Preface

The most wide-ranging and comprehensive collection of its kind, *The Norton Anthology of Theory and Criticism* offers one or more selections from 148 figures, representing major developments from ancient to recent times, from Gorgias and Plato to bell hooks, Judith Butler, and Stuart Moulthrop. In contrast to comparable anthologies, it provides generous selections from previously underrepresented fields, such as rhetoric, medieval theory, and criticism by women and people of color, along with a full complement of works from canonical figures such as Aristotle, Immanuel Kant, Karl Marx, Cleanth Brooks, Mikhail Bakhtin, and Michel Foucault: From canonical authors, it includes classic texts as well as selections newly revalued. The standard works of Western theory and criticism from the ancient Greeks to the present are represented, as are texts from “forgotten” figures such as Moses Maimonides, Friedrich Schleiermacher, and Frantz Fanon. The anthology is particularly rich in modern and contemporary theory, providing materials from 93 writers and covering all the main schools and movements; ranging from Marxism, psychoanalysis, and formalism to poststructuralism; cultural studies, race and ethnicity studies, and many more. We have also drawn from vital minor currents, including body studies, media theory, theory of national literature and institutional analysis and history. This anthology consolidates the many gains won through the expansion of theory in recent decades.

In view of current changes, it is worth pausing for a moment to reconsider the configuration and meaning of “theory” itself. Today the term encompasses significant works not only of poetics, theory of criticism, and aesthetics as of old, but also of rhetoric, media and discourse theory, semiotics, race and ethnicity theory, gender theory, and visual and popular culture theory. But theory in its newer sense means still more than this broadly expanded body of topics and texts. It entails a mode of questioning and analysis that goes beyond the earlier New Critical research into the “literariness” of literature. Because of the effects of poststructuralism, cultural studies, and the new social movements, especially the women’s and civil rights movements, theory now entails skepticism toward systems, institutions, and norms; a readiness to take critical stands and to engage in resistance; an interest in blind spots, contradictions, and distortions (often discovered to be ineradicable); and a habit of linking local and personal practices to the larger economic, political, historical, and ethical forces of culture. This theory—or “cultural critique,” as it is more descriptively termed—is less concerned with elaborating conditions of possibility, as is Kantian critique, than with investigating and criticizing values, practices, categories, and representations embedded in cultural texts and surrounding institutions. To an earlier generation, such theory looks like advocacy rather

than a disinterested, objective inquiry into poetics and the history of literature. This revealing fault line that divides traditionalist literary critics from large numbers of contemporary theorists is perhaps today's version of the old Renaissance and neoclassical battles between the ancients and the moderns.

The Table of Contents list figures and texts in chronological order. An Alternative Table of Contents recasts the chronological order, providing lists of figures in four categories commonly used in studying theory: schools and movements; major genres; historical periods; and key issues and topics. Additional ways of organizing the history and subject matter of theory and criticism are possible; the Alternative Table of Contents is meant to be suggestive and not comprehensive. Other figures in the anthology could be included in the existing categories. We decided against combining proponents and opponents in the popular schools and movements categories, as is sometimes done. Thus, for example, neither Leon Trotsky nor Mikhail Bakhtin appear under "Formalism" as its most celebrated critics. To list together antagonists and advocates would have created confusion and unduly multiplied the number of figures in our categories. Within each school and movement, of course, readers will encounter differences and disputes. One of the risks of the categories we employ in the Alternative Table of Contents is that their groupings of figures and topics from different periods and moments unavoidably de-emphasize historical conflicts, evolution, and differences. That noted, the editors hope our readers find the Alternative Table of Contents suggestive and useful. Many ways of configuring the materials in the anthology are outlined in M. Keith Booker's manual for instructors, *Teaching with "The Norton Anthology of Theory and Criticism": A Guide for Instructors*, a rich source of planning options, classroom strategies, and examination and discussion questions.

The Introduction to Theory and Criticism that follows the two Tables of Contents consists of fifteen brief, semiautonomous sections that introduce students to the field of theory through its main historical periods, its major modern and contemporary schools and movements, its perennial issues and problems, and its key terms. We are aware of no source offering students a quicker, more wide-ranging, or more lucid bird's-eye view of the history and nature of the field. Sections have been subtitled for easy reference in making assignments and in following the trajectory of the discussion.

Each selection in the anthology is fully annotated so that students may focus on the texts and not have to consult reference sources for basic information. Headnotes to each figure cover a range of topics. To begin with, they provide helpful biographical information and historical background. They discuss sources and critical receptions as well as the relevance of the selections for theoretical questions. They highlight each selection's main arguments, where necessary defining key terms and concepts and pointing out related perennial problems in the field. They regularly refer to other works by the authors and note problems identified by later critics. They position the authors in relation to other figures in the anthology, picturing the history of theory not as a string of isolated pearls but as a mosaic in which each work fits into larger frames of ongoing discussions and arguments. Finally, an annotated selected bibliography is given for each figure, covering main texts and editions, biographical sources (when available), the best secondary sources and criticism, and bibliographies related to the author's works (where available).

In choosing the selections the editors have been guided by a range of criteria. We have looked for readable and teachable texts that reflect the scope of the history of theory. This does not mean, however, that challenging and difficult texts are missing. We have favored complete works and self-contained excerpts; snippets are the exception. Yet in a number of cases we have edited texts to focus on topics germane to the field and to save time, space for other selections, and the energy of readers. We have sought out the best editions and translations; for Plato, Aristotle, Longinus, Kant, and Hegel, we introduce new, highly regarded translations. From the outset we have followed the practice that no figure or selection could make it into the anthology without the agreement of at least half the editors. We have also made quite a few selections with an eye to pairing or triangulating—for example, we chose the famous closing section on writing from Plato's *Phaedrus*, having in mind Derrida's landmark critique of that text in his *Dissemination*. When they occur, such fruitful counterpoints are indicated in the headnotes and in the Alternative Table of Contents. Of course, innumerable combinations and permutations are possible, and our accounts cannot be exhaustive. But we have noted typographically all cross-references in the headnotes and footnotes by putting in small capitals the names of theorists and critics appearing in the anthology. While we have privileged standard works and contemporary classics of theory, we have also sought to resurrect forgotten texts and to discover overlooked gems. We believe you will be pleasantly surprised.

The Selected Bibliography of Theory and Criticism at the end of the anthology is the most comprehensive one in existence, containing works through the close of the twentieth century. It lists leading English-language sources in six main categories: Theory and Criticism Bibliographies; Anthologies of Theory and Criticism; Histories of Criticism and Theory; specialized Glossaries, Encyclopedias, and Handbooks; Introductions and Guides; and Modern and Contemporary Critical Schools and Movements. We have divided the three longest of these parts into convenient subcategories: into historical period in the lists both of anthologies and of histories of criticism and into sixteen autonomous profiles in the schools and movements section. To make the bibliography of schools and movements most useful to students, we have organized and briefly annotated the sources in short essays rather than lists, presenting each of the sixteen profiles in a five-paragraph format: (1) groundbreaking texts; (2) introductions, overviews, and histories; (3) anthologies and readers; (4) school- or movement-specific reference works (handbooks, dictionaries, encyclopedias, etc.); and (5) "crossover texts." This last category attests to the increasing frequency with which contemporary works of theory are not limited to one or two domains of influence. It can be argued that in recent years many of the most innovative writings have been hybrid, crossover texts, mixing and matching strands from numerous schools and movements, and we have sought to illustrate this significant trend judiciously.

In putting this anthology together, we have faced a number of challenges. One difficulty was coping with the impossibility of including every significant theorist. Our original list of 250 figures had to be shortened to 148: even a very long book such as this one imposes limits. A few of the lengthiest selections—by Longinus, John Dryden, Percy Bysshe Shelley, and Adrienne Rich, for instance—had to be trimmed, and each editor had favorite figures

dropped. The enclosure of post-World War II theory in the university and its increased professionalization have meant that contemporary nonacademic critics, literary journalists, and writers have been largely excluded from the theory canon—a trend slowly being reversed, we hope. Theory remains resolutely Eurocentric, but we look forward to a time when it will go global. Our Selected Bibliography posed its own nagging challenges of inclusion and exclusion. To cite just one case, we had to be rigorously selective in the category of guides and introductions to theory, since there are so many available. We trust we have not missed any major resources. Our Subject Index errs on the side of fullness; we calculated that this would help more than hinder the reader seeking assistance.

The editors of this anthology were selected because of their scholarly expertise. They combine knowledge of canonical works with awareness of contemporary trends and extensive experience as teachers. Each was involved in constructing the anthology's contents and design, and each was responsible for refining selections, drafting headnotes, compiling bibliographies, and editing one another's work. In preparing the volume the editors have incurred obligations to many colleagues, whom we thank separately in the Acknowledgments. With their help, we believe we have made this a readable and teachable anthology replete with significant texts for our contemporaries, meaningful in the context of the history of theory, and able to enlighten and challenge today's students.

Acknowledgments

While putting this anthology together, we incurred numerous debts to many people, whom we would like to acknowledge publicly.

We thank the following for making valuable suggestions and corrections during various stages: Meryl Altman (DePauw University), Eyal Amiran (Michigan State University), Albert Russell Ascoli (University of California at Berkeley), Eve Tavor Bannet (University of Oklahoma), Patrick Brantlinger (Indiana University), Timothy Andres Brennan (University of Minnesota at Twin Cities), Diane Brown (Macalester College), Gerald L. Bruns (University of Notre Dame), Angie Chabram-Dernersesian (University of California at Davis), Michel Chaouli (Indiana University), King-Kok Cheung (University of California at Los Angeles), Verena Andermatt Conley (Harvard University), Eva L. (University of Oklahoma), R. Allen Shoaf (University of Florida), Brigid Slipka (Kenyon College), the late Michael Sprinker (State University of New York at Stony Brook), Peter Struck (Ohio State University), Gregory Ulmer (University of Florida), Steven Ungar (University of Iowa), H. Aram Veese (City College of New York), Alan R. Velie (University of Oklahoma), Jerry W. Ward Jr. (Tougaloo College), Robyn R. Warhol (University of Vermont), Michael Warner (Rutgers University), Joel Weinsheimer (University of Minnesota at Twin Cities), Kathleen Welch (University of Oklahoma), Saranya Wheat (Kenyon College), Robyn Wiegman (Duke University), Martha Woodmansee (Case Western Reserve University), and Duncan Wu (Oxford University).

Several global readings of the Selected Bibliography of Theory and Criticism were provided by David Gorman (Northern Illinois University) and Wallace Martin (University of Toledo). We are particularly in the debt of Professor Martin, who graciously shared his own abundant bibliographic research on the history of theory and criticism.

All of these colleagues have helped make this anthology possible, and with much gratitude we thank them for their valuable time and effort. We single out Richard Dienst, David Gorman, Martin Irvine, John Kirby, and Donald Marshall for substantial contributions to this text.

M. Keith Booker (University of Arkansas at Fayetteville) has written a highly useful instructor's manual, *Teaching with "The Norton Anthology of Theory and Criticism": A Guide for Instructors*, which we strongly recommend to teachers. His contribution extended beyond the manual to text selections, headnotes, and bibliographical items.

The general editor thanks the editors, who have been passionately engaged in every facet of this work. It has been a wonderful collaboration.

The editors in turn would like to thank Vincent Leitch for his inspiration, guidance, and tireless work on this project from beginning to end.

At W. W. Norton, our editor, Peter Simon, guided this anthology with great professional care. Our exceptional copyeditor, Alice Falk, made significant contributions throughout this project, and Marian Johnson and Isobel Evans, managing editor and assistant editor, respectively, kept the complex publishing process moving smoothly. We thank them all.

We appreciate our supportive home universities, especially the libraries at Harvard University, Kenyon College, the University of Missouri, the University of North Carolina at Chapel Hill, the University of Oklahoma, and Wellesley College.

Thanks are also due our research assistants. In this regard the editors would like to thank Jeremy Countryman, Mary DiLucia, Melissa Feuerstein, Bill Johnson González, Tina Hall, Heidi Lynn Kyser-Genoist, Eric Leuschner, Lilian Porten, Marjut Ruti, Maggie Schmitt, and Mary Schwartz. The general editor would also like to acknowledge Christine Braunberger and Mitchell R. Lewis: the former designed the template of our schools and movements bibliographies, while the latter played an active role in every aspect of the project over a period of three years.

We would also like to extend a personal thanks to friends and families.

The Norton Anthology of Theory and Criticism

Introduction to Theory and Criticism

In recent decades, theory and criticism have grown ever more prominent in literary and cultural studies, treated less as aids to the study of literature and culture than as ends in themselves. As Jonathan Culler notes in *Framing the Sign: Criticism and Its Institutions* (1988), "Formerly the history of criticism was part of the history of literature (the story of changing conceptions of literature advanced by great writers), but . . . now the history of literature is part of the history of criticism." This dramatic reversal, which occurred gradually over the course of the twentieth century, means that the history of criticism and theory increasingly provides the general framework for studying literature and culture in colleges and universities. Some literary scholars and writers deplore the shift toward theory, regarding it as a turn away from literature and its central concerns. These "antitheorists," as they are called, advocate a return to studying literature for itself—yet however refreshing this position may at first appear, it has problems: it itself presupposes a definition of literature, and it promotes a certain way of scrutinizing literature ("for itself"). In other words, the antitheory position turns out to rely on unexamined—and debatable—theories of literature and criticism. What theory demonstrates, in this case and in others, is that there is no position free of theory, not even the one called "common sense."

The history of theory and criticism from ancient times to the present is one of contending ideas and opinions about such apparently self-evident topics as "literature" and "interpretation." Historically, interpretation has been conceptualized in a number of different ways: as, for example, objective textual analysis or moral assessment or emotional response or literary evaluation or cultural critique. The same is also true of literature, which has been defined in terms of its ability to represent reality, or to express its author's inner being, or to teach morality, or to cleanse our emotions, to name only a few common but conflicting formulations. The history of criticism and theory contains many such arguments. Taken together, the antitheorists themselves adhere to very different, often contradictory understandings of literature and interpretation. Such conflict points to the vitality, the excitement, and the complexity of the field of theory and criticism, whose expansive universe of perennial issues and problems engages ideas not only about literature, language, interpretation, genre, style, meaning, and tradition but also about subjectivity, ethnicity, race, gender, class, culture, nationality, ideology, institutions, and historical periods. In this anthology, students new to literary and cultural studies will discover a wide-ranging interdisciplinary and com-

parative field whose practitioners examine, formulate, and assess all manner of theories and problems related to the study of literature and culture.

In addition, students new to criticism and theory will encounter a rich array of technical terms and concepts, critical approaches and schools, and literary and cultural theories and theorists. From *signifier* to *deconstruction* to *cultural studies*, from Kant to Foucault, the field of theory and criticism is marked by a multitude of signposts sometimes unfamiliar to even the most widely read students. In this introduction as well as in the headnotes to each author, we help students make sense of this complex but rewarding field. We begin the introduction by surveying an array of notable answers to two central questions—what is interpretation? and what is literature?—in order to establish our bearings. Shifting direction, we then survey the historical development of theory and criticism, from the classical to the Romantic, after which we provide brief overviews of major schools and movements of the last century. Along the way, we discuss many of the theorists in this anthology, explain perennial problems and issues, define key concepts and terms, and illuminate the underlying structure of the field of theory and criticism, including its most significant conflicts.

WHAT IS INTERPRETATION?

Within the field of theory and criticism, various terms and concepts are applied to the encounter between the reader and the text. This transaction, which we will provisionally call “reading” or “interpretation,” typically involves such activities as personal response, appreciation, evaluation, historical reception, explication, exegesis, and critique. Not surprisingly, the master words *interpretation* and *reading* are themselves debatable. In fact, in choosing a term or terms to characterize the encounter between text and reader, one takes a specific theoretical position regarding the exact nature of reading and interpretation.

Consider a few such keywords. Whereas *explication* and *exegesis* stress the objective labor of deciphering a text in a methodical way (line by line, in the case of a short poem), *personal response* and *appreciation* emphasize the intimate, casual, and subjective aspects of reading. *Critique* and *historical reception*, in turn, accentuate the distances in values and time between the interpreter and the work. An exegesis of a text is not the same as an appreciation or a critique. Exegesis presumes a dense and enigmatic text in need of elaborate explanation; appreciation implies a reader-friendly work just waiting to be enjoyed here and now; and critique presupposes a hidden set of questionable or dangerous premises and values undergirding a complex document. In the case of exegesis an interpreter needs to be a knowledgeable puzzle solver; appreciation positions the reader as an eager and sympathetic hedonist; and critique calls for a critic at once suspicious and ethical, committed to a set of values different from, or directly opposed to, those expressed in the text. In depicting the critical encounter, theories of reading and interpretation invariably assign characteristics to texts and allocate particular roles and tasks to readers.

Many of the selections in this anthology differ markedly in how they char-

acterize interpretation and reading. For instance, Friedrich Schleiermacher draws a detailed account of interpretation both as historically informed grammatical explication and as psychological identification with the author. His view contrasts with the perspective of Fredric Jameson, who advocates an elaborate three-phase process of interpretation focused specifically on ideology, critique of social contradictions, class antagonisms, and historical stages of social development manifested in texts. And Paul de Man instead pictures reading as a mode of exegesis wherein the reader's rewriting or re-staging of the text replaces the original with an interpretive allegory: reading for him unavoidably becomes "misreading." That highly competent theorists can propose completely different models of reading fuels continued theoretical debate about interpretation.

One of the most familiar ways of reading is the mode of textual analysis developed by the New Critics, particularly Cleanth Brooks. During the mid-twentieth century, the New Criticism became the dominant critical practice in North American and British universities, and it remains influential today, especially in the introductory literature classroom. To interpret as a New Critic is to demonstrate through multiple (re)readings of poetic texts the intricacy of artistic forms. "Meaning" is found neither in a simple paraphrase of the text, nor in propositions extracted from it, but in carefully orchestrated and unified textual elements (for example, images, tropes, tones, and symbols). The literary work is (pre)conceived as an autonomous, highly coherent, dramatic artifact (a "well-wrought urn") separate from and above the life of the author and reader as well as separate from its social context and from everyday language. Textual inconsistencies are harmonized by being valorized as literary ambiguities, paradoxes, or ironies.

Yet there are problems with this seemingly sensible method. Various theorists have complained that it posits an overly aestheticized, narrow theory of meaning. The "close reading" or "practical criticism" advocated rules out a great deal, including personal response, authorial intention, propositional meaning, social and historical context, and ideology. It values retrospective analysis rather than the risky ongoing experience or actual process of trying to make sense of a work. It privileges freestanding spatial form over temporal flow and critical distance over the reader's personal participation. It makes textual unity mandatory, finessing gaps and loose ends. It favors well-made and compact rather than sprawling works and genres. The famous reading practice of New Criticism is a calculated emptying out of literary interpretation in order to highlight intrinsic artistic craft and form while ruling out such extrinsic matters as morality, psychology, and politics.

Even without sampling further the many theories of reading and interpretation presented in this anthology, we can readily see that there are no easy answers to the question "what is interpretation?" New Criticism has been singled out to demonstrate how a practice of reading might be questioned, but many of the other theories in this anthology could have served equally well. The problematic of interpretation/reading continues to be a major preoccupation in the field of criticism and theory. All who think critically have an opportunity to engage various theories of reading and to formulate their own views.

WHAT IS LITERATURE?

Another major question—"what is literature?"—can be, and regularly is, answered by associating *literature* with such key terms as *representation, expression, knowledge, poetic or rhetorical language, genre, text, or discourse*.

In our ordinary understanding, literature represents life; it holds up, as it were, a mirror to nature and is thus "mimetic." The expressive theory of literature, which regards literature as stemming from the author's inner being, similarly depends on a notion of mirroring, though here literature reflects the inner soul rather than the external world of the writer. The didactic theory, which sees literature as a source of knowledge, insight, wisdom, and perhaps prophecy, is compatible with both the mimetic and the expressive theory: literature can depict external and internal realities while at the same time disseminating valuable knowledge and clarifying emotions. The dominant view of literature as both mimetic and didactic, still alive today, arose with the ancient Greeks and was challenged by the Romantics and then the moderns. Though the theory of literature—or "poetics," as it is sometimes called—has been a contested topic throughout history, the debate has been especially fierce in modern and contemporary times.

Modern theorists often insist that the language of literature, unlike that of newspapers and science, foregrounds poetic effects (particularly tropes and figures) that range from alliteration, assonance, metaphor, and paradox to rhythm and rhyme. In this "formalist" theory of literature or poetics, neither depiction of external or internal reality nor knowledge about existence or refined emotion distinguishes literature from ordinary and scientific discourse: instead, "literariness" (or "poeticity") renders literature distinctive and special. The theory first emerged during the nineteenth century when poets such as Edgar Allan Poe and Gerard Manley Hopkins started exploring, sometimes extravagantly, the constituent materials of literature (especially sound effects), turning away from the notion of literature as simply a reliable recorder of nature or source of morality. A similar transformation followed in the visual arts; the postimpressionist painters focused on paint textures, brush strokes, and color intensities rather than seeking photographic realities. Writers and theorists at the time often felt that to justify literature by pointing to its accuracy and realism was to put it in competition with the sciences, social sciences, journalism, and photography—a competition they believed it could not win. Conversely, by emphasizing the literariness of literature, they would accord it a distinctive and elevated aesthetic status over competing domains and fields, ensuring its survival and dignity in challenging times. Such a formalist theory of literature prevailed in the early and mid-twentieth century among Anglo-American New Critics and Slavic formalists, many of whom are represented in this anthology.

A well-known heuristic device conveniently summarizes all the accounts of literature discussed up to this point. Developed by M. H. Abrams in *The Mirror and the Lamp: Romantic Theory and the Critical Tradition* (1953), this study aid pictures the literary "work" at the center of a triangular structure; the outer three points are occupied by the "universe," the "artist," and the "audience." Mimetic theory emphasizes the relations between the work and the universe; expressive theory foregrounds the link between work and

artist; didactic theory highlights the tie between work and audience. Formalist theory focuses on the work itself; as we have just seen, it characteristically deemphasizes connections between the text and the universe, artist, or audience. Until the early Romantic era, literary theory dealt largely with the poem's relationship to the universe and the audience; in the nineteenth century it focused on the artist; and in the twentieth century it turned to the work itself. Most theories of criticism and literature, argues Abrams, juggle these four major elements and orientations, tending to privilege one.

This classification scheme and its lessons have proven useful, especially in illustrating basic theoretical orientations and in delineating broad historical trends. But the famous diagram has limitations, as any theorist will tell you. Perhaps the most serious is that it stops with modernism: it predates the appearance of such influential postmodern theoretical movements as structuralism, poststructuralism, feminism, postcolonial theory, and cultural studies. Abrams maps out a progression from mimesis and didacticism to expressionism to formalism, but recent theory and criticism of literature have moved on to cultural critique. In the process, theorists have focused in turn on the imitation of reality and its lessons, on inner truths and visions, on poetic techniques and their orchestrations, and on sociohistorical and political representations and their values. In this historical development the "old" problems recede from view but never disappear; instead, they undergo reconfiguration and occupy new conceptual relations.

Consider, for instance, the structuralist or semiotic theory of literature that fits all literary texts into genre classifications. According to this perspective, a genre is defined by arbitrary sets of conventions, such as those governing the haiku—a poem of seventeen syllables in three lines of five, seven, and five syllables, respectively. These conventions distance literary writing from ordinary reality, even when the conventions are calculated to give the appearance of direct reportage. In seeing literature as genre consisting of complex sets of codes, the structuralist retains the formalist view of literature as a separate mode of discourse that follows its own artistic rules but adds the key sociological concept of *convention*. Because conventions are not only literary but also linguistic and cultural, literature and society are reconnected through discourse.

Poststructuralist and deconstructive accounts of literature go one step further by problematizing the notion of mirroring, which, as we have seen, undergirds expressive, didactic, and mimetic theories of literature. They do so through a close and technically complex examination of the workings of language—seen as distant and different from reality, for it necessarily contains distorting rhetorical and genre devices. Language is not a simple transparent medium. Any use of language, no matter how typical or everyday, employs *some* combination of historical conventions and figurative devices,

which compromises its transparency. Moreover, language separates from "reality" at the very basic level of the sign because, strictly speaking, words are not things. The four letters *b*, *i*, *r*, *d* are not an actual feathered creature. In linguistic terminology, neither *signifiers* (words) nor *signifieds* (concepts) are *referents* (things). Because language consists of "floating signifiers" that are detached from reality, it simulates or summons things as they are. Language deals in effects rather than things. The gaps between signifiers, signifieds, and referents render the truthfulness and reliability of language *undecidable* (a technical term from mathematics borrowed by poststructuralism). Language is thus, to employ technical deconstructive terms, *text* or *textuality*, meaning a complex interweaving of self-referential, undecidable relationships. In extreme forms, this challenging theory of literature as textuality views language as thoroughly divorced from reality; in more moderate forms, language maintains a relation to reality, albeit a highly unstable one. At stake is literature's ability to reflect reality or impart reliable knowledge—and the uncertainty raises doubts about its truth claims and about earlier theories of literature. This area of inquiry is commonly labeled the "crisis of reference" (or "referentiality").

The dizzying deconstructive view of literature as text has been opposed by the widespread recent poststructuralist theory of literature as *discourse*, a term associated with the influential work of Michel Foucault. Discourse theorists explicitly trace the language of literature to its source in the spoken language of everyday social life. Conceived by its many advocates as anti-elitist, this materialist theory of discourse—whether it stems from the work of Foucault, Mikhail M. Bakhtin, black aestheticians, New Historicists, cultural materialists, queer theorists, psychoanalytic critics, or cultural studies scholars (all allotted space in this anthology and discussed later in the introduction)—insists that language is uttered by embodied subjects situated historically in contentious social spheres that are regulated by powerful institutions. Significantly, this theory of the *social* text—of language use as dialogical—gives new life to earlier views of literature as mimetic, expressive, and didactic.

Literature, according to these recent discourse theories, re-presents and refracts reality. Indeed, language itself constitutes reality; it also produces distortions. This is mimesis with a difference: literature represents reality; but reality is grounded in convention, not nature, and it is subject to illusion. Similarly, discourse theorists affirm that literature expresses the inner life of authors, but life is understood to be a regulated *social* phenomenon that differs with the time, location, and group of the author. In place of the solitary poet giving unique expression to truths universal to all humankind, we find in recent discourse theories an embattled "scriptor" creatively mixing and matching cultural codes derived from her or his situation, community, and tradition. In this account literature retains didactic as well as mimetic and expressive powers. The knowledge it conveys is of the "cultural unconscious"—that is, of the archive of historical words, symbols, codes, instincts, wishes, and conflicts characteristic of a people and its era. To treat discourse as social text pluralizes the theory of literature, making a single universal or totalizing theory of literature, good for all times and places, appear reductive. Literatures replace literature.

Theories of literature and theories of reading have affinities with one another. Here are four instances. First, the formalist idea of literature as a

well-made artistic object corresponds to the notion of reading as careful explication and evaluation of dense poetic style. Second, when viewed as the spiritual expression of a gifted seer, poetry elicits a biographical approach to criticism focused on the poet's inner development. Third, dense historical symbolic works presuppose a theory of reading as exegesis or decipherment. Fourth, literature conceived as social text or discourse calls for cultural critique. While we can separate theories of literature from theories of interpretation, they often work hand in hand.

CLASSICAL THEORY AND CRITICISM

Anthologies covering the history of theory and criticism usually begin with the classical theorists, and rightly so, because their influence on its development has continued up to the present. The most influential classical theorists in Western culture are Plato and Aristotle, followed distantly by Horace. Recently, a renewed interest in rhetoric has brought Gorgias, Quintilian, and others into the picture—a change that illustrates the mutability of the canon of theory. Taken together, the classical theorists represent a wide range of opinions about literature and its significance developed over a millennium (from the fifth century B.C.E. to the fifth century C.E.). To sample their groundbreaking work, we will consider some of their opinions on two leading, often interrelated issues of their time: literary mimesis and didacticism.

On these two issues, Plato and his student Aristotle present the best-known views. Both agree that *mimēsis* (imitation or representation) is a key feature of poetry, but they conceive of and evaluate it quite differently. Plato has his spokesperson Socrates disapprove of poetry's imitation of reality on the grounds that poetry cannot depict truth and teach morality and that it is irrational—based on inspiration, not knowledge. As an idealist philosopher, he locates reality in a transcendent world of eternal Forms or Ideas that only reason can properly apprehend; this world is distinct from the illusory phenomenal world of our senses, which poetry represents. For Plato, the material world is at best an imperfect copy of the original transcendent world of Ideas, and poetry is but a degraded copy of a copy. He concludes that poetic representation threatens social stability by offering false images and unsuitable role models. In *Republic*, therefore, he has Socrates recommend that it be banished from the ideal society, except perhaps that poetry which praises the gods and avoids representing them in an unseemly fashion.

Plato takes this severe position in part because he is reacting against the views of earlier sophists such as Gorgias and Thrasymachus, whom he represents as less concerned with truth than with persuasion. They saw language as not simply representing reality but in effect producing reality by shaping the beliefs of an audience. As a result, in oratory as well as in poetry, what matters most is bringing a particular audience to hold a specific point of view, not imitating an absolute truth. Some sophists even boasted that in a debate they could argue any side of an issue and win. Later rhetoricians such as Quintilian emphasized that the good orator was also a morally good man, but truth and honesty apparently mattered little to fifth-century Greek sophists, who significantly influenced the formation of Plato's ethical position.

Less transcendental than Plato and Socrates, and more concerned with truth than the sophists, Aristotle asserts that poetic imitation can reveal truth precisely because it does not passively copy appearances: it is a more creative act. Poetry in this view is an organized whole, whose parts are organically related and subordinated to a single objective. Because he focuses on tragic drama, Aristotle takes plot as the key example of the organization of poetry. For him, plot is not a random sequence of incidents but a unified whole with a beginning, middle, and end structured by logical necessity. Unlike history, which is built on accidental details, poetry rises above the description of particulars to represent universal truths about nature. This new view of imitation springs from Aristotle's belief that human beings have a natural instinct for imitation, which is generally pleasurable and connected with learning.

Later developments in classical theory and criticism build on the groundbreaking work of the Greek rhetoricians, Plato, and Aristotle. Horace, a poet, follows Aristotle in asserting that poets can and must imitate nature, adding that it is also important for young poets to imitate great writers. As he approves of poetic imitation, Horace stresses the importance of morality and decorum. For him, the pleasures of imitation are best yoked with moral teaching: he declares that the primary function of poetry is to combine "pleasure with usefulness." This famous Horatian maxim has exerted considerable influence on all subsequent theorizing.

MEDIEVAL THEORY AND CRITICISM

Spanning the course of a millennium (from the fifth through the fifteenth century), medieval theory and criticism contain numerous documents related to the practices of reading and interpretation, to the theory of language, and to the nature and use of literature.

Much medieval literary theory evolved out of the interpretation of sacred Scriptures. Drawing on the Neoplatonism of Plotinus and his disciple Proclus, medieval writers explored how to read the Book of God's Word (the Bible) as a divinely authorized representation of the Book of God's Works (nature). Hugh of St. Victor, for instance, describes interpretation as the reflection, or imitation, of God's works in his words. For Hugh, the whole visible world is a book written by the finger of God. Thus in reading one discovers not a pale imitation of nature, as Plato believed, but the ways in which reading a text and reading the world are parallel activities.

This medieval theory of hermeneutics (the art and science of interpretation) is grounded in Augustine's notion that human language is a divinely ordained reflection of the Logos (the Word of God), which is said to guarantee the unity of meaning in the Bible and the book of nature, even if that meaning is not readily discernible. Language truthfully portrays the world as it is, in spite of the confusion caused by the multiplication of tongues at Babel. In other words, language is "transparent." According to Augustine, language exists only to convey a meaning that preexists it; it cannot be reflexive or playful (as it may be in poetry); and it must efface itself in pointing to the preexistent truth it represents.

Most medieval writers accepted the Augustinian theory of language, and they also shared Augustine's deep distrust of poetic fables and figurative

language. But they constantly faced serious theoretical contradictions. Try as they might to assert the "truth" of language and the uselessness of poetic fictions, medieval writers could not overlook the presence of both poetry and fables in the master text of Christianity, the Bible. The most common if still not entirely satisfactory response was to argue that the transcendental majesty of God could be represented only indirectly, through poetic or figurative language. In this view, the heroic songs and psalms of the Old Testament, as well as Christ's parables in the New Testament, function as metaphoric mediations, creating similitudes between this world and the next. Such similitudes are necessary, Augustine argues, so that "by means of corporeal and temporal things we may comprehend the eternal and spiritual." Ultimately, the medieval defense of poetry was based on Macrobius's key distinction between fables that "merely gratify the ear" and those that "encourage the reader to good works."

In exploring such issues, medieval writers relied primarily on the textual techniques of exegesis. Particularly important were the exegetical genres of the gloss and the commentary, derived from the works of ancient grammarians and expanded for explication of the Bible. Glosses are elucidations of individual words or phrases, written in the margins or between the lines of a text; commentaries are much more extensive textual expositions, appearing at first as local and marginal remarks (like footnotes) but later produced as freestanding continuous texts (see, for example, Bernardus Sylvestris's twelfth-century *Commentary on the First Six Books of Virgil's "Aeneid"*). Known as the *enarratio poetarum* (exposition of the poets), these interpretive genres shaped the basic approach to all authoritative texts, which were transmitted in manuscripts filled with glosses and commentary that retained space for future textual exegesis.

The dominant technique of medieval gloss and commentary is allegory, a method of reading texts for their underlying esoteric meanings. Quintilian's definition of allegory as meaning "one thing in the words, another in the senses" was the basis of all medieval definitions of allegory; but what was for him a figure of speech became, when combined with the Augustinian belief that poetry is a revelation of an otherwise inaccessible transcendent world, a critical tool to explain and control the dissemination of meanings in sacred Scriptures. Only later would it become a literary genre. Following Quintilian, medieval writers eventually elaborated four levels of allegorical interpretation to be used in the study of the Bible: the *literal*, or historical; the *allegorical*, or spiritual; the *tropological*, or moral; and the *anagogical*, or mystical. In the New Testament story of Christ's raising of Lazarus from the dead, for example, the medieval exegete would recognize first that on the literal level, the story is a record of an event that actually took place. On the allegorical level, the story prefigures Christ's death, descent into hell, and resurrection. On the tropological level, it represents the sacrament of Penance, whereby the individual soul is raised from the death of sin. And on the anagogical level, it portrays the resurrection of the body after the Last Judgment.

By the twelfth century, medieval writers had extended allegorical biblical interpretation to the study of pagan mythologies and great classical works of art, such as Virgil's epic poem, the *Aeneid*. Medieval Christians could not literally accept pagan gods, nor could they simply read the stories as "fables," but they could see them as expressions of philosophical ideas. Eventually,

allegorical interpretation was applied to contemporary writing; as in Dante's own reading of his *Divine Comedy* in "Letter to Can. Grande." Although it slowly passed out of favor after the Middle Ages, allegorical interpretation reemerged as a significant influence in the late twentieth century—especially in the work of Northrop Frye and Fredric Jameson, both of whom developed schemes for interpreting texts based on multiple levels of interpretation.

Medieval theory and criticism, significantly, concerns itself with prescriptive poetics: that is, with how to write poetry. Inspired by Horace's *Ars Poetica*, this pragmatic criticism synthesizes classical views on rhetoric, grammar, and style, often taking the form of guides to composition. Perhaps the best-known medieval Horatian critic is Geoffrey of Vinsauf, who adopts and revises Horace's fundamental principle of decorum for a medieval audience. For Geoffrey, the poet's objective is not to invent new subject matter but to develop new ways of treating traditional themes. In this regard, the poet is like the medieval exegete, who preserves the past and develops intricate ways of extending it.

RENAISSANCE AND NEOCLASSICAL THEORY AND CRITICISM

While Renaissance and neoclassical literary theory and criticism display a renewed interest in Greek and Latin classics, they also manifest a new concern with vernacular languages and national literatures. Spanning the sixteenth, seventeenth, and eighteenth centuries, the debate between the ancients and the moderns began in Italy and extended throughout western Europe, setting the framework for much of the theory and criticism of the time—and addressing problems that are still with us today.

The defenders of the ancients directed attention to classical genres such as tragic drama and epic, holding them up as models for composition. At first, the ideal was not just to imitate the genres of antiquity but to use their languages, especially Latin. The argument for strictly adhering to classical forms grew out of a unique synthesis of Aristotle's *Poetics* and Horace's *Ars Poetica*. From the *Poetics*, Renaissance critics developed an appreciation for isolating and distinguishing genres, which they tended to treat prescriptively rather than descriptively. The most famous instance is the doctrine of the "three unities" (action, place and time), which extrapolates from Aristotle's notion of the unity of action to demand that dramas have not only one action but also one setting and a brief span of fictional time (not exceeding one day). Here Aristotle's original description of a body of preexisting Greek tragedies is turned into a set of rules for the writing of plays. This position, which first emerged in the commentaries on Aristotle by the Italian Renaissance critic Ludovico Castelvetro, found its most influential expression a century later in the critical writings of the neoclassical French dramatist Pierre Corneille and the English poet John Dryden—both of whom in their creative works were dedicated to their native languages and literatures and thus combined modern and ancient perspectives.

Joined to the doctrine of the three unities was a special Horatian concern with "verisimilitude." In practice, this meant depicting historical realities and facts and excluding fantastic beings and events (except those that could be

explained by Christian beliefs, such as the actions of God and demons). Critics often pointed to significant passages in Horace that stressed the importance of decorum and of copying the techniques and strategies of one's accomplished literary predecessors. The general sense was that by imitating classics, modern Renaissance and neoclassical writers were also imitating nature. This position was strongly advocated by the Italian critic Julius Caesar Scaliger and was later summed up memorably in one of the many witty neoclassical couplets of Alexander Pope's *Essay on Criticism*. Pope notes that the youthful poet Virgil scorned to represent anything except nature when he set out to write his epic, the *Aeneid*: "But when t' examine ev'ry Part he came, / *Nature* and *Homer* were, he found, the *same*." Pope concludes from Virgil's example, "Learn hence for Ancient Rules a just Esteem; / To copy *Nature* is to copy *Them*."

In contrast to the ancients, the moderns not only appreciated but championed new literary forms that departed from the various classical genres. One among many examples is Giambattista Giralaldi's defense of the new Renaissance romantic epic, epitomized by Ludovico Ariosto's *Orlando Furioso* and later by Edmund Spenser's *Faerie Queene*. Critics of these long poems pointed out that they lacked unity and verisimilitude and that they deviated markedly from the classical epic, but Giralaldi praised the variety of Ariosto's poem as well as its "marvelous" incidents, claiming that it constituted a new genre not subject to classical rules. In a parallel move, Giacopo Mazzoni supported Dante's dream allegory in the *Divine Comedy*, stressing the importance of purely imaginary imitation. Informing both Mazzoni's and Giralaldi's arguments is a view of the poet's creative powers as unbounded. Sir Philip Sidney captured the essence of this position, which set the stage for Shakespeare, when he stated, "Nature never set forth the earth in so rich tapestry as divers poets have done, neither with pleasant rivers, fruitful trees, sweet smelling flowers, nor whatsoever else may make the too much loved earth more lovely. Her world is brazen, the poets only deliver a golden."

With this defense of the unfettered powers of the poet also came a defense of the use of vernacular languages in place of Latin. Critics and poets began to believe that they could rival the great literary achievements of Greece and Rome with their respective native languages. This trend began as early as Dante, whose *Divine Comedy* was composed in Italian, but in the Renaissance it spread across western Europe. The Italian language was defended by Giralaldi and Mazzoni, the French language by Joachim du Bellay and Pierre de Ronsard, and the English language by Sidney and George Puttenham. The turn to the vernacular reflected the growing national consciousness of the time and an increasing preoccupation with distinct national literary traditions.

ROMANTIC THEORY AND CRITICISM

The Romantic movement in the arts developed in the latter half of the eighteenth century, inspired in part by the American and French Revolutions, and flourished in the early nineteenth century, spreading throughout Europe and the New World. Although it manifests a variety of forms in specific social

and historical contexts, the major characteristic of Romanticism is arguably its focus on the individual. Romantic theory was significantly influenced by the philosopher Immanuel Kant's attention to the ways in which subjectivity determines our apprehension of the world. It was also influenced by the developing regard for individual sensibility and originality, a concern first memorably manifested during the mid-eighteenth century in the critical work of the poet Edward Young.

In Romantic theory and criticism, emphasis on the individual led to an unprecedented focus on poetry as the personal expression of the poet—a development that aimed to counter the decorum, traditionalism, and preoccupation with genre characteristic of neoclassicism. Romantic poets such as Johann Wolfgang von Goethe, William Wordsworth, and Percy Bysshe Shelley all saw their art as intimately bound up with their personal impressions, moods, feelings, and sentiments, while Romantic critics such as Schleiermacher called for readers' sympathetic identification with the author.

In discussions of poetry, Romantics frequently drew attention to how the imagination transforms and synthesizes discrete sense perceptions, creating unique organic poems. Perhaps the most celebrated instance of this focus appears in *Biographia Literaria*, where Samuel Taylor Coleridge claims that the poet “diffuses a tone and spirit of unity, that blends, and (as it were) fuses, each into each, by that synthetic and magical power, to which we have exclusively appropriated the name of imagination.” This Romantic view of the poem as an organic form developed by the individual imagination was contrary to the neoclassical dictate that artists must imitate previous works of art and follow the rules of their genre. As exemplified by Coleridge, Elizabeth Robinson Montagu, and others, it led to a renewed appreciation of the unique creative genius of Shakespeare, whose unusual and irregular plays were often criticized by neoclassical theorists for ignoring the unities of action, time, and place. Later the Romantic concept of organic form, shorn of theorizing about the author, would inspire early-twentieth-century formalist theories of intricate poetic structure and coherence.

The Romantic fascination with the synthesizing power of the imagination paralleled an abiding concern with the symbol, displayed most famously in the writings of Coleridge and Ralph Waldo Emerson. For the Romantics, the poetic symbol magically expressed universal ideas through particular concrete details, images, and metaphors. Unlike allegory, which they widely condemned as a mechanical imposition of meaning and morality onto poetry, the poetic symbol manifested its meaning organically, providing aesthetic pleasure and beauty as well as moral truth. According to Friedrich von Schiller, the process of reading a poem was an experience of “play”—a serious play that reconciled the particular and the general and brought an uplifting sense of freedom to the reader and the poet, saving them from the alienation and despair of the modern world. For the Romantics, poetry—through the symbol—humanized an increasingly dehumanized world.

The genre of choice during the Romantic era was the lyric poem, which displaced the epic poem favored by neoclassical writers (longer Romantic poems tended to be arrangements of lyric pieces, as in Wordsworth's *Prelude*). Of all the available genres, the lyric poem was best suited for the expression of individual emotion. Not uncommonly, the lyric appeared as a “fragment,” a technique that further stressed the break with neoclassicism,

which valued unity, wholeness, and rational design. Many lyrics aimed to attain a sublimity associated with robust imaginative grandeur, infinity, irrationality, and fear and terror, which was achieved less through sophisticated style and rhetoric (as in the classical writer Longinus, the earliest theorist of the sublime) than by the force of individual genius.

The long struggle of the novel to be regarded as a serious literary form as yet had little effect on theory and criticism, though this genre (especially the Gothic novel) thrived during the Romantic period. The classical hierarchy of literary genres—epic followed by tragic drama and then by lyric poetry—left little room for the humble and prosaic novel until Victorian times. And still today the novel cedes pride of place in literary history to epic poetry and tragic drama, though perhaps no longer to lyric poetry.

A final significant trait of Romantic theory was an emphasis on historical stages of development. The changing social, political, and economic conditions around them prompted many thinkers to ponder literary and cultural history. In theory and criticism, such attention led to repeated attempts—by Jean-Jacques Rousseau, G. W. F. Hegel, Thomas Love Peacock, Germaine de Staël, and others—to correlate specific forms of literature and the arts to specific historical periods. Often, poetry was identified—as it had earlier been by Giambattista Vico—with “primitive” forms of society, in which people were purportedly less rational and more intuitive. This concern with the dynamics of history was to have a significant impact on the influential work of Karl Marx.

MARXISM

From ancient times, literature and the arts have portrayed, and criticism and theory have discussed, differences in people’s social class and history. But with the spread and maturation of capitalism through its various stages, economic and other disparities have more visibly polarized wealthy and poor classes, city residents and ghetto dwellers, inhabitants of the first and third worlds, whites and people of color, men and women. Class formations, class consciousness, and class tensions form part of the historical experience of modernization, and theory and criticism have been grappling with these and related issues for several centuries now.

Many of the current concepts, terms, and issues related to social class derive from Marxist criticism, a diverse and influential source for literary and cultural theory that stems from the work of the nineteenth-century German philosopher and economist Karl Marx. One of its grounding concepts is Marx’s theory of “modes of production.” According to Marx, human history is divided into seven successive historical modes of production—tribal hordes, Neolithic kinship societies, oriental despotism, ancient slaveholding societies, feudalism, capitalism, and communism. Class conflict within a specific mode of production follows a basic overall pattern. The capitalist or bourgeois mode of our time has been characterized mainly by the conflict between the industrial working class (the *proletariat*, or labor) and the owners and manipulators of the means of production (the *bourgeoisie*). Other classes, including the unemployed and criminals (the *lumpenproletariat*) as well as the dwindling aristocracy, watch this conflict from the historical side-

lines. Sooner or later, Marx predicted, international labor will win and the communist mode of production will emerge triumphant, eventually leading to a society free from rampant inequalities, exploitation, and class struggle.

According to Marxist theory, the socioeconomic elements of society constitute its base (or foundation), while its cultural spheres—specifically its politics, law, religion, philosophy, and arts—compose its superstructure. *Ideology* consists of the ideas, beliefs, forms, and values of the ruling class that circulate through all the cultural spheres. Members of the working class who ascribe to bourgeois ideas and values exhibit “false consciousness,” since such values ignore the socioeconomic realities of their own working-class lives. *Hegemony* designates the continuous ideological domination of all classes by the ruling class through such nonviolent stabilizing and consensus-building institutions as church, school, family, the media, the mainstream arts, trade unions, business interests, and technoscientific establishments. These institutions are what the celebrated Marxist theorist Louis Althusser calls “Ideological State Apparatuses” (ISAs): they manage social instability and conflict to impose and maintain hegemonic order; working for the most part outside of official state power.

Culture and the arts in the Marxist view are neither innocent entertainment nor independent of social forces; they play a significant role in transmitting ideology and shoring up the hegemonic order. This is not to say that artists and intellectuals are merely mouthpieces of the dominant social class, because many explicitly protest the ruling systems and implicitly address their contradictions and shortcomings. The ideological orientations of a literary work can be quite complicated: a text often contains mixed and contradictory messages that reflect its broad social milieu rather than its author’s personal philosophy. From a Marxist perspective, artistic works frequently present fugitive, alternative, and counterhegemonic images sometimes suggesting liberatory possibilities and lending them a socially critical undertone.

Viewed from the vantage point of stylistics (the branch of linguistics that analyzes literary style), the conflicts of classes and groups in society produce what Bakhtin famously called “heteroglossia”—that is, the complex stratification of a language like English into different dialects, generational slangs, professional argots, speech genres, group codes, literary genres, and class mannerisms. Many novels (for example, James Joyce’s *Ulysses*) incorporate such social conflicts in the form of heteroglot discourse, a carnivalization of different languages that revolt against official style.

With the rise of consumer and multinational capitalism, many have found Karl Marx’s concepts of the *commodity*, *commodity fetishism*, and *commodification* increasingly useful for understanding culture and society, and thus the terms often appear in the writings of contemporary critics and theorists. Commodities are goods or services produced primarily for monetary exchange and profit—a carpenter may, for example, build a table to sell, not to use. For him, or her, this commodity has exchange value, not use value. Labor itself has come to be bought and sold in a money economy; rather than being applied by isolated workers to the production of goods for personal use, it is more typically used in the service of another to earn and then exchange money for items necessary for subsistence. The fetishism of the commodity describes both our fascination as we stand before a glittering array of products in a store and our forgetting the paid labor of workers that

went into the products. This displacement of use value from the commodity—its transformation into cash exchange—results in the alienation of workers from their own labor: carpenters in the factory care little about the tables they assemble. Moreover, the extraction of profit by owners from their workers' labor results in exploitation, which is a key element of all commodity exchange. The term *commodification* names this whole accelerating phenomenon of producing goods and services not for their use value but their exchange value, a phenomenon that threatens to permeate every sphere of life in our time. Marxist critics complain that commodification promotes reification, the tendency to view people and human relations as things or objects with price tags. In the arts, for instance, commodification leads artists to hawk their works anxiously to gain profits in an impersonal, competitive market, and it has positioned critics as the hired advisers to moneyed collectors. Observing this process, theorists have begun to wonder if criticism and the arts can any longer possess a socially critical dimension.

Indeed, contemporary Marxist critics and cultural studies scholars (who are indebted to Marxism) increasingly worry about the co-optation by the market (and the media) of every form of resistance, ranging across the arts and popular culture. If outrageous radical vanguard movements such as surrealism and punk can become profitable commodities, is opposition to hegemony possible? The agencies of commodification and hegemonic incorporation threaten to defuse the radical force of all subversive artistic practices, transforming them into hot news stories and merchandise destined for the market economy. Marxist criticism and cultural studies frequently aim their critical inquiries at this system and its dynamics.

PSYCHOANALYSIS

It is often said that Sigmund Freud discovered the unconscious, but it is more accurate to say that he and other psychoanalysts mapped its spaces and mechanisms. The findings of psychoanalysis have filtered into literary and cultural criticism and theory, providing a battery of terms, concepts, and problems that reach beyond those critics who describe themselves as psychoanalytic.

According to psychoanalysis, the human psyche consists of unconscious and conscious spheres, with most of its contents lodged out of sight in the unconscious and covered over by a relatively smaller and less dense consciousness. The keys to the dark and inaccessible unconscious lie, psychoanalysts say, in free association, fantasies, slips of the tongue (so-called Freudian slips), and especially dreams, all of which reveal deeply buried, repressed, and self-censored wishes. The techniques used to interpret such unconscious materials, particularly dreams, have been useful to literary and cultural critics as well as psychoanalysts, since they are all in the business of deciphering cryptic symbolic texts.

The nightly formation of dreams, or the *dream-work* in Freudian terminology, involves the censorship of unconscious wishes (frequently sexual) that undergo four kinds of deliberate, positive distortion on their way to consciousness: condensation, displacement, symbolization, and secondary revision or elaboration. These unconscious processes explain why dreams

usually emerge as garbled “nonsense.” The task of the psychoanalyst is, with the help of the patient, to make sense of dream texts. Here, psychoanalysis asserts that nonsense is meaningful and that distortion is inescapable and creative. Both assertions are taken seriously by many critics and theorists as they work to understand texts, especially since literary discourses are often as seemingly nonsensical and distorted as dreams. Psychoanalytic decoding of symbols has proved particularly illuminating to critics, notably those followers of Carl Jung who have made inventories of archetypes—universal symbols such as the garden and the desert, water and fire, the hero and the monster, the river journey and the ordeal, birth and death—that they believe are stored in humanity’s collective unconscious.

Many highly influential modern and postmodern theories of literature are indebted to psychoanalysis and its foundational concept of the unconscious. Two examples of such psychopoetics—Harold Bloom’s “anxiety of influence” and French feminism’s *écriture féminine*—illustrate the richness and complexity of psychoanalytic theories. According to Bloom, each major poet in the Anglo-American tradition from the early Romantics to the late modernists has suffered a devastating yet productive anxiety of influence, as the newcomer poet selects a role model both to imitate and to compete against, wishing ultimately to emerge as a major poet who triumphs over (but triumphs because of) the poetic precursor. Prior to the neoclassical and Romantic periods, literary influence was almost entirely beneficial (as in the case, say, of Spenser’s influence on Milton). With the rise of the subjective lyric poem as a major genre, influence became baleful, involving the aspiring poet’s primal repression of the precursor plus a series of later psychological defenses against this parent figure, including masochistic reversals, sublimations, introjections, regressions, and projections. These all entail what Bloom calls “misprision” (mistaking, misreading, misinterpreting), the inescapable and necessary creative *distortion* enacted unconsciously in the newcomer’s poems in imitation of, and competition with, the loved but hated precursor. Bloom’s complex psychopoetics has been criticized for focusing on competition instead of collaboration, for favoring canonical poets over less well known poets, and for omitting nearly all writing by women, but Bloom’s critics have rarely questioned the usefulness of his theoretical understanding of distortion or of unconscious repression, two key psychoanalytical concepts widely used in the field of theory and criticism.

The literary theory of *écriture féminine* (feminine/female writing) derives from the work of the celebrated psychoanalyst Jacques Lacan, as creatively revised by the French feminist Hélène Cixous. According to Lacan’s challenging theory, an infant moves during its earliest psychosocial development from an “Imaginary order”—a mother-centered, nonsubjugated, presymbolic, pre-oedipal space of bodily drives and rhythms (linked with the unconscious)—to a “Symbolic order” of separation between self and (m)other, of law and patriarchal social codes, and of loss and associated desire (linked with consciousness). *Écriture féminine* is a radical, disruptive mode of “feminine” writing that is opposed to patriarchal discourse with its rigid grammar, boundaries, and categories; tapping into the Imaginary, it gives voice to the unconscious, the body, the nonsubjective, and polymorphous drives. Even though such feminine writing can be produced by male as well as female writers (for example, by Jean Genet and James Joyce), it is a psychopoetics

positioned by Cixous explicitly against patriarchal values and practices.

In both the anxiety of influence and *écriture féminine*, as in psychoanalysis generally, Freud's theory of the "Oedipus complex" plays a key role. According to this theory, an infant must successfully complete various stages of development (oral, anal, oedipal) to ensure later psychological well-being. In the oedipal stage, the (male) child must separate from the mother and identify with the father on his way to entering the Symbolic order. The Oedipal complex is displayed by those males whose failure to negotiate the oedipal stage of development leaves them deeply attached to their mothers and often feeling rivalry with their fathers. Bloom's theory of the anxiety of influence presents a parallel rivalry with the father. And *écriture féminine* is a feminist effort to reconceive the pre-oedipal sphere as a highly positive source of creativity and liberation, rather than simply an infantile domain of irrational instincts that we must all abandon.

Perhaps the most famous contemporary revision of Freudian oedipal theory appears in Gilles Deleuze and Félix Guattari's Marxist and psychoanalytical *Anti-Oedipus*, a book that criticizes many aspects of Freud's work—notably, the bourgeois presupposition that the nuclear family is the universal framework for all normal human development. According to Deleuze and Guattari, Freudian theory subjugates the disruptive unconscious—with its often antisocial desires and flows—to the hegemonic order of the patriarchal family, the rule of law, and the capitalist economy. Freud's psychoanalysis, focused as it is on the oedipal triangle, is unable to acknowledge the truly complex nature of subjectivity, seen by Deleuze and Guattari as an open-ended process of becoming in which multiple contradictory positions and roles coexist and clash.

FORMALISM

Formalist criticism rose to prominence in the early twentieth century, usually defining itself in opposition to subjectivist theories of literature such as Romanticism, which was perceived to be both solipsistic and relativistic. Formalist criticism is not interested in the feelings of poets, the individual responses of readers, or representations of "reality"; instead, it attends to artistic structure and form. The two best-known schools of formalist criticism are Anglo-American New Criticism and Russian formalism.

As discussed above, New Critics approach literature—particularly poetry—as an autonomous entity. They focus on the form of the literary object, self-consciously separating literary criticism from the study of sources, biography, reception, social and historical contexts, politics, and other "extrinsic" matters. They advocate intrinsic analysis or "close reading" that avoids paraphrase and thematic statements, examining instead the complex stylistic orchestrations that compose poetry. What New Critics seek in their studies of poetic form is a set of "organic" relationships of literary elements (images, symbols, tropes, features of genre and style, settings, and tones), whose overall unity often depends on ambiguity, paradox, or irony. This special state of aesthetic suspension—reminiscent of Kant's earlier "purposiveness without purpose" and Coleridge's "balance or reconciliation of opposite or discordant qualities"—is for them a defining feature of poetry. It distinguishes the lit-

erary from the more ordinary uses of language found in journalism, everyday speech, scientific writing, and so on, where direct communication, not highly wrought aesthetic form, is most important.

Similarly, Russian formalist critics such as Roman Jakobson and Boris Eichenbaum distinguish between the literary and the nonliterary. They view literature primarily as a verbal art, rather than as a reflection of reality or an expression of emotions. Separating literary criticism from such fields as psychology, sociology, and intellectual history, they focus on the distinguishing features of literature, its "literariness." What most separates literature from other modes of discourse is that it draws attention to its own medium, that is, to a complex texture of formal devices and strategies that include versification, style, and narrative structure. Whereas New Critics study the artful convergence of elements in a literary structure, Russian formalists examine the creative deviation of elements from the background of literary norms and conventions.

The importance of formalism, especially the Anglo-American variety, cannot be underestimated. Because it is the dominant mode of modern criticism against which much later theory typically defines itself in whole or in part, we will return to it later in this introduction.

READER-RESPONSE THEORY

Contemporary critical theory offers a rich panoply of types of readers—ideal readers, superreaders, implied readers, virtual readers, real readers, historical readers, resisting readers, critical readers, and more. Such terms are usually found in reader-response theory and reception aesthetics, realms that focus on theories of readers and meaning.

In reading a novel, one can sometimes extrapolate from it an implied reader, a figure whom the text seems to be addressing and who occasionally functions as a character in the work (for example, the characters to whom Marlow tells his story in Joseph Conrad's *Heart of Darkness*). An implied reader differs both from a virtual reader, to whom the text is vaguely addressed by the author, and from a historical reader, who actually reads the text at the time of its publication. The hypothetical perfect decoder of the work, who knows everything necessary to make sense of it, is the ideal reader; but the most original and innovative texts require a superreader, a special ideal reader endowed not only with extensive linguistic and literary knowledge but also with superior aesthetic sensibility. Both the critical and the resisting reader, situated in definite historical moments and possessing strong values and interests, find themselves opposing and interrogating texts (imagine an average American today reading Hitler's *Mein Kampf*). Real readers are people whose actual responses to novels, plays, poems, and other texts have been recorded by theorists and, in some cases, analyzed for their individual styles and for the personal psychological quirks that they reveal.

Theories of meaning accompany these accounts of various readers. Some reader-response theories construe meaning as an entity located in the text or in a paraphrase of the text and thus view readers as discovering objective textual meanings. But other reader-response theories argue that insofar as reading occurs through time and involves the continuous adjustment of per-

ceptions, ideas, feelings, and evaluations, the meaning of a work is the moment-by-moment experience of it, not something separate or left over. Meaning is therefore a process, not a product; it is an event, not a retrospective reconstruction or intellectual reformulation. This subjectivist theory of meaning has several obvious limitations, however: it endorses the idea of reading as private consumption, and it construes *experience* as a straightforward, unconditioned, and knowable process.

Some reader-response theorists see meaning as a production dependent on preexisting social codes and protocols of interpretation. In this view, every interpretive community—for example, psychoanalytical critics—employs a particular set of interpretive strategies for (re)writing (that is, producing) texts and for constituting their properties, intentions, and meanings. Such preestablished strategies determine the shape of meaning, which thus is neither prior to nor independent of the act of interpretation.

The New Critics approach meaning quite differently. They warn against the “heresy of paraphrase,” emphasizing that it is a mistake for a reader to paraphrase a work’s content in order to distill its propositional meaning. Textual paraphrases usually end up being moral or utilitarian statements, putting literature on a level and in competition with other disciplines such as philosophy, religion, or politics. By invoking the “affective fallacy” and “intentional fallacy,” two related and equally famous New Critical concepts, they forbid us to locate meaning in the emotional responses of the reader or in the intentions of the author, respectively. According to the New Critics, the literary artifact does not need the support of such external agents if it is well made. The sense of *meaning* becomes complex and abstract for these formalists. On the one hand, it is a secondary, relatively unimportant feature of literary structure; on the other, it is an aesthetic concept of organic unity that reconciles textual incongruities in the name of irony, paradox, or ambiguity. New Criticism is most celebrated for telling us what meaning is not: it is not propositional truth, nor the author’s intention, nor a reader’s response.

To help clarify the concept, some theorists, such as E. D. Hirsch Jr., have added the notion of significance. While significance changes, meaning does not. Here meaning is construed as a fixed, self-identical, reproducible object derived from the author’s intention. Significance, which builds on meaning, adds the reader’s personal associations, interests, values, and contexts. Over time a text may come to have a different significance but not a different meaning. The reader therefore operates on two levels, one subjective and one objective, with the latter seen as higher.

Meaning is often understood as having multiple levels, with the reader playing different roles as part of one complicated task. Consider approaches as different as the medieval division of textual meaning into four levels (literal, allegorical, moral, mystical), which emphasizes the spiritual realm, and Fredric Jameson’s Marxist attention to three horizons of meaning (social stratification, class struggle, mode of production), which aims to discover the utopian elements of cultural texts. Such levels or horizons inevitably are set in hierarchies, a process that leads to disagreements among theorists as they argue over which should take priority.

No concepts of meaning or notions of the reader and the reading process should be taken at face value by students of theory. They should be thought

of as complex problematics perennially at issue, likely to crop up at any point in discussions about criticism and interpretation.

STRUCTURALISM AND SEMIOTICS

Pioneering concepts and methods of structural linguistics and anthropology have strongly influenced how modern theory and criticism understand cultural phenomena. Out of structuralist methodology has come the discipline of semiotics or semiology, a field that studies sign systems, codes, and conventions of all kinds, ranging from human to animal languages, the language of fashion to the lexicon of food, the codes of diagnostic medicine to those of written literature. By extension, literary semiotics construes its primary object of analysis to be literature as a system, while social (or cultural) semiotics explores culture as a set of interlocking systems and subsystems.

The model for structuralist thinking is Ferdinand de Saussure's pioneering linguistics, which centers not on individual utterances but on the underlying rules and conventions that enable language to operate. Saussurean structuralism analyzes the social or collective dimensions of language, focusing on grammar rather than usage, rules rather than actual expressions, and *langue* (the system of language) rather than *parole* (actual speech). This linguistics is concerned with the infrastructure of language common to all speakers at a given time (which operates on an unconscious level), and not with surface phenomena or historical change. Thus it attends to the synchronic (that which exists now) not the diachronic (that which exists and changes over time).

In valuing deep structure over surface phenomena, structuralism strongly resembles Marxism and psychoanalysis, both of which examine underlying causes and transpersonal forces of complex systems, shifting attention away from individual human consciousness and choice. Structuralism thereby shares in the widespread and ongoing modern antihumanism that decenters the individual, portraying the self as a construct and a consequence of impersonal systems. Individuals neither originate nor control the conventions of their social existence, mental life, or mother tongue. Rather, they are created by social and cultural systems, within which they are subjects. For this reason, many contemporary theorists, especially structuralist, Marxist, and psychoanalytical critics, prefer the terms *subject* and *subjectivity to person* or *individual*.

To get a sense of the kinds of projects that structuralism and semiotics might undertake, consider the fashion system. As members of a society, people know which items of clothing, textures, colors, and styles go with which. In most Western societies today, sneakers don't fit with a tuxedo, a top hat doesn't work with jeans and a T-shirt, and a pair of red shoes, an orange skirt, and a purple blouse simply don't go together. Few people would be able to supply a complete written description of all the unconscious but well-known rules of dress, but such a list could be created—by structuralists and semioticians. Similarly, sophisticated readers as well as authors possess a considerable amount of knowledge in the form of not-quite-explicit conventions and rules of reading, which structuralist poetics aims to chart. Most

stories can be reduced to one of a few underlying basic plots, and most characters are variations on a few types, which structuralist narratology aims to inventory.

POSTSTRUCTURALISM AND DECONSTRUCTION

In recent decades, poststructuralism has set the terms and the agenda for many of the major developments and debates in the field of theory and criticism. It has played a significant role in shaping the direction of other schools and movements, particularly feminist criticism, postcolonial theory, cultural studies, film studies, and queer theory. Originally a vanguard movement of French literary intellectuals and philosophers who came into prominence during the 1960s and 1970s and who all were critical of structuralism, it quickly spread to intellectuals around the globe. By the close of the twentieth century, poststructuralism had become the leading edge of postmodernism and was often labeled “postmodern theory.”

We have already touched on some of the main features of poststructuralism. They include the problematizing of linguistic referentiality, an emphasis on heteroglossia, the decentering of the subject, the rejection of “reason” as universal or foundational, the criticism of humanism, and a stress on difference.

Poststructuralist accounts of literature often stem from deconstructive theory, especially its three interconnected concepts of textuality (or floating signifiers), rhetoricity, and intertextuality. Because the signifier (word) is disconnected from the signified (concept) and the referent (thing), language floats or slides in relation to reality, a condition made more severe with the additional sliding introduced into language by figurative language, such as metaphors and metonymies. Such rhetoricity (as it is called) adds layers of substitutions and supplements (more differences) to floating signifiers. Textuality and rhetoricity are conditioned by yet a third sliding or differential element, intertextuality—a text’s dependence on prior words, concepts, connotations, codes, conventions, unconscious practices, and texts. Every text is an intertext that borrows, knowingly or not, from the immense archive of previous culture. The term (*inter*)textuality, with the parentheses, captures the sense of textuality as being conditioned by this inescapable historical intertext.

The technical term *dissemination* is commonly employed to name the deconstructive concept of textual meaning; rather than being simply ambiguous or paradoxical, as in earlier New Criticism, meaning here is sliding, abyssal, undecidable. The linguistic, rhetorical, and intertextual properties of language undermine or deconstruct stable meaning. Poststructuralist theories of language, whether they focus on floating signifiers, rhetoricity, intertextuality, dissemination, *écriture féminine*, or elsewhere, typically bring traditional mimetic, expressive, didactic, and formalist theories into crisis but do not flatly invalidate their claims. This “undecidability,” a particular hallmark of Jacques Derrida’s and Paul de Man’s deconstruction, galvanizes opponents—particularly when joined to the related poststructuralist claim of the “death of the author,” which explicitly disconnects the text from any grounding in authorial intention or psychology.

Deconstructive conceptions of reading as both misreading and misprision, discussed earlier, do not signal an end to textual interpretation but change its grounds. The redoubled reading typical of much deconstruction rests on claims of interest and insight, not of validity or truth. A reading or interpretation of a text does not prove but persuades: it is more or less compelling, productive, original, or useful. This pragmatic set of criteria links deconstruction with contemporary U.S. neopragmatism, an influential philosophy that insists on the contingency of all human arrangements and concepts.

Deconstruction originated in the name of a special difference (or *différance*), stemming from both structural linguistics and phenomenological philosophy. It denotes the structure of differences that defines both the sliding (differential) operation of the signifier-signified complex and, more abstractly, the being of entities that are already differentiated and divided because they necessarily exist in space and in time. Leftist-oriented deconstruction extends these concepts of ontological difference and differential meaning to include sociopolitical differences in class, gender, sexuality, race, and ethnicity. There is perhaps no more vexed term in contemporary poststructuralist theory than *différance*.

Deconstruction is not just a school but also an analytic procedure developed by Derrida, a historian of philosophy, that has become a methodological instrument widely used by all manner of literary and cultural theorists and critics. "A deconstruction" involves *inversion* and *reinscription* of a traditional philosophical opposition. First, one locates in a chosen text a significant conceptual opposition (for example, nature/culture, purity/contamination, animality/humanity, or male/female) at a moment of maximum instability. To invert the binary pair, one shows how the belated second term is actually indispensable and constitutively prior to the primary term. For instance, it is from the vantage point of culture that nature is named and defined; similarly, the idea of purity depends on the prior possibility of contamination. To reinscribe the terms of the opposition, one must destabilize and transform—deconstruct—the usual understanding of the concepts, especially their temporal and hierarchical relations. Thus Derrida famously deconstructed the speech/writing opposition by showing how writing precedes speech; characteristically, he reinscribes the concept of writing (*écriture* in French) to mean any and all forms of inscription and at the same time undercuts the privileging of speech as face-to-face spontaneous utterance.

Certain significant strands of poststructuralism focus on desire, the body, and subjectivity rather than on textuality, rhetoricity, and deconstruction. Two cases mentioned earlier (in the discussion of psychoanalytic criticism) are the theories of *écriture féminine* and the anti-oedipus. In this domain—where psychoanalysis, gender studies, cultural studies, and poststructuralism intersect—the problems of subject formation, gender identity, and political resistance link poststructuralism not only with cultural studies and feminist theory but also with postcolonial criticism, queer theory, and related movements and schools. By comparison, the deconstructive strands of poststructuralism concerned with the rhetoricity and undecidability of literary texts seem narrowly focused, conservative, formalistic, and apolitical. Poststructuralism in its political form is also interested in popular culture, minority literatures, radical politics, "deviant" subjectivities, and the dynamics of hegemonic institutions. A great deal of common ground, therefore, is shared by

politically oriented poststructuralism, Marxism, and postmodern social activism such as the feminist, lesbian and gay rights, and ethnic civil rights movements. The commingling of approaches, disciplines, and movements can be quite confusing, but it has produced some of the most interesting and original criticism and theory of recent times.

FEMINISM AND QUEER THEORY

Feminist criticism is part of the broader feminist political movement that seeks to rectify sexist discrimination and inequalities. While there is no single feminist literary criticism, there are a half dozen interrelated projects: exposing masculinist stereotypes, distortions, and omissions in male-dominated literature; studying female creativity, genres, styles, themes, careers, and literary traditions; discovering and evaluating lost and neglected literary works by women; developing feminist theoretical concepts and methods; examining the forces that shape women's lives, literature, and criticism, ranging across psychology and politics, biology and cultural history; and creating new ideas of and roles for women, including new institutional arrangements. Feminist theory and criticism have brought revolutionary change to literary and cultural studies by expanding the canon, by critiquing sexist representations and values, by stressing the importance of gender and sexuality, and by proposing institutional and social reforms.

Theorists of a "feminist aesthetic" argue that women have a literature of their own, possessing its own images, themes, characters, forms, styles, and canons. In Elaine Showalter's pioneering account of British novelists from the early nineteenth century to the 1970s, for example, women writers form a subculture sharing distinctive economic, political, and professional realities, all of which help determine specific problems and artistic preoccupations that mark women's literature. Sandra M. Gilbert and Susan Gubar propose that nineteenth-century women writers had to negotiate alienation and psychological disease in order to attain literary authority, which they achieved by reclaiming the heritage of female creativity, remembering their lost foremothers, and refusing the debilitating cultural roles of *angel* and *monster* assigned to them by patriarchal society. Countering Harold Bloom's masculinist "anxiety of influence" (explained above), Gilbert and Gubar's "anxiety of authorship" depicts the precursor poet as a sister or mother whose example enables the latecomer writer to develop collaboratively against the confining and sickening backdrop of forbidding male literary authority. Diseases common among women in male-dominated, misogynistic societies include agoraphobia, anorexia, bulimia, claustrophobia, hysteria, and madness in general, and they recur in the images, themes, and characters of women's literature.

As Judith Fetterley insists in *The Resisting Reader: A Feminist Approach to American Fiction* (1978), women read differently than men. She examines classic American fiction from Irving and Hawthorne to Hemingway and Mailer and points out that this is not "universal" but masculine literature, which forces women readers to identify against themselves. Such literature neither expresses nor legitimates women's experiences, and in reading it women have to think as men, identify with male viewpoints, accept male

values and interests, and tolerate sexist hostility and oppression. Under such conditions, women must become "resisting readers" rather than assenting ones, using feminist criticism as one way both to challenge male domination of the institutions of literature and to change society.

As concepts such as the anxiety of authorship, *écriture féminine*, and the potential of the Imaginary order suggest, psychoanalysis is fundamental to a great deal of feminist theory and criticism. However, feminist psychoanalysis is typically revisionist: it has had to work through and criticize the "phallogocentric" presuppositions and prejudices of Sigmund Freud, Jacques Lacan, and other pioneering psychoanalysts. For example, the feminine anxiety of authorship—in its opposition to the masculine anxiety of influence—reconfigures the "oedipal" relationship between writers as cooperative and nurturing rather than competitive and rivalrous. Similarly, *écriture féminine* transforms Lacan's idea of the Imaginary, casting it not simply as an infantile sphere of primary drives superseded on the way to the patriarchal Symbolic order but as a liberating domain of bodily rhythms and pulsations associated with the mother that permeates literature, especially modern experimental poetry. Moreover, the pre-Symbolic Imaginary order, a realm of bisexual/androgynous/polymorphous sexuality, opens the possibility of sexual liberation from the suffocating confines of the "compulsory heterosexuality" that dominates patriarchal culture.

Within feminist circles, there are political differences and conflicts of interest among women of color and white women, women from different classes, women of different sexualities, women belonging to different nations and groups, and women who are liberals, conservatives, radicals, and revolutionaries. Black women have complained that white middle-class women, in academia as well as in the mass media, often end up speaking for feminism or for all women, even though they tend to represent only their own interests. Third world women, abroad and at home (Latinas, aboriginals, Asian women), feel similarly silenced and unrepresented in mainstream social agendas, which rarely consider their needs or issues. Lesbian women have likewise organized themselves to ensure that their voices are heard. The "politics of difference" opens onto a world of differences and multiple identities among and within women themselves.

One of the main flash points among feminist critics has been identity politics, by which is meant a politics of difference based on some fixed or definable identity (as a middle-class white woman, a working-class black woman, a third world brown woman, and so on). Critics of identity politics have several major complaints. To begin with, defining feminist identity by giving priority to race or class or geography tends to essentialize these features, reducing people to social indicators whose "real essence" is determined by race or class or country of origin. Moreover, an emphasis on the multiplicity of female identities undermines the solidarity and united front of feminists. Advocates of the politics of difference respond, in turn, that the act of herding all women into one homogeneous category (Woman) is a reductive totalization and very unlikely to disturb the dominant order. They argue that alliances and coalitions, in strategic cooperation with other new social movements, will best and most democratically address issues of equality and recognition. In the spheres of theory and criticism, the politics of difference opposes universal notions of traditional humanism and promotes two key ideas: there are many women's literatures across the

globe, and there are many modes of resistance and of resisting reading.

An influential field that has built on ideas from feminist criticism, gender studies, women's studies, and lesbian and gay studies is queer theory. It begins by criticizing the dominant heterosexual binary, masculine/feminine, which enthrones "the" two sexes and casts other sexualities as abnormal, illicit, or criminal. Queer theory attacks the homophobic and patriarchal basis of heterosexuality. It aims beyond lesbian and gay rights philosophies to study other so-called perverse, deviant, and alternative sexualities. For example, queer theorists investigate the historical developments of such categories as *sodomite*, *hermaphrodite*, and *homosexual*, as well as *woman* and *man*, stressing the socially constructed character of sexualities. Of particular interest are transgressive phenomena such as drag, camp, cross-dressing, and transsexuality, all of which highlight the nonbiological, performative aspects of gender construction. To be "masculine" or "feminine" requires practicing an array of rituals (which cross-dressers faithfully mimic and parody in the production of gender identity).

POSTCOLONIAL STUDIES AND RACE AND ETHNICITY STUDIES

Postcolonial studies is an interdisciplinary field that examines the global impact of European colonialism, from its beginnings in the fifteenth century up to the present. Broadly speaking, it aims to describe the mechanisms of colonial power, to recover excluded or marginalized "subaltern" voices, and to theorize the complexities of colonial and postcolonial identity, national belonging, and globalization.

One major issue concerns the nature of representation. Following the groundbreaking example of Edward Said's *Orientalism*, postcolonial critics have examined the ways in which Western representations of third world countries serve the political interests of their makers. Postcolonial critics problematize "objective" perception, pointing out the unbalanced power relations that typically shape the production of knowledge. They argue that the West has constructed the third world as an "Other." Such ideological projections typically become the negative terms of binary oppositions in which the positive terms are normative representations of the West. Further, these damaging stereotypes circulate through anthropological, historical, and literary texts, as well as mass media such as newspapers, television, and cinema.

A related line of inquiry in postcolonial theory studies how institutions of Western education function in the spread of imperialism. Historical documents such as Thomas Babington Macaulay's "Minute on Indian Education" show that education—including the study of English literature and the English language—plays a strategic part in ruling over colonized peoples. As it inculcates Western Eurocentric values, literary education supports a kind of "cultural colonization," creating a class of colonial subjects often burdened by a double consciousness and by divided loyalties. It helps Western colonizers rule by consent rather than by violence. The nature of this enterprise has led some—for example, Ngugi wā Thiong'o, Henry Owuor Anyumba, and Taban lo Liyong in "On the Abolition of the English Department"—to call for the dismantling of institutions of Western education in the third world.

The realization of the extent to which the cultures of colonizers and col-

onized interact has prompted reflections on the hybrid nature of culture. No culture, one argument goes, is ever pure. This insight is everywhere evident in our own era of globalized postindustrial capitalism: the nationalism that undergirds notions of pure culture is daily called into question by the international flows of commodities, money, information, technology, and workers. These dynamics of globalization, hybridization, and nationalism preoccupy scholars of postcolonial studies.

Postcolonial literary criticism focuses specifically on literatures produced by subjects in the context of colonial domination, most notably in Africa, Asia, and the Caribbean. Building on knowledge of the institutions of Western education and the hybrid nature of culture, the analysis of postcolonial literature characteristically explores the complex interactions and antagonisms between native, indigenous, "precolonial" cultures and the imperial cultures imposed on them.

The concerns of postcolonial literary studies overlap with those of race and ethnicity studies, a broad field that examines a wide array of topics (including literature) related to minority ethnic groups; in North America these would include African, Asian, Hispanic, and Native peoples, among others. Consider the case of African Americans, whose history has included deportation, slavery, oppression, and struggle. Some scholars argue that the black community in the United States has evolved a distinctive and separate way of life, neither Anglo-Saxon nor African. The character of African American arts is communal rather than individualistic, their psychology is repudiative rather than accommodative of racism, and their tradition is oral-musical rather than textual: they possess their own values, styles, customs, themes, techniques, and genres. In the past, mainstream white critics have found the black arts to be grotesque, humorous, entertaining, inferior. African American artists have responded variously; sometimes adopting white values and forms, or rejecting them outright, or blending them into a hybrid. Literary critics engaged in race and ethnicity studies analyze the nature and dynamics of minority literatures, usually focusing on one literature but occasionally examining as well the context of dominant cultures (thereby overlapping with postcolonial studies).

CULTURAL STUDIES AND NEW HISTORICISM

Theories concerned with literature and its interpretation almost inevitably touch on ideas about culture. If we define *culture* as the aggregate of language, knowledge, belief, morality, law, custom, and art collectively acquired by human beings, then it is easy to see how the contents and forms of culture supply the materials and procedures of literature and criticism. As a way of life (and sphere of struggle), culture obviously encompasses elements not only of elite but also of popular and mass arts and practices. Yet the contemporary recognition of "low-" and "middle-brow" culture is something new in the long history of modern cultural criticism, which for several centuries has focused mainly on exceptional and elite forms. In recent decades cultural critics have started paying serious attention to mass, popular, and everyday materials, usually in the context of their ideologies (dominant ideas and values). Those in the discipline now called cultural studies, in particular, have begun studying such discourses as television, cinema, advertising, rock

music, magazines, minority literatures, and popular literature (thrillers, science fiction, romances, westerns, Gothic fiction), characteristically focusing on how such materials are produced, distributed, and consumed.

While researchers in cultural studies employ various methods, including surveys, field-based studies, textual interpretations, historical background studies, and participant observations, institutional analysis and ideology critique have been especially important. Critics interested in present-day popular romances, for instance, have examined the practices of institutions such as publishing companies and bookstores in shaping and maintaining the rules of the romance genre as well as in packaging and promoting successful reproductions of the form. Since institutions overlap and connect with satellite institutions, an investigation into one often leads to another. In the case of romance, one who began by scrutinizing the genre's presence in television soap operas and women's magazines would soon find links to publishers, literary agents, booksellers, television programmers, magazine editors, and authors. Because circuits of institutions play such important roles in creating, conditioning, and commodifying cultural discourses, their analysis is central to the enterprise of cultural studies.

Ideology critique critically examines the ideas, feelings, beliefs, values, and representations embedded in, and promoted by, the artifacts and practices of a culture or a group. It overlaps with institutional analysis. For instance, in *English in America*, Richard Ohmann describes how the institution of English studies itself disseminates not only the practical skills of analysis, organization, and literacy but also the values of detachment, caution, and cooperation, all of which aid the smooth operation of contemporary capitalist societies. Associated with the professional managerial classes, such attitudes and manners (ideology) are invisible yet ever present in English classrooms, as well as in places of employment.

Some literary critics have opposed cultural studies, particularly criticizing the twin displacements of the canon (the body of works traditionally accepted as "great") by popular culture and of poetic explication by sociological analyses, especially ideology critique. Because cultural studies deals with issues of conflict, domination, class struggle, minorities, state power, and ideology, they fault it for politicizing the discipline. Often this debate sets multiculturalism and analysis attentive to race, class, and gender against literary appreciation and close reading.

Yet many literary scholars have incorporated the concerns of cultural studies into the historical analysis of literature, examining class conflicts, hegemonic forces, and racial and gender codes in such texts as William Shakespeare's plays, Charles Dickens's novels, and Walt Whitman's poetry. Particularly important in this regard is the critical movement known as the "New Historicism" (a term coined in the early 1980s by Stephen Greenblatt). New Historicists study literary texts not as autonomous objects but as material products emerging out of specific social, cultural, and political contexts. This view of literature breaks down the traditional distinction between literary and nonliterary texts and forms. Typically, New Historicists demonstrate the ways in which the power relations of a particular era shape how literature is produced, distributed, and consumed, making use of a wide range of contemporary materials—everything from diaries and travel writings to legal documents to medical and penal records. Some dismiss such historical literary investigations as watered-down, co-opted cultural analysis, not cultural studies proper.

Cultural studies advocates argue that what counts as literature changes from one time, place, and group to another. Before the eighteenth century in western Europe, the word *literature* designated all books and writing. Only during the neoclassical and Romantic eras did literature come to be more narrowly defined as belles lettres. Perhaps contemporary debates over the concept of literature may be seen as staging a return to the older definition; in any case, they explicitly contest the aestheticizing or refining of literature typical of the modern age.

Cultural studies offers distinctive answers to the two key questions with which we began—what is interpretation? what is literature? First, literature consists of popular, mass, and minority genres as well as elite canonical works. It includes a wide array of discursive materials, from writings in standard literary genres to rap lyrics, blues poems, oral legends, diaries, magazines, movies, posters, romances, soap operas, and so on. With a different population or in another time or place, literature would be differently defined. There is one constant in this culturally relative definition: literature is symptomatic of the state of its society. Second, interpretation employs institutional analysis, ideology critique, and field-based research, as well as textual explication, exegesis, aesthetic appreciation, and personal response. For cultural studies, personhood (or subjectivity) involves three things: the operations of our unconscious, the effects of surrounding sociohistorical forces, and the multiple subject positions that each individual occupies. This complex view of subjectivity applies to the author, not just the critic: authored texts by definition contain unconscious and socially symptomatic materials unique to specific times, places, and persons. It is thus no surprise that cultural studies and formalist literary criticism are seen as opposed, antagonistic critical projects—one expansive and wide-ranging, the other contracted and tightly focused; one engaged with psychology, sociology, and politics, the other wedded to aesthetics and poetics.

There are very good reasons that, as Jonathan Culler observes, contemporary theory now frames the study of literature and culture in academic institutions. Theory raises and answers questions about a broad array of fundamental issues, some old and some new, pertaining to reading and interpretive strategies, literature and culture, tradition and nationalism, genre and gender, meaning and paraphrase, originality and intertextuality, authorial intention and the unconscious, literary education and social hegemony, standard language and heteroglossia, poetics and rhetoric, representation and truth, and so on. In addition, theory opens literary and cultural studies to neighboring disciplines and numerous national traditions. And it reinvigorates the field not only by reexamining the canonical list of great works and the tool kit of basic concepts and methods but also by recasting the received interpretations of old texts and frameworks and by revealing interesting new zones of meaning and possibilities for future critical inquiry.

Theorists are fond of pointing out that everyone has a theory, about the world as well as about literature and interpretation, and that theories must be examined, debated, and tested. Plato suggested long ago that the unexamined life is not worth living, providing a worthy *crédo* for philosophers—and for students of theory and criticism.

Theory and Criticism

GORGIAS OF LEONTINI

ca. 483–376 B.C.E.

With its observations on the power of speech (*logos*), Gorgias's "Encomium of Helen" develops a classical rhetoric antithetical to Platonic poetics, one that anticipates JACQUES DERRIDA's twentieth-century critique of PLATO. Where Plato commends moral content, Gorgias praises elegant form; where Plato is didactic, Gorgias aims to persuade through performance; where Plato—and those who followed him, like AUGUSTINE—condemns rhetoric as dangerously false, Gorgias embraces it. Speech, Gorgias wrote in another fragment, "summons whoever wishes [to compete], but crowns the one who is able." The highly wrought style for which he is justly famous, with its frequent use of paradox, antithesis, balancing clauses, and rhyme, has its closest modern parallel in OSCAR WILDE's celebrated epigrammatic style. Like Wilde, Gorgias raises significant issues about the radical contingency of all truth claims, issues that have been central to contemporary theoretical debates.

Gorgias came from a Greek colony in Sicily and, by all accounts, lived to be more than one hundred years old. Nothing is known of his life until he came to Athens in 427 B.C.E. as part of an embassy from his native Leontini. There his dazzling oratorical style, whose force is difficult to capture in translation, made him something of a sensation; he quickly became one of the most influential of the sophists, a group of itinerant teachers who went from city to city earning their living by instructing others in subtle argumentation. Although later writers would credit them with philosophical doctrines, in particular a skepticism about the claims of reason to arrive at truth, the sophists were members of a profession and not a school of thought. That we today use the term *sophistry* to refer to plausible but fallacious arguments reflects the influence of the sophists' critics.

Gorgias confined himself almost exclusively to the teaching of oratory—rhetoric—which was the main road to success in Greek city-states. In the *Meno*, Plato writes that he admired Gorgias because he did not claim to be a teacher of *aretē*, or virtue; "in fact, he laughs at others he hears making such promises. He thinks one should make men skillful at speaking." Only fragments of Gorgias's rhetorical works survive, primarily in the form of commonplaces, or rhetorical exercises that were used to instruct others. The "Encomium of Helen" is an example of this genre, as is the longer fragment in defense of Palamides, a minor Greek hero at Troy. Gorgias concludes his defense of Helen, "I wished to write this speech for Helen's encomium and my amusement," suggesting that like the other fragments of his speeches that survive, it was an epideictic composition—a display piece intended to demonstrate the principles of rhetoric to his pupils, presumably accompanied by a verbal commentary that has not survived.

The extant "Encomium of Helen" illustrates Gorgias's flamboyant style, which Plato later parodied in Agathon's speech in the *Symposium*. The defense of Helen of Troy, a character long vilified by poets, proves a fitting challenge for the even most accomplished rhetorician. But it also serves as a pretext for a discussion of the power of speech, which Gorgias equates with the force of compulsion, an argument developed in modern times by many critics, most notably FRIEDRICH NIETZSCHE and PAUL DE MAN. Gorgias likens the power of speech to persuade to the power of magical charms or drugs to alter the mind or body. He has none of Plato's firm belief that right reasoning will ultimately lead to truth. Speech is as likely to lead to "evil persuasion" as to correct action. The elaborate antitheses and paradoxes of Gorgias's style may express the belief that since truth exists but is contingent, a clear expression of contrasts and alternatives is needed if one is to sift through the competing claims of persuasive speech. In the history of theory and criticism, rhetoric continually raises such problems as the truth status of language, the power and pleasure of persuasive discourse, and the reliability of figures and tropes.

BIBLIOGRAPHY

D. M. MacDowell has published the Greek text of the *Encomium on Helen* with a parallel English translation (1989). Michaël Gagarin and Paul Woodruff include all the extant fragments attributed to Gorgias in *Early Greek Political Thought from Homer to the Sophists* (1995). Their translations are based on the Greek text established by Thomas Buchheim in his edition with German translation, *Reden, Fragmente, und Testimonien* (1989). The standard account of the sophists is *The Sophists* by W. K. C. Guthrie; the volume, published separately in 1971, was originally part of volume 3 of his *History of Greek Philosophy* (6 vols., 1962–81). George Kerferd offers a comprehensive interpretation of the whole movement in *The Sophistic Movement* (1981). Susan C. Jarratt's *Rereading the Sophists: Classical Rhetoric Refigured* (1991) reads the sophists with and against contemporary literary theories, including feminism and deconstruction. C. J. Classen's *Sophistik* (1976) includes a thorough and useful bibliography.

From Encomium of Helen¹

[1] For a city the finest adornment (*kosmos*) is a good citizenry, for a body beauty, for a soul wisdom, for an action *aretē*,² and for a speech truth; and the opposites of these are indecorous. A man, woman, speech, deed, city or action that is worthy of praise should be honored with acclaim, but the unworthy should be branded with blame. For it is equally error and ignorance to blame the praiseworthy and praise the blameworthy. [2] The man who speaks correctly what ought to be said has a duty to refute those who find fault with Helen. Among those who listen to the poets a single-voiced, single-minded conviction has arisen about this woman, the notoriety of whose name is now a reminder of disasters. My only wish is to bring reason to the debate, eliminate the cause of her bad reputation, demonstrate that her detractors are lying, reveal the truth, and put an end to ignorance.

1. Translated by Michael Gagarin and Paul Woodruff, who occasionally include the Greek in paren-

theses.

2. Excellence or virtue (Greek).

[3] That the woman I speak of is by nature and birth the foremost of the foremost, men or women, is well known by all.³ Clearly her mother was Leda and her father in fact a god, but in story a mortal: Zeus and Tyndareus. One was thought to be her father because he was, the other was reported to be because he said he was; one was mightiest of men, the other tyrant of all.

[4] Born from such as these, she equaled the gods in beauty, not concealed but revealed. Many were the erotic passions she aroused in many men, and her one body brought many bodies full of great ambition for great deeds; some had abundant wealth, some the glory of an old noble lineage, some the vigor of personal valor, and some the power of acquired wisdom. All came for love that desires to conquer and from unconquerable desire for honor.

[5] Who it was or why or how he took Helen and fulfilled his love, I shall not say. For to tell those who know something they know carries conviction, but does not bring pleasure. Now that my speech has passed over the past, it is to the beginning of my future speech that I proceed and propose the likely reasons for Helen's journey to Troy.

[6] Either she did what she did because of the will of fortune and the plan of the gods and the decree of necessity, or she was seized by force, or persuaded by words, (or captured by love). If she left for the first reason, then any who blame her deserve blame themselves, for a human's anticipation cannot restrain a god's inclination. For by nature the stronger is not restrained by the weaker but the weaker is ruled and led by the stronger: the stronger leads, the weaker follows. Now, a god is stronger than a human in strength, in wisdom, and in other respects; and so if blame must be attached to fortune and god, then Helen must be detached from her ill repute.

[7] If she was forcibly abducted and unlawfully violated and unjustly assaulted, it is clear that her abductor, her assaulter, engaged in crime; but she who was abducted and assaulted encountered misfortune. Thus, the undertaking undertaken by the barbarian was barbarous in word and law and deed and deserves blame in word, loss of rights in law, and punishment in deed. But she who was violated, from her country separated, from her friends isolated, surely (*eikotōs*) deserves compassion rather than slander. For he did and she suffered terrible things. It is right to pity her but hate him.

[8] If speech (*logos*) persuaded and deluded her mind, even against this it is not hard to defend her or free her from blame, as follows: speech is a powerful master and achieves the most divine feats with the smallest and least evident body.⁴ It can stop fear, relieve pain, create joy, and increase pity. How this is so, I shall show; [9] and I must demonstrate this to my audience to change their opinion.

Poetry (*poiēsis*) as a whole I deem and name "speech (*logos*) with meter."

3. According to the Greek myth, Helen was the daughter of Zeus, who took the form of a swan before raping her mother, Leda. Before he would give her in marriage, Helen's human father, Tyndareus, made all the Greek princes swear an oath that if any wrong were done to her husband they would come to his aid. Thus the Trojan prince Paris's abduction of Helen from her husband,

Menelaus, precipitated the Trojan War. Paris had been asked to judge the beauty of three goddesses; he declared the fairest to be Aphrodite, goddess of love, who had promised him the love of the world's most beautiful woman (i.e., Helen) if he chose her. 4. Gorgias seems to be describing speech as if it were a physical body, so small it cannot be seen, moving from person to person.

To its listeners poetry brings a fearful shuddering, a tearful pity, and a grieving desire, while through its words the soul feels its own feelings for good and bad fortune in the affairs and lives of others. Now, let me move from one argument to another. [10] Sacred incantations with words inject pleasure and reject pain, for in associating with the opinion of the mind, the power of an incantation enchants, persuades, and alters it through bewitchment. The twin arts of witchcraft and magic have been discovered, and these are illusions of mind and delusions of judgment. [11] How many men on how many subjects have persuaded and do persuade how many others by shaping a false speech! For if all men on all subjects had memory of the past, (understanding) of the present, and foresight into the future; speech would not be the same in the same way;⁵ but as it is, to remember the past, to examine the present, or to prophesy the future is not easy; and so most men on most subjects make opinion an adviser to their minds. But opinion is perilous and uncertain, and brings those who use it to perilous and uncertain good fortune. [12] What reason is there, then, why Helen did not go just as unwillingly under the influence of speech as if she were seized by the violence of violators? For persuasion expelled her thought—persuasion, which has the same power, but not the same form as compulsion (*anankē*). A speech persuaded a soul that was persuaded; and forced it to be persuaded by what was said and to consent to what was done. The persuader, then, is the wrongdoer, because he compelled her, while she who was persuaded is wrongly blamed, because she was compelled by the speech. [13] To see that persuasion, when added to speech, indeed molds the mind as it wishes, one must first study the arguments of astronomers, who replace opinion with opinion: displacing one but implanting another, they make incredible, invisible matters apparent to the eyes of opinion. Second, compulsory debates with words,⁶ where a single speech to a large crowd pleases and persuades because written with skill (*technē*), not spoken with truth. Third, contests of philosophical arguments, where it is shown that speed of thought also makes it easy to change a conviction based on opinion. [14] The power of speech has the same effect on the disposition of the soul as the disposition of drugs on the nature of bodies. Just as different drugs draw forth different humors from the body—some putting a stop to disease, others to life—so too with words: some cause pain, others joy, some strike fear, some stir the audience to boldness, some benumb and bewitch the soul with evil persuasion.

[15] The case has been made: if she was persuaded by speech, her fortune was evil, not her action. The fourth reason, I discuss in my fourth argument. If it was love that did all these things, she will easily escape blame for the error that is said to have occurred.

* * *

[19] So if Helen's eye, pleased by Alexander's⁷ body, transmitted to her soul an eagerness and striving for love, why is that surprising? If love is a god, with the divine power of gods, how could a weaker person refuse and reject him? But if love is a human sickness and a mental weakness, it must not be blamed as mistake, but claimed as misfortune. For it came, as it came, snared

5. Text uncertain, but the sense clearly is "the same as it is now" [translators' note].

6. This expression probably designates speeches

in law courts [translators' note].

7. Paris.

by the mind, not prepared by thought, under the compulsion of love, not the provision of art (*technē*).

[20] How then can the blame of Helen be considered just? Whether she did what she did, invaded by love, persuaded by speech, impelled by force or compelled by divine necessity, she escapes all blame entirely.

[21] With my speech I have removed this woman's ill repute; I have abided by the rule laid down at the beginning of my speech; I have tried to dispel the injustice of blame and the ignorance of opinion; I wished to write this speech for Helen's encomium and my amusement.

ca. 400 B.C.E.

PLATO

ca. 427—ca. 347 B.C.E.

A monumental figure in the history of Western philosophy, Plato looms nearly as large in the history of European literary theory. Indeed, for many literary scholars he marks the beginning of the tradition of literary theory, although his choice of the dialogue format, in which historical personages convey particular arguments, suggests that the issue he raises had already been debated before he took them up—as do the extant fragments of the writings of the pre-Socratic philosophers. The several dozen dialogues attributed to Plato engage almost every issue that interests philosophers: the nature of being; the question of how we come to know things; the proper ordering of human society; and the nature of justice, truth, the good, beauty, and love. Although Plato did not set out to write systematic literary theory—unlike his student ARISTOTLE, who produced a treatise on poetics—his consideration of philosophical issues in several of the dialogues leads him to reflect on poetry, and those reflections have often set the terms of literary debate in the West.

What binds together Plato's various discussions of poetry is a distrust of *mimēsis* (representation or imitation). According to Plato, all art—including poetry—is a mimesis of nature, a copy of objects in the physical world. But those objects in the material world, according to the idealist philosophy that Plato propounds, are themselves only mutable copies of timeless universals, called Forms or Ideas. Poetry is merely a copy of a copy, leading away from the truth rather than toward it. Philosophers and literary critics ever since, from PLOTINUS in the third century C.E. to JACQUES DERRIDA in the late twentieth century, have wrestled with the terms of Plato's critique of poetry, revising it or attempting to point out inconsistencies in his argument.

Plato was born about four years after the beginning of the twenty-five-year-long Peloponnesian War between Athens and Sparta and just after the death of the great Athenian statesman Pericles, who had overseen the city's artistic golden age. His parents both came from distinguished Athenian families, and his stepfather, an associate of Pericles, was an active participant in the political and cultural life of fifth-century Athens. Plato had two older brothers, Glaucon and Adeimantus, who appear as characters in his longest dialogue, *Republic* (ca. 375 B.C.E.). As a young man, growing up in a city at war and in constant political turmoil, he seems to have been destined for a political career. But after the Peloponnesian War ended in 405, with the defeat and humiliation of Athens, the excesses of Athenian political life under

the oligarchical rule (404–403) of the so-called Thirty Tyrants and under the restored democracy left Plato disillusioned with political life. The execution in 399 of Socrates, on charges of impiety and corrupting the young, was a turning point in his life. The older philosopher was a close friend of Plato's family, and Plato's writings attest to Socrates' great influence on him. Indeed, the position of Socrates in European philosophy is unique. Though he apparently never wrote a word, his influence on subsequent thought through his followers, Plato in particular, is incalculable.

After Socrates' death Plato retired from Athenian political life and traveled for a number of years. In 388 he journeyed to Italy and Sicily, where he became the friend of Dionysius I, the ruler of Syracuse, and his brother-in-law Dion. The following year he returned to Athens, where he founded the Academy, an institution devoted to research and instruction in philosophy and the sciences; he taught there for the rest of his life. Plato envisioned the Academy as a school for statesmen where he could train a new kind of philosopher-ruler (or "guardian") according to the principles set forth in his *Republic*. Unlike the older sophist GORGIAS or Plato's contemporary rival Isocrates, who both taught the arts of rhetoric and persuasion, Plato focused primarily in the Academy on mathematics, logic, and philosophy. However, when Dionysius died in 367, Dion invited Plato to return to Syracuse to undertake the philosophical education of the new ruler, Dionysius II. Plato went, perhaps with the hope of putting the theory of *Republic* into practice; but philosophy proved no match for local politics and Dionysius's suspicions. Indeed, a return visit resulted in Plato's brief imprisonment; by 360 he was back at the Academy for good.

Plato is recognized as a master of the dialogue form and as one of the great prose stylists of the Greek language. His published writings, apparently all of which are preserved, consist of some twenty-six dramatic dialogues on philosophical and related themes. The central problematic posed by this form is that it becomes virtually impossible to attribute any statement directly to Plato: he never speaks in his own person. The only exceptions are a series of thirteen letters (whose authenticity is still a matter of scholarly debate) written in the last decades of Plato's life, most addressing the political situation in Syracuse. Only the seventh—and longest—letter takes up philosophical issues. For the most part, Plato places his arguments in the mouths of characters who may or may not be based on historical persons. The speakers can never be assumed to be voicing Plato's own views or the views of those whose names they bear. In almost all the dialogues, Socrates is the focal character and Plato's mouthpiece, but Plato's Socrates is not the historical Socrates. These complications, which thwart efforts to fix Plato's thought within a series of propositional statements, have attracted much attention, especially from late-twentieth-century poststructuralist philosophers like Derrida.

The chronology of Plato's dialogues is highly controversial, but most scholars divide the works roughly into three periods. The earliest works, begun after 399, include the *Apology of Socrates* and *Crito*, in which Plato defends Socrates against the charges that led to his death; *Gorgias*, in which Socrates' opponent is the sophist Gorgias; and *Ion* (one of our selections), which examines poetry as a kind of divine madness. Characteristic of these early Platonic dialogues is Socrates' disarming claim of ignorance and a formal technique of cross-examination called *elenchus*, a method of questioning designed to lead a learner through stages of reasoning and to expose the contradictions in an opponent's original statement. This method of "emptying out" the question by Socrates to reveal his opponents' ignorance is especially evident in his discussion of poetry with *Ion*, a rhapsode (professional reciter of epic poetry). The middle period, from 380 to 367, includes the *Symposium*, *Cratylus*, and *Republic*, all begun after the founding of the Academy; they develop the theory of Forms or Ideas anticipated in the early dialogues. The Forms constitute a realm of unchanging being to which the world of individual mutable objects is subordinate. Because the Forms are immutable, they are more real—and more true—than the changeable material world. The Form of the Good enjoys a unique status,

for it is responsible for the being and intelligibility of the world as a whole. Plato's famous "Allegory of the Cave" in book 7 of *Republic* (one of our selections), a passage that has generated much interest among poststructuralist theorists, provides a memorable introduction to the Platonic theory of Forms, which is reiterated in book 10's equally well known critique of artistic imitation. *Cratylus* is of interest to theorists of language because the dispute in this dialogue concerns the "correctness" of names: do they point unproblematically to the "nature of things"—that is, to the Forms—as Hermogenes contends, or are they merely a matter of convention, as Cratylus argues? Socrates concludes that the matter is unresolvable, but that "no one with any understanding will commit himself or the education of his soul to names, or trust them or their givers to the point of firmly stating that he knows something." To the late period (366–360) belong *Timaeus*, which throughout the Middle Ages was Plato's most widely known work; *Critias*; *Sophist*; and *Phaedrus*, the latter closing with a notorious attack on writing.

In *Ion*, our opening selection, Plato's Socrates engages Ion in a debate about the nature of the rhapsode's knowledge of poetry, about the nature of poetry, and about the status of knowledge itself. Poetry, Socrates maintains, is not an art; it is a form of divine madness: "the poet is an airy thing, winged and holy, and he is not able to make poetry until he becomes inspired and goes out of his mind." This debate between the claims of inspiration and those of art would subsequently have a long history in European literary criticism. Is poetry primarily a craft with a set of rules that can be taught and learned, as HORACE, GEOFFREY OF VINSauf, and ALEXANDER POPE argue, or is it primarily the result of inspiration or genius, as LONGINUS, PLOTINUS, FRIEDRICH VON SCHILLER, WILLIAM WORDSWORTH, RALPH WALDO EMERSON, and others, following Plato, have maintained?

Plato's Socrates goes a step further. Not only is poetry a form of divinely inspired madness, but so is criticism. "You are powerless to speak of Homer," he tells Ion, "on the basis of knowledge or mastery." Socrates uses the image of a magnet as a metaphor for divine inspiration: as a magnet attracts iron and passes that attraction along, so the gods inspire the artist, who inspires the interpreter, who, in turn, inspires the audience. For Plato's Socrates, the work of poet and critic is not divided between inspiration and rational analysis, as it is for most modern critics (see, for instance, MATTHEW ARNOLD and the New Critic CLEANTH BROOKS); rather, it lies on a continuum, and the work of the critic is no more rational than that of the poet, the critic's knowledge no more truthful.

However, it is helpful when reading Plato to remember that his dialogues don't always present a straightforward argument or arrive at a single unambiguous conclusion. The process of elenchus and Socrates' persistent irony often make it difficult to pin him down to any one position. In *Ion*, is Socrates making fun of the pomposity of the rhapsode, or does he seriously believe that whatever truth emerges from poetry and the interpretation of poetry results only from divine madness?

On the surface, it might seem that *Ion* treats poetry very differently than does the later *Republic*, our second selection, where Plato's Socrates argues that far from being divinely inspired, poets lie and ought to be banished from the ideal republic—or, at the very least, heavily censored and kept in check. But *Ion* presents a view of knowledge that is consistent with the weightier arguments in *Republic*. However divinely inspired, Socrates argues, poets' and critics' knowledge is of a different order than, and one decidedly inferior to, the knowledge of charioteers, fishermen, or philosophers. To the modern student of literature, this denigration of the poet's learning appears downright odd. Surely the standards by which the knowledge of a charioteer or a fisherman or a mathematician would be judged are irrelevant in judging the value of poetry. Why demand that the poet "know" about horses in the same way that a horseman "knows" about horses?

To understand Socrates' remarks about knowledge, the modern reader needs to understand the centrality of poetry to Greek education. In a culture in which literacy

was a relatively new and suspect technology, knowledge was frequently encoded and passed on through the mnemonic devices of music and poetry. The instruction provided by the sophists and by Plato's main rival, Isocrates, was almost exclusively rhetorical and literary. Even in *Republic*, a book concerned with the ideal education of the guardians and citizens, Socrates divides schooling into physical training for the body and music and poetry for the soul. Socrates' criticism of poetry and its representations appears to be directed against a culture that believed literally "that poets know all crafts, all human affairs." In such a culture, Socrates' insistence makes more sense: a poet needs to know a horse the way a horseman knows a horse. In his Academy, however, Plato promoted a learning whose foundation was dialectics, dialogue, and philosophical reasoning.

Both the Allegory of the Cave and *Republic* 10's infamous critique of mimesis explore the nature of knowledge and its proper objects. The world we perceive through the senses, Socrates argues, is illusory and deceptive. It depends on a prior realm of separately existing Forms, organized beneath the Form of Good. The realm of Forms is accessible not through the senses, as is the world of appearances, but only through rigorous philosophic discussion and thought, based on mathematical reasoning. For Plato's Socrates, measuring, counting, and weighing all bring us closer to the realm of Forms than do poetry's pale representations of nature. All art and poetry, because they represent what is already an inferior representation of the true original (the Forms), can only lead further away from the truth, and further into a world of illusion and deception. Virtually every subsequent defense of poetry (memorable examples include those by Aristotle, SIR PHILIP SIDNEY, APHRA BEHN, and PERCY BYSSHE SHELLEY) has had to come to terms with Plato's devastating attack on poetry as inferior and deceptive mimesis.

Plato's *Phaedrus* (from which our final selection has been taken) has been of interest to contemporary literary theory for its discussion of the evils of writing. There Plato has Socrates relate the story of the invention of writing by the Egyptian god Theuth (Thoth), who offers it to King Thamus. Thamus declines the offer, deciding that humans are better off without writing because it substitutes an alien inscription—lifeless signs—for the authentic living presence of spoken language. Far from aiding memory, writing will cause it to atrophy. For Plato, the only good memory is *anamnesis*, the recollection of spiritual truths through genuine, living wisdom: that is, through philosophy. Plato reiterates this point in his Seventh Letter, where he says: "anyone who is seriously studying high matters will be the last to write about them and thus expose his thought to the envy and criticism of men . . . [W]henver we see a book, whether the laws of a legislator or a composition on any other subject, we can be sure that if the author is really serious, the book does not contain his best thoughts; they are stored away with the fairest of his possessions. And if he has committed these serious thoughts to writing, it is because men, not the gods, have taken his wits away." Yet Plato's use of a myth in *Phaedrus* to frame his philosophical objections to writing raises questions of its own, since presumably myths suffer from the same defects as the texts of the sophists, rhetoricians, poets, and other purveyors of false wisdom whom Plato criticizes elsewhere. Derrida offers a celebrated unraveling of the logic of Plato's argument against writing in his *Dissemination* (see below), which may be the most significant encounter between a twentieth-century philosopher and Plato.

Plato is the progenitor of Western didactic criticism and theory: the idea that literature should serve moral and social functions. *Republic*, where he describes an ideal well-regulated community in which the educational curriculum promotes respect for law, reason, authority, self-discipline, and piety, has been especially influential. Although Plato's Socrates loves and regularly cites Homer's *Iliad* and *Odyssey*, he calls for the censorship of many passages in these works that represent sacrilegious, sentimental, unlawful, and irrational behavior. Above all else, he requires that literature teach goodness and grace. Plato's relentless application of this standard

to all literature marks one of the most noteworthy beginnings of the ancient quarrel between philosophy and poetry.

BIBLIOGRAPHY

The standard Greek edition of the entire works of Plato, including those of dubious authorship, is *Platonis Opera*, edited by John Burnet (5 vols., 1900–1907). This edition is being updated by a team of scholars led by E. A. Duke (2 vols. to date, 1995–). For a handy one-volume English translation of selected dialogues by various translators, see *The Collected Dialogues of Plato*, edited by Edith Hamilton and Huntington Cairns (1961). *Plato: Complete Works*, edited by John M. Cooper (1997), is the most complete one-volume collection, with the best translations available (done by various hands). The best translation of *Republic* is Robin Wakefield's (1993).

A. E. Taylor's *Plato, the Man and His Work* (1926; 7th ed., 1969) contains a complete translation of Diogenes Laërtius's third-century C.E. life of Plato, which has served as the basis for modern reconstructions of the philosopher's life. Several books provide good introductions to Plato's aesthetic theory, including Whitney J. Oates, *Plato's View of Art* (1972); Iris Murdoch, *The Fire and the Sun: Why Plato Banished the Artists* (1977); which attempts to defend Plato's view of the arts; and Morriss Henry Partee, *Plato's Poetics: The Authority of Beauty* (1981). Gerald F. Else, *Plato and Aristotle on Poetry* (1986), is a comparative study of the aesthetic theory of Greece's two greatest philosophers. In *Postmodern Platos* (1985), Catherine H. Zuckert examines the centrality of Platonic thought to theorists from Friedrich Nietzsche to Jacques Derrida. Other books dealing with Plato's importance to poststructuralist criticism include Jasper Neel, *Plato, Derrida, and Writing* (1988), and *Plato and Postmodernism*, edited by Steven Shankman (1994). *The Cambridge Companion to Plato*, edited by Richard Kraut (1992), contains essays on several aspects of Plato's thought, including aesthetics. Andrea Wilson Nightingale's *Genres in Dialogue: Plato and the Construct of Philosophy* (1996) examines Plato's integration of Greek poetry and rhetoric into his dialogues. For an introduction to *Republic*, see Julia Annas, *An Introduction to Plato's "Republic"* (1981). On *Phaedrus* and Plato's discussions of rhetoric and writing, see Ronna Burger, *Plato's "Phaedrus": A Defense of a Philosophic Art of Writing* (1980); Charles Griswold Jr., *Self-Knowledge in Plato's "Phaedrus"* (1986); and David A. White, *Rhetoric and Reality in Plato's "Phaedrus"* (1993). For an advanced, close reading of this dialogue, see Seth Benardete's *Rhetoric of Morality and Philosophy: Plato's "Gorgias" and "Phaedrus"* (1994). For feminist readings of Plato, see *Feminist Interpretations of Plato*, edited by Nancy Tuala (1994). Two books that analyze the Platonic dialogue as a literary form are *Platonic Writings, Platonic Readings*, edited by Charles Griswold Jr. (1988), and Charles H. Kahn, *Plato and the Socratic Dialogue* (1996). The most complete and up-to-date bibliography can be found in *The Cambridge Companion to Plato* (cited above).

Ion¹

[530] SOCRATES:² Ion! Hello. Where have you come from to visit us this time? From your home in Ephesus?

ION: No, no, Socrates. From Epidaurus, from the festival of Asclepius.³

1. Translated by Paul Woodruff, who sometimes adds clarifying words or phrases in square brackets; also in square brackets in the text are the Stephanus numbers used almost universally in citing Plato's works: they refer to the pages of a 1578 edition published by Henri Estienne.

2. Greek philosopher (469–399 B.C.E.) and Plato's spokesperson.

3. Greco-Roman hero and god of healing. Epidaurus: small Greek state on a peninsula of the Saronic Gulf, famed for its 4th-century B.C.E. temple of Asclepius.

SOCRATES: Don't tell me the Epidaurians hold a contest for *rhapsodes*⁴ in honor of the god?

ION: They certainly do! They do it for every sort of poetry and music.

SOCRATES: Really! Did you enter the contest? And how did it go for you?

ION: First prize, Socrates! We carried it off.

SOCRATES: That's good to hear. Well, let's see that we win the games at Athens, next.

ION: We'll do it, Socrates, god willing.

SOCRATES: You know, Ion, many times I've envied you rhapsodes your profession. Physically, it is always fitting for you in your profession to be dressed up to look as beautiful as you can; and at the same time it is necessary for you to be at work with poets—many fine ones, and with Homer⁵ above all, who's the best poet and the most divine—and you have to learn his thought, not just his verses! Now that is something to envy! I mean, no one would ever get to be a good rhapsode if he didn't understand what is meant by the poet. A rhapsode must come to present the poet's thought to his audience; and he can't do that beautifully unless he knows what the poet means. So this all deserves to be envied.

ION: That's true, Socrates. And that's the part of my profession that took the most work. I think I speak more beautifully than anyone else about Homer; neither Metrodorus of Lampsacus nor Stesimbrotus of Thasos nor Glaucón⁶ nor anyone else past or present could offer as many beautiful thoughts about Homer as I can.

SOCRATES: That's good to hear, Ion. Surely you won't begrudge me a demonstration?

ION: Really, Socrates, its worth hearing how well I've got Homer dressed up. I think I'm worthy to be crowned by the Sons of Homer⁷ with a golden crown.

SOCRATES: Really, I shall make time to hear that later. [531] Now I'd just like an answer to this: Are you so wonderfully clever about Homer alone—or also about Hesiod and Archilochus?⁸

ION: No, no. Only about Homer. That's good enough, I think.

SOCRATES: Is there any subject on which Homer and Hesiod both say the same things?

ION: Yes, I think so. A good many.

SOCRATES: Then, on those subjects, would you explain Homer's verse better and more beautifully than Hesiod's?

ION: Just the same Socrates, on those subjects, anyway, where they say the same things.

SOCRATES: And how about the subjects on which they do not say the same things? Divination, for example. Homer says something about it and so does Hesiod.

ION: Certainly.

4. Professional orators who recited poetry, especially that of Homer and the other epic poets.

5. Greek epic poet (ca. 8th c. B.C.E.), to whom the *Iliad* and the *Odyssey* are attributed.

6. Plato had an elder brother with this name. Metrodorus (ca. 330–ca. 277 B.C.E.), a follower and friend of the Athenian philosopher Epicurus and one of the most important teachers of Epicu-

reanism. Stesimbrotus (active late 5th c. B.C.E.) biographer of Homer.

7. The Homeridae, a guild of rhapsodes devoted to reciting Homer's poetry who originally claimed to be his descendants.

8. Earliest Greek lyric poet (active ca. 650 B.C.E.). Hesiod (active ca. 700 B.C.E.), Greek epic didactic poet.

SOCRATES: Well. Take all the places where those two poets speak of divination, both where they agree and where they don't: who would explain those better and more beautifully, you, or one of the diviners if he's good?

ION: One of the diviners.

SOCRATES: Suppose *you* were a diviner: if you were really able to explain the places where the two poets agree, wouldn't you also know how to explain the places where they disagree?

ION: That's clear.

SOCRATES: Then what in the world is it that you're clever about in Homer but not in Hesiod and the other poets? Does Homer speak of any subjects that differ from those of *all* the other poets? Doesn't he mainly go through tales of war, and of how people deal with each other in society—good people and bad, ordinary folks and craftsmen? And of the gods, how *they* deal with each other and with men? And doesn't he recount what happens in heaven and in hell, and tell of the births of gods and heroes? Those are the subjects of Homer's poetry-making, aren't they?

ION: That's true, Socrates.

SOCRATES: And how about the other poets? Did they write on the same subjects?

ION: Yes, but Socrates, they didn't do it the way Homer did.

SOCRATES: How, then? Worse?

ION: Much worse.

SOCRATES: And Homer does it better?

ION: *Really* better.

SOCRATES: Well now, Ion, dear heart, when a number of people are discussing arithmetic, and one of them speaks best, I suppose *someone* will know how to pick out the good speaker.

ION: Yes.

SOCRATES: Will it be the same person who can pick out the bad speakers, or someone else?

ION: The same, of course.

SOCRATES: And that will be someone who has mastered arithmetic, right?

ION: Yes.

SOCRATES: Well. Suppose a number of people are discussing healthy nutrition, and one of them speaks best. Will one person know that the best speaker speaks best, and another that an inferior speaker speaks worse? Or will the same man know both?

ION: Obviously, the same man.

SOCRATES: Who is he? What do we call him?

ION: A doctor.

SOCRATES: So, to sum it up, this is what we're saying: when a number of people speak on the same subject, it's always the same person [532] who will know how to pick out good speakers and bad speakers. If he doesn't know how to pick out a bad speaker, he certainly won't know a good speaker—on the same subject, anyway.

ION: That's so.

SOCRATES: Then it turns out that the same person is "wonderfully clever" about both speakers.

ION: Yes.

SOCRATES: Now *you* claim that Homer and the other poets (including

Hesiod and Archilochus) speak on the same subjects, but not equally well. *He's good, and they're inferior.*

ION: Yes, and it's true.

SOCRATES: Now if you really do know who's speaking well, you'll know that the inferior speakers are speaking worse.

ION: Apparently so.

SOCRATES: You're superb! So if we say that Ion is equally clever about Homer and the other poets, we'll make no mistake. Because you agree yourself that the same person will be an adequate judge of all who speak on the same subjects, and that almost all the poets *do* treat the same subjects.

ION: Then how in the world do you explain what *I* do, Socrates? When someone discusses another poet I pay no attention, and I have no power to contribute anything worthwhile: I simply doze off. But let someone mention Homer and right away I'm wide awake and I'm paying attention and I have plenty to say.

SOCRATES: *That's* not hard to figure out, my friend. Anyone can tell that you are powerless to speak about Homer on the basis of the knowledge or mastery. Because if your ability came by mastery, you would be able to speak about all the other poets as well. Look, there is an art of poetry as a whole, isn't there?

ION: Yes.

SOCRATES: And now take the whole of *any* other subject: won't it have the same discipline throughout? And this goes for every subject that can be mastered. Do you need me to tell you what I mean by this, Ion?

ION: Lord, yes, I do, Socrates. I love to hear you wise men talk.

SOCRATES: I wish that were true, Ion. But wise? Surely you are the wise men, you rhapsodes and actors, you and the poets whose work you sing. As for me, I say nothing but the truth, as you'd expect from an ordinary man. I mean, even this question I asked you—look how commonplace and ordinary a matter it is. Anybody could understand what I meant: don't you use the same discipline throughout whenever you master the whole of a subject? Take this for discussion—painting is a subject to be mastered as a whole, isn't it?

ION: Yes.

SOCRATES: And there are many painters, good and bad, and there have been many in the past.

ION: Certainly.

SOCRATES: Have you ever known anyone who is clever at showing what's well painted and what's not in the work of Polygnotus,⁹ but who's powerless to do that for other painters? [533] Someone who dozes off when the work of other painters is displayed, and is lost; and has nothing to contribute—but when he has to give judgment on Polygnotus or any other painter (so long as it's just *one*), he's wide awake and he's paying attention and he has plenty to say—have you ever known anyone like that?

ION: Good lord no, of course not!

SOCRATES: Well. Take sculpture. Have you ever known anyone who is clever at explaining which statues are well made in the case of Daedalus, son of Metion, or Epeius, son of Panopeus, or Theodorus of Samos,¹⁰ or any

9. Greek painter from Thasos (ca. 500–ca. 440 B.C.E.), later an Athenian citizen.

1. Greek architect and sculptor (active ca. 550

B.C.E.). Daedalus: in Greek mythology, a consummately skilled Athenian artisan and artist. Epeius: mythological builder of the Trojan Horse.

other *single* sculptor, but who's lost when he's among the products of other sculptors, and he dozes off and has nothing to say?

ION: Good lord no. I haven't.

SOCRATES: And further, it is my opinion, you've never known anyone ever—not in flute-playing; not in cithara-playing, not in singing to the cithara, and not in rhapsodizing—you've never known a man who is clever at explaining Olympus or Thamyras or Orpheus or Phemius,² the rhapsode from Ithaca, but who has nothing to contribute about Ion, the rhapsode from Ephesus, and cannot tell when he does his work well and when he doesn't—you've never known a man like that.

ION: I have nothing to say against you on that point, Socrates. But *this* I know about myself: I speak about Homer more beautifully than anybody else and I have lots to say; and everybody says I do it well. But about the other poets I do not. Now see what that means.

SOCRATES: I do see, Ion, and I'm going to announce to you what I think that is. As I said earlier, that's not a subject you've mastered—speaking well about Homer; it's a divine power that moves you, as a "Magnetic" stone moves iron rings. (That's what Euripides called it; most people call it "Heraclian.")³ This stone not only pulls those rings, if they're iron, it also puts power *in* the rings, so that they in turn can do just what the stone does—pull other rings—so that there's sometimes a very long chain of iron pieces and rings hanging from one another. And the power in all of them depends on this stone. In the same way, the Muse⁴ makes some people inspired herself, and then through those who are inspired a chain of other enthusiasts is suspended. You know, none of the epic poets, if they're good, are masters of their subject; they are inspired, possessed, and that is how they utter all those beautiful poems. The same goes for lyric poets if they're good: just as the Corybantes⁵ [534] are not in their right minds when they dance, lyric poets, too, are not in their right minds when they make those beautiful lyrics, but as soon as they sail into harmony and rhythm they are possessed by Bacchic frenzy. Just as Bacchus worshippers⁶ when they are possessed draw honey and milk from rivers, but not when they are in their right minds—the soul of a lyric poet does this too, as they say themselves: For of course poets tell us that they gather songs at honey-flowing springs; from glades and gardens of the Muses, and that they bear songs to us as bees carry honey, flying like bees. And what they say is true. For a poet is an airy thing, winged and holy, and he is not able to make poetry until he becomes inspired and goes out of his mind and his intellect is no longer in him. As long as a human being has his intellect in his possession he will always lack the power to make poetry or sing prophecy. Therefore because it's not by mastery that they make poems or say many lovely things about their subjects (as you do about Homer)—but because it's by a divine gift—each poet is able to compose

2. Court singer in the palace of Odysseus in Homer's *Odyssey*. Olympus: Greek mountain, famed as the home of the gods. Thamyras: mythological Thracian bard who challenged the Muses. Orpheus: Greek musician unrivaled among mortals.

3. Natural magnets apparently came from Magnesia and Heraclia in Caria in Asia Minor, and were called after those places [translator's note]. Euripides (ca. 485—ca. 406 B.C.E.), Athenian tragedian.

4. One of the 9 daughters of Memory who preside

over the arts and all intellectual pursuits.

5. Priests of the goddess Cybele, the Great Mother of the gods (whose worship spread west from Asia Minor); her followers engaged in wild and sometimes bloody dances.

6. Bacchus worshippers apparently danced themselves into a frenzy in which they found streams flowing with honey and milk (Euripides, *Bacchae* 708–11) [translator's note]. Bacchus: Greek and Roman god of wine (Bakchos is one of the names of Dionysus).

beautifully only that for which the Muse has aroused him: one can do dithyrambs, another encomia, one can do dance songs, another, epics, and yet another, iambs;⁷ and each of them is worthless for the other types of poetry. You see, it's not mastery that enables them to speak those verses, but a divine power, since if they knew how to speak beautifully on one type of poetry by mastering the subject, they could do so for all the others also. That's why the god takes their intellect away from them when he uses them as his servants, as he does prophets and godly diviners, so that we who hear should know that *they* are not the ones who speak those verses that are of such high value, for their intellect is not in them: the god himself is the one who speaks, and he gives voice through them to us. The best evidence for this account is Tynnichus from Chalcis,⁸ who never made a poem anyone would think worth mentioning, *except* for the praise-song everyone sings, almost the most beautiful lyric-poem there is, and simply, as he says himself, "an invention of the Muses." In this more than anything, then, I think, the god is showing us, so that we should be in no doubt about it, that these beautiful poems are not human, not even *from* human beings, but are divine and from gods; that poets are nothing but representatives of the gods, possessed by whoever possesses them. To show *that*, the god deliberately sang the most beautiful lyric poem [535] through the most worthless poet. Don't you think I'm right, Ion?

ION: Lord yes, I certainly do. Somehow you touch my soul with your words, Socrates, and I do think it's by a divine gift that good poets are able to present these poems to us from the gods.

SOCRATES: And you rhapsodes in turn present what the poets say.

ION: That's true too.

SOCRATES: So you turn out to be representatives of representatives.

ION: Quite right.

SOCRATES: Hold on, Ion; tell me this. Don't keep any secrets from *me*. When you recite epic poetry well and you have the most stunning effect on your spectators, either when you sing of Odysseus⁹—how he leapt into the doorway, his identity now obvious to the suitors, and he poured out arrows at his feet—or when you sing of Achilles charging at Hector, or when you sing a pitiful episode about Andromache or Hecuba or Priam,¹ are you at that time in your right mind, or do you get beside yourself? And doesn't your soul, in its enthusiasm, believe that it is present at the actions you describe, whether they're in Ithaca or in Troy or wherever the epic actually takes place?

ION: What a vivid example you've given me, Socrates! I won't keep secrets from *you*. Listen, when *I* tell a sad story, my eyes are full of tears; and when *I* tell a story that's frightening or awful, my hair stands on end with fear and my heart jumps.

SOCRATES: Well, Ion, should we say this man is in his right mind at times like these: when he's at festivals or celebrations, all dressed up in fancy clothes, with golden crowns, and he weeps, though he's lost none of his finery—or when he's standing among millions of friendly people and he's

7. A meter based on the syllabic pattern short-long; iambic trimeter was regularly used in the dialogue and set speeches of tragedy. "Encomia": hymns of praise. "Dithyrambs": choral poems originally sung in honor of Dionysus, later associated with highly excited music and impassioned language.

8. Greek poet known solely for his paean to Apollo, which does not survive.

9. King of Ithaca, the hero of Homer's *Odyssey*; he pours out arrows in *Odyssey* 22.

1. King of Troy; he appears in Homer's *Iliad*. Achilles: greatest Greek warrior of the Trojan War and central character of the *Iliad*. Hector: oldest son of Priam and the greatest of the Trojan warriors, slain by Achilles (see *Iliad* 22). Andromache: wife of Hector. Hecuba: wife of Priam and mother of Hector.

frightened, though no one is undressing him or doing him any harm? Is he in his right mind then?

ION: Lord no, Socrates. Not at all, to tell the truth.

SOCRATES: And you know that you have the same effects on most of your spectators too, don't you?

ION: I know very well that we do. I look down at them every time from up on the rostrum, and they're crying and looking terrified, and as the stories are told they are filled with amazement. You see I must keep my wits and pay close attention to them: if I start them crying, *I* will laugh as I take their money, but if *they* laugh, I shall cry at having lost money.

SOCRATES: And you know that this spectator is the last of the rings, don't you—the ones that I said take their power from each other by virtue of the Heraclian stone[the magnet]? The middle ring is you, [536] the rhapsode or actor, and the first one is the poet himself. The god pulls people's souls through all these wherever he wants, looping the power down from one to another. And just as if it hung from that stone, there's an enormous chain of choral dancers and dance teachers and assistant teachers hanging off to the sides of the rings that are suspended from the Muse. One poet is attached to one Muse, another to another (we say he is "possessed," and that's near enough, for he is *held*). From these first rings, from the poets, *they* are attached in their turn and inspired, some from one poet, some from another: some from Orpheus, some from Musaeus,² and many are possessed and held from Homer. You are one of *them*, Ion, and you are possessed from Homer. And when anyone sings the work of another poet, you're asleep and you're lost about what to say; but when any song of that poet is sounded, you are immediately awake, your soul is dancing, and you have plenty to say. You see it's not because you're a master of knowledge about Homer that you can say what you say, but because of a divine gift, because you are possessed. That's how it is with the Corybantes, who have sharp ears only for the specific song that belongs to whatever god possesses them; they have plenty of words and movements to go with *that* song; but they are quite lost if the music is different. That's how it is with you, Ion: when anyone mentions Homer, you have plenty to say, but if he mentions the others you are lost; and the explanation of this, for which you ask me—why it is that you have plenty to say about Homer but not about the others—is that it's not mastering the subject, but a divine gift, that makes you a wonderful singer of Homer's praises.

ION: You're a good speaker, Socrates. Still, I would be amazed if you could speak well enough to convince me that I am possessed or crazed when I praise Homer. I don't believe you'd think so if you heard me speaking on Homer.

SOCRATES: And I really do want to hear you, but not before you answer me this: on which of Homer's subjects do you speak well? I don't suppose you speak well on *all* of them.

ION: I do, Socrates, believe me, on every single one!

SOCRATES: Surely not on those subjects you happen to know nothing about, even if Homer does speak of them.

ION: And these subjects Homer speaks of, but I don't know about—what are they?

[537] SOCRATES: But doesn't Homer speak about professional subjects in

2. Mythical singer, closely connected with Orpheus.

many places, and say a great deal? Chariot driving, for example, I'll show you, if I can remember the lines.

ION: No, I'll recite them. I *do* remember.

SOCRATES: Then tell me what Nestor says to his son Antilochus, when he advises him to take care at the turning post in the horse race they held for Patroclus' funeral.

ION: "Lean," he says,

Lean yourself over on the smooth-planed chariot
Just to the left of the pair. Then the horse on the right—
Goad him, shout him on, easing the reins with your hands.
At the post let your horse on the left stick tight to the turn
So you seem to come right to the edge, with the hub
Of your welded wheel. But escape cropping the stone . . .⁴

SOCRATES: That's enough. Who would know better, Ion, whether Homer speaks correctly or not in these particular verses—a doctor or a charioteer?

ION: A charioteer, of course.

SOCRATES: Is that because he is a master of that profession, or for some other reason?

ION: No. It's because he's a master of it.

SOCRATES: Then to each profession a god has granted the ability to know a certain function. I mean, the things navigation teaches us—we won't learn them from medicine as well, will we?

ION: Of course not.

SOCRATES: And the things medicine teaches us we won't learn from architecture.

ION: Of course not.

SOCRATES: And so it is for every other profession: what we learn by mastering one profession we won't learn by mastering another, right? But first, answer me this. Do you agree that there are different professions—that one is different from another?

ION: Yes.

SOCRATES: And is this how you determine which ones are different? When I find that the knowledge [involved in one case] deals with different subjects from the knowledge [in another case], then I claim that one is a different profession from the other. Is that what you do?

ION: Yes.

SOCRATES: I mean if there is some knowledge of the same subjects, then why should we say there are two different professions?—Especially when each of them would allow us to know the same subjects! Take these fingers: I know there are five of them, and you know the same thing about them that I do. Now suppose I asked you whether it's the same profession—arithmetic—that teaches you and me the same things, or whether it's two different ones. Of course you'd say it's the same one.

ION: Yes.

[538] SOCRATES: Then tell me now what I was going to ask you earlier.

3. Achilles' dearest friend, slain by Hector. Nestor: the oldest of the Greek generals at Troy; in the *Iliad*, he often gives advice. His son Antilochus

later died fighting at Troy.

4. *Iliad* 23.335–40 [translator's note].

Do you think it's the same way for every profession—the same profession must teach the same subjects, and a different profession, if it is different, must teach not the same subjects, but different ones?

ION: That's how I think it is, Socrates.

SOCRATES: Then a person who has not mastered a given profession will not be able to be a good judge of the things which belong to that profession, whether they are things said or things done.

ION: That's true.

SOCRATES: Then who will know better whether or not Homer speaks beautifully and well in the lines you quoted? You, or a charioteer?

ION: A charioteer.

SOCRATES: That's because you're a rhapsode, of course, and not a charioteer.

ION: Yes.

SOCRATES: And the rhapsode's profession is different from the charioteer's.

ION: Yes.

SOCRATES: If it's different, then its knowledge is of different subjects also.

ION: Yes.

SOCRATES: Then what about the time Homer tells how Hecamede, Nestor's woman, gave barley-medicine to Machaon to drink? He says something like this—

Over wine of Pramnos she grated goat's milk cheese
With a brazen grater. . . . And onion relish for the drink . . .⁵

Is Homer right or not: would a fine diagnosis here come from a doctor's profession or a rhapsode's?

ION: A doctor's.

SOCRATES: And what about the time Homer says:

Leaden she plunged to the floor of the sea like a weight
That is fixed to a field cow's horn. Given to the hunt
It goes among ravenous fish, carrying death.⁶

Should we say it's for a fisherman's profession or a rhapsode's to tell whether or not he describes this beautifully and well?

ION: That's obvious, Socrates. It's for a fisherman's.

SOCRATES: All right, look. Suppose you were the one asking questions, and you asked me, "Socrates, since you're finding out which passages belong to each of the professions Homer treats—which are the passages that each profession should judge—come tell me this: which are the passages that belong to a diviner and to divination, passages he should be able to judge as to whether they're well or badly composed?" Look how easily I can give you a true answer. Often, in the *Odyssey*, he says things like what Theoclymenus says—the prophet of the sons of Melampus:

[539] Are you mad? What evil is this that's upon you? Night
Has enshrouded your hands, your faces, and down to your knees.
Wailing spreads like fire, tears wash your cheeks.

5. *Iliad* 11.639–40 with 630 [translator's note].
Machaon: a fighter and healer in the *Iliad*.

6. *Iliad* 24.80–82 [translator's note].

Ghosts fill the dooryard, ghosts fill the hall, they rush
To the black gate of hell, they drop below darkness. Sunlight
Has died from a sky run over with evil mist.⁷

And often in the *Iliad*, as in the battle at the wall.⁸ There he says:

There came to them a bird as they hungered to cross over.
An eagle, a high-flier, circled the army's left
With a blood-red serpent carried in its talons, a monster,
Alive, still breathing, it has not yet forgotten its warlust,
For it struck its captor on the breast, by the neck;
It was writhing back, but the eagle shot it groundwards
In agony of pain, and dropped it in the midst of the throng,
Then itself, with a scream, soared on a breath of the wind.⁹

I shall say that these passages and those like them belong to a diviner. They are for him to examine and judge.

ION: That's a true answer, Socrates.

SOCRATES: Well, *your* answers are true, too, Ion. Now *you* tell me—just as I picked out for you, from the *Odyssey* and the *Iliad*, passages that belong to a diviner and ones that belong to a doctor and ones that belong to a fisherman—in the same way, Ion, since you have more experience with Homer's work than I do, you pick out for me the passages that belong to the rhapsode and to his profession, the passages a rhapsode should be able to examine and to judge better than anyone else.

ION: My answer, Socrates, is "all of them."

SOCRATES: That's not *your* answer, Ion. Not "all of them." Or are you really so forgetful? But no, it would not befit a *rhapsode* to be forgetful.

[540] ION: What do you think I'm forgetting?

SOCRATES: Don't you remember you said that a rhapsode's profession is different from a charioteer's?

ION: I remember.

SOCRATES: And didn't you agree that because they are different they will know different subjects?

ION: Yes.

SOCRATES: So a rhapsode's profession, on *your* view, will not know everything, and neither will a rhapsode.

ION: But things like that are exceptions, Socrates.

SOCRATES: By "things like that" you mean that almost all the subjects of the other professions are exceptions, don't you? But then what sort of thing *will* a rhapsode know, if not everything?

ION: My opinion, anyhow, is that he'll know what it's fitting for a man or a woman to say—or for a slave or a freeman, or for a follower or a leader.

SOCRATES: So—what should a leader say when he's at sea and his ship is hit by a storm—do you mean a rhapsode will know better than a navigator?

ION: No, no. A navigator will know *that*.

7. *Odyssey* 20.351–57; line 354 is omitted by Plato [translator's note].

8. The city wall of Troy.

9. *Iliad* 12.200–207 [translator's note].

SOCRATES: And when he is in charge of a sick man, what should a leader say—will a rhapsode know better than a doctor?

ION: Not that, either.

SOCRATES: But he *will* know what a slave should say. Is that what you mean?

ION: Yes.

SOCRATES: For example, what should a slave who's a cowherd say to calm down his cattle when they're going wild—will a rhapsode know what a cowherd does not?

ION: Certainly not.

SOCRATES: And what a woman who spins yarn should say about working with wool?

ION: No.

SOCRATES: And what a man should say, if he's a general, to encourage his troops?

ION: Yes! That's the sort of thing a rhapsode will know.

SOCRATES: What? Is a rhapsode's profession the same as a general's?

ION: Well, I certainly would know what a general should say.

SOCRATES: Perhaps that's because you're also a general by profession, Ion. I mean, if you were somehow both a horseman and a cithara-player at the same time, you would know good riders from bad. But suppose I asked you: "Which profession teaches you good horsemanship—the one that makes you a horseman, or the one that makes you a cithara-player?"

ION: The horseman, I'd say.

SOCRATES: Then if you also knew good cithara-players from bad, the profession that taught you *that* would be the one which made you a cithara-player, not the one that made you a horseman. Wouldn't you agree?

ION: Yes.

SOCRATES: Now, since you know the business of a general, do you know this by being a good rhapsode?

ION: I don't think there's any difference.

[541] SOCRATES: What? Are you saying there's no difference? On your view is there one profession for rhapsodes and generals, or two?

ION: One, I think.

SOCRATES: So anyone who is a good rhapsode turns out to be a good general too.

ION: Certainly, Socrates.

SOCRATES: It also follows that anyone who turns out to be a good general is a good rhapsode too.

ION: No. This time I don't agree.

SOCRATES: But you do agree to this: anyone who is a good rhapsode is a good general too.

ION: I quite agree.

SOCRATES: And aren't you the best rhapsode in Greece?

ION: By far, Socrates.

SOCRATES: Are you also a general, Ion? Are you the best in Greece?

ION: Certainly, Socrates. That, too, I learned from Homer's poetry.

SOCRATES: Then why in heaven's name, Ion, when you're both the best general *and* the best rhapsode in Greece, do you go around the country

giving rhapsodies but not commanding troops? Do you think Greece really needs a rhapsode who is crowned with a golden crown? And does not need a general?¹

ION: Socrates, *my* city is governed and commanded by you [by Athens]; we don't need a general. Besides, neither your city nor Sparta would choose me for a general. You think you're good enough for that yourselves.

SOCRATES: Ion, you're superb. Don't you know Apollodorus of Cyzicus?

ION: What does *he* do?

SOCRATES: He's a foreigner who has often been chosen by Athens to be their general. And Phanosthenes of Andros and Heraclides of Clazomenae—they're also foreigners; they've demonstrated that they are worth noticing, and Athens appoints them to be generals or other sorts of officials. And do you think that *this* city, that makes such appointments, would not select Ion of Ephesus and honor him, if they thought he was worth noticing? Why? Aren't you people from Ephesus Athenians of long standing?² And isn't Ephesus a city that is second to none?

But *you*, Ion, you're doing me wrong, if what you say is true that what enables you to praise Homer is knowledge or mastery of a profession. You assured me that you knew many lovely things about Homer, you promised to give a demonstration; but you're cheating me, you're a long way from giving a demonstration. You aren't even willing to tell me what it is that you're so wonderfully clever *about*, though I've been begging you for ages. Really, you're just like Proteus,³ you twist up and down and take many different shapes, till finally you've escaped me altogether by turning yourself into a general, [542] so as to avoid proving how wonderfully wise you are about Homer.

If you're really a master of your subject, and if, as I said earlier, you're cheating me of the demonstration you promised about Homer, then you're doing me wrong. But if you're not a master of your subject, if you're possessed by a divine gift from Homer, so that you make many lovely speeches about the poet without knowing anything—as I said about you—then you're not doing me wrong. So choose, how do you want us to think of you—as a *man* who does wrong, or as someone *divine*?

ION: There's a great difference, Socrates. It's much lovelier to be thought divine.

SOCRATES: Then *that* is how we think of you, Ion, the lovelier way: it's as someone divine, and not as master of a profession, that you are a singer of Homer's praises.

ca. 390 B.C.E.

1. The memory of Athens' defeat in the Peloponnesian War (which ended in 404 B.C.E.) was perhaps still fresh in Plato's mind when he wrote this dialogue.

2. For most of the 5th century, Ephesus, an important center of trade founded by Ionian col-

onists on the west coast of Asia Minor, belonged to an alliance led by Athens against the Persians.

3. Son of Poseidon (Greek god of the sea), who had both the power of prophecy and the power to change shape; when he was held fast, he would answer questions (see *Odyssey* 4.385-570).

From Republic¹

From Book II

* * *

'All right, then let's devise a theoretical education for these people,² as if we were making up a story and weren't worried about time.'

'Yes, that's a good idea.'

'How shall we educate them, then? Or is it hard to improve on the educational system which has evolved over a long period of time? This, as you know, consists of exercise for the body and cultural studies for the mind.³

'Yes.'

'And shall we begin the cultural programme before the physical one?'

'Of course.'

'Cultural studies include literature, don't you think?' I asked.

'I do.'

'Aren't there two kinds of literature, true and false?'

'Yes.'

[377] 'Should we include both kinds in our educational system, and start with the untrue kind?'

'I don't understand what you're getting at,' he said.

'Don't you realize,' I asked, 'that we start by telling children stories which are, by and large, untrue, though they contain elements of truth? And stories precede physical exercise in our education of children.'

'True.'

'Which is why I suggested that cultural studies should be taken up before physical exercise.'

'It was a good suggestion,' he said.

'Now, do you appreciate that the most important stage of any enterprise is the beginning, especially when something young and sensitive is involved? You see, that's when most of its formation takes place, and it absorbs every impression that anyone wants to stamp upon it.'

'You're absolutely right.'

'Shall we, then, casually allow our children to listen to any old stories, made up by just anyone, and to take into their minds views which, on the whole, contradict those we'll want them to have as adults?'

'No, we won't allow that at all.'

1. Translated by Robin Waterfield. The numbers in square brackets are the Stephanus numbers used almost universally in citing Plato's works; they refer to the pages of a 1578 edition published by Henri Estienne.

2. At this point in *Republic*, the philosopher Socrates (469–399 B.C.E., Plato's spokesperson) and Adeimantus are discussing what education the future rulers (or "guardians") of the perfect state should have. Socrates (speaking here) leads the discussion and Adeimantus follows (Socrates' other interlocutor in our selections from *Republic* is Adeimantus's brother Glaucon).

3. Nowadays we think of education, especially school education, in terms of information and

skills above all. But it is important to realize that the kind of education Plato is offering here, which is primarily education of character (though reading, writing, and elementary arithmetic would be covered by the *grammatistēs*, the teacher responsible for literature, as it was in Athens), is *all* the education a contemporary Athenian child could expect: he would be taught by a *grammatistēs*, a *kitharistēs* (music and lyric poetry), and a *paidotribēs* (physical exercise). Higher (i.e. intellectual) education of any kind was a novelty, introduced by the sophists [translator's note]. Sophists: itinerant teachers of the 5th century B.C.E., they were Greece's first professional teachers (see GORGIAS). 4. I.e. fiction or non-fiction [translator's note].

'So our first job, apparently, is to oversee the work of the story-writers, and to accept any good story they write, but reject the others. We'll let nurses and mothers tell their children the acceptable ones, and we'll have them devote themselves far more to using these stories to form their children's minds than they do to using their hands to form their bodies. However, we'll have to disallow most of the stories they currently tell.'

'Which stories?' he asked.

'If we examine the grander kind of story,' I said, 'that will give us insights into the more lightweight kind as well, because the same principle must be involved and both kinds are bound to have the same effect, don't you think?'

'That sounds fine to me,' he replied, 'but I don't even understand which stories you're describing as grander.'

'The ones which Hesiod, Homer,⁵ and their fellow poets tell us. In the past, it's always been the poets who've composed untrue stories to tell people, and it's no different nowadays.'

'Which stories?' he asked. 'And what's their defect, in your view?'

'There is no defect which one ought to condemn more quickly and more thoroughly,' I replied, 'especially if the lies have no redeeming feature.'

'Yes, but what is this defect?'

'Using the written word to give a distorted image of the nature of the gods and heroes, just as a painter might produce a portrait which completely fails to capture the likeness of the original.'

'Yes,' he said, 'it's quite right to find fault with that sort of thing. But how do they do that? What kinds of things do they say?'

'First and most important, since the subject is so important,' I said, 'there is no redeeming feature to the lies which Hesiod repeats, about Uranus' deeds and Cronus' revenge on Uranus. [378] Then there are Cronus' deeds and what his son did to him.⁶ Now, I think that even if these stories are true, they oughtn't to be told so casually to young people and people who lack discrimination; it's better to keep silent, and if one absolutely has to speak, to make them esoteric secrets told to as few people as possible, who are to have sacrificed no mere piglet,⁷ but something so large and rare that the smallest conceivable number of people get to hear them.'

'Yes,' he said, 'these stories are definitely dangerous.'

'And we must censor them in our community, Adeimantus,' I said. 'No young person is to hear stories which suggest that were he to commit the vilest of crimes, and were he to do his utmost to punish his father's crimes, he wouldn't be doing anything out of the ordinary, but would simply be behaving like the first and the greatest gods.'

'No, I absolutely agree,' he said. 'I share your view that these stories are unsuitable and shouldn't be repeated.'

5. Greek epic poet (ca. 8th c. B.C.E), to whom the *Iliad* and the *Odyssey* are attributed. Hesiod (active ca. 700 B.C.E.), Greek epic didactic poet.

6. Hesiod, *Theogony* 154-210, 453-506. Uranus (Heaven) hated his children and kept them packed in their mother Earth's womb, to her agony. One of the children, Cronus, was persuaded by Earth to castrate his father when he came to have sex with Earth. Cronus then became lord of creation. Cronus wanted to remain king, so he swallowed all of his children in case one of them might take over

someday. Their mother Rhea, however, hid one of them away on Crete and gave Cronus a rock to swallow instead. In due course the child, Zeus, overthrew Cronus and established himself as king of the gods [translator's note].

7. A pig or piglet was a standard small sacrifice and was usual before initiation into the Eleusinian mysteries [translator's note]. "Eleusinian mysteries": secret cults at Eleusis in honor of Demeter, goddess of grain, and her daughter Persephone.

'And that's not all,' I said. 'The stories which have gods fighting and scheming and battling against one another are utterly unsuitable too, because they're just as untrue. If the prospective guardians of our community are to loathe the casual quarrels with one another, we must take good care that battles between gods and giants⁸ and all the other various tales of gods and heroes coming to blows with their relatives and friends don't occur in the stories they hear and the pictures they see. No, if we're somehow to convince them that fellow citizens never fall out with one another, that this is wrong, then that is the kind of story they must hear, from childhood onwards, from the community's elders of both sexes; and the poets they'll hear when they're older must be forced to tell equivalent stories in their poetry. But we'd better not admit into our community the story of Hera being tied up by her son, or the episode when Hephaestus⁹ is hurled away by his father for trying to save his mother from a beating, or any of the battles between the gods which Homer has in his poetry, whether or not their intention is allegorical. The point is that a young person can't tell when something is allegorical and when it isn't, and any idea admitted by a person of that age tends to become almost ineradicable and permanent. All things considered, then, that is why a very great deal of importance should be placed upon ensuring that the first stories they hear are best adapted for their moral improvement.'

'Yes, that makes sense,' he said. 'But suppose we were once again to be asked, in this context as well, what stories we meant, how would we respond?'

'Adeimantus,' I said, 'you and I are not making up stories at the moment; we're founding a community. [379] Founders ought to know the broad outlines within which their poets are to compose stories, so that they can exclude any compositions which do not conform to those outlines; but they shouldn't themselves make stories up.'

'You're right,' he said. 'But that's precisely the point: what are these guidelines for talking about the gods?'

'They'd be something like this,' I said. 'Whatever the type of poetry—epic, lyric, or tragic—God must of course always be portrayed as he really is.'¹

'Yes, he must.'

'Well, isn't God good, in fact, and shouldn't he be described as such?'

'Of course.'

'And nothing good is harmful, is it?'

'I don't think so.'

'Now, can anything harmless cause damage?'

'No, of course not.'

'Can anything incapable of causing damage do anything bad?'

'Again, no.'

'And something which never does bad couldn't be responsible for bad, could it?'

'Of course not.'

8. For example, the war between Zeus and the Titans, who were his father's siblings, and the later revolt by the giants, defeated by all the gods and Heracles. The Gigantomachia was a popular subject for sculpture.

9. Greek god of fire and metalworking. According to one legend, he was lamed when Zeus cast him out of heaven for defending his mother, Hera,

queen of the gods (see *Iliad* 1.591–97). According to another myth, Hephaestus fashioned a throne for Hera with hidden chains, to punish her for rejecting him.

1. The Greek philosophers tend to talk equally of "God" and the "god": there is a single Divine of which the gods are various manifestations [translator's note].

'Well now, is goodness beneficial?'

'Yes.'

'And it's responsible for doing good, then?'

'Yes.'

'So goodness is not responsible for everything: it's responsible for things that are in a good state, but bad things cannot be attributed to it.'

'Exactly,' he said.

'The same goes for God too, then,' I said. 'Since he is good, he cannot be responsible for everything, as is commonly said. He is responsible only for a small part of human life, and many things cannot be attributed to him—I mean, there's far more bad than good in the world. He and he alone must be held responsible for the good things, but responsibility for bad things must be looked for elsewhere and not attributed to God.'

'I think you're absolutely right,' he said.

'So,' I said, 'we shouldn't connive at Homer or any other poet making the stupid mistake of saying about the gods, "Two jars sit on Zeus' threshold: one is full of good destinies, but the other is full of wretched destinies", and that if Zeus mixes the two up together and doles them out to someone, that person "sometimes meets with bad, sometimes with good", whereas if he doesn't mix them up, but allots the pernicious ones to someone in an unadulterated form, that person "is driven over the glorious earth by the evil of poverty".² Nor will we connive at them claiming that "Zeus is the dispenser of both good and evil".

'Moreover, we'll disapprove of the attribution of Pandarus' perjury and truce-breaking to the agency of Athena and Zeus,³ and of the gods' quarrel and its resolution to Themis and Zeus;⁴ [380] and we'll not allow the younger generation to hear the idea which Aeschylus⁵ expresses as "When God wants to visit utter ruin on a household, he implants the cause in men." No, if plays are composed (such as the one these lines are from) about Niobe's afflictions, or about the trials and tribulations of the descendants of Pelops,⁶ or about the Trojan War, the playwrights must either be prohibited from saying that God was responsible for these events, or if they do attribute them to God, they have to come up with an explanation which approximates to the one we're looking for at the moment, and say that what God did was right and good, in the sense that the people in question were being punished and therefore benefited; but poets should be prohibited from saying that these people were in a *bad* way as a result of being punished and that this was God's doing. The claim that the sinners were badly off because they were in need of punishment, and that in punishing them God was benefiting them, is permissible; but the claim that God, who is good, is responsible for any instance of badness is to be resisted as forcefully as possible by anyone who wants a well-regulated community, until it is never spoken and never heard

2. *Iliad* 24.527–32 [translator's note].

3. *Iliad* 4.20–72 [translator's note]. Pandarus: Trojan archer favored by Apollo. Athena: Greek goddess of wisdom and war and the patron god of Athens; in the passage cited, she takes on the form of a Trojan and persuades Pandarus to break the truce (as Zeus has bid her to do).

4. Perhaps *Iliad* 20.1–74 or 15.12–217 [translator's note] Themis: Greek goddess of justice, wisdom, and good counsel.

5. Greek tragedian (525–456 B.C.E.); from his *Niobe* (a lost play). Because Niobe, wife of a legendary king of Thebes, boasted that she had more children than the goddess Leto, Leto's children, Apollo and Artemis, killed her six sons and six daughters (see *Iliad* 24.602–17).

6. I.e., the ill-starred Atreus, Agamemnon, Orestes, and Electra: see especially Aeschylus's *Oresteian trilogy* [translator's note].

by anyone, of whatever age, whether the tale is told in verse or in prose. And the reasons are that the voicing of these views is sacrilege, they do us no good, and they are inconsistent with one another.'

'I approve of this law,' he said. 'I'll be right behind you when you cast your vote for it.'

'So now we have the first of the laws and guidelines which pertain to the gods,' I said. 'Any spoken words or composed works will have to conform to the principle that God is not responsible for everything, but only for good.'

'Well, I'm certainly happy with it,' he said.

'All right, then. What about a second principle, as follows? Do you think that God is a sorcerer and can by exercising his will vary his appearance from time to time, sometimes by actually changing and transforming his appearance into a large number of forms, and at other times by deluding us into thinking that's what he's done? Or do you think he's uniform and extremely unlikely to abandon his own appearance?'

'I'm not in a position to say just at the moment,' he replied.

'Look at it this way. Isn't it inevitable that if anything sheds its form, the change is due either to itself or to something else?'

'Yes.'

'Now, really good things are extremely unlikely to be altered or moved by an external agent, aren't they? For instance, a human body is altered by food, drink, and exercise, and plants are altered by the heat of the sun and by wind and phenomena like that; but the more healthy and strong a thing is, the less likely [381] it is to be altered.'

'Of course.'

'And the more courageous and intelligent a mind is, the less likely it is that an external agent would disturb it and alter it?'

'Yes.'

'Moreover, the same principle applies universally even to manufactured items, such as utensils, houses, and clothes: things which are well made and are in good condition are less likely to be altered by time and other phenomena.'

'True.'

'So anything which is in a good state—whether that is due to nature or human skill or both—can hardly be changed at all by an external agent.'

'That sounds right.'

'But God and the divine realm are of course in all respects as perfect as anything can be.'

'Of course.'

'From this point of view, then, God is extremely unlikely to have at his disposal a large number of forms.'

'Yes, extremely unlikely indeed.'

'Would he, however, change and alter himself internally, by his own resources?'

'If he changes in the first place,' he said, 'then obviously this must be how.'

'Well, does he enhance and improve himself, or does he worsen and debase himself?'

'If he changes,' he said, 'then it must be for the worse, since it's unthinkable that God's goodness and excellence are anything less than perfect.'

'You're absolutely right,' I said. 'And, Adeimantus, in this context, do you

think that anyone—human or divine—deliberately makes himself deteriorate in any respect?’

‘That’s impossible,’ he said.

‘It is equally impossible, then,’ I said, ‘for God to want to change himself. Since, as we have found, the divine nature is as perfect and as good as anything could be, then any god retains his own form in a uniform, direct fashion for ever.’

‘I think that’s absolutely inevitable,’ he said.

‘It follows, Adeimantus,’ I said, ‘that none of our poets is to say, “The gods travel around human habitations disguised as all sorts of visitors from other lands.”⁷ Nor are they to tell lies about Proteus and Thetis,⁸ or present Hera in a tragedy or any other kind of poem in an altered form, as a mendicant holy woman begging alms “for the life-giving children of the Argive river Inachus”,⁹ or repeat the mass of other similar lies that have been told. Furthermore, we should neutralize the poets’ influence on mothers, which makes them scare their children with terrible stories about how some gods tend to prow around during the hours of darkness in a wide variety of unfamiliar human guises, so that we stop the mothers blaspheming against the gods, and at the same time stop them making their children too timid.’

‘Yes, we should,’ he said.

‘But even if it isn’t in the gods’ nature actually to change,’ I said, ‘do they magically delude us into seeing them appear in all kinds of guises?’

‘It’s not inconceivable,’ he said.

[382] ‘Well, would God willingly mask the truth behind appearance and deceive us by his words or actions?’ I asked.

‘I don’t know,’ he answered.

‘Don’t you know that a true falsehood (if you’ll allow me the phrase) is loathed by everyone, divine or human?’ I asked.

‘What do you mean?’ he asked.

‘I mean,’ I said, ‘that no one chooses and wants to be deceived in the most important part of himself and about the most important things. The presence of falsehood there is his worst fear.’

‘I still don’t understand,’ he said.

‘That’s because you think I’m trying to make a high-powered point,’ I said. ‘But all I’m saying is that no one is at all happy at being lied to and deceived in his mind about the facts; no one likes being ignorant, and the existence and presence of falsehood there are extremely unwelcome to everyone; they particularly hate it there.’

‘They certainly do,’ he said.

‘Well, I might have been perfectly correct when I described this state a moment ago as true falsehood—the state of misapprehension caused by falsehood in the mind. I mean, a spoken lie is a kind of copy and subsequent reflection of the mental condition, and no pure lie, don’t you think?’

‘Yes.’

‘Now, a genuine lie is hated by men as well as gods.’

7. *Odyssey* 17.485–86 [translator’s note].

8. A sea nymph who was fated to bear a son mightier than his father; she married the hero Peleus and bore Achilles. Proteus: prophetic son of Poseidon, Greek god of the sea, who had the power to change shape.

9. Both a river and a river god. Argive: of Argos, a city-state on the Peloponnese. The “children” are presumably the river’s tributaries with their “life-giving” water. The quotation is from *The Xantriai*, a lost play by Aeschylus.

'I think so.'

'What about a spoken lie? Aren't there occasions and situations when telling lies is helpful and doesn't therefore warrant hatred? What about when we're dealing with enemies, or with people we count as friends, but who are trying to do something bad because they've gone mad or have somehow taken leave of their senses? Isn't telling lies helpful under these circumstances as a preventative medicine? Moreover, consider those stories we were discussing not long ago: we cannot know the truth about events in the past, so we make something up which approximates as closely as possible to the truth, and that helps us, doesn't it?'

'Yes,' he said, 'you're quite right.'

'Which of these reasons, then, makes telling lies helpful to God? Would he make up something which resembles the truth because he doesn't know the past?'

'That's a ridiculous suggestion,' he said.

'So there's nothing of the lying poet in God.'

'I don't think so.'

'Would he lie out of fear for his enemies?'

'Hardly.'

'Because his friends have taken leave of their senses or gone mad?'

'Anyone witless or insane is no friend of God,' he said.

'So God has no reason to lie.'

'No.'

'So it is not in the nature of deities or gods to deceive.'

'Absolutely not,' he said.

'Whether acting or speaking, then, God is entirely uniform and truthful. He doesn't actually change himself, and he doesn't delude others either, during their sleeping or their waking hours, in how he appears or in what he says or in the signs he sends.'

[383] 'Listening to you speak,' he said, 'I find myself agreeing with you.'

'So do you agree,' I said, 'that this is the second principle to which religious discussions and literature must conform—that the gods are not shape-shifting wizards and do not mislead us by lying in what they say or do?'

'I agree.'

'Although there is much to commend in Homer, then, we won't approve of the passage when Zeus sends the dream to Agamemnon.¹ Likewise, we won't approve of the bit of Aeschylus² where Thetis says that at her wedding Apollo "celebrated in song how happy my children would make me—how they wouldn't know sickness and would live for many long years—and went on and on about how lucky I was and how the gods smiled on me, until he made my heart glad. And since Phoebus³ is a god and abounds in prophetic skill, I expected his words to be true. But for all his singing, for all his sharing of our feast, for all these claims of his, it is he who has now killed my son." We'll come down hard on anyone who says anything like this about the gods: we'll refuse him a chorus and ban teachers from using his works to educate

1. Zeus sends a lying dream to Agamemnon that the capture of Troy is imminent in *Iliad* 2. Notice that Plato is not denying the existence of omens and portents, only that they can be false or that false ones can be sent by the gods; it is we who misinterpret the gods' messages [translator's note].

Agamemnon: king of Mycenae and commander of the Greek expedition against Troy.

2. From a lost play [translator's note].

3. Apollo, god of prophecy as well as healing and music.

our children. Otherwise, our guardians won't grow up to be religious people, or to be as godlike themselves as is humanly possible.'

'I'm in complete agreement with these principles,' he said, 'and would want them enshrined as laws.'

From *Book III*

[386] 'All right, then,' I said. 'If people are going to revere the gods, respect their parents, and not belittle friendship with one another, then apparently those are the kinds of stories they should and shouldn't hear about the gods, from childhood onwards.'

'I'm sure we're right about this,' he said.

'What about if they are to be brave? Won't they also need stories which are designed to make them fear death as little as possible? I mean, don't you think that courage and fearing death are mutually exclusive?'

'Yes, I certainly do,' he answered.

'What about the idea that Hades⁴ doesn't just exist, but is terrifying? Do you think this goes with facing death fearlessly and with preferring death in battle to defeat and slavery?'

'Of course not.'

'So here's another aspect of story-telling for us to oversee, apparently. We must ask those who take on the job of telling stories not to denigrate Hades in the simple fashion they have been, but to speak well of it, because otherwise they'll not only be lying, but also not speaking in a way that is conducive to courage in battle.'

'Yes, we must,' he said.

'Then we'll start with the following lines,' I said, 'and delete everything which resembles them: "I'd rather be a slave labouring for someone else—someone without property, who can hardly make a living—than rule over all the spirits of the dead"; and "The vile, dank halls, which even the gods hate, might appear to men and gods"; and "Amazing! The soul, the likeness of a person, really does exist in Hades' halls, but it is completely witless"; and "He alone had consciousness, while the rest were darting shadows"; and "His soul flew from his body and went to Hades bewailing its fate, forfeiting courage and the glory of young manhood"; [387] and "Like a wisp of smoke, his soul went down to the underworld with a shrill cry"; and "As when bats flit about squeaking in the depths of an awful cave, when one of them loses its perch on the crowded rock, and they cling to one another, so the flock of souls went with shrill cries."'⁵ We'll implore Homer and the rest of the poets not to get cross if we strike these and all similar lines from their works. We'll explain that it's not because the lines are not good poetry and don't give pleasure to most people; on the contrary, the better poetry they are, the more they are to be kept from the ears of children and men who are to be autonomous and to be more afraid of losing this freedom than of death.'

'Absolutely.'

'Now, we'd better get rid of all the frightening and terrifying names which crop up here. I mean names like Cocytus and Styx,⁶ ghost and wraith, and

4. The Greek underworld.

5. Quoted from, respectively, *Odyssey* 11.489–91, *Iliad* 20.64–66, *Iliad* 23.103–4, *Odyssey* 10.495, *Iliad* 16.856–57, *Iliad* 23.100–101, and *Odyssey*

24.6–9 [translator's note].

6. Two of the rivers of Hades—Lamentation and Hateful [translator's note].

so on—all the names which are designed to make everyone who hears them shudder. In another context, they may have a useful purpose to serve; but our worry is that this shivering might make our guardians too feverish and enervated.’

‘It’s a legitimate worry,’ he remarked.

‘Should we ban them, then?’

‘Yes.’

‘It’s names which have the opposite effect that should be used in both prose and poetry, isn’t it?’

‘Clearly.’

‘Shall we also remove the passages where eminent men weep and wail in mourning, then?’

‘We have to,’ he said. ‘It follows from what we’ve already done.’

‘Let’s see whether or not we’re right to remove them,’ I said. ‘We can agree that one good man will not regard death as a terrible thing for another good man—a friend of his—to suffer.’

‘Yes, we can.’

‘So a good man won’t mourn as if the other person had suffered something terrible.’

‘No.’

‘Moreover, we can also agree that a good man is preeminently capable of providing himself with a good life entirely from his own resources, and is absolutely the last person to need anyone or anything else.’

‘True.’

‘So he’d be the last person to be overwhelmed by the loss of a son or a brother or some money and so on and so forth.’

‘Yes, definitely.’

‘He’ll also be the last person to mourn, then, when some such disaster overtakes him: no one will endure it with more equanimity than him.’

‘Very true.’

‘We’d be right, then, not to have famous men mourning. We can allow women to do that (as long as they aren’t admirable women) and any bad men there might be, [388] so that the people we claim to be training for guardianship of our land find all that sort of behavior distasteful.’

‘That’s right,’ he said.

‘So we have a further request to make of Homer and the rest of the poets. We’ll ask them not to portray Achilles, who was the son of a goddess, “at one point lying on his side, then later on his back, and then on his front; and then getting to his feet and sailing, crazed with grief, over the sands of the bitter sea”, or as “pouring handfuls of filthy ashes over his head”,⁷ or generally as weeping and wailing to the extent and in the fashion that the poet portrays him. And we’ll ask them not to have Priam, a close relative of the gods by birth, “begging and rolling in the dung as he calls out to each man by name”.⁸ We’ll be even more forceful, however, in our request that they don’t portray the *gods* lamenting and saying things like, “Oh, poor me! How wretched I am to have borne the noblest of children!”⁹ or at the very least they ought to stop short of giving such an inaccurate portrait of the greatest of the gods

7. *Iliad* 24.10–13, 18.23–24 [translator’s note]. Achilles: the greatest of the Greek warriors at Troy and the central figure of the *Iliad*.

8. *Iliad* 22.414–15 [translator’s note]. Priam: the

last king of Troy, descended from Zeus.

9. *Iliad* 18.54 [translator’s note]. The speaker is Thetis.

that they have him saying, "Alas! The man I now see being chased around Troy is dear to me, and my heart grieves", and "Alas that Sarpedon, the dearest of men to me, is destined to fall at the hands of Patroclus the son of Menoetius."¹

'The point is, my dear Adeimantus, that if the young men of our community hear this kind of thing and take it seriously, rather than regarding it as despicable and absurd, they're hardly going to regard such behaviour as despicable in human beings like themselves and feel remorse when they also find themselves saying or doing these or similar things. Instead, they won't find it at all degrading to be constantly chanting laments and dirges for trivial incidents, and they won't resist doing so.'

'You're quite right,' he said.

'And what we've just been arguing, in effect—and at the moment no one's come up with a better argument, so we should stick to this one—is that we must prevent this happening.'

'Yes, we must.'

'Now, they'd better not be prone to laughter either. I mean, the stronger the laughter, the stronger the consequent emotional reaction too—that's almost inevitable.'

'I agree,' he said.

'We should, therefore, refuse admittance to any poetry which portrays eminent humans as being overcome by laughter, and [389] do so even more vigorously if it shows gods in that state.'

'Yes, indeed,' he said.

'So we'll also reject the lines of Homer where he says about the gods, "Unquenchable laughter arose among the blessed gods as they watched Hephaestus bustling about the house."² According to your argument, we should disallow this type of passage.'

'Yes, if you want to attribute the argument to me,' he said. 'At any rate, we should disallow it.'

'Next, they must rate honesty highly. You see, if we were right in what we were saying a short while ago, and the gods really have no use for falsehood, although it can serve as a type of medicine for us humans, then clearly lying should be entrusted to doctors, and laymen should have nothing to do with it.'

'Clearly,' he said.

'If it's anyone's job, then, it's the job of the rulers of our community: they can lie for the good of the community, when either an external or an internal threat makes it necessary. No one else, however, should have anything to do with lying. If an ordinary person lies to these rulers of ours, we'll count that as equivalent in misguidedness, if not worse, to a patient lying to his doctor about his physical condition, or someone misleading a ship's captain, with respect to his ship or crew, by telling him lies about his own state or that of one of his fellow crewmen.'

'You're absolutely right,' he said.

'So if anyone else is caught lying in our community—"any artisan, whether diviner or healer of ills or carpenter"³—he is to be punished on the grounds

1. *Iliad* 22.168–69 [Hector is being chased by Achilles], 16.433 [translator's note]. Sarpedon: a son of Zeus who fought with the Trojans. Patro-

clus: the best friend of Achilles.

2. *Iliad* 1.599–600 [translator's note].

3. *Odyssey* 17.383–84 [translator's note].

that he's introducing a practice which is just as liable to wreck and ruin a community as a ship.'

'Yes, it would,' he said, 'if what people did was influenced by what he had said.'

'Now, won't the young men of our community need self-discipline?'

'Of course.'

'And aren't the most important aspects of self-discipline, at least for the general rank and file, obedience to those in authority and establishing one's authority over the pleasures of drink, sex, and food?'

'I think so.'

'So I'm sure we'll approve of the kind of thing Homer has Diomedes say—"Sit down, shut up, and listen to me"⁴—and related passages, like "Exuding an aura of courage, the Greeks advanced in silence, respecting their leaders",⁵ and so on and so forth.'

'Yes, we will.'

'Well, what about lines like "You're groggy with wine, you have the eyes of a dog and the heart of a deer"⁶ and the next few lines? Are they all right? [390] And what about all the other impertinent things people have said to their rules in works of prose or poetry?'

'We won't approve of them.'

'That, I suppose, is because they don't encourage self-discipline in their audience, though they may well be enjoyable from another point of view. What do you think?'

'I agree,' he said.

'What about having your cleverest character saying that in his opinion the best thing in the world is when "The nearby tables are laden with bread and meat, and the steward draws wine from the mixing-bowl, brings it, and pours it into the cups"⁷ Do you think this is the right material for a young man to hear if he is to be self-controlled? Or "There is no death worse than death by starvation, no more wretched fate to face"⁸ And then there's the passage where, while everyone else—mortal and immortal—is asleep, Zeus stays awake to do some planning, but in no time at all it is driven completely out of his mind by his sexual desire, and he is so overwhelmed by the sight of Hera that he doesn't even want to go to their room, but wants to have sex with her there and then, on the ground, and he says that he's feeling more desire for her even than the first time they slept together, "without our parents knowing".⁹ And the story of how Hephaestus ensnared Ares and Aphrodite for similar reasons is equally inappropriate material for them to hear.'

'I couldn't agree with you more,' he said. 'It's quite unsuitable.'

'On the other hand,' I said, 'it's worth their paying attention to the portrayal

4. *Iliad* 4.412 [translator's note]. Diomedes: a lord of Argos who was one of the best Greek fighters at Troy.

5. A combination of *Iliad* 3.8 and 4.431 [translator's note].

6. *Iliad* 1.225; Achilles is insulting his leader Agamemnon by calling him a lecherous, cowardly drunk [translator's note].

7. *Odyssey* 9.8–10 [translator's note]. The lines are spoken by Odysseus, who is often described as clever or scheming.

8. *Odyssey* 12.342; the point is that this sentiment encouraged Odysseus's men to steal the Sun-god's cattle [translator's note].

9. *Iliad* 14.294–351; quotation, 296 [translator's note].

1. *Odyssey* 8.266–366 [translator's note]. When Hephaestus learned that his wife, Aphrodite, the Greek goddess of love and beauty, was committing adultery with Ares, the god of war, he fashioned a metal net and caught the pair in bed.

on stage or in writing of occasions when famous men express, by their words or actions, resistance to all kinds of temptations. For instance, there are the lines, "He struck his breast and spoke sternly to his heart: 'Patience, heart—you've put up with worse in the past.'" ²

'Absolutely,' he said.

'Then again, we shouldn't let them be mercenary or avaricious.'

'Of course not.'

'So they shouldn't repeat the verse "Gifts win over even gods and magnificent kings".³ And we won't compliment Achilles' attendant Phoenix on his restraint in advising Achilles to accept the gifts he was being offered and help the Greeks in their fight, but not to refrain from his "wrath" unless he was bribed. It will also go against our wishes and our convictions for Achilles himself to be mercenary enough to accept Agamemnon's gifts and to refuse to release a corpse [391] until he'd been given a ransom.'⁴

'Yes, it would be wrong to approve of that kind of behavior,' he said.

'Now, the fact that it's Homer makes me hesitate,' I said, 'but I'm not sure it's not actually sacrilegious for us to say things like this about Achilles and accept them when others say them. The same goes also for when Achilles says to Apollo, "There's no god more baneful than you—you with your aloofness. You misled me, and I'd pay you back if I could."⁵ We shouldn't believe that he refused to obey the river-god either, and was ready to fight him, and that he said of his hair, which was dedicated to another river, the Spercheius, "I hereby give my hair to the hero Patroclus: may he take it with him",⁶ when Patroclus was dead—we shouldn't believe that he did this. And we'll deny the truth of the stories that he dragged Hector around Patroclus' tomb and slaughtered prisoners on his funeral pyre.⁷ And we won't allow our citizens to believe that Achilles—the child of a goddess and of Peleus (who was himself a model of self-discipline and a grandson of Zeus) and tutored by the sage Cheiron—was so full of turmoil that he suffered from the two conflicting diseases of mean-spirited avarice and disdain for gods and men.'

'You're right,' he said.

'Moreover,' I went on, 'we won't believe or tolerate the story about those horrific kidnap projects by Theseus and Peirithous, who were respectively the sons of Poseidon⁸ and Zeus; and in general, we find it unthinkable that anyone with a god as a parent, or any hero, would be unscrupulous enough to do the terrible, sacrilegious things people falsely attribute to them. No, we should force the poets to deny either that the heroes did these things or that their parents were gods, but not to say both; and they should also be forcibly prevented from trying to persuade the young men of our community that the gods are the source of evil and that the heroes are no better than

2. *Odyssey* 20.17–18 [translator's note].

3. A proverb, possibly originating with Hesiod [translator's note].

4. Achilles accepts Agamemnon's gifts at *Iliad* 19.278–81; Priam brings him gifts to release Hector's body at *Iliad* 24.469–595 [translator's note].

5. *Iliad* 22.15, 20 [translator's note].

6. The river Scamander in *Iliad* 21.211–382; the river Spercheius, *Iliad* 23.151. The river was supposed to guarantee Achilles' safe return from the war; because it has failed to do so, Achilles tells it off and bitterly re-dedicates his hair to his dead

companion Patroclus. It was a primitive Greek practice to dedicate your hair to a river; the fact that hair grows makes it an external manifestation of one's life-force, so in dedicating your hair, you are dedicating yourself [translator's note].

7. *Iliad* 24.14–18, 23.175–77 [translator's note].

8. Greek god of the sea. Theseus: legendary hero and king of Athens, who was assisted by his friend Peirithous both in carrying off Helen and in attempting to retrieve Persephone from the underworld.

ordinary people. We demonstrated earlier the impossibility of bad things originating with the gods; so, as we said then, these stories are not only sacrilegious, but also false.'

'Of course.'

'And they have a pernicious effect on their audience as well, in the sense that no one will find his own badness reprehensible once he's been persuaded that these things are and always have been done by "immediate descendants of the gods, close relatives of Zeus, people whose altar to Zeus, their father-protector, is high on Mount Ida, above the clouds" and "in whom the blood of deities is still fresh".⁹ That's why we must put an end to stories of this nature: if we don't, they will engender [392] in the young men of our community a casual attitude towards badness.'

'I quite agree,' he said.

'Now,' I said, 'if we want to distinguish what in literature should be allowed and what should be censored, there's one further type of writing we should still look at, isn't there? I mean, we've discussed how gods must be portrayed—and deities, heroes, and the dead.'

'Yes.'

'So wouldn't we be left with writing which has human beings as its subject?'

'Yes, obviously.'

'In fact, though, we can't evaluate this kind of writing at the moment.'

'Why not?'

'Because what we'd claim, I imagine, is that poets and prose-writers misrepresent people in extremely important ways, when—as they often do—they portray immoral people as happy and moral people as unhappy, and write about the rewards of undiscovered immorality and how morality is good for someone else, but disadvantageous to oneself. I suppose we'd proscribe assertions of that kind, and tell them that their poems and stories are to make the opposite points, don't you think?'

'I'm certain we would,' he said.

* * *

'It follows, then, that good use of language, harmony, grace, and rhythm all depend on goodness of character. I'm not talking about the state which is actually stupidity, but which we gloss as goodness of character; I'm talking about when the mind really had equipped the character with moral goodness and excellence.'

'Absolutely,' he said.

'And shouldn't the young people of our community take every opportunity to cultivate these qualities, if they are to do their jobs?'

'Yes, they should.'

[401] 'Now, painting and related arts, and weaving, embroidery, architecture, and the manufacture of utensils in general, and also the physical structures of creatures and plants, are all pervaded by these qualities, in the sense that they may display grace or inelegance. And inelegance, lack of rhythm,

9. Both passages are from the *Niobe* of Aeschylus; Niobe is talking about her father Tantalus, a notorious criminal whose father was Zeus [translator's

note]. Tantalus cooked his own son, Pelops, and served him to the gods.

1. Glaucon.

and disharmony are allied to abuse of language and a corrupt character, whereas their opposites are allied to and reflect a disciplined and good character.'

'Absolutely,' he said.

'Is it only the poets we should oversee, then, and compel to choose between imbuing their composition with the image of goodness of character or not practising their art in our community? Don't we also have to oversee artisans in general and stop them imbuing their portraits of animals, their edifices, and whatever else they may produce, with corruption, lack of self-restraint, meanness of spirit, and inelegance, and punish failure to comply with a ban on working in our community? Otherwise, during their upbringing our guardians will be surrounded by the pernicious pasturage of images of badness, which will be so common that they'll often be nibbling and feeding on them, day in and day out, a little at a time, until without realizing it they'll amass badness in their minds. No, we must look for craftsmen who have the innate gift of tracking down goodness and grace, so that the young people of our community can live in a salubrious region where everything is beneficial and where their eyes and ears meet no influences except those of fine works of art, whose effect is like a breeze which brings health from favorable regions, and which imperceptibly guides them, from childhood onwards, until they are assimilated to, familiar with, and in harmony with the beauty of reason.'

'Yes, that would be an outstandingly fine upbringing for them,' he said.

'Now, Glaucon,' I said, 'isn't the prime importance of cultural education due to the fact that rhythm and harmony sink more deeply into the mind than anything else and affect it more powerfully than anything else and bring grace in their train? For someone who is given a correct education, their product is grace; but in the opposite situation it is inelegance. And isn't its importance also due to the fact that a proper cultural education would enable a person to be very quick at noticing defects and flaws in the construction or nature of things? In other words, he'd find offensive the things he ought to find offensive. Fine things would be appreciated and enjoyed by him, and he'd accept them into his mind as nourishment and would therefore become truly good; [402] even when young, however, and still incapable of rationally understanding why, he would rightly condemn and loathe contemptible things. And then the rational mind would be greeted like an old friend when it did arrive, because anyone with this upbringing would be more closely affiliated with rationality than anyone else.'

'Yes,' he said, 'to my mind those are the kinds of reasons for cultural education.'

'It's analogous to the process of becoming literate, then,' I said. 'We weren't literate until we realized that, despite being few in number, the letters are fundamental wherever they occur, and until we appreciated their importance whether the word which contained them was great or small, and stopped thinking that we didn't need to take note of them, but tried hard to recognize them everywhere, on the grounds that literacy would elude us until we were capable of doing so.'

'True.'

'And we won't be able to tell which letters are which when they're reflected

in water or a mirror either, until we can recognize the letters themselves, will we? It takes the same expertise and training, doesn't it?

'Absolutely.'

'Then this is incredibly similar to what I've been saying. We won't be cultured either (and this doesn't apply only to us, but to the people we're claiming to educate for guardianship) until we recognize the types—self-discipline, courage, generosity, broadness of vision, and all the qualities which are allied and opposed to them—wherever they occur, and notice instances of their presence, whether it is the qualities themselves or their reflections that we are noticing, and don't underestimate them whether the situation in which they're occurring is great or small, but bear in mind that it takes the same expertise and training. Right?'

'Definitely,' he said.

'Now,' I went on, 'imagine a situation where someone combines beautiful mental characteristics with physical features which conform to the same principle and so are consistent and concordant with the beauty of his mind. Could there be a more beautiful sight for anyone capable of seeing it?'

'Hardly.'

'And the more beautiful a thing is, the more lovable it is?'

'Naturally.'

'Therefore, the more people are of this type, the more a cultured person will love them. If they're discordant, however, he will not love them.'

'No, he won't,' he said, 'if they have a mental defect; but if their flaw is physical, he'll put up with it and not refuse his affection.'

'I appreciate what you're saying,' I said. 'I know you are or were in love with someone like that, and I concede the point. But answer me this: can self-discipline and excessive pleasure go together?'

'Of course not,' he said. 'Pleasure deranges people just as effectively as distress.'

'Can excessive pleasure partner any of the other virtues?'

[403] 'No.'

'What about promiscuity and dissoluteness?'

'Yes, they're its chief partners.'

'Can you think of any pleasure which is greater and more intense than sexual pleasure?'

'No, I can't,' he said, 'and I can't think of any pleasure which is more manic either.'

'And authentic love is a disciplined and cultured love of someone who is restrained as well as good-looking. Yes?'

'Definitely,' he said.

'Authentic love should have no involvement, then, with anything manic or anything which bears the trace of dissoluteness, should it?'

'No, it shouldn't.'

'Doesn't it follow, then, that lovers and their boyfriends who love and are loved authentically should have no involvement with this pleasure and should have nothing to do with it?'

'That's right, Socrates,' he said. 'They most certainly should not.'

'So you'll apparently be making a regulation in the community we're founding to the effect that although a lover can (if he can persuade his boyfriend

to let him) kiss and spend time with and touch his boyfriend, as he would his son—which is to say, for honourable reasons—still his relationship with anyone he cares for will basically be such that he never gives the impression that there is more to it than that. Otherwise, he'll be liable to condemnation for lacking culture and moral sensibility.'

'Exactly,' he said.

'Now, do you join me in thinking that we've completed our discussion of cultural studies?' I asked. 'At any rate, we've reached a good place to finish: I mean, it's good for cultural studies to lead ultimately to love of beauty.'

'I agree,' he said.

* * *

From *Book VII*

[514] 'Next,' I said, 'here's a situation which you can use as an analogy for the human condition—for our education or lack of it. Imagine people living in a cavernous cell down under the ground; at the far end of the cave, a long way off, there's an entrance open to the outside world. They've been there since childhood; with their legs and necks tied up in a way which keeps them in one place and allows them to look only straight ahead, but not to turn their heads. There's firelight burning a long way further up the cave behind them, and up the slope between the fire and the prisoners there's a road, beside which you should imagine a low wall has been built—like the partition which conjurors place between themselves and their audience and above which they show their tricks.'

'All right,' he² said.

'Imagine also that there are people on the other side of this wall who are carrying all sorts of artefacts. These artefacts, human statuettes, and animal models carved in stone and wood [515] and all kinds of materials stick out over the wall; and as you'd expect, some of the people talk as they carry these objects along, while others are silent.'

'This is a strange picture you're painting,' he said, 'with strange prisoners.'

'They're no different from us,' I said. 'I mean, in the first place, do you think they'd see anything of themselves and one another except the shadows cast by the fire on to the cave wall directly opposite them?'

'Of course not,' he said. 'They're forced to spend their lives without moving their heads.'

'And what about the objects which were being carried along? Won't they only see their shadows as well?'

'Naturally.'

'Now, suppose they were able to talk to one another: don't you think they'd assume that their words applied to what they saw passing by in front of them?'³

'They couldn't think otherwise.'

'And what if sound echoed off the prison wall opposite them? When any of the passers-by spoke, don't you think they'd be bound to assume that the sound came from a passing shadow?'

2. Glaucon.

3. In Platonic terms, this shows the extent of the

prisoners' delusion, since our words really refer to types [translator's note].

'I'm absolutely certain of it,' he said.

'All in all, then,' I said, 'the shadows of artefacts would constitute the only reality people in this situation would recognize.'

'That's absolutely inevitable,' he agreed.

'What do you think would happen, then,' I asked, 'if they were set free from their bonds and cured of their inanity? What would it be like if they found that happening to them? Imagine that one of them has been set free and is suddenly made to stand up, to turn his head and walk, and to look towards the firelight. It hurts him to do all this and he's too dazzled to be capable of making out the objects whose shadows he'd formerly been looking at. And suppose someone tells him that what he's been seeing all this time has no substance, and that he's now closer to reality and is seeing more accurately, because of the greater reality of the things in front of his eyes—what do you imagine his reaction would be? And what do you think he'd say if he were shown any of the passing objects and had to respond to being asked what it was? Don't you think he'd be bewildered and would think that there was more reality in what he'd been seeing before than in what he was being shown now?'

'Far more,' he said.

'And if he were forced to look at the actual firelight, don't you think it would hurt his eyes? Don't you think he'd turn away and run back to the things he could make out, and would take the truth of the matter to be that these things are clearer than what he was being shown?'

'Yes,' he agreed.

'And imagine him being dragged forcibly away from there up the rough, steep slope,' I went on, 'without being released until he's been pulled out into the sunlight. Wouldn't this treatment cause him pain and distress? [516] And once he's reached the sunlight, he wouldn't be able to see a single one of the things which are currently taken to be real, would he, because his eyes would be overwhelmed by the sun's beams?'

'No, he wouldn't,' he answered, 'not straight away.'

'He wouldn't be able to see things up on the surface of the earth, I suppose, until he'd got used to his situation. At first, it would be a shadows that he could most easily make out, then he'd move on to the reflections of people and so on in water,⁴ and later he'd be able to see the actual things themselves. Next, he'd feast his eyes on the heavenly bodies and the heavens themselves, which would be easier at night: he'd look at the light of the stars and the moon, rather than at the sun and sunlight during the daytime.'

'Of course.'

'And at last, I imagine, he'd be able to discern and feast his eyes on the sun—not the displaced image of the sun in water or elsewhere, but the sun on its own, in its proper place.'

'Yes, he'd inevitably come to that,' he said.

'After that, he'd start to think about the sun and he'd deduce that it is the source of the seasons and the yearly cycle, that the whole of the visible realm

4. The stage of looking at reflections and so on outside the cave does not differ in terms of objects from the stage of looking at the effigies in the cave. But it differs in that it is now more difficult for one

to return to the safety of convention [translator's note].

5. The sun in the allegory is, of course, goodness [translator's note].

is its domain, and that in a sense everything which he and his peers used to see is its responsibility.'

'Yes, that would obviously be the next point he'd come to,' he agreed.

'Now, if he recalled the cell where he'd originally lived and what passed for knowledge there and his former fellow prisoners, don't you think he'd feel happy about his own altered circumstances, and sorry for them?'

'Definitely.'

'Suppose that the prisoners used to assign prestige and credit to one another, in the sense that they rewarded speed at recognizing the shadows as they passed, and the ability to remember which ones normally come earlier and later and at the same time as which other ones, and expertise at using this as a basis for guessing which ones would arrive next. Do you think our former prisoner would covet these honours and would envy the people who had status and power there, or would he much prefer, as Homer describes it, "being a slave labouring for someone else—someone without property",⁶ and would put up with anything at all, in fact, rather than share their beliefs and their life?'

'Yes, I think he'd go through anything rather than live that way,' he said.

'Here's something else I'd like your opinion about,' I said. 'If he went back underground and sat down again in the same spot, wouldn't the sudden transition from the sunlight mean that his eyes would be overwhelmed by darkness?'

'Certainly,' he replied.

'Now, the process of adjustment would be quite long this time, and suppose that before his eyes had settled down and while he wasn't seeing well, [517] he had once again to compete against those same old prisoners at identifying those shadows. Wouldn't he make a fool of himself? Wouldn't they say that he'd come back from his upward journey with his eyes ruined, and that it wasn't even worth trying to go up there? And wouldn't they—if they could—grab hold of anyone who tried to set them free and take them up there and kill him?'

'They certainly would,' he said.

'Well, my dear Glaucon,' I said, 'you should apply this allegory, as a whole, to what we were talking about before. The region which is accessible to sight should be equated with the prison cell, and the firelight there with the light of the sun. And if you think of the upward journey and the sight of things up on the surface of the earth as the mind's ascent to the intelligible realm, you won't be wrong—at least, I don't think you'd be wrong, and it's my impression that you want to hear. Only God knows if it's actually true, however. Anyway, it's my opinion that the last thing to be seen—and it isn't easy to see either—in the realm of knowledge is goodness; and the sight of the character of goodness leads one to deduce that it is responsible for everything that is right and fine, whatever the circumstances, and that in the visible realm it is the progenitor of light and of the source of light, and in the intelligible realm it is the source and provider of truth and knowledge. And I also think that the sight of it is a prerequisite for intelligent conduct either of one's own private affairs or of public business.'

'I couldn't agree more,' he said.

6. *Odyssey* 11.489 [translator's note]. In Homer, the comparison is between being a living slave and ruling over the dead—a passage that, according to

Republic 3.386c (see above), should be deleted. 7. As Socrates was killed [translator's note], found guilty of impiety and corrupting Athens' youth.

'All right, then,' I said. 'I wonder if you also agree with me in not finding it strange that people who've travelled there don't want to engage in human business: there's nowhere else their minds would ever rather be than in the upper region—which is hardly surprising, if our allegory has got this aspect right as well.'

'No, it's not surprising,' he agreed.

'Well, what about this?' I asked. 'Imagine someone returning to the human world and all its misery after contemplating the divine realm. Do you think it's surprising if he seems awkward and ridiculous while he's still not seeing well, before he's had time to adjust to the darkness of his situation, and he's forced into a contest (in a lawcourt or wherever) about the shadows of morality or the statues which cast the shadows, and into a competition whose terms are the conceptions of morality held by people who have never seen morality itself?'

'No, that's not surprising in the slightest,' he said.

[518] 'In fact anyone with any sense,' I said, 'would remember that the eyes can become confused in two different ways, as a result of two different sets of circumstances: it can happen in the transition from light to darkness, and also in the transition from darkness to light. If he took the same facts into consideration when he also noticed someone's mind in such a state of confusion that it was incapable of making anything out, his reaction wouldn't be unthinking ridicule. Instead, he'd try to find out whether this person's mind was returning from a mode of existence which involves greater lucidity and had been blinded by the unfamiliar darkness, or whether it was moving from relative ignorance to relative lucidity and had been overwhelmed and dazzled by the increased brightness. Once he'd distinguished between the two conditions and modes of existence, he'd congratulate anyone he found in the second state, and feel sorry for anyone in the first state. If he did choose to laugh at someone in the second state, his amusement would be less absurd than when laughter is directed at someone returning from the light above.

'Yes,' he said, 'you're making a lot of sense.'

* * *

From *Book X*

[595] 'You know,' I said, 'the issue of poetry is the main consideration—among many others—which convinces me that the way we were trying to found our community was along absolutely the right lines.'

'What are you thinking of?' he⁸ asked.

'That we flatly refused to admit any representational poetry.⁹ I mean, its total unacceptability is even clearer, in my opinion, now that we've distinguished the different aspects of the mind.'

'How is it clearer?'

'Well, this is just between ourselves: please don't denounce me to the tragic playwrights and all the other representational poets. But it looks as though this whole genre of poetry deforms its audience's minds,¹ unless they have the antidote, which is recognition of what this kind of poetry is actually like.'

8. Glaucon.

9. Tragedy and epic; insofar as they are imitative, they are by definition removed from reality. The total ban here seems to contradict *Republic 2* and

3, where Socrates encourages literary representation of behavior that is appropriate and good.

1. Poetry deforms minds in the sense that it feeds our lower mind and, by virtue of the fact that its

'What do you mean? What do you have in mind?' he asked.

'It's fairly clear,' I said, 'that all these fine tragedians trace their lineage back to Homer: they're Homer's students and disciples, ultimately. And this makes it difficult for me to say what I have to say, because I've had a kind of fascinated admiration for Homer ever since I was young. Still, we should value truth more than we value any person, so, as I say, I'd better speak out.'

'Yes,' he said.

'And you'll listen to what I have to say, or rather respond to any questions I ask?'

'Yes. Go ahead and ask them.'

'Can you tell me what representation basically is? You see, I don't quite understand its point myself.'

'And I suppose I do!' he said.

'It wouldn't surprise me if you did,' I said. 'Just because a person can't see very well, it doesn't mean that [596] he won't often see things before people with better eyesight than him.'

'That's true,' he said. 'All the same, I'd be too shy to explain any views I did have in front of you, so please try to come up with an answer yourself.'

'All right. Shall we get the enquiry going by drawing on familiar ideas? Our usual position is, as you know, that any given plurality of things which have a single name constitutes a single specific type.² Is that clear to you?'

'Yes.'

'So now let's take any plurality you want. Would it be all right with you if we said that there were, for instance, lots of beds and tables?'

'Of course.'

'But these items of furniture comprise only two types—the type of bed and the type of table.'

'Yes.'

'Now, we also invariably claim that the manufacture of either of these items of furniture involves the craftsman looking to the type and then making the beds or tables (or whatever) which we use. The point is that the type itself is not manufactured by any craftsman. How could it be?'

'It couldn't.'

'There's another kind of craftsman too. I wonder what you think of him.'

'What kind?'

'He makes everything—all the items which every single manufacturer makes.'

'He must be extraordinarily gifted.'

'Wait: you haven't heard the half of it yet. It's not just a case of his being able to manufacture all the artefacts there are: every plant too, every creature (himself included), the earth, the heavens, gods, and everything in the heavens and in Hades under the earth—all these are made and created by this one man!'

'He really must be extraordinarily clever,' he said.

'Don't you believe me?' I asked. 'Tell me, do you doubt that this kind of craftsman could exist under any circumstances, or do you admit the possibility that a person could—in one sense, at least—create all these things? I

domain is appearance, does not feed that inner organ which can perceive truth and reality (trans-

lator's note).

2. That is, the Idea or Form.

mean, don't you realize that you yourself could, under certain circumstances, create all these things?'

'What circumstances?' he asked.

'I'm not talking about anything complicated or rare,' I said. 'It doesn't take long to create the circumstances. The quickest method, I suppose, is to get hold of a mirror and carry it around with you everywhere. You'll soon be creating everything I mentioned a moment ago—the sun and the heavenly bodies, the earth, yourself, and all other creatures, plants, and so on.'

'Yes, but I'd be creating appearances, not actual real things,' he said.

'That's a good point,' I said. 'You've arrived just in time to save the argument. I mean, that's presumably the kind of craftsman a painter is. Yes?'

'Of course.'

'His creations aren't real, according to you; but do you agree that all the same there's a sense in which even a painter creates a bed?'

'Yes,' he said, 'he's another one who creates an apparent bed.'

[597] 'What about a joiner who specializes in making beds? Weren't we saying a short while ago that what he makes is a particular bed, not the type, which is (on our view) the real bed?'

'Yes, we were.'

'So if there's no reality to his creation, then it isn't real; it's similar to something real, but it isn't actually real. It looks as though it's wrong to attribute full reality to a joiner's or any artisan's product, doesn't it?'

'Yes,' he said, 'any serious student of this kind of argument would agree with you.'

'It shouldn't surprise us, then, if we find that even these products are obscure when compared with the truth.'

'No, it shouldn't.'

'Now, what about this representer we're trying to understand? Shall we see if these examples help us?' I asked.

'That's fine by me,' he said.

'Well, we've got these three beds. First, there's the real one, and we'd say, I imagine, that it is the product of divine craftsmanship: I mean, who else could have made it?'

'No one, surely.'

'Then there's the one the joiner makes.'

'Yes,' he said.

'And then there's the one the painter makes. Yes?'

'Yes, agreed.'

'These three, then—painter, joiner, God—are responsible for three different kinds of bed.'

'Yes, that's right.'

'Now, God has produced only that one real bed. The restriction to only one might have been his own choice, or it might just be impossible for him to make more than one. But God never has, and never could, create two or more such beds.'

'Why not?' he asked.

'Even if he were to make only two such beds,' I said, 'an extra one would emerge, and both the other two would be of that one's type. It, and not the two beds, would be the real bed.'

'Right,' he said.

'God realized this, I'm sure. He didn't want to be a kind of joiner, making a particular bed: he wanted to be a genuine creator and make a genuine bed. That's why he created a single real one.'

'I suppose that's right.'

'Shall we call him its progenitor, then, or something like that?'

'Yes, he deserves the name,' he said, 'since he's the maker of this and every other reality.'

'What about a joiner? Shall we call him a manufacturer of beds?'

'Yes.'

'And shall we also call a painter a manufacturer and maker of beds and so on?'

'No, definitely not.'

'What do you think he does with beds, then?'

'I think the most suitable thing to call him would be a representer of the others' creations,' he said.

'Well, in that case,' I said, 'you're using the term "representer" for someone who deals with things which are, in fact, two generations away from reality, aren't you?'

'Yes,' he said.

'The same goes for tragic playwrights, then, since they're representers: they're two generations away from the throne of truth, and so are all other representers.'

'I suppose so.'

'Well, in the context of what we're now saying about representation, I've got a further question about painters. [598] Is it, in any given instance, the actual reality that they try to represent, or is it the craftsmen's products?'

'The craftsmen's products,' he said.

'Here's another distinction you'd better make: do they try to represent them as they are, or as they appear to be?'

'What do you mean?' he asked.

'I'll tell you. Whether you look at a bed from the side or straight on or whatever, it's still just as much a bed as it ever was, isn't it? I mean, it doesn't actually alter it at all: it just *appears* to be different, doesn't it? And the same goes for anything else you can mention. Yes?'

'Yes,' he agreed. 'It seems different, but isn't actually.'

'So I want you to consider carefully which of these two alternatives painting is designed for in any and every instance. Is it designed to represent the facts of the real world or appearances? Does it represent appearance or truth?'

'Appearance,' he said.

'It follows that representation and truth are a considerable distance apart, and a representer is capable of making every product there is only because his contact with things is slight and is restricted to how they look. Consider what a painter does, for instance: we're saying that he doesn't have a clue about shoemaking or joinery, but he'll still paint pictures of artisans working at these and all other areas of expertise, and if he's good at painting he might paint a joiner, have people look at it from far away, and deceive them—if they're children or stupid adults—by making it look as though the joiner were real.'

'Naturally.'

'I think the important thing to bear in mind about cases like this, Glaucon, is that when people tell us they've met someone who's mastered every craft, and is the world's leading expert in absolutely every branch of human knowledge, we should reply that they're being rather silly. They seem to have met the kind of illusionist who's expert at representation and, thanks to their own inability to evaluate knowledge, ignorance, and representation, to have been so thoroughly taken in as to believe in his omniscience.'

'You're absolutely right,' he said.

'Now, we'd better investigate tragedy next,' I said, 'and its guru, Homer, because one does come across the claim that there's no area of expertise, and nothing relevant to human goodness and badness either—and nothing to do with the gods even—that these poets don't understand. It is said that a good poet must understand the issues he writes about, if his writing is to be successful, and that if he didn't understand them, he wouldn't be able to write about them. So we'd better try to decide between the alternatives. Either the people who come across these representational poets are being taken in and are failing to appreciate, when they see their products, that these products are [599] two steps away from reality and that it certainly doesn't take knowledge of the truth to create them (since what they're creating are appearances, not reality); or this view is valid, and in fact good poets are authorities on the subjects most people are convinced they're good at writing about.'

'Yes, this definitely needs looking into,' he said.

'Well, do you think that anyone who was capable of producing both originals and images would devote his energy to making images, and would make out that this is the best thing he's done with his life?'

'No, I don't.'

'I'm sure that if he really knew about the things he was copying in his representations, he'd put far more effort into producing real objects than he would into representations, and would try to leave behind a lot of fine products for people to remember him by, and would dedicate himself to being the recipient rather than the bestower of praise.'

'I agree,' he said. 'He'd gain a lot more prestige and do himself a great deal more good.'

'Well, let's concentrate our interrogation of Homer (or any other poet you like) on a single area. Let's not ask him whether he can tell us of any patients cured by any poet in ancient or modern times, as Asclepius³ cured his patients, or of any students any of them left to continue his work, as Asclepius left his sons. And even these questions grant the possibility that a poet might have had some medical knowledge, instead of merely representing medical terminology. No, let's not bother to ask him about any other areas of expertise either. But we do have a right to ask Homer about the most important and glorious areas he undertakes to expound—warfare, tactics, politics, and human education. Let's ask him, politely, "Homer, maybe you aren't two steps away from knowing the truth about goodness; maybe you aren't involved in the manufacture of images (which is what we called representation). Perhaps you're actually only one step away, and you do have the ability to recognize which practices—in their private or their public

3. Hero and god of healing (in the *Iliad*, a mortal).

lives—improve people and which ones impair them. But in that case, just as Sparta has its Lycurgus⁴ and communities of all different sizes have their various reformers, please tell us which community has you to thank for improvements to its government. Which community attributes the benefits of its good legal code to you? Italy and Sicily name Charondas in this respect, we Athenians name Solon.⁵ Which country names you?” Will he have any reply to make?”

‘I don’t think so,’ said Glaucon. ‘Even the Homeridae⁶ themselves don’t make that claim.’

[600] ‘Well, does history record that there was any war fought in Homer’s time whose success depended on his leadership or advice?’

‘No.’

‘Well then, are a lot of ingenious inventions attributed to him, as they are to Thales of Miletus and Anacharsis of Scythia?⁷ I mean the kinds of inventions which have practical applications in the arts and crafts and elsewhere. He is, after all, supposed to be good at creating things.’

‘No, there’s not the slightest hint of that sort of thing.’

‘All right, so there’s no evidence of his having been a public benefactor, but what about in private? Is there any evidence that, during his lifetime, he was a mentor to people, and that they used to value him for his teaching and then handed down to their successors a particular Homeric way of life? This is what happened to Pythagoras:⁸ he wasn’t only held in extremely high regard for his teaching during his lifetime, but his successors even now call their way of life Pythagorean and somehow seem to stand out from all other people.’

‘No, there’s no hint of that sort of thing either,’ he said. ‘I mean, Homer’s associate Creophylus⁹ cultural attainments would turn out to be even more derisory than his name suggests they are, Socrates, if the stories about Homer are true. You see, Creophylus is said to have more or less disregarded Homer during his lifetime.’

‘Yes, that is what we’re told,’ I agreed. ‘But, Glaucon, if Homer really had been an educational expert whose products were better people—which is to say, if he had knowledge in this sphere and his abilities were not limited to representation—don’t you think he’d have been surrounded by hordes of associates, who would have admired him and valued his company highly? Look at Protagoras of Abdera, Prodicus of Ceos,¹ and all the rest of them: they can use their exclusive tuition to make their contemporaries believe that without them in charge of their education they won’t be capable of managing

4. Traditional founder of the Spartan political, social, and legal systems.

5. Athenian statesman and poet (ca. 638–559 B.C.E.) who reformed the city’s constitution. Charondas (6th c. B.C.E.), lawgiver of Catana and other colonies of Chalchis in Sicily.

6. The “guild” of people who claimed descent from Homer, in the sense of maintaining and perpetuating his poems, also claimed inside knowledge of all aspects of the poet’s life and perpetuated a lot of apocryphal tales about him [translator’s note]. *Homeridae* literally means “Sons of Homer.”

7. Scythian prince (6th c. B.C.E.) who traveled widely in Greece and gained a reputation for wis-

dom; he was said to have invented the potter’s wheel. Thales (6th c. B.C.E.) reputed founder of geometry and physical science, who calculated eclipses and discovered the solstice.

8. Greek philosopher and mathematician (6th c. B.C.E.).

9. Greek poet; his name literally means “meat-kin.” Glaucon’s meaning is that meat was a more important part of a coarse athlete’s diet than a cultured intellectual’s; and it would have been a sign of culture on Creophylus’s part not to have neglected his mentor [translator’s note].

1. Greek sophist, a contemporary of Socrates. Protagoras (5th c. B.C.E.), Greek philosopher, one of the most successful of the sophists.

their own estates, let alone their communities, and they're so appreciated for this expertise of theirs that their associates almost carry them around on their heads.² So if Homer or Hesiod had been able to help people's moral development, would their contemporaries have allowed them to go from town to town reciting their poems? Wouldn't they have kept a tighter grip on them than on their money, and tried to force them to stay with them in their homes? And if they couldn't persuade them to do that, wouldn't they have danced attendance on them wherever they went, until they'd gained as much from their teaching as they could?'

'I don't think anyone could disagree with you, Socrates,' he said.

'So shall we classify all poets, from Homer onwards, as representers of images of goodness (and of everything else which occurs in their poetry), and claim that they don't have any contact with the truth? The facts are as we said a short while ago: a painter creates an illusory shoemaker, when not only does he not understand anything about shoemaking, [601] but his audience doesn't either. They just base their conclusions on the colours and shapes they can see.'

'Yes.'

'And I should think we'll say that the same goes for a poet as well: he uses words and phrases to block in some of the colours of each area of expertise, although all he understands is how to represent things in a way which makes other superficial people, who base their conclusions on the words they can hear, think that he's written a really good poem about shoemaking or military command or whatever else it is that he's set to metre, rhythm, and music. It only takes these features to cast this powerful a spell: that's what they're for. But when the poets' work is stripped of its musical hues and expressed in plain words, I think you've seen what kind of impression it gives, so you know what I'm talking about.'

'I do,' he said.

'Isn't it,' I asked, 'like what noticeably happens when a young man has alluring features, without actually being good-looking, and then this charm of his deserts him?'

'Exactly,' he said.

'Now, here's another point to consider. An image-maker, a representer, understands only appearance, while reality is beyond him. Isn't that our position?'

'Yes.'

'Let's not leave the job half done: let's give this idea the consideration it deserves.'

'Go on,' he said.

'What a painter does, we're saying, is paint a picture of a horse's reins and a bit. Yes?'

'Yes.'

'While they're made by a saddler and a smith, aren't they?'

'Yes.'

'Does a painter know what the reins and the bit have to be like? Surely

2. As effigies and images of the gods were carried through the streets during a ritual procession [translator's note].

even their makers, the smith and the saddler, don't know this, do they? Only the horseman does, because he's the one who knows how to make use of them.'

'You're quite right.'

'In fact, won't we claim that it's a general principle?'

'What?'

'That whatever the object, there are three areas of expertise: usage, manufacture, and representation.'

'Yes.'

'Now, is there any other standard by which one assesses the goodness, fineness, and rightness of anything (whether it's a piece of equipment or a creature or an activity) than the use for which it was made, by man or by nature?'

'No.'

'It's absolutely inevitable, then, that no one knows the ins and outs of any object more than the person who makes use of it. He has to be the one to tell the manufacturer how well or badly the object he's using fares in actual usage. A pipe-player,³ for example, tells a pipe-maker which of his pipes do what they're supposed to do when actually played, and goes on to instruct him in what kinds of pipes to make, and the pipe-maker does what he's told.'

'Of course.'

'So as far as good and bad pipes are concerned, it's a knowledgeable person who gives the orders, while the other obeys the orders and does the manufacturing. Right?'

'Yes.'

'Justified confidence, then, is what a pipe-maker has about goodness and badness (as a result of spending time with a knowledgeable person and having to listen to him), while knowledge is the province [602] of the person who makes use of the pipes.'

'Yes.'

'Which of these two categories does our representer belong to? Does he acquire knowledge about whether or not what he's painting is good or right from making use of the object, or does he acquire true belief because of having to spend time with a knowledgeable person and being told what to paint?'

'He doesn't fit either case.'

'As far as goodness and badness are concerned, then, a representer doesn't have either knowledge or true beliefs about whatever it is he's representing.'

'Apparently not.'

'How nicely placed a poetic representer is, then, to know what he's writing about!'

'Not really.'

'No, because all the same, despite his ignorance of the good and bad aspects of things, he'll go on representing them. But what he'll be representing, apparently, is whatever appeals to a large, if ignorant, audience.'

'Naturally.'

'Here are the points we seem to have reached a reasonable measure of agreement on, then: a representer knows nothing of value about the things

3. Or "flute player."

he represents; representation is a kind of game, and shouldn't be taken seriously; and those who compose tragedies in iambic and epic verse⁴ are, without exception, outstanding examples of representers.'

'Yes.'

'So the province of representation is indeed two steps removed from truth, isn't it?' I said.

'Yes.'

'But on which of the many aspects of a person does it exert its influence?'

'What are you getting at?'

'Something like this. One and the same object appears to vary in size depending on whether we're looking at it from close up or far away.'

'Yes.'

'And the same objects look both bent and straight depending on whether we look at them when they're in water or out of it, and both concave and convex because sight gets misled by colouring. Our mind obviously contains the potential for every single kind of confusion like this. It's because illusory painting aims at this affliction in our natures that it can only be described as sorcery; and the same goes for conjuring and all trickery of that sort.'

'True.'

'Now, methods have evolved of combating this—measuring, counting, and weighing are the most elegant of them—and consequently of ending the reign within us of apparent size, number, and weight, and replacing them with something which calculates and measures, or even weighs. Right?'

'Of course.'

'And this, of course, is the job of the rational part of the mind, which is capable of performing calculations.'

'Yes.'

'Now, it's not uncommon for the mind to have made its measurements, and to be reporting that x is larger than y (or smaller than it, or the same size as it), but still to be receiving an impression which contradicts its measurements of these very objects.'

'Yes.'

'Well, didn't we say that it's impossible for a single thing to hold contradictory beliefs at the same time about the same objects?'

'Yes, we did, and we were right.'

[603] 'So the part of the mind whose views run counter to the measurements must be different from the part whose views fall in with the measurements.'

'Yes.'

'But it's the best part of the mind which accepts measurements and calculations.'

'Of course.'

'The part which opposes them, therefore, must be a low-grade part of the mind.'

'Necessarily.'

'Well, all that I've been saying has been intended to bring us to the point where we can agree that not only does painting—or rather representation in

4. The meter of epics is dactylic hexameter (a 6-foot line based on the syllabic patterns long-short-short); iambic trimeter (a 3-foot line based

on the syllabic pattern short-long) was the most common meter of dialogue and set speeches in tragedies.

general—produce a product which is far from truth, but it also forms a close, warm, affectionate relationship with a part of us which is, in its turn, far from intelligence. And nothing healthy or authentic can emerge from this relationship.'

'Absolutely,' he said.

'A low-grade mother like representation, then, and an equally low-grade father produce low-grade children.'

'I suppose that's right.'

'Does this apply only to visual representation,' I asked, 'or to aural representation as well—in other words, to poetry?'

'I suppose it applies to poetry as well,' he said.

'Well, we'd better not rely on mere suppositions based on painting,' I said. 'Let's also get close enough to that part of the mind which poetic representation consorts with to see whether it's of low or high quality.'

'Yes, we should.'

'We'd better start by having certain ideas out in the open. We'd say that representational poetry represents people doing things, willingly or unwillingly, and afterwards thinking that they've been successful or unsuccessful, and throughout feeling distressed or happy. Have I missed anything out?'

'No, nothing.'

'Well, does a person remain internally unanimous throughout all this? We found that, in the case of sight, there's conflict and people have contradictory views within themselves at the same time about the same objects. Is it like that when one is doing things too? Is there internal conflict and dissent? But it occurs to me that there's really no need for us to decide where we stand on this issue now, because we've already done so, perfectly adequately, in an earlier phase of the discussion,⁵ when we concluded that, at any given moment, our minds are teeming with countless thousands of these kinds of contradictions.'

'That's right,' he said.

'Yes,' I said. 'But that earlier discussion of ours was incomplete, and I think it's crucial that we finish it off now.'

'What have we left out?' he asked.

'If a good man meets with a misfortune such as losing a son or something else he values very highly, we've already said, as you know, that he'll endure this better than anyone else.'

'Yes.'

'But here's something for us to think about. Will he feel no grief, or is that impossible? If it's impossible, is it just that he somehow keeps his pain within moderate bounds?'

'The second alternative is closer to the truth,' he said.

[604] 'But now I've got another question for you about him. Do you think he'll be more likely to fight and resist his distress when his peers can see him, or when he's all alone by himself in some secluded spot?'

'He'll endure pain far better when there are people who can see him, of course,' he said.

'When he's all alone, however, I imagine he won't stop himself expressing

5. In *Republic* 4.439b–444a, where Socrates argues that each mind or soul is divided into three distinct and sometimes warring parts (the rational, the spirited, and the desiring).

a lot of things he'd be ashamed of anyone hearing, and doing a lot of things he'd hate anyone to see him do.'

'That's right,' he agreed.

'Isn't it the case that reason and convention recommend resistance, while the actual event pushes him towards distress?'

'True.'

'When a person is simultaneously pulled in opposite directions in response to a single object, we're bound to conclude that he has two sides.'

'Of course.'

'One of which is prepared to let convention dictate the proper course of action, isn't it?'

'Can you explain how?'

'Convention tells us, as you know, that it's best to remain as unruffled as possible when disaster strikes and not to get upset, on the grounds that it's never clear whether an incident of this nature is good or bad, that nothing positive is gained by taking it badly, that no aspect of human life is worth bothering about a great deal, and that grief blocks our access to the very thing we need to have available as quickly as possible in these circumstances.'

'What do you have in mind?' he asked.

'The ability to think about the incident,' I replied, 'and, under the guidance of reason, to make the best possible use of one's situation, as one would in a game of dice when faced with how the dice had fallen. When children bump into things, they clutch the hurt spot and spend time crying; instead of behaving like that, we should constantly be training our minds to waste no time before trying to heal anything which is unwell, and help anything which has fallen get up from the floor—to banish mourning by means of medicine.'

'Yes, that's the best way to deal with misfortune,' he said.

'Now, our position is that the best part of our minds is perfectly happy to be guided by reason like this.'

'That goes without saying.'

'Whereas there's another part of our minds which urges us to remember the bad times and to express our grief, and which is insatiably greedy for tears. What can we say about it? That it's incapable of listening to reason, that it can't face hard work, that it goes hand in hand with being frightened of hardship?'

'Yes, that's right.'

'Now, although the petulant part of us is rich in a variety of representable possibilities, the intelligent and calm side of our characters is pretty well constant and unchanging. This makes it not only difficult to represent, but also difficult to understand when it is represented, particularly when the audience is the kind of motley crowd you find crammed into a theatre, because they're simply not acquainted with the experience that's being represented to them.'

[605] 'Absolutely.'

'Evidently, then, a representational poet has nothing to do with this part of the mind: his skill isn't made for its pleasure, because otherwise he'd lose his popular appeal. He's concerned with the petulant and varied side of our characters, because it's easy to represent.'

'Obviously.'

'So we're now in a position to see that we'd be perfectly justified in taking hold of him and placing him in the same category as a painter. He resembles a painter because his creations fall short of truth, and a further point of resemblance is that the part of the mind he communicates with is not the best part, but something else. Now we can see how right we'd be to refuse him admission into any community which is going to respect convention, because now we know which part of the mind he wakes up. He destroys the rational part by feeding and fattening up this other part, and this is equivalent to someone destroying the more civilized members of a community by presenting ruffians with political power. There's no difference, we'll claim, between this and what a representational poet does: at a personal level, he establishes a bad system of government in people's minds by gratifying their irrational side, which can't even recognize what size things are—an object which at one moment it calls big, it might call small the next moment—by creating images, and by being far removed from truth.'

'Yes.'

'However, we haven't yet made the most serious allegation against representational poetry. It has a terrifying capacity for deforming even good people. Only a very few escape.'

'Yes, that is terrifying. Does it really do that?'

'Here's my evidence: you can make up your mind. When Homer or another tragedian represents the grief of one of the heroes, they have him deliver a lengthy speech of lamentation or even have him sing a dirge and beat his breast; and when we listen to all this, even the best of us, as I'm sure you're aware, feels pleasure. We surrender ourselves, let ourselves be carried along, and share the hero's pain; and then we enthuse about the skill of any poet who makes us feel particularly strong feelings.'

'Yes, I'm aware of this, of course.'

'However, you also appreciate that when we're afflicted by trouble in our own lives, then we take pride in the opposite—in our ability to endure pain without being upset. We think that this is manly behaviour, and that only women behave in the way we were sanctioning earlier.'

'I realize that,' he said.

'So,' I said, 'instead of being repulsed by the sight of the kind of person we'd regret and deplore being ourselves, we enjoy the spectacle and sanction it. Is this a proper way to behave?'

'No, it certainly isn't,' he said. 'It's pretty unreasonable, I'd say.'

[606] 'I agree,' I said, 'and here's even more evidence.'

'What?'

'Consider this. What a poet satisfies and gratifies on these occasions is an aspect of ourselves which we forcibly restrain when tragedy strikes our own lives—an aspect which hungers after tears and the satisfaction of having cried until one can cry no more, since that is what it is in its nature to want to do. When the part of us which is inherently good has been inadequately trained in habits enjoined by reason, it relaxes its guard over this other part, the part which feels sad. Other people, not ourselves, are feeling these feelings, we tell ourselves, and it's no disgrace for us to sanction such behaviour and feel sorry for someone who, even while claiming to be good, is over-indulging in grief; and, we think, we are at least profiting from the pleasure, and there's no point in throwing away the pleasure by spurning the whole

poem or play. You see, few people have the ability to work out that we ourselves are bound to store the harvest we reap from others: these occasions feed the feeling of sadness until it is too strong for us easily to restrain it when hardship occurs in our own lives.'

'You're absolutely right,' he said.

'And doesn't the same go for humour as well? If there are amusing things which you'd be ashamed to do yourself, but which give you a great deal of pleasure when you see them in a comic representation or hear about them in private company—when you don't find them loathsome and repulsive⁶—then isn't this exactly the same kind of behaviour as we uncovered when talking about feeling sad? There's a part of you which wants to make people laugh, but your reason restrains it, because you're afraid of being thought a vulgar clown. Nevertheless, you let it have its way on those other occasions, and you don't realize that the almost inevitable result of giving it energy in this other context is that you become a comedian in your own life.'

'Yes, that's very true,' he said.

'And the same goes for sex, anger, and all the desires and feelings of pleasure and distress which, we're saying, accompany everything we do: poetic representation has the same effect in all these cases too. It irrigates and tends to these things when they should be left to wither, and it makes them our rulers when they should be our subjects, because otherwise we won't live better and happier lives, but quite the opposite.'

'I can't deny the truth of what you're saying,' he said.

'Therefore, Glaucon,' I went on, 'when you come across people praising Homer and saying that he is the poet who has educated Greece,⁷ that he's a good source for people to learn how to manage their affairs and gain culture in their lives, and that one should structure the whole of one's life in accordance with his precepts, [607] you ought to be kind and considerate: after all, they're doing the best they can. You should concede that Homer is a supreme poet and the original tragedian, but you should also recognize that the only poems we can admit into our community are hymns to the gods and eulogies of virtuous men. If you admit the entertaining Muse of lyric and epic poetry, then instead of law and the shared acceptance of reason as the best guide, the kings of your community will be pleasure and pain.'

'You're quite right,' he agreed.

'So,' I said, 'since we've been giving poetry another hearing, there's our defence: given its nature, we had good grounds for banishing it earlier from our community. No rational person could have done any different. However, poetry might accuse us of insensitivity and lack of culture, so we'd better also tell her that there's an ancient quarrel between poetry and philosophy. There are countless pieces of evidence for this enmity between them, but here are just a few: there's that "bitch yelping and baying at her master"; there's "featuring prominently in the idle chatter of fools"; there's "control by a crowd of know-alls"; there are those whose "subtle notions" lead them to realize that they do indeed have "notional incomes".⁸ All the same, we

6. It is important to remember in this paragraph that Greek Old Comedy relied extremely heavily on very crude sexual humor [translator's note].

7. Herodotus said that Homer and Hesiod had described the form and function of the gods for the Greeks. In general, Homer was still in Plato's

day considered an essential part of one's education, not only as poetry, but as a source of wisdom, morality, and all kinds of information. This is the background to Plato's attack [translator's note].

8. We know the author of none of these snatches of verse [translator's note].

ought to point out that if the kinds of poetry and representation which are designed merely to give pleasure can come up with a rational argument for their inclusion in a well-governed community, we'd be delighted—short of compromising the truth as we see it, which wouldn't be right—to bring them back from exile: after all, we know from our own experience all about their spell. I mean, haven't *you* ever fallen under the spell of poetry, Glaucon, especially when the spectacle is provided by Homer?'

'I certainly have.'

'Under these circumstances, then, if our allegations met a poetic rebuttal in lyric verse or whatever, would we be justified in letting poetry return?'

'Yes.'

'And I suppose we'd also allow people who champion poetry because they like it, even though they can't compose it, to speak on its behalf in prose, and to try to prove that there's more to poetry than mere pleasure—that it also has a beneficial effect on society and on human life in general. And we won't listen in a hostile frame of mind, because we'll be the winners if poetry turns out to be beneficial as well as enjoyable.'

'Of course we will,' he agreed.

'And if it doesn't, Glaucon, then we'll do what a lover does when he thinks that a love affair he's involved in is no good for him: he reluctantly detaches himself. Similarly, since we've been conditioned by our wonderful societies until we have a deep-seated love for this kind of poetry, [608] we'll be delighted if there proves to be nothing better and closer to the truth than it. As long as it is incapable of rebutting our allegations, however, then while we listen to poetry we'll be chanting these allegations of ours to ourselves as a precautionary incantation against being caught once more by that childish and pervasive love. Our message will be that the commitment appropriate for an important matter with access to the truth shouldn't be given to this kind of poetry. People should, instead, be worried about the possible effects, on one's own inner political system, of listening to it and should tread cautiously; and they should let our arguments guide their attitude towards poetry.'

'I couldn't agree more,' he said.

'You see, my dear Glaucon,' I said, 'what's in the balance here is absolutely crucial—far more so than people think. It's whether one becomes a good or a bad person, and consequently has the calibre not to be distracted by prestige, wealth, political power, or even poetry from applying oneself to morality and whatever else goodness involves.'

'Looking back over our discussion,' he said, 'I can only agree with you. And I think anyone else would do the same as well.'

* * *

ca. 375 B.C.E.

*From Phaedrus*¹

* * *

SOCRATES: Well, then, that's enough about artfulness and artlessness in connection with speaking.

PHAEDRUS: Quite.

SOCRATES: What's left, then, is aptness and ineptness in connection with writing: What feature makes writing good, and what inept? Right?

PHAEDRUS: Yes.

SOCRATES: Well, do you know how best to please god when you either use words or discuss them in general?

PHAEDRUS: Not at all. Do you?

SOCRATES: I can tell you what I've heard the ancients said, though they alone know the truth. However, if we could discover that ourselves, would we still care about the speculations of other people?

PHAEDRUS: That's a silly question. Still, tell me what you say you've heard.

SOCRATES: Well, this is what I've heard. Among the ancient gods of Naucratis in Egypt there was one to whom the bird called the ibis is sacred. The name of that divinity was Theuth,² and it was he who first discovered number and calculation, geometry and astronomy, as well as the games of checkers and dice, and, above all else, writing.

Now the king of all Egypt at that time was Thamus, who lived in the great city in the upper region that the Greeks call Egyptian Thebes; Thamus they call Ammon.³ Theuth came to exhibit his arts to him and urged him to disseminate them to all the Egyptians. Thamus asked him about the usefulness of each art, and while Theuth was explaining it, Thamus praised him for whatever he thought was right in his explanations and criticized him for whatever he thought was wrong.

The story goes that Thamus said much to Theuth, both for and against each art, which it would take too long to repeat. But when they came to writing, Theuth said: "O King, here is something that, once learned, will make the Egyptians wiser and will improve their memory; I have discovered a potion for memory and for wisdom." Thamus, however, replied: "O most expert Theuth, one man can give birth to the elements of an art, but only another can judge how they can benefit or harm those who will use them. And now, [275] since you are the father of writing, your affection for it has made you describe its effects as the opposite of what they really are. In fact, it will introduce forgetfulness into the soul of those who learn it: they will not practice using their memory because they will put their trust in writing, which is external and depends on signs that belong to others, instead of trying to remember from the inside, completely on their own. You have not discov-

1. Translated by Alexander Nehamas and Paul Woodruff. The participants in the dialogue are the philosopher Socrates (469–399 B.C.E., Plato's spokesperson) and Phaedrus (ca. 450–400 B.C.E.), a Socratic philosopher. The numbers in square brackets are the Stephanus numbers used almost universally in citing Plato's works; they refer to the pages of a 1578 edition published by Henri Estienne.

2. Also known as Thoth, whom the Greeks identified with Hermes, the messenger of the gods. Naucratis: a Greek trading colony in Egypt. The following story, which reworks elements of Greek and Egyptian mythology, is probably an invention of Plato's.

3. Chief god of the Egyptians, identified by the Greeks with an aspect of Zeus.

ered a potion for remembering, but for reminding; you provide your students with the appearance of wisdom, not with its reality. Your invention will enable them to hear many things without being properly taught, and they will imagine that they have come to know much while for the most part they will know nothing. And they will be difficult to get along with, since they will merely appear to be wise instead of really being so."

PHAEDRUS: Socrates, you're very good at making up stories from Egypt or wherever else you want!

SOCRATES: But, my friend, the priest of the temple of Zeus at Dodona⁴ say that the first prophecies were the words of an oak. Everyone who lived at that time, not being as wise as you young ones are today, found it rewarding enough in their simplicity to listen to an oak or even a stone, so long as it was telling the truth, while it seems to make a difference to you, Phaedrus, who is speaking and where he comes from. Why, though, don't you just consider whether what he says is right or wrong?

PHAEDRUS: I deserved that, Socrates. And I agree that the Theban king was correct about writing.

SOCRATES: Well, then, those who think they can leave written instructions for an art, as well as those who accept them, thinking that writing can yield results that are clear or certain, must be quite naive and truly ignorant of Ammon's prophetic judgment: otherwise, how could they possibly think that words that have been written down can do more than remind those who already know what the writing is about?

PHAEDRUS: Quite right.

SOCRATES: You know, Phaedrus, writing shares a strange feature with painting. The offsprings of painting stand there as if they are alive, but if anyone asks them anything, they remain most solemnly silent. The same is true of written words. You'd think they were speaking as if they had some understanding, but if you question anything that has been said because you want to learn more, it continues to signify just that very same thing forever. When it has once been written down, every discourse rolls about everywhere, reaching indiscriminately those with understanding no less than those who have no business with it, and it doesn't know to whom it should speak and to whom it should not. And when it is faulted and attacked unfairly, it always needs its father's support; alone, it can neither defend itself nor come to its own support.

PHAEDRUS: You are absolutely right about that, too.

[276] SOCRATES: Now tell me, can we discern another kind of discourse, a legitimate brother of this one? Can we say how it comes about, and how it is by nature better and more capable?

PHAEDRUS: Which one is that? How do you think it comes about?

SOCRATES: It is a discourse that is written down, with knowledge, in the soul of the listener; it can defend itself, and it knows for whom it should speak and for whom it should remain silent.

PHAEDRUS: You mean the living, breathing discourse of the man who knows, of which the written one can be fairly called an image.

4. A sanctuary of Zeus in Epirus famous as the center of an oracle, which was said to speak through an oak tree (see *Odyssey* 14.327-28, 19.296-97; Herodotus 2.55.1).

SOCRATES: Absolutely right. And tell me this. Would a sensible farmer, who cared about his seeds and wanted them to yield fruit, plant them in all seriousness in the gardens of Adonis⁵ in the middle of the summer and enjoy watching them bear fruit within seven days? Or would he do this as an amusement and in honor of the holiday, if he did it at all? Wouldn't he use his knowledge of farming to plant the seeds he cared for when it was appropriate and be content if they bore fruit seven months later?

PHAEDRUS: That's how he would handle those he was serious about, Socrates, quite differently from the others, as you say.

SOCRATES: Now what about the man who knows what is just, noble, and good? Shall we say that he is less sensible with his seeds than the farmer is with his?

PHAEDRUS: Certainly not.

SOCRATES: Therefore; he won't be serious about writing them in ink, sowing them, through a pen, with words that are as incapable of speaking in their own defense as they are of teaching the truth adequately.

PHAEDRUS: That wouldn't be likely.

SOCRATES: Certainly not. When he writes, it's likely he will sow gardens of letters for the sake of amusing himself, storing up reminders for himself "when he reaches forgetful old age" and for everyone who wants to follow in his footsteps, and will enjoy seeing them sweetly blooming. And when others turn to different amusements, watering themselves with drinking parties and everything else that goes along with them, he will rather spend his time amusing himself with the things I have just described.

PHAEDRUS: Socrates, you are contrasting a vulgar amusement with the very noblest—with the amusement of a man who can while away his time telling stories of justice and the other matters you mentioned.

SOCRATES: That's just how it is, Phaedrus. But it is much nobler to be serious about these matters, and use the art of dialectic.⁶ The dialectician chooses a proper soul and plants and sows within it discourse accompanied by knowledge—discourse capable of helping itself as well as the man who planted it, [277] which is not barren but produces a seed from which more discourse grows in the character of others. Such discourse makes the seed forever immortal and renders the man who has it as happy as any human being can be.

PHAEDRUS: What you describe is really much nobler still.

SOCRATES: And now that we have agreed about this, Phaedrus, we are finally able to decide the issue.

PHAEDRUS: What issue is that?

SOCRATES: The issue which brought us to this point in the first place: We wanted to examine the attack made on Lysias⁷ on account of his writing speeches, and to ask which speeches are written artfully and which not. Now, I think that we have answered that question clearly enough.

PHAEDRUS: So it seemed; but remind me again how we did it.

5. Pots or window boxes used for forcing plants during the festival of Adonis, a Greek mythological figure whose cult is associated with vegetation and fertility.

6. That is, use logic to investigate the nature of

truth through critical analysis of concepts and hypotheses.

7. Athenian orator (ca. 459—ca. 380 B.C.E.), whose oration on love provides the occasion for the discussion in *Phaedrus*.

SOCRATES: First, you must know the truth concerning everything you are speaking or writing about; you must learn how to define each thing in itself; and, having defined it, you must know how to divide it into kinds until you reach something indivisible. Second, you must understand the nature of the soul, along the same lines; you must determine which kind of speech is appropriate to each kind of soul, prepare and arrange your speech accordingly, and offer a complex and elaborate speech to a complex soul and a simple speech to a simple one. Then, and only then, will you be able to use speech artfully, to the extent that its nature allows it to be used that way, either in order to teach or in order to persuade. This is the whole point of the argument we have been making.

PHAEDRUS: Absolutely. That is exactly how it seemed to us.

SOCRATES: Now how about whether it's noble or shameful to give or write a speech—when it could be fairly said to be grounds for reproach, and when not? Didn't what we said just a little while ago make it clear—

PHAEDRUS: What was that?

SOCRATES: That if Lysias or anybody else ever did, or ever does write—privately or for the public, in the course of proposing some law—a political document which he believes to embody clear knowledge of lasting importance, then this writer deserves reproach, whether anyone says so or not. For to be unaware of the difference between a dream-image and the reality of what is just and unjust, good and bad, must truly be grounds for reproach even if the crowd praises it with one voice.

PHAEDRUS: It certainly must be.

SOCRATES: On the other hand, take a man who thinks that a written discourse on any subject can only be a great amusement, that no discourse worth serious attention has ever been written in verse or prose, and that those that are recited in public without questioning and explanation, in the manner of the rhapsodes,⁸ are given only in order to produce conviction. [278] He believes that at their very best these can only serve as reminders to those who already know. And he also thinks that only what is said for the sake of understanding and learning, what is truly written in the soul concerning what is just, noble, and good can be clear, perfect, and worth serious attention: Such discourse should be called his own legitimate children, first the discourse he may have discovered already within himself and then its sons and brothers who may have grown naturally in other souls insofar as these are worthy; to the rest, he turns his back. Such a man, Phaedrus, would be just what you and I both would pray to become.

PHAEDRUS: I wish and pray for things to be just as you say.

SOCRATES: Well, then: our playful amusement regarding discourse is complete. Now you go and tell Lysias that we came to the spring which is sacred to the Nymphs⁹ and heard words charging us to deliver a message to Lysias and anyone else who composes speeches, as well as to Homer and anyone else who has composed poetry either spoken or sung, and third, to Solon¹ and anyone else who writes political documents that he calls laws: If any one of you has composed these things with a knowledge of the truth, if you can

8. Professional orators who recited poetry, especially that of Homer and the other epic poets.

9. In Greek mythology, goddesses of lower rank, often associated with aspects of nature (the ocean,

trees, etc.).

1. Athenian statesman and poet (ca. 638–559 B.C.E.), who reformed the city's constitution.

defend your writing when you are challenged, and if you can yourself make the argument that your writing is of little worth, then you must be called by a name derived not from these writings but rather from those things that you are seriously pursuing.

PHAEDRUS: What name, then, would you give such a man?

SOCRATES: To call him wise, Phaedrus, seems to me too much, and proper only for a god. To call him wisdom's lover—a philosopher—or something similar would fit him better and be more seemly.

PHAEDRUS: That would be quite appropriate.

SOCRATES: On the other hand, if a man has nothing more valuable than what he has composed or written, spending long hours twisting it around, pasting parts together and taking them apart—wouldn't you be right to call him a poet or a speech writer or an author of laws?

PHAEDRUS: Of course.

SOCRATES: Tell that, then, to your friend.

PHAEDRUS: And what about you? What shall you do? We must surely not forget your own friend.

SOCRATES: Whom do you mean?

PHAEDRUS: The beautiful Isocrates.² What are you going to tell him, Socrates? What shall we say he is?

SOCRATES: Isocrates is still young, Phaedrus. But I want to tell you [279] what I foresee for him.

PHAEDRUS: What is that?

SOCRATES: It seems to me that by his nature he can outdo anything that Lysias has accomplished in his speeches; and he also has a nobler character. So I wouldn't be at all surprised if, as he gets older and continues writing speeches of the sort he is composing now, he makes everyone who has ever attempted to compose a speech seem like a child in comparison. Even more so if such work no longer satisfies him and a higher, divine impulse leads him to more important things. For nature, my friend, has placed the love of wisdom in his mind.

That is the message I will carry to my beloved, Isocrates, from the gods of this place; and you have your own message for your Lysias.

PHAEDRUS: So it shall be. But let's be off, since the heat has died down a bit.

SOCRATES: Shouldn't we offer a prayer to the gods here before we leave?

PHAEDRUS: Of course.

SOCRATES: O dear Pan³ and all the other gods of this place, grant that I may be beautiful inside. Let all my external possessions be in friendly harmony with what is within. May I consider the wise man rich. As for gold, let me have as much as a moderate man could bear and carry with him.

Do we need anything else, Phaedrus? I believe my prayer is enough for me.

PHAEDRUS: Make it a prayer for me as well. Friends have everything in common.

SOCRATES: Let's be off.

ca. 370 B.C.E.

2. Athenian orator, rhetorician, and teacher (436–338 B.C.E.), whose school attracted pupils from all over Greece and greatly influenced later methods of education.

3. Greek god of shepherds and flocks, usually depicted as part human, part goat; he is invoked because this conversation has taken place in the countryside.

ARISTOTLE

384–322 B.C.E.

Alongside his teacher PLATO, Aristotle is the great founding figure of Western philosophy and literary theory. Aristotle invented the scientific method of analysis and, in a wide-ranging series of treatises, codified the divisions of knowledge into disciplines and subdisciplines that carry on to the present day, such as physics, chemistry, zoology, biology, botany, psychology, politics, logic, and epistemology. Unlike Plato, who uses the dialogue to dramatize paths of thinking in a conversational literary form, Aristotle relies in his extant works on categorization and logical differentiation in a straightforward propositional manner. He focuses on the distinctive qualities of any given object of study, whether of plants or of poems, systematically describing their specific features and construction.

Plato and other ancient writers often commented on literary works, but Aristotle inaugurated the systematic and distinctive discipline of literary criticism and theory with the *Poetics*. It is perhaps the most influential work in the history of criticism and theory, shaping future considerations of genre, prosody, style, structure, and form. Its modern impact began in the Renaissance, when it was rediscovered from fragmentary manuscript sources and taken as a rulebook for literary composition. Its descriptions of formal unity influenced seventeenth-century European writers, such as the French dramatist PIERRE CORNEILLE, and eighteenth-century writers reviving its precepts as “neoclassicism.” In twentieth-century literary theory the *Poetics* was foundational for formalist methods, which apply objective modes of analysis to linguistic artifacts and discern the structural attributes of literary works; it influenced a wide array of critics, ranging from the Russian formalists (like BORIS EICHENBAUM) and the American New Critics (like WILLIAM K. WIMSATT JR. and MONROE C. BEARDSLEY) to the archetypal critics (notably NORTHROP FRYE) and the French structuralists (like TZVETAN TODOROV).

Aristotle's *Rhetoric* suggests a different avenue for the study of literature. Rather than seeing literary works in terms of their distinctive features and internal construction, it opens for consideration their affective and political dimensions as forms of public speech. Because of its focus on types of public speaking, the *Rhetoric's* influence on literary study has been less direct than that of the *Poetics*, but its emphasis on audience response undergirds subsequent theoretical approaches concerned with the reader, interpretation, and the political effects of literature. Although Aristotle himself does not favor one avenue of investigation over another, his distinction between poetics and rhetoric reflects a perennial division in literary theory: the split between theories concerned with the internal properties of literature and those concerned with literature's external effects, especially on readers and society.

Aristotle was born in Stagira in northern Greece, which was under the rule of Macedonia. His father, Nicomachus, was the personal physician to and a friend of Amyntus II, the king of Macedonia. Scholars speculate that his father's practice as a physician inculcated in Aristotle a pragmatic interest in biology and the natural world, and Aristotle's ties to the Macedonian court affected his subsequent career. In 367 B.C.E. Aristotle went to study at Plato's Academy in Athens, where he distinguished himself as one of Plato's best students and eventually became a teacher himself. In 347, around the time of Plato's death, Aristotle left Athens; he traveled first to Assos in Asia Minor, where he taught in a colony of Platonists for three years, and then to the island of Lesbos, where he did the biological research that grounded his later scientific treatises. In 344 or 343, Amyntas's son, King Philip, invited Aristotle to tutor his heir, Alexander (later known as Alexander the Great), who was then about thirteen years old. While he had contact with and received the patronage of Alexander until his death, Aristotle concluded his tutoring in 340, after which he probably lived

in Macedonia or Stagira, perhaps then completing the *Rhetoric*. In 335, when Alexander acceded to the throne and departed for his campaigns in Asia, Aristotle returned to Athens and began his own school at the Lyceum. He taught poetics, rhetoric, politics, ethics, and metaphysics, and probably at this time worked on his famous treatises, including the *Politics*, the *Nicomachean Ethics*, and the *Poetics*. After the death of Alexander in 323, when public sentiment against Macedonia was rising, Aristotle left Athens to live in Chalcis on the island of Euboea, where he died in 322. For Aristotle the life of the philosopher was not reclusive and scholarly but unfolded in the midst of public affairs.

Only about a fifth of Aristotle's prodigious 150 reported works survive—transmitted, usually imperfectly, through manuscript copies in the Middle Ages. His treatises are known as "esoteric" works, because they were not copied by scribes to be distributed but were available only in libraries for study by others; some seem to be lecture notes or study guides rather than polished works. This accounts for their compressed style and sometimes abrupt transitions, frequent repetitions, and shorthand references to other works or writers. It also makes the works particularly difficult to date, since they were probably composed and revised over a period of time. The *Poetics*, very likely gathered from a set of incomplete notes, survived only in a few faulty copies. Scholars speculate that we have only half the original text and that the missing second half dealt with comedy.

Aristotle's early writings, now known only by the reports of ancient writers, were written in the form of dialogues, obviously showing the influence of Plato. His more mature works, however, depart from his teacher's model in a number of significant ways. Stylistically, he replaces the literary approach with systematic expositions of particular subjects, more in the form of technical manuals than dramatic accounts. Methodologically, Aristotle operates through analysis, which in its root sense entails examining objects by studying their component parts, and through differentiation and classification. For instance, in biology Aristotle starts with the most general category—living organisms; he then examines them according to what differentiates them—as plants, animals, and so on; further classifies them into particular species; and catalogues their distinctive traits. Philosophically, Aristotle grounds his research on a more pragmatic basis than Plato, looking at nature and the objects of the real world. In so doing, he tacitly rejects Plato's fundamental concept of transcendent Ideas or Forms that govern and generate reality. In his own terms, Aristotle often works from induction, drawing his general conclusions from the particular objects he observes, whereas Plato usually works from deduction, drawing particular conclusions from his general metaphysical concept of being.

The *Poetics* demonstrates Aristotle's analytical method, which here parallels that of his examinations of biology or zoology. Aristotle turns to the various categories of human artifacts, differentiating those made in language and eventually focusing on poetry and especially on the species-specific traits of epic and tragedy. He assumes a distinction between the wide class of objects that are humanly made and those that are naturally produced—between, say, a chair and a tree. (The Greek word for a "poetry," *poiēsis*, is itself based on the verb "to make.") In treating poetry as a craft, Aristotle differs from Plato, who discusses poetry in terms of inspiration and the emotive transport of the poet—a strain that continues in nineteenth-century Romanticism, exemplified by WILLIAM WORDSWORTH's definition of poetry as "the spontaneous overflow of emotion." Aristotle limits his study of poetry to its observable kinds and its formal construction, more or less ignoring questions about its affective origins, which he regards as falling under the auspices of other pursuits, such as psychology or rhetoric.

Drawing on a wide range of literary examples, especially Sophocles' celebrated tragedy *Oedipus Rex*, Aristotle adduces six salient parts of tragedy, in order of their importance—plot, character, thought, diction, music, and spectacle. He spends the most time on the first, specifying the key features of good plots. Central to Aristotle

is imitation (*mimēsis*), and he judges the best plots to have verisimilitude: they must be plausible (even if impossible). He also stresses a logically connected order (an appropriate starting point, elaboration, and a dramatic end or resolution), centered on one unified action rather than depicting multiple, divergent, or unnecessary actions. The best kind of resolution is one that shows a reversal (*peripeteia*) of position for the main character, as well as the character's recognition (*anagnōrisis*) of his or her fate. Aristotle reasons that the characters in tragedy should come from high positions, otherwise their tragic circumstances would not be remarkable; he also prescribes that their fates be linked to their own error (*hamartia*, literally "missing the mark," though frequently translated as "flaw"), rather than from some accident or wickedness. Aristotle concludes somewhat technically by classifying parts of speech (in his discussion of diction), sketching solutions to problems of interpretation, and comparing the genres of tragedy and epic.

Though rooted in the literature of its time (and focusing especially on a form of drama quite different from ours), the extant *Poetics* has continued to powerfully influence criticism. Aristotle's systematic categorization of genus and species and his comparison of tragedy and epic underlie all genre theory. Notably, they undergird modern considerations of the historical movement from epic to the novel, such as those of GYÖRGY LUKÁCS and MIKHAIL BAKHTIN. Perhaps most decisively, Aristotle's systematic description of plot and its component parts ground contemporary narrative theory, in particular the technical field of narratology.

His scientific examination of poetry has been championed by the New Critics Wimsatt and CLEANTH BROOKS as "Aristotle's answer" to Plato, responding both to Plato's view of poetry as a degraded imitation twice removed from the reality of eternal Ideas or Forms and to his suspicion of poetry as stirring emotions in a way that is dangerous for society. Instead of directly disagreeing with Plato, Aristotle implicitly validates poetry by examining it as a legitimate branch of study. Countering Plato's notion of poetry as degraded imitation, Aristotle sees poetry as a source of universal knowledge of human behavior: unlike history, which produces knowledge only of specific situations, poetry describes the actions of characters who might be any humans. Moreover, he claims that good poetry has a positive emotional effect on its audience, which he calls *katharsis*—perhaps the most important and variously interpreted word in the *Poetics*. Some commentators have interpreted the term in a medical sense, as a purgative that flushes out the audience's unwieldy emotion; others see it in terms of moral purification. More recently, critics have equated catharsis with ethical and intellectual clarification.

In other treatises, Aristotle analyzes natural objects in terms of four component "causes," schematized as material, formal, efficient, and final. If we apply this rubric to poetry, the material cause of a poem would be its raw material—language; the formal cause, the shape of the resulting object—the poem; its efficient cause, what makes it—the poet; and the final cause, the end use—its effects on an audience, emotionally as well as educationally and politically. Although Aristotle alludes to audience response in his discussion of catharsis, in the *Poetics* he is most concerned with the material and formal causes of poetry. This concentrated focus has strongly marked modern literary criticism—notably that of the New Critics, who explicitly disallow considerations of the audience as "the affective fallacy," in the phrase of Wimsatt and Beardsley. However, Aristotle is by no means so dismissive. Instead, he treats considerations of the audience—the final cause—as a different line of research, taken up in his *Rhetoric*.

We have come to understand rhetoric as the study of figures of speech, following the medieval and Renaissance traditions (and the modern practice of writers like PAUL DE MAN), but Aristotle defines it more broadly as the ability to see the available means of persuasion. In typical Aristotelian fashion, the *Rhetoric* begins in book 1 by differentiating three elements of persuasion in public speech: the arguments a speaker uses; the *ēthos* or character of the speaker; and the disposition of the audience. Additionally, it differentiates three species of public speeches: deliberative, which deal

with future events, as in politics; judicial, which concern past events, as in law courts; and epideictic, which are concerned with the present as they praise or blame a person, as in a eulogy or declamatory attack. Aristotle stresses the importance of argument in part to challenge the then prevalent teachings of the sophists, such as GORGIAS in an earlier generation, who he believed used rhetoric irresponsibly, lacking concern for valid reasoning.

However, Aristotle also acknowledges the elements of persuasion outside the realm of reasoning, paying particular attention to the emotions that speeches induce in their audiences. In book 2, Aristotle adduces the first systematic study of affect, differentiating emotions such as anger, calmness, fear, confidence, shame, pity, indignation, envy, and emulation. In book 3, paralleling his examination of diction in the *Poetics*, Aristotle concludes with a discussion of *lexis* (variously translated as "style," "word choice," or "form of expression"). Perhaps the most important term in the *Rhetoric* is *telos*—the final cause, end, objective, or goal of persuasion—effected through emotion and style as well as argument. The *Rhetoric* highlights the public ends of language rather than its formal properties.

Although its influence has not been as sustained or decisive as that of the *Poetics*, the *Rhetoric* proposes what the twentieth-century philosopher MARTIN HEIDEGGER called the first work of hermeneutics; that is, it considers how response is a factor in interpretation. In its delineations of emotions, it presages the aesthetic tradition, whose concern is the affective dimensions of literary works, and it provides a grounding for reader-response theory, which centers on subjective audience interaction rather than the objective features of the work itself. Perhaps most significantly, it suggests the historical and political significance of literature in its role as public discourse.

Whether acknowledged or not, Aristotle's seminal distinction between poetics and rhetoric has been crucial in contemporary debates over the proper object of literary criticism. Against the tendency fostered by the New Critics and later the deconstructive critics who advocated a narrow linguistic study of literature, recent decades have witnessed a "rhetorical turn" toward methods favoring attention to the personal, historical, and social effects of literary texts. Some object that such approaches address topics outside the purview of literary study. That is, they urge a strict poetic view, arguing that literary criticism should focus on the distinctive attributes of literary works. But when we take account of his *Rhetoric* alongside the *Poetics*, we see that Aristotle does not disallow these other topics; he opens literary study to a consideration of its pedagogical and social ends as well as its distinctive formal properties.

BIBLIOGRAPHY

There are a vast number of editions and translations of Aristotle's works, from the medieval period to the present. Our text of the *Poetics* comes from "Poetics" I, with the "Tractatus Coislinianus," A Hypothetical Reconstruction of "Poetics" II, and the Fragments of the "On the Poets," admirably translated and annotated by Richard Janko (1986), which is based on the standard edition of Rudolf Kassel, *Aristotelis "De Arte Poetica Liber"* (1965). Our selection from the *Rhetoric* is taken from the definitive present-day English version, *Aristotle "On Rhetoric": A Theory of Civic Discourse*, translated and annotated by George A. Kennedy (1991), which also includes useful commentary. It draws on an amalgam of Greek texts, including *Aristotelis "Ars Rhetorica,"* edited by W. David Ross (1959); *Aristote, "Rhétorique,"* edited by Médéric Dufour and André Wartelle (3 vols., 1960–73); and *Aristotelis "Ars Rhetorica,"* edited by Rudolf Kassel (1976). *The Complete Works of Aristotle*, edited by Jonathan Barnes (2 vols., 1984), contains the best compendium of Aristotle's works in English. *The Basic Works of Aristotle*, edited by Richard McKeon (1941), who was the leading American expositor of Aristotle through the mid-twentieth century, is an earlier but still useful compendium.

Jonathan Barnes's *Aristotle* (1982) is a brief, accessible overview of Aristotle's life and works. In a crowded field, Abraham Edel's *Aristotle and His Philosophy* (1982) and John M. Rist's *Mind of Aristotle* (1989) stand out as good basic introductions to Aristotle's biography and works. *The Cambridge Companion to Aristotle*, edited by Barnes (1995), contains chapters on important phases of Aristotle's philosophical project, including a survey of his life and work by Barnes.

On the *Poetics*, Stephen Halliwell's *Aristotle's "Poetics"* (1986) is the authoritative contemporary interpretation. Gerald F. Else, *Aristotle's "Poetics": The Argument* (1957), provides a detailed commentary on the text, and his *Plato and Aristotle on Poetry* (1986) is a useful comparative study. D. W. Lucas's *Aristotle—"Poetics"* (1968) offers significant commentary as well as the Kassel edition of the Greek text. Martha Nussbaum's *Fragility of Goodness: Luck and Ethics in Greek Philosophy* (1986) contains an influential modification of the argument about catharsis. *Aristotle's "Poetics" and English Literature: A Collection of Critical Essays*, edited by Elder Olson (1965), gathers views from the eighteenth century through the 1960s, highlighting the work of the Chicago Critics, or "Neo-Aristotelians," who promoted a formal method in literary study during the mid-twentieth century. Its last chapter, "Rhetoric and Poetic in the Philosophy of Aristotle," by Richard McKeon, a Chicago Critic, offers an illuminating discrimination of poetic and rhetorical approaches. McKeon's "Literary Criticism and the Concept of Imitation in Antiquity," in *Critics and Criticism: Essays in Method* (ed. R. S. Crane, 1952), is an important text on imitation. *Essays on Aristotle's "Poetics,"* edited by Amélie Oksenberg Rorty (1992), is an excellent contemporary collection by philosophers and scholars of Aristotle, clarifying concepts such as mimesis, catharsis, and comedy.

On the *Rhetoric*, W. M. A. Grimaldi's *Aristotle, "Rhetoric": A Commentary* (1980) is a useful exposition. *Essays on Aristotle's "Rhetoric"* (1996), edited by Amélie Oksenberg Rorty as a companion to her volume on the *Poetics*, provides an excellent range of contemporary interpretations and reevaluations of the text. Alexander Nehamas's "Pity and Fear in the *Rhetoric* and *Poetics*," in *Aristotle's "Rhetoric": Philosophical Essays* (ed. David J. Furley and Nehamas, 1994), cogently compares Aristotle's treatment of emotion in both texts and, in a provocative argument, claims that catharsis refers to the internal resolution of a tragic plot itself rather than to the response of the audience.

The "*Poetics*" of Aristotle and the "*Tractatus Coislinianus*": *A Bibliography from about 900 till 1996*, compiled by Omert J. Schrier (1998), testifies to the massive literature relating to the *Poetics*. *Aristotle's "Rhetoric": Five Centuries of Philological Research*, compiled by Keith V. Erickson (1975), covers the many studies of the *Rhetoric*. *The Cambridge Companion to Aristotle* contains an excellent bibliography on all of Aristotle's work, with individual sections on the *Poetics* and *Rhetoric*. Both Janko's edition of the *Poetics* and Kennedy's of the *Rhetoric* include selective bibliographies on their respective texts. The Rorty collections on the *Poetics* and *Rhetoric* also include good selective bibliographies.

Poetics¹

[1, 1447a] Our topic is poetry in itself and its kinds, and what potential each has; how plots should be constructed if the composition is to turn out well;

1. Translated by Richard Janko, who sometimes adds clarifying words or phrases in square brackets and includes the Greek in parentheses. Also in square brackets in the text are the traditional chapter divisions inserted by Renaissance editors and

the Bekker numbers used almost universally in citing Aristotle's works; they refer to the page numbers and columns of an 1831 edition by Immanuel Bekker.

also, from how many parts it is [constituted], and of what sort they are; and likewise all other aspects of the same enquiry. Let us first begin, following the natural [order], from first [principles].

Epic and tragic composition, and indeed comedy, dithyrambic composition,² and most sorts of music for wind and stringed instruments are all, [considered] as a whole, representations.³ They differ from one another in three ways, by using for the representation (i) different media, (ii) different objects, or (iii) a manner that is different and not the same.

Some people use colours and forms for representations, making images of many objects (some by art, and some by practice), and others do so with sound; so too all the arts we mentioned produce a representation using rhythm, speech and melody, but use these either separately or mixed. E.g., the art of [playing] the oboe and lyre, and any other arts that have the same potential (e.g. that of [playing] the pan-pipes), use melody and rhythm alone, but the art of dancers [uses] rhythm by itself without melody; for they too can represent characters, sufferings and actions, by means of rhythms given form.

But the art of representation that uses unaccompanied words or verses [1447b] (whether it mixes these together or uses one single class of verse-form) has to the present day no name. For we have no common name for the mimes of Sophron and Xenarchus and the Socratic dialogues,⁴ and would not have one even if someone were to compose the representation in [iambic] trimeters, elegiacs⁵ or some other such verse. But people attach the word "poet" to the verse-form, and name some "elegiac poets" and other "epic poets," terming them poets not according to [whether they compose a] representation but indiscriminately, according to [their use of] verse. Thus if someone brings out a work of medicine or natural science in verse, they normally call him a poet; but there is nothing in common between Homer and Empedocles⁶ except the verse-form. For this reason it is right to call the former a poet, but the latter a natural scientist rather than a poet. Likewise, if someone produced a representation by intermingling all the verse-forms, just as Chaereon⁷ composed his *Centaur* (a recitation which mixes all the verse-forms), he must still be termed a poet. This, then, is how we should define these matters.

Some arts use all the media we have mentioned (i.e. rhythm, song and verse), like the composition of dithyrambic poems, that of nomos,⁸ and tragedy and comedy; they differ because the former use all the media at the same time, the latter [use them only] in certain parts. So these are what I mean

2. Greek choral poetry originally sung in honor of Dionysus, the god of wine worshipped in an ecstatic cult.

3. From the Greek *mimēsis*, translated as "representation" or "imitation."

4. The philosophical works of PLATO (ca. 427–ca. 327 B.C.E.), which are written as dialogues featuring his teacher, Socrates (469–399 B.C.E.), and one or more interlocutors. "Mimes": imitative performances usually featuring short scenes from daily life. Sophron of Syracuse (5th c. B.C.E.) wrote mimes in rhythmic prose; his son Xenarchus also wrote mimes.

5. A verse form consisting of couplets whose first line is in dactylic hexameter (i.e., a 6-foot line based on the syllabic pattern long-short-short), the

meter of epic, and whose second line replaces the 3d and 6th foot with one long syllable. "Iambic trimeters": the verse form of most dialogue and set speeches in tragedies (a 3-foot line based on the pattern short-long).

6. Pre-Socratic Greek natural philosopher (ca. 493–433 B.C.E.), who wrote in epic meter (dactylic hexameter). Homer (ca. 8th c. B.C.E.), Greek epic poet to whom is attributed the *Iliad* and the *Odyssey*; the ancient Greeks also credited him with a number of lost shorter epics; including the comic *Magrites*.

7. Greek tragedian (mid-4th c. B.C.E.).

8. Originally, melodies (for lyre or flute) created to accompany epic texts; later, choral compositions.

by the differences between the arts in the media by which they produce the representation.

[2, 1448a] Since those who represent people in action, these people are necessarily either good or inferior. For characters almost always follow from these [qualities] alone; everyone differs in character because of vice and virtue. So they are either (i) better than we are, or (ii) worse, or (iii) such [as we are], just as the painters [represent them]; for Polygnotus used to make images of superior persons, Pauson of worse ones, and Dionysius⁹ of those like [us].

Clearly each of the [kinds of] representation we mentioned will contain these differences, and will vary by representing objects which vary in this manner. For these divergences can arise in dancing and in playing the oboe and lyre. They can also arise in speeches and unaccompanied verse: e.g. (i) Homer [represents] better persons, (ii) Cleophon [represents] ones like [us], and (iii) Hegemon of Thasos, who was the first to compose parodies, and Nicochares¹ who composed the *Deiliad*, [represent] worse ones. [They can arise] likewise in dithyramps and nomes: for just as Timotheus and Philoxenus [represented] Cyclopes,² [so] one may represent [people in different ways]. Tragedy too is distinguished from comedy by precisely this difference; comedy prefers to represent people who are worse than those who exist, tragedy people who are better.

[3] Again, a third difference among these [kinds] is the manner in which one can represent each of these things. For one can use the same media to represent the very same things, sometimes (a) by narrating (either (i) becoming another [person], as Homer does, or (ii) remaining the same person and not changing), or (b) by representing everyone as in action and activity.

Representation, then, has these three points of difference, as we said at the beginning, its media, its objects and its manner. Consequently, in one respect Sophocles is the same sort of representational artist as Homer, in that both represent good people, but in another he is like Aristophanes,³ since both represent men in action and doing [things].

This is why, some say, their works are called "dramas," because they represent men "doing" (*drōntas*). For this reason too the Dorians⁴ lay claim to both tragedy and comedy. The Megarians⁵ here allege that comedy arose during the time of their democracy, and the Megarians in Sicily claim it; for Ephicharmus was from there, though he was not much prior to Chionides and Magnes.⁶ Some of the Dorians in the Peloponnese lay claim to tragedy. They produce the names [of comedy and drama] as an indication [of their origins]: they say that they call villages *kōmai* but the Athenians call them *dēmoi*, on the assumption that comedians were so called not from their rev-

9. Painter from Colophon. Polygnotus (ca. 500–ca. 440 B.C.E.), one of the first great Greek painters. Pauson (late 5th c. B.C.E.), Athenian caricaturist.

1. Athenian comic poet (active ca. 390 B.C.E.), whose *Deiliad* (*deilos* means "cowardly") parodied heroic epic. Cleophon (4th c. B.C.E.), Athenian tragic poet. Hegemon (5th c. B.C.E.), poet whose parodies won competitions in Athens.

2. Mythical one-eyed giants. Timotheus of Miletus (ca. 450–ca. 360 B.C.E.) and Philoxenus of Cythera (ca. 435–ca. 380 B.C.E.) were both Greek dithyrambic poets.

3. Greatest poet of Greek Old Comedy (450–385

B.C.E.). Sophocles (ca. 496–406 B.C.E.), great Greek tragedian.

4. A people (probably originally from southwest Macedonia) that invaded Greece ca. 1100–1000 B.C.E., reaching south into the Peloponnese.

5. Residents of a Dorian city on the Isthmus of Corinth (west of Athens); it was a democracy in the 6th century B.C.E.

6. Aristotle names three early comic poets: Ephicharmus was Sicilian (active early 5th c. B.C.E.) and wrote in Doric Greek, while Chionides (active ca. 485 B.C.E.) and Magnes (active ca. 470 B.C.E.) were Athenian.

elling (*kōmazein*), but because they wandered around the villages, ejected in disgrace from the town. [1448b] They also say that they term "doing" *dran*, but that the Athenians term it *prattein*.

Anyway, as for the points of difference in representation, and how many and what they are, let this account suffice.

[4] Two causes seem to have generated the art of poetry as a whole, and these are natural ones.

(i) Representation is natural to human beings from childhood. They differ from the other animals in this: man tends most towards representation and learns his first lessons through representation.

Also (ii) everyone delights in representations. An indication of this is what happens in fact: we delight in looking at the most detailed images of things which in themselves we see with pain, e.g. the shapes of the most despised wild animals even when dead. The cause of this is that learning is most pleasant, not only for philosophers but for others likewise (but they share in it to a small extent). For this reason they delight in seeing images, because it comes about that they learn as they observe, and infer what each thing is, e.g. that this person [represents] that one. For if one has not seen the thing [that is represented] before, [its image] will not produce pleasure as a representation, but because of its accomplishment, colour, or some other such cause.

Since by nature we are given to representation, melody and rhythm (that verses are parts of rhythms is obvious), from the beginning those by nature most disposed towards these generated poetry from their improvisations, developing it little by little. Poetry was split up according to their particular characters; the grander people represented fine actions, i.e. those of fine persons, the more ordinary people represented those of inferior ones, at first composing invectives, just as the others composed hymns and praise-poems. We do not know of any composition of this sort by anyone before Homer, but there were probably many [who composed invectives]. Beginning with Homer [such compositions] do exist, e.g. his *Margites* etc. In these the iambic verse-form arrived too, as is appropriate. This is why it is now called "iambic", because they used to lampoon (*iambizein*) each other in this verse-form. Thus some of the ancients became composers of heroic poems, others of lampoons.

Just as Homer was the greatest composer of serious poetry (not that he alone composed well, but because he alone composed dramatic representations), so too he was first to indicate the form of comedy, by dramatising not an invective but the laughable. For his *Margites* stands in the same relation to comedies as do the *Iliad* and *Odyssey* to tragedies. [1449a] When tragedy and comedy appeared, people were attracted to each [kind of] composition according to their own particular natures. Some became composers of comedies instead of lampoons, but others presented tragedies instead of epics, because comedy and tragedy are greater and more honourable in their forms than are lampoon and epic. To consider whether tragedy is now fully [developed] in its elements or not, as judged both in and of itself and in relation to its audiences, is a different topic.

Anyway, arising from an improvisatory beginning (both tragedy and comedy—tragedy from the leaders of the dithyramb, and comedy from the leaders of the phallic processions which even now continue as a custom in many of

our cities), [tragedy] grew little by little, as [the poets] developed whatever [new part] of it had appeared; and, passing through many changes, tragedy came to a halt, since it had attained its own nature.

(i) Aeschylus⁷ was first to increase the number of its actors from one to two; he reduced the [songs] of the chorus, and made speech play the main role. Sophocles [brought in] three actors and scenery.

(ii) Again, as for its magnitude, [starting] from trivial plots and laughable diction, because it had changed from a satyric [composition],⁸ [tragedy only] became grand at a late date. Its verse-form altered from the tetrameter⁹ to iambic verse. For at first [poets] used the tetrameter, because the composition was satyric and mainly danced; but when [spoken] diction came in, nature itself found the proper verse-form. The iambic is the verse most suited to speech; and indication of this is that in [everyday] speech with each other we use mostly iambic [rhythms], but rarely hexameters, and [only] when we depart from the intonations of [everyday] speech.

(iii) Again, as for the number of its episodes,¹ and how each of its other [parts] is said to have been elaborated, let them pass as described; it would probably be a major undertaking to go through their particulars.

[5] Comedy is, as we said, a representation of people who are rather inferior—not, however, with respect to every [kind of] vice, but the laughable is [only] a part of what is ugly. For the laughable is a sort of error and ugliness that is not painful and destructive, just as, evidently, a laughable mask is something ugly and distorted without pain.

The transformations of tragedy, and [the poets] who brought them about, have not been forgotten; but comedy was disregarded from the beginning, because it was not taken seriously. [1449b] For the magistrate granted a chorus of comic performers at a late date—they had been volunteers. The record of those termed its poets begins from [a time] when comedy already possessed some of its forms. It is unknown who introduced masks, prologues, a multiplicity of actors, etc. As for the composing of plots, Epicharmus and Phormis² [introduced it]. In the beginning it came from Sicily, and, of the poets at Athens, Crates³ was the first to relinquish the form of the lampoon and compose generalised stories, i.e. plots.

Epic poetry follows tragedy insofar as it is a representation of serious people which uses speech in verse; but they differ in that [epic] has a single verse-form, and is narrative. Again, with respect to length, tragedy attempts as far as possible to keep within one revolution of the sun or [only] to exceed this a little, but epic is unbounded in time; it does differ in this respect, even though [the poets] at first composed in the same way in tragedies as in epics. As for their parts, some are the same, others are particular to tragedy. For this reason, whoever knows about good and inferior tragedies knows about

7. The earliest of the 3 great Greek tragedians (525–456 B.C.E.).

8. That is, like the satyr plays that formed part of the spring festival of Dionysus in early-5th-century B.C.E. Athens. Each of the poets competing wrote three tragedies and one satyr play; the latter presented grotesque versions of ancient legends, with the chorus dressed as satyrs (half-man, half-goat, and wearing a phallus).

9. That is, trochaic tetrameter (a 4-foot line based on the syllabic pattern long-short); though occa-

sionally used for dialogue in tragedies, this fast-moving line was thought less stately than iambic meter. The choruses in tragedies used other meters.

1. The sections of a tragedy that are positioned between two choruses.

2. Syracusan writer of comedy, apparently a contemporary of Epicharmus.

3. Athenian comic poet (active ca. 450–ca. 430 B.C.E.).

epics too. Tragedy possesses all [the parts] that epic has, but those that it possesses are not all in epic.

[6] We will discuss representational art in hexameters, and comedy, later. Now let us discuss tragedy, taking up the definition of its essence that results from what we have said.

Tragedy is a representation of a serious, complete action which has magnitude, in embellished speech, with each of its elements [used] separately in the [various] parts [of the play]; [represented] by people acting and not by narration; accomplishing by means of pity and terror the catharsis⁴ of such emotions.

By "embellished speech," I mean that which has rhythm and melody, i.e. song; by "with its elements separately," I mean that some [parts of it] are accomplished only by means of spoken verses, and others again by means of song.

Since people acting produce the representation, first (i) the ornament of spectacle will necessarily be a part of tragedy; and then (ii) song and (iii) diction, for these are the media in which they produce the representation. By "diction" I mean the construction of the [spoken] verses itself; by "song" I mean that of which the meaning is entirely obvious.

Since [tragedy] is a representation of an action, and is enacted by people acting, these people are necessarily of a certain sort according to their character and their reasoning. For it is because of these that we say that actions are of a certain sort, [1450a] and it is according to people's actions that they all succeed or fail. So (iv) the plot is the representation of the action; by "plot" here, I mean the construction of the incidents. By (v) the "characters," I mean that according to which we say that the people in action are of a certain sort. By (vi) "reasoning," I mean the way in which they use speech to demonstrate something or indeed to make some general statement.

So tragedy as a whole necessarily has six parts, according to which tragedy is of a certain sort. These are plot, characters, diction, reasoning, spectacle and song. The media in which [the poets] make the representation comprise two parts [i.e. diction and song], the manner in which they make the representation, one [i.e. spectacle], and the objects which they represent, three [i.e. plot, character and reasoning]; there are no others except these. Not a few of them, one might say, use these elements; for they may have instances of spectacle, character, plot, diction, song and reasoning likewise.

But the most important of these is the structure of the incidents. For (i) tragedy is a representation not of human beings but of action and life. Happiness and unhappiness lie in action, and the end [of life] is a sort of action, not a quality; people are of a certain sort according to their characters, but happy or the opposite according to their actions. So [the actors] do not act in order to represent the characters, but they include the characters for the sake of their actions. Consequently the incidents, i.e. the plot, are the end of tragedy, and the end is most important of all.

(ii) Again, without action a tragedy cannot exist, but without characters it may. For the tragedies of most recent [poets] lack character, and in general there are many such poets. E.g. too among the painters, how Zeuxis⁵ relates

4. A much-debated Greek term, related to a verb meaning "to cleanse" or "purify"; usually left untranslated and understood as "purgation," it can

also mean "clarification."

5. Greek painter from Heraclea in southern Italy; he was in Athens ca. 400 B.C.E.

to Polygnotus—Polygnotus is a good character-painter; but Zeuxis' painting contains no character at all.

(iii) Again, if [a poet] puts in sequence speeches full of character, well-composed in diction and reasoning, he will not achieve what was [agreed to be] the function of tragedy; a tragedy that employs these less adequately, but has a plot (i.e. structure of incidents), will achieve it much more.

(iv) In addition, the most important things with which a tragedy enthalls [us] are parts of plot—reversals and recognitions.

(v) A further indication is that people who try their hand at composing can be proficient in the diction and characters before they are able to structure the incidents; e.g. too almost all the early poets.

So plot is the origin and as it were the soul of tragedy, and the characters are secondary. It is very similar [1450b] in the case of painting too: if someone daubed [a surface] with the finest pigments indiscriminately, he would not give the same enjoyment as if he had sketched an image in black and white. Tragedy is a representation of an action, and for the sake of the action above all [a representation] of the people who are acting.

Reasoning comes third, i.e. being able to say what is possible and appropriate, which is its function in the case of the speeches of civic life and rhetoric. The old [poets] made people speak like citizens, but the recent ones make them speak like rhetoricians. Character is that which reveals decision, of whatever sort; this is why those speeches in which the speaker decides or avoids nothing at all do not have character. Reasoning, on the other hand, is that with which people demonstrate that something is or is not, or make some universal statement.

Diction is fourth. By "diction" I mean, as we said earlier, communication by means of language, which has the same potential in the case of both verse and [prose] speeches.

Of the remaining [parts], song is the most important of the embellishments. Spectacle is something enthralling, but is very artless and least particular to the art of poetic composition. The potential of tragedy exists even without a performance and actors; besides, the designer's art is more essential for the accomplishment of spectacular [effects] than is the poets'.

[7] Now that these definitions have been given, let us next discuss what sort of structure of the incidents there should be, since this is the first and most important [part] of tragedy. We have laid down that tragedy is the representation of a complete i.e. whole action which has some magnitude (for there can be a whole with no magnitude). A whole is that which has a beginning, a middle and a conclusion. A beginning is that which itself does not of necessity follow something else, but after which there naturally is, or comes into being, something else. A conclusion, conversely, is that which itself naturally follows something else, either of necessity or for the most part, but has nothing else after it. A middle is that which itself naturally follows something else, and has something else after it. Well-constructed plots, then, should neither begin from a random point nor conclude at a random point, but should use the elements we have mentioned [i.e. beginning, middle and conclusion].

Further, to be fine both an animal and every thing which is constructed from some [parts] should not only have these [parts] in order, but also possess a magnitude that is not random. For fineness lies in magnitude and

order. For this reason a fine animal can be neither very small, for observation becomes confused when it approaches an imperceptible instant of time; nor [can it be] very large, for [1451a] observation cannot happen at the same time, but its unity and wholeness vanish from the observers' view, e.g. if there were an animal a thousand miles long. Consequently, just as in the case of bodies and of animals these should have magnitude, but [only] a magnitude that is easily seen as a whole, so too in the case of plots these should have length, but [only] a length that is easily memorable.

As for the limit on their length, one limit relates to performances and the perception [of them], not to the art [itself]. If the performance of a hundred tragedies were required [at one tragic competition], they would be performed "against the clock," as the saying goes! But as for the limit according to the nature of the thing [itself], the larger the plot is, the finer it is because of its magnitude, so long as the whole is still clear. To give a simple definition, in whatever magnitude a change from misfortune to good fortune, or from good fortune to misfortune, can come about by a sequence of events in accordance with probability or necessity—this is an adequate definition of its magnitude.

[8] A plot is not unified, as some suppose, if it concerns one single person. An indefinitely large number of things happens to one person, in some of which there is no unity. So too the actions of one person are many, but do not turn into a single action. For this reason, it seems, all those poets who composed a *Heracleid*, a *Theseid*⁶ or similar poems are in error. They suppose that, because Heracles was a single person, his story too must be a single story. But, just as Homer is superior in other respects, it seems that he saw this clearly as well (whether by art or by nature). In composing the *Odyssey*, he did not put into his poem everything that happened to *Odysseus*,⁷ e.g. that he was wounded on Parnassus and pretended to be insane during recruitment; whether one of these things happened did not make it necessary or probable that the other would happen. But he constructed the *Odyssey* around a single action of the kind we are discussing, and the *Iliad* similarly.

Therefore, just as in the other representational arts a single representation is of a single [thing], so too the plot, since it is a representation of action, ought to represent a single action, and a whole one at that; and its parts (the incidents) ought to be so constructed that, when some part is transposed or removed, the whole is disrupted and disturbed. Something which, whether it is present or not present, explains nothing [else], is no part of the whole.

[9] It is also obvious from what we have said that it is the function of a poet to relate not things that have happened, but things that may happen, i.e. that are possible in accordance with probability or necessity. For [1451b] the historian and the poet do not differ according to whether they write in verse or without verse—the writings of Herodotus⁸ could be put into verse, but they would be no less a sort of history in verse than they are without verses. But the difference is that the former relates things that have happened, the latter things that may happen. For this reason poetry is a more philosophical and more serious thing than history; poetry tends to speak of

6. In ancient Greece, there were several epic *Heracleids* and *Theseids*—poems depicting, respectively, the heroes Heracles and Theseus.

7. The wily king of Ithaca whose efforts to return home to Greece after the Trojan War are chron-

clined in the *Odyssey*.

8. Greek historian (ca. 484–425 B.C.E.), chiefly of the Persian Wars; sometimes called "the father of history."

universals, history of particulars. A universal is the sort of thing that a certain kind of person may well say or do in accordance with probability or necessity—this is what poetry aims at, although it assigns names [to the people]. A particular is what Alcibiades⁹ did or what he suffered.

In the case of comedy this has already become clear. When [comic poets] have composed a plot according to probability, only then do they supply the names at random; they do not, like the composers of lampoons, compose [poems] about particular individuals. In the case of tragedy [the poets] keep to actual names. The reason is that what is possible is believable; we do not believe that what has never happened is possible, but things which have happened are obviously possible—they would not have happened, if they were impossible. Nonetheless, even among tragedies some have only one or two well-known names, and the rest made up; and some have not one, e.g. Agathon's¹ *Antheus*. In this [drama] the incidents and the names alike are made up, and it is no less delightful. Consequently one must not seek to keep entirely to the traditional stories which tragedies are about. In fact it is ridiculous to seek to do so, since even the well-known [incidents] are known only to a few people, but even so everyone enjoys them.

So it is clear from these arguments that a poet must be a composer of plots rather than of verses, insofar as he is a poet according to representation, and represents actions. So even if it turns out that he is representing things that happened, he is no less a poet; for there is nothing to prevent some of the things that have happened from being the sort of things that may happen according to probability, i.e. that are possible, which is why he can make a poetic composition about them.

Among simple plots and actions, episodic [tragedies] are the worst. By "episodic" I mean a plot in which there is neither probability nor necessity that the episodes follow one another. Such [tragedies] are composed by inferior poets because of themselves, but by good ones because of the actors. For in composing competition-pieces, they extend the plot beyond its potential and [1452a] are often compelled to distort the sequence.

The representation is not only of a complete action but also of terrifying and pitiable [incidents]. These arise to a very great or a considerable extent when they happen contrary to expectation but because of one another. For they will be more amazing in this way than if [they happened] on their own, i.e. at random, since the most amazing even among random events are those which appear to have happened as it were on purpose, e.g. the way the statue of Mitys at Argos² killed the man who was the cause of Mitys' death, by falling on him as he looked at it. Such things do not seem to happen at random. Consequently plots of this kind are necessarily finer.

[10] Among plots, some are simple and some are complex; for the actions, of which plots are representations, are evidently of these kinds. By "simple," I mean an action which is, as we have defined it, continuous in its course and single, where the transformation comes about without reversal or recognition. By "complex," I mean an action as a result of which the transformation is accompanied by a recognition, a reversal or both. These should

9. Athenian politician and general (ca. 450–404 B.C.E.).

1. Innovative Athenian tragedian (d. ca. 401 B.C.E.); less than 40 lines of his works remain.

2. The providential punishment of the murderer of Mitys of Argos happened some time before or around 374 B.C.E. [translator's note].

arise from the actual structure of the plot, so it happens that they arise either by necessity or by probability as a result of the preceding events. It makes a great difference whether these [events] happen because of those or [only] after those.

[11] A reversal is a change of the actions to their opposite, as we said, and that, as we are arguing, in accordance with probability or necessity. E.g. in the *Oedipus*,³ the man who comes to bring delight to Oedipus, and to rid him of his terror about his mother, does the opposite by revealing who Oedipus is; and in the *Lynceus*,⁴ Lynceus is being led to his death, and Danaus follows to kill him, but it comes about as a result of the preceding actions that Danaus is killed and Lynceus is rescued.

A recognition, as the word itself indicates, is a change from ignorance to knowledge, and so to either friendship or enmity, among people defined in relation to good fortune or misfortune. A recognition is finest when it happens at the same time as a reversal, as does the one in the *Oedipus*. There are indeed other [kinds of] recognition. For it can happen in the manner stated regarding inanimate objects and random events; and one can recognise whether someone has done something or not done it. But the sort that most belongs to the plot, i.e. most belongs to the action, is that which we have mentioned: for such a recognition and reversal [1452b] will contain pity or terror (tragedy is considered to be a representation of actions of this sort), and in addition misfortune and good fortune will come about in the case of such events.

Since recognition is a recognition of people, some recognitions are by one person only of the other, when the identity of one of them is clear; but sometimes there must be a recognition of both persons. E.g. Iphigeneia is recognised by Orestes⁵ as a result of her sending the letter, but it requires another recognition for him [to be recognised] by Iphigeneia. These, then, reversal and recognition, are two parts of plot. A third is suffering. Of these, we have discussed reversal and recognition. Suffering is a destructive or painful action, e.g. deaths in full view, agonies, woundings etc.

[12] Regarding the parts of tragedy, we stated earlier which ones should be used as elements. The quantitative parts, i.e. the separate parts into which it is divided, are as follows: (i) prologue, (ii) episode, (iii) exit and (iv) choral [part], with this divided into (a) processional and (b) stationary [song]—these are shared by all [dramas], and [songs sung] from the stage, i.e. dirges—these are particular [to some].

(i) A prologue is a whole part of a tragedy that is before the processional [song] of the chorus.

(ii) An episode is a whole part of a tragedy that is between whole choral songs.

(iii) An exit is a whole part of a tragedy after which there is no song of the chorus.

3. *Oedipus Rex* (ca. 430 B.C.E.), by Sophocles—a play to which Aristotle frequently refers as a model for his definition of tragedy. Unknowingly, Oedipus kills his father, Laius; takes his father's place as king of Thebes; and marries his mother, Jocasta. When he learns that he has not escaped the fate foretold, he gouges out his eyes and banishes himself, hence undergoing a reversal from king to outcast.

4. Lost tragedy by the orator and tragic poet Theodectes (ca. 375–334 B.C.E.), about the daughters of King Danaus of Argos, who ordered them to kill their husbands (all obeyed except Hypermestra, whose husband was Lynceus).

5. In *Iphigeneia in Tauris* (ca. 413 B.C.E.), by Euripides (ca. 485–ca. 406 B.C.E.), the youngest of the 3 great Greek tragedians.

(iv) Of the choral [part], (a) a processional is the first whole utterance of the chorus; (b) a stationary song is a song of the chorus without anapaestic⁶ trochaic verse; and (c) a dirge is a lament shared by the chorus and [those] on stage.

Regarding the parts of tragedy, we stated earlier which ones should be used [as elements]; the quantitative ones, i.e. the separate parts into which it is divided, are these.

[13] After what we have just been saying, we must perhaps discuss next what [poets] should aim at and what they should beware of in constructing plots, i.e. how tragedy will achieve its function. Since the construction of the finest tragedy should be not simple but complex, and moreover it should represent terrifying and pitiable events (for this is particular to representation of this sort), first, clearly, it should not show (i) decent men undergoing a change from good fortune to misfortune; for this is neither terrifying nor pitiable, but shocking. Nor [should it show] (ii) wicked men [passing] from misfortune to good fortune. This is most untragic of all, as it has nothing of what it should; for it is neither morally satisfying nor pitiable nor terrifying. [1453a] Nor, again, [should it show] (iii) a thoroughly villainous person falling from good fortune into misfortune: such a structure can contain moral satisfaction, but not pity or terror, for the former is [felt] for a person undeserving of his misfortune, and the latter for a person like [ourselves]. Consequently the outcome will be neither pitiable nor terrifying.

There remains, then, the person intermediate between these. Such a person is one who neither is superior [to us] in virtue and justice, nor undergoes a change to misfortune because of vice and wickedness, but because of some error, and who is one of those people with a great reputation and a good fortune, e.g. Oedipus, Thyestes⁷ and distinguished men from similar families. Necessarily, then, a plot that is fine is single rather than (as some say) double, and involves a change not from misfortune to good fortune, but conversely, from good fortune to misfortune, not because of wickedness but because of a great error by a person like the one mentioned, or by a better person rather than a worse one.

An indication [that this is so] is what is coming about. At first the poets recounted stories at random, but now the finest tragedies are constructed around a few households, e.g. about Alcmeon, Oedipus, Orestes, Meleager, Thyestes, Telephus and the others, who happen to have had dreadful things done to them, or to have done them.⁸ So the tragedy which is finest according to the [principles of the] art results from this structure. For this reason, people make the same error when they bring against Euripides the charge that he does this in his tragedies, and many of his [tragedies] end in misfortune; for this, as we said, is correct. A very important indication [that this is so is the following].

6. Based on a foot of the syllabic pattern short-short-long (sometimes known as marching meter because of its regularity).

7. Like Oedipus, a popular subject for Greek tragedy, though none survive; his story has numerous variants. He unknowingly ate the flesh of his own sons, served by his brother Atreus; and following the advice of an oracle, he committed incest with his daughter to begot the son who would avenge him.

8. Few of the tragedies involving these characters

survive. Alcmaeon and Orestes kill their mothers, Eriphyle and Clytemnestra, to avenge their fathers' deaths and are driven mad by the Furies (female demons who punish kin-murderers); Meleager kills his uncles, and as a result his mother kills him; and Telephus, fated to kill his great-uncles, is exposed by his grandfather (a tragedy by Euripides told of Telephus's wound, received from Achilles as the Greeks were preparing to sail for Troy, that would not heal).

On stage, i.e. in performance, tragedies of this sort, if they are done correctly, are obviously the most tragic, and although Euripides manages badly in other respects, he is obviously the most tragic of poets.

The second[-best] structure is that which some say is first, the [tragedy] which has a double structure like the *Odyssey*, and which ends in opposite ways for the better and worse [persons]. This [structure] would seem to be first because of the weakness of the audiences; the poets follow the spectators, composing to suit their wishes. But this is not the pleasure [that comes] from tragedy, but is more particular to comedy. There the bitterest enemies in the story, e.g. Orestes and Aegisthus,⁹ exit as friends at the conclusion, and nobody kills anyone else.

[14, 1453b] That which is terrifying and pitiable can arise from spectacle, but it can also arise from the structure of the incidents itself; this is superior and belongs to a better poet. For the plot should be constructed in such a way that, even without seeing it, someone who hears about the incidents will shudder and feel pity at the outcome, as someone may feel upon hearing the plot of the *Oedipus*. To produce this by means of spectacle is less artful and requires lavish production. Those [poets] who use spectacle to produce what is only monstrous and not terrifying have nothing in common with tragedy. For we should not seek every [kind of] pleasure from tragedy, but [only] the sort which is particular to it. Since the poet should use representation to produce the pleasure [arising] from pity and terror, it is obvious that this must be put into the incidents.

Let us consider, then, what sorts of occurrence arouse dread or compassion in us. These sorts of action against each another necessarily take place between friends, enemies or people who are neither. If it is one enemy [who does the action] to another, there is nothing pitiable, whether he does it or is [only] about to do it, except in the suffering itself. Nor [is it pitiable] if the people are neither [friends nor enemies]. But when suffering happen within friendly relationships, e.g. brother against brother, son against father, mother against son or son against mother, when someone kills someone else, is about to, or does something else of the same sort—these are what must be sought after.

[The poet] cannot undo the traditional stories, I mean e.g. that Clytemnestra is killed by Orestes or Eriphyle by Alcmeon; but he should invent for himself, i.e. use the inherited [stories], well. Let me explain more clearly what I mean by "well."

The action may arise (i) in the way the old [poets] made people act knowingly, i.e. in full knowledge, just as Euripides too made Medea¹ kill her children. Or (ii) they may be going to act, in full knowledge, but not do it. Or (iii) they may act, but do the dreadful deed in ignorance, and then recognise the friendly relationship later, as Sophocles' *Oedipus* [does]. This is outside the drama; but [they may do the deed] in the tragedy itself, as Astydamos' Alcmeon or Telegonus in the *Wounded Odysseus*² [do]. Again, fourth beside

9. Clytemnestra's lover (and Agamemnon's cousin), whom (in the version told in Aeschylus's *Agamemnon*) Orestes also kills.

1. A sorceress from Colchis. In *Medea* (431 B.C.E.), to avenge herself on Jason, who has deserted her for the daughter of a king, she kills his—and her—children.

2. A lost play by Sophocles in which Telegonus, the son of Odysseus and Circe, fatally wounds his father without knowing his identity. Astydamos (active ca. 390 B.C.E.), a prolific Athenian tragedian; *Alcmaeon* (and all but a few lines of his works) is lost.

these [ways] is (iv) to be about to do something deadly in ignorance [of one's relationship], but to recognise it before doing so. Beside these there is no other way; for the act is necessarily either done or not done, and those who act either have knowledge or do not.

Among these [ways], (i) to be about to act in full knowledge, but not do it, is the worst. For this is shocking and also not tragic, as there is no suffering. For this reason nobody composes in this way, [1445a] except rarely, e.g. Haemon against Creon in the *Antigone*.³ (ii) To act is second[-worst]. (iii) To act in ignorance, but recognise [the relationship] afterwards, is better. This has nothing shocking in it, and the recognition is astonishing. (iv) The last [way] is the best. I mean e.g. the *Cresphontes*, where Merope is about to kill her son, but does not kill him and recognises him; the *Iphigeneia*, where [it is the same for] the sister and her brother; and the *Helle*,⁴ where the son is about to hand over his mother but recognises her. This is why, as we said a while ago, tragedies are not about many families. [The poets] sought to produce this sort [of effect] in their plots, and discovered how to not by art but by chance; so they are obliged to concern themselves with those households in which such sufferings have happened.

As for the structure of the incidents, and what sort of plots there should be, let this suffice.

[15] Regarding characters, there are four things at which [the poet] should aim.

(i) First and foremost, the characters should be good. [The tragedy] will have character if, as we said, the speech or the action makes obvious a decision of whatever sort; it will have a good character, if it makes obvious a good decision. [Good character] can exist in every class [of person]; for a woman can be good, and a slave can, although the first of these [classes] may be inferior and the second wholly worthless.

(ii) Second, [they should be] appropriate. It is possible to be manly in character, but it is not appropriate for a woman to be so manly or clever.

(iii) Third, [the character should be life-]like. This is different from making the character good and appropriate in the way already stated.

(iv) Fourth, [the character should be] consistent. If the model for the representation is somebody inconsistent, and such a character is intended, even so it should be consistently inconsistent.

An example of unnecessary villainy of character is the Menelaus in the *Orestes*; of the unsuitable and inappropriate, the lament of Odysseus in the *Scylla*, and the speech of Melanippe;⁵ and of the inconsistent, the *Iphigeneia at Aulis* (the girl who begs [for her life] does not seem at all like the later *Iphigeneia*).⁶

In the characters too, exactly as in the structure of the incidents, [the

3. By Sophocles (ca. 441 B.C.E.). Haemon, who loves Antigone, tries to kill his father (Creon, king of Thebes), who is responsible for her suicide.

4. Nothing more is known of this play. The *Cresphontes* (now lost) and *Iphigeneia in Tauris* are both by Euripides.

5. In *Melanippe the Wise*, a lost play by Euripides; the heroine apparently argues with a philosophical sophistication inappropriate for a woman. Menelaus in the *Orestes*; in Euripides' play (408 B.C.E.), Menelaus basely refuses to help his nephew:

Scylla: a lost dithyramb by Timotheus, in which Odysseus weeps in an unmanly way for his crew members killed by the monster Scylla.

6. That is, *Iphigeneia at Tauris*. Euripides' play set at Aulis (ca. 405 B.C.E.) depicts Iphigeneia about to be sacrificed by her father, Agamemnon, so that the Greeks may have fair winds as they sail to Troy; according to one version of the myth, she was saved by Artemis and transported far away to Tauris, where she becomes high priestess (and where Orestes later comes).

poet] ought always to seek what is either necessary or probable, so that it is either necessary or probable that a person of such-and-such a sort say or do things of the same sort, and it is either necessary or probable that this [incident] happen after that one.

It is obvious that the solutions of plots too should come about as a result of the plot itself, [1454b] and not from a contrivance, as in the *Medea* and in the passage about sailing home in the *Iliad*.⁷ A contrivance must be used for matters outside the drama—either previous events which are beyond human knowledge, or later ones that need to be foretold or announced. For we grant that the gods can see everything. There should be nothing improbable in the incidents; otherwise, it should be outside the tragedy, e.g. that in Sophocles' *Oedipus*.

Since tragedy is a representation of people who are better than we are, [the poet] should emulate the good portrait-painters. In rendering people's particular shape, while making them [life-]like, they paint them as finer [than they are]. So too the poet, as he represents people who are angry, lazy, or have other such traits, should make them such in their characters, [but] decent [too]. E.g. Homer [made] Achilles⁸ good as well as an example of stubbornness. [The poet] should guard against these things, as well as against [causing] reactions contrary to those that necessarily follow from the art of poetry. In fact one can often make errors in these; there is a sufficient account of them in my published work.

[16] We stated earlier what recognition is. As for the kinds of recognition, (i) the first is the least artful, which [poets] make most use of from lack of resourcefulness—recognition by signs. Of these, (a) some are congenital, e.g. "the spear-head that the earth-born bear," or [the birth-marks like] stars such as Carcinus⁹ [made up] in his *Thyestes*. (b) Others are acquired. Of these (1) some are on the body, e.g. scars, and (2) others are external, e.g. necklaces, and e.g. [the recognition] by means of the dinghy in the *Tyro*.¹

These can be used more or less well; e.g. Odysseus was recognised from his scar in one way by the nurse, and in another by the swineherds.² For the latter recognitions, and all similar ones, are less artful because of the [means of] proof; but those that result from a reversal, like that in the "Bath-scene," are better.

(ii) Second are those recognitions made up by the poet, which is why they are not artful. E.g. in the *Iphigeneia*, how Orestes makes it known that he is Orestes; for Iphigeneia is recognised by means of the letter, but he himself says what the poet wants, not what the plot does. For this reason, this recognition is not far from the error we [just] mentioned; Orestes could have brought some actual objects. Also "the shuttle's voice" in Sophocles' *Tereus*.³

7. In *Iliad* 8.155–81, only the arbitrary intervention of the goddess Athena prevents the Greeks from giving up the fight at Troy and going home. The *Medea*: after killing her children, Medea flies off in the chariot of the sun-god Helios, her grandfather; this "contrivance" is the *deus ex machina*.
8. The greatest warrior among the Greeks and the central character of the *Iliad*. He displays his "stubbornness" by long refusing to engage in the battle because of his anger with Agamemnon, the leader of the Greek forces.

9. Prolific Greek tragic poet (early 4th c. B.C.E.). The preceding quotation may be from Euripides'

lost *Antigone*.

1. A lost play by Sophocles; Tyro's sons are abandoned in a small boat that leads to their later recognition.

2. Odysseus is recognized artfully (because inevitably) by his nurse when he shows them his scar in the "bath scene" (*Odyssey* 19.386–475); but his declaration of his identity to the swineherds, when he shows them the scar as proof (21.205–25), is manufactured by the poet.

3. A lost play. Philomela tells her sister the story of her rape by Tereus, who has torn out her tongue to silence her, by weaving a picture of it.

(iii) The third [kind of recognition] is by means of a memory, when someone reacts to something he sees, [1455a] like the one in Dicaeogenes' *Cypriots* where he bursts into tears upon seeing the painting, or the one in the "Tale told to Alcinous"⁴ where Odysseus hears the lyre-player and weeps at his memories, as a result of which they recognise him:

(iv) Fourth is recognition resulting from an inference, e.g. in the *Libation Bearers*, on the grounds that "someone like [Electra] has come; but there is nobody like [her] except Orestes; it is he, then, who has come".⁵ Or the recognition [proposed by] the sophist Polyidus concerning Iphigeneia: it would be reasonable, he said, for Orestes to infer that "his sister was sacrificed, and it [now] falls to him to be sacrificed himself." Or in Theodectes' *Tydeus*, on the grounds that "he came to find a son, but is to die himself." Or the recognition in the *Sons of Phineus*:⁶ when the women see the place they infer their fate, on the grounds that "they are fated to be killed there, for [the boys] were left to perish there."

There is also a combined recognition resulting from a false inference by the audience, e.g. in *Odysseus the False Messenger*:⁷ for the fact that [Odysseus could] bend the bow, but nobody else [could], is made up by the poet and is a premise, and [so is Odysseus'] saying that he would recognise the bow which he had not seen; but the way he is expected to make himself known by the former means, but does so by the latter, is a [case of] false inference.

(v) The best recognition of all is that which results from the incidents themselves, when our astonishment comes about by means of probable [incidents], e.g. in Sophocles' *Oedipus* and the *Iphigeneia*: it is probable that Iphigeneia would wish to dispatch a letter. For such recognitions alone are without made-up [incidents] and necklaces. Recognitions as a result of inference are second[-best].

[17] In constructing his plots and using diction to bring them to completion, [the poet] should put [the events] before his eyes as much as he can. In this way, seeing them very vividly as if he were actually present at the actions [he represents], he can discover what is suitable, and is least likely to miss contradictions. An indication of this is the [contradiction] for which Carcinus was criticised. His Amphiarus comes up out of a shrine;⁸ this would have been missed by anyone not seeing it as a spectator. But [the play] failed on stage, as the spectators were upset about it.

As far as possible, [the poet should] also bring [his plots] to completion with gestures. Given the same nature, those [poets] who experience the emotions [to be represented] are most believable, i.e. he who is agitated or furious [can represent] agitation and anger most truthfully. For this reason, the art of poetry belongs to the genius or the madman; of these, the first are adaptable, the second can step outside themselves.

As for his stories, both those [already] made up and those he composes himself, [1455b] he should set them out as universals, and only then introduce episodes, i.e. extend them. I mean that he might investigate what is

4. King of the Phaeacians and Odysseus's host in *Iliad* 7-12 (for the telltale weeping, see 8.521-34). Dicaeogenes (late 5th c. B.C.E.), a minor Greek tragedian.

5. Aeschylus, *Libation Bearers* (458 B.C.E.), lines

168-234.

6. Lost, as is *Tydeus*. Polyidus (early 4th c. B.C.E.), perhaps the poet and critic Polyidus of Selymbria.

7. A lost play by an unknown author.

8. In a lost play.

universal in them in the following way, e.g. [the story] of Iphigeneia: "a girl has been sacrificed and disappears in a way unclear to the people who sacrificed her. She is set down in another country, where there is a law that foreigners must be sacrificed to the goddess; this is the priesthood she is given. Some time later it turns out that the priestess' brother arrives. . . ." The fact that the oracle commanded him to go there, for some reason that is not a universal, and his purpose [in going], are outside the plot. "After he arrives, he is captured. When he is about to be sacrificed [by his sister], he makes himself known [to her]," either as Euripides or as Polyidus arranged it, "by saying—as would be probable—that it was not only his sister's fate to be sacrificed, but his own too. This leads to the rescue." After this [the poet] should now supply the names and introduce episodes. Take care that the episodes are particular [to the story], e.g. in Orestes' case his madness through which he is captured, and his rescue by means of the purification.

In dramas the episodes are brief, but epic is lengthened out with them. The story of the *Odyssey* is not long: "someone has been away from home for many years, with a god on the watch for him, and he is alone. Moreover affairs at home are such that his wealth is being consumed by [his wife's] suitors, and his son is being plotted against [by them]. He arrives after much distress, makes himself known to some people, and attacks. He is rescued, his enemies annihilated." This is what is proper [to the *Odyssey*]; its other [parts] are episodes.

[18] [Part] of every tragedy is the complication, and [part] is the solution. The [incidents] outside [the tragedy] and often some of those inside it are the complication, and the rest is the solution. By "complication," I mean the [tragedy] from the beginning up to the final part from which there is a transformation towards good fortune or misfortune; by "solution," the [tragedy] from the beginning of the transformation up to the end. E.g. in Theodectes' *Lynceus*, the prior incidents, the capture of the baby and then its parents' explanation is the complication, and the [tragedy] from the demand for the death penalty up to the end is the solution.

There are four kinds of tragedy (for we said that its parts too are of the same number): (i) the complex tragedy, the whole of which is reversal and recognition; (ii) the tragedy of suffering, e.g. the [tragedies called] *Ajax* and [1456a] *Ixion*;⁹ (iii) the tragedy of character, e.g. the *Women of Phthia* and the *Peleus*;¹ (iv) the fourth [kind] is spectacle, e.g. the *Daughters of Phorcys*, the *Prometheus*² and [dramas set] in Hades. Preferably [the poet] should attempt to have all [the parts]; otherwise, the most important and the majority of them, especially given the way people belittle poets nowadays. Since there have been poets good at each part [of tragedy], they demand that a single [poet] surpass the particular good [quality] of each one; but it is not right to call a tragedy the same [as another] or different according to anything

9. No play of this name survives. Ixion was the first to murder kin and attempted to rape Hera, queen of the gods; as punishment for the second crime, he is chained forever to a wheel in the underworld. *Ajax*: Sophocles' play (ca. 445 B.C.E.) tells the story of the Greek warrior driven mad by Athena who then commits suicide out of shame.

1. Both lost works revolve around the family of Achilles, who was the son of Peleus and came from Phthia. *Women of Phthia* is by Sophocles; both

Sophocles and Euripides wrote plays titled *Peleus*.
2. Perhaps Aeschylus's *Prometheus Bound*, whose hero speaks while bound to the rocks in the Caucasus. *Daughters of Phorcys*: perhaps by Aeschylus. Phorcys was a sea god, and his daughters were monsters: the 3 Graeae, old women who shared one tooth and one eye, and the 3 serpent-haired Gorgons, the sight of whom turned humans to stone.

so much as the plot, that is, [plots] with the same development and solution. Many [poets] develop [the plot] well and solve it badly, but one should harmonise both [parts].

[The poet] ought to remember what we have often said, and not compose a tragedy with an epic structure (by an "epic" structure, I mean one with more than one plot), e.g. if someone were to compose [a tragedy with] the whole plot of the *Iliad*. For there, the parts receive suitable magnitude because of the length [of the epic]; but in dramas the result is far from one's expectation.

An indication [that this is so is the following]: those [tragedians] who composed a *Sack of Troy* as a whole and not in part like Euripides, or a *Niobe*³ and not like Aeschylus, either fail or compete badly, since even Agathon failed in this one respect. In reversals and in simple incidents, they aim to arouse the amazement which they desire; for this is tragic and morally satisfying. This is possible when someone who is clever but villainous is deceived, like Sisyphus,⁴ or someone who is brave but unjust is defeated. This is even probable, as Agathon says; for it is probable that many things will happen even against probability.

[The poet] should regard the chorus as one of the actors. It should be a part of the whole, and contribute to the performance, not as in Euripides but as in Sophocles. In the rest the sung [parts] belong to the plot no more than they belong to another tragedy. For this reason they sing interludes; Agathon was first to begin this. Yet what difference is there between singing interludes and trying to adapt a speech, or a whole episode, from one [drama] to another?

[19] We have discussed the other elements [of tragedy]; it remains to discuss diction and reasoning. As for reasoning, what was said about it in my *Rhetoric*⁵ should be assumed; for this is proper rather to that enquiry. All [the effects] that have to be produced by speech fall under reasoning. The types of these are (i) demonstration and refutation, (ii) the production of emotions [1456b] (e.g. pity, terror, anger, etc.), and again (iii) [arguments about things'] importance or unimportance.

In the incidents too [the poet] clearly should use some of the same elements when he needs to make things [e.g.] pitiable, dreadful, important or probable, except that there is this difference, that these [effects] should be apparent without a production, but those dependent on speech should be produced by the speaker and arise from speech. What would be the speaker's function, if the element were apparent even without [the use of] speech?

Among matters related to diction, one kind of investigation is the forms of the diction. Knowledge of this belongs to the art of delivery and to the person with mastery in it. [I mean] e.g. what is a command, what is a wish, a statement, a threat, a question, an answer, etc. No criticism at all made

3. There are no known epics concerning Niobe; Aeschylus's *Niobe* is lost. *Sack of Troy*: a poem in the epic cycle, by Lesches of Mytiline (ca. 7th c. B.C.E.) or Arctinus of Miletus (ca. 8th c. B.C.E.). Euripides treated some of the same events in his *Trojan Women* and *Hecuba*.

4. A sly trickster who murdered travelers and once even chained the god of death, he is punished eter-

nally for betraying Zeus's secrets; he tries to roll a stone over the top of a steep hill, but always falls and must try again from the bottom. Aeschylus, Sophocles, and Euripides all wrote plays on Sisyphus.

5. In a discussion of types of argument; see *Rhetoric* 1356a-1358a.

against the art of poetry, that is based on knowledge or ignorance of these [forms], actually deserves to be taken seriously. What error could anybody consider there to be in "Sing, goddess, of the wrath," which Protagoras⁶ criticises on the grounds that [Homer] supposes he is making a wish, but is giving an order? (For Protagoras says that telling someone to do something or not do it is an order.) For this reason let us leave this investigation aside, as it belongs to another art and not to that of poetry.

[20] The parts of diction in its entirety are as follows: (i) the element [i.e. letter], (ii) the syllable, (iii) the particle, (iv) the conjunction, (v) the name [i.e. noun or adjective], (vi) the verb, (vii) the inflection, (viii) the utterance.

(i) The element is an indivisible sound—not every [kind of] sound, but one from which it is natural for a composite sound to arise. For wild animals too make indivisible sounds, none of which I mean by an element. The types of this [kind of] sound are (a) the vowel, (b) the semi-vowel and (c) the consonant.

(a) A vowel is that which has an audible sound without a contact [between the parts of the mouth]. (b) A semi-vowel is that which has an audible sound with [such] a contact, e.g. *s* and *r*. (c) A consonant is that which has no audible sound in itself with [such] a contact, but becomes audible together with those elements that have a sound of some sort; e.g. *g* and *d*.

The elements differ according to the forms of the mouth, the places [in the mouth where they are produced], aspiration, non-aspiration, length, shortness, and also high, low or intermediate pitch. One must investigate the particulars of these matters in works on versification.

(ii) A syllable is a non-significant sound composed of a consonant and [an element] which has sound. In fact *gr* without an *a* is a syllable, and [it is also a syllable] with an *a*, as in *gra*. But the investigation of the differences between these also belongs to the art of versification.

(iii) A particle is (a) a non-significant sound which neither precludes, [1457a] nor brings about, the production of a single significant sound that by nature is composed of several sounds [i.e. an utterance], and which it is not appropriate to place at the beginning of an utterance on its own, e.g. *men, ētoi, de*. Or [it is] (b) a non-significant sound which by nature produces, as a result of [joining together] several sounds that are significant, a single significant sound [i.e. an utterance], e.g. "about," "concerning" etc.

(iv) A conjunction is a non-significant sound which makes clear the beginning of an utterance, its end or its dividing-point, and which by nature is placed both at the extremities and in the middle [of an utterance], e.g. "or," "because," "but."

(v) A name [i.e. noun or adjective] is a composite significant sound without [an indication of] time, no part of which is significant in itself. For in double names we do not use [any part] as being significant in and of itself: e.g. in "Theodore" [i.e. "gift of god"] *dore* is not significant.

(vi) A verb is a composite significant sound with [an indication of] time, no part of which is significant in itself, just as in the case of names. For "human being" or "white" does not signify when, but "walks" or "walked"

6. Pre-Socratic philosopher (5th c. B.C.E.), who was one of the most successful of the sophists, or itinerant teachers. "Sing . . .": the first words of the *Iliad*.

signifies this as well, present time in the first case, and past time in the second.

(vii) An inflection of a name or verb is either (a) the inflection according to the [part] that signifies "of him," "for him," etc., or (b) that according to the [part] that signifies "one" or "many," e.g. "person" or "persons," or (c) that according to the delivery, e.g. according to [whether it is] a question or an order; for "did he walk?" or "walk!" is an inflection of the verb according to these kinds.

(viii) An utterance is a composite significant sound, some parts of which signify something in themselves. For not every utterance is composed of verbs and names, e.g. the definition of a human being, but there can be an utterance without verbs. However, an utterance will always have a part that signifies something [in itself], e.g. "Cleon" in "Cleon walks."

An utterance can be single in two ways, either (a) by signifying one thing, or (b) by a conjunction of several things. E.g. the *Iliad* is one by a conjunction [of many things], but the definition of a human being is one by signifying one thing.

[21] The kinds of name are (i) single (by "single," I mean that which is not composed from [parts] that are significant, e.g. "earth"), and (ii) double. Of the double name, (a) one [kind] is composed of [a part] that is significant and [a part] that is non-significant, except that these [parts] are not significant and non-significant in the [double] name [itself]; (b) the other [kind] is composed of [parts] that are significant. There can be a triple and a quadruple name, even a multiple one; e.g. most of the names of the people of Marseilles, "Hermocaicoxanthus," who prays to Zeus." [1457b] Every name is either (i) standard, (ii) exotic, (iii) a metaphor, (iv) an ornament, (v) made-up, (vi) lengthened, (vii) reduced or (viii) altered.

By (i) "standard," I mean a name which a particular people uses; by (ii) "exotic," I mean one which other people uses. Consequently it is obvious that it is possible for the same [name] to be both exotic and standard, but not for the same people. For *sigunon* ("spear") is standard for the Cypriots,⁸ but exotic for us; and "spear" is standard for us, but exotic for the Cypriots.

(iii) A "metaphor" is the application [to something] of a name belonging to something else, either (a) from the genus to the species, or (b) from the species to the genus, or (c) from a species to [another] species, or (d) according to analogy.

By (a), "from genus to species," I mean e.g. "here stands my ship": for [the species] lying at anchor is a [part of the genus] standing. By (b), "from species to genus," I mean e.g. "truly has Odysseus done ten thousand deeds of worth": for [the species] "ten thousand" is [part of the genus] "many," and [Homer] uses it here instead of "a lot". By (c), "from species to species," I mean e.g. [killing a man by] "draining out his life with bronze" [i.e. a weapon], and [drawing water by] "cutting it with long-edged bronze" [i.e. a bowl]: for here [the poet] calls cutting "draining" and draining "cutting". Both are [species of the genus] "taking away." By (d), "analogy," I mean when *b* is to *a* as *d* is to *c*; for [the poet then] will say *d* instead of *b*, or *b* instead of *d*.

7. A comical name compounded from the names of three rivers (Hermus, Caicus, and Xanthus) in western Asia Minor, where the founders of Mar-

seilles (then called Massalia) originated.

8. That is, those speaking the dialect of Greek used on the island of Cyprus.

Sometimes too [poets] add [to the metaphor] the thing to which the name relates, instead of what it means. I mean e.g. that the wine-bowl stands to Dionysus as the shield does to Ares:⁹ so [the poet] will call a wine-bowl "shield of Dionysus" and a shield "wine-bowl of Ares." Again, as old age stands to life, so the evening stands to the day: so [the poet] will call evening "old age of the day," as Empedocles does, and old age "the evening of life" or "the sunset of life."

There may be no current name for some of the things in the analogy, but even so they will be expressed in the same way. E.g. to scatter seed is to sow, and to scatter radiance from the sun has no name; but this has the same relation to the sun as sowing does to the seed. For this reason [the poet] says "sowing god-wrought radiance."

This manner of [making a] metaphor can be used in another way too. After terming something by a name that belongs to something else, one can deny to it one of the things particular to [that other thing], e.g. if [a poet] called a shield not "wine-bowl of Ares" but "wine-bowl without wine."

(iv) [An "ornament" is ***]¹

(v) A "made-up [name]" is one which is wholly unused by people, but which the poet supplies himself. There would seem to be some such names, e.g. "branchers" for "horns" or "prayerman" for "priest."

(vi)-(vii) As for lengthened [1458a] or shortened names, the former is one which uses a longer vowel than the one particular [to it], or an inserted syllable. The latter is one some [part] of which has been shortened. A lengthened [name] is e.g. *polēos* for *poleōs* "of the city," and *Pelēiadeō* for *Peleidou* "son of Peleus"; a shortened [name] is e.g. *kri* [for *krithē*] "barley," *dō* [for *dōma*] "mansion" and, in "one seeing comes from both [eyes]," *ops* [for *opsis*] "seeing."

(viii) An altered [name] is when [the poet] leaves some of the appellation [unaltered], but makes up some of it, e.g. "by her righter breast" instead of "right."

Among names [in] themselves, (a) some are masculine, (b) some are feminine, and (c) some are in between [i.e. neuter].² (a) Masculine names are those that end in *n*, *r*, *s* and the elements that are composed of *s*; there are two of these, *ps* and *x* [i.e. *ks*]. (b) Feminine names are (i) those that end in the vowels that are always long, i.e. in *ē* and *ō*, and (ii) those that end in *a* among the vowels that may be lengthened. Consequently the elements in which the masculine and feminine names end turn out to be equal in number [i.e. three], for *ps* and *x* are composite. No names end in a consonant, nor in a short vowel [that is always short]. There are only three names ending in *i*, "honey," "gum" and "pepper" (*meli*, *kommi*, *peperi*); there are five ending in *u*, "spear," "fleece," "mustard," "knee" and "city" (*doru*, *pōu*, *napu*, *gonu*, *astu*). The [names] that are in between end in these elements [*a*, *i* and *u*], and in *n*, [*r*] and *s*.

[22] The virtue of diction is to be clear and not commonplace. Diction made up of standard names is clearest, but is commonplace. An example is the poetry of Cleophon and that of Sthenelus.³ Diction that uses unfamiliar

9. Greek god of war.

1. Aristotle distinguishes between ornamental and standard names, but his account here is missing in all surviving manuscripts.

2. Some editors condemn this paragraph (which contains much that is not true) as spurious.

3. Perhaps a tragic poet whose style was mocked by Aristophanes [translator's note].

names is grand and altered from the everyday. By "unfamiliar," I mean the exotic [name], metaphor, lengthening and everything that is contrary to what is standard. But if someone makes all [the names] of this sort, [his poem] will be either a riddle or gibberish. If [it is composed] of metaphors, it will be a riddle; if of exotic [names], gibberish. For it is the form of a riddle to use an impossible combination [of names] in saying things that are the case. This cannot be done with the combination of the other names, but is possible with metaphor, e.g. "I saw a man glue bronze on a man with fire," etc. Things [composed] of exotic names are gibberish. [The poet], then, should mix these [two kinds] in some way. The first (e.g. the exotic name, metaphor, ornament and the other kinds we mentioned) will produce that which is not everyday and commonplace, and the standard name will produce clarity.

Lengthenings, curtailments and alterations of names make no small contribution [1458b] towards making the diction clear and not everyday. These will produce what is not everyday, because of their variation from what is standard, as they are contrary to the norm, but clarity will come from what they have in common with the norm. Consequently those who criticize this manner of speech and ridicule the poet [for using it] are not correct to abuse him. E.g. old Euclides, to show that it is easy to compose if [a poet] is allowed to lengthen [names] as much as he wishes, composed as a lampoon in his words "I saw Epichares walking to Marathon" and "not mixing hellebore for him."⁴ To use this manner in some obvious way is laughable. [The need for] due measure is shared by all the types [of unfamiliar names]. For [a poet] who purposely uses metaphors, exotic [names], and the other kinds unsuitably, with a view to arousing laughter, can accomplish the same [effect].

How much what is appropriate is superior [to what is inappropriate] can be observed, in the case of lengthened [names], by inserting the [standard] names into the verse [instead]. In the case of exotic [names], as well as metaphors and the other forms, someone who substitutes the standard names can see that what we are saying is true. E.g. when Euripides composed the same iambic verse as Aeschylus, and substituted only one name, an exotic name instead of the usual standard one, his verse seems fine, but Aeschylus' seems ordinary. For Aeschylus in his *Philoctetes*⁵ composed the verse

"the gangrene which eats at the flesh of my foot,"

but Euripides substituted "feasts on" for "eats at." Also, [in the verse]

"now I am a paltry man, nothing worth and plain,"⁶

suppose that someone substituted the standard names to say

"now I am a little man, a feeble one and ugly."

Compare too

"setting down a squalid hassock and a paltry table,"⁷

4. The two phrases are unrelated; both contain words with arbitrarily lengthened syllables. Euclides: identity unknown; both an Athenian magistrate and a Megaran philosopher of that name were active ca. 400 B.C.E. Epichares: a common name in Athens. Marathon: a large Attic city on the northeast coast. "Hellebore": an herb thought to be a cure for madness.

5. A lost play (the *Philoctetes* of Sophocles but not

Euripides survives). Philoctetes, who used the bow and arrows of Heracles, sailed with the Greeks for Troy but was left behind on an island because a wound on his foot, caused by snakebite, produced a horrible smell. He remained alone for 10 years, until on the advice of an oracle he and his bow were brought to Troy.

6. *Odyssey* 9.515.

7. *Odyssey* 20.259.

with

“setting down a nasty hassock and a little table,”

or “the headlands bellow” with “the headlands yell.”

Again, Aripbrates⁸ ridiculed the tragedians on the grounds that they use things which nobody would say in his [everyday] speech, e.g. “without the palace” and not “outside the palace,” “of thee,” “mine own,” [1459a] “Achilles round” and not “around Achilles,” etc. Because all such [names] are not among the standard ones, they produce what is not everyday in the diction. But Aripbrates was ignorant of this.

It is important to use each of the [kinds] mentioned suitably, both double names and exotic ones, but the metaphorical [kind] is the most important by far. This alone (a) cannot be acquired from someone else, and (b) is an indication of genius. For to make metaphors well is to observe what is like [something else].

Among names, double ones are most appropriate for dithyrambs, exotic ones for heroic [verses]⁹ and metaphors for iambic verses. In heroic verses all the [kinds] mentioned are useful. In iambic verses, because these represent [everyday] diction as far as possible, those [kinds] of names are appropriate which one can use in [prose] speeches too. These are the standard name, metaphor and ornament.

As for tragedy, i.e. representation by means of acting, let this account suffice us.

[23] As for the art of exposition and representation in verse, it is clear that, just as in tragedies, [the epic poet] should construct plots that are dramatic (i.e. [plots] about a single whole action that is complete, with a beginning, middle [parts] and end), so that it will produce the pleasure particular to it, as a single whole animal does. The constructions [of of the incidents] should not be like histories; in these it is necessary to produce a description not of a single action, but of a single time, with all that happened during it to one or more people; each [event] relates to the others at random. Just as the sea-battle at Salamis and the battle against the Carthaginians in Sicily happened at the same time,¹ but did not contribute to the same end, so too in sequential [periods of] time one thing sometimes comes about after another, but from these there comes about no single end. But this is what the majority, almost, of [epic] poet do.

For this reason, as we said already, Homer appears marvellous compared to the others, in that he did not undertake to put into his composition even the [Trojan] war as a whole, although it has a beginning and an end. For the plot would probably have been too big and not easily seen as a whole; or, if it were moderate in magnitude, [it would have been too] complex in its variety [of incidents]. As it is, selecting a single part [of it], Homer has used many of them as episodes, e.g. he diversifies his composition with the “Catalogue of Ships”² and other episodes. The other [poets] compose about a single man, a single time, or a single action that has many parts, e.g. he who composed the [1459b] *Cypria* and the *Little Iliad*.³ Consequently one or at most two

8. An unknown comic poet.

9. That is, verses in the meter of epic (dactylic hexameter).

1. According to Herodotus (7.166.1), the victory of the Greek fleet over the Persians at Salamis and the victory of the Sicilian Greeks led by Gelon over

the Carthaginians occurred on the same day in 480 B.C.E.

2. *Iliad* 2.484–759.

3. Poems in the epic cycle, of unknown authorship: the *Cypria* related the origins of the Trojan War and the *Little Iliad* events after the end of the *Iliad*.

tragedies in each case are produced from the *Iliad* and the *Odyssey*; but many [are produced] from the *Cypria*, and from the *Little Iliad* more than eight, e.g. the *Judgment of Arms*, *Philoctetes*, *Neoptolemus*, *Eurypylos*, *Vagabondage*, *Laconian Women*, *Sack of Troy*, *Embarkation*, *Sinon*, and *Trojan Women*.⁴

[24] Again, epic must have the same kinds as tragedy, for [it must be] either (i) simple or (ii) complex, (iii) an epic of character or (iv) one of suffering. Its parts, except for song and spectacle, are the same; in fact it needs reversals, recognitions and sufferings. Again, the reasonings and diction should be fine.

Homer is first and foremost in the use of all of these. In fact each of his poems is constructed in each of the two ways—the *Iliad* is simple and full of suffering, the *Odyssey* is complex (for it is recognition right through) and full of character. In addition, he has surpassed all [others] in diction and reasoning.

Epic differs [from tragedy] in (i) the length of its [plot-]structure, and (ii) its verse.

(i) As for its length, the definition that we stated is sufficient; it should be possible to see at one view its beginning and end. This would be so, if the structures were smaller than the ancient ones, but reached [the length of] the number of tragedies presented at a single hearing.

For extending its magnitude, epic has an [advantage] very particular [to it]. In tragedy, it is not possible for many parts [of the action] to be presented as being done at the same time, but only the part of the actors on the stage. But in epic, because it is exposition, it is possible to put in many parts which are accomplished at the same time; with these—provided they are particular [to it]—the weight of the poem is increased. Consequently epic has this advantage [over tragedy], both (a) for [giving it] splendour, and (b) for diverting the listener and introducing episodes that are unlike [one another]. For likeness [in episodes] is soon boring and makes tragedies fail.

(ii) As for its verse-form, heroic verse has been found appropriate from experience. If anyone produced an expository representation in some other verse-form, or in many, it would obviously be unsuitable. Heroic verse is the stateliest and weightiest of the verse-forms. For this reason, it most readily admits exotic names, metaphors and lengthenings—for expository representation exceeds the other [kinds] in this too. But the iambic and tetrameter [1460a] verse-forms are [fast-]moving, as the first is related to action, and the second to dance. It would be still more odd if someone mixed them, as Chaeremon did. For this reason, nobody has composed a long structure in any verse other than the heroic; but, as we said, nature itself teaches [poets] to choose [the verse-form] that is appropriate to it.

Homer deserves acclaim for many things, but especially because he alone among [epic] poets is well aware of what he himself should do. The poet should say very little himself; for this is not the way in which [a poet] represents. The other [epic poets] do the performing themselves right through [the poem], but represent few [people speaking] and do so rarely.

4. Only Sophocles' *Philoctetes* and Euripides' *Trojan Women* are extant; some editors doubt that Aristotle is responsible for all the titles in this list.

But Homer, after a brief preamble, immediately brings on a man, a woman, or some other [person]—and none of them characterless, but [all] with character.

[The poet] should put what is amazing into his tragedies; but what is improbable, from which amazement arises most, is more admissible in epic because [the audience] does not see the person in action. For the passage about the pursuit of Hector⁵ would obviously be laughable on the stage, with the Greeks standing still and not pursuing him, and Achilles forbidding them to do so, but it passes unnoticed in the epic verses. What is amazing is pleasant. An indication [of this is that] everyone narrates [stories] with additions, so as to please.

Homer above all has taught the other [poets] to tell untruths in the right way, that is, [by] a false inference. For if, whenever *p* exists or comes to be, *q* exists or comes to be, people suppose that if the latter (*q*) exists, the former (*p*) also exists or comes to be. But this [supposition] is untrue. For this reason, if the former (*p*) is untrue, but it follows from its existence that something else (*q*) exists or comes to be, [the poet] should add it [i.e. *q*]. Because we know that this (*q*) is true, our soul falsely infers that the former (*p*) exists too. An example of this is the passage in the "Bath-scene."⁶

Impossible [incidents] that are believable should be preferred to possible ones that are unbelievable, and stories should not be constructed from improbable parts, but above all should contain nothing improbable; otherwise, it should be outside the plot-structure, like Oedipus' not knowing how Laius was killed. But it should not be within the drama, like the people who narrate [the accident at] the Pythian games in the *Electra*, and the person who comes to Mysia from Tegea without speaking in the *Mysians*.⁷ Consequently it is ridiculous to say that the plot would have been ruined [without the improbability]; such plots should not be constructed in the first place. But if one is set up, and it appears fairly logical, even an oddity can be admitted. For even the improbabilities in the *Odyssey* over the putting ashore [of Odysseus]⁸ would clearly not be tolerable, if an [1460b] inferior poet composed them. But as it is, the poet makes the oddity disappear by using his other good [qualities] for embellishment. [The poet] should take great pains with the diction in the slack parts [of the poem], i.e. those with neither character nor reasoning. For in turn excessively resplendent diction obscures characters and reasoning.

[25] As for the questions that are raised [about epic poetry] and their solutions, it may become obvious to how many kinds they belong, and of what sort they are, if we investigate them as follows.

(i) Since a poet represents, just like a painter or some other maker of images, at any moment he is necessarily representing one of three things, either (a) things as they were or are, or (b) things as people say and think [they were or are], or (c) things as they should be.

5. *Iliad* 22.131–207; Hector, eldest son of the king of Troy and the greatest Trojan warrior, initially flees Achilles.

6. That is, Penelope's false inference, from the disguised Odysseus's accurate description of some clothing, that his tale of being a Cretan who met her husband Odysseus is true (*Odyssey* 19.165–250).

7. A play of Aeschylus or Sophocles; Tegea in the Peloponnese is far distant from Mysia in northwest Asia Minor. *Electra*: Sophocles' tragedy (ca. 414 B.C.E.) contains a false account (lines 680–763) of Orestes' death in a chariot crash in the Pythian games, which were founded centuries after the events of the play.

8. *Odyssey* 13.116–25.

(ii) These things are expressed in diction in which there are exotic names, metaphors and many modifications of diction; we grant these to poets.

(iii) In addition, there is not the same [standard of] correctness in the art of civic life as in that of poetry, nor is there in any other art as in that of poetry. Error in the art of poetry itself is of two sorts, (a) error in the art itself, (b) error in it by coincidence. For if [an artist] decided to represent [a horse correctly, but erred in the representation because of his] lack of ability, the error belongs to the art itself; but if he decided to represent it incorrectly, and [represented] the horse with both right legs thrown forward, [it is] an error in the individual art (e.g. one in medicine or another art of whatever sort), not in the art of poetry itself.

Consequently one should consider and solve the criticisms that are among the questions raised [starting] from these [principles].

(i) First, some [criticisms should be solved] with reference to the art itself. [If] impossibilities have been produced, there is an error; but it is correct, if it attains the end of the art itself. The end has been stated [already, i.e.] if in this way it makes either that part [of the poem], or another part, more astonishing. An example is the pursuit of Hector.

However, if the end [of the art] could have been brought about better or no worse [without erring] according to the art concerned with these matters, the error is not correct. For [the poet] should, if possible, have made no errors at all.

(ii) Again, to which sort does the error belong, to those in the art [itself], or [to those in it] by coincidence? The error is less, if [an artist] did not know that a female deer has no horns, than if he painted without representing [anything].

(iii) In addition, if [the poet] is criticised for representing things that are not true, perhaps he is representing them [as] they should be, e.g. as Sophocles said that he himself portrayed people as they should be, but Euripides portrayed them as they are—there is the solution.

(iv) If [the solution] is in neither of these ways, then [it may be] on the grounds that people say [it is] so, e.g. the [stories] about the gods. These are perhaps neither better [told this way] nor true, but are possibly [lies] [1461a] as Xenophanes⁹ thought; yet people say [it is] so.

(v) Some things are perhaps not better [than they should be], but were so, e.g. the passage about the weapons:

“their spears, [set] upright on the butt-spike . . .”¹

This was the custom then, as it is among the Illyrians even now.

(vi) As for whether someone's saying or action is fine or not so fine, one must consider not only what was said or done itself, to see whether it is good or inferior, but also the person saying or doing it, and to whom, at what time, by what means and to what end, e.g. whether it is to bring about a greater good, or to avert a greater evil.

(vii) Some [criticisms] must be resolved by looking at the diction, e.g. by [assuming] an exotic name in “the *oureis* first”:² perhaps [Homer] means not

9. Pre-Socratic philosopher and poet (ca. 570—ca. 480 B.C.E.) who denounced immoral tales of the Greek gods.

1. *Iliad* 10.152–53.

2. *Iliad* 1.50, where the Greek word *ourēas* may derive either from *oreus* (mule) or *ouros* (sentinal).

"mules" but "sentinels." As for Dolon³ "who was evil in form," [Homer may mean] not that his body was misproportioned, but that his face was ugly; for the Cretans call someone fair of face "well-formed." Also by "mix it purer" [he may mean] not "[mix the wine] stronger," as if for drunkards, but "mix it faster."

(viii) Some things are said with a metaphor, e.g. "all gods and men slept all night long," but [Homer] says at the same time "but when he gazed at the Trojan plain, [he marvelled at] the din of flutes and pipes." "All" is said for "many" with a metaphor; for "all" is a lot. So too "[this constellation] alone has no share [in the baths of Ocean]" is said with a metaphor; for what is best known is "alone."

(ix) [Some questions should be solved] with reference to the pronunciation, as Hippias of Thasaos⁴ solved [the question of] "but grant that he gain his prayer" [instead of "we grant"], and "part rotted by rain" [instead of "not rotted"].

(x) Some [should be solved] by punctuation, e.g. Empedocles' "at once were things mortal born, that learnt before to be immortal, and things were mixed, pure before."

(xi) Some [should be solved] by [assuming] an ambiguity, [e.g.] in "more of the night has gone," "more" is ambiguous.

(xii) Some [should be solved] with reference to a habit of diction. People call mixed [wine] "wine," whence [Homer] composed "a greave of new-wrought tin" [i.e. of bronze, copper mixed with tin]; and they call men who work iron "bronze-smiths," whence his calling Ganymede⁵ "wine-pourer of Zeus," although [gods] do not drink wine [but nectar]. This could also be [solved] with reference to a metaphor.

Whenever any name would seem to signify something contradictory, one should consider how many ways it may signify in the passage, e.g. in "there the brazen spear was held" consider how many ways it can mean "was stopped there," one way or another as best one may understand it, according to the exact opposite of what [1461b] Glaucon⁶ says.

Again, some people illogically make some prior assumption, and judging it right themselves make inferences [from it]. If there is a contradiction to their own supposition, they criticise [the poet] as if he had said what they think. This has happened in the case of Icarus. People suppose that Icarus is a Lacedaemonian: so they think it odd that Telemachus⁷ does not meet him when he goes to Lacedaemon. But perhaps it is as the Cephallenians say; they say that Odysseus took a wife from among them, and that [Penelope's father] was Icadus and not Icarus. It is probable that the question [has arisen] because of an error [by Homer's critics].

In general, (i) the impossibility should be explained with reference either to (a) the composition, or to (b) [making something] better [than it is], or to (c) opinion. In relation to [the needs of] the composition, a believable impos-

All the following examples in this passage come from the *Iliad*, sometimes abbreviating the original.

3. A Trojan scout killed by the Greeks (*Iliad* 10.314-457).

4. An unknown figure (possibly an individual who died in Athens in 404 B.C.E.).

5. A beautiful young Trojan prince seized and carried to Olympus by Zeus's eagle; he became a minor Greek god.

6. Perhaps the interpreter of Homer named by Plato in *Ion* 530d (see above).

7. Odysseus's son. Icarus: Penelope's father, from Sparta (Lacedaemonia).

sibility is preferable to an unbelievable possibility. For it may be impossible that there are people like those Zeus painted, but [it is] better [so]. For [the artist] should improve on his model.

(ii) Improbabilities [should be explained] with reference to what people say; for one must solve them in this way, and on the grounds that sometimes an improbability is no improbability: for it is probable that things will happen even against probability.

(iii) Sayings that are contradictory should be considered just like refutations in arguments, as to whether it is the same thing [that is meant], relates to the same thing, or is said in the same way. Consequently [these] must be solved with reference either to (a) what [the poet] himself says or to (b) what a sensible person may assume.

Criticism of improbability and wickedness is correct when, with no necessity at all to do so, [the poet] uses an improbability, as Euripides uses Aegus,⁸ or villainy, as Euripides uses Menelaus in the *Orestes*.

So the criticisms that people make are of five kinds—that things are impossible, improbable, harmful, contradictory, or incorrect in terms of [another] art. Solutions must be looked for among the items we have stated; there are twelve of them.

[26] One may be puzzled about which is better, epic or tragic representation. If the less vulgar representation is better, and the less vulgar is always that which relates to better spectators, it is very clear that the one which represents in all respects is vulgar. Assuming that [the spectators] will not react unless [each actor] adds something himself, they use a lot of movement, like inferior oboe-players who whirl about if they have to represent a discus, and drag the chorus-leader about if they are playing the *Scylla*. So tragedy is [a representation] of this sort. Compare too how the earlier actors regarded those who came after them. Mynniscus used to call Callippides a monkey, on the grounds that he went to great excesses, and the opinion about Pindarus⁹ was similar. [1462a] As the later actors stand to them, so the whole art [of tragedy] stands to epic. So people say that epic relates to decent spectators, who have no need of gestures, but the tragic [art] relates to inferior ones. Therefore, if it is vulgar, clearly it would be worse [than epic].

So let us discuss these matters. (i) First, the charge is not against the art of [tragic] composition but against that of [the actors'] delivery. For [visual] signs can be overworked even in reciting an epic, as Sosistratus did, and in singing, as Mnasithesus of Opus¹ did.

(ii) Next, not all movement is to be rejected, unless dance is to be too, but [only] that of inferior [people], such as that for which Callippides was criticised, and others now are, on the grounds that they represent women who are not free born.

(iii) Again, tragedy can produce its own [effect] even without movement, as epic does. For it is obvious from reading it what sort [of tragedy] it is. So if tragedy is superior in all other things, this at any rate does not necessarily belong to it.

8. In *Medea* (lines 663–758). Aegus, king of Athens, happens to pass through Corinth and see Medea; he promises her future asylum.

9. Presumably an actor. Mynniscus of Chacis

(active ca. 460–420 B.C.E.), an actor known for roles in Aeschylus's plays. Callippides (active ca. 427–400 B.C.E.), a Greek actor.

1. Both unknown.

(i) Furthermore, [tragedy is superior] because it has everything that epic has; for it is even possible to use its verse [in tragedy].

(ii) Again, it also has as no small part of it music and spectacles, by means of which its pleasures are constructed very vividly.

(iii) Next, it has vividness in reading as well as in performance.

(iv) Again, [it has the advantage] that the end [1462b] of the representation is in a smaller length. What is more concentrated is more pleasurable than what is diluted with a lot of time [in performance]. I mean, e.g. [the effect] if someone put Sophocles' *Oedipus* into as many epic verses as the *Iliad*.

(v) Again, the epic poets' representation is less unified. An indication [of this is] that more than one tragedy comes from any [epic] representation. Consequently, if they compose a unified plot, it appears either docked, if it is briefly presented, or watery, if it accords with the length [appropriate to] the verse-form. [By "less unified"], I mean, e.g. [the effect] if it is composed of several [complete] actions, just as the *Iliad* and the *Odyssey* have many such parts, which have magnitude even in themselves. Yet these poems are as well constructed as [epics] may be, and are, as far as possible, representations of a single action.

So if tragedy is superior in all these ways, and also in [achieving] the function of the art (for tragedy and epic should produce not a random pleasure, but the one we have mentioned), it is obvious that it will be superior to epic as it achieves its end more than epic does.

So regarding tragedy and epic, in themselves, their kinds and their parts, as to how many there are and how they differ, and what are the causes of doing well or not [in them], and regarding questions raised and their solutions, let this account suffice.

ca. 330 B.C.E.

From Rhetoric¹

From Book I

FROM CHAPTER 2

Let rhetoric be [defined as] an ability, in each [particular] case, to see the available means of persuasion. This is the function of no other art;² for each of the others is instructive and persuasive about its own subject: for example, medicine about health and disease and geometry about the properties of magnitudes and arithmetic about numbers and similarly in the case of the other arts and sciences. But rhetoric seems to be able to observe the persuasive about "the given," so to speak. That, too, is why we say it does not include technical knowledge of any particular, defined genus [of subjects].

Of the *pisteis*,³ some are atechnic ["nonartistic"], some entechnic ["em-

1. Translated by George A. Kennedy, who sometimes adds clarifying words or phrases in square brackets. Also in square brackets in the text are the Bekker numbers used almost universally in citing Aristotle's works; they refer to the page numbers and columns of an 1831 edition by Immanuel Bek-

ker.

2. In Greek, *technē*. Aristotle distinguishes between human arts, such as rhetoric or poetics, and sciences, such as physics or logic, which adduce verifiable results.

3. Proofs or means of persuasion (Greek).

bodied in art, artistic"]. I call atechnic those that are not provided by "us" [i.e., the potential speaker] but are preexisting: for example, witnesses, testimony of slaves taken under torture, contracts, and such like; and artistic whatever can be prepared by method and by "us"; thus, one must use the former and *invent* the latter. [1356a] Of the *pisteis* provided through speech there are three species: for some are in the character of the speaker, and some in disposing the listener in some way, and some in the argument itself, by showing or seeming to show something.

[There is persuasion] through character whenever the speech is spoken in such a way as to make the speaker worthy of credence; for we believe fair-minded people to a greater extent and more quickly [than we do others] on all subjects in general and completely so in cases where there is not exact knowledge but room for doubt. And this should result from the speech, not from a previous opinion that the speaker is a certain kind of person; for it is not the case, as some of the technical writers propose in their treatment of the art, that fair-mindedness on the part of the speaker makes no contribution to persuasiveness; rather, character is almost, so to speak, the controlling factor in persuasion.

[There is persuasion] through the hearers when they are led to feel emotion by the speech; for we do not give the same judgment when grieved and rejoicing or when being friendly and hostile. To this and only this we said contemporary technical writers try to give their attention. The details on this subject will be made clear when we speak about the emotions.

Persuasion occurs through the arguments when we show the truth or the apparent truth from whatever is persuasive in each case.

* * *

FROM CHAPTER 3

The species of rhetoric are three in number; for such is the number [of classes] to which the hearers of speeches belong. A speech [situation] consists of three things: a speaker and a subject on which he speaks and someone addressed, [1358b] and the objective⁴ of the speech relates to the last (I mean the hearer). Now it is necessary for the hearer to be either a spectator or a judge, and [in the latter case] a judge of either past of future happenings. A member of a democratic assembly is an example of one judging about future happenings, a jury-man an example of one judging the past. A spectator is concerned with the ability [of the speaker]. Thus, there would necessarily be three genera of rhetorics, deliberative, judicial, demonstrative.⁵ Deliberative advice is either protreptic ["exhortation"] or apotreptic ["dissuasion"]; for both those advising in private and those speaking in public always do one or the other of these. In the law court there is either accusation or defense; for it is necessary for the disputants to offer one or the other of these. In epideictic, there is either praise or blame. Each of these has its own "time": for the deliberative speaker, the future (for whether exhorting or dissuading he advises about future events); for the speaker in court, the past (for he always prosecutes or defends concerning what has been done); in epideictic the present is the most important; for all speakers praise or blame

4. In Greek, *telos*, also translated as "end" or "goal."

5. In Greek, *epideiktikon*, also translated as "epideictic."

in regard to existing qualities, but they often also make use of other things, both reminding [the audience] of the past and projecting the course of the future. The "end" of each of these is different, and there are three ends for three [species]: for the deliberative speaker [the end] is the advantageous and the harmful (for someone urging something advises it as the better course and one dissuading dissuades on the ground that it is worse), and he includes other factors as incidental: whether it is just or unjust, or honorable or disgraceful; for those speaking in the law courts [the end] is the just and the unjust, and they make other considerations incidental to these; for those praising and blaming [the end] is the honorable and the shameful, and these speakers bring up other considerations in reference to these qualities. Here is a sign that the end of each [species of rhetoric] is what has been said: sometimes one would not dispute other factors; for example, a judicial speaker [might not deny] that he has done something or done harm, but he would never agree that he has [intentionally] done wrong; for [if he admitted that,] there would be no need of a trial. Similarly, deliberative speakers often grant other factors, but they would never admit that they are advising things that are not advantageous [to the audience] or that they are dissuading [the audience] from what is beneficial; and often they do not insist that it is not unjust to enslave neighbors or those who have done no wrong. And similarly, those who praise or blame do not consider whether someone has done actions that are advantageous or harmful [to himself] [1359a] but often they include it even as a source of praise that he did what was honorable without regard to the cost to himself; for example, they praise Achilles because he went to the aid of his companion Patroclus⁶ knowing that he himself must die, though he could have lived. To him, such a death was more honorable; but life was advantageous.

* * *

From *Book II*

FROM CHAPTER 1

These [topics, set forth in book I] are the proper sources of exhortation and dissuasion, praise and blame, and prosecution and defense, and the kinds of opinions and propositions useful for their persuasive expression; for enthymemes⁷ are concerned with these matters and drawn from these sources, so the result is speaking in a specific way in each genus of speeches. But since rhetoric is concerned with making a judgment (people judge what is said in deliberation, and judicial proceedings are also a judgment), it is necessary not only to look to the argument, that it may be demonstrative and persuasive but also [for the speaker] to construct a view of himself as a certain kind of person and to prepare the judge; for it makes much difference in regard to persuasion (especially in deliberations but also in trials) that the speaker seem to be a certain kind of person and that his hearers suppose him to be disposed toward them in a certain way and in addition if they, too, happen

6. In stories of the Trojan War, Achilles' closest friend; Achilles rejoined the battle to avenge his death at the hands of the Trojan hero Hector.

7. Rhetorical argument by deduction, applying general principles to specific cases, that leaves one

of its premises unstated. Enthymemes use a looser form of reasoning than syllogisms, which are technical logical arguments that follow a rigid 3-part procedure.

to be disposed in a certain way [favorably or unfavorably to him]. For the speaker to seem to have certain qualities is more useful in deliberation; for the audience to be disposed in a certain way [is more useful] in lawsuits, for things do not seem the same to those who are friendly and those who are hostile, nor [the same] to the angry and the calm but either altogether different or different in importance: [1378a] to one who is friendly, the person about whom he passes judgment seems not to do wrong or only in a small way; to one who is hostile, the opposite; and to a person feeling strong desire and being hopeful, if something in the future is a source of pleasure, it appears that it will come to pass and will be good; but to an unemotional person and one in a disagreeable state of mind, the opposite.

There are three reasons why speakers themselves are persuasive; for there are three things we trust other than logical demonstrations. These are practical wisdom and virtue and good will; for speakers make mistakes in what they say or advise through [failure to exhibit] either all or one of these; for either through lack of practical sense they do not form opinions rightly; or though forming opinions rightly they do not say what they think because of a bad character; or they are prudent and fair-minded but lack good will, so that it is possible for people not to give the best advice although they know [what] it [is]. These are the only possibilities. Therefore, a person seeming to have all these qualities is necessarily persuasive to the hearers. The means by which one might appear prudent and good are to be grasped from analysis of the virtues, for a person would present himself as being of a certain sort from the same sources that he would use to present another person; and good will and friendliness need to be described in a discussion of the emotions.

The emotions are those things through which, by undergoing change, people come to differ in their judgments and which are accompanied by pain and pleasure, for example, anger, pity, fear, and other such things and their opposites. There is need to divide the discussion of each into three headings. I mean, for example, in speaking of anger, what is their *state of mind* when people are angry and against *whom* are they usually angry, and for what sort of *reasons*; for if we understood one or two of these but not all, it would be impossible to create anger [in someone]. And similarly, in speaking of the other emotions.

* * *

From Book III

FROM CHAPTER 2

[1404b] Let the matters just discussed be regarded as understood, and let the virtue of style⁸ be defined as "to be clear" (speech is a kind of sign, so if it does not make clear it will not perform its function)—and neither flat nor above the dignity of the subject, but appropriate. The poetic style is hardly flat, but it is not appropriate for speech. The use of nouns and verbs in their prevailing meaning makes for clarity; other kinds of words, as discussed in the *Poetics*,⁹ makes the style ornamented rather than flat. To deviate [from

8. In Greek, *lexis*, literally "speech"; the word is variously translated "language," "word choice," and

"expression," as well as "style."
9. See *Poetics* 21–22, 1457a–1459a (above).

prevailing usage] makes language seem more elevated; for people feel the same in regard to *lexis* as they do in regard to strangers compared with citizens. As a result, one should make the language unfamiliar, for people are admirers of what is far off, and what is marvelous is sweet. Many [kinds of words] accomplish this in verse and are appropriate there; for what is said [in poetry] about subjects and characters is more out of the ordinary, but in prose much less so; for the subject matter is less remarkable, since even in poetry it would be rather inappropriate if a slave used fine language or if a man were too young for his words, or if the subject were too trivial, but in these cases, too, propriety is a matter of contraction or expansion. As a result, authors should compose without being noticed and should seem to speak not artificially but naturally. (The latter is persuasive, the former the opposite; for [if artifice is obvious] people become resentful, as at someone plotting against them, just as they are at those adulterating wines.) An example is the success of Theodorus'¹ voice when contrasted with that of other actors; for his seems the voice of the actual character, but the others' those of somebody else. The "theft" is well done if one composes by choosing words from ordinary language. Euripides² does this and first showed the way.

ca. 340 B.C.E.

1. Renowned Athenian tragic actor (active ca. 370 B.C.E.).

2. Greek tragedian (ca. 485—ca. 406 B.C.E.).

HORACE

65—8 B.C.E.

It would be impossible to overestimate the importance of Horace's *Ars Poetica* (*Art of Poetry*) for the subsequent history of literary criticism. Since its composition in the first century B.C.E., this epigrammatic and sometimes enigmatic critical poem has exerted an almost continual influence over poets and literary critics alike—perhaps because its dicta, phrased in verse form, are so eminently quotable. Horace's injunction that poetry should both "instruct and delight" has been repeated so often that it has come to be known as the Horatian platitude. His practical approach to poetry as a craft, or *ars*, contrasts markedly with the more theoretical bent of his predecessors, especially ARISTOTLE and PLATO. In fact, unlike Plato, Horace holds the poet in very high regard, as his "Epistle to Augustus" suggests: "The poet forms the young child's stammering mouth, and turns his ear at a timely hour from obscene discourse; next he also shapes his heart with friendly precepts, castigating harshness, resentment, and wrath. He tells of deeds honorably done, instructs rising generations by the examples of famous men, and consoles the sick and helpless."

Horace describes himself in his youth as the impoverished son of a freed slave, yet he rose to great prominence in Rome, becoming both a leading member of the illustrious circle of poets patronized by the emperor Augustus (63 B.C.E.—14 C.E.) and one of Rome's greatest poets and satirists. Quintus Horatius Flaccus was born in Venusia, a Roman military colony in southeastern Italy on the border between Apulia and

Lucania. His father worked as an auctioneer and had a small landholding. It is possible that in his poetry (our main source for his biography) Horace somewhat exaggerates his family's poverty. His father was apparently wealthy enough to send his son to Rome for his schooling. At the age of nineteen Horace went to Athens to the university. There Marcus Brutus convinced him to join in his futile attempt to re-establish the Republic. He accompanied Brutus to Asia Minor and was appointed to the high post of military tribune. After the defeat of Brutus and Cassius at Philippi in 42 B.C.E. at the hands of Octavian—the future Augustus who would one day be the poet's patron—Horace returned to Rome, to find that his father's home and land had been confiscated. Despite this setback, he was able to obtain a pardon for his part in the rebellion and to purchase a position as *scriba quaestorius*, a keeper of records in the treasury. At this time, he also began his career as a poet. His abilities were recognized by Gaius Maecenas, a wealthy aristocrat and the most prominent literary patron in Rome, to whom he was introduced by the poet Virgil. He maintained a close friendship with Maecenas until the latter's death. Around 38 B.C.E., through Maecenas, Horace became a member of the small circle of writers who enjoyed the patronage of Octavian, now the emperor. Though he declined an offer to become the emperor's secretary, the emperor's support enabled Horace to do nothing but write poetry for the rest of his life. He died of a sudden illness on November 27, 8 B.C.E., only two months after the death of his patron and friend Maecenas, next to whose tomb he was buried.

Horace is celebrated for his poetry; between 39 and 10 B.C.E., he produced numerous epodes (lyric poems), odes, satires, and verse epistles (letters). Many of the epistles deal with the subject of poetry: the best-known are the "Epistle to Florus" (19); the "Epistle to Augustus" (12), which examines the role of poetry in the state and asserts the merits of contemporary (that is, Augustan) poetry; and the famous "Epistle to the Pisones."

QUINTILIAN was the first to give the title *ars poetica* (art of poetry) or *liber de arte poetica* (book of the poetic art) to Horace's letter to the Pisones, a prominent Roman family with interests in poetry and literary criticism. The *Ars Poetica* was written perhaps as late as 10 B.C.E., although the date remains controversial, as do the identities of the members of the Piso family—father and sons—whom the poem addresses. Most likely the senior Piso is Lucius Calpurnius Piso (48 B.C.E.—32 C.E.); the sons have not been identified. The *Ars Poetica* is less a formal verse epistle, however—the trappings of the letter form are superficial at best—than a long conversational poem about poetry, written by an experienced and famous poet of the day. This form was widely imitated by later poets—most notably by GEOFFREY OF VINSANF in the twelfth century, PIERRE DE RONSARD in the sixteenth, Nicolas Boileau in the seventeenth, ALEXANDER POPE in the eighteenth, Lord Byron in the nineteenth, and Wallace Stevens in the twentieth. The genre of literary theory in verse form presents many challenges. Because of the requirements of versification, the structure of Horace's text—its organization and transitions—is often dictated less by logical argumentation than by verbal association and rhetorical tone. Translation of the *Ars Poetica* (476 lines long) is notoriously difficult. Many English translations imitate Horace's hexameter lines by using rhymed couplets, which tend to reduce Horace's urbane wit at best to a string of epigrammatic statements held together by the meter, at worst to doggerel. For this reason, we have chosen a prose translation here.

While heavily indebted to Greek literature, and in particular to Aristotle (especially the *Poetics* and *Rhetoric*), the *Ars Poetica* is neither a systematic exposition of a coherent theory of poetic composition nor a comprehensive textbook for aspiring writers. Instead, it is an argument for poetry as a craft. Poetry is not merely inspired madness (as in Plato) or genius; it is an art and, as such, has rules and conventions that require both instruction and practice. Horace understands the concept of *ars* in three ways: as a practiced mastery of a craft, as a systematic knowledge of theory and technique, and as a capacity for objective self-criticism. His urbane text counsels the aspiring

young poet, in this case probably the elder Piso son, that the craft of poetry will require painstaking work and self-sacrifice to acquire.

Another key principle that dominates the whole of the *Ars Poetica* is decorum. Briefly defined, decorum is the discernment and use of appropriateness, propriety, proportion, and unity in the arts, whether in painting, sculpture, or poetry. This is the Horatian principle that most appealed to later French and English neoclassical critics (see, for example, Pope, below), who often applied standards of decorum more rigidly than Horace himself would have. For Horace, decorum required that the poet fit the part to the whole, the subject to the appropriate genre, and meter and language to both character and circumstance. A skillful poet, knowledgeable in the craft of poetry and observant of the principles of decorum, would produce the kind of poetry able to "delight and instruct" its audiences.

Among the many dicta for which Horace's text is most famous are the warning against the "purple patch" (*purpureus pannus*) and the declarations that "poetry resembles painting" (*ut pictura poesis*), "even Homer sometimes sleeps" (*idem dormitat Homerus*), and poetry should be "pleasing" and "useful" (*dulce et utile*). Purple patches are inappropriately placed ornate passages that violate the principle of decorum and thus should be avoided by writers. Later critics have built on Horace's likening of poetry to painting to explore the spatial as well as the temporal dimensions of literature (see below, for example, G. E. LESSING and Erich Auerbach). Because sometimes even a poet as great as Homer errs, Horace counsels tolerance of occasional small faults. The pleasures of poetry for readers and theater audiences should be joined to practical and moral instruction embodied in the work, though Horace seems more preoccupied with delight and careful craft than with moral uplift. It is to these and other pithy and suggestive observations that modern critics often turn when considering Horace.

Horace's critics have complained that the long epistle is disorganized, that it sometimes sacrifices sense for the sake of wit, and that it lacks grandeur, being preoccupied with audience response. Since its publication, however, the *Ars Poetica* has appealed to those literary critics interested in codifying the principles of poetic composition, in arguing the relative merits of craft and genius in poetry, and in debating whether the primary goal of literature is pleasure or instruction.

BIBLIOGRAPHY

The complete Latin works of Horace are collected in *Q. Horati Flacci Opera*, edited by D. R. Shackleton Bailey (1985). The standard Latin edition of the *Ars Poetica* with English commentary can be found in *Epistles Book II and Epistle to the Pisones*, edited by Niall Rudd (1989). This text also includes the important "Epistle to Augustus" and the "Epistle to Florus." *The Complete Works of Horace*, edited by Charles E. Passage (1983), offers an English translation of Horace's collected poetry, including the *Ars Poetica*. Very readable prose translations are also provided by D. A. Russell in *Ancient Literary Criticism* (1972) and by Leon Golden in O. B. Hardison and Leon Golden's *Horace for Students of Literature: The "Ars Poetica" and Its Tradition* (1995), which also includes a series of documents that demonstrate the influence of Horace's epistle throughout the history of Western literary criticism. A Latin *Life of Horace* exists; it is attributed to the Roman historian Suetonius (ca. 69–140 C.E.). A recent English biography is Peter Levi's *Horace: A Life* (1997).

D. A. Russell's essay on the *Ars Poetica* in *Horace* (ed. C. D. N. Costa, 1973) provides a useful and brief introduction to the poem. Charles O. Brink's monumental three-volume study, *Horace on Poetry* (1963–82), offers an indispensable advanced study of Horace's critical principles; it includes texts and commentaries on the *Ars Poetica*, the "Epistle to Augustus," and the "Epistle to Florus." Ross S. Kilpatrick, in *The Poetry of Criticism: Horace, Epistles II and the Ars Poetica* (1990), also focuses on Horace's writing on literature in a format more accessible to the beginning student

of Horace. Bernard Frischer, in *Shifting Paradigms: New Approaches to Horace's "Ars Poetica"* (1991), presents a detailed statistical analysis of the epistle's many controversies.

Volume 3 of Brink's *Horace on Poetry* (cited above) contains an extensive bibliography of primary and secondary sources on Horace's literary criticism. For a more general work, see the bibliographical essay in *Homage to Horace: A Bimillenary Celebration* (ed. S. J. Harrison, 1995).

Ars Poetica¹

Unity and Consistency

Imagine a painter who wanted to combine a horse's neck with a human head, and then clothe a miscellaneous collection of limbs with various kinds of feathers, so that what started out at the top as a beautiful woman ended in a hideously ugly fish. If you were invited, as friends, to the private view, could you help laughing? Let me tell you, my Piso² friends, a book whose different features are made up at random like a sick man's dreams, with no unified form to have a head or a tail, is exactly like that picture.

'Painters and poets have always enjoyed recognized³ rights to venture on what they will.' [11] Yes, we know; indeed, we ask and grant this permission turn and turn about. But it doesn't mean that fierce and gentle can be united, snakes paired with birds or lambs with tigers.

Serious and ambitious designs often have a purple patch or two sewn on to them just to make a good show at a distance—a description of a grove and altar of Diana,⁴ the meanderings of a stream running through pleasant meads, the River Rhine, the rainbow: [19] but the trouble is, it's not the place for them.

Maybe you know how to do a picture of a cypress tree? What's the good of that, if the man who is paying for the picture is a desperate ship-wrecked mariner swimming to safety? The job began as a wine-jar: the wheel runs round—why is that a tub that's coming out? In short, let it be what you will, but let it be simple and unified.

Skill Needed to Avoid Faults

Most of us poets—father and worthy sons—are deceived by appearances of correctness. I try to be concise, but I become obscure; my aim is smoothness, but sinews and spirit fail; professions of grandeur end in bombast; the over-cautious who fear the storm creep along the ground. Similarly, the writer who wants to give fantastic variety to his single theme [30] paints a dolphin in his woods and a wild boar in his sea. If art is wanting, the flight from blame leads to faults. The poorest smith near the School of Aemilius⁵ will reproduce nails and mimic soft hair in bronze, though he has no luck with the over-all effect of his work, because he won't know how to organize the

1. Translated by D. A. Russell. In this prose translation of Horace's verse, subheads have been added by the translator.

2. Horace is thought to have addressed the *Ars* to Lucius Calpurnius Piso (48 B.C.E.–32 C.E.) and his sons, though none of the sons has been positively

identified.

3. Or "equal" [translator's note].

4. Roman goddess of the hunt, the moon, and childbirth.

5. A school for gladiators, near the shops of bronze workers.

whole. If I were anxious to put anything together, I would as soon be that man as I would live with a mis-shapen nose when my black eyes and black hair had made me a beauty.

You writers must choose material equal to your powers. Consider long what your shoulders will bear and what they will refuse. [40] The man who chooses his subject with full control will not be abandoned by eloquence or lucidity of arrangement.

As to arrangement: its excellence and charm, unless I'm very wrong, consist in saying at this moment what needs to be said at this moment, and postponing and temporarily omitting a great many things. An author who has undertaken a poem must be choosy—cling to one point and spurn another.

As to words: if you're delicate and cautious in arranging them, you will give distinction to your style if an ingenious combination makes a familiar word new. If it happens to be necessary to denote hidden mysteries by novel symbols, [50] it will fall to you to invent terms the Cethegi in their loin-cloths⁶ never heard—and the permission will be granted if you accept it modestly—and, moreover, your new and freshly invented words will receive credit, if sparingly derived from the Greek springs. Is the Roman to give Caecilius and Plautus privileges denied to Virgil and Varius?⁷ Why am I unpopular if I can make a few acquisitions, when the tongue of Cato and Ennius⁸ so enriched their native language and produced such a crop of new names for things?

Fashions in Words

It always has been, and always will be, lawful to produce a word stamped with the current mark. [60] As woods change in leaf as the seasons slide on, and the first leaves fall, so the old generation of words dies out, and the newly born bloom and are strong like young men. We and our works are a debt owed to death. Here a land-locked sea protects fleets from the North wind—a royal achievement; here an old barren marsh where oars were piled feeds neighbouring cities and feels the weight of the plough; here again a river gives up a course that damaged the crops and learns a better way. But whatever they are, all mortal works will die; and still less can the glory and charm of words endure for a long life. [70] Many words which have fallen will be born again, many now in repute will fall if usage⁹ decrees: for in her hand is the power and the law and the canon of speech.

Metre and Subject

Histories of kings and generals, dreadful wars: it was Homer¹ who showed in what metre these could be narrated. Lines unequally yoked in pairs²

6. I.e., primitive Romans [translator's note].

7. Roman poet (ca. 74–14 B.C.E.), friend of Virgil and Horace; author of the tragedy *Thyestes*. Caecilius Statius (d. ca. 168 B.C.E.), former slave from Gaul who wrote Latin comedies. Plautus (d. ca. 184 B.C.E.), Roman comic dramatist whose plays were modeled on Greek New Comedy originals. Virgil (70–19 B.C.E.), Roman poet and friend of Horace.

8. Roman tragic and epic poet (ca. 239–169 B.C.E.) who tried to refine the Latin language according to Greek example. Cato (234–149

B.C.E.), Roman statesman, stern moralist, and prolific writer of treatises and history.

9. Or "need" [translator's note].

1. Greek epic poet (8th c. B.C.E.) to whom the *Iliad* and *Odyssey* are traditionally attributed.

2. In elegiac couplets, formed by a dactylic hexameter (a 6-foot line based on the syllabic pattern long-short-short) and a line replacing the 3d and 6th foot with one long syllable. The shorter second line gives the couplet a sense of falling off, thought to impart melancholy.

formed the setting first for lamentations, then for the expression of a vow fulfilled³ though who first sent these tiny 'elegies' into the world is a grammarians' quarrel and still *sub judice*. Madness armed Archilochus with its own iambus;⁴ [80] that too was the foot that the comic sock and tragic buskin held, because it was suitable for dialogue, able to subdue the shouts of the mob, and intended by nature for a life of action. To the lyre, the Muse granted the celebration of gods and the children of gods, victorious boxers, winning race-horses, young men's love, and generous wine. If I have neither the ability nor the knowledge to keep the duly assigned functions and tones of literature, why am I hailed as a poet? Why do I prefer to be ignorant than learn, out of sheer false shame? A comic subject will not be set out in tragic verse; [90] likewise, the Banquet of Thyestes⁵ disdains being told in poetry of the private kind, that borders on the comic stage. Everything must keep the appropriate place to which it was allotted.

Nevertheless, comedy does sometimes raise her voice, and angry Chremes⁶ perorates with swelling eloquence. Often too Telephus and Peleus⁷ in tragedy lament in prosaic language, when they are both poor exiles and throw away their bombast and words half a yard long, if they are anxious to touch the spectator's heart with their complaint.

Emotion and Character

It is not enough for poetry to be beautiful; it must also be pleasing and lead the hearer's mind wherever it will. [101] The human face smiles in sympathy with smilers and comes to the help of those that weep. If you want me to cry, mourn first yourself; *then* your misfortunes will hurt me, Telephus and Peleus. If your words are given you ineptly, I shall fall asleep or laugh. Sad words suit a mournful countenance, threatening words an angry one; sportive words are for the playful, serious for the grave. For nature first shapes us within for any state of fortune—gives us pleasure or drives us to anger or casts us down to the ground with grievous sorrow and pains us—[111] and then expresses the emotions through the medium of the tongue. If the words are out of tune with the speaker's fortunes, the knights and infantry of Rome will raise a cackle. It will make a lot of difference whether the speaker is a god or a hero, an old man of ripe years or a hot youth, an influential matron or a hard-working nurse, a travelling merchant or the tiller of a green farm, a Colchian or an Assyrian, one nurtured at Thebes or at Argos.⁸

Choice and Handling of Myth

Either follow tradition or invent a consistent story. [120] If as a writer you are representing Achilles with all his honours, let him be active, irascible,

3. Horace is thinking of inscriptions accompanying dedications to gods {translator's note}.

4. Metrical foot made of one short and one long syllable; iambic trimeter was the measure used in dialogue in both Greek comedies and Greek tragedies. Archilochus (ca. 7th c. B.C.E.), Ionian lyric poet thought to be the earliest writer of iambic verse.

5. In Greek mythology, Atreus murdered his brother Thyestes' son and served the boy to Thyestes, who had seduced Atreus's wife.

6. Miserly character in the comedies of Terence

(Roman dramatist, ca. 190—ca. 159 B.C.E.).

7. Father of the Greek hero Achilles, the central character in the *Iliad*. Telephus: son of Heracles and Auge, wounded by Achilles' spear and cured by its rust.

8. The Argive Agamemnon shows reserve and dignity, while the Theban Creon is a headstrong tyrant. The Assyrian would be effeminate, as compared with the Colchian, but both would be barbarians (Assyria was an ancient empire of west Asia; Colchis bordered the Black Sea).

implacable, and fierce; let him say 'the laws are not for me' and set no limit to the claims that arms can make. Let Medea be proud and indomitable, Ino full of tears, Ixion treacherous, Io never at rest, Orestes full of gloom.⁹ On the other hand, if you are putting something untried on the stage and venturing to shape a new character, let it be maintained to the end as it began and be true to itself. It is hard to put generalities in an individual way: you do better to reduce the song of Troy to acts than if you were the first to bring out something unknown and unsaid.¹ [131] The common stock will become your private property if you don't linger on the broad and vulgar round, or anxiously render word for word, a loyal interpreter, or again, in the process of imitation, find yourself in a tight corner from which shame, or the rule of the craft, won't let you move; or, once again, if you avoid a beginning like the cyclic poet²—

Of Priam's fortune will I sing, and war
well known to fame.

If he opens his mouth as wide as that, how *can* the promiser bring forth anything to match it? The mountains shall be in labour, and there shall be born—a silly mouse. [140] How much better was the way of that poet whose every endeavour is to the point!

Tell me, O Muse, of him who, after Troy
had fallen, saw the manners and the towns
of many men.³

His plan is not to turn fire to smoke, but smoke to light, so as to relate magnificent wonders thereafter—Antiphates and the Cyclops, Scylla and Charybdis.⁴ He doesn't start the Return of Diomedes from the death of Meleager,⁵ nor begin the Trojan war from the twin egg;⁶ he is always making good speed towards the end of the story, and carries his hearer right into the thick of it as though it were already known. [150] He leaves out anything which he thinks cannot be polished up satisfactorily by treatment, and tells his fables and mixes truth with falsehood in such a way that the middle squares with the beginning and the end with the middle.

Let me tell you what I and the public both want, if you're hoping for an applauding audience that will wait for the curtain and keep its seat until the epilogue-speaker says 'Pray clap your hands'.⁷ You must mark the manners

9. Son of Agamemnon and Clytemnestra who avenges his father's murder by killing his mother and her lover; he is gloomy because the Furies hound him for the crime of matricide. Medea: enchantress of Greek myth who helps Jason gain the Golden Fleece, and, after he abandons her, murders their children in revenge. Ino: daughter of Cadmus, wife of Athamas; pursued by her enraged husband after plotting against her step-children, she leaped into the sea with her son. Ixion: king who slew his father-in-law and is bound to a perpetually revolving wheel in the underworld as punishment for his attempted seduction of Juno. Io: daughter of Inachus who was loved by Zeus and subsequently transformed into a cow, goaded by gadflies sent by the angry Hera, Zeus's wife.

1. I.e., to invent names and circumstances for a general theme is undesirable; if you object that the known myths are hackneyed, the remedy is in the treatment of them in a new way [translator's note].

2. That is, a poet of the epic cycle, writing poems in Homeric style and usually about events of the Trojan War.

3. *Odyssey* 1. lff. [translator's note].

4. Characters from Homer's *Odyssey*: Antiphates, king of the Laestrygonians; Cyclops, Greek mythological giant with one eye; Scylla, half-human sea monster that takes men from passing ships; Charybdis, a dangerous whirlpool in the waters between Sicily and Italy, regarded as a female monster.

5. Uncle of Diomedes, a Greek hero in the *Iliad*, and therefore of an older generation.

6. The offspring of Leda and Zeus were twins, Clytemnestra and Helen; Helen, taken from her husband by the Trojan prince Paris, is usually considered by poets to be the immediate cause of the Trojan War.

7. The comedies of the Roman playwrights Plautus and Terence close with *plaudite* (applaud!) or an equivalent phrase.

of each time of life, and assign the appropriate part to changing natures and ages. The child, just able to repeat words and planting his steps on the ground with confidence, is eager to play with his contemporaries, gets in and out of a temper without much cause, and changes hour by hour. [161] The beardless youth, his tutor at last, out of the way, enjoys his horses and dogs and the grass of the sunny Park. Moulded like wax into vice, he is surly to would-be advisers, slow to provide for necessities, prodigal of money, up in the air, eager, and quick to abandon the objects of his sudden love. Soon interests change: the grown man's mind pursues wealth and influential connections, is enslaved to honour, and avoids doing anything he may soon be trying to change. [169] Many distresses surround the old man. He is acquisitive, and, poor man, daren't put his hand on what he has laid up; he is afraid to use it. He goes about his business timidly and coldly, procrastinating, letting things drag on in hope, lazy yet greedy of his future; he is awkward and grumbling, given to praising the days when he was a boy and to criticizing and finding fault with his juniors. Years as they come bring many blessings with them, and as they go take many away. To save yourself giving a young man an old man's role or a boy a grown man's, remember that your character should always remain faithful to what is associated with his age and suits it.

*Some Rules for Dramatists*⁸

Actions may be either performed on the stage or reported when performed. [180] What comes in through the ear is less effective in stirring the mind than what is put before our faithful eyes and told by the spectator to himself. However, you are not to bring on to the stage events which ought to be carried out within; you are to remove many things from sight, and let them be related in due course by the eloquence of an eye-witness. Don't let Medea murder the children before the people's gaze, or wicked Atræus cook human offal in public, or Procne be metamorphosed into a bird or Cadmus⁹ into a snake. Anything you show me like that earns my incredulity and disgust.

A play that wants to be in demand and to be revived must not be shorter or longer than five acts.¹

[191] There should be no god to intervene, unless the problem merits such a champion.²

No fourth character should attempt to speak.

The chorus should play an actor's part, and do a man's duty. It should not sing between the acts anything which has no relevance to or cohesion with the plot. It should side with the good and give them friendly counsel, restrain the angry, and approve those who scruple to go astray. It should praise a frugal table's fare, sound justice, law, and times of peace when the town's gates stand open. [200] It should keep secrets entrusted to it, and beg and pray the gods that Fortune may return to the wretched and abandon the proud.

8. Most of the precepts enumerated in this section may be found in ARISTOTLE'S *Poetics* (see above).

9. Founder of Thebes; in Ovid's *Metamorphoses*, Cadmus and his wife are changed into serpents. Atræus: father of Agamemnon and Menelaus; he arranged the feast of Thyestes. Procne: wife of Tereus, who punished him for raping her sister by killing her own child and serving him to her husband; later all three were turned into birds.

1. Not Aristotelian; but Menander seems normally to have composed his comedies in five acts, separated by choral interludes [translator's note]. Menander (ca. 342-ca. 292 B.C.E.), a leading writer of Greek New Comedy.

2. The *deus ex machina* was a divine character lowered from above the stage to conveniently resolve the action at the end of a play.

Development of Tragedy

The flute used not to be, as it is now, bound with copper and a rival to the trumpet. It was slight and simple, with few apertures, but serviceable to accompany and aid the chorus and to fill with its music the still not too crowded benches, where a population of no great size gathered in numbers easily counted, honest and decent and modest. But when that same population won wars and began to extend its territory, when longer walls came to embrace the cities, and people indulged themselves on holidays by drinking in the daytime, and nobody blamed them, [211] then rhythm and tunes acquired greater licence. For what taste could the uneducated show, the holiday crowd of countrymen and townsmen, honest folk and rogues, all mixed up together? This is how the musician came to add movement and elaboration to his art, and to trail his robe as he roamed the stage. This is how even the austere lyre gained a stronger voice, while lofty eloquence produced strange utterance and thought that shrewdly grasped practical needs and prophesied the future grew indistinguishable from the oracles of Delphi.³

Satyr-Plays⁴

[220] The competitor in tragic poetry, who strove for a worthless goat,⁵ next showed the rustic Satyrs, naked. Preserving his seriousness despite his keen wit, he made an attempt at a joke, because the audience, drunk and lawless at the end of the festival, had to be prevented from going away by tricks and pleasing innovations. But the way to recommend your laughing, joking satyrs, the way to turn seriousness to jest, is this: no god or hero you bring on the stage, if he was seen not long ago in royal gold and purple, must lower his language and move into a humble cottage; not, on the other hand, must his efforts to get off the ground lead him to try to grasp clouds and void. [231] Tragedy does not deserve to blurt out trivial lines, but she will modestly consort a little with the forward satyrs, like a respectable lady dancing because she must on a feast day.

As a Satyr-writer, my Piso friends, I shall not limit my liking to plain and proper terms, nor yet try to be so different from the tone of tragedy that there is no difference between Davus talking or bold Pythias, when she's just tricked Simon out of a talent,⁶ and Silenus, at once guardian and servant of the god he has brought up. [240] I shall make up my poem of known elements, so that anyone may hope to do the same, but he'll sweat and labour to no purpose when he ventures: such is the force of arrangement and combination, such the splendour that commonplace words acquire. Your woodland Fauns, if you take my judgement, should beware of behaving as if they were born at the street corner and were creatures of the Forum—they

3. The oracle of Apollo, and the most important oracle in ancient Greece.

4. These featured Silenus and satyrs in burlesque episodes of myth; style and meter were those of tragedy, not comedy. The piece was commonly performed as a fourth play after three tragedies. Euripides' *Cyclops* [ca. 410 B.C.E.] is the only complete extant example: Aristotle believed satyr-plays were at the origin of tragedy; others, as Horace here, that they were a later refinement [translator's

note]. Silenus: male spirit associated with Dionysus, later represented as a drunken old man. "Satyrs": woodland spirits, usually part human, part goat.

5. Horace believes that the Greek term *tragōidia*, literally, "goat song," took its name from the prize of a goat.

6. Typical New Comedy names: slave, maid or prostitute, old man [translator's note].

shouldn't play the gallant in languishing verse or crack dirty and disreputable jokes; possessors of horses⁷ or ancestors or property take offence at this sort of thing and don't look kindly on work approved by the fried-peas-and-nuts public, or give it the prize.

The Need for Technical Perfection

[251] A long syllable following a short one makes an iambus.⁸ He is a quick foot; this is why he ordered iambic lines to be called trimeters, although he was giving six beats to the line, and was the same in form from first to last. Not all that long ago, wanting to fall rather more slowly and weightily upon our ears, he admitted the stately spondees to family privileges—what a comfortable; easy-going foot he is!—but without being quite so complaisant as to give up the second and fourth positions in the line. Rarely does he appear in Accius'⁹ noble trimeters, and his rarity in Ennius' [260] weighty lines as they fly out on the stage damns them with the shocking accusation of hasty and careless craftsmanship—or else sheer ignorance of the trade.

Of course, it's not every critic that notices lines that aren't tuneful, and Roman poets have enjoyed undeserved licence. But does that entitle *me* to make mistakes and scribble away carelessly? Or should I rather expect everyone to see my mistakes, and so play safe and cautious, keeping within the bounds of what I can hope to be pardoned for? In that case, all I've done is to avoid blame; I have not deserved praise.

Greek Models

Study Greek models night and day. [270] Your ancestors praised Plautus' metre and his humour. On both counts their admiration was too indulgent, not to say childish, if it's true that you and I know how to distinguish a witless jest from a subtle one and if we've skill in our fingers and ears to know what sounds are permitted.

Inventiveness of the Greeks in Drama

The hitherto unknown genre of the tragic Muse is said to be Thespis'¹ invention; he is supposed to have carried on a cart verses to be sung and acted by performers whose faces were smeared with wine-lees. After him came Aeschylus,² the inventor of the mask and splendid robe; he gave the stage a floor of modest boards, and taught the actors to talk big and give themselves height by their high boots. [281] Next came Old Comedy,³ much praised, though its liberty degenerated into vice and violence deserving restraint of law; the law was accepted, and the chorus fell silent, its right of shameful insult removed.

7. In the Roman Republic, the *equites* (horsemen or "knights") formed a wealthy class almost equal to senators in social standing.

8. Horace's main theme in what preceded was propriety; in the next section it is perfection. He marks the transition by humorously giving some very elementary metrical instruction (translator's note). A spondee is a metrical foot formed by two long syllables.

9. Roman playwright and literary critic (170–90 B.C.E.).

1. Pioneer of Greek tragedy (6th. c. B.C.E.) who introduced the actor's reply to the chorus.

2. Greek dramatist (525–456 B.C.E.) who introduced the third actor to the Greek stage.

3. The greatest writer of Old Comedy was Aristophanes (ca. 450–ca. 385 B.C.E.).

Inventiveness of the Romans

Our poets have left nothing unattempted. Not the least part of their glory was won by venturing to abandon the footsteps of the Greeks and celebrate our own affairs; some produced historical plays, some comedies in Roman dress. [289] Latium⁴ would have been as famous for literature as for valour and deeds of arms if the poets had not, one and all, been put off by the labour and time of polishing their work. Children of Numa,⁵ show your disapproval of any poem which long time and much correction have not disciplined and smoothed ten times over, to satisfy the well-pared nail.

The Poet⁶

Democritus⁷ thinks native talent a happier thing than poor, miserable art, and banishes sane poets from his Helicon.⁸ That's why so many don't bother to cut their nails or beard, but seek solitude and keep away from the bath. [299] For a man is sure to win the reward and name of poet if he never lets barber Licinus get hold of that head that three Anticyras⁹ won't make sound. I'm a fool to purge my bile when spring comes round. I could write as good poetry as any; but nothing is worth that price, and so I'll play the part of the whetstone, that can sharpen the knife though it can't itself cut. In other words, without writing myself, I will teach function and duty—where the poet's resources come from, what nurtures and forms him, what is proper and what not, in what directions excellence and error lead.

Wisdom is the starting-point and source of correct writing. [310] Socratic books¹ will be able to point out to you your material, and once the material is provided the words will follow willingly enough. If a man has learned his duty to his country and his friends, the proper kind of love with which parent, brother, and guest should be cherished, the functions of a senator and a judge, the task of a general sent to the front—then he automatically understands how to give each character its proper attributes. My advice to the skilled imitator will be to keep his eye on the model of life and manners, and draw his speech living from there.

[319] Sometimes a play devoid of charm, weight, and skill, but attractive with its commonplaces and with the characters well drawn, gives the people keener pleasure and keeps them in their seats more effectively than lines empty of substance and harmonious trivialities.

Greek and Roman Attitudes

The Greeks have the gift of genius from the Muse, and the power of well-rounded speech. They covet nothing but praise. Roman boys do long sums and learn to divide their *as* into a hundred parts.²

4. Area of central Italy that included Rome.
5. Numa Pompilius, half-legendary second king of Rome (traditional dates, 715–673 B.C.E.).

6. From this point, the poem turns to topics concerned with the poet himself: inspiration, moral knowledge, care for posterity, commitment. This main theme continues to the end [translator's note].

7. Greek philosopher (460–370 B.C.E.).

8. Mountain sacred to the Muses.

9. Hellebore, proverbially a cure for madness, came from Anticyra [translator's note].

1. The Greek philosopher Socrates (469–399 B.C.E.) left no writings, but he was the most important speaker in the dialogues of his greatest pupil, PLATO (ca. 427–ca. 347 B.C.E.).

2. Twelve unclae = 1 as; 5 unclae = quincunx; one-third as = triens; one-half as = semis [translator's note]. An as was worth perhaps \$3.

'Young Albinus,³ subtract one uncia from a quincunx: what's left? . . . You could have told me by now . . .'

'A triens.'

'Excellent. You'll be able to look after your affairs. Now add an uncia. What is it now?'

[330] 'A semis.'

Once this rust and care for cash has tainted the soul, can we hope for poems to be written that deserve preserving with cedar oil and keeping safe in smooth cypress?

Poets aim either to do good or to give pleasure—or, thirdly, to say things which are both pleasing and serviceable for life.

Whatever advice you give, be brief, so that the teachable mind can take in your words quickly and retain them faithfully. Anything superfluous overflows from the full mind.

Whatever you invent for pleasure, let it be near to truth. We don't want a play to ask credence for anything it feels like, or draw a living child from the ogress's belly after lunch. [341] The ranks of elder citizens chase things off the stage if there's no good meat in them, and the high-spirited youngsters won't vote for dry poetry. The man who combines pleasure with usefulness wins every suffrage, delighting the reader and also giving him advice; this is the book that earns money for the Sosii,⁴ goes overseas and gives your celebrated writer a long lease of fame.

However, there are some mistakes we are ready to forgive. The string doesn't always give the note that the hand and mind intended: it often returns a high note when you ask for a low. [350] The bow won't always hit what it threatens to hit. But when most features of a poem are brilliant, I shan't be offended by a few blemishes thrown around by carelessness or human negligence. But what then? If a copyist goes on making the same mistake however much he is warned, he is not forgiven; if a lyre-player always gets the same note wrong, people laugh at him; so, in my estimation, if a poet fails to come off a good deal, he's another Choerilus,⁵ whom I admire with a smile if he's good two or three times. Why, I'm angry even if good Homer goes to sleep, [360] though a doze is quite legitimate in a long piece of work.

Poetry is like painting. Some attracts you more if you stand near, some if you're further off. One picture likes a dark place, one will need to be seen in the light, because it's not afraid of the critic's sharp judgement. One gives pleasure once, one will please if you look it over ten times.

Dear elder son of Piso, though your father's words are forming you in the right way and you have wisdom of your own besides, take this piece of advice away with you and remember it. In some things, a tolerable mediocrity is properly allowed. A mediocre lawyer or advocate [370] is a long way from the distinction of learned Messalla and doesn't know as much as Aulus Cascellius,⁶ but he has his value. But neither men nor gods nor shop-fronts allow a poet to be mediocre. Just as music out of tune or thick ointment or Sardinian honey with your poppy⁷ gives offence at a nice dinner, because the

3. Roman family name.

4. Booksellers (the Sosii were brothers and well-known booksellers).

5. Minor poet of the 4th c. B.C.E. who accompanied Alexander the Great on his campaigns and was paid to celebrate him.

6. Famous Augustan lawyer. Messalla Corvinus (64 B.C.E.—8 C.E.), Roman political leader, orator, author, soldier, and a patron of the arts.

7. Poppy seeds, when roasted and served with honey, were considered a delicacy; but they were spoiled if the honey had a bitter flavor.

meal could go on without them, so poetry, which was created and discovered for the pleasure of the mind, sinks right to the bottom the moment it declines a little from the top. The man who doesn't know how to play keeps away from the sporting gear in the park. [380] The man who's never been taught ball or discus or hoop keeps quiet, so that the packed spectators can't get a free laugh. But the man who doesn't know how to make verses still has a go. Why shouldn't he? He's free, and of free birth, he's assessed at an equestrian property rate, and he's not got a fault in the world.

You will never do or say anything if Minerva⁸ is against you: your taste and intelligence guarantee us that. But if you do write something some day, let it find its way to critic Maecius⁹' ears, and your father's, and mine, and be stored up for eight years in your notebooks at home. You will be able to erase what you haven't published; words once uttered forget the way home.

Poetry and Its Social Uses and Value

[391] Orpheus,¹ who was a holy man and the interpreter of the gods, deterred the men of the forests from killing and from disgusting kinds of food. This is why he was said to tame tigers and rabid lions. This too is why Amphion,² the founder of the city of Thebes,³ was said to move rocks where he wished by the sound of the lyre and coaxing prayers. In days of old, wisdom consisted in separating public property from private, the sacred from the secular, in checking promiscuity, in laying down rules for the married, in building cities, in inscribing laws on wooden tablets. [400] And that is how honour and renown came to divine poets and poetry. After them came the great Homer and Tyrtaeus,³ who sharpened masculine hearts for war by their verses. Oracles were uttered in verse. The path of life was pointed out in verse. Kings' favours were won by the Muses' tunes. Entertainment was found there also, and rest after long labour. So there is no call to be ashamed of the Muse with her skill on the lyre or of Apollo⁴ the singer.

Art and Nature

Do good poems come by nature or by art? This is a common question. For my part, I don't see what study can do without a rich vein of talent, [410] nor what good can come of untrained genius. They need each other's help and work together in friendship. A boy who wants to reach the hoped-for goal in the race endures and does a lot, sweats and freezes, refrains from sex and wine. The clarinetist who is playing in honour of Apollo learns his lesson first and stands in awe of his master. But nowadays it's enough to say: 'I write marvellous poems. The itch take the hindmost! It's a disgrace for me to be left behind and admit I don't know something that, to be sure, I never learned.'

8. Roman goddess of handicrafts and war, whose attributes became conflated with those of the Greek goddess Athena.

9. Roman author of 12 epigrams of whom nothing is known except his name.

1. A holy man because he founded the Greek religion Orphism. His extraordinary musical powers—said to be able to charm not only wild beasts but also rocks and trees—made Orpheus a model of

the poet.

2. Son of Zeus and Antiope, responsible in part for the miraculous construction of the walls of Thebes.

3. Poet of the 7th c. B.C.E.—according to tradition, a lame Attic schoolmaster—who composed war songs and martial elegies for the Spartans, who sang them while marching.

4. Son of Zeus and Leto, god of music and poetry.

[419] A poet who is rich in land and investments bids his flatterers 'come and better themselves'—just like an auctioneer collecting a crowd to buy his wares. But if he's a man who can set out a good dinner properly and go bail for a poor and impecunious client and get him out of a grim legal tangle, I shall be surprised if the lucky fellow knows how to distinguish a false friend from a true. If you have given a man a present, or if you want to, don't then lead him, full of joy, to your verses. He's bound to say 'Splendid, beautiful, just right'; he'll grow pale here, he'll drip dew from loving eyes, he'll jump about, he'll beat the ground with his foot. [431] Your mocker is more deeply stirred than your true admirer, just as hired mourners at a funeral say and do almost more than those who genuinely grieve. Kings are said to ply a man with many cups and test him with wine if they are trying to discover if he deserves their friendship. If you write poetry, the fox's hidden feelings will never escape you. If you read anything aloud to Quintilius,⁵ he'd say 'pray change that, and that'. You would say you couldn't do better, [440] though you'd tried two or three times, to no purpose. Then he'd tell you to scratch it out and put the badly turned lines back on the anvil. If you preferred defending your error to amending it, he wasted no more words or trouble on preventing you from loving yourself and your handiwork without competition. A wise and good man will censure flabby lines, reprehend harsh ones, put a black line with a stroke of the pen besides unpolished ones, prune pretentious ornaments, force you to shed light on obscurities, convict you of ambiguity, mark down what must be changed. [450] He'll be an Aristarchus.⁶ He won't say, 'Why should I offend a friend in trifles?' These trifles lead to serious troubles, if once you are ridiculed and get a bad reception.

The Mad Poet

Men of sense are afraid to touch a mad poet and give him a wide berth. He's like a man suffering from a nasty itch, or the jaundice, or fanaticism, or Diana's wrath.⁷ Boys chase him and follow him round incautiously. And if, while he's belching out his lofty lines and wandering round, he happens to fall into a well or a pit, like a fowler intent on his birds, then, however long he shouts 'Help! Help! Fellow citizens, help!' there'll be no one to bother to pick him up. [461] And if anyone should trouble to help and let down a rope, my question will be, 'How do you know that he didn't throw himself down deliberately? Are you sure he wants to be saved?' And I shall tell the tale of the death of the Sicilian poet. Empedocles⁸ wanted to be regarded as an immortal god, and so he jumped, cool as you like, into burning Etna.⁹ Let poets have the right and privilege of death. To save a man against his will is the same as killing him. This isn't the only time he's done it. If he's pulled out now, he won't become human or lay aside his love of a notorious end.

[470] It's far from clear *why* he keeps writing poetry. Has the villain pissed on his father's ashes? Or disturbed the grim site of a lightning-strike? Any-

5. Roman critic of the 2d c. B.C.E.; the name is used here to denote someone with taste.

6. The great Alexandrian scholar [2d c. B.C.E.] marked spurious or doubtful lines in Homer with the sign which Horace here attributes to the good critic [translator's note].

7. Lunacy (as the word's derivation from *luna* sug-

gests) was supposed to be caused by the moon goddess, Diana.

8. Sicilian philosopher and statesman (5th c. B.C.E.). The actual place and manner of his death is disputed.

9. Europe's highest active volcano, located in Sicily.

way, he's raving, and his harsh readings put learned and unlearned alike to flight, like a bear that's broken the bars of his cage. If he catches anyone, he holds on and kills him with reading. He's a real leech that won't let go of the skin till it's full of blood.

ca. 10 B.C.E.

LONGINUS

first century C.E.

Since the eighteenth century, the ancient Greek text *On Sublimity* has maintained a reputation as one of the most influential classical works in the tradition of European criticism, despite the uncertainty that surrounds its authorship and date of composition. A distinctive feature of this famous treatise is its favorable commentary on the role of emotion (*pathos*) in the practices of writing, oratory, and reading. According to the author of *On Sublimity* (*Peri Hupsous* in Greek), whom critics refer to as "Longinus," the presence of noble passion is essential for achieving sublimity (*hupsos*), by which he means an elevated and lofty style of writing that rises above the ordinary. From Longinus's author-centered perspective, writers and orators achieve greatness not just by rhetorical techniques but also by deep feelings, profound thoughts, and natural genius: "Sublimity is the echo of a noble mind." Often the experience of reading a great author or listening to a great speech leads us to a feeling of ecstasy or transport (*ekstasis*), which is distinct from the more rational effects of persuasion, the goal of rhetoric. For Longinus, sublimity uplifts the spirit of the reader, filling him or her with unexpected astonishment and pride, arousing noble thoughts, and suggesting more than words can convey.

The extant text of *On Sublimity* derives from a tenth-century medieval manuscript that offers conflicting statements as to the identity of the treatise's creator. For unknown reasons, the table of contents attributes the text to either "Dionysius or Longinus," while the title of the manuscript itself simply indicates that a certain "Dionysius Longinus" is the author. The first attribution suggests that the author is either the Augustan Age Dionysius of Halicarnassus or Cassius Longinus, the third-century pupil of PLOTINUS. For various detailed reasons, neither of these alternatives has convinced scholars. The principal argument against Dionysius is that *On Sublimity* does not comport with the style and general approach of his other works, whose authorship is not in question. The main point of contention against Longinus, who in the eighteenth century was universally held to be the author, is that textual evidence taken from the concluding chapter on the decline of literature suggests a date of composition no later than 100 C.E., thus ruling out a third-century author. The title of the manuscript offers no solution either, for nothing is known of a Dionysius Longinus. One of the few things that can be determined with some certainty is that the author must have been a Hellenized Jew or at least in contact with Jewish culture, since the opening of Genesis is cited as a worthy example of sublimity. Such a reference is quite distinctive: no other known pagan writer employs the Bible in this manner. While scholars continue to attribute *On Sublimity* to Cassius Longinus, they do so as a matter of convenience.

Despite seven lengthy gaps that make up approximately one-third of the original text, the intended organization of *On Sublimity* is reasonably certain. After the formal preface addressed to Postumius Terentianus (about whom we know nothing) and the

enumeration of common faults that arise when authors attempt to achieve sublimity, Longinus provides some general marks of true sublimity. Then, in the eighth chapter, he proceeds to enumerate the five sources of sublimity: great thoughts, strong emotion, certain figures of thought and speech, noble diction, and dignified word arrangement. The remainder of the treatise, except for the anomalous short final chapter on the decline of literature (not included in our selection), concerns itself with detailed analytical discussion of each source in the order in which they are first listed, with illustrative digressions on Homer (8th c. B.C.E.), Demosthenes (384–322 B.C.E.), and PLATO (ca. 427–347 B.C.E.), among others. While the text on the second source, strong emotion, is no longer extant, the author's understanding of it is clear from many comments scattered throughout the treatise.

Often cited as a peak moment in *On Sublimity* is the digression on Plato and the orator Lysias (ca. 459–ca. 380 B.C.E.) near the end of the treatise, following the discussion of metaphors. The digression on genius, as it is known, is important because it provides a detailed and eloquent account of sublimity through a series of concise comparisons in which Homer, Plato, and Demosthenes figure as exemplary geniuses. (Many classical writers are mentioned in the text.) Longinus is prompted by the preference of Caecilius, a rival theorist of the sublime (1st c. B.C.E.), for Lysias over Plato. Lysias, Caecilius claims, is a more faultless, pure, and correct writer than Plato, who often gets carried away with his metaphors. Longinus responds by saying that flawless or impeccable mediocrity, which never reaches the heights of sublimity, is not to be preferred over erratic genius. The former, which concerns itself with exactitude, minutia, and correctness, remains within the domain of the familiar, the humble, the charming, and the customary; the latter ranges freely over the grandeur, the loftiness, and the vastness of nature, admiring such awe-inspiring phenomena as the Nile, the Danube, the Rhine, or indeed the ocean, rather than the lesser streams. For Longinus, the faults that geniuses sometimes manifest are excusable because they are inevitable in the pursuit of sublimity, which expresses the boundless thought of human beings and raises them to the "spiritual greatness of god." Freedom from error, per se, Longinus concludes, does not achieve the emotional intensity of sublimity, which strikes suddenly like the brilliance of lightning. Because of the grand manner in which Longinus makes his case here and throughout the treatise, ALEXANDER POPE would later say that Longinus "is himself that great Sublime he draws."

On Sublimity differs fundamentally from Platonic doctrine, which distrusted the frenzied and irrational flights of poetic inspiration and banned poetry from the ideal republic. Cleverly, Longinus points out that Plato does not practice what he preaches. In citing Plato as an example of a sublime writer, Longinus reinterprets the philosopher, highlighting the unconscious ways in which he too is "carried away by a sort of literary madness." *On Sublimity* also differs from HORACE, who in the *Ars Poetica* coolly stresses rhetorical strategies rather than the erratic genius of authors; Horace would have felt comfortable with the last three sources of the sublime, centered as they are on rhetoric, but probably not with the first two, which depend on the mind and heart of the author. In some respects, Longinus's treatise is more like ARISTOTLE's *Poetics*, for they both take note of the formal techniques and psychological effects of literature, Aristotle famously focusing on the emotional "catharsis" that an audience experiences during the performance of a tragedy. An important distinction between the two is that Longinus considers the emotional psychology of the author as well as that of the audience.

Longinus's text appears not to have been read during ancient or medieval times, perhaps because it was lost. It reemerged as an important text first in the Renaissance, with the Italian translation of Niccolò da Falgano in 1560, but especially with Nicolas Boileau's 1674 French rendering. The latter made *On Sublimity* a central text in European criticism throughout the eighteenth century and set the stage for many discussions of the sublime, including those by JOSEPH ADDISON, EDMUND BURKE, and, most notably, IMMANUEL KANT. With Kant's *Critique of Judgment* (1790), the theory

of the sublime reached a level of analytical rigor considerably beyond Longinus, who, by comparison, is content merely to enact the sublime and work intuitively. Still, Longinus manages to anticipate many of Kant's major themes, especially his fascination with the uplifting sense of the "supersensible" (the transcendent). He also anticipates Romantic theories of literature, which focus on the creative genius of the author.

From a contemporary perspective, Longinus's view of the sublime has limitations. It focuses mainly on the profound feelings and thoughts of geniuses and audiences, without attending to the ways in which they are structured or determined by language. Longinus does discuss figurative language, rhetoric, and composition, but the ideas and emotions of the genius precede such linguistic "ornamentation." The audience's experience, moreover, is said to transcend words. Such a view contrasts with the influential rhetorical reading of the sublime by the deconstructive theorist PAUL DE MAN, who—especially in his "Phenomenality and Materiality in Kant" (1984)—underscores the figurative or tropological determination of consciousness. Another important limitation for contemporary theory is Longinus's emphasis on spiritual transcendence. Some late-twentieth-century theorists of postmodern culture, including FREDRIC JAMESON and JEAN-FRANÇOIS LYOTARD, conceive the sublime in materialist cultural terms—as disorienting experiences of unrepresentable new global systems and networks and as inconceivable cataclysmic modern historical events (such as the Holocaust). Such theorizing, however, could not have taken place without Longinus's groundbreaking analysis in *On Sublimity*, which thus will continue to be a key text for understanding the sublime.

BIBLIOGRAPHY

The original Greek text with valuable critical commentary can be found in "Longinus" *on the Sublime* (1964), edited by the leading Longinus scholar, D. A. Russell. English translations include W. R. Roberts's *Longinus on the Sublime* (1899); W. H. Fyfe's Loeb Classical Library edition (vol. 199, 1927); and, most notably, D. A. Russell's version in *Ancient Literary Criticism: The Principal Texts in New Translations* (1972) and in *Classical Literary Criticism* (1989), both edited by Russell and M. Winterbottom. Fyfe's translation has also been revised by Russell in the more recent Loeb edition (1995). Both of Russell's translations offer useful and authoritative introductions and annotations.

Works of criticism focusing on the English reception of Longinus include T. R. Henn's *Longinus and English Criticism* (1934) and S. H. Monk's *The Sublime: A Study of Critical Theories in Eighteenth-Century England* (1935). J. W. H. Atkins's *Literary Criticism in Antiquity, A Sketch of Its Development*, volume II, *Graeco-Roman* (1934) and G. M. A. Grube's *Greek and Roman Critics* (1965) offer comprehensive discussions of the text of *On Sublimity*, covering important social and historical contexts. M. H. Abrams's *The Mirror and the Lamp: Romantic Theory and the Critical Tradition* (1953) includes insightful comments on Longinus's relationship to the emergence of Romanticism, while Jules Brody's *Boileau and Longinus* (1958) concentrates on the poet-critic who with his late-seventeenth-century French translation contributed the most to Longinus's great reputation in Europe. *Classical Criticism*, volume 1 of *The Cambridge History of Literary Criticism*, includes an informative short piece on Longinus by D. A. Russell (ed. George A. Kennedy, 1989). For an overview of theories of the sublime, see *The Sublime: A Reader*, edited by Andrew Ashfield and Peter De Bolla (1993). For bibliographic information, see Demotrio St. Marin's *Bibliography of the Essay on the Sublime* (1967) and Thomas Gwinup and Fidelia Dickinson's *Greek and Roman Authors: A Checklist of Criticism* (1982).

From On Sublimity¹

Preface

My dear Postumius Terentianus,²

[1.1] You will recall that when we were reading together Caecilius³ monograph *On Sublimity*, we felt that it was inadequate to its high subject, and failed to touch the essential points. Nor indeed did it appear to offer the reader much practical help, though this ought to be a writer's principal object. Two things are required of any textbook: first, that it should explain what its subject is; second, and more important, that it should explain how and by what methods we can achieve it. Caecilius tries at immense length to explain to us what sort of thing 'the sublime' is, as though we did not know; but he has somehow passed over as unnecessary the question how we can develop our nature to some degree of greatness. [1.2] However, we ought perhaps not so much to blame our author for what he has left out as to commend him for his originality and enthusiasm.

You have urged me to set down a few notes on sublimity for your own use. Let us then consider whether there is anything in my observations which may be thought useful to public men. You must help me, my friend, by giving your honest opinion in detail, as both your natural candour and your friendship with me require. It was well said that what man has in common with the gods is 'doing good and telling the truth'.

[1.3] Your education dispenses me from any long preliminary definition. Sublimity is a kind of eminence or excellence of discourse. It is the source of the distinction of the very greatest poets and prose writers and the means by which they have given eternal life to their own fame. [1.4] For grandeur produces ecstasy rather than persuasion in the hearer; and the combination of wonder and astonishment always proves superior to the merely persuasive and pleasant. This is because persuasion is on the whole something we can control, whereas amazement and wonder exert invincible power and force and get the better of every hearer. Experience in invention and ability to order and arrange material cannot be detected in single passages; we begin to appreciate them only when we see the whole context. Sublimity, on the other hand, produced at the right moment, tears everything up like a whirlwind, and exhibits the orator's whole power at a single blow.

[2.1] Your own experience will lead you to these and similar considerations. The question from which I must begin is whether there is in fact an art of sublimity or profundity. Some people think it is a complete mistake to reduce things like this to technical rules. Greatness, the argument runs, is a natural product, and does not come by teaching. The only art is to be born like that. They believe moreover that natural products are very much weakened by being reduced to the bare bones of a textbook.

[2.2] In my view, these arguments can be refuted by considering three points:

1. Translated by D. A. Russell, who has also supplied the headings in the text. The chapter and section numbers, included in square brackets, date to the 16th century.

2. Nothing is known of Postumius Terentianus.

3. Caecilius of Calacte in Sicily (1st c. B.C.E.), Greek rhetorician. His monograph on sublimity is

lost, but later references in Longinus's text suggest that the author neglected the role of strong noble emotion and generous use of metaphor, valuing the even tone of impeccably correct and faultless writers over the ecstasy, wonder, and astonishment of erratic geniuses.

(i) Though nature is on the whole a law unto herself in matters of emotion and elevation, she is not a random force and does not work altogether without method.

(ii) She is herself in every instance a first and primary element of creation, but it is method that is competent to provide and contribute quantities and appropriate occasions for everything, as well as perfect correctness in training and application.

(iii) Grandeur is particularly dangerous when left on its own, unaccompanied by knowledge, unsteadied, unballasted, abandoned to mere impulse and ignorant temerity. It often needs the curb as well as the spur.

[2.3] What Demosthenes⁴ said of life in general is true also of literature: good fortune is the greatest of blessings, but good counsel comes next, and the lack of it destroys the other also. In literature, nature occupies the place of good fortune, and art that of good counsel. Most important of all, the very fact that some things in literature depend on nature alone can itself be learned only from art.

If the critic of students of this subject will bear these points in mind, he will, I believe, come to realize that the examination of the question before us is by no means useless or superfluous.

* * *

Some Marks of True Sublimity

At this stage, the question we must put to ourselves for discussion is how to avoid the faults which are so much tied up with sublimity. [6.1] The answer, my friend, is: by first of all achieving a genuine understanding and appreciation of true sublimity. This is difficult; literary judgement comes only as the final product of long experience. However, for the purposes of instruction, I think we can say that an understanding of all this can be acquired. I approach the problem in this way:

[7.1] In ordinary life, nothing is truly great which it is great to despise; wealth, honour, reputation, absolute power—anything in short which has a lot of external trappings—can never seem supremely good to the wise man because it is no small good to despise them. People who could have these advantages if they chose but disdain them out of magnanimity are admired much more than those who actually possess them. It is much the same with elevation in poetry and literature generally. We have to ask ourselves whether any particular example does not give a show of grandeur which, for all its accidental trappings, will, when dissected, prove vain and hollow, the kind of thing which it does a man more honour to despise than to admire. [7.2] It is our nature to be elevated and exalted by true sublimity. Filled with joy and pride, we come to believe we have created what we have only heard. [7.3] When a man of sense and literary experience hears something many times over, and it fails to dispose his mind to greatness or to leave him with more to reflect upon than was contained in the mere words, but comes instead to seem valueless on repeated inspection, this is not true sublimity; it endures only for the moment of hearing. Real sublimity contains much food for reflection, is difficult or rather impossible to resist, and makes a strong and inefaceable impression on the memory. [7.4] In a word, reckon

4. *Oration* 23.113 [translator's note]. Demosthenes (384–322 B.C.E.), the greatest Athenian orator.

those things which please everybody all the time as genuinely and finely sublime. When people of different trainings, ways of life, tastes, ages, and manners all agree about something, the judgement and assent of so many distinct voices lends strength and irrefutability to the conviction that their admiration is rightly directed.

The Five Sources of Sublimity; The Plan of the Book

[8.1] There are, one may say, five most productive sources of sublimity. (Competence in speaking is assumed as a common foundation for all five; nothing is possible without it.)

(i) The first and most important is the power to conceive great thoughts; I defined this in my work on Xenophon.⁵

(ii) The second is strong and inspired emotion. (These two sources are for the most part natural; the remaining three involve art.)

(iii) Certain kinds of figures. (These may be divided into figures of thought and figures of speech.)

(iv) Noble diction. This has as subdivisions choice of words and the use of metaphorical and artificial language.⁶

(v) Finally, to round off the whole list, dignified and elevated word-arrangement.

Let us now examine the points which come under each of these heads.

I must first observe, however, that Caecilius has omitted some of the five—emotion, for example. [8.2] Now if he thought that sublimity and emotion were one and the same thing and always existed and developed together, he was wrong. Some emotions, such as pity, grief, and fear, are found divorced from sublimity and with a low effect. Conversely, sublimity often occurs apart from emotion. Of the innumerable examples of this I select Homer's bold account of the Aloadae:⁷

Ossa upon Olympus they sought to heap; and on Ossa
Pelion with its shaking forest, to make a path to heaven—

and the even more impressive sequel—

and they would have finished their work . . .⁸

[8.3] In orators, encomia⁹ and ceremonial or exhibition pieces always involve grandeur and sublimity, though they are generally devoid of emotion. Hence those orators who are best at conveying emotion are least good at encomia, and conversely the experts at encomia are not conveyers of emotion. [8.4] On the other hand, if Caecilius thought that emotion had no contribution to make to sublimity and therefore thought it not worth mentioning, he was again completely wrong. I should myself have no hesitation in saying that there is nothing so productive of grandeur as noble emotion in the right place. It inspires and possesses our words with a kind of madness and divine spirit.

5. Athenian historian and essayist (ca. 428—ca. 354 B.C.E.).

6. Or "and-coined words" [translator's note].

7. In Greek mythology, the two sons of Poseidon (god of the sea) and Iphimedieta, wife of Aloeus.

8. *Odyssey* 11.315–17 [translator's note]. Ossa,

Olympus, and Pelion are all mountains in north-eastern Greece.

9. Formal poems (odes) or speeches in praise of a living person, object, or event, but not a god, delivered before a special audience. See, for example, GORGIAS's *Encomium of Helen* (above).

(i) *Greatness of Thought*

[9.1] The first source, natural greatness, is the most important. Even if it is a matter of endowment rather than acquisition, we must, so far as is possible, develop our minds in the direction of greatness and make them always pregnant with noble thoughts. You ask how this can be done. [9.2] I wrote elsewhere something like this: 'Sublimity is the echo of a noble mind.' This is why a mere idea, without verbal expression, is sometimes admired for its nobility—just as Ajax's silence in the *Vision of the Dead* is grand and indeed more sublime than any words could have been.¹ [9.3] First then we must state where sublimity comes from: the orator must not have low or ignoble thoughts. Those whose thoughts and habits are trivial and servile all their lives cannot possibly produce anything admirable or worthy of eternity. Words will be great if thoughts are weighty.

* * *

Selection and Organization of Material

[10.1] Now have we any other means of making our writing sublime? Every topic naturally includes certain elements which are inherent in its raw material. It follows that sublimity will be achieved if we consistently select the most important of these inherent features and learn to organize them as a unity by combining one with another. The first of these procedures attracts the reader by the selection of details, the second by the density of those selected.

Consider Sappho's² treatment of the feelings involved in the madness of being in love. She uses the attendant circumstances and draws on real life at every point. And in what does she show her quality? In her skill in selecting the outstanding details and making a unity of them:

[10.2] To me he seems a peer of the gods, the man who sits facing you and hears your sweet voice
and lovely laughter; it flutters my heart in my breast. When I see you only for a moment, I cannot speak;
my tongue is broken, a subtle fire runs under my skin; my eyes cannot see, my ears hum;
cold sweat pours off me; shivering grips me all over; I am paler than grass; I seem near to dying;
but all must be endured . . .³

[10.3] Do you not admire the way in which she brings everything together—mind and body, hearing and tongue, eyes and skin? She seems to have lost them all, and to be looking for them as though they were external to her. She is cold and hot, mad and sane, frightened and near death, all by turns. The result is that we see in her not a single emotion, but a complex of emotions. Lovers experience all this; Sappho's excellence, as I have said, lies in her adoption and combination of the most striking details.

A similar point can be made about the descriptions of storms in Homer,

1. *Odyssey* 11.563. Note that this is not an example, but a simile illustrating the point that ideas in themselves can be grand [translator's note].

2. Greek lyric poet (b. ca. 612 B.C.E.).

3. Sappho, frag. 31 Lobel-Page.

who always picks out the most terrifying aspects. [10.4] The author of the *Arimaspea* on the other hand expects these lines to excite terror:

This too is a great wonder to us in our hearts:
there are men living on water, far from land, on the deep sea:
miserable they are, for hard is their lot;
they give their eyes to the stars, their lives to the sea;
often they raise their hands in prayer to the gods,
as their bowels heave in pain.⁴

Anyone can see that this is more polished than awe-inspiring. Now compare it with Homer [10.5] (I select one example out of many):

He fell upon them as upon a swift ship falls a wave,
huge, wind-reared by the clouds. The ship
is curtained in foam, a hideous blast of wind
roars in the sail. The sailors shudder in terror:
they are carried away from under death, but only just.⁵

[10.6] Aratus⁶ tried to transfer the same thought:

A little plank wards off Hades.

But this is smooth and unimpressive, not frightening. Moreover, by saying 'a plank wards off Hades', he has got rid of the danger. The plank *does* keep death away. Homer, on the other hand, does not banish the cause of fear at a stroke; he gives a vivid picture of men, one might almost say, facing death many times with every wave that comes. Notice also the forced combination of naturally uncompoundable prepositions: *hupek*, 'from under'. Homer has tortured the words to correspond with the emotion of the moment, and expressed the emotion magnificently by thus crushing words together. He has in effect stamped the special character of the danger on the diction: 'they are carried away from under death'.

[10.7] Compare Archilochus on the shipwreck, and Demosthenes on the arrival of the news ('It was evening . . .').⁷

In short, one might say that these writers have taken only the very best pieces, polished them up and fitted them together. They have inserted nothing inflated, undignified, or pedantic. Such things ruin the whole effect, because they produce, as it were, gaps or crevices, and so spoil the impressive thoughts which have been built into a structure whose cohesion depends upon their mutual relations.

4. From a lost poem attributed to Aristeas of Proconnesus, a prophet of Apollo said to have traveled in Siberia in the 7th c. B.C.E. The lines perhaps express the surprised comment of innocent continentals, deep in Asia, on the tales they have heard about ships and seagoing [translator's note].

5. *Odyssey* 15.624-28 [translator's note].

6. *Phaenomena* 299 [translator's note]. Aratus (ca. 315-ca. 240 B.C.E.), Greek poet who often wrote on philosophy and natural science.

7. The example from Archilochus cannot be certainly identified. That from Demosthenes (*On the Crown* 169) describes the alarm at Athens when

news arrived of Philip's occupation of Elatea (339 B.C.E.): "It was evening when somebody brought the *prutaneis* [city magistrates] the news that Elatea was captured. Some of them got up in the middle of dinner and began to drive the traders from the stalls in the *agora* and burn the wicker hurdles. Other sent for the generals and gave instructions to the trumpeter. The town was full of uproar" [translator's note]. Archilochus (7th c. B.C.E.), earliest Greek lyric poet whose work survives. Philip II (359-336 B.C.E.), king of Macedon. Elatea: strategically located town, three days' march from Athens.

Amplification

[11.1] The quality called 'amplification' is connected with those we have been considering. It is found when the facts or the issues at stake allow many starts and pauses in each section. You wheel up one impressive unit after another to give a series of increasing importance. There are innumerable varieties of amplification: [11.2] it may be produced by commonplaces, by exaggeration or intensification of facts or arguments, or by a build-up of action or emotion. The orator should realize, however, that none of these will have its full effect without sublimity. Passages expressing pity or disparagement are no doubt an exception; but in any other instance of amplification, if you take away the sublime element, you take the soul away from the body. Without the strengthening influence of the sublimity, the effective element in the whole loses all its vigour and solidity.

[11.3] What is the difference between this precept and the point made above about the inclusion of vital details and their combination in a unity? What in general is the difference between amplification and sublimity? I must define my position briefly on these points, in order to make myself clear.

[12.1] I do not feel satisfied with the definition given by the rhetoricians: 'amplification is expression which adds grandeur to its subject'. This might just as well be a definition of sublimity or emotion or tropes. All these add grandeur of some kind. The difference lies, in my opinion, in the fact that sublimity depends on elevation, whereas amplification involves extension; sublimity exists often in a single thought, amplification cannot exist without a certain quantity and superfluity. [12.2] To give a general definition, amplification is an aggregation of all the details and topics which constitute a situation, strengthening the argument by dwelling on it; it differs from proof in that the latter demonstrates the point made . . .

* * *

Imitation of Earlier Writers as a Means to Sublimity

[13.2] Plato,⁸ if we will read him with attention, illustrates yet another road to sublimity, besides those we have discussed. This is the way of imitation and emulation of great writers of the past. Here too, my friend, is an aim to which we must hold fast. Many are possessed by a spirit not their own. It is like what we are told of the Pythia⁹ at Delphi: she is in contact with the tripod near the cleft in the ground which (so they say) exhales a divine vapour, and she is thereupon made pregnant by the supernatural power and forthwith prophesies as one inspired. Similarly, the genius of the ancients acts as a kind of oracular cavern, and effluences flow from it into the minds of their imitators. Even those previously not much inclined to prophesy become inspired and share the enthusiasm which comes from the greatness of others. [13.3] Was Herodotus the only 'most Homeric' writer? Surely Stesichorus¹ and Archilochus earned the name before him. So, more than any,

8. Greek philosopher (427-347 B.C.E.). For PLATO's comments on poetry, see above.

9. A priestess of Apollo and the most famous of his oracles (located on the slopes of Mt. Parnassus

near the Greek city Delphi).

1. Greek choral poet (ca. 630-555 B.C.E.) who wrote narratives on epic themes. Herodotus (ca. 484-ca. 425 B.C.E.), Greek historian.

did Plato, who diverted to himself countless rills from the Homeric spring. (If Ammonius² had not selected and written up detailed examples of this, I might have had to prove the point myself.) [13.4] In all this process there is no plagiarism. It resembles rather the reproduction of good character in statues and works of art.³ Plato could not have put such a brilliant finish on his philosophical doctrines or so often risen to poetical subjects and poetical language, if he had not tried, and tried wholeheartedly, to compete for the prize against Homer, like a young aspirant challenging an admired master. To break a lance in this way may well have been a brash and contentious thing to do, but the competition proved anything but valueless. As Hesiod says, 'this strife is good for men.'⁴ Truly it is a noble contest and prize of honour, and one well worth winning, in which to be defeated by one's elders is itself no disgrace.

[14.1] We can apply this to ourselves. When we are working on something which needs loftiness of expression and greatness of thought, it is good to imagine how Homer would have said the same thing, or how Plato or Demosthenes or (in history) Thucydides⁵ would have invested it with sublimity. These great figures, presented to us as objects of emulation and, as it were, shining before our gaze, will somehow elevate our minds to the greatness of which we form a mental image. [14.2] They will be even more effective if we ask ourselves 'How would Homer or Demosthenes have reacted to what I am saying, if he had been here? What would his feelings have been?' It makes it a great occasion if you imagine such a jury or audience for your own speech, and pretend that you are answering for what you write before judges and witnesses of such heroic stature. [14.3] Even more stimulating is the further thought: 'How will posterity take what I am writing?' If a man is afraid of saying anything which will outlast his own life and age, the conceptions of his mind are bound to be incomplete and abortive; they will miscarry and never be brought to birth whole and perfect for the day of posthumous fame.

Visualization (*Phantasia*)

[15.1] Another thing which is extremely productive of grandeur, magnificence and urgency, my young friend, is visualization (*phantasia*). I use this word for what some people call image-production. The term *phantasia* is used generally for anything which in any way suggests a thought productive of speech,⁶ but the word has also come into fashion for the situation in which enthusiasm and emotion make the speaker *see* what he is saying and bring it *visually* before his audience. [15.2] It will not escape you that rhetorical visualization has a different intention from that of the poets: in poetry the aim is astonishment, in oratory it is clarity. Both, however, seek emotion and excitement.

2. Head of the Alexandrian library (2d c. B.C.E.) and author of commentaries on Homer and other Greek authors.

3. Text uncertain: perhaps "the reproduction of beauty of form . . ." [translator's note].

4. *Works and Days* 24: healthy rivalry contrasted

with the strife that produces war [translator's note]. Hesiod (active ca. 700 B.C.E.), Greek didactic poet.

5. Greek historian (ca. 455–ca. 400 B.C.E.).

6. A Stoic definition [translator's note].

Mother, I beg you, do not drive them at me,
the women with the blood in their eyes and the snakes—
they are here, they are here, jumping right up to me.⁷

Or again:

O! O! She'll kill me. Where shall I escape?⁸

The poet himself saw the Erinyes,⁹ and has as good as made his audience see what he imagined.

* * *

[15.8] The poetical examples, as I said, have a quality of exaggeration which belongs to fable and goes far beyond credibility. In an orator's visualizations, on the other hand, it is the element of fact and truth which makes for success; when the content of the passage is poetical and fabulous and does not shrink from any impossibility, the result is a shocking and outrageous abnormality. This is what happens with the shock orators of our own day; like tragic actors, these fine fellows *see* the Erinyes, and are incapable of understanding that when Orestes says

Let me go; you are one of my Erinyes,
you are hugging me tight, to throw me into Hell,¹

he visualizes all this *because he is mad*.

[15.9] What then is the effect of rhetorical visualization? There is much it can do to bring urgency and passion into our words; but it is when it is closely involved with factual arguments that it enslaves the hearer as well as persuading him. 'Suppose you heard a shout this very moment outside the court, and someone said that the prison had been broken open and the prisoners had escaped—no one, young or old, would be so casual as not to give what help he could. And if someone then came forward and said "This is the man who let them out", our friend would never get a hearing; it would be the end of him.'² [15.10] There is a similar instance in Hyperides' defence of himself when he was on trial for the proposal to liberate the slaves which he put forward after the defeat.³ 'It was not the proposer', he said, 'who drew up this decree: it was the battle of Chaeronea.' Here the orator uses a visualization actually in the moment of making his factual argument, with the result that his thought has taken him beyond the limits of mere persuasiveness. [15.11] Now our natural instinct is, in all such cases, to attend to the stronger influence, so that we are diverted from the demonstration to the astonishment caused by the visualization, which by its very brilliance conceals the factual aspect. This is a natural reaction: when two things are joined together, the stronger attracts to itself the force of the weaker.

[15.12] This will suffice for an account of sublimity of thought produced by greatness of mind, imitation, or visualization.⁴

7. Euripides, *Orestes* 255–57. Orestes sees the Furies [translator's note]. The Furies: hideous spirits, who avenge wrongs done to kindred, especially murder.

8. Euripides, *Iphigenia in Tauris* 291. Again Orestes and the Furies [translator's note].

9. That is, the Furies.

1. Euripides, *Orestes* 264–65 [translator's note].

2. Demosthenes, *Orations* 24.208 [translator's

note].

3. I.e., after Philip's victory at Chaeronea (338 B.C.E.). The speech is not extant [translator's note]. Hyperides (389–322 B.C.E.), Greek orator, professional speech writer, and prosecutor. Chaeronea: northernmost town of Boeotia, where Philip defeated the Athenians and the Thebans.

4. Note that this is not a complete summary of chaps. 9–15 [translator's note].

(iii) *Figures: An Example to Illustrate the Right Use of Figures*⁵

[16.1] The next topic is that of figures. Properly handled, figures constitute, as I said, no small part of sublimity. It would be a vast, or rather infinite, labour to enumerate them all; what I shall do is to expound a few of those which generate sublimity, simply in order to confirm my point.

[16.2] Here is Demosthenes putting forward a demonstrative argument on behalf of his policy.⁶ What would have been the natural way to put it? 'You have not done wrong, you who fought for the liberty of Greece; you have examples to prove this close at home: the men of Marathon, of Salamis, of Plataea did not do wrong.' But instead of this he was suddenly inspired to give voice to the oath by the heroes of Greece: 'By those who risked their lives at Marathon, you have not done wrong!' Observe what he effects by this single figure of conjuration, or 'apostrophe' as I call it here. He deifies his audience's ancestors, suggesting that it is right to take an oath by men who fell so bravely, as though they were gods. He inspires the judges with the temper of those who risked their lives. He transforms his demonstrations into an extraordinary piece of sublimity and passion, and into the convincingness of this unusual and amazing oath. At the same time he injects into his hearers' minds a healing specific, so as to lighten their hearts by these paeans of praise and make them as proud of the battle with Philip as of the triumphs⁷ of Marathon and Salamis. In short, the figure enables him to run away with his audience.

* * *

The Relation between Figures and Sublimity

[17.1] At this point, my friend, I feel I ought not to pass over an observation of my own. It shall be very brief: figures are natural allies of sublimity and themselves profit wonderfully from the alliance. I will explain how this happens.

Playing tricks by means of figures is a peculiarly suspect procedure. It raises the suspicion of a trap, a deep design, a fallacy. It is to be avoided in addressing a judge who has power to decide, and especially in addressing tyrants, kings, governors, or anybody in a high place. Such a person immediately becomes angry if he is led astray like a foolish child by some skilful orator's figures. He takes the fallacy as indicating contempt for himself. He becomes like a wild animal. Even if he controls his temper, he is now completely conditioned against being convinced by what is said. A figure is therefore generally thought to be best when the fact that it is a figure is concealed.

[17.2] Thus sublimity and emotion are a defence and a marvellous aid against the suspicion which the use of figures engenders. The artifice of the trick is lost to sight in the surrounding brilliance of beauty and grandeur, and it escapes all suspicion. 'By the men of Marathon . . .' is proof enough. For how did Demosthenes conceal the figure in that passage? By sheer bril-

5. The section on the second source of the sublime, strong emotion, is missing from the extant Greek manuscript.

6. The passage discussed is in *Orations* 18.208 [translator's note].

7. At Marathon, the Athenians aided by the Plataeans became the first Greeks to defeat the Persians (490 B.C.E.); near the island of Salamis, the Persian fleet was routed by combined Greek forces (480 B.C.E.).

liance, of course. As fainter lights disappear when the sunshine surrounds them, so the sophisms of rhetoric are dimmed when they are enveloped in encircling grandeur. [17.3] Something like this happens in painting: when light and shadow are juxtaposed in colours on the same plane, the light seems more prominent to the eye, and both stands out and actually appears much nearer. Similarly, in literature, emotional and sublime features seem closer to the mind's eye, both because of a certain natural kinship and because of their brilliance. Consequently, they always show up above the figures, and overshadow and eclipse their artifice.

* * *

Hyperbaton

* * *

[22.1] Hyperbaton is an arrangement of words or thoughts which differs from the normal sequence . . . ⁸ It is a very real mark of urgent emotion. People who in real life feel anger, fear, or indignation, or are distracted by jealousy or some other emotion (it is impossible to say how many emotions there are; they are without number), often put one thing forward and then rush off to another, irrationally inserting some remark, and then hark back again to their first point. They seem to be blown this way and that by their excitement, as if by a veering wind. They inflict innumerable variations on the expression, the thought, and the natural sequence. Thus hyperbaton is a means by which, in the best authors, imitation approaches the effect of nature. Art is perfect when it looks like nature, nature is felicitous when it embraces concealed art. Consider the words of Dionysius of Phocaea in Herodotus:⁹ 'Now, for our affairs are on the razor's edge, men of Ionia, whether we are to be free or slaves—and worse than slaves, runaways—so if you will bear hardships now, you will suffer temporarily but be able to overcome your enemies.'

[22.2] The natural order of thought would have been: 'Men of Ionia, now is the time for you to bear hardships, for our affairs are on the razor's edge.' The speaker has displaced 'men of Ionia'; he begins with the cause of fear, as though the alarm was so pressing that he did not even have time to address the audience by name. He has also diverted the order of thought. Before saying that they must suffer hardship themselves (that is the gist of his exhortation), he first gives the reason why it is necessary, by saying 'our affairs are on the razor's edge'. The result is that he seems to be giving not a premeditated speech but one forced on him by the circumstances.

[22.3] It is even more characteristic of Thucydides to show ingenuity in separating by transpositions even things which are by nature completely unified and indivisible.

Demosthenes is less wilful in this than Thucydides, but no one uses this kind of effect more lavishly. His transpositions produce not only a great sense of urgency but the appearance of extemporization, as he drags his hearers with him into the hazards of his long hyperbata. [22.4] He often holds in suspense the meaning which he set out to convey and, introducing one extra-

8. Probably a few words are missing here [translator's note].

9. *Histories* 6.11 [translator's note]. Dionysius of Phocaea: commander of Greek fleet in the battle

of Lade (494 B.C.E.), which the Persians won. In the ancient world, defeated peoples were often enslaved.

neous item after another in an alien and unusual place before getting to the main point, throws the hearer into a panic lest the sentence collapse altogether, and forces him in his excitement to share the speaker's peril, before, at long last and beyond all expectation, appositely paying off at the end the long due conclusion; the very audacity and hazardousness of the hyperbata add to the astounding effect. There are so many examples that I forbear to give any.

* * *

Conclusion of the Section on Figures

[29.2] So much, my dear Terentianus, by way of digression on the theory of the use of those figures which conduce to sublimity. They all make style more emotional and excited, and emotion is as essential a part of sublimity as characterization is of charm.

(iv) Diction: General Remarks

[30.1] Thought and expression are of course very much involved with each other. We have therefore next to consider whether any topics still remain in the field of diction. The choice of correct and magnificent words is a source of immense power to entice and charm the hearer. This is something which all orators and other writers cultivate intensely. It makes grandeur, beauty, old-world charm, weight, force, strength, and a kind of lustre bloom upon our words as upon beautiful statues; it gives things life and makes them speak. But I suspect there is no need for me to make this point; you know it well. It is indeed true that beautiful words are the light that illuminates thought.

[30.2] Magniloquence, however, is not always serviceable: to dress up trivial material in grand and solemn language is like putting a huge tragic mask on a little child. In poetry and history, however . . .¹

Use of Everyday Words

* * *

[31.1] Theopompus² much-admired phrase seems to me to be particularly expressive because of the aptness of the analogy, though Caecilius manages to find fault with it: 'Philip was excellent at stomaching facts.' An idiomatic phrase is sometimes much more vivid than an ornament of speech, for it is immediately recognized from everyday experience, and the familiar is inevitably easier to credit. 'To stomach facts' is thus used vividly of a man who endures unpleasantness and squalor patiently, and indeed with pleasure, for the sake of gain. [31.2] There are similar things in Herodotus: 'Cleomenes in his madness cut his own flesh into little pieces with a knife till he had sliced himself to death', 'Pythes continued fighting on the ship until he was cut into joints.'³ These phrases come within an inch of being vulgar, but they are so expressive that they avoid vulgarity.

1. Lacuna equivalent to about four pages [translator's note].

2. Greek historian (b. ca. 378 B.C.E.).

3. *Histories* 6.75, 7.181 [translator's note]. Cleo-

menes: king of Sparta (reigned ca. 519-480 B.C.E.). Pythes: soldier who fought against the Persians ca. 480 B.C.E.

Metaphors

[32.1] As regards number of metaphors, Caecilius seems to agree with the propounders of the rule that not more than two or at most three may be used of the same subject. Here too Demosthenes is our canon. The right occasions are when emotions come flooding in and bring the multiplication of metaphors with them as a necessary accompaniment. [32.2] 'Vile flatterers, mutilators of their countries, who have given away liberty as a drinking present, first to Philip and now to Alexander, measuring happiness by the belly and the basest impulses, overthrowing liberty and freedom from despotism, which Greeks of old regarded as the canons and standards of the good.'⁴ In this passage the orator's anger against traitors obscures the multiplicity of his metaphors.

[32.3] This is why Aristotle and Theophrastus⁵ say that there are ways of softening bold metaphors—namely by saying 'as if', 'as it were', 'if I may put it so', or 'if we may venture on a bold expression'. Apology, they say, is a remedy for audacity. [32.4] I accept this doctrine, but I would add—and I said the same about figures—that strong and appropriate emotions and genuine sublimity are a specific palliative for multiplied or daring metaphors, because their nature is to sweep and drive all these other things along with the surging tide of their movement. Indeed it might be truer to say that they *demand* the hazardous. They never allow the hearer leisure to count the metaphors, because he too shares the speaker's enthusiasm.

[32.5] At the same time, nothing gives distinction to commonplaces and descriptions so well as a continuous series of tropes.⁶ This is the medium in which the description of man's bodily tabernacle is worked out so elaborately in Xenophon and yet more superlatively by Plato.⁷ Thus Plato calls the head the 'citadel' of the body; the neck is an 'isthmus' constructed between the head and the chest; the vertebrae, he says, are fixed underneath 'like pivots'. Pleasure is a 'lure of evil' for mankind; the tongue is a 'taste-meter'. The heart is a 'knot of veins' and 'fountain of the blood that moves impetuously round', allocated to the 'guard-room'. The word he uses for the various passages of the canals is 'alleys'. 'Against the throbbing of the heart,' he continues, 'in the expectation of danger and in the excitation of anger, when it gets hot, they contrived a means of succour, implanting in us the lungs, soft, bloodless, and with cavities, a sort of cushion, so that when anger boils up in the heart, the latter's throbbing is against a yielding obstacle, so that it comes to no harm.' Again: he calls the seat of the desires 'the women's quarters', and the seat of anger 'the men's quarters'. The spleen is for him 'a napkin for the inner parts, which therefore grows big and festering through being filled with secretions'. 'And thereafter', he says again, 'they buried the whole under a canopy of flesh', putting the flesh on 'as a protection against dangers from without, like felting.' Blood he called 'fodder of the flesh'. For the purpose of nutrition, he says also, 'they irrigated the body, cutting channels as in gardens, so that the streams of the veins might flow as it were from an incoming stream, making the body an aqueduct'. Finally: when the end is at hand, the soul's 'ship's cables' are 'loosed', and she herself 'set free'.

4. Demosthenes 18.296 [translator's note].

5. Greek philosopher and naturalist (ca. 370—ca. 285 B.C.E.), pupil and successor of Aristotle.

6. Figures of speech.

7. Xenophon, *Memorabilia* 1.4.5ff.; Plato, *Ti-maeus* 65c–85e ("Longinus" picks various details out of this long passage, and runs them together) [translator's note].

[32.6] The passage contains countless similar examples; but these are enough to make my point, namely that tropes are naturally grand, that metaphors conduce to sublimity, and that passages involving emotion and description are the most suitable field for them. [32.7] At the same time, it is plain without my saying it that the use of tropes, like all other good things in literature, always tempts one to go too far. This is what people ridicule most in Plato, who is often carried away by a sort of literary madness into crude, harsh metaphors or allegorical fustian. 'It is not easy to understand that a city ought to be mixed like a bowl of wine, wherein the wine seethes with madness, but when chastened by another, sober god, and achieving a proper communion with him, produces a good and moderate drink.'⁸ To call water 'a sober god', says the critic, and mixture 'chastening', is the language of a poet who is far from sober himself.

Digression: Genius versus Mediocrity

[32.8] Faults of this kind formed the subject of Caecilius' attack in his book on Lysias,⁹ in which he had the audacity to declare Lysias in all respects superior to Plato. He has in fact given way without discrimination to two emotions: loving Lysias more deeply than he loves himself, he yet hates Plato with an even greater intensity. His motive, however, is desire to score a point, and his assumptions are not, as he believed, generally accepted. In preferring Lysias to Plato he thinks he is preferring a faultless and pure writer to one who makes many mistakes. But the facts are far from supporting his view.

[33.1] Let us consider a really pure and correct writer. We have then to ask ourselves in general terms whether grandeur attended by some faults of execution is to be preferred, in prose or poetry, to a modest success of impeccable soundness. We must also ask whether the greater *number* of good qualities or the greater good qualities ought properly to win the literary prizes. These questions are relevant to a discussion of sublimity, and urgently require an answer.

[33.2] I am certain in the first place that great geniuses are least 'pure'. Exactness in every detail involves a risk of meanness; with grandeur, as with great wealth, there ought to be something overlooked. It may also be inevitable that low or mediocre abilities should maintain themselves generally at a correct and safe level, simply because they take no risks and do not aim at the heights, whereas greatness, just because it is greatness, incurs danger.

[33.3] I am aware also of a second point. All human affairs are, in the nature of things, better known on their worse side; the memory of mistakes is ineffaceable, that of goodness is soon gone. [33.4] I have myself cited not a few mistakes in Homer and other great writers, not because I take pleasure in their slips, but because I consider them not so much voluntary mistakes as oversights let fall at random through inattention and with the negligence of genius. I do, however, think that the greater good qualities, even if not consistently maintained, are always more likely to win the prize—if for no other reason, because of the greatness of spirit they reveal. Apollonius makes no mistakes in the *Argonautica*; Theocritus¹ is very felicitous in the *Pastorals*,

8. *Laws* 773c–d (translator's note).

9. Greek orator (ca. 459–ca. 380 B.C.E.) who reacted against the grandiose manner of Gorgias, striving for common language, pure diction, and lucidity rather than powerful emotional appeals.

1. Greek poet (ca. 300–ca. 260 B.C.E.) whose works are the earliest example of pastoral poetry. Apollonius of Rhodes (b. ca. 295 B.C.E.), head of the Alexandrian library and poet; his *Argonautica* is the great epic of the Alexandrian period.

apart from a few passages not connected with the theme; but would you rather be Homer or Apollonius? [33.5] Is the Eratosthenes² of that flawless little poem *Erigone* a greater poet than Archilochus, with his abundant, uncontrolled flood, that bursting forth of the divine spirit which is so hard to bring under the rule of law? Take lyric poetry: would you rather be Bacchylides or Pindar?³ Take tragedy: would you rather be Ion of Chios or Sophocles?⁴ Ion and Bacchylides are impeccable, uniformly beautiful writers in the polished manner; but it is Pindar and Sophocles who sometimes set the world on fire with their vehemence, for all that their flame often goes out without reason and they collapse dismally. Indeed, no one in his senses would reckon all Ion's works put together as the equivalent of the one play *Oedipus*.

[34.1] If good points were totted up, not judged by their real value, Hyperides would in every way surpass Demosthenes. He is more versatile, and has more good qualities. He is second-best at everything, like a pentathlon competitor; always beaten by the others for first place, he remains the best of the non-specialists. [34.2] In fact, he reproduces all the good features of Demosthenes, except his word-arrangement, and also has for good measure the excellences and graces of Lysias. He knows how to talk simply where appropriate; he does not deliver himself of everything in the same tone, like Demosthenes. His expression of character has sweetness and delicacy. Urbanity, sophisticated sarcasm, good breeding, skill in handling irony, humour neither rude nor tasteless but flavoured with true Attic salt,⁵ an ingenuity in attack with a strong comic element and a sharp sting to its apt fun—all this produces inimitable charm. He has moreover great talents for exciting pity, and a remarkable facility for narrating myths with copiousness and developing general topics with fluency. For example, while his account of Leto is in his more poetic manner, his Funeral Speech is an unrivalled example of the epideictic style.⁶ [34.3] Demosthenes, by contrast, has no sense of character. He lacks fluency, smoothness, and capacity for the epideictic manner; in fact he is practically without all the qualities I have been describing. When he forces himself to be funny or witty, he makes people laugh at him rather than with him. When he wants to come near to being charming, he is furthest removed from it. If he had tried to write the little speech on Phryne or that on Athenogenes,⁷ he would have been an even better advertisement for Hyperides. [34.4] Yet Hyperides' beauties, though numerous, are without grandeur: 'inert in the heart of a sober man', they leave the hearer at peace. Nobody feels frightened reading Hyperides.

But when Demosthenes begins to speak, he concentrates in himself excellences finished to the highest perfection of his sublime genius—the intensity of lofty speech, living emotions, abundance, acuteness, speed where speed

2. Eratosthenes of Cyrene (ca. 275–194 B.C.E.), Greek poet, critic, geographer, and astronomer.

3. Major Greek lyric poet (518–438 B.C.E.), known for his elaborate odes (encomia) celebrating victories in athletic and music contests. Bacchylides (ca. 524–ca. 452), Greek lyric poet also known for his odes.

4. One of the great Greek tragedians (ca. 496–406 B.C.E.), best known for his *Oedipus* trilogy. Ion of Chios (ca. 490–ca. 421 B.C.E.), Greek poet famed chiefly for his tragedies, none of which has survived.

5. Elegant wit.

6. The speech (*Deliacus*) in which the myth of Leto was told is lost; the Funeral Speech is extant (*Oration* 2) [translator's note]. "The epideictic style": speech designed for delivery at festivals and funeral orations; it is distinguished from forensic oratory (for law courts) and deliberative (political) oratory. Leto: the mother of the Greek deities Apollo and Artemis.

7. The first is lost; the second is *Oration* 3 (5) [translator's note]. Phryne (4th c. B.C.E.), celebrated Greek courtesan. Athenogenes: Athenian businessman who was the subject of Hyperides' "Against Athenogenes."

is vital, all his unapproachable vehemence and power. He concentrates it all in himself—they are divine gifts, it is almost blasphemous to call them human—and so outpoints all his rivals, compensating with the beauties he has even for those which he lacks. The crash of his thunder, the brilliance of his lightning make all other orators, of all ages, insignificant. It would be easier to open your eyes to an approaching thunderbolt than to face up to his unremitting emotional blows.

[35.1] To return to Plato and Lysias, there is, as I said, a further difference between them. Lysias is much inferior not only in the importance of the good qualities concerned but in their number; and at the same time he exceeds Plato in the number of his failings even more than he falls short in his good qualities.

[35.2] What then was the vision which inspired those divine writers who disdained exactness of detail and aimed at the greatest prizes in literature? Above all else, it was the understanding that nature made man to be no humble or lowly creature, but brought him into life and into the universe as into a great festival, to be both a spectator and an enthusiastic contestant in its competitions. She implanted in our minds from the start an irresistible desire for anything which is great and, in relation to ourselves, supernatural.

[35.3] The universe therefore is not wide enough for the range of human speculation and intellect. Our thoughts often travel beyond the boundaries of our surroundings. If anyone wants to know what we were born for, let him look round at life and contemplate the splendour, grandeur, and beauty in which it everywhere abounds. [35.4] It is a natural inclination that leads us to admire not the little streams, however pellucid and however useful, but the Nile, the Danube, the Rhine, and above all the Ocean. Nor do we feel so much awe before the little flame we kindle, because it keeps its light clear and pure, as before the fires of heaven, though they are often obscured. We do not think our flame more worthy of admiration than the craters of Etna,⁸ whose eruptions bring up rocks and whole hills out of the depths, and sometimes pour forth rivers of the earth-born, spontaneous fire. [35.5] A single comment fits all these examples: the useful and necessary are readily available to man, it is the unusual that always excites our wonder.

[36.1] So when we come to great geniuses in literature—where, by contrast, grandeur is not divorced from service and utility—we have to conclude that such men, for all their faults, tower far above mortal stature. Other literary qualities prove their users to be human; sublimity raises us towards the spiritual greatness of god. Freedom from error does indeed save us from blame, but it is only greatness that wins admiration. [36.2] Need I add that every one of those great men redeems all his mistakes many times over by a single sublime stroke? Finally, if you picked out and put together all the mistakes in Homer, Demosthenes, Plato, and all the other really great men, the total would be found to be a minute fraction of the successes which those heroic figures have to their credit. Posterity and human experience—judges whose sanity envy cannot question—place the crown of victory on their heads. They keep their prize irrevocably, and will do so

so long as waters flow and tall trees flourish.⁹

8. An active volcano in Sicily.
9. "Epigram on the tomb of Midas," ascribed to

Homer: see Plato, *Phaedrus* 264d [translator's note].

[36.3] It has been remarked that 'the failed Colossus is no better than the Doryphorus of Polyclitus'.¹ There are many ways of answering this. We may say that accuracy is admired in art and grandeur in nature, and it is *by nature* that man is endowed with the power of speech; or again that statues are expected to represent the human form, whereas, as I said, something higher than human is sought in literature.

[36.4] At this point I have a suggestion to make which takes us back to the beginning of the book. Impeccability is generally a product of art; erratic excellence comes from natural greatness; therefore, art must always come to the aid of nature, and the combination of the two may well be perfection.

It seemed necessary to settle this point for the sake of our inquiry; but everyone is at liberty to enjoy what he takes pleasure in.

* * *

(v) *Word-Arrangement or Composition*

[39.1] There remains the fifth of the factors contributing to sublimity which we originally enumerated. This was a certain kind of composition or word-arrangement. Having set out my conclusions on this subject fully in two books, I shall here add only so much as is essential for our present subject.

Effect of Rhythm

Harmony is a natural instrument not only of conviction and pleasure but also to a remarkable degree of grandeur and emotion. [39.2] The *aulos*² fills the audience with certain emotions and makes them somehow beside themselves and possessed. It sets a rhythm, it makes the hearer move to the rhythm and assimilate himself to the tune, 'untouched by the Muses though he be'.³ The notes of the lyre, though they have no meaning, also, as you know, often cast a wonderful spell of harmony with their varied sounds and blended and mingled notes. [39.3] Yet all these are but spurious images and imitations of persuasion, not the genuine activities proper to human nature of which I spoke.⁴ Composition, on the other hand, is a harmony of words, man's natural instrument, penetrating not only the ears but the very soul. It arouses all kinds of conceptions of words and thoughts and objects, beauty and melody—all things native and natural to mankind. The combination and variety of its sounds convey the speaker's emotions to the minds of those around him and make the hearers share them. It fits his great thoughts into a coherent structure by the way in which it builds up patterns of words. Shall we not then believe that by all these methods it bewitches us and elevates to grandeur, dignity, and sublimity both every thought which comes within its compass and ourselves as well, holding as it does complete domination over our minds? It is absurd to question facts so generally agreed. Experience is proof enough.

* * *

1. It is not certain whether "Longinus" means the Colossus of Rhodes or some other large statue. For the Doryphorus, famous for its proportions, see, e.g., G. M. A. Richter, *Handbook of Greek Art* (Phaldon, 1959), 110 [translator's note]. Polyclitus: a leading Greek sculptor of the second half of the 5th c. B.C.E. (a number of copies of his Dory-

phorus exist).

2. A reed instrument (often translated "pipe" or "flute").

3. Euripides, frag. 663 Nauck [translator's note].

4. Presumably in the work referred to in 39.1 [translator's note].

Effect of Period Structure

[40.1] I come now to a principle of particular importance for lending grandeur to our words. The beauty of the body depends on the way in which the limbs are joined together, each one when severed from the others having nothing remarkable about it, but the whole together forming a perfect unity. Similarly great thoughts which lack connection are themselves wasted and waste the total sublime effect, whereas if they co-operate to form a unity and are linked by the bonds of harmony, they come to life and speak just by virtue of the periodic structure.⁵ It is indeed generally true that, in periods, grandeur results from the total contribution of many elements.

[40.2] I have shown elsewhere that many poets and other writers who are not naturally sublime, and may indeed be quite unqualified for grandeur, and who use in general common and everyday words which carry with them no special effect, nevertheless acquire magnificence and splendour, and avoid being thought low or mean, solely by the way in which they arrange and fit together their words. Philistus, Aristophanes⁶ sometimes, Euripides generally, are among the many examples. [40.3] Thus Heracles says after the killing of the children:

I'm full of troubles, there's no room for more.⁷

This is a very ordinary remark, but it has become sublime, as the situation demands. If you re-arrange it, it will become apparent that it is in the composition, not in the sense, that Euripides' greatness appears.

[40.4] Dirce is being pulled about by the bull:

And where it could, it writhed and twisted round,
dragging at everything, rock, woman, oak,
juggling with them all.⁸

The conception is fine in itself, but it has been improved by the fact that the word-harmony is not hurried and does not run smoothly; the words are propped up by one another and rest on the intervals between them; set wide apart like that, they give the impression of solid strength.

* * *

Conclusion

[43.6] There is no urgent need to enumerate in detail features which produce a low effect. We have explained what makes style noble and sublime; the opposite qualities will obviously make it low and undignified.

* * *

1st century C.E.

5. A sentence (i.e., a "period") composed of intricately balanced main and dependent clauses, often artfully arranged to create a sense of anticipation.

6. Major Greek comic dramatist (ca. 450—ca. 385 B.C.E.). Philistus (ca. 430—356 B.C.E.), Greek historian of Sicily.

7. Euripides, *Hercules Furens* 1245 [translator's

note].

8. From Euripides' lost *Antiope* (frag. 221 Nauck) [translator's note]. The quote describes how the mythical Dirce died. She was tied to the tail of a bull by Antiope's sons, who were attempting to avenge the mistreatment Dirce inflicted on their mother.

QUINTILIAN

ca. 30/35—ca. 100

Coming at the height of the classical period, Quintilian's *Institutio Oratoria* (*Institutes of Rhetoric*) stands as one of the most important statements of Roman rhetorical theory and practice. Its influence extends from medieval and Renaissance philosophers and literary figures, such as AUGUSTINE, HUGH OF ST. VICTOR, and John of Salisbury, to eighteenth-century critics like ALEXANDER POPE, who praised "Quintilian's copious work," wherein was found "the justest rules, and clearest method joined." Even today, it would be difficult to follow discussions of rhetorical language in more recent formalist and poststructuralist theorists such as ROMAN JAKOBSON, CLEANTH BROOKS, JACQUES DERRIDA, and PAUL DE MAN without the kind of technical knowledge of how tropes work so lucidly explained in Quintilian's rhetoric.

Describing the education of the rhetorician from childhood to adulthood, the *Institutio Oratoria* combines detailed accounts of various rhetorical techniques, including the invention and arrangement of discourse, and descriptions of the various figures of speech and thought; it adds philosophic speculation on the proper uses of rhetoric. Because he is a practitioner and teacher of rhetoric, Quintilian does not equate the rhetorician's task with the philosopher's. However, he was an astute enough observer of his own time to fear the potential for corruption and manipulation in rhetoric. The skills he teaches in the *Institutio Oratoria* might easily be used by "harlots, flatterers, and seducers." But unlike the Greek rhetorician GORGAS, who noted that rhetoric might as easily be used to promote evil as virtue, Quintilian is not content to accept rhetoric's moral neutrality. He advocates the study of philosophy as a necessary component of a rhetorician's training to ensure that the good orator will also be a good person. Quintilian's teachings, then, contain an ethical imperative that he shares with PLATO, HORACE, LONGINUS, and Augustine. Its legacy, which has permeated the history of literary criticism, is the widely held idea that the study of literature is worthwhile because it can make us more virtuous and discriminating, while instilling in us proper moral values.

Marcus Fabius Quintilianus was born at Calagurris in Spain sometime between 30 and 35 C.E. His father, who may have been a Roman rhetorician, sent his son to Rome to study rhetoric. After finishing his education, Quintilian returned for a short while to his native Spain. However, by 68 he was back in the Roman capital teaching and practicing law. Quintilian became a famous teacher, the first rhetorician to found a public school and receive a state salary. Among his students was the celebrated Roman writer Pliny the Younger. When he retired from teaching in 88, he was appointed by the emperor Domitian as tutor to his two great-nephews and heirs. Quintilian's family life, however, seems to have been much less successful than his public one. The introduction to book 6 of the *Institutio Oratoria* contains a moving description of the death of his son, whom he intended as one of the beneficiaries of his pedagogical advice, as well as expressions of grief over the death of his wife at the age of nineteen and the loss of another son. The date of Quintilian's death is unknown, but it was very probably sometime around 100 C.E.

The *Institutio Oratoria*, the only extant text by Quintilian, was written during the last years of Domitian's reign (which ended with the emperor's murder in 96 C.E.) against a backdrop of political unrest; during this time, the emperor had turned to persecution to maintain his rule, executing people on the flimsiest of excuses and banishing all the philosophers from Rome for fear they would incite people to rebellion. Quintilian's continued favor with the emperor was, therefore, so remarkable that it has led some to question his integrity.

Institutio Oratoria, which might more accurately be translated *On the Teaching of*

Rhetoric, outlines (in twelve parts) a course of study enabling the "good man" (*vir bonus* in Latin—education among the Romans was reserved almost exclusively for elite men) to achieve success as an orator. Book 1 opens by describing how the very young should be educated in preparation for the study of rhetoric. Book 2 defines the nature and aims of rhetoric. Books 3 to 7 discuss such technical matters as invention, the different parts of a speech, and argumentative proofs. Books 8 to 10 deal with oratorical style, including various ornamental figures and tropes. Book 11 examines memorization and oral delivery, while the final section of book 12 portrays the perfect orator. Most of this material is not new; Quintilian's work distills the classical rhetorical tradition that precedes him, drawing heavily on Greek and Roman sources. ARISTOTLE'S *Rhetoric* (see above) is an important precursor, but perhaps the most significant influence is the great Roman rhetorician and statesman Cicero (106–43 B.C.E.). While Quintilian's work fell out of favor shortly after his death, by the Middle Ages it had become, along with the anonymous *Rhetorica ad Herennium* (86–82 B.C.E., *Rhetoric Addressed to C. Herennius*), mistakenly attributed to Cicero, an influential source of rhetorical and poetic theory.

The three excerpts below illustrate important features of the *Institutio Oratoria*. Books 8 and 9 define and illustrate the use of the various tropes and figures that constitute the principal sources of rhetorical ornamentation. Book 12 makes the argument for the inclusion of ethics as a part of rhetorical instruction. Although Quintilian is interested primarily in the application of ornaments to rhetoric, not poetry, he frequently uses the poetry of Homer, Virgil, Horace, and others as examples; as a result, throughout the Middle Ages and Renaissance, his analysis of various tropes and figures was construed as advice for poets as well as rhetoricians on how to increase vividness and feeling, variety and interest, conviction and belief (see, for instance, GEOFFREY OF VINSANF). Chapter 6 of book 8 describes the various tropes, which he defines as "the artistic alteration of a word or phrase from its proper meaning to another." He examines closely metaphor and synecdoche, mentioning simile, ellipsis, and metonymy and warning against their coarse or obscure use.

In book 9, Quintilian turns to a discussion of rhetorical figures, which he distinguishes from tropes. While a *trope* involves the substitution of one word for another, a *figure* does not necessarily entail any change either to the order or meaning of words; instead it is "a form of expression to which a new aspect is given by art." He further distinguishes between figures of speech and figures of thought, suggesting that for him and his contemporaries, thought and the language it is clothed in remain two separate and distinct entities, with language strictly subordinated to thought. A good example of his discussion of figures of thought is his cogent analysis of irony in sections 44 to 49 of book 9, chapter 2. This analysis, however, also reveals the cracks and instabilities in Quintilian's neat divisions between speech and thought: he ends up admitting that a single irony might be classified as trope, figure of speech, and figure of thought. Considerable confusion still surrounds these terms today, and often they are used interchangeably.

Unlike Augustine, Quintilian is not interested in exploring a linguistic theory of signs that might explain figurative language; his concern is the practical uses of rhetoric in oratory and poetry. He does, however, recognize that tropes such as metaphor are not merely optional ornaments of style; some are necessary to convey meaning. He also acknowledges, as many of our own contemporary critics do, that metaphoric language may be very much part of the mental processes by which we find meaning in our world. But unlike those contemporary theorists, Quintilian does not see figurative language as a threat to the stability of linguistic reference. For him, words have their primary "proper" (referential) uses; figurative uses are always secondary. For theorists like Paul de Man, however, processes such as metaphor and metonymy reveal a fundamental instability of linguistic reference and a slippage in signification.

Our final selection, from book 12, examines the moral education of the rhetori-

cian. Quintilian takes exception to the view that virtue is acquired naturally; not only can it be taught, it must be taught. Here Quintilian distinguishes between the role of the philosopher and that of the orator in the state. Philosophers do not argue cases in the law courts or the Senate. Plato's imaginary Republic to the contrary, they do not govern. But though the two occupations are distinct, he urges the orator to learn what the philosopher has to teach. Orators must not only delight; they must also instruct their audiences. Quintilian quickly surveys the three main fields of philosophy—dialectics (or logic), ethics, and physics (which includes religion)—and maintains that all are relevant to the training of an orator. He seems to us today a philosophical pluralist when he advises his reader to swear allegiance to no particular brand of philosophy, but to pick and choose freely from those precepts that will perfect him both in "the glory of a virtuous life" and in eloquence.

Quintilian's injunctions remind us of the importance of rhetoric in Roman education (it was almost the entire curriculum for higher education), an education with a very practical end—the training of lawyers and statesmen capable of pleading cases in public. While a Roman citizen would not necessarily read Quintilian the better to appreciate beautiful poetry, subsequent critics in the Middle Ages, Renaissance, and beyond assimilated to their poetics both Quintilian's analysis of rhetorical technique and his ethical imperative that the rhetorician represent, as MATTHEW ARNOLD might have put it, "the best that has been thought and said."

BIBLIOGRAPHY

The standard Latin text for the *Institutio Oratoria*, the only existing text by Quintilian, is Michael Winterbottom's two-volume 1970 edition; the four-volume edition by H. E. Butler (1920–22) includes a facing English translation. A biographical sketch of Quintilian can be found in George A. Kennedy, *Quintilian* (1969), which also provides a useful introduction to the *Institutio Oratoria*. Charles Baldwin Sears's *Ancient Rhetoric and Poetic Interpreted from Representative Works* (1924) offers a helpful introduction to the relationships in classical literature between rhetoric and poetics and is still frequently cited in studies on Quintilian. Winterbottom's *Problems in Quintilian* (1970) presents a more advanced analysis of the *Institutio Oratoria*. Kennedy's *New History of Classical Rhetoric* (1974) and M. L. Clarke's *Rhetoric at Rome: A Historical Survey* (1996) both examine Quintilian's contributions to the history of rhetoric in ancient Rome. Roy Harris, in *Landmarks in Linguistic Thought: The Western Tradition from Socrates to Saussure* (1997), places Quintilian in the context of Western linguistic theory.

For a bibliography, see James J. Murphy's *Quintilian on the Teaching of Speaking and Writing* (1987). Lewis A. Sussman's *Major Declamations Ascribed to Quintilian* (1987) contains the most current and complete bibliography.

From Book 8

FROM CHAPTER 5

* * *

[35] I will now proceed to the next subject for discussion, which is, as I have said, that of *tropes*, or *modes*, as the most distinguished Roman rhetoricians call them. Rules for their use are given by the teachers of literature as well.

1. Translated by H. E. Butler.

But I postponed the discussion of the subject when I was dealing with literary education, because it seemed to me that the theme would have greater importance if handled in connexion with the ornaments of oratory, and that it ought to be reserved for treatment on a larger scale.

FROM CHAPTER 6

By a *trope* is meant the artistic alteration of a word or phrase from its proper meaning to another. This is a subject which has given rise to interminable disputes among the teachers of literature, who have quarrelled no less violently with the philosophers than among themselves over the problem of the *genera* and *species* into which *tropes* may be divided, their number and their correct classification. [2] I propose to disregard such quibbles as in no wise concerning the training of an orator, and to proceed to discuss those *tropes* which are most necessary and meet with most general acceptance, contenting myself merely with noting the fact that some *tropes* are employed to help out our meaning and others to adorn our style, that some arise from words used *properly* and others from words used *metaphorically*, and that the changes involved concern not merely individual words, but also our thoughts and the structure of our sentences. [3] In view of these facts I regard those writers as mistaken who have held that *tropes* necessarily involved the substitution of word for word. And I do not ignore the fact that as a rule the *tropes* employed to express our meaning involve ornament as well, though the converse is not the case, since there are some which are intended solely for the purpose of embellishment.

[4] Let us begin, then, with the commonest and by far the most beautiful of *tropes*, namely, *metaphor*, the Greek term for our *translatio*.² It is not merely so natural a turn of speech that it is often employed unconsciously or by uneducated persons, but it is in itself so attractive and elegant that however distinguished the language in which it is embedded it shines forth with a light that is all its own. [5] For if it be correctly and appropriately applied, it is quite impossible for its effect to be commonplace, mean or unpleasing. It adds to the copiousness of language by the interchange of words and by borrowing, and finally succeeds in accomplishing the supremely difficult task of providing a name for everything. A noun or a verb is transferred from the place to which it properly belongs to another where there is either no *literal* term or the *transferred* is better than the *literal*. [6] We do this either because it is necessary or to make our meaning clearer or, as I have already said, to produce a decorative effect. When it secures none of these results, our metaphor will be out of place. As an example of a necessary metaphor I may quote the following usages in vogue with peasants when they call a vinebud *gemma*, a gem (what other term is there which they could use?), or speak of the *crops being thirsty* or the *fruit suffering*. For the same reason we speak of a *hard or rough man*, there being no *literal* term for these temperaments. [7] On the other hand, when we say that a man is *kindled to anger* or *on fire with greed* or that he has *fallen into error*, we do so to enhance our meaning. For none of these things can be more literally described in its own words than in those which we import from elsewhere.

2. Transferred or figurative use of a word (Latin).

But it is a purely ornamental metaphor when we speak of *brilliance of style, splendour of birth, tempestuous public assemblies, thunderbolts of eloquence*, to which I may add the phrase employed by Cicero in his defence of Milo where he speaks of Clodius³ as the *fountain*, and in another place as *the fertile field and material of his client's glory*. [8] It is even possible to express facts of a somewhat unseemly character by a judicious use of metaphor, as in the following passage.⁴

"This do they lest too much indulgence make
The field of generation slothful grow
And choke its idle furrows."

On the whole *metaphor* is a shorter form of *simile*, while there is this further difference, that in the latter we compare some object to the thing which we wish to describe, whereas in the former this object is actually substituted for the thing. [9] It is a comparison when I say that a man did something *like a lion*, it is a metaphor when I say of him, *He is a lion*. Metaphors fall into four classes. In the first we substitute one living thing for another, as in the passage where the poet, speaking of a charioteer says,⁵

"The steersman then
With mighty effort wrenched his charger round."

or when Livy says that Scipio was continually *barked at* by Cato.⁶ [10] Secondly, inanimate things may be substituted for inanimate, as in the Virgilian.

"And gave his fleet the rein,"

or inanimate may be substituted for animate, as in

"Did the Argive bulwark fall by sword or fate?"⁸

or animate for inanimate, as in the following lines:

"The shepherd sits unknowing on the height
Listening the roar from some far mountain brow."

[11] But, above all, effects of extraordinary sublimity are produced when the theme is exalted by a bold and almost hazardous metaphor and inanimate objects are given life and action, as in the phrase

"Araxes' flood that scorns a bridge,"

[12] or in the passage of Cicero, already quoted, where he cries, "What was that sword of yours doing, Tubero, the sword you drew on the field of Pharsalus? Against whose body did you aim its point? What meant those arms you bore?" Sometimes the effect is doubled, as in Virgil's.

"And with venom arm the steel."²

3. Roman politician (b. 92 B.C.E.) who played a part in the exile of Cicero in 58 B.C.E. Cicero (106–43 B.C.E.), Roman statesman, orator, and author. Milo: Roman politician (d. 48 B.C.E.), who murdered Clodius in 52 B.C.E.; he was unsuccessfully defended by Cicero.

4. Virgil [70–19 B.C.E.], *Georgics* 3.135 [translator's note].

5. Probably from Ennius [translator's note]. Ennius (239–149 B.C.E.), Roman epic poet.

6. Roman statesman and stern moralist (234–149 B.C.E.). Livy (59 B.C.E.–17 C.E.), Roman historian.

Scipio (185–129 B.C.E.), Roman general.

7. Virgil, *Aeneid* 6.1.

8. From an unknown tragedian [translator's note].

9. This and the previous passage are from Virgil's *Aeneid* (2.307, 8.728).

1. City in Thessaly, situated on the main road to central Greece; the site of Caesar's defeat in 48 B.C.E. of his former ally Pompey. Tubero (1st c. B.C.E.), jurist and annalist, who fought on the side of Pompey but was later reconciled to Caesar.

2. Virgil, *Aeneid* 9.773.

For both "to arm the steel" and "to arm with venom" are metaphors. [13] These four kinds of metaphor are further subdivided into a number of *species*, such as transference from rational beings to rational and from irrational to irrational and the reverse, in which the method is the same, and finally from the whole to its parts and from the parts to the whole. But I am not now teaching boys: my readers are old enough to discover the *species* for themselves when once they have been given the *genus*.

[14] While a temperate and timely use of metaphor is a real adornment to style, on the other hand, its frequent use serves merely to obscure our language and weary our audience, while if we introduce them in one continuous series, our language will become allegorical and enigmatic. There are also certain metaphors which fail from meanness, such as that of which I spoke above:³

"There is a rocky wart upon the mountain's brow."

or they may even be coarse. [15] For it does not follow that because Cicero was perfectly justified in talking of "the sink of the state," when he desired to indicate the foulness of certain men, we can approve the following passage from an ancient orator: "You have lanced the boils of the state." Indeed Cicero himself has demonstrated in the most admirable manner how important it is to avoid grossness in metaphor, such as is revealed by the following examples, which he quotes:—"The state was gelded by the death of Africanus," or "Glaucia,⁴ the excrement of the senate-house." [16] He also points out that a metaphor must not be too great for its subject or, as is more frequently the case, too little, and that it must not be inappropriate. Anyone who realises that these are faults, will be able to detect instances of them only too frequently. But excess in the use of metaphor is also a fault, more especially if they are of the same species. [17] Metaphors may also be harsh, that is, far-fetched, as in phrases like "the snows of the head" or

"Jove with white snow the wintry Alps bespewed."⁵

The worst errors of all, however, originate in the fact that some authors regard it as permissible to use even in prose any metaphors that are allowed to poets, in spite of the fact that the latter aim solely at pleasing their readers and are compelled in many cases to employ metaphor by sheer metrical necessity. [18] For my own part I should not regard a phrase like "the shepherd of the people" as admissible in pleading, although it has the authority of Homer, nor would I venture to say that winged creatures "swim through the air," despite the fact that this metaphor has been most effectively employed by Virgil to describe the flight of bees and of Daedalus.⁶ For metaphor should always either occupy a place already vacant, or if it fills the room of something else, should be more impressive than that which it displaces.

[19] What I have said above applies perhaps with even greater force to *synecdochē*. For while *metaphor* is designed to move the feelings, give special distinction to things and place them vividly before the eye, *synecdochē* has

3. Discussed earlier in this book (8.3.48).

4. A witty popular orator who died sometime after 99 B.C.E.; in 102 he was nearly expelled from the Senate by political enemies. Africanus: Scipio Africanus (236-184 B.C.E.), the Roman general who defeated the Carthaginian army during the Second Punic War.

5. From Furtus, an old epic poet of the second century [translator's note].

6. In Greek mythology, an Athenian artist celebrated for his mechanical skill, who was said to have escaped Crete by fashioning wings of wax and feathers and flying to Sicily.

the power to give variety to our language by making us realise many things from one, the whole from a part, the *genus* from a *species*, things which follow from things which have preceded; or, on the other hand, the whole procedure may be reversed. It may, however, be more freely employed by poets than by orators. [20] For while in prose it is perfectly correct to use *muco*, the point, for the whole sword, and *tectum*, roof, for a whole house, we may not employ *puppis*, stern, to describe a ship, nor *abiés*, fir, to describe planks; and again, though *ferrum*, the steel, may be used to indicate a sword, *quadrupes* cannot be used in the sense of horse. It is where numbers are concerned that *synecdochē* can be most freely employed in prose. For example, Livy frequently says, "The Roman won the day," when he means that the Romans were victorious; on the other hand, Cicero in a letter to Brutus⁷ says, "We have imposed on the people and are regarded as orators," when he is speaking of himself alone. [21] This form of *trope* is not only a rhetorical ornament, but is frequently employed in everyday speech. Some also apply the term *synecdochē* when something is assumed which has not actually been expressed, since one word is then discovered from other words, as in the sentence,

"The Arcadians to the gates began to rush,"⁸

when such omission creates a blemish, it is called an *ellipsis*. [22] For my own part, I prefer to regard this as a figure, and shall therefore discuss it under that head. Again, one thing may be suggested by another, as in the line,

"Behold, the steers
Bring back the plough suspended from the yoke,"⁹

from which we infer the approach of night. I am not sure whether this is permissible to an orator except in arguments, when it serves as an indication of some fact. However, this has nothing to do with the question of style.

[23] It is but a short step from *synecdochē* to *metonymy*, which consists in the substitution of one name for another, and, as Cicero tells us, is called *hypallage* by the rhetoricians. These devices are employed to indicate an invention by substituting the name of the inventor, or a possession by substituting the name of the possessor. Virgil, for example, writes:

"Ceres by water spoiled,"

and Horace:

"Neptune admitted to the land
Protects the fleets from blasts of Aquilo."¹⁰

If, however, the process is reversed, the effect is harsh. [24] But it is important to enquire to what extent *tropes* of this kind should be employed by the orator. For though we often hear "Vulcan" used for fire and to say *vario Marte pugnatum est* for "they fought with varying success" is elegant and idiomatic, while *Venus*² is a more decent expression than *coitus*, it would be too bold for the severe style demanded in the courts to speak of *Liber* and *Ceres*³

7. Marcus Brutus (ca. 85–42 B.C.E.), Roman statesman and orator.

8. Virgil, *Aeneid* 11.142; the word "began" is omitted.

9. Virgil, *Eclogue* 2.66.

10. Virgil, *Aeneid* 1.177; HORACE (65–8 B.C.E.),

Ars Poetica 63.

2. The Roman goddess of love. Vulcan: Roman god of fire and metalworking. Mars: Roman god of war.

3. Roman corn goddess. Liber: Roman god of fertility and especially of wine.

when we mean bread and wine. Again, while usage permits us to substitute that which contains for that which is contained, as in phrases such as "civilised cities," or "a cup was drunk to the lees," or "a happy age," [25] the converse procedure would rarely be ventured on by any save a poet: take, for example, the phrase:

"Ucalegon burns next."⁴

It is, however, perhaps more permissible to describe what is possessed by reference to its possessor, as, for example, to say of a man whose estate is being squandered, "the man is being eaten up." Of this form there are innumerable species. [26] For example, we say "sixty thousand men were slain by Hannibal at Cannae,"⁵ and speak of "Virgil" when we mean "Virgil's poems"; again, we say that supplies have "come," when they have been "brought," that a "sacrilege," and not a "sacrilegious man" has been detected, and that a man possesses a knowledge of "arms," not of "the art of arms." [27] The type which indicates cause by effect is common both in poets and orators. As examples from poetry I may quote:

"Pale death with equal foot knocks at the poor man's door"

and

"There pale diseases dwell and sad old age,"⁶

while the orator will speak of "headlong anger," "cheerful youth" or "slothful ease."

[28] The following type of *trope* has also some kinship with *synecdochē*. For when I speak of a man's "looks" instead of his "look," I use the plural for the singular, but my aim is not to enable one thing to be inferred from many (for the sense is clear enough), but I merely vary the form of the word. Again, when I call a "gilded roof," a "golden roof," I diverge a little from the truth, because gilding forms only a part of the roof. But to follow out these points is a task involving too much minute detail even for a work whose aim is not the training of an orator.

* * *

From Book 9

FROM CHAPTER 1

In my last book I spoke of *tropes*. I now come to *figures*, called *σχήματα* in Greek, a topic which is naturally and closely connected with the preceding. [2] For many authors have considered *figures* identical with *tropes*, because whether it be that the latter derive their name from having a certain form or from the fact that they effect alterations in language (a view which has also led to their being styled *motions*), it must be admitted that both these features are found in *figures* as well. Their employment is also the same. For they add force and charm to our matter. There are some again who call *tropes figures*, Artorius Proculus⁷ among them. [3] Further the resemblance between the two is so close that it is not easy to distinguish between them. For although

4. Virgil, *Aeneid* 2.311. Ucalegon was a Trojan hero who also appears in book 3 of Homer's *Iliad*.
5. Village in Apulia, the site of a famous victory against Rome in 216 B.C.E. by Hannibal (247-182

B.C.E.), a great Carthaginian general.
6. The first passage is quoted from Horace, *Odes* 1.4.13, the second from Virgil, *Aeneid* 6.275.
7. Prominent Roman jurist (early 1st c. C.E.).

certain kinds differ, while retaining, a general resemblance (since both involve a departure from the simple and straightforward method of expression coupled with a certain rhetorical excellence), on the other hand some are distinguished by the narrowest possible dividing line: for example, while *irony* belongs to *figures of thought* just as much as to *tropes*, *periphrasis*, *hyperbaton* and *onomatopoea*⁸ have been ranked by distinguished authors as *figures of speech* rather than *tropes*.

[4] It is therefore all the more necessary to point out the distinction between the two. The name of *trope* is applied to the transference of expressions from their natural and principal signification to another, with a view to the embellishment of style or, as the majority of grammarians define it, the transference of words and phrases from the place which is strictly theirs to another to which they do not properly belong. A *figure*, on the other hand, as is clear from the name itself, is the term employed when we give our language a conformation other than the obvious and ordinary. [5] Therefore the substitution of one word for another is placed among *tropes*, as for example in the case of *metaphor*, *metonymy*, *antonomasia*, *metalepsis*, *synecdochē*, *catachresis*, *allegory* and, as a rule, *hyperbole*,⁹ which may, of course, be concerned either with words or things. *Onomatopoea* is the creation of a word and therefore involves substitution for the words which we should use but for such creation. [6] Again although *periphrasis* often includes the actual word whose place it supplies, it still uses a number of words in place of one. The *epithet* as a rule involves an element of *antonomasia* and consequently becomes a *trope* on account of this affinity. *Hyperbaton* is a change of order and for this reason many exclude it from *tropes*. None the less it transfers a word or part of a word from its own place to another. [7] None of these can be called *figures*. For a *figure* does not necessarily involve any alteration either of the order or the strict sense of words. As regards *irony*, I shall show elsewhere how in some of its forms it is a *trope*, in others a *figure*. For I admit that the name is common to both and am aware of the complicated and minute discussions to which it has given rise. They, however, have no bearing on my present task. For it makes no difference by which name either is called, so long as its stylistic value is apparent, since the meaning of things is not altered by a change of name. [8] For just as men remain the same, even though they adopt a new name, so these artifices will produce exactly the same effect, whether they are styled *tropes* or *figures*, since their values lie not in their names, but in their effect. * * * [9] It is best therefore in dealing with these topics to adopt the generally accepted terms and to understand the actual thing, by whatever name it is called. But we must note the fact that *trope* and *figure* are often combined in the expression of the same thought, since figures are introduced just as much by the metaphorical as by the literal use of words.

[10] There is, however, a considerable difference of opinion among authors as to the meaning of the name,¹ the number of *genera* and the nature

8. Use or invention of words that sound like their meaning (e.g., *buzz*). "Periphrasis": circumlocution. "Hyperbaton": separation of words usually belonging together or, more generally, any departure from ordinary word order.

9. Exaggerated or extravagant terms used for emphasis. "Antonomasia": descriptive phrase for proper name or a proper name for a quality asso-

ciated with it (e.g., "the Bard" to refer to Shakespeare). "Metalepsis": attribution of a present effect to a remote cause. "Catachresis": an implied metaphor, using words wrenched from common usage. "Allegory": according to Quintilian, allegory "presents one thing in words and another in meaning" (8.6.44).

1. Figure.

and number of the *species* into which figures may be divided. The first point for consideration is, therefore, what is meant by a *figure*. For the term is used in two senses. In the first it is applied to any form in which thought is expressed, just as it is to bodies which, whatever their composition, must have some shape. [11] In the second and special sense, in which it is called a *schema*, it means a rational change in meaning or language from the ordinary and simple form, that is to say, a change analogous to that involved by sitting, lying down on something or looking back. Consequently when a student tends to continuous or at any rate excessive use of the same cases, tenses, rhythms or even feet, we are in the habit of instructing him to vary his *figures* with a view to the avoidance of monotony. [12] In so doing we speak as if every kind of language possessed a *figure*: for example *cursitare* and *lectitare*² are said to have the same figure, that is to say, they are identical in formation. Therefore in the first and common sense of the word everything is expressed by *figures*. If we are content with this view, there is good reason for the opinion expressed by Apollodorus (if we may trust the statement of Caecilius³ on this point) to the effect that he found the rules laid down in this connexion quite incomprehensible. [13] If, on the other hand, the name is to be applied to certain attitudes, or I might say gestures of language, we must interpret *schema* in the sense of that which is poetically or rhetorically altered from the simple and obvious method of expression. It will then be true to distinguish between the style which is devoid of figures (or ἀσχημάτιστος) and that which is devoid of figures (or ἔσχηματισμένη). [14] But Zoilus⁴ narrowed down the definition, since he restricted the term *schema* to cases when the speaker pretends to say something other than that which he actually does say. I know that this view meets with common acceptance: it is, in fact, for this reason that we speak of *figured* controversial themes, of which I shall shortly speak. We shall then take a *figure* to mean a form of expression to which a new aspect is given by art.

[15] Some writers have held that there is only one kind of *figure*, although they differ as regards the reasons which lead them to adopt this view. For some of them, on the ground that a change of words causes a corresponding change in the sense, assert that all *figures* are concerned with words, while others hold that *figures* are concerned solely with the sense, on the ground that words are adapted to things. Both these views are obviously quibbling. [16] For the same things are often put in different ways and the sense remains unaltered though the words are changed, while a *figure of thought* may include several *figures of speech*. For the former lies in the conception, the latter in the expression of our thought. The two are frequently combined, however, as in the following passage: "Now, Dolabella,⁵ [I have no pity] either for you or for your children": for the device by which he turns from the judges to Dolabella is a *figure of thought*, while *iam iam* ("now") and *liberum* ("your children") are *figures of speech*.

[17] It is, however, to the best of my knowledge, generally agreed by the

2. Frequentative forms of the Latin verbs *curro* (run) and *lego* (read) [translator's note].

3. Teacher and writer of the Augustan era (active ca. 20 B.C.E.), the first to give public lectures on Virgil and other contemporary poets. Apollodorus (ca. 104–22 B.C.E.), influential rhetorician, best known for his oral teaching, whose theories are dis-

cussed elsewhere by Quintilian.

4. Cynic rhetor and philosopher (4th c. B.C.E.).

5. Roman commander (80–43 B.C.E.) who was declared a public enemy by the Senate and who committed suicide. He was the son-in-law of Cicero, who is being quoted; his two sons by Cicero's daughter, Tullia, probably died in infancy.

majority of authors that there are two classes of *figure*, namely *figures of thought*, that is of the mind, feeling or conceptions, since all these terms are used, and *figures of speech*, that is of words, diction, expression, language or style: the name by which they are known varies, but mere terminology is a matter of indifference. * * * We may therefore conclude that, like language itself, figures are necessarily concerned with thought and with words.

[19] As, however, in the natural course of things we conceive ideas before we express them, I must take *figures of thought* first. Their utility is at once great and manifold, and is revealed with the utmost clearness in every product of oratory. For although it may seem that proof is infinitesimally affected by the *figures* employed, none the less those same *figures* lend credibility to our arguments and steal their way secretly into the minds of the judges. [20] For just as in sword-play it is easy to see, parry, and ward off direct blows and simple and straightforward thrusts, while side-strokes and feints are less easy to observe and the task of the skilful swordsman is to give the impression that his design is quite other than it actually is, even so the oratory in which there is no guile fights by sheer weight and impetus alone; on the other hand, the fighter who feints and varies his assault is able to attack flank or back as he will, to lure his opponent's weapons from their guard and to outwit him by a slight inclination of the body. [21] Further, there is no more effective method of exciting the emotions than an apt use of figures. For if the expression of brow, eyes and hands has a powerful effect in stirring the passions, how much more effective must be the aspect of our style itself when composed to produce the result at which we aim? But, above all, *figures* serve to commend what we say to those that hear us, whether we seek to win approval for our character as pleaders; or to win favour for the cause which we plead, to relieve monotony by variation of our language, or to indicate our meaning in the safest or most seemly way.

[22] But before I proceed to demonstrate what *figures* best suit the different circumstances, I must point out that their number is far from being as great as some authorities make out. For I am not in the least disturbed by the various names which the Greeks more especially are so fond of inventing. [23] First of all, then, I must repudiate the views of those who hold that there are as many types of *figure* as there are kinds of emotion, on the ground, not that emotions are not qualities of the mind, but that a figure, in its strict, not its general sense, is not simply the expression of anything you choose to select. Consequently the expression in words of anger, grief, pity, fear, confidence or contempt is not a *figure*, any more than persuasion, threats, entreaty or excuse. [24] But superficial observers are deceived by the fact that they find *figures* in all passages dealing with such themes, and select examples of them from speeches; whereas in reality there is no department of oratory which does not admit such *figures*. But it is one thing to admit a *figure* and another to be a *figure*; I am not going to be frightened out of repeating the term with some frequency in my attempt to make the facts clear. [25] My opponents will, I know, direct my attention to special figures employed in expressing anger, in entreating for mercy, or appealing to pity, but it does not follow that expressions of anger, appeals to pity or entreaties for mercy are in themselves *figures*. Cicero, it is true, includes all ornaments of oratory under this head, and in so doing adopts, as it seems to me, a middle course. For he does not hold that all forms of expression are to be regarded

as *figures*, nor, on the other hand, would he restrict the term merely to those expressions whose form varies from ordinary use. But he regards as figurative all those expressions which are especially striking and most effective in stirring the emotions of the audience. He sets forth this view in two of his works.⁶

* * *

FROM CHAPTER 2

* * *

I have found some who speak of *irony* as *dissimulation*, but, in view of the fact that this latter name does not cover the whole range of this figure, I shall follow my general rule and rest content with the Greek term. *Irony* involving a *figure* does not differ from the *irony* which is a *trope*, as far as its *genus* is concerned, since in both cases we understand something which is the opposite of what is actually said; on the other hand, a careful consideration of the *species of irony* will soon reveal the fact that they differ. [45] In the first place, the *trope* is franker in its meaning, and, despite the fact that it implies something other than it says, makes no pretence about it. For the context as a rule is perfectly clear, as, for example, in the following passage from the Catilinarian orations. "Rejected by him, you migrated to your boon-companion, that excellent gentleman Metellus."⁷ In this case the irony lies in two words, and is therefore a specially concise form of *trope*. [46] But in the *figurative* form of irony the speaker disguises his entire meaning, the disguise being apparent rather than confessed. For in the *trope* the conflict is purely verbal, while in the *figure* the meaning, and sometimes the whole aspect of our case, conflicts with the language and the tone of voice adopted; nay, a man's whole life may be coloured with *irony*, as was the case with Socrates,⁸ who was called an *ironist* because he assumed the role of an ignorant man lost in wonder at the wisdom of others. Thus, as continued *metaphor* develops into *allegory*, so a sustained series of *tropes* develops into this *figure*. [47] There are, however, certain kinds of this *figure* which have no connexion with *tropes*. In the first place, there is the *figure* which derives its name from negation and is called by some ἀντίφρασις.⁹ Here is an example: "I will not plead against you according to the rigour of the law, I will not press the point which I should perhaps be able to make good" or again, "Why should I mention his decrees, his acts of plunder, his acquisition, whether by cession or by force, of certain inheritances?" or "I say nothing of the first wrong inflicted by his lust" or "I do not even propose to produce the evidence given concerning the 600,000 sesterces"; or "I might say, etc."¹ [48] Such kinds of irony may even be sustained at times through whole sections of our argument, as, for instance, where Cicero says, "If I were to plead on this point as though there were some real charge to refute, I should speak at greater length." It is also *irony* when we assume the tone of command or concession, as in Virgil's

6. Cicero's *Orator* (46 B.C.E.) and *De Oratore* (55 B.C.E.).

7. Roman consul (d. ca. 59 B.C.E.) who, at the request of Cicero, was put in charge of quashing the conspiracy of the Roman patrician Cataline, which ended in Cataline's death in 62 B.C.E. Cicero published his speeches against Cataline, delivered in 63 when he was consul, in 60.

8. Greek philosopher (ca. 470–399 B.C.E.) whose teachings have survived primarily through the works of his followers, most notably the dialogues of PLATO.

9. *Antiphrasis* (Greek): irony of using words to mean the opposite of their literal sense.

1. The examples are all from Cicero. "Sesterces": Roman coins (worth several dollars each).

"Go!
Follow the winds to Italy;"²

[49] or when we concede to our opponents qualities which we are unwilling that they should seem to possess. This is specially effective when we possess these qualities and they do not, as in the following passage,

"Brand *me* as coward, Drances, since thy sword
Has slain such hosts of Trojans."³

A like result is produced by reversing this method when we pretend to own to faults which are not ours or which even recoil upon the heads of our opponents, as for example,

" 'Twas I that led the Dardan gallant on
To storm the bridal bed of Sparta's queen!"⁴

From *Book 12*

FROM CHAPTER 2

Since then the orator is a good man, and such goodness cannot be conceived as existing apart from virtue, virtue, despite the fact that it is in part derived from certain natural impulses, will require to be perfected by instruction. The orator must above all things devote his attention to the formation of moral character and must acquire a complete knowledge of all that is just and honourable. For without this knowledge no one can be either a good man or skilled in speaking, [2] unless indeed we agree with those who regard morality as intuitive and as owing nothing to instruction: indeed they go so far as to acknowledge that handicrafts, not excluding even those which are most despised among them, can only be acquired by the result of teaching, whereas virtue, which of all gifts to man is that which makes him most near akin to the immortal gods, comes to him without search or effort, as a natural concomitant of birth. But can the man who does not know what abstinence is, claim to be truly abstinent? [3] or brave, if he has never purged his soul of the fears of pain, death and superstition? or just, if he has never, in language approaching that of philosophy, discussed the nature of virtue and justice, or of the laws that have been given to mankind by nature or established among individual peoples and nations? What a contempt it argues for such themes to regard them as being so easy of comprehension! [4] However, I pass this by; for I am sure that no one with the least smattering of literary culture will have the slightest hesitation in agreeing with me. I will proceed to my next point, that no one will achieve sufficient skill even in speaking, unless he makes a thorough study of all the workings of nature and forms his character on the precepts of philosophy and the dictates of reason. [5] For it is with good cause that Lucius Crassus,⁵ in the third book of the *de Oratore*, affirms that all that is said concerning equity, justice, truth and the

2. Virgil, *Aeneid* 4.381; Dido is speaking to Aeneas. She continues by praying for his destruction [translator's note]

3. Virgil, *Aeneid* 11.383. Turnus addresses Drances, who has been attacking him as the cause of the war and bidding him fight himself, if he would win Lavinia for his bride [translator's note].

4. Virgil, *Aeneid* 10.92. Juno ironically pretends to have brought about the rape of Helen [the precipitating event of Trojan War], which was in reality the work of Venus [translator's note].

5. Outstanding Roman orator (140–91 B.C.E.), main speaker of Cicero's *De Oratore*.

good, and their opposites, forms part of the studies of an orator, and that the philosophers, when they exert their powers of speaking to defend these virtues, are using the weapons of rhetoric, not their own. But he also confesses that the knowledge of these subjects must be sought from the philosophers for the reason that, in his opinion, philosophy has more effective possession of them. [6] And it is for the same reason that Cicero in several of his books and letters proclaims that eloquence has its fountain-head in the most secret springs of wisdom, and that consequently for a considerable time the instructors of morals and of eloquence were identical. Accordingly this exhortation of mine must not be taken to mean that I wish the orator to be a philosopher, since there is no other way of life that is further removed from the duties of a statesman and the tasks of an orator. [7] For what philosopher has ever been a frequent speaker in the courts or won renown in public assemblies? Nay, what philosopher has ever taken a prominent part in the government of the state, which forms the most frequent theme of their instructions? None the less I desire that he, whose character I am seeking to mould, should be a "wise man" in the Roman sense, that is, one who reveals himself as a true statesman, not in the discussions of the study, but in the actual practice and experience of life. [8] But inasmuch as the study of philosophy has been deserted by those who have turned to the pursuit of eloquence, and since philosophy no longer moves in its true sphere of action and in the broad daylight of the forum, but has retired first to porches and gymnasia and finally to the gatherings of the schools, all that is essential for an orator, and yet is not taught by the professors of eloquence, must undoubtedly be sought from those persons in whose possession it has remained. The authors who have discoursed on the nature of virtue must be read through and through, that the life of the orator may be wedded to the knowledge of things human and divine. [9] But how much greater and fairer would such subjects appear if those who taught them were also those who could give them most eloquent expression! O that the day may dawn when the perfect orator of our heart's desire shall claim for his own possession that science that has lost the affection of mankind through the arrogance of its claims and the vices of some that have brought disgrace upon its virtues, and shall restore it to its place in the domain of eloquence, as though he had been victorious in a trial for the restoration of stolen goods! [10] And since philosophy falls into three divisions, physics, ethics and dialectic,⁶ which, I ask you, of these departments is not closely connected with the task of the orator?

Let us reverse the order just given and deal first with the third department which is entirely concerned with words. If it be true that to know the properties of each word, to clear away ambiguities, to unravel perplexities, to distinguish between truth and falsehood, to prove or to refute as may be desired, all form part of the functions of an orator, who is there that can doubt the truth of my contention? [11] I grant that we shall not have to employ dialectic with such minute attention to detail when we are pleading in the courts as when we are engaged in philosophical debate, since the orator's duty is not merely to instruct, but also to move and delight his audience; and to succeed in doing this he needs a strength, impetuosity and grace

6. Logic.

as well. For oratory is like a river: the current is stronger when it flows within deep banks and with a mighty flood, than when the waters are shallow and broken by the pebbles that bar their way. [12] And just as the trainers of the wrestling school do not impart the various *throws* to their pupils that those who have learnt them may make use of all of them in actual wrestling matches (for weight and strength and wind count for more than these), but that they may have a store from which to draw one or two of such tricks, as occasion may offer; [13] even so the science of dialectic, or if you prefer it of disputation, while it is often useful in definition, inference, differentiation, resolution of ambiguity, distinction and classification, as also in luring on or entangling our opponents, yet if it claim to assume the entire direction of the struggles of the forum, will merely stand in the way of arts superior to itself and by its very subtlety will exhaust the strength that has been pared down to suit its limitations. [14] As a result you will find that certain persons who show astonishing skill in philosophical debate, as soon as they quit the sphere of their quibbles, are as helpless in any case that demands more serious pleading as those small animals which, though nimble enough in a confined space, are easily captured in an open field.

[15] Proceeding to moral philosophy or ethics, we may note that it at any rate is entirely suited to the orator. For vast as is the variety of cases (since in them, as I have pointed out in previous books, we seek to discover certain points by conjecture, reach our conclusions in others by means of definition, dispose of others on legal grounds or by raising the question of competence, while other points are established by syllogism⁷ and others involve contradictions or are diversely interpreted owing to some ambiguity of language), there is scarcely a single one which does not at some point or another involve the discussion of equity and virtue, while there are also, as everyone knows, not a few which turn entirely on questions of quality. [16] Again in deliberative assemblies how can we advise a policy without raising the question of what is honourable? Nay, even the third department of oratory, which is concerned with the tasks of praise and denunciation, must without a doubt deal with questions of right and wrong. [17] For the orator will assuredly have much to say on such topics as justice, fortitude, abstinence, self-control and piety. But the good man, who has come to the knowledge of these things not by mere hearsay, as though they were just words and names for his tongue to employ, but has grasped the meaning of virtue and acquired a true feeling for it, will never be perplexed when he has to think out a problem, but will speak out truly what he knows. [18] Since, however, *general* questions are always more important than special (for the particular is contained in the universal, while the universal is never to be regarded as something superimposed on the particular), everyone will readily admit that the studies of which we are speaking are pre-eminently concerned with general questions. [19] Further, since there are numerous points which require to be determined by appropriate and concise definitions (hence the *definitive basis* of cases), it is surely desirable that the orator should be instructed in such things by those who have devoted special attention to the subject. Again, does not every question of law turn either

7. A deductive argument in logic consisting of a major premise, a minor premise, and a conclusion; its validity depends entirely on its form.

on the precise meaning of words, the discussion of equity, or conjecture as to the intention—subjects which in part encroach on the domain of dialectic and in part on that of ethics? [20] Consequently all oratory involves a natural admixture of all these philosophic elements—at least, that is to say, all oratory that is worthy of the name. For mere garrulity that is ignorant of all such learning must needs go astray, since its guides are either non-existent or false.

Physics⁸ on the other hand is far richer than the other branches of philosophy, if viewed from the standpoint of providing exercise in speaking; in proportion as a loftier inspiration is required to speak of things divine than of things human; and further it includes within its scope the whole of ethics, which as we have shown are essential to the very existence of oratory. [21] For, if the world is governed by providence, it will certainly be the duty of all good men to bear their part in the administration of the state. If the origin of our souls be divine, we must win our way towards virtue and abjure the service of the lusts of our earthly body. Are not these themes which the orator will frequently be called upon to handle? Again there are questions concerned with auguries and oracles or any other religious topic (all of them subjects that have often given rise to the most important debates in the senate) on which the orator will have to discourse, if he is also to be the statesman we would have him be. And finally, how can we conceive of any real eloquence at all proceeding from a man who is ignorant of all that is best in the world? [22] If our reason did not make these facts obvious, we should still be led by historical examples to believe their truth. For Pericles,⁹ whose eloquence, despite the fact that it has left no visible record for posterity, was none the less, if we may believe the historians and that free-speaking tribe, the old comic poets, endowed with almost incredible force, is known to have been a pupil of the physicist Anaxagoras, while Demosthenes, greatest of all the orators of Greece, sat at the feet of Plato.¹ [23] As for Cicero, he has often proclaimed the fact that he owed less to the schools of rhetoric than to the walks of Academe: nor would he ever have developed such amazing fertility of talent, had he bounded his genius by the limits of the forum and not by the frontiers of nature herself.

But this leads me to another question as to which school of philosophy is like to prove of most service to oratory, although there are only a few that can be said to contend for this honour. [24] For in the first place Epicurus² banishes us from his presence without more ado, since he bids all his followers to fly from learning in the swiftest ship that they can find. Nor would Aristippus,³ who regards the highest good as consisting in physical pleasure, be likely to exhort us to the toils entailed by our study. And what part can Pyrrho⁴ have in the work that is before us? For he will have doubts as to whether there exist judges to address, accused to defend, or a senate where he can be called upon to speak his opinion. [25] Some authorities hold that the Academy⁵ will be the most useful school, on the ground

8. I. e., natural philosophy in the widest sense [translator's note]. This includes religion.

9. Athenian statesman (ca. 495–429 B.C.E.).

1. Greek philosopher (427–347 B.C.E.). Anaxagoras (ca. 500–ca. 428 B.C.E.), Greek philosopher. Demosthenes (384–322 B.C.E.), Athenian orator

and statesman.

2. Greek philosopher (341–270 B.C.E.).

3. Greek philosopher (ca. 435–ca. 356 B.C.E.).

4. Greek philosopher (365–275 B.C.E.).

5. Athenian school founded by Plato.

that its habit of disputing on both sides of a question approaches most nearly to the actual practice of the courts. And by way of proof they add the fact that this school has produced speakers highly renowned for their eloquence. The Peripatetics⁶ also make it their boast that they have a form of study which is near akin to oratory. For it was with them in the main that originated the practice of declaiming on general questions by way of exercise. The Stoics,⁷ though driven to admit that, generally speaking, their teachers have been deficient both in fullness and charm of eloquence, still contend that no men can prove more acutely or draw conclusions with greater subtlety than themselves. [26] But all these arguments take place within their own circle, for, as though they were tied by some solemn oath or held fast in the bonds of some superstitious belief, they consider that it is a crime to abandon a conviction once formed. On the other hand, there is no need for an orator to swear allegiance to any one philosophic code. [27] For he has a greater and nobler aim, to which he directs all his efforts with as much zeal as if he were a candidate for office, since he is to be made perfect not only in the glory of a virtuous life, but in that of eloquence as well. He will consequently select as his models of eloquence all the greatest masters of oratory, and will choose the noblest precepts and the most direct road to virtue as the means for the formation of an upright character. He will neglect no form of exercise, but will devote special attention to those which are of the highest and fairest nature. [28] For what subject can be found more fully adapted to a rich and weighty eloquence than the topics of virtue, politics, providence, the origin of the soul and friendship? The themes which tend to elevate mind and language alike are questions such as what things are truly good, what means there are of assuaging fear, restraining the passions and lifting us and the soul that came from heaven clear of the delusions of the common herd.

PLOTINUS

ca. 204/5–270

Plotinus's "On the Intellectual Beauty," the eighth treatise of his Fifth Ennead (one of a group of fifty-four treatises), provides an influential theory of representation, Platonic in its origins, that challenges PLATO's notorious distrust of storytelling. Plotinus is the third-century founder and greatest philosopher of Neoplatonism—a philosophical system that locates reality in a transcendental spiritual realm that gives meaning to the visible world. Plotinus denies that art is merely the pale imitation of a more perfect nature. He argues instead that artists struggle to invest an inchoate matter with form and beauty, thus enabling both viewers and artists to transcend the

sensible world and discover the more "real" intelligible world of Forms, with the ultimate goal of unification with the One (the transcendent source of all being). Plotinus's revisions of Plato, especially his description of an intellectual ascent from the corporeal world to the intelligible world of Forms, were transmitted through the Christian works of AUGUSTINE (354–430), MACROBIUS (b. ca. 360), and Boethius (480–524), later shaping the Christian Neoplatonism of the Middle Ages (see, for example, Bernardus Silvestrus, d. ca. 1160). Plotinus's influence, however, extends beyond the Middle Ages to a varied array of movements and figures, including Romantic theories of artistic creativity (see, for instance, FRIEDRICH VON SCHILLER, SAMUEL TAYLOR COLERIDGE, PERCY BYSSHE SHELLEY, and RALPH WALDO EMERSON), the more enigmatic twentieth-century psychoanalytic writings of HAROLD BLOOM, and many versions of contemporary New Age philosophy and religion.

Details of Plotinus's life can be reliably gleaned from a biography written by his disciple and editor, the Greek philosopher Porphyry. Although he complains that Plotinus "could never be induced to tell of his ancestry, his parentage or his birthplace," others record that he was born in either Lyco or Lycopolis in Egypt. His name is Roman, though his native language was Greek. At twenty-eight he was "caught by the passion for philosophy." He spent the next eleven years studying in Alexandria, Egypt, a famous center of learning, under Ammonius Saccas, a philosopher born of Christian parents who reverted to Greek paganism and who was supposed to have reconciled the doctrines of ARISTOTLE and Plato. During his Alexandrian sojourn, Plotinus also encountered the works of the Jewish philosopher Philo of Alexandria (ca. 20 B.C.E.–50 C.E.), as well as those of the Gnostics and Neopythagoreans. In 242/3 Plotinus joined the Emperor Gordian's expedition against Persia, as a means of learning about Eastern philosophy. When the campaign failed, he settled in Rome as a teacher. There he was the center of a circle of intellectuals that included men of letters and professional philosophers. Plotinus was also interested in social problems and tried to persuade the Emperor Gallienus to invest in a scheme to found a city (called Platonopolis) in Campania, Italy, to be governed by the principles set forth in Plato's *Republic*. He remained in Rome until his last illness, when he retired to Campania.

Plotinus, according to Porphyry, "remained a long time without writing." At about the age of fifty, he began to produce a series of philosophical essays in Greek that grew out of his seminars and were intended primarily for circulation among his pupils. Porphyry records that when he first came to know Plotinus there were twenty-one of these treatises. By the time of the philosopher's death there were fifty-four. After Plotinus's death, Porphyry was left with the task of editing the manuscripts, which he describes as "slovenly." Between 300 and 305, he arranged them into six sets or "enneads" (from the Greek *ennea*, "nine") of nine treatises, "an arrangement which pleased me by the happy combination of the perfect number six with the nines"—a reference to Pythagorean numerology, in which twice three is perfect harmony or unity and three threes produce the perfect plural. Porphyry's organization loosely binds together a series of seemingly discrete and unrelated treatises. If there is any other method of organization to the treatises of the *Enneads*, it is created through the recapitulation in each one of the basic elements of the Plotinian system. Such an arrangement, with its emphasis on unity and harmony within plurality, mirrors the philosophical idealism of Plotinus's thought. A strict dualist, Plotinus posits a fundamental split between the intelligible world—that is, the world of ideas and Ideal Forms—and the sensible world of matter. For Plotinus the intelligible world is unchanging and nonspatial; for this reason it is, more real than the sensible world of matter. The sensible world is the changeable image of the intelligible world, its extension in time and space.

The opening paragraphs of "On the Intellectual Beauty" illustrate Plotinus's tendency to reproduce his entire system within each treatise. In them he describes the ascent from the beauty of the corporeal world to the beautiful itself, expressed in

terms of the Plotinian hierarchy. "On the Intellectual Beauty" challenges Plato's controversial view of art as an imitation—twice removed from the real (the intelligible), and therefore a copy of a copy. Nature, Plotinus argues, is an emanation, and not a copy, of a higher reality, an ideal reality the artist may apprehend because the arts "run back up to the forming principles from which nature derives."

"The forming principles from which nature derives"—the intelligible world—can be mapped through a hierarchy of three principal causes, or *archai* (for a critique of the philosophical notion of *archē* as origin, beginning, or first principle, see JACQUES DERRIDA). In this scheme, agency is transmitted from (1) the Absolute Being, called the One or the Good, to creation through (2) the *nous* (Greek), or Intellect, from which emanates (3) the Soul of the world, that is, the soul of individual humans, animals, and finally matter. The One transcends essence and existence; it has neither number nor name. It is the source of everything and the goal toward which everything strives. (In later Christian Neoplatonism the One is God.) In the translation below, Plotinus refers to the One as the "Father which is beyond Intellect." Intellect (the *nous*) proceeds from the One; it is thought thinking itself, flanked by absolute knowledge and wisdom. The Intellect's thoughts are the Platonic Forms, the eternal and unchanging paradigms of which sensible things are imperfect images. These Forms, for Plotinus, are not ideas; they are substances and more real than the sensible things through which we come to understand them. Finally, the Soul, or *psychē* (Greek), proceeds from the Intellect and mediates between the intelligible and the sensible world. Soul is the lowest intelligible cause; it forms and orders the sensible world. Humans stand midway between the two worlds; the body belongs to the sensible world, while the soul has its roots in the intelligible world.

The goal of philosophy for Plotinus is the soul's transcendence of the sensible, its ascent toward an intuition of the Intellect, and ultimately a complete and ecstatic union with the One. Since the more beautiful a thing is the closer it is to the One, art's beauty can provide a privileged glimpse of the One, but not as an exact copy or duplication of it. The ascent from the beauty of the corporeal world to the beautiful itself is expressed in terms of Plotinus's doctrine of intellectual ascent. The beauty of the work of art resides not in its materials or anything of the sensible world, but in the form art imparts to the work. This visible form is itself merely a pale reflection of the beauty that resides in art itself, "which is greater and more beautiful than anything in the external object." Far from being a dangerous misrepresentation of reality, as Plato states in the *Republic*, art—the contemplation of the beautiful and ultimately of beauty itself—can be the means by which individuals ascend toward ecstatic unification with the One. Plotinus claimed to have experienced this divine ecstasy on several occasions; he may be alluding to such an experience in sections 3 and 4 of our selection.

"On the Intellectual Beauty" is not Plotinus's only attempt to describe the place of art in his philosophic system. The sixth treatise of the First Ennead, "On Beauty," which builds on Diotima's speech in Plato's *Symposium*, covers much the same ground and was influential among artists, especially during the Renaissance. Of special significance for literary criticism is Plotinus's insistence that the Forms that beauty contemplates are not discursive forms of knowledge—*theorems and propositions*—but "beautiful images . . . not painted but real." Images in the intelligible world are not re-presentations of absent (or lost) referents but are fully present, like archetypes; only our embodiedness in the sensible world prevents us from apprehending them.

Ultimately, however, Plotinus's importance to literary criticism may lie less in what he says specifically about the arts than in the influence his philosophic idealism has exerted on subsequent thinking in the West. On the one hand, because Plotinus's Neoplatonism locates reality in a transcendent world of spirit rather than in an imperfect material world, his work appealed to the leaders of an emergent Christianity anxious to reconcile biblical narrative with mystical Christian doctrine. On the other,

his emphasis in this treatise on intuitive knowledge at the expense of the rational and the discursive especially appealed to later Romantic poets and critics reacting against Enlightenment rationalism. Yet the plenitude promised by "On the Intellectual Beauty"—its belief in a prelinguistic realm of ideas that can stand outside of and provide an origin for the sensible world—has been the target of contemporary post-structuralist critiques of Western philosophy, which explore the deconstructive roles of absence and lack in constituting philosophical ideas and mystical religions.

BIBLIOGRAPHY

The standard Greek text of the *Enneads* can be found in *Plotini Opera* (3 vols., 1964–82), edited by Paul Henry and Hans-Rudolf Schwyzer. Stephen MacKenna's translation, *Plotinus: The Six Enneads* (1921–30), contains an English version not only of the entire *Enneads* but of Porphyry's *Life of Plotinus* as well. A. H. Armstrong's *Plotinus* (1953) remains a classic introduction to Plotinian philosophy. J. M. Rist, in *Plotinus: The Road to Reality* (1967), discusses specialized topics in Plotinus, including beauty. D. J. O'Meara's *Plotinus: An Introduction to the Enneads* (1993) is a more recent and highly recommended introduction to Plotinus. Lloyd P. Gerson's *Plotinus* (1994) offers an extensive and more advanced philosophical discussion of most aspects of his thought. Gerson's *Cambridge Companion to Plotinus* (1996) is an indispensable guide to research on the philosopher.

For bibliographies, see A. J. Blumenthal, "Plotinus in the Light of Twenty Years' Scholarship, 1951–1971," and K. Corrigan and P. O'Cleirigh, "The Course of Plotinian Scholarship from 1971–1986," both contained in *Aufstieg und Niedergang der römischen Welt* (ed. Wolfgang Haase, 1987). Gerson's bibliography in *The Cambridge Companion to Plotinus* is also helpful.

From the Fifth Ennead

Eighth Tractate On the Intellectual Beauty¹

1. It is a principle with us that one who has attained to the vision of the Intellectual² Beauty and grasped the beauty of the Authentic Intellect will be able also to come to understand the Father and Transcendent of that Divine Being. It concerns us, then, to try to see and say, for ourselves and as far as such matters may be told, how the Beauty of the divine Intellect and of the Intellectual Cosmos may be revealed to contemplation.

Let us go to the realm of magnitudes:—suppose two blocks of stone lying side by side: one is unpatterned, quite untouched by art; the other has been minutely wrought by the craftsman's hands into some statue of god or man, a Grace or a Muse,³ or if a human being, not a portrait but a creation in which the sculptor's art has concentrated all loveliness.

Now it must be seen that the stone thus brought under the artist's hand to the beauty of form is beautiful not as stone—for so the crude block would be as pleasant—but in virtue of the Form or Idea introduced by the art. This form is not in the material; it is in the designer before ever it enters the stone;

1. Translated by Stephen MacKenna.

2. Plotinus uses the term "Intellectual" or "Intelligible" to refer to a transcendent realm that can be apprehended only by the understanding, not by the senses. The opening paragraphs illustrate the

ascent from the beauty of the corporeal world to Beauty itself in terms of a mystical hierarchy.

3. One of the 9 Greek sister goddesses presiding over the arts and sciences. Grace: one of the 3 Greek sister goddesses of charm and beauty.

and the artificer holds it not by his equipment of eyes and hands but by his participation⁴ in his art. The beauty, therefore, exists in a far higher state in the art; for it does not come over integrally into the work; that original beauty is not transferred; what comes over is a derivative and a minor: and even that shows itself upon the statue not integrally and with entire realization of intention but only in so far as it has subdued the resistance of the material.

Art, then, creating in the image of its own nature and content, and working by the Idea or Reason-Principle of the beautiful object it is to produce, must itself be beautiful in a far higher and purer degree since it is the seat and source of that beauty, indwelling in the art, which must naturally be more complete than any comeliness of the external. In the degree in which the beauty is diffused by entering into matter, it is so much the weaker than that concentrated in unity; everything that reaches outwards is the less for it, strength less strong, heat less hot, every power less potent, and so beauty less beautiful.

Then again every prime cause must be, within itself, more powerful than its effect can be: the musical does not derive from an unmusical source but from music; and so the art exhibited in the material work derives from an art yet higher.

Still the arts are not to be slighted on the ground that they create by imitation of natural objects; for, to begin with, these natural objects are themselves imitations; then, we must recognize that they give no bare reproduction of the thing seen but go back to the Reason-Principles from which Nature itself derives, and, furthermore, that much of their work is all their own; they are holders of beauty and add where nature is lacking. Thus Pheidias wrought the Zeus⁵ upon no model among things of sense but by apprehending what form Zeus must take if he chose to become manifest to sight.

2. But let us leave the arts and consider those works produced by Nature and admitted to be naturally beautiful which the creations of art are charged with imitating, all reasoning life and unreasoning things alike, but especially the consummate among them, where the moulder and maker has subdued the material and given the form he desired. Now what is the beauty here? It has nothing to do with the blood or the menstrual process: either there is also a colour and form apart from all this or there is nothing unless sheer ugliness or (at best) a bare recipient, as it were the mere Matter of beauty.

Whence shone forth the beauty of Helen,⁶ battle-sought; or of all those women like in loveliness to Aphrodite;⁷ or of Aphrodite herself; or of any human being that has been perfect in beauty; or of any of these gods manifest to sight, or unseen but carrying what would be beauty if we saw?

In all these is it not the Idea, something of that realm but communicated to the produced from within the producer, just as in works of art, we held, it is communicated from the arts to their creations? Now we can surely not

4. A crucial term in the Greek philosopher PLATO (ca. 427–327 B.C.E.), who often describes sensible objects as “participating” in the Form of which they are the imperfect copy.

5. King of all Greek gods. The renowned statue of Zeus called *Olympian Zeus*, known only from descriptions made by ancient writers, was the

most famous work of the Greek sculptor Pheidias (5th c. B.C.E.).

6. In Greek mythology, the most beautiful woman in the world. She was married to a Greek king, Menelaus, and her abduction by the Trojan prince Paris precipitated the Trojan War.

7. Greek goddess of love, beauty, and fertility.

believe that, while the made thing and the Idea thus impressed upon Matter are beautiful, yet the Idea not so alloyed but resting still with the creator—the Idea primal, immaterial, firmly a unity—is not Beauty.

If material extension were in itself the ground of beauty, then the creating principle, being without extension, could not be beautiful: but beauty cannot be made to depend upon magnitude since, whether in a large object or a small, the one Idea equally moves and forms the mind by its inherent power. A further indication is that as long as the object remains outside us we know nothing of it; it affects us by entry; but only as an Idea can it enter through the eyes which are not of scope to take an extended mass: we are, no doubt, simultaneously possessed of the magnitude which, however, we take in not as mass but by an elaboration upon the presented form.

Then again the principle producing the beauty must be, itself, ugly, neutral, or beautiful: ugly, it could not produce the opposite; neutral, why should its product be the one rather than the other? The Nature, then, which creates things so lovely must be itself of a far earlier beauty;⁸ we, undisciplined in discernment of the inward, knowing nothing of it, run after the outer, never understanding that it is the inner which stirs us; we are in the case of one who sees his own reflection but not realizing whence it comes goes in pursuit of it.

But that the thing we are pursuing is something different and that the beauty is not in the concrete object is manifest from the beauty there is in matters of study, in conduct and custom; briefly, in soul or mind. And it is precisely here that the greater beauty lies, perceived whenever you look to the wisdom in a man and delight in it, not wasting attention on the face, which may be hideous, but passing all appearance by and catching only at the inner comeliness, the truly personal; if you are still unmoved and cannot acknowledge beauty under such conditions, then looking to your own inner being you will find no beauty to delight you and it will be futile in that state to seek the greater vision, for you will be questing it through the ugly and impure.

This is why such matters are not spoken of to everyone; you, if you are conscious of beauty within, remember.

3. Thus there is in the Nature-Principle itself an Ideal archetype of the beauty that is found in material forms and, of that archetype again, the still more beautiful archetype in Soul, source of that in Nature. In the proficient soul this is brighter and of more advanced loveliness: adorning the soul and bringing to it a light from that greater light which is Beauty primally, its immediate presence sets the soul reflecting upon the quality of this prior, the archetype which has no such entries, and is present nowhere but remains in itself alone, and thus is not even to be called a Reason-Principle but is the creative source of the very first Reason-Principle which is the Beauty to which Soul serves as Matter.

This prior, then, is the Intellectual-Principle, the veritable, abiding and not fluctuant since not taking intellectual quality from outside itself. By what image, thus, can we represent it? We have nowhere to go but to what is less. Only from itself can we take an image of it; that is, there can be no repre-

8. Plotinus refers here not to temporal but to spiritual priority; such beauty is closer to the One.

sentation of it, except in the sense that we represent gold by some portion of gold—purified, either actually or mentally, if it be impure—insisting at the same time that this is not the total thing gold, but merely the particular gold of a particular parcel. In the same way we learn in this matter from the purified Intellect in ourselves or, if you like, from the gods and the glory of the Intellect in them.

For assuredly all the gods are august and beautiful in a beauty beyond our speech. And what makes them so? Intellect; and especially Intellect operating within them (the divine sun and stars) to visibility. It is not through the loveliness of their corporeal forms: even those that have body are not gods by that beauty; it is in virtue of Intellect that they, too, are gods, and as gods beautiful. They do not veer between wisdom and folly: in the immunity of Intellect unmoving and pure, they are wise always, all-knowing, taking cognizance not of the human but of their own being and of all that lies within the contemplation of Intellect. Those of them whose dwelling is in the heavens are ever in this meditation—what task prevents them?—and from afar they look, too, into that further heaven by a lifting of the head. The gods belonging to that higher Heaven itself, they whose station is upon it and in it, see and know in virtue of their omnipresence to it. For all There is heaven; earth is heaven, and sea heaven; and animal and plant and man; all is the heavenly content of that heaven: and the gods in it, despising neither men nor anything else that is there where all is of the heavenly order, traverse all that country and all space in peace.

4. To 'live at ease' is There; and to these divine beings verity is mother and nurse, existence and sustenance; all that is not of process but of authentic being they see, and themselves in all: for all is transparent, nothing dark, nothing resistant; every being is lucid to every other, in breadth and depth; light runs through light. And each of them contains all within itself, and at the same time sees all in every other, so that everywhere there is all, and all is all and each all, and infinite the glory. Each of them is great; the small is great; the sun, There, is all the stars; and every star, again, is all the stars and sun. While some one manner of being is dominant in each, all are mirrored in every other.

Movement There is pure (as self-caused), for the moving principle is not a separate thing to complicate it as it speeds.

So, too, Repose is not troubled, for there is no admixture of the unstable; and the Beauty is all beauty since it is not resident in what is not beautiful. Each There walks upon no alien soil; its place is its essential self; and, as each moves, so to speak, towards what is Above, it is attended by the very ground from which it starts: there is no distinguishing between the Being and the Place; all is Intellect, the Principle and the ground on which it stands, alike. Thus we might think that our visible sky (the ground or place of the stars), lit as it is, produces the light which reaches us from it, though of course this is really produced by the stars (as it were, by the Principles of light alone, not also by the ground as the analogy would require).

In our realm all is part rising from part and nothing can be more than partial; but There each being is an eternal product of a whole and is at once

9. A Homeric expression to describe the life of the gods; for example, see *Iliad* 6.138.

a whole and an individual manifesting as part but, to the keen vision There, known for the whole it is.

The myth of Lynceus¹ seeing into the very deeps of the earth tells us of those eyes in the divine. No weariness overtakes this vision which yet brings no such satiety as would call for its ending; for there never was a void to be filled so that, with the fullness and the attainment of purpose, the sense of sufficiency be induced: nor is there any such incongruity within the divine that one Being There could be repulsive to another: and of course all There are unchangeable. This absence of satisfaction means only a satisfaction leading to no distaste for that which produces it; to see is to look the more, since for them to continue in the contemplation of an infinite self and of infinite objects is but to acquiesce in the bidding of their nature.

Life, pure, is never a burden; how then could there be weariness There where the living is most noble? That very life is wisdom, not a wisdom built up by reasonings but complete from the beginning, suffering no lack which could set it inquiring, a wisdom primal, unborrowed, not something added to the Being, but its very essence. No wisdom, thus, is greater; this is the authentic knowing, assessor to the divine Intellect as projected into manifestation simultaneously with it; thus, in the symbolic saying, Justice is assessor to Zeus.

(Perfect wisdom:) for all the Principles of this order, dwelling There, are as it were visible images projected from themselves, so that all becomes an object of contemplation to contemplators immeasurably blessed. The greatness and power of the wisdom There we may know from this, that it embraces all the real Beings, and has made all and all follow it, and yet that it is itself those beings, which sprang into being with it, so that all is one and the essence There is wisdom. If we have failed to understand, it is that we have thought of knowledge as a mass of theorems and an accumulation of propositions, though that is false even for our sciences of the sense-realm. But in case this should be questioned, we may leave our own sciences for the present, and deal with the knowing in the Supreme at which Plato glances where he speaks of 'that knowledge which is not a stranger in something strange to it'²—though in what sense, he leaves us to examine and declare, if we boast ourselves worthy of the discussion. This is probably our best starting-point.

5. All that comes to be, work of nature or of craft, some wisdom has made: everywhere a wisdom presides at a making.

No doubt the wisdom of the artist may be the guide of the work; it is sufficient explanation of the wisdom exhibited in the arts; but the artist himself goes back, after all, to that wisdom in Nature which is embodied in himself; and this is not a wisdom built up of theorems but one totality, not a wisdom consisting of manifold detail co-ordinated into a unity but rather a unity working out into detail.

Now, if we could think of this as the primal wisdom, we need look no further, since, at that, we have discovered a principle which is neither a derivative nor a 'stranger in something strange to it'. But if we are told that,

1. One of the Argonauts, who was said to be so sharp-sighted that he could see things under-

ground.

2. Plato, *Phaedrus* 247d-e.

while this Reason-Principle is in Nature, yet Nature itself is its source, we ask how Nature came to possess it; and, if Nature derived it from some other source, we ask what that other source may be; if, on the contrary, the principle is self-sprung, we need look no further: but if (as we assume) we are referred to the Intellectual-Principle we must make clear whether the Intellectual-Principle engendered the wisdom: if we learn that it did, we ask whence: if from itself, then inevitably it is itself Wisdom.

The true Wisdom, then (found to be identical with the Intellectual-Principle), is Real Being; and Real Being is Wisdom; it is wisdom that gives value to Real Being; and Being is Real in virtue of its origin in wisdom. It follows that all forms of existence not possessing wisdom are, indeed, Beings in right of the wisdom which went to their forming, but, as not in themselves possessing it, are not Real Beings.

We cannot, therefore, think that the divine Beings of that sphere, or the other supremely blessed There, need look to our apparatus of science: all of that realm (the very Beings themselves), all is noble image, such images as we may conceive to lie within the soul of the wise—but There not as inscription but as authentic existence. The ancients had this in mind when they declared the Ideas (Forms) to be Beings, Essentials.

6. Similarly, as it seems to me, the wise of Egypt—whether in precise knowledge or by a prompting of nature—indicated the truth where, in their effort towards philosophical statement, they left aside the writing-forms that take in the detail of words and sentences—those characters that represent sounds and convey the propositions of reasoning—and drew pictures instead, engraving in the temple-inscriptions a separate image for every separate item: thus they exhibited the absence of discursiveness in the Intellectual Realm.

For each manifestation of knowledge and wisdom is a distinct image, an object in itself, an immediate unity, not an aggregate of discursive reasoning and detailed willing. Later from this wisdom in unity there appears, in another form of being, an image, already less compact, which announces the original in terms of discourse and seeks the causes by which things are such that the wonder rises how a generated world can be so excellent.

For, one who knows must declare his wonder that this Wisdom, while not itself containing the causes by which Being exists and takes such excellēce, yet imparts them to the entities produced in Being's realm. This excellence, whose necessity is scarcely or not at all manifest to search, exists, if we could but find it out, before all searching and reasoning.

What I say may be considered in one chief thing, and thence applied to all the particular entities:

7. Consider the universe: we are agreed that its existence and its nature come to it from beyond itself; are we, now, to imagine that its maker first thought it out in detail—the earth, and its necessary situation in the middle; water and, again, its position as lying upon the earth; all the other elements and objects up to the sky in due place and order; living beings with their appropriate forms as we know them, their inner organs and their outer limbs—and that having thus appointed every item beforehand, he then set about the execution?

Such designing was not even possible; how could the plan for a universe

come to one that had never looked outward? Nor could he work on material gathered from elsewhere as our craftsmen do, using hands and tools; feet and hands are of the later order.

One way, only, remains: all things must exist in something else; of that prior—since there is no obstacle, all being continuous within the realm of reality—there has suddenly appeared a sign, an image, whether given forth directly or through the ministry of soul or of some phase of soul, matters nothing for the moment: thus the entire aggregate of existence springs from the divine world, in greater beauty There because There unmingled but mingled here.

From the beginning to end all is gripped by the Forms of the Intellectual Realm: Matter itself is held by the Ideas of the elements and to these Ideas are added other Ideas and others again, so that it is hard to work down to crude Matter beneath all that sheathing of Idea. Indeed since Matter itself is, in its degree, an Idea—the lowest—all this universe is Idea and there is nothing that is not Idea as the archetype was. And all is made silently, since nothing had part in the making but Being and Idea—a further reason why creation went without toil. The Exemplar was the Idea of an All and so an All must come into being.

Thus nothing stood in the way of the Idea, and even now it dominates, despite all the clash of things: the creation is not hindered on its way even now; it stands firm in virtue of being All. To me, moreover, it seems that if we ourselves were archetypes, Ideas, veritable Being, and the Idea with which we construct here were our veritable Essence, then our creative power, too, would toillessly effect its purpose: as man now stands, he does not produce in his work a true image of himself: become man; he has ceased to be the All; ceasing to be man—we read—'he soars aloft and administers the Cosmos entire';³ restored to the All he is maker of the All.

But—to our immediate purpose—it is possible to give a reason why the earth is set in the midst and why it is round and why the ecliptic runs precisely as it does, but, looking to the creating principle, we cannot say that because this was the way therefore things were so planned: we can say only that because the Exemplar is what it is, therefore the things of this world are good; the causing principle, we might put it, reached the conclusion before all formal reasoning and not from any premises, not by sequence or plan but before either, since all of that order is later, all reason, demonstration, persuasion.

Since there is a Source, all the created must spring from it and in accordance with it; and we are rightly told not to go seeking the causes impelling a Source to produce, especially when this is the perfectly sufficient Source and identical with the Term: a Source which is Source and Term must be the All-Unity, complete in itself.

8. This then is Beauty primally: it is entire and omnipresent as an entirety; and therefore in none of its parts or members lacking in beauty; beautiful thus beyond denial. Certainly it cannot be anything (be, for example, Beauty) without being wholly that thing; it can be nothing which it is to possess partially or in which it utterly fails (and therefore it must entirely be Beauty entire).

3. Plato, *Phaedrus* 246c.

If this principle were not beautiful, what other could be? Its prior does not deign to be beautiful; that which is the first to manifest itself—Form and object of vision to the intellect—cannot but be lovely to see. It is to indicate this that Plato, drawing on something well within our observation, represents the Creator as approving the work he has achieved: the intention is to make us feel the lovable beauty of the archetype and of the Divine Idea; for to admire a representation is to admire the original upon which it was made.

It is not surprising if we fail to recognize what is passing within us: lovers, and those in general that admire beauty here, do not stay to reflect that it is to be traced, as of course it must be, to the Beauty There. That the admiration of the Demiurge⁴ is to be referred to the Ideal Exemplar is deliberately made evident by the rest of the passage: 'He admired; and determined to bring the work into still closer likeness with the Exemplar':⁵ he makes us feel the magnificent beauty of the Exemplar by telling us that the Beauty sprung from this world is, itself, a copy from That.

And indeed if the divine did not exist, the transcendently beautiful, in a beauty beyond all thought, what could be lovelier than the things we see? Certainly no reproach can rightly be brought against this world save only that it is not That.

9. Let us, then, make a mental picture of our universe: each member shall remain what it is, distinctly apart; yet all is to form, as far as possible, a complete unity so that whatever comes into view, say the outer orb of the heavens, shall bring immediately with it the vision, on the one plane, of the sun and of all the stars with earth and sea all living things as if exhibited upon a transparent globe.

Bring this vision actually before your sight, so that there shall be in your mind the gleaming representation of a sphere, a picture holding all the things of the universe moving or in repose or (as in reality) some at rest, some in motion. Keep this sphere before you, and from it imagine another, a sphere stripped of magnitude and of spatial differences; cast out your inborn sense of Matter, taking care not merely to attenuate it: call on God, maker of the sphere whose image you now hold, and pray Him to enter. And may He come bringing His own Universe with all the gods that dwell in it—He who is the one God and all the gods, where each is all, blending into a unity, ~~dis~~ distinct in powers but all one god in virtue of that one divine power of many facets.

More truly, this is the one God who is all the gods; for, in the coming to be of all those, this, the one, has suffered no diminishing. He and all have one existence, while each again is distinct. It is distinction by state without interval: there is no outward form to set one here and another there and to prevent any from being an entire identity; yet there is no sharing of parts from one to another. Nor is each of those divine wholes a power in fragment, a power totalling to the sum of the measurable segments: the divine is one all-power, reaching out to infinity, powerful to infinity; and so great is God that his very members are infinites. What place can be named to which He does not reach?

Great, too, is this firmament of ours and all the powers constellated within it, but it would be greater still, unspeakably, but that there is inbound in it

4. In Plato's *Timaeus*, a subordinate deity who fashions the physical world in the image of eternal

ideas.

5. Plato, *Timaeus* 37c.

something of the petty power of body; no doubt the powers of fire and other bodily substances might themselves be thought very great, but in fact, it is through their failure in the true power that we see them burning, destroying, wearing things away, and slaving towards the production of life; they destroy because they are themselves in process of destruction; and they produce because they belong to the realm of the produced.

The power in that other world has merely Being and Beauty of Being. Beauty without Being could not be, nor Being voided of Beauty: abandoned of Beauty, Being loses something of its essence. Being is desirable because it is identical with Beauty; and Beauty is loved because it is Being. How then can we debate which is the cause of the other, where the nature is one? The very figment of Being needs some imposed image of Beauty to make it passable, and even to ensure its existence; it exists to the degree in which it has taken some share in the beauty of Idea; and the more deeply it has drawn on this, the less imperfect it is, precisely because the nature which is essentially the beautiful has entered into it the more intimately.

10. This is why Zeus, although the oldest of the gods and their sovereign, advances first (in the *Phaedrus*⁶ myth) towards that vision, followed by gods and demigods and such souls as are of strength to see. That Being appears before them from some unseen place and rising loftily over them pours its light upon all things, so that all gleams in its radiance; it upholds some beings, and they see; the lower are dazzled and turn away, unfit to gaze upon that sun, the trouble falling the more heavily on those most remote.

Of those looking upon that Being and its content, and able to see, all take something but not all the same vision always: intently gazing, one sees the fount and principle of Justice, another is filled with the sight of Moral Wisdom, the original of that quality as found, sometimes at least, among men, copied by them in their degree from the divine virtue which, covering all the expanse, so to speak, of the Intellectual Realm is seen, last attainment of all, by those who have known already many splendid visions.

The gods see, each singly and all as one. So, too, the souls; they see all There in right of being sprung, themselves; of that universe and therefore including all from beginning to end and having their existence There if only by that phase which belongs inherently to the Divine, though often too they are There entire, those of them that have not incurred separation.

This vision Zeus takes and it is for such of us, also, as share his love and appropriate our part in the Beauty There, the final object of all seeing, the entire beauty upon all things; for all There sheds radiance, and floods those that have found their way thither so that they too become beautiful; thus it will often happen that men climbing heights where the soil has taken a yellow glow will themselves appear so, borrowing colour from the place on which they move. The colour flowering on that other height we speak of is Beauty; or rather all There is light and beauty, through and through, for the beauty is no mere bloom upon the surface.

To those that do not see entire, the immediate impression is alone taken into account; but those drunken with this wine, filled with the nectar, all their soul penetrated by this beauty, cannot remain mere gazers: no longer

6. Plato, *Phaedrus* 246e.

is there a spectator outside gazing on an outside spectacle; the clear-eyed hold the vision within themselves, though, for the most part, they have no idea that it is within but look towards it as to something beyond them and see it as an object of vision caught by a direction of the will.

All that one sees as a spectacle is still external; one must bring the vision within and see no longer in that mode of separation but as we know ourselves; thus a man filled with a god—possessed by Apollo⁷ or by one of the Muses—need no longer look outside for his vision of the divine being; it is but finding the strength to see divinity within.

11. Similarly any one, unable to see himself, but possessed by that God, has but to bring that divine-within before his consciousness and at once he sees an image of himself, himself lifted to a better beauty: now let him ignore that image, lovely though it is, and sink into a perfect self-identity, no such separation remaining; at once he forms a multiple unity with the God silently present; in the degree of his power and will, the two become one; should he turn back to the former duality, still he is pure and remains very near to the God; he has but to look again and the same presence is there.

This conversion brings gain: at the first stage, that of separation, a man is aware of self; but retreating inwards, he becomes possessor of all; he puts sense away behind him in dread of the separated life and becomes one in the Divine; if he plans to see in separation, he sets himself outside.

The novice must hold himself constantly under some image of the Divine Being and seek in the light of a clear conception; knowing thus, in a deep conviction, whither he is going—into what a sublimity he penetrates—he must give himself forthwith to the inner and, radiant with the Divine Intellections (with which he is now one), be no longer the seer, but, as that place has made him, the seen.

Still, we will be told, one cannot be in beauty and yet fail to see it. The very contrary: to see the divine as something external is to be outside of it; to become it is to be most truly in beauty: since sight deals with the external, there can here be no vision unless in the sense of identification with the object.

And this identification amounts to a self-knowing, a self-consciousness, guarded by the fear of losing the self in the desire of a too wide awareness.

It must be remembered that sensations of the ugly and evil impress us more violently than those of what is agreeable and yet leave less knowledge as the residue of the shock: sickness makes the rougher mark, but health, tranquilly present, explains itself better; it takes the first place, it is the natural thing, it belongs to our being; illness is alien, unnatural, and thus makes itself felt by its very incongruity, while the other conditions are native and we take no notice. Such being our nature, we are most completely aware of ourselves when we are most completely identified with the object of our knowledge.

This is why in that other sphere, when we are deepest in that knowledge by intellection, we are aware of none; we are expecting some impression on sense, which has nothing to report since it has seen nothing and never could

7. Greek god associated with prophecy, music, and poetry.

in that order see anything. The unbelieving element is sense; it is the other, the Intellectual-Principle, that sees; and if this too doubted, it could not even credit its own existence, for it can never stand away and with bodily eyes apprehend itself as a visible object.

12. We have told how this vision is to be procured, whether by the mode of separation or in identity: now, seen in either way, what does it give to report?

The vision has been of God in travail of a beautiful offspring, God engendering a universe within himself in a painless labour and—rejoiced in what he has brought into being, proud of his children—keeping all closely by Him, for the pleasure He has in his radiance and in theirs.

Of this offspring—all beautiful, but most beautiful those that have remained within—only one has become manifest without; from him (Zeus, sovran over the visible universe), the youngest born, we may gather, as from some image, the greatness of the Father and of the Brothers that remain within the Father's house.

Still the manifested God cannot think that he has come forth in vain from the father; for through him another universe has arisen, beautiful as the image of beauty, and it could not be lawful that Beauty and Being should fail of a beautiful image.

This second Cosmos at every point copies the archetype: it has life and being in copy, and has beauty as springing from that diviner world. In its character of image it holds, too, that divine perpetuity without which it would only at times be truly representative and sometimes fail like a construction of art; for every image whose existence lies in the nature of things must stand during the entire existence of the archetype.

Hence it is false to put an end to the visible sphere as long as the Intellectual endures, or to found it upon a decision taken by its maker at some given moment.

That teaching shirks the penetration of such a making as is here involved: it fails to see that as long as the Supreme is radiant there can be no failing of its sequel but, that existing, all exists. And—since the necessity of conveying our meaning compels such terms—the Supreme has existed for ever and for ever will exist.

13. The God fettered (as in the Kronos⁸ Myth) to an unchanging identity leaves the ordering of this universe to his son (to Zeus), for it could not be in his character to neglect his rule within the divine sphere, and, as though sated with the Authentic-Beauty, seek a lordship too recent and too poor for his might. Ignoring this lower world, Kronos (Intellectual-Principle) claims for himself his own father (Ouranos,⁹ the Absolute, or One) with all the upward-tending between them: and he counts all that tends to the inferior, beginning from his son (Zeus, the All-Soul), as ranking beneath him. Thus he holds a mid-position determined on the one side by the differentiation implied in the severance from the very highest and, on the other, by that which keeps him apart from the link between himself and the lower: he

8. Pre-Hellenic Greek agricultural deity, the son of Ouranos (heaven) and Gaia (earth).

9. Personification of heaven in Greek mythology.

stands between a greater father and an inferior son. But since that father is too lofty to be thought of under the name of Beauty, the second God remains the primally beautiful.¹

Soul also has beauty, but is less beautiful than Intellect as being its image and therefore, though beautiful in nature, taking increase of beauty by looking to that original. Since then the All-Soul—to use the more familiar term—since Aphrodite herself is so beautiful, what name can we give to that other? If Soul is so lovely in its own right, of what quality must that prior be? And since its being is derived, what must that power be from which the Soul takes the double beauty, the borrowed and the inherent?

We ourselves possess beauty when we are true to our own being; our ugliness is in going over to another order; our self-knowledge, that is to say, is our beauty; in self-ignorance we are ugly.

Thus beauty is of the Divine and comes Thence only.

Do these considerations suffice to a clear understanding of the Intellectual Sphere or must we make yet another attempt by another road?

ca. 260–70

ca. 300–305

1. Plotinus here explains the story of Ouranus, Kronos, and Zeus as symbolically referring to the Three Hypostases: the One, Intellect, and Soul.

His version of their myths differs markedly from the power struggle usually recounted (see, e.g., Hesiod's *Theogony*).

AUGUSTINE OF HIPPO

354–430

“Scripture teaches nothing but charity, nor condemns anything except cupidity.” Although this critical touchstone, articulated by St. Augustine in *On Christian Doctrine*, may strike modern readers as more theological than literary, it involved Augustine in some strikingly modern literary issues: for example, how signs function, how readers make meaning of texts, and how interpretations are validated. He offers a specifically Christian response to the problem of intentionality when he says of the Scriptures, “Whoever finds a lesson there useful to the building of charity, even though he has not said what the author may be shown to have intended in that place, has not been deceived, nor is he lying in any way.”

Augustine was born in a North African Roman province in present-day Algeria—a backwater of the Roman Empire. Although his mother, Monica, was a devout Christian, his father was a pagan and thus their son was not baptized. He studied in the rhetoric schools of Carthage, where he was attracted to Manichaeism, an early Christian philosophy noted for its extreme metaphysical and moral dualism and its belief that evil is as powerful as good. The other great influence on his intellectual development was Greek philosophy, most notably the works of such Neoplatonists as PLOTINUS. Augustine taught in Carthage for seven years, from 376 to 383. He then went to Rome, where he set up as a teacher of rhetoric. By 384, at the age of thirty, he was a prominent enough scholar to be appointed municipal professor of rhetoric by the city of Milan. There, profoundly moved by the preaching of Ambrose, the bishop of Milan, he was baptized in 387. He resigned his position and returned to North

Africa, where, in 391, he became a priest. In 395 he was appointed bishop of Hippo, a position he held until his death.

Augustine was an extremely prolific writer (his bibliography numbers over one thousand works). Besides his celebrated *Confessions*, written around 400, and his magisterial philosophy of history, *City of God* (413–26), undertaken in the wake of the sack of Rome, he wrote many commentaries on the Bible and polemics against prominent heresies of the time, including Manichaeism. Two treatises that deal with the theory of criticism and biblical interpretation—*On Christian Doctrine* and *The Trinity*—were written after his appointment as bishop of Hippo. *On Christian Doctrine*, whose first three books were written around 395 (book 4 was added in 427), is a central text of medieval philosophy and aesthetics. *The Trinity*, completed in 416, deals with, among other things, key problems of signification: that is, how to establish meaning.

Augustine wrote at a time when Christianity was just beginning to establish itself, a time when there was no agreement on a fixed text for its Scriptures. The Bible consisted of scattered manuscript fragments (complete Bibles were rare), written variously in Hebrew, Greek, and Latin. Because of his early experiences with Manichaeism, Augustine recognized the need for some way to authorize the interpretation of Scriptures to prevent Christianity from fragmenting into sects. The existing hodgepodge of unconnected and sometimes contradictory narratives could not simply be taken as a group of literal documents. Only a method of interpreting figurative language could unravel the many difficult and obscure passages contained in various Scriptures, but to argue for a figurative reading of the sacred texts of Christianity required mechanisms to limit meaning to authorized interpretations. Drawing from many sources, including classical Platonic thinking about language (see PLATO), the rhetorical tradition in which he was trained (see QUINTILIAN), the epistles of St. Paul, and the early traditions of biblical criticism pioneered by Origen (180–254) in Greek and Sts. Jerome (ca. 347–420) and Ambrose (ca. 340–397) in Latin, Augustine fashioned a theory of signification that would dominate Western hermeneutics for ten centuries after his death. In the later Middle Ages, Augustinian sign theory would be further developed into a system of exegesis (a method for interpreting texts allegorically) by writers such as HUGH OF ST. VICTOR and THOMAS AQUINAS, as well as by vernacular poets such as DANTE.

Augustine's originality lay in linking the theory of signs to a theory of language, which to this point had been considered separately, and in bringing both theories to bear on the practice of interpreting Scriptures. His first principles, the basic elements of signification, were transmitted almost unchanged to the modern linguist FERDINAND DE SAUSSURE. Augustine distinguishes in *On Christian Doctrine* between things and signs: "A sign is a thing which causes us to think of something beyond the impression that the thing itself makes upon the senses." He further differentiates between natural and conventional signs: natural signs, such as smoke or the tracks of an animal, signify without intending to; conventional signs, such as words, are used by living beings to convey things they have sensed or understood. Conventional signs may be further distinguished as literal and figurative; for instance, "ox" may conventionally refer to a four-legged draft animal, but in the New Testament it also figuratively symbolizes one of the four evangelists. This careful survey of assumptions might seem, at first glance, somewhat obvious and simple, but it is necessary so that Augustine can posit a stable one-to-one correspondence between signs and the things they signify. The development of an adequate theory of conventional signs, especially the figurative, is one of the goals of Augustinian hermeneutics—as it is for much subsequent theory of interpretation, including modern semiotics. It is, however, a project undermined by signs' ability to carry multiple meanings (to function in richly figurative ways), a problem Augustine never adequately resolved.

The final book of *The Trinity* elucidates the problem of figurative signs in its analysis of a baffling theological concept: how the Godhead can unite three persons—the Father, the Son, and the Holy Spirit—in one. Here Augustine reprises and extends his analysis of signs in *On Christian Doctrine*. The Bible's explanations of mysteries of faith like the Trinity can only be shrouded in enigmatic allegory, a kind of narrative that, according to Quintilian, "means one thing in the words, another in the sense." The sign is supposed to point unidirectionally to a thing; however, figurative signs convert or "commute" (to use JACQUES DERRIDA's term) things into signs in a process that may be, for modern theorists, interminable. This process of commutation works to undermine the stable referentiality that Augustine seeks. *The Trinity* asserts the stability of the biblical sign to guarantee that the relationship between literal and figurative uses is as stable as the relationship between sign and thing. But Augustinian sign theory requires a mysterious transcendental signified (again Derrida's term), a prevocalic word that can stand outside of, initiate, and control the processes of figurative language: "We must, therefore, come to that word of man; . . . it precedes all the signs by which it is signified, and is begotten by the knowledge which remains in the mind . . . just as it is." Yet because allegory depends on the gap between signs and what they signify, there is always a danger, which Augustine does not fully acknowledge, that interpretation will reveal not a stable and fixed truth but a free play of signification. Instead he fills the gap opened up between sign and signifier with faith. Notwithstanding the theological nature of his solution to a problem that continues to vex contemporary linguistics, Augustine's rich remarks on signification laid the foundation for twentieth-century semiotics.

BIBLIOGRAPHY

Augustine's complete works in Latin can be found in his *Opera Omnia* (1830–38). More up-to-date editions of some works appear in the unfinished *Bibliothèque Augustinienne* (1947–). English translations of Augustine's major works, including Stephen McKenna's 1963 translation of *The Trinity*, are included in Catholic University's *Fathers of the Church* series (1947–). D. W. Robertson Jr.'s 1958 translation of *On Christian Doctrine* is usually favored by scholars. John Healey's 1940 translation of *The City of God* is widely cited, as is John K. Ryan's 1960 translation of *The Confessions*. Peter Brown's universally acclaimed biography, *Augustine of Hippo* (1967), is an excellent source of information on the saint's life. Eugene Portalie's *Guide to the Thought of St. Augustine* (1960) is an accessible and carefully indexed guide to Augustine's writings. D. W. Robertson's *Preface to Chaucer* (1963), controversial since its publication, is a learned and useful introduction to Augustinian aesthetics. Marcia L. Colish's *Mirror of Language: A Study in the Medieval Theory of Knowledge* (1968) cogently draws out the implications of Augustinian sign theory for later medieval theorists such as Thomas Aquinas and Dante. *Augustine: A Collection of Critical Essays* (1972), edited by R. A. Markus, provides a range of critical views. Augustine's influence on the later Middle Ages is examined in *Reading and Wisdom: The De doctrina christiana of Augustine in the Middle Ages*, edited by E. D. English (1995). The *Augustinus-Lexicon* (1985–), when completed (vol. 1 is currently available), will become the standard reference work, containing encyclopedic articles on Augustine's life, works, and doctrine. The *Fichier Augustinien* (1972) offers a comprehensive bibliography to 1970, with one supplemental volume (1978).

*From On Christian Doctrine*¹*From Book One*

II

[2] All doctrine concerns either things or signs, but things are learned by signs. Strictly speaking, I have here called a "thing" that which is not used to signify something else, like wood, stone, cattle, and so on; but not that wood concerning which we read that Moses cast it into bitter waters that their bitterness might be dispelled,² nor that stone which Jacob placed at his head,³ nor that beast which Abraham sacrificed in place of his son.⁴ For these are things in such a way that they are also signs of other things.⁵ There are other signs whose whole use is in signifying, like words. For no one uses words except for the purpose of signifying something. From this may be understood what we call "signs"; they are things used to signify something. Thus every sign is also a thing, for that which is not a thing is nothing at all; but not every thing is also a sign. And thus in this distinction between things and signs, when we speak of things, we shall so speak that, although some of them may be used to signify something else, this fact shall not disturb the arrangement we have made to speak of things as such first and of signs later. We should bear in mind that now we are to consider what things are, not what they signify beyond themselves.

From Book Two

I

[1] Just as I began, when I was writing about things, by warning that no one should consider them except as they are, without reference to what they signify beyond themselves, now when I am discussing signs I wish it understood that no one should consider them for what they are but rather for their value as signs which signify something else. A sign is a thing which causes us to think of something beyond the impression the thing itself makes upon the senses. Thus if we see a track, we think of the animal that made the track; if we see smoke, we know that there is a fire which causes it; if we hear the voice of a living being, we attend to the emotion it expresses; and when a trumpet sounds, a soldier should know whether it is necessary to advance or to retreat, or whether the battle demands some other response.

[2] Among signs, some are natural and others are conventional. Those are natural which, without any desire or intention of signifying, make us aware of something beyond themselves, like smoke which signifies fire. It does this without any will to signify, for even when smoke appears alone, observation and memory of experience with things bring a recognition of an underlying fire. The track of a passing animal belongs to this class, and the face of one who is wrathful or sad signifies his emotion even when he does not wish to

1. Translated by D. W. Robertson Jr., who sometimes adds clarifying words or phrases in brackets.

2. Exodus 15.25.

3. Genesis 28.11.

4. Genesis 22.13.

5. According to St. Augustine, the "wood" is a sign of the cross. The "stone" and the "beast" represent the human nature of Christ [translator's note].

show that he is wrathful or sad, just as other emotions are signified by the expression even when we do not deliberately set out to show them. But it is not proposed here to discuss signs of this type. Since the class formed a division of my subject, I could not disregard it completely, and this notice of it will suffice.

II

[3] Conventional signs are those which living creatures show to one another for the purpose of conveying, in so far as they are able, the motion of their spirits or something which they have sensed or understood. Nor is there any other reason for signifying, or for giving signs, except for bringing forth and transferring to another mind the action of the mind in the person who makes the sign. We propose to consider and to discuss this class of signs in so far as men are concerned with it, for even signs given by God and contained in the Holy Scriptures are of this type also, since they were presented to us by the men who wrote them. Animals also have signs which they use among themselves, by means of which they indicate their appetites. For a cock who finds food makes a sign with his voice to the hen so that she runs to him. And the dove calls his mate with a cry or is called by her in turn, and there are many similar examples which may be adduced. Whether these signs, or the expression or cry of a man in pain, express the motion of the spirit without intention of signifying or are truly shown as signs is not in question here and does not pertain to our discussion, and we remove this division of the subject from this work as superfluous.

III

[4] Among the signs by means of which men express their meanings to one another, some pertain to the sense of sight, more to the sense of hearing, and very few to the other senses. For when we nod, we give a sign only to the sight of the person whom we wish by that sign to make a participant in our will. Some signify many things through the motions of their hands, and actors give signs to those who understand with the motions of all their members as if narrating things to their eyes. And banners and military standards visibly indicate the will of the captains. And all of these things are like so many visible words. More signs, as I have said, pertain to the ears, and most of these consist of words. But the trumpet, the flute, and the harp make sounds which are not only pleasing but also significant, although as compared with the number of verbal signs the number of signs of this kind are few. For words have come to be predominant among men for signifying whatever the mind conceives if they wish to communicate it to anyone. However, Our Lord gave a sign with the odor of the ointment with which His feet were anointed;⁶ and the taste of the sacrament of His body and blood signified what He wished;⁷ and when the woman was healed by touching the hem of His garment,⁸ something was signified. Nevertheless, a multitude of innumerable signs by means of which men express their thoughts is made

6. In the gospel of St. John (12.3-8), Mary anoints Christ's feet with precious ointment. Later in *On Christian Doctrine*, Augustine interprets the "good odor" of the ointment as a sign of "good fame"

(3.12.18).

7. Matthew 26.28; Luke 22.19-20.

8. Matthew 9.20-22.

up of words. And I could express the meaning of all signs of the type here touched upon in words, but I would not be able at all to make the meanings of words clear by these signs.

IV

[5] But because vibrations in the air soon pass away and remain no longer than they sound, signs of words have been constructed by means of letters. Thus words are shown to the eyes, not in themselves but through certain signs which stand for them. These signs could not be common to all peoples because of the sin of human dissension which arises when one people seizes the leadership for itself. A sign of this pride is that tower⁹ erected in the heavens where impious men deserved that not only their minds but also their voices should be dissonant.

X

[15] There are two reasons why things written are not understood: they are obscured either by unknown or by ambiguous signs. For signs are either literal or figurative. They are called literal when they are used to designate those things on account of which they were instituted; thus we say *bos* [ox] when we mean an animal of a herd because all men using the Latin language call it by that name just as we do. Figurative signs occur when that thing which we designate by a literal sign is used to signify something else; thus we say "ox" and by that syllable understand the animal which is ordinarily designated by that word, but again by that animal we understand an evangelist, as is signified in the Scripture, according to the interpretation of the Apostle, when it says, "Thou shalt not muzzle the ox that treadeth out the corn."¹

XI

[16] Against unknown literal signs the sovereign remedy is a knowledge of languages. And Latin-speaking men, whom we have here undertaken to instruct, need two others for a knowledge of the Divine Scriptures, Hebrew and Greek,² so that they may turn back to earlier exemplars if the infinite variety of Latin translations gives rise to any doubts. Again, in these books we frequently find untranslated Hebrew words, like *amen*, *alleluia*, *racha*, *hosanna*, and so on, of which some, although they could be translated, have been preserved from antiquity on account of their holier authority, like *amen* and *alleluia*; others, like the other two mentioned above, are said not to be translatable into another language. For there are some words in some languages which cannot be translated into other languages. And this is especially true of interjections which signify the motion of the spirit rather than any part of a rational concept. And these two belong to this class: *racha* is said to be an expression of indignation and *hosanna* an expression of delight. But a knowledge of these two languages is not necessary for these few things, which are easy to know and to discover, but, as we have said, it is necessary

1. Deuteronomy 25.4. St. Paul interprets oxen as apostles, those "who labor in the word and doc-

trine," in 1 Corinthians 9.9 and 1 Timothy 5.18.

2. Augustine himself admits to having little Greek and no Hebrew.

on account of the variety of translations. We can enumerate those who have translated the Scriptures from Hebrew into Greek, but those who have translated them into Latin are innumerable. In the early times of the faith when anyone found a Greek codex, and he thought that he had some facility in both languages, he attempted to translate it.

XXIX

[40] Lettered men should know, moreover, that all those modes of expression which the grammarians designate with the Greek word *tropes* were used by our authors, and more abundantly and copiously than those who do not know them and have learned about such expressions elsewhere are able to suppose or believe. Those who know these tropes, however, will recognize them in the sacred letters, and this knowledge will be of considerable assistance in understanding them. But it is not proper to teach them to the ignorant here, lest we seem to be teaching the art of grammar. I advise that they be learned elsewhere, although I have already advised the same thing before in the second book where I discussed the necessary knowledge of languages. For letters from which grammar takes its name—the Greeks call letters *grám-mata*—are indeed signs of sounds made by the articulate voice with which we speak. And not only examples of all these tropes are found in reading the sacred books, but also the names of some of them, like *allegoria*, *aenigma*, *parabola*.³ And yet almost all of these tropes, said to be learned in the liberal arts, find a place in the speech of those who have never heard the lectures of grammarians and are content with the usage of common speech. For who does not say, “So may you flourish”? And this is the trope called metaphor. Who does not use the word *piscina* [basin, pool, pond, tank, or other large container for water] for something which neither contains fish nor was constructed for the use of fish, when the word itself is derived from *piscis* [fish]? This trope is called catachresis.⁴

[41] It would be tedious to describe other examples of this kind. For the vulgar speech even extends to those tropes which are more remarkable because they imply the opposite of what is said, like that which is called irony or antiphrasis.⁵ Now irony indicates by inflection what it wishes to be understood, as when we say to a man who is doing evil, “You are doing well.” Antiphrasis, however, does not rely on inflection that it may signify the contrary, but either uses its own words whose origin is from the contrary, like *lucus*, “groove,” so called *quod minime luceat*, “because it has very little light”; or it indicates that a thing is so when it wishes to imply the contrary, as when we seek to obtain what is not there and we are told, “There is plenty.” Or, by adding words we may indicate that what we say is to be taken in a contrary sense, as when we say, “Beware of him, for he is a good man.” And what unlearned man does not say such things without knowing at all what these tropes are or what they are called? Yet an awareness of them is nec-

3. Teaching moral lessons by means of extended metaphors. “*Allegoria*”: saying one thing to mean another. “*Aenigma*”: allusive or obscure speech.

4. A strained use of words.

5. From *anti*, meaning reverse, and *phrasis*, meaning diction: saying one thing and meaning the contrary.

essary to a solution of the ambiguities of the Scriptures, for when the sense is absurd if it is taken verbally, it is to be inquired whether or not what is said is expressed in this or that trope which we do not know; and in this way many hidden things are discovered.

From The Trinity¹

From Book Fifteen

FROM CHAPTER 9

[15] We have spoken about these things because of what the Apostle has said: 'we see now through a mirror.'² But since he added 'in an enigma,' his meaning is unknown to many who are ignorant of that branch of literature in which these modes of speech are taught; they are called tropes by the Greeks, and we ourselves also use this Greek word in place of the Latin. For just as we are more accustomed to say *schemata*³ than figures, so we are more accustomed to say tropes instead of modes. But to render the names of all the modes or tropes in Latin, so as to apply to each word its appropriate name, is very difficult and quite unusual. Therefore, some of our interpreters, reluctant to use the Greek word where the Apostle says 'which are by way of allegory,'⁴ have translated it by a circumlocution, saying 'those which signify one thing by another.' But there are very many species of this trope or allegory, and among them is that which is also called an enigma.⁵

But the definition of a generic term itself must include all the species. And, therefore, just as every horse is an animal, but not every animal is a horse, so every enigma is an allegory, but not every allegory is an enigma. What, then, is an allegory except a trope in which one thing is understood from another, as when he writes to the Thessalonians: 'Therefore, let us not sleep as do the rest, but let us be wakeful and sober. For they who sleep, sleep at night, and they who are drunk are drunk at night. But let us, who are of the day, be sober?'⁶ This allegory, however, is not an enigma, for unless one is very slow of comprehension, its meaning is clear. But, to explain it briefly, an enigma is an obscure allegory, such as: 'The horseleech has three daughters,'⁷ and whatever expressions are similar to this. But where the Apostle⁸ speaks of the allegory, he finds it not in the words but in the deed; for he pointed out that by the two sons of Abraham, the one by a slave-girl and the other by a free woman—he was not speaking figuratively, but of something that also took place—the two Testaments are to be understood; this was obscure before he explained it, and, hence, such an allegory, which is a general name, could also be specially called an enigma.

7. Proverbs 30.15.

8. St. Paul, Galatians 4.22-24.

FROM CHAPTER 10

* * *

[18] Some thoughts, then, are speeches of the heart, and that a mouth is also there⁹ is shown by the Lord when He says: 'What goes into the mouth doth not defile a man, but what comes out of the mouth, that defiles a man.'¹ In one sentence he has included the two different mouths of man, the one of the body, the other of the heart. For certainly these people² thought that a man is defiled by that which enters the mouth of the body, but the Lord said a man is defiled by that which comes out of the mouth of the heart. Such was the explanation that He Himself gave of what He had said. For a little later He spoke of this subject to His disciples: 'Are you also even yet without understanding? Do you not understand that whatever enters the mouth, passes into the belly and is cast out into the drain?' Here indeed He referred very clearly to the mouth of the body. But He indicates the mouth of the heart in that which follows: 'But the things that proceed out of the mouth come from the heart, and it is they that defile a man. For out of the heart come evil thoughts,' etc.³ What clearer explanation can there be than this? Yet because we speak of thoughts as speeches of the heart, we do not, therefore, mean that they are not at the same time acts of sight, which arise from the sights of knowledge when they are true.

For when these take place outwardly through the body, then speech is one thing and sight another thing; but when we think inwardly, then both are one: Just as hearing and sight are two things, differing from each other in the senses of the body, but in the mind it is not one thing to see and another thing to hear; and, therefore, although speech is not seen outwardly, but is rather heard, yet the Holy Gospel says that the inner speeches, that is, the thoughts, were seen by the Lord and not heard: 'They said within themselves, "He blasphemes,"' and then it adds: 'And when Jesus had seen their thoughts.'⁴ He saw, therefore, what they had said. For by His own thought He saw their thoughts which they alone thought that they saw.

[19] Whoever, then, can understand the word, not only before it sounds, but even before the images of its sounds are contemplated in thought—such a word belongs to no language, that is, to none of the so-called national languages, of which ours is the Latin—whoever, I say, can understand this, can already see through this mirror and in this enigma some likeness of that Word of whom it was said: 'In the beginning was the Word, and the Word was with God; and the Word was God.'⁵

For when we speak the truth, that is, speak of what we know, then the word which is born from the knowledge itself which we retain in the memory must be altogether of the same kind as that knowledge from which it is born. For the thought formed from that thing which we know is the word which we speak in our heart, and it is neither Greek, nor Latin, nor of any other language, but when we have to bring it to the knowledge of those to whom we are speaking, then some sign is assumed by which it may be made known. And generally this is a sound, but at times also a nod; the former is shown

9. That is, in the heart.

4. Matthew 9.2-4.

5. John 1.1.

to the ears, the latter to the eyes, in order that that word which we bear in our mind may also become known by bodily signs to the senses of the body. For even to nod, what else is it but to speak, as it were, in a visible manner? A witness for this opinion is found in the Sacred Scriptures, for we read as follows in the Gospel according to John: 'Amen, amen I say to you, one of you shall betray me. The disciples therefore looked at one another, uncertain of whom he was speaking. Now one of his disciples, he whom Jesus loved, was reclining at Jesus' bosom. Simon Peter therefore beckoned to him, and said to him, "Who is it of whom he speaks?"' ⁶ Behold, he spoke by beckoning what he did not venture to speak aloud. But we make use of these and other corporeal signs of this kind when we speak to the eyes or the ears of those who are present. But letters have also been found by which we can also speak to those who are absent; but the letters are the signs of words, while the words themselves in our speech are signs of the things of which we are thinking.

FROM CHAPTER 11

[20] Hence, the word which sounds without is a sign of the word that shines within, to which the name of word more properly belongs. For that which is produced by the mouth of the flesh is the sound of the word, and is itself also called the word, because that inner word assumed it in order that it might appear outwardly. For just as our word in some way becomes a bodily sound by assuming that in which it may be manifested to the senses of men, so the Word of God was made flesh by assuming that in which He might also be manifested to the senses of men. And just as our word becomes a sound and is not changed into a sound, so the Word of God indeed becomes flesh, but far be it from us that it should be changed into flesh. For by assuming it, not by being consumed in it, this word of ours becomes a sound, and that Word becomes flesh.

Whoever, then, desires to arrive at some kind of a likeness to the Word of God, although unlike it in many things, let him not behold our word which sounds in the ears, either when it is brought forth in sound, or when it is thought in silence. For all words, no matter in what language they may sound, are also thought in silence; and hymns run through our mind, even when the mouth of the body is silent; not only the numbers of the syllables, but also the melodies of the hymns, since they are corporeal and belong to that sense of the body called hearing, are present by their own kind of incorporeal images to those who think of them, and silently turn all of them over in their minds.

But we must pass by these things in order to arrive at that word of man, for by its likeness, of whatever sort it may be, the Word of God may in some manner be seen as in an enigma: not that which was spoken to this or that Prophet, and of which it was said: 'But the word of God increased and multiplied,'⁷ and of which it was again said: 'Faith then by hearing, and hearing by the word of Christ,'⁸ and again: 'When you received from us the word of God, you received it not as the word of man, but, as it truly is, the word of God.'⁹ There are numberless instances in the Scriptures where similar state-

6. John 13.21-24.
7. Acts 6.7.

8. Romans 10.17.
9. 1 Thessalonians 2.13.

ments are made about the word of God, which is scattered in the sounds of many different languages through the hearts and mouths of men. But it is called the word of God, therefore, because a divine and not a human doctrine is handed down. But by means of this likeness we are endeavoring to see that Word of God, in whatever way we can, of whom it was said: 'The Word was God,' of whom it was said: 'All things were made through him,' of whom it was said: 'The Word was made flesh,'¹ of whom it was said: 'The word of God on high is the fountain of wisdom.'²

We must, therefore, come to that word of man, to the word of a living being endowed with reason, to the word of the image of God, not born of God but made by God; this word cannot be uttered in sound nor thought in the likeness of sound, such as must be done with the word of any language; it precedes all the signs by which it is signified, and is begotten by the knowledge which remains in the mind when this same knowledge is spoken inwardly, just as it is. For the sight of thought is very similar to the sight of knowledge. For, when it is spoken through a sound or through some bodily sign, it is not spoken just as it is, but as it can be seen or heard through the body. When, therefore, that which is in the knowledge is in the word, then it is a true word, and the truth which is expected from man, so that what is in the knowledge is also in the word, and what is not in the knowledge is not in the word; it is here that we recognize 'Yes, yes; no, no.'³ In this way the likeness of the image that was made approaches, insofar, as it can, to the likeness of the image that was born, whereby God the Son is proclaimed as substantially like the Father in all things.

The following likeness in this enigma to the Word of God is also to be noted: just as it was said of that Word: 'All things were made through him,'⁴ where it is declared that God made all things through His only-begotten Word, so there are no works of man which are not first spoken in the heart, and, therefore, it is written: 'The beginning of every work is the word.'⁵ But even here when the word is true, then it is the beginning of a good work. But the word is true, if it is begotten from the knowledge of working well, so that here too the admonition may be preserved: 'Yes, yes; no, no.' If it is 'yes' in the knowledge by which one must live, it is also 'yes' in the word by which the work is to be fulfilled; if it is 'no' there, it is also 'no' here. Otherwise, such a word will be a lie, not the truth, and consequently a sin and not a right work.

In the likeness of our word, there is also this likeness of the Word of God, that our word can exist and yet no work may follow it; but there can be no work unless the word precedes, just as the Word of God could be, even though no creature existed, but no creature could be, except through that Word through whom all things were made. Therefore, not God the Father, not the Holy Spirit, not the Trinity itself, but the Son alone, who is the Word of God, was made flesh, although the Trinity brought this about, in order that by our word following and imitating His example, we might live rightly, that is, that we might have no lie either in the contemplation or in the work of our word. But this perfection of this image is to be at some time in the

future. In order to obtain it, the good master instructs us by the Christian faith and the doctrine of godliness, that 'with face unveiled, from the veil of the Law, which is the shadow of things to come, beholding the glory of the Lord,' that is, looking as it were through a mirror, 'we might be transformed into the same image from glory to glory, as through the Spirit of the Lord,'⁶ according to our previous explanation of these words.

6. 2 Corinthians 3.18.

MACROBIUS

b. ca. 360

Throughout the Middle Ages and up until at least the end of the seventeenth century, Macrobius's *Commentary on the Dream of Scipio* was the authoritative text on the meaning of dreams, influencing poets and critics from DANTE and Chaucer down to Milton. In addition this account of dreams in general, and Scipio's dream in particular, engages with questions about the role of fables in philosophy and the figurative nature of the truth that have interested philosophers as diverse as FRIEDRICH NIETZSCHE, Richard Rorty, and JACQUES DERRIDA. When Macrobius wrote that "Philosophy does not discountenance all stories nor does it accept all," he defined for subsequent ages the Neoplatonic attitude toward literature. Some fables proclaim their falsity and deserve at best to be relegated to "children's nurseries." But others, those which present "a decent and dignified conception of holy truths . . . presented beneath a modest veil of allegory," are not only appropriate but necessary to philosophy. In this way Macrobius's commentary defends Cicero's inclusion of the "Dream of Scipio" in a serious philosophical treatise on good government.

In the oldest manuscripts the author of *Commentary on the Dream of Scipio* is called "Macrobius Ambrosius Theodosius, vir clarissimus et illustris" (most famous and illustrious man), a title that, in the Roman world of late antiquity, was used only of someone holding the highest public office. Almost nothing else is known of his life except that he was not a native of Italy; he may have been from Africa; he had a son, Eustachius, to whom he dedicated his major works; and he flourished at the end of the fourth and beginning of the fifth century. Scholars have attempted, unsuccessfully, to identify him with various government functionaries also named Macrobius who are mentioned in legal texts of the period. Although he was a contemporary of St. AUGUSTINE, it is not clear whether Macrobius was a Christian. He never mentions Christianity and reveals in his writing a fondness for pagan antiquities. However, to hold high governmental positions in the fifth-century Roman world, he would have had to be at least a nominal Christian, and nothing in the texts attributed to him would contradict the beliefs of fifth-century Christianity.

Macrobius is the author of two works that have been wholly or partially preserved, the *Saturnalia* (ca. 395) and *Commentary on the Dream of Scipio* (ca. 400). A third treatise, *On the Differences and Similarities of the Greek and Latin Verb*, has been lost, though summaries of it survive in the later Middle Ages. Books 3 and 4 of *Saturnalia* are devoted to commentary on Virgil's works; they illustrate the tendency

in the fourth-century Roman world to regard Virgil less as a great poet than as a philosopher, an authority of prodigious wisdom and learning, a role he plays in the *Commentary* as well.

At the conclusion of his *Republic*, the Roman statesman and philosopher Cicero (106–43 B.C.E.) recounts a dream of Scipio Africanus the Younger (Roman general and statesman, ca. 184–129 B.C.E), in which he meets his famous grandfather, Scipio Africanus the Elder (ca. 235–183 B.C.E.), the general who defeated Hannibal during the Second Punic War. In the course of the dream, Scipio the Elder shows his grandson a vision of the “celestial circles, orbits, and spheres, the movements of the planets, and the revolutions of the heavens.” The *Republic*, a treatise on good government modeled on PLATO’s *Republic*, was not known in the Middle Ages except for this brief fragment, which was preserved only because Macrobius wondered why Cicero would choose to include such a “fiction and dream” in a serious philosophical treatise. Macrobius defends the obviously fabulous “Dream of Scipio” from detractors who argued that “philosophers should refrain from using fiction since no kind of fiction has a place with those who profess to tell the truth.”

Macrobius’s *Commentary on the Dream of Scipio* is a fascinating example of an early commentary on a nonbiblical text; it greatly influenced the development of this medieval genre, an expository tradition that grew out of the late classical encyclopedic glosses of pagan texts. Commentaries were central to the medieval experience of reading any authoritative (that is, Latin) text, an integral part of the process of transmitting canonical works. Macrobius’s commentary uses Scipio’s dream as an occasion for an exposition of Neoplatonic doctrine and its relation to such subjects as arithmetic, astronomy, the music of the spheres, geography, and the immortality of the soul. Macrobius’s philosophical Neoplatonism, however, his belief that reality must be located in a transcendental spiritual realm that gives meaning to the visible world, is of interest to literary critics primarily because it contends that the higher truths philosophy strives to discover can be accessed only through figurative language and allegorical veils.

“The Dream of Scipio” offers a wide-ranging account of dreams and their relationship to the fables required to make sense of transcendent truths such as the nature of the soul or God. Macrobius catalogues the various types of dreams, particularly the five varieties of “enigmatic dreams,” demonstrating a systematic approach to dream interpretation that would dominate the understanding of dreams for centuries. Throughout the Middle Ages, this chapter on dreams was the most popular section of the *Commentary*. While its details differ from the later psychoanalytic approach to dreams, Macrobius’s account shares with SIGMUND FREUD’s analysis a belief that dreams function like narratives and can be used to uncover truths not visible to empirical observation.

BIBLIOGRAPHY

The standard Latin edition of Macrobius’s works, *Macrobius*, was edited by Francis Eyssenhardt in 1893 and updated by J. Willis in 1963. *Commentary on the Dream of Scipio* was translated into English by William Harris Stahl in 1952. In 1969 Percival Vaughan Davies published an English translation of Macrobius’s only other surviving work, *The Saturnalia*. Few studies focus on Macrobius as a figure in his own time. These include Thomas Whittaker in *Macrobius: or, Philosophy, Science, and Letters in the Year 400* (1923) and Herman de Ley in *Macrobius and Numenius: A Study of Macrobius, In Somnium Scipionis l.c.12* (1972). T. R. Glover includes a chapter on Macrobius in *Life and Letters in the Fourth Century* (1968), as does Jane Chance in *Medieval Mythography: From Roman North Africa to the School of Chartres, A.D. 433–1177* (1994). Most literary studies track the influence of Macrobius’s analysis of dreams on later medieval literature and criticism; among the best examples are Allison M. Peden’s “Macrobius and Medieval Dream Literature” (1985) and Constance B.

Heatt's "The Dreams of Troilus, Criseyde, and Chauntecleer: Chaucer's Manipulation of the Categories of Macrobius" (1988).

From Commentary on the Dream of Scipio¹

Chapter III

[1] After these prefatory remarks, there remains another matter to be considered before taking up the text of *Scipio's Dream*. We must first describe the many varieties of dreams recorded by the ancients, who have classified and defined the various types that have appeared to men in their sleep, wherever they might be.² Then we shall be able to decide to which type the dream we are discussing belongs.

[2] All dreams may be classified under five main types: there is the enigmatic dream, in Greek *oneiros*, in Latin *somnium*; second, there is the prophetic vision, in Greek *horama*, in Latin *visio*; third, there is the oracular dream, in Greek *chrematismos*, in Latin *oraculum*; fourth, there is the nightmare, in Greek *enypnion*, in Latin *insomnium*; and last, the apparition, in Greek *phantasma*, which Cicero, when he has occasion to use the word, calls *visum*.

[3] The last two, the nightmare and the apparition, are not worth interpreting since they have no prophetic significance. [4] Nightmares may be caused by mental or physical distress, or anxiety about the future: the patient experiences in dreams vexations similar to those that disturb him during the day. As examples of the mental variety, we might mention the lover who dreams of possessing his sweetheart or of losing her, or the man who fears the plots or might of an enemy and is confronted with him in his dream or seems to be fleeing him. The physical variety might be illustrated by one who has overindulged in eating or drinking and dreams that he is either choking with food or unburdening himself, or by one who has been suffering from hunger or thirst and dreams that he is craving and searching for food or drink or has found it. Anxiety about the future would cause a man to dream that he is gaining a prominent position or office as he hoped or that he is being deprived of it as he feared.

[5] Since these dreams and others like them arise from some condition or circumstance that irritates a man during the day and consequently disturbs him when he falls asleep, they flee when he awakes and vanish into thin air. Thus the name *insomnium* was given, not because such dreams occur "in sleep"—in this respect nightmares are like other types—but because they are noteworthy only during their course and afterwards have no importance or meaning.

[6] Virgil, too, considers nightmares deceitful: "False are the dreams (*insomnia*) sent by departed spirits to their sky."³ He used the word "sky" with reference to our mortal realm because the earth bears the same relation to the regions of the dead as the heavens bear to the earth. Again, in describ-

1. Translated by William Harris Stahl.

2. Macrobius's classification of dreams may have been derived from Artemidorus (late 2d c. C.E.), a Greek writer who traveled extensively to collect

dreams and wrote a treatise, *Onirocriticon*, on the interpretation of dreams.

3. *Aeneid* 6.896.

ing the passion of love, whose concerns are always accompanied by nightmares, he says: "Oft to her heart rushes back the chief's valour, oft his glorious stock; his looks and words cling fast within her bosom, and the pang withholds calm rest from her limbs." And a moment later: "Anna, my sister, what dreams (*insomnia*) thrill me with fears?"⁴

[7] The apparition (*phantasma* or *visum*) comes upon one in the moment between wakefulness and slumber, in the so-called "first cloud of sleep." In this drowsy condition he thinks he is still fully awake and imagines he sees specters rushing at him or wandering vaguely about, differing from natural creatures in size and shape, and hosts of diverse things, either delightful or disturbing. To this class belongs the incubus,⁵ which, according to popular belief, rushes upon people in sleep and presses them with a weight which they can feel. [8] The two types just described are of no assistance in foretelling the future; but by means of the other three we are gifted with the powers of divination.

We call a dream oracular in which a parent, or a pious or revered man, or a priest, or even a god clearly reveals what will or will not transpire, and what action to take or to avoid. [9] We call a dream a prophetic vision if it actually comes true. For example, a man dreams of the return of a friend who has been staying in a foreign land, thoughts of whom never enter his mind. He goes out and presently meets his friend and embraces him. Or in his dream he agrees to accept a deposit, and early the next day a man runs anxiously to him, charging him with the safekeeping of his money and committing secrets to his trust. [10] By an enigmatic dream we mean one that conceals with strange shapes and veils with ambiguity the true meaning of the information being offered, and requires an interpretation for its understanding. We need not explain further the nature of this dream since everyone knows from experience what it is. There are five varieties of it: personal, alien, social, public, and universal. [11] It is called personal when one dreams that he himself is doing or experiencing something; alien, when he dreams this about someone else; social, when his dream involves others and himself; public, when he dreams that some misfortune or benefit has befallen the city, forum, theater, public walls, or other public enterprise; universal, when he dreams that some change has taken place in the sun, moon, planets, sky, or regions of the earth.

[12] The dream which Scipio reports that he saw embraces the three reliable types mentioned above, and also has to do with all five varieties of the enigmatic dream. It is oracular since the two men who appeared before him and revealed his future, Aemilius Paulus and Scipio the Elder, were both his father,⁶ both were pious and revered men, and both were affiliated with the priesthood. It is a prophetic vision since Scipio saw the regions of his abode after death and his future condition. It is an enigmatic dream because the truths revealed to him were couched in words that hid their profound meaning and could not be comprehended without skillful interpretation.

It also embraces the five varieties of the last type. [13] It is personal since Scipio himself was conducted to the regions above and learned of his future.

4. *Aeneid* 4.3–5, 9.

5. An evil spirit or demon, originating in personified representations of nightmares, who was supposed to have sexual intercourse with women while they were sleeping.

6. Scipio the Younger (ca. 184–129 B.C.E.), the natural son of Aemilius Paulus (d. 160 B.C.E.), a famous Roman general, was adopted sometime before 168 B.C.E. by Scipio Africanus, the eldest son of Scipio the Elder.

It is alien since he observed the estates to which the souls of others were destined. It is social since he learned that for men with merits similar to his the same places were being prepared as for himself. It is public since he foresaw the victory of Rome and the destruction of Carthage, his triumph on the Capitoline, and the coming civil strife.⁷ And it is universal since by gazing up and down he was initiated into the wonders of the heavens, the great celestial circles, and the harmony of the revolving spheres,⁸ things strange and unknown to mortals before this; in addition he witnessed the movements of the stars and planets and was able to survey the whole earth.

[14] It is incorrect to maintain that Scipio was not the proper person to have a dream that was both public and universal inasmuch as he had not yet attained the highest office but, as he himself admitted, was still ranked "not much higher than a private soldier."⁹ The critics say that dreams concerning the welfare of the state are not to be considered significant unless military or civil officers dream them, or unless many plebeians have the same dream.

[15] They cite the incident in Homer¹ when, before the assembled Greeks, Agamemnon disclosed a dream that he had had about a forthcoming battle. Nestor, who helped the army quite as much with his prudence as all the youth with their might, by way of instilling confidence in the dream said that in matters of general welfare they had to confide in the dream of a king, whereas they would repudiate the dream of anyone else. [16] However, the point in Scipio's favor was that although he had not yet held the consulship² or a military command, he—who himself was destined to lead that campaign—was dreaming about the coming destruction of Carthage, was witnessing the public triumph in his honor, and was even learning of the secrets of nature; for he excelled as much in philosophy as in deeds of courage.

[17] Because, in citing Virgil above as an authority for the unreliability of nightmares, we excerpted a verse from his description of the twin portals of dreams, someone may take the occasion to inquire why false dreams are allotted to the gate of ivory and trustworthy ones to the gate of horn.³ He should avail himself of the help of Porphyry,⁴ who, in his *Commentaries*, makes the following remarks on a passage in Homer⁵ presenting the same distinction between gates: "All truth is concealed. [18] Nevertheless, the soul, when it is partially disengaged from bodily functions during sleep, at times gazes and at times peers intently at the truth, but does not apprehend it; and when it gazes it does not see with clear and direct vision, but rather with a dark obstructing veil interposed." [19] Virgil attests that this is natural in the following lines: "Behold—for all the cloud, which now, drawn over thy sight, dulls thy mortal vision and with dank pall enshrouds thee, I will tear away."⁶ [20] If, during sleep, this veil permits the vision of the attentive soul to perceive the truth, it is thought to be made of horn, the nature of which is such that, when thinned, it becomes transparent. When the veil

7. Cicero was writing shortly before the civil war that was to end republican government in Rome. The Capitoline: a hill in Rome. Carthage: an African city (near modern Tunis) destroyed by the Romans in 146 B.C.E. in the Second Punic War.
8. The ancients believed that the universe consisted of a fixed Earth surrounded by eight or nine concentric spheres. The movement of the spheres was supposed to produce a perfectly harmonious music.

dulls the vision and prevents its reaching the truth, it is thought to be made of ivory, the composition of which is so dense that no matter how thin a layer of it may be, it remains opaque.

ca. 400

HUGH OF ST. VICTOR

ca. 1097–1141

It is common for students of literature to question the utility of literary study and for their professors to defend it, articulating its place among the disciplines that constitute the contemporary university curriculum. Medieval writers wrestled with the same questions, especially writers concerned with the education of those who would join the ranks of the literate. And though their answers might sometimes seem alien to us, their inquiry touches on issues that continue to resonate with modern readers of literature. Indeed, every literary curriculum begins with Hugh of St. Victor's three questions in *The Didascalicon, or On the Study of Reading* (ca. 1125): what should the literate individual read, in what sequence, and in what manner?

A book about literacy, *The Didascalicon* is a clear and orderly compendium of the medieval arts: a guide for the study of texts, both sacred and profane, written at a time when a "new learning"—specialized, rational, and scientific—was threatening the established curriculum of the trivium (grammar, dialectic, and rhetoric). In answer to those who embraced dialectic and disputation for their own sake, Hugh insists, in the preface to *The Didascalicon*, on the importance of reading, which "holds first place in instruction." Later in the text, he elaborates on the importance of understanding how to read figurative language: "Following the shadow, one comes to the body: learn the figure, and you will come to the truth." Hugh's attempt to combine, in a single rigorous educational program, biblical interpretation, theology, and a comprehensive philosophy was ambitious; the breadth and scope of his synthesis would earn him the title of "a second Augustine" (see AUGUSTINE). *The Didascalicon* attempts to demonstrate how all knowledge—secular and religious—can be used as preparation for the study of the Bible, which, in turn, would lead to the contemplation of God.

The facts of Hugh's life have been the subject of some controversy among medieval scholars. The evidence available on his early life is fragmentary and often enigmatic. He was born most likely in the last decade of the eleventh century and educated somewhere in Saxony or the Low Countries. Around 1118 Hugh arrived at the abbey of St. Victor in Paris, where he took his monastic vows and ultimately became master of its school. He served as prior of the abbey from 1133 until his death in 1141. Founded in 1108 by William of Champeaux in reaction to the success of the Parisian schools of theology, which emphasized dialectic and debate, the abbey of St. Victor already had a tradition of learning by the time of Hugh's arrival, but it did not have a distinctive theological or philosophical project. It was ready to receive the kind of intellectual synthesis and direction provided by texts like Hugh's *Dindimus's Epitome of Philosophy* (written between 1118 and 1125) and *The Didascalicon*. His work, aimed primarily at teachers, laid the groundwork for the teaching program at St. Victor's and brought the abbey considerable renown; its curriculum was widely copied throughout Europe in the twelfth century, influencing medieval writers as diverse as John of Salisbury and THOMAS AQUINAS. Hugh is also known for his biblical com-

mentaries and a number of mystical texts, the most important of which is the treatise *On the Sacraments of the Christian Faith* (ca. 1133).

The Didascalicon, Hugh's best-known work, belongs to a tradition of literature concerned with developing methods for the education of the individual. In the West the model of such didascalical literature is Augustine's *On Christian Doctrine* (see above), though the genre is considerably older, going back to Roman writers such as Cicero (106–43 B.C.E.) and QUINTILIAN and ultimately to the educational models propounded by PLATO and ARISTOTLE. *The Didascalicon's* concern to integrate various areas of learning with the study of Scriptures and with the scientific pursuit of a whole complex of arts is characteristic of the twelfth-century renaissance, a period that saw the growth of towns, the development of vernacular literature, the revival of the classical poets, the recovery of Greek science and philosophy, and especially the origins of universities.

The first half of *The Didascalicon* describes the range of secular knowledge, dividing philosophy into four master categories: the theoretical, or speculative, which leads toward the contemplation of truth; the practical, which includes morality and ethics; the mechanical, which incorporates the "occupations of life"; and the logical, without which one cannot understand rationally the other three. This division owes more to an Aristotelianism derived by way of Boethius (480–524 C.E.) than to Plato or the Neoplatonism (see PLOTINUS) that had dominated intellectual life in Europe since the fifth century. Knowledge of the four branches of philosophy was, for Hugh, a necessary preparation for the contemplative life that is the ultimate goal of *The Didascalicon*; in the end, however, reason must be supplemented by revelation.

For Hugh, as for Augustine before him, the authority of biblical language derived from its special mode of signification that sets it apart from secular texts. The Bible is polysemous, allowing individual signs to carry several different meanings or senses. In explicating Scriptures, Hugh advises the reader to consider—in order—the letter, the sense, and the inner meaning of a text. The "letter" refers to such matters as grammar, style, and rhetoric. The "sense" refers to the most obvious meaning conveyed by the letter. The "inner meaning," or *sententia*, is the hidden or deeper senses contained in the literal level.

Whereas earlier, for Augustine, meaning could disseminate from a word in several and perhaps even unpredictable directions (so long as the reader adhered to the interpretive principle of charity), for Hugh, as for other twelfth-century exegetes, meanings are organized systematically and hierarchically on three levels: the historical, the allegorical (which refers to the spiritual meaning), and the topological (which refers to moral messages). While this system of biblical interpretation was introduced in the West through the writings of John Cassian in the fourth century, it reached the height of its popularity in the twelfth century in treatises like *The Didascalicon*, although Hugh differs from most medieval exegetes in ascribing to Scriptures only three levels rather than four (compare, for example, Thomas Aquinas and DANTE). He also differs from other twelfth-century exegetes in his insistence that all three meanings cannot be dogmatically sought in every passage of Scriptures. Reacting against the allegorizing tendencies of many of his contemporaries, who often disregarded the literal sense of the text in favor of its other senses, Hugh asserted the importance of history—of the Bible's being the historical narrative of God's interactions with humanity—as the basis of all subsequent exegesis. His *Chronica* (written before 1141) was an attempt to write a history of the Jews that would illuminate the literal level of Scriptures.

Only after mastering the historical level of interpretation through the study of history, language, and geography are students ready to move on to the discipline of allegory, into which Hugh incorporated the field of theology. His *On the Sacraments of the Christian Faith*, the first great theological synthesis, or *summa*, of the Middle

Ages, is designed to provide the foundation for allegorical interpretation. Ultimately, students should be prepared to turn to the study of tropology, which concerned the moral and contemplative life. This Hugh examines most systematically in his two treatises on Noah's ark—*On the Moral Ark of Noah* and *On the Mystical Ark of Noah* (both written before 1141), which provide a methodical exposition of the stages of contemplative life.

Hugh's attempt to create an interpretive system that could order and control the proliferation of meanings attached to the Bible's figurative language reflects the widespread medieval tendency toward synopsis. But far from determining once and for all the significance of particular texts, new interpretations or "glosses" of the Bible proliferated in subsequent centuries at such a rate that by the fourteenth century, the term "gloss" was virtually synonymous with a lie, and much of the intellectual force of the later Protestant movement was directed against a system of commentary that had become overly complex and detached from the original narrative. Yet in its effort to come to terms with the difficulties of biblical language, Hugh's magisterial synthesis solidified conventions of interpretation that would influence subsequent literary criticism long after its particulars were forgotten. Like Augustine centuries before him and E. D. HIRSCH JR. centuries later, Hugh counsels interpreters to seek out the intention of the author first and relevant facts from the author's historical milieu and horizon second, two conventions of interpretation widely used and debated today.

BIBLIOGRAPHY

Hugh of St. Victor's Latin works are collected in the *Patrologia Latina*, vols. 175–77 (1879). Modern editions of individual Latin texts include *Didascalicon de studio legendi*, edited by Charles H. Buttmer (1939), and *Opera propaedeutica*, edited by Roger Baron (1966), which includes *Epitome Dindimi in philosophiam*. English translations include *On the Sacraments of the Christian Faith*, by Roy J. Defarrari (1951); *The Divine Love: Two Treatises*, an anonymous translation by a sister of the Anglican Community of St. Mary the Virgin (1956; C.S.M.V.); *Soliloquy on the Earnest Money of the Soul*, by Kevin Herbert (1956); *The Didascalicon: A Medieval Guide to the Arts* (1961), by Jerome Taylor, with valuable introduction and notes; and *Selected Spiritual Writings* (which includes the treatises on Noah), also translated by an anonymous sister of the C.S.M.V. (1962), with a useful introduction by Aelred Squire. While not exactly a typical biography, Jerome Taylor's *Origins and Early Life of Hugh of St. Victor: An Evaluation of the Tradition* (1957) presents a critical survey of the conflicting evidence available on Hugh's life.

John Philip Kleinz, in *The Theory of Knowledge of Hugh of St. Victor* (1944), examines Hugh's pedagogical works. Hugh's approach to biblical interpretation is treated in Beryl Smalley's *Study of the Bible in the Middle Ages* (1952). Roger Baron's French *Science et sagesse chez Hugues de Saint-Victor* (1957) is the best book-length study of Hugh's thought. For a modern commentary from a sympathetic, committed Christian, see Ivan Illich, *In the Vineyard of the Text: A Commentary of Hugh's Didascalicon* (1993). Rebecca Moore, in *Jews and Christians in the Life and Thought of Hugh of St. Victor* (1998), examines the respective influences of both the Jewish and Christian hermeneutic traditions on Hugh's writing. The bibliography in Taylor (cited above) is complete, though now dated. Readers may supplement it with the bibliography in Mark D. Jordan's entry on Hugh of St. Victor in the *Routledge Encyclopedia of Philosophy* (ed. Edward Craig, 1998).

*From The Didascalicon¹**From Book One*

FROM CHAPTER ELEVEN: CONCERNING THE ORIGIN OF LOGIC

Having demonstrated the origin of the theoretical, the practical, and the mechanical arts,² we must now therefore investigate as well the derivation of the logical; and these I have left to the end because they were the last to be discovered. All the other arts were invented first; but that logic too should be invented was essential, for no man can fitly discuss things unless he first has learned the nature of correct and true discourse. For, as Boethius³ declares, when the ancients first applied themselves to searching out the natures of things and the essentials of morality, they of necessity erred frequently, for they lacked discrimination in the use of words and concepts: "This is frequently the case with Epicurus,⁴ who thinks that the universe consists of atoms, and who falsely maintains that pleasure is virtue. Clearly, such errors befell Epicurus and others because, being unskilled in argument, they transferred to the real world whatever conclusion they had reached by reasoning. This is a great error indeed, for real things do not precisely conform to the conclusions of our reasoning as they do to a mathematical count. In counting, whatever result obtains in the figure of one who computes correctly is sure to obtain in reality as well, so that if a count of one hundred is registered, one hundred objects will also necessarily be found as the basis for that count. In argument, however, such a relationship does not obtain with equal force, and whatever emerges in the course of a discussion does not find a fixed counterpart in nature, either. Thus it is that the man who brushes aside knowledge of argumentation falls of necessity into error when he searches out the nature of things. For unless he has first come to know for certain what form of reasoning keeps to the true course of argument, and what form keeps only to a seemingly true course, and unless he has learned what form of reasoning can be depended upon and what form must be held suspect, he cannot attain, by reasoning, the imperishable truth of things.

"Since, therefore, the ancients, having fallen often into many errors, came to certain conclusions and arguments which were false and contrary to each other; and since it seemed impossible, when contrary conclusions had been constructed concerning the same matter, either that both the conclusions which mutually inconsistent trains of reasoning had established should be true, or that there should be ambiguity concerning which train of reasoning should be credited, it was apparent that the true and whole nature of argument itself should be considered first. Once this was known, then they could also know whether the results discovered by argument were truly held. Hence, skill in the discipline of logic began—that discipline which provides

1. Translated by Jerome Taylor, who sometimes includes the original Latin in parentheses.

2. In previous and subsequent chapters Hugh divides all the arts into four branches: the theoretical, which strives for the contemplation of truth; the practical, which includes ethics and morality; the mechanical, which incorporates the "occupations of life"; and the logical, which "provides the

knowledge necessary for correct speaking and argumentation."

3. Roman philosopher (480–524), best known for *The Consolation of Philosophy*, a frequently cited medieval text.

4. Greek moral and natural philosopher (341–270 B.C.E.).

ways of distinguishing between modes of argument and the trains of reasoning themselves, so that it can be known which trains of reasoning are sometimes true, sometimes false, which moreover are always false, and which never false."⁵ And so logic came last in time, but is first in order. It is logic which ought to be read first by those beginning the study of philosophy, for it teaches the nature of words and concepts, without both of which no treatise of philosophy can be explained rationally.

Logic is so called from the Greek word *logos*, which has a double sense. For *logos* means either word (*sermo*) or reason, and hence logic can be called either a linguistic (*sermocinalis*) or a rational science. Rational logic, which is called argumentative, contains dialectic, and rhetoric, Linguistic logic stands as genus to grammar, dialectic, and rhetoric, thus containing argumentative logic as a subdivision. It is linguistic logic that we put fourth after the theoretical, practical, and mechanical. It must not be supposed, however, that this science is called logical, that is, linguistic, because before its discovery there were no words, or as if men before its time did not have conversations with one another.⁶ For both spoken and written words existed previously, but the theory of spoken and written language was not yet reduced to an art; no rules for speaking or arguing correctly had yet been given. All sciences, indeed, were matters of use before they became matters of art. But when men subsequently considered that use can be transformed into art, and what was previously vague and subject to caprice can be brought into order by definite rules and precepts, they began, we are told, to reduce to art the habits which had arisen partly by chance, partly by nature—correcting what was bad in use, supplying what was missing, eliminating what was superfluous, and furthermore prescribing definite rules and precepts for each usage.

Such was the origin of all the arts; scanning them all, we find this true. Before there was grammar, men both wrote and spoke; before there was dialectic, they distinguished the true from the false by reasoning; before there was rhetoric, they discoursed upon civil laws; before there was arithmetic, there was knowledge of counting; before there was an art of music, they sang; before there was geometry, they measured fields; before there was astronomy, they marked off periods of time from the courses of the stars. But then came the arts, which, though they took their rise in usage, nonetheless excel it.⁷

This would be the place to set forth who were the inventors of the separate arts, when these persons flourished and where, and how the various disciplines made a start in their hands: first, however, I wish to distinguish the individual arts from one another by dividing philosophy into its parts, so to say. I should therefore briefly recapitulate the things I have said thus far, so that the transition to what follows may more easily be made.

5. Quoted from Boethius, *Commentaria in Porphyrium a se translatum* 2 (*Patrologia Latina*, 64, 73A–B) [translator's note].

6. By contrast, Adelard of Bath, in *De eodem et diverso* (Willner, ed., p. 18), credits grammar with making speech possible for men, who "at first roamed the fields like beasts, without mutual intercourse and with their reason silent" [translator's note]. Adelard (12th c.), English scholastic philosopher.

7. Cf. Cicero, *De oratore* 1.42.187–88: "Almost all things now comprehended in the arts were once scattered and disordered. So in music, . . . in geometry, . . . in astronomy, . . . in grammar, all these things seemed unknown and without order. A certain art was therefore imposed on them from without . . . to tie together the disconnected and fragmentary material and delimit it in some kind of rational order" [translator's note]. Cicero (106–43 B.C.E.), Roman statesman, orator, and author.

We have said that there are four branches of knowledge only, and that they contain all the rest: they are the theoretical, which strives for the contemplation of truth; the practical, which considers the regulation of morals; the mechanical, which supervises the occupations of this life; and the logical, which provides the knowledge necessary for correct speaking and clear argumentation.

* * *

From *Book Three*

CHAPTER THREE: WHICH ARTS ARE PRINCIPALLY TO BE READ

Out of all the sciences⁸ above named, however, the ancients, in their studies, especially selected seven to be mastered by those who were to be educated. These seven they considered so to excel all the rest in usefulness that anyone who had been thoroughly schooled in them might afterward come to a knowledge of the others by his own inquiry and effort rather than by listening to a teacher. For these, one might say, constitute the best instruments, the best rudiments, by which the way is prepared for the mind's complete knowledge of philosophic truth. Therefore they are called by the name *trivium* and *quadrivium*,⁹ because by them, as by certain *ways (viae)*, a quick mind enters into the secret places of wisdom.

In those days, no one was thought worthy the name of master who was unable to claim knowledge of these seven. Pythagoras,¹ too, is said to have maintained the following practice as a teacher: for seven years, according to the number of the seven liberal arts, no one of his pupils dared ask the reason behind statements made by him; instead, he was to give credence to the words of the master until he had heard him out, and then, having done this, he would be able to come at the reason of those things himself. We read that some men studied these seven with such zeal that they had them completely in memory, so that whatever writings they subsequently took in hand or whatever questions they proposed for solution or proof, they did not thumb the pages of books to hunt for rules and reasons which the liberal arts might afford for the resolution of a doubtful matter, but at once had the particulars ready by heart. Hence, it is a fact that in that time there were so many learned men that they alone wrote more than we are able to read. But the students of our day, whether from ignorance or from unwillingness, fail to hold to a fit method of study, and therefore we find many who study but few who are wise. Yet it seems to me that the student should take no less care not to expend his effort in useless studies than he should to avoid a lukewarm pursuit of good and useful ones. It is bad to pursue something good negligently; it is worse to expend many labors on an empty thing. But because not everyone is mature enough to know what is of advantage to him, I shall briefly indicate to the student which writings seem to me more useful than others, and then I shall add a few words on the method of study.

8. That Hugh uses the terms "art" and "science" interchangeably is evident from a comparison of the title and opening sentence of this chapter [translator's note].

9. A group of 4 studies consisting of arithmetic,

music, geometry, and astronomy. "Trivium": a group of 3 studies consisting of grammar, rhetoric, and logic.

1. Greek philosopher and mathematician (6th c. B.C.E.).

CHAPTER EIGHT: CONCERNING ORDER IN EXPOUNDING A TEXT

One kind of order is observed in the disciplines, when I say, for instance, that grammar is more ancient than dialectic, or arithmetic comes before music; another kind in codices or anthologies, when I declare, for instance, that the Catilinarian orations are ahead of the *Jugurtha*;² another kind in narration, which moves in continuous series; and another kind in the exposition of a text.

Order in the disciplines is arranged to follow nature. In books it is arranged according to the person of the author or the nature of the subject matter.³ In narration it follows an arrangement which is of two kinds—either natural, as when deeds are recounted in the order of their occurrence, or artificial, as when a subsequent event is related first and a prior event is told after it. In the exposition of a text, the order followed is adapted to inquiry.

Exposition includes three things: the letter, the sense, and the inner meaning. The letter is the fit arrangement of words, which we also call construction; the sense is a certain ready and obvious meaning which the letter presents on the surface; the inner meaning is the deeper understanding which can be found only through interpretation and commentary. Among these, the order of inquiry is first the letter, then the sense, and finally the inner meaning. And when this is done, the exposition is complete.

From *Book Five*

CHAPTER TWO: CONCERNING THE THREEFOLD UNDERSTANDING

First of all, it ought to be known that Sacred Scripture has three ways of conveying meaning—namely, history, allegory, and tropology.⁴ To be sure, all things in the divine utterance must not be wrenched to an interpretation such that each of them is held to contain history, allegory, and tropology all at once. Even if a triple meaning can appropriately be assigned in many passages, nevertheless it is either difficult or impossible to see it everywhere. "On the zither and musical instruments of this type not all the parts which are handled ring out with musical sounds; only the strings do this. All the other things on the whole body of the zither are made as a frame to which may be attached, and across which may be stretched, those parts which the artist plays to produce sweetness of song."⁵ Similarly, in the divine utterances are placed certain things which are intended to be understood spiritually only, certain things that emphasize the importance of moral conduct, and certain things said according to the simple sense of history. And yet, there

2. A history of the Jugurthine war in Rome, written by the Roman historian Sallust (ca. 86–ca. 35 B.C.E.). Catilinarian orations: a history of a conspiracy headed by the Roman statesman Cataline, also by Sallust. Hugh may be confusing Cicero's orations against Cataline with Sallust's *Bellum Catalinae*; however, his point is that we should study an author's texts in order.

3. That is, works may be selected for inclusion in a single codex either because they belong to a single author or connected group of authors, or because they treat a common subject [translator's

note].

4. Unlike most medieval thinkers, Hugh leaves out the fourth, or anagogical, level of interpretation, the mystical sense concerned with the fate of souls after the Last Judgment (see, for example, Bernardus Silvestris, THOMAS AQUINAS, and DANTE).

5. Quoted verbatim from Isidore, *Quaestiones in Vetus Testamentum Praefatio 4* (*Patrologia Latina*, v.82, p. 208), but independently applied by Hugh to Scripture [translator's note]. Isidore (ca. 570–636), Spanish prelate and scholar.

are some things which can suitably be expounded not only historically but allegorically and tropologically as well. Thus is it that, in a wonderful manner, all of Sacred Scripture is so suitably adjusted and arranged in all its parts through the Wisdom of God that whatever is contained in it either resounds with the sweetness of spiritual understanding in the manner of strings; or, containing utterances of mysteries set here and there in the course of a historical narrative or in the substance of a literal context, and, as it were, connecting these up into one object, it binds them together all at once as the wood does which curves under the taut strings; and, receiving their sound into itself, it reflects it more sweetly to our ears—a sound which the string alone has not yielded, but which the wood too has formed by the shape of its body. Thus also is honey more pleasing because enclosed in the comb, and whatever is sought with greater effort is also found with greater desire. It is necessary, therefore, so to handle the Sacred Scripture that we do not try to find history everywhere, nor allegory everywhere, nor tropology everywhere but rather that we assign individual things fittingly in their own places, as reason demands. Often, however, in one and the same literal context, all may be found together, as when a truth of history both hints at some mystical meaning by way of allegory, and equally shows by way of tropology how we ought to behave.

From Book Six

CHAPTER EIGHT: CONCERNING THE ORDER OF EXPOSITION

Exposition includes three things: the letter, the sense, and the deeper meaning (*sententia*). The letter is found in every discourse, for the very sounds are letters; but sense and a deeper meaning are not found together in every discourse. Some discourses contain only the letter and sense, some only the letter and a deeper meaning, some all these three together. But every discourse ought to contain at least two. That discourse in which something is clearly signified by the mere telling that nothing else is left to be supplied for its understanding contains only letter and sense. But that discourse in which the hearer can conceive nothing from the mere telling unless an exposition is added thereto contains only the letter and a deeper meaning in which, on the one hand, something is plainly signified and, on the other, something else is left which must be supplied for its understanding and which is made clear by exposition.

CHAPTER NINE: CONCERNING THE LETTER

Sometimes the letter is perfect, when, in order to signify what is said, nothing more than what has been set down needs to be added or taken away—as, "All wisdom is from the Lord God";⁶ sometimes it is compressed, when something is left which must be supplied—as, "The Ancient to the lady Elect";⁷ sometimes it is in excess, when, either in order to inculcate an idea or because of a long parenthetical remark, the same thought is repeated or

⁶ Ecclesiasticus 1.1.

⁷ 2 John 1.1. John addresses his second epistle to

"The elder unto the elect lady and her children, whom I love in the truth."

another and unnecessary one is added, as Paul, at the end of his Epistle to the Romans, says: "Now to him . . ." and then, after many parenthetical remarks, concludes, "to whom is honor and glory."⁸ The other part of this passage seems to be in excess. I say "in excess," that is, not necessary for making the particular statement. Sometimes the literal text is such that unless it is stated in another form it seems to mean nothing or not to fit, as in the following: "The Lord, in heaven the throne of him,"⁹ that is, "the throne of the Lord in heaven"; "the sons of men, the teeth of those are weapons and arrows,"¹ that is, "the teeth of the sons of men"; and "man, like grass the days of him,"² that is, "man's days": in these examples the nominative case of the noun and the genitive case of the pronoun are put for a single genitive of the noun; and there are many other things which are similar. To the letter belong construction and continuity.

CHAPTER TEN: CONCERNING THE SENSE

Some sense is fitting, other unfitting. Of unfitting sense, some is incredible, some impossible, some absurd, some false. You find many things of this kind in the Scriptures, like the following: "They have devoured Jacob."³ And the following: "Under whom they stoop that bear up the world."⁴ And the following: "My soul hath chosen hanging."⁵ And there are many others.

There are certain places in Divine Scripture in which, although there is a clear meaning to the words, there nevertheless seems to be no sense, either because of an unaccustomed manner of expression or because of some circumstance which impedes the understanding of the reader, as is the case, for example, in that passage in which Isaias says: "In that day seven women shall take hold of one man, saying: We will eat our own bread, and wear our own apparel: only let us be called by thy name. Take away our reproach."⁶ The words are plain and open. You understand well enough, "Seven women shall take hold of one man." You understand, "We will eat our own bread." You understand, "We will wear our own apparel." You understand, "Only let us be called by thy name." You understand, "Take away our reproach." But possibly you cannot understand what the sense of the whole thing together is. You do not know what the Prophet wanted to say, whether he promised good or threatened evil. For this reason it comes about that you think the passage, whose literal sense you do not see, has to be understood spiritually only. Therefore, you say that the seven women are the seven gifts of the Holy Spirit, and that these take hold of one man, that is, Christ, in whom it pleased all fulness of grace to dwell because he alone received these gifts without measure; and that he alone takes away their reproach so that they may find someone with whom to rest, because no one else alive asked for the gifts of the Holy Spirit.

See now, you have given a spiritual interpretation, and what the passage may mean to say literally you do not understand. But the Prophet could also

8. Romans 16.25-27.

9. Psalms 11.4 (psalms here are numbered as in the King James version).

1. Psalms 57.4.

2. Psalms 103.15.

3. Psalms 79.7.

4. Job 9.13.

5. Job 7.15. This and the previous example are adduced by Gregory the Great, *Moralium libri Epistula missoria* 3 (*Patrologia Latina* 75, 513 D), to show the impossibility of understanding all things in Scripture literally [translator's note]. Gregory (d. 604), pope and Father of the Church.
6. Isaiah 4.1.

mean something literal by these words.⁷ For, since he had spoken above about the slaughter of the transgressing people, he now adds that so great would be the destruction of that same people and to such an extent were their men to be wiped out that seven women will hardly find one husband, for only one woman usually has one man; and, while now women are usually sought after by men, then, in contrary fashion, women will seek after men; and, so that one man may not hesitate to marry seven women at the same time, since he might not have the wherewithal to feed and clothe them, they say to him: "We will eat our own bread, and wear our own apparel." It will not be necessary for you to be concerned about our well-being, "only let us be called by thy name," so that you may be called our husband and *be* our husband so that we may not be heralded as rejected women, and die sterile, without children—which at that time was a great disgrace. And that is why they say, "Take away our reproach."

You find many things of this sort in the Scriptures, and especially in the Old Testament—things said according to the idiom of that language and which, although they are clear in that tongue, seem to mean nothing in our own.

CHAPTER ELEVEN: CONCERNING THE DEEPER MEANING

The divine deeper meaning can never be absurd, never false. Although in the sense, as has been said, many things are found to disagree, the deeper meaning admits no contradiction, is always harmonious, always true. Sometimes there is a single deeper meaning for a single expression; sometimes there are several deeper meanings for a single expression; sometimes there is a single deeper meaning for several expressions; sometimes there are several deeper meanings for several expressions. "When, therefore, we read the Divine Books, in such a great multitude of true concepts elicited from a few words and fortified by the sound rule of the catholic faith, let us prefer above all what it seems certain that the man we are reading thought. But if this is not evident, let us certainly prefer what the circumstances of the writing do not disallow and what is consonant with sound faith. But if even the circumstances of the writing cannot be explored and examined, let us at least prefer only what sound faith prescribes. For it is one thing not to see what the writer himself thought, another to stray from the rule of piety. If both these things are avoided, the harvest of the reader is a perfect one. But if both cannot be avoided, then, even though the will of the writer may be doubtful, it is not useless to have elicited a deeper meaning consonant with sound faith."⁸ "So too, if, regarding matters which are obscure and farthest removed from our comprehension, we read some of the Divine Writings and find them susceptible, in sound faith, to many different meanings, let us not plunge ourselves into headlong assertion of any one of these meanings, so that if the truth is perhaps more carefully

7. The exclusively allegorical interpretation is Origen's; Jerome, in his commentary on Isaias, gives both a literal and allegorical interpretation; *Commentaria in Isaiam prophetam* 2.4 (*Patrologia Latina*, 24, 72–3) [translator's note]. Origen (185–232), a prolific early Christian writer, frequently cited by medieval authors. Jerome (ca. 340–420),

Father of the Church, author of the Latin Vulgate translation of the Bible.

8. Quoted from Augustine, *The Literal Meaning of Genesis* (*De Genesis ad litteram*) 1.21 (*Patrologia Latina*, 34, 262) [translator's note]. AUGUSTINE (354–430), early Christian philosopher and Father of the Church.

opened up and destroys that meaning, we are overthrown; for so we should be battling not for the thought of the Divine Scriptures but for our own thought, and this is such a way that we wished the thought of the Scriptures to be identical with our own, whereas we ought rather to wish our thought identical with that of the Scriptures."⁹

ca. 1125

9. Quoted from Augustine, *The Literal Meaning of Genesis* 1.18 (*Patrologia Latina*, 34, 260) [translator's note].

MOSES MAIMONIDES (RABBI MOSES BEN MAIMON) 1135–1204

Moses Maimonides' *Guide of the Perplexed* brings into view what MATTHEW ARNOLD might call Hebraic ways of thinking about textual interpretation that continue to be relevant to literary theory today. As JACQUES DERRIDA declares in *Writing and Difference* (1967): "We live in the difference between the Jew and the Greek, which is perhaps the unity of what is called history." While Greek philosophy values the universal, the general, and the univocal, Jewish thought is more open to ambiguity, contradiction, and plurality of meaning. Where Greek thought separates interpretation from text, Jewish hermeneutics tends to see text and its interpretation as part of one process. Conflicts over these values have been central to contemporary debates, especially those on poststructuralism, even as the original theological issues that created them have become increasingly unfamiliar. Maimonides' importance for the Latin Middle Ages is twofold: he is among the handful of Jewish and Islamic scholars who reintroduced the works of ARISTOTLE, including Aristotelian literary criticism, to Europe; and he influenced Scholastic philosophers like THOMAS AQUINAS. But the significance of Jewish hermeneutics (the theory and practice of interpretation) for contemporary literary theory has not been as well understood as that of Christian hermeneutics, even though it is clear that Maimonides' methods of exegesis have strongly affected Jewish theorists who have shaped recent theoretical debates, such as SIGMUND FREUD, HAROLD BLOOM, and Derrida.

Maimonides resembles AUGUSTINE when he insists on the need for an allegorical interpretation of the Torah (the Jewish Scriptures). Like other Western theorists of interpretation, Maimonides worries about three principal problems: discovering the author's original intention, warding off ingenious overinterpretation, and finding deep as opposed to superficial meaning. And he too argues that esoteric meanings exist, though they can often only be glimpsed before fading back into obscurity—which, he believes, is as it should be. The meaning of sacred texts is not always accessible to the vulgar but can be understood only by the perfect (virtuous) person, one who is prone to being perplexed. This is the reader that Maimonides addresses.

Maimonides' approach will seem somewhat alien to students of a Western literary criticism based on Greek methods of interpretation—and their Christian derivatives—which separate the literary text from its commentary and which strive for a univocal, single, "correct" interpretation. Jewish hermeneutics, as exemplified by Maimonides' *Guide of the Perplexed*, treats text and interpretation as dual aspects of the same revelation that remains open to multiple textual meanings and endless indeterminacy.

Maimonides was born into an influential Jewish family in Cordova, in Muslim Spain, near the end of the *convivencia*, the period from the eighth to the twelfth centuries when the three great religious cultures of the Middle Ages—Christian, Jewish, and Islamic—coexisted relatively peacefully on the Iberian Peninsula. His father, from whom he received his rabbinic instruction, was a noted Talmudist (a scholar of the collection of ancient Jewish law) as well as a mathematician and astronomer. In addition, Maimonides received a secular education from the most distinguished Arabic scholars of his day. He was thirteen years old when Cordova was captured by the Almohads, members of a fundamentalist Islamic sect, and his family was compelled to choose between Islam and exile. They chose the latter; after wandering around Spain for ten years, they took up residence in Fez in Morocco, where Maimonides devoted himself to studies in theology and medicine. Fez was also under the rule of the Almohads, and for a while the family tried to pass as Muslims. But Maimonides' growing reputation as a scholar (by sixteen he had already published a treatise on logical terminology) brought him under the scrutiny of the authorities. He was even tried for having lapsed from Islam, a capital crime; he escaped death only because an Arab friend interceded. In 1165 the family set sail for the Holy Land, then held by Christians. They finally settled in Egypt, where Maimonides lived for the rest of his life. In Cairo he went into business in precious stones; but when his brother, his business partner, was lost at sea with the family fortune, Maimonides turned to medicine to support himself, becoming physician to the court of the grand vizier. He describes his work there as grueling, yet in his spare time he became the unofficial leader of the Jewish community of Cairo, studied the Torah, and worked on his comprehensive code of Jewish law. His widespread reputation for learning made him one of the most celebrated Jews of the Middle Ages; England's King Richard invited Maimonides to become his royal physician. Maimonides' death was publicly mourned throughout the Jewish world, and his body was moved to the Holy Land, where his grave has been a pilgrimage site ever since.

Maimonides' writings are extensive and eclectic; they include lengthy and ambitious works in medicine, theology, and philosophy. He wrote several commentaries on traditional Jewish law. He began his *Commentary on the Mishnah* (1168)—the great legal code composed during the period between 10 and 220 C.E. that was designed to organize and regulate Jewish oral law—when he was just twenty-three, completing it ten years later. A second collection, the massive *Mishneh Torah* (1178), was meant to provide a complete classification of rabbinic law. This alone would have been an unprecedented undertaking; but the *Mishneh Torah* is more than simply a law code. In it Maimonides also included many interpretations, passages of exegesis, historical surveys, and explanations of difficult phrases and concepts. *The Guide of the Perplexed* (1190) turns from the codification of religious law to "the science of the law in its true sense." In this wide-ranging and occasionally baffling treatise, Maimonides attempts to reconcile faith with philosophical reason, Judaism with a newly recovered Aristotelianism. More specifically, he wants to demonstrate that Judaism is not irreconcilable with the understanding of physics and metaphysics articulated by the twelfth-century Aristotelians. In the course of his introduction, he argues that when their "internal" sense is properly understood, the *Account of the Beginning* (the Genesis story) refers to "natural science" (physics) and *The Account of the Chariot* (Ezekiel 1 and 10) to "divine science" (metaphysics).

Ostensibly written for his disciple, Joseph ben Judah, *The Guide* elucidates obscure parables and terms found in "the books of the prophets." Maimonides, whose interpretive skills were honed by his extensive investigations of the Mishnah, argues that to penetrate the meaning of Scriptures and the Talmud (the great collections of oral law compiled between the second and fifth centuries C.E.) requires a fully elaborated method of interpretation (a hermeneutic). In his introduction, he explains that the failures to understand (1) the polysemy (many meanings) of biblical language and (2) the biblical use of obscure parables (which maintain the secrets of divine knowledge)

give rise to "perplexity" even in the learned. Significantly, biblical texts are full of terms that are difficult to understand because they are "equivocal"—they have more than one meaning; or "derivative"—they contain supplemental meanings derived from other terms; or "amphibolus"—they are understood as having sometimes one and sometimes many meanings. Maimonides illustrates his discussions with frequent quotations from the Bible.

A purely linguistic comprehension of the richness of biblical language, according to Maimonides, is insufficient for understanding the Torah and Talmud, for these texts are also full of parables designed to obscure the "secrets of the prophetic books." Such an understanding requires a more fully elaborated theory of narrative, which Maimonides sketches in his introduction, including a key distinction between those parables that must be interpreted word by word and those that must be interpreted holistically.

For Maimonides, contradictions, far from being philosophical flaws, are to be embraced and studied according to principles he sets forth at the end of the introduction, where he identifies seven types. Perhaps the most interesting of the contradictions in Maimonides' own hermeneutic is the essential tension in his introduction between the injunction to secrecy—his understanding that the secrets of that divine science "ought not to be taught even to one man, except if he be wise and able to understand by himself, in which case only the chapter headings may be transmitted to him"—and the need to pass those secrets from generation to generation by teaching them to others. In the context of a close-knit and homogeneous community, it might be possible to preserve secret knowledge by passing it on orally from teacher to student, master to disciple. But in the context of the Jewish Diaspora, which could separate teacher from pupil—as happened to Maimonides and his disciple Joseph—written texts become necessary for organizing and preserving such knowledge, even while running the risk that the teacher "in effect would be teaching them to thousands of men." To preserve from the ignorant and the vulgar "those truths especially requisite for [the pupil's] apprehension," Maimonides must adopt the very techniques of the texts he seeks to explain: he must conceal them by scattering them throughout the treatise and entangling them with contradictions so that the truths are "glimpsed and then again concealed."

Insofar as Maimonides' interpretive method strikes the modern student of literary criticism as perhaps too esoteric to illuminate literary issues, that response may suggest the extent to which Greek modes of thinking have determined Western literary criticism. Yet Jewish hermeneutics has continued to exert at least a covert influence on the development of the dominant tradition. Although it was translated from its original Arabic into Hebrew and Latin during the Middle Ages, *The Guide of the Perplexed* was, ironically, not eagerly accepted within the Jewish community, because it advocated the study of philosophy alongside the more important study of the Torah. But in the century following his death, Maimonides' influence spread widely among Jews and Christians alike. Maimonides and his famous predecessor Rashi (Rabbi Solomon ben Isaac, 1040–1105, a talmudic scholar from Troyes) were both important precursors of the Scholasticism of the High Middle Ages, affecting Christian exegetes such as HUGH OF ST. VICTOR and Thomas Aquinas. There are also elements in later Freudian analysis that elaborate and extend the rabbinic hermeneutics articulated by Maimonides. Finally, many of the issues that interest contemporary literary theorists such as Derrida and his Yale School disciples, most notably Harold Bloom—for example, the indeterminacy of interpretation or the continuity between literary text and interpretation—show the influence of Jewish approaches to interpretation.

BIBLIOGRAPHY

The modern Arabic edition of *The Guide of the Perplexed* (*Dalalat al-Ha'irin*) was compiled in 1929 by S. Munk and translated into English by Shlomo Pines (1963);

Joseph Kafih's three-volume edition (1972) offers parallel Arabic and Hebrew versions. Large sections of the *Mishneh Torah* as well as other writings by Maimonides are available in English translation in *The Maimonides Reader*, edited by Isadore Twersky (1972). The standard biography is Abraham Joshua Heschel's *Maimonides: A Biography* (1981). Leo Strauss's essay "The Literary Character of *The Guide for the Perplexed*," originally included in *Essays on Maimonides: An Octocentennial Volume* (ed. Salo W. Baron, 1941) and later reprinted in *Maimonides: A Collection of Critical Essays* (ed. Joseph A. Buijs, 1988), is an indispensable introduction to Maimonides' method in *The Guide*. In *Maimonides and Aquinas: A Contemporary Appraisal* (1979), Jacob Haberman documents Maimonides' contributions to medieval thought, while Susan A. Handelman, in *The Slayers of Moses: The Emergence of Rabbinic Interpretation in Modern Literary Theory* (1982), examines the relationship between early Jewish biblical hermeneutics and contemporary deconstructive literary theory. The collection of essays edited by Geoffrey H. Hartman and Sanford Budick, *Midrash and Literature* (1986), also examines the relationships between Jewish hermeneutics and literary theory. A excellent bibliography is appended to Buijs's *Maimonides* (cited above).

From The Guide of the Perplexed¹

[Introduction to the First Part]

Cause me to know the way wherein I should walk,
For unto Thee have I lifted my soul.²

Unto you, O men, I call,
And my voice is to the sons of men.³

Incline thine ear, and hear the words of the wise,
And apply thy heart unto my knowledge.⁴

The first purpose of this Treatise is to explain the meanings of certain terms occurring in books of prophecy. Some of these terms are equivocal; hence the ignorant attribute to them only one or some of the meanings in which the term in question is used. Others are derivative terms; hence they attribute to them only the original meaning from which the other meaning is derived. Others are amphibolous terms,⁵ so that at times they are believed to be univocal and at other times equivocal. It is not the purpose of this Treatise to make its totality understandable to the vulgar or to beginners in speculation, nor to teach those who have not engaged in any study other than the science of the Law—I mean the legalistic study of the Law. For the purpose of this Treatise and of all those like it is the science of Law in its true sense.⁶ Or rather its purpose is to give indications to a religious man for whom the validity of our Law has become established in his soul and has become actual in his belief—such a man being perfect in his religion and character, and

1. Translated by Shlomo Pines, who occasionally supplies explanatory text in brackets.

2. Psalms 143.8.

3. Proverbs 8.4.

4. Proverbs 22.17.

5. Words understood as having sometimes one meaning and sometimes many meanings. "Equivocal"; words with more than one meaning. "Derivative": words containing supplemental meanings

derived from other words; words used figuratively.

6. In an earlier work, the *Mishneh Torah* (literally, "repetition of the Torah"), Maimonides collected, organized, and commented on the oral rabbinic law—called the Mishnah—that had evolved in the first centuries of the common era. In *The Guide of the Perplexed*, he turns his attention to the relationship between Jewish law and philosophy as well as to interpretive theory.

having studied the sciences of the philosophers and come to know what they signify. The human intellect having drawn him on and led him to dwell within its province, he must have felt distressed by the externals of the Law and by the meanings of the above-mentioned equivocal, derivative, or amphibolous terms, as he continued to understand them by himself or was made to understand them by others. Hence he would remain in a state of perplexity and confusion as to whether he should follow his intellect, renounce what he knew concerning the terms in question, and consequently consider that he has renounced the foundations of the Law. Or he should hold fast to his understanding of these terms and not let himself be drawn on together with his intellect, rather turning his back on it and moving away from it, while at the same time perceiving that he had brought loss to himself and harm to his religion. He would be left with those imaginary beliefs to which he owes his fear and difficulty and would not cease to suffer from heartache and great perplexity.

This Treatise also has a second purpose: namely, the explanation of very obscure parables occurring in the books of the prophets, but not explicitly identified there as such. Hence an ignorant or heedless individual might think that they possess only an external sense, but no internal one. However, even when one who truly possesses knowledge considers these parables and interprets them according to their external meaning, he too is overtaken by great perplexity. But if we explain these parables to him or if we draw his attention to their being parables, he will take the right road and be delivered from this perplexity. That is why I have called this Treatise "The Guide of the Perplexed."

I do not say that this Treatise will remove all difficulties for those who understand it. I do, however, say that it will remove most of the difficulties, and those of the greatest moment. A sensible man thus should not demand of me or hope that when we mention a subject, we shall make a complete exposition of it, or that when we engage in the explanation of the meaning of one of the parables, we shall set forth exhaustively all that is expressed in that parable. An intelligent man would be unable to do so even by speaking directly to an interlocutor. How then could he put it down in writing without becoming a butt for every ignoramus who, thinking that he has the necessary knowledge, would let fly at him the shafts of his ignorance? We have already explained in our legal compilations some general propositions concerning this subject and have drawn attention to many themes. Thus we have mentioned there that the *Account of the Beginning*⁷ is identical with natural science, and the *Account of the Chariot*⁸ with divine science; and have explained the rabbinic saying: *The Account of the Chariot ought not to be taught even to one man, except if he be wise and able to understand by himself, in which case only the chapter headings may be transmitted to him.*⁹ Hence you should not ask of me here anything beyond *the chapter headings*. And

7. Literally, the *Work of the Beginning* [translator's note]. That is, the Genesis story.

8. Literally, the *Work of the Chariot* [translator's note]. That is, Ezekiel 1 and 10.

9. From the Babylonian Talmud, Hagigah, 11b, 13a [translator's note]. The Babylonian Talmud is one of the two great Talmuds, or collections of oral law: it was compiled between the 2d and 5th cen-

turies C.E. (the Jerusalem Talmud was compiled between 220 C.E. and the end of the 4th c.). It is divided into six Orders; each Order has a number of tractates. Hagigah is one of the tractates, which are further divided into chapters and then paragraphs. More generally, the Talmud is divided into the Mishnah, which states the law, and the Gemara, which presents the discussion of it.

even those are not set down in order or arranged in coherent fashion in this Treatise, but rather are scattered and entangled with other subjects that are to be clarified. For my purpose is that the truths be glimpsed and then again be concealed, so as not to oppose that divine purpose which one cannot possibly oppose and which has concealed from the vulgar among the people those truths especially requisite for His apprehension. As He has said: *The secret of the Lord is with them that fear Him*.¹ Know that with regard to natural matters as well, it is impossible to give a clear exposition when teaching some of their principles as they are. For you know the saying of [the Sages], *may their memory be blessed: The Account of the Beginning ought not to be taught in the presence of two men*.² Now if someone explained all those matters in a book, he in effect would be *teaching* them to thousands of men. Hence these matters too occur in parables in the books of prophecy. The *Sages, may their memory be blessed*, following the trail of these books, likewise have spoken of them in riddles and parables, for there is a close connection between these matters and the divine science, and they too are secrets of that divine science.

You should not think that these great *secrets* are fully and completely known to anyone among us. They are not. But sometimes truth flashes out to us so that we think that it is day, and then matter and habit in their various forms conceal it so that we find ourselves again in an obscure night, almost as we were at first. We are like someone in a very dark night over whom lightning flashes time and time again. Among us there is one³ for whom the lightning flashes time and time again, so that he is always, as it were, in unceasing light. Thus night appears to him as day. That is the degree of the great one among the prophets, to whom it was said: *But as for thee, stand thou here by Me*,⁴ and of whom it was said: *that the skin of his face sent forth beams, and so on*.⁵ Among them there is one to whom the lightning flashes only once in the whole of his night; that is the rank of those of whom it is said: *they prophesied, but they did so no more*.⁶ There are others between whose lightning flashes there are greater or shorter intervals. Thereafter comes he who does not attain a degree in which his darkness is illumined by any lightning flash. It is illumined, however, by a polished body or something of that kind, stones or something else that give light in the darkness of the night. And even this small light that shines over us is not always there, but flashes and is hidden again, as if it were the *flaming sword which turned every way*.⁷ It is in accord with these states that the degrees of the perfect vary. As for those who never even once see a light, but grope about in their night, of them it is said: *They know not, neither do they understand; They go about in darkness*.⁸ The truth, in spite of the strength of its manifestation, is entirely hidden from them, as is said of them: *And now men see not the light which is bright in the skies*.⁹ They are the vulgar among the people. There is then no occasion to mention them here in this Treatise.

Know that whenever one of the perfect wishes to mention, either orally or in writing, something that he understands of these *secrets*, according to the degree of his perfection, he is unable to explain with complete clarity and

1. Psalm 25.14.

coherence even the portion that he has apprehended, as he could do with the other sciences whose teaching is generally recognized. Rather there will befall him when teaching another that which he had undergone when learning himself. I mean to say that the subject matter will appear, flash, and then be hidden again, as though this were the nature of this subject matter, be there much or little of it. For this reason, all the Sages possessing knowledge of God the Lord, knowers of the truth, when they aimed at teaching something of this subject matter, spoke of it only in parables and riddles. They even multiplied the parables and made them different in species and even in genus. In most cases the subject to be explained was placed in the beginning or in the middle or at the end of the parable; this happened where a parable appropriate for the intended subject from start to finish could not be found. Sometimes the subject intended to be taught to him who was to be instructed was divided—although it was one and the same subject—among many parables remote from one another. Even more obscure is the case of one and the same parable corresponding to several subjects, its beginning fitting one subject and its ending another. Sometimes the whole is a parable referring to two cognate subjects within the particular species of science in question. The situation is such that the exposition of one who wishes to teach without recourse to parables and riddles is so obscure and brief as to make obscurity and brevity serve in place of parables and riddles. The men of knowledge and the sages¹ are drawn, as it were, toward this purpose by the divine will just as they are drawn by their natural circumstances. Do you not see the following fact? God, may His mention be exalted, wished us to be perfected and the state of our societies to be improved by His laws regarding actions. Now this can come about only after the adoption of intellectual beliefs, the first of which being His apprehension, may He be exalted, according to our capacity. This, in its turn, cannot come about except through divine science, and this divine science cannot become actual except after a study of natural science. This is so since natural science borders on divine science, and its study precedes that of divine science in time as has been made clear to whoever has engaged in speculation on these matters. Hence God, may He be exalted, caused His book to open with the *Account of the Beginning*, which, as we have made clear, is natural science. And because of the greatness and importance of the subject and because our capacity falls short of apprehending the greatest of subjects as it really is, we are told about those profound matters—which divine wisdom has deemed necessary to convey to us—in parables and riddles and in very obscure words. As [the Sages], *may their memory be blessed*, have said: *It is impossible to tell mortals² of the power of the Account of the Beginning. For this reason Scripture tells you obscurely: In the beginning God created, and so on.*³ They thus have drawn your attention to the fact that the above-mentioned subjects are *obscure*. You likewise know Solomon's saying: *That which was is far off, and exceeding deep; who can find it out?*⁴ That which is said about all this is in

1. The Arabic term *al-hukama'* often designates the philosophers [translator's note].

2. Literally, flesh and blood [translator's note].

3. Cf. Midrash Shnei Ketubim, Batei Midrashoth, IV [translator's note]. Midrash: literally, "to seek out the meaning" (Hebrew); an explanation of a text from the Torah (the 5 books of Moses; more generally known as the first 5 books of the Old

Testament). The term may refer to a collection of such explanations or to a hermeneutic technique by which such explanations are produced. A midrash might explain a single word or a gap in the text. There are midrashim for every book of the Torah, and Maimonides here refers to a midrash on Genesis.

4. Ecclesiastes 7.24.

equivocal terms so that the multitude might comprehend them in accord with the capacity of their understanding and the weakness of their representation, whereas the perfect man, who is already informed, will comprehend them otherwise.

We had promised in the Commentary on the *Mishnah* that we would explain strange subjects in the "Book of Prophecy" and in the "Book of Correspondence"—the latter being a book in which we promised to explain all the difficult passages in the *Midrashim*⁵ where the external sense manifestly contradicts the truth and departs from the intelligible. They are all parables. However, when, many years ago, we began these books and composed a part of them, our beginning to explain matters in this way did not commend itself to us. For we saw that if we should adhere to parables and to concealment of what ought to be concealed, we would not be deviating from the primary purpose. We would, as it were, have replaced one individual by another of the same species. If, on the other hand, we explained what ought to be explained, it would be unsuitable for the vulgar among the people. Now it was to the vulgar that we wanted to explain the import of the *Midrashim* and the external meanings of prophecy. We also saw that if an ignoramus among the multitude of Rabbanites⁶ should engage in speculation on these *Midrashim*, he would find nothing difficult in them, inasmuch as a rash fool, devoid of any knowledge of the nature of being, does not find impossibilities hard to accept. If, however, a perfect man of virtue should engage in speculation on them, he cannot escape one of two courses: either he can take the speeches in question in their external sense and, in so doing, think ill of their author and regard him as an ignoramus—in this there is nothing that would upset the foundations of belief; or he can attribute to them an inner meaning, thereby extricating himself from his predicament and being able to think well of the author whether or not the inner meaning of the saying is clear to him. With regard to the meaning of prophecy, the exposition of its various degrees, and the elucidation of the parables occurring in the prophetic books, another manner of explanation is used in this Treatise. In view of these considerations, we have given up composing these two books in the way in which they were begun. We have confined ourselves to mentioning briefly the foundations of belief and general truths, while dropping hints that approach a clear exposition, just as we have set them forth in the great legal compilation, *Mishneh Torah*.⁷

My speech in the present Treatise is directed, as I have mentioned, to one who has philosophized and has knowledge of the true sciences, but believes at the same time in the matters pertaining to the Law and is perplexed as to their meaning because of the uncertain terms and the parables. We shall include in this Treatise some chapters in which there will be no mention of an equivocal term. Such a chapter will be preparatory for another, or it will hint at one of the meanings of an equivocal term that I might not wish to mention explicitly in that place, or it will explain one of the parables or hint

5. Maimonides uses here and subsequently the term *drashoth* [translator's note]. The Hebrew term (singular *derash* or *derasha*) refers to the meanings derived from the original text by means of a variety of rabbinic techniques.

6. Tenth-century teachers who began to use philosophy to supplement the written Torah and the oral Torah (Talmud) as a defense against ration-

alism. Though their philosophical thinking was not as sophisticated as Maimonides' use of Aristotle, they paved the way for him and other Jewish philosophers.

7. Maimonides' massive compilation of Jewish rabbinic law, written a decade before *The Guide of the Perplexed*.

at the fact that a certain story is a parable. Such a chapter may contain strange matters regarding which the contrary of the truth sometimes is believed, either because of the equivocality of the terms or because a parable is taken for the thing being represented or vice versa.

As I have mentioned parables, we shall make the following introductory remarks: Know that the key to the understanding of all that the prophets, peace be on them, have said, and to the knowledge of its truth, is an understanding of the parables, of their import, and of the meaning of the words occurring in them. You know what God, may He be exalted, has said: *And by the ministry of the prophets have I used similitudes.*⁸ And you know that He has said: *Put forth a riddle and speak a parable.*⁹ You know too that because of the frequent use prophets make of parables, the prophet has said: *They say of me: Is he not a maker of parables?*¹ You know how Solomon began his book: *To understand a proverb, and a figure; The words of the wise, and their dark sayings.*² And it said in the Midrash: *To what were the words of the Torah to be compared before the advent of Solomon? To a well the waters of which are at a great depth and cool, yet no man could drink of them. Now what did one clever man do? He joined cord with cord and rope with rope and drew them up and drank. Thus did Solomon say one parable after another and speak one word after another until he understood the meaning of the words of the Torah.*³ That is literally what they say. I do not think that anyone possessing an unimpaired capacity imagines that the words of the Torah referred to here that one contrives to understand through understanding the meaning of parables are ordinances concerning the building of tabernacles, the lulab, and the law of four trustees.⁴ Rather what this text has in view here is, without any doubt, the understanding of obscure matters. About this it has been said: *Our Rabbis say: a man who loses a sela or a pearl in his house can find the pearl by lighting a taper worth an issar.*⁵ *In the same way this parable in itself is worth nothing, but by means of it you can understand the words of the Torah.*⁶ This too is literally what they say. Now consider the explicit affirmation of [the Sages], *may their memory be blessed*, that the internal meaning of the words of the Torah is a pearl whereas the external meaning of all parables is worth nothing, and their comparison of the concealment of a subject by its parable's external meaning to a man who let drop a pearl in his house, which was dark and full of furniture. Now this pearl is there, but he does not see it and does not know where it is. It is as though it were no longer in his possession, as it is impossible for him to derive any benefit from it until, as has been mentioned, he lights a lamp—an act to which an understanding of the meaning of the parable corresponds. The Sage has said: *A word fitly spoken is like apples of gold in settings [maskiyyoth] of silver.*⁷ Hear now an

8. Hosea 12.10.

9. Ezekiel 17.2.

1. Ezekiel 20.49.

2. Proverbs 1.6. Proverbs is one of the books of the Bible traditionally ascribed to Solomon.

3. Cf. Midrash on the Song of Songs, 1.1 [translator's note].

4. Maimonides, contrasting those parts of the Torah that can be taken as parables with those that are completely straightforward (not in need of special interpretation), gives three examples of straightforward ordinances. "Tabernacle": a suk-kah or building constructed during the holiday of Sukkoth, which occurs after the High Holy Days

and commemorates the Jews' wandering in the desert. "Lulab": a wand of sorts, fashioned of palm leaves, willow, and myrtle and waved in four directions during the holiday of Sukkoth. "The law of the four trustees": the four categories of legal guardian over someone else's property, which include the unpaid guardian, the borrower, the paid guardian, and the hirer.

5. A coin; ninety-six issar were worth a sela. "A sela": a silver coin [translator's note].

6. Cf. Midrash on the Song of Songs, 1.1 [translator's note].

7. Proverbs 25.11.

elucidation of the thought that he has set forth. The term *maskiyyoth* denotes filigree traceries; I mean to say traceries in which there are apertures with very small eyelets, like the handiwork of silversmiths. They are so called because a glance penetrates through them; for in the [Aramaic] translation of the Bible the Hebrew term *va-yashqeph*—meaning, he glanced—is translated *va-istekhe*.⁸ The Sage accordingly said that a saying uttered with a view to two meanings is like an apple of gold overlaid with silver filigree-work having very small holes. Now see how marvellously this dictum describes a well-constructed parable. For he says that in a saying that has two meanings—he means an external and an internal one—the external meaning ought to be as beautiful as silver, while its internal meaning ought to be more beautiful than the external one, the former being in comparison to the latter as gold is to silver. Its external meaning also ought to contain in it something that indicates to someone considering it what is to be found in its internal meaning, as happens in the case of an apple of gold overlaid with silver filigree-work having very small holes. When looked at from a distance or with imperfect attention, it is deemed to be an apple of silver; but when a keensighted observer looks at it with full attention, its interior becomes clear to him and he knows that it is of gold. The parables of the prophets, peace be on them, are similar. Their external meaning contains wisdom that is useful in many respects, among which is the welfare of human societies, as is shown by the external meaning of *Proverbs* and of similar sayings. Their internal meaning, on the other hand, contains wisdom that is useful for beliefs concerned with the truth as it is.

Know that the prophetic parables are of two kinds. In some of these parables each word has a meaning, while in others the parable as a whole indicates the whole of the intended meaning. In such a parable very many words are to be found, not every one of which adds something to the intended meaning. They serve rather to embellish the parable and to render it more coherent or to conceal further the intended meaning; hence the speech proceeds in such a way as to accord with everything required by the parable's external meaning. Understand this well.

An example of the first kind of prophetic parable is the following text: *And behold a ladder set up on the earth, and so on.*⁹ In this text, the word *ladder* indicates one subject; the words *set up on the earth* indicate a second subject; the words *and the top of it reached to heaven* indicate a third subject; the words *and behold the angels of God* indicate a fourth subject; the word *ascending* indicates a fifth subject; the words *and descending* indicate a sixth subject; and the words *And behold the Lord stood above it* indicate a seventh subject. Thus every word occurring in this parable refers to an additional subject in the complex of subjects represented by the parable as a whole.

An example of the second kind of prophetic parable is the following text: *For at the window of my house I looked forth through my lattice; And I beheld among the thoughtless ones, I discerned among the youths, A young man void of understanding, Passing through the street near her corner, And he went the way to her house; In the twilight, in the evening of the day, In the blackness*

8. A verbal form deriving from the same root as the word *maskiyyoth*. Genesis 26.8 [translator's note].

9. Genesis 28.12–13. After the word *earth*, the

verses read: *and the top of it reached to heaven; and behold the angels of God ascending and descending on it. And behold the Lord stood above it* [translator's note].

of night and the darkness. And, behold, there met him a woman With the attire of a harlot, and wily of heart. She is riotous and rebellious, and so on.¹ Now she is in the streets, now in the broad places, and so on.² So she caught him, and so on.³ Sacrifices of peace-offerings were due from me, and so on.⁴ Therefore came I forth to meet thee, and so on.⁵ I have decked with the coverlets, and so on.⁶ I have perfumed my bed, and so on.⁷ Come, let us take our fill of love, and so on.⁸ For my husband is not at home, and so on.⁹ The bag of money, and so on.¹ With her much fair speech she causeth him to yield. With the blandishment of her lips she enticeth him away.² The outcome of all this is a warning against the pursuit of bodily pleasures and desires. Accordingly he [Solomon] likens matter, which is the cause of all these bodily pleasures, to a harlot who is also a married woman. In fact his entire book is based on this allegory. And we shall explain in various chapters of this Treatise his wisdom in likening matter to a married harlot, and we shall explain how he concluded this book of his with a eulogy of the woman who is not a harlot but confines herself to attending to the welfare of her household and husband. For all the hindrances keeping man from his ultimate perfection, every deficiency affecting him and every disobedience, come to him from his matter alone, as we shall explain in this Treatise. This is the proposition that can be understood from this parable as a whole. I mean that man should not follow his bestial nature; I mean his matter, for the proximate matter of man is identical with the proximate matter of the other living beings. And as I have explained this to you and disclosed the secret of this parable, you should not hope [to find some signification corresponding to every subject occurring in the parable]³ so that you could say: what can be submitted for the words, *Sacrifices of peace-offerings were due from me; this day have I paid my vows?* What subject is indicated by the words, *I have decked my couch with coverlets?* And what subject is added to this general proposition by the words, *For my husband is not at home?* The same holds good for the other details in this chapter. For all of them only figure in the consistent development of the parable's external meaning, the circumstances described in it being of a kind typical for adulterers. Also the spoken words and other such details are of a kind typical of words spoken among adulterers. Understand this well from what I have said for it is a great and important principle with regard to matters that I wish to explain.

When, therefore, you find that in some chapter of this Treatise I have explained the meaning of a parable and have drawn your attention to the general proposition signified by it, you should not inquire into all the details occurring in the parable, nor should you wish to find significations corre-

1. The omitted words are: *her feet abide not in her house* [translator's note].

2. The omitted words are: *and lieth in wait at every corner* [translator's note].

3. The omitted words are: *and kissed him, and with impudent face she said unto him* [translator's note].

4. The omitted words are: *this day have I paid my vows* [translator's note].

5. The omitted words are: *diligently to seek thy face, and I have found thee* [translator's note].

6. The omitted words are: *my bed, with striped cloths of the yarn of Egypt* [translator's note].

7. The omitted words are: *with myrrh, aloes and cinnamon* [translator's note].

8. The omitted words are: *until the morning; let us solace ourselves with loves* [translator's note].

9. The omitted words are: *he is gone a long journey* [translator's note].

1. The omitted words are: *he has taken with him, and will come home at the full moon* [translator's note].

2. Proverbs 7.6-21.

3. The words enclosed in brackets appear in Ibn Tibbon's Hebrew translation, but not in the printed Arabic text. There is little doubt that in this case Ibn Tibbon's text is more correct [translator's note].

sponding to them. For doing so would lead you into one of two ways: either into turning aside from the parable's intended subject, or into assuming an obligation to interpret things not susceptible of interpretation and that have not been inserted with a view to interpretation. The assumption of such an obligation would result in extravagant fantasies such as are entertained and written about in our time by most of the sects of the world, since each of these sects desires to find certain significations for words whose author in no wise had in mind the significations wished by them. Your purpose, rather, should always be to know, regarding most parables, the whole that was intended to be known. In some matters it will suffice you to gather from my remarks that a given story is a parable, even if we explain nothing more; for once you know it is a parable, it will immediately become clear to you what it is a parable of. My remarking that it is a parable will be like someone's removing a screen from between the eye and a visible thing.

INSTRUCTION WITH RESPECT TO THIS TREATISE

If you wish to grasp the totality of what this Treatise contains, so that nothing of it will escape you, then you must connect its chapters one with another; and when reading a given chapter, your intention must be not only to understand the totality of the subject of that chapter, but also to grasp each word that occurs in it in the course of the speech, even if that word does not belong to the intention of the chapter. For the diction of this Treatise has not been chosen at haphazard, but with great exactness and exceeding precision, and with care to avoid failing to explain any obscure point. And nothing has been mentioned out of its place, save with a view to explaining some matter in its proper place. You therefore should not let your fantasies elaborate on what is said here, for that would hurt me and be of no use to yourself. You ought rather to learn everything that ought to be learned and constantly study this Treatise. For it then will elucidate for you most of the obscurities of the Law that appear as difficult to every intelligent man. I adjure—by God, may He be exalted!—every reader of this Treatise of mine not to comment upon a single word of it and not to explain to another anything in it save that which has been explained and commented upon in the words of the famous Sages of our Law who preceded me. But whatever he understands from this Treatise of those things that have not been said by any of our famous Sages other than myself should not be explained to another; nor should he hasten to refute me, for that which he understood me to say might be contrary to my intention. He thus would harm me in return for my having wanted to benefit him and would *repay evil for good*.⁴ All into whose hands it falls should consider it well; and if it slakes his thirst, though it be on only one point from among the many that are obscure, he should thank God and be content with what he has understood. If, on the other hand, he finds nothing in this Treatise that might be of use to him in any respect, he should think of it as not having been composed at all. If anything in it, according to his way of thinking, appears to be in some way harmful, he should interpret it, even if in a farfetched way, in order to *pass a favorable judgment*.⁵ For as we are enjoined to act in this way toward our vulgar ones, all the more should

4. Psalm 38.20.

5. Cf. Mishnah, Aboth, 1 6 [translator's note].

Aboth, meaning literally "Father," is a tractate of the Mishnah.

this be so with respect to our erudite ones and Sages of our Law who are trying to help us to the truth as they apprehend it. I know that, among men generally, every beginner will derive benefit from some of the chapters of this Treatise, though he lacks even an inkling of what is involved in speculation. A perfect man, on the other hand, devoted to Law and, as I have mentioned, perplexed, will benefit from all its chapters. How greatly will he rejoice in them and how pleasant will it be to hear them! But those who are confused and whose brains have been polluted by false opinions and misleading ways deemed by them to be true sciences, and who hold themselves to be men of speculation without having any knowledge of anything that can truly be called science,⁶ those will flee from many of its chapters. Indeed, these chapters will be very difficult for them to bear because they cannot apprehend their meaning and also because they would be led to recognize the falseness of the counterfeit money in their hands—their treasure and fortune held ready for future calamities. God, may He be exalted, knows that I have never ceased to be exceedingly apprehensive about setting down those things that I wish to set down in this Treatise. For they are concealed things; none of them has been set down in any book—written in the religious community⁷ in these times of *Exile*—the books composed in these times being in our hands. How then can I now innovate and set them down? However, I have relied on two premises, the one being [the Sages'] saying in a similar case, *It is time to do something for the Lord, and so on*;⁸ the second being their saying, *Let all thy acts be for the sake of Heaven*.⁹ Upon these two premises have I relied when setting down what I have composed in some of the chapters of this Treatise.

To sum up: I am the man who when the concern pressed him and his way was straitened and he could find no other device by which to teach a demonstrated truth other than by giving satisfaction to a single virtuous man while displeasing ten thousand ignoramuses—I am he who prefers to address that single man by himself, and I do not heed the blame of those many creatures. For I claim to liberate that virtuous one from that into which he has sunk, and I shall guide him in his perplexity until he becomes perfect and he finds rest.

INTRODUCTION

One of seven causes should account for the contradictory or contrary statements to be found in any book or compilation.

The first cause. The author has collected the remarks of various people with differing opinions, but has omitted citing his authorities and has not attributed each remark to the one who said it. Contradictory or contrary statements can be found in such compilations because one of the two propositions is the opinion of one individual while the other proposition is the opinion of another individual.

6. In this phrase the same Arabic term is translated by two words: "knowledge" and "science" [translator's note].

7. Meaning the Jewish community [translator's note].

8. The verse continues as follows: *for they have infringed Thy Law*. Psalms 119.126; cf. Babylonian Talmud, Berakhoth, 63 [translator's note]. Berakhoth: a tractate of the Talmud.

9. Mishnah, Aboth, II 17.

The second cause. The author of a particular book has adopted a certain opinion that he later rejects; both his original and later statements are retained in the book.

The third cause. Not all the statements in question are to be taken in their external sense; some are to be taken in their external sense, while some others are parables and hence have an inner content. Alternatively, two apparently contradictory propositions may both be parables and when taken in their external sense may contradict, or be contrary to, one another.

The fourth cause. There is a proviso that, because of a certain necessity, has not been explicitly stated in its proper place; or the two subjects may differ, but one of them has not been explained in its proper place, so that a contradiction appears to have been said, whereas there is no contradiction.

The fifth cause arises from the necessity of teaching and making someone understand. For there may be a certain obscure matter that is difficult to conceive. One has to mention it or to take it as a premise in explaining something that is easy to conceive and that by rights ought to be taught before the former, since one always begins with what is easier. The teacher, accordingly, will have to be lax and, using any means that occur to him or gross speculation, will try to make that first matter somehow understood. He will not undertake to state the matter as it truly is in exact terms, but rather will leave it so in accord with the listener's imagination that the latter will understand only what he now wants him to understand. Afterwards, in the appropriate place, that obscure matter is stated in exact terms and explained as it truly is.

The sixth cause. The contradiction is concealed and becomes evident only after many premises. The greater the number of premises needed to make the contradiction evident, the more concealed it is. It thus may escape the author, who thinks there is no contradiction between his two original propositions. But if each proposition is considered separately—a true premise being joined to it and the necessary conclusion drawn—and this is done to every conclusion—a true premise being joined to it and the necessary conclusion drawn—, after many syllogisms the outcome of the matter will be that the two final conclusions are contradictory or contrary to each other. That is the kind of thing that escapes the attention of scholars who write books. If, however, the two original propositions are evidently contradictory, but the author has simply forgotten the first when writing down the second in another part of his compilation, this is a very great weakness, and that man should not be reckoned among those whose speeches deserve consideration.

The seventh cause. In speaking about very obscure matters it is necessary to conceal some parts and to disclose others. Sometimes in the case of certain dicta this necessity requires that the discussion proceed on the basis of a certain premise, whereas in another place necessity requires that the discussion proceed on the basis of another premise contradicting the first one. In such cases the vulgar must in no way be aware of the contradiction; the author accordingly uses some device to conceal it by all means.

The contradictions that are to be found in the *Mishnah* and the *Baraitoth*¹ are due to the first cause. Thus you will find that they constantly ask: *Does not the beginning [of the passage] constitute an objection against its end?* In such cases the answer is: *The beginning is the opinion of a certain rabbi and the end that of another rabbi.* You likewise will find that they say: *Rabbi [Judah ha-Nasi]² agreed with the opinion of a certain rabbi in this one matter and therefore cited it anonymously. In that other matter he agreed with the opinion of that other rabbi and therefore cited it anonymously.* You often will find them also saying: *Who is the author of this anonymous passage? Such and such rabbi. Who is the author of that passage of the Mishnah? Such and such rabbi.* Such cases are innumerable. The contradictions or divergences to be found in the *Talmud* are due to the first cause and to the second. Thus you find them constantly saying: *In this matter he agreed with this rabbi and in that with another rabbi.* They likewise say: *He agreed with him on one point and disagreed on another.* They also say: *[The two statements are made by] two Amoraim³ who disagree as to the opinion of a certain rabbi.* All contradictions of this kind are due to the first cause. Contradictions due to the second cause are referred to when they say: *Rab abandoned this opinion. Raba⁴ abandoned that opinion.* In such cases an inquiry is made as to which of the two statements is the later one. This is similar to their saying: *In the first recension [of the Talmud] by Rabbi Ashi,⁵ he said one thing, and in the second another.* That some passages in every prophetic book, when taken in their external sense, appear to contradict or to be contrary to one another is due to the third cause and to the fourth. And it was with this in view that this entire introduction was written. You already know how often [the Sages], *may their memory be blessed*, say: *One verse says this and another verse says that.* They straightway establish that there is an apparent contradiction. Thereupon they explain that a proviso is lacking in the statement of the subject or that the two texts have different subjects. Thus, they say: *Solomon, it is not enough for you that your words contradict those of your father? They also contradict themselves, and so on.*⁶ Cases of this are frequent in the sayings of the Sages, *may their memory be blessed*; however, most of the prophetic statements they refer to concern commandments or precepts regarding conduct. We, on the other hand, propose to draw attention to verses that are apparently contradictory with regard to opinions and beliefs. Part of this will be explained in some of the chapters of this Treatise, for this subject too belongs to *the mysteries of the Torah*. Whether contradictions due to the seventh cause are to be found in the books of the prophets is a matter for speculative study and investigation. Statements about this should not be a matter of conjecture. As for the divergences occurring in the books of the philosophers, or rather of those who know the truth, they are due to the fifth cause. On the other hand, the contradictions occurring in most of the books of authors and

1. A collection of extraneous rabbinic statements collected after the *Mishnah* but never incorporated into the *Talmud*.

2. Judah the Prince or Patriarch (135–ca. 220 C.E.), rabbi responsible for codifying the *Mishnah* out of the collected oral tradition, ca. 200 C.E.

3. Literally, "sayers" (Hebrew); rabbinic teachers whose opinions are preserved in the *Talmud*. They lived from the 3d to the 5th century C.E. in both Palestine and Babylonia.

4. Possibly Raba Bar Joseph bar Hama (299–352 C.E.), although the context suggests Malmonides

may simply be referring by way of example to any rabbi or teacher. Rab, honorific given to Abba bar Aivu (3d c.), a student of Judah ha Nisi who founded a *yeshiva* (school) at Sura. That he is simply called Rab (or rabbi) reflects his status.

5. Babylonian teacher who died early in the 5th century C.E. He was head of the *yeshiva* at Sura and famous for his reading of the whole *Talmud* during two months of the year.

6. Babylonian *Talmud*, *Shabbath*, 30a [translator's note]. *Shabbath*: a tractate of the *Talmud*.

commentators other than those we have mentioned are due to the sixth cause. Likewise in the *Midrashim* and the *Haggadah*⁷ there is to be found great contradiction due to this cause. That is why the Sages have said: *No questions should be asked about difficulties in the Haggadah*. There are also to be found therein contradictions due to the seventh cause. Divergences that are to be found in this Treatise are due to the fifth cause and the seventh. Know this, grasp its true meaning, and remember it very well so as not to become perplexed by some of its chapters.

And after these introductory remarks, I shall begin to mention the terms whose true meaning, as intended in every passage according to its context, must be indicated. This, then, will be a key permitting one to enter places the gates to which were locked. And when these gates are opened and these places are entered into, the souls will find rest therein, the eyes will be delighted, and the bodies will be eased of their toil and of their labor.

1190

7. Theological speculation, general ethical teachings that have not attained the status of law (*halachah*); parables, maxims, legends, and folklore.

GEOFFREY OF VINSAUF

ca. 1200

Geoffrey of Vinsauf is perhaps most familiar to students of English literature through the work of the poet Geoffrey Chaucer. In his *Nun's Priest's Tale*, Chaucer parodies Geoffrey of Vinsauf's lament on the death of Richard I in *Poetria Nova*: "O dear sovereign master, Geoffrey, you who movingly elegized the death of noble King Richard when he was slain by the arrow, would that I had your art and skill to rail at Friday as you did." Chaucer's mock praise suggests that even in the fourteenth century, Geoffrey of Vinsauf's best-known work, *Poetria Nova* (ca. 1200, *New Poetics*), had a reputation for stylistic extravagance. That Chaucer could so casually refer to it also suggests its popularity. Throughout the late Middle Ages, the *Poetria* was a widely read treatise on poetry; almost 200 extant manuscript copies, as well as a number of elaborate commentaries written between the thirteenth and fifteenth centuries, attest to its considerable influence on Latin and vernacular literature.

While most medieval literary criticism is concerned with the proper reading either of the ancient poets (see, for instance, Bernardus Silvestris and GIOVANNI BOCCACCIO) or of the Bible (see AUGUSTINE and THOMAS AQUINAS), Geoffrey's textbook for working poets is keenly interested in modernity and innovation. Not that he rejects the authority of tradition: indeed, his own treatise is explicitly modeled on HORACE's *Ars Poetica* (see above). But just as his "new" poetics reconceives and revises Horatian poetics, so aspiring poets, he maintains, best imitate tradition when they renew and refresh it. The rich texture of Geoffrey's citations calls to mind the later poststructuralist notion of intertextuality—the interanimation within a text of citations, references, echoes, and cultural languages—as described by contemporary theorists like ROLAND BARTHES. Written in Latin poetic verse that illustrates the principles Geoffrey is setting forth, *Poetria Nova* exhibits a Barthesian pleasure in the display of language for its own sake.

Geoffrey of Vinsauf was a poet and a teacher of rhetoric who lived in the last decades of the twelfth and the beginning of the thirteenth centuries. Few details of his life survive; even the dates of his birth and death are unrecorded. The manuscripts of the *Poetria Nova* attribute it to a "Galfridus Anglicus" (Geoffrey the Englishman) who studied in Paris and taught in "Hamton" (probably Northampton) and who, on at least one occasion, accompanied a mission to Rome in the service of either King Richard (reigned 1189–99) or King John (reigned 1199–1216) of England. Geoffrey seems in every way the product of the Anglo-Norman culture into which he was born, a hybrid of the English-French cultural exchange facilitated by the Norman conquest of England nearly a century earlier. Traditional, but less trustworthy, accounts of his life place his birth in Normandy, France, and his early education at St. Frideswide, Oxford. He is supposed to have returned to the Continent for further university study, first in Paris and later in Italy. A quarrel with a friend named Robert may have earned him the displeasure of a Bishop Adam so that he was forced to appeal to the archbishop of Canterbury for protection. The intercession of the archbishop enabled him to return to England as a tutor. His designation "Vinsauf" in English, or "de Vino Salvo" in Latin, comes from a treatise attributed to him on the keeping of wine. Topical references in the *Poetria Nova*—including a dedication to Innocent III (whose papacy extended from 1198 to 1216), allusions to the death of Richard I (1199), and a reference to Pope Innocent III's interdict on England (1208–13)—not only help date the poem and its revisions fairly precisely to the first decades of the thirteenth century, but provide a historical context for Geoffrey's life as well. He was writing during a period of renewed interest in literature at the Continental cathedral schools and was a contemporary of important members of the influential School of Chartres, especially Bernardus Silvestris and John of Salisbury, sharing important literary concerns with them.

Geoffrey is best known for *Poetria Nova*, but at least three other works have been securely attributed to him. *Documentum de Modo et Arte Dictandi et Versificandi* (*Instruction in the Method and Art of Speaking and Versifying*) is a long prose treatise on rhetoric and poetics, written earlier than the *Poetria Nova* but covering much the same material. While the *Poetria Nova* is a treatise and poem intended specifically for aspiring poets, the *Documentum* consists primarily of rhetorical exercises in essay writing and poetry. *Summa de Coloribus Rhetoricis* (*A Summary of the Colors of Rhetoric*) is a briefer work, primarily on figures of speech. The "Causa Magistri Gaufridi Vinesauf" ("The Apology of Master Geoffrey of Vinsauf") is one of a number of short poems of topical and political interest attributed to Geoffrey.

The title of Geoffrey's most popular book suggestively indicates the author's relation to tradition and innovation. *Poetria Nova* refers to the medieval traditions of rhetoric and of poetics. By the late twelfth century, Cicero's rhetorical treatise *De Inventione* (ca. 85 B.C.E., *On Invention*) had been added to the rhetoric curriculum of the schools, joining the standard rhetorical text, the *Rhetorica ad Herennium* (ca. 86–82 B.C.E., *Rhetoric Addressed to C. Herennius*), which had been falsely attributed to Cicero. *De Inventione* was called the "old rhetoric" (*rhetorica vetus*) and the *Ad Herennium* the "new rhetoric" (*rhetorica nova*). Horace's *Ars Poetica*, known as the *Poetria*, was the standard treatise on poetics. Geoffrey's *Poetria Nova* thus announces itself as a work rooted in the tradition of Horace, but carrying Horatian poetics forward in the same way that the *Ad Herennium* carries forward Cicero's *De Inventione*. Despite this gesture toward Horace, the *Poetria Nova* contains not a single citation from Horace, and its examples of figurative language are not culled from classical authors; rather, they are entirely invented by Geoffrey, a mark of his commitment to innovation and to a rethinking of traditional poetics. Unlike his predecessors, Geoffrey is less interested in carefully defining poetic techniques than in creatively illustrating them.

Though Geoffrey recognizes natural ability (*ingenium*) as a prerequisite for the poet, he is concerned in the *Poetria Nova* with the practical aspects of the poet's

training. In the debate between the claims of genius or inspiration and of craft, Geoffrey follows Horace rather than PLATO (in *Ion*; see above) and LONGINUS, who portray an ecstatic poet moved to utterance by a supernatural agency. For Geoffrey, genius is necessary but useless without proper training and experience. His poet is an artisan—an architect, to use the metaphor he develops in the beginning of the treatise—rather than a vehicle for transcendent revelation. Yet his view of the poet as *artifex*, or creator, links him with the medieval tradition of Neoplatonism rooted in PLOTINUS's belief that artistic creation is a reflection of divine creation; at least this is how generations of commentators have read his opening remarks on poetry.

Geoffrey sees the poet's training as requiring a theoretical understanding of language and composition (*ars*), diligent practice (*usus*), and the reading and imitation of great authors (*imitatio*). His treatise, following the *Ad Herennium*, reduces the five divisions of rhetoric common in Roman treatises to four, leaving out techniques of invention (the choice of material): (1) disposition, or the ordering of material; (2) style, including amplification, abbreviation, and figures of speech and thought; (3) memory; and (4) delivery. The discussion of the figures of speech and thought, however, is by far the longest section of the *Poetria Nova*, occupying nearly four-fifths of the 2,100-line text. (Our selection includes the treatment of disposition and style.) Geoffrey shares with Horace the concept of decorum (i.e., the outer garment of ornamentation must suit the inner nature of the words) and with his medieval contemporaries a concern for distinguishing proper and figurative uses of language; but more than any other classical or medieval literary theorist, he displays a fascination with the texture of language for its own sake that, at times, seems modern. His discussion of amplification—which explains seven ways to lengthen a literary work—is a bravura performance.

The *Poetria Nova* demonstrates the fusion of poetics and rhetoric that characterized medieval thinking about poetry. This treatise and its imitators constituted the training manuals of most European poets from the thirteenth century through the Renaissance, and they remain to this day a primary source for technical discussion of poetic figures. More significantly, Geoffrey of Vinsauf revitalized a tradition of verse criticism, begun with Horace, that is carried on in English literature by ALEXANDER POPE's *Essay on Criticism* (1711; see below) in the eighteenth century, Lord Byron's "English Bards and Scottish Reviewers" (1809) and "Hints from Horace" (1811) in the nineteenth, and Wallace Stevens's "Notes toward a Supreme Fiction" (1947) in the twentieth.

BIBLIOGRAPHY

Latin editions of Geoffrey's *Poetria Nova*, *Documentum*, and *Summa* can all be found in *Les Arts poétiques du XIIe et du XIIIe siècles* (ed. Edmond Faral, 1924). Margaret F. Nims, *Poetria Nova of Geoffrey of Vinsauf* (1967), remains the standard English prose translation of *Poetria Nova*. Prose translations have also been done by Ernest Gallo in *The "Poetria Nova" and Its Sources in Early Rhetorical Doctrine* (1971) and by Jane Baltzell Kopp in *Three Medieval Rhetorical Arts* (ed. James Jerome Murphy, 1971). Roger Parr has made available an English version of *Documentum de Modo et Arte Dictandi et Versificandi* (1968).

The few details about Geoffrey's life that survive are found primarily in the "Causa Magistri Gaufredi" and have been summarized by Josiah Cox Russell in *The Dictionary of Writers of Thirteenth-Century England* (1967). Marjorie Curry Woods's edition and translation of one of the twelfth-century anonymous commentaries on the *Poetria Nova*, *An Early Commentary on the Poetria Nova of Geoffrey of Vinsauf* (1985), provides some interesting evidence about the earliest reception of Geoffrey's text. Walter Sedgwick, "The Style and Vocabulary of the Latin Arts of Poetry in the Twelfth and Thirteenth Centuries," *Speculum* 3 (1928), is a classic study of the *Poetria Nova*. Both Douglas Kelly, "The Theory of Composition in Medieval Narrative

Poetry and Geoffrey of Vinsauf's *Poetria Nova*," *Mediaeval Studies* 31 (1969), and Ernest Gallo, "The Grammarian's Rhetoric: *The Poetria Nova* of Geoffrey of Vinsauf in Medieval Eloquence," in *Studies in the Theory and Practice of Medieval Rhetoric* (ed. James J. Murphy, 1978), are important studies of the text. Alexandre Leupin's essay "Absolute Reflexivity: Geoffroi de Vinsauf," in *Medieval Texts and Contemporary Readers* (ed. Laurie A. Finke and Martin B. Shichtman, 1987), examines Geoffrey's obsession with modernity in his "new" poetics, linking the *Poetria Nova* with contemporary literary theory's interest in textuality. For bibliography on Geoffrey, consult James J. Murphy's *Medieval Rhetoric: A Select Bibliography* (1971).

From *Poetria Nova*¹

I. General Remarks on Poetry Divisions of the Present Treatise

If a man has a house to build, his impetuous hand does not rush into action. The measuring line of his mind first lays out the work, and he mentally outlines the successive steps in a definite order. The mind's hand² shapes the entire house before the body's hand builds it. Its mode of being is archetypal before it is actual. Poetic art may see in this analogy the law to be given to poets: let the poet's hand not be swift to take up the pen, nor his tongue be impatient to speak; (50)³ trust neither hand nor tongue to the guidance of fortune. To ensure greater success for the work, let the discriminating mind, as a prelude to action, defer the operation of hand and tongue, and ponder long on the subject matter. Let the mind's interior compass first circle the whole extent of the material. Let a definite order chart in advance at what point the pen will take up its course, or where it will fix its Cadiz.⁴ As a prudent workman, construct the whole fabric within the mind's citadel; let it exist in the mind before it is on the lips.

When due order has arranged the material in the hidden chamber of the mind, (60) let poetic art come forward to clothe the matter with words. Since poetry comes to serve, however, let it make due preparation for attendance upon its mistress. Let it take heed lest a head with tousled locks, or a body in rumpled garments, or any final details⁵ prove displeasing, and lest in adorning one part it should in some way disfigure another. If any part is ill-groomed, the work as a whole incurs censure from that one part. A touch of gall makes all the honey bitter; a single blemish disfigures the entire face. Give careful thought to the material, therefore, that there may be no possible grounds for reproach. (70)

Let the poem's beginning, like a courteous attendant, introduce the subject with grace. Let the main section, like a diligent host, make provision for its worthy reception. Let the conclusion, like a herald when the race is over,

1. Translated by Margaret F. Nims, who sometimes includes explanatory material in square brackets in the text. The subheads are provided by Alex Preminger, O. B. Hardison Jr., and Kevin Kerrane (eds. of *Classical and Medieval Literary Criticism*, 1974).

2. Geoffrey makes frequent use of corporal metaphors [translator's note].

3. Numbers in parentheses refer to line numbers

of the original Latin verse.

4. Limit. (To the Greeks and Romans, Cadiz [in Spain], the ancient Gades, was long the westernmost point of the known world.) [Translator's note.]

5. Geoffrey refers, again in a corporal metaphor (head, body, final details) to the three parts of a composition: beginning, middle, end [translator's note].

dismiss it honorably. In all of its parts let the whole method of presentation bring credit upon the poem, lest it falter in any section, lest its brightness suffer eclipse.

In order that the pen may know what a skillful ordering of material requires, the treatise to follow begins its course with a discussion of order. Since the following treatise begins its course with a discussion of order, its first concern is the path⁶ that the ordering of material should follow. (80) Its second care: with what scales⁷ to establish a delicate balance if meaning is to be given the weight appropriate to it. The third task is to see that the body of words is not boorishly crude but urbane. The final concern is to ensure that a well-modulated voice enters the ears and feeds the hearing, a voice seasoned with the two spices of facial expression and gesture.⁸

From II. *Ordering the Material*

The material's order may follow two possible courses: at one time it advances along the pathway of art, at another it travels the smooth road of nature. Nature's smooth road points the way when "things" and "words" follow the same sequence, and the order of discourse does not depart from the order of occurrence. (90) The poem travels the pathway of art if a more effective order presents first what was later in time, and defers the appearance of what was actually earlier. Now, when the natural order is thus transposed, later events incur no censure by their early appearance, nor do early events by their late introduction. Without contention, indeed, they willingly assume each other's place, and gracefully yield to each other with ready consent. Deft artistry inverts things in such a way that it does not pervert them; in transposing, it disposes the material to better effect. The order of art is more elegant than natural order, and in excellence far ahead, even though it puts last things first.⁹ (100)

The first branch of order has no offshoots; the second is prolific: from its marvelous stock, bough branches out into boughs, the single shoot into many, the one into eight. The air in this region of art may seem murky and the pathway rugged, the doors locked and the theory itself entangled with knots. Since that is so, the words that follow will serve as physicians for that disorder. Scan them well: here you will find a light to dispel the darkness, safe footing to traverse rugged ground, a key to unlock the doors, a finger to loose the knots. (110) The way is thrown open; guide the reins of your mind as the nature of your course demands.

Let that part of the material which is first in the order of nature wait outside the gates of the work. Let the end, as a worthy precursor, be first to enter and take up its place in advance, as a guest of more honorable rank, or even as master. Nature has placed the end last in order, but art respectfully defers to it, leads it from its humble position and accords it the place of honor.

The place of honor at the beginning of a work does not reserve its luster

6. That is, natural order or the order of art [translator's note].

7. That is, amplified or abbreviated treatment, as the dignity of the subject demands [translator's note].

8. In *Poetria Nova* Geoffrey modifies the classical

five divisions of rhetoric—invention, organization, style, memory, and delivery—leaving out invention.

9. Bernardus Silvestris (d. ca. 1160) makes a similar distinction between natural and artificial order.

for the end of the material only; rather, two parts share the glory: the end of the material and the middle. (120) Art draws from either of these a graceful beginning. Art plays, as it were, the conjurer: causes the last to be first, the future to be present, the oblique to be straight, the remote to be near; what is rustic becomes urbane, what is old becomes new, public things are made private, black things white, and worthless things are made precious.

If a still more brilliant beginning is desired (while leaving the sequence of the material unchanged) make use of a proverb,¹ ensuring that it may not sink to a purely specific relevance, but raise its head high to some general truth. See that, while prizing the charm of the unusual, it may not concentrate its attention on the particular subject, (130) but refuse, as if in disdain, to remain within its bosom. Let it take a stand above the given subject, but look with direct glance towards it. Let it say nothing directly about the subject, but derive its inspiration therefrom.

This kind of beginning is threefold, springing up from three shoots. The shoots are the first, the middle, and the last parts of the theme. From their stem a sprig, as it were, bursts forth, and is thus wont to be born, one might say, of three mothers. It remains in hiding, however, and when summoned it refuses to hear. It does not as a rule come forward when the mind bids it; it is of a somewhat haughty nature, and does not present itself readily nor to all. (140) It is reluctant to appear, unless, indeed, it is compelled to do so.

Proverbs, in this way, add distinction to a poem. No less appropriately do exempla² occupy a position at the beginning of a work. The same quality, indeed, shines forth from exempla and proverbs, and the distinction conferred by the two is of equal value. In stylistic elegance, proverbs alone are on a par with exempla. Artistic theory has advanced other techniques [for the poem's beginning] but prefers these two; they have greater prestige. The others are of less worth and more recent appearance; the sanction of time favors the two forms mentioned. Thus the way that lies open is more restricted, its use more appropriate, its art superior, as we see both from artistic principle and from practice. . . .³ (150)

From III. Amplification and Abbreviation

For the opening of the poem, the principles of art outlined above have offered a variety of paths. The poem's development now invites you onward. Keeping to our image, direct your steps further along the road's course.

The way continues along two routes: there will be either a wide path or a narrow, either a river or a brook. You may advance at a leisurely pace or leap swiftly ahead. You may report the matter with brevity or draw it out in a lengthy discourse. The footing on either path is not without effort; (210) if you wish to be wisely guided, entrust yourself to a reliable guide. Reflect upon the precepts below; they will guide your pen and teach the essentials for each path. The material to be molded, like the molding wax, is at first

1. The author understands by the term *proverbium* any general truth drawn from observation or experience [translator's note].

2. The term *exemplaris imago* (illustrative image) renders more precisely what Geoffrey understands by the term *exemplum*. All the exempla he offers

as models in this treatise are exemplary images rather than stories [translator's note].

3. Here and elsewhere, ellipses marked by three periods represent the deletions of Preminger, Hardison, and Kerrane.

hard to the touch. If intense concentration enkindle native ability, the material is soon made pliant by the mind's fire, and submits to the hand in whatever way it requires, malleable to any form. The hand of the mind controls it, either to amplify or curtail.

A. AMPLIFICATION

REPETITION (*interpretatio, expolitio*).⁴ If you choose an amplified form, proceed first of all by this step: (220) although the meaning is one, let it not come content with one set of apparel. Let it vary its robes and assume different raiment. Let it take up again in other words what has already been said; let it reiterate, in a number of clauses, a single thought. Let one and the same thing be concealed under multiple forms—be varied and yet the same.

PERIPHRAISIS (*circuitio, circumlocutio*). Since a word, a short sound, passes swiftly through the ears, a step onward is taken when an expression made up of a long and leisurely sequence of sounds is substituted for a word. In order to amplify the poem, avoid calling things by their names; use other designations for them. (230) Do not unveil the thing fully but suggest it by hints. Do not let your words move straight onward through the subject, but, circling it, take a long and winding path around what you were going to say briefly. Retard the tempo by thus increasing the number of words. This device lengthens brief forms of expression, since a short word abdicates in order that an extended sequence may be its heir. Since a concept is confined in one of three strongholds—in a noun, or a verb, or a combination of both—do not let the noun or verb or combination of both render the concept explicit, but let an amplified form stand in place of verb or noun or both. (240)

COMPARISON (*collatio*). A third step is comparison, made in accord with one of two laws—either in a hidden or in an overt manner. Notice that some things are joined deftly enough, but certain signs reveal the point of juncture. A comparison which is made overtly presents a resemblance which signs explicitly point out. These signs are three: the words *more, less, equally*. A comparison that is made in a hidden way is introduced with no sign to point it out. It is introduced not under its own aspect but with dissembled mien, as if there were no comparison there at all, (250) but the taking on, one might say, of a new form marvelously engrafted, where the new element fits as securely into the context as if it were born of the theme. The new term is, indeed, taken from elsewhere, but it seems to be taken from there; it is from outside and does not appear outside; it makes an appearance within and is not within; so it fluctuates inside and out, here and there, far and near; it stands apart, and yet is at hand. It is a kind of plant; if it is planted in the garden of the material the handling of the subject will be pleasanter. Here is the flowing water of a well-spring, where the source runs purer; here is the formula for a skillful juncture, where the elements joined flow together and touch each other as if they were not contiguous but continuous; (260) as if the hand of nature had joined them rather than the hand of art. This type of comparison is more artistic; its use is much more distinguished.

4. The words in parentheses are the usual Latin terms for the techniques being discussed.

APOSTROPHE (*apostrophatio, exclamatio*). In order that you may travel the more spacious route, let apostrophe be a fourth mode of delay. By it you may cause the subject to linger on its way, and in it you may stroll for an hour. Take delight in apostrophe; without it the feast would be ample enough, but with it the courses of an excellent cuisine are multiplied. The splendor of dishes arriving in rich profusion and the leisured delay at the table are festive signs. (270) With a variety of courses we feed the ear for a longer time and more lavishly. Here is food indeed for the ear when it arrives delicious and fragrant and costly. Example may serve to complement theory: the eye is a surer arbiter than the ear. One example is not enough; there will be an ample number; from this ample evidence learn what occasion suitably introduces apostrophe, what object it addresses, and in what form.

Rise up, apostrophe, before the man whose mind soars too high in prosperity, and rebuke him thus:

Why does joy so intense excite your spirit? Curb jubilation with due restraint and extend not its limits beyond what is meet [appropriate]. O soul, heedless of misfortune to come, imitate Janus[.]⁵ (280)

* * *

DIGRESSION. If it is desirable to amplify the treatise yet more fully, go outside the bounds of the subject and withdraw from it a little; let the pen digress, but not so widely that it will be difficult to find the way back. (530) This technique demands a talent marked by restraint, lest the bypath be longer than decorum allows. A kind of digression is made when I turn aside from the material at hand, bringing in first what is actually remote and altering the natural order. For sometimes, as I advance along the way, I leave the middle of the road, and with a kind of leap I fly off to the side, as it were; then I return to the point whence I had digressed. Lest this matter of digression be veiled in obscurity, I offer the following example:

The bond of a single love bound together two hearts; a strange cause divided them one from the other. But before they were parted, lips pressed kisses on lips; (540) a mutual embrace holds and enfolds them both. From the fount of their eyes, tears flow down their cheeks, and sobs alternate with farewells. Love is a spur to grief, and grief a witness to the strength of love. Winter yields to spring. The air unclasps its robe of cloud, and heaven caresses the earth. Moist and warm, air sports with earth, and the feminine earth feels the masculine power of the air.⁶ A flower, earth's child, bursts forth into the breeze and smiles at its mother. Their first foliage adorns the tips of the trees; seeds that were dead spring up into life; (550) the promise of harvest to come lives first in the tender blade. Now is the season in which birds delight. This hour of time found the lovers apart, who yet through their love were not parted.

DESCRIPTION, pregnant with words, follows as a seventh means of amplifying the work. But although the path of description is wide, let it also be wise, let it be both lengthy and lovely. See that the words with due ceremony are wedded to the subject. If description is to be the food and ample refresh-

5. Roman god of doorways, associated with beginnings and represented by a double-faced head. With "O soul," Geoffrey gives an example of apostrophe, or rhetorical address.

6. The topos [stock rhetorical theme] of *Mater Terra* (mother earth) and *Pater Aether* (father air) appears frequently in classical and medieval times [translator's note].

ment of the mind, avoid too curt a brevity as well as trite conventionality. Examples of description, accompanied by novel figures, will be varied, (560) that eye and ear may roam amid a variety of subjects.

If you wish to describe, in amplified form, a woman's beauty:

Let the compass of Nature first fashion a sphere for her head; let the color of gold give a glow to her hair, and lilies bloom high on her brow. Let her eyebrows resemble in dark beauty the blackberry, and a lovely and milk-white path separate their twin arches. Let her nose be straight, of moderate length, not too long nor too short for perfection. Let her eyes, those watch-fires of her brow, be radiant with emerald light, or with the brightness of stars. (570) Let her countenance emulate dawn: not red, nor yet white—but at once neither of those colors and both. Let her mouth be bright, small in shape—as it were, a half-circle. Let her lips be rounded and full, but moderately so; let them glow, aflame, but with gentle fire. Let her teeth be snowy, regular, all of one size, and her breath like the fragrance of incense. Smoother than polished marble let Nature fashion her chin—Nature, so potent a sculptor. Let her neck be a precious column of milk-white beauty, (580) holding high the perfection of her countenance. From her crystal throat let radiance gleam, to enchant the eye of the viewer and enslave his heart. Let her shoulders, conforming to beauty's law, not slope in unlovely descent, nor jut out with an awkward rise; rather, let them be gracefully straight. Let her arms be a joy to behold, charming in their grace and their length. Let soft and slim loveliness, a form shapely and white, a line long and straight, flow into her slender fingers. Let her beautiful hands take pride in those fingers. (590) Let her breast, the image of snow, show side by side its twin virginal gems. Let her waist be close girt, and so slim that a hand may encircle it. For the other parts I am silent—here the mind's speech is more apt than the tongue's. Let her leg be of graceful length and her wonderfully tiny foot dance with joy at its smallness.

So let the radiant description descend from the top of her head to her toe, and the whole be polished to perfection.

If you wish to add to the loveliness thus pictured an account of attire (600):

Let her hair, braided and bound at her back, bind in its gold; let a circlet of gold gleam on her ivory brow. Let her face be free of adornment, lovely in its natural hue. Have a starry chain encircle her milk-white neck. Let the border of her robe gleam with fine linen; with gold let her mantle blaze. Let a zone, richly set with bright gems, bind her waist, and bracelets enrich her arms. Have gold encircle her slender fingers, and a jewel more splendid than gold shed its brilliant rays. Let artistry vie with materials in her fair attire; (610) let no skill of hand or invention of mind be able to add aught to that apparel. But her beauty will be of more worth than richness of vesture. Who, in this torch, is unaware of the fires? Who does not find the flame? If Jupiter in those days of old had seen her, he would not, in Amphitryon's shape, have deluded Alcmena;⁷ nor assumed the face of Diana to defraud you, Callisto,

7. In classical mythology, the wife of Amphitryon; the visit by Jupiter/Zeus (father and ruler of the gods) resulted in the birth of Hercules/Heraclēs (the Romans borrowed heavily from Greek mythology, often assimilating Greek gods to native Italian deities). What follows is a list of mortals and goddesses whom Zeus, in various forms, successfully

pursued; many of them bore him children. Callisto was a follower of the huntress Artemis (identified with Diana), turned into a bear by either Hera or Artemis and made a constellation by Zeus; Io, daughter of the river-god Inachus, was changed into a cow by Zeus to protect her from Hera; Antiope bore the famous musician Amphion and

of your flower; nor would he have betrayed Io in the form of a cloud, nor Antiope in the shape of a satyr, nor the daughter of Agenor as a bull, nor you, Mnemosyne, as a shepherd; nor the daughter of Asopo in the guise of fire; nor you, Deo's daughter, in the form of a serpent; nor Leda as a swan; nor Danae in a shower of gold. (620) This maiden alone would he cherish, and see all others in her. . . .

OPPOSITION (*oppositio, oppositum*). There remains yet another means of fostering the amplified style: any statement at all may assume two forms: one form makes a positive assertion, the other negates its opposite. (670) The two modes harmonize in a single meaning; and thus two streams of sound flow forth, each flowing along with the other. Words flow in abundance from the two streams. Consider this example: "*That young man is wise.*" Affirm the youthfulness of his countenance and deny its age: "*His is the appearance of youth and not of old age.*" Affirm the maturity of his mind and deny its youthfulness: "*His is the mind of mature age and not of youth.*" The account may perhaps continue along the same line: "*His is not the cheek of age but of youth; (680) his is not the mind of youth but age.*" Or, choosing details closely related to the theme, you may travel a rather long path, thus:

His face is not wrinkled, nor is his skin dry; his heart is not stricken with age, nor is his breath labored; his loins are not stiff, nor is his back bowed; physically he is a young man, mentally he is in advanced maturity.

In this way, plentiful harvest springs from a little seed; great rivers draw their source from a tiny spring; from a slender twig a great tree rises and spreads.

B. ABBREVIATION

If you wish to be brief, (690) first prune away those devices mentioned above which contribute to an elaborate style; let the entire theme be confined within narrow limits. Compress it in accordance with the following formula. Let *emphasis* be spokesman, saying much in few words. Let *artculus*,⁸ with staccato speech, cut short a lengthy account. The *ablative*,⁹ when it appears alone without a pilot, effects a certain compression. Give no quarter to *repetition*. Let skillful *implication* convey the unsaid in the said. Introduce no *conjunction* as a link between clauses—let them proceed uncoupled (*g syndeton*).¹ Let the craftsman's skill effect a *fusion of many concepts in one*, (700) so that many may be seen in a single glance of the mind. By such concision you may gird up a lengthy theme; in this bark you may cross a sea. This form of expression is preferable for a factual account, in order not to enshroud facts discreetly in mist, but rather to clear away mist and usher in sunlight. Combine these devices, therefore, when occasion warrants: emphasis, artculus, ablative absolute, deft implication of one thing in the rest,

his twin brother Zethus, dual rulers of Thebes; the daughter of Agenor, king of Phoenicia, was Europa, whom Zeus carried off after taking the form of a white bull; Mnemosyne (literally, "memory"; Greek) was the mother of the 9 Muses; when the river-god Asopus tried to prevent Zeus from abducting his daughter Aegina, Zeus drove him off with a thunderbolt; the daughter of Deo—another name for Demeter, goddess of agriculture—is Persephone (Zeus was also her father); Leda, the wife of Tyndareus, king of Sparta, bore Helen of Troy

(as well as Clytemnestra, Castor, and Pollux); and Danaë, who was locked in a tower because of the prophecy that her son would kill her father, bore the hero Perseus.

8. A word by itself, or a short phrase in place of a sentence (Latin).

9. A grammatical case in Latin that appears in a number of independent constructions.

1. The omission of conjunctions between words, phrases, or clauses, as in this sentence.

omission of conjunctions between clauses, fusion of many concepts in one, avoidance of repetition. (710) Draw on all of these, or at least on such as the subject allows. Here is a model of abbreviation; the whole technique is reflected in it:

Her husband abroad improving his fortunes, an adulterous wife bears a child. On his return after long delay, she pretends it begotten of snow.² Deceit is mutual. Slyly he waits. He whisks off, sells, and—reporting to the mother a like ridiculous tale—pretends the child melted by sun. . . .

From IV. *Ornaments of Style*

Whether it be brief or long, a discourse should always have both internal and external adornment, but with a distinction of ornament reflecting the distinction between the two orders. First examine the mind of a word, and only then its face; (740) do not trust the adornment of its face alone. If internal ornament is not in harmony with external, a sense of propriety is lacking. Adorning the face of a word is painting a worthless picture: it is a false thing, its beauty fictitious; the word is a whitewashed wall and a hypocrite, pretending to be something whereas it is nothing. Its fair form conceals its deformity; it makes a brave outward show, but has nothing within. It is a picture³ that charms one who stands at a distance, but displeases the viewer who stands at close range. Take care, then, not to be hasty, but be Argus⁴ in relation to what you have said, and, Argus-eyed, examine the words in relation to the meaning proposed. (750) If the meaning has dignity, let that dignity be preserved; see that no vulgar word may debase it. That all may be guided by precept: let rich meaning be honored by rich diction, lest a noble lady blush in pauper's rags.

In order that meaning may wear a precious garment, if a word is old, be its physician and give to the old a new vigor. Do not let the word invariably reside on its native soil⁵—such residence dishonors it. Let it avoid its natural location, (760) travel about elsewhere, and take up a pleasant abode on the estate of another. There let it stay as a novel guest, and give pleasure by its very strangeness. If you provide this remedy, you will give to the word's face a new youth.

DIFFICULT ORNAMENT

METAPHOR (*translatio*). The method suggested above affords guidance in the artistic transposition of words. If an observation is to be made about man, I turn to an object which clearly resembles man [in the quality or state of being I wish to attribute to him]. When I see what that object's proper vesture is, in the aspect similar to man's, I borrow it, and fashion for myself a new garment in place of the old. For example, taking the words in their literal sense, (770) gold is said to be yellow; milk, white; a rose, very red; honey, sweet-flowing; flames, glowing; snow, white. Say therefore: *snowy* teeth, *flaming* lips, *honied* taste, *rosy* countenance, *milky* brow, *golden* hair.

2. The story of the snow child was a popular theme in the Middle Ages [translator's note].

3. See HORACE, *Ars Poetica* (ca. 10 B.C.E.), lines 361–62: "Poetry is like painting. Some attracts you more if you stand near, some if you're further off."

4. That is, watchful; in Greek mythology, Argus had a hundred eyes.

5. The word's "native soil" (*proprium locum*) refers to its literal meaning rather than to its position in the sentence [translator's note].

These word-pairs are well suited to each other: teeth, snow; lips, flames; taste, honey; countenance, rose; brow, milk; hair, gold. And since here the linking of aspects that are similar sheds a pleasing light, if the subject of your discourse is not man, turn the reins of your mind to the human realm. With artistic tact, transpose a word which, in its literal sense, applies to man in an analogous situation. (780) For example, if you should wish to say: "Springtime makes the earth beautiful; the first flowers grow up; the weather turns mild; storms cease; the sea is calm, its motion without violence; the vales are deep, the mountains lofty"; consider what words, in a literal sense, express the analogous situation in our human life. When you adorn something, you *paint*; when you enter on existence, you *are born*; affable in discourse, you *placate*; withdrawing from all activity, you *sleep*; motionless, you *stand on fixed foot*; sinking down, you *lie*; lifted into the air, you *rise*. (790) The wording is a source of pleasure, then, if you say:

Springtime paints the earth with flowers: the first blossoms are born; the mild weather soothes; storms, dying down, slumber; the sea stands still, as if without movement; the valleys lie deep; the mountains rise aloft. . . .

Art has woven other garments of less price, yet they, too, have a dignified and appropriate use. There are in all ten⁶ tropes, six in this group, four [in addition to metaphor, onomatopoeia, antonomasia,⁷ and allegory] mentioned above. (960) This decade of figures adorns expression in a way we term *difficult* in that a word is taken only in its figurative and not in its literal sense. All the tropes are of one general class, distinguished by the figurative status of the words and the uncommon meaning assigned them. Lest understanding be uncertain and hesitant here, the following examples will ensure confidence.

METONYMY (*denominatio*). Consider a statement of this kind: *The sick man seeks a physician; the grieving man, solace; the poor man, aid*. Expression attains a fuller flowering in this trope: *Illness is in need of a physician; grief is in need of solace; poverty is in need of aid*. (970) There is a natural charm in this use of the abstract for the concrete, and so in the change of *sick man* to *sickness*, *grieving man* to *grief*, *poor man* to *poverty*.

What does fear produce? Pallor. What does anger cause? A flush. Or what, the vice of pride? A swelling up. We refashion the statement thus: *Fear grows pale, anger flushes; pride swells*. There is greater pleasure and satisfaction for the ear when I attribute to the cause what the effect claims as its own.

Let the comb's action groom the hair after the head has been washed. Let scissors trim away from the hair whatever is excessive, (980) and let a razor give freshness to the face. In this way, art teaches us to attribute to the instrument, by a happy turn of expression, what is proper to the one who uses it. So from the resources of art springs a means of avoiding worn-out paths and of travelling a more distinguished route.

Again, a statement expressed in the following way adds luster to style: *We*

6. In his discussion of the tropes, the author follows the treatment in *Ad Herennium* 4.31.42–34.46. But Geoffrey lists only nine figures (anastrophe and transposition are included under hyperbaton), omitting the tenth, *circuitio* or periphrasis [translator's note]. *Rhetorical Herennium*: a rhetorical treatise (ca. 86–82 B.C.E.) wrongly attributed to the Roman statesman and orator Cicero.

Anastrophe: inversion of normal word order for rhetorical emphasis (a kind of "hyperbaton," which is any rhetorical device involving unusual word order).

7. Use of a proper name to stand for an entire class which that name represents; also the use of an epithet for a proper name (e.g., referring to Shakespeare as "the Bard").

have robbed their bodies of steel, their coffers of silver, their fingers of gold. The point here is not that zeugma⁸ adorns the words with its own figure of speech, but that when I am about to mention something, I withhold its form completely and mention only the material. Whereas a less elegant style mentions both, art is silent about one, and conveys both by a single term. This device brings with it three advantages (990): it curtails the number of words required, it constitutes a poetic adornment, and it is helpful to the meter. It curtails the number of words in that a single term is more succinct than a word-group; it constitutes a poetic adornment in that an expression of this kind is artistically more skillful; and it is helpful to the meter if an oblique case, whose form the meter rejects, requires such help. This is clear from the following example: *The finger rejoices in gold*. *Gold* is a shorter sound, a *ring of gold* is longer; the latter form names the object itself, the former conveys it more artfully; in the former [*aurum*] the meter admits of oblique cases, in the latter [*annulus auri*] it rejects them. (1000)

Instead of the thing contained, name that which contains it, choosing the word judiciously whether it be noun or adjective. Introduce a noun in this way: *tippling England; weaving Flanders; bragging Normandy*. Try out an adjective thus: *clamorous market-places; silent cloisters; lamenting prison; jubilant house; quiet night; laborious day*. Seek turns of expression like the following: *In time of sickness Salerno, with its medical skill, cures those who are ill. In civil causes Bologna arms the defenceless with laws. Paris, in the arts, dispenses bread to feed the strong.* (1010) *Orleans, in its cradle, rears tender youth on the milk of the authors.*

HYPERBOLE (*superlatio*). Give hyperbole rein, but see that its discourse does not run ineptly hither and yon. Let reason keep it in check, and its moderate use be a source of pleasure; that neither mind nor ear may shrink from excess. For example, employing this trope: *A rain of darts lashes the foe like hail; the shattered array of spears resembles a forest; a tide of blood flows like a wave of the sea, and bodies clog the valleys*. This mode of expression diminishes or heightens eulogy to a remarkable degree; (1020) and exaggeration is a source of pleasure when both ear and good usage commend it.

SYNECDOCHE (*intellectio*). If you intend to say: *I studied for three years*, you may, with happier effect, adorn the statement. The wording above is inelegant and trite; you may refine the inelegant, your file may renew the trite in this way: *The third summer came upon me in study; the third autumn found me engaged; the third winter, embroiled me in cares; in study I passed through three spring times*. I word the statement more skillfully when, suppressing the whole, I imply that whole from the parts, in the way just exemplified. Part of the year may be wet. *The year is wet;* (1030) part may be dry: *The year is dry;* part may be hot. *The year is hot;* part may be mild: *The year is mild*. I attribute to the whole what characterizes a part of it. By this same mode of reckoning, you, Gion,⁹ will be accounted turbid and clear, narrow and broad, brackish and sweet, because of some varied part of your course. Again, by the same figure, a day is to be accounted dry and yet rainy because of a part of it. Since both forms of this figure are pleasing, you may give pleasure by either form.

8. A figure of speech in which a single word, usually a verb or adjective, governs in a grammatically parallel way two or more other words (as in the

previous sentence); often one use is literal and the other figurative.

9. The river Garonne in France.

CATACHRESIS (*abusio*). There is likewise an urbane imprecision of diction when a word is chosen which is neither literal nor precise in its context, but which is related to the literal word. For example, if one proposes to say: (1040): *The strength of the Ithacan is slight, but yet he has a mind of great wisdom*, let catachresis alter the wording thus: *Strength in Ulysses' is short, wisdom in his heart is long*, for there is a certain affinity between the words *long* and *great*, as between *short* and *slight*.

In the figures given above there is a common element of adornment and weightiness, arising from the fact that an object does not come before us with unveiled face, and accompanied by its natural voice; rather, an alien voice attends it, and so it shrouds itself in mist, as it were, but in a luminous mist. (1050)

HYPERBATON² (*transgressio*). A certain weightiness of style results also from the order of words alone, when units grammatically related are separated by their position, so that an inversion of this sort occurs (anastrophe [*perversio*]): *rege sub ipso; tempus ad illud; ea de causa; rebus in illis* [under the king himself; up to that time; for this reason; in those matters]; or a transposed order of this sort (transposition [*transjectio*]): *Dura creavit pestiferam fortuna famem* [harsh fortune produced a pestilent famine]; *Letalis egenam gente fames spoliavit humum* [deadly famine robbed the destitute soil of produce]. Here words related grammatically are separated by their position in the sentence. Juxtaposition of related words conveys the sense more readily, but their moderate separation sounds better to the ear and has greater elegance. (1060)

* * *

VARIOUS PRESCRIPTIONS

If you heed the directives carefully and suit words to content, you will speak with precise appropriateness in this way. If mention has perhaps arisen of an object, sex, age, condition, event, place, or time, it is regard for its distinctive quality that the object, sex, age, condition, event, time, or place claims as its due. Felicity in this matter is an admirable thing, for when I make an apt use of qualifying words [*determino*] I give the whole theme a finished completeness [*termino*]. An object described [*condita*] in its entirety is a dish well-seasoned [*condita*]. Note this prescription and heed its tenor; (1850) it is a prescription that is valid for prose as well as for verse. The same principle of art holds good for both, although in a different way.

Meter is straitened by laws, but prose roams along a freer way, for the public road of prose admits here and there wagons and carts, whereas the narrow path of a line of verse does not allow of things so inelegant. Verse wishes its very words to be graceful in appearance, lest the rustic form of a word embarrass by its ungainliness, and bring shame to the line. Meter desires to appear as a handmaid with hair adorned, with shining cheek, slim body, and peerless form. (1860) The charming gracefulness of verse cannot find a group of words of equal sweetness to the ear. A line of prose is a

1. Odysseus, king of Ithaca and the hero of Homer's *Odyssey*.

2. The translations under this heading do not

reflect the unusual Latin word order (e.g., *rege sub ipso* literally reads "the king under himself").

coarser thing; it favors all words, observing no distinction except in the case of those which it keeps for the end of periods:³ such words are those whose penultimate syllable carries the accent. It is not desirable that other words hold this final position. Aulus Gellius⁴ reaches the same conclusion and subjoins his reason: lest otherwise the number of syllables be weak and insufficient to bring the line to a close. If the last word of a period should be, as it frequently is, of a different cursus,⁵ (1870) nevertheless the one suggested above is preferable in as much as sounder opinion supports it—and my authority here is Aulus Gellius.⁶ For the rest, the method of prose and verse does not differ; rather, the principles of art remain the same, whether in a composition bound by the laws of meter or in one independent of those laws, although what depends upon the principles of art is not always the same. In both prose and verse see that diction is controlled in such a way that words do not enter as dry things, but let their meaning confer a juicy savor upon them, and let them arrive succulent and rare. Let them say nothing in a childish way; see that they have dignity but not pomposity, lest what should be honorable becomes onerous. (1880) Do not let them enter with unsightly mien; rather, see that there is both internal and external adornment. Let the hand of artistic skill provide colors of both kinds.

3. Sentences.

4. Author (ca. 130–180 C.E.) of the Latin work *Attic Nights*, whose 20 books treat many different topics.

5. Arrangement of accents.

6. The reference is to Aulus Gellius, *Attic Nights* 1.7.20 [translator's note].

THOMAS AQUINAS

1225–1274

Thomas Aquinas's *Summa Theologica*, with its compelling synthesis of faith and reason, of Platonism and Aristotelianism, of Hellenistic and Christian thought, marks the high point of the Scholastic philosophy and theology of the Middle Ages. But it may be difficult to imagine that Aquinas, the medieval philosopher most widely read today, could have much to say about poetics, which he relegates in the *Summa* to "the least of all the sciences." Yet when read against the backdrop of the so-called commentary tradition, the tradition of allegorical interpretation of biblical and secular texts, Aquinas's writings on biblical exegesis force a reevaluation of our portrait of the saint as a prosaic logician. Early in the *Summa*, Aquinas wrestles with a problem that has continued to perplex both literary critics and philosophers of language: how to reconcile the indeterminacy of figurative language (such as poetic metaphor) with a belief in the ability of language to guarantee stable reference and access to truth and reality. If language cannot guarantee that the intentions of its author—whether divine or human—can be known, then how can it function as a vehicle of knowledge? The centrality of this question to contemporary debates over the nature of language and signification makes Aquinas's uneasy resolution of it—his insistence on both the

multiplicity of meaning and the stability of reference in the biblical text—all the more interesting.

Thomas Aquinas (Tommaso d'Aquino) was born in his father's castle in Roccaseca in central Italy, the youngest son of a noble family. At the age of five he was sent to the Benedictine monastery of Monte Cassino to begin his education, and in 1236 he entered the University of Naples. Some time between 1240 and 1243, against his parents' wishes, he decided to join the Dominican friars, an order founded in 1205 and dedicated to learning and preaching. On the way to Rome he was abducted by his brothers and imprisoned for two years at the castle of San Giovanni, where his family tried everything—including hiring a prostitute to seduce him—to break his will. When his family finally relented, Thomas took his vows; he was sent to Cologne, Germany, in 1244 where he continued his education under the direction of Albertus Magnus, the most famous scholar of the order. Thomas's taciturnity as a student earned him a reputation for dullness, though Albertus, on hearing him defend a difficult thesis, is reported to have said, "We call this young man a dumb ox, but his bellowing in doctrine will one day resound throughout the world."

In 1245 Thomas accompanied Albertus to Paris as a student. In 1248, when a new *studium generale* (a school founded by the Dominicans for the teaching of theology) was opened in Cologne, Albertus returned as its master. Thomas went with him to serve as a bachelor, or subregent, under him. While in Cologne, in 1250, he was ordained a priest by the city's archbishop. In 1252 Thomas was sent to Paris to fill the position of bachelor at the *studium generale* in that city. His primary duty was teaching the *Sentences* of Peter Lombard (ca. 1100–1160), the basic textbook for all theology courses in the Middle Ages, and his commentaries on that book would later furnish the materials and plan for his chief work, the *Summa Theologica*. In 1257 Thomas took the degree of doctor in theology from the University of Paris and was subsequently appointed regent (or master) in theology, a position he held until 1259. The years between 1259 and 1265 are not well documented; most likely he spent them teaching, preaching, writing, and traveling throughout Europe. In 1265 he went to Rome to serve as regent of the *studium generale* founded there, and in 1268 the order sent him back to the University of Paris. In 1274, while traveling to the Council of Lyons, he fell ill. He was taken to the monastery of Fossanova, where he died on March 7. He was canonized a saint on July 18, 1323.

Aquinas composed more than sixty books on philosophy, theology, ethics, and exegesis. His exegetical works include commentaries on various books of the Bible, including Job, the Psalms, Isaiah, Jeremiah, the Epistles of St. Paul, and his *Catena Aurea* (a commentary on all four Gospels). His philosophical works include thirteen commentaries on ARISTOTLE, which were instrumental in the efforts of Christian scholarship to assimilate the Greek philosopher's newly discovered works. His *Summa contra Gentiles* (1261–64) was a defense of the Christian faith against the Jews and Muslims of Spain, whose scholarship was central to the recovery of Aristotle's writing in thirteenth-century Europe. This work reveals the breadth and depth of his understanding of the Jewish and Islamic philosophy of the period, especially that of MAIMONIDES (1135–1204) and the great Islamic philosopher Avicenna (980–1037). Far and away his greatest work, however, is the twenty-two-volume *Summa Theologica* (1265–73), an encyclopedic compendium, left unfinished at his death, designed to organize systematically and to explicate all of Christian theology and philosophy.

In his prologue to the *Summa*, Aquinas explains, "we shall endeavor, confiding in the Divine assistance, to treat of these things that pertain to sacred doctrine with brevity and clearness, in so far as the subject to be treated will permit." The fourfold method Aquinas follows, a method identified with Scholasticism, is first to pose a yes or no question, next to offer all of the arguments for the no position, then to present the contrary argument, and finally to supply a complete defense of his own position by replying to the objections outlined at the beginning. This form is illustrated in the selection below.

Very early in the *Summa*, in articles 9 and 10 of question 1, "On Sacred Doctrine: What Kind It Is and What It Covers," Aquinas deals with problems of interpretation that have occupied literary critics from ancient and medieval Christian and Jewish exegetes down to poststructuralist theorists like JACQUES DERRIDA. He wishes not only to explain the obscurities and ambiguities of biblical texts but also to understand the theoretical consequences of figurative language in a text that claims privileged authorship. Aquinas, like other medieval religious writers, has inherited the Platonic distrust of poetry—which is, in part, a distrust of the multiplicity of meaning and the instability of linguistic reference. The divine text, he argues, must "make truth clear," while figurative language obscures truth. Yet Scriptures use figurative language frequently; thus Aquinas must struggle to reconcile this kind of unstable language with the authority and infallibility of the sacred biblical word.

While poetry uses metaphors "for the sake of lively description," Aquinas argues, Scriptures use them of necessity. While poetry promotes deception, Scriptures reveal spiritual truths through corporeal metaphors. He offers three defenses of Scriptures' use of figurative language, which will find their way into the Italian poet-critic BOC-CACCIO's defense of poetry in the fourteenth century. For Aquinas, the figurative language of Scriptures exercises the thoughtful mind, serves as a defense against the "ridicule of the impious," and preserves readers from error because it appeals to the senses to guide them to the intelligible. Like AUGUSTINE, Aquinas endorses the possibility that the Bible contains multiple meanings, while maintaining that such multiplicity does not lead to indeterminacy. And, like his twelfth-century predecessors, HUGH OF ST. VICTOR and Bernardus Silvestris, he attempts to contain any uncontrolled proliferation of meaning by organizing these multiple meanings vertically and hierarchically in the now famous scheme that attaches different meanings to the literal, allegorical, moral, and anagogical (or mystical) senses and levels of the text.

What sets Aquinas apart from his predecessors is his decidedly non-Platonic insistence that all interpretation of biblical texts must proceed from the literal sense alone. Aquinas's claim that nothing necessary to faith is conveyed through the allegorical senses of the Bible that is not conveyed clearly and openly through the literal sense would seem at odds with his endorsement of multiple meanings, since the obvious consequence of literal reading would be to render the techniques of *allegoresis* redundant. Indeed, there are some scholars who have argued that Aquinas's literal reading of Scriptures led to the rejection of allegorical readings of the Bible during the Reformation. Yet in their effort to come to terms with the difficulties of biblical language, Aquinas and other medieval exegetes developed conventions of interpretation that would influence all subsequent literary criticism long after the fourfold scheme of allegory was forgotten. Among these conventions is the practice of searching for "hidden" meanings in the text and the tendency to value literary texts for their multiplicity and complexity of meaning.

Aquinas occupies a pivotal position between the Neoplatonic exegetes of the twelfth century, philosopher-theologians such as Hugh of St. Victor and Bernardus Silvestris who wrote in Latin for a primarily clerical audience, and Italian poet-critics such as DANTE and Boccaccio, who, writing in Italian, would literally invent vernacular literary criticism in the fourteenth. Twelfth-century exegetes (Hugh may be the exception here) believed, with Augustine, that meaning had been hidden in the biblical text by God, so they subordinated the literal sense of the text to its allegorical senses in much the same way that Neoplatonists subordinated the material world to the transcendental world of forms (see PLATO and PLOTINUS). The revival of interest in Aristotle in the thirteenth century had profound consequences for the study of signification in both biblical and secular texts. Aquinas's more Aristotelian analyses of Scriptures privilege the literal over allegorical sense; and because the literal sense was identified with the expression of the author's intention, his remarks on biblical commentary set the stage for the appreciation of the individual poet's style apparent in the landmark fourteenth-century Italian criticism of Dante and Boccaccio.

BIBLIOGRAPHY

Not all of Aquinas's works exist in critical editions, but the many volumes of the still-unfinished *Opera Omnia* (1882, *Complete Works*), edited by the Leonine Commission (commissioned by Pope Leo XIII), provide the best available Latin text. The Marietta editions, in several volumes that appeared throughout the twentieth century, reproduce the Leonine Latin text in a more convenient format with useful research aids. Nor have all Aquinas's works been translated into English. The *Summa Theologica* is available in a twenty-two-volume English edition by the Fathers of the English Dominican Province (1920–31). The *Summa Contra Gentiles* was translated by the English Dominican Fathers (1923–29). A selection of translations by various hands of Aquinas's biblical commentaries can be found in the Aquinas Scripture Series (1966–). *The Pocket Aquinas*, edited by Vernon O. Bourke (1968), offers selections from Aquinas's writings in readable translations. James A. Weisheipl's *Friar Thomas D' Aquino* (rev. ed., 1983), is the standard biography.

F. C. Copleston's *Aquinas* (1955) is a useful introduction to both Aquinas's philosophy and its historical background. M. D. Chenu's *Toward Understanding St. Thomas* (1964) offers a classic interpretation of Aquinas's thought. Umberto Eco's *Aesthetics of Thomas Aquinas* (1988) examines the difficulty of deriving an aesthetics from Aquinas's thought, making connections with issues in contemporary aesthetics. Norman Kretzmann and Eleanor Stump's *Cambridge Companion to Aquinas* (1993) provides ten studies designed to introduce all aspects of Aquinas's thought, including his work on biblical commentary. Richard Ingardia's *Thomas Aquinas: International Bibliography, 1977–1990* (1993), an indispensable and well-organized bibliography, gives synopses of many published items.

From Summa Theologica¹

From *Question I*

NINTH ARTICLE

WHETHER HOLY SCRIPTURE SHOULD USE METAPHORS?

We proceed thus to the Ninth Article:—

Objection 1. It seems that the Holy Scripture should not use metaphors. For that which is proper to the lowest science seems not to befit this science, which holds the highest place of all. But to proceed by the aid of various similitudes and figures is proper to poetry, the least of all the sciences. Therefore it is not fitting that this science should make use of such similitudes.

Obj. 2. Further, this doctrine seems to be intended to make truth clear. Hence a reward is held out to those who manifest it: *They that explain me shall have life everlasting.*² But by such similitudes truth is obscured. Therefore to put forward divine truths by likening them to corporeal things does not befit this science.

Obj. 3. Further, the higher creatures are, the nearer they approach to the divine likeness. If therefore any creature be taken to represent God, this representation ought chiefly to be taken from the higher creatures, and not from the lower; yet this is often found in the Scriptures.

1. Translated by Fathers of the English Dominican Province.

2. Ecclesiasticus 24.31.

On the contrary, It is written: *I have multiplied visions, and I have used similitudes by the ministry of the prophets.*³ But to put forward anything by means of similitudes is to use metaphors. Therefore this sacred science may use metaphors.

I answer that, It is befitting Holy Writ to put forward divine and spiritual truths by means of comparisons with material things. For God provides for everything according to the capacity of its nature. Now it is natural to man to attain to intellectual truths through sensible objects, because all our knowledge originates from sense. Hence in Holy Writ spiritual truths are fittingly taught under the likeness of material things. This is what Dionysius says: *We cannot be enlightened by the divine rays except they be hidden within the covering of many sacred veils.*⁴ It is also befitting Holy Writ, which is proposed to all without distinction of persons—*To the wise and to the unwise I am a debtor*⁵—that spiritual truths be expounded by means of figures taken from corporeal things, in order that thereby even the simple who are unable by themselves to grasp intellectual things may be able to understand it.

Reply Obj. 1. Poetry makes use of metaphors to produce a representation, for it is natural to man to be pleased with representations. But sacred doctrine makes use of metaphors as both necessary and useful.

Reply Obj. 2. The ray of divine revelation is not extinguished by the sensible imagery wherewith it is veiled, as Dionysius says;⁶ and its truth so far remains that it does not allow the minds of those to whom the revelation has been made, to rest in the metaphors, but raises them to the knowledge of truths; and through those to whom the revelation has been made others also may receive instruction in these matters. Hence those things that are taught metaphorically in one part of Scripture, in other parts are taught more openly. The very hiding of truth in figures is useful for the exercise of thoughtful minds, and as a defence against the ridicule of the impious, according to the words *Give not that which is holy to dogs.*⁷

Reply Obj. 3. As Dionysius says,⁸ it is more fitting that divine truths should be expounded under the figure of less noble than of nobler bodies, and this for three reasons. Firstly, because thereby men's minds are the better preserved from error. For then it is clear that these things are not literal descriptions of divine truths, which might have been open to doubt had they been expressed under the figure of nobler bodies, especially for those who could think of nothing nobler than bodies. Secondly, because this is more befitting the knowledge of God that we have in this life. For what He is not is clearer to us than what He is. Therefore similitudes drawn from things farthest away from God form within us a truer estimate that God is above whatsoever we may say or think of Him. Thirdly, because thereby divine truths are the better hidden from the unworthy.⁹

3. Hosea 12.10.

4. From *The Celestial Hierarchy* 1 [translator's note]. Its author, Pseudo-Dionysius, was a Neoplatonic writer of late-5th-century Syria who successfully passed himself off as Dionysius the Areopagite, whose conversion by St. Paul is recorded in Acts 17.34. His writing was influenced by PLOTINUS.

5. Romans 1.14.

6. *Celestial Hierarchy* 1 [translator's note].

7. Matthew 7.6.

8. *Celestial Hierarchy* 1 [translator's note].

9. In his reply to objection 3, Aquinas expresses some traditional justifications for using figurative language when speaking of God. Some, including the argument that such language obscures divine truths from the unworthy, are repeated in BOCACCIO'S defense of poetry in *Genealogy of the Gentile Gods* (1350–62; see below). There is a paradox involved in Aquinas's explanation that we know God better negatively through what he is not than through what he is, which we can never comprehend.

TENTH ARTICLE

WHETHER IN HOLY SCRIPTURE A WORD MAY HAVE SEVERAL SENSES?

We proceed thus to the Tenth Article:—

Objection 1. It seems that in Holy Writ a word cannot have several senses, historical or literal, allegorical, tropological or moral, and anagogical. For many different senses in one text produce confusion and deception and destroy all force of argument. Hence no argument, but only fallacies, can be deduced from a multiplicity of propositions. But Holy Writ ought to be able to state the truth without any fallacy. Therefore in it there cannot be several senses to a word.

Obj. 2. Further, Augustine says that *the Old Testament has a fourfold division as to history, etiology, analogy, and allegory.*¹ Now these four seem altogether different from the four divisions mentioned in the first objection. Therefore it does not seem fitting to explain the same word of Holy Writ according to the four different senses mentioned above.

Obj. 3. Further, besides these senses, there is the parabolical,² which is not one of these four.

On the contrary, Gregory says: *Holy Writ by the manner of its speech transcends every science, because in one and the same sentence, while it describes a fact, it reveals a mystery.*³

I answer that, The author of Holy Writ is God, in whose power it is to signify His meaning, not by words only (as man also can do), but also by things themselves. So, whereas in every other science things are signified by words, this science has the property, that the things signified by the words have themselves also a signification. Therefore that first signification whereby words signify things belongs to the first sense, the historical or literal. That signification whereby things signified by words have themselves also a signification is called the spiritual sense, which is based on the literal, and presupposes it. Now this spiritual sense has a threefold division. For as the Apostle says the Old Law is a figure of the New Law,⁴ and Dionysius says *the New Law itself is a figure of future glory.*⁵ Again, in the New Law, whatever our Head has done is a type of what we ought to do. Therefore, so far as the things of the Old Law signify the things of the New Law, there is the allegorical sense; so far as the things done in Christ, or so far as the things which signify Christ, are types of what we ought to do, there is the moral sense. But so far as they signify what relates to eternal glory, there is the anagogical sense. Since the literal sense is that which the author intends, and since the author of Holy Writ is God, Who by one act comprehends all things by His intellect, it is not unfitting, as Augustine says, if, even according to the literal sense, one word in Holy Writ should have several senses.⁶

Reply Obj. 1. The multiplicity of these senses does not produce equivocation or any other kind of multiplicity, seeing that these senses are not multiplied because one word signifies several things; but because the things signified by the words can be themselves types of other things. Thus in Holy Writ no con-

3. From *Moralia in Job* 20.1 [translator's note], by

Pope Gregory I (540–604).

4. A rough paraphrase of Hebrews 10.1.

5. *Celestial Hierarchy* 1 [translator's note.]

6. *Confessions* 12.31.42 [translator's note].

fusion results, for all the senses are founded on one—the literal—from which alone can any argument be drawn, and not from those intended in allegory, as Augustine says.⁷ Nevertheless, nothing of Holy Scripture perishes on account of this, since nothing necessary to faith is contained under the spiritual sense which is not elsewhere put forward by the Scripture in its literal sense.

Reply Obj. 2. These three—history, etiology, analogy—are grouped under the literal sense. For it is called history, as Augustine expounds,⁸ whenever anything is simply related; it is called etiology when its cause is assigned, as when Our Lord gave the reason why Moses allowed the putting away of wives—namely, on account of the hardness of men's hearts; it is called analogy whenever the truth of one text of Scripture is shown not to contradict the truth of another. Of these four, allegory alone stands for the three spiritual senses. Thus Hugh of S. Victor⁹ includes the analogical under the allegorical sense, laying down three senses only—the historical, the allegorical, and the tropological.

Reply Obj. 3. The parabolical sense is contained in the literal, for by words things are signified properly and figuratively. Nor is the figure itself, but that which is figured, the literal sense. When Scripture speaks of God's arm, the literal sense is not that God has such a member, but only what is signified by this member, namely, operative power. Hence it is plain that nothing false can ever underlie the literal sense of Holy Writ.

DANTE ALIGHIERI

1265–1321

The Divine Comedy (1307–21) secured Dante's reputation as the greatest poet of the Middle Ages; his literary criticism marks him as the first major theorist of European vernacular literature. Yet the relationship between Dante's masterpiece and his comments on poetics has vexed scholars throughout the modern period: How could a work as monumental and groundbreaking as *The Divine Comedy* be the product of as derivative and seemingly reductive a poetics as that described in his famous letter to Can Grande della Scala (1319)? Many have denied the authenticity of this letter, believing that the theologically driven allegory depicted there could not have been the basis for so great a poem. Such a position, however, neglects the subtleties of Dante's adaptation of the techniques of biblical exegesis to poetry. At the heart of these debates are questions about the nature and status of allegorical representation that have perennially engaged critics, including twentieth-century figures such as Erich Auerbach and PAUL DE MAN.

Much of Dante's literary criticism is derivative of the great twelfth- and thirteenth-century biblical scholars who preceded him—especially THOMAS AQUINAS, to whom he is most immediately indebted. But he is the first to make the intellectual achieve-

ments of medieval Latin culture accessible to those who did not know Latin and, just as significantly, to apply them to secular texts that could circulate among a growing audience of vernacular readers. In his *Eloquence in the Vernacular Tongue* (ca. 1304–08), Dante writes, “I see that such eloquence is unquestionably needed by almost everyone, for not only men, but even women and children (to the extent their nature allows) strive for it.” His goal as a critic was to “enlighten the discernment of those who, like the blind, roam the streets thinking for the most part that what is really behind is in front.” In fourteenth-century Europe, Dante’s defense of Italian, his own vernacular, as an appropriate vehicle for poetry was innovative; indeed, the debate continued to rage long after—taken up, for example, by JOACHIM DU BELLAY in sixteenth-century France, JOHN DRYDEN in seventeenth-century England, and NGUGI WĀ THIONG’O in twentieth-century Kenya. In addition, Dante’s remarks on the polysemous nature of poetic language continue to resound within present-day debates about allegory.

Dante Alighieri was born in Florence to a family that was neither wealthy nor especially prominent. His father, Alighiero di Bellincione d’Alighiero, was a member of the lesser nobility. Little is known about Dante’s early education, though he probably received elementary instruction in grammar, language, and philosophy. Later he was a pupil of the Florentine encyclopedist, statesman, and poet Brunetto Latini, who, in the *The Divine Comedy*, is confined to the seventh circle of Hell for his sins against nature (sodomy). Under Latini’s direction, Dante studied literature and rhetoric and associated himself with several respected Florentine poets, including Guido Cavalcanti. In 1283 he inherited a modest amount of money from his parents, and two years later he married Gemma Donati, who bore him four children. The death in 1290 of his childhood friend Beatrice Portinari proved to be a turning point in Dante’s life, propelling him to begin an intense study of the philosophical works of Boethius (480–524 C.E.), Cicero (106–43 B.C.E.), and ARISTOTLE (384–322 B.C.E.). It also resulted in the appearance of his only work to be written in Florence. Dante’s commemoration of Beatrice’s death, *La Vita Nuova* (ca. 1295, *The New Life*), was a new, innovative approach to love poetry that equated love with mystical and spiritual revelation. His memorialization of Beatrice would continue in *The Divine Comedy*, where she serves as his guide to redemption in the third volume, *Paradiso*.

In the last decade of the thirteenth century, Dante became involved in Florence’s increasingly violent politics. For much of the late thirteenth century Italy was engulfed in a civil war between the Ghibellines (a party favoring imperial rule for Italy) and the Guelphs (a party advocating control by the papacy). By the time of Dante’s birth, Florence had become a Guelph stronghold; but the Guelph party itself had split into two factions, the White and the Black, divided more by competing family loyalties than by opposing political philosophies. In 1295 Dante, a supporter of the White Guelphs, got entangled in the city’s politics by enrolling in the Guild of Doctors and Pharmacists. A year later he participated in a citizen’s government known as the Council of the Hundred. He was elected for a term as one of the six priors, or magistrates, of Florence in 1300. By 1302, however, the Black Guelphs had begun to displace the Whites in Florentine politics, and Dante was exiled on pain of death if he returned to Florence. He spent the next few years wandering around Italy, during which time he produced both *De Vulgari Eloquentia* (*Eloquence in the Vernacular Tongue*), a theoretical and practical defense of the literary uses of the vernacular (written, ironically, in Latin), and *Il Convivio* (1306–09, *The Banquet*), an encyclopedic collection of *canzoni* (or short poems) followed by related prose commentaries on philosophy. Both projects were abandoned before they were completed, probably because as early as 1306 Dante became caught up in the plan of *The Divine Comedy*.

By 1312 Dante took up residence in Verona, where he sought the patronage of that city’s imperial vicar, Can Grande della Scala, a member of the powerful Scaliger family. There he wrote most of his greatest work, *The Divine Comedy*, dedicating it

final volume, the *Paradiso*, to his patron. *De Monarchia*, a political treatise, was most likely written around 1317. Dante spent the last three years of his life in Ravenna; he died without having ever returned to his native Florence.

In our selections, Dante confronts the problem of how to understand and construe textual meaning. Both his encyclopedic treatise *Il Convivio* and his famous letter dedicating the *Paradiso* to his patron, Can Grande della Scala, examine the relationship between general critical principles and the detailed interpretation of specific parts of a text. Dante is remarkably consistent in his descriptions of how poetry is to be read and interpreted. He extends to vernacular poetry the four senses of allegorical interpretation—the literal, the allegorical, the moral, and the anagogical—articulated in earlier medieval commentaries on biblical texts. In doing so, he effects a synthesis between the “allegory of the poets,” or the allegories that Christian writers such as Bernardus Silvestris attributed to pagan poets such as Virgil, and the “allegory of the theologians,” or the interpretations of Scriptures developed by exegetes such as HUGH OF ST. VICTOR and Aquinas. Although in classical rhetoric *allegory* involves one thing while meaning another, Dante insists that his allegories are not simple substitution codes (this is how Bernardus earlier understands Virgil’s *Aeneid*). Instead, each of the four “senses” of the text inheres in and evokes the other three simultaneously. The text is polysemous: that is, it has many meanings—including the literal—that occur in a single imaginative act. Dante’s commentaries demonstrate that textual exegesis (explication) was not expected to follow the theory of allegorical “senses” in any dogmatic or wooden way. That a poem could be interpreted literally and in three figurative senses (allegorical, moral, and anagogical) does not imply that every episode or every symbol must contain all four meanings. Dante offers a more subtle approach. Much of the richness of *The Divine Comedy*, for example, derives from the gap allegory opens up between the sign and what it might signify. The promise of stable signification seemingly held out by the allegorical method is offset by his claim that the text is polysemous, open to many meanings. This recurring paradox has also fascinated present-day critics of allegory, who are generally more interested than was Dante in the destabilization of meaning that accompanies the possibility of multiple meanings.

BIBLIOGRAPHY

Dante’s literary criticism can be found in the Italian *Opere minori di Dante Alighieri* (1986). The standard Italian edition of *Il Convivio* was edited by Maria Simonelli (1966). Two recent English translations of *Il Convivio*, by Christopher Ryan (1989) and by Richard H. Lansing (1990), both based on the Simonelli edition, are superior to earlier translations. *The Letters of Dante* (1920), with Latin text, edited and with English translation by Paget Toynbee, is the standard edition of Dante’s letters. The best translation of the “Letter to Can Grande” can be found in Robert S. Haller’s *Literary Criticism of Dante Alighieri* (1973), which also contains *Eloquence in the Vernacular Tongue* and other critical statements. The best biography of Dante remains Michele Barbi’s *Life of Dante* (1933; trans. 1954).

Dante has been the subject of commentaries by important poet-critics, the most prominent among them T. S. Eliot’s *Dante* (1928). Erich Auerbach, in *Dante: Poet of the Secular World* (1929) and *Mimesis: The Representation of Reality in Western Literature* (1953), argues that Dante’s comments on allegorical reading are central to an interpretation of *The Divine Comedy*. For important introductions to Dantean poetics, see Thomas Bergin, *An Approach to Dante* (1965), and Francis Fergusson, *Dante* (1966). Peter Dronke, in *Dante and the Medieval Latin Tradition* (1986), and Henry Ansgar Kelly, in *Tragedy and Comedy from Dante to Pseudo-Dante* (1989), have both questioned the authenticity of the letter to Can Grande, arguing that Auerbach’s insistence on a figural reading of *The Divine Comedy* based on that letter is mistaken. J. F. Took’s *Dante Lyric Poet and Philosopher: An Introduction to the Minor Works*

(1990) contains an important chapter on *Il Convivio*. In *Dante's Epistle to Cangrande* (1993), Robert Hollander summarizes the debate over the letter to Can Grande, while defending Dante's authorship and its relevance to the allegorical reading of *The Divine Comedy*. For a bibliography on Dante, consult the *American Dante Biography*, edited by Anthony L. Pelligrini and Christopher Kleinhenz (1993).

From *Il Convivio*¹

From *Book Two*

CHAPTER I

Now that by way of a preface my bread has been sufficiently prepared in the preceding book through my own assistance, time calls and requires my ship to leave port; thus, having set the sail of my reason to the breeze of my desire, I enter upon the open sea with the hope of a smooth voyage and a safe and praiseworthy port at the end of my feast. But so that this food of mine may be more profitable, I wish to show, before it appears, how the first course must be eaten.²

As I stated in the first chapter, this exposition must be both literal and allegorical. To convey what this means, it is necessary to know that writings can be understood and ought to be expounded principally in four senses. The first is called the literal, and this is the sense that does not go beyond the surface of the letter, as in the fables of the poets. The next is called the allegorical, and this is the one that is hidden beneath the cloak of these fables, and is a truth hidden beneath a beautiful fiction. Thus Ovid says that with his lyre Orpheus tamed wild beasts and made trees and rocks move toward him,³ which is to say that the wise man with the instrument of his voice makes cruel hearts grow tender and humble and moves to his will those who do not devote their lives to knowledge and art; and those who have no rational life whatsoever are almost like stones. Why this kind of concealment was devised by the wise will be shown in the penultimate book. Indeed the theologians take this sense otherwise than do the poets; but since it is my intention here to follow the method of the poets, I shall take the allegorical sense according to the usage of the poets.⁴

The third sense is called moral, and this is the sense that teachers should intently seek to discover throughout the scriptures, for their own profit and that of their pupils; as, for example, in the Gospel we may discover that when

1. Translated by Richard H. Lansing.

2. In the allegorical framework of *Il Convivio*, Dante uses the conceit of a banquet to represent human knowledge. Like Boethius's *Consolation of Philosophy* (ca. 524 C.E.), *Il Convivio* employs a combination of verse and prose commentary called *prosimetrum*. In Dante's allegorical banquet, the "meat" is the *canzoni*, or verses, and the "bread" the commentaries on those verses.

3. Ovid (43 B.C.E.–17 C.E.), *Metamorphoses*, 11.1–2. In Greek mythology, Orpheus was the greatest of all mortal musicians.

4. What Dante means by distinguishing between the allegory of the poets and the allegory of the theologians is not entirely clear and has given rise

to endless speculation. The theologians insist on the veracity of all four levels of meaning, and conceived of the allegorical levels (the typological, tropological, and anagogical) to depend on a literal level which was historically true. In the allegory of the poets, as exemplified by the allusion to the myth of Orpheus, the literal level is a "bella menzongna," a beautiful fiction having no basis in historical reality. In the allegory of the theologians, moreover, the second level always refers to some aspect of Christ's historical being, of which he is the ideal type, which is not the case with the poets. The third and fourth levels are shared in common by both modes of allegory [translator's note].

Christ ascended the mountain to be transfigured, of the twelve Apostles he took with him but three, the moral meaning of which is that in matters of great secrecy we should have few companions.⁵

The fourth sense is called anagogical, that is to say, beyond the senses; and this occurs when a scripture is expounded in a spiritual sense which, although it is true also in the literal sense, signifies by means of the things signified a part of the supernal things of eternal glory, as may be seen in the song of the Prophet which says that when the people of Israel went out of Egypt, Judea was made whole and free.⁶ For although it is manifestly true according to the letter, that which is spiritually intended is no less true, namely, that when the soul departs from sin it is made whole and free in its power. In this kind of explication, the literal should always come first, as being the sense in whose meaning the others are enclosed, and without which it would be impossible and illogical to attend to the other senses, and especially the allegorical. It would be impossible because in everything that has an inside and an outside it is impossible to arrive at the inside without first arriving at the outside; consequently, since in what is written down the literal meaning is always the outside, it is impossible to arrive at the other senses, especially the allegorical, without first arriving at the literal.

Moreover, it would be impossible because in every natural or artificial thing it is impossible to proceed to the form unless the subject on which the form must be imposed is prepared first—just as it is impossible for a piece of jewelry to acquire its form if the material (that is, its subject) is not first arranged and prepared, or a chest to acquire its form if the material (that is, the wood) is not first arranged and prepared. Consequently, since the literal meaning is always the subject and material of the other senses, especially of the allegorical, it is impossible to come to an understanding of them before coming to an understanding of it. Moreover, it would be impossible because in every natural or artificial thing it is impossible to proceed unless the foundation is laid first, as in a house or in studying; consequently, since explication is the building up of knowledge, and the explication of the literal sense is the foundation of the others, especially of the allegorical, it is impossible to arrive at the other senses without first arriving at it.

Moreover, even supposing it were possible, it would be illogical, that is to say out of order, and would therefore be carried out with great labor and much confusion. Consequently as the Philosopher says in the first book of the *Physics*,⁷ nature wills that we proceed in due order in our learning, that is, by proceeding from that which we know better to that which we know not so well; I say that nature wills it since this way of learning is by nature innate in us. Therefore if the senses other than the literal are less understood (which they are, as is quite apparent), it would be illogical to proceed to explain them if the literal had not been explicated first. For these reasons, therefore, I shall on each occasion discuss first the literal meaning concerning each canzone, and afterwards I shall discuss its allegory (that is, the hidden truth), at times touching on the other senses, when opportune, as time and place deem proper.

5. The apostles Peter, James, and John; see Matthew 17.1–8, Mark 9.1–7, Luke 9.28–36 [translator's note].

6. Psalm 114; Dante refers to this same psalm in his "Letter to Can Grande" (below).

7. Aristotle, *Physics* 1.1, 184a17–21.

From The Letter to Can Grande¹

* * *

[6] Therefore, if one should wish to present an introduction to a part of a work, it is necessary to present some conception of the whole work of which it is a part. For this reason I, who wish to present something in the form of an introduction to the above-mentioned part of the whole *Comedy*, have decided to preface it with some discussion of the whole work, in order to make the approach to the part easier and more complete.² There are six questions, then, which should be asked at the beginning about any doctrinal work: what is its subject, its form, its agent, its end, the title of the book, and its branch of philosophy. In three cases the answers to these questions will be different for the part of the work I propose to give you than for the whole, that is, in the cases of its subject, form, and title, while in the other three, as will be clear upon inspection, they will be the same. Thus these first three should be specifically asked in a discussion of the whole work, after which the way will be clear for an introduction to the part. Let us, then, ask the last three questions not only about the whole but also about the offered part itself.

[7] For the clarification of what I am going to say, then, it should be understood that there is not just a single sense in this work:³ it might rather be called *polysemous*, that is, having several senses. For the first sense is that which is contained in the letter, while there is another which is contained in what is signified by the letter. The first is called literal, while the second is called allegorical, or moral or anagogical. And in order to make this manner of treatment clear, it can be applied to the following verses: "When Israel went out of Egypt, the house of Jacob from a barbarous people, Judea was made his sanctuary, Israel his dominion."⁴ Now if we look at the letter alone, what is signified to us is the departure of the sons of Israel from Egypt during the time of Moses; if at the allegory, what is signified to us is our redemption through Christ; if at the moral sense, what is signified to us is the conversion of the soul from the sorrow and misery of sin to the state of grace; if at the anagogical, what is signified to us is the departure of the sanctified soul from bondage to the corruption of this world into the freedom of eternal glory. And although these mystical senses are called by various names, they may all be called allegorical, since they are all different from the literal or historical. For allegory is derived from the Greek *alleon*, which means in Latin *alienus* ("belonging to another") or *diversus* ("different").

[8] This being established, it is clear that the subject about which these two senses play must also be twofold. And thus it should first be noted what the subject of the work is when taken according to the letter, and then what its subject is when understood allegorically. The subject of the whole work, then, taken literally, is the state of souls after death, understood in a simple sense; for the movement of the whole work turns upon this and about this.

1. Translated by Robert Haller. Can Grande della Scala (1287–1329), the imperial vicar of Verona, was Dante's patron; his name means "Big Dog."

2. Dante dedicated the third volume of *The Divine Comedy*, the *Paradiso*, to Can Grande; the letter

serves as an introduction to that part of the poem.

3. *The Divine Comedy*.

4. Psalm 114.1–2; Dante uses the same psalm to illustrate the anagogical level of meaning in *Il Convivio* (see above).

If on the other hand the work is taken allegorically, the subject is man, in the exercise of his free will, earning or becoming liable to the rewards or punishments of justice.

* * *

[10] The title of the work is, "Here begins the Comedy of Dante Alighieri, a Florentine by birth but not in character." To understand the title, it must be known that comedy is derived from *comos*, "a village," and from *oda*, "a song," so that a comedy is, so to speak, "a rustic song."⁵ Comedy, then, is a certain genre of poetic narrative differing from all others. For it differs from tragedy in its matter, in that tragedy is tranquil and conducive to wonder at the beginning, but foul and conducive to horror at the end, or catastrophe, for which reason it is derived from *tragos*, meaning "goat," and *oda*, making it, as it were, a "goat song," that is, foul as a goat is foul. This is evident in Seneca's⁶ tragedies. Comedy, on the other hand, introduces a situation of adversity, but ends its matter in prosperity, as is evident in Terence's⁷ comedies. And for this reason some writers have the custom of saying in their salutations, by way of greeting, "a tragic beginning and a comic ending to you." And, as well, they differ in their manner of speaking. Tragedy uses an elevated and sublime, style, while comedy uses an unstudied and low style, which is what Horace implies in the *Art of Poetry* where he allows comic writers occasionally to speak like the tragic, and also the reverse of this:

Yet sometimes even comedy elevates its voice,
and angry Chremes rages in swelling tones;
and in tragedy Telephus and Peleus often lament
in prosaic speeches. . . .⁸

So from this it should be clear why the present work is called the *Comedy*. For, if we consider the matter, it is, at the beginning, that is, in Hell, foul and conducive to horror, but at the end, in Paradise, prosperous, conducive to pleasure, and welcome. And if we consider the manner of speaking, it is unstudied and low, since its speech is the vernacular, in which even women communicate. There are, besides these, other genres of poetic narrative, such as pastoral verse, elegy, satire, and the hymn of thanksgiving, as could also be gathered from Horace in his *Art of Poetry*. But there is no purpose to discussing these at this time.

* * *

1321

5. For a similar derivation of "comedy" (usually linked to the Greek *kōmos*, "revel," not *kōmē*, "village"), see ARISTOTLE, *Poetics* 3, 1447a (above).

6. Roman philosopher and author of several tragedies (ca. 4 B.C.E.—65 C.E.).

7. Roman comic dramatist (ca. 190–159 B.C.E.).

8. HORACE [65–8 B.C.E.], *Art of Poetry* 93–96 [translator's note]; reprinted above. Chremes: a character in Aristophanes' comedy *Ecclesiazusae* (ca. 392 B.C.E.). Telephus: in Greek mythology, a son of Heracles. Peleus: the father of the Greek hero Achilles.

GIOVANNI BOCCACCIO

1313-1375

Giovanni Boccaccio, author of the famous *Decameron* (1358), was, with DANTE and Petrarch, a pioneer of Italian vernacular literature and of the humanism that would become the philosophical basis of the Renaissance. Although Boccaccio's present-day reputation is based primarily on the bawdy tales of the *Decameron*, his romances and scholarly works were indispensable sources for poets throughout the Renaissance. His *Genealogia Deorum Gentilium* (1350-62, *Genealogy of the Gentile Gods*), an encyclopedic compendium in Latin of pagan mythology designed as a guide to the ancient poets, culminates in books 14 and 15 with a defense of poetry against the criticisms of it that reach back to PLATO's *Republic*. Like John of Salisbury in the twelfth century, Boccaccio defends poetry in terms that are unmistakably medieval. But he also stands in a long line of practicing poets who have written in defense of their art, ranging from HORACE (65-8 B.C.E.), JOACHIM DU BELLAY (ca. 1522-1560), and SIR PHILIP SIDNEY (1554-1586) to JOHN DRYDEN (1631-1700), ALEXANDER POPE (1688-1744), WILLIAM WORDSWORTH (1770-1850), and PERCY BYSSHE SHELLEY (1792-1822).

Boccaccio was born in Tuscany, the illegitimate son of a merchant, Boccaccino di Chelino, and raised in Florence. Having provided him with a grammatical and literary education, as well as practical business training, his father sent him in 1327 to serve an apprenticeship in Naples. Boccaccio, however, preferred the aristocratic intellectual circles of the court of Robert of Anjou to a life in commerce. He began to mingle in courtly society and to write stories in verse and prose. He fell in love with—and wrote about—an unattainable aristocratic woman he called Fiammetta, who has been identified as Maria d'Aquino, an illegitimate daughter of King Robert. His first literary works appeared during this period, including the allegorical poem *La caccia di Diana* (ca. 1334, *Dianna's Hunt*) and two romances: *Filostrato* (ca. 1335)—a version of the story of Troilus and Criseida, later adapted by both Chaucer and Shakespeare—and *Teseida* (ca. 1339), a source of Chaucer's *Knight's Tale*. In 1341 Boccaccio returned to Florence, where he discovered a different kind of intellectual and artistic community, one that followed in the style of the recently deceased Dante. Under the influence of this literary tradition of allegorical didacticism that stressed the moral and symbolic dimensions of literature, he wrote the allegorical works *Comedy of the Florentine Nymphs* (1341-42) and *Fiammetta* (1343). By 1348, when the bubonic plague had reached Italy, Boccaccio began his greatest work, the hundred prose tales of the *Decameron* (1348-53). The plague provides their framework—ten young people retreat to the country to escape the disease and tell ten stories each as a means of entertaining themselves during their confinement.

About 1350, around the same time that he began the *Genealogy of the Gentile Gods*, Boccaccio became involved in Florentine politics, serving on various ambassadorial missions. He also met Petrarch, beginning a friendship that would last until Petrarch's death in 1374. He turned from literature to scholarship, especially to the study of classical history, literature, and mythology, translating the Roman historian Livy, searching for ancient manuscripts, learning Greek, and attempting to establish an academic chair in Greek in Florence. Between 1350 and 1362 he wrote in Latin most of the *Genealogy*, as well as such scholarly collections as his *Fates of Illustrious Men* (1356, *De Casibus Virorum Illustrium*) and *Concerning Famous Women* (1361, *De Mulieribus Claris*), which was an important source for CHRISTINE DE PIZAN's famous *City of Ladies* (1405). In 1362 Boccaccio underwent a spiritual crisis during which he considered burning his secular writing and taking holy orders; he was dissuaded from both by Petrarch. A year later he retired to his native town, Certaldo, where he remained active in Florentine politics. By 1373 he had completed a biog-

raphy, *Life of Dante*. In the same year, he is said to have met the English poet Chaucer in Florence. He died at Certaldo two years later.

Boccaccio intended *Genealogy of the Gentile Gods* as a monumental work of scholarship, a mythological sourcebook that would introduce readers to the study of the ancient poets. His decision to write in Latin rather than Italian is a measure of its seriousness as a scholarly project. Books 1–13, mostly completed by 1360, contain Boccaccio's allegorical interpretations of Greek mythology. By the 1360s, however, he seemed to feel that some kind of defense of the ancient poets was necessary as well, to show that they were, as he writes in the first chapter of book 15, "really men of wisdom, . . . their compositions full of profit and pleasure to the reader." Boccaccio's defense of poetry in books 14 and 15 compiles and arranges in a single document a series of arguments both for and against poetry that had been in circulation for at least a thousand years. Together with Plato's writing on poetry and ARISTOTLE'S *Poetics* (which was not recovered in Europe until the fifteenth century), it provides the substance of Renaissance literary theory. The influence of the *Genealogy's* defense of poetry during the Renaissance is easily discernible, for instance, in Sir Philip Sidney's *Apology for Poetry* (see below), published in England over two centuries later.

In chapter 5 of book 14 Boccaccio neutralizes the arguments of poetry's detractors, especially the philosophers who, since Plato, had been chief among those denouncing poetry as a distraction from the pursuit of truth. In the Middle Ages, the theologians had inherited the philosopher's mantle. Both philosophy and theology enjoyed enormous prestige in this period, beside which all other forms of knowledge, including poetry, were dismissed as trivial—especially in Italy, where the study of theology was more isolated from the other liberal arts than in the rest of Europe. Boccaccio borrows a scene from Dante's *Il Convivio* (see above), ultimately derived from Boethius's *Consolation of Philosophy* (ca. 524), opening chapter 5 with a vision of Lady Philosophy. Unlike either Dante or Boethius, however, Boccaccio puts poets in "high places," as Lady Philosophy's counselors, and relegates philosophers and other critics of poetry to the "noisy crowd" surrounding her. In a neat reversal, the text's allegory makes the poets the true followers of philosophy, while poetry's detractors are exposed as impostors. Placing the criticisms of poetry into the mouths of this crowd of pretenders robs them of their force; at the same time, poetry is redefined as proceeding, like philosophy, from "the bosom of God." Later in the text, Boccaccio concedes that philosophy does arrive at truth, but only by slow reason; poets do so by leaps of imagination.

Chapter 7 contains Boccaccio's most important ideas about poetry, ideas that draw both on his own experience as a poet and on critics who preceded him, including Horace, AUGUSTINE (354–430 C.E.), MACROBIUS (b. ca. 360 C.E.), Dante, and his friend Petrarch. He defines poetry as "fervid and exquisite invention" combined with "fervid expression, in speech or writing," insisting that inspiration, education in the liberal arts, and craft are equally important in its creation. Following Aristotle and the Roman orator Cicero, Boccaccio carefully distinguishes poetry from rhetoric, countering a medieval tendency to subordinate poetry to both rhetoric and grammar. While the poet needs to master the rules and methods of rhetoric, poetry transcends it both in its "invention" and its "expression." Whereas rhetoricians are required to be "simple and clear," poets have license to invent wonders and to make language seem strange.

In chapter 12, Boccaccio takes on the charge that poets are often obscure, engaging in an argument that sounds remarkably similar to contemporary debates about theoretical jargon. If poets are obscure, so too, he argues, are philosophers such as Plato and Aristotle, who "abound in difficulties so tangled and involved that . . . they have yielded no clear nor consistent meaning." Holy Scriptures, he points out, are full of ambiguous and difficult passages, yet no critic would dare, for fear of blasphemy, accuse their author of deliberate obscurity for the sake of appearing clever. Obscurity, for Boccaccio, is both engaging and fruitful, as it is for MAIMONIDES (1135–1204). It

protects poetry from vulgar people, while usefully prompting multiple interpretations from the learned.

True to his roots in medieval linguistics, which insists on a fundamental distinction between words used "properly" and those used "figuratively," Boccaccio never allows himself to question openly the notion of language as a transparent medium referring to an independent reality. For him, poetry is always subordinate to some higher reality—philosophy, theology, the divine. However, by insisting that poetry's "veil of fiction" "clothes" the naked truth, Boccaccio unwittingly challenges traditional assumptions about the referential nature of language and poetry, pointing toward the fundamentally figurative basis of all language.

BIBLIOGRAPHY

A modern Italian edition of the complete works of Giovanni Boccaccio is now in progress under the editorial direction of Vittore Branca, *Tutte le opere di Giovanni Boccaccio* (10 vols. to date, 1964–). For the Latin text of *Genealogy of the Gentile Gods*, consult the definitive edition by Vincenzo Romano (1951). An English translation of books 14 and 15 of *Genealogy of the Gentile Gods* is available in Charles G. Osgood, *Boccaccio on Poetry* (1930). Other of Boccaccio's critical works in English include his *Life of Dante*, translated by P. H. Wicksteed (1922); *De mulieribus claris: Concerning Famous Women*, translated by Guido A. Guarino (1963); and *De casibus: The Fates of Illustrious Men*, translated in an abridged version by Louis Brewer Hall (1965). For an intellectual biography of Boccaccio in English with important primary material translated, see Vittore Branca, *Boccaccio: The Man and His Works* (1976).

Much of the secondary criticism of Boccaccio focuses on the *Decameron*. The introduction to Charles Osgood's *Boccaccio on Poetry* is an indispensable guide to Boccaccio's literary criticism. Erich Auerbach's chapter on Boccaccio in *Mimesis* (1953) offers a fundamental discussion of realism in his writing. Herbert G. Wright traces Boccaccio's considerable influence on English poets in *Boccaccio in England: From Chaucer to Tennyson* (1957). For a general introduction to Boccaccio and his work, see Judith Powers Serafini-Sauli, *Giovanni Boccaccio* (1982). Thomas Hyde's essay "Boccaccio and the Genealogies of Myth," *PMLA* 100 (1985), offers a close analysis of the *Genealogy of the Gentile Gods*. Gregory Stone provides an advanced study of Boccaccio's literary criticism in *The Ethics of Nature in the Middle Ages: On Boccaccio's Poetaphysics* (1998). For a bibliography, consult Joseph P. Consoli, *Giovanni Boccaccio: An Annotated Bibliography* (1992).

V. OTHER CAVILLERS AT THE POETS AND THEIR IMPUTATIONS

There is also, O most serene of rulers,² as you know far better than I, a kind of house established in this world by God's gift, in the image of a celestial council, and devoted only to sacred studies. Within, on a lofty throne, sits Philosophy,³ messenger from the very bosom of God, mistress of all knowledge. Noble is her mien and radiant with godlike splendor. There she sits

1. Translated by Charles G. Osgood.

2. Boccaccio claims that his treatise was commissioned by King Hugh of Cyprus, king of Cyprus and Jerusalem from 1324 to 1358. Hugh was dead by 1359; it is not clear why Boccaccio continues

to address him.

3. The ultimate source for this image of Lady Philosophy is Boethius's *Consolation of Philosophy* (ca. 524 C.E.), Prose 1.3.

arrayed in royal robes and adorned with a golden crown, like the Empress of all the World. In her left hand she holds several books, with her right hand she wields a royal sceptre, and in clear and fluent discourse she shows forth to such as will listen the truly praiseworthy ideals of human character, the forces of our Mother Nature, the true good, and the secrets of heaven. If you enter you do not doubt that it is a sanctuary full worthy of all reverence; and if you look about, you will clearly see there every opportunity for the higher pursuits of the human mind, both speculation and knowledge, and will gaze with wonder till you regard it not merely as one all-inclusive household, but almost the very image of the divine mind. Among other objects of great veneration there, behind the mistress of the household, are certain men seated in high places, few in number, of gentle aspect and utterance, who are so distinguished by their seriousness, honesty, and true humility, that you take them for gods not mortals. These men abound in the faith and doctrine of their mistress, and give freely to others of the fullness of their knowledge.

But there is also another group—a noisy crowd—of all sorts and conditions. Some of these have resigned all pride, and live in watchful obedience to the injunctions of their superiors, in hopes that their obsequious zeal may gain them promotion. But others there are who grow so elated with what is virtually elementary knowledge, that they fall upon their great mistress' robes as it were with their talons, and in violent haste tear away a few shreds as samples; then don various titles which they often pick up for a price; and, as puffed up as if they knew the whole subject of divinity, they rush forth from the sacred house, setting such mischief afoot among ignorant people as only the wise can calculate. Yet these rascals are sworn conspirators against all high arts. First they try to counterfeit a good man; they exchange their natural expression for an anxious, careful one. They go about with downcast eye to appear inseparable from their thoughts. Their pace is slow to make the uneducated think that they stagger under an excessive weight of high speculation. They dress unpretentiously, not because they are really modest, but only to mask themselves with sanctity. Their talk is little and serious. If you ask them a question they heave a sigh, pause a moment, raise their eyes to heaven, and at length deign to answer. They hope the bystanders will infer from this that their words rise slowly to their lips, not from any lack of eloquence, but because they are fetched from the remote sanctuary of heavenly secrets. They profess piety, sanctity, and justice, and often, forsooth, utter the words of the prophet,⁴ "The zeal of God's house hath eaten me up."

Then they proceed to display their wonderful knowledge, and whatever they don't know they damn—to good effect too. This they do to avoid inquiry about subjects of which they are ignorant, or else to affect scorn and indifference in such matters as cheap, trivial, and obvious, while they have devoted themselves to things of greater importance. When they have caught inexperienced minds in traps of this sort, they proceed boldly to range about town, dabble in business, give advice, arrange marriages, appear at big dinners, dictate wills, act as executors of estates, and otherwise display arrogance unbecoming to a philosopher. Thus they blow up a huge cloud of

4. David, Psalms 69.9; John 2.17 [translator's note].

popular reputation, and thereby so strut with vanity that, when they walk abroad, they want to have everybody's finger pointing them out, to overhear people saying that they are great masters of their subjects, and see how the grand folk rise to meet them in the squares of the city and call them "Rabbi,"⁵ speak to them, invite them, give place and defer to them. Straightway they throw off all restraint and become bold enough for anything; they are not afraid to lay their own sickles to the harvest of another; and haply, while they are basely defiling other people's business, the talk may fall upon poetry and poets. At the sound of the word they blaze up in such a sudden fury that you would say their eyes were afire. They cannot stop; they go raging on by the very momentum of their wrath. Finally, like conspirators against a deadly enemy, in the schools, in public squares, in pulpits, with a lazy crowd, as a rule, for an audience, they break out into such mad denunciation of poets that the bystanders are afraid of the speakers themselves, let alone the harmless objects of attack.

They say poetry is absolutely of no account, and the making of poetry a useless and absurd craft; that poets are tale-mongers, or, in lower terms, liars; that they live in the country among the woods and mountains because they lack manners and polish. They say, besides, that their poems are false, obscure, lewd, and replete with absurd and silly tales of pagan gods, and that they make Jove,⁶ who was, in point of fact, an obscene and adulterous man, now the father of gods, now king of heaven, now fire, or air, or man, or bull, or eagle, or similar irrelevant things; in like manner poets exalt to fame Juno⁷ and infinite others under various names. Again and again they cry out that poets are seducers of the mind, prompters of crime, and, to make their foul charge, fouler, if possible, they say they are philosophers' apes, that it is a heinous crime to read or possess the books of poets; and then, without making any distinction, they prop themselves up, as they say, with Plato's authority⁸ to the effect that poets ought to be turned out-of-doors—nay, out of town, and that the Muses,⁹ their mumming mistresses, as Boethius' says, being sweet with deadly sweetness, are detestable, and should be driven out with them and utterly rejected. But it would take too long to cite everything that their irritable spite and deadly hatred prompt these madmen to say. It is also before judges like these—so eminent, forsooth, so fair, so merciful, so well-inclined—that my work will appear, O glorious Prince; and I know full well they will gather about it like famished lions,² to seek what they may devour. Since my book has entirely to do with poetic material, I cannot look for a milder sentence from them than in their rage they thunder down upon poets. I am well aware that I offer my breast to the same missiles that their hatred has already employed; but I shall endeavor to ward them off.

O merciful God, meet now this foolish and ill-considered clamor of mad men, and oppose their rage. And thou, O best of kings, as I advance upon their line, support me with the strength of thy noble soul, and help me in my fight for thee; for courage and a stout heart must now be mine. Sharp and poisonous are their weapons, but weak withal. Foolish judges though

5. Literally, "my master," "my teacher" (Hebrew).

6. Jupiter, the chief Roman god (identified with the Greek god Zeus).

7. Jupiter's wife and sister, the chief Roman goddess (identified with the Greek goddess Hera).

8. See PLATO, *Republic* 3.398a-b (above).

9. In Greek mythology, 9 daughters of Memory who preside over the arts and all intellectual pursuits.

1. Roman Christian philosopher (470-524).

2. Like the Devil: 1 Peter 5.8 [translator's note].

they be, they are strong in other ways, and I tremble with fear before them, unless God, who deserteth not them that trust in Him, and thou, also, favor me. Slender is my strength and my mind weak, but great is my expectation of help; borne up by such hope, I shall rush upon them with justice at my right hand.

VII. THE DEFINITION OF POETRY, ITS ORIGIN, AND FUNCTION

This poetry, which ignorant triflers cast aside, is a sort of fervid and exquisite invention, with fervid expression, in speech or writing, of that which the mind has invented. It proceeds from the bosom of God, and few, I find, are the souls in whom this gift is born; indeed so wonderful a gift it is that true poets have always been the rarest of men. This fervor of poesy is sublime in its effects: it impels the soul to a longing for utterance; it brings forth strange and unheard-of creations of the mind; it arranges these meditations in a fixed order, adorns the whole composition with unusual interweaving of words and thoughts; and thus it veils truth in a fair and fitting garment of fiction. Further, if in any case the invention so requires, it can arm kings, marshal them for war, launch whole fleets from their docks, nay, counterfeit sky, land, sea, adorn young maidens with flowery garlands, portray human character in its various phases, awake the idle, stimulate the dull, restrain the rash, subdue the criminal, and distinguish excellent men with their proper meed of praise: these, and many other such, are the effects of poetry. Yet if any man who has received the gift of poetic fervor shall imperfectly fulfil its function here described, he is not, in my opinion, a laudable poet. For, however deeply the poetic impulse stirs the mind to which it is granted, it very rarely accomplishes anything commendable if the instruments by which its concepts are to be wrought out are wanting—I mean, for example, the precepts of grammar and rhetoric, an abundant knowledge of which is opportune. I grant that many a man already writes his mother tongue admirably, and indeed has performed each of the various duties of poetry as such; yet over and above this, it is necessary to know at least the principles of the other Liberal Arts,³ both moral and natural, to possess a strong and abundant vocabulary, to behold the monuments and relics of the Ancients, to have in one's memory the histories of the nations, and to be familiar with the geography of various lands, of seas, rivers and mountains.

Furthermore, places of retirement, the lovely handiwork of Nature herself, are favorable to poetry, as well as peace of mind and desire for worldly glory; the ardent period of life also has very often been of great advantage. If these conditions fail, the power of creative genius frequently grows dull and sluggish.

Now since nothing proceeds from this poetic fervor, which sharpens and illumines the powers of the mind, except what is wrought out by art,⁴ poetry is generally called an art. Indeed the word poetry has not the origin that many carelessly suppose, namely *poio*, *pois*, which is but Latin *fungo*, *fungis*; rather it is derived from a very ancient Greek word *poetes*,⁵ which means in

3. The liberal arts in the Middle Ages included the trivium (grammar, rhetoric, and logic) and the quadrivium (arithmetic, geometry, music, and astronomy).

4. Conscious skill, technique, indispensable to

poetic creation [translator's note].

5. Boccaccio's limitations in Greek have allowed him to follow Isidore of Seville—bad etymology and all—in this whole passage, as did writers before him who knew no Greek [translator's note].

Latin exquisite discourse (*exquisita locutio*). For the first men who, thus inspired, began to employ an exquisite style of speech, such, for example, as song in an age hitherto unpolished, to render this unheard-of discourse sonorous to their hearers, let it fall in measured periods; and lest by its brevity it fail to please, or, on the other hand, become prolix and tedious, they applied to it the standard of fixed rules, and restrained it within a definite number of feet and syllables. Now the product of this studied method of speech they no longer called by the more general term poesy, but poem. Thus as I said above, the name of the art, as well as its artificial product, is derived from its effect.

Now though I allege that this science of poetry has ever streamed forth from the bosom of God upon souls while even yet in their tenderest years, these enlightened cavillers will perhaps say that they cannot trust my words. To any fair-minded man the fact is valid enough from its constant recurrence. But for these dullards I must cite witnesses to it. If, then, they will read what Cicero,⁶ a philosopher rather than a poet, says in his oration delivered before the senate in behalf of Aulus Licinius Archias,⁷ perhaps they will come more easily to believe me. He says: "And yet we have it on the highest and most learned authority, that while other arts are matters of science and formula and technique, poetry depends solely upon an inborn faculty, is evoked by a purely mental activity, and is infused with a strange supernal inspiration."

But not to protract this argument, it is now sufficiently clear to reverent men, that poetry is a practical art,⁸ springing from God's bosom and deriving its name from its effect, and that it has to do with many high and noble matters that constantly occupy even those who deny its existence. If my opponents ask when and in what circumstances, the answer is plain: the poets would declare with their own lips under whose help and guidance they compose their inventions when, for example, they raise flights⁹ of symbolic steps to heaven, or make thick-branching trees¹ spring aloft to the very stars, or go winding about mountains to their summits. Haply, to disparage this art of poetry now unrecognized by them, these men will say that it is rhetoric which the poets employ. Indeed, I will not deny it in part, for rhetoric has also its own inventions. Yet, in truth, among the disguises of fiction rhetoric has no part, for whatever is composed as under a veil, and thus exquisitely wrought, is poetry and poetry alone.²

Isidore of Seville (ca. 560–636), Spanish bishop and encyclopedist; see his *Etymologiarum* 8.7.2, "De poeta." The Greek *poiesō* (which is, in fact, related to "poet") means "make, create"; the Latin *fungo* means "form, invent."

6. Roman statesman, orator, and author (106–43 B.C.E.).

7. A Greek poet of Antioch, whose claim of Roman citizenship was successfully defended by Cicero; the greater part of his oration is devoted to glorifying literature (the quotation is from *Pro Archia* 8.18).

8. *Facultas* (ability, power, capacity, skill [Latin]) [translator's note].

9. Dante's mountain of Purgatory, and perhaps the steps from circle to circle (*Purgatorio* 11.40; 13.1; 17.65, 77; 25.8; etc.); or the three steps in *Purgatorio* 9.76ff.; or the mystic stairway of the Seventh Heaven (*Paradiso* 21.8; 22.68) [transla-

tor's note]. For DANTE ALIGHIERI (1265–1321), see above.

1. Like Pandarus and Bitias in Virgil's *Aeneid* [19 B.C.E.], 9.677–82: "While they within stand at the right and left / Before the turrets, armed, their lofty heads / Flashing with plumes. So by some river's bank, / Whether the Po or pleasant Athesis, / Two breezy oaks lift up their unshorn heads, / And nod their lofty tops" [translator's note].

2. According to Aristotle (*Rhetoric* 3.2) poetry can create wonder by strange matter and expression, as rhetoric should not. Cicero (*De Oratore* 1.16) says that the poet is more restricted than the orator by "numbers" but less in choice of words. Augustine (*De Ordine* 2.14.40) finds the grammarians rather than the rhetoricians are poetry's proper judges. In the Middle Ages the academic conception of poetry became debased and subordinated to rhetoric and grammar. Boccaccio obviously is

XII. THE OBSCURITY OF POETRY IS NOT JUST CAUSE
FOR CONDEMNING IT

These cavillers further object that poetry is often obscure, and that poets are to blame for it, since their end is to make an incomprehensible statement appear to be wrought with exquisite artistry; regardless of the old rule of the orators, that a speech must be simple and clear. Perverse notion! Who but a deceiver himself would have sunk low enough not merely to hate what he could not understand, but incriminate it, if he could? I admit that poets are at times obscure. At the same time will these accusers please answer me? Take those philosophers among whom they shamelessly intrude; do they always find their close reasoning as simple and clear as they say an oration should be? If they say yes, they lie; for the works of Plato and Aristotle, to go no further, abound in difficulties so tangled and involved that from their day to the present, though searched and pondered by many a man of keen insight, they have yielded no clear nor consistent meaning. But why do I talk of philosophers? There is the utterance of Holy Writ, of which they especially like to be thought expounders; though proceeding from the Holy Ghost, is it not full to overflowing with obscurities and ambiguities? It is indeed, and for all their denial, the truth will openly assert itself. Many are the witnesses, of whom let them be pleased to consult Augustine,³ a man of great sanctity and learning, and of such intellectual power that, without a teacher, as he says himself, he learned many arts, besides all that the philosophers teach of the ten categories. Yet he did not blush to admit that he could not understand the beginning of Isaiah. It seems that obscurities are not confined to poetry. Why then do they not criticise philosophers as well as poets? Why do they not say that the Holy Spirit wove obscure sayings into his works, just to give them an appearance of clever artistry? As if He were not the sublime Artificer of the Universe!⁴ I have no doubt they are bold enough to say such things, if they were not aware that philosophers already had their defenders, and did not remember the punishment⁵ prepared for them that blaspheme against the Holy Ghost. So they pounce upon the poets because they seem defenseless, with the added reason that, where no punishment is imminent, no guilt is involved. They should have realized that when things perfectly clear seem obscure, it is the beholder's fault. To a half-blind man, even when the sun is shining its brightest, the sky looks cloudy. Some things are naturally so profound that not without difficulty can the most exceptional keenness in intellect sound their depths; like the sun's globe, by which, before they can clearly discern it, strong eyes are sometimes repelled.⁶ On the other hand, some things, though naturally clear perhaps, are so veiled by the artist's skill that scarcely anyone could by mental effort derive sense from them; as

protesting against the medieval opinion partly by appealing to the Ancients, but chiefly by consulting the fact of a poet's experience [translator's note]. For ARISTOTLE (384-322 B.C.E.) and the theologian AUGUSTINE (354-430 C.E.), see above. 3. Augustine, *Confessions* 4.16: "And what did it profit me that, when scarcely twenty years old, a book of Aristotle's entitled *The Ten Predicaments [Categories]* fell into my hands? . . . I read it alone and understood it . . . And what did it profit me that I . . . read unaided, and understood, all the books that I could get of the so-called liberal arts?"

. . . Whatever was written either on rhetoric or logic, geometry, music, or arithmetic, did I, without any great difficulty, and without the teaching of any man, understand." Cited by Petrarch, *Invectivae contra Medicum* [1355], 3, p. 1105 [translator's note].

4. Wisdom 7.21, 22 [translator's note].

5. Mark 3.29 [translator's note].

6. Perhaps a reminiscence of Dante, *Paradiso* 1.54ff. A favorite figure with Dante: cf. *Purgatorio* 32.11; *Paradiso* 25.118; etc. [translator's note].

the immense body of the sun when hidden in clouds cannot be exactly located by the eye of the most learned astronomer. That some of the prophetic poems are in this class, I do not deny:

Yet not by this token is it fair to condemn them; for surely it is not one of the poet's various functions to rip up and lay bare the meaning which lies hidden in his inventions. Rather where matters truly solemn and memorable are too much exposed, it is his office by every effort to protect as well as he can and remove them from the gaze of the irreverent, that they cheapen not by too common familiarity. So when he discharges this duty and does it ingeniously, the poet earns commendation, not anathema.

Wherefore I again grant that poets are at times obscure, but invariably explicable if approached by a sane mind; for these cavillers view them with owl eyes, not human. Surely no one can believe that poets invidiously veil the truth with fiction, either to deprive the reader of the hidden sense, or to appear the more clever; but rather to make truths which would otherwise cheapen by exposure the object of strong intellectual effort and various interpretation, that in ultimate discovery they shall be more precious. In a far higher degree is this the method of the Holy Spirit; nay, every right-minded man should be assured of it beyond any doubt. Besides it is established by Augustine in the *City of God*, Book Eleven, when he says:

"The obscurity of the divine word has certainly this advantage, that it causes many opinions about the truth to be started and discussed, each reader seeing some fresh meaning in it."

Elsewhere he says of Psalm 126:⁷

"For perhaps the words are rather obscurely expressed for this reason, that they may call forth many understandings, and that men may go away the richer, because they have found that closed which might be opened in many ways, than if they could open and discover it by one interpretation."

To make further use of Augustine's testimony (which so far is adverse to these recalcitrants), to show them how I apply to the obscurities of poetry his advice on the right attitude toward the obscurities of Holy Writ, I will quote his comment on Psalm 146:⁸

"There is nothing in it contradictory: somewhat there is which is obscure, not in order that it may be denied thee, but that it may exercise him that shall afterward receive it," etc.

But enough of the testimony of holy men on this point, I will not bore my opponents by again urging them to regard the obscurities of poetry as Augustine regards the obscurities of Holy Writ. Rather I wish that they would wrinkle their brows a bit, and consider fairly and squarely, how, if this is true of sacred literature addressed to all nations, in far greater measure is it true of poetry, which is addressed to the few.

If by chance in condemning the difficulty of the text, they really mean its figures of diction and oratorical colors and the beauty which they fail to recognize in alien words, if on this account they pronounce poetry obscure—my only advice is for them to go back to the grammar schools,⁹

7. Augustine, *Enarratio: Patrologia. Latina* 37.1675. Boccaccio's quotation immediately precedes the passage on the obscurity of Isaiah cited above [translator's note].

8. *Enarratio: Patrologia. Latina* 37.1907. The preceding words are "Honor God's Scripture, honor

God's Word, though it be not plain; in reverence wait for understanding. Be not wanton to accuse either the obscurity or seeming contradiction of Scripture" (trans. Coke) [translator's note].

9. The study of poetry was subject either to grammar or to rhetoric in the medieval scheme. See

bow to the ferule, study, and learn what license ancient authority granted the poets in such matters, and give particular attention to such alien terms as are permissible beyond common and homely use. But why dwell so long upon the subject? I could have urged them in a sentence to put off the old mind,¹ and put on the new and noble; then will that which now seems to them obscure look familiar and open. Let them not trust to concealing their gross confusion of mind in the precepts of the old orators; for I am sure the poets were ever mindful of such. But let them observe that oratory is quite different, in arrangement of words, from fiction, and that fiction has been consigned to the discretion of the inventor as being the legitimate work of another art than oratory. "In poetic narrative above all, the poets maintain majesty of style and corresponding dignity." As saith Francis Petrarch² in the Third Book of his *Invectives*, contrary to my opponents' supposition, "Such majesty and dignity are not intended to hinder those who wish to understand, but rather propose a delightful task, and are designed to enhance the reader's pleasure and support his memory. What we acquire with difficulty and keep with care is always the dearer to us," so continues Petrarch.³ In fine, if their minds are dull, let them not blame the poets but their own sloth. Let them not keep up a silly howl against those whose lives and actions contrast most favorably with their own. Nay, at the very outset they have taken fright at mere appearances, and bid fair to spend themselves for nothing. Then let them retire in good time, sooner than exhaust their torpid minds with the onset and suffer a violent repulse.

But I repeat my advice to those who would appreciate poetry, and unwind its difficult involutions. You must read, you must persevere, you must sit up nights, you must inquire, and exert the utmost power of your mind. If one way does not lead to the desired meaning, take another; if obstacles arise, then still another; until, if your strength holds out, you will find that clear which at first looked dark. For we are forbidden by divine command⁴ to give that which is holy to dogs, or to cast pearls before swine.

1350-62

book 14, chapter 7. Though Boccaccio does not mention rhetoric in this passage, it is, like 14.7, a stroke on behalf of the liberation of poetry from technical bondage [translator's note].

1. Ephesians 4.22; Colossians 3.9 [translator's note].

2. Italian poet and humanist (1304-1374).

3. *Invectivae contra Medicum*, p. 1105. Petrarch has just been comparing the obscurity of poets with that of Holy Writ, not citing the difference between oratory and poetry. Boccaccio's quotation, either through his carelessness or corruption of his text, differs slightly from Petrarch [translator's note].

4. Matthew 7.6 [translator's note].

CHRISTINE DE PIZAN

ca. 1365—ca. 1429

The most prolific woman writer of the Middle Ages, Christine de Pizan was the first European woman to earn a living as a writer and, as such, she was acutely aware of the difficulty of reconciling the demands of writing with the occupations of women. In *Christine's Vision* (1405), a lengthy complaint against Fortune in the tradition of Boethius's *Consolation of Philosophy* (ca. 524), she laments that "although I was naturally inclined to scholarship from my birth, my occupation with the tasks common to married women and the burden of frequent childbearing had deprived me of it." The sheer volume of her literary output is all the more remarkable for a woman who was married and bearing children at the age of fifteen.

Christine was born in Venice around 1365. Shortly after, her father, Tommaso di Benvenuto da Pizzano, an astrologer-physician, received an offer of employment from Charles V of France—the age's greatest patron—and in 1368 he brought his family to Paris. Around 1380, at "the age when young girls are customarily assigned husbands" (according to *Christine's Vision*), Christine was married to Etienne de Castel. In the same year, the death of Charles V meant the loss of the royal patronage Tommaso had enjoyed; the family fortunes soon began to wane. In 1389 both Tommaso and Castel died, leaving Christine a twenty-five-year-old widow with three small children and a large household. Though her father and husband left her a small inheritance, they also left her with debts, which required many years of expensive litigation to settle. Fortunately, Christine's father had given her some education, so Christine turned to writing to support her family.

From 1399 until her death in 1429 she wrote more than twenty volumes of prose and verse, which she presented to members of the French court, relying on their uncertain patronage. In her earliest composition, *Epistle of the God of Love* (1399), she deplored the popularity of the *Romance of the Rose*, one of the central works of medieval French literature, for its negative representations of women. In 1402 she initiated France's first literary debate—what became known as the "Quarrel of the Rose"—over the merits of Jean de Meun's continuation of that poem. In the course of this debate, Christine disputed some of the most prominent fifteenth-century French intellectuals, including Jean Gerson, chancellor of the University of Paris, and Jeun de Montreuil, the provost of Lille and a royal secretary. But Christine did not limit herself only to women's concerns, to the so-called *querelle des femmes* for which we remember her today. In 1404 she won her first large commission from Philip the Bold of Burgundy to write a biography of his father, Charles V. During her career she wrote on subjects as diverse as good government (something sorely lacking in early-fifteenth-century France), military strategy, religion, morality, and ethics. She died shortly after completing the *Ditié de la pucelle* (1429), a poem about Joan of Arc.

The Book of the City of Ladies, the work for which Christine is best known, was completed in 1405. In it, Christine continues a critique of misogyny begun in the Quarrel of the Rose. Her criticisms reveal a typically medieval distrust of the excesses of poetic language cut loose from proper signification. Misogynist writing is untrue because its authors have not understood the proper use of language. Christine's distrust of false representation reveals her indebtedness to theories of language pioneered by ST. AUGUSTINE, while her interest in allegory links her with writers such as QUINTILIAN, HUGH OF ST. VICTOR, and DANTE, all of whom developed medieval notions of exegesis. Her attempt to counter the misogynist representations of the "philosophers and poets" with true representations of "good women" owes its largest debt to BOCCACCIO's *Concerning Famous Women* (1361), though she is far from being an uncritical reader of that text. While nearly three-quarters of the tales in the *City of Ladies* are found in Boccaccio's work, Christine's adaptations show her to be a resist-

ing reader, her text a refutation of Boccaccio's often back-handed praise of women.

The opening of the *City of Ladies* illustrates some ways in which women read and write under the conditions of patriarchy. The predominance of "wicked insults" about women and their behavior in the books she reads prompts Christine to disregard everything she knows about women and to ask God why, if women were so evil, she could not have been born as a man. The process of building a "city of ladies" entails reeducating herself to read as a woman and to discern true from false representations of women. Christine's collection of stories about illustrious women might be read as an early attempt to counter what SANDRA M. GILBERT AND SUSAN GUBAR in the twentieth century call the "anxiety of authorship" suffered by the woman writer, the fear that "because she can never become a precursor, the act of creation will isolate and destroy her." To clear the ground for a "city of ladies," Reason, her guide, must unpack the logical errors in misogynist discourse, articulating the reasons that so many learned men would slander women. But that is only a first step. The woman writer overcomes her anxiety of authorship only by actively seeking female precursors, the task that Christine sets herself in the *City of Ladies*. Like so many female critics who would follow her—for example, MARY WOLLSTONECRAFT and VIRGINIA WOOLF—Christine recognizes that because women have been denied education and thus kept ignorant, they have been unable to counter male images of female wickedness. Despite this spirited defense of women, we would be wrong to claim Christine as a feminist precursor. Her social vision of women's proper sphere is ultimately quite conservative, even for its time. Nevertheless, the *City of Ladies* remains an important document, an early voice of female resistance to the tradition of male misogyny.

BIBLIOGRAPHY

Perhaps the surest sign of the critical neglect of Christine de Pizan is the lack of any editions or translations of her collected works. Maurice Roy edited *Oeuvres poétiques de Christine de Pizan* (1886–89), but it excludes the prose works for which Christine is best known. Charity Canon Willard edited a selection of Christine's works in translation, *The Writings of Christine de Pizan* (1992), which better captures the diversity of her writing. Generally, it is easier to find translations than editions of individual works. Eric Hicks edited the "Quarrel of the Rose" as *Le Débat sur le Roman de la Rose* (1977). The only edition of *The Book of the City of Ladies* in the original Old French is Maureen Curnow's 1975 Ph.D. dissertation, "The *Livre de la Cité des Dames*: A Critical Edition," which Earl Jeffrey Richards translated as *The Book of the City of Ladies* in 1982. Much of what we know about Christine's life comes to us from her own autobiographical writing, especially *Christine's Vision*, translated by Glenda K. McLeod (1993). Charity Canon Willard offers the best modern biography in *Christine de Pizan: Her Life and Works* (1984).

Critical interest in Christine and her writing increased exponentially in the 1980s and 1990s, largely because of the influence of feminist criticism. Sandra Hindman's *Christine de Pizan's "Epistre d'Othea": Painting and Politics at the Court of Charles VI* (1986) offers a richly detailed description of the social context of Christine's writing. Sheila Delany's controversial essay "Mothers to Think Back Through: Who Are They? The Ambiguous Example of Christine de Pizan," in *Medieval Texts, Contemporary Readers* (ed. Laurie A. Finke and Martin B. Shichtman, 1987) was instrumental in raising questions about feminist appropriations of Christine. Maureen Quilligan's *Allegory of Female Authority: Christine de Pizan's "Cité des Dames"* (1991) offers a sophisticated theoretical analysis of *The City of Ladies*. The variety of critical responses to Christine is usefully represented by collections of essays, of which the best are *Politics, Gender, and Genre: The Political Thought of Christine de Pizan*, edited by Margaret Brabant (1992), and *Christine de Pizan and the Categories of Difference*, edited by Marilyn Desmond (1998). Other resources include Angus J. Kennedy, *Christine de Pizan: A Bibliographic Guide* (1984; supplement 1994), and Edith Yenal, *Christine de Pizan: A Bibliography* (1989).

From The Book of the City of Ladies¹

From Part One

1. HERE BEGINS THE BOOK OF THE CITY OF LADIES, WHOSE FIRST CHAPTER TELLS WHY AND FOR WHAT PURPOSE THIS BOOK WAS WRITTEN.

[1.1.1] One day as I was sitting alone in my study surrounded by books on all kinds of subjects, devoting myself to literary studies, my usual habit, my mind dwelt at length on the weighty opinions of various authors whom I had studied for a long time. I looked up from my book, having decided to leave such subtle questions in peace and to relax by reading some light poetry. With this in mind, I searched for some small book. By chance a strange volume came into my hands, not one of my own, but one which had been given to me along with some others. When I held it open and saw from its title page that it was by Mathéolus,² I smiled, for though I had never seen it before, I had often heard that like other books it discussed respect for women. I thought I would browse through it to amuse myself. I had not been reading for very long when my good mother called me to refresh myself with some supper, for it was evening. Intending to look at it the next day, I put it down. The next morning, again seated in my study as was my habit, I remembered wanting to examine this book by Mathéolus. I started to read it and went on for a little while. Because the subject seemed to me not very pleasant for people who do not enjoy lies, and of no use in developing virtue or manners, given its lack of integrity in diction and theme, and after browsing here and there and reading the end, I put it down in order to turn my attention to more elevated and useful study. But just the sight of this book, even though it was of no authority, made me wonder how it happened that so many different men—and learned men among them—have been and are so inclined to express both in speaking and in their treatises and writings so many wicked insults about women and their behavior. Not only one or two and not even just this Mathéolus (for this book had a bad name anyway and was intended as a satire) but, more generally, judging from the treatises of all philosophers and poets and from all the orators—it would take too long to mention their names—it seems that they all speak from one and the same mouth. They all concur in one conclusion: that the behavior of women is inclined to and full of every vice. Thinking deeply about these matters, I began to examine my character and conduct as a natural woman and, similarly, I considered other women whose company I frequently kept, princesses, great ladies, women of the middle and lower classes, who had graciously told me of their most private and intimate thoughts, hoping that I could judge impartially and in good conscience whether the testimony of so many notable men could be true. To the best of my knowledge, no matter how long I confronted or dissected the problem, I could not see or realize how their claims could be true when compared to the natural behavior and character of women. Yet I still argued vehemently against women, saying

1. Translated by Earl Jeffrey Richards.
2. The *Liber Lamentationum Matheoluli* (*The Book of the Lamentations of Mathéolus*), composed

around 1300, translated from Latin into French in the last decades of the 14th century.

that it would be impossible that so many famous men—such solemn scholars, possessed of such deep and great understanding, so clear-sighted in all things, as it seemed—could have spoken falsely on so many occasions that I could hardly find a book on morals where, even before I had read it in its entirety, I did not find several chapters or certain sections attacking women, no matter who the author was. This reason alone, in short, made me conclude that, although my intellect did not perceive my own great faults and, likewise, those of other women because of its simpleness and ignorance, it was however truly fitting that such was the case. And so I relied more on the judgment of others than on what I myself felt and knew. I was so transfixed in this line of thinking for such a long time that it seemed as if I were in a stupor. Like a gushing fountain, a series of authorities, whom I recalled one after another, came to mind, along with their opinions on this topic. And I finally decided that God formed a vile creature when He made woman, and I wondered how such a worthy artisan could have deigned to make such an abominable work which, from what they say, is the vessel as well as the refuge and abode of every evil and vice. As I was thinking this, a great unhappiness and sadness welled up in my heart, for I detested myself and the entire feminine sex, as though we were monstrosities in nature. And in my lament I spoke these words:

[1.1.2] "Oh, God, how can this be? For unless I stray from my faith, I must never doubt that Your infinite wisdom and most perfect goodness ever created anything which was not good. Did You yourself not create woman in a very special way and since that time did You not give her all those inclinations which it pleased You for her to have? And how could it be that You could go wrong in anything? Yet look at all these accusations which have been judged, decided, and concluded against women. I do not know how to understand this repugnance. If it is so, fair Lord God, that in fact so many abominations abound in the female sex, for You Yourself say that the testimony of two or three witnesses lends credence, why shall I not doubt that this is true? Alas, God, why did You not let me be born in the world as a man, so that all my inclinations would be to serve You better, and so that I would not stray in anything and would be as perfect as a man is said to be? But since Your kindness has not been extended to me, then forgive my negligence in Your service, most fair Lord God, and may it not displease You, for the servant who receives fewer gifts from his lord is less obliged in his service." I spoke these words to God in my lament and a great deal more for a very long time in sad reflection, and in my folly I considered myself most unfortunate because God had made me inhabit a female body in this world.³

4. HERE THE LADY EXPLAINS TO CHRISTINE THE CITY WHICH SHE HAS BEEN COMMISSIONED TO BUILD AND HOW SHE WAS CHARGED TO HELP CHRISTINE BUILD THE WALL AND ENCLOSURE, AND THEN GIVES HER NAME.

[1.4.1] "Thus, fair daughter, the prerogative among women has been bestowed on you to establish and build the City of Ladies. For the foundation

3. While she is engaged in this lamentation, three ladies appear to Christine, comforting her. The first speaks to her, telling her that with their help

she will build a city of ladies, which would house "all ladies of fame and women worthy of praise."

and completion of this City you will draw fresh waters from us as from clear fountains, and we will bring you sufficient building stone, stronger and more durable than any marble with cement could be. Thus your City will be extremely beautiful, without equal, and of perpetual duration in the world.

[1.4.1] "Have you not read that King Tros founded the great city of Troy with the aid of Apollo, Minerva, and Neptune,⁴ whom the people of that time considered gods, and also how Cadmus founded the city of Thebes with the admonition of the gods? And yet over time these cities fell and have fallen into ruin. But I prophesy to you, as a true sybil,⁵ that this City, which you will found with our help, will never be destroyed, nor will it ever fall, but will remain prosperous forever, regardless of all its jealous enemies. Although it will be stormed by numerous assaults, it will never be taken or conquered.

[1.4.3] "Long ago the Amazon kingdom was begun through the arrangement and enterprise of several ladies of great courage who despised servitude, just as history books have testified. For a long time afterward they maintained it under the rule of several queens, very noble ladies whom they elected themselves, who governed them well and maintained their dominion with great strength. Yet, although they were strong and powerful and had conquered a large part of the entire Orient in the course of their rule and terrified all the neighboring lands (even the Greeks, who were then the flower of all countries in the world, feared them), nevertheless, after a time, the power of this kingdom declined, so that as with all earthly kingdoms, nothing but its name has survived to the present. But the edifice erected by you in this City which you must construct will be far stronger, and for its founding I was commissioned, in the course of our common deliberation, to supply you with durable and pure mortar to lay the sturdy foundations and to raise the lofty walls all around, high and thick, with mighty towers and strong bastions, surrounded by moats with firm blockhouses, just as is fitting for a city with a strong and lasting defense. Following our plan, you will set the foundations deep to last all the longer, and then you will raise the walls so high that they will not fear anyone. Daughter, now that I have told you the reason for our coming and so that you will more certainly believe my words, I want you to learn my name, by whose sound alone you will be able to learn and know that, if you wish to follow my commands, you have in me an administrator so that you may do your work flawlessly. I am called Eädy Reason; you see that you are in good hands. For the time being then, I will say no more."⁶

8. HERE CHRISTINE TELLS HOW, UNDER REASON'S COMMAND AND ASSISTANCE, SHE BEGAN TO EXCAVATE THE EARTH AND LAY THE FOUNDATION.

[1.8.1] Then Lady Reason responded and said, "Get up, daughter! Without waiting any longer, let us go to the Field of Letters. There the City of Ladies will be founded on a flat and fertile plain, where all fruits and freshwater rivers are found and where the earth abounds in all good things. Take the pick of your understanding and dig and clear out a great ditch wherever you

4. Christine uses the Roman names of the Greek gods: Apollo, god of music and prophecy; Minerva (Athena), goddess of war and wisdom; and Neptune (Poseidon), god of the sea.

5. Prophetess.

6. The second and third ladies introduce themselves as Rectitude and Justice. Christine thanks the ladies for their comfort and promises to obey them in all things.

see the marks of my ruler, and I will help you carry away the earth on my own shoulders."

[1.8.2] I immediately stood up to obey her commands and, thanks to these three ladies, I felt stronger and lighter than before. She went ahead, and I followed behind, and after we had arrived at this field I began to excavate and dig, following her marks with the pick of cross-examination. And this was my first work:

[1.8.3] "Lady, I remember well what you told me before, dealing with the subject of how so many men have attacked and continue to attack the behavior of women, that gold becomes more refined the longer it stays in the furnace, which means the more women have been wrongfully attacked, the greater waxes the merit of their glory. But please tell me why and for what reason different authors have spoken against women in their books, since I already know from you that this is wrong; tell me if Nature makes man so inclined or whether they do it out of hatred and where does this behavior come from?"

Then she replied, "Daughter, to give you a way of entering into the question more deeply, I will carry away this first basketful of dirt. This behavior most certainly does not come from Nature, but rather is contrary to Nature, for no connection in the world is as great or as strong as the great love which, through the will of God, Nature places between a man and a woman. The causes which have moved and which still move men to attack women, even those authors in those books, are diverse and varied, just as you have discovered. For some have attacked women with good intentions, that is, in order to draw men who have gone astray away from the company of vicious and dissolute women, with whom they might be infatuated, or in order to keep these men from going mad on account of such women, and also so that every man might avoid an obscene and lustful life. They have attacked all women in general because they believe that women are made up of every abomination."

"My lady," I said then, "excuse me for interrupting you here, but have such authors acted well, since they were prompted by a laudable intention? For intention, the saying goes, judges the man."

"That is a misleading position, my good daughter," she said, "for such sweeping ignorance never provides an excuse. If someone killed you with good intention but out of foolishness, would this then be justified? Rather, those who did this, whoever they might be, would have invoked the wrong law; causing any damage or harm to one party in order to help another party is not justice, and likewise attacking all feminine conduct is contrary to the truth, just as I will show you with a hypothetical case. Let us suppose they did this intending to draw fools away from foolishness. It would be as if I attacked fire—a very good and necessary element nevertheless—because some people burnt themselves, or water because someone drowned. The same can be said of all good things which can be used well or used badly. But one must not attack them if fools abuse them, and you have yourself touched on this point quite well elsewhere in your writings.⁷ But those who have spoken like this so abundantly—whatever their intentions might be—have formulated their arguments rather loosely only to make their point. Just

7. Reason may be referring to Christine's letters in the debate over the *Romance of the Rose* (1402).

like someone who has a long and wide robe cut from a very large piece of cloth when the material costs him nothing and when no one opposes him, they exploit the rights of others. But just as you have said elsewhere, if these writers had only looked for the ways in which men can be led away from foolishness and could have been kept from tiring themselves in attacking the life and behavior of immoral and dissolute women—for to tell the straight truth, there is nothing which should be avoided more than an evil, dissolute, and perverted woman, who is like a monster in nature, a counterfeit estranged from her natural condition, which must be simple, tranquil, and upright—then I would grant you that they would have built a supremely excellent work. But I can assure you that these attacks on all women—when in fact there are so many excellent women—have never originated with me, Reason, and that all who subscribe to them have failed totally and will continue to fail. So now throw aside these black, dirty, and uneven stones from your work, for they will never be fitted into the fair edifice of your City.

[1.8.4] “Other men have attacked women for other reasons: such reproach has occurred to some men because of their own vices and others have been moved by the defects of their own bodies, others through pure jealousy, still others by the pleasure they derive in their own personalities from slander. Others, in order to show they have read many authors, base their own writings on what they have found in books and repeat what other writers have said and cite different authors.”

* * *

From *Part Two*

36. AGAINST THOSE MEN WHO CLAIM IT IS NOT GOOD FOR WOMEN TO BE EDUCATED.

[2.36.1] Following these remarks,⁸ I, Christine, spoke, “My lady, I realize that women have accomplished many good things and that even if evil women have done evil, it seems to me, nevertheless, that the benefits accrued and still accruing because of good women—particularly the wise and literary ones and those educated in the natural sciences whom I mentioned above—outweigh the evil. Therefore, I am amazed by the opinion of some men who claim that they do not want their daughters, wives, or kinswomen to be educated because their mores would be ruined as a result.”

She responded, “Here you can clearly see that not all opinions of men are based on reason and that these men are wrong. For it must not be presumed that mores necessarily grow worse from knowing the moral sciences, which teach the virtues, indeed, there is not the slightest doubt that moral education amends and ennobles them. How could anyone think or believe that whoever follows good teaching or doctrine is the worse for it? Such an opinion cannot be expressed or maintained. I do not mean that it would be good for a man or a woman to study the art of divination or those fields of learning which are forbidden—for the holy Church did not remove them from common use without good reason—but it should not be believed that women are the worse for knowing what is good.

[2.36.2] “Quintus Hortensius, a great rhetorician and consummately skilled

8. By Christine's second guide, Rectitude.

orator in Rome, did not share this opinion. He had a daughter, named Hortensia,⁹ whom he greatly loved for the subtlety of her wit. He had her learn letters and study the science of rhetoric, which she mastered so thoroughly that she resembled her father Hortensius not only in wit and lively memory but also in her excellent delivery and order of speech—in fact, he surpassed her in nothing. As for the subject discussed above, concerning the good which comes about through women, the benefits realized by this woman and her learning were, among others, exceptionally remarkable. That is, during the time when Rome was governed by three men,¹ this Hortensia began to support the cause of women and to undertake what no man dared to undertake. There was a question whether certain taxes should be levied on women and on their jewelry during a needy period in Rome. This woman's eloquence was so compelling that she was listened to, no less readily than her father would have been, and she won her case.

[2.36.3] "Similarly, to speak of more recent times, without searching for examples in ancient history, Giovanni Andrea,² a solemn law professor in Bologna not quite sixty years ago, was not of the opinion that it was bad for women to be educated. He had a fair and good daughter, named Novella, who was educated in the law to such an advanced degree that when he was occupied by some task and not at leisure to present his lectures to his students, he would send Novella, his daughter, in his place to lecture to the students from his chair. And to prevent her beauty from distracting the concentration of her audience, she had a little curtain drawn in front of her. In this manner she could on occasion supplement and lighten her father's occupation. He loved her so much that, to commemorate her name, he wrote a book of remarkable lectures on the law which he entitled *Novella super Decretalium*,³ after his daughter's name.

[2.36.4] "Thus, not all men (and especially the wisest) share the opinion that it is bad for women to be educated. But it is very true that many foolish men have claimed this because it displeased them that women knew more than they did. Your father, who was a great scientist and philosopher, did not believe that women were worth less by knowing science; rather, as you know, he took great pleasure from seeing your inclination to learning. The feminine opinion of your mother, however, who wished to keep you busy with spinning and silly girlishness, following the common custom of women, was the major obstacle to your being more involved in the sciences. But just as the proverb already mentioned above says, 'No one can take away what Nature has given,' your mother could not hinder in you the feeling for the sciences which you, through natural inclination, had nevertheless gathered together in little droplets. I am sure that, on account of these things, you do not think you are worth less but rather that you consider it a great treasure for yourself; and you doubtless have reason to."

And I, Christine, replied to all of this, "Indeed, my lady, what you say is as true as the Lord's Prayer."

1405

9. Hortensia appears in BOCCACCIO's *Concerning Famous Women* (1361), chap. 82. Quintus Hortensius: dictator (a temporary position of great power) appointed in 287 B.C.E.

1. Rome was usually governed by two men (consuls elected for two-year terms); the third here is

the dictator.

2. Andrea (1275–1347) must have been known to Christine's father.

3. Literally, "new things about the decrees" (Latin).

GIAMBATTISTA GIRALDI

1504–1573

An Italian Renaissance dramatist, poet, and literary theorist who distinguished himself as an early advocate of innovative literary form, Giambattista Giraldi argued in favor of vernacular languages and national literatures—two contentious issues since at least the time of DANTE ALIGHIERI—and underscored how evolving social conditions inevitably determine the changing modes of literature and the values of criticism. Giraldi's work promoting the new Renaissance romantic epic ("romance") was especially controversial, eliciting criticism from many of his contemporaries who argued for the tried-and-true ideas of antiquity, particularly those of ARISTOTLE and HORACE, and for strict adherence to the rules of classical genres. As a learned scholar, Giraldi was not opposed in principle to the classical tradition. In fact, he was influenced by Aristotle's *Poetics*, whose authority grew steadily in Italy over the course of the sixteenth century. Unlike many of his fellow critics, however, Giraldi was willing to question and limit Aristotle's precepts. In the so-called debate between the "ancients" and the "moderns," which continued into the eighteenth century with ALEXANDER POPE and SAMUEL JOHNSON, Giraldi finally sided with the moderns, adding fuel to the growing controversy in the Renaissance over the legitimacy of emerging forms of literature.

Born in Ferrara, Giraldi taught rhetoric at the University of Ferrara from 1541 to 1562. Perhaps the most noteworthy biographical detail about his life is the controversy between him and a student, Giovambattista Pigna, over the originality of his ideas on the romance form. Pigna was the first to publish a defense of the new genre, titled *I romanzi* (1554), but Giraldi charged him with plagiarism, an accusation with which subsequent scholars have tended to agree. In literary matters, Giraldi is especially noted for writing an accomplished series of tragedies, including *Orbecche* (1541) and *Dido* (1543). Although influenced by the classical tradition of drama, Giraldi was the first tragic playwright to depict atrocities on stage rather than simply reporting them through a messenger, as Aristotle had advised in the *Poetics*; and he was among a growing number of writers who departed from the classical tradition in their use of the vernacular language. He enjoys the further distinction of having made the first reference in modern criticism to the doctrine of the unity of time in his *Discorso delle comedie et delle tragedie* (1554, *Discourse on Comedy and Tragedy*), anticipating, among others, the seventeenth-century French writer PIERRE CORNEILLE. He also composed an influential series of *novelle* called *Hecatomithi* (1565, *The Hundred Stories*), from which Shakespeare later derived the plots for *Othello* and *Measure for Measure*. In his poetry Giraldi referred to himself as "Cynthius," an epithet for the Greek god Apollo who was believed to be born atop Mount Cynthus on the Aegean island of Delos. As a result, he became known in Italy as "Giraldi Cinzio" or "Il Cinzio," and in England as "Cynthio" or "Cinthio."

Giraldi contributed most influentially to Renaissance poetics in the controversy over the genre of the new romance, whose groundbreaking example is *Orlando Furioso* (1516), composed by the major Italian poet Ludovico Ariosto (1474–1533), whom as a youth Giraldi befriended. Written in the vernacular tongue rather than in Latin, Renaissance romances are long narrative poems in metrical form on courtly subjects that combine some of the techniques of the classical epic with the methods and materials of the medieval romance; they are usually marked by an abundance of characters and plot lines. Edmund Spenser's *Faerie Queene* (1590) is the premier English example. Opponents of the form argued that romance violated not only Aristotle's preference for single unified actions but also time-tested conventions established by the epic poets Homer and Virgil. Intervening in the heated debate with his *Discorso intorno al comporre dei romanzi* (1554, *Discourse on the Composition of*

Romances), while also being prompted by Pigna, GiralDI mounted a spirited defense of the modern romance form, and of Ariosto in particular, writing in effect a manifesto on behalf of a new European hybrid genre.

In our excerpts from the *Discourse*, GiralDI first claims that the multiple plots of the romance genre possess an *organic* unity, much like a well-proportioned body. Such a modern organicist claim, even if unjustified by most Renaissance romances, is an interesting anticipation of Romantic theories of poetry (as exemplified, for instance, by SAMUEL TAYLOR COLERIDGE). GiralDI argues against strict imitation of classical modes, on the grounds that poetry, following the dictates of "decorum," ought to judiciously reflect the mores of specific places, times, and peoples. Moreover, he argues for a moral view of poetry, as SIR PHILIP SIDNEY does in England at the time, but against the values of classical literatures, which are not suitable for his own age, not least because of their pagan religions.

In many respects GiralDI shows himself to be a modern, a tendency that extends to his critical distaste for the excessive allegorizing of classical and medieval criticism, such as one finds in Bernadus Silvestris's *Commentary on the First Six Books of Virgil's "Aeneid"*. GiralDI's controversial modern view also turns a skeptical eye toward the secularized four-level model of interpretation that arose out of the medieval commentary tradition, passing from the theological writings like those of THOMAS AQUINAS to the more secular writings of Dante and GIOVANNI BOCCACCIO. He is especially impatient with the oversubtle and lengthy commentaries on the Italian lyric poet Petrarch (1304–1374).

From a contemporary perspective, one jarring aspect of GiralDI's theory of decorum is his emphasis on "blood, position, dignity, and authority." It is clear that he takes a bold step in poetic theory with his attempt to historicize art; but reflecting the prevailing views of his time, he leaves the function of art subordinated to the service of an aristocratic status quo, inattentive to art's critical or oppositional possibilities. Yet GiralDI contributes to an important defense of the modern that parallels related arguments made during the Renaissance by GIACOPO MAZZONI in Italy, JOACHIM DU BEL-LAY in France, and George Puttenham in England. Furthermore, he sets the stage for the later theoretical discussions surrounding the great romances of the period, Torquato Tasso's *Gerusalemme Liberata* (1575) and Spenser's *Faerie Queene*. His work continues to shape scholarship on the romance form to this day.

BIBLIOGRAPHY

The authoritative edition of the Italian text of the *Discourse on the Composition of Romances* (1554) appears in GiralDI's *Scritti Estetici: De' Romanzi, delle Comedie, e delle Tragedie*, edited by Giulio Antimaco (1864), which also includes *Discorso delle comedie et delle tragedie* (1554) in Italian. These two discourses constitute GiralDI's principal works of criticism. *GiralDI Cinthio on Romances*, translated by Henry L. Snuggs (1968), presents an English translation of the complete *Discourse on the Composition of Romances*, plus a useful introduction and notes. *Literary Criticism: Plato to Dryden* (ed. Allan H. Gilbert, 1962) contains translated excerpts from the *Discourse* and a series of GiralDI's pieces defending his critical views of tragedy against Aristotelian precepts. A complete English translation of GiralDI's *Discourse on Comedy and Tragedy* is not available, nor is a biography.

Joel E. Spingarn's *History of Literary Criticism in the Renaissance* (2d ed., 1908) presents some valuable remarks on GiralDI's theories in relationship to both drama and romance, but Bernard Weinberg's *History of Literary Criticism in the Italian Renaissance* (2 vols., 1961) offers the most comprehensive and authoritative presentation in English of GiralDI's work, conveniently situated within a detailed overview of Italian Renaissance criticism. Baxter Hathaway's *Marvels and Commonplaces: Renaissance Literary Criticism* (1968) discusses GiralDI's position in the battle between realism and fantasy in Renaissance literary criticism. On GiralDI's dramatic

theories and practices, see Philip Russell Horne's *Tragedies of Giambattista Cinthio Giraldi* (1962), Peggy Osborn's *G. B. Giraldi's Altile: The Birth of a New Dramatic Genre in Renaissance Ferrara* (1992), and Mary G. Morrison's *Tragedies of G. B. Giraldi Cinthio: The Transformation of Narrative Source into Stage Play* (1997). No bibliographies on Giraldi in English are available.

From Discourse on the Composition of Romances¹

* * *

In setting out to write about the art of composing Romances, Messer Giovambattista,² I see I am undertaking a hard and fatiguing task, since, indeed, no one that I am aware of has written on this subject and since many authors have written variously in this form of poetry, not only in other nations and peoples but also among us Italians. My difficulty is increased by your ability and learning, which is such that I doubt my being able to write anything you have not already seen and considered, because, while my pupil, you studied poetry, diligently absorbed what I said, and wrote about poems of all kinds. Since then you have devoted yourself to study and writing and have continually read or written excellent works. But although my undertaking may be difficult and laborious, nevertheless the love I have had for you during the long time you were my pupil leads me to devote myself to the task.

* * *

Romances Not of One Action

Now in turning to the subject: It should be pointed out that subjects or materials of Romances are not in the manner of Vergil's and Homer's,³ both of whom undertook imitating only one action of one man, whereas ours have imitated many actions not of one man only but of many, since they build the whole fabric of their work upon eight or ten persons, but they give to the work the name of that person or that action which is dominant in the whole work and on which all the others depend, or at least to that which reasonably binds them together. This kind of poem, moreover, came from neither the Greeks nor the Latins; indeed it came laudably from our own language, having given to the excellent writers of it the same authority which the two writers already named gave to their works.

* * *

Organic Interrelation of Parts

But, returning to our subject: When the writer has planned where he is to begin his work, he ought to exercise great diligence to see that the parts fit together as do the parts of the body. * * * In putting the framework together,

1. Translated by Henry L. Snuggs.

2. Giovambattista Pigna (1529–1575), an Italian writer, critic, and student of Giraldi. Giraldi accused Pigna of stealing his ideas for his book *I romanzi* (1554), which was published before the *Discourse*. Pigna had apparently solicited his teacher's ideas by letter and then published them in his work. Leaving this address to Pigna intact is

part of Giraldi's strategy to explain the similarity of their work and to gain recognition for the originality of his work here.

3. Greek epic poet (ca. 842 c. B.C.E.); his *Iliad* focuses on Achilles and his *Odyssey* on Odysseus. Virgil (70–19 B.C.E.), Roman epic poet, his *Aeneid* centers on the Trojan Aeneas.

he will seek to fill up the hollows and to equalize the size of the members. This can be done by putting the filling matters in proper and necessary places, such as loves, hates, complaints, laughter, jests, grave matter, discords, peace-makings, ugly and beautiful things, descriptions of places, times, persons, fables feigned by himself and drawn from olden times, voyages, wanderings, shows, unforeseen events, deaths, funeral rites, lamentations, recognitions, things terrible and pitiable, nuptials, births, victories, triumphs, single combats, jousts, tournaments, catalogs, marshaling of troops, and other similar things which perhaps are such that it would be no small task to detail all one by one. There is nothing above or under the heavens or in the depths of the abyss that is not at the command and under the judgment of the prudent poet who can with varied ornaments embellish the body of his work and bring it not merely to an excellent but to a lovely figure. With these he gives the parts a just measure and decorous ornament, in such proportion that the result is a disciplined and well constituted body.⁴

The arrangement ought to be considered not only in the principal parts, which are the beginning, the middle, and the end, but in every bit of these parts. For this reason the poet ought to consider not only the whole body but each particular part, so that each may be set with beautiful order in its place, with admirable grace, and with the proper proportion and so that the whole, with that beauty and grace, will be to each of them proper and fitting. Just as the face takes on its own beauty and color and as the neck takes both in another form, and the breast, the arms, and the other parts of the body have their own forms, so the ornaments of each part of the poem are varied and diverse. Concerning this matter it is not possible to give laws other than to advise the writer that he discern in the light of his judgment what belongs to the form of the body on which he is about to create, advising him, however, not to become so preoccupied with one part that it makes the others, by not fitting in the whole, seem ugly or their beauty deformed. It is better that the whole be moderately beautiful than that two or three be so excellent that their excellence both to themselves and to the others be a cause of the deformity of the rest[.]

* * *

Undue Limitation by Ancient Poets

To speak now generally: I say that judicious authors gifted in composing ought not so to limit their freedom within the bounds set by those who wrote before them that they dare not set foot outside the tracks of others. Apart from being a bad use of the gifts that mother nature gave them, such restraint would prevent poetry from going beyond certain bounds which one writer has marked off and from moving a foot from the way the first fathers made it walk. The great Vergil, understanding that if architecture, military science, rhetoric, geometry, music, and the other arts worthy of the liberal mind are allowed to add, to increase, to diminish, to change, judged that this was much more fitting for the poet, to whom had been given the same power given by the consent of the world to the excellent painter, namely, the authority to vary the likenesses according to the artistic purpose. He showed therefore

4. Giraldi promotes symmetry, proportion, and variety, but not economy in literary form.

how in many places good writers, treading where the ancients trod, can turn aside somewhat from the beaten path, letting at times their own footprints go toward Helicon.⁵ This is to be seen not only in the Latins but also in the Greeks, above all in Homer, and even more in our Tuscan poets, whose compositions are of no less value in their language than those of the Greek and Latin poets in theirs, although the Tuscans have not followed the ways of the Greek and Latin. To speak truly, our language has also its forms of poetry so properly its own that they are not those of any other language or nation. Indeed one ought not to try to hold the Tuscan poet within the confines that bind the Greek and Latin, as we have said sufficiently elsewhere.

Modern Poets as Models

One ought to walk along those roads which the better poets of our tongue have laid out, with the same authority that the Greek and Latin poets have had in their languages. For this reason I have laughed many times at some who have wished to proclaim the writers of the Romances to be completely under the laws of art as given by Aristotle and Horace,⁶ not considering that neither of them knew this language or this manner of composing. Indeed these works are not to be put at all under such laws and rules, but ought to be left with the boundaries set by those who among us have given authority and reputation to this form of poetry. Just as the Greeks and Latins have drawn the art of their writing from their poets, so we also ought to draw from our poets and hold ourselves to that form which the better poets of the Romances have given us. We see that Ovid,⁷ ingenious poet, laid aside in his *Metamorphoses* the laws of Vergil and Homer and did not follow the laws of Aristotle given us in his *Poetics*; nevertheless, he emerged as a beautifully artistic poet, with such benefit to the Latin language that he became a wonder. He was not reprehended nonetheless because he did not follow in the footsteps of the others. This happened because he devoted himself to the writings of matter for which rules and examples did not exist, just as there were no materials on our Romances. Just as he who would write a poem of one action would err if he ignored his models and the laws derived from all the works of like composition, so he who would write Romances of more than one action would err if he did not follow those who are now recognized as great and excellent; in the Romances of more than one action the writers to be followed will be those whose mode of composing will merit praise.

* * *

The Civil Function of the Poet

The function, then, of our poet, as regards the inducing of mores, is to praise virtuous actions and censure the vicious; and by means of the terrible and

5. A mountain sacred to Apollo and the Muses, who had a temple there.

6. Roman lyric poet and satirist (65–8 B.C.E.). ARISTOTLE (384–322 B.C.E.), Greek philosopher. They gave “the laws of art” in, respectively, *Ars Poetica* and *Poetics* (for both, see above).

7. Roman poet (43 B.C.E.–17 C.E.); his major epic-length *Metamorphoses* is a compendium of different mythological stories united not by a single character but by the common theme of metamorphosis.

the miserable to make the vicious actions odious to him who reads. In these two respects the writers of Romances in our language are much ampler than the heroic Greeks and Latins, who only hinted at such censures and praises, whereas ours go further, especially in praising or censuring things of their time. This custom (insofar as I can understand it) was first begun by Dante,⁸ who also surpassed the times before him. This was then accepted most graciously by our judicious Petrarch⁹ not only in his canzoni and sonnets, as in the canzone on Italy and the sonnets on Rome but also in his *Triumphs*, in which at many places he passes into digressions and then turns back skillfully to the subject he left. In this same manner our great and magnificent Ariosto¹ has also succeeded, as he did admirably in putting into his work things beyond the scope of his primary purpose, but which contribute a marvelous beauty to his work. And such things will contribute much to the works of others who will put them in judiciously and decorously.

* * *

Decorum

In these matters as in others, the poet ought always to have his eye on decorum, which is none other than what is fitting to places, times, and persons. Thus the ancient observers of nature said that decorum was that beauty, that grace, born from the forms of speaking when judgment and moderation were joined together and carried in themselves some manifestation of mores. These mores should be reflected in speech no less than the loveliness of color in a beautiful body; in other words, decorum is nothing other than grace and appropriateness. So the poet ought to be mindful not only of the actions but also of the speeches and responses which men carry on among themselves. For one would speak with a king in a different way than he would speak with a gentleman, and a king will answer another king as he would not answer one of his subjects or another lesser prince. He will speak to soldiers to urge them into battle otherwise than to quiet people who are in armed rebellion. In still a different way one captain will speak to another and one senator to another. So it happens with other kinds of persons, according to their blood, position, dignity, and authority, and according to places and times;² these things are left to the judgment of the writer, because estimation of this springs entirely from and rests in the writer's prudence.

* * *

Absurdity of Excessive Allegoresis

They become only frenetic who by the example of these authors make so many fantasies on the works of Petrarch and of other writers that, for every sonnet on which they choose to comment, they compose a whole volume.³

8. DANTE ALIGHIERI (1265–1321), Italian poet; his *Divine Comedy* (1321) is an epic Christian poem.

9. Italian writer and poet (1304–1374). Written at different times between 1340 and 1374, but never presented as a single poem, his *Triumphs* are six long poems covering the themes of love, chastity, death, fame, time, and eternity.

1. Ludovico Ariosto (1471–1533), Italian poet; author of the major romance *Orlando Furioso* (1516).

2. In introducing his persons, the poet ought to consider carefully what they are prone to do and to suffer. In doing so, he will find useful a knowledge of the differences in nations and in natures, the manners of life, usages, and customs; and the management of affairs and the power of those who he will bring in [Gibaldi's note].

3. Gibaldi is chastising critics who produce lengthy and fantastical allegorical interpretations of poems.

In the name of philosophers they would draw out not only the Platonic and Peripatetic⁴ philosophies and all that is contained within the golden circle of all the disciplines—called by the better wits the study of humanity—but also the cabalistic⁵ superstitions and all that is in divine and human laws, making chimeras and fantasies completely foreign to the meaning of the things on which they comment. Not to speak of others, there were and are today some who, departing from the true sense, make such fabrications on some of Petrarch's things that these appear spiritual; and call them marvels; and find therein the voice of love, or nature, or Jove, or Juno,⁶ or desire, or beauty, or the sun, or the sky; and such other things they would derive which have never been written from the beginning of the world up to their age. Petrarch would no more have subscribed to these visionary things if he had seen them than he would to one who made him an ecclesiastic, vesting him as a minor friar, girding him with a cord, and putting wooden clogs on his feet. This is bad usage indeed and unworthy of acceptance by intelligent men! Although such exhibitions may show a man to be learned and versed in various disciplines, they show him to be without judgment in applying them without moderation. I do not know, Messer Giovambattista, what such men think they are doing. As for me, I think there is no writing in the world so inane about which such fabricated dreams cannot be made, whenever a learned and ingenious man wishes to waste his time on them.

You and I knew Mariano Buonincontro of Palermo, a man of incisive and lively intelligence, who at an early age was a recipient here in Ferrara of an honorary doctor of laws. To make fun of such geniuses, this man made (as you know) the most beautiful sonnets in the world, as to diction and rhythm, but which said nothing and were without sense. Then he allowed them to be issued under the name of some fine man; he himself moved among the others and let it be known that he wished to discuss them, saying that their sense was marvelous. He therefore induced everyone to make fantastic judgments about them. Among the others he issued one that seemed to be on the death of the illustrious Signora the Duchess of Urbino. Here it is.

I piu lievi, che Tigre, pensier miei
 Scorgendo il cor, che tra doi petti intiero
 Tiene un pensier, poi che gl'ingombra il vero
 Et folle error, fuggono i casi rei.
 Et benche da gli antichi Semidei
 Biasmato fosse ovunque ogn'altro è fiero
 Monte d'orgogli. Ahi lassa, io gia non spero
 Gioir in quel disir, c'haver vorrei.
 Onde dal crudo suon stancata l'alma
 Germoglia in me l'ardir, poi che s'agghiaccia,
 Et scalda hor quinci, hor quindi il caldo gelo.
 Et io del verde fior perdo la traccia;
 Me l'asconde lo sdegno in picciol velo
 Tolta da i tronchi error la grave salma.
 Benche, chi tien la palma

4. Aristotelian.

5. Pertaining to a form of medieval Jewish mysticism.

6. Queen of the Roman gods. Jove: king of the Roman gods.

De gli inganni morta', brami con forza
 Condur a l'empio fin l'amara scorza.⁷

He said that this was a work of rare genius. Spreading abroad about it some things to make it seem to be his, he induced a very learned but injudicious Siense to make on it a commentary divided into four books, which is still read. So point by point, which made no sense and said nothing, that fellow spun out stuff such as he had never read in all his life.

* * *

[E]xpositions ought to be brief, since lengthy ones are an annoyance in this language as they were in Latin (if the subject did not merit, as, for example, Macrobius' commentary of Cicero's *Dream of Scipio* and Hierocles⁸ on the verses of Pythagoras⁹). In this respect the Greeks were too verbose, especially those who commented on Homer. Some of these run into exceedingly long commentaries; others go into such fantastic matters that (like other Chrysippuses)¹ they would allegorize every story in Homer, reading meanings into the poem which he perhaps never imagined. Landino would do the same for Vergil,² but little success followed him, not because he did not show himself learned and intelligent but because the Italians have similar discourses in abundance, and it is not our intention to linger over these. They may leave this pretension to the Greeks, who in order to make their fable-writers and poets appear more than human are taken with these vanities.

* * *

1554

7. The sonnet is indeed nonsense, as the following "literal" translation will show: "Happier than a tiger my thoughts, discerning my heart, which among learned bosoms entirely holds a thought, since it loads on it the true and the foolish mistake, they flee the evil events. And although it should be blamed by the old demigods wherever all other is a fierce mountain of pride. Alas, already I do not hope to rejoice in that desire that I would like to have. Therefore, wearied by the harsh sound, the soul sprouts ardor in me when it is reaped to the ground and warms up, now here, now there, the hot frost, and I lose trace of a green flower; for me scorn hid it in a little veil taken by mutilated error from the grave corpse; though he who holds the palm of the mortal frauds may yearn with force to lead to the impious end the bitter rind" [translator's note].

8. Hierocles of Alexander [5th c. C.E.], the Latin

title of his work is *Commentarius in Aurea Carmina Pythagoreorum* [translator's note]. MACROBIUS (b. ca. 360), Roman author; for his *Commentary*, see above.

9. Greek philosopher and mathematician (6th c. B.C.E.).

1. The Greek philosopher [ca. 280–207 B.C.E.]. A long catalog of his works is appended to his life in Diogenes Laertius, 7. Except for a few fragments, these are lost. Precisely where Giraldis derived what he says of Chrysippus as an allegorizer of Homer and to which of his works he refers is uncertain [translator's note].

2. Cristoforo Landino (1424–1492) was so imbued with Neoplatonism that he conceived of poetry as allegorical and involving "arcani e divini sensi," as in his commentary on the *Aeneid* (1478) [translator's note].

JOACHIM DU BELLAY

ca. 1522–1560

Joachim du Bellay is known for having written one of the first theoretical defenses of a vernacular language against an imperial language. Contemporary postcolonial writers often attack the prestige of European languages, but those same European languages were once considered by Renaissance authors to be inferior to Latin and Greek. In *The Defence and Illustration of the French Language* (1549), Joachim du Bellay argued that with careful cultivation, French was capable of equaling Greek and Latin as a literary language. But du Bellay's defense of the vernacular was paradoxically also an attack on the vernacular: French poetry, in his view, had to abandon its own popular forms in order to acquire the dignity of the classics.

Born in Anjou (France), a younger son in a minor branch of an ancient and noble French family, Joachim du Bellay possessed, from the beginning, both nobility and resentment. Impoverished, in poor health, and abandoned, du Bellay was to dream of a future as noble as the past—a nobility obtained through the pen rather than the sword. He was a frail child, and one of his long illnesses later left him nearly deaf. Both his parents had died by the time he was ten, leaving him in the care of an older brother. In one of the few references to his early years, Joachim berates his brother for indifference and for neglecting his education. Still, he did learn Latin and ultimately left home to study law at Poitiers, where he appears to have concentrated more on studying rhetoric and entering poetry competitions. His time at Poitiers is described by scholars as setting the scene for his entrance into the world of scholarship, poetry, and the life of the mind, the world that would become his legacy.

By all accounts, the turning point of du Bellay's life was the day he met PIERRE DE RONSARD, a distant cousin encountered by chance, apparently at a country inn. They were about the same age, with a common passion for learning and a shared love of poetry. Ronsard was a student in Paris at the Collège de Coqueret, a small, run-down boardinghouse that was one of many colleges that then formed the University of Paris. Du Bellay moved to Paris and enrolled at Coqueret in 1547.

Jean Dorat, the master at Coqueret, was a young, enthusiastic scholar of Greek philology, the historical and comparative study of the language, literature, and culture of ancient Greece. As master, he transformed the college into a center of humanism and rigorous scholarship. The handful of young noblemen who lived there studied literally around the clock, sometimes working in shifts to make the most efficient use of candles. They learned Greek, Latin, and Italian poetry and argued about translations, rhetoric, and the use of language. They soon began to see themselves as a unified group destined to bring about revolutionary changes in poetry. The group first called itself the Brigade but later chose a more peaceful, and more grandiose, name: the *Pléiade*, or constellation of seven poets (Pierre de Ronsard, Joachim du Bellay, Jean-Antoine de Baif, Etienne Jodelle, Pontus de Tyard, Rémy Belleau, and Jean Dorat himself). Believing in the divine inspiration of poetry, they looked to the future, intent on creating a rich language that would benefit French poets to come.

Two years after his arrival in Paris, du Bellay wrote and published *The Defence and Illustration of the French Language*. That same year he published a collection of love sonnets in French, *L'Olive* (the sonnet was one of the few vernacular forms approved by the *Pléiade*). In 1553 he accompanied Cardinal Jean du Bellay, his cousin, to Rome, where he served, grumblingly, as the cardinal's secretary. Two of his major works came out of his four-year stay in Italy: the sonnets in *Les Antiquitez de Rome* (1558) praise the glories of ancient Rome, while the poems in *Les Regrets* (1558) tell of the disillusionment he felt in the Rome of the present day. His failed love affair with a married Italian woman seems to have hastened his return to his newly appreciated homeland. Two years later, miserable, he died at the age of thirty-seven.

To understand du Bellay's argument in the *Defence*, we must recall the status of the French language during the sixteenth century. While Latin was the language of scholarship, legal documents, and poetry, the French vernacular suffered from an intellectual inferiority complex as the language of the masses, more frequently spoken than written. This two-language social order led to continual discord over the comparative value of languages, particularly French and Latin. During the 1530s and 1540s, scholars enthusiastically translated the texts of ancient Greece and Rome into the vernacular. However, because Latin was considered a richer, more poetic language, these same men composed their own poetry in Latin. The weighty presence of Latin in the church, in the academy, and in the poetry of French authors signified to some a linguistic enslavement. The question naturally arose as to what equips a language for eloquence. Was it the very nature of Greek and Latin that allowed a flourishing of scholarship? Or, rather, were all languages potentially equal?

The Defence and Illustration of the French Language was written with a specific goal: to justify the French vernacular by establishing a new poetics to elevate the status of French and, in turn, France itself. A 1548 pamphlet had set the popular forms of French poetry on a par with Greek and Latin works, but the students at the Collège de Coqueret saw this declaration of victory in the battle for French as premature. French poetry required the enrichment provided by a study of classical authors. The *Pléiade* needed to respond with a manifesto, and du Bellay was the man for the job. As the pamphlet that provoked his treatise indicates, vernacular forms were already enjoying a lively reception through the efforts of poets of lowly birth such as Clément Marot, a rival of du Bellay's. Du Bellay was thus engaging in a class struggle with other French poets while defending French against Latin.

The *Defence* begins with a distinction between the natural and the cultural. Claiming that all languages are potentially equal in value, du Bellay points out the fundamental difference between plants and languages. While languages may appear to be of the same order as plants, they are, in fact, cultural constructs and thus not subject to the same *natural* variations of strength and weakness. The relative weakness of the French language is only temporary. Du Bellay supports this claim by discussing the rise of Latin: the Romans borrowed extensively from Greek authors but wrote in Latin; through imitation, they transformed Latin from a rather rough and brutish tongue to a language of literature and philosophy. Even the Greeks, he will later claim, drew from the wisdom of Egypt and India.

Although du Bellay begins his treatise by distinguishing between languages and plants, he goes on to employ a wide array of agricultural metaphors to describe the kinds of cultivation needed to transform a feeble language into a fruitful one. The metaphor of grafting seems ideal, conveying a process neither natural nor artificial: the grafting of one language onto another makes possible the development of robust new forms.

To enrich the vernacular, du Bellay recommends translation as a way of incorporating the knowledge of the ancients; but for highly rhetorical writings, especially poetry, translation cannot capture stylistic invention, which is specific to each language. Therefore, for poetry, imitation rather than translation is needed. The word du Bellay uses for a properly cultivated language is *copious*, which can be read as both "abundant" and "copied." But imitation should not be slavish: imitation can improve a natural genius but not create one. Without imitation, genius remains "wild"; without genius, imitation remains "apelite." What is to be imitated is the *spirit* of the original, not its external form.

Nevertheless, classical forms are inherently richer than popular forms, and French poets should adopt them, swallowing their classical predecessors whole and cannibalistically incorporating their genius. French poetry should abandon the ballades, rondelets, and virelays of the medieval popular tradition in favor of more learned forms: the ode (soon to be cultivated by Ronsard), the elegy, the eclogue, the sonnet. Du Bellay thus exhorts French poets to imitate and reincarnate the poets of Greece and Rome in order to demonstrate that French poetry can be as noble as the classics.

By trying to become something it was not, French poetry began to become what it is. The struggle between classical and popular forms gave rise to a kind of poetry that could not have been derived from either alone. Du Bellay's defense of French, ambivalent though it was about the popular roots of the vernacular, launched a poetic movement destined to stand as one of the golden moments of French poetry.

BIBLIOGRAPHY

Little of du Bellay's work has been translated into English: the *Defence* is available in an English translation by Gladys M. Turquet (1939), as is *Regrets*, translated by C. H. Sisson (1984). *Joachim du Bellay* (1971) by L. Clark Keating includes a biography as well as a general introduction.

There are relatively few book-length studies of du Bellay in English; however, many books on Renaissance poetics contain chapters on him. Especially useful are the chapters in W. F. Patterson's *Three Centuries of French Poetic Theory: A Critical History of the Chief Arts of Poetry in France (1328-1630)* (1935) and in S. J. Holyoake's concise study, *An Introduction to French Sixteenth Century Poetic Theory* (1972). The chapter on du Bellay in Margaret Ferguson's *Trials of Desire: Renaissance Defenses of Poetry* (1983) examines the political and historical context of the *Defence*, as well as the implications of du Bellay's own "borrowing" from Italian treatises. For a theoretical discussion of the Pléiade poets as a whole, see Grahame Castor's *Pléiade Poetics: A Study in Sixteenth-Century Thought and Terminology* (1964). Other good general studies include Dorothy Coleman, *The Chaste Muse: A Study of Joachim Du Bellay's Poetry* (1980), and David Hartley, *Patriotism in the Work of Joachim Du Bellay: A Study of the Relationship between the Poet and France* (1993). Margaret Brady Wells has compiled an extensive unannotated bibliography: *Du Bellay, a Bibliography* (1974).

From The Defence and Illustration of the French Language¹

From Book I

CHAPTER I.

THE ORIGIN OF LANGUAGES

If nature (of whom a personage of high renown has not without reason doubted whether we should call her mother or stepmother²) had given to men a common will and consent, besides the innumerable commodities which would have thereby resulted, human inconstancy would not have needed to forge for itself so many manners of speaking. Which diversity and confusion can rightly be called the Tower of Babel.³ For languages are not born of themselves after the fashion of herbs, roots, or trees: some infirm and weak in their nature; the others healthy, robust, and more fitted to carry the burden of human conceptions; but all their virtue is born in the world of the desire and will of mortals. That (it seems to me) is a great reason why one should not thus praise one language and blame the other; since they all come from a single source and origin, that is from the caprice⁴ of men, and have been formed from a single judgment for a single end, that is to signify amongst us the conceptions and understandings of the mind. It is true that

1. Translated by Gladys M. Turquet.

2. That is, kind or merciless; see *Natural History* 7.1, by the Roman writer Pliny the Elder (23-79 C.E.).

3. See Genesis 11, which describes how God responded to men's attempt to build this tower to

heaven by confusing their language, thereby creating many different languages where there had been one for all people.

4. The original French is *fantaisie* (fantasy, imagination).

in the succession of time, some from having been more carefully regulated have become richer than others; but this should not be attributed to the felicity of the said languages, but to the sole artifice and industry of men. So then all the things which nature has created, all the arts and sciences in the four quarters of the globe, are each in their own way the same thing; but since men are of diverse wills, therefore do they speak and write diversely. In this connection I cannot sufficiently blame the foolish arrogance and temerity of some in our nation who, being in no wise Greek nor Latin, misprize and reject with a more than stoical haughtiness all things written in French; and I cannot sufficiently wonder at the strange opinion of some learned men who think that our vulgar tongue⁵ is incapable of good letters and erudition: as if an invention for language alone should be judged good or bad. The former I do not⁶ undertake to satisfy. The latter I desire (if it be possible for me) to bring to change their opinion by means of a few reasons which I hope to deduce: not that I feel myself more far-seeing in that, or in other things, than they, but because the affection they bear towards foreign languages does not allow them to make healthy and complete judgment of their vulgar tongue.

CHAPTER II.

THAT THE FRENCH LANGUAGE SHOULD NOT BE CALLED BARBAROUS

To begin, then, to enter the subject, concerning the meaning of this word barbarous: in ancient times they were called barbarous who spoke Greek incorrectly. For as strangers coming to Athens strove to speak Greek, they often fell into this absurd expression βαρβαρος.⁷

Afterwards the Greeks transported the name to brutal and cruel manners, calling all nations outside Greece, *Barbarians*. That should in no way diminish the excellence of our tongue; because this Greek arrogance, admiring only its own inventions, had neither law nor privilege to legitimize its own nation and bastardize all the others; as Anacharsis said: the Scythians⁸ were barbarians among the Greeks, but the Athenians were also barbarians among the Scythians, and even had the barbarity of the customs of our ancestors moved them to call us Barbarians, I do not see that things are so that we should now be considered as such; seeing that in civility of manners, equity of laws, magnanimity of heart, in short, in all forms and ways of living no less praiseworthy than profitable, we are not anything less than they; and still further, seeing that they themselves are now such that we may justly call them by that name which they gave to others. Still less should this happen because the Romans called us Barbarians, seeing that in their ambition and insatiable hunger for glory, they sought not only to subjugate but to render other nations vile and abject beside them: principally the Gauls,⁹ from whom they suffered more shame and hurt than from others.

In this connection, thinking many times, whence comes it that the deeds of the Roman people are so celebrated throughout the world, nay, so far

5. The vernacular (here, French).

6. "Do not": added by the editor to correct the translator's error.

7. Barbarous (Greek).

8. The Greek name for the nomadic peoples north of the Black Sea, in what is today Moldova,

Ukraine, and western Russia. Anacharsis (6th c. B.C.E.), Scythian prince who traveled widely in Greece and was later credited with many pithy sayings.

9. Ancient Celtic peoples occupying the area that became modern France.

more highly preferred to those of all other nations taken together, I find no greater reason than this: that the Romans did have so great a multitude of writers that most of their deeds (to say no worse) through the space of so many years, arduous in battle, laying waste of Italy, invasions of foreigners, have been preserved entire until our times. On the contrary, the actions of other nations, especially of the Gauls, before they fell into the power of the French,¹ and the actions of the French themselves since they gave their name to the Gauls, have been so ill collected, that we have almost lost not only the glory of them, but even the memory of them. Thereto the envy of the Romans has aided, who, as if in a certain conspiracy conspiring against us, weakened, as far as they were able, our warlike glory, whose brilliance they could not endure, and not only have they done us wrong thereby, but, to render us still more contemptible, they have called us brutal, cruel, and barbarous. Someone will say: Why have they exempted the Greeks from this name? Because they would have done more harm to themselves than to the Greeks, from whom they borrowed all the good which they had, at least with regard to the sciences and the illustration of their language. These reasons seem to me sufficient to make any equitable adjudicator of things understand, that our language (though we have been called barbarians by our enemies and by those who had no right to give to us this name) should yet not be misprized, especially by those to whom it is proper and natural: and who are in nothing less than the Greeks or Romans.

CHAPTER III.
WHY THE FRENCH LANGUAGE IS NOT SO RICH AS
THE GREEK AND LATIN

And if our language be not so copious and rich as the Greek or Latin, that must not be imputed to it as a fault, as if of itself it could never be other than poor or sterile: but rather must one attribute it to the ignorance of our ancestors, who having (as someone² says, speaking of the ancient Romans) in higher esteem well-doing than fair speaking, and liking to leave to posterity examples of virtue, rather than precepts, deprived themselves of the glory of their fine deeds, and us of the fruit of the imitation thereof: and by the same means have left us our language so poor and bare that it has need of the ornaments and (so to speak) the plumes³ of other persons. But who would say that Greek and Latin were always in the state of excellence wherein they were seen in the time of Homer and of Demosthenes, of Virgil and of Cicero?⁴ And if these authors had judged, that never, whatever diligence and culture were brought thereto, would these tongues have been able to produce greater fruit, would they have laboured so much to bring them to that point where we now see them? So can I say of our tongue, which now begins to flower without fructifying; or rather, like a plant and small shoot, has not yet flowered, still less borne all the fruit that it might well produce. That

1. That is, the Franks, German tribes that entered the Roman provinces in the 3d century C.E. and overthrew the last Roman governor in Gaul in 486.

2. The Roman historian Sallust (86-34 B.C.E.) in *Bellum Catalinae* 8.

3. The French *plumes* allows a pun here [translator's note]. *Plume* means both "pen" and

"feather."

4. Du Bellay chooses conventional representatives of excellence in Greek and Latin: in epic poetry, Homer (ca. 8th c. B.C.E.) and Virgil (70-19 B.C.E.); and in oratory, the Athenian Demosthenes (384-322 B.C.E.) and Cicero (106-43 B.C.E.).

certainly, not by any defect in the nature thereof, as apt to engender as others, but by the fault of those who have had the care of it, and have not sufficiently cultivated it; but like a wild plant in that same desert where it had begun to live, without ever watering it, or pruning, or guarding from brambles and thorns which shaded it, have let it grow old and almost die. And if the ancient Romans had been as negligent of the culture of their language when first it began to bud, certainly it would never in so short a time have become so great. But they, in the manner of good agriculturals, did first transplant it from a wild to a domestic place; then that it might the earlier and the better fructify, cutting off all round the useless twigs, in exchange for these did restore free and domestic branches, drawn in masterly fashion from the Greek tongue, which quickly were so well grafted and made like unto their trunk that henceforward they appeared no longer adopted but natural. Thence were born in the Latin tongue those flowers and those fruits coloured with the great eloquence, the numbers,⁵ and the artificial binding together of phrases, all which things, not so much by its own nature as by artifice, every language is accustomed to produce. Therefore if the Greeks and the Romans, more diligent in the cultivation of their languages than we in that of ours, were unable to find therein, except with great toil and industry, either grace or number or finally any eloquence, should we marvel if our vulgar tongue is not so rich as it well might be, and thereby take the opportunity to misprize it as a vile thing and of little price? The time will come (maybe), and I hope for it with the help of good French fortune, when this noble and puissant kingdom will in its turn obtain the reins of sovereignty, and when our language (if with Francis⁶ the whole French language be not buried), which now begins to throw out its roots, will emerge from the ground, and rise to such height and greatness, that it can equal the Greeks themselves and the Romans, producing, even as they, Homers and Demosthenes, Virgils and Ciceros, just as France has sometimes produced her Pericles, Nicias, Alcibiadés, Themistocles, Caesars, and Scipios.⁷

CHAPTER IV.

THAT THE FRENCH LANGUAGE IS NOT SO POOR AS MANY ESTEEM IT

I do not, however, consider our vulgar tongue, as it now is, to be so vile, so abject as do these ambitious admirers of the Greek and Latin tongues, who would not think, were they even Pitho,⁸ goddess of persuasion, that they could say anything good, unless it were in a foreign tongue, not comprehended of the vulgar. And he who will look closely, will discover that our French tongue is not so poor that it cannot render faithfully what it borrows from others, not so unfertile that it cannot produce of itself some fruit of good invention by means of the industry and diligence of its cultivators, if some are found who are such good friends of their country and of themselves, that they will apply themselves thereto. But to whom, after God, shall we

5. Meters.

6. Francis I (1494–1547), king of France (1515–47) and patron of the arts.

7. Du Bellay names famous statesmen and generals. The Greeks, all Athenians, were active during the 5th century B.C.E.—Pericles (ca. 495–429), Nicias (ca. 470–413), Alcibiades (ca. 450–

404), and Themistocles (ca. 528–462). Julius Caesar (100–44 B.C.E.) and Scipio Africanus (ca. 236–184/3 B.C.E.) were the most brilliant generals of Roman antiquity as well as statesmen.

8. That is, Peitho (literally, "persuasion"; Greek), in Greek mythology the personification of persuasion and seduction.

render thanks for such a benefit if not to our late good king and father, Francis, the first of that name and first in all virtues? I say first, since he has in his noble kingdom first restored all the good arts and sciences in their ancient dignity: and our language, which before was harsh and ill-polished, he has thus rendered elegant, and if not so copious as it well might be, at least a faithful interpreter of all others. And it is in such wise that philosophers, historians, doctors, poets, orators, both Greek and Roman, have learned to speak in French. What shall I say of the Hebrews? The sacred writings give ample testimony of what I say. I leave aside here the superstitious reasonings of those who maintain that the mysteries of theology ought not to be laid bare and, as it were, profaned in the vulgar tongue,⁹ and that which those in the opposite camp allege. For this discussion is proper only for that which I have undertaken, which is solely to show that our language had not at its birth the gods and the stars in such enmity, that it cannot one day attain to the height of excellence and perfection as well as the others, since all sciences can faithfully and copiously be treated in it, as may be seen in the very great number of books, Greek and Latin, nay, even Italian and Spanish and others, translated into French by many excellent pens of our day.

CHAPTER V.

THAT TRANSLATIONS ARE NOT SUFFICIENT TO GIVE PERFECTION TO THE FRENCH LANGUAGE

In any case this most praiseworthy labour of translation seems not to me the only means, nor sufficient, to raise our vulgar tongue to be the equal and paragon of the other tongues. Which I claim to prove so clearly that none (as I believe) will wish to contradict, unless he be a manifest calumniator of truth; and firstly: It is a thing agreed among all the best authors of rhetoric, that there are five parts of fair speaking: invention, elocution, arrangement, memory, and pronunciation.¹ Now since the two last are to be learned, not so much by the benefit of tongues as they are given to each of us according to the fertility of his nature, increased and maintained by studious exercise and continual diligence, since also arrangement lies rather in the discernment and good judgment of the orator than in definite rules and precepts—seeing that the events of time, the circumstances of place, the conditions of persons, and the diversity of occasions, are innumerable—I will content myself with speaking of the two first: that is of invention and of elocution. The office then of the orator is to speak elegantly and copiously of each thing proposed. Now this faculty of speaking thus of all things, can be acquired only by the perfect understanding of the sciences, which were first treated by the Greeks, and next by the Romans, imitators of them. It is therefore necessary that these two tongues be understood by him who would acquire this copiousness and richness of invention, the first and principal piece in the harness of the orator. And touching this point, faithful translators can greatly serve and aid those who have not the sole means of devoting themselves to foreign tongues. But as for elocution, certainly the most difficult part, and without which all other things are, as it were, useless, and like a

9. Many within the Catholic Church resisted the publication of the Bible in French.

1. These divisions are standard in Greek and Latin handbooks of rhetoric.

sword still covered with its sheath—elocution (say I) by which principally an orator is judged more excellent, and a manner of speaking better, than another—as for that elocution from which is derived the name of eloquence itself, and whose virtue lies in words which are proper to the common usage of speech used therein and not alienated therefrom; in the metaphors, allegories, comparisons, similitudes, energies,² and so many other figures and ornaments without which any oration or poem is bare, maimed, and weak, I shall never believe that this can be learned from translators, because it is impossible to render it with the same grace which the author used; since each language has a something proper to itself alone, of which if you strive to express the nativeness in another language, observing the law of translation, which is not to expatiate yourself beyond the limits of the author, your diction will be constrained, cold, and ungraceful. And to prove it be thus, read me a Demosthenes and a Homer in Latin, a Cicero and a Virgil in French, to see if they will engender such emotions, nay, if even as a Proteus,³ they will transform you in diverse sorts, as you feel, reading these authors in their own languages. You will seem to pass from the burning mountain of Etna to the cold summit of Caucasus.⁴ And that which I say of the Greek and Latin languages, should equally be said of all the vulgar tongues, of which I will cite as an example only a Petrarch,⁵ of whom I dare to say that if Homer and Virgil, born again, had undertaken to translate him, they could not render him with the same grace and naturalness as lies in his own native Tuscan. In any case, some in our time have undertaken to make him speak in French.⁶ These briefly are the reasons which have made me think that the diligent service of translators, in other ways most useful for instructing those ignorant of foreign tongues in the knowledge of things, is not sufficient to give to our own language that perfection, that final touch which painters give to their pictures, which we desire. And if the reasons which I have alleged seem not strong enough, I will produce for my guarantors and defenders the ancient Roman authors, poets principally and orators, who (as Cicero translated some books of Xenophon and Aratus,⁷ and as Horace gives the precepts of good translating⁸) have devoted themselves to this part more for their study and particular profit than for the publication and amplification of their language, their glory, and the convenience of others. If any have seen some works of that time under the title of translations, I mean works of Cicero, of Virgil, and that most happy age of Augustus,⁹ they can deny what I say.

2. Aristotle, *energeia* [translator's note]: a crucial term in the philosophy of ARISTOTLE that is usually translated "actuality." In *Rhetoric* 3.1, 1411b, he declares that "vivid presentation" is achieved by "expressions that signify activity/actuality."

3. In Greek mythology a seer, son of Poseidon (god of the sea), who is able to assume different shapes at will.

4. Mountain range between the Black and Caspian Seas. Etna: a volcano on the eastern coast of Sicily.

5. Italian poet and scholar (1304–1374).

6. Beginning early in the 16th century, several French translations of Petrarch appeared, most notably by the French poet Clément Marot (ca.

1496–1544), du Bellay's rival.

7. Greek poet (ca. 315–ca. 240 B.C.E.); his best-known work, a poem on astronomy titled *Phaenomena*, was translated by Cicero. Xenophon (ca. 428/7–ca. 354 B.C.E.) Athenian historian and general, author of the *Anabasis*, which significantly influenced Latin literature.

8. Du Bellay may have in mind the advice of the Roman poet HORACE (65–8 B.C.E.) in *Ars Poetica*, lines 268–69, to "study Greek models night and day."

9. The first emperor of Rome (63 B.C.E.–14 C.E.) proclaimed emperor, 27). He was a great patron of letters, and, after decades of civil war, his rule was a time of peace and prosperity.

CHAPTER VI.

OF BAD TRANSLATORS, AND OF NOT TRANSLATING THE POETS

But what shall I say of some truly more worthy to be called traducers¹ than translators? For they traduce those whom they undertook to explain, robbing them of their glory, and by the same means seduce ignorant readers, showing them white for black; and, to acquire the name of savants, they translate on credit those languages of which they never understood the first elements, like Hebrew and Greek; and again, to make themselves the better known, tackle the poets—a race of authors certainly to which if I were able or wished to translate I would so little address myself, because of that excellence of invention which they have more than others, that grandeur of style, magnificence of words, gravity of sentences, audacity and variety of figures, and countless other lights of poetry: in short, that energy, and I know not what of spirit which is in their writings, which the Latins would call genius.² All which things can as much be expressed in translating, as a painter can represent the soul with the body of him whom he undertakes to draw from nature. What I say is not addressed to those who by the command of princes and great lords translate the most famous Greek and Latin poets, because the obedience one owes to such personages admits of no excuse in this place, but indeed I mean to speak to those who from blitheness of heart (as we say) undertake such things lightly and in the same way acquit themselves thereof. O Apollo! O muses!³ thus to profane the sacred relics of antiquity! But I will say no more thereof. He then who would make a work worthy of price in his own tongue, let him leave this labour of translating, principally the poets, to those who from a laborious and little profitable thing, I would even say useless, nay, harmful, to the enrichment of their language, rightly get more of vexation than of glory.

CHAPTER VII.

HOW THE ROMANS ENRICHED THEIR LANGUAGE

If the Romans (someone will say) did not devote themselves to this labour of translation, by what means then were they able to enrich their language, even to make it almost equal to the Greek? Imitating the best Greek authors, transforming themselves into them, devouring them; and, after having well digested them, converting them into blood and nourishment, taking for themselves, each according to his nature, and the argument he wished to choose, the best author of whom they observed diligently all the most rare and exquisite virtues, and these like shoots, as I have already said, they grafted and applied to their own tongue. By doing this (I say) the Romans did build those fine writings which we praise and admire so much, now equalling one of these writings with the Greeks and now excelling them.

And of what I say, give good proof Cicero and Virgil, whom willingly and for their honour I name always in the Latin tongue, of whom the one gave himself entirely to the imitation of the Greeks, counterfeited, and did express

1. The English cannot reproduce the neat Italian *traduttori*, *traditori*, nor du Bellay's *traditeurs* . . . *traducteurs* [translator's note].

2. The guardian spirit of a person or place.

3. In Greek mythology, 9 daughters of Memory who preside over the arts and all intellectual pursuits. Apollo: the Greek and Roman god of music and prophecy.

in so lively a fashion the fertility of Plato, the vehemence of Demosthenes, and the joyful sweetness of Isocrates, that Molo, the Rhodian,⁴ once hearing him declaim, cried that he brought Greek eloquence to Rome. The other did so well imitate Homer, Hesiod, and Theocritus,⁵ that it has since been said of him that of these three he surpassed the first, equalled the second, and approached so closely to the other, that if the felicity of the arguments he treated had been equal, it were doubtful to whom to give the palm. I therefore ask you who are busied only with translations, if these so famous authors had amused themselves with translating, would they have raised their language to the excellence and height wherein we now see it? Think not then by any diligence and industry that you may employ in this direction, to so do that our language, which still creeps along the ground, may lift its head and rise up on its feet.

From Book II

CHAPTER III.

THAT NATURAL TALENT IS NOT SUFFICIENT FOR HIM WHO IN POETRY WOULD MAKE A WORK WORTHY OF IMMORTALITY

But since that in all languages there are good and bad, I will not (reader) that without election and judgment you should take the first comer. It were far better to write without imitation than resemble a bad author, since it is a thing agreed among the most learned that natural talent can do more without doctrine than doctrine without natural talent. However, since the amplification of our language (which is whereof I treat) cannot be made without doctrine, and without erudition, I would fain warn those who aspire to this glory to imitate the good Greek and Roman authors, nay, even the Italian, Spanish, and others, or else not to write at all, except to oneself (as we say) and to one's muses. Let one not cite here some of ours, who without doctrine, and at most none other than mediocre, have acquired great reputation in our tongue.⁶ Those who readily admire small things, and disdain that which exceeds their judgment, may attach to them what value they will, but I know well that the learned will put them in no other rank than those who speak French well, and who have (as Cicero said, of the ancient Roman authors) good wit but very little artifice. Let it not be alleged to me also that poets are born, for that applies to the ardour and alacrity of spirit, which naturally excites poets, and without which all doctrine would be imperfect and useless. Certainly it would be too easy a thing, and therein contemptible, to become eternal through renown, if the felicity of nature, given over to the most unlearned, were sufficient to make a thing worthy of immortality. Who would fly through the hands and mouths of men,⁷ must long remain within his chamber; and who desires to live in the memory of posterity must, as though dead in himself, sweat and tremble many a time; and even as our

4. Apollonius Molon (1st c. B.C.E.), rhetorician who lectured at Rhodes and visited Rome; he taught Cicero and other Romans. PLATO (ca. 427–ca. 327 B.C.E.), Greek philosopher; like him, Cicero wrote philosophical dialogues, including *De Republica*. Isocrates (436–338 B.C.E), Athenian orator, rhetorician, and teacher.

5. Greek poet (ca. 300–260 B.C.E.), whose pas-

toral poetry Virgil imitated in his *Eclogues*. Hesiod (active ca. 700 B.C.E.), Greek didactic poet whom Virgil imitated in his *Georgics*.

6. The allusion is again to Clément Marot, who was a popular poet at the court of Francis I.

7. Here begins a passage lifted verbatim from one of du Bellay's Italian predecessors, Sperone Speroni (*Dialogo delle lingue*, 1542).

courtier poets drink, eat, and sleep at their ease, so must he endure hunger, thirst, and long vigils. These are the things whereon the writings of men fly to heaven. But in order that I may return to the beginning of this question, let our imitator first consider those whom he would imitate, and that which in them he can imitate and which should be imitated, in order not to do as those, who wishing to appear like unto some great lord, will imitate a petty gesture or vicious way of acting in him, rather than his virtues and good graces. Before all things must he have the judgment to know his own strength, and test how much his shoulders can carry; let him sound diligently his natural gifts, and compose himself for the imitation of him whom he feels he most nearly approaches. Otherwise his imitation will resemble that of the ape.

CHAPTER IV.

WHAT KINDS OF POEMS THE FRENCH POET SHOULD CHOOSE

Read, then, and read again (O future poet); with daily and with nightly hand, turn the leaves of your Greek and Latin exemplars, then leave aside all these old French poesies to the floral games of Toulouse, and the contest of Rouen,⁸ the rondels, ballades, virelays, chants royal, songs, and other such spices⁹ which do corrupt the taste of our tongue, and serve not, save to bear witness to our ignorance. Throw thyself upon these pleasant epigrams, not as do to-day a host of makers of new stories, who in ten lines are content to say nothing of worth in the first nine, provided that in the tenth is the little word to laugh at, but in imitation of a Martial,¹ or of some other well approved; if lasciviousness please thee not, mingle the profitable with the agreeable.² Distil with a flowing style, and not rugged, these touching elegies after the example of an Ovid, a Tibullus, and a Propertius,³ mingling therein at times those ancient fables, no small ornament of poetry. Sing me those odes, unknown as yet of the French muse, on a lute well accorded to the sound of the Greek and Roman lyre, and let there be no line wherein appeareth not some vestige of rare and ancient erudition. And for this, matter will be furnished thee by the praises of the gods and virtuous men, the immutable order of earthly things, the solitudes of young men such as love, flowing wine, and good cheer. Above all things see that this kind of poem be far removed from the vulgar, enriched and made illustrious with proper words and epithets by no means idle, adorned with grave sentences, and varied with all manner of poetical colours and ornaments: not like a *Laissez la verde couleur*, *Amour avecques Psyches*, *O combien est heureuse*,⁴ and other such works, more worthy to be called vulgar songs than odes or lyrical verses. As for epistles, they are not a kind of poem which can greatly enrich our vulgar tongue, since they are readily of familiar and domestic things, unless thou

8. The oldest of several bourgeois fraternal societies established beginning in the 12th century to cultivate music and poetry. The Floral Games of Toulouse: an institution founded in 1323 by seven minstrel poets; during the 16th century, at the height of its glory, it was renamed the College of the Art and Science of Rhetoric.

9. Vernacular French medieval poetic genres.

1. Roman poet (ca. 10–ca. 104 C.E.) best known for his witty epigrams that depicted Roman society, high and low (sometimes in very coarse language).

2. Compare Horace, *Ars Poetica*, line 343: "The man who combines pleasure with usefulness wins every suffrage."

3. Roman poet (ca. 50–ca. 15 B.C.E.), one of the great masters of Latin love elegy (that is, a poem in elegiac couplets, a specific metrical form). Ovid (43 B.C.E.–17 C.E.) and Tibullus (ca. 50–19 B.C.E.) also wrote highly polished elegies.

4. Three 16th-century French *chansons* (songs): "Leave the Green Color," "Love [or Cupid] with Psyche," and "Oh How Happy."

didst wish to make them in imitation of elegies as Ovid did, or sententious and grave, as Horace.⁵ As much, too, do I say of satires, which the French, I know not how, have called *coqs à l'âne*,⁶ in which I advise thee to exercise thyself as little as possible, just as I desire thee to be removed from ill-speaking; unless thou didst wish, after the example of the ancients, in heroic verse (that is to say, lines of ten to eleven, and not only of eight to nine [syllables]), under the name of satire, and not with that inept title *coq à l'âne*, modestly to tax the vices of thine age, sparing the names of the vicious persons. Thou hast for this Horace, who, according to Quintilian,⁷ holds the first place among the satirists. Ring me out those fine sonnets, a no less learned than pleasing Italian invention, conformable in name with the ode, and different from it only in that the sonnet has ambiguous lines, regulated and limited; and the ode may run through all manner of lines freely, nay, even invent them at pleasure, after the example of Horace, who did sing in nineteen sorts of lines, as the grammarians tell us. For the sonnet, then, thou hast Petrarch and some modern Italians. Sing me on well-resounding pipe, or on well-joined flute, those pleasant rustic eclogues,⁸ after the example of Theocritus and Virgil: or marine eclogues, after the manner of Sannazaro,⁹ the Neapolitan gentleman. Might it please the muses that in all these kinds of poetry which I have named we had many such imitations, as is this eclogue on the birth of the son of Monseigneur the Dauphin, to my taste one of the best little works that Marot¹ ever made. Adopt also into the French family those flowing and dainty hendecasyllables, following the example of a Catullus, a Pontanus, and a Secundus,² which thou shalt be able to do, if not in quantity at least in the number of syllables. As for comedies and tragedies, if kings and republics would restore them to their ancient dignity, which the farces and moralities have usurped, I should be of the opinion that thou shouldst busy thyself therewith, and if thou dost wish to do so, for the adorning of thy language, thou knowest where thou shouldst find their archetypes.

1549

5. Horace's epistles are conversational, not grave; but the long poems of *Epistles 2* concern literature. Ovid's elegiac epistles are his *Heroides* (letters from legendary women to their absent lovers or husbands) and his *Tristia* and *Letters from Pontus* (describing the hardships of the poet's exile and pleading for leniency).

6. From the expression *sauter du coq à l'âne* (to jump from the cock to the donkey); stories characterized by absurd associations.

7. Roman rhetorician and teacher of oratory (ca. 30/35—ca. 100 C.E.; see above); he calls Horace the best satirist in *Institutio Oratoria* 10.1.94.

8. Short poems—often pastoral—in the form of a dialogue or soliloquy, particularly popular during

the 15th and 16th centuries.

9. Jacopo Sannazaro (1458–1530), a poet born in Naples who was greatly admired by the poets of the Pléiade.

1. Clément Marot, official court poet. The Dauphin: Francis of Valois, the future King Francis II, born January 19, 1544.

2. Joannes Secundus (1511–1536), Latin name of the neo-Latin poet Jean Everaerts. Giovanni Pontano (1426–1503), neo-Latin prose writer and poet of the Italian Renaissance. Catullus (ca. 84—ca. 54 B.C.E.), Roman lyric poet who was the first to adopt Greek hendecasyllables—11-syllable lines in a set pattern of "quantity" (i.e., syllable length)—to represent everyday Latin speech.

PIERRE DE RONSARD

1524–1585

Often referred to by his contemporaries in France as the "Prince of Poets," Pierre de Ronsard enjoyed considerable fame during his lifetime. His reputation went into eclipse a century later as a strict codification of French poetry accompanied the rise of the classical theater, of which Renaissance poetry—exemplified by Ronsard—was treated as a crude precursor. But he was brought out of the shadows again by the Romantics, who were eager to find a looser and more lyrical alternative to those same classic verse forms. His rescuers, however, were precisely those whose influence would make it difficult for readers to appreciate him on his own terms: the Romantics privileged originality, subjectivity, and marginality, which were not at all in Ronsard's mind or vocabulary. For him, the poet aspired to equal the ancients and to give public and universal voice to enduring truths.

Ronsard was born into a family with a long tradition of political connections and royal service. His grandfather, who had been in the employ of Louis XI, had fought in wars with the duke of Orléans (later Louis XII) and Francis I. Ronsard's father, a committed humanist, served Francis I as *maître d'hôtel du roi* and governor to the king's children, and spent four years in Madrid with them while they were held as hostages in place of their father. The loyal courtier was rewarded by the king with the refurbishing of his country manor, done in high Italian style by Italian workmen. The Ronsard family was Catholic, patriotic, and noble, and their manor in the Loire valley, like the court of Francis I, became a center of Renaissance values and learning. At the age of nine, Pierre was sent to the Collège de Navarre in Paris, where he did so badly that he withdrew after a term. He then left to take a series of positions as a young courtier. At age twelve, he became page to the king's children, chiefly to the fourteen-year-old Charles, duke of Orléans. Soon he accompanied the duke's sister to Scotland, and thereafter he made other diplomatic journeys to the Netherlands, London, and Alsace. During one of his journeys to Alsace, he contracted a serious illness and became partially deaf; this automatically precluded him from having a diplomatic or military career. Barred from a life of active service, he nevertheless went on to serve four monarchs with his poetic voice. In 1543 he received simple tonsure from Bishop René du Bellay (great-uncle of the poet JOACHIM DU BELLAY), a position that, while short of ordination as a priest, made him eligible to receive revenue from church properties and established him as a celibate churchman for the rest of his life.

At the age of twenty, after his father's death, Ronsard returned to Paris and undertook the study of Greek and Latin letters. He was invited to study with the twelve-year-old son of Lazare de Baïf, a diplomat with whom Ronsard had traveled when he was younger; both were instructed by France's foremost Hellenist, Jean Dorat. Eventually, the two followed Dorat to the Collège de Coqueret, a small boarding college that was part of the University of Paris system. The dedicated group of eager young scholars at Coqueret worked tirelessly to master a curriculum consisting almost exclusively of Greek and Latin poetry. They began to see themselves as a unified, select group with a mission that turned out to be nothing less than a revolution of French poetic language. First they called themselves the "Brigade," but soon they adopted the name *Pléiade*. The young men of the *Pléiade* (Ronsard, Joachim du Bellay, and five others) began publishing their poetry and entered the public discourse about poetic theory in 1549 with du Bellay's *Defence and Illustration of the French Language* (see above). They established themselves as an intellectual aristocracy, believing in the divine origin of poetry and their own position as poetic equals to their classical precursors.

Ronsard's first published poems served as illustrations of Pléiade poetic ideals. Written in French, they were closely modeled on classical and Italian forms. In 1550 the first four books of his *Odes* were published. Two years later he published his first sonnets, *Les Amours de Cassandre*, ostensibly inspired by his love for a Florentine banker's daughter, Cassandre de Salviati. His sonnets, like Petrarch's, exemplify that strange amalgam of Christianity and pagan philosophy that came to be known as Neoplatonism (see PLOTINUS), clearly marked out by the names of the women he addresses: Cassandra (who prophesied the Trojan War), Marie (who was the virgin mother of Christ), and Helen (whose abduction caused the Trojan War).

His most ambitious work was never completed. Wishing to rival the classical epic poems, Ronsard envisioned a French *Aeneid*, the *Franciade*, on which he began work in 1554, early in his poetic career. He finally published the first four books of it in 1572, but left both the court and the epic on the death of his patron, Charles IX, in 1574. He composed his most celebrated work—a series of poems called *Sonnets to Hélène* (1578)—after leaving the public arena of court poet. These poems were written near the end of his life, when he fell in love with the much younger Hélène de Sùgères, a lady-in-waiting to Catherine de Medici; she ultimately refused his passion for her, but did not prevent his poetic consummation with her name.

Ronsard is remembered today mainly for his sonnets, but he wrote in at least twenty genres, and his voice and purpose ranged widely. In the early 1560s his writings responded to and participated in the rising tension between Catholics and Protestants. As a court poet and a churchman, he was a defender of Catholicism, but his stance was more practical and patriotic than theological. He wanted poetry to strengthen the state, not individual freedom. For him Protestants, even French Protestants (called Huguenots), were foreigners. They upset the genteel coexistence of the court, the church, and the classics on which his poetry was based. Strict Calvinists went so far as to express suspicions about the sensuality and paganness of any poetry that imitated the Greeks and the Romans. What had once seemed universal and eternal suddenly became partisan and historical. Ronsard's writing became more political and polemical during the first period of violent conflict; but when the Peace of Amboise ended the first war of religion in 1563, he began to withdraw from public rhetoric and tried to reestablish a more distant, oracular, ahistorical voice for poetry. It was at this point that he wrote "A Brief on the Art of French Poetry" (1565). The "Brief"'s seeming distance from any historical events is a response to, not a sign of detachment from, the trauma of civil war. It was part of a short-lived historical moment in which the French court attempted to achieve tolerance and cultural unity.

"A Brief on the Art of French Poetry," written at the very middle point of Ronsard's poetic career, holds a place in the tradition of letters addressed by established poets to young, aspiring poets. Like HORACE's *Ars Poetica* (see above) or Rainer Maria Rilke's *Letters to a Young Poet* (1929), Ronsard's "Brief" takes the form of advice on both the specifics of poetry and on how to live as a poet. It is a prose letter written to Alphonse Delbène (1540–1608), a young member of the noble Florentine Del-Bene family that had taken refuge in French courts in the early sixteenth century, fleeing Francis I's unsuccessful campaigns in Italy. In the "Brief" Ronsard is trying to accomplish several tasks: to combine classical poetics with Christian beliefs, to combine invention with imitation, to adjudicate the claims of competing languages and dialects, and to explore some of the techniques of a well-made poem in French.

He begins his counsel with the importance of divine inspiration. Divine power is transmitted to mortals through the medium of poetry: the poet is to men what God is to the poet. Ronsard's belief in poetic inspiration echoes PLATO's *Ion* (see above), in which a chain of inspiration runs from the gods to the Muses to the inspired artist. Ronsard upholds the Pléiade's respect for classical models, echoing in his subtitles

the *inventio*, *dispositio*, and *elocutio* of traditional rhetoric. He teaches the young poet not only how to imitate classical poets, making sure to explain that their mythology is to be taken as an allegory of the powers of God, but also how to train his eye on contemporary crafts and skills, particularly metallurgy, so as to learn (and not just imitate) the craft of poetry. In one of the earliest arguments in favor of the poetry workshop, he encourages his addressee to share his poems widely with his fellows. He comments on the technical apparatus of French vernacular poetry, offering guidelines for rhythm, rhyme, and musicality; in this he resembles his contemporaries GIAMBATTISTA GIRALDI in Italy and George Puttenham in England.

Drawing, as does Homer, on the most vivid and concrete of figures, the poet, he argues, must nevertheless find what is most proper and harmonious to his subject. Individual imagination not tempered by the scrutiny of other poets and by the example of great predecessors risks becoming disordered, fantastic, "monstrous." But appropriate and healthy hybridization makes a language stronger. In an age in which France was in the process of being consolidated politically and linguistically, Ronsard recommends that the poet take his vocabulary not just from the court but from the rich dialects of the provinces. The true French poet should rise above history and write poetry for the ages.

Not until Victor Hugo in the nineteenth century would French poetry again achieve so classical and public a voice. But Hugo, writing ambitious epics while exiled by Napoleon III, saw the moral authority of poetry as a kind of alternative government, not as a handmaiden of the court. Nor was Hugo the only nineteenth-century poet to revive Ronsard's voice. The Romantic critic Sainte-Beuve resurrected the Renaissance to counteract the rigidity of post-Renaissance classical verse forms developed in the theater. Yet Ronsard's influence has been both anticlassic and classic: the classical pantheon itself underwent a revival in the mid-nineteenth century, spurred by the so-called Parnassian poets, to the point that CHARLES BAUDELAIRE lamented, "Who will deliver us from the Greeks and the Romans?" The virtuosity and freshness of Ronsard's manipulation of the classical past, of the sonnet form, of the oracular tone, and of the French language have continued to inspire poets four centuries after he wrote his letter to Alphonse Delbène. The serenity of his view of poetry has perhaps come to sound dated in the turbulence of modern times, but it is important to remember that his own century was no less turbulent. His advice to rise above petty polemics and historical contests is itself a contested, but often appealing, contribution to the history of poetics.

BIBLIOGRAPHY

The standard two-volume *Oeuvres Complètes* of Ronsard's work exists in the Pléiade edition (whose name harks back to the group of poets that he led); it was revised in 1994. Morris Bishop's *Ronsard, Prince of Poets* (1940) and D. B. Wyndham Lewis's *Ronsard* (1944) are somewhat dated biographical studies (a 1990 biography by Michel Simonin is available in French). *Pierre de Ronsard* (1970) by K. R. W. Jones provides a general introduction. Isidore Silver's work should be included in any serious Ronsard scholarship, most notably the three-volume study *The Intellectual Evolution of Ronsard* (1969-92) and *Three Ronsard Studies* (1978). A collection of essays edited by Terence Cave, *Ronsard the Poet* (1973), offers an excellent study of Ronsard's poetic vision, including both classical and Renaissance influences. It also contains a good bibliography. For a comparative approach, see Alfred W. Satterthwaite, *Spenser, Ronsard, and du Bellay: A Renaissance Comparison* (1960). There is an annotated bibliography on Ronsard in the *Critical Bibliography of French Literature*, vol. 2, *The Sixteenth Century* (rev. ed., 1985).

From A Brief on the Art of French Poetry¹

Although the art of Poetry can be neither learned nor taught by precept, it being a thing more experiential than traditional, yet, in so far as human art, attainment, and labor will permit, I wish to lay down some rules by which one day you² may be able to reach the first order of skill in this happy calling, by my means, who confess myself reasonably learned in it. Always you will hold the Muses in reverence, in singular veneration, and not have them serve for any purpose dishonorable, ridiculous, or libelous; but you are to keep them beloved and sacramental, the daughters of Jupiter³ which is to say, of God, who in his sacred grace, first through them made known to ignorant peoples the excellence of his majesty. For poetry was in the earliest time only an allegorical theology, to carry into men's coarse brains, by charming and prettily colored fables, the secret truths which they could not comprehend if openly declared. The Athenian Eumolpus, Linus the instructor of Hercules, Orpheus, Homer, Hesiod⁴ invented this excellent profession. So poets were called divine, not so much for the god-like soul which made them wonderful above others, as for the communion which they had with oracles, prophets, diviners, sibyls, interpreters of dreams, for of what these knew the poets had learned the superior part: to what the oracles said in few words, these elevated persons gave expansion, color, commentary, being for the people what the sibyls and diviners were but for themselves. A long time afterward appeared in the same country the second school of poets, whom I call human, as being more filled with artifice and labor, than with divine inspiration. As an example of the latter, the Roman poets swarmed in abundance, with so many puffed out and artificial books that they brought to book-stores more burden than honor, except for five or six, whose understanding of their art, accompanied by perfect craftsmanship, has always held my admiration.

But since the Muses are not willing to reside in a soul unless it be kindly, saintly, virtuous, you should act always with kindness, never with meanness, sullenness, or chagrin; moved by a fine spirit, let nothing enter your soul which is not superhuman, divine. You are to bear in highest regard conceptions which are elevated, grand, beautiful—not those that lie round the earth. For the principal thing is invention, which comes as much from goodness of nature as from the lessons of the good ancient authors. If you attempt a great work, you should show yourself religious and God-fearing, beginning the poem either with his name or with another which will represent some effect of his majesty, as in the example of the Greek poets, "Sing, O Goddess,

1. Translated by James Harry Smith.

2. Alphonse Delbène (1540–1608), an aspiring young French poet whose Italian parents had come to France during Francis I's failed campaigns in Italy.

3. In Roman mythology, king of the gods. In Greek mythology, the 9 Muses (who preside over the arts and all intellectual pursuits) are the daughters of Zeus and Mnemosyne (literally, "Memory").

4. Ronsard names mythical and historical figures of classical Greece, all images of "divine poets" that can mediate between Muses and men: Eumolpus, raised in Thrace but linked to Athens through his

mother, is said to have founded the mysteries at Eleusis and to have excelled in singing and in playing the flute and lyre; Linus, the son of Apollo, god of music, was said to have taught the lyre to Hercules (whom the Romans called "Hercules"), greatest of the legendary Greek heroes, and to Orpheus, a musician unrivaled among mortals; Homer is credited with composing the *Iliad* and *Odyssey* (ca. 8th c. B.C.E.); and Hesiod, a didactic poet (active ca. 700 B.C.E.), is often paired with Homer as the other main representative of early epic.

the wrath," "Tell me of the man, O Muse," "With Zeus let us begin," "Beginning from thee O Phoebus,"⁵ and of the Latin, "Great Mother of Rome," "Muse, relate to me the causes."⁶ For the Muses, Apollo, Mercury, Pallas, Venus,⁷ and other such deities represent to us no other thing than powers of God, to which the earliest men gave various names, in accord with the different effects of his incomparable majesty. And it must also show you that nothing can be good or perfect, if the beginning not come of God. Then, you are to study the writings of the good poets, and learn by heart as many of them as you can. You are to take great pains to correct and file your verses, and are not to excuse faults in them any more than a good gardener neglects his poles when he sees them overburdened with branches useless or of little account. You are to hold sweet converse with the other poets of your time: you will honor the oldest among them as your fathers, those your age, as your brothers, the younger, as the children. And you will show to your fellow poets your writings, for you should let nothing see the light which has not first been viewed and reviewed by your friends whom you think the best qualified on the matter; to the end that by such relationships and familiarities of your minds, with the learning and the talent that you have, you will arrive with ease at the height of all honor, having for local example the virtues of your father,⁸ who not only has surpassed in his, the Italian language, those in highest reputation in his time, but even has made the victory doubtful between himself and those who write today with most purity and learning the old language of the Romans.

But since you have denied recognition to Greek and Latin as mediums of composition, and only French remains, which ought to be the more readily commended to you, as it is your native language, I shall say a few things that seem expedient, and without losing you in a large and tedious forest, I shall conduct you straightway, and by the path which I have found shortest, so that you may easily overtake those who first set out on the road, and may find yourself not out-stripped to any extent at all.

In the manner in which Latin verse has its feet,⁹ as you know, we have in our French poetry a certain measure of syllables, according to the kind of poem to be written; and this cannot be trespassed without offense to the law of our verse, the particular measures and numbers of which I treat more amply farther on. We have also a *cæsura*¹ on the vowel *e*, which is done away whenever it is encountered with another vowel or a diphthong, provided that the vowel which follows *e* not have the force of a consonant. In imitation of my precepts you will appoint the verses, masculine and feminine,² as well as it be possible for you to do, to approach nearest music and the harmony of instruments, in the favor of which poetry seems to have been born: for poetry without instruments, or without the grace of one or more voices, is in no

5. First lines from, respectively, Homer's *Iliad* and *Odyssey*, Theocritus's *Idyll* 17 (ca. 260 B.C.E.), and an unidentified work [based on translator's note].

6. Opening invocations from two Roman poems, Lucretius's *De Rerum Natura* (ca. 55 B.C.E.) and Virgil's *Aeneid* (17 B.C.E.) [based on translator's note].

7. In Roman mythology, goddess of love. Apollo: Greek and Roman god of music, healing, and prophecy. Mercury: Roman messenger-god. Pallas: Athena, Greek goddess of wisdom, the arts, and war.

8. Bartolomeo Del-Bene, Italian poet and historian.

9. The basic building blocks of Latin and Greek verse forms, consisting of various fixed patterns of long and short syllables.

1. A caesura, a pause in a line of verse; but here Ronsard means an elision, the omission of an unstressed vowel.

2. In French poetry, a feminine ending occurs when the last word in a line ends in a mute "e"; all other lines have masculine endings.

wise charming, any more than instruments unenlivened by a pleasing voice. If you happen to have composed the two first verses masculine in ending, make the next two feminine, and proceed in this manner for the remainder of your elegy or *chanson*,³ that the musicians may the more easily harmonize with it. As to lyric verse, you will build the first couplet as you desire, but the others must follow the plan of the first. If you make use of Greek and Roman proper names, you will, in so far as your tongue permits, give them French terminations; there are many which cannot so be changed. You ought not to disdain our old Latin words, but to choose them with prudence.

You will frequent the practitioners of all trades, seamanship, hunting, falconry, and especially those that owe the perfection in their craft to the furnace: goldsmiths, foundrymen, blacksmiths, metallurgists; and from them you will store up many good and lively semblances, along with the very names of the instruments, to enrich and beautify your work. For just as one may not call a body fair, comely, or gifted, unless it be made up of blood, veins, arteries, and tendons, and, above all, have a purely natural color, so Poetry cannot be charming, alive, or perfect without excellent inventions, descriptions, comparisons, which are the nerve and the life of books, which can force the centuries to leave them, in universal remembrance, victorious over time.

You are to learn to choose dexterously, and to appropriate to your work the most significant words of the dialects of our France, when those of your nation are not sufficiently proper or significant; not troubling yourself whether they be of Gascony, Poitou, Normandy, Manche, Lyonnais, or another province, provided only that they be good, and that they properly express what you want to say; without affecting too much the speech of the court, which is many times quite mediocre to be the language of courtly ladies and of gentlemen, who pursue more the practice of arms than of well chosen speech. You will observe that the Greek language would never have been so scattered and so full of dialects and varieties of words as it is, had not the majority of the republics that flourished in that time selfishly desired that their learned citizens write in their own particular dialects. And because of that there has come down an infinity of dialects, phrases, and manners of speaking, which even today carry on their foreheads the marks of their native countries, which are held indifferently good by the learned pens that write of that time. For a country can never be so entirely perfect that it may not borrow some something from its neighbor. And I doubt not that if there remained in France the Dukes of Burgundy, Picardy, Normandy, Brittany, Champaign, Gascony, they would yet desire the extreme honor of their subjects' writing in a provincial dialect. For princes must be no less eager to widen the bounds of their realms than, on the example of the Romans, to extend the language of their countries through all nations. But today, France under one king, we are compelled, if we wish to come to any honor, to speak the courtier's language; or our labor, however learned it may be, is liable to be estimated of little value, or may be totally scorned. And since the goods and favors come in from this source, it is often necessary to yield to the opinion of some court lady or some young courtier, who will often have as little knowledge of good and true poetry as they have skill in arms and other of the more honorable exercises.

3. Song (French).

Of Invention⁴

Since I have mentioned invention before, it seems to me that it would be timely here to refresh your memory by a short notice of it. Invention is nothing other than the natural virtue of an imagination, conceiving the ideas and forms of all things that can be imagined, whether of heaven or of earth, living or inanimate, for the purpose of afterwards representing, describing, imitating: for just as the aim of the orator is to persuade, so that of the poet is to imitate, invent, and represent—things which are, or which may be—in a resemblance to truth. And it must not be doubted that after one has invented boldly and well, a “disposition” of verse which is effective will follow, for disposition follows invention, in all cases, just as the shadow does a body. When I bid you invent fair things and great, I do not mean inventions fantastic and melancholic; these do not more correspond to one another than do the broken dreams of one in a frenzy, or terribly tormented by a fever, to an imagination bruised or injured, in which a thousand monstrous forms, without order or connection, are represented. But your inventions, on which I cannot give you rules, as they are of the spirit, must be well ordered and appointed. And although they seem to pass those of the vulgar, they must nevertheless be such as can easily be conceived and understood by everyone.

Of Disposition

As invention depends upon the refined state of the mind, so disposition depends upon sound invention, consisting in an elegant and consummate placing and ordering of the things invented; it does not permit what appertains to one place to be put in another, but, operating by artifice, study, and application, it disposes and sets each matter to its proper point. For examples of it you may take the ancient authors and those of the moderns who have during the last fifteen years illuminated our literature, now justly proud in this glorious achievement. Happy demi-gods, they who cultivate their own earth, nor strive after another, from which they could only return thankless and unhappy, unrecompensed, unhonored. The first to dare abandon the ancient Greek and Roman languages for the greater glory of their own truly must be good sons, not ungrateful citizens; worthy to be signalized in a public statue, wherein from age to age men shall encounter a lasting memorial of them and of their greatness: not that other languages should be ignored; for I counsel you to know them perfectly, and from them, as from an old treasure found under the earth, enrich your own nation. For it is very difficult to write well in the vernacular if one be not perfectly, or at least fairly, learned in those more honored and more famous languages.

Of Elocution

Elocution is a propriety and splendor of words, properly chosen and adorned, in varying lengths of sentence, which make the verse glitter like precious stones on the fingers of some great lord. Under elocution I put choice of words, which Virgil and Horace⁵ so conscientiously observed. For you ought

4. The traditional divisions of ancient rhetoric are invention, arrangement (disposition), diction (elocution), memory, and delivery; Ronsard omits the

last two.

5. Roman poet (65–8 B.C.E.; see above), much studied in the early Renaissance. Virgil (70–19

to strive to be well supplied with words, and to call the most appropriate and significant that you can to serve as the sinew and force of your song, which will shine in proportion as the words be significant, and chosen with judgment. You are not to forget the comparisons, the descriptions of places, streams, forests, mountains, of night, and of sunrise, of mid-day, of the winds, the sea, of gods and goddesses, with their proper attributes, dress, cars, horses: guiding yourself in this by imitation of Homer, whom you are to observe as a divine example, from whom you are to draw, as from life, the most perfect lineaments for your picture.

Of Poetry in General

You are to know that great poems never begin at the first point of the action, nor are so completed as that the reader, taken with the delight of it, may not still wish the end farther off; but the good literary craftsmen begin in the middle, and knowing so well how to join the beginning to the middle, and the middle to the end, make of the pieces so produced a body entire and perfect. Never begin a poem on a large scale unless its subject stretch back before the memory of men; and invoke the Muse, who remembers everything, being a goddess, to sing to you things of which men can remember nothing. The others, little poems, may be begun abruptly, the lyric odes, for example, in the composition of which I advise you to train yourself first, taking care above all against being more the versifier than the poet: for fable and fictions have furnished the material for the good poets, those who have been recommended to posterity from as far back as memory goes; and mere verse is but the aim of the ignorant versifier, who thinks that he has made great headway in his work when he has composed a great many rhyming verses which so smell of prose that I am amazed how our French publishers can print such drugs, to the confusion of authors, and of our nation as a whole. I should inform you of the proper subjects for each particular kind of poem, if you had not already read the *arts of poetry* of Horace and of Aristotle,⁶ in which I know you are fairly well versed.

I counsel you to avoid epithets⁷ relating to objects of nature, as they do not advance at all the sense of what you want to say; for example, *the flowing river*, *the green bough*, and infinite others. You should seek out epithets which mean something, not merely fill up your verse form, or trifle with your sense. Take this verse for an example:

The vaulted sky encloses all the earth.

I have said "vaulted," and not "burning," "clear," "high," or "azure," because a vault appertains to the embracing and enclosing a thing. You may well say,

The small boat goes along the running wave,

because the course of the water makes the boat to run. The Romans have been very cautious observers of this rule, Virgil and Horace among the others. The Greeks, as in all things pertaining to verse, have been freer about it, and have not regarded it so closely. You are also to avoid the manner of

B.C.E.), Roman poet generally viewed as the greatest of the Augustans.

6. For the *Arts Poetica* of Horace and the *Poetics*

of ARISTOTLE, see above.

7. Adjectives or adjectival phrases expressing a characteristic of the person or thing described.

composition of the Italians in your language, who commonly put four or five epithets one after the other in the same verse, as for example, "dear, comely, angelic, rich gifts." You can see that such epithets are more to puff up and paint the verse than to fill any need in it. Content yourself with one epithet, or at most, with two, unless some time for amusement you make five or six, but if you follow my advice in the matter, that will happen as infrequently as you can manage.

Of Rhyme

Rhyme is the correspondence and cadence of syllables, falling at the ends of the verses, which I wish you to observe as well for masculine as the feminine, in the two complete, perfect syllables, or at least in the masculine, provided that it be resonant, and of a sound perfect and entire. Examples of the feminine: *France, Esperance, despence, negligence, familiare, founiliere, premiere, chere, mere*. Examples of the masculine: *surmonter, monter, donter, sauter, Juppiter*. Always you are to be more attentive to good invention and to the words, than to the rhyme, which comes easily enough of itself after some little practise and experience.

* * *

And you must not worry, as I've said so many times, about the opinions that people might have of your writing, keeping as a firm rule that it is better to be in the service of truth than in the service of opinion.⁸ People only want to know what they see in front of their eyes, and, lending credence without proof, think that our forebears were wiser than we, and that we must follow them completely, without inventing anything new. In this they err greatly against bountiful nature, which they believe today to be sterile and barren of minds, and which they think bestowed at the beginning all the virtues upon the first men without saving any to offer—as a generous mother should—to those who would be born later, throughout the many centuries to come.

1565

8. The final paragraph of the treatise is translated by the editor.

GIACOPO MAZZONI

1548–1598

In his *On the Defense of the Comedy of Dante* (1587, *Della difesa della Comedia di Dante*), the Italian Renaissance philosopher and scholar Giacopo Mazzoni set out to defend DANTE ALIGHIERI's great medieval poem from a growing number of detractors. As was also the case with the new Renaissance romantic epic, a genre defended by Mazzoni's elder contemporary GIAMBATTISTA GIRALDI, Dante's extended dream allegory was widely criticized as unrealistic. Instead of subscribing to the general

preference for what PLATO had called realistic ("icastic") imitation, Mazzoni chose to defend "phantastic" or purely imaginary imitation, claiming it to be the basis of Dante's *Divine Comedy*. In the process, Mazzoni developed an elaborate theory of the poetic "idol" (image or simulacrum), going well beyond the defense of a particular poem to formulate what many scholars believe to be the most fully developed system of literary aesthetics of the Renaissance.

Born in Cesena, Italy, Mazzoni as a young man was educated in Bologna, where he learned Hebrew, Greek, Latin, rhetoric, and poetics. In 1563 he entered the University of Padua to study philosophy and jurisprudence. Thereafter, he taught for brief periods at the universities in Rome, Pisa, and his native Cesena. He spent much of his time managing his family estates, but he often entered into public debates with many prominent public figures and made the acquaintance of such famous Italian writers as Sperone Speroni, Ludovico Castelvetro, and Torquato Tasso, among others. He was reputed to have an astoundingly good memory, able to recall at will any part of the works of Lucretius (ca. 94–55 B.C.E.), Virgil (70–19 B.C.E.), Dante, and Ludovico Ariosto (1474–1533), and he routinely defeated all opponents at public memory contests. He considered himself primarily a philosopher, an identification clearly reflected not only in the sophisticated argumentative structure of the *Defense* but also in his major work, *De Triplici Hominum Vita, Activa Nempe, Contemplativa, et Religiosa Methodi Tres* (1576, *On the Three Ways of Man's Life: the Active, the Contemplative, and the Religious*), a philosophical attempt in Latin to reconcile the views of PLATO and ARISTOTLE. In this work, as in the *Defense*, Mazzoni demonstrates a command of the history of philosophy and cites an impressive number of authorities and sources. His abiding concern with Dante scholarship is demonstrated by his having published before his *Defense* the polemical *Discorso in difesa della Commedia della divino poeta Dante* (1572, *The Discourse in Defense of the Comedy of the Divine Poet Dante*). Critics generally agree, however, that the earlier work is much less successful. Taken from Mazzoni's book-length "Introduction and Summary" to his *Defense*, our selection has very few references to Dante, offering instead a straightforward presentation of Mazzoni's theory of poetry. Reflecting his celebrated memory, this text shows extensive reliance on a wide range of classical philosophers and rhetoricians, including Plato and Aristotle, as well as various Greek sophists and Neoplatonists, particularly Philostratus (active 3d c. C.E.) and Proclus (412–485 C.E.). Considered structurally, the "Introduction and Summary" presents three definitions of poetry one right after the other. Each definition views poetry from a different perspective, that of the poem, the audience, and social utility (or what the author calls the "civil faculty").

Mazzoni indicates, to begin with, that poetry is an imitative art that has as its object the idol (image or simulacrum), not classical literary models, as other Renaissance theorists, such as PIERRE DE RONSARD, argued. The concrete particulars that the image presents, however, are primarily *phantastic* (imaginary or marvelous) rather than *icastic* (realistic). As a result, poetry is a species of sophistic rhetoric in that it deals with what is credible and persuasive, not with what is necessarily true. Seen from the perspective of the audience, the goal of poetry is to move the reader to pleasure and delight in the perception of believable images (idols). Mazzoni argues, in addition, that the distinct pleasure of poetry should ultimately lead to its social utility or moral purpose. As an entertaining recreational game, poetry is a means of pleasantly interrupting the serious business of the world in order that business may be later resumed with freshness and vigor. It does instruct, but in a concealed way; consequently it may be regarded at its best as regulated by the civil faculty. Mazzoni's view here is summed up cryptically in his belief that Aristotle's "*Poetics* is the ninth book of [his] *Politics*."

A distinctive feature of Mazzoni's work is that it proceeds by continuous logical differentiation. Defining poetry for him requires making precise distinctions between similar but different phenomena. Perhaps the key distinction is the earliest, involving

three types of objects: the idea, the work, and the idol, which conform to the observable, the fabricable, and the imitable. Here Mazzoni isolates the distinct traits of poetry by differentiating it from epistemology (the observable) and the practical arts (the fabricable). After subdividing the imitable into the phantastic and icastic, he goes on to assess these two forms of imitation in relation to ancient and "second" sophistic rhetoric. Since ancient sophistic used made-up names and second sophistic named real individuals, Mazzoni classifies the phantastic under the former and the icastic under the latter. In this differentiation he further emphasizes the autonomy and the imaginative or phantastic force of the image. Such complex sets of distinctions form the basis of Mazzoni's "Introduction and Summary," which tries to develop a complete and perfect definition of poetry.

Along the way Mazzoni distinguishes "poetics" from poetry, and he also develops a sociological theory of genre. Poetics examines a poem in relationship to the civil faculty, noting prescribed standards, rules, and laws, while poetry looks at a poem from the perspective of its making, attending to its form. As for genre, Mazzoni notes that there are three kinds of poetry: the comic, the heroic, and the tragic. Each of these is addressed to one of the three sorts of people whom Plato thought necessary for civil society: artisans, soldiers, and magistrates, respectively. (Artisans include lower- and middle-class citizens.) Mazzoni's point is that each genre regulates a particular social class, instilling civil obedience. The humor of comic poetry consoles artisans, resigning them to their low or modest estate, while the glorious battles of heroic poetry inspire soldiers to freely defend their country. Tragic poetry depicts the downfall of noble persons and, in so doing, encourages magistrates to take their duties seriously.

Some critics of Mazzoni have perceived contradictions in his definitions of poetry, particularly in his attempt to reconcile the pleasures of imitation with the lessons of the civil faculty. Moreover, some twentieth-century theory implicitly questioned his distinction between icastic and phantastic imitation, pointing out the artifice involved in even "realistic" modes of imitation. In spite of these criticisms, Mazzoni raises to a rigorous level of analysis the discussion of literary mimesis (imitation and representation) initiated by Plato and Aristotle. In emphasizing poetry's relationship to images and games, he also foreshadows later Romantic interest in theories of imagination and aesthetic play, as exemplified most influentially in the works, respectively, of SAMUEL TAYLOR COLERIDGE and FRIEDRICH VON SCHILLER.

BIBLIOGRAPHY

There is no complete English translation of *On the Defense of the Comedy of Dante*. A book-length English rendering of its "Introduction and Summary" can be found in *On the Defense of the Comedy of Dante: Introduction and Summary*, translated by Robert L. Montgomerly (1983), who also provides detailed scholarly annotations plus a superb preface covering textual, historical, biographical, and critical matters. The standard modern Italian edition is *Introduzione della Difesa della "Commedia" di Dante*, edited by Enrico Musacchio and Gigino Pellegrini (1982). A generous selection of excerpted passages from other parts of *On the Defense of the Comedy of Dante* appears in *Literary Criticism: Plato to Dryden* (ed. and trans. Allan H. Gilbert, 1940). A dated biography in Italian exists, Pierantonio Serassi's *La Vita di Jacopo Mazzoni, Patrizio Cesenate* (1790). Illuminating biographical details can be found in Montgomerly's preface.

A comprehensive and authoritative critical overview of Mazzoni's work appears in Bernard Weinberg's magisterial *History of Literary Criticism in the Italian Renaissance* (2 vols., 1961). Also useful are Baxter Hathaway's *Age of Criticism: The Late Renaissance in Italy* (1962) and his *Marvels and Commonplaces: Renaissance Literary Criticism* (1968): the former contextualizes Mazzoni's work in relationship to five leading issues of his time, while the latter narrows its context to the debates surrounding

imitation. A formalist critique of how Mazzoni evades defining poetry can be found in Robin Louis McAllister's "Meaning, Language, and Conceptualization: Alternatives in Mazzoni and Dante," *Language and Style* 5 (1971). For a New Critical perspective on Mazzoni that accentuates the novelty of his treatment of the image, see Murray Krieger's "Jacopo Mazzoni, Repository of Diverse Critical Traditions or Source of a New One?" in his *Poetic Presence and Illusion: Essays in Critical History and Theory* (1979). A limited bibliography of criticism can be found in Montgomery's book; for a bibliography of primary texts, see Weinberg's history.

From On the Defense of the Comedy of Dante

*From Introduction and Summary*¹

It seems to me that before we proceed to discuss matters belonging to this defense, it would be well to offer first in briefer form what may be termed a summary notion of the art of poetry and of the defense of Dante,² bringing together some considerations scattered through the present volume and adding some others, the whole of which will serve not only as an opportune introduction to what I am going to say, but also as a brief compendium of what has been said.

It is the common opinion of all schools of philosophy that the arts and sciences are distinguished and separated from one another by means of a proper and particular object or subject. (I do not at this point differentiate between these two names around which each school constructs its discourse.) But no matter how this subject is handled, there is no agreement at all in opinion within the same school. For some (and the Bishop of Caserta³ in his *Monomachia* followed this opinion) prefer to think that the objects of the arts and sciences are distinct according to a distinction between things insofar as they are things. And on the basis of this condition they are forced to admit two quite extraordinary conclusions. The first is that metaphysics is a comprehensive science, that which concerns itself (so to speak) with universal being, and that the other arts and sciences are a part of it, considering each of these some part of universal being. The second conclusion (if the first is correct) is that each particular art and science has for its subject some thing that could not then be the subject of any other art or science. And since both of these conclusions are quite false, as is shown elsewhere (we will discuss it briefly later), it must therefore be judged that the above opinion is not in any way conformable to the truth. [7] Passing on then to a better and truer opinion and following the Peripatetics,⁴ I say, as they believe, that the arts and sciences derive their true and real distinctions from objects, not insofar as they are things, but insofar as they are (forgive me, all you strictly Tuscan writers, the necessity of this word) knowable⁵ and, if one can speak so, artificiable.

* * *

1. Translated by Robert L. Montgomery, who occasionally adds clarifying words in brackets. The bracketed section numbers correspond to those of the 1587 first edition, which is not paginated.
2. The Italian poet DANTE ALIGHIERI (1265–1321).

3. Antonio Bernardi (1503–1565), bishop of Caserta from 1552 to 1554.

4. Followers of the Greek philosopher ARISTOTLE (384–322 B.C.E.).

5. Mazzoni uses the word *scibilli*, a borrowing from Latin.

[8] Since on this topic I find no doctrine more copious or sound than that of Plato⁶ in the tenth book of the *Republic*, so, following in his footsteps, I say that there are three types of objects and that they have three ways in which they can be devised; as a consequence these constitute three species of arts in the first category. The objects are idea, work, and idol. The idea is the object of the ruling, or we might say, the governing arts. The work is the object of the fabricating arts, and the idol is the object of the imitating arts. Therefore the modes of the objects of the arts, insofar as they are capable of being differently treated by artifice will be three; that is, the observable, the fabricable, the imitable. The arts that only contemplate a thing pertinent to some object are the ruling arts, and they are founded in the idea. Such is the art of horsemanship when it deals with the bridle. For the art of horsemanship does not consist in making the bridle but is concerned only with the idea of how it has to work and prescribes to the bridle maker what he must hold to, to make it work. [9] The arts that make the bridle (which was first conceived by the ruling art) are those that have as object what is called the work. The arts that make what was first conceived by the ruling arts are the fabricating arts and have as object what is called the work, and such is bridlemaking, which makes the work of the bridle and nothing else. The imitating arts have been so named because they deal with the object only insofar as it is imitable; hence Plato said that it has an idol as object, which means the simulacrum or image of some other things.

Since, therefore, the same thing may be treated in different sciences under different modes of the knowable, so also the same thing can be submitted to different arts by different modes of artifice. And we have a clear example in the bridle: it belongs to the art of horsemanship when considered in its idea, to the art of bridlemaking when made as a work, and to painting when imitated as an idol.

But there may arise a doubt of some importance in thus distinguishing the imitative arts from other arts, for it would seem that the fabricating arts also deserve the name of imitation, since each one of these imitates in its work the model of the idea conceived by the ruling art. Thus, for example, the art of bridlemaking forms a bridle exactly in conformity to the idea conceived by horsemanship. Therefore it would seem that the fabricating arts are not very well distinguished from the imitating arts. I respond that (as has already been said) the distinction between arts derives from their objects insofar as they are capable of being devised variously and distinctly. [10] Now the artifice of the work is not only to represent the idea of the ruling art; it also has to serve other ends. And in this way we can say that bridlemaking forms the bridle in accordance with the idea conceived by horsemanship; still, this bridle is not made in order to represent the similitude of the idea, but rather so that it can be used in various ways in managing horses. Hence we see that the artifice of the fabricating arts aims at something other than just representing or resembling; therefore I say that the fabricating arts cannot be called imitative. But those arts that have the idol as object have an object that has no other end in its artifice but to represent and resemble; hence they are called imitative. And just as philosophers have come to call the logical faculty rational, not because it uses reason—for in this sense all the arts and all the faculties are rational—but because it has an object that takes

6. Greek philosopher (427–347 B.C.E.). For book 10 of *Republic*, see above.

all its being from reason and in reason; so we say that the imitative arts are so named, not because they use imitation—for in this sense all the arts involve more or less some kind of imitation—but because they have objects that have no other being or use except by reason of imitation or in imitation.

* * *

It can therefore be concluded that the imitative arts have been so named because they have as objects those things which are good for no other end or no other use than to represent or to resemble; and they are distinguished from the other arts that are not called imitative because their objects are good for other uses or other ends than representation or resemblance alone. In this way, then, the idol is the object of the imitative arts. [11] But in order to understand clearly what this idol, which is the true and sufficient object of the imitative arts, is, and in order to unravel all the complications that are wont to become involved in this subject, so that we may anticipate a perfect and settled account of it, it is necessary to begin at some distance.

* * *

[15] Coming now to our topic, I say that when we previously concluded that the idol is the object of the imitative arts, we did not mean that sort of idol that originates without human artifice, * * * but instead that which does have its origins in our artifice, arising only from our phantasy or our intellect by means of our choice and will, like the idols in painting, sculpture, and so on. I conclude therefore that this species of idol is that which is a suitable object of human imitation and that when Aristotle said at the beginning of the *Poetics* that all the kinds of poetry are imitation,⁷ he meant that sort of imitation which has as its object the idol that arises from human artifice in the way we have stated. Rather I will say further that all imitations that arise from human artifice insofar as they are imitations have the idol as object in this manner.

But it would seem that the words of Suidas⁸ are contrary to this determination, for he shows himself believing that the idol that derives from human artifice is not an adequate object of the imitative arts, unless the idol is joined to some other different thing that he calls a similitude. Here are his words: "Idols are effigies of things that do not subsist, like tritons, sphinxes, or centaurs. But similitudes are the images of subsistent things, like beasts or men." [16] According to this statement of Suidas we see that there are two imitations. One of them represents the true, as a painter does when he represents with colors the effigy of a known man; and the other represents the caprice of the person who is doing the imitating, just as the painter does when he depicts according to the caprice of his phantasy. We see at the same time that the idol is the object of this second sort of imitation and at the same time that the similitude is the object of the first. Therefore, it is not true that the idol that is born of human artifice is an adequate object of every imitation.

7. "Epic poetry and tragedy, comedy also and dithyrambic poetry, and the music of the flute and the lyre in most of their forms, are all in their general conception modes of imitation," *Poetics* 1 (trans. S. H. Butcher). In emphasizing imitation as the

production of man-made images, Mazzoni seems to make a silent comment on Plato's theory of dæmonic inspiration in *Ion* [translator's note]. For the dialogue *Ion*, see above.

8. Greek lexicographer (late 10th c. C.E.).

We may respond that this statement of Suidas concerning the idol is too narrow and also in opposition to what other writers have said. Hesychius,⁹ uttering other sentiments about the term "idol," speaks as follows: "The idol is similitude, image, and sign." He shows clearly then with these words that the idol is also taken as a similitude and as an image of something discovered. Ammonius in the *Etymology* and Favorinus¹ in the *Vocabulary* explaining the etymology of the idol have said that it derives "from the verb εἶδω, which means match or resemble," almost as if it meant that the idol is of things that are apparent but not found and of things that are found, of which it represents the likeness. Let us add to it what Plato left us in writing in the *Sophist* that imitation is of two species, one of which he names the icastic, and it is that which represents things that are really found or at least have been, and the other he called phantastic, of which we have examples in paintings made according to the caprice of the artist. And even he himself says the same thing in the tenth book of the *Republic*, namely that the idol is the object of every imitation. Therefore the idol must also be common to phantastic imitation. * * *

I believe, then, that everyone is able to understand up to this point what imitative art is and how it is distinguished from other arts that are not imitative, and what the idol is, which is the object of imitation. Now I add that poetry ought to be placed under this imitative art or imitation, as a species under its genus. Therefore, in beginning to define poetry one can say that it is imitation.

* * *

[29] Now let us sum up the discussion to this point concerning the nature of the imitative arts, their distinctiveness from the nonimitative arts, and the fact that poetry which is icastic or phantastic, dramatic or narrative, always has imitation for its genus, since it always forms idols and images in the ways mentioned.

The genus of poetry having been established, it remains for us to investigate the differences according to which it has come to be distinguished and separated from all the other imitative arts. And first of all it would seem that reason requires that we find the instrument proper to poetic imitation, and then its subject matter, and next its efficient cause, and then its final cause. In this fashion we will have established its definition completely and perfectly.

Now if we can find a genus that includes only three species, that is, harmony, number, and meter, we will by combining them with imitation have arrived at a proper instrument. But since such a genus is not to be found, we will compensate with rules taught by Aristotle at the beginning of the *Posterior Analytics*,² and instead of the general term we will take the names

9. Alexandrian grammarian (active 4th c. C.E.).

1. Rhetorician of Rome (ca. 80-ca. 150 C.E.). Ammonius (active 5th c. C.E.), Alexandrian philosopher, disciple of Proclus.

2. *Posterior Analytics* 1.2, 71b-72b. Aristotle here argues the case for syllogistically arriving at a general conclusion on the basis of premises that are certain and require no prior demonstration to establish their certainty. Moreover, the premises

must be better known than the conclusion. Mazzoni will try to arrive at the distinctive generic description of poetry by using those attributes necessary to it, namely harmony, number, and meter. In other words, he will argue that poetry is a name given to a kind of imitation using these instruments, but as a genus its character is assumed rather than a previously given certainty [translator's note].

of all three species and say that poetry is an imitation made with harmony, with number, and with meter, singly or together.

* * *

[44] Now that we have found the genus, and the individuality of poetry—that is, its instrument³—we can be said to have discovered its entire form. Next it would appear that orderliness requires that we turn to inquire into its proper subject and material. In the opinion of many these are falsehood and lying, even though the verisimilar is a fitting subject of poetry. And they have let themselves be induced to believe this because they think that the true poet is one who by himself fabricates the invention of his poem, adding that he who takes it from a place other than his own invention does not deserve the name of a true poet. They suppose also that this is the opinion of Aristotle, who called Empedocles⁴ more often a natural philosopher than a poet, because not his own invention but the truth of natural things was thought to exhibit itself in his verses.⁵ And in another place he says that Herodotus's⁶ history reduced to verse would still be history. And in this context I wish to mention that Euphronius in one of his comedies compared the poet to a cook in the following two lines cited by Athenaeus⁷ in his *Banquet of the Wise Men*: "The cook is no different from the poet, since both use wit to make art." * * * On account of all these authorities and others besides, it would be very easy to fall into the view of those who maintain that poetry has no subject other than the fabulous and false, but is yet linked to the verisimilar, since verisimilitude, according to the rule of Aristotle, is to be sought in the poets' fables.

[45] On the contrary, I maintain that this opinion does not conform to the truth for many reasons. Among these I am going to choose those which I think are most to the point. Therefore I will note first that the verisimilar false comes into some other arts that are different from that of the poets, such as rhetoric, which Aristides in the oration against the *Gorgias* of Plato and Philostratus⁸ in the Proem to the *Lives of the Sophists* calls "praise" [*adulante*], that which always and everywhere impresses the verisimilar false on the minds of judges to turn them from the straight way of justice. And on this topic I recall having read a most splendid dialogue by Signor Camillo Paleotti, a most erudite gentleman and also the most illustrious Maecenas⁹ of letters in this century, in which with very effective arguments and lively reasons he shows that the verisimilar false is, though greatly abused by the corrupt world, virtually the universal subject of the arts, the sciences, and education. Therefore it cannot be concluded that it is the proper and sufficient subject of the poets' art. Moreover, if it were to be the true subject of poetry, then poetry could not in any way be capable of truth; yet Plato wrote, Aristotle agreed, and reason persuades us that just the contrary is the case.

3. Mazzoni has just argued that the instruments of poetry are taken from music because they produce delight and because they reduce to order the immoderate pleasures that poetic imitation can instill.

4. Greek philosopher, poet, orator, physician, scientist, and statesman (ca. 493—ca. 433 B.C.E.).

5. *Poetics* 1, 1447b.

6. Greek historian (ca. 484—ca. 425 B.C.E.). See Aristotle, *Poetics* 9, 1451b.

7. Greek scholar (active ca. 200 C.E.). Euphronius (active mid–3d c. B.C.E.), an obscure Greek comic poet.

8. Greek sophist (b. ca. 170 C.E.). Aristides (2d c. C.E.), celebrated Greek sophist.

9. That is, patron; the Roman statesman Maecenas (d. 8 B.C.E.) was a great patron of letters. Paleotti (1552–1597), Catholic cardinal who wrote on law, religious subjects, and morality.

Therefore Plato in the *Republic* and in the *Laws* having approved that kind of poetry which treats the Gods in conformity to the truth, has demonstrated that he believes that truth is not repugnant to poetry.¹ [46] Likewise Aristotle has confirmed this judgment in three places in the *Poetics*. The first is in these words: "And if it happens that anyone treats poetically of things that have actually happened, he would nevertheless be a poet. For nothing prevents anything that has actually happened from being such that it might happen and could happen in a verisimilar way, so that he who treats them is a poet." The second place is at the beginning of the defense of poets: "For either he represents things that have happened or are said to have happened or appear to have happened or ought to have happened." The third is a little after this where he writes: "And beyond this it will be objected that the things he has said are not true. But they are what ought to be true."² In all three places, and especially in the last two, we see manifestly that Aristotle has sometimes conceded that the poet may use the true as a subject and that from everything said before, the idol in icastic imitation is, in Aristotle's opinion, a poetic idol.

But in addition to the authority of Plato and Aristotle, there is also reason to prove that the poet sometimes utters what is true. For when he is recounting the wanderings of some hero, he can do no less many times than describe places in the countryside. In these he follows the facts of geography, so either it must be said that he occasionally loses his title of poet, which would be quite ridiculous, or we must confess that the true may sometimes be a poetic subject. And we have already shown that idols and images can also be made from the true, both in narrative and in representation [i.e., drama].

From all these considerations it seems to me that we ought to affirm two conclusions as correct. The first of them is that the false is not always necessarily the subject of poetry. The second is that since the subject of poetry is sometimes true and sometimes false, there is consequently a need to constitute a poetic subject that by itself can be sometimes true and sometimes false. * * *

[47] Now if we remove the false and in its place put the true, we do not therefore destroy poetry, since we have already said that it can stand together with the true. The same can be said of the possible, for if the impossible is substituted in poetry, it will not therefore come to be corrupted or spoiled, if the impossible is credible. But if we take away the credible and in its place put the incredible, the nature of poetry is totally destroyed. And on the other hand taking the credible and at the same time removing the possible, we still have the poetic subject, as Aristotle has clearly testified in the following words: "As to what belongs to poetry, the credible impossible is more often to be preferred to the incredible and possible."³ Therefore it ought to be said that among all these there is no more appropriate subject of poetry than the credible. And even more to the point, how much the credible by its very nature includes both the true and the false, for often not only the true but also the false is credible.

* * *

1. Cf. *Republic* 2.377-79 [see above] and *Laws* 7.801 [translator's note].

2. *Poetics* 9, 1451b; 25, 1460b; and 25, 1460b.

3. *Poetics* 24, 1460a.

[51] Therefore, the credible is the object of that persuasion whose end is that which has now been demonstrated. And because it has already been decided on the authority of Aristotle that the credible is the subject of the art of the poets, it seems to me that we can draw three conclusions from what has been said. The first of them is that the poet being always concerned with the credible, he must as a necessary consequence treat everything in a fashion suitable to the credible, that is, always making use of singular and sensible means to represent the things he writes about whatever they may be. [52] And even if he treats things pertinent to contemplative doctrine, he must make every effort to represent them by idols and sensible simulacra, which Empedocles did not do. Hence, he was more often termed a physicist than a poet. In this matter Dante is really marvelous, as we will demonstrate more fully in the fifth book. For the present we must be content with this single example in which he speaks of the most holy and ineffable Trinity, writing:

Within the profound and clear substance
Of the exalted light three circles appeared to me,
Of three colors and one magnitude.
And one in the other, like a rainbow in a rainbow
Seemed reflected, and the third seemed like
Fire breathed forth equally from the one and the other.⁴

And for this reason it also happens that the poet uses such frequent comparisons and lengthy and specific parables. And whoever looks for the reasons why the poet is obligated at the very least in his storytelling to use this mode of the credible may rest content with the following reason: because the poet must speak to the people, among whom are many rude and uneducated men, and if he were to discuss knowable things in a mode appropriate to the sciences, they would not understand. And so he treats his subject in a credible mode, that is, instructing by means of comparisons and similitudes taken from sensible things, and the people, who understand that in sensible things truth resides in a way that is revealed by the poet, easily believe for this reason that the same is true of intelligible things.

From this we are able to conclude that it is not denied to the poet to treat things pertinent to the sciences and the speculative intellect, but he treats them in a credible manner, making idols and poetic images, as Dante, with most marvelous and noble artifice, has certainly done in representing all intellectual nature and the intelligible world itself with idols and images most beautifully to all eyes.

I recall that Plato in the *Phaedrus*, exalting his own invention, wrote just to this point: "But of that place that is beyond the heavens, I do not know that any of the poets has ever treated or is likely to treat it in a manner worthy of the way it is."⁵ And so on. But if he had seen Dante's third canticle, he would without any doubt have recognized his own invention as inferior and given the palm to Dante, and consequently to poets for knowing how to make idols and images appropriate to giving to the popular understanding the quality of the supercelestial world. Concerning this I have written at length in the fifth book where I also show with what tact Dante has at times

4. *Paradiso* 33.115-20 [translator's note].

5. *Phaedrus* 247c.

introduced either a philosopher or a theologian to discuss matters pertinent to the contemplative sciences in an understandable fashion, never deviating from the credible. [53] The second conclusion is that, since the poet has the credible as his subject, he ought therefore to oppose credible things to the true and the false, the possible and the impossible, by which I mean that he ought to give more importance to the credible than to any of the others I have enumerated.

Therefore, if it should happen that two things should appear before the poet, one of them false but credible and the other true but incredible or at least not very credible, then the poet must leave the true and follow the credible. And if anyone wants an example, let him read what I have written in the seventy-third chapter of the third book, where it is shown that Ariosto⁶ has described the mouths of the Ganges River according to credibility, departing totally from the truth. And if the Ganges were such that its mouths faced the south, as Ariosto has said, then it would also be necessary to say that Taprobana is New Zealand and not Sumatra.⁷ And yet Ariosto, following the credible and leaving the true, has said that Sumatra is Taprobana. This is discussed in the thirtieth chapter of the third book.

The third and last conclusion, which is almost a corollary of the previous two, is that poetry, in order to give more importance to the credible than to the true, must be strictly categorized under the rational faculty named by the ancients "sophistic." [54] And for a complete understanding of this truth, which (unless I am mistaken) has until now remained mysterious, it must be understood that the poetic art may be taken in two modes, that is, either according as it is concerned with the laws of the poetic idol, or according as it is concerned with fashioning or forming the poetic idol.

The first mode ought to be called "poetics" and the second "poetry." In the first mode is the ruling art, which uses the idol and is part of the civil faculty, as we will show a little further on. In the second mode is the art that forms and fabricates the idol and is a species of the rational faculty. As I have said, it ought to be included under sophistic, since it does not care about the true. I am aware that I may have offended the sensibilities of poets by fastening upon an art considered until now virtually divine and the title of sophistic, which has come to be thought repellent and scandalous. Yet to console them a bit I wish to dwell a bit upon the art of the sophists to show where it has or does not have positive or negative meanings. And for an easier understanding of what we have to say, I will set down here the words of Philostratus at the beginning of his *Lives of the Sophists*, which will be seen to contain a summary knowledge of the sophistic art very different from that commonly understood. Here then are the words of Philostratus:

Ancient sophistic must be called philosophical rhetoric, since it argues the same things treated by philosophers. Those who bring forward questions and doubts about each little item, have neglected to understand the ancient sophists about whom they speak with such assurance. Even so, their introductions say, "I understand this," "I know this," "It is just a portion that I have considered." Or, "Nothing is permanent for men." Either this mode of beginning adds luster to an oration or it makes

6. Ludovico Ariosto (1474–1533), Italian poet.

7. A glance at the atlas will confirm Ariosto's supe-

rior knowledge of geography and the points of the compass [translator's note].

plainer what is going to be treated. It was part of human prophecy, which the Egyptians and the Chaldeans studied, and before them the Indians prophesied by means of the stars. It belonged to the oracles, as the Pythian oracle⁸ said,

"I know the number of grains of sand and how great the seas are."

And this:

"Of wood were the walls which Jove gave to Tritonia [Athena]." Also, both Orestes and Alcmeon⁹ killing their mothers and many other things similarly fashioned were the subjects that the ancient sophists practised, and, drawing them out at length, they ornamented them everywhere with conceits, referring to the gods, heroes, justice, strength, and sometimes going even higher, they treated the creation of the world itself.

[55] In these words of Philostratus we have the proposition that sophistic is what treats everything rhetorically—that is, credibly—and reasons confidently with a certain vaunting of its propositions and takes feigned subjects like Orestes and Alcmeon, imitating the one or the other and representing them by idols. Now, that such representation by idols and images is proper to the sophistic art Plato has clearly shown in the *Sophist* where he names it 'Εἰδωλοποιητικὴν, that is, "The making of idols,"¹ that which represents apparent reality. This was also confirmed by Alexander Aphrodisias² in his *Commentary on the Elenches of Aristotle*. Philostratus in the place cited above, seeking to prove that Prodicus Chio³ was also a sophist, shows that he wrote a book in which he dealt with a matter pertinent to moral philosophy, namely, the appetites for virtue and vice which are at war within young men, and made idols and images for them. [55] He then says, "And for this purpose Prodicus Chio wrote a pleasant speech in which virtue and vice in feminine guise stood around Hercules.⁴ But he adorned and altered both of them as he saw fit and presented them to the young Hercules, here ease and softness and there discomfort and toil."

It seems to me therefore that one can reasonably say that poetry deserves to be placed under this ancient sophistic, since it also treats things credibly and speaks with such boldness as to profess to know all things by means of the Muses and Apollo.⁵ Certainly Hesiod,⁶ as a poet, became arrogant enough to pretend to know all things past, present, and future at once, and on this point I was pleased to see the opinion of a well-read commentator⁷ on the *Poetics* who feels that it is not suitable to the poet in any way to use words or modes of speech which place in doubt the things he discusses, for, professing the credible more than others, he ought to utter things with great assurance and boldness. Thus on this condition also the poet deserves the name of sophist, and even more he deserves it as the maker of idols and as representing everything with images, as has been shown at sufficient length in the preceding discourse.

8. The most famous of Apollo's oracles, at Delphi; its priestess was the Pythia.

9. In Greek mythology, each avenged his father's death by killing his mother.

1. Plato's word is *eidōlopoiikē*; see especially *Sophist* 235b–236c, 268d.

2. Aristotelian commentator known as Exegetes (active 200 C.E.).

3. Prodicus of Chios (active 5th c. B.C.E.), a sophist concerned with precise diction and a friend of

Socrates.

4. The Roman name for Heracles, the greatest hero of classical mythology.

5. The ancient Greeks considered the Muses and Apollo to be the sources of inspiration for the arts and sciences.

6. Greek didactic poet (active ca. 700 B.C.E.).

7. Ludovico Castelvetro (ca. 1505–1571), Italian critic and philologist.

Philostratus also says that the ancient sophists willingly talked of gods and heroes, which material is held to be appropriate to poets. And therefore in this respect also it can be concluded that poetry is a species of ancient sophistic. But in order to understand perfectly everything pertinent to this discourse, it will be well to disclose all the other species of sophistic and then to see which are convenient to poetry, and which are not. Therefore, having discussed ancient sophistic in the words quoted above, Philostratus then shows that there is another species that he calls second sophistic, about which he writes in the following way: "Following this was one which does not suit the term new, for it also was ancient. But more often than not it favors and takes as its subjects the poor, the rich, gentlemen, or tyrants, giving them names, as in history. The old sophistic of Gorgias Leontinus originated in Thessaly, and the second sophistic of Aeschines,⁸ son of Astrometus, was already in decline in the Athenian republic."

[57] We know by these words of Philostratus that the old sophistic was not different from the second in any other way, except that the old used made-up names and the second used real names. Whence it can be said that icastic poetry is a species of the second sophistic and phantastic poetry is a species of the ancient sophistic. Now I think that everyone should know that Philostratus believed the sophistic art to be that which set the true aside to behold the credible, and that he considered it worthy and noble, not low and scandalous, as Boethius⁹ preferred to depict it, and perhaps also Aristotle and Plato. But to reconcile those authors who have condemned sophistic with those who have praised it, we have to understand that sophistic was considered in some way to partake of the rectitude of true philosophy.

Now only true philosophy directs the intellect by means of the true and the will by means of the good. Therefore only the sophistic totally contrary to true philosophy misdirects the intellect by means of the false and the will by means of evil. It was this sort of sophistic which was condemned by Plato and Aristotle and all their followers, and apparently Plato wanted to gather under this species of sophistic the poetry of Homer¹ as that which misdirected the intellect by representing false things about the gods and heroes and that which misdirected the will with that variety of imitation and immoderate augmenting of our feelings which were discussed just previously.² [58] And therefore one could say that any other poetry like that of Homer would have to be placed under the sophistic condemned by that philosopher, and not only was it banished from Plato's *Republic* but also from that of the Athenians, as Philostratus has written in the following words: "The Athenians, perceiving the eloquence of the sophists, chased them from the courts, on the grounds that they dominated the courts with unjust utterance and had too great a power over the law." Therefore the species of sophistic condemned by the philosopher is that which misdirects the intellect with falsehood and the will with injustice. Under which he also places that sort of poetry which produces the same disorders and which does not really deserve the name of poetry, since it does not form its idols according to the laws of poetic practice or theory, as was plainly discussed a little before.

8. Famous Athenian orator (ca. 397–ca. 322 B.C.E.). GORGIAS (ca. 483–376 B.C.E.), famous rhetor and sophist known for eloquence and skepticism.

9. Roman philosopher (ca. 480–524 C.E.).

1. Greek epic poet (8th c. B.C.E.); his *Iliad* and *Odyssey* were in effect the national poems of ancient Greece.

2. *Republic* 2.377–78 and *Protagoras* 316 [translator's note].

The second species of sophistic is that which Philostratus called the old sophistic, which indeed sets feigned things before the intellect, yet does not mislead the will, so that it claims in every way to make it conformable to what is just. And that kind of sophistic was never condemned by the ancients. And if, even so, it should appear to someone that it deserves condemnation for misleading the intellect by some falsehood, I say that he should know that the ancient pagan philosophers (being at variance in this matter with the truth of sacred theology) have praised this misleading of the intellect in certain things, when it is directed to a legitimate end. And in this respect Plato preferred that the magistrate should be able to tell lies to his citizens for the sake of some public good.³ I pass over the fact that this species of sophistic almost always contains some truth under the skin of a first appearance.

Now I maintain that phantastic poetry regulated by the proper laws belongs to that ancient sophistic, since it also offers feigned things to our intellects in order to regulate the appetite. And often it contains under the outer covering of fiction the truth of many noble concepts.

The third species of sophistic is that which Philostratus called the second sophistic, which does not employ feigned names and events, but rather true names and real actions on which are based discussions appropriate to the rules of justice. [59] And this was also much praised by the ancients: thus Demosthenes⁴ and Aeschines professed to be most worthy and excellent in this kind, as Philostratus makes evident in the following words: "In this way Aeschines and Demosthenes publicly traded insults, when they were trying a case before the courts." And this was also called a species of sophistic, because even though it made use of true things in the cause of justice, yet it did so in a credible manner. For which reason the sophists sometimes departed from the truth if the false were a more credible or effective instrument in persuading those of what they wished. There is no better example than the following warning by Valerius Harpocration⁵ about an oration of Demosthenes: "Demosthenes affirmed in his oration on the fleet that the revenue of the Athenian republic was six thousand talents⁶ (a sum of three million six hundred thousand escudos), writing thus: 'He will hear that our fields yield us a revenue of six million talents.' This was either an error on the part of the scribe, or the orator spoke cleverly to make it appear that the republic had a greater ability to make war than the king of Persia."

Under the third species of sophistic we ought in my judgment to place iastic poetry, which represents true actions and persons but always in a credible way. [60] Therefore, on the basis of this entire discussion of sophistic with the fundamentals we have provided, everyone can understand that poetry is a rational faculty and that, among other rational faculties, it ought not to be placed with those that teach the truth, avoiding all other matters, but with those that employ all their power to examine the apparent credible, avoiding the true, and that this was the reason the ancients called it sophistic. To all these reasons may be added the authority of two most excellent writers. The first is Plato, who, as we have said, called the sophist a maker of idols;

3. *Republic* 3.389b (see above).

4. Athenian orator and statesman (384–322 B.C.E.); his great rival was Aeschines.

5. Alexandrian lexicographer and scholar of ora-

tory (active 2d c. C.E.).

6. About 340,000 lbs. (an Athenian talent was ca. 57 lbs.) of silver.

that is, a sophistic imitator. In the tenth book of the *Republic* where he discusses the imitator he calls him the "marvelous sophist," adding that he never represents the true, but always the apparent. "The painter," he says, "does not paint the real bed, only its appearance." And just after this he says clearly that an imitation is three stages removed from the truth, the first stage being the art of using, the second the art of making, and the third that of imitating. And then he concludes: "Therefore the imitator imitates at a distance from the truth, and, as we have seen, he is able to do all things because he touches only a small part of them, and that part is an image."⁷ The second authority is Plutarch, who in the essay where he deals with how a young man ought to listen to poems, writes as follows: "But he who does not forget, but always keeps in mind the tricks of poetry in telling lies, will say to it at every turn, 'O clever device, whose hide is more varied than the lynx's, why when joking do you deceive with a serious brow, pretending to tell the truth?'"⁸ And he has previously shown that poetry willingly accepts the lie in order better to please.

Therefore, I firmly conclude that poetry is a sophistic art and that through imitation, which is its proper genus, and the credible, which is its subject, and through delight, which is its end, when it is under that genus, and has that subject, and gains that end, it is many times forced to find room for the false. And although I have only cited Philostratus, Plato, and Plutarch on this point, a thousand others could be found whom I have left in the wings so as not to be too long.

And so the credible is the subject of poetry. But because it is also the subject of rhetoric we must necessarily see in what way it can be made to become proper to both poetry and rhetoric, since we will not fall into the error of those who accept the verisimilar false.

[61] I say therefore that the credible insofar as it is credible is the subject of rhetoric and the credible insofar as it is marvelous is the subject of poetry, for poetry must not only utter credible things but also marvelous things. And for this reason when it can do so credibly, it falsifies human and natural history and passes beyond them to impossible things, as I prove in the sixth chapter of the third book and in the others following, in which a full digression treats this material. So that, if two things equally credible were offered to the poet, ~~one~~ of them more marvelous than the other, though false, not just impossible, the poet ought to take it and refuse the other. And if anyone wants examples, let him read the abovementioned digression, in which, I am convinced, he will find many to the point in each of Aristotle's ten predicaments.⁹

But perhaps there is someone who might wonder why the credible marvelous is not found in company with the true. And he might also suppose that what was said before—that poetry sometimes admits the true—is wrong. I respond that sometimes true things are found in poetry which are often more marvelous than the false, not only in natural things, as Pliny the Younger¹ has shown in the eighth book of his *Letters* when he writes to

7. *Republic* 10.596d, 597e; 601d, 602c; 603a.

8. Plutarch, "How a Young Man Should Study Poetry," *Moralia*, Loeb ed., vol. 1, pp. 83–84 [translator's note]. Plutarch (ca. 50–ca. 120 C.E.), Greek biographer and moralist.

9. The "predicaments" or predicables make up Aristotle's *Categories*. They are substance, quan-

tity, quality, relation, place, time, position, state, action, and affection [translator's note].

1. Roman rhetorician (ca. 61–ca. 112 C.E.), nephew of the natural historian Pliny the Elder. Among his correspondents on literary subjects was Caninius Rufus, of whom little else is known.

Caninius Rufus, but also in human history, as that same Pliny has shown in the ninth book, writing to the same Caninius. [62] In the latter he explains that the war made on Dacia by the Emperor Trajan,² although true, was nevertheless a worthy subject for a poem because it was marvelous. Here are his words: "I greatly approve your plan of writing a poem on the Dacian war, for where could you have found a subject so fresh, so eventful, so broad, and, in short, so poetical; a subject which, although most true, is also marvelous. You will write of rivers turned into new channels, of bridges thrust across rivers for the first time, of camps pitched on precipitous mountains."³ See how well Pliny demonstrates that the true can sometimes reach the marvelous. Concerning this topic there only remains to discuss that authority by which it seems to be proven that the false, insofar as it is verisimilar, is a poetic subject. I mention first of all that it is the case that Aristotle calls Empedocles more a physicist than a poet, and this is confirmed by Plutarch in the essay on understanding poems cited above: "I do not know of poetry without fable or fiction. For the verses of Empedocles and of Parmenides, the *Theriaca* of Nicander, and the sayings of Theognis⁴ are more often than not sermons, so that as a vehicle to cast off the baseness of prose, I prefer the grandeur and measure of poetry."⁵ Now as for the authority of Aristotle, we can respond to it in two ways, the first of which is that he has said that Empedocles is more often a physicist than a poet, but he has not by that statement said absolutely that he is not a poet, so that affirming that he is more of a physicist than a poet, he has in some way said that he is a poet, since the grammarians tell us that the comparative assumes the positive.

The second way of answering Aristotle is that it could be said (as it was said above) that Empedocles did not merit the name of poet, not because he dealt with true things, for it has already been shown that poetry is able sometimes to treat the true; but because he dealt with things belonging to the sciences scientifically, when he was obligated as a poet to treat them credibly, that is, forming idols and images, matching his mode of instruction more often to the sensitive than to the intellectual powers. As for Plutarch, I say that either he is really speaking of the true and perfect poet, who (as it is said) ought more often to be placed under phantastic imitation, rather than icastic imitation, or his opinion is in opposition to that of Aristotle and Plato, that is, that poetry cannot in any fashion be made from the true. And this answer ought to suffice for the authority of Plutarch, which has been cited to the contrary. [63] To Aristotle's text where he writes that the history of Herodotus laid out in verse would still be history, and so not worthy of the name of poetry, I respond that it is true, but that it does not follow from this that one cannot in some way make a poem out of history, when it is represented as the credible marvelous in idols and particularized images. But if it were narrated in the mode appropriate to history, without making idols and images, even if it were laid out in verse, it would always remain history.

2. Roman emperor, 98–117 C.E. (b. 53); he successfully conquered Dacia (roughly equivalent to modern Romania) in 105.

3. Pliny the Younger, *Letters*, book 8, letter 4. The reference to a natural marvel is in book 9, letter 33 [translator's note].

4. A Greek elegiac poet of Megara (active ca. 540 B.C.E.), known for his large fragmentary collection

of gnomic verses. Parmenides (b. ca. 515 B.C.E.) Greek didactic poet and philosopher known for his *On Nature*, which contains the earliest Greek discussion of philosophical method. Nicander (2d c. B.C.E.), Greek poet and grammarian. 5. Plutarch, "How a Young Man Should Study Poetry," *Moralia*, Loeb ed., vol. 1, pp. 83–85 [translator's note].

And this was what Aristotle meant at that place [in the *Poetics*]. To the authority of Euphron,⁶ I respond that the true can also be sweetened by narrating it in conformity with the credible, using idols and images.

For this reason I believe that icastic poetry, which takes a true subject from history, may nevertheless combine some things of its own in order to render that history more particularized. This is no doubt even more clearly evident in the dramatic-icastic than in the narrative-icastic.

As for the authority of Plato in the *Phaedo*, I say that he discussed phantastic poetry which always takes a fabulous subject, either forming one totally feigned or falsifying a true story. And for this reason he says in that place [the *Phaedo*] that the poet deserves his name more often for his inventing of fables than for his inventing of verses.⁷ Or one might say that he takes the fable in the sense of every invention that can be suitable to the poem and names it fable, because for him such subjects are false and fabulous. [64] But it should not for this reason be said that he did not believe that the true could be a poetic subject, since in an infinite number of other places he says just the contrary, as has already been shown.

Therefore let us summarize what has been said on the poetic subject, that it ought to be credible and at the same time marvelous, and then joining this subject to the form already disclosed above, we can now say that *poetry is an imitation made with harmony, rhythm, and verses, singly or together, of things credible and marvelous*.

There remains for the completion of this definition that we find the efficient and final causes of poetry. Now as for the efficient cause, we might dispatch it by saying that it is the human intellect. But this is a cause common to all the other arts, and we only wish to find one that is more appropriate to poetry and that, joined to its end, will reveal the proper origin and legitimate use of poetry.

Therefore in order to lay the foundation for this, I believe there is no surer way than to consider what that art is that discovers the use of poetry, because that, unless I deceive myself, will reveal the origin and the end of poetry. I think, then, that the civil faculty⁸ is that which discovers not only the use of poetry but also explains the norm and the rules for the poetic idol. The following consideration presses me toward this belief, namely, that all the natural powers and the arts that are born of human reason are usually directed to contrary objects, as for example medicine, which not only deals with health and healthful potions but also with sickness and poisons. We can say also that the legal profession likewise not only professes to deal with justice but with injustice as well.

Now keeping this in mind, I say that the civil faculty not only professes to understand the justness of human actions but also the justness of the cessation of human actions, a justness that is opposed to the first justness as deprivation is opposed to habit. * * * [65] But the cessation of a process, as will be explained a little further on, must dispose and prepare men so that they are more apt and eager for the process. Therefore the same faculty will provide the rule for the activity and its cessation. [66] And note that I do not

6. Poet of Greek New Comedy (active 270 B.C.E.).

7. Apparently a somewhat inaccurate reference to *Phaedo* 61b.

8. By the civil faculty Mazzoni means, roughly

speaking, ethics, or the mode of discourse that decides the social relevance of something [translator's note].

take cessation to be total privation or extinction or activity, but only cessation of serious and difficult activities, and so in the word *cessation* we include the activities of play and amusement which we do for recreation and entertainment. So it can be said that the contrariety of function and cessation is not only privation but (as was said above) also positive. It is privation insofar as the cessation indicates the absence of serious work. It is positive insofar as the cessation of serious work might contain some pleasant activity apt to restore the spirits fatigued by the more important function. This is clearly enough indicated by Aristotle in the tenth book of the *Ethics* and the eighth of the *Politics*, where discussing cessation (which he treats at length in the fifth chapter of the second book), the name is always ἀνάπαυσις and not σχολή⁹ to make it clear that he does not take the otium that is the father of all vices as entertainment or the cessation of serious things, but rather some peaceful and gentle activity.¹

So it appears to me that one can firmly say that in order for cessation to be the opposite of the privative and positive activity, it must necessarily be the concern of one art and a single faculty. But the civil faculty is that which considers the rightness of an activity, so it should also consider the rightness of its cessation. Within it, as I have said, are contained all the activities of amusement, that is, those performed in games. Therefore the consideration of the rightness of pleasure will without any doubt be pertinent in some way to the civil faculty and to moral philosophy. But among all games none is found more worthy, more noble, and more central than what the poets' work has made. Therefore the civil faculty takes care to consider principally among the other pleasures the standard and rightness of poetry.

Now, that the ancients believed that poetry was a game is shown in the abovementioned chapter of the second book on the authority of Virgil, Horace, Timocles² the comic poet, Plato in the tenth book of the *Republic*, and in the fifth of the *Laws*, and Eusebius of Caesarea³ in the twelfth book of the *Evangelical Preparations*. To these can be added the authority of Aristotle, who in the seventh book of the *Politics* calls games "the imitations of those things you do seriously." And there is the authority of Plato who in the second book of the *Laws* says of poetic imitation: "Again I call it amusement and play."⁴ From all these considerations it seems to me that it can be reasonably said that the civil faculty ought to be divided into two principal parts, one of which is concerned with the laws of activities and is given the general name of politics, that is the civil law. [67] The other is concerned with the laws of cessation or the laws of recreational activities, and is called poetics. And on this basis I believe that the *Poetics* is the ninth book of the *Politics*, and my view seems to me all the more correct in that I find in the eighth book of the *Politics* and at the beginning of the first chapter of the *Poetics* he commences to deal with music, in order to proceed step by step to discuss the recreation of the civil faculty. And so I say that the first seven books of

9. Both Greek terms can denote rest and repose, but the first (*anapausis*) suggests leisure and relaxation while the second (*scholē*) implies idleness.

1. *Nicomachean Ethics* 10.3; *Politics* 8 generally concerns education and leisure. The sixth chapter of the second book would seem more to Mazzoni's point than the fifth, which deals with a number of topics ranging from the justice system to political

innovation [translator's note].

2. Greek poet of Middle Comedy (active ca. 330 B.C.E.). Virgil (70–19 B.C.E.), Roman poet. HORACE (65–8 B.C.E.), Roman lyric poet and satirist.

3. Bishop of Caesarea and historian of the early Christian church (ca. 260–340 C.E.).

4. Aristotle, *Politics* 7.1334a; Plato, *Laws* 2.667e [translator's note].

the *Politics* speak of the civil faculty at work and the last two speak of the civil faculty (so to speak) at rest, a state we have just previously called poetics.⁵

Therefore poetics is part of the civil faculty and is what prescribes the standards, the rules, and the laws of the idol in poetry. So in a way it can be said that poetics deals with the idea of the idol and poetry with the making of it. Thus poetics will be in its genus the ruling art, using the idol made by poets to that end we have just previously mentioned. And in its genus poetry will be the fabricating art, the maker of the idol, which is then to be used by poetics and by the civil faculty.

[68] We can therefore add to the previous words concerning the definition of poetry its efficient cause and say: *Poetry is an imitation made with harmony, number, and verses, singly or together, of credible and marvelous things discovered by the civil faculty.*

Up to this point we have disclosed the form, the subject matter, and the making of poetry, so that it remains only to turn our hand to the discussion of its final cause. Ancient and modern writers have raised a great fuss about this, not knowing very well whether they should take usefulness or delight or both, or neither the one nor the other, as the end of poetry.

* * *

[70] Now for a complete solution to the present questions, it is necessary to understand that it is not inappropriate for the same thing when considered in diverse ways to have diverse and different ends. And because in this matter I desire to be understood by everyone, it will not perhaps weigh against me to discuss the abovementioned proposition by means of some examples taken from natural things. Therefore I maintain that nature (as is demonstrated at length in the fifty-fifth chapter of the third book) forms the tongues of animals for one principal end, that is for taste, in order that by means of the delight taken in the tasting of food animals will be almost violently impelled to keep themselves alive. And therefore it can be said definitely that nature has formed the tongue in order to serve as an instrument of the vital powers and the concupiscible appetite. However (as Aristotle has declared in many places cited in the abovementioned chapter), nature has sometimes directed that same tongue to an end other than taste, since in men it has made it also an instrument of speech, and consequently as such it is not just an instrument of the vital power or the concupiscible appetite, but, rather, of the rational power and appetite. And at other times it has also been formed as an instrument of the irascible power, having been placed among their weapons of defense, as is seen in bees and in certain other insects.

Thus it can be said that the adequate and principal end that nature proposes in the fashioning of the tongue is taste, since the tongue is not found fashioned by nature unless it is directed to this end. [71] But for all this it can also be added that sometimes nature forms that same tongue to serve another end and consequently it is an instrument of other powers than the

5. The latter part of book 7 and all of book 8 discuss liberal education, that is, the education appropriate to a free man. For Aristotle this means not just someone not a slave, but a citizen relieved from the compulsion to labor or earn a living by

commerce. The civil faculty at rest or leisure thus concerns itself with contemplation and with the study and appreciation of certain kinds of elevated enjoyment such as music and poetry [translator's note].

concupiscible or vital, and this is clearly seen in the tongues of bees and men. The first of these is an instrument not only of the concupiscible appetite but also of the irascible, and in this second mode it is not made for taste but for defense. The second is an instrument of the vital power and of the rational, and in the latter mode its end is human speech. Therefore, the tongue can be considered in three different manners, that is, as an instrument of the concupiscible, of the irascible, or of the rational appetites, and in each one of these modes it always has a different end—when used by the concupiscible power, it has taste as its end; when used by the irascible, offense; when used by the rational, speech—yet in such a way that taste seems always to be the more suitable and essential end among all the others.

In like fashion I say that poetry can be considered in three different modes, that is, as an imitative art, either as enjoyment or amusement simply, or as enjoyment or amusement directed, ruled, and defined by the civil faculty. If it is considered as an imitative art, I say that it has no other end than to represent or resemble correctly. And this is what Plato, Proclus, and Maximus of Tyre⁶ meant in the passages cited above. [72] Now it should be understood that (as Aristotle has written in the tenth book of the *Ethics*) delight is an accident proper to some functions, and among them is without doubt most proper to imitation, since it seems in a way joined to it so that no mode of imitation can be found that does not at the same time bring both delight and pleasure. * * *

Since, therefore, imitation is always linked to delight, so it happens that all those who have attempted to produce games and enjoyment have produced them with some kind of imitation, as I have shown in discussing the ancient game of chess in the sixth chapter of the second book, and I may add here (to provide an example different from those two) the game of *primero*,⁷ in which is represented the image of ochlocracy, that is, that republic in which the common people have the most power. For since in this kind of republic the aristocrats are weak and the common people strong, so in the game the cards commonly given the noblest names are of lesser value than the other cards that have the vulgar name of waste paper because of their baseness. Now since imitation itself can be considered as part of the above-mentioned game, in this mode it has no other end than to represent the image of ochlocracy and can be deemed a game and amusement, and in such a mode we recognize no other end than delight and pleasure. So I say that poetry can in the same way be thought of as an imitative art and as a game and amusement.

In the first mode it has as its end the correctness of the idol, that is, whether the thing has been imitated in an appropriate way. But in the second mode it contemplates delight and pleasure as its end, and these are joined to a good and perfect imitation. [73] Therefore, I conclude that poetry as an imitative art has the correctness of the idol as its end, but as a thing that should be used for play and amusement and to interrupt some more serious and rigorous business, it here proposes as its end delight born of appropriate imitation. Now this delight that poetry brings us can be looked at in two ways: that is, either as free and independent of any law, or as subject to and

6. Sophist (ca. 125–185 C.E.), Proclus (412–485 C.E.), Neoplatonic philosopher and systematizer known for his commentaries on Plato's works.

7. A card game, often called "prime" in Renaissance England [translator's note].

regulated by the civil faculty. In the first mode it is the end of that poetry which was classified under the kind of sophistic worthy of blame, because it disordered the appetite with immoderate delight, producing complete rebellion against reason and bringing on damage and loss to a virtuous life.

That was the sort of poetry banished from his republic by Plato, concerning the reason for which Maximus of Tyre has written in his eighth sermon that just as Mithecus, the most excellent cook, was banished by the Spartans, despite the fact that he was greatly esteemed among the other peoples of Greece, only because his art had no other end than to please the taste, which was totally repugnant to the sobriety of the Lacedaemonians;⁸ so also did Plato banish poets from his republic as having regard for nothing other than delighting too freely. [74] And Proclus in the *Poetic Questions*, having admitted that this sort of poetry is truly enjoyable, supplies the reasons why it is damaging and harmful to civil life: "I will therefore suggest two reasons why Plato did not accept tragedy and comedy in a proper republic as worthy of the education of the young. One was the variety (as it is called) of the imitations; the other was the unlimited moving of the passions, which he wished to moderate however he could. To this can be added as a third the case of saying any sort of wickedness in those same genres about gods and heroes." And so on.

If, therefore, one has to reason about the end of this poetry, it can be definitely said that as an imitative art its end is the correctness of the idol, but that as recreation its only end is pleasure.

But if delight is considered insofar as it is regulated and defined by the civil faculty, we will necessarily have to say that it is directed toward the useful and consequently is that species of poetry which was placed under praiseworthy sophistic, that is, under that which orders the appetite and submits it to the reason, and, considered as game, defined by the civil faculty to have usefulness as its end. It is nevertheless true that I do not ascertain that this species of poetry is as rough and austere as Proclus claims in the first poetic questions, where he distinguishes two species of poetry, the good and the evil, in the following words: "But it is especially the job of the laws concerning the instruction of youth to keep an eye on such poetry as that which is genuinely enjoyable, pleasing, but not useful for teaching virtue, and which the more it is enjoyable, so the more it is harmful. And to the same laws belongs the choice of an austere muse that guides us to virtue by the right way. For we do not find the wonder of medicine in what is pleasant but in that which heals." In these words of Proclus we see that he believes poetry has to be more a medicine than an enjoyment and that consequently by giving it the useful as its end he does not mind if he separates it from any sort of delight. [75] But it is beyond doubt that in this he disagrees with Plato, who has clearly admitted in many places that poetry is the bringer of the useful to our minds by means of the delight it offers us under the species of enjoyment and recreation.

And to understand fully this favorable opinion of Plato's one has to know that there are three sorts of men to whom he apparently believed the civil faculty—by which we mean moral philosophy—could bring some betterment. These three sorts are: those disposed and habituated to the good, those

8. Citizens of Sparta (also called "Lacedaemon").

who are wicked and habituated to evil, and those who are not disposed or in any way habituated either to good or evil. Among the first sort are the men who have learned to curb the disorderly movements of the appetites, and I think that these are the ones who practise moral philosophy well (as Plato himself writes in the *Protagoras* and the *Gorgias*) insofar as it is lawful, that is, insofar as it gives laws and precepts for living well and happily and free of passion. Of the second sort are impious men used to despising the decrees of the law, and for these he shows at length in the *Gorgias* that moral philosophy is useful, insofar as it is judicial, that is, insofar as evildoers are punished by penalties established in trials.⁹ [76] Of the third sort are young girls and boys and all those who feel the tumult of passions, who, in addition, are not used to either good or evil, but who still can be taught the way of virtue and as well be instructed in the way of vice. And because these—as Aristotle has written at the beginning of the *Ethics*—are greatly agitated by their turbulent passions and violent affections, therefore, he believes, they are not apt listeners to the teaching of moral philosophy.¹ But Plato thinks that even these may be offered moral teachings seasoned with poetic sweetness. So it appears that Plato believes (according to what he writes in the second, third, and tenth books of the *Republic*, but even more plainly in the second book of the *Laws*) that the poetic faculty is the civil faculty, or moral philosophy, and it gives instruction to those who are unfit for naked instruction, either because of their age or the strength of their passions. And so I conclude with Proclus that Plato sometimes calls poetry a medicine, like that which aims to make souls healthy, and thus has usefulness as its end.

But I disagree with Proclus because he does not recognize any sort of delight in poetry. Even Plato allows that it introduces the useful by means of delight, for thus he praises it and calls it play and wants to be so understood: "Because the more tender minds do not accept serious studies, their studies are called games and songs and are performed as play; so when men are physically ill, those who care for them spread their nourishment with sweet condiments, but they make unhealthful food unpleasant, so that they learn to accept the one and reject the other."²

* * *

[78] Now without any doubt I think that as regards the end of poetry this is a correct opinion, that is, that perfect poetry regards delight as the cause of the useful. And as proof of my opinion, I am going to make the following discussion a little different from that of Plato.

Therefore I say that perfect poetry is game and is modified by the civil faculty; insofar as it is recreation it has delight as its end, but insofar as it is modified or, so to speak, characterized by moral philosophy, it puts delight first in order to provide a later benefit. And from this it seems to me that the civil faculty has decided that everyone may enjoy the delight that comes from poetry. And it has been so established by Plato in his *Laws* and by other legislators. I say further that the Athenian Republic so valued the delight brought to the people by poets that they were not ashamed to give each year many hundreds of coins to its citizens to buy themselves seats in the theatre

where they could more easily hear the comedies and tragedies acted. * * * [79] And if it should seem to anyone that it is necessary to set forth more in detail the mode and type of this benefit, I am pressed, in order to satisfy this desire, to say something briefly.

[80] Plato wanted his republic to be composed of three sorts of persons: artisans, soldiers, and magistrates. Proclus added that under the category of artisans Plato included all the lower- and middle-class citizens, and that under the category of magistrates he included all those more powerful people who had the government of the republic in their hands. Now based upon this supposition I say that there are, deriving from the providence of the civil faculty in the city, three principal kinds of poetry—the heroic, the tragic, and the comic, each one of which makes use of delight to benefit all the people; each principally aimed at the benefit of one of those three parts that are, according to Plato, necessary to civil community. And so we say that the heroic poem was principally directed at soldiers, since by means of the virtuous actions of the heroes represented in such poems, they would be as if spurred on by glory driven to imitate it. Tragedy principally looks to the utility and benefit of princes, magistrates, and the powerful and, so as to keep them always under the justice of the laws, represents freely the dreadful and terrible downfall of great persons, which comes almost to be a bridle to restrain and moderate the size of their fortune. Comedy has as its principal intention the benefit of persons of low or moderate estate, and to console them for their modest fortune it usually presents actions that always end happily. And in this way, I think, the civil faculty inclines to the understanding that the humble and popular life is so much more enjoyable and filled with greater contentment than the grand or regal life. * * *

[82] Since the civil faculty seeks to implant in the minds of humble citizens obedience to their superiors, so that out of desire for novelties they should not be moved to disobedience or rebellion, and so that they should always remain content with their condition, it gave birth to comedy, in which the humble life is shown to be happy, fortunate, and capable of infinite solace. On the other hand, since the more powerful and all those raised to the mastery of others have not had to pay too much attention to their fortune, and consequently have become insupportable and insolent in their rule, the civil faculty wished to create tragedy, which would function as an adequate counterweight to the insolence of prosperous fortune. Hence all those who find themselves in such a condition will be able to extract useful instruction in moderating the pride characteristic of their state. [83] This usefulness of tragedy, I believe, is clearly enough indicated by Dio Chrysostum³ in these words: "Nor is it anyone poor that the tragic situation deals with. On the contrary, all tragedies concern the Atreides, the Agamemnons, and the Oedipuses,⁴ who possess a great abundance of gold, silver, fields, and cattle. So they say that the golden fleece was the greatest of all misfortunes." And so on.

Now it seems to me that from what has been said before concerning the utility to be derived from comedy and tragedy, we can conclude that those two kinds of poems are directed by the civil faculty to the extinguishing of

3. Rhetorician (ca. 40—ca. 120 C.E.), an adherent of Cynic-Stoic philosophy.

4. The sons of Atreus (i.e., the Atreides), Mene-

laus and Agamemnon, like Oedipus, were kings of Greek city-states.

sedition and the preservation of peace. And because the civil faculty also has to keep military education in mind, in order that in times of war the republic may be capable of defending itself, it seems to me that it can probably be supposed that for this end the civil faculty created the heroic poem, in which is celebrated the highest strength of the heroes, and especially of those who generously disdain death for the sake of the country, to the end of reminding our soldiers of like examples so that they will consequently be more prone to despise the perils of death for the safety and increase of the public good. And in this way we see that these three species of poetry ruled by the civil faculty, in addition to delight, bring utility and benefit to the republic, instructing in an almost concealed way the three kinds of men, from which (according to Plato) the ideal order of citizens is made up. * * *

[84] Now to come to the end of this definition, I think it would be well to recapitulate in a brief epilogue what has been said before about the final cause of poetry. I say therefore that since language is always the instrument of the concupiscible power and has enjoyment as its end, but that, nevertheless considered as an instrument of the irascible power, it has as its end the defense of the sensitive soul; and if considered as an instrument of the rational power, its end is language. In the same way poetry is always an imitative art, and insofar as it is such, its end is always to represent the images of things correctly. Nevertheless, considered as a game, its end is delight; and considered as a game modified by the civil faculty, its immediate end is delight, but directed to profit.

On this premise, it seems to me that it can be concluded that poetry is capable of three definitions according as it is looked at in three different ways, that is, either as imitation, or purely as a game, or as a game modified by the civil faculty. In the first mode it can, perhaps, be defined this way: *Poetry is an art made with verse, number, and harmony, singly or together, imitative of the credible marvelous, and invented by the human intellect to represent the images of things suitably.* In the second mode this other definition would perhaps be appropriate: *Poetry is a game made with verse, number, and harmony, singly or together, imitating the credible marvelous, and invented by the human intellect in order to delight.* Now, since of poetry considered in the first mode we have come to understand all the authority that acknowledges correct imitation as the poetic end, so of poetry considered in the second mode we have expounded all the other authority that accepts only delight as poetic end[.] * * *

[85] In the third mode perhaps there is room for this last definition: *Poetry is a game made with verses, number, and harmony, singly or together, imitating the credible marvelous and invented by the civil faculty to delight the people in a useful way.* Of poetry considered in this mode, we have to understand fully all the authorities that attribute to it the end of usefulness by means of delight. [86] In this regard we should attend to the following words of Proclus, in which he talks of poetry more as a kind of learning than as imitation: "Now if it must be an imitation, as we have said, it also has to concern itself with worthy goodness. For I say that all its virtuous deeds, whether or not they are fashioned by imitation, have no more important end than the good."

From these three definitions there necessarily follow four corollaries. The first of these is that poetry taken in the first two modes is neither ruled nor governed by the civil faculty. The second is that only poetry in the third mode

is that which is ruled and governed by moral philosophy or the civil faculty. The third is that the poetic that considers the idol in the first mode and that which likewise considers the idol in the second mode of poetry should not in any way be called a part of moral philosophy. The fourth and last corollary is that only the poetic that considers the idol in the third mode of poetry is that which really deserves to be called part of the civil faculty. And each good poet should put together his poems according to the rules of this mode of poetry, as Dante has done better than all the others.

* * *

1587

SIR PHILIP SIDNEY

1554–1586

Sir Philip Sidney embodied the aristocratic ideals of the Renaissance man: he was a courtier, soldier, statesman, amateur scholar, and poet—a legendary figure in his own lifetime. Author of the first English sonnet sequence, Sidney also wrote the first landmark of literary criticism in English. In 1579, a Puritan minister named Stephen Gosson published an attack on the theaters titled *The School of Abuse*, dedicating it, without permission, “to the right noble Gentleman, Master Philip Sidney, Esquire”; Sidney countered the following year with his defense, *An Apology for Poetry*, sometimes called *A Defence of Poetry* (1580–81). Though it responds to specific attacks, the *Apology* enjoys significance far beyond its occasion for its synthesis of the Renaissance understanding of classical literary theory, which set the terms of literary debate in England for the next two centuries, and for its formidable handling of its genre—the defense of poetry—which Sidney adapted from classical and medieval models.

Because Gosson’s attack draws so heavily on PLATO’s objections to poetry, Sidney’s *Apology* reads like a reply to the *Republic*. Though his classicism is filtered through the Italian humanists of the fourteenth and fifteenth century (it echoes BOCCACCIO’s defense of poetry in *Genealogy of the Gentile Gods*), Sidney relies particularly on ARISTOTLE’s *Poetics* and HORACE’s *Ars Poetica*. His remarks on the state of the English language and its poetry would define the significant literary issues for later English critics—including JOHN DRYDEN and APHRA BEHN in the seventeenth century and SAMUEL JOHNSON in the eighteenth—shaping the direction taken by post-Renaissance neoclassicism.

Sidney was born at Penshurst, the eldest son of Sir Henry Sidney and Mary Dudley, daughter of the duke of Northampton. His godfather, after whom he was named, was Philip II of Spain, husband of Queen Mary I. In 1564 he entered Shrewsbury school in Shropshire. By 1568 he was a student in Christ Church at Oxford University, though he left in 1571 without taking a degree, perhaps because of an outbreak of the plague. He departed England for the traditional “Grand Tour” of the Continent, arriving in Paris in 1572, in time to witness the infamous St. Bartholomew’s Day Massacre of the Protestants.

In March 1575 Sidney returned to London, succeeding his father as Queen Elizabeth’s cupbearer (a purely ceremonial position). The next year he traveled to Ireland with his father, the lord deputy, and the earl of Essex (Walter Devereux).

Negotiations began for a marriage between Sidney, then twenty-three, and Essex's fourteen-year-old daughter Penelope. Sidney began writing sonnets addressed to her, calling her Stella and himself Astrophil, a literary exercise inspired by the sonnets of the Italian poet Petrarch (1304–1374) to Laura. Though in 1581 Penelope married another, the sonnets continued for many years, even after Sidney's own marriage.

Sidney, who was greatly admired both in England and on the Continent for his sophistication and learning, was for several years unable to find employment at court; he belonged to the faction led by his uncle Robert Dudley, the earl of Leicester, one of Queen Elizabeth's favorites. He divided his time between visits with his illustrious friends, among them the poet Edmund Spenser, and his own writing. When he fell out of favor with the queen, he retreated to his sister's estate and began work on the *Old Arcadia*, also known as *The Countess of Pembroke's Arcadia* (after his sister), a pastoral romance alternating prose and poetry that was completed about 1581. Two sonnet sequences followed, *Certaine Sonets* (1581) and *Astrophil and Stella* (1581–82). He also began, but did not complete, a revision of the *Arcadia*. In keeping with his sense of the decorum required of a courtier, none of Sidney's works, including the *Apology*, was published during his lifetime; instead, they circulated privately among his friends in manuscript.

By 1583 Sidney's fortunes seemed to be changing. He was knighted and finally given a government appointment. In the fall he married Frances Walsingham, daughter of Queen Elizabeth's secretary of state, and his father-in-law paid off his considerable debts. In 1585 the queen appointed him governor of Flushing in the Netherlands, where she had sent troops to fight against Spain in support of the Protestant cause. There, in September 1586, in a raid on a Spanish convoy at Zutphen, Sidney was wounded by a bullet in the left thigh. The wound became infected, and he died at Arrhem on October 17 at the age of thirty-two. All Europe mourned his loss, and after a lavish state funeral he was buried in St. Paul's Cathedral in London.

An Apology for Poetry is a classic statement of Renaissance literary theory primarily because of its scope, its typicality, and its grace and clarity. Unlike his English contemporary George Puttenham, Sidney displays little interest in formulating the technical rules of poetry or rhetoric; he treats the subject of poetry much more broadly. At the same time, Sidney's debts are clear; he is a synthesizer, not a trailblazer. *An Apology* is a veritable encyclopedia of Renaissance humanism. Though structured as a classical oration with the standard seven parts (exordium, proposition, division, examination, refutation, digression, peroration), Sidney's text is more usefully understood as treating three major topics: The first part defends the dignity of poetry, demonstrating its superiority to philosophy and history because it combines the moral precepts of the one with the entertaining examples of the other, all the while cloaking its lessons with the pleasurable devices of art. Along the way, Sidney discusses the ethics of genres, ranging from pastoral, elegy, and satire to comedy, tragedy, and epic. The second part deals with the specific objections raised against poetry, in particular the charge that the poet is a liar. Sidney follows Boccaccio on this point, famously declaring: "Now for the poet, he nothing affirms, and therefore never lieth." Poets' imitations are not lies, as Plato charged, because poets make no truth claims. The third part of the essay examines the current state of English literature. Here Sidney, the practicing poet, offers some critical comments on diction, poetic figures, meter, rhyme, rhythm, and the English vernacular compared to other languages. Of particular interest is Sidney's pointed criticism of the English drama for failing to adhere to the unities of time and place sketched in Aristotle's *Poetics*. This issue would occupy neoclassical critics of the drama from PIERRE CORNEILLE through Samuel Johnson.

A fundamental aesthetic problem of the late sixteenth century concerns the object and purpose of poetry's representation. Sidney's definition of poetry sets an agenda

for the discussion of poetry that brings together many of the learned commonplaces of Renaissance criticism: "an art of imitation, . . . that is to say, a representing, counterfeiting, or figuring forth—to speak metaphorically, a speaking picture—with this end, to teach and delight." This definition is less notable for its originality (it is drawn almost word for word from the Italian-born humanist Julius Caesar Scaliger's *Poetics* of 1561, which, in turn, was indebted to Aristotle's *Poetics* and Horace's *Ars Poetica*) than for the insights it gives into the critical controversies of the period. The definition, and Sidney's subsequent discussion of it, raises three issues—all derived from Plato's discussion of poetry in the *Republic*—that dominate literary criticism until the end of the eighteenth century: the nature of imitation, the problem of defining nature, and the injunction that poetry serve moral ends.

Although the principle of imitation reigned unchallenged in literary theory from the Renaissance to the end of the eighteenth century, not all critics meant the same thing by *imitation*, nor did they necessarily agree on what is imitated (compare GIACOMO MAZZONI's extremely elaborate contemporaneous views on the subject with Sidney's). At the center of the controversy over imitation was a debate about nature itself: what constituted nature and what was the status of representations of "reality"? Like the third-century C.E. philosopher PLOTINUS, Sidney uses the Platonic theory of Forms to refute Plato's criticism of poetry. The Neoplatonic mimesis espoused by Sidney held that the nature the poet imitated was the ideal, not the material, world. In the Renaissance, the ideal of nature was God's cosmological plan. Sidney perhaps best represents this viewpoint when he argues that "right poets" "imitate to teach and delight, and to imitate borrow nothing of what is, hath been, or shall be, but range only reined with learned discretion into the divine consideration of what may be and should be." This view of mimesis is based on a religious belief in providential design; because the universe is the product of divine wisdom, the purpose of the poet is ultimately to affirm the rule of justice and order. The ideal that Sidney invokes—what may be or should be—is more "real" than what is. In the next century this view of nature runs head on into the scientific revolution, and the debate is recast in Dryden's *Essay of Dramatic Poesy* (see below) and elsewhere.

Critics of the *Apology*, especially modern ones, have argued that it is derivative, that Sidney is simply not an original theorist, and that the rhetorical play and intertextual abundance of his Renaissance prose is tiring. Yet so long as contemporary literary theorists such as JACQUES DERRIDA, Richard Rorty, and DONNA HARAWAY are still debating the status of nature and the ideological stakes involved in representation, Sidney's essay, with its elegant variation on Platonic mimesis, will repay close scrutiny.

BIBLIOGRAPHY

The complete works of Sir Philip Sidney are available in *Complete Works*, edited by Albert Feuillerat (4 vols., 1922–26). The standard edition of *An Apology for Poetry* with copious endnotes may be found in *The Miscellaneous Prose of Sir Philip Sidney*, edited by Katherine Duncan-Jones and Jan Van Dorsten (1973). There are several other single-volume editions of the text, including Forrest G. Robinson's 1970 edition. For a seventeenth-century biography, consult *Sir Fulke Greville's Life of Sir Philip Sidney* (1652), available in *The Prose of Fulke Greville*, edited by Mark Caldwell (1987). For a recent biography, see Katherine Duncan-Jones, *Sir Philip Sidney: Courtier Poet* (1991).

Forrest G. Robinson, *The Shape of Things Known: Sidney's Apology in Its Philosophical Tradition* (1972), is an important book-length study of Sidney's famous essay. A. C. Hamilton provides a brief but important study of Sidney in *Sir Philip Sidney: A Study of His Life and Works* (1977). Andrew D. Weiner, in *Sir Philip Sidney and the Poetics of Protestantism: A Study of Contexts* (1978), places the poet and critic within the context of the religious controversies that dominated his life and times. For an introduction to Sidney, see Katherine Duncan-Jones's excellent contribution

to the Oxford Authors series, *Sir Philip Sidney* (1989). Critical interest in Sidney's "self-fashioning," his creation of images of himself in both his poetry and criticism, is evidenced by such books as Alan Hager's *Dazzling Images: The Masks of Sir Philip Sidney* (1991) and Edward Berry's *Making of Sir Philip Sidney* (1998). Peter C. Herman's *Squitter-wits and Muse-haters: Sidney, Spenser, Milton, and Renaissance Anti-poetic Sentiments* (1996) examines the sixteenth- and seventeenth-century debates about poetry with which Sidney's *Apology* engages. For a bibliography, consult *Sir Philip Sidney: An Annotated Bibliography of Texts and Criticism (1554–1984)*, edited by Donald V. Stump (1994).

An Apology for Poetry

When the right virtuous Edward Wotton¹ and I were at the Emperor's Court together, we gave ourselves to learn horsemanship of John Pietro Pugliano, one that with great commendation had the place of an esquire² in his stable. And he, according to the fertility of the Italian wit, did not only afford us the demonstration of his practice, but sought to enrich our minds with the contemplations therein, which he thought most precious. But with none I remember mine ears were at any time more loaden, than when (either angered with slow payment, or moved with our learner-like admiration) he exercised his speech in the praise of his faculty. He said soldiers were the noblest estate of mankind, and horsemen the noblest of soldiers. He said they were the masters of war and ornaments of peace, speedy goers and strong abiders, triumphers both in camps and courts. Nay, to so unbeliev'd³ a point he proceeded, as that no earthly thing bred such wonder to a prince as to be a good horseman. Skill of government was but a *pedanteria*⁴ in comparison. Then would he add certain praises by telling what a peerless beast a horse was; the only serviceable courtier without flattery, the beast of most beauty, faithfulness, courage, and such more, that if I had not been a piece of a logician before I came to him, I think he would have persuaded me to have wished myself a horse. But thus much at least with his no few words he drave into me, that self-love is better than any gilding to make that seem gorgeous wherein ourselves are parties. Wherein, if Pugliano his strong affection and weak arguments will not satisfy you, I will give you a nearer example of myself, who (I know not by what mischance), in these my not old years and idlest times, having slipped into the title of a poet, am provoked to say something unto you in the defence of that my unelected vocation, which if I handle with more good will than good reasons, bear with me, sith the scholar is to be pardoned that followeth the steps of his master. And yet I must say that, as I have just cause to make a pitiful defence of poor poetry, which from almost the highest estimation of

1. Edward Wotton (1548–1626), first Baron Wotton, was an English courtier and statesman. During his Continental travels Sidney spent the winter of 1574–75 at the Imperial Court of Maximilian II in Vienna. In company with his mentor, Hubert Languet, Sidney engaged in a warm friendship with Wotton. At the end of May 1575, Wotton joined Sidney in Antwerp for the return voyage to

England. A decade later Wotton was mentioned in Sidney's will and served as a pallbearer in the poet's funeral procession [Forrest G. Robinson's note].

2. An esquire, or equerry, was an officer in charge of the horses and stables of a noble personage [Robinson's note].

3. Unbelievable.

4. Pedantry, useless book learning (Italian).

learning is fallen to be the laughing-stock of children, so have I need to bring some more available⁵ proofs, sith the former is by no man barred of his deserved credit, the silly⁶ latter hath had even the names of philosophers used to the defacing of it, with great danger of civil war among the Muses.⁷

And first, truly, to all them that, professing learning, inveigh against poetry, may justly be objected that they go very near to ungratefulness to seek to deface that which, in the noblest nations and languages that are known, hath been the first light-giver to ignorance, and first nurse, whose milk by little and little enabled them to feed afterwards of tougher knowledges. And will they now play the hedgehog that, being received into the den, drove out his host? Or rather the vipers, that with their birth kill their parents? Let learned Greece, in any of her manifold sciences, be able to show me one book before Musaeus, Homer, and Hesiod,⁸ all three nothing else but poets. Nay, let any history be brought that can say any writers were there before them, if they were not men of the same skill as Orpheus, Linus,⁹ and some other are named, who, having been the first of that country that made pens deliverers of their knowledge to their posterity, may justly challenge to be called their fathers in learning; for not only in time they had this priority (although in itself antiquity be venerable), but went before them, as causes to draw with their charming sweetness the wild untamed wits to an admiration of knowledge. So as Amphion was said to move stones with his poetry to build Thebes,¹ and Orpheus to be listened to by beasts, indeed stony and beastly people, so among the Romans were Livius Andronicus and Ennius.² So in the Italian language, the first that made it aspire to be a treasure-house of science were the poets Dante, Boccaccio, and Petrarch.³ So in our English were Gower and Chaucer,⁴ after whom, encouraged and delighted with their excellent fore-going, others have followed to beautify our mother tongue, as well in the same kind as in other arts.

This did so notably show itself, that the philosophers of Greece durst not a long time appear to the world but under the masks of poets. So Thales, Empedocles, and Parmenides⁵ sang their natural philosophy in verses; so did Pythagoras and Phocylides their moral counsels; so did Tyrtaeus in war matters and Solon⁶ in matters of policy: or rather, they being poets, did exercise

5. Efficacious, that may avail.

6. Here used with an affectionate rather than pejorative connotation [Robinson's note].

7. In Greek mythology, 9 daughters of Memory who preside over the arts and all intellectual pursuits.

8. Greek didactic epic poet (active ca. 700 B.C.E.). Musaeus: mythical singer associated with Orpheus, mythical musician unrivaled among mortals. Homer (ca. 8th c. B.C.E.) Greek epic poet to whom the *Iliad* and the *Odyssey* are attributed.

9. Mythical singer; in some accounts, he taught Orpheus and Heracles.

1. Ancient Greek city whose mythical founders were Amphion and Zethus, twin sons of Zeus; by playing his lyre, Amphion built the city's walls.

2. Two of the earliest Roman poets: Livius Andronicus (d. ca. 205 B.C.E.) wrote tragedies, comedies, and an adaptation of Homer's *Odyssey*; Ennius (239–169 B.C.E.) wrote dramas, satires,

and an epic history of Rome.

3. Scholar and humanist (1304–1374). DANTE ALIGHIERI (1265–1321), best known for the *Divine Comedy*. GIOVANNI BOCCACCIO (1313–1375), best known for *The Decameron*.

4. Author (ca. 1343–1400) of *The Canterbury Tales*. John Gower (1330–1408), poet who wrote in French and Latin as well as English.

5. Author (b. ca. 515 B.C.E.) of *On Nature*, in hexameter verse. Thales (6th c. B.C.E.), astronomer and geometer, who in fact left no writings. Empedocles (ca. 493–ca. 433 B.C.E.), scientist and statesman who wrote two philosophical poems, *On Nature and Purifications*.

6. Athenian poet and statesman (active early 6th c. B.C.E.). Pythagoras (6th c. B.C.E.), Greek philosopher and mathematician. Phocylides (active 544–591 B.C.E.), gnomic poet of Miletus. Tyrtaeus (7th c. B.C.E.), Spartan poet and general whose works include war songs.

their delightful vein in those points of highest knowledge which before them lay hid to the world. For that wise Solon was directly a poet, it is manifest, having written in verse the notable fable of the Atlantic Island, which was continued by Plato.⁷

And truly, even Plato, whosoever well considereth shall find that in the body of his work, though the inside and strength were philosophy, the skin as it were and beauty depended most of poetry, for all standeth upon dialogues, wherein he feigneth many honest burgesses of Athens to speak of such matters, that if they had been set on the rack they would never have confessed them; besides his poetical describing the circumstances of their meetings, as the well ordering of a banquet, the delicacy of a walk, with interlacing mere tales, as Gyges⁸ ring and others, which who knoweth not to be flowers of poetry did never walk into Apollo's⁹ garden.

And even historiographers (although their lips sound of things done, and verity be written in their foreheads) have been glad to borrow both fashion and perchance weight of poets. So Herodotus¹ entitled his *History* by the name of the nine Muses, and both he and all the rest that followed him either stole or usurped of poetry their passionate describing of passions, the many particularities of battles, which no man could affirm; or, if that be denied me, long orations put in the mouths of great kings and captains, which it is certain they never pronounced. So that truly, neither philosopher nor historiographer could at the first have entered into the gates of popular judgments if they had not taken a great passport of poetry, which, in all nations at this day where learning flourisheth not, is plain to be seen; in all which they have some feeling of poetry.

In Turkey, besides their law-giving divines, they have no other writers but poets. In our neighbor country Ireland, where truly learning goeth very bare, yet are their poets held in a devout reverence. Even among the most barbarous and simple Indians where no writing is, yet have they their poets, who make and sing songs which they call *areytos*,² both of their ancestors' deeds and praises of their gods; a sufficient probability that, if ever learning come among them, it must be by having their hard dull wits softened and sharpened with the sweet delights of poetry. For until they find a pleasure in the exercises of the mind, great promises of much knowledge will little persuade them that know not the fruits of knowledge. In Wales, the true remnant of the ancient Britons, as there are good authorities to show the long time they had poets which they called *bards*, so through all the conquests of Romans, Saxons, Danes, and Normans, some of whom did seek to ruin all memory of learning from among them, yet do their poets even to this day last, so as it is not more notable in soon beginning than in long continuing.

But since the authors of most of our sciences were the Romans, and before them the Greeks, let us a little stand upon their authorities, but even so far as to see what names they have given unto this now scorned skill. Among

7. Greek philosopher (ca. 427–ca. 347 B.C.E.; see above), who writes of the lost continent of Atlantis in *Timaeus* 25 and *Critias*.

8. King of Lydia, ca. 685–657 B.C.E.; according to Plato (*Republic* 2.359d–360b), after the shepherd Gyges found a ring that enabled him to become invisible, he was able to assume the rule of the

kingdom.

9. Greek and Roman god of poetry.

1. Greek historian (ca. 484–ca. 425 B.C.E.); his *History* was divided into 9 "Muses" by a later editor.

2. This was a ceremonial dance accompanied by songs, common among the Indians in the Americas [Robinson's note].

the Romans a poet was called *vates*, which is as much as a diviner, foreseer, or prophet, as by his conjoined words *vaticinium* and *vaticinari*,³ is manifest; so heavenly a title did that excellent people bestow upon this heart-ravishing knowledge. And so far were they carried into the admiration thereof, that they thought in the chanceable hitting upon any such verses great foretokens of their following fortunes were placed. Whereupon grew the word of *Sortes Virgilianae*, when by sudden opening Virgil's⁴ book they lighted upon any verse of his making, whereof the Histories of the Emperors' Lives are full: as of Albinus,⁵ the governor of our island, who in his childhood met with this verse,

*Arma amens capio nec sat rationis in armis,*⁶

and in his age performed it; which, although it were a very vain and godless superstition, as also it was to think that spirits were commanded by such verses—whereupon this word charms, derived of *carmina*,⁷ cometh—so yet serveth it to show the great reverence those wits were held in. And altogether not without ground, since both the oracles of Delphos and Sibylla's⁸ prophecies were wholly delivered in verses. For that same exquisite observing of number and measure in words, and that high flying liberty of conceit proper to the poet, did seem to have some divine force in it.

And may not I presume a little further, to show the reasonableness of this word *vates*, and say that the holy David's Psalms are a divine poem?⁹ If I do, I shall not do it without the testimony of great learned men, both ancient and modern. But even the name Psalms will speak for me, which being interpreted is nothing but songs; then, that it is fully written in meter, as all learned hebricians agree,¹ although the rules be not yet fully found; lastly and principally, his handling his prophecy, which is merely poetical. For what else is the awaking his musical instruments, the often and free changing of persons, his notable *prosopopoeias*,² when he maketh you, as it were, see God coming in His majesty, his telling of the beasts' joyfulness, and hills leaping, but a heavenly poesy,³ wherein almost he showeth himself a passionate lover of that unspeakable and everlasting beauty to be seen by the eyes of the mind, only cleared by faith?⁴ But truly, now having named him, I fear me I seem to profane that holy name, applying it to poetry, which is among us thrown down to so ridiculous an estimation. But they that with quiet judg-

3. To prophesy. *Vates*: poet-prophet. *Vaticinium*: a prophecy (all Latin).

4. Roman poet (70–19 B.C.E.). *Sortes Virgilianae*: literally, "Virgilian lots" (Latin)—the practice of using a randomly chosen line from Virgil's *Aeneid* to tell one's fortune.

5. Roman governor of Britain, hailed as emperor by his troops in 195 C.E.; defeated two years later, he committed suicide.

6. Out of my mind I seized my arms, although there was little reason in arms (or, "I had no plan for battle"); *Aeneid* 2.314.

7. Songs, poems (Latin); the Romans also used the word to mean "magic charms."

8. Originally a single prophetic female, the Sibyl was gradually pluralized into a number of local personages. The Sibylline prophecies, as described by Virgil (*Aeneid* 6.77–101), were ecstatic verse riddles like those delivered at Delphi. Delphos: in

antiquity the location of the Delphic Oracle. The presiding deity was Apollo, at whose temple the woman Pythia delivered prophetic riddles (Robinson's note).

9. The biblical King David is traditionally credited with writing the Book of Psalms, thought to be divinely inspired.

1. Many Renaissance scholars who knew some Hebrew erroneously thought the psalms were written in verse forms approximating classical meters.

2. Personifications (Greek).

3. Sidney is generally careful to distinguish between "poetry," the finished product of the poet's art, and "poesy," the craft or technique of writing [Robinson's note].

4. The notion that faith serves to clarify inner vision was a commonplace in Christian thought [Robinson's note].

ments will look a little deeper into it, shall find the end and working of it such, as being rightly applied, deserveth not to be scourged out of the Church of God.

But now let us see how the Greeks named it and how they deemed of it. The Greeks called him a poet, which name hath, as the most excellent, gone through other languages. It cometh of this word *poiein*, which is, to make, wherein I know not whether by luck or wisdom we Englishmen have met with the Greeks in calling him a maker: which name, how high and incomparable a title it is, I had rather were known by marking the scope of other sciences than by my partial allegation.

There is no art delivered to mankind that hath not the works of nature for his principal object, without which they could not consist, and on which they so depend, as they become actors and players, as it were, of what nature will have set forth. So doth the astronomer look upon the stars, and by that he seeth, setteth down what order nature hath taken therein. So do the geometrician and arithmetician in their diverse sorts of quantities. So doth the musician in times tell you which by nature agree, which not. The natural philosopher thereon hath his name, and the moral philosopher standeth upon the natural virtues, vices, and passions of man; and follow nature (saith he) therein, and thou shalt not err. The lawyer saith what men have determined; the historian what men have done. The grammarian speaketh only of the rules of speech, and the rhetorician and logician, considering what in nature will soonest prove and persuade, thereon give artificial⁶ rules, which still are compassed within the circle of a question, according to the proposed matter. The physician weigheth the nature of a man's body, and the nature of things helpful or hurtful unto it. And the metaphysic, though it be in the second and abstract notions, and therefore be counted supernatural, yet doth he indeed build upon the depth of nature.⁷ Only the poet, disdain- ing to be tied to any such subjection, lifted up with the vigor of his own invention, doth grow in effect another nature, in making things either better than nature bringeth forth, or quite anew, forms such as never were in nature, as the Heroes, Demigods, Cyclops, Chimeras, Furies,⁸ and such like; so as he goeth hand in hand with nature, not enclosed within the narrow warrant of her gifts, but freely ranging only within the zodiac of his own wit.

Nature never set forth the earth in so rich tapestry as divers poets have done, neither with pleasant rivers, fruitful trees, sweet smelling flowers, nor whatsoever else may make the too much loved earth more lovely. Her world is brazen, the poets only deliver a golden.

But let those things alone and go to man, for whom as the other things are, so it seemeth in him her uttermost cunning is employed, and know

5. Its.

6. Part of an established discipline or art. The usage here bears none of the pejorative connotations ("fictitious," "unnatural") current today [Robinson's note].

7. The metaphysician ("metaphysic") is not concerned with specific sense impressions (first notions), but with universals which have been abstracted from sensory experience. Sidney's psychology is Aristotelian at this point, for his assurance that "second and abstract notions" are

derived from "the depth of nature" implies that the forms conceived in the mind are immanent in the natural world [Robinson's note].

8. In Greek mythology, avenging deities who punish crimes both in this world and after death. Heroes: in the Greek sense, individuals who are part human, part divine. Demigods: offspring of a god and a mortal. Cyclops: one-eyed giants. Chimeras: fire-breathing female monsters with a lion's head, goat's body, and serpent's tail.

whether she have brought forth so true a lover as Theagenes, so constant a friend as Pylades, so valiant a man as Orlando, so right a prince as Xenophon's Cyrus,⁹ so excellent a man every way as Virgil's Aeneas. Neither let this be jestingly conceived, because the works of the one be essential,¹ the other in imitation or fiction; for any understanding knoweth the skill of the artificer standeth in that *Idea* or fore-conceit of the work, and not in the work itself. And that the poet hath that *Idea* is manifest by delivering them forth in such excellency as he hath imagined them. Which delivering forth also is not wholly imaginative, as we are wont to say by them that build castles in the air, but so far substantially it worketh, not only to make a Cyrus, which had been but a particular excellency, as nature might have done, but to bestow a Cyrus upon the world to make many Cyruses, if they will learn aright why and how that maker made him.

Neither let it be deemed too saucy a comparison to balance the highest point of man's wit with the efficacy of nature, but rather give right honor to the heavenly Maker of that maker, who having made man to His own likeness, set him beyond and over all the works of that second nature, which in nothing he showeth so much as in poetry, when with the force of a divine breath he bringeth things forth far surpassing her doings, with no small argument to the incredulous of that first accursed fall of Adam: sith our erected wit maketh us know what perfection is, and yet our infected will keepeth us from reaching unto it. But these arguments will by few be understood, and by fewer granted. Thus much (I hope) will be given me, that the Greeks with some probability of reason gave him the name above all names of learning.

Now let us go to a more ordinary opening of him, that the truth may be more palpable: and so I hope, though we get not so unmatched a praise as the etymology of his names will grant, yet his very description, which no man will deny, shall not justly be barred from a principal commendation.

Poesy therefore is an art of imitation, for so Aristotle termeth it in this word *mimesis*, that is to say, a representing, counterfeiting, or figuring forth—to speak metaphorically, a speaking picture—with this end, to teach and delight.² Of this have been three several kinds.

The chief both in antiquity and excellency were they that did imitate the inconceivable excellencies of God. Such were David in his Psalms, Solomon in his Song of Songs, in his Ecclesiastes and Proverbs, Moses and Deborah³ in their Hymns, and the writer of Job; which, beside other, the learned Emanuel Tremellius and Franciscus Junius⁴ do entitle the poetical part of the Scripture. Against these none will speak that hath the Holy Ghost in due

9. Cyrus the Great of Persia, exemplary ruler in the *Cyropaedia*, a Greek prose romance by the Greek military commander and historian Xenophon (ca. 228/7–ca. 354 B.C.E.). Theagenes: hero of Heliodorus's Greek romance, *Aethiopia* (3d c. C.E.). Pylades: friend of Orestes (the son of Agamemnon and Clytemnestra). Orlando: hero of several Italian poems, including Ludovico Ariosto's *Orlando Furioso* (1532).

1. Actual or real, as opposed to something "in imitation or fiction" [Robinson's note].

2. Compare HORACE (65–8 B.C.E.), *Ars Poetica*, line 333: "Poets aim either to do good or to give pleasure." ARISTOTLE (384–322 B.C.E) begins the *Poetics* by discussing the nature of poetic *mimēsis*

(see above).

3. A biblical prophet and judge of Israel who sings a famous song of triumph when the king of Canaan is defeated (Judges 5). Solomon: the biblical king of Israel was traditionally viewed as the author of the books named. Moses: after the Egyptians pursuing the Israelites perished in the Red Sea, Moses sang a triumphal song of praise to God (Exodus 1.1–15).

4. Emanuel Tremellius (1510–1580), a Jew converted to Protestantism, and Franciscus Junius (1545–1602), a French Protestant scholar, together produced a Latin translation of the Bible (1575–80) [Robinson's note].

holy reverence. In this kind, though in a full wrong divinity, were Orpheus, Amphion, Homer in his Hymns,⁵ and many other, both Greeks and Romans. And this poesy must be used by whosoever will follow St. James his counsel in singing psalms when they are merry,⁶ and I know is used with the fruit of comfort by some, when in sorrowful pangs of their death-bringing sins, they find the consolation of the never-leaving goodness.

The second kind is of them that deal with matters philosophical: either moral, as Tyrtaeus, Phocylides, and Cato;⁷ or natural, as Lucretius, and Virgil's *Georgics*;⁸ or astronomical, as Manilius and Pontanus; or historical, as Lucan:⁹ which who mislike, the fault is in their judgments quite out of taste, and not in the sweet food of sweetly uttered knowledge.

But because this second sort is wrapped within the fold of the proposed subject, and takes not the course of his own invention, whether they properly be poets or no let grammarians dispute,¹ and go to the third, indeed right poets, of whom chiefly this question ariseth. Betwixt whom and these second is such a kind of difference as betwixt the meaner sort of painters (who counterfeit only such faces as are set before them), and the more excellent, who having no law but wit, bestow that in colors upon you which is fittest for the eye to see: as the constant though lamenting look of Lucretia when she punished in herself another's fault.² Wherein he painteth not Lucretia whom he never saw, but painteth the outward beauty of such a virtue. For these third be they which most properly do imitate to teach and delight, and to imitate borrow nothing of what is, hath been, or shall be, but range only reined with learned discretion into the divine consideration of what may be and should be. These be they that, as the first and most noble sort, may justly be termed *vates*, so these are waited on in the excellentest languages and best understandings with the fore-described name of poets; For these indeed do merely make to imitate, and imitate both to delight and teach, and delight to move men to take that goodness in hand which without delight they would fly as from a stranger, and teach, to make them know that goodness where-unto they are moved: which being the noblest scope to which ever any learning was directed, yet want there not idle tongues to bark at them.

These be subdivided into sundry more special denominations. The most notable be the Heroic, Lyric, Tragic, Comic, Satiric, Iambic, Elegiac, Pastoral, and certain others, some of these being termed according to the matter they deal with, some by the sorts of verses they liked best to write in. For indeed the greatest part of poets have apparelled their poetical inventions in that numbrous³ kind of writing which is called verse; indeed but apparelled; verse being but an ornament and no cause to poetry, sith there have been

5. Poems (8th-6th c. B.C.E.) in epic style on mythic subjects, by various unknown authors. "Wrong divinity": inspired by false gods.

6. "Is any [among you] merry? Let him sing psalms" (James 5.13).

7. Dionysius Cato, the reputed author of the Latin *Disticha de Moribus* (3d c. C.E.), a popular elementary textbook on morality in medieval and Elizabethan schools.

8. A didactic poem about and celebrating agriculture. Lucretius (ca. 99-50 B.C.E.), Roman poet whose epic on Epicurean philosophy is titled *On the Nature of Things*.

9. Roman statesman and poet (39-65 C.E.), who wrote a historical epic, *The Civil War*. Manilius

(active ca. 10-20 C.E.), author of the *Astronomica*, a didactic poem on astrology. [Pontanus: Latin name of Giovanni Pontano (1426-1503), whose poem on the stars, *Urania*, Sidney may have known.—Robinson's note.]

1. For Sidney and other Renaissance writers the study of grammar also encompassed writing, composition, spelling, speech, and "literature," including poetry and history.

2. In Roman legend, Lucretia was raped by the son of the king of Rome; after telling her husband, she committed suicide (the popular uprising that followed, led by Junius Brutus, resulted in the founding of the Roman Republic in 510 B.C.E.).

3. In poetic meters.

many most excellent poets that never versified, and now swarm many versifiers that need never answer to the name of poets. For Xenophon, who did imitate so excellently as to give us *effigiem justi imperii*, the portraiture of a just empire, under the name of Cyrus (as Cicero saith of him⁴), made therein an absolute heroical poem. So did Heliiodorus in his sugared invention of that picture of love in Theagenes and Cariclea, and yet both these writ in prose: which I speak to show, that it is not rhyming and versing that maketh a poet, no more than a long gown maketh an advocate, who though he pleaded in armor should be an advocate and no soldier. But it is that feigning notable images of virtues, vices, or what else, with that delightful teaching, which must be the right describing note to know a poet by: although indeed the senate of poets hath chosen verse as their fittest raiments, meaning, as in matter they passed all in all, so in manner to go beyond them, not speaking (table talk fashion, or like men in a dream) words as they chanceably fall from the mouth, but peizing⁵ each syllable of each word by just proportion according to the dignity of the subject.

Now therefore it shall not be amiss first to weigh this latter sort of poetry by his works, and then by his parts, and if in neither of these anatomies⁶ he be condemnable, I hope we shall obtain a more favorable sentence. This purifying of wit, this enriching of memory, enabling of judgment, and enlarging of conceit,⁷ which commonly we call learning, under what name soever it come forth, or to what immediate end soever it be directed, the final end is to lead and draw us to as high a perfection as our degenerate souls, made worse by their clayey lodgings, can be capable of. This, according to the inclination of the man, bred many formed impressions.⁸ For some that thought this felicity principally to be gotten by knowledge and no knowledge to be so high and heavenly as acquaintance with the stars, gave themselves to astronomy; others, persuading themselves to be demi-gods if they knew the causes of things, became natural and supernatural philosophers; some an admirable delight drew to music; and some, the certainty of demonstration, to the mathematics. But all, one and other, having this scope, to know, and by knowledge to lift up the mind from the dungeon of the body to the enjoying his own divine essence. But when by the balance of experience it was found that the astronomer, looking to the stars, might fall into a ditch, that the inquiring philosopher might be blind in himself, and the mathematician might draw forth a straight line with a crooked heart; then lo did proof, the overruler of opinions, make manifest that all these are but serving sciences, which, as they have each a private end in themselves, so yet are they all directed to the highest end of the mistress knowledge, by the Greeks called *architectonike*,⁹ which stands (as I think) in the knowledge of a man's self, in the ethic and politic consideration, with the end of well doing and not of well knowing only: even as the saddler's next end is to make a good saddle, but his farther end, to serve a nobler faculty, which is horsemanship;

4. See Cicero's *Epistles to His Brother Quintus* 1.8.23 [Robinson's note]. Cicero (106-43 B.C.E.), Roman statesman and orator.

5. Weighing.

6. Analyses.

7. Concept.

8. Each man, according to the disposition of his faculties, is drawn to one or another of the arts and sciences [Robinson's note].

9. Literally, "of or for a master builder" (thus the

art or science that governs all, just as a master builder directs workers).

1. Following Aristotle, Sidney argues that the arts and sciences culminate in a master science (*architectonike*) which comprehends the knowledge of the ultimate human good. But where Aristotle designates politics as the supreme discipline, Sidney selects that self-knowledge which results in "well doing" [Robinson's note].

so the horseman's to soldiery, and the soldier not only to have the skill, but to perform the practice of a soldier. So that, the ending end of all earthly learning, being virtuous action, those skills that most serve to bring forth that have a most just title to be princes over all the rest.

Wherein if we can show the poet's nobleness by setting him before his other competitors, among whom as principal challengers step forth the moral philosophers, whom, me thinketh, I see coming towards me with a sullen gravity, as though they could not abide vice by daylight, rudely clothed for to witness outwardly their contempt of outward things, with books in their hands against glory, whereto they set their names, sophisticatedly speaking against subtlety, and angry with any man in whom they see the foul fault of anger. These men casting largesse as they go of definitions, divisions, and distinctions,² with a scornful interrogative do soberly ask whether it be possible to find any path so ready to lead a man to virtue as that which teacheth what virtue is; and teacheth it not only by delivering forth his very being, his causes and effects, but also by making known his enemy vice, which must be destroyed, and his cumbersome servant passion, which must be mastered, by showing the generalities that containeth it, and the specialities that are derived from it; lastly, by plain setting down, how it extendeth itself out of the limits of a man's own little world to the government of families, and maintaining of public societies.

The historian scarcely giveth leisure to the moralist to say so much, but that he, loaden with old mouse-eaten records, authorizing himself (for the most part) upon other histories, whose greatest authorities are built upon the notable foundation of hearsay, having much ado to accord differing writers, and to pick truth out of partiality, better acquainted with a thousand years ago than with the present age, and yet better knowing how this world goeth than how his own wit runneth, curious for antiquities and inquisitive of novelties, a wonder to young folks and a tyrant in table talk, denieth in a great chafe that any man, for teaching of virtue and virtuous actions, is comparable to him. I am *testis temporum, lux veritatis, vita memoriae, magistra vitae, nuncia vetustatis*.³ The philosopher (saith he) teacheth a disputative virtue, but I do an active; his virtue is excellent in the dangerous Academy of Plato,⁴ but mine showeth forth her honorable face in the battles of Marathon, Pharsalia, Poitiers, and Agincourt.⁵ He teacheth virtue by certain abstract considerations, but I only bid you follow the footing of them that have gone before you. Old-aged experience goeth beyond the fine-witted philosopher, but I give the experience of many ages. Lastly, if he make the song-book, I put the learner's hand to the lute; and if he be the guide, I am the light.

Then would he allege you innumerable examples, confirming story by

2. Terms from medieval scholastic logic which survived in Renaissance handbooks. Definition is the most general statement about an object, stating its genus and specific difference (e.g., "man is a rational animal"). Division is a more specific classification into species, parts, or adjuncts, and distinction is the separation of a substance and its accidents [that is, properties or attributes that are nonessential; Robinson's note].

3. "I am the witness of the times, the light of truth, the life of memory, the teacher of life, and the mes-

senger of antiquity"; from Cicero, *De Oratore* 2.9.36 (which has *nuntia*, not *nuncia*; the subject is "history").

4. Plato's school on the outskirts of Athens, founded about 385 B.C.E.

5. All sites of great victories: at Marathon, the Greeks defeated the Persians in 490 B.C.E.; at Pharsalia, Julius Caesar defeated Pompey in 48 B.C.E.; at Poitiers, the English defeated the French in 1356; and at Agincourt, Henry V defeated the French in 1415.

story, how much the wisest senators and princes have been directed by the credit of history, as Brutus, Alphonsus of Aragon,⁶ and who not, if need be? At length the long line of their disputation maketh a point in this, that the one giveth the precept, and the other the example.⁷

Now whom shall we find (sith the question standeth for the highest form⁸ in the school of learning) to be moderator? Truly, as me seemeth, the poet; and if not a moderator, even the man that ought to carry the title from them both, and much more from all other serving sciences. Therefore compare we the poet with the historian and with the moral philosopher, and if he go beyond them both, no other human skill can match him. For as for the divine, with all reverence it is ever to be excepted, not only for having his scope as far beyond any of these as eternity exceedeth a moment, but even for passing each of these in themselves. And for the lawyer, though *jus*⁹ be the daughter of justice, and justice the chief of virtues, yet because he seeketh to make men good rather *formidine poenae* than *virtutis amore*,¹ or to say righter, doth not endeavor to make men good, but that their evil hurt not others; having no care so he be a good citizen, how bad a man he be; therefore as our wickedness maketh him necessary, and necessity maketh him honorable, so is he not in the deepest truth to stand in rank with these who all endeavor to take naughtiness away, and plant goodness even in the secretest cabinet of our souls. And these four are all that any way deal in that consideration of men's manners, which being the supreme knowledge, they that best breed it deserve the best commendation.

The philosopher therefore and the historian are they which would win the goal, the one by precept, the other by example. But both, not having both, do both halt. For the philosopher, setting down with thorny argument the bare rule, is so hard of utterance and so misty to be conceived, that one that hath no other guide but him shall wade in him till he be old before he shall find sufficient cause to be honest. For his knowledge standeth so upon the abstract and general that happy is that man who may understand him, and more happy that can apply what he doth understand.

On the other side, the historian, wanting the precept, is so tied, not to what should be but to what is, to the particular truth of things and not to the general reason of things, that his example draweth no necessary consequence, and therefore a less fruitful doctrine.

Now doth the peerless poet perform both: for whatsoever the philosopher saith should be done, he giveth a perfect picture of it in someone by whom he presupposeth it was done, so as he coupleth the general notion with the particular example. A perfect picture I say, for he yieldeth to the powers of the mind an image of that whereof the philosopher bestoweth but a wordish description, which doth neither strike, pierce, nor possess the sight of the soul so much as that other doth. For as in outward things, to a man that had never seen an elephant or a rhinoceros, who should tell him most exquisitely all their shapes, color, bigness, and particular marks; or of a gorgeous palace, the architecture, with declaring the full beauties, might well make the hearer

6. Alphonsus V of Aragon (1396–1458) carried the Roman histories written by Livy and Caesar into battle with him. Brutus: Marcus Brutus (85–42 B.C.E.) was inspired to rise up against Caesar by the thought of his great republican ancestor, Junius Brutus, who expelled the Tarquin kings.

7. "The one" is philosophy, "the other," history.

8. Grade level.

9. Law (Latin).

1. "From fear of punishment" and "by love of virtue"; from Horace, *Epistles* 1.16.52–53.

able to repeat, as it were by rote, all he had heard, yet should never satisfy his inward conceits with being witness to itself of a true lively knowledge. But the same man, as soon as he might see those beasts well painted, or the house well in model, should straightways grow without need of any description, to a judicial² comprehending of them. So no doubt the philosopher, with his learned definition, be it of virtue, vices, matters of public policy or private government, replenisheth the memory with many infallible grounds of wisdom, which, notwithstanding, lie dark before the imaginative and judging power if they be not illuminated or figured forth by the speaking picture of poesy.

Tully³ taketh much pains and many times not without poetical helps to make us know the force love of our country hath in us. Let us but hear old Anchises⁴ speaking in the midst of Troy's flames, or see Ulysses⁵ in the fullness of all Calypso's delights bewail his absence from barren and beggarly Ithaca. Anger, the Stoics say, was a short madness: let but Sophocles bring you Ajax on a stage, killing and whipping sheep and oxen, thinking them the army of Greeks with their chieftains Agamemnon and Menelaus,⁶ and tell me if you have not a more familiar insight into anger than finding in the schoolmen his genus and difference. See whether wisdom and temperance in Ulysses and Diomedes;⁷ valor in Achilles, friendship in Nisus and Euryalus,⁷ even to an ignorant man, carry not an apparent shining; and contrarily, the remorse of conscience in Oedipus, the soon repenting pride in Agamemnon, the self-devouring cruelty in his father Atreus,⁸ the violence of ambition in the two Theban brothers, the sour-sweetness of revenge in Medea;⁹ and to fall lower, the Terentian Gnatho and our Chaucer's Pandar,¹ so expressed that we now use their names to signify their trades; and finally, all virtues, vices, and passions so in their own natural seats laid to the view that we seem not to hear of them, but clearly to see through them.

But even in the most excellent determination of goodness, what philosopher's counsel can so readily direct a prince as the feigned Cyrus in Xenophon, or a virtuous man in all fortunes, as Aeneas in Virgil, or a whole commonwealth, as the way of Sir Thomas More's² *Utopia*? I say the way, because where Sir Thomas More erred, it was the fault of the man and not

2. Judicious.

3. Cicero (his full name is Marcus Tullius Cicero).

4. The father of Aeneas: he resists when Aeneas comes to carry him out of Troy as it is being sacked (Virgil, *Aeneid* 2.634-49).

5. Odysseus, king of Ithaca, who on his way home from Troy was held for years against his will by Calypso, a sea nymph on an island in the Ionian Sea. For his lamentation, see *Odyssey* 5.151-58.

6. In the tragedy *Ajax*, by Sophocles (ca. 496-406 B.C.E.), after Achilles' arms have been given to Odysseus, Ajax is driven mad by Athena and slays the Greek herds, believing them to be the Greeks who have scorned his claim to the armor.

7. All figures in Homer's *Iliad* and Virgil's *Aeneid*: Ulysses is regularly characterized by such epithets as "inventive" and "wise"; Diomedes, a great fighter, demonstrates his temperance when he exchanges armor with rather than fighting Glaucus, a Trojan ally whose grandfather had been a guest of his own grandfather (*Iliad* 6.119-236); Nisus and Euryalus, Trojans who accompanied Aeneas to Italy, are inseparable friends, and Nisus dies avenging Euryalus's death (*Aeneid* 9.176-445).

8. All figures often treated in Greek tragedy: Oedipus unknowingly kills his father and marries his mother; Agamemnon regrets too late the pride that persuaded him to enter his home by walking on purple silks fit for a god (see Aeschylus, *Agamemnon*, 458 B.C.E., lines 918-49); and Atreus serves his brother Thyestes the flesh of Thyestes' sons as punishment for committing adultery with Atreus's wife.

9. Medea's revenge on her husband Jason, who has deserted her to marry a king's daughter, is to murder his—and her own—children. "The two Theban brothers": Polynices and Eteocles, the two sons of Oedipus, who kill one another fighting over the rule of Thebes.

1. Pandarus, the type of the pander, from Chaucer's *Troilus and Criseyde* (ca. 1385). Gnatho: a boastful parasite whose name through the 17th century was synonymous with parasite or sycophant; from the Roman comedy *Eunuchus* by Terence (ca. 190-159 B.C.E.).

2. English writer, humanist, and statesman (1477-1535); his *Utopia* (1516) described an ideal society.

of the poet, for that way of patterning a commonwealth was most absolute, though he perchance hath not so absolutely performed it. For the question is, whether the feigned image of poesy or the regular instruction of philosophy hath the more force in teaching: wherein if the philosophers have more rightly showed themselves philosophers than the poets have obtained to the high top of their profession, as in truth,

*Mediocribus esse poetis,
Non dii, non homines, non concessere columnae;*³

it is, I say again, not the fault of the art, but that by few men that art can be accomplished.

Certainly, even our Saviour Christ could as well have given the moral commonplaces of uncharitableness and humbleness as the divine narration of Dives and Lazarus; or of disobedience and mercy, as that heavenly discourse of the lost child and the gracious father;⁴ but that His thorough-searching wisdom knew the estate of Dives burning in hell, and of Lazarus being in Abraham's bosom, would more constantly (as it were) inhabit both the memory and judgment. Truly, for myself, me seems I see before my eyes the lost child's disdainful prodigality, turned to envy a swine's dinner: which by the learned divines are thought not historical acts, but instructing parables. For conclusion, I say the philosopher teacheth, but he teacheth obscurely, so as the learned only can understand him; that is to say, he teacheth them that are already taught. But the poet is the food for the tenderest stomachs, the poet is indeed the right popular philosopher, whereof Aesop's⁵ tales give good proof; whose pretty allegories, stealing under the formal tales of beasts, make many more beastly than beasts begin to hear the sound of virtue from these dumb speakers.

But now may it be alleged that if this imagining of matters be so fit for the imagination, then must the historian needs surpass, who bringeth you images of true matters, such as indeed were done, and not such as fantastically or falsely may be suggested to have been done. Truly, Aristotle himself, in his discourse of poesy, plainly determineth this question, saying that poetry is *philosophoteron* and *spoudaioteron*, that is to say, it is more philosophical and more studiously serious than history.⁶ His reason is, because poesy dealeth with *katholou*, that is to say, with the universal consideration, and the history with *kathékaston*, the particular: now, saith he, the universal weighs what is fit to be said or done, either in likelihood or necessity (which the poesy considereth in his imposed names), and the particular only marks whether Alcibiades⁷ did or suffered this or that. Thus far Aristotle, which reason of his (as all his) is most full of reason.

For indeed, if the question were whether it were better to have a particular act truly or falsely set down, there is no doubt which is to be chosen, no more than whether you had rather have Vespasian's⁸ picture right as he was,

3. But neither men nor gods nor shop-fronts allow a poet to be mediocre (Latin); Horace, *Ars Poetica*, lines 372-73).

4. References to two biblical parables, that of the beggar Lazarus and the rich man (*dives* in Latin means "rich"; Luke 16. 19-25) and that of the prodigal son (Luke 15.11-32).

5. The supposed author of a collection of Greek fables. Like parables from the Bible, allegorical

tales teach by vivid exemplification rather than bald definition. Aesop's *Fables* were very popular during the Renaissance, both for their "delightful teaching" and as an introduction to Greek [Robinson's note].

6. See *Poetics* 9, 1450a36-1451b11.

7. Athenian general and politician (ca. 450-404 B.C.E.).

8. Roman emperor (9-79 C.E.; ruled 69-79).

or at the painter's pleasure, nothing resembling. But if the question be for your own use and learning, whether it be better to have it set down as it should be or as it was, then certainly is more doctrinable the feigned Cyrus in Xenophon than the true Cyrus in Justin,⁹ and the feigned Aeneas in Virgil than the right Aeneas in Dares Phrygius.¹ As to a lady that desired to fashion her countenance to the best grace, a painter should more benefit her to portrait a most sweet face, writing Canidia² upon it, than to paint Canidia as she was, who Horace sweareth was foul and ill favored.

If the poet do his part aright, he will show you in Tantalus,³ Atreus, and such like, nothing that is not to be shunned; in Cyrus, Aeneas, Ulysses, each thing to be followed; where the historian, bound to tell things as things were, cannot be liberal (without he will be poetical) of a perfect pattern, but as in Alexander or Scipio⁴ himself, show doings, some to be liked, some to be disliked. And then how will you discern what to follow but by your own discretion, which you had without reading Quintus Curtius?⁵ And whereas a man may say, though in universal consideration of doctrine the poet prevaileth, yet that the history, in his saying such a thing was done, doth warrant a man more in that he shall follow. The answer is manifest, that if he stand upon that was, as if he should argue, because it rained yesterday, therefore it should rain today, then indeed it hath some advantage to a gross conceit.⁶ But if he know an example only informs a conjectured likelihood, and so go by reason, the poet doth so far exceed him, as he is to frame his example to that which is most reasonable, be it in warlike, politic, or private matters; where the historian in his bare way hath many times that which we call fortune to overrule the best wisdom. Many times he must tell events whereof he can yield no cause; or if he do, it must be poetical.

For that a feigned example hath as much force to teach as a true example (for as for to move, it is clear, sith the feigned may be tuned to the highest key of passion), let us take one example wherein a poet and a historian do concur. Herodotus and Justin do both testify that Zopyrus, King Darius⁷ faithful servant, seeing his master long resisted by the rebellious Babylonians, feigned himself in extreme disgrace of his king, for verifying of which he caused his own nose and ears to be cut off: and so flying to the Babylonians, was received, and for his known valor so far credited that he did find means to deliver them over to Darius. Much like matter doth Livy record of Tarquinius⁸ and his son. Xenophon excellently feigneth such

9. Justinus, who made a summary (3d c. C.E.) of the Augustan *Philippic Histories*; it was widely read in the Middle Ages.

1. A priest of Hephaestus at Troy (*Iliad* 5.9–10), supposed author of a pre-Homeric account of the Trojan War whose Latin prose "translation" was drawn on by medieval authors.

2. A sorceress whom Horace describes in *Epode* 7 as murdering a boy to make love charms (*Epode* 17 is a mock recantation, pretending fear of her powers).

3. Legendary king (grandfather of Atreus) who tested the gods by cooking and serving them his dismembered son Pelops; he suffers eternal hunger and thirst, standing in a pool and surrounded by fruit that remains always out of reach.

4. Roman general (ca. 236–184/3 B.C.E.), who defeated Hannibal and the Carthaginians. Alexander: Alexander the Great (356–323 B.C.E.),

Macedonian king whose conquests reached to India and who was probably the greatest general of antiquity.

5. Quintus Curtius Rufus (active ca. mid-1st c. C.E.), rhetorician and historian who wrote a 10-book history of Alexander, portraying him as a fortunate tyrant.

6. Large-scale poetical image.

7. Persian king (ca. 550–486 B.C.E.) who had to quell numerous revolts during his reign; the most important was in Babylonia. Zopyrus: a Persian who ended the 20-month siege of Babylon by the trick Sidney describes.

8. Lucius Tarquinius Superbus, the last king of Rome (by tradition, reigned 534–510 B.C.E.), whose son, Lucius Tarquinius Priscus, pretended to desert to the enemy and then acted to his father's advantage. Livy (59 B.C.E.–17 C.E.), Roman historian.

another stratagem performed by Abradatas⁹ in Cyrus' behalf. Now would I fain¹ know, if occasion be presented unto you to serve your prince by such an honest dissimulation, why you do not as well learn it of Xenophon's fiction as of the other's verity? And truly so much the better, as you shall save your nose by the bargain, for Abradatas did not counterfeit so far. So then the best of the historian is subject to the poet; for whatsoever action or faction, whatsoever counsel, policy, or war stratagem the historian is bound to recite, that may the poet (if he list²) with his imitation make his own, beautifying it both for further teaching and more delighting, as it pleaseth him: having all, from Dante his heaven to his hell, under the authority of his pen. Which if I be asked what poets have done so, as I might well name some, yet say I, and say again, I speak of the art and not of the artificer.

Now, to that which commonly is attributed to the praise of histories, in respect of the notable learning is gotten by marking the success, as though therein a man should see virtue exalted and vice punished; truly that commendation is peculiar to poetry, and far off from history. For indeed poetry ever setteth virtue so out in her best colors, making fortune her well-waiting handmaid, that one must needs be enamored of her. Well may you see Ulysses in a storm and in other hard plights, but they are but exercises of patience and magnanimity, to make them shine the more in the near-following prosperity. And of the contrary part, if evil men come to the stage, they ever go out (as the tragedy writer³ answered to one that misliked the show of such persons) so manacled as they little animate folks to follow them. But the historian, being captived to the truth of a foolish world, is many times a terror from well doing, and an encouragement to unbridled wickedness. For see we not valiant Miltiades rot in his fetters; the just Phocion and the accomplished Socrates put to death like traitors; the cruel Severus live prosperously; the excellent Severus miserably murdered; Sylla and Marius dying in their beds; Pompey and Cicero⁴ slain then, when they would have thought exile a happiness? See we not virtuous Cato driven to kill himself, and rebel Caesar⁵ so advanced that his name yet after 1600 years lasteth in the highest honor? And mark but even Caesar's own words of the fore-named Sylla (who in that only did honestly, to put down his dishonest tyranny), *litteras nescivit*,⁶ as if want of learning caused him to do well. He meant it not by poetry,

9. A king of Susa (6th c. B.C.E.) and ally of the Assyrians against Cyrus who later joined Cyrus, according to Xenophon's *Cyropaedia*.

1. Willingly, gladly.

2. Wishes.

3. The Greek tragedian Euripides (ca. 483–ca. 406 B.C.E.), according to the *Moralia* of Plutarch (ca. 50–ca. 120 C.E.).

4. Killed at Antony's command as he was trying to escape from Rome (his orations defending the Republic and against Antony after Caesar's death had earned him a place on the list of proscribed enemies). Miltiades (ca. 550–489 B.C.E.), Athenian general and victor at Marathon later imprisoned by the Athenians. Phocion (4th c. B.C.E.), Athenian general and statesman unjustly executed for treason because he had opposed the will of the people. Socrates (469–399 B.C.E.), Greek philosopher immortalized in the writings of his pupil Plato and condemned to death on charges of impiety and corrupting youth. "Cruel-Severus": Lucius

Septimus Severus (145/6–211 C.E.), emperor of Rome (193–211), who is perhaps called cruel because he spent much of his time putting down rebellions and dealing with rivals. "Excellent Severus": Alexander Severus (208/9–235 C.E.), emperor of Rome (222–35), a peaceful and religious man slain by his troops. Sylla and Marius: Lucius Cornelius Sulla (ca. 138–78 B.C.E.) and Gaius Marius (157–86 B.C.E.), Roman generals whose struggle for military and political supremacy led to civil war (88–82 B.C.E.). Pompey: Pompey the Great (106–48 B.C.E.), Roman soldier and statesman defeated at Pharsalia by his former ally, Caesar, and murdered in Egypt.

5. Julius Caesar's rebellion against the Senate in 49 B.C.E. led to civil war and the end of the Roman Republic. Cato: Cato the Younger (95–46 B.C.E.), a defender of the Republic who committed suicide after Caesar's decisive victory at Thapsus.

6. He was ignorant of letters (Latin).

which not content with earthly plagues, deviseth new punishments in hell for tyrants, nor yet by philosophy, which teacheth *occidendos esse*;⁷ but no doubt by skill in history, for that indeed can afford you Cypselus, Periander, Phalaris, Dionysius,⁸ and I know not how many more of the same kennel, that speed well enough in their abominable injustice or usurpation. I conclude therefore, that he excelleth history, not only in furnishing the mind with knowledge, but in setting it forward to that which deserveth to be called and accounted good: which setting forward and moving to well doing indeed setteth the laurel crown⁹ upon the poet as victorious, not only of the historian, but over the philosopher, howsoever in teaching it may be questionable.

For suppose it be granted (that which I suppose with great reason may be denied) that the philosopher, in respect of his methodical proceeding, doth teach more perfectly than the poet: yet do I think that no man is so much *philophilosophos*¹ as to compare the philosopher in moving with the poet. And that moving is of a higher degree than teaching, it may by this appear: that it is well nigh the cause and the effect of teaching. For who will be taught if he be not moved with desire to be taught; and what so much good doth that teaching bring forth (I speak still of moral doctrine) as that it moveth one to do that which it doth teach? For as Aristotle saith, it is not *gnosis* but *praxis*² must be the fruit. And how *praxis* can be, without being moved to practice, is no hard matter to consider.

The philosopher showeth you the way, he informeth you of the particularities, as well of the tediousness of the way, as of the pleasant lodging you shall have when your journey is ended, as of the many by-turnings that may divert you from your way. But this is to no man but to him that will read him, and read him with attentive studious painfulness; which constant desire, whosoever hath in him, hath already passed half the hardness of the way, and therefore is beholding³ to the philosopher but for the other half. Nay truly, learned men have learnedly thought that where once reason hath so much overmastered passion as that the mind hath a free desire to do well, the inward light each mind hath in itself is as good as a philosopher's book; seeing in nature we know it is well to do well, and what is well and what is evil, although not in the words of art which philosophers bestow upon us; for out of natural conceit⁴ the philosophers drew it. But to be moved to do that which we know, or to be moved with desire to know, *hoc opus, hic labor est*.⁵

Now therein of all sciences (I speak still of human, and according to the human conceits) is our poet the monarch. For he doth not only show the way, but giveth so sweet a prospect into the way, as will entice any man to enter into it. Nay, he doth as if your journey should lie through a fair vineyard, at the first give you a cluster of grapes, that full of that taste, you may long to pass further. He beginneth not with obscure definitions which must

7. That they must be killed (Latin).

8. All Greek "tyrants" (that is, rulers): Cypselus, in Corinth, ca. 657–625 B.C.E.; Periander, son of Cypselus, in Corinth, 625–585 B.C.E.; Phalaris, whose rule in Acragas (Sicily), ca. 570–ca. 544 B.C.E., was notoriously cruel; and Dionysius, in Syracuse, 405–367 B.C.E.

9. Like the crowns (of various greens, including laurel) awarded to victors in the Greek athletic contests; laurel, because of its association with

Apollo, is linked to poetry.

1. A lover of philosophers (Greek).

2. Action (Greek). *Gnosis*: knowledge (Greek). See *Nicomachean Ethics* 1.3, 1095a.

3. Beholden.

4. The distinction here is between concepts in their natural form, seen in the mind, and concepts artificially set forth in words [Robinson's note].

5. This is the work, this is the labor (Latin); Virgil, *Aeneid* 6.129.

blur the margent with interpretations and load the memory with doubtfulness, but he cometh to you with words set in delightful proportion, either accompanied with, or prepared for, the well enchanting skill of music; and with a tale forsooth he cometh unto you, with a tale which holdeth children from play and old men from the chimney corner. And pretending no more, doth intend the winning of the mind from wickedness to virtue, even as the child is often brought to take most wholesome things by hiding them in such other as have a pleasant taste: which, if one should begin to tell them the nature of aloes or rhubarb⁶ they should receive, would sooner take their physic at their ears than at their mouth. So is it in men (most of which are childish in the best things till they be cradled in their graves), glad they will be to hear the tales of Hercules,⁷ Achilles, Cyrus, and Aeneas; and hearing them, must needs hear the right description of wisdom, valor, and justice; which, if they had been barely, that is to say, philosophically set out, they would swear they be brought to school again.

That imitation whereof poetry is, hath the most conveniency to nature of all other, insomuch that, as Aristotle saith, those things which in themselves are horrible, as cruel battles, unnatural monsters, are made in poetical imitation delightful.⁸ Truly, I have known men that, even with reading *Amadis de Gaule*⁹ (which God knoweth wanteth much of a perfect poesy), have found their hearts moved to the exercise of courtesy, liberality, and especially courage. Who readeth Aeneas carrying old Anchises on his back that wisheth not it were his fortune to perform so excellent an act? Whom do not the words of Turnus move (the tale of Turnus having planted his image in the imagination)?

*Fugientem haec terra videbit,
Usque adeone mori miserum est?*¹

Where the philosophers, as they scorn to delight, so must they be content little to move, saving wrangling whether virtue be the chief or the only good, whether the contemplative or the active life do excel: which Plato and Boethius² well knew, and therefore made mistress philosophy very often borrow the masking raiment of poesy. For even those hard-hearted evil men who think virtue a school name, and know no other good but *indulgere genio*,³ and therefore despise the austere admonitions of the philosopher, and feel not the inward reason they stand upon, yet will be content to be delighted, which is all the good fellow poet seemeth to promise, and so steal to see the form of goodness (which seen they cannot but love) ere themselves be aware, as if they took a medicine of cherries.

Infinite proofs of the strange effects of this poetical invention might be alleged; only two shall serve, which are so often remembered as I think all men know them. The one of Menenius Agrippa,⁴ who, when the whole peo-

6. Two bitter purgatives.

7. The Roman spelling of Heracles, greatest of the legendary Greek heroes.

8. See *Poetics* 4, 1448b. "Conveniency to": accordance with.

9. A Spanish prose romance (first published 1508, but the story dates at least to the 14th c.).

1. Will this land see Turnus fleeing? Is it so terrible to die? (Latin); Virgil, *Aeneid* 12.645-46. Turnus: legendary king in Italy who made war

against the newly arrived Trojans and was defeated by Aeneas in single combat.

2. Neoplatonic Roman philosopher (ca. 480-524), author of *The Consolation of Philosophy*.

3. To indulge one's appetite (Latin); slightly misquoted from *Satire* 5.151 by the Roman poet Persius (34-62 C.E.).

4. Plebeian consul who reputedly used a fable from Aesop (retold by Sidney) in 494 B.C.E. to convince the plebes of the futility of secession.

ple of Rome had resolutely divided themselves from the Senate, with apparent show of utter ruin, though he were (for that time) an excellent orator, came not among them upon trust of figurative speeches or cunning insinuations, and much less with far fet⁵ maxims of philosophy, which (especially if they were Platonic) they must have learned geometry before they could well have conceived; but forsooth he behaves himself like a homely⁶ and familiar poet. He telleth them a tale, that there was a time when all the parts of the body made a mutinous conspiracy against the belly, which they thought devoured the fruits of each other's labor: they concluded they would let so unprofitable a spender starve. In the end, to be short (for the tale is notorious, and as notorious that it was a tale), with punishing the belly they plagued themselves. This applied by him wrought such effect in the people, as I never read that ever words brought forth but then so sudden and so good an alteration; for upon reasonable conditions a perfect reconcilment ensued. The other is of Nathan the prophet,⁷ who when the holy David had so far forsaken God as to confirm adultery with murder, when he was to do the tenderest office of a friend, in laying his own shame before his eyes, sent by God to call again so chosen a servant, how doth he it but by telling of a man whose beloved lamb was ungratefully taken from his bosom?—the application most divinely true, but the discourse itself feigned; which made David (I speak of the second and instrumental cause⁸), as in a glass, to see his own filthiness, as that heavenly psalm of mercy⁹ well testifieth.

By these therefore examples and reasons I think it may be manifest that the poet, with that same hand of delight, doth draw the mind more effectually than any other art doth. And so a conclusion not unfity ensueth, that as virtue is the most excellent resting place for all worldly learning to make his end of, so poetry, being the most familiar to teach it, and most princely to move towards it, in the most excellent work is the most excellent workman.

But I am content not only to decipher him by his works (although works in commendation or dispraise must ever hold an high authority), but more narrowly will examine his parts, so that (as in a man), though all together may carry a presence full of majesty and beauty, perchance in some one defectious¹ piece we may find a blemish. Now in his parts, kinds, or species (as you list to term them), it is to be noted that some poesies have coupled together two or three kinds, as tragical and comical, whereupon is risen the tragi-comical. Some, in the like manner, have mingled prose and verse, as Sannazaro² and Boethius. Some have mingled matters heroical and pastoral. But that cometh all to one in this question, for if severed they be good, the conjunction cannot be hurtful. Therefore, perchance forgetting some, and leaving some as needless to be remembered, it shall not be amiss in a word to cite the special kinds, to see what faults may be found in the right use of them.

Is it then the pastoral poem which is misliked (for perchance where the hedge is lowest they will soonest leap over)?³ Is the poor pipe disdained which

5. Fetched.

6. Unsophisticated.

7. Told in 2 Samuel 12; after committing adultery with Bathsheba, King David contrived to have her husband, Uriah, killed in battle.

8. The second cause is the parable itself, while the first cause is David's acceptance of God's will [Robinson's note].

9. Psalm 51, in which David prays for the remis-

sion of his sins [Robinson's note]. Glass: mirror.

1. Defective.

2. Jacopo Sannazaro (1458–1530), whose pastoral romance *Arcadia* (1502) influenced Sidney's own *Arcadia*.

3. Like most Renaissance poets, Sidney thinks of the pastoral as the humblest of the poetic genres, designed for low subjects and to be executed in an equally low style [Robinson's note].

sometime out of Meliboeus' mouth can show the misery of people under hard lords or ravening soldiers? And again, by Tityrus,⁴ what blessedness is derived to them that lie lowest from the goodness of them that sit highest? sometimes, under the pretty tales of wolves and sheep, can include the whole considerations of wrong doing and patience; sometimes show that contention for trifles can get but a trifling victory; where perchance a man may see that even Alexander and Darius,⁵ when they strave who should be cock of this world's dunghill, the benefit they got was that the after-livers may say,

*Haec memini et victum frustra contendere Thyrsin:
Ex illo Corydon, Corydon est tempore nobis.*⁶

Or is it the lamenting elegiac?⁷ which in a kind heart would move rather pity than blame, who bewails with the great philosopher Heraclitus⁸ the weakness of mankind and the wretchedness of the world; who surely is to be praised, either for compassionate accompanying just causes of lamentation, or for rightly painting out how weak be the passions of woefulness. Is it the bitter but wholesome iambic?⁹ which rubs the galled mind in making shame the trumpet of villainy with bold and open crying out against naughtiness. Or the satiric? who

*Omne vafer vitium, ridenti tangit amico,*¹

who sportingly never leaveth until he make a man laugh at folly, and at length ashamed to laugh at himself, which he cannot avoid, without avoiding the folly; who, while

*Circum praecordia ludit,*²

giveth us to feel how many head-aches a passionate life bringeth us to; how, when all is done,

*Est Ulubris, animus si nos non deficit aequus*³

No, perchance it is the comic, whom naughty play-makers and stage-keepers have justly made odious. To the argument of abuse I will answer after. Only thus much now is to be said, that the comedy is an imitation of the common errors of our life, which he representeth in the most ridiculous and scornful sort that may be, so as it is impossible that any beholder can be content to be such a one.

Now, as in geometry the oblique must be known as well as the right, and in arithmetic the odd as well as the even, so in the actions of our life who

4. A speaker in Virgil's *Eclogue* 1, as is Meliboeus; Meliboeus laments the seizure of his land, confiscated for the use of resettled ex-soldiers, while Tityrus rejoices that his lands were protected by a patron in Rome.

5. The invading Alexander twice defeated Darius, the king of Persia, before Darius was deposed and finally murdered in 330 B.C.E. by his own soldiers.

6. These things I remember, that the conquered Thyrsis contended in vain./From this time Corydon, Corydon is ours (Latin); Virgil, *Eclogues* 7.69-70. The victory of Alexander the Great over Darius of Persia comes to the same thing as Corydon's victory over Thyrsis in a singing contest.

7. In classical poetry, a poem in a specific metrical form; in English poetry, any serious poem on love or death.

8. Greek pre-Socratic (active ca. 500 B.C.E.), known as "the weeping philosopher" because of his gloomy views; Heraclitus emphasized that all things are in flux.

9. Metrical form that Aristotle associates with lampoons (*Poetics* 4, 1448b).

1. The rascal probes his friend's every fault while making him laugh (Latin); slightly misquoted from Persius, *Satire* 1.116-17, who is describing the satires of Horace.

2. He plays with his [friend's] heart (Latin); Persius 1.117.

3. Even in Ulubrae, if our equanimity doesn't fail us [what we seek (i.e., to live well) is here] (Latin); slightly adapted from Horace, *Epistles* 1.11.30. Ulubrae was an uninspiring town surrounded by marshes.

seeth not the filthiness of evil wanteth a great foil to perceive the beauty of virtue. This doth the comedy handle so in our private and domestical matters, as with hearing it we get as it were an experience what is to be looked for of a niggardly Demea, of a crafty Davus, of a flattering Gnatho, of a vainglorious Thraso;⁴ and not only to know what effects are to be expected, but to know who be such by the signifying badge⁵ given them by the comedian. And little reason hath any man to say that men learn evil by seeing it so set out, sith, as I said before, there is no man living but, by the force truth hath in nature, no sooner seeth these men play their parts, but wisheth them *in pistrinum*;⁶ although perchance the sack of his own faults lie so behind his back that he seeth not himself dance the same measure; whereto yet nothing can more open his eyes than to find his own actions contemptibly set forth. So that the right use of comedy will (I think) by nobody be blamed, and much less of the high and excellent tragedy, that openeth the greatest wounds and showeth forth the ulcers that are covered with tissue; that maketh kings fear to be tyrants, and tyrants manifest their tyrannical humors; that with stirring the affects of admiration and commiseration teacheth the uncertainty of this world, and upon how weak foundations gilden roofs are builded; that maketh us know,

*Qui sceptrā saevus duro imperio regit,
Timet timentes, metus in auctorem reddit.⁷*

But how much it can move, Plutarch yieldeth a notable testimony of the abominable tyrant Alexander Pheraeus,⁸ from whose eyes a tragedy well made and represented drew abundance of tears; who without all pity had murdered infinite numbers, and some of his own blood, so as he that was not ashamed to make matters for tragedies, yet could not resist the sweet violence of a tragedy. And if it wrought no further good in him, it was that he, in despite of himself, withdrew himself from hearkening to that which might mollify his hardened heart. But it is not the tragedy they do mislike; for it were too absurd to cast out so excellent a representation of whatsoever is most worthy to be learned.

Is it the lyric⁹ that most displeaseth? who with his tuned lyre and well accorded voice giveth praise, the reward of virtue, to virtuous acts; who gives moral precepts and natural problems;¹ who sometimes raiseth up his voice to the height of the heavens in singing the lauds of the immortal God. Certainly, I must confess my own barbarousness, I never heard the old song of Percy and Douglas² that I found not my heart moved more than with a trumpet; and yet is it sung but by some blind crowder³ with no rougher voice

4. Type characters in Terence: respectively, the overbearing father, clever servant, parasite, and braggart. Terence was the chief classical model for comedy during the Renaissance.

5. A character's "signifying badge" was his name, dress, manner, and other characteristics [Robinson's note].

6. To the mill (Latin); mills were worked usually by draft animals, but sometimes by Roman slaves being punished.

7. He who wields the scepter with harsh authority/Fears those who fear him; the fear returns to its author (Latin); slightly misquoted from *Oedipus*, lines 705-6, by the philosopher and playwright Seneca the Younger (ca. 4 B.C.E.—

65 C.E.).

8. Ruler of Pherae, 369-358 B.C.E.; in his *Life of Pelopidas*, Plutarch (ca. 50-ca. 120 C.E.) records that Alexander, whose savagery he details, wept at the sufferings of Hecuba and Andromache in the Greek playwright Euripides' *Troades* (415 B.C.E.).

9. That is, a song accompanied by a musical instrument, usually the lyre.

1. "Problems" were questions posed for discussion [Robinson's note].

2. Antagonists in *The Battle of Chevy Chase*, a 15th-century poem commemorating the 1388 Battle of Otteburn.

3. Player of a crowd, an ancient Welsh stringed instrument; a fiddler.

than rude style; which, being so evil apparelled in the dust and cobwebs of that uncivil age, what would it work, trimmed in the gorgeous eloquence of Pindar?⁴ In Hungary I have seen it the manner at all feasts, and other such meetings, to have songs of their ancestors' valor, which that right soldier-like nation think the chiefest kindlers of brave courage. The incomparable Lacedemonians⁵ did not only carry that kind of music ever with them to the field, but even at home, as such songs were made, so were they all content to be the singers of them; when the lusty men were to tell what they did, the old men what they had done, and the young men what they would do. And where a man may say that Pindar many times praiseth highly victories of small moment, matters rather of sport than virtue; as it may be answered, it was the fault of the poet, and not of the poetry, so indeed the chief fault was in the time and custom of the Greeks, who set those toys at so high a price that Philip of Macedon reckoned a horse-race won at Olympus among his three fearful felicities.⁶ But as the unimitable Pindar often did, so is that kind most capable and most fit to awake the thoughts from the sleep of idleness to embrace honorable enterprises.

There rests the heroical, whose very name (I think) should daunt all backbiters; for by what conceit can a tongue be directed to speak evil of that which draweth with it no less champions than Achilles, Cyrus, Aeneas, Turnus, Tydeus, and Rinaldo?⁷ who doth not only teach and move to a truth, but teacheth and moveth to the most high and excellent truth; who maketh magnanimity and justice shine throughout all misty fearfulness and foggy desires; who, if the saying of Plato and Tully be true, that who could see virtue would be wonderfully ravished with the love of her beauty, this man sets out to make her more lovely in her holiday apparel, to the eye of any that will deign not to disdain until they understand. But if anything be already said in the defence of sweet poetry, all concurrereth to the maintaining the heroical, which is not only a kind, but the best and most accomplished kind of poetry. For as the image of each action stirreth and instructeth the mind, so the lofty image of such worthies most inflameth the mind with desire to be worthy, and informs with counsel how to be worthy. Only let Aeneas be worn in the tablet of your memory, how he governeth himself in the ruin of his country; in the preserving his old father and carrying away his religious ceremonies;⁸ in obeying the god's commandment to leave *Dido*,⁹ though not only all passionate kindness, but even the human consideration of virtuous gratefulness, would have craved other of him; how in storms, how in sports, how in war, how in peace, how a fugitive, how victorious, how besieged, how besieging, how to strangers, how to allies, how to enemies, how to his own; lastly, how in his inward self, and how in his outward gov-

4. Greek lyric poet (ca. 518–438 B.C.E.), known for his elaborate odes honoring victors in athletic contests. "Uncivil age": the Middle Ages.

5. Spartans.

6. According to Plutarch (*Life of Alexander* 3), Philip of Macedon received news of a victory in battle, a winner at the race track in Olympia, and the birth of Alexander, all on the same day [Robinson's note].

7. A hero in Ariosto's *Orlando Furioso* and Torquato Tasso's *Gerusalemme Liberata* (1581).

Tydeus: one of the "seven against Thebes," mythical heroes who aided Polynices' attempt to wrest rule of Thebes from his brother Eteocles, featured in the epic *Thebais* by Statius (ca. 46–96 C.E.).

8. Virgil, *Aeneid* 2.705–20. "Ceremonies": religious objects (here, the household gods).

9. The queen of Carthage, whom Jupiter orders Aeneas to leave so that he may fulfill his destiny in Italy. As he departs, she commits suicide. See *Aeneid* 4.

ernment. And, I think, in a mind not prejudiced with a prejudicating humor, he will be found in excellency fruitful; yea, even as Horace saith,

*melius Chrysippo et Crantore.*¹

But truly I imagine it falleth out with these poet-whippers, as with some good women, who often are sick, but in faith they cannot tell where. So the name of poetry is odious to them, but neither his cause nor effects, neither the sum that contains him nor the particularities descending from him, give any fast handle to their carping dispraise.

Sith then poetry is of all human learning the most ancient and of most fatherly antiquity, as from whence other learnings have taken their beginnings; sith it is so universal that no learned nation doth despise it, nor no barbarous nation is without it; sith both Roman and Greek gave divine names unto it, the one of prophesying, the other of making, and that indeed, that name of making is fit for him, considering that whereas other arts retain themselves within their subject and receive, as it were, their being from it, the poet only bringeth his own stuff, and doth not learn a conceit out of a matter, but maketh matter for a conceit; sith neither his description nor his end containeth any evil, the thing described cannot be evil; sith his effects be so good as to teach goodness and to delight the learners; sith therein (namely in moral doctrine, the chief of all knowledges) he doth not only far pass the historian, but for instructing is well nigh comparable to the philosopher, and for moving, leaves him behind him; sith the Holy Scripture (wherein there is no uncleanness) hath whole parts in it poetical, and that even our Saviour Christ vouchsafed to use the flowers of it; sith all his kinds are not only in their united forms, but in their severed dissections, fully commendable; I think (and think I think rightly) the laurel crown appointed for triumphing captains doth worthily (of all other learnings) honor the poet's triumph.²

But because we have ears as well as tongues, and that the lightest reasons that may be will seem to weigh greatly if nothing be put in the counterbalance, let us hear, and, as well as we can, ponder, what objections may be made against this art, which may be worthy either of yielding or answering.

First, truly, I note not only in these *mysomousoi*, poet-haters, but in all that kind of people who seek a praise by dispraising others, that they do prodigally spend a great many wandering words in quips and scoffs, carping and taunting at each thing which, by stirring the spleen³ may stay the brain from a thorough beholding the worthiness of the subject. Those kind of objections, as they are full of very idle easiness, sith there is nothing of so sacred a majesty but that an itching tongue may rub itself upon it, so deserve they no other answer, but instead of laughing at the jest, to laugh at the jester. We know a playing wit can praise the discretion of an ass, the comfortableness of being in debt, and the jolly commodity of being sick of the plague. So of the contrary side, if we will turn Ovid's verse,

1. A better [teacher] than Chrysippus and Crantor (Latin); Horace, *Epistles* 1.2.4, referring to Homer. Chrysippus (ca. 280–207 B.C.E.), Stoic philosopher. Crantor (ca. 335–ca. 275 B.C.E.), philosopher and commentator on Plato.

2. Sidney is perhaps thinking of the crowning of

Petrarch as poet laureate at Rome in 1341. In ancient Rome the laurel crown was generally reserved for victorious generals [Robinson's note].

3. Thought in the Renaissance to be the source of melancholy and ill temper.

*Ut lateat virtus proximitate mali,*⁴

that good lie hid in nearness of the evil, Agrippa will be as merry in showing the vanity of science as Erasmus⁵ was in commending of folly. Neither shall any man or matter escape some touch of these smiling railers. But for Erasmus and Agrippa, they had another foundation than the superficial part would promise. Marry, these other pleasant fault-finders, who will correct the verb before they understand the noun, and confute others' knowledge before they confirm their own, I would have them only remember that scoffing cometh not of wisdom. So as the best title in true English they get with their merriments is to be called good fools, for so have our grave forefathers ever termed that humorous kind of jesters.

But that which giveth greatest scope to their scorning humors is rhyming and versing. It is already said (and, as I think, truly said), it is not rhyming and versing that maketh poesy. One may be a poet without versing, and a versifier without poetry. But yet presuppose it were inseparable (as indeed it seemeth Scaliger⁶ judgeth), truly it were an inseparable commendation. For if *oratio* next to *ratio*, speech next to reason, be the greatest gift bestowed upon mortality, that cannot be praiseless which doth most polish that blessing of speech, which considers each word not only (as a man may say) by his forcible quality, but by his best measured quantity,⁷ carrying even in themselves a harmony (without (perchance) number, measure, order, proportion be in our time grown odious). But lay aside the just praise it hath, by being the only fit speech for music (music, I say, the most divine striker of the senses), thus much is undoubtedly true, that if reading be foolish without remembering, memory being the only treasurer of knowledge, those words which are fittest for memory are likewise most convenient for knowledge.

Now, that verse far exceedeth prose in the knitting up of the memory, the reason is manifest. The words (besides their delight, which hath a great affinity to memory) being so set as one word cannot be lost but the whole work fails; which accuseth itself, calleth the remembrance back to itself, and so most strongly confirmeth it. Besides, one word so, as it were, begetting another, as be it in rhyme or measured verse, by the former a man shall have a near guess to the follower. Lastly, even they that have taught the art of memory have showed nothing so apt for it as a certain room divided into many places, well and thoroughly known. Now that hath the verse in effect perfectly, every word having his natural seat, which seat must needs make the words remembered. But what needeth more in a thing so known to all men? Who is it that ever was a scholar that doth not carry away some verses

4. Adapted from the *Ars Amatoria* (*Art of Love*) 2.662 of the Roman poet Ovid (43 B.C.E.–17 C.E.); Sidney's translation follows.

5. Desiderius Erasmus (1466–1536), Dutch humanist scholar, author of *The Praise of Folly* (1509). Agrippa: Heinrich Cornelius Agrippa von Nettesheim (1486–1535), German doctor and occult philosopher; in *On the Uncertainty and Vanity of Arts and Sciences* (ca. 1530), he attacked the idea that knowledge is based in human reason.

6. Julius Caesar Scaliger (1484–1558), Italian-born French classical scholar; in his *Poetics* (1561), he claimed that the poet's product was

verses (and not, with Aristotle, the imitation of human action).

7. In classical poetry the basic rhythmic unit is quantitative, based on the time required to pronounce a syllable. English poetry, on the other hand, derives its rhythm from the accent (long or short, stressed or unstressed) given to a syllable. For a short period during the Renaissance, however, there was a controversial and ultimately unsuccessful attempt (centering around Sidney and his associates) to compose English poetry in quantitative meters [Robinson's note].

of Virgil, Horace, or Cato, which in his youth he learned, and even to his old age serve him for hourly lessons? as

*Percontatorem fugito, nam garrulus idem est.*⁸

*Dum sibi quisque placet, credula turba sumus.*⁹

But the fitness it hath for memory is notably proved by all delivery of arts: wherein for the most part, from grammar to logic, mathematic, physic, and the rest, the rules chiefly necessary to be borne away are compiled in verses. So that verse, being in itself sweet and orderly, and being best for memory, the only handle of knowledge, it must be in jest that any man can speak against it.

Now then go we to the most important imputations laid to the poor poets. For aught I can yet learn, they are these. First, that there being many other more fruitful knowledges, a man might better spend his time in them than in this. Secondly, that it is the mother of lies. Thirdly, that it is the nurse of abuse, infecting us with many pestilent desires, with a siren's sweetness drawing the mind to the serpent's tail of sinful fancy. And herein especially comedies give the largest field to ear,¹ as Chaucer saith; how both in other nations and in ours, before poets did soften us, we were full of courage, given to martial exercises, the pillars of manlike liberty, and not lulled asleep in shady idleness with poets' pastimes. And lastly, and chiefly, they cry out with an open mouth, as if they had outshot Robin Hood, that Plato banished them out of his commonwealth.² Truly, this is much, if there be much truth in it.

First, to the first, that a man might better spend his time is a reason indeed; but it doth (as they say) but *petere principium*:³ for if it be, as I affirm, that no learning is so good as that which teacheth and moveth to virtue, and that none can both teach and move thereto so much as poetry, then is the conclusion manifest that ink and paper cannot be to a more profitable purpose employed. And certainly, though a man should grant their first assumption, it should follow (methinks) very unwillingly, that good is not good because better is better. But I still and utterly deny that there is sprung out of earth a more fruitful knowledge.

To the second therefore, that they should be the principal liars, I answer paradoxically, but truly, I think truly, that of all writers under the sun the poet is the least liar, and, though he would, as a poet can scarcely be a liar. The astronomer, with his cousin the geometrician, can hardly escape, when they take upon them to measure the height of the stars. How often, think you, do the physicians lie when they aver things good for sickness, which afterwards send Charon⁴ a great number of souls drowned in a potion before they come to his ferry? And no less of the rest, which take upon them to affirm. Now for the poet, he nothing affirms, and therefore never lieth. For, as I take it, to lie is to affirm that to be true which is false; so as the other artists,⁵ and especially the historian, affirming many things, can, in the

8. Flee the inquirer, for he is talkative (Latin); Horace, *Epistles* 1.18.69.

9. While each pleases himself, we are a credulous crowd (Latin); Ovid, *Remedia Amoris* (*Remedy of Love*), 686.

1. To plow; Chaucer uses the phrase "a large feeld to ere" in *The Knight's Tale*, line 28.

2. See *Republic* 3.398a-b, 10.595a-608b

(above).

3. Beg the question (Latin); that is, assume the truth of what is to be proved.

4. In classical mythology, the ferryman who takes the souls of the dead over the river Styx.

5. Practitioners of all the liberal arts, which include history and philosophy as well as poetry, painting, and sculpture.

cloudy knowledge of mankind, hardly escape from many lies. But the poet (as I said before) never affirmeth. The poet never maketh any circles about your imagination to conjure you to believe for true what he writes. He citeth not authorities of other histories, but even for his entry calleth the sweet Muses to inspire into him a good invention; in troth, not laboring to tell you what is or is not, but what should or should not be. And therefore, though he recount things not true, yet because he telleth them not for true, he lieth not, without we will say that Nathan lied in his speech before alleged to David; which, as a wicked man durst scarce say, so think I none so simple would say that Aesop lied in the tales of his beasts; for who thinks that Aesop writ it for actually true were well worthy to have his name chronicled among the beasts he writeth of. What child is there that, coming to a play, and seeing Thebes written in great letters upon an old door, doth believe that it is Thebes? If then a man can arrive at that child's age to know that the poet's persons and doings are but pictures what should be, and not stories what have been, they will never give the lie to things not affirmatively but allegorically and figuratively written. And therefore, as in history looking for truth, they go away full fraught with falsehood, so in poesy looking for fiction, they shall use the narration but as an imaginative ground-plot of a profitable invention.⁶

But hereto is replied that the poets give names to men they write of, which argueth a conceit of an actual truth, and so, not being true, proves a falsehood. And doth the lawyer lie then, when under the names of John a Stile and John a Noakes⁷ he puts his case? But that is easily answered. Their naming of men is but to make their picture the more lively, and not to build any history: painting men, they cannot leave men nameless. We see we cannot play at chess but that we must give names to our chessmen; and yet, methinks, he were a very partial champion of truth that would say we lied for giving a piece of wood the reverend title of a Bishop. The poet nameth Cyrus or Aeneas no other way than to show what men of their fames, fortunes, and estates should do.

Their third is, how much it abuseth men's wit, training it to wanton sinfulness and lustful love: for indeed that is the principal, if not the only, abuse I can hear alleged. They say the comedies rather teach than reprehend amorous conceits. They say the lyric is larded with passionate sonnets, the elegiac weeps the want of his mistress, and that even to the heroical Cupid hath ambitiously climbed.⁸ Alas, Love, I would thou couldst as well defend thyself as thou canst offend others. I would those on whom thou dost attend could either put thee away, or yield good reason why they keep thee. But grant love of beauty to be a beastly fault (although it be very hard, sith only man, and no beast, hath that gift to discern beauty); grant that lovely name of love to deserve all hateful reproaches (although even some of my masters the philosophers spent a good deal of their lamp-oil in setting forth the excellency of it); grant, I say, whatsoever they will have granted, that not only love, but lust, but vanity, but (if they list) scurrility, possesseth many leaves of the poet's books; yet think I, when this is granted, they will find their sentence

6. The "ground-plot" is a bare skeleton or frame upon which the reader is to work out ("invent") the full meaning of the poet's original "*Idea* or fore-conceit" [Robinson's note].

7. That is, hypothetical names (like "John Doe").

8. Cupid's invasion of the world of heroic action is one of the central themes in Sidney's *Arcadia* [Robinson's note]. Cupid: Roman god of love.

may with good manners put the last words foremost, and not say that poetry abuseth man's wit, but that man's wit abuseth poetry.

For I will not deny but that man's wit may make poesy (which should be *eikastike*, which some learned have defined, figuring forth good things) to be *phantastike*,⁹ which doth contrariwise infect the fancy with unworthy objects; as the painter, that should give to the eye either some excellent perspective, or some fine picture fit for building or fortification, or containing in it some notable example, as Abraham sacrificing his son Isaac, Judith killing Holofernes, David fighting with Goliath,¹ may leave those, and please an ill-pleased eye with wanton shows of better hidden matters. But what, shall the abuse of a thing make the right use odious? Nay truly, though I yield that poesy may not only be abused, but that being abused, by the reason of his sweet charming force it can do more hurt than any other army of words, yet shall it be so far from concluding that the abuse should give reproach to the abused, that contrariwise it is a good reason that whatsoever being abused doth most harm, being rightly used (and upon the right use each thing conceiveth his title) doth most good.

Do we not see the skill of physic (the best rampire² to our often-assaulted bodies), being abused, teach poison the most violent destroyer? Doth not knowledge of law, whose end is to even and right all things, being abused, grow the crooked fosterer of horrible injuries? Doth not (to go to the highest) God's word abused breed heresy, and His name abused become blasphemy? Truly a needle cannot do much hurt, and as truly (with leave of ladies be it spoken) it cannot do much good. With a sword thou mayest kill thy father, and with a sword thou mayest defend thy prince and country. So that, as in their calling poets the fathers of lies they say nothing, so in this their argument of abuse they prove the commendation.

They allege herewith that before poets began to be in price³ our nation hath set their hearts' delight upon action, and not upon imagination; rather doing things worthy to be written than writing things fit to be done. What that before time was, I think scarcely Sphinx⁴ can tell, sith no memory is so ancient that hath the precedence of poetry. And certain it is that, in our plainest homeliness, yet never was the Albion⁵ nation without poetry. Marry, this argument, though it be levelled against poetry, yet is it indeed a chain-shot⁶ against all learning, or bookishness, as they commonly term it. Of such mind were certain Goths,⁷ of whom it is written that, having in the spoil of a famous city taken a fair library, one hangman (belike fit to execute the fruits of their wits) who had murdered a great number of bodies, would have set fire on it. No, said another very gravely, take heed what you do, for while they are busy about these toys; we shall with more leisure conquer their countries. This indeed is the ordinary doctrine of ignorance, and many words

9. The art of producing appearances. *Eikastike*: the art of copying or portraying (both Greek). The terms are contrasted by Plato, *Sophist* 236d.

1. All biblical references: Abraham prepares to sacrifice Isaac in Genesis 22; Judith kills Holofernes, a general of Nebuchadnezzar who is besieging her city, after tricking him into a drunken stupor, in Judith 12 (a book of the Apocrypha); David fights and slays the Philistine giant Goliath in 1 Samuel 17.

2. Rampart, fortification. "Physic": medicine.

3. Highly esteemed.

4. In Greek mythology, the riddling monster (with a woman's face, lion's body, and bird's wings) bested by Oedipus.

5. Ancient name for Britain.

6. A kind of shot (mostly used in naval warfare, to destroy masts and rigging) formed by two balls connected by a chain.

7. A Germanic people who sacked Athens in 267 C.E.

sometimes I have heard spent in it; but because this reason is generally against all learning as well as poetry, or rather all learning but poetry; because it were too large a digression to handle, or at least too superfluous (sith it is manifest that all government of action is to be gotten by knowledge, and knowledge best by gathering many knowledges, which is reading), I only, with Horace, to him that is of that opinion,

*Jubeo stultum esse libenter;*⁸

for as for poetry itself, it is the freest from this objection.

For poetry is the companion of camps. I dare undertake *Orlando Furioso* or honest King Arthur,⁹ will never displease a soldier: but the quiddity of *ens* and *prima materia* will hardly agree with a corselet.¹ And therefore, as I said in the beginning, even Turks and Tartars are delighted with poets. Homer, a Greek, flourished before Greece flourished. And if to a slight conjecture a conjecture may be opposed, truly it may seem that, as by him their learned men took almost their first light of knowledge, so their active men received their first motions of courage. Only Alexander's example may serve, who by Plutarch is accounted of such virtue that fortune was not his guide, but his foot-stool; whose acts speak for him, though Plutarch did not, indeed the phoenix of warlike princes. This Alexander left his schoolmaster, living Aristotle, behind him, but took dead Homer with him. He put the philosopher Callisthenes² to death for his seeming philosophical, indeed mutinous, stubbornness; but the chief thing he ever was heard to wish for was that Homer had been alive. He well found he received more bravery of mind by the pattern of Achilles than by hearing the definition of fortitude. And therefore, if Cato misliked Fulvius³ for carrying Ennius with him to the field, it may be answered that if Cato misliked it, the noble Fulvius liked it, or else he had not done it: for it was not the excellent Cato Uticensis⁴ (whose authority I would much more have revered), but it was the former, in truth a bitter punisher of faults, but else a man that had never well sacrificed to the Graces.⁵ He misliked and cried out upon all Greek learning, and yet, being eighty years old, began to learn it, belike fearing that Pluto⁶ understood not Latin. Indeed, the Roman laws allowed no person to be carried to the wars but he that was in the soldier's roll, and therefore, though Cato misliked his unmustered person, he misliked not his work. And if he had, Scipio Nasica⁷ judged by common consent the best Roman, loved him. Both the other Scipio brothers,⁸ who had by their virtues no less surnames than of Asia and Africa, so loved him that they caused his body to be buried in their sepulcher. So

8. I gladly order that he be a fool (Latin); misquoted from Horace, *Satires* 1.1.63.

9. Legendary British king, famous for creating the Round Table.

1. A piece of armor that covers the torso. "The quiddity of *ens* and *prima materia*": the whatness of being and primal matter; Sidney is mocking the elaborate language of scholastic philosophy.

2. Aristotle's nephew, a historian who accompanied and wrote about Alexander. After a quarrel with Alexander, he was accused of conspiracy and executed (327 B.C.E.).

3. Marcus Fulvius Nobilior, patron of Ennius, who took the poet on his Aetolian campaign of 189 B.C.E. Cato: Cato the Elder (234–149 B.C.E.), a famously stern moralist.

4. Cato the Elder's great-grandson, an opponent of Caesar.

5. Three goddesses of beauty and charm, dear friends of the Muses.

6. Roman god of the underworld and the dead.

7. Roman consul in 191 B.C.E., of whom little is known; Livy's *Histories* (29.14) records that "the Senate judged him to be the best of good men in the whole community."

8. Two cousins of Scipio Nasica: Lucius Cornelius Scipio earned the name *Asiaticus* by defeating Antiochus at Magnesia in 189 B.C.E. Publius Cornelius Scipio (ca. 236–184/3 B.C.E.) earned the name *Africanus* in 201 by defeating Hannibal and the Carthaginians in Africa.

as Cato, his authority being but against his person, and that answered with so far greater than himself, is herein of no validity.

But now indeed my burden is great; now Plato his name is laid upon me; whom I must confess, of all philosophers I have ever esteemed most worthy of reverence, and with great reason, sith of all philosophers he is the most poetical. Yet if he will defile the fountain out of which his flowing streams have proceeded, let us boldly examine with what reasons he did it. First, truly a man might maliciously object that Plato, being a philosopher, was a natural enemy of poets: for indeed, after the philosopher had picked out of the sweet mysteries of poetry the right discerning true points of knowledge, they forthwith putting it in method, and making a school-art of that which the poets did only teach by a divine delightfulness, beginning to spurn at their guides like ungrateful prentices; were not content to set up shops for themselves but sought by all means to discredit their masters; which, by the force of delight being barred them, the less they could overthrow them, the more they hated them. For indeed, they found for Homer seven cities; and strave who should have him for their citizen; where many cities banished philosophers as not fit members to live among them. For only repeating certain of Euripides' verses, many Athenians had their lives saved of the Syracusans; when the Athenians themselves thought many philosophers unworthy to live.⁹ Certain poets, as Simonides and Pindar; had so prevailed with Hiero the First,¹ that of a tyrant they made him a just king, where Plato could do so little with Dionysius,² that he himself of a philosopher was made a slave! But who should do thus, I confess, should requite the objections made against poets with like cavillation³ against philosophers; as likewise one should do that should bid one read *Phaedrus* or *Symposium* in Plato, or the discourse of love in Plutarch, and see whether any poet do authorize abominable filthiness,⁴ as they do. Again, a man might ask out of what commonwealth Plato did banish them. In sooth, thence where he himself alloweth community of women. So as belike this banishment grew not for effeminate wantonness, sith little should poetical sonnets be hurtful when a man might have what woman he listed. But I honor philosophical instructions, and bless the wits which bred them, so as they be not abused, which is likewise stretched to poetry.

Saint Paul⁵ himself (who yet for the credit of poets allegeth twice two poets, and one of them by the name of prophet) setteth a watchword upon philosophy, indeed upon the abuse; so doth Plato, upon the abuse, not upon poetry. Plato found fault that the poets of his time filled the world with wrong opinions of the gods, making light tales of that unspotted essence, and therefore would not have the youth depraved with such opinions.⁶ Herein may much be said; let this suffice: the poets did not induce such opinions;

9. In 413 B.C.E. the Athenians, led by Nicias, were defeated by the Syracusans. Plutarch reports (*Life of Nicias* 29) that many of the Athenians were saved from bondage by their knowledge of Euripides, whose poetry was in great esteem among their captors; he also relates (23) the harsh fate of philosophers in Athens [Robinson's note].

1. Tyrant of Syracuse (478–467/6 B.C.E.), whose court was visited by Pindar in 476. Simonides (ca. 556–468 B.C.E.), Greek lyric and elegiac poet who visited the court of Hieron about 476.

2. Syracusan ruler (b. ca. 397 B.C.E.) who became

tyrant of Syracuse in 367. Invited to Sicily by an influential Syracusan, Plato tried with little success to mold Dionysius into a philosopher-king. After Dionysius tricked Plato into returning in 361, he temporarily imprisoned the philosopher.

3. Frivolous objections.

4. That is, homosexuality.

5. Early Christian apostle (d. ca. 62 C.E.); see Acts 17:28: "For in him [the Lord] we live, and move, and have our being; as certain also of your own poets have said."

6. See *Republic* 2.377a–380c (above).

but did imitate those opinions already induced. For all the Greek stories can well testify that the very religion of that time stood upon many and many-fashioned gods, not taught so by the poets, but followed according to their nature of imitation. Who list may read in Plutarch the discourses of Isis and Osiris,⁷ of the cause why oracles ceased, of the divine providence, and see whether the theology of that nation stood not upon such dreams, which the poets indeed superstitiously observed; and truly (sith they had not the light of Christ) did much better in it than the philosophers, who, shaking off superstition, brought in atheism. Plato therefore (whose authority I had much rather justly construe than unjustly resist) meant not in general of poets, in those words of which Julius Scaliger saith, *Qua autoritate barbari quidam atque hispidi abuti velint ad poetas e republica exigendos*;⁸ but only meant to drive out those wrong opinions of the Deity (whereof now, without further law, Christianity hath taken away all the hurtful belief), perchance (as he thought) nourished by the then esteemed poets. And a man need go no further than to Plato himself to know his meaning: who, in his dialogue called *Ion*, giveth high and rightly divine commendation to poesy.⁹ So as Plato, banishing the abuse, not the thing, not banishing it, but giving due honor unto it, shall be our patron and not our adversary. For indeed, I had much rather (sith truly I may do it) show their mistaking of Plato (under whose lion's skin they would make an ass-like braying against poesy) than go about to overthrow his authority; whom, the wiser a man is, the more just cause he shall find to have in admiration; especially sith he attributeth unto poesy more than myself do, namely, to be a very inspiring of a divine force; far above man's wit, as in the afore-named dialogue is apparent.

Of the other side, who would show the honors have been by the best sort of judgments granted them, a whole sea of examples would present themselves: Alexanders, Caesars, Scipios, all favorers of poets; Laelius,¹ called the Roman Socrates, himself a poet, so as part of *Hæautontimorimēnos*² in Terence was supposed to be made by him. And even the Greek Socrates, whom Apollo confirmed to be the only wise man, is said to have spent part of his old time in putting Aesop's fables into verses. And therefore full evil should it become his scholar Plato to put such words in his master's mouth against poets. But what need more? Aristotle writes the Art of Poesy; and why, if it should not be written? Plutarch teacheth the use to be gathered of them; and how if they should not be read? And who reads Plutarch's either history or philosophy, shall find he trimmeth both their garments with guards of poesy. But I list not to defend poesy with the help of her underling historiography. Let it suffice that it is a fit soil for praise to dwell upon; and what dispraise may set upon it, is either easily overcome, or transformed into just commendation.

So that, sith the excellencies of it may be so easily and so justly confirmed, and the low-creeping objections so soon trodden down, it not being an art

7. The topics that Sidney mentions derive from chapters in Plutarch's *Moralia*. The Egyptian deities Osiris and his wife Isis, for example, appear in *De Iside et Ostride* (*On Isis and Osiris*) [Robinson's note].

8. Whose authority some barbarous and insensitive men wish to misuse in order to expel poets from the state (Latin); Scaliger, *Poetics* I.20 [Robinson's note].

9. In *Ion* (see esp. 533d–535a), Socrates argues that poets rely not on art but on divine inspiration (see above).

1. Gaius Laelius (b. ca. 186 B.C.E.), promoter of the study of literature and philosophy, nicknamed "Wise." Cicero compares him to Socrates in *De Officiis* I.90.

2. *The Self-Tormentor* (163 B.C.E.).

of lies, but of true doctrine; not of effeminateness, but of notable stirring of courage; not of abusing man's wit, but of strengthening man's wit; not banished, but honored by Plato; let us rather plant more laurels for to engarland our poets' heads (which honor of being laureate, as besides them only triumphant captains wear, is a sufficient authority to show the price they ought to be had in), than suffer the ill-favoring breath of such wrong-speakers once to blow upon the clear springs of poesy.

But sith I have run so long a career in this matter, methinks before I give my pen a full stop it shall be but a little more lost time to inquire why England (the mother of excellent minds) should be grown so hard a step-mother to poets, who certainly in wit ought to pass all other, sith all only proceedeth from their wit, being indeed makers of themselves, not takers of others. How can I but exclaim

*Musa, mihi causas memora, quo numine laeso?*³

Sweet poesy, that hath anciently had kings, emperors, senators, great captains, such as, besides a thousand others, David, Adrian, Sophocles, Germanicus,⁴ not only to favor poets, but to be poets. And of our nearer times can present for her patrons a Robert, king of Sicily, the great King Francis of France, King James of Scotland;⁵ such cardinals as Bembus and Bibbiena;⁶ such famous preachers and teachers as Beza and Melanchthon;⁷ so learned philosophers as Fracastorius⁸ and Scaliger; so great orators as Pontanus and Muretus; so piercing wits as George Buchanan;⁹ so grave counselors as, besides many, but before all, that Hospital of France,¹ than whom (I think) that realm never brought forth a more accomplished judgment, more firmly builded upon virtue—I say these, with numbers of others, not only to read others' poesies, but to poetise for others' reading—that poesy, thus embraced in all other places, should only find in our time a hard welcome in England, I think the very earth lamenteth it, and therefore decketh our soil with fewer laurels than it was accustomed. For heretofore poets have in England also flourished, and, which is to be noted, even in those times when the trumpet of Mars² did sound loudest. And now that an over-faith quietness should seem to strew the house for poets, they are almost in as good reputation as the mountebanks³ at Venice. Truly even that, as of the one side it giveth great praise to poesy, which like Venus⁴ (but to better purpose) had rather be troubled in the net with Mars than enjoy the homely quiet of Vulcan;⁵ so serves it for a piece of a reason why they are less grateful

3. O Muse, remind me of the causes, of the offense to [Juno's] divine power (Latin); Virgil, *Aeneid* 1.8.

4. The nephew and adopted son (15 B.C.E.–19 C.E.) of the emperor Tiberius. Adrian: Hadrian (76–138 C.E.), emperor of Rome (117–38), a noted patron of the arts.

5. Either King James I of England (who was James VI of Scotland, 1566–1625) or James I of Scotland (1394–1437). Robert: Robert of Anjou (1278–1343), who ruled Naples for 34 years (1309–43) and was a patron of Petrarch. King Francis (1494–1547), French king known as a patron of the arts.

6. Bernardo Dovizi (1470–1520), who wrote the first comedy in Italian, *Calandria* (with a plot derived from Plautus). Bembus: Pietro Bembo (1470–1547), Italian Renaissance grammarian and an editor and author of poetry.

7. Philip Melanchthon (1497–1560), German humanist, theologian, and Protestant reformer.

Theodore Beza (1519–1605), French author, translator, and theologian who succeeded John Calvin as leader of the Protestant Reformation.

8. Girolamo Fracastoro (ca. 1484–1553), Italian physician, poet, astronomer, and geologist.

9. Scottish humanist and author (1506–1582), tutor to Mary, Queen of Scots, and James VI of Scotland. Muretus: Marc-Antoine de Muret (1526–1585), French humanist, classical scholar, and poet.

1. Michel de L'Hospital (ca. 1504–1573), lawyer, humanist, poet, and advocate of religious tolerance.

2. Roman god of war.

3. Showmen peddling quack medicine from a platform.

4. Roman goddess of love.

5. Roman god of fire and metalworking; Vulcan captured his wife Venus in adultery with Mars in a fine chain-link net and hauled them in it before

to idle England, which now can scarce endure the pain of a pen. Upon this necessarily followeth that base men with servile wits undertake it, who think it enough if they can be rewarded of the printer. And so as Epaminondas⁶ is said, with the honor of his virtue to have made an office, by his exercising it which before was contemptible, to become highly respected; so these, no more but setting their names to it, by their own disgracefulness disgrace the most graceful poesy. For now, as if all the Muses were got with child to bring forth bastard poets, without any commission they do post over the banks of Helicon,⁷ till they make the readers more weary than post-horses; while in the meantime they,

Queis meliore luto finxit praeordia Titan,⁸

are better content to suppress the out-flowing of their wit than, by publishing them, to be accounted knights of the same order.

But I, that before ever I durst aspire unto the dignity, am admitted into the company of the paper-blurrers, do find the very true cause of our wanting estimation is want of desert, taking upon us to be poets in despite of Pallas.⁹ Now wherein we want desert were a thank-worthy labor to express; but if I knew, I should have mended myself. But I, as I never desired the title, so have I neglected the means to come by it. Only, over-mastered by some thoughts, I yielded an inky tribute unto them. Marry, they that delight in poesy itself should seek to know what they do, and how they do, and especially look themselves in an unflattering glass of reason, if they be inclinable unto it. For poesy must not be drawn by the ears; it must be gently led, or rather it must lead; which was partly the cause that made the ancient-learned affirm it was a divine gift, and no human skill; sith all other knowledges lie ready for any that hath strength of wit; a poet no industry can make, if his own genius be not carried unto it; and therefore is it an old proverb, *orator fit, poeta nascitur*.¹ Yet confess I always that as the fertilest ground must be manured, so must the highest flying wit have a Daedalus² to guide him. That Daedalus, they say, both in this and in other, hath three wings to bear itself up into the air of due commendation: that is, Art, Imitation, and Exercise. But these, neither artificial rules nor imitative patterns, we much cumber ourselves withal. Exercise indeed we do, but that very fore-backwardly: for where we should exercise to know, we exercise as having known; and so is our brain delivered of much matter which never was begotten by knowledge. For there being two principal parts, matter to be expressed by words, and words to express the matter; in neither we use Art or Imitation rightly. Our matter is *quodlibet* indeed, though wrongly performing Ovid's verse,

Quicquid conabor dicere, versus erit.³

never marshalling it into an assured rank, that almost the readers cannot tell where to find themselves.

the other gods. The story is told in Homer, *Odyssey* 8.266–366, and Ovid, *Metamorphosis* 4.169–89.

6. Theban statesman and general (ca. 410–362 B.C.E.), famous for defeating the Spartans at Leuctra in 371.

7. Boeotian mountain, home of the Muses. The "bank" properly belongs to the spring Hippocrene, a source of poetic inspiration.

8. Whose heart Titan fashioned with finer earth (Latin); adopted from *Satire* 14.35, by the Roman poet Juvenal (ca. 55–ca. 140 C.E.).

9. Without wisdom. Pallas Athena was thought to be the personification of wisdom [Robinson's note].

1. An orator is made, a poet is born (Latin).

2. In Greek mythology, a consummately skilled Athenian artisan; he escaped King Minos of Crete by fashioning wings of feathers and wax and flying to Greece.

3. Whatever I will try to say, it will be verse (Latin); Ovid, *Tristia* 4.10.26. *Quodlibet*: what you will (Latin).

Chaucer undoubtedly did excellently in his *Troilus and Criseyde*, of whom truly I know not whether to marvel more, either that he in that misty time could see so clearly, or that we in this clear age walk so stumblingly after him. Yet had he great wants, fit to be forgiven in so reverent antiquity. I account the *Mirror of Magistrates*⁴ meetly furnished of beautiful parts, and in the Earl of Surrey's⁵ lyrics many things tasting of a noble birth, and worthy of a noble mind. *The Shepherd's Calendar*⁶ hath much poetry in his eclogues; indeed worthy the reading if I be not deceived. That same framing of his style to an old rustic language I dare not allow, sith neither Theocritus⁷ in Greek, Virgil in Latin, nor Sannazzaro in Italian, did affect it. Besides these; do I not remember to have seen but few (to speak boldly) printed that have poetical sinews in them: for proof whereof, let but most of the verses but put in prose, and then ask the meaning, and it will be found that one verse did but beget another, without ordering at the first what should be at the last; which becomes a confused mass of words with a tingling sound of rhyme, barely accompanied with reason.

Our tragedies and comedies (not without cause cried out against), observing rules neither of honest civility nor of skillful poetry, excepting *Gorboduc*⁸ (again I say, of those that I have seen), which notwithstanding, as it is full of stately speeches and well sounding phrases, climbing to the height of Seneca his style,⁹ and as full of notable morality, which it doth most delightfully teach, and so obtain the very end of poesy; yet in troth it is very defective in the circumstances, which grieveth me, because it might not remain as an exact model of all tragedies. For it is faulty both in place and time; the two necessary companions of all corporal actions. For where the stage should always represent but one place, and the uttermost time presupposed in it should be, both by Aristotle's precept and common reason, but one day, there is both many days and many places inartificially¹ imagined.

But if it be so in *Gorboduc*; how much more in all the rest? where you shall have Asia of the one side, and Afric of the other, and so many other under-kingdoms; that the player, when he cometh in, must ever begin with telling where he is, or else the tale will not be conceived. Now ye shall have three ladies walk to gather flowers, and then we must believe the stage to be a garden. By and by we hear news of shipwreck in the same place, and then we are to blame if we accept it not for a rock. Upon the back of that comes out a hideous monster with fire and smoke, and then the miserable beholders are bound to take it for a cave. While in the meantime two armies fly in, represented with four swords and bucklers, and then what hard heart will not receive it for a pitched field?

Now of time they are much more liberal, for ordinary it is that two young princes² fall in love. After many traverses, she is got with child, delivered of a fair boy, he is lost, groweth a man, falls in love, and is ready to get another child, and all this in two hours' space: which, how absurd it is in sense, even

4. *A Mirror for Magistrates* (1559), a collection of Elizabethan poems on the fall of great men in English history (each told in the 1st person).

5. Henry Howard, earl of Surrey (1517–1547), English poet.

6. Work of 1579 by Edmund Spenser, author of *The Faerie Queen*, who dedicated it to Sidney.

7. Greek poet (ca. 300–ca. 260 B.C.E.), whose

Idylls are the earliest models for pastoral poetry.

8. An English play (first performed 1562) written by Thomas Sackville and Thomas Norton.

9. The tragedies as well as the prose style of Seneca had great influence in the Renaissance.

1. Without artifice. For Aristotle's limit on the time of a tragedy, see *Poetics* 5, 1449b.

2. Sovereigns (of either sex).

sense may imagine, and art hath taught, and all ancient examples justified, and at this day, the ordinary players in Italy will not err in. Yet will some bring in an example of *Eunuchus* in Terence; that containeth matter of two days, yet far short of twenty years. True it is, and so was it to be played in two days, and so fitted to the time it set forth. And though Plautus³ hath in one place done amiss, let us hit with him, and not miss with him. But they will say, how then shall we set forth a story which containeth both many places and many times? And do they not know that a tragedy is tied to the laws of poesy, and not of history, not bound to follow the story, but having liberty, either to feign a quite new matter, or to frame the history to the most tragical conveniency? Again, many things may be told which cannot be showed, if they know the difference betwixt reporting and representing. As for example, I may speak (though I am here) of Peru, and in speech digress from that to the description of Calicut; but in action I cannot represent it without Pacolet's horse.⁴ And so was the manner the ancients took, by some *nuncius*⁵ to recount things done in former time or other place.

Lastly, if they will represent an history, they must not (as Horace saith) begin *ab ovo*,⁶ but they must come to the principal point of that one action which they will represent. By example this will be best expressed. I have a story of young Polydorus,⁷ delivered for safety's sake, with great riches; by his father Priam, to Polymnestor, king of Thrace, in the Trojan war time. He, after some years, hearing the overthrow of Priam, for to make the treasure his own, murdereth the child. The body of the child is taken up by Hecuba. She, the same day, findeth a sleight to be revenged most cruelly of the tyrant: Where now would one of our tragedy writers begin, but with the delivery of the child? Then should he sail over into Thrace, and so spend I know not how many years, and travel numbers of places. But where doth Euripides? Even with the finding of the body, leaving the rest to be told by the spirit of Polydorus. This need no further to be enlarged; the dullest wit may conceive it:

But besides these gross absurdities, how all their plays be neither right tragedies, nor right comedies, mingling kings and clowns not because the matter so carrieth it, but thrust in clowns by head and shoulders, to play a part in majestical matters, with neither decency nor discretion, so as neither the admiration and commiseration, nor the right sportfulness, is by their mongrel tragi-comedy obtained. I know Apuleius⁸ did somewhat so; but that is a thing recounted with space of time, not represented in one moment: and I know the ancients have one or two examples of tragi-comedies, as Plautus hath *Amphitrio*. But if we mark them well, we shall find that they never, or very daintily, match horn-pipes and funerals. So falleth it out, that having indeed no right comedy, in that comical part of our tragedy we have nothing but scurrility, unworthy of any chaste ears, or some extreme show of doltishness, indeed fit to lift up a loud laughter, and nothing else: where the whole tract of a comedy should be full of delight, as the tragedy should be still maintained in a well raised admiration.

3. Roman comic playwright (d. ca. 184 B.C.E.).

4. Flying horse owned by a dwarf in the French romance *Valentine and Orson* (1489). Calicut: port in southwest India.

5. Messenger (Latin).

6. From the beginning; literally, "from the egg" (Latin). See Horace, *Ars Poetica* 147.

7. Told in Euripides' *Hecuba* (ca. 424 B.C.E.).

8. Author (b. ca. 123 C.E.) of *The Golden Ass*, a Latin satirical romance.

But our comedians think there is no delight without laughter; which is very wrong, for though laughter may come with delight, yet cometh it not of delight, as though delight should be the cause of laughter; but well may one thing breed both together: nay, rather in themselves they have, as it were, a kind of contrariety; for delight we scarcely do; but in things that have a conveniency to ourselves, or to the general nature; laughter almost ever cometh of things most disproportioned to ourselves and nature. Delight hath a joy in it, either permanent or present. Laughter hath only a scornful tickling. For example, we are ravished with delight to see a fair woman, and yet are far from being moved to laughter. We laugh at deformed creatures, wherein certainly we cannot delight. We delight in good chances, we laugh at mischances; we delight to hear the happiness of our friends or country, at which he were worthy to be laughed at that would laugh; we shall contrarily laugh sometimes to find a matter quite mistaken and go down the hill against the bias,⁹ in the mouth of some such men, as for the respect of them one shall be heartily sorry, yet he cannot choose but laugh; and so is rather pained than delighted with laughter. Yet deny I not but that they may go well together; for as in Alexander's picture¹ well set out, we delight without laughter, and in twenty mad antics we laugh without delight, so in Hercules, painted with his great beard and furious countenance, in a woman's attire, spinning at Omphale's² commandment, it breedeth both delight and laughter. For the representing of so strange a power in love procureth delight, and the scornfulness of the action stirreth laughter.

But I speak to this purpose, that all the end of the comical part be not upon such scornful matters as stirreth laughter only, but, mixed with it, that delightful teaching which is the end of poesy. And the great fault even in that point of laughter, and forbidden plainly by Aristotle,³ is that they stir laughter in sinful things, which are rather execrable than ridiculous: or in miserable, which are rather to be pitied than scorned. For what is it to make folks gape at a wretched beggar or a beggarly clown; or against law of hospitality, to jest at strangers because they speak not English so well as we do? What do we learn? sith it is certain

*Nil habet infelix paupertas durius in se,
Quam quod ridiculos homines facit.*⁴

But rather a busy loving courtier; a heartless threatening Thraso, a self-wise-seeming schoolmaster; an awry-transformed traveler: these, if we saw walk in stage names, which we play naturally, therein were delightful laughter, and teaching delightfulness: as in the other, the tragedies of Buchanan do justly bring forth a divine admiration. But I have lavished out too many words of this play matter. I do it because, as they are excelling parts of poesy, so is there none so much used in England, and none can be more pitifully abused; which, like an unmannerly daughter, showing a bad education, causeth her mother poesy's honesty to be called in question.

9. Contrary to its expected course. The balls used in lawn bowling have a bias, a peculiarity in weight or shape that causes them to swerve.

1. Plutarch, in his *Life of Alexander* 4, discusses Apelles' (4th c. B.C.E.) famous painting of Alexander [Robinson's note].

2. Queen of Lydia, whom the legendary hero

served for 3 years as a slave in order to be purified of a murder; during that time he fell in love with her.

3. See Aristotle, *Nicomachean Ethics* 4.8, 1128a.

4. Luckless poverty has nothing harsher in it than that it makes men ridiculous (Latin); Juvenal, *Satire* 3.152-53.

Other sorts of poetry almost have we none, but that lyrical kind of songs and sonnets: which, Lord, if He gave us so good minds, how well it might be employed, and with how heavenly fruit, both private and public, in singing the praises of the immortal beauty, the immortal goodness of that God who giveth us hands to write and wits to conceive; of which we might well want words, but never matter; of which we could turn out eyes to nothing but we should ever have new budding occasions. But truly many of such writings as come under the banner of unresistable love, if I were a mistress, would never persuade me they were in love; so coldly they apply fiery speeches, as men that had rather read lovers' writings, and so caught up certain swelling phrases, which hang together, like a man which once told me the wind was at north-west and by south, because he would be sure to name winds enough, than that in truth they feel these passions, which easily (as I think) may be betrayed, by that same forcibleness or *energia*⁵ (as the Greeks call it) of the writer. But let this be a sufficient though short note, that we miss the right use of the material point of poesy.

Now, for the outside of it, which is words, or (as I may term it) diction, it is even well worse. So is that honey-flowing matron eloquence apparelled, or rather disguised in a courtesan-like painted affectation: one time with so far fet words, that may seem monsters, but must seem strangers to any poor Englishman; another time, with coursing⁶ of a letter, as if they were bound to follow the method of a dictionary; another time, with figures and flowers, extremely winter-starved. But I would this fault were only peculiar to versifiers, and had not as large possession among prose-printers; and (which is to be marvelled) among many scholars; and (which is to be pitied) among some preachers. Truly I could wish, if at least I might be so bold to wish in a thing beyond the reach of my capacity, the diligent imitators of Tully and Demosthenes⁷ (most worthy to be imitated) did not so much keep Nizolian paper-books⁸ of their figures and phrases, as by attentive translation (as it were) devour them whole, and make them wholly theirs. For now they cast sugar and spice upon every dish that is served to the table, like those Indians, not content to wear earrings at the fit and natural place of the ears, but they will thrust jewels through their nose and lips because they will be sure to be fine.

Tully, when he was to drive out Catiline,⁹ as it were with a thunderbolt of eloquence, often used that figure of repetition, *Vivit Vivit? Imo vero etiam in senatum venit*,¹ &c. Indeed, inflamed with a well-grounded rage, he would have his words (as it were) double out of his mouth, and so do that artificially which we see men do in choler naturally. And we, having noted the grace of those words, hale them in sometime to a familiar epistle, when it were too too much choler² to be choleric. How well store of *similiter cadences*³ doth

5. A very specific kind of energy; Aristotle (*Rhetoric* 3.10–11, 1410b–12a) and Scaliger (*Poetics* 3.26) both emphasize that *energeia* is that quality in language which makes concepts or ideas clear [Robinson's note].

6. Pursuing (to create alliteration).

7. Athenian statesman (384–322 B.C.E.) considered the greatest Greek orator (as Cicero was thought the greatest Roman orator).

8. Commonplace books like those of the Italian lexicographer Marius Nizolius (16th c.).

9. Lucius Sergius Catalina (ca. 108–62 B.C.E.), Roman whose frustrated political ambitions

(including a consular election lost to Cicero) led him to plan an uprising in Rome; Cicero denounced the conspiracy in a famous series of "Catalinarian" orations.

1. He lives. Does he live? Yes, and in fact he even comes into the Senate (Latin); Cicero, *In Catilinam* 1.1.2.

2. Anger.

3. Similar cadences (Latin; properly, *cadentia*); the effect achieved when consecutive sentences or phrases terminate with the same cadence [Robinson's note].

sound with the gravity of the pulpit, I would but invoke Demosthenes' soul to tell, who with a rare daintiness useth them. Truly they have made me think of the sophister⁴ that with too much subtlety would prove two eggs three, and though he might be counted a sophister, had none for his labor. So these men, bringing in such a kind of eloquence, well may they obtain an opinion of a seeming fineness, but persuade few, which should be the end of their fineness.

Now for similitudes in certain printed discourses, I think all herbarists,⁵ all stories of beasts, fowls, and fishes are rifled up, that they come in multitudes to wait upon any of our conceits; which certainly is as absurd a surfeit to the ears as is possible: for the force of a similitude not being to prove anything to a contrary disputer, but only to explain to a willing hearer; when that is done, the rest is a most tedious prattling, rather over-swaying the memory from the purpose whereto they were applied, than any whit informing the judgment, already either satisfied, or by similitudes not to be satisfied. For my part, I do not doubt, when Antonius and Crassus,⁶ the great forefathers of Cicero in eloquence, the one (as Cicero testifieth of them) pretended not to know art, the other not to set by it, because with a plain sensibleness they might win credit of popular ears; which credit is the nearest step to persuasion; which persuasion is the chief mark of oratory; I do not doubt (I say) but that they used these knacks very sparingly; which, who doth generally use, any man may see doth dance to his own music, and so be noted by the audience more careful to speak curiously⁷ than to speak truly.

Undoubtedly (at least to my opinion undoubtedly) I have found in divers smally⁸ learned courtiers a more sound style than in some professors of learning; of which I can guess no other cause but that the courtier, following that which by practice he findeth fittest to nature, therein (though he know it not) doth according to art, though not by art: where the other, using art to show art, and not to hide art (as in these cases he should do), flieth from nature, and indeed abuseth art.

But what? methinks I deserve to be pounded⁹ for straying from poetry to oratory: but both have such an affinity in this wordish consideration, that I think this digression will make my meaning receive the fuller understanding; which is not to take upon me to teach poets how they should do, but only, finding myself sick among the rest, to show some one or two spots of the common infection grown among the most part of writers; that, acknowledging ourselves somewhat awry, we may bend to the right use both of matter and manner; whereto our language giveth us great occasion, being indeed capable of any excellent exercising of it. I know some will say it is a mingled language. And why not so much the better, taking the best of both the other?¹ Another will say it wanteth grammar. Nay truly, it hath that praise, that it wanteth not grammar: for grammar it might have, but it needs it not; being so easy of itself, and so void of those cumbersome differences of cases, gen-

4. A sophist; one who relies on specious reasoning.

5. Those skilled in herbs; herbalists.

6. Lucius Licinius Crassus (140—ca. 90 B.C.E.), outstanding orator who is the chief speaker in Cicero's *De Oratore*. Antonius: Marcus Antonius (143—87 B.C.E.), Crassus's rival, portrayed with

him in *De Oratore* and *Brutus* (also by Cicero).

7. Elaborately, artfully.

8. Slightly.

9. Impounded, like a trespassing animal.

1. Sidney refers to the use of other languages—Greek and Latin (or French)—to enhance the style of English.

ders, moods, and tenses, which I think was a piece of the Tower of Babylon's curse,² that a man should be put to school to learn his mother-tongue. But for the uttering sweetly and properly the conceits of the mind, which is the end of speech, that hath it equally with any other tongue in the world; and is particularly happy in compositions of two or three words together, near the Greek, far beyond the Latin, which is one of the greatest beauties can be in a language.

Now of versifying there are two sorts, the one ancient, the other modern: the ancient marked the quantity of each syllable, and according to that framed his verse; the modern, observing only number (with some regard of the accent), the chief life of it standeth in that like sounding of the words which we call rhyme. Whether of these be the more excellent would bear many speeches: the ancient (no doubt) more fit for music, both words and tune observing quantity, and more fit lively to express divers passions, by the low and lofty sound of the well-weighed syllable. The latter likewise, with his rhyme, striketh a certain music to the ear; and, in fine, sith it doth delight, though by another way, it obtains the same purpose: the one being in either sweetness, and wanting in neither majesty. Truly the English, before any other vulgar language I know, is fit for both sorts: for, for the ancient, the Italian is so full of vowels that it must ever be cumbered with elisions; the Dutch,³ so of the other side with consonants, that they cannot yield the sweet sliding fit for a verse; the French in his whole language hath not one word that hath his accent in the last syllable saving two, called *antepenultima*; and little more hath the Spanish, and therefore very gracefully may they use dactyls.⁴ The English is subject to none of these defects.

Now for the rhyme, though we do not observe quantity, yet we observe the accent very precisely, which other languages either cannot do, or will not do so absolutely. That *caesura*,⁵ or breathing place in the midst of the verse, neither Italian nor Spanish have; the French and we never almost fail. Lastly, even the very rhyme itself, the Italian cannot put in the last syllable, by the French named the masculine rhyme, but still in the next to the last, which the French call the female, or the next before that, which the Italians term *sdrucchiola*.⁶ The example of the former is *buono, suono*; of the *sdrucchiola* is *femina, semina*. The French, of the other side, hath both the male, as *bon, son*, and the female, as *plaise, tasie*. But the *sdrucchiola* he hath not: where the English hath all three, as *due, true; father, rather; motion, potion*; with much more which might be said, but that I find already the triflingness of this discourse is much too much enlarged.

So that sith the ever-praiseworthy poesy is full of virtue-breeding delightfulness, and void of no gift that ought to be in the noble name of learning; sith the blames laid against it are either false or feeble; sith the cause why it is not esteemed in England is the fault of poet-apes, not poets; sith, lastly,

2. That the one language of the people be confounded, so "that they may not understand one another's speech"; the story of the Tower of Babel is told in Genesis 11.

3. German.

4. A dactyl, composed of an accented and two unaccented syllables (e.g. *fórmútláte* is obviously easier to produce in languages abundant with

words that have accented antepenultimate ["the last saving two"] syllables) [Robinson's note].

5. A pause in a line of poetry; English poetry is much more flexible in its use of the caesura than the poetry of many other European vernacular languages.

6. Literally, "slippery": that is, the easy sliding of rhymes of three or more syllables.

our tongue is most fit to honor poesy, and to be honored by poesy; I conjure you all that have had the evil luck to read this ink-wasting toy of mine, even in the name of the nine Muses, no more to scorn the sacred mysteries of poesy, no more to laugh at the name of poets, as though they were next inheritors to fools, no more to jest at the reverent title of a rhymer; but to believe with Aristotle that they were the ancient treasurers of the Grecians' divinity; to believe with Bembus that they were first bringers-in of all civility; to believe with Scaliger that no philosopher's precepts can sooner make you an honest man than the reading of Virgil; to believe with Clauserus, the translator of Cornutus,⁷ that it pleased the heavenly Deity, by Hesiod and Homer, under the veil of fables, to give us all knowledge, logic, rhetoric, philosophy natural and moral, and *quid non?*⁸ to believe with me that there are many mysteries contained in poetry, which of purpose were written darkly, lest by profane wits it should be abused, to believe with Landino⁹ that they are so beloved of the gods, that whatsoever they write proceeds of a divine fury; lastly, to believe themselves when they tell you they will make you immortal by their verses.

Thus doing, your name shall flourish in the printers' shops; thus doing, you shall be of kin to many a poetical preface; thus doing, you shall be most fair, most rich, most wise, most all, you shall dwell upon superlatives. Thus doing, though you be *libertino patre natus*, you shall suddenly grow *Hurculea proles*,¹

*Si quid mea carmina possunt*²

Thus doing, your soul shall be placed with Dante's Beatrice, or Virgil's Anchises.³ But if (fie of such a but) you be born so near the dull-making cataract of Nilus that you cannot hear the planet-like music of poetry,⁴ if you have so earth-creeping a mind that it cannot lift itself up to look to the sky of poetry, or rather, by a certain rustical disdain, will become such a mome as to be a Momus⁵ of poetry; then, though I will not wish unto you the ass's ears of Midas,⁶ nor to be driven by a poet's verses (as Bubonax⁷ was) to hang himself, nor to be rhymed to death, as it is said to be done in Ireland;⁸ yet thus much curse I must send you in the behalf of all poets, that while you live, you live in love, and never get favor for lacking skill of a sonnet; and when you die, your memory die from the earth for want of an epitaph.

1580-81

1595

7. Lucius Annaeus Cornutus (b. ca. 20 C.E.), teacher of rhetoric and Stoic philosophy at Rome. Clauserus: Conrad Clauser, a 16th-century German humanist.

8. What not (Latin).

9. Christoforo Landino (1424-1504), Florentine humanist who developed this argument in his edition of Dante's *Divine Comedy* (1481).

1. A descendant of Hercules (Latin). *Libertino patre natus*: born of an ex-slave father (Latin); Horace, *Satires* 1.6.6.

2. If my songs can do anything (Latin); Virgil, *Aeneid* 9.446.

3. That is, with the blessed dead; Dante meets Beatrice in heaven in the *Divine Comedy*, and Aeneas finds his father, Anchises, in the Elysian Fields during his journey to the underworld (*Aeneid* 6).

4. Resembling the music of the spheres, the most beautiful of all music. Nilus: Cicero compared the Nile River's cataracts, whose noise deafened those who lived nearby, to the music of the spheres, which deafened all people (*Scipio's Dream* 5).

5. Greek son of Night, a sleepy god always mocking and criticizing. "Mome": a stupid person, blockhead.

6. Legendary king of Phrygia; when Midas judged Pan the winner of a musical contest with Apollo, Apollo gave him ass's ears (this is the version told in Ovid, *Metamorphoses* 11.146-93).

7. Sidney fuses the names of the two involved: Bupalus, a sculptor who hanged himself, and Hipponax, the 6th-century B.C.E. poet who satirized him.

8. Irish bards were thought to be able to cause death with their rhymed charms.

PIERRE CORNEILLE

1606—1684

Pierre Corneille provoked literary quarrels, infuriated critics, and delighted audiences for the better part of the seventeenth century. Decidedly not a courtly *dramatist*, Corneille was a *playwright*. A member of the emerging bourgeoisie, he wrote plays for money and to please audiences, not to curry favor with the royal or the literary establishment. It is therefore ironic that he is often seen today as the spokesman and exemplar of French classical theater. His promotion of classical "rules" is in part a plea for the value of not taking them too literally.

Corneille was born in the Normandy town of Rouen, France, where his father was a minor administrative official. After undergoing a rigorous and regulated Jesuit education, in which he excelled in Latin, he began legal studies in 1622; two years later he enrolled at the bar of Rouen. He argued only one case, with disastrous results: he stumbled over his words and stuttered, and at the age of nineteen he abandoned a legal career that had just begun. His father then bought him two modest magisterial posts in Rouën, in the department of rivers and forests. In 1629 a troupe of actors passed through Rouen, and Corneille showed them the script for a five-act comedy, *Mélite*. No one quite knows when he composed the play, or what may have inspired him to launch himself suddenly into the world of theater. The troupe took the play to Paris, where it was performed that winter and was the hit of the 1629–30 season. For the next several years, he wrote a new play each season—mostly comedies, but also tragicomedies and tragedies.

In 1637 Corneille's most famous play, *Le Cid* (based on a Spanish original; its title derived from the Arab word for "lord"), appeared and incited a flurry of critical attention that became known as the "Quarrel of *The Cid*." The Quarrel originated in the tension between Corneille's two audiences: the public and the critics. The public loved *Le Cid*, whose success was demonstrated even at the level of language: a new expression, "beau comme *Le Cid*" (as fine as *Le Cid*), entered the Parisian vernacular. The critics, on the other hand, sought to demonstrate the moral threat posed by the play, and in a series of pamphlets they attacked it and its author. In *Le Cid* a young woman, torn between love and duty, seems about to marry the man who has just killed her father. Such behavior, the critics argued, offends both reason and moral values. Drawing on the classical authority of both ARISTOTLE and HORACE, they insisted on the didactic function of the theater. A play's moral instruction, they claimed, was achieved by strict adherence to the rules of classical theater; these included the unities of time, place, and action and—more important—the need for both verisimilitude (*vraisemblance*) and decorum (*bienséance*). The critics held that a play should not only please, but please according to the rules. Louis XIII's chief minister, Cardinal de Richelieu, considered the stage the site for enacting a universal public virtue. He had founded the Académie Française (the French Academy) just two years before the staging of *Le Cid*, and the Quarrel offered him the public forum to assert his public moral authority. After a year of literary skirmishes—pamphlets and protests on the subversive nature of art and the need for public virtue—Richelieu, who had once included Corneille among his privileged "Five Authors," stepped in: with the authority of absolutism and the Académie, he proclaimed *Le Cid* contrary to the rules of *vraisemblance*. Corneille retreated to Rouen and indirectly answered the attacks by composing two tragedies on Roman themes, *Horace* (1639) and *Cinna* (1642). Both works adhere to the classical rules of composition.

In his conformity to the very rules that had been invoked against him, Corneille was implicitly siding with his critics and using the controversy to rethink his own baroque-ness. The term *baroque*, derived from the artistic extravagance originally associated with the architecture of Catholic Spain and Italy, refers to a recurrent stylistic

tendency rather than simply to a period, art form, or culture. In France the baroque is seen as extending the exuberance of the Renaissance, while classicism is seen as taming it. The baroque is based on energy, antithesis, exaggeration, and the stretching and transgressing of boundaries; the classical is based on balance and on the intensity of restraint. To the French, paradoxically, Shakespeare is too "baroque"—mixed, impure, multileveled, imperfect. In French classical theater, the forces of the baroque are internalized and held in precarious equilibrium within the self. Corneille succeeded in finding within classical rules a framework more suitable for his dramas of subjective conflict than that offered by the more diffuse and extravagant spectacles of the baroque theater that had inspired his earlier works. In 1642 he also wrote *Polyeucte martyr*, treating a Christian subject in the style of a classical work. The four plays of this period (*Le Cid*, *Horace*, *Cinna*, and *Polyeucte*) constitute what was later termed Corneille's tetralogy.

The luxuriant growth of the French language called for a century earlier by the poets JOACHIM DU BELLAY and PIERRE DE RONSARD had undergone a severe pruning in the early seventeenth century by a strict legislator of classical verse forms, François de Malherbe, and the golden age of French classical theater (called "neoclassical" in England) had begun. Malherbe prescribed the decorum of verse, which was followed quite faithfully for the next two centuries, both in theater and in lyric poetry: the twelve-syllable line, called an "alexandrine," was expected to break in the middle and not run on to the next line without a grammatical justification; in addition, rhyme should alternate between "masculine" and "feminine" endings. Corneille continued to be an anomalous champion of this theatrical and poetic regulation.

By the mid-1640s, Corneille was clearly the master of the French stage; he continued to live in Rouen, while traveling frequently to Paris. Married in 1641, he led the life of a provincial Catholic bourgeois with his wife and, eventually, seven children. In 1644 his first collection of plays was published. Now under the new political régime, the regency of Anne of Austria and her prime minister, Cardinal Mazarin (both Richelieu and Louis XIII had died), Corneille continued in his fame. In 1647, when he was considered for the third time, Corneille was elected to the French Academy.

During the revolt (known as "La Fronde") of a group of powerful nobles against the monarchy, Corneille's plays waned somewhat in popularity, though he wrote several "machine plays" that delighted crowds with their spectacular special effects and settings. Whenever a play of his was not well received, Corneille tended to retreat from public life. During one of his retreats he translated and published Thomas à Kempis's fifteenth-century Latin treatise *The Imitation of Jesus Christ* (1656); while it was obviously a radical shift from theatrical comedies, the translation was a great popular success.

His plays of the 1660s—mostly tragedies—were less popular than his earlier works. Times had changed: Corneille was still respected, but two younger playwrights—Racine and Molière—were beginning to steal the hearts of audiences and the favor of the court of the "Sun King," Louis XIV. Racine began his career by attacking Corneille, and the rivalry reached a head when, in 1670, Corneille and Racine were each urged to write a tragedy on the same topic (the doomed love between a Roman emperor and the queen of Palestine), unaware of the other's intention. Racine's *Bérénice* was deemed superior to Corneille's *Tite et Bérénice*, and Racine subsequently went on to write his greatest plays. Corneille continued to write, too, but with diminishing success; his last play, *Suréna, général des Parthes*, was produced in 1675. He died in 1684; in the following year his younger brother, Thomas Corneille, also a playwright, was given his seat in the French Academy, with the blessing of the belatedly gracious Racine.

More than twenty years after the Quarrel of *Le Cid*, Corneille wrote and published a defense of his dramatic style. The defense took the form of *Trois Discours sur le poème dramatique* (1660, *Three Discourses on Dramatic Poetry*), which was published

in the seventh edition of his theatrical works. His discourses had a double aim: on the one hand, he needed to uphold the authority of Aristotle and the "ancients" against the frenzy and formlessness of the baroque; on the other, he needed to defend his theatrical practices against the rigid interpretation of that same Aristotle, whose authority had underpinned the Academy's criticism of *Le Cid*. Although he is often seen as a rigid apologist for classical form, Corneille actually argues for flexibility, for a practical adaptation of the sometimes unclear statements made in the *Poetics*, suiting the spirit but not always the letter of Aristotle's description of a well-made tragedy.

Corneille's *Trois Discours* directly responded to the publication in 1657 of the Abbé d'Aubignac's *Pratique du théâtre* (*The Practice of Theater*), but the essays were obviously part of a much larger critical dialogue that had been going on throughout Corneille's career—a dialogue that had in many ways begun the year *Le Cid* opened in Paris. In *An Essay of Dramatic Poesy* (1668; see below), the English dramatist JOHN DRYDEN took up the issues with equal intensity. In the *Discourses*, written to introduce the three volumes of Corneille's own plays (the play printed under the author's supervision being a relatively recent departure from ancient practice), Corneille cites only himself among living dramatists, referring often to the ancients. The three essays each endorse Aristotelian ideas but argue that the strict rules of French classical theater are based on an overly literal interpretation of the *Poetics*. Again and again, Corneille claims that everyone agrees with Aristotle—they just don't agree on what he means.

Corneille opens the first discourse by quoting Aristotle's declaration that the sole purpose of drama is to please the spectator, and he repeatedly demonstrates that this desire to please the spectator will serve as his first axiom, to which the other rules of classical theater will often, but not always, be subordinate. The moralists of the seventeenth century, citing Aristotle, argued that the classical conventions necessarily led to didactic theater. But Corneille makes the didactic function secondary to entertainment. Though citing the same sources—Aristotle and Horace—he interprets them to challenge received ideas and to serve his own aesthetic ends. For example, in the first *Discours*, on the matter of *bienséance*, he views Aristotle's statement that a character's morals must be "good" not as a call for "naive depiction of vices and virtues," but rather as an insistence on character development: each character must be true to his or her history. To support his claim, he lists many examples from classical Greek theater of heroes who are adulterers or killers; here, says Corneille, classical theater transcends the simplistic idea that audiences need moral heroes to be "good" and adulterers and killers to be "bad" and therefore punished. It is more important to portray human behavior as it is, in keeping with a character's birth, family, and social status, than to offer flawless paragons of moral behavior.

In the second *Discours*, Corneille discusses the Aristotelian ideas on the nature of tragedy, especially the ways in which the tragic hero elicits pity and fear from the audience, which in turn leads to a purging, or catharsis, of those passions. He argues that human emotions are complicated and that the oppositions inherent in human nature, such as the contradictory forces of love and duty, will evoke pity and empathy from the audience. While classical theory prescribes that all actions should be both probable and necessary, some of the most intense tragic effects are created by predicaments that are not, at least according to *bienséance*, probable. Yet these unlikely events can nevertheless reveal something fundamental about human nature.

"Of the Three Unities of Action, Time, and Place," our selection, continues in the tone of the first two discourses. Using many examples from his own plays and quoting liberally from Aristotle's *Poetics*, Corneille in the third *Discours* both justifies his own dramatic works and explains the theories behind them. Above all, he is a pragmatist—a successful playwright and seasoned craftsman who has refused to submit to the prescriptive dicta of theatrical critics of his time. He knows that a play must please, even dazzle the audience.

Here he shows how the three unities can, at times, assist in the overall aim of

theater. He begins by discussing the unity of action, which, for Corneille, does not require only one action on stage. "One complete action" may contain several other less-developed actions, which may or may not take place on the stage. He allows for some action to take place offstage between acts, and he also allows for particular actions that do not necessarily bring about the principal action. He does advise the writer to avoid actions that have happened before the time of the play, since such narrations of prior events will burden the spectator's memory, and he criticizes the multiple subplots that characterize Shakespearean drama.

The unity of time is founded on Aristotle's statement that the action of a play should be contained "within a single circuit of the sun." Corneille dismisses the argument as to whether Aristotle's maxim referred to a twelve-hour day or a twenty-four-hour day, offering instead the principle of proportion. A portrait will "gain in excellence" as it closely resembles reality. Since a play lasts about two hours, the action represented should come as close to two hours as possible. Yet precision in this unity may make the spectator aware of an unnatural need to compress the action; therefore, as with most theatrical strictures, Corneille wishes to allow latitude, and above all to "leave the matter of duration to the imagination of the spectators."

Corneille similarly calls for a judicious approach to the unity of place. Baroque plays, which sometimes spanned continents, were clearly in violation of *vraisemblance*. But a confined space like that of the theater itself—royal apartments, for example—might turn out to be overly restrictive (Shakespeare could be said to have gotten around this by staging his plays in a theater called the Globe). The concentration provided by a spatial confinement approaching that of the theater itself should always make sense. One should seek unity as much as possible, but at the same time recognize that not every subject can be adapted to its demands.

Within the strictures derived from Aristotle, then, Corneille is arguing for a loosening, not a tightening, of classical rules. His discussion of the unities, often taken to be prescriptive, is really a defense of flexibility. True, he brandishes Aristotle's authority against the exuberance of baroque forms. But his Aristotle can be adapted to fit a wide range of theatrical practices. The point, he concludes, is "to make the ancient rules agree with modern pleasures." Corneille would have been surprised to find that for later playwrights, especially in Germany during the early eighteenth century, he had become the epitome of the cold nobility and rigid formalism of the same classical theater into which he had constantly attempted to breathe life.

BIBLIOGRAPHY

Corneille's third *Discours* is the one most often reprinted, in part because its title, "Of the Three Unities of Time, Place, and Action," is so closely associated with the theory of classical drama. The three *Discours* do not exist in a single English edition. The first, "On the Uses and Elements of Dramatic Poetry," is translated by Beatrice Stewart MacClintock in *European Theories of the Drama* (ed. Barrett H. Clark, 1965). The second, "Discourse on Tragedy and of the Methods of Treating it, according to Probability and Necessity," can be found in *Dramatic Essays of the Neoclassic Age* (ed. Henry Hitch Adams and Baxter Hathaway, 1950). The third, our selection, is found in *The Continental Model* (ed. Scott Elledge and Donald Schier, 1960). The three essays are published together in French, with a helpful introduction and notes in English, in *Pierre Corneille: Writings on the Theatre*, edited by H. T. Barnwell (1965).

Two notable introductory works are P. J. Yarrow, *Corneille* (1963), and Claire L. Carlin, *Pierre Corneille Revisited* (1998); the latter offers a biographical chapter. Mitchell Greenberg's *Corneille, Classicism, and the Ruses of Symmetry* (1986) is an invaluable study of Corneille's tragic universe. David R. Clarke, *Pierre Corneille: Poetics and Political Drama under Louis XIII* (1992), and John Lyons, *The Tragedy of Origins: Pierre Corneille and Historical Perspective* (1966), provide two different interpretations of the nature of "history" in Corneille's plays. Two comparative studies—Benedetto Croce's classic *Ariosto, Shakespeare, and Corneille* (1920) and

A. Donald Sellstrom's more speculative *Corneille, Tasso, and Modern Poetics* (1986)—are of interest. The best bibliography of Corneille studies is the Corneille chapter in *A Critical Bibliography of French Literature*, vol. 3A, *The Seventeenth Century* (ed. Mare Fumaroli and Gwyneth Castor, 1983).

Of the Three Unities of Action, Time, and Place¹

The two preceding discourses and the critical examination of the plays which my first two volumes contain have furnished me so many opportunities to explain my thoughts on these matters² that there would be little left for me to say if I absolutely forbade myself to repeat.

I hold then, as I have already said, that in comedy, unity of action consists in the unity of plot or the obstacle to the plans of the principal actors, and in tragedy in the unity of peril, whether the hero falls victim to it or escapes. It is not that I claim that several perils cannot be allowed in the latter or several plots or obstacles in the former, provided that one passes necessarily from one to the other; for then escape from the first peril does not make the action complete since the escape leads to another danger; and the resolution of one plot does not put the actors at rest since they are confounded afresh in another. My memory does not furnish me any ancient examples of this multiplicity of perils linked each to each without the destruction of the unity of action; but I have noted independent double action as a defect in *Horace* and in *Théodore*,³ for it is not necessary that the first kill his sister upon gaining his victory nor that the other give herself up to martyrdom after having escaped prostitution; and if the death of Polyxène and that of Astyanax in Seneca's⁴ *Trojan Women* do not produce the same irregularity I am very much mistaken.

In the second place, the term unity of action does not mean that tragedy should show only one action on the stage. The one which the poet chooses for his subject must have a beginning, a middle, and an end;⁵ and not only are these three parts separate actions which find their conclusion in the principal one, but, moreover, each of them may contain several others with the same subordination. There must be only one complete action, which leaves the mind of the spectator serene; but that action can become complete only through several others which are less perfect and which, by serving as preparation, keep the spectator in a pleasant suspense. This is what must be contrived at the end of each act in order to give continuity to the action. It is not necessary that we know exactly what the actors are doing in the intervals which separate the acts, nor even that they contribute to the action when they do not appear on the stage; but it is necessary that each act leave us in the expectation of something which is to take place in the following one.

If you asked me what Cléopâtre is doing in *Rodogune*⁶ between the time

1. Translated by Donald Schier.

2. The principles Corneille had derived from ARISTOTLE's *Poetics* (see above). The first two discourses were "On the Uses and Elements of Dramatic Poetry" and "Discourse on Tragedy and of the Methods of Treating It, according to Probability and Necessity." Each play also had an *examen* (critical examination) appended by Corneille.

3. Two tragedies by Corneille, written respectively

in 1640 and 1645.

4. Seneca the Younger (ca. 4 B.C.E.—65 C.E.), Roman philosopher, statesman, and tragedian.

5. See Aristotle, *Poetics* 7, 1450b.

6. *Rodogune, Princesse des Parthes* (1644), a tragedy by Corneille in which Cleopatra, queen of Syria, promises the throne to the one of her two sons, Antiochus and Seleucus, who will bring to her the head of Rodogune, with whom both are in

when she leaves her two sons in the second act until she rejoins Antiochus in the fourth, I should be unable to tell you, and I do not feel obliged to account for her; but the end of this second act prepares us to see an amicable effort by the two brothers to rule and to hide Rodogune from the venomous hatred of their mother. The effect of this is seen in the third act, whose ending prepares us again to see another effort by Antiochus to win back these two enemies one after the other and for what Séleucus does in the fourth, which compels that unnatural mother [Cléopâtre] to resolve upon what she tries to accomplish in the fifth, whose outcome we await with suspense.

In *Le menteur*⁷ the actors presumably make use of the whole interval between the third and fourth acts to sleep; their rest, however, does not impede the continuity of the action between those two acts because the third does not contain a complete event. Dorante ends it with his plan to seek ways to win back the trust of Lucrèce, and at the very beginning of the next he appears so as to be able to talk to one of her servants and to her, should she show herself.

When I say that it is not necessary to account for what the actors do when they are not on stage, I do not mean that it is not sometimes very useful to give such an accounting; but only that one is not forced to do it, and that one ought to take the trouble to do so only when what happens behind the scenes is necessary for the understanding of what is to take place before the spectators. Thus I say nothing of what Cléopâtre did between the second and the fourth acts, because during all that time she can have done nothing important as regards the principal action which I am preparing for; but I point out in the very first lines of the fifth act that she has used the interval between these latter two for the killing of Séleucus, because that death is part of the action. This is what leads me to state that the poet is not required to show all the particular actions which bring about the principal one; he must choose to show those which are the most advantageous, whether by the beauty of the spectacle or by the brilliance or violence of the passions they produce, or by some other attraction which is connected with them, and to hide the others behind the scenes while informing the spectator of them by a narration or by some other artistic device; above all, he must remember that they must all be so closely connected that the last are produced by the preceding and that all have their source in the protasis⁸ which ought to conclude the first act. This rule, which I have established in my first *Discourse*, although it is new and contrary to the usage of the ancients, is founded on two passages of Aristotle. Here is the first of them: "There is a great difference," he says, "between events which succeed each other and those which occur because of others." The Moors come into the *Cid*¹ after the death of the Count and not because of the death of the Count; and the fisherman comes into *Don Sanche*² after Charles is suspected of being the Prince of Aragon and not because he is suspected of it; thus both are to be criticized. The second passage is even more specific and says precisely "that

love. When Seleucus is killed, Cleopatra prepares to poison Antiochus and Rodogune, but ends up drinking the poison herself.

7. *The Liar* (1643), a comedy by Corneille in which a provincial fabulator, Dorante, seeks to impress two Parisian women, Lucrèce and Clarice.
8. The introductory act or exposition of classical

Greek drama (literally, "that which is put forward"; Greek), a term of late antiquity.

9. Aristotle, *Poetics* 10, 1452a.

1. *Le Cid* (1637), a tragedy by Corneille.

2. *Don Sanche d'Aragon* (1649), a heroic comedy by Corneille.

everything that happens in tragedy must arise necessarily or probably from what has gone before."³

The linking of the scenes which unites all the individual actions of each act and of which I have spoken in criticizing *La Suivante*⁴ is a great beauty in a poem and one which serves to shape continuity of action through continuity of presentation; but, in the end, it is only a beauty and not a rule. The ancients did not always abide by it although most of their acts have but two or three scenes. This made things much simpler for them than for us, who often put as many as nine or ten scenes into each act. I shall cite only two examples of the scorn with which they treated this principle: one is from Sophocles,⁵ in *Ajax*, whose monologue before he kills himself has no connection with the preceding scene; the other is from the third act of Terence's⁶ *The Eunuch*, where Antipho's soliloquy has no connection with Chremes and Pythias who leave the stage when he enters. The scholars of our century, who have taken the ancients for models in the tragedies they have left us, have even more neglected that linking than did the ancients, and one need only glance at the plays of Buchanan, Grotius, and Heinsius,⁷ of which I spoke in the discussion of *Polyeucte*,⁸ to agree on that point. We have so far accustomed our audiences to this careful linking of scenes that they cannot now witness a detached scene without considering it a defect; the eye and even the ear are outraged by it even before the mind has been able to reflect upon it. The fourth act of *Cinna*⁹ falls below the others through this flaw; and what formerly was not a rule has become one now through the assiduousness of our practice.

I have spoken of three sorts of linkings in the discussion of *La Suivante*: I have shown myself averse to those of sound, indulgent to those of sight, favorable to those of presence and speech; but in these latter I have confused two things which ought to be separated. Links of presence and speech both have, no doubt, all the excellence imaginable; but there are links of speech without presence and of presence without speech which do not reach the same level of excellence. An actor who speaks to another from a hiding-place without showing himself forms a link of speech without presence which is always effective; but that rarely happens. A man who remains on stage merely to hear what will be said by those whom he sees making their entrance forms a link of presence without speech; this is often clumsy and falls into mere pretense, being contrived more to accede to this new convention which is becoming a precept than for any need dictated by the plot of the play. Thus, in the third act of *Pompée*,¹ Achorée, after having informed Charmion of the reception Caesar gave to the king when he presented to him the head of that

3. Aristotle, *Poetics* 10, 1452a.

4. *The Lady's Maid* (1633), a comedy by Corneille; his earlier criticism was in the *examen* to the play.

5. Greek tragic dramatist (ca. 496–406 B.C.E.). *Ajax* (ca. 441) is generally regarded as the earliest of his extant plays.

6. Roman comic dramatist (ca. 190–ca. 159 B.C.E.); *Eunuchus* was produced in 161.

7. Daniël Heinsius (1580–1655), Dutch poet and classical scholar; he published an edition of Aristotle's *Poetics* (1611), and his *De Tragoediae Constitutione* (1611) decisively influenced French classical theater. George Buchanan (1506–1582), Scottish humanist, educator, and man of letters who taught Latin in Paris and was known throughout Europe as a scholar and a Latin poet. Hugo

Grotius (1583–1645), Dutch jurist whose writings also included a number of tragedies.

8. *Polyeucte martyr* (1640), a Christian tragedy by Corneille; this earlier discussion was in the *examen* to the play.

9. *Cinna, ou la clémence d'Auguste* (1641, *Cinna, or the Clemency of Augustus*), a tragedy by Corneille. In an effort to avenge her father, Emilie incites her beloved Cinna to overthrow the emperor, Augustus. He is betrayed by a fellow conspirator, Maxime, also in love with Emilie; the conspirators are, in the end, all pardoned by a merciful Augustus.

1. *La mort de Pompée* (1642, *The Death of Pompey*), a tragedy by Corneille.

hero, remains on the stage where he sees the two of them come together merely to hear what they will say and report it to Cléopâtre. Ammon does the same thing in the fourth act of *Andromède*² for the benefit of Phinée, who retires when he sees the king and all his court arriving. Characters who become mute connect rather badly scenes in which they play little part and in which they count for nothing. It is another matter when they hide in order to find out some important secret from those who are speaking and who think they are not overheard, for then the interest which they have in what is being said, added to a reasonable curiosity to find out what they cannot learn in any other way, gives them an important part in the action despite their silence; but in these two examples Ammon and Achorée lend so cold a presence to the scenes they overhear that, to be perfectly frank, whatever feigned reason I give them to serve as pretext for their action, they remain there only to connect the scenes with those that precede, so easily can both plays dispense with what they do.

Although the action of the dramatic poem must have its unity, one must consider both its parts: the complication and the resolution. "The complication is composed," according to Aristotle, "in part of what has happened off stage before the beginning of the action which is there described, and in part from what happens on stage; the rest belongs to the resolution. The change of fortune forms the separation of these two parts. Everything which precedes it is in the first part, and this change, with what follows it, concerns the other."³ The complication depends entirely upon the choice and industrious imagination of the poet and no rule can be given for it, except that in it he ought to order all things according to probability or necessity, a point which I have discussed in the second *Discourse*; to this I add one piece of advice, which is that he involve himself as little as possible with things which have happened before the action he is presenting. Such narrations are annoying, usually because they are not expected, and they disturb the mind of the spectator, who is obliged to burden his memory with what has happened ten or twelve years before in order to understand what he is about to see; but narrations which describe things which happen and take place behind the scenes once the action has started always produce a better effect because they are awaited with some curiosity and are a part of the action which is being shown. One of the reasons why so many illustrious critics favor *Cinna* above anything else I have done is that it contains no narration of the past, the one *Cinna* makes in describing his plot to Emilie being rather an ornament which tickles the mind of the spectators than a necessary marshaling of the details they must know and impress upon their memories for the understanding of what is to come. Emilie informs them adequately in the first two scenes that he is conspiring against Augustus in her favor, and if *Cinna* merely told her that the plotters are ready for the following day he would advance the action just as much as by the hundred lines he uses to tell both what he said to them and the way in which they received his words. There are plots which begin at the very birth of the hero like that of *Héraclius*,⁴ but these great efforts of the imagination demand an extraordinary

2. A successful "machine play" (extravagant spectacle) (1650) by Corneille.

3. Aristotle, *Poetics* 18, 1455b.

4. *Héraclius, empereur d'Orient* (1647); a tragedy by Corneille. In this complicated drama of near-

incest and mistaken identity, the main characters are Héraclius, the legitimate prince; Phocas, the usurping ruler; Martian, son (unbeknownst to him) of Phocas; and Pulchérie, sister of Héraclius.

attention of the spectator and often keep him from taking a real pleasure in the first performances, so much do they weary him.

In the resolution I find two things to avoid: the mere change of intention and the machine.⁵ Not much skill is required to finish a poem when he who has served as the obstacle to the plans of the principal actors for four acts desists in the fifth without being constrained to do so by any remarkable event; I have spoken of this in the first *Discourse* and I shall add nothing to that here. The machine requires no more skill when it is used only to bring down a god who straightens everything out when the actors are unable to do so. It is thus that Apollo functions in the *Orestes*:⁶ this prince and his friend Pylades, accused by Tyndarus and Menelaus of the death of Clytemnestra and condemned after prosecution by them, seize Helen and Hermione; they kill, or think they kill the first, and threaten to do the same with the other if the sentence pronounced against them is not revoked. To smooth out these difficulties Euripides seeks nothing subtler than to bring Apollo down from heaven, and he, by absolute authority, orders that Orestes marry Hermione and Pylades Electra; and lest the death of Helen prove an obstacle to this, it being improbable that Hermione would marry Orestes since he had just killed her mother, Apollo informs them that she is not dead, that he has protected her from their blows and carried her off to heaven at the moment when they thought they were killing her. This use of the machine is entirely irrelevant, being founded in no way on the rest of the play, and makes a faulty resolution. But I find a little too harsh the opinion of Aristotle, who puts on the same level the chariot Medea uses to flee from Corinth after the vengeance she has taken on Creon.⁷ It seems to me there is a sufficient basis for this in the fact that she has been made a magician and that actions of hers as far surpassing natural forces as that one have been mentioned in the play. After what she did for Jason at Colchis and after she had made his father Aeson young again following his return, and after she had attached invisible fire to the gift she gave to Creusa, the flying chariot is not improbable and the poem has no need of other preparation for that extraordinary effect. Seneca gives it preparation by this line which Medea speaks to her nurse:

Tuum quoque ipsa corpus hinc mecum aveham;⁸

and I by this one which she speaks to Aegeus

I shall follow you tomorrow by a new road.⁹

Thus the condemnation of Euripides, who took no precautions, may be just and yet not fall on Seneca or on me: and I have no need to contradict Aristotle in order to justify myself on this point.

5. That is, the *deus ex machina* (god from a machine; Latin); in some Greek tragedies, a sort of crane lowered a god from the sky to provide a quick resolution to an entangled plot.

6. A drama (408 B.C.E.) by Euripides (ca. 485–ca. 406 B.C.E.), the Greek playwright who used the *deus ex machina* most frequently. In the Greek myth, Orestes kills his mother, Clytemnestra, to avenge her murder of his father, Agamemnon. Tyndareus is the father of Clytemnestra and of Helen (of Troy), whose husband is Menelaus; Hermione is Helen's daughter, and Electra is Orestes' sister. Apollo is the Greek god of music and prophecy.

7. At the end of Euripides' *Medea* (431 B.C.E.); see

Poetics 15, 1453a–1454b. At Colchis, Medea, a sorceress, helps Jason steal the Golden Fleece, and later marries him; when he chooses to marry the daughter of Creon, king of Corinth (unnamed in Euripides' play, named Creusa in Seneca's), she sends Jason's new wife a robe covered in a deadly ointment and kills Jason's and her two children, escaping in the dragon-drawn chariot of Helios (the sun), her grandfather.

8. Seneca, *Medea*, line 975: "I'll also carry away your corpse from here with me" (Medea is addressing her dead child).

9. Corneille, *Médée* (1635); Aegeus is a legendary king of Athens, whom Medea marries after fleeing Corinth.

From the action I turn to the acts, each of which ought to contain a portion of it, but not so equal a portion that more is not reserved for the last than for the others and less given to the first than to the others. Indeed, in the first act one may do no more than depict the moral nature of the characters and mark off how far they have got in the story which is to be presented. Aristotle does not prescribe the number of the acts; Horace limits it to five;¹ and although he prohibits having fewer, the Spaniards are obstinate enough to stop at three and the Italians often do the same thing. The Greeks used to separate the acts by the chanting of the chorus, and since I think it reasonable to believe that in some of their poems they made it chant more than four times, I should not want to say they never exceeded five. This way of distinguishing the acts was less handy than ours, for either they paid attention to what the chorus was chanting or they did not; if they did, the mind of the spectators was too tense and had no time in which to rest; if they did not, attention was too much dissipated by the length of the chant, and when a new act began, an effort of memory was needed to recall to the imagination what had been witnessed and at what point the action had been interrupted. Our orchestra presents neither of these two inconveniences; the mind of the spectator relaxes while the music is playing and even reflects on what he has seen, to praise it or to find fault with it depending on whether he has been pleased or displeased; and the short time the orchestra is allowed to play leaves his impressions so fresh that when the actors return he does not need to make an effort to recall and resume his attention.

The number of scenes in each act has never been prescribed by rule, but since the whole act must have a certain number of lines which make its length proportionate to that of the others, one may include in it more or fewer scenes depending on whether they are long or short to fill up the time which the whole act is to consume. One ought, if possible, to account for the entrance and exit of each actor; I consider this rule indispensable, especially for the exit, and think there is nothing so clumsy as an actor who leaves the stage merely because he has no more lines to speak.

I should not be so rigorous for the entrances. The audience expects the actor, and although the setting represents the room or the study of whoever is speaking, yet he cannot make his appearance there unless he comes out from behind the tapestry, and it is not always easy to give a reason for what he has just done in town before returning home, since sometimes it is even probable that he has not gone out at all. I have never seen anybody take offense at seeing Emilie begin *Cinna* without saying why she has come to her room; she is presumed to be there before the play begins, and it is only stage necessity which makes her appear from behind the scenes to come there. Thus I should willingly dispense from the rigors of the rule the first scene of each act but not the others, because once an actor is on the stage anyone who enters must have a reason to speak to him or, at least, must profit from the opportunity to do so when it offers. Above all, when an actor enters twice in one act, in comedy or in tragedy, he must either lead one to expect that he will soon return when he leaves the first time, like Horace in the second act and Julie in the third act of *Horace*, or explain on returning why he has come back so soon.

1. The Roman poet HORACE (65-8 B.C.E.), *Ars Poetica*, lines 189-90 (see above).

Aristotle wishes the well-made tragedy to be beautiful and capable of pleasing without the aid of actors and quite aside from performance.² So that the reader may more easily experience that pleasure, his mind, like that of the spectator, must not be hindered, because the effort he is obliged to make to conceive and to imagine the play for himself lessens the satisfaction which he will get from it. Therefore, I should be of the opinion that the poet ought to take great care to indicate in the margin the less important actions which do not merit being included in the lines, and which might even mar the dignity of the verse if the author lowered himself to express them. The actor easily fills this need on the stage, but in a book one would often be reduced to guessing and sometimes one might even guess wrong, unless one were informed in this way of these little things. I admit that this is not the practice of the ancients; but you must also allow me that because they did not do it they have left us many obscurities in their poems which only masters of dramatic art can explain; even so, I am not sure they succeed as often as they think they do. If we forced ourselves to follow the method of the ancients completely, we should make no distinction between acts and scenes because the Greeks did not. This failure on their part is often the reason that I do not know how many acts there are in their plays, nor whether at the end of an act the player withdraws so as to allow the chorus to chant, or whether he remains on stage without any action while the chorus is chanting, because neither they nor their interpreters have deigned to give us a word of indication in the margin.

We have another special reason for not neglecting that helpful little device as they did: this is that printing puts our plays in the hands of actors who tour the provinces and whom we can thus inform of what they ought to do, for they would do some very odd things if we did not help them by these notes. They would find themselves in great difficulty at the fifth act of plays that end happily, where we bring together all the actors on the stage (a thing which the ancients did not do); they would often say to one what is meant for another, especially when the same actor must speak to three or four people one after the other. When there is a whispered command to make; like Cléopâtre's to Laonice which sends her to seek poison,³ an aside would be necessary to express this in verse if we were to do without the marginal indications, and that seems to me much more intolerable than the notes which give us the real and only way, following the opinion of Aristotle, of making the tragedy as beautiful in the reading as in performance, by making it easy for the reader to imagine what the stage presents to the view of the spectators.

The rule of the unity of time is founded on this statement of Aristotle "that the tragedy ought to enclose the duration of its action in one journey of the sun or try not to go much beyond it."⁴ These words gave rise to a famous dispute as to whether they ought to be understood as meaning a natural day of twenty-four hours or an artificial day of twelve; each of the two opinions has important partisans, and, for myself, I find that there are subjects so difficult to limit to such a short time that not only should I grant the twenty-four full hours but I should make use of the license which the philosopher

2. Aristotle, *Poetics* 6, 1450b.

3. In *Rodogune*.

4. Aristotle, *Poetics* 5, 1449b.

gives to exceed them a little and should push the total without scruple as far as thirty. There is a legal maxim which says that we should broaden the mercies and narrow the rigors of the law, *odia restringenda, favores ampliandi*; and I find that an author is hampered enough by this constraint which forced some of the ancients to the very edge of the impossible. Euripides in *The Suppliants*⁵ makes Theseus leave Athens with an army, fight a battle beneath the walls of Thebes, which was ten or twelve leagues away, and return victorious in the following act; and between his departure and the arrival of the messenger who comes to tell the story of his victory, the chorus has only thirty-six lines to speak. That makes good use of such a short time. Aeschylus⁶ makes Agamemnon come back from Tröy with even greater speed. He had agreed with Clytemnestra, his wife, that as soon as the city was taken he would inform her by signal fires built on the intervening mountains, of which the second would be lighted as soon as the first was seen, the third at the sight of the second, and so on; by this means she was to learn the great news the same night. However, scarcely had she learned it from the signal fires when Agamemnon arrives, whose ship, although battered by a storm, if memory serves, must have traveled as fast as the eye could see the lights. *The Cid* and *Pompée*, where the action is a little precipitate, are far from taking so much license; and if they force ordinary probability in some way, at least they do not go as far as such impossibilities.

Many argue against this rule, which they call tyrannical, and they would be right if it were founded only on the authority of Aristotle; but what should make it acceptable is the fact that common sense supports it. The dramatic poem is an imitation, or rather a portrait of human actions, and it is beyond doubt that portraits gain in excellence in proportion as they resemble the original more closely. A performance lasts two hours and would resemble reality perfectly if the action it presented required no more for its actual occurrence. Let us then not settle on twelve or twenty-four hours, but let us compress the action of the poem into the shortest possible period, so that the performance may more closely resemble reality and thus be more nearly perfect. Let us give, if that is possible, to the one no more than the two hours which the other fills. I do not think that *Rodogune* requires much more; and perhaps two hours would be enough for *Cinna*. If we cannot confine the action within the two hours, let us take four, six, or ten, but let us not go much beyond twenty-four for fear of falling into lawlessness and of so far reducing the scale of the portrait that it no longer has its proportionate dimensions and is nothing but imperfection.

Most of all, I should like to leave the matter of duration to the imagination of the spectators and never make definite the time the action requires unless the subject needs this precision, but especially not when probability is a little forced, as in the *Cid*, because precision serves only to make the crowded action obvious to the spectator. Even when no violence is done to a poem by the necessity of obeying this rule, why must one state at the beginning that the sun is rising, that it is noon at the third act, and that the sun is setting at the end of the last act? This is only an obtrusive affectation; it is enough to establish the possibility of the thing in the time one gives to it and

5. A tragedy first performed ca. 422 B.C.E.
6. Greek tragic dramatist (525–456 B.C.E.); Cor-

neille describes the beginning of his *Agamemnon* (458).

that one be able to determine the time easily if one wishes to pay attention to it, but without being compelled to concern oneself with the matter. Even in those actions which take no longer than the performance it would be clumsy to point out that a half hour has elapsed between the beginning of one act and the beginning of the next.

I repeat what I have said elsewhere,⁷ that when we take a longer time, as, for instance, ten hours, I should prefer that the eight extra be used up in the time between the acts and that each act should have as its share only as much time as performance requires especially when all scenes are closely linked together. I think, however, that the fifth act, by special privilege, has the right to accelerate time so that the part of the action which it presents may use up more time than is necessary for performance. The reason for this is that the spectator is by then impatient to see the end, and when the outcome depends on actors who are off stage, all the dialogue given to those who are on stage awaiting news of the others drags and action seems to halt. There is no doubt that from the point where Phocas exits in the fifth act of *Héraclius* until Amyntas enters to relate the manner of his death, more time is needed for what happens off stage than for the speaking of the lines in which Héraclius, Martian, and Pulchérie complain of their misfortune. Prusias and Flaminius, in the fifth act of *Nicomède*,⁸ do not have the time they would need to meet at sea, take counsel with each other, and return to the defense of the queen; and the Cid has not enough time to fight a duel with Don Sanche during the conversations of the Infanta with Léonor and of Chimène with Elvire. I was aware of this and yet have had no scruples about this acceleration of which, perhaps, one might find several examples among the ancients, but the laziness of which I have spoken will force me to rest content with this one, which is from the *Andria*⁹ of Terence. Simo slips his son Pamphilus into the house of Glycerium in order to get the old man, Crito, to come out and to clear up with him the question of the birth of his mistress, who happens to be the daughter of Chremes. Pamphilus enters the house, speaks to Crito, asks him for the favor and returns with him; and during this exit, this request, and this re-entry, Simo and Chremes, who remain on stage, speak only one line each, which could not possibly give Pamphilus more than time enough to ask where Crito is, certainly not enough to talk with him and to explain to him the reasons for which he should reveal what he knows about the birth of the unknown girl.

When the conclusion of the action depends on actors who have not left the stage and about whom no one is awaiting news, as in *Cinna* and *Rodogune*, the fifth act has no need of this privilege because then all the action takes place in plain sight, as does not happen when part of it occurs off stage after the beginning of the act. The other acts do not merit the same freedom. If there is not time enough to bring back an actor who has made his exit, or to indicate what he has done since that exit, the accounting can be postponed to the following act; and the music, which separates the two acts, may use up as much time as is necessary; but in the fifth act no postponement is possible: attention is exhausted and the end must come quickly.

7. In the *Examen de Mélièze*, which precedes the present Discourse in the edition published by Corneille [translator's note].

8. A tragedy (1651) by Corneille.

9. *The Maid of Andros* (166 B.C.E.), Terence's first play.

I cannot forget that although we must reduce the whole tragic action to one day, we can nevertheless make known by a narration or in some other more artful way what the hero of the tragedy has been doing for several years, because there are plays in which the crux of the plot lies in an obscurity of birth which must be brought to light, as in *Oedipus*.¹ I shall not say again that the less one burdens oneself with past actions, the more favorable the spectator will be, because of the lesser degree of trouble he is given when everything takes place in the present and no demands are made on his memory except for what he has seen; but I cannot forget that the choice of a day both illustrious and long-awaited is a great ornament to a poem. The opportunity for this does not always present itself, and in all that I have written until now you will find only four of that kind: the day in *Horace* when two nations are to decide the question of supremacy of empire by a battle; and the ones in *Rodogune*, *Andromède*, and *Don Sanche*. In *Rodogune* it is a day chosen by two sovereigns for the signature of a treaty of peace between the hostile crowns, for a complete reconciliation of the two rival governments through a marriage, and for the elucidation of a more than twenty-year-old secret concerning the right of succession of one of the twin princes on which the fate of the kingdom depends, as does the outcome of both their loves. The days in *Andromède* and *Don Sanche* are not of lesser importance, but, as I have just said, such opportunities do not often present themselves, and in the rest of my works I have been able to choose days remarkable only for what chance makes happen on them and not by the use to which public arrangements destined them long ago.

As for the unity of place, I find no rule concerning it in either Aristotle or Horace. This is what leads many people to believe that this rule was established only as a consequence of the unity of one day, and leads them to imagine that one can stretch the unity of place to cover the points to which a man may go and return in twenty-four hours. This opinion is a little too free, and if one made an actor travel post-haste, the two sides of the theater might represent Paris and Rouen. I could wish, so that the spectator is not at all disturbed, that what is performed before him in two hours might actually be able to take place in two hours, and that what he is shown in a stage setting which does not change might be limited to a room or a hall depending on a choice made beforehand; but often that is so awkward, if not impossible, that one must necessarily find some way to enlarge the place as also the time of the action. I have shown exact unity of place in *Horace*, *Polyeucte*, and *Pompée*, but for that it was necessary to present either only one woman, as in *Polyeucte*; or to arrange that the two who are presented are such close friends and have such closely related interests that they can be always together, as in *Horace*; or that they may react as in *Pompée* where the stress of natural curiosity drives Cléopâtre from her apartments in the second act and Cornélie in the fifth; and both enter the great hall of the king's palace in anticipation of the news they are expecting. The same thing is not true of *Rodogune*: Cléopâtre and she have interests which are too divergent to permit them to express their most secret thoughts in the same place. I might say of that play what I have said of *Cinna*, where, in general, everything happens

1. The *Oedipus Rex* (ca. 430 B.C.E.) of Sophocles is the best-known treatment of the story (an *Oedipus* of Seneca is also extant); at the climax of the

play Oedipus learns that he has unknowingly killed his father and married his mother. Corneille wrote his *Oedipe* in 1659.

in Rome and, in particular, half of the action takes place in the quarters of Auguste and half of it in Emilie's apartments. Following that arrangement, the first act of this tragedy would be laid in Rodogune's antechamber, the second, in Cléopâtre's apartments, the third, in Rodogune's; but if the fourth act can begin in Rodogune's apartments it cannot finish there, and what Cléopâtre says to her two sons one after the other would be badly out of place there. The fifth act needs a throne room where a great crowd can be gathered. The same problem is found in *Héraclius*. The first act could very well take place in Phocas's quarters, the second, in Léontine's apartments; but if the third begins in Pulchérie's rooms, it cannot end there, and it is outside the bounds of probability that Phocas should discuss the death of her brother in Pulchérie's apartments.

The ancients, who made their kings speak in a public square, easily kept a rigorous unity of place in their tragedies. Sophocles, however, did not observe it in his *Ajax*, when the hero leaves the stage to find a lonely place in which to kill himself and does so in full view of the people; this easily leads to the conclusion that the place where he kills himself is not the one he has been seen to leave, since he left it only to choose another.

We do not take the same liberty of drawing kings and princesses from their apartments, and since often the difference and the opposition on the part of those who are lodged in the same palace do not allow them to take others into their confidence or to disclose their secrets in the same room, we must seek some other compromise about unity of place if we want to keep it intact in our poems; otherwise we should have to decide against many plays which we see succeeding brilliantly.

I hold, then, that we ought to seek exact unity as much as possible, but as this unity does not suit every kind of subject, I should be very willing to concede that a whole city has unity of place. Not that I should want the stage to represent the whole city, that would be somewhat too large, but only two or three particular places enclosed within its walls. Thus the scene of *Cinna* does not leave Rome, passing from the apartments of Auguste to the house of Emilie. *Le menteur* takes place in the Tuileries and in the Place Royale at Paris, and *La Suite*² shows us the prison and Mélisse's house at Lyons. *The Cid* increases even more the number of particular places without leaving Seville; and since the close linking of scenes is not observed in that play, the stage in the first act is supposed to represent Chimène's house, the Infante's apartments in the king's palace, and the public square; the second adds to these the king's chamber. No doubt there is some excess in this freedom. In order to rectify in some way this multiplication of places when it is inevitable, I should wish two things done: first, that the scene should never change in a given act but only between the acts, as is done in the first three acts of *Cinna*; the other, that these two places should not need different stage settings and that neither of the two should ever be named, but only the general place which includes them both, as Paris, Rome, Lyons, Constantinople, and so forth. This would help to deceive the spectator, who, seeing nothing that would indicate the difference in the places, would not notice the change, unless it was maliciously and critically pointed out, a thing which few are capable of doing,

2. *La Suite du menteur* (1643, *Sequel to the Liar*), a comedy by Corneille.

most spectators being warmly intent upon the action which they see on the stage. The pleasure they take in it is the reason why they do not seek out its imperfections lest they lose their taste for it; and they admit such an imperfection only when forced, when it is too obvious, as in *Le Menteur* and *La Suite*, where the different settings force them to recognize the multiplicity of places in spite of themselves.

But since people of opposing interests cannot with verisimilitude unfold their secrets in the same place, and since they are sometimes introduced into the same act through the linking of scenes which the unity of place necessarily produces, one must find some means to make it compatible with the contradiction which rigorous probability finds in it, and consider how to preserve the fourth act of *Rodogune* and the third of *Héraclius*, in both of which I have already pointed out the contradiction which lies in having enemies speak in the same place. Jurists allow legal fictions, and I should like, following their example, to introduce theatrical fictions by which one could establish a theatrical place which would not be Cléopâtre's chamber nor Rodogune's, in the play of that name, nor that of Phocas, of Léontine or of Pulchérie in *Héraclius*, but a room contiguous to all these other apartments, to which I should attribute these two privileges: first, that each of those who speaks in it is presumed to enjoy the same secrecy there as if he were in his own room; and second, that whereas in the usual arrangement it is sometimes proper for those who are on stage to go off, in order to speak privately with others in their rooms, these latter might meet the former on stage without shocking convention, so as to preserve both the unity of place and the linking of scenes. Thus Rodogune, in the first act, encounters Laonice, whom she must send for so as to speak with her; and, in the fourth act, Cléopâtre encounters Antiochus on the very spot where he has just moved Rodogune to pity, even though in utter verisimilitude the prince ought to seek out his mother in her own room since she hates the princess too much to come to speak to him in Rodogune's, which, following the first scene, would be the locus of the whole act, if one did not introduce that compromise which I have mentioned into the rigorous unity of place.

Many of my plays will be at fault in the unity of place if this compromise is not accepted, for I shall abide by it always in the future when I am not able to satisfy the ultimate rigor of the rule. I have been able to reduce only three plays, *Horace*, *Polyeucte*, and *Pompée*, to the requirements of the rule. If I am too indulgent with myself as far as the others are concerned, I shall be even more so for those which may succeed on the stage through some appearance of regularity. It is easy for critics to be severe; but if they were to give ten or a dozen plays to the public, they might perhaps slacken the rules more than I do, as soon as they have recognized through experience what constraint their precision brings about and how many beautiful things it banishes from our stage. However that may be, these are my opinions, or if you prefer, my heresies concerning the principal points of the dramatic art, and I do not know how better to make the ancient rules agree with modern pleasures. I do not doubt that one might easily find better ways of doing that, and I shall be ready to accept them when they have been put into practice as successfully as, by common consent, mine have been.

JOHN DRYDEN

1631–1700

John Dryden worked expertly in poetry, drama, criticism, and translation. He was a true literary professional, an eminent (if controversial) public writer who took pride in his craft. While his achievements are impressive and his influence significant, his writing is often too topical and occasional to give great pleasure to nonspecialist readers today. In poetry and criticism, Dryden prepared the way for later writers who built upon what he had done—ALEXANDER POPE and SAMUEL JOHNSON in particular.

Biographical evidence suggests that Dryden's middle-class parents supported the Puritan cause and Parliament. Dryden was educated at Westminster School and at Trinity College, Cambridge, receiving his degree in 1654.

His first important poem, *Heroic Stanzas* (1658, published 1659), eulogized Oliver Cromwell, the Puritan religious, military, and political leader and the lord protector of England (1653–58). Dryden was present at Cromwell's funeral, as were the Puritan poets John Milton and Andrew Marvell. In 1660, when Charles II assumed the throne eleven years after the execution of his father, Charles I, Dryden celebrated the event in his poem *Astrea Redux* ("justice restored"). This and later shifts in his political and religious positions led many critics to charge that he was an opportunist; but as SAMUEL JOHNSON noted in his *Life of Dryden*, "if he changed, he changed with the nation."

Annus Mirabilis ("year of wonders," 1667), a historical poem that describes two events of 1666, the English defeat of the Dutch naval fleet and the Great Fire in London that destroyed two-thirds of the city, helped win Dryden the poet laureateship in 1668. Other celebrated poems include the mock-heroic "Mac Flecknoe" (1682), a model for Pope's *Dunciad*; the political satires *Absalom and Achitophel* (1681) and *The Medal* (1682); and two religious poems, "Religio Laici" ("a layman's religion," 1682), which is a defense of Anglicanism, and *The Hind and the Panther* (1687), which criticizes the Anglican Church and reflects Dryden's conversion to Catholicism.

Dryden also was the major dramatist of his day. His best comedy is *Marriage à la Mode* (1671), and his most noteworthy tragedies are *Aureng-Zebe* (in rhymed couplets, 1675) and *All for Love, or The World Well Lost* (in blank verse, 1677). The last of these, influenced by French neoclassic theory, adapts Shakespeare's *Antony and Cleopatra* to the three unities of action, place, and time (see PIERRE CORNEILLE). In addition to plays and dramatic criticism, Dryden produced skillful translations of such classical authors as Persius, Juvenal, Plutarch, and Virgil; some scholars have judged his *Fables, Ancient and Modern* (1700), consisting of translations and paraphrases of Ovid, BOCCACCIO, and Chaucer, to be his finest achievement. Dryden's critical writings also form a significant and serious body of work. From his defenses, prefaces, dedications, prologues, and epilogues—and his poems on or to other writers and artists—we can piece together his literary and critical views.

Dryden occupies a central place in the history of English criticism and prose. His relaxed, conversational style, MATTHEW ARNOLD observed in the nineteenth century, is "such as we would all gladly use if we only knew how." Dryden examined the nature of comedy and tragedy, satire, poetry, and translation. He knew well, and was influenced by, Greek, Roman, and neoclassical French texts and theories; at the same time, he valued English writers from Chaucer to Ben Jonson and Shakespeare and sought to mediate among classical, modern, and national literary traditions.

Dryden's judgments are solid and sensible. "A man should have a reasonable, philosophical, and in some measure mathematical head to be a complete and excellent poet," he once observed, "and besides this should have experience in all sorts of humors and manners of men; should be thoroughly skilled in conversation and should

have a great knowledge of mankind in general." His formulations are frequently witty and his advice cogent, as in his preface to the *Fables*: "An Author is not to write all he can, but only all he ought." Dryden respects authority and precedent without being weighed down by them: "If the plays of the Ancients are more correctly plotted, ours are more beautifully written. . . . 'Tis not enough that Aristotle has said so, for Aristotle drew his models of tragedy from Sophocles and Euripides; and if he had seen ours, might have changed his mind." His tone is urbane, cultured, and civilized; and like Arnold and T. S. ELIOT, his criticism benefits from his own wide range of experience in creative writing.

Dryden's strengths and limits as a critic are displayed in his best-known critical work, the lengthy conversation *An Essay of Dramatic Poesy* (1668; rev. 1684), from which we take our first selection. His stated purpose is "to vindicate the honor of our English writers from the censure of those who unjustly prefer the French before them." Through his four speakers, he treats the relationship between the ancients and the moderns, French dramatic theory and English practice, and the use of rhyme in drama, commenting along the way on Shakespeare, Jonson, and other authors. Samuel Johnson maintained of the *Essay* that "modern English prose begins here"; he identifies Dryden as "the father of English criticism." But while the *Essay* is confident, leisurely, graceful, exploratory, and spirited, it is nonetheless a little slow and sometimes pedantic. The tone is appealing up to a point: Dryden favors balance, counterpoint, argument; he uses the "essay" form to undertake a tentative inquiry. He seeks to break down and complicate distinctions, opening up such apparently fixed terms as *propriety* and *decorum*. But the *Essay* overall lacks the energy, boldness, and edge of Dryden's best satiric poems.

Dryden's criticism shines in excerpts, like those included here from the *Essay* (which set the terms of Shakespeare criticism for the next century) and the passages on tragedy from the preface to *Troilus and Cressida* and on translation from the preface to *Sylvae*. At his focused best, he is informed and judicious. Everyone interested in the history of criticism should know why he mattered and value his reflections on literary tradition, genre, and the theory and practice of translation. He is a leader in the distinguished line of England's poet-critics that begins with Sidney and includes Johnson, SAMUEL TAYLOR COLERIDGE, Arnold, and Eliot.

BIBLIOGRAPHY

For many years the standard edition of Dryden was the eighteen-volume collection first published in 1808 and revised in 1882–93. It has been replaced by the University of California Press edition, edited E. N. Hooker, H. T. Swedenberg Jr., et al. (14 vols. to date, 1956–). There are two well-annotated collections of Dryden's criticism, the first edited by W. P. Ker (2 vols., 1900), the second by George Watson (2 vols., 1962). Other helpful collections include John Aden, *Critical Opinions of John Dryden* (1963); *Literary Criticism of John Dryden*, edited by Arthur C. Kirsch (1966); and H. James Jensen, *A Glossary of John Dryden's Critical Terms* (1969).

The best biography is James Anderson Winn, *John Dryden and His World* (1987). Also valuable are James Marshall Osborn, *John Dryden: Some Biographical Facts and Problems* (rev. ed., 1965), and Winn, "When Beauty Fires the Blood": *Love and the Arts in the Age of Dryden* (1992). A good survey of the life and works is Paul Hammond, *John Dryden: A Literary Life* (1991).

Important modern studies of Dryden include T. S. Eliot, *Homage to John Dryden* (1924) and *John Dryden: The Poet, the Dramatist, the Critic* (1932); and Louis I. Bredvold, *The Intellectual Milieu of John Dryden* (1934). The best books on the criticism are Edward Pechter, *Dryden's Classical Theory of Literature* (1975), and James Engell, *Forming the Critical Mind: Dryden to Coleridge* (1989). Philip Harth, *Contexts of Dryden's Thought* (1968), is the standard work on Dryden's philosophical and reli-

gious views; Harth's *Pen for a Party: Dryden's Tory Propaganda in Its Contexts* (1993) is also valuable. Michael Werth Gelber, *The Just and the Lively: The Literary Criticism of John Dryden* (1999), analyzes the criticism as a full and coherent body of literary theory.

For bibliographic works, see Hugh Macdonald, *John Dryden: A Bibliography of Early Editions and Drydeniana* (1939); *John Dryden: The Critical Heritage*, edited by James Kinsley and Helen Kinsley (1971); *An Annotated Bibliography of John Dryden: Texts and Studies, 1949–1973*, edited by John A. Zamonski (1975); *John Dryden: A Survey and Bibliography of Critical Studies, 1895–1974*, edited by David J. Latt and Samuel Holt Monk (1976); and James M. Hall, *John Dryden: A Reference Guide* (1984).

From An Essay of Dramatic Poesy

* * *

"To begin, then, with Shakspeare.¹ He was the man who of all modern, and perhaps ancient poets, had the largest and most comprehensive soul. All the images of nature were still present to him, and he drew them, not laboriously, but luckily; when he describes anything, you more than see it, you feel it too. Those who accuse him to have wanted learning, give him the greater commendation: he was naturally learned; he needed not the spectacles of books to read nature; he looked inwards, and found her there. I cannot say he is everywhere alike; were he so, I should do him injury to compare him with the greatest of mankind. He is many times flat, insipid; his comic wit degenerating into clenches,² his serious swelling into bombast. But he is always great, when some great occasion is presented to him; no man can say he ever had a fit subject for his wit, and did not then raise himself as high as above the rest of poets,

Quantum lenta solent inter viburna cypressi.³

The consideration of this made Mr. Hales of Eaton⁴ say, that there was no subject of which any poet ever writ, but he would produce it much better done in Shakspeare; and however others are now generally preferred before him, yet the age wherein he lived, which had contemporaries with him—Fletcher and Jonson,⁵ never equalled them to him in their esteem: and in the last king's court,⁶ when Ben's reputation was at highest, Sir John Suckling,⁷ and with him the greater part of the courtiers, set our Shakspeare far above him.

"Beaumont and Fletcher, of whom I am next to speak, had, with the advantage of Shakspeare's wit, which was their precedent, great natural gifts, improved by study: Beaumont especially being so accurate a judge of plays,

1. In this excerpt, Neander (the Dryden character) is speaking. William Shakespeare (1564–1616) wrote plays between about 1590 and 1612.

2. Puns, quibbles.

3. As do cypresses among the bending shrubs (Latin). From Virgil, *Eclogues* 1.125 (37 B.C.E.).

4. John Hales (1584–1656), a fellow of Eton, one of England's most famous endowed boarding

schools (founded in 1440).

5. Ben Jonson (1572–1637), English dramatist and poet. John Fletcher (1579–1625), English dramatist who collaborated with Francis Beaumont (1584–1616) on a number of plays from 1606 to 1613 (each also wrote plays on his own).

6. Charles I (1600–1649, reigned 1625–49).

7. English poet and courtier (1609–1642).

that Ben Jonson, while he lived, submitted all his writings to his censure, and, 'tis thought, used his judgment in correcting, if not contriving, all his plots. What value he had for him, appears by the verses he writ to him;⁸ and therefore I need speak no farther of it. The first play that brought Fletcher and him in esteem was their *Philaster*:⁹ for before that, they had written two or three very unsuccessfully, as the like is reported of Ben Jonson, before he writ *Every Man in his Humour*.¹ Their plots were generally more regular than Shakspeare's, especially those which were made before Beaumont's death; and they understood and imitated the conversation of gentlemen much better; whose wild debaucheries, and quickness of wit in repartees, no poet before them could paint as they have done. Humour,² which Ben Jonson derived from particular persons, they made it not their business to describe: they represented all the passions very lively, but above all, love. I am apt to believe the English language in them arrived to its highest perfection: what words have since been taken in, are rather superfluous than ornamental. Their plays are now the most pleasant and frequent entertainments of the stage; two of theirs being acted through the year for one of Shakspeare's or Jonson's: the reason is, because there is a certain gaiety in their comedies, and pathos in their more serious plays, which suit generally with all men's humours. Shakspeare's language is likewise a little obsolete, and Ben Jonson's wit comes short of theirs.

"As for Jonson, to whose character I am now arrived, if we look upon him while he was himself (for his last plays were but his dotages),³ I think him the most learned and judicious writer which any theatre ever had. He was a most severe judge of himself, as well as others. One cannot say he wanted wit, but rather that he was frugal of it. In his works you find little to retrench or alter. Wit, and language, and humour also in some measure, we had before him; but something of art was wanting to the drama till he came. He managed his strength to more advantage than any who preceded him. You seldom find him making love in any of his scenes, or endeavouring to move the passions; his genius was too sullen and saturnine⁴ to do it gracefully, especially when he knew he came after those who had performed both to such an height. Humour was his proper sphere; and in that he delighted most to represent mechanic people.⁵ He was deeply conversant in the ancients, both Greek and Latin, and he borrowed boldly from them: there is scarce a poet or historian among the Roman authors of those times whom he has not translated in *Sejanus* and *Catiline*.⁶ But he has done his robberies so openly, that one may see he fears not to be taxed by any law. He invades authors like a monarch; and what would be theft in other poets is only victory in him. With the spoils of these writers he so represents old Rome to us, in its rites, ceremonies, and customs, that if one of their poets had written either of his tragedies, we had seen less of it than in him. If there was any fault in his language, 'twas that he weaved it too closely and laboriously, in his comedies⁷ especially: perhaps, too, he did a little too much Romanise our tongue, leav-

ing the words which he translated almost as much Latin as he found them: wherein, though he learnedly followed their language, he did not enough comply with the idiom of ours. If I would compare him with Shakspeare, I must acknowledge him the more correct poet, but Shakspeare the greater wit. Shakspeare was the Homer, or father of our dramatic poets; Jonson was the Virgil, the pattern of elaborate writing; I admire him, but I love Shakspeare. To conclude of him; as he has given us the most correct plays, so in the precepts which he has laid down in his *Discoveries*,⁸ we have as many and profitable rules for perfecting the stage, as any wherewith the French can furnish us."⁹

1668, 1684

From Preface to Troilus and Cressida

* * *

I hasten to the end or scope of Tragedy, which is, to rectify or purge our passions, fear, and pity.

To instruct delightfully is the general end of all poetry. Philosophy instructs, but it performs its work by precept; which is not delightful, or not so delightful as example. To purge the passions by example is therefore the particular instruction which belongs to Tragedy. Rapin,¹ a judicious critic, has observed from Aristotle, that pride and want of commiseration are the most predominant vices in mankind; therefore, to cure us of these two, the inventors of Tragedy have chosen to work upon two other passions, which are fear and pity. We are wrought to fear by their setting before our eyes some terrible example of misfortune, which happened to persons of the highest quality; for such an action demonstrates to us that no condition is privileged from the turns of fortune; this must of necessity cause terror in us, and consequently abate our pride. But when we see that the most virtuous, as well as the greatest, are not exempt from such misfortunes, that consideration moves pity in us, and insensibly works us to be helpful to, and tender over, the distressed; which is the noblest and most god-like of moral virtues. Here it is observable that it is absolutely necessary to make a man virtuous, if we desire he should be pitied: we lament not, but detest, a wicked man; we are glad when we behold his crimes are punished, and that poetical justice is done upon him. Euripides was censured by the critics of his time for making his chief characters too wicked; for example, Phædra,² though she loved her son-in-law with reluctancy, and that it was a curse upon her family for offending Venus,³ yet was thought too ill a pattern for the stage. Shall we therefore banish all char-

8. Jonson's *Timber, or Discoveries Made upon Men and Matter* (1640) is a series of notes and extracts on writing and other subjects.

9. Most notably in PIERRE CORNEILLE'S *Of the Three Unities* (1660; see above).

1. René Rapin (1621–1687), French Jesuit priest, poet, and critic. He draws on the *Poetics* (see

above) of the Greek philosopher ARISTOTLE (384–322 B.C.E.).

2. A character in the Greek tragedy *Hippolytus* (428 B.C.E.) by Euripides (ca. 485–406 B.C.E.).

3. The Roman name for Approdite, the Greek goddess of love.

acters of villainy? I confess I am not of that opinion; but it is necessary that the hero of the play be not a villain; that is, the characters, which should move our pity, ought to have virtuous inclinations, and degrees of moral goodness in them. As for a perfect character of virtue, it never was in Nature, and therefore there can be no imitation of it; but there are alloys of frailty to be allowed for the chief persons, yet so that the good which is in them shall outweigh the bad, and consequently leave room for punishment on the one side and pity on the other.

After all, if any one will ask me whether a tragedy cannot be made upon any other grounds than those of exciting pity and terror in us, Bossu,⁴ the best of modern critics, answers thus in general: That all excellent arts, and particularly that of poetry, have been invented and brought to perfection by men of a transcendent genius; and that, therefore, they who practise afterwards the same arts are obliged to tread in their footsteps, and to search in their writings the foundation of them; for it is not just that new rules should destroy the authority of the old. But Rapin writes more particularly thus, that no passions in a story are so proper to move our concernment as fear and pity; and that it is from our concernment we receive our pleasure is undoubted; when the soul becomes agitated with fear for one character, or hope for another, then it is that we are pleased in Tragedy, by the interest which we take in their adventures.

Here, therefore, the general answer may be given to the first question, how far we ought to imitate Shakspeare and Fletcher⁵ in their plots; namely, that we ought to follow them so far only as they have copied the excellencies of those who invented and brought to perfection Dramatic Poetry; those things only excepted which religion, custom of countries, idioms of languages, etc., have altered in the superstructures, but not in the foundation of the design.

How defective Shakspeare and Fletcher have been in all their plots Mr. Rymer⁶ has discovered in his criticisms: neither can we, who follow them, be excused from the same or greater errors; which are the more unpardonable in us because we want their beauties to countervail our faults. The best of their designs, the most approaching to antiquity, and the most conducing to move pity, is the *King and no King*,⁷ which, if the farce of *Bessus*⁸ were thrown away, is of that inferior sort of tragedies which end with a prosperous event. It is probably derived from the story of *Cedipus*, with the character of Alexander the Great in his extravagances given to Arbaces. The taking of this play, amongst many others, I cannot wholly ascribe to the excellency of the action, for I find it moving when it is read: 'tis true the faults of the plot are so evidently proved that they can no longer be denied. The beauties of it must therefore lie either in the lively touches of the passion, or we must conclude, as I think we may, that even in imperfect plots there are less degrees of Nature, by which some faint emotions

4. René Le Bossu (1631–1680), a French critic whose discourse on epic poetry, published in 1675 and translated in English in 1695, was admired by English critics.

5. John Fletcher (1579–1625), English dramatist best known for his collaborations with Francis Beaumont (1584–1616). He is said to have collaborated with William Shakespeare (1564–1616) on *Henry VIII* and *The Two Noble Kinsman*.

6. Thomas Rymer (1641–1713), historian and critic; author of *The Tragedies of the Last Age Consider'd* (1678), which Dryden admired, and *A Short View of Tragedy* (1693), infamous for its attack on Shakespeare.

7. A tragicomedy by Beaumont and Fletcher (1611).

8. A cowardly braggart in *A King and No King*. Arbaces is another character in the play.

of pity and terror are raised in us; as a less engine will raise a less proportion of weight, though not so much as one of Archimedes's⁹ making; for nothing can move our nature but by some natural reason which works upon passions. And since we acknowledge the effect there must be something in the cause.

1679

From Preface to Sylvae

* * *

For, after all, a translator is to make his author appear as charming as possibly he can, provided he maintains his character, and makes him not unlike himself. Translation is a kind of drawing after the life; where every one will acknowledge there is a double sort of likeness, a good one and a bad. 'Tis one thing to draw the outlines true, the features like, the proportions exact, the colouring itself perhaps tolerable; and another thing to make all these graceful, by the posture, the shadowings, and, chiefly, by the spirit which animates the whole. I cannot, without some indignation, look on an ill copy of an excellent original; much less can I behold with patience Virgil, Homer,¹ and some others, whose beauties I have been endeavouring all my life to imitate, so abused, as I may say, to their faces, by a botching interpreter. What English readers, unacquainted with Greek or Latin, will believe me, or any other man, when we commend those authors, and confess we derive all that is pardonable in us from their fountains, if they take those to be the same poets whom our Oglebys² have translated? But I dare assure them, that a good poet is no more like himself in a dull translation than his carcass would be to his living body. There are many who understand Greek and Latin, and yet are ignorant of their mother-tongue. The proprieties and delicacies of the English are known to few; 'tis impossible even for a good wit³ to understand and practise them, without the help of a liberal education, long reading, and digesting of those few good authors we have amongst us, the knowledge of men and manners, the freedom of habitudes and conversation with the best company of both sexes; and, in short, without wearing off the rust which he contracted while he was laying in a stock of learning. Thus difficult it is to understand the purity of English, and critically to discern not only good writers from bad, and a proper style from a corrupt, but also to distinguish that which is pure in a good author from that which is vicious and corrupt in him. And for want of all these requisites, or the greatest part of them, most of our ingenious young men take up some cried-up English poet for their model, adore him, and imitate him, as they think, without knowing wherein he is defective, where he is boyish and trifling,

9. Greek mathematician, engineer, and physicist (3d c. B.C.E.). He famously remarked, "Give me a place to stand and I will move the earth."

1. Virgil (70–19 B.C.E.) and Homer (ca. 8th c. B.C.E.) are traditionally judged the greatest classi-

cal poets.

2. John Ogilby (1600–1676), a Scottish map-maker, translated works by Virgil and Homer.

3. Intelligence.

wherein either his thoughts are improper to his subject, or his expressions unworthy of his thoughts, or the turn of both is unharmonious. Thus it appears necessary that a man should be a nice⁴ critic in his mother-tongue before he attempts to translate a foreign language. Neither is it sufficient that he be able to judge of words and style, but he must be a master of them too; he must perfectly understand his author's tongue and absolutely command his own. So that to be a thorough translator he must be a thorough poet. Neither is it enough to give his author's sense in good English, in poetical expressions, and in musical numbers;⁵ for though all these are exceeding difficult to perform, there yet remains an harder task; and 'tis a secret of which few translators have sufficiently thought. I have already hinted a word or two concerning it; that is, the maintaining the character of an author, which distinguishes him from all others, and makes him appear that individual poet whom you would interpret. For example, not only the thoughts, but the style and versification of Virgil and Ovid⁶ are very different: yet I see, even in our best poets who have translated some parts of them, that they have confounded their several talents, and, by endeavouring only at the sweetness and harmony of numbers, have made them both so much alike that, if I did not know the originals, I should never be able to judge by the copies which was Virgil and which was Ovid. It was objected against a late noble painter⁷ that he drew many graceful pictures, but few of them were like. And this happened to him because he always studied himself more than those who sat to him. In such translators I can easily distinguish the hand which performed the work, but I cannot distinguish their poet from another. Suppose two authors are equally sweet, yet there is a great distinction to be made in sweetness, as in that of sugar and that of honey. I can make the difference more plain by giving you (if it be worth knowing) my own method of proceeding in my translations out of four several poets in this volume; Virgil, Theocritus, Lucretius, and Horace.⁸ In each of these, before I undertook them, I considered the genius and distinguishing character of my author. I looked on Virgil as a succinct and grave majestic writer; one who weighed not only every thought, but every word and syllable; who was still aiming to crowd his sense into as narrow a compass as possibly he could; for which reason he is so very figurative that he requires (I may almost say) a grammar apart to construe him. His verse is everywhere sounding the very thing in your ears whose sense it bears, yet the numbers are perpetually varied to increase the delight of the reader; so that the same sounds are never repeated twice together. On the contrary, Ovid and Claudian,⁹ though they write in styles differing from each other, yet have each of them but one sort of music in their verses. All the versification and little variety of Claudian is included within the compass of four or five lines, and then he begins again in the same tenor; perpetually closing his sense at the end of a verse, and that verse commonly which they call golden, or two substantives and two adjectives, with a verb betwixt them to keep the peace. Ovid, with all his

8. Roman poet (65–8 B.C.E.; see above). Theoc-

ritus (ca. 300—ca. 260 B.C.E.), Greek pastoral poet. Lucretius (ca. 94–55 B.C.E.), Roman philosopher and poet.

9. A Greek-speaking Alexandrian (d. ca. 404 C.E.) who found great success in Rome writing Latin poetry.

sweetness, has as little variety of numbers and sound as he: he is always, as it were, upon the hand-gallop, and his verse runs upon carpet-ground.¹ He avoids, like the other, all synalœphas, or cutting off one vowel when it comes before another in the following word; so that, minding only smoothness, he wants² both variety and majesty. But to return to Virgil: though he is smooth where smoothness is required, yet he is so far from affecting it that he seems rather to disdain it; frequently makes use of synalœphas, and concludes his sense in the middle of his verse. He is everywhere above conceits of epigrammatic wit and gross hyperboles; he maintains majesty in the midst of plainness; he shines, but glares not; and is stately without ambition, which is the vice of Lucan.³ I drew my definition of poetical wit from my particular consideration of him: for propriety of thoughts and words are only to be found in him; and where they are proper they will be delightful. Pleasure follows of necessity as the effect does the cause, and therefore is not to be put into the definition. This exact propriety of Virgil I particularly regarded as a great part of his character; but must confess, to my shame, that I have not been able to translate any part of him so well as to make him appear wholly like himself. For where the original is close no version can reach it in the same compass. Hannibal Caro's,⁴ in the Italian, is the nearest, the most poetical, and the most sonorous of any translation of the *Æneids*; yet, though he takes the advantage of blank verse, he commonly allows two lines for one of Virgil, and does not always hit his sense. Tasso⁵ tells us, in his letters, that Sperone Speroni, a great Italian wit, who was his contemporary, observed of Virgil and Tully,⁶ that the Latin orator endeavoured to imitate the copiousness of Homer, the Greek poet; and that the Latin poet made it his business to reach the conciseness of Demosthenes,⁷ the Greek orator. Virgil therefore, being so very sparing of his words, and leaving so much to be imagined by the reader, can never be translated as he ought in any modern tongue. To make him copious is to alter his character; and to translate him line for line is impossible, because the Latin is naturally a more succinct language⁸ than either the Italian, Spanish, French, or even than the English, which, by reason of its monosyllables, is far the most compendious of them. Virgil is much the closest⁹ of any Roman poet, and the Latin hexameter has more feet than the English heroic.¹

Besides all this, an author has the choice of his own thoughts and words, which a translator has not; he is confined by the sense of the inventor to those expressions which are the nearest to it: so that Virgil, studying² brevity, and having the command of his own language, could bring those words into a narrow compass, which a translator cannot render without circumlocutions. In short, they who have called him the torture of grammarians, might

1. Smooth ground. "Hand-gallop": an easy gallop: (i.e., with the horse held well in hand).

2. Lacks.

3. Roman writer of prose and verse (39–65 C.E.). His unfinished epic poem on the Roman civil war, though overwritten, had many 17th-century admirers.

4. Annibale Caro (1507–1566), translator of the *Æneid* (1581).

5. Torquato Tasso (1544–1595), Italian poet. Tasso makes this statement not in a letter but in his *Discourse on the Art of Poetry* (1587). Sperone

Speroni of Padua (1500–1588) was considered one of Tasso's enemies.

6. Marcus Tullius Cicero (106–43 B.C.E.), Roman statesman and the greatest orator of the Republic.

7. The greatest Athenian orator (384–322 B.C.E.).

8. Latin lacks the words "a," "an," and "the."

9. Most condensed.

1. English heroic or epic couplets are in iambic pentameter and thus use a line one metrical foot shorter than the Latin dactylic hexameter.

2. Aiming at.

also have called him the plague of translators; for he seems to have studied not to be translated. I own that, endeavouring to turn his *Nisus and Euryalus*³ as close as I was able, I have performed that episode too literally; that giving more scope to *Mezentius and Lausus*,⁴ that version, which has more of the majesty of Virgil, has less of his conciseness; and all that I can promise for myself is only that I have done both better than Ogleby, and perhaps as well as Caro; so that, methinks, I come like a malefactor, to make a speech upon the gallows, and to warn all other poets, by my sad example, from the sacrilege of translating Virgil. Yet, by considering him so carefully as I did before my attempt, I have made some faint resemblance of him; and had I taken more time, might possibly have succeeded better; but never so well as to have satisfied myself.

* * *

1685

3. Devoted Trojan friends and companions who die together in a dramatic episode of the *Aeneid*, book 9.

4. Mezentius, cruel king of the Tyrrhenians, who

was driven from his throne by his subjects; he and his son Lausus are killed by Aeneas at the close of book 10 of the *Aeneid*.

APHRA BEHN

1640-1689

In *A Room of One's Own* (1929), VIRGINIA WOOLF writes that "All women together ought to let flowers fall upon the tomb of Aphra Behn, for it was she who earned them the right to speak their minds." Behn was the first Englishwoman to earn a living as a writer. As such, she became the model for the commercial woman-writer operating outside the narrow circle of mainstream propriety while trying to gain a place within it. In her critical writing, she reveals the obstacles faced by a woman striving to earn a living in a profession dominated by men. She describes her exclusion from the polite society that would underwrite and support her plays, as well as the different standards applied to her as a woman. Perhaps because of her sex, her literary criticism tells us more about the everyday difficulties faced by practicing dramatists than do the writings of any literary critic of the time. The prefaces to her plays are peopled by theater managers and licensors who threaten to suppress her plays, critics who find them obscene, and audiences who shout them down; there are directors who rewrite her lines and actors who mangle them. Her critical writing, unburdened by the classical university education that was denied to her, undermines the commonplaces of seventeenth-century criticism by setting her practical experience as a playwright against the "rules" of neoclassical orthodoxy articulated by earlier critics such as SIR PHILIP SIDNEY, PIERRE CORNEILLE, and JOHN DRYDEN.

Although the circumstances of Behn's birth remain mired in controversy, she was most probably born Aphra Johnson, and may have been the daughter of Bartholomew Johnson and Elizabeth Denham baptized in Harbledown outside of Canterbury, England, on December 14, 1640. In her early twenties, Behn went with her family to Surinam (Dutch Guiana), then an English possession, where her father or a relative of her father was nominated to the post of lieutenant-governor. He died en route, but

the family settled in Surinam anyway; they remained there until 1664, when England resigned the colony to the Dutch. She describes her life in Surinam in her famous novel *Oroonoko* (1688). On her return to England, she married a city merchant named Behn, a gentleman of Dutch extraction about whom little is known. Her married life was brief: by 1666 her husband was dead, perhaps one of the victims of the plague that swept London in 1665–66, and she was forced to earn a living on her own. In 1666 she was persuaded by Thomas Killigrew, then licensee of the King's Theater, to act as a spy in the second Anglo-Dutch War. But the English government failed to pay even Behn's living expenses while she was in Holland, and she had to borrow money to survive. When she returned to London in 1667, she was imprisoned for failure to pay her debts. Somehow she regained her freedom, and by 1670 she had begun her career as a dramatist with the successful production of *The Forced Marriage* at Lincoln's Inn Fields. She went on to become one of the most prolific writers of the late seventeenth century, surpassed in output only by John Dryden, England's poet laureate.

Behn wrote during the Restoration, which began in 1660 when Charles II returned from exile in France to take the throne after a twenty-year interregnum. The Puritans had closed the theaters at the beginning of the English Civil War, in the early 1640s; the two that now reopened were very different from those of Shakespeare's day, a generation earlier. The most revolutionary change was that women, not boys, played women's roles. The presence of actresses in the Restoration theater undoubtedly enabled Behn to make a successful living writing plays, though women playwrights, like actresses, were never considered quite respectable.

During her career Behn wrote at least eighteen plays, as well as many poems and prose works. In addition she is considered one of the "mothers" of the English novel. Her best and most successful plays were *The Rover* (1677) and *The Lucky Chance* (1687). Though her sex alone was enough to make her a controversial writer, she did not shy away from the political controversies of her day, remaining all her life a staunch royalist. In 1682 she was briefly arrested and charged with "abusive reflections upon persons of quality" for an epilogue she had written chastising the duke of Monmouth, the illegitimate son of Charles II, for his rebellion against his father. She also wrote the first antislavery novel, *Oroonoko*, which was later made into a play by Thomas Southern. On April 16, 1689, Aphra Behn died and was buried in Westminster Abbey—not among the poets in Poets' Corner, but in the cloister. Her epitaph is attributed to her former lover John Hoyle: "Here lies proof that wit can never be/ Defence enough against mortality."

Behn's work as a literary critic—which is limited primarily to the prefaces and dedicatory letters she wrote for her plays—falls into two periods, each marked by a sustained piece of critical writing: the "Epistle to the Reader" prefacing her third play, *The Dutch Lover* (1673), and the preface to *The Lucky Chance*, written toward the end of her career. In these two selections we can see the development of Behn's critical attitudes toward the fashionable literary debates of her day, especially those about propriety and decorum in the drama.

The "Epistle to the Reader" was written when Behn was trying to establish a name for herself in the extremely competitive world of the theater. With characteristic acerbic wit, her "Epistle" exposes the elitist underpinnings of late-seventeenth-century literary theory. She is the first English critic to reject outright HORACE's platitude that literature must instruct and delight. Most English writers responded to earlier Puritan attacks on the theater by arguing that plays were a means of inculcating morality, but Behn rejects this approach. She argues that poetry—and drama in particular—rarely if ever improves anyone's morality, nor indeed are plays written with such an end in mind. Their purpose is to entertain, and that is the sole measure of their success. Behn's "apology" for her art does not draw on the authority of the classical tradition embodied by venerable critics such as ARISTOTLE and Horace. Unlike Dryden, who in *An Essay of Dramatic Poesy* (1668) charts the evolution of the

modern stage from classical antiquity, sprinkling his argument liberally with Latin and Greek quotations, Behn has everything to gain from separating her profession—playwriting—from literary activities that required a university education and knowledge of languages to which she was denied access because of her sex. Stripping away the “Academick frippery” that surrounded the debate over the “musty rules of Unity,” she suggests that more important than the structural unity of a play’s action, time, and plot is the competence of the actors who perform it. Not preoccupied by the classical defense of poetry, she is able to discuss with scathing honesty the realities of competing in the theatrical world of the late seventeenth century.

Behn’s prose style is more difficult than is usual even for a seventeenth-century text. In “Epistle to the Reader,” she mimics the philosophically dense and incomprehensible language of fashionable intellectual debate as well as the modish slang of the day. Unable to call on the shared intellectual tradition that shaped the literary criticism of contemporaries like Dryden, Behn’s criticism is immersed in the day-to-day culture of the fashionable society she hoped would support her efforts as a writer, and these references sometimes seem obscure to all but historians of the period.

Moving from the bantering wit and dense style of the “Epistle” to the later preface to *The Lucky Chance*, a more orthodox statement about literature and a defense against charges of impropriety, one is struck by the difference in tone and content. Perhaps chastened by her imprisonment, or simply reflecting her position in 1687 as a more successful, less marginalized, dramatist, Behn expresses her desire to “tread in those successful Paths my Predecessors have so long thriv’d in, to take those Measures that both the Ancient and Modern Writers have set me,” thus linking herself with the tradition she had rejected in her earlier essay. Nevertheless, Behn still eloquently and forthrightly defends her right to compete as a writer on equal terms with men. She attacks the overt sexual biases and double standards of the criticism of her day that condemned a play simply because of the sex of its author, exposing what the late-twentieth-century feminist Mary Ellmann, in *Thinking about Women* (1968), called criticism by sexual analogy. Such criticism treats books by women as if they were women, indulging in an “intellectual measuring of busts and hips.” In pleading for “my Masculine Part the Poet in me,” Behn anticipates the feminist analyses of critics such as SANDRA M. GILBERT AND SUSAN GUBAR, who argue that the Western tradition of literature has gendered authorship as a masculine activity, thereby creating, in women, an “anxiety of authorship.”

It would be a mistake, however, to make too great a claim for Behn’s feminism. Her libertine pose masked a conservative royalist politics and a desire for access to the elite society that excluded her. She saw herself as an exception to the rule of women’s exclusion from the profession of writing rather than as a pathbreaker demonstrating the error of that rule. Her outspokenness and her refusal to conform politely to the dictates of modesty and propriety led later generations of critics, like Dr. John Doran, writing in his *Annals of the English Stage* (1864), to dismiss her as “a mere harlot who danced through uncleanness and dared them to follow,” but these same qualities have made her a figure of great interest to feminist critics.

BIBLIOGRAPHY

The standard text of Behn’s works is the seven-volume edition by Janet M. Todd, *The Works of Aphra Behn* (1992–96). For two valuable biographies of Behn, see Maureen Duffy, *The Passionate Shepherdess: Aphra Behn, 1640–1689* (1977), and Angeline Goreau, *Reconstructing Aphra: A Social Biography of Aphra Behn* (1980). Frederick M. Link’s *Aphra Behn* (1968) offers a useful introduction to Behn’s work. Tanya Claire Tenkarian describes Behn’s contributions to the development of the novel in *Aphra Behn and the Rise of the English Novel: Gender and Genre* (1993). The two best anthologies of essays, with contributions by several prominent Behn scholars, are *Rereading Aphra Behn: History, Theory, and Criticism*, edited by Heidi Hutner

(1993), and *Aphra Behn Studies*, edited by Janet M. Todd (1996). Todd describes Behn's literary reputation in *The Critical Fortunes of Aphra Behn* (1998).

For bibliography, see Mary Ann O'Donnell, *Aphra Behn: An Annotated Bibliography of Primary and Secondary Sources* (1986). Consult the bibliography in Janet M. Todd's *Secret Life of Aphra Behn* (1996) for an update.

From The Dutch Lover

Epistle to the Reader

Good, Sweet, Honey, Sugar-candied
READER¹

(Which I think is more than any one has call'd you yet.) I must have a word or two with you before you do advance into the Treatise; but 'tis not to beg your pardon for diverting you from your affairs, by such an idle Pamphlet as this is, for I presume you have not much to do, and therefore are to be obliged to me for keeping you from worse employment, and if you have a better, you may get you gone about your business: but if you will mispend your time, pray lay the fault upon your self; for I have dealt pretty fairly in the matter, and told you in the Title Page what you are to expect within. Indeed, had I hung out a sign of the Immortality of the Soul, of the Mystery of Godliness, or of Ecclesiastical Policie, and then had treated you with Indiscernibility, and Essential Spissitude (words,² which though I am no competent Judge of, for want of Languages, yet I fancy strongly ought to mean just nothing) with a company of Apocryphal midnight tales cull'd out of the choicest insignificant Authors; If I had only prov'd in Folio that *Apollonius*³ was a naughty Knave, or had presented you with two or three of the worst principles transcrib'd out of the peremptory and ill natur'd, (though prettily ingenious) Doctor of *Malmsbury*⁴ undigested, and ill manag'd by a silly, fancy, ignorant, impertinent,⁵ ill educated Chaplain, I were then indeed sufficiently in fault; but having inscrib'd Comedy on the beginning of my Book, you may guess pretty near what peny-worths you are like to have, and ware⁶ your money and your time accordingly.

I would not yet be understood to lessen the dignity of Playes, for surely they deserve a place among the middle, if not the better sort of Books, for I have heard that most of that which bears the name of Learning, and which has abused such quantities of Ink and Paper, and continually imploys so many ignorant, unhappy souls for ten, twelve, twenty years in the University⁷

1. In the prefaces to the printed texts of plays, the habit of mocking readers often complemented the mockery of audiences in prologues [except as indicated, all notes are Janet M. Todd's].

2. The habit of confounding the public with difficult words was much mocked.

3. Apollonius is probably Apollonius of Tyana, a Greek philosopher following Pythagoras (6th c. B.C.E.). He was born at the beginning of the Christian era, and to some skeptics such as Charles Blount (and later Voltaire [1694-1778]) he represented a coherent and admirable moral alternative to Christ and his teaching. "In Folio" indicated

a full sized sheet of paper or parchment folded only once, therefore a volume of the largest size.

4. Thomas Hobbes (1588-1679), born in Wiltshire, was an influential materialist whose avoidance of Christian concepts provoked much abuse and argument. [Malmsbury: Malmesbury, a town in Wiltshire.—editor's note.]

5. Rude [editor's note].

6. Spend [editor's note].

7. The colleges at Oxford and Cambridge University followed a very traditional curriculum, which Behn more than once criticized [editor's note].

(who yet poor wretches think they are doing something all the while) as Logick, &c. and several other things (that shall be nameless, lest I should mispel them) are much more absolutely nothing than the errantest Play that e're was writ. Take notice, Reader, I do not assert this purely upon my own knowledge, but I think I have known it very fully prov'd, both sides being fairly heard, and seen some ingenious opposers of it most abominably baffled in the Argument: Some of which I have got so perfectly by rote, that if this were a proper place for it, I am apt to think myself could almost make it clear; and as I would not undervalue Poetry, so neither am I altogether of their judgement, who believe no wisdom in the world beyond it. I have often heard indeed (and read) how much the World was anciently oblig'd to it for most of that which they call'd Science, which my want of letters makes me less assur'd of than others happily may be; but I have heard some wise men say, that no considerable part of the useful knowledge was this way communicated, and on the other way, that it hath serv'd to propagate so many idle superstitions, as all the benefits it hath or can be guilty of, can never make sufficient amends for, which unaided by the unlucky charms of Poetry, could never have possess'd a thinking Creature such as man. However true this is, I am my self well able to affirm that none of all our English Poets, and least the Dramatique (so I think you call them) can be justly charg'd with too great reformation of mens minds or manners, and for that I may appeal to general experiment, if those who are the most assiduous Disciples of the Stage, do not make the fondest⁸ and the lewest crew about this Town; for if you should unhappily converse [with] them through the year, you will not find one dram of sence amongst a Club of them, unless you will allow for such a little Link-Boys⁹ Ribaldry, thick larded with unseasonable oaths, & impudent defiance of God, and all things serious, and that at such a senceless damn'd unthinking rate, as, if 'twere well distributed, would spoil near half the Apothecaries trade, and save the sober people of the Town the charge of Vomits;¹ And it was smartly said, (how prudently I cannot tell) by a late learned Doctor, who, though himself no great asserter of a Deity, (as you'll believe by that which follows) yet was observed to be continually perswading of this sort of men, (if I for once may call them so) of the necessity and truth of our Religion; and being ask'd how he came to bestir himself so much this way, made answer, that it was because their ignorance and indiscreet debauch made them a scandal to the profession of Atheism. And for their wisdom and design, I never knew it reach beyond the invention of some notable expedient, for the speedier ridding them of their estate, (a devilish clog to Wit and Parts) than other growling² Mortals know; or battering half a dozen fair new Windows in a Morning after their debauch, whilst the dull unjantee³ Rascal they belong to is fast asleep. But I'll proceed no farther in their character, because that miracle of Wit (in spite of Academick frippery) the mighty *Echard*⁴ hath already done it to my satisfaction; and whoever undertakes a Supplement to any thing he hath discours'd, had better for their reputation be doing nothing.

Besides, this Theam is worn too thread-bare by the whiffling⁵ would-be

8. Most foolish, most idiotic [editor's note].

9. Boys employed to carry torches to light people through the streets.

1. Purges [editor's note].

2. Growling [editor's note].

3. Dull, not showy [editor's note].

4. John Eachard mocked the university education of the clergy.

5. Moving inconstantly, "as if driven by a puff of wind," *Johnson's Dictionary* [published in 1755 by SAMUEL JOHNSON].

Wits of the Town, and of both the stone-blind-eyes of the Kingdom. And therefore to return to that which I before was speaking of, I will have leave to say that in my judgement the increasing number of our latter Plays have not done much more towards the amending of mens Morals, or their Wit, than hath the frequent Preaching; which this last age hath been pester'd with, (indeed without all Controversie they have done less harm) nor can I once imagine what temptation any one can have to expect it from them: for, sure I am, no Play was ever writ with that désign.⁶ If you consider Tragedy, you'll find their best of characters unlikely patterns for a wise man to pursue: For he that is the Knight of the Play, no sublunary feats must serve his Dulcinea;⁷ for if he can't bestrid the Moon, he'll ne'er maké good his business to the end, and if he chance to be offended, he must without considering right or wrong confound all things he meets, and put you half a score likely tall fellows into each pocket; and truly if he come not something near this pitch, I think the Tragedies not worth a farthing; for Playes were certainly intended for the exercising of mens passions, not their understandings, and he is infinitely far from wise, that will bestow one moments private meditation on such things: And as for Comedie, the finest folks you meet with there, are still unfitter for your imitation, for though within a leaf or two of the Prologue, you are told that they are people of Wit, good Humour, good Manners, and all that: yet if the Authors did not kindly add their proper names, you'd never know them by their characters; for whatsoe'er's the matter, it hath happen'd so spitefully in several Playes, which have been prettie well receiv'd of late, that even those persons that were meant to be the ingenious Censors of the Play, have either prov'd the most debauch'd, or most unwittie people in the Companie: nor is this error very lamentable, since as I take it Comedie was never meant, either for a converting or confirming Ordinance:⁸ In short, I think a Play the best divertisement⁹ that wise men have; but I do also think them nothing so, who do discourse as formalité about the rules of it, as if 'twere the grand affair of humane life. This being my opinion of Plays, I studied only to make this as entertaining as I could, which whether I have been successful in, my gentle Reader, you may for your shilling judge.¹ To tell you my thoughts of it, were to little purpose, for were they very ill, you may be sure I would not have expos'd it; nor did I so till I had first consulted most of those who have a reputation for judgement of this kind; who were at least so civil (if not kind) to it as did encourage me to venture it upon the Stage, and in the Press: Nor did I take their single word for it, but us'd their reasons as a confirmation of my own.

Indeed that day 'twas Acted first, there comes me into the Pit, a long, lithèr, phlegmatick, white, ill-favour'd, wretched Fop,² an officer in Masquerade newly transported with a Scarfe & Feather³ out of France, a sorry

6. Throughout the century the stage had been attacked by Puritans as a pernicious influence on the morals of the spectators. Many playwrights including Dryden sought to counter this by urging the ethical and moral base of their work. [JOHN DRYDEN (1631–1700), English playwright, poet, and critic—editor's note.]

7. A reference to Cervantes' *Don Quixote* [1605, 1616], where the hero's beloved is called Dulcinea. Don Quixote was famous for his lofty but unrealistic ideals. ["Sublunary": terrestrial, of this world—editor's note.]

8. Authoritative direction.

9. Entertainment [editor's note].

1. Costs of seats in the theatre varied but on the whole the cheapest seats in the gallery went for a shilling. In the pit a seat was about half a crown and in the boxes four shillings.

2. Lither means lazy or sluggish according to *Elisha Coles' An English Dictionary* (1676); phlegmatic means "full of Phlegme, the cold and moist humour of the body"; a fop is a foolish dandy. [Coles (1640–1680), a schoolmaster who was among the earliest English lexicographers—editor's note.]

3. Military dandyism.

Animal that has nought else to shield it from the uttermost contempt of all mankind, but that respect which we afford to Rats and Toads, which though we do not well allow to live, yet when considered as a part of God's Creation, we make honourable mention of them. A thing, Reader—but no more of such a Smelt:⁴ This thing, I tell ye, opening that which serves it for a mouth, out issued such a noise as this to those that sate about it, that they were to expect a woful Play, God damn him, for it was a womans. Now how this came about I am not sure, but I suppose he brought it piping hot from some, who had with him the reputation of a villanous Wit: for Creatures of his size of sence talk without all imagination, such scraps as they pick up from other folks. I would not for a world be taken arguing with such a propertie as this; but if I thought there were a man of any tolerable parts, who could upon mature deliberation distinguish well his right-hand from his left, and justly state the difference between the number of sixteen and two, yet had this prejudice upon him; I would take a little pains to make him know how much he errs. For waving the examination,⁵ why women having equal education with men, were not as capable of knowledge, of whatever sort as well as they: I'll only say as I have touch'd before, that Plays have no great room for that which is mens great advantage over women, that is Learning: We all well know that the immortal *Shakespears* Playes (who was not guilty of much more of this than often falls to womens share)⁶ have better pleas'd the World than *Johnsons* works, though by the way 'tis said that *Benjamin* was no such Rabbi neither, for I am inform'd his Learning was but Grammer high;⁷ (sufficient indeed to rob poor *Salust*⁸ of his best Orations) and it hath been observ'd, that they are apt to admire him most confoundedly, who have just such a scantling of it as he had; and I have seen a man the most severe of *Johnsons* Sect,⁹ sit with his Hat remov'd less than a hairs breadth from one sullen posture for almost three hours at the Alchymist; who at that excellent Play of *Harry the Fourth*¹ (which yet I hope is far enough from Farce) hath very hardly kept his Doublet whole; but affectation hath always had a greater share both in the actions and discourse of men than truth and judgement have: and for our Modern ones, except our most unimitable Laureat,² I dare to say I know of none that write at such a formidable rate, but that a woman may well hope to reach their greatest hights. Then for their musty rules of Unity,³ and God knows what besides, if they meant any thing, they are

4. A simpleton [editor's note].

5. Refraining from an investigation into [editor's note].

6. Much was made of Shakespeare's lack of university education which allowed him to be a useful predecessor for a female playwright. See Dryden's *An Essay of Dramatic Poesy* (1668): "He was naturally learn'd; he needed not the spectacles of books to read Nature. . . ."

7. In the Restoration Ben Jonson [1572–1637] was the most esteemed of the dramatists writing before the Interregnum. "Grammer high" indicated the level achieved at a grammar school, where learned languages were grammatically taught. ["The Interregnum": 1649–60, the period between Charles I's execution and the Restoration of the monarchy and the accession of Charles II—editor's note.]

8. Sallust (86–34 B.C.E.) was a Roman historian whose works on the Catiline conspiracy [in 63 B.C.E.] provided many plots for English playwrights. Jonson's *Catiline* was performed in 1611.

9. A reference to those believing in the rules of drama such as Thomas Shadwell [1643–1692] who had had success with *The Sullen Lovers* (1688) and *The Humourists* (1671). In his preface to the printed text of the former he praised the three unities and declared that all playwrights should imitate Jonson in the creation of humour characters, "though none are like to come near; he being the onely person that appears to me to have made perfect Representations of Humane Life."

1. *The Alchemist* by Jonson and *Henry IV* by Shakespeare. The line between proper comedy and farce was frequently drawn. For example, in his preface to *An Evening's Love* (1671) Dryden wrote, "Comedy consists . . . of natural actions and characters; . . . Farce . . . of forced humours, and unnatural events."

2. John Dryden became poet laureate in 1668 [editor's note].

3. The three unities of time, place, and action; see above SIR PHILIP SIDNEY, PIERRE CORNEILLE, and Dryden [editor's note].

enough intelligible, and as practible by a woman; but really methinks they that disturb their heads with any other rules of Playes besides the making them pleasant, and avoiding of scurrility, might much better be employ'd in studying how to improve mens too too imperfect knowledge of that ancient English Game, which hight long Laurence:⁴ And if Comedy should be the Picture of ridiculous mankind, I wonder any one should think it such a sturdy task, whilst we are furnish'd with such precious Originals as him, I lately told you of; if at least that Character do not dwindle into Farce, and so become too mean an entertainment for those persons who are us'd to think. Reader, I have a complaint or two to make to you, and I have done; Know then this Play was hugely injur'd in the Acting, for 'twas done so imperfectly as never any was before, which did more harm to this than it could have done to any of another sort; the Plot being busie (though I think not intricate) and so requiring a continual attention, which being interrupted by the intolerable negligence of some that acted in it, must needs much spoil the beauty on't. My Dutch Lover⁵ spoke but little of what I intended for him, but supply'd it with a deal of idle stuff, which I was wholly unacquainted with, till I had heard it first from him; so that Jack-pudding⁶ ever us'd to do: which though I knew before, I gave him yet the part, because I knew him so acceptable to most o'th' lighter Periwigs about the Town, and he indeed did vex me so, I could almost be angry: Yet, but Reader, you remember, I suppose, a fusty piece of Latine that has past from hand to hand this thousand years they say (and how much longer I can't tell) in favour of the dead.⁷ I intended him a habit much more notably ridiculous, which if it can ever be important was so here, for many of the Scenes in the three last Acts depended upon the mistakes of the Colonel for *Haunce*, which the ill-favour'd likeness of their Habits is suppos'd to cause. Lastly, my Epilogue was promis'd me by a Person⁸ who had surely made it good, if any, but he failing of his word, deputed one, who has made it as you see, and to make out your penyworth you have it here. The Prologue is by misfortune lost. Now, Reader, I have eas'd my mind of all I had to say, and so sans farther compliment, Adieu.

1673

Preface to *The Lucky Chance*

The little Obligation I have to some of the witty Sparks¹ and Poets of the Town, has put me on a Vindication of this Comedy from those Censures that Malice, and ill Nature have thrown upon it, tho in vain: The Poets I

4. A Long Lawrence was an instrument marked with signs about three inches long like a short ruler or totem with eight sides. Each side had a different set of markings of strokes, zigzags and crosses. A game of chance was played especially at Christmas, each player rolling the Long Lawrence and losing or winning pins or tokens according to which side came up. The term "Lawrence" may have come from the marks, seeming like the bars of a gridiron on which St. Lawrence was martyred. See Alice Bertha Gomme, *The Traditional Games of England, Scotland, and Ireland* (London, 1894).
5. Behn may be referring to the famous comic actor Edward Angel when she blamed the actor

playing Haunce [the Dutch Lover] for ad-libbing instead of following her lines.

6. Low-class buffoon [editor's note].

7. The proverb is *De mortuis nil nisi bonum*, Speak well of the dead.

8. Possibly a reference to Edward Ravenscroft with whom Behn was friendly at the time. His failure might have been due to a bout of venereal disease. Ravenscroft wrote the epilogue for Behn's *The Town-Fopp* (1676). [Ravenscroft (ca. 1654–1707), British playwright—editor's note.]

1. Fops, dandies [except as indicated, all subsequent notes are Janet M. Todd's].

heartily excuse, since there is a sort of Self-Interest in their Malice, which I shou'd rather call a witty Way they have in this Age, of Railing at every thing they find with pain successful, and never to shew good Nature and speak well of any thing; but when they are sure 'tis damn'd, then they afford it that worse Scandal, their Pity. And nothing makes them so through-stitch an Enemy as a full Third Day,² that's Crime enough to load it with all manner of Infamy; and when they can no other way prevail with the Town, they charge it with the old never failing Scandal—That's 'tis not fit for the Ladys: As if (if it were as they falsly give it out) the Ladys were oblig'd to hear Indecencies only from their Pens and Plays; and some of them have ventur'd to treat 'em as Courself as 'twas possible, without the least Reproach from them; and in some of their most Celebrated Plays have entertained 'em with things, that if I should here strip from their Wit and Occasion that conducts 'em in and makes them proper, their fair Cheeks would perhaps wear a natural Colour³ at the reading them: yet are never taken Notice of, because a Man writ them; and they may hear that from them they blush at from a Woman—But I make a Challenge to any Person of common Sense and Reason—that is not wilfully bent on ill Nature, and will in spite of Sense wrest a double *Entendre* from every thing; lying upon the Catch for a Jest or a Quibble, like a Rook for a Cully;⁴ but any unprejudic'd Person that knows not the Author, to read any of my Comedys and compare 'em with others of this Age, and if they find one Word that can offend the chastest Ear, I will submit to all their peevish Cavills; but Right or Wrong they must be Criminal because a Woman's; condemning them without having the Christian Charity, to examine whether it be guilty or not; with reading, comparing, or thinking; the Ladies taking up any Scandal on Trust from some conceited Sparks, who will in spite of Nature be Wits and *Beaus*; then scatter it for Authentick all over the Town and Court, poisoning of others Judgment with their false Notions, condemning it to worse than Death, of Fame. And to fortifie their Detraction, charge me with all the Plays that have ever been offensive; though I wish with all their Faults I had been the Author of some of those they have honour'd me with.

For the farther Justification of this Play; it being a Comedy of Intrigue, Dr. *Davenant*⁵ out of Respect to the Commands he had from Court, to take great Care that no Indecency should be in Plays, sent for it and nicely look't it over, putting out any thing he but imagin'd the Criticks would play with. After that, Sir *Roger L'Estrange*⁶ read it and licens'd it, and found no such Faults as 'tis charg'd with: Then Mr. *Killigrew*,⁷ who more severe than any, from the strict Order he had, perus'd it with great Circumspection; and lastly the Master Players, who you will I hope in some Measure esteem Judges of Decency and their own Interest, having been so many Years Prentice to the Trade of Judging.

2. Good payment from the third night's profits, the traditional recompense for the playwright; through-stitch: complete, from a stitch that went right through the cloth.

3. A blush rather than cosmetic paint.

4. A card-sharper or a cheat for a victim. ['Quibble': a pun—editor's note.]

5. Charles Davenant (1656–1714), eldest son of Sir William Davenant, who received the patent for the Duke's Company after the Restoration.

Charles was co-owner of the United Company, which put on *The Lucky Chance*; he was also an M.P. and helped in the licensing of plays.

6. Licensor of published works throughout most of the Restoration and a man much admired by Behn for his propagandist efforts for the royal government.

7. Charles Killigrew (1655–1725), co-owner of the United Company and Master of the Revels. He was responsible for the content of performed plays.

I say, after all these Supervisors the Ladys may be convinc'd, they left nothing that cou'd offend, and the Men of their unjust Reflections on so many Judges of Wit and Decencys. When it happens that I challenge any one, to point me out the least Expression of what some have made their Discourse, they cry, *That Mr. Leigh⁸ opens his Night Gown, when he comes into the Bride-chamber*; if he do, which is a Jest of his own making, and which I never saw, I hope he has his Cloaths on underneath? And if so, where is the Indecency? I have seen in that admirable Play of *Oedipus*,⁹ the Gown open'd wide, and the Man shown in his Drawers and Wastecoat, and never thought it an Offence before. Another cries, *Why we know not what they mean, when the Man takes a Woman off the Stage, and another is thereby cuckolded*; is that any more than you see in the most Celebrated of your Plays? as the *City Politicks*, the *Lady Mayoress*, and the *Old Lawyers Wife*,¹ who goes with a Man she never saw before, and comes out again the joyfull'st Woman alive, for having made her Husband a Cuckold with such Dexterity, and yet I see nothing unnatural nor obscene: 'tis proper for the Characters. So in that lucky Play of the *London Cuckolds*,² not to recite Particulars. And in that good Comedy of *Sir Courtly Nice*,³ the *Taylor to the young Lady*—in the fam'd *Sir Fopling, Dorimont* and *Bellinda*,⁴ see the very Words—In *Valentinian*,⁵ see the Scene between the *Court Bawds*. And *Valentinian* all loose and ruff'd a Moment after the Rape, and all this you see without scandal, and a thousand others. The *Moor of Venice* in many places: The *Maids Tragedy*—see the Scene of undressing the Bride, and between the *King* and *Amintor*, and after between the *King* and *Evadne*⁶—All these I Name as some of the best Plays I know; If I should repeat the Words exprest in these Scenes I mention, I might justly be charg'd with coarse ill Manners, and very little Modesty, and yet they so naturally fall into the places they are design'd for, and so are proper for the Business, that there is not the least Fault to be found with them; though I say those things in any of mine wou'd damn the whole Peice, and alarm the Town. Had I a Day or two's time, as I have scarce so many Hours to write this in (the Play, being all printed off and the Press waiting,) I would sum up all your Beloved Plays, and all the things in them that are past with such Silence by; because written by Men: such Masculine Strokes in me, must not be allow'd. I must conclude those Women (if there be any such) greater Criticks in that sort of Conversation than my self, who find any of that sort of mine, or any thing that can justly

8. Anthony Leigh, the famous comic actor. The offending action is specified in the stage directions.
9. A play of 1678 by Nathaniel Lee and Dryden; in act 2, scene 1, Oedipus enters sleepwalking in his shirt. [JOHN DRYDEN (1631–1700), English playwright, poet, and critic—editor's note.]

1. *City Politicks*: John Crowne's Tory play performed in the season of 1682–83. The Lady Mayoress and the Old Lawyers Wife are two characters who make their husbands cuckolds.

2. A popular play of Behn's friend, Edward Ravenscroft, performed in 1681. It has three cuckolds in it.

3. John Crowne's comedy from 1685, *The Taylor to the Young Lady*, uses double entendres in his talk with the young woman and her aunt in act 2, scene 2.

4. Etherege's *Man of Mode; or, Sir Fopling Flutter* (1676). The hero, Dorimant, sleeps with Belinda

and then describes the pleasure. [George Etherege (1635–1692), English comic playwright—editor's note.]

5. Edward Hyde, Lord Rochester's 1684 revision of Francis Beaumont (ca. 1584–1616) and John Fletcher's (1579–1625) earliest play, which concerns the rape of Lucina by the emperor Valentinian. Beaumont and Fletcher were younger contemporaries of Shakespeare, known for their popular collaborations [editor's note].

6. *The Maid's Tragedy* was a popular play by Beaumont and Fletcher, revived in the Restoration; in it the King forces a marriage between Amintor and Evadne his mistress and indulges in bawdy remarks about the wedding night and the failure of consummation. The *Moor of Venice*: Shakespeare's *Othello* [1603–04], one of the first plays to be performed on the Restoration stage.

be reproach't. But 'tis in vain by dint of Reason or Comparison to convince the obstinate Criticks, whose Business is to find Fault, if not by a loose and gross Imagination to create them, for they must either find the Jest, or make it; and those of this sort fall to my share, they find Faults of another kind for the Men Writers. And this one thing I will venture to say, though against my Nature, because it has a Vanity in it: That had the Plays I have writ come forth under any Mans Name, and never known to have been mine; I appeal to all unbyast Judges of Sense, if they had not said that Person had made as many good Comedies, as any one Man that has writ in our Age; but a Devil on't the Woman damns the Poet.

Ladies, for its further Justification to you, be pleas'd to know, that the first Copy of this Play was read by several Ladys of very great Quality, and unquestioned Fame, and received their most favourable Opinion, not one charging it with the Crime, that some have been pleas'd to find in the Acting. Other Ladys who saw it more than once, whose Quality and Vertue can sufficiently justifie any thing they design to favour, were pleas'd to say, they found an Entertainment in it very far from scandalous; and for the Generality of the Town, I found by my Receipts it was not thought so Criminal. However, that shall not be an Encouragement to me to trouble the Criticks with new Occasion of affronting me, for endeavouring at least to divert; and at this rate, both the few Poets that are left, and the Players who toil in vain, will be weary of their Trade.

I cannot omit to tell you, that a Wit of the Town, a Friend of mine at *Wills Coffee House*,⁷ the first Night of the Play, cry'd it down as much as in him lay, who before had read it and assured me he never saw a prettier Comedy. So complaisant one pestilent Wit will be to another, and in the full Cry make his Noise too; but since 'tis to the witty Few I speak, I hope the better Judges will take no Offence, to whom I am oblig'd for better Judgments; and those I hope will be so kind to me, knowing my Conversation not at all addicted to the Indecencys alledged, that I would much less practice it in a Play, that must stand the Test of the censuring World. And I must want common Sense, and all the Degrees of good Manners, renouncing my Fame, all Modesty and Interest for a silly Sawcy fruitless Jest, to make Fools laugh, and Women blush, and wise Men asham'd; My self all the while, if I had been guilty of this Crime charg'd to me, remaining the only stupid, insensible. Is this likely, is this reasonable to be believ'd by any body, but the wilfully blind? All I ask, is the Priviledge for my Masculine Part the Poet in me, (if any such you will allow me) to tread in those successful Paths my Predecessors have so long thriv'd in, to take those Measures that both the Ancient and Modern Writers have set me, and by which they have pleas'd the World so well. If I must not, because of my Sex, have this Freedom, but that you will usurp all to your selves; I lay down my Quill, and you shall hear no more of me, no not so much as to make Comparisons, because I will be kinder to my Brothers of the Pen, than they have been to a defenceless Woman; for I am not content to write for a Third day only. I value Fame as much as if I had been born a *Hero*; and if you rob me of that, I can retire from the ungrateful World, and scorn its fickle Favours.

7. A famous London coffeehouse in Covent Garden kept by Will Unwin.

GIAMBATTISTA VICO

1668–1744

The Italian philosopher Giambattista Vico is noted for his original insights into the origins and development of language and culture. An advocate of a holistic approach, centered on language, to the study of society, he produced wide-ranging analyses that addressed issues not only in history and sociology but also in jurisprudence, philosophy, theology, politics, rhetoric, and poetics. His most celebrated accomplishment, from the perspective of the twenty-first century, is his monumental *Scienza nuova* (*New Science*), which he issued in three editions (1725, 1730, 1744). Anticipating the developmental theories of G. W. F. HEGEL and KARL MARX, this work presents the now-famous theory of the three periods of social development, which he termed the ages of the gods, heroes, and men. Among the distinctive features of each period are differences in language and literature as well as in government and law. The general sense, as in Hegel and Marx, is that human nature is not absolute but historical, a product of changing social institutions and material configurations. For literary theory, the most important claims of Vico's *New Science* are its arguments for the origin of human society in the prerational poetic nature of human beings and for the primordial status of four "master tropes" of rhetoric.

Born in Naples, Vico was the son of a bookseller. He received an education in Scholastic philosophy and in rhetoric from a series of Neapolitan clergymen, becoming proficient in Latin literature. By the age of seventeen, Vico was applying himself to the study of civil and canon (church) law, writing poetry on the side as a pleasant diversion. He became accomplished enough as a poet that for much of his life he was often called on by the aristocracy to write occasional verse for important public events, such as weddings or funerals. He briefly studied law at the University of Naples, but he relied mostly on local tutors and self-education. As a young man, he befriended a group of "modern" intellectuals, known as the Investigators, who critiqued or rejected the authority of the "ancients." Central to this controversial group was the new philosophy of Galileo Galilei (1564–1642), Francis Bacon (1561–1626), and René Descartes (1596–1650), as well as the "alternative" classical views of the Greek philosopher Epicurus (341–270 B.C.E.) and the Roman poet Lucretius (ca. 94–55 B.C.E.). Reflecting the widespread intellectual changes in Europe that have come to be known as the Enlightenment, the group was largely concerned with putting science and philosophy on a rational and empirical foundation.

In 1699 Vico became professor of rhetoric at the University of Naples, a position he held for more than forty years. His early annual orations, now available in *On Humanistic Education* (1993), address the proper methods and functions of education. During this time he joined the Palatine Academy, an eclectic group of modern intellectuals committed to the emerging values of the Enlightenment. As befitted his education and intellectual associations, Vico was interested in a wide variety of subjects, including the physical sciences and mathematics. In 1710 he published his first major work, *De antiquissima Italorum sapientia* (*On the Most Ancient Wisdom of the Italians*), which attempts to reconstruct the nonrationalistic philosophy of a pre-Roman civilization via the etymological study of Latin words. Here and in his other works, Vico strove to be a persuasive philologist, as he studied cultures and their histories through languages, especially etymologies; his philological work was not valued in his own time, but it was later admired by such leading twentieth-century critics as Erich Auerbach and EDWARD W. SAID. Vico's next important publication, *Il diritto universale* (1720–22, *Universal Law*), focused on the historical origin and development of jurisprudence. In chronological order, it traced the emergence of different types of society, identifying a particular form of law with each while also making important links to various linguistic, literary, and religious forms. Later, at

the invitation of a nobleman, Vico also published his autobiography (1725–28), the first modern example of its kind.

In 1725 Vico published the first edition of his *New Science*. As a study of the nonrationalistic origins and historical development of “gentile” (pre-Christian, non-Jewish) societies, it strongly resembles the two major works that preceded it. He considered the *New Science* his most important work, which would reveal the underlying order in the diversity of the gentile nations just as Isaac Newton’s *Principia Mathematica* (1687) had unveiled the eternal laws of nature. Vico was deeply disappointed by the book’s reception, however, which tended to be unfavorable when not indifferent. Feeling misunderstood and unacknowledged, he described himself as “a foreigner in his own country.” In 1735 he was appointed the official historian to Charles Bourbon, then king of Naples and Sicily, but he remained primarily concerned with revising his *New Science*. He published a second edition in 1730 and prepared a third, which appeared shortly after his death in 1744.

Our selections, taken from the third edition, begin with Vico’s discussion of the historical stages that gentile nations have traversed. Comparing the various ancient histories of the Egyptians, Chaldeans, Scythians, Phoenicians, Greeks, and Romans, he reveals an underlying universal pattern—the expression of a divine providence working in the world, reducing multiplicity to order. The necessary course (*corso*) that the nations must run passes through the ages of the gods, heroes, and men. Each age is characterized by a particular kind of nature, custom, jurisprudence, government, and language. A distinctive feature of Vico’s sequence of ages—unlike the classical movement from golden to iron age—is its susceptibility to what he calls a “recourse” (*ricorso*) or recurrence, which suggests that a nation may retrace a previous stage or all three.

One of Vico’s main concerns is the poetic nature of the first human beings in the age of the gods, the “master key” of his science. As he explains it, the first human beings apprehended the world in a “poetic” manner. With vigorous imaginations and robust senses, but feeble powers of reasoning, they responded to their unknown world with passionate fear and wonder, creating sublime images of nature. In this regard, Vico’s portrait of the early poets suggests the influence of LONGINUS’s classical theory of sublimity; a bit later, Jean-Jacques Rousseau (1712–1778) would make a similar argument about the origin of languages. The point, for Vico, is that the poetic nature of the first human beings inaugurated their world. In support of this view, he points out that the first poets anthropomorphized nature and accounted for the unknown in human and metaphorical terms. Vico’s famous example is the “primitive” human response to the terror of lightning and thunder: namely, the imaginative creation of the angry sky god, Jove.

Vico suggests that the religions—as well as the logic, morals, economics, politics, physics, cosmography, astronomy, geography, and history—of the gentile nations are rooted in poetic and rhetorical responses to nature. In some sense the foundations of civil society can be said to reside in the modifications of the minds and institutions of human beings. But such modifications are not so much analytical or rational as they are poetic or, more precisely, rhetorical. Metaphor, synecdoche, metonymy, and irony, Vico’s four master figures, shape human beings’ apprehension of the world.

Perhaps the most pointed criticism of Vico’s thinking is that he reduces the complexities of culture and society to a “universal history.” One can also criticize Vico for displaying little concern for cultures and histories beyond those of Greece and Rome and for unfairly privileging Christianity by not treating it historically. Despite the limitations of his methodology and his cultural chauvinism, however, Vico’s attention to poetic expression offers a corrective to the dominant rational thought of the Enlightenment, bearing comparison with MARTIN HEIDEGGER’s later theories of poetry: both thinkers assign poetry a fundamental role in world building. His sense of a human nature as fundamentally historical, moreover, anticipates Karl Marx, who refers approvingly to Vico in a famous footnote to *Capital* (1867). Finally, Vico pio-

neers the concern with rhetorical tropes as foundational to human life developed by such twentieth-century thinkers as ROMAN JAKOBSON, HAYDEN WHITE, PAUL DE MAN, and HAROLD BLOOM, a great admirer of Vichian poetics.

BIBLIOGRAPHY

The standard Italian edition of Vico's works is edited by Benedetto Croce and Fausto Nicolini (8 vols. in 11, 1914–42). English translations include *On the Study Methods of Our Time* (1709; trans. 1990); *On the Most Ancient Wisdom of the Italians* (1710; trans. 1988); *The Autobiography of Giambattista Vico* (1725–28; trans. 1944); the third edition of *The New Science of Giambattista Vico* (1744; trans. 1968), to which has been added Vico's "Practic of the New Science"; and *On Humanistic Education* (trans. 1993) and *The Art of Rhetoric* (trans. 1996), both translated and edited by Giorgio A. Pinton and Arthur W. Shippee. *Vico: Selected Writings*, edited and translated by Leon Pompa (1982), includes selections from *On the Most Ancient Wisdom of the Italians*, the 1725 version of the *New Science*, and Vico's orations. For information on Vico's life, see his autobiography cited above; Robert Flint's *Vico* (1901; rpt. 1979); and H. P. Adam's *Life and Writings of Giambattista Vico* (1935). A valuable brief introduction to the life and work is Peter Burke's *Vico* (1985).

Benedetto Croce's *Philosophy of Giambattista Vico* (1911; trans. 1913) is an important critical study that put Vico's work on the map in the early twentieth century. For a sense of the wide range and multidisciplinary nature of Vico studies, see the following three collections: *Giambattista Vico: An International Symposium*, edited by Giorgio Tagliacozzo and Hayden White (1969); *Giambattista Vico's Science of Humanity*, edited by Tagliacozzo and Donald Phillip Verene (1976); and *Vico: Past and Present*, edited by Tagliacozzo (1981). Also helpful in this regard are Max Harold Fisch and Thomas Goddard Bergin's introduction to Vico's autobiography cited above and the annual volumes of *New Vico Studies* (1983–), published by the Institute for Vico Studies. Illuminating studies of the *New Science* include Verene's *Vico's Science of the Imagination* (1981), Leon Pompa's *Vico: A Study of the New Science* (2d ed., 1990), Ernesto Grassi's *Vico and Humanism: Essays on Vico, Heidegger, and Rhetoric* (1990), Joseph Mall's *Rehabilitation of Myth: Vico's "New Science"* (1992), and Giuseppe Mazzotta's *New Map of the World: The Poetic Philosophy of Giambattista Vico* (1999). A philosophical and historically informed study of Vico is available in Isaiah Berlin's *Vico and Herder: Two Studies in the History of Ideas* (1976). On the subject of Marx and Vico, see *Vico and Marx: Affinities and Contrasts*, edited by Giorgio Tagliacozzo (1983). For discussions of Vico in relationship to rhetoric, see Michael Mooney's *Vico in the Tradition of Rhetoric* (1985) and John D. Schaeffer's *Sensus Communis: Vico, Rhetoric, and the Limits of Relativism* (1990). Bibliographies of criticism and primary texts appear in Robert Crease's *Vico in English: A Bibliography of Writings by and about Giambattista Vico* (1978), Molly Black Verene's *Vico: A Bibliography of Works in English from 1884 to 1994* (1994), and the annual volumes of *New Vico Studies*.

From The New Science¹

* * *

31 This New Science or metaphysic, studying the common nature of nations in the light of divine providence, discovers the origins of divine and human institutions among the gentile nations, and thereby establishes a sys-

1. Translated by Thomas Goddard Bergin and Max Harold Fisch, who occasionally supply clarifying words or references in brackets.

tem of the natural law of the gentes,² which proceeds with the greatest equality and constancy through the three ages which the Egyptians handed down to us as the three periods through which the world had passed up to their time. These are: (1) The age of the gods, in which the gentiles believed they lived under divine governments, and everything was commanded them by auspices³ and oracles, which are the oldest institutions in profane history. (2) The age of the heroes, in which they reigned everywhere in aristocratic commonwealths, on account of a certain superiority of nature which they held themselves to have over the plebs. (3) The age of men, in which all men recognized themselves as equal in human nature, and therefore there were established first the popular commonwealths and then the monarchies, both of which are forms of human government.

32 In harmony with these three kinds of nature and government, three kinds of language were spoken which compose the vocabulary of this Science: (1) That of the time of the families when gentile men were newly received into humanity. This, we shall find, was a mute language of signs and physical objects having natural relations to the ideas they wished to express. (2) That spoken by means of heroic emblems, or similitudes, comparisons, images, metaphors, and natural descriptions, which make up the great body of the heroic language which was spoken at the time the heroes reigned. (3) Human language using words agreed upon by the people, a language of which they are absolute lords, and which is proper to the popular commonwealths and monarchical states; a language whereby the people may fix the meaning of the laws by which the nobles as well as the plebs are bound. Hence, among all nations, once the laws had been put into the vulgar⁴ tongue, the science of laws passed from the control of the nobles. Hitherto, among all nations, the nobles, being also priests, had kept the laws in a secret language as a sacred thing. That is the natural reason for the secrecy of the laws among the Roman patricians until popular liberty arose.

Now these are the same three languages that the Egyptians claimed had been spoken before in their world, corresponding exactly both in number and in sequence to the three ages that had run their course before them. (1) The hieroglyphic or sacred or secret language, by means of mute acts. This is suited to the uses of religion, for which observance is more important than discussion. (2) The symbolic, by means of similitudes, such as we have just seen the heroic language to have been. (3) The epistolary or vulgar, which served the common uses of life. These three types of language are found among the Chaldeans, Scythians, Egyptians, Germans, and all the other ancient gentile nations; although hieroglyphic writing survived longest among the Egyptians, because for a longer time than the others they were closed to all foreign nations (as for the same reason it still survives among the Chinese), and hence we have a proof of the vanity of their imagined remote antiquity.

33 We here bring to light the beginnings not only of languages but also of letters, which philology⁵ has hitherto despaired of finding. We shall give a specimen of the extravagant and monstrous opinions that have been held

2. Heathen peoples (ecclesiastical). "The gentile nations": pre-Christian non-Hebrew societies.

3. Those who prophesy from the flight of birds.

4. Ordinary, common.

5. The discipline that studies culture and its history through languages, especially through historical and comparative linguistics.

up to now. We shall observe that the unhappy cause of this effect is that philologists have believed that among the nations languages first came into being and then letters; whereas (to give here a brief indication of what will be fully proved in this volume) letters and languages were born twins and proceeded apace through all their three stages. These beginnings are precisely exhibited in the causes of the Latin language, as set forth in the first edition of the *New Science* (which is the second of the three passages on whose account we do not regret that book). By the reasoning out of these causes many discoveries have been made in ancient Roman history, government, and law, as you will observe a thousand times, O reader, in this volume. From this example, scholars of oriental languages, of Greek, and, among the modern languages, particularly of German, which is a mother language, will be enabled to make discoveries of antiquities far beyond their expectations and ours.

34 We find that the principle of these origins both of languages and of letters lies in the fact that the first gentile peoples, by a demonstrated necessity of nature, were poets who spoke in poetic characters. This discovery, which is the master key of this Science, has cost us the persistent research of almost all our literary life, because with our civilized natures we [moderns] cannot at all imagine and can understand only by great toil the poetic nature of these first men. The [poetic] characters of which we speak were certain imaginative genera (images for the most part of animate substances, of gods or heroes, formed by their imagination) to which they reduced all the species or all the particulars appertaining to each genus; exactly as the fables of human times, such as those of late comedy, are intelligible genera reasoned out by moral philosophy, from which the comic poets form imaginative genera (for the best ideas of the various human types are nothing but that) which are the persons of the comedies. These divine or heroic characters were true fables or myths, and their allegories are found to contain meanings not analogical but univocal, not philosophical but historical, of the peoples of Greece of those times.

Since these genera (for that is what the fables in essence are) were formed by most vigorous imaginations, as in men of the feeblest reasoning powers, we discover in them true poetic sentences, which must be sentiments clothed in the greatest passions and therefore full of sublimity and arousing wonder. Now the sources of all poetic locution are two: poverty of language and need to explain and be understood. Heroic speech followed immediately on the mute language of acts and objects that had natural relations to the ideas they were meant to signify, which was used in the divine times. Lastly, in the necessary natural course of human institutions, language among the Assyrians, Syrians, Phoenicians, Egyptians, Greeks, and Latins began with heroic verses, passed thence to iambics,⁶ and finally settled into prose. This gives certainty to the history of the ancient poets and explains why in the German language, particularly in Silesia, a province of peasants, there are many natural versifiers, and in the Spanish, French and Italian languages the first authors wrote in verse.

35 From these three languages is formed the mental dictionary by which

6. Poetic metrical feet (a short plus a long syllable) that approximate the rhythm of conversation. "Heroic verses": the formal dactylic hexameter (a

6-foot line, based on the syllabic pattern long-short-short) of Greek and Latin epic.

to interpret properly all the various articulated languages, and we make use of it here wherever it is needed. In the first edition of the *New Science* we gave a detailed illustration of it, in which this idea of it was presented: that from the eternal properties of the fathers, which we in virtue of this Science considered them to have had in the state of the families and of the first heroic cities in the time when the languages were formed, we find proper meanings [of terms] in fifteen different languages, both dead and living, by which they were diversely called, sometimes from one property and sometimes from another. (This is the third passage in which we take satisfaction in that edition of our book.) Such a lexicon is necessary for learning the language spoken by the ideal eternal history traversed in time by the histories of all nations; and for scientifically adducing authorities to confirm what is discussed in the natural law of the gentes and hence in every particular jurisprudence.

36 Along with these three languages—proper to the three ages in which three forms of government prevailed; conforming to three types of civil natures, which succeed one another as the nations run their course—we find there went also in the same order a jurisprudence suited to each in its time.⁷

* * *

51 Premising such reflections on the vain opinion of their own antiquity held by these gentile nations and above all by the Egyptians, we should begin our study of gentile learning by scientifically ascertaining this important starting-point—where and when that learning had its first beginnings in the world—and by adducing human reasons thereby in support of Christian faith, which takes its start from the fact that the first people of the world were the Hebrews, whose prince was Adam, created by the true God at the time of the creation of the world. It follows that the first science to be learned should be mythology or the interpretation of fables; for, as we shall see, all the histories of the gentiles have their beginnings in fables, which were the first histories of the gentile nations. By such a method the beginnings of the sciences as well as of the nations are to be discovered, for they sprang from the nations and from no other source. It will be shown throughout this work that they had their beginnings in the public needs or utilities of the peoples and that they were later perfected as acute individuals applied their reflection to them. This is the proper starting-point for universal history, which all scholars say is defective in its beginnings.

* * *

331 But in the night of thick darkness enveloping the earliest antiquity, so remote from ourselves, there shines the eternal and never failing light of a truth beyond all question: that the world of civil society⁸ has certainly been made by men, and that its principles are therefore to be found within the modifications of our own human mind. Whoever reflects on this cannot but marvel that the philosophers should have bent all their energies to the study of the world of nature, which, since God made it, He alone knows; and that they should have neglected the study of the world of nations, or civil world,

7. The three types of jurisprudence are mystic theology, civil equity (reason of state), and natural equity.

8. The totality of institutions constituting gentile human societies governed by law.

which, since men had made it, men could come to know. This aberration was a consequence of that infirmity of the human mind by which, immersed and buried in the body, it naturally inclines to take notice of bodily things, and finds the effort to attend to itself too laborious ; just as the bodily eye sees all objects outside itself but needs a mirror to see itself.

* * *

342 In one of its principal aspects, this Science must therefore be a rational civil theology of divine providence, which seems hitherto to have been lacking. For the philosophers have either been altogether ignorant of it, as the Stoics and the Epicureans⁹ were, the latter asserting that human affairs are agitated by a blind concourse of atoms, the former that they are drawn by a deaf [inexorable] chain of cause and effect; or they have considered it solely in the order of natural things, giving the name of natural theology to the metaphysics in which they contemplate this attribute [i.e., the providence] of God, and in which they confirm it by the physical order observed in the motions of such bodies as the spheres and the elements and in the final cause observed in other and minor natural things. But they ought to have studied it in the economy of civil institutions, in keeping with the full meaning of applying to providence the term "divinity" [i.e., the power of divining], from *divinari*, to divine, which is to understand what is hidden from men—the future—or what is hidden *in* them—their consciousness. It is this [divinatory providence] that makes up the first and principal part of the subject matter of jurisprudence, namely the divine institutions [e.g., augury] on which depend the human institutions which make up its other and complementary part. Our new Science must therefore be a demonstration, so to speak, of what providence has wrought in history, for it must be a history of the institutions by which, without human discernment or counsel, and often against the designs of men, providence has ordered this great city of the human race. For though this world has been created in time and particular, the institutions established therein by providence are universal and eternal.

* * *

349 Our Science therefore comes to describe at the same time an ideal eternal history traversed in time by the history of every nation in its rise, development, maturity, decline, and fall. Indeed, we make bold to affirm that he who meditates this Science narrates to himself this ideal eternal history so far as he himself makes it for himself by that proof "it had, has, and will have to be." For the first indubitable principle posited above is that this world of nations has certainly been made by men, and its guise must therefore be found within the modifications of our own human mind. And history cannot be more certain than when he who creates the things also narrates them. Now, as geometry, when it constructs the world of quantity out of its elements, or contemplates that world, is creating it for itself, just so does our Science [create for itself the world of nations], but with a reality greater by just so much as the institutions having to do with human affairs are more

9. Followers of the Greek philosopher Epicurus (341–271 B.C.E.). Stoics: followers of the Greek philosopher Zeno (335–263 B.C.E.).

real than points, lines, surfaces, and figures are. And this very fact is an argument, O reader, that these proofs are of a kind divine and should give thee a divine pleasure, since in God knowledge and creation are one and the same thing.

* * *

361 We have said above in the Axioms that all the histories of the gentile nations have had fabulous beginnings, that among the Greeks (who have given us all we know of gentile antiquity) the first sages were the theological poets, and that the nature of everything born or made betrays the crudeness of its origin. It is thus and not otherwise that we must conceive the origins of poetic wisdom. And as for the great and sovereign esteem in which it has been handed down to us, this has its origin in the two conceits,¹ that of nations and that of scholars, and it springs even more from the latter than from the former. For just as Manetho,² the Egyptian high priest, translated all the fabulous history of Egypt into a sublime natural theology, so the Greek philosophers translated theirs into philosophy. And they did so not merely for the reason that the histories as they had come down to both alike were most unseemly, but for the following five reasons as well.

362 The first was reverence for religion, for the gentile nations were everywhere founded by fables on religion. The second was the grand effect thence derived, namely this civil world, so wisely ordered that it could only be the effect of a superhuman wisdom. The third was the occasions which, as we shall see, these fables, assisted by the veneration of religion and the credit of such great wisdom, gave the philosophers for instituting research and for meditating lofty things in philosophy. The fourth was the ease with which they were thus enabled, as we shall also show farther on, to explain their sublime philosophical meditations by means of the expressions happily left them by the poets. The fifth and last, which is the sum of them all, is the confirmation of their own meditations which the philosophers derived from the authority of religion and the wisdom of the poets. Of these five reasons, the first two and the last contain the praises of the divine wisdom which ordained this world of nations, and the witness the philosophers bore to it even in their errors. The third and fourth are deceptions permitted by divine providence, that thence there might arise philosophers to understand and recognize it for what it truly is, an attribute of the true God.

363 Throughout this book it will be shown that as much as the poets had first sensed in the way of vulgar wisdom, the philosophers later understood in the way of esoteric wisdom; so that the former may be said to have been the sense and the latter the intellect of the human race. What Aristotle³ [*On the Soul* 432a7f] said of the individual man is therefore true of the race in general: *Nihil est in intellectu quin prius fuerit in sensu*. That is, the human mind does not understand anything of which it has had no previous impression (which our modern metaphysicians call "occasion") from the senses. Now the mind uses the intellect when, from something it senses, it gathers

1. Forms of excessively high regard for one's own worth or virtue. Among nations conceit is demonstrated by the claim of nearly every gentile nation to have been the origin of civilization; among scholars it is manifested in the attribution of one's own knowledge and wisdom to various kinds of

ancient writings.

2. Egyptian priest and historian (active ca. 280 B.C.E.); his *History of Egypt*, which covered rulers from mythical times to 323, became the basis of our conventional numbering of dynasties.

3. Greek philosopher (384–322 B.C.E.; see above).

something which does not fall under the senses; and this is the proper meaning of the Latin verb *intelligere*.

364 Now, before discussing poetic wisdom, it is necessary for us to see what wisdom in general is. Wisdom is the faculty which commands all the disciplines by which we acquire all the sciences and arts that make up humanity. Plato* [in his *Alcibiades I*, 124eff?] defines wisdom as "the perfecter of man." Man, in his proper being as man, consists of mind and spirit, or, if we prefer, of intellect and will. It is the function of wisdom to fulfill both these parts in man, the second by way of the first, to the end that by a mind illuminated by knowledge of the highest institutions, the spirit may be led to choose the best. The highest institutions in this universe are those turned toward and conversant with God; the best are those which look to the good of all mankind. The former are called divine institutions, the latter human. True wisdom, then, should teach the knowledge of divine institutions in order to conduct human institutions to the highest good. We believe that this was the plan upon which Marcus Terentius Varro,⁵ who earned the title "most learned of the Romans," erected his great work, [*The Antiquities*] of *Divine and Human Institutions*, of which the injustice of time has unhappily bereft us. We shall treat of these institutions in the present book so far as the weakness of our education and the meagerness of our erudition permit.

365 Wisdom among the gentiles began with the Muse, defined by Homer⁶ in a golden passage of the *Odyssey* [8.63] as "knowledge of good and evil," and later called divination. It was on the natural prohibition of this practice, as something naturally denied to man, that God founded the true religion of the Hebrews, from which our Christian religion arose. The Muse must thus have been properly at first the science of divining by auspices, and this was the vulgar wisdom of all nations, of which we shall have more to say presently. It consisted in contemplating God under the attribute of his providence, so that from *divinari* his essence came to be called divinity. We shall see presently that the theological poets, who certainly founded the humanity of Greece, were versed in this wisdom, and this explains why the Latins called the judicial astrologers "professors of wisdom." Wisdom was later attributed to men renowned for useful counsels given to mankind, as in the case of the Seven Sages of Greece.⁷ The attribution was then extended to men who for the good of peoples and nations wisely ordered and governed commonwealths. Still later the word "wisdom" came to mean knowledge of natural divine things; that is, metaphysics, called for that reason divine science, which, seeking knowledge of man's mind in God, and recognizing God as the source of all truth, must recognize him as the regulator of all good. So that metaphysics must essentially work for the good of the human race, whose preservation depends on the universal belief in a provident divinity. It is perhaps for having demonstrated this providence that Plato deserved to be called divine; and that which denies to God this great attribute must be

4. Greek philosopher (ca. 427—ca. 347 B.C.E.); modern scholars believe that PLATO did not write the *Alcibiades*.

5. Roman scholar (116—27 B.C.E.).

6. Greek epic poet (ca. 8th c. B.C.E.). Homer's *Iliad* begins "Sing, Muse, . . ."

7. Seven statesman and thinkers of the early 5th

century B.C.E., credited with formulating pithy aphorisms (e.g., "Know thyself"; "Avoid extremes"). Plato (*Protagoras* 343a) names them as Solon of Athens, Chilon of Sparta, Thales of Miletus, Bias of Priene, Cleobulus of Lindus, Pittacus of Mitylene, and Myson of Chen.

called stupidity rather than wisdom. Finally among the Hebrews, and thence among us Christians, wisdom was called the science of eternal things revealed by God; a science which, among the Tuscans, considered as knowledge of the true good and true evil, perhaps owed to that fact the first name they gave it, "science in divinity."

366 We must therefore distinguish more truly than Varro did the three kinds of theology. First, poetic theology, that of the theological poets, which was the civil theology of all the gentile nations. Second, natural theology, that of the metaphysicians. Third, our Christian theology, a mixture of civil and natural with the loftiest revealed theology; all three united in the contemplation of divine providence. (Our third kind takes the place of Varro's poetic theology, which among the gentiles was the same as civil theology, though he distinguished it from both civil and natural theology because, sharing the vulgar common error that the fables contained high mysteries of sublime philosophy, he believed it to be a mixture of the two.) Divine providence has so conducted human institutions that, starting from the poetic theology which regulated them by certain sensible signs believed to be divine counsels sent to man by the gods, and by means of the natural theology which demonstrates providence by eternal reasons which do not fall under the senses, the nations were disposed to receive revealed theology in virtue of a supernatural faith, superior not only to the senses but to human reason itself.

367 But because metaphysics is the sublime science which distributes their determinate subject matters to all the so-called subaltern sciences; and because the wisdom of the ancients was that of the theological poets, who without doubt were the first sages of the gentile world; and because the origins of all things must by nature have been crude: for all these reasons we must trace the beginnings of poetic wisdom to a crude metaphysics. From this, as from a trunk, there branch out from one limb logic, morals, economics, and politics, all poetic; and from another, physics, the mother of cosmography and astronomy, the latter of which gives their certainty to its two daughters, chronology and geography—all likewise poetic. We shall show clearly and distinctly how the founders of gentile humanity by means of their natural theology (or metaphysics) imagined the gods; how by means of their logic they invented languages; by morals, created heroes; by economics, founded families, and by politics, cities; by their physics, established the beginnings of things as all divine; by the particular physics of man, in a certain sense created themselves; by their cosmography, fashioned for themselves a universe entirely of gods; by astronomy, carried the planets and constellations from earth to heaven; by chronology, gave a beginning to [measured] times; and how by geography the Greeks, for example, described the [whole] world within their own Greece.

368 Thus our Science comes to be at once a history of the ideas, the customs, and the deeds of mankind. From these three we shall derive the principles of the history of human nature, which we shall show to be the principles of universal history, which principles it seems hitherto to have lacked.

* * *

374 From these first men, stupid, insensate, and horrible beasts, all the philosophers and philologists should have begun their investigations of the

wisdom of the ancient gentiles; that is, from the giants in the proper sense in which we have just taken them. (Father Boulduc⁸ in his *De ecclesia ante Legem* says the scriptural names of the giants signify "pious, venerable and illustrious men"; but this can be understood only of the noble giants who by divination founded the gentile religions and gave the age of giants its name.) And they should have begun with metaphysics, which seeks its proofs not in the external world but within the modifications of the mind of him who meditates it. For since this world of nations has certainly been made by men, it is within these modifications that its principles should have been sought. And human nature, so far as it is like that of animals, carries with it this property, that the senses are its sole way of knowing things.

375 Hence poetic wisdom, the first wisdom of the gentile world, must have begun with a metaphysics not rational and abstract like that of learned men now, but felt and imagined as that of these first men must have been, who, without power of ratiocination, were all robust sense and vigorous imagination. This metaphysics was their poetry, a faculty born with them (for they were furnished by nature with these senses and imaginations); born of their ignorance of causes, for ignorance, the mother of wonder, made everything wonderful to men who were ignorant of everything. Their poetry was at first divine, because, as we saw in the passage from Lactantius,⁹ they imagined the causes of the things they felt and wondered at to be gods. (This is now confirmed by the American Indians, who call gods all the things that surpass their small understanding. We may add the ancient Germans dwelling about the Arctic Ocean, of whom Tacitus¹ tells that they spoke of hearing the sun pass at night from west to east through the sea, and affirmed that they saw the gods. These very rude and simple nations help us to a much better understanding of the founders of the gentile world with whom we are now concerned.) At the same time they gave the things they wondered at substantial being after their own ideas, just as children do, whom we see take inanimate things in their hands and play with them and talk to them as though they were living persons.

376 In such fashion the first men of the gentile nations, children of nascent mankind, created things according to their own ideas. But this creation was infinitely different from that of God. For God, in his purest intelligence, knows things, and, by knowing them, creates them; but they, in their robust ignorance, did it by virtue of a wholly corporeal imagination. And because it was quite corporeal, they did it with marvelous sublimity; a sublimity such and so great that it excessively perturbed the very persons who by imagining did the creating, for which they were called "poets," which is Greek for "creators." Now this is the threefold labor of great poetry: (1) to invent sublime fables suited to the popular understanding, (2) to perturb to excess, with a view to the end proposed: (3) to teach the vulgar to act virtuously, as the poets have taught themselves; as will presently be shown. Of this nature of human institutions it remained an eternal property, expressed in a noble phrase of Tacitus, that frightened men vainly "no sooner imagine than they believe" (*fingunt simul creduntque*).²

377 Of such natures must have been the first founders of gentile human-

8. Jacques Boulduc (d. 1646), French priest and author.

9. Firmianus Lactantius (ca. 240–ca. 320 C.E.), Roman Christian writer and rhetorician; Vico

refers to *Divine Institutions* 1.15.

1. Cornelius Tacitus (ca. 55–ca. 120 C.E.), Roman historian; Vico refers to *Germania* 45.

2. Tacitus, *Annales* 6.5.10 [translators' note].

ity when at last the sky fearfully rolled with thunder and flashed with lightning, as could not but follow from the bursting upon the air for the first time of an impression so violent. As we have postulated, this occurred a hundred years after the flood in Mesopotamia³ and two hundred years after it throughout the rest of the world; for it took that much time to reduce the earth to such a state that, dry of the moisture of the universal flood, it could send up dry exhalations or matter igniting in the air to produce lightning. Thereupon a few giants, who must have been the most robust, and who were dispersed through the forests on the mountain heights where the strongest beasts have their dens, were frightened and astonished by the great effect whose cause they did not know, and raised their eyes and became aware of the sky. And because in such a case the nature of the human mind leads it to attribute its own nature to the effect, and because in that state their nature was that of men all robust bodily strength, who expressed their very violent passions by shouting and grumbling, they pictured the sky to themselves as a great animated body, which in that aspect they called Jove, the first god of the so-called greater gentes, who meant to tell them something by the hiss of his bolts and the clap of his thunder. And thus they began to exercise that natural curiosity which is the daughter of ignorance and the mother of knowledge, and which, opening the mind of man, gives birth to wonder. This characteristic still persists in the vulgar, who, when they see a comet or sundog⁴ or some other extraordinary thing in nature, and particularly in the countenance of the sky, at once turn curious and anxiously inquire what it means. When they wonder at the prodigious effects of the magnet on iron, even in this age of minds enlightened and instructed by philosophy, they come out with this: that the magnet has an occult sympathy for the iron; and so they make of all nature a vast animate body which feels passions and affections.

378 But the nature of our civilized minds is so detached from the senses, even in the vulgar, by abstractions corresponding to all the abstract terms our languages abound in, and so refined by the art of writing, and as it were spiritualized by the use of numbers, because even the vulgar know how to count and reckon, that it is naturally beyond our power to form the vast image of this mistress called "Sympathetic Nature." Men shape the phrase with their lips but have nothing in their minds; for what they have in mind is falsehood, which is nothing; and their imagination no longer avails to form a vast false image. It is equally beyond our power to enter into the vast imagination of those first men, whose minds were not in the least abstract; refined, or spiritualized, because they were entirely immersed in the senses; buffeted by the passions, buried in the body. That is why we said above that we can scarcely understand, still less imagine, how those first men thought who founded gentile humanity.

379 In this fashion the first theological poets created the first divine fable; the greatest they ever created: that of Jove, king and father of men and gods; in the act of hurling the lightning bolt; an image so popular, disturbing, and instructive that its creators themselves believed in it, and feared, revered, and worshiped it in frightful religions. And by that trait of the human mind

3. That is, Noah's Flood (Genesis 7).

4. A bright spot tinged with color that can appear

on a parhelic circle (a luminous halo parallel to the horizon at the altitude of the sun).

noticed by Tacitus whatever these men saw, imagined, or even made or did themselves they believed to be Jove; and to all of the universe that came within their scope, and to all its parts, they gave the being of animate substance. This is the civil history of the expression "All things are full of Jove" (*Iovis omnia plena*)⁵ by which Plato later understood the ether which penetrates and fills everything.⁶ But for the theological poets Jove was no higher than the mountain peaks. The first men, who spoke by signs, naturally believed that lightning bolts and thunderclaps were signs made to them by Jove; whence from *nuo*, to make a sign, came *numen*, the divine will, by an idea more than sublime and worthy to express the divine majesty. They believed that Jove commanded by signs, that such signs were real words, and that nature was the language of Jove. The science of this language the gentiles universally believed to be divination, which by the Greeks was called theology, meaning the science of the language of the gods. Thus Jove acquired the fearful kingdom of the lightning and became the king of men and gods; and he acquired the two titles, that of best (*optimus*) in the sense of strongest (*fortissimus*) (as by a reverse process *fortis* meant in early Latin what *bonus*⁷ did in late), and that of greatest (*maximus*) from his vast body, the sky itself. From the first great benefit he conferred on mankind by not destroying it with his bolts, he received the title *Soter*, or savior. (This is the first of the three principles we have taken for our Science.) And for having put an end to the feral wandering of these few giants, so that they became the princes of the gentes, he received the epithet *Stator*, stayer or establisher. The Latin philologists explain this epithet too narrowly from Jove, invoked by Romulus, having stopped the Romans in their flight from the battle with the Sabines.⁸

380 Thus the many Joves the philologists wonder at are so many physical histories preserved for us by the fables, which prove the universality of the flood. For every gentile nation had its Jove, and the Egyptians had the conceit to say that their Jove Ammon was the most ancient of them all.

381 Thus, in accordance with what has been said about the principles of the poetic characters, Jove was born naturally in poetry as a divine character or imaginative universal, to which everything having to do with the auspices was referred by all the ancient gentile nations, which must therefore all have been poetic by nature. Their poetic wisdom began with this poetic metaphysics, which contemplated God by the attribute of his providence; and they were called theological poets, or sages who understood the language of the gods expressed in the auspices of Jove; and were properly called divine in the sense of diviners, from *divinari*, to divine or predict. Their science was called Muse, defined by Homer as the knowledge of good and evil; that is, divination on the prohibition of which God ordained his true religion for Adam. Because they were versed in this mystic theology, the Greek poets, who explained the divine mysteries of the auspices and oracles, were called *mystae*, which Horace⁹ learnedly renders "interpreters of the gods." Every gentile nation had its own sybil versed in this science, and we find mention

5. Virgil, *Eclogue* 3.60 [translators' note].

6. Plato, *Cratylus* 412d [translators' note].

7. Good (Latin); *optimus* is its superlative form.

8. Romulus, mythical founder of Rome, procured wives for his citizens by inviting the Sabines, a

group of neighboring tribes, to a festival and seizing the women; this led to a series of wars (which ended with Romulus as king).

9. Roman poet and satirist (65–8 B.C.E.); Vico quotes *Ars Poetica*, line 391 (see above).

of twelve of them. Sybils and oracles are the most ancient institutions of the gentile world.

382 All the things here discussed agree with that golden passage of Eusebius¹ [i.e., Lactantius] on the origins of idolatry: that the first people, simple and rough, invented the gods "from terror of present power." Thus it was fear which created gods in the world; not fear awakened in men by other men, but fear awakened in men by themselves. Along with this origin of idolatry is demonstrated likewise the origin of divination, which was brought into the world at the same birth. The origins of these two were followed by that of the sacrifices made to procure or rightly understand the auspices.

383 That such was the origin of poetry is finally confirmed by this eternal property of it: that its proper material is the credible impossibility. It is impossible that bodies should be minds, yet it was believed that the thundering sky was Jove. And nothing is dearer to poets than singing the marvels wrought by sorceresses by means of incantations. All this is to be explained by a hidden sense the nations have of the omnipotence of God. From this sense springs another by which all peoples are naturally led to do infinite honors to divinity. In this manner the poets founded religions among the gentiles.

384 All that has been so far said here upsets all the theories of the origin of poetry from Plato and Aristotle down to Patrizzi, Scaliger, and Castelvetro.² For it has been shown that it was deficiency of human reasoning power that gave rise to poetry so sublime that the philosophies which came afterward, the arts of poetry and of criticism, have produced none equal or better, and have even prevented its production. Hence it is Homer's privilege to be, of all the sublime, that is, the heroic poets, the first in the order of merit as well as in that of age. This discovery of the origins of poetry does away with the opinion of the matchless wisdom of the ancients, so ardently sought after from Plato to Bacon's *De sapientia veterum*.³ For the wisdom of the ancients was the vulgar wisdom of the lawgivers who founded the human race, not the esoteric wisdom of great and rare philosophers. Whence it will be found, as it has been in the case of Jove, that all the mystic meanings of lofty philosophy attributed by the learned to the Greek fables and the Egyptian hieroglyphics are as impertinent as the historical meanings they both must have had are natural.

* * *

400 That which is metaphysics insofar as it contemplates things in all the forms of their being, is logic insofar as it considers things in all the forms by which they may be signified. Accordingly, as poetry has been considered by us above as a poetic metaphysics in which the theological poets imagined bodies to be for the most part divine substances, so now that same poetry is considered as poetic logic, by which it signifies them.

401 "Logic" comes from *logos*, whose first and proper meaning was *fabula*, fable, carried over into Italian as *favella*, speech. In Greek the fable

1. Lactantius, *Divine Institutions* 1.15.

2. Vico names three Italian Renaissance philosophers noted for their critical engagement with classical literary theory, particularly Aristotle's *Poetics*: Francesco Patrizzi (1529–1597), Julius Caesar

Scaliger (1484–1558), and Lodovico Castelvetro (1505–1571).

3. *On the Wisdom of the Ancients*, by Francis Bacon (1561–1626), an English philosopher, was published in 1609.

was also called *mythos*, myth, whence comes the Latin *mutus*, mute. For speech was born in mute times as mental [or sign] language, which Strabo⁴ in a golden passage says existed before vocal or articulate [language]; whence *logos* means both word and idea. It was fitting that the matter should be so ordered by divine providence in religious times, for it is an eternal property of religions that they attach more importance to meditation than to speech. Thus the first language in the first mute times of the nations must have begun with signs, whether gestures or physical objects, which had natural relations to the ideas [to be expressed]. For this reason *logos*, or word, meant also deed to the Hebrews and thing to the Greeks, as Thomas Gataker⁵ observes in his *De instrumenti stylo*. Similarly, *mythos* came to be defined for us as *vera narratio*, or true speech, the natural speech which first Plato and then Iamblichus⁶ said had been spoken in the world at one time. But this was mere conjecture on their part, and Plato's effort to recover this speech in the *Cratylus* was therefore vain, and he was criticized for it by Aristotle and Galen.⁷ For that first language, spoken by the theological poets, was not a language in accord with the nature of the things it dealt with (as must have been the sacred language invented by Adam, to whom God granted divine onomathesia, the giving of names to things according to the nature of each), but was a fantastic speech making use of physical substances endowed with life and most of them imagined to be divine.

402 This is the way in which the theological poets apprehended Jove, Cybele or Berecynthia, and Neptune,⁸ for example, and, at first mutely pointing, explained them as substances of the sky, the earth, and the sea, which they imagined to be animate divinities and were therefore true to their senses in believing them to be gods. By means of these three divinities, in accordance with what we have said above concerning poetic characters, they explained everything appertaining to the sky, the earth, and the sea. And similarly by means of the other divinities they signified the other kinds of things appertaining to each, denoting all flowers, for instance, by Flora, and all fruits by Pomona. We nowadays reverse this practice in respect of spiritual things, such as the faculties of the human mind, the passions, virtues, vices, sciences, and arts; for the most part the ideas we form of them are so many feminine personifications, to which we refer all the causes, properties, and effects that severally appertain to them. For when we wish to give utterance to our understanding of spiritual things, we must seek aid from our imagination to explain them and, like painters, form human images of them. But these theological poets, unable to make use of the understanding, did the opposite and more sublime thing: they attributed senses and passions, as we saw not long since, to bodies, and to bodies as vast as sky, sea, and earth. Later, as these vast imaginations shrank and the power of abstraction grew, the personifications were reduced to diminutive signs. Metonymy⁹ drew a cloak of learning over the prevailing ignorance of these origins of human

institutions, which have remained buried until now. Jove becomes so small and light that he is flown about by an eagle. Neptune rides the waves in a fragile chariot. And Cybele rides seated on a lion.

* * *

404 All the first tropes are corollaries of this poetic logic. The most luminous and therefore the most necessary and frequent is metaphor. It is most praised when it gives sense and passion to insensate things, in accordance with the metaphysics above discussed, by which the first poets attributed to bodies the being of animate substances, with capacities measured by their own, namely sense and passion, and in this way made fables of them. Thus every metaphor so formed is a fable in brief. This gives a basis for judging the time when metaphors made their appearance in the languages. All the metaphors conveyed by likeness taken from bodies to signify the operations of abstract minds must date from times when philosophies were taking shape. The proof of this is that in every language the terms needed for the refined arts and recondite sciences are of rustic origin.

405 It is noteworthy that in all languages the greater part of the expressions relating to inanimate things are formed by metaphor from the human body and its parts and from the human senses and passions. Thus, head for top or beginning; the brow and shoulders of a hill; the eyes of needles and of potatoes; mouth for any opening; the lip of a cup or pitcher; the teeth of a rake, a saw, a comb; the beard of wheat; the tongue of a shoe; the gorge of a river; a neck of land; an arm of the sea; the hands of a clock; heart for center (the Latins used *umbilicus*, navel, in this sense); the belly of a sail; foot for end or bottom; the flesh of fruits; a vein of rock or mineral; the blood of grapes for wine; the bowels of the earth.¹ Heaven or the sea smiles; the wind whistles; the waves murmur; a body groans under a great weight. The farmers of Latium used to say the fields were thirsty, bore fruit, were swollen with grain; and our rustics speak of plants making love, vines going mad, resinous trees weeping. Innumerable other examples could be collected from all languages. All of which is a consequence of our axiom that man in his ignorance makes himself the rule of the universe, for in the examples cited he has made of himself an entire world. So that, as rational metaphysics teaches that man becomes all things by understanding them (*homo intelligendo fit omnia*), this imaginative metaphysics shows that man becomes all things by *not* understanding them (*homo non intelligendo fit omnia*); and perhaps the latter proposition is truer than the former, for when man understands he extends his mind and takes in the things, but when he does not understand he makes the things out of himself and becomes them by transforming himself into them.

406 In such a logic, sprung from such a metaphysics, the first poets had to give names to things from the most particular and the most sensible ideas. Such ideas are the sources, respectively, of synecdoche² and metonymy. Metonymy of agent for act resulted from the fact that names for agents were commoner than names for acts. Metonymy of subject for form and accident

1. Several of Vico's examples for which there are no common English parallels are here omitted, and substitutions are made for several others [translators' note].

2. A rhetorical trope or figure of speech in which a part is substituted for a whole or vice versa, as in "all hands on deck."

was due to inability to abstract forms and qualities from subjects. Certainly metonymy of cause for effect produced in each case a little fable, in which the cause was imagined as a woman clothed with her effects: ugly Poverty, sad Old Age, pale Death.

407 Synecdoche developed into metaphor as particulars were elevated into universals or parts united with the other parts together with which they make up their wholes. Thus the term "mortals" was originally and properly applied only to men, as the only beings whose mortality there was any occasion to notice. The use of "head" for man or person, so frequent in vulgar Latin, was due to the fact that in the forest only the head of a man could be seen from a distance. The word "man" itself is abstract, comprehending as in a philosophic genus the body and all its parts, the mind and all its faculties, the spirit and all its dispositions. In the same way, *tignum* and *culmen*, log and top, came to be used with entire propriety when thatching was the practice for rafter and thatch; and later, with the adornment of cities, they signified all the materials and trim of a building. Again, *tectum*, roof, came to mean a whole house because in the first times a covering sufficed for a house. Similarly, *puppis*, poop, for a ship, because it was the highest part and therefore the first to be seen by those on shore; as in the returned barbarian times a ship was called a sail. Similarly, *mucro*, point, for sword, because the latter is an abstract word and as in a genus comprehends pommel, hilt, edge, and point; and it was the point they felt which aroused their fear. Similarly, the material for the formed whole, as iron for sword, because they did not know how to abstract the form from the material. That bit of synecdoche and metonymy, *Tertia messis erat* ("It was the third harvest"), was doubtless born of a natural necessity, for it took more than a thousand years for the astronomical term "year" to rise among the nations; and even now the Florentine peasantry say, "We have reaped so many times," when they mean "so many years." And that knot of two synecdoches and a metonymy, *Post aliquot, mea regna videns, mirabor, aristas?* ("After a few harvests shall I wonder at seeing my kingdoms?"),³ betrays only too well the poverty of expression of the first rustic times, in which the phrase "so many ears of wheat"—even more particular than harvests—was used for "so many years." And because of the excessive poverty of the expression, the grammarians have assumed an excess of art behind it.

408 Irony certainly could not have begun until the period of reflection, because it is fashioned of falsehood by dint of a reflection which wears the mask of truth. Here emerges a great principle of human institutions, confirming the origin of poetry disclosed in this work: that since the first men of the gentile world had the simplicity of children, who are truthful by nature, the first fables could not feign anything false; they must therefore have been, as they have been defined above, true narrations.

409 From all this it follows that all the tropes (and they are all reducible to the four types above discussed), which have hitherto been considered ingenious inventions of writers, were necessary modes of expression of all the first poetic nations, and had originally their full native propriety. But these expressions of the first nations later became figurative when, with the further development of the human mind, words were invented which signi-

3. Virgil, *Eclogue* 1.69 [translators' note].

fied abstract forms or genera comprising their species or relating parts with their wholes. And here begins the overthrow of two common errors of the grammarians: that prose speech is proper speech, and poetic speech is improper; and that prose speech came first and afterward speech in verse.

* * *

779 We have shown that poetic wisdom justly deserves two great and sovereign tributes. The one, clearly and constantly accorded to it, is that of having founded gentile mankind, though the conceit of nations on the one hand and that of scholars on the other, the former with ideas of an empty magnificence and the latter with ideas of an impertinent philosophical wisdom, have in effect denied it this honor by their very efforts to affirm it. The other, concerning which a vulgar tradition has come down to us, is that the wisdom of the ancients made its wise men, by a single inspiration, equally great as philosophers, lawmakers, captains, historians, orators, and poets, on which account it has been so greatly sought after. But in fact it made or rather sketched them such as we have found them in the fables. For in these, as in embryos or matrices,⁴ we have discovered the outlines of all esoteric wisdom. And it may be said that in the fables the nations have in a rough way and in the language of the human senses described the beginnings of this world of sciences, which the specialized studies of scholars have since clarified for us by reasoning and generalization. From all this we may conclude what we set out to show in this Book: that the theological poets were the sense and the philosophers the intellect of human wisdom.

JOSEPH ADDISON

1672–1719

The English poet, dramatist, and essayist Joseph Addison is best known as the co-author with Richard Steele of an influential series of periodical essays, published in *The Tatler* (April 12, 1709–January 2, 1711) and *The Spectator* (first series, March 1, 1711–December 6, 1712; second series, 1714). He is distinguished for his clear, orderly prose style, which did much to elevate the status of the essay as a literary form, and for his skillful descriptions of character, which helped prepare the way for later eighteenth-century pioneers in a new English genre, the novel. Addison was an important cultural and literary figure, particularly for middle-class readers. As he explained in *Spectator* No. 10: "It was said of Socrates that he brought philosophy down from heaven to inhabit among men; and I shall be ambitious to have it said of me that I have brought philosophy out of closets and libraries, schools and colleges, to dwell in clubs and assemblies, at tea-tables and in coffeehouses." Addison achieved this goal and became a model for generations of critics and essayists.

Addison was educated at Oxford, where he excelled in classical studies and composed Latin verse that JOHN DRYDEN admired. By his early twenties, Addison had

already published poetry, but he was as intent on political advancement as on literary success. He used his literary talents to praise leading statesmen of the Whig political party, which sought to limit royal power. His career reached its height in 1713, when his neoclassical tragedy *Cato* was produced in London; it focuses on the Roman republican Cato (95–46 B.C.E.), who chose suicide rather than submit to the dictator Julius Caesar. SAMUEL JOHNSON judged *Cato* “rather a poem in dialogue than a drama,” and modern scholars have found it tedious; but it was a popular success and was frequently performed, in part because many interpreted it as a commentary on the English political scene.

Successful in both literature and politics, Addison was appointed undersecretary of state (1706); secretary to Lord Wharton, the lord lieutenant in Ireland (1709); and chief secretary for Ireland (1715). Later he served as lord commissioner for trade (1716), and on retirement he was rewarded with a generous pension. He had entered Parliament as a Whig in 1708 and held his seat until his death in 1719.

Addison's partnership with the Irish writer and Whig supporter Steele—whom he had known since their school days together—began in 1709. He contributed 42 essays to Steele's *Tatler*, and collaborated with Steele on 36 others; he wrote even more—274 essays of a total of 555—for their joint venture *The Spectator*. *The Tatler* appeared three times a week, *The Spectator* every day except Sunday (both were later published in book form). These periodicals gave Addison a means to fulfill his cultural mission. He concurred with the ideal that Steele defined for *The Tatler*, which was “to enliven Morality with Wit, and to temper Wit with Morality,” thereby offering men and women a guide to virtue. But together with urbane, witty sketches of fictional characters (notably the eccentric, kindly country gentleman Sir Roger de Coverley) and advice on conduct were essays devoted to the writings of John Locke, John Milton, and others. Addison claimed that each copy that was purchased was in turn passed on to twenty people or more, and he hoped that his lucid treatment of important topics in literature and philosophy would significantly influence the public's critical judgment and taste.

In our first selection, *Spectator* No. 62, Addison examines the nature of wit, one of the most complex, shifting terms in poetics. In a broad sense, it means the natural ability to perceive and understand, keen intelligence, quick and subtle perception; but it refers more specifically to the capacity of writers to perceive and express relationships between seemingly disparate or incongruous things in striking, paradoxical, surprising figures of speech. From the seventeenth through the eighteenth centuries, wit was a central topic in literary theory and criticism. ALEXANDER POPE defined it most memorably—“True wit is nature to advantage dressed, / What oft was thought, but ne'er so well expressed” (*An Essay on Criticism*, 1711; see below)—but Dryden and Johnson also discuss it in detail.

For the Romantics and Victorians, wit mattered less than imagination. Sometimes too, in this period and even earlier, wit was simultaneously praised and devalued, taken as a sign of quickness in repartee but not necessarily of serious or profound reflection. As Voltaire remarked in his *Philosophical Dictionary* (1764), “he who cannot shine by thought, seeks to bring himself into notice by a witticism.” In this sense, it was frequently associated with satire, comedy, and humor. But in the modern period, T. S. ELIOT, F. R. LEAVIS, and CLEANTH BROOKS reinvigorated the serious meanings of wit and enriched critical understanding of the play of irony and paradox, linking it to the best in the English poetical tradition.

Addison begins by quoting John Locke's distinction between *wit*, which emphasizes congruity and resemblance, and *judgment*, which stresses distinction and difference. But he adds that true wit requires a verbal effect that delights and surprises the reader. The resemblance must not be unduly common or familiar, nor wholly verbal—ideas as well as words are involved. Most of Addison's discussion treats such “mixed wit,” but he ends by moving outward from the writer's use of language to the responses of readers, anticipating the intricate issues of aesthetics probed later in the century by

DAVID HUME, IMMANUEL KANT, and other philosophers and theorists. Like Dryden and the French critic Jean Regnaud de Segrais (1624–1701), Addison aims to teach readers to value wit in its best forms and not to rest content with simpler uses, however appealing at first these might be; indeed, he connects wit with the quality of humanity.

In our second selection, from *Spectator* No. 412, Addison examines the imagination. He reiterates his point about the uncommon and the new, describing the pleasure that we receive when our sight is refreshed by a surprising and gratifying view of an object or scene that gives us a new idea of something that we thought we already understood. Addison's discussion of "greatness" reflects the interest in the sublime sparked by the French critic Nicolas Boileau's 1674 translation of *On Sublimity*, a Greek text attributed to LONGINUS (first century C.E.; see above). Like wit, *the sublime* is a complex term and literary category. It connotes majesty, awe, nobility, and spiritual, moral, and intellectual excellence. In some discussions, it chiefly refers to something in natural scenes and landscapes; at the same time, the term often evokes the response of viewers—their sensations and feelings that Nature creates—a topic that Kant later explored in his *Critique of Judgment* (1790; see below).

For his part, Addison appears especially interested in the viewer, audience, reader—in what one might call the psychology of the sublime. In other papers (e.g., *Spectator* No. 416), he extends his inquiry into the sublime and the beautiful by distinguishing between the primary and secondary pleasures of the imagination; in the first, the viewer responds directly to an object, whereas in the second, he or she is returned to that object through a work of literature or art. Addison suggests that the writer or artist can thus kindle pleasures that rival or exceed those that Nature itself provides.

Addison's brief critical and theoretical papers, while lucid, are rarely profound or deep. Dryden is the more pioneering critic and theorist, and Pope the more brilliantly adroit: Addison does not operate at their level. Nor does he show the sophistication and depth that later critics (including EDMUND BURKE, Johnson, and SAMUEL TAYLOR COLERIDGE) display in treating the same topics. But Addison remains significant for the influential cultural work—the work of the public intellectual—that he undertook. He read widely in literature and philosophy (both English and French), summarized well what he had discovered, and successfully brought it into the public sphere. In defining terms and making distinctions, Addison gave his readers the critical vocabulary that they needed to sort and categorize the relationship between words and ideas, between the world they inhabited and the literature they consumed. Though he is not as central to the tradition of theory and criticism as are Johnson and Coleridge, Addison is a key influence on both of them.

BIBLIOGRAPHY

Donald F. Bond prepared modern editions of *The Spectator* (5 vols., 1965) and *The Tatler* (3 vols., 1987). One-volume editions include *Addison and Steele: Selections from "The Tatler" and "The Spectator"*, edited by R. J. Allen (1957); *Selected Essays from "The Tatler," "The Spectator," and "The Guardian"*, edited by Daniel McDonald (1973); and *Selections from the "Tatler" and the "Spectator" of Steele and Addison*, edited by Angus Ross (1982). For Addison's correspondence, see *Letters*, edited by Walter Graham (1941).

A good biography is Peter Smithers, *The Life of Joseph Addison* (2d ed., 1968). For a cogent brief overview, consult Robert M. Otten, *Joseph Addison* (1982). Helpful critical studies include Lee Andrew Elioseff, *The Cultural Milieu of Addison's Literary Criticism* (1963); Edward A. Bloom and Lillian D. Bloom, *Joseph Addison's Sociable Animal: In the Market Place, on the Hustings, in the Pulpit* (1971); and Michael G. Ketcham, *Transparent Designs: Reading, Performance, and Form in the "Spectator" Papers* (1985). Other resources include *Addison and Steele: The Critical Heritage*,

edited by Edward A. Bloom and Lillian D. Bloom (1980), and Charles A. Knight, *Joseph Addison and Richard Steele: A Reference Guide, 1730–1991* (1994).

The Spectator, No. 62

[*True and False Wit*]

Scribendi recte sapere est et principium et fons.¹

—HOR., *Ars Poet.* 309.

Mr. Locke² has an admirable reflection upon the difference of wit and judgment, whereby he endeavours to show the reason why they are not always the talents of the same person. His words are as follow: 'And hence, perhaps, may be given some reason of that common observation, that men who have a great deal of wit and prompt memories, have not always the clearest judgment, or deepest reason. For wit lying most in the assemblage of ideas, and putting those together with quickness and variety, wherein can be found any resemblance or congruity, thereby to make up pleasant pictures and agreeable visions in the fancy; judgment, on the contrary, lies quite on the other side, in separating carefully one from another, ideas wherein can be found the least difference, thereby to avoid being misled by similitude, and by affinity to take one thing for another. This is a way of proceeding quite contrary to metaphor and allusion; wherein, for the most part, lies that entertainment and pleasantry of wit which strikes so lively on the fancy, and is therefore so acceptable to all people.'

This is, I think, the best and most philosophical account that I have ever met with of wit, which generally, though not always, consists in such a resemblance and congruity of ideas as this author mentions. I shall only add to it, by way of explanation, that every resemblance of ideas is not that which we call wit, unless it be such an one that gives delight and surprise to the reader. These two properties seem essential to wit, more particularly the last of them. In order therefore that the resemblance in the ideas be wit, it is necessary that the ideas should not lie too near one another in the nature of things; for where the likeness is obvious, it gives no surprise. To compare one man's singing to that of another, or to represent the whiteness of any object by that of milk and snow, or the variety of its colours by those of the rainbow, cannot be called wit, unless, besides this obvious resemblance, there be some further congruity discovered in the two ideas that is capable of giving the reader some surprise. Thus when a poet tells us, the bosom of his mistress is as white as snow, there is not wit in the comparison; but when he adds, with a sigh, that it is as cold too, it then grows into wit. Every reader's memory may supply him with innumerable instances of the same nature. For this reason, the similitudes in heroic poets, who endeavour rather to fill the mind with great conceptions, than to divert it with such as are new and surprising, have

1. Knowledge is the source and fount of writing correctly (Latin). From *Ars Poetica* (see above) by the Roman lyric poet HORACE (65–8 B.C.E.).

2. John Locke (1632–1704), English philosopher. The "reflection" is in his *Essay concerning Human Understanding* (1690), 2.11.2.

seldom anything in them that can be called wit. Mr. Locke's account of wit, with this short explanation, comprehends most of the species of wit, as metaphors, similitudes, allegories, enigmas, mottoes, parables, fables, dreams, visions, dramatic writings, burlesque, and all the methods of allusion; as there are many other pieces of wit (how remote soever they may appear at first sight from the foregoing description) which upon examination will be found to agree with it.

As true wit generally consists in this resemblance and congruity of ideas, false wit chiefly consists in the resemblance and congruity sometimes of single letters, as in anagrams, chronograms, lipograms,³ and acrostics; sometimes of syllables, as in echoes and doggerel rhymes; sometimes of words, as in puns and quibbles; and sometimes of whole sentences or poems, cast into the figures of eggs, axes, or altars:⁴ nay, some carry the notion of wit so far, as to ascribe it even to external mimicry; and to look upon a man as an ingenious person, that can resemble the tone, posture, or face of another.

As true wit consists in the resemblance of ideas, and false wit in the resemblance of words, according to the foregoing instances; there is another kind of wit which consists partly in the resemblance of ideas, and partly in the resemblance of words; which for distinction's sake I shall call mixed wit. This kind of wit is that which abounds in Cowley, more than in any author that ever wrote. Mr. Waller⁵ has likewise a great deal of it. Mr. Dryden is very sparing in it. Milton had a genius much above it. Spenser⁶ is in the same class with Milton. The Italians, even in their epic poetry, are full of it. Monsieur Boileau,⁷ who formed himself upon the ancient poets, has everywhere rejected it with scorn. If we look after mixed wit among the Greek writers, we shall find it nowhere but in the epigrammatists. There are indeed some strokes of it in the little poem ascribed to Musæus,⁸ which by that, as well as many other marks, betrays itself to be a modern composition. If we look into the Latin writers, we find none of this mixed wit in Virgil, Lucretius, or Catullus;⁹ very little in Horace, but a great deal of it in Ovid, and scarce anything else in Martial.¹

Out of the innumerable branches of mixed wit, I shall choose one instance which may be met with in all the writers of this class. The passion of love in its nature has been thought to resemble fire; for which reason the words fire and flame are made use of to signify love. The witty poets therefore have taken an advantage from the doubtful meaning of the word fire, to make an infinite number of witticisms. Cowley observing the cold regard of his mis-

3. Compositions in which all words containing a certain letter or letters are omitted. "Chronograms": phrases in which certain letters express a date (e.g., capitalized letters that stand for Roman numerals).

4. Famous example of such pattern or shaped poems include "The Altar" and "Easter Wings" by George Herbert (1593-1633).

5. Edmund Waller (1606-1687), English poet admired for his development of the heroic couplet. Abraham Cowley (1618-1667), English metaphysical poet. Unusual metaphor is characteristic of metaphysical poetry.

6. Edmund Spenser (ca. 1552-1599), English poet whose works include the epic *The Faerie Queene*. JOHN DRYDEN (1631-1700), English poet, dramatist, and critic. John Milton (1608-1674),

English poet and prose writer; his masterpiece is the epic *Paradise Lost*.

7. Nicolas Boileau (1636-1711), French poet, dramatist, and critic; author of *The Art of Poetry*, a treatise in verse (1674).

8. Greek poet (probably late 5th c. C.E.). "The little poem": *Hero and Leander*, translated in 1635.

9. All poets of the Latin "Golden Age," writing in varied genres on a range of subjects: eclogues, georgics, and epic (Virgil, 70-19 B.C.E.); philosophy (Lucretius, ca. 94-55 B.C.E.); and love lyrics and elegy (Catullus, ca. 84-ca. 54 B.C.E.).

1. Roman poet (ca. 40-ca. 104 C.E.), known for his epigrams. Ovid (43 B.C.E.-17 C.E.), Roman poet of outstanding verbal brilliance, author of love poetry and a highly mannered epic, the *Metamorphoses*.

tress's eyes,² and at the same time their power of producing love in him, considers them as burning-glasses made of ice; and finding himself able to live in the greatest extremities of love, concludes the torrid zone to be habitable. When his mistress has read his letter written in juice of lemon by holding it to the fire, he desires her to read it over a second time by love's flames. When she weeps, he wishes it were inward heat that distilled those drops from the limbeck.³ When she is absent he is beyond eighty, that is, thirty degrees nearer the pole⁴ than when she is with him. His ambitious love is a fire that naturally mounts upwards; his happy love is the beams of heaven, and his unhappy love flames of hell. When it does not let him sleep, it is a flame that sends up no smoke; when it is opposed by counsel and advice, it is a fire that rages the more by the wind's blowing upon it. Upon the dying of a tree in which he had cut his loves, he observes that his written flames had burned up and withered the tree. When he resolves to give over his passion, he tells us that one burnt like him for ever dreads the fire. His heart is an Ætna, that instead of Vulcan's shop encloses Cupid's forge in it.⁵ His endeavouring to drown his love in wine, is throwing oil upon the fire. He would insinuate to his mistress, that the fire of love, like that of the sun (which produces so many living creatures) should not only warm but beget. Love is another place cooks pleasure at his fire. Sometimes the poet's heart is frozen in every breast, and sometimes scorched in every eye. Sometimes he is drowned in tears, and burnt in love, like a ship set on fire in the middle of the sea.

The reader may observe in every one of these instances, that the poet mixes the qualities of fire with those of love; and in the same sentence speaking of it both as a passion, and as real fire, surprises the reader with those seeming resemblances or contradictions that make up all the wit in this kind of writing. Mixed wit therefore is a composition of pun and true wit, and is more or less perfect as the resemblance lies in the ideas or in the words: its foundations are laid partly in falsehood and partly in truth: reason puts in her claim for one half of it, and extravagance for the other. The only province therefore for this kind of wit, is epigram, or those little occasional poems that in their own nature are nothing else but a tissue of epigrams. I cannot conclude this head of mixed wit, without owning that the admirable poet out of whom I have taken the examples of it, had as much true wit as any author that ever writ; and indeed all other talents of an extraordinary genius.

It may be expected, since I am upon this subject, that I should take notice of Mr. Dryden's definition of wit; which, with all the deference that is due to the judgment of so great a man, is not so properly a definition of wit, as of good writing in general. Wit, as he defines it, is a propriety of words and thoughts adapted to the subject.⁶ If this be a true definition of wit, I am apt to think that Euclid⁷ was the greatest wit that ever set pen to paper: it is certain there never was a greater propriety of words and thoughts adapted

2. In "The Mistress, or Several Copies of Love-Verses" (1647).

3. Alembic: that is, an apparatus used in distillation.

4. That is, 30 degrees nearer than in England, which is roughly 50 degrees north of the equator.

5. Mt. Etna, a volcano in Sicily, was supposed to be the workshop of Vulcan, the Roman god of fire, who had a forge; Cupid, son of Vulcan and Venus,

was the Roman boy-god of love.

6. Dryden, preface to *The State of Innocence* (1674, 1677): "The definition of wit . . . is only this: that it is a propriety of thoughts and words; or, in other terms, thoughts and words elegantly adapted to the subject."

7. Greek mathematician (active ca. 300 B.C.E.), author of a 13-volume treatise on mathematics, the *Elements*.

to the subject, than what that author has made use of in his elements. I shall only appeal to my reader, if this definition agrees with any notion he has of wit: if it be a true one, I am sure Mr. Dryden was not only a better poet, but a greater wit than Mr. Cowley; and Virgil a much more facetious man than either Ovid or Martial.

Bouhours,⁸ whom I look upon to be the most penetrating of all the French critics, has taken pains to show that it is impossible for any thought to be beautiful which is not just, and has not its foundation in the nature of things; that the basis of all wit is truth; and that no thought can be valuable, of which good sense is not the ground-work. Boileau has endeavoured to inculcate the same notion in several parts of his writings, both in prose and verse. This is that natural way of writing, that beautiful simplicity, which we so much admire in the compositions of the ancients; and which nobody deviates from, but those who want strength of genius to make a thought shine in its own natural beauties. Poets who want this strength of genius to give that majestic simplicity to nature, which we so much admire in the works of the ancients, are forced to hunt after foreign ornaments, and not to let any piece of wit of what kind soever escape them. I look upon these writers as Goths⁹ in poetry, who, like those in architecture, not being able to come up to the beautiful simplicity of the old Greeks and Romans, have endeavoured to supply its place with all the extravagances of an irregular fancy. Mr. Dryden makes a very handsome observation on Ovid's writing a letter from Dido to Æneas,¹ in the following words: 'Ovid (says he, speaking of Virgil's fiction of Dido and Æneas) takes it up after him, even in the same age, and makes an ancient heroine of Virgil's new-created Dido; dictates a letter for her just before her death to the ungrateful fugitive; and, very unluckily for himself, is for measuring a sword with a man so much superior in force to him, on the same subject. I think I may be judge of this, because I have translated both. The famous author of the art of love² has nothing of his own; he borrows all from a greater master in his own profession, and, which is worse, improves nothing which he finds: nature fails him, and being forced to his old shift, he has recourse to witticism. This passes indeed with his soft admirers, and gives him the preference to Virgil in their esteem.'

Were not I supported by so great an authority as that of Mr. Dryden, I should not venture to observe, that the taste of most of our English poets, as well as readers, is extremely Gothic. He quotes Monsieur Segrais³ for a threefold distinction of the readers of poetry: in the first of which he comprehends the rabble of readers, whom he does not treat as such with regard to their quality, but to their numbers and the coarseness of their taste. His words are as follow: 'Segrais has distinguished the readers of poetry, according to their capacity of judging, into three classes. (He might have said the

8. Dominique Bouhours (1628–1702), Jesuit teacher and grammarian; one of his works was translated into English in 1705 as *The Art of Criticism*.

9. Germanic peoples who invaded the Roman Empire in the early centuries of the Christian era. "Gothic" at this time has several meanings: Germanic; medieval, not classical; barbarous, crude. It also refers to a medieval architectural style not derived from Greek or Roman models.

1. In one of Ovid's *Heroides*, which were verse let-

ters between mythological lovers. Dryden's observation is from the dedication to his translation of Virgil's *Aeneid* (1697), Ovid's source for the story of Dido, the legendary founder and queen of Carthage, who killed herself when Æneas, the legendary founder of Rome, deserted her.

2. *The Art of Love* is a didactic poem by Ovid.

3. Jean Regnaud de Segrais (1624–1701), French poet who translated Virgil's *Aeneid* and *Georgics*; Dryden quotes from an essay prefixed to that translation.

same of writers too, if he had pleased.) In the lowest form he places those whom he calls *les petits esprits*,⁴ such things as are our upper-gallery audience in a play-house; who like nothing but the husk and rind of wit, prefer a quibble, a conceit, an epigram, before solid sense and elegant expression: these are mob-readers. If Virgil and Martial stood for parliament-men, we know already who would carry it.⁵ But though they make the greatest appearance in the field, and cry the loudest, the best on't is they are but a sort of French Huguenots, or Dutch boors,⁶ brought over in herds, but not naturalised; who have not lands of two pounds per annum in Parnassus,⁷ and therefore are not privileged to poll.⁸ Their authors are of the same level, fit to represent them on a mountebank's stage, or to be masters of the ceremonies in a bear-garden:⁹ yet these are they who have the most admirers. But it often happens, to their mortification, that as their readers improve their stock of sense (as they may by reading better books, and by conversation with men of judgment) they soon forsake them.'

I must not dismiss this subject without observing, that as Mr. Locke in the passage above mentioned has discovered the most fruitful source of wit, so there is another of a quite contrary nature to it, which does likewise branch itself out into several kinds. For not only the resemblance but the opposition of ideas does very often produce wit; as I could show in several little points, turns, and antitheses, that I may possibly enlarge upon in some future speculation.

[*On the Sublime*]

—*Divisum sic breve fiet opus.*¹

—MART., *Epig.* 4.83.

I shall first consider those pleasures of the imagination which arise from the actual view and survey of outward objects. And these, I think, all proceed from the sight of what is great, uncommon, or beautiful. There may, indeed, be something so terrible or offensive, that the horror or loathsomeness of an object may overbear the pleasure which results from its greatness, novelty, or beauty; but still there will be such a mixture of delight in the very disgust it gives us, as any of these three qualifications are most conspicuous and prevailing.

By greatness, I do not only mean the bulk of any single object, but the largeness of a whole view, considered as one entire piece. Such are the prospects of an open champian² country, a vast uncultivated desert, of huge

2. Unbroken level plain.

heaps of mountains, high rocks and precipices, or a wide expanse of waters, where we are not struck with the novelty or beauty of the sight, but with that rude kind of magnificence which appears in many of these stupendous works of Nature. Our imagination loves to be filled with an object, or to grasp at anything that is too big for its capacity. We are flung into a pleasing astonishment at such unbounded views, and feel a delightful stillness and amazement in the soul at the apprehension of them. The mind of man naturally hates everything that looks like a restraint upon it, and is apt to fancy itself under a sort of confinement, when the sight is pent up in a narrow compass, and shortened on every side by the neighbourhood of walls or mountains. On the contrary, a spacious horizon is an image of liberty, where the eye has room to range abroad, to expatiate³ at large on the immensity of its views, and to lose itself amidst the variety of objects that offer themselves to its observation. Such wide and undetermined⁴ prospects are as pleasing to the fancy, as the speculations of eternity or infinitude are to the understanding. But if there be a beauty or uncommonness joined with this grandeur, as in a troubled ocean, a heaven adorned with stars and meteors, or a spacious landscape cut out into rivers, woods, rocks, and meadows, the pleasure still grows upon us, as it arises from more than a single principle.

Everything that is new or uncommon raises a pleasure in the imagination, because it fills the soul with an agreeable surprise, gratifies its curiosity, and gives it an idea of which it was not before possessed. We are, indeed, so often conversant with one set of objects, and tired out with so many repeated shows of the same things, that whatever is new or uncommon contributes a little to vary human life, and to divert our minds, for a while, with the strangeness of its appearance: it serves us for a kind of refreshment, and takes off from that satiety we are apt to complain of in our usual and ordinary entertainments. It is this that bestows charms on a monster, and makes even the imperfections of nature please us. It is this that recommends variety, where the mind is every instant called off to something new, and the attention not suffered to dwell too long, and waste itself on any particular object. It is this, likewise, that improves what is great or beautiful, and makes it afford the mind a double entertainment. Groves, fields, and meadows are at any season of the year pleasant to look upon, but never so much as in the opening of the spring, when they are all new and fresh with their first gloss upon them, and not yet too much accustomed and familiar to the eye. For this reason there is nothing that more enlivens a prospect than rivers, jetteaus,⁵ or falls of water, where the scene is perpetually shifting, and entertaining the sight every moment with something that is new. We are quickly tired with looking upon hills and valleys, where everything continues fixed and settled in the same place and posture, but find our thoughts a little agitated and relieved at the sight of such objects as are ever in motion, and sliding away from beneath the eye of the beholder.

But there is nothing that makes its way more directly to the soul than beauty, which immediately diffuses a secret satisfaction and complacency through the imagination, and gives a finishing to anything that is great or uncommon. The very first discovery of it strikes the mind with an inward

3. Range freely.

4. Open.

5. Fountains or jets of water.

joy, and spreads a cheerfulness and delight through all its faculties. There is not, perhaps, any real beauty or deformity more in one piece of matter than another, because we might have been so made that whatsoever now appears loathsome to us might have shown itself agreeable; but we find by experience that there are several modifications of matter which the mind, without any previous consideration, pronounces at first sight beautiful or deformed. Thus we see that every different species of sensible⁶ creatures has its different notions of beauty, and that each of them is most affected with the beauties of its own kind. This is nowhere more remarkable than in birds of the same shape and proportion, where we often see the male determined in his courtship by the single grain⁷ or tincture of a feather, and never discovering any charms but in the colour of its species.⁸

* * *

There is a second kind of beauty that we find in the several products of art and nature which does not work in the imagination with that warmth and violence as the beauty that appears in our proper species, but is apt, however, to raise in us a secret delight, and a kind of fondness for the places or objects in which we discover it. This consists either in the gaiety or variety of colours, in the symmetry and proportion of parts, in the arrangement and disposition of bodies, or in a just mixture and concurrence of all together. Among these several kinds of beauty the eye takes most delight in colours. We nowhere meet with a more glorious or pleasing show in nature than what appears in the heavens at the rising and setting of the sun, which is wholly made up of those different stains of light that show themselves in clouds of a different situation. For this reason we find the poets, who are always addressing themselves to the imagination, borrowing more of their epithets from colours than from any other topic.

As the fancy delights in everything that is great, strange, or beautiful, and is still more pleased the more it finds of these perfections in the same object, so it is capable of receiving a new satisfaction by the assistance of another sense. Thus any continued sound, as the music of birds, or a fall of water, awakens every moment the mind of the beholder, and makes him more attentive to the several beauties of the place that lie before him. Thus, if there arises a fragrant of smells or perfumes, they heighten the pleasures of the imagination, and make even the colours and verdure of the landscape appear more agreeable; for the ideas of both senses recommend each other, and are pleasanter together than when they enter the mind separately. As the different colours of a picture, when they are well disposed, set off one another, and receive an additional beauty from the advantage of their situation.

1712

6. Endowed with sensation.

7. Hue.

8. We have omitted here 19 lines of Latin verse,

probably by Addison himself, describing the courtship of birds.

EDWARD YOUNG

1683–1765

Edward Young's *Conjectures on Original Composition* (1759) is rarely included in anthologies of criticism and theory, and his poetry has not fared much better, though his once extremely popular poem *Night Thoughts* is often mentioned in literary histories and sometimes excerpted in anthologies. But *Conjectures*, like THOMAS LOVE PEACOCK's "Four Ages of Poetry" (1820), is a text that deserves to be better known. In part *Conjectures* is interesting simply as a revelation of Young's ambitious, competitive, and discontented literary personality; more broadly, it is significant as a vigorous mid-eighteenth-century statement of ideas about poetic originality and imagination that writers in the Romantic period, decades later, would richly develop in their criticism and would seek to embody in their poetry.

Young was born in the village of Upham, near Winchester, the county town of Hampshire in southern England, where his father was rector. He was educated at Winchester School and later at New College and Corpus Christi College of Oxford University, where he became a fellow of All Souls College in 1708. He received the degrees of bachelor of laws in 1714 and doctor of laws in 1719.

After failing to win patronage and preferment through a panegyric in heroic couplets, Young tried his hand at religious verse and blank-verse tragedies. Perhaps disappointment at the slow pace of his literary and political career led Young to make plans for the priesthood; he was ordained in 1724. In 1728 he became royal chaplain to King George II, but the office did not lead to the kind of position that Young had hoped for. In 1730 he became rector of Welwyn, a Hertfordshire village twenty miles from London, where he continued writing poetry.

In 1731 Young married Elizabeth Lee; she died in 1740, a blow from which he never recovered. It is believed by some scholars that *The Complaint, or Night Thoughts on Life, Death, and Immortality* (1742–46) was meant to commemorate his wife and other family members who had passed away. After *Night Thoughts*, Young wrote little. The only literary work of significant interest that Young composed in his final decades is the curiously spirited and life-affirming treatise *Conjectures on Original Composition*.

There is some difference of opinion among scholars about the sources for *Conjectures*, which is presented in the form of a letter "To the Author of *Sir Charles Grandison*"—Samuel Richardson, the writer of epistolary novels who was a friend of Young's and acted as a literary adviser to him. Some literary historians have suggested that Young's essay developed directly from his conversations with Richardson about the critic Joseph Warton's *Essay on the Genius and Writings of Pope* (1756), which Warton had dedicated to Young. Warton's text includes an account of the challenges faced by modern poets living in an unheroic age and outlines a theory of history purporting to show that the power of the poetic imagination has been shrinking. According to Warton, the present is a period of didactic verse closer to prose than to the sublime poetry that Shakespeare and Milton created, and Young may be taking aim at this somewhat dismaying view of the contemporary literary scene.

Other scholars have traced Young's arguments to his reading of the treatise *On Sublimity*, attributed to the Greek author LONGINUS, thereby situating Young near to EDMUND BURKE's *Philosophical Inquiry into the Origin of Our Ideas on the Sublime and the Beautiful* (1757; see below) and related texts on the sublime by JOSEPH ADDISON, DAVID HUME, and other critics and philosophers in the eighteenth century. Whatever its sources, Young's text—a potent half-polemic, half-meditation—is a puzzle. The dismal, dreary author of *Night Thoughts*, a man in his late seventies, here celebrates the imagination, extols human potential, and urges writers to reach for originality and genius. In discussing the merits of the "ancients and the moderns,"

and the relationship between native genius and the rules, Young takes part in a debate made familiar by the writings of many poets and critics in France and England in the seventeenth and eighteenth centuries. But key differences in Young's argument propel it toward the Romantic period rather than incline it backward toward the neo-classical era.

At one juncture, for example, Young uses biological and organic metaphors, stating that "an Original" is "of a vegetable nature; it rises spontaneously from the vital root of genius." Such organic terms for poetic composition would be invoked years later by German and English Romantic poets and critics, especially SAMUEL TAYLOR COLERIDGE. And when Young comments on the hazards of imitation and the perils of self-doubt, he almost appears to be preparing a path for RALPH WALDO EMERSON's exhortations to know and reverence ourselves, strive to be original, make contact with and affirm the power of the divinity within.

Young acknowledges the achievements of the ancients, but he stresses that the work of modern writers need not be inferior to them. Writers in the present day should not so much imitate the poems by the ancients as they should follow (that is, be inspired by) the ancients' spirit, the genius that these texts from the past exemplify. If we base our work on that by the ancient authors, then we risk denying our own potential for greatness and suppress the genius within us. At one point Young complains that "illustrious examples engross, prejudice and intimidate." Originality requires invention and innovation, leading to the discovery and discussion of new subjects. It is the progressive element or trait in persons that makes history new rather than a repetition of actions already done. It is also valuable because it foregrounds the individual and hence is in keeping with the Protestant tradition of personal freedom and independence.

BIBLIOGRAPHY

In the eighteenth and nineteenth centuries, there were a number of editions of Young's poetical works; a two-volume *Complete Works* was published in 1854. To date, the only modern text of *Conjectures on Original Composition* is that edited by Edith J. Morley in 1918 (reprinted in facsimile editions in 1966 and 1970). Henry Charles Shelley, *The Life and Letters of Edward Young* (1914), is outdated; see now *The Correspondence of Edward Young, 1683-1765*, edited by Henry Pettit (1971).

Cecil Vivian Wicker, *Edward Young and the Fear of Death: A Study in Romantic Melancholy* (1952), focuses on the poetry and says little about *Conjectures*. Isabel St. John Bliss, *Edward Young* (1969), offers a useful brief survey. Joel Weinsheimer's *Imitation* (1984) treats the theory of "imitation" in literature and comments on Young, John Locke, and Samuel Johnson. In "The Stranger within Young's *Conjectures*," *ELH* 53.3 (1986), Robert L. Chibka explores Young's theory of originality. For bibliography, see Francesco Cordasco, *Edward Young: A Handlist of Critical Notices and Studies* (1950), and James E. May, "A Bibliography of Secondary Materials for the Study of Edward Young, 1683-1765," *Bulletin of Bibliography* 46.4 (1989).

*From Conjectures*¹ on Original Composition

I begin with *Original Composition*; and the more willingly, as it seems an original subject to me, who have seen nothing hitherto written on it: But, first, a few thoughts on Composition in general. Some are of opinion, that its growth, at present, is too luxuriant; and that the Press is overcharged.

1. Interpretations of signs, forecasts, as well as guesses.

Overcharged, I think, it could never be, if none were admitted, but such as brought their *Imprimatur* from *sound Understanding*, and the *Public Good*. Wit, indeed, however brilliant, should not be permitted to gaze self-amour'd on its useless Charms, in that Fountain of Fame (if so I may call the Press), if beauty is all that it has to boast; but, like the first *Brutus*,² it should sacrifice its most darling offspring to the sacred interests of virtue, and real service of mankind.

This restriction allowed, the more composition the better. To men of letters, and leisure, it is not only a noble amusement, but a sweet refuge; it improves their parts, and promotes their peace: It opens a back-door out of the bustle of this busy, and idle world; into a delicious garden of moral and intellectual fruits and flowers; the key of which is denied to the rest of mankind. When stung with idle anxieties, or teased with fruitless impertinence, or yawning over insipid diversions, then we perceive the blessing of a letter'd recess. With what a gust do we retire to our disinterested, and immortal friends in our closet,³ and find our minds, when applied to some favourite theme, as naturally, and as easily quieted, and refreshed, as a peevish child (and peevish children are we all till we fall asleep) when laid to the breast? Our happiness no longer lives on charity; nor bids fair for a fall, by leaning on that most precarious, and thorny pillow, another's pleasure, for our repose. How independent of the world is he, who can daily find new acquaintance, that at once entertain, and improve him, in the little world, the minute but fruitful creation, of his own mind?

These advantages *Composition* affords us, whether we write ourselves, or in more humble amusement peruse the works of others. While we bustle thro' the thronged walks of public life, it gives us a respite, at least, from care; a pleasing pause of refreshing recollection. If the country is our choice; or fate, there it rescues us from *sloth* and *sensuality*, which, like obscene vermin, are apt gradually to creep unperceived into the delightful bowers of our retirement, and to poison all its sweets. Conscious guilt robs the rose of its scent, the lilly of its lustre; and makes an *Eden* a deflowered, and dismal scene.

Moreover, if we consider life's endless evils, what can be more prudent, than to provide for consolation under them? A consolation under them the wisest of men have found in the pleasures of the pen. Witness, among many more, *Thucydides*, *Xenophon*, *Tully*, *Ovid*, *Seneca*, *Pliny* the younger,⁴ who says *In uxoris infirmitate, & amicorum periculo, aut morte turbatus, ad studia, unicum doloris levamentum, confugio*. And why not add to these their modern equals, *Chaucer*, *Rawleigh*, *Bacon*, *Clarendon*,⁵ under the same shield, unwounded by misfortune, and nobly smiling in distress?

Composition was a cordial to these under the frowns of fortune; but evils

2. The traditional founder of the Roman Republic (6th c. B.C.E.); according to legend, he killed his two sons when he discovered that they were conspiring to restore the Tarquins, the Etruscan family whose members had ruled as kings.

3. "A small room of privacy and retirement" (*Johnson's Dictionary*, 1755).

4. Roman orator and statesman (82-113). Young inaccurately quotes his *Letters* 8.19: "Distracted by my wife's ill health, by the dangerous illness or death of my friends, I fly to my studies, the sole consolation of my sorrows." *Thucydides* (455-400 B.C.E.), Greek historian. *Xenophon* (ca. 428/7-

ca. 354 B.C.E.), Greek historian and essayist. *Tully*: Marcus Tullius Cicero (106-43 B.C.E.), Roman writer, statesman, and orator. *Ovid* (43 B.C.E.-17 C.E.), Roman poet. *Seneca the Younger* (ca. 4 B.C.E.-65 C.E.), Roman philosopher, dramatist, and statesman.

5. Edward Hyde, earl of Clarendon (1609-1674), English politician and historian; Geoffrey Chaucer (ca. 1343-1400), English poet. *Rawleigh*: Sir Walter Raleigh (1552-1618), English courtier, navigator, colonizer, and writer. *Francis Bacon* (1561-1626), English philosopher and statesman. *John Milton* (1608-1674), English poet.

there are, which her smiles cannot prevent, or cure. Among these are the languors of old age. If those are held honourable, who in a hand benumbed by time have grasped the just sword in defence of their country; shall they be less esteemed, whose unsteady pen vibrates to the last in the cause of religion, of virtue, of learning? Both these are happy in *this*, that by fixing their attention on objects most important, they escape numberless little anxieties, and that *tedium vitae*⁶ which often hangs so heavy on its evening hours. May not this insinuate some apology for my spilling ink, and spoiling paper, so late in life?

But there are, who write with vigor, and success, to the world's delight, and their own renown. These are the glorious fruits where genius prevails. The mind of a man of genius is a fertile and pleasant field, pleasant as *Elysium*, and fertile as *Tempe*;⁷ it enjoys a perpetual spring. Of that spring, *Originals* are the fairest flowers: *Imitations* are of quicker growth, but fainter bloom. *Imitations* are of two kinds; one of nature, one of authors: The first we call *Originals*, and confine the term *Imitation* to the second. I shall not enter into the curious enquiry of what is, or is not, strictly speaking, *Original*, content with what all must allow, that some compositions are more so than others; and the more they are so, I say, the better. *Originals* are, and ought to be, great favourites, for they are great benefactors; they extend the republic of letters, and add a new province to its dominion: *Imitators* only give us a sort of duplicates of what we had, possibly much better, before; increasing the mere drug of books, while all that makes them valuable, *knowledge* and *genius*, are at a stand. The pen of an *original* writer, like *Armida's*⁸ wand, out of a barren waste calls a blooming spring: Out of that blooming spring an *Imitator* is a transplanter of laurels, which sometimes die on removal, always languish in a foreign soil.

But suppose an *Imitator* to be most excellent (and such there are), yet still he but nobly builds on another's foundation; his debt is, at least, equal to his glory; which therefore, on the balance, cannot be very great. On the contrary, an *Original*, tho' but indifferent (its *Originality* being set aside), yet has something to boast; it is something to say with him in *Horace*,

Meo sum Pauper in aere;⁹

and to share ambition with no less than *Cæsar*,¹ who declared he had rather be the first in a village, than the second at *Rome*.

Still farther: An *Imitator* shares his crown, if he has one, with the chosen object of his imitation; an *Original* enjoys an undivided applause. An *Original* may be said to be of a *vegetable* nature; it rises spontaneously from the vital root of *genius*; it *grows*, it is not *made*: *Imitations* are often a sort of *manufacture* wrought up by those *mechanics*, *art*, and *labour*, out of pre-existent materials not their own.

Again: We read *Imitation* with somewhat of his languor, who listens to a twice-told tale: Our spirits rouse² at an *Original*; that is a perfect stranger, and all throng to learn what news from a foreign land: And tho' it comes,

6. Irksomeness of life (Latin).

7. A valley (sacred to Apollo) in northeast Greece between Mount Olympus and Mount Ossa. Elysium: in classical mythology, the dwelling place of the blessed dead.

8. The enchantress in the epic *Jerusalem Delivered* (1581); by the Italian poet Torquato Tasso.

9. I'm poor [but live] on my own money (Latin). *Epistles* 2.2.12, by the Roman poet HORACE (65-8 B.C.E.).

1. Julius Caesar (100-44 B.C.E.), Roman statesman and general whose dictatorship ended the Republic.

2. Rouse, awaken.

like an *Indian* prince, adorned with feathers only, having little of weight; yet of our attention it will rob the more solid, if not equally new: Thus every telescope is lifted at a new-discovered star; it makes a hundred astronomers in a moment, and denies equal notice to the sun. But if an *Original*, by being as excellent, as new, adds admiration to surprize, then are we at the writer's mercy; on the strong wing of his imagination, we are snatched from *Britain* to *Italy*, from climate to climate, from pleasure to pleasure; we have no home, no thought, of our own; till the magician drops his pen: And then falling down into ourselves, we awake to flat realities, lamenting the change, like the beggar who dreamt himself a prince.

It is with thoughts, as it is with words; and with both, as with men; they may grow old, and die. Words tarnished, by passing thro' the mouths of the vulgar, are laid aside as inelegant, and obsolete. So thoughts, when become too common, should lose their currency; and we should send new metal to the mint, that is, new meaning to the press. The division of tongues at *Babel*³ did not more effectually debar men from *making themselves a name* (as the Scripture speaks,) than the too great concurrence, or union of tongues will do for ever. We may as well grow good by another's virtue, or fat by another's food, as famous by another's thought. The world will pay its debt of praise but once; and instead of applauding, explode a second demand, as a cheat.

If it is said, that most of the *Latin* classics, and all the *Greek*, except, perhaps, *Homer*, *Pindar*, and *Anacreon*,⁴ are in the number of *Imitators*, yet receive our highest applause; our answer is, That they tho' not *real*, are *accidental Originals*; the works they imitated, few excepted, are lost: They, on their father's decease, enter as lawful heirs, on their estates in fame: The fathers of our copyists are still in possession; and secured in it, in spite of *Goths*,⁵ and *Flames*, by the perpetuating power of the Press. Very late must a modern *Imitator's* fame arrive, if it waits for their decease.

An *Original* enters early on reputation: *Fame*, fond of new glories, sounds her trumpet in triumph at its birth; and yet how few are awaken'd by it into the noble ambition of like attempts? Ambition is sometimes no vice in life; it is always a virtue in Composition. High in the towering *Alps* is the fountain of the *Po*;⁶ high in fame, and in antiquity, is the fountain of an *Imitator's* undertaking; but the river, and the imitation, humbly creep along the vale. So few are our *Originals*, that, if all other books were to be burnt, the letter'd world would resemble some metropolis in flames, where a few incombustible buildings, a fortress, temple, or tower, lift their heads, in melancholy grandeur, amid the mighty ruin. Compared with this conflagration, old *Omar*⁷ lighted up but a small bonfire, when he heated the baths of the Barbarians, for eight months together, with the famed *Alexandrian* library's inestimable spoils, that no prophane book might obstruct the triumphant progress of his holy *Alcoran*⁸ round the globe.

But why are *Originals* so few? not because the writer's harvest is over, the great reapers of antiquity having left nothing to be gleaned after them; nor

3. Where God—alarmed that the people, speaking a single tongue, were successfully building a tower to "make [them] a name"—is said to have "confound[ed] their language." See Genesis 11.1–9.

4. Greek lyric poet (b. ca. 570 B.C.E.). Homer (ca. 8th c. B.C.E.), earliest Greek epic poet. Pindar (518–438 B.C.E.), Greek lyric poet.

5. Germanic invaders of the Roman Empire in the early centuries of the Christian era.

6. A river in northern Italy; it rises near the border with France, on Monte Viso in the Alps.

7. A caliph (ca. 581–644), or leader of an Islamic polity. This story of the destruction of the great library at Alexandria, in northern Egypt, on the city's capture by the Arabs is now discounted (it had already burned several times, most recently in 391).

8. The Koran.

because the human mind's teeming time is past, or because it is incapable of putting forth unprecedented births; but because illustrious examples *engross*, *prejudice*, and *intimidate*. They *engross* our attention, and so prevent a due inspection of ourselves; they *prejudice* our judgment in favour of their abilities, and so lessen the sense of our own; and they *intimidate* us with the splendor of their renown, and thus under diffidence bury our strength. Nature's impossibilities, and those of diffidence lie wide asunder.

Let it not be suspected, that I would weakly insinuate any thing in favour of the moderns, as compared with antient authors; no, I am lamenting their great inferiority. But I think it is no *necessary* inferiority; that it is not from divine destination, but from some cause far beneath the moon:⁹ I think that human souls, thro' all periods, are equal; that due care, and exertion, would set us nearer our immortal predecessors than we are at present; and he who questions and confutes this, will show abilities not a little tending toward a proof of that equality, which he denies.

After all, the first antients had no merit in being *Originals*: They could *not* be *Imitators*. Modern writers have a *choice* to make; and therefore have a merit in their power. They may soar in the regions of *liberty*, or move in the soft fetters of easy *imitation*; and *imitation* has as many plausible reasons to urge, as *Pleasure* had to offer to *Hercules*.¹ *Hercules* made the choice of an hero, and so became immortal.

Yet let not assertors of classic excellence imagine, that I deny the tribute it so well deserves. He that admires not antient authors, betrays a secret he would conceal, and tells the world, that he does not understand them. Let us be as far from neglecting, as from copying, their admirable compositions: Sacred be their rights, and inviolable their fame. Let our understanding feed on theirs; they afford the noblest nourishment; But let them nourish, not annihilate, our own. When we read, let our imagination kindle at their charms; when we write, let our judgment shut them out of our thoughts; treat even *Homer* himself as his royal admirer was treated by the cynic; bid him stand aside, nor shade our Composition from the beams of our own genius; for nothing *Original* can rise, nothing immortal, can ripen, in any other sun.²

Must we then, you say, not imitate antient authors? Imitate them, by all means; but imitate aright. He that imitates the divine *Iliad*, does not imitate *Homer*; but he who takes the same method, which *Homer* took, for arriving at a capacity of accomplishing a work so great. Tread in his steps to the sole fountain of immortality; drink where he drank, at the true *Helicon*,³ that is, at the breast of nature: Imitate; but imitate not the *Composition*, but the *Man*. For may not this paradox pass into a maxim? *viz.* 'The less we copy the renowned antients, we shall resemble them the more.'

But possibly you may reply, that you must either imitate *Homer*, or depart

9. In *An Enquiry into the Life and Writings of Homer* (1735), the classical scholar Thomas Blackwell speculates that the planets may influence or even cause genius and originality.

1. According to tradition, two women appeared before the legendary hero Hercules (Heracles) when he was pondering which course of life to follow: Pleasure offered a life of enjoyment, while Virtue offered a life of labor and fame. Hercules chose the latter.

2. An allusion to an exchange said to have occurred between Alexander the Great (356–323

B.C.E.) and the Greek philosopher Diogenes (ca. 400–ca. 325 B.C.E.), founder of the Cynic school of philosophy, which emphasized self-sufficiency and the pursuit of virtue. When Alexander asked what he could do for Diogenes, the philosopher answered: "Just stand aside so you don't keep the sun off me."

3. Mountain in central Greece, sacred to Apollo; it was the home of the Muses, and the spring Hippocrene, struck from the rock by the foot of the flying horse Pegasus, provided inspiration to poets.

from nature. Not so: For suppose you was to change place, in time, with *Homer*; then, if you write naturally, you might as well charge *Homer* with an imitation of you. Can you be said to imitate *Homer* for writing so, as you would have written, if *Homer* had never been? As far as a regard to nature, and sound sense, will permit a departure from your great predecessors; so far, ambitiously, depart from them; the farther from them in *similitude*, the nearer are you to them in *excellence*; you rise by it into an *Original*; become a noble collateral, not an humble descendant from them. Let us build our Compositions with the spirit, and in the taste, of the antients; but not with their materials: Thus will they resemble the structures of *Pericles* at *Athens*, which *Plutarch*⁴ commends for having had an air of antiquity as soon as they were built. All eminence, and distinction, lies out of the beaten road; excursion, and deviation, are necessary to find it; and the more remote your path from the highway, the more reputable; if, like poor *Gulliver*⁵ (of whom anon) you fall not into a ditch, in your way to glory.

What glory to come near, what glory to reach, what glory (presumptuous thought!) to surpass, our predecessors? And is that then in nature absolutely impossible? Or is it not, rather, contrary to nature to fail in it? Nature herself sets the ladder, all wanting is our ambition to climb. For by the bounty of nature we are as strong as our predecessors; and by the favour of time (which is but another round in nature's scale) we stand on higher ground. As to the *first*, were *they* more than men? Or are we less? Are not our minds cast in the same mould with those before the flood?⁶ The flood affected matter; mind escaped. As to the *second*; though we are moderns, the world is an antient; more antient far, than when they, whom we most admire, filled it with their fame. Have we not their beauties, as stars, to guide; their defects, as rocks, to be shunn'd; the judgment of ages on both, as a chart to conduct, and a sure helm to steer us in our passage to greater perfection than theirs? And shall we be stopt in our rival pretensions to fame by this just reproof?

Stat contra, dicitque tibi tua pagina, fur es.

MART.⁷

It is by a sort of noble contagion, from a general familiarity with their writings, and not by any particular sordid theft, that we can be the better for those who went before us. Hope we, from plagiarism, any dominion in literature; as that of *Rome* arose from a nest of thieves?

Rome was a powerful ally to many states; antient authors are our powerful allies; but we must take heed, that they do not succour, till they enslave, after the manner of *Rome*. Too formidable an idea of their superiority, like a spectre, would fright us out of a proper use of our wits; and dwarf our understanding, by making a giant of theirs. Too great awe for them lays genius under restraint, and denies it that free scope, that full elbow-room, which is requisite for striking its most masterly strokes. Genius is a master-workman, learning is but an instrument; and an instrument, tho' most val-

4. Greek essayist and biographer (ca. 50–ca. 120 C.E.). Under the leadership of Pericles (ca. 495–429 B.C.E.), Athens built many temples and structures (the most famous being the Parthenon on the Acropolis); see Plutarch, *Pericles* 13.

5. The hero of Jonathan Swift's satire *Gulliver's Travels* (1726).

6. That is, the biblical Flood (Genesis 6–9) that destroyed all humanity except for Noah and his

family. Young may also have in mind JOHN DRYDEN's "Epistle to Congreve" (1694); Dryden refers to "previous generations of poets; before the English Revolution and the Restoration (1660), as "the giant race, before the flood" (line 5).

7. The Roman poet Martial (ca. 40–ca. 104 C.E.), *Epigrams* 1.55. 12: "Your page confronts you and says to you, You are a thief."

uable, yet not always indispensable. Heaven will not admit of a partner in the accomplishment of some favourite spirits; but rejecting all human means, assumes the whole glory to itself. Have not some, tho' not famed for erudition, so written, as almost to persuade us, that they shone brighter, and soared higher, for escaping the boasted aid of that proud ally?

Nor is it strange; for what, for the most part, mean we by genius, but the power of accomplishing great things without the means generally reputed necessary to that end? A *genius* differs from a *good understanding*, as a magician from a good architect; *that* raises his structure by means invisible; *this* by the skilful use of common tools. Hence genius has ever been supposed to partake of something divine. *Nemo unquam vir magnus fuit, sine aliquo afflatu divino.*⁸

Learning, destitute of this superior aid, is fond, and proud, of what has cost it much pains; is a great lover of rules, and boaster of famed examples: As beauties less perfect, who owe half their charms to cautious art, learning inveighs against natural unstudied graces, and small harmless inaccuracies, and sets rigid bounds to that liberty, to which genius often owes its supreme glory; but the no-genius its frequent ruin. For unprescribed beauties, and unexampled excellence, which are characteristics of *genius*, lie without the pale of *learning's* authorities, and laws; which pale, genius must leap to come at them: But by that leap, if genius is wanting, we break our necks; we lose that little credit, which possibly we might have enjoyed before. For rules, like crutches, are a needful aid to the lame, tho' an impediment to the strong. A *Homer* casts them away; and, like his *Achilles*,

Jura negat sibi nata, nihil non arrogat,⁹

by native force of mind. There is something in poetry beyond prose-reason; there are mysteries in it not to be explained, but admired; which render mere prose-men infidels to their divinity. And here pardon a second paradox; viz. '*Genius* often then deserves most to be praised, when it is most sure to be condemned; that is, when its excellence, from mounting high, to weak eyes is quite out of sight.'

If I might speak farther of learning, and genius, I would compare genius to virtue, and learning to riches. As riches are most wanted where there is least virtue; so learning where there is least genius. As virtue without much riches can give happiness, so genius without much learning can give renown. As it is said in *Terence*,¹ *Pecuniam negligere interdum maximum est lucrum*; so to neglect of learning, genius sometimes owes its greater glory. Genius, therefore, leaves but the second place, among men of letters, to the learned. It is their merit, and ambition, to fling light on the works of genius, and point out its charms. We most justly reverence their informing radius for that favour; but we must much more admire the radiant stars pointed out by them.

A star of the first magnitude among the moderns was *Shakespeare*; among the antients, *Pindar*; who (as *Vossius*² tells us) boasted of his no-learning,

8. No one was ever a great man without some divine inspiration (Latin). Inaccurately quoted from Cicero, *De Natura Deorum* (*On the Nature of the Gods*), 2.66.

9. He denies that the laws were made for him, and sets no limits to his claims (Latin). Slightly misquoted from Horace, *Ars Poetica*, line 122. (see

above). Achilles: the greatest Greek warrior at Troy and the focus of Homer's *Iliad*.

1. Roman comic playwright (ca. 120–159 B.C.E.); the quotation is from *Adelphi* 2.216: "Sometimes the best way to make money is to disregard it."

2. G. J. Vossius (1577–1649), Dutch critic, rhetorician, and scholar.

calling himself the eagle, for his flight above it. And such genii as these may, indeed, have much reliance on their own native powers. For genius may be compared to the natural strength of the body; learning to the super-induced accoutrements of arms: if the first is equal to the proposed exploit, the latter rather encumbers, than assists; rather retards, than promotes, the victory. *Sacer nobis inest Deus*,³ says *Seneca*. With regard to the moral world, *conscience*, with regard to the intellectual, *genius*, is that god within. Genius can set us right in Composition, without the rules of the learned; as conscience sets us right in life, without the laws of the land: *This*, singly, can make us good, as men: *that*, singly, as writers, can, sometimes, make us great.

I say, sometimes, because there is a genius, which stands in need of learning to make it shine. Of genius there are two species, an earlier, and a later; or call them *infantine*, and *adult*. An adult genius comes out of nature's hand, as *Pallas*⁴ out of *Jove's* head, at full growth, and mature: *Shakespeare's* genius was of this kind; On the contrary, *Swift* stumbled at the threshold, and set out for distinction on feeble knees:⁵ His was an infantine genius; a genius, which, like other infants, must be nursed, and educated, or it will come to nought: Learning is its nurse, and tutor; but this nurse may overlay with an indigested load, which smothers common sense; and this tutor may mislead, with pedantic prejudice, which vitiates the best understanding: As too great admirers of the fathers of the church⁶ have sometimes set up their authority against the true sense of Scripture; so too great admirers of the classical fathers have sometimes set up their authority, or example, against reason.

* * *

Quite clear of the dispute concerning *antient and modern learning*, we speak not of performance, but powers. The modern powers are equal to those before them; modern performance in general is deplorably short. How great are the names just mentioned? Yet who will dare affirm, that as great may not rise up in some future, or even in the present age? Reasons there are why talents may not *appear*, none why they may not *exist*, as much in one period as another. An evocation of vegetable fruits depends on rain, air, and sun; an evocation of the fruits of genius no less depends on externals. What a marvellous crop bore it in *Greece*, and *Rome*? And what a marvellous sunshine did it there enjoy? What encouragement from the nature of their governments, and the spirit of their people? *Virgil* and *Horace* owed their divine talents to Heaven; their immortal works, to men; thank *Mæcenus* and *Augustus*⁷ for them. Had it not been for these, the genius of those poets had lain buried in their ashes. *Athens* expended on her theatre, painting, sculpture, and architecture, a tax levied for the support of a war: *Cæsar* dropt his papers when *Tully* spoke; and *Philip* trembled at the voice of *Demosthenes*:⁸ And has there arisen but one *Tully*, one *Demosthenes*, in so long a course of years?

3. Divinity dwells within us (Latin). Scholars have not found these exact words in *Seneca's* writings, but a similar statement can be found in his *Moral Epistles* 41.

4. Athena, Greek goddess of war and wisdom and patroness of the arts, said to have been born full-grown from the head of Zeus (whom the Romans identified with Jupiter, or Jove).

5. Swift began his literary career unsuccessfully, writing Pindaric odes.

6. Early Christian writers who established church doctrine before the 8th century (e.g., AUGUSTINE).

7. First emperor of Rome (63 B.C.E.—14 C.E.). *Virgil* (70—19 B.C.E.), Roman poet. *Mæcenus* (d. 8 C.E.), trusted counselor of Augustus and a famous patron of the arts.

8. Greek orator (384—322 B.C.E.), who exhorted the citizens of Athens to resist Philip II (382—336 B.C.E.), the king of Macedon.

The powerful eloquence of them both in one stream, should never bear me down into the melancholy persuasion, that several have not been born, tho' they have not emerged. The sun as much exists in a cloudy day, as in a clear; it is outward, accidental circumstances that with regard to genius either in nation, or age,

Collectas fugat nubes, solemque reducit.
VIRG.⁹

As great, perhaps, greater than those mentioned (presumptuous as it may sound) may, possibly, arise; for who hath fathomed the mind of man? Its bounds are as unknown, as those of the creation; since the birth of which, perhaps, not One has so far exerted, as not to leave his possibilities beyond his attainments, his powers beyond his exploits. Forming our judgments, altogether by what *has* been done, without knowing, or at all inquiring, what possibly *might* have been done, we naturally enough fall into too mean an opinion of the human mind. If a sketch of the divine Iliad before *Homer* wrote, had been given to mankind, by some superior being, or otherwise, its execution would, probably, have appeared beyond the power of man. Now, to surpass it, we think impossible. As the first of these opinions would evidently have been a mistake, why may not the second be so too? Both are founded on the same bottom; on our ignorance of the possible dimensions of the mind of man.

Nor are we only ignorant of the dimensions of the human mind in general, but even of our own. That a man may be scarce less ignorant of his own powers, than an oyster of its pearl, or a rock of its diamond; that he may possess dormant, unsuspected abilities, till awakened by loud calls, or stung up by striking emergencies, is evident from the sudden eruption of some men, out of perfect obscurity, into publick admiration, on the strong impulse of some animating occasion; not more to the world's great surprize, than their own. Few authors of distinction but have experienced something of this nature, at the first beamings of their yet unsuspected genius on their hitherto dark Composition: The writer starts at it, as at a lucid meteor in the night; is much surprized; can scarce believe it true. During his happy confusion, it may be said to him, as to Eve at the lake,

What there thou seest, fair creature, is thyself.
MILT.¹

Genius, in this view, is like a dear friend in our company under disguise; who, while we are lamenting his absence, drops his mask, striking us, at once, with equal surprize and joy. This sensation, which I speak of in a writer, might favour, and so promote, the fable of poetic inspiration: A poet of a strong imagination, and stronger vanity, on feeling it, might naturally enough realize the world's mere compliment, and think himself truly inspired. Which is not improbable; for enthusiasts of all kinds do no less.

Since it is plain that men may be strangers to their own abilities; and by thinking meanly of them without just cause, may possibly lose a name, perhaps a name immortal; I would find some means to prevent these evils.

9. Virgil, *Aeneid* 1.143: "He puts to flight the gathered clouds, and he brings back the sun."

1. Milton, *Paradise Lost* (1667), 4.468.

Whatever promotes virtue, promotes something more, and carries its good influence beyond the *moral* man: To prevent these evils, I borrow two golden rules from *ethics*, which are no less golden in *Composition*, than in life. 1. *Know thyself*; 2dly, *Reverence thyself*: I design to repay ethics in a future letter,² by two rules from rhetoric for its service.

Ist. *Know thyself*. Of ourselves it may be said, as *Martial* says of a bad neighbour,

Nil tam prope, proculque nobis.³

Therefore dive deep into thy bosom; learn the depth, extent, bias, and full fort of thy mind; contract full intimacy with the stranger within thee; excite and cherish every spark of intellectual light and heat, however smothered under former negligence, or scattered through the dull, dark mass of common thoughts; and collecting them into a body, let thy genius rise (if a genius thou hast) as the sun from chaos; and if I should then say, like an *Indian*, *Worship it*, (though too bold) yet should I say little more than my second rule enjoins, (*viz.*) *Reverence thyself*.

That is, let not great examples, or authorities, browbeat thy reason into too great a diffidence of thyself: Thyself so reverence, as to prefer the native growth of thy own mind to the richest import from abroad; such borrowed riches make us poor. The man who thus reverences himself, will soon find the world's reverence to follow his own. His works will stand distinguished; his the sole property of them; which property alone can confer the noble title of an *author*; that is, of one who (to speak accurately) *thinks*, and *composes*; while other invaders of the press, how voluminous, and learned soever, (with due respect be it spoken) only *read*, and *write*.

This is the difference between those two luminaries in literature, the well-accomplished scholar, and the divinely-inspired enthusiast; the *first* is, as the bright morning star; the *second*, as the rising sun. The writer who neglects those two rules above will never stand alone; he makes one of a group, and thinks in wretched unanimity with the throng: Incumbered with the notions of others, and impoverished by their abundance, he conceives not the least embryo of new thought; opens not the least vista thro' the gloom of ordinary writers, into the bright walks of rare imagination, and singular design; while the true genius is crossing all publick roads into fresh untrodden ground; he, up to the knees in antiquity, is treading the sacred footsteps of great examples, with the blind veneration of a bigot saluting the papal toe;⁴ comfortably hoping full absolution for the sins of his own understanding, from the powerful charm of touching his idol's infallibility.

* * *

Shakespeare mingled no water with his wine, lower'd his genius by no vapid imitation. *Shakespeare* gave us a *Shakespeare*, nor could the first in antient fame have given us more! *Shakespeare* is not their son, but brother; their equal; and that, in spite of all his faults. Think you this too bold? Consider, in those antients what is it the world admires? Not the fewness of their faults, but the number and brightness of their beauties; and if *Shakespeare* is their

2. Never written.

3. Nothing else is so near and yet so far from us (Latin); *Martial*, *Epigrams* 1.86.

4. English Protestants of the time held Catholics and Catholicism in low regard.

equal (as he doubtless is) in that, which in them is admired, then is *Shakespeare* as great as they; and not impotence, but some other cause, must be charged with his defects. When we are setting these great men in competition, what but the comparative size of their genius is the subject of our inquiry? And a giant loses nothing of his size, tho' he should chance to trip in his race. But it is a compliment to those heroes of antiquity to suppose *Shakespeare* their equal only in dramatic powers; therefore, though his faults had been greater, the scale would still turn in his favour. There is at least as much genius on the *British* as on the *Grecian* stage, tho' the former is not swept so clean; so clean from violations not only of the *dramatic*, but *moral* rule; for an honest heathen, on reading some of our celebrated scenes, might be seriously concerned to see, that our obligations to the religion of nature were cancel'd by Christianity.

Johnson,⁵ in the serious drama, is as much an imitator, as *Shakespeare* is an original. He was very learned, as *Sampson*⁶ was very strong, to his own hurt: Blind to the nature of tragedy, he pulled down all antiquity on his head, and buried himself under it; we see nothing of *Johnson*, nor indeed, of his admired (but also murdered) antients; for what shone in the historian is a cloud on the poet; and *Cataline*⁷ might have been a good play, if *Salust* had never writ.

Who knows whether *Shakespeare* might not have thought less, if he had read more? Who knows if he might not have laboured under the load of *Johnson's* learning, as *Enceladus*⁸ under *Ætna*? His mighty genius, indeed, through the most mountainous oppression would have breathed out some of his inextinguishable fire; yet, possibly, he might not have risen up into that giant, that much more than common man, at which we now gaze with amazement, and delight. Perhaps he was as learned as his dramatic province required; for whatever other learning he wanted, he was master of two books, unknown to many of the profoundly read, though books, which the last conflagration alone can destroy; the book of nature, and that of man. These he had by heart, and has transcribed many admirable pages of them, into his immortal works. These are the fountain-head, whence the *Castalian* streams⁹ of *original* composition flow; and these are often mudded by other waters, tho' waters in their distinct chanel, most wholesome and pure: As two chymical liquors, separately clear as crystal, grow foul by mixture, and offend the sight. So that he had not only as much learning as his dramatic province required, but, perhaps, as it could safely bear. If *Milton* had spared some of his learning, his muse would have gained more glory, than he would have lost, by it.

* * *

1759

5. That is, Ben Jonson (1572–1637).

6. The biblical hero Samson, who pulled down the pillars of a building to kill his enemies and himself (Judges 16.23–30).

7. A Roman tragedy (1611) by Jonson, based on *The Conspiracy of Catiline*, by the Roman historian Sallust (ca. 86–35 B.C.E.)

8. In Greek mythology, the most powerful of the giants who warred against the gods; defeated, he was buried under Sicily's Mount Etna.

9. Waters flowing from a fountain on Mount Parnassus, sacred to Apollo and the Muses; those who drink them are inspired with the gift of poetry.

ALEXANDER POPE

1688–1744

Scholars have noted dozens of sources—the Roman writers HORACE and QUINTILIAN, the French poet-critic Nicolas Boileau (1636–1711), his English contemporary JOHN DRYDEN, and many more—for Alexander Pope's versified "art of poetry," *An Essay on Criticism* (1711); but their labors, while valuable, in a sense miss the central point. Pope advanced no claims for the originality of the views he presented, and in the final analysis his poem is memorable perhaps less for its doctrine than for the brilliance of its style, which revitalizes familiar teachings and makes them sparkle. It delightfully illustrates Pope's own view of literary "borrowing": that "poets, like merchants, should repay with something of their own what they take from others, not, like pirates, make prize of all they meet." The *Essay* is a sophisticated, witty poem, a compendium of critical principles, with much reading and reflection behind it—from an author who was astonishingly young when it was written.

Pope was born in London in 1688, the year of the Glorious Revolution, when the Catholic King James II was deposed in favor of Protestant William III and Mary II. He was the son of a linen merchant who was Roman Catholic, and thus suffered from the controls of England's anti-Catholic laws. Though not always strictly enforced, these laws were onerous. Catholics were prevented from practicing their religion freely; they could not legally reside within ten miles of London; they were not allowed to attend the universities, vote, or hold public offices or seats in Parliament. In 1711 Pope's family moved to Binfield in Windsor Forest, thirty miles outside London, a place that Pope described evocatively in one of his best early poems, "Windsor-Forest" (1713).

A local priest taught Greek and Latin to Pope, and he picked up French and Italian during a short term of study in London. Pope's father encouraged him to write verse, insisting that his son's rhymes be perfect, and Pope early on crafted "imitations" of Chaucer (ca. 1343–1400), Edmund Spenser (1552–1599), Edmund Waller (1606–1687), and Abraham Cowley (1618–1667). Limitations not simply legal but also physical encouraged him to focus on his literary efforts. Tuberculosis of the bones in childhood had curved Pope's spine and stunted his growth—he was only four and a half feet tall—and throughout his life he suffered from frequent and severe headaches.

In addition to *An Essay on Criticism* and "Windsor-Forest," Pope's major poems include "The Rape of the Lock" (1712; enlarged ed., 1714); *The Dunciad*, targeting Pope's literary enemies (first published anonymously in 1728; enlarged eds. 1742, 1743); *Moral Essays* (1731–35); *Imitations of Horace* (1733–38) and their prologue, "An Epistle to Dr. Arbuthnot" (1735); and *An Essay on Man* (1733–34), a philosophical poem designed to "vindicate the ways of God to Man" (1.16). Pope also produced a magnificent translation of the *Iliad* (1715–20), co-translated the *Odyssey* (1725–26), and edited the works of Shakespeare (1725). He had concerns outside literature; his keen interests in painting, sculpture, architecture, and horticulture were expressed in the garden and grotto that he built at Twickenham, a five-acre villa he rented on the Thames, where he moved with his mother after his father's death in 1718.

An Essay on Criticism was published anonymously on May 15, 1711, a week before the poet's twenty-third birthday. The manuscript we have is dated in Pope's hand, "Written in the year 1709," but elsewhere he put the date of composition as early as 1706. And though he claimed to have written the *Essay* quickly, the manuscript shows that he revised his poem carefully. For later editions, Pope provided a table of contents and divided the 750-line poem into three parts—the second starting at line 201 and the third at line 560.

Pope means his lively heroic couplets to remind readers of principles they already

should know. Like many writers in the seventeenth and eighteenth centuries, he judges literature to be plagued by ill-informed, careless, proud, and pompous critics, whose mistaken evaluations of texts mislead authors as well as readers. John Dryden, in "The Author's Apology for Heroic Poetry" (1677), similarly laments that he and his fellow authors have "fallen into an age of illiterate, censorious, and detracting people, who, thus qualified, set up for critics." In the *Essay* Pope writes that the dismaying state of criticism reflects a broad historical decline from the Greek and Roman past—the golden age of art, when critics generously sought to advise authors and to instruct readers on how to appreciate them.

The best works of art, Pope maintains, derive from a deeply felt, well-reasoned study of Nature; and studying the great works of the past leads one to see their reliance on the stable principles of harmony and order that Nature itself teaches. This is Pope's and his age's neoclassicism—to imitate the ancient authors and adopt the critical precepts that these authors and their texts embody. Like Jonathan Swift, JOSEPH ADDISON, and other significant writers of the early to mid-eighteenth century, Pope particularly admired the authors, notably Virgil, Ovid, and Horace, who had flourished during the reign of the Roman emperor Augustus (27 B.C.E.—14 C.E.), and he sought through his writing to make his own era similarly "Augustan" in its literary production. Reading Homer and Virgil, Pope believed, sharpens taste and judgment and enables us to perceive the intimate relationship between art and Nature. The classic texts are, like Nature, a standard and a guide. Their balance, harmony, and good proportion are evident in their parts as well as demonstrated in the whole. In the prosody of a poem, for example, the sound and meter in a well-proportioned and well-regulated work enact the actions and the sense conveyed (see lines 364–73).

At moments, as when Pope rebukes pride and envy (e.g., lines 201–18), the *Essay* might strike some readers today as less about literature and criticism than about morality. But as Pope sees it, good authors or critics must truly know themselves and possess a finely developed moral sense and purpose. Such people know and abide by the limits of human aspiration, seek models for right aesthetic and moral conduct, and guard against the self-delusion and self-destructiveness of overweening pride.

Some critics contend that Pope uses his chief terms, such as *Nature*, *wit*, and *judgment*, too loosely, and they have claimed that the *Essay* lacks a coherent structure. It is, like Horace's *Ars Poetica*, more associative than logical; it offers encouragement and advice in a sequence of briskly paced observations on the nature of art, the value of the ancients, the importance of the rules, the need to observe decorum in word selection, the connection between artistic creation and criticism, and other topics. The key words are invoked in different passages to enliven the specific point at hand. Rather than using them "loosely," Pope deliberately draws on all of their senses.

For example, *wit* (from the Old English *witan*, "to know") is a complex, multivalent word, difficult to pin down, and Pope capitalizes adroitly on its range of meanings and implications. It means, first, the mind or the understanding, the faculty of reasoning and thinking. In his *Dictionary* (1755), SAMUEL JOHNSON gives as its "original signification" "the powers of the mind; the mental faculties; the intellects." But *wit* can also refer, he notes, to a poetic conceit, figure of speech, felicitous phrasing, common sense, inventiveness, astuteness of perception, the capacity to see resemblance in apparently unlike things, cleverness, fancy, genius; it can mean the imaginative power that judgment must temper and control (see, e.g., lines 82–83), even as it also implies judgment itself—*wit* curbing excessive *wit*. Pope offers his own definition in perhaps the best-known couplets of the *Essay*:

True Wit is Nature to Advantage drest,
 What oft was Thought, but ne'er so well Express,
 Something, whose Truth convinc'd at Sight we find,
 That gives us back the Image of our Mind. (lines 297–300)

Wit is Nature; it instances something that we have all thought, but whose sheer truth the poet now makes compelling through his or her language. True wit is subtle, sharp, and, above all, surprising—a striking image, a vivid metaphor, a paradoxical figure of speech. Addison and Johnson also delve into the nature of wit, but it is Pope who exemplifies the meanings of this complex word and idea more inventively than any other writer in the canon of eighteenth-century English literature.

The most memorable assessment of the *Essay* remains Samuel Johnson's: "[The *Essay*] exhibits every mode of excellence that can embellish or dignify didactic composition, selection of matter, novelty of arrangement, justness of precept, splendour of illustration, and propriety of digression." It is a hopeful work, all the more affecting in light of the political quarrels and ferocious literary feuds in which Pope engaged later in his career. These climaxed in his gigantic satire of literary idiosyncrasy, *The Dunciad*, in *Four Books*, published in October 1743. In this great last text of his poetic career, Pope describes the sublime awfulness of hordes of pedants, false poets, and dunces. His dazzling punitive wit here takes on the grotesque grandeur of mock-epic, on a scale eclipsing that displayed in the elegant, highly cultivated early work. *The Dunciad* shows Pope's angry realization of the difficulty in winning wide acceptance for the neoclassical views that he had advocated and had described with both power and grace in *An Essay on Criticism*.

BIBLIOGRAPHY

The standard source for studying Pope is the *Twickenham Edition of the Works of Alexander Pope* (11 vols., 1939–69). Volume 1 (1961), edited by E. Audra and Aubrey Williams, includes a carefully annotated text of *An Essay on Criticism*. Also recommended is Robert M. Schmitz's "Essay on Criticism," 1709; *A Study of the Bodleian Manuscript Text with Facsimiles, Transcripts, and Variants* (1962), which examines the manuscript version of the *Essay*. A good one-volume selection is *Poetry and Prose of Alexander Pope*, edited by Aubrey Williams (1969), which uses the text established for the Twickenham edition. Other important primary sources include *The Correspondence of Alexander Pope*, edited by George Sherburn (5 vols., 1956); and two volumes of prose works, the first edited by Norman Ault, *The Prose Works of Alexander Pope* (1936), and the second by Rosemary Cowler, *The Prose Works of Alexander Pope*, vol. 2, *The Major Works, 1725–1744* (1986). For selections from Pope's critical writings, see *Literary Criticism of Alexander Pope*, edited by Bertrand A. Goldgar (1965).

There are two superb biographical treatments: George Sherburn, *The Early Career of Alexander Pope* (1934), which covers the period to 1727; and Maynard Mack, *Alexander Pope: A Life* (1985), which examines the life and the writings in depth and detail. Also recommended: Howard Erskine-Hill, *The Social Milieu of Alexander Pope: Lives, Example, and the Poetic Response* (1975); Maynard Mack, *The Garden and the City: Retirement and Politics in the Later Poetry of Pope, 1731–1743* (1969); and Reginald Berry, *A Pope Chronology* (1988).

Two older studies of Pope's verse remain valuable: Geoffrey Tillotson, *On The Poetry of Pope* (2d ed., 1950), and Reuben Brower, *Alexander Pope: The Poetry of Allusion* (1959). These should be supplemented by Laura Brown, *Alexander Pope* (1985), a Marxist study that relates Pope to the culture of empire and capitalism; Ellen Pollak, *The Poetics of Sexual Myth: Gender and Ideology in the Verse of Swift and Pope* (1985), a feminist analysis; G. Douglas Atkins, *Quests of Difference: Reading Pope's Poems* (1986), which draws on Jacques Derrida's and Paul de Man's deconstructive theories and practices; Leopold Damrosch Jr., *The Imaginative World of Alexander Pope* (1987), a keen exploration of Pope's literary career as the product of his feelings of isolation and sexual, artistic, political, and financial marginality; Valerie Rumbold, *Women's Place in Pope's World* (1989), a cogent treatment of Pope's relationships with women and his poetry about them; and Helen Deutsch, *Resemblance and Disgrace: Alexander Pope and the Deformation of Culture* (1996).

Much of the best critical work on Pope has been collected in *Essential Articles for the Study of Pope*, edited by Maynard Mack (1968); *Alexander Pope: A Critical Anthology*, edited by F. W. Bateson and N. A. Joukovsky (1971); *Alexander Pope: Writers and Their Backgrounds*, edited by Peter Dixon (1972); and *Pope: The Critical Heritage*, edited by James Barnard (1973). Recent collections include *The Enduring Legacy: Alexander Pope Tercentenary Essays*, edited by G. S. Rousseau and Pat Rogers (1988), and *Pope: New Contexts*, edited by David Fairer (1990). See also the special issue of *The New Orleans Review*, vol. 15 (1980), edited by Ronald Schleifer and titled *The Poststructuralist Pope*. Helpful bibliographical works are Reginald H. Griffith, *Alexander Pope: A Bibliography* (2 vols., 1922–27), and Wolfgang Kowalk, *Alexander Pope: An Annotated Bibliography of Twentieth-Century Criticism, 1900–1979* (1981).

An Essay on Criticism

———Si quid novisti rectius istis,
Candidus imperti; si non, his utere mecum.

—HORAT.¹

'Tis hard to say, if greater Want of Skill
Appear in *Writing* or in *Judging* ill;
But, of the two, less dang'rous is th' Offence,
To tire our *Patience*, than mis-lead our *Sense*:
5 Some few in *that*, but Numbers err in *this*,
Ten Censure² wrong for one who Writes amiss;
A Fool might once *himself* alone expose,
Now One in *Verse* makes many more in *Prose*.
'Tis with our *Judgments* as our *Watches*, none
10 Go just *alike*, yet each believes his own.
In *Poets* as true *Genius* is but rare,
True *Taste* as seldom is the *Critick's* Share;
Both must alike from Heav'n derive their Light,
These *born* to Judge, as well as those to Write.
15 Let such teach others who themselves excell,
And *censure freely* who have *written well*.
Authors are partial to their *Wit*, 'tis true,
But are not *Criticks* to their *Judgment* too?
Yet if we look more closely, we shall find
20 Most have the *Seeds* of Judgment in their Mind;
Nature affords at least a *glimm'ring Light*;
The *Lines*, tho' touch'd but faintly, are drawn right.
But as the slightest Sketch, if justly trac'd,
Is by ill *Colouring* but the more disgrac'd,
25 So by *false Learning* is good *Sense* defac'd;
Some are bewilder'd in the Maze of Schools,
And some made *Coxcombs*³ Nature meant but *Fools*.
In search of *Wit* these lose their *common Sense*,
And then turn *Criticks* in their own Defence.

1. HORACE (65–8 B.C.E.), *Epistles* 1.6.67–68: "If you know any maxims better than these, be so good as to let me know them; if not, use these as I do."

2. Judge.

3. Pretenders to learning, conceited asses.

30 Each burns alike, who can, or cannot write,
 Or with a *Rival's*, or an *Eunuch's* spite.
 All *Fools* have still an Itching to deride,
 And fain wou'd be upon the *Laughing Side*:
 If *Mævius* Scribble in *Apollo's*⁴ spight,
 35 There are, who *judge* still worse than he can write.

Some have at first for *Wits*, then *Poets* past,
 Turn'd *Criticks* next, and prov'd plain *Fools* at last;
 Some neither can for *Wits* nor *Criticks* pass,
 As heavy *Mules* are neither *Horse* nor *Ass*.

40 Those half-learn'd *Witlings*, num'rous in our Isle,
 As half-form'd *Insects* on the Banks of *Nile*;⁵
 Unfinish'd Things, one knows not what to call,
 Their Generation's so *equivocal*:

To tell⁶ 'em, wou'd a *hundred Tongues* require,
 45 Or *one vain Wit's*, that might a hundred tire.

But *you* who seek to *give* and *merit* Fame,
 And justly bear a *Critick's* noble Name,
 Be sure *your self* and your own *Reach* to know,
 How far your *Genius*, *Taste*, and *Learning* go;
 50 Launch not beyond your *Depth*, but be discreet,
 And mark *that Point* where *Sense* and *Dulness meet*.

Nature to all things fix'd the *Limits* fit,
 And wisely curb'd proud *Man's* pretending *Wit*:
 As on the *Land* while *here* the *Ocean* gains,

55 In *other Parts* it leaves wide sandy *Plains*;
 Thus in the *Soul* while *Memory* prevails,
 The solid *Pow'r* of *Understanding* fails;
 Where *Beams* of warm *Imagination* play,
 The *Memory's* soft *Figures* melt away.

60 One *Science*⁷ only will one *Genius* fit;
 So *vast* is *Art*,⁸ so *narrow* *Human Wit*:
 Not only bounded to *peculiar Arts*,
 But oft in *those*, confin'd to *single Parts*.

Like *Kings* we lose the *Conquests* gain'd before,
 65 By *vain Ambition* still to make them more:
 Each might his *sev'ral Province* well command,
 Wou'd all but *stoop* to what they *understand*.

First follow *NATURE*,⁹ and your *Judgment* frame
 By her just *Standard*, which is still the same:¹

70 *Unerring Nature*, still divinely bright,
 One *clear, unchang'd*, and *Universal Light*,
Life, *Force*, and *Beauty*, must to all impart,
 At once the *Source*, and *End*, and *Test* of *Art*.

4. Greek and Roman god of poetry. Mævius: a bad poet (1st c. B.C.E.), to whom both Virgil (*Eclogue* 3) and Horace (*Epode* 10) allude.

5. The ancients believed that forms of animal and insect life were spontaneously generated on the banks of the Nile River.

6. Count.

7. Branch of learning.

8. Pope alludes to a maxim attributed to Hippocrates (469–399 B.C.E.), celebrated Greek physi-

cian: "Life is short, but art [sometimes translated 'science'] is long, opportunity fleeting, experiment dangerous, judgment difficult."

9. The term encompasses the physical world, the sum of human experiences, and the principle of order and coherence in the universe.

1. Compare JOHN DRYDEN's claim in *Parallel betwixt Poetry and Painting* (1695): "For Nature is still the same in all ages, and can never be contrary to herself."

Art from that Fund each *just Supply* provides,
 75 Works *without Show*,² and *without Pomp* presides:
 In some fair Body thus th' informing Soul
 With Spirits feeds, with Vigour fills the whole,
 Each Motion guides, and ev'ry Nerve sustains;
It self unseen, but in th' *Effects*, remains.
 80 Some, to whom Heav'n in Wit has been profuse,
 Want as much more, to turn it to its use;
 For *Wit*³ and *Judgment* often are at strife,
 Tho' meant each other's Aid, like *Man* and *Wife*.
 'Tis more to *guide* than *spur* the Muse's Steed;⁴
 85 Restrain his Fury, than provoke his Speed;
 The winged Courser, like a gen'rous⁵ Horse,
 Shows most true Mettle when you *check* his Course.

Those RULES of old *discover'd*, not *devis'd*,
 Are *Nature* still, but *Nature Methodiz'd*;
 90 *Nature*, like *Liberty*,⁶ is but restrain'd
 By the same Laws which first *herself* ordain'd.

Hear how learn'd *Greece* her useful Rules indites,
 When to repress, and when indulge our Flights:
 High on *Parnassus*⁷ Top her Sons she show'd,
 95 And pointed out those arduous Paths they trod,
 Held from afar, aloft, th' Immortal Prize,
 And urg'd the rest by equal Steps to rise;
 Just *Precepts* thus from great *Examples* giv'n,
 She drew from *them* what they deriv'd from *Heav'n*.
 100 The gen'rous Critick *fann'd* the *Poet's Fire*,
 And taught the World, *with Reason* to *Admire*.
 Then Criticism the Muse's Handmaid prov'd,
 To dress her Charms, and make her more belov'd;
 But following Wits from that Intention stray'd;
 105 Who cou'd not win the Mistress, woo'd the Maid;
 Against the Poets *their own Arms* they turn'd,
 Sure to hate most the Men from whom they *learn'd*.
 So modern *Pothecaries*, taught the Art
 By *Doctor's Bills*⁸ to play the *Doctor's Part*,
 110 Bold in the Practice of *mistaken Rules*,
 Prescribe, apply, and call their *Masters Fools*.
Some on the Leaves⁹ of ancient Authors prey,
 Nor Time nor Moths e'er spoil'd so much as they:
 Some dryly plain, without Invention's Aid,
 115 Write dull *Receipts*¹ how Poems may be made:
 These leave the Sense, their Learning to display,
 And those explain the Meaning quite away.

2. Pope here recalls the familiar Latin maxim *ars est celare artem* (the art is to conceal the art).

3. *Wit* has a range of meanings, including reasoning power, intelligence, mental soundness, sanity, astuteness of perception or judgment, and the ability to see relationships between seemingly disparate things. It also can refer to a person of sound judgment and perception.

4. Pegasus, the winged horse of classical mythology, identified with inspiration. Muse: one of the

9 daughters of Memory who preside over the arts and all intellectual pursuits.

5. High spirited, noble.

6. In the manuscript, Pope wrote "monarchy."

7. Mountain in central Greece, sacred to Apollo, the Muses, and Dionysus.

8. Medical prescriptions. "Pothecaries": druggists.

9. Pages.

1. Recipes, prescriptions.

You then whose Judgment the right Course wou'd steer,
 Know well each ANCIENT's proper *Character*,
 120 His *Fable*, *Subject*, *Scope* in ev'ry Page,
Religion, *Country*, *Genius* of his Age:
 Without all these at once before your Eyes,
Cavil you may, but never *Criticize*.
 Be *Homer's Works*² your *Study*, and *Delight*,
 125 Read them by Day, and meditate by Night,
 Thence form your Judgment, thence your Maxims bring,
 And trace the Muses *upward* to their *Spring*;³
 Still with *It self compar'd*, his *Text* peruse;
 And let your *Comment* be the *Mantuan Muse*.⁴
 130 When first young *Maro* in his boundless Mind
 A Work t'outlast Immortal *Rome* design'd,
 Perhaps he seem'd *above* the Critick's Law,
 And but from *Nature's Fountains* scorn'd to draw:
 But when t'examine ev'ry Part he came,
 135 *Nature* and *Homer* were, he found, the *same*:
 Convinc'd, amaz'd, he checks the bold Design,
 And Rules as strict his labour'd Work confine,
 As if the *Stagyrite*⁵ o'erlook'd each Line.
 Learn hence for Ancient *Rules* a just Esteem;
 140 To copy *Nature* is to copy *Them*.
 Some Beauties yet, no Precepts can declare,
 For there's a *Happiness*⁶ as well as *Care*.
Musick resembles *Poetry*, in each
 Are *nameless Graces* which no Methods teach,
 145 And which a *Master-Hand* alone can reach.
 If, where the *Rules* not far enough extend,
 (Since Rules were made but to promote their End)
 Some Lucky LICENSE answers to the full
 Th' Intent propos'd, *that License is a Rule*.
 150 Thus *Pegasus*, a nearer way to take,
 May boldly deviate from the common Track.
 Great Wits sometimes may *gloriously offend*,
 And rise to *Faults* true Criticks *dare not mend*;
 From *vulgar Bounds* with *brave Disorder* part,
 155 And *snatch* a *Grace* beyond the Reach of Art,
 Which, without passing thro' the *Judgment*, gains
 The *Heart*, and all its End *at once* attains:
 In *Prospects*, thus, some *Objects* please our Eyes,
 Which *out of Nature's common Order* rise,
 160 The shapeless *Rock*, or hanging *Precipice*.
 But tho' the *Ancients* thus their *Rules* invade,
 (As *Kings* dispense with *Laws* Themselves have made)
Moderns, beware! Or if you must offend

2. As the earliest Greek literature, Homer's *Iliad* and *Odyssey* (ca. 8th c. B.C.E.) were considered the source of all subsequent poetry.

3. Hippocrene, a spring sacred to the Muses on Mt. Helicon, in central Greece.

4. Virgil (70–19 B.C.E.), born near Mantua (his full name was Publius Vergilius Maro). As the

author of the greatest Latin epic, the *Aeneid*, he's often linked with Homer.

5. ARISTOTLE (384–322 B.C.E.), born in Stagira (in Macedonia). Later critics derived the "rules" for tragedy and epic from his *Poetics* (see above).

6. Good luck; felicity.

Against the *Precept*, ne'er transgress its *End*,
 165 Let it be *seldom*, and *compell'd by Need*.
 And have, at least, *Their Precedent* to plead.
 The Critick else proceeds without Remorse,
 Seizes your Fame, and puts his Laws in force.

I know there are,⁷ to whose presumptuous Thoughts
 170 Those *Freer Beauties*, ev'n in *Them*, seem Faults:⁸
 Some Figures *monstrous* and *mis-shap'd* appear,
 Consider'd *singly*, or beheld too *near*,
 Which, but *proportion'd* to their *Light*, or *Place*,
 Due Distance *reconciles* to Form and Grace.
 175 A prudent Chief not always must display
 His Pow'rs in *equal Ranks*, and *fair Array*,
 But with th' *Occasion* and the *Place* comply,
 Conceal his Force, may seem sometimes to *Fly*.
 Those oft are *Stratagems* which *Errors* seem,
 180 Nor is it *Homer Nods*,⁹ but *We* that *Dream*.

Still green with Bays¹ each *ancient Altar* stands,
 Above the reach of *Sacrilegious Hands*,
 Secure from *Flames*, from *Envy's fiercer Rage*,
 Destructive *War*, and all-involving *Age*.
 185 See, from *each Clime* the Learn'd their Incense bring;
 Hear, in *all Tongues* consenting² *Pæans* ring!
 In Praise so just, let ev'ry Voice be join'd,³
 And fill the *Gen'ral Chorus* of *Mankind!*
 Hail *Bards Triumphant!* born in *happier Days*;
 190 *Immortal Heirs* of *Universal Praise!*
 Whose Honours with Increase of *Ages grow*,
 As Streams roll down, *enlarging* as they flow!
 Nations *unborn* your mighty Names shall sound,
 And Worlds applaud that must not yet be *found!*
 195 Oh may some Spark of your *Cœlestial Fire*
 The last, the meanest of your Sons inspire,
 (That on weak *Wings*, from far, pursues your *Flights*;
 Glows while he *reads*, but *trembles* as he *writes*)
 To teach vain Wits a Science *little known*,
 200 T' *admire* Superior Sense, and *doubt* their own!

OF all the Causes which conspire to blind
 Man's erring Judgment, and misguide the Mind,
 What the weak Head with strongest Byass⁴ rules,
 Is *Pride*, the *never-failing Vice* of *Fools*.
 205 Whatever Nature has in *Worth* deny'd,
 She gives in large *Recruits*⁵ of *needful Pride*;
 For as in *Bodies*, thus in *Souls*, we find
 What wants in *Blood* and *Spirits*, swell'd with *Wind*;
Pride, where Wit fails, steps in to our Defence,

7. That is, I know there are those.

8. Pronounced "fawts."

9. Compare Horace, *Ars Poetica*, lines 358–59: "even . . . good Homer goes to sleep" (often translated "nods").

1. Laurels, associated with Apollo and thus with

poetry.

2. In harmony.

3. Pronounced "jined."

4. Bias, a term from lawn bowling: the irregularity in the shape of the ball that causes it to swerve.

5. Supplies, troops, reinforcements.

210 And fills up all the *mighty Void* of *Sense!*
 If once right Reason drives *that Cloud* away,
Truth breaks upon us with *resistless Day*;
 Trust not your self; but your Defects to know,
 Make use of ev'ry *Friend*—and ev'ry *Foe*.
 215 A *little Learning* is a dang'rous Thing;
 Drink deep, or taste not the *Pierian*⁶ Spring:
 There *shallow Draughts* intoxicate the Brain,
 And drinking *largely* sobers us again.
 Fir'd at first Sight with what the *Muse* imparts,
 220 In *fearless Youth* we tempt⁷ the Heights of Arts,
 While from the bounded *Level* of our Mind,
Short Views we take, nor see the *Lengths behind*,
 But *more advanc'd*, behold with strange Surprise
 New, distant Scenes of *endless Science* rise!
 225 So pleas'd at first, the towring *Alps* we try,
 Mount o'er the Vales, and seem to tread the Sky;
 Th' *Eternal Snows* appear already past,
 And the first *Clouds* and *Mountains* seem the last:
 But *those attain'd*, we tremble to survey.
 230 The growing Labours of the lengthen'd Way,
 Th' *increasing Prospect* tires our wandring Eyes,
 Hills peep o'er Hills, and *Alps* on *Alps* arise!
 A perfect Judge will *read* each Work of Wit
 With the same Spirit that its Author *writ*,
 235 Survey the *Whole*, nor seek slight Faults to find,
 Where *Nature moves*, and *Rapture warms* the Mind;
 Nor lose, for that malignant dull Delight,
 The *gen'rous Pleasure* to be charm'd with Wit.
 But in such *Lays*⁸ as neither *ebb*, nor *flow*,
 240 *Correctly cold*, and *regularly low*,
 That shunning Faults, one quiet *Tenour* keep;
 We cannot *blame* indeed—but we may *sleep*.
 In Wit, as Nature, what affects our Hearts
 Is not th' *Exactness* of peculiar Parts;
 245 'Tis not a *Lip*, or *Eye*, we Beauty call,
 But the joint Force and full *Result* of *all*.
 Thus when we view some well-proportion'd *Dome*,⁹
 (The *World's* just Wonder, and ev'n *thine O Rome!*)
 No single Parts unequally surprize;
 250 All comes *united* to th' admiring Eyes;
 No monstrous Height, or Breadth, or Length appear;
 The *Whole* at once is *Bold*, and *Regular*.
 Whoever thinks a faultless Piece to see,
 Thinks what ne'er was, nor is, nor e'er shall be.
 255 In ev'ry Work regard the *Writer's End*,
 Since none can compass more than they *Intend*;
 And if the *Means* be just, the *Conduct* true,

6. Belonging to the Pierides, another name for the Muses (the spring is Hippocrene).

7. Attempt, dare.

8. Songs; narrative poems or ballads.

9. Specifically, the dome of St. Peter's Basilica in Rome (16th c.).

Applause, in spite of trivial Faults, is due.¹
 As Men of Breeding, sometimes Men of Wit,
 260 T' avoid *great Errors*, must the *less* commit,
 Neglect the Rules each *Verbal Crittick* lays,
 For *not* to know some Trifles, is a Praise.
 Most Criticks, fond of some subservient Art,
 Still make the *Whole* depend upon a *Part*,
 265 They talk of *Principles*, but Notions prize,
 And All to one lov'd Folly Sacrifice.
 Once on a time, *La Mancha's Knight*,² they say,
 A certain *Bard* encountring on the Way,
 Discours'd in Terms as just, with Looks as Sage,
 270 As e'er cou'd *Dennis*,³ of the *Grecian Stage*;
 Concluding all were desp'rate Sots and Fools,
 Who durst depart from *Aristotle's Rules*.
 Our Author, happy in a Judge so nice,⁴
 Produc'd his Play, and beg'd the Knight's Advice,
 275 Made him observe the *Subject* and the *Plot*,
 The *Manners, Passions, Unities*,⁵ what not?
 All which, exact to *Rule* were brought about,
 Were but a *Combate in the Lists*⁶ left out.
What! Leave the Combate out? Exclaims the Knight;
 280 Yes, or we must renounce the *Stagyrite*.
Not so by Heav'n (he answers in a Rage)
Knights, Squires, and Steeds, must enter on the Stage.
 So vast a Throng the Stage can ne'er contain.
Then build a New, or act it in a Plain.
 285 Thus Criticks, of less *Judgment* than *Caprice*,
Curious,⁷ not *Knowing*, not *exact*, but *nice*,
 Form *short Ideas*; and offend in *Arts*
 (As most in *Manners*) by a *Love to Parts*.
 Some to *Conceit*⁸ alone their Taste confine,
 290 And glitt'ring Thoughts struck out⁹ at ev'ry Line;
 Pleas'd with a Work where nothing's just or fit;
 One *glaring Chaos* and *wild Heap* of Wit:
 Poets like Painters, thus, unskill'd to trace
 The *naked Nature* and the *living Grace*,
 295 With *Gold* and *Jewels* cover ev'ry Part,
 And hide with *Ornaments* their *Want of Art*.
True Wit is *Nature* to Advantage drest,
 What oft was *Thought*, but ne'er so well *Express*,
Something, whose Truth convinc'd at Sight we find,
 300 That gives us back the Image of our Mind:
 As Shades more sweetly recommend the Light,

1. Compare John Dryden, "The Author's Apology for Heroic Poetry" (1677): "Tis malicious and unmannerly to snarl at the little lapses of a pen, from which Virgil himself stands not exempted."

2. Don Quixote, title character of the work by Miguel de Cervantes (1605, 1615); but Pope's story is taken from a spurious sequel to *Don Quixote* written by Don Alonzo Fernandez de Avellaneda (trans. 1705).

3. John Dennis (1657–1734), English critic and

playwright.

4. Precise, overrefined.

5. The neoclassical unities (of action, time, and place) thought to govern drama; see PIERRE CORNEILLE, *Of the Three Unities*. (1660; above).

6. Field for jousting.

7. Particular, difficult to satisfy.

8. The extravagant use of similes and metaphors.

9. Produced by a stroke of invention.

So modest Plainness sets off sprightly Wit:
For *Works* may have more *Wit* than does 'em good,
As *Bodies* perish through Excess of *Blood*.¹

305 Others for *Language* all their Care express,
And value *Books*, as *Women Men*, for *Dress*:
Their Praise is still—*The Stile is excellent*:²
The *Sense*, they humbly take upon Content.²
Words are like *Leaves*; and where they most abound,
310 Much *Fruit of Sense* beneath is rarely found.
False Eloquence, like the *Prismatic Glass*,
Its gawdy Colours spreads on *ev'ry place*;³
The Face of Nature we no more Survey,
All glares *alike*, without *Distinction* gay:
315 But true *Expression*, like th' unchanging *Sun*,
Clears, and *improves* whate'er it shines upon,
It *gilds* all Objects, but it *alters* none.
Expression is the *Dress of Thought*, and still
Appears more *decent* as more *suitable*;
320 A vile Conceit in pompous Words express,
Is like a Clown in regal Purple drest;
For diff'rent *Styles* with diff'rent *Subjects* sort,
As several Garbs with Country, Town, and Court.
Some by *Old Words* to Fame have made Pretence;
325 Ancients in *Phrase*, meer Moderns in their *Sense*!
Such *labour'd Nothings*, in so *strange* a *Style*,
Amaze th'unlearn'd, and make the Learned *Smile*.
Unlucky, as *Fungoso*⁴ in the Play,
These Sparks with aukward *Vanity* display
330 What the Fine Gentleman wore *Yesterday*!
And but so mimick ancient Wits at best,
As Apes our Grandsires in their *Doublets drest*.
In *Words*, as *Fashions*, the same Rule will hold;
Alike *Fantastick*, if *too New*, or *Old*;
335 Be not the *first* by whom the *New* are try'd,
Nor yet the *last* to lay the *Old* aside.

But most by *Numbers*⁵ judge a Poet's Song,
And *smooth* or *rough*; with them, is *right* or *wrong*;
In the bright *Muse* tho' thousand *Charms* conspire,
340 Her *Voice* is all these tuneful Fools admire,
Who haunt *Parnassus* but to please their Ear,
Not mend their Minds; as some to *Church* repair,
Not for the *Doctrine*, but the *Musick* there.
These *Equal Syllables* alone require,
345 Tho' oft the Ear the *open Vowels* tire,⁶
While *Expletives*⁷ their feeble Aid do join,

1. Standard medical practice of Pope's time included bleeding patients to reduce their "excess of blood."

2. Accept on authority.

3. An allusion to Isaac Newton's *Optics* (1703), which discusses the prism and spectrum.

4. A poor student in Ben Jonson's play *Every Man out of His Humour* (1599), who tries without success to keep up with the fashions.

5. Meters.

6. That is, when a word ending in a vowel is followed by a word beginning with one (e.g., "the open"). Throughout this passage, Pope exemplifies in his verse the fault or virtue discussed.

7. Words used to complete the number of feet needed in a line of verse without adding to the sense.

And ten low Words oft creep in one dull Line,
 While they ring round the same *unvary'd Chimes*,
 With sure *Returns* of still *expected Rhymes*.
 350 Where-e'er you find the *cooling Western Breeze*,
 In the next Line, it *whispers thro' the Trees*;
 If *Chrystal Streams* with *pleasing Murmurs* creep,
 The Reader's threaten'd (not in vain) with *Sleep*.
 355 Then, at the *last*, and *only* Couplet fraught
 With some *unmeaning* Thing they call a *Thought*,
 A *needless Alexandrine*⁸ ends the Song,
 That like a wounded Snake, drags its slow length along.
 Leave such to tune their own dull Rhimes, and know
 What's *roundly smooth*, or *languishingly slow*;
 360 And praise the *Easie Vigor* of a Line,
 Where *Denham's* Strength, and *Waller's* Sweetness join.⁹
 True Ease in Writing comes from Art, not Chance,
 As those move easiest who have learn'd to dance.
 'Tis not enough no Harshness gives Offence,
 365 The *Sound* must seem an *Eccho* to the *Sense*.
 Soft is the Strain when *Zephyr*¹ gently blows,
 And the *smooth Stream* in *smoother Numbers* flows;
 But when loud Surges lash the sounding Shore,
 The *hoarse, rough Verse* shou'd like the *Torrent* roar.
 370 When *Ajax*² strives, some *Rock's* vast Weight to throw,
 The Line too *labours*, and the Words move *slow*;
 Not so, when swift *Camilla*³ scours the Plain,
 Flies o'er th'*unbending* Corn, and skims along the Main.
 Hear how *Timotheus*⁴ vary'd Lays surprize,
 375 And bid Alternate Passions fall and rise!
 While, at each Change, the Son of *Lybian Jove*⁵
 Now *burns* with Glory, and then *melts* with Love;
 Now his *fierce Eyes* with *sparkling Fury* glow;
 Now *Sighs* steal out, and *Tears* begin to flow:
 380 *Persians* and *Greeks* like *Turns of Nature*⁶ found,
 And the *World's Victor* stood subdu'd by *Sound*!
 The *Pow'r of Musick* all our Hearts allow;
 And what *Timotheus* was, is *Dryden* now.
 Avoid *Extreams*; and shun the Fault of such,
 385 Who still are pleas'd *too little*, or *too much*.
 At ev'ry Trifle scorn to take Offence,
 That always shows *Great Pride*, or *Little Sense*;
 Those *Heads* as *Stomachs* are not sure the best
 Which nauseate all, and nothing can digest.

8. A line of 12 syllables (rather than the usual 10), like line 357.

9. Pope, like Dryden before him, admired the English poets John Denham (1615–1669) and, especially, Edmund Waller (1606–1687) for having improved English versification (in particular, the heroic couplet, the form used in this poem).

1. The west wind; a gentle breeze.

2. A Greek hero in the *Iliad*, known for his great strength.

3. A woman warrior who fought against the Trojans in Italy. In *Aeneid* 7.808–11, Virgil describes her ability to skim over ears of wheat (i.e., "corn") and over the sea.

4. Greek poet (ca. 450–ca. 360 B.C.E.).

5. Alexander the Great (356–323 B.C.E.), who liked to claim that Zeus (identified with the Roman Jupiter) was his father. Priests of the celebrated oracle of Zeus Ammon in Siwa, north of the Libyan desert, greeted Alexander as the son of Zeus.

6. Alternations of feelings.

390 Yet let not each gay *Turn* thy Rapture move,
 For Fools *Admire*, but Men of Sense *Approve*;⁷
 As things seem *large* which we thro' *Mists* descry,
Dulness is ever apt to *Magnify*.

Some *foreign* Writers, some our *own* despise;
 395 The *Ancients* only, or the *Moderns* prize:
 (Thus *Wit*, like *Faith*, by each Man is apply'd
 To *one small Sect*, and All are *damn'd beside*.)
 Meanly they seek the Blessing to confine,
 And force *that Sun* but on a *Part* to Shine;
 400 Which not alone the *Southern Wit* sublimes,⁸
 But ripens Spirits in cold *Northern Climes*;
 Which from the first has shone on *Ages past*,
 Enlights the *present*, and shall warm the *last*:
 (Tho' *each* may feel *Increases* and *Decays*,
 405 And see now *clearer* and now *darker Days*)
 Regard not then if *Wit* be *Old* or *New*,
 But blame the *False*, and value still the *True*.

Some ne'er advance a Judgment of their own,
 But *catch* the *spreading Notion* of the Town;
 410 They reason and conclude by *Precedent*,
 And own *stale Nonsense* which they ne'er invent.
 Some judge of Authors' *Names*, not *Works*, and then
 Nor praise nor blame the *Writings*, but the *Men*.
 Of all this *Servile Herd* the worst is He
 415 That in *proud Dulness* joins with *Quality*,⁹
 A constant Critick at the Great-man's Board,
 To *fetch and carry* Nonsense for my Lord.
 What *woful stuff* this Madrigal wou'd be,
 In some starv'd Hackny Sonneteer,¹ or me?
 420 But let a *Lord* once own the *happy Lines*,
 How the *Wit brightens*! How the *Style refines*!
 Before *his sacred Name* flies ev'ry Fault,
 And each *exalted Stanza teems* with *Thought*!

The *Vulgar* thus through *Imitation* err;
 425 As oft the *Learn'd* by being *Singular*;
 So much they scorn the Crowd, that if the Throng
 By *Chance* go right, they *purposely* go wrong;
 So Schismatics² the *plain Believers* quit,
 And are but damn'd for having *too much Wit*.

430 Some praise at Morning what they blame at Night;
 But always think the *last Opinion* right.
 A Muse by these is like a Mistress us'd,
 This hour she's *idoliz'd*, the next *abus'd*,
 While their weak Heads, like Towns unfortify'd,
 435 'Twixt Sense and Nonsense daily change their Side.
 Ask them the Cause; *They're wiser still*, they say;
 And still to Morrow's wiser than to Day.
 We think our *Fathers* Fools, so *wise* we grow;

7. Judge with discrimination (vs. wonder at without comprehension).

8. Raises up.

9. People of high rank.

1. Hireling poet.

2. Sectarians in religion.

Our *wiser Sons*, no doubt, will think *us* so.
 440 Once *School-Divines*³ this zealous Isle o'erspread;
 Who knew most *Sentences*⁴ was *deepest read*;
 Faith, Gospel, All, seem'd made to be *disputed*,
 And none had *Sense enough to be Confuted*.
 445 *Scotists* and *Thomists*,⁵ now, in Peace remain,
 Amidst their *kindred Cobwebs* in *Duck-Lane*.⁶
 If *Faith* it self has *different Dresses* worn,
 What wonder *Modes* in *Wit* shou'd take their Turn?
 Oft, leaving what is Natural and fit,
 The *current Folly* proves the *ready Wit*,⁷
 450 And Authors think their Reputation safe,
 Which lives as long as *Fools* are pleas'd to *Laugh*.
 Some valuing those of their own *Side*, or *Mind*,
 Still make themselves the measure of Mankind;
 Fondly⁸ we think we honour Merit then,
 455 When we but praise *Our selves* in *Other Men*.
 Parties in *Wit* attend on those of *State*,
 And publick Faction doubles private Hate.
Pride, *Malice*, *Folly*, against *Dryden* rose,
 In various Shapes of *Parsons*,⁹ *Criticks*, *Beaus*,⁹
 460 But *Sense* surviv'd, when *merry Jest*s were past;
 For rising Merit will *buoy up* at last.
 Might he return, and bless once more our Eyes,
 New *Blackmores* and new *Milbourns*¹ must arise;
 Nay shou'd great *Homer* lift his awful² Head,
 465 *Zoilus*³ again would start up from the Dead.
Envy will *Merit* as its *Shade* pursue,
 But like a Shadow, proves the *Substance* true;
 For envy'd *Wit*, like *Sol* Eclips'd, makes known
 Th' *opposing Body's* Grossness, not its *own*.
 470 When first that Sun too powerful Beams displays,
 It draws up Vapours which obscure its Rays;
 But ev'n those Clouds at last adorn its Way,
 Reflect new Glories, and augment the Day.
 Be thou the *first* true Merit to befriend;
 475 *His* Praise is lost, who stays till *All* commend;
 Short is the Date, alas, of *Modern Rhymes*;
 And 'tis but just to let 'em live *betimes*.⁴
 No longer now that Golden Age appears,

3. Medieval theologians.

4. A reference to Peter Lombard's *Four Books of Sentences* (ca. 1145–51), which in a long series of questions presents the views of the fathers and doctors of the church on complex doctrinal matters; it became the standard theological text of the Middle Ages.

5. The two main schools of medieval philosophy were the followers of Duns Scotus (ca. 1270–1308) and of THOMAS AQUINAS (1225–1274).

6. A London street where old books were sold.

7. Facile, clever expression.

8. Foolishly.

9. John Wilmot (1647–1680)⁹ second earl of Rochester, and George Villiers (1627–1687), second duke of Buckingham. "Parsons": these

included Jeremy Collier (1650–1726), whose *Short View of the Immorality and Profaneness of the English Stage* (1698) targeted Dryden. "Criticks": these included Thomas Shadwell (ca. 1642–1692), an English dramatist and poet who savagely attacked Dryden in the 1680s.

1. Luke Milbourne (1649–1720), a clergyman whose *Notes on Dryden's Virgil* (1698) criticized the translation. Sir Richard Blackmore (1654–1729), physician and poet who criticized Dryden in *Satire against Wit* (1700).

2. Awe-inspiring.

3. A 4th-century B.C.E. philosopher and grammarian notorious for his bitter attacks on the *Iliad* and the *Odyssey*.

4. Before it is too late.

When *Patriarch-Wits* surviv'd a *thousand Years*;
 480 Now Length of *Fame* (our *second Life*) is lost,
 And bare *Threescore* is all ev'n That can boast:
 Our Sons their Fathers' *failing Language* see,
 And such as *Chaucer* is, shall *Dryden* be.⁵
 So when the faithful *Pencil* has design'd
 485 Some *bright Idea* of the Master's Mind,
 Where a *new World* leaps out at his command,
 And ready Nature waits upon his Hand;
 When the ripe Colours *soften* and *unite*;
 And sweetly *melt* into just *Shade* and *Light*,
 490 When mellowing Years their full *Perfection* give,
 And each *Bold Figure* just begins to *Live*;
 The *treach'rous Colours* the fair *Art* betray,
 And all the bright *Creation* fades away!
 Unhappy *Wit*, like most mistaken Things,
 495 Attunes not for the *Envy* which it brings.
 In *Youth* alone its empty *Praise* we boast,
 But soon the *Short-liv'd Vanity* is lost!
 Like some fair *Flow'r*: the early *Spring* supplies,
 That gaily *Blooms*, but ev'n in *blooming Dies*.
 500 What is this *Wit* which must our *Cares* employ?
 The *Owner's Wife*, that *other Men* enjoy,
 Then most our *Trouble* still when most *admir'd*,
 And still the more we *give*, the more *requir'd*;
 Whose *Fame* with *Pains* we guard, but lose with *Ease*,
 505 Sure *some* to *vex*, but never *all* to *please*;
 'Tis what the *Vicious fear*, the *Virtuous shun*;
 By *Fools* 'tis *hated*, and by *Knaves undone*!
 If *Wit* so much from *Ign'rance* undergo,
 Ah let not *Learning* too commence its *Foel*
 510 *Of old*, those met *Rewards* who cou'd *excel*,
 And such were *Prais'd* who but *endeavour'd well*:
 Tho' *Triumphs* were to *Gen'ral's* only due,
Crowns were reserv'd to grace the *Soldiers* too.⁶
 Now, they who reach *Parnassus'* lofty *Crown*,
 515 Employ their *Pains* to spurn some others down;
 And while *Self-Love* each jealous *Writer* rules,
Contending Wits become the *Sport of Fools*:
 But still the *Worst* with most *Regret* commend,
 For each *Ill Author* is as bad a *Friend*.
 520 To what base *Ends*, and by what *abject Ways*,
 Are *Mortals* urg'd thro' *Sacred*⁷ *Lust of Praise*!
 Ah ne'er so *dire* a *Thirst of Glory* boast,
 Nor in the *Critick* let the *Man* be lost!
Good-Nature and *Good-Sense* must ever join;
 525 To *Err* is *Humane*;⁸ to *Forgive*, *Divine*.

5. Like others of his day, Pope believed that changes in the English language would eventually make Dryden's verse seem as distant and strange as Chaucer's.

6. At the time of the Roman general's triumph—

a formal procession celebrating an important victory—various crowns were awarded to those of his soldiers who had won distinction.

7. Accursed.

8. Human.

But if in Noble Minds some Dregs remain,
 Not yet purg'd off, of Spleen and sow'r Disdain,
 Discharge that Rage on more Provoking Crimes,
 Nor fear a Dearth in these Flagitious⁹ Times.
 530 No Pardon vile *Obscenity* should find,
 Tho' *Wit* and *Art* conspire to move your Mind;
 But *Dulness* with *Obscenity* must prové
 As Shameful sure as *Impotence* in *Love*.
 In the fat Age of Pleasure, Wealth, and Ease,
 535 Sprung the rank Weed, and thriv'd with large Increase;
 When *Love* was all an easie Monarch's¹ Care;
 Seldom at *Council*, never in a *War*:
Jilts rul'd the State, and Statesmen *Farces* writ;
 Nay *Wits* had *Pensions*, and young *Lords*² had *Wit*:
 540 The Fair state panting at a *Courtier's Play*,
 And not a *Mask*³ went *un-improv'd* away:
 The modest *Fan* was lifted up no more,
 And *Virgins smil'd* at what they *blush'd* before—
 The following *Licence* of a *Foreign Reign*⁴
 545 Did all the Dregs of bold *Socinus*⁵ drain;
 Then Unbelieving *Priests* reform'd the Nation,
 And taught more *Pleasant* Methods of Salvation;
 Where Heav'ns Free Subjects might their *Rights* dispute,
 Lest God himself shou'd seem too *Absolute*.
 550 *Pulpits* their *Sacred Satire* learn'd to spare,
 And *Vice admir'd*⁶ to find a *Flatt'rer* there!
 Encourag'd thus, *Witt's Titans*⁷ brav'd the Skies,
 And the Press groan'd with *Licenc'd Blasphemies*—
 These Monsters, *Criticks!* with your *Darts* engage,
 555 Here point your *Thunder*, and exhaust your *Rage!*
 Yet shun their *Fault*, who, *Scandalously nice*,
 Will needs *mistake* an *Author into Vice*;
 All seems *Infected* that th' *Infected spy*,
 As all looks yellow to the *Jaundic'd Eye*.⁸

560 LEARN then what *MORALS Criticks* ought to show,
 For 'tis but *half a Judge's Task*, to *Know*.
 'Tis not enough, *Taste*, *Judgment*, *Learning*; join;
 In all you speak, let *Truth* and *Candor*⁹ shine:
 That not alone what to your *Sense* is due,
 565 All may allow; but seek your *Friendship* too.
 Be *silent* always when you *doubt* your *Sense*;

9. Extremely wicked, heinous.

1. Charles II (1630–1685).

2. These include George Villiers, John Wilmot, and Charles Sackville, sixth earl of Dorset (1638–1706). "Jilts": harlots, here Charles's mistresses. "Farces": Villiers, *The Rehearsal* (1671); Sir Charles Sedley, *The Mulberry Garden* (1668); and Sir George Etherege, *The Man of Mode* (1676).

3. Fashionable women often wore masks to the theater.

4. England's William III (1650–1702), whose policies increased toleration toward religious Nonconformists, came from the Netherlands.

5. Faustus Socinus (1539–1604), who developed a doctrine rejecting the divinity of Christ that was first espoused by his uncle, the Italian theologian Laelius Socinus (1525–1562).

6. Was amazed.

7. Giants born of Earth and Heaven, whom Zeus and the Olympian gods defeated in battle.

8. The Romans believed that to those suffering from jaundice (a yellow discoloration of the skin and the whites of the eyes), everything takes on a yellow tinge.

9. Impartiality.

And *speak*, tho' *sure*, with *seeming Diffidence*:
 Some positive persisting Fops we know,
 Who, if *once wrong*, will needs be *always so*;
 570 But you, with *Pleasure* own your *Errors* past,
 And make each *Day* a *Critick*¹ on the *last*.
 'Tis not enough your *Counsel* still be *true*,
Blunt Truths more *Mischief* than *nice Falshoods* do;
 Men must be *taught* as if you *taught* them *not*;
 575 And Things *unknown* propos'd as Things *forgot*:
 Without *Good Breeding*, *Truth* is disapprov'd;
That only makes *Superior Sense* *belov'd*.
 Be *Niggards* of *Advice* on no *Pretence*;
 For the *worst Avarice* is that of *Sense*:
 580 With mean *Complacence*² ne'er betray your *Trust*,
 Nor be so *Civil* as to prove *Unjust*;
 Fear not the *Anger* of the *Wise* to raise;
 Those best can *bear Reproof*, who *merit Praise*.
 'Twere well, might *Criticks* still this *Freedom* take;
 585 But *Appius*³ reddens at each *Word* you *speak*,
 And *stares*, *Tremendous*! with a *threatning Eye*,
 Like some *fierce Tyrant* in *Old Tapestry*!
 Fear most to tax an *Honourable Fool*,
 Whose *Right* it is, *uncensur'd* to be *dull*;
 590 Such without *Wit* are *Poets* when they *please*,
 As without *Learning* they can take *Degrees*.⁴
 Leave dang'rous *Truths* to unsuccessful *Satyrs*,⁵
 And *Flattery* to fulsome *Dedicators*,
 Whom, when they *Praise*, the *World* believes no more,
 595 Than when they *promise* to give *Scribbling* o'er.
 'Tis best sometimes your *Censure* to *restrain*,
 And *charitably* let the *Dull* be *vain*:
 Your *Silence* there is better than your *Spite*,
 For who can *rail* so long as they can *write*?
 600 Still humming on, their drowzy *Course* they *keep*,
 And *lash'd* so long, like *Tops*, are *lash'd asleep*.⁶
False Steps but help them to renew the *Race*,
 As after *Stumbling*, *Jades*⁷ will *mend* their *Pace*.
 What *Crouds* of these, impenitently *bold*,
 605 In *Sounds* and jingling *Syllables* grown *old*,
 Still *run on* *Poets* in a raging *Vein*,
 Ev'n to the *Dregs* and *Squeezings* of the *Brain*;
 Strain out the *last*, dull droppings of their *Sense*,
 And *Rhyme* with all the *Rage* of *Impotence*!
 610 Such shameless *Bards* we have; and yet 'tis *true*,
 There are as *mad*, abandon'd *Criticks* too.
 The *Bookful Blockhead*, ignorantly *read*,
 With *Loads* of *Learned Lumber* in his *Head*,

1. Critique of, commentary on.

2. Desire to please.

3. John Dennis; Appius, in his tragedy *Appius and Virginia* (1709), was highly sensitive to criticism. Dennis frequently used the word "tremendous."

4. Those in certain positions (e.g., privy council-

lors) could receive university degrees without fulfilling any requirements.

5. Satires.

6. When tops spin rapidly they "sleep," seeming not to move.

7. Worn-out horses.

With his own Tongue still edifies his Ears,
 615 And always *List'ning to Himself* appears.
 All Books he reads, and all he reads assails,
 From *Dryden's Fables* down to *Durfey's Tales*.⁸
 With *him*, most Authors steal their Works, or buy;
*Garth*⁹ did not write his own *Dispensary*.
 620 Name a new *Play*, and *he's* the Poet's *Friend*,
 Nay show'd his Faults—but when wou'd Poets mend?
 No Place so Sacred from such Fops is barr'd,
 Nor is *Paul's Church* more safe than *Paul's Church-yard*:¹
 Nay, fly to *Altars*; *there* they'll talk you dead;
 625 For *Fools* rush in where *Angels* fear to tread.
 Distrustful *Sense* with modest *Caution* speaks;
 It still *looks home*, and *short Excursions* makes;
 But *ratling Nonsense* in full *Vollies* breaks;
 And never shock'd, and never turn'd aside,
 630 *Bursts out*, resistless, with a thundring *Tyde*!
 But where's the Man, who Counsel *can* bestow,
 Still *pleas'd to teach*, and yet not *proud to know*?
 Unbiass'd, or² by *Favour* or by *Spite*;
 Not *dully prepossest*, nor *blindly right*;
 635 Tho' *Learn'd*, well-bred; and tho' well-bred, sincere;
 Modestly bold, and Humanly severe?
 Who to a *Friend* his Faults can freely show,
 And gladly praise the Merit of a *Foe*?
 Blest with a *Taste* exact, yet unconfin'd;
 640 A *Knowledge* both of *Books* and *Humankind*;
Gen'rous Converse;³ a *Soul* exempt from *Pride*;
 And *Love to Praise*, with *Reason* on his Side?
 Such once were *Criticks*, such the *Happy Few*,
Athens and *Rome* in better Ages knew.
 645 The mighty *Stagyrite* first left the Shore,
 Spread all his Sails, and durst the Deeps explore;
 He steer'd securely, and discover'd far,
Led by the Light of the *Mæonian*⁴ *Star*.
 Poets, a *Race* long unconfin'd and free,
 650 Still fond and proud of *Savage Liberty*,
 Receiv'd his Laws,⁵ and stood convinc'd 'twas fit
 Who conquer'd *Nature*, shou'd preside o'er *Wit*.
Horace still charms with graceful *Negligence*,
 And without *Method* *talks* us into *Sense*,
 655 Will like a *Friend* familiarly convey
 The *truest Notions* in the *easiest way*.⁶
 He, who *Supream* in Judgment, as in *Wit*,
 Might boldly censure, as he boldly writ;

8. *Tales Tragical and Comical* (1704), by Thomas D'Urfey (1653–1723). Dryden's *Fables: Fables, Ancient and Modern* (1700), a set of verse translations.

9. Sir Samuel Garth (1661–1719), later a friend of Pope's, was (wrongly) accused of falsely claiming authorship of the mock-heroic *The Dispensary* (1699).

1. Where booksellers had stalls.

2. Either.

3. Well-bred conversation.

4. Of Maeonia (region of Asia Minor), where Homer was said to have been born.

5. Rules for literary composition.

6. Least formal, highly accessible.

Yet judg'd with *Coolness* tho' he sung with *Fire*;
 660 His *Precepts* teach but what his *Works* inspire.
 Our *Criticks* take a contrary *Extream*,
 They *judge* with *Fury*, but they *write* with *Fle me*?
 Nor suffers *Horace* more in wrong *Translations*
 By *Wits*, than *Criticks* in as wrong *Quotations*.
 665 See *Dionysius*⁸ *Homer's* Thoughts refine,
 And call new *Beautés* forth from ev'ry *Line*!
 Fancy and *Art* in gay *Petronius*⁹ please,
 The *Scholar's Learning*, with the *Courtier's Ease*.
 In grave *Quintilian's*¹ copious *Work* we find
 670 The justest *Rules*, and clearest *Method* join'd;
 Thus *useful Arms* in *Magazines*² we place,
 All rang'd in *Order*, and dispos'd with *Grace*,
 But less to please the *Eye*, than arm the *Hand*,
 Still fit for *Use*, and ready at *Command*.
 675 Thee, bold *Longinus*!³ all the *Nine*⁴ inspire,
 And bless *their Critick* with a *Poet's Fire*.
 An ardent *Judge*, who *Zealous* in his *Trust*,
 With *Warmth* gives *Sentence*, yet is always *Just*;
 Whose *own Example* strengthens all his *Laws*,
 680 And *Is himself* that great *Sublime* he draws.
 Thus long succeeding *Criticks* justly reign'd,
License repress'd, and *useful Laws* ordain'd;
Learning and *Rome* alike in *Empire* grew
 And *Arts* still follow'd where her *Eagles*⁵ flew;
 685 From the same *Foes*, at last, both felt their *Doom*,
 And the same *Age* saw *Learning* fall, and *Rome*.
 With *Tyranny*, then *Superstition* join'd,
 As that the *Body*, this enslav'd the *Mind*;
 Much was *Believ'd*, but little *understood*,
 690 And to be *dull* was constru'd to be *good*;
 A *second Deluge* *Learning* thus o'er-run,
 And the *Monks* finish'd what the *Goths* begun.⁶
 At length, *Erasmus*,⁷ that *great, injur'd Name*,
 (The *Glory* of the *Priesthood*, and the *Shame*!)
 695 *Stemm'd* the wild *Torrent* of a *barb'rous Age*,
 And drove those *Holy Vandals* off the *Stage*.
 But see! each *Muse*, in *Leo's*⁸ *Golden Days*,
 Starts from her *Trance*, and trims her wither'd *Bays*!

7. Phlegm, thought to cause sluggishness and indifference; it was one of the four humors in early physiology.

8. Dionysius of Halicarnassus, Greek rhetor and historian active in Rome ca. 30–7 B.C.E.

9. Petronius Arbiter, the author of the *Satyricon* (1st c. C.E.); he may have been the courtier Petronius who was the judge on questions of taste at the court of Nero (emperor 54–68).

1. Roman rhetorician (ca. 30/35–100 C.E.); his "copious work" is the 12-volume *Institutio Oratoria* (see above).

2. Storehouses.

3. Greek rhetorician (1st c. C.E.), to whom the

treatise *On Sublimity* is attributed (see above).

4. The 9 Muses.

5. Emblems on the Roman army's banners.

6. That is, the medieval theologians put the finishing touches on the damage done to learning by the Goths and Vandals, the Germanic peoples who had earlier sacked Rome.

7. Dutch scholar and philosopher (1466–1536), author of *The Praise of Folly*, a humanist satire on the abuses of learning. He was "the glory of the priesthood" because of his erudition and goodness, and its "shame" in that he was persecuted.

8. Pope Leo X (1475–1521), a patron of learning and the arts during the Italian Renaissance.

Rome's ancient *Genius*,⁹ o'er its *Ruins* spread,
 700 Shakes off the *Dust*, and rears his rev'rend Head!
 Then *Sculpture* and her *Sister-Arts* revive;
Stones leap'd to *Form*, and *Rocks* began to live;
 With sweeter *Notes* each rising *Temple* rung;
 A *Raphael* painted, and a *Vida*¹ sung!
 705 Immortal *Vida*! on whose honour'd Brow
 The Poet's *Bays* and Critick's *Ivy*² grow:
*Cremona*³ now shall ever boast thy Name,
 As next in Place to *Mantua*, next in Fame.
 But soon by *Impious Arms* from *Latium*⁴ chas'd,
 710 Their *ancient Bounds* the banish'd *Muses* past;
 Thence *Arts* o'er all the *Northern World* advance;
 But *Critic Learning* flourish'd most in *France*.
 The *Rules*, a Nation born to serve, obeys,
 And *Boileau*⁵ still in Right of *Horace* sways.
 715 But we, brave *Britons*, *Foreign Laws* despis'd,
 And kept *unconquer'd*, and *unciviliz'd*,
 Fierce for the *Liberties of Wit*, and bold,
 We still defy'd the *Romans*, as of old.
 Yet some there were, among the *sounder Few*
 720 Of those who *less presum'd*, and *better knew*,
 Who durst assert the *juster Ancient Cause*,
 And here *restor'd Wit's Fundamental Laws*.
 Such was the *Muse*, whose *Rules* and *Practice* tell,
Nature's chief Master-piece is writing well.⁶
 725 Such was *Roscomon*⁷—not more *learn'd* than *good*,
 With *Manners* gen'rous as his *Noble Blood*;
 To him the *Wit of Greece* and *Rome* was known,
 And ev'ry *Author's Merit*, but his own.
 Such late was *Walsh*,⁸—the *Muse's Judge* and *Friend*,
 730 Who justly knew to blame or to commend;
 To *Failings mild*, but *zealous* for *Desert*;
 The *clearest Head*, and the *sincerest Heart*.
 This humble *Praise*, lamented *Shadel* receive,
 This *Praise* at least a *grateful Muse* may give!
 735 The *Muse*, whose early *Voice* you taught to *Sing*,
 Prescrib'd her *Heights*, and prun'd her *tender Wing*,
 (Her *Guide* now lost) no more attempts to *rise*,
 But in low *Numbers* short *Excursions* tries:
 Content, if hence th' *Unlearn'd* their *Wants* may view,
 740 The *Learn'd* reflect on what before they knew:
 Careless of *Censure*, nor too fond of *Fame*;

9. Guardian or protective spirit of a place.

1. Marco Girolamo Vida (ca. 1480–1566), Italian poet who wrote in Latin; Raphael: Raffaello Santi (1483–1520), Italian painter.

2. Symbol of poetry and learning.

3. City in northern Italy.

4. Italy. Rome was sacked by Hapsburg mercenaries in 1527; Pope suggests that learning then fled to other parts of Europe, especially France.

5. Nicolas Boileau (1636–1711), French critic and poet; his works include the poem *L'Art poé-*

tique (1674).

6. Quoted from the *Essay on Poetry* (1682), by Pope's friend and supporter John Sheffield (1648–1721).

7. Wentworth Dillon (ca. 1633–1685), fourth earl of Roscomon, poet and critic; author of the *Essay on Translated Verse* (1684).

8. William Walsh (1663–1708), whom Dryden praised as "the best critic of our nation"; he was Pope's friend and mentor.

Still pleas'd to *praise*, yet not afraid to *blame*,
 Averse alike to *Flatter*, or *Offend*,
 Not *free* from Faults, nor yet too vain to *mend*.

1711

SAMUEL JOHNSON

1709–1784

As countless anecdotes attest, Samuel Johnson was cantankerous and dogmatic. He inveighed against the philosopher George Berkeley's (1685–1753) apparent denial of the reality of the external world by kicking a stone and declaring, "I refute him *thus*." And he coined many mordant aphorisms, such as "The road to hell is paved with good intentions" and "Patriotism is the last refuge of a scoundrel." Theatrical, deliberately provocative, and beloved by many friends and admired by fellow writers, Johnson is one of the most influential critics in English literary history. "The best part of every author," Johnson affirmed, "is in general to be found in his book," and this is true in his own case. Though he often chastised himself for indolence, fearful that salvation would be denied to him because he was not fully using his great gifts, he was in fact astonishingly productive, and in many genres. His literary labors include a monumental *Dictionary of the English Language*, a comprehensive edition of Shakespeare, and the *Lives of the English Poets*, a set of insightful, vividly written biographical and literary portraits of seventeenth- and eighteenth-century authors.

Johnson was born at Lichfield, Staffordshire, a town about 100 miles northwest of London. His father was a bookseller, and his education consisted largely of the volumes in his father's bookshop and what was "whipped" into him by the master of the grammar school in Lichfield. He attended Pembroke College at Oxford for only a year, leaving in December 1729 because he lacked the funds to continue. At Oxford, he later recounted, "I was miserably poor, and I thought to fight my way by my literature and my wit"; the fight, continuing in later years, would leave him in poverty for most of his life.

Johnson was an intense, discerning reader; as the economist Adam Smith recalled, "Johnson knew more books than any man alive." While at Oxford, he pored over the popular devotional tract *A Serious Call to a Devout and Holy Life* (1729), by the schoolmaster and minister William Law. He termed Law's book "the finest piece of hortatory theology in any language," and it is the foundation for the prayers and meditations that he composed later in his life.

In July 1735 Johnson married Elizabeth Jervis Porter, a forty-six-year-old widow and mother of three children. With money from her, Johnson opened a school in Edial, near Lichfield, in 1736. One of his students was David Garrick, who became a poet, essayist, and acclaimed actor. While there, Johnson worked on an historical tragedy, *Irene*, which recounts the story of the love of Sultan Mahomet for the lovely Irene, a Christian slave captured in Constantinople. (The play was not performed until 1749, in a production that Garrick organized.) The school soon proved a failure, however, in part because Johnson lacked the credential of a university degree.

In 1737 Johnson and Garrick traveled to London; with a population between 650,000 and 700,000, it had become the largest city in Europe. Johnson found it captivating and later famously professed: "Why, Sir, you find no man, at all intellec-

tual, who is willing to leave London. No, Sir, when a man is tired of London, he is tired of life; for there is in London all that life can afford." Once settled there, he began his association with the *Gentleman's Magazine*, contributing to it not only prose and poetry but also, from 1741 to 1744, a series of speeches purporting to represent debates in the House of Commons: he re-created them, relying solely on notes and reports.

Johnson was working on and planning larger projects as well. In 1745 he wrote "Miscellaneous Observations on the Tragedy of Macbeth," along with a proposal for an edition of Shakespeare; in the following year, he outlined his "Plan of a Dictionary of the English Language." His major prose publication of this period was *An Account of the Life of Mr. Richard Savage* (1744), a book that details the trials of a failed poet whom Johnson knew and the tribulations of Grub Street, the address of many literary hacks and desperate writers. In verse his central achievement was "The Vanity of Human Wishes," published in 1749. This solemn, disquieting rumination on the futility of worldly hopes and endeavors was the first composition that Johnson issued under his own name.

In the 1750s Johnson wrote many periodical essays. The best of this work appeared in *The Rambler*, which was published twice weekly from March 1750 to March 1752. The twentieth-century critic Walter Jackson Bate has described these pieces as "saturated with thought to an extent unexceeded by any other writer of English prose since Francis Bacon." Johnson's wife Elizabeth told him at the time: "I thought very well of you before this; but I did not imagine you could have written any thing equal to this." She died on March 17, 1752, three days after the publication of its last number. Johnson also contributed essays to his friend John Hawkesworth's periodical *The Adventurer*; and from 1758 to 1760, he wrote yet another series of essays, titled *The Idler*, which were published in a weekly newspaper, *The Universal Chronicle*. But Johnson's greatest accomplishment of the decade was *A Dictionary of the English Language*, published in two large folio volumes in April 1755. Nine years in the making, and compiled by Johnson and six assistants, it consists of 40,000 defined words and 114,000 quotations that illustrate the meanings.

In one week's time in January 1759, Johnson wrote his only long fictional work, *Rasselas*, so that he could pay for his mother's funeral and settle her debts. Three years later he received from King George III an annual pension of 300 pounds, winning at last a measure of economic security. Soon after, he met the Scotsman James Boswell, a twenty-two-year-old lawyer less interested in law than in literature and politics. Boswell cultivated Johnson's friendship; watched him in action at literary clubs with Adam Smith, the painter Joshua Reynolds, EDMUND BURKE, and other luminaries; sparred with him in conversation; and gathered facts and anecdotes about him. Boswell made Johnson the subject of what is often called the greatest biography in English, *The Life of Samuel Johnson, LL.D.* (1791).

Johnson's eight-volume edition of Shakespeare was published in October 1765. The much-delayed work was flawed: Johnson neither performed the complete collation of texts he had promised nor examined carefully the sources that Shakespeare had drawn on. And while he ignored the sonnets and poems, he (like the Romantic critics) treats the plays not as works for the stage but as texts to be read. Nonetheless, the preface—one of our selections—and the many interpretive notes amount to a compelling assessment. Johnson celebrates Shakespeare's gifts in portraying character and revealing truths about human nature and, more important, defends the playwright against charges of violating the dramatic unities of time and place and improperly mixing the genres of tragedy and comedy. Johnson was not the first to propose that authors be granted freedom to depart from classical rules and prescriptions for literary composition, but his authority and formidable style gave this position its irresistible legitimacy. SAMUEL TAYLOR COLERIDGE, William Hazlitt, and other critics in the early 1800s balked at (even as they oversimplified) Johnson's neoclassical principles and disputed his evaluations of authors, yet his support for rule-breaking

innovation, in the preface to Shakespeare and elsewhere, helped prepare the literary and cultural ground for the Romantic revolution.

In 1777 Johnson, then sixty-seven, was approached by London booksellers to contribute brief prefaces to a multivolume edition of English poets. Though the original plan was scaled back (instead of including all reputable poets from Chaucer on, the survey began in the seventeenth century with Cowley), Johnson did much more than required, producing in all about 400,000 words of biographical and interpretive text on the fifty-two poets (all male). Each preface follows a three-part plan, as Johnson recounts the author's biography, summarizes the main features of his character, and critically examines the writings; the essays on Cowley, Milton, DRYDEN, POPE, and ADDISON expanded into panoramic studies of the writer's life and works.

The *Lives of the English Poets* (1783) is not a grand act of personal canon making. While Johnson proposed several additions, the choices generally were not his own. He believed in an English literary canon—one that surpassed the literatures of other nations—but that canon could not be determined by any single critic. Unlike such modern critics as T. S. ELIOT, F. R. Leavis, and HAROLD BLOOM, who seek through robust arguments to reorder literary rankings that they view as dated and objectionable, Johnson found the test of time decisive. As he explained in the preface to *Shakespeare*, "What has been longest known has been most considered, and what is most considered is best understood."

For Johnson, the best contemporary literature resembles the great literature of the past in its fidelity to the facts of unchanging human nature and in its concern for moral instruction—for guidance in how best to live (that is, how best to bear life's pain). "Nothing can please many," he wrote, "and please long, but just representations of general nature." Thus in our selection from *Rasselas* Johnson emphasizes that "the business of the poet . . . is to examine, not the individual, but the species; to remark general properties and large appearances." "Great thoughts," he observes in the *Life of Cowley* (our final selection), "are always general." Such an appeal to shared values does not entirely preclude literary originality. As "On Fiction," our selection from *The Rambler*, indicates, Johnson could accept the emerging genre of the novel as long as its practitioners stayed alert to their moral duty to readers. And often in his criticism he commends poets for their capacity to delight or surprise us, for their powers of verbal invention. But by originality, Johnson meant what was new and unexpected and deeply recognizable—the refreshed, reawakened expression of truths with which readers would already be familiar.

Johnson proposed writing a "History of Criticism as it relates to judging of authors, from Aristotle to the present age," but he never undertook this daunting project; his general attitude toward critics and criticism must be pieced together from essays, letters, and parts of the preface to Shakespeare and the *Lives of the English Poets*. In *Rambler* 92, Johnson comes as close as he does anywhere to defining the work of the critic, stressing "principles," "rational deduction," and "science" and concluding: "Criticism reduces those regions of literature under the dominion of science, which have hitherto known only the anarchy of ignorance, the caprices of fancy, and the tyranny of prescription." Yet on this topic, as so often in his writing, Johnson calls attention to facets of literary experience that undercut the very positions he elsewhere advocates: he is often his sharpest, most cogent critic. In the preface to *Shakespeare*, he readily acknowledges the limitations of "the rules of criticism": "there is always an appeal open from criticism to nature." Generic categories and literary conventions matter; critics must consider how well or badly an author abides by them. But historical context, Johnson realizes, must be considered as well; as he explains in his *Life of Dryden*, "That which is easy at one time was difficult at another." Thus even such a highly principled critic could contend, in his *Life of Pope*, that we err when we "judge by principles rather than perception."

Johnson possessed a strong sense of the power and responsibility of writers; as he emphasizes in *Rambler* 4, novelists must use their talents to correct error and teach

good conduct: they should not describe persons and situations—however true-to-life these might be—that could corrupt the minds of readers, particularly the young and inexperienced. The poet has an equal burden. Offended by the mixture of sacred and profane elements in Milton's pastoral elegy "Lycidas," Johnson calls the poem vulgar and disgusting, indecent and impious. This assault on "Lycidas" is notorious, yet it is significant less for the stridency of Johnson's judgment than for the strength of his response, the intensity of his experience as a reader.

The motions of Johnson's mind are more supple, balanced (if precariously at times), and even contradictory than might be predicted of a voice that is so confident and proud. We should heed his performance as a writer—the behavior of his language, the turns and tones of his subtle and complex sentences and paragraphs—in order to appreciate him fully. The final two paragraphs of the *Life of Cowley*, in which Johnson sums up the achievements of the metaphysical poets after having criticized them, illustrate his flexibility of mind. For modern readers, Johnson's style and point of view may require some getting accustomed to. But as MATTHEW ARNOLD concluded ("Johnson's Lives," 1878) in a formulation still pertinent today: "The more we study Johnson, the higher will be our esteem for the power of his mind, the width of his interests, the largeness of his knowledge, the freshness, fearlessness, and strength of his judgments."

BIBLIOGRAPHY

The standard edition has been *The Works of Samuel Johnson* (11 vols., 1825; reprinted in 1970 as *Dr. Johnson's Works*). It is being superseded by *The Yale Edition of the Works of Samuel Johnson* (13 vols. to date, 1958–). Other valuable editions of Johnson's works include *The Lives of the English Poets*, edited by George Birkbeck Hill (3 vols., 1905); *Johnson's "Lives of the Poets": A Selection*, edited by J. P. Hardy (1971); and *The Life of Richard Savage*, edited by Clarence Tracy (1971). *The Letters of Samuel Johnson*, edited by Bruce Redford (5 vols., 1992–94), known as the Hyde Edition, is an indispensable resource. *The Complete English Poems*, edited by J. D. Fleeman (1971), is a well-edited collection. The best one-volume selection of Johnson's poetry and prose is *Samuel Johnson*, edited by Donald Greene (1984). On Johnson's critical outlook, see *The Critical Opinions of Samuel Johnson*, a topical anthology compiled by Joseph Epes Brown (1926).

The points of departure for biography are James Boswell, *The Journal of a Tour to the Hebrides* (1785) and *The Life of Samuel Johnson, LL.D.* (1791). Of the many editions of these works—often published together—the best, with detailed notes, is by George Birkbeck Hill, revised and enlarged by L. F. Powell (6 vols., 1934–50, 1964). There are a number of excellent modern biographies: James L. Clifford, *Yōūng Sam [or Samuel] Johnson* (1955), and his *Dictionary Johnson: Samuel Johnson's Middle Years* (1979); Walter Jackson Bate, *Samuel Johnson* (1977), which includes expert commentary on Johnson's writings; Thomas Kaminski, *The Early Career of Samuel Johnson* (1987); John Wain, *Samuel Johnson* (rev. ed., 1988), a vivid portrait of Johnson as a literary professional; Robert DeMaria Jr., *The Life of Samuel Johnson: A Critical Biography* (1993), a first-rate survey of Johnson's literary career; Richard Holmes, *Dr. Johnson and Mr. Savage* (1993); and Lawrence I. Lipking, *Samuel Johnson: The Life of an Author* (1998). Donald Greene, *Samuel Johnson* (rev. ed., 1989), offers a fine briefer treatment. Also useful are Norman Page, *A Dr. Johnson Chronology* (1990), and Pat Rogers, *The Samuel Johnson Encyclopædia* (1996).

For a range of critical opinion, see Walter Jackson Bate, *The Achievement of Samuel Johnson* (1958); Paul Fussell, *Samuel Johnson and the Life of Writing* (1971), filled with sharp perceptions about Johnson's rhetoric and relation to his readers; and Thomas Reinert, *Regulating Confusion: Samuel Johnson and the Crowd* (1996), which explores Johnson's attitudes toward the crowd, the city, and urban culture. Early critical reception is collected in *Johnson: The Critical Heritage*, edited by James T.

Boulton (1971). Collections of criticism include *Samuel Johnson: New Critical Essays*, edited by Isobel Grundy (1984); *Johnson and His Age*, edited by James Engell (1984); and *Johnson after Two Hundred Years*, edited by Paul J. Korshin (1986).

On Johnson's literary criticism, see Jean H. Hagstrum, *Samuel Johnson's Literary Criticism* (1952), a good overview of Johnson's attitudes toward nature, the sublime, wit, and other key topics; Leopold Damrosch Jr., *The Uses of Johnson's Criticism* (1976); Morris R. Brownell, *Samuel Johnson's Attitude to the Arts* (1989), which astutely examines Johnson's positions on music, art, and architecture; Steven Lynn, *Samuel Johnson after Deconstruction: Rhetoric and "The Rambler"* (1992), with interesting comparisons between Johnson and Harold Bloom, Jacques Derrida, and other contemporary theorists; Charles Hinnant, "Steel for the Mind": *Samuel Johnson and Critical Discourse* (1994), which relates Johnson's work to recent debates in literary theory; and Robert DeMaria Jr., *Samuel Johnson and the Life of Reading* (1997). Examinations of Johnson's critical work on Shakespeare include G. F. Parker, *Johnson's Shakespeare* (1989), offering cogent analysis of responses to Johnson by Romantic poets and critics, and Edward Tomarken, *Samuel Johnson on Shakespeare: The Discipline of Criticism* (1991). On Johnson as biographer of poets, consult Robert Folkenflik, *Samuel Johnson, Biographer* (1978); Martin Maner, *The Philosophical Biographer: Doubt and Dialectic in Johnson's "Lives of the Poets"* (1988); and Catherine Neal Parke, *Samuel Johnson and Biographical Thinking* (1991).

The standard bibliography is William P. Courtney and David Nichol Smith, *A Bibliography of Samuel Johnson* (1915). It is supplemented by R. W. Chapman and Allen T. Hazen, "Johnsonian Bibliography: A Supplement to Courtney," in *Oxford Bibliographical Society, Proceedings and Papers*, vol. 5, pt. 3 (1938). James L. Clifford and Donald J. Greene, *Samuel Johnson: A Survey and Bibliography of Critical Studies* (1970), contains 4,000 items. See also Donald Greene and John A. Vance, *A Bibliography of Johnsonian Studies, 1970-1985* (1987).

The Rambler, No. 4

[On Fiction]

*Simul et jucunda et idonea dicere vitae.*¹

—Horace, ARS POETICA, 1.334.

And join both profit and delight in one:

—Creech.²

The works of fiction, with which the present generation seems more particularly delighted,³ are such as exhibit life in its true state, diversified only by accidents that daily happen in the world, and influenced by passions and qualities which are really to be found in conversing with mankind.

This kind of writing may be termed not improperly the comedy of romance,⁴ and is to be conducted nearly by the rules of comic poetry. Its province is to bring about natural events by easy means, and to keep up curiosity without the help of wonder: it is therefore precluded from the

1. "To speak of life both agreeably and appropriately" (Latin). HORACE (65–8 B.C.E.), Roman poet; for the *Ars Poetica* (Art of Poetry), see above.

2. Thomas Creech (1659–1700), English classical scholar. Here he translates the epigraph above.

3. Possibly Tobias Smollett's *Roderick Random* (1748) and Henry Fielding's *Tom Jones* (1749).

4. An entertaining story of love and adventure, which includes elements of fantasy and myth.

machines and expedients of the heroic romance, and can neither employ giants to snatch away a lady from the nuptial rites, nor knights to bring her back from captivity; it can neither bewilder its personages in deserts,⁵ nor lodge them in imaginary castles.

I remember a remark made by Scaliger upon Pontanus,⁶ that all his writings are filled with the same images; and that if you take from him his lillies and his roses, his satyrs and his dryads,⁷ he will have nothing left that can be called poetry. In like manner, almost all the fictions of the last age will vanish, if you deprive them of a hermit and a wood, a battle and a shipwreck.

Why this wild strain of imagination found reception so long, in polite and learned ages, it is not easy to conceive; but we cannot wonder that, while readers could be procured, the authors were willing to continue it: for when a man had by practice gained some fluency of language, he had no further care than to retire to his closet, let loose his invention, and heat his mind with incredibilities;⁸ a book was thus produced without fear of criticism, without the toil of study, without knowledge of nature, or acquaintance with life.

The task of our present writers is very different; it requires, together with that learning which is to be gained from books, that experience which can never be attained by solitary diligence, but must arise from general converse, and accurate observation of the living world. Their performances have, as Horace expresses it, *plus oneris quantum veniæ minus*,⁹ little indulgence, and therefore more difficulty. They are engaged in portraits of which every one knows the original, and can detect any deviation from exactness of resemblance. Other writings are safe, except from the malice of learning, but these are in danger from every common reader; as the slipper ill executed was censured by a shoemaker who happened to stop in his way at the Venus of Apelles.¹

But the fear of not being approved as just copyers of human manners, is not the most important concern that an author of this sort ought to have before him. These books are written chiefly to the young, the ignorant, and the idle, to whom they serve as lectures of conduct, and introductions into life. They are the entertainment of minds unfurnished with ideas, and therefore easily susceptible of impressions; not fixed by principles, and therefore easily following the current of fancy; not informed by experience; and consequently open to every false suggestion and partial account.

That the highest degree of reverence should be paid to youth, and that nothing indecent should be suffered to approach their eyes or ears; are precepts extorted by sense and virtue from an ancient writer,² by no means eminent for chastity of thought. The same kind, tho' not the same degree of caution, is required in every thing which is laid before them; to secure them from unjust prejudices, perverse opinions, and incongruous combinations of images.

5. Deserts.

6. Jovianus Pontanus (1426–1503), Italian poet. The remark was by Julius Caesar Scaliger, an Italian-born French scholar (1484–1558), in his *Poetics* 5.4.

7. In classical mythology, wood nymphs. "Satyrs": goatlike sylvan deities.

8. Things that cannot be believed. "Closet": "a small room of privacy and retirement" (Johnson's

Dictionary).

9. Slightly misquoted from Horace, *Epistles* 2.1.170 (translated by Johnson).

1. Greek painter (4th c. B.C.E.). The story of the shoemaker correcting the artist's representation comes from the Roman writer Pliny the Elder (23/4–79 C.E.), *Natural History* 35.84.

2. Juvenal (ca. 55–ca. 140 C.E.), Roman poet; see *Satire* 14.

In the romances formerly written, every transaction and sentiment was so remote from all that passes among men, that the reader was in very little danger of making any applications to himself; the virtues and crimes were equally beyond his sphere of activity; and he amused himself with heroes and with traitors, deliverers and persecutors, as with beings of another species, whose actions were regulated upon motives of their own, and who had neither faults nor excellencies in common with himself.

But when an adventurer is levelled with the rest of the world, and acts in such scenes of the universal drama, as may be the lot of any other man; young spectators fix their eyes upon him with closer attention, and hope by observing his behavior and success to regulate their own practices, when they shall be engaged in the like part.

For this reason these familiar histories may perhaps be made of greater use than the solemnities of professed morality, and convey the knowledge of vice and virtue with more efficacy than axioms and definitions. But if the power of example is so great, as to take possession of the memory by a kind of violence, and produce effects almost without the intervention of the will, care ought to be taken that, when the choice is unrestrained, the best examples only should be exhibited; and that which is likely to operate so strongly, should not be mischievous or uncertain in its effects.

The chief advantage which these fictions have over real life is, that their authors are at liberty, tho' not to invent, yet to select objects, and to cull from the mass of mankind, those individuals upon which the attention ought most to be employ'd; as a diamond, though it cannot be made, may be polished by art, and placed in such a situation, as to display that lustre which before was buried among common stones.

It is justly considered as the greatest excellency of art, to imitate nature; but it is necessary to distinguish those parts of nature, which are most proper for imitation: greater care is still required in representing life, which is so often discoloured by passion, or deformed by wickedness. If the world be promiscuously³ described, I cannot see of what use it can be to read the account; or why it may not be as safe to turn the eye immediately upon mankind, as upon a mirror which shows all that presents itself without discrimination.

It is therefore not a sufficient vindication of a character, that it is drawn as it appears, for many characters ought never to be drawn; nor of a narrative, that the train of events is agreeable to observation and experience, for that observation, which is called knowledge of the world, will be found much more frequently to make men cunning than good. The purpose of these writings is surely not only to show mankind, but to provide that they may be seen hereafter with less hazard; to teach the means of avoiding the snares which are laid by Treachery for Innocence, without infusing any wish for that superiority with which the betrayer flatters his vanity; to give the power of counteracting fraud, without the temptation to practise it; to initiate youth by mock encounters in the art of necessary defence, and to increase prudence without impairing virtue.

Many writers, for the sake of following nature, so mingle good and bad qualities in their principal personages, that they are both equally conspicu-

3: In a mixed, disorderly fashion.

ous; and as we accompany them through their adventures with delight, and are led by degrees to interest ourselves in their favour, we lose the abhorrence of their faults, because they do not hinder our pleasure, or, perhaps, regard them with some kindness for being united with so much merit.

There have been men indeed splendidly wicked, whose endowments threw a brightness on their crimes, and whom scarce any villainy made perfectly detestable, because they never could be wholly divested of their excellencies; but such have been in all ages the great corrupters of the world, and their resemblance ought no more to be preserved, than the art of murdering without pain.

Some have advanced, without due attention to the consequences of this notion, that certain virtues have their correspondent faults, and therefore that to exhibit either apart is to deviate from probability. Thus men are observed by Swift to be "grateful in the same degree as they are resentful."⁴ This principle, with others of the same kind, supposes man to act from a brute impulse, and pursue a certain degree of inclination, without any choice of the object; for, otherwise, though it should be allowed that gratitude and resentment arise from the same constitution of the passions, it follows not that they will be equally indulged when reason is consulted; yet unless that consequence be admitted, this sagacious maxim becomes an empty sound, without any relation to practice or to life.

Nor is it evident, that even the first motions to these effects are always in the same proportion. For pride, which produces quickness of resentment, will obstruct gratitude, by unwillingness to admit that inferiority which obligation implies; and it is very unlikely, that he who cannot think he receives a favour will acknowledge or repay it.

It is of the utmost importance to mankind, that positions of this tendency should be laid open and confuted; for while men consider good and evil as springing from the same root, they will spare the one for the sake of the other, and in judging, if not of others at least of themselves, will be apt to estimate their virtues by their vices. To this fatal error all those will contribute, who confound the colours of right and wrong, and instead of helping to settle their boundaries, mix them with so much art, that no common mind is able to disunite them.

In narratives, where historical veracity has no place, I cannot discover why there should not be exhibited the most perfect idea of virtue; of virtue not angelical, nor above probability, for what we cannot credit we shall never imitate, but the highest and purest that humanity can reach, which, exercised in such trials as the various revolutions of things shall bring upon it, may, by conquering some calamities, and enduring others, teach us what we may hope, and what we can perform. Vice, for vice is necessary to be shewn, should always disgust; nor should the graces of gaiety, or the dignity of courage, be so united with it, as to reconcile it to the mind. Wherever it appears, it should raise hatred by the malignity of its practices, and contempt by the meanness of its stratagems; for while it is supported by either parts or spirit, it will be seldom heartily abhorred. The Roman tyrant⁵ was content to be

4. These are the words of the English poet and critic ALEXANDER POPE (1688–1744), not the English satirist and poet Jonathan Swift (1667–1745). The contemporary source is the Swift-Pope

Miscellantes 2 (1727): 354. "Grateful": pleasing, agreeable.

5. The emperor Gaius Julius Caesar Germanicus (12–41 C.E.), known as "Caligula."

hated, if he was but feared; and there are thousands of the readers of romances willing to be thought wicked, if they may be allowed to be wits. It is therefore to be steadily inculcated, that virtue is the highest proof of understanding, and the only solid basis of greatness; and that vice is the natural consequence of narrow thoughts, that it begins in mistake, and ends in ignominy.

1750

From The History of Rasselas, Prince of Abyssinia

Chapter X.

Imlac's History Continued. A Dissertation upon Poetry

"Wherever I¹ went, I found that Poetry was considered as the highest learning, and regarded with a veneration somewhat approaching to that which man would pay to the Angelick Nature. And it yet fills me with wonder, that, in almost all countries, the most ancient poets are considered as the best: whether it be that every other kind of knowledge is an acquisition gradually attained, and poetry is a gift conferred at once; or that the first poetry of every nation surprised them as a novelty, and retained the credit by consent which it received by accident at first: or whether, as the province of poetry is to describe. Nature and Passion, which are always the same, the first writers took possession of the most striking objects for description, and the most probable occurrences for fiction, and left nothing to those that followed them, but transcription of the same events, and new combinations of the same images. Whatever be the reason, it is commonly observed that the early writers are in possession of nature, and their followers of art: that the first excel in strength and invention, and the latter in elegance and refinement.²

"I was desirous to add my name to this illustrious fraternity. I read all the poets of Persia and Arabia, and was able to repeat by memory the volumes,³ that are suspended in the mosque of Mecca. But I soon found that no man was ever great by imitation. My desire of excellence impelled me to transfer my attention to nature and to life. Nature was to be my subject, and men to be my auditors: I could never describe what I had not seen: I could not hope to move those with delight or terrour, whose interests and opinions I did not understand.

"Being now resolved to be a poet, I saw every thing with a new purpose; my sphere of attention was suddenly magnified: no kind of knowledge was to be overlooked. I ranged mountains and deserts for images and resemblances, and pictured upon my mind every tree of the forest and flower of the valley. I observed with equal care the crag of the rock and the pinnacles of the palace. Sometimes I wandered along the mazes of the rivulet, and sometimes watched the changes of the summer clouds. To a poet nothing

1. The speaker is the philosopher and poet Imlac, who is addressing Prince Rasselas, son of the emperor of Abyssinia.

2. Johnson's observations here are connected to debates in the period about what constituted

poetic originality and whether modern authors could achieve it. See EDWARD YOUNG, *Conjectures on Original Composition* (1759; above).

3. Illuminated manuscripts of sacred texts, "suspended" or hung in mosques.

can be useless. Whatever is beautiful, and whatever is dreadful, must be familiar to his imagination: he must be conversant with all that is awfully vast or elegantly little.⁴ The plants of the garden, the animals of the wood, the minerals of the earth, and meteors of the sky, must all concur to store his mind with inexhaustible variety: for every idea is useful for the inforcement or decoration of moral or religious truth;⁵ and he, who knows most, will have most power of diversifying his scenes, and of gratifying his reader with remote allusions and unexpected instruction.

"All the appearances of nature I was therefore careful to study, and every country which I have surveyed has contributed something to my poetical powers.

"In so wide a survey, said the prince, you must surely have left much unobserved. I have lived, till now, within the circuit of those mountains, and yet cannot walk abroad without the sight of something which I had never beheld before, or never heeded.

"The business of a poet, said Imlac, is to examine, not the individual, but the species: to remark general properties and large appearances: he does not number the streaks of the tulip, or describe the different shades in the verdure of the forest. He is to exhibit in his portraits of nature such prominent and striking features, as recal the original to every mind; and must neglect the minuter discriminations, which one may have remarked, and another have neglected, for those characteristic which are alike obvious to vigilance and carelessness.

"But the knowledge of nature is only half the task of a poet; he must be acquainted likewise with all the modes of life. His character requires that he estimate the happiness and misery of every condition; observe the power of all the passions in all their combinations, and trace the changes of the human mind as they are modified by various institutions and accidental influences of climate or custom, from the spriteliness of infancy to the despondence of decrepitude. He must divest himself of the prejudices of his age or country; he must consider right and wrong in their abstracted and invariable state; he must disregard present laws and opinions, and rise to general and transcendental⁶ truths, which will always be the same: he must therefore content himself with the slow progress of his name; contemn the applause of his own time, and commit his claims to the justice of posterity. He must write as the interpreter of nature, and the legislator of mankind, and consider himself as presiding over the thoughts and manners of future generations; as a being superiour to time and place.

"His labour is not yet at an end: he must know many languages and many sciences; and, that his stile may be worthy of his thoughts, must, by incessant practice, familiarize to himself every delicacy of speech and grace of harmony."

1759

4. Johnson is drawing on EDMUND BURKE's account of the sublime in *A Philosophical Enquiry into the Origin of Our Ideas of the Sublime and Beautiful* (1757; see below).

5. In "A Defence of 'An Essay of Dramatic Poesy'" (1668), JOHN DRYDEN states: "moral truth is the

mistress of the poet as much as of the philosopher; poesy must resemble natural truth, but it must be ethical."

6. "General; pervading many particulars" (Johnson's *Dictionary*).

From Preface to Shakespeare

That praises are without reason lavished on the dead, and that the honours due only to excellence are paid to antiquity, is a complaint likely to be always continued by those, who, being able to add nothing to truth, hope for eminence from the heresies of paradox; or those, who, being forced by disappointment upon consolatory expedients, are willing to hope from posterity what the present age refuses, and flatter themselves that the regard which is yet denied by envy, will be at last bestowed by time.

Antiquity, like every other quality that attracts the notice of mankind, has undoubtedly votaries that reverence it, not from reason, but from prejudice. Some seem to admire indiscriminately whatever has been long preserved, without considering that time has sometimes co-operated with chance; all perhaps are more willing to honour past than present excellence; and the mind contemplates genius through the shades of age, as the eye surveys the sun through artificial opacity. The great contention of criticism is to find the faults of the moderns, and the beauties of the ancients. While an author is yet living we estimate his powers by his worst performance, and when he is dead, we rate them by his best.

To works, however, of which the excellence is not absolute and definite; but, gradual and comparative; to works not raised upon principles demonstrative and scientifick, but appealing wholly to observation and experience, no other test can be applied than length of duration and continuance of esteem. What mankind have long possessed they have often examined and compared; and if they persist to value the possession, it is because frequent comparisons have confirmed opinion in its favour. As among the works of nature no man can properly call a river deep, or a mountain high, without the knowledge of many mountains, and many rivers; so in the productions of genius, nothing can be stiled excellent till it has been compared with other works of the same kind. Demonstration¹ immediately displays its power, and has nothing to hope or fear from the flux of years; but works tentative and experimental must be estimated by their proportion to the general and collective ability of man, as it is discovered in a long succession of endeavours. Of the first building that was raised, it might be with certainty determined that it was round or square; but whether it was spacious or lofty must have been referred to time. The Pythagorean scale of numbers² was at once discovered to be perfect; but the poems of *Homer* we yet know not to transcend the common limits of human intelligence, but by remarking, that nation after nation, and century after century, has been able to do little more than transpose his incidents, new-name his characters, and paraphrase his sentiments.

The reverence due to writings that have long subsisted arises therefore not from any credulous confidence in the superior wisdom of past ages, or gloomy persuasion of the degeneracy of mankind, but is the consequence of acknowledged and indubitable positions, that what has been longest known has been most considered, and what is most considered is best understood,

1. "The highest degree of deducible or argumental evidence" (Johnson's *Dictionary*).

2. The Greek philosopher and mathematician

Pythagoras (6th c. B.C.E.) is thought to have discovered the musical ratios of the octave (2:1), the fifth (3:2), and the fourth (4:3).

The Poet, of whose works I have undertaken the revision,³ may now begin to assume the dignity of an ancient, and claim the privilege of established fame and prescriptive veneration. He has long outlived his century, the term commonly fixed as the test of literary merit.⁴ Whatever advantages he might once derive from personal allusions, local customs, or temporary opinions, have for many years been lost; and every topick of merriment, or motive of sorrow, which the modes of artificial life afforded him, now only obscure the scenes which they once illuminated. The effects of favour and competition are at an end; the tradition of his friendships and his enmities has perished; his works support no opinion with arguments, nor supply any faction with invectives; they can neither indulge vanity nor gratify malignity; but are read without any other reason than the desire of pleasure, and are therefore praised only as pleasure is obtained; yet, thus unassisted by interest or passion, they have past through variations of taste and changes of manners, and, as they devolved from one generation to another, have received new honours at every transmission.

But because human judgment, though it be gradually gaining upon certainty, never becomes infallible; and approbation, though long continued, may yet be only the approbation of prejudice or fashion; it is proper to inquire, by what peculiarities of excellence *Shakespeare* has gained and kept the favour of his countrymen.

Nothing can please many, and please long, but just representations of general nature. Particular manners can be known to few, and therefore few only can judge how nearly they are copied. The irregular combinations of fanciful invention may delight a-while, by that novelty of which the common satiety of life sends us all in quest; but the pleasures of sudden wonder are soon exhausted, and the mind can only repose on the stability of truth.

Shakespeare is above all writers, at least above all modern writers, the poet of nature; the poet that holds up to his readers a faithful mirror of manners and of life.⁵ His characters are not modified by the customs of particular places, unpractised by the rest of the world; by the peculiarities of studies or professions, which can operate but upon small numbers; or by the accidents of transient fashions or temporary opinions: they are the genuine progeny of common humanity, such as the world will always supply, and observation will always find. His persons act and speak by the influence of those general passions and principles by which all minds are agitated, and the whole system of life is continued in motion. In the writings of other poets a character is too often an individual; in those of *Shakespeare* it is commonly a species.

It is from this wide extension of design that so much instruction is derived. It is this which fills the plays of *Shakespeare* with practical axioms and domestic wisdom. It was said of *Euripides*,⁶ that every verse was a precept; and it may be said of *Shakespeare*, that from his works may be collected a system of civil and oeconomical⁷ prudence. Yet his real power is not shewn in the splendour of particular passages, but by the progress of his fable,⁸ and the

tenour of his dialogue; and he that tries to recommend him by select quotations, will succeed like the pedant in *Hierocles*,⁹ who, when he offered his house to sale, carried a brick in his pocket as a specimen.

It will not easily be imagined how much *Shakespeare* excels in accomodating his sentiments to real life, but by comparing him with other authours. It was observed of the ancient schools of declamation, that the more diligently they were frequented, the more was the student disqualified for the world, because he found nothing there which he should ever meet in any other place. The same remark may be applied to every stage but that of *Shakespeare*. The theatre, when it is under any other direction, is peopled by such characters as were never seen, conversing in a language which was never heard, upon topicks which will never arise in the commerce of mankind. But the dialogue of this authour is often so evidently determined by the incident which produces it, and is pursued with so much ease and simplicity, that it seems scarcely to claim the merit of fiction, but to have been gleaned by diligent selection out of common conversation, and common occurrences.

Upon every other stage the universal agent is love, by whose power all good and evil is distributed, and every action quickened or retarded. To bring a lover, a lady and a rival into the fable; to entangle them in contradictory obligations, perplex them with oppositions of interest, and harrass them with violence of desires inconsistent with each other; to make them meet in rapture and part in agony; to fill their mouths with hyperbolical joy and outrageous sorrow; to distress them as nothing human ever was distressed; to deliver them as nothing human ever was delivered; is the business of a modern dramatist. For this probability is violated, life is misrepresented, and language is depraved. But love is only one of many passions; and as it has no great influence upon the sum of life, it has little operation in the dramas of a poet, who caught his ideas from the living world, and exhibited only what he saw before him. He knew, that any other passion, as it was regular or exorbitant, was a cause of happiness or calamity.

Characters thus ample and general were not easily discriminated and preserved; yet perhaps no poet ever kept his personages more distinct from each other. I will not say with *Pope*,¹ that every speech may be assigned to the proper speaker, because many speeches there are which have nothing characteristical; but perhaps, though some may be equally adapted to every person, it will be difficult to find, any that can be properly transferred from the present possessor to another claimant. The choice is right, when there is reason for choice.

Other dramatists can only gain attention by hyperbolical or aggravated characters, by fabulous and unexampled excellence or depravity, as the writers of barbarous romances invigorated the reader by a giant and a dwarf; and he that should form his expectations of human affairs from the play, or from the tale, would be equally deceived. *Shakespeare* has no heroes; his scenes are occupied only by men, who act and speak as the reader thinks that he should himself have spoken or acted on the same occasion: Even where the agency is supernatural the dialogue is level with life. Other writers disguise

9. Hierocles of Alexander (5th c. C.E.), Greek Neoplatonic philosopher and author of a book of humorous anecdotes that Johnson translated in

1741.

1. In *Preface to Shakespeare* (1725), by ALEXANDER POPE (1688-1744).

the most natural passions and most frequent incidents; so that he who contemplates them in the book will not know them in the world: *Shakespeare* approximates the remote, and familiarizes the wonderful; the event which he represents will not happen, but if it were possible, its effects would probably be such as he has assigned; and it may be said, that he has not only shewn human nature as it acts in real exigencies, but as it would be found in trials, to which it cannot be exposed.

This therefore is the praise of *Shakespeare*, that his drama is the mirror of life; that he who has mazed² his imagination, in following the phantoms which other writers raise up before him, may here be cured of his delirious extasies, by reading human sentiments in human language, by scenes from which a hermit may estimate the transactions of the world, and a confessor predict the progress of the passions.

His adherence to general nature has exposed him to the censure of critics, who form their judgments upon narrower principles. *Dennis* and *Rhymer* think his *Romans* not sufficiently *Roman*; and *Voltaire*³ censures his kings as not completely royal. *Dennis* is offended, that *Menenius*,⁴ a senator of *Rome*, should play the buffoon; and *Voltaire* perhaps thinks decency violated when the *Danish Usurper*⁵ is represented as a drunkard. But *Shakespeare* always makes nature predominate over accident; and if he preserves the essential character, is not very careful of distinctions superinduced and adventitious. His story requires Romans or kings, but he thinks only on men. He knew that *Rome*, like every other city, had men of all dispositions; and wanting a buffoon, he went into the senate-house for that which the senate-house would certainly have afforded him. He was inclined to shew an usurper and a murderer not only odious but despicable, he therefore added drunkenness to his other qualities, knowing that kings love wine like other men, and that wine exerts its natural power upon kings. These are the petty cavils of petty minds; a poet overlooks the casual distinction of country and condition, as a painter, satisfied with the figure, neglects the drapery.

The censure which he has incurred⁶ by mixing comick and tragick scenes, as it extends to all his works, deserves more consideration. Let the fact be first stated, and then examined.

Shakespeare's plays are not in the rigorous and critical sense either tragedies or comedies, but compositions of a distinct kind; exhibiting the real state of sublunary⁷ nature, which partakes of good and evil, joy and sorrow, mingled with endless variety of proportion and innumerable modes of combination; and expressing the course of the world, in which the loss of one is the gain of another; in which, at the same time, the reveller is hastening to his wine, and the mourner burying his friend; in which the malignity of one is sometimes defeated by the frolick of another; and many mischiefs and many benefits are done and hindered without design.

Out of this chaos of mingled purposes and casualties the ancient poets, according to the laws which custom had prescribed, selected some the crimes

7. Beneath the moon; of this world, earthly.

of men, and some their absurdities; some the momentous vicissitudes of life, and some the lighter occurrences; some the terrors of distress, and some the gayeties of prosperity. Thus rose the two modes of imitation, known by the names of *tragedy* and *comedy*, compositions intended to promote different ends by contrary means, and considered as so little allied, that I do not recollect among the *Greeks* or *Romans* a single writer who attempted both.

Shakespeare has united the powers of exciting laughter and sorrow not only in one mind, but in one composition. Almost all his plays are divided between serious and ludicrous characters, and, in the successive evolutions of the design, sometimes produce seriousness and sorrow, and sometimes levity and laughter.

That this is a practice contrary to the rules of criticism will be readily allowed; but there is always an appeal open from criticism to nature. The end of writing is to instruct; the end of the poetry is to instruct by pleasing.⁸ That the mingled drama may convey all the instruction of tragedy or comedy cannot be denied, because it includes both in its alternations of exhibition and approaches nearer than either to the appearance of life, by shewing how great machinations and slender designs may promote or obviate one another, and the high and the low co-operate in the general system by unavoidable concatenation.

It is objected, that by this change of scenes the passions are interrupted in their progression, and that the principal event, being not advanced by a due gradation of preparatory incidents, wants at last the power to move, which constitutes the perfection of dramatick poetry. This reasoning is so specious, that it is received as true even by those who in daily experience feel it to be false. The interchanges of mingled scenes seldom fail to produce the intended vicissitudes of passion. Fiction cannot move so much, but that the attention may be easily transferred; and though it must be allowed that pleasing melancholy be sometimes interrupted by unwelcome levity, yet let it be considered likewise, that melancholy is often not pleasing, and that the disturbance of one man may be the relief of another; that different auditors have different habitudes; and that, upon the whole, all pleasure consists in variety.

The players,⁹ who in their edition divided our authour's works into comedies, histories, and tragedies, seem not to have distinguished the three kinds by any very exact or definite ideas.

An action which ended happily to the principal persons, however serious or distressful through its intermediate incidents, in their opinion, constituted a comedy. This idea of a comedy continued long amongst us; and plays were written, which, by changing the catastrophe, were tragedies to-day, and comedies to-morrow.

Tragedy was not in those times poem of more general dignity or elevation than comedy; it required only a calamitous conclusion, with which the common criticism of that age was satisfied, whatever lighter pleasure it afforded in its progress.

History was a series of actions, with no other than chronological succession, independent on each other, and without any tendency to introduce or regulate the conclusion. It is not always very nicely distinguished from trag-

8. See Horace, *Ars Poetica*, lines 343-44 (above).

9. John Heminges (d. 1630) and Henry Condell (d. 1627), members of Shakespeare's acting com-

pany, edited the *Shakespeare First Folio*, published in 1623.

edy. There is not much nearer approach to unity of action in the tragedy of *Antony and Cleopatra*, than in the history of *Richard the Second*. But a history might be continued through many plays; as it had no plan, it had no limits.

Through all these denominations of the drama, *Shakespeare's* mode of composition is the same; an interchange of seriousness and merriment, by which the mind is softened at one time, and exhilarated at another. But whatever be his purpose, whether to gladden or depress, or to conduct the story, without vehemence or emotion, through tracts of easy and familiar dialogue, he never fails to attain his purpose; as he commands us, we laugh or mourn, or sit silent with quiet expectation, in tranquillity without indifference.

When *Shakespeare's* plan is understood, most of the criticisms of *Rhymer* and *Voltaire* vanish away. The play of *Hamlet* is opened, without impropriety, by two sentinels; *Iago*¹ bellows at *Brabantio's* window, without injury to the scheme of the play, though in terms which a modern audience would not easily endure; the character of *Polonius*² is seasonable and useful; and the *Grave-diggers* themselves may be heard with applause.

Shakespeare engaged in dramatick poetry with the world open before him; the rules of the ancients were yet known to few; the publick judgment was unformed; he had no example of such fame as might force him upon imitation, nor criticks of such authority as might restrain his extravagance: He therefore indulged his natural disposition, and his disposition, as *Rhymer* has remarked, led him to comedy. In tragedy he often writes, with great appearance of toil and study, what is written at last with little felicity; but in his comick scenes, he seems to produce without labour, what no labour can improve. In tragedy he is always struggling after some occasion to be comick; but in comedy he seems to repose, or to luxuriate, as in a mode of thinking congenial to his nature. In his tragick scenes there is always something wanting, but his comedy often surpasses expectation or desire. His comedy pleases by the thoughts and the language, and his tragedy for the greater part by instinct and action. His tragedy seems to be skill, his comedy to be instinct.

The force of his comick scenes has suffered little diminution from the changes made by a century and a half, in manners or in words. As his personages act upon principles arising from genuine passion, very little modified by particular forms, their pleasures and vexations are communicable to all times and to all places; they are natural, and therefore durable; the adventitious peculiarities of personal habits, are only superficial dies, bright and pleasing for a little while, yet soon fading to a dim tinct, without any remains of former lustre; but the discriminations of true passion are the colours of nature; they pervade the whole mass, and can only perish with the body that exhibits them. The accidental compositions of heterogeneous modes are dissolved by the chance which combined them; but the uniform simplicity of primitive qualities neither admits increase, nor suffers decay. The sand heaped by one flood is scattered by another, but the rock always continues in its place. The stream of time, which is continually washing the dissoluble fabricks of other poets, passes without injury by the adamant³ of *Shakespeare*.

If there be, what I believe there is, in every nation, a style which never

1. In *Othello* (1603-04).

2. A meddling figure of comedy in *Hamlet*, as are the grave diggers.

3. An impregnable and surpassingly hard substance.

becomes obsolete, a certain mode of phraseology so consonant and congenial to the analogy and principles of its respective language as to remain settled and unaltered; this style is probably to be sought in the common intercourse of life, among those who speak only to be understood, without ambition of elegance. The polite are always catching modish innovations, and the learned depart from established forms of speech, in hope of finding or making better; those who wish for distinction forsake the vulgar, when the vulgar is right; but there is a conversation above grossness and below refinement, where propriety resides, and where this poet seems to have gathered his comick dialogue. He is therefore more agreeable to the ears of the present age than any other authour equally remote, and among his other excellencies deserves to be studied as one of the original masters of our language.

These observations are to be considered not as unexceptionably constant, but as containing general and predominant truth. *Shakespeare's* familiar dialogue is affirmed to be smooth and clear, yet not wholly without ruggedness or difficulty; as a country may be eminently fruitful, though it has spots unfit for cultivation: His characters are praised as natural, though their sentiments are sometimes forced, and their actions improbable; as the earth upon the whole is spherical, though its surface is varied with protuberances and cavities.

Shakespeare with his excellencies has likewise faults, and faults sufficient to obscure and overwhelm any other merit. I shall shew them in the proportion in which they appear to me, without envious malignity or superstitious veneration. No question can be more innocently discussed than a dead poet's pretensions to renown; and little regard is due to that bigotry which sets candour higher than truth.

His first defect is that to which may be imputed most of the evil in books or in men. He sacrifices virtue to convenience, and is so much more careful to please than to instruct, that he seems to write without any moral purpose. From his writings indeed a system of social duty may be selected, for he that thinks reasonably must think morally; but his precepts and axioms drop casually from him; he makes no just distribution of good or evil, nor is always careful to shew in the virtuous a disapprobation of the wicked; he carries his persons indifferently through right and wrong, and at the close dismisses them without further care, and leaves their examples to operate by chance. This fault the barbarity of his age cannot extenuate; for it is always a writer's duty to make the world better, and justice is a virtue independent on⁴ time or place.

The plots are often so loosely formed, that a very slight consideration may improve them, and so carelessly pursued, that he seems not always fully to comprehend his own design. He omits opportunities of instructing or delighting which the train of his story seems to force upon him, and apparently rejects those exhibitions which would be more affecting, for the sake of those which are more easy.

It may be observed, that in many of his plays the latter part is evidently neglected. When he found himself near the end of his work, and, in view of his reward, he shortened the labour to snatch the profit. He therefore remits his efforts where he should most vigorously exert them, and his catastrophe⁵ is improbably produced or imperfectly represented.

4. Independent of.

5. The climax of a dramatic action.

He had no regard to distinction of time or place, but gives to one age or nation, without scruple, the customs, institutions, and opinions of another, at the expence not only of likelihood, but of possibility. These faults *Pope* has endeavoured, with more zeal than judgment, to transfer to his imagined interpolators.⁶ We need not wonder to find *Hector* quoting *Aristotle*, when we see the loves of *Theseus* and *Hippolyta*⁷ combined with the *Gothick* mythology of fairies. *Shakespeare*, indeed, was not the only violator of chronology, for in the same age *Sidney*, who wanted not the advantages of learning, has, in his *Arcadia*,⁸ confounded the pastoral with the feudal times, the days of innocence, quiet and security, with those of turbulence, violence, and adventure.

In his comick scenes he is seldom very successful, when he engages his characters in reciprocations of smartness and contests of sarcasm; their jests are commonly gross, and their pleasantry licentious; neither his gentlemen nor his ladies have much delicacy, nor are sufficiently distinguished from his clowns by any appearance of refined manners. Whether he represented the real conversation of his time is not easy to determine; the reign of *Elizabeth*⁹ is commonly supposed to have been a time of stateliness, formality and reserve; yet perhaps the relaxations of that severity were not very elegant. There must, however, have been always some modes of gayety preferable to others, and a writer ought to chuse the best.

In tragedy his performance seems constantly to be worse, as his labour is more. The effusions of passion which exigence forces out are for the most part striking and energetic; but whenever he solicits his invention, or strains his faculties, the offspring of his throes is tumour,¹ meanness, tediousness, and obscurity.

In narration he affects a disproportionate pomp of diction, and a wearisome train of circumlocution, and tells the incident imperfectly in many words, which might have been more plainly delivered in few. Narration in dramattick poetry is naturally tedious, as it is unanimated and inactive, and obstructs the progress of the action; it should therefore always be rapid, and enlivened by frequent interruption. *Shakespeare* found it an encumbrance, and instead of lightening it by brevity, endeavoured to recommend it by dignity and splendour.

His declamations or set speeches are commonly cold and weak, for his power was the power of nature; when he endeavoured, like other tragick writers, to catch opportunities of amplification, and instead of inquiring what the occasion demanded, to show how much his stores of knowledge could supply, he seldom escapes without the pity or resentment of his reader.

It is incident² to him to be now and then entangled with an unwieldy sentiment, which he cannot well express, and will not reject; he struggles with it a while, and if it continues stubborn, comprises it in words such as occur, and leaves it to be disentangled and evolved³ by those who have more leisure to bestow upon it.

6. In his *Preface to Shakespeare*, *Pope* maintained that "the many blunders and illiteracies of the first publishers of [Shakespeare's] works" explain why the texts are marred by errors and anachronisms.

7. Figures from Greek mythology who are characters in *A Midsummer Night's Dream* (ca. 1595). *Hector*: a character in *Troilus and Cressida* (1601–02; sec 2.2.165–66); the Greek philosopher *ARISTOTLE* (384–322 B.C.E.) lived centuries after the

events in that play are presumed to have occurred.
8. A prose romance (1590) by SIR PHILIP SIDNEY (1554–1586).

9. Elizabeth I (1533–1603; reigned 1558–1603).

1. "Affected pomp; false magnificence; puffy grandeur" (*Johnson's Dictionary*).

2. Likely to happen.

3. Deduced, worked out. "Comprises": sums up.

Not that always where the language is intricate the thought is subtle, or the image always great where the line is bulky; the equality of words to things is very often neglected, and trivial sentiments and vulgar ideas disappoint the attention, to which they are recommended by sonorous epithets and swelling figures.⁴

But the admirers of this great poet have never less reason to indulge their hopes of supreme excellence, than when he seems fully resolved to sink them in dejection, and mollify them with tender emotions by the fall of greatness, the danger of innocence, or the crosses of love. He is not long soft and pathetick without some idle conceit, or contemptible equivocation. He no sooner begins to move, than he counteracts himself; and terrour and pity, as they are rising in the mind, are checked and blasted by sudden frigidity.

A quibble⁵ is to *Shakespeare*, what luminous vapours are to the traveller; he follows it at all adventures; it is sure to lead him out of his way, and sure to engulf him in the mire. It has some malignant power over his mind, and its fascinations are irresistible. Whatever be the dignity or profundity of his disquisition, whether he be enlarging knowledge or exalting affection, whether he be amusing attention with incidents, or enchaining it in suspense; let but a quibble spring up before him, and he leaves his work unfinished. A quibble is the golden apple for which he will always turn aside from his career,⁶ or stoop from his elevation. A quibble, poor and barren as it is, gave him such delight, that he was content to purchase it, by the sacrifice of reason, propriety and truth. A quibble was to him the fatal *Cleopatra* for which he lost the world, and was content to lose it.⁷

It will be thought strange, that, in enumerating the defects of this writer, I have not yet mentioned his neglect of the unities;⁸ his violation of those laws which have been instituted and established by the joint authority of poets and of criticks.

For his other deviations from the art of writing I resign him to critical justice, without making any other demand in his favour, than that which must be indulged to all human excellence: that his virtues be rated with his failings: But, from the censure which this irregularity may bring upon him, I shall, with due reverence to that learning which I must oppose, adventure to try how I can defend him.

His histories, being neither tragedies nor comedies are not subject to any of their laws; nothing more is necessary to all the praise which they expect, than that the changes of action be so prepared as to be understood, that the incidents be various and affecting, and the characters consistent, natural, and distinct. No other unity is intended, and therefore none is to be sought.

In his other works he has well enough preserved the unity of action. He has not, indeed, an intrigue regularly perplexed and regularly unravelled: he does not endeavour to hide his design only to discover it, for this is seldom the order of real events, and *Shakespeare* is the poet of nature: But his plan has commonly what *Aristotle* requires, a beginning, a middle, and an end;⁹

4. Figures of speech.

5. "A low conceit depending on the sound of words; a pun" (*Johnson's Dictionary*).

6. Course. In Greek mythology, Atalanta lost a footrace to Hippomenes (who thereby won her in marriage) because she paused to pick up three golden apples that he dropped in her path.

7. In *Shakespeare's* tragedy *Antony and Cleopatra* (1606–07), the renowned soldier Mark Antony is willing to trade his eminent position for the love of the Egyptian queen Cleopatra.

8. That is, the neoclassical unities of time, place, and action.

9. *Aristotle*, *Poetics* 7 (see above).

one event is concatenated with another, and the conclusion follows by easy consequence. There are perhaps some incidents that might be spared, as in other poets there is much talk that only fills up time upon the stage; but the general system makes gradual advances, and the end of the play is the end of expectation.

To the unities of time and place he has shewn no regard; and perhaps a nearer view of the principles on which they stand will diminish their value, and withdraw from them the veneration which, from the time of *Corneille*,¹ they have very generally received, by discovering that they have given more trouble to the poet, than pleasure to the auditor.

The necessity of observing the unities of time and place arises from the supposed necessity of making the drama credible. The criticks hold it impossible, that an action of months or years can be possibly believed to pass in three hours; or that the spectator can suppose himself to sit in the theatre, while ambassadors go and return between distant kings, while armies are levied and towns besieged, while an exile wanders and returns, or till he whom they saw courting his mistress, shall lament the untimely fall of his son. The mind revolts from evident falsehood, and fiction loses its force when it departs from the resemblance of reality.

From the narrow limitation of time necessarily arises the contraction of place. The spectator, who knows that he saw the first act at *Alexandria*, cannot suppose that he sees the next at *Rome*, at a distance to which not the dragons of *Medea*² could, in so short a time, have transported him; he knows with certainty that he has not changed his place, and he knows that place cannot change itself; that what was a house cannot become a plain; that what was *Thebes* can never be *Persepolis*.

Such is the triumphant language with which a critick exults over the misery of an irregular poet, and exults commonly without resistance or reply. It is time therefore to tell him by the authority of *Shakespeare*, that he assumes, as an unquestionable principle, a position, which, while his breath is forming it into words, his understanding pronounces to be false. It is false, that any representation is mistaken for reality; that any dramattick fable in its materiality was ever credible, or, for a single moment, was ever credited.

The objection arising from the impossibility of passing the first hour at *Alexandria*, and the next at *Rome*, supposes, that when the play opens, the spectator really imagines himself at *Alexandria*, and believes that his walk to the theatre has been a voyage to *Egypt*, and that he lives in the days of *Antony* and *Cleopatra*. Surely he that imagines this may imagine more. He that can take the stage at one time for the palace of the *Ptolemies*, may take it in half an hour for the promontory of *Actium*. Delusion, if delusion be admitted, has no certain limitation; if the spectator can be once persuaded, that his old acquaintance are *Alexander* and *Caesar*, that a room illuminated with candles is the plain of *Pharsalia*, or the bank of *Granicus*,³ he is in a state of elevation above the reach of reason, or of truth, and from the heights of

1. PIERRE CORNEILLE (1606–1684), French tragic dramatist whose very popular play *Le Cid* was criticized for violating the three unities. See his *Of the Three Unities* (1660; above).

2. According to Greek mythology, after avenging herself on her unfaithful husband, Jason, by murdering their children, Medea departed in a chariot

drawn by dragons.

3. A river in Asia Minor (near the site of Troy) that gave its name to a famous battle at which Alexander the Great routed the Persians (334 B.C.E.). Pharsalia: at Pharsalus, Julius Caesar defeated his Roman rival Pompey (48 B.C.E.).

empyrean poetry, may despise the circumscriptions of terrestrial nature. There is no reason why a mind thus wandering in extasy should count the clock, or why an hour should not be a century in that calenture⁴ of the brains that can make the stage a field.

The truth is, that the spectators are always in their senses, and know, from the first act to the last, that the stage is only a stage, and that the players are only players. They came to hear a certain number of lines recited with just gesture and elegant modulation. The lines relate to some action, and an action must be in some place; but the different actions that compleat a story may be in places very remote from each other; and where is the absurdity of allowing that space to represent first *Athens*, and then *Sicily*, which was always known to be neither *Sicily* nor *Athens*, but a modern theatre?

By supposition, as place is introduced, time may be extended; the time required by the fable elapses for the most part between the acts; for, of so much of the action as is represented, the real and poetical duration is the same. If, in the first act, preparations for war against *Mithridates* are represented to be made in *Rome*, the event of the war may, without absurdity, be represented, in the catastrophe, as happening in *Pontus*; we know that there is neither war, nor preparation for war; we know that we are neither in *Rome* nor *Pontus*; that neither *Mithridates* nor *Lucullus* are before us. The drama exhibits successive imitations of successive actions; and why may not the second imitation represent an action that happened years after the first, if it be so connected with it, that nothing but time can be supposed to intervene? Time is, of all modes of existence, most obsequious to the imagination; a lapse of years is as easily conceived as a passage of hours. In contemplation we easily contract the time of real actions, and therefore willingly permit it to be contracted when we only see their imitation.

It will be asked, how the drama moves, if it is not credited. It is credited with all the credit due to a drama. It is credited, whenever it moves, as a just picture of a real original; as representing to the auditor what he would himself feel, if he were to do or suffer what is there feigned to be suffered or to be done. The reflection that strikes the heart is not, that the evils before us are real evils, but that they are evils to which we ourselves may be exposed. If there be any fallacy, it is not that we fancy the players, but that we fancy ourselves unhappy for a moment; but we rather lament the possibility than suppose the presence of misery, as a mother weeps over her babe, when she remembers that death may take it from her. The delight of tragedy proceeds from our consciousness of fiction; if we thought murders and treasons real, they would please no more.

Imitations produce pain or pleasure, not because they are mistaken for realities, but because they bring realities to mind. When the imagination is recreated by a painted landscape, the trees are not supposed capable to give us shade, or the fountains coolness; but we consider, how we should be pleased with such fountains playing beside us, and such woods waving over us. We are agitated in reading the history of *Henry* the Fifth, yet no man takes his book for the field of *Agencourt*.⁵ A dramattick exhibition is a book recited with concomitants that encrease or diminish its effect. Familiar comedy is often more powerful on the theatre, than in the page; imperial tragedy

4. A delirium (specifically, a delusion suffered by sailors who imagine that the sea is a green field).

5. Agencourt, a village in France near which an

English army under Henry V defeated a much larger French force in 1415.

is always less. The humour of *Petruchio* may be heightened by grimace; but what voice or what gesture can hope to add dignity or force to the soliloquy of *Cato*.⁶

A play read, affects the mind like a play acted. It is therefore evident, that the action is not supposed to be real; and it follows, that between the acts a longer or shorter time may be allowed to pass, and that no more account of space or duration is to be taken by the auditor of a drama, than by the reader of a narrative, before whom may pass in an hour the life of a hero, or the revolutions of an empire.

Whether *Shakespeare* knew the unities, and rejected them by design, or deviated from them by happy ignorance, it is, I think, impossible to decide, and useless to enquire. We may reasonably suppose, that, when he rose to notice, he did not want⁷ the counsels and admonitions of scholars and critics, and that he at last deliberately persisted in a practice, which he might have begun by chance. As nothing is essential to the fable, but unity of action, and as the unities of time and place arise evidently from false assumptions, and, by circumscribing the extent of the drama, lessen its variety, I cannot think it much to be lamented, that they were not known by him, or not observed: Nor, if such another poet could arise, should I very vehemently reproach him, that his first act passed at *Venice*, and his next in *Cyprus*.⁸ Such violations of rules merely positive,⁹ become the comprehensive genius of *Shakespeare*, and such censures are suitable to the minute and slender criticism of *Voltaire*:

*Non usque adeo permiscuit imis
Longus summa dies, ut non, si voce Metelli
Serventur leges, malint a Caesare tolli.*¹

Yet when I speak thus slightly of dramattick rules, I cannot but recollect how much wit and learning may be produced against me; before such authorities I am afraid to stand, not that I think the present question one of those that are to be decided by mere authority, but because it is to be suspected, that these precepts have not been so easily received but for better reasons than I have yet been able to find. The result of my enquiries, in which it would be ludicrous to boast of impartiality, is, that the unities of time and place are not essential to a just drama, that though they may sometimes conduce to pleasure, they are always to be sacrificed to the nobler beauties of variety and instruction; and that a play, written with nice² observation of critical rules, is to be contemplated as an elaborate curiosity, as the product of superfluous and ostentatious art, by which is shewn, rather what is possible, than what is necessary.

He that, without diminution of any other excellence, shall preserve all the unities unbroken, deserves the like applause with the architect, who shall display all the orders of architecture³ in a citadel, without any deduction

6. The title character of a tragedy by JOSEPH ADDISON (1713); his soliloquy on immortality (5.1.1–40), delivered just before he kills himself, was admired in the 18th century as an expression of noble sentiment. *Petruchio*: Petruccio, the hero in *Shakespeare's* comedy *The Taming of the Shrew* (ca. 1592).

7. Lack.

8. Places that figure in *Shakespeare's* tragedy *Othello*.

9. Arbitrary; not natural.

1. The course of time has not wrought such confusion that the laws would not rather be trampled on by Caesar than saved by Metellus (Latin; trans. J. D. Duff). From Lucan, *Civil War* (ca. 63 C.E.), 3.138–40.

2. Precise.

3. Building styles, characterized by the type of classical column used.

from its strength; but the principal beauty of a citadel is to exclude the enemy; and the greatest graces of a play, are to copy nature and instruct life.

Perhaps, what I have here not dogmatically but deliberately written, may recal the principles of the drama to a new examination. I am almost frightened at my own temerity; and when I estimate the fame and the strength of those that maintain the contrary opinion, am ready to sink down in reverential silence; as *Aeneas* withdrew from the defence of *Troy*, when he saw *Neptune* shaking the wall, and *Juno* heading the besiegers.⁴

Those whom my arguments cannot persuade to give their approbation to the judgment of *Shakespeare*, will easily, if they consider the condition of his life, make some allowance for his ignorance.

Every man's performances, to be rightly estimated, must be compared with the state of the age in which he lived, and with his own particular opportunities; and though to the reader a book be not worse or better for the circumstances of the authour, yet as there is always a silent reference of human works to human abilities, and as the enquiry, how far man may extend his designs, or how high he may rate his native force, is of far greater dignity than in what rank we shall place any particular performance, curiosity is always busy to discover the instruments, as well as to survey the workmanship, to know how much is to be ascribed to original powers, and how much to casual and adventitious help. The palaces of *Peru* or *Mexico* were certainly mean and incommodious habitations, if compared to the houses of *European* monarchs; yet who could forbear to view them with astonishment, who remembered that they were built without the use of iron?

From Lives of the English Poets

From Cowley¹

* * *

[ON METAPHYSICAL WIT]

Cowley, like other poets who have written with narrow views and, instead of tracing intellectual pleasure to its natural sources in the mind of man, paid their court to temporary prejudices, has been at one time too much praised and too much neglected at another.

Wit, like all other things subject by their nature to the choice of man, has its changes and fashions, and at different times takes different forms. About the beginning of the seventeenth century appeared a race of writers that may be termed the metaphysical poets,² of whom in a criticism on the works of Cowley it is not improper to give some account.

4. See Virgil, *Aeneid* (19 B.C.E.) 2.610–14. Aeneas is a heroic warrior, but Neptune and Juno are gods.

1. The English poet and essayist Abraham Cowley (1618–1667).

2. A term probably taken from JOHN DRYDEN'S

complaint about the poetry of John Donne (1572–1631) in *A Discourse Concerning the Original and Progress of Satire* (1693): "He affects the metaphysics . . . and perplexes the minds of the fair sex with nice speculations of philosophy, when he

The metaphysical poets were men of learning, and to shew their learning was their whole endeavour; but, unluckily resolving to shew it in rhyme, instead of writing poetry they only wrote verses, and very often such verses as stood the trial of the finger better than of the ear; for the modulation was so imperfect that they were only found to be verses by counting the syllables.

If the father of criticism³ has rightly denominated poetry τέχνη μιμητική, *an imitative art*, these writers will without great wrong lose their right to the name of poets, for they cannot be said to have imitated any thing: they neither copied nature nor life; neither painted the forms of matter nor represented the operations of intellect.

Those however who deny them to be poets allow them to be wits. Dryden confesses of himself and his contemporaries that they fall below Donne in wit, but maintains that they surpass him in poetry.

If Wit be well described by Pope as being 'that which has been often thought, but was never before so well expressed,'⁴ they certainly never attained nor ever sought it, for they endeavoured to be singular in their thoughts; and were careless of their diction. But Pope's account of wit is undoubtedly erroneous; he depresses it below its natural dignity, and reduces it from strength of thought to happiness of language.

If by a more noble and more adequate conception that be considered as Wit which is at once natural and new, that which though not obvious is, upon its first production, acknowledged to be just; if it be that, which he that never found it, wonders how he missed; to wit of this kind the metaphysical poets have seldom risen. Their thoughts are often new, but seldom natural; they are not obvious, but neither are they just; and the reader, far from wondering that he missed them, wonders more frequently by what perverse-ness of industry they were ever found.

But Wit, abstracted from its effects upon the hearer, may be more rigorously and philosophically considered as a kind of *discordia concors*;⁵ a combination of dissimilar images, or discovery of occult resemblances in things apparently unlike. Of wit, thus defined, they have more than enough. The most heterogeneous ideas are yoked by violence together; nature and art are ransacked for illustrations, comparisons, and allusions; their learning instructs, and their subtilty surprises; but the reader commonly thinks his improvement dearly bought, and, though he sometimes admires, is seldom pleased.

From this account of their compositions it will be readily inferred that they were not successful in representing or moving the affections. As they were wholly employed on something unexpected and surprising they had no regard to that uniformity of sentiment, which enables us to conceive and to excite the pains and the pleasure of other minds: they never enquired what on any occasion they should have said or done, but wrote rather as beholders than partakers of human nature; as beings looking upon good and evil, impassive and at leisure; as Epicurean⁶ deities making remarks on the actions of men

should engage their hearts, and entertain them with the softness of love." See also T. S. ELIOT, "The Metaphysical Poets" (1921; below).

3. The Greek philosopher ARISTOTLE (387-322 B.C.E.).

4. Slightly misquoted from *An Essay on Criticism* (1711), line 298, by ALEXANDER POPE (1688-

1744; see above).

5. Harmonious disharmony (Latin).

6. That is, free from disturbance. The Greek philosopher Epicurus (341-270 B.C.E.) taught that personal happiness is the highest good, best attained through austere living and the study of philosophy.

and the vicissitudes of life, without interest and without emotion. Their courtship was void of fondness and their lamentation of sorrow. Their wish was only to say what they hoped had been never said before.

Nor was the sublime⁷ more within their reach than the pathetic; for they never attempted that comprehension and expanse of thought which at once fills the whole mind, and of which the first effect is sudden astonishment, and the second rational admiration. Sublimity is produced by aggregation, and littleness by dispersion: Great thoughts are always general, and consist in positions not limited by exceptions, and in descriptions not descending to minuteness. It is with great propriety that subtlety, which in its original import means exility⁸ of particles, is taken in its metaphorical meaning for nicety of distinction. Those writers who lay on the watch for novelty could have little hope of greatness; for great things cannot have escaped former observation. Their attempts were always analytick: they broke every image into fragments, and could no more represent by their slender conceits and laboured particularities the prospects of nature or the scenes of life, than he who dissects a sun-beam with a prism can exhibit the wide effulgence of a summer noon.

What they wanted however of the sublime they endeavoured to supply by hyperbole; their amplification had no limits: they left not only reason but fancy behind them, and produced combinations of confused magnificence that not only could not be credited, but could not be imagined.

Yet great labour directed by great abilities is never wholly lost: if they frequently threw away their wit upon false conceits, they likewise sometimes struck out unexpected truth: if their conceits were far-fetched, they were often worth the carriage.⁹ To write on their plan it was at least necessary to read and think. No man could be born a metaphysical poet, nor assume the dignity of a writer by descriptions copied from descriptions, by imitations borrowed from imitations, by traditional imagery and hereditary similes, by readiness of rhyme and volubility of syllables.

In perusing the works of this race of authors the mind is exercised either by recollection or inquiry; either something already learned is to be retrieved, or something new is to be examined. If their greatness seldom elevates, their acuteness often surprises; if the imagination is not always gratified, at least the powers of reflection and comparison are employed; and in the mass of materials, which ingenious absurdity has thrown together, genuine wit and useful knowledge may be sometimes found, buried perhaps in grossness of expression, but useful to those who know their value, and such as, when they are expanded to perspicuity and polished to elegance, may give lustre to works which have more propriety though less copiousness of sentiment.

7. On the sublime, see the writings of JOSEPH ADDISON (1672-1719; above) and EDMUND BURKE (1729-1797; below).

8. Smallness in number or size.

9. That is, worth the trouble of carrying them so far.

DAVID HUME

1711–1776

The Scottish philosopher and historian David Hume responded to and developed the empiricist work of his predecessors John Locke (1632–1704) and George Berkeley (1685–1753). He, too, opposed the rationalist belief in innate ideas and held that knowledge derives from experience. But he moved beyond them toward a position of radical skepticism, denying the possibility of certain knowledge and maintaining that the mind itself is a bundle of sensations. Indeed, Hume reached the conclusion that we cannot derive and prove a theory of reality at all; we can know only experience and must base our beliefs upon it.

Hume is one of the major figures of the Enlightenment. Many criticized his skeptical views as extremist and alarming, especially because they challenged religious orthodoxy; yet many others acclaimed him as one of Scotland's and Europe's foremost thinkers. In the words of the modern scholar Walter Jackson Bate, "in Hume's writings, human reason was dissected with such devastating effect that philosophy has never since quite recovered the traditional classical confidence in reason." This achievement is all the more fascinating from a man described by one friend, the Scottish economist Adam Smith, "as approaching as nearly to the idea of a perfectly wise and virtuous man, as perhaps the nature of human frailty will admit."

Hume's major philosophical and moral writings include *A Treatise of Human Nature* (1739–40), usually regarded as his masterpiece and an extraordinary achievement for an author in his mid-twenties; *Essays, On Moral and Political Subjects* (1741); *An Enquiry Concerning Human Understanding*—a simplified version of the *Treatise* (1748); and *An Enquiry Concerning the Principles of Morals* (1751, "of all my writings incomparably the best"). He also wrote *Political Discourses* (1752), *The Natural History of Religion* (1755), and the *History of England* (6 vols., 1754–62), which for decades was the standard work in the field. The extent of Hume's skepticism is reflected in his late writings on religion, where he disputes all claims for any rational or natural theology; knowing that these ideas would be controversial, he withheld the text of *The Dialogues Concerning Natural Religion* (1779) until after his death.

Born in Edinburgh, David Hume attended the university there. In 1734 he journeyed to Anjou, in northwest France, where he studied and wrote. In 1739 he returned to England to help prepare his *Treatise* for publication. Later in life, Hume professed that this book was ill-argued and philosophically immature, yet it remains perhaps his most widely read work (particularly the first section, on morals). The poor response to the *Treatise* deeply disappointed him—he remarked that it "fell dead-born from the press"—but the greater success of the later *Essays* led him to hope that he might be selected for the chair of moral philosophy at the University of Edinburgh in 1744. His critics, however, protested that his views were heretical and even atheistic. For example, Hume argued that "the idea of God, as meaning an infinitely intelligent, wise, and good Being, arises from reflecting on the operations of our own mind, and augmenting, without limit, those qualities of goodness and wisdom." Men and women, so it seems, make their Maker; and Hume's own calm in the face of such observations disturbed his detractors all the more.

Having failed to receive the academic position he sought, Hume then took leave of Edinburgh for a long period, traveling and serving in a number of educational, military, and diplomatic posts in Scotland, England, and Europe. In 1748 he published his *Enquiry Concerning Human Understanding*, which revised and popularized book 1 of his *Treatise*. Two new sections, "Of Miracles" and "Of a Particular Providence and of a Future State," show Hume's dissent from religious belief and doctrine, as does, less directly, the slightly later *Enquiry Concerning the Principles of Morals*. For Hume, sentiments and not the decrees of God are the basis for morality.

From the early 1750s to the mid-1760s, Hume spent most of his time in Edinburgh. In 1752 he was made keeper of the Advocates Library, a post that enabled him to concentrate on the historical research and writing that led to his *History*. In 1763 he took a diplomatic position in Paris, where—admired for his intellectual gifts and personality—he became friends with aristocrats and literary men. Hume spent his final years mostly in Edinburgh, revising and correcting his works. His friends Adam Smith, the writer and playwright S. J. Pratt, and Samuel Johnson's biographer James Boswell all described how Hume, without a belief in an afterlife, prepared for death—thereby sparking yet more charges of apostasy. The publication in 1779 of Hume's *Dialogues* and, in 1782, of two essays on suicide and immortality renewed these accusations and criticisms.

Hume is skeptical, but he is also intellectually curious, lucid in his prose, and cogent and complicated in his thought; he is sometimes perplexing and contradictory, but never obscure, in argument. We can gain some sense of the nature of his skepticism by pondering the connection, as he sees it, between one event and another. The *cause* of their connection, Hume argues, is something for which we have no impression and thus no idea; as a result, we ourselves infer this causal link. But while we cannot see or prove the connection, we can say we know that it exists, because of the cause-and-effect relationship that we draw from our experience, which leads us to expect that it will recur.

Our selection, "Of the Standard of Taste," is a celebrated literary performance, and it bears suggestively on modern and contemporary debates about standards in criticism, reader-response theory, interpretive communities, and canon formation. The essay itself has an unusual origin. In 1756 Hume had prepared a new book for publication, to be titled *Five Dissertations*; its five essays were "The Natural History of Religion," "Of the Passions," "Of Tragedy," "Of Suicide," and "Of the Immortality of the Soul." The antireligious thrust of the final two essays, however, made Hume's publisher fearful, and he was in fact threatened with prosecution should they appear in print. Hume replaced the two troublesome essays with "Of the Standard of Taste," and the book—retitled *Four Dissertations*—was published early in 1757.

Hume begins with the fact of critical disagreement, the wide variations in "taste" that testify both to the different observations that persons make and to the different terms—or differing meanings attached to the same terms—that they use to describe what they have experienced. In light of all this, he asks, can we ever hope to identify a "standard of taste"? The first answer seems to be that we cannot. As we ponder the idea of a standard, we find ourselves inclined to say that merit or value is always in the eye of the beholder—thus one person praises an object as beautiful that another, or most others, would say is ugly. How can that atypical view be disputed or, in Hume's word, "regulated"? We are left with differences in taste, and no standard for discriminating among them in any final sense.

But Hume then queries the position that he has just seemed to endorse. Does not common sense tell us all that in poetry John Milton is superior to John Ogilby, and in prose Joseph Addison is superior to John Bunyan? The epic poems of Homer, which gave pleasure to readers in classical times, continue to do the same for readers in England and France in the eighteenth century. His poetry has endured when that by many others (whose compositions once enjoyed a high reputation) has not. Hume therefore proposes that each person has the capacity for recognizing true beauty, which offers after all the prospect of a "true standard of taste and sentiment." Of course, not all capacities are realized; as Hume puts it, some people lack "delicacy of imagination" and are therefore unable to feel the "proper sentiment of beauty."

More experience: this is Hume's main remedy for the shortcomings in aesthetic response that afflict some persons. He recommends that they practice an art and reexamine its works, making their taste finer, more subtle and discriminating. Hume stresses the need for comparisons among a range of works only to insist, a moment later, that we examine the object at hand free from "prejudice." Here, as elsewhere,

Hume may appear to be contradicting himself on a point that he seemed to judge crucial. But such shifts are part of the open, flexible, and exploratory nature of his approach.

Hume's essay is flawed. His slighting reference to the Koran is unacceptable, and he takes for granted judgments (e.g., Addison's superiority to Bunyan) that many today would quarrel with—a point that exposes his reliance on the "common sense" of his time. Moreover, his argument has a circularity that is hard to overlook. Some persons, he says, have a finer taste than others. How do we know this? Because it is universally acknowledged to be so.

Though Hume's style marks him as a writer of the eighteenth century, in certain respects his views anticipate certain disquieting ironies of poststructuralist theory. The scholar James Engell has described Hume's position in this essay in terms that evoke JACQUES DERRIDA: "The standard of taste becomes a presence that is, in a sense, an absence. . . . Hume is saying that in matters of taste, although there is very definitely at any given time in history a center or a standard, we cannot define or find that center—at least we cannot precisely agree what it is. It is always, for us, de-centered." As a philosopher Hume is close to us; we read him often with a shock of recognition.

BIBLIOGRAPHY

For Hume's writings, see *The Essays, Moral, Political, and Literary*, edited by T. H. Green and T. H. Grose (4 vols., 1874–75), and *The Philosophical Works of David Hume*, edited by T. H. Green and T. H. Grose (4 vols., 1882–86; rpt. 1964). Eugene F. Miller has prepared a good modern edition of Hume's essays (rev. ed., 1987). For a one-volume collection, see *The Essential David Hume*, edited by Robert Paul Wolff (1969). The correspondence is available in *The Letters of David Hume*, edited by J. Y. T. Greig (2 vols., 1932), and *New Letters of David Hume*, edited by Raymond Klibansky and Ernest C. Mossner (1954). The standard biography is Ernest C. Mossner, *The Life of David Hume* (2d ed., 1980).

Chapter 2 in Terry Eagleton, *The Ideology of the Aesthetic* (1990), examining Hume, Shaftesbury, and Burke, is illuminating. Hume has also received much attention as a literary artist in his own right; see Leo Braudy, *Narrative Form in History and Fiction: Hume, Fielding, and Gibbon* (1970); John J. Richetti, *Philosophical Writing: Locke, Berkeley, Hume* (1983); Jerome Christensen, *Practicing Enlightenment: Hume and the Formation of a Literary Career* (1987); Leopold Damrosch, *Fictions of Reality in the Age of Hume and Johnson* (1989); M. A. Box, *The Suasive Art of David Hume* (1990); Adam Potkay, *The Fate of Eloquence in the Age of Hume* (1994); and Adela Pinch, *Strange Fits of Passion: Epistemologies of Emotion, Hume to Austen* (1996).

An excellent resource is *The Cambridge Companion to Hume*, edited by David Norton (1993), which includes an essay by Peter Jones on Hume's literary and aesthetic theory. See also T. E. Jessop, *A Bibliography of David Hume and of Scottish Philosophy from Frances Hutcheson to Lord Balfour* (1938); Roland Hall, *A Hume Bibliography, from 1930* (1971); the bibliographical essay in *Hume and the Enlight-*

enment (ed. William B. Todd, 1974); and Roland Hall, *Fifty Years of Hume Scholarship: A Bibliographical Guide* (1978).

Of the Standard of Taste

The great variety of Taste, as well as of opinion, which prevails in the world, is too obvious not to have fallen under every one's observation. Men of the most confined knowledge are able to remark¹ a difference of taste in the narrow circle of their acquaintance, even where the persons have been educated under the same government, and have early imbibed the same prejudices. But those, who can enlarge their view to contemplate distant nations and remote ages, are still more surprized at the great inconsistency and contrariety. We are apt to call *barbarous* whatever departs widely from our own taste and apprehension: But soon find the epithet of reproach retorted on us. And the highest arrogance and self-conceit is at last startled, on observing an equal assurance on all sides, and scruples, amidst such a contest of sentiment, to pronounce positively in its own favour.

As this variety of taste is obvious to the most careless enquirer; so will it be found, on examination, to be still greater in reality than in appearance. The sentiments of men often differ with regard to beauty and deformity of all kinds, even while their general discourse is the same. There are certain terms in every language, which import blame, and others praise; and all men, who use the same tongue, must agree in their application of them. Every voice is united in applauding elegance, propriety, simplicity, spirit in writing; and in blaming fustian, affectation, coldness, and a false brilliancy: But when critics come to particulars, this seeming unanimity vanishes; and it is found, that they had affixed a very different meaning to their expressions. In all matters of opinion and science, the case is opposite: The difference among men is there oftener found to lie in generals than in particulars; and to be less in reality than in appearance. An explanation of the terms commonly ends the controversy; and the disputants are surprized to find, that they had been quarrelling, while at bottom they agreed in their judgment.

Those who found morality on sentiment, more than on reason, are inclined to comprehend ethics under the former observation, and to maintain, that, in all questions, which regard conduct and manners, the difference among men is really greater than at first sight it appears. It is indeed obvious, that writers of all nations and all ages concur in applauding justice, humanity, magnanimity, prudence, veracity; and in blaming the opposite qualities. Even poets and other authors, whose compositions are chiefly calculated to please the imagination, are yet found from HOMER down to FENELON,² to inculcate the same moral precepts, and to bestow their applause and blame on the same virtues and vices. This great unanimity is usually ascribed to the influence of plain reason; which, in all these cases, maintains similar sentiments

1. Observe, notice.

2. François Fénelon (1651–1715), French churchman and writer, author of a didactic romance of Homeric characters, *The Adventures of Telemachus* (1699). Telemachus is the son of

Odysseus and Penelope. Homer: the epics the *Iliad* (whose central figure is Achilles) and the *Odyssey* (centered on Odysseus, or Ulysses) were often taken as the starting point of Western literature (ca. 8th c. B.C.E.).

in all men, and prevents those controversies, to which the abstract sciences are so much exposed. So far as the unanimity is real, this account may be admitted as satisfactory: But we must also allow that some part of the seeming harmony in morals may be accounted for from the very nature of language. The word *virtue*, with its equivalent in every tongue, implies praise; as that of *vice* does blame: And no one, without the most obvious and grossest impropriety, could affix reproach to a term, which in general acceptance is understood in a good sense; or bestow applause, where the idiom requires disapprobation. HOMER'S general precepts, where he delivers any such, will never be controverted; but it is obvious, that, when he draws particular pictures of manners, and represents heroism in ACHILLES and prudence in ULYSSES, he intermixes a much greater degree of ferocity in the former, and of cunning and fraud in the latter, than FENELON would admit of. The sage ULYSSES in the GREEK poet seems to delight in lies and fictions, and often employs them without any necessity or even advantage: But his more scrupulous son, in the FRENCH epic writer, exposes himself to the most imminent perils, rather than depart from the most exact line of truth and veracity.

The admirers and followers of the ALCORAN³ insist on the excellent moral precepts interspersed throughout that wild and absurd performance. But it is to be supposed, that the ARABIC words, which correspond to the ENGLISH, equity, justice, temperance, meekness, charity, were such as, from the constant use of that tongue, must always be taken in a good sense; and it would have argued the greatest ignorance, not of morals, but of language, to have mentioned them with any epithets, besides those of applause and approbation. But would we know, whether the pretended prophet had really attained a just sentiment of morals? Let us attend to his narration; and we shall soon find, that he bestows praise on such instances of treachery, inhumanity, cruelty, revenge, bigotry, as are utterly incompatible with civilized society. No steady rule of right seems there to be attended to; and every action is blamed or praised, so far only as it is beneficial or hurtful to the true believers.

The merit of delivering true general precepts in ethics is indeed very small. Whoever recommends any moral virtues, really does no more than is implied in the terms themselves. That people, who invented the word *charity*, and used it in a good sense, inculcated more clearly and much more efficaciously, the precept, *be charitable*, than any pretended legislator or prophet, who should insert such a *maxim* in his writings. Of all expressions, those, which, together with their other meaning, imply a degree either of blame or approbation, are the least liable to be perverted or mistaken.

It is natural for us to seek a *Standard of Taste*; a rule, by which the various sentiments of men may be reconciled; at least, a decision, afforded, confirming one sentiment, and condemning another.

There is a species of philosophy, which cuts off all hopes of success in such an attempt, and represents the impossibility of ever attaining any standard of taste. The difference, it is said, is very wide between judgment and sentiment. All sentiment is right; because sentiment has a reference to nothing beyond itself, and is always real, wherever a man is conscious of it. But all determinations of the understanding are not right; because they have a

3. The Koran, which collects and records the revelations of the Prophet Muhammad.

reference to something beyond themselves, to wit, real matter of fact; and are not always conformable to that standard. Among a thousand different opinions which different men may entertain of the same subject, there is one, and but one, that is just and true; and the only difficulty is to fix and ascertain it. On the contrary, a thousand different sentiments, excited by the same object, are all right: Because no sentiment represents what is really in the object. It only marks a certain conformity or relation between the object and the organs or faculties of the mind; and if that conformity did not really exist, the sentiment could never possibly have being. Beauty is no quality in things themselves: It exists merely in the mind which contemplates them; and each mind perceives a different beauty. One person may even perceive deformity, where another is sensible of beauty; and every individual ought to acquiesce in his own sentiment, without pretending to regulate those of others. To seek the real beauty, or real deformity, is as fruitless an enquiry, as to pretend to ascertain the real sweet or real bitter. According to the disposition of the organs, the same object may be both sweet and bitter; and the proverb has justly determined it to be fruitless to dispute concerning tastes. It is very natural, and even quite necessary, to extend this axiom to mental, as well as bodily taste; and thus common sense, which is so often at variance with philosophy, especially with the sceptical kind, is found, in one instance at least, to agree in pronouncing the same decision.

But though this axiom, by passing into a proverb, seems to have attained the sanction of common sense; there is certainly a species of common sense which opposes it, at least serves to modify and restrain it. Whoever would assert an equality of genius and elegance between OGILBY and MILTON, or BUNYAN and ADDISON,⁴ would be thought to defend no less an extravagance, than if he had maintained a mole-hill to be as high as TENERIFFE,⁵ or a pond as extensive as the ocean. Though there may be found persons, who give the preference to the former authors; no one pays attention to such a taste; and we pronounce without scruple the sentiment of these pretended critics to be absurd and ridiculous. The principle of the natural equality of tastes is then totally forgot, and while we admit it on some occasions, where the objects seem near an equality, it appears an extravagant paradox, or rather a palpable absurdity, where objects so disproportioned are compared together.

It is evident that none of the rules of composition are fixed by reasonings *a priori*, or can be esteemed abstract conclusions of the understanding, from comparing those habitudes⁶ and relations of ideas, which are eternal and immutable. Their foundation is the same with that of all the practical sciences, experience; nor are they any thing but general observations, concerning what has been universally found to please in all countries and in all ages. Many of the beauties of poetry and even of eloquence are founded on falsehood and fiction, on hyperboles, metaphors, and an abuse or perversion of terms from their natural meaning. To check the sallies of the imagination, and to reduce every expression to geometrical truth and exactness, would be the most contrary to the laws of criticism; because it would produce a work, which, by universal experience, has been found the most insipid and dis-

4. Hume pairs two poets, John Ogilby (1600–1676) and John Milton (1608–1674), and two prose writers, John Bunyan (1628–1688) and JOSEPH ADDISON (1672–1719).

5. Largest of the Canary Islands and site of a volcanic peak.

6. Habits.

agreeable. But though poetry can never submit to exact truth, it must be confined by rules of art, discovered to the author either by genius or observation. If some negligent or irregular writers have pleased, they have not pleased by their transgressions of rule or order, but in spite of these transgressions: They have possessed other beauties, which were conformable to just criticism; and the force of these beauties has been able to overpower censure, and give the mind a satisfaction superior to the disgust arising from the blemishes. ARIOSTO⁷ pleases; but not by his monstrous and improbable fictions, by his bizarre mixture of the serious and comic styles, by the want of coherence in his stories, or by the continual interruptions of his narration. He charms by the force and clearness of his expression, by the readiness and variety of his inventions, and by his natural pictures of the passions, especially those of the gay and amorous kind: And however his faults may diminish our satisfaction, they are not able entirely to destroy it. Did our pleasure really arise from those parts of his poem, which we denominate faults, this would be no objection to criticism in general: It would only be an objection to those particular rules of criticism, which would establish such circumstances to be faults, and would represent them as universally blameable. If they are found to please, they cannot be faults; let the pleasure, which they produce, be ever so unexpected and unaccountable.

But though all the general rules of art are founded only on experience and on the observation of the common sentiments of human nature, we must not imagine, that, on every occasion, the feelings of men will be conformable to these rules. Those finer emotions of the mind are of a very tender and delicate nature, and require the concurrence of many favourable circumstances to make them play with facility and exactness, according to their general and established principles. The least exterior hindrance to such small springs, or the least internal disorder, disturbs their motion, and confounds the operation of the whole machine. When we would make an experiment of this nature, and would try the force of any beauty or deformity, we must choose with care a proper time and place, and bring the fancy to a suitable situation and disposition. A perfect serenity of mind, a recollection of thought, a due attention to the object; if any of these circumstances be wanting, our experiment will be fallacious, and we shall be unable to judge of the catholic and universal beauty. The relation, which nature has placed between the form and the sentiment, will at least be more obscure; and it will require greater accuracy to trace and discern it. We shall be able to ascertain its influence not so much from the operation of each particular beauty, as from the durable admiration, which attends those works, that have survived all the caprices of mode and fashion, all the mistakes of ignorance and envy.

The same HOMER, who pleased at ATHENS and ROME two thousand years ago, is still admired at PARIS and at LONDON. All the changes of climate, government, religion, and language, have not been able to obscure his glory. Authority or prejudice may give a temporary vogue to a bad poet or orator; but his reputation will never be durable or general. When his compositions are examined by posterity or by foreigners, the enchantment is dissipated,

7. Lodovico Ariosto (1474–1533), Italian poet; his masterpiece is the romantic epic *Orlando Furioso* (1516).

and his faults appear in their true colours. On the contrary, a real genius, the longer his works endure, and the more wide they are spread, the more sincere is the admiration which he meets with. Envy and jealousy have too much place in a narrow circle; and even familiar acquaintance with his person may diminish the applause due to his performances: But when these obstructions are removed, the beauties, which are naturally fitted to excite agreeable sentiments, immediately display their energy; and while the world endures, they maintain their authority over the minds of men.

It appears then, that, amidst all the variety and caprice of taste, there are certain general principles of approbation or blame, whose influence a careful eye may trace in all operations of the mind. Some particular forms or qualities, from the original structure of the internal fabric, are calculated to please, and others to displease; and if they fail of their effect in any particular instance, it is from some apparent defect or imperfection in the organ. A man in a fever would not insist on his palate as able to decide concerning flavours; nor would one, affected with the jaundice, pretend to give a verdict with regard to colours.⁸ In each creature, there is a sound and a defective state; and the former alone can be supposed to afford us a true standard of taste and sentiment. If, in the sound state of the organ, there be an entire or a considerable uniformity of sentiment among men, we may thence derive an idea of the perfect beauty; in like manner as the appearance of objects in day-light, to the eye of a man in health, is denominated their true and real colour, even while colour is allowed to be merely a phantasm of the senses.

Many and frequent are the defects in the internal organs, which prevent or weaken the influence of those general principles, on which depends our sentiment of beauty or deformity. Though some objects, by the structure of the mind, be naturally calculated to give pleasure, it is not to be expected, that in every individual the pleasure will be equally felt. Particular incidents and situations occur, which either throw a false light on the objects, or hinder the true from conveying to the imagination the proper sentiment and perception.

One obvious cause, why many feel not the proper sentiment of beauty, is the want of that *delicacy* of imagination, which is requisite to convey a sensibility of those finer emotions. This delicacy every one pretends to: Every one talks of it; and would reduce every kind of taste or sentiment to its standard. But as our intention in this essay is to mingle some light of the understanding with the feelings of sentiment, it will be proper to give a more accurate definition of delicacy, than has hitherto been attempted. And not to draw our philosophy from too profound a source, we shall have recourse to a noted story in *DON QUIXOTE*.⁹

It is with good reason, says *SANCHO* to the squire with the great nose, that I pretend to have a judgment in wine: This is a quality hereditary in our family. Two of my kinsmen were once called to give their opinion of a hog's-head, which was supposed to be excellent, being old and of a good vintage. One of them tastes it; considers it; and after mature reflection pronounces the wine to be good, were it not for a small taste of leather, which he per-

8. It was thought that to a person whose eye was discolored by jaundice, everything would look yellow; see *ALEXANDER POPE, An Essay on Criticism* (1711), lines 558–59.

9. The novel *Don Quixote* (1605, 1615), by Miguel de Cervantes; this story comes from part 2, chapter 13.

ceived in it. The other, after using the same precautions, gives also his verdict in favour of the wine; but with the reserve of a taste of iron, which he could easily distinguish. You cannot imagine how much they were both ridiculed for their judgment. But who laughed in the end? On emptying the hogshead, there was found at the bottom, an old key with a leathern thong tied to it.

The great resemblance between mental and bodily taste will easily teach us to apply this story. Though it be certain, that beauty and deformity, more than sweet and bitter, are not qualities in objects, but belong entirely to the sentiment, internal or external; it must be allowed, that there are certain qualities in objects, which are fitted by nature to produce those particular feelings. Now as these qualities may be found in a small degree, or may be mixed and confounded with each other, it often happens, that the taste is not affected with such minute qualities, or is not able to distinguish all the particular flavours, amidst the disorder, in which they are presented. Where the organs are so fine, as to allow nothing to escape them; and at the same time so exact as to perceive every ingredient in the composition: This we call delicacy of taste, whether we employ these terms in the literal or metaphorical sense. Here then the general rules of beauty are of use; being drawn from established models, and from the observation of what pleases or displeases, when presented singly and in a high degree: And if the same qualities, in a continued composition and in a smaller degree, affect not the organs with a sensible delight or uneasiness, we exclude the person from all pretensions to this delicacy. To produce these general rules or avowed patterns of composition is like finding the key with the leathern thong; which justified the verdict of SANCHE'S kinsmen, and confounded those pretended judges who had condemned them. Though the hogshead had never been emptied, the taste of the one was still equally delicate, and that of the other equally dull and languid: But it would have been more difficult to have proved the superiority of the former, to the conviction of every by-stander. In like manner, though the beauties of writing had never been methodized, or reduced to general principles; though no excellent models had ever been acknowledged; the different degrees of taste would still have subsisted, and the judgment of one man been preferable to that of another; but it would not have been so easy to silence the bad critic, who might always insist upon his particular sentiment, and refuse to submit to his antagonist. But when we show him an avowed principle of art; when we illustrate this principle by examples, whose operation, from his own particular taste, he acknowledges to be conformable to the principle; when we prove, that the same principle may be applied to the present case, where he did not perceive or feel its influence: He must conclude, upon the whole, that the fault lies in himself, and that he wants the delicacy, which is requisite to make him sensible of every beauty and every blemish, in any composition or discourse.

It is acknowledged to be the perfection of every sense or faculty, to perceive with exactness its most minute objects, and allow nothing to escape its notice and observation. The smaller the objects are, which become sensible to the eye, the finer is that organ, and the more elaborate its make and composition. A good palate is not tried by strong flavours; but by a mixture of small ingredients, where we are still sensible of each part, notwithstanding its minuteness and its confusion with the rest. In like manner, a quick and acute perception of beauty and deformity must be the perfection of our men-

tal taste; nor can a man be satisfied with himself while he suspects, that any excellence or blemish in a discourse has passed him unobserved. In this case, the perfection of the man, and the perfection of the sense or feeling, are found to be united. A very delicate palate, on many occasions, may be a great inconvenience both to a man himself and to his friends: But a delicate taste of wit or beauty must always be a desirable quality; because it is the source of all the finest and most innocent enjoyments, of which human nature is susceptible. In this decision the sentiments of all mankind are agreed. Wherever you can ascertain a delicacy of taste, it is sure to meet with approbation; and the best way of ascertaining it is to appeal to those models and principles, which have been established by the uniform consent and experience of nations and ages.

But though there be naturally a wide difference in point of delicacy between one person and another, nothing tends further to increase and improve this talent, than *practice* in a particular art, and the frequent survey or contemplation of a particular species of beauty. When objects of any kind are first presented to the eye or imagination, the sentiment, which attends them, is obscure and confused; and the mind is, in a great measure, incapable of pronouncing concerning their merits or defects. The taste cannot perceive the several excellencies of the performance; much less distinguish the particular character of each excellency, and ascertain its quality and degree. If it pronounce the whole in general to be beautiful or deformed, it is the utmost that can be expected; and even this judgment, a person, so unpractised, will be apt to deliver with great hesitation and reserve. But allow him to acquire experience in those objects, his feeling becomes more exact and nice: He not only perceives the beauties and defects of each part, but marks the distinguishing species of each quality, and assigns it suitable praise or blame. A clear and distinct sentiment attends him through the whole survey of the objects; and he discerns that very degree and kind of approbation or displeasure, which each part is naturally fitted to produce. The mist dissipates, which seemed formerly to hang over the object: The organ acquires greater perfection in its operations; and can pronounce, without danger of mistake, concerning the merits of every performance. In a word, the same address and dexterity, which practice gives to the execution of any work, is also acquired by the same means, in the judging of it.

So advantageous is practice to the discernment of beauty, that, before we can give judgment on any work of importance, it will even be requisite, that that very individual performance be more than once perused by us, and be surveyed in different lights with attention and deliberation. There is a flutter or hurry of thought which attends the first perusal of any piece, and which confounds the genuine sentiment of beauty. The relation of the parts is not discerned: The true characters of style are little distinguished: The several perfections and defects seem wrapped up in a species of confusion, and present themselves indistinctly to the imagination. Not to mention, that there is a species of beauty, which, as it is florid and superficial, pleases at first; but being found incompatible with a just expression either of reason or passion, soon palls upon the taste, and is then rejected with disdain, at least rated at a much lower value.

It is impossible to continue in the practice of contemplating any order of beauty, without being frequently obliged to form *comparisons* between the several species and degrees of excellence, and estimating their proportion to each other. A man, who has had no opportunity of comparing the different kinds of beauty, is indeed totally unqualified to pronounce an opinion with regard to any object presented to him. By comparison alone we fix the epithets of praise or blame, and learn how to assign the due degree of each. The coarsest daubing contains a certain lustre of colours and exactness of imitation, which are so far beauties, and would affect the mind of a peasant or Indian with the highest admiration. The most vulgar ballads are not entirely destitute of harmony or nature; and none but a person, familiarized to superior beauties, would pronounce their numbers² harsh, or narration uninteresting. A great inferiority of beauty gives pain to a person conversant in the highest excellence of the kind, and is for that reason pronounced a deformity: As the most finished object, with which we are acquainted, is naturally supposed to have reached the pinnacle of perfection, and to be entitled to the highest applause. One accustomed to see, and examine, and weigh the several performances, admired in different ages and nations, can alone rate the merits of a work exhibited to his view, and assign its proper rank among the productions of genius.

But to enable a critic the more fully to execute this undertaking, he must preserve his mind free from all *prejudice*,³ and allow nothing to enter into his consideration, but the very object which is submitted to his examination. We may observe, that every work of art, in order to produce its due effect on the mind, must be surveyed in a certain point of view, and cannot be fully relished by persons, whose situation, real or imaginary, is not conformable to that which is required by the performance. An orator addresses himself to a particular audience, and must have a regard to their particular genius,⁴ interests, opinions, passions, and prejudices; otherwise he hopes in vain to govern their resolutions, and inflame their affections. Should they even have entertained some *prepossessions* against him, however unreasonable, he must not overlook this disadvantage; but, before he enters upon the subject, must endeavour to conciliate their affection, and acquire their good graces. A critic of a different age or nation, who should peruse this discourse, must have all these circumstances in his eye, and must place himself in the same situation as the audience, in order to form a true judgment of the oration. In like manner, when any work is addressed to the public, though I should have a friendship or enmity with the author, I must depart from this situation; and considering myself as a man in general, forget, if possible, my individual being and my peculiar circumstances. A person influenced by prejudice, complies not with this condition; but obstinately maintains his natural position, without placing himself in that point of view, which the performance supposes. If the work be addressed to persons of a different age or nation, he makes no allowance for their peculiar views and prejudices; but, full of the manners of his own age and country, rashly condemns what seemed admirable in the eyes of those for whom alone the discourse was calculated. If the work be executed for the public, he never sufficiently

2. Metrical structure.

3. An unreasonable preconceived judgment or

conviction.

4. Disposition.

enlarges his comprehension, or forgets his interest as a friend or enemy, as a rival or commentator. By this means, his sentiments are perverted; nor have the same beauties and blemishes the same influence upon him, as if he had imposed a proper violence on his imagination, and had forgotten himself for a moment. So far his taste evidently departs from the true standard; and of consequence loses all credit and authority.

It is well known, that in all questions, submitted to the understanding, prejudice is destructive of sound judgment, and perverts all operations of the intellectual faculties: It is no less contrary to good taste; nor has it less influence to corrupt our sentiment of beauty. It belongs to *good sense* to check its influence in both cases; and in this respect, as well as in many others, reason, if not an essential part of taste, is at least requisite to the operations of this latter faculty. In all the nobler productions of genius, there is a mutual relation and correspondence of parts; nor can either the beauties or blemishes be perceived by him, whose thought is not capacious enough to comprehend all those parts, and compare them with each other, in order to perceive the consistence and uniformity of the whole. Every work of art has also a certain end or purpose, for which it is calculated; and is to be deemed more or less perfect, as it is more or less fitted to attain this end. The object of eloquence is to persuade, of history to instruct, of poetry to please by means of the passions and the imagination. These ends we must carry constantly in our view, when we peruse any performance; and we must be able to judge how far the means employed are adapted to their respective purposes. Besides, every kind of composition, even the most poetical, is nothing but a chain of propositions and reasonings; not always, indeed, the justest and most exact, but still plausible and specious, however disguised by the colouring of the imagination. The persons introduced in tragedy and epic poetry, must be represented as reasoning, and thinking, and concluding, and acting, suitably to their character and circumstances; and without judgment, as well as taste and invention, a poet can never hope to succeed in so delicate an undertaking. Not to mention, that the same excellence of faculties which contributes to the improvement of reason, the same clearness of conception, the same exactness of distinction, the same vivacity of apprehension, are essential to the operations of true taste, and are its infallible concomitants. It seldom, or never happens, that a man of sense, who has experience in any art, cannot judge of its beauty; and it is no less rare to meet with a man who has a just taste without a sound understanding.

Thus, though the principles of taste be universal, and nearly, if not entirely the same in all men; yet few are qualified to give judgment on any work of art, or establish their own sentiment as the standard of beauty. The organs of internal sensation are seldom so perfect as to allow the general principles their full play, and produce a feeling correspondent to those principles. They either labour under some defect, or are vitiated by some disorder; and by that means, excite a sentiment, which may be pronounced erroneous. When the critic has no delicacy, he judges without any distinction, and is only affected by the grosser and more palpable qualities of the object: The finer touches pass unnoticed and disregarded. Where he is not aided by practice, his verdict is attended with confusion and hesitation. Where no comparison has been employed, the most frivolous beauties, such as rather merit the name of defects, are the object of his admiration. Where he lies under the

influence of prejudice, all his natural sentiments are perverted. Where good sense is wanting, he is not qualified to discern the beauties of design and reasoning, which are the highest and most excellent. Under some or other of these imperfections, the generality of men labour; and hence a true judge in the finer arts is observed, even during the most polished ages, to be so rare a character: Strong sense, united to delicate sentiment, improved by practice, perfected by comparison, and cleared of all prejudice, can alone entitle critics to this valuable character; and the joint verdict of such, wherever they are to be found, is the true standard of taste and beauty.

But where are such critics to be found? By what marks are they to be known? How distinguish them from pretenders? These questions are embarrassing; and seem to throw us back into the same uncertainty, from which, during the course of this essay, we have endeavoured to extricate ourselves.

But if we consider the matter aright, these are questions of fact, not of sentiment. Whether any particular person be endowed with good sense and a delicate imagination, free from prejudice, may often be the subject of dispute, and be liable to great discussion and enquiry: But that such a character is valuable and estimable will be agreed in by all mankind. Where these doubts occur, men can do no more than in other disputable questions, which are submitted to the understanding: They must produce the best arguments, that their invention suggests to them; they must acknowledge a true and decisive standard to exist somewhere, to wit, real existence and matter of fact; and they must have indulgence to such as differ from them in their appeals to this standard. It is sufficient for our present purpose, if we have proved, that the taste of all individuals is not upon an equal footing, and that some men in general, however difficult to be particularly pitched upon, will be acknowledged by universal sentiment to have a preference above others.

But in reality the difficulty of finding, even in particulars, the standard of taste, is not so great as it is represented. Though in speculation, we may readily avow a certain criterion in science and deny it in sentiment, the matter is found in practice to be much more hard to ascertain in the former case than in the latter. Theories of abstract philosophy, systems of profound theology, have prevailed during one age: In a successive period, these have been universally exploded: Their absurdity has been detected: Other theories and systems have supplied their place, which again gave place to their successors: And nothing has been experienced more liable to the revolutions of chance and fashion than these pretended decisions of science. The case is not the same with the beauties of eloquence and poetry. Just expressions of passion and nature are sure, after a little time, to gain public applause, which they maintain for ever. ARISTOTLE, and PLATO, and EPICURUS, and DESCARTES,⁵ may successively yield to each other: But TERENCE and VIRGIL⁶ maintain an universal, undisputed empire over the minds of men. The abstract philosophy of CICERO⁷ has lost its credit: The vehemence of his oratory is still the object of our admiration.

Though men of delicate taste be rare, they are easily to be distinguished in society, by the soundness of their understanding and the superiority of

5. Hume names four philosophers: the Greeks ARISTOTLE (384–322 B.C.E.), PLATO (ca. 427–ca. 347 B.C.E.), and Epicurus (341–270 B.C.E.), and the French René Descartes (1596–1650).

6. Roman poet (70–19 B.C.E.). Terence (ca. 190–159 B.C.E.), Roman comic playwright.

7. Roman statesman and orator (106–43 B.C.E.).

their faculties above the rest of mankind. The ascendant, which they acquire, gives a prevalence to that lively approbation, with which they receive any productions of genius, and renders it generally predominant. Many men, when left to themselves, have but a faint and dubious perception of beauty, who yet are capable of relishing any fine stroke, which is pointed out to them. Every convert to the admiration of the real poet or orator is the cause of some new conversion. And though prejudices may prevail for a time, they never unite in celebrating any rival to the true genius, but yield at last to the force of nature and just sentiment. Thus, though a civilized nation may easily be mistaken in the choice of their admired philosopher, they never have been found long to err, in their affection for a favourite epic or tragic author.

But notwithstanding all our endeavours to fix a standard of taste, and reconcile the discordant apprehensions of men, there still remain two sources of variation, which are not sufficient indeed to confound all the boundaries of beauty and deformity, but will often serve to produce a difference in the degrees of our approbation or blame. The one is the different humours of particular men; the other, the particular manners and opinions of our age and country. The general principles of taste are uniform in human nature: Where men vary in their judgments, some defect or perversion in the faculties may commonly be remarked; proceeding either from prejudice, from want of practice, or want of delicacy; and there is just reason for approving one taste, and condemning another. But where there is such a diversity in the internal frame or external situation as is entirely blameless on both sides, and leaves no room to give one the preference above the other; in that case a certain degree of diversity in judgment is unavoidable, and we seek in vain for a standard, by which we can reconcile the contrary sentiments.

A young man, whose passions are warm, will be more sensibly touched with amorous and tender images, than a man more advanced in years, who takes pleasure in wise, philosophical reflections concerning the conduct of life and moderation of the passions. At twenty, OVID may be the favourite author; HORACE at forty; and perhaps TACITUS⁸ at fifty. Vainly would we, in such cases, endeavour to enter into the sentiments of others, and divest ourselves of those propensities, which are natural to us. We choose our favourite author as we do our friend, from a conformity of humour and disposition. Mirth or passion, sentiment or reflection; whichever of these most predominates in our temper, it gives us a peculiar sympathy with the writer who resembles us.

One person is more pleased with the sublime; another with the tender; a third with raillery. One has a strong sensibility to blemishes, and is extremely studious of correctness: Another has a more lively feeling of beauties, and pardons twenty absurdities and defects for one elevated or pathetic⁹ stroke. The ear of this man is entirely turned towards conciseness and energy; that man is delighted with a copious, rich, and harmonious expression. Simplicity is affected by one; ornament by another. Comedy, tragedy, satire, odes, have each its partizans, who prefer that particular species of writing to all others. It is plainly an error in a critic, to confine his approbation to one species or style of writing, and condemn all the rest. But it is almost impossible not to

8. Roman public official and historian (ca. 55–ca. 120. C.E.). Ovid (43 B.C.E.–17 C.E.), Roman poet best known for his love poetry. HORACE (65–8

B.C.E.), Roman lyric poet and satirist whose works often reflected his own life.

9. That is, full of pathos or feeling.

feel a predilection for that which suits our particular turn and disposition. Such preferences are innocent and unavoidable, and can never reasonably be the object of dispute, because there is no standard, by which they can be decided.

For a like reason, we are more pleased, in the course of our reading, with pictures and characters, that resemble objects which are found in our own age or country, than with those which describe a different set of customs. It is not without some effort, that we reconcile ourselves to the simplicity of ancient manners, and behold princesses carrying water from the spring, and kings and heroes dressing their own victuals. We may allow in general, that the representation of such manners is no fault in the author, nor deformity in the piece; but we are not so sensibly touched with them. For this reason, comedy is not easily transferred from one age or nation to another. A FRENCHMAN or ENGLISHMAN is not pleased with the ANDRIA of TERENCE, or CLITIA of MACHIAVEL;¹ where the fine lady, upon whom all the play turns, never once appears to the spectators, but is always kept behind the scenes, suitably to the reserved humour of the ancient GREEKS and modern ITALIANS. A man of learning and reflection can make allowance for these peculiarities of manners; but a common audience can never divest themselves so far of their usual ideas and sentiments, as to relish pictures which no wise resemble them.

But here there occurs a reflection, which may, perhaps, be useful in examining the celebrated controversy concerning ancient and modern learning; where we often find the one side excusing any seeming absurdity in the ancients from the manners of the age, and the other refusing to admit this excuse, or at least, admitting it only as an apology for the author, not for the performance. In my opinion, the proper boundaries in this subject have seldom been fixed between the contending parties. Where any innocent peculiarities of manners are represented, such as those above mentioned, they ought certainly to be admitted; and a man, who is shocked with them, gives an evident proof of false delicacy and refinement. The poet's *monument more durable than brass*,² must fall to the ground like common brick or clay, were men to make no allowance for the continual revolutions of manners and customs, and would admit of nothing but what was suitable to the prevailing fashion. Must we throw aside the pictures of our ancestors, because of their ruffs and fardingales?³ But where the ideas of morality and decency alter from one age to another, and where vicious manners are described, without being marked with the proper characters of blame and disapprobation; this must be allowed to disfigure the poem, and to be a real deformity. I cannot, nor is it proper I should, enter into such sentiments; and however I may excuse the poet, on account of the manners of his age, I never can relish the composition. The want of humanity and of decency, so conspicuous in the characters drawn by several of the ancient poets, even sometimes by HOMER and the GREEK tragedians, diminishes considerably the merit of their noble performances, and gives modern authors an advantage over them. We are not interested in the fortunes and sentiments of such rough heroes: We are

1. Niccolò Machiavelli (1469–1527), Italian political theorist; he wrote the play *Clizia* in 1525. In *Andria* (166 B.C.E.), the young woman at the center of the action never speaks a word.

2. Horace, *Odes* 3.30.1.

3. Farthingales: supports (such as hoops) that expanded skirts to extend them at the hip line. "Ruffs": stiff collars.

displeased to find the limits of vice and virtue so much confounded: And whatever indulgence we may give to the writer on account of his prejudices, we cannot prevail on ourselves to enter into his sentiments, or bear an affection to characters, which we plainly discover to be blameable.

The case is not the same with moral principles, as with speculative opinions of any kind. These are in continual flux and revolution. The son embraces a different system from the father. Nay, there scarcely is any man, who can boast of great constancy and uniformity in this particular. Whatever speculative errors may be found in the polite writings of any age or country, they detract but little from the value of those compositions. There needs but a certain turn of thought or imagination to make us enter into all the opinions, which then prevailed, and relish the sentiments or conclusions derived from them. But a very violent effort is requisite to change our judgment of manners, and excite sentiments of approbation or blame, love or hatred, different from those to which the mind from long custom has been familiarized. And where a man is confident of the rectitude of that moral standard, by which he judges, he is justly jealous of it, and will not pervert the sentiments of his heart for a moment, in complaisance to any writer whatsoever.

Of all speculative errors, those, which regard religion, are the most excusable in compositions of genius; nor is it ever permitted to judge of the civility or wisdom of any people, or even of single persons, by the grossness or refinement of their theological principles. The same good sense, that directs men in the ordinary occurrences of life, is not hearkened to in religious matters, which are supposed to be placed altogether above the cognizance of human reason. On this account, all the absurdities of the pagan system of theology must be overlooked by every critic, who would pretend to form a just notion of ancient poetry; and our posterity, in their turn, must have the same indulgence to their forefathers. No religious principles can ever be imputed as a fault to any poet, while they remain merely principles, and take not such strong possession of his heart, as to lay him under the imputation of *bigotry* or *superstition*. Where that happens, they confound the sentiments of morality, and alter the natural boundaries of vice and virtue. They are therefore eternal blemishes, according to the principle abovementioned: nor are the prejudices and false opinions of the age sufficient to justify them.

It is essential to the ROMAN catholic religion to inspire a violent hatred of every other worship, and to represent all pagans, mahometans,⁴ and heretics as the objects of divine wrath and vengeance. Such sentiments, though they are in reality very blameable, are considered as virtues by the zealots of that communion, and are represented in their tragedies and epic poems as a kind of divine heroism. This bigotry has disfigured two very fine tragedies of the FRENCH theatre, *POLIEUCTE* and *ATHALIA*;⁵ where an intemperate zeal for particular modes of worship is set off with all the pomp imaginable, and forms the predominant character of the heroes. "What is this," says the sublime JOAD to JOSABET, finding her in discourse with MATHAN, the priest of BAAL, "Does the daughter of DAVID speak to this traitor? Are you not afraid, lest the earth should open and pour forth flames to devour you both? Or lest these holy walls should fall and crush you together? What is his purpose? Why comes that enemy of God hither to poison the air, which we breathe,

4. Muslims.

5. *Athalie* (1691), by Jean Racine; Hume quotes

from 3.5. *Polyeucte* (1641-42), play by PIERRE CORNEILLE.

with his horrid presence?" Such sentiments are received with great applause on the theatre of PARIS; but at LONDON the spectators would be full as much pleased to hear ACHILLES tell AGAMEMNON, that he was a dog in his forehead, and a deer in his heart, or JUPITER threaten JUNO with a sound drubbing, if she will not be quiet.⁶

RELIGIOUS principles are also a blemish in any polite composition, when they rise up to superstition, and intrude themselves into every sentiment, however remote from any connection with religion. It is no excuse for the poet, that the customs of his country had burthened⁷ life with so many religious ceremonies and observances, that no part of it was exempt from that yoke. It must for ever be ridiculous in PETRARCH⁸ to compare his mistress, LAURA, to JESUS CHRIST. Nor is it less ridiculous in that agreeable libertine, BOCCACE,⁹ very seriously to give thanks to GOD ALMIGHTY and the ladies, for their assistance in defending him against his enemies.

1757

6. See Homer, *Iliad* 1.225, 565–67. Hume's point is that English audiences are unmoved by the tragedies' Catholic sentiments.

7. Burdened.

8. Francesco Petrarca (1304–1374), Italian poet, scholar, and humanist; Laura is the subject of a series of love lyrics titled *Canzoniere* or *Rima* (see,

e.g., no. 3 for the comparison to Jesus).

9. GIOVANNI BOCCACCIO (1313–1375), Italian poet and writer. His most famous work, the *Decameron* (1351–53), is a collection of 100 tales supposedly told over 10 days; Hume refers here to the introduction to "The Fourth Day."

IMMANUEL KANT

1724–1804

Immanuel Kant's massive contributions to modern metaphysics, epistemology, and ethics aside, his *Critique of Judgment* (1790) ranks with Aristotle's *Poetics* among our most important philosophical treatises on art. Kant's book is a compendium of the beliefs about and ideals for art that have come to be called *aestheticism* (the separation of artistic concerns and values into their own sphere, which is seen as superior to all others). The branch of philosophy dealing with the nature of beauty, art, and taste first arose in the mid-eighteenth century in the work of Edmund Alexander Baumgarten, DAVID HUME, and EDMUND BURKE. Kant's *Critique of Judgment* responds to and augments their earlier work while giving art an exalted place within human existence, a place that justifies the new philosophical interest in art as a distinct sphere of human activity. The specifics of Kant's characterization of art resonate throughout the Romantic and modernist periods and have become a frequent target of post-World War II theorists and philosophers.

Kant was born in Königsberg, East Prussia, where he attended the university, became a professor at that same university, and died shortly after his retirement. He never married and he never traveled outside of East Prussia. His regular, uneventful life is summed up in the legend that Königsberg residents set their clocks by his appearance for his afternoon walk at precisely the same time each day. His early work was mostly in the natural sciences, with one excursion into aesthetics: *Observations on the Feeling of the Beautiful and Sublime* (1764). In this work, he argues that such feelings are purely subjective, precisely the position he sets himself against when later revisiting the same terrain in his *Critique of Judgment*.

Kant's major work begins with the *Critique of Pure Reason* (1781), in which he develops his "critical philosophy" to overcome David Hume's subjectivist skepticism. This "first critique" was followed by two others: the *Critique of Practical Reason* (1788) and the *Critique of Judgment*. The three books cover the true, the good, and the beautiful, respectively. By *critique* Kant meant a delineation of the fundamental or "transcendent" conditions necessary to any particular mental process. Thus the *Critique of Pure Reason* presents the mental forms (or categories) that must be in place within the perceiving subject for any successful apprehension of the external world. He insists that these universals (for example, cause and effect, or unity) are implanted within every human being and underwrite the very possibility of "understanding" (that is, the ability to process, organize, and comprehend the data given to our senses by the outside world). We can never directly know what he calls "things-in-themselves," because we process sensory data through preexisting mental categories.

The *Critique of Practical Reason* attempts to provide a universal foundation for morals, which concern nonphysical ideas, not material realities. Kant's basic claim is that practical reason in each individual dictates the same fundamental moral dictum: never do anything that you could not willingly endorse being done by everyone else in the world.

The first two critiques create a gap between the physical (sensible) and nonphysical (supersensible) worlds. Understanding deals with the physical world of cause and effect, where each occurrence has been determined by prior events. Because practical reason deals with ideas, it exists in a realm of freedom. The ability to think makes humans free, but they are also physical creatures subject to physical causality. The *Critique of Judgment* exists to bridge this gap between what Kant sees as two aspects of human nature. The very word *aesthetic*, whose Greek root means "of the senses," aids Kant's efforts to get from the sensory to the supersensible. Beauty is experienced through the senses, but points us beyond mere sensation.

That Kant fixes on the aesthetic experience of beauty to solve a pressing problem in his own large-scale system has been irrelevant to many of the artists and writers who subsequently adopted or adapted his characterization of art. The literature on the *Critique of Judgment* divides into two traditions, one focusing on Kant's overall philosophical project and the other focusing on the theory of art one can derive from Kant's work; our selection is slanted toward the latter, but to understand Kant's way of approaching the whole topic of art we must also take into account his broader philosophical goal.

Kant's primary aim is to establish the "subjective universality" of the judgment that something is beautiful or sublime. Judgment in general is the determination of whether a particular instance qualifies as one thing or another. For example, given the number "10," I judge it to be an even number because I recognize that it is divisible by 2. Or when I judge the object in front of me to be a table, I am (Kant says) simply "subsuming" a particular thing under the general concept of table, a concept I already possess. Such judgments are "determinative" and "objective." Since the concepts *even number* and *table* already exist and unambiguously provide the rule my judgment follows, there is little room for error or disagreement.

The statements "it's beautiful" and "it's a table" are identical in form, yet we are much more likely to disagree over the former. Why? Kant's answer has two parts. On the one hand, by saying "it's beautiful" rather than "I think it's beautiful," I am claiming that beauty resides in the object and I am thus making a claim to validity beyond my individual, subjective preferences. On the other hand, *beautiful* is not a determinative concept like *table* or *even number*: judgments about beauty are instead "reflective," occurring in the absence of a firm rule or standard, and hence are more likely to generate disagreement. The ability to judge well amid such uncertainties is called *taste*—and some people have better taste than others (though Kant would insist that everyone has the potential to achieve the highest possible taste).

In considering the notion of taste, Kant is (once again) engaging with David Hume. While accepting Hume's contention that taste is something learned, Kant believes that he failed in "Of the Standard of Taste" (1757; see above) to defend against the possible conclusion that it is culturally relative. Kant's solution is to distinguish between what is "agreeable," what is "good," and what is "beautiful." (As a rule of thumb, reading Kant becomes easier when one pays attention to what distinctions he attempts to draw and why.) The good is a matter of reason—and of what we *should* desire. The agreeable is a matter of the senses—and of what we physically desire. The beautiful mixes the sensible with the nonsensible—and involves no desire whatsoever: thus Kant calls judgments of beauty "disinterested." Perhaps nothing Kant advanced has been as influential as this severance of the beautiful from interest. His basic notion is that a sensory experience of pleasure can move from the subjective ("that is pleasing to me") to the objective ("that should please everyone") only if purged of its individual, interested elements.

Kant uses the example of the difference between taste in food and taste in flowers. My daughter and I can agree that cotton candy is sweet, but she likes and desires it while I dislike and do not desire it. There is no disputing taste in such matters precisely because it is tied to idiosyncratic, physiological appetites. But Kant believes that things change when we perceive a field of flowers—or a painting of flowers. The flowers have no purpose in relation to my life or my physical needs. I can contemplate them disinterestedly, and thus my judgment about their beauty is not connected to their gratifying my personal sensibility. My statement "they are beautiful" solicits, Kant says, the agreement of everyone else in a way that my statement "I like green beans" does not.

The understanding of art that follows from this analysis was widely adopted. MATTHEW ARNOLD's "Function of Criticism at the Present Time" (1864) is an important attempt to extend the ideal of disinterestedness to criticism; more recent critics have attempted to refute the notion (see our selections by PIERRE BOURDIEU, BARBARA HERRNSTEIN SMITH, and TERRY EAGLETON). Crucially, Kant's argument leads him to elevate artistic form over matter. Because he is trying to demote the physical appeal of the aesthetic, he claims that the formal properties of the observed object, not its physical and material properties, most influence judgments of beauty. Sensual responses are subjective (later writers also consider them vulgar), failing to rise above the level of the agreeable. This distinction is still used today by some to distinguish pornography from art with sexual content. In addition, the valorization of form over matter resurfaces in the various modernist versions of "abstract" and "nonrepresentational" art that emerge between 1850 (Flaubert's desire to write a novel about nothing) and 1950 (abstract expressionism).

Disinterestedness as an aesthetic ideal also entails distinguishing between the useful and the nonutilitarian work of art. At its most extreme, it generates the credo of aestheticism: "art for art's sake" (for example, see our selections from THÉOPHILE GAUTIER, WALTER PATER, and OSCAR WILDE). The beautiful object should not be tainted with any mundane purpose. The troubled relationship between art and commerce stems in part from this dream of an art that can transcend all petty worldly concerns. Kant expresses this aim in a famous formula: the beautiful object reveals "purposiveness without purpose." That is, the object is comprehensible only if we assume it was made by a purposive agent (an a priori condition of aesthetic judgment that Kant's "critique" reveals), even though it has no particular, determinative purpose. The formal coherence of flowers is incomprehensible apart from a general assumption of their "purposiveness," although we can ascribe no particular purpose to them. Art objects aspire to general purposiveness in the absence of any concrete purpose.

As we apprehend such objects, we respond with "free play" of the mind (a notion further developed by FRIEDRICH VON SCHILLER, among many others). The aesthetic therefore provides an experience of freedom within the physical world of causal deter-

ation. Aesthetic experience is crucial to Kant because it makes possible a "harmony" between our human freedom and our physical immersion in the world—the feeling that is the true foundation of our experiences of beauty. And because such harmony is available to all humans, I can solicit their agreement with my particular judgments of beauty. But in any particular case, I may not succeed in gaining others' agreement. Kant is careful to say that beauty is only an "ideal," not a "concept." The example is singular, but it carries a general significance. Each artwork, like every judgment about beauty, solicits its audience's approval both as a particular and as an example of a kind, a genre, or an act of criticism. For that reason, there is no rule of beauty: its validity for everyone will always be "exemplary."

For Kant, beauty intimates the harmony within our dual human nature as free and physical beings. Beauty ultimately refers to the subjective experience of this harmony rather than to any property in the object that promotes that experience. Hence aesthetic experience is "subjective"; but because all humans are susceptible to the experience of harmony, this response possesses a "universality" usually absent in subjective judgments. Kant goes even further when he calls beauty "the symbol of morality" (§59) and comes close to providing beauty a purpose and an interest. His own interests in writing the third critique certainly come to light in this statement: he wants the experience of the beautiful to signify that humans live in an "intelligible" universe, that the ideas and precepts generated by human reason are in tune with the nature of the universe itself. The experience of beauty tells us that mind and world fit.

The sublime, in contrast, shows us a misfit between mind and world. When we experience a hurricane or an earthquake, nature appears to dwarf human concerns and capabilities. The sublime, according to Kant, allows us to glimpse things beyond comprehension and to experience the limits of the sensible, physical world, generating feelings of awe and terror. This experience of the limits of the sensible, of its inability to encompass aspects of our mental world, reminds us of "the superiority of the rational vocation of our cognitive powers over the greatest power of sensibility." But even while performing this important function of pointing us away from the sensible toward the mysterious supersensible, the sublime remains disquieting because in doing so it indicates a split between the two. It is just this experience of disjunction that Kant needs to subsume within the grander overarching experience of harmony that comes with the beautiful. Thus "the concept of the sublime in nature is not nearly as important and rich in implications as that of the beautiful in nature."

Kant inherits the notion of the sublime as a central feature of the aesthetic from LONGINUS and Burke, but he addresses it primarily to contain it; his remarks, though suggestive, have had relatively little influence. He is not particularly sympathetic to the brand of Romantic melancholy that emphasizes the tragic gulf between human aspirations and what the world renders possible. Nor is he interested in the recurrent artistic experience of struggling to express the ineffable with the limited material resources (sound, paint, stone) afforded to the arts. The revival of interest in the sublime in poststructuralist writers such as PAUL DE MAN and JEAN-FRANÇOIS LYOTARD has informed recent critiques of the Kantian aesthetics of beauty.

In fact, attitudes toward Kant are something of a litmus test among post-1945 theorists. Section 40 encapsulates what we might call Kant's liberal optimism—his belief that disinterested judgments can enable "unprejudiced," "broadened" thinking and pave the way toward "enlightenment" and agreement. The *sensus communis*, an understanding shared by all humans, serves as both the guarantor (since everyone potentially possesses it) and the end result of the discussions surrounding varying judgments. Anti-Kantians (often proponents of the sublime) deny the possibility of such common ground for discussion and eventual agreement, arguing that the translation of different viewpoints into a common language always already erases or represses the very differences that constitute the disagreement.

It might seem surprising that the *Critique of Judgment* has been an extraordinarily influential text on art. After all, in some ways, the book is hardly about art at all. Most of Kant's examples come from nature, and *aesthetic* in his usage refers more to what is experienced through the senses than to something specifically artistic. Like Aristotle, he focuses on the spectator's response rather than on artistic production, but without Aristotle's interest in the elements or properties of the art object. Kant apparently believes that it makes no difference whether the object is natural or human-made. Even when he does distinguish art from nature in §43, Kant is more concerned with preserving art's freedom—aligning it with beauty against the determined world of science and the utilitarian concerns of craft—than with examining the consequences of art's being (by definition) artificial. He never considers why the beauties offered by nature do not suffice, or what art can do that nature cannot.

Not surprisingly, Kant's influential description of the genius (the creative artist) highlights freedom above all else. The genius has a natural gift for using the materials (words, paint, musical notes) of the various arts "to express what is ineffable," that is, nonmaterial ideas and emotions. In the greatest artworks, imagination's freedom harmonizes with understanding's lawfulness, a result achievable not "by any compliance with rules, . . . but . . . only by the subject's nature."

Although there were always dissenters, Kant's general account of the aesthetic as formal, free, nonutilitarian, disinterested, and nonsensory was the prevailing orthodoxy for almost two centuries. That so many post-World War II theorists have written against the *Critique of Judgment* testifies to the continuing importance of the understanding of art that it enshrines and that they have attempted to revise.

BIBLIOGRAPHY

The Cambridge edition of the works of Immanuel Kant (1992–) now in progress will offer the first complete scholarly edition in English of all of Kant's writing (in the list below, all translations published after 1991 belong to this edition). *Theoretical Philosophy, 1755–1770*, edited by David Walford (1992), contains much of Kant's early work (although not his 1764 book on aesthetics), while *Practical Philosophy*, edited by Mary J. Gregor (1996), collects the major works on morality (including *Groundwork of the Metaphysics of Morals*, 1785; *Critique of Practical Reason*, 1788; and *The Metaphysics of Morals*, 1797, along with the important essays "What Is Enlightenment?" 1784 and "Toward Perpetual Peace," 1795). Kant's major individual works are *Observations on the Feeling of the Beautiful and Sublime* (1764; trans. 1960); *Critique of Pure Reason* (1781; trans. 1998); *Prolegomena to Any Future Metaphysics* (1783; trans. 1950); *Metaphysical Foundations of Natural Science* (1786; trans. 1970); *Critique of Judgment* (1790; trans. 1987); *Religion within the Boundaries of Mere Reason* (1793; trans. 1998); *The Conflict of Faculties* (1798; trans. 1979); and *Anthropology from a Pragmatic Point of View* (1798; trans. 1974). Kant's essays, lectures, and letters can be found in *Kant: On History*, edited by Louis White Beck (1963); *Selected Pre-Critical Writings and Correspondence with Beck*, edited by G. B. Kerferd and D. E. Walford (1968); *Kant's Political Writings*, edited by Hans Reiss (1970); *Lectures on Philosophical Theology*, edited by Allen W. Wood and Gertrude M. Clark (1978); *Perpetual Peace and Other Essays on Politics, History, and Morals*, edited by Ted Humphrey (1983); *Lectures on Logic*, edited by J. Michael Young (1992); *Lectures on Ethics*, edited by Peter Heath and J. B. Schneewind (1997); *Lectures on Metaphysics*, edited by Karl Ameriks and Steve Naragon (1997); and *Correspondence*, edited by Arnulf Zweig (1999). The best biography is Ernst Cassirer's *Kant's Life and Thought* (1921; trans. 1981).

The secondary literature on Kant is immense. *The Cambridge Companion to Kant*, edited by Paul Guyer (1992), offers the best single-volume overview of Kant's career. The best introduction to standard philosophical responses to the *Critique of Judgment* is *Essays in Kant's Aesthetics*, edited by Ted Cohen and Paul Guyer (1982). See also

René Wellek's *Immanuel Kant in England* (1931). Of the many encounters with the third critique from within "theory," the following works have been especially important: Hannah Arendt, *Lectures on Kant's Political Philosophy* (1982); Pierre Bourdieu, *Distinction: A Social Critique of the Judgement of Taste* (1979; trans. 1984); Jacques Derrida, *The Truth in Painting* (1978; trans. 1987); Barbara Herrnstein Smith, *Contingencies of Value* (1988); Terry Eagleton, *The Ideology of the Aesthetic* (1990); J. M. Bernstein, *The Fate of Art* (1992); and Jean-François Lyotard, *Lessons on the Analytic of the Sublime* (1991; trans. 1994). Paul Guyer's *Kant and the Claims of Taste* (2d ed., 1997) is the most comprehensive treatment of the *Critique of Judgment* within Anglo-American philosophy. The most useful bibliography on Kant is found in *The Cambridge Companion; Essays in Kant's Aesthetics* offers an extensive, though now somewhat dated, bibliography on that topic.

From Critique of Judgment¹

From Introduction

Judgment in general is the ability to think the particular as contained under the universal. If the universal (the rule, principle, law) is given, then judgment, which subsumes the particular under it, is *determinative* (even though [in its role] as transcendental judgment it states a priori the conditions that must be met for subsumption under that universal to be possible). But if only the particular is given and judgment has to find the universal for it, then this power is merely *reflective*.

* * *

ON THE AESTHETIC PRESENTATION OF THE PURPOSIVENESS² OF NATURE

What is merely subjective in the presentation of an object, i.e., what constitutes its reference to the subject and not to the object, is its aesthetic character; but whatever in it serves, or can be used, to determine the object (for cognition)³ is its logical validity. In the cognition of an object of sense these two references [to the subject and to the object] occur together.

* * *

[T]hat subjective [feature] of a presentation *which cannot at all become an element of cognition* is the *pleasure* or *displeasure* connected with that presentation. For through this pleasure or displeasure I do not cognize anything in the object of the presentation, though it may certainly be the effect of some cognition. Now a thing's purposiveness, insofar as it is presented in the perception of the thing, is also not a characteristic of the object itself (for no such characteristic can be perceived), even though it can be inferred from a cognition of things. Therefore, the subjective [feature] of the pres-

1. Translated by Werner S. Pluhar, who occasionally retains the original German words or adds information in brackets in the text. Unless otherwise specified, parenthetical terms are in Latin and are translated in the text.

2. The general sense that a thing was formed by a purposive hand, although without a specific func-

tion or purpose (a key term in Kant's aesthetic theory).

3. The process in which sense data plus the categories of understanding ("pure reason") combine in our ability to apprehend and name objects in the external world. "Aesthetic": pertaining to an individual's sensory experiences.

entation which cannot at all become an element of cognition is the purposiveness that precedes the cognition of an object and that we connect directly with this presentation even if we are not seeking to use the presentation of the object for cognition. Therefore, in this case we call the object purposive only because its presentation is directly connected with the feeling of pleasure, and this presentation itself is an aesthetic presentation of purposiveness. The only question is whether there is such a presentation of purposiveness at all.

When pleasure is connected with mere apprehension (*apprehensio*) of the form of an object of intuition, and we do not refer the apprehension to a concept so as to give rise to determinate cognition, then we refer the presentation not to the object but solely to the subject; and the pleasure cannot express anything other than the object's being commensurate with the cognitive powers that are, and insofar as they are, brought into play when we judge reflectively, and hence [expresses] merely a subjective formal purposiveness of the object. For this apprehension of forms by the imagination could never occur if reflective judgment did not compare them, even if unintentionally, at least with its ability [in general] to refer intuitions to concepts. Now if in this comparison a given presentation unintentionally brings the imagination (the power of a priori intuitions) into harmony with the understanding (the power of concepts), and this harmony arouses a feeling of pleasure, then the object must thereupon be regarded as purposive for the reflective power of judgment. A judgment of this sort is an aesthetic judgment about the object's purposiveness; it is not based on any concept we have of the object, nor does it provide such a concept. When the form of an object (rather than what is material in its presentation, viz., in sensation) is judged in mere reflection on it (without regard to a concept that is to be acquired from it) to be the basis of a pleasure in such an object's presentation, then the presentation of this object is also judged to be connected necessarily with this pleasure, and hence connected with it not merely for the subject apprehending this form but in general for everyone who judges [it]. The object is then called beautiful, and our ability to judge by such a pleasure (and hence also with universal validity) is called taste.

* * *

From *Book I. Analytic of the Beautiful*

§1. A JUDGMENT OF TASTE IS AESTHETIC

If we wish to decide whether something is beautiful or not, we do not use understanding to refer the presentation to the object so as to give rise to cognition; rather, we use imagination⁴ (perhaps in connection with understanding) to refer the presentation to the subject and his feeling of pleasure or displeasure. Hence a judgment of taste is not a cognitive judgment and so is not a logical judgment but an aesthetic one, by which we mean a judgment whose determining basis *cannot be other than subjective*. But any reference of presentations, even of sensations, can be objective (in which case it signifies what is real [rather than formal] in an empirical presentation);

4. The ability to represent in thought the features experienced in the sense perception of the external world.

excepted is a reference to the feeling of pleasure and displeasure—this reference designates nothing whatsoever in the object; but here the subject feels himself, [namely] how he is affected by the presentation.

To apprehend a regular, purposive building with one's cognitive power (whether the presentation is distinct or confused) is very different from being conscious of this presentation with a sensation of liking. Here the presentation is referred only to the subject, namely, to his feeling of life, under the name feeling of pleasure or displeasure, and this forms the basis of a very special power of discriminating and judging. This power does not contribute anything to cognition, but merely compares the given presentation in the subject with the entire presentational power, of which the mind becomes conscious when it feels its own state. The presentations given in a judgment may be empirical (and hence aesthetic), but if we refer them to the object, the judgment we make by means of them is logical. On the other hand, even if the given presentations were rational, they would still be aesthetic if, and to the extent that, the subject referred them, in his judgment, solely to himself (to his feeling).

§2. THE LIKING THAT DETERMINES A JUDGMENT OF TASTE IS DEVOID OF ALL INTEREST

Interest is what we call the liking we connect with the presentation of an object's existence. Hence such a liking always refers at once to our power of desire, either as the basis that determines it, or at any rate as necessarily connected with that determining basis. But if the question is whether something is beautiful, what we want to know is not whether we or anyone cares, or so much as might care, in any way, about the thing's existence, but rather how we judge it in our mere contemplation of it (intuition or reflection). Suppose someone asks me whether I consider the palace I see before me beautiful. I might reply that I am not fond of things of that sort, made merely to be gaped at. Or I might reply like that Iroquois *sachem* who said that he liked nothing better in Paris than the eating-houses.⁵ I might even go on, as *Rousseau*⁶ would, to rebuke the vanity of the great who spend the people's sweat on such superfluous things. I might, finally, quite easily convince myself that, if I were on some uninhabited island with no hope of ever again coming among people, and could conjure up such a splendid edifice by a mere wish, I would not even take that much trouble for it if I already had a sufficiently comfortable hut. The questioner may grant all this and approve of it; but it is not to the point. All he wants to know is whether my mere presentation of the object is accompanied by a liking, no matter how indifferent I may be about the existence of the object of this presentation. We can easily see that, in order for me to say that an object is *beautiful*, and to prove that I have taste, what matters is what I do with this presentation within myself, and not the [respect] in which I depend on the object's existence. Everyone has to admit that if a judgment about beauty is mingled with the least interest then it is very partial and not a pure judgment of taste. In

5. Kant's reference has been traced to Pierre François Xavier de Charlevoix, *History and General Description of New France* (Paris, 1744) [translator's note]. Charlevoix (1682–1761), French Jesuit

explorer.

6. Jean-Jacques Rousseau (1712–1778), Swiss-born French political philosopher and novelist.

order to play the judge in matters of taste, we must not be in the least biased in favor of the thing's existence but must be wholly indifferent about it.

There is no better way to elucidate this proposition, which is of prime importance, than by contrasting the pure disinterested liking that occurs in a judgment of taste with a liking connected with interest, especially if we can also be certain that the kinds of interest I am about to mention are the only ones there are.

§3. A LIKING FOR THE AGREEABLE IS CONNECTED WITH INTEREST

AGREEABLE is what the senses like in sensation.

* * *

Now, that a judgment by which I declare an object to be agreeable expresses an interest in that object is already obvious from the fact that, by means of sensation, the judgment arouses a desire for objects of that kind, so that the liking presupposes something other than my mere judgment about the object: it presupposes that I have referred the existence of the object to my state insofar as that state is affected by such an object. This is why we say of the agreeable not merely that we *like* it but that it *gratifies* us. When I speak of the agreeable, I am not granting mere approval: the agreeable produces an inclination. Indeed, what is agreeable in the liveliest way requires no judgment at all about the character of the object, as we can see in people who aim at nothing but enjoyment (this is the word we use to mark the intensity of the gratification): they like to dispense with all judging.

§4. A LIKING FOR THE GOOD IS CONNECTED WITH INTEREST

Good is what, by means of reason, we like through its mere concept. We call something (*viz.*, if it is something useful) *good for* [this or that] if we like it only as a means. But we call something *intrinsically good* if we like it for its own sake. In both senses of the term, the good always contains the concept of a purpose, consequently a relation of reason to a volition (that is at least possible), and hence a liking for the existence of an object or action. In other words, it contains some interest or other.

In order to consider something good, I must always know what sort of thing the object is [meant] to be, i.e., I must have a [determinate] concept of it. But I do not need this in order to find beauty in something. Flowers, free designs, lines aimlessly intertwined and called foliage: these have no significance, depend on no determinate concept, and yet we like [*gefallen*] them. A liking [*Wohlgefallen*] for the beautiful must depend on the reflection, regarding an object, that leads to some concept or other (but it is indeterminate which concept this is). This dependence on reflection also distinguishes the liking for the beautiful from [that for] the agreeable, which rests entirely on sensation.⁷

It is true that in many cases it seems as if the agreeable and the good are one and the same. Thus people commonly say that all gratification (especially if it lasts) is intrinsically good, which means roughly the same as to be (last-

7. That is, the pleasure derived from beauty is related to the indeterminate concept of purposiveness; thus judgments of beauty stand between the

pure sensuousness of the agreeable and the pure rationality of the good.

ingly) agreeable and to be good are one and the same. Yet it is easy to see that in talking this way they are merely substituting one word for another by mistake, since the concepts that belong to these terms are in no way interchangeable. Insofar as we present an object as agreeable, we present it solely in relation to sense; but if we are to call the object good [as well], and hence an object of the will, we must first bring it under principles of reason, using the concept of a purpose. [So] if something that gratifies us is also called *good*, it has a very different relation to our liking. This is [also] evident from the fact that in the case of the good there is always the question whether it is good merely indirectly or good directly (i.e., useful, or intrinsically good), whereas in the case of the agreeable this question cannot even arise, since this word always signifies something that we like directly. (What we call beautiful is also liked directly.)

* * *

But despite all this difference between the agreeable and the good, they do agree in this: they are always connected with an interest in their object. This holds not only for the agreeable—see §3—and for what is good indirectly (useful), which we like as the means to something or other that is agreeable, but also for what is good absolutely and in every respect, i.e., the moral good, which carries with it the highest interest. For the good is the object of the will (a power of desire that is determined by reason). But to will something and to have a liking for its existence, i.e., to take an interest in it, are identical.

§5. COMPARISON OF THE THREE SORTS OF LIKING, WHICH DIFFER IN KIND

Both the agreeable and the good refer to our power of desire and hence carry a liking with them; the agreeable a liking that is conditioned pathologically by stimuli (*stimuli*), the good a pure practical liking that is determined not just by the presentation of the object but also by the presentation of the subject's connection with the existence of the object; i.e., what we like is not just the object but its existence as well. A judgment of taste, on the other hand, is merely *contemplative*, i.e., it is a judgment that is indifferent to the existence of the object: it [considers] the character of the object only by holding it up to our feeling of pleasure and displeasure. Nor is this contemplation, as such, directed to concepts, for a judgment of taste is not a cognitive judgment (whether theoretical or practical) and hence is neither *based* on concepts, nor directed to them as *purposes*.

Hence the agreeable, the beautiful, and the good designate three different relations that presentations have to the feeling of pleasure and displeasure, the feeling by reference to which we distinguish between objects or between ways of presenting them. The terms of approbation which are appropriate to each of these three are also different. We call *agreeable* what GRATIFIES us, *beautiful* what we just LIKE, good what we ESTEEM, or *endorse* [*billigen*], i.e., that to which we attribute [*setzen*] an objective value. Agreeableness holds for nonrational animals too; beauty only for human beings, i.e., beings who are animal and yet rational, though it is not enough that they be rational (e.g., spirits) but they must be animal as well; the good, however, holds for

every rational being as such, though I cannot fully justify and explain this proposition until later. We may say that, of all these three kinds of liking, only the liking involved in taste for the beautiful is disinterested and *free*, since we are not compelled to give our approval by any interest, whether of sense or of reason. So we might say that [the term] liking, in the three cases mentioned, refers to *inclination*, or to *favor*, or to *respect*. For FAVOR is the only free liking. Neither an object of inclination, nor one that a law of reason enjoins on us as an object of desire, leaves us the freedom to make an object of pleasure for ourselves out of something or other. All interest either presupposes a need or gives rise to one; and, because interest is the basis that determines approval, it makes the judgment about the object unfree.

Consider, first, the interest of inclination, [which occurs] with the agreeable. Here everyone says: Hunger is the best sauce; and to people with a healthy appetite anything is tasty provided it is edible. Hence if people have a liking of this sort, that does not prove that they are selecting [*Wahl*] by taste. Only when their need has been satisfied can we tell who in a multitude of people has taste and who does not.

EXPLICATION OF THE BEAUTIFUL INFERRED FROM THE FIRST MOMENT⁸

Taste is the ability to judge an object, or a way of presenting it, by means of a liking or disliking *devoid of all interest*. The object of such a liking is called *beautiful*.

§6. THE BEAUTIFUL IS WHAT IS PRESENTED WITHOUT CONCEPTS AS THE OBJECT OF A UNIVERSAL LIKING

This explication of the beautiful can be inferred from the preceding explication of it as object of a liking devoid of all interest. For if someone likes something and is conscious that he himself does so without any interest, then he cannot help judging that it must contain a basis for being liked [that holds] for everyone. He must believe that he is justified in requiring a similar liking from everyone because he cannot discover, underlying this liking, any private conditions, on which only he might be dependent, so that he must regard it as based on what he can presuppose in everyone else as well. He cannot discover such private conditions because his liking is not based on any inclination he has (nor on any other considered interest whatever): rather, the judging person feels completely *free* as regards the liking he accords the object. Hence he will talk about the beautiful as if beauty were a characteristic of the object and the judgment were logical (namely, a cognition of the object through concepts of it), even though in fact the judgment is only aesthetic and refers the object's presentation merely to the subject. He will talk in this way because the judgment does resemble a logical judgment inasmuch as we may presuppose it to be valid for everyone. On the other hand, this universality cannot arise from concepts. For from concepts there is no transition to the feeling of pleasure or displeasure (except in pure practical laws; but these carry an interest with them, while none is connected with pure judgments of taste). It follows that,

8. The "analytic of the beautiful" of book 1 is divided into four "moments," which treat beauty in terms of quality, quantity, purposes, and liking for the object, respectively.

since a judgment of taste involves the consciousness that all interest is kept out of it, it must also involve a claim to being valid for everyone, but without having a universality based on concepts. In other words, a judgment of taste must involve a claim to subjective universality.

§7. COMPARISON OF THE BEAUTIFUL WITH THE AGREEABLE AND THE GOOD IN TERMS OF THE ABOVE CHARACTERISTIC

As regards the *agreeable* everyone acknowledges that his judgment, which he bases on a private feeling and by which he says that he likes some object, is by the same token confined to his own person. Hence, if he says that canary wine is agreeable he is quite content if someone else corrects his terms and reminds him to say instead: It is agreeable to *me*. This holds moreover not only for the taste of the tongue, palate, and throat, but also for what may be agreeable to any one's eyes and ears. To one person the color violet is gentle and lovely, to another lifeless and faded. One person loves the sound of wind instruments, another that of string instruments. It would be foolish if we disputed about such differences with the intention of censuring another's judgment as incorrect if it differs from ours, as if the two were opposed logically. Hence about the agreeable the following principle holds: *Everyone has his own taste* (of sense).

It is quite different (exactly the other way round) with the beautiful. It would be ridiculous if someone who prided himself on his taste tried to justify [it] by saying: This object (the building we are looking at, the garment that man is wearing, the concert we are listening to, the poem put up to be judged) is beautiful *for me*. For he must not call it *beautiful* if [he means] only [that] *he* likes it. Many things may be charming and agreeable to him; no one cares about that. But if he proclaims something to be beautiful, then he requires the same liking from others; he then judges not just for himself but for everyone, and speaks of beauty as if it were a property of things. That is why he says: The *thing* is beautiful, and does not count on other people to agree with his judgment of liking on the ground that he has repeatedly found them agreeing with him; rather, he *demand*s that they agree. He reproaches them if they judge differently, and denies that they have taste, which he nevertheless demands of them, as something they ought to have. In view of this [*sofern*], we cannot say that everyone has his own particular taste. That would amount to saying that there is no such thing as taste at all, no aesthetic judgment that could rightfully lay claim to everyone's assent.

* * *

§8. IN A JUDGMENT OF TASTE THE UNIVERSALITY OF THE LIKING IS PRESENTED ONLY AS SUBJECTIVE

* * *

We must begin by fully convincing ourselves that in making a judgment of taste (about the beautiful) we require [*ansinnen*] *everyone* to like the object, yet without this liking's being based on a concept (since then it would be the good), and that this claim to universal validity belongs so essentially to a judgment by which we declare something to be *beautiful* that it would not occur to anyone to use this term without thinking of universal validity;

instead, everything we like without a concept would then be included with the agreeable. For as to the agreeable we allow everyone to be of a mind of his own, no one requiring [*zumuten*] others to agree with his judgment of taste. But in a judgment of taste about beauty we always require others to agree. Insofar as judgments about the agreeable are merely private, whereas judgments about the beautiful are put forward as having general validity (as being public), taste regarding the agreeable can be called taste of sense, and taste regarding the beautiful can be called taste of reflection, though the judgments of both are aesthetic (rather than practical) judgments about an object, [i.e.,] judgments merely about the relation that the presentation of the object has to the feeling of pleasure and displeasure. But surely there is something strange here. In the case of the taste of sense, not only does experience show that its judgment (of a pleasure or displeasure we take in something or other) does not hold universally, but people, of their own accord, are modest enough not even to require others to agree (even though there actually is, at times, very widespread agreement in these judgments too). Now, experience teaches us that the taste of reflection, with its claim that its judgment (about the beautiful) is universally valid for everyone, is also rejected often enough: What is strange is that the taste of reflection should nonetheless find itself able (as it actually does) to conceive of judgments that can demand such agreement, and that it does in fact require this agreement from everyone for each of its judgments. What the people who make these judgments dispute about is not whether such a claim is possible; they are merely unable to agree, in particular cases, on the correct way to apply this ability.

* * *

If we judge objects merely in terms of concepts, then we lose all presentation of beauty. This is why there can be no rule by which someone could be compelled to acknowledge that something is beautiful. No one can use reasons or principles to talk us into a judgment on whether some garment, house, or flower is beautiful. We want to submit the object to our own eyes, just as if our liking of it depended on that sensation. And yet, if we then call the object beautiful, we believe we have a universal voice, and lay claim to the agreement of everyone, whereas any private sensation would decide solely for the observer himself and his liking.

We can see, at this point, that nothing is postulated in a judgment of taste except such a *universal voice* about a liking unmediated by concepts. Hence all that is postulated is the *possibility* of a judgment that is aesthetic and yet can be considered valid for everyone. The judgment of taste itself does not *postulate* everyone's agreement (since only a logically universal judgment can do that, because it can adduce reasons); it merely *requires* this agreement from everyone, as an instance of the rule, an instance regarding which it expects confirmation not from concepts but from the agreement of others. Hence the universal voice is only an idea. (At this point we are not yet inquiring on what this idea rests.) Whether someone who believes he is making a judgment of taste is in fact judging in conformity with that idea may be uncertain; but by using the term beauty he indicates that he is at least referring his judging to that idea, and hence that he intends it to be a judgment of taste. For himself, however, he can attain certainty on this point, by merely

being conscious that he is separating whatever belongs to the agreeable and the good from the liking that remains to him after that. It is only for this that he counts on everyone's assent, and he would under these conditions [always] be justified in this claim, if only he did not on occasion fail to observe these conditions and so make an erroneous judgment of taste.

§9. INVESTIGATION OF THE QUESTION WHETHER IN A JUDGMENT OF TASTE THE FEELING OF PLEASURE PRECEDES THE JUDGING OF THE OBJECT OR THE JUDGING PRECEDES THE PLEASURE

The solution of this problem is the key to the critique of taste and hence deserves full attention.

If the pleasure in the given object came first, and our judgment of taste were to attribute only the pleasure's universal communicability to the presentation of the object, then this procedure would be self-contradictory. For that kind of pleasure would be none other than mere agreeableness in the sensation, so that by its very nature it could have only private validity, because it would depend directly on the presentation by which the object is given.

Hence it must be the universal communicability of the mental state, in the given presentation, which underlies the judgment of taste as its subjective condition, and the pleasure in the object must be its consequence. Nothing, however, can be communicated universally except cognition, as well as presentation insofar as it pertains to cognition; for presentation is objective only insofar as it pertains to cognition, and only through this does it have a universal reference point with which everyone's presentational power is compelled to harmonize. If, then, we are to think that the judgment about this universal communicability of the presentation has a merely subjective determining basis, i.e., one that does not involve a concept of the object, then this basis can be nothing other than the mental state that we find in the relation between the presentational powers [imagination and understanding] insofar as they refer a given presentation to *cognition in general*.

When this happens, the cognitive powers brought into play by this presentation are in free play, because no determinate concept restricts them to a particular rule of cognition. Hence the mental state in this presentation must be a feeling, accompanying the given presentation, of a free play of the presentational powers directed to cognition in general. Now if a presentation by which an object is given is, in general, to become cognition, we need *imagination* to combine the manifold of intuition, and *understanding*⁹ to provide the unity of the concept uniting the [component] presentations. This state of *free play* of the cognitive powers, accompanying a presentation by which an object is given, must be universally communicable; for cognition, the determination of the object with which given presentations are to harmonize (in any subject whatever) is the only way of presenting that holds for everyone.

But the way of presenting [which occurs] in a judgment of taste is to have subjective universal communicability without presupposing a determinate concept; hence this subjective universal communicability can be

9. The a priori mental categories. "The manifold of intuition": the sense data that we receive from the outside world.

nothing but [that of] the mental state in which we are when imagination and understanding are in free play (insofar as they harmonize with each other as required for *cognition in general*). For we are conscious that this subjective relation suitable for cognition in general must hold just as much for everyone, and hence be just as universally communicable, as any determinate cognition, since cognition always rests on that relation as its subjective condition.

Now this merely subjective (aesthetic) judging of the object, or of the presentation by which it is given, precedes the pleasure in the object and is the basis of this pleasure, [a pleasure] in the harmony of the cognitive powers. But the universal subjective validity of this liking, the liking we connect with the presentation of the object we call beautiful, is based solely on the mentioned universality of the subjective conditions for judging objects.

* * *

EXPLICATION OF THE BEAUTIFUL INFERRED FROM THE SECOND MOMENT

Beautiful is what, without a concept, is liked universally.

* * *

§11. A JUDGMENT OF TASTE IS BASED ON NOTHING BUT THE FORM OF PURPOSIVENESS OF AN OBJECT (OR OF THE WAY OF PRESENTING IT)

Whenever a purpose is regarded as the basis of a liking, it always carries with it an interest, as the basis that determines the judgment about the object of the pleasure. Hence a judgment of taste cannot be based on a subjective purpose. But a judgment of taste also cannot be determined by a presentation of an objective purpose, i.e., a presentation of the object itself as possible according to principles of connection in terms of purposes, and hence it cannot be determined by a concept of the good. For it is an aesthetic and not a cognitive judgment, and hence does not involve a *concept* of the character and internal or external possibility of the object through this or that cause; rather, it involves merely the relation of the presentational powers to each other, insofar as they are determined by a presentation.

Now this relation, [present] when [judgment] determines an object as beautiful, is connected with the feeling of a pleasure, a pleasure that the judgment of taste at the same time declares to be valid for everyone. Hence neither an agreeableness accompanying the presentation, nor a presentation of the object's perfection and the concept of the good, can contain the basis that determines [such a judgment]. Therefore the liking that, without a concept, we judge to be universally communicable and hence to be the basis that determines a judgment of taste, can be nothing but the subjective purposiveness in the presentation of an object, without any purpose (whether objective or subjective), and hence the mere form of purposiveness, insofar as we are conscious of it, in the presentation by which an object is *given* us.

* * *

§13. A PURE JUDGMENT OF TASTE IS INDEPENDENT OF
CHARM AND EMOTION

All interest ruins a judgment of taste and deprives it of its impartiality, especially if, instead of making the purposiveness precede the feeling of pleasure as the interest of reason does, that interest bases the purposiveness on the feeling of pleasure; but this is what always happens in an aesthetic judgment that we make about something insofar as it gratifies or pains us. Hence judgments affected in this way can make either no claim at all to a universally valid liking, or a claim that is diminished to the extent that sensations of that kind are included among the bases determining the taste. Any taste remains barbaric if its liking requires that *charms* and *emotions* be mingled in, let alone if it makes these the standard of its approval.

And yet, (though beauty should actually concern only form), charms are frequently not only included with beauty, as a contribution toward a universal aesthetic liking, but are even themselves passed off as beauties, so that the matter of the liking is passed off as the form.¹ This is a misunderstanding that, like many others having yet some basis in truth, can be eliminated by carefully defining these concepts.

A *pure judgment of taste* is one that is not influenced by charm or emotion (though these may be connected with a liking for the beautiful), and whose determining basis is therefore merely the purposiveness of the form.

§14. ELUCIDATION BY EXAMPLES

Aesthetic judgments, just like theoretical (i.e., logical) ones, can be divided into empirical and pure. Aesthetic judgments are empirical if they assert that an object or a way of presenting it is agreeable or disagreeable; they are pure if they assert that it is beautiful. Empirical aesthetic judgments are judgments of sense (material aesthetic judgments); only pure aesthetic judgments (since they are formal) are properly judgments of taste.

Hence a judgment of taste is pure only insofar as no merely empirical liking is mingled in with the basis that determines it. But this is just what happens whenever charm or emotion have a share in a judgment by which something is to be declared beautiful.

Here again some will raise objections, trying to make out, not merely that charm is a necessary ingredient in beauty, but indeed that it is sufficient all by itself to [deserve] being called beautiful.

* * *

But the view that the beauty we attribute to an object on account of its form is actually capable of being heightened by charm is a vulgar error that is very prejudicial to genuine, uncorrupted, solid [*gründlich*] taste. It is true that charms may be added to beauty as a supplement: they may offer the mind more than that dry liking, by also making the presentation of the object interesting to it, and hence they may commend to us taste and its cultivation, above all if our taste is still crude and unpracticed. But charms do actually impair the judgment of taste if they draw attention to themselves as [if they were] bases for judging beauty. For the view that they contribute to beauty

1. That is, material embellishments are mistakenly thought to be the source of beauty.

is so far off the mark that it is in fact only as aliens that they must, indulgently, be granted admittance when taste is still weak and unpracticed, and only insofar as they do not interfere with the beautiful form.

In painting, in sculpture, indeed in all the visual arts, including architecture and horticulture insofar as they are fine arts, *design* is what is essential; in design the basis for any involvement of taste is not what gratifies us in sensation, but merely what we like because of its form. The colors that illuminate the outline belong to charm. Though they can indeed make the object itself vivid to sense, they cannot make it beautiful and worthy of being beheld. Rather, usually the requirement of beautiful form severely restricts [what] colors [may be used], and even where the charm [of colors] is admitted it is still only the form that refines the colors.

All form of objects of the senses (the outer senses or, indirectly, the inner sense as well) is either *shape* or *play*; if the latter, it is either play of shapes (in space, namely, mimetic art and dance), or mere play of sensations (in time). The *charm* of colors or of the agreeable tone of an instrument may be added, but it is the *design* in the first case and the *composition* in the second that constitute the proper object of a pure judgment of taste; that the purity of the colors and of the tones, or for that matter their variety and contrast, seem to contribute to the beauty, does not mean that, because they themselves are agreeable, they furnish us, as it were, with a supplement to, and one of the same kind as, our liking for the form. For all they do is to make the form intuitable more precisely, determinately, and completely, while they also enliven the presentation by means of their charm, by arousing and sustaining the attention we direct toward the object itself.

Even what we call *ornaments* (*parerga*),² i.e., what does not belong to the whole presentation of the object as an intrinsic constituent, but [is] only an extrinsic addition, does indeed increase our taste's liking, and yet it too does so only by its form, as in the case of picture frames, or drapery on statues, or colonnades around magnificent buildings. On the other hand, if the ornament itself does not consist in beautiful form but is merely attached, as a gold frame is to a painting so that its charm may commend the painting for our approval, then it impairs genuine beauty and is called *finery*.

Emotion, a sensation where agreeableness is brought about only by means of a momentary inhibition of the vital force followed by a stronger outpouring of it, does not belong to beauty at all. But sublimity (with which the feeling of emotion is connected) requires a different standard of judging from the one that taste uses as a basis. Hence a pure judgment of taste has as its determining basis neither charm nor emotion, in other words, no sensation, which is [merely] the matter of an aesthetic judgment.

* * *

§ 16. A JUDGMENT OF TASTE BY WHICH WE DECLARE AN OBJECT
BEAUTIFUL UNDER THE CONDITION OF A DETERMINATE CONCEPT
IS NOT PURE

There are two kinds of beauty, free beauty (*pulchritudo vaga*) and merely accessory beauty (*pulchritudo adhaerens*). Free beauty does not presuppose a concept of what the object is [meant] to be. Accessory beauty does pre-

2. By-works, subordinate things (Greek).

suppose such a concept, as well as the object's perfection in terms of that concept. The free kinds of beauty are called (self-subsistent) beauties of this or that thing. The other kind of beauty is accessory to a concept (i.e., it is conditioned beauty) and as such is attributed to objects that fall under the concept of a particular purpose.

Flowers are free natural beauties. Hardly anyone apart from the botanist knows what sort of thing a flower is [meant] to be; and even he, while recognizing it as the reproductive organ of a plant, pays no attention to this natural purpose when he judges the flower by taste. Hence the judgment is based on no perfection of any kind, no intrinsic purposiveness to which the combination of the manifold might refer. Many birds (the parrot, the humming-bird, the bird of paradise) and a lot of crustaceans in the sea are [free] beauties themselves [and] belong to no object determined by concepts as to its purpose, but we like them freely and on their own account. Thus designs *à la grecque*,³ the foliage on borders or on wallpaper, etc., mean nothing on their own: they represent [*vorstellen*] nothing, no object under a determinate concept, and are free beauties. What we call fantasias in music (namely, music without a topic [*Thema*]), indeed all music not set to words, may also be included in the same class.

When we judge free beauty (according to mere form) then our judgment of taste is pure. Here we presuppose no concept of any purpose for which the manifold is to serve the given object, and hence no concept [as to] what the object is [meant] to represent; our imagination is playing, as it were, while it contemplates the shape, and such a concept would only restrict its freedom.

* * *

§17. ON THE IDEAL OF BEAUTY

There can be no objective rule of taste, no rule of taste that determines by concepts what is beautiful. For any judgment from this source [i.e., taste] is aesthetic, i.e., the basis determining it is the subject's feeling and not the concept of an object. If we search for a principle of taste that states the universal criterion of the beautiful by means of determinate concepts, then we engage in a fruitless endeavor, because we search for something that is impossible and intrinsically contradictory. The universal communicability of the sensation (of liking or disliking)—a universal communicability that is indeed not based on a concept—[I say that] the broadest possible agreement among all ages and peoples regarding this feeling that accompanies the presentation of certain objects is the empirical criterion [for what is beautiful]. This criterion, although weak and barely sufficient for a conjecture, [does suggest] that a taste so much confirmed by examples stems from [a] deeply hidden basis, common to all human beings, underlying their agreement in judging the forms under which objects are given them.

That is why we regard some products of taste as *exemplary*. This does not mean that taste can be acquired by imitating someone else's. For taste must be an ability one has oneself; and although someone who imitates a model

3. The phrase *à la grecque* [in the style of the Greeks; French] was apparently used in the eighteenth century—and is still used by some

present-day French art historians—to characterize the classicism in what is now called the Louis XVI style [translator's note].

may manifest skill insofar as he succeeds in this, he manifests taste only insofar as he can judge that model himself. From this, however, it follows that the highest model, the archetype of taste, is a mere idea, an idea which everyone must generate within himself and by which he must judge any object of taste, any example of someone's judging by taste, and even the taste of everyone [else].

Idea properly means a rational concept, and *ideal* the presentation of an individual being as adequate to an idea. Hence that archetype of taste, which does indeed rest on reason's indeterminate idea of a maximum, but which still can be presented not through concepts but only in an individual exhibition, may more appropriately be called the ideal of the beautiful. Though we do not have such an ideal in our possession, we do strive to produce it within us. But it will be merely an ideal of the imagination, precisely because it does not rest on concepts but rests on an exhibition, and the power of exhibition is the imagination.

* * *

EXPLICATION OF THE BEAUTIFUL INFERRED FROM THE THIRD MOMENT

Beauty is an object's form of *purposiveness* insofar as it is perceived in the object *without the presentation of a purpose*.⁴

§18. WHAT THE MODALITY OF A JUDGMENT OF TASTE IS

About any presentation I can say at least that there is a *possibility* for it (as a cognition) to be connected with a pleasure. About that which I call *agreeable* I say that it *actually* gives rise to pleasure in me. But we think of the *beautiful* as having a *necessary* reference to liking. This necessity is of a special kind. It is not a theoretical objective necessity, allowing us to cognize a priori that everyone *will feel* this liking for the object I call beautiful. Nor is it a practical objective necessity, where, through concepts of a pure rational will that serves freely acting beings as a rule, this liking is the necessary consequence of an objective law and means nothing other than that one absolutely (without any further aim) ought to act in a certain way. Rather, as a necessity that is thought in an aesthetic judgment, it can only be called *exemplary*, i.e., a necessity of the assent of *everyone* to a judgment that is regarded as an example of a universal rule that we are unable to state. Since an aesthetic judgment is not an objective and cognitive one, this necessity cannot be derived from determinate concepts and hence is not apodeictic.⁵ Still less can it be inferred from the universality of experience (from a thorough agreement among judgments about the beauty of a certain object). For

4. It might be adduced as a counterinstance to this explication that there are things in which we see a purposive form without recognizing a purpose in them [but which we nevertheless do not consider beautiful]. Examples are the stone utensils sometimes excavated from ancient burial mounds, which are provided with a hole as if for a handle. Although these clearly betray in their shape a purposiveness whose purpose is unknown, we do not declare them beautiful on that account. And yet, the very fact that we regard them as work[s] of art

already forces us to admit that we are referring their shape to some intention or other and to some determinate purpose. That is also why we have no direct liking whatever for their intuition. A flower, on the other hand, e.g., a tulip, is considered beautiful, because in our perception of it we encounter a certain purposiveness that, given how we are judging the flower, we do not refer to any purpose whatever [Kant's note].

5. Absolutely certain.

not only would experience hardly furnish a sufficient amount of evidence for this, but a concept of the necessity of these judgments cannot be based on empirical judgments.

§19. THE SUBJECTIVE NECESSITY THAT WE ATTRIBUTE TO A JUDGMENT OF TASTE IS CONDITIONED

A judgment of taste requires everyone to assent; and whoever declares something to be beautiful holds that everyone *ought* to give his approval to the object at hand and that he too should declare it beautiful. Hence the *ought* in an aesthetic judgment, even once we have [*nach*] all the data needed for judging, is still uttered only conditionally. We solicit everyone else's assent because we have a basis for it that is common to all. Indeed, we could count on that assent, if only we could always be sure that the instance had been subsumed correctly under that basis, which is the rule for the approval.

* * *

§22. THE NECESSITY OF THE UNIVERSAL ASSENT THAT WE THINK IN A JUDGMENT OF TASTE IS A SUBJECTIVE NECESSITY THAT WE PRESENT AS OBJECTIVE BY PRESUPPOSING A COMMON SENSE

Whenever we make a judgment declaring something to be beautiful, we permit no one to hold a different opinion, even though we base our judgment only on our feeling rather than on concepts; hence we regard this underlying feeling as a common rather than as a private feeling. But if we are to use this common sense in such a way, we cannot base it on experience; for it seeks to justify us in making judgments that contain an ought: it does not say that everyone *will* agree with my judgment, but that he *ought* to. Hence the common sense, of whose judgment I am at that point offering my judgment of taste as an example, attributing to it *exemplary* validity on that account, is a mere ideal standard. With this standard presupposed, we could rightly turn a judgment that agreed with it, as well as the liking that is expressed in it for some object, into a rule for everyone. For although the principle is only subjective, it would still be assumed as subjectively universal (an idea necessary for everyone); and so it could, like an objective principle, demand universal assent insofar as agreement among different judging persons is concerned, provided only we were certain that we had subsumed under it correctly.

That we do actually presuppose this indeterminate standard of a common sense is proved by the fact that we presume to make judgments of taste. But is there in fact such a common sense, as a constitutive principle of the possibility of experience, or is there a still higher principle of reason that makes it only a regulative principle for us, [in order] to bring forth in us, for higher purposes, a common sense in the first place? In other words, is taste an original and natural ability, or is taste only the idea of an ability yet to be acquired and [therefore] artificial, so that a judgment of taste with its requirement for universal assent is in fact only a demand of reason to produce such agreement in the way we sense? In the latter case the *ought*, i.e., the objective necessity that everyone's feeling flow along with the particular feeling of each person, would signify only that there is a possibility of reaching such agreement; and the judgment of taste would only offer an example

of the application of this principle. These questions we neither wish to nor can investigate at this point. For the present our task is only to analyze the power of taste into its elements, and to unite these ultimately in the idea of a common sense.

EXPLICATION OF THE BEAUTIFUL INFERRED FROM THE FOURTH MOMENT

Beautiful is what without a concept is cognized as the object of a *necessary* liking.

GENERAL COMMENT ON THE FIRST DIVISION⁶ OF THE ANALYTIC

If we take stock of the above analyses, we find that everything comes down to the concept of taste, namely, that taste is an ability to judge an object in reference to the *free lawfulness* of the imagination. Therefore, in a judgment of taste the imagination must be considered in its freedom. This implies, first of all, that this power is here not taken as reproductive, where it is subject to the laws of association, but as productive and spontaneous (as the originator of chosen forms of possible intuitions). Moreover, [second,] although in apprehending a given object of sense the imagination is tied to a determinate form of this object and to that extent does not have free play (as it does [e.g.] in poetry), it is still conceivable that the object may offer it just the sort of form in the combination of its manifold as the imagination, if it were left to itself [and] free, would design in harmony with the *understanding's lawfulness* in general. And yet, to say that the *imagination* is *free* and yet *lawful of itself*, i.e., that it carries autonomy with it, is a contradiction. The understanding alone gives the law. But when the imagination is compelled to proceed according to a determinate law, then its product is determined by concepts (as far as its form is concerned); but in that case the liking, as was shown above, is a liking not for the beautiful but for the good (of perfection, at any rate, formal perfection), and the judgment is not a judgment made by taste. It seems, therefore, that only a lawfulness without a law, and a subjective harmony of the imagination with the understanding without an objective harmony—where the presentation is referred to a determinate concept of an object—is compatible with the free lawfulness of the understanding (which has also been called purposiveness without a purpose) and with the peculiarity of a judgment of taste.

From *Book II. Analytic of the Sublime*

§23. TRANSITION FROM THE POWER OF JUDGING THE BEAUTIFUL TO THAT OF JUDGING THE SUBLIME

The beautiful and the sublime are similar in some respects. We like both for their own sake, and both presuppose that we make a judgment of reflection rather than either a judgment of sense or a logically determinative one. Hence in neither of them does our liking depend on a sensation, such as that of the agreeable, nor on a determinate concept, as does our liking for

6. That is, the first book—the analytic of the beautiful.

the good; yet we do refer the liking to concepts, though it is indeterminate which concepts these are. Hence the liking is connected with the mere exhibition or power of exhibition, i.e., the imagination, with the result that we regard this power, when an intuition is given us, as harmonizing with the *power of concepts*, i.e., the understanding or reason, this harmony furthering [the aims of] these. That is also why both kinds of judgment are *singular* ones that nonetheless proclaim themselves universally valid for all subjects, though what they lay claim to is merely the feeling of pleasure, and not any cognition of the object.

But some significant differences between the beautiful and the sublime are also readily apparent. The beautiful in nature concerns the form of the object, which consists in [the object's] being bounded. But the sublime can also be found in a formless object, insofar as we present *unboundedness*, either [as] in the object or because the object prompts us to present it, while yet we add to this unboundedness the thought of its totality. So it seems that we regard the beautiful as the exhibition of an indeterminate concept of the understanding, and the sublime as the exhibition of an indeterminate concept of reason.⁷ Hence in the case of the beautiful our liking is connected with the presentation of *quality*, but in the case of the sublime with the presentation of *quantity*. The two likings are also very different in kind. For the one liking ([that for] the beautiful) carries with it directly a feeling of life's being furthered, and hence is compatible with charms and with an imagination at play. But the other liking (the feeling of the sublime) is a pleasure that arises only indirectly: it is produced by the feeling of a momentary inhibition of the vital forces followed immediately by an outpouring of them that is all the stronger. Hence it is an emotion, and so it seems to be seriousness, rather than play, in the imagination's activity. Hence, too, this liking is incompatible with charms, and, since the mind is not just attracted by the object but is alternately always repelled as well, the liking for the sublime contains not so much a positive pleasure as rather admiration and respect, and so should be called a negative pleasure.

But the intrinsic and most important distinction between the sublime and the beautiful is presumably the following. If, as is permissible, we start here by considering only the sublime in natural objects (since the sublime in art is always confined to the conditions that [art] must meet to be in harmony with nature), then the distinction in question comes to this: (Independent) natural beauty carries with it a purposiveness in its form, by which the object seems as it were predetermined for our power of judgment, so that this beauty constitutes in itself an object of our liking. On the other hand, if something arouses in us, merely in apprehension and without any reasoning on our part, a feeling of the sublime, then it may indeed appear, in its form, contrapurposive for our power of judgment, incommensurate with our power of exhibition, and as it were violent to our imagination, and yet we judge it all the more sublime for that.

We see from this at once that we express ourselves entirely incorrectly when we call this or that *object of nature* sublime, even though we may quite correctly call a great many natural objects beautiful; for how can we call something by a term of approval if we apprehend it as in itself contrapur-

7. *Reason* refers to our mental work with nonphysical ideas; *understanding* refers to apprehension and cognition of the physical world.

posive? Instead, all we are entitled to say is that the object is suitable for exhibiting a sublimity that can be found in the mind. For what is sublime, in the proper meaning of the term, cannot be contained in any sensible form but concerns only ideas of reason, which, though they cannot be exhibited adequately, are aroused and called to mind by this very inadequacy, which can be exhibited in sensibility. Thus the vast ocean heaved up by storms cannot be called sublime. The sight of it is horrible; and one must already have filled one's mind with all sorts of ideas if such an intuition is to attune it to a feeling that is itself sublime, inasmuch as the mind is induced to abandon sensibility and occupy itself with ideas containing a higher purposiveness.

Independent natural beauty reveals to us a technic of nature that allows us to present nature as a system in terms of laws whose principle we do not find anywhere in our understanding: the principle of a purposiveness directed to our use of judgment as regards appearances. Under this principle, appearances must be judged as belonging not merely to nature as governed by its purposeless mechanism, but also to [nature considered by] analogy with art. Hence even though this beauty does not actually expand our cognition of natural objects, it does expand our concept of nature, namely, from nature as mere mechanism to the concept of that same nature as art, and that invites us to profound investigations about [how] such a form is possible. However, in what we usually call sublime in nature there is such an utter lack of anything leading to particular objective principles and to forms of nature conforming to them, that it is rather in its chaos that nature most arouses our ideas of the sublime, or in its wildest and most ruleless disarray and devastation, provided it displays magnitude and might. This shows that the concept of the sublime in nature is not nearly as important and rich in implications as that of the beautiful in nature, and that this concept indicates nothing purposive whatever in nature itself but only in what *use* we can make of our intuitions of nature so that we can feel a purposiveness within ourselves entirely independent of nature. For the beautiful in nature we must seek a basis outside ourselves, but for the sublime a basis merely within ourselves and in the way of thinking that introduces sublimity into our presentation of nature. This is a crucial preliminary remark, which separates our ideas of the sublime completely from the idea of a purposiveness of nature, and turns the theory of the sublime into a mere appendix to our aesthetic judging of the purposiveness of nature. For through these ideas we do not present a particular form in nature, but only develop [the] purposive use that the imagination makes of the presentation of nature.

* * *

§25. EXPLICATION OF THE TERM SUBLIME

We call *sublime* what is *absolutely* [*schlechthin*] *large*. To be large [*groß*] and to be a magnitude [*Größe*] are quite different concepts (*magnitudo* and *quantitas*). Also, saying *simply* [*schlechtweg*] (*simpliciter*) that something is large is quite different from saying that it is *absolutely large* (*absolute, non comparative magnum*).⁸ The latter is *what is large beyond all comparison*.

* * *

8. Absolutely, not comparatively, large (Latin).

The above explication can also be put as follows: *That is sublime in comparison with which everything else is small.* We can easily see here that nothing in nature can be given, however large we may judge it, that could not, when considered in a different relation, be degraded all the way to the infinitely small, nor conversely anything so small that it could not, when compared with still smaller standards, be expanded for our imagination all the way to the magnitude of a world; telescopes have provided us with a wealth of material in support of the first point, microscopes in support of the second. Hence, considered on this basis, nothing that can be an object of the senses is to be called sublime. [What happens is that] our imagination strives to progress toward infinity, while our reason demands absolute totality as a real idea, and so [the imagination,] our power of estimating the magnitude of things in the world of sense, is inadequate to that idea. Yet this inadequacy itself is the arousal in us of the feeling that we have within us a supersensible power; and what is absolutely large is not an object of sense, but is the use that judgment makes naturally of certain objects so as to [arouse] this (feeling), and in contrast with that use any other use is small. Hence what is to be called sublime is not the object, but the attunement⁹ that the intellect [gets] through a certain presentation that occupies reflective judgment.

Hence we may supplement the formulas already given to explicate the sublime by another one: *Sublime is what even to be able to think proves that the mind has a power surpassing any standard of sense.*

§26. ON ESTIMATING THE MAGNITUDE OF NATURAL THINGS, AS WE
MUST FOR THE IDEA OF THE SUBLIME

* * *

In order for the imagination to take in a quantum intuitively, so that we can then use it as a measure or unity in estimating magnitude by numbers, the imagination must perform two acts: *apprehension (apprehensio)*, and *comprehension (comprehensio aethetica)*. Apprehension involves no problem, for it may progress to infinity. But comprehension becomes more and more difficult the farther apprehension progresses, and it soon reaches its maximum, namely, the aesthetically largest basic measure for an estimation of magnitude. For when apprehension has reached the point where the partial presentations of sensible intuition that were first apprehended are already beginning to be extinguished in the imagination, as it proceeds to apprehend further ones, the imagination then loses as much on the one side as it gains on the other; and so there is a maximum in comprehension that it cannot exceed.

This serves to explain a comment made by *Savary* in his report on Egypt:¹ that in order to get the full emotional effect from the magnitude of the pyramids one must neither get too close to them nor stay too far away. For if one stays too far away, then the apprehended parts (the stones on top of one another) are presented only obscurely, and hence their presentation has no effect on the subject's aesthetic judgment; and if one gets too close, then the eye needs some time to complete the apprehension from the base

9. That is, the mental sensation that attends perceiving an object that exceeds the capacity of our senses.

1. *Lettres sur l'Égypte* (1785–86, *Letters on Egypt*), by Claude-Étienne Savary (1750–1788), French traveler.

to the peak, but during that time some of the earlier parts are invariably extinguished in the imagination before it has apprehended the later ones, and hence the comprehension is never complete. Perhaps the same observation can explain the bewilderment or kind of perplexity that is said to seize the spectator who for the first time enters St. Peter's Basilica in Rome. For he has the feeling that his imagination is inadequate for exhibiting the idea of a whole, [a feeling] in which imagination reaches its maximum, and as it strives to expand that maximum, it sinks back into itself, but consequently comes to feel a liking [that amounts to an] emotion [*rührendes Wohlgefallen*].

I shall say nothing for now regarding the basis of this liking, a liking connected with a presentation from which one would least expect it, namely, a presentation that makes us aware of its own inadequacy and hence also of its subjective unpurposiveness for the power of judgment in its estimation of magnitude. Here I shall only point out that if the aesthetic judgment in question is to be *pure* (*unmixed with any teleological* and hence rational judgment), and if we are to give an example of it that is fully appropriate for the critique of *aesthetic* judgment, then we must point to the sublime not in products of art (e.g., buildings, columns, etc.), where both the form and the magnitude are determined by a human purpose, nor in natural things *whose very concept carries with it a determinate purpose* (e.g., animals with a known determination in nature), but rather in crude nature (and even in it only insofar as it carries with it no charm, nor any emotion aroused by actual danger), that is, merely insofar as crude nature contains magnitude. For in such a presentation nature contains nothing monstrous (nor anything magnificent or horrid); it does not matter how far the apprehended magnitude has increased, just as long as our imagination can comprehend it within one whole. An object is *monstrous* if by its magnitude it nullifies the purpose that constitutes its concept. And *colossal* is what we call the mere exhibition of a concept if that concept is almost too large for any exhibition (i.e., if it borders on the relatively monstrous); for the purpose of exhibiting a concept is hampered if the intuition of the object is almost too large for our power of apprehension. A pure judgment about the sublime, on the other hand, must have no purpose whatsoever of the object as the basis determining it, if it is to be aesthetic and not mingled with some judgment of understanding or of reason.

Since the presentation of anything that our merely reflective power of judgment is to like without an interest must carry with it a purposiveness that is subjective and yet universally valid, but since in the sublime (unlike the beautiful) our judging is not based on a purposiveness of the *form* of the object, the following questions arise: What is this subjective purposiveness, and how does it come to be prescribed as a standard, thereby providing a basis for a universally valid liking accompanying the mere estimation of magnitude—an estimation that has been pushed to the point where the ability of our imagination is inadequate to exhibit the concept of magnitude?

When the imagination performs the combination [*Zusammensetzung*] that is required to present a magnitude, it encounters no obstacles and on its own progresses to infinity, while the understanding guides it by means of numerical concepts, for which the imagination must provide the schema; and in this procedure, which is involved in the logical estimation of magnitude,

there is indeed something objectively purposive under the concept of a purpose (since any measuring is a purpose).

* * *

The infinite, however, is absolutely large (not merely large by comparison). Compared with it everything else (of the same kind of magnitudes) is small. But—and this is most important—to be able even to think the infinite as a *whole* indicates a mental power that surpasses any standard of sense. For [thinking the infinite as a whole while using a standard of sense] would require a comprehension yielding as a unity a standard that would have a determinate relation to the infinite, one that could be stated in numbers; and this is impossible. If the human mind is nonetheless to *be able even to think* the given infinite without contradiction, it must have within itself a power that is supersensible, whose idea of a noumenon² cannot be intuited but can yet be regarded as the substrate underlying what is mere appearance, namely, our intuition of the world. For only by means of this power and its idea do we, in a pure intellectual estimation of magnitude, comprehend the infinite in the world of sense *entirely under* a concept, even though in a mathematical estimation of magnitude by *means of numerical concepts* we can never think it in its entirety. Even a power that enables us to think the infinite of supersensible intuition as given (in our intelligible substrate) surpasses any standard of sensibility. It is large beyond any comparison even with the power of mathematical estimation—not, it is true, for [the pursuit of] a theoretical aim on behalf of our cognitive power, but still as an expansion of the mind that feels able to cross the barriers of sensibility with a different (a practical) aim.

Hence nature is sublime in those of its appearances whose intuition carries with it the idea of their infinity. But the only way for this to occur is through the inadequacy of even the greatest effort of our imagination to estimate an object's magnitude. In the mathematical estimation of magnitude, however, the imagination is equal to the task of providing, for any object, a measure that will suffice for this estimation, because the understanding's numerical concepts can be used in a progression and so can make any measure adequate to any given magnitude. Hence it must be the *aesthetic* estimation of magnitude where we feel that effort, our imagination's effort to perform a comprehension that surpasses its ability to encompass [*begreifen*] the progressive apprehension in a whole of intuition, and where at the same time we perceive the inadequacy of the imagination—unbounded though it is as far as progressing is concerned—for taking in and using, for the estimation of magnitude, a basic measure that is suitable for this with minimal expenditure on the part of the understanding. Now the proper unchangeable basic measure of nature is the absolute whole of nature, which, in the case of nature as appearance, is infinity comprehended. This basic measure, however, is a self-contradictory concept (because an absolute totality of an endless progression is impossible). Hence that magnitude of a natural object to which the imagination fruitlessly applies its entire ability to comprehend must lead the concept of nature to a supersensible substrate (which underlies both nature and

2. Something as it is in itself (which Kant sets against *phenomenon*, a "mere appearance" grasped through the senses).

our ability to think), a substrate that is large beyond any standard of sense and hence makes us judge as *sublime* not so much the object as the mental attunement in which we find ourselves when we estimate the object.

Therefore, just as the aesthetic power of judgment in judging the beautiful refers the imagination in its free play to the *understanding* so that it will harmonize with the understanding's *concepts* in general (which concepts they are is left indeterminate), so in judging a thing sublime it refers the imagination to *reason* so that it will harmonize subjectively with reason's *ideas* (which ideas they are is indeterminate), i.e., so that it will produce a mental attunement that conforms to and is compatible with the one that an influence by determinate (practical) ideas would produce on feeling.

This also shows that true sublimity must be sought only in the mind of the judging person, not in the natural object the judging of which prompts this mental attunement. Indeed, who would want to call sublime such things as shapeless mountain masses piled on one another in wild disarray, with their pyramids of ice, or the gloomy raging sea? But the mind feels elevated in its own judgment of itself when it contemplates these without concern for their form and abandons itself to the imagination and to a reason that has come to be connected with it—though quite without a determinate purpose, and merely expanding it—and finds all the might of the imagination still inadequate to reason's ideas.

* * *

§27. ON THE QUALITY OF LIKING IN OUR JUDGING OF THE SUBLIME

The feeling that it is beyond our ability to attain to an idea *that is a law for us* is RESPECT. Now the idea of comprehending every appearance that may be given us in the intuition of a whole is an idea enjoined on us by a law of reason, which knows no other determinate measure that is valid for everyone and unchanging than the absolute whole. But our imagination, even in its greatest effort to do what is demanded of it and comprehend a given object in a whole of intuition (and hence to exhibit the idea of reason), proves its own limits and inadequacy, and yet at the same time proves its vocation to [obey] a law, namely, to make itself adequate to that idea. Hence the feeling of the sublime in nature is respect for our own vocation. But by a certain subreption³ (in which respect for the object is substituted for respect for the idea of humanity within our[selves, as] subject[s]) this respect is accorded an object of nature that, as it were, makes intuitable for us the superiority of the rational vocation of our cognitive powers over the greatest power of sensibility.

Hence the feeling of the sublime is a feeling of displeasure that arises from the imagination's inadequacy, in an aesthetic estimation of magnitude, for an estimation by reason, but is at the same time also a pleasure, aroused by the fact that this very judgment, namely, that even the greatest power of sensibility is inadequate, is [itself] in harmony with rational ideas, insofar as striving toward them is still a law for us. For it is a law (of reason) for us, and part of our vocation, to estimate any sense object in nature that is large for us as being small when compared with ideas of reason; and whatever

3. A misrepresentation; a misunderstanding derived from such a misrepresentation.

arouses in us the feeling of this supersensible vocation is in harmony with the law, and by the greatest effort of the imagination in exhibiting the unity of itself to estimate magnitude is [itself] a reference to something *large absolute*, and hence also a reference to reason's law to adopt only this something as the supreme measure of magnitude. Hence our inner perception that every standard of sensibility is inadequate for an estimation of magnitude by reason is [itself] a harmony with laws of reason, as well as a displeasure that arouses in us the feeling of our supersensible vocation, according to which finding that every standard of sensibility is inadequate to the ideas of reason is purposive and hence pleasurable.

In representing the sublime in nature the mind feels *agitated*, while in an aesthetic judgment about the beautiful in nature it is in *restful* contemplation. This agitation (above all at its inception) can be compared with a vibration, i.e., with a rapid alternation of repulsion from, and attraction to, one and the same object. If a [thing] is excessive for the imagination (and the imagination is driven to [such excess] as it apprehends [the thing] in intuition), then [the thing] is, as it were, an abyss in which the imagination is afraid to lose itself. Yet, at the same time, for reason's idea of the supersensible [this same thing] is not excessive but conforms to reason's law to give rise to such striving by the imagination. Hence [the thing] is now attractive to the same degree to which [formerly] it was repulsive to mere sensibility. The judgment itself, however, always remains only aesthetic here. For it is not based on a determinate concept of the object, and presents merely the subjective play of the mental powers themselves (imagination and reason) as harmonious by virtue of their contrast. For just as, when we judge the beautiful, imagination and *understanding* give rise to a subjective purposiveness of the mental powers by their *accordance*, so do imagination and *reason* here give rise to such a purposiveness by their *conflict*, namely, to a feeling that we have a pure and independent reason, or a power for estimating magnitude, whose superiority cannot be made intuitable by anything other than the inadequacy of that power which in exhibiting magnitudes (of sensible objects) is itself unbounded.

* * *

§28. ON NATURE AS A MIGHT

Might is an ability that is superior to great obstacles. It is called *dominance* [*Gewalt*] if it is superior even to the resistance of something that itself possesses might. When in an aesthetic judgment we consider nature as a might that has no dominance over us, then it is *dynamically sublime*.

If we are to judge nature as sublime dynamically, we must present it as arousing fear. (But the reverse does not hold: not every object that arouses fear is found sublime when we judge it aesthetically.) For when we judge [something] aesthetically (without a concept), the only way we can judge a superiority over obstacles is by the magnitude of the resistance. But whatever we strive to resist is an evil, and it is an object of fear if we find that our ability [to resist it] is no match for it. Hence nature can count as a might, and so as dynamically sublime, for aesthetic judgment only insofar as we consider it as an object of fear.

We can, however, consider an object *fearful* without being afraid of it, namely, if we judge it in such a way that we merely *think* of the case where we might possibly want to put up resistance against it, and that any resistance would in that case be utterly futile. Thus a virtuous person fears God without being afraid of him. For he does not think of wanting to resist God and his commandments as a possibility that should worry *him*. But for every such case, which he thinks of as not impossible intrinsically, he recognizes God as fearful.

Just as we cannot pass judgment on the beautiful if we are seized by inclination and appetite, so we cannot pass judgment at all on the sublime in nature if we are afraid. For we flee from the sight of an object that scares us, and it is impossible to like terror that we take seriously. That is why the agreeableness that arises from the cessation of a hardship is *gladness*. But since this gladness involves our liberation from a danger, it is accompanied by our resolve never to expose ourselves to that danger again. Indeed, we do not even like to think back on that sensation, let alone actively seek out an opportunity for it.

On the other hand, consider bold, overhanging and, as it were, threatening rocks, thunderclouds piling up in the sky and moving about accompanied by lightning and thunderclaps, volcanoes with all their destructive power, hurricanes with all the devastation they leave behind, the boundless ocean heaved up, the high waterfall of a mighty river, and so on. Compared to the might of any of these, our ability to resist becomes an insignificant trifle. Yet the sight of them becomes all the more attractive the more fearful it is, provided we are in a safe place. And we like to call these objects sublime because they raise the soul's fortitude above its usual middle range and allow us to discover in ourselves an ability to resist which is of a quite different kind, and which gives us the courage [to believe] that we could be a match for nature's seeming omnipotence.

For although we found our own limitation when we considered the immensity of nature and the inadequacy of our ability to adopt a standard proportionate to estimating aesthetically the magnitude of nature's *domain*, yet we also found, in our power of reason, a different and nonsensible standard that has this infinity itself under it as a unit; and since in contrast to this standard everything in nature is small, we found in our mind a superiority over nature itself in its immensity. In the same way, though the irresistibility of nature's might makes us, considered as natural beings, recognize our physical impotence, it reveals in us at the same time an ability to judge ourselves independent of nature, and reveals in us a superiority over nature that is the basis of a self-preservation quite different in kind from the one that can be assailed and endangered by nature outside us. This keeps the humanity in our person from being degraded, even though a human being would have to succumb to that dominance [of nature]. Hence if in judging nature aesthetically we call it sublime, we do so not because nature arouses fear, but because it calls forth our strength (which does not belong to nature [within us]), to regard as small the [objects] of our [natural] concerns: property, health, and life, and because of this we regard nature's might (to which we are indeed subjected in these [natural] concerns) as yet not having such dominance over us, as persons, that we should have to bow to it if our highest principles were at stake and we had to choose between upholding or abandoning them.

Hence nature is here called sublime [*erhaben*] merely because it elevates [*erhebt*] our imagination, [making] it exhibit those cases where the mind can come to feel its own sublimity, which lies in its vocation and elevates it even above nature.

This self-estimation loses nothing from the fact that we must find ourselves safe in order to feel this exciting liking, so that (as it might seem), since the danger is not genuine, the sublimity of our intellectual ability might also not be genuine. For here the liking concerns only our ability's *vocation*, revealed in such cases, insofar as the predisposition to this ability is part of our nature, whereas it remains up to us, as our obligation, to develop and exercise this ability. And there is truth in this, no matter how conscious of his actual present impotence man may be when he extends his reflection thus far.

I admit that this principle seems farfetched and the result of some subtle reasoning, and hence high-flown [*überschwenglich*] for an aesthetic judgment. And yet our observation of man proves the opposite, and proves that even the commonest judging can be based on this principle, even though we are not always conscious of it. For what is it that is an object of the highest admiration even to the savage? It is a person who is not terrified, not afraid, and hence does not yield to danger but promptly sets to work with vigor and full deliberation. Even in a fully civilized society there remains this superior esteem for the warrior, except that we demand more of him: that he also demonstrate all the virtues of peace—gentleness, sympathy, and even appropriate care for his own person—precisely because they reveal to us that his mind cannot be subdued by danger. Hence, no matter how much people may dispute, when they compare the statesman with the general, as to which one deserves the superior respect, an aesthetic judgment decides in favor of the general. Even war has something sublime about it if it is carried on in an orderly way and with respect for the sanctity of the citizens' rights. At the same time it makes the way of thinking of a people that carries it on in this way all the more sublime in proportion to the number of dangers in the face of which it courageously stood its ground. A prolonged peace, on the other hand, tends to make prevalent a mere[ly] commercial spirit, and along with it base selfishness, cowardice, and softness, and to debase the way of thinking of that people.

* * *

§29. ON THE MODALITY OF A JUDGMENT ABOUT THE SUBLIME IN NATURE

Beautiful nature contains innumerable things about which we do not hesitate to require everyone's judgment to agree with our own, and can in fact expect such agreement without being wrong very often. But we cannot with the same readiness count on others to accept our judgment about the sublime in nature. For it seems that, if we are to pass judgment on that superiority of [such] natural objects, not only must our aesthetic power of judgment be far more cultivated, but also so must the cognitive powers on which it is based.

In order for the mind to be attuned to the feeling of the sublime, it must be receptive to ideas. For it is precisely nature's inadequacy to the ideas—and this presupposes both that the mind is receptive to ideas and that the

imagination strains to treat nature as a schema for them—that constitutes what both repels our sensibility and yet attracts us at the same time, because it is a dominance [*Gewalt*] that reason exerts over sensibility only for the sake of expanding it commensurately with reason's own domain (the practical one) and letting it look outward toward the infinite, which for sensibility is an abyss. It is a fact that what is called sublime by us, having been prepared through culture, comes across as merely repellent to a person who is uncultured and lacking in the development of moral ideas. In all the evidence of nature's destructive force [*Gewalt*], and in the large scale of its might, in contrast to which his own is nonexistent, he will see only the hardship, danger, and misery that would confront anyone forced to live in such a place. Thus (as Mr. de Saussure⁴ relates) the good and otherwise sensible Savoyard peasant did not hesitate to call anyone a fool who fancies glaciated mountains. He might even have had a point, if Saussure had acted merely from fancy, as most travelers tend to, in exposing himself to the dangers involved in his observations, or in order that he might some day be able to describe them with pathos. In fact, however, his intention was to instruct mankind, and that excellent man got, in addition, the soul-stirring sensation and gave it into the bargain to the readers of his travels.

But the fact that a judgment about the sublime in nature requires culture (more so than a judgment about the beautiful) still in no way implies that it was initially produced by culture and then introduced to society by way of (say) mere convention. Rather, it has its foundation in human nature: in something that, along with common sense, we may require and demand of everyone, namely, the predisposition to the feeling for (practical) ideas, i.e., to moral feeling.

This is what underlies the necessity—which we include in our judgment about the sublime—of the assent of other people's judgment to our own. For just as we charge someone with a lack of *taste* if he is indifferent when he judges an object of nature that we find beautiful, so we say that someone has no *feeling* if he remains unmoved in the presence of something we judge sublime. But we demand both taste and feeling of every person, and, if he has any culture at all, we presuppose that he has them. But we do so with this difference: taste we demand unhesitatingly from everyone, because here judgment refers the imagination merely to the understanding, our power of concepts; in the case of feeling, on the other hand, judgment refers the imagination to reason, our power of ideas, and so we demand feeling only under a subjective presupposition (though we believe we are justified and permitted to require [fulfillment of] this presupposition in everyone): we presuppose moral feeling in man. And so we attribute necessity to this [kind of] aesthetic judgment as well.

* * *

§40. ON TASTE AS A KIND OF *SENSUS COMMUNIS*

We often call the power of judgment a *sense*, when what we notice is not so much its reflection as merely its result. We then speak of a sense of truth, a sense of decency, of justice, etc. We do this even though we know, or at least

4. Horace Bénédict de Saussure (1740–1799), Swiss geologist and botanist [translator's note].

properly ought to know, that a sense cannot contain these concepts, let alone have the slightest capacity to pronounce universal rules, but that a conception of truth, propriety, beauty, or justice could never enter our thoughts if we were not able to rise above the senses to higher cognitive powers. [This] *common human understanding*, which is merely man's sound ([but] not yet cultivated) understanding, is regarded as the very least that we are entitled to expect from anyone who lays claim to the name of human being; and this is also why it enjoys the unfortunate honor of being called common sense (*sensus communis*), and this, indeed, in such a way that the word common (not merely in our language, where it is actually ambiguous, but in various others as well) means the same as *vulgar*—i.e., something found everywhere, the possession of which involves no merit or superiority whatever.

Instead, we must [here] take *sensus communis* to mean the idea of a sense *shared* [by all of us], i.e., a power to judge that in reflecting takes account (a priori), in our thought, of everyone else's way of presenting [something], in order as it were to compare our own judgment with human reason in general and thus escape the illusion that arises from the ease of mistaking subjective and private conditions for objective ones, an illusion that would have a prejudicial influence on the judgment. Now we do this as follows: we compare our judgment not so much with the actual as rather with the merely possible judgments of others, and [thus] put ourselves in the position of everyone else, merely by abstracting from the limitations that [may] happen to attach to our own judging; and this in turn we accomplish by leaving out as much as possible whatever is matter, i.e., sensation, in the presentational state, and by paying attention solely to the formal features of our presentation or of our presentational state. Now perhaps this operation of reflection will seem rather too artful to be attributed to the ability we call *common* sense. But in fact it only looks this way when expressed in abstract formulas. Intrinsically nothing is more natural than abstracting from charm and emotion when we seek a judgment that is to serve as a universal rule.

[Let us compare with this *sensus communis*] the common human understanding, even though the latter is not being included here as a part of the critique of taste. The following maxims may serve to elucidate its principles: (1) to think for oneself; (2) to think from the standpoint of everyone else; and (3) to think always consistently. The first is the maxim of an *unprejudiced*, the second of a *broadened*, the third of a *consistent* way of thinking. The first is the maxim of a reason that is never *passive*. A propensity to a passive reason, and hence to a heteronomy of reason, is called *prejudice*; and the greatest prejudice of all is *superstition*, which consists in thinking of nature as not subject to rules which the understanding through its own essential law lays down as the basis of nature. Liberation from superstition is called *enlightenment*; for although liberation from prejudices generally may also be called enlightenment, still superstition deserves to be called a prejudice preeminently (*in sensu eminenti*),⁵ since the blindness that superstition creates in a person, which indeed it even seems to demand as an obligation, reveals especially well the person's need to be guided by others, and hence his state of a passive reason. As for the second maxim concerning

5. In the prominent sense [of the term] (Latin).

[a person's] way of thinking, it seems that we usually [use a negative term and] call someone limited (of a *narrow* mind as opposed to a *broad* mind) if his talents are insufficient for a use of any magnitude (above all for intensive use). But we are talking here not about the power of cognition, but about the *way of thinking* [that involves] putting this power to a purposive use; and this, no matter how slight may be the range and the degree of a person's natural endowments, still indicates a man with a *broadened way of thinking* if he overrides the private subjective conditions of his judgment, into which so many others are locked, as it were, and reflects on his own judgment from a *universal standpoint* (which he can determine only by transferring himself to the standpoint of others). The third maxim, the one concerning a *consistent* way of thinking, is hardest to attain and can in fact be attained only after repeated compliance with a combination of the first two has become a skill. We may say that the first of these maxims is the maxim of the understanding, the second that of judgment, the third that of reason.

Resuming now the thread from which I just digressed, I maintain that taste can be called a *sensus communis* more legitimately than can sound understanding, and that the aesthetic power of judgment deserves to be called a shared sense more than does the intellectual one, if indeed we wish to use the word *sense* to stand for an effect that mere reflection has on the mind, even though we then mean by sense the feeling of pleasure. We could even define taste as the ability to judge something that makes our feeling in a given presentation *universally communicable* without mediation by a concept.

The aptitude that human beings have for communicating their thoughts to one another also requires that imagination and understanding be related in such a way that concepts can be provided with accompanying intuitions, and intuitions in turn with accompanying concepts, these intuitions and concepts joining to [form] cognition. But here the harmony of the two mental powers is *law-governed*, under the constraint of determinate concepts. Only where the imagination is free when it arouses the understanding, and the understanding, without using concepts, puts the imagination into a play that is regular [i.e., manifests regularity], does the presentation communicate itself not as a thought but as the inner feeling of a purposive state of mind.

Hence taste is our ability to judge a priori the communicability of the feelings that (without mediation by a concept) are connected with a given presentation.

* * *

§43. ON ART IN GENERAL

(1) *Art* is distinguished from *nature* as doing (*facere*) is from acting or operating in general (*agere*); and the product or result of art is distinguished from that of nature, the first being a work (*opus*), the second an effect (*effectus*).

By right we should not call anything art except a production through freedom, i.e., through a power of choice that bases its acts on reason. For though we like to call the product that bees make (the regularly constructed honeycombs) a work of art, we do so only by virtue of an analogy with art; for as soon as we recall that their labor is not based on any rational delib-

eration on their part, we say at once that the product is a product of their nature (namely, of instinct), and it is only to their creator that we ascribe it as art.

[It is true that] if, as sometimes happens when we search through a bog, we come across a piece of hewn wood, we say that it is a product of art, rather than of nature, i.e., that the cause which produced it was thinking of a purpose to which this object owes its form. Elsewhere too, I suppose, we see art in everything that is of such a character that before it became actual its cause must have had a presentation of it (as even in the case of bees), yet precisely without the cause's having [in fact] *thought* of that effect. But if we simply call something a work of art in order to distinguish it from a natural effect, then we always mean by that a work of man.

(2) *Art*, as human skill, is also distinguished from *science* ([i.e., we distinguish] *can* from *know*), as practical from theoretical ability, as technic from theory (e.g., the art of surveying from geometry). That is exactly why we refrain from calling anything art that we *can* do the moment we *know* what is to be done, i.e., the moment we are sufficiently acquainted with what the desired effect is. Only if something [is such that] even the most thorough acquaintance with it does not immediately provide us with the skill to make it, then to that extent it belongs to art. *Camper*⁶ describes with great precision what the best shoe would have to be like, yet he was certainly unable to make one.

(3) *Art* is likewise distinguished from *craft*. The first is also called *free art*, the second could also be called *mercenary art*. We regard free art [as an art] that could only turn out purposive (i.e., succeed) if it is play, in other words, an occupation that is agreeable on its own account; mercenary art we regard as labor, i.e., as an occupation that on its own account is disagreeable (burdensome) and that attracts us only through its effect (e.g., pay), so that people can be coerced into it. To judge whether, in a ranking of the guilds, watchmakers should be counted as artists but smiths as craftsmen, we would have to take a viewpoint different from the one adopted here: we would have to compare [*Proportion*] the talents that each of these occupations presupposes. Whether even among the so-called seven free arts⁷ a few may not have been included that should be numbered with the sciences, as well as some that are comparable to crafts, I do not here wish to discuss. It is advisable, however, to remind ourselves that in all the free arts there is yet a need for something in the order of a constraint, or, as it is called, a *mechanism*. (In poetry, for example, it is correctness and richness of language, as well as prosody and meter.) Without this the *spirit*, which in art must be *free* and which alone animates the work, would have no body at all and would evaporate completely. This reminder is needed because some of the more recent educators believe that they promote a free art best if they remove all constraint from it and convert it from labor into mere play.

* * *

6. Peter Camper (1722–1789), Dutch anatomist and naturalist [translator's note].

7. That is, the liberal arts of medieval education, made up of the trivium (grammar, logic, and rhet-

oric) and the more advanced quadrivium (music, arithmetic, geometry, and astronomy). *Liber* means "free" in Latin.

§49. ON THE POWERS OF THE MIND WHICH CONSTITUTE GENIUS

* * *

In a word, an aesthetic idea is a presentation of the imagination which is conjoined with a given concept and is connected, when we use imagination in its freedom, with such a multiplicity of partial presentations that no expression that stands for a determinate concept can be found for it. Hence it is a presentation that makes us add to a concept the thoughts of much that is ineffable, but the feeling of which quickens our cognitive powers and connects language, which otherwise would be mere letters, with spirit.

So the mental powers whose combination (in a certain relation) constitutes *genius* are imagination and understanding. One qualification is needed, however. When the imagination is used for cognition, then it is under the constraint of the understanding and is subject to the restriction of adequacy to the understanding's concept. But when the aim is aesthetic, then the imagination is free, so that, over and above that harmony with the concept, it may supply, in an unstudied way, a wealth of undeveloped material for the understanding which the latter disregarded in its concept. But the understanding employs this material not so much objectively, for cognition, as subjectively, namely, to quicken the cognitive powers, though indirectly this does serve cognition too. Hence genius actually consists in the happy relation—one that no science can teach and that cannot be learned by any diligence—allowing us, first, to discover ideas for a given concept, and, second, to hit upon a way of *expressing* these ideas that enables us to communicate to others, as accompanying a concept, the mental attunement that those ideas produce. The second talent is properly the one we call spirit. For in order to express what is ineffable in the mental state accompanying a certain presentation and to make it universally communicable—whether the expression consists in language or painting or plastic art—we need an ability [*viz.*, spirit] to apprehend the imagination's rapidly passing play and to unite it in a concept that can be communicated without the constraint of rules (a concept that on that very account is original, while at the same time it reveals a new rule that could not have been inferred from any earlier principles or examples).

If, after this analysis, we look back to the above explication of what we call *genius*, we find: *First*, genius is a talent for art, not for science, where we must start from distinctly known rules that determine the procedure we must use in it. *Second*, since it is an artistic talent, it presupposes a determinate concept of the product, namely, its purpose; hence genius presupposes understanding, but also a presentation (though an indeterminate one) of the material, *i.e.*, of the intuition, needed to exhibit this concept, and hence presupposes a relation of imagination to understanding. *Third*, it manifests itself not so much in the fact that the proposed purpose is achieved in exhibiting a determinate concept, as, rather, in the way *aesthetic ideas*, which contain a wealth of material [suitable] for that intention, are offered or expressed; and hence it presents the imagination in its freedom from any instruction by rules, but still as purposive for exhibiting the given concept. Finally, *fourth*, the unstudied, unintentional subjective purposive-

ness in the imagination's free harmony with the understanding's lawfulness presupposes such a proportion and attunement of these powers as cannot be brought about by any compliance with rules, whether of science or of mechanical imitation, but can be brought about only by the subject's nature.

These presuppositions being given, genius is the exemplary originality of a subject's natural endowment in the *free* use of his cognitive powers. Accordingly, the product of a genius (as regards what is attributable to genius in it rather than to possible learning or academic instruction) is an example that is meant not to be imitated, but to be followed by another genius. (For in mere imitation the element of genius in the work—what constitutes its spirit—would be lost.) The other genius, who follows the example, is aroused by it to a feeling of his own originality, which allows him to exercise in art his freedom from the constraint of rules, and to do so in such a way that art itself acquires a new rule by this, thus showing that the talent is exemplary. But since a genius is nature's favorite and so must be regarded as a rare phenomenon, his example gives rise to a school for other good minds, i.e., a methodical instruction by means of whatever rules could be extracted from those products of spirit and their peculiarity; and for these [followers] fine art is to that extent imitation, for which nature, through a genius, gave the rule.

But this imitation becomes *aping* if the pupil *copies* everything, including even the deformities that the genius had to permit only because it would have been difficult to eliminate them without diminishing the force of the idea. This courage [to retain deformities] has merit only in a genius. A certain *boldness* of expression, and in general some deviation from the common rule, is entirely fitting for a genius; it is however not at all worthy of imitation, but in itself always remains a defect that [any]one must try to eliminate, though the genius has, as it were, a privilege to allow the defect to remain [anyway], because the inimitable [element] in the momentum of his spirit would be impaired by timorous caution.

* * *

§59. ON BEAUTY AS THE SYMBOL OF MORALITY

* * *

Now I maintain that the beautiful is the symbol of the morally good; and only because we refer [*Rücksicht*] the beautiful to the morally good (we all do so [*Beziehung*] naturally and require all others also to do so, as a duty) does our liking for it include a claim to everyone else's assent, while the mind is also conscious of being ennobled, by this [reference], above a mere receptivity for pleasure derived from sense impressions, and it assesses the value of other people too on the basis of [their having] a similar maxim in their power of judgment. The morally good is the intelligible that taste has in view, as I indicated in the preceding section;⁸ for it is with this intelligible that even our higher cognitive powers harmonize, and without this intelligible contradictions would continually arise from the contrast between the nature

8. Section 58, omitted from our selection.

of these powers and the claims that taste makes. In this ability [taste], judgment does not find itself subjected to a heteronomy from empirical laws, as it does elsewhere in empirical judging—concerning objects of such a pure liking it legislates to itself, just as reason does regarding the power of desire. And because the subject has this possibility within him, while outside [him] there is also the possibility that nature will harmonize with it, judgment finds itself referred to something that is both in the subject himself and outside him, something that is neither nature nor freedom and yet is linked with the basis of freedom, the supersensible, in which the theoretical and the practical power are in an unknown manner combined and joined into a unity. I shall now bring up a few points of this analogy [between the beautiful and the morally good], noting at the same time what difference there is between them.

(1) The beautiful we like *directly* (but only in intuition reflect[ed upon], not in its concept, as we do morality). (2) We like it *without any interest*. (Our liking for the morally good is connected necessarily with an interest, but with an interest that does not precede our judgment about the liking but is produced by this judgment in the first place.) (3) In judging the beautiful, we present the *freedom* of the imagination (and hence [of] our power [of] sensibility) as harmonizing with the lawfulness of the understanding. (In a moral judgment we think the freedom of the will as the will's harmony with itself according to universal laws of reasons.) (4) We present the subjective principle for judging the beautiful as *universal*, i.e., as valid for everyone, but as unknowable through any universal concept. (The objective principle of morality we also declare to be universal[ly valid], i.e., [valid] for all subjects, as well as for all acts of the same subject, but also declare to be knowable through a universal concept.) Hence not only is a moral judgment capable of [having] determinate constitutive principles, but its possibility *depends* on our basing the[se] maxims on those principles and their universality.

The common understanding also habitually bears this analogy in mind, and beautiful objects of nature or of art are often called by names that seem to presuppose that we are judging [these objects] morally. We call buildings or trees majestic and magnificent, or landscapes cheerful and gay; even colors are called innocent, humble, or tender, because they arouse sensations in us that are somehow analogous to the consciousness we have in a mental state produced by moral judgments. Taste enables us, as it were, to make the transition from sensible charm to a habitual moral interest without making too violent a leap; for taste presents the imagination as admitting, even in its freedom, of determination that is purposive for the understanding, and it teaches us to like even objects of sense freely, even apart from sensible charm.

EDMUND BURKE

1729-1797

The sublime, which Edmund Burke examines in his major work *A Philosophical Enquiry into the Origins of Our Ideas of the Sublime and Beautiful* (1757), is one of the most intriguing terms in the history of literary criticism and theory. When invoked to name the defining quality of a great literary or artistic work, it usually suggests grandeur, vastness, awe, immense power. But the concept has a complex history, and critics and theorists have for centuries explored its meanings. It was first described in the treatise *On Sublimity*, written in the first century C.E. by a Greek rhetorician known (because of an early misattribution) as LONGINUS; in this text, the sublime is defined as "excellence in language" and as the "expression of a great spirit." It is associated as well with frightening, huge phenomena in nature—volcanoes, storms, the surging seas. Here already are signs of the tensions and ambiguities that Burke, and others in the eighteenth and nineteenth centuries, inquired into. Is the sublime a fact about nature or art, or both? Is the sublime a property of the work of literature itself? Or is it, instead, less in the work than in the soul, mind, or character of the genius who produces the work? Or—yet another variation—is it an extraordinary experience brought about by the power of the perceiver, and thus testimony not to the work or to the author but to something in the reader, something special in the intensity of the reader's response?

While Burke's contribution to aesthetics is significant, he is best known as a political theorist and statesman. He was born in Dublin, Ireland; his father, a lawyer, was a Protestant, and his mother was a Roman Catholic. He attended Trinity College in Dublin from 1743 to 1748 and then in 1750 began the study of law at the Middle Temple in London. His first publication, a satiric work titled *A Vindication of Natural Society*, was published anonymously in 1756. It was followed the next year by the *Enquiry*, also published anonymously, and this book won praise from scholars and critics in England and abroad. Burke soon became friends with a number of accomplished writers and artists, including Oliver Goldsmith, SAMUEL JOHNSON, and Joshua Reynolds; Johnson called Burke's work on the sublime "an example of true criticism." Beginning in 1758, Burke was also the editor (anonymously) of *The Annual Register*, a survey of world affairs; he held the position for three decades.

In 1765 Burke was appointed secretary to the Marquess of Rockingham, a notable Whig political leader, and he became a member of Parliament. He took an active role in debates over the relationship between Parliament and the king, as George III attempted to increase the power of the monarchy; the Whigs sought to limit royal authority. In his pamphlet *Thoughts on the Cause of the Present Discontents* (1770), Burke criticized George's choice of ministers and presented a new conception of political "party." Traditionally, political parties had been seen as inherently subversive and unpatriotic, as well as sources of factionalism; but Burke viewed parties as collectives brought together on the basis of shared public principles. Rightly conceived, "party" was a "constitutional link between king and parliament, providing consistency and strength in administration, or principled criticism in opposition."

In addition to his efforts to limit the power of the king, Burke was involved in the 1760s and 1770s in the disputes about how best to govern the American colonies, a question considered in *Thoughts*. He delivered a number of speeches on this issue, faulting the policies of the British government for being rigid, contradictory, and unworkable. He called for "conciliation"—not an end to imperial authority but a more pragmatic exercise of it that would take into serious account the reasons for the colonists' complaints about taxation and lack of representation.

Burke was also an angry, incisive critic of the French Revolution, which broke out in 1789 and which many British writers, including WILLIAM WORDSWORTH and SAMUEL TAYLOR COLERIDGE initially welcomed and supported. In his classic text *Reflections on the Revolution in France* (1790), Burke inveighed against unfettered democracy and dangerous appeals to the universal "rights of man" as he defended tradition, monarchy, and a hereditary aristocracy. He resisted abstract speculation and (as he defined them) systems and schemes for social and political change that ignored the long history and organic interrelatedness of sociopolitical life, culture, and institutions. Society, for Burke, means a "partnership" between "those who are living, those who are dead, and those who are yet to be born." It is dangerously wrong to interfere with this partnership, however alluring the ideals invoked as justification.

In the excerpt below, we see Burke writing as a literary theorist, taking up a subject that previous critics had discussed and that resonated in the verse of contemporary poets. He is indebted, for example, to JOSEPH ADDISON's essays on taste, the imagination, and the sublime (see above) and to DAVID HUME's "Of the Standard of Taste" (1757; see above). Like those writers, he operates within the empirical tradition that John Locke had established in *An Essay concerning Human Understanding* (1690)—that knowledge derives from sense experience and that simple ideas are combined into more complex ones. Burke has also absorbed the melancholy, reflective, sometimes ominous and disquieting poetry of EDWARD YOUNG ("Night Thoughts," 1742), Thomas Gray ("Elegy Written in a Country Churchyard," 1751), and others. He is interested in the psychological and physical nature of our response to the exalted and the fearful, the terrible and terrifying, both in art and in nature.

Burke begins with "On Taste," a long introduction (added for the second edition) covering aesthetic judgment. Like Hume, he aims to show that we can do better than simply conclude that "Taste cannot be disputed," as if there were no shared standards and principles for judgment. He says, for example, that while a man may come to prefer the taste of tobacco to that of sugar, neither he nor anyone else believes that tobacco is sweet. An "acquired" preference is not the same as a "natural" one, he explains. In their sense of pleasure and pain, Burke concludes, persons are the same: "Light is more pleasing than darkness. . . . No man thinks a goose to be more beautiful than a swan." This does not mean that everyone speaks with equal insight and accuracy about a work of art: some possess more knowledge than others and hence they see elements in the work that others do not. Thus some persons might seem not properly to value Virgil's epic poem, the *Aeneid* (19 B.C.E.), not because their taste is defective but primarily because they lack knowledge and experience. One can detect in this commentary on "taste" Burke's investment in the idea of consensus, the notion that persons of different social and cultural backgrounds can nonetheless reach agreement on principles and standards—a belief that decades later would fuel his furious response to the upheavals of the French Revolution.

Burke's stress on knowledge and experience is evident in his account of the relation between taste and judgment. "A wrong taste," he explains, is caused by "a defect of judgment" that reflects "a weakness of understanding" or, "more commonly," a "want of proper exercise." Burke emphasizes that differences in taste derive from prejudices and passions that mar judgment, rather than from any intrinsic gifts of imagination and insight that make some persons naturally better judges than others. "Sensibility" is important, he states, but he insists that experience and knowledge can develop and strengthen judgment, even as he adds that in the response to literature there is less difference in judgment than in the response to philosophy and abstract argument: "Men are far better agreed on the excellence of a description in Virgil, than on the truth or falsehood of a theory of Aristotle."

The later sections of Burke's book treat the sublime and its relationship to the beautiful. Used as an adjective, "sublime" (from the Latin *sublimis*, "on high, uplifted, raised up") in the sixteenth and seventeenth centuries meant grand, elevated, lofty. By the middle of the seventeenth century, it also suggested the highest moral, intel-

actual, or emotional level, as well as great nobility of character. Late in the century, it was used as both an adjective and a noun to refer, as it does today, to a sensation—overwhelming awe, astonishment, fear, terror—produced by great scenes in nature and powerful works of literature and art.

Though Burke read Longinus's text when he was a student at Trinity, he seems already to have been fascinated by the idea and experience of the sublime. For example, while in his teens he commented in a letter on a flood he saw in Dublin: "It gives me pleasure to see nature in these great though terrible scenes. It fills the mind with grand ideas, and turns the soul in upon itself." In his *Essay on Criticism* (1711; see above), ALEXANDER POPE had highlighted the order, harmony, and proportion that characterized Nature—and that writers should seek to embody in their work. But in this letter and in his book on the sublime, Burke is getting at an irrational element in both nature and art, something not captured by terms such as *reason, order, proportion, and balance*.

Burke also delves into the response of the reader or viewer to the sublime, and in his attention to the psychological nature of response he looks forward to the philosopher IMMANUEL KANT in his *Critique of Judgment* (1790), the German dramatist and critic G. E. LESSING, Coleridge, and RALPH WALDO EMERSON. Coleridge and Emerson, and, later, Walt Whitman, discover the sublime in the commonplace and everyday through the power of the perceiving mind—the capacity to recognize and voice, as Whitman does, the awe-inspiring infinite meaningfulness of a leaf of grass. Burke's influence on the understanding of the "terror" associated with the sublime is also apparent in the theory and practice of the Gothic novel; in *The Mysteries of Udolpho* (1794), Ann Radcliffe describes the impact of terror on the mind in Burkean terms: "A terror of this nature, as it occupies and expands the mind, and elevates it to a high expectation, is purely sublime; and leads us, by a kind of fascination, to seek even the object from which we appear to shrink."

Unlike some theorists of the era, though like Kant later in the century, Burke makes a distinction between the sublime and the beautiful. The sublime he connects to terror, obscurity, vastness, infinity; the beautiful he associates with smallness, brightness of color, the finite. His book stands roughly midway between the elegant neoclassicism of JOHN DRYDEN and Pope and the transcendence-seeking Romantic poetry and criticism of Wordsworth and Coleridge. Burke was one of the central figures in the challenge to the tradition that Dryden and Pope represented, and he helped prepare the way for the literary revolution of the 1790s—which coincided with the French Revolution that he so despised. In yet another irony, for the deconstructionists PAUL DE MAN, JACQUES DERRIDA, and their followers, the sublime has come to signify the plurality in language that keeps meaning from ever achieving a fixed form: dizzying, disorienting, and disorder-generating, it is dramatically at odds with the values that Burke in his political writing eloquently defended.

BIBLIOGRAPHY

For complete editions of Burke, see *Works* (9 vols., 1839) and *Works* (8 vols., 1868–80). A modern edition is in progress: *Writings and Speeches of Edmund Burke*, edited by Paul Langford (5 vols. to date, 1981–). An important source is the *Correspondence* (10 vols., 1958–78). A selection of the letters has been edited by Harvey C. Mansfield (1984). There are two annotated editions of *A Philosophical Enquiry into the Origin of Our Ideas of the Sublime and Beautiful*, the first by James T. Boulton (1958), the second by Adam Phillips (1990). For Burke's biography, consult Alice P. Miller, *Edmund Burke and His World* (1979), and Stanley Ayling, *Edmund Burke: His Life and Opinions* (1988). For a detailed, measured assessment, see F. P. Lock's study (in progress), *Edmund Burke* (1998–).

Literary critics have paid much attention recently to Burke as a thinker and writer. Good discussions can be found in David Bromwich, *A Choice of Inheritance: Self and*

Community from Edmund Burke to Robert Frost (1989); Terry Eagleton, *The Ideology of the Aesthetic* (1990); Frances Ferguson, *Solitude and the Sublime: Romanticism and the Aesthetics of Individuation* (1992), a study of Burke, Kant, and eighteenth- and nineteenth-century aesthetic theory; and Tom Furniss, *Edmund Burke's Aesthetic Ideology: Language, Gender, and Political Economy in Revolution* (1993). For background, see *The Sublime: A Reader in British Eighteenth-Century Aesthetic Theory*, edited by Andrew Ashfield and Peter de Bolla (1996). Bibliographical resources on Burke include William B. Todd, *A Bibliography of Edmund Burke* (1964); Clara I. Gandy, *Edmund Burke: A Bibliography of Secondary Studies to 1982* (1983); and Leonard W. Cowie, *Edmund Burke, 1729–1797: A Bibliography* (1994).

From A Philosophical Enquiry into the Origin of Our Ideas of the Sublime and Beautiful

Introduction on Taste

On a superficial view, we may seem to differ very widely from each other in our reasonings, and no less in our pleasures: but notwithstanding this difference, which I think to be rather apparent than real, it is probable that the standard both of reason and Taste is the same in all human creatures. For if there were not some principles of judgment as well as of sentiment common to all mankind, no hold could possibly be taken either on their reason or their passions, sufficient to maintain the ordinary correspondence of life. It appears indeed to be generally acknowledged, that with regard to truth and falsehood there is something fixed. We find people in their disputes continually appealing to certain tests and standards which are allowed on all sides, and are supposed to be established in our common nature. But there is not the same obvious concurrence in any uniform or settled principles which relate to Taste. It is even commonly supposed that this delicate and aerial¹ faculty, which seems too volatile to endure even the chains of a definition, cannot be properly tried by any test, nor regulated by any standard. There is so continual a call for the exercise of the reasoning faculty, and it is so much strengthened by perpetual contention, that certain maxims of right reason seem to be tacitly settled amongst the most ignorant. The learned have improved on this rude science, and reduced those maxims into a system. If Taste has not been so happily cultivated, it was not that the subject was barren, but that the labourers were few or negligent; for to say the truth, there are not the same interesting motives to impel us to fix the one, which urge us to ascertain the other. And after all, if men differ in their opinion concerning such matters, their difference is not attended with the same important consequences, else I make no doubt but that the logic of Taste, if I may be allowed the expression, might very possibly be as well digested, and we might come to discuss matters of this nature with as much certainty, as those which seem more immediately within the province of mere reason. And indeed it is very necessary at the entrance into such an enquiry, as our present, to make this point as clear as possible; for if Taste has no fixed principles, if the imagination is not affected according to some invariable and certain laws, our labour is like to be employed to very little purpose;

1. Reaching high into the air, lofty.

as it must be judged an useless, if not an absurd undertaking, to lay down rules for caprice, and to set up for a legislator of whims and fancies.

The term Taste, like all other figurative terms, is not extremely accurate: the thing which we understand by it, is far from a simple and determinate idea in the minds of most men, and it is therefore liable to uncertainty and confusion. I have no great opinion of a definition, the celebrated remedy for the cure of this disorder. For when we define, we seem in danger of circumscribing nature within the bounds of our own notions, which we often take up by hazard, or embrace on trust, or form out of a limited and partial consideration of the object before us, instead of extending our ideas to take in all that nature comprehends, according to her manner of combining. We are limited in our enquiry by the strict laws to which we have submitted at our setting out.

—*Circa vilem patulumque morabimur orbem
Unde pudor proferre pedem vetat aut operis lex.*²

A definition may be very exact, and yet go but a very little way towards informing us of the nature of the thing defined; but let the virtue of a definition be what it will, in the order of things, it seems rather to follow than to precede our enquiry, of which it ought to be considered as the result. It must be acknowledged that the methods of disquisition and teaching may be sometimes different, and on very good reason undoubtedly; but for my part, I am convinced that the method of teaching which approaches most nearly to the method of investigation, is incomparably the best; since not content with serving up a few barren and lifeless truths, it leads to the stock on which they grew; it tends to set the reader himself in the track of invention, and to direct him into those paths in which the author has made his own discoveries, if he should be so happy as to have made any that are valuable.

But to cut off all pretence for cavilling, I mean by the word Taste no more than that faculty, or those faculties of the mind which are affected with, or which form a judgment of the works of imagination and the elegant arts. This is, I think, the most general idea of that word, and what is the least connected with any particular theory. And my point in this enquiry is to find whether there are any principles, on which the imagination is affected, so common to all, so grounded and certain, as to supply the means of reasoning satisfactorily about them. And such principles of Taste, I fancy there are; however paradoxical it may seem to those, who on a superficial view imagine, that there is so great a diversity of Tastes both in kind and degree, that nothing can be more indeterminate.

All the natural powers in man, which I know, that are conversant about external objects, are the Senses; the Imagination; and the Judgment. And first with regard to the senses. We do and we must suppose, that as the conformation of their organs are nearly, or altogether the same in all men, so the manner of perceiving external objects is in all men the same, or with little difference. We are satisfied that what appears to be light to one eye, appears light to another; that what seems sweet to one palate, is sweet to

2. Misquoted from HORACE (65–8 B.C.E.), *Ars Poetica* (see above): "We shall linger with the low and open world, from which place modesty or the law of the work prevent our feet from moving"

(lines 132, 135). Burke leaves out the word *non*: Horace is instructing the aspiring poet *not* to linger.

another; that what is dark and bitter to this man, is likewise dark and bitter to that; and we conclude in the same manner of great and little, hard and soft, hot and cold, rough and smooth; and indeed of all the natural qualities and affections of bodies. If we suffer ourselves to imagine, that their senses present to different men different images of things, this sceptical proceeding will make every sort of reasoning on every subject vain and frivolous, even that sceptical reasoning itself, which had persuaded us to entertain a doubt concerning the agreement of our perceptions. But as there will be very little doubt that bodies present similar images to the whole species, it must necessarily be allowed, that the pleasures and the pains which every object excites in one man, it must raise in all mankind, whilst it operates naturally, simply, and by its proper powers only; for if we deny this, we must imagine, that the same cause operating in the same manner, and on subjects of the same kind, will produce different effects, which would be highly absurd. Let us first consider this point in the sense of Taste, and the rather as the faculty in question has taken its name from that sense. All men are agreed to call vinegar sour, honey sweet, and aloes³ bitter; and as they are all agreed in finding these qualities in those objects, they do not in the least differ concerning their effects with regard to pleasure and pain. They all concur in calling sweetness pleasant, and sourness and bitterness unpleasant. Here there is no diversity in their sentiments; and that there is not appears fully from the consent of all men in the metaphors which are taken from the sense of Taste. A sour temper, bitter expressions, bitter curses, a bitter fate, are terms well and strongly understood by all. And we are altogether as well understood when we say, a sweet disposition, a sweet person, a sweet condition, and the like. It is confessed, that custom, and some other causes, have made many deviations from the natural pleasures or pains which belong to these several Tastes; but then the power of distinguishing between the natural and the acquired relish remains to the very last. A man frequently comes to prefer the Taste of tobacco to that of sugar, and the flavour of vinegar to that of milk; but this makes no confusion in Tastes, whilst he is sensible that the tobacco and vinegar are not sweet, and whilst he knows that habit alone has reconciled his palate to these alien pleasures. Even with such a person we may speak, and with sufficient precision, concerning Tastes. But should any man be found who declares, that to him tobacco has a Taste like sugar, and that he cannot distinguish between milk and vinegar; or that tobacco and vinegar are sweet, milk bitter, and sugar sour, we immediately conclude that the organs of this man are out of order, and that his palate is utterly vitiated. We are as far from conferring with such a person upon Tastes, as from reasoning concerning the relations of quantity with one who should deny that all the parts together were equal to the whole. We do not call a man of this kind wrong in his notions, but absolutely mad. Exceptions of this sort in either way, do not at all impeach our general rule, nor make us conclude that men have various principles concerning the relations of quantity, or the Taste of things. So that when it is said, Taste cannot be disputed, it can only mean, that no one can strictly answer what pleasure or pain some particular man may find from the Taste of some particular thing. This indeed cannot be disputed; but we may dispute, and with sufficient

clearness too, concerning the things which are naturally pleasing or disagreeable to the sense. But when we talk of any peculiar or acquired relish; then we must know the habits, the prejudices, or the distempers⁴ of this particular man, and we must draw our conclusion from those.
