an arrogant intelligence, a gourmand’s appetite, and an orchid grower extraordinaire. Goodwin treats clients, cops, women, and murderers with the same degree of wit and reality he applies to Wolfe. Singly they would be engaging but together they form a brilliant partnership that brought a new, humorous touch to detective fiction. Another character in the Nero Wolfe series, Inspector L. T. Cramer, NYPD, has been described by George Dove in his book, *The Police Procedural* (1992) as probably the most familiar policeman in classic detective fiction. Cramer’s feelings toward Wolfe move from skepticism to open hostility to open admiration within the space of a single novel.

Rex Todhunter Stout was born in Noblesville, Indiana, in 1886, the sixth of nine children of John and Lucetta Todhunter Stout, who were Quakers. The family later moved to Kansas, where by the age of nine, Stout was a child prodigy, especially in mathematics. He attended the University of Kansas but did not complete a degree, leaving to enlist in the United States Navy, where he served as a yeoman on President Theodore Roosevelt’s yacht. When he returned to civilian life in 1908 he began working as a bookkeeper, and devised a system of school banking that netted him a considerable fortune, making possible a trip to Paris and an opportunity to write. Among his early freelance articles was one in which he purported to analyze the palm prints he personally obtained from President William Howard Taft. Stout turned out three critically acclaimed novels before *Fer de Lance* that never attained the popularity he later achieved with his Nero Wolfe novels. In his private life Stout was outspoken, first against Nazism and then later against the use of nuclear weapons. In 1941, he served as emcee of the radio program “Speaking of Liberty” and, during World War II, he wrote propaganda and volunteered for the Fight for Freedom organization.

In Stout’s Nero Wolfe series, the detective is portrayed as solving crimes from his brownstone on New York’s 35th Street, adhering to a schedule regardless of murderers with guns, bombs in guest rooms, or clients with problems. In *The League of Frightened Men* (1935), Goodwin suggests that Wolfe step out into the street in front of the house to bring his powers to bear on a cabdriver there, an important witness. “Out?” Wolfe exclaims, looking at Goodwin in horror. When Goodwin explains that his employer would not even have to step off the curb, the unflappably cool Wolfe replies, “I don’t know, Archie, why you persist in trying to badger me into frantic sorties.” Wolfe did, however, leave the house upon occasion to attend orchid shows as in *Some Buried Caesar* (1938) or to be incarcerated in the local jail in *A Family Affair* (1973).

In Stout’s novels, character and dialogue are more important than plot. Goodwin is portrayed as dashing around—even falling in

love—while Wolfe is defined as a slightly comic but always impressive figure, even if only for his sheer bulk. Weighing a full seventh of a ton, the enormous Wolfe can cross his legs only with great difficulty whenever he finds a strong enough chair in which to seat himself. Goodwin takes great delight in his observation and recording of Wolfe's movements and habits, his glasses of beer, his tending of a collection of 10,000 orchids, or his method of entering a room. Stout himself summed up his career in this quotation: "You know goddam well why, of all kinds of stories, the detective story is the most popular. It supports, more than any other kind of story, man's favorite myth, that he's *Homo sapien*, the rational animal. And of course the poor son-of-a-bitch isn't a rational animal at all—I think the most important function of the brain is thinking up reasons for the decisions his emotions have made. Detective stories support that myth."

Strait, George (1952—)

When George Strait burst on to the national scene in 1981, he was identified with a movement in country music known as New Traditionalism, a return by young country artists to old country styles. Pop music had come to dominate the country charts during the 1970s, and Strait, along with Ricky Skaggs, Randy Travis, and others, were among the dissenters. Before long, Strait went on to become one of music's most commercially successful recording and touring artists.

Born in Poteet and raised in Pearsall, Texas, Strait and his brother lived with their father, a junior high school math teacher and part-time rancher. A true Texas cowboy, Strait helped out on the family ranch. Growing up, he ignored country music in favor of the pop music of the British Invasion of the 1960s, as did many of his peers. In high school, Strait played in a number of garage bands. After graduation, he eloped with Norma, his high-school sweetheart, and after a short flirtation with college, joined the Army in 1971. It was while he was stationed in Hawaii that he began performing country music, as a singer in a band on the base.

Strait finished his military service in 1975, and returned to Texas to study agriculture at Southwest Texas State University. It was there that Strait formed the Ace in the Hole Band, which became a big

George Strait

regional draw. The group released a couple of records on the Dallas-based D Records label and made several trips to Nashville, though they failed to draw the attention of anyone in the music industry there. Erv Woolsey, a Texas club owner and former record-promotions executive, saw the band one night and took an interest. In 1980, Woolsey convinced MCA to sign Strait, and eventually became and remained his manager.

Strait's first single was released in the spring of 1981, and reached the top ten. His 1982 offering "Fool Hearted Memory" was his first number-one single, and since then he has had an amazing string of chart successes, including more than 30 number-one country singles. Every album he has released since 1981's *Strait Country* (more than 20 in all) has been certified gold or platinum. He holds many concert box-office records, having mounted some of the most successful United States concert tours in the 1980s and 1990s. In 1992, he made his silver screen debut with a starring role in a film called *Pure Country*. In 1995, MCA released a four-disc career retrospective called *Strait out of the Box*, which became one of the best-selling box sets in country-music history.

Though country music has become increasingly more pop since the 1980s, Strait seldom strays too far from Texas honky-tonk and the shuffle beat of western swing. He has successfully negotiated the line between commercial and traditional for quite some time. He is a song stylist, greatly influenced by Merle Haggard, known for his subtle phrasing and supple vocals. His style is evocative of such classic country singers as Lefty Frizzell and Ray Price. Though he is not a songwriter, he has proven his skills in song selection. His glitter-free

cowboy-hat-and-denim fashion style has helped to spawn a legion of faceless “hat acts” in country music over the years, but Strait has an understated and elegant presence, existing in stark contrast to the bombastic style of Garth Brooks, country music’s other giant male country superstar.

Stratemeyer, Edward (1862-1930)

It seems ironic that America’s most prolific creator of juvenile popular fiction is a man whose name is hardly known. Edward Stratemeyer revolutionized the world of children’s writing by adapting it to the methods of mass production. His Stratemeyer Syndicate,

Edward L. Stratemeyer

founded at the turn of the twentieth century, hired ghostwriters to develop hundreds of stories based on Stratemeyer’s outlines. From this “fiction factory,” as some have called it, came such durable American heroes as the Bobbsey Twins, Tom Swift, the Hardy Boys, and Nancy Drew.

Born in New Jersey in 1862, the son of German immigrants, Stratemeyer grew up admiring the rags-to-riches stories of Horatio Alger and aspired to write similar books. The progress of Edward Stratemeyer’s career is reminiscent of an Alger plot as well. Although he did not quite start in rags, Stratemeyer eventually obtained riches by steadily climbing the ranks of the professional fiction-writer’s business. As a child, he had a small printing press which he used to print and distribute copies of his own stories. As a young adult he sold several small pieces, for small sums, to various papers. But his first important sale came in 1889 when the popular *Golden Days* story paper bought “Victor Horton’s Idea” for the substantial sum of \$75.

Encouraged by this success, Stratemeyer spent the following years publishing widely, using both his own name and several pseudonyms. In addition to selling serials to story papers, he branched out to writing dime novels, and became a regular contributor to the various publications owned by Street and Smith, the premier publisher of popular fiction in its day. In 1893 Stratemeyer became an editor at *Good News*, a Street and Smith publication, while also supplying it with original material. During his years as a writer and editor of dime novels and story papers, Stratemeyer learned principles he would later apply to his own syndicate. He saw, for example, the value of establishing “house names” as pseudonyms, for this allowed several authors to work interchangeably on a series without disrupting the public’s relationship with the “author.” He also saw that copyright holders earned the greatest financial rewards: an author could be hired at a flat rate to produce a story, but the copyright holder could print and reprint that story at will and reap the benefits indefinitely.

Stratemeyer steadily steered his career toward the more respectable world of hardcover fiction. In 1894 he began recycling some of his former story-paper serials as complete books, shaping the volumes into series. The thrifty system of recycling, renaming, and reworking would become a hallmark of the Stratemeyer’s operations, influencing his own work and that of the Syndicate for years after his death. In 1898 Stratemeyer enjoyed his first great success with hardcover fiction. He had been circulating a war-themed manuscript just as the Spanish-American war broke out. The publishers reviewing the manuscript asked Stratemeyer to revise it, incorporating the news of Dewey’s naval victory in the Philippines. *Under Dewey at Manila* became an immediate bestseller, initiating one of Stratemeyer’s many series on historical and military themes.

In 1899 Stratemeyer launched his watershed series, *The Rover Boys*, under the name Arthur M. Winfield. Stratemeyer later claimed to have chosen this pseudonym for its cryptic symbolism: Arthur stood for “author,” and Winfield represented his desire to win in his field. The initial “M” stood for the number of books he hoped to sell—first “a thousand” (as the Roman numeral for one thousand), and then “a million,” depending on when he was asked. The *Rover Boys* series was an enormous success and was the first series to exemplify what later became the Stratemeyer Syndicate formula: average teenage heroes having extraordinary adventures, with lots of action and excitement driving the plot. Despite his early training in the blood-and-thunder milieu of dime novels, Stratemeyer kept his hardcover fiction for youngsters clean and wholesome. After 1900 Stratemeyer’s work for story papers and dime novel houses diminished, as he focused more attention on his own series books. Within a few years he

had several series going at once, and decided that an assembly-line approach would be a more efficient method for producing the quantity of material he had in mind.

The Stratemeyer Syndicate, begun in 1905, employed the methods Stratemeyer had learned earlier in his career. He devised plots and titles for stories, then hired ghostwriters to flesh out the skeletons, making them sign agreements not to reveal their identities. His hired hands were other dime novel authors like himself, some of whom he had known at Street and Smith, as well as journalists and other professionals skilled in turning out high quantity on tight deadlines. His most important employee was his friend Howard Garis, who would later become famous in his own right as the author of the Uncle Wiggily stories. For Stratemeyer he wrote several series, most famously Tom Swift. Howard's wife, Lilian Garis, also a children's writer, contributed volumes to the Syndicate's Bobbsey Twins series and others.

Not all of Stratemeyer's properties were for children. He repackaged dime novels from his early career as fare for young adult readers. Moreover, he also functioned as a literary agent who purchased manuscripts from other writers and had them published under various house pseudonyms. A handful of his properties were written for the adult fiction market, such as a series of mysteries written by "Chester K. Steele." But children's series were the backbone of the Stratemeyer Syndicate, and their themes were wide-ranging, covering school stories, westerns, mysteries, sports, career stories, and other genres. The popularity of these books was enormous. The catalogs of Cupples & Leon and Grosset & Dunlap, two of his main publishers, were laden with Syndicate fare—although, thanks to the pseudonyms, young readers were unaware that all of the books they were devouring came from the same source.

Stratemeyer's near-monopoly of the children's series market brought him some unwelcome scrutiny. Franklin K. Mathiews, librarian for the Boy Scouts of America, published a scathing article in *Outlook* magazine in 1914, "Blowing Out the Boys' Brains." In it, Mathiews asserted that sensationalist series books, marked by rapid-fire plots, absurd coincidences, multiple cliff-hangers, and a total lack of character-development, damaged boys' imaginations by overstimulation, thus ruining them for the subtleties of better literature. There was a degree of sense in Mathiews' complaints, and educators and librarians around the country took up the cry. Stratemeyer's success, however, was never seriously compromised because children loved his books and could afford to buy them themselves. But down through the decades there always remained a strain of protest against the vapid and sensationalism of series books. The books, however, were not working in a vacuum; they were part of a general trend, catering to the same appetite for speed and superficiality that would later be exemplified by television. Despite disapproval from the more educated segments of the population, children craved this style of entertainment and the great demand called for an equally great supply.

Accordingly, the 1910s and 1920s were prolific decades for the Stratemeyer Syndicate. In the five year span between 1912 and 1917, the syndicate was producing nearly 50 distinct series, and a similar amount ten years later, from 1922-27. But in the spring of 1930 Edward Stratemeyer succumbed to pneumonia, and died at age 68. After attempting unsuccessfully to find a buyer for the syndicate, Stratemeyer's daughters, Harriet Adams and Edna Stratemeyer, assumed operation of the family business.

Stratemeyer left behind enough material to allow the syndicate to continue normally for another two years; after 1932, however, the

material was gone and the Great Depression had damaged the book market. The sisters trimmed the business down considerably, killing off nearly their whole line of series. They kept only the proven cash-cows, including Nancy Drew and the Hardy Boys, among a few others. A few new series were begun during the depression, but the syndicate remained a much more conservative and narrowly-focused business than it had been during Stratemeyer's tenure. The body of series was cut down even further when the advent of World War II required conservation of paper and the metal plates used for printing books. By the late 1940s, the syndicate was producing only half a dozen series.

In 1942 Edna Stratemeyer married and moved away, leaving Harriet Adams as the active partner. Adams' strategy for success involved maximizing the value of the syndicate's back-catalog. She resurrected old series in reprint editions with new publishers and signed deals to have her characters translated into foreign languages and other media. Former bestseller Bomba the Jungle Boy benefitted from this treatment, as he became the hero of a string of "B" movies, from 1949-52, and a reprint series of books, both of which were released in other countries as well as the United States. In 1954 Adams revitalized the Tom Swift legacy by launching the Tom Swift, Jr. series, based on the original hero's son. Guided by talented ghostwriter James Lawrence, this series became a major latter-day success for the syndicate. Other new series were attempted during the following years, but the only other substantial hit was *The Happy Hollisters* (1953-1970), written by syndicate partner Andrew Svenson.

Adams' most controversial decision came in 1959, when she launched a project to revise and rewrite all the volumes in the Hardy Boys and Nancy Drew series, as well as many of the Bobbsey Twins. Her decision was caused primarily by concerns that modern children were impatient with the now old-fashioned texts of the original books. A further motivation came from complaints the syndicate received about the insulting portrayals of ethnic characters. Not only had the syndicate historically tended to cast minorities as villains, but early ghostwriters often used ethnic stereotypes as sources of humor. Adams responded to both concerns with one remedy, gradually replacing original books with new versions that were shorter, thoroughly modern, and (relatively) stereotype-free. The revisions were mere shadows of their former glory, however, as much of the books' charm and style had been erased.

Another controversy erupted in 1979 when Adams changed publishers. Dissatisfied with the practices of Grosset and Dunlap, her primary publishers for nearly 50 years, Adams signed a contract with Simon and Schuster. Grosset sued, and the litigation put the famous syndicate series at the center of a well-publicized custody battle. The case was decided in favor of the syndicate, and Simon and Schuster brought out new versions of Nancy Drew, Tom Swift, the Hardy Boys, and the Bobbsey Twins. Harriet Adams died in 1982, and her partners sold the business to Simon and Schuster two years later. Throughout the 1980s and 1990s the publishers continued to work with their properties in much the same way the syndicate had, hiring ghostwriters and swearing them to secrecy. Despite efforts to revitalize Tom Swift and the Bobbsey Twins, both series were discontinued in the early 1990s, but Nancy Drew and the Hardy Boys continued and even expanded into a variety of spin-off series.

Simon and Schuster's greatest service to the Stratemeyer Syndicate, however, came with its donation of nearly all of the syndicate's paperwork to the New York Public Library. This collection of records, which opened to the public in September 1998, dates from the earliest years of Edward Stratemeyer's career and forms the

largest single location for research into the syndicate's history. During the 1990s an increasing number of scholars noted the massive influence of the Stratemeyer Syndicate, not only as the single largest contributor to children's popular fiction in the twentieth century, but also as a model of a publishing phenomenon. Reaching several generations of American readers, the products of the Stratemeyer Syndicate have had an incalculable effect on America's consciousness.

Stratemeyer Syndicate

See Stratemeyer, Edward

Stratton-Porter, Gene (1863-1924)

Gene Stratton-Porter was a popular author, photographer, and illustrator whose prolific output of romance-spiced nature writings found an enthusiastic audience with middle-class Americans in the early 1900s. Her 26 books have been through multiple editions (many of the titles still in print at the close of the century), and the most popular of these sold millions of copies in the years leading up to and encompassing World War I.

Stratton-Porter's novels have not endured on the basis of their literary merit. Even at the height of her popularity, critics were not fond of her work, which they considered to be formulaic and unrealistic. The broad appeal of Stratton-Porter's fiction lay in her unique and seemingly effortless ability to portray and foster the vicarious involvement of the reader in the vivid and detailed goings-on of natural dramas: the hatching of great moths, the breeding and nesting of birds, the gurglings and whisperings and unfoldings of swamp and woodland. Nature writing was already an established and successful genre, with authors such as John Burroughs, Ernest Thompson Seton, and John Muir. Stratton-Porter added her own twist, tempering the nature message with enough romantic fiction to engage the reader's interest.

Stratton-Porter wrote what she knew best. Born Geneva Stratton, the youngest of 12 children, in Wabash County, Indiana, she spent long unsupervised hours in fascinated contemplation of the plant and wildlife that abounded in what was as yet largely untamed wilderness. When her family moved into town in her 11th year, she took with her a collection of pet birds. Marriage, in 1886, to Charles Darwin Porter, and the birth of her only daughter, Jeannette, two years later, kept

Stratton-Porter occupied with homely concerns, but the family's move to Geneva, Indiana, in 1890 placed her adjacent to a unique natural setting—Limberlost Swamp. Here, in the kind of personal metamorphosis characteristic of her future plots, Stratton-Porter became the Bird Woman. Bored and discontented with the social boundaries of small-town housewifery, and spurred by the chance pairing of a gift camera with the need to illustrate some writing projects on bird life, Stratton-Porter took to the swamp.

The long and arduous field hours and her bird studies, at which she became increasingly proficient, provided not only the raw material for her nonfiction, but also the experiences, observations, and many of the characterizations (modeled after interactions with farmers, loggers, and other people she found in the swamp) for her fiction. Her first book, *The Song of the Cardinal* (1903), illustrated with her own photographs and detailing the life of a cardinal and its mate, was well-received, albeit by a small audience.

Stratton-Porter decided to try her hand at a second book—natural history with, this time, a human love story running through it—and *Freckles* (1904) set the stage for the rest of her career. While publishers were initially concerned about the predominating natural world in her work, Stratton-Porter's admanance that it remain, and her subsequent sales records, won the day. Those of her novels to achieve bestseller status were *Freckles*, *A Girl of the Limberlost* (1909), *Laddie* (1913), and *Michael O'Halloran* (1915). Recognizing that her fiction found better sales than her natural history works, Stratton-Porter arranged with her publishers to alternate nonfiction with the novels. *What I Have Done with Birds* (1907) and *Moths of the Limberlost* (1912) are representative of the best of her nonfiction. They tended to be lavishly produced volumes with her own photographic illustrations accompanied by text in a descriptive, informal style. This presentation, while accurate in great detail, appealed more to nature lovers than naturalists, and contributed to her recognition as a novelist rather than for the substantial contributions she made to photography and bird behavior studies.

Stratton-Porter's interests and abilities coalesced with a literary output for which an American readership lay ready and waiting. She wrote about nature when nature-writing was in vogue. She wrote overwhelmingly positive and uplifting stories—her primary theme being the overcoming of personal obstacles through faith, trust, and hard work in the atmosphere of peace bestowed by interaction with nature—at a time when Americans were not only avid consumers of fiction but were attracted to themes that would, however temporarily, divert them from the urban grind and the grim reality of World War I.

Stratton-Porter's exposure benefited from yet another popular medium with the proliferation of women's magazines. She had regularly contributed articles to publications such as *Outing* and *Recreation*, but in 1921 she was approached by *McCall's* and offered an editorial page. "Gene Stratton-Porter's Page" gave her a powerful forum for disseminating her message of positive thinking and right living. Novel serializations and poems appeared in *Good Housekeeping* as well.

Not surprisingly, Stratton-Porter's success drew the attention of Hollywood. She had moved from Indiana to California in 1920 and had initially contracted with filmmaker Thomas Inca, billing "Clean Pictures for Clean People." Dissatisfied with the results of the first project to produce *Michael O'Halloran*, and by now a very wealthy and determined woman, Stratton-Porter established her own production company. Ultimately seven of her novels were made into films.

In 1924 Stratton-Porter died in an automobile accident. At the close of the twentieth century her novels no longer are sought by

mainstream readers, but they are still on the shelves of public and academic libraries; especially *Freckles*, which remains after others have been relegated to storage. Stratton-Porter and her audience were made for each other, her work providing a gentle reflection of American mores and desires that saw drastic change in the years between the two world wars.

Strawberry, Darryl (1962—)

Darryl Strawberry's life reads like a soap opera. This major league ballplayer was the first pick overall in the 1980 free-agent draft, selected by the New York Mets. Without a doubt, he possessed the raw talent that could have earned him a spot in the Hall of Fame, but his erratic career has been a textbook case of overindulgence resulting in underachievement.

Professionally speaking, Strawberry's best years were the late 1980s. Yet while he was entrenched as a slugger-hero for the Mets, he never blossomed into superstardom. Furthermore, he was to earn as much publicity for drinking, drugs, and marital and tax problems. By the 1990s he had evolved into an injury-prone underachiever. A low point came in 1993, when he hit a measly .140 in 32 games for the Los Angeles Dodgers. In the mid-1990s, however, an older, humbled Strawberry was resurrected by the New York Yankees. Although he did not complain that he was relegated to part-time status, he spent most of 1997 on the disabled list; near the end of the 1998 season, as the Yanks were on their way to a record-breaking 125-win campaign, he faced the biggest challenge of his life when he was diagnosed with colon cancer.

Streaking

Streaking, the practice of running naked through a public gathering, has been around for many years, but it attained full-fledged craze status only in the 1970s when, it seemed, all manner of strange behavior was soaring into public consciousness. Some historians

A group of men streaking through the streets of New York City.

have tagged Lady Godiva as the world's first streaker, but she rode—not ran—while deliberately concealing her nudity under her long, flowing hair. Not to be confused with simple nudism, streaking is an inherently exhibitionist act and thus the perfect public gesture for an exhibitionist age.

The spring of 1974 represented the high moment of modern streaking. In March of that year, the University of Missouri endured a mass streaking by more than 600 students. The nude collegians paraded past the campus's Ionic columns as a crowd estimated at 1,500 watched and cheered. In April, hayseed comedian Ray Stevens's single "The Streak" rocketed to number one on the pop charts. "He ain't rude. He ain't rude. He's just in the mood to run in the nude," crooned Stevens of the eponymous nudist. Full national exposure came that same month. During the broadcast of the Academy Awards ceremony, streaker Robert Opal shocked the crowd of Hollywood swells by letting it fly during David Niven's introduction of Elizabeth Taylor. "The only way he could get a laugh was by showing his shortcomings," quipped an unruffled Niven. Undeterred, the 33-year-old streaker managed to extract his full fifteen minutes of fame from the situation. As a result of the Oscar publicity, he pursued a brief career as a stand-up comic and was hired as a "guest streaker" for Hollywood parties. When the streaking craze died down, Opal moved to San Francisco, where he was found murdered in 1979.

Not surprisingly, academics and opinion writers tried to explain the streaking craze. In 1974, a psychology professor at the University of South Carolina did one of the first studies on the phenomenon. After much research, he concluded that the average male streaker was “a tall Protestant male weighing 170 pounds with a B grade average [who] dated regularly, came from a town with a population less than 50,000 and a family where the father is a business or professional man and the mother is a housewife.” Female streakers, the study found, “tended to be small, 5 feet 3 inches and 117 pounds.”

Others tried a more sociological approach. At the low end, streaking was dismissed as little more than an outrageous fad on the order of swallowing goldfish or packing phone booths. At the high end, it was touted as a lifestyle choice, a non-violent form of protest, and even a type of therapy. E. Paul Bindrim, the so-called “father of nude psychotherapy,” coached more than 3000 people through their first experience of public nudity. Explaining his philosophy to the *Los Angeles Times*, Bindrim declared: “Clothing is kind of a mask. So there are reasons to think if you remove clothing, you get a freer atmosphere where people would talk more openly.”

When streaking became a national craze, Bindrim wrote an op-ed piece for the *Los Angeles Times* in which he commented more specifically on the trend: “Streaking is healthy, and I predict that it is here to stay,” he wrote. “It may change form, but its essential ingredient, the tacit sanctioning of public nudity, will remain. . . . Running is the only aspect of streaking that will die out.” Belying Bindrim’s prediction, scampering in the nude enjoyed something of a revival in the 1990’s. It even briefly gained front-page status again when it invaded the pristine world of lawn tennis. In 1996, Melissa Johnson, a 23-year-old London student, streaked across Centre Court moments before the men’s Wimbledon final. The topless woman, wearing only a tiny maid’s apron, pranced momentarily in front of finalists Richard Krajicek and MaliVai Washington as they posed near the net for photographs. She was quickly escorted off the court by two policemen as both players and most of the 14,000 fans broke into laughter.

Streep, Meryl (1948—)

Considered by many to be “the” actress of her generation, Meryl Streep remains in a class by herself in terms of critical acclaim and career longevity. A two-time Oscar winner, she has been nominated for ten Academy Awards throughout a career which has spanned more than twenty-five films. Known primarily for her heavy dramatic roles as neurotic or obsessed characters—many of which have required her to assume an accent—Streep has also proven versatile in playing both comedy and action roles.

Ironically, Mary Louise Streep was not driven to be an actress during her affluent New Jersey childhood. More drawn to athletics, she was a swimmer who later became a cheerleader in high school. It was upon enrolling at the exclusive Vassar College that Streep became obsessed with both literature and acting—in addition to singing with a musical group and acting as vice president of her sophomore class. Besides extensive work behind the scenes in

Meryl Streep

designing lighting and costumes, one of her many leading roles was in Strindberg’s *Miss Julie*, in which she asserts she was not “any good” but did have her first moment of epiphany as an actress “where you leave everything behind” and achieve “transcendence or something.” Subsequent graduate work at Yale allowed her to play approximately forty roles, which were most often not reality-based, which she considered ironic in view of the heavy reality of the vast majority of her film work. After graduation in 1975, Streep won major roles at Joseph Papp’s Public Theater in New York and the New York Shakespeare Festival. She made her Broadway debut in *Trelawny of the Wells* and won rave reviews and a Tony nomination for her performance in Tennessee Williams’s *Twenty-Seven Wagons Full of Cotton*.

Her first film role—most of which ended up on the cutting-room floor—was with Jane Fonda and Vanessa Redgrave in *Julia* in 1977. It was followed by an Emmy-winning performance in the highly praised TV miniseries *Holocaust* and a performance opposite Robert De Niro (in the first of three films with him) in her first Oscar-nominated role in *The Deer Hunter*. Of the latter film, Streep contends that since the role was basically unwritten she was required to improvise her own lines of dialogue and interaction.

Streep made a series of high-profile films throughout the 1980s, beginning with her role in *Kramer vs. Kramer*, for which she won her

first Academy Award for best supporting actress for her portrayal of Joanna, Dustin Hoffman's neglected wife who abandons her family. She subsequently received Oscar nominations for *The French Lieutenant's Woman*, *Silkwood*, *Out of Africa*, and *A Cry in the Dark*. Her second Oscar—this time for best actress—as well as many other prestigious awards resulted from her role as a tortured Polish concentration camp survivor in 1983's *Sophie's Choice*. Streep also returned to the theater, winning an Obie award for acting, singing, and dancing the lead in a musical adaptation of *Alice in Wonderland*.

Seeking a break from a succession of heavy, character-driven roles, Streep then made a succession of comedies such as *She-Devil*, costarring reigning TV sitcom queen Roseanne; then, in a surprise move, performing her own stunts in a demanding role as a white-water rafting guide in the action thriller *The River Wild*. Her tenth Oscar-nominated performance was as a bored Italian war bride who finds love with costar and director Clint Eastwood in the highly acclaimed *The Bridges of Madison County* in 1995.

Streep has worked with nearly every important director and every leading man of note, all of whom praise her talents. Sydney Pollack, who directed her in *Out of Africa*, claimed that not only is Streep capable of becoming “a totally new human being,” but, further, is able to effectively communicate the character's struggles to the audience. Alan J. Pakula, who directed Streep in *Sophie's Choice*, once commented, “If there's a heaven for directors, it would be to direct Meryl Streep your whole life.”

Throughout her career Streep has been nominated for and received many other prestigious awards. In 1997 she received the first Bette Davis Lifetime Achievement Award to “honor an actor or actress whose career distinctly parallels the high professional standards set by the late movie legend”; the Women in Film's Crystal Award, reserved for women whose work has helped enhance the role of women within the entertainment industry; the prestigious Silver Medallion at Telluride Film Festival's 25th Anniversary Celebration; and in 1998 received her star on the Hollywood Walk of Fame to coincide with the release of her twenty-fifth feature film, *One True Thing*.

A political activist, Streep has also hosted and narrated television specials championing the rights of women and children, literacy, and ecological issues. She not only testified in congress against the use of pesticides but organized “Mothers and Others,” an anti-pesticide organization, which has grown from thirty-five members to thirty-eight thousand.

Known for avoiding Hollywood glitz, Streep is fiercely defensive of her private life in the hills of northwest Connecticut, on a secluded eighty-nine-acre estate with a forty-seven-acre private lake. Married since 1978 to sculptor Don Gummer, Streep is the mother of four children and claims “Even my decisions about what films I make are predicated on the fact that I think about how my children will view them . . . and how it will either enhance it or strafe the soul of their future.” Considering herself a mother first and a movie star second, she often takes her family with her on location, and she was once named one of the outstanding mothers of the year by the National Mother's Day Committee.

Street and Smith

One of America's oldest publishing houses, Street and Smith helped to ensure the spread of mass literacy in the United States. Producing inexpensive books and periodicals, Street and Smith was long known for its dime novels, pulp fiction, popular magazines, and comic books. Featured prominently were the tales of Jesse James, Buffalo Bill, Nick Carter, Frank Merriwell, and the Shadow. Noteworthy authors included Edward Z. C. Judson, Horatio Alger Jr., Gilbert M. Patten, and Eugene T. Sawyer, while reprints of Rudyard Kipling, Sir Arthur Conan Doyle, Robert Louis Stevenson, and Victor Hugo abounded. In the 1850s, Street and Smith began producing dime novels, soon becoming the most successful publisher in the field, surpassing even Beadle and Adams, Munro, and Tousey. As one commentator quipped, “Munros to the left of them, Tousey to right of them, Street and Smith behind them, Onward they blood-and-thundered.” Beginning in 1859, many of Street and Smith's serialized novels appeared in the *New York Weekly*, recently purchased by Francis S. Street and Francis S. Smith.

From the mid nineteenth century onward, Street and Smith helped to shape the image of the American hero, while moving from dime novels—which frequently sold for a nickel—to pulp fiction. Real-life individuals with anti-heroic qualities, such as the outlaw Jesse James and the Western adventurer Buffalo Bill, were presented in a glorified light. Alger's *Ragged Dick*, whose protagonist was a former bootblack turned bank clerk, helped to reinforce a belief in self-reliance and individualism as America entered an era of rapid modernization. Detective Nick Carter, who first appeared in the *New York Weekly* in 1886, was a more cerebral figure: “He was a master of disguise, and could so transform himself that even old Sim (his father) could not recognize him. And his intellect, naturally keen as a razor blade, had been incredibly sharpened by the judicious cultivation of the astute old man.” In 1896, Patten offered Frank Merriwell, a genius of an athletic stripe who invariably bested his competitors—but always did so honorably—in the pages of *Tip-Top Weekly*. Thus, the Street and Smith heroes included men of the Wild West, city lads and slickers, and athletes, in a period when urbanization and industrialization were transforming the national landscape.

Street and Smith was known for its pulp fiction, which was initiated by Frank Munsey's *Argosy* at the close of the nineteenth century, supplanting dime novels and story papers. Street and Smith contributed gaudy, three-colored covers. Russell Nye contends that Street and Smith's *New Buffalo Bill Weekly*, published in 1912, was “the last genuine dime novel.” Pulp magazines, most of the general adventure variety, thrived, while Street and Smith contributed *Detective Story* (1915), *Western Story* (1919), and *Love Story* (1921). Created by a young woman, Amita Fairgrieve, *Love Story* began as a quarterly but ended up as a weekly. By 1938, *Love Story* produced a score of imitators, including *True Love Stories*, *Pocket Love*, *Romantic Range*, and *Real Love*. Selling as many as 10 million copies by the 1930s, the pulps suffered from heightened production charges during the following decade. The death-knell of pulp magazines was ushered in by radio, television, and 25 cent paperback books. Along with other publishers, Street and Smith began emphasizing publications that garnered large advertising budgets.

Street and Smith was known for far more than its pulp, producing periodicals like *Popular Magazine*, which began in 1903 as a quarterly intended “for boys and ‘Old Boys,’” but soon became an action, adventure, and outdoors semimonthly. With a circulation of

nearly a quarter of a million, *Popular Magazine* was published until 1928. Upton Sinclair contributed to the publication, as did top pulp authors such as B. M. Bower, H. H. Knibbs, and Rex Beach. Appearing in 1937, *Pic* began printing risqué photographs of young women, while posing questions such as, “Do White Men Go Berserk in the Tropics?” With World War II coming to a close, *Pic* became a more respectable men’s magazine, with its circulation surpassing the 600,000 mark; mounting costs, however, doomed it.

By the late 1940s, Street and Smith closed its last pulp and a series of comic books, opting to highlight slick periodicals like *Charm*, *Mademoiselle*, and *Living for Young Homemakers*. *Mademoiselle*, which targeted women from 17-30, had been introduced in 1935. Quentin Reynolds referred to Street and Smith as “a fiction factory,” while contending that the company had long thrived because of its diversity and readiness to discard increasingly unpopular publications. Family control of Street and Smith terminated in 1959, when the company was purchased by Condé Nast Publications, reportedly for \$4 million and stock options. Among the magazines acquired were *Charm*, *Living for Young Homemakers*, *Astounding Science Fiction*, *Air Progress*, and *Hobbies for Young Men*.

A Streetcar Named Desire

According to Brooks Atkinson, the major theater critic of the mid-century, Tennessee Williams’ urban tragedy, *A Streetcar Named Desire*, was “a modern masterpiece” that “took Broadway by storm.” Considered by many to be the finest drama of America’s finest post-war playwright, *A Streetcar Named Desire* made an indelible impression on American culture. Under the muscular direction of Elia Kazan, the incendiary play, which won both the Pulitzer Prize and the Critics’ Circle Award in 1947, was the follow-up to Williams’ 1944 debut, *The Glass Menagerie*; but whereas the earlier play was primarily a meditative memory piece, *Streetcar* is rife with activity. Its melodramatic structure, however, is never allowed to eclipse the emotional and atmospheric authenticity of the play. It is particularly revered for its multi-faceted characterizations; its rich

dialogue, which is masterful in its lyricism as well as its use of working-class vernacular; and the role it played in popularizing a new, naturalistic style of American acting, known colloquially as the “The Method.”

Streetcar depicts domestic strife. At the start of the play, an unmarried, thirtyish, out-of-work schoolteacher, Blanche DuBois, arrives at the home of her younger sister, Stella. Since both young women were reared in the lap of luxury on a lush Mississippi homeplace called Belle Reeve, the cultivated Blanche is somewhat shocked to find Stella living in rather squalid conditions in the French Quarter of New Orleans. More troubling to Blanche is her sister’s marriage to a loutish, “common” ex-serviceman named Stanley Kowalski. For her part, Stella is dismayed to learn that Belle Reeve was forfeited to creditors under Blanche’s watch. Clearly, both sisters have lost their social and economic footing, but while Stella is perfectly content in her rough-hewn but passionate marriage, Blanche is dispossessed, one step away from poverty.

The play recounts Blanche’s efforts to adapt to her new circumstances with her dignity and sanity intact, and documents her poignant attempts to conceal her advancing age, her professional failure and her highly sexual nature from those who might judge her harshly. “A woman’s charm is fifty-percent illusion,” Blanche confides to Stella, and Stella indulges her fragile sister, encouraging Blanche’s blossoming courtship with Stanley’s gentle co-worker, Mitch. But Stanley ultimately becomes Blanche’s destroyer, tearing away her tissue of lies and insulting her fine sensibilities. “I’ve been on to you from the start,” he bellows to her at *Streetcar*’s climax. His subsequent rape of Blanche causes what scholar Harold Bloom calls “a psychic rending” that is enough to nudge Blanche into madness. In the end, bound for a state asylum, Blanche leaves the home of her merciless brother-in-law and disbelieving sister, a lovely but broken spirit in an inhumane world. Her destruction is so complete that some critics, Kenneth Tynan for one, have read the play as a comment on the decline of civilization, the trampling of man’s finer instincts by the implacable brutality of the modern world.

Several of the play’s lines have found an affectionate place in the American vocabulary. Stanley’s anguished, full-throated cry, “Stella, STELLAAAA!” has become something of a cultural touchstone, and Blanche’s lilting final line, “I have always depended on the kindness of strangers,” has endured as Blanche’s perfect motto, as it utilizes a genteel euphemism for sexual promiscuity to reconcile Blanche’s poetic frailty with her more desperate animal behavior.

Though Blanche is the role of greater complexity and sympathy, both major characters continue to live in the cultural imagination. Blanche’s mix of cultivation, hysteria, and tragedy makes her an unforgettable creation, while Stanley, “the exuberantly macho American Pole,” in Ronald Hayman’s felicitous description, has been accorded iconic status. Much of this stature is no doubt due to the role’s close identification with Marlon Brando, for rarely has an actor taken possession of a role so effectively and completely. Many actresses have triumphed as Blanche (“a relatively imperishable creature of the stage,” according to Williams), not only Jessica Tandy in the original production, but Vivien Leigh in the 1951 film version, and in the 1990s, Jessica Lange on stage and television. But as for Stanley, Brando’s remains the definitive interpretation. His Stanley is cunning, explosive, overtly sexual, and the ways in which the actor communicated character through his body language was startlingly modern to 1947 audiences, a living advertisement for the Method and

Marlon Brando and Vivian Leigh star in the film adaptation of Tennessee Williams' play *A Street Car Named Desire*.

the acting school that advanced it, Lee Strasberg's Actor's Studio. It is ironic that in early drafts of the play this emblem of machismo appeared as a considerably more androgynous figure. According to *New Republic* writer Geoffrey O'Brien, the final product in the form of Brando—grunting and sweating with exhibitionistic virility—"proposed a different way for men to be. Talking was small part of it."

After originating the role on Broadway, Brando revived his performance for the acclaimed 1951 film, which was also directed by Kazan. Original Broadway cast members Kim Hunter (Stella) and Karl Malden (Mitch) recreated their supporting roles, carrying off Academy Awards for their efforts. Oscars were also awarded to the film for Best Picture, and to Leigh as Best Actress; oddly, only Brando was passed over (he won three years later for the Kazan-directed *On the Waterfront*).

The great success of the Kazan movie adaptation has deterred any subsequent attempts to film the play as a feature. However, television producers have proven more intrepid; prior to the 1995 version that starred Jessica Lange and Alec Baldwin, Ann-Margret and Treat Williams filled the shoes of Blanche and Stanley for the

1984 TV movie, and the play continues to be performed at both the amateur and professional levels all over the world. Composer Andre Previn based an opera on the play, and debuted it at the San Francisco Opera House in 1998 (Previn's *Streetcar* was also broadcast on public television that year), further attesting to the enduring legacy of Williams' masterpiece.

Streisand, Barbra (1942—)

Since she first got her break on the Broadway stage in 1962, Barbra Streisand has elicited extreme reactions from her public and from critics. Either adored or detested, the Streisand persona has, almost from the beginning, been larger than life. Indeed, it has almost overshadowed her considerable talents as singer, actress, director, producer, and writer. Though she has often been confused, frightened, and angered by both the homage and the vitriol heaped upon her, she has remained a strong personality, a productive artist, and a phenomenon in the entertainment field.

Born Barbara Joan Streisand in 1942, in Brooklyn, New York, to Jewish working-class parents, Streisand's father died when she was 15 months old. Within a few years her mother had remarried. Streisand's stepfather was an emotionally abusive man, who her mother described as "allergic to children." Her mother was undemonstrative, calling her daughter "ugly" and ridiculing the young Barbara's aspirations to be an actress. Streisand, however, was not to be deterred and as a young girl she sang in the halls of her

Barbra Streisand

Flatbush apartment building, learning to appreciate the sound of her own voice as it echoed off the walls. As a teenager she began taking acting lessons and haunting the theaters and clubs of Manhattan's Greenwich Village, seeking an entrance to the stage.

She moved to the Village in 1960. Although she wanted to become an actress, friends who heard her sing encouraged her to enter talent night at a local club, and soon she embarked on a career as a cabaret singer, dropping the middle "a" from her name so that it would stand out. Her vibrant soprano soon won Streisand a loyal local audience, mostly of gay men. Working in the Village she also met the drag queens who worked the clubs and learned from them the campy flamboyance of the diva, which she used to cover her insecurity on-stage.

Her big break came in the 1962 show *I Can Get It for You Wholesale*, when she was cast as the frumpy Miss Marmelstein. Making the most of a small part, Streisand impressed critics and audience, and, when she sang her one song, she stopped the show. The following year, *The Barbra Streisand Album* was released and won the Grammy Award for Album of the Year.

In 1964, she was cast in the leading role of the new play *Funny Girl*, playing comic and singer Fanny Brice. The role could have been made for her, as Brice too was a Jewish girl, not conventionally pretty, but with a powerful talent and an intense will to succeed. The play was a success—23 curtain calls on opening night—and overnight Streisand became a star. The girl whose mother had recommended she give up the stage and seek a secure secretarial job was on the cover of *Time* and *Life* magazines, and on television. *My Name is Barbra*, the first of many Streisand television specials, won an Emmy in 1965.

Streisand's voice has always been her most dependable asset. Most comfortable singing show tunes and popular classics, she has sung everything from Christmas carols to rock 'n' roll. Since 1964, she has sold more than 60 million records. Thirty-eight of her albums have made the top 40, and at least 24 have sold one million copies, more than anyone except Elvis Presley and the Beatles. She has won eight Grammy Awards, was named a Grammy Legend in 1992, and won a Grammy Lifetime Achievement Award in 1995. But she never lost her insecurity about performing on stage, and after she received death threats before a concert in New York's Central Park in 1967, she stopped giving public concerts. It was almost 30 years later, in 1993, that she performed for an audience again, doing what she called her last concert tour.

As an actress, Streisand's work has been less universally acclaimed. After starring in the movie of *Funny Girl*, for which she won the Academy Award for best actress, Streisand went on to make many films; some successes like *The Way We Were* in 1973; and some failures, like *The Main Event* in 1977. Many, like *A Star Is Born* (1976) were critical flops, but did well at the box office, proving the loyalty of Streisand's fans.

Often accused of trying to control production in the films she appeared in, Streisand wanted to direct films herself. In 1983, she realized her dream by becoming the first woman to co-write, direct, produce, and star in a feature film. *Yentl* was the story of a Jewish girl in eighteenth-century Russia who disguised herself as a boy so that she could go to school and gain the education that was forbidden to girls. The project was close to Streisand's heart and she was hurt and angered by the mixed critical reception and the almost total snubbing of the film by the Academy of Motion Picture Arts and Sciences. She went on to direct and produce other films, but continued to be ignored by the Academy. Even when her film *Prince of Tides* was nominated

for Best Picture, she did not receive the Best Director nomination traditionally given to Best Picture nominees.

The motion picture establishment and many critics have been hard on Barbra Streisand. Even audiences have been polarized, some loving her ethnic looks and Brooklyn accent, others finding her abrasive and ugly. Her reputation in Hollywood ranges from hard-working perfectionist to neurotic narcissist. She has defended herself against accusations of egotism by citing the sexism of the Hollywood system. "A man is forceful," she has said, "a woman is pushy . . . He's assertive—she's aggressive. He strategizes—she manipulates."

As a young singer, Streisand's raw emotion, ineffectively masked by awkward brashness and affected diva mannerisms, touched a chord with audiences. They identified with her endearing insecurity, respected her refusal to change her nose or her accent, and admired her drive to succeed and be respected. Streisand's response to the adoration of her fans has been complex. Stunned and overwhelmed by her sudden popularity after *Funny Girl*, she called the crowds that mobbed the stage door "the crazies," and slipped out alternate exits to avoid them. As she has achieved the success she sought, Streisand has become more polished. Her speech has softened, and, while she has still not changed her nose, in part fearful of affecting her voice, her face and body show the effects of expensive care. She treats her fans with respect but still keeps aloof. Her fans, who have seen her progress flamboyantly through three decades of fashion and ideology, seem to welcome each transformation.

Unlike many performers who got their start before gay audiences, Streisand has never tried to distance herself from her gay fans. She has remained an icon among gay men and cheerfully acknowledges the connection, joking on-stage about being outdone by a group of Barbra drag queens, and even hiring a Barbra impersonator to fool her friends at a party. In a serious vein, she has raised money for AIDS (Acquired Immune Deficiency Syndrome) research, made a television movie about the career of lesbian coast guard officer Margarethe Cammermeyer, and spearheaded a celebrity boycott of Colorado after anti-gay legislation passed there.

Politically liberal and wealthy (in 1997, her worth was estimated at \$100 million), she created the Streisand Foundation, which donates money to such causes as civil rights, AIDS, and the environment. With the election of Bill Clinton as president, she became a frequent visitor to Washington and an active fund-raiser for the Democratic party. Though she sometimes drew ridicule for speaking about politics, she insisted on the rights of artists to free expression, and on respect for liberal traditions.

Though her career, like her persona, has often been controversial, and though she has not always lived up to the expectations of critics or fans, Barbra Streisand accomplished what she intended from the beginning—she became a star. "I always knew I would be famous. . . I was never contented. . . I wanted to prove to the world that they shouldn't make fun of me."

Strip Joints/Striptease

Strip joints feature females engaging in provocative dance and titillating disrobing for a predominantly male clientele. Some strip joints do cater to females with male strippers like the Chippendales. Antecedents of the modern striptease include the auletrides of ancient Greece, geishas of Japan, belly dancers of Arabia, and a variety of singing and dancing "strumpets" found throughout history.

Dance is a self-conscious display of personal charms for excitation. Virtually all species of animals, birds, and fishes engage in conscious display to stimulate sexual excitement and attraction. Striptease adds simultaneous disrobing to the dance. Striptease costumes often use clothing associated with the mores and taboos of society, including religious taboos (the nun's habit and crucifix), sexual taboos (the school girl uniform and anklet socks), hunting fetishes (feathers and animal skins), and socio-economic symbols

Burlesque queen Blaze Starr.

(jewels and furs). Removing clothes both flaunts mores and taboos associated with the clothes and leads to sexual arousal. The gradual revelation of nudity as the stripper's clothes are slowly removed evoke fantasies that lead to sexual arousal. The female breast has been the primary historic focus of striptease. According to Desmond Morris, *The Naked Ape*, the appeal of the breast is probably associated with the imprinting of the female breast on the male during early childhood resulting in a permanent sexual reflex behavior, in addition to the human erect posture and face-to-face copulation in which the female breast substitutes for the buttocks, which is the primary sexual stimulus of all other primates.

Modern titillation and tease was perfected in the 1860 music halls of Paris and London. After World War I, risqué nudity became commonplace in the cabarets of Berlin, reviews of Paris, and the nightclubs of the New York Bowery, where the term "striptease" was first used. With the sexual revolution, and the civil rights, woman's rights, and free speech movements of the 1960s, striptease became more mainstream and moved into the discotheques, theater districts, cinemas, and adult entertainment districts in most cities worldwide. As striptease became more widespread, it influenced popular dance by introducing sensual and erotic body movements.

In the late twentieth century, striptease evolved from titillating dance into more radical "show routines," "lap dances," "performance art exhibitions," and "sex shows." In the show routine, the striptease is continued to full nudity and to a full gynecological exhibition of the vagina, often with simulated or actual masturbation by the dancer. In the lap dance (and table dance) simulated sex acts are performed on the male observer as the dancer gyrates in extremely close proximity to the observer's body. Some criticize performance art exhibitions for seeking to exploit state and federal grants for arts funding and to avoid zoning restrictions by claiming to exhibit a more artistic and aesthetic rendition of many of the same acts performed in show routines and lap dances. In the sex show, found throughout Europe and the developing world but rarely in the United States, two or more performers engage in simulated or actual sex acts and copulation for the voyeuristic enjoyment of observers.

The strip joint, and its historic antecedents, have served a variety of social functions. The venue has maintained gender separation, providing a males-only retreat where affairs of business, politics, and sport could be conducted. This function was highly criticized by feminists who demanded access to those affairs. The strip joint also has provided an outlet for the male libido. Lewis Berg and Robert Street offer a typical warning in their 1953 marriage manual, *Sex: Methods and Manners*: "A woman should realize that all normal men are sexually responsive to the exposure of the female body. This is particularly true where strange women are concerned, since the male perpetually seeks variety. It accounts for the popularity of burlesque and girl shows in general, and for exhibitions of the strip-tease, bubble-dance, and fan-dance character. Few husbands, if any, are totally indifferent to these attractions." Thirdly, striptease has offered lucrative wages for female performers, some of whom lack the education, skills, or enthusiasm for other employment. Research has reported that many skilled and educated women abandon traditional careers for higher-paying and less demanding careers in striptease. Some strippers remain active into age 50 or 60.

Offering unconditional sexual stimulation, the striptease artist has functioned as a surrogate lover for noncompetitive men who fear rejection in the post-feminist social world. The striptease offers genuine entertainment and a ration of female companionship for males in military camps, gold fields, industrial centers, and other

isolated locations away from opportunities for social interaction with females. Despite the contributions of strip joints and strippers, they are relegated to low social status. Indeed, the strip joint is occasionally a front for prostitution, substance abuse, gambling, and other illegal activities. To limit their impact on the larger society, many communities try to restrict strip joints to certain locations safely away from schools and churches.

Striptease has been used as a symbol of both feminism and anti-feminism. While striptease represents the female right to self-expression and control of her body, it also represents the male chauvinistic exploitation of women as purely sexual objects for entertainment.

Stuart, Marty (1958-)

Beneath a rock 'n' roll hairdo that makes donning a cowboy hat impossible, and with a collection of flamboyant jackets that would have made Liberace jealous, Marty Stuart emerged in the 1980s as a talented country instrumentalist—he plays both guitar and mandolin—songwriter, and performer. Born in Philadelphia, Mississippi, in 1958, Stuart first picked up a mandolin at the age of five. By 1972, the 13-year-old was playing the instrument with legendary bluegrass guitarist Lester Flatt. After Flatt's death in 1979, Stuart signed on as a guitarist with one of his all-time heroes, country-music great Johnny Cash and remained with Cash's band for six years before leaving in 1986 to begin a solo career. Stuart has also performed with such stars as Bill Monroe, Bob Dylan, the Everly Brothers, Willie Nelson, guitarist Doc Watson, Billy Joel, Neil Young, fiddler Vassar Clements, and Emmylou Harris. Songs penned by Stuart have been recorded by Harris as well as Wynonna Judd, George Strait, and Buck Owens.

Stuart produced his first solo album, *Busy Bee Cafe*, in 1982, while still a member of Cash's band. For this album, he enlisted the

Marty Stuart

help of fellow pickers like guitarists Doc Watson and Cash, Dobroist Jerry Douglas, and banjo-great Carl Jackson, catching the eye of CBS Records, which signed him on and produced *Marty Stuart* four years later. In 1990, with his first MCA effort, *Hillbilly Rock*, Stuart caught fire with country-music listeners in a big way. His “hillbilly music—with a thump!,” as he called it, had fans clamoring for more, and he served it up on the 1991 release, *Tempted*. The album allowed Stuart to focus on his own distinct style, especially in its best-known single, “Burn Me Down,” which had a long run on country radio.

This One’s Gonna Hurt You, Stuart’s first gold record, was driven up the charts by the momentum of *Tempted* and the celebrated “No Hats” tour he made with fellow country artist Travis Tritt. Released in 1993, *This One’s Gonna Hurt You* blends the best of bluegrass, delta blues, and 1950s rockabilly with honky-tonk swing, ringing gospel harmonies and some gutsy guitar work. One of the album’s most popular cuts, “The Whiskey Ain’t Workin’ Any-more”—sung with fellow “No-Hatter” Tritt—earned Stuart a Grammy award, his first Country Music Association Award, and three BMI songwriter awards. But Stuart’s proudest moment had already come:

in 1992 he became the 72nd performer to be honored by membership in Nashville’s Grand Ole Opry, the “high church” of country music.

The kudos heaped on *This One’s Gonna Hurt You* made it a tough act for Stuart to follow, and he postponed release of his seventh album, *Love and Luck* (1994), until he could get the mix of songs just right. Other recordings made in the 1990s, including *The Marty Party Hit Pack*, continue to provide a musical panorama of country influences that all come together under the musicianship of Stuart and his ever-changing, four-star lineup of collaborators, among them bluegrass fiddler Stuart Duncan, country vocalists Vince Gill, guitarist Ricky Skaggs, and banjoist Bela Fleck.

Throughout his career in country music, Stuart has consistently striven to keep alive the musical traditions of old-time country, traditions that continue to influence him greatly. On stage he plays country-rock pioneer Clarence White’s 1954 Fender Telecaster, and he owns several Martins that belonged to Hank Williams, Sr. and Lester Flatt. His tour bus is modeled on the one used by honky-tonker Ernest Tubb. He still likens his career to the tours he used to make with the Sullivans, a family of bluegrass gospel singers, during the

1980s. "You know, sometimes I feel like it's a crusade, or a mission, a crusade for hillbilly music," he once told an interviewer.

Stuckey's

If you grew up in the 1950s or 1960s, chances are you might have gone on a cross-country car trip with your family. And your journey probably included a stop at Stuckey's, a turquoise-roofed building along one of America's highways. At Stuckey's you bought gas, food, and souvenirs. You also used the clean restrooms and basked in the atmosphere of air conditioning. Finally, before you left Stuckey's, you purchased some candy, probably one of their famous Pecan Log Rolls. You were ready to continue your trip.

The 1950s marked the first time in American history when families were able to travel throughout the United States. These benefits came about due to the post-World War II economic boom and the availability of leisure time afforded workers in the new American corporate structure. This freedom was also greatly enhanced by the introduction of the Interstate Highway system in 1956. Highways had a tremendous impact on American life. Average annual driving increased by 400 percent while shopping centers, suburbs, drive-in movies, gas stations, and fast food establishments entered the popular culture.

And as people began traveled cross-country on these new 41,000 miles of roads, they needed gas, restrooms, and a places to eat—that is where Stuckey's came in. Vacationing by car became the American way after the war and Stuckey's was an important part of that experience. Stuckey's were especially prevalent in the South and Western United States. In the 1950s and 1960s, they seemed to be everywhere. Stuckey's billboards lined the interstate, "Slow Down, Stuckey's 1000 feet" or "Pecan Log Rolls, 4 for \$1 with gas Fill-up."

Stuckey's opened its first store in 1934 when Bill and Ethyl Stuckey began selling their family pecan candy to motorists in Georgia. After some success, they opened other stores along busy highways in Georgia and Florida and began including gasoline pumps, restaurants, and souvenirs along with their famous Pecan Log Roll candy.

While the Pecan Log Rolls might have been Stuckey's most significant contribution to America's sweet tooth, Stuckey's also distinguished itself with other items. Souvenirs like rubber snakes, T-shirts, novelty cigarette lighters, state salt-and-pepper shakers, and more recently, anything with Elvis on it, gave Stuckey's a lasting place in the hearts and minds of traveling American's during the 1950s and 1960s.

By the mid-1960s, Stuckey's enjoyed a virtual monopoly on American highways. During the early 1970s, at its peak, there were

360 Stuckey's stores in 31 states. But monopolies do not last forever and things began to change for Stuckey's. Fast food chains like McDonald's and Dairy Queen saw a golden opportunity to increase their business with highway travelers. Soon, even those fast food giants were joined in the competition by gas station-convenience store chains like Super America. And by the late 1970s, cheap air fares made long distance traveling by car less common. New highways were also replacing some of the older routes and many Stuckey's were left on less traveled roads. Furthermore, says one business analyst, "Stuckey's image became a little tired and often synonymous with our parents and grandparents. And the need for those personal touches traditionally associated with Stuckey's and those plastic souvenirs were replaced by fast food, fast service, and extended hours." Consequently, the number of Stuckey's began to fall in the late 1970s.

In 1985, Bill Stuckey, Jr., tried to reinvigorate the store by mixing some well-known brand names with traditional Stuckey's merchandise. More recently, Stuckey's has entered into partnerships with other fast food chains like Dairy Queen and Citgo, to sell Stuckey's candies and souvenirs at those businesses. The idea is to develop a number of Stuckey's Express locations within the more successful fast food chains. Finally, Stuckey's has replaced the turquoise roof and old pecan shop look with a more contemporary facade and logo. From its peak of 361 stores, Stuckey's operated just over 50 establishments in the late 1990s.

Stuckey's no longer rules the roadsides of America. However, the chain still sells thousands of its Pecan Log Rolls and souvenir salt-and-pepper shakers. But for anyone who traveled during the 1950s and 1960s along America's roadways, Stuckey's will always be a fond memory of that experience.

Student Demonstrations

Colleges and universities have historically been centers of political dissent. Perhaps because university students are in a rarefied state of independence, suspended between parental control and the mundane responsibilities of adult life, perhaps because the very nature of university education inspires students to form opinions and to take those opinions seriously, students have frequently been leaders in movements for social change. As early as the fourth century, Common Era, throughout the middle ages, and continuing into the modern era, university students have protested against politics and policies they find distasteful. The 1960s, shorthand for an era that began in the 1950s and continued into the 1970s, marked a time of massive social upheaval. African Americans began to organize to fight the state supported racism that oppressed them. Women

Student protest in the 1960s.

and gays began to question the social order that kept them subservient and invisible. There was open dissent about government policies, particularly regarding the undeclared war in Vietnam. Citizens began to mistrust the government officials they had always been told knew best. And at the core of each of these growing movements were the energetic, angry challenges of the student movements, both in the United States and around the world.

Though media representations of the student protest movements of the 1960s may be content with showing long-haired demonstrators waving flowers at police, the fact is that many complex political movements evolved in the 1960s. Some students were deeply involved in these movements, while others were simply swept up in their wake. The 1960s really began with the formation of two radical student organizations that would exemplify major waves of student activity of the era, the Student Non-Violent Coordinating Committee (SNCC, pronounced “snick”) and Students for a Democratic Society (SDS).

SNCC was formed in 1960 with the support of a major civil rights organization, the Southern Christian Leadership Conference, to give a voice to young black civil rights activists who were impatient with the careful tactics of their elders. Almost immediately, SNCC

took a more radical approach to the fight for civil rights, though it maintained a commitment to non-violence. SNCC organized demonstrations, became involved in the “Freedom Rides” campaign to desegregate Southern buses, and worked to reform voting laws. In one of its most successful demonstrations, SNCC was instrumental in organizing the Freedom Summer of 1964, when busloads of mostly white students from the north came south where they lived with black families and did extensive organizing, from teaching in the Freedom Schools to registering black voters. Besides the extraordinary accomplishment of public education and outreach, the Freedom Summer played a large part in the passage of the United States Voting Rights Act.

By 1966, impatient with continued prejudice and discrimination, the membership of SNCC grew increasingly radical. Members like Stokely Carmichael and H. Rap Brown embodied this change of attitude. New catch phrases became, “Black Power!” and “Violence is as American as cherry pie.” SNCC joined with another new organization for young black militants, the Black Panther Party, and demonstrations were no longer peaceful sit-ins, but angry, threatening near-riots. The Black Panther Party also began to look outside the

United States for support, to countries like Cuba for whom revolution was more than a symbol.

Also formed in 1960, the Students for a Democratic Society put out its famous statement of purpose, the Port Huron Statement, in 1962. Drafted at a national meeting of SDS in Port Huron, Michigan, the statement began, "We are people of this generation, bred in at least modest comfort, housed now in universities, looking uncomfortably to the world we inherit." The statement was an indictment of modern American values and called for students to demand a truly "participatory democracy," and to fight against social injustice and materialistic capitalism. In 1963, in an effort to act on this statement, SDS formed the Economic Research and Action Project to put participatory democracy into practice. In the summer of 1964, 125 SDS organizers attempted political organizing among the urban poor in various cities across the country. But it was its mobilization against the Vietnam War for which the SDS is best remembered.

By the mid-1960s, television broadcasts of wartime violence and American casualties were causing doubt among many Americans as to the rationale behind the war, and the greatest doubters of all were college students of draft age and their friends. Demonstrations against the war sprang up on college and university campuses everywhere, some at military recruiting offices, some at ROTC buildings, anywhere that held some connection to the war. On April 17, 1965, SDS organized the first of several mass demonstrations against the Vietnam War in Washington, D.C. Fifteen thousand demonstrators joined them. In November, SDS cosponsored another demonstration that drew 30,000 antiwar protesters.

Like SNCC, SDS members grew impatient with the slowness of governmental response to their impassioned protests, and the group became more militant. By the time over 700 demonstrators were arrested at an SDS protest at Columbia University in 1968, the organization was already beginning to metamorphose into the fiercely militant Weathermen. In 1969, the Weathermen organized the "Days of Rage" of violent protest and rioting at the Democratic convention in Chicago. Eventually, radical members formed the Weather Underground, which considered itself a guerrilla warfare group, and continued to be active until 1977, taking responsibility for 12 bombings, and releasing 22 political communiques and a book, *Prairie Fire*. While many radicals later disavowed their militant stands, many others, like SDS' Bernadette Dohrn, stand behind their youthful politics and continue to work on the left for social change.

Most students were not members of any group, but a large number felt strongly about the social and political issues that motivated the organizations. Raised by a generation that had been largely unquestioningly patriotic, the students of the 1960s questioned everything their parents and their government told them. They began to feel they had been lied to, that the privilege they enjoyed was tainted because it came at the expense of people of color both at home and in Vietnam. Most of all, they did not want themselves or their friends to kill or be killed in Vietnam defending the lie. Following the pattern of groups like SNCC and SDS, student demonstrations of the early 1960s were largely peaceful rallies and marches, with the occasional teach-in about the war or sit-in in a controversial building on campus.

Unfortunately, university administrations and campus police did not understand how to deal with such challenges to their authority and often responded by attempting to clamp down with tighter control, which usually resulted in greater and more violent rebellion. Along with antiwar protests, "student power" movements developed as students insisted on having a voice in the way their schools were run. The Free Speech Movement (FSM) at the University of California at

Berkeley began when the university attempted to ban student political organization on campus. When campus police tried to arrest a student distributing civil rights literature, 3,000 students sat down, immobilizing the police car, until beaten back by police with clubs. The FSM continued to protest the university policy, resulting in the occupation of Sproul Hall on campus on December 2, 1964 and the arrest of almost 800 students. Though large universities like Berkeley and Columbia are famous for dramatic student demonstrations, the wave of protest was nationwide and effected a broad spectrum of colleges. Buildings were occupied and even bombed in institutions from Washington University in Saint Louis to the College of William and Mary in Virginia. Student organizers reasoned that since they were fighting to save lives, both American and Vietnamese, damage to mere property was imminently justified.

Perhaps the most famous example of overreaction to student protest occurred at Ohio's Kent State University in May, 1970. Following an announcement by President Richard Nixon of a new escalation in the war, students across the United States rose up in a series of angry protests. The national guard was called out to control crowds of demonstrators at Kent State, not an unusual practice for frustrated administrators. With little training in handling crowds, overwrought guardsmen fired into the crowd, killing four students and setting off a fresh wave of outraged protests. Fourteen days later, a similar incident at Jackson State University in Mississippi caused the deaths of two students and wounding of nine others. Though these incidents provoked public horror, little investigation was done, and the guardsmen involved were never punished.

While American students were organizing demonstrations across the United States, around the world students in France, Japan, England, Spain, Czechoslovakia, and other countries were also rising up in protest against university or government policies. May and June of 1968, a turbulent year in the United States, saw a nationwide strike of students and workers in France. One of the differences between demonstrations in the United States and those in many other countries, especially in France, was that the European students often allied themselves with labor, protesting in conjunction with working people. In the United States, many working class people viewed protesting students with angry suspicion, as privileged brats who despised their achievements and denigrated their flag. Though some American students sought alliances with working people, others referred to them derisively as "hard-hats" and saw them as the enemy, the arms and voices of unthinking patriotism that supported the state lie and the materialistic American dream. These stereotypes—the wealthy, downwardly-mobile, foul-mouthed hippie and the "America, love it or leave it" narrow-minded hard-hat—often prevented communication between students and laborers that might have revealed their common interests.

There was some truth to the rebel stereotype. Counterculture young men did wear their hair long, both because it was fashionable and to challenge the authority that insisted they cut it. Young women wore their hair long and straight too, and eschewed makeup and bras and often did not shave their legs. Both sexes wore clothes that were casual to the point of raggedness. These styles were adopted by the youth of the 1960s, along with a direct mode of speech liberally peppered with profanity, partially as a reaction against the careful facades of propriety so important to their parents' generation, and partially to conform with the careful facade of impropriety so necessary to the rebel generation. There was a culture of protest and, along with its mandated style of dress and speech, it had its own literature and music. Radicals read Richard Wright's *Native Son*, Eldridge

Cleaver's *Fire and Ice*, and Angela Davis' speeches in the *Guardian*. They listened to rock music that was specifically political, like Buffalo Springfield's "For What It's Worth" and Country Joe and the Fish's "I'm-Fixin'-to-Die Rag," or to music filled with a raw and painful passion, like Janis Joplin and the Doors.

Student protests continue around the world, with each generation defining its style and its issues. SDS activist Tom Hayden described the achievements of his generation grandly, "We ended a war, toppled two presidents, desegregated the South, and broke other barriers of discrimination." While some former protesters of the 1960s might be more jaded as to the long-lasting effects of their efforts, there is no doubt that the idealistic energy of the youth of that period did change history. Richard Nixon later admitted that fears of heightened protest limited his escalation of the war in Vietnam. While racial discrimination clearly still exists in the United States, state-sanctioned segregation no longer does. Shortly after the dramatic demonstrations of 1968, both France and the United States lowered their voting age to 18. The Green Party in Germany continues to fight for the causes that German youth demonstrated for in the 1960s. For a period of a few years, the hippies and activists of the New Left felt sure they could change the world, and that passion is perhaps their greatest legacy.

Students for a Democratic Society (SDS)

SDS was one of the largest and most militant organizations to oppose the Vietnam War. It grew from a small group of young socialists to an organization of over 100,000 members, with chapters on over 350 college campuses. The small Student League for Industrial Democracy became Students for a Democratic Society in 1960, and 1962 saw the publication of its Port Huron Statement, a manifesto critiquing American society and proposing student activism as a solution to the problems identified. The document was circulated widely, causing student interest in SDS to grow significantly.

In 1964, some SDS chapters organized demonstrations against the growing American involvement in Vietnam. As the war intensified, so did SDS opposition, including attacks on ROTC programs, the occupying of campus buildings, and student strikes. Media coverage of these protest activities tended to focus not only on the most disruptive and violent acts, but also on the most radical SDS spokesmen. The coverage was to the group's disadvantage—it tended to attract the most politically extreme young people (thus radicalizing SDS even further), and it gave the impression to middle-class Americans that SDS consisted entirely of violent would-be revolutionaries.

In 1968, SDS participated in the demonstrations at the Democratic National Convention in Chicago. SDS president Tom Hayden was one of the "Chicago Seven" who were later tried on federal charges of conspiracy to riot. In 1969, internal dissension caused SDS to self-destruct, leaving only a core of its most radicalized members, who soon began to call themselves the Weathermen.

Studio 54

A legendary New York nightclub, Studio 54 was infamous for its sexual licentiousness (nudity on the dance floor, topless busboys, a unique gay/straight clientele mix) and an eclectic/elitist door policy that integrated the beautiful, the eccentric, and a vast array of celebrities (the Jagers, Andy Warhol, Liza Minelli, Michael Jackson, etc.). Studio 54 was opened in April 1977 by Steve Rubell and Ian Schrager; early in 1980, they were both sent to prison for tax evasion. The nightclub ownership then changed hands twice before it finally closed in March 1986. Immortalized, in a fictional form, in the films *54* (1998) and *The Last Days of Disco* (1998), Studio 54 has come to symbolize a historical transition point: from the freedom and hedonism of the 1970s into the yuppie elitism and self-destructiveness of the 1980s.

Studio One

Although it had its genesis as a radio program, *Studio One* became the longest running anthology drama series of the "Golden Age of Television," with more than 500 live teleplays on CBS from 1948 through 1958, and earned a reputation as a visual innovator in broadcast storytelling. A product of television's infancy, the series disseminated drama of a high order, bringing classical works and serious "one-off" plays to a wide popular audience, and sowing the seeds for a generation of Hollywood writers and directors to learn their craft on the small screen. While other series were known for psychological realism, *Studio One*, under its first producer, Worthington Miner, explored the technical and stylistic potentials of the medium.

Worthington Miner thought with his eyes, and focused on a highly inventive, visual mode of storytelling. For him, *Studio One* existed somewhere between live drama and film. It was a "live

Inside Studio 54.

performance staged for multiple cameras.” Whereas most dramatic series efficiently relayed a live performance using a static three-camera set-up, the camera movement was an integral part of the *Studio One* performance. The actors were positioned and choreographed so they could be shot through apertures in the scenery, and flying walls were employed. Elaborate physical productions filled the studio above Grand Central Terminal, and in the first two years of the show, Miner himself created 39 of the 44 live productions, employing techniques that kept audiences constantly attentive.

In a modern dress production of William Shakespeare’s *Julius Caesar* during the first season, for example, Miner moved the camera in extremely tight for a close-up of the eyes of one of the conspirators, while the pre-recorded voice of the actor played over the live close-up. In this attempt to reveal thought, Miner jumped inside the character’s mind, using methods that both unnerved and excited the viewers. For *Battleship Bismarck* the producer featured inventive camera angles, tight groupings, and quick, live-camera cuts in place of post-production editing—he often used long, shallow sets that allowed him to shoot from sharp angles. He also employed arresting lighting techniques for outdoor scenes, as in *Macbeth* starring Charlton Heston, one of the show’s regular performers. This array of technical and stylistic devices created a specific form of visual storytelling appropriate for the infant medium.

These innovations were vital to the success of the program. Most outstanding dramatic material was already under option to Hollywood, which was not about to share it with an upstart medium that was perceived as a threat to the livelihood of the film industry. In addition, the film studios argued that kinescopes (a film of the image from the picture tube), which were broadcast later in markets other than New York, violated their rights to certain properties. Also, there were not yet seasoned television writers and television could not afford to hire established stage or screen dramatists. Consequently, Miner not only adapted plays from the great classical canon and other work in the public domain, but also drew on lesser Broadway vehicles and short stories.

In 1953 Felix Jackson became producer of *Studio One* and began his stewardship with a critically acclaimed production of George Orwell’s *1984*. He established the emphasis on original drama, most notably with Reginald Rose’s *Twelve Angry Men*, but despite these and other successes (*The Defender*) many of the works from the mid-1950s were “kitchen sink” dramas, stories of ordinary people dealing with a range of ordinary domestic and emotional problems. Larger social and political themes were largely left untouched. In spite of high ratings, sponsors and advertising agencies were generally unhappy with the quotidian locales and stories, feeling that they were sabotaging the implicit fantasies and dreams of consumerism

presented in their commercials. CBS and Westinghouse demanded that Rose's *Thunder on Sycamore Street*, based on an actual incident involving a black family moving into a white neighborhood, be altered. Fearing for the sensibilities of Southern affiliates and their white viewers, the black protagonist was changed to an ex-convict. Rose partially managed to subvert this revision by withholding this information until the very end of the show. As Erik Barnouw notes, viewers responded with their own predilections, and the sponsors and network discovered that they had unwittingly presented the type of controversy they had hoped to avoid.

Actress Betty Furness did the commercials during the first year's telecasts and continued to do so for the remainder of the program's life on the air. Her live demonstrations of Westinghouse's household appliances made her the most famous and recognized spokesperson in American television.

The shift to Hollywood and film allowed the networks and sponsors to create something more akin to the production values of feature films. Intimate, minimalist settings and the "marvelous world of the ordinary" were on their way out. Filmed productions for television had the potential for an economic after-life in syndication, while action-oriented genres, especially Westerns, could be churned out quickly on film. Sponsors were relieved of the worry of approving a new set of characters and a potentially problematic script each week—they, and their audiences, could happily identify with a few ongoing characters and personalities instead. In 1957, the amount of prime time programming originating on the West Coast jumped from 40 per cent to 71 per cent. *Studio One in Hollywood* premiered in January of 1958. It still broadcast live but was off the air by September.

Studio System

As Herbert Hoover's oft-quoted aphorism states, the business of America is business. But what this truism fails to take into account is the powerful urge for respect, for status, that accompanies the simple aim of making a buck. Though there is no aristocracy in America, not so far as recognized by law, no one who has ever thirsted after power and influence with only money as a weapon, and then come face to face with the invisible blue-bloods arrayed before the gate, can have any faith in this homily to America's virtuous democracy. So it was with the founders of the major Hollywood studios. Immigrants or the sons of immigrants, Eastern Europeans, and Jews, of slight education and deprived backgrounds, they knew from bitter experience to what extent they would be allowed within the provinces of power: not at all. So they created an empire of their own and called it Hollywood, a domain where they could play as philosopher kings or petty tyrants while they remade America in their own image; the better to be accommodated.

It all started in New York City, where several perspicacious young Jews—independently of each other—recognized in the nascent film business the possibility of future wealth. Unlike their competition, they saw that film, far from being a passing novelty,

would ultimately have a nearly universal appeal. This fact was not lost on men like Adolph Zukor, a young Hungarian immigrant who made a small fortune in the fur business, and whose story is fairly representative. "[T]here was something in Zukor that went unsatisfied," writes Neal Gabler in *An Empire of Their Own*. "It could have been that he felt his social mobility was blocked by the fur business; no matter how much wealth he accumulated, he would still be associated with something unmistakably Jewish, as the fur trade was, and slightly declassé, as all the garment trades were." In 1903, when a cousin of Zukor came to him for a loan to open an arcade of electric novelties and "peep" machines, the usually cautious Zukor thought to himself: "A Jew could make a lot of money at this." Zukor had an advantage that the purveyors of these machines lacked: from his years in the fur business, Zukor had become adept at judging the market. At the time, films were only beginning to be shown on large screens. Their more common form was the "peep" machine, where a brief film, like *The Great Train Robbery* (1903), could be viewed for a nickel. Zukor saw the commercial potential of movie theaters, and his experience in opening one bore him out. Zukor also perceived the potential market for longer films—"canned" theater as it were, a revolutionary idea for its time—and he believed that movies could both entertain and edify. He obtained the rights for an hour and a half French film starring Sarah Bernhardt, which became an instant success.

Across America, a similar narrative was being played out among ambitious first generation Jews, in touch with the desires of their audience and willing to go out on a limb to satisfy their only half formulated desires. Nickelodeons were popular in the immigrant community, and subsequently were viewed as somewhat disreputable by established businessmen, precisely because of that popularity. The Jews, who had no such qualms, made a killing and then, in their efforts to satisfy the viewing public, began making films of their own. At the time, Thomas Edison had put together a trust of older, more established film producers and distributors, with the intent of enforcing the patent payments he held on film equipment. Incensed, the upstart film producers waged a covert war on the Edison Trust, many of them fleeing to Los Angeles, outside of the long arm of Edison. Coincidentally, the sunny, clement weather in Los Angeles was also conducive to film-making.

In the 1910s a period of consolidation occurred, resulting in several large conglomerates that both produced, distributed, and owned theaters; thus were born the major Hollywood studios. By the mid-1920s, a distinct pecking order existed in Hollywood between the smaller, poverty row studios and the powerful conglomerates such as Paramount (Zukor's company), Universal, RKO, Twentieth Century-Fox, and Metro-Goldwyn-Mayer (MGM). With the coming of sound film in the late 1920s, filmmakers had realized Zukor's ambition of "canned" theater. Paramount, MGM, Universal, Twentieth Century-Fox, and to a lesser extent, Warner Brothers and Columbia vied for supremacy in this period, each establishing a distinctive style and stable of stars that in many ways reflected the personalities and conceits of their respective heads.

With the coming of sound and with the popularity of films during the Depression, the studios found themselves shaping the entertainment of an entire nation. Many studio heads took their role as cultural arbiters seriously, and shaped their studio's pictures to fit a certain image. Zukor had a penchant for "quality" entertainment, scouring the European continent for artists and presenting his finds in lavish period pieces wholly devoid of any concern for realpolitik. Louis B. Mayer, who as a result of luck and business cunning had finessed himself into heading the conglomeration of three rival

companies, was preoccupied with family values. He perceived himself as a patriarch at the head of an enormous extended family (the studio), and by extension the viewing public. A man who had refused to allow his two daughters to go to college for fear they might acquire subversive ideas, he evinced the same concern for the viewing public as a whole. As can be expected from such a man, the pictures MGM made were wholesome things, and in the 1930s, Mickey Rooney and his Andy Hardy movies and wholesome sporting epics were examples of the good, clean fun that predominated at MGM. Universal and Twentieth Century-Fox had both made early successes in silent pictures, but were unable to adapt as readily. Universal, outside of their classic 1930s horror movies and a few lavish production pieces, merely weathered the storm. It was Columbia and Warner Brothers, both marginal upstarts, that adapted best to the changing current of American life, Warner with their fast-paced, starkly lit gangster films, and Columbia with breezy, wise-cracking screwball comedies.

Film succeeded so far beyond the studio presidents' dreams that they were soon involved in a continental search to expand the talent-pool. Agents and scouts were sent scurrying across Europe to lure directors, technicians, and actors to Hollywood. Ernst Lubitsch and Erich von Stroheim came early, impressed by the technical innovations in American films. Fritz Lang came later, a refugee from Hitler's Germany, as were an increasing number of novelists, playwrights, musicians, artists, and composers who, while playing only a marginal role, enlivened the atmosphere considerably. New York was not immune to studio agent's incursions. Throughout the 1930s, novelists and playwrights lit out west after the brass ring. Some, like F. Scott Fitzgerald and Dorothy Parker, were feted and cajoled into writing for pictures, and in turn, reacted with derision. Others, like William Faulkner and Raymond Chandler, were failed authors who relied on Hollywood to sustain them. Nathaniel West, whose books had sold as poorly as Faulkners, turned his bile into artistry, penning the caustic *Day of the Locust*, which would reign as the most venal, acerbic take on Hollywood until the much less distinguished *What Makes Sammy Run* supplanted it in 1941.

In 1939, the year *Gone with the Wind* and *The Wizard of Oz* were released, film was the nation's eleventh-largest industry, with studios turning out some five hundred new movies each year. A decade later, the major studios were losing money, and films' influence was slipping, superseded by its lilliputian rival, television. The HUAC (House Un-American Activities Committee) hearings investigating communist influences in Hollywood further reduced any lingering sensations of omnipotence among the studio heads, who were forced to blacklist some of their most notable talent. What damaged the studios most, however, was the success of an anti-trust suit in the Supreme Court in 1948. Investigations of the studios' monopolistic practices dated back to 1920, when the consolidation of production and distribution had effectively squeezed out all but a few independents, with the studios building enormous temples to themselves with their ornate theaters. Practices such as block-booking and blind selling enabled studios to cram a slew of mediocre films down the throats of theater owners to get the one film they wanted to show. By 1948, the Justice Department had finally drawn a line in the dirt. RKO was the first to cave in, followed in short order by Loew's and then the other majors. Hollywood would never recover.

The system these men created to sustain their vision, the studio system, lasted a little over a quarter century, from the mid-1910s to the early 1950s. By the mid-1950s, control of many majors had reverted to Wall Street and the pioneers were retiring or succumbing

to the stress of running a studio. Harry Cohn died of a heart attack in the mid-1950s, Louis Mayer succumbed to Leukemia, and Jack Warner lived until 1967 before dying of a stroke. Only Adolph Zukor, the grand old man of the studios, would live past his seventies, dying peacefully in his sleep at the age of one hundred and two.

For the common man—and the movies made the common man a recognizable demographic—the movies became, like the flickering images in Plato's cave, a simulacrum of reality. "A picture, all it is is an expensive dream," Harry Warner once said, and there is ample evidence to suggest that the studio heads themselves thought it so, and made their own version of America out of believing it. By recreating the world in dream form, they could supersede the accident of birth that delivered the studio heads to such a lowly station, and overcome the chance of birth that appeared to have precluded them from tasting the fruits of the high and mighty.

Sturges, Preston (1898-1959)

After a childhood abroad, a stint in the army, and a turn as an inventor creating kiss-proof lipstick, in 1929 Chicago native Preston Sturges staged his first Broadway play. From that nearly accidental debut, he fashioned a career in Hollywood's "Golden Age" that film critic Andrew Sarris calls "one of the most brilliant and bizarre bursts of creation in the history of the American cinema." Hired as a writer in 1932, by 1940 Sturges became the first screenplay author to direct his own script when he penned and directed *Christmas in July*, *Remember the Night*, and Academy Award winner, *The Great McGinty*. By 1944 he had secured his lasting legacy with signature romantic comedies: *The Lady Eve* and *Sullivan's Travels* (both 1941), *The Palm Beach Story* (1942), and *The Miracle of Morgan's Creek* (1944). Sturges was hailed for his brilliance in studio publicity and for his movies' eccentric, visionary critiques of American society.

Styron, William (1925—)

The novels of William Styron have won major literary awards, received tremendous popular attention, and been the subject of controversy. Styron's two best known novels, *The Confessions of Nat Turner* (1967) and *Sophie's Choice* (1979), deal respectively with an American slave rebellion and the Holocaust. *The Confessions of Nat Turner*, based on a documented revolt by slaves in Virginia's Tidewater area in 1831, won the Pulitzer Prize, yet sparked much hostile criticism from black writers and critics. Many charged Styron with historical falsification while others believed it was unconscionable for a white novelist to presume to enter the mind of a black slave. *Sophie's Choice*, set in post-World War II Brooklyn, is the story of an Auschwitz survivor who is plagued by horrible memories and caught in a turbulent love relationship. Styron has also chronicled his battle with depression in a memoir, *Darkness Visible* (1992).

Suburbia

The development of suburbs—residential communities on the outskirts of cities—was one of the most dominant features of American life in the twentieth century. Far from being merely a way Americans organized their housing and ordered their landscape, the suburbs created an entirely new way of ordering American social life and culture. The result was a phenomenon known as “suburbia,” a term denoting not only a physical place but often a cultural and social mind-set as well. The rise of suburbia in the nineteenth and twentieth centuries had a major role in the development of American culture, extending long-cherished American beliefs in individuality and an agrarian ideal in new ways while simultaneously working to reshape both the American physical and social landscape.

While suburbia had its major impact during the twentieth century, it originated and developed in the nineteenth century. “I view large cities,” Thomas Jefferson once wrote, “as pestilential to the morals, the health, and the liberties of man.” Jefferson's anti-urban view was shared by a growing number of people in the nineteenth century. As cities became crowded with people, bringing

A suburb in south Phoenix, 1998.

increased sanitation, transportation, and crime problems, those Americans who could afford to, namely the growing middle class, began moving to larger, single-family homes on the outskirts of major American cities. This was in direct opposition to European cities, where the middle and upper classes preferred to remain in the central city, and poorer people were pushed to the outskirts. Prior to the mid-nineteenth century, work and home were closely intertwined, and cities reflected this mixture as well with residential buildings coexisting with commercial ones. As industrialization advanced, home and work became increasingly separated as men went off to work and women stayed at home. New innovations in transportation, from ferries and omnibuses to steam railroads and horse-drawn streetcars, helped make this transition possible.

These new 1840s and 1850s suburbs contributed to the monumental shift in middle-class culture in key ways. New suburban homes became a measure of success for these middle classes, a way of telling the world they had arrived. Having money and success meant that the man of the house was able to move his family out of the increasingly grimy and dangerous city to a more pastoral, Edenic place separated from the world of work and commerce. It also allowed these families to reestablish at least a symbolic connection to Jefferson's agrarian ideal, where every family owned its own piece of land and thus remained independent—a key necessity for the success

of liberty, and thus the republic. With fewer people making their living in farming as the century progressed, suburban homes with their often ornate gardens offered the closest approximation possible to this agrarian ideal. The suburbs also contributed to the development of the cult of domesticity. Separated from the world of work in their suburban enclaves, women were placed at the center of the domestic world, caring for hearth and home, husband and children, a role exalted as one of supreme importance. Women were viewed as the centers of morality and the important transmitters of this morality to their children and thus to future generations.

These ideals were not unique to the nineteenth century. The exaltation of the domestic sphere for women, the intense desire of Americans to own their own homes, the need to keep some kind of connection to the rural past in an increasingly urbanized present, the desire for social status, and the need for physical and economic security continued to find resonance within American culture throughout the twentieth century. Transportation factors again played an important role, from the development of streetcars in the late nineteenth century to the increasing dominance of the automobile after the 1920s and particularly after the development of the national highway system that began in the 1950s. Suburbs throughout the twentieth century continued to act as an increasingly attractive alternative to inner-city living for those who could afford it. Suburbs grew tremendously throughout the 1920s and 1930s, as bungalow houses and other styles sprang up one after the other on the more affluent sides of major cities around the United States. Throughout this period, suburbs remained closely tied to their urban cores, and their growth accompanied the larger process of urbanization occurring in the United States. In 1920, the number of people living in urban centers became a majority of the population (51.7 percent) for the first time.

With this increase in urban growth, developers across the country took advantage of the continuing desire for suburban living, buying up huge parcels of suburban land and developing it into neighborhoods and subdivisions. One of the most successful was J. C. Nichols of Kansas City, Missouri, whose Country Club District development played upon the deep cultural imperatives behind suburbanization. Nichols combined the lure of the new with the pastoral beauty of the past. His homes built during the 1920s had the most modern of conveniences: gas and electric service, the latest household appliances, and access to transportation connections. He set the homes amid a park-like setting, with generous set-back lines from the street, and ensured his development's success by enacting permanent deed restrictions that limited the extent to which residents could change their houses and yards. He also enacted racially restrictive covenants, ensuring that no resident sold his or her house to African Americans, Jews, or members of other minority groups. In doing so, Nichols ensured that his development remained exclusive. His homes were expensive, and both he and his buyers made sure their investments did not decline in value. More importantly, these restrictions preserved the reason many people were moving to the suburbs in the first place: to avoid the problems (and peoples) of the cities and to provide an environment in which they would not only be surrounded by the bounty of nature, but also by their own kind of people. Nichols's formula, and success, proved a powerful example to developers across the country who mimicked the restrictive covenants, design, and prestige of Nichols's Country Club District. Many similar developments sprang up across the United States during the 1920s.

The depression of the 1930s, and the collapse of the housing market, brought a temporary end to the great wave of exclusive

suburban developments, but suburbia, and the needs it served, was hardly finished. After World War II, the United States experienced its greatest wave of suburban development, one that showed little sign of abating at the end of the 1990s. The same cultural factors that had influenced suburban development in the period in the nineteenth and early twentieth centuries remained in the postwar period. One crucial difference was that as suburbia grew, it became available to a wider spectrum of Americans, reflecting the growth of the middle class during the postwar economic boom; however, it still remained largely closed to minorities. No longer were suburbs the exclusive domain of the well-to-do. Indeed, it is the 1950s that many associate with the suburbs, even though they existed long before, and continued long after, that decade. That association is the result of the vast cultural and social impact suburbia had on the United States in the postwar years.

The widening access to suburbia largely can be attributed to one man, developer William Levitt. Like his predecessor Nichols, Levitt's approach proved immensely successful and thus very popular, spawning an untold number of imitators. Levitt's idea was rather simple: he brought mass-production techniques and low prices to suburban housing just as Henry Ford had done in the automobile industry. Taking advantage of the great demand for housing, and benefiting from federal government housing policies which provided mortgage guarantees for both developers and homeowners, Levitt purchased a large parcel of rural land in suburban Long Island. There, he used mass-production techniques to construct more than ten thousand small, inexpensive homes. All were virtually identical, and all sold almost immediately. They proved immensely popular with young couples eager to raise their new families in a comfortable and safe environment. The result was an almost instant community, called Levittown. With low initial and monthly payments for houses in such communities, many families could afford to leave the cities in greater and greater numbers for the relative space, comfort, and security of the suburbs. The result was "white flight," as urban whites moved out of the inner cities to escape the growing influx of black, Hispanic, and other minority groups. This population movement eventually took jobs, tax money, and a diverse population away from America's inner cities, contributing to the decline of cities across the country.

But for those who could enjoy these new suburban developments, suburbia had a strong impact on American social life, so much so that the suburban lifestyle dominated American culture from the 1950s on. Television shows such as *Leave It to Beaver* and *Ozzie and Harriet* centered around white middle-class families in the suburbs. Their lives were idyllic ones, representing peace and harmony. The suburbs and their images on television also worked to promote a reworking of gender roles. Fathers were usually dressed in business suits and were often shown coming home from work to discover the mishaps or other plot twists that had occurred during the day. Women were portrayed as homemakers content with baking cookies, making dinner, and caring for their children and husbands. This idyllic view of suburbia was not entirely incorrect, however, as the suburbs reinforced traditional notions of family and gender that had been challenged by working women during the World War II years. With the strict division of the home from the world of work, suburbia in the 1950s and after continued trends that had begun in the mid-nineteenth century. The suburbs also contributed to what many soon labeled the "culture of conformity." New suburban developments such as Levittown were homogenous places. Not only were the houses virtually identical, but their inhabitants were as well. These new communities were quickly filled by new families, many of them headed by young veterans eager to return to a normal life after the

traumas of World War II, with similar backgrounds, experiences, needs, and ages. Group socialization and the adherence to established social norms was encouraged; individuality and isolation were not. Many found this new environment appealing, but critics soon began to criticize the social conformity demanded by the suburbs. John Keats, in his book *The Crack in the Picture Window* (1956), attacked the conformity of suburbs as a “postwar, homogenous hell” of rigid social roles that produced an environment of mediocrity. Folksinger Pete Seeger sang in “Little Boxes”: “Little boxes, on the hillside, little boxes made of ticky-tacky . . . little boxes all the same.” And not only were the houses all the same, but the people were as well, going through exactly the same experiences, living in identical social boxes that, as Seeger sang it, might well have been coffins.

In addition to its cultural impact, suburbs also had a great impact on the American landscape and environment, encouraging the development of an automobile culture and suburban sprawl. Spread out away from cities, without access to older public transportation systems such as subways and rail lines, suburbanites depended on their cars for access to jobs in the city. This development was encouraged by the 1956 Federal Highway Act which provided more than \$25 billion to construct more than forty thousand miles of highways. It was the largest public works project in the history of the United States. In a culture that was already in love with the automobile, the suburbs encouraged even greater reliance on them. The result was suburban sprawl. Instead of tightly compacted centers where most services, entertainment, and employment were easily accessible on foot, suburbs encouraged all of these functions to spread out. Thus restaurants, stores, and other facilities each occupied their own buildings with parking surrounding them. Some were clustered in strip malls or enclosed shopping malls, but like the suburbs as a whole, all were geared to the need of the automobile.

Suburbia also encouraged the unique American social phenomenon of obsession with lawns and lawn care. Among the deeper ideological bases for suburbia was the need to recreate an Edenic natural setting that was believed to be superior to the concrete jungles of city life. Preserving the image of life in a garden, however, was difficult with so many houses so close together. As a substitute, Americans began to view their lawns as each contributing to a seamless expanse of grass that created as much of a park-like setting as possible. Maintaining this lawn became an important cultural imperative, as homeowners were responsible for keeping up their portion of the “park.” Encouraged by magazines, advertising, seed companies, and often by homeowners’ restrictive clauses that mandated proper upkeep of lawns, lawn care became a major suburban activity. In suburban developments during the warmer months, weekends were filled with the drone of lawn mowers. Competitions were held in neighborhoods to establish the “yard of the month,” and people who refused to do their part were often shunned and occasionally sued for their noncompliance. The lawn obsession was also part of a larger cultural interest in outdoor life, and suburbs promoted such things as outdoor barbecues, swimming pools, and gardening.

While the classic 1950s image of suburbia still exists at the turn of the century, suburbs in the 1980s and 1990s were in the midst of change. The biggest shift came in the relationship between suburbs and the cities they surrounded. By the 1980s, many suburbs were beginning to evolve into self-contained communities where people not only lived, but worked. In Orange County, California (outside Los Angeles); Cobb County, Georgia (north of Atlanta); Tyson’s Corner, Virginia (outside Washington, D.C.); and in similar communities

across the country, suburbs became the locations for major office complexes that were home to thousands of workers. With their living and working needs now available in the suburbs, there was less and less need for suburbanites to travel to the downtowns of central cities. They developed into their own small cities that writer Joel Garreau labeled “edge cities.” That trend, which historian Jon Teaford called “postsuburbia,” was indicative of a new age in the history of suburbs. While still a relatively new phenomenon, this shift may also portend a change in the ability of suburbia to fill certain cultural needs. With work and home sites now close together, the role of suburbs as an idyllic retreat from the world of commerce was changing by the late 1990s, reversing a trend that began in the early nineteenth century. These developments, and the increasing concern over suburban sprawl with its often negative effects on the environment and on what many were calling a loss of community in American life, were still in their infancy by the late 1990s. The long-term effects of these changes on the historic roles suburbia has played in American social and cultural life remain to be seen.

Suicide

While actual reasons for suicide stem from complicated and often indeterminate causes, the public is left to sort out the implications of what Primo Levi calls this “noninstinctive, unnatural choice.” In the early part of the twentieth century, suicide was a taboo subject. Popular opinion held that madness was the most plausible explanation for a person taking his or her own life. When suicides were mentioned in the 1910s and 1920s, they were characterized in terms of trends: *Literary Digest* once reported of “rashes” of childhood suicides, and again of college campus suicides. Suicide was seen as virtually a contagious disease.

The stock market crash of 1929 brought the first widespread acknowledgement of suicide in the twentieth century, with instantly legendary images of despondent former millionaires leaping to their deaths. As some news accounts of the time would have it, a person walking through New York City would have had difficulty navigating the bodies littered on Wall Street. Without question, the crash did

eventually cause a number of suicides, but as John Kenneth Galbraith reported, statistics suggest that the “suicide wave” of 1929 was largely a myth: “For several years before 1929, the suicide rate had been gradually rising. It continued to increase in that year, with a further and much sharper increase in 1930, 1931, and 1932—years when there were many things besides the stock market to cause people to conclude that life was no longer worth living.” This notwithstanding, the widely-reported millionaire suicides expanded America’s understanding of the causes of suicide to include not only madness but also great financial loss. Capitalism itself became a credible contributing factor in suicides.

For decades, suicide receded into the shadows, until the 1962 death of movie star and legendary sex symbol Marilyn Monroe. Events surrounding Monroe’s death became fodder for gossip columns and investigative reports throughout the rest of the twentieth century. Instead of repudiating her for committing suicide, the nation shared her tragedy. Her death helped spawn the growth of suicide hotlines, where people who felt suicidal were encouraged to discuss their feelings with counselors. Monroe’s later well-publicized dependence on prescription drugs fueled the opinion that the pressures of celebrity became too much for her. With the acceptance that the public might have contributed to Monroe’s final act, suicide moved from private blame into the arena of shared responsibility. Unfortunately, statistics subsequent to her suicide also lend credence to the theory that suicides can be “contagious”; according to Herbert Hendin, “Just after Marilyn Monroe’s death, the notes of a number of suicides linked their own deaths to her presumed suicide . . . A sense of sharing the tragic death or suicide of someone famous . . . enables some people to feel that their death has a meaning it would otherwise lack.”

Throughout the 1960s and into the 1990s the pressures celebrities experience were also linked to drug abuse and overdose, nowhere more than in the music industry. The deaths of rock stars Janis Joplin, Jimi Hendrix, and Elvis Presley, all of whom accidentally overdosed, were received with a sense of tragedy similar to Monroe’s death. Though these deaths were officially “accidental,” fame had surely influenced self-destructive behavior. Other high-profile victims of the deadly combination of fame and drug abuse included comedian Freddie Prinze, who shot himself in 1977 at the age of 22, comedian John Belushi, who died of a drug overdose in 1982, and “grunge” music pioneer Kurt Cobain, with a history of treatment for a heroin addiction, who shot himself in 1994.

The connection between a creative personality and suicide has seemed particularly close among writers. The most prominent instances of the twentieth century were the deaths of Ernest Hemingway in 1961, Sylvia Plath in 1963, and Anne Sexton in 1974. While Hemingway’s suicide was attributed to poor physical and mental health, it seemed in keeping with his gonzo personality. The deaths of Plath and Sexton, however, seemed more tragic because they were comparatively young and healthy. Their deaths were especially indicative of the troubled female artist. As A. Alvarez writes of Sylvia Plath, public perception perverted her death into “a myth of the poet as a sacrificial victim, offering herself up for the sake of her art.” Her suicide intimated to the public that art had the power to destroy.

Religious fervor, long attributed as a cause for insanity and suicide, also showed its powers of destruction. When 914 followers of the Reverend Jim Jones committed mass suicide in Jonestown, Guyana in 1978, suicide became inextricably linked to religious cults. Jones was seen as a charismatic brainwasher who convinced his members that their deaths were, according to him, “an act of

revolutionary suicide protesting the conditions of an inhuman world.” Subsequent cases confirmed the apocalyptic and suicidal nature of cults, most notably the Branch Davidians in Texas in 1993, and the 39 suicides of members of the Heaven’s Gate cult in California in 1997.

The early 1990s saw rock musicians Judas Priest and Ozzy Osbourne of the group Black Sabbath defend their music in separate court cases which accused that their songs influenced teens to commit suicide. In both cases, the first amendment rights of the musicians were upheld. Still, Osbourne’s song “Suicide Solution,” as well as other songs such as “Goodbye Cruel World” by Pink Floyd, books such as *Illusions* by Richard Bach, and films such as *Dead Poet’s Society* continued to draw criticism for what some saw as glorifying the act of suicide.

At the close of the twentieth century, physician-assisted suicide dominated the headlines, with purported “suicide doctor” Jack Kevorkian challenging laws across the country that made assisted suicide illegal. In 1998 he appeared on the news program *60 Minutes* which aired a tape of him assisting a suicide. Kevorkian orchestrated the publicity stunt in an effort to force a Supreme Court ruling on the constitutionality of a person’s “right to die.”

While suicide remained complex for most Americans, by the end of the twentieth century the topic had emerged from the shadows to be discussed in the light of the shared public arena.

Sullivan, Ed (1902-1974)

Ed Sullivan, who could not sing, dance, or act, was television’s greatest showman in its early years. For twenty-three years, from 1948 to 1971, he hosted America’s premiere variety show every Sunday night on CBS, on which he introduced an eclectic array of talent that included everything from opera singers to dancing bears to Elvis Presley and the Beatles. Sullivan, a former newspaper columnist, appeared on the nation’s television screens as a most untelegenic presence. He was everything that a professional television host is not supposed to be—awkward, stiff, and prone to frequent malapropisms.

Ed Sullivan with Lucille Ball on the *Ed Sullivan Show*.

His real talent was behind the scenes, as a man who had his finger on the pulse of America's cultural tastes. He understood instinctively that a variety show should present acts that would appeal to the various demographic segments of its audience. Only on *The Ed Sullivan Show* could you see such diverse talents as Van Cliburn, Rudolf Nureyev, Robert Goulet, Richard Pryor, a plate spinner, and The Rolling Stones. With his distinctive nasal voice, Sullivan regularly promised audiences "a really big shew" and delivered by offering up virtually every form of twentieth-century entertainment.

Edward Vincent Sullivan was born on September 28, 1902, in the Harlem section of Manhattan, New York City, the son of a customs inspector. He was one of seven children (his twin brother, Daniel, died in his first year) and was raised in Port Chester, New York. Young Edward was a poor student, but a strong athlete who won ten letters in sports. Upon graduating from high school he became a newspaper sports reporter. In 1932, he joined the *New York Daily News* as a Broadway columnist and soon came into contact with many figures in the entertainment industry. While serving as emcee of the newspaper-sponsored Harvest Moon Ball dance contest in 1947, he was "discovered" by Worthington Miner, a general manager at CBS-TV, who asked Sullivan to host a planned variety series called *Toast of the Town*. The series debuted on June 20, 1948, reflecting from the beginning Sullivan's keen sense of diversity in programming. That initial episode featured Broadway's Richard Rodgers and Oscar Hammerstein, the rising comedy team of Dean Martin and Jerry Lewis in their first TV appearance, classical pianist Eugene List, ballerina Kathryn Lee, a group of singing New York City firemen, and six June Taylor dancers (called the "Toastettes"). Within that

single hour was something for everyone, from the highbrow to the most common man.

During his 23-year run on CBS, Ed Sullivan served as the cultural arbiter for much of middle America. He worked constantly to insure that his audience witnessed the very best entertainment available, as he was deeply involved in all aspects of the show. He booked all the acts himself, helped edit each performer's material, and frequently juggled the show's running order. Some claimed he was a dictatorial taskmaster, but Sullivan took full responsibility for the success or failure of each week's episode. In 1967 he revealed his show-business philosophy when he stated, "An audience will forgive a bad act but never bad taste." For a man who sought perfection in even his silliest performers, Sullivan always presented himself as a rather bumbling persona. An article in *TV Guide* once described him by writing: "Not since radio's Major Bowes have the airways been subjected to such a bumbling Barnum. Cod-eyed, cement-faced and so scaredy-cat stiff that he's been suspected of having a silver plate in his head, Sullivan has yet to complete gracefully the smallest gesture, unravel his vowels, or conquer a simple introduction." Sullivan's distinctive voice and mannerisms made him the target of many comics and impressionists, including John Byner and Will Jordan. While he may have been awkward, Sullivan knew his job was to introduce the talent and leave the stage so they could shine.

The format of Sullivan's show, which was re-titled *The Ed Sullivan Show* in 1955, changed little over its many years. It was basically a filmed vaudeville show with acts chosen to appeal to the broadest possible audience. Guests from the world of the classical arts included violinist Itzhak Perlman, dancer Margot Fonteyn, and opera star Roberta Peters. For a rare TV appearance by diva Maria Callas, Sullivan staged a full scene from *Tosca*. Guests designed to attract more middle-class audiences included Broadway and movie stars, such as Richard Burton and Julie Andrews performing a scene from *Camelot*, songs by Barbra Streisand, Dinah Shore, and Eddie Fisher, and Henry Fonda reading Lincoln's Gettysburg Address. Sullivan was very fond of comics and often invited Borscht Belt veterans like Alan King and Henny Youngman to perform. His most frequently returning comedy guests, however, were the Canadian team of Wayne and Shuster. For the youngsters in the audience, Sullivan was always sure to include a novelty act. These included acrobats, mimes, animal acts, and much more. The specialty act most associated with Sullivan was the lovable Italian mouse puppet, Topo Gigio, who frequently exclaimed, "Hey, Eddie, kees-a-me goodnight!" Occasionally, Sullivan would devote an entire show to one subject, such as honoring the works of Irving Berlin, Cole Porter, and Walt Disney.

By the mid-1950s Sullivan became aware that American popular culture was changing drastically. He helped to promote racial diversity by showcasing black performers, such as Pearl Bailey, Nat "King" Cole, George Kirby, and Leontyne Price. Other television shows refused to present African-American guests due to sponsor complaints. Furthermore, Sullivan began inviting rock and roll stars onto the show to raise its appeal to the demographically important teen audience. Elvis Presley made three memorable visits in 1956. Although cameras showed him from only the waist up on his last appearance to calm adult fears of the singer's swiveling pelvis, the fact that Presley was on the show seemed to legitimize rock to the adult audience. On February 9, 1964, an appearance by the Beatles earned Sullivan his highest rating ever. That broadcast is considered a milestone event in television history. Throughout the 1960s, more members of the counterculture appeared with Sullivan, such as Janis Joplin, Marvin Gaye, and The Rolling Stones. While he liked the

ratings they brought, he was often uncomfortable with their attitudes and material. He had heated confrontations with The Doors and Bob Dylan over his attempts to censor their songs. Younger comedians like George Carlin, Woody Allen, and Bill Cosby were also more visible in the 1960s. After 1087 episodes that presented over 10,000 performers, *The Ed Sullivan Show* left the air on June 6, 1971. Ed Sullivan died in October, 1974.

Ed Sullivan and his variety program are monuments to a form of entertainment that no longer exists. Today, the mass television audience has nearly disappeared and has been dispersed with the advent of cable and more specialized programming. *The Ed Sullivan Show* provided one of the last opportunities for the entire family to gather round the tube and be entertained by a single program. The show was immortalized by the hit Broadway musical *Bye, Bye Birdie* as the emblem of all that was good with television. For contemporary viewers it offered a rare opportunity to witness the performances of many of the twentieth century's greatest artists. As authors Harry Castleman and Walter Podrazik wrote of Sullivan in 1989, "He was good because he was a good packager of entertainment. . . . He could spot talent, knew how to balance an hour program, and didn't waste time calling attention to himself. We could use more hosts like him now." Sullivan's legacy is enshrined in the many "really big shews" that entertained a generation.

Sullivan, John L. (1858-1918)

Bare-knuckle prizefighter John L. Sullivan became a symbol of ethnic pride and working-class masculinity to the nineteenth-century, Irish-American community from which he emerged. Because of his boisterous claims to "lick any son of a bitch in the house" and his ability to back up his claim, many Irish Americans saw in Sullivan a way to take revenge upon the unwelcoming American society. The working-class Irish took pride as Sullivan knocked out his Anglo-Protestant opponents, yet Sullivan's popularity went beyond mere ethnic and class identity; the rest of American society slowly began to accept Sullivan as well. Because of his mass appeal, Sullivan became one of the first cultural heroes and sporting celebrities of the nineteenth century. Along with his rise in popularity, boxing earned a measure of respectability as a sporting endeavor. When Sullivan began boxing, prizefights were against the law. By the time he quit, boxing matches were a cultural event attended by all segments of society.

John L. Sullivan

John Lawrence Sullivan was born into the Irish working-class community of Roxbury, Massachusetts, in 1858. Like many Irish immigrants, Sullivan's father worked as a hod carrier in the lowest-paying of the new industrial jobs. As was the norm for the youth of his community, Sullivan moved into the industrial work force quickly. He worked a variety of odd jobs but was unable to hold down steady work because of a tendency to get into fights with his fellow workers. To support himself, Sullivan began to play baseball and box semiprofessionally. He complemented his boxing with neighborhood fights in theatres and movie halls. Sullivan and his friends soon earned reputations through such street fights. It was in these theatres, the Sullivan legend later suggested, that he first stood up and made his famous boast, "I'm John L. Sullivan and I can lick any son of a bitch in the house." These claims, along with strongman demonstrations of lifting beer kegs above his head, soon earned Sullivan the nickname "Boston Strong Boy" and the reputation of an up-and-coming pugilist. On the strength of his reputation, Sullivan issued a challenge to Paddy Ryan, the reigning champion.

Prizefighting in nineteenth-century America was a working-class amusement, and fights often took place inside the ethnic saloons that dotted the working-class community. Middle-class society frowned

upon the practice of boxing, so much so that bare-knuckle prizefighting was outlawed. Champions often held a questionable position within the community. They often split their time between boxing, breaking up barroom scuffles, and brawling at the ballot box for the local political machine. Paddy Ryan was just such a champion. By 1882, however, he could ignore the young challenger from Boston no longer and agreed to a bout. In February, Ryan and Sullivan met for the first time in Mississippi City, Mississippi. Sullivan dominated the champion from the start, winning not only first fall and first blood, but knocking out Ryan after nine rounds.

Now recognized as the heavyweight champion, Sullivan did not become, like Ryan, political muscle. Instead, Sullivan issued his most famous and broad sweeping challenge. He dared anyone in the United States to last four rounds with him in a gloved match and offered a \$1,000 prize to those who could. With the offers lining up, Sullivan began a whirlwind tour of the states. His travels took on a carnivalesque atmosphere with juggling acts and vaudeville shows preceding his defeat of whoever challenged him. From 1878 to 1905, Sullivan won 31 of 35 bouts, 16 by knockout. Because of his tour and the fact that he rarely lost his bet, Sullivan's popularity soared. Irish Americans across the country flocked to see the man who fought with both the colors of the United States and Ireland in his corner. Because Sullivan fought gloved matches, his bouts were legal and could be seen by people who had not watched prizefighting before. Sullivan quickly became a cultural icon whose name and image appeared in advertisements and vaudeville shows.

Sullivan was still considered the champion of boxing and, as such, was required to defend his title in a bare-knuckle fight. He had managed to stave off most challengers with gloved matches, but by 1889, Jake Kilrain demanded a bare-knuckle bout. Kilrain had taken a path similar to Sullivan's, rising out of the Irish working class by his fists. His impressive record combined with the accumulated effect of years of Sullivan's legendary drinking made the odds even at the time of the fight. On July 8, 1889, the two men squared off in what would be the last bare-knuckle championship bout. Despite years of hard drinking and weak fights, Sullivan had trained himself back into shape. Fighting under the scorching Mississippi sun, Sullivan and Kilrain faced each other for more than two hours and 75 rounds until Kilrain was unable to start the 76th.

Although Sullivan did enjoy a great deal of popularity outside his working-class community, not every one accepted his display of masculine aggression and violence. Parts of the American middle class, especially the emergent Irish-American middle class, distanced themselves from the bruiser from Roxbury. Many cheered when "Gentleman" Jim Corbett, a man of breeding who had learned to box in a club instead of the street, knocked out Sullivan in 21 rounds in New Orleans in September 1892 to earn the U.S. world heavyweight boxing champion title.

During his career, Sullivan earned more than \$1 million, but spent it all. He became an advocate of prohibition and delivered lectures on the topic.

Summer Camp

For over a century, summer camps have provided millions of American children with their first taste of the world outside their family and neighborhood. The first commercial camp began in 1881; at the end of the nineteenth century, a handful of camps served elite Protestant boys almost exclusively. In the early twentieth century, the industry extended and diversified its reach. At its peak in the prosperous years after World War II, about one in six children attended camp. Camp is still an important part of many children's summers: while the traditional eight week private camp is no longer as popular as once it was, in the late 1990s over eight million children and adolescents between the ages of five and seventeen attend a wide variety of camps—5500 overnight and 3000 day camps—each summer. While day camps, short-term overnight camps and specialty camps serve increasing numbers of children, many camps feature traditional activities that have varied little for generations: living in cabins with children of similar backgrounds; taking daily swims and engaging in other water and land sports, hikes and overnight trips; doing arts and crafts; singing camp songs and roasting marshmallows around campfires. The industry has reflected disparate and changing goals, but the basic premise remains the same: that camps foster community life, personal development, and skill-building, while providing retreats from the problems and dangers of the outside world.

Summer camp is a distinctly American invention, whose origins reflect the aspirations and anxieties of late nineteenth century middle and upper class life. First, as cities grew, particularly in the Northeast, industrialization and urbanization inspired some well-to-do men (and a few women) to travel to wilderness areas to experience the reinvigorating romance of nature, and its fortification for urban life. Second, concepts of child-rearing among the upper and middle class were in transition; as the birthrate among urban well-to-do families declined, parents devoted increasing resources toward providing a sheltered and longer childhood for their smaller families. Acknowledging that children had their own peer cultures, adults expressed anxiety about how best to supervise and guide them. Rural children had traditionally helped their parents on farms during the summer, but increasing numbers of urban children and upper class children had no set tasks over the long vacation. In addition, the first summer camps reflected the particular anxieties of their founders, a group of white middle- and upper-class Protestant men who worried about the effects of modernity upon elite boys' manliness. Youth leaders feared the enfeeblement of those who, they believed, ought by virtue of their class to lead the nation. Camp was to be an antidote to the "softness" of the modern work regime and vacations at resort hotels: a place where privileged boys would experience the toughening effects of outdoor life, albeit amidst the safety of select peers and adult supervision.

Given that camps claimed to be an antidote to modern urban life, it is unsurprising that they achieved their greatest popularity near the largest urban centers, particularly at lakes and mountains within a day's travel of the densely settled Northeast. While smaller camping districts—such as the Upper Midwest and the mountains of North Carolina—emerged in the early twentieth century, summer camps have always been most popular in the Northeast, where they first started. The Gunnery Camp near Milford, Connecticut (1861-1879) has long been cited as the earliest camp model. It was not a separate camp but part of the summer term of a boarding school; for two weeks each summer, the boys lived in tents by the sea and simulated the life of soldiers. Other early efforts included the North Mountain School of

Physical Culture, northeast of Wilkes-Barre, Pennsylvania, run in the late 1870s for “weakly boys,” and the first church-sponsored camp, run by the Reverend George Hinckley of Hartford, Connecticut during the summers of 1880 and 1881 near Wakefield, Rhode Island. Ernest Balch’s Camp Chocorua, which ran from 1881 to 1889 on Asquam Lake, New Hampshire, was the first commercial organized camp. Chocorua provided a model that camps of all kinds would cite for years to come, in which children with similar family backgrounds lived together away from home, sharing leisure activities, chores, camp rituals and inside jokes.

Chocorua, like later camps, lauded the wilderness but took advantage of modern innovations. The boys made their own boats and did extensive chores around the grounds, but within a few years they were living in cabins instead of tents, and the camp had inaugurated a complex financial system to teach the boys about modern commerce. In general, while many camps started small, with a few tents and a rowboat, if they were successful they sheltered children from the wilderness that they extolled, and provided comforts and improved recreational facilities as quickly as they could afford them. From the 1880s onward, innovations have run the gamut from electricity to miniature golf courses, leading to countless discussions among camping professionals about what exactly makes a camp “campy.”

At the turn of the twentieth century, the field of camping expanded to benefit the poor as well as the rich. Progressive Era reformers worried particularly about the plight of new immigrant children growing up in city tenements, where poverty and overcrowding bred malnutrition and disease. Hoping both to assert a moral control over potentially unruly new Americans, and to provide healthful and pleasurable activities in rural settings for needy youth, a variety of nonprofit and charitable organizations started their own camps. Settlement Houses, church groups, and charitable organizations all sponsored short trips to the country for poor urban children. At the same time, camping opportunities for middle class children grew as YMCAs, YMHAs and their female counterparts began to work more intensively with children and adolescents. By the 1910s, reflecting new models of athletic girlhood, increasing numbers of girls’ camps opened. New youth organizations such as the Boy Scouts, Girl Scouts, and Camp Fire Girls specifically exhorted children to camp outdoors. By the early twentieth century, boys and girls of many ethnicities and social classes were camping at their own facilities (as in other forms of commercial recreation, children of color experienced more limited camping opportunities).

As ideas about child-rearing and recreation shifted over the course of the century, so did camps’ daily routines. Most of the very early camps had a decidedly religious character. Protestants, and later Jews and Catholics, saw in camp a means to reinforce their religious communities. By the 1920s, camping had expanded to serve a variety of interest groups, all of whom saw in camping communal possibilities that transcended their individual political, religious, and social differences. Zionists, Progressive educators, hiking enthusiasts, socialists, and military types all created camps in their own image. But they also were responsive to larger trends in children’s recreation. During the First World War, many camps adopted military drill and army-style discipline. In the 1930s, influenced by the pedagogical theories of John Dewey, a countering discourse stressed creativity, social adjustment, and personality development. One enduring legacy is the place of Indian-style ritual. In the first years of the twentieth century, Ernest Thompson Seton’s youth organization, the Woodcraft League, inspired many camps to “play Indian” by making teepees and totem poles, telling Indian stories by the campfire, and wearing

moccasins and headdresses. Driven by nostalgia and desire for pre-modern “authenticity,” many camps have continued to invoke Indian pasts.

Across the country, overnight camps flourished in the postwar years, as a generation of baby boomers grew to camping age. In 1948 the national umbrella organization, the American Camping Association, finally instituted national standards for camp accreditation, after decades of debate. But the years since have been rocky ones. Since the mid 1970s, more than 2500 camps, or about one in five, have gone out of business. In the late 1960s and 1970s, camp owners found themselves competing against not only trips to Europe but also the anti-authoritarian youth culture of that era. Camps near major cities and tourist centers have fallen victim to high expenses and the temptation of high real estate prices. In response, many traditional eight-week camps have inaugurated shorter sessions to accommodate parents who are scheduling their children’s summers more tightly around competing interests, including joint custody issues and alternate family vacation plans. In addition, traditional camps now compete against newer specialty camps which focus on particular skills or provide specific experiences: computer skills, weight loss, gymnastics or soccer, and bike tours across the country. At the end of the 1990s, 75 percent of all camps were run by nonprofit groups and social service agencies, serving children of all economic classes. In other words, the popular image of the extended vacation at a private eight-week camp does not fully reflect the experience of most contemporary campers, for whom the average stay is one week at a non-profit camp. But in the popular imagination, camps represent sites for children’s adventurous “coming of age,” rather than quick trips. In films such as *Meatballs* (1979), *Little Darlings* (1980), and *Addams Family Values* (1993), camps are a place where children and adolescents embark upon voyages of self-discovery, friendship, and loneliness, pranks of all kinds, and, if they are teenagers, sexual and romantic exploration. For adults who once attended them, camps often represent a nostalgic reminder of childhood.

For over a century, disparate groups have held in common the belief that rural spaces are healthier and safer for children, and that camps in particular can be spaces of social transformation, in which adults can teach children the arts of acculturation and good (class, racial, ethnic, religious, political and gender-appropriate) citizenship before returning them to their homes. Collectively, summer camps have shown an ability to change with the times and to accommodate different and sometimes diametrically opposed groups. They provide a window into the expansion of children’s recreation in the twentieth century, and to the changes in American social order that have enabled a widening range of communities to create children’s leisure in their own image.

Summer, Donna (1948—)

Singer Donna Summer was the first and perhaps only true luminary of the disco era. Beginning with a breakthrough 1975 hit that pigeonholed her as a libidinous electrified diva, Summer recorded several albums over the next few years that brought her international fame; for a brief time her style even seemed to be breaking down racial barriers in American pop music. She was often referred to as the "queen of disco" and by 1979 had topped the charts with *Bad Girls*, the best-selling album by a female performer that year.

Summer was born La Donna Gaines in 1948 and grew up in Boston. As a youth, she sang gospel in her church and moved to

Donna Summer

Europe before finishing high school when offered a role in the stage version of the popular hippie musical *Hair*. She spent the next several years in Germany, married an Austrian named Helmut Sommer (and kept his name after their 1974 divorce), and appeared in theater productions before beginning to work with two successful Munich producers, Giorgio Moroder and Pete Bellote, at their Musicland Studios. The duo made minor disco hits for the European dance-club scene that were quietly making their way to the underground night-clubs frequented by gays, blacks, and Latinos in New York City. Such discos grew in popularity when a downturn in the economy made such clubs—with their five-dollar cover for an evening of entertainment—a preferable alternative to concerts.

Billboard magazine had introduced a disco chart in early 1975 after savvy record companies realized the huge potential of the emerging dance-club scene: certain records were selling in the thousands without any radio airplay at all. Summer had two minor hits in Europe, then suggested to her producers that they record something similar to a breathy French hit from 1959, "*Je t'aime . . . moi non plus*" by Jane Birkin and Serge Gainsbourg. What they came up with was three minutes of Summer singing the words "love to love you, baby," a few other phrases, and a lot of moaning. When the track found its way to a party at the Los Angeles home of Neil Bogart, who had made a fortune in the sixties with a label that put out bubble-gum pop, his guests clamored to hear it over and over. He contacted Moroder and Bellote, asked them to make a longer version, and signed Summer to his new label, Casablanca.

Summer had a huge hit in the United States with "Love to Love You, Baby," and a debut album of the same name went gold. "It was a disc that spun day and night throughout the summer of 1975," wrote Albert Goldman in *Esquire* just two years later. "To the layman, it was just another catchy tune; to the initiate, it was the first unambiguous sign that we were in for another epidemic of the dancing sickness—that recurrent mania that sweeps over this country and Europe on an average of once every ten years. . . ." *Time* journalist Jay Cocks wrote, three years after its debut, that the song seemed to signify "disco's coming-out party," the emergence of homosexual subculture into mainstream America. Goldman termed it "the first frankly erotic album ever to achieve wide currency and airplay. Broadcasting the cries and moans of a woman enjoying intercourse may not sound like much of a breakthrough in this age of explicit sex and rampant pornography," Goldman wrote in 1977, "but it must be borne in mind that phono-recording is the most oppressively censored medium in America."

Summer became a household name. For a time she had a constant bodyguard, since fans were known to trap her in elevators. She released a number of albums over the next few years, including two in 1976, *A Love Trilogy* and *Four Seasons of Love*. A less-discofied album, *I Remember Yesterday*, had a great hit the following year with "I Feel Love." The song was notable for what came to be known as the "galloping bass line," a thumping, 140-beat-per-minute backbone of drum-machine rhythm structure that became the staple of many a disco hit. "Donna Summer snapped her choruses over booming rhythm tracks that moved the artfully tied construction boots of gay men and the teetery hetero platforms of the Saturday Night Fever disco hordes," wrote Gerri Hirshey in *Rolling Stone*. Summer's 1978 double-live album, *Live and More*, sold millions.

In 1978 Summer made her film debut in *Thank God It's Friday*, and a song she wrote and sang for it, "Last Dance" won her one of several Grammy Awards that year. The album *Bad Girls*, released in 1979, featured a blend of rock and disco—much of which she actually

wrote herself—and garnered both good reviews and, again, huge sales. Yet it would also be her last for Casablanca, and in 1980 she became the first act signed by record industry executive David Geffen on his new label. She made *The Wanderer* in 1980 but had only a few minor chart successes over the next decade.

Despite her low profile for so many years after the death of disco, Summer has long enjoyed a cult following. The resurgence of disco kitsch in the mid-1990s—which helped breathe a bit of life into the careers of the Village People and the Bee Gees—was also beneficial to her. In March of 1998 she gave a benefit concert for New York City's Gay Men's Health Crisis at Carnegie Hall. "After nearly two hours of mature ovations and controlled excitement . . . the remarkably well-behaved audience could no longer be contained," wrote Larry Flick in *Billboard*. "As she began a salacious, guitar-drenched rendition of 'Hot Stuff,' fans rushed down the red carpeted aisles toward the stage." Summer lives in Nashville and hopes to see a musical she wrote, *Ordinary Girl*, debut on Broadway in 1999.

Sun Records

Established in Memphis by visionary Sam Phillips in 1952, Sun Records revolutionized pop music. At his Memphis Recording Service, Phillips recorded blues artists and then started Sun as a home for some of them. In 1954 Phillips recorded Elvis Presley, whose blending of musical genres had a major impact on the course of popular music. In his book on Sun, Colin Escott quotes Phillips on Elvis: "He sings Negro songs with a white voice which borrows in mood and emphasis from the country style, modified by popular music. It's a blend of all of them." After selling Elvis' contract to RCA for \$35,000, Phillips had the capital to continue work with influential artists like Carl Perkins, Johnny Cash, Jerry Lee Lewis, and Charlie Rich. In 1969, Sun was sold to recording executive Shelby Singleton who went about reissuing many of Sun's important early recordings.

Sundance Film Festival

The Sundance Film Festival helped to revolutionize the world of American independent cinema by cultivating an audience for daring and innovative films, and often catalyzing theatrical distribution deals for such films that otherwise would not have a chance for release. In 1981, actor Robert Redford, interested and concerned about the state of film in the United States, founded the Sundance Institute, an organization devoted to the support and development of emerging screenwriters and directors. Quickly turning into a fertile ground for new artists (over 300 filmmakers benefit annually from its various film, screenwriting, and cultural programs), the Institute ballooned into the high-profile Sundance Film Festival, an annual, winter event held in the quaint village of Park City, Utah, that is attended by over 10,000 people. The festival runs over a period of ten days, and screens international films, documentaries, short films, and American independent premieres—making the festival the pre-eminent showcase for American independent films in the world. Understanding the importance of encouraging the spectrum of visions that film artists have, Redford and his Institute have helped to enhance the quality of American films, along with giving an array of talented people the opportunity to develop and refine new work. The Sundance Film Festival has also helped to launch the careers of talented, eccentric actors and actresses that mirror its hip, young aesthetic, such as Lily Taylor and Parker Posey. Because of Sundance's widely publicized success stories of past participants (Quentin Tarantino/*Reservoir Dogs*, Neil LaBute/*In the Company of Men*, and Allison Anders/*Gas, Food, Lodging*, for example), and the diverse and bold style of the films it supports, the festival has attracted a great deal of attention in and out of Hollywood, making it one of the most talked about events related to the film industry.

Studios tend to pursue more commercial scripts; stories that offer the guarantee of drawing in large audiences and funds. Scripts bought by large studios are often reworked without the original writer to match the studio's market-driven vision, and not the artist's. But with Sundance and its persistent focus on risky choices that were pleasing audiences, sleek studio executives armed with cellphones and celebrities began to flood the Sundance Film Festival, giving it sudden prestige. As American audiences began to lust after such stories, studio executives became more sycophantic towards their writers and directors. Wining and dining cutting-edge filmmakers, during the course of the festival they often foster careers that prove to be long-lasting.

Films screened at Sundance started a new trend towards dramatizing stories of a darker nature. Whether it be physical violence with an edge of black humor (Quentin Tarantino), or emotional violence (Neil LaBute), people were becoming more drawn to films that explored different terrain and did not necessarily have happy endings. Large studio films tend to offer easy entertainment. Even when they are sad, there can be excessive sentimentality that allows for an audience to have an emotional release and leave the theater satisfied after having had a good cry. But the new wave of films and

Carl Perkins, one of the original Sun Records recording artists.

filmmakers that Sundance was producing did not do that. Instead, they offered worlds with little solace or answers where characters were cruel to each other, as in Labute's film *In the Company of Men* (which premiered at Sundance in 1997, launching his independent film career), which told the story of disillusioned and bored corporate men who seduce a mute woman in their office just so they can have the satisfaction of dumping her. It is important to tell these kinds of stories, because they explore the intricate ways people relate to one another, which are often unhealthy. These films leave audiences feeling uncomfortable, and that is a new and confusing feeling, but not necessarily a bad one. There is nothing wrong with "feel-good" entertainment, but it is refreshing to have a film take chances with character, storyline, and behavior.

Sundance has even produced an "illegitimate offspring" in the form of "Slam Dance." Also in Park City, it supposedly includes films that were rejected by Sundance, as well as others, and holds its festival concurrently with Sundance's. Slam Dance, too, has caught on and now Hollywood executives have to divide their time between both festivals, always on the lookout for fresh, undiscovered talent.

Independent film's involvement with larger studios has not always been a smooth relationship. Writer/director Todd Solondz, for example, whose film debut *Welcome to the Dollhouse* hit big after premiering at Sundance in 1996 (it was the winner of the Grand Jury

Prize), was courted by a studio that wanted to back his next film, *Happiness*. But when executives balked at Solondz' delicate, dark story about a tortured suburban pedophile, Solondz would not tone it down, and was promptly dropped by that studio (another studio picked up the film, and it was released and received good reviews).

For two weeks in winter, throngs of entertainment people flock to the little town of Park City, Utah, as the world watches via entertainment programs and the news, to network and buy independent films. There is no restaurant, bar, or street corner in town that is without somebody affiliated with the film industry and ready to deal.

Sunday, Billy (1862-1935)

A former professional baseball player with an entertainer's flair and a mastery of idiomatic language, Billy Sunday set the pace for modern evangelism. His tabernacle crusades of the early 1900s combined showmanship with Fundamentalism and produced thousands of converts. His influence on the cultural dynamics of the country is incalculable for, while many doubted the sincerity of Sunday's believers, his "Elmer Gantry" style would be copied by American evangelists throughout the twentieth century, serving to increase and cement the religious right as a significant force in society.

Born William Ashley Sunday on November 19, 1862 in a farmhouse near Ames, Iowa, Billy Sunday seemed an unlikely candidate for the ministry. While a stint in an orphanage instilled habits of honesty, Sunday was also known to fight, drink, and chase women. He held a series of odd jobs until a baseball scout noticed his athletic abilities, and in 1883 he joined the Chicago White Stockings and enjoyed the boisterous life of a professional athlete. One afternoon in 1886, while out with friends at a Chicago saloon, Sunday encountered an evangelistic group from the Pacific Garden Mission. Intrigued by their singing, he accepted an invitation to services and was soon converted, joining the Jefferson Park Presbyterian Church a short time later. He continued to play baseball, but gave up his habits of drinking and swearing, and began giving inspirational talks to young fans. Sunday left baseball in 1891 to work for the Chicago YMCA. In 1893, he joined J. Wilburn Chapman's evangelistic services as an advance man, handling technical details for the revival

Billy Sunday

services. When Chapman retired in 1895, Sunday assumed his place and began a touring ministry.

Sunday's tabernacle crusades were conducted in temporary wooden structures with sawdust covered floors. While the revival meeting was not new to America—the tradition stretched back to the Second Great Awakening of the early 1800s and the camp meetings on the frontier—Sunday added new elements to make his events successful. Careful planning went into the crusades, and teamwork was essential. A Sunday campaign resembled a vaudeville show as much as a mission; advance men promoted the coming attraction, secretaries made local arrangements, and bands and choirs were hired to provide entertainment. In 1909, Homer A. Rodeheaver, a song leader and trombone player, joined Sunday's troupe, and the tabernacle rang with music and excitement in the build-up to Sunday's explosive sermons.

Combining athletic gestures with colorful language, Sunday harangued his audiences about the need to get right with God. He defended the brevity of his visits by saying, "They tell me a revival is only temporary: so is a bath, but it does you good." He linked religion to patriotism and upright living, urging people to accept Christ as their savior and to signify their intention to convert by walking down the aisle and shaking Sunday's hand. Thousands did so. A New York campaign alone drew a million and a half people with 100,000 conversions. The weakness in his work was that he did not encourage people to join any specific church, and thus many of his converts never became committed to a particular faith.

Sunday did not avoid controversial issues or tone down his Fundamentalist message in order to court popularity. He advocated Prohibition and wholeheartedly embraced the war effort, using religion to promote the sale of war bonds during World War I. He denounced Modernism in religion, advocated the enactment of laws to ban the teaching of evolution in schools, and was a friend and advisor to conservative politicians. Unlike most evangelists, who settled down to become pastors or teachers in religious colleges, Sunday remained a fixture on the "sawdust trail." By his death on November 6, 1935, he had led over 300 campaigns and claimed to have brought 300,000 souls to Christ.

By using the modern techniques of show business and linking religion not to intricate theology, but to common language and experiences, Billy Sunday established a unique American form of evangelism. Later leaders, most notably Billy Graham, would continue his practice of large-scale campaigns aimed at emotional conversions.

Sunday Driving

A catchphrase that made specific reference to people who broke the Sabbath by driving their automobiles, especially during church

services, Sunday driving stood as a metaphor for what many believed was a nationwide decline in morality. For many Americans, the twentieth century marked an irreversible decline in everything they held dear. Uncontrollable “outside forces” seemed to be tearing apart families, destroying tight-knit communities, and eroding the foundations of morality on which previous generations had built their lives. Ministers around the country railed against these changes and identified the accoutrements of modernity as prime culprits: telephones, radios, movies, and professional sports all received a measure of blame for corrupting the American spirit. To many people, however, nothing symbolized the degeneration of the modern era quite as well as the automobile. And to ministers facing declining church attendance, a particular cause for alarm was the increase in Sunday driving.

Ministers were not the only ones who believed that Sunday driving was cause for public concern. In a 1922 article in *Scribner's* magazine, Allen Albert claimed that “in good motoring weather I have attended Sunday-morning services from Waycross, Ga., to Manistee, Mich., and it would be hard to find any pews emptier anywhere.” Ruth Suckow also illustrated the concern that the growing popularity of Sunday driving caused in her novel, *Country People* (1924): “It was a wonder to Emma to sit on the porch on Sunday afternoons and count how many vehicles went by. But grandpa wouldn't even try to count. ‘Ach, no! no! no!’ was all that he would say. This was all so wicked on Sunday!” In Nashville, a 1923 ordinance forbade any business to sell gasoline, oil, or automobiles on Sundays, and prohibited automobile service facilities from operating as well. “Everyone wanted to enjoy a Sunday outing in the automobile,” editorialized the *Tattler* in 1929, “but realized he was taking a big chance. He might run out of gas, have a puncture or break down miles away from home. Then the whole family would have to walk back.”

Despite protests against Sunday driving, however, the practice always had many more advocates than opponents. Some people pointed out that automobiles could just as easily carry people to church as away from it. As *Motor Age* commented in 1919: “Even the farmer in the remotest rural district may wait until the last minute, jump into his car and go to church, attend services and be home in less than the time it used to take him to get there alone.” Others, such as a writer for the *Christian Advocate* in 1920, rationalized that automobiles might encourage “many immoral practices,” including “desecration of the Sabbath,” but that “all good things are liable to abuse.” Some believed the freedom and mobility of automobiles would encourage religious celebration. “He . . . would take his religion out of doors, where God smiled and spoke to burdened business men,” wrote a writer for *Christian Century* in 1928. “In serene solitude he would drive his car over smoky and smelly roads, oblivious of all but the deeper invisible realities. To the care-free accompaniment of the motor he would raise hymns of joy to the God of breeze and field.” And of course there were all of the Americans who took to the roads on Sundays, disregarding protests from those who held onto older notions of morality. For better or for worse, Sunday driving became a standard feature of American culture—more notable for its unremarkable regularity than for the emotionally charged controversy it once provoked.

Sunset Boulevard

Axel Madsen writes of *Sunset Boulevard* (1950) that it is “a gnawing, haunting, and ruthless film with a dank smell of corrosive delusion hanging over it.” A classic film noir, *Sunset Boulevard* is a cynical and decadent tragi-comedy narrated, in true noir fashion, by a dead man. Populated by faded silent movie stars like Gloria Swanson, Erich von Stroheim, and Buster Keaton, it is the story of a weak-willed writer (William Holden) who, in trying to escape his creditors, happens upon the mansion of a wealthy, but slightly mad, silent movie star who perpetually waits for a phone call from a studio which has long since forgotten about her. The handsome writer becomes a kept man who struggles to make it in the movie business, only to fall prey to his keeper as he tries to make his escape from her obsessive love for him.

Typical of Billy Wilder's sophisticated and cynical style, *Sunset Boulevard* is a black comedy about the casualties of the Hollywood dream machine, and those obsessed by fame and success in the cruel world of the movie studios. The film is filled with stylish settings and wonderfully biting dialogue, and it has attained the status of a cult classic with quotable lines like the famous, “I'm ready for my close up now, Mr. De Mille.” There is also a Broadway musical version of the film created by Andrew Lloyd Webber.

Super Bowl

More than any other sporting event in America, the Super Bowl has truly become a cultural phenomenon. According to 1999 National Football League figures, more than 138 million people in the United States alone watched the Super Bowl, with over 750 million total Super Bowl viewers in 187 countries. The Super Bowl has become, according to writer Michael Real (as quoted in Dona Schwartz's *Contesting the Super Bowl*), a “mythic spectacle,” that “in the classical manner of mythical beliefs and ritual activities. . . is a communal celebration of and indoctrination into specific socially dominant emotions, life-styles, and values.” The Super Bowl brings together several institutions: sports, television, advertising, and the American corporate culture. The Super Bowl serves as an end-of-the-season celebration, glorifying revenues accumulated by team owners, advertisers, media outlets, and many other businesses that share in the tremendous profits generated by professional football.

The Super Bowl itself stems from a fierce rivalry between two football leagues. In 1960, the upstart American Football League (AFL) challenged the popular and well-established National Football League (NFL). The AFL was well funded and soon began to contest the NFL in a bidding war for college players. In 1965, the AFL scored its first major coup when the New York Jets signed University of Alabama star quarterback Joe Namath. Namath's personality, media appeal, and on-field success gave the AFL an early degree of legitimacy. The AFL was also helped by a television contract. Under an exclusive deal with the American Broadcasting Company (ABC), each AFL team was paid \$150,000, money that kept the league afloat during the difficult, early years of its existence.

In 1966, the AFL decided to further assert itself by attempting to sign established, veteran NFL players. When several of its stars signed lucrative contracts, the NFL found it had little choice but to accept the situation and started working on a merger of the two leagues. In June 1966, an NFL-AFL merger was announced. The merger called for a common draft of college players and a championship game—the Super Bowl—to start in 1967. The new league would be called the National Football League with the previous rivals split into two divisions: the National Football Conference (NFC) and the American Football Conference (AFC). The full merger would take place in 1970. The Super Bowl pitted the winners of the two conferences in one game in late January, following the regular season and a series of playoff games.

During the first few years of the new National Football League, the two conferences maintained separate identities and schedules. Initially then, the Super Bowl became a contest where the upstart AFL would try to prove its mettle against more established teams. As might be expected, in the first two Super Bowls (Super Bowls I and II), the NFL Green Bay Packers easily defeated their AFL opponents. Most believed it would take years before an AFL team would actually win a Super Bowl. Then in Super Bowl III, the AFL champion New York Jets were matched against the powerful Baltimore Colts. Jets quarterback "Broadway Joe" Namath, on the eve of the contest in which the Colts were heavily favored, "guaranteed" a Jets victory. On January 12, 1969, the Jets stunned the sports world by defeating the Colts 16-7. The Jets victory finally gave the AFL its due and helped bring the two leagues together when the merger officially began the next year.

Enhancing the merger of the two leagues in 1970 was a television package from ABC. For just over \$8 million each season, ABC agreed to televise thirteen prime-time games on Monday nights. Television revenues for the NFL totaled nearly \$150 million. Overall, it meant that each of the twenty-six NFL teams in 1970 would receive about \$1.7 million. The popularity of football stemmed primarily from its television exposure. During the 1970s, television transformed football into America's premier spectator sport. Before the 1973 season, Congress lifted TV blackouts on home games that were not sold out. While some predicted that this legislation would make it hard for some small market teams to fill the stands, that did not prove to be the case. Not only did TV viewing increase, but teams actually sold more tickets. And it was TV contracts that became the meal ticket for the NFL—not single game sales. In 1978, the NFL signed the most lucrative sports TV contract ever. In January of that year, a Lou Harris poll found that 70 percent of the nation's sports fans followed football, compared to 54 percent who followed baseball.

With the help of television, over the past three decades the game on the field has become just an ancillary part of the entire Super Bowl experience. More than anything else however, the Super Bowl is

about money and corporate advertising. This January spectacle is the most lucrative sporting event in the United States and has become as much an advertising contest as a sports production. The NFL sold the broadcast rights for the 1999 Super Bowl for over \$60 million and NFL properties, the licensing arm of the league, sells approximately \$200 million in merchandise for the game. At the Super Bowl itself, logo placement, advertising angles, and television commercials have taken on more importance than the outcome of the game. In fact, television commercials slated for the Super Bowl are often shown as news items on local broadcasts days before the game. There are even postgame telecasts that examine and evaluate the quality of Super Bowl commercials.

To demonstrate the serious connection between advertising and the Super Bowl, one need look no further than Anheuser-Busch's "Bud Bowl," which has been a part of Super Bowl television broadcasts since 1989. The Bud Bowl is a fictitious football game, played out in expensive commercial spots, between animated beer bottles of Budweiser and Budweiser Light. The Bud Bowl employs real announcers and millions of dollars are spent to show these beer bottles running up and down the field attempting to score touchdowns. But the key to the Bud Bowl is Anheuser-Busch's promotions, which begin months before the game itself at hundreds of retail outlets. The beer company offers thousands of prizes that are tied into these advertising spots at the Super Bowl. Because of the advertising and prize giveaways, the final score of the Bud Bowl has become more important to the American television viewer than the results of the Super Bowl. Anheuser-Busch even set up a toll free number so potential prize winners could call and find out the final score of the Bud Bowl.

By 1999, 30-second Super Bowl advertising spots were selling for well over \$1 million. Yet the evidence indicates that those sums are well worth the price for American corporate advertisers. In 1991, the Gillette Company used the Super Bowl to introduce its new Sensor razor. Gillette spent over \$3 million on Super Bowl advertising to reach their male audience. By focusing its ads on Super Bowl Sunday, Gillette sold out its Sensor inventory through February and March following the broadcast, and the company was able to increase its market share by 35 percent in 1991. Evidence gathered by writer Phil Schaaf for his book *Sports Marketing* indicated that 66 percent of people tested recall Super Bowl commercials.

Money and corporate infiltration of the Super Bowl has also influenced the type of fans that attend the January event. In a sport that caters to the "average" fan during the regular season, few of those ordinary team boosters will ever have the opportunity to see a Super Bowl. Tickets are not sold to the general public—most go to corporate sponsors, celebrities, National Football League owners and officials, other players, and news organizations. In fact, during Super Bowl XXIX, 646 news organizations and 407 international media representatives were given Super Bowl credentials. The number of journalists working at the Super Bowl for these newsgroups totaled 2846. An actual statistical breakdown of fans who attend a Super Bowl shows the following: 35 percent attend on corporate expense accounts; 33 percent earn more than \$100,000 annually; 27 percent own their own company; 25 percent are corporate officers; and 22 percent sit on corporate boards of directors. So the look of a Super Bowl is far different from the look of a football game on a regular Sunday in October or November.

But a Super Bowl does bring in a great deal of money to a host city. It is estimated that the Phoenix metropolitan area brought in

\$187 million when it hosted the Super Bowl. In Minneapolis, Minnesota, during the 1991 Super Bowl, 2,000 jobs were created for that event. All but the first Super Bowl has been a sellout, even though the cheapest tickets at the 1999 game sold for just over \$250. Scalpers, or illegal ticket brokers, generally get four times that much for a Super Bowl ticket. Tim Green, a former professional football player, wrote in his book *The Dark Side of the Game* that, "January is when the big money really starts to drop." Green is referring to the legal and illegal betting that accompanies the Super Bowl. The game is the most gambled on sporting event in the United States. A person can lay a wager on just about any facet of the game: the first quarter score, which team will score first, which running back will get the most yards, the total score, or how many yards a particular quarterback will throw for. Between \$35 and \$60 million in legal gambling goes on for each Super Bowl game—illegal estimates are much higher.

Since television and media coverage dominates the Super Bowl, it is inevitable that politics has entered the formula. The Super Bowl is the most watched one-day event in the world. There is no worry about a rain-out and viewers represent a wide demographic range (41 percent of all American television viewers are female). The Super Bowl is also the third biggest eating day in America—behind only Christmas and Thanksgiving. In 1993, several national women's groups announced that Super Bowl Sunday was the worst day of the year for violence against women. Women's shelters claimed that hot lines were "flooded with more calls from victims [on Super Bowl Sunday] than any other day of the year." And a study was released by Old Dominion University in Norfolk, Virginia, which showed that hospital admissions of women rose after games won by the Washington Redskins. While many subsequently questioned the links between domestic violence and the Super Bowl, the women's groups had scored a public relations coup by releasing their finding just before the Super Bowl, when national and world media attention was so focused upon that event. But additional evidence showed that the Super Bowl brings out the worst in American sports fans. After Denver won its second consecutive Super Bowl in 1999, rowdy fans rioted in that city, overturning cars, breaking windows, and starting fires. One sports psychologist determined that testosterone levels of young males rose by 20 percent when their team won a big game. During the 1992 game between the Buffalo Bills and the Washington Redskins, American Indian groups used the Super Bowl media glare to call attention to what they believed were racist and demeaning use of nicknames and mascots on professional sports teams. The Redskin team nickname was considered especially egregious to the American Indian Movement (AIM) and protestors ringed the stadium on Super Bowl Sunday chanting slogans to voice their cause. Because of the media saturation in town for the Super Bowl, the American Indian Movement appeared on television and were interviewed for national and international media outlets. While nothing came of the protests, AIM was able to get their message out and even forced the National Football League to issue a statement about the team nicknames.

The Super Bowl has offered the American sports fan a plethora of heroic players and exciting teams: Joe Namath, Terry Bradshaw, Joe Montana, John Elway, the Miami Dolphins, Pittsburgh Steelers, Dallas Cowboys, and San Francisco 49ers. But player statistics and heroics have become overshadowed by economic, social, and cultural issues: Who will sing the national anthem? Who will perform at the half-time festivities? What television commercials will catch the attention of the American public? What political issues might arise this year? And, what is the betting line on the game? These issues

have turned the Super Bowl into more of a media event than a sporting contest.

Superman

The first and most important comic book superhero, Superman looms large not only in comic books but in all of twentieth-century American popular culture. Among the few American characters instantly recognizable in virtually every corner of the globe, Superman is truly a pop culture icon. Certainly there is no purer representative of the fantastic possibilities inherent in the comic book medium.

Superman sprang from the imagination of two Jewish teenagers growing up in Cleveland during the Great Depression. Jerry Siegel and Joe Shuster were both lower-middle-class sons of immigrants who believed in the American dream. Avid readers of science fiction and pulp magazines, the two youths aspired to write and draw their own adventure comic strip. In 1934, after several try-outs in their school newspaper, Siegel and Shuster hit upon the idea that they suspected would be a salable comic strip. In his striking red-and-blue costume with flowing red cape and red "S" emblazoned on his chest, Superman was the ultimate strongman, capable of achieving almost any physical feat. He was a fantastic being from a doomed alien planet (later revealed to be Krypton), come to apply the superhuman blessings of his native home in the service of his adopted world. And perhaps most importantly, he assumed the persona of an undistinguished mild-mannered newspaper reporter named Clark Kent. Unpretentious and seeking no glory, he was a superhero who would retreat into the anonymity of American society when his spectacular deeds were accomplished. Here was the crucial point of reference for a Depression-era culture that extolled the virtues of the "common man."

Superman was a brilliant creation—ingenious in its very simplicity and instantly accessible to a mass audience. It was, of course,

Superman

not an entirely original concept. Superheroes of various sorts had a long history in popular myth and folklore. But the Superman/Clark Kent dichotomy was original as a contemporary expression of adolescent wish-fulfillment. Siegel and Shuster, both of whom wore glasses and admitted to being shy, insecure, and unsuccessful with girls in high school, put much of themselves and their fantasies into the character. In truth, the essence of Superman's appeal was almost universal—especially to young males. Any boy or man who has felt in any way inadequate in a society of formidable male gender expectations has at times wished that he could transcend his human frailty as easily as Clark Kent removed his glasses.

Such a concept was destined to be a popular one with young people. But the middle-aged men who ran the newspaper syndicates failed to recognize Superman's appeal. After several years of failing to sell their idea to the newspapers, Siegel and Shuster reluctantly sold it to a fledgling comic book company called Detective Comics (DC), for whom they had done some freelance work. As part of the contract, the two young men would write and draw the series as long as DC allowed them to, but they also forsook all rights to the character in exchange for \$130 (\$10 per page for the 13-page story). It proved to be one of the most infamous contracts ever signed in the history of the American entertainment industry.

Superman debuted in the first issue of DC's *Action Comics*, dated June 1938. The cover of the classic issue, which now fetches prices of over \$50,000 from collectors, showed the costumed hero

lifting an automobile over his head as stupefied criminals flee in terror before him. It was an impossible image that DC's publishers feared would only confuse readers. But the audience responded positively and quickly. Only a few issues into publication, *Action Comics* became the best-selling comic book on the market, and the reason—confirmed by informal newsstand surveys—was obvious: Superman was a winning concept.

In later years Superman evolved into a character who was stoic, morally beyond reproach, and frankly rather humorless and dull. But Siegel and Shuster initially portrayed him as a feisty character who most closely resembled a super-powered "hard-boiled" detective. He was a wise guy, who took to crime fighting with an adolescent glee, routinely took time to mock and humiliate his adversaries as he thrashed them, and did not shrink from breaking the law when it stood in the way of true justice. It was a macho world into which only the glamorous Lois Lane intruded. Although she had no time for the plain Clark Kent, she was, of course, infatuated with Superman, who rarely had time for her. Siegel and Shuster cast their superhero as a populist "champion of the oppressed," who defended common Americans from the evils of big money, political corruption, and greed in all its forms. As the United States drifted into war, Superman turned his attention to foiling spies and saboteurs on the American home front, although his creators deliberately kept him away from the front so as not to upstage America's real-life heroes in uniform.

At a time when most successful comic book titles sold between 200,000 and 400,000 copies per issue, each issue of *Action Comics*—featuring only one Superman story—consistently sold around 900,000 copies. Mindful of these figures, DC featured the character in a second title, *Superman*, which established industry records by selling a staggering average of 1,300,000 copies per bimonthly issue. The Superman phenomenon was not limited to comic books either. By 1941 Superman was featured in a syndicated newspaper strip, a series of short animated films produced by Paramount, and a highly popular radio show that opened with the immortal lines: "Faster than a speeding bullet! More powerful than a locomotive! Able to leap tall buildings in a single bound! Look! Up in the sky! It's a bird! It's a plane! It's . . . Superman!" Within a few short years of his comic book debut, Superman had become a cartoon figure almost as widely recognized as Disney's Mickey Mouse.

It is difficult to overestimate the influence that Superman has had on the comic book industry. Before his appearance, comic books hardly constituted a medium distinct from newspaper comic strips. Most featured either reprinted newspaper strips or derivative variations thereof. Superman was the first original character to exploit the fantastic creative possibilities of the comic book medium—possibilities limited only by the imagination and skill of writers and artists. Images that would have been technically onerous or impossible to represent in motion pictures or radio could be easily adapted to the comic book format. Superman's improbable adventures demonstrated this, and he single-handedly gave the comic book industry a reason for being. Superman became the most widely imitated character in comic books, spawning a host of costumed superheroes from DC and its competitors. These superheroes established the comic-book industry as a viable commercial entertainment industry, and they have been the mainstay of comic books ever since.

Superman also established DC Comics as the industry's leading publisher. For a time, even his creators benefited financially from Superman's profits. But Siegel and Shuster saw diminishing returns for themselves even as their creation continued to generate massive

revenue for the publisher. In 1947 they sued DC, trying to secure the profits that they claimed Superman should have earned them over the years. The court ruled against them, claiming that under the original 1938 contract, they had no rights to the character. For the next several decades they saw no royalties from the comic book industry's most lucrative property. In the late 1970s, after the news media reported that Superman's creators were living in poverty, DC relented and paid them a yearly stipend for the remainder of their lives. A notorious tale well known to comic-book creators, the plight of Siegel and Shuster helped to rally writers and artists to push for new royalties and financial incentives, which the major publishers subsequently introduced in the 1980s.

Superman remained the most popular and best-selling comic-book character well into the 1960s. Under the close editorial direction of Mort Weisinger, Superman evolved into a character befitting his status as the elder statesman among superheroes. Abandoning all semblance of his rambunctious younger days, Superman became a staid, predictable, and paternalistic figure, always adhering to the strict letter of the law. He also gradually acquired an array of powers that made him almost invincible: flight, X-ray vision, telescopic vision, super-hearing, super-breath, the ability to move through time, the strength to move planets, and invulnerability to virtually everything except Kryptonite, the meteoric remnants of his native world Krypton. Weisinger created a fairy-tale Superman mythos that incorporated Superman's youth (as Superboy in the Midwestern town of Smallville), his friends (Lois Lane and Jimmy Olson were featured in their own comic books), villains like Lex Luthor and Brainiac, and spin-off characters like Supergirl and Krypto the Superdog. To overcome the creative limitations of the virtually omnipotent superhero, Weisinger also conceived a variety of "imaginary" stories that explored such questions as, "What if Superman had gone to another planet besides Earth?" and even "What if Superman had died?" These simple and entertaining stories were clearly aimed at children, and they sold well. Airing from 1953 to 1957, the highly successful *Adventures of Superman* television series, to which Weisinger was a consultant, kept Superman in the public consciousness and served to promote his comic books to the new generation of baby boomers. In the mid 1990s, an ABC television series called *Lois and Clark: The New Adventures of Superman* introduced the characters—played by Teri Hatcher and Dean Cain, respectively—to a new generation of viewers.

Superman's popularity among comic-book readers waned in the late 1960s. Faced by intense competition from Marvel's wave of more "human" superheroes like Spider-Man, the Hulk, and the Fantastic Four, Superman's irreproachable Boy Scout image had become a commercial liability for new generations of young people grown expectant of anti-establishment trends in youth culture. By the mid 1970s, the character's comic book sales were at an all-time low, although his image remained the most lucrative comic book licensed property for toys and other products. The pinnacle of the character's earning power came in the late 1970s and early 1980s in a series of major Warner Brothers *Superman* movies starring Christopher Reeve in the title role. Success in other media, however, did not translate into impressive comic book sales, which continued to lag well behind those of trendy morally ambivalent superheroes like the X-Men, the Punisher, and even DC's Batman, who began as a follow-up to Superman and proved to be far more adaptable to changing times.

The history of Superman in the comic books over the past several decades has largely been shaped by DC's periodic attempts to

revitalize the character by making him less "super." In 1971 Superman's powers were halved. In 1988, DC contracted popular writer/artist John Byrne to rewrite Superman's origin, hoping to spark fan interest. Surely the most blatant of these efforts came in 1992 with the much-hyped "Death of Superman." To no one's surprise, the event produced a short-term boom in Superman's sales and concluded in the "Rebirth of Superman." In 1997 Superman got a radical new costume change. While nostalgic fans disapproved, DC responded that it had little choice but to try new things to reverse Superman's steady commercial decline.

Superman will probably never be as popular as he once was. But that in no way diminishes his significance. As the archetype for the superhero genre so intrinsic to American comic books, he deserves his stature as the industry's de facto world ambassador. His presence is firmly etched into a global popular culture, encompassing motion pictures, television, advertising, music, and common language. And for the generations weaned on his adventures, Superman will forever remain the quintessential champion of truth, justice, and the American way.

Supermodels

The word "supermodel" was first used in the 1940s, but the supermodel phenomenon belongs to the 1980s and 1990s, when a few women epitomizing glamour and opulence captured the American popular consumer's imagination. For most of the supermodel era, the pantheon included Cindy Crawford, Naomi Campbell, Kate Moss, Claudia Schiffer, Linda Evangelista, and Christy Turlington—all of them tall, architectural, and distinctive in appearance—who represented both the triumph of unadulterated image and the mass marketing of fashion.

Models had been famous before—Suzy Parker in the 1950s, Twiggy in the 1960s, Christie Brinkley in the 1970s—but the supermodels were touted for taking charge of their own careers, marketing themselves assiduously, and commanding huge fees for themselves and their agents. They cast themselves in discrete roles: Crawford was the confident sexual one, Moss the waif, Schiffer the one who looked like Brigitte Bardot. Like most models, they tended to launch their careers in Europe, where the pay was relatively low but a girl (often as young as fourteen or fifteen) could accumulate photographs and develop a distinctive "look." Once in New York, the U.S. modeling capital, a girl hoped to sign or continue a relationship with a powerful agency such as Elite and Ford, where clients in search of an

Naomi Campbell leads a group of models on the catwalk for the Versace collection in Milan, 1997.

image looked first. The supermodels were lucky to enter the American scene at the moment in which fashion designers were changing their target market from the wealthy elite to the masses. When Calvin Klein began to advertise on television, billboards, and bus shelters, the subliminal message seemed to be that even common people and their clothes could attract attention; paradoxically, perhaps, his model Brooke Shields shot to celebrity (as, later, did his muse Moss). At the same time, Hollywood actresses had de-glamorized themselves; now that they were more inclined to appear in jeans and unwashed hair rather than in evening gowns and jewels, models stepped in to feed America's hunger for opulence, harking back to the glamour of stars such as Myrna Loy and Grace Kelly. Yet, perhaps because they had no real careers beyond posing, and didn't even select the clothes or products they would wear, the supermodels were able to represent a product, an image, completely—in this regard they were forums for display, not fleshed-out characters.

The individual supermodels themselves achieved name-brand recognition. Advertisers focused on the same six (and a few slightly less enduring lights, such as Elle MacPherson, Paulina Porizkova, and Tyra Banks) in part to show they could afford to: hiring Turlington for

seventy-two hours at a cost of sixty thousand dollars was a good way for a company to display its success, confidence, and solvency. Models and supermodels alike made most of their money in advertising: Turlington's 1991 contract with Maybelline, for example, netted her eight hundred thousand dollars for twelve days' work a year. The more prestigious work, including magazine covers, was comparatively unremunerative—in 1995 *Vogue*, *Glamour*, or *Mademoiselle* might pay as little as one hundred dollars a day—though the exposure did help establish a model as a commodity. But a woman who had achieved supermodel status never had to worry: in 1995 Claudia Schiffer, modeling's biggest wage earner, made twelve million dollars from various assignments. In the eras of Reaganomics and, later, recession, such well-publicized paydayes were part of a supermodel's allure.

The wild and bratty behavior that often accompanied the models' sudden wealth was another element of their mystique; unleashed on New York, a number of them danced and drugged the nights away, and they were known for prima donna behavior such as sulkily kicking their limo drivers in the neck. Off the runway and out of the magazine, they lived larger than life, and the careers of many would-be supermodels ended in financial ruin and despair. Psychologists Vivian Diller and Jill Muir-Sukenick, both former models, explained in *Psychology Today* that many in the business suffer from a "fragile personality that makes them potentially self-destructive . . . what we call 'extreme narcissistic vulnerability.'" Without a secure sense of and liking for herself, argued Diller and Muir-Sukenick, such a young woman might easily fall prey to exploitative agents, clients, drug dealers, and others who prey on the young and attractive. Models' dissolution became a popular subject for articles, books, and movies, as audiences craved to see the girls consumed like the products they represented.

As it turned out, despite the supermodels' status, the public was interested in them as images, not as women. Though Campbell wrote a novel, and Crawford (who once referred to herself as "Cindy, Inc.") made TV specials and a movie, these attempts at establishing themselves as personalities largely failed. While some photographers and designers achieved respect and enduring fame as artists, their models, including the celestial six, were often considered merely a medium for expression. In the late 1990s, magazines started heralding "The Fall of the Supermodel," noting that reglamorized actresses were claiming many of the most prestigious modeling jobs and that consumers (in the words of superagent Katie Ford) had grown tired of "just seeing six people at the center of most magazines." Image was not enough to guarantee an enduring place in the popular imagination.

Surf Music

Surf music, while not always about surfing, emerged out of the subculture created by surfers in Hawaii and California in the late 1940s and 1950s. Two distinct streams of surf music developed, one primarily instrumental, the other predominately vocal, each expressing a distinctive aspect of the surfer subculture. The sound was most prominent in the early and mid-1960s, when instrumental surf music was heard accompanying television shows such as *Hawaii Five-O*, and vocal surf music by The Beach Boys was topping the sales charts.

While surfing as a form of recreation and sport developed in the nineteenth century as a Polynesian pastime, it was not until the early twentieth century that surfing caught on outside of Hawaii. Olympic swimming champion Duke Kahanamoku (1912 and 1920 Olympics) toured the mainland U.S. in the wake of his Olympic triumphs and created interest in surfing through exhibitions on both the East and West coasts. Early in the twentieth century, surfboards were made usually of solid wood, but big-wave riders increasingly preferred hollow boards after Tom Blake introduced one in 1928. Still, the lightest boards made of plywood weighed around 50 pounds, with big-wave boards weighing more than twice that. Blake introduced other design modifications, such as the addition of a tail fin, which aided in maneuvering.

World War II stalled surfing's development for the duration, then it transformed the sport as technological developments in plastic foams and resin revolutionized surfboard construction. Bob Simmons, a hydrodynamics student from Santa Monica, California, sandwiched polystyrene between two pieces of wood, wrapped the entire board in fiberglass, and sealed it with resin. The result was a lightweight, durable board that was shaped easily and could be maneuvered well with minimum experience. Postwar prosperity led to the development of local surfing communities in southern California, Hawaii, and eastern Australia. For many of these surfers, dedication to the sport required them to maintain "open" work schedules that allowed them to hit the surf whenever it was good. This often meant many of them were unemployed or worked only during low periods in the surf. This preference for surf over employment, reinforced by the traditional Hawaiian ideas of leisure, community, and nature, went against the grain of mainstream American postwar thinking, in which conformity and economic success were paramount.

Creating a counterculture of sorts, surfers not only promoted their sport but a way of life as well. This surfer lifestyle included Hawaiian "palapas," or palm-frond huts appearing on California beaches, with after-surf barbecues and campouts serving to bind this community together. *Surfer* magazine appeared in 1960 to inform the surfing community of events, products, developments, and achievements. Surfing films portrayed spectacular rides from Hawaii and Australia to California and vice versa, but these documentaries, shot on 16mm film, received little attention outside of the surfing community. Bud Browne, the pioneer of the surf documentary, presented *The Big Surf*, *Hawaiian Surfing Memories*, and *Trip to Makaha*, all in the 1950s. This subculture was too small to have an impact on mainstream culture until writer Frederick Kohner penned a 1956 novel based on some of the exploits of his daughter Kathy on a Malibu beach where she "hung out" with several prominent surfers including Mickey Dora (one of the sport's first superstars), Billy Al Bengston (aka "Moondoggie"), and Terry "Tubesteak" Tracey. Tubesteak began calling Kathy a "girl-midget" since she was around five feet tall, and the name quickly transformed into "Gidget." The

film *Gidget*, based on these stories, appeared in 1959, starring Sandra Dee and James Darren. Numerous sequels and knockoffs followed, such as *Gidget Goes Hawaiian* (1961), *Beach Party* and *Gidget Goes to Rome* (1963), *Muscle Beach Party* (1964), *Beach Blanket Bingo* and *How to Stuff a Wild Bikini* (1965).

The sound tracks for these movies were composed primarily of pop music with lyrics pertaining to the beach, but a new sounding music also made an appearance in these films, surf music. Created by Dick Dale, "King of the Surf Guitar," surf music began as a musical attempt to recreate the sensation of riding a wave. Dale's combination of cascading licks, rapid playing, and a powerful bass line served as a perfect soundtrack for surf documentaries, and occasionally turned up in Hollywood beach movies, but like films based on surfing, the music also developed along two different lines. Surf music by instrumental groups like Dick Dale and the Deltones, The Ventures, The Chantays, and the Surfaris, found a devoted audience among surfers themselves, as did classic documentaries such as Bruce Brown's *Endless Summer* (1964). Meanwhile, beach music by vocal groups like Jan and Dean and The Beach Boys flooded the mainstream airwaves and, along with beach movies, represented the surfing subculture to most other Americans.

Instrumental surf music reached its widest audience with the Ventures' theme for the television series *Hawaii Five-O*. The group also had hits with "Walk, Don't Run" and "Perfidia" (both 1960). The Surfaris (from inland Glendora, California) are best known for their 1962 song "Wipe Out," characterized by the hysterical laugh and high-pitched "wipe out" that opens the song. The Chantays reached number four on the sales charts with its classic "Pipeline," while Dick Dale and the Deltones continued their reign as the official cult band of the surf crowd with songs like "The Victor" (1964) and "Let's Go Trippin'" (1961). These instrumentals took elements of popular music and transformed them by emphasizing the bass line and using the guitar as a melodic instead of rhythmic instrument. A good example of this is found in The Ventures' "Walk, Don't Run." Written and originally recorded by jazz guitarist Johnny Smith, who was inspired by a "walk, don't run" sign in a New York subway, the song was recorded by country guitarist Chet Atkins in 1957 as a lilting ballad. By adding a driving beat and bass line, The Ventures created a version that recalled elements of Atkins' guitar work plus jazz elements such as "bending" notes and a blue tonality, all with a rock and roll beat. The song peaked at number two on the sales chart in 1960, right behind another beach-inspired song, Brian Hyland's "Itsy Bitsy Teenie Weenie Yellow Polka Dot Bikini."

Despite the popularity of instrumental surf music, or perhaps because of it, vocal surf music became the more widely disseminated form of the genre. While the music had little to do with the blazing guitars and heavy bass of Dick Dale and The Ventures, the lyrics of vocal surf music sought to capture the feel of the surfer subculture. "Surfin'" (1962), the first hit by a teen group from Hawthorne, California, called The Beach Boys, describes the dedication of surfers to their sport: "Surfin' is the only life, the only way for me." Written by non-surfer Brian Wilson and based mainly on stories from Beach Boy members and surfers Mike Love and Dennis Wilson, the songs of the Beach Boys presented an American youth market with an image of sunshine, beautiful girls, and surfing that was wholesome and superficial. In songs like "Surfin Safari" (1962), "Surfin' USA" and "Surfer Girl" (1963), "Fun, Fun, Fun" and "I Get Around" (1964), "Help Me, Rhonda" and "California Girls" (1965), "Wouldn't it Be Nice" and "Good Vibrations" (1966), the leisure pursuits of young southern Californians became a national industry. Reinforced

by other performers, such as Jan and Dean (“Surf City” 1963) and the beach movies of Frankie Avalon and Annette Funicello, the surfer subculture became a marketing tool used to sell not only entertainment, but a whole range of products as well, such as clothing. Hang Ten, founded in 1961, produced clothing with its trademark symbol of two bare feet representing the act of hanging ones toes off the front end of a surfboard. Offshoot sports also developed, like skateboarding, originally called “sidewalk surfing,” and, in the 1980s, sailboarding.

Instrumental surf music witnessed a resurgence in the 1990s with the release of compact disc compilations of surf music and its use in new films like Quentin Tarrantino’s *Pulp Fiction* (1994) and Bruce Brown’s *The Endless Summer II* (1994), a sequel to the 1964 original.

Susann, Jacqueline (1921-1974)

Jacqueline Susann, sometimes called the Joan Crawford of novelists, wrote only three works of fiction between 1966 and 1973, but her first novel, *Valley of the Dolls*, was one of the 10 most widely distributed books of all time. While her often maligned books eventually went out of print, Susann was still remembered as the first writer to become a media celebrity through her aggressive promotional appearances on television talk shows. A mid-1990s revival saw *Dolls* back in print again, some relatively serious re-evaluations of her campy, but charismatic work, and Susann’s perhaps inevitable ascension into the pantheon of gay male pop culture icons.

Born in Philadelphia, Pennsylvania, in 1921, Susann moved to New York in 1936, a beauty contest winner anxious to crash show business. In 1939 she married Irving Mansfield, and worked as both model and actress, appearing in Broadway and road company productions, including *The Women* in 1937. Lacking the talent, luck, and angles to really hit performing big time, Susann was still addictively drawn to celebrities and their world, and her 15 years on the fringes of show business paid off in a shrewdly exploited literary career. This commenced in 1963 with the nonfiction success, *Every Night, Josephine*, about Susann’s beloved pet poodle. But Susann’s next book, the novel *Valley of the Dolls* in 1966, channeled her inside show business savvy into a best-selling combination of romance, lurid sex, and sensationalism which, as the publishing blurb used to say, ripped the lid off the entertainment industry. Susann and her press agent husband also launched the kind of hard-sell promotional campaign that had previously been exploited only by Hollywood. The first author to effectively exploit the television talk show circuit, Susann became as famous as her controversial books. In a legendary media incident she and Truman Capote traded insults during separate talk show appearances, Capote delivering his now infamous jibe that Susann reminded him of “a truck driver in drag.”

While commercially successful, Susann’s work was savaged by critics, instilling in her a longing for approval and prestige that was

never to be truly gratified. While prestigious Random House distributed Susann’s first two books, they often denied being her publisher because the titles were actually published by Bernard Geis, an outsider in the New York publishing world. James B. Twitchell observes: “. . . the modern phenomenon of celebrity-as-author was rediscovered by publishers like Bernard Geis after the collected wisdom of Art Linkletter became a best-seller. Geis realized that just as out-and-out hacks can be made into celebrities, celebrities can be made into authors”—and thus, Susann instinctively realized, authors could be made into celebrities. After Simon and Schuster published her second book of fiction, *The Love Machine* in 1969, an editor reputedly sent Susann a rose and a note saying simply “For us, once was enough,” as her third and final novel, *Once Is Not Enough*, was being published by William Morrow in 1973.

Ironically, Susann’s private life became more dramatic than any of her fiction. In 1962 she was diagnosed with breast cancer, which a mastectomy failed to alleviate, and, until her death in 1974, spent the rest of her life on painkillers. Her condition was never announced publicly. In addition, Susann and Mansfield’s only son, Guy, was autistic, a fact also concealed from the world at large. Thus while Susann pushed the envelopes of content in her fiction, in real life she adhered to what she perceived as the expectations of her era, believing the public demanded celebrities who conformed to a positive, if manufactured image, no matter what the actuality of their private lives.

Valley of the Dolls, a lurid, sudsy saga of three young women coping none too well with the challenges of show business, remains Susann’s key work. Aside from its delirious camp excesses, the cult status of the 1967 film version (in which Susann briefly appears) was instantly certified when Judy Garland was replaced by Susan Hayward shortly after production commenced, and retrospectively by co-star Sharon Tate’s brutal death in the Charles Manson clan multiple murder case. Leonard Maltin calls the film a “terribly written, acted, and directed BOMB”—he also cites an updated and expanded four-hour 1981 television remake as “superior to the 1967 theatrical version.” A 1971 in-name-only sequel, Russ Meyer’s equally cultish *Beyond the Valley of the Dolls* took Susann’s hyperbole into the realm of deliberate (and violent) camp.

In late 1997 Grove Press reissued the long-out-of-print *Valley of the Dolls*, peaking a mainstream Susann renaissance which had been percolating within gay culture for over a decade—the cult status of Susann among American gay men was the subject of a detailed feature article, “Pink Trash,” in no less than the usually staid *New York Times*, in July of 1997. The revival also included a New York City drag stage production of *Dolls*, the trendy popularity of gay smart-set VOD parties featuring jelly beans in the form of Susann’s famous Valium pills (or “dolls”), a 1998 television movie bio, *Scandalous Me*, and the announcement of a theatrical film of Susann’s life to star Bette Midler. But perhaps the most bizarre manifestation of 1990s Susann-mania was an “interview” with the deceased author published in *Interview* magazine in October 1997, and based on a seance involving drag performer Lypsinka and a medium named Miss Eek.

Nora Ephron comments on Susann’s work: “With the possible exception of *Cosmopolitan* magazine, no one writes about sadism in modern man and masochism in modern woman quite so horribly and accurately as Jacqueline Susann. *Valley of the Dolls* had a message that had a magnetic appeal for women readers: it describes the standard female fantasy—of going to the big city, striking it rich, meeting fabulous men—and went on to show every reader that she

was far better off than the heroines in the book. It was, essentially, a morality tale.” *Art Forum* editor Sydney Pokorny gushes: “She’s camp, she’s glam, she’s frivolous, she understood the appeal of modern celebrity better than anyone else (except maybe Andy Warhol), and on top of it all her heroines were always powerful, independent women. Jackie is a prophet of pop culture.”

Jackie herself put it this way: “People who read me can get off the subway and go home feeling better about their own crappy lives, and luckier than the people they’ve been reading about.”

Susskind, David (1923-1987)

David Susskind was one of the few successful television producers to also star in front of the camera. He began his career in the late forties as an agent, eventually representing such stars as Jerry Lewis and Dinah Shore. After forming Talent Associates with Alfred Levy, he started to package live dramas, before becoming a full-time producer in the mid 1950s. Over the course of more than thirty years, he produced hundreds of television dramas for such series as *The DuPont Show of the Week* and *Armstrong Circle Theater*; over a dozen movies, including *Raisin in the Sun* (1961) and *Alice Doesn’t Live Here Anymore* (1974); and numerous stage plays. Aspiring to be the Cecil B. DeMille of television, Susskind especially cherished prestige specials and among his award-winners were *The Ages of Man* (1966), with John Gielgud; *Death of a Salesman* (1967), starring Lee J. Cobb; and *Eleanor and Franklin* (1976), with Edward Hermann. In 1958 he became a celebrity as host of his own talk series, *Open End*, which had unlimited time to examine an issue. The brash Susskind liked to confront his guests, exemplified by his heated exchange with Soviet Premier Nikita Khrushchev. His often-controversial series, which was trimmed to two hours in the early sixties, covered a wide range of topics, from such weighty issues as racism and organized crime to tabloid fare, including astrology and sex change operations. Retitled *The David Susskind Show* in 1967, the program continued for nineteen years until the host’s untimely death in February 1987.

Swaggart, Jimmy (1935—)

A leading televangelist of the 1980s, Jimmy Swaggart became an American celebrity whose rise and fall were both comedy and tragedy. A self-trained piano virtuoso, whose hot Gospel stylings were barely distinguishable from the rock ‘n’ roll standards performed by his cousin, Jerry Lee Lewis, Swaggart might have become a major popular music artist. But he chose preaching, evolving a pulpit manner characterized by physical gyrations, abundant tears, and impassioned Biblical declamations. Scorning as bland sentimentality the positive thinking of other religious opinion makers, he further rejected the ecumenical spirit of Billy Graham. Swaggart chose instead to deliver fire-and-brimstone sermons, always tough on sin, especially that of a sensual nature. Though he first imitated the preaching of the tent evangelists of his Southern youth, he quickly learned the masterful use of media, first radio and later television. Often regarded as the most effective of the televangelists of the 1970s and 1980s, his blend of show-business hucksterism and old-fashioned Holy Ghost revivalism perpetuated a long tradition of American folk evangelism.

Born in 1935 near Ferriday, Louisiana, Jimmy Lee Swaggart was the son of a lay preacher in the charismatic Assemblies of God. Derisively called “holy rollers” in the early years of the century, members of this denomination moved into the middle class after World War II. Their spirit-filled devotional style began to influence the older, mainline churches, both Protestant and Catholic. Young Swaggart started preaching at age six, though he was not “born again” until two years later. Religion remained the major preoccupation of his entire youth. Offered a recording contract, about the time

Jimmy Swaggart

his cousin and best friend Jerry Lee was becoming famous, Swaggart vowed to use his own musical talents only in the service of the Lord. He even advised God to strike him with paralysis should he ever perform "the devil's music."

By the time he was 23, Swaggart was regularly traveling the gospel preaching circuit, along with his wife, Francis, who would remain a full partner throughout his ministry, and their two-year-old son, who would grow up to become his father's lieutenant. Backcountry evangelism, always as much entertainment as religion, put Swaggart's temperament and talent to good use. By 1964, despite success as a traveling preacher, he yearned for more respectability and was properly ordained by the Assemblies of God. He then took his "crusades" into cities. He also inaugurated a Gospel recording career and eventually sold more than 15 million recordings. In 1973 he added a weekly television program.

By the end of the 1980s Swaggart's telecasts and publications were addressing a regular national audience of almost two million. His outreach extended to 53 countries. Like other media preachers, Swaggart sought to anchor his operations; he chose Baton Rouge, Louisiana, as home base, where he built a Family Worship Center to seat 7,500. Perhaps in compensation for his own meager schooling, he readily followed the precedent of other celebrity preachers such as Aimee Semple McPherson and Oral Roberts by founding his own Bible college to train Christian workers for domestic and foreign service.

Politically conservative and openly judgmental, Swaggart made enemies. He could be fierce and even personal in his attacks. Among his targets were Roman Catholics, lukewarm Protestants, social "liberals," and fellow preachers with moral failings. He seemed oblivious to his own vulnerability when in early 1987 he launched the national scandal that came to be known as "Gospelgate." He accused rival televangelist Jim Bakker of adultery. Though the charges were easily substantiated, it did not take long for Swaggart's enemies to publicly expose his own predilections. They revealed that he had engaged in a series of voyeuristic acts with a prostitute in a Louisiana motel.

Owning up to his wrongdoing, labeling it "sin" rather than merely inappropriate behavior, Swaggart gave the premier performance of his life on February 21, 1988, to a capacity audience gathered at his Family Worship Center. His lips quivered as he weepingly apologized to his wife, his son, his daughter-in-law, and the Assemblies of God "which helped bring the gospel to my little beleaguered town, when my family was lost without Jesus." Finally, Swaggart apologized to Jesus Himself and asked to be renewed by His cleansing blood. So powerful was this confession that subsequent public acknowledgements of moral lapses by national figures have come to be known as "doing a Swaggart."

The Assemblies of God eventually defrocked Swaggart as later transgressions surfaced. Even without their blessing, his ministry continued throughout the 1990s, but his force was largely spent, and the impressive evangelistic compound he had built in Louisiana fell into some disrepair. With admissions of wrongdoing and investigations of financial irregularities of several televangelists, the influence of "the electronic church" went into general decline. Religious journals stopped lamenting that the seat in front of the television set was replacing the church pew. But Swaggart's career had become part of his century's unique body of religious lore, and he would be remembered in all his passion and moral ambiguity as a genuine American type.

Swann, Lynn (1952-)

During the late 1970s, a period when professional football players were joining the ranks of U.S. pop-culture icons, wide

Lynn Swann at the University of Southern California.

receiver Lynn Swann was at the peak of his highly successful nine-year career in the National Football League. Swann played on four Super Bowl championship-winning teams for the Pittsburgh Steelers when that team was dominating NFL play. Swann's trademark was his ability to make acrobatic catches, especially at key junctures of important ballgames.

The Pittsburgh Steelers drafted Swann, a Tennessee native, in the first round of the 1974 NFL Draft following his graduation from the University of Southern California (USC), where he had been a unanimous choice for All-American honors during his senior year. While at USC he also earned a letter as a long jumper at track.

Swann was named the Most Valuable Player in Super Bowl X in 1976, as Pittsburgh defeated the Dallas Cowboys by a 21-17 score to become only the third team to win back-to-back Super Bowls. Swann caught four passes for a total of 161 receiving yards. The highlight was Swann's catch of a 64-yard touchdown pass from quarterback Terry Bradshaw for a game-deciding score. Swann also made a diving 53-yard catch during the second quarter, a feat that is considered by many to be one of the greatest in Super Bowl history.

In Super Bowl XIII, Swann caught an 18-yard touchdown pass from Bradshaw that was the decisive play in the Steelers' 35-31 victory over the Cowboys. Swann caught seven passes for 124 yards in that victory, an accomplishment made even more impressive because of doubts he would even play in that game due to a concussion he incurred in the American Football Conference (AFC) Finals against the Oakland Raiders. He had even been confined to his bed for several days prior to the Super Bowl, with doctors warning him that another hard hit could cause more extensive, and even career-threatening, damage. Despite the risks, Swann decided to play, with spectacular results.

Swann's performance in Super Bowl XIII was the culmination of his best professional season. In that year, 1979, he caught 61 passes for a total of 880 yards, and scored 11 touchdowns. During the 1979 season, Swann caught a decisive 47-yard touchdown pass from Bradshaw in the third quarter of Pittsburgh's 31-19 victory over the Los Angeles Rams, a play in which Swann leapt between two defenders to catch the ball before reaching the end zone.

Part of Swann's great success came from his being teamed with another wide receiver drafted in 1974, John Stallworth, who formed another threat at the wide-receiver position and prevented other teams from focusing all of their attention on Swann. The two men gave quarterback Terry Bradshaw an inviting choice of targets. As Swann noted in Lou Sahadi's *Super Steelers: The Making of a Dynasty*, "John [Stallworth] and I are both moving targets. It's just up to Terry to hit us. What's happened is that we developed a remarkable, almost undefinable rapport among the three of us."

Swann ranks second in receiving yards in the Super Bowl (364) and touchdowns (3) to San Francisco great Jerry Rice. During his playing career, he was named to the NFL Pro Bowl on three occasions. He has been a finalist for induction into the Professional Football Hall of Fame in Canton, Ohio, every year that he has been eligible. Regarding Swann's failure to be inducted into the Hall of Fame, his teammate Joe Greene noted "Lynn Swann didn't have the stats, but he sure as heck had an impact. . . . He didn't play a long time, but he made an impact. . . . He played a lot of big games. I'm a great Lynn Swann fan. He deserves a lot more consideration."

Following his retirement from professional football in 1982, Swann worked as a sports broadcaster for the ABC network, covering football as well as a diverse array of other sports, ranging from rugby to dog-sled racing. Swann has also been active in a wide variety of

charitable and other causes. He has served as the national spokesperson for the Big Brothers and Big Sisters of America since 1980, and on the Board of Trustees of the Pittsburgh Ballet Theater, for which he created a youth scholarship. He was named the NFL Man of the Year in 1981, and has also competed in several marathons. Swann had a cameo as a television announcer in the 1991 movie *The Last Boy Scout*.

Swatch Watches

The Swatch watch was released in 1983 as a response by the Swiss watch industry to the encroaching Japanese influence on the market for inexpensive high tech timepieces. The first Swatch was made of slim plastic with only 51 components, allowing it to be sold cheaply. By the 1990s the Swatch had become the most successful wristwatch brand of all time. The key to the popularity of Swatch was its collectibility. By rotating designs and discontinuing popular lines at key moments, the Swatch company was able to give their watches a cult status, especially among young people.

The Sweatshirt

The humble gray cotton sweatshirt with fleece lining was one of the last garments to come out of the gym locker into high-style fashion. The wonderfully practical sports coverup was determinedly unglamorous: it was affiliated with no one sport in particular; its heavy cotton tended to lose shape over time and, unlike jeans, move away from sexual outline to a gray blob. Technology, which around the early 1980s introduced just enough synthetic stretch (generally less than 5 percent) to maintain shape, collar, and cuffs without losing the integrity and feel of cotton, catapulted the sweatshirt out of the bottom of the locker. In 1981, Norma Kamali made a woman's jumpsuit ensemble for day or evening in gray sweatshirt material; by 1986, Emporio Armani styling showed hooded sweatshirts with sports jackets; in 1987, Quincy Jones appeared in an American Express advertisement in a short-sleeved sweatshirt. Perhaps a more influential popularizer of sweatshirts as fashionable garb was actress

Jennifer Beals, who wore cut up sweatshirts in the 1983 movie *Flashdance*. Since the 1980s, sweatshirt gray has become a popular color for diverse clothing.

Swimming Pools

In 1988, a local dispute in East Hampton, Long Island, received national attention. An affluent couple was threatening to sue their town for refusing them a permit to build a second swimming pool at their ocean-front home. While the dispute hinged on issues of zoning restrictions and environmental protection, the story was widely reported due to its almost comical justification of Thorstein Veblen's

1899 critique of the "leisure class." If one backyard pool is an emblem of comfort and leisure, two pools at an ocean-front home exemplify conspicuous consumption run amok.

At the same time, a different sort of swimming pool controversy was raging in Greenspoint, New York. Residents of this Brooklyn neighborhood bitterly disagreed about what should be done with the crumbling remains of the McCarren Park municipal pool. Some in the community, especially the Latino and African American residents, wanted the pool restored to its former splendor. Built in 1936, this enormous pool, which could accommodate 6,800 swimmers at a time, had served as a recreation resort for locals unable to afford memberships at private pools and, according to a *New York Times* writer, had been "the hub of the working-class neighborhood's summertime social life." Other area residents, most of whom were white, wanted the pool closed permanently or rebuilt on a much smaller scale. They feared that such a large public pool would become a locus for urban crime.

These two episodes reveal the diverse and often discordant cultural meanings Americans attach to swimming pools. Private pools symbolize, sometimes in an extreme way, the "good life"—a life of material comfort and leisure. Public pools, however, evoke

A swimming pool.

very different images. Some of the residents of Greenspoint associated public pools with urban decay and social disorder, while others saw the possibility of a rejuvenated and vibrant community life. These contradictory cultural meanings date back to the first swimming pools built in America and highlight some of the successes and failures of twentieth-century American society.

Athletic clubs, colleges, and wealthy homeowners built the first private swimming pools in America during the Gilded Age. These pools were used for both sport and leisure, which at the time were the almost exclusive domain of the well-to-do. Early public swimming pools, built in and around large northern cities, served a different purpose for a different segment of society. Brookline, Massachusetts, opened the first municipal pool in 1897. Like most early public pools, it was located within a bathhouse. Progressive reformers and municipal leaders viewed these swimming pools as public health institutions and intended them to promote cleanliness among the nation's growing population of urban poor. Gradually, public pools evolved from baths to fitness institutions to, by the second decade of the twentieth century, recreation and leisure facilities.

Social and cultural conflict dominated the history of swimming pools in America during the first half of the twentieth century. The vast majority of pools during this period were public. They were intensely contested civic spaces—controversies over where pools should be built, who should be allowed to use them, and how they should be used reflected the dominant tensions in American society. These racial and class tensions, often obscured in other areas of life, appeared with striking clarity and definition at public pools because Americans perceived them to be intimate and potentially hazardous spaces. Swimming in a pool necessitated exposing one's body; it brought swimmers visually and, in a way, physically into intimate contact with one another. Swimming also exposed people to the dirt and disease of other swimmers. Consequently, the class, ethnic, and racial phobias that circumscribed and limited social interaction in general at this time became heightened at swimming pools.

In the early twentieth century, the social and cultural contests over swimming pools divided along class lines. A controversial proposal to build a swimming pool in New York's Central Park illustrates this class dynamic. John Mitchel, president of the Board of Aldermen, proposed the pool so that the city's poor, especially the children, would have a clean and cool place to bathe and play during the summer. Without such a pool, these children had no place to swim except among the rats, garbage, and sewage in the East and Hudson Rivers. The mostly middle-class New Yorkers who opposed Mitchel's proposal were determined to maintain the park in its original form. A pool would "desecrate" the park, they feared, by transforming their oasis of genteel recreation into a popular amusement center. "No Coney Island, if you please, in the park," one opponent pleaded. These critics were also determined to protect the park's social landscape. "I have never been in favor of putting a swimming pool in Central Park," affirmed Park Commissioner Charles Stover, "I should consider it disastrous if the only swimming pool belonging to the city was put there. It would attract all sorts of undesirable people." Stover suggested instead that this swimming pool for the masses be built in a more appropriate location: "under the approaches to the Manhattan bridge." By keeping the swimming pool out of Central Park, New York's middle class defended their Victorian pastimes and reinforced the physical distance between themselves and their working-class neighbors.

The late 1920s and early 1930s marked an important transition in the history of swimming pools. The number and popularity of public

pools increased dramatically. Large northern cities doubled and even tripled the number of pools they provided for their residents, while southern cities and smaller communities built municipal pools for the first time. The social contest over these pools changed as well: race replaced class as the most important distinction in determining patterns of discrimination. This racial contest, however, still occurred within a larger class context. Middle- and working-class blacks competed with working- and lower middle-class whites for the use of public pools, while wealthy whites swam at private pools.

The pattern of the racial struggle at public swimming pools was closely tied to the size of the community and the region in which the pool was located. In the South, black Americans were excluded from using public pools entirely. In large northern cities, racial discrimination took the form of segregation. Cities like New York, Chicago, and Boston largely avoided direct racial conflict and violence by providing separate pools for black residents. However, in smaller communities, black and white residents often competed over the use of a single pool. The dynamic of this struggle varied from town to town, but generally involved exclusion, protest, and violence.

Elizabeth, New Jersey, for example, opened its municipal pool in June, 1930. By August of that year, a group of black residents had filed a complaint with the city protesting their exclusion from the pool. The city's Board of Recreation Commissioners ruled that blacks should have equal access to the facility. The pool remained tenuously integrated for two summers, but in 1933, black residents stopped using it because white swimmers continually harassed and assaulted them. In 1938, black residents tried to integrate the pool again, but were once again subjected to the same abuse. Finally, the Board closed the pool. It could no longer condone the discrimination and violence, but apparently would not arrest the perpetrators.

The history of swimming pools fundamentally changed after World War II. America's rising economic tide, the increased rate of suburbanization, and racial desegregation combined to cause a dramatic increase in the number of private and residential pools. The economic prosperity of the postwar era coupled with advances in pool construction made backyard pools affordable to America's expanding middle class. In 1950, Americans owned only 2,500 private residential swimming pools; by 1970 they owned 713,000. During the same period, proliferating suburban communities often chose to build private swim clubs instead of public pools.

This general trend towards privatization was, at least partially, in response to the forced desegregation of municipal pools. During the 1940s, black Americans won several important legal victories against communities with segregated swimming pools. One such community was Montgomery, West Virginia, which built a public pool in 1940 but did not open it. The city's elected officials faced a conundrum: they did not want Montgomery's black residents swimming in the pool, but they were reluctant to defy West Virginia's anti-discrimination statutes by openly turning them away. The city eventually leased the pool to a private non-profit community association in 1946 for one dollar. The pool finally opened that summer and the now "private" administrators denied blacks admittance. The African American residents of Montgomery quickly sued the city, arguing that leasing the pool to private interests did not relieve the city of its obligation to afford black citizens equal rights. The federal courts agreed: "Justice would be blind indeed if she failed to detect the real purpose in this effort of the City of Montgomery to clothe public function with the mantle of private responsibility. 'The voice is Jacob's voice,' even though 'the hands are the hands of Esau.'" The court-ordered desegregation of Montgomery's pool, however, was a hollow victory

for the city's black residents. In response to the court's decision, Montgomery closed the pool until 1961. White residents were apparently more willing to go without a community pool than swim with their black neighbors.

Pool use continued to divide along racial lines in the 1970s and 1980s. Just as many white Americans chose to avoid living next to black Americans during this period by moving to restricted neighborhoods, they chose to avoid swimming with them by joining private swim clubs or building backyard pools. African and Latino Americans, many of whom continued to live in large cities, were left to swim at deteriorating public pools. Even most whites who remained in urban areas did not swim at public pools. As the Greenspoint controversy shows, some did not want municipal pools in their neighborhoods at all. America's history of segregated swimming pools thus became its legacy.

The shift from public to private pools has, in some ways, transformed the quality of community life in America. Throughout much of the twentieth century, the public swimming pool served as a stage for public discourse. Community life was fostered, monitored, and disputed at these municipal institutions. The recent privatization of swimming, however, constitutes a retreat from public life. Private pools, especially residential ones, have stifled the public discourse that used to occur at community pools. Instead of swimming, chatting, and fighting with their neighbors at municipal pools, private pool owners have fenced themselves into their own backyards. The Greenspoint controversy shows that public debate at and about municipal pools has not been silenced completely; however, too many controversies in contemporary America resemble the East Hampton dispute: people fighting to get away from their community rather than fighting to be a part of it.

Swing Dancing

In the 1930s swing bands emerged at the forefront of American popular music, evolving from the jazz genre, which was primarily produced and listened to by blacks, into one patronized also by urban whites. Long before baseball was integrated, the big swing bands—led by Duke Ellington, Benny Goodman, and Count Basie—brought

together black and white musicians in a new social amalgam that decisively changed American culture. Musically, swing offered rhythmic flexibility. Swing music is marked by a subtle swaying, living pulse, which came from musicians playing just ahead of the beat enough to be syncopated, or dragging behind it enough to be bluesy. Swing, notes historian Lewis Erensberg, caused "a general revolution in the popular dance in the United States" as white youth took up the black dance innovations in order to banish whatever ballroom gentility remained in the Depression. After World War II, swing grew increasingly fragmented, and became less of a dance music and more of a concert music. Although bebop succeeded it as the new wave of jazz innovation, it did not stimulate a new form of social dancing.

Harlem became the cultural capital of black America in the late 1920s and it is here that swing dancing began, first appearing as the Lindy Hop. Originated among secret gangs in Harlem—which was quickly being populated by African-Americans as whites departed—the steps were refined and made famous by dancers at Harlem's Savoy Ballroom. Lindy Hop refers to Charles Lindbergh's "hop"—his historic solo flight—across the Atlantic Ocean in 1927. Observing the acrobatics of some dancers at the Savoy Ballroom, "Shorty George" Snowden, a dance enthusiast, said "Look at them kids hoppin' over there. I guess they're doin' the Lindy Hop." The swing combined steps from the shag, the Texas tommy, and vaudeville into a ballroom dance—a syncopated two-step or box step that accented the offbeat; the fundamental innovation of the dance was the "breakaway," when the partners spun away from each other and improvised a break. The acrobatic or "air steps" were judo-like variations in which partners would roll and flip each other over the back. The Lindy Hop evolved into the jitterbug—a more acrobatic and an almost "choreographed" version of the Lindy Hop. "The white jitterbug is oftener than not uncouth to look at," reported the *New York Times* according to swing historian David Stowe, "but his Negro original is quite another matter. His movements are never so exaggerated that they lack control, and there is an unmistakable dignity about his most violent figures."

Jitterbug enjoyed enormous popularity from 1936 until the end of the war. Every soda shop had a jukebox where teenagers were able to jitterbug after school. Eventually, in the late 1940s, the Lindy and jitterbug evolved into what has come to be called "East Coast swing"—which had a rotating character, the couple has no fixed relation to the room. An almost separate version of swing dancing developed on the West Coast, in which the two partners remain in a narrow slot on the dance floor. Even after swing was musically moribund, jitterbug remained the basic framework for couples dancing in the early days of rock 'n' roll. It passed from the scene only after the Twist had introduced the stand alone form of dancing in the early 1960s.

In the late 1990s, partnered social dancing began to make a comeback, with swing dancing an integral part of the revival. There has also been a renaissance of swing and big band music—typified by groups like the Royal Crown Revue and Big Bad Voodoo Daddy. Ballroom dance classes became extremely popular, particularly on college campuses. In the larger cities, ballrooms, dance clubs, and the larger dance teaching studios offer special nights of swing dancing. Contemporary social dancing reflected an extensive process of blending: for instance, hip hop dance styles have incorporated elements of the Lindy and jitterbug and new swing styles showed a strong Latin influence.

—Jeffrey Escoffier

A couple swing dancing to the tunes of the Jerry Wald Orchestra.

Swinging

Of all the social phenomena of the 1970s, one of the least practiced but most discussed was swinging, sometimes called partner swapping or wife swapping. Though few couples actually indulged in this practice, there were enough who did, or who knew about someone who did, to give the phenomenon widespread awareness. When the trend lost its popular buzz, however, swinging returned to what it had always been—the casual avocation of a group of hardcore enthusiasts.

There have always been swingers throughout history. The Bible records enough incidents of men lying down with other men's handmaidens to fill the *Penthouse* letters page many times over. And informal "clubs" devoted to extramarital experimentation have been around from the early days of the Republic. But the emergence of "swinging" as a loosely organized lifestyle coincided with America's "sexual revolution" in the 1960s.

Generally conducted at poolside parties and potluck dinners, partner swapping claimed about one million adherents during its heyday in the 1970s. Sometimes swinging involved couples placing ads in adult publications or choosing other couples they might like to pair up with. At other times, the encounters were purposely made random. One popular forum for selecting partners was the "key party," in which the men tossed their car keys into a bowl and the women fished them out to determine with whom they would spend the night. The climate of sexual freedom espoused in such magazines as *Playboy* and *Penthouse* accelerated acceptance of the practice and eventually led to coverage in more mainstream publications as well.

Partner swapping even made it onto prime-time television. A 1971 episode of *All in the Family* traced the comic consequences of Edith Bunker's inadvertent reply to an ad from a pair of swingers.

Vincent Gardenia and Rue McClanahan played the bewildered couple, who met up with the old morality in the form of Archie Bunker, America's avatar of sexual counterrevolution. But such downbeat portrayals of the lifestyle were the exception rather than the rule, as more people briefly flirted with the idea that maybe this open-marriage thing had some advantages to it after all.

An even surer sign that partner swapping had hit the mainstream came in 1973, when two members of the New York Yankees pitching staff swapped wives for the long haul. Lefties Mike Kekich and Fritz Peterson announced the spouse exchange in a bizarre press conference during spring training. The unique trade was completed with the addition, not of the customary "player to be named later," but of the rest of their families: children, pets, and, residences. For the record, Kekich broke up with Marilyn Peterson soon after the switch, while Fritz Peterson remained married to the former Susan Kekich more than 25 years later. The high-profile swap briefly captured national headlines, but the fact that it did not scandalize baseball indicated just how much American sexual mores were changing.

The novelty of swinging eventually wore off, however. During the 1980s, AIDS and sexually transmitted diseases made all but its diehard believers reconsider the advantages of monogamy. With a conservative administration in Washington, promiscuity regained some of its negative stigma. Swinging once again became the private preserve of a little-publicized subculture. Still, during the 1990s, three million Americans were estimated to be swinging on a recreational basis. Facilitated by the Internet, and fueled by a reaction against the sexual moderation invoked during the AIDS era, sexual adventurousness was once again on the rise. House parties still provided a prominent medium for partner swapping, although a new wave of institutions, including affinity groups, travel agencies, and even bed and breakfasts, were catering to the burgeoning swinging lifestyle. In August of 1997, more than 4,000 people attended a convention of the North American Swing Club Association in Palm Springs, California, where seminars were offered on such topics as "Recipes for a Successful Orgy" and "Growing Up with Kinky Parents."

The prevailing ethos at swinging encounters continued to be freewheeling sexual experimentation. But there were some changes from the wild and lawless 1970s. The spread of AIDS sensitized many partner-swapping enthusiasts to the primacy of good hygiene and a more judicious choice of partners. And society's growing acceptance of homosexuality allowed more swingers to experiment with same-sex partners. There was even a mini-wave of nostalgia for the old ways subsumed in the larger national wistfulness about the 1970s, as evidenced in such films as Ang Lee's *The Ice Storm* (1998), based on Rick Moody's novel of the same name. The film, whose harrowing climax occurs during a "key party" attended by its suburban Connecticut protagonists, captured the emotional sterility that allowed swinging to spread beyond a small hedonistic cult to briefly capture the fancy of middle-class America.

Since its inception in a suburban Chicago newspaper in 1978, Nicole Hollander's comic strip, *Sylvia*, has evolved to become a leading expression of postmodern feminism in satiric form. Appearing daily in newspapers coast-to-coast, Hollander's popular strip has also been reprinted in many books, including such titles as *I'm in Training to be Tall and Blonde*, and *Ma, Can I Be a Feminist and Still Like Men?*

If the title character in Cathy Guisewite's *Cathy* strip represents the relationship struggles—romantic, parental, and inter-office—of a neurotic, thirtysomething working woman, *Sylvia* portrays a somewhat older, stouter, work-at-home woman comfortable with herself but at war with the foibles of contemporary society. Actually, *Sylvia* herself does not always appear in the strip that bears her name, a sly, surrealist stream-of-consciousness in which Hollander applies her own witty touch to subjects both slight and substantial, from such comedy staples as pets and airlines to such fresher ground as gender inequality and goddess spirituality. *Sylvia* is a plump, fiftyish advice columnist who is as likely to be found conversing with her cats or a space alien as her nubile daughter, Rita, or her friend, Beth-Ann. Like many of us, *Sylvia* also talks back to the media: When a commercial on the radio announces, "Spray N' Wash gets out what America gets into," bubble-bathing *Sylvia* responds: "Send some to El Salvador!"

Nicole Hollander, the strip's creator, had also worked as an art instructor and book illustrator, but she found fame as a comic strip writer/artist when *Sylvia*, initially created for a suburban Chicago newspaper in 1978, was picked up for syndication by the Universal Press Syndicate in 1979. The increased visibility led inevitably to *Sylvia* books and a line of greeting cards; in 1981, another syndicate, Field Enterprises, bought the *Sylvia* rights and added a Sunday strip, since discontinued. For a time, Nicole Hollander incorporated herself as The *Sylvia* Syndicate and took over her own distribution. By the end of the 1990s, *Sylvia* was being distributed by the Los Angeles Times Syndicate, although Hollander retained the copyright on her daily creations. Hollander was featured prominently in a PBS documentary about contemporary female comic strip artists.

Although there are recurring themes in *Sylvia*, there are no storylines; each day's strip is self-contained. Her visual style is purposefully slapdash, in keeping with *Sylvia*'s cutting-edge humor. What distinguishes the *Sylvia* strip is its celebration of the life of the mind of its heroine. As often as not, there is nothing happening in the strip *per se* except what *Sylvia* is imagining, in the fashion of a latter-day Little Nemo in Slumberland, except that she is wide awake both physically and ideologically. The strip's innovative fancies and conceits include "Menacing Supercops of the Future" such as the "fashion cop," policing errors of taste and style, or the "love cop," seeking to break up incompatible couples or prevent them from forming; the eternally annoying "Woman Who Does Everything More Beautifully Than You"; "Alien Lovers"; "Special Goddesses"; "The Woman Who Worries About Everything"; "The Cat Who Hypnotizes His Mistress"; "From the Diary of a Woman Who Never Forgets a Slight"; "Gender-Based Differences—How to Tell if You're a Gal or a Guy"; and "The Lonely Detective," in which

Sylvia imagines herself a noirish Phillipa Marlowe-type private eye tackling contemporary societal issues.

Popular culture has always been a rich source for *Sylvia*'s satire. At times, her advice column was featured in the strip—she once addressed one of her troubled readers as “Dear disgusting wimp”—although in recent years the column is seldom referred to directly. Other gambits have included Sylvia's proposals for TV game shows, such as the one in which recently divorced couples would have tried to guess each other's most annoying habits, or her extreme take-offs from *The Three Faces of Eve*, imagined dramas about women with three-way personality splits, one of which is always a housewife, as in: “housewife, snake-handler, and educator,” or “housewife, hair stylist, and brain surgeon.” Considering that Hollander's *Sylvia* strip has always been frankly feminist, multiethnic, multispecies, and unabashedly liberal in outlook, it is not surprising that it will sometimes refer to current events, although the “ripped from the headlines” approach has never been *Sylvia*'s prime focus as it has been for strips such as *Doonesbury*. In any given year, however, *Sylvia* will manage to reflect—and have fun with—the mood of a small but hearty band of free-thinkers as they warily eye the shenanigans of the world at large.

Syndication

Syndication refers to the sale or distribution of television programs that are offered to multiple markets for non-network exhibition. As a practice, syndication stands opposed to network broadcasting where content and schedule are determined nationally for all affiliated stations. Syndication includes a variety of program types including movies, first-run series, re-runs of network programming, talk shows, game shows, foreign programs, and children's series. While syndication may resemble network distribution in that the same programs air over many separate outlets, the timing (day of the week as well as time of day) may vary from location to location. Serving as a counterbalance to network control, syndication has developed from

the simple sale of off-network programming in the early 1950s, into a number of complex and varied business practices including off-net, first run, re-run, and barter syndication. More than just the distribution of programs, syndication regulations and practices have played a major role in the development of contemporary television. From the Federal Communication Commission's (FCC) “Prime-Time Access Rules” (PTAR) and “Financial Interests and Syndication” (Fin/Syn) rulings, to the programming of UHF, cable, and even entirely new networks, syndication has been one of the most debated—and most important—business and programmatic practices within the television industry.

During the 1950s the television networks owned and controlled most of the programming they aired. The networks were able to present re-runs of programs, or sell the rights, even if they had minimal or no investment in the actual production. Networks defended this practice by arguing that they were equally responsible for the success of a series, since they promoted, placed, and provided the exposure for the program. This left them in the enviable position of taking minimal financial risk in a show's production, while at the same time enjoying long term profit from its being broadcast (and re-broadcast). Unable to risk the capital necessary to produce a series on their own, many independent production companies disappeared during these early years, and by the 1960s, almost all programming was produced by the networks or movie studios. In an attempt to limit the networks' monopolization of television production, exhibition, and distribution, the FCC examined syndication and made sweeping changes to network practices in 1970-1971. The FCC's motivation was to re-energize local and independent production, and to accomplish this goal they adopted the Fin/Syn and PTAR rulings.

The Fin/Syn rulings effectively ended network monopolies on syndication. Following these rulings networks could not syndicate domestically and could only sell a program internationally if they had completely financed the production. Furthermore, networks were limited in the number of programs they could produce, thus creating greater dependence on outside production companies. The PTAR, on the other hand, limited prime-time network broadcasts to the 8:00 to 11:00 pm slot in the top 50 television markets. In adopting these rules the FCC hoped that they would open access to programming, and encourage affiliates to air shows that were independently or locally produced. Rather than generating a resurgence of local programming, however, the PTAR led to the development of inexpensive shows which attracted a significant audience—often in the form of game shows like *Wheel of Fortune* or *Jeopardy*. Ironically the FCC's decisions had tremendous economic ramifications which affected the television and movie industry alike. Given one year to divest themselves of their syndication services, networks sold these divisions. Such sales led to the formation of new companies like Viacom which, once a division of CBS, now owns Paramount Pictures and its own television network (UPN).

Syndication became increasingly important as television expanded and the new and independent Ultra High Frequency (UHF) television stations looked for programming. With the expansion of non-network stations syndicators found themselves in the enviable position of supplying content for a significant portion of the daily television schedule. Separated from the networks, the syndication industry became more profitable, powerful, and competitive, leading to new practices intended to make programs more economically attractive to affiliates. One such example is “barter syndication,” which was designed to meet the needs of advertisers and affiliates alike. In this form of syndication, the distributor would give the

program to affiliates free of charge in exchange for ad time on the program. By placing a program in enough markets around the country, the syndicator could then sell commercials to national advertisers and keep the revenue as their payment. During the early days of UHF, stations needing to fill their schedules were cash-poor, and barter syndication offered them a way to gain programming without expending their limited capital. Eventually, as stations became more established, syndicators would move towards a combination of cash payments and ad time for their programs.

The most common form of syndication is “off-network syndication,” which refers to programs that have already aired on network television. The cost of these programs was generally recouped during their network runs, which meant that most of the syndication revenue became profit. Anyone who grew up watching television after the 1960s is familiar with a host of programs, from *Gilligan’s Island*, *F-Troop*, or *Rockford Files*, to name a few, which were (and still are) aired in this manner. With the growth of cable, entire networks, such as TV Land, were built on the strength and popularity of off-network programming. A more recent trend has been “first run syndication,” which refers to programs that are syndicated when they are new. While there is more financial risk in this type of syndication—since the costs are not absorbed through network exhibition—these programs offered tremendous control and profit potential to the producers. Perhaps the most famous shows distributed in this fashion include *Baywatch*, *Star Trek: The Next Generation*, and a number of game shows. By the 1980s, the emergence and success of “first-run syndication” led to a new type of inexpensive programming known as “reality programming,” “trash,” or “tabloid TV.”

With the success of cable television in the 1980s, syndicators once again experienced an increased demand for programs. Following the growth of independent stations, the expanded cable market made syndication one of the most profitable businesses in television. This all began to change by the late 1980s, however, as production companies recognized the greater value of their programs, and new

networks emerged, reducing the number of independent stations. The first blow came with the formation of the Fox network, which combined a number of previously independent stations and supplied them with regular network programming. By the end of the 1980s syndicators experienced additional setbacks when the FCC eased syndication rules and policies, thus allowing networks more freedom to produce and distribute programming. This situation was then further exacerbated by the development of two new networks (WB and UPN) which committed many of the remaining independents to network programming. Nevertheless, syndication remains a viable, powerful, and profitable method of television distribution.

In addition to the economic ramifications, syndication has also created a unique cultural phenomenon: cross-generational exposure to television programming. Because of syndication, the favorite programs of one generation of television viewers may remain popular decades after they have aired. This practice appeals to a sense of nostalgia for some, and demonstrates the timelessness of television’s generic programmatic qualities to others. In either case television is somewhat unique in that series and children’s programs continue to be enjoyed for generation after generation.

T

Tabloid Television

During the 1980s, the proliferation of popular television shows focusing on sex, crime, and gossip, such as *A Current Affair*, *Hard Copy*, and *Inside Edition*, led some media critics to fear that the lines between responsible journalism and sensationalism were being blurred. These “tabloid television” shows, so designated because of their resemblance to supermarket tabloid newspapers, relied for their content on gossip, barely credible sources, an appeal to emotion, and the use of checkbook journalism, staged reenactments of events, and home video footage. These practices have had an impact on mainstream broadcast journalism, which has been charged with downplaying more serious news in order to compete for viewers and advertising revenue.

Tabloid television began in earnest in 1986 when media magnate Rupert Murdoch created *A Current Affair* and put it into syndication. The half-hour show featured anchorman Maury Povich and stories focusing on sex, crime, and sleaze. At the height of its popularity, it claimed ninety million viewers in the United States. This show spawned a series of copies, such as *Hard Copy* and *Inside Edition*, which for many uninformed people blur the distinction between responsible journalism and gossip. In the 1990s, such events as the O. J. Simpson murder trial and the death of Princess Diana offered much fodder for the purveyors of tabloid television.

The methods used by the producers of tabloid television are at odds with acceptable journalistic practice as defined by mainstream television news. Checkbook journalism is one of the most hotly contested practices. The tabloids commonly pay their sources for interviews, especially exclusive ones. Mainstream journalists argue that this encourages sources to embellish their stories in order to make more money. Likewise, the use of re-enactments of crimes or other activities blurs the line between what actually happened and a fictionalized account of what may have happened. Yet, even as mainstream journalists condemn these practices, they are increasingly using them in their own shows.

The O. J. Simpson trial offered an important case study in tabloid television. Coverage of the trial became continuous, and mainstream journalists began to compete with the tabloids, often by employing many of their methods. NBC News, for example, using computer modeling, “re-created” the murder for viewers. In another example, *Dateline NBC* rigged the gas tanks on some Ford trucks to explode as a way of dramatizing their alleged danger. Some mainstream broadcasters have also begun citing tabloid reports as “news” in their own reports, justifying it with the disclaimer that they are reporting information, though its truth or falsity could not be verified. This sort of “peeping tom” journalism—reporting on what the tabloids are saying and even criticizing it—offers to the mainstream journalists a way of carrying the same information, but with reduced risk. Yet, the continued use of this activity means that ultimately, there is little differentiation between the tabloids and the mainstream.

Author Matthew Ehrlich argues that this separation between mainstream and tabloid news has never been that concrete. In *The Journalism of Outrageousness: Tabloid Television News vs. Investigative News*, he points out that the principle characteristics of the

tabloids have always been similar to the characteristics of investigative news. For example, both take a stand on the guilt or innocence of the particular parties involved, both take a moralizing tone, and both examine crime and sex. The only difference, Ehrlich argues, is that investigative news uses this material to inform and possibly rectify the world, while the tabloids use the material merely for entertainment.

The zenith of tabloid journalism may have come with the death of Princess Diana in August 1997. In a statement made after her death, her brother, Lord Spencer, expressed his belief that the “press would kill her in the end,” a reference to the high-speed car chase involving *paparazzi* photographers in Paris. Although print tabloids were most implicated in the event, the criticism implicated tabloid television as well.

Tabloids

Tabloids were originally pint-sized newspapers specializing in the sensational. Once confined to so-called “scandal sheets,” or magazine-style newspapers that many people saw only in grocery store checkout lines, during the last years of the twentieth century their subject matters of sex and scandal seeped into the mainstream press and virtually all other media, including magazines, radio, television, and the Internet. Nearly all of American journalism seemed affected by the spread of tabloid news, as coverage of the personal foibles and problems of celebrities and presidents became commonplace. The line between the splashy press and the serious journal became blurred.

Once a proprietary name for a pill or tablet, the word “tabloid” came to be almost exclusively associated with sensational journalism. Later, “tabloid” described a newspaper about half the size of most broadsheets. Tabloids popularized the news by featuring bold pictorial coverage of sex escapades, murder and gore, sports, and scandals of all sorts, but especially those relating to the lives of the rich and famous. The word tabloid also sprouted offshoot words, such as “tabloidese” for the breezy writing style of many tabloids, “tabloidesque” to connote tabloid-type publications, and “tabloidization” to mean compression of stories or literature, according to *The New Shorter Oxford English Dictionary*.

To understand the incursion of tabloids and the tabloid style into the mainstream media, it is helpful to consider three eras of journalism: the early days of the media barons, the era of young, free-spirited reporters in the anything-goes years around the "Roaring Twenties," and the electronic age when new forms of media mushroomed. Although *Vanity Fair* in its late twentieth century incarnation dubbed the 1990s the "Tabloid Decade," the last several decades of the century could be called a tabloid age when stories of murders, sex, scandal, and the once-private lives of public officials spread into every home through newspapers or the electronic media.

In the early years of U.S. journalism, power belonged to those who owned a printing press. There was no competition from radio, television, or other media in news coverage, advertising, or audience appeal. In the 1800s and early 1900s, the pulse of American journalism ticked away in New York City, where publishers found gold in what was called the "penny press," a new form of American papers that produced eye-opening stories that were long on scandal and mayhem but short on analysis or depth. Publisher Benjamin Day launched the early penny press trend with his *New York Sun* in 1833. Another New York publisher, James Gordon Bennett, followed with *The Herald* in 1835. Six years later the famed Horace Greeley edited the *Tribune* as a penny press.

But the best known promoters of mass-appeal newspapers were mogul William Randolph Hearst and his rival, Joseph Pulitzer. Hearst created an empire in New York and a dozen other cities of big-circulation newspapers, successful magazines, and a wire service (International News Service). His power extended to American foreign policy. When his headline-shouting newspapers published reports about Cuba's demands for independence from Spain, the articles helped bring on the 1898 Spanish-American War.

Hearst was in fierce combat for newspaper circulation dominance with Pulitzer, a Hungarian-born newspaperman who bought and created newspapers, including the *St. Louis Dispatch* and the *St. Louis Post*, which he formed into the *Post-Dispatch*. Later, Pulitzer entered the New York journalism wars, buying the *World* in 1883 and four years later the *Evening World*. Pulitzer and Hearst battled furiously for readers through hyped-up news accounts that gave rise to the derogatory "yellow journalism" brand. After his death, however, Pulitzer's name became associated with high journalistic standards. Through his will, he endowed Columbia University's School of Journalism and started the distinguished Pulitzer prize for news excellence. Hearst too left a legacy of newspapers, magazines, and broadcast outlets.

If Pulitzer and Hearst drove the popular press wagons, the workhorses and talent pulling them were the reporters. In the early days, they were often a rough-and-tumble bunch who had little education but shared a knack for digging up stories and dirt and spinning a good yarn. Although they were poorly paid for their efforts, some of the nation's biggest literary figures of the twentieth century, such as Ernest Hemingway, got their start in newspapering.

What they lacked in college education, many of these young reporters of the 1920s made up on the streets and in the police stations of the nation. H. L. Mencken, the great Baltimore newspaperman, writer, and all-around curmudgeon, belonged to this breed. He wrote in 1942 of his early newspaper days:

At a time when the respectable bourgeois youngsters of my generation were college freshmen, oppressed by simian sophomores and affronted with balderdash daily and hourly by chalky pedagogues, I was at large in a

wicked seaport of half a million people with a front seat at every public show, as free of the night as of the day, and getting earfuls and eyeful of instruction in a hundred giddy arcana, none of them taught in schools. I was laying in all the worldly wisdom of a police lieutenant, a bartender, a shyster lawyer, or a midwife. And it certainly would be idiotic to say that I was not happy. . . . Life was arduous but it was gay and carefree. The days chased one another like kittens chasing their tails.

If there was one work of literature that encapsulated this wild and woolly journalism, it was the highly celebrated play *The Front Page* about newspapering in Chicago written by two former Chicago newsmen, Ben Hecht and Charles MacArthur. Hecht, who later gained fame as a screenwriter and author, recalled his early days as a newspaperman fondly, much as Mencken did, in his 1963 book about reporting days, *Gaily Gaily*. Hecht wrote: "I came to Chicago at the age of sixteen and a half and went to work immediately as a newspaper reporter on the *Chicago Journal*. I write of the five merry years that followed. As sang Bliss Carman: Oh, but life went gaily, gaily . . ."

The essential trait among the memorable early newsmen, whether it was Damon Runyon, who wrote humorously of the guys and dolls of the underside of life, or sports writer and columnist Ring Lardner, it was the ability to spin a good yarn. Gene Fowler, called "the last of the troubadours," was one of the best on Park Row (the Fleet Street of New York, where many newspaper offices were located) during the early era of the 1920s. A talented writer and gifted reporter, Fowler portrayed the news scene in his 1961 book of reminiscences of the 1920s:

I still can see the incredibly fast flutter of bandit Gerald Chapman's small feet as he dies on the hangman's rope. I again can hear Queen Marie of Romania tell her lady-in-waiting 'get rid of that damned thing!' after the Dakota Indians have given Her Majesty a war bonnet. Once again I am present at Carnegie Hall as the addled Mayor Hylan makes his ghostwritten address of welcome to President Woodrow Wilson; but unthinkingly keeps his back turned to Mr. Wilson during the ceremony. I remember also the lean Irish statesman Eamon de Valera, clad in his long underwear and huge boxing gloves on his hands, as he spars with his bull-necked secretary in a sitting room at the old Waldorf.

Even as I write, there unaccountably springs to mind an occasion when I asked Henry Ford about the sleep habits of his good friend [Thomas] Edison. Was it true, as legend had it, that Mr. Edison, like Napoleon, slept but four hours? Yes, said Mr. Ford, but Mr. Edison slept twice and sometimes three times a day. . . ! Little things about big men. Or, if you will, big things about little men. . . . The stories of my day are no longer big in the public attention, or else have been chewed upon until the taste is gone.

There were scores of sensational and landmark stories in those days that were covered by the serious papers as well as tabloids, although more colorfully in the latter. There was the manslaughter trial of top comic film actor Fatty Arbuckle, who was acquitted of

brutally assaulting a young actress while he was at the peak of his career, his fame second only to that of Charlie Chaplin. There was Charles Lindbergh's historic transatlantic flight and the later trial of Bruno Hauptmann for the kidnap-murder of the Lindbergh baby. There were riveting accounts of murders and prohibition, the constitutional amendment giving women the right to vote, elections, the Depression, and World Wars I and II.

After World War II, journalism started maturing and opening up its pages to previously untouched stories as competition grew from radio and the new medium of television. In the prewar days, for example, few Americans knew that President Franklin Delano Roosevelt was crippled from infantile paralysis, or polio. An unwritten rule in the press was to protect Roosevelt from being shown, described, or referred to as confined to a wheelchair or wearing braces to stand briefly, assisted by crutches. It was not until after Roosevelt's death in 1945 that his true condition became universally known.

During the postwar era, most of the misdeeds of celebrities were still confined to gossipmongers and a magazine called *Confidential*, which exploited the private lives of movie stars. Few newspapers followed up with front-page stories on material *Confidential* dug up. Major exceptions included the sensational trial and subsequent acquittal of dashing Hollywood actor Errol Flynn on a charge of rape on a yacht.

Stories of large public scope, rather than scandal, dominated traditional newspapers and television news. There were the assassinations of President John Kennedy, Martin Luther King, and Senator Robert Kennedy; space travel; the Civil Rights Movement; the Vietnam War; the Watergate scandal; the resignation of President Richard Nixon. But then came scandals that forced themselves onto front pages by their very dramatic nature and the public stature of those involved, such as the accidental drowning of Mary Jo Kopechne, a young aide of Senator Edward Kennedy, after a car driven by Kennedy went off a small wooden bridge following a party on Chappaquiddick Island, Massachusetts in 1969.

The Chappaquiddick story was the first of a series of news reports about the exploits of Washington figures. The most powerful congressman at the time, House Ways and Means Committee Chairman Wilbur Mills, splashed his way onto front pages after his girlfriend, a striptease artist nicknamed "The Argentine Firecracker," jumped unexplainably into the Tidal Basin in the wee hours after the married and very private Mills and the woman had spent an argumentative evening together. Another powerful congressman, Wayne Hays, made news when it became known he had hired a woman with whom he had an intimate relationship to work in his office as a secretary, although she later admitted she couldn't take shorthand or type. The presidential ambitions of Senator Gary Hart ended after reporters learned the married candidate was socializing with a young woman. Especially damaging to Hart was a widely circulated photograph of him and the woman together on a Miami boat called "Monkey Business."

The scope of news coverage was revolutionized again when cable television began filling 24 hours a day with nonstop news, talk, and gossip. "Television tabloid" programs such as *Hard Copy* and *Inside Edition* delivered exposés and inside scoops on celebrities. The mainstream press started paying attention. *The Washington Post*, for example, promoted a new gossip column. The mainstay *New York Times* even started running short pieces on celebrities.

In the 1990s, scandals reported in mainstream media included Washington Mayor Marion Barry's conviction and sentencing on a drug possession charge after being caught on videotape smoking

crack cocaine in a hotel room with a woman who was not his wife during a police raid. Tales of sex and other titillating topics started cascading. The Senate confirmed Clarence Thomas, a black jurist, as an associate justice of the Supreme Court, but not before a former aide, Anita Hill, testified she was sexually harassed by him. There was John Wayne Bobbitt, whose penis was cut off by his wife, Lorena Bobbitt, and who later became a pornographic film curiosity after his organ was surgically replaced. There was the rape trial and acquittal of Senator Edward Kennedy's nephew William Kennedy Smith. But no story to date had captured the public interest as did the nationally televised "trial of the century" in 1995 of O.J. Simpson, who was accused of stabbing his wife, Nicole, and a young man, Ron Goldman, to death. The acquittal of the former professional football hero produced emotions across the nation ranging from outrage to joy. For worldwide coverage, few stories could match the 1997 death of Britain's Princess Diana, who, along with her boyfriend and driver, was killed in an automobile crash after a high-speed chase by photographers through the streets of Paris.

The proportions of the news coverage of the O.J. Simpson case and the death of "Princess Di" were surpassed in the United States when a young woman named Monica Lewinsky arrived in Washington, D.C., and nearly brought down the President of the United States. Her story of sexual intimacy with President William Jefferson Clinton in the Oval Office while she was a White House intern and President Clinton's persistent denials resulted in the House of Representatives' impeachment of Clinton on charges of perjury and obstruction of justice. After much agonizing, the Senate, in only the second impeachment trial of a president in U.S. history, acquitted Clinton of the charges, thus keeping him in office.

The story of the Clinton presidency involved scandal even before he was elected. Voters elected him despite stories he had had an affair while Arkansas governor with a night club singer named Gennifer Flowers. That story, picked up by the mainstream media, was broken by a grocery store tabloid, the *Star*, with the bold headline "My 12-Year Affair with Bill Clinton." By coincidence, it was the same publication that brought down Dick Morris, one of Clinton's top political advisers, during the 1996 Democratic convention by breaking the story that Morris had been conducting an extramarital affair with a Washington prostitute at a hotel near the White House.

Media revelations about President Clinton's extramarital affair brought out defenders who pointed out that other presidents, going back to Thomas Jefferson and including Franklin Roosevelt and John Kennedy, had also had affairs. Pundits said future presidential candidates would routinely be queried on their sexual pasts. Where journalists once left the private lives of politicians alone, it appeared the personal problems of politicians would no longer be off the record. There appeared to be no limits to the public's appetite—already stimulated by stories of sex on daytime TV soap operas and in movies and now fed by newspapers, cable TV, and the Internet—for salaciousness and sensation. The last years of the twentieth century saw the way paved for universal coverage of the foibles of the famous, profoundly changing the tone of American politics, largely because of the irresistible dynamics of tabloid journalism.

—Michael L. Posner

Tales from the Crypt

Tales from the Crypt was one of the most popular and notorious horror comic books of the early 1950s. Like other titles published by EC Comics, *Crypt* featured stories that explored the depravity of human nature and the hypocrisy of middle-class society. Brutality, bloodshed, and sadism were the norm in these stories, and—much to the horror of American parents—the kids loved it.

When the series became widely imitated by competing publishers, the proliferation of horror comics provoked a public backlash that led ultimately to a 1954 U.S. Senate investigation into the comic-book industry. Chastised publishers adopted a stringent Comics Code that year which prohibited the publication of horror comic books like *Crypt*.

Talk Radio

Credited with shaping presidential elections and blamed for creating a climate of intolerance, talk radio rose to prominence in the 1990s by offering Americans a free, unfiltered, and often national forum. Whether the issue was a pushy boss, a hapless sports team, or a downtown-parking crunch, talk radio became a sort of water-cooler for the masses. The rise also reflected the increasingly combative nature of American discourse, with on-air arguments, taunts, and racy, satiric routines often the key to a talk show's success. As ratings increased, so did the critics who believed that the radio hosts were, in part, to blame for the increasingly hostile environment that led to a series of high-profile incidents, including the terrorist bombing in Oklahoma City. Leading talk show hosts Howard Stern, G. Gordon Liddy, and Don Imus were branded "shock jocks" for their brash, obnoxious, and often controversial points of view. As Howard Kurtz notes in *Hot Air*, "When White House chief of staff Leon Panetta wanted to attack Newt Gingrich, the strongest insult he could muster was to accuse the House speaker of acting like 'an out-of-control radio talk show host.'" But whether agitator or great equalizer, talk radio offers anyone with a telephone a chance to become part of the national debate. And its influence can be felt off the dial as well, as radio jocks write best-selling books, star in films, and are spoofed on the television sketch comedy show, *Saturday Night Live*.

The emergence of talk radio came about because of technological advances as much as the need for an open forum. Commercial

Don Imus

radio had existed since the 1920s, but the toll free telephone lines and satellite hook-ups that encouraged the spread of the format were not in place for another 60 years.

In the early days of radio, before television, the best known voices were comedians making the jump from the vaudeville stage, old-style newsmen, and sportscasters. The first true talk radio host may have been celebrity interviewer Barry Gray, who began broadcasting out of New York City in the mid-1940s. But Gray's show was without one key element: the caller. Jerry Williams, who went on the air in Boston in 1957, became the first to take calls. He used two tape recorders to comply with the federal regulations requiring delays.

In addition to technical limitations, talk radio was held back by a 1949 law, the Fairness Doctrine, which required equal time for opposing views. The change began in the late 1950s when machinery made the seven second delay possible, enabling hosts to put callers on the air without fear. Talk radio received a similar boost in the 1980s with the spread of satellite and digital phone technologies, which made toll free numbers more affordable for station managers. Emboldened by the fact that these calls were being made not only to a radio station, but also in many cases a radio station in another time zone, callers embraced this new forum. They could yell at another human and risk nothing more than being cut off by the host. In addition, Ronald Reagan abolished the Fairness Doctrine in 1987.

Talk radio spread from 75 stations nationwide in 1980, to 125 by 1987, and 1,350 by 1998.

From the start, talk radio proved a strong voice for political protest. Jerry Williams brought consumer advocate Ralph Nader onto the air to criticize automobile makers in the 1960s. Twenty years later, Williams led a repeal of a law requiring the mandatory use of seat belts in Massachusetts. In 1988, Congress wanted to vote itself a 51 percent pay raise. A nationwide network of talk show hosts, led by Detroit's Roy Fox, suggested listeners send tea bags to Washington, D.C., to show their displeasure. More than 150,000 tea bags were dumped in front of the White House; Congress withdrew the pay raise. A decade later, lawmakers had not forgotten. A survey of members of Congress revealed that 46 percent of them found talk radio the most influential media source during the health care debate; 15 percent cited the *New York Times*.

As talk radio gained stature, so did the voices behind it. In many cases, these were failed disc jockeys who had tried, in vain, to fit into the more conventional music format. Larry King was a broadcasting veteran who first went on the air in 1960 in Miami, Florida, struggled later with a gambling problem and three bad marriages, and was eventually arrested for misusing \$5,000 from a business associate. In 1978, King got what just about everyone in radio gets: a second chance. From the 12th Floor Studio in Crystal City, Virginia, he launched the first nationally broadcast radio show, talking from midnight to 5:30 a.m. The success of his show proved that national talk shows could make it. King eventually left radio for his nightly interview television talk show on the Cable News Network and launched a regular column in the *USA Today*, laying the foundation for the rise of the talk star.

Rush Limbaugh, a college dropout who had failed repeatedly as a rock 'n' roll disc jockey, launched his talk show in the mid-1980s, immediately establishing himself as a conservative voice; his show went national in 1988. No matter that Limbaugh had not registered to vote for several presidential elections; he was courted by then-President George Bush as the 1992 elections approached. Seeking his on-air support, Bush invited Limbaugh to the White House and even carried the talk show host's bags. Limbaugh's influence was considered so widespread that an effort by Congress to bring back the Fairness Doctrine in the 1990s was quickly dubbed the "hush-Rush" bill by the *Wall Street Journal*.

Limbaugh's success provided ample fodder to talk radio's critics. A Times Mirror poll showed Limbaugh's audience to be 92 percent white and 56 percent male. And his on-air mistakes created a strong anti-Rush backlash. The *Flush Rush Quarterly* spurred much of it, reporting Limbaugh's errors. On the Reagan-era Iran Contra scandal, for example, Limbaugh stated: "There is not one indictment. There is not one charge." In reality, there had been 14 people indicted and 11 who had either pleaded guilty or been convicted.

Limbaugh's histrionics were mild compared to those of the freewheeling Howard Stern, the self-proclaimed "moron" of talk radio. Stern made no secret of his distaste for his profession. "Radio is a scuzzy, bastard industry that's filled with deviants, circus clown rejects, the lowest of the low," he said.

Off the air, Stern was the dedicated family man who did not go to parties and spent most of his time with his college sweetheart turned wife, Alison. On the air, he discussed his sexual fantasies, argued with his staff, belched, and complained about the size of his penis. Unlike many other talk shows, Stern attacked celebrity culture instead of celebrating it. He called Oprah Winfrey "a big dolt with an empty, oversized head" and Roseanne "a fat slob." He also promoted a

series of B-level figures, from Jessica Hahn, known for her affair with television preacher Jim Bakker, to Frank Stallone Jr., the less-famous brother of Sylvester. Stern's reporter, Stuttering John, carried out further attacks on celebrity culture. Disarmed by the stutter, expecting another *Entertainment Tonight*-styled softball interview, celebrities were shocked when confronted by John's questions. When Gennifer Flowers held a press conference to address her affair with then-Presidential candidate Bill Clinton, Stuttering John stole the show from the pack of mainstream reporters. "Gennifer," he asked, "did Governor Clinton use a condom?"

Stern also drew the wrath of the Federal Communications Commission (FCC), receiving 21 of 44 fines levied. When Alfred Sikes, chairman of the FCC, fined Stern's employer, Infinity, \$1.7 million for allegedly broadcasting obscenities, the radio host responded, on the air, by hoping that Sikes would develop cancer.

If Stern and Limbaugh were considered too controversial by many, Don Imus found a proper balance between shock radio and serious discourse. A radio star whose first career collapsed in the 1970s due to his addiction to cocaine and alcohol, Imus returned to the national airwaves in 1988. His morning show was a mix of news, racy skits, and spoof songs. Imus found himself in line with the media elite, interviewing President Clinton at one point and regularly hosting serious news veterans like Cokie Roberts, Dan Rather, and Tim Russert. He also appeared on the David Brinkley show.

It is this range—from the serious to the frivolous—that talk radio proponents say makes the medium more powerful than the generally entertainment focussed programming on television talk shows. *Talkers* magazine reports that the top five issues on talk radio between 1990 to 1995 were the O.J. Simpson case, the 1992 elections, the Persian Gulf War, the Oklahoma City Bombing, and the Los Angeles riots. But lest it be taken too seriously, *Talkers* also rated discussion of John Wayne Bobbitt, the man whose penis was surgically reattached after it had been cut off by his wife, higher than debates on Bosnia and gays in the military.

For those more interested in serious-minded talk, National Public Radio (NPR) emerged a decade before Limbaugh, Stern, and Imus. Known for lengthy reports and the breathy but understated delivery of its hosts, NPR's style is so distinctive it has also been spoofed on *Saturday Night Live*. NPR made its debut on May 3, 1971 with its first broadcast of *All Things Considered*. That first broadcast reached a few hundred thousand listeners through only 104 public radio stations. Twenty five years later, *All Things Considered* would reach 16 million Americans through NPR's 520 member stations, all the while holding faithful to the wishes of its first director, Bill Siemering, who wanted "calm conversation, analysis and explication."

By the late 1990s, NPR had long established itself as a dependable voice, but the influence of hot talkers like Limbaugh and Stern was still being debated. Limbaugh took credit for the Republican victories during the 1994 Congressional elections and made the cover of *Time* magazine, the headline posed: "Is Rush Limbaugh Good For America?" But by the end of 1996, Clinton had won a second term and the conservative movement was floundering.

Nobody debated whether talk radio would survive. It had made stars of big mouths (Stern, Imus), political impresarios (Limbaugh, G. Gordon Liddy), shrinks and sex therapists (Dr. Laura Schlesinger, Dr. Judy Kuriansky), and even discarded politicians (former New York Governor Mario Cuomo, former New York City mayor Ed Koch).

Whether we liked it or not, we had become, as Howard Kurtz wrote, “a talk show nation.”

—Geoff Edgers

Talking Heads

From their earliest days, Talking Heads were a band that defied categorization. Playing in New York during the height of the mid-1970s punk scene, Talking Heads were a preppy-looking trio that became a punk band by association. Despite being musically different, Talking Heads' minimalist sound, their musical combination of energy and intelligence, and their self-conscious and unpretentious demeanor connected them to punk. Some critics tried using the term “Art Rock” to describe the band's intellectual approach to their music, but the term fell short: Talking Heads were cerebral, but they were also eminently danceable, too. Like the characters in their songs, Talking Heads' music dramatized the human predicament of the duel between head and heart.

David Byrne (vocals and guitar), Tina Weymouth (bass), and Chris Frantz (drums) began as a trio in 1975, after dropping out of the Rhode Island School of Design and relocating to New York. Their first single, “Love Goes to a Building on Fire,” was released in early 1977 and displayed the band's spare technique. That same year, the band signed to Sire Records, an independent label whose roster included the Ramones, and released *Talking Heads '77*. The album added keyboardist Jerry Harrison, a former graduate student at Harvard. Their debut appeared to often ecstatic reviews. The lyrics to “Don't Worry About the Government” celebrated civil servants and life's more mundane qualities: “My building has every convenience/ It's going to make life easy for me.” The song's simplicity was almost shocking in its honesty. Hardly a tentative songwriter, Byrne was also capable of writing tense music in “No Compassion” and “Psycho Killer.” The latter song, although not a hit single, brought the group widespread attention for the song's psychodrama: “I can't sleep 'cos my bed's on fire/Don't touch me I'm a real live wire.” The notoriety of “Psycho Killer” was fueled even further by Byrne's physical resemblance to actor Anthony Perkins, who played Norman Bates in Alfred Hitchcock's *Psycho*.

The group's 1978 release, *More Songs About Buildings and Food*, began a long collaboration with producer Brian Eno, who essentially became a fifth member of the group. The album produced a Top-40 hit, a cover of soul singer Al Green's “Take Me to the

River.” The modest hit provided a glimpse into the band's future commercial successes, as well as their developing forays into dance, funk, and international rhythms. “Take Me to the River” also vindicated the band's commercial philosophy: “It wouldn't please us to make music that's impossible to listen to,” said Byrne in *Rolling Stone*, “but we don't want to compromise for the sake of popularity. It's possible to make exciting, respectable stuff that can succeed in the marketplace.”

The opening track on 1979's *Fear of Music*, “I Zimbra,” had polyrhythmic arrangements that announced the group's new musical direction. Not everyone was paying attention. “Life During Wartime,” one of the group's best-known songs, contained the line, “This ain't no disco,” and some mistakenly thought that Talking Heads were the new standard-bearers for the anti-disco movement. The irony around “Life During Wartime” was all too real. Around the time that Talking Heads began incorporating international rhythms, rock critic Ken Tucker wrote that “seldom in pop music history has there been a larger gap between what black and white audiences are listening to than there is right now.” *Remain in Light*, which was released in 1980, was the realization of the polyrhythmic experiment in “I Zimbra.” Augmented by a host of outside musicians, *Remain in Light* had the feeling of a free-flowing jam session at first, but it was tightly structured and disciplined. The album displayed funk and African influences when many whites took the phrase “Black music” to describe several distinct musical forms, like disco, funk, soul, and rhythm and blues.

The next year found the band pursuing solo projects that continued the group's musical blends. Weymouth and Frantz's side project, *The Tom Tom Club*, contained a merger of new wave with dance music, and also rap. The self-titled album included “Genius of Love,” a song whose rhythm was used by several R & B and rap artists of the 1990s. Byrne completed a score for *The Catherine Wheel*, a dance performance by Twyla Tharp that proceeded with *Remain in Light*'s sound. In 1985, Byrne's next project was for an experimental theater piece called *Music for the Knee Plays*, which employed traditional New Orleans brass band struts and funeral marches. Byrne's skill in working with other musical forms was hitting its stride.

The band's first album in three years was 1983's *Speaking in Tongues*. Eno was no longer sharing production chores, and the band shed many of its guest musicians. Talking Heads had a hit with “Burning Down the House” and reached the peak of their popularity with the 1984 film, *Stop Making Sense*. Directed by Jonathan Demme, the film documented the Talking Heads' 1983 tour, and won the National Society of Film Critics Award for Best Documentary. The group recorded three more albums before they unofficially broke up in 1988. In 1996, at the peak of alternative music's popularity, the group decided to reform without Byrne, as the Heads, and recorded *No Talking Just Head*. Byrne sued his former bandmates and asked for an injunction against the album's release. Then, shortly before the album's release date, a settlement was reached and the album was released to generally abysmal reviews.

Talking Heads expanded the musical borders of American popular music. By the late 1980s, international musical styles were being adopted by mainstream artists, like Peter Dinklage and Paul Simon. What the mainstream considered to be acceptable was broadening. In another sense, Talking Heads extended personal musical borders as much as they were intent on stretching national ones. Ken Tucker, in his review of *Remain in Light*, summed up the climate in which the group was attempting to bridge musical gaps: “By 1978,

punk and disco had divided the pop audience. What did Talking Heads do? They recorded Al Green's 'Take Me to the River.' The gesture was a heroic one."

Tang

Tang instant beverage entered American popular culture in the 1960s with a remarkable journey to outer space. The vitamin-fortified drink was first marketed in the late 1950s as a healthy alternative to soda pop. After being chosen by the National Aeronautic and Space Administration (NASA) to be the drink of the astronauts, Tang flew on several flights in the 1960s and soon became a drink of choice for children hoping to emulate the feats of the astronauts. Despite the introduction of new flavors in addition to the classic orange, Tang's popularity diminished in the 1980s and 1990s along with America's excitement over the space program.

Tanning

In the late nineteenth century, high fashion dictated the maintenance of alabaster skin. Creamy white skin signified a person of privileged status, not an unfortunate sun-darkened field laborer. But as the industrial age dawned and laborers increasingly spent long hours in factories and the coal haze above city streets blocked the sun from reaching their tenement windows, the professional-managerial class, with its increased leisure time, embraced a culture of outdoor living. Furthermore, the consumer culture that emerged along with the products of the industrial age prompted a cultural shift toward an emphasis on appearance. Advertising, motion pictures, and the popular press inundated people with images of the body: images that emphasized the display of hedonism, leisure, and sexuality. A tan soon became a status symbol.

Fashion proved the greatest influence on the popularity of the suntan. Many learned about fashion through film; in the early 1920s Bela Balázs had noticed that film was a major influence in the cultural shift away from "words" and toward "visual images" that "drew attention to the appearance of the body, the clothing, demeanour, and

A sunbather gets a tan in the Florida sun.

gesture," according to Mike Featherstone in *Theory Culture and Society*. Douglas Fairbanks Sr. was among the first to popularize the suntan. In his films and publicity shots in the popular press his bronzed skin became an emblem of his vigorous pursuit of outdoor activities. While other male celebrities quickly followed his lead, women, even Douglas' wife Mary Pickford, preserved their light skin. Europe continued to dictate fashion at this time, so when fashion designer Coco Chanel returned from vacation with a deep bronze tan and began using tanned mannequins for her designs in the 1920s, tanning transformed into a cultural obsession in and of itself. Consequently, the deep cut backs of women's dresses in the 1920s and 1930s required tanned skin for the wearer to be appropriately fashionable. The more revealing fashions became adornments for bronzed skin, and by 1946, women could tan their skin publicly in as little as a bikini.

The new sun worship prompted by fashion had support from science, which had begun to report the healthful benefits of sunshine at the turn of the century. Previous warnings about the sun's harmful effects on the skin gave way to new research that had proven the sun's healing qualities on diseases like rickets and tuberculosis in the late 1800s. Articles announcing the healing benefits of heliotherapy and tanned skin proliferated. An antebellum health advisor, William A. Alcott, promoted the idea that "Not a few individuals would be gainers in point of health, especially children and females, by being slightly tanned over their surface." Dr. Edwin E. Slosson reported in *Daily Science News Bulletin* in 1923 that, instead of being harmful, "It seems that ultra-violet and violet rays may be positively beneficial," according to *Literary Digest*, which featured a photo of babies

at the beach with the caption: “Nothing is better for babies—or grown people either—than a good coat of tan, we have it on high scientific authority.” And by 1929, an American article proclaimed that “the skin of a healthy man is brown, smooth, and sleek,” according to Featherstone.

During the warm months, interest in sunbathing on beaches began in the interwar years and continued unabated into the early 1980s. But while many could sunbathe during the summer, only the well-off could afford the cost of air travel, which allowed them to spend winters in sunny locations. There were few status symbols as obvious as tanned skin during the winter. *Newsweek* reported in 1966 that in the “jet age” the tan had become a status symbol that could “be worn like Brooks Brothers clothes as a sure sign of affluence.” Tanned skin became synonymous with health, wealth, leisure, and style.

“Nothing is as transient, useless, or completely desirable as a suntan,” a pre-feminist Gloria Steinem wrote in *The Beach Book* in 1963, adding “What a tan will do is make you look good, and that justifies anything.” Steinem perfectly captured the kind of zeal that fueled many hours of sunbathing. The desire for tanned skin prompted formulas for obtaining the perfect tan to abound. People coated themselves in baby oil and red iodine believing this mixture would turn their skins a fashionable caramel brown color. Some smoothed on a purple peroxide foam which promised to speed the tanning time and bleach the body hair to enhance the depth of the tan’s color by contrast. Others restricted their diets before tanning, eating vitamins and avoiding wine and spicy foods, to increase their chances of getting a coppery glow. Some even rubbed their skin with salt to tan faster. The truly fanatical sun worshipers lay inside aluminum coffins or ringed their necks with sun reflectors to ensure themselves an even tan. The proliferation of tanning salons and tanning booths promised people of every class access to a year-round tan by the late 1970s. (Indoor tanning became one of the fastest growing industries in North America, increasing 54 percent between 1986 and 1988, according to *U.S. News and World Report*.) People willingly sought out these seemingly ridiculous activities because, according to *Newsweek*, “only the result counts.” An episode of the sitcom *Seinfeld* highlighted the folly of these tanning strategies when the character Kramer coats himself in butter as he basks in the sun, only to appear and smell like a well-roasted turkey to his hungry friend, Newman.

Any number of brands sought to capitalize on the craze for suntanned skin. The first branded suntan cream available in America was a Coppertone brand cream made mostly of cocoa butter that was introduced in 1944. By 1945 Coppertone Suntan Oil was advertised with an “Indian Head seal” and the slogan “Don’t Be a Paleface.” But Coppertone’s most enduring image—“Little Miss Coppertone”—debuted on Miami-areas billboards in 1953. The illustration of the tanned young girl whose dog is pulling down her panties to display her white-skinned bare bottom soon graced billboards, advertisements, and product labels across the country. The little girl came to represent the youthfulness associated with tanned skin. If Little Miss Coppertone represented the youthfulness of tanned skin, Ban de Soliel Orange Gelée advertisements captured the sexual appeal of the suntan. The 1970s and 1980s advertisements for the Bain de Soliel brand using the sultry and darkly tanned model, Kriss Ziemer, epitomized the glamour many hoped a tan would confer.

While the hazardous effects of a sunburn and the detrimental effects of sun bathing on fair-skinned people had long been known, worries about tanning began to reach a wider audience by the 1970s as the incidence of skin cancer had begun to rise noticeably. Between 1930 and 1986 the Skin Cancer Foundation of the American Cancer

Society figured that the incidence of melanoma had risen tenfold, from one in every 1,500 people to one in every 150. Research into the ill effects of sun bathing resulted in the proliferation of products to protect the skin from burning. The Coppertone Solar Research Center created and initiated the use of SPF factors—a standardized measurement of a sunscreen’s ability to protect the skin and prevent sunburn—in sun lotions in 1972, but SPF numbers (2, 4, 6, 8) did not appear on product labels until 1977. And not until 1980 did the Skin Care Foundation grant Coppertone Supershade 15 an acceptance seal as an “effective aid in the prevention of sun-induced skin cancer.” When research in the 1980s revealed that most exposure to the sun occurs during childhood, Little Miss Coppertone began to promote sun protection over tanned skin for children. The first offering of SPF 30 formulas appeared in 1993, and by 1998, Coppertone had joined with the American Academy of Dermatology to promote the use of sun-blocks in the “Stop the Sun, Not the Fun” campaign, the first in-school sun safety program. By 1994, Little Miss Coppertone could be seen with a hat, sunglasses, and T-shirt, when she was used to help promote the new UV Index.

The scientific authority of the 1990s condemned tanning. Doctor Darrel Rigel, professor of dermatology at New York University, Manhattan, told *FDA Consumer Magazine* contributor Alexandra Greeley that “There is no such thing as a safe tan. Why does the body tan? Because the body is being injured by ultraviolet radiation that hits it. This causes the body to make melanin, a natural sun screen. So to get tan, you must get injured first.” The American Cancer Society reported that by the late 1990s the incidence of malignant melanoma had risen to one in 75 and predicted that 44,200 people would be diagnosed with the disease in 1999, of which 9,200 would die, according to Gandee. The scientific community has linked the rise in the number of affluent young people afflicted with melanoma to air travel. Dermatologist Patricia Wexler told Gandee that the melanoma rate is higher in younger generations “because our parents didn’t go to the Delano or the Hamptons or St. Bart’s.”

Despite the overwhelming evidence of the negative effects of the suntan, tanning products companies continued to promote the benefits of a tan. The Bain de Soliel brand began to use lightly tanned women in its ads, but continued to promote products to help obtain deeply bronzed skin into the 1990s, as did many other brands. One significant change in the promotion of tanning products was the residual rhetoric about how “healthy” tanned skin looks. A 1999 radio ad for the Go Bronze sunless tanning lotion sold at the Bon Marché department store, for example, featured a woman saying that she wanted tan, healthy looking skin too.

Sunless tanning products could offer the “look” without the damage. Sunless tanning products that turned the skin a realistic tan color made the sunless tanning market more viable in the 1990s than it had been when the first sunless tanning products were introduced in 1960. These first products, including Schering-Plough Healthcare Products’ Quick Tanning lotion, the first sunless tanning lotion, offered an orange-ish tan color that was easily identified as fake. Some fashion magazines, like *Vogue*, furthered the interest in sunless tanning lotions by presenting articles about the harmful effects of the sun in the same issue that featured photos of bathing suit clad models covered in sunless tanning lotions frolicking on a sun-drenched beach.

Though by the late 1990s some continued to mimic the looks of actor George Hamilton, who *Newsweek* dubbed the “Sultan of Suntan” for the year-round tan he has maintained for three decades, there had been a steady increase in the numbers of people who Coppertone identified as “sun concerned”—a category based on

sales of products with an SPF number of 8 and over—since the early 1980s. A 1994 survey by the American Academy of Dermatology reported that one third of the respondents never sunbathe and always use a sun screen, according to Greeley. And dermatologist Dennis Gross indicated that in assessing his patients from the mid- to late 1990s, “the number of women who consider a tan desirable has gone from the majority to the minority,” according to Gandee. Aside from the medical reasons to curb suntanning, the sexual appeal of pale skin was beginning to gain followers with the admirers of public figures, including Gwyneth Paltrow, Nicole Kidman, and Uma Thurman. In addition, fashion magazines like *Elle* began to feature paler models for spring and summer issues. Future historians may well look back on the fashionable suntan as an oddity of the twentieth century.

Tap Dancing

An indigenous American dance form that evolved as African and British dance traditions merged during the eighteenth and nineteenth centuries, tap dancing involves the production of syncopated sounds by the dancer’s feet. Tap dancing has been a mainstay of virtually every type of popular performing-arts entertainment in the United States, from minstrel shows to vaudeville, revues, extravaganzas, Broadway and Hollywood musicals, nightclubs, precision dance teams, and television variety programs. A remarkably adaptive dance form, tap has fused with and reflected the changing entertainment

sensibilities of American audiences for almost 200 years. Tap routines figure prominently in children’s dance recitals, as dance instruction is a popular enrichment activity for youngsters and many are too young for, or uninterested in, the serious discipline of ballet. Adult amateurs also find tap dancing a fun form of recreation and exercise.

Though some trace the roots of tap back to the ships that transported enslaved Africans to America (as the Africans’ dancing was observed by the Europeans, and vice versa) the significant merging of the two dance traditions began on southern plantations. When a mid-eighteenth century law forbade slaves from playing drums, they increased the use of their feet to embody rhythms in their dancing. Their observations of the articulated foot actions of Irish step dancing and other European dances practiced by their masters engendered a new hybrid dance form in which the Africans combined fancy footwork with their sophisticated rhythmic sensibilities. Oftentimes they were put into contests by their masters and won prizes for the most daring or complex dancing. This inspired individual creativity and competition, characteristics that continued to drive the development of tap dancing well into the twentieth century.

In the minstrel shows, the most popular form of American entertainment during the mid-nineteenth century, tap dancing became a codified stage dance form. Its most esteemed practitioner was William Henry Lane, known as Master Juba, a free African American who was one of the only blacks to be allowed to perform onstage with whites. The new social dances that sprang up around the turn of the twentieth century were incorporated into the developing tap dance vocabulary. By 1910 the use of metal plates attached to the bottoms of the shoes’ heels and toes became commonplace; previously, the dancers wore wooden-soled shoes or pounded nails or pennies into leather soles.

Vaudeville became the next important breeding ground for the advancement of tap dancing. Striving to earn a living in a business that depended on continuously pleasing and surprising audiences, tap dancers were constantly inventing more impressive maneuvers. Different categories of tap dancers evolved: eccentric dancers, such as Ray Bolger, sported a loose, rubbery movement style; comedy dancers, such as Bert Williams and George Walker, were duos who danced as foils to one another; flash acts, such as the Nicholas Brothers, added spectacular acrobatic tricks to their tapping; class acts, such as Charles “Honi” Coles, were elegant in their costuming and movements; and the rhythm- or jazz-tappers, such as John W. Bubbles, explored the complicated rhythms of jazz music.

By the 1930s tap dancing chorus lines had become a prominent feature of Broadway and Hollywood musicals. While such stars as Fred Astaire, Gene Kelly, Ann Miller, Eleanor Powell, Shirley Temple, and Bill “Bojangles” Robinson advanced the popularity and artistry of tap dancing, the ensembles stunted tap’s artistic growth. The art of tap dancing lies in the subtle nuances and complex rhythmic interchanges between the beat, the music, and the tapping sounds. When executed by large groups, the sounds must be simple, otherwise multiplication breeds muddiness. Precision teams, such as the Rockettes, have solidified tap dancing’s place in American popular entertainment, but have frozen it, artistically. It was at the Hoofers Club in Harlem that the art of tap flourished as the great jazz-tappers held improvisational “challenge” contests and pushed each other to further develop their skills.

During the 1950s and 1960s tap “hibernated” as its performance outlets vanished. The Hoofers Club had closed and jazz-tappers found that the crowded rhythms of be-bop, the new form of jazz music, left no space for tap sounds. Rock ‘n’ roll was too loud for

tapping. The age of movie musicals was ending, nightclubs turned to comedy and music acts, ballet had overtaken Broadway, and vaudeville had long since died.

The tap revival began when a group of old-time hoofers appeared at the Newport Jazz Festival in the early 1960s and intrigued the public with their artistry. In 1968 a series of “Tap Happenings,” held in Manhattan, provided opportunities for audiences to witness the legendary jazz-tappers. By the 1970s the rhythmic explorations of these early hoofers were recognized as an integral part of the development of jazz music. Their work, and tap dancing in general, began to be viewed with serious eyes.

The 1970s was a nostalgic decade on Broadway and re-introduced tap dancing in new musicals, such as *No, No, Nanette* (1971) and *Bubbling Brown Sugar* (1976). The release, in 1974, of Metro Goldwyn Mayer’s *That’s Entertainment!* re-acquainted audiences with the tap dance stars of old Hollywood musicals. New tap dance stars soon emerged and put a contemporary urban face on tapping. Gregory Hines appeared in the Broadway musicals *Sophisticated Ladies* (1983) and *Jelly’s Last Jam* (1991), and in the film *Tap* he pioneered an electronic form of tapping, originally engineered by Al Desio, whereby the dancer makes music through electronic transmitters built into the tap shoes. Savion Glover fused tap with hip-hop sensibilities and wowed audiences with his fierce, heavy-footed style in the Broadway revue *Bring in ’da Noise, Bring in ’da Funk* (1996). In 1989 Congress declared National Tap Dance Day to be celebrated annually on May 25, Robinson’s birthday.

Though many dancers of the 1990s approach tap as art, it is not commonly perceived as serious dance. Tap dancing has been called America’s folk dance and, as such, will probably always be most appreciated for the joy it gives to its participants—both professional and amateur—and to spectators of popular entertainment.

Tarantino, Quentin (1963—)

Best known for writing and directing the Oscar winning film *Pulp Fiction* (1994), Quentin Tarantino is one of the most critically lauded film directors of the 1990s. In *Reservoir Dogs* (1992) he redefined the primary elements of the pulp genre—murder, drugs, sex, violence, and betrayal—by introducing self-consciously witty dialogue, formal inventiveness, and slick yet casual violence. As a result he raised what had been traditionally judged as a B movie genre to an avant-garde art form. His style has become like a brand name in the film industry. Celebrating popular culture and capitalizing on the political correctness backlash of the 1990s, Tarantino’s audiences are served a hearty dose of shallowness, ease, and familiarity combined

with as much violence and sex as an R rating can indulge. In addition to writing and directing he also acts, produces, and distributes films.

—Adrienne Russell

Tarbell, Ida (1957-1944)

One of *McClure’s* muckrakers, Ida Tarbell changed the oil business in America. A female journalist was not common at the turn of the twentieth century, especially not one who muckraked or scandalized industry. From *McClure’s* excerpts, Tarbell published the two volume *History of Standard Oil* in 1904. In it she revealed the many unfair business practices of Standard Oil and owner John Rockefeller. Tarbell became a whistleblower on the most powerful trust in America. She earned the name the Joan of Arc of the oil region. The government broke up the Standard Oil Company in 1911.

Ida Tarbell was born in Titusville, Pennsylvania, to an oil baron father, Franklin Tarbell. Ida, the only female freshman, attended Allegheny College and gained a degree in biology in 1880, and joined the staff at *McClure’s* magazine with muckrakers Ray Stannard Baker and Lincoln Steffens. Her inquiry into Rockefeller was not all from professional interest; her father invented wooden barrels to hold oil and attained great wealth, but nearly went bankrupt when he failed to sell his business to John Rockefeller. His ultimate victory, however, would come when *The History of Standard Oil* and its revelations led to the break up of the largest corporation in America.

Ida Tarbell was also a historian. Her first major publication in 1895 was on Napoleon and Josephine Bonaparte. She wrote eight books on Abraham Lincoln, his relatives, and his family. In fact, until the release of Abraham Lincoln’s Papers in 1947 she was considered the measure of Lincoln history. Ida Tarbell made her mark in an era when women journalists were often not taken seriously.

Tarkanian, Jerry (1930—)

Jerry Tarkanian—ever so appropriately nicknamed “Tark the Shark”—is both one of the most talented and controversial college basketball coaches in the history of the sport. His nineteen-year tenure at the University of Nevada-Las Vegas began in 1973, and was highlighted by a quartet of appearances in the Final Four, a national championship in 1990, and an overall record of 509-105. Nonetheless, throughout his UNLV career, Tarkanian constantly was in conflict with the National Collegiate Athletic Association, the governing body of college sports. In the late 1970s, the NCAA placed the Runnin’ Rebels’ hoops program on two years’ probation for recruiting violations. The school was directed to suspend its coach—an action that Tarkanian blocked with a court order. He also sued the NCAA, albeit unsuccessfully—although the case went all the way to

the Supreme Court. And yet another clash between Tark and the NCAA ended up in the Supreme Court, in which the justices rejected the coach's attempt to resurrect a Nevada state law that had shielded Tarkanian and his UNLV associates, who had been charged with breaching NCAA regulations.

Two years after UNLV won the national championship in 1990, the NCAA commenced another major investigation of Tarkanian. This time, the coach resigned under pressure—and yet again sued the NCAA, accusing the organization of trying to run him out of college basketball. The suit was settled in 1998, just before it was set to go to trial. While admitting no liability, the NCAA paid Tarkanian \$2.5 million. “They can never, ever, make up for all the pain and agony they caused me,” Tarkanian observed. “All I can say is that for 25 years they beat the hell out of me.” Tarkanian eventually signed on as the basketball coach of Fresno State, from which he had graduated in 1955. However, the conflict surrounding him did not subside. In 1997, controversy again swirled on campus when it was revealed that the Bulldogs had recruited a convicted wife abuser, and two of his players were accused of assaulting their girlfriends. The following year, two players were jailed on charges of grand theft and assault with a deadly weapon. Nonetheless, Jerry Tarkanian remains a seminal figure in the sport of college basketball, where his unconventional style combined with his phenomenal success, have left a deep and lasting impact on the game.

Tarkington, Booth (1869-1946)

A prolific and versatile writer of mainstream fiction, (Newton) Booth Tarkington is remembered for his portrayals of middle-class life in late nineteenth- and early twentieth-century Indiana. His best known works, *The Magnificent Ambersons* (1918) and *Alice Adams* (1921), were awarded the first and the fourth Pulitzer Prizes for literature. The former was adapted for the screen by Orson Welles in 1942, and the latter is considered by critics to be Tarkington's finest accomplishment. A novelist, playwright, essayist, and briefly a politician, Tarkington produced a total of 171 short stories, 21 novels, 9 novellas, and 19 plays along with a number of movie scripts, radio dramas, and even illustrations over the course of a career that lasted from 1899 until his death in 1946. Having achieved a wide audience but not the lasting respect of critics, most agree that his finest work was done around the time of World War I.

Born in Indianapolis, Indiana, to the sort of comfortably well-established family that he later popularized in his fiction, Tarkington dictated his first short story to his sister at the age of six, and by the age of 16 had written a 14-act work on Jesse James. After graduation from Princeton, Tarkington moved to New York and labored futilely for

Booth Tarkington

five years to get his work published before turning to his own background for inspiration. Said Tarkington, “I had no real success until I struck Indiana subjects.” He later described his first book, *The Gentleman from Indiana*, as “an emotional tribute to the land of my birth.” A commercial success, it received only lukewarm comment from critics, many of whom labeled it an unrealistic romance. This was a general pattern set for Tarkington's career. A 1991 *Dictionary of Literary Biography* entry on Tarkington suggested that “Although he had more talent than most of his contemporaries, his work never quite achieved major significance, and he had to be content with a large rather than a discriminating audience.”

In 1902, Tarkington married Laurel Louisa Fletcher and was elected to the Indiana House of Representatives as a Republican, though he was forced to vacate his seat a year later due to an illness. The couple spent most of the next decade traveling through Europe, but Booth's happiness, as well as his writing, were disrupted by bouts of excessive drinking and finally by divorce in 1911. One year later he married Susanah Keifer and took up his literary career again full-time. In 1914 he began work on his “Penrod” stories, which recaptured boyhood life in the late nineteenth century. In the postwar years, Tarkington's career reached its zenith with two Pulitzer Prizes. His prolific output during this time was not accidental; by all accounts he was a literary workhorse sometimes putting in 18-hour days of solid

writing with little or no diversion until the task of the moment was complete. The popularity of this work made him financially comfortable, and beginning in the 1920s Tarkington settled in to what he called “the milk run”—summers at Kennebunkport, Maine, and winters in Indianapolis. Cataracts gradually diminished his sight, and in 1930 he went completely blind. Surgeries successfully returned a part of his vision a year later, but his vitality was diminished. He turned primarily to children’s stories in the final phase of his career, while also becoming a significant collector of art. He died in 1946 after an illness.

The volumes that Tarkington completed over the course of the first half of the twentieth century form a documentary testament of industrialization, urbanization, and social flux in urban middle America. Biographer James Woodress characterized his body of work as “a paradigm of growth in the Midwest.” In his fiction, Tarkington clearly expressed his distaste for the bustle and grime of urban life. *The Magnificent Ambersons* documented the incursion of the dirty streets, unkempt masses, and smoke-filled air of the industrializing metropolis into an idyllic nineteenth-century world. Part of the tragedy of the book is aesthetic as the beautiful estate of the great family is vanquished by bland, utilitarian architecture and uncultured people. Yet, ironically, Tarkington chose to spend much of his adult life in the city whose fall he lamented in his fiction. Addressing this paradox, Tarkington said, “I belong here, I am part of it, and it is part of me. I understand it and it understands me. I would be out of touch with what I know best if I did not spend at least part of each year in Indianapolis.”

In describing his style, an anonymous reviewer in the *North American Review* commented, “Mr. Tarkington is neither a realist, nor a romanticist, nor a localist, nor an impressionist, nor any special kind of literary artist, but simply a complete novelist.” Tarkington himself fought the impetus to pigeonhole his work, vehemently rejecting the label of “romanticist” that some reviewers tried to force upon him. His literary heroes were Mark Twain and especially William Dean Howells. Dickinson quoted Tarkington on his wholesome, all-American tastes: “[He] admires all those things which every decent, ordinary, simple-hearted person admires,” and “hates precisely those things hated by all honest, healthy, ‘American,’ people.” Yet, Tarkington was nonetheless criticized by some conservative contemporaries for his critique of the American fascination with wealth, superficiality, and what he often referred to as “bigness” as ends in themselves, an overriding selfishness that he saw leading society toward mental and spiritual degeneration.

Tarkington lives on through his two Pulitzer-winning novels, the “Penrod” stories, and Orson Welles’ 1942 film adaptation of *The Magnificent Ambersons*. These are remembered for their sentimental and socially conscious renderings of boyhood and middle-class life in the American Midwest around the turn of the century. Tarkington is not considered a literary genius, despite the Pulitzers. Instead, his legacy is as one of the most popular writers of the first half of the twentieth century—a period in which he sold more than five million volumes.

Tarzan

Edgar Rice Burroughs’ Tarzan, the world’s best-known apeman, first swung into view in the pages of a pulp fiction magazine in 1912. The Lord of the Jungle went on to conquer the media, including books, movies, comic strips, radio, comic books, and television. Burroughs was in his middle thirties and had failed in several professions—including being an instructor at a military academy, running a stationery store, and working as a salesman of pencil sharpeners—when he turned to the writing of pulp fiction in the second decade of the twentieth century. His first published work was a serial titled *Under the Moons of Mars*. It introduced his science fiction hero John Carter and started in the February 1912 issue of *All-Story* magazine. Later that same year, borrowing from the works of such writers as H. Rider Haggard and Rudyard Kipling, Burroughs invented his major character. His novel *Tarzan of the Apes*, subtitled “A Romance of the Jungle,” appeared in its entirety in the October issue of *All-Story*.

Tarzan, like Kipling’s Mowgli, was a feral child. In the case of young John Clayton, the future Lord Greystoke, the little boy was raised by apes in the wilds of Africa. His parents, Lord and Lady Greystoke, were marooned on the African coast by the mutinous crew of the ship they’d been traveling on. Tarzan’s father built a hut for himself and his pregnant wife, and it was there that the boy was born. His mother died soon after and his father was later killed by an attacking band of great apes. But a female ape named Kala, who’d just lost her own offspring, adopted and raised the child. “The apes called him Tarzan, meaning white-skin,” as the comic strip version explained. “He grew up among them. He learned to speak their language and he lived as they did, in the trees.” Somewhere along the way the wild child learned modesty and took to wearing a sort of sarong fashioned from a leopard skin. He later, after stumbling upon his family’s hut, discovered books and taught himself to read. As his knowledge increased, the boy began to suspect that he was no ordinary ape.

Burroughs was basically a fantasist and well aware that in a real life situation, his little white-skinned hero wouldn’t have made it to his first birthday. But it was more fun ignoring reality. The novice author also didn’t have much of an idea of what Africa was really like. In the pulpwood version of *Tarzan of the Apes*, Burroughs included a tiger named Sabor among his animal cast. His editor didn’t catch this, and it took a reader to write in and point out that “the tiger is not and never has been included in the fauna of the African continent.”

Eventually Tarzan encountered other humans. Initially they were natives, and the earliest interactions were far from cordial. Then

The cast of the *Tarzan* films (from left): Jane (Maureen O'Sullivan), Tarzan (Johnny Weismuller), Boy (Johnny Sheffield), and Cheetah.

another group of mutineers arrived in his stretch of wilderness. This bunch had captured a group of treasure seekers headed up by Professor Porter and included his daughter Jane and Tarzan's cousin William Cecil Clayton, the present Lord Greystoke and suitor of Jane Porter. Once Tarzan, now a full grown young man, encountered Jane, he was smitten. He proceeded to rescue her and her friends and to arrange a jungle interlude, perfectly innocent, with her. Eventually, however, she sailed back to America, leaving her Jungle Lord behind. Tarzan, with the help of a new friend, was able to establish that he was the true Lord Greystoke. But when he followed Jane to her home, he became convinced that she actually loved the other Clayton. So rather than tell her or William Clayton the truth, he delivered one of the great curtain lines in fiction—"My mother was an Ape. I don't know who my father was."

In addition to Kipling and Haggard, Burroughs was very much influenced by Victorian fiction in general. Tarzan is very much a typical Victorian hero, a fellow who is a gentleman to the core. And just as true gentlemen like *Oliver Twist* and *David Copperfield* survived in the urban jungle of nineteenth century London, Tarzan

survived in the jungles of Africa and proved that he, too, was a gentleman. A gentleman, if he's honest and right-thinking, can't be kept from rising to his true rank in society. And in the next several books John Clayton did just that, eventually winning back his title and marrying Jane. Burroughs, knowing his audience well, always made certain that there was an abundance of jungle action, lost cities, cruel villains, lovely maidens, wild savages, white goddesses, and untamed beasts in each subsequent Tarzan book.

Tarzan's conquest of the media began almost at once. In 1914, *Tarzan of the Apes* appeared as a hardcover novel. Eventually there would be two dozen novels about the apeman, the majority of them serialized in pulp magazines, such as *Argosy* and *Blue Book*, prior to publication. *Tarzan of the Apes* became a silent movie in 1918. Barrel-chested Elmo Lincoln, who'd portrayed a blacksmith in *The Birth of a Nation*, was the first screen Tarzan. He was followed in the role by such actors as Frank Merrill, James Pierce (who married Burroughs' daughter Joan) and P. Dempsey Tabler. In the talkies of the 1930s, Buster Crabbe, Bruce Bennett (under his real name of Herman Brix) and Glenn Morris all took turns at wearing the leopard

skin. But the definitive Tarzan of that decade, as well as of the 1940s, was Johnny Weissmuller. Not an actor but a record-breaking swimmer, he was in his late twenties when he first took to the trees for MGM's *Tarzan the Ape Man*. It's said that he beat out such contenders as Joel McCrea, Johnny Mack Brown, and Clark Gable for the part. W. S. Van Dyke directed the film, and Maureen O'Sullivan played Jane.

MGM's Tarzan was not the articulate gentleman of the novels. He was a rather primitive fellow not much more versed in human speech than one of his apes. "My lines read like a backward two-year-old talking to his nurse," Weissmuller once complained. The major reasons for making his screen apeman less than fluent were probably Weissmuller's slightly fluted voice and his evident inability to get conviction into any line of dialogue containing more than a half dozen words. For swimming, grappling with man and beast, rescuing Jane, and swinging from tree to tree on a vine, though, he had no equal. An assortment of others, usually athletes rather than actors, succeeded him in the role in the more than 50 films created around the Tarzan character. Of all the Tarzan films, however, the 1984 *Greystoke: The Legend of Tarzan, Lord of the Apes*, best captures Burroughs' original vision of the character.

Tarzan came to the comic pages as a daily strip in 1929, with a Sunday page added in 1931. The dailies, for several years, were anonymous adaptations of the Burroughs' novels. There were no dialogue balloons or sound effects, and the copy, set in type, ran below the pictures. Hal Foster, a seasoned advertising illustrator by then, drew the first sequences. Having little faith in comics and even less love for Tarzan, he soon dropped the project, and a less gifted artist named Rex Maxon took over drawing the daily and the Sunday. Burroughs, who had originally wanted pulp illustrator J. Allen St. John for the job, never thought much of Maxon's rendering of his hero, nor of the jungle denizens. Since United Feature Syndicate had the final say, all the author could do was write disgruntled letters to the editors there. These apparently had some effect, because Foster was eventually persuaded to come back and draw the Sunday *Tarzan* page.

Foster's pages were impressively and ambitiously drawn, and he could render ancient Egyptian civilizations surviving in contemporary Africa, Viking pirates, prehistoric monsters on the rampage, and even a foxhunt in rural England with equal ease. When he left the feature in the middle 1930s, he was replaced by Burne Hogarth. Among the subsequent artists were Bob Lubbers, Russ Manning, Gil Kane and Gray Morrow.

United Feature included reprints of *Tarzan* in the lineup of *Tip Top Comics*, launched in 1936, and subsequently also in *Comics On Parade* and *Sparkler Comics*. Dell introduced original adventures of the jungleman in 1947 with artwork by former Disney artist Jesse Marsh. In later years, both Marvel and DC Comics tried, unsuccessfully, to make a go of a comic book devoted to the character. The chief artist at DC was Joe Kubert. Tarzan's influence in the comics did not die with his strip; other comic strips used the character for comic effect, including Sam Watterson's *Calvin and Hobbes* (in 1986), Gary Larson's *The Far Side* (1991), Dan Piraro's *Bizarro* (1997), Gary Blehm's *Penmen* (1997), Wiley Miller's *Non-Sequitur* (1997), and Mike Peters' *Mother Goose and Grimm* (1998), among others. Burroughs' hero also appeared in Big Little Books, on the radio, and on television. Disney also produced a full-length animated feature.

Taxi

At the Sunshine Cab Company on the television series *Taxi* (1978-1983), everyone comes off a little angry for putting in long hours at an unrewarding job while yearning for something better. Everyone that is except for Alex Reiger (Judd Hirsch), the only practical thinker in the entire garage who declares in the initial episode, "Me? I'm a cab driver. I'm the only cab driver in this place." Like Ralph Kramden in *The Honeymooners*, each week the characters of *Taxi* would take a new chance at success only to return to the garage defeated but still hopeful about the future.

Taxi was not only one of the best situation comedies of the latter 1970s, it was also one of the most awarded and critically acclaimed. It won 18 Emmys in its five year run (winning the Outstanding Comedy Series Emmy the first three of those years), and helped to launch the careers of Danny DeVito and Christopher Lloyd.

The cast of *Taxi*.

The series came into existence solely on the track record of its writer-producers, James L. Brooks, Stan Daniels, David Davis, and Ed Weinberger, who had been behind the highly successful *Mary Tyler Moore Show* and its spin-offs. The four men decided to leave MTM and form their own production unit at Paramount Studios, which they named John Charles Walters Productions after a sign Weinberger had seen in an English pub. There was no such person at the company, but the name sounded dignified.

Wanting to get away from shows about white collar women workers, James Brooks decided to revive an idea he had with David Davis about doing a show concerned with taxi drivers, an idea once considered in conjunction with Jerry Belson (co-creator of *The Odd Couple* TV series) before it was abandoned. The producers had persuaded MTM to purchase the rights to an article on cabbies by Mark Jacobson that ran in the June 21, 1976 issue of *New York* magazine. Grant Tinker of MTM agreed to sell the rights for the article to the new production company for the same amount that he had purchased them for—\$1,500.

The part of Alex Reiger was written with Judd Hirsch in mind, but after the failure of his series *Delvecchio*, Hirsch was reluctant to return to television until he read the show's first script. While Reiger would sometimes be troubled by philosophical questions when not dispensing advice to the others, Louie DePalma (DeVito), the firm's disagreeable, dishonest dispatcher never seemed to suffer from hurt feelings or a troubled conscience.

The DePalma character was originally a minor part until casting director Joel Thurm brought in Danny DeVito who walked into the office in character and quickly came to dominate the show just as he did the garage. By and large, the show resisted using gratuitous insults and wisecracks, with the exception of DePalma, who was given to saying things like, "Banta, sometimes I wish you were smarter just so you could see how dumb you are" or "Fill out this form, and I hope you fill it out better than you fill out your pants." DePalma provides the conflict and is the enemy that the other cabbies band against.

Other characters went through changes as well. Tony Danza's Tony Banta character was originally supposed to be a punch-drunk Irish heavyweight rather than an unsuccessful young boxer, while Marilu Henner's Elaine Nardo character was supposed to be a tough-minded Italian woman in her thirties rather than a young, divorced woman looking to make ends meet, but the producers altered the characters to fit the performers they selected.

The characters on the show were realistic, except for Latka Gravas (Andy Kaufman), the cheerful mechanic from a mythic foreign country, who was included because the producers had enjoyed Kaufman's stand-up act and wanted to incorporate the kind of material he did into the show. Other characters included an aspiring actor Bobby Wheeler (Jeff Conway) unable to land a part, and Reverend Jim Ignatowski (Christopher Lloyd), a former hippie burn-out and minister of the "Church of the Peaceful" who seemed off in his own world and had an infinite number of peculiarities. Rev. Jim had been written as a one-shot, and was recruited to become a regular the second season when the shy John Burns' character—played by Randall Carver—was written out of the show.

What makes the show a classic is the enormously high quality of the writing and the acting that went into the series. *Taxi*, like *M*A*S*H*, found a way to bring humor to what would often be potentially tragic situations. The characters are often estranged from other family and by being co-workers become friends, forming an unlikely family of their own. Hirsch was particularly adept at picking out subtle, perceptive nuances in his performances, while Kaufman,

Carol Kane (who played Latka's wife Simka), and Christopher Lloyd were simply off-the-wall wacky and amusing. The entire cast was nominated for a Golden Globe Award in 1979.

Left alone by the network and given a good time slot, *Taxi* started off as a resounding success, finishing its first two seasons in the top twenty. However, in the third season, ABC moved the series to Wednesday night and saw the ratings fall off. When it was moved to Thursdays the following season, it did even worse, falling to 53rd place, and it was soon canceled despite its Best Comedy Series Emmy wins.

Strangely enough, Grant Tinker left MTM in 1981 to become the head of the NBC Network, where he promoted the idea of quality programming. He beat out a bid from HBO for giving the series a second chance, and *Taxi* was picked up by NBC for its fifth and final season. (DeVito recorded a promo as DePalma snarling, "Same time, better network!").

Unfortunately for the show's followers, the numbers remained low. The following September when the Academy of Television Arts and Sciences presented the series with three Emmys, Outstanding Lead Actor in a Comedy Series winner Hirsch quipped, "Don't they know we've been canceled?" In accepting his award, Hirsch declared, "If you can't get it out of your mind, if you have to keep giving laurels to us, then you should put it back on the air." However, there was to be no second reprieve, though the series proved very successful in syndication.

Taxi Driver

Taxi Driver captured the angst felt throughout America in the post-Vietnam era. Directed by Martin Scorsese, *Taxi Driver* (1976) is a psychological drama and a tale of alienation, displaced sexuality, and life in the big city. The film stars Robert De Niro, Harvey Keitel, Cybill Sheperd, Jodie Foster, Peter Boyle, and Albert Brooks. Scorsese's male protagonists tend to be energetic, violent, and driven toward public recognition; Travis Bickle, played by De Niro, is no exception. Travis is a Vietnam-era vet who yearns to "be somebody" but only succeeds in becoming increasingly deranged and lonely as the film progresses. Scorsese's cinematography and the cast's skillful acting made *Taxi Driver* an enduring portrait of one of America's most disconcerting periods.

Set in New York City, *Taxi Driver* traces the daily habits of Travis as he drives his cab through the city, working long hours to avoid the monotony of his life. The film opens with shots of De Niro's eyes looking at the world from behind the glass windshield of his cab, calling to mind his isolation from society, which becomes magnified with time. Travis' life changes when he falls for a political campaign manager named Betsy, played by Cybill Sheperd. Betsy's rejection of

Robert De Niro as Travis Bickle in *Taxi Driver*.

Travis instigates his obsession with guns and fixation with the idea of rescuing a teen-age prostitute he meets in his cab, played by Jodie Foster.

Travis simultaneously destroys his body with drugs, alcohol, and junk food, and yearns to get himself into shape and to get his life organized. These two poles of his personality are best illustrated by an infamous scene in which Travis has a standoff with his mirror image. Travis looks at himself in the mirror and utters the most frequently quoted lines in the film: “You talking to me? You talking to me? You talking to me? . . . Well I’m the only one here.” This scene enacts the construction, rehearsal, and performance of masculinity. In the privacy of his own room, Travis practices the role of the type of man he would like to be and calls to mind the anxiety embedded in the process of striving for this masculine ideal in the American post-Vietnam era.

The score for *Taxi Driver* was written by Alfred Hitchcock’s composer, Bernard Herman, and completed the day before he died. While he collaborated with Hitchcock on many films, Herman is most famous for composing the soundtracks for *Psycho* and *Vertigo*. Like many of Hitchcock’s films, *Taxi Driver* is a film about making movies. In a direct reference to Hitchcock, Scorsese appears in a shot at the beginning of the film. He later acts in a scene in which he and De Niro gaze at the silhouette of a woman through an apartment window (calling to mind Hitchcock’s *Rear Window*). The cinematic spectator is continually addressed by shots of De Niro watching movies, films, projectors, the gazes of secret service men through photographic lenses, Travis’ mirror, and the car window through which Travis experiences much of the world.

Director Martin Scorsese grew up in an Italian-American community in Little Italy. He entered a seminary after grammar school

only to be asked to leave at the age of fourteen after falling in love with a girl. Scorsese attributes much of his cinematic fascination with issues of family loyalty, hierarchy, and spirituality to his early years in Catholic school. He made his first short film in high school and went on to study film at New York University. While most of Scorsese’s earlier body of work deals with issues pertaining to Italian-American identity, later in life, he began to turn his camera away from Little Italy with films such as *Alice Doesn’t Live Here Anymore*, *The King of Comedy*, *After Hours*, *The Last Temptation of Christ*, and *Kundun*. This is certainly not to say that Italian-American themes have not played a continual role in Scorsese’s work. His 1990s films such as *Goodfellas* and *Casino*, and standards such as *Raging Bull* and *Mean Streets* point to his continuing interest in exploring stereotypes of Italian-Americans through mafia narratives.

Taylor, Elizabeth (1932—)

Fame and notoriety attached themselves to Elizabeth Taylor very early in her life and never left her. It is more than likely that she will forever occupy a place in both cultural and social history as twentieth-century America’s most celebrated woman—as well as one of its most beautiful—and certainly Hollywood’s last genuine star in the great tradition. Whether in good films or bad, the pull of her magnetic presence continually drew hordes of fans, mesmerized by her screen persona and her off-screen life, which took on the aura of myth.

A national institution and a living legend, Taylor became the paradigmatic exemplar of media-driven notions of celebrity, and an emblem of outrageous excess—conditions that defined her adult image. Her extraordinary, colorful and, indeed, remarkable life, made her an object of constant fascination to the public, among whom she variously evoked admiration, even worship, as well as periodically inviting derision or attracting moral outrage. However, the notoriety that has attached to her fabled marriages (seven husbands, eight weddings), her abundant wealth, her disappointments and tragedies, her many illnesses, weight problems, and battles with substance abuse, served seriously to overshadow her acting achievements to the detriment of her professional reputation.

By the time she voluntarily retired from filmmaking after a character role as Pearl Slaghoople in *The Flintstones* (1994), her 51st

Elizabeth Taylor

and last film, Elizabeth Taylor had the longest postwar career of any actress in Hollywood. It was largely as undistinguished as it was lengthy, her abundance of talent and intelligence too often buried, as she herself observed with her customary candor, in a welter of mediocrity. Nevertheless, among her credits, the handful of good roles in worthwhile films rightfully earned her five Academy Award nominations and two Oscars, the French Legion d'Honneur, and the American Film Institute Lifetime Achievement award; while her eloquent campaigning for causes, notably in the field of AIDS research, brought her the Academy's Jean Hersholt Humanitarian Award.

Elizabeth Rosemond Taylor was born in Hampstead, London, on February 27, 1932, the daughter of American parents. Francis Taylor was an art dealer and his wife Sara was a socially ambitious former stage actress. Thanks to their influential connections, Elizabeth and her elder brother Howard enjoyed a privileged early childhood. To escape World War II, the Taylors returned to the United States in 1939, finally settling in Beverly Hills, where Francis opened a fashionable gallery in the Beverly Hills Hotel. With child and teen stars a popular fixture of Hollywood movies at that time, Sara Taylor was determined that her pretty, violet-eyed daughter would be one of them.

A shy child who loved animals, Elizabeth had no desire to become an actress but, in the grip of an iron-willed mother, found herself at age nine auditioning for MGM, who turned her down, and Universal who took her on. She made her debut playing an objectionable brat with little to say in a poor comedy programmer called *There's One Born Every Minute* (1941), after which the studio dropped her. She lived the natural life of a child again until late the

following year when she made *Lassie Come Home* for MGM, beginning a contractual association with MGM that lasted until the early 1960s. The studio immediately lent her to Fox for a tiny role as the child who dies in *Jane Eyre* (1943), after which she was enrolled in the MGM schoolroom, and appeared (mostly in small featured roles) in a string of films that were largely forgettable. It was the death of normality. Owned by the studio and controlled by her mother, Elizabeth did as she was told, her self-image gradually shaped by her movies, her adolescence a fantasy lived through the roles she played.

In 1943, while training for her first major role—in *National Velvet*—Elizabeth fell from her horse and sustained a spinal injury, the first of several such over the course of her life. When the film was released in 1944, her performance as Velvet Brown who, disguised as a boy jockey, wins the Grand National, enchanted critics and audiences alike. Fresh, natural, and vivacious, the 12-year-old also revealed the beginnings of her great beauty that even the braces on Velvet's teeth failed to mar. Over the next few years Elizabeth was transformed from sparkling teenager to ripening, sensuous woman, with no intermediate stage. As the eponymous *Cynthia* (1947), her role sounded a perilous echo of her own life—an over-protected, over-controlled teenager battling with her mother (Mary Astor) to gain adolescent freedoms; in *A Date with Judy* (1948) she was the sophisticated, sexy, and knowing teenager who sets out successfully to catch the man (Robert Stack, aged 29) earmarked for Judy (Jane Powell).

In a radio interview with Louella Parsons just before the release of *Cynthia*, the 15-year-old rising star, who had not yet been allowed a boyfriend, said that she wanted to be a great actress, but added, with ironic prescience, "most of all, I want to snare a husband." Meanwhile, MGM sent her to England in late 1948 to play a wife—married to Robert Taylor—in *Conspirator*, a film whose only merit was to reveal the actress's burgeoning beauty, talent, and physical maturity. She was 17.

All eyes were on the young Elizabeth Taylor by 1949, a year in which she made the cover of *Time* magazine, became engaged to the wealthy and eligible William Pawley Jr. in a blaze of publicity, broke the engagement when he demanded she give up the career to which she was now totally committed, and, on loan to Paramount, began work on *A Place in the Sun*. Under the guidance of director George Stevens, her performance marked a new seriousness in what was the most significant film of her career to that date and one of the best she had ever made. Elizabeth, at her most incandescent as the young heiress ensnared in a doomed love affair, starred opposite Montgomery Clift. Offscreen, they adored one another, but it was a hopeless situation for the deeply infatuated Elizabeth, who learned to settle for a close and enduring friendship with the homosexual Clift, and fell in love with Nicky Hilton instead.

She met Hilton, heir to the hotel fortune, while filming *A Place in the Sun* and married him in May 1950. The extravagant "fairytale" wedding was glitteringly stage-managed by MGM, as was the release of her new film, rushed out to coincide with her nuptials. The resulting publicity made *Father of the Bride*, in which Elizabeth starred as the about-to-be wed daughter of Spencer Tracy and Joan Bennett, one of the studio's most profitable hits. The real-life, 18-year-old bride left on an extended European honeymoon during which she discovered that her husband was a neglectful, abusive, womanizing drunk. By December the marriage was over. Bruised and bewildered, Elizabeth went back to work, moved to her own apartment for the first time, and was squired by choreographer and director Stanley Donen. MGM

disapproved, and sent her to England in June of 1951 to play a secondary role in *Ivanhoe*.

By the time she returned, *A Place in the Sun* had placed her firmly in the upper echelon of stardom, and she was in love with Michael Wilding, the British actor who, at 38, was twice her age. Demonstrating the willful determination that became one of the hallmarks of her character, she virtually proposed to him, and they married in 1952. The couple had two sons, but their floundering marriage, doomed from the start by the inequity of age and status, was over by 1956, the release year of *Giant* in which Elizabeth gave a fine dramatic performance opposite Rock Hudson and James Dean, and the year she began making *Raintree County*.

A lavish period drama which cast Elizabeth as a Southern belle tormented in love, *Raintree County* (1957) brought the actress her first Oscar nomination but, during filming, Montgomery Clift had the car crash which famously left its mark on his beauty. Elizabeth, who had been devastated by the death of her friend James Dean in similar circumstances, was first at the scene, cradling his bloody head in her lap. She remained his closest friend, and it was reportedly at her insistence that he then seriously drug- and alcohol-addicted actor was cast in *Suddenly Last Summer* (1959)—the film which brought her an Oscar nomination for her performance as Katharine Hepburn's traumatized niece.

In 1957, Elizabeth was swept off her feet by the flamboyant producer and impresario Mike Todd (born Avrom Goldbogen), 24 years her senior. She converted to Judaism and married him in Acapulco in February 1957. The best man was Todd's great friend, crooner Eddie Fisher. August brought the premature and difficult birth of Liza Todd, and Elizabeth was warned that she could have no more children. (Three years later she adopted a German-born daughter, to be known as Maria Burton). In March 1958, Elizabeth had begun filming *Cat on a Hot Tin Roof* with Paul Newman when Todd's plane, *Lucky Liz*, crashed in a storm. A hysterical and grief-stricken Taylor emerged from sedated seclusion to complete the film, giving a performance of powerful depth as Tennessee Williams's unhappy Maggie the Cat and earning a well-deserved Oscar nomination.

Eddie Fisher provided solace in her grief. When he divorced his wife, Debbie Reynolds, to become Taylor's fourth husband, the star's sympathetic public, fueled by the tabloids, turned hostile, branding her a home-breaker. (In truth, the Fisher-Reynolds marriage had been in crisis for some time.) Eddie and Elizabeth married in a Las Vegas synagogue in May 1959, the year she was approached by Walter Wanger to play the title role in *Cleopatra*. Facetiously agreeing to consider the offer for a fee of one million dollars, Taylor was astounded when Twentieth Century-Fox agreed to this unprecedented and astonishing sum. But first she had a contractual obligation to fulfill at MGM.

The vehicle chosen for her was *Butterfield 8*, in which she played Gloria Wandrous, high-class hooker and nymphomaniac who pays for her sins by dying in the wreckage of her sports car. The moral climate and censorship rules of the time caused endless headaches in the search for compromise, resulting in a sub-standard and tacky film that, from the outset, Elizabeth was opposed to making. Despite the roller-coaster ride of her private life and her volatile temperament, she was no scarlet woman, and her eventual forced acquiescence represented a tough battle that the studio won. She co-starred with Laurence Harvey and, at her insistence, her husband Eddie Fisher. Despite the odds, Elizabeth, the throat scar from her recent surgery largely concealed, gave a convincing performance which, ironically, brought her first Oscar win, thought to have been awarded on the

sympathy vote. (Co-nominee Shirley MacLaine famously remarked, "I lost to a tracheotomy.")

In September 1960, Elizabeth Taylor arrived in London to begin work on *Cleopatra* for director Rouben Mamoulian. Her co-stars were Stephen Boyd (Antony) and Peter Finch (Caesar). By October 10, Elizabeth was ill, and by November 18, her recurring infections led to the temporary shutdown of filming. She flew to Palm Springs to recuperate and returned in January 1961 to resume work. Mamoulian had resigned and was replaced by Joseph L. Manckiewicz who set to work on script changes. At this time, the *Motion Picture Herald* top ten box-office poll was announced, with Elizabeth Taylor at number one. While work on the script dragged on, the Taylor-Fisher retinue, installed at the Dorchester Hotel, lived like royalty, with "Queen" Elizabeth exhibiting the extravagance for which she became renowned. She had her favorite foods specially flown in from several corners of America, as well as from France and Italy and, while Manckiewicz rewrote the script, she shopped. The marriage to Fisher was not turning out to be a success.

On March 4, 1961, Elizabeth became dangerously ill and was rushed to the London Clinic where emergency surgery was performed. For some days she hovered between life and death while the world (and Twentieth Century-Fox) held its anxious breath, but emerged from the clinic on March 11 having made, according to the surgeons, a miraculous recovery. Restored to favor by her adoring public, the world's most famous glamour icon departed to California for necessary rest and recuperation, and collected her *Butterfield 8* Oscar while *Cleopatra* was once again shut down and rescheduled to shoot in Rome.

The Taylor-Fisher entourage—three children, several dogs and cats, and a large staff—arrived in Rome on September 1, and took up residence at the Villa Papa, a seven-bedroom mansion set in eight acres of gardens a few minutes from the Cinecittà studios. Delays in filming had brought cast changes, and the new Mark Antony, Richard Burton, was occupying a nearby villa with his family. Filming began on September 25, fraught with the problems of a half-finished script and uncompleted sets. Amid the chaos, Elizabeth remained calm and professional—and fell head-over-heels in love with Richard Burton.

Their affair was most protracted and public adultery that the modern world had yet beheld; and the world remained at once scandalized and transfixed by the affair for the best part of 14 years in the face of the Taylor-Burton antics. The complexities of double divorce prevented the couple from marrying until March 1964, during Burton's Canadian season of *Hamlet*, by which time they had made *The VIPs* (1963) together. It was a feeble British film that cashed in shamelessly on the couple's notoriety, but worse was to follow with the risibly awful *The Sandpiper* (1964). Professionally, the liaison marked a period of decline for both of them. Their fees (never less than a million plus for Taylor) were grossly disproportionate to the quality of their joint ventures, with the shining exception of *Who's Afraid of Virginia Woolf?*; this screen adaptation of Edward Albee's play revealed a hitherto unthinkable Taylor: blowzy, loud, passionate, and vitriolic as the embittered Martha, locked in a poisonous game with her husband George. It was a *tour de force*, the finest work of her career, and her second Oscar was a fitting tribute to her committed and lacerating performance.

The Burtons, inescapably, were famous for being famous. They were also famous for their drinking binges, their rows, and their astonishing extravagances. They became a kind of traveling circus, buying an ocean-going yacht, several homes, priceless paintings and, for Elizabeth, jewelry. Burton bought his wife the Krupp diamond

(\$305,000), the historic “La Peregrina” pearl (\$37,000), the Cartier diamond (\$1.1 million), and the Shah Jahan yellow diamond (\$900,000). By 1972, the marriage was in trouble and 1973 saw the announcement of a separation and a failed attempt to reconcile. They were divorced in 1974, remarried on the banks of an African river in Botswana in 1975, and parted finally in 1976.

Between their endless travels and upheavals, Elizabeth had made numerous films, of which only *The Taming of the Shrew* with Burton and *Reflections in a Golden Eye* with Brando (both 1967) merited any real attention. At the end of 1976 she married ex-Secretary to the Navy John Warner, and settled in Virginia to play the role of the loyal politician’s wife. Her high profile campaigning helped her husband to the U.S. Senate, but she grew bored and put on weight; the couple separated in 1981. With her film career gradually petering out, Elizabeth took to the stage for the first time, playing Regina in *The Little Foxes* on Broadway and in London’s West End (1981-82). It was a brave stab at a medium for which she was totally untrained, but the public flocked to the show, and in 1983 she joined forces with Richard Burton, playing Amanda to his Elyot in Noel Coward’s *Private Lives* on Broadway. It was a risible exercise, really, but the public willingly paid inflated ticket prices to see the legendary pair.

In August 1984 Richard Burton died of a cerebral hemorrhage. Elizabeth collapsed at the news, but stayed away from the funeral for fear of causing a media stampede. She subsequently made a pilgrimage to Burton’s family in Wales and attended a memorial service in London before returning to make a TV movie (one of several during the 1980s, among them *North and South* and *Sweet Bird of Youth*). The following year brought more grief with the news that her friend Rock Hudson was ill with AIDS. Her publicized visit to Hudson’s bedside marked the beginning of her high profile campaigning for AIDS awareness and research funds, and it became her primary occupation as her acting career wound down.

Throughout the late 1980s, Elizabeth Taylor’s name was romantically linked with numerous men, among them actor George Hamilton and the multi-millionaire Malcolm Forbes. She made *Young Toscanini* (1987) in Italy for Franco Zeffirelli, which was shown at the Venice Film Festival, but was barely released. It was her last major screen appearance. Alongside her AIDS work, she launched the first of her perfumes (the aptly named “Passion”), and gave attention to her children and grandchildren. She continued, however, to be dogged with illnesses of various kinds and, increasingly, relied on pain-killing drugs. (According to biographer Donald Spoto, she suffered 73 illnesses, accidents and injuries requiring hospitalization between 1947 and 1994). Suffering the effects of drug dependency, she checked herself into the Betty Ford Clinic in 1988, where she met construction worker Larry Fortensky.

In October 1991, in a ceremony held at singer Michael Jackson’s ranch, thirty-nine-year-old Fortensky became fifty-nine-year-old Elizabeth Taylor’s seventh husband. It was a last act of personal folly, and the marriage was over by 1997, the year that she had an operation to remove a brain tumor. Once again, people the world over waited anxiously for the outcome but Elizabeth Taylor emerged, shaven-headed, to continue crusading on behalf of the less fortunate, demonstrating the truth of her own words, spoken in a 1987 interview: “I have no plans to succumb. I am a survivor.”

Taylor, James (1948—)

Blending folk, country, and blues to create his own distinctive musical sound, James Taylor spearheaded the singer-songwriter movement in the 1970s. Born in Boston in 1948, Taylor began playing guitar at twelve and soon was performing at small folk gigs. But having struggled with depression at boarding school, at sixteen, Taylor checked himself into a mental hospital, where he graduated from high school. After moving to London in 1968, Taylor was the first outside artist signed to the Beatles’ Apple Records. Following the release of his first album, he returned to the United States in 1969, where his first single, “Carolina In My Mind” climbed the charts. In 1971, Taylor was featured on the cover of *Time* magazine as the “originator of the singer-songwriter era.” Described in *Time* as “a blend of Heathcliffian inner fire with a melancholy sorrows-of-young-Werther look,” Taylor was romantically linked to Joni Mitchell, but married singer Carly Simon in 1972, the same year he won his first Grammy. Throughout the 1970s and 1980s, Taylor continued to release critically and commercially successful albums, refining his style while maintaining his superb musical craftsmanship. Still touring to packed houses in the 1990s, Taylor’s 1997 album, *Hourglass*, rose to Number 9 on the Billboard chart and went platinum. Now in his fifties, James Taylor may be the granddaddy of singer-songwriters, but he remains a thoroughly contemporary musician and an ever-popular star.

Taylor, Robert (1911-1969)

Typecast for most of his career as a handsome ladies man, Robert Taylor became a top box office attraction after his first major film in 1936 and continued to star in big budget movies for the next twenty years. The list of leading ladies who played opposite Taylor include some of the biggest stars of Hollywood’s Golden Age: Irene Dunne, Loretta Young, Barbara Stanwyck, Joan Crawford, Greta Garbo, Jean Harlow, Hedy Lamarr, Ava Gardner, Greer Garson,

Robert Taylor

Vivien Leigh, Norma Shearer, Katharine Hepburn, Elizabeth Taylor, and Deborah Kerr. Of his long association with MGM, Taylor said: "I stayed with one studio for twenty years, took what they gave me to do, did my work." Summarizing his treatment at the hands of movie critics, he said, "I never got raves, but neither did I get pans."

Born Spangler Arlington Brough (a name dear to trivia buffs), the son of a physician in Filley, Nebraska, Taylor initially decided on a medical career, but acting in amateur productions in college soon led him in another direction. He enrolled in a Los Angeles drama school, where a talent scout saw him in a production of *Journey's End*. After a screen test, he was signed by MGM to a seven-year contract, starting at \$35 a week. In his first film he played a supporting role to Will Rogers in *Handy Andy* (1934). A succession of low-budget pictures followed, but in 1936 he moved to number four in the box office ratings with the teary film, *Magnificent Obsession*, opposite Irene Dunne. Taylor starred in the role of a playboy who becomes a respected surgeon in order to restore the sight of a woman he had blinded in an automobile accident. After the film was released, all of the most glamorous Hollywood leading ladies wanted to play opposite the handsome young actor.

Two other important films followed in 1936—Taylor starred with Barbara Stanwyck in *His Brother's Wife* and with Joan Crawford in an historical drama, *The Gorgeous Hussy*. His sudden appeal at the box office led MGM to star him opposite Greta Garbo in *Camille*. Comparing him with the uniquely talented Garbo, critics were almost unanimous in calling the pairing one of the great mismatches of cinema history. Studio executives pointed out, however, that in the important area of ticket sales, Taylor ranked number three in 1937,

while Garbo was only number six. In 1937 Taylor played the more macho role of a secret service agent, who is ordered by President McKinley to join a gang of robbers to expose a powerful mob, in *This is My Affair*, opposite Barbara Stanwyck as a saloon-girl. Taylor and Stanwyck were married in 1939, a much-publicized Hollywood romance that lasted until 1952.

In the late 1930s, studios gave Taylor parts designed to draw more men to his pictures. He was the cocky, athletic young American in *Yank at Oxford* (1938), a boxer in *The Crowd Roars* (1938), and he even starred in a Western, *Stand Up and Fight* (1939). Taylor's own favorite film was the romantic *Waterloo Bridge* (1940), in which he played a soldier who meets a ballet dancer (Vivien Leigh) during a London air raid.

His most expensive film was *Quo Vadis* (1951), in which he essayed the role of a Roman centurion, which Gregory Peck had turned down. In the lavishly made movie, shot in Italy, Taylor falls in love with a Christian beauty (Deborah Kerr), in a plot that threatens to throw both of them to the lions. The movie grossed \$11 million, at that time the fourth biggest moneymaker in history. Other big budget spectacles followed: *Ivanhoe* (1952), *Knights of the Round Table* (1953), and *Valley of the Kings*, filmed in Egypt in 1954. In the next few years Taylor's popularity dwindled, and his contract with MGM ended, but he continued to work in minor films and in a television series called *The Detectives*. In his last movie in 1969, he and Charles Boyer played secret agents in *The Day the Hot Line Got Hot*. He died that same year after a long struggle with cancer. Fellow actor Ronald Reagan, then governor of California, said at his funeral: "He was more than a pretty boy, an image that embarrassed him because he was a man who respected his profession and was a master of it."

Teddy Bears

Most adults carry fond, even significant memories of their own teddy bear, a possession integral to the childhood of all but the severely deprived in America and beyond. Although these days one can find stuffed toys representing every animal from an aardvark to a zebra, the figure of the bear remains the most popular choice, among children and adults alike. By the latter part of the twentieth century, teddy bears had become something of an industry in the United States and Europe.

Both the United States and Germany lay claim to the invention of the teddy bear, each for good reasons. In fact, however, the teddy bear seems to be the product of a remarkable historical coincidence occurring in 1902. One part of the story starts in Mississippi, where President Theodore Roosevelt was on a hunting trip. One of his companions captured a black bear cub, tied a rope around its neck, and brought it to Roosevelt to shoot, but the President, seeing no sport in

A young girl hugs a giant teddy bear.

killing an exhausted, bound, and defenseless animal, declined. A reporter traveling with the hunting party telegraphed the story to *The Washington Post*, which ran a front-page cartoon by Clifford Berryman the following day, showing Roosevelt refusing to shoot the bear cub with the caption “Drawing the line in Mississippi.” In Brooklyn, New York, the cartoon was seen by one Morris Michtom, the owner of a small novelty store, who had been trying unsuccessfully to sell a few stuffed toy bears made by his wife, Rose. Inspired by Berryman’s cartoon, Michtom wrote to the White House, received permission to use the presidential name, and put the toys in his shop window with a sign reading, “Teddy’s bears.” The bears sold quickly, and the demand for more was so great that Michtom soon founded the Ideal Novelty and Toy Corporation and put “Teddy’s bears” into mass production.

Meanwhile, thousands of miles away in Germany, Richard Steiff was also in the grip of a big idea. While watching some trained bears performing in a circus, Steiff had the thought that a toy bear standing upright with jointed arms and legs might be a marketable commodity. He made some drawings of his conception and took them to his aunt, Margarete Steiff, a well-known toy and doll maker. She designed a stuffed bear based on her nephew’s ideas, and exhibited them at the 1903 Leipzig Toy Fair. European stores initially expressed no interest in the new toys, but an American buyer was enthusiastic and ordered several thousand for export to the United States. Consequently, the teddy bear may be said to have two birthdays, although the name is clearly owed to its American maker and the president who inspired it.

Today, teddy bears are big business; there are an estimated 2.5 million collectors in the United States alone. So significant has this

“bear market” become, the industry now distinguishes between two kinds of teddy bears: toys and collectibles. Toy bears are distinguished by their soft stuffing, designed to make them “huggable,” while collectible teddys are characterized by jointed arms and legs, firm stuffing, and a relatively unyielding exterior. Many experts regard Gund, Inc. as the premier maker of cuddly toy bears, but to collectors, Steiff still reigns supreme, with antique Steiff bears sometimes fetching in excess of \$10,000 at auctions.

The popularity of the teddy bear soon spread beyond the United States to Britain and elsewhere, and some teddys are based on characters in universally loved children’s stories by English writers. Winnie the Pooh, the honey-loving bear created by A. A. Milne in 1926, has been a perennial favorite, as has Paddington Bear, who first appeared in the 1950s storybook *A Bear Called Paddington* by Michael Bond and Peggy Fortnum. A stuffed Smokey the Bear has been around for decades to remind bear lovers that “Only *you* can prevent forest fires.” Teddy bears have also been based on human characters, both real and fictional, several with movie connotations. Thus, we have had such creations as “Humphrey Beargart,” “Theda Beara,” and the macho “Rambear.”

Any popular collectible tends to spawn enterprises designed to feed it, and teddy bear collecting is no exception. There are mail-order catalogs devoted to bears and other bear products (such as T-shirts and posters), magazines for the teddy bear collector, bear calendars, teddy bear conventions, and innumerable internet sites devoted to commerce in stuffed bears.

Teen Idols

As long as there are teenagers, there will be teen idols. From the vintage “Frankie” Sinatra to Elvis Presley, from the Beatles to David Cassidy, from the New Kids on the Block to ‘N Sync, the names and faces may change with the decades, but the emotions that drive the phenomenon do not. Teen idols are a rite of passage for pre-teens and early teens. They are dream mates who fuel romantic daydreams, and provide a safe release for hormonally-charged emotions. After all, unlike flesh-and-blood boyfriends or girlfriends, the teen idols make no demands.

Collectively, teen idols have long been dismissed as lightweight and flashes-in-the-pan. But, in fact, many notable performers have passed through the teen idol ranks. Before becoming one of Hollywood’s most prolific and acclaimed leading men, John Travolta was a popular pin-up, the result of his co-starring role in the 1975 TV series, *Welcome Back, Kotter*. The 1997 box office blockbuster, *Titanic*, derived much of its drawing power from the casting of teen idol, Leonardo DiCaprio. Pop-soul maestro Michael Jackson was a teen idol in the 1980s, as well as the previous decade, when he was one of the Jackson Five. The Beatles were huge teen idols in the 1960s, as

Bobby Darin in concert.

was Elvis Presley in the 1950s. In the 1940s, females screamed for Sinatra.

Even those teen idols who did not successfully make a transition as their fans matured continue to be regarded with affection. To their fans, they represent a special time in their lives. To the credit of these teen idols, they also left imprints on popular culture. For example, many of the icons of the 1950s—the decade in which the modern teen idol is rooted—became fixtures on the record charts. From late 1957 through 1963, the young performers were responsible for at least thirteen number one hits. They included Tab Hunter’s “Young Love” and Frankie Avalon’s “Venus.” Another twenty tunes by teen idols climbed to the top five.

Just as Presley had gone from recording studio to Hollywood, the idols made the leap to the big screen. Theirs were major names during the final years of the so-called Hollywood “star system.” Sandra Dee, who became a teen favorite with her depiction of the surfing-obsessed Gidget, went on to become a top-ten box office draw for the years 1960, 1961, 1962, and 1963—an astonishing feat, considering the list also included Doris Day, Cary Grant, Elizabeth Taylor, and Frank Sinatra. Between 1959 and 1964, Fabian appeared in no less than ten films, ranging from comedies to teen genre flicks to

a John Wayne action adventure. Tab Hunter clocked in seventeen films between 1950 and 1964.

Of course, teen idols did not originate in the 1950s. Back in the 1930s, singer-actor Rudy Vallee induced swoons from schoolgirls when he performed while clutching a megaphone. But it is Frank Sinatra who is credited as the official pioneer of the teen idol movement. At age 27, Sinatra had a skinny, vulnerable look. That look, combined with his lush romantic ballads, elicited mass hysterics and stampeding among teenage “bobby soxers” at his December 1942 performances at New York’s Paramount Theater. When Sinatra later appeared at the Boston Armory, the seats were bolted down as a security measure.

In the 1950s, the emergence of American teenage culture prompted another kind of hero worship. Before he cinched his eternal stardom with his car crash death of 1955, James Dean had come to symbolize the teenager in pain, with his angst-ridden performance in *Rebel Without a Cause*. The early Elvis Presley had his own angst-ridden performances in song, including the bravado *Heartbreak Hotel*. But Dean and Presley also summoned up a sense of looming danger. In Presley’s case, his sexy stage antics and the fact that he was a white singer who sounded “black” made him anathema to authority figures.

A much safer alternative was found in Charles Eugene Boone. Better known as Pat Boone, the young performer from Nashville, Tennessee, emerged as the flip side of the coin that bore the imprints of Dean and Presley. Considering the era's controversy over rock 'n' roll, it is significant that Boone rose to fame by singing cover versions of songs originally recorded by African-Americans. His easy-going delivery and boyish charm helped to defuse the volatility of rock 'n' roll. Furthermore, Boone did not emote sexual magnetism. It was Boone who set the stage for what transpired, following a Richter-scale shift in the world of rock 'n' roll.

Denoting that upheaval was the U.S. Army's 1958 decision to draft Elvis Presley. Other significant careers also came to a standstill. Chuck Berry faced a prison term for having transported a minor over a state line for sexual purposes. Jerry Lee Lewis was blackballed because of his marriage to his thirteen-year-old cousin. Plane and car crashes took the lives of Buddy Holly, Ritchie Valens, and Eddie Cochran.

With the music world in transition, promoters moved in to provide an antidote—a new commodity to entice the growing teenage spending power. The idea was to cater to teenage desires, but without the erratic undercurrent or explosive passion that had made Presley an infamous household name. So the new teenage idol was created. It was no coincidence that, along with the lure of their talent—some of it legitimate, some wholly manufactured—the teen idols were exceedingly clean cut and attractive. Or that the male teen idols appeared vulnerable as opposed to predatory. After all, strong masculine qualities can be off-putting to young females. Thus, over the years, many teen idols have had an androgynous look.

More than any of the others, Fabian and Frankie Avalon set the standards against which the 1950s teen idols were measured. Both young men had the engaging affability of the boy-next-door. And not coincidentally, both were managed by Philadelphia producer-promoter Bob Marcucci, who was teamed with Peter DeAngelis in Chancellor Records. The label was based in Philadelphia, a city that specialized in turning out teen idols.

Phil Spector—the legendary producer known for his work with girl groups, the Righteous Brothers, and the Beatles, and the “wall of sound” that backed their tunes—has called Philadelphia of the 1950s “the most insane, most dynamite, the most beautiful city in the history of rock 'n' roll and the world.” The city's thriving music industry included competing record labels and their respective producers, and promoters. Their collective goal was to get their performers booked on the Dick Clark-hosted *American Bandstand*. As the premiere showcase for rock 'n' roll performers, the show was essential to the careers of would-be teen idols.

When the pioneering rock 'n' roll artists had made their ascent, there were no national television shows devoted to rock 'n' roll. The performers made their reputations after months or even years of touring. Prior to his famed appearances on the *Ed Sullivan Show*, Presley was a regional star, the result of having played the hinterlands. Only after becoming known regionally did he enjoy exposure on national TV variety shows. By contrast, the teen idols could become “overnight” successes as a result of a single, carefully-promoted TV appearance. Ricky Nelson's rise as a teen idol began when he sang a single song on his family's long-running series, *The Adventures of Ozzie and Harriet*. Tommy Sands was an unknown seventeen-year-old when he appeared in the NBC telecast of *The Singing Idol*, which generated eight thousand pieces of fan mail. Avalon, Bobby Rydell, and Fabian all owed their fame to *American Bandstand*.

The rise and fall of Fabian stands as a cautionary chapter in the teen idol annals. Fabiano Forte was a 14-year-old boy literally sitting on his front porch when he was spotted by Marcucci, who was already managing Avalon. Though Fabian's father had just been taken away by ambulance after having suffered a heart attack, Marcucci was brazen enough to ask, “Say, kid, can you sing?” Fabian was not interested. After continuing to see the teenager in the neighborhood, including at the corner drug store where he worked, Marcucci returned to the family home. This time Fabian agreed to become a Marcucci protégé.

At the time, Avalon was finally enjoying success as a singer—after having bombed with a trio of singles. But unlike Avalon, who could carry a tune and was an accomplished musician, Fabian had no natural musical prowess, in fact, he had failed his high school chorus class. But Marcucci persisted, taking the youth to a series of vocal coaches and introducing him to local audiences via sock hops. He also launched a major promotional campaign touting Fabian as “The Fabulous One.” Still, despite several *American Bandstand* appearances, the teenager's initial records failed. “You gotta find this kid a hit record!” Clark told Marcucci. That hit turned out to be “I'm a Man,” which Fabian lip-synched on a December 1958 show. The single climbed the charts, and paved the way for additional hits, tours, and movie roles. But Fabian's fame and largely off-key singing also led to cruel barbs from the press, which left the teenager both hurt and bewildered.

Ironically, Fabian garnered some of his best notices when he played a psychopathic killer in a 1961 episode of the TV anthology series, *Bus Stop*. But the casting of the teen idol also generated controversy, for teen idols of the day were not expected to have dimension as artists. For that reason, they were not taken seriously by the very industry that created them. Thus, when times and tastes changed, and his teenage fan base grew older, Fabian had to grapple to survive as a performer. Of his reign as an icon, Fabian once said, “I was just a street-punk kid who got into all this because my father had a heart attack and the family needed money. I didn't know nothing. Sure I had girls—I was a healthy young man. But what all this teen idol stuff comes down to is business. Big business.”

In the 1960s, that big business was typified by the staggering success of the Beatles, and the fellow and female Britons and Americans who followed in their wake. Foremost among the latter was the fabricated-for-TV group, the Monkees. Selected from a casting call that drew more than 400 applicants, the group starred in their own series and a major movie, and had eight Top 40 hits, two of which went to number one.

Integral to the success of Monkeemania, Beatlemania, and myriad other teen idol-manias was the teen fan magazine industry, which thrived during this era. A hybrid of the “girl's” magazines which debuted in the 1940s and early rock 'n' roll magazines, some of these publications had monthly sales of more than 900,000 copies.

Reflecting the relationship between the idols and publishing, teen fan magazine pioneer Charles Laufer once related how he honed in on the appeal of 1970s teen icon, David Cassidy. It happened as he was watching an episode of TV's *Marcus Welby, M.D.* “A kid comes on, and he's got diabetes. I didn't know who he was, but he was raw-boned and vulnerable, and I thought, this kid's terrific. So I waited for the credits. The next day I came into the office and said, ‘Who the hell is David Cassidy?’” Laufer tracked down Cassidy, who was about to begin work on the 1970 TV show, *The Partridge Family*, about a family singing group. Laufer went on to publish the *Partridge Family* teen magazine, and to oversee the group's fan club. Though it was a

fictional group, in which only two of the show's cast members, Cassidy and stepmother Shirley Jones, actually sang, the Partridge Family went on to have a number one hit, with "I Think I Love You." The shag-haired Cassidy would later call the group "the last gasp of innocence in America."

In truth, there have been many more gasps of innocence within the teen idol roll call. During the 1970s the roster included Cassidy's half-brother, Shaun Cassidy, as well as Donnie and Marie Osmond, Robbie Benson, and Andy Gibb. Among 1980s names were Scott Baio, John Stamos, Menudo, and Debbie Gibson. The safe, sweet side of teen ideldom continued in the 1990s, with the actor Jonathan Taylor Thomas and singing groups such as Hanson.

But another kind of teen idol, who is less than wholesome, also managed to exist in a parallel universe. The metamorphosis began in the late 1970s, and is exemplified by Kiss, which became a potent teen idol force despite the group's shock-value tactics. According to fan magazine publishers, kids rallied to the group's larger-than-life stage theatrics, as well as to the members' comic book-like appearances. Those appearances made them seem more like fictional characters, as opposed to "real" and therefore threatening heavy metal artists. Madonna, meanwhile, was embraced as the enticing embodiment of the disobedient girl and a proud boy toy, something about which young females fantasize. In the 1990s, that naughty but cool mantle shifted to the Spice Girls and their mantra espousing "girl power!"

Of course, the Spice Girls could not have succeeded in a more modest era; by the same token, a Connie Francis would today be considered an anachronism. For teen idols are both a product and a reflection of their times. As with all product, their success/failure is indelibly linked to marketing, as well as timing. The stakes are tantalizing. According to the Recording Industry Association of America, of the 532 million albums purchased in the United States in 1996, twenty-five percent were bought by 10 to 19-year-olds. That same group comprised a significant percentage, fifty-eight and thirty, respectively, of the rap and rock markets.

Just as the teen idols of the 1950s were able to become overnight successes as a result of television, the current teen idols are able to become multi-millionaires on the basis of synergy and mass-marketing. Consider: At their height in the late 1980s, the New Kids on the Block, comprised of five rapping Boston "boys," sold eighty million albums and \$500 million worth of merchandising. Their 1990 earnings were \$1 billion.

But the power of teen ideldom is not summed up merely by dollars and cents. "When you're talking about teen idols, you're talking about being godlike," said Bobby Sherman, a leading 1970s teen idol. But there are distinctions between the teen idol types. As explained by Sherman: "See, there's an A group and a B group. The A group is like the Beatles. They create a lifestyle which changes people. Then there's the B's, like I was. I was like a number in a system that was created in a succession of molds that perform well for their time and place."

Yet when the Beatles first arrived on the scene, they were perceived by the media to be no more than a fad. To young females, they were cause to celebrate, en masse, and to release sexual energy. The group's musical evolution and staying power could not have been foreseen. The same can be said of the young performers who carry on the teen idol tradition. Some may go on to achieve greatness. If not, they will doubtless live on in the scrapbooks and the memories of the fans whose hearts and lives they touched.

Teenage Mutant Ninja Turtles

The Teenage Mutant Ninja Turtles cartoon characters—Leonardo, Raphael, Donatello, and Michaelangelo—were one of the greatest cross-media phenomena of the 1980s and early 1990s. The Turtles, ordinary pets mutated into superheroes, began as an underground comic book created by cartoonists Peter Laird and Kevin Eastman in the mid-1980s as a spoof of such comics as the mutant X-Men and the grim, urban Daredevil. An instant smash, the Turtles soon branched out into other media, including films, an animated television series, multiple toy and merchandise tie-ins, even a live-action television program. The success came at the cost of their identity, however, as the original, funky nature of the Turtles comics became more cartoonish and child-friendly to better facilitate their mass acceptance.

Teenagers

Initially invented as a marketing target, "teenagers" only came into existence after World War II. Possibly our most important years, our teenage years are a time of transition, a period in which we develop from children into adults. We may remember them as either the best or the worst days of our lives, but the life experiences encountered between the ages of 12 and 20 leave a lasting impression: burgeoning emotional and sexual feelings; physiological development of secondary sexual characteristics; entry into the order of

Teenagers in 1956.

society through individual and group affiliations. Since the instantiation of teenagers as a category, they subsequently may have been exploited ruthlessly as such by commercial interests, but this also has allowed (and continues to allow) the identification and interrogation of issues affecting one of the most important groups within society.

Following World War II, a sudden boom in affluence in the West produced new market forces: a growth in original consumer goods (nylon, televisions, fridge freezers) and the appearance of new groups at whom those goods could be marketed. Teenagers were one; they were initially invented as a target marketing group, a new demographic to be tapped, whose wealth came from their parents' increased financial freedom. The number of products created for and aimed at teenagers since World War II has been phenomenal, and shopping remains popular. In the 1990s, teens made 40 percent more trips to the mall than other shoppers. What is particularly interesting is what those products tell us about teenagers: what they're (supposedly) interested in and what their concerns are, plus how we think about them and how that thinking has changed over the decades. The realms of pop music, television, and cinema provide especially illuminating examples.

Pop music is seen as music for children. Passion for the predictable and disposable three-minute song is perceived as an immaturity of taste; we supposedly "grow out of" listening to pop music and

start listening to classical music, jazz, the blues, and so on. In addition, the short shelf-life of pop bands and the general transience and ephemerality of pop music is representative of the fickle tastes of changeable teenagers; it reflects the "passing phase" nature of teenage life. Elvis Presley was (and remains, even after his death in 1977) one of the most successful pop stars; unlike most pop musicians, Elvis's career spanned two decades. His meteoric rise to fame as a singer and guitarist was cashed in on with a raft of low-budget movies, often named after his song titles, including *Love Me Tender* (1956), *Jailhouse Rock* (1957), and *Blue Hawaii* (1961). At the beginning of his musical career, Elvis drew attention by dancing in a way branded as sexually lewd; he gyrated his hips while crooning, earning him the nickname "Elvis the Pelvis." Teenage girls screamed and swooned at his concerts, behavior that has become a common female reaction to male pop stars, especially boy bands.

The sexual aspect of Elvis's music was a cause for concern. A supposedly trivial form of music suddenly seemed subversive. Could the lyrics of pop music, or the antics of pop stars, pass on unwanted messages to a susceptible teenage audience? This has been a persistent worry for moral guardians and would-be censors. Teenagers are still seen as children and thus vulnerable and worthy of protection, yet in their journey toward adulthood, they are interested in adult issues such as sex and drugs. Girls also screamed, notably, at the Beatles, the

British four-piece whose enormous popularity and lengthy career challenged the status of pop music as trivial and ephemeral. Like Elvis, the Beatles also appeared in films specifically made for their teenage audience, including *A Hard Day's Night* (1964) and *Help!* (1965). In addition, as with Elvis, no marketing opportunity was too silly. It was possible, for instance, to buy Beatle "moptop" wigs. Teenagers, it seemed, would spend their money on anything, so long as it had a faint connection to their pop idols. Similarly, they would buy anything targeted directly at them; thus, in pop music, songs could be found targeted directly at teenagers and their concerns, such as "Teenage Idol," "Teenager in Love," and "Sweet Sixteen."

If longevity and/or success is achieved (which can be assisted by the possibility of cross-media synergy), the potential financial rewards for pop stars are large. This has led to the artificial manufacture of a great number of pop musicians and bands, from the Monkees in the 1960s (who also had their own television show) to the Backstreet Boys in the 1990s. The formula remains an occasionally successful one. If there has been one change in the form of pop music, it is that lyrics have become raunchier as restrictive moral codes have relaxed; the songs of teenage soul/R & B star Usher are exemplary of this fact. Generally, however, pop music remains anodyne, all sexuality being expressed in a suggestive yet naive way. Pop stars themselves may be styled to be attractive to the teenage audience, but it is an ambiguous, soft-edged, safe kind of attractiveness. It is unclear whether this is really what teenagers want, or merely what the producers and manufacturers of pop music will allow.

The invention of the teenager category coincided with the widespread introduction of the television set into American society, but, initially, television had problems programming material for teenagers; in contrast, children's programs and those for adults were clearly identifiable. Teenagers had to make do with shows with a broader appeal, such as popular family-oriented dramatic series, variety shows, and comedy programs, some of which featured teenage characters: *Little House on the Prairie*, *I Love Lucy*, *Bewitched*, *The Brady Bunch*, *The Johnny Carson Show*. This is not to say that programs for teenagers were not made; pop music shows, though usually lifeless and presented by adults, were popular, as were examples such as *The Monkees* television show. Teenagers were conceptualized by television during this period as "older children"; if they had their own interests, they were those dictated to them.

The gradual expansion of television over the decades, including the introduction of satellite and cable arenas, has produced a plethora of channels, all of which need filling with material. The 1980s and 1990s saw the production of an enormous number of programs aimed directly at teenagers, mostly comedies and drama series set in and around schools: *The Wonder Years*, *Beverly Hills 90210*, *Party of Five*, *My So-Called Life*, *Saved by the Bell*, and so on. In the 1990s, there were entire channels devoted to teenage programming. These programs projected a very different conception of teenagers than those of the 1960s. The adolescents of the 1990s were now "young adults," confronted with a raft of difficult social issues such as drug use, pregnancy, bullying, sexual identity, and homelessness. In addition, the stars of teenage television programs often appeared much like pop stars—physically attractive, yet sexually ambiguous and, therefore, safe.

Unlike television, cinema speedily capitalized on the existence of a solvent teenage audience. The 1950s was a decade in which

drive-in movies became popular with high school students, and so a range of quickly produced films, in identifiable genres, were made specifically for this audience. These included a lengthy series of beach/surf movies, a wealth of teenage gang movies, and such cheaply made horror films as *I Was a Teenage Werewolf* (1957) and *I Was a Teenage Frankenstein* (1957). Also released during this decade were films about teenagers with a broader audience appeal, such as *The Wild One* (1954) and *Rebel without a Cause* (1955). Because of the film rating system, these movies about teenagers were able to offer a corrective to television's sanitized conception; the adolescents in *Rebel without a Cause*, for instance, deal with alcohol, suicide dares, gang bullying, knife fights, and homelessness, among other factors. Films about teenagers are numerous. This may be because the tribulations of adolescence are effective (melodramatic) narrative devices; it may be because Western culture tends to associate youth with beauty. The 1980s were notable for the number of films produced about teenagers; with the recurrent presence of certain actors, a series of these became known as the Brat Pack films: *Sixteen Candles* (1984), *Pretty in Pink* (1986), *The Breakfast Club* (1985), and *Ferris Bueller's Day Off* (1986). Issues affecting the teens in these narratives included truancy, detention, dating, and drug use—issues similar to those impinging on 1950s movie teenagers.

Cinematic representations of adolescence tend to depict it as either a difficult time of angst, alienation, and loneliness, or as an idyllic period of innocence, unlimited fun, and growth through misadventure. The first set produces iconic images of rebel teens—James Dean, River Phoenix, Drew Barrymore, Natalie Wood. The second—including such films as *American Graffiti* (1973) and *Stand by Me* (1986)—serves a similar mythologizing purpose, reinforcing the cultural conception of adolescence as "the best years of your life." In the 1990s, there have been two minor developmental trends in the filmic depiction of teenagers. First, teenagers actually may be portrayed as sexually active, rather than this simply being suggested; for example, the audience sees two of the teenage characters having sex in *Inventing the Abbotts* (1997). Second, it has become possible to represent teenagers as vicious, unpleasant individuals; in *Kids* (1995), the two lead characters commit acts of racial and sexual violence without remorse.

Tejano Music

During the 1930s and 1940s a music developed which mirrored the evolution of Hispanics in southwestern cities into Mexican Americans, a bicultural community emerging from Mexican roots within the United States. This was the first generation of Americans of Mexican descent to aspire for inclusion in Anglo-American life. Popular dance band ensembles catered to this generation's biculturalism by playing genres chosen from both the Latin and the American traditions: *bolero*, *danzón*, *guaracha*, and *rumba* alternating with boogie, swing, and fox-trot, among others. After World War II, a type of fusion of the traditions took place that developed into a distinctive sound, especially among the *orquestas* and *conjuntos* in Texas, where the largest Hispanic recording companies existed at that time. The result was a music that came to be known as Tejano.

As orchestras became more professional and ballroom dance circuits extended throughout the Southwest, the Texas recording artists became the greatest in demand and spread their new music throughout the Southwest and northern Mexico. Among the first prominent big bands were Beto Villa's from Falfurrias, Texas, whose leader is sometimes called the father of the Mexican American *orquesta*. Villa popularized a folksy, "country"-style polka; this polka, in particular, came to be known as "Tex-Mex," especially when compared with the more sophisticated urban sounds of *danzones*, *guarachas*, fox-trots, and swings. Villa's influence was so strong that many followers appeared throughout the Southwest, most noteworthy of them being singer-saxophonist Isidro López, also from Texas, who is known for adding the working-class *canción ranchera* to the Tex-Mex repertoire. Balde González of Victoria, Texas, and Pedro Bugarín of Phoenix, Arizona, smoothed out the musical deliveries and broadened the repertoire of genres included in Tex-Mex.

The peak years for the Mexican-American *orquesta* were the 1960s and 1970s, during which emerged Little Joe Hernández, one of the greatest all-time performers and popularizers of Tex-Mex. Little Joe led a band made up of family members and friends under a series of names and struggled to get studios to record his music and radio stations to play it in Texas. Finally, he had to form his own recording and distribution companies. Little Joe, in addition, fused the Tex-Mex *ranchero* sound with American jazz and rock within the same musical number to achieve a unique bi-musical sound which came to be called "La Onda Chicana" (The Chicano Wave). Little Joe's first experiment in this Chicano Wave occurred on his hugely successful 1972 LP *Para La Gente (For the People)*. Backing Joe and his brother Johnny's harmonic duet were the usual instruments of a well-organized Mexican American band of those years: two trumpets, two saxophones, a trombone, and a rhythm section of bass, electric guitar, drums, and keyboards. On the album, many of the arrangements were augmented with strings from the Dallas symphony—a novelty for Tex-Mex music—and with the interlacing of jazz riffs. Even at the turn of the century, many of the numbers included on this historic LP are standard fare among dance bands in Mexican American communities.

Texas continues to be the center for Tejano music, from whence dance bands and recording artists tour to as far north as Chicago and New York City and as far south as Mexico City. The advent of the three Spanish-language television networks further popularized the

music into the Caribbean and South America. Younger generations of Mexican Americans further infused the music with rock influences in the 1990s and took it far afield from its country roots, mirroring the overwhelming concentration of Hispanics in big cities today.

Telephone

The telephone is a device for conducting spoken conversations across any distance beyond the range of the unaided human ear or the unamplified human voice. It works by transferring the atmospheric vibrations of human speech into a solid body, and by converting those vibrations into electrical impulses sent through a conducting medium—originally metal wires, but now optical fibers and electromagnetic microwaves as well. The word is a compound of two Greek words, "tele" ("far") and "phone" ("sound"), and the instrument is the most widely-used of all telecommunications appliances, with hundreds of millions of telephones in use all over the world. On any given

Alexander Graham Bell with his invention, the telephone.

business day, approximately two billion calls are placed, just in the United States. The telephone is also the archetypal electronic “medium,” in the sense of the word intended by Marshall McLuhan—an “extension of man”—but its social impact is grossly understudied in favor of the more readily observable “bully blow” of the television. Telephones are small and unobtrusive and their impact on our visible environment (except for the poles and wires) has not transformed our relationship to it.

Notwithstanding a host of rival claimants, the traditional account of the telephone’s invention by the Scottish-born Alexander Graham Bell (1847-1922) remains substantially the correct one. While the word “telephone” itself had been used to describe a device similar to a children’s string telephone as long ago as the seventeenth century, and although the general concepts on which the invention was based had been known for several decades, it was certainly Bell who experienced the sudden flash of insight which he immediately translated into a working model.

Bell and his assistant Thomas Watson had been trying to develop not a telephone, but something Bell called a “harmonic telegraph,” by which he hoped to expand the bottleneck throttling communications traffic and permit the transmission of more than one telegraph message over a single wire at the same time. Bell’s ideas involved a series of vibrating metal reeds (like those used in wind instruments). Of course, once he had developed that technology, his goal was, in fact, to discover a way to transmit all the sounds of the human voice via his “harmonic telegraph.” On June 2, 1875, Bell and Watson were working at opposite ends of a line and Bell heard the distinct sound of a plucked reed coming through the line. He ran to the next room and shouted to his assistant, “Watson! What did you do then? Don’t change anything!” From that moment, it took only an hour or so more of plucking the reeds and listening to the sounds they made before Bell was able to give Watson instructions on making the first “Bell telephone,” which was capable of transmitting only the sounds of the human voice, not words. Bell and Watson worked through the summer of 1875, and in September, Bell began to write the specifications for his basic patent, which was issued on March 7, 1876 (#174,465). It is, to date, the most valuable patent ever issued. (The famous “Mr. Watson, come here! I want you!” was spoken after the first patent was issued, when Bell and Watson were working on perfecting their transmitter.) Ultimately victorious, Bell had to defend his patent in over 600 separate lawsuits.

The Bell Telephone Company, first of its kind, was founded on July 9, 1877. That same July, Bell married Mabel Hubbard and sailed to England to introduce his telephone there. Well before 1900, Thomas Watson, Thomas Edison, Emil Berliner, and others had worked with Bell’s patented technology to produce what would be recognized as a telephone in the late 1990s. The telephone has consisted of the same basic components: a power source, switch hook, dialer, ringer, transmitter, and receiver.

The social impact of the telephone has been literally incalculable. Although the telegraph, patented by the painter Samuel B. Morse in 1840, enjoys pride of place as the first electric instrument to extend and greatly speed human communication, it never became a ubiquitous home appliance like the telephone—it was too complicated to use, and required too much special knowledge (codes, key technique). All a person needs to know in order to use a telephone is how to talk and to listen; it is not necessary to be literate or to have more than a

minimal mechanical aptitude. It is, moreover, next to impossible to gossip using a telegraph. Like a religion, telegraphy has its privileged class, the operators, and gossip passes most freely between equals, without going through an intermediary. Because the telephone enables two people to exchange gossip directly, though they may be on opposite sides of the Earth, the telephone has, more than any other invention, produced what Marshall McLuhan called “the global village.”

The telephone has changed war and business and the whole gamut of public activities, as well, but it has not transformed them out of recognition, the way it has altered the fundamental relationship of one individual to another and of one individual to society. Warfare is altered by the invention of a new weapon, from the metal sword to the atomic bomb; business is altered by intellectual inventions like double entry book-keeping or speculation or advertising or market capitalism. Public life has changed with the emergence of new institutions—the law, the “Republic,” democracy, dictatorship—and is now being replaced by the television camera.

But the telephone began the seismic shift in sensibility described by Martin Pawley in his book *The Private Future*: “Western societies are collapsing not from an assault on their most cherished values, but from a voluntary, almost enthusiastic abandonment of them by people who are learning to lead private lives of an unprecedented completeness with the aid of the momentum of a technology which is evolving more and more into a pattern of socially atomizing appliances.” The telephone, which has been traditionally promoted as a means of bringing people together, of connecting them, is in fact the archetype of Pawley’s “socially atomizing appliance.” The filmmaker Bill Forsyth gives a perfect example of this in his film, *Local Hero*. The character played by Peter Riegert wants to invite to dinner a girl standing less than 20 feet away from him on the other side of a glass partition—so he dials her extension. That is “the Private Future” in action.

Cordless phones, answering machines, cellular phones, “call waiting,” phones in automobiles, headset phones which free up both hands—all these seem likely to increase our dissociation from the here and now, and to hasten our withdrawal from the public sphere into “private lives of an unprecedented completeness.” The dangers inherent in the disappearance of any meaningful public life should be obvious. On the most primitive level, consider the person driving a big shiny suburban wagon, about to negotiate a tricky left turn through a busy intersection while they chat on the telephone with a friend. This person has the illusion of being in two places at once—with the friend and in traffic—but is in fact nowhere at all. The friendship, however, is not in physical danger—the other vehicles approaching that intersection, along with their passengers, are in the gravest peril. By the end of the 1990s legislation restricting the use of telephones in automobiles in the United States began to pass in several states. The whole concept of interdependence, of civic responsibility, is losing its force. The huge juggernaut of communications technology which was launched when Alexander Graham Bell burst in on Thomas Watson and shouted “Don’t change anything!” has changed everything. Whether for the better or the worse depends on the relative importance you ascribe to the social contract.

—Gerald Carpenter

Televangelism

Since the beginnings of commercial radio, evangelical Christians have recognized the effectiveness of the broadcast media as a vehicle for disseminating their faith. By enabling them to reach new audiences as well as committed believers, broadcasting has provided evangelists with a means of building large and widespread followings. As a result, religious broadcasters have continually taken advantage of new broadcast technologies, from local radio programs in the early 1920s to 24-hour cable television networks by the late 1970s. The use of television by evangelists as a medium for expressing their views proved to be an especially influential development during the last quarter of the twentieth century, as conflicts between religious conservatives and mainstream popular culture grew. In this context, the term “televangelism” became widely adopted to describe the use of broadcasting to promote not only evangelical Christian beliefs, but also a wide range of social and political views espoused by Christian fundamentalists.

The roots of contemporary televangelism can be traced to the 1950s, when evangelists such as Billy Graham, Rex Humbard, and Oral Roberts started to use television programs to spread their conservative Protestant beliefs. Most early examples of televangelism

adopted a traditional format, concentrating on sermons, church services, and revival meetings, and operated on fairly small budgets. Early televangelist programming was also generally restricted to Sunday mornings, and was usually broadcast over a small number of stations covering a limited geographical area. Over time, however, technological changes and increasing resources allowed televangelists to reach much larger audiences. The advent of videotape, for example, provided an inexpensive and flexible means of distributing programs, so that they did not have to be broadcast live or recorded on expensive motion picture film. And the proliferation of television stations during the 1950s and 1960s provided a broader variety of outlets for televangelism, as did the subsequent expansion of cable television.

As a result of these innovations, televangelism underwent a major period of growth during the 1970s. Organizations like Pat Robertson's Christian Broadcasting Network and Jim Bakker's Praise The Lord (PTL) Satellite Network were able to use local cable television systems, linked by satellite transmissions, to bring their programming to virtually all parts of the country, and throughout the week, not just on Sundays. To take advantage of this increase in exposure, televangelists also adopted new programming formats, such as the talk show and the news magazine, which had become staples of commercial television. The rapid growth in their operations also brought greater political influence to televangelists during the late 1970s and 1980s. With the conservative turn in American politics at this time, and the rise of the Christian right as a political force, prominent televangelists like Jerry Falwell and Pat Robertson found that broadcasting provided them with a powerful tool for publicizing their views and shaping the nation's political agenda.

Towards the end of the 1980s, however, televangelism went into a period of decline, primarily as a result of separate financial and sexual scandals involving Jim Bakker and Jimmy Swaggart, two leading religious broadcasters. Their sexual misconduct and Bakker's misappropriation of funds donated to the PTL Network exposed televangelism to increasing public criticism and suspicion. The core audience of the television evangelists did not turn away from them, but their broader influence within American society dropped, as did their television ratings. The failure of Pat Robertson to win the Republican presidential nomination in 1988 also marked a downturn in the political influence of the conservative televangelists. Christian broadcasters responded to these trends by trying to broaden the appeal of their programming, experimenting with new formats and offering an increasing number of family-oriented programs without an explicit religious or political message.

Through their successful use of broadcasting technology, televangelists have established a notable presence in American popular culture over the past several decades. Considerable disagreement exists over the size of their audiences, even before the scandals of the 1980s, and a number of studies have suggested that televangelists have had more success in reinforcing the faith of existing believers than in reaching new converts. Nonetheless, televangelism has become a persistent feature of the American broadcast media, and as such has contributed substantially to the diversity of views that constitute American popular culture.

Television

At the same time radio began to achieve commercial viability in the 1920s, the United States and Britain began experimenting with "television," the wireless transmission of moving pictures. Although Britain was initially somewhat more successful, both countries experienced a lot of difficulty in the early stages. There were a variety of reasons for this. In America, many people whose livelihoods were tied to radio were also responsible for developing television. Accordingly, they were in no hurry to see radio, a sure money maker, usurped by the new medium. In addition, the Depression greatly slowed the development of television in the 1930s. There was also a tremendous amount of infighting between potential television manufacturers and the Federal Communications Commission (FCC) in trying to establish uniform technical standards. And finally, just as it seemed as though television was poised to enter American homes, the onset of World War II delayed its ascendancy until the war's end. However, in the late 1940s and early 1950s commercial television exploded on the American market, forever changing the way products are sold, people

A couple ponders the purchase of their first television.

are entertained, and news events are reported. In the years immediately following World War II television quickly became America's dominant medium, influencing, shaping, and recording popular culture in a way no other media has ever equaled.

Although televisions first appeared on the market in 1939, because there were virtually no stations and no established programming, it wasn't until just after World War II that TV began its meteoric rise to media dominance. As John Findling and Frank Thackeray note in *Events That Changed America in the Twentieth Century*, in 1946 only 7,000 TV sets were sold. However, as television stations began appearing in an increasing number of cities, the number of sets sold rose dramatically. In 1948 172,000 sets were sold; in 1950 there were more than 5,000,000 sets sold. By 1960 more than 90 percent of American homes had TV sets, a percentage which has only climbed since. Before television, Americans had spent their leisure time in a variety of ways. But as each new station appeared in a particular city, corresponding drops would occur in restaurant business, movie gates, book and magazine sales, and radio audiences. By the early 1960s Americans were watching over 40 hours of TV a week, a number that has remained remarkably stable ever since.

Television originally only had 12 Very High Frequency (VHF) channels—2 through 13. In the late 1940s over 100 stations were competing for transmission on VHF channels. Frequency overcrowding resulted in stations interfering with one another, which led to the FCC banning the issuance of new licenses for VHF channels for nearly four years, at the conclusion of which time stations receiving new licenses were given recently developed Ultra High Frequency (UHF) channels (14 through 88). However, most TV sets needed a special attachment to receive UHF channels, which also had a worse picture and poorer sound than VHF channels. Unfortunately, it was mostly educational, public access, and community channels that were relegated to UHF. Because of the FCC's ban, the three major networks, ABC, CBS, and NBC, were able to corner the VHF channels and dominate the television market until well into the 1980s.

From its introduction in American society, television has proven itself capable of holding its audience riveted to the screen for countless hours. As a result, people who saw television as a means through which to provide culturally uplifting programming to the American public were gravely disappointed. Instead, TV almost immediately became an unprecedentedly effective means of selling products. Most Americans weren't interested in "educational" programming, and if people don't watch advertisers don't pay for air time in which to sell their products. TV shows in the late 1940s followed the model established by the success of radio; single advertisers paid for whole shows, the most common of which were half hour genre and variety shows. But in 1950 a small lipstick company named Hazel Bishop changed forever the way companies sold their products.

When Hazel Bishop first began advertising on TV in 1950 they had only \$50,000 a year in sales. In two short years of television advertising, and at a time when only 10 percent of American homes had TV sets, that number rose to a stunning \$4.5 million. As advertisers flocked to hawk their products on TV, TV executives scrambled to find a way to accommodate as many companies as possible, which would result in astronomical profits for both the advertisers and the networks. TV executives realized that single product sponsorship was no longer effective. Instead, they devised a system of longer breaks during a show, which could be split up into 30

second "spots" and sold to a much larger number of advertisers. Although this advertising innovation led to television's greatest period of profitability, it also led to advertising dictating television programming.

In the early 1950s television advertisers realized they had a monopoly on the American public; they were competing with each other, not with other mediums, such as books or magazines. Americans watched regardless what was on. Advertisers discovered that what most people would watch was what was the least objectionable (and often the most innocuous) show in a given time slot; hence the birth of the concept of "Least Objectionable Programming." A TV show didn't have to be good, it only had to be less objectionable than the other shows in the same time slot. Although more "serious" dramatic television didn't entirely disappear, the majority of shows were tailored to create the mood advertisers thought would result in their consumers being the most amenable to their products. By the mid-1950s lightweight sitcoms dominated the American television market. The relative success and happiness of television characters became easily measurable by the products they consumed.

Prior to the twentieth century, "leisure time" was a concept realized by generally only the very wealthy. But as the American middle class grew astoundingly fast in the post World War II boom, a much larger population than ever before enjoyed leisure time, which helped contribute to television's remarkable popularity. Perhaps even more important was the rise of the concept of "disposable income," money that people could spend on their wants rather than needs. Advertisers paying for the right to influence how people might spend their disposable income largely funded television. As a result, television was ostensibly "free" prior to the late 1970s. Nevertheless, television's cost has always been high; it has played perhaps the single largest role in contributing to America's becoming a consumer culture unparalleled in world history. Countless television shows have achieved an iconic stature in American popular culture, but none have had as powerful an effect on the way American's live their day to day lives as have commercials.

By the mid-1950s it became clear that television's influence would not be confined to the screen. Other forms of media simply could not compete directly with television. As result, they had to change their markets and formats in order to secure a consistent, although generally much smaller than pre-television, audience. Perhaps the most far reaching consequence of the rise of television is that America went from being a country of readers to a country of watchers. Previously hugely popular national magazines such as *Colliers*, *Life*, and *The Saturday Evening Post* went out of business in the late 1950s. Likewise, as television, an ostensibly more exciting visual medium than radio, adapted programming previously confined to the radio, radio shows quickly lost their audience. Magazines and radio stations responded similarly. Rather than trying to compete with TV they became specialized, targeting a singular demographic audience. Simultaneously, advertisers grew more savvy in their research and development and realized that highly specific consumer markets could be reached via radio and magazine advertising. Strangely, television's rise to prominence secured the long term success of radio and magazines; their response to the threat of television eventually resulted in a much larger number of magazines and radio stations than had been available before television. In the late 1990s audiences can find a radio station or magazine that focuses on just about any subject they might want.

Perhaps the industry struck hardest by the advent of television was the American film industry. Hollywood initially considered TV

an inferior market, not worthy of its consideration. And why not, for in the late 1940s as many as 90 million people a week went to the movies. But television's convenience and easy accessibility proved much competition for Hollywood. By the mid-1950s the industry's audience had been reduced to half its former number. Hollywood never recovered as far as actual theater audiences are concerned. In fact, by the late 1990s only 15 million people a week attended the cinema, and this in a country with twice the population it had in the late 1940s. However, Hollywood, as it seemingly always does, found a way to adapt. Rather than relying exclusively on box-office receipts, Hollywood learned to use television to its advantage. Now after market profits, including the money generated from pay-per-view, cable channels, premium movie channels, and, most of all, video sales and rentals, are just as important to a film's success, if not more so, than a film's box-office take.

In addition, television's media domination has contributed greatly to blurring the lines between TV and Hollywood. Most Hollywood studios also produce TV shows on their premises. Furthermore, just as radio stars once made the jump from the airwaves to the silver screen, TV stars routinely make the jump from the small screen to the movies. As a result, many American celebrities can't be simply categorized in the way they once were. Too many stars have their feet in too many different mediums to validate singular labels. Take, for example, Oprah Winfrey, a television talk show maven who has also been involved in several successful books, promoted the literary careers of others, frequently appeared on other talk shows and news magazines as a guest, and has acted in and produced a number of both television and Hollywood films. Although hers is an extreme example, television's unequalled cultural influence has resulted in turning any number of stars who would have formerly been confined to one or two mediums into omnipresent multimedia moguls.

If radio ushered in the era of "broadcast journalism," TV helped to further define and legitimize it. In addition, television newscasts have changed the way Americans receive and perceive news. By the late 1950s TV reporters had learned to take advantage of emerging technologies and use them to cover breaking news stories live. Television broadcasts and broadcasters grew to hold sway over public opinion. For, example, public sentiment against the Vietnam War was fueled by nightly broadcasts of its seemingly senseless death and destruction. Walter Cronkite added further fuel to the growing fire of anger and resentment in 1968 when he declared on-air that he thought the war in Vietnam was a "terrible mistake." When most Americans think of the events surrounding JFK, Martin Luther King, and Bobby Kennedy's assassinations, the civil rights movement, the first moon walk, the Challenger space shuttle disaster, the Gulf War, and the 1992 riots in Los Angeles after the Rodney King trial verdict, it is the televised images that first come to mind.

Unfortunately, by the late 1990s many Americans had come to rely on television news as their main source of information. In addition to nightly news and news oriented cable networks, cheap-to-make and highly profitable "news magazines" such as *Dateline NBC*, *20/20*, and *48 Hours* have become TV's most common form of programming. Rarely do these shows feature news of much importance; instead, they rely on lurid and titillating reports that do nothing to enrich our knowledge of world events but nevertheless receive consistently high ratings, thus ensuring the continuing flow of advertising dollars. That most Americans rely on television for their information means that most Americans are underinformed; for full accounts of a particular story it is still necessary to seek out supporting

written records in newspapers, magazines, and books. The problem with relying on television for information is, as Neil Postman writes, "not that television presents us with entertaining subject matter but that all subject matter is presented as entertaining." Accordingly, it is Postman's contention that America's reliance on TV for information is dangerous, for when people "become distracted by trivia, when cultural life is redefined as a perpetual round of entertainments, when serious conversation becomes a form of baby-talk, when, in short, a people become an audience and their public business a vaudeville act, then a nation finds itself at risk."

Because of news broadcasting and the fact that television is the best way to reach the largest number of Americans, television has helped shape American politics in the second half of the twentieth century. Effective television advertising has become crucial to the success or failure of nearly any national election. Unfortunately, such advertising is rarely completely factual or issue oriented. Instead, most such advertisements are used to smear the reputation of a particular candidate's opponent. Perhaps the most famous example of such advertisements occurred in the 1988 Presidential campaign, during which Republican George Bush ran a series of slanted and inflammatory spots about his Democratic opponent, Michael Dukakis. Furthermore, the careers of several presidents have become inextricably intertwined with TV. For example, President Ronald Reagan, a former minor movie star and television product pitchman, used his television savvy so effectively that he came to be known as "the Great Communicator." Conversely, President Bill Clinton, whose initial effective use of television has reminded some of JFK's, became victim to his own marketability when in August of 1998 he admitted in a televised speech to the nation that he had lied about his affair with a young intern named Monica Lewinsky. His admission, which was meant to put the incident behind him, instead spawned a virtual television cottage industry, with literally dozens of shows devoting themselves to continual discussion about his fate, which was ultimately decided in a televised impeachment trial.

Strangely, considering the man was wary of the medium, perhaps no politician's career has been more tied to television than Richard Nixon's. As a vice presidential candidate on Dwight Eisenhower's 1952 Republican Presidential bid, Nixon came under fire for allegedly receiving illegal funding. A clamor arose to have Nixon removed from the ticket. On September 23, 1952, Nixon went on TV and delivered a denial to the accusations, which has since become known as "the Checkers speech." More than 1 million favorable letters and telegrams were sent supporting Nixon; he remained on the ticket and he and Eisenhower won in a landslide. Conversely only eight years later TV would play a role in Nixon's losing his own bid for the White House. Nixon agreed to a series of televised debates with his much more telegenic opponent, John Fitzgerald Kennedy. Nixon's pasty face and sweaty brow may have cost him the election. Many historians believe that Kennedy "won" the debates as much by his more polished appearance and manner than by anything he said. Nixon learned from his error. While again running for the Presidency in 1968, Nixon hired a public relations firm to run his campaign. The result was a much more polished, image conscious, and TV friendly Nixon; he won the election easily. In the last chapter of Nixon's political career, broadcast and print media helped spur investigations into his involvement with the Watergate affair. The hearings were broadcast live on TV, which helped to turn public

opinion against the President, who resigned from office as a result. One of the most famous images in TV history of television is that of Nixon turning and waving to the crowd as he boarded the helicopter that removed him from power forever.

Prior to World War II, baseball was widely recognized as America's national pastime. Games were often broadcast live, and the country blissfully spent its summers pursuing the on-the-field exploits of larger than life figures such as Babe Ruth. However, after the war other sports grew to prominence, largely because of television, beer, and, until 1970, cigarette advertisers, who saw in sports audiences a target market for their products. Individual sports such as golf and tennis, grew in popularity, but team sports such as hockey, basketball, and most of all, football had the greatest increases. By the late 1960s and with the advent of the Super Bowl, annually America's most viewed broadcast, football surpassed baseball as America's favorite pastime. Because of their nature, team sports have a built in drama that escalates in intensity over the duration of a season. Americans are drawn to the players in this drama, which has resulted in athletes hawking products perhaps more than any other cultural icons. In fact, as advertising revenues increasingly fund sports, athletes have become perhaps the highest paid workers in America. Michael Jordan earned a reported \$30 million to play for the Chicago Bulls in the 1997-98 season. In the Fall of 1998 pitcher Kevin Brown signed with the Los Angeles Dodgers for a seven year deal worth \$105 million. Accompanying their paychecks is a rise in media scrutiny. Elite athletes are hounded by paparazzi in a way once reserved for movie stars and royalty. Such is the price of television fame in America.

Despite the ridiculous salaries and the accompanying out-of-control egos of many athletes and owners, it could be argued that television has made sports better for most people. Seeing a game live at a venue remains thrilling, but TV, with its multiple camera angles and slow motion instant replays, is by far a better way to actually see a game. In addition to better vision, one has all the comforts of home without the hassle of inclement weather, expensive tickets, heavy traffic, and nearly impossible parking. And because of TV and its live transmission of sports, certain moments have become a part of America's collective cultural fabric in a way that never would have been possible without television. Heroes and goats achieve legendary status nearly immediately. Just as important to our culture as the televising of events of political and social importance is the broadcast of sporting events. Although not particularly significant in their contribution to human progress, because of television the images of San Francisco 49er Joe Montana's pass to Dwight Clark in the back of the endzone in the 1981 NFC championship game to beat the Dallas Cowboys or of a ground ball dribbling between Boston Red Sox first baseman Bill Buckner's legs in the sixth game of the 1986 World Series are just as much a part of American culture's visual memory as the image of Neil Armstrong walking on the moon.

As the twentieth century careens to a close and America prepares to embark on a new century, debates over television's inarguable influence continue to rage. Is TV too violent? Is television's content too sexually oriented? Has television news coverage become vacuous and reliant on the superfluous and tawdry? Is TV damaging our children and contributing to the fraying of America's social fabric? Regardless of the answers to these and countless other questions about television's influence, the inarguable fact is that television is

the most important popular culture innovation in history. Our heroes and our villains are coronated and vanquished on television. Sound bites as diverse in intent and inception as "where's the beef," "read my lips," and "just do it," have become permanently and equally ensconced in the national lexicon. Television is not without its flaws, but its accessibility and prevalence has created what never before existed: shared visual cultural touchstones. As one America mourned the death of JFK, argued about the veracity of the Clarence Thomas/ Anita Hill hearings, recoiled in horror as Reginald Denny was pulled from his truck and beaten, and cheered triumphantly as Mark McGwire hoisted his son in the air after hitting his 62nd home run. For better or for worse, in the second half of the twentieth century television dominated and influenced the American cultural landscape in an unprecedented fashion.

Television Anchors

According to television news legend Walter Cronkite, the term "anchorman" was invented by Sig Mickelson, the first head of the television and radio news department at CBS. It was expressly coined for use at the political conventions of 1952, the first ever covered by modern television. These conventions were made coherent by one

Walter Cronkite

broadcaster who provided perspective on events and introduced reporters bringing news from various parts of the convention; in short, a man who anchored the broadcast. In the United States and other developed countries around the world, television news anchors have become the de facto source of news for much of the public. With fewer people reading newspapers, and more and more getting their information from television, television news anchors on national and local newscasts have become the people the public turns to with the question, “What happened today?” Television news anchors, with their individual quirks and inflections, help to put a human face on the news. The power of the anchor to slant or comment on the news has been a source of concern for conservative and liberal critics alike. In totalitarian systems, they are often seen as nothing more than the face of the government, reporting news which is patently false or propagandistic.

Walter Cronkite set the standard for anchors in the United States during the period when he was known as the “most trusted man in America.” Cronkite was even urged to run for president at various times in his career. His sign off, “And that’s the way it is,” rivaled Edward R. Murrow’s “Good night and good luck” as the most popular signature piece of any news person. Other significant news

anchors of the 1960s included Chet Huntley and David Brinkley, who brought a partnership sensibility to the job that became a template for other newscasts. Their familiar signature—“Goodnight Chet. Goodnight David”—was often invoked in both comedy and drama.

The first television news anchors were used on weather reports and national and local television newscasts. Many of the first news anchors had worked originally in radio where the news format consisted of a news “reader” announcing the news in sonorous and serious tones. This immediately translated to television, where a clock or sheet of paper were used as props to make the set design appear serious. Early local television news instituted the “anchor” as the centerpiece of the show, delivering news, sports, and weather. It was only late in the 1960s that news programs began to have separate segments for different types of news, each presented by its own reporter. During this period, the news anchor began to rise in prominence, since he (early anchors were almost exclusively male) was the person that attracted viewers to the channel. The most popular anchors were those who appeared trustworthy and serious.

In the 1970s, feminism began to lead to the installation of female co-anchors on many newscasts. Soon the serious reading of the news was supplemented with repartee and chat among co-anchors. News consultants, such as Frank Magid and Associates, helped to bring about a more “scientific” method of choosing news anchors based on demographic sensibilities and entertainment style. Men and women with telegenic looks and breezy ad libbing skills are used to attract viewers, while older news people with significant experience are usually retired or given reporting assignments in the field. Audiences seem to want reporters they can trust, but anchorpeople who entertain them.

The conflict caused by the changing role of the news anchor was probably best highlighted in *Network* (1976), Paddy Chayefsky’s vivid send-up of the news industry, which presaged the merging of news and entertainment. In the film, the news anchor, after suffering a mental breakdown, returns to the news desk only to entreat his audience to “get out of their chairs, go to the window and scream, I am as mad as hell and I’m not going to take it anymore!” The anchor’s complaint became a popular catch phrase for the universal frustration of modern life. Ted Baxter, the fictional news anchor on the *Mary Tyler Moore Show* (1970-77), perhaps best exemplified the stereotype of the modern anchorman: the vacuous, handsome man, puffed up with self-importance and barely aware of the meaning of anything he is reading on the air.

Temple, Shirley (1928—)

Shirley Temple, Hollywood's quintessential child star during the 1930s and 1940s, became a diplomat in later years, serving as Ambassador to Ghana and Czechoslovakia and as the U.S. Ambassador to the United Nations under her married name, Shirley Temple Black. But it is the diminutive smiling moppet with golden ringlets that most older Americans remember from the Saturday afternoon matinees of their own childhoods. Her unique appeal and immense popularity were without precedent and have never been equaled by the junior members of the Hollywood acting fraternity. The child star who acted, danced, and sang her way into the hearts of millions was the sun that shone through the clouds of the depression years. In a series of box-office smashes, Little Shirley Temple dispensed sweetness and light, beguiling her adult audiences and upstaging her adult co-stars in a series of films specially concocted to capitalize on her qualities. Decades before the rise of film-product merchandising, Temple's popularity gave rise to a profitable industry in Shirley Temple products such as dolls, cut-outs, and clothes, and her name has passed into the language as a synonym for cute, smiling, curly-haired, doll-like little girls—and even as the eponym for a non-alcoholic cocktail served to children and teetotaling adults.

Shirley Temple

Shirley made her first feature film appearance in 1932. She was awarded a special Academy award "in grateful recognition of her outstanding contribution to screen entertainment during the year 1934," and was the number-one box-office attraction in the United States and Britain from 1935 to 1938. During this time her salary had risen to \$100,000 per picture, but by the end of 1939, unable to keep advancing age at bay, her career began its downward slide. She was 11 years old.

Born in Santa Monica, California, on April 23, 1928, Shirley was taken to dancing classes at age three by an ambitious stage mother who later hawked around her daughter to various film studios. The child was first chosen for a series of one-reel movies called "Baby Burlesks," a quick stepping stone to her first small roles in features. In 1934, Fox Studios, needing a tot to perform a song and dance number in *Stand Up and Cheer*, engaged her at \$150 per week. She made an immediate impact with the number, "Baby Take a Bow" and emerged with a Fox contract. Meanwhile, *Little Miss Marker*, the first film under a two-picture deal that Mrs. Temple had previously made with Paramount, was released several weeks after *Stand Up and Cheer*, and became a huge hit. Based on a story by Damon Runyon, it was this film—something of a classic and frequently remade—that catapulted the six-year-old Temple to stardom.

As little Miss Marker, little Miss Temple was paired with Adolphe Menjou, the smooth veteran of many a more sophisticated screen liaison. She played the daughter of a gambler who, in debt to his bookie, dumps his small daughter on the man as "security" and disappears. Menjou played the seemingly flint-hearted bookie who softens under the influence of the charming, loving child, reforms his ways, and embraces the role of surrogate father. With minor variations on its basic idea, *Little Miss Marker* established the formula for the subsequent string of mediocre films whose success rested on their star's tiny shoulders. Most of the stories were formulaic: a child, generally an orphan or, at the very least, motherless, is packed off by some inept or mildly villainous guardian to live with a reluctant relative. In double-quick time she melts the stony heart of whichever aunt or grandfather she has been inflicted upon, never wants to leave, is reclaimed for purposes of exploitation by the original caregiver and, after much phony but effectively plotted tension, is blissfully reunited with her loved ones.

Exploiting the success of her number in *Stand Up and Cheer*, Fox rushed her into *Baby Take a Bow* (Shirley as the daughter of an ex-con who straightens out under her sunny influence); then it was back to Paramount for *Now and Forever* with Gary Cooper and Carole Lombard (he a jewel thief, she his mistress and Shirley his motherless daughter); the year ended with *Bright Eyes*, in which an orphaned Shirley sang the hit song "On the Good Ship Lollipop." In 1935 she danced with Bill "Bojangles" Robinson in *The Little Colonel* and *The Littlest Rebel*; in *Our Little Girl* she succeeded in reuniting her two estranged parents; in *Curly Top*, a loose retelling of *Daddy Longlegs*, she sang another hit song, "Animal Crackers in My Soup" as she took control of her adoptive playboy-father's affairs, both professional and romantic.

And so it continued. Temple, remaining cute as a button, proved herself a real trouper, delivering her lines and dispensing wisdom to adults with unnerving authority and breaking effortlessly into song and dance with breathtaking ease. In *Stowaway* (1936), the eight-year-old impersonated Eddie Cantor, Al Jolson, and Ginger Rogers

dancing with a Fred Astaire doll; the film version of *Heidi* (1937) suited her to perfection and won critical plaudits; *Wee Willie Winkie* the same year shamelessly changed the original Rudyard Kipling character from a small boy to a small girl. Directed by John Ford, the tale of a child who becomes the mascot of a British army regiment in colonial India was the most expensively produced of the Temple vehicles, with sentimentality taking second place to action. *Rebecca of Sunnybrook Farm* (1938), about an orphan who becomes a radio star, reprised Shirley's career and remains an excellent introductory film for those who have never seen her.

Neither her novelty nor her popularity faded until 1939 when her ratings began to slip after *The Little Princess* and *Susannah of the Mounties*. In 1940, with her asking price now \$300,000, she starred in Maurice Maeterlinck's *The Blue Bird*, adapted by the author and filmed in color; it was the first Shirley Temple vehicle to lose money. At the end of the year, Mrs. Temple and the studio (now Twentieth Century-Fox), who had long had an uneasy relationship, agreed to terminate Shirley's contract. She returned to the screen via MGM, who did not know what to do with her and, after a feeble performance in *Kathleen* (1941), she went to United Artists and appeared in *Miss Annie Rooney* (1942). She disappeared for two years and came back in *Since You Went Away* (1944), a popular wartime family drama in which she played third fiddle to Claudette Colbert and Jennifer Jones.

The world had changed, and so had Shirley Temple, now 16. She was rejected by a disappointed public unable to accept her transformation from dream child to attractive but ordinary teenager, and ten more films between 1945 and 1949 (including *The Bachelor and the Bobby-Soxer* with Cary Grant), and marriage, at 17, to John Agar, only continued the downward slide. Two comeback attempts with television series in 1958 and 1960 failed to generate any enthusiasm and finally marked the end of her career. Divorced from Agar, she married TV executive Charles Black in 1950 and, as Shirley Temple Black, entered Republican politics during the 1960s. Her congressional bid was unsuccessful, but she was appointed a U.S. representative to the United Nations, became the American ambassador to Ghana (1974-76), then the U.S. Chief of Protocol and, finally, in 1989, ambassador to Czechoslovakia.

Described by David Thomson as not "just a child leading her life under adult shadows, but a Lilliputian moralist in ringlets, tap-dancing into your heart and then delivering the sententious message that sorts out confusion," Shirley Temple certainly had her detractors. There were those who found her unbearable, and those who noted the shortcomings in her singing and dancing. Novelist and one-time film critic Graham Greene was famously sued for a review in which he asserted that she was an adult masquerading as a child. But to most, she was the perfect antidote to reality in a difficult era, who later said of her career, "I class myself with Rin-Tin-Tin. At the end of the Depression people were perhaps looking for something to cheer themselves up. They fell in love with a dog and a little girl. It won't happen again."

—Robyn Karney

The Temptations

While many believe the Temptations to be the favorite soul singing group of all time, this assessment of the band's accomplishments is limited considering their substantial impact upon both the look and sound of popular music. Formed in Detroit, Michigan, in 1960 at a time when AM radio was a multi-layered media format that gave access and success to a large quantity of artists from rock, pop, country, soul, blues, and rockabilly music, the Temptations set a standard for vocal performers and created a sound and style that remains distinctly their own. Built around the remnants of two previous bands, the Distant and the Primes, the Temptations were a major force in the success of Berry Gordy's Motown Records and have been referred to as the originators of the "Motown Sound." Rising to popularity with other precedent-setting Motown performers such as Marvin Gaye, Martha and the Vandellas, and the Supremes, the Temptations were at the center of a huge music explosion. Over the course of nearly 40 years the Temptations would have 19 members and earn 3 Grammy Awards. The group would place 43

The Temptations

singles in the rhythm and blues (R&B) Top 10 as well as earn 14 R&B number one hits. As pop artists, the Temptations would hit number one four times and place 15 sides in the pop Top 10.

Known for their lush harmonies, smooth on-stage choreography, and a bold sense of fashion which made them immediately recognizable, the Temptations conquered pop, rock, R&B, and the soul music market during the course of a career that remains strong. From the start, the membership of the Temptations was ever changing. The Distant, a local Detroit outfit, who recorded for the Northern label and released a single in 1959, "Come On," included Elbridge Bryant, bass singer Melvin Franklin, and baritone Otis Williams. The Primes were a trio of transplants from Alabama comprised of tenor Eddie Kendricks, Kell Osborne, and Paul Williams. It was Otis Williams who brought Kendricks and Paul Williams into the fold when the Primes broke up. Impressed by the Primes' use of choreography, Otis Williams wanted to incorporate that into the Distant's live performances. The Distant changed their name to the Temptations and by 1961 they were signed to a Motown subsidiary, Miracle. While at Miracle the Temptations released several sides with only one achieving any commercial success, "Dream Come True," in 1962. By 1963 Bryant was out of the band and was replaced in 1964 by the notable tenor voice of David Ruffin.

At this point the Temptations began working with William "Smokey" Robinson. A songwriter of immeasurable talent and a producer who would go on to achieve his own success with the Miracles, Robinson gave the Temptations their first hit, "The Way You Do the Things You Do." It would be the first of many Top 10 hits for the group. Their debut album, *Meet the Temptations*, was released in 1964. In 1965 the Temptations scored big and gave the world what would become their signature song, "My Girl." Another Robinson composition, "My Girl" was number one on both the pop and R&B charts. Crossing over as they were, in an era of racial strife and turmoil, made their accomplishments even more meaningful and paved the way for others to follow. They continued this pattern and in 1965 they release another hit from the pen of Smokey Robinson, "Get Ready." Harder and more edgy, "Get Ready" was of tremendous appeal to rock audiences. Two albums resulted from their early association with Robinson, *Sing Smokey*, in 1965 and *Gettin' Ready*, which also contained the stunning, "Ain't Too Proud to Beg," another signature tune for the Temptations.

Moving on, the Temptations began working with producers Norman Whitfield and Brian Holland and also moved Ruffin into the lead vocal position, a spot Kendricks had filled admirably for some time. Ruffin's voice soared on well known hits "Beauty's Only Skin Deep" and "(I Know) I'm Losing You." Together, Kendricks and Ruffin shared lead vocal duties on the classic romantic hit, "You're My Everything," from the 1967 album *With a Lot o' Soul*. Ruffin pushed to have his name placed in front of the band's name, a request that resulted in his firing from the Temptations. He was replaced by Dennis Edwards, a former member of another band, the Contours. Edwards' voice was a perfect fit as the Temptations took their sound into a more psychedelic direction. Edwards' arrival ushered in a time of change for the Temptations and their sound when he recorded the stinging lead vocal for "I Can't Get Next to You," the most significant cut from the Puzzle People project in 1969.

With Whitfield in full control of production, the Temptations were moving away from the smooth, soulful love songs that had made

them so successful. Tunes like "Cloud Nine," "Psychedelic Shack," and "Ball of Confusion (That's What the World is Today)" were commentary on America's drug culture and politics. Changing their sound and style to fit into the world around them, the Temptations remained current, timely, and part of the mainstream. Furthermore, their influence carried over as rock and pop acts sought to emulate not only their moves, but their material.

By 1971 Kendricks was leaving the band. His swan song with the Temptations was "Just My Imagination," a mellow, flowing tune that showed off the group's skillful harmonies. Paul Williams, who suffered from alcoholism, also left around this time. Damon Harris and Richard Street joined the Temptations. Rumors of the band's demise circulated. But, the Grammy-winning single, "Papa Was a Rolling Stone," displaying vast expanses of instrumental work and Edwards' strong vocals, was a huge crossover hit that only seemed to underscore the versatility and tenacity of the group. Their album, *All Directions*, released in 1972, put an end to the idea that the Temptations were about to disband as did a Grammy Award for their album *Masterpiece* the following year.

After more lineup changes, the Temptations recorded their final project for Motown Records in 1976. *The Temptations Do the Temptations* signaled the end of an era as the act moved to Atlantic Records. Atlantic had designs on turning the Temptations into a disco act. Unsuccessful and dissatisfied, the Temptations returned to Motown and hit the charts once again in 1979 with the single, "Power." A reunion tour and album followed in 1982. Ruffin and Kendricks joined the five current Temptations in what was a brief, but glorious moment in time that included an impressive SRO performance at Radio City Music Hall in New York City. Problems, both personal and professional, made it impossible for Ruffin and Kendricks to remain. In 1984 Ali-Ollie Woodson was on board as lead singer.

Inducted into the Rock 'n' Roll Hall of Fame in 1989 by blue-eyed soul duo Daryl Hall and John Oates, the Temptations were formally acknowledged for their contribution to popular culture and to America's music. Yet, their success was marked by tragedy all along the way. Original member Paul Williams died in 1973 of a self-inflicted gunshot wound. Later, Ruffin passed away in 1991 of a drug overdose while Kendricks succumbed to lung cancer in 1992. Another founding member, Melvin Franklin, lost his life in 1995 after a brain seizure. By the 1990s Otis Williams was the only original member left performing with the group and had spent years in court defending his right to use the Temptations' name after Edwards left and formed a rival group. Publishing his autobiography in 1988, he carried on while Motown released a number of anthologies and greatest hits packages, including *Emperors of Soul* in 1994, and the critically acclaimed *Ultimate Collection* in 1996.

A 1990s renaissance of sorts, however, caused renewed interest in the band. Romantic R&B singing acts of all racial persuasions looked to the work of the Temptations for inspiration. The Temptations' sound was found in the work of chart topping 1990s acts such as BoyzIIMen, Babyface, and the Backstreet Boys. Further interest in the group was fueled by an NBC television movie, *The Temptations*, shown in two parts in November, 1998. Based upon Williams' book, the miniseries focused upon the classic Temptations lineup, the drama of their collective rise to fame and fortune, and the individual trials and tragedies of each member. The 1998 release of a brand new CD, *Phoenix Rising*, also on Motown, refuted the idea that the Temptations were merely an oldies act resting upon their laurels. Williams,

along with tenor Ron Tyson, Barrington Henderson, Terry Weeks, and Harry McGillberry, Jr., give credence to the original member's expression, "Tems forever."

The Ten Commandments

The annual network presentation of Cecil B. De Mille's 1956 epic film *The Ten Commandments* has been an American television standard every Easter for decades. Highlighted by Oscar-winning special effects, such as the spectacular parting of the Red Sea, *The Ten Commandments* vividly tells the Biblical story of the life of Moses, with 1950s superstar Charlton Heston in the lead role. Featuring a cast of thousands, the three-plus hour saga remains a perennial audience

favorite, proving that larger-than-life spectacle continues to be among Hollywood's principal contributions to popular culture.

One of the most important early motion picture directors, Cecil B. De Mille helped define Hollywood's early cinematic style in silent films such as the classic 1915 melodrama *The Cheat*. Primarily a comedy director in his early career, De Mille made his first epic film, *The Ten Commandments*, in 1923. In this earlier version, De Mille interwove the Biblical story with a modern-day parable of two brothers, one a saint, the other a sinner. Even though the shooting budget exceeded a million dollars, the film was a huge moneymaker for Paramount Pictures and made De Mille the top director of his day.

In the mid-1920s, the director started his own studio and his reputation reached legendary proportions. As noted in Baseline's *Encyclopedia of Film*, "By the middle of the decade De Mille, with his Germanic swagger, boots and riding crop, had come to represent the archetypal director to the moviegoing public." After movies switched to sound, De Mille remained one of Hollywood's most bankable directors throughout the 1930s and 1940s, known for his sweeping historical epics.

In 1950, the sixty-nine-year-old director reunited with his great silent star, Gloria Swanson, to make the classic *Sunset Blvd.* Two years later, he directed *The Greatest Show on Earth*, which won the Oscar for Best Picture—DeMille's first. In 1955, rumors began

Charlton Heston (right) and Yul Brynner in a scene from the film *The Ten Commandments*.

circulating Hollywood that the legendary director was planning to remake his 1923 classic, *The Ten Commandments*. Everyone wanted to audition. As actor Vincent Price, who would be cast as Baka, the Master Builder of the Pyramids, recalled, “I think all of us, Eddie Robinson, myself, Judith Anderson, we all really wanted to be in a De Mille picture. We really felt that you couldn’t call yourself a star unless you had been in a De Mille picture! So we all took these sort of small, but rather arresting parts.” Indeed, the cast was star-studded, with Charlton Heston as Moses, Yul Brynner as Ramses, and Anne Baxter as Nefretiti, and featuring Edward G. Robinson, Yvonne De Carlo, Debra Paget, Nina Foch, Judith Anderson, Vincent Price, and John Carradine. Bit players included future television stars Mike Connors and Robert Vaughn and musician Herb Alpert.

In *The Ten Commandments*, Golden Age Hollywood filmmaking meets the 1950s. As described by film critic Pauline Kael, “Charlton Heston is the highly athletic Moses; Anne Baxter is the kittenish princess who loves him; Judith Anderson is the sinister slave who knows the secret of his Jewish birth; Cedric Hardwicke is the likable old Pharaoh; Yul Brynner is the prince who beats Moses to the Egyptian throne; Edward G. Robinson is the traitor to the Jews; Debra Paget is the young slave old Robinson has got his eyes on. Stir them all together, throw in stone tablets, a whopping big Golden Calf, part the Red Sea, and you’ve got Cecil B. De Mille’s epic—3 hours and 38 minutes of it. As old-fashioned hokum, it’s palatable and rather tasty.” Filmed in VistaVision, *The Ten Commandments* was nominated for seven Academy Awards, winning for Special Effects.

Both Hollywood and Cecil B. De Mille made better films than *The Ten Commandments*, but few have remained as popular for as long. A family favorite, a good old-fashioned epic, a television tradition, *The Ten Commandments* has become a staple of American popular culture.

—Victoria Price

Tennis

A ball, a racket, and a net. The simplicity of tennis is one reason that its origins are difficult to pinpoint. At any one point in time, variations of the game were probably played in almost every country in the world. Some historians believe the game was first invented in the Middle Ages—it is mentioned in twelfth-century manuscripts—but exactly when and where is probably lost to antiquity. The word tennis is derived from the French word “tenez,” meaning “to hold.” Certainly the French greatly enjoyed the game, and by the sixteenth

century up to 2,000 Jeu-de-Paume (the name for the ball) courts had been built in France, and it is thought that every western European country had courts at the time.

Perhaps until the nineteenth century, tennis courts were walled, and the exact rules of the game may have differed from country to country, perhaps even court to court. In 1858, however, a lawn court was constructed in England, and by 1873 an Englishman, Major Walter Clopton Wingfield, modernized and standardized the game. Calling his game Sphairistike (Greek for ball and stick), the net was set at four feet eight inches, while the court was shaped like an hourglass, narrow at the net and wider at the baseline. The game was played to 15 points. This standardization probably was the reason for an increased interest in the game. At about the same time, the game spread to the United States, and soon after, worldwide.

The early establishment of national championships in major tennis-playing countries demonstrates the fast-growing popularity of tennis during this period. In 1877, Wimbledon, the British championship, was first played. In 1881, the United States National Championship (now the U.S. Open) was held. Ten years later the French National championship (now the French Open) began, and by 1905 the national championship of Australia (now the Australian Open) was played. In addition, in 1900 the Davis Cup, a team competition between the United States and England, was first held, and the tournament has since become an annual international championship.

Over the years, various surfaces have been used to play the game, ranging from grass to clay to concrete to composition. Each is generally better suited to different aspects of the game, and rather than undermining the standardization of the game, it has added a diversity to both amateur and tournament play. For example, the French Open is played on clay while Wimbledon is on grass.

Unlike most sports, tennis had a remarkably difficult time meshing amateur and professional status into its organizational format. Although a professional tournament had been held in the United States as early as 1927, not until the 1960s did the “Open Era” of professional tennis begin.

Tennis in the twentieth century is highlighted by a litany of great players from different eras. In the 1920s, American Bill Tilden enjoyed great popularity. In the 1930s, 1940s, and 1950s, Ellsworth Vines, Fred Perry, Don Budge, Jack Kramer, Pancho Gonzales, and Lew Hoad, were, at various times, either ranked number one or regarded as such. In the 1950s and early 1960s, a host of Australian players reached the top echelon, most notably Rod Laver. Others included Hoad, Ken Rosewall, Frank Sedgman, and Neal Fraser. By the late 1960s and 1970s, players like Arthur Ashe, Stan Smith, and John Newcombe came to the forefront. By the 1980s, Bjorn Borg, Ivan Lendl, and John McEnroe were marquee names while Pete Sampras, Boris Becker, and Andre Agassi have been dominate players in the 1990s.

Women’s tennis has also had an illustrious list of notable players such as Frenchwoman Suzanne Lenglen in the 1920s, Americans Helen Wills and Helen Hull Jacobs in the 1920s and 1930s, Americans Maureen “Little Mo” Connolly and Althea Gibson, the first to break the color line in tennis, in the 1950s, Australian Margaret Court, Brazilian Maria Bueno, and American Billie Jean King in the 1960s, Australian Evonne Goolagong, American Chris Evert, and Czech Martina Navratilova in the 1970s and 1980s, and German Steffi Graf, American Monica Seles, and Swiss Martina Hingis in the 1990s.

Pete Sampras

In part, professional tennis has been somewhat of a battle of the sexes. The battle was perhaps best exemplified by the much ballyhooed “match of the century” held in the Houston Astrodome in 1973. The match pitted women’s star Billie Jean King against former Wimbledon champion Bobby Riggs. Months earlier Riggs, a self-appointed “king of the chauvinist pigs,” challenged all women athletes in general, but specifically the top ranked woman’s player in the world, to a tennis match. The number two ranked women’s tennis player Margaret Court accepted, and Riggs promptly beat her 6-2, 6-1 in what was called the Mother’s Day Massacre. This led to the King-Riggs Astrodome match in front of 30,000 fans and a worldwide television audience of 50 million. Although Riggs claimed to be a chauvinist, he probably did more for women’s tennis than any male player in history. In front of the large audience, King beat Riggs in three straight sets and took home the \$100,000 winner-take-all prize. The resultant publicity drew attention to the growing complaint from women professionals that their prize money should be equal to men’s, particularly since many women players felt their blend of finesse and power made women’s matches more enjoyable for spectators. The

Women’s Tennis Association, coincidentally founded the year of the King-Riggs match, has consistently worked toward greater equity in prize money and purses for women have become substantially larger, but generally remain smaller than those awarded to men.

Tennis Shoes/Sneakers

Although a nineteenth century American lexicographer described sneakers as “shoes with canvas tops and rubber soles,” the vernacular meaning has come to include any shoe with natural or synthetic rubber soles. Uppers can be of leather, nylon, canvas, plastic, or combinations of these. Alternative names for sneakers include tennis shoes, gym shoes, plimsolls, felony shoes, cross trainers, boat shoes, and running shoes. The most popular type of shoe, sneakers accounted for just over a third of all shoes sold in 1996 according to Sporting Goods Marketing Association.

Modern sneakers have beginnings in various sports shoes. One ancestor is the expensive British upper-class footwear of the late 1800s, used for lawn tennis, cricket, croquet, and at the beach. Worn by both sexes, these canvas or leather lace-up oxfords—or high tops—had rubber soles. By the end of the nineteenth century they were priced for the average consumer. Field and track shoes are also forerunners in the industry. At the turn of the twentieth century, football and baseball players wore essentially the same shoe: leather high-topped lace-ups with leather soles and cleats. Sears sold leather shoes made specifically for runners as early as 1897.

From 1900 through the 1920s not much changed, but in the 1930s through the 1960s technical improvements that ultimately

made sneakers trendy were implemented. The quintessential sneaker—the Converse All Star—premiered in 1917. In 1922, Montgomery Ward offered high and low top sneakers—for “work, play or everyday wear”—for children and adults. Paul Sperry introduced his wavy sole for boating shoes in 1935 and other shoemakers produced non-skid soles in patterns including diamonds, feathers, and chain-links. Keds offered a variety of colored uppers, and sponge rubber, plastic foam, cushioned heels, and soles adding comfort were later introduced. In addition, it was in the 1940s and 1950s that Dassler Brothers (later split into Puma and Adidas), Converse, Spalding, and other companies were gaining reputations as sports shoemakers. Also during this time, sneakers, coupled with blue jeans, became symbols of youth. Adidas eventually made shoes with nylon uppers and velcro began to be used as a fastener in the 1960s. The 1970s pushed sneakers into the spotlight with the optimum shoe pursued by both consumers and manufacturers. Geoffery Beene, Calvin Klein, and other designers transformed sneakers into fashion.

When jogging became a popular pastime *Runner's World* printed surveys comparing the qualities of shoes. The running fad of the late 1970s propelled shoe manufacturers such as Saucony, Brooks, and Etonic to develop anti-pronation devices on their shoes so athletes would land flatfooted. Flared and elevated heels, in addition to soft molded and cantilevered soles, were some of the improvements

A pair of tennis shoes.

designers offered. One of a number of athletes turned sneaker designers, Bill Bowerman, a University of Oregon coach, created the waffle sole for added traction. With their popularity well established, by 1978 sneakers amounted to 50 percent of all shoes sold.

By the 1980s many shoe brands had become household words. The aerobic exercise trend of this time called for a new kind of shoe that Reebok pioneered. Nike joined in with a gas-filled midsole in the late 1970s, and by the 1980s added windows in the sole to display this air. Hip-hop musicians soon adopted sneakers as part of their style and referenced them in their songs. In 1986 rappers Run-DMC issued “My Adidas,” an anthem to the Super Star model they wore without laces. The same year, Reebok came out with a pump shoe for the excessive price of \$175: the strong desire to be in vogue, coupled with an inability to afford expensive sneakers, even pushed a few young people to rob, and sometimes kill, others for their costly sneakers.

From the 1980s into the 1990s, the technologically-crafted sneaker looked ready for space trekking—take, for example, L. A. Gear’s flashing lights, straps, and intricate lacing systems, along with the sculptured, multicolored soles of Puma, New Balance, and other brands. With lighter materials, shoes could afford to be bulky, resembling moon boots more than sports shoes. Still, despite the style and technology, the questionable labor practices of Southeast Asian manufacturers contracted to make shoes for brands like Nike and Reebok eventually caused consumer boycotts.

While athletic styles were similar for males and females, non-sport sneakers were distinctively for women. Keds advertised low-heeled pumps with toe bows in 1917 for “Milady.” Sequin sneakers, stitch-it-yourself needlepoint sneakers, and wedge heeled satin sneakers were all 1970s products. About this time fashion designer Betsy Johnson created high-heeled sneakers, a style that would gain popularity in the 1990s, along with sneaker clogs. Another 1990s style, homemade platform sneakers, was copied by Converse and fashion designer Donna Karan, among others.

Meanwhile, new retail venues were created to meet the demand for sneakers. Into the 1960s, sporting goods stores sold athletic shoes with their low-tech siblings available in regular shoe shops. By the early 1960s specialty stores such as The Sneaker Shop of Bridgeport, Connecticut opened. Department stores had designated athletic footwear and accessories sections. In shopping malls, the Athlete’s Foot, Foot Locker, and, exclusively for women, Lady Foot Locker, among others, sold only sneakers. By the late 1990s, super stores such as Sneaker Stadium and The Sports Authority dotted the landscape. Nike owners Phil Knight and Bill Bowman, who had retail outlets as importers for Tiger (now Asics), opened Nike Towns, selling Nike shoes, apparel, and accessories.

Athletes’ endorsements for sneakers were common after 1920. Chuck Taylor, whose signature was added to the Converse All Star in 1923, had directed basketball clinics for Converse and had been on the Akron Firestones basketball team. Northwestern University coach “Dutch” Lonborg lent his name to the 1932 Montgomery Ward basketball shoe. Jim Thorpe endorsed B. F. Goodrich’s “Chief Long Lance” brand sneakers. Female endorsers in the 1970s included Chris Evert for Converse and Virginia Wade for ProKeds. Endorsements, however, created mixed loyalties in the 1970s and 1980s. Some athletes wore favorite shoes with the logo of their endorser hiding the brand they wore. Others changed shoes during the course of a game, giving multiple endorsers equal time. But in the commodified

culture of the 1990s, endorsements by athletes like Michael Jordan for Nike propelled manufacturers into hero-selling machines.

10,000 Maniacs

Formed under the name Still Life in rural Jamestown, New York in February 1981, 10,000 Maniacs became noted for its melodic folk music and the wistful lyricism and distinct vocal patterns of its lead singer, Natalie Merchant. After releasing one EP and three albums, the group blossomed into prominence in the late 1980s on the strength of its single “What’s the Matter Here.” The hit put them in the Top 40 along with friends R.E.M. Following the success of its fifth album, *Blind Man’s Zoo* (1989), the band’s participation in the MTV (Music Television) Inaugural Ball for President Clinton in 1992, and its swan song performance on MTV Unplugged (1994), Merchant left to pursue a successful solo career. The remaining members of the band, guitarist Robert Buck, keyboardist Dennis Drew, and bassist Steve Gustafson, recruited an old collaborator, singer-violinist Mary Ramsey, releasing *Love Among the Ruins* (1997) to critical praise, marking a new chapter in the band’s eventful career.

—Scott Thill

Tenuta, Judy (1951—)

Stand-up comedienne Judy Tenuta is the goddess of her own religion, Judyism, and she encourages the “pigs” in her audience to worship her. Her performances may include accordion music, sadomasochistic play with audience members, and stories of dating the Pope punctuated by her catch-phrase, “It could happen!” In 1997, she hosted an Internet talk show, *The Princess of Pop Culture*. Her comedy albums include *Buy This, Pigs!* (1987) and *In Goddess We Trust* (1995).

Terkel, Studs (1912—)

Studs Terkel was born Louis Terkel in New York City. When he was eight, his family moved to Chicago, a city of raw midwestern muscularity and deep jazz rhythms that sharply influenced his life and career. His love of acting and jazz combined with his urban working-class environment spawned his dual role as local radio personality and oral historian.

Though he graduated from college and law school at the University of Chicago, Terkel never practiced law. Instead, taking his nickname from a famous literary character of the day, Studs Lonigan, he succumbed to the lure of the stage, acting in radio and community theater productions and even in the exciting new medium of television. From 1949 until 1951, he had his own weekly show on NBC, *Studs' Place*, an innovative, improvisational situation comedy about "regular folks." Terkel took the show's loose, unscripted format from the jazz he loved.

In 1951, anticommunist fever was rising, and Terkel's television career was cut short when NBC discovered he had signed leftist petitions seeking reform on such controversial issues as rent control and segregation. With his typical stubborn conviction, Terkel refused to renounce the petitions, and his show was canceled. His next step was to approach radio station WFMT with a proposal for an hour-long interview show. The station hired him and became Terkel's home for the next 45 years, until his retirement in 1997.

During those years, Terkel interviewed hundreds of politicians, writers, artists, and "regular folks," becoming in the process the quintessential "regular folk" himself. Dressed in his trademark uniform, a red and white checked shirt, and red socks, Terkel developed an interviewing style that was homey yet incisive, respectful yet downright curious, which made many people comfortable in revealing their insights and experiences to him.

His interviews with celebrities and politicians were sensitive and probing, often undressing sides of figures in popular culture that were previously concealed. Terkel often ventured out across the United States with his show, interviewing ordinary people. Many of his fans would agree that he made his biggest contributions to society in these treks as a chronicler of the impact of historical events on everyday life.

Terkel often quoted a poem by Bertold Brecht:

When the Chinese wall was built, where'd the masons
go for lunch?
When Caesar conquered Gaul was there not even a cook
in the army?
When the Armada sank, King Philip wept.
Were there no other tears?

It is these individuals whom history leaves out of its story who most deeply interested Terkel, and he strove to become their scribe. Beginning with *Giants of Jazz* in 1957, which extolled previously little known black musicians, Terkel produced a series of books that gave voice to the experience of the "regular folks." In 1967 he wrote *Division Street America*, the first of his oral histories, quickly followed by *Hard Times: An Oral History of the Great Depression* (1970), *Working: People Talk About What They Do All Day and How They Feel About What They Do* (1974), *American Dreams, Lost and Found* (1980), *The Good War: An Oral History of World War II* (1985), *The Great Divide: Second Thoughts on the American Dream* (1988), *Race: How Blacks and Whites Think and Feel About the American Obsession* (1992), *Coming of Age: The Story of Our*

Century By Those Who Have Lived in It (1995), and *My American Century* (1997).

Each book depicts a multifaceted picture of the historical period it covers and the society that lived through it. Not interested in pat answers or definitive statements, Terkel took delight in the astonishing variety of human experience, and it is that delight he passes on to his readers, like a jovial host at a huge gathering.

"Oral journalism is associated with me," Terkel has said, "and I like that, and it's true. Because it's the sound of the voice that I'd like to capture." Terkel indeed captured the sound of hundreds of voices, previously unheard, but his own voice is apparent in his books as well, often merely in what he chose to write about. He jokingly related that his red checked shirt represents his politics. Terkel's ideological beliefs as a long-time socialist and his interest in working people went hand in hand. A resister of technology, he never used an electric typewriter or drove a car, preferring to take the bus to work. His down-to-earth style perhaps contributed to his success in radio, a much less superficial and glamour-oriented medium than television. He expressed his concern over how high-tech media has affected interpersonal relations when he complained, "We are more and more into communications and less into communication."

The Terminator

The Terminator is one of the most popular robots of film. There are actually two models of Terminator: the metal skeleton covered by human flesh (technically a cyborg) first seen in *The Terminator* (James Cameron, 1984); and the liquid metal, shape-shifting new T-1000 introduced in the sequel, *The Terminator 2: Judgment Day* (Cameron, 1991). Both were created by Stan Winston, following Cameron's designs. The older Terminator (Arnold Schwarzenegger) comes from the near future to kill Sarah, the mother of the still unborn John Connor, who will become the guerrilla leader that fights the rebellious machines in a future war. In the sequel, this evil Terminator becomes the fatherly protector of mother and son, saving them from the murderous T-1000. The *Terminator* films have appealed to the popular imagination thanks to their special effects (especially the infographics of the sequel) and the magnetic presence of Schwarzenegger in the title role.

Terry and the Pirates

A popular and highly influential adventure strip, *Terry and the Pirates* was set in China and began in the autumn of 1934. It was written and drawn during its heyday by Milton Caniff. The cinematic layouts and the impressionistic inking style that Caniff perfected influenced a whole generation of comic strip and comic book artists.

Terry Lee was a kid of 12 when he arrived in the Orient, accompanied by an avuncular adventurer named Pat Ryan. Almost immediately the pair was tangling with an assortment of pirates on land and sea. Among them was the quintessential femme fatale, the Dragon Lady. During World War II, Caniff, who had been dealing with the Japanese invaders since the late 1930s, turned *Terry and the Pirates* into a fairly authentic chronicle of combat activities in the China-Burma-India theater. He left his strip at the end of 1946 to do

Steve Canyon. *Terry and the Pirates*, taken over by George Wunder, continued until early in 1973.

Thalberg, Irving G. (1899-1936)

Irving Grant Thalberg may have been the most influential motion picture executive of his time. "The Boy Wonder," as he was called, was an expert in knowing what the public wanted and how to get it to them under budget. As head of production for Metro Golwyn Mayer (MGM) he oversaw countless productions during his tenure, including *The Big Parade* (1925) and *Mutiny on the Bounty* (1935) although *The Good Earth* (1937) was the only picture for which he ever received on-screen credit as producer.

Despite suffering from a weak heart his entire life, Thalberg was a classic workaholic. After their marriage in 1927, he personally oversaw the career of his wife, actress Norma Shearer. Thalberg was often quoted as saying, "Credit you give yourself is not worth having." The Thalberg Award, given by the Academy of Motion Picture Arts and Sciences, is named for him.

Thanksgiving

A national holiday in the United States since 1863, Thanksgiving has come to play a number of important roles in popular culture. It was customary in Europe to hold days of thanksgiving both for successful harvests and for events such as military victories, deliverance from plagues, and royal births. The date and site of the first Thanksgiving in what is now the United States are still debated, but the most famous in pre-independence times was that held in October, 1621 in the Plymouth Colony. There, European immigrants, "the Pilgrims," and indigenous Wampanoag Indians celebrated the harvest season with feasting that included the dish that would become a

traditional part of the day: turkey. Throughout the colonial era, days of thanksgiving were common, especially in New England, but not universal or regular. Although national days of thanksgiving were proclaimed by the Continental Congress in 1777 and by President Washington in 1789, there was no great clamor for an annual festival until the nineteenth century.

Credit for the establishment of Thanksgiving Day as a nationwide holiday must go to Sarah Josepha Buell Hale, the editor of an influential women's magazine (and author of "Mary Had a Little Lamb") who lobbied legislatures and presidents from 1827 on. In 1863 Abraham Lincoln proclaimed the last Thursday of November as a day of "thanksgiving and praise to our beneficent Father who dwelleth in the Heavens," and since then it has been an annual celebration, though the date has varied. From 1939-1941 President Franklin Delano Roosevelt, in response to the complaints of businessmen that there was insufficient shopping time between Thanksgiving and Christmas, proclaimed Thanksgiving to be the third Thursday in November. This, however, created conflicts with the dating of the holiday in many states which had their own Thanksgiving legislation, so Congress in 1941 passed a joint resolution decreeing that the observance should fall on the fourth Thursday of November.

Thanksgiving, as a non-denominational harvest festival, is part of the American civic religion, able to be celebrated by people of any faith or none at all. It is marked by Pilgrim pageants, the decoration of schools, churches, and shopping malls with harvest themes, proclamations by politicians voicing gratitude for the country's prosperity, and the televising of college and professional football games. Above all, it is the day the extended family gathers for a dinner with a menu that has become stereotypical, almost invariably including turkey, stuffing, mashed potatoes, sweet potatoes, cranberries, and pumpkin pie. Americans abroad observe the day (in a way they would not trouble themselves for Memorial Day or Presidents' Day, for example) and attempt to duplicate this traditional meal as best they can in a foreign setting. The illustrator Norman Rockwell's depictions of this family feast have become American icons.

Thanksgiving, in the shorthand of popular culture, stands for family togetherness for good or ill. Motion pictures such as *Planes, Trains & Automobiles* (1987) and *Dutch* (1991) have been built around the utter necessity of returning home, whatever the obstacles, for this holiday. The final scene of *Raising Arizona* (1987) is a dream sequence in which a dysfunctional and childless couple are blessed in the future by the arrival of children and grandchildren for a Rockwell-style Thanksgiving. On the other hand, films like *The Ice Storm* (1997) and *Home for the Holidays* (1995) use the Thanksgiving setting in a claustrophobic way to emphasize the troubles of a family gone wrong.

Thanksgiving also marks the semi-official launch of another holiday: Christmas. As early as 1889 a New York newspaper claimed that "as soon as the Thanksgiving turkey is eaten the great question of buying Christmas presents begins to take the terrifying shape it has come to assume." Thanksgiving Parades, especially Macy's in New York and that on Los Angeles' Santa Claus Lane, usher in the shopping season.

Tharp, Twyla (1941—)

A leading choreographer of modern dance and ballet, Twyla Tharp rose to prominence during "the dance boom" of the 1960s and 1970s. Tharp's choreography incorporates dance elements from roll 'n' roll, blues, and jazz, and has been set to the music of Jelly Roll Morton, Bix Biederbecke, and Fats Waller, as well as Chuck Berry, the Beach Boys, and David Byrne. In the mid-1970s, Tharp began to cross-over into ballet choreography. *Push Comes to Shove* and *Nine Sinatra Songs* were the two finest works that grew from her collaboration with Mikhail Baryshnikov and the American Ballet Theater. Other important works are *The Catherine Wheel* and *In the Upper Room*. Although her work continues to draw on modern dance, she is arguably the most important ballet choreographer since George Balanchine. Tharp's choreography can be seen in the movies, *Hair*, *Ragtime*, *Amadeus*, and *White Nights* and a Broadway version of *Singin' in the Rain*. She continues to choreograph for and tour with her own company.

Them!

First and best of the giant insect/arachnid subgenre of horror films, *Them!* was directed by Gordon Douglas and released by Warner Brothers in 1954. Atomic bomb testing in the American Southwest causes ants to mutate, growing to great size. A scientist (Edmund Gwenn), his daughter (Joan Weldon), an FBI agent (James Arness), and a police officer (James Whitmore) lead the effort to find and destroy the migrating horde of ants before it is too late.

The film is characterized by a matter-of-fact approach. Early witnesses to the ants' existence are either semi-catatonic, like the young girl who can say only "Them!" or the pilot (Fess Parker) who is placed in a psychiatric ward after claiming to have seen giant bugs. The climax, an all-out assault on the ant colony living in the Los Angeles sewers, is moody and frightening, especially by the standards of 1950s' special effects.

Later, lesser films in this genre included *Tarantula* (1955) and the 1957 films *The Deadly Mantis*, *Beginning of the End*, and *The Black Scorpion*.

The Thing

John Carpenter's *The Thing* (1982) is one of the peaks of sci-fi horror cinema, comparable only to *Alien* (1979). Its premise is simple and effective. A group of American scientists working in Antarctica are stalked by a shape-shifting alien, which kills them one by one and then assumes the victim's physical and mental identity. This extraterrestrial creature has lain dormant for centuries, buried in the Arctic ice, until a team of Norwegian scientists defrosts it. The originality of Carpenter's film, otherwise quite conventional as regards character development and plot structure, stems from the shape-shifting abilities of the alien. Suspense is consistently maintained throughout the film because the creature's nature makes it impossible for the audience to predict the shape it will take next. Intense horror is achieved by each new manifestation of the Thing, based on the truly scary designs of special effects wizard Rob Bottin.

The Thing is actually a double adaptation. Its main inspiration is Christian Nyby's 1951 film *The Thing (from another world)*, an

adaptation of "Who Goes There?," a short story by John W. Campbell Jr. which was also the basis of Carpenter's version. Nyby's *Thing* is one of the many monster films produced in the 1950s, a vogue fueled by terrors related to the Cold War and its feared alien—that is to say, communist—invasion of America. The first *Thing* failed to truly frighten the audience because the horrific potential of Campbell's original shape-shifting alien could not be adequately realized on the screen. Producer Howard Hawks wanted to achieve what would be achieved thirty years later by special effects artist Rick Baker and director John Landis in *An American Werewolf in London* (1982): a complete on-screen transformation of human into horrific non-human creature. The rudimentary special effects available to Nyby and his crew made this utterly impossible and they had to rely on the traditional man in a rubber suit, shaped in this case—its detractors claim—as a rather unimpressive giant carrot.

After the success of Ridley Scott's *Alien* (1979)—a story loosely based on another sci-fi pulp tale about a hostile alien fond of invading human bodies—the time seemed ripe to face the challenge Hawks had failed to meet. By 1981 special effects had progressed far from the poor 1950s standards under the guidance of make-up pioneer Dick Smith. Two of his disciples, Rick Baker and Rob Bottin, had discovered the wonders of latex foam, a new, supple material invented by George Bau, which enabled them to turn their wild flights of

From left: T. K. Carter, Kurt Russell, and Donald Moffat in a scene from the film *The Thing*.

fancy into actual sculptures and models. Baker and Bottin commenced a fierce competition for the position of king of special effects, beginning with a werewolf film on which they worked together, Joe Dante's *The Howling* (1981). Baker won the first round by reaping the first Oscar for Best Make-Up thanks to his work in *An American Werewolf in London*, but the quality of Bottin's work for Carpenter's *The Thing* certainly did not lag behind Baker's.

The Thing is now a cult film. Its original release, however, was badly timed, for it coincided with that of Steven Spielberg's *E.T.* Audiences charmed by Spielberg's cute, homesick alien found little to enjoy in Carpenter's grim tale, which, in addition to horrific scenes of mutation, offers one of the most pessimistic endings on record. By the late 1990s, *The Thing* had been fully vindicated by devoted fans who carved a niche for Carpenter's film in the roll call of top horror films. Its new-found popularity could be accounted for by two main factors: one, no doubt, the quality of Bottin's extraordinary work, which aged well and is hailed by many contemporary monster-makers as seminal inspiration. The scene of the post-mortem that reveals the bizarre, nightmarish shapes the alien can assume is one of the most terrifying metamorphoses ever filmed.

The other factor that contributes to the cult status of *The Thing* is the atmosphere of despair that surrounds Carpenter's doomed heroes. Unlike countless monster films which conclude with the victory of humankind and the destruction of the alien monster, the end of *The Thing* suggests that the monster is alive as one of the only two survivors—either the sensible black scientist Nauls (T. K. Carter) or McReady, the rugged white hero played by Kurt Russell. Suggesting that the monster might find its last refuge in an African American man may have come to seem provocative enough with the onset of political correctness; but even more provocative is the suggestion that it is perhaps the hero, with whom our sympathy has lain throughout the film, who is the monster. Very little hope is left for trust among human beings or for the survival of humankind. This bleak prospect awoke an echo of sympathy in the more pessimistic late 1980s and 1990s, when fears of nuclear annihilation or alien conquest were superseded by fears of more subtle invasions, such as that by the AIDS virus. Fortunately for the admirers of Carpenter's masterpiece, no trivializing sequel followed—doubtless because of its downbeat conclusion and poor box-office returns.

The Third Man

Holly Martins (Joseph Cotton) arrives in postwar Vienna to visit his friend Harry Lime (Orson Welles) only to find that Harry is dead. When Major Calloway (Trevor Howard) claims that Harry was a black marketeer, Holly begins to investigate Harry's mysterious death. He discovers that Harry is still alive and is as

corrupt as Calloway claimed. Holly's conscience is torn between Calloway and the beautiful Anna Schmidt (Alida Valli), Harry's lover who urges Holly to remain loyal to his friend. *The Third Man* (1949) is remembered for its compelling tale of mystery, Anton Karas' haunting zither score, and the blend of expressionism's jagged angles and *film noir*'s shadows in Robert Krasker's Oscar-winning cinematography.

This Is Your Life

A human-interest show that presented documentary-style biographies of celebrities through the recollections and testimonials of colleagues, friends, and relatives, *This Is Your Life* was one of the most popular shows on radio and television during its lengthy run. Although occasionally lesser-known but accomplished guests appeared on the program, the show is best remembered for its surprise tributes to Marilyn Monroe, Jack Benny, Bette Davis, and other Hollywood stars.

Created by perennial host Ralph Edwards for radio in the 1940s, *This Is Your Life* came to television on October 1, 1952 as a half-hour series lasting for nine seasons on NBC. On both radio and television, the show's format was the same. Edwards would appear to encounter the evening's guest by happenstance in or near the television studio. After a brief exchange of pleasantries, Edwards would announce "This is your life!" and the startled guest would be taken to the

A scene from the television show *This Is Your Life*.

show's set where his or her life story would unfold before a live studio audience. Reading from the *This Is Your Life* book, Edwards would recount the celebrity's childhood, school years, and rise to fame with a sentimental flare certain to elicit an emotional outpouring from both guest and audience. Edwards was so effective, in fact, that one show celebrating the life of educator Laurence C. Jones inspired his television audience to send \$700,000 in contributions to a Mississippi college. The show's specialty, however, seemed to be orchestrating parades of long-lost teachers and friends whose appearance was sure to trigger tears from the honored guest.

From time to time a planned show would have to be scrapped because the celebrity learned of the project in advance, but for the most part Edwards was remarkably successful in his *Candid Camera* style ruses, especially since the show was broadcast live until the 1959-1960 season. *This Is Your Life* did, however, tip off two guests: Lillian Roth, so that producers could obtain permission to discuss her successful struggle with alcoholism, and Eddie Cantor, who producers feared might experience a heart attack at too dramatic a surprise.

The show generated two spin-offs, a British version of *This Is Your Life* and, in 1953, *The Comeback Story*, which each week presented the inspiring tale of a faded star who was regaining fame and fortune. It also spun off several incarnations of itself. Edwards revived *This Is Your Life* in 1971, this time featuring the Nelson Riddle Orchestra, but the syndicated show lasted only one season. It re-emerged for another try in 1983, and over the years several *This Is Your Life* specials have appeared on NBC, with Ralph Edwards hosting until 1993. Despite its reputation for sentimentality and sensationalism, *This Is Your Life* has proven to be a resilient formula for the surprise party, whether televised or not. Not only have television producers fit it into every decade's programming, if only for an evening, but the words "This is your life!" have entered the popular imagination as a theme appropriate to almost any kind of party or celebration.

Thomas, Danny (1912-1991)

Although he later starred in the longest running situation comedy in television history and became one of TV's top producers, Danny Thomas once denounced the new medium as a "workplace for idiots." He made this comment after spending two years hosting NBC's *All-Star Revue*, rotating with comedians Jack Carson, Jimmy Durante, and Ed Wynn. He quit the show in 1952 to return to the

Danny Thomas

nightclub circuit. A year later, he was back on the small screen, well on his way to becoming one of the icons of television's Golden Age.

Born Muzyad Yakhoo in Deerfield, Michigan, the fifth of nine children of Catholic immigrants from Lebanon, Danny's first experience in show business was selling candy at a burlesque theater. At age twenty he began singing on a Detroit radio station, and six years later he started a career in nightclubs, as a standup comic and master of ceremonies. His popularity steadily increased during the 1940s, leading to a brief career in films. In his two best remembered films, he played pop composer Gus Kahn in *I'll See You in My Dreams* (1951), and the Al Jolson role in the remake of *The Jazz Singer* (1953).

In 1953, Thomas began developing a situation comedy for ABC. Discussing the project with writer Mel Shavelson, Danny explained that he wanted to stay home with his family in Los Angeles. As he wrote in his autobiography in 1990, "I was away on the road so much that they hardly knew me. They called me 'Uncle Daddy.'" Shavelson realized at once that they had a concept for a comedy show, featuring a nightclub entertainer trying to have a normal family life along with a career in show business. Danny's wife Rose Marie suggested the title, *Make Room for Daddy*. While Danny was on the road, the children took over his space in the home, and when he returned, they had to shift bedrooms and move their belongings to "make room for Daddy."

The show made its debut on ABC in September 1953, running for four seasons with its ratings near the bottom, ranking 107th of the 118 shows in that period. The low ratings came despite the fact that the show won an Emmy as Best Situation Comedy Series in 1954, the same year Danny won his Emmy for Best Actor Starring in a Regular Series. After the third season, Jean Hagen, Danny's on-screen wife,

quit the show and became the first leading character in a sitcom to die in the off-season. When the next season started, little Terry and Rusty were told, “Mommy’s gone to Heaven.”

In 1957 the renamed *Danny Thomas Show* was moved to CBS and aired on Monday night in the 9 p.m. time slot. In the first episode Danny had just married his new bride (Marjorie Lord), who arrived with a cute, precocious five-year-old stepdaughter, played by Angela Cartwright. Another popular character on the show was Danny’s Lebanese Uncle Tonoose, played by Hans Conried. Ratings immediately soared to the top ten, and the newfound audience remained loyal throughout the run of the series, which ended in 1964.

In 1967, a special, *Make More Room for Daddy*, aired on NBC. Two years later, another special entitled *Make Room for Granddaddy*, reuniting Thomas, Marjorie Lord, Angela Cartwright, Rusty Hamer, and Hans Conried, proved so popular that it became a pilot for the 1970-71 series on ABC. Danny’s “grandson,” played by Michael Hughes, was introduced on that show. Danny’s real-life children also became important in show business; son, Tony, produced such hit shows as *Golden Girls* and *Empty Nest*, and daughter, Marlo, starred in the hit series *That Girl*.

In the 1950s, Thomas had branched out into production, forming partnerships first with Sheldon Leonard and later with Aaron Spelling. He became one of the most successful television producers of the 1950s and 1960s, whose blockbuster programs included *The Andy Griffith Show*, *The Dick Van Dyke Show*, *Gomer Pyle*, and *The Mod Squad*.

In 1991 Danny Thomas made a rare guest appearance on his son Tony’s series, *Empty Nest*. A week later, his fans were stunned to learn that he had died of a heart attack. His later years were marked by his generosity in giving and raising money for his favorite charity, St. Jude’s Hospital.

Thomas, Isiah (1961—)

National Basketball Association (NBA) legend Isiah Thomas starred for two seasons at the University of Indiana, where he won All-American honors in 1981, led the Hoosiers to a national title, and was cited as the NCAA (National Collegiate Athletics Association) tournament’s Most Valuable Player. Following that season, Thomas chose to leave school and turn pro. He was drafted in the first round by the Detroit Pistons, and went on to play 13 seasons in the NBA. The six-foot-one, 185-pound point guard became the Pistons’ captain and star, leading the team to three successive appearances in the NBA finals (from 1988 through 1990). In the latter two years, the Pistons emerged as champs. In 1990, Thomas was cited as the MVP (Most Valuable Player) of the finals. Between 1982 and 1993 he started in

12 successive NBA All-Star games, and was the contest’s MVP in 1984 and 1986.

In his time in the NBA, Thomas teamed with Joe Dumars to make up one of pro basketball’s top backcourts. Upon his retirement after the 1993-1994 season, he was the Pistons’ all-time scoring leader, with 18,822 points. He also was tops in assists with 9,061, steals with 1,861, and games played with 979. One of the keys to his success has been his mental approach to the game. “I’ve always believed no matter how many shots I miss,” Thomas once said, “I’m going to make the next one.”

Although he left college before graduation, Thomas continued his studies and in 1988 earned a degree in criminal justice. Since his retirement, he has transferred his intelligence and ambition to off-court endeavors. “If all I’m remembered for is being a good basketball player,” he declared, “then I’ve done a bad job with the rest of my life.” Thomas first became a part-owner and vice president of the NBA expansion Toronto Raptors. He hoped to take over the team, but the deal, involving majority owner Allan Slaight, fell apart, resulting in Thomas leaving the Raptors and joining NBC as a basketball analyst. He has also been involved in banking, land development, sports and amusement activities, and other business ventures in the Detroit area. Nonetheless, Isiah Thomas’s greatest glory came on the basketball court. In 1996, he was named one of the 50 Greatest Players in NBA history.

Thomas, Lowell (1892-1981)

A best-selling author, globe-trotting adventurer, and legendary broadcaster, Lowell Thomas travelled from the arctic to the outback, covering stories ranging from World War I to Lawrence of Arabia. He came to radio in 1930 and stayed—for a variety of sponsors and two different networks—until 1976. His 15-minute nightly broadcast was rarely far from the top of the news ratings chart, and his sign-off line is well remembered: “And so long until tomorrow.”

Thomas, Marlo (1943—)

Marlo Thomas will always be best remembered as the naively innocent and exhaustingly enthusiastic Ann Marie of the television show *That Girl* (1966-1971). One of the first series to present an unmarried female pursuing anything other than a husband, it was more traditional than it claimed. Although the show made a great deal

of the fact that she was an aspiring actress living on her own in New York City, both Ann's father and her ever-present boyfriend were just a phone call away when she found herself in one of her never-ending predicaments. Moreover, she was seldom seen auditioning and worked at only low-paying temporary jobs suitable for women of the period. Despite her inability to find a reliable source of income, she somehow managed to live in a three-room apartment in a good neighborhood in New York City and dress in the height of fashion.

After the series ended Thomas became a producer and in that capacity won Emmy Awards for her work on *Marlo and Friends in Free to Be . . . You and Me* and *The Body Human: Facts for Girls*. She won a third Emmy for her role in *Nobody's Child* (1986). She has also been a strong advocate for a variety of women's causes. In 1980, Thomas married talk-show host Phil Donahue.

Thompson, Hunter S. (1939—)

Hunter S. Thompson represents life on the edge, the counter to culture, the man who has listed his religion as none, his politics as

Hunter S. Thompson

anarchist, and his hobby as collecting guns. He claimed membership in the American Civil Liberties Union, the National Rifle Association, and the National Organization for the Reform of Marijuana Laws, and once ran for sheriff of Aspen, Colorado. Strange as it may seem, the drug- and alcohol-abusing Thompson at one time worked for *Time* magazine, the *New York Herald Tribune*, and the *National Observer* before he went straight and started writing for the voice of the counterculture, *Rolling Stone*, and invented "gonzo journalism," or at least that's the storyline. He was even turned into a character in the comic strip *Doonesbury*.

Thompson made his first major visit to the edge in 1965, when he wrote an article for *The Nation* about the Hell's Angels entitled "The Motorcycle Gangs: Losers and Outsiders." The article led to a book contract. Thompson spent a year with the Angels as a field study for the book. He was charged with separating fact from fancy and in doing so he condemned the press for coverage that he felt misrepresented the Angels. Generally, the press merely repeated what law enforcement officials chose to say rather than learning the truth by riding with the members.

Thompson's book portrayed the Angels as drug-using and alcohol-abusing gang members who believed that women were put on earth to service them. Perhaps the lowest point of the book was Thompson's description of gang sex with one woman. And at the end, some Angels nearly stomped him to death and Thompson suddenly seemed not so fond of the motorcyclists.

The titles of Thompson's books say something about Thompson and his subject matter: *The Great Shark Hunt: Strange Tales from a Strange Time*; *Gonzo Papers, Volume One, The Curse of Lono, Generation of Swine: Tales of Shame and Degradation in the '80s*; *Gonzo Papers, Volume Two, Songs of the Doomed: More Notes on the Death of the American Dream*; *Gonzo Papers, Volume Three, The Proud Highway: The Saga of a Desperate Northern Gentleman*; *Fear and Loathing in Las Vegas: A Savage Journey to the Heart of the American Dream*, and *Fear and Loathing on the Campaign Trail '72*. "Fear and Loathing in . . ." became a trademark Thompson headline on many of his *Rolling Stone* articles.

The two *Fear* books followed *Hell's Angels* and helped establish Thompson as a writer with an attitude. The Las Vegas book was purported to be an autobiographical account of Thompson's failure to cover two events for a magazine because he spent more time on drug trips than reporting. The book includes a character named Raoul Duke, who was really Thompson, and who in Garry Trudeau's *Doonesbury* became "Uncle Duke." More than 25 years after the book was published, it was made into a movie that received some good reviews, but wasn't in the theaters very long.

Fear and Loathing on the Campaign Trail '72, a collection of articles Thompson wrote for *Rolling Stone*, to some extent continued to reflect Thompson's loathing of the mainstream press, while at the same time making Thompson the center of the reportage rather than the candidates. Another *Rolling Stone* writer, Timothy Crouse, wrote a book about how the press covered the 1972 presidential campaign, and he provided many of the stories about Thompson's non-journalistic antics. Crouse even claimed that, when *Rolling Stone* dispatched him and Thompson to Washington to open a bureau, Crouse was "to write the serious backup pieces, keep Thompson out of trouble, and carry the bail bond money." Thompson showed up on the campaign trail in sneakers, sunglasses, a Miami sports shirt, and a hunting

jacket; everyone else in the press corps wore coats and ties. Thompson was downright irreverent, Crouse reported, offering to share his beer, Wild Turkey, and drugs and wondering outloud if at the next campaign stop he'd have time to drop some acid. Eventually, however, many members of the press came to respect Thompson because he was able to write what they couldn't. While his colleagues were committed to objective reporting, Thompson's talent was in his ability to fill his pieces with his own opinions expressed in descriptive language.

Thompson invented "gonzo journalism" while covering the Kentucky Derby (Thompson was born in Louisville) for *Scanlan's Magazine* in 1970. He claimed later that the article did not come about through any careful plotting of storyline and subsequent revision the way most writing is born, but had been created out of necessity when Thompson, unable to write, merely ripped pages out of his notebook, numbered them and sent them on to his editor. The result was "The Kentucky Derby Is Decadent and Depraved," a hilarious account of Thompson in Louisville. Thompson's claim aside, the article worked too well to have been assembled randomly, but no one noticed, and Thompson later proclaimed himself the inventor of gonzo journalism.

Thompson continued to be published, if not in *Rolling Stone* or other magazines and newspapers, then in book collections of his journalistic pieces—namely, the "gonzo papers." Meanwhile, he continued to behave outrageously. "I'm afraid I've become addicted to my own adrenaline," he told a *Washington Post* writer in 1991. His writing style has been badly imitated but hardly duplicated. Generally, those who continued to follow him enjoyed his irreverent and rich writing, and he remained a larger-than-life example of the counterculture of the 1960s.

Thompson, John (1941—)

Olympic and college basketball coach John Thompson, Jr. became the first African American to guide an NCAA championship

basketball team in 1984. Thompson led the Georgetown University Hoyas team from 1972-1999. Thompson turned around Georgetown's abysmal record, making it a national powerhouse in the Big East Conference that he helped to charter in 1979. Under his leadership, the team compiled 24 consecutive victorious seasons (excluding his first year there), beating its opponents in more than 70 percent of its games. Thompson's college athletes were known for their aggressive playing styles as well as for their commitment to academic achievement at their elite Catholic institution. The coach supervised both his players' scholarly progress as well as their outside friendships, rescuing some stars from the bad influence of drug dealers. Thompson's shoulder-resting trademark towel that he used on court to wipe away his perspiration symbolized his hard-driven temperament. But he also kept a deflated basketball on his desk as a symbol to Georgetown players that there should be more to their lives than the game.

Thomson, Bobby (1923—)

Robert Brown "Bobby" Thomson played major league baseball from 1946 through 1960. On October 3, 1951, as a New York Giant, he belted a home run to win the National League Pennant in his team's final at-bat. That "shot heard round the world" became what many consider the most dramatic event in the history of American sports. The home run capped a thrilling pennant race between the New York Giants and their bitter rivals, the Brooklyn Dodgers. In front of a national television audience, Thomson and the Giants reveled in their victory just as New York delighted in its place at the cultural center of a thriving postwar America. But Thomson's home run retained significance well beyond the 1950s. Beginning in the 1970s, as Major League Baseball increasingly cloaked itself in the garb of nostalgia, the shot heard round the world symbolized a simpler America, where an average guy who lived with his mother on Staten Island could drive to Manhattan one autumn afternoon and return home a hero.

Bobby Thomson was born in Glasgow, Scotland, on October 23, 1923. At the age of two, he moved with his mother and five siblings to join his father James in New York. James Thomson was a cabinet-maker who had moved to America to seek a better living. The Thomsons would struggle financially throughout Bobby's youth on Staten Island.

Thomson first played professionally, without much success, in the Giants' minor league organization in 1942. He then postponed his

Bobby Thomson

baseball career to join the U.S. Army Air Corps. After spending three years stationed in Victorville, California, he went to a Giants training camp for returning serviceman. The Giants assigned him to their Triple-A affiliate in Jersey City where he played for one year. After an outstanding rookie season with the Giants in 1947, Thomson showed only occasional flashes of brilliance. Critics accused him of harboring a nonchalant attitude that adversely affected his play. By 1951, Thomson seemed destined for an average career on a mediocre New York Giants team.

In the early part of the 1951 season, neither Thomson nor the Giants had improved. The Giants lost 12 of their first 14 games. Over that period Thomson hit a dismal .193. Although the Giants recovered from their disheartening start, in early August they found themselves a distant second, 13 1/2 games behind the Brooklyn Dodgers. The press and most fans predicted that the championship would go to Brooklyn. But on August 11, the Giants started a 16-game winning streak fueled by Thomson's hot hitting and climbed within reach of the Dodgers. The Giants caught the Dodgers with one day left in the season, and after the season's final game, the two teams remained tied for first place. New York and Brooklyn split the first two games of a three-game playoff series. The winner of the third game would take the National League pennant.

The deciding game started inauspiciously for the Giants, as they fell behind 4 to 1, thanks in part to Thomson's poor base running. The Dodger pitcher Don Newcombe appeared indestructible until the bottom of the ninth inning. After three base hits the Giants closed the gap to 4 to 2 and had base runners on second and third. With the

winning run coming to the plate, and his pitcher clearly tiring, Brooklyn manager Charlie Dressen made a call to the bullpen for Ralph Branca. With one out, Bobby Thomson stepped into the batter's box. Thomson watched Branca's first pitch blow past him for a strike. Branca's second pitch came in hard, high, and inside. Thomson lashed out at the ball, and it shot off his bat toward the left field wall. Russ Hodges, the Giants announcer, called the action on WMCA radio: "There's a long drive . . . it's gonna be . . . I believe . . . The Giants win the pennant! The Giants win the pennant! The Giants win the pennant! The Giants win the pennant! I don't believe it! The Giants win the pennant!" Thomson claimed his feet never touched the ground as he circled the bases.

The shot heard round the world immediately gained legendary status, epitomizing New York's and America's postwar optimism. The series was the first sporting event to be telecast live from coast to coast, and its dramatic finish affirmed New York's place as the de facto capital of a thriving American culture. New York sportswriter Red Smith captured the euphoric sense of disbelief. "Now it is done," he wrote, "Now the story ends. And there is no way to tell it. The art of fiction is dead. Reality has strangled invention. Only the utterly impossible, the inexpressibly fantastic can ever be plausible again." Bobby Thomson's home run spoke for a city and a nation where the impossible had become the attainable.

Bobby Thomson played solid baseball for eight more years, but never recaptured the glory of 1951. Following the 1953 season, the Giants traded him to Milwaukee. He played briefly for several other teams before retiring in 1960. Thomson settled in New Jersey with his wife Elaine and their three children, where he worked as a paper products salesman.

In the 1970s, amid salary disputes and escalating ticket prices, Major League Baseball began to market itself through nostalgia, attempting to connect the contemporary game to a mythical past. Thomson's homer became the crowning moment of that myth. The shot heard round the world symbolized a time of innocence and purity, when players played for the love of the game, and the fans loved their players—a time when the tall, plodding, immigrant son of a cabinetmaker could swing a bat and become a hero.

Thorogood, George (1952—)

George Thorogood's gritty blues-rock music earned him the title of "today's master of yesterday's rock 'n' roll" and brought a

working-class consciousness to the 1980s pop scene. Beginning as a blues guitarist in the vein of Elmore James and Hound Dog Taylor, Thorogood and his group the Destroyers crossed over to a pop/rock audience in 1978 with his cover of Hank Williams's "Move It On Over." In 1982 he released his major-label debut, *Bad to the Bone*, and its title track remains his best-known single, due in large part to its repeated exposure on MTV.

Though three subsequent albums all went gold, Thorogood's audience began to shrink. His only major success in the 1990s was the single "Haircut," a rebellion against authority figures who urged the song's protagonist to "get a haircut, and get a real job." Thorogood nevertheless continued to tour and record, releasing a "comeback" album, *Rockin' My Life Away*, in 1997.

Thorpe, Jim (1888-1953)

Few would argue that Jim Thorpe is one of the most accomplished American athletes of the entire twentieth century. His time in the National Football League (NFL) and Football Hall of Fame enshrinement data attests to this fact. Here, it is noted that he was an "All-America halfback at Carlisle [and] 1912 Olympic decathlon champion . . . First big-name athlete to play pro football, signing with the pre-NFL Canton Bulldogs in 1915 . . . Named 'The Legend' on the all-time NFL team . . . Voted top American athlete of first half of 20th century. . . ." Additionally, Thorpe won Olympic gold in both the decathlon and pentathlon. That his medals were ingloriously stripped away because he had briefly played professional baseball is one of the less-than-honorable deeds of the International Olympic Committee.

James Francis Thorpe, a Sac and Fox Indian, was born in the Oklahoma Territory. His Indian name was Wa-tho-biuck (or "Bright Path"), and he, his twin brother Charles, mother, and rancher father resided in a one-room cabin near the small town of Bellemont. Young Jim was a natural athlete who loved and excelled in all sports. His early life, however, was laden with disappointment and tragedy. When he was eight, his brother was stricken with fever and subsequently passed away. Five years later, his mother died of blood poisoning. In 1904, at age 16, he headed east to Pennsylvania's Carlisle Indian School. His small size—he was 5 feet 5 inches tall and weighed 115 pounds—prevented him from finding a spot on the Carlisle varsity football team. This frustration, coupled with the death of his father, resulted in declining grades, alienation, and eventual sequestering in the Carlisle guardhouse.

By his late teens, Thorpe had grown five inches, adding bulk and muscle. Pop Warner, Carlisle's legendary coach, first took note of his track-and-field skills, and eventually recruited him for the football team. He started out as a kicker, became the starting halfback during the 1908 season, and his athletic career began to blossom. During that

Jim Thorpe

season, his running, punting, place-kicking, and occasional passing guided Carlisle to a 10-2-1 record; Walter Camp, America's reigning football expert, cited him as a third-team All-American.

After playing professional baseball in the Carolina League, Thorpe returned to Carlisle and solidified his legend as an all-time-great college gridiron star. In 1911, he was involved in two out of every three of Carlisle's offensive plays. His 50 and 60 yard punts soared through the sky. In the year's penultimate contest, an 18-15 victory over Harvard, he carried the ball on 40 percent of all plays and kicked four field goals. Carlisle ended the campaign with an 11-1 record; the following season, Thorpe added to his luster by leading Carlisle to a 12-1 mark. In both years, Camp cited him as a first-team All-American.

Perhaps Thorpe's greatest triumph came in the 1912 Olympics, held in Stockholm. He was set to compete in two punishing events: the pentathlon, made up of five track-and-field competitions (javelin throw, discus throw, running broad jump, 200-meter dash, and 1,500-meter race); and the decathlon, consisting of 10 events (javelin throw, discus throw, long jump, high jump, pole vault, shot-put, 400-meter run, 1,500-meter run, 100-meter dash, and 100-meter hurdles). He won gold medals in each, and King Gustav of Sweden proclaimed that Thorpe was the "greatest athlete in the world."

Thorpe returned to the United States a bona fide hero. But the cheering was to be short-lived. A journalist soon discovered that Thorpe had played professional baseball. Therefore, he could not be classified an amateur athlete; only amateurs could compete in the Olympics. In a letter to the Amateur Athletic Union, Thorpe wrote, "I did not play for the money . . . but because I like to play ball. I was not wise to the ways of the world and I did not realize this was wrong and that it would make me a professional in track sports."

Back when Thorpe was in his athletic prime, it was a common practice for college athletes to pass their summers playing pro ball to pick up a few extra bucks. They played under assumed names—so no one was the wiser—and they could retain their amateur status. Had Thorpe done so, his indiscretion would have remained a secret. When confronted with the accusation that he had played ball for money, he was honest enough to admit the truth. Nevertheless, he was divested of his medals by the International Olympic Committee. This dishonor is particularly ironic considering that, today, professionals with million-dollar salaries are allowed to compete for Olympic gold. For the "crime" of playing pro baseball, Thorpe pulled down a salary of \$25 to \$30 a week.

Thorpe was to be the Bo Jackson and Deion Sanders of his day, as he went on to play major league baseball and pro football. His debut in the majors came in 1913, when he patrolled the outfield for the New York Giants. From then through 1919 he played in 289 games, mostly for the Giants, but with brief stints in Cincinnati and Boston. In 1915, Thorpe made his pro football debut with the Canton Bulldogs. Between 1915 and 1928, he played halfback for the Bulldogs (where he spent the bulk of his career), Cleveland Indians, Oorang Indians, Rock Island Independents, New York Giants, and Chicago Cardinals. In 1916, he was the Bulldogs' starting halfback and head coach, guiding his team to an undefeated season. In 1920, he became the first president of the American Professional Football Association, the precursor of the NFL. Thorpe also was an innovator; during his pro career, he conceived the style of tackling in which the tackler attempts to halt the runner with his shoulder, rather than arm.

Jim Thorpe was 40 when he retired from football. For the next two decades he held various menial jobs—often, ironically, working under an assumed name because of the humiliation. He toiled as a B-movie actor in Hollywood. He accepted public speaking engagements in which he would be garbed in Indian gear as he discussed athletics and the plight of the American Indian. During these hard times, he also became an alcoholic.

In January 1950, the Associated Press surveyed 391 sportswriters and broadcasters to determine the greatest athletes of the first half of the twentieth century. Thorpe was cited as the top football player, and bested Babe Ruth as the finest all-around athlete. A year later, his life story was told in the Hollywood movie *Jim Thorpe—All American*, with Burt Lancaster in the title role. Thorpe died in 1953, after suffering his third heart attack. The following year, his remains were placed in a mausoleum in Mauch Chunk, a Pennsylvania town of 5,000 located at the foot of the Pocono mountains, which was summarily renamed for Thorpe.

Since his death, his honors have multiplied. In 1955, the NFL's Most Valuable Player trophy was named for Thorpe; the trophy awarded to college football's top defensive player also was named for him. In 1958, he was admitted into the National Indian Hall of Fame, and in 1961, he was chosen for the Pennsylvania Hall of Fame. By 1963, he had become a charter inductee in the Football Hall of Fame—and, when arriving at the Hall, located in Canton, one is greeted by a statue of Thorpe. Most importantly, in 1982—29 years after his death—Juan Antonio Samaranch, the new president of the International Olympic Committee, reestablished Thorpe's amateur status. The following year, his children were presented with facsimiles of his Olympic medals.

The Three Caballeros

Produced with the newly formed Office of Inter-American Affairs, Walt Disney Studio's animated film *The Three Caballeros* (1945) presented stellar technical achievements, blending live action and animation in color on a scale never achieved before, and putting the film years ahead of its time. Rooted in the World War II era, the film was one of a series of features, beginning with *Saludos Amigos* (1943), attempting to celebrate diplomatic relations between the United States and Latin America by erasing the stereotyped images of Latin American culture and people common in Hollywood cinema:

the untrustworthy Mexican womanizing Latin lover “guerillero”; his female counterpart, the lascivious Latin woman; and the stupid, lazy “poncho.”

These films are also noted for being the first concerted effort to use animation as an instructional medium for popular audiences and as an effort to atone for what Eric Smoodin in *Animating Culture* describes as “the previous sins of Yankee cultural chauvinism.” Yet what started out as a lesson in geography with more balanced depictions of place and people evolved into fantastical depictions of what Smoodin notes as “geographies animated by imagination and desire.” *The Three Cabelleros* actually reveals more about the culture and ideologies of the United States than it does about the nations of Mexico and Brazil, the featured countries. Latin America is presented to the star of the film, Donald Duck, as a series of birthday presents. It constructs a tourist representation of Latin America, its peoples and culture, exotic with pleasures and fun offered for the delight of North America. This is well-illustrated by Donald Duck’s reaction to Latin American women as constructed in the text. The film renders the people of Latin America, and particularly the women, as homogeneous. The diversity of racial types on the continent is not presented, rather the women are “recognizably” Latin American. Their portrayal is linked directly to the images of Latin American women popularized by Carmen Miranda, and they are linked to hyper-sexuality, both in the male’s reaction to them and visually, as in the Carmen Molina dance sequence with phallic cacti. Though the effort to present a truer vision of Latin America is made obvious, *The Three Cabelleros* reveals an underlying set of messages of American imperialism and racism.

Three Investigators Series

The Three Investigators series, a 43-volume set of mysteries for juvenile readers published by Random House between 1964 and 1987, featured three 13-year-old male amateur sleuths, Jupiter Jones, Pete Crenshaw, and Bob Andrews. Jupiter, a former child actor, was the group’s leader, Pete the impulsive athlete, and Bob the reserved, studious type. Although the sleuths were amateurs, they were portrayed handling themselves in a thoroughly professional manner,

including offering business cards and maintaining scrupulous files in their office, a trailer hidden in a junkyard owned by Jupiter’s aunt and uncle. The office had several secret entrances, including a tunnel which could be accessed through a loose board on the junkyard fence. The Three Investigators also used modern equipment in their investigations, including the telephone and portable tape recorders.

Film director Alfred Hitchcock served as a consultant to the Three Investigators at the beginning and end of each story. After Hitchcock’s death in 1980, the series stopped using his name as a character, replacing him with a fictitious film director, Hector Sebastian, for new titles and paperback reprints of the first thirty volumes. The early volumes (1-8, 10) were written by Robert Arthur Feder (1909-1969), who served as an editor for the *Alfred Hitchcock Magazine*, the author of many screenplays for *Alfred Hitchcock Presents*, and the compiler of several short-story collections bearing the director’s name. The title pages of the Three Investigators books identified the authors of each volume. Some of them wrote under pen names, such as “Robert Arthur” for Robert Arthur Feder, “William Arden” for Dennis Lynds, and “Marc Brandel” for Marcus Beresford; others, such as Nick West and Mary Virginia Carey, used their real names.

The Three Investigators were too young to drive, and in the early books were chauffeured around their native Rocky Beach (near Hollywood, California) in a gold-plated limousine whose services they had won in the first volume. In later books, their chauffeur returned to help the boys during his time off. This transportation complication made the Three Investigators series more believable to readers who were just a few years younger and facing the same problems. Because of the more realistic adventures experienced by the trio, librarians preferred them over the mass-market—and old-fashioned—Hardy Boys books.

After the publication of the earlier volumes, Random House issued a new series of Three Investigators Crimebusters stories, but they were discontinued after a little more than a dozen paperback volumes were published. In these stories, written by some of the same writers as the original series, Jupe, Pete, and Bob were old enough to drive and hold down part-time jobs. The Crimebusters series had a modern theme with more action and violence, erasing the innocence of the original series. The Three Investigators have proven popular in Germany and several new stories were written specifically for that market in a series known in translation as the “Three Question Marks.”

—James D. Keeline

The Three Stooges

Although they spent more than three decades making films, it was television that turned the Three Stooges into one of the most recognizable and beloved comedy teams in the world. Specializing in unsophisticated, violent slapstick, the Three Stooges slapped, poked, and generally abused each other in more than two hundred short films between 1934 and 1958, when their shorts were released to television, to the delight of a whole new generation of Three Stooges fans.

Formed in vaudeville in 1923, the team’s original members were Moe Howard (born June 19, 1897, as Moses Horowitz; died May 4, 1975) and his brother Shemp (born March 17, 1895, as Samuel

The Three Stooges

Horowitz; died November 23, 1955), who acted as sidekicks to their boyhood friend, comedian Ted Healy. In its early years, the act was billed “Ted Healy and His Stooges” and sometimes “The Racketeers.” While various “stooges” moved in and out of the act, each virtually interchangeable with another, the addition of Larry Fine (born October 5, 1902, as Louis Feinberg; died January 24, 1975) in 1925 rounded out the troupe. For the next several years Healy’s Racketeers were Moe, Larry, Shemp, and Fred Sanborn. Although there was very little that was innovative about the team’s act—the physical comedy they performed was borrowed from old vaudeville slapstick—their success in vaudeville led them to Broadway in the late 1920s and to film in 1930, where this lineup supported Healy in the feature film *Soup to Nuts*. Although the film was not a hit, the Stooges found a warm audience.

In the meantime, a rift had grown between Healy and his players, as the trio resented the pay inequity by which they were paid only one-tenth of the more than one thousand dollars Healy earned weekly. Such financial disagreements were exacerbated by Healy’s problems with alcohol, which were worsening. The Stooges left Healy when he nixed a contract offered to them by Fox (to perform without Healy),

striking out on their own as “Howard, Fine and Howard” while Healy hired new stooges to do the old act. Although Healy managed to convince them to return, Shemp left the act to pursue a career in feature films and was replaced by Curly (born October 1903 as Jerome Lester Horowitz; died January 18, 1952), who soon emerged as the most popular stooge. Signed to a one-year contract with Metro-Goldwyn Mayer studios in 1933, the Stooges appeared in six feature films, including *Meet the Baron*, *Dancing Lady* (with Joan Crawford), *Fugitive Lovers*, and *Hollywood Party*. But it was short films such as *Plane Nuts* that allowed them to reproduce their vaudeville act. When their contract was up, Healy stayed with MGM, while the Three Stooges went on as a trio, signing a deal with Columbia for a series of two-reel comedies—a commitment that would end up lasting twenty-five years.

It was during the early Columbia years that Moe, Larry, and Curly developed into recognizable characters, with hairstyles that scarcely changed over the decades: Moe’s thick black mop with its evenly cut bangs was as much a fixture of the act as the two large tufts of curly hair that protruded from Larry’s balding head. Moe assumed Healy’s role as the leader (off camera as well), slapping, poking, or

punching the childlike Curly or the hapless Larry. However, it was the bald and portly Curly who usually stole the show, delighting audiences with his masterful body language, which he exercised with his feet as much as his hands, sometimes dancing or spinning on the floor. Curly's high-pitched voice was also used to great effect by singing, barking, and most of all, wise-cracking—while his occasional defiance of the bossy Moe almost always resulted in more abuse.

The films generally followed a standard plot, which of course was merely a vehicle for their slapstick set pieces and verbal gags. In most films, the group would take on occupations such as plumbers, waiters, doctors, salesmen, soldiers, or businessmen, where they would proceed to make a mess of the situation. Although the tiniest disagreements would usually result in an exchange of slaps, pokes, and insults—a formula that was usually repeated several times in each film—in the end Moe, Larry, and Curly always stuck together in their efforts to resolve whatever problem they faced.

Working under directors such as Edward Bernds, Charlie Chase, Del Lord, and Jules White, the Stooges didn't write their own scripts, but their ad-libbing frequently survived the films' final cut. Highlights of their early years with Columbia include their World War II parodies of Hitler in *You Nazy Spy* (1940) and *I'll Never Say Heil Again* (1941). Such performances had personal resonance because of the Stooges' Jewish background but were nevertheless enhanced by Moe's striking transformation into the German fuehrer. Although the trio appeared in occasional feature films, including *Start Cheering* (1938), *Time Out for Rhythm* (1941), and *Swing Parade* (1946), short subjects remained the principal format for their films.

With his health steadily deteriorating, Curly suffered a stroke while on the set of *Halfwit's Holiday* in May 1946 and was forced to retire from the act. His brother Shemp returned from a solo career as a character comedian and rejoined the group. Although it was difficult to fill the shoes of the trio's most popular member, Shemp helped to sustain the group's success for the next decade, until his unexpected death in November 1955. Despite the loss of another brother, Moe chose to continue the act with one-time burlesque star Joe Besser replacing Shemp. While the Three Stooges had starred in Columbia's top-grossing short-subject series for many years, the era of short-subject films was nevertheless coming to a close by the early 1950s. With most major studios having phased out two-reelers, the Stooges' career with Columbia ended in 1958 when the studio closed its short-subjects department.

Just as the act seemed on the verge of retiring, a new generation discovered a quarter century of face-slapping, nose-tweaking, eye-poking comedy with the release of seventy-eight Columbia shorts (featuring Curly) to television. Capitalizing on their renewed popularity, the group carried on by making numerous personal appearances (which had always been their most lucrative source of income) and launching a line of merchandise and comic books. Meanwhile, by 1959 Joe Besser had been replaced by Joe De Rita, who became known as "Curly Joe," and the trio ventured into a series of feature films aimed primarily at children, including *Have Rocket, Will Travel* (1959), *Snow White and the Three Stooges* (1961), *The Three Stooges Meet Hercules*, *The Three Stooges in Orbit* (both 1962), and *The Outlaws Is Coming* (1965). In 1965 the group produced live-action wraparounds for a series of five-minute animated cartoons.

The impact of the Three Stooges' comeback in the late 1950s and 1960s was part of a general renewal of interest in slapstick

comedy. During this period many of the works of the Marx Brothers, Laurel and Hardy, and the silent films of Charlie Chaplin were revived and found new television audiences. On the big screen, the success of high-budget feature films such as *It's a Mad, Mad, Mad, Mad World* (1963), *Those Magnificent Men in Their Flying Machines* (1965), and *The Great Race* (1965) was probably due in no small part to the Three Stooges' role in the renaissance of physical comedy. Long after the Three Stooges' demise, homage continued to be paid to Curly's antics in cartoons such as "Jabberjaw" in the 1970s.

Although they had retired by the end of the 1960s, the Three Stooges' popularity continued to grow in succeeding decades, weathering criticism from parents concerned with the group's excessive violence and from some women offended by the Stooges' objectification of women. In the 1990s the images of the "classic" Three Stooges—Moe, Larry, and Curly—endured not only in their short films, but also in television commercials and merchandise such as calendars, books, and computer screen savers.

Three's Company

Three's Company was the definitive mindless television sex comedy, speaking to a generation ripe for the numbing. Running on ABC from 1977 to 1984, it reflected the swinging needs of the viewers, and was the vehicle through which a major Hollywood blackballing took place.

Three's Company starred John Ritter as the prat-falling chef Jack Tripper, Joyce DeWitt as the sensible florist Janet Wood, and Suzanne Somers as the prototypical dumb blond secretary (and minister's daughter), Chrissy (full name: Christmas) Snow. As the series opened, Janet and Chrissy needed a third roommate for their Santa Monica apartment. The morning after the going-away party for their last roommate, they found a man sleeping in their bathtub, and, upon learning that he could cook, they let him move in. Nothing sexual ever went on between the roommates, but not for Jack's lack of

The cast of *Three's Company*.

leering. While he was hitting on anything in a skirt, he had to pretend to be gay so the landlord would allow the living arrangement, which was still a new idea in the 1970s.

Usually joining the trio at the local hangout, the Regal Beagle, was Jack's sleazy best friend Larry Dallas (Richard Kline). The landlords were impotent Stanley and sex-starved Helen Roper, played by Norman Fell (who also played an uptight landlord in *The Graduate*) and Audra Lindley. Jack often had to distract Mr. Roper by coming on to him and disgusting him into leaving; though it was never given a name, Jack's faux homosexuality manifested itself in limp wrists, simpering, and hissing. The Ropers were spun off in 1979, and Jack, Janet and Chrissy's new landlord was Ralph Furley, a leisure-suited nebbish played by Don Knotts.

Three's Company was chock-full of pratfalls (Ritter's forte), double entendres, and misunderstandings ("I overheard Janet say she's late . . . oh my God, she must be pregnant!"). In a typical episode Jack gives someone cooking lessons, but a roommate thinks he's giving "love lessons."

The show became hugely popular, and was featured on the cover of *Newsweek* in February 1978, with a staged shot of Somers with her underwear falling off and Ritter leering over her shoulder, something that never happened on the show. Even the theme song (" . . . where the kisses are hers and hers and his . . . ") implied sex where there was none.

Three's Company made a celebrity out of the buxom Somers, who got her big break with a few seconds of screen time in George Lucas' *American Graffiti*, along with half a dozen other actors. In the

summer of 1980, Somers asked her *Three's Company* producers for the same amount of money the male stars of the era were bringing home—a share of the profits and a fivefold salary increase, from \$30,000 to \$150,000 per episode. The producers didn't go for it, and, making an example of her, held her to her contract for a final year. During the 1980-1981 season, Somers appeared only in one-minute inserts at the end of each show, featuring Chrissy talking on the phone to one of the characters; it was explained that Chrissy was tending to her sick mother in Fresno. The inserts were taped separately on a closed set. Soon Chrissy was written out of the show, and Hollywood closed its doors on Somers.

Somers' first replacement, in the fall of 1980, was Chrissy's cousin, the blond and clumsy Cindy Snow (Jennilee Harrison). After a year, Cindy moved out to go to UCLA Vet school, but still stopped by. In the fall of 1981, lanky nurse Terri Alden (Priscilla Barnes) moved in. In 1984, Janet got married, Terri moved to Hawaii, and Jack met his true love Vicky Bradford. Jack and Vicky spun off into *Three's a Crowd* (1985-86), where they lived together (Vicky didn't believe in marriage) above Jack's restaurant. Jack's foil this time was Vicky's disapproving father, who also owned the building.

Most of the show's stars became indelibly associated with their roles (with the exception of Knotts, who will always be remembered as Barney Fife in *The Andy Griffith Show*). Somers did make a comeback, mostly by continuing to look good as she aged, which she owed to a product she will be forever associated with, the Thighmaster (and later, the Buttmaster). Besides exercise books and videos, she also wrote and spoke out about surviving abuse.

Thurber, James (1894-1961)

Ohio-born satirical writer James Thurber was most noted for his ability to illustrate, through the use of humor, the frailties of human beings in a world seemingly dominated by forces of their own making. His primary media, the short story and his famous pen-and-ink cartoon sketches, have served as models for later critics and observers of the social scene who write in a casual style reminiscent of the *New Yorker*, which began publication in the 1920s and for which Thurber was a regular contributor. Much of his work, including his writings and drawings of animals, especially dogs, and the unforgettable Walter Mitty have become permanent fixtures in American literary folklore.

Thurber was born in Columbus in 1894, during a time when the United States was experiencing great change due to the forces of

industrial development: explosive urban growth, immigration, labor upheavals, and the dizzying pace of technological advancement. All of these influenced Thurber's work. Thurber's poor eyesight—as a child his brother William accidentally shot him in the eye with a bow and arrow—prevented him from enjoying an active childhood and later in life rendered him legally blind. After a difficult start at Ohio State University, Thurber found his stride as editor of the school newspaper and literary magazine. While in college, he befriended future playwright and film director Elliott Nugent, with whom he would collaborate in New York in later years.

Thurber's writing career foundered from the start. He accepted a job as a reporter for the Columbus *Dispatch* after World War I, moved to Europe in the 1920s to write for overseas newspapers, then returned to the United States and wrote for the New York *Post*. While living in New York, Thurber met author E. B. White, who introduced him to the editors of the *New Yorker*, a new magazine that hoped to capitalize on the "Roaring Twenties" image of the city by developing a smart, lighthearted, and slightly irreverent literary style. Thurber was hired as an associate editor, and then later managed to get himself "demoted" to a contributing author. The marriage of the *New Yorker* and Thurber was fortuitous: his articles and sketches graced the pages of the magazine for years to come and helped set the overall tone for the publication. Thurber and White collaborated on the 1929 bestselling book *Is Sex Necessary?*, a spoof on the sex-psychology books popular during the 1920s.

Thurber's use of humor to point out human shortcomings took several forms. His cartoons often depicted people struggling with the trials and tribulations of everyday life, especially in the face of modern technology that often made things more, rather than less, troublesome. Thurber believed that humans often unnecessarily complicated their lives through an excess of "abstract reasoning" instead of being practical. Thus, he always portrayed animals in a sympathetic light, commending their reliance on instinctive wisdom instead of the fuzzy reasoning of humans. Males were especially targeted for ridicule by Thurber; his cartoons often included spineless husbands being berated by their domineering and opinionated wives. In "The Secret Life of Walter Mitty," (1939) Thurber's most famous *New Yorker* story, he created a title character who escaped his meager, workaday world by becoming a larger-than-life hero in his daydreams, a gentle symbol of humanity's loss of direction and purpose in modern times. Thurber's work also found its way to the stage, as in *The Male Animal* (1940), a Broadway collaboration with Elliott Nugent, and *A Thurber Carnival* (1960), an off-Broadway revue in which Thurber himself performed.

Beset with alcoholism, rage, and blindness, Thurber's last years were not happy ones for him or his friends, and his personal problems were reflected in his creative output. In a piece for the *New York Times Book Review*, John Updike commented that "The writer who had produced *Fables for Our Time* and *The Last Flower* out of the thirties had become, by the end of the fifties, one more indignant senior citizen penning complaints about the universal decay of virtue." Still, Thurber is considered one of the century's most prominent humorous writers, with works that took many forms over the span of his career, including novels, short stories, articles, and sketches—almost all of them containing a strain of melancholia that is distinctly modern in style. A quotation from one of his many fables perhaps best describes Thurber's attitude: A dinosaur, talking to a

human, remarked "There are worse things than being extinct, and one of them is being you." Thurber was not a hater of mankind; he was a modernist who saw the limitations of man in a conspicuously optimistic age.

Tierney, Gene (1920-1991)

Debuting as a teenage model and budding stage actress, Gene Tierney soon metamorphosed into one of Hollywood's most recognizable movie stars of the 1940s and 1950s. Her reputation relied on promotion of her distinctive looks and physical elegance. Twentieth Century Fox founder Darryl Zanuck famously proclaimed her, "unquestionably the most beautiful woman in movie history." With high cheekbones and unusually shaped eyes, Tierney, a New Yorker, was considered "exotic." Studios cast her in films that highlighted her mystique like *The Shanghai Gesture* (1941) and *The Egyptian* (1954). In seeming contradiction with her inscrutable features, Tierney's image also reflected her Swiss finishing school poise and sophistication, garnering her the cosmopolitan title role in the film noir classic *Laura* (1944) and that of the love-obsessed femme fatale of *Leave Her to Heaven* (1945). Offscreen, Tierney's life embraced another incongruity. The popular star suffered well publicized misfortunes and subsequent breakdowns, and her aura of graceful beauty came to signify tragedy.

Tiffany & Company

Tiffany, a name long synonymous with elegance and style, owes its lustre to the New York firm founded by Charles Lewis Tiffany

which, since becoming Tiffany & Company in 1853, has provided the well-to-do with exquisitely crafted jewelry and home furnishings. Louis Comfort Tiffany, a brilliant and famous glass designer, founded Tiffany Studios in 1900 and succeeded his father as head of Tiffany & Company. Tiffany's place in America's popular imagination was given a boost by Truman Capote's 1958 novel *Breakfast at Tiffany's* and the 1961 film of the same title, in which Audrey Hepburn as Holly Golightly accepts from her admirer a Tiffany-engraved toy Crackerjack ring. No doubt the popularity of the girls' name Tiffany in the last decades of the twentieth century owes much to its associations with the beautiful creations of Tiffany & Company.

Tijuana Bibles

It is surely no accident that illicit pornographic comic books, popularly known as Tijuana Bibles, thrived during the heyday of media censorship in modern America, roughly the mid-1920s to the mid-1950s. In the early decades of the century, movies, comic strips, and pulp magazines all had ample room for the naughty and risqué, but by the 1920s the pressures of social respectability were increasingly hemming in popular culture. The acceptance of the stringent Hays Code by Hollywood in 1934 was a significant turning point in this larger trend. Like girlie magazines and stag movies, Tijuana Bibles represented an escape from the puritanism of mainstream culture. As the cartoonist Harvey Kurtzman, creator of *Mad* magazine, once noted, "The obvious repression of sexual fantasy in [mainstream comic strips] brought its release in the little dirty books, or Tijuana Bibles."

Almost as ephemeral as washroom graffiti, Tijuana Bibles were anonymous in every sense imaginable. For the most part, no one knows who wrote them, who drew them, or who published them. The name "Tijuana Bible" plays off the fictitious foreign addresses that were given as the place of publication. In addition to erotic and exotic Mexico, Tijuana Bibles were said to be produced in Cuba, England, and even Canada. Some suggested that organized crime was behind these tawdry sex books. Cartoonist Will Eisner, best known for creating the masked crime fighter the Spirit, frequently has recounted the story of how as a struggling artist in the 1930s he was approached by a gangster who wanted him to draw Tijuana Bibles.

Yet, despite their obscure origin, almost one thousand separate Tijuana Bibles were published and managed to circulate throughout North America. "The distribution system was mysterious, but it worked," commented Kurtzman. Comic book historian Donald Gilmore, in the first scholarly study of the genre, noted that Tijuana Bibles were "conceived in dark attics, published in dingy garages on unnamed alleys, and distributed from the hip pockets of vendors

across the nation. . . . [but] accounted for a multi-million-dollar business in the tight economy of the Great Depression."

The earliest Tijuana Bibles of the 1920s and 1930s were comic strip parodies. Often deftly done imitations, these books featured such stars of the funny pages as Betty Boop, Popeye, Olive Oyl, Mickey Mouse, and Dick Tracy all engaging in activities forbidden in family newspapers. In positing a secret sex life for popular cultural icons, Tijuana Bibles both influenced and anticipated the work of such later cartoonists as Kurtzman, whose *Little Annie Fanny* started running in *Playboy* in the 1960s. The work of countercultural cartoonists of the late 1960s like Robert Crumb and S. Clay Wilson—who drew Disney-esque animals with earthy human appetites—also shows the influence of Tijuana Bibles.

By the early 1930s, Tijuana Bibles had expanded from their origins as cartoon parodies and started featuring Hollywood celebrities such as Laurel and Hardy, Mae West, the Marx Brothers, and Clark Gable. These Tijuana Bibles played off the rumors of "Hollywood Babylon" that flourished in the tabloid press. Hollywood was shown as a happy playground of orgies and bisexuality. Noting the large number of strips featuring celebrities, cartoonist Art Spiegelman observes that Tijuana Bibles "were not overtly political but were by their nature anti-authoritarian, a protest against what Freud called Civilization and Its Discontents. Here was a populist way to rebel against the mass media and advertising designed to titillate and manipulate, but never satisfy."

Some Tijuana Bibles that were more explicitly political in one way: they featured such world figures as Hitler, Mussolini, Stalin, Chiang Kai-shek, and even Whittaker Chambers (a Cold War spy who, a recent biography confirms, was a bisexual, just as he was portrayed in a Tijuana Bible from the late 1940s). As with the Hollywood strips, the politics of these Tijuana Bibles was implicitly anti-authoritarian, ridiculing the powerful by showing that they had base needs. Of course, there was a limit to how subversive Tijuana Bibles could be. In all these strips, the main goal was to titillate, and they replicated the racial and ethnic stereotypes found in mainstream culture.

Artistically, the quality of Tijuana Bibles varied greatly. Two talented cartoonists, "Doc" Rankin and Wesley Morse, have been identified and singled out by aficionados of the genre. Bob Adelman praised Rankin's "graceful, articulate, Deco style" and Morse's "wonderful graphic flair." (Morse went on to do *Bazooka Joe* comics in the 1950s.) Only a few other Tijuana Bible cartoonists, all of them anonymous, were as good as Rankin and Morse. The worst Tijuana Bibles were also among the worst comic books ever done: crudely drawn, illiterate, and mean-spirited.

With the decline of censorship in the mid-1950s, signaled by the emergence of *Playboy* in 1955, Tijuana Bibles lost their reason to exist. However, as with other trashy and throw-away bits of the past, Tijuana Bibles continue to have a nostalgic appeal. In the mid-1970s, the novelist John Updike wrote that the type of pornography he "most missed" was "Popeye, Olive Oyl, and Wimpy fellating and gamahuching one another, in comic books circulating in southern Pennsylvania in the late 1940s." Not surprisingly, books reprinting Tijuana Bibles continue to roll off the press.

—Jeet Heer

Time

Published weekly without interruption since March 3, 1923, *Time: The Weekly News-Magazine* (the final word is no longer hyphenated) pioneered a new genre of publication that was invented in the United States after the First World War and spawned many imitators at home and abroad. *Time* was the first mass-circulation magazine to offer a weekly digest of current events and commentary organized into departments, written in an oft-parodied breezy, idiosyncratic style. As the inaugural publication in Henry Luce's publishing empire that within little more than a decade included *Fortune*, *Life*, and *Architectural Forum*, the periodical quickly established itself as a "lengthened shadow" of its founder, who maintained close control over its content and used it to shape public opinion toward accepting his views about the role of the United States in "the American Century." As such, it frequently was thought to be a Republican-oriented publication: it published highly favorable coverage of the presidential aspirations of Herbert Hoover, Wendell Willkie, and Dwight Eisenhower—though, surprisingly, Luce voted for Alfred E. Smith, Hoover's Democratic opponent in 1928. Not surprisingly, *Time's* opinions were frequently at odds with that of Franklin D. Roosevelt, though Luce gave his wholehearted support to the administration in the interest of national unity during World War II. *Time* was one of the earliest and most vocal critics of the right-wing tactics of Senator Joseph McCarthy in the 1950s. Even though the Time-Life empire had evolved into Time-Warner by the 1990s, with Time, Inc. New Media establishing a brand-conscious presence on the World Wide Web, *Time* "the weekly newsmagazine" still maintains an important role as one of the three leading American newsweeklies along with *Newsweek* and *U.S. News and World Report*.

The genesis of *Time* magazine had its roots in the deep but often contentious friendship between two old schoolmates from Hotchkiss and Yale: Henry R. Luce and Briton Hadden. Luce was born and raised in China, the son of a Presbyterian missionary and the grandson of a Scranton, Pennsylvania grocer. Hadden was a native of Brooklyn, New York, the son of a stockbroker and the grandson of a bank president. The two had worked together on publication boards at their alma maters and served in a military-reserve unit during World War I, an experience that convinced them that the typical American was poorly informed of current events. They graduated with Yale's class of 1920, Luce winning the DeForest award for oratory with a speech that foreshadowed his later "American Century" editorial stance at *Time* and *Life* with its idealism in advocating American benevolent hegemony as "the great friend of the lame, the halt and the blind among nations, the comrade of all nations that struggle to rise to higher planes of social and political organization. . . ."

It was while working together as reporters on the *Baltimore News* in 1922 that Luce and Hadden hatched plans for their weekly magazine, which they originally wanted to call *Facts*. Earlier, while

working briefly as a reporter for the *New York World*, Luce had proposed to Hadden an idea "for a magazine that comes out every Friday with all the news condensed so you and all the other rich millionaires commuting home for the weekend can catch up on the news that they have missed. How's that?" The two men quit the *News* after three months, drew up a prospectus, convinced some wealthy friends to invest in their enterprise, and spent most of 1922 setting up editorial offices in New York and hiring a staff. Among the part-timers listed on *Time's* first masthead were two men who later became somewhat prominent poets: Stephen Vincent Benét, a book reviewer, and Archibald MacLeish, who wrote the Education section for ten dollars a week. For National Affairs editor, Luce hired Alan Rinehart, the son of novelist Mary Roberts Rinehart. In days when gender roles were somewhat stratified, men were hired as editors and reporters while women researchers were hired as "secretarial assistants."

Luce projected a first-year income of \$155,000, most of it from twenty-five thousand subscriptions at \$5 each, and the remaining \$30,000 from advertising. The fledgling publishers were disappointed when a mailing of half a million promotional pieces yielded only six thousand subscribers. Another five thousand were earmarked for newsstand distribution. The folksy tone affected in a stockholders' report just before Christmas 1922 hardly suggests that the fledgling venture would within a generation grow into one of the world's most powerful media conglomerates: "*Time* knows well that the people that will help it most are those who are best satisfied with it. For that reason it does not desire to antagonize any of its stockholders by asking to do anything that is distasteful. From time to time summary requests will be made. . . : 'Give me a letter to this potential advertiser.' 'Get me 13 subscriptions.'"

A sketch of retiring House Speaker Joseph G. Cannon graced the cover of *Time's* Volume I, No. 1 when it was published on March 3, 1923. The thirty-two-page magazine (including covers) carried a relatively steep newsstand price of fifteen cents. Half of the newsstand's allotment of five thousand copies came back unsold, for a total of about nine thousand copies circulated, far less than optimistic projections of twenty-five thousand. For the first year or so, both circulation and advertising revenue remained sluggish. When Volume I was completed, the publishers sent bound copies to charter subscribers. Among those who sent back endorsements was Franklin D. Roosevelt, the unsuccessful vice-presidential candidate in 1920, who wrote in part "I do not think the articles are too brief—they are just about right in length and they are unbiased as far as it is possible for red-blooded Americans to make them so."

There was little original reporting in *Time's* early issues, which were cobbled together from newspapers, wire-service reports, speeches, and other sources, rewritten in the inimitable *Time* style that was largely the brainchild of Briton Hadden. The first issue defined what would remain *Time's* approach over the years, with only minor variations: items organized into departments such as national news, foreign news, the arts (and their subdivisions), books, religion, education, finance, and so forth. The first issue also featured three light-humor departments: Imaginary Interviews, Point with Pride, and View with Alarm. Stories were created by teams of writers and researchers, supplemented in later years by reporters and correspondents from bureaus around the world. A brief *New York Times* notice heralding the launch of the publication was headlined "Time a New Weekly—First Issue of Magazine Devoted to Summarizing Progress." True to its mission as articulated by Luce to Hadden, the

magazine was designed to be read by busy millionaires and others in less than an hour; columns were at first restricted to seven inches. An unusual feature of the new magazine was its regular coverage of the number of lynchings in the Southern states. Robert T. Elson, in his semiofficial two-volume history *The World of Time Inc.*, quoted Luce: “We were what would be called pro civil rights for Negroes from the beginning. One of the things in which we may have been useful is the fact that we tried to report every single lynching. We tried to print the exact story, without moralizing.” *Time* was also the first publication to apply the honorific “Mr.” to both black and white subjects.

Time, especially in its earlier decades, is perhaps best known for the idiosyncratic style favored by Hadden, which has been variously termed “breezy,” “arch,” or “cute.” It was notable for the liberal use of word coinages, especially portmanteaus or puns, as in describing a young would-be newspaper publisher as a “Hearstling”; for its resuscitation of words and allusions from classical Greek such as “kudos” or “katabasis”; for its syntax-bending, especially through the use of inverted word order, as in “Forth from the White House followed by innumerable attendants, Mr. and Mrs. Warren G. Harding set out. . . .” (their return, not surprisingly, was termed a “katabasis”); for its historical and literary allusions; and for its pomposity-deflating identification of subjects with their middle names, as in “Walter Percy Chrysler,” or with nicknames in parentheses, as in “Bernarr (‘Body Love’) Macfadden.” *Time*’s stylists also pioneered in the stringing together of frequently alliterative adjectives, as when describing George Bernard Shaw as “mocking, mordant, misanthropic”; and in the uncanonical use of nouns as attributives, as in “Teacher Scopes.” Clearly, *Time* was being written for an educated and well-read audience: Elson suggested that Hadden’s admiration for Homeric Greek prompted him to pepper his copy with a plethora of hyphenated modifiers: “At all times Hadden had by him a carefully annotated translation of the *Iliad*. In the back cover he had listed hundreds of words, especially verbs and the compound adjectives, which had seemed to him fresh and forceful. The classic ring of this vocabulary, which he frequently reviewed, served him as a tuning fork for the language that he wanted in *Time*.” Luce is credited for the popularization of several words, such as “tycoon,” a term previously used to describe a Japanese shogun which he applied to American business moguls, and “pundit,” after the name of a Yale literary club he had joined.

As a cost-saving measure, *Time*’s editorial offices moved to Cleveland, Ohio, in 1925 but returned to New York City within three years. By the end of the 1920s, the publication had published several sixty-page-plus issues and was reporting net profits of \$125,000 on total revenues of \$1.3 million, with a circulation guarantee approaching three hundred thousand. Newsstand sales doubled in a year, to twenty-three thousand copies. In 1928, with the selection of Charles Lindbergh, *Time* initiated its notable custom of selecting a “Man of the Year”—hero or villain—which over the years has been expanded to include women, anonymous groups (such as the under-thirty generation), and even the personal computer. The Man of the Year philosophy echoed Luce’s secular-evangelical belief that history was mightily shaped by individual will, a phenomenon he saw himself embodying as the most influential publisher of his era at the time of his death in 1967.

In February of 1929, Hadden, then thirty-one, died of a streptococcal infection exacerbated by overwork, and Luce assumed

even greater day-by-day oversight of the publication, confirming his reputation as a shrewd businessman as well as a savvy journalist. In the months before the stock-market crash ushered in the Great Depression, *Time*’s tilt toward business had become quite evident. Within a month after Hadden’s death, Luce said in a speech, with characteristic flourish: “Business is, essentially, our civilization; for it is the essential characteristic of our times. . . . Business is our life. It is the life of the artist, the clergyman, the philosopher, the doctor, because it determines the conditions and problems of life with which either artist or philosopher, let alone ordinary mortals, have to deal.” It thus struck some observers as strange that Luce should have packed the editorial staff of his new publication, *Fortune* (which debuted February 1930), with such imaginative writers as Archibald MacLeish, Dwight Macdonald, and Russell Davenport. “There are men who can write poetry, and there are men who can read balance sheets,” said Luce. “The men who can read balance sheets cannot write. . . . Of necessity, we made the discovery that it is easier to turn poets into business journalists than to turn bookkeepers into writers.”

During the early 1930s, Luce enlisted the new medium of radio to expand *Time*’s reach while simultaneously shaping the way radio would present news and documentary material. Luce hired Fred Smith of a Cincinnati radio station to develop a radio program based on *Time*’s weekly content. Originally titled *News casting*, the project quickly evolved into the *News Acting*, in which short news items were dramatized with sound effects, and then into the full-blown radio program *The March of Time*, which employed leading radio performers and announcers to reenact the week’s events in a Friday night, half-hour, CBS-network program, introduced by a fanfare and the words “On a thousand fronts the history of the world moves swiftly forward. . . .” Agnes Moorehead and Orson Welles were among the graduates of the early broadcasts of *The March of Time*. Within a few years, a moving-picture-newsreel version was created, and the legend “Time Marches On” soon became a familiar sight on movie screens from coast to coast. Although, as Elson wrote, “the method of *The March of Time* is no longer acceptable as journalism . . . TV, the modern film documentary, the new school of *cinéma vérité* owe much to its pioneering methods.”

Despite the success of this and other ventures, *Time* and its sister publications suffered through the Depression years, especially when factoring in the huge start-up costs of *Life* in 1936. In the period before the United States entered World War II—*Time* coined that designation in a September 1939 issue when it confidently reported “World War II began last week at 5:20 a.m. (Polish time) Friday, September 1”—Luce had come to believe that Americans had a fateful role to play in world affairs and urged military aid to the beleaguered European allies. After Pearl Harbor, Luce committed *Time* to the cause of “absolute victory.” He also threw his support to the Nationalist Chinese forces of Chiang Kai-shek, much to the consternation of *Time*’s correspondent in China, Theodore H. White (later of *Making of the President* fame), who broke with Luce when ordered to write flattering pieces about the man White called “China’s somber tyrant.” John Heidenry complained in his *New York Times* review of a 1995 book about Luce and White that the publisher “believed that ideological distortion of the news was often preferable to objectivity, particularly where China and the Republican Party were concerned.” In the years that followed, *Time* maintained a firm anti-Communist tack, but it also was among the first publications to

challenge the demagoguery of Wisconsin Senator Joseph McCarthy. Still, *Time* during the 1950s and 1960s was perceived as having a Republican bias—at least an “Eastern establishment” Republican bias, for *Time* endorsed, for the first time, the Democratic presidential candidate in 1964, favoring Lyndon B. Johnson over Barry Goldwater. Luce had retired as editor-in-chief earlier that year, handing over the reins to Hedley Donovan. Andrew Heiskell had already taken over as chairman of the parent company. At Luce’s retirement, the firm that had started forty-some years earlier with an investment of \$86,000 had grown to a conglomerate with revenues of more than \$400 million.

In January of 1990, Time, Inc. and Warner Communication combined to form an even larger conglomerate, the largest in the United States, bringing together Luce’s company “with its rich journalistic history and its aristocratic, traditional leadership” and Warner, “with its lucrative stable of movie, entertainment and cable television properties,” in the words of the *New York Times*. During the 1980s, the management of Time, Inc. decided that it was time to deemphasize the role of its magazines as future sources of revenue and corporate viability, leading some observers, like Richard M. Clurman, to worry about the future of its journalistic integrity, as described in his 1992 book *To the End of Time: The Seduction and Conquest of a Media Empire*. Clurman’s fear of “people in Time Warner who believe and act as if the purpose of business is only business” stands ironically against Henry Luce’s declaration in 1929 that “Business is, essentially, our civilization.”

In 1998, *Time* celebrated its seventy-fifth anniversary with a gala at New York’s Radio City Music Hall to which were invited all living men and women who had appeared on the magazine’s cover, a star-studded affair with guests ranging from President Bill Clinton to Russian ex-premier Mikhail Gorbachev to Billy Graham to Sharon Stone to Toni Morrison. By century’s end, managing editor Walter Isaacson has been credited with restoring some of the old luster of *Time*’s authority and credibility in a “post-magazine” era by leading the publication into the new-media era via its Pathfinder Internet service, by increasing science and technology coverage, and by planning *The Time 100* series on CBS Television. Revenues at the publication increased 21 percent in 1997 to about \$94 million, and circulation rose slightly to 4.2 million, earning *Time* the designation “Hottest Magazine of ’97” by *Adweek*.

Times Square

Less of a square and more like two triangles located at the intersection of Broadway and Seventh Avenue in New York City, Times Square has been associated over the years with a series of seemingly opposite combinations: both high and low culture, glitz and grime, and exciting bright lights and seedy dark corners. The history of Times Square is a direct reflection of the history of Americans’ relationship with their cities.

The origin of Times Square can be traced to the 1811 New York Commissioner of Streets and Roads’ plan, which laid out the Manhattan grid above Fourteenth Street. The significance of this plan, and many others like it across the United States prior to and after 1811, is that the future growth of the American city was partitioned off and predetermined as easy-to-develop slices of land. This not only assured efficient exploitation, but also brought about a sort of “democratization” of the city, which the older cities of Europe with their main squares, large cathedrals, and prominent town halls did not possess. By virtue of this new grid, every building was just as important as the next, at least in terms of location on the grid. And so, the nineteenth-century American city gradually filled up its preplanned grid, creating uniform streets between often not-so-uniform buildings. American city-dwellers of this time lived in cities because they wanted to; that is, because they preferred the orderly and paved conditions of the city over the often irregular and muddy conditions of the rural areas, the only other option at this time (just before the suburbanization of America).

As New York expanded north from 14th Street, the diagonal path of the former Indian trail known as “the Bloomingdale Road” (later Broadway) was so strong that it ignored the 1811 grid plan and cut right through it. As a result, at every intersection of Broadway with a north-south avenue, a “square” came into being: Union Square at Fourth (Park) Avenue, Madison Square at Fifth Avenue, Herald Square at Sixth Avenue, and Long Acre (Times) Square at Seventh Avenue.

In the 1890s, live-performance theatres (or “legitimate theatres”) began to locate themselves in and around Long Acre Square: Oscar Hammerstein’s 1895 Olympia Theatre on Broadway between 44th and 45th streets was one of the first and most famous. Others soon followed from their former locations below 23rd Street, and the area soon became known as a “theatre district.” At its peak in 1925, there were approximately 80 legitimate theatres within the vicinity of Times Square.

The story goes that because the City of New York had not yet installed street-lighting as far north as Long Acre Square, theatre owners took it upon themselves. Exploiting the new technology of electric lighting, the fronts of the new theatres became giant advertisements, spelling out the play on offer and sometimes also the main players. Later, multiple-story-high advertisements for chewing gum, soft drinks, and other products appeared. The result was that by about 1910, Broadway was dazzlingly lit up at night and became known as “The Great White Way.”

In 1904, Long Acre Square changed its name to Times Square after the completion of the *New York Times* tower at 42nd Street and Broadway. The newspaper decided to celebrate the opening of its new building by counting down the last minutes of 1904 from the top of it. Two years later, the festivities grew to include the lowering of a ball at midnight. This event soon grew into the enormous annual party held every year in Times Square.

Also in 1904, a subway shuttle was opened which linked Times Square with Grand Central Station at 42nd and Park Avenue. This was followed by an IRT line (1918) and a BMT line (1923), both with stops at 42nd Street—and thus another aspect of Times Square was born: a transportation hub, an interchange, a “Crossroads of the World.” This nickname later was strengthened by an IND line stop (1932) and the New York City Port Authority Bus Terminal (1950) at 42nd Street and Eighth Avenue, and the first Lincoln Tunnel entrance/exit (1937) at 42nd and Tenth Avenue.

The theatres (and their accompanying restaurants, bars, and hotels), the fantastic lights, and the busy transportation interchanges were all direct reflections of how the concept of “city” was portrayed in the mind of an American at the turn of the twentieth century. The city at that time was a place of energy, excitement, and culture. It was the place to be, the place where anything could happen and where most things did. The theatre represented high culture, and those who attended the performances were the elite. The lights, however, could be enjoyed by anyone, and Broadway, Times Square, and 42nd Street (it is difficult to separate them) at the turn of the twentieth century was a place to see and be seen.

With the arrival of talking movies in the late 1920s and the Depression of the 1930s, the character of the Times Square area began to change. It still remained a center for entertainment, but at that time both high and low culture were represented: live performance and musical comedy theatres on one side, and burlesque houses and “movie palaces” on the other. In addition, in that time before plane travel became commonplace, New York City was a port of call for anyone traveling between Europe and America, especially during World War II when most every American soldier passed through and spent some time at Times Square. It was a crowded and popular place, as exemplified by the estimated two million people who thronged Times Square on August 14, 1945, to read the official announcement of Japanese surrender on the *Times* building’s “zipper” (news bulletin board).

In the years following World War II, the rise of television (which brought entertainment into the home, no need to go out) and city suburbs (which were clean, spacious, and safe) further strengthened the decline of Times Square and also the American city. The area began to take on vulgar associations, and its large-scale advertisements reflected this with block-long flashing neon gin bottles and 30-foot-high heads which puffed cigarettes boasting real smoke. The

42nd Street corridor became known not only for pornographic movies, but also its easy access to prostitution, and by extension, it also became a place for illegal drug trading and street gambling.

To many city-dwellers, the new burlesque houses, movie palaces, and general gawking crowds were an insult to the city but were part of a growing trend; it was changing from being a special place where special things happened to being an ordinary, common place associated with dirt and grime, overcrowded conditions, degeneracy, and crime, and, as a result, neglect and dereliction. After World War II, the American city was not seen as a place to live. Instead, it was seen as a place to get away from—hence the growth of suburban communities which, however, paradoxically still depended upon the city as the “place to work.”

During the late 1970s and early 1980s, as foreshadowed by the 1967 replacement of the 1904 *Times* building’s original facade with blank marble panels, the Times Square area again dramatically changed. This time it was a physical, not social change: from a mixture of different-sized theatres and commercial buildings into a wasteland of overscaled and faceless skyscrapers. Many famous turn-of-the-century theatres were demolished to make way for new developments, which were carried out with the promise that they would “revitalize” Times Square, but all they really did was add to its density.

One of the reactions to this change of Times Square was the 1987 city ordinance that required new buildings to include “super” signage several stories high and with varying degrees of animation. In addition, a 1988 ruling gave “landmark” status to most remaining theatres in the area, following the general trend in New York and other American cities of building preservation by government intervention. At the same time, large-scale musical productions with hummable tunes and easy lyrics catering to a simpler audience than live theatre became successful at Times Square theatres.

Various urban planning development studies and inquiries were undertaken to ascertain if anything could be done for the area, but no consensus was reached. In 1992, the private Times Square Business Improvement District, composed of area property owners and residents, was established. This organization, similar to others set up across the United States at this time, was privately funded to undertake those duties normally associated with the city government: public safety, sanitation, community services, economic strategy, and tourism promotion.

The city ordinances concerning the aesthetics of future development, the listing of “historic” buildings, and the creation of private entities to do the city’s job all had the goal of retaining a sort of street-life status quo, but at the expense of turning Times Square into a regulated and controlled public amusement park. This last stage reflects the state of the American city at the turn of the twenty-first century: the city as a place to visit, as one might visit an amusement park. As Americans began to not only live and work in the suburbs, they also began to realize that while the suburbs might be cleaner, more spacious, and safer than the city, they were also more boring. The city, at this point, became that preserved exciting piece of the past whose purpose was to be used when one wanted that “urban experience.”

In 1996, the next logical step along this road was taken as The Disney Corporation renovated the Amsterdam Theatre (1903), once home to the Ziegfeld Follies, for its own use in staging offerings such

as *Beauty and the Beast* and *The Lion King*. Dick Clark's Rock 'n Roll New Year's Eve celebration of 1998 (his twenty-seventh), complete with its ever youthful and tanned host, was reportedly attended by half a million people and watched on television by an estimated 300 million. At that point, the only things missing were crying kids and the long lines for the rides.

Timex Watches

The introduction of the Timex watch in 1956 revolutionized the time-keeping industry. The relatively simple design, with fewer parts than other watches, made the Timex more durable, a feature which led to one of the world's most important advertising campaigns. Capitalizing on the country's growing fascination with television, Timex hired veteran newsman John Cameron Swayze to run an elaborate series of torture tests—live on Steve Allen's popular Sunday night program. Timex watches were smashed by jackhammers, slobbered through dishwashers, and strapped to world class divers taking flops off the cliffs of Acapulco. By 1956, sales of the watch that "takes a lickin' and keeps on tickin'" surpassed the five million mark. One of the more famous commercials occurred in 1958, when Swayze strapped a Timex to an outboard motor. When the watch slipped off the propeller and disappeared into the tub of water, Swayze had to promise to try again the following week. Timex decided to end the torture tests campaign in 1977 with a staged failure: an elephant stomped and crushed a watch. "It worked," Swayze quipped to the television audience, "in rehearsal."

Tiny Tim (1927?-1996)

"Tiny Tim" was the last and most successful of many stage names adopted by singer and ukulele player Herbert Khaury. Born in New York, Khaury was a struggling performer as Derry Dover, Larry Love, Julian Foxglove, and Sir Timothy Thames, before being given a small part in the counterculture movie *You Are What You Eat* in 1968. He became modestly well-known as Tiny Tim, the pseudonym he was currently employing, and received his first national exposure shortly afterwards on NBC's *Rowan and Martin's Laugh-In*. His odd garb, odder stage presence, and falsetto renditions of old songs quickly made Tiny Tim a celebrity. His signature song (and 1968 hit) was "Tip-Toe Thru' the Tulips with Me"; it was first recorded in 1929.

A frequent guest on *The Tonight Show*, Tiny Tim made history when he married "Miss Vicki" during the episode of December 18, 1969; the ceremony was witnessed by over 20 million viewers in America—a daughter, Tulip, was born in 1971, and the couple divorced six years later.

Both in falsetto and a quavery baritone, Tiny Tim recorded hundreds of popular songs from the nineteenth and twentieth centuries, and knew thousands more. He had probably performed a more varied repertoire of songs, in more venues, than any other singer of his generation. He died in Minneapolis, where he had moved with his third wife, "Miss Sue," on November 30, 1996.

The Titanic

In the realm of popular culture, the *Titanic* has turned out to be more than just a ship that sank; it has become an icon of an era long past, as well as a contemporary phenomenon. It seems that each generation since the sinking has rediscovered the shipwreck in new books, movies, and even music.

When the luxury ocean liner *Titanic* left Queenstown, Ireland, on April 11, 1912, the ship's fame was far different than it would become in just a few short days. The voyage of the *Titanic* was a tremendous news event all around the world. The *Titanic* was the largest and most luxurious liner of its time. The world was thrilled with the improvements the industrial age had brought to their lives and *Titanic* seemed to be the ultimate realization of their dreams; many began to speak of conquering Mother Nature. When *Titanic* was called "unsinkable," some saw the description as proof of man's supremacy, while others saw it as a direct challenge to God.

When the *Titanic* struck an iceberg on April 14, 1912 and sank two hours later, with over 1,500 souls losing their lives, the world also

The *Titanic*

lost much of its innocence and faith in man as a superior being. If this ship, so carefully planned and built to withstand anything, could sink on its maiden voyage, on what could society depend? Was the sinking a warning from God, as some religious leaders claimed? Was it meant to warn the public against the materialism of “the Gilded Age,” as some proposed? Would it reverse the progress the age of industry was bringing? As is often the case with tragedies, many used the event to argue an ideological perspective. Religious leaders, for example, used the example of Ida Strauss, who chose to remain with her husband on the ship, as an example to argue against divorce. Among some groups, women who survived were scolded for not following Mrs. Strauss’ example and remaining with their husbands to perish. Both sides of the suffrage issue also used the *Titanic* tragedy to argue their case.

Ironically, the sinking of the *Titanic* also came to illuminate growing disparities in class around the world. In 1912, the world was marked by very distinct social classes, and it was a time when those with money were perceived as rarefied beings, somehow superior to others. Sailing on the *Titanic* were many who were of immense wealth, such as John Jacob Astor and Benjamin Guggenheim. While neither man survived, many other first class passengers did. When those numbers were compared to the number of steerage passengers rescued, an outcry was heard against the privileged. Why did they seemingly have more right to be rescued than the others? While the

industrial revolution continued, there was a backlash against progress and the wealthy. Change was in the air.

The tragedy also spawned increased efforts to launch rescue operations for those involved in water accidents. In the hope of averting a repeat of the event, the International Ice Patrol was founded by the nations of the North Atlantic. The official inquiries in America and Britain also produced changes in the laws regarding lifeboats and other safety issues. After its use on the *Titanic*, the Marconi wireless apparatus was popularized to send distress signals so that rescuers on land could receive messages regarding survivors.

In a media-saturated society, it is only appropriate that it would not take long before the *Titanic* tragedy became a popular commodity. Between 1912-1913, there were at least 100 songs about the *Titanic* published, including Leadbelly’s recording of “Down with the Old Canoe.” The first motion picture, starring survivor Dorothy Gibson and titled *Saved from the Titanic*, appeared just one month after the disaster and was filmed on the *Titanic*’s sister ship, the *Olympic*. Survivor Lawrence Beesley published his account, *The Loss of the S.S. Titanic*, six weeks after the tragedy. Additionally, articles appeared in *Scientific American* and other popular magazines of the time, and countless books were written surrounding the sinking. One such book, a 1898 novel by Morgan Robertson, was also rediscovered. *Futility* was the story of a ship so similar to the *Titanic* in every way, including its name, Titan, that many felt it had predicted the sinking of the *Titanic*.

After 1913, most of the interest in the *Titanic* died down rapidly. The great ship occasionally showed up again, mainly in motion pictures, including the British film *Atlantic* (1929) and the German film *Titanic* (1943). The German film, made during World War II, was a propaganda exercise with the only heroic person on the ship a fictional German crew member. In 1953, the United States finally produced their version of the story in true Hollywood style. Starring Barbara Stanwyck and Clifton Webb, *Titanic* was a melodrama with the shipwreck used largely as a background for the fictional story of an estranged couple who reconcile as the ship sinks.

By November 1955, the *Titanic* myth experienced its first resurgence. Walter Lord, a longtime student of *Titanic* lore, published his classic—*A Night to Remember*—retelling the story of *Titanic*’s short life. By January 1956, it had sold 60,000 copies, and has never been out of print since. Another book appeared two months after Lord’s, but *Down to Eternity* by Richard O’Connor was received poorly.

Not to be left out of the “picture,” so to speak, in March 1956, a teleplay about the *Titanic*, directed by George Roy Hill and narrated by Claude Rains, was shown on network television. By May, an episode of the popular *You Are There* series dealt with the *Titanic*. In addition, motion pictures began appearing, including *Abandon Ship* (1957) and *A Night to Remember* (1958). The latter film, produced in documentary style, is regarded as the most faithful and accurate telling to that time. Now a permanent part of popular culture, the story of the woman who was the most famous survivor of the *Titanic*, Margaret Tobin Brown, was chronicled in *The Unsinkable Molly Brown*. The story was first reproduced as a musical on Broadway with Tammy Grimes (1960) as the title character, and then in a motion picture with Debbie Reynolds (1964). Both were huge successes and proved there was continued interest in the shipwreck.

The *Titanic* again slipped to semi-obscurity in the mid-1960s. It did, however, remain a popular subject for the occasional television

show. In 1966, the premier episode of the television adventure show, *The Time Tunnel*, dealt with the disaster. A television miniseries, *S.O.S. Titanic*, starring David Janssen as John Jacob Astor, was also produced in 1979. The ship also played an important role in fictional books such as Clive Cussler's *Raise the Titanic* (1976) and *The Memory of Eva Ryker* (1978), written by Norman Hall.

On September 11, 1985, Dr. Robert Ballard of the Woods Hole Oceanographic Institute and Jean-Louis Michel of the French IFREMER Institute returned the *Titanic* to the front pages when they located the wreck of the ship. It had long been a Holy Grail of sorts to those fascinated by it, and previous expeditions had tried unsuccessfully to locate the wreckage. Dr. Ballard became an instant celebrity and a vocal critic of those who wanted to salvage items from the ship. There were even those who wanted to try to raise the *Titanic*. Articles in *National Geographic* and other magazines appeared, along with more books on the subject, including reprints of Walter Lord's book. Documentaries such as *Secrets of the Titanic* (1986) soon began to appear, and it seemed that the event was taking on a mystical quality. There was even a video game, *Search for the Titanic*, appearing in 1989, that allowed players to finance and plan an expedition to locate the wreckage.

Interest remained high over the next few years as periodic new books and television specials kept the *Titanic* visible to the public. Much debate went on about whether or not to salvage any of the ship. Those who argued to salvage the ship were concerned that time was of the essence, and felt that artifacts would soon be all that was left of the event. Those against salvaging it, championed by Ballard, felt the wreck was a memorial and should be left alone. Eventually, the pro-salvage group won, and artifacts from the ship were eventually brought to the surface.

On April 23, 1997, a new interpretation of the disaster appeared when *Titanic: A New Musical*—a big budget theater production—debuted on Broadway. In a theater season with few successes and even fewer legitimate hits, this musical was the smash of the season; it won 5 Tony awards, including one for Best Musical.

Nothing, however, could prepare the world for the coming of the James Cameron film, *Titanic*, in 1997. Amid rumor and innuendo regarding “the most expensive film ever made,” the public waited for its release and a chance to it judge for themselves. When the release date was delayed and the film went over budget, many predicted another disaster, this one of a business nature. Would it be a hit or the most expensive miss in motion picture history? It became obvious after the film's initial release that Cameron did not need to worry. *Titanic* became the largest grossing movie ever and tied previous Academy Award winner *Ben Hur* (1959) for most trophies won, with 11. The soundtrack from the movie became the best selling movie soundtrack in history; the love theme from the movie, “My Heart Will Go On” performed by Celine Dion, quickly became a number one song. And the stars of the motion picture, Leonardo DiCaprio and Kate Winslet, both relatively unknown before the film, became superstars.

The public could not get enough of the film or the ship. Using life-size models and computer generated images, the film was generally considered the most historically accurate, although some historians disagreed with liberties taken with some of the characters in the film. The Edwardian hairstyles and wardrobe depicted sparked a fashion craze, and the blue diamond necklace that was a centerpiece of the plot became a bestselling piece of costume jewelry.

In the late twentieth century, the *Titanic* continues to fascinate the public. There are faithful *Titanic* buffs who have read about and pondered the fate of the vessel for many years. Many of them are members of the Titanic Historical Society, whose headquarters are in a jewelry store in Indian Orchard, Massachusetts. Membership increases every time the *Titanic* returns to the front page of the news, but it took a blockbuster film to make the *Titanic* a true cultural phenomenon among the general public. The *Titanic* remains a commodity to be bought and sold. The sinking of the *Titanic* is a historic tragedy which will forever be a part of history and of popular culture.

—Jill A. Gregg

To Kill a Mockingbird

Harper Lee's novel *To Kill a Mockingbird* gives an accurate reflection of race relations in the Southern United States during the 1930s. The novel, set around a single-father family in small-town Alabama, contains a vast array of symbolism to intertwine the main plot with several subplots. Through her novel, Lee debunked the quaint antebellum Southern society for the realism of Southern culture. The timing of this publication, which denounced prejudicial attitudes, coordinated with the early Civil Rights Movement in the United States. This best selling novel became a classic and required reading for many American high school students.

Author Harper Lee was born in Monroeville, Alabama, in 1926. She spent four years at the University of Alabama and one year at Oxford University in England. She also attended law school, leaving six months short of finishing her coursework to pursue a writing career in New York City. There she helped author Truman Capote research *In Cold Blood*. To earn money she took a job as an airline reservation clerk. In 1960, Lee published *To Kill a Mockingbird*, and in 1961 the novel won the Pulitzer Prize. By 1962, an Academy Award-winning motion picture was produced from the novel, and, in the same year, Lee won the Paperback of the Year award given by *Bestsellers* magazine to the best selling paperback of the year.

Harper Lee, a direct descendant of General Robert E. Lee, recommended to potential authors, “Write what you know and do so thoughtfully.” She emphatically denied the her prize-winning work

Gregory Peck (standing) in a scene from the film *To Kill a Mockingbird*.

was autobiographical. The similarities it contains to her own life are striking, however. Her father, Amasa Coleman Lee, for instance, was a lawyer.

The novel's symbolism and clarity made it a literary classic. It is narrated in the voice of a white six-year-old tomboy named Jean Louise "Scout" Finch. She lives with her ten-year-old brother, Jem, and her father, Atticus Finch, in the small town of Maycomb, Alabama. The story centers on the alleged rape of the white Mayella Ewell, daughter of the wicked Bob Ewell, by the black Tom Robinson. Atticus serves as Robinson's attorney. The all-white jury finds Robinson guilty even after Atticus proves reasonable doubt of Robinson's guilt.

The novel portrays common, real-life stereotypical racist events of the time. Atticus faces taunts of "nigger lover" and "lawing for niggers." There also is the attempted lynching of Mr. Robinson. The perceived threat of blacks to white women and the salvation embodied in white males are mocked.

Throughout the novel, Lee pursues various themes like ignorance versus knowledge, cowardice versus heroism, and children versus adults. Courage versus cowardice is portrayed in Atticus's demeanor in a confrontation with Bob Ewell over Atticus's open disbelief of Mayella's accusation. The dispute also represents an old stereotype of race cohesion that Ewell believes Atticus is breaking. Lee draws parallels of ignorance in her handling of characters Boo Radley and Tom Robinson; they are both presumed guilty with no one having taken the time to get to know them. Radley is the Finch's neighbor who has an evil reputation, especially among the children, who fear him without ever having met him. Radley turns out to be a hero when he saves Scout and Jem from murder at the hands of Bob Ewell. Tom Robinson dies while trying to escape prison, representing how the racist South has endured and egalitarian measures have floundered.

Explicitly symbolic is Jem's attempt to make a snowman during a rare Alabama snowfall. As he makes the snow into a ball he rolls it to accrue more snow. While rolling the snowball it picks up dirt giving the snowman a dirty surface. The snowman signifies the superficiality of skin color.

To Kill a Mockingbird underscores many themes and represents a universal story from a regional perspective. The overall argument involves the obvious plea for justice while mocking the mores of Southern society. It is Lee's only major published work. Though she faded back into the obscurity of Monroeville, Alabama, her mark in literary persuasion endures.

—Scott Stabler

To Tell the Truth

To Tell the Truth was one of the most durable and popular panel quiz shows ever to appear on television, having a run of more than twenty years in both network and syndicated form. Along with *What's My Line?* and *I've Got a Secret*, *To Tell the Truth* was one of three similar shows introduced by Mark Goodson-Bill Todman Productions in the 1950s. These shows were designed to appeal to a relatively upscale television audience and to counter the effects of

widely publicized quiz show payola scams. In the original version of *To Tell the Truth*, which ran from 1956 to 1968 on CBS, Bud Collyer was host (he also hosted *Beat the Clock*), moderating a group of celebrity panelists that included Orson Bean, Polly Bergen, Kitty Carlisle, Peggy Cass, and Tom Poston. The show ran on prime time from 1956 to 1967 and in the daytime from 1962 to 1968.

The panelists' goal was to determine which one of three players was telling the truth about an unusual event or circumstance in which they were involved. All three claimed by affidavit to be the authentic truth-teller, and each panelist was given an opportunity to question the contestants individually for a designated amount of time. After the panelists completed their questioning, the host asked, "Will the real John Doe please stand up?" The contestants were then awarded money based on their success in fooling the panel. Because the genuine contestant was not identified until the end of the question sessions, those in the home and studio audience were able to play along. After the "real John Doe" introduced himself or herself, the impostors identified themselves to the panelists. The information disclosed in these introductions was almost as entertaining as the game itself, as the impostors were often struggling actors or individuals employed in careers that could not have been more dissimilar from that of the "real" truth-teller.

To Tell the Truth had a second run in syndication from 1969 to 1978 with hosts Garry Moore (1969-1977) and Joe Garagiola (1977-1978). Orson Bean, Peggy Cass, and Kitty Carlisle returned as panelists and were joined by Bill Cullen. Another short-lived version ran in syndication from 1980 to 1981 with host Robin Ward and regular panelists Peggy Cass and Soupy Sales. The longevity of this show and others like it probably had much to do with its extremely low production costs. The consistent appearance of familiar panelists also added to the show's popularity, as the personal style of each of the celebrities was part of the entertainment. Kitty Carlisle could be expected to make her appearance in floor-length gown and feather boa, Peggy Cass would look erudite but down-to-earth in her horn-rimmed glasses, and Orson Bean could be counted on to ask questions that revealed a font of obscure knowledge. After the demise of the show, these personalities would continue to be remembered by the public primarily in their roles as panelists on *To Tell the Truth*, although each went on to other unrelated ventures: Peggy Cass, for example, joined the company of the popular musical *Nunsense*, and Kitty Carlisle Hart established herself as a prime mover in the arts world through her role as head of the New York State Council on the Arts.

Today

The longest-running early-morning network television program, the *Today* show premiered on NBC on January 14, 1952, just months after the first live coast-to-coast television broadcast in the United States. Aired live from New York at 7 a.m. Mondays through Fridays, the two-hour show—the prototype of the news-magazine format—added a live Saturday program in the 1990s. By the late 1990s, nearly half a century after its origin, the *Today* show was still relying on its original format: a combination of news, interviews with leading newsmakers, features on topics such as health, personal finance, and food, and entertainment segments.

Sylvester “Pat” Weaver, who developed *Your Show of Shows* and the *Tonight* show, created the *Today* show as a type of broadcast news magazine that could be watched in segments while viewers ate breakfast or prepared to go to work or school. It premiered when television sets were a rarity and early-morning broadcasting was unknown. In 1952, daytime television was still a rarity in many parts of the United States.

After a considerable search, the man Weaver chose to host the show was Dave Garroway, a relaxed, witty conversationalist who wore professorial horn-rimmed spectacles. His early experience as a radio newscaster, plus his wide audience gained on the variety show *Garroway at Large* over WMAQ-TV in Chicago, convinced Weaver he was the performer needed to attract and hold a nationwide audience that was just out of bed. Jack Lescoulie was picked to report sports as well as the amusing stories from the day's news, and Jim Fleming read a news summary every half hour. *Today* opened in its own studio in the RCA Exhibition Hall on West 49th Street in Manhattan, outfitted with a large plate-glass window that allowed passers-by to see the show and be seen on camera. President Harry Truman, known for his morning walks, happened to lead his entourage by the *Today* window one morning when he was in New York and was stopped for a brief interview. During the show's first year, television critics complained of the show's slow pace and obsession with technological gadgets.

The show began making money in its second year, attracting larger audiences and luring thousands of children and their parents by adding J. Fred Muggs to the cast. Muggs was a strong-minded ten-month-old chimpanzee, owned by trainers Buddy Menella and Roy Waldron, and his unpredictable antics sometimes intimidated the staff but delighted the audience. Within the year J. Fred was making

personal appearance tours and meeting his adoring fans. He became more difficult to handle each year, and after five years gave way to a new chimp named Mr. Kokomo. The press release announcing his retirement said that Muggs was leaving to “extend his personal horizons.”

In 1953 Frank Blair became the show's newscaster and remained on *Today* for 23 years, longer than anyone else connected with the show. That same year the show began to feature shapely young women as “*Today* girls,” who read the temperature and a one-word description of the weather in major U.S. cities. The first of these was actress Estelle Parsons, followed by Lee Ann Meriwether (Miss America of 1955), singer Helen O'Connell, and actresses Betsy Palmer, Florence Henderson, and Maureen O'Sullivan. The only one of them to gain long-running status on the show was Barbara Walters, whose role was gradually expanded to that of co-anchor. Walters, who had appeared on the rival CBS *The Morning Show* was originally hired by *Today* as a writer. Pressed into on-camera service during the events surrounding the assassination of President John F. Kennedy, she became a regular in 1963.

In July of 1961 Dave Garroway closed the show for the last time, giving his audience a smile, a raised open palm, and his trademark “peace” signoff. He was replaced by John Chancellor, a veteran newscaster who was never comfortable in the show's format and left after 14 months. Hugh Downs replaced Chancellor in October, 1962, becoming the only television personality to have a regular position on all three of Pat Weaver's program creations, *Today*, *Tonight*, and *Home*. Downs had been Jack Paar's announcer and sidekick during the entire run of the Paar show from 1957-62. He continued to appear regularly on *ABC's 20/20*, co-anchoring the show with Barbara Walters, in the late 1990s.

Frank McGee replaced Downs in October, 1971, and Walters's growing stature on the show strained their relationship. Jim Hartz, hired with Walters's approval, replaced McGee—who died of bone cancer in 1974—and after a short stay was himself replaced by Tom Brokaw. When Walters left the show for a lucrative ABC contract in 1976, an extensive search was begun to replace her, and six candidates were tested on air: Cassie Mackin, Betty Rollin, Linda Ellerbee, Kelly Lange, Betty Furness, and Jane Pauley. Pauley, born in 1950, was only two years older than the show itself, but she won over all the contenders, and the new team of Brokaw, Pauley, and Willard Scott was able, in 1977, to bolster the show's declining ratings and maintain the show's number-one rank among morning shows. Bryant Gumbel joined the show as a sportscaster in 1980 and became a co-host in 1982. By that time, *Today* no longer was the dominant force in the early morning. *ABC's Good Morning America*, which had previously beaten *Today* in the ratings for a few weeks in 1979, now won the ratings race consistently in 1982 and 1983, and in one week in 1983, the *CBS Morning News* nudged *Today* into third place.

During the 1980s the Gumbel-Pauley-Scott team increased the show's ratings and won the race against *Good Morning America* frequently until 1989, when a well-publicized incident sent the series into another decline. In February, 1989, an intra-office memo in which Gumbel was harshly critical of Scott and Gene Shalit was leaked to the press, causing fans to express their loyalty by changing channels. The second move that proved unpopular with the viewers was the reduced role played by Jane Pauley when Deborah Norville was added to the show as newscaster. Pauley announced her departure on December 28, 1989, but continued on other NBC shows, filling in for Tom Brokaw on the *NBC Nightly News* and hosting her own prime-time series, *Real Life with Jane Pauley*.

Bryant Gumbel interviewing Richard Nixon on the *Today* show, 1990.

Today's ratings plunged 15 percent in the spring of 1990, and *Good Morning America* was atop the charts again, but in April, 1991, the popular Katie Couric was named co-host with Bryant Gumbel, and *Today* soon became dominant again. She had joined the show in June, 1990, as its first national correspondent and had served as substitute anchor since February, 1991. A native of Washington, D.C., and an honor graduate of the University of Virginia, Couric showed an intelligent, probing, but polite and friendly style in memorable segments of the show, including Hillary Rodham Clinton's first television interview as First Lady, General Colin Powell's

farewell to his position on the joint chiefs of staff, Anita Hill's first interview after the crisis with Clarence Thomas, and General Norman Schwarzkopf's first interview after the Persian Gulf War. She has also co-hosted, with Dick Enberg, NBC's morning coverage of the Summer Olympics in Barcelona (1992) and Atlanta (1996).

Matt Lauer, a native of New York City, replaced Bryant Gumbel as co-anchor of *Today* in January, 1997, and the show has continued to gain viewers. A graduate of Ohio University with a degree in communications, Lauer worked as co-anchor of *Today in New York* for the city's NBC affiliate before joining the network *Today* show's

news desk in 1994. His frequent filling in for golfing buddy Gumbel led to an outpouring of cards and letters from fans throughout the nation, and Lauer was promoted to co-anchor. Another factor in the show's continued high ratings was the moving of the show into a glass-walled, ground-floor production center in June, 1994. Just as in the early days of the show, the crowd outside the window has become a vital part of the *Today* show, and the stars frequently conduct on-the-spot interviews with visitors. In January, 1999, *Today* had national ratings nearly twice those of the next highest competitor.

The *Today* show remains a window on the world for its viewers, with live shows originating from the Orient Express streaking across Europe, as well as from China, the Soviet Union, the French Riviera, Italy, the United Kingdom and Ireland, Australia, South America, and Cuba. Other familiar faces on the 1999 *Today* show include Ann Curry, news anchor; Al Roker, weather; Gene Shalit, film critic; and Willard Scott, known for his comic remarks and his daily list of America's latest centenarians.

Toffler, Alvin (1928—)

Alvin Toffler, the most popular futurist in America, became a celebrity in the 1960s and 1970s for his predictions and suggestions for ways people could cope with the unprecedented rate of change initiated by new technologies. With the publication of his bestseller *Future Shock* in 1970, Toffler became a household name and won many admirers in government and business. *The Third Wave* (1980) made him internationally known, and with *Powershift: Knowledge, Wealth, and Violence at the Edge of the Twenty-First Century* (1991) and *Creating a New Civilization: The Politics of the Third Wave* (1994), Toffler became a prominent political advisor. Since 1993, Toffler's wife, Heidi, has begun to share authorial credit with him, although he claims that she co-authored all of his previous books as well. Together they are known as the couple "who brought futurism to the masses," as Michael Krantz has written in *Time* magazine.

In *Future Shock*, Toffler argued that Americans were experiencing confusion and denial about the changes they were witnessing in society. He called this "future shock," a concept he derived from the anthropological concept of "culture shock," which means the inability of members of primitive cultures to adapt to a more advanced culture. Very similarly, Toffler argued, Americans were growing unable to cope with the new culture that was coming into being as technology changed the way people worked and lived. Witnessing the social upheaval of the 1960s, Toffler believed that the mass hysteria of the protests and growing divorce and crime rates were signs that

Americans were reaching a limit beyond which they could accept no more change. As remedies to future shock, Toffler argued that children should read more science fiction and that the study of the future should become a standard part of American education.

The main problem, according to Toffler, was that America was undergoing a fundamental shift from a Second Wave to a Third Wave society. The First Wave was the adoption of the agrarian way of life 10,000 years ago, the Second Wave was the urbanization and industrial revolution of the nineteenth century, and the Third Wave that began after the Second World War he called a "super-industrial revolution." This last phase of human development was fueled by the rise of technologies that were driven by knowledge rather than raw material power. In 1980 he predicted in *The Third Wave* that the personal computer would become a household item, three years before IBM (International Business Machines) introduced computers for home use. Toffler also believed that an information superhighway would become an important part of our everyday lives and that changes in our economy would effect a fundamental restructuring of our society; a "demassification" that would turn back some of the effects of centralization and standardization of the industrial era. Workers would return to the home, establishing living patterns similar in some ways to the First Wave of human development. The difference, however, is that people would be linked by new technologies that enabled them to communicate with others all over the world. And instead of having to purchase identical, mass-produced products, consumers would be presented with a growing number of choices as smaller industries became more feasible. Finally, in what became the focus of his last two books, the federal government would become less centralized as power shifted to smaller interest groups and local governments.

Toffler looked forward to the changes that would take place, arguing optimistically that a more direct democracy, more varieties of family structure and home life, greater utilization of renewable energy resources, a decentralized government, and a more accessible media would result from the Third Wave, effectively eliminating social hierarchies. He attempted to ease the fears of Americans about the rapid rate of change. In *The Third Wave* he argued that "we are the final generation of an old civilization and the first generation of a new one . . . much of our personal confusion, anguish, and disorientation can be traced directly to the conflict within us, and within our political institutions, between the dying Second Wave civilization and the emergent Third Wave civilization that is thundering to take its place." His optimism about the positive effects this shift would have on the quality of life and his urgent message that we must prepare for these changes rather than impede their progress drew many disciples, most notably Ronald Reagan and Newt Gingrich. Ted Turner even claimed to have gotten the idea for *CNN* (*Cable News Network*) from *The Third Wave*.

Alvin and Heidi Tofflers' main goal has been to prepare people for the changes ahead and to make them more comfortable with the concept of change. They want Americans to abandon their nostalgia for small-town life, the nuclear family, and employment stability of the past, and to embrace a future in which knowledge and flexibility will be the greatest assets. As Alvin Toffler told Charles Platt in *Dream Makers*, he wants to "open up the reader's mind to other ways of conceptualizing our political and social structures. I think that helps people adapt."

—Anne Boyd

Toga Parties

At the turn of the twentieth century, when the poet Ezra Pound advised writers to "make it new," he was referring to the need for a new vision that would propel artists through a new century. But as artists, intellectuals, writers, and other makers of culture turned to their crafts in order to create a new world, they found themselves looking to the past as much as they looked to the future. They looked not to the recent past, from which they wanted to free themselves, but to the ancient past of Greece and Rome. Homage to the Classical world sometimes manifested itself in the form of the toga party, which took place throughout the century and became particularly popular during the 1970s. Revising Classical culture to modern sensibilities, toga parties represented not only youthful exuberance, but an underlying desire to maintain a link to the past. (The name derives from the "toga," a simple cloth wrap worn loosely around the body in imitation of the national garment of the early Romans). Such parties played out the legendary excess of the Roman god, Bacchus, the god of wine, and his Greek precursor, Dionysus.

It is not hard to see why the figure of Dionysus had such appeal to those in the twentieth century, when more open attitudes toward sexuality began to take hold. At the beginning of the century, "modern women" announced their modernity by cropping their hair short and wearing Greek bangs, and during the 1920s, Classical style tunics became popular. One motto of the 1930s—"wine, women, and song"—was a direct call from the ancient rite of the Bacchanal, or Dionysian rites of spring. The call of the ancient Greeks and Romans was even heard at the Roosevelt White House in the early 1930s, when Eleanor Roosevelt hosted a great toga party in an attempt to poke fun at the politicians and newswriters who viewed F.D.R. as a second Caesar.

The toga was revived when the 1978 film *Animal House* featured a fraternity house toga party, prompting a new fad on college campuses. Across the United States, students wrapped themselves in bedsheets draped like togas in an attempt to imitate Greek and Roman figures and the Bacchanal. At times, John Belushi and other actors from *Animal House* would show up at such parties. Perhaps the most widely publicized, if not the largest, toga party was held at the University of Wisconsin, where 10,000 persons attended, all wearing sheets draped like togas, many of them sporting garlands of flowers in their hair. Much as rock concerts of the 1960s defined the 1960s generation, toga parties became an identifying rite of passage for the generation of the 1970s. During the 1990s, toga parties were still known to take place, although largely as a nostalgic gesture.

Tokyo Rose

During the fight with Japan in World War II, Allied (mostly American) fighting men in the Pacific were assailed with Japanese radio propaganda broadcast from radio stations throughout the Japanese empire. Many of the broadcasters were women, and they began to be known by the term "Tokyo Rose." The American Office of War Information (OWI), based on a study of the Japanese propaganda broadcasts, concluded that none of these women referred to herself as Tokyo Rose; the OWI considered the name "Tokyo Rose" to be "strictly a GI invention."

The various "Tokyo Rose" broadcasters spread different types of propaganda. Some of the woman broadcasters taunted the Allied soldiers by implying that their wives and sweethearts back home were being unfaithful to them. Although the United States Foreign Broadcast Information Service (FBIS) did not pick up any Japanese broadcasts which predicted specific military movements, some soldiers later claimed that "Tokyo Rose" announcers would identify Allied units, predict Japanese bombing raids, warn soldiers who were about to go into battle that they would be cut to pieces, and make otherwise demoralizing remarks.

Some of the Japanese broadcasts were less blatant than this. There was one Tokyo-based program, known as *Zero Hour*, which consisted of musical numbers, readings of letters from Allied POWs, and some news. A woman DJed the musical portions of the program; the woman interspersed the music with brief, and generally innocuous, commentary. The woman DJ on "Zero Hour" was an American named Iva Toguri (later d'Aquino). Though she never referred to herself as "Tokyo Rose" in her broadcasts—her moniker was "Orphan Ann"—she ended up being assigned the role of Tokyo Rose.

Iva Toguri was born in the United States to Japanese parents. In 1941 she was in graduate school, studying to be a doctor, but she left the country for Japan to take care of a sick aunt. Although she was a native of the United States, she had problems getting a passport and had to travel without one. After Pearl Harbor, the war stranded her in Japan. While seeking work to support herself in Japan, Toguri got a part-time clerical job at NHK, the government radio service. She was noticed by Charles Cousens, a POW who had served with the Australian army and who had been ordered by his Japanese captors to make radio propaganda aimed at the Allies. Cousens—who was later cleared of treason charges by Australian authorities—claimed that he was trying to sabotage the "Zero Hour" program by making it useless as propaganda. As part of that plan, Cousens claimed, he hired Iva Toguri because she was anti-Japanese and had a bad radio voice.

While she was working for Japanese radio, Toguri helped out many Allied POWs who were interned in the Tokyo area, giving them food and expressing pro-American sentiments. At the end of the war in 1945, the newly-married Iva Toguri d'Aquino did not seem to regard herself as a traitor, and she was willing to talk to the American press about her activities.

Tokyo Rose

Following the war, two Hearst reporters looking for the famous “Tokyo Rose” were led to d’Aquino, who signed a contract with one of the reporters giving various Hearst enterprises the exclusive rights to her story. In return, d’Aquino was promised \$2,000 (which for various reasons she never got). In the contract, d’Aquino identified herself as “the one and original ‘Tokyo Rose’” and gave numerous autographs identifying herself as “Tokyo Rose.” D’Aquino was stretching the truth, and it soon led her into serious trouble.

American authorities held d’Aquino in a Japanese prison for nearly a year while investigators tried to determine whether her broadcasts on behalf of Japan amounted to treason. Released in 1946 for lack of evidence, she faced a renewed campaign to block her return to the United States in 1947. The American Legion and broadcaster Walter Winchell did not want the traitress Tokyo Rose to be a free woman in the United States, and they campaigned for a reopening of the case. In 1948, Attorney General Tom Clark directed that d’Aquino be tried for treason.

D’Aquino was brought from Japan to San Francisco, where she was tried in 1949. Of the eight charges against her, the jury found her guilty of only one charge. According to the jury, she claimed in one broadcast that the Japanese had won the battle of Leyte Gulf (which they had not) and she allegedly taunted Allied soldiers about this imagined defeat. D’Aquino received a ten-year sentence and, as a convicted traitor, she was stripped of her American citizenship. After spending eight years in prison, d’Aquino was released in 1956. The United States commenced deportation proceedings, but dropped them in 1958. D’Aquino went to work in her family’s store in Chicago, which she was still running in 1998.

Beginning around 1974, the Japanese American Citizens League (JACL) took an interest in d’Aquino’s case. The JACL believed that d’Aquino had been a loyal American who had done what she could to assist American POWs, who had taken a job as a disc jockey and made innocuous broadcasts, and who had been targeted by unscrupulous journalists and prosecutors who were trying to transform her into the mythical “Tokyo Rose.” Media reports sympathetic to d’Aquino appeared in 1976. The jury foreman at her trial told *60 Minutes* that he thought d’Aquino was innocent of all charges. Articles in the *Chicago Tribune* indicated that two of the witnesses against her had lied. (Later, documents acquired through the Freedom of Information Act indicated that the two witnesses had made statements to the FBI in identical language, raising the inference that they had been coached.)

The JACL received support from other important quarters. The California legislature, several municipal governing bodies, conductor Seiji Ozawa, and the American Veterans Committee all endorsed a pardon. Influential Japanese-American politicians joined the campaign, particularly S. I. Hayakawa, who was soon to become a republican senator from California and who had access to President Gerald Ford. In January 1977, just before his term of office came to an end, President Ford pardoned d’Aquino. The pardon restored d’Aquino’s civil rights, including her American citizenship.

Tolkien, J. R. R. (1892-1973)

Born in South Africa in 1892 to English parents and resident of the United Kingdom from 1895 until his death in 1973, J. R. R. Tolkien is the most prominent fantasy writer of the twentieth century. He is beloved for his epic fantasy trilogy, *The Lord of the Rings* (1954-1955), and its prequel, *The Hobbit* (1937). Although exactitude is impossible, Patrick Curry estimates worldwide sales of *The Lord of the Rings* at approximately 50 million copies—“probably the biggest-selling single work of fiction this century.” *The Hobbit* has sold an estimated 35 to 40 million copies, and Tolkien’s books have been translated into more than 30 languages. A 1997 survey of some 25,000 readers in England found *The Lord of the Rings* to be the runaway winner as the most important book of the past 100 years.

Tolkien was also a prominent philologist. His academic career encompassed 39 years, dating from his appointment in 1920 as Reader in English Language at Leeds University. He became the Rawlinson and Bosworth Professor of Anglo-Saxon at Oxford University in 1925, and held the prestigious Merton Professor of English position at Oxford from 1945 until his retirement in 1959. His essay, “*Beowulf: The Monsters and the Critics*” (1936), is regarded as a landmark scholarly work, as is his examination of regional dialect in the *Canterbury Tales*, “Chaucer as a Philologist” (1949). His critical edition of *Sir Gawain and the Green Knight* (1925), developed in collaboration with E. V. Gordon, is still taught today.

“There were not two Tolkiens, one an academic and the other a writer,” asserts T. A. Shippey, “They were the same man, and the two sides of him overlapped so that they were indistinguishable—or rather they were not two sides at all, but different expressions of the same mind, the same imagination.” Tolkien’s academic research delved deeply into ancient Northern literatures, and led him to learn such languages as Finnish, Gothic, Middle English, Old English, Old Norse, and Welsh. This research in turn shaped his fiction. In the United States foreword to the Ballantine edition of *The Lord of the Rings* (1966), Tolkien avers that his trilogy is “primarily linguistic in inspiration.”

The blurring of Tolkien as an academic and a fantasy writer is no more apparent than in his essay “On Fairy-Stories,” first presented as the 1938 Andrew Lang Lecture at the University of St. Andrews and later expanded for the collection, *Tree and Leaf*, in 1964. Here, Tolkien demarcates a territory for fantasy that is distinct from stories that are framed—that is, normalized—as travellers’ tales, dreams, or beast fables. Fantasy entails an act of sub-creation, namely, a “Secondary World” that is separate from the “Primary World” of everyday life. Secondary worlds must be internally consistent, thereby structuring a sense of “credible, commanding Secondary Belief.” Central to fantasy are the elements of Recovery, Escape, and Consolation. Tolkien coined the term “Eucatastrophe,” which denotes the “sudden joyous ‘turn’” that is the hallmark of fairy-tale happy endings.

J. R. R. Tolkien

Tolkien applied the precepts of “On Fairy-Stories” to the secondary world that occupied much of his life: Middle-earth. The genesis of Middle-earth was a poem written by Tolkien during his student days, based on a line from the Old English Advent poem “Crist,” by Cynewulf. “Hail, Earendel, brightest of angels, over middle-earth sent to men,” sparked the imagination of Tolkien and established the basis for a cosmology that began to emerge during World War I. As a lieutenant with the Lancashire Fusiliers, Tolkien was posted to France and fought in the battle of the Somme. He later explained in a letter to his son, Christopher, that many of the early

writings about Middle-earth were composed “in grimy canteens, at lectures in cold fogs, in huts full of blasphemy and smut, or by candle lights in bell-tents, even some down in dugouts under shell fire.” These writings bore the title *The Book of Lost Tales*.

Tolkien returned to Oxford after a bout with trench fever and found sustenance in the English countryside. He was seized with the desire to create a mythology for England. Humphrey Carpenter quotes Tolkien on this point in his definitive biography, where the Oxford professor recollects how he “had a mind to make a body of more or less connected legend, ranging from the large and cosmogonic

to the level of romantic fairy-story—the larger founded on the lesser in contact with the earth, the lesser drawing splendor from the vast backcloths—which I could dedicate simply: to England; to my country.’’

A small literary circle of Christian academics—The Inklings—acted as midwife for Tolkien’s mythology. At Oxford, Tolkien regularly met with Owen Barfield, Charles Williams, and C. S. Lewis, whose *Chronicles of Narnia* would later adorn the lists of fantasy literature. The Inklings read aloud passages of their work, including a “children’s” novel that Tolkien had been writing since one fateful day in the late 1920s, when he scribbled on the page of a blank exam book, “In a hole in the ground there lived a hobbit.’’

The Hobbit was published in 1937 to popular and critical acclaim. Set in Middle-earth, it narrates the adventures of Bilbo Baggins, a staid halfling who embarks on a quest with the wizard Gandalf and a party of dwarves to reclaim treasure stolen by the dragon, Smaug. Along the way, Bilbo finagles a magic ring away from a twisted hobbit named Gollum. “Prediction is dangerous,’’ ventured the *Times Literary Supplement*, “but *The Hobbit* may well prove a classic.’’

Bilbo’s inheritance is at the heart of *The Lord of the Rings*, which approached completion in 1950. Frodo Baggins undertakes a perilous journey to Mount Doom in the land of Mordor, ruled by the dark lord, Sauron. There he must cast away Bilbo’s ring, revealed by Gandalf to be the One Ring of Power lost by Sauron in the distant past. Humans, dwarves, and elves aid Frodo in his quest, while the War of the Ring ignites across Middle-earth. Tolkien unsuccessfully negotiated with Collins publishing house for the joint issuing of his epic with *The Silmarillion*, a revised version of *The Book of Lost Tales*. Allen and Unwin, publishers of *The Hobbit*, eventually agreed to publish *The Lord of the Rings* in three volumes—*The Fellowship of the Ring* (1954), *The Two Towers* (1954), and *The Return of the King* (1955).

Reaction to *The Lord of the Rings* varied. If some critics waxed rhapsodic, others derided Tolkien’s work as medievalist pablum. The trilogy was received as an independent work, since *The Silmarillion* languished unpublished for over 20 years. The trilogy did not achieve widespread attention until 1966, following its publication in the United States by Ballantine Books in the wake of an unauthorized Ace Books paperback edition in 1965. It quickly vaulted to the top of the bestseller ranks and mushroomed into a full-blown cult phenomenon on college campuses during the 1960s and early 1970s.

The Silmarillion was finally published posthumously in 1977. Fans were perplexed by the lofty creation myth, biblical language, detailed genealogies, and the almost complete lack of characterization. Critics were equally baffled until the scope of Tolkien’s mythology was communicated via the editorship of his son, Christopher. *Unfinished Tales of Númenor and Middle-earth* appeared in 1980, followed by the 12-volume opus of textual criticism, *The History of Middle-earth* (1983-1996). Christopher Tolkien combed his father’s papers for seemingly every story fragment and draft pertaining to Middle-earth; the scale of his findings will likely occupy scholars for years.

Tolkien’s influence on fantasy and science fiction has been profound. His example of a consistent, detailed secondary world is now the norm for imaginative writing. He is furthermore credited with the rekindling of fantasy as a narrative art. Among his descendants one might include such contemporary novelists as Peter S. Beagle, Stephen R. Donaldson, Robert Jordan, and Tad Williams. Tolkien has inspired a legion of lesser imitators as well, with the result being derivative, multi-volume series boasting faux medieval Europe

settings and fit to bursting with cookie-cutter elves, inns, wizards, and megalomaniac dark lords. If Tolkienesque fantasy seems hackneyed today, few of his successors come close to rivaling the width and depth of the Middle-earth cosmos.

Tom of Finland (1920-1991)

After 30 years of limited circulation in gay magazines and exhibitions in gay clubs, Tom of Finland’s frankly pornographic drawings have enjoyed a vast popularity since the 1970s: They have been exhibited worldwide and even mainstream publishers have produced collections of his work. Tom of Finland is now considered, in the words of his biographer, “the foremost name in gay erotic art” and the critic Nayland Blake has defined him “one of the gay world’s few authentic icons,” noting Tom’s influence on artists as different as Robert Mapplethorpe, Bruce Weber, and Rainer Werner Fassbinder. A foundation was established a few years before Tom’s death to preserve and perpetuate his work and, in the 1990s, Tom of Finland’s influence has even extended to fashion, as the name of the pornographer has become a trademark for a line of male clothes.

Tom of Finland was born Touko Laaksonen in 1920 in Kaarina, then a rural area in the southwestern part of Finland. In 1939, after graduating from high school, Laaksonen went to art school in Helsinki to study advertising, but he soon had to suspend his studies because of World War II. After the war he completed his degree and also learned to play the piano at the renowned Sibelius Institute. In these early post-war years, Laaksonen kept his “dirty drawings” (as he liked to call them) to himself and earned his living by working as a freelance advertiser during the day and playing the piano at parties and cafés in Helsinki’s bohemian districts in the evenings. It was not until 1957 that Laaksonen decided to submit some of his less graphic drawings (which he signed as Tom of Finland) for publication in *Physique Pictorial*, an American muscle magazine. The editor was so enthusiastic about them that the cover of the Spring 1957 issue of the magazine featured a drawing by Tom of Finland.

During the late 1950s and the 1960s, Tom of Finland’s drawings were published regularly in American and European magazines and sold to private publications all over the world; but homosexual art did not sell very well at the time and Tom of Finland could not give up his advertising job any earlier than 1973, the same year of his first

European exhibition. Five years later Tom of Finland went to the United States for the first American exhibition of his drawings in Los Angeles. During this trip he met Durk Dehner who was to become Tom of Finland's successful manager and co-founder of the Tom of Finland Foundation. After the death of his companion of 28 years, Veli, in 1981, Tom of Finland divided his life equally between Finland and the United States until his own death ten years later. In 1987 the anthological volume, *Tom of Finland Retrospective*, was published to such a great success that a companion volume, *Retrospective II*, was also produced. Both volumes document Tom of Finland's career from the naturalist drawings of the late 1940s to the 1987 "safe-sex" poster urging the use of condoms, passing through his mature work featuring perfect physiques, exaggerated poses, and improbable sizes.

The characters in Tom of Finland's drawings are mostly men in uniform (soldiers, policemen, sailors, lumberjacks, and bikers in leather) involved in homosexual sex of all kinds and in every (im)possible position. Their huge pectorals and muscles, their perfectly-rounded bottoms and their enormous penises point to the exaggerated maleness of Tom of Finland's men, an iconography that goes against the dominant representation of gay men as effeminate and is thus an important point of reference for the leather gay subculture. Tom of Finland's drawings counteract also the enduring stereotype of "the sad and unhappy homosexual": the men in them are clearly having a lot of fun and are proud of their sexual orientation. Tom of Finland once declared that when he started to draw, "a gay man was made to feel nothing but shame about his feelings and his sexuality. I wanted my drawings to counteract that, to show gay men being happy and positive about who they were." Even if some of Tom of Finland's drawings take place in prisons or police-stations or depict sadomasochistic situations, there is always a strong sense of play underlying them and drama never intervenes.

A complex network of looks takes place in most of Tom of Finland's drawings. As Nayland Blake has pointed out, Tom of Finland has challenged the framework of the single gaze of traditional pornography where the object presents itself passively to the eyes of the viewer. In Tom of Finland's drawings there is an interaction of looks between the different characters, which complements the gaze of the viewer. Often the two men having sex in the foreground are observed by a third man in the background. Sometimes the characters even respond to the gaze of the viewer, as in the case of Tom of Finland's re-elaboration of Michelangelo's David (commissioned by the conservative Italian film-director Franco Zeffirelli). Tom of Finland's David, much better endowed than Michelangelo's, wears a defiant look on his face and seems to be telling the viewer: "I know what you're looking at."

Tom of Finland's *oeuvre* is a lot more than just a series of "dirty drawings." As Dennis Forbes and Fred Bissonnes have pointed out, when the cultural history of the late twentieth century's Gay Liberation Movement will be written, Tom of Finland will have to be acknowledged as having created an effective iconography for part of the gay world.

Tom Swift Series

A popular series of forty boys' novels published by Grosset & Dunlap between 1910 and 1941, the Tom Swift books were mostly published under the pen name "Victor Appleton," though they were produced by the Stratemeyer Syndicate, a book packager that created other popular juvenile literature. Attempts were made to revive the series three times over the years, once in the 1950s with the Tom Swift, Jr. books, and again in the 1980s and 1990s, but they were never as successful as the originals. The hero of the first series was Tom Swift, a young inventor, portrayed as a plucky, ingenious figure who used modern technology and American know-how to create new devices and foil his rivals. An excerpt from an advertisement written by Edward Stratemeyer (1862-1930) for the first Tom Swift books characterizes the scope of this series: "It is the purpose of these spirited tales to convey in a realistic way the wonderful advances in land and sea locomotion and to interest the boy of the present in the hope that he may be a factor in aiding the marvelous development that is coming in the future."

The Stratemeyer Syndicate, which created more than 1400 books between 1904 and 1984, devised the series concepts and hired writers to complete book-length stories from a limited outline in exchange for a flat-fee compensation (\$75.00 for the first Tom Swift book in 1910). The writer hired to become "Victor Appleton" for the majority of the Tom Swift volumes was Stratemeyer's close friend, Howard Roger Garis (1873-1962), who created the Uncle Wiggily stories and ghostwrote nearly 300 books for the Syndicate. Stratemeyer and Garis worked closely to craft a series of adventure stories with inventions inspired by the real-world work of inventors who were mentioned in magazines like *Scientific American*. Other writers involved on a limited basis for this series included W. Bert Foster and John W. Duffield.

The early Tom Swift volumes featured existing vehicles, like a motorcycle and a motorboat that Tom acquired and improved with suggestions from his father, "the aged inventor," Barton Swift. Next, Tom helped others with their inventions, the *Red Cloud*, an airship designed by John Sharp, and a submarine built by his father. By the fifth volume (all five were published in 1910), Tom built his first invention, an alkaline battery for an electric car. Later inventions of note included his sky racer (1911), a revolutionary photo telephone (1914), a coast-to-coast airline express (1926), a motor home called a "house on wheels" (1929), and a device to allow radio listeners to see the performers on a silvery screen with his "talking pictures" (1928).

In most cases, Tom Swift's vehicles were bigger and faster than their real-world counterparts, which often did not become practical until much later. A typical story involved a discussion of an exotic locale or strange event by the main characters, Tom, Barton, Tom's chum Ned Newton, and their eccentric friend, Mr. Wakefield Damon, who "blessed" more than 1,200 items and parts of his body throughout the series. Tom and friends were usually dogged by rivals, including Andy Foger, the squint-eyed redheaded bully who seemed to be on the scene no matter how remote the locale.

The Tom Swift series generated a combined sales of more than six million volumes so it is no surprise that in the early 1950s, the Stratemeyer Syndicate created a spin-off series, Tom Swift Jr., to try to reclaim part of the market share lost to the *Rick Brant* series (1948-1967), published under the "John Blaine" pseudonym. Work on the Tom Swift, Jr. series was begun in 1951 and by January 1952, a manuscript of the first volume was far enough along to receive comments by one of the Syndicate's science consultants, Robert H. Snyder. Despite this early start, the first five books in the series would not be published until 1954 after rewrites. Between 1954 and 1971, Grosset & Dunlap published thirty-three books about Tom Swift, Jr., his sister Sandra, pal Bud Barclay, and potential girlfriend, Phyllis Newton, daughter of Ned Newton from the original series. Tom Swift, Sr. makes appearances as a middle-aged man who remains active in science and invention. While the original series had titles like *Tom Swift and His Electric Rifle* (1911), the Tom Swift, Jr. series used atomic, electronic, and outer-space themes, like *Tom Swift and His Atomic Earth Blaster* (1954). For the Tom Swift, Jr. series, plot took a back seat to title in the early development of a volume. Long lists of proposed titles were considered. Once a title was selected, a story idea would be devised to match it.

"Victor Appleton II" was said to have "inherited his wonderful storytelling ability from the original Victor Appleton" in dust jacket ads for the early books. It is hard to say whether the Syndicate was referring to the ghostwriters or itself. While several writers wrote a volume or two, most of the newer series (volumes 5-7, 9-29) were written by James Duncan Lawrence (1918-1994), a Syndicate ghostwriter who also wrote for a number of different media, including screenplays for television and radio, books, and comic strips.

The Tom Swift, Jr. series was discontinued in 1971 due to declining sales, which had more to do with the aging Baby Boomers than it did with the perceived problem of Tom's achievements being surpassed by a real-world NASA. At the close of the Tom Swift, Jr. series, an anonymous memo laid the groundwork for yet another new Tom Swift series set in the far future where Tom Swift's inventions have become a reality. This new series was, indeed, set in the far future and contained science-fiction stories of interplanetary space travel with titles like *Terror on the Moons of Jupiter* (1981). Very little in the way of invention was included in the stories, and little or no reference was made to the previous two series. Part of the reason for this was that the new group of ghostwriters had published science fiction books under their own names, and because this series was published by Wanderer, a division of Simon & Schuster, which had purchased the Stratemeyer Syndicate in 1984. The third Tom Swift series was discontinued at this time.

In 1991, Simon & Schuster decided to try the venerable name of Tom Swift again in a new series published under its Archway imprint. Thirteen volumes were published of Tom Swift in a contemporary setting with inventions again being the focus, as in *Cyborg Kickboxer* (1991) and *Death Quake* (1993). This new series did not sell well and it was soon discontinued. All in all, Tom Swift appeared in ninety-nine stories in four series since the first volume was published in 1910.

Tomlin, Lily (1939—)

Lily Tomlin, a gifted comedienne, writer, and actress, emerged on American television in the early 1970s as a featured performer on the highly innovative and successful comedy variety series *Rowan & Martin's Laugh-In*. She became noted for her gallery of memorable characters, such as Ernestine the telephone operator and the sassy, five-year-old Edith Ann, and for her ability to transform herself into many vivid personas without costume changes or make-up. Throughout the 1970s and 1980s she established herself as "America's reigning female comic genius" by appearing in a series of praised television specials, releasing a bestselling comedy album, and making a successful transition onto the movie screen. Known for her versatility, Tomlin occasionally appeared in more dramatic roles for some of Hollywood's most respected directors. In 1985, she scored her

Lily Tomlin

greatest artistic triumph by appearing in her one-woman Broadway smash *The Search for Signs of Intelligent Life in the Universe*, which presented Tomlin's attempt to summarize a generation of social history through a series of character sketches. By the 1990s, Tomlin was displaying her talents on series television, film, animation, and commercials.

Mary Jean Tomlin, born on September 1, 1939, in Detroit, Michigan, had a great interest in observing people from childhood. Raised by a factory worker and housewife who had moved north from Paducah, Kentucky, in search of jobs during the Depression, Tomlin expressed an interest in theatre while attending Wayne State University. She combined her desire to perform comedy with talents for observation and mimicry in order to find her own style as a performer. Author Jeff Sorensen comments on Tomlin's comedic evolution when he writes: "Unlike other comics who stick with one successful persona, she was determined to play as many parts as she could dream up. Characters impressions were what interested Tomlin; she had no intention of standing up and telling topical jokes on subjects." Of her comic style she has said, "My comedy is actual life with the slightest twist of exaggeration. I construct compressed accuracy, a character essence that is as true as I can get it. I don't go for laughter. I never play for a joke *per se*. If the joke gets in the character's way, I take it out."

Tomlin began her career playing in Detroit coffeehouses while still in college, eventually making her way to New York. While honing her routines at a Manhattan nightclub and in several off-Broadway productions, Tomlin's career took off after she landed a part on *Laugh-In* in 1969. Tomlin became an instant celebrity during her tenure on *Laugh-In*, which lasted from 1969 to 1973. She endeared herself to audiences by inventing characters embodying both humor and intelligence. The most recognizable of her zany characters was Ernestine the telephone operator, a nasal and overbearing woman who began her sketches with the catchphrase: "One ringy-dingy, two ringy-dingy, is this the party to whom I am speaking?" The wise-cracking Ernestine became so popular that AT&T offered Tomlin \$500,000 to do a commercial, but the comedienne refused noting it would compromise the character's comedic integrity. One of Ernestine's most famous lines was "We don't care. We don't have to. We're the Phone Company." Tomlin's next most popular character of the early 1970s was Edith Ann, an uninhibited, lisping, five-year-old who sat in an oversized rocking chair as she discussed her life. Edith Ann would conclude her observations with her trademark expression "And that's the truth." Tomlin continued to create memorable characters after she left *Laugh-In* to star in a series of comedy specials. Her most famous creations include Trudy the bag lady, Sister Boogie-Woman, and Mrs. Beasley. The great popularity of these and other characters transformed Tomlin into a national comedic phenomenon.

The comedienne's versatility continued to expand as she moved beyond television. Her film debut came in 1975 when she was cast in Robert Altman's music industry epic *Nashville*. Tomlin, in a noncomedic role, played Linnea, a devoted mother and gospel singer who had an affair with a rock star. For this performance she received an Academy Award nomination. She followed this early screen success with such acclaimed films as *The Late Show* (1977), *9 to 5* (1980), *All of Me* (1984), and *Big Business* (1988). Her career suffered its greatest setback in 1978 with the release of *Moment by Moment*, which paired her with John Travolta in a romance. Critics lambasted the film, and audiences ignored it. Tomlin bounced back in

1985 with her Broadway triumph *The Search for Signs of Intelligent Life in the Universe*. She and writer Jane Wagner produced the acclaimed feminist look at the human condition that appealed to all audiences. Tomlin continued to express her versatility into the 1990s by appearing in such diverse roles as a TV executive on the sitcom *Murphy Brown*, the teacher/bus driver on the animated educational show *The Magic School Bus*, and through many film and TV guest appearances. Two of her best characterizations of this period were as an aging hippie in the film *Flirting with Disaster* and as a murderous Christmas spirit in a 1998 episode of *The X-Files*.

Tone, Franchot (1905-1968)

In the succinct words of David Thomson, "Tone was perhaps all that Franchot had—that and Joan Crawford," the first of his four wives. Born the son of a wealthy industrialist in Niagara, New York, and educated at Cornell, Franchot Tone had a distinguished stage career, working with the Group Theater among others. His film career, however, although long and prolific (1933 to 1965), consigned him to roles as wealthy café-society sophisticates, weak cads, or the losing end of love triangles in archetypal romances of the 1930s and 1940s. In 1935 he was Oscar-nominated for a supporting role in *Mutiny on the Bounty*, and married Crawford "after one of the most denied, affirmed, and re-denied romances Hollywood had ever witnessed," as one columnist commented. Unhappy with his film roles, he returned to Broadway, starring in Ernest Hemingway's *The Fifth Column* in 1940, but was soon back in Hollywood. Although he lacked the necessary screen charisma for leading-man stardom, he worked with many of the top directors, including John Ford, Von Sternberg, and Billy Wilder. He made several films with Crawford, and was with Jean Harlow in *Bombshell* (1933) and Bette Davis in *Dangerous* (1935), but gave his most memorable performances towards the end of his career and his life: the dying president in Otto Preminger's *Advise and Consent* (1962) and the grim Ruby Lapp in Arthur Penn's *Mickey One* (1965).

The Tonight Show

NBC's venerable late-night talk show *The Tonight Show* has provided a unique window into the changing times and mores of contemporary American culture. Beginning in 1954, its four principal hosts have used the program as a pulpit for nightly commentary on events both profound and piddling. Over the decades, the show has fluctuated wildly in terms of its influence and quality. At various times it offered groundbreaking comedy, scintillating conversation, and instructions for stylish living. Even Jay Leno's tepid, non-threatening *Tonight Show* of the 1990s seemed somehow to reflect the tenor of its self-satisfied times.

The first host of *The Tonight Show* was Steve Allen, a former disc jockey who had presided over a succession of Golden Age TV offerings. During his innovative three-year run as host, Allen established the program's basic format: a monologue followed by a comedy set piece and a series of conversations with celebrity guests. Allen also inaugurated the show's long-running practice of breaking in new stand-up comics. Lenny Bruce and Mort Sahl were just two of the comedians who got their start slinging jokes at Allen's audience. In later years, such prominent entertainers as George Carlin, Richard Pryor, and Roseanne Barr would gain their initial national exposure on the program.

In 1956, NBC moved Allen onto another show and briefly retooled *The Tonight Show*. That experiment failed and the network eventually brought in Jack Paar, a garrulous game show host, as Allen's replacement. Beginning in July of 1957, Paar brought a more erudite presence to *The Tonight Show*. He eschewed comedy skits for genteel conversation, often booking guests from the political arena. Robert F. Kennedy, Richard Nixon, and labor leader George Meany were a few of the luminaries who chatted with Paar over the years.

Behind the veneer of a highbrow gabber, there was a darker side to Paar as well. He picked fights with notable figures in broadcasting, Walter Winchell and Ed Sullivan among them. On numerous occasions he threatened to quit the program, citing network interference and his own ennui with the late-night grind Paar was the first of *The Tonight Show* hosts to cut his work week down from five days to three. On February 11, 1960, Paar finally walked out on the program—literally, in the middle of a broadcast. He did return to his desk a few weeks later, but after a series of additional controversial incidents, Paar took his leave of *The Tonight Show* in March of 1962.

After a half-year interregnum, during which guest hosts filled the command chair, Johnny Carson became Paar's successor. A glib boy magician from Nebraska, Carson brought a midwestern geniality, along with a sharp wit, to the hosting chores. He also introduced America to Ed McMahon, his second banana from the game show

Frank Sinatra (left) and Johnny Carson on *The Tonight Show* in 1976.

Who Do You Trust, to serve as announcer and sounding board. The pair would remain together on the program for the next 30 years, with McMahon's famous introduction, "Heeeeere's Johnny!" becoming a globally recognized refrain.

For a time, Carson retained Paar's reliance on learned guests, though over the decades Hollywood glitz began to trump intelligent conversation. In a reflection of this shift, the show moved from New York to Los Angeles in 1972. Out west, *The Tonight Show* took on more of an adult urban contemporary feel. Hipsters like Burt Reynolds and Hugh Hefner replaced the stodgy Hubert Humphreys of the Paar years. *The Tonight Show* became more popular than ever, as "Johnny" reveled in his shaman of late-night status.

The show's veneer of cool began to melt away in the 1980s, as *The Tonight Show* grew old along with its audience. Once the icon of hipness, Carson now seemed a mainstream fuddy-duddy, as edgier comics like David Letterman and, later, Arsenio Hall began to steal some of his limelight. The nadir of *The Tonight Show* came with the 1983 installation of Borscht Belt fossil Joan Rivers as Carson's permanent guest host. The whining, shrewish Rivers alienated many of the show's loyal viewers—and eventually enraged her patron by jumping ship for her own, competitive late-night program. Carson replaced her with comedian Jay Leno, who took over when Carson abruptly announced his retirement as of May 1992.

Leno, who beat out the more talented Letterman for the job after a well-publicized internecine struggle, took over the day after Carson signed off. He made almost no changes to the format, apart from dropping the unnecessary second banana. A workaholic stand-up, Leno relied on his strong monologues to distract attention from his sub-par interviewing skills. He seemed on the verge of losing control of the show when Letterman fielded a competitive program on CBS, but rode back to the top of the ratings on the strength of his jokes about the O.J. Simpson murder trial. Though Leno's tame take on late-night chat offered little to differentiate it from its competitors, the equity in *The Tonight Show* franchise and the host's skill with a one-liner ensured it would remain a subject of office water cooler conversation for years to come.

Tootsie

Named one of the top 100 American Films by the American Film Institute, *Tootsie* was released in 1982, and became the year's blockbuster romantic comedy. The 1980s saw the opening of several films featuring cross-dressing, including *Yentl*, *Victor/Victoria*, and *Torch Song Trilogy*; and yet it was *Tootsie* that garnered the most critical attention and popular acclaim. The American cultural obsession with cross-dressing surfaces in newspaper stories, television talk shows, children's tales, and movies. Anthropologists, literary critics, and historians all have paid a great deal of attention to cross-dressing, producing studies of hermaphrodites, boy actors, and the politics of camp. Cross-dressing and the treatment of cross-dressing raises, in a relatively concise if somewhat confusing fashion, questions of the

Film poster for *Tootsie*.

construction of gender and sexuality. If a man can dress up successfully as a woman, does that mean that gender itself is merely a performance, albeit a culturally dictated one? What does it mean to "become a woman?" That is, what are our culture's definitions of femininity, and, by implication, masculinity? Upon its release, *Tootsie* quickly became a focus for popular and critical debate of these questions. Both critics and popular audiences responded to the film's investigation of gender roles as well as its interrogation of what it means to be a woman and what it *could* mean to be a man.

In *Tootsie*, Dustin Hoffman plays Michael Dorsey, an out-of-work New York actor who dresses as a woman, Dorothy Michaels, in order to land a role in a very successful soap opera, *Southwest General*. His character, named Emily Kimberley, becomes a fan favorite because of his/her improvised feminist protests on the set. Off stage, Hoffman falls in love with Jessica Lange, another actress in the series, who, thinking Hoffman is a woman, becomes his/her confidante. Finally, Dorothy un masks, and the movie concludes with a stereotypically happy romantic ending and with Michael's understanding of the difficulties of being a woman. Becoming a woman for Michael means more, the movie implies, than simply shaving more often, wearing makeup, and donning pantyhose. In other words, while pretending to be Dorothy in order to make a living, Michael realizes that it's no easy game to live as a woman in our culture.

Michael Dorsey and Dorothy Michaels are both familiar figures in Hollywood's long history of representations of male-female impersonators in movies such as *Pat and Mike*, *Easy Living*, *Bringing up Baby*, and *Some Like It Hot*. In fact, Hoffman modeled Dorothy Michaels's mannerisms on Jack Lemmon's Daphne in *Some Like It Hot*. *Tootsie*'s appeal, however, lies in the way that it moves beyond the farcical transvestitism of its predecessors. *Tootsie* attempts to be social commentary, not just comedy. Dustin Hoffman's performance in the film does not resemble drag or camp, but rather presents itself as a serious comment about playing a woman in contemporary American culture (just as it is serious business for Michael Dorsey within the context of the movie).

Tootsie quickly became the ground from which to spring feminist critiques of women in mainstream film, including analyses of positive and negative images of women and feminism in film, as well as of the potential co-optation of feminism for enormous commercial profit. Many critics asserted that *Tootsie*'s lesson is that women are simply better than men—Dorothy Michaels, they argue, is not only more successful than Michael Dorsey, but she is more sympathetic, feeling, and observant as well. (Indeed, Hoffman's oft-repeated claims in interviews that playing Dorothy made him a better man, less prone to anger and more sensitive to others' needs, seems to attest to this interpretation.) Since Dorothy Michaels is really a man, however, others have argued that the hidden message of the film is that men are actually better than women. After all, no matter whether one thinks that *Tootsie* destabilizes gender roles or reaffirms them, a man disguised as a woman seems to be better at being a woman than a real woman (as Teri Garr's character learns, when she discovers that Dustin Hoffman has won the role of Emily over her). Many critics read the film as arguing that only a man can be tough and honest enough to express women's rights. In fact, "Tootsie" has become slang among some literary and film critics for a man who claims his identity as a feminist even while maintaining a sexist understanding of women. The image of Dustin Hoffman in a long red sequined dress operates simultaneously, it seems, as both a feminist icon and a parody of feminism.

Although *Tootsie* is all about acting, in the end it is unclear whether or not the film implies that all gender roles are performances. Do the daily rituals of becoming a woman which *Tootsie* obsessively documents—tweezing eyebrows, applying mascara, shaving legs, applying nail polish, and fixing one's hair—mean the same thing for a man dressing as a woman as they do for a woman dressing up? There does not seem to be any question, for example, that Dorothy Michaels is "really" Michael Dorsey (that is, that his masculinity is a performance). In addition, the film does not investigate the ways in which femininity is a performance that the women in the movie perform as well (or not as well) as the men. "Genuine" gender roles are reasserted at the end of the movie, suggesting that cross-dressing or the understanding of gender as performance should take place only on stage, or for limited periods. In other words, one could read *Tootsie* as a slick (some would argue exploitative) poke at gender roles, whose conclusion leaves those roles finally intact (as a film that is, in the end, not good for women). And yet, such a reading might be too simplistic, for it denies what makes the film so popular in the first place—the basic ambiguity of cross-dressing itself.

Top 40

Top 40 is a listing of the 40 most popular single records in the nation for a given week, and is derived from radio station playlists and retail sales. The listing is based on trade magazines including *Gavin Report*, *Cashbox*, and *Billboard*. Top 40 also is an AM radio format that consists of music, trivial talk, news, and promotions including services, money, and goods given to listeners. Though Top 40 radio has undergone many changes in its 45-year history, it remains a viable format. From 1956 to the present, Top 40 has provided Americans, especially those born in the 1940s, a musical smorgasbord served up through their favorite disc jockey. Disc jockeys were chosen on the basis of their voice, excitement, and sex appeal. The Top 40 format did not leave much room for personalities, and for that reason did not appeal to some disc jockeys. At first, Top 40 was not aimed at a teenage market; instead disc jockeys, adhering to a playlist, entertained and did what was called "formula radio." But Top 40 soon became a bridge from adult-oriented music to rock 'n' roll and rhythm and blues to other styles. The youth market gravitated to Top 40, and with the evolution of rock 'n' roll contributed to its early success. By 1958, Top 40 stations had spread from the Midwest to the rest of the country.

While the Top 40 format originated in 1956, there were earlier developments in radio that helped in its formation. In 1935, *Your Hit Parade*, a program on NBC, featured live performances of the most-liked songs based on sheet music, records, and airplay. In 1941, *Lucky Lager Dance Time*, a Los Angeles radio program on KFAC, first aired playing hit records and a "Lucky Ten" countdown. By 1949, KOWH, an Omaha, Nebraska, radio station, featured a playlist of popular records. Popular disc jockey Alan Freed produced the *Moondog Rock and Roll Party* in 1951 that introduced black music to a mostly white audience. In 1953, radio still held its own against television, with 96 percent of homes and 76 percent of cars having radios. Americans listened to radio on a daily basis or at least once per week. In 1953, New Orleans radio station WDSU played the top 20. Top 40 became an expanded version of previous programs, including *Your Hit Parade* and *Lucky Lager Dance Time*, and was programmed over a full broadcast day with disc jockeys and local advertisements.

The exact origin of the Top 40 is disputed and there are several explanations of its beginning. In one instance, Top 40 began in the context of several bars in several cities, including Omaha, New Orleans, Dallas, San Antonio, and Houston. Another story credits radio programmer Bill Gavin with having invented the Top 40 chart. Most scholars of radio and disc jockey Dick Clark, however, give credence to Top 40 beginning at a bar in Omaha where in an interval of two years from 1953 to 1955, Todd Storz, operator of KOWH devised the format. The story goes that Storz and his program director, Bill Stewart, were sitting in a bar in Omaha, when they became aware that patrons played the same jukebox selections repeatedly over the course of four hours. When one of the patrons was asked why, she plainly responded, "I like 'em." Inspired by her

response, Stewart, based on the most-played records on the jukebox, developed a playlist of thirty songs. Storz implemented this playlist at KOWH and the ratings improved drastically. Yet, another etymology of Top 40 has Storz developing a radio program at his New Orleans station WTIK called *Top 40 at 1450* immediately after acquiring it in 1953. The program was in response to rival station WDSU's *The Top 20 at 1280* show. Disc jockey Bob Howard, reasoned that if a list of 20 hits was satisfactory, then 40 would be outstanding, and consequently developed a show of 40 selections called *Top 40 at 1450*. In 1955, influenced by Howard, Storz at WTIK radio in New Orleans continued the concept at an Omaha radio station. KLIF owner Gordon McLendon also initiated the Top 40 format, including goofy promotions and jingles. By 1956, Top 40 had developed into a popular format.

Several key individuals were considered pioneers of Top 40, with each bringing an innovation that became part and parcel to the format. Gordon McLendon, called "the Orson Welles of radio," was a creative talent with programming and promotional ideas that gave early Top 40 its form, vitality, and innovative jingles. In radio, jingles are the most reliable indicators for listeners remembering a station. Jingles existed before Top 40, but it was McLendon who hired a music director, who in turn employed a vocal group to record jingles designed for Top 40.

Mike Joseph and Chuck Blore were also two important programmers in early Top 40 radio. It was McLendon who employed Blore as a disc jockey and program director. Blore is credited with the concept of "Color Radio," a term inspired by color television and a format developed in 1958 at KFWB in Los Angeles. "Color Radio" had nothing to do with ethnic diversity, but rather diversity in promotions, news, music, and a strong amusement and entertainment element. Joseph, a radio consultant, kept the industry focused on playing the hits and giving listeners what they wanted—always a central mission of Top 40 radio. Bill Gavin, programmer for the *Lucky Lager Dance Time* programs heard on 48 western stations, monitored sales and combined these data with other statistics, creating the *Bill Gavin's Record Report* in 1958. This information base became the foundation on which the Top 40 playlist was created. *The Gavin Report* was an innovation in the radio business that gave statistics on various markets and was essential to the development of Top 40.

In its early years, from 1956 to around 1962, Top 40 was democracy in radio. Musical categories including pop, rock 'n' roll, country, rhythm and blues, novelty tunes, jazz, and movie soundtracks made the format and were played to a mass audience. For example, from a list of Top 40 singles, the following songs and artists were represented in the following categories in 1960: pop ("Save the Last Dance for Me," the Drifters), rock 'n' roll ("It's Now or Never," Elvis Presley), country ("He'll Have to Go," Jim Reeves), rhythm and blues ("Finger Poppin' Time," Hank Ballard & the Midnighters), novelty tune ("Itsy Bitsy Teenie Weenie Yellow Polka Dot Bikini," Brian Hyland), jazz ("Georgia on My Mind," Ray Charles), and movie soundtrack ("Theme from 'A Summer Place,'" Percy Faith). A clock, sometimes called a "hot clock" in the early days and now a computer readout with a written scenario, drives Top 40. Disc jockeys have to religiously follow the clock. Relying on its popularity, a song, could be repeated every hour or every six hours. Top 40 has not been without criticism, and while the format purported to play what people wanted to hear and espouse democratic ideals, critics, including Columbia Records, accused disc jockeys of relinquishing air time and kowtowing to teenage tastes. Obviously, during the course of its maturity, Top 40 changed in that each of the various subgenres of pop

and rhythm and blues either now has its own radio format and niche market or no radio home at all.

The disc jockey, a term coined by record executive Jack Kapp in 1940, was the heart and soul of Top 40. A good disc jockey could imbue the staid format with a personality and identity. Entertainers in their own right, disc jockeys of Top 40 radio, would introduce and build up a song by talking while playing the instrumental introduction, finishing just before the vocal would start. This practice was called "hitting the post" or the art of the talk-up. While it is questionable whether disc jockeys could accurately predict what records would become hits, Top 40 radio disc jockeys always took credit for selecting certain hits. Disc jockey Wolfman Jack takes a more conservative stance on the role of disc jockeys making hits. "As long as I can remember there've been lists," he said. "Top 40 lists in the trade magazines, and in my life since 1960 I've been going by the goddamned charts. You didn't vary too far. There's no disc jockey alive who can make a record happen. All you can do is give it exposure." Many stations featured a pick hit based on a disc jockey's recommendation that actually turned out to be a hit.

The exposure of diverse musical styles, including African American popular music, owes much to the Top 40 format. By 1957, led by Chuck Berry and Fats Domino, a number of African American styles, from calypso to rhythm and blues, made the format, including records by Harry Belafonte, the Del Vikings (the first successful interracial group in rock 'n' roll), the Drifters, Della Reese, Little Richard, the Coasters, Little Anthony and the Imperials, the Platters, Larry Williams, Roy Brown, Jimmy Reed, and Ruth Brown. The first Motown entry in the format was Barrett Strong's "Money," followed in succeeding years with records by the Supremes, and the Four Tops, among others. Some of the most enduring rock 'n' roll also debuted on the Top 40. In 1957, Jerry Lee Lewis, Buddy Holly and the Crickets, and the Everly Brothers all appeared on the Top 40.

While black popular music could be heard on Top 40 by the original performers of the music, the Top 40 format often played emasculated and watered-down versions of black popular music. "Cover" records had made their debut many years before Top 40. A narrow definition of "cover" referred to a song that was successful by a black artists and then recorded by a white artist on a major label. Black bluesman Joe Turner's "Shake, Rattle and Roll" was recorded by Bill Haley and His Comets. "Sincerely" by the Moonglows, a black vocal group, was recorded by the McGuire Sisters. The covers in many instances climbed to the top of the charts while the "authentic" originals were shut out. Eventually, the black originals began to outshine the covers, as Sam Cooke's "You Send Me" did over the Teresa Brewer's version.

Top 40, according to radio consultant Guy Zapoleon, can be a format envisioned in four cycles, each lasting from seven to nine years. Each cycle has three stages: birth, extremes, and doldrums. Cycle 1 (1956-1963) encompasses pop, rock, R&B, dance, and country. Cycle 2 (1964-1973) embodies pop, rock, R&B, acid rock and soft rock, and country. Cycle 3 (1974-1983) embraces pop, rock, R&B, the disco, adult/contemporary, and country. Cycle 4 (1984-1993) includes pop, rock, R&B, rap/funk, adult/contemporary, and country. By the end of the twentieth century, rap or hip-hop, country, and hard rock have yet to penetrate the Top 40. When rap first broke into the pop charts, Casey Kasem, the originator of the countdown and *Casey's Top 40*, is credited with playing the hits, but other Top 40 stations have taken a harder line irrespective of how rap songs charted, most Top 40 stations have consistently avoided rap. Perhaps

mainstream rap artists such as Mase and Will Smith will eventually be palatable to the format.

Payola, the act of paying for air play, long suspected in the radio industry, was investigated by Congress in 1960. Representative Oren Harris and his subcommittee targeted Alan Freed, an extremely popular disc jockey who was found guilty of two counts of commercial bribery by the New York District Attorney's Office. His fine was small, but as a result he lost his job and was subsequently indicted for back income taxes. Payola scandals gained notoriety and resurfaced in 1984 and again in 1986. Despite these scandals, Zapoleon believed that Top 40 remained robust and continued to mirror the best of all types of music.

While Top 40 may have been democratic in its selection of playlists where each song was evaluated on its own merit, it was less so in terms of the diversity in race and gender of Top 40 disc jockeys. The majority of Top 40 disc jockeys were white males. No satisfactory explanation exists as to why more disc jockeys of color were not employed in Top 40 radio. In 1964, after Top 40 had been in existence for more than nine years, several black disc jockeys were hired, including Larry McCormick, reportedly the first African American disc jockey to work at KFWB in Los Angeles. In 1965, Chuck Leonard was hired for New York's WABC radio, and in 1968, Frankie Crocker was a Top 40 DJ on WMCA. Also in 1968, Walt Love was hired as a Top 40 disc jockey at Houston's KILT. In 1973, Yvonne Daniels, daughter of singer-dancer Billy Daniels, broke gender and race by becoming the first woman and first African American to be hired as a Top 40 disc jockey at WLS in Chicago.

By 1965, disc jockey and program director Bill Drake experimented with programming ideas to transform KHJ in Los Angeles to a Top 40 station, devising the concept of "Boss Radio." This Top 40 format was copied by numerous stations across the country. By 1968, the listening audience for Top 40 began to erode from competition by FM "free form" (later called "progressive" rock) radio. During most of the 1970s, Top 40 did maintain a smaller audience, even as the popularity of disco peaked in 1978. Though Top 40 regained some of its listening audience in 1983, by 1993, mainstream Top 40 disappeared as new appellations, including rock and alternative, were added to Top 40 formats. The number of radio stations identifying themselves as Top 40 also dwindled from 578 to 441. Gavin noted that the strong competition experienced by Top 40 stations brought the ratings down. In addition to competition from other radio stations, MTV (Music Television) launched in 1981, was an immediate success with young viewers. MTV essentially did what Top 40 had purported to do all along, and that was play the hits and give listeners what they wanted to hear.

In 1997, Top 40, fueled by popular artists such as the Spice Girls, made a comeback, and in its more than 45 years of existence continued to be the best format for variety in music. The Top 40 radio format was a general standard that achieved intermittent success and impacted the music industry. It was a format and system that monopolized playlists, not only dictating songs radio listeners heard, but the number of times, the order, time of day, and even to some extent the professional lives of the artists printed alongside the titles on the list. Top 40 inherently became its own worst enemy, since as listeners tended to mature, they developed preferences for certain types of music instead of the melange of popular songs on the playlists. Radio stations began emphasizing light rock, classic soul and R&B, classical, and jazz in efforts to capture a particular segment of the market. In spite of its vacillations, Top 40 has presented a diverse repertoire of songs that reflects the world of popular music.

Top 40 has remained resilient in spite of its many changes. "Through forty years, it (Top 40) had weathered one payola scandal after another, one competing format after another, one new technology after another, and all the shifts in fortune that society, culture, politics, and the economy can bring," observed noted writer and editor, Ben Fong-Torres. By the end of the twentieth century, Top 40 continued to be a viable format.

—Willie Collins

Tora! Tora! Tora!

A 1970 motion picture recounting the attack on Pearl Harbor by the Japanese during World War II, *Tora! Tora! Tora!* was at the time of its release the second most expensive movie ever made, just behind *Cleopatra* in actual cost. Based on the historic novels *Tora! Tora! Tora!* by Gordon W. Prange and *The Broken Seal* by Ladislav Farago, the film recounts what happened on both the American and Japanese sides. The title refers to the Japanese code word which signaled the launch of the attack.

The idea for making the film came from Elmo Williams, who was hoping for another financial triumph along the lines of *The Longest Day*. From the beginning it was planned as a film of monumental scale that would examine the events of Pearl Harbor in precise detail. A tremendous amount of research had been done by Dr. Gordon Prang and his staff at the University of Maryland. (Prang had been appointed by General Douglas MacArthur as the official historian of the Pacific war, and had the advantage of being fluent in Japanese). In order to further enhance the authenticity of the film, Akira Kurosawa, Japan's most famous and possibly greatest director, was hired to direct the Japanese scenes.

The production faced numerous problems. For example, apart from one destroyer, nothing was left of the original Japanese fleet, requiring the filmmakers to construct a Japanese aircraft carrier and a plywood battleship and have them sent to Japan for filming. With no Japanese Zeroes available, 28 Vultee AT-6's were "stretched" six feet so that they would appear to be the same size and were then fitted with appropriate cowlings, windshields, and wheel skirts (with the result that parts were always falling off during flight).

Nor was there much left of the American fleet either, now that it had been mothballed. One floating battleship set alone cost \$1 million to construct. The Fox miniature department built models of 19 Japanese ships and ten American ships at a scale of three-quarters of an inch to the foot, thereby creating forty-foot "miniatures." They also had to build to scale the Battleship Row docks and surrounding land areas.

Tora! Tora! Tora! took two years to prepare under the supervision of Williams. American director Richard Fleischer was called in

A scene from the film *Tora! Tora! Tora!*

during the last six months of preparation before shooting was to begin. He met with Kurosawa and Williams in Hawaii. Williams wanted Kurosawa to cut several scenes from the script that he felt were extraneous. Kurosawa was reluctant but agreed. Kurosawa also felt it was important to depict the Japanese military as all spit and polish, formal, correct, obsessed with protocol and ceremony, while Fleischer would depict the American military as relaxed, laid-back, a bit sloppy, and casual.

Ultimately, the producers of the film spent \$25 million to reenact the attack on Pearl Harbor, more than the Japanese had spent to launch it. The attack itself was a complex sequence requiring smoke, flames, explosions, planes diving or bombing or crashing, torpedoes running; hangers, planes, and ships blowing up; anti-aircraft and machine guns firing, as well as actors in almost every shot.

The American sequences were scripted by Larry Forrester and starred Martin Balsam as Admiral Kimmel, Joseph Cotten as Secretary of War Stimson, E.G. Marshall as Lt. Colonel Bratton, James Whitmore as Admiral Halsey, and Jason Robards as General Walter C. Short. The Japanese sections were scripted by Hideo Oguni and Ryuzo Kikushima and starred Soh Yamamura as Admiral Yamamoto, Tatsuya Mihashi as Commander Genda, Takahiro Tamura as Lt. Commander Fuchida, Eijiro Tono as Admiral Nagumo, and Koreya Senda as Prince Konoye.

In Japan, Kurosawa began to resent the intrusion of five American production people sent to oversee things. He insisted on shooting interior scenes from 4:00 p.m. to midnight. He did not like the American design of the prefabricated structure sent to Toei Studios to serve as his administration building. He cast the heads of several large corporations in bit parts (in hopes that they might finance his next film), and insisted that everyone on the crew wear special *Tora! Tora! Tora!* jackets and regulation Navy caps and salute the actors whenever one passed by.

When the first day of shooting came, set inside a shrineroom on board a battleship, Kurosawa decided it was the wrong shade of white and insisted that every member of the crew work to repaint it. He became obsessed with endless minor details while overlooking a major one, despite warnings from the Americans. The plywood battleship sent over from America was being constructed facing the wrong direction.

Soon the Japanese portions were falling far behind schedule. The studio became intolerant of the delays, and Kurosawa was receiving threats from politically important people who did not want the film to be made at all. (On his way to the set, Kurosawa would lie down on the floor of the limousine to avoid assassination). As he became more abusive, his own crew started to turn against him. The story was released that illness forced him off the picture, but the truth was the

studio had finally had enough and fired him. Two commercial Japanese directors, Toshio Masuda and Kinji Fukasaku took over.

Perhaps it was because of the Japanese involvement, but the final film downplays the real reasons for the United States contemplating war with Japan before the attack. There is no mention of Japanese aggression in China or the much-publicized atrocities committed by the Japanese during their occupation. The film also fails to portray opposition to the war from within the ranks of the Japanese military.

Six servicemen were injured during the filming of the attack, and after rumors circulated of Naval carriers transporting props for the shoot, Representative John M. Murphy of New York proposed legislation to forbid the military to participate in commercial motion picture production.

The film is notable for how accurately it depicts the actual events, and it won an Academy Award for A.D. Flowers and L.B. Abbott for its spectacular battle effects. However, it did not prove to be the major league blockbuster its producers had hoped it would be, easily being eclipsed by the year's other great war epic, Franklin Schaffer's *Patton*. Many Americans did not like having to read Japanese subtitles during the Japanese portions of the film, and others feared that the Zero pilots would be made to seem heroic at the expense of American servicemen who struggled vainly to defend the base.

Tormé, Mel (1925-1999)

One of the most versatile entertainers of all time, Mel Tormé, known as the "Velvet Fog," was one of America's most acclaimed vocalists as well as a composer-arranger, drummer, actor in films and television, and star performer on records and the live concert stage. In 1996, his 67th year in show business, he broke all records by performing for the twentieth consecutive year at both Carnegie Hall and the Hollywood Bowl. The popular holiday classic "The Christmas Song" ("Chestnuts roasting on an open fire") is his best-known composition.

Born in Chicago, Tormé began his career at age four, singing on weekly radio broadcasts with the Coon-Sanders Nighthawk Band in 1929 and with Buddy Rogers and his Band in the early 1930s. When he was six, he worked regularly with vaudeville units around Chicago, and at nine he was cast as Jimmy the newsboy on the popular NBC radio soap opera *Song of the City*. Remaining as a regular in the show

Mel Tormé

from 1934-40, Mel used his spare time to study drums and songwriting. At age fifteen he wrote his first hit song, "Lament to Love," which was recorded by Harry James in 1941. The following year he joined the Chico Marx Band in California as a drummer, singer, and arranger.

When the band broke up in July, 1943, the young singer's career began to soar. He made his debut in a feature film with Frank Sinatra in RKO's *Higher and Higher*, followed shortly by *Pardon My Rhythm* and *Let's Go Steady*, minor musicals with a high school setting. These two films featured the Mel-Tones, a singing group formed by students from Los Angeles City College, featuring Tormé as lead singer and arranger.

After serving in the army during World War II, Mel signed a contract with MGM studios. There he played in *Good News* (1947), a popular college film starring June Allison and Peter Lawford and featuring the "Varsity Drag." Mel also appeared in *Words and Music* (1948) with Mickey Rooney and Judy Garland. During the 1950s he recorded a string of hit records and toured widely on the concert stage as the leading jazz singer of the new "Cool School."

Making the transition to television in 1951, he starred with Peggy Lee on TV's *Top Tunes*, a summer replacement for *The Perry Como Show*. For the next two years he hosted a daily talk show on CBS. In 1957 he earned an Emmy nomination for best supporting actor in a *Playhouse 90* production entitled "The Comedian." During this time he was frequently featured on television variety shows.

His career as an author began in 1963 when producer George Schlatter hired Mel to write scripts for *The Judy Garland Show* on CBS. His experiences in coping with the unpredictable star of the

show led him to write *The Other Side of the Rainbow*, which was published by William Morrow and became a best seller. His later books include his autobiography, *It Wasn't All Velvet, Drummin' Men: The Heartbeat of Jazz, the Swing Years, and The World of Gene Krupa: That Legendary Drummin' Man*.

His long career includes appearances with most of America's best-known symphony orchestras. In 1983 Mel won the Grammy Award as Best Male Jazz Vocalist for the album *An Evening with George Shearing and Mel Tormé*. While performing at the White House for President and Mrs. Reagan the following year, he was told he had received a second Grammy for the album *Top Drawer*. As the aging superstar of pop music, Tormé won an even wider audience with frequent appearances as himself on the popular television comedy, *Night Court*. Tormé passed away in June of 1999.

Touched by an Angel

Premiering in 1994, the television series *Touched by an Angel* chose a unique formula to achieve success. The series relied on spiritual faith, love, and redemption to send positive messages in an age of dramatic television filled with tremendous violence and negativity. The three main characters, all angels, include: Tess (Della Reese), the supervisor and mentor; Monica (Roma Downey), the new angel; and Andrew (John Dye), the angel of death. The angels assist a wide range of different characters with their personal relationships and tackle many serious issues along the way, including AIDS (Acquired Immune Deficiency Syndrome), capital punishment, and teenage pregnancy. While the series focused on spiritual thoughts and does use the word “god,” it does not assert any specific religion or religious agenda. With little fanfare at first, *Touched by An Angel* consistently gained in popularity over the late 1990s to become a top ranked and unique drama series.

Tour de France

The Tour de France bicycle race is the world's largest annual sporting event, having been run every year since 1903 except for periods during the two World Wars. With a live television audience of 900 million viewers in 163 countries in 1998, its popularity is surpassed only by the World Cup and the Olympics. Unfolding during a three-week period every July, it covers approximately 2,500 miles and is divided into daily segments that traverse France by various routes. The race pits some 21 teams of riders against mountainous segments in the Alps and Pyrenees and flat segments in Brittany and Normandy, culminating with a spectacular symbolic finish on the Champs-Élysées in Paris. Individual riders also compete against each other in time trials. The overall leader earns the right to wear an illustrious yellow jersey. Victories by American Greg Lemond in 1986, 1989, and 1990 enhanced the event's popularity profile in the United States.

Town Meetings

Typically held once a year, town meetings bring citizens together to vote on decisions about local affairs, including ordinances, taxes, town officers, and local improvements. Most historians associate town meetings with the region and culture of New England, especially Massachusetts and Vermont. Town meetings symbolize a strong belief in political equality and direct democracy (versus the representative democracy of America's constitution), which explains why town meetings continue today. Some historians and political scientists argue that town meetings are not truly democratic because citizens simply defer to an unspoken leadership when attending them. The meetings were re-popularized by Bill Clinton's presidential campaign in 1992.

Toy Story

This joint venture between Pixar Animation Studios and Walt Disney Productions was the first fully computer-animated feature-length film. Pixar's John Lasseter, who won an Academy Award for Special Achievement in honor of his leadership, directed and co-wrote the film. Disney released the film on November 22, 1995, with what has become its characteristic media blitz, spawning products as diverse as toys in Burger King Kids Meals, T-shirts, shoes, hats, and *The Toy Story Animated StoryBook*. Celebrity voices abound in the film with Tom Hanks as Woody, Tim Allen as Buzz Lightyear, and Don Rickles as Mr. Potato Head. The combination of 3D computer animation, the Disney label, and star power made for a sure-fire hit that was one of the highest-grossing films of 1995. *Toy Story* has made Woody and Buzz familiar household names, and the profits led to further collaborative projects between Disney and Pixar, including a sequel, *Toy Story II*.

Toys

Pushed out by a celebrity-driven popular culture, beloved toys of the past, including blocks, erector sets, doll houses, trains, tops, and tea sets, have almost disappeared because of media advertising that targets children not as imaginative players but as pop culture consumer imitators. Material objects, such as *Citizen Kane*'s Rosebud, Mattel's Barbie, and Hasbro's GI Joe, are reflections of society's attitudes towards children. Toys mirror cultural notions about family and childrearing values, while concomitantly resonating with a child's inner-world of play. Thus contemporary toys mimic ideas found on television rather than creative possibilities found in a child's imagination. Children today may be able to dress Barbie in a vast array of wardrobe options, but gone are the days of popular toys that allowed a previous generation of children to build, imagine, and interact with unique forms from a more diverse range of choices, choices that were not prescribed by celebrity icons on places like television, computer, and movie screens.

Although toys have been around for thousands of years, the relationship between toys, children, and culture has shifted with the passing of time. Gary Cross, in *Kid's Stuff*, notes the discovery of 5,000-year-old dolls, balls, rattles, and ancient artifacts resembling smaller versions of adult tools and weapons. Many of these early toys and miniatures were made for religious rites or for the exclusive use of adults. Wooden Noah's Arks and fashion dolls, for example, were favorite gifts of aristocratic women in the Middle Ages, while clay soldiers and knights were a source of entertainment for adult men. Eventually these "adult toys" were given to children. Brian Sutton-Smith, in his book *Toys as Culture*, explains that play and toys

became a part of children's culture in the 1600s as a result of a decreased need for child labor combined and a new and related concern with controlling children's behavior. Play and toys began to be considered by such serious thinkers as John Locke and Jean Jacques Rousseau, who held that children were different than adults and needed protection and special activities, like play, to progress.

Changes in American domestic life facilitated the introduction of toys into the home. Over the course of the nineteenth century, work was done with greater frequency away from the house and not by children, furthering the notion that children needed to be treated differently. Toys and children's books began to claim more importance in this new children's culture of the nineteenth century, for it was thought that they could provide for the moral and intellectual development of the child.

Developing industrial and technological capacities brought innovations to the making of toys; rubber, plaster, and sheet metal made toys easier to manufacture. Germany was the largest exporter of toys in the early nineteenth century, and more than any other country was responsible for the modern world of toys. Just another dry good in the United States, toys offered gender-typed play tools for boys and dolls for girls. After the Civil War, however, chain stores like Woolworth's (1879) and Sears (1887) emerged and began to sell toys as gifts. Other stores, such as Macy's, designated specific sections of their consumer spaces for the sale of toys. FAO Schwartz opened in 1870 as a specialty retailer of toys.

Notions about the amount of toys required in children's lives changed when Christmas became a legal holiday in the mid-nineteenth century, helped along by the popularization of Santa in Clement Moore's 1823 poem, "A Visit from St. Nicholas." The promise of Santa's arrival promoted an even larger children's market. Santa added a sense of mystery and a morality theme as "His List" told him who was "naughty or nice"; at the same time, this happy image of St. Nick served to disguise the crass commercialism of the Christmas spirit. Ultimately, indulging children became part of a family's status reinforced by new advertising and commercial interests.

Toys bought for boys in the early twentieth century reflected a fascination with industrialization and technology; early "industrial" toys include Lionel trains (1906), Moline Buddy trucks (1910), Gilbert Erector sets (1913), Tinker toys, and Lincoln Logs (1916). These construction toys were the antecedent of Legos (1954), the very successful Danish Toy that allows children to follow a design or build their own creations. "Theodore Roosevelt and the Spanish American War set the stage for the development of numerous male-identified toys" explains David Brody in his dissertation, *Fantasy Realized*. The famous and durable Teddy Bear (based on Teddy Roosevelt's popularity) became a favorite as well as the Daisy Air Rifle (1898), Admiral Dewey Dolls, and the very successful, yet racist, Billikens (1912) with their Orientalized physical traits. In contrast toys for girls reflected domestic life, featuring dolls and miniature kitchen appliances. Doll companies like E. I. Horsman and Effanbee and manufacturers like Schoenhut and Steiff produced the Patsy Doll (1924), Raggedy Ann, and other companion dolls.

In 1901 John Dewey wrote about the importance of toys promoting the psychological needs of the child. Dewey ushered in a whole group of child experts in the twentieth century including the psychologist Stanley G. Hall and later the author of *Baby and Child Care*, Benjamin Spock, who promoted toys that fostered imagination and creativity. Educators, psychologists, and politicians soon had a great deal to say about childrearing and family values. Beginning in 1912, Maria Montessori began making parents aware of the importance of

the objects children played with in terms of their ability to learn. Educational toys started to be promoted by a very aggressive *Parent's Magazine* (1926), whose subscribers were mainly mothers with expendable income. Urged on by such experts, parents grew interested in creating children who could navigate the more industrialized twentieth century with a greater sense of ease.

Noel Barrett, toy expert and star of PBS's *Antique Road Show*, is particularly impressed with how toys changed from what he calls "Sunday Toys with religious significance" to toys like mechanical banks, which adults could justify buying for their children since they taught thrift. Children were now considered as a special and vulnerable group in society. Toys were meant to help prepare the young for success as Playskool (1928) and Fisher-Price (1930) sold more blocks, desks, and doll houses. What was not considered by the child experts was how new developments within the realm of popular culture were impacting children's lives. As the celebrity glow of Teddy Roosevelt and Charles Lindbergh sold dolls and toy airplanes, toy makers began to look ahead to other venues for child-marketing connections.

In 1904, the Brown Shoe Company bought the exclusive rights to the popular comic strip character Buster Brown in an effort to sell more children's shoes at the World's Fair in St. Louis. It worked, and Buster also sold dolls and toys with both his and his dog's image on them. Later radio characters, like Little Orphan Annie, Tom Mix, and Jack Armstrong sold cereal and advertising premium toys. In the 1940s Captain Midnight asked children to use their Ovaltine decoder to decipher secret messages. The Dionne Quintuplets sold dolls and cutouts, as did Shirley Temple and Charlie McCarthy.

But it took a strange character, related to the rodent family, with the ears of Bing Crosby, a mouth like Martha Ray, and a high pitched squeaky voice, to really launch children's popular culture. Walt Disney understood the value of successful children's characters. Beginning in 1928, he parlayed Mickey Mouse and others like him into dolls, toys, theme parks, movies, and billions of dollars. Even before the advent of television, Disney marketed Pinocchio dolls and Snow White coloring books. When he discovered the power of TV, he produced the incredibly commercial *Mickey Mouse Club* (1955). *The Wonderful World of Disney* became the first kid's infomercial highlighting upcoming Disney toys and theme park attractions. Later films of the 1980s and 1990s such as *The Little Mermaid*, *Tarzan*, *Pocahontas*, *Mulan*, and *Lion King* all have their own dolls, puzzles, and tapes. The stories told are not just Disneyfied for dramatic reasons, but very often modified to sell more toys and are intensely self-referential, with each medium encouraging the involvement in the other. Each character becomes a brand that begs children to buy more. Indeed, the movies *Pocahontas* and *The Little Mermaid* featured irrelevant hair brushing scenes designed to make their heroines more appetizing for little girl doll play.

In the late 1940s, television replaced radio as children's predominant form of entertainment. Beginning in 1947 under the title *Puppet Playhouse*, *Howdy Doody* was the first successful children's TV show. The selling of products related to the show began in 1949 when, according to Stephen Davis author of *Say Kids What Time Is It?*, Western Printing offered a surprising royalty for a Howdy Doody Comic book. The producer thought this would be great publicity. But after 10 million comic books were sold, property rights and merchandising became the focus of the program. Howdy soon began selling cards, dolls, and toys related to the characters on the show. Scripts were modified, as children reacted in an almost Pavlovian manner to anything promoted. Princess Summer Fall Winter Spring, who was

pushed onto the stage to provide a female character, helped sell little girls untold Indian dolls and costumes. Television thus not only entertained children but shaped their consumer decisions. Sensing the power of this new media, both Hasbro, starting with Mr. Potato Head in 1951, and Mattel, with the Burp-Gun in 1955, made the decision to market on TV. As Stephen Kline points out in *Out of the Garden*, these marketing decisions revolutionized the toy industry. Up until the 1950s, yo-yos, toy tanks, Slinkys, Frisbees, play dishes, Silly putty, and cap guns held their own as companies like Marx and Ideal made their profits with efficient production techniques and little Christmas advertising. Mattel's and Hasbro's decision now tied toys to electronic images, not Santa. Toy making became a year round business, and the most highly promoted toys soon began to drive the others from the market.

Perhaps the most prominent member of this new genre of toys was Barbie, who was created by Ruth Handler, the wife and business partner of Mattel executive Elliot Handler. Ruth Handler created Barbie to fill a void in the girl's fashion doll industry. Originally discovered as a sex novelty toy in Europe, Barbie has the shape of a young woman, with long legs, large bust, and narrow waist. She reflects a teenage fantasy world, for she is beautiful and sexy, well dressed, and autonomous; Barbie has no parental ties. With her accessories and play environments she stresses the virtue of consumerism. In Barbie's world, consumerism means happiness. While not really a TV series tie-in toy, she was among the first toys to be heavily marketed by television. In the 1990s, Barbie is everywhere. Barbie's marketers use what Mattel calls a "segmentation strategy" of not one Barbie doll, but many, for different types of play. With every young girl in the country having an average of eight Barbies, she is America's most successful commercial toy.

Puppeteer Jim Henson and Joan Ganz Cooney met in 1969 and formed The Children's Television Workshop; their creations included Big Bird, Cookie Monster, Rubber Ducky, and, of course, Bert and Ernie. These amusing characters began selling letters of the alphabet, words, and pro-social values on *Sesame Street* but soon moved into dolls, toys, pajamas, and almost any other consumer good imaginable. There was even more merchandising as Henson's *Muppets* and their movies became blockbusters and Tickle Me Elmo became the most sought after Christmas toy in 1997. At a ceremony following Henson's untimely death, his daughter told a Vassar College audience that "the bond between the Muppet's characters and their ever renewing audience was the Henson's Company biggest asset."

The 1970s was the height of old time TV merchandising, as *Scooby Doo* and Hanna Barbera, with their *Jetsons* and *Flintstones*, continued the media success of children's television and licensed products. Still, the show came first and the merchandising followed. This was all to change with the 1976 release of George Lucas's *Star Wars*. From the beginning, Lucas sought to promote the interrelation between the licensed products and the movies, using the movies as a long commercial for the products and vice-versa. Using the myth-creating principles of Joseph Campbell, Lucas formed a magical universe populated by phenomenal characters like Luke Skywalker, Hans Solo, and Princess Leia. These movies and their related products remained top sellers twenty years after their introduction and promised to surge in sales with the release of the new *Star Wars* movie, *The Phantom Menace* in 1999.

By 1980 Strawberry Shortcake's creators got this licensing message and acted quickly, according to Tom Engelhardt in "The Strawberry Shortcake Strategy." American Greeting Card's surveyed young girls about the qualities they would find most appealing

in a doll and toy maker Kenner introduced her at the Toy Fair in New York City. Strawberry Shortcake was pink, soft, and spoke of her “berry” nice friends. One billion dollars in products sold quickly after she was given her own TV special. *My Little Pony* and *The Care Bears* (both 1983) followed with more programming and merchandising. The toys and lunch boxes now came first. Children’s groups were outraged by this type of activity and a sympathetic FCC spoke out about television’s obligation to children. But the deregulation of the airwaves that proceeded under the administration of President Ronald Reagan (1980-1988) brought no guidelines concerning appropriate marketing to children. As a result, the after school air waves became filled with product-driven programs like *Masters of the Universe*, *He-Man*, and other such shows. The new Fox Children’s Network and Nickelodeon began to not only impact on a child’s Saturday mornings but their after school time as well, with shows like *The Teenage Mutant Ninja Turtles* (1980s), *The Mighty Morphin Power Rangers* (1993), and *The Rugrats* (1991). Programming now became a series of infomercials where movies and live shows related to the program were promoted and every character or hideout was for sale. While networks worried about audience share during prime time, children’s television advertising revenues continued to soar as new toys needed both program time-slots and commercials to be successful.

Toy production in the 1990s was dominated by two major manufacturers: Mattel, which owned Barbie, Tyco, Hot Wheels, and Fisher-Price; and Hasbro, parent to Kenner, Milton Bradley (who created the Game of Life in 1860), Playskool, Tonka (maker of trucks and Play-Doh), Coleco (Cabbage Patch Kids), and Parker Brothers. As described in G. Wayne Miller’s book about the Hassenfeld family’s progression from pencil manufacturer to world-wide toy maker Hasbro, *Toy Wars*, Mattel and Hasbro are huge global conglomerates locked in a bitter struggle for world toy dominance; they continuously swallow up lesser manufacturers and mass produce toys that have brand and media recognition. Their on-going battle involves stock prices and options rather than children and play, as toy executives answer only to Wall Street. Controlling the brand names in toys like Mr. Potato Head, G.I. Joe, Batman, Star Wars, Etch-a-Sketch, and Monopoly is not enough. Even the huge distributors like Toys “R” Us and Target are small time compared to an omnipresent media promoting what children should buy, as program content and advertising commingle.

At the millennium a whole new set of toy manufacturing options are becoming available. The very nature of what constitutes our previous conceptions of media-based possibilities is being radically reconfigured by cyberspace and DTV. New “Toy Stories” are emerging with the advent of on-line web sites where a child’s favorite licensed characters sell toys. Children want more than a functioning toy, they want a share of the media’s emphasis on celebrity, a piece of purchasable personality. This personality represents power, glamour, money, beauty, respect, and invulnerability. Information and media mega-companies fill this need with the syndication and synergy of electronic characters. Ever-growing media corporations are now our most important children’s story tellers and the new toy makers.

Tracy, Spencer (1900-1967)

Spencer Tracy, frequently defined by his peers as “an actor’s actor,” was the prime exemplar of understated acting in both comedy and drama. The unruffled simplicity was deceptive, for beneath the surface of that craggy face and chunky frame simmered anger, passion, compassion, or grief, as the role required. It is for his famous

Spencer Tracy

on-screen partnership with his legendary off-screen love, the redoubtable Katharine Hepburn, that Tracy remains best remembered, but his other achievements in a film career that spanned thirty-seven years and some seventy-three films were substantial.

Tracy was cast in a unique mold. He achieved leading man status of the first rank without a vestige of glamour or movie-star good looks. His strikingly natural persona, combined with many of the characters he played, became a benchmark for solid values and dependability as he worked his way through a succession of priests, fathers, judges, and down-to-earth avenging angels. Avuncular, often gruff, and sometimes irascible (a reflection of his own temper), there generally lurked an understanding heart beneath the rough exterior. Stern but kindly, often with a twinkle in his eye, Tracy was a rock of integrity who, but for graying hair and the lines of age that barely disturbed his familiar face, never essentially changed in either appearance or manner.

Born in Milwaukee, Tracy was the son of a truck salesman. He was educated at a Jesuit school and initially intended to enter the ministry, but he later found he preferred dramatics and decided to become an actor. In 1922, he enrolled in the American Academy of Dramatic Arts in New York. After graduation, he embarked on a succession of menial jobs until he eventually found work in a stock company. Gradually he made it to Broadway where, in 1930, his lead performance in a successful prison drama, *The Last Mile*, caught the attention of Hollywood director John Ford, who cast him as the lead in *Up the River*, a gangster film, that same year.

The next five years were spent under contract to Fox, where Tracy made a couple of interesting films, including *The Power and the Glory* (1933), but his best roles came among the frequent loan-outs to other studios, notably in the hard-hitting *20,000 Years in Sing Sing* (1933), made for Michael Curtiz at Warner Brothers. In this film, Tracy starred as a criminal who confesses to a murder of which he is innocent, and the actor was given ample opportunity to display toughness and humanity in equal measure. Indeed, during these early years, Tracy frequently was cast as a rough-hewn character, either made good or gone to the bad. Having married in 1923 and always a devout Catholic, a guilt-ridden Tracy courted unwelcome publicity in the early 1930s when his affair with Loretta Young was revealed in the scandal sheets. When, in 1935, he was arrested for drunkenness, Fox fired him. MGM hired him and, in time, provided fertile ground for a rich crop of roles that established Tracy as a star.

His first major success at MGM was as the man who survives an unjust lynching and seeks vengeance in Fritz Lang's powerful drama *Fury* in 1936, the same year he played the priest in *San Francisco* and earned his first Oscar nomination. He won the Oscar the following year for his role as the Portuguese sailor protecting Freddie Bartholomew in *Captains Courageous* and in 1938 became the first actor to win two in a row when he was again voted best actor as Father Flanagan in *Boys Town*—the first of his biopics.

In 1942 the Tracy-Hepburn collaboration began with *Woman of the Year*, in which his sports reporter and her politician, wonderfully ill-matched, fall in love. The film set the tone for the most successful and popular of their films together as sparring partners in the battle of the sexes, competitive, witty, sometimes acidic, but always affectionate. In Frank Capra's political comedy *State of the Union* (1948) Tracy is a presidential candidate, Hepburn his estranged wife; in George Cukor's *Adam's Rib* (1949) they are married lawyers on opposite sides of an attempted murder case; in Cukor's *Pat and Mike* (1952), she is a sporting phenomenon, he a sports promoter of dubious connections who sets out to exploit her money-making

potential. *Without Love* (1945), an uncertain romance from a failed Broadway play, sank without a trace (the only one to do so), while there were more serious but less popular excursions with Cukor's *Keeper of the Flame* (1942), Tracy impressive as a reporter destroying the reputation of a dead politician, and *Sea of Grass* (1947), a brooding drama with Tracy cast as a work-obsessed cattle tycoon.

In 1950, directed by Vincente Minnelli, Tracy played the gruff, bumbling, and put-upon *Father of the Bride* to daughter Elizabeth Taylor, a huge hit which won him an Oscar nomination and was followed by a hit sequel, *Father's Little Dividend* (1951), but quality vehicles were growing thinner and, correspondingly, so were the memorable performances. The only truly noteworthy contributions to the 1950s were his political campaigner in John Ford's *The Last Hurrah* and his one-armed, dark-suited avenger in John Sturges's *Bad Day at Black Rock* (1955). Descending on a crumbling one-horse outpost to unearth a terrible secret and seek justice, Tracy was never better than in this superb Western morality tale, unconquerable, implacable, ironic, compassionate, and heroic. It earned him a third Academy nomination, and there was a fourth for *The Old Man and The Sea* (1958).

The 1960s brought the onset of illness. During his last years, Tracy grew increasingly moody and difficult to work with, and producers shied away from using him. An exception was Stanley Kramer, and it was for him that the actor gave his impressive last three performances: a thinly disguised Clarence Darrow defending in an equally thinly disguised Scopes Trial in *Inherit the Wind* (1960), the presiding judge wrestling with the Nazi legacy in *Judgment at Nuremberg* (1961), and, in a last glorious reunion with Hepburn, another irascible, bewildered, and tender-hearted father in *Guess Who's Coming to Dinner?* Already very ill, Tracy died a few weeks after filming was completed.

Trading Stamps

Trading stamps are small pieces of glue-backed colored paper, given in proportion to purchases made and redeemable for merchandise. They were first used in the United States in Schuster's Department Store in Milwaukee, Wisconsin, in 1890. Schuster's gave the stamps to customers paying in cash in an effort to limit credit use. The S&H Green Stamp Co. attributes their invention to their founders (the Sperry and Hutchinson of S&H) in 1896 as a way to "say thank-you" to customers and calls the trading stamps "America's first frequent shopper program and grandfather of marketing promotions such as frequent flyer miles." The first S&H redemption center opened in 1897 as a kiosk. One of the earliest items in the catalog was a Bissell

carpet sweeper; its modern counterpart was still in the catalog 100 years later.

The heyday of the trading stamp came during the 1950s and 1960s when large numbers of Americans got the stamps with their groceries and exchanged filled books (usually 1500-3000 stamps) for a variety of household goods. At the height of stamp fever, S&H distributed its catalogs free in supermarkets and operated multiple redemption centers, the size of small shops, in towns all over the United States. They claim that in 1964 its catalog was the largest single publication in the United States.

S&H Green Stamps, Top Value, King Korn, Triple S, Gold Bell, and Plaid were among the most popular nationally circulated brands of stamps. Attesting to the pop chic of trading stamps, artist Andy Warhol painted a series of S&H green stamps posters along the lines of his famous Campbell Soup works.

As consumers opted for lower prices in lieu of stamps in the 1970s and 1980s the movement waned but never disappeared. One of the last major grocery chains to carry the stamps was the Publix chain in Florida, which dropped them in favor of coupons and other promotions that were less costly to the store. A 1988 study in the *Academy of Marketing Science Journal* notes that a survey of retail stores showed that stores that gave trading stamps had significantly lower gross profit margins and net profit returns than did stores that did not.

At the end of the twentieth century, the consumer's persistent desire to be tangibly rewarded for patronage continued in other forms—frequent flier miles, the return of percentages of credit card purchases—but only a few retail establishments offered actual trading stamps. The stamp movement tried to keep pace with changes in technology. Although S&H continued to distribute stamps and offer merchandise catalogs, they began to offer “paperless green stamps” saved on an ID card and added automatically at the register. In addition to redemption for gifts in the catalog, the stamps could be used to save in the store, as coupons for entertainment, frequent flyer miles, and donations toward a charity or community project.

Trailer Parks

Any film or television program refers to certain “stock” devices to create a chosen visual and emotional environment. A frequent image in modern culture is a tightly-packed row of homes, similar in style and each with a tiny fragment of land, which serves for parking, storage, recreation, gardening, and decoration. The homes follow the model of the tight suburb, but they are not American ranch houses. This image is dominated by rectangular trailers, most of which have removed wheels or at least concealed them with a trelice covering. During its history, the trailer, or mobile home, has been viewed as progressive, adventurous, and, finally, as the opposite of these American ideals. Today, when a director or producer incorporates the trailer park into a visual narrative, she seeks most often to depict Americans locked in—spiritually and physically—to a lower economic class by

social strictures. Some call the trailer park America's modern tenement; yet, the trailer park's existence also suggests one of the nation's most democratic achievements—home ownership available to all classes.

The enlightened thought of Thomas Jefferson helped to make personal home ownership an American ideal. As they configured capitalist thought, economic philosophers/visionaries Adam Smith and Thomas Hobbes incorporated property value into the scheme by making personal land ownership possible within enlightened societies at the end of the 1700s. The owner could then increase the value by “improving” the property so that it would be sold for a higher price. This philosophy made up the foundation for Jefferson's dream of an agrarian republic, full of small property owners who each tended (and improved) his own land. The American housing ideal has not ventured too far from these foundations over 200 years of development. Urban growth has provided alternative models—such as apartments and condos—but the ideal of the vast majority of Americans is to own their own home. Rising home prices after 1950 forced developers to construct a new version of this ideal that would involve classes previously unable to own their own property. The effort to appeal to lower and lower-middle class American urges for home ownership bred the trailer park.

The trailer grew out of Americans' early-twentieth-century impulse to travel the nation by automobile. The trailer-camper allowed complete freedom to pull over at any time and enjoy the comforts of home. This travel filled an important void when services were few, and allowed many Americans to reject the rapidity and regiment of train travel for the slow, wandering travel of the open road. Prior to the spread of hotels and following the proliferation of automobile ownership, roadside camping offered the most reliable form of comfort during travel. An autocamper's outfit was an instant hotel to which one had to add only water. “Just back off the main road,” instructs one guide, “in a little grove of white birches on the bank of a noisy brook, which will furnish water and perchance fish enough to fill the breakfast frying pan!” While tents remained the most popular implement for car camping, the trailer grew in popularity from 1920 to 1950. By tent or trailer, car camping spread from fad to institution during this era, giving form to the autocamp: an open site in which campers pooled together. A unique culture rapidly grew out of such sites, particularly the male effort to assess and rate others' camping equipment and technology. Not dissimilar from the shared space of the modern trailer park, campers interacted with others whenever they left the cover of their tent or trailer. In the autocamps, the travelers discussed other sites, the road, and equipment. Out of such ingenuity, the “gypsy-trailer form” began standardized manufacture after 1920.

Cabin camping also grew in popularity during the inter-war years; by 1935, however, the nation was most enthused with the evolving trailer technology. Between 1935 and 1937, popular articles included “Back to the Covered Wagon,” “Nation of Nomads,” “Tin-Canners,” “Nomads of the Road,” “Home of the Free,” and many other related topics. Futurists even began to predict that every American would soon live permanently in a cheap trailer. Their thinking revolved around the common sense of such mobility as well as the Depression-era thoughts of limiting waste. The trailer, after all, offered Americans the fulfillment of their most basic needs of shelter and safety, with few unnecessary frills. Modernist thinkers rallied around this model as the wave for the standardized future—the geodesic dome with wheels. Such thinkers, however, overlooked Americans' unique cultural preferences. Americans who could still afford

A mobile home/trailer park in Wyoming.

nicer homes would want them. But the trailer offered possibilities for those of lesser means. As developers created standardized suburbs for the middle and upper-middle class from 1950 to 1980, the same drive for conformity and ownership fueled the construction of the first trailer parks. Now, of course, the sites were not for transients who would take their trailer and leave in the morning; they were not, however, intended as end homes. The mobility behind the trailer park was economic: developers assumed young families would use them as a temporary home while saving for their suburban dream home.

Used originally as temporary housing, trailer parks became noticeable to most Americans after World War II, when they were clustered around Army posts and construction sites. Today, mobile home parks are not temporary aberrations on the landscape. More than 13 million Americans, most of them from young blue-collar families, call trailers their temporary homes. Few Americans or architectural historians are willing to consider such mobile homes dwellings. Critics stress that the trailer is not architecture; instead, it is an industrial product, mass-produced, low-cost, and disposable. Bypassing craftsmen, the trailer comes out of a midwestern factory by truck almost ready for occupancy. The attraction, of course, is the low cost of the trailer, compared even to the smallest house. Standardized suburban homes, such as the bungalow, have achieved dwelling status; but the mobile home remains without a place in our architectural lexicon. Quite literally, most communities also exclude trailer

parks from the mainstream, relegating them to the least desirable tracts of land, such as along rail lines, highways, or flood areas. Additionally, the odd transience of the trailer place it outside of taxation and even standard land ownership. The trailer park is not dissimilar from the autocamps of the early twentieth century: ordinarily, residents own their trailer but only lease or rent the plot on which it rests. The home, though, will normally remain at the site long after residents move.

At once, the trailer park represents the proliferation of American ideals of ownership to all economic classes and also a culture of exclusion and transience. The trailer park, then, clearly becomes ironic as it begins young families on the track to owning their own home while also divorcing them from enduring community connections. As the media reported the housing crisis of the 1970s, it also helped to create the enduring stereotypes of trailer parks. Townhouses and trailers were consistently presented as inadequate, makeshift substitutes for detached suburban dwellings. The new alternatives were posed as a threat to the postwar suburban ideal. Currently, between 50 and 70 percent of American communities ban mobile homes from privately owned lots in residential neighborhoods. This restricts Americans who may only be able to afford a mobile home to reside within the lowly trailer park. Over half of the nation's mobile homes are sited in parks, surrounded by high walls required by local

codes. It is likely that the trailer park, a construction of modern, industrial sensibilities, will remain “lower-class” squatter settlements into the future.

Tramps

The tramp or hobo (the tramp’s name for himself) refers to a wandering foot traveler, often a vagrant, thief, or beggar with no fixed

abode or destination. The term hobo, originally a migratory American worker hitching rides on freight trains, has disappeared as modern society increasingly controlled the outcast individuals who chose the itinerant or homeless life.

In the 1870s, American Civil War veterans and immigrants swelled the ranks of unemployed boys and men traveling from job to job, and the “tramp menace” alarmed newspaper editorialists and civic leaders concerned about the growing number of homeless vagrants descending on towns and cities. Tramps were often driven from town or sentenced to the jail or the workhouse for vagrancy; even skilled craftsmen, such as itinerant or tramp printers, were unwelcome in small towns. Allan Pinkerton, the legendary American detective, warned of the danger tramps posed in his 1878 book *Strikers, Communists and Tramps*. But tramps found in the new railroad system mobility to seek work in harvests, lumberjacking, mining, or construction projects.

Hostility to the independent tramp may be found as early as St. Benedict’s rule in 535 A.D. against the *girovagi* or wandering monks for whom religious life was but a pretense, and who led their lives

A homeless man.

without restraint or obedience to church authority. The Elizabethan Poor law of 1603 also condemned England's wandering, sturdy beggars, as did early American courts. By 1700 Boston selectmen, for example, warned migrant strangers or vagabonds to leave town and refused them public charity.

By the Victorian era the hobo had become a fixture in the American circus; perhaps the most famous hobo clown was Emmett Kelly (1898-1979), who portrayed Weary Willie the Hobo on television and in films such as *The Greatest Show on Earth* (1952). In silent movies, Charlie Chaplin's Little Tramp was his signature character in seventy films such as *The Kid* (1921) and *The Gold Rush* (1925). Another famous tramp clown was Red Skelton's television character Freddie the Freeloader in the 1950s and 1960s. In the theater of the absurd, Samuel Beckett's *Waiting for Godot* (1954) portrayed two pensive tramps on a country road musing about the nature of human existence. American literature celebrated the romantic hobo or tramp life, from Mark Twain's *Huckleberry Finn* (1884) to Beat Generation writer Jack Kerouac's *On The Road* (1957) and *Dharma Bums* (1958), as well as in folk music by the Industrial Workers of the World (the IWW or Wobblies) and troubadours like Woody Guthrie and Pete Seeger. Harry Kemp (1883-1960), the hobo poet, wrote autobiographical poems and narratives about his tramp adventures. But other works documented the grim reality of the hobo life, as in Jack London's *The Tramp* (1911) and George Orwell's *Down and Out in Paris and London* (1933).

During the Depression of the 1930s, the number of tramps increased dramatically as more than a million homeless men, women, girls, and boys rode the rails and lived in hobo jungles in search of work or adventure. By that era, reformers such as Father Edward Flanagan, who opened the Workingmen's Hotel and Boys' Town in Omaha, and Dorothy Day, who established the Catholic Worker Movement in New York, addressed serious social problems associated with tramping. By the 1980s homelessness was recognized as a major social issue in the United States when a rapid increase in people without adequate housing reached one million. Many of these contemporary tramps are young or mentally ill, unlike the older white alcoholic men found earlier in skid-row flophouse hotels.

The movies *Boxcar Bertha* (1972) and *Ironweed* (1987) celebrate female hoboes. Hollywood featured hoboes in socially conscious movies, *Wild Boys of the Road* (1933) and *Sullivan's Travels* (1941), and later in *Joe Hill* (1971), *Emperor of the North* (1973), and *Bound for Glory* (1976). Most tramp songs glorify the freedom of the open road and the autonomy of the hobo life while overlooking its chronic poverty, hunger, violence, and insecurity.

The bum, a sedentary beggar who avoids work, is a variant of the tramp or hobo. This derogatory name originated in the German word *bummler*, or loafer. In the 1860s it meant a foraging soldier, and later to loaf, beg, or wander like a vagabond or tramp. By the 1890s it referred to a hobo hitching a ride on a freight train. In the 1920s it came to mean ejection from a saloon via the bum's rush, or inferior quality as in a bum job. By the 1960s it referred to resort habitués such as the beach bum or ski bum. Today, however, the tramp tradition survives in the annual National Hobo Convention at Britt, Iowa, and in the memory of men and women who last rode the rails in the Great Depression of the 1930s.

Traveling Carnivals

In American culture, the traveling carnival evokes all things seamy, dubious, and lurid. In their heyday, some three hundred different traveling carnivals roamed the United States offering a glimpse of mystery and excitement, and sometimes danger. It was the rare child who did not think of joining a traveling carnival or circus to escape a stultifying small-town environment. The carnival was the poor man's entertainment. An egalitarian institution, carnivals practiced equal-opportunity speculation, and thus acquired a reputation for trickery and deceit, if not outright fraud, and as a consequence of America's developing network of train lines and highways, these carnivals were able to penetrate the most remote backwaters of the country. The carnival remains one of America's most enduring cultural institutions.

The United States, being a young country, has long had fairly primitive tastes in entertainment. For the better part of the nineteenth century, entertainment in rural America consisted of traveling circuses and burlesque troops, vaudeville and magic-lantern shows, all traversing the country by train or horse-and-buggy, offering temporary relief from the boredom of country life. The showmen were both exalted and disdained; occupants of an insular class, they were much maligned but envied for their carefree lifestyle. Cities contained a richer palette of diversions, but actors and showmen were no less scorned there. Going to dime museums exhibiting freaks of nature, magic acts, or flea circuses was a popular pastime with the people, and in the latter half of the century, resort towns located near urban centers sprang up to accommodate a growing middle class. Resort entertainment choices mirrored those of the city, with freak shows, burlesque, and primitive amusement parks relocating for the summer season. From these disparate entertainments, the traveling carnival emerged. It was an ad-hoc gathering of shows and concessions that traveled under the casual imprimatur of a manager or showman who handled the business end of things, and was responsible for hiring and firing acts.

Most histories credit the 1893 Chicago World's Fair—which brought together the largest agglomeration of showmen ever assembled up to that point—with the traveling carnival's origination. Along the Midway Plaisance, an avenue at the fair's periphery, the freak shows, games of chance, burlesque, wild west shows, and other more unsavory diversions assembled, and their close proximity led many of the showmen to compare notes on their business. "The showmen working the Midway Plaisance," writes Robert Bogdan, "not only shared the same grounds and experiences but even met to discuss common problems . . . it was in the area around Buffalo Bill's Wild West Show, that the idea for a collective amusement company was first discussed."

Otto Schmidt, a participant in these meetings, organized the Chicago Midway Plaisance Amusement Company, and he and his acts set out on a tour of the Northeast. The show featured thirteen attractions, some direct from the Midway Plaisance, but failed to make its final booking in New Orleans, folding due to poor organization and business practices. Nevertheless, it provided the model for a new type of traveling amusement—part circus, part amusement park—and several showmen from Schmidt's troupe revamped the idea with success, going on to operate some of the first traveling carnivals.

From spring to fall of 1902, seventeen carnivals toured the United States. They pitched their tents in empty fields or vacant lots, or were booked in conjunction with state and county fairs, these having become a welcome diversion for the small towns that served as the center of isolated farm communities. By 1905, there were forty-six traveling carnivals plying their trade. By 1937, an estimated three hundred different shows traversed the country.

The average carnival consisted of a circular avenue, the midway (the name derived from that of the avenue leading to the big top in a circus), ringed by the different attractions and circumscribing the rides and food vendors within a circular enclosure of colorful tents. Among the different attractions, a pre-World War II carnival would invariably include a model show, where naked (if the police could be sufficiently bribed) or scantily clad young women were exhibited behind a see-through fabric; a sex exhibit in which grift was especially common (anything even loosely associated with sex—fetuses preserved in formaldehyde, anatomical aids, or caged guinea pigs—could suffice); a palm reader; a dance pavilion; games of chance; food concessions; and, of course, the rides.

The rides were usually owned and operated by the carnivals manager, and they provided a constant draw, an insurance against the vagaries of local jurisprudence, which often prohibited many acts from performing, or made grift a difficult and hazardous endeavor. Most carnivals would also include a free act, usually some spectacular dare-devil stunt, for instance, plunging off a tower into a small pool of water. This act was performed at the peak hour of carnival business, providing a climax and focal point to the day's events. If the rides were the bread-and-butter of a carnival, games of chance were the jam. Extremely lucrative for the concessionaire, when the police would allow them, games of chance were in great part to blame for the carnival's dubious reputation, and a frequent source of animosity between the townies and the carnies. The games were almost always rigged, and the "marks" duped out of a considerable amount of cash. Where the police were vigilant, vendors laid off the "grift." Where gambling was illegal or heavily frowned upon, the games paid off in "slum," or trinkets.

Every carnival featured a freak show, often called a "ten-in-one" or "string show," consisting of a number of different acts appearing in a single tent. The freak show provided the mystery to a carnival and, although now moribund as an institution, it remains of abiding interest, with freak show paraphernalia commanding high prices by collectors. Most shows had at least one genuine *lusus naturae*—a fat woman, a living skeleton, Siamese twins—and a number of "made" acts. These ranged from outright frauds—a wild man of Borneo (or geek) who might have grown up in Brooklyn, or a mind-reader who worked his dazzling clairvoyance by means of an elaborate code—to acts that were semi-legitimate. Tattooed men, torture acts, sword-swallowers, and snake charmers were the most common sort of act, constituting a sort of middle class of the carnival

world; they ranked slightly lower than nature's aristocrat, the freak, but far above the lowly geek.

To attract an audience, a "talker," a quick-talking announcer, would gather a crowd, attracted by the talker's "pitch" as well as by the exhibitions, several of whom would appear with him on the "bally platform" giving short demonstrations. This was called "turning the tip." Once the tip had been turned, that is, lured into paying the entrance fee, they would be further induced to buy cheap merchandise—photos, pamphlets, and the like—and then to pay an additional fee to see the "blow-off," a genuine freak—a fat man or woman, a bearded lady, pin-heads, or victims of other birth defects. A good "blow-off" could underwrite the operating expenses of a ten-in-one, therefore, freaks were a highly valued commodity.

Carnival life fostered an us-and-them attitude. You were either "with it" (in the know), or a mark. There was no middle ground, and sometimes pitched battles, deemed "clems" by the carnies, would erupt. Often small-town carnival-goers were simply suspicious, and often the fights started after the games of chance had bled them dry. In small town America of 1930s, it was simply second-nature to distrust the carnies. And yet, the lurid quality of the carnival, the danger of being swindled, appears to have been part of the attraction. Carnival and carny alike were exotic, simultaneously feared and envied. The carnies rejection of the "normal" world, of proper society, was an affront, but it was also an invitation. In the midst of the Great Depression, when the traveling carnivals were at their most popular, customers could still be counted on to spend their hard-earned pennies. Perhaps it was because escape from the hardship of everyday life had assumed a monumental importance for the hard-pressed citizenry.

After World War II, the number of carnivals in operation dropped substantially. No one single reason can account for their precipitous decline. Perhaps it was that small-town audiences had become more sophisticated; perhaps changing social mores diminished the popularity of the freak show; or perhaps it was simply that society had become more regimented, and the escape carnivals represented had become anomalous. In addition, corporatism had invaded the carnival world. The result is today's pallid excuse for a carnival: no freak shows, games of chance that pay off in worthless trinkets, and not even a faint hint of danger or sex. The forbidden, as much a part of the carnival mystique as cotton candy or the smell of sawdust, had been excised from the carnival, and without the danger, the fun and excitement was simply less alluring.

But the image of the carnival remains powerfully alluring. Carnival paraphernalia—banners and promotional materials—are now much sought-after by collectors. In literature, as well, the carnival works its distinctive magic. By cleverly inverting the carnival-goer's presumption of fraud, Charles G. Finney's novel, *The Circus of Dr. Lao* (1935), wrote of a traveling circus in which all the attractions are fantastically real, yet the townies fail to see past their suspicions. Katherine Dunn's best-selling novel, *Geek Love* about a family of carnival freaks, purposefully deformed *in utero*, captured the public imagination in the late 1980s, becoming a best-seller. Since Todd Browning's 1932 masterpiece, *Freaks*, the carnival has routinely appeared in motion pictures, and its appearance is usually metaphor for subterfuge and betrayal. More recent films such as *Carny* (1980) treat the wayward carny with more affection, but one need only read David Foster Wallace's essay, "Getting Away from Being Pretty Much Away from It All," to comprehend the slightly sinister quality of the carnival and its workers.

Carnivals conjure up a host of associations in American culture. Heirs to both the showmanship of a Wild Bill Hickock and the entertaining mendacity of the snake-oil salesman, carnivals tap deeply into the American psyche: its restlessness, its love/hate relationship with conformity, its romance with all things criminal. The carnival was a non-judgmental environment where the deformed, the drifter, the loser could find a place that would accept him unconditionally; it was a metaphor for freedom from troubles, from the mundane, and into a magical world where the rule is that things aren't always what they seem.

Travolta, John (1954—)

There are two John Travoltas. One is the late 1970s star who rose to the dizzy heights of worldwide fame thanks to his roles in *Saturday Night Fever* (1977) and *Grease* (1978). The other is the actor who was reborn from the embers of his cooling popularity thanks to Quentin Tarantino's cult mega-hit *Pulp Fiction* (1994). Other facets of John Travolta include his membership of the much-questioned Church of Scientology—seemingly the secret of his perseverance against all odds in his road towards permanent fame—and his early image as a dancing and singing idol.

Travolta's first taste of stardom came with his role as Tony Manero in John Badham's *Saturday Night Fever*. This film followed Travolta's noted appearances in the TV series *Welcome Back Kotter*, as high-school troublemaker Vinnie Barbarino (1975-6); the TV tearjerker, *The Boy in the Plastic Bubble* (1976); and in the first adaptation of a Stephen King novel, director Brian de Palma's *Carrie* (1976), in which Travolta played a sadistic classmate of the victimized heroine. *Saturday Night Fever*, the film that came to epitomize the booming disco culture of the 1970s, created a sweeping worldwide craze around Travolta—complete with countless dancing imitators vying for fame in Manero's famous cheap, white, three-piece suit. It also gave Travolta his first nomination for an Oscar as Best Actor. The second would come years later for his supporting role as Vincent Vega in *Pulp Fiction*.

Among his many admirers, actress Bette Davis remarked that although Travolta was talented, he would not last. Davis' prophetic

John Travolta in a scene from the film *Saturday Night Fever*.

words proved, if not true, at least remarkably accurate. The role of Tony Manero was followed by the very popular Danny Zuko of *Grease*, a musical Travolta knew well from his early theater days—in which he became a teenage cult icon with Olivia Newton-John—and *Urban Cowboy's* Bud (1980). But the 1980s proved much less congenial to Travolta's supple talent and he was relegated to a string of mediocre films that did badly at the box office. The first signs of his renewed popularity came with the popular but insubstantial *Look Who's Talking* trilogy (1989, 1990, 1993), which was punctuated by Travolta's ineffectual resurrection of Tony Manero in Sylvester Stallone's *Staying Alive* (1993).

Just when Travolta seemed definitively condemned to playing uninspired roles like the James Ubriacco of *Look Who's Talking* for the rest of his acting life, Quentin Tarantino stepped in, convincing his much adored idol to play heroine fiend hit man Vincent Vega. Travolta's return was but one of the ingredients that turned *Pulp Fiction* into a massive hit, and the film placed the tarnished star back into the top list of Hollywood icons. Since 1994 Travolta has hardly had time to savor the sweet taste of his success, as he has been busy working non-stop in films of a varied range. His performances include an action villain in *Broken Arrow* (1996), a gangster-cum-producer in *Get Shorty* (1996), a mechanic turned supernatural hero in *Phenomenon* (1996), a devoted de-faced FBI agent in *Face Off* (1997), and even the contradictory roles of angel in *Michael* (1996) and the Bill Clinton-inspired character Governor Jack Stanton in *Primary Colors* (1998).

Travolta has amply displayed both his abilities as an actor and his understanding of the vagaries of show business, securing a sheltered financial position for himself that has allowed him to weather the difficult years in comfort. As a cultural phenomena, Travolta's career further begs the question: To what degree are actors shaped by the roles they play? As with Julia Roberts and *Pretty Woman*, it is unclear whether Travolta made the roles he played in

films such as *Saturday Night Live* and *Grease* unique, or whether these unique roles made him. Like all other contemporary Hollywood big names, Travolta is subjected to a system in which the individual talent of each performer is very hard to assess, as acting is but one ingredient in the complex process of filmmaking. His popularity, like that of many other major stars, results from a capricious combination of talent, adroit choosing of roles, availability, luck and the mysterious “x” factor, best defined as being in the right place at the right time. And finally, Tarantino’s idolization of Travolta, which perhaps had a touch of irony, appears to be a crucial factor, without which Travolta would not be the star he is at the end of the twentieth century.

The Treasure of the Sierra Madre

Long acknowledged as a classic of Hollywood cinema, director John Huston’s 1948 film *The Treasure of the Sierra Madre* was among the first to make extensive use of on-location shooting and anticipated the themes that would come to characterize film noir: paranoia, greed, and duplicity. The virtue of the film is that it can be understood on a variety of levels—as an adventure story, as an etiology of one man’s mental disease, as a subtle critique of capitalism, or as an anthropologic study of the clash of cultures. Laced with disturbing psychological truths, it is precisely the fable-like quality of the film—the timeless and acute observation of human nature—that makes the film so remarkable. Huston won Oscars for best direction and screenplay, and his father, Walter, for best supporting actor.

In the Mexican town of Tampico, booming oil fields have attracted adventurers from every continent, lured by the scent of easy money. Fred C. Dobbs (Humphrey Bogart) is a drifter of dubious temperament who has bottomed out in Tampico but stills dreams of the big score—he covets luxury but has not the patience or perseverance to work for it. As the first scene shows, Dobbs is unscrupulous; he repeatedly panhandles from a wealthy American (played by John Huston) and then uses the money for such unnecessary luxuries as a haircut, buying lottery cards, and coffee. After teaming up with another young American, Bob Curtin (Tim Holt), and an aging prospector, Howard (Walter Huston), who has dazzled the younger men with stories of rich gold deposits in the surrounding mountains, he sets out on a quest for riches that will ultimately prove his undoing.

A book cover of *The Treasure of the Sierra Madre*.

Dobbs is the weak link in the chain. Curtin and Howard, although not paragons of virtue, are basically decent, realistic individuals. In one scene, the three discuss what they will do with their newfound wealth; Howard plans to open a business to sustain him in his old age; Curtin dreams of buying a farm. Dobbs, on the other hand, thinks only of the luxuries and women he will buy, and the people he will impress. The more gold they find, the further Dobbs descends into a delusional world—gold fever, as prospectors call it—in which his compatriots are mortal enemies. Every incident becomes proof of his partners’ duplicity. For example, Dobbs becomes convinced Curtin is hunting for his stash, when in fact, he has unwittingly stumbled upon a gila monster and is trying to drive it off. Curtin dares Dobbs to put his hand under the rock. Dobbs hesitates, and Curtin kills the reptile.

Further evidence of Dobbs’s evaporating morality is evidenced when an American, Cody, who has followed Curtin back from a trip to restock supplies wishes to join in their venture. Curtin, though unhappy, is amenable to the proposal, but Dobbs is adamantly opposed—he wants to kill the newcomer. It remains for Howard to cast his vote, and he has reluctantly sided with Dobbs when Mexican bandits—who had earlier waylaid the prospectors’ train—stumble on the encampment, claiming to be *Federales*. In the ensuing melee (the source of the famous quote “Badges? We ain’t got no badges. We

don't need no badges. I don't have to show you any stinking badges.''), Cody is killed, and the prospectors find a letter to his wife in his pocket. Curtin and Howard resolve to give a share of their gold to Cody's widow, but Dobbs abstains, saying, "You two must've been born in a revival meeting."

The Treasure of the Sierra Madre is a morality play, and Dobbs is its Richard III, undone by his own instability. After Howard is temporarily separated from the two younger men, the last restraint on Dobbs's behavior is removed. Dobbs attacks Curtin, who manages to disarm his attacker, but then finds himself captive to Dobbs's psychosis, keeping watch over him until he can no longer stay awake. Dobbs seizes his chance and guns Curtin down. As he sits before the fire, his face enveloped in the flames, he is consumed by his madness as the flames dance about him: "Conscience—what a thing—if you believe you got a conscience, it'll pester you to death . . . but if you don't believe ya got one . . . what can it do to ya?" Appropriately, Dobbs meets his fate at the hands of his brother in bestiality, Jefe the bandit leader, who kills him, seizing the burros and provisions, and discarding the gold, which the bandits take for sand. The gold dust scatters in the wind. "O laugh, Curtin, old boy," cries Howard, when the two men (Curtin having escaped death) find the empty bags. "It's a great joke played on us by the Lord or fate or nature or whoever you prefer . . . but whoever or whatever played it certainly had a sense of humor!"

Psychiatrist Harvey R. Greenberg has written that *The Treasure of the Sierra Madre* "is much more than a clinical vignette of a diseased personality driven mad by gold. It is, by turns, the story of a young man's coming of age, of an aging man's search for his last resting place. It is a rousing adventure tale, a subtle commentary on the capitalist mentality . . . But I am always drawn back to Dobbs himself, to this mean-spirited, vicious, yet strangely sympathetic figure." Paranoids litter the literature of western man—Richard III, Lady Macbeth, Rebekka West in Ibsen's *Rosmersholm*. It is a testament to Huston's ability as a storyteller and the breadth of his psychological insight that 50 years after its making, *The Treasure of the Sierra Madre* is still a powerful, convincing film. Dobbs has become one of the most memorable anti-heroes in film history, not because he is a villain, but because in his madness there lurks something all audience members can recognize. Dobbs is a reminder that the real villain is most often within.

—Michael Baers

Treviño, Lee (1939—)

In 1968, Lee Treviño became the first Mexican American to win a major professional golf championship at the U.S. Open, and he became the first player in history to shoot all four rounds of the event under par. Born in Dallas, Texas, and raised by his mother, who worked as a housekeeper, and his maternal grandfather, a grave digger, Treviño got involved in golf because their four-room farmhouse overlooked the back of the Glen Lakes Country Club fairways. As a boy, Treviño studied the form of golfers on the course from his own backyard. He dropped out of school in the seventh grade and made his way into what was then an exclusively Anglo rich man's sport by working as a caddie and greenskeeper.

Treviño became a professional golfer in 1966, and by 1970 he was the leading money winner on the Professional Golfers' Association tour. In 1971, Treviño became the first player to win the U.S., British, and Canadian opens in a single year, and was the first Hispanic ever named PGA Player of the Year, Associated Press Athlete of the Year, and *Sports Illustrated* Sportsman of the Year. He won the British Open again in 1972 and the PGA again in 1974 among many other tournaments. He was awarded the Vardon Trophy for the fewest strokes per round (69.73 for 82 rounds), the lowest since Sam Snead in 1958. Treviño was struck by lightning in 1974, and the

Lee Treviño

resulting back problems and surgeries restricted his play in the early 1980s. He served as a TV sports commentator, but came back to win the PGA in 1984 and the British Masters in 1985. Treviño retired from the PGA tour in 1985, with his thirty victories and a total career earnings of more than \$3 million (third highest). Treviño has been elected to the Texas Sports, American Golf, and World Golf Halls of Fame.

Trevor, Claire (1909—)

Born in New York City, trained at the American Academy of Dramatic Arts and Columbia University, Claire Trevor has sustained a long and prolific acting career that includes over 150 movies, 200 radio shows, 20 stage plays, and scores of television dramas. Trevor began her film career in 1933 in *Jimmy and Sally*. Playing a boozy moll in *Key Largo* (1948), she won an Oscar as best supporting actress. In 1956 she won an Emmy for best single performance by an actress for her role in the Producer's Showcase television drama, *Dodsworth*, with Frederic March. As late as 1987 she appeared in a motion picture *Breaking Home Ties*, based on Norman Rockwell images.

Trillin, Calvin (1935—)

Calvin Trillin, journalist and storyteller of the American scene, has introduced his readers to friends in unlikely places like Horse Cave, Kentucky, exposed several small-town scandals, and revealed a great many of his own idiosyncrasies along the way. Readers know a little bit about the way he thinks and a lot about the way he eats from the pages of his self-titled "tummy trilogy," *American Fried* (1974), *Alice, Let's Eat* (1978), and *Third Helpings* (1983). We've also met his family: his wife Alice, who "has a weird predilection for limiting our family to three meals a day," and his two daughters, Abigail and Sarah, the latter of whom "refused to enter a Chinese restaurant unless she was carrying a bagel in reserve. . . 'just in case.'" (*Alice, Let's Eat*). Since many of these pieces originated as columns in the *New Yorker* and other magazines, Trillin's cast of characters has become a memorable and anxiously awaited feature for regular

readers. Trillin enthusiasts have also developed an appetite for the best barbecue in the world, available only in his hometown, Kansas City, Missouri. Trillin writes about food not as an expert nor, indeed, as a cook—we learn that Alice does the cooking at home—but as the owner of a prodigious appetite for foods that the doctor generally does not recommend.

Calvin Trillin's journalistic career began after his graduation from Yale in 1957 and a subsequent stint in the U.S. Army. From 1960 to 1963 he worked as an Atlanta correspondent for *Time*, as well as in various other departments of the magazine, until he was invited by editor William Shawn to join the *New Yorker* staff. His initial assignment for the *New Yorker* led to his first book, *An Education in Georgia* (1964), about the forced integration of the University of Georgia at Athens. Trillin continued to demonstrate his reportorial ability in his regular *New Yorker* feature, "U.S. Journal," in which he recorded the experiences of ordinary American people in times of stress. Many of these articles later appeared in book collections such as *Killings* (1984), a compilation of short pieces on wrongful deaths and suicides, and *American Stories* (1991), which includes a few more tales of crime mixed in with profiles of favorite Trillin characters like Fats Goldberg, the formerly fat pizza baron who shuttles between New York and Kansas City, Missouri, where he always stops for a chili dog at Kresge's.

Trillin is equally at home in many genres. His short satirical commentaries from *The Nation* are collected in *Uncivil Liberties* (1982) and *With All Disrespect: More Civil Liberties* (1985). He has also written fiction, including three compilations of short stories "written for Alice" and a novel entitled *Runestruck* (1977), the story of a pre-Columbian artifact discovered in a small town in Maine. Trillin has tried his hand at light verse as well in *Deadline Poet* (1995). His more ruminative side is shown in memoirs like *Remembering Denny* (1993), about a Yale friend who never lived up to his initial promise as a "golden boy" and eventually killed himself.

As a journalist, Trillin knows the value of a good lead, in both senses of the word: as story idea and as reader enticement. A few examples of the latter:

Not long ago, I ran across a man who pulls his own teeth. ("Ouch," *With All Disrespect*, 55)

Not long ago, I became preoccupied with the cost of the wristwatches worn by the New Jersey State Legislature. ("The Dark Side," *Uncivil Liberties*, 75).

In my version of a melancholy walk on the waterfront, I find myself walking through a cold Atlantic mist along the docks of some East Coast city, wearing a turned up trenchcoat, making the best approximation of footsteps echoing on the cobblestones that can be expected from a man wearing crepe-soled shoes, and ducking into a passage that turns out to be the entrance to a gourmet kitchen-supply shop called something like the Wondrous Whisk—where I soberly inspect imported French cherry pitters and antique butter molds and Swedish meat slicers.

("Weekends for Two," *Alice, Let's Eat*, 155)

Like Kansas City barbecue, Calvin Trillin's writing can be addictive.

Trivial Pursuit

Trivial Pursuit can be credited with creating a whole new category of board games for adults as well as an entire industry of trivia games. On December 15, 1979, Canadian photographer Chris Haney and sportswriter Scott Abbott were inspired to create the game after competing against each other in a Scrabble game. They had originally planned to call their game Trivia Pursuit until Haney's wife jokingly referred to it as Trivial Pursuit, and the name stuck. The first 1,100 sets cost \$75 each to manufacture. But after selling them to retailers for \$15 a game, by early 1982 Haney and Abbott were in debt. Then the U.S. game company, Selchow and Righter, became interested after hiring a PR consultant who saw Trivial Pursuit's potential as a popular leisure-time diversion. After Selchow and Righter bought the rights to the board game, 3.5 million games had been sold by late 1983. A year later, the figure had jumped to 20 million. By the 1990s, retail sales had exceeded \$1 billion, and the game was available in 19 different languages and 33 countries. There has been a Trivial Pursuit television show, and the game is available on computer and on the Internet. Since its debut in 1982, there have been 40 variations of the game, and Trivial Pursuit has become an essential part of the universal language of popular culture.

Trixie Belden

"Schoolgirl shamus" Trixie Belden was featured in mysteries beginning with #1 *The Secret Mansion*, published by the Whitman Company in 1948, and concluding with #39 *The Mystery of the Galloping Ghost*, issued in 1986. Julie Campbell wrote the first six volumes. Then the new publisher, Golden Press, hired ghostwriters

who used the pseudonym Kathryn Kenny. Thirteen-year-old Trixie lived in rural New York. She, her brothers, and friends, all members of the club Bob Whites of the Glen, participated in American and international adventures, usually solving thefts. Trixie appealed to teenage readers because her lifestyle and dreams were more familiar to them than those of Nancy Drew. The Trixie Belden mysteries enabled readers to explore and solve problems vicariously. Set in a wholesome country environment, the stories were often didactic, criticizing wealthy socialites while praising the virtue of domesticity and self-sacrifice and reinforcing middle- and lower-class values. In each book, Trixie heroically rescued people or property from danger. Often impulsive and impatient, Trixie was always capable and honest, and worked to earn money for such charity projects as UNICEF. Adult fans continue to collect the out-of-print books and sponsored internet sites about Trixie.

Trout, Robert (1908—)

Robert Trout was radio broadcasting's first true anchorman. The concept was purely a practical innovation: the networks' foreign correspondents and highly paid analysts were the stars, yet someone had to introduce their reports, kill time during technical problems, or read late-breaking bulletins as they poured into the studio. Trout was hand-picked for this role as war clouds gathered over Europe in 1938, and gradually—broadcast after broadcast, day after day, crisis after crisis—he turned what had been a simple announcer's chore into a star role, creating the "broadcast news" institution that continues to this day.

Trout came out of local radio in Washington. Assigned to introduce President Roosevelt's "fireside chats," FDR was said to be so impressed with the young announcer's ad-libbing skill, he sometimes delayed the start of his talk a few seconds just to see how Trout would fill the time. The CBS network soon beckoned, even as the European situation worsened. The networks were beefing up their news operations, assigning correspondents to every major world capital; when the March 1938 German-Austrian crisis exploded, CBS brass picked Trout to sit in the studio, reading the late bulletins and introducing reports from the network's far-flung correspondents. And while the job could (and, on NBC, was) handled by any number of nameless staff announcers, Trout took the role at CBS and made it his own.

Broadcasting legend, of course, holds that the great innovation of that Austrian crisis was the invention of the "news roundup," the blending of several European correspondents' reports into a single live broadcast. Indeed, even the notion of CBS letting its own European staff speak on the air was an innovation in these pioneering days, but the idea of Trout holding the coverage together from New York, broadcast after broadcast—one steady, instantly identifiable voice speaking for the network over the long days or weeks of crisis—was equally revolutionary, and Trout seemed instinctively to understand the potential of his new role. His delivery was fast and facile, his

manner urbane but not arrogant, his voice authoritative yet not pompous. By the time Germany invaded Poland in September 1939, it was impossible to imagine coverage of a major event without Trout at the CBS microphone, smoothly steering listeners from one event to the next, juggling shortwave reports and incoming bulletins while masterfully hitting every cue and station break.

Strangely, NBC never imitated this single “Voice of Authority” idea; even Trout’s own bosses seemed not to realize what they had created. When CBS European chief Edward Murrow returned from his London posting in late 1941, the network brass sent Trout overseas—as a reporter. It was an obvious sign that they understood Trout’s star status, yet the admittedly prestigious London assignment was ill-advised at best. Trout acquitted himself adequately, but his absence from the New York studio deprived CBS of the central force that had spearheaded its crisis coverage for so long. Without him, CBS’s coverage of the attack on Pearl Harbor seemed particularly disjointed and rudderless.

Trout was back in New York by midwar, turning the London job back over to Murrow, and picking up right where he’d left off. It was Trout whose voice sounded across the nation just after 3:30 on the morning of June 6, 1944: “This means invasion!” he intoned, and America knew the D-Day landings were officially under way. It was Trout whose leaden, disbelieving tones addressed the nation upon the unexpected death of President Roosevelt in April 1945, and it was Trout (after sleeping on a cot just outside the studio for several days, so as not to miss the big moment) who told the world at 7 p.m. on August 14, 1945, “The Japanese have accepted our terms fully . . . this, ladies and gentlemen is the end of the Second World War!”

Tougher times followed. Murrow again returned to New York, this time taking a job as chief of CBS’s news operation. In 1946, Trout was given a real plum: his own nightly broadcast, a five-evening-a-week extravaganza sponsored by Campbell’s Soup. It didn’t last long. By 1948, Murrow realized he hated the executive suite, and Campbell’s jumped at the chance to return the legendary broadcaster to the air . . . alone. Trout was off the show, a pill so bitter he resigned and defected to NBC for a time before patching things up and returning to CBS in the early 1950s.

And there he stayed, reporting everything from political conventions to the 1961 Alan Shepard spaceflight to a series of war-years retrospectives in the mid-1960s. His one big television break came in 1964, when low ratings and behind-the-scenes turmoil led CBS bigwigs to oust Walter Cronkite from the anchor chair, replacing him with Trout and Roger Mudd—a combination which was a blatant effort to copy the wild success of NBC’s Huntley-Brinkley team. Trout and Mudd did no better against NBC, however, and viewer protests quickly guaranteed Cronkite’s return to center stage.

Trout continued to work on radio, reporting on the political conventions into the late 1980s (more recently for ABC). He could always be counted on to reminisce about the war years or the glory days of network radio.

True Detective

One of the first “pulp” magazines—so named because it was printed on cheap, grainy wood-pulp paper—*True Detective* helped pioneer the American crime story genre in the 1920s. The monthly periodical, which started life as *True Detective Mysteries* in 1924, was retitled *True Detective* with the October 1939 issue. As the name suggests, the magazine devoted itself to true crime stories, making full use of the manners and language of the United States. The “hardboiled” investigators featured in its pages represented a break with the European “Great Detective” tradition. Dashiell Hammett, creator of Sam Spade, was among the crime writers whose work appeared in the pages of *True Detective*.

True Story Magazine

In 1919 the eccentric publisher Bernarr Macfadden began publication of *True Story Magazine*. According to Macfadden the magazine was inspired by personal letters of “confession” sent to him in his capacity as the editor/founder of *Physical Culture*. Sensing a widespread interest in the changing social/sexual codes of modern America, Macfadden put out a new magazine filled with first-hand accounts of social problems such as pre-marital sex, illegitimacy, adultery, unemployment, social relations, and crime (alongside ever-so slightly risqué movie-stills of each story’s most dramatic moments—the kiss, the temptation, the horrible realization). The magazine personalized issues that were hotly debated in Jazz Age America (dancing, drinking, partying, petting) and offered a unique working-class perspective on issues that were not necessarily unique to the working class. Sensational, emotional, and controversial, *True Story* disseminated tales of sex, sin, and redemption that seemingly revealed the ubiquity of modern sexual and social “irregularity.” Most educated observers hated the magazine, figuring that it depicted the worst aspect of the “revolution in manners and morals” that occurred in the 1920s.

But workaday America loved the new confessional magazine. *True Story* became the publishing smash hit of the 1920s. In 1934 one critic offered Macfadden a back-handed complement when he noted that millions of Americans “wallow in the filth of his politely dressed confessions.” Achieving circulation figures close to the two million mark by 1929, *True Story* easily matched the sales of traditional big-sellers such as *Ladies Home Journal* and the *Saturday Evening Post*. *True Story* (along with siblings *True Romance* and *True Experience*, and competitors like *True Confessions*) would maintain a large and devoted readership right into the 1990s. However the *True Story* which can be found on back shelves in supermarkets today bears only

a slight resemblance to the popular original. Macfadden lost control of his publication during the 1940s, but even by that time the magazine had come to represent a much more muted version of the original “confessional” genre. Over time *True Story* evolved into a magazine that told mild tales of women’s sexual misadventure, tempered by strong doses of normative moral sermonizing. In the 1920s, the period in which *True Story* shocked middle-class Americans into a series of renewed (and somewhat successful) efforts at censorship, the magazine was an innovative, raunchy, working-class pulp that purveyed an eclectic range of stories designed to appeal to both a male and female audience.

The popularity of *True Story* has too often been ascribed solely to its “sex sells” credo. In fact, in the 1920s *True Story* offered the reader much more than titillating sex tales; it offered working-class Americans stories told in their own voice (the magazine offered money for reader’s personal stories). Although scholars have, and not without reason, scoffed at Macfadden’s claims that his stories were both true and written by authentic working-class Americans, there is little question that his idea that stories of everyday working-class life were important was an original one. *True Story* argued, both explicitly and implicitly, that the story of modern working-class America was drama of epic proportions. In its original guise, *True Story* told tales of how working-class men and women struggled to negotiate the changes wrought by modernity. The central premise of the magazine in those early days was the notion that “it is a new world . . . and it might be well to get ready for it.” *True Story* claimed to help its readers make sense of the “maelstrom of chaotic inconsistency” that was modern life and taught them how to safely embrace “the enthusiastic, buoyant spirit” of the Jazz Age. In short *True Story* told tales of seemingly particular modern moral downfall (drugs, crime, sex)—even if it did then offer up some patently old-fashioned and universal remedies for redemption (confess, make amends, walk a straighter path).

The importance of *True Story* lies in the ways in which it challenged the hegemony of middle-class publishing norms. Failing to apologize for the cheapness of his endeavor, Macfadden outraged middle America (even as it tempted its youth) by daring to elevate rowdy, raunchy, working-class youth into modern heroes and heroines. *True Story* not only revealed and popularized the ways in which working-class youth flouted convention; it argued that its working-class antihero/ines were the success stories of modern America. *True Story* valorized the lifestyles of the new American working class, with their extra dollars in their pockets, their love of material goods, and their desire for things previously denied. The magazine did not deny the realities of modern temptation; rather, *True Story* explicitly argued that it could teach working-class youth how to safely negotiate their path through modern life—through the vicarious (albeit entertaining) experience of stumbling, falling, and getting up again.

As the 1920s progressed *True Story* lost its radical edge. Bernarr Macfadden, influenced by new marketing credos, sought to expand his advertising and his audience base. In order to achieve greater circulation figures and larger advertising revenues, Macfadden successfully transformed his confessional magazine into a women’s magazine. He achieved this transformation by erasing most of the “men’s stories,” including advertising that targeted women, and—as a pander to conservative advertisers—toning down the content of the confessional stories. By the 1930s *True Story* was a tamer version of the original confessional concept, and a decidedly less exciting one. Although *True Story* lost its male readership along with its male confessions, the magazine did continue to offer one of the few working-class voices in the marketplace. However that voice was less

raw, more conservative, and increasingly mediated by the concerns of advertisers and editors. *True Story* would barely change its format in the following seven decades. Although the transformation of the magazine into a women’s romance magazine proved an effective survival strategy, the moment at which *True Story* was most vital, most alive, was undoubtedly during that time in the 1920s when Macfadden’s confessional stories seemed to herald (terrifyingly and excitingly) the dawn of a raunchy modern American moment.

T-Shirts

Sex, work, and democracy together advanced the T-shirt as a clothing icon of the late twentieth century. Until the 1940s, the T-shirt was exclusively an undershirt. Sailors, however, in shipboard fraternity, worked in T-shirts. These World War II, T-shirted heroes appeared in *Life Magazine* (cover, *Life*, July 13, 1942) and cavorted in the musical *South Pacific*. The private world was now public, and the undershirt entered society, sometimes with the renegade image of Marlon Brando, other times with the innocent white shirt of James Dean. The T-shirt would not have the authority of the cut-and-sewn shirt with collar until the 1980s when Bruce Springsteen reinforced the T-shirt’s proletarian roots but also identified the T-shirt with the new 1980s masculinity of sex-object, gym-built male bodies.

Tupperware

Perhaps no product line epitomizes post-World War II American suburbia as much as Tupperware plastic kitchen containers. Earl Tupper (1907-1983), inveterate experimenter from Harvard, Massachusetts, used his experience in 1937 working for Dupont to develop his own kind of plastic, which he used to make all types of products.

A Tupperware party.

He founded the Earl S. Tupper Company in 1938, which had some success selling gas masks and signal lamp parts to the Navy during World War II. But when he applied his flexible and durable material to civilian needs, Tupper achieved his greatest success.

In 1945 Tupper trademarked his perfected plastic, Polyethylene-Tupper, or “Poly-T,” the “material of the future.” Forever interested in women’s daily lives (he experimented with designs for garter belt hooks and brassieres, for example), Tupper used this innovative material to create an entirely new line of housewares which revolutionized the way women dealt with food and other things in their kitchens. Up until this time, plastics like Bakelite and celluloid were common materials but had limited uses—products made from them were either brittle or heavy and were not suitable for use with foods. In contrast, Tupperware was perfect in the kitchen. It came in many forms, including tumblers, bowls, pitchers, ice cube trays, butter dishes, and even cocktail shakers. Tupper’s most famous and effective innovation, in 1947, was a set of storage canisters with resealable lids that could be “burped” to let out and keep out excess air. They were light-weight, air-tight, indestructible, and waxy-textured for a good grip. These canisters proved to be great improvements over the more common glass and metal containers women had been using in the kitchen, which were heavy, not air-tight, were prone to sweating from refrigerator condensation, and broke easily.

Tupper’s plastic products were not only utilitarian, but also materially seductive. The drinking tumblers came in many colors, including lime, raspberry, lemon, plum, and orange. The bowls were attractively shaped and could even be used to display fresh-fruit centerpieces. Tupperware was such an embodiment of post-war materialism that some of its pieces became part of the Museum of Modern Art’s permanent collection in 1955, and were described as “carefully considered shapes . . . marvelously free of that vulgarity which characterizes so much household equipment.” It is ironic that Tupper, such a pioneer bringing the modernity of his translucent

plastic designs into the home, was an antiquarian at heart. He believed, nostalgically, in the traditional values of hand-craftsmanship and manual labor, and his home was filled with antiques. In contrast, the products he engineered and manufactured were truly “tomorrow’s designs with tomorrow’s materials.”

While Tupper brought new materials and new forms into the domestic sphere, his products also introduced a new kind of sociability among women through private home sales. From 1950 on, Tupperware was marketed and distributed only by direct selling, through Tupperware Parties, overseen by Tupperware Home Parties Incorporated, established in 1951 and also known as the Cinderella Company. These parties were actually commercial opportunities orchestrated as social events. A hostess would throw a party in her home, inviting friends and neighbors in order to provide first-hand demonstrations of the products (like how to “burp” the storage canisters), and to give her guests a chance to purchase Tupperware items. Here, women also played games and could win Tupperware prizes, and the hostess would try to recruit potential hostesses to give their own parties—all in exchange for Tupperware items for herself.

This method of product distribution paradoxically offered women the freedom to be entrepreneurs while it emphasized their domestic duties as wives and mothers, giving them the chance to socialize on their own, yet in a way that channeled them into their traditional gender roles. However ambiguous, Tupper’s marketing strategy—overseen by homemaker Brownie Wise until 1958—was clearly successful. In 1954 over 200,000 women were dealers, distributors, and managers. In that same year sales topped \$25 million and allowed Tupper to double the size of his Blackstone, Massachusetts, manufacturing facility. In 1958 he sold his interest in the company to Justin Dart of the Rexall Drug Company.

Tupperware and the party system both successfully entered Britain in 1961. By 1979 there were over 50,000 people selling over \$700 million worth of Tupperware. In the 1980s Tupperware was sold in over 42 countries and carried product lines fitting specific cultural needs, like the sushi saver in Japan. To bring it up to date, Morris Cousins redesigned Tupperware in the 1990s, giving it “Euro styling” with brighter colors and sleeker shapes. The company introduced “Tupperkids,” a line of children’s toys, in 1994. What is more, Tupperware is so familiar to Americans that it has become a generic word applied to all such plastic storage containers with resealable lids, and has come to symbolize the unique blend of domesticity, materialism, and superficiality that is seen to characterize life in the American suburb.

Turner, Ike (1931—) and Tina (1938—)

Formed in 1959 in St. Louis, Missouri, the partnership of Mississippi rhythm-and-blues musician Ike Turner and a young singer from Nutbush, Tennessee, named Annie Mae Bullock would result in one of popular music's most combustible sounds. Known for their impressive live performances, Ike and Tina Turner were an immediate crossover sensation who eventually released some 29 albums on various labels. As significant as their contribution was to American black music, their 16-year union as the Ike and Tina Turner Revue also left an indelible impression upon rock and pop music the world over. Supported by a full R&B orchestra and choreographed backup singers, Ike was bandleader, arranger, and producer for the duo. With a distinctive on-stage style, the Ike and Tina Turner Revue created a whirlwind of sensation and emotion that inspired audiences and performers alike. Compatible with R&B, straight blues, Motown soul, and hard-core rock and roll, Ike and Tina Turner shared bills with many top performers including the Rolling Stones. While Ike was the competent instrumentalist and songwriter, it was Tina who created for herself an enduring place within popular culture. As both a woman and a performer of strength, grace, and spirit, Tina overcame poverty, self-doubt, and abuse in order to succeed personally and professionally.

Starting out as a piano player, Ike Turner made history early on in 1951 when he played on the Sun Studios session that produced one of the first rock and roll records ever recorded, Jackie Brenston's

Ike and Tina Turner

“Rocket 88.” Picking up the guitar shortly thereafter, Turner became a busy session player who worked with blues greats Howlin’ Wolf, Elmore James, and Otis Rush. It was at this time that he developed his distinctive stinging guitar style.

His own band, Ike Turner’s Rhythm Kings, was the toast of East St. Louis when Annie Mae Bullock (Tina), the daughter of sharecroppers, met Ike Turner for the first time. Tina joined Turner’s touring band as a backup vocalist in 1956, when she was 18. By 1958 she was the star of the show. It was her lovely growl and wild, gospel accents that set her apart from other singers at the time. The high-energy performer filled the stage with her powerful presence and made every lyric of a song come to life. As sexual as she was talented, Tina was not simply a soul singer or an R&B singer: she was something new and different, and this captured the attention of both white and black audiences.

As Ike and Tina Turner, they recorded their first single in 1959 for Sue Records, “A Fool in Love.” By 1960 this side was a No. 2 hit on the R&B charts. Following up with “I Idolize You,” “It’s Gonna Work Out Fine,” and “Poor Fool,” the Ike & Tina Turner Revue had five Top 10 hits on the R&B charts in less than 3 years. Their first album, *The Soul of Ike and Tina Turner* was released in 1964 on Sue. Working for top labels such as Warner Brothers, Liberty Records, London, Hallmark, Valiant, Sunset and United Artists, Ike and Tina released at least one project every year until their final album, *Nutbush City Limits*, was recorded in 1973. Their most successful project, in 1970, was *Workin’ Together*. Released on Liberty, this recording included Tina’s version of “Proud Mary.” Another highlight of their years together was working with producer Phil Spector, whose “Wall of Sound” production style dominated American pop music during the 1960s. This big sound complimented Tina’s vocal prowess dramatically as is evidenced on *River Deep and Mountain High*, released in 1966.

While Ike and Tina’s stage union produced spectacular results and Tina had carved a name for herself as one of the premier women of rock and pop, their personal life together was hardly satisfactory. Ike Turner was a taskmaster who insisted upon total control in everything, including his marriage. Using fear and her own youthful inexperience against her, Ike finally married Tina in Mexico. After years of mistreatment and abuse, Tina left Ike in 1975, eventually divorcing him and rebuilding her career as a solo artist. In 1984, at the age of 45, she was once more an international sensation, making the charts again with her album *Private Dancer*. In 1985 she had a starring role in the popular Mel Gibson film *Mad Max Beyond Thunderdome*, for which she also recorded the hit single “We Don’t Need Another Hero.” The 1993 film *What’s Love Got to Do With It?* chronicled Tina’s rocky career and starred Angela Bassett along with Laurence Fishburne as Ike Turner. Ike spent the 1980s battling drugs and legal problems. In 1991 Ike and Tina Turner were inducted into the Rock and Roll Hall of Fame and EMI America released *Proud Mary: The Best of Ike and Tina Turner*, a 23-track collection detailing their career from the early 1960s through the mid-1970s.

Turner, Lana (1920-1995)

Nicknamed the “Sweater Girl,” actress Lana Turner defined feminine sexuality for a generation during the World War II era. She portrayed an archetypal character in *The Postman Always Rings Twice*, the first American film version of a James Cain novel and a seminal film noir, and helped reestablish the melodrama genre in the 1950s with her appearances in *Peyton Place* and *Imitation of Life*. But Turner’s importance is not rooted in her acting. Turner was a movie star in the old style, a product of the studio system, a glamour girl, a femme fatale.

Jean Mildred Frances Turner’s film career began when she was fifteen years old and was hired to be an extra in *A Star Is Born*. MGM gave her the name Lana, and studio publicity claimed she had been discovered by the editor of the *Hollywood Reporter* while having a strawberry soda at Schwab’s drugstore; Turner later said she was drinking a Coke at the Top Hat Café. Her first significant role came in what was only her second film, Mervyn LeRoy’s *They Won’t Forget* (1937), in which she played Mary Clay, a teenage girl who is raped and murdered twelve minutes into the film. In her most famous scene,

Lana Turner

Turner has no dialogue and simply walks across the screen wearing the tight sweater that earned her her nickname. The scene launched Turner’s career; critics wrote about “the girl in the sweater,” and filmgoers sent fan letters to MGM.

Turner went on to make fifty-three films in thirty-nine years. In most of them she played a variation on one characterization: sexy but not quite slutty, strong but vulnerable. In 1945 Turner was one of the most highly paid actresses in Hollywood, and by the time she appeared in *The Postman Always Rings Twice* in 1946, she had already been a top box office draw for several years. Still, the film provided her with her definitive role; writing in *The Films of Lana Turner*, Lou Valentino observed, “if Turner fans had to make a choice, *Postman* is the movie they would most elect to have time-capsuled.” In it, Turner plays the unhappy wife of a much older man who plots with a handsome young drifter to murder her husband. Because the Hays Code would not allow MGM to film a faithful adaptation of Cain’s overtly sexual novel, director Tay Garnett dressed Turner in white for most of the film, which, according to Garnett, “made everything she did seem less sensuous. It was also attractive as hell. And it somehow took a little of the stigma off.”

At the height of her popularity, Turner was a pervasive presence in American society. Children could buy Lana Turner paper dolls and coloring books. Her likeness was painted on airplane noses. There was a song titled “The Lana Turner Blues.” Perhaps most significantly, Turner played a major role in defining the manner in which women would be portrayed in American popular culture. In the 1940s she appeared on magazine covers almost monthly. She endorsed beauty products and made the buxom look popular—in 1948 4.5 million breast pads were sold to American women, who wanted to look like the Sweater Girl.

In the late 1950s Turner moved into melodramas. She received her only Academy Award nomination for *Peyton Place*, in which she plays a widowed woman who becomes the subject of scandal when she is forced to reveal that her teenaged daughter is illegitimate. In 1957, the signing of a sex symbol like Turner to the role of the mother made headlines. In *Imitation of Life*, Turner’s most financially successful film, she plays an actress and mother who arranges for an unemployed African American woman, Annie, and her daughter to live with her and act as her servants. As the two women’s daughters grow older, Annie’s daughter “passes” for white and grows ashamed of her mother.

Turner was married seven times, most notably to bandleader Artie Shaw and actor Lex Barker. In 1958, Turner’s daughter, Cheryl Crane, stabbed and killed Turner’s boyfriend, mobster Johnny Stompanato. Turner survived the bad publicity surrounding Stompanato’s murder and her daughter’s trial with no visible damage to her career. She made nine more motion pictures after *Imitation*, and she appeared on television and on stage in the 1970s and 1980s. Turner died of throat cancer in 1995.

Turner, Ted (1938—)

Ted Turner, a flamboyant Southern entrepreneur and sportsman, first came to prominence in 1977 when, as the skipper of the winning yacht in the America's Cup race, he shocked the rather staid community of Newport Rhode Island with his wild celebrations and partying. Yet, this notoriety masked the fact that he was also in the process of creating television's first "superstation," a local television station that, through the power of satellite communications, could broadcast its signal to cable-equipped households across the United States and ultimately around the world. In the process, he reinvented television viewing patterns for most Americans and forced the networks to rethink their traditional broadcasting options.

His career, in fact, began very quietly in 1970 when his Turner Communications, a small family-owned and billboard-oriented advertising agency, merged with Atlanta's Rice Broadcasting and took over a controlling interest in local television station WTCG. During the first year of the Turner regime, the station's most popular show

Ted Turner

became *Georgia Championship Wrestling*. Ironically, news programming, for which Turner would later become famous, received scant attention, being broadcast only at three or four a.m. when there were few viewers. Even at that hour, serious news stories were, for the most part, treated "tongue in cheek" and more as entertainment than as a public service. To Turner, there seemed to be no such thing as good news and viewers were regarded as being much better off watching reruns of old television series instead of dreary recounts of what went on in the world.

His purchase of the television station, however, led him to a development that would turn television on its head. Turner eventually discovered the existence of a communications satellite in a geosynchronous orbit over the earth that could be used on a 24-hour basis by anyone willing to pay the rent. The technology which was then in its infancy and which relied on the National Aeronautics and Space Administration for its positioning was not highly publicized and had been, as a consequence, under-utilized by broadcasting entities, few of which saw the possibilities for global programming. Yet, to the flamboyant Turner, the idea of a small local station being able to send its signal all over the world made perfect sense.

Beginning with a tall television tower and a lone earth station microwave dish maintained by one technician, Turner proudly proclaimed his operation to be the world's first "superstation." Utilizing an eclectic blend of movies, sports, reruns of discontinued television series, and his own original programming produced by a subsidiary company, the station achieved the status of a basic cable selection on most systems around the country and, in fact, probably helped spread the growth of cable during the next decade. Under Turner's direction, the station went from a money losing operation to generating a profit of almost \$2 million within its first 18 months. It was renamed WTBS in 1979 to reflect its corporate affiliation and became the primary revenue source financing the next components of the Turner empire.

Doing a flip-flop on his anti-news stance, Turner expanded his broadcasting base the following year by creating the innovative Cable News Network (CNN), a 24-hour news service carried by satellite to cable systems around the world. He correctly noted that the proliferation of cable programming had placed its emphasis on entertainment programming, ignoring the fact that continuous newscasting would be an ideal melding with cable since public interest was high and because the traditional networks dismissed 24-hour news service as too costly. To Turner, however, the financial risk was a gamble worth taking. He put the service on the air in June 1980 by leveraging most of his holdings and routing all of the profits from WTBS and his other interests into the fledgling enterprise.

At first, the station was regarded as something of a novelty by the critics and the networks alike, who dismissed the ambitious programming as "light weight journalism" at best. Yet, the new network with news bureaus around the world began to get its reporters to breaking stories well before the established news organizations. By 1990, it surpassed the networks with its on-the-spot coverage of the Persian Gulf War and established itself as the premier television news service in the United States. As a result, by the mid-1990s, it had expanded its viewership to 140 countries around the world and had created such off-shoots as CNN Headline News and CNN International.

In 1986, Turner took another risk by purchasing the Metro Goldwyn Mayer (MGM)/United Artists motion picture studio in a complicated cash/stock transaction valued at approximately \$1.5 billion. In order to finance his portion, Turner had to break up the studio and divest himself of a number of subdivisions to keep the money coming in. He immediately sold the United Artists portion of

the studio back to financier Kirk Kerkorian, who had sold him the entire studio to begin with; he also included MGM's film and television production and distribution in the Kerkorian package. Additionally, he sold the lot itself to television production entity Lorimar-Telepictures and wound up only with MGM's large library of motion pictures, which included the pre-1948 Warner Bros. and RKO films. Turner was now the owner of perhaps the largest library of filmed entertainment in the world—sufficient programming to keep WTBS going forever, in addition to being able to market the films on video and lease them to other networks.

Turner's next move, the controversial "colorizing" of many of the black-and-white films in his new library, raised the ire of film purists aghast at the thought of seeing such classics as *Casablanca* (1941) and *Citizen Kane* (1941) broadcast with computer-enhanced artificial color. Congress even got into the act by holding hearings to determine authorship and copyright issues relating to film to see if the Southern mogul actually had the right to contradict the original artistic intent by introducing color. The issue was never resolved but it did sensitize Turner to the issues involved, and his company has subsequently played a leading role in film preservation efforts in the United States. He also established the Turner Classic Movie channel in the early 1990s to show motion pictures in their original manifestations, with a knowledgeable host to introduce each one and talk about its production history.

Turner has also played a leading role in a number of other altruistic endeavors as well. For most of his life, he has been an ardent environmentalist, but in the mid-1980s, he began to take an equally strong stand against warfare by exploring viable methods of bringing people together. In 1985, he founded the Better World Society to produce film and television documentaries to educate people about such issues as pollution, hunger, and the perils of the arms race. He followed this a year later with *The Goodwill Games*, a scaled down version of the Olympic Games in an effort to promote brotherhood and world peace. He lost \$26 million on the first games staged in Moscow in 1986, and followed that with another \$44 million shortfall in the 1991 games held in Seattle. In 1992, he created the "Turner Tomorrow Awards" to provide an incentive for writers around the world to come up with positive solutions to problems effecting the world.

With his 1991 marriage to actress and political activist Jane Fonda, he expanded his concerns to share and support his longtime interest in Native American issues. He produced a number of documentaries and fact-based feature films on his TNT channel to show the development of American history from the Native American point of view and to spotlight the contributions of indigenous Americans to the United States. In recent years, he has expanded his commitment to his social concerns by creating a list of volunteer initiatives that individuals can do to make the world a better place. The tenets include initiatives on family size, pollution, and conservation of the environment.

In 1997, with his typical flamboyance, Turner pledged a gift of \$1 billion to the United Nations to be distributed over the following decade. He emphasized, however, that the money could not be used for administrative or "housekeeping expenses." It had to be used for programs such as disease control, cleaning up landmines, UNICEF (United Nations International Children's Emergency Fund) children's programs, refugee relief, and peacekeeping.

The proposed gift to the United Nations was based on money that he received in stock shares for merging his company with Time Warner in 1997 to form the world's largest media company. Under

the terms of the deal, Time Warner gained access to Turner's interests in cable and satellite television and, importantly, the rights to the library of pre-1948 Warner Bros. films, RKO films, and the MGM collection. In effect, Time Warner reclaimed its heritage and then some. The possibilities of commercial exploitation of the Turner materials in the Warner Bros. stores, and fledgling theme parks with videos, new character licensing, and reissues of restored films is seemingly unlimited. In return, Turner became Time Warner's largest stockholder, with "clout" only surpassed by Chief Executive Officer Gerald Levin. He immediately began pressing the company to initiate an austerity program to reduce what he considered to be an untenable corporate debt approaching \$17 billion. This included selling the corporate jets and consolidating redundant departments created by the merger.

While many find the combination of unbridled ambition in the business world juxtaposed with a genuine concern for environmental and social causes in his personal life to be an odd mix, his closest associates view it as an inevitable consequence of Turner's unsettled childhood. As the son of an equally ambitious businessman, Robert Edward Turner II, who had seen his own parents lose their South Carolina home during the Great Depression, he was conscious of the value of a dollar. This was amplified, at the age of 24, by his father's suicide after losing the family billboard advertising business due to debts. Turner also suffered through his younger sister's extended illness and death from lupus erythematosus only four years earlier. The combined experiences turned him away from organized religions but left him with an equally religious fervor to cure some of the ills of the world. "One should not set goals that he cannot reach," he told *Time* magazine in 1992. "I'm not going to rest until all the world's problems have been solved. Homelessness, AIDS [Acquired Immune Deficiency Syndrome]. I'm in great shape. I mean the problems will survive me—no question about it."

Still, Ted Turner will seemingly continue to manage the contradictory feats of creating a corporate empire and also to continue to give much of it away for worthy causes as long as he is able to "wheel and deal" his way through American finance and industry.

—Steve Hanson

TV Dinners

Introduced in the 1930s, General Foods offered the first proto-TV dinner, which was a frozen Irish stew. Successfully reaching a larger market, Swanson manufactured pot pies in 1951, and followed four years later with their mass-marketed "TV Dinners." The first TV Dinner was turkey with cornbread dressing, peas, and sweet potatoes; other varieties like Salisbury steak, ham, and chicken quickly followed.

These frozen dinners reflected changes in cultural patterns. Americans bought 70 million TV Dinners in 1955, 214 million in 1960, and 2 billion in 1994. The first meals were indeed meant to be eaten in front of the television, a relatively new technology in American homes at mid-twentieth century. To satiate larger appetites, Swanson introduced the "Hungry Man's Dinner" in 1972, and changed the generic name from "TV Dinner" to "Frozen Dinner." Producers of frozen dinners in the 1980s and 1990s reflected shifting preoccupations with foods, emphasizing low-calorie yet upscale meals—calling their products Lean Cuisine, Budget Gourmet, and Le Menu—and making cooking times even shorter by utilizing the microwave oven.

TV Guide

In 1953, when television was still a brand-new and growing phenomenon on the American scene, the president of Philadelphia's Triangle Publishing—Walter H. Annenberg—conceived the idea of a national television magazine. Inspired by the wide circulation of a local magazine called *TV Digest*, Annenberg envisioned one central nationwide magazine with separate editions containing the different local television listings. Annenberg moved quickly, keeping the convenient digest size and adding glossy color photographs and articles. On April 3, 1953, *TV Guide* was born and remains the premier listing for television fanatics in the late twentieth century.

Beginning what was to be a tradition of exclusive reportage on television and its surrounding issues, the cover of the first issue showed one of the first photos of comedy queen Lucille Ball's new baby. The magazine was issued in 10 editions, each geared to a different locality, and it sold more than one and a half million copies. The idea had proved to be a good one, and *TV Guide* went on to become the best-selling weekly in the United States, with a circulation of more than 13 million readers. The 10 editions grew to 119 regional editions, and *TV Guide* became the name most often associated with not only television program listings but also with television journalism. Though perhaps not the most glamorous aspect of the television industry, *TV Guide* is certainly one of the most familiar.

The main office of *TV Guide* is still in Radnor, Pennsylvania, but the staff of over 1,300 is scattered in more than 20 bureaus around the country. Because *TV Guide's* competition includes the free television sections of local newspapers, the weekly had to offer viewers something special, not available in the local listings. Because of this, the editorial staff of *TV Guide* has always employed a two-pronged approach—the listings and the articles.

To maximize the value of its program listings, *TV Guide* writers are assigned to cover individual television shows. Rather than using studio press releases, these writers screen programs and even read scripts themselves to ensure that their descriptions of the shows are accurate. The National Features Department of the journal moved to New York City in 1991, to be even closer to the television industry there.

TV Guide's other approach to creating public demand for its product has been its articles. The pages not filled with program listings contain photographs of stars, reviews of weekly programs and television movies, and articles. Some articles are the predictable fluffy pieces highlighting the off-camera antics of sitcom casts, or light-weight interviews with current popular stars. Light though they may be, these articles are often exactly what the television viewer wants to see—alternate views of favorite shows and stars, and the critics' opinion of the shows they watch. But *TV Guide* takes itself seriously

as a television magazine as well. In the sentiments of the editorial staff, “*TV Guide*’s remarkable success stems from its ability to present not only broad, objective reporting about what is on television but also in-depth, provocative coverage about the TV industry itself and the effect television has on society.”

To accomplish this purpose, the journal employs its own staff of distinguished reviewers and commentators, and has also sought outside contributors who would draw readers. Politicians such as John F. Kennedy and Gerald Ford, and eminent writers like Joyce Carol Oates and John Cheever have been found in its pages along with names more commonly associated with the entertainment industry but no less distinguished, such as David Brinkley and Katherine Hepburn; even political activists like Gloria Steinem and Coretta Scott King have found their way into *TV Guide*. While printing the writing of such famous personalities is clever editorial policy on the part of a magazine eager to boost sales, appearing in such a popular magazine is also a smart move for a writer who wants to be widely read.

In 1988, *TV Guide* was sold to Rupert Murdoch—a flamboyant Australian entrepreneur associated with sensational journalism—who was accumulating a vast entertainment empire. *TV Guide* joined the *London Times*, the Fox television network, Twentieth Century Fox movie studio, Harper and Row publishers, and dozens of other publications and companies as part of Murdoch News Corporation. Murdoch continued and expanded the *TV Guide* tradition of entertainment coverage that is both entertaining and thoughtful. Senator Paul Simon gave the *TV Guide* report on television violence much credit for encouraging Congressional hearings about television violence, and the Public Relations Service Council also acknowledged the magazine’s role in prompting them to set ethical standards for video news releases. Along with the serious side of television reportage, Murdoch brought some of the flashy side of television to *TV Guide*. In 1998, the first annual *TV Guide Awards Show* was broadcast, with winners selected by reader vote, and the USA Network has signed a deal to produce several *TV Guide* specials.

In 1998, News Corp. sold *TV Guide* to Tele-Communication Incorporated (TCI), one of the major cable companies in the United States. Competing not only with the Sunday newspaper pull-outs but also with new print competitors like Time, Inc.’s *Entertainment Weekly* and the cable on-screen guides, the circulation of *TV Guide* began to slip. Acquisition by TCI, however, marries the venerable and highly recognized *TV Guide* name with cable. A “TV Guide Channel” runs continuously to inform viewers of programming, and an on-line *TV Guide* magazine offers readers instant links to a variety of entertainment sites. Even the familiar pocket-sized digest format will change when *TV Guide* puts out its first full-sized edition in the late 1990s, offering reviews and commentaries for the first time on theatrical release movies as well as television.

As *TV Guide* changes with the times, it also offers a link to a simpler time—the early days of television when viewers, not yet inundated with entertainment, eagerly awaited news of the week’s programs supplemented with pictures and stories about the stars. Viewers appreciated a journal that took the new medium as seriously as they did, and they devoured the magazine that was all about television—right down to the crossword puzzle. In the 1960s, Marshal McLuhan envisioned a global community with television at its center. Television has no doubt been a huge force in modern culture, but not perhaps in the way he foresaw. By the late 1990s, there are more television stations and more different kinds of programming than could have been imagined at the birth of the medium. Though

there are hundreds of channel and program guides, *TV Guide* was the first and, to many American viewers, the only “real” guide to the exciting world promised by television. A glance back through the past issues of *TV Guide* provides a good chronicle of what television has been and what it has to say for itself.

Tweety Pie and Sylvester

When Friz Freleng directed 1947’s “Tweety Pie,” he may not have known he was making history. This, the first pairing of Sylvester the sputtering cat and Tweety (later Tweety) the wide-eyed canary, won an Academy Award and united a duo that would appear in more than 40 Warner Brothers cartoon shorts by 1962. Sylvester and Tweety earned their studio another Academy Award for 1957’s “Birds Anonymous” and several other Oscar nominations through the years. Generations of Americans have grown up watching Sylvester’s classic, ever-thwarted attempts to catch Tweety. With two of the most famous voices in cartoons, both supplied by Mel Blanc, Sylvester’s sloppy “sufferin succotash” and Tweety’s baby-voiced “I tawt I taw a puddy tat,” Sylvester and Tweety are two of the most quickly identified characters in cartoons.

A number of Warner Brothers cartoons featuring a predator unable to catch his prey appeared and gained popularity in the 1940s, including such classic pairings as Elmer Fudd and Bugs Bunny and the Road Runner and Wile E. Coyote. Other studios created similar cartoons, one of the earliest examples being MGM’s Tom and Jerry. Many of these cartoons, like Sylvester and Tweety, survived into the 1990s. Few characters, however, have attained the status Sylvester and Tweety enjoy.

Primarily responsible for uttering his tag lines (“I tawt I taw a puddy tat! I did! I did taw a puddy tat!” and “You bad old puddy tat!”) and looking cute, Tweety isn’t known for his superior wit or intelligence. Then again, that little canary is consistently able to get away from Sylvester, an animal who is both larger and faster than he is. Tweety is a popular character, both liked and disliked by audiences. Some like him because he does always get away from Sylvester, and also because he is so cute—bright yellow with big blue eyes and a baby voice. On the other hand, many people find him irritating for the same reasons. Either way, Tweety is one of the most recognized and imitated characters in cartoons.

If Tweety is not known for his superior wit and intelligence, Sylvester is known for his decided lack thereof. He generally goes barreling into situations, never considering the possibilities or consequences. When, in an effort to catch the delectable Tweety, Sylvester dresses up in a dog suit and is caught by the dog catcher, the moment he’s thrown in the back of the truck with a group of mangy mutts, he takes off his costume and shouts, “But I’m a cat!” Sylvester’s son, Junior, is so ashamed of his father, he generally walks around with a paper bag over his head. Sylvester’s only virtue may be his dogged persistence. In the face of constant failure, he continues to try. A

combination of stupidity, audacity, and sputtering temper, Sylvester defies the image of the cat as smart, cool, and collected. He continues to be, along with the likes of Bugs Bunny and Daffy Duck, one of the Warner Brothers's most popular and liked characters.

Both Sylvester and Tweety appeared in other cartoons before being paired for "Tweety Pie." Since this first pairing, Tweety has appeared almost exclusively with Sylvester. Other regular characters added spice to the Sylvester and Tweety cartoons, including Granny, Tweety's owner and protector, and a bulldog, who, in his general dislike for cats, often saves Tweety from Sylvester's schemes. Sylvester was also given a son, Junior, for 1950's "Pop 'Im Pop." Sylvester has had other adventures, appearing in cartoons with Speedy Gonzales, the world's fastest mouse, and Hippety Hopper, the baby kangaroo. Sylvester even made a cameo appearance as the Grand Duke in "The Scarlet Pumpernickel."

The Sylvester and Tweety cartoons, like their counterparts, began as "curtain-raisers" in theatres. A 1949 U.S. Supreme Court ruling that declared it illegal for studios to demand that theaters book a cartoon, newsreel, or live-action short in addition to hit films marked the beginning of the end of curtain-raisers. The advent of television and less public interest in movies made it difficult for studios to recover the costs of creating a cartoon short. Some less expensive cartooning methods came out of this time, but, ultimately, cartoon shorts had to make the move to television or perish. Sylvester and Tweety made this transition, culminating in a self-titled repackaging of their older cartoons as well as other Warner Brothers shorts which premiered on September 11, 1976 on CBS. Sylvester and Tweety shorts appear into the 1990s on various programs on network and cable stations.

Perhaps one of the most important factors in the continuing popularity of Tweety and Sylvester is Warner Brothers Studio's ability to keep the characters' faces in front of viewers. Sylvester and Tweety have been reincarnated in a new cartoon series, *Sylvester and Tweety Mysteries*, which premiered on September 9, 1995 on the WB Television Network. The duo appeared in 1996's *Space Jam* with legendary basketball player Michael Jordan. The cat and canary have been seen endorsing products such as Miracle Whip dressing and MCI long distance. On April 27, 1998, the United States Post Office honored Tweety and Sylvester with a 32 cent postage stamp. Sylvester and Tweety are on tee shirts, shorts, socks, underwear, and other articles of clothing. They appear prominently in products from clothing to cups to clocks sold at the Warner Brothers Studio Stores in malls across the United States.

Sylvester and Tweety are just two of numerous Warner Brothers cartoon characters who appeared in the first half of the 20th century and have enjoyed continuing popularity. Warner Brothers's marketing of the characters is no small part of their fame, but Sylvester and Tweety have an appeal that goes beyond marketing. Sylvester is not the cat we might expect, and Tweety certainly isn't as innocent as he appears. Their interactions are what makes great comedy. With Sylvester and Tweety, it is always the unexpected that makes audiences laugh. When people have seen the cartoons repeatedly and are still laughing, Sylvester and Tweety Pie's continuing popularity seems to be assured.

Twelve-Step Programs

Addiction-recovery treatments modeled on the techniques of Alcoholics Anonymous (AA), Twelve-Step programs are manifestations of the nineteenth-century self-help and social collectivist movements. AA and similar organizations also represent a form of secularized religion, involving both Christian and Eastern philosophical principles, that became popular in the twentieth century. The Twelve Steps are a series of behavior-modification principles that appeal to a higher power, take action through personal inventories, make amends to others, and spread the message. Beginning with alcoholism, the treatment philosophy has been applied to gambling, eating disorders, drug addictions, sexual disorders, physical health problems, and a variety of other damaging compulsive behaviors, with varying degrees of success and not without some controversy.

The industrialization and resulting prosperity of mid-nineteenth-century Victorian Britain encouraged a renewed belief in restraining moral attributes such as hard work, respectable behavior, and personal responsibility. These values were not only embraced by the new, growing middle class in England, but appealed to other classes as well. Author Samuel Smiles enshrined what he called his "gospel of work" in a series of best-selling books including the 1859 *Self-Help*. This book, which was based on a series of self-improvement lectures that Smiles gave to young men, taught that financial success and personal happiness were based entirely on individual initiative and faith in God. Smiles' self-help movement spread across the Atlantic to the rapidly industrializing United States and influenced a generation of American self-help activists including physician John Harvey Kellogg. Kellogg was hired to supervise the Seventh Day Adventists' Health Reform Institute, located in Battle Creek, Michigan, in 1876. Beyond the breakfast cereal he helped invent as a health food, Kellogg became the most prominent self-help health advocate in the world until his death in 1943. He spread, popularized, and helped make nearly universal the Adventist notion that individuals are responsible for and can do something about their physical and spiritual health.

During the early twentieth century, a Protestant evangelist named Frank N. D. Buchman established the Oxford Group, a religious movement that encouraged conversion experiences through confession, restitution, and self-survey. Before the group became involved with Fascism in the late 1930s, it attracted two converts with severe drinking-related problems, New York City stockbroker William Griffith Wilson, or "Bill W." as he was known to his AA friends, and Akron, Ohio physician Robert Holbrook Smith, or "Dr. Bob." The pair adapted the principles and practices of the Oxford Group in tandem with the well-known self-help health dogma of Kellogg to the problem of controlling drinking. Previously, alcoholism had been treated as a matter for moral persuasion, institutionalization, or law enforcement. Bill W. and Dr. Bob's new program consisted of helping, talking to, or otherwise maintaining contact

with other drunkards to engage in spiritual activity. On June 10, 1935, Dr. Bob had his last drink, marking the official start of Alcoholics Anonymous.

The circles of recovering alcoholics in AA grew slowly at first. The noble experiment of Prohibition, which ended in 1933, had changed the culture of alcoholism in American society. All-male saloons died with the introduction of Prohibition in 1920, replaced by mixed-sex drinking that continued after 1933. Gone was the fraternity of men supporting each other in and out of alcoholism. Prohibition forced drinking undercover, into homes, hotel rooms, and other places where it had not been common previously. Bootleg beverages, especially beer, were often weak or reduced with other substances so that they could be consumed in greater quantities.

The end of Prohibition meant the return of alcoholic beverages to their traditional strengths, a reality to which many drinkers could not adjust. Coupled with enticing stories in the press, advertisements promoting drinking as sophisticated and glamorous, and the abundant use of alcohol in Hollywood movies, alcoholism gradually increased in the years during and after the Great Depression. There were over 100 members of AA by 1939, the same year the basic Twelve-Step program, *Alcoholics Anonymous*, or the "Big Book" as it was known in the movement, was published. A national AA service office was established in New York City in 1940 and the *Saturday Evening Post* gave the AA and the Twelve-Step program its first extensive national publicity in 1941.

Bill W. wrote The Twelve Steps in a burst of inspiration during 1938 and 1939, but they were based on debate among members and reflected the collective nature of the organization and its religious underpinnings. Though the original version was written in the stilted language of the day, subsequent editions of the "Big Book" have kept the original wording. The founders described themselves as "average Americans," but most were male, Protestant, white, and middle class. Their perspective reflected their environment, although the group had made efforts to distance itself from the earlier temperance movement that had flourished among the same social-economic class by stressing that alcohol was not in itself bad, only that some individuals were unable to drink in moderation. The first tenet of the Twelve-Step program was that members had to admit their powerlessness in their addiction. AA maintained that a person had to "hit bottom" and find him or herself in a totally powerless situation before redemption was possible. After members were introduced on the anonymous, first-name basis pioneered by AA (every member is greeted with "Hi" and their AA name), Twelve-Step meetings were built around the near-destruction testimonials of new and old members.

Next, the member had to express the crucial element of belief: adherence to a power greater than him or herself. Only with faith could the member move on to Step Three, turn his or her life over to God, Step Six, be ready to have God remove defects of character, and Step Seven, ask Him to remove shortcomings. Steps Four to Nine, including the making of a moral inventory, the admission of past wrong-doings to another person, and the listing and making of amends to people who had been wronged, were called the action Steps. The action Steps said nothing about drinking, for in AA parlance, "liquor was but a symptom." Steps Ten to Twelve continued inventory taking and wrong-doing admission, the improvement of one's knowledge of God through prayer and meditation, and the undergoing of a conversion experience. A "spiritual awakening" as the result of these Steps, which permitted the member to spread the Twelve-Step method to other addicts and practice the principles in

everyday life, was considered to represent the continuance or maintenance of the Steps. In AA's conception, helping other alcoholics was considered the best means by which to maintain an individual's own continued sobriety. It also perpetuated the AA organization and spread the Twelve-Step concept.

From its modest beginnings, AA has grown into a worldwide organization with hundreds of thousands of members. Fellowship continues to be organized on a local level with no dues payable. Contributions for expenses are accepted from those attending meetings only. Affiliation of the AA or its local groups with churches, political organizations, or other official institutions is barred by the AA Twelve Traditions, another seminal document. More than 200 other organizations have developed their own versions of the Twelve-Step program, including Al-Anon, the organization for members of the families of alcoholics founded in 1951, Narcotics Anonymous, Gamblers Anonymous, Overeaters Anonymous, Debtors Anonymous, Augustine Fellowship Sex & Love Addicts Anonymous, Survivors of Incest Anonymous, and more recently, Cocaine, Nicotine, and Co-Dependents Anonymous.

The Twelve-Step program continues to be a focus of debate. Experts argue that it is difficult to evaluate recidivism rates of Twelve-Step program participants because of their anonymity. AA's insistence that alcoholism is a disease counters more recent research that alcoholism is a behavior without physical cause. The first continuing female member of AA, Marty Mann, joined in 1937, but feminists and minorities argue that AA is oppressive through language in the Twelve Steps, which they perceive as constraining, repressive, and fostering co-dependence. They hold also that AA literature does not allow for discussion of social issues, such as discrimination and poverty, which often affect individual drinking patterns. The Twelve-Step's insistence in God or a "Higher Power" has run afoul of the doctrine of the separation of church and state, especially when the AA cooperates with law enforcement officials in mandating AA treatment for convicted offenders. And AA's Protestant Christian roots has led to criticism that it is in itself a form of religion, or at least a quasi-religious organization like Transcendental Meditation or Scientology, an allegation AA denies.

The Twelve-Step program has been borrowed by numerous, less serious behaviors such as shop and fish-o-holics. The AA meeting format, with members' accounts of desperate experiences and the "Hi, I'm so-and-so" introduction, have been the object of lampoons and parodies. In an episode of the popular 1990s television sitcom *Seinfeld*, the character George harassed a new AA member friend for failing to properly complete Step Eight, making amends to persons harmed, to the extent that the friend was driven to binge on liquor-flavored ice cream. Still, most experienced therapists agreed that any form of treatment for addictive behavior is most likely to show a higher rate of success if the patient joins Alcoholics Anonymous or another Twelve-Step Organization. In the face of the omnipresent social problem of alcoholism and its detrimental effects on children and families, the growing social acceptance of gambling and tolerance of compulsive gamblers, and an ever-increasing variety of other addictive behaviors, Twelve-Step programs provide adequate substitutes for a dependent way of life.

The Twenties

The 1920s were a period of rapid industrial growth, economic prosperity, and cultural change. Due mainly to the automobile industry, building and road construction, the development of the radio and advertising industries, and the emergence of "the new woman," the 1920s are often seen as the first "modern" decade in which the major characteristics of the twentieth century first emerged. Tensions between ideas of modernity and accepted traditional values characterize the popular culture of the twenties.

Following American involvement in the First World War, the 1920s witnessed an emphasis on domestic concerns such as the economy and the cultural values of American society. The economic boom of the 1920s, best illustrated by Henry Ford's dominance of the automobile industry through the use of interchangeable parts in automobile production, led to a high standard of living for many Americans as wages increased while working hours decreased. This was possible mainly through the increased mechanization of industry and production on a massive scale. Ford's River Rouge plant in Michigan, in which raw materials were processed, parts fabricated and assembled all under Ford's control, illustrates the strengths of the 1920s economy. Ford produced an automobile which required little in highly paid skilled labor and could be sold at a relatively cheap price. The automobile industry, in turn, fueled growth in related industries such as construction, glass, rubber, oil, and tourism. This boom created an American economy in which industrial production, for the first time, outpaced consumer demand. In order to accommodate this increase in production, corporations turned to advertising as a way to increase demand. It was during the 1920s that businesses began advertising directly to consumers and not retailers. The purpose of the advertisements became less about the presentation of information about a product and more about creating a positive image for a corporation or product by implying various benefits resulting from the product's purchase. Employing popularized ideas about the expression of desires taken from Sigmund Freud's theories of sexual repression leading to neurosis, advertisers sought to exploit the desires of the consuming public by emphasizing the benefits of consumption.

The emphasis on expression over repression went beyond the realm of advertising and can be seen in the popular culture of the

1920s. From novels such as F. Scott Fitzgerald's *The Great Gatsby* (1925) and Sinclair Lewis' *Babbitt* (1922) to the increasingly frenetic sound of jazz music and new dances such as the Lindy Hop (named after famous flyer Charles Lindbergh), American popular culture reflected a modern sense of ethics and values focused on individual pleasure and expression. Even all-American celebrities, such as Douglas Fairbanks and Mary Pickford, were challenged by more sexually expressive personalities such as Rudolph Valentino and Greta Garbo. This more modern approach to popular culture was reinforced by modern media, such as the radio, phonographs, and sound film. Both the form and content of 1920s popular culture demonstrated a sense of modernity.

In literature, the 1920s were characterized by the writings of what Gertrude Stein called "the lost generation." Writers such as Fitzgerald, Lewis, Ernest Hemingway, John Dos Passos, T. S. Eliot, Ezra Pound, e. e. cummings, and Sherwood Anderson critiqued American society, especially the traditions and values of rural life, or in their words, "the village." These writers were disillusioned by their involvement in the First World War and this disillusionment is reflected in their writings. It was a lost generation, according to Malcolm Cowley in *Exile's Return: A Literary Odyssey of the 1920s* "because it was uprooted, schooled away, and almost wrenched away from its attachment to any region or tradition." But the "lost generation" writers were not the only significant writers during the 1920s. Women like Edna St. Vincent Millay attempted to capitalize on the less repressive atmosphere of the 1920s by flaunting sexual expression in their poetry and life, and African American writers such as poets Langston Hughes and Countee Cullen, novelists Claude McKay, Jean Toomer, Jessie Faust, and Zora Neale Hurston joined artists such as Aaron Douglas and Augusta Savage in leading the "Harlem Renaissance."

This greater mainstream acceptance of African-American culture is also reflected in the growing influence of jazz music on American popular music. The First World War was instrumental in the spread of jazz music. The military's forced closure of New Orleans' red light district, Storyville, forced many jazz musicians employed there out of Louisiana northward in search of other opportunities, and war mobilization provided greater contact between races at military installations and wartime manufacturing plants. These two factors led black musicians to adapt black blues and jazz to the expectations of a white audience. Jazz spread first among younger audiences, mainly due to its spontaneous nature and its association with chaotic dancing, and critics denounced it as unmusical, intoxicating, and immoral. Despite these objections, jazz became the most popular form of music during the 1920s, dominating the radio airwaves, record sales, and even influencing movies such as *The Jazz Singer* (1927). As jazz music became more popular, it also became more standardized, organized, and arranged. What had once been music that emphasized improvisation throughout a piece became a highly structured, formulaic genre in which improvisation was limited to specific breaks in the arrangement of jazz "riffs." What had been "hot" jazz, by musicians such as Louis Armstrong and his Hot Five, became "sweet" jazz at the hands of band leaders like Guy Lombardo and his Royal Canadians, or "symphonic" jazz in the words of Paul Whiteman. Whiteman's orchestra debuted George Gershwin's "Rhapsody in Blue," in 1924, subtitled "for jazz band and piano." The work was primarily symphonic with jazz motifs. These orchestras and large bands developed what would become Big Band swing music in the 1930s and 1940s.

Like jazz music, motion pictures also gained greater acceptance during the 1920s as they moved out of working-class storefront nickelodeons into grand movie palaces attracting a middle-class and middle-brow audience. In the various conflicts between traditional values and modernity, movies challenged accepted middle-class values. According to Robert Sklar, in his book *Movie-Made America: A Cultural History of American Movies*, “movies came to be seen as offering values distinctly different from those of middle-class culture, and providing greater opportunities for ethnic minorities than other economic sectors.” Not only was the movie industry dominated by recent immigrants, the films themselves (being silent in the early 1920s) were easily adapted to a variety of immigrant cultures and easily understood by immigrant audiences, and as the audience for movies grew, so did the respectability of movies as an art form and acceptable leisure activity. The movie industry portrayed a changing America not only through the opportunities it created for a more heterogeneous population, or the attractions it held for a mass audience, but the movies themselves presented the values of modern America at the same time as it reinforced traditional middle-class values. Two of the most popular male stars illustrate this point. Rudolph Valentino, in his short career before his sudden death in 1926, embodied the modern, passionate, and sexually expressive male of the 1920s in such films as *The Sheik* (1921) and *Blood and Sand* (1922), while Douglas Fairbanks, in *The Mark of Zorro* (1920), *Robin Hood* (1922), and *The Thief of Bagdad* (1925), embodied the traditional, robust, athletic, all-American male. Both men became celebrities and helped to cultivate the studio star system in which performers became the major commodity used in selling a movie to the public.

The 1920s witnessed the consolidation of the power of the studios, especially Paramount Studios under Adolph Zukor, which was the largest of the silent film producers. Metro-Goldwyn-Mayer was created by theater owner Marcus Loew, who bought and combined Metro Picture Company with Samuel Goldwyn’s Picture Company under the direction of Louis B. Mayer. Chafing under the influence of powerful producers and studio executives, director D. W. Griffith, and actors Charlie Chaplin, Douglas Fairbanks, and Mary Pickford formed the United Artists Corporation in 1919 to distribute individually produced films, and thereby avoid the formal structure of a studio. Each of these companies controlled several aspects of film production, distribution, and exhibition, yet the greatest change in Hollywood film occurred at the fledgling Warner Brothers Studio when they purchased and began producing films with the Vitaphone (sound-on-disc) technology in 1926. Within a few years, sound film production outpaced silent film. With the premiere of *The Jazz Singer* in 1927, the silent era ended.

In many ways, the silent era in popular culture ended earlier with the spread of radio technology in the 1920s. From amateurs broadcasting in basements and garages to fully formed and regulated networks after the Radio Act of 1927, the radio industry developed into Americans’ most utilized and trusted source of news, information, and entertainment. The 1920s were a decade of growth for the radio industry, not only in its technical aspects, but in regards to programming as well. Radio stations learned what worked well on radio and what did not. The most attractive aspect of radio for the audience was its immediacy. Broadcasts of sporting events, from boxing matches and baseball games, political conventions and election returns, live remote broadcasts from big-city ballrooms, and news reporting all became mainstays of the radio industry. Radio also

found itself the new home of variety entertainment after the decline of vaudeville. The most popular radio comedy, *Amos and Andy*, featured white vaudevillians Freeman Gosden and Charles Correll portraying two black southerners whose simple ways and common misunderstandings provided the humor for the show. The pervasive nature of radio reinforced, to a national audience, many regionally held stereotypes, especially of minorities. Many people believed what they heard on the radio, not only because it was capable of presenting news upon its occurrence, but because the radio produced a certain form of intimacy in which the listener identified with the broadcast in ways unlike other forms of media. The presence of a radio set within one’s home and the necessity of the listener to create images from the sounds presented resulted in each listener creating a very personal program, unique and individual. This transformation in communications and entertainment, through its immediacy and national appeal, reinforced the feeling that the 1920s were the start of the “modern” era.

This modern shift in social and cultural values did not take place unopposed. Several social movements can be explained as a revolt against the changes occurring in American society; as a revolt against modernity. Nativism, prohibition, and counter-evolution were all attempts to save traditional values in the face of change. Nativism came in three basic forms. All, however, expressed a deep discomfort with the changes occurring in American society and mainly with the changes occurring as a result of immigration. Anti-radicalism was a form of nativism in which people who disagreed with the government were seen as undesirable. The attacks on foreigners during and after WWI, in such notable instances as the Palmer raids and the unfair trial of anarchists Sacco and Vanzetti were all part of this fear of radicals, especially in the wake of the Bolshevik Revolution in Russia in 1917. This fear of radicals spilled over into a fear of non-Protestants, especially against Jews, but even against Catholics. Michigan and Nebraska both passed laws prohibiting parochial schools, and critics of President Woodrow Wilson called him “the puppet of the Pope.” This fear of others naturally translated into fierce support of white Anglo-Saxon Protestants. In 1921, Madison Grant wrote *The Passing of the Great Race* in which he described not only the hierarchy of races, with whites being at the top, but he also distinguished between whites by dividing Europeans into three main groups, Mediterraneans, Alpines, and Nordics, with Nordics being the superior group. This belief in the inferiority of Asians, Africans, and southern and eastern Europeans led to the passage of the National Origins Act of 1924 in which immigration quotas were designed to increase the number of nordic immigrants while decreasing all others; this also meant the complete exclusion of Asian immigrants and small quotas for southern and eastern European immigrants. The most dramatic example of nativism during the 1920s can be seen in the revival of the Ku Klux Klan (KKK). Unlike the post-Civil War era, when the purpose of the Klan was to intimidate African Americans, the 1920s Klan advocated white supremacy over not only Blacks, but also Jews, Catholics, and any immigrants who were not white Anglo-Saxon Protestants. The Klan also became modern by using expert advertisers to promote themselves and recruit new members. By 1923 over 3 million Americans were members of the Klan, with the strongest Klan organizations in the Midwest and the West.

In January of 1919 the 18th Amendment was passed, prohibiting the manufacturing, selling, or transporting of intoxicating beverages in the United States. The Volstead Act of 1919 defined intoxicating beverages as anything with more than 0.5 percent alcohol. This move towards prohibition of alcohol was yet another attempt to return

America to what many perceived as its past. The proliferation of saloons in the late nineteenth and early twentieth centuries was seen by many people as an expression of change, of encroaching foreign influence. Halting this process of change meant reinforcing and retaining traditional values.

Part of the attack on things foreign and things new was the attack on science, and especially in those areas where scientific theory and practice conflicted with deeply held religious beliefs, such as in the case of the theory of evolution and the belief in creationism. In 1925, the state of Tennessee passed a law prohibiting the teaching of evolution in public schools and colleges. In a test case in July of 1925, schoolteacher John T. Scopes was tried under this law in Dayton, Tennessee. The case became a national sensation, with two of the most prominent attorneys representing each side. The American Civil Liberties Union hired the famous trial lawyer Clarence Darrow to argue against the law, while the state got William Jennings Bryan (the populist and Democratic presidential hopeful) to argue its side. The “monkey trial,” as it was known, argued over the issue of evolution versus creationism, but in the end the judge ruled that the only thing that mattered was the fact that Scopes did teach evolution and therefore was guilty. He was fined \$100, which was suspended by the state supreme court. It was a victory for the anti-modernists, but it would be their last one. A few days after the trial ended, William Jennings Bryan died, and with him died much of the 1920s fundamentalist movement.

Each of these social movements (nativism, prohibition, and anti-evolutionism), seen in conjunction with the rapid spread of automobiles, economic prosperity, and the radio and film industries, illustrates the conflicted state of American culture during the 1920s.

23 Skidoo

Though commonly associated with the “roaring twenties,” the popular catch phrase, “23 Skidoo,” actually originated around the turn of the twentieth century. Its origin has been accredited to two contemporaneous sources: *The Only Way*, a Broadway adaptation of Charles Dickens’ *Tale of Two Cities*, and telegraphic code. In the last act of the aforementioned play, an old woman solemnly intones the number of victims on their way to the gallows, with special emphasis on number 23, the play’s protagonist. The cry, “23!,” was soon taken up by Broadway habitués. In telegraphic code, 23 is an abbreviation

for “Away with you!” Skidoo, a derivation of skedaddle, was soon added to “23” for the edification of those who had not seen the play or were unfamiliar with telegraphic code. For the next 20 years, the expression, or one of its variants, was commonly heard amongst students and young sophisticates, where it ordinarily meant “Get lost!,” but was frequently used without any precise meaning. By the end of the 1920s, “23 Skidoo” had fallen out of common usage, but has since proved more enduring than other catch phrases of the period.

20/20

With the premiere on June 6, 1978 of its program *20/20*, ABC Television launched its first ever news magazine. The youngest and the most troubled television network in the late 1970s, ABC was engaging in a major initiative to revise its news programming under the tutelage of its newly appointed president, Roone Arledge. Arledge targeted a number of ways in which ABC could improve its news division with the goal being to attract the average American viewer rather than news junkies. One result of this push was *20/20*, which was based on the success of the CBS program *60 Minutes*, which, since its premiere in 1968, had enjoyed significant popularity as a different means to present news through the use of longer segments and non-traditional news time slots.

The very first *20/20* program was hosted by *Time* magazine critic Robert Hughes and former *Esquire* editor Harold Hayes. The kick-off story featured a report on rabbit abuse at greyhound tracks, and signally failed to attract critical enthusiasm. The initial reviews ranged from “dizzily absurd” from *The New York Times* to “the trashiest stab at candycane journalism yet” from *The Washington Post*. Arledge immediately realized that the program’s concept had to be reworked if it was to succeed. He rearranged the show’s focus and introduced a new anchor, the longtime *Today* show personality Hugh Downs. Under the beloved Downs, *20/20* thrived and took on more of a consumer focus. In 1984, Arledge decided to bring on Barbara Walters, also a *Today* show alumnus but more recently a rising star within ABC. The combination of the two anchors was a hit with the viewers and, through *20/20*, Walters and Downs earned a place among the most respected journalists in television history.

20/20 has featured countless groundbreaking and exclusive interviews with world-famous figures drawn from many different arenas of public life. Often controversial, they have ranged from politics and show business to sportsmen, and even criminals. Among the most memorable interviewees have been Cuba’s president, Fidel Castro; Bill and Hillary Clinton, appearing at the height of the Whitewater controversy; Olympic diving champion Greg Louganis, who revealed for the first time that he was stricken with AIDS and had been HIV-positive when he competed in the 1988 Olympics; and

former White House intern and presidential paramour, Monica Lewinsky. Also contributing to *20/20*'s success with viewers has been its numerous health-related stories, one of the most personal involving Downs being shadowed by a crew who filmed him during his knee procedure and subsequent recovery.

Encouraged by the strong showing of *20/20* and the continued popularity of the rival *60 Minutes*, and spurred on by NBC's competitive bid into the news magazine forum with *Dateline*, ABC has created other news magazines over the years. With NBC's *Dateline* airing up to five times per week, in 1997 ABC decided to increase *20/20* showings to several nights a week. While this proved mildly successful, the network made a more radical move for the 1998-1999 season, combining all ABC news magazines (notably *PrimeTimeLive*) under the *20/20* brand. Airing at least three times weekly, *20/20* expanded its original consumer focus to embrace the more investigative pieces and hard journalism that had marked *PrimeTimeLive*, as well as to include more features on the day's top news. Additionally, Downs and Walters were no longer the sole anchors of the expanded program, but shared responsibilities with several other top ABC journalists, notably Sam Donaldson, Diane Sawyer, Charles Gibson, and Connie Chung.

Twiggy (1949—)

Arguably the very first “supermodel,” England’s Twiggy became an international star in the mid-1960s, bringing the world an idealized image of a youthful “Swinging London” and, for better or worse, heavily influencing popular conceptions of femininity. On the one hand, the ninety-one-pound, saucer-eyed Twiggy (born Lesley Hornby) was a positive celebration of androgyny and a radical break from the 1950s’ insistence that female sex symbols possess curvaceous figures. Conversely, some critics have argued that Twiggy’s slight physique helped push standards of thinness too far, leading many young women toward personal dissatisfaction with their bodies and, in some cases, anorexia. After saturating the pages of fashion magazines at the end of the 1960s and appearing in a handful of films in the early 1970s, notably Ken Russell’s *The Boyfriend*, Twiggy adopted the last name Lawson and largely remained out of the limelight. However, Twiggy’s influence upon the fashion industry never truly waned, as svelte boyishness recurred as a theme in female models for decades.

The Twilight Zone

Created by the visionary writer Rod Serling, *The Twilight Zone* proved both a landmark of televised science fiction and a powerful touchstone in America’s pop cultural consciousness. The black-and-white anthology series, which ran on CBS from 1959 to 1964, generated lukewarm ratings at the time but has grown in public estimation over time. Over the course of its five-year network run, *The Twilight Zone* explored themes never before examined on television. It exposed the talents of a generation of talented character players, like Jack Klugman, William Shatner, and Robert Duvall, who would go on to become household names for subsequent portrayals. It also cemented the legacy of its creator, at the time known principally as the author of socially concerned live dramas.

Serling created *The Twilight Zone* to serve as a forum for his commentary about technology, conformity, discrimination, and a whole host of other issues. Frustrated by his inability to explore these

A scene from *The Twilight Zone* episode “Time Enough at Last.”

topics in mainstream dramas in the face of censorship by network executives and skittish advertisers, he hoped that the show’s science fiction anthology format might allow him to introduce a little liberal orthodoxy to viewers without alarming the suits. But if Serling was in it for the advocacy, the show’s other creative collaborators consistently pulled it back into the realm of traditional fantasy. This dialectic proved good for all parties concerned.

The Twilight Zone premiered on October 2, 1959. Its introductory episode, “Where Is Everybody,” established the tone and creative parameters of the series. In it, a young man in Air Force garb finds himself in a seemingly deserted town. After increasingly frantic attempts to locate its inhabitants, he breaks down in despair. Only at the end is it revealed that the man is an astronaut being subjected to an experiment in an isolation booth, and that the proceedings have been an hallucination. In countless subsequent installments, *The Twilight Zone* would rely on this same formula of an ordinary human being suddenly beset by extraordinary circumstances. Quite frequently, there was an unexpected twist at the denouement that cast the strange events in a new or supernatural light. To provide context and codify the cosmic significance of the events, Serling himself provided opening and closing narration, usually on camera in an immaculate Kuppenheimer suit.

To supply these dark melodramas from week to week, *The Twilight Zone* relied upon a stable of writers seasoned in the macabre arts of science fiction and fantasy. Along with Serling, short story veterans Richard Matheson and Charles Beaumont formed a creative trioka that was responsible for much of the series’ high-quality

teleplays. Matheson’s scripts tended toward more hard-science content, like the classic “Little Girl Lost,” about a child who vanishes through her bedroom wall into another dimension. Beaumont crafted some of the show’s more horrific installments, like the gothic gem “The Howling Man,” in which a traveler in Europe happens upon the devil being kept locked up in a cell in a monastery. Other important contributors to the series included George Clayton Johnson; Montgomery Pittman; Earl Hamner, Jr.; Reginald Rose; and Ray Bradbury, who eventually wrote for the show as well.

But it was the workaholic Serling who took on the bulk of the creative burden. All told, Serling would write 92 of the 156 broadcast episodes, more than one-third of the total. His influence over the show was especially keen during the first three seasons, when he personally penned some of the program’s signature installments. “Eye of the Beholder” addressed people’s perceptions of beauty, through the eyes of a bandaged and “disfigured” young woman whom viewers see revealed in a shocking climax. “Mirror Image” explored the nature of identity when a woman waiting in a bus station is suddenly confronted by her exact double. And the chilling “The Obsolete Man” touched on Cold War themes in relating the last days of a librarian of the future condemned to death for defending the utility of books.

Episodes like these allowed Serling to fulfill his vision of commenting on existential and political themes without incurring the wrath of advertisers and network executives. But the show’s social concern also emboldened Serling to write all too pontifically at times, a problem that was exacerbated by his heavy workload. Too many of his episodes seem written in a rush of sanctimony, with long, windy speechifying from the central characters on the major issues of the day. Even the many gems could not spare the program from lukewarm public interest. *The Twilight Zone* was never a hit in the ratings and was in danger of cancellation by CBS almost from the start. At the end of the third season, the network elected to expand the show to an hour in hopes that that might change its fortunes. But the quality of the scripts suffered, with many seeming interminably padded at the new running time. After a desultory fifth season, during which most of the series best creative talent left, the axe finally fell.

The Twilight Zone may have ended in 1964, but its influence continued to grow. Many of the show’s writers, like Richard Matheson, took their talents to the big screen. Others continued to work in television. Earl Hamner, Jr., who wrote several episodes for *The Twilight Zone* set in the rural backwoods, went on to create *The Waltons*, the long-running cornpone drama on CBS. Fittingly, Serling remained the busiest of all. He co-wrote the screenplay for *Planet of the Apes* in 1968, among other theatrical ventures. He also released a series of short story adaptations of his classic *Twilight Zone* teleplays. But Serling’s talents remained best suited for the small screen. He hosted a very *Twilight Zone*-like anthology series, *Night Gallery*, from 1970 to 1972, but network interference eventually drove him out of the medium altogether. He died following complications from open heart surgery on June 28, 1975.

Long after its network run had ended, *The Twilight Zone* remained a staple of syndicated reruns nationwide. Often aired late at night, it gave the creeps to a whole new generation of insomniacs who had not been around for the initial airings. The show’s appeal was so broad that in 1977, *Saturday Night Live* could do a parody of it (with Dan Aykroyd doing a dead-on Serling) that had the audience howling with recognition. Serling’s widow even launched a *Twilight Zone* magazine featuring new fiction in the series tradition. The time seemed ripe for a major revival of the franchise.

But all did not work out as planned. In 1982, a *Twilight Zone* movie was released to much anticipation. In keeping with the spirit of the series, producer Steven Spielberg had opted for an anthology format, comprised of three remakes of classic *Twilight Zone* installments and a fourth, all-new story. Up and coming directors Joe Dante (*The Howling*), John Landis (*An American Werewolf in London*), and George Miller (*The Road Warrior*) were brought in to helm three of the segments, with Spielberg handling the fourth. Despite all that talent, however, and the best efforts of screenwriter Richard Matheson, the result was a tepid mishmash that bombed at the box office. Each of the three remakes was markedly inferior to the original, while Landis' segment, the lone original story, was a sanctimonious misfire, dismissed by the show's aficionados as an unintentional parody of Serling. The fact that actor Vic Morrow was beheaded during filming did little to enhance the picture's public relations cachet, and embroiled Landis in a career-threatening lawsuit.

Somewhat more successful—artistically, if not commercially—was a new *Twilight Zone* television series, launched in 1985 on CBS. The new show boasted a stellar lineup of creative talent, from Ray Bradbury, Stephen King, and Harlan Ellison on the writers' side to directors like William Friedkin, Joe Dante, and John Milius. Actor Charles Aidman, who had appeared in two original *Twilight Zone* episodes, assumed Serling's post as narrator/moral contextualizer. A number of top-flight episodes were produced, like Ellison's brilliant "Paladin of the Lost Hour," that recaptured the spirit of the old series. But budget cuts, network interference, and low ratings eventually took their toll, and the series was mothballed for good in 1989.

Four decades after its network debut, *The Twilight Zone* continued to intrigue both the general public and fans of the science fiction/fantasy genre. The phrase "Twilight Zone kind of feeling" has entered the popular lexicon as a term for the series' quintessentially eerie sensation of otherworldly alienation. Marathon airings of the nearly 40-year-old episodes generated powerhouse ratings for local syndicated stations well into the 1990s, making the syndication package a prized possession within the broadcast industry. In 1996, cable's Sci-Fi Channel secured exclusive rights to air reruns of the original series—albeit in a truncated form allowing for additional commercial time, something of which Serling would most assuredly not approve. Nevertheless, its viability into a second millennium ensured that Serling and his unique vision would remain a permanent marker on America's pop cultural landscape.

Twin Peaks

With a quirky mixture of murder mystery, soap opera, film noir, and the avant-garde, *Twin Peaks* rewrote the formula for prime-time television drama in the early 1990s. Created by American filmmaker David Lynch (*The Elephant Man*, *Blue Velvet*, *Lost Highway*), *Twin Peaks* was a character-driven show, sporting a cast of more than one

hundred, and used intricately interwoven subplots to keep viewers tuned in. This unconventional epic revolves around the murder of Laura Palmer, small-town beauty queen, and the investigating FBI agent whose dreams and quasi-Buddhist methods reveal the Black Lodge, a surreal waiting room inhabited by the personification of pure evil known only as BOB. *Twin Peaks* was canceled in 1991 after only twenty-nine episodes.

Twister

Invented by Reyn Guyer, this game asks several players to reach over, under, and across each other to place their hands and feet on colored circles on a large vinyl game board. Named "Twister" by Milton Bradley, the game was demonstrated on the *Tonight Show* in 1966. While Eva Gabor was on her hands and knees, show host Johnny Carson stood over her and reached for another circle; the sexual innuendo and close physical contact made for controversial television and helped attract American youths to the game. Twister sold 13 million games in its first year. In 1987, at the University of Massachusetts campus in Amherst, 4150 contestants set a record for the number of simultaneous Twister players.

2 Live Crew

2 Live Crew, the primary progenitors of a hip-hop sub-genre called Miami Bass, will probably be better remembered for their important legal battles than their music. Their sexually explicit songs that often objectified women and which featured relatively simple bass-driven beats drew the attention of many conservative law enforcement officials from their hometown of Miami, as well as elsewhere. 2 Live Crew's legal perils during the late 1980s and early 1990s opened up debates about censorship and made them unwitting proponents of free speech.

Foreshadowing the legal battles over intellectual property that dogged the group a few years down the line, the group's first legal confrontation involved the appropriation of the name Luke Skywalker as a stage name by the group's leader (born Luther Campbell, Dec. 22, 1960). Lucasfilm, the owner of the *Star Wars* trilogy trademark,

2 Live Crew

promptly sued the group when they began to find aboveground exposure when 2 Live Crew's second album, *Move Somethin'* (1987), reached number 68 on the *Billboard* pop chart. As a result, Luther Campbell's stage and record company names were shortened to "Luke" and "Luke Records," respectively. The album that gained the most attention, though, was *As Nasty As They Wanna Be* (1989) which reached the pop album charts' Top Forty and spawned a hit single, "Me So Horny." Despite its many detractors, from conservative law enforcement officials, right-wing Christian groups, and music critics, *As Nasty As They Wanna Be* sold over two million copies, many of which were likely sold because of publicity drawn from criticism of the group.

Enraged by the explicit content of 2 Live Crew, a Coral Gables attorney named Jack Thompson launched an all-out war against the group, culminating in a Broward County, Florida judge deeming the album obscene under state law in March of 1990. Soon after, a record store owner in Ft. Lauderdale, Florida and another in Huntsville, Alabama were arrested by local sheriffs departments for violating obscenity laws. Around the same time, 2 Live Crew was arrested for

performing songs from *As Nasty As They Wanna Be* in a Florida nightclub and, when visiting the same town, alternative band Too Much Joy was arrested for performing songs from that album in an act of protest. These events escalated into a full scale debate within the media over free speech and first amendment protection, with radio and television talk show pundits arguing over 2 Live Crew's social and musical merits.

The two record store retailers were eventually acquitted, as were 2 Live Crew and Too Much Joy—all by juries that either criticized local authorities for wasting their time or, in one case, wanted to deliver the not guilty verdict in the form of a rap. In May 1992 the obscenity ruling was reversed by the eleventh United States Circuit Court of Appeals and an appeal was refused to be heard by the United States Supreme Court. But 2 Live Crew's legal woes were not over, as they faced another suit filed against them for the unauthorized sampling of Roy Orbison's "Oh, Pretty Woman." The owners of the song's copyright, Acuff-Rose, argued that 2 Live Crew's use of the song devalued the original's worth. After a protracted legal battle that eventually went to the United States Supreme Court, that court ruled

in 1994 that the 2 Live Crew version constituted fair use under copyright law and was therefore legal. In a time dominated by easy access to digital recording and transferring technology, this was seen as a significant ruling by legal scholars.

Riding the wave of publicity after the *As Nasty As They Wanna Be* scandal, 2 Live Crew milked another couple of minor hit albums in 1990 and 1991 (*Banned in the USA* and *Sports Weekend*, respectively). Soon after, however, the group's mainstream success fizzled and the original lineup disbanded, with Luke going on as a solo artist, periodically releasing solo albums on his own label.

2001: A Space Odyssey

In 1964 film director Stanley Kubrick approached science fiction writer Arthur C. Clarke seeking a plot for “the proverbial good

A scene from the film *2001: A Space Odyssey*.

science fiction movie.” They worked together to craft a story inspired by Clarke’s short story “The Sentinel,” in which an astronaut discovers a mysterious pyramid on the moon. As Clarke wrote a novel derived from their script, Kubrick created a unique movie which continues to amaze and frustrate viewers, the 1968 MGM film *2001: A Space Odyssey*.

The film presents an abbreviated and speculative version of human evolution. The story opens at “The Dawn of Man” as pre-human man-apes discover a large, upright black slab. The apes are drawn to the monolith as it sings to them. After this, one ape, Moon-Watcher (Daniel Richter), discovers that a bone can be used as a club and learns how to use the club’s power to acquire food and to dominate the emerging ape society. The setting shifts in one of the most famous cuts in film history: Moon-Watcher tosses his club into the air; as it falls, the club suddenly transforms into a spaceship sliding through space. The plot now focuses on Heywood Floyd (William Sylvester), an official with the National Astronautics Council, who is traveling to the moon to investigate a mysterious black monolith discovered there. The monolith had obviously been created by intelligent extraterrestrial beings and deliberately buried in a lunar crater. When Floyd arrives at the monolith, it emits a piercing shriek.

The setting shifts again to the *Discovery*, a spaceship en route to Jupiter. The ship carrying three scientists in suspended animation is staffed by astronauts Dave Bowman (Keir Dullea) and Frank Poole (Gary Lockwood) and the HAL 9000 computer (voice of Douglas Rain). After a mysterious equipment failure, Dave and Frank become suspicious of the supposedly infallible HAL. The astronauts conspire to disconnect HAL but the all-seeing computer learns of their plot. HAL murders the sleeping scientists, sets Frank adrift in space, and traps Dave outside the ship. After he manages to reboard the *Discovery* via an airlock, Dave dismantles HAL’s memory, reducing the computer to infancy and, finally, death. As HAL’s red eye goes black, a video begins to play in which Floyd explains the *Discovery*’s secret mission. The moon monolith’s shriek had been a transmission aimed at Jupiter, and the *Discovery* had been sent in search of the signal’s destination. In the film’s final segment (“Jupiter and Beyond the Infinite”), Dave flies a pod toward a monolith floating in space near Jupiter and is transported through a stargate (depicted as a psychedelic lightshow) into a surreal, symbolic world where he ages and dies in ornate but sterile white rooms. His death seems to produce a celestial fetus, the next stage in human evolution.

The film polarized the critics; their responses tended to be either strongly positive or strongly negative. The film was daringly different from other major studios’ big-budget releases. It did not have a clear storyline or a central protagonist. There was little dialogue, and what dialogue there was was deliberately innocuous. Overall, *2001* presented a cold universe in which humans behave like passionless automatons and in which the most sympathetic character is the homicidal computer HAL. Some critics responded to *2001*’s uniqueness as a step forward in the art of filmmaking. For example, Mike Steele, reporting in *The Minneapolis Tribune*, saw *2001* as a step “closer to the purity of the film” and away from a sequential storyline imposed by literary aesthetics. Other critics found the movie to be a confusing muddle. In *The Village Voice*, Andrew Sarris called the movie a “thoroughly uninteresting failure” and the ending “an exercise in mystifying abstract fantasy in the open temple of High Art.” As *2001* found its audience, several critics who had panned it

wrote second reviews to reassess the movie's merits under a different set of criteria. Although Sarris, for his part, wrote a second review only to say that his opinion had not changed.

Despite the confusion and disfavor of many viewers, *2001* quickly gained the status of a "cult film," a movie which inspires fanatical devotion in a relatively small audience. The film continues to be a film for several cults. For science fiction fans, it is a realistic depiction of space travel. No other movie in the genre before or since has remained so true to the laws of physics. For film buffs, it presents a dazzling experiment with the elements of filmmaking. While viewers accustomed to conventional American movies may bemoan the long sequences of play with sight and sound which do not advance a linear plot, lovers of the filmmaker's art delight as a spaceship and a space station waltz to Johann Strauss' "On the Beautiful Blue Danube." For devotees of the hallucinogenic drug culture, the surreal imagery, particularly in the final segment, was "The Ultimate Trip" promised by the tagline of a 1974 re-release. *2001* remains an active part of the popular imagination and is often imitated, referenced, and parodied in various media. In the 1996 film, *Independence Day*, for example, David Levinson (played by Jeff Goldblum) opens his laptop, and HAL's red eye appears on its screen.

Kubrick succeeded in offering the "proverbial good science fiction movie" because *2001* addresses universal, eternal questions: What is the meaning of life? What is the nature of God? What is the destiny of humanity? Are we alone in the universe? What is the relationship between humans and their machines? One of the aspects of the movie that frustrates viewers is that Kubrick provides no clear answers to these questions, but the nature of the questions is that they are unanswerable. As Clarke put it, "If you understood *2001* completely, we failed. We wanted to raise more questions than we answered." The film poses ancient questions in a relatively new language, science, and in a new medium, film. The extraterrestrial monoliths seem to be guiding human evolution; thus, they serve as a metaphor for the hand of God or destiny. However, *2001* explores theological issues outside of the framework of any religion or established mythology. It forces its audience to rethink the assumptions such a framework might provide.

Perhaps the most memorable ingredient of *2001* is HAL, the fullest development of a sequence of human tools which began with the bone club. One of the major issues of science fiction has been whether a machine capable of independent thought would be "human." In *2001*, HAL is a terrifying monster, but he also seems to be more human than the humans. The audience cannot help but find the computer sympathetic as he begs for his life; we see that HAL only killed out of fear. As interaction with computers becomes increasingly a part of everyday life, HAL remains a powerful symbol of both the peril and the promise of artificial intelligence. Fans have noticed that if each letter of HAL is replaced by the next letter in the alphabet, HAL becomes IBM (Clarke denies that this was intentional). In 1997 (the year HAL was supposedly created), David Stork published a collection of essays, *Hal's Legacy: 2001's Computer as Dream and Reality*, in which scientists explore how close current technology comes to creating a HAL 9000.

Tyson, Mike (1966—)

Born in Brooklyn and educated in the pugilistic arts on the New York streets, Mike Tyson went on to become history's youngest world boxing champion at age nineteen. From the start of his professional career in 1985, Tyson displayed contradictions of character that dogged him in controversy. An efficient powerhouse of a fighter, his inability to control his anger in his personal life sidelined his career more than once. When this anger finally caused him to lose control in the ring and bite an opponent's ear, many thought the incident signaled the end of his boxing career. However, Tyson proved himself as skilled at comebacks as at knockouts. By the end of the twentieth century, 15 years after his debut in the ring, it was

Mike Tyson

evident that so long as promoters were able to make millions of dollars on every round he fought, “Iron Mike” Tyson would continue to be welcomed whenever he might choose to enter the ring.

Boxing has often been a controversial and paradoxical sport. Many see it as simple brutality, a gladiator-like contest where bloodthirsty audiences cheer as opponents batter each other senseless. Others claim boxing as one of the earliest refined athletic skills, a noble art requiring balletic precision, muscular power, and that indefinable yet essential quality—“heart.” Perhaps it is because of that engaging quality of heart that boxing has given rise to so many heroes who have captured the public imagination. And yet, like boxing itself, boxing heroes are often contradictory figures with whom the public has a love-hate relationship. Boxing requires many of the same fighting skills that are necessary to the survival of young men growing up in poverty on urban streets. Thus many champs have come from underprivileged backgrounds, using their skills and toughness to pursue the wealth and fame that championship boxing promises those that succeed. The rise of the ghetto-bred fighter, particularly among African Americans and other minority groups, symbolizes the American dream of rising from poverty and obscurity to wealth and fame. From Jack Dempsey to Muhammad Ali, boxing champions have become national icons, glorifying the attributes of brashness, guts and furious strength.

Mike Tyson is a paradigm example of the phenomenon. Born into a poor African-American family and raised by a single mother on welfare, he has said of his own origins, “I was born in guck, mud. Humiliation.” On his own from around age ten, Tyson was not tall, but he was powerfully built and filled with rage, and he learned early how to earn his way by mugging and purse-snatching. By the time he was 13, he had been arrested 38 eight times, finally ending up at the “bad cottage” at Tryon School for Boys in Catskill, New York. Tyson has described the reformatory with a poignant simplicity that a sociologist might envy: “Just a bunch of bad kids no one cared about

in a square box.” It was at Tryon School that ex-boxer Bobby Stewart recognized the tough youngster’s fighting talent, and introduced him to Cus D’Amato, a visionary trainer who had been behind boxing champions Floyd Patterson and Jose Torres.

D’Amato recognized Tyson’s potential and undertook his training. Tyson’s amateur career was only mildly distinguished—he competed in trials for the 1984 Olympics, and earned a place on the team as an alternate—but in 1985 he entered the professional arena like a steamroller. From 1985 until 1990, he won every fight, most with knockouts and most in the first round. By 1986, he was world heavyweight champion. Then, in 1990, displaying the inconsistency fans would later come to expect, he suffered his first professional defeat at the hands of Buster Douglas, a virtual unknown with 50-1 odds against him. In 1988, at the height of his glory days, Tyson married actress Robin Givens. The petite Givens and her “gentle giant” husband were a pair made for the media, and they received an onslaught of attention from tabloids and television. The fairy tale union did not last however, and, though it was shocking, it surprised few when Givens confessed in a television interview with Barbara Walters that Tyson abused her and that life with him was “pure hell.” The couple was divorced in 1989.

In 1992, the fighter made world headlines when he was convicted of rape and given a six-year prison sentence. Although persistently denying the charge, he served three years in a minimum-security prison where he converted to Islam, and came out declaring he was a changed man. He immediately resumed his boxing career, and by 1996 again held both the WBC and WBA heavyweight titles. Working with flamboyant boxing promoter Don King, Tyson negotiated one of the most lucrative boxing contracts in history, a \$158 million deal with the Las Vegas MGM Grand Hotel and Showtime Entertainment Television for six fights or two and a half years, whichever came first.

Tyson’s comeback success did not last. In 1997, in a rematch fight with Evander Holyfield, who had previously beaten him, “Iron Mike” lost control and bit pieces off both of Holyfield’s ears. The boxing world, as well as the larger public, reeled in shock and disgust. Ear-biting jokes became a television staple, and Tyson’s boxing license was suspended for life. However, after some 18 months of therapy and anger counseling, Tyson approached the boxing commissions in New Jersey and Nevada with assurances that he had once again mended his ways. Both commissions voted him mentally fit to box, and he made another comeback.

Tyson has continued to win matches, often within an embarrassingly short time. After his release from prison in 1995, fans who paid up to \$1500 a seat to watch him fight the hopelessly outclassed Peter McNeeley were disgruntled when the fight lasted only a few minutes. However, the fighter has continued to be plagued by the consequences of his uncontrolled rage. In 1999, he was sentenced to another year in jail for violating parole by assaulting two motorists after an automobile accident, and was facing assault charges by two women.

In over a decade of intense and dramatic career boxing, Mike Tyson has only fought 200 rounds in all, and only three of his fights have gone the distance. Out of 48 fights, he has won 45, knocking out his opponent in 39 of them. The press and the public have tended either to glorify him as the poor kid who made good, or to demonize him as a thug and a felon. In reality, Tyson is the uncomfortable sum

of many contradictory parts, and often expresses these with the simple, incisive perception of a self-educated man. Pummeling other men to the mat was the only way for a painfully poor black street kid to rise to the top of the heap, and Tyson channeled his deep anger at life into boxing. He achieved unprecedented success, but has remained isolated, distrustful and angry even during his best times. Five foot eleven and weighing in at 220 pounds, Tyson is a massive man who looks like a fighter. His voice is incongruously soft and high, hinting at a gentle core overlaid by years of depression, defensiveness, and pure rage. Perhaps it is this ambiguous combination of qualities, the suggestion of the hurt child beneath the brutal physical powerhouse, which keeps the public from giving up completely on "Iron Mike." After all, this juxtaposition is what gives boxing its appeal—the glory through the pain. Robin Givens added perhaps the

most telling dimension to the picture, "I think he's probably going to turn out to be the all-American tragedy. There's something about Michael that's dangerous."
