This agreement of mankind is not confined to the Taste solely. The principle of pleasure derived from sight is the same in all. Light is more pleasing than darkness. Summer, when the earth is clad in green, when the heavens are serene and bright, is more agreeable than winter, when everything makes a different appearance. I never remember that any thing beautiful, whether a man, a beast, a bird, or a plant, was ever shewn, though it were to an hundred people, that they did not all immediately agree that it was beautiful, though some might have thought that it fell short of their expectation, or that other things were still finer. I believe no man thinks a goose to be more beautiful than a swan, or imagines that what they call a Friezland hen excels a peacock. It must be observed too, that the pleasures of the sight are not near so complicated, and confused, and altered by unnatural habits and associations, as the pleasures of the Taste are; because the pleasures of the sight more commonly acquiesce in themselves; and are not so often altered by considerations which are independent of the sight itself. But things do not spontaneously present themselves to the palate as they do to the sight; they are generally applied to it, either as food or as medicine; and from the qualities which they possess for nutritive or medicinal purposes, they often form the palate by degrees, and by force of these associations. Thus opium is pleasing to Turks, on account of the agreeable delirium it produces. Tobacco is the delight of Dutchmen, as it diffuses a torpor and pleasing stupefaction. Fermented spirits please our common people, because they banish care, and all consideration of future or present evils. All of these would lie absolutely neglected if their properties had originally gone no further than the Taste; but all these, together with tea and coffee, and some other things, have past from the apothecary's shop to our tables, and were taken for health long before they were thought of for pleasure. The effect of the drug has made us use it frequently; and frequent use, combined with the agreeable effect, has made the Taste itself at last agreeable. But this does not in the least perplex our reasoning; because we distinguish to the last the acquired from the natural relish. In describing the Taste of an unknown fruit, you would scarcely say, that it had a sweet and pleasant flavour like tobacco, opium, or garlic; although you spoke to those who were in the constant use of these drugs, and had great pleasure in them. There is in all men a sufficient remembrance of the original natural causes of pleasure, to enable them to bring all things offered to their senses to that standard, and to regulate their feelings and opinions by it. Suppose one who had so vitiated his palate as to take more pleasure in the Taste of opium than in that of butter or honey, to be presented with a bolus of squills; there is hardly any doubt but that he would prefer the butter or honey to this nauseous morsel, or to any other bitter drug to which he had not been accustomed; which proves that his palate was naturally like that of other men in all things, that it is still like the palate of other men in many things, and only vitiated in some particular points. For in judging of any new thing, even of a Taste similar to that which

4. Disturbances of the bodily "humors" or "tempers" once thought to govern human physiology.

he has been formed by habit to like, he finds his palate affected in the natural manner, and on the common principles. Thus the pleasure of all the senses, of the sight, and even of the Taste, that most ambiguous of the senses, is the same in all, high and low, learned and unlearned.

Besides the ideas, with their annexed pains and pleasures, which are presented by the sense; the mind of man possesses a sort of creative power of its own; either in representing at pleasure the images of things in the order and manner in which they were received by the senses, or in combining those images in a new manner, and according to a different order. This power is called Imagination; and to this belongs whatever is called wit, fancy, invention, and the like. But it must be observed, that this power of the imagination is incapable of producing any thing absolutely new; it can only vary the disposition of those ideas which it has received from the senses.⁵ Now the imagination is the most extensive province of pleasure and pain, as it is the region of our fears and our hopes, and of all our passions that are connected with them; and whatever is calculated to affect the imagination with these commanding ideas, by force of any original natural impression, must have the same power pretty equally over all men. For since the imagination is only the representative of the senses, it can only be pleased or displeased with the images from the same principle on which the sense is pleased or displeased with the realities; and consequently there must be just as close an agreement in the imaginations as in the senses of men. A little attention will convince us that this must of necessity be the case.

But in the imagination, besides the pain or pleasure arising from the properties of the natural object, a pleasure is perceived from the resemblance, which the imitation has to the original; the imagination, I conceive, can have no pleasure but what results from one or other of these causes. And these causes operate pretty uniformly upon all men, because they operate by principles in nature, and which are not derived from any particular habits or advantages. Mr. Locke very justly and finely observes of wit, that it is chiefly conversant in tracing resemblances; he remarks at the same time, that the business of judgment is rather in finding differences.⁶ It may perhaps appear, on this supposition, that there is no material distinction between the wit and the judgment, as they both seem to result from different operations of the same faculty of *comparing*. But in reality, whether they are or are not dependent on the same power of the mind, they differ so very materially in many respects, that a perfect union of wit and judgment is one of the rarest things in the world. When two distinct objects are unlike to each other, it is only what we expect; things are in their common way; and therefore they make no impression on the imagination: but when two distinct objects have a resemblance, we are struck, we attend to them, and we are pleased. The mind of man has naturally a far greater alacrity and satisfaction in tracing resemblances than in searching for differences; because by making resemblance we produce *new images*, we unite, we create, we enlarge our stock; but in making distinctions we offer no food at all to the imagination; the task itself is more severe and irksome, and what pleasure we derive from it is something of a negative and indirect nature. A piece of news is told me in

5. Compare *An Essay concerning Human Understanding* (1690), 2.2.2, 2.12.2, by the English

empiricist philosopher John Locke (1632–1704).

the morning; this, merely as a piece of news, as a fact added to my stock, gives me some pleasure. In the evening I find there was nothing in it. What do I gain by this, but the dissatisfaction to find that I had been imposed upon? Hence it is, that men are much more naturally inclined to belief than to incredulity. And it is upon this principle, that the most ignorant and barbarous nations have frequently excelled in similitudes, comparisons, metaphors, and allegories, who have been weak and backward in distinguishing and sorting their ideas. And it is for a reason of this kind that Homer⁷ and the oriental writers, though very fond of similitudes, and though they often strike out such as are truly admirable, they seldom take care to have them exact; that is, they are taken with the general resemblance, they paint it strongly, and they take no notice of the difference which may be found between the things compared.

Now as the pleasure of resemblance is that which principally flatters the imagination, all men are nearly equal in this point, as far as their knowledge of the things represented or compared extends. The principle of this knowledge is very much accidental, as it depends upon experience and observation, and not on the strength or weakness of any natural faculty; and it is from this difference in knowledge that what we commonly, though with no great exactness, call a difference in Taste proceeds. A man to whom sculpture is new, sees a barber's block,⁸ or some ordinary piece of statuary; he is immediately struck and pleased, because he sees something like an human figure; and entirely taken up with this likeness, he does not at all attend to its defects. No person, I believe, at the first time of seeing a piece of imitation ever did. Some time after, we suppose that this novice lights upon a more artificial⁹ work of the same nature; he now begins to look with contempt on what he admired at first; not that he admired it even then for its unlikeness to a man, but for that general though inaccurate resemblance which it bore to the human figure. What he admired at different times in these so different figures, is strictly the same; and though his knowledge is improved, his Taste is not altered. Hitherto his mistake was from a want of knowledge in art, and this arose from his inexperience; but he may be still deficient from a want of knowledge in nature. For it is possible that the man in question may stop here, and that the masterpiece of a great hand may please him no more than the middling performance of a vulgar artist; and this not for want of better or higher relish, but because all men do not observe with sufficient accuracy on the human figure to enable them to judge properly of an imitation of it. And that the critical Taste does not depend upon a superior principle in men, but upon superior knowledge, may appear from several instances. The story of the ancient painter and the shoemaker is very well known. The shoemaker set the painter right with regard to some mistakes he had made in the shoe of one of his figures, and which the painter, who had not made such accurate observations on shoes, and was content with a general resemblance, had never observed.¹ But this was no impeachment to the Taste of the painter, it only shewed some want of knowledge in the art of making

9. Skillfully made.

1. In his *Natural History* 35.84, the Roman writer Pliny the Elder (23/4–79 C.E.) tells this story of the Greek painter Apelles. See also SAMUEL JOHNSON, *The Rambler*, No. 4 (1750; above).

shoes. Let us imagine, that an anatomist had come into the painter's working room. His piece is in general well done, the figure in question in a good attitude, and the parts well adjusted to their various movements; yet the anatomist, critical in his art, may observe the swell of some muscle not quite just in the peculiar action of the figure. Here the anatomist observes what the painter had not observed, and he passes by what the shoemaker had remarked. But a want of the last critical knowledge in anatomy no more reflected on the natural good Taste of the painter, or of any common observer of his piece, than the want of an exact knowledge in the formation of a shoe. A fine piece of a decollated² head of St. John the Baptist was shewn to a Turkish emperor; he praised many things, but he observed one defect; he observed that the skin did not shrink from the wounded part of the neck. The sultan on this occasion, though his observation was very just, discovered no more natural Taste than the painter who executed this piece, or than a thousand European connoisseurs who probably never would have made the same observation. His Turkish majesty had indeed been well acquainted with that terrible spectacle, which the others could only have represented in their imagination. On the subject of their dislike there is a difference between all these people, arising from the different kinds and degrees of their knowledge; but there is something in common to the painter, the shoemaker, the anatomist, and the Turkish emperor, the pleasure arising from a natural object, so far as each perceives it justly imitated; the satisfaction in seeing an agreeable figure; the sympathy proceeding from a striking and affecting incident. So far as Taste is natural, it is nearly common to all.

In poetry, and other pieces of imagination, the same parity may be observed. It is true, that one man is charmed with Don Bellianis,³ and reads Virgil coldly; whilst another is transported with the Eneid,⁴ and leaves Don Bellianis to children. These two men seem to have a Taste very different from each other; but in fact they differ very little. In both these pieces, which inspire such opposite sentiments, a tale exciting admiration is told; both are full of action, both are passionate, in both are voyages, battles, triumphs, and continual changes of fortune. The admirer of Don Bellianis perhaps does not understand the refined language of the Eneid, who if it was degraded into the style of the Pilgrim's Progress,⁵ might feel it in all its energy, on the same principle which made him an admirer of Don Bellianis.

In his favorite author he is not shocked with the continual breaches of probability, the confusion of times, the offences against manners, the trampling upon geography; for he knows nothing of geography and chronology, and he had never examined the grounds of probability. He perhaps reads of a shipwreck on the coast of Bohemia;⁶ wholly taken up with so interesting an event, and only solicitous for the fate of his hero, he is not in the least troubled at this extravagant blunder. For why should he be shocked at a shipwreck on the coast of Bohemia, who does not know but that Bohemia may be an island in the Atlantic ocean? and after all, what reflection is this on the natural good Taste of the person here supposed?

2. Beheaded.

3. Geronimo Fernandez's chivalric romance *Historia del valeroso é invencible Principe don Bellanis de Grecia* (1547-49), published in full and in translation as *The Famous and Delectable History of Don Bellienis of Greece* (1673).

5. *The Pilgrim's Progress* (1678), popular religious allegory by John Bunyan.

6. A notorious geographical error in Shakespeare, *The Winter's Tale* (ca. 1611), 3.3.2: Bohemia has no seacoast.

So far then as Taste belongs to the imagination, its principle is the same in all men; there is no difference in the manner of their being affected, nor in the causes of the affection; but in the *degree* there is a difference, which arises from two causes principally; either from a greater degree of natural sensibility, or from a closer and longer attention to the object. To illustrate this by the procedure of the senses in which the same difference is found, let us suppose a very smooth marble table to be set before two men; they both perceive it to be smooth, and they are both pleased with it, because of this quality. So far they agree. But suppose another, and after that another table, the latter still smoother than the former, to be set before them. It is now very probable that these men, who are so agreed upon what is smooth, and in the pleasure from thence, will disagree when they come to settle which table has the advantage in point of polish. Here is indeed the great difference between Tastes, when men come to compare the excess or diminution of things which are judged by degree and not by measure. Nor is it easy, when such a difference arises, to settle the point, if the excess or diminution be not glaring. If we differ in opinion about two quantities, we can have recourse to a common measure, which may decide the question with the utmost exactness; and this I take it is what gives mathematical knowledge a greater certainty than any other. But in things whose excess is not judged by greater or smaller, as smoothness and roughness, hardness and softness, darkness and light, the shades of colours, all these are very easily distinguished when the difference is any way considerable, but not when it is minute, for want of some common measures which perhaps may never come to be discovered. In these nice⁷ cases, supposing the acuteness of the sense equal, the greater attention and habit in such things will have the advantage. In the question about the tables, the marble polisher will unquestionably determine the most accurately. But notwithstanding this want of a common measure for settling many disputes relative to the senses and their representative the imagination, we find that the principles are the same in all, and that there is no disagreement until we come to examine into the preeminence or difference of things, which brings us within the province of the judgment.

So long as we are conversant with the sensible qualities of things, hardly any more than the imagination seems concerned; little more also than the imagination seems concerned when the passions are represented, because by the force of natural sympathy they are felt in all men without any recourse to reasoning, and their justness recognized in every breast. Love, grief, fear, anger, joy, all these passions have in their turns affected every mind; and they do not affect it in an arbitrary or casual manner, but upon certain, natural and uniform principles. But as many of the works of imagination are not confined to the representation of sensible objects, nor to efforts upon the passions, but extend themselves to the manners, the characters, the actions, and designs of men, their relations, their virtues and vices, they come within the province of the judgment, which is improved by attention and by the habit of reasoning. All these make a very considerable part of what are considered as the objects of Taste; and Horace sends us to the schools of philosophy and the world for our instruction in them.⁸ Whatever certainty is to be acquired in morality and the science of life; just the same degree of certainty have we in what relates to them in works of imitation. Indeed it is

7. Involving great precision.

8. Horace, *Ars Poetica* 309–18.

for the most part in our skill in manners, and in the observances of time and place, and of decency in general, which is only to be learned in those schools to which Horace recommends us, that what is called Taste by way of distinction, consists; and which is in reality no other than a more refined judgment. On the whole it appears to me, that what is called Taste, in its most general acceptation, is not a simple idea, but is partly made up of a perception of the primary pleasures of sense, of the secondary pleasures of the imagination, and of the conclusions of the reasoning faculty, concerning the various relations of these, and concerning the human passions, manners and actions. All this is requisite to form Taste, and the ground-work of all these is the same in the human mind; for as the senses are the great originals of all our ideas, and consequently of all our pleasures, if they are not uncertain and arbitrary, the whole ground-work of Taste is common to all, and therefore there is a sufficient foundation for a conclusive reasoning on these matters.

Whilst we consider Taste, merely according to its nature and species, we shall find its principles entirely uniform; but the degree in which these principles prevail in the several individuals of mankind, is altogether as different as the principles themselves are similar. For sensibility and judgment, which are the qualities that compose what we commonly call a *Taste*, vary exceedingly in various people. From a defect in the former of these qualities, arises a want of Taste; a weakness in the latter, constitutes a wrong or bad one. There are some men formed with feelings so blunt, with tempers so cold and phlegmatic, that they can hardly be said to be awake during the whole course of their lives. Upon such persons, the most striking objects make but a faint and obscure impression. There are others so continually in the agitation of gross and merely sensual pleasures, or so occupied in the low and drudgery of avarice, or so heated in the chace⁹ of honours and distinction, that their minds, which had been used continually to the storms of these violent and tempestuous passions, can hardly be put in motion by the delicate and refined play of the imagination. These men, though from a different cause, become as stupid and insensible as the former; but whenever either of these happen to be struck with any natural elegance or greatness, or with these qualities in any work of art, they are moved upon the same principle.

The cause of a wrong Taste is a defect of judgment. And this may arise from a natural weakness of understanding (in whatever the strength of that faculty may consist) or, which is much more commonly the case, it may arise from a want of proper and well-directed exercise, which alone can make it strong and ready. Besides that ignorance, inattention, prejudice, rashness, levity, obstinacy, in short, all those passions, and all those vices which pervert the judgment in other matters, prejudice it no less in this its more refined and elegant province. These causes produce different opinions upon every thing which is an object of the understanding, without inducing us to suppose, that there are no settled principles of reason. And indeed on the whole one may observe, that there is rather less difference upon matters of Taste among mankind, than upon most of those which depend upon the naked reason; and that men are far better agreed on the excellence of a description in Virgil, than on the truth or falsehood of a theory of Aristotle.¹

9. Chace.

1. On the Greek philosopher (384–322 B.C.E.), see above.

A rectitude of judgment in the arts which may be called a good Taste, does in a great measure depend upon sensibility; because if the mind has no bent to the pleasures of the imagination, it will never apply itself sufficiently to works of that species to acquire a competent knowledge in them. But, though a degree of sensibility is requisite to form a good judgment, yet a good judgment does not necessarily arise from a quick sensibility of pleasure; it frequently happens that a very poor judge, merely by force of a greater complexional² sensibility, is more affected by a very poor piece, than the best judge by the most perfect; for as every thing new, extraordinary, grand, or passionate is well calculated to affect such a person, and that the faults do not affect him, his pleasure is more pure and unmixed; and it is merely a pleasure of the imagination, it is much higher than any which is derived from a rectitude of the judgment; the judgment is for the greater part employed in throwing stumbling blocks in the way of the imagination, in dissipating the scenes of its enchantment, and in tying us down to the disagreeable yoke of our reason: for almost the only pleasure that men have in judging better than others, consists in a sort of conscious pride and superiority, which arises from thinking rightly; but then, this is an indirect pleasure, a pleasure which does not immediately result from the object which is under contemplation. In the morning of our days, when the senses are unworn and tender, when the whole man is awake in every part, and the gloss of novelty fresh upon all the objects that surround us, how lively at that time are our sensations, but how false and inaccurate the judgments we form of things? I despair of ever receiving the same degree of pleasure from the most excellent performances of genius which I felt at that age, from pieces which my present judgment regards as trifling and contemptible. Every trivial cause of pleasure is apt to affect the man of too sanguine a complexion: his appetite is too keen to suffer his Taste to be delicate; and he is in all respects what Ovid says of himself in love,

*Molle meum levibus cor est violabile telis,
Et semper causa est, cur ego semper amem.*³

One of this character can never be a refined judge; never what the comic poet calls *elegans formarum, spectator*.⁴ The excellence and force of a composition must always be imperfectly estimated from its effect on the minds of any, except we know the temper and character of those minds. The most powerful effects of poetry and music have been displayed, and perhaps are still displayed, where these arts are but in a very low and imperfect state. The rude hearer is affected by the principles which operate in these arts even in their rudest condition; and he is not skilful enough to perceive the defects. But as the arts advance towards their perfection, the science of criticism advances with equal pace, and the pleasure of judges is frequently interrupted by the faults which are discovered in the most finished compositions.

Before I leave this subject I cannot help taking notice of an opinion which

2. Constitutional.

3. Slightly misquoted from the Roman poet Ovid, *Heroides* (ca. 5 C.E.): "My soft heart is vulnerable to light darts, and there is always a reason why I

am always in love" (15:79-80).

4. From *Eunuchus* (161 B.C.E.), by the Roman comic playwright Terence: "a refined observer of forms" (line 566).

many persons entertain, as if the Taste were a separate faculty of the mind, and distinct from the judgment and imagination; a species of instinct by which we are struck naturally, and at the first glance, without any previous reasoning with the excellencies, or the defects of a composition. So far as the imagination and the passions are concerned, I believe it true, that the reason is little consulted; but where disposition, where decorum, where congruity are concerned, in short wherever the best Taste differs from the worst, I am convinced that the understanding operates and nothing else; and its operation is in reality far from being always sudden, or when it is sudden, it is often far from being right. Men of the best Taste by consideration, come frequently to change these early and precipitate judgments which the mind from its aversion to neutrality and doubt loves to form on the spot. It is known that the Taste (whatever it is) is improved exactly as we improve our judgment, by extending our knowledge, by a steady attention to our object, and by frequent exercise. They who have not taken these methods, if their Tastes decides quickly, it is always uncertainly; and their quickness is owing to their presumption and rashness, and not to any sudden irradiation that in a moment dispels all darkness from their minds. But they who have cultivated that species of knowledge which makes the object of Taste, by degrees and habitually attain not only a soundness, but a readiness of judgment, as men do by the same methods on all other occasions. At first they are obliged to spell, but at last they read with ease and with celerity: but this celerity of its operation is no proof, that the Taste is a distinct faculty. Nobody I believe has attended the course of a discussion, which turned upon matters within the sphere of mere naked reason, but must have observed the extreme readiness with which the whole process of the argument is carried on, the grounds discovered, the objections raised and answered, and the conclusions drawn from premises, with a quickness altogether as great as the Taste can be supposed to work with; and yet where nothing but plain reason either is or can be suspected to operate. To multiply principles for every different appearance, is useless, and unphilosophical too in a high degree.

This matter might be pursued much further; but it is not the extent of the subject which must prescribe our bounds, for what subject does not branch out to infinity? it is the nature of our particular scheme, and the single point of view in which we consider it, which ought to put a stop to our researches.

From Part I

SECTION VII. OF THE SUBLIME

Whatever is fitted in any sort to excite the ideas of pain, and danger, that is to say, whatever is in any sort terrible, or is conversant about terrible objects, or operates in a manner analogous to terror, is a source of the *sublime*; that is, it is productive of the strongest emotion which the mind is capable of feeling. I say the strongest emotion, because I am satisfied the ideas of pain are much more powerful than those which enter on the part of pleasure. Without all doubt, the torments which we may be made to suffer, are much greater in their effect on the body and mind, than any pleasures which the

most learned voluptuary could suggest, or than the liveliest imagination, and the most sound and exquisitely sensible body could enjoy. Nay I am in great doubt, whether any man could be found who would earn a life of the most perfect satisfaction, at the price of ending it in the torments, which justice inflicted in a few hours on the late unfortunate regicide in France.⁵ But as pain is stronger in its operation than pleasure, so death is in general a much more affecting idea than pain; because there are very few pains, however exquisite, which are not preferred to death; nay, what generally makes pain itself, if I may say so, more painful, is, that it is considered as an emissary of this king of terrors. When danger or pain press too nearly, they are incapable of giving any delight, and are simply terrible; but at certain distances, and with certain modifications, they may be, and they are delightful, as we every day experience. The cause of this I shall endeavour to investigate hereafter.

From Part III

SECTION XXVII. THE SUBLIME AND BEAUTIFUL COMPARED

On closing this general view of beauty, it naturally occurs, that we should compare it with the sublime; and in this comparison there appears a remarkable contrast. For sublime objects are vast in their dimensions, beautiful ones comparatively small; beauty should be smooth, and polished; the great, rugged and negligent; beauty should shun the right line, yet deviate from it insensibly; the great in many cases loves the right line, and when it deviates, it often makes a strong deviation; beauty should not be obscure; the great ought to be dark and gloomy; beauty should be light and delicate; the great ought to be solid, and even massive. They are indeed ideas of a very different nature, one being founded on pain, the other on pleasure; and however they may vary afterwards from the direct nature of their causes, yet these causes keep up and eternal distinction between them, a distinction never to be forgotten by any whose business it is to affect the passions. In the infinite variety of natural combinations we must expect to find the qualities of things the most remote imaginable from each other united in the same object. We must expect also to find combinations of the same kind in the works of art. But when we consider the power of an object upon our passions, we must know that when any thing is intended to affect the mind by the force of some predominant property, the affection produced is like to be the more uniform and perfect, if all the other properties or qualities of the object be of the same nature, and tending to the same design as the principal;

*If black, and white blend, soften, and unite,
A thousand ways, are there no black and white?*⁶

If the qualities of the sublime and beautiful are sometimes found united, does this prove, that they are the same, does it prove, that they are any way

5. Robert-François Damiens (1715–1757), who attempted to kill Louis XV on January 5, 1757, was tortured to death on March 28.

6. Slightly misquoted from ALEXANDER POPE, *An Essay on Man* (1733–34), 2.213–14.

allied, does it prove even that they are not opposite and contradictory? Black and white may soften, may blend, but they are not therefore the same. Nor when they are so softened and blended with each other, or with different colours, is the power of black as black, or of white as white, so strong as when each stands uniform and distinguished.

1757, 1759

GOTTHOLD EPHRAIM LESSING

1729–1781

Gotthold Ephraim Lessing is known for having questioned one of the most famous statements never meant. In HORACE'S *Ars Poetica*, the Latin phrase *ut pictura poesis* (as painting, so poetry) was taken by many generations of critics to be prescriptive ("poetry *should* be like painting") rather than analogical ("poetry, like painting, does the following . . ."). Regardless of Horace's intent, the prescription has been immensely productive for poetry; but in *Laocoön* (1766) Lessing attacks this presumption of equivalence between poetry and painting, spelling out the differences between the visual and the verbal arts.

Born in Kamenz, Saxony, to a country pastor, Lessing was the first of twelve children (five died in childhood). After acquiring a solid education in languages and sciences, he enrolled at the University of Leipzig and soon fell under the spell of a more worldly and freethinking friend. His parents, alarmed by this influence and by Lessing's familiarity with the theater, called him home. When he explained to them that the hostility between church and theater could be overcome by improving the theater, he was allowed to return to Leipzig, where he became actively involved with a theatrical company, writing and producing plays. Unfortunately, the company failed, leaving Lessing to cover the debts; he fled, first to Wittenberg, then to Berlin.

Once in Berlin, he declared financial independence; working as a translator, reviewer, and playwright, he became the first German author to live by his pen. He found intellectual companionship with several close friends, especially the philosopher Moses Mendelssohn, who was introduced to Lessing as a chess partner and who influenced many of Lessing's aesthetic ideas.

In Berlin Lessing developed his gifts for both drama and debate. To him, the recommendation that German theater imitate seventeenth-century French classical drama (an idea promoted by Johann Christoph Gottsched) seemed a terrible mistake. The French had literalized ARISTOTLE and tied the theater to an overly formal set of rules. In his play *Miss Sara Sampson* (1755), Lessing attempted something quite different from PIERRE CORNEILLE, the epitome of classicism. He wrote the first German bourgeois tragedy—that is, a tragedy involving not the court but a middle-class family. He also entered the first of several intense polemical exchanges on unlikely topics by writing *Vademecum* (1754), a critique of a translation of Horace written by a pastor who was, unfortunately for Lessing, a protégé of Frederick II of Prussia. Frederick later repaid him by not appointing him to the post of royal librarian in Berlin.

Though he was barely supporting himself, the next few years were very productive: he wrote fables and a treatise on fables, plays, and a life of Sophocles, and he collaborated on the *Letters Concerning the Most Recent Literature* (1759–81) with his friends Mendelssohn and Gotthold Samuel Nicolai. In these letters, Lessing contin-

ued his campaign to free drama from French classicism, arguing that it should take its inspiration from Shakespeare. He also became close friends with a poet and military man who later served as the model for the hero of his comedy of honor, *Minna von Barnhelm* (1767). In 1760 Lessing took up a post as secretary to a general in Breslau. His excellent salary enabled him to send money to his family and to buy books. It was during this period that he wrote *Laocöon, oder Über die Grenzen der Malerei und Poesie* (*Laocöon, or On the Limits of Painting and Poetry*), from which our selection is taken.

Thwarted in his hopes to become the royal librarian in Berlin, he became dramatist and consultant to a repertory theater in Hamburg. There he began publishing the periodical the *Hamburg Dramaturgy* (which contained views far more radical than any he could practice), invested in a publishing house, and engaged again in a polemic—this time with the antiquarian Christian Adolphe Klotz, who had attacked his *Laocöon*. In response, he wrote *Letters of Antiquarian Content* (1768–69) and *How the Ancients Portrayed Death* (1769). Finally, unable to extricate himself from the dispute, frustrated with the constraints of the theater, and unsuccessful in business, he took refuge in the post of librarian at the Ducal Library in Wolfenbüttel.

Lessing was well suited for the job, though the library was dilapidated and isolated. As he put it in order, he corresponded with scholars and, in 1773, began publishing some of the library's holdings. He also began a correspondence with the recently widowed Eva König (whose family he had known in Hamburg), whom he married in 1776; a year later Eva gave birth to a child, and both died within days.

Lessing continued his work in drama, completing *Emilia Galotti*, a political tragedy, in 1772. *Nathan the Wise*, a dramatic poem about religious tolerance, was performed at Easter 1778; it stirred controversy by putting its message of universal brotherhood in the mouth of a noble Jew. Lessing went on publishing his literary discoveries as well, and the fragments from Heinrich Samuel Reimarus's thesis on natural religion embroiled him in his final, and most intense, polemical exchange. His main attacker was Johann Melchior Goeze, and Lessing's angry *Anti-Goeze* pamphlets of 1778 and other writings on religion led to his being censored: he had to submit his later writings to the duke for approval. His provocative argument was that the truth of religion could never be captured in any fixed form; even the Bible was full of errors and contradictions. It was the *search* for truth and not any one Truth that proved the value of humanity. Little wonder that Lessing fell so readily into polemic: for him, such exchanges did not lead to truth but enacted it. In his last work, *The Education of the Human Race* (1780), Lessing continued to analyze the relation between reason and faith, education and revelation. Furious with all existing religions, Lessing was equally furious with smug atheism or complacent freethinking. His health declined after 1778, and he died at Wolfenbüttel at the age of fifty-two.

In spite of the variety of his interests and writings, Lessing's importance for literary criticism in English rests almost exclusively on the impact of his 1766 *Laocöon*. He begins it by discussing the role of the critic, whose duty with respect to the work of art is to make distinctions and discern causes rather than simply to register effects. While endorsing the well-known saying of the early-fifth-century B.C.E. poet Simonides that painting is mute poetry and poetry a speaking picture, he argues that although the two arts are similar in *aim* (imitation) and in *effect* (pleasure), they differ greatly in *means* (visual versus verbal). Lessing goes on to analyze their differences.

In the course of his essay, Lessing takes on a veritable bookshelf of other writings, most notably Count Caylus's *Tableaux tirés de l'Illiade, de l'Odyssee d'Homere et de l'Enéide de Virgile, avec des observations générales sur le costume* (1757, *Scenes from Homer's Iliad and Odyssey and Virgil's Aeneid, with General Comments about Costume*); Joseph Spence's 1747 dialogues on visual and verbal art called *Polymetis*; and, most important, Johann Joachim Winckelmann's 1754 *Gedanken über die Nachahmung der griechischen Werke* (*Thoughts on the Imitation of Greek Works*). It is Winckelmann's concept of classical Greek "noble simplicity and quiet grandeur" that

Lessing wishes to combat, not in the visual arts (where, he argues, it belonged) but in the verbal arts: epic and (implicitly) tragedy. The cold formalism of classical French drama was too much like sculpture; Lessing wants to make sure that the art of imitation in drama draws on Aristotle (plot is the "imitation of an action") rather than PLATO (mimesis is the imitation of a *form*). Winckelmann's idealization of Greek beauty had a powerful appeal; indeed, it was still being attacked a century later by FRIEDRICH NIETZSCHE in *The Birth of Tragedy* (1872).

Laocoön stands as the first modern contribution to what we might call "media studies," in the sense that Lessing attempts to describe the limits and possibilities of the visual and verbal *media*. Our selection highlights the lines of the analysis and minimizes the polemical digressions and extended classical allusions, emphasizing the argument—which runs as follows. Painting is more similar to its subject than poetry is: in painting, both the medium and the thing imitated are visual, whereas poetry can use only words, arbitrary designations, to convey things that do not resemble words at all. In addition, visual art is static while verbal art unfolds through succession. Visual art is an art of *space*; verbal art is an art of *time*. Verbal art cannot equal the instant vividness of sculpture or painting, but it can depict things that visual art cannot capture: invisibility, negation, rhetoric. Visual art, in order to achieve maximum dynamism, has to choose the "pregnant moment," the moment most suggestive of the entire situation.

The word "pregnant" has come to have a life of its own in Lessing criticism in English; it was used by many translators (though not ours) to render the German *fruchtbar* ("fruitful"—here translated "effective") and *prügnant* (from the verb *prägen*, "to stamp, emboss, impress"; the adjective does mean "pregnant," but only figuratively, as "pregnant with meaning"—here translated "suggestive"). This phantom pregnancy is a good symbol of what Lessing is describing: the moment most likely to contain forces that can be continued in the imagination of the spectator. In visual art, therefore, a covert narrative force is always present. The same force exists in verbal descriptions of purely visual phenomena; even when poetry depicts an object rather than an action, it moves along the object in time as if from the standpoint of the object's maker rather than of its passive viewer.

Lessing's distinction between the arts has often been contested. In his 1957 essay on Lessing, the art historian E. H. Gombrich points out that visual art itself is conventional, not natural. In 1945 the literary critic Joseph Frank protested that a literary work of art exists not just in time but also in space. And many art historians have objected that a painting cannot be viewed all at once; it must be experienced through time. Taking an opposite tack, some theorists of *epiphany* (the depiction of a work of visual art in a poem) have felt that Lessing opens up possibilities he doesn't pursue. Far from being impossible in poetry, *epiphany* constitutes an interesting poetic challenge.

Because of his persistent fascination with what could *not* be visualized, Lessing is a particularly useful theorist of verbal art. In his discussion of fables, he points out that the test of a good fable is the impossibility of illustrating it. In his last writings about religion, he argues that even writing has too positive an existence to convey what escapes representation altogether. Perhaps this dissatisfaction with *every* medium is what makes his writings so suggestive for literary and aesthetic theory.

BIBLIOGRAPHY

Lessing's *Laokoön* (1766) has been translated into English many times. The most easily accessible edition was published in 1962 as *Laocoön: An Essay on the Limits of Painting and Poetry*, translated with an introduction and useful notes by Edward Allen McCormick. Many of Lessing's other theoretical works, however, are available only in German. The best recent selection of Lessing's works, heavily oriented toward theater, is *Nathan the Wise, Minna von Barnhelm, and Other Plays and Writings*,

edited by Peter Demetz (1991). For Lessing's drama theory, see *Hamburg Dramaturgy*, edited by Victor Lange (1962). See also *Lessing's Theological Writings*, edited by Henry Chadwick (1956). A more complete English translation was undertaken by E. C. Beasley and Helen Zimmern, under the editorship of Edward Bell, more than a century ago: *Selected Prose Works of G. E. Lessing* (1890). Good general studies devoted to Lessing's life and works are H. B. Garland, *Lessing: The Founder of Modern German Literature* (1962), and Edward M. Batley, *Catalyst of Enlightenment: Gott-hold Ephraim Lessing* (1990). Studies situating Lessing in a larger context include a very useful collective volume edited by Alexej Ugrinsky called *Lessing and the Enlightenment* (1986) and Robert S. Leventhal's *Disciplines of Interpretation: Lessing, Herder, Schlegel, and Hermeneutics in Germany, 1750–1800* (1994). Early in the twentieth century, Irving Babbitt's *New Laokoon: An Essay on the Confusion of the Arts* (1910) attempted to restore Lessing's sense of distinction to a world led astray by Romanticism's tendency to cross or blur boundaries. E. H. Gombrich's short *Lessing* (1957) paints a brilliant portrait of a man whose dialectical mind had no real use for visual art.

The publication in 1984 of David Wellbery's *Lessing's "Laocoön": Semiotics and Aesthetics in the Age of Reason* brought Lessing into post-Saussurian discussions of sign theory. Simon Richter's *Laocoön's Body and the Aesthetics of Pain: Winckelmann, Lessing, Herder, Moritz, Goethe* (1992) provides an interesting analysis of the relation between pain and beauty. Carol Jacobs offers a good analysis of the rhetoric of Lessing's polemics in "Fictional Histories: Lessing's *Laocoön*," in her *Telling Time* (1993). Susan Gustafson's *Absent Mothers and Orphaned Fathers: Narcissism and Abjection in Lessing's Aesthetic and Dramatic Production* (1995) combines a discussion of Lessing's plays with a reading of the *Laocoön* that uses Julia Kristeva's theory of maternal erasure or "abjection," in a daring feminist psychoanalysis. A special issue of *Poetics Today* on Lessing (20.2 [1999]) offers a very interesting collection of essays, particularly striking for the debates about gender as a category of analysis. The volume concludes with a long, energetic, polemical review of the literature on Lessing by Meir Sternberg. For debates about ecphrasis, see Murray Krieger's 1967 essay "*Ekphrasis* and the Still Movement of Poetry; or, *Laocoön* Revisited," later collected in Krieger's *Ekphrasis: The Illusion of the Natural Sign* (1992); W. J. T. Mitchell's 1984 essay "Space and Time: Lessing's *Laocoön* and the Politics of Genre," later collected in his *Iconology: Image, Text, Ideology* (1986); and James Heffernan's *Museum of Words* (1993). There is a bibliography in German on Lessing by Doris Kuhles, *Lessing-Bibliographie 1971–1985* (1988).

From *Laocoön*¹

From Preface

The first person to compare painting with poetry was a man of fine feeling who observed that both arts produced a similar effect upon him. Both, he felt, represent absent things as being present and appearance as reality. Both create an illusion, and in both cases the illusion is pleasing.

A second observer, in attempting to get at the nature of this pleasure, discovered that both proceed from the same source. Beauty, a concept which we first derive from physical objects, has general rules applicable to a number of things: to actions and thoughts as well as to forms.

1. Translated by Edward Allen McCormick (who sometimes adds clarifying words or phrases in square brackets); the full title is *Laocoön, or On the Limits of Painting and Poetry*.

A third, who examined the value and distribution of these general rules, observed that some of them are more predominant in painting, others in poetry. Thus, in the one case poetry can help to explain and illustrate painting, and in the other painting can do the same for poetry.

The first was the amateur, the second the philosopher, and the third the critic.

The first two could not easily misuse their feelings or their conclusions. With the critic, however, the case was different. The principal value of his observations depends on their correct application to the individual case. And since for every one really discerning critic there have always been fifty clever ones, it would have been a miracle if this application had always been made with the caution necessary to maintain a proper balance between the two arts.

* * *

From Chapter One

The general and distinguishing characteristics of the Greek masterpieces of painting and sculpture are, according to Herr Winckelmann,² noble simplicity and quiet grandeur, both in posture and in expression. "As the depths of the sea always remain calm," he says "however much the surface may be agitated, so does the expression in the figures of the Greeks reveal a great and composed soul in the midst of passions."

Such a soul is depicted in Laocoön's³ face—and not only in his face—under the most violent suffering. The pain is revealed in every muscle and sinew of his body, and one can almost feel it oneself in the painful contraction of the abdomen without looking at the face or other parts of the body at all. However, this pain expresses itself without any sign of rage either in his face or in his posture. He does not raise his voice in a terrible scream, which Virgil describes his Laocoön as doing;⁴ the way in which his mouth is open does not permit it. Rather he emits the anxious and subdued sigh described by Sadolet.⁵ The pain of body and the nobility of soul are distributed and weighed out, as it were, over the entire figure with equal intensity. Laocoön suffers, but he suffers like the Philoctetes of Sophocles⁶; his anguish pierces our very soul, but at the same time we wish that we were able to endure our suffering as well as this great man does.

Expressing so noble a soul goes far beyond the formation of a beautiful body. This artist must have felt within himself that strength of spirit

2. Johann Joachim Winckelmann (1717–1768), German classical scholar whose *Thoughts on the Imitation of Greek Works in Painting and Sculpture* (1754) prompted Lessing's response.

3. A Trojan priest. The best-known version of his story is found in the *Aeneid*, by the Roman poet Virgil (70–19 B.C.E.), who describes how when Laocoön unsuccessfully tries to warn his countrymen against the Greek "gift" of the Trojan horse, the goddess Athena sends two huge serpents to strangle him and his two sons (2.40–56, 199–227). The famous sculpture described by Winckelmann represents the three dying figures in the grip of the snakes; discovered in 1506, it is thought to be a collaborative work of the 2d century B.C.E. Lao-

coön is thus depicted in both sculpture and poetry, giving Lessing the pivot on which he will differentiate between the arts.

4. *Aeneid* 2.222.

5. Jacopo Sadoletto (1477–1547), Italian prelate and poet, who wrote a poem about the Laocoön group when it was discovered.

6. Greek tragedian (ca. 496–406 B.C.E.). The Greek hero Philoctetes used the bow and arrows of Heracles; he sailed for Troy but was left behind on an island because a wound on his foot, caused by snakebite, produced a horrible smell. He remained alone for 10 years, until on the advice of an oracle he and his bow were brought to Troy.

which he imparted to his marble. In Greece artists and philosophers were united in one person, and there was more than one Metrodorus.⁷ Philosophy extended its hand to art and breathed into its figures more than common souls. . . .⁸

The remark on which the foregoing comments are based, namely that the pain in Laocoön's face is not expressed with the same intensity that its violence would lead us to expect, is perfectly correct. It is also indisputable that this very point shows truly the wisdom of the artist. Only the ill-informed observer would judge that the artist had fallen short of nature and had not attained the true pathos of suffering.

But as to the reasons on which Herr Winckelmann bases this wisdom, and the universality of the rule which he derives from it, I venture to be of a different opinion.

* * *

[I]f, according to the ancient Greeks, crying aloud when in physical pain is compatible with nobility of soul, then the desire to express such nobility could not have prevented the artist from representing the scream in his marble. There must be another reason why he differs on this point from his rival the poet,⁹ who expresses this scream with deliberate intention.

From *Chapter Two*

Whether it be fact or fiction that Love inspired the first artistic effort in the fine arts,¹ this much is certain: she never tired of guiding the hands of the old masters. Painting, as practiced today, comprises all representations of three-dimensional bodies on a plane. The wise Greek, however, confined it to far narrower limits by restricting it to the imitation of beautiful bodies only. The Greek artist represented only the beautiful, and ordinary beauty, the beauty of a lower order, was only his accidental subject, his exercise, his relaxation. The perfection of the object itself in his work had to give delight, and he was too great to demand of his audience that they be satisfied with the barren pleasure that comes from looking at a perfect resemblance, or from consideration of his skill as a craftsman. Nothing in his art was dearer to him or seemed nobler than its ultimate purpose.

"Who would want to paint you when no one even wants to look at you?" an old epigrammatist² asks of an exceedingly deformed man. Many an artist of our time would say, "Be as ugly as possible, I will paint you nevertheless. Even though no one likes to look at you, they will still be glad to look at my picture, not because it portrays you but because it is a proof of my art, which knows how to present such a monster so faithfully."

* * *

7. An Athenian (2d c. B.C.E.) who, according to Pliny the Elder (23/4–79 C.E.; see *Natural History* 35.135), was both a painter and a philosopher.

8. Winckelmann, *Thoughts on the Imitation of Greek Works*, pp. 21, 22 [Lessing's note]. Some of the author's notes have been edited, and some omitted.

9. That is, Virgil.

1. Lessing alludes to the story of a Corinthian maid who, saddened by her lover's impending departure drew his outline on a wall while he slept (see Pliny the Elder, *Natural History* 35.151); her father, a potter, filled in the outline with clay and thus invented bas relief.

2. Antiochus of Syracuse (5th c. B.C.E.).

The law of the Olympic judges sprang from the same idea of the beautiful. Every victor in the Olympic games received a statue, but only the three-time winner had a portrait-statue erected in his honor. This was to prevent the increase of mediocre portraits among works of art, for a portrait, although admitting idealization, is dominated by likeness. It is the ideal of one particular man and not of man in general.

We laugh when we hear that among the ancients even the arts were subject to the civil code. But we are not always right when we do so. Unquestionably, laws must not exercise any constraint on the sciences, for the ultimate goal of knowledge is truth. Truth is a necessity to the soul, and it is tyranny to impose the slightest constraint on the satisfaction of this essential need. But the ultimate goal of the arts is pleasure, and this pleasure is not indispensable. Hence it may be for the lawmaker to determine what kind of pleasure and how much of each kind he will permit.

The plastic arts in particular—aside from the inevitable influence they exert on the character of a nation—have an effect that demands close supervision by the law. If beautiful men created beautiful statues, these statues in turn affected the men, and thus the state owed thanks also to beautiful statues for beautiful men. (With us the highly susceptible imagination of mothers seems to express itself only in producing monsters.)

From this point of view I believe I can find some truth in some of the ancient tales which are generally rejected as outright lies. The mothers of Aristomenes, Aristodamas, Alexander the Great, Scipio, Augustus, and Galerius³ all dreamed during pregnancy that they had relations with a serpent. The serpent was a symbol of divinity, and the beautiful statues and paintings depicting Bacchus, Apollo, Mercury, or Hercules⁴ were seldom without one. Those honest mothers had feasted their eyes on the god during the day, and their confused dreams recalled the image of the reptile. Thus I save the dream and abandon the interpretation born of the pride of their sons and the impudence of the flatterer. For there must be some reason why the adulterous fantasy was always a serpent.

But I am digressing. I wanted simply to establish that among the ancients beauty was the supreme law of the visual arts. Once this has been established, it necessarily follows that whatever else these arts may include must give way completely if not compatible with beauty, and, if compatible, must at least be subordinate to it.

Let us consider expression. There are passions and degrees of passion which are expressed by the most hideous contortions of the face and which throw the whole body into such unnatural positions as to lose all the beautiful contours of its natural state. The ancient artists either refrained from depicting such emotions or reduced them to a degree where it is possible to show them with a certain measure of beauty.

* * *

3. This list mixes the legendary (the first 2 are Greek heroes) and the historical—the great general Alexander of Macedonia (356–323 B.C.E.), the Roman general Scipio Africanus (236–184/3 B.C.E.), and the Roman emperors Augustus (63 B.C.E.–14 C.E.) and Galerius (ca. 250–ca. 311 C.E.).

4. The Roman name for Heracles, the greatest of the Greek heroes. Bacchus: Greek and Roman god of wine and a name of Dionysus, whose cult was orgiastic. Apollo: Greek and Roman god of music, healing, and prophecy. Mercury: Roman messenger of the gods.

If we apply this now to the Laocoön, the principle which I am seeking becomes apparent. The master strove to attain the highest beauty possible under the given condition of physical pain. The demands of beauty could not be reconciled with the pain in all its disfiguring violence, so it had to be reduced. The scream had to be softened to a sigh, not because screaming betrays an ignoble soul, but because it distorts the features in a disgusting manner. Simply imagine Laocoön's mouth forced wide open, and then judge! Imagine him screaming, and then look! From a form which inspired pity because it possessed beauty and pain at the same time, it has now become an ugly, repulsive figure from which we gladly turn away. For the sight of pain provokes distress; however, the distress should be transformed, through beauty, into the tender feeling of pity.

The wide-open mouth, aside from the fact that the rest of the face is thereby twisted and distorted in an unnatural and loathsome manner, becomes in painting a mere spot and in sculpture a cavity, with most repulsive effect.

* * *

From Chapter Three

As I have already said, art has been given a far wider scope in modern times. It is claimed that representation in the arts covers all of visible nature, of which the beautiful is but a small part. Truth and expression are art's first law, and as nature herself is ever ready to sacrifice beauty for the sake of higher aims, so must the artist subordinate it to his general purpose and pursue it no farther than truth and expression permit. It is enough that truth and expression transform the ugliest aspects of nature into artistic beauty.

But even if we were willing to leave these ideas for the moment unchallenged as to their value, we would still have to consider, quite independently of these ideas, why the artist must nevertheless set certain restraints upon expression and never present an action at its climax.

The single moment of time to which art must confine itself by virtue of its material limitations will lead us, I believe, to such considerations.

If the artist can never make use of more than a single moment in ever-changing nature, and if the painter in particular can use this moment only with reference to a single vantage point, while the works of both painter and sculptor are created not merely to be given a glance but to be contemplated—contemplated repeatedly and at length—then it is evident that this single moment and the point from which it is viewed cannot be chosen with too great a regard for its effect. But only that which gives free rein to the imagination is effective.⁵ The more we see, the more we must be able to imagine. And the more we add in our imaginations, the more we must think we see. In the full course of an emotion, no point is less suitable for this than its climax. There is nothing beyond this, and to present the utmost to the eye is to bind the wings of fancy and compel it, since it cannot soar above the impression made on the senses, to concern itself with weaker images, shunning the visible fullness already represented as a limit beyond which it cannot

5. In German, *fruchtbar*: "fruitful."

go. Thus, if Laocoön sighs, the imagination can hear him cry out; but if he cries out, it can neither go one step higher nor one step lower than this representation without seeing him in a more tolerable and hence less interesting condition. One either hears him merely moaning or else sees him dead.

Furthermore, this single moment, if it is to receive immutable permanence from art, must express nothing transitory. According to our notions, there are phenomena, which we conceive as being essentially sudden in their beginning and end and which can be what they are only for a brief moment. However, the prolongation of such phenomena in art, whether agreeable or otherwise, gives them such an unnatural appearance that they make a weaker impression the more often we look at them, until they finally fill us with disgust or horror. La Mettrie,⁶ who had himself portrayed in painting and engraving as a second Democritus, seems to be laughing only the first few times we look at him. Look at him more often and the philosopher turns into a fop. His laugh becomes a grin. The same holds true for screaming. The violent pain which extorts the scream either soon subsides or else destroys the sufferer. When a man of firmness and endurance cries out he does not do so unceasingly, and it is only the seeming perpetuity of such cries when represented in art that turns them into effeminate helplessness or childish petulance. This, at least, the artist of the Laocoön had to avoid, even if screaming had not been detrimental to beauty, and if his art had been allowed to express suffering without beauty.

Among the ancient painters Timomachus⁷ seems to have been the one most fond of subjects that display extreme passion. His raving Ajax and his fantastic Medea⁸ were famous paintings, but from the descriptions we have of them it is clear that he thoroughly understood and was able to combine two things: that point or moment which the beholder not so much sees as adds in his imagination, and that appearance which does not seem so transitory as to become displeasing through its perpetuation in art. Timomachus did not represent Medea at the moment when she was actually murdering her children, but a few moments before, when a mother's love was still struggling with her vengefulness. We can foresee the outcome of this struggle; we tremble in anticipation of seeing Medea as simply cruel, and our imagination takes us far beyond what the painter could have shown us in this terrible moment. But for this very reason we are not offended at Medea's perpetual indecision, as it is represented in art, but wish it could have remained that way in reality. We wish that the duel of passions had never been decided, or at least had continued long enough for time and reflection to overcome rage and secure the victory for maternal feelings. This wisdom on the part of Timomachus has earned him lavish and frequent praise and

6. Julien Offroy de La Mettrie (1709–1751), French physician and philosopher, whose *L'Homme machine* (1747) made him the most notorious materialist of his day. The Greek Democritus (ca. 460–ca. 370 B.C.E.) was also a materialist (he argued that everything, including the soul, is composed of atoms); he was known as the "laughing philosopher," perhaps because he believed that individuals were responsible for their own well-being.

7. Byzantine painter (late 4th c. B.C.E.) mentioned

by Pliny the Elder (35.11).

8. A sorceress from Colchis who took revenge on her husband Jason (for deserting her to marry a king's daughter) by killing his (and her) two children. Ajax: one of the greatest Greek warriors at Troy; driven mad by Athena, he killed animals believing that he was attacking the Greek leaders who had refused to give him the armor of the dead Achilles (when he regained his senses, he killed himself). Both figures were often treated in art and tragedies.

raised him far above another, unknown painter who was foolish enough to depict Medea at the height of her rage, thus endowing her brief instant of madness with a permanence that is an affront to all nature.

* * *

From *Chapter Nine*

If we wish to compare the painter and the poet in particular instances, we must first know whether they both enjoyed complete freedom; whether, that is to say, they could work toward producing the greatest possible effect in their respective arts without any external constraint.

Religion often represented just such an external constraint on the classical artist. His work, destined for worship and devotion, could not always be as perfect as it would have been if he had had as his sole aim the pleasure of his spectators. But superstition overloaded the gods with symbols, and the most beautiful gods were not always honored as such.

In the temple at Lemnos, from which the pious Hypsipyle⁹ rescued her father in the disguise of the god, Bacchus was represented with horns. No doubt he appeared this way in all his temples since the horns were symbolic and one of his necessary attributes. Only the free artist, who did not have to create his Bacchus for some temple, omitted this symbol; and if we find none with horns among the extant statues of him, we may perhaps take this as proof that none of them belongs among the consecrated ones under which he was actually worshiped. Besides this, it is highly probable that the wrath of pious iconoclasts during the first centuries of Christianity fell in great part on these latter. Only seldom did they spare a work of art, because it had not been desecrated by adoration.

However, since pieces of both kinds are to be found among the excavated objects of antiquity, I should prefer that only those be called works of art in which the artist had occasion to show himself as such and in which beauty was his first and ultimate aim. None of the others, which betray too obvious traces of religious conventions, deserves this name because in their case the artist did not create for art's sake,¹ but his art was merely a handmaid of religion, which stressed meaning more than beauty in the material subjects it allotted to art for execution. By this I do not mean to say that religion has not also frequently sacrificed meaning for beauty, or, out of consideration for art and the more refined taste of the period, has ceased to emphasize it to such a degree that beauty alone would seem to be the sole object.

* * *

From *Chapter Ten*

I comment on an expression of astonishment in Spence² which clearly shows how little thought he must have given to the limits of poetry and painting.

9. Daughter of King Thoos, the son of Dionysus; the women of the island of Lemnos killed all the other men, who had left their wives for Thracian women.

1. Possibly the first use of the expression "art for

art's sake."

2. Joseph Spence (1699–1768), an Oxford professor whose *Polymetis* (1747), written in dialogues, is one of the targets of Lessing's criticism.

"As to the muses in general," he says, "it is strange that the poets are so brief in describing them, far briefer in fact than might be expected for goddesses to whom they are so greatly indebted."³

What can this mean but that he is amazed that when poets speak of the muses they do not use the mute language of painters? To the poets Urania is the muse of astronomy; we recognize her office from her name and her functions. The artist, in order to make her recognizable, must show her pointing with a wand to a celestial globe. The wand, the globe, and the pointing position are his letters, from which he lets us spell out the name Urania. But when the poet wishes to say that Urania had foreseen his death long ago in the stars,

*Ipsa diu positis lethum praedixerat astris Uranie . . .*⁴

why should he, out of respect for the painter, add: "Urania, her wand in hand, the celestial globe before her"? It is as though a man who can and may speak were at the same time using those signs which the mutes in the Turkish seraglio⁵ invented among themselves for lack of a voice.

Spence again expresses the same astonishment when speaking of the moral beings, those divinities whom the ancients made preside over the virtues and the conduct of human life. "It should be remarked," he says, "that the Roman poets have far less to say about the best of these moral beings than one would expect. On this point the artists are much more complete, and whoever wants to know what appearance each of them made need only look at the coins of the Roman emperors. The poets, to be sure, often speak of these beings as persons, but of their attributes, their clothing and their appearance in general they have little to say."⁶

When the poet personifies abstractions, he characterizes them sufficiently by their names and the actions he has them perform.

The artist lacks these means and must therefore add to his personified abstractions symbols by which they may be recognized. But because these symbols are something different and mean something different, they make the figures allegorical.

The female figure with a bridle in her hand; another leaning against a pillar—these are, in art, allegorical figures. For the poet, however, Moderation and Constancy are not allegorical beings but simply personified abstractions.

Necessity invented these symbols for the artist, for only through them can he make it understood what this or that figure is supposed to represent. But why should the poet have forced upon him what the artist had to accept of necessity; a necessity which he himself has no part of?

The very thing which so surprised Spence should be prescribed to poets as a general law. They must not convert the necessities of painting into a part of their own wealth. Nor must they regard the means that art has invented in order to keep up with poetry as perfections which should give

3. *Polymetis*, Dialogue VIII, p. 91 [Lessing's note]. "Muses": in Greek mythology, the 9 daughters of memory who preside over the arts and all intellectual pursuits.

4. Statius, *Thebaid* 8.551 [Lessing's note]; the preceding clause translates the Latin. Statius (ca.

46-96 C.E.), Roman poet.

5. The harem, women's quarters overseen at courts by eunuchs and, in Lessing's account, mutes.

6. *Polymetis*, Dialogue X, pp. 137, 139 [Lessing's note].

them reason for envy. When the artist adorns a figure with symbols, he raises what was a mere figure to a higher being; but if the poet employs these artistic trimmings, he turns that higher being into a puppet.

* * *

Chapter Twelve

Homer⁷ treats of two kinds of beings and actions, visible and invisible. This distinction cannot be made in painting, where everything is visible and visible in but one way. Hence, when Count Caylus⁸ makes the pictures of invisible actions follow the visible ones in an unbroken sequence, and when in his paintings showing mixed actions, i.e., those in which both visible and invisible beings take part, he does not and perhaps cannot specify how the latter (which only we who look at the picture are supposed to discover in it) are to be introduced so that the figures in the painting do not see them (or at least appear not to see them)—when Count Caylus does this, I say, the series as a whole as well as a number of single pictures necessarily become extremely confused, incomprehensible, and self-contradictory.

Still, with the book before us it would be possible to remedy this fault. The worst of it is that when painting erases the distinction between visible and invisible beings it simultaneously destroys all those characteristic features by which this latter, higher order is raised above the lower one.

For example, when the gods, who are divided as to the fate of the Trojans, finally come to blows, the entire battle is represented in the poem as being invisible.⁹ This invisibility gives the imagination free rein to enlarge the scene and envisage the persons and actions of the gods on a grander scale than the measure of ordinary man. But painting must adopt a visible scene, whose various indispensable parts become the scale for the figures participating in it—a scale which the eye has ready at hand and whose lack of proportion to the higher beings makes them appear monstrous on the artist's canvas.

Minerva, whom Mars¹ ventures to attack first in this battle, steps back and with her mighty hand seizes a large, black, rough stone which the united strength of men had rolled there for a landmark in times past:

ἦ δ' ἀναχασσαμένη λίθον εἴλετο χειρὶ παχείῃ
 κείμενον ἐν πεδίῳ, μέλανα, τρηχύν τε μέγαν τε,
 τὸν ῥ' ἀνδρες πρότεροι θέσαν ἔμμεναι οὖρον αρούρης.²

In order to form a proper estimate of the size of this stone we should remember that Homer makes his heroes twice as strong as the strongest men of his own time but tells us that these again were surpassed in strength by the men whom Nestor³ knew in his youth. Now I ask, if Minerva hurls a stone which no one man, not even one from Nestor's youth, could set up as a landmark—if Minerva hurls such a stone at Mars, of what stature is the goddess sup-

7. Greek epic poet (ca. 8th c. B.C.E.) to whom the *Iliad* and the *Odyssey* are attributed.

8. Philippe de Tubières (1692–1765), French art critic; his *Scenes from Homer's Iliad and Odyssey and Virgil's Aeneid* (1757) is the third of Lessing's targets.

9. *Iliad* 21.385 [Lessing's note].

1. Ares, Greek god of war. Minerva: Athena, Greek goddess of war and wisdom.

2. But Athene giving back caught up in her heavy hand a stone/that lay in the plain, black and rugged and huge, one which men/of a former time had set there as boundary mark of the cornfield; *Iliad* 21.403–5 (trans. Richmond Lattimore) [translator's note].

3. The oldest of the Greek generals who fought at Troy.

posed to be? If her stature is in proportion to the size of the stone, then the element of the marvelous disappears. A man three times my size naturally ought to be able to hurl a stone three times as large as I can. But if the stature of the goddess is not in proportion to the size of the stone, an improbability for the eye arises in the painting whose offensiveness is not removed by the cold calculation that a goddess must possess superhuman strength. Wherever I see a greater effect, I also expect to see a greater cause.

And Mars, thrown to the ground by this mighty stone,

ἑπτὰ δ' ἔπεσχε πλέθρα πεσών,⁴

covered seven acres of land. It is impossible for the painter to give the god this extraordinary size, and yet if he does not do so, it is no longer Mars—or at least not the Homeric Mars—who is lying on the ground, but a common warrior.

Longinus⁵ says that it seemed to him now and then as though Homer raised his men to gods and reduced his gods to men. Painting carries out this reduction. In it everything which in the poem raises the gods above godlike human creatures vanishes altogether. Size, strength, and swiftness—qualities which Homer always has in store for his gods in a higher and more extraordinary degree than that bestowed on his finest heroes—must in the painting sink to the common level of humanity. Jupiter and Agamemnon, Apollo and Achilles, Ajax and Mars⁶ all become exactly the same kind of beings, recognizable by nothing more than their outward conventional symbols.

The means which painting uses to convey to us that this or that object must be thought of as invisible is a thin cloud veiling the side of the object that is turned toward the other persons in the pictures. It appears that this cloud was borrowed from Homer, for when in the tumult of battle one of the more important heroes runs into great danger, from which only a divine power can save him, the poet has the protecting divinity envelop him in a thick cloud, or in darkness, and so carry him away, as Paris is carried off by Venus, or Idæus by Neptune, or Hector by Apollo.⁷ And Caylus never fails to recommend heartily this mist or cloud to the artist when he outlines for him a painting of such occurrences. And yet who can fail to see that concealment by cloud or night is, for the poet, nothing more than a poetic expression for rendering a thing invisible? For that reason it has always been a source of surprise to me to see this poetic expression actually used and a real cloud introduced in the painting, behind which the hero stands hidden from his enemy as behind a screen. That was not what the poet intended. It exceeds the limits of painting, for in this case the cloud is a true hieroglyphic, a mere symbol, which does not render the rescued hero invisible, but says to the spectators: you must imagine to yourselves that he is invisible. It is no

4. Falling, he covered seven *plethra*; *Iliad* 21.407. One *plethron* was 10,000 square feet.

5. The name given the 1st century C.E. author of *On Sublimity* (see above); the reference is to section 7.

6. Lessing pairs each god with an appropriate man. Jupiter: Zeus, king of the Gods. Agamemnon: king of Mycenae and leader of the Greeks at Troy. Achilles: the greatest Greek warrior at Troy and the focus of the *Iliad*.

7. All episodes from the *Iliad* (3.380–82, 5.23, 20.443–44). Paris: prince of Troy who was awarded the most beautiful woman in the world by Aphrodite (Venus), goddess of love, for naming her the most beautiful of 3 goddesses. Idæus: son of a Trojan priest of Hephaestus who is in fact saved by Hephaestus, the god of the forge. Hector: oldest prince of Troy and the greatest of the Trojan warriors (Apollo favored the Trojans).

better than the scrolls that issue from the mouths of figures in old Gothic paintings.

It is true that when Apollo rescues Hector from Achilles, Homer has the latter make three further thrusts with his spear into the thick mist (τρίλις δ' ἠέρα τύψε βαθείαν).⁸ But in the language of poetry this means only that Achilles was so enraged that he made the three additional thrusts before realizing that his enemy was no longer before him. Achilles did not see an actual mist, and the power of the gods to render invisible did not lie in any mist, but in their ability to bear the object away swiftly. It was only to show that this abduction took place too quickly for the human eye to follow the disappearing body that the poet first conceals it in a mist or cloud. And it was not because a cloud appeared in place of the abducted body, but because we think of that which is wrapped in mist as being invisible. Accordingly, Homer sometimes inverts the case, and instead of rendering the object invisible, causes the subject to be struck blind. For example, Neptune blinds Achilles when he rescues Aeneas from his murderous hands by suddenly snatching him out of the thick of the fight and placing him in the rear.⁹ Actually, however, Achilles' eyes are no more blinded than, in the former example, the abducted heroes are wrapped in a cloud. The poet merely makes this or that addition in order to make more palpable to our senses that extreme rapidity of abduction which we call disappearance.

However, painters have appropriated the Homeric mist not only in those cases where Homer himself used it, or would have used it (namely, in rendering persons invisible or causing them to disappear), but in every instance where the spectator is supposed to see something in the painting which the characters themselves, or some of them, cannot see. Minerva became visible to Achilles alone when she prevented him from assaulting Agamemnon.¹ I know of no other way to express this, says Caylus, than by concealing her from the rest of the council by a cloud. But this is in complete violation of the spirit of the poet! Invisibility is the natural condition of his gods; no blindfolding, no interruption of the rays of light is needed to prevent them from being seen; but an enlightenment, an increased power of mortal vision is required, if they are intended to be seen. Thus it is not only that in painting the cloud is an arbitrary and not a natural sign; but this arbitrary sign does not even possess the definite distinctness which it could have as such, for it is used both to render the visible invisible and the invisible visible.

Chapter Fifteen

As experience shows, the poet can raise to this degree of illusion the representation of objects other than those that are visible. Consequently, whole categories of pictures which the poet claims as his own must necessarily be beyond the reach of the artist. Dryden's *Song for St. Cecelia's Day*² is full of musical pictures which leave the painter's brush idle. But I do not want to stray too far from my subject with such examples, from which in the final

analysis we learn little more than that colors are not sounds and ears not eyes.³

I will confine myself rather to the consideration of pictures of visible objects only, which are common to both poet and painter. Why is it that a number of poetic pictures of this kind are of no use to the painter and, conversely, many real pictures lose most of their effect when treated by the poet? Example may guide me here. I repeat: the picture of Pandarus⁴ in the fourth book of the *Iliad* is one of the most elaborate and graphic in all of Homer. From the seizing of the bow to the flight of the arrow every moment is painted, and all these moments follow in such close succession and yet are so distinct, one from the other, that if we did not know how a bow should be handled, we would be able to learn it from this description alone: Pandarus takes out his bow, strings it, opens the quiver, chooses an unused, well-feathered arrow, adjusts the arrow's notch to the string and draws both back; the string is brought close to the breast, the metal point of the arrow comes close to the bow, the great round bow springs open again with a clang, the string vibrates, and the arrow has sped away, flying eagerly toward its mark.

Caylus cannot have overlooked this splendid picture. What, then, did he find there to make him consider it unable to afford material to his artists? And why was it that the council of deliberating and drinking gods seemed to him better suited for his purpose? The subjects are visible in both cases, and what more than visible subjects does the painter need to fill his canvas?

The difficulty must be this: although both subjects, being visible, are equally suitable for actual painting, there is still this essential difference between them: in the one case the action is visible and progressive, its different parts occurring one after the other in a sequence of time, and in the other the action is visible and stationary, its different parts developing in co-existence in space. But if painting, by virtue of its symbols or means of imitation, which it can combine in space only, must renounce the element of time entirely, progressive actions, by the very fact that they are progressive, cannot be considered to belong among its subjects. Painting must be content with coexistent actions or with mere bodies which, by their position, permit us to conjecture an action. Poetry, on the other hand. . . .

From Chapter Sixteen

But I shall attempt now to derive the matter from its first principles.

I reason thus: if it is true that in its imitations painting uses completely different means or signs than does poetry, namely figures and colors in space rather than articulated sounds in time, and if these signs must indisputably bear a suitable relation to the thing signified, then signs existing in space can express only objects whose wholes or parts coexist, while signs that follow one another can express only objects whose wholes or parts are consecutive.

Objects or parts of objects which exist in space are called bodies. Accordingly, bodies with their visible properties are the true subjects of painting.

Objects or parts of objects which follow one another are called actions. Accordingly, actions are the true subjects of poetry.

3. An allusion to a quotation in Caylus from Jean de la Fontaine (1621-1695), French author of fables.

4. An ally of the Trojans who broke the truce between the Greeks and Trojans in the passage described (*Iliad* 4.105-26).

However, bodies do not exist in space only, but also in time. They persist in time, and in each moment of their duration they may assume a different appearance or stand in a different combination. Each of these momentary appearances and combinations is the result of a preceding one and can be the cause of a subsequent one, which means that it can be, as it were, the center of an action. Consequently, painting too can imitate actions, but only by suggestion through bodies.

On the other hand, actions cannot exist independently, but must be joined to certain beings or things. Insofar as these beings or things are bodies, or are treated as such, poetry also depicts bodies, but only by suggestion through actions.

Painting can use only a single moment of an action in its coexisting compositions and must therefore choose the one which is most suggestive⁵ and from which the preceding and succeeding actions are most easily comprehensible.

Similarly, poetry in its progressive imitations can use only one single property of a body. It must therefore choose that one which awakens the most vivid image of the body, looked at from the point of view under which poetry can best use it. From this comes the rule concerning the harmony of descriptive adjectives and economy in description of physical objects.

I should put little faith in this dry chain of reasoning: did I not find it completely confirmed by the procedure of Homer, or rather if it had not been just this procedure that led me to my conclusions. Only on these principles can the grand style of the Greek be defined and explained, and only thus can the proper position be assigned to the opposite style of so many modern poets, who attempt to rival the painter at a point where they must necessarily be surpassed by him.

I find that Homer represents nothing but progressive actions. He depicts bodies and single objects only when they contribute toward these actions, and then only by a single trait. No wonder, then, that where Homer paints, the artist finds little or nothing to do himself; and no wonder that his harvest can be found only where the story assembles a number of beautiful bodies in beautiful positions and in a setting favorable to art, however sparingly the poet himself may paint these bodies, these positions, and this setting. If we go through the whole series of paintings as Caylus proposes them, one by one, we find that each is a proof of this remark.

* * *

From *Chapter Seventeen*

But the objection will be raised that the symbols of poetry are not only successive but are also arbitrary; and, as arbitrary symbols, they are of course able to represent bodies as they exist in space. Examples of this might be taken from Homer himself. We need only to recall his shield of Achilles⁶ to have the most decisive instance of how discursively and yet at the same time poetically a single object may be described by presenting its coexistent parts.

I shall reply to this twofold objection. I call it twofold because a correct

5. In German, *den prägnantesten wählen*: "choose the most pregnant (with meaning)."

6. Forged by the god Hephaestus to replace the armor borrowed by his friend Patroclus, whom

Hector killed; its intricate work is described at length (*Iliad* 18.478-608).

deduction must hold good even without examples; and, conversely, an example from Homer is of importance to me even when I am unable to justify it by means of deduction.

It is true that since the symbols of speech are arbitrary, the parts of a body may, through speech, be made to follow one another just as readily as they exist side by side in nature. But this is a peculiarity of speech and its signs in general and not as they serve the aims of poetry. The poet does not want merely to be intelligible, nor is he content—as is the prose writer—with simply presenting his image clearly and concisely. He wants rather to make the ideas he awakens in us so vivid that at that moment we believe that we feel the real impressions which the objects of these ideas would produce on us. In this moment of illusion we should cease to be conscious of the means which the poet uses for this purpose, that is, his words. This was the substance of the definition of a poetical painting given above. But the poet is always supposed to paint, and we shall now see how far bodies with their coexistent parts adapt themselves to this painting.

* * *

From *Chapter Eighteen*

And yet should Homer himself have lapsed into this lifeless description of material objects? I do hope that there are but few passages which one can find to support this; and I feel certain that these few passages are of such a nature as to confirm the rule to which they seem to be the exception.

It remains true that succession of time is the province of the poet just as space is that of the painter.

It is an intrusion of the painter into the domain of the poet, which good taste can never sanction, when the painter combines in one and the same picture two points necessarily separate in time, as does Fra Mazzuoli⁷ when he introduces the rape of the Sabine women⁸ and the reconciliation effected by them between their husbands and relations, or as Titian⁹ does when he presents the entire history of the prodigal son, his dissolute life, his misery, and his repentance.

It is an intrusion of the poet into the domain of the painter and a squandering of much imagination to no purpose when, in order to give the reader an idea of the whole, the poet enumerates one by one several parts or things which I must necessarily survey at one glance in nature if they are to give the effect of a whole.

But as two equitable and friendly neighbors do not permit the one to take unbecoming liberties in the heart of the other's domain, yet on their extreme frontiers practice a mutual forbearance by which both sides make peaceful compensation for those slight aggressions which, in haste and from force of circumstance, the one finds himself compelled to make on the other's privilege: so also with painting and poetry.

To support this I will not cite the fact that in great historical paintings the

7. Francesco Mazzuoli (1503–1540), Italian painter.

8. A famous legend of early Rome. Romulus, its mythical founder, gained wives for the men he had gathered to his new city by inviting neighboring peoples to a festival and seizing the women. The war that followed between Romans and Sabines

ended when the Sabine women thrust themselves onto the battlefield between their fathers and their new husbands, leading to peace and the union of the foes under a single government.

9. Tiziano Vecelli (ca. 1477–1576), Italian painter. For the story of the prodigal son, see Luke 15.11–32.

single moment is always somewhat extended, and that perhaps there is not a single work comprising a wealth of figures in which each one of them is in exactly that motion and position it should be in at the moment of the main action; some are represented in the attitude of a somewhat earlier, others in that of a somewhat later moment. This is a liberty which the master must justify by certain refinements in the arrangement—in the way he uses his figures and places them closer to or more distant from the main action—which permits them to take a more or less momentary part in what is going on. I shall merely make use of a remark made by Mengs concerning Raphael's¹ drapery. "In his paintings," he says, "there is a reason for every fold, whether it be because of its own weight or because of the movement of the limbs. Sometimes we can tell from them how they were before, and Raphael even tried to attach significance to this. We can see from the folds whether an arm or a leg was in a backward or forward position prior to its movement; whether the limb had moved or is moving from contraction to extension, or whether it had been extended and is now contracted."² It is indisputable that in this case the artist is combining two different moments into one. For since that part of the drapery which lies on the foot immediately follows it in its forward motion—unless the drapery be of very stiff material and hence entirely unsuitable for painting—there is no moment in which the garment can form any other fold whatsoever except that which the actual position of the limb requires. However, if it is permitted to form a different fold, then the drapery is represented at the moment preceding and the limb at the following. Nevertheless, who would be so particular with the artist who finds it advantageous to show us these two moments at the same time? Who would not praise him rather for having had the understanding and the courage to commit such a minor error for the sake of obtaining greater perfection of expression?

The poet deserves the same forbearance. His progressive imitation actually allows him to allude to only one side, only one characteristic of his material objects at one time. But when the happy structure of his language permits him to do this in a single word, why should he not be allowed to add a second word now and then? And why not even a third, if it is worth the trouble? Or even a fourth? I have already said that for Homer a ship is only a black ship, or a hollow ship, or a swift ship, or at the most a well-manned black ship. This is to be understood of his style in general. Here and there we find a passage in which he adds a third descriptive epithet. Καμπύλα κύκλα, χάλκεια, ὀκτάκνημα³ round, bronze, eight-spoked wheels. And also a fourth: ἀσπίδα πάντοσ' εἶσιν, καλὴν, χαλκείην, ἐξήλατον,⁴ a uniformly smooth, beautiful, embossed bronze shield. Who would censure him for this? Who would not rather thank him for this little extravagance when he feels what a good effect it can have in some few suitable passages?

But I shall not allow the particular justification of either poet or painter to be based on the above-mentioned analogy of the two friendly neighbors. A mere analogy neither proves nor justifies anything. The following consideration must be their real justification: just as in the painter's art two differ-

1. Raffaello Santi (1483–1520), Italian painter. Anton Raphael Mengs (1728–1779), German painter and art critic; a close friend of Winckelmann.

2. *Thoughts about Beauty and Taste in Painting* [1771], p. 69 [Lessing's note].

3. *Iliad* 5.722–23.

4. *Iliad* 12.294–95.

ent moments border so closely on one another that we can, without hesitation, accept them as one, so in the poet's work do the several features representing the various parts and properties in space follow one another in such rapid succession that we believe we hear them all at once.

It is in this, I say, that the excellence of Homer's language aids him unusually well. It not only allows him the greatest possible freedom in the accumulation and combination of epithets, but it finds such a happy arrangement for these accumulated adjectives that the awkward suspension of their noun disappears. Modern languages are lacking entirely in one or more of these advantages. For example, the French must paraphrase the *καμπυλα κυκλα, χάλκεα, ὀκτάκνημα* with "the round wheels, which were of bronze and had eight spokes." They give the meaning but destroy the picture. Yet the picture is everything here and the meaning nothing; and without the former the latter turns the liveliest of poets into a tiresome bore, a fate which has often befallen our good Homer under the pen of the conscientious Madame Dacier.⁵ The German language, on the other hand, can usually translate Homer's epithets with equally short equivalent adjectives, although it is unable to imitate the advantageous arrangement of Greek. We can say, to be sure, *die runden, ehernen, achtspeichigten* . . . [the round, brazen, eight-spoked], but *Räder* [wheels] drags behind. Who does not feel that three different predicates, before we learn the subject, can produce only an indistinct and confused picture? The Greek combines the subject and the first predicate, and leaves the others to follow. He says, "round wheels, brazen, eight-spoked." And so we know immediately what he is speaking of. In conformity with the natural order of thought, we first become acquainted with the thing itself and then with its accidents. Our [German] language does not enjoy this advantage. Or should I say, it does enjoy it but can seldom make use of it without ambiguity? Both amount to the same thing. For if we place the adjectives after the subject, they must stand *in statu absoluto*, i.e., in uninflected form. Hence, we must say *runde Räder, ehern und achtspeichigt* (round wheels, brazen and eight-spoked). However, in this *statu* the German adjectives are identical with the German adverbs, and if we take them as such with the next verb that is predicated of the subject, they not infrequently produce a completely false, and in any case a very uncertain meaning.

But I am lingering over trifles and it may appear as if I were going to forget the shield, the shield of Achilles, that is—the famous picture which more than anything else caused Homer to be considered by the ancients a master of painting.⁶ A shield, it will be said, is a single material object which the poet cannot present by describing its coexistent parts. And yet Homer, in more than a hundred splendid verses, has described this shield, its material, its form, all the figures which filled its enormous surface, so exactly and in such detail that it was not difficult for modern artists to produce a drawing of it exact in every part.

My answer to this particular objection is that I have already answered it. Homer does not paint the shield as finished and complete, but as a shield that is being made. Thus, here too he has made use of that admirable artistic

5. Anne Lefèvre Dacier (ca. 1650–1720), well-known French translator of Greek and Latin works, including both the *Iliad* (1699) and the *Odyssey* (1708).

6. Dionysius Halicarnassus, *Vita Homeri*, in Thomas Gale, *Opuscula mythologica* [1671], p. 401 [Lessing's note].

device: transforming what is coexistent in his subject into what is consecutive, and thereby making the living picture of an action out of the tedious painting of an object. We do not see the shield, but the divine master as he is making it. He steps up to the anvil with hammer and tongs, and after he has forged the plates out of the rough, the pictures which he destines for the shield's ornamentation rise before our eyes out of the bronze, one after the other, beneath the finer blows of his hammer. We do not lose sight of him until all is finished. Now the shield is complete, and we marvel at the work. But it is the believing wonder of the eyewitness who has seen it forged.

* * *

From *Chapter Twenty-One*

We might ask whether poetry does not lose too much when we take from her all depictions of physical beauty? But who would do this? If we dissuade her from taking one particular way to attain such pictures, and from following confusedly the footsteps of a sister art without ever reaching the same goal, do we thereby exclude her from every other path where art in turn must see poetry take the lead?

The same Homer, who so assiduously refrains from detailed descriptions of physical beauties, and from whom we scarcely learn in passing that Helen had white arms and beautiful hair,⁷ nevertheless knows how to convey to us an idea of her beauty which far surpasses anything art is able to accomplish toward that end. Let us recall the passage where Helen steps before an assembly of Trojan elders. The venerable old men see her, and one says to the other:

Ὀδ' νέμεσις Τρώας καὶ εὐκνήμιδας Ἀχαιοὺς
τοιγῆδ' ἀμφὶ γυναικὶ πολὺν χρόνον ἄλγεα πάσχειν,
αἰνῶς ἀθανάτησι θεῆς εἰς ὄψα ἔοικεν.⁸

What can convey a more vivid idea of beauty than to let cold old age acknowledge that she is indeed worth the war which had cost so much blood and so many tears?

What Homer could not describe in all its various parts he makes us recognize by its effect. Paint for us, you poets, the pleasure, the affection, the love and delight which beauty brings, and you have painted beauty itself.

* * *

1766

7. *Iliad* 3.329; "white arms" 121 [Lessing's note]. Helen: in Greek mythology, daughter of Zeus and Leda and wife of Menelaus; her abduction by Paris led to the Trojan War.

8. *Iliad* 3.156-58 [Lessing's note]. "Surely there

is no blame on Trojans and strong-greaved Achaeans / if for long time they suffer hardship for a woman like this one. Terrible is the likeness of her face to immortal goddesses" (trans. Lattimore).

FRIEDRICH VON SCHILLER

1759–1805

Friedrich von Schiller was one of the foremost German writers of the late eighteenth and early nineteenth centuries. Perhaps best known for his dramas, he was also an editor, a journalist, a writer of vivid letters (especially to Goethe and to the German philologist and diplomat Wilhelm von Humboldt), a historian, a translator (of Euripides, Shakespeare, and Racine), a poet, and a literary theorist.

Born in Marbach, Germany, Schiller became an army medical officer in Stuttgart in 1780. But soon he began seriously working on poetry and drama, choosing a literary career. He published *Die Räuber* (1781, *The Robbers*) at his own expense, and its performance in 1782 was a landmark in German theatrical history. Romantic writers in England, especially SAMUEL TAYLOR COLERIDGE and the critic William Hazlitt, admired *The Robbers* for its presentation of the themes of liberty, abuse of power, and authoritarianism.

On the recommendation of Goethe, Schiller was named professor of history at the University of Jena in 1789, and in 1797–98 they worked together on a collection of ballads (a collaboration contemporaneous with that of WILLIAM WORDSWORTH and Coleridge in England).

Many readers admire Schiller's lyrics and ballads, though his long didactic poems (e.g., *The Artists*, 1789, on the power of art to civilize and bring compassion to mankind) are more famous; best known to English-speaking audiences is his "Ode to Joy," which Beethoven set to music in his monumental Ninth Symphony.

In several influential texts on literary and dramatic theory, aesthetics, and the sublime, Schiller explored the relations between art, politics, and history. He himself looked primarily to IMMANUEL KANT's *Critique of Judgment* (1790; see above), and his development of and response to Kant's ideas later influenced the literary theory of the German Romantic writers and of Coleridge.

In *On the Aesthetic Education of Man* (1795), Schiller was writing in the immediate aftermath of the French regicide and Reign of Terror, during which thousands were executed. The sufferings and shocks of the French Revolution inform his inquiry into the role of art: how can humankind achieve freedom when the failure of political solutions is so graphically displayed? In this text, which grew from a series of actual letters to a benefactor (our selection contains three letters), Schiller explains that freedom can occur only through education, and the key to education is the experience of beauty—the elevation of mind and soul through art. Beauty allows persons to ennoble their nature; each of us can become a "beautiful soul" (*schöne Seele*) harmonizing duty and inclination through art, which Schiller associates with the "play impulse" or "play drive" that makes reconciliation and transcendence possible.

Schiller's *On Naive and Reflective Poetry* (1795–96), a companion piece, contrasts the ancients and the moderns, their different attitudes toward nature, and their performances in poetry. (Often the title's second adjective is given as "sentimental," but that term does not accurately translate *sentimentalisch*.) Modern poets, Schiller states, will never regain the naive—that is, the immediate and unconscious—relationship to nature that the ancients enjoyed. He focuses not on rules to be obeyed or ignored but rather on different types of consciousness. As in *On the Aesthetic Education of Man*, his primary concern is the author's conception of self and of the ideals and purposes of art—the motivating power that informs and imparts life to the text.

Schiller's broad sense of a break between a harmonious past and the divided or disrupted present in which artists perceive the difficulty, if not the impossibility, of embodying their hopes and desires in their actual work, is echoed in the poetry and criticism of MATTHEW ARNOLD, T. S. ELIOT, and many other nineteenth- and twentieth-century writers. They may disagree on the timing, but all emphasize that this shift

in consciousness—a dissociation of sensibility—manifests itself in the operations of individual thought and feeling and in the style and structure of poetry.

In the selection below from *On the Aesthetic Education of Man*, Schiller touches on the sense of acute cultural crisis that impels his arguments about the priority of the aesthetic. He summons up an optimistic vision of the artist preparing “the shape of things to come,” even as he testifies to the ordeal of being an artist in a hostile environment. Defy the world’s opinion: this is Schiller’s advice to those wondering whether they can endure in the midst of an unsympathetic and corrupt age. The artist should be true to the heart’s “noble impulses”: “Impart to the world you would influence a *Direction* towards the good, and the quiet rhythm of time will bring it to fulfilment.” Through our inner potential, we revitalize ourselves and reinvigorate (and sometimes disturb and unsettle) others.

The weakness of this position is that Schiller separates “the rhythm of time” (which he trusts) from the very different rhythm of the world of Utility that, he concedes, now rules but that he believes can be transcended. Others grappled more directly with the comprehensive changes driven by the accelerating power of capitalism, described by the Scottish-born historian (and biographer of Schiller) Thomas Carlyle in “Signs of the Times” (1829): “Not the external and the physical alone is now managed by machinery, but the internal and spiritual also. . . . Men are grown mechanical in head and in heart, as well as in hand.” Not just KARL MARX AND FRIEDRICH ENGELS but the Victorian critics and social reformers John Ruskin and William Morris responded to this alienation in ways that Schiller—whose aesthetic works are grounded less in historical reference and analysis than in idealization of the harmonious wholeness of the ancient Greeks—could not.

Yet Schiller, a prophet of the alienation that would pain many later authors, believed that this alienation could be overcome through the civilizing power of literature, enabling a higher Ideal to triumph over the degraded principles and practices to which persons were currently (and so mistakenly) loyal. A passionate advocate for individual and political freedom, Schiller gave everything to his art; “the Muses drained me dry,” he wrote to Goethe (1795), and, after a long period of poor health, he died in his mid-forties.

BIBLIOGRAPHY

German editions of Schiller’s writings include the *Säkular-Ausgabe*, edited by Eduard von der Hellen (16 vols., 1904–05), and the *Horenausgabe*, edited by C. Schüddekopf and C. Hofer (22 vols., 1910–26), which includes many of his letters. German scholars have noted that many English translations of Schiller’s texts are unreliable. Coleridge’s translation of *Wallenstein* (1800) is important. The translation and edition of *On the Aesthetic Education of Man* by E. M. Wilkinson and L. A. Willoughby (1967) is outstanding. A single-volume edition is *Friedrich Schiller: An Anthology for Our Times*, (trans. Jane Bannard Greene et al., 1959). For a selection of Schiller’s writings on criticism and aesthetics, see *Essays*, edited by Walter Hinderer and Daniel O. Dahlstrom (1993).

A good biographical point of departure is William Witte, *Schiller* (1949). See also John Simon, *Friedrich Schiller* (1981), and T. J. Reed, *Schiller* (1991). For critical analysis, consult S. S. Kerry, *Schiller’s Writings on Aesthetics* (1961); Charles E. Passage, *Friedrich Schiller* (1975); Juliet Sychrava, *Schiller to Derrida: Idealism in Aesthetics* (1989); and Lesley Sharpe, *Friedrich Schiller: Drama, Thought, and Politics* (1991), a well-contextualized treatment of Schiller’s work as a dramatist, poet, and literary theorist. Patrick T. Murray, *The Development of German Aesthetic Theory from Kant to Schiller: A Philosophical Commentary on Schiller’s “Aesthetic Education of Man,” 1795* (1994), places Schiller’s aesthetics in their literary and national contexts. See also Linda Marie Brooks, *The Menace of the Sublime to the Individual Self:*

Kant, Schiller, Coleridge, and the Disintegration of Romantic Identity (1996), and R. D. Miller, *Schiller and the Ideal of Freedom* (1970).

For a concise study of the critical writings, see René Wellek, "Kant and Schiller," in *A History of Modern Criticism, 1750–1950*, vol. 1, *The Later Eighteenth Century* (1955). A more detailed, challenging assessment can be found in Anthony Savile, *Aesthetic Reconstructions: The Seminal Writings of Lessing, Kant, and Schiller* (1987). T. J. Reed, *The Classical Centre: Goethe and Weimar, 1775–1832* (1980), is stimulating on the relationship between Goethe and Schiller. For bibliography, see Wolfgang Vulpius, *Schiller-Bibliographie, 1893–1958* (1959) and *Schiller-Bibliographie, 1959–63* (1967); and R. Pick, "Schiller in England, 1787–1960: A Bibliography," *Publications of the English Goethe Society* 30 (1961).

From On the Aesthetic Education of Man¹

Second Letter

1. BUT should it not be possible to make better use of the freedom you accord me than by keeping your attention fixed upon the domain of the fine arts? Is it not, to say the least, untimely to be casting around for a code of laws for the aesthetic world at a moment when the affairs of the moral offer interest of so much more urgent concern, and when the spirit of philosophical inquiry is being expressly challenged by present circumstances to concern itself with that most perfect of all the works to be achieved by the art of man: the construction of true political freedom?

2. I would not wish to live in a century other than my own, or to have worked for any other. We are citizens of our own Age no less than of our own State. And if it is deemed unseemly, or even inadmissible, to exempt ourselves from the morals and customs of the circle in which we live, why should it be less of a duty to allow the needs and taste of our own epoch some voice in our choice of activity?

3. But the verdict of this epoch does not, by any means, seem to be going in favour of art, not at least of the kind of art to which alone my inquiry will be directed. The course of events has given the spirit of the age a direction which threatens to remove it ever further from the art of the Ideal. This kind of art must abandon actuality, and soar with becoming boldness above our wants and needs; for Art is a daughter of Freedom, and takes her orders from the necessity inherent in minds, not from the exigencies of matter. But at the present time material needs reign supreme and bend a degraded humanity beneath their tyrannical yoke. *Utility* is the great idol of our age, to which all powers are in thrall and to which all talent must pay homage. Weighed in this crude balance, the insubstantial merits of Art scarce tip the scale, and, bereft of all encouragement, she shuns the noisy market-place of our century. The spirit of philosophical inquiry² itself is wresting from the Imag-

1. Translated by E. M. Wilkinson and L. A. Wiloughby. These letters were originally addressed to Schiller's benefactor Friedrich Christian, duke of Augustenburg.

2. Pertaining not only to the study of fundamental principles but also to the empirical investigation into practical things.

ination one province after another, and the frontiers of art contract the more the boundaries of science expand.

4. Expectantly the gaze of philosopher and man of the world alike is fixed on the political scene, where now, so it is believed, the very fate of mankind is being debated. Does it not betray a culpable indifference to the common weal not to take part in this general debate? If this great action is, by reason of its cause and its consequences, of urgent concern to every one who calls himself man, it must, by virtue of its method of procedure, be of quite special interest to every one who has learnt to think for himself. For a question which has hitherto always been decided by the blind right of might, is now, so it seems, being brought before the tribunal of Pure Reason³ itself, and anyone who is at all capable of putting himself at the centre of things, and of raising himself from an individual into a representative of the species, may consider himself at once a member of this tribunal, and at the same time, in his capacity of human being and citizen of the world, an interested party who finds himself more or less closely involved in the outcome of the case. It is, therefore, not merely his own cause which is being decided in this great action; judgement is to be passed according to laws which he, as a reasonable being, is himself competent and entitled to dictate.

5. How tempting it would be for me to investigate such a subject in company with one who is as acute a thinker as he is a liberal citizen of the world! And to leave the decision to a heart which has dedicated itself with such noble enthusiasm to the weal of humanity. What an agreeable surprise if, despite all difference in station, and the vast distance which the circumstances of the actual world make inevitable, I were, in the realm of ideas, to find my conclusions identical with those of a mind as unprejudiced as your own! That I resist this seductive temptation, and put Beauty before Freedom, can, I believe, not only be excused on the score of personal inclination, but also justified on principle. I hope to convince you that the theme I have chosen is far less alien to the needs of our age than to its taste. More than this: if man is ever to solve that problem of politics in practice he will have to approach it through the problem of the aesthetic, because it is only through Beauty that man makes his way to Freedom. But this cannot be demonstrated without my first reminding you of the principles by which Reason is in any case guided in matters of political legislation.

Sixth Letter

1. HAVE I not perhaps been too hard on our age in the picture I have just drawn? That is scarcely the reproach I anticipate. Rather a different one: that I have tried to make it prove too much. Such a portrait, you will tell me, does indeed resemble mankind as it is today; but does it not also resemble any people caught up in the process of civilization, since all of them, without exception, must fall away from Nature by the abuse of Reason before they can return to her by the use of Reason?

3. See IMMANUEL KANT, *The Critique of Pure Reason* (1781). In the preface, Kant states that his goal is to "assure to reason its lawful claims, and dismiss

all groundless pretensions, not by despotic decrees, but in accordance with its own eternal and unalterable laws."

2. Closer attention to the character of our age will, however, reveal an astonishing contrast between contemporary forms of humanity and earlier ones, especially the Greek. The reputation for culture and refinement, on which we otherwise rightly pride ourselves *vis-à-vis* humanity in its *merely* natural state, can avail us nothing against the natural humanity of the Greeks. For they were wedded to all the delights of art and all the dignity of wisdom, without however, like us, falling a prey to their seduction. The Greeks put us to shame not only by a simplicity to which our age is a stranger; they are at the same time our rivals, indeed often our models, in those very excellences with which we are wont to console ourselves for the unnaturalness of our manners. In fullness of form no less than of content, at once philosophic and creative, sensitive and energetic, the Greeks combined the first youth of imagination with the manhood of reason in a glorious manifestation of humanity.

3. At that first fair awakening of the powers of the mind, sense and intellect did not as yet rule over strictly separate domains; for no dissension had as yet provoked them into hostile partition and mutual demarcation of their frontiers. Poetry had not as yet coquetted with wit, nor speculation prostituted itself to sophistry. Both of them could, when need arose, exchange functions, since each in its own fashion paid honour to truth. However high the mind might soar, it always drew matter lovingly along with it; and however fine and sharp the distinctions it might make, it never proceeded to mutilate. It did indeed divide human nature into its several aspects, and project these in magnified form into the divinities of its glorious pantheon; but not by tearing it to pieces; rather by combining its aspects in different proportions, for in no single one of their deities was humanity in its entirety ever lacking. How different with us Moderns! With us too the image of the human species is projected in magnified form into separate individuals—but as fragments, not in different combinations, with the result that one has to go the rounds from one individual to another in order to be able to piece together a complete image of the species. With us, one might almost be tempted to assert, the various faculties appear as separate in practice as they are distinguished by the psychologist in theory, and we see not merely individuals, but whole classes of men, developing but one part of their potentialities, while of the rest, as in stunted growths, only vestigial traces remain.

4. I do not underrate the advantages which the human race today, considered as a whole and weighed in the balance of intellect, can boast in the face of what is best in the ancient world. But it has to take up the challenge in serried ranks, and let whole measure itself against whole. What individual Modern could sally forth and engage, man against man, with an individual Athenian for the prize of humanity?

5. Whence this disadvantage among individuals when the species as a whole is at such an advantage? Why was the individual Greek qualified to be the representative of his age, and why can no single Modern venture as much? Because it was from all-unifying Nature that the former, and from the all-dividing Intellect that the latter, received their respective forms.

6. It was civilization itself which inflicted this wound upon modern man. Once the increase of empirical knowledge, and more exact modes of thought, made sharper divisions between the sciences inevitable, and once the increasingly complex machinery of State necessitated a more rigorous separation of ranks and occupations, then the inner unity of human nature was severed too, and a disastrous conflict set its harmonious powers at variance. The intuitive and the speculative understanding now withdrew in hostility to take up positions in their respective fields, whose frontiers they now began to guard with jealous mistrust; and with this confining of our activity to a particular sphere we have given ourselves a master within, who not infrequently ends by suppressing the rest of our potentialities. While in the one a riotous imagination ravages the hard-won fruits of the Intellect, in another the spirit of abstraction stifles the fire at which the heart should have warmed itself and the imagination been kindled.

7. This disorganization, which was first started within man by civilization and learning, was made complete and universal by the new spirit of government. It was scarcely to be expected that the simple organization of the early republics should have survived the simplicity of early manners and conditions; but instead of rising to a higher form of organic existence it degenerated into a crude and clumsy mechanism. That polypoid character of the Greek States, in which every individual enjoyed an independent existence but could, when need arose, grow into the whole organism, now made way for an ingenious clock-work, in which, out of the piecing together of innumerable but lifeless parts, a mechanical kind of collective life ensued. State and Church, laws and customs, were now torn asunder; enjoyment was divorced from labour, the means from the end, the effort from the reward. Everlastingly chained to a single little fragment of the Whole, man himself develops into nothing but a fragment; everlastingly in his ear the monotonous sound of the wheel that he turns, he never develops the harmony of his being, and instead of putting the stamp of humanity upon his own nature, he becomes nothing more than the imprint of his occupation or of his specialized knowledge. But even that meagre, fragmentary participation, by which individual members of the State are still linked to the Whole, does not depend upon forms which they spontaneously prescribe for themselves (for how could one entrust to their freedom of action a mechanism so intricate and so fearful of light and enlightenment?); it is dictated to them with meticulous exactitude by means of a formulary which inhibits all freedom of thought. The dead letter takes the place of living understanding, and a good memory is a safer guide than imagination and feeling.

8. When the community makes his office the measure of the man; when in one of its citizens it prizes nothing but memory, in another a mere tabularizing⁴ intelligence, in a third only mechanical skill; when, in the one case, indifferent to character, it insists exclusively on knowledge, yet is, in another, ready to condone any amount of obscurantist thinking as long as it is accompanied by a spirit of order and law-abiding behaviour; when, moreover, it insists on special skills being developed with a degree of intensity which is

4. Making lists or tables.

only commensurate with its readiness to absolve the individual citizen from developing himself in extensivity—can we wonder that the remaining aptitudes of the psyche are neglected in order to give undivided attention to the one which will bring honour and profit? True, we know that the outstanding individual will never let the limits of his occupation dictate the limits of his activity. But a mediocre talent will consume in the office assigned him the whole meagre sum of his powers, and a man has to have a mind above the ordinary if, without detriment to his calling, he is still to have time for the chosen pursuits of his leisure. Moreover, it is rarely a recommendation in the eyes of the State if a man's powers exceed the tasks he is set, or if the higher needs of the man of parts constitute a rival to the duties of his office. So jealously does the State insist on being the sole proprietor of its servants that it will more easily bring itself (and who can blame it?) to share its man with the Cytherean, than with the Uranian, Venus.⁵

9. Thus little by little the concrete life of the Individual is destroyed in order that the abstract idea of the Whole may drag out its sorry existence, and the State remains for ever a stranger to its citizens since at no point does it ever make contact with their feeling. Forced to resort to classification in order to cope with the variety of its citizens, and never to get an impression of humanity except through representation at second hand, the governing section ends up by losing sight of them altogether, confusing their concrete reality with a mere construct of the intellect; while the governed cannot but receive with indifference laws which are scarcely, if at all, directed to them as persons. Weary at last of sustaining bonds which the State does so little to facilitate, positive society begins (this has long been the fate of most European States) to disintegrate into a state of primitive morality, in which public authority has become but one party *more*, to be hated and circumvented by those who make authority necessary, and only obeyed by such as are capable of doing without it.

10. With this twofold pressure upon it, from within and from without, could humanity well have taken any other course than the one it actually took? In its striving after inalienable possessions in the realm of ideas, the spirit of speculation could do no other than become a stranger to the world of sense, and lose sight of matter for the sake of form. The practical spirit, by contrast, enclosed within a monotonous sphere of material objects, and within this uniformity still further confined by formulas, was bound to find the idea of an unconditioned Whole receding from sight, and to become just as impoverished as its own poor sphere of activity. If the former was tempted to model the actual world on a world conceivable by the mind, and to exalt the subjective conditions of its own perceptual and conceptual faculty into laws constitutive of the existence of things, the latter plunged into the opposite extreme of judging all experience whatsoever by one particular fragment of experience, and of wanting to make the rules of its *own* occupation apply indiscriminately to all others. The one was bound to become the victim of empty subtilities, the other of narrow pedantry; for the former stood too high to discern the particular, the latter too low to survey the Whole. But the

5. Uranian Venus presides over sacred love; Cytherean Venus presides over profane love.

damaging effects of the turn which mind thus took were not confined to knowledge and production; it affected feeling and action no less. We know that the sensibility of the psyche depends for its intensity upon the liveliness, for its scope upon the richness, of the imagination. The preponderance of the analytical faculty must, however, of necessity, deprive the imagination of its energy and warmth, while a more restricted sphere of objects must reduce its wealth. Hence the abstract thinker very often has a *cold* heart, since he dissects his impressions, and impressions can move the soul only as long as they remain whole; while the man of practical affairs often has a *narrow* heart, since his imagination, imprisoned within the unvarying confines of his own calling, is incapable of extending itself to appreciate other ways of seeing and knowing.

11. It was part of my procedure to uncover the disadvantageous trends in the character of our age and the reasons for them, not to point out the advantages which Nature offers by way of compensation. I readily concede that, little as individuals might benefit from this fragmentation of their being, there was no other way in which the species as a whole could have progressed. With the Greeks, humanity undoubtedly reached a maximum of excellence, which could neither be maintained at that level nor rise any higher. Not maintained, because the intellect was unavoidably compelled by the store of knowledge it already possessed to dissociate itself from feeling and intuition in an attempt to arrive at exact discursive understanding; not rise any higher, because only a specific degree of clarity is compatible with a specific fullness and warmth. This degree the Greeks had attained; and had they wished to proceed to a higher stage of development, they would, like us, have had to surrender their wholeness of being and pursue truth along separate paths.

12. If the manifold potentialities in man were ever to be developed, there was no other way but to pit them one against the other. This antagonism of faculties and functions is the great instrument of civilization—but it is only the instrument; for as long as it persists, we are only on the way to becoming civilized. Only through individual powers in man becoming isolated, and arrogating to themselves exclusive authority, do they come into conflict with the truth of things, and force the Common Sense, which is otherwise content to linger with indolent complacency on outward appearance, to penetrate phenomena in depth. By pure thought usurping authority in the world of sense, while empirical thought is concerned to subject the usurper to the conditions of experience, both these powers develop to their fullest potential, and exhaust the whole range of their proper sphere. And by the very boldness with which, in the one case, imagination allows her caprice to dissolve the existing world-order, she does, in the other, compel Reason to rise to the ultimate sources of knowing, and invoke the law of Necessity against her.

13. One-sidedness in the exercise of his powers must, it is true, inevitably lead the individual into error; but the species as a whole to truth. Only by concentrating the whole energy of our mind into a *single* focal point, contracting our whole being into a single power, do we, as it were, lend wings to this individual power and lead it, by artificial means, far beyond the limits

which Nature seems to have assigned to it. Even as it is certain that all individuals taken together would never, with the powers of vision granted them by Nature alone, have managed to detect a satellite of Jupiter which the telescope reveals to the astronomer, so it is beyond question that human powers of reflection would never have produced an analysis of the Infinite or a Critique of Pure Reason,⁶ unless, in the individuals called to perform such feats, Reason had separated itself off, disentangled itself, as it were, from all matter, and by the most intense effort of abstraction armed their eyes with a glass for peering into the Absolute. But will such a mind, dissolved as it were into pure intellect and pure contemplation, ever be capable of exchanging the rigorous bonds of logic for the free movement of the poetic faculty, or of grasping the concrete individuality of things with a sense innocent of preconceptions and faithful to the object? At this point Nature sets limits even to the most universal genius, limits which he cannot transcend; and as long as philosophy has to make its prime business the provision of safeguards against error, truth will be bound to have its martyrs.

14. Thus, however much the world as a whole may benefit through this fragmentary specialization of human powers, it cannot be denied that the individuals affected by it suffer under the curse of this cosmic purpose. Athletic bodies can, it is true, be developed by gymnastic exercises; beauty only through the free and harmonious play of the limbs. In the same way the keying up of individual functions of the mind can indeed produce extraordinary human beings; but only the equal tempering of them all, happy and complete human beings. And in what kind of relation would we stand to either past or future ages, if the development of human nature were to make such sacrifice necessary? We would have been the serfs of mankind; for several millennia we would have done slaves' work for them, and our mutilated nature would bear impressed upon it the shameful marks of this servitude. And all this in order that a future generation might in blissful indolence attend to the care of its moral health, and foster the free growth of its humanity!

15. But can Man really be destined to miss himself for the sake of any purpose whatsoever? Should Nature, for the sake of her own purposes, be able to rob us of a completeness which Reason, for the sake of hers, enjoins upon us? It must, therefore, be wrong if the cultivation of individual powers involves the sacrifice of wholeness. Or rather, however much the law of Nature tends in that direction, it must be open to us to restore by means of a higher Art the totality of our nature which the arts themselves have destroyed.

Ninth Letter

1. BUT is this not, perhaps, to argue in a circle? Intellectual education is to bring about moral education, and yet moral education is to be the condition of intellectual education? All improvement in the political sphere is to proceed from the ennobling of character—but how under the influence of a

6. That is, Kant's *Critique of Pure Reason*.

barbarous constitution is character ever to become ennobled? To this end we should, presumably, have to seek out some instrument not provided by the State, and to open up living springs which, whatever the political corruption, would remain clear and pure.

2. I have now reached the point to which all my preceding reflections have been tending. This instrument is *Fine Art*; such living springs are opened up in its immortal exemplars.

3. Art, like Science, is absolved from all positive constraint and from all conventions introduced by man; both rejoice in absolute *immunity* from human arbitrariness. The political legislator may put their territory out of bounds; he cannot rule within it. He can proscribe the lover of truth; Truth itself will prevail. He can humiliate the artist; but Art he cannot falsify. True, nothing is more common than for both, science as well as art, to pay homage to the spirit of the age, or for creative minds to accept the critical standards of prevailing taste. In epochs where character becomes rigid and obdurate, we find science keeping a strict watch over its frontiers, and art moving in the heavy shackles of rules; in those where it becomes enervated and flabby, science will strive to please, and art to gratify. For whole centuries thinkers and artists will do their best to submerge truth and beauty in the depths of a degraded humanity; it is they themselves who are drowned there, while truth and beauty, with their own indestructible vitality, struggle triumphantly to the surface.

4. The artist is indeed the child of his age; but woe to him if he is at the same time its ward or, worse still, its minion! Let some beneficent deity snatch the suckling betimes from his mother's breast, nourish him with the milk of a better age, and suffer him to come to maturity under a distant Grecian sky. Then, when he has become a man, let him return, a stranger, to his own country; not, however, to gladden it by his appearance, but rather, terrible like Agamemnon's son,⁷ to cleanse and to purify it. His theme he will, indeed, take from the present; but his form he will borrow from a nobler time, nay, from beyond time altogether, from the absolute, unchanging, unity of his being. Here, from the pure aether⁸ of his genius, the living source of beauty flows down, untainted by the corruption of the generations and ages wallowing in the dark eddies below. The theme of his work may be degraded by vagaries of the public mood, even as this has been known to ennoble it; but its form, inviolate, will remain immune from such vicissitudes: The Roman of the first century had long been bowing the knee before his emperors when statues still portrayed him erect; temples continued to be sacred to the eye long after the gods had become objects of derision; and the infamous crimes of a *Nero* or a *Commodus*⁹ were put to shame by the noble style of the building whose frame lent them cover. Humanity has lost its dignity; but Art has rescued it and preserved it in significant stone. Truth lives on in

7. Orestes, who "cleansed" his home on his return by killing his mother Clytemnestra and her lover Aegisthus, who had murdered Agamemnon (a myth often treated in Greek tragedy, most notably in Aeschylus's *Oresteia* trilogy, 458 B.C.E.).

8. For the Greeks, the clear air beyond the clouds;

the element breathed by the gods.

9. Both were notoriously cruel emperors of Rome: Nero (37–68 C.E.), emperor 54–68; Commodus (161–192), emperor 180–92. Under the Republic, which ended in the 1st century B.C.E., Romans did not "bow the knee."

the illusion of Art, and it is from this copy, or after-image, that the original image will once again be restored. Just as the nobility of Art *survived* the nobility of Nature, so now Art goes before her, a voice rousing from slumber and preparing the shape of things to come. Even before Truth's triumphant light can penetrate the recesses of the human heart, the poet's imagination will intercept its rays, and the peaks of humanity will be radiant while the dews of night still linger in the valley.

5. But how is the artist to protect himself against the corruption of the age which besets him on all sides? By disdaining its opinion. Let him direct his gaze upwards, to the dignity of his calling and the universal Law, not downwards towards Fortune and the needs of daily life. Free alike from the futile busyness which would fain set its mark upon the fleeting moment, and from the impatient spirit of enthusiasm which applies the measure of the Absolute to the sorry products of Time, let him leave the sphere of the actual to the intellect, which is at home there, whilst he strives to produce the Ideal out of the union of what is possible with what is necessary. Let him express this ideal both in semblance and in truth, set the stamp of it upon the play of his imagination as upon the seriousness of his conduct, let him express it in all sensuous and spiritual forms, and silently project it into the infinity of time.

6. But not everyone whose soul glows with this ideal was granted either the creative tranquillity or the spirit of long patience required to imprint it upon the silent stone, or pour it into the sober mould of words, and so entrust it to the executory hands of time. Far too impetuous to proceed by such unobtrusive means, the divine impulse to form often hurls itself directly upon present-day reality and upon the life of action, and undertakes to fashion anew the formless material presented by the moral world. The misfortunes of the human race speak urgently to the man of feeling; its degradation more urgently still; enthusiasm is kindled, and in vigorous souls ardent longing drives impatiently on towards action. But did he ever ask himself whether those disorders in the moral world offend his reason, or whether they do not rather wound his self-love? If he does not yet know the answer, he will detect it by the zeal with which he insists upon specific and prompt results. The pure moral impulse is directed towards the Absolute. For such an impulse time does not exist, and the future turns into the present from the moment that it is seen to develop with inevitable Necessity out of the present. In the eyes of a Reason which knows no limits, the Direction is at once the Destination, and the Way¹ is completed from the moment it is trodden.

7. To the young friend of truth and beauty who would inquire of me how, despite all the opposition of his century, he is to satisfy the noble impulses of his heart, I would make answer: Impart to the world you would influence a *Direction* towards the good, and the quiet rhythm of time will bring it to fulfilment. You will have given it this direction if, by your teaching, you have elevated its thoughts to the Necessary and the Eternal, if, by your actions and your creations, you have transformed the Necessary and the Eternal into

1. See John 14.6: "Jesus saith unto him, I am the way, the truth, and the life: no man cometh unto the Father, but by me."

an object of the heart's desire. The edifice of error and caprice will fall—it must fall, indeed it has already fallen—from the moment you are certain that it is on the point of giving way. But it is in man's inner being that it must give way, not just in the externals he presents to the world. It is in the modest sanctuary of your heart that you must rear victorious truth, and project it out of yourself in the form of beauty, so that not only thought can pay it homage, but sense, too, lay loving hold on its appearance. And lest you should find yourself receiving from the world as it is the model you yourself should be providing, do not venture into its equivocal company without first being sure that you bear within your own heart an escort from the world of the ideal. Live with your century; but do not be its creature. Work for your contemporaries; but create what they need, not what they praise. Without sharing their guilt, yet share with noble resignation in their punishment, and bow your head freely beneath the yoke which they find as difficult to dispense with as to bear. By the steadfast courage with which you disdain their good fortune, you will show them that it is not through cowardice that you consent to share their sufferings. Think of them as they ought to be, when called upon to influence them; think of them as they are, when tempted to act on their behalf. In seeking their approval appeal to what is best in them, but in devising their happiness recall them as they are at their worst; then your own nobility will awaken theirs, and their unworthiness not defeat your purpose. The seriousness of your principles will frighten them away, but in the play of your semblance they will be prepared to tolerate them; for their taste is purer than their heart, and it is here that you must lay hold of the timorous fugitive. In vain will you assail their precepts, in vain condemn their practice; but on their leisure hours you can try your shaping hand. Banish from their pleasures caprice, frivolity, and coarseness, and imperceptibly you will banish these from their actions and, eventually, from their inclinations too. Surround them, wherever you meet them, with the great and noble forms of genius, and encompass them about with the symbols of perfection, until Semblance conquer Reality, and Art triumph over Nature.

1795

MARY WOLLSTONECRAFT

1759–1797

Mary Wollstonecraft wrote one of the first treatises of modern feminism. A *Vindication of the Rights of Woman* (1792) inserts an analysis of the relations between the sexes into a wholesale revolutionary attack on hereditary privilege of all sorts—birth, wealth, rank, and gender. Of course, not every revolutionary theorist in the 1790s would include male privilege on such a list: the French National Assembly's Declaration of the Rights of Man in 1789 said nothing about the rights of women. Yet Wollstonecraft's argument for rational education for both sexes was based on the promise of freedom enthusiastically greeted by many English writers in the early days of the French Revolution.

Wollstonecraft had previously written *A Vindication of the Rights of Men* (1790), one of the first polemical responses to EDMUND BURKE's conservative *Reflections on the Revolution in France* (1790). Months before Thomas Paine's perhaps better-known *Rights of Man* (1791–92), Wollstonecraft composed the first *Vindication* at white heat; it was printed anonymously. For Wollstonecraft, Burke's defense of the charms of existing arrangements was of a piece with the implicit gendering of his earlier aesthetic distinction between the beautiful and the sublime in his *Philosophical Enquiry into the Origin of Our Ideas of the Sublime and Beautiful* (1757; see above). Beauty was a property of weaker entities than man; sublimity, of stronger. Women's beauty was thus synonymous with women's inferiority. In both her *Vindications*, Wollstonecraft skillfully demystifies all arguments designed to justify inequality on the basis of existing arrangements, customs, or feelings alone.

As the second-born and first daughter of six children, she experienced firsthand the preference accorded men in both property and dignity. Her older brother was the only grandchild to inherit part of his grandfather's fortune (made in the silk industry), much of which was consumed by Mary's father as he attempted to lead the life of a gentleman farmer. As his finances worsened, he appropriated money that had been set aside for the other children and seems to have become increasingly brutal. At age nineteen Mary decided to strike out on her own.

In addition to trying her hand at several of the positions open to middle-class women without resources (lady's companion, governess, seamstress), Wollstonecraft opened a school at Newington Green with her two younger sisters and a dear friend, Fanny Blood. Although Mary's formal education had ended when she was fifteen, she was an avid reader and later taught herself French, German, Dutch, and Italian. The school failed, but the experience gave rise to Wollstonecraft's first publication, *Thoughts on the Education of Daughters* (1786), and to an acquaintance with anti-establishment thinkers, especially the Dissenter Dr. Richard Price (whose sermon on the anniversary of England's Glorious Revolution of 1688 was soon to provoke Burke's *Reflections*).

While working as a governess for the Kingsborough family in Ireland, Wollstonecraft wrote her first novel—*Mary, A Fiction* (1788); when dismissed by the Kingsboroughs (for reasons that are unclear), she returned to London, where her sympathetic publisher, Joseph Johnson, put her to work doing translations and reviews for his new *Analytical Review*. Around his table gathered some of the most interesting intellectuals of the day, including the radical thinker Thomas Paine, the painter Henry Fuseli, the political philosopher and novelist William Godwin, and the poet William Blake.

When the Bastille prison was stormed by a Paris mob in 1789, inaugurating the French Revolution, English radicals looked to France with great enthusiasm. As WILLIAM WORDSWORTH would later put it in his poem "French Revolution" (1809), "Bliss was it in that dawn to be alive[.] . . . What temper at the prospect did not wake / To happiness unthought of?" (also included in *The Prelude* [1805] 10.692–707). It was in this climate that Mary Wollstonecraft composed her *Vindications*. To the promise of liberty and equality for all men, Wollstonecraft added the simple but radical idea that women, too, had a right to develop their faculties freely, that the laws subjecting them to fathers or husbands could be changed, and that their existing defects (and indeed their charms) were largely a result of social conditioning, and could be modified. By comparing women to military men—both are fond of dress, trained in obedience, and not expected to think for themselves—she implies that education and socialization account for more differences than does gender alone.

At the time of writing *A Vindication of the Rights of Woman*, Wollstonecraft was just beginning to experience the additional complications that a life of passion could create for an independent woman attempting to live by her reason. She fell in love with Henry Fuseli and horrified his wife by suggesting that the three of them might live together. Soon thereafter, she went to Paris alone.

Once in France, she wrote about the French Revolution (her *Historical and Moral View of the Origin and Progress of the French Revolution, and the Effect It Has Produced in Europe* was published in 1794), observed the Reign of Terror with increasing recoil, and fell in love with a dashing American, Gilbert Imlay, who, when British citizens were being rounded up, registered her as his wife for her protection. She conceived a child with him, whom she named Fanny, after Fanny Blood. Though the birth was without complications, Wollstonecraft's life was not. Gilbert was often absent on "business," and on two occasions when Wollstonecraft was to join him in London, she discovered evidence of his infidelities. She twice attempted suicide; between attempts, she offered to journey to Scandinavia to investigate some business dealings for Imlay, and, traveling with a toddler and an attendant, wrote letters detailing her travels (later published as *Letters Written during a Short Residence in Norway, Denmark, and Sweden*, 1796). But the relationship with Imlay was over. As VIRGINIA WOOLF memorably surmised in her 1929 short essay on Wollstonecraft (reprinted in *The Second Common Reader*): "Tickling minnows he had hooked a dolphin, and the creature rushed him through the waters till he was dizzy and only wanted to escape."

Wollstonecraft reentered the circle of intellectuals around Joseph Johnson, and this time she found a great deal to discuss with the forty-year-old William Godwin, who was now at the peak of his career (having published *Political Justice* in 1793 and the novel *Caleb Williams* in 1794). Soon "it was friendship melting into love," as Godwin later described it. Both of them were opposed to marriage on principle—he felt that all formal commitments violate the feelings that inspire them, and she felt that marriage laws disadvantage women. Nevertheless, when Mary found herself pregnant again, they married at the beginning of 1797 so that the child would be legitimate. Ironically, many "respectable" acquaintances who had wanted to believe that Mary was married to Imlay broke off relations when this gesture of propriety revealed the earlier illegitimacy.

The author of *A Vindication of the Rights of Woman* was happily working on a novel titled *Maria, or the Wrongs of Woman* (the play—and lack of symmetry—between universal "rights" and gender-specific "wrongs" sums up the differences between Wollstonecraft's treatises and her novels) while she awaited the birth of "William." But she and Godwin had little chance to test their marital experiment. On September 10, 1797, she died of an infection contracted during unsuccessful attempts to remove her broken and unexpelled placenta, eleven days after giving birth to a daughter—the future Mary Shelley, author of a Gothic novel of education (*Frankenstein*) and wife of a passionate disciple of both Godwin and Wollstonecraft, PERCY BYSSHE SHELLEY.

Unlike other middle-class women, whose husbands, fathers, wealth, or connections veiled their legal powerlessness, Mary Wollstonecraft clearly saw the damage caused by sexual inequality. She was socialized for but she never experienced a life of respectable dependency. The first readers of *A Vindication of the Rights of Woman* applauded her apparent commitment to bourgeois respectability, but when Godwin published in his *Memoirs of Mary Wollstonecraft* (1798) a frank account of her subsequent sexual life, the increasingly conservative public reacted to her lack of deference (for which modern feminists applaud her) with horror. Her freedom and independence were seen as proof of licentiousness and immorality.

Mary Wollstonecraft was a cultural and not a literary critic, but as an acute reader of the contradictions inherent in the literary tradition she is a forerunner of "ideological" reading. Literature was central to her work in several fundamental ways. In her novels, she plumbs the conflicts between reason and emotion ("sensibility"), or within reason itself, neither of which are dealt with in her treatises. In her reply to Burke, she does not separate his aesthetic from his political theory. And she finds at the heart of the literary canon the same sexual inequality and incoherence she is arguing against in society at large.

In the extract printed below, for example, Wollstonecraft begins by pointing out

two incompatible moments in Milton's *Paradise Lost*: Adam's plea to God for an equal and Eve's birth as an unequal. How are these to be reconciled? If God exists, she argues, and if humans are all characterized by their capacity for immortality, then one God fits all, and virtue must be the same in kind, if not in degree, for both sexes. The obedience and secondariness expected of women ("He for God only, she for God in him," as Milton put it) make a mockery of true companionship, giving women access only to a reflection of the light of reason that they should seek for themselves. In good Enlightenment fashion, Wollstonecraft comes close to taking the Serpent's role, arguing Eve out of blind obedience and into independent thinking.

Wollstonecraft is particularly concerned with the education of women, entering a larger discussion concerning education in general during the period. Jean-Jacques Rousseau's *Emile* (1762) had argued that men should have *less* rather than *more* education. Society needed to return to, preserve, and nurture man's natural goodness. Wollstonecraft agreed with much that Rousseau wrote about fresh air, exercise, and natural reason, but she vigorously criticized his differentiation between the educations of *Emile* and *Sophie*. While *Emile* was expected to develop all his faculties, *Sophie* was expected to develop only in such a way as to remain "pleasing" to men. Wollstonecraft was not alone in calling for change—she had reviewed with approval Catharine Macauley Graham's *Letters on Education* (1790), and her treatise was dedicated to Charles-Maurice de Talleyrand-Périgord, who had promoted women's education in a 1791 report to the French National Assembly—but her logic was particularly incisive.

Today Wollstonecraft is celebrated for her early advocacy of women's equality and rationality and for arguing against the degradation and subjugation of women justified by "the arbitrary power of beauty." Her unblinking accounts of existing female defects in mind, body, and character—which sometimes sound misogynist themselves—were in the service of the new forms of freedom and education sought by proponents of Enlightenment reason and revolutionary change.

BIBLIOGRAPHY

Mary Wollstonecraft has been well served by modern editors. Her complete works have been edited in seven volumes by Janet Todd and Marilyn Butler (1989), and *A Vindication of the Rights of Woman* is available in several accessible editions. Her two novels *Mary* and *Maria* (along with *Matilda*, an early novel by Mary Wollstonecraft Shelley, her daughter) have been published in a single volume edited by Janet Todd (1991). An excellent edition of the two *Vindications*, with helpful notes and appendixes, has been prepared by D. L. Macdonald and Kathleen Scherf (1997). Following the first modern scholarly biography, Ralph Wardle's *Mary Wollstonecraft* (1951), numerous others have appeared; particularly noteworthy are Claire Tomalin's *Life and Death of Mary Wollstonecraft* (1974), Gary Kelly's *Revolutionary Feminism: The Mind and Career of Mary Wollstonecraft* (1992), and Janet Todd's *Mary Wollstonecraft: A Revolutionary Life* (2000). Many general studies of Wollstonecraft devote substantial space to the intertwining of her life and work: good basic introductions include Moira Ferguson and Janet Todd's *Mary Wollstonecraft* (1984), Jennifer Lorch's *Mary Wollstonecraft: The Making of a Radical Feminist* (1990), and Harriet Jump's *Mary Wollstonecraft: Writer* (1994). For a good selection of recent essays, see *Feminist Interpretations of Mary Wollstonecraft*, edited by Maria Falco (1996). To contextualize Wollstonecraft within the aesthetics and politics of her day, see Mary Poovey, *The Proper Lady and the Woman Writer: Ideology as Style in the Works of Mary Wollstonecraft, Mary Shelley, and Jane Austen* (1984); the debate about Enlightenment "reason" between Timothy Reiss and Frances Ferguson in *Gender and Theory* (ed. Linda Kauffman, 1989); Syndy Conger, *Mary Wollstonecraft and the Language of Sensibility* (1994); and Claudia Johnson's discussion of politics, gender, and sentimentality in *Equivocal Beings: Politics, Gender, and Sentimentality in the 1790s*

(1995). Susan Gubar's examination of current feminist criticism, *Critical Condition: Feminism at the Turn of the Century* (2000), contains an analysis of Wollstonecraft's own misogyny. Janet Todd's *Mary Wollstonecraft: An Annotated Bibliography* (1976) is helpful for the period before the flowering of contemporary feminist criticism, but it needs updating.

From A Vindication of the Rights of Woman

From Chapter II.

The Prevailing Opinion of a Sexual Character Discussed

To account for, and excuse the tyranny of man, many ingenious arguments have been brought forward to prove, that the two sexes, in the acquirement of virtue, ought to aim at attaining a very different character: or, to speak explicitly, women are not allowed to have sufficient strength of mind to acquire what really deserves the name of virtue. Yet it should seem, allowing them to have souls, that there is but one way appointed by Providence to lead *mankind* to either virtue or happiness.

If then women are not a swarm of ephemeron¹ triflers, why should they be kept in ignorance under the specious name of innocence? Men complain, and with reason, of the follies and caprices of our sex, when they do not keenly satirize our headstrong passions and groveling vices.—Behold, I should answer, the natural effect of ignorance! The mind will ever be unstable that has only prejudices to rest on, and the current will run with destructive fury when there are no barriers to break its force. Women are told from their infancy, and taught by the example of their mothers, that a little knowledge of human weakness, justly termed cunning, softness of temper, *outward* obedience, and a scrupulous attention to a puerile kind of propriety, will obtain for them the protection of man; and should they be beautiful, every thing else is needless, for, at least, twenty years of their lives.

Thus Milton² describes our first frail mother; though when he tells us that women are formed for softness and sweet attractive grace, I cannot comprehend his meaning, unless, in the true Mahometan³ strain, he meant to deprive us of souls, and insinuate that we were beings only designed by sweet attractive grace, and docile blind obedience, to gratify the senses of man when he can no longer soar on the wing of contemplation.

How grossly do they insult us who thus advise us only to render ourselves gentle, domestic brutes! For instance, the winning softness so warmly, and frequently, recommended, that governs by obeying. What childish expressions, and how insignificant is the being—can it be an immortal one? who will condescend to govern by such sinister methods! “Certainly,” says Lord Bacon, “man is of kin to the beasts by his body; and if he be not of kin to God by his spirit, he is a base and ignoble creature!”⁴ Men, indeed, appear to me to act in a very unphilosophical manner when they try to secure the

1. Short-lived (literally, living only one day).

2. John Milton (1608–1674), English poet whose epic poem, *Paradise Lost* (1667), tells the biblical story of the fall of humankind; Wollstonecraft refers to book 4.298.

3. Muslim. Islam was thought to deny that women have souls.

4. Francis Bacon (1561–1626), *Essays or Counsels Civil and Moral* (1625), Essay 16, “Of Atheism” [D. L. Macdonald and Kathleen Scherf’s note].

good conduct of women by attempting to keep them always in a state of childhood. Rousseau⁵ was more consistent when he wished to stop the progress of reason in both sexes, for if men eat of the tree of knowledge, women will come in for a taste;⁶ but, from the imperfect cultivation which their understandings now receive, they only attain a knowledge of evil.

Children, I grant, should be innocent; but when the epithet is applied to men, or women, it is but a civil term for weakness. For if it be allowed that women were destined by Providence to acquire human virtues, and by the exercise of their understandings, that stability of character which is the firmest ground to rest our future hopes upon, they must be permitted to turn to the fountain of light, and not forced to shape their course by the twinkling of a mere satellite.⁷ Milton, I grant, was of a very different opinion; for he only bends to the indefeasible right of beauty, though it would be difficult to render two passages which I now mean to contrast, consistent. But into similar inconsistencies are great men often led by their senses.

"To whom thus Eve with *perfect beauty* adorn'd.
My Author and Disposer, what thou bidst
Unargued I obey; so God ordains;
God is *thy law*, *thou mine*: to know no more
Is Woman's *happiest* knowledge and her *praise*."⁸

These are exactly the arguments that I have used to children; but I have added, your reason is now gaining strength, and, till it arrives at some degree of maturity, you must look up to me for advice—then you ought to *think*, and only rely on God.

Yet in the following lines Milton seems to coincide with me; when he makes Adam thus expostulate with his Maker.

"Hast thou not made me here thy substitute,
And these inferior far beneath me set?
Among *unequals* what society
Can sort, what harmony or true delight?
Which must be mutual, in proportion due
Giv'n and receiv'd; but in *disparity*
The one intense, the other still remiss
Cannot well suit with either, but soon prove
Tedious alike: of *fellowship* I speak
Such as I seek, fit to participate
All rational delight—"⁹

In treating, therefore, of the manners of women, let us, disregarding sensual arguments, trace what we should endeavour to make them in order to co-operate, if the expression be not too bold, with the supreme Being.

By individual education, I mean, for the sense of the word is not precisely defined, such an attention to a child as will slowly sharpen the senses, form

the temper, regulate the passions as they begin to ferment, and set the understanding to work before the body arrives at maturity; so that the man may only have to proceed, not to begin, the important task of learning to think and reason.

To prevent any misconstruction, I must add, that I do not believe that a private education can work the wonders which some sanguine writers have attributed to it. Men and women must be educated, in a great degree, by the opinions and manners of the society they live in. In every age there has been a stream of popular opinion that has carried all before it, and given a family character, as it were, to the century. It may then fairly be inferred, that, till society be differently constituted, much cannot be expected from education. It is, however, sufficient for my present purpose to assert, that, whatever effect circumstances have on the abilities, every being may become virtuous by the exercise of its own reason; for if but one being was created with vicious inclinations, that is positively bad, what can save us from atheism? or if we worship a God, is not that God a devil?

Consequently, the most perfect education, in my opinion, is such an exercise of the understanding as is best calculated to strengthen the body and form the heart. Or, in other words, to enable the individual to attain such habits of virtue as will render it independent. In fact, it is a farce to call any being virtuous whose virtues do not result from the exercise of its own reason. This was Rousseau's opinion respecting men:¹ I extend it to women, and confidently assert that they have been drawn out of their sphere by false refinement, and not by an endeavour to acquire masculine qualities. Still the regal homage which they receive is so intoxicating, that till the manners of the times are changed, and formed on more reasonable principles, it may be impossible to convince them that the illegitimate power, which they obtain, by degrading themselves, is a curse, and that they must return to nature and equality, if they wish to secure the placid satisfaction that unsophisticated affections impart. But for this epoch we must wait—wait, perhaps, till kings and nobles, enlightened by reason, and, preferring the real dignity of man to childish state, throw off their gaudy hereditary trappings: and if then women do not resign the arbitrary power of beauty—they will prove that they have less mind than man.

I may be accused of arrogance; still I must declare what I firmly believe, that all the writers who have written on the subject of female education and manners from Rousseau to Dr. Gregory,² have contributed to render women more artificial, weak characters, than they would otherwise have been; and, consequently, more useless members of society. I might have expressed this conviction in a lower key; but I am afraid it would have been the whine of affection, and not the faithful expression of my feelings, of the clear result, which experience and reflection have led me to draw. When I come to that division of the subject, I shall advert to the passages that I more particularly disapprove of, in the works of the authors I have just alluded to; but it is first necessary to observe, that my objection extends to the whole purport of those books, which tend, in my opinion, to degrade one half of the human species, and render women pleasing at the expence of every solid virtue.

1. Expressed early in *Emile*.

2. John Gregory (1724–1773), *A Father's Legacy to His Daughters* (1774). Wollstonecraft included

substantial excerpts from Gregory in *The Female Reader* ([compiled in] 1789) [Macdonald and Scherf's note].

Though, to reason on Rousseau's ground, if man did attain a degree of perfection of mind when his body arrived at maturity, it might be proper, in order to make a man and his wife *one*, that she should rely entirely on his understanding; and the graceful ivy, clasping the oak that supported it, would form a whole in which strength and beauty would be equally conspicuous. But, alas! husbands, as well as their helpmates, are often only overgrown children; nay, thanks to early debauchery, scarcely men in their outward form—and if the blind lead the blind, one need not come from heaven³ to tell us the consequence.

Many are the causes that, in the present corrupt state of society, contribute to enslave women by cramping their understandings and sharpening their senses. One, perhaps, that silently does more mischief than all the rest, is their disregard of order.

To do every thing in an orderly manner, is a most important precept, which women, who, generally speaking, receive only a disorderly kind of education, seldom attend to with that degree of exactness that men, who from their infancy are broken into method, observe. This negligent kind of guess-work, for what other epithet can be used to point out the random exertions of a sort of instinctive common sense, never brought to the test of reason? prevents their generalizing matters of fact—so they do to-day, what they did yesterday, merely because they did it yesterday.

This contempt of the understanding in early life has more baneful consequences than is commonly supposed; for the little knowledge which women of strong minds attain, is, from various circumstances, of a more desultory kind than the knowledge of men, and it is acquired more by sheer observations on real life, than from comparing what has been individually observed with the results of experience generalized by speculation. Led by their dependent situation and domestic employments more into society, what they learn is rather by snatches; and as learning is with them, in general, only a secondary thing, they do not pursue any one branch with that persevering ardour necessary to give vigour to the faculties, and clearness to the judgment. In the present state of society, a little learning is required to support the character of a gentleman; and boys are obliged to submit to a few years of discipline. But in the education of women, the cultivation of the understanding is always subordinate to the acquirement of some corporeal accomplishment; even while enervated by confinement and false notions of modesty, the body is prevented from attaining that grace and beauty which relaxed half-formed limbs never exhibit. Besides, in youth their faculties are not brought forward by emulation; and having no serious scientific study, if they have natural sagacity it is turned too soon on life and manners. They dwell on effects, and modifications, without tracing them back to causes; and complicated rules to adjust behaviour are a weak substitute for simple principles.

As a proof that education gives this appearance of weakness to females, we may instance the example of military men, who are, like them, sent into the world before their minds have been stored with knowledge or fortified by principles. The consequences are similar; soldiers acquire a little super-

3. That is, be Jesus; in Matthew 15.14 he declares that "if the blind lead the blind, both shall fall into the ditch."

ficial knowledge, snatched from the muddy current of conversation, and, from continually mixing with society, they gain, what is termed a knowledge of the world; and this acquaintance with manners and customs has frequently been confounded with a knowledge of the human heart. But can the crude fruit of casual observation, never brought to the test of judgment, formed by comparing speculation and experience, deserve such a distinction? Soldiers, as well as women, practise the minor virtues with punctilious politeness. Where is then the sexual difference, when the education has been the same? All the difference that I can discern, arises from the superior advantage of liberty, which enables the former to see more of life.

It is wandering from my present subject, perhaps, to make a political remark; but, as it was produced naturally by the train of my reflections, I shall not pass it silently over.

Standing armies can never consist of resolute, robust men; they may be well disciplined machines, but they will seldom contain men under the influence of strong passions, or with very vigorous faculties. And as for any depth of understanding, I will venture to affirm, that it is as rarely to be found in the army as amongst women; and the cause, I maintain, is the same. It may be further observed, that officers are also particularly attentive to their persons, fond of dancing, crowded rooms, adventures, and ridicule.⁴ Like the *fair sex*, the business of their lives is gallantry.—They were taught to please, and they only live to please. Yet they do not lose their rank in the distinction of sexes, for they are still reckoned superior to women, though in what their superiority consists, beyond what I have just mentioned, it is difficult to discover.

The great misfortune is this, that they both acquire manners before morals, and a knowledge of life before they have, from reflection, any acquaintance with the grand ideal outline of human nature. The consequence is natural; satisfied with common nature, they become a prey to prejudices, and taking all their opinions on credit, they blindly submit to authority. So that, if they have any sense, it is a kind of instinctive glance, that catches proportions, and decides with respect to manners; but fails when arguments are to be pursued below the surface, or opinions analyzed.

May not the same remark be applied to women? Nay, the argument may be carried still further, for they are both thrown out of a useful station by the unnatural distinctions established in civilized life. Riches and hereditary honours have made cyphers of women to give consequence to the numerical figure;⁵ and idleness has produced a mixture of gallantry and despotism into society, which leads the very men who are the slaves of their mistresses to tyrannize over their sisters, wives, and daughters. This is only keeping them in rank and file, it is true. Strengthen the female mind by enlarging it, and there will be an end to blind obedience; but, as blind obedience is ever sought for by power, tyrants and sensualists are in the right when they endeavour to keep women in the dark, because the former only want slaves, and the latter a play-thing. The sensualist, indeed, has been the most dangerous of

4. Why should women be censured with petulant acrimony, because they seem to have a passion for a scarlet coat? Has not education placed them more on a level with soldiers than any other class of men? [Wollstonecraft's note]. "Ridicule"; that

which is ridiculous.

5. That is, women are merely zeroes ("ciphers") to add to the family name, inflating its value but being nothing in themselves.

tyrants, and women have been duped by their lovers, as princes by their ministers, whilst dreaming that they reigned over them.

I now principally allude to Rousseau, for his character of *Sophia* is, undoubtedly, a captivating one, though it appears to me grossly unnatural; however it is not the superstructure, but the foundation of her character, the principles on which her education was built, that I mean to attack; nay, warmly as I admire the genius of that able writer, whose opinions I shall often have occasion to cite, indignation always takes place of admiration, and the rigid frown of insulted virtue effaces the smile of complacency, which his eloquent periods⁶ are wont to raise, when I read his voluptuous reveries. Is this the man, who, in his ardour for virtue, would banish all the soft arts of peace, and almost carry us back to Spartan discipline? Is this the man who delights to paint the useful struggles of passion, the triumphs of good dispositions, and the heroic flights which carry the glowing soul out of itself?—How are these mighty sentiments lowered when he describes the pretty foot and enticing airs of his little favourite! But, for the present, I wave⁷ the subject, and, instead of severely reprehending the transient effusions of overweening sensibility, I shall only observe, that whoever has cast a benevolent eye on society, must often have been gratified by the sight of humble mutual love, not dignified by sentiment, or strengthened by a union in intellectual pursuits. The domestic trifles of the day have afforded matters for cheerful converse, and innocent caresses have softened toils which did not require great exercise of mind or stretch of thought: yet, had not the sight of this moderate felicity excited more tenderness than respect? An emotion similar to what we feel when children are playing, or animals sporting,⁸ whilst the contemplation of the noble struggles of suffering merit has raised admiration, and carried our thoughts to that world where sensation will give place to reason.

Women are, therefore, to be considered either as moral beings, or so weak that they must be entirely subjected to the superior faculties of men.

Let us examine this question. Rousseau declares that a woman should never, for a moment, feel herself independent, that she should be governed by fear to exercise her *natural* cunning, and made a coquetish slave in order to render her a more alluring object of desire, a *sweeter* companion to man, whenever he chooses to relax himself. He carries the arguments, which he pretends to draw from the indications of nature, still further, and insinuates that truth and fortitude, the corner stones of all human virtue, should be cultivated with certain restrictions, because, with respect to the female character, obedience is the grand lesson which ought to be impressed with unrelenting rigour.

What nonsense! when will a great man arise with sufficient strength of mind to puff away the fumes which pride and sensuality have thus spread over the subject! If women are by nature inferior to men, their virtues must

6. Sentences.

7. Waive.

8. Similar feelings has Milton's pleasing picture of paradisaical happiness ever raised in my mind; yet, instead of envying the lovely pair, I have, with conscious dignity, or Satanic pride, turned to hell for sublimer objects. In the same style, when viewing some noble monument of human art, I have traced

the emanation of the Deity in the order I admired, till, descending from that giddy height, I have caught myself contemplating the grandest of all human sights;—for fancy quickly placed, in some solitary recess, an outcast of fortune, rising superior to passion and discontent [Wollstonecraft's note].

be the same in quality, if not in degree, or virtue is a relative idea; consequently, their conduct should be founded on the same principles, and have the same aim.⁹

Connected with man as daughters, wives, and mothers, their moral character may be estimated by their manner of fulfilling those simple duties; but the end, the grand end of their exertions should be to unfold their own faculties and acquire the dignity of conscious virtue. They may try to render their road pleasant; but ought never to forget, in common with man, that life yields not the felicity which can satisfy an immortal soul. I do not mean to insinuate, that either sex should be so lost in abstract reflections or distant views, as to forget the affections and duties that lie before them, and are, in truth, the means appointed to produce the fruit of life; on the contrary, I would warmly recommend them, even while I assert, that they afford most satisfaction when they are considered in their true, sober light.

Probably the prevailing opinion, that woman was created for man, may have taken its rise from Moses's poetical story;¹ yet, as very few, it is presumed, who have bestowed any serious thought on the subject, ever supposed that Eve was, literally speaking, one of Adam's ribs, the deduction must be allowed to fall to the ground; or, only be so far admitted as it proves that man, from the remotest antiquity, found it convenient to exert his strength to subjugate his companion, and his invention to shew that she ought to have her neck bent under the yoke, because the whole creation was only created for his convenience or pleasure.

Let it not be concluded that I wish to invert the order of things; I have already granted, that, from the constitution of their bodies, men seem to be designed by Providence to attain a greater degree of virtue. I speak collectively of the whole sex; but I see not the shadow of a reason to conclude that their virtues should differ in respect to their nature. In fact, how can they, if virtue has only one eternal standard? I must therefore, if I reason consequentially, as strenuously maintain that they have the same simple direction, as that there is a God.

It follows then that cunning should not be opposed to wisdom, little cares to great exertions, or insipid softness, varnished over with the name of gentleness, to that fortitude which grand views alone can inspire.

I shall be told that woman would then lose many of her peculiar graces, and the opinion of a well known poet might be quoted to refute my unqualified assertion. For Pope has said, in the name of the whole male sex,

"Yet ne'er so sure our passion to create,
As when she touch'd the brink of all we hate."²

In what light this sally places men and women, I shall leave to the judicious to determine; meanwhile I shall content myself with observing, that I cannot discover why, unless they are mortal,³ females should always be degraded by being made subservient to love or lust.

To speak disrespectfully of love is, I know, high treason against sentiment

9. Rousseau argues that men's and women's virtues are essentially different [Macdonald and Scherf's note].

1. Moses was traditionally credited with writing the first 5 books of the Bible; see Genesis 2.18-25.

2. ALEXANDER POPE (1688-1744), "Epistle II, To a Lady: Of the Characters of Women" (1735), 51-52.

3. That is, unless they are not as capable as men of immortal life.

and fine feelings; but I wish to speak the simple language of truth, and rather to address the head than the heart. To endeavour to reason love out of the world, would be to out Quixote⁴ Cervantes, and equally offend against common sense; but an endeavour to restrain this tumultuous passion, and to prove that it should not be allowed to dethrone superior powers, or to usurp the sceptre which the understanding should ever coolly wield, appears less wild.

Youth is the season for love in both sexes; but in those days of thoughtless enjoyment provision should be made for the more important years of life, when reflection takes place of sensation. But Rousseau, and most of the male writers who have followed his steps, have warmly inculcated that the whole tendency of female education ought to be directed to one point:—to render them pleasing.

Let me reason with the supporters of this opinion who have any knowledge of human nature, do they imagine that marriage can eradicate the habitude of life? The woman who has only been taught to please will soon find that her charms are oblique sunbeams, and that they cannot have much effect on her husband's heart when they are seen every day, when the summer is passed and gone. Will she then have sufficient native energy to look into herself for comfort, and cultivate her dormant faculties? or, is it not more rational to expect that she will try to please other men; and, in the emotions raised by the expectation of new conquests, endeavour to forget the mortification her love or pride has received? When the husband ceases to be a lover—and the time will inevitably come, her desire of pleasing will then grow languid, or become a spring of bitterness; and love, perhaps, the most evanescent of all passions, gives place to jealousy or vanity.

I now speak of women who are restrained by principle or prejudice; such women, though they would shrink from an intrigue with real abhorrence, yet, nevertheless, wish to be convinced by the homage of gallantry that they are cruelly neglected by their husbands; or, days and weeks are spent in dreaming of the happiness enjoyed by congenial souls till their health is undermined and their spirits broken by discontent. How then can the great art of pleasing be such a necessary study? it is only useful to a mistress; the chaste wife, and serious mother, should only consider her power to please as the polish of her virtues, and the affection of her husband as one of the comforts that render her task less difficult and her life happier.—But, whether she be loved or neglected, her first wish should be to make herself respectable, and not to rely for all her happiness on a being subject to like infirmities with herself.

* * *

4. That is, to be more foolishly impractical than Don Quixote, the overly idealistic title character of the novel (1605, 1615) by Miguel de Cervantes (1547–1616).

GERMAINE NECKER DE STAËL

1766-1817

Mme de Staël is one of the few women writers without whom the history of French literature cannot be told. Bridging the gap between the old regime and the Revolution, between national and comparative literatures, and between classical aesthetics and *littérature engagée*, her writings were an advance justification of both Romanticism and realism in France. Celebrated for her conversation, condemned for her sexuality, and alternately lauded and vilified for her politics, she embodied the kind of freedom that revolutionary theorists seldom imagined for women. She was a child of the Enlightenment and never abandoned the principles of self-realization it entailed. "The only reason to fear women's wit," she wrote in 1800, "would be some sort of scrupulous anxiety about their happiness. And indeed, by developing their rational minds one might well be enlightening them as to the misfortunes often connected with their fate; but the same reasoning would apply to the effect of the enlightenment on the happiness of the human race in general, a question which seems to me to have been decided once and for all."

Germaine de Staël was born in Paris to Swiss Protestant parents. Her father, Jacques Necker, had amassed a fortune in banking, thanks to French laws that prevented most Catholics from lending money at high interest. Her mother, Suzanne (née Curchod), maintained a celebrated salon. Germaine seems not to have inherited her mother's great beauty, but her childhood was spent in the company of famous Enlightenment figures such as Edward Gibbon, chronicler of the fall of the Roman Empire and former suitor of Suzanne Curchod; Denis Diderot and Jean d'Alembert, authors of the *Encyclopédie*; and many others. Her father, appointed to act as Louis XVI's finance minister in 1777, was lionized by both the king, whose treasury he restored, and the people, whom he fed. Indeed, it was his dismissal by the king in 1789 that led to the storming of the Bastille.

At age nineteen, Germaine Necker was one of the wealthiest heiresses in Europe. Her parents, seeking a son-in-law who was not Catholic, briefly considered William Pitt the Younger, but she was unwilling to move to England. In 1786 she settled on a young Swedish suitor very much in favor with the French and the Swedish courts. Erik Magnus de Staël-Holstein, a penniless nobleman, had had his eye on Germaine's fortune since she was twelve. King Gustavus III made him Swedish ambassador to France for life (in a complicated bargain in which France gave Sweden the Caribbean Island of St. Barthélemy), and Germaine was assured she would never have to live in Sweden.

Germaine de Staël supplemented this marriage of convenience through passionate involvements with some of the most interesting men of the century. Her lovers were numerous; among the best known were Charles-Maurice de Talleyrand, then bishop of Autun; Count Louis de Narbonne, whose ambivalence during the early revolutionary period led him to support both Lafayette and the royal family; Benjamin Constant, whose brilliant conversation matched her own and who fictionalized their affair in his novel *Adolphe* (1816); and Adolphe Ribbing, who masterminded the assassination of the same Swedish king who had brought about her marriage. August Wilhelm von Schlegel was central to her intellectual life and preceptor to her children (she gave birth to five, and only the first—who died in infancy—was conceived within marriage). Her last love was a younger man and a commoner, John Rocca, with whom at forty-five she bore a retarded son and whom she secretly married before she died (Erik having died in 1802). On reading Mme de Staël's first novel, *Delphine* (1802), and recognizing the autobiographical elements in it, Talleyrand quipped: "Mme de Staël has disguised both herself and me as women in her novel." De Staël's mother, influenced by Jean-Jacques Rousseau's theories of education in his *Emile* (1762) but

switching the gender roles presented in that work, had brought her daughter up with the independence of an Emile, not the compliance of a Sophie.

Although she wanted nothing more than to live in Paris, Mme de Staël spent most of her adult life elsewhere—not just in France but also in England, Germany, Italy, Sweden, Russia, Austria, and, most important, Switzerland, where her parents, in and out of favor in France, had bought the château of Coppet in 1784. Her exile by Napoleon in 1803 to “forty leagues from Paris” was only the most official of her banishments by political forces on the left and on the right. Her defense of a constitutional monarchy was too royalist for the revolutionary Jacobins, and her defense of a republic was too revolutionary for the aristocratic *émigrés*. A moderate in favor of both liberty and property, she offended everyone. The authors of the French constitution frequented her Paris salon, but she wrote in defense of Queen Marie Antoinette. Napoleon, neither constitutional nor republican, was a worthy opponent for fourteen years. He not only exiled her from Paris but also planted spies in her entourage, had her correspondence read, took offense at all her writings, and stopped publication of her *On Germany* in 1810. Yet her opposition to Napoleon did not prevent a certain identification: in his final days, she informed him of a plot on his life. In 1815, when Napoleon was at last defeated, she hoped for a constitutional monarchy but rallied to the support of the restoration of Louis XVIII; she was reimbursed, in the process, for the two million francs her father had lent the royal treasury.

Wherever she lived, Mme de Staël configured a brilliant salon around her. Her passion for intellectual conversation both seduced and exhausted her guests, whom she received, in the manner of the old regime, from the moment she awoke to the moment she retired (a day whose length grew as her insomnia worsened). Conversations within the “Groupe de Coppet” (Coppet Group) revolved around liberal opposition to Napoleon and around Romantic ideals of literature and human progress. Leading figures such as Johann Wolfgang von Goethe, Wilhelm von Humboldt, Lord Byron, Simonde de Sismondi, and Juliette Récamier fueled Mme de Staël’s changing sense of the possibilities. Her château at Coppet has remained a gathering place for scholars and writers; colloquia on her work regularly take place there, where she was laid to rest next to her parents.

De Staël’s early “*Essay on Fictions*,” published in 1795 (our first selection), makes the case, in her characteristic epigrammatic style, for what was eventually to become the nineteenth-century realist novel. Novels, she claims, should broaden their range to include every human predicament, not simply romantic love. Novels can give the creative intellect the space to explore every intractable problem facing postrevolutionary man and woman. Fictions in which “nothing is true and everything is likely” will challenge novel writers to represent what they take to be the real. Unlike philosophical allegories, which subordinate fiction to ideas, and historical fictions, which subordinate fiction to facts, the novel can re-create the world as it is and, in the process, change it. Useless if merely accurate or merely imaginary, literature has the power to move, to awaken, to inform, to distract, and to console. Far from being outside of history, the novel can come to grips with everything that *makes* history.

On Literature Considered in Its Relationship to Social Institutions (1800), from which our second selection is taken, is a fitting monument to the turn from the eighteenth to the nineteenth century. Deeply connected to the fate of the French Revolution, which had just passed through the Reign of Terror (during which Mme de Staël lost many friends and was almost executed herself), *On Literature* describes history as an ongoing process that, whatever its setbacks, ultimately heads toward human progress and perfectibility. As a domain in which the mind can stretch itself to the utmost, literature is an intimate part of the process. When, in later conversation, Mme de Staël was introduced to Goethe’s views on art for art’s sake, she found this Weimar aesthetic contrary to all she hoped for from literature, but so dialectical was her mind that she loved to find an idea she could resist. As Goethe later reported, “My obstinate contrariness often drove her to despair, but it was then that she was

at her most amiable and that she displayed her mental and verbal agility most brilliantly."

Romanticism in France is rooted in the writings of Rousseau, another Swiss, but by all accounts the decisive turn was taken when Mme de Staël introduced German Romanticism to the French. In her book *On Germany* (1810), she offered Europe and particularly France an alternative to the empire of Napoleon with his taste for classicism and absolutism. Her division between northern literature (melancholy, medieval, Christian, emotional, misty—Romantic) and southern literature (sunny, rational, sensual, pagan—classical) was both cosmopolitan and nationalist in an age when modern nationalism was just taking shape. All of the categories were problematic, but despite the rhetorical force of Mme de Staël's oppositions, their thrust was less essential ("the German soul," "the French mind") than dialectical. Within the French tradition, the seeds of Romanticism already existed: all that was needed was to make them grow. And German thinkers would provide the nutrients.

In addition to her theoretical and political writings, de Staël is famous for two novels—*Delphine* (1802) and *Corinne, or Italy* (1807). The latter paints a portrait of a celebrated, independent woman artist; her art is deepened by her love for an Englishman who, initially attracted by her talent, eventually abandons her for a less complex partner. Corinne, who is half English and half Italian, combines the genius of the Mediterranean with the sensitivity of the North in her poetry, but she suffers, in the end, from culture's inability to incorporate superior and complex women. Mme de Staël had much to say about the plight of the woman intellectual, whether living in a monarchy or in a republic, a plight that is nowhere more cogently analyzed than in our selection from *On Literature*. The category of "exceptional woman," a term invented by French culture both to counteract and to appropriate women like Mme de Staël, continued to function well into the twentieth century, as SIMONE DE BEAUVOIR was to find out. By separating the exception from the condition of women in general, society recognizes and benefits from female talent without having to change its view—often shared by the exceptional woman herself—of women as such.

BIBLIOGRAPHY

In addition to the literary and cultural works mentioned above, Mme de Staël's writings include many stories and plays, a tribute to Rousseau (*Letters on Rousseau*, 1788), *Reflections on the Trial of the Queen* (1793), *Reflections on Peace* (1794), *The Influence of the Passions* (1796), *Reflections on Suicide* (1813), and "The Spirit of Translation" (1816). Posthumously published were the *Considerations on the Principal Events of the French Revolution* (1818), *Ten Years of Exile* (1820), the *Complete Works* (1820), and many volumes of correspondence, some of which is still being discovered. Mme de Staël's work is not all easy to obtain in English translation. A wide range of selections can be found in *Madame de Staël on Politics, Literature, and National Character*, edited and translated by Monroe Berger (1964), and in *An Extraordinary Woman*, edited and translated by Vivian Folkenflik (1987). The biography by J. Christopher Herold, *Mistress to an Age* (1958), is, while somewhat dated, informative and well written.

In France there is a very active de Staël industry, which publishes a journal, *Cahiers staëliens* (*Staël Notebooks*), and holds many conferences. The most important figure in this enterprise is Simone Ballayé, whose work has not been much translated into English, but who has contributed an essay to the excellent anthology *Germaine de Staël: Crossing the Borders*, edited by Madelyn Gutwirth, Ariele Goldberger, and Karyna Szmurlo (1991). Madelyn Gutwirth's own *Madame de Staël, Novelist: The Emergence of the Artist as Woman* (1978) is also good, especially in its account of the shift in de Staël studies opened up by feminist criticism. Two fine general studies of Mme de Staël's life and works are Charlotte Hogsett, *The Literary Existence of Germaine de Staël* (1987), and Gretchen Rous Besser, *Germaine de Staël Revisited*

(1994). For an analysis of the place of *On Germany* in the rise of Romanticism, see John Claiborne Isbell, *The Birth of European Romanticism: Truth and Propaganda in Staël's "De l'Allemagne," 1810–1813* (1994). And for a study of the complexity of gender roles and models in Rousseau and de Staël, see Lori Jo Marso's excellent *(Un)Manly Citizens* (1999). There is an extensive annotated bibliography of criticism on de Staël in French by Pierre H. Dubé, *Bibliographie de la Critique sur Madame de Staël, 1789–1994* (1998).

From Essay on Fictions¹

Introduction

Man's most valuable faculty is his imagination. Human life seems so little designed for happiness that we need the help of a few creations, a few images, a lucky choice of memories to muster some sparse pleasure on this earth and struggle against the pain of all our destinies—not by philosophical force, but by the more efficient force of distraction. The dangers of imagination have been discussed a good deal, but there is no point in looking up what impotent mediocrity and strict reason have said on this topic over and over again. The human race is not about to give up being stimulated, and anyone who has the gift of appealing to people's emotions is even less likely to give up the success promised by such talent. The number of necessary and evident truths is limited; it will never be enough for the human mind or heart. The highest honor may well go to those who discover such truths, but the authors of books producing sweet emotions or illusions have also done useful work for humanity. Metaphysical precision cannot be applied to man's affections and remain compatible with his nature. Beginnings are all we have on this earth—there is no limit. Virtue is actual and real, but happiness floats in space; anyone who tries to examine happiness inappropriately will destroy it, as we dissolve the brilliant images of the mist if we walk straight through them. And yet the advantage of fictions is not the pleasure they bring. If fictions please nothing but the eye, they do nothing but amuse; but if they touch our hearts, they can have a great influence on all our moral ideas. This talent may be the most powerful way there is of controlling behavior and enlightening the mind. Man has only two distinct faculties: reason and imagination. All the others, even feeling, are simply results or combinations of these two. The realm of fiction, like that of imagination, is therefore vast. Fictions do not find obstacles in passions: they make use of them. Philosophy may be the invisible power in control of fictions, but if she is the first to show herself, she will destroy all their magic.

When I talk about fictions, I will therefore be considering them from two perspectives of content and charm: this kind of writing may contain pleasure without useful purpose, but never vice versa. Fictions are meant to attract us; the more moral or philosophical the result one is trying to achieve, the more they have to be decked out with things to move us, leading us to the goal without advance warning. In mythological fictions I will consider only the poet's talent; these fictions could well be examined in the light of their

1. Translated by Vivian Folkenflik.

religious influence, but such a point of view is absolutely foreign to my subject. I will be discussing the writings of the ancients according to the impression they create in our times, so my concern must be with their literary talent rather than their religious beliefs.

Fictions can be divided into three groups: (1) marvelous and allegorical fictions, (2) historical fictions, (3) fictions in which everything is both invented and imitated, where nothing is true and everything is likely.²

This topic should really be discussed in an extensive treatise including most existing literary works and involving thoughts on almost every topic, since the complete exposition of any one idea is connected to the whole chain of ideas. But I am only trying to prove that the most useful kind of fiction will be novels taking life as it is, with delicacy, eloquence, depth, and morality, and I have excluded everything irrelevant to that goal from this essay.

III

The third and last part of this essay must deal with the usefulness of natural fictions, as I call them, where everything is both invented and imitated, so that nothing is true but everything looks true to life. Tragedies with completely imaginary subjects will not be included here; they portray a more lofty nature, an extraordinary situation at an extraordinary level. The verisimilitude of such plays depends on events that are extremely rare, and morally applicable to very few people. Comedies and other dramas are in the theater what novels are to other fiction: their plots are taken from private life and natural circumstances. However, the conventions of the theater deprive us of the commentary which gives examples of reflections their individuality. Dramas are allowed to choose their characters among people other than kings and heroes, but they can show only broadly defined situations, because there is no time for nuance. And life is not concentrated like that—does not happen in contrasts—is not really theatrical in the way plays have to be written. Dramatic art has different effects, advantages, and means which might well be discussed separately, but I think only the modern novel is capable of achieving the constant, accurate usefulness we can get from the picture of our ordinary, habitual feelings. People usually make a separate case of what they call philosophical novels; all novels should be philosophical, as they should all have a moral goal. Perhaps, however, we are not guided so inevitably toward this moral goal when all the episodes narrated are focused on one principal idea, exempting the author from all probability in the way one situation follows another. Each chapter then becomes a kind of allegory—its events are only there to illustrate the maxim at the end. The novels *Candide*, *Zadig*, and *Memnon*,³ while delightful in other respects, would be much more useful if they were not marvelous, if they offered an example instead of an emblem and if, as I say, the whole story did not have to relate to the same goal. Such novels are at the same disadvantage as teachers: children never believe them, because they make everything that happens relate to the lesson at hand. Children unconsciously know already

2. That is, realist novels, discussed under heading III.

3. Tales by Voltaire: *Zadig* was published in 1747;

Memnon in 1749, *Candide* in 1759 [translator's note].

that there is less regularity than that in real life. Events are also invented in novels like Richardson's and Fielding's,⁴ where the author is trying to keep close to life by following with great accuracy the stages, developments, and inconsistencies of human history, and the way the results of experience always come down to the morality of actions and the advantages of virtue, nonetheless. In these novels, however, the feelings are so natural that the reader often believes he is being spoken to directly, with no artifice but the tactfulness of changing the names.

The art of novel-writing does not have the reputation it deserves because of a throng of bad writers overwhelming us with their colorless productions; in this genre, perfection may require the greatest genius, but mediocrity is well within everyone's grasp. This infinite number of colorless novels has almost used up the passion portrayed in them; one is terrified of finding the slightest resemblance in one's own life to the situations they describe. It has taken the very greatest masters to bring this genre back again, despite the writers who have degraded it. And others have dragged it even lower by including disgusting scenes of vice. Despite the fact that fiction's main advantage is to gather around man everything in nature that might be useful to him as a lesson or model, some writers supposed we might have some kind of use for these detestable paintings of evil habits. As if such fictions could ever leave a heart that rejected them in the same state of purity as a heart that had never known them! The novel as we conceive of it, however—as we have a few examples of it—is one of the most beautiful creations of the human mind, and one of the most influential on individual morality, which is what ultimately determines the morality of the public.

There is a very good reason why public opinion does not have enough respect for the writing of good novels, however. This is because novels are considered to be exclusively devoted to the portrayal of love—the most violent, universal, and true passion of them all, but also the passion which inspires no interest at any other time of life than youth, since youth is all it influences. We may well believe that all deep and tender feelings belong to the nature of love, and that hearts which have neither known nor pardoned love cannot feel enthusiasm in friendship, devotion in misery, worship of one's parents, passion for one's children. One can feel respect for one's duties, but no delight or self-surrender in their accomplishment, if one has not loved with all the strength of one's soul, ceasing to be one's self to live entirely in another. The destiny of women and the happiness of men who are not called upon to govern empires often depend for the rest of their lives on the role they gave to the influence of love in their youth. Nevertheless, when people reach a certain age, they completely forget the impression love made on them. Their character changes; they devote themselves to other goals, other passions; and these new interests are what we should extend the subjects of novels to include. A new career would then be open to authors who have the talent to paint all the emotions of the human heart, and are able to use their intimate knowledge of it to involve us. Ambition, pride, greed, vanity could be the primary topic of novels which would have situations as varied as those arising from love, and fresher plots. Will people object that such a tableau of men's passions exists in history, and that we should

4. Samuel Richardson (1689–1761) and Henry Fielding (1707–1754), English novelists.

look for it there? History does not reach the lives of private men, feelings and characters that do not result in public events. History does not act on you with sustained moral interest. Reality often fails to make an effect; and the commentary needed to make a lasting impression would stop the essential quick narrative pace, and give dramatic form to a work that should have a very different sort of merit. And the moral of history can never be completely clear. This may be because one cannot always show with any degree of certainty the inner feelings that punish the wicked in their prosperity and reward the virtuous in their misery, or perhaps because man's destiny is not completed in this life. Practical morality is founded on the advantages of virtue, but the reading of history does not always put it in the limelight.

Great historians (especially Tacitus)⁵ do try to attach some moral to every event they relate, making us envy the dying Germanicus, and hate Tiberius at the pinnacle of his grandeur. But they can still portray only those feelings certified by facts. What stays with us from a reading of history is more likely to be the influence of talent, the brilliance of glory, the advantages of power, than the quiet, subtle, gentle morality which is the basis of individual happiness and the relationship between individuals. Everyone would think me ridiculous if I said I set no value on history, and that I preferred fictions—as if fictions did not arise from experience, and as if the delicate nuances shown in novels did not come from the philosophical results and mother-ideas presented by the great panorama of public events! However, the morality of history only exists in bulk. History gives constant results by means of the recurrence of a certain number of chances: its lessons apply to nations, not individuals. Its examples always fit nations, because if one considers them in a general way they are invariable; but it never explains the exceptions. These exceptions can seduce each man as an individual; the exceptional circumstances consecrated by history leave vast empty spaces into which the miseries and wrongs that make up most private destinies could easily fall. On the other hand, novels can paint characters and feeling with such force and detail that they make more of an impression of hatred for vice and love for virtue than any other kind of reading. The morality of novels belongs more to the development of the internal emotions of the soul than to the events they relate. We do not draw a useful lesson from whatever arbitrary circumstance the author invents as punishment for the crime; what leaves its indelible mark on us comes from the truthful rendition of the scenes, the gradual process or sequence of wrongdoing, the enthusiasm for sacrifices, the sympathy for misfortune. Everything is so true to life in such novels that we have no trouble persuading ourselves that everything could happen just this way—not past history, but often, it seems, the history of the future.

Novels give a false idea of mankind, it has been said. This is true of bad novels, as it is true of paintings which imitate nature badly. When novels are good, however, nothing gives such an intimate knowledge of the human heart as these portrayals of the various circumstances of private life and the impressions they inspire. Nothing gives so much play to reflection, which

5. Roman historian (ca. 55–ca. 120 C.E.). In *Annales* 2, Tacitus recounts the strains between Tiberius (42 B.C.E.–37 C.E.; emperor, 14 C.E.–37 C.E.) and his nephew Germanicus (15 B.C.E.–19

C.E.), whom he adopted but whose popularity he perceived as a threat; given command of the eastern provinces, Germanicus died (probably poisoned) in Syria.

finds much more to discover in details than in generalities. Memoirs would be able to do this if their only subjects were not, as in history, famous men and public events. If most men had the wit and good faith to give a truthful, clear account of what they had experienced in the course of their lives, novels would be useless—but even these sincere narratives would not have all the advantages of novels. We would still have to add a kind of dramatic effect to the truth; not deforming it, but condensing it to set it off. This is the art of the painter: far from distorting objects, it represents them in a way that makes them more immediately apprehended. Nature sometimes shows us things all on the same level, eliminating any contrasts; if we copy her too slavishly we become incapable of portraying her. The most truthful account is always an imitative truth: as a tableau, it demands a harmony of its own. However remarkable a true story may be for its nuances, feelings, and characters, it cannot interest us without the talent necessary for the composition of fiction. But despite our admiration for the genius that lets us penetrate the recesses of the human heart, it is impossible to bear all those minute details with which even the most famous novels are burdened. The author thinks they add to the picture's verisimilitude, blind to the fact that anything that slows down the interest destroys the only truth fiction has: the impression it produces. To put everything that happens in a room onstage is to destroy theatrical illusion completely. Novels have dramatic conventions also: the only thing necessary in an invention is what adds to the effect one is creating. If a glance, a movement, or an unnoticed circumstance helps paint a character or develop our understanding of a feeling, the simpler the means, the greater the merit in catching it—but a scrupulously detailed account of an ordinary event diminishes verisimilitude instead of increasing it. Thrown back on a positive notion of what is true by the kind of details that belong only to truth, you soon break out of the illusion, weary of being unable to find either the instruction of history or the interest of a novel.

The greatest power of fiction is its talent to touch us; almost all moral truths can be made tangible if they are shown in action. Virtue has so much influence on human happiness or misery that one can make most of life's situations depend on it. Some severe philosophers condemn all emotions, wanting moral authority to rule by a simple statement of moral duty. Nothing is less suited to human nature. Virtue must be brought to life if ~~she~~ it is to fight the passions with any chance of winning; a sort of exaltation must be aroused for us to find any charm in sacrifice; misfortune must be embellished for us to prefer it to the great charm of guilty enticement; and the touching fictions which incite the soul to generous feelings make it unconsciously engage itself in a promise that it would be ashamed to retract in similar circumstances. But the more real power there is in fiction's talent for touching us, the more important it becomes to widen its influence to the passions of all ages, and the duties of all situations. The primary subject of novels is love, and characters who have nothing to do with it are present only as accessories. It would be possible to find a host of new subjects if one followed a different plan. *Tom Jones*⁶ has the most general moral of any novel: love appears in it as only one of many means of showing the philosophical result.

6. *The History of Tom Jones, a Foundling* (1749), a novel by Fielding.

The real aim of *Tom Jones* is to show the uncertainty of judgments founded on appearances, proving the superiority of natural and what we may call involuntary virtues over reputations based on mere respect for external etiquette. And this is one of the most useful, most deservedly famous of all novels. *Caleb Williams*, by Mr. Godwin,⁷ is a recent novel which, despite some tedious passages and oversights, seems to give a good idea of this inexhaustible genre. Love plays no part in this fiction; the only motives for the action are the hero's unbridled passion for the world's respect and Caleb's overpowering curiosity, leading him to discover whether or not Falkland deserves the esteem he enjoys. We read this story with all the absorption inspired by romantic interest and the reflection commanded by the most philosophical tableau.

Some successful fictions do give pictures of life unrelated to love: several *Moral Tales* of Marmontel, a few chapters of *Sentimental Journey*, various anecdotes from the *Spectator*⁸ and other books on morality, some pieces taken from German literature, whose superiority is growing every day. There is still, however, no new Richardson devoting himself to paint men's other passions in a novel completely exploring the progress and consequences of these passions. The success of such a work would come from the truth of its characters, the force of its contrasts and the energy of its situations, rather than from that feeling which is so easy to paint, so quick to arouse interest, pleasing women by what it makes them remember even if it cannot attract them by the greatness or novelty of the scenes it presents. What beautiful things we would find in the Lovelace⁹ of ambition! What philosophical developments, if we were eager to explain and analyze all the passions, as novels have already done for love! Let no one object that books on morality are enough to teach us a knowledge of our duties; such books cannot possibly go into all the nuances of delicacy, or detail the myriad resources of the passions. We can glean a morality purer and higher from novels than from any didactic work on virtue; didactic works are so dry that they have to be too indulgent. Maxims have to be generally applicable, so they never achieve that heroic delicacy we may offer as a model but cannot reasonably impose as a duty. Where is the moralist who could say: "If your whole family wants you to marry a detestable man, and you are prompted by their persecution to give a few signs of the most innocent interest to the man you find attractive, you are going to bring death and dishonor upon yourself?" This, however, is the plot of *Clarissa*; this is what we read with admiration, without a word of protest to the author who touches us and holds us captive. What moralist would claim that it is better to abandon oneself to deep despair, the sort of despair that threatens life and disturbs the mind, rather than marry the most virtuous man in the world if his religion is different from your own? Well, we need not approve of the superstitious opinions of *Clementina*,¹ but love struggling against a scruple of conscience and duty winning out over

7. William Godwin (1756-1836), English novelist and political theorist, married to MARY WOLLSTONECRAFT; *Caleb Williams* was published in 1794.

8. A periodical (1711-12) written by JOSEPH ADDISON and Richard Steele. Jean-François Marmontel (1723-1799), French author whose *Moral Tales* (1761-86) appeared first in a journal. *Sentimental Journey through England and France*: a

1768 narrative by Laurence Sterne.

9. The villain-hero who seduces the title character in Richardson's *Clarissa*, or, *The History of a Young Lady* (1747-48).

1. The Italian woman who renounces the eponymous hero of Richardson's *History of Sir Charles Grandison* (1753-54) [shortened translator's note].

passion are a sight that moves and touches even loose-principled people who would have rejected such a conclusion disdainfully if it had been a maxim preceding the tableau instead of an effect that followed it. In novels of a less sublime genre, there are so many subtle rules for women's conduct! We could support this opinion by quoting from masterpieces like *The Princess of Clèves*, *The Count of Comminge*, *Paul and Virginia*, *Cecilia*, most of the writings of Madame Riccoboni, *Caroline*, whose charm is felt by everyone, the touching episode of *Caliste*, the letters of *Camilla*,² in which the mistakes of a woman and their miserable consequences give a more moral and severe picture than the spectacle of virtue itself, and many other French, English, and German works. Novels have the right to offer the severest morality without revolting our hearts; they have captured feeling, the only thing that can successfully plead for indulgence. Pity for misfortune or interest in passion often win the struggle against books of morality, but good novels have the art of putting this emotion itself on their side and using it for their own ends.

There is still one serious objection to love stories: that they paint love in such a way as to arouse it, and that there are moments in life when this danger wins out over every kind of advantage. This drawback could not exist in novels about any other human passion, however. By recognizing the most fleeting symptoms of a dangerous inclination from the very beginning, one could turn oneself as well as others away from it. Ambition, pride, and avarice often exist without the least consciousness on the part of those they rule. Love feeds on the portrait of its own feelings, but the best way to fight the other passions is to make them be recognized. If the features, tricks, means, and results of these passions were as fully shown and popularized by novels as the history of love, society would have more trustworthy rules and more scrupulous principles about all the transactions of life. Even if purely philosophical writings could predict and detail all the nuances of actions, as do novels, dramatic morality would still have the great advantage of arousing indignant impulses, and exaltation of soul, a sweet melancholy—the various effects of fictional situations, and a sort of supplement to existence. This impression resembles the one we have of real facts we might have witnessed, but it is less distracting for the mind than the incoherent panorama of events around us, because it is always directed toward a single goal. Finally, there are men over whom duty has no influence, and who could still be preserved from crime by developing within them the ability to be moved. Characters capable of adopting humanity only with the help of such a faculty of emotion, the physical pleasure of the soul, would naturally not deserve much respect; nevertheless, if the effect of these touching fictions became widespread enough among the people, it might give us some assurance that we would no longer have in our country those beings whose character poses the most incomprehensible moral problem that has ever existed. The gradual steps from the known to the unknown stop well before we reach any understanding of the emotions which rules the executioners of France. Neither events nor books can have developed in them the least trace of humanity, the memory

2. All these works are novels. *The Princess of Clèves* is by Mme de La Fayette (1678); *The Count of Comminge* (1735) is by Mme de Tencin; *Paul and Virginia* (1787) is by Jacques-Henri Bernadin de Saint-Pierre; *Cecilia* (1782) and *Camilla* (1796) are by Fanny Burney; Marie-Jeanne Riccoboni

(1713–1792) wrote a number of novels in the mid-18th century. *Caroline* is probably *Caroline de Litchfield* (1785), by Isabelle de Montolieu. Isabelle de Charrière, later [Benjamin] Constant's intimate friend, wrote *Caliste* (1787) [translator's note].

of a single sensation of pity, any mobility within the mind itself for them to remain capable of that constant cruelty, so foreign to all the impulses of nature—a cruelty which has given mankind its first limitless concept, the complete idea of crime.

There are writings whose principal merit is the eloquence of passion, such as the "Epistle of Abelard" by Pope, *Werther*, the *Portuguese Letters*, and especially *The New Héloïse*.³ The aim of such works is often moral, but what remains with us more than anything else is the absolute power of the heart: We cannot classify such novels. Every century has one soul and one genius capable of achieving this—it cannot be a genre, it cannot be a goal. Who would want to proscribe these miracles of the word, these deep impressions which satisfy all the emotions of the passionate? Readers enthusiastic about such talent are very few in number; these works always do their admirers good. Let ardent, sensitive souls admire them; they cannot make their language understood by anyone else. The feelings that disturb such beings are rarely understood; constantly condemned, they would believe themselves alone in the world, they would soon hate their own nature for isolating them, if a few passionate, melancholy works did not make them hear a voice in the desert of life, letting them find in solitude a few rays of the happiness that escapes them in the middle of society. The pleasure of retreat is refreshing after the vain attempts of disappointed hope; far from this unfortunate creature, the entire universe may be in motion, but such eloquent, tender writing stays near him as his most faithful friend, the one who understands him best. Yes, a book must be right if it offers even one day's distraction from pain; it helps the best of men. Of course there are also sorrows that come from one's own character flaws, but so many of them come from superiority of mind or sensitivity of heart! and there are so many that would be easier to bear if one had fewer good qualities! I respect the suffering heart, even when it is unknown to me; I take pleasure in fictions whose only effect might be to comfort this heart by capturing its interest. In this life, which we pass through rather than feel, the distributor of the only real happiness of which human nature is capable would be someone who distracts man from himself and others, suspending the action of the passions by substituting independent pleasures for them—if the influence of his talent could only last.

see nothing ahead of you but sterile rocks; but once you are at the peak, heaven is at your head, and at your feet the kingdom of Cashmere.

—*The Indian Hut*, by Bernadin de Saint-Pierre²

The existence of women in society is still uncertain in many ways. A desire to please excites their minds; reason recommends obscurity; and their triumphs and failures are equally and completely arbitrary.

I believe a day will come when philosophical legislators will give serious attention to the education of women, to the laws protecting them, to the duties which should be imposed on them, to the happiness which can be guaranteed them. At present, however, most women belong neither to the natural nor to the social order. What succeeds for some women is the ruin of others; their good points may do them harm, their faults may prove useful. One minute they are everything, the next nothing. Their destiny resembles that of freedmen under the emperors: if they try to gain any influence, this unofficial power is called criminal, while if they remain slaves their destiny is crushed.

It would no doubt be generally preferable for women to devote themselves entirely to the domestic virtues, but the peculiar thing about men's judgments of women is that they are much likelier to forgive women for neglecting these duties than for attracting attention by unusual talent. Men are quite willing to tolerate women's degradation of the heart, so long as it is accompanied by mediocrity of mind. The best behavior in the world can scarcely obtain forgiveness for real superiority.

I am now going to discuss the various causes of this peculiar phenomenon, beginning with the condition of women writers in monarchies, then in republics. I am interested in the differences these political situations make in the destinies of women who set their minds upon literary celebrity; I will then consider more generally the sort of happiness fame can promise these women.

In monarchies, women have ridicule to fear; in republics, hatred.

In a monarchy, the sense of the right and proper is so acute that any unusual act or impulse to change one's situation looks ridiculous right away. Anything your rank or position forces you to do finds a thousand admirers; everything you invent spontaneously, with no obligation, is judged severely and in advance. The jealousy natural to all men calms down only if you can apologize for success under cover of some obligation. Unless you cover fame itself with the excuse of your situation and practical interests, if people think your only motive is a need to distinguish yourself, you will annoy those whom ambition is leading in the same direction as yourself.

Men can always hide their vanity or their craving for applause under the appearance or reality of stronger, nobler passions; but women who write are generally assumed to be primarily inspired by a wish to show off their wit. As a result, the public is very reluctant to grant its approval, and the public's sense that women cannot do without this approval is precisely what tempts it to deny it. In every walk of life, as soon as a man sees your obvious need of him, his feelings for you almost always cool down. A woman publishing a

2. French naturalist and author (1737–1814), heavily influenced by the writings of Jean-Jacques Rousseau (1712–1788); his novel *The Indian Hut* was published in 1791. "Lahor" and "Cashmere,"

now better known as Lahore and Kashmir, are regions of northern India (in 1947 Lahore was divided between India and Pakistan).

book makes herself so dependent on public opinion that those who mete it out make her harshly aware of their power.

These general causes, acting more or less uniformly in all countries, are reinforced by various circumstances peculiar to the French monarchy. The spirit of chivalry, still lingering on in France, was opposed in some respects to the overeager cultivation of letters even by men; it must have aroused all the more dislike for women concentrating on literary studies and turning their thoughts away from their primary concern, the sentiments of the heart. The niceties of the code of honor might well make men averse from submitting themselves to the motley criticism attracted by publicity. How much more must they have disliked seeing the creatures entrusted to their protection—their wives, sisters, daughters—running the gauntlet of public criticism, or even giving the public the right to make a habit of talking about them!

Great talent could triumph over all these considerations, but it was still hard for women to bear reputations as authors nobly, simultaneously combining them with the independence of high rank and keeping up the dignity, grace, ease, and unself-consciousness that were supposed to distinguish their habitual style and manners.

Women were certainly allowed to sacrifice household occupations to a love of society and its pleasures; serious study, however, was condemned as pedantic. If from the very first moment one did not rise above the teasing which went on from all sides, this teasing would end by discouraging talent and poisoning the well of confidence and exaltation.

Some of these disadvantages are not found in republics, especially if one of the goals of the republic is the encouragement of enlightenment. It might perhaps be natural for literature to become women's portion in such a state, and for men to devote themselves entirely to higher philosophy.

The education of women has always followed the spirit of the constitutions established in free countries. In Sparta, women were accustomed to the exercises of war; in Rome, they were expected to have austere and patriotic virtues. If we want the moving principle of the French Republic to be the emulation of enlightenment and philosophy, it is only reasonable to encourage women to cultivate their minds, so that men can talk with them about ideas that would hold their interest.

Nevertheless, ever since the Revolution men have deemed it politically and morally useful to reduce women to a state of the most absurd mediocrity. They have addressed women only in a wretched language with no more delicacy than wit. Women have no longer any motive to develop their minds. This has been no improvement in manners or morality. By limiting the scope of ideas we have not succeeded in bringing back the simplicity of primitive life: the only result of less wit has been less delicacy, less respect for public opinion, fewer ways to endure solitude. And this applies to everything else in the current intellectual climate too: people invariably think that enlightenment is the cause of whatever is going wrong, and they want to make up for it by making reason go backward. Either morality is a false concept, or the more enlightened we are the more attached to morality we become.

If Frenchmen could give their wives all the virtues of Englishwomen, including retiring habits and a taste for solitude, they would do very well to prefer such virtues to the gifts of brilliant wit. All the French will manage to do this way, however, is to make their women read nothing, know nothing,

and become incapable of carrying on a conversation with an interesting idea, or an apt expression, or eloquent language. Far from being kept at home by this happy ignorance, Frenchwomen unable to direct their children's education would become less fond of them. Society would become more necessary to these women—and also more dangerous, because no one could talk to them of anything but love, and this love would not even have the delicacy that can stand in for morality.

If such an attempt to make women completely insipid and frivolous ever succeeded, there would be several important losses to national morality and happiness. Women would have fewer ways to calm men's furious passions. They would no longer have any useful influence over opinion—and women are the ones at the heart of everything relating to humanity, generosity, delicacy. Women are the only human beings outside the realm of political interest and the career of ambition, able to pour scorn on base actions, point out ingratitude, and honor even disgrace if that disgrace is caused by noble sentiments. The opinion of society would no longer have any power over men's actions at all if there were no women left in France enlightened enough to make their judgments count, and imposing enough to inspire genuine respect.

I firmly believe that under the ancien régime, when opinion exerted such wholesome authority, this authority was the work of women distinguished by character and wit. Their eloquence was often quoted when they were inspired by some generous scheme or defending the unfortunate; if the expression of some sentiment demanded courage because it would offend those in power.

These are the same women who gave the strongest possible proofs of devotion and energy during the course of the Revolution.

Men in France will never be republican enough to manage without the independence and pride that comes naturally to women. Women may indeed have had too much influence on public affairs under the ancien régime; but they are no less dangerous when bereft of enlightenment, and therefore of reason. Their influence then turns to an inordinate craving for luxury, undiscerning choices, indelicate recommendations. Such women debase the men they love, instead of exalting them. And is the state the better off for it? Should the very limited risk of meeting a woman whose superiority is out of line with the destiny of her sex deprive the republic of France's reputation for the art of pleasing and living in society? Without any women, society can be neither agreeable nor amusing; with women bereft of wit, or the kind of conversational grace which requires the best education, society is spoiled rather than embellished. Such women introduce a kind of idiotic chatter and cliquish gossip into the conversation, alienating all the superior men and reducing brilliant Parisian gatherings to young men with nothing to do and young women with nothing to say.

We can find disadvantages to everything in life. There are probably disadvantages to women's superiority—and to men's; to the vanity of clever people; to the ambition of heroes; to the imprudence of kind hearts, the irritability of independent minds, the recklessness of courage, and so forth. But does that mean we should use all our energy to fight natural gifts, and direct our social institutions toward humbling our abilities? It is hardly as if there were some guarantee that such degradation would promote familial or governmental authority. Women without the wit for conversation or writing

are usually just that much more skillful at escaping their duties. Unenlightened countries may not understand how to be free, but they are able to change their masters with some frequency.

Enlightening, teaching, and perfecting women together with men on the national and individual level: this must be the secret for the achievement of every reasonable goal, as well as the establishment of any permanent social or political relationships.

The only reason to fear women's wit would be some sort of scrupulous anxiety about their happiness. And indeed, by developing their rational minds one might well be enlightening them as to the misfortunes often connected with their fate; but that same reasoning would apply to the effect of enlightenment on the happiness of the human race in general, a question which seems to me to have been decided once and for all.

If the situation of women in civil society is so imperfect, what we must work toward is the improvement of their lot, not the degradation of their minds. For women to pay attention to the development of mind and reason would promote both enlightenment and the happiness of society in general. The cultivated education they deserve could have only one really unfortunate result: if some few of them were to acquire abilities distinguished enough to make them hungry for glory. Even this risk, however, would do society no harm, and would only be unfortunate for the very limited number of women whom nature might dedicate to the torture of useless superiority.

And if there were to be some woman seduced by intellectual celebrity and insistent on achieving it! How easy it would be to divert her, if she were caught in time! She could be shown the dreadful destiny to which she was on the verge of committing herself. Examine the social order, she would be told; you will soon see it up in arms against any woman trying to raise herself to the height of masculine reputation.

As soon as any woman is pointed out as a person of distinction; the general public is prejudiced against her. The common people judge according to a few common rules which can be followed without taking any risks. Whatever goes beyond the habitual immediately offends people who consider daily routine the safeguard of mediocrity. A superior man is enough to startle them; a superior woman, straying even farther from the beaten track, must surprise and annoy them even more. A distinguished man almost always has some important career as his field of action, so his talents may turn out to be useful to the interests of even those who least value the delights of the mind. The man of genius may become a man of power, so envious and silly people humor him. But a clever woman is only called upon to offer them new ideas and lofty sentiments, about which they could not care less; her celebrity seems to them much ado about nothing.

Even glory can be a source of reproach to a woman, because it contrasts with her natural destiny. Strict virtue condemns the celebrity even of something which is good in itself, because it damages the perfection of modesty. Men of wit are so astounded by the existence of women rivals that they cannot judge them with either an adversary's generosity or a protector's indulgence. This is a new kind of combat, in which men follow the laws of neither kindness nor honor.

Suppose, as a crowning misfortune, a woman were to acquire celebrity in a time of political dissension. People would think her influence unbounded,

even if she had no influence at all; accuse her of all her friends' actions; and hate her for everything she loved. It is far preferable to attack a defenseless target than a dangerous one.

Nothing lends itself more quickly to vague assumptions than the dubious life of a woman with a famous name and an obscure career. An empty-witted man may inspire ridicule, a man of bad character may drop under the weight of contempt, a mediocre man may be cast aside—but everyone would much rather attack the unknown power they call a woman. When the plans of the ancients did not work out, they used to convince themselves that fate had thwarted them. Our modern vanity also prefers to attribute its failures to secret causes instead of to itself; in time of need, what stands in for fatality is the supposed power of famous women.

Women have no way to show the truth, no way to throw light on their lives. The public hears the lie; only their intimate friends can judge the truth. What real way is there for a woman to disprove slanderous accusations? A man who had been slandered lets his actions answer the universe, saying, "My life is a witness: it too must be heard."³ But where can a woman find any such witness? A few private virtues, hidden favors, feelings locked into the narrow circle of her situation, writings which may make her known in places where she does not live, in times when she will no longer exist.

A man can refute calumny in his work itself, but self-defense is an additional handicap for women. For a woman to justify herself is a new topic for gossip. Women feel there is something pure and delicate in their nature, quickly withered by the very gaze of the public. Wit, talent, passion in the soul may make them emerge from this mist which should always be surrounding them, but they will always yearn for it as their true refuge.

However distinguished women may be, the sight of ill will makes them tremble. Courageous in misfortune, they are cowards against dislike; thought uplifts them, but their character is still weak and sensitive. Most women whose superior abilities make them want renown are like Erminia dressed in armor.⁴ Warriors see the helmet, the lance; the bright plume of feathers, and think they are up against strength, so they attack with violence; with the very first blows, they have struck at the heart.

Such injustices can not only spoil a woman's happiness and peace of mind, but also alienate even the most important objects of her affection. Who can be sure that a libelous portrayal will not strike at the truth of memory? Who knows whether or not slanderers, having wreaked havoc with life, will rob death itself of the tender, regretful feelings that should be associated with the memory of a beloved woman?

So far I have portrayed only the unfairness of men: but what about the threat of injustice from other women? Do not women secretly arouse the malevolence of men? Do women ever form an alliance with a famous woman, sustaining her, defending her, supporting her faltering steps?

And that is still not all. Public opinion seems to release men from every duty toward a recognizably superior woman. Men can be ungrateful to her, unfaithful, even wicked, without making public opinion responsible for

3. No source has been identified; but the quoted sentence is written in the French classical alexandrine (12-syllable) meter.

4. In Tasso's *Jerusalem Delivered* (1581), the prin-

cess Erminia wears borrowed armor to seek her love Tancred in the Christian camp [translator's note].

avenging her. "Is she not an extraordinary woman?" That says it all; she is abandoned to her own strength, and left to struggle with misery. She lacks both the sympathy inspired by a woman and the power protecting a man. Like the pariahs of India,⁵ such a woman parades her peculiar existence among classes she cannot belong to, which consider her as destined to exist on her own, the object of curiosity and perhaps a little envy: what she deserves, in fact, is pity.

1800

5. Those who are at the bottom or outside of the traditional caste system of India (the words in the epigraph from *The Indian Hut* are spoken by a pariah).

FRIEDRICH SCHLEIERMACHER

1768–1834

German philosopher, classical philologist, and leading liberal Protestant theologian, Friedrich Schleiermacher is best known as a founder of modern general hermeneutics: that is, the art of understanding and interpreting discourse through systematic procedures. His most important contribution to the history of theory and criticism is arguably his "Outline of the 1819 Lectures," a fragmentary document produced in midcareer and published from handwritten notes after his death. In this pioneering depiction of the processes of textual understanding, Schleiermacher argued that to understand a text fully one must understand simultaneously the entire thought of a writer as well as the whole language he or she employs, keeping in mind that the language modifies the author's thought just as the author's thought modifies the language. The two major tasks of textual interpretation, according to Schleiermacher, are to comprehend the language and historical culture of a text (grammatical interpretation) and to reconstruct an author's purpose (psychological or "technical" interpretation). With these insights Schleiermacher laid the foundation of modern hermeneutics, preparing the way for such important yet widely divergent twentieth-century theorists of interpretation as MARTIN HEIDEGGER and E. D. HIRSCH JR.

Schleiermacher was born in Breslau, Prussia, and studied at two Moravian Brethren schools and at the University of Halle. During the late 1790s he began his celebrated translation into German of almost all of Plato's works (still in print); he was active in the Berlin circle of Romanticists, being a close associate and briefly roommate of Friedrich Schlegel, to whose vanguard journal, *Athenaeum*, he was an early contributor. He served as chaplain and professor of theology and philosophy at Halle between 1804 and 1806, later taking a position at the University of Berlin (1810–34), which he co-founded. Schleiermacher regularly preached at Trinity Church in Berlin, advocating the right of union for Reformed and Lutheran groups in Prussia, freedom of the church from the state, shorter working hours, social insurance, and women's rights.

Schleiermacher's theology reflects the influence of Romanticism and Moravian pietism, especially in his two most famous works, *On Religion: Speeches to Its Cultured Despisers* (1799) and *The Christian Faith* (1821–22), which argue that religion is an intuitive feeling for and dependence on the infinite realm, not a set of moral or metaphysical principles; religion needed no external justification. It was to convince

his fellow German Romantics that they were not as far from religion as they believed that he undertook the first book, a confession of faith that gained him a national reputation overnight. Today he is often regarded as one of the most significant Protestant theologians since Luther. In his time his influence was wide, reaching such figures as RALPH WALDO EMERSON, who also devalued doctrine in favor of intuitive dependence on the infinite.

His interest in understanding the Bible led to Schleiermacher's concern with hermeneutics. In his "Outline of the 1819 Lectures," our selection, he expands on his basic distinction between grammatical and psychological interpretation, noting that the latter involves two distinct methods. Using the first, divinatory interpretation, one seeks to identify intuitively with the author; Schleiermacher sees this as representing a feminine dimension of our knowledge of human nature. (This mode of interpretation echoes his notions about religion as an intuitive feeling.) Using the second method, comparative interpretation, one works to understand a text as a type or historical genre; it is purportedly a masculine force.

Both psychological and grammatical interpretation primarily seek to isolate the text's central idea, procedure, or motivating principle in light of which all textual details can be gauged. Artful interpretation requires such centering and multiple rigorous readings. But problems do arise, some of which are avoidable and some not. Interpretation necessarily gets caught up in various circularities. Readers early in the process intuit the meaning of a text, which then predetermines the directions of meaning. This is one version of the celebrated "hermeneutic circle" of interpretation, identified by Schleiermacher and later explored by leading hermeneuticists, especially Heidegger and Hans-Georg Gadamer (b. 1900). To understand the whole text, Schleiermacher points out, one must understand each part; but to understand each part, one must understand the whole. He expands this circle by requiring that to understand an individual text, an interpreter must understand the complete historical context and vocabulary of a language—foreknowledge derived paradoxically from individual texts.

Schleiermacher catalogues several types of avoidable misunderstanding, which result from bias, mistaking a text's meaning, or misjudging the value of a segment of text. (Under the influence of FRIEDRICH NIETZSCHE and SIGMUND FREUD, contemporary critics such as HAROLD BLOOM and PAUL DE MAN, unlike Schleiermacher, have come to conceive "misunderstanding" as an ineradicable, productive element of all understanding.) Moreover, for Schleiermacher allegorical interpretation—that is, reading symbolically—risks erroneously discovering everything in everything, unless the text itself legitimates the approach with an allusion appropriate to both the contextual and the central textual ideas. Finally, historical interpretation can run into trouble by construing an ancient text in terms of modern conditions instead of uncovering its writer's relationship to his or her milieu and language.

Schleiermacher posits two broad categories of texts. "Objective texts" such as histories and epics require a minimum of psychological interpretation and a maximum of grammatical interpretation, whereas "subjective texts" such as personal letters and lyrics call for more psychological than grammatical interpretation. The goal of hermeneutics in either case is—as he famously declared—"to understand the discourse just as well and even better than its creator." We have no way of knowing the creator's purpose other than through reconstruction, but "No individual inspection of a work ever exhausts its meaning."

Helpfully, Schleiermacher outlines four types of positive hermeneutical reconstruction. There are two types of grammatical or objective reconstruction—historical and divinatory—and two types of psychological or subjective reconstruction—historical and divinatory. In brief, objective historical reconstruction examines how language shapes the text, objective divinatory reconstruction analyzes how the text itself developed that language, subjective historical reconstruction explores the text as the

product of the author's soul, and subjective divinatory reconstruction attempts to determine how the process of writing affects the writer's inner thoughts. Interpretation for Schleiermacher is at once psychological and grammatical, intuitive and comparative. It is an art of understanding, not just explaining, the act of a living, intuiting person gifted with foreknowledge and experience of life as well as linguistic and cultural competence—an art that always requires a leap into the midst of textual complexities and circularities.

Earlier German hermeneutics, as practiced in the contexts of theology, law, and literature, focused narrowly on philology, particularly its penchant for interpretive procedures and rules of validation. Schleiermacher here broadens its scope toward a phenomenological philosophy attentive to the roles of intuition; understanding, and foreknowledge in the lived world of human beings. This shift was variously amplified by his greatest successors, Wilhelm Dilthey (1833–1911), Heidegger, and Gadamer. Schleiermacher is generally credited with grounding hermeneutics in human understanding, with according language a foundational role in interpretation, and with highlighting the interdependence of mind and medium, subject and object, divination and comparison.

However much successors and followers admire and build on Schleiermacher's work, they find problems with his hermeneutic theory. In the various editions of his *Truth and Method—Outline for a Philosophical Hermeneutics* (1960), Gadamer characterizes the principle of divination as hopelessly Romantic, and he faults Schleiermacher for not taking into account the historical context and prejudices of the interpreter, which, he shrewdly argues, are essential constituents of understanding. Intuition assumes uniform human experience; prejudices arise in a world of antagonistic standpoints. And the leading modern French hermeneuticist, Paul Ricoeur (b. 1913), contends that Schleiermacher does not sufficiently distinguish between the author and the ideas governing the work; Ricoeur sees the latter as the true object of interpretation. Schleiermacher vacillates, too, on what constitutes the "text" (or object of inquiry)—it is sometimes the author's oeuvre (complete works), sometimes a particular work, and sometimes a genre or cultural archive.

Various critics, moreover, have noted Schleiermacher's tendency, especially in his late works, to "psychologize": that is, to pass through language to the supposed prelinguistic mental processes and intentions of the author, forgetting that grammar and psychology are interdependent. When this happens, Schleiermacher's hermeneutics turns into psychological reconstruction, which is the direction taken by Dilthey. A similar path is staked out by E. D. Hirsch Jr., who, however, turns to interpretative reconstruction as a way to rectify the rampant critical subjectivism and relativism that he believes plague contemporary literary criticism, including much hermeneutics.

In spite of criticisms, Schleiermacher's contributions to hermeneutics should not be underestimated. His psychological notion of divination enabled him to explicitly correct and complement earlier Enlightenment concepts of rationality. He usefully jettisoned the old rigid separations of hermeneutics into specialized biblical, legal, and literary kinds, developing a self-conscious project for a general hermeneutics. Like his important contemporaries FRIEDRICH SCHILLER and SAMUEL TAYLOR COLERIDGE, he attempted to reconcile well-entrenched inherited philosophical oppositions, especially subject/object, finite/infinite, individual/social, and psychology/grammar. He construed understanding as an act of dialogue, not verification. Lastly, he pictured the act of interpretation as antiauthoritarian and nonhierarchical, in keeping with the radical social forces of his time (committed to toppling monarchical regimes and feudal class arrangements, manifested especially in the French Revolution) and with the dynamics of early democracy and capitalism. All these elements, which marked Schleiermacher historically as a Romantic, significantly influenced the work of later philosophical hermeneutics.

BIBLIOGRAPHY

Schleiermacher's collected works, *Sämtliche Werke* (1835–64), mainly lecture notes, were published after his death in thirty-one volumes, including theological writings, sermons, and philosophical and miscellaneous texts, plus four volumes of letters (1858–63). Starting in the early 1980s his collected writings and correspondence began to appear in a projected forty-volume German edition, *Kritische Gesamtausgabe*, with approximately a dozen volumes reaching print in the first two decades. His manuscripts on interpretation theory were published posthumously and first translated into English by James Duke and Jack Forstman as *Hermeneutics: The Handwritten Manuscripts* (1977), based on the German edition by Heinz Kimmerle (1959; 2d ed., 1974), and then more fully in a new translation, *Hermeneutics and Criticism and Other Writings*, edited and translated by Andrew Bowie (1998).

Biographical information is available in *The Life of Schleiermacher as Unfolded in His Autobiography and Letters* (2 vols., 1860), translated by Frederica Rowan; Wilhelm Dilthey's monumental but unfinished *Das Leben Schleiermachers* (1870); Friedrich Wilhelm Kantzenbach's *Friedrich Daniel Ernst Schleiermacher in Selbstzeugnissen und Bilddokumenten* (1967); and Martin Redeker's spiritually sympathetic intellectual biography, *Schleiermacher: Life and Thought* (1968; trans. 1973).

Informative texts about Schleiermacher's work include Richard B. Brandt's *Philosophy of Schleiermacher: The Development of His Theory of Scientific and Religious Knowledge* (1941); Richard E. Palmer's valuable introduction, *Hermeneutics: Interpretation Theory in Schleiermacher, Dilthey, Heidegger, and Gadamer* (1969); Manfred Frank's landmark reassessment of Schleiermacher's hermeneutics in *Das individuelle Allgemeine: Textstrukturierung und -interpretation nach Schleiermacher* (1977); Tilottama Rajan's contemporary contextualizing in *The Supplement of Reading: Figures of Understanding in Romantic Theory and Practice* (1990); Julie Ellison's innovative feminist exegesis and critique of Schleiermacher's hermeneutics in *Delicate Subjects: Romanticism, Gender, and the Ethics of Understanding* (1990); the cogent introduction in Jean Grondin's *Introduction to Philosophical Hermeneutics* (1994); and Andrew Bowie's chapter factoring in the groundbreaking recent work of Manfred Frank in *From Romanticism to Critical Theory: The Philosophy of German Literary Theory* (1997). Terrence Tice's *Schleiermacher Bibliography* (1966) contains almost 2,000 items with annotations, and another 1,250 were added to his *Schleiermacher Bibliography (1784–1984): Updating and Commentary* (1985).

From Hermeneutics

From Outline of the 1819 Lectures¹

INTRODUCTION²

1. Hermeneutics as the art of understanding does not yet exist in general; rather, only various specialized hermeneutics exist.

1. [We speak of] only the art of understanding, not the exposition of the understanding. The latter would only be a specialized part of the art of

1. Edited and translated by Jan Wojcik and Roland Haas, who occasionally insert the original German or explanatory words or phrases in brackets.

2. The Outline consists of an "Introduction," "First Part: The Grammatical Exposition," and

"Second Part: The Technical (or Psychological) Interpretation." The headings are somewhat misleading: The "Introduction" gives a systematic exposition of principles for analyzing the language and psychological manifestations of a literary text. The "First Part" elaborates the principles for the

speaking and writing that could only be dependent on the general principles of hermeneutics.

2. This refers as well to difficult points in foreign-language texts. In reading them, one more often presumes familiarity with the subject matter and the language. When one is familiar with both, the distinction between them becomes difficult to make because one has perhaps not understood properly the more apparent. Only an artistic understanding consistently grasps the discourse [*Reden*] of a text [*Schrift*].³

3. Usually one supposes that one could rely on a healthy knowledge of human nature for formulating the general principles of interpretation. But then there is the danger that one would also tend to rely on a healthy feeling about the exceptional qualities of a text in determining what they meant.

2. It is very difficult to determine the exact nature of a general hermeneutics.

1. For a long time it was handled as a supplement to logic, but as one had to give up all logical tenets in its practice, this had to cease. The philosopher has no inclination to establish a theory about hermeneutics because he believes that it is more important to be understood than to understand.

2. Philology⁴ has made positive contributions throughout history. But its method of hermeneutics is simply to aggregate observations.

3. [Hermeneutics is] the art of relating discourse [*Reden*] and understanding [*Verstehen*] to each other; discourse, however, being on the outer sphere of thought, requires that one must think of hermeneutics as an art, and thus as philosophical.

1. Thus the art of exposition depends on their composition. They are mutually dependent to the point that where discourse is without art, so is the understanding of it.

4. Discourse is the mediation of shareable thought. As a result both rhetoric and hermeneutics share a common relationship to the dialectic.⁵

1. Discourse is of course also a mediation of thought among individuals. Thought becomes complete only through interior discourse, and in this respect discourse could be considered manifested thought. But where the thinker thinks original thoughts, he himself requires the art of discourse to transform them into expressions that afterwards require exposition [*Auslegung*].

2. The unity of hermeneutics and rhetoric results from the fact that every act of understanding is the obverse of an act of discourse, in that one must come to grasp the thought which was at the base of the discourse.

analysis of language; the "Second Part" extends the "Introduction" in describing how the two parts of interpretation work together in the "divination" of a text. We limit our translation to the "Introduction" and the "Second Part" which comprise the heart of Schleiermacher's hermeneutical principles. We have referred to the marginal notes Schleiermacher added to the manuscript in 1828 only when they clarified ambiguities in the text [translators' note].

3. Discourse (*Reden*) is Schleiermacher's term for the discursive sense of a text, shaped by the par-

ticular language the author uses to express his inner thoughts (see 4-6). Here he makes a distinction between the literal meaning of a text (*Schrift*) and the discursive meaning (*Reden*) that is most obvious when one reads a somewhat unfamiliar foreign language (see 14.2) [translators' note].

4. The scholarly discipline dedicated to the historical understanding of foreign cultures through linguistic and comparative analysis of texts.

5. That part of logic concerned with thinking, notably thinking embodied in discourse.

3. The dependence of both on the dialectic results from the fact that all development of knowledge is dependent on both discourse and understanding.

5. As every discourse has a two-part reference, to the whole language and to the entire thought of its creator, so all understanding of speech consists of two elements [*Momenten*]*—*understanding the speech as it derives from the language and as it derives from the mind of the thinker.

1. Every speech derives from a given language. One can also turn this around and say that originally and continuously language only comes into being through discourse; at any rate, communication presupposes the accessibility of the language; that is, a shared knowledge of the same. When something comes between unmediated discourse and communication, the art of discourse begins, for one must take into consideration the possibility that the listener might find something strange in someone else's use of language.

2. Every discourse depends on earlier thought. One can also turn this around, of course, but in relation to communication it remains true, since the art of understanding only has to do with progressive thinking.

3. It follows that every person is on one hand a locus in which a given language is formed after an individual fashion and, on the other, a speaker who is only able to be understood within the totality of the language. In the same way, he is also a constantly developing spirit, while his discourse remains an object within the context of other intellection.

6. Understanding is only an interaction of these two elements.

1. Discourse can only be understood as a fact of the spirit if it is understood as a characteristic of the language, because the innateness of the language modifies the spirit.

2. It can also only be understood as a modification of the language if it is understood as a fact of the spirit, because all influences of individuals on the language are manifested through discourse.

7. Both stand completely equal, and one could only with injustice claim that the grammatical interpretation is the inferior and the psychological the superior.

1. The psychological is the superior only if one views language as the means by which the individual communicates his thoughts; the grammatical is then merely a cleaning away of temporary difficulties.

2. The grammatical is the superior if one views language as stipulating the thinking of all individuals and the individual's discourse only as a locus at which the language manifests itself.

3. Only by means of such a reciprocity could one find both to be completely similar.

8. The essential hermeneutical task is to handle every part in such a way that the handling of the other parts will produce no change in the results, or, in other words, every part must be handled as a discrete unit with equal respect paid to all other parts.

1. This reciprocity is important even if one part predominates over the other according to what was said in paragraph six.

2. But each is only complete if it makes the other redundant and contributes to construing the other, because indeed language [*Sprache*] can only be learned inasmuch as its discourse [*Rede*] can be understood; and in the same way, the inner cohesion of humanity can only be understood as it manifests itself externally through its discourse.

9. Exposition [*Auslegung*] is an art.

1. Every part stands by itself. Every composition is a finite certainty out of the infinite uncertainty. Language is an infinite because every element can be determined in a specific manner only through the other elements. And this is also true for the psychological part because every perspective of an individual is infinite; and the outside influences on people extend into the disappearing horizon. A composition composed of such elements cannot be defined by rules, which carry with them the security of their application.

2. Should the grammatical part be considered by itself, one would need in some cases a complete knowledge of the language, or, in others, a complete knowledge of the person. As neither can ever be complete, one must go from one to the other, and it is not possible to give any rules as to how this should be done.

10. The successful performance of the art depends on a linguistic talent and a talent for assessing individual human nature.

1. By the first point we do not mean the facility for learning foreign languages—the difference between the mother tongue and a foreign language does not come into consideration here for the time being; rather, a sense for the contemporaneity of a language; for analogy, difference, etc. One could mean by this that rhetoric and hermeneutics must always be together. Just as hermeneutics requires other talents, so also does rhetoric, if not always the same ones. The linguistic talent, at any rate, is shared, even if the hermeneutical method develops it differently than the rhetorical method does.

2. The knowledge of human nature is here the superior of those subjective elements in the development of discourse. No less importantly, hermeneutics and artistic human presentation are always together. But a great number of hermeneutical mistakes are based on the deficiency of linguistic talent, or in its faulty application.

3. Inasmuch as these talents are generally given by nature, so hermeneutics is a commonsense endeavor. Inasmuch as a person is missing one talent, he is crippled, and the other talents can only serve to help him adjudicate about that which all together would have permitted him to know directly.

11. Not all discourse is on an equal footing for exposition. Certain discourses have no value for it, others an absolute value; the majority lie between these two points.

1. Something of no value might excite no interest as an entity, but would still be important in the language as a reiteration which language requires for the preservation of its continuity. But that which repeats only already available things is worth nothing in itself. Like talking about the

weather. Alone, this is not an absolute nothing, only minimal. For it developed itself in the same way as significant things.

2. When the grammatical aspect predominates in a work, even the most imaginative, we call it classical. When the psychological aspect predominates, we call it original. And, of course, one part could absolutely dominate the other only if the author was an absolute genius.

3. To be classical, a work must be more than transitory; it must determine subsequent production. No less so the original. And even the best work cannot be free from influence.

12. When both aspects of interpretation—the analysis of the grammatical and the psychological part of a text—are used equally throughout, they are nevertheless always used in different proportions.

1. This follows from the fact that something of grammatical insignificance does not necessarily have to be of psychological insignificance, and vice versa; and insignificance in one does not imply insignificance in the other.

2. A minimum of psychological interpretation is needed with a predominately objective subject. [To this belongs] pure history, especially of specific individuals, as comprehensive studies tend more to draw on subjective conclusions; also epics, commercial discussions which want to become history, and strictly didactic writings of every kind. The interpreter's subjectivity should not enter the exposition; rather, it should be affected by the exposition. A minimum of grammatical interpretation accompanies a maximum of psychological in the exposition of personal letters, especially when they transmit didactic advice or historical information. (Lyrics or polemics too?)

13. There is no other diversity in the methods of exposition aside from those cited above.

1. As an example, we can take the wonderful perspective which comes from the argument over the historical exposition of the New Testament, based on the question whether there are special modes of interpretation reserved for it alone. In this debate the assertion of the historical school is the only correct one, that the New Testament authors are products of their age. The only danger in their reasoning is their tendency to overlook the power of Christianity to create new concepts and forms of expression; they tend to explain everything in light of available concepts and forms. To correct the historical style of interpretation one has to resist this one-sidedness. Correct interpretation requires a relationship of the grammatical and psychological interpretation, since new concepts can arise out of new emotional experiences.

2. One would also err if one thought of a historical interpretation as simply a retrospective view of the textual events. One must keep in mind that what was written was often written in a different day and age from the one in which the interpreter lives; it is the primary task of interpretation not to understand an ancient text in view of modern thinking, but to rediscover the original relationship between the writer and his audience.

3. The Allegorical Interpretation. First of all, it is not an interpretation of an allegory, where the only purpose is to understand the figurative mean-

ing without reference to whether there is truth at the base of it or not. Examples of allegories would be the parable of the sower, or the story of the rich man.⁶ Rather, allegorical interpretation begins with a presupposition that the meaning is lacking in the immediate context, and so one needs to supply a figurative one. With this supposition one is unsatisfied with the general principle that every speech can have only one grammatical meaning. The dissatisfaction arises, perhaps, from the correct assessment that an allusion in a text does point to a second meaning; one who does not comprehend it could completely follow the whole context, but would still be missing one meaning situated within the discourse. The danger is that one could find an allusion which is not situated within the discourse. Then one would dissect the discourse improperly. The test for a proper allusion is this: to see whether it seems entwined as one of the contextual ideas within the main line of thought, to assess whether the explicit thoughts inspire the implicit. But the contextual ideas are not therewith to be considered merely individual and insignificant. Rather, just as the whole world is made up of many men, each idea contributes to its whole sense, even if it appears only as its dark shadow.

There is, after all, a parallelism in many various lines of thought, so that something could inspire something else; for example, there is parallelism between the physical and ethical, and between the musical and the visual arts. One should be careful, however, to detect whether there are any indications for the figurative expressions one seems to detect. The allegorical interpretations which have been made without such indication, especially in traditional interpretations of Homer and the Bible, all depend on a special assumption. This is that the books of Homer⁷ and the Old Testament are special compendiums, the Old Testament above all, which contains all wisdom in some form or another. Along with this, both of them have appeared to have a mystical content compounded of sententious philosophy on the one hand and history on the other.

With myths, however, no technical interpretation is possible, since one cannot focus on an individual text⁸ and alternatively compare the literal and the figurative meaning. There is certainly a different situation regarding the New Testament which leads to two kinds of blunders. First, its association with the Old Testament encourages the use of the same methods often associated with the Old Testament interpretation. Second, the New Testament interpreters tend more than their Old Testament counterparts to view the Holy Spirit as the book's author. But the Holy Spirit cannot be thought of as a temporally contingent and characteristic consciousness. From this false view springs the inclination to find everything foreshadowed everywhere. Common sense, or precise instructions on how texts should be read, can protect texts from this inclination, but isolated passages which seem to be unmeaningful in themselves seem to encourage it.

4. Here the question occasionally intrudes upon us, whether the holy books of the Holy Spirit must be handled differently than others. We must not be concerned with dogmatic decisions about inspiration, since they themselves derive from interpretation. We must not distinguish between the

6. Both in the New Testament: for the sower, see Matthew 13.1-9, 18-23; for the rich man, see Luke 16.19-31.

7. The *Iliad* and the *Odyssey* (ca. 8th c. B.C.E.),

each divided into 24 books.

8. Myths have no single author and no single established text; therefore technical (psychological) interpretation is impossible.

preaching and the writing of the apostles, since their future church had to be built on the preaching. And it follows from this that we must not believe that the whole of Christianity directly developed from the writings, since they are all aimed at specific communities and could also not have been understood by subsequent readers if they had not been understood by the original audience. Each community simply sought out the specific characteristics of the Jesus story according to its own given particular focus on the many details. Therefore, we must expose it to the same method and consider that even if the authors were no more than dead tools, still the Holy Spirit could only have spoken through them as they themselves would have spoken.

5. The most dangerous deviation from this principle is encouraged by the cabalistic⁹ style of exposition which directs its endeavors to find everything in everything. Only their interpretive endeavors which respect the diversity which results from the various relationships of both constructed parts can rightfully be called exposition.

14. The difference between artful and crude exposition has nothing to do with whether the work is familiar or strange, or with the discourse or the text, but solely with whether one wants to understand certain things exactly or not.

1. If it were only foreign and old texts that needed the art, the original readers would not have needed it, and the art would then depend on the differences between them and us. This difference must first be resolved, of course, through a knowledge of language and history; the exposition begins only after a successful identification of the text's original meaning. The difference between interpreting an old foreign text and a local contemporary one is only that with the old text the process of discovering its relevance to its milieu cannot completely precede the identification of its meaning; rather, both must be integrated from the beginning.

2. The text [*Schrift*] is not always the focus of attention either. Otherwise the art would only become necessary through the difference between text and discourse; that is to say, by the absence of the living voice and by the inaccessibility of other personal influences. These things, however, require exposition themselves, while they always remain somewhat nebulous. A living voice can certainly facilitate understanding a great deal, but even the writer must take into consideration that writing is not the same as speaking. If it were, then the art of exposition would be superfluous, which is, of course, not the case. Consequently, the need for exposition depends on the difference between written and spoken discourse, when the latter does not accompany the former.

3. Thus, when discourse and text behave so that no other difference remains between them save the one indicated, it follows that the artfully correct exposition has no other goal than that which we have in hearing every common spoken discourse.

15. The careless practice of the art results from the fact that understanding is pursued in the light of a negative goal: that misunderstanding should be avoided.

9. Esoteric, mystical.

1. Careless interpretation tends to limit its understanding to obtaining certain easy-to-attain goals.

2. But even it must avail itself of the art in difficult cases; and thus hermeneutics can even arise from the artless practice. But since it only sees difficulties as isolated problems, it becomes an aggregate of observations. And for the same reason tends to consider itself a specialized hermeneutics because it brings special methods to the solving of difficult problems. This is how the theological, the juristic, and the philological methods originated, and what they consider to be their special purposes.

3. The basis for their view is the peculiarity of their special languages and the peculiar manner in which their speakers communicate to their hearers.

16. Strict interpretation begins with misunderstanding and searches out a precise understanding.

1. This results from its beginning with an assumption about what the meaning is that properly should only be discovered in the way the language and intention present it.

2. Careless interpretation distinguishes only the [predetermined] sense from the manner of expression, which in fact depend on each other for their mutual identity, the determination of which is the minimum requirement for avoiding artless practice.¹

17. Two things should be avoided: qualitatively misunderstanding the content, and quantitatively misunderstanding nuance.

1. Examined objectively, qualitative misunderstanding is mistaking the place of a part of a discourse in the language with that of another one, as, for example, the confusion of the meaning of a word with that of another. The qualitative misunderstanding is subjective, the mistaking of the meaning of an expression, so that one gives the same thing a different meaning than the speaker gave to it in his sphere.

2. Quantitative misunderstanding arises from a subjective response to the value of the elaboration a speaker gives to a part of the text, or by analogy from an objective response to a part taken out of context.

3. The quantitative, which is normally taken little into account, always leads to the qualitative.

4. These negative expressions cover all interpretive operations. But one could not develop the rules from their negativity alone; rather, one must develop them positively, with a constant eye on the negative.

5. One must also distinguish the difference between passive and active misunderstanding. The latter is timidity which, however it might be the consequence of a bias that nothing can appear certain unless it is very obvious, can still entertain very false assumptions.

18. The art can only develop its rules from a positive formula, and this is the historical and the divinatory [prophetic], objective and subjective reconstruction [*Nachkonstruieren*] of the given discourse.

1. Paraphrase: artful interpretation begins with a hunch about a text's meaning which it continuously corrects and refines; careless interpretation

begins with a prejudice about a text's meaning which it forces the text to support [translators' note].

1. Objective historical reconstruction considers how the discourse behaves in the totality of the language, and considers a text's self-contained knowledge as a product of the language. Objective divinatory reconstruction assesses how the discourse itself developed the language. Without both of these, one cannot avoid qualitative and quantitative misunderstanding.

2. Subjective historical reconstruction considers a discourse as a product of the soul; subjective divinatory assesses how the process of writing affects the writer's inner thoughts. Without both, just as was the case above, misunderstanding is once again unavoidable.

3. The task is this, to understand the discourse just as well and even better than its creator. Since we have no unmediated knowledge of that which is within him, we must first seek to become conscious of much which he could have remained unconscious of, unless he had become self-reflectingly his own reader. For objective reconstruction he has no more data than we do.

4. Posed in this manner, the task is an infinite one, because there is an infinity of the past and the future that we wish to see in the moment of discourse. Hence, this art is just as capable of inspiration as any other. In fact, a text has no meaning unless it can give rise to this inspiration. However, the decision on how far one wishes to pursue an approach must be, in any case, determined practically, and actually is a question for a specialized hermeneutics and not for a general one.

19. One must first equate oneself with the author by objective and subjective reconstruction before applying the art.

1. With objective reconstruction one proceeds through a knowledge of the language as the author used it. It must be more exact than even the original readers possessed, who themselves had to put themselves in the place of the author. With subjective reconstruction one proceeds through the knowledge of the author's inner and outer life.

2. But both can only be completely secured through a similarly complete exposition. For only from a reading of all of an author's works can one become familiar with his vocabulary, his character, and his circumstances.

20. The vocabulary and the history of the period in which an author works constitute the whole within which his texts must be understood with all their peculiarities.

1. This complete knowledge is contained within an apparent circle,² so that every extraordinary thing can only be understood in the context of the general of which it is a part, and vice versa. And all knowledge can only be scientific to the extent that it is complete.

2. This circle makes possible an identification with the author, and thus it follows that, first, the more complete knowledge we possess, the better bolstered we are for exposition, and, second, no material for exposition can be understood in isolation; rather, every reading makes us better suited for understanding by enriching our previous knowledge. We can only be satisfied with immediate understanding when dealing with the meaningless.

2. The troubling yet unavoidable "hermeneutic circle" of interpretation.

21. If the knowledge of the particular vocabulary can only be amassed during the exposition through lexical help and through individual observation, there can exist no self-sufficient exposition.

1. Only an independent knowledge of the actual life of a language gives one a source independent of the exposition for the knowledge of the vocabulary. For this reason we have only an incomplete understanding of what Greek and Latin words mean. Hence, the first lexical task in such cases is to consider the whole literature as a context for understanding the individual linguistic item. These complementary tasks balance each other through the exposition itself, contributing to an artful exposition.

2. Under the term *vocabulary* I subsume the dialect, period, and the mode—prose or poetry.

3. Even first impressions should be based on lexical meaning, for spontaneous interpretation can only rest on prior knowledge [*Vorkenntnisse*], but even all decisions about the language in dictionaries and in explanatory notes proceed from special and other perhaps unreliable expositions.

4. In the area of the New Testament, one can say with certainty that the unreliability and arbitrariness of the exposition rests largely on this fault. This is because contrasting analogies always develop from individual observations. For example, the development of New Testament vocabulary is rooted in classical antiquity and developed through Macedonian Greek through its use by the profane Jewish writers and by Josephus and Philo, by the deuterocanonical writers, and by the writers of the Septuagint,³ who flavored their Greek with Hebrewisms.

22. Even if the necessary knowledge of history comes only from prolegomena, there can still exist no self-sufficient exposition.

1. Such prolegomena are the sort of critical helps it is the duty of a publisher who desires to be a mediator to use. But they must depend on a knowledge of the whole literary circle a work belongs to, and the whole development of an author himself. Thus they are themselves dependent on exposition, and so are all reckonings whose beginnings are not determined by a specific goal. The exact expositor must, however, gradually glean everything from the sources themselves, and it is because of this that his task can only progress from easy to more difficult. But the dependency becomes most injurious if one brings in such notes in the prolegomena that actually could only be derived from the interpreted work itself.

2. The New Testament has given birth to a special discipline: the writing of the introduction. This is not an actual organic component of the theological discipline; but it is a practical expedient, partly for the beginner, partly for the master, since it is easier to bring together all of the relevant examinations in one place. But the expositor should always contribute to it so as to augment and relate the great mass of evidence.

23. An individual element can only be understood in light of its place in the whole text; and therefore, a cursory reading for an overview of the whole must precede the exact exposition.

3. A Greek translation of the Hebrew Scriptures by Jewish scholars (ca. 3d c. B.C.E.), Flavius Josephus (b. 37/8 C.E.) and Philo Judaeus (ca. 20 B.C.E.—ca. 50 C.E.); secular Jewish writers of

history and philosophy, respectively. "Deuterocanonical writers": authors of books of the Scriptures contained in the Septuagint but not in the Hebrew canon.

1. Understanding appears to go in endless circles, for a preliminary understanding of even the individuals themselves comes from a general knowledge of the language.

2. Synopses that the author gives himself are too dry to engage even the technical aspect of interpretation, and with summaries like those publishers authorize for prefaces one comes under the influence of their interpretations.

3. The aim is to find the main idea in light of which the others must be measured, and this goes as well for the technical aspect—to find the main procedure from which the others can more easily be found. It is similarly indispensable for grammatical interpretation, which is obvious from the various forms of misunderstanding it often raises.

4. One can omit it easier when dealing with the unmeaningful, and although with difficult works it appears to be less helpful, it is actually all the more indispensable. A general summary is characteristically the least help in understanding difficult writers.

Should the exposition be done partially, one would eventually have to connect both aspects in the execution of the interpretation, but in theory one must divide and handle each specially, even if afterwards one must endeavor to develop each so completely that the other becomes indispensable, or, what is more important, so that its result coincides with the first. The grammatical interpretation leads the way.

PART TWO THE TECHNICAL INTERPRETATION

1. The common beginning for both the technical and the grammatical interpretation is the general overview which grasps the unity of the work and the main features of the composition. The unity of the work, the theme, will be viewed here as the writer's motivating principle, and the foundation of the composition as his peculiar nature as it is manifested in each motif.

The unity of the work derives from the manner in which the grammatical constructions available in the language are composed or connected. The author sets a verbal object in motion as communication. The difference between popular and scientific works is that the author of the former arranges the subject according to his peculiar style, which mirrors itself in his ordering. Because each author has minor conceptions each of which is determined by his peculiarities, one can recognize them from among analogous omissions and anomalous inclusions.

I perceive the author as he functions in the language: partly bringing forth new things by his use of language, partly retaining qualities of language which he repeats and transmits. In the same way, from a knowledge of an area of speech, I can perceive the author's language as its product and see how he operates under its aegis. Both methods are the same process begun from different starting points.

2. The ultimate goal of the psychological [technical] exposition is nothing other than to perceive the consequences of the beginning; that is to say, to consider the work as it is formed by its parts, and to perceive every part in light of the work's overall subject as its motivation; this is also to say that the form is seen to be shaped by the subject matter.

When I have looked at everything individually, there is nothing left over to understand. It is also obvious in itself that the apparent contrast between understanding the individual parts and understanding the whole disappears when every part receives the same treatment as the whole. But the goal [of good interpretation] is only achieved in the continuity of both perspectives. Even when much is only to be understood grammatically, it is not understood fully unless one can make an intrinsic analysis which never loses sight of the genesis of the work.

3. The goal of good interpretation is to understand the style completely.

We are accustomed to understanding style as the handling of language. We presume that thought and language intertwine throughout, and the specific manner with which one understands the subject requires an understanding of the arrangement of words: i.e., the handling of language.

The peculiarity of an individual conception results from what is missing or added to a conventional conception. Whatever peculiarity results from imitation or habit results in a bad style.

4. Good interpretation can only be approximated.

We are, considering all advances in hermeneutical theory, still far from making it a perfect art, as the perennial fights over the writings of Homer and over the comparative merits of the three tragic writers⁴ show.

No individual inspection of a work ever exhausts its meaning; interpretation can always be rectified. Even the best is only an approximation of the meaning. Because interpretation so seldom succeeds, and because even the superior critic is open to criticism, we can see that we are still far from the goal of making hermeneutics a perfect art.

5. Before beginning the technical exposition, we must know the manner in which the subject occurred to the originator, and how he acquired his language, and anything else one can learn about his mannerisms.

First, one must consider the prior development of the genre of the work at the time when it was written; second, one must consider the use made of the genre typically in the place where the writer worked and in adjacent areas; finally, no exact understanding of the development and usage is possible without a knowledge of the related contemporary literature and especially the works the author might have used as a model. Such a cohesive study is indispensable.

The third goal raises very troublesome problems. We could say that the interpretive process as a whole is only as easy as this step is to take. But because even this step requires a judgment which can also be anticipated in the previous steps, it is possible that one might be able to omit it. Biographies of the author were originally annexed to their works for this purpose; nowadays this connection is overlooked. The best sort of prolegomena attends to the first two points.

With these contextualizations [*Vorkenntnissen*] in hand one can gain an

4. That is, the Greek tragedians Aeschylus, Sophocles, and Euripides (all active 5th c. B.C.E.). "Perennial fights": over whether the *Iliad* and *Odyssey*

were by a single poet or were collections of short works put together from various sources.

excellent perception of the essential characteristic of a work upon a first reading.

6. The whole task requires the use of two methods, the divinatory and the comparative, which, however, as they constantly refer back to each other, must not be separated.

Using the divinatory, one seeks to understand the writer intimately [*unmittelbar*] to the point that one transforms oneself into the other. Using the comparative, one seeks to understand a work as a characteristic type, viewing the work, in other words, in light of others like it. The one is the feminine force in the knowledge of human nature; the other is the masculine.

Both refer back to each other. The first depends on the fact that every person has a susceptibility to intuiting others, in addition to his sharing many human characteristics. This itself appears to depend on the fact that everyone shares certain universal traits; divination consequently is inspired as the reader compares himself with the author.

But how does the comparative come to subsume the subject under a general type? Obviously, either by comparing, which could go on infinitely, or by divination.

Neither may be separated from the other, because divination receives its security first from an affirmative comparison, without which it might become outlandish. But the comparative of itself cannot yield a unity. The general and specific must permeate each other, and this can only happen by means of divination.

7. The idea of the work, by which the author's fundamental purpose [*Wille*] reveals itself, can only be understood in terms of the convergence of the basic material and its peculiarity of his developments.

The basic material by itself stipulates no set manner of execution. As a rule it is easy enough to determine, even if it is not exactly specified; but for all that, one can be mistaken. One finds the purpose of the work most precisely in its peculiar or characteristic development of its material. Often the characteristic motif has only a limited influence on certain sections of a work, but nonetheless shapes the character of the work by its influence on others. The interpretive knack is to somehow intuit the meaning while being cautiously aware of how the intuition in some ways predetermines the process of validating it.

1959, 1974

GEORG WILHELM FRIEDRICH HEGEL

1770–1831

IMMANUEL KANT (1724–1804) and G. W. F. HEGEL are the ARISTOTLE and PLATO of modern Continental philosophy, the two dominant figures from whom everything else seems to flow. Hegel is a great synthesizer, a system builder who bequeaths to modern thought the conviction that an individual entity's meaning rests not in itself but in the relationship of that thing to other things within an all-encompassing, ever-changing whole. Where the part is *situated* is crucial. All modern criticism that stresses the historical and social context of utterances or intertextual connections is Hegelian to some degree.

Hegel was the son of a minor court official in the duchy of Württemberg, in what is now Germany. He studied theology at the University of Tübingen, where he became friends with the poet Friedrich Hölderlin and the philosopher Friedrich von Schelling. After graduating in 1793, Hegel worked as a private tutor until he began teaching at the University of Jena in 1801, the year he published his first book. In 1807 he published *Phenomenology of Spirit*, the first version of his grand philosophical vision and one of the great philosophical masterpieces of all time. A sexual scandal (he had a child with his landlord's wife) forced Hegel to leave Jena in 1807, and he would not teach in a university again until 1816. He reached the height of his fame and influence with his lectures at the University of Berlin, which he delivered regularly from 1818 until his death. Many of these series were published either by Hegel himself or from the notes taken by his students, as was *Lectures on Fine Art* (1835–38).

Hegel is usually associated with the *dialectic*, which entails the confrontation of any thesis with its opposite (antithesis), and the resultant synthesis of the two through a process of "overcoming" (*aufgehoben* in German). We might call the dialectic the motor of the Hegelian system, stressing movement and change over stasis. This system, which places individual elements in relation to one another, is in constant motion. Meaning and truth are never fixed because they are always in process. The world possesses not determinate being but only momentary resting places on the stages of becoming. Hegel does believe that there will be stasis and perfection at the end of history, and at times he appears to believe that his philosophy is that end, the moment when consciousness fully understands its own nature—its essential unity with all that exists. Spirit (*Geist*) is the name Hegel most often uses to designate this fundamental unity, and the goal of philosophy is to gain the "absolute knowledge" that would consist of Spirit recognizing the world as its own emanation. The changes of history, its dialectical path, would then come to an end. The dream of such completion has proven extraordinarily alluring yet often dangerous. Shorn of that dream, Hegel's philosophy gives us a dynamic world of interrelationships in which the various elements contend with one another through dialectical struggle. Hegel's most famous disciple, KARL MARX, adopts both the vision of struggle and the dream of an end to strife. But Hegelian themes also echo, in a different key, throughout the work of poststructuralists such as MICHEL FOUCAULT and JULIA KRISTEVA.

Our first selection presents the most famous instance of dialectical confrontation in Hegel, the so-called Master-Slave ("lord" and "bondsmen" in our translation) dialectic. Although dense and abstract, this section of *Phenomenology of Spirit* has been very influential, especially in France, where, by way of Alexandre Kojève's celebrated *Introduction to the Reading of Hegel* (1947), it shaped the thought of JEAN-PAUL SARTRE, SIMONE DE BEAUVOIR, JACQUES LACAN, and JACQUES DERRIDA, among others. The question Hegel asks is this: how does a human being come to consciousness of itself as a self (a consciousness that animals lack)? Hegel assumes that humans are not born with the sense "I am John Smith, and this is what I believe and am like." How then do we acquire self-consciousness? Only in meeting with something that is not the self, according to Hegel. Confrontation with my limits, with the not-self,

enables me to identify what is self, what belongs to me. The reality of this discovered self depends on two things: I must have the consciousness that I am a self (which Hegel calls "being-for-self"), and my existence must be acknowledged or recognized by other human beings ("being-for-others"). In Hegel's words, "Self-consciousness exists in and for itself when, and by the fact that, it so exists for another; that is, it exists only in being acknowledged."

Most interpreters have seen Hegel as demonstrating that selfhood is a social fact. The child develops a sense of self largely because others treat it as a self—and the self will be socially constructed in different ways, depending on how it is treated. Selves are not born but made, in a dialectical social process of interrelationships among selves. This ongoing process proceeds through "moments" that Hegel then identifies as stages on the way toward full self-consciousness. Just as the self develops consciousness over time, so the human species as a whole passes through moments in history on the path to absolute knowledge. *Phenomenology of Spirit* traces this movement of humans through time to the culminating moment of the full self-consciousness of Spirit.

In the Master-Slave dialectic, the counterposed selves who are coming to consciousness have so much at stake that their relationships are a constant source of strife, "such that they prove themselves and each other through a life-and-death struggle." Selves do not take their fundamental dependence on others kindly. Here power enters the discussion, as Hegel imagines that each individual would prefer to guarantee continued recognition from the other, while not extending that recognition in turn. Such imbalance, taken to its extreme, is figured by Hegel as the relationship between a master and a slave, which is established in a battle that ends when the Slave grants recognition and service to the Master in return for continued life. (Both the Master and Slave stake their life in the battle, but the loser becomes a slave by choosing a life of servitude over death at the hand of the victor.)

The Master, however, finds victory hollow. Recognition, like love, has value only when it is freely given, when it comes from someone who is like me in status. If the other acknowledges my existence only because forced to do so, how can that calm my lurking doubt about who I am? (Hegel not only anticipates the processes of self-formation described by SIGMUND FREUD but also describes the existential anxiety that haunts any attachment to "identity.") The Master's access to his own selfhood is mediated through his relationship to the Slave; and since that Slave is "not an independent consciousness, but a dependent one," the Master "is, therefore, not certain of *being-for-self* as the truth of himself." By obliterating the Slave's independence, the Master has removed the very "other" that must be encountered to achieve selfhood.

Meanwhile, the Slave moves from the "dread . . . it has experienced" in the face of "death, the absolute Lord [or Master]" to a fairly satisfactory self-consciousness achieved through work. (The Hegelian description of labor as redeeming greatly influenced Marx.) The Slave gains a sense of self because his labor has an effect on a material world of resistant objects. The Master has lost contact with the non-self (except with the Slave) because he has left all physical interaction with the world to the Slave. This ironic reversal of the Master-Slave relationship points toward the reciprocity of dependence that Hegel sees as characterizing human relationships: "They *recognize* themselves as *mutually recognizing* one another." Only if I am willing to acknowledge that the other is also a self, who has a need and a right to be a being-for-self, can I satisfactorily establish my own selfhood.

This account provides a memorable and persuasive model for understanding the complex dynamics of intersubjective relationships. Selfhood is a social product that individuals crave; identity has to be constructed through contentious interaction with and relation to others; this process makes us dependent on others, and thus inclined to resent and fear them; and such dependence involves forms of psychological and social power that are distinct from physical force or the power afforded by superior wealth. Whenever modern literary theorists and critics have been interested in questions of identity and of the self's confrontation with the other (however understood),

Hegel's famous account of the Master-Slave dialectic has hovered in the background.

Our second selection consists of excerpts from the introduction to *Lectures on Fine Art*—Hegel's contribution to philosophical aesthetics, the field that seeks to define the aims of the arts, the features of art objects, the activity of artists, and the effects of the arts on audiences. Aesthetics dates from the 1750s, but Hegel clearly echoes Plato on the arts. For Hegel, the fundamental goal of humanity is to come to full consciousness of the Idea (or Spirit), and philosophy is the golden road to that goal. Yet, unlike Plato, he wants to praise art, not condemn it. Because Hegel accepts the superiority of spirit over matter, truth over appearance, universal over particular, intellectual over sensual, and logic over feeling, he must argue that art, understood correctly, is not merely a sensuous, material, singular thing; instead, it contributes to human understanding of the Idea.

Hegel takes the line of argument suggested by his model of thinking. Just as the self in the Master-Slave dialectic can come to self-consciousness only through encountering an other, so thinking needs to encounter an object. The Spirit or Idea dwells within humans, but as "a *thinking* consciousness" a person "draws out of himself and puts *before himself* what . . . is." After art has given Spirit a concrete form, it can be apprehended. This account makes art part of the philosophical project of coming to full consciousness—and provides Hegel with firm answers to a number of problems that bedevil aesthetics.

In the first part of our selection, Hegel reviews previous notions of the arts, steering a middle path between accounts that emphasize rules and those that rely on pure inspiration. More important, Hegel asserts the superiority of human-made artistic objects to God-made natural ones by appealing to their spiritual purpose. Spirit dwells in nature as well as in humans, but only humans are conscious of reaching an awareness of spirit. A man needs art "to lift the inner and outer world into his spiritual consciousness as an object in which he recognizes again his own self." In Hegel's quasi-religious philosophy, human life reaches its highest form when we recognize that the spirit of the creator permeates all of the created world, including ourselves. To discover this true self, to align ourselves with spirit, is to attain "free rationality."

True to his historicist convictions, in the second part of our selection Hegel presents the movement to full self-consciousness as occurring in stages. Symbolic, classical, and romantic art form a dialectical triad. Symbolic art, tied to "perceived natural objects," attempts but fails to attach a spiritual significance to those objects. This failure has its uses, since at least "the foreignness of the Idea to natural phenomena" is made manifest. The gap here between the natural and the spiritual is, Hegel tells us, "sublime," a striking revision of a category invoked in antiquity by LONGINUS and in the eighteenth century by JOSEPH ADDISON, EDMUND BURKE, and Kant.

The failure of primitive symbolic art, associated with the ancient Near East, generates its antithesis, classical art; and what Hegel sees as the higher, Western tradition begins. By focusing on "the human form," the Greeks gave the Idea an adequate material embodiment. Since humans are a potent example of the union of spirit and body, Hegel finds ingenious the classical solution to the problem of "bring[ing] the spiritual before our eyes in a sensuous manner." But it too has a defect—the opposite of that of symbolic art, which could not give the Idea a local habitation and name. Classical art fails because it "determine[s]" spirit "as particular and human," thus obscuring its "absolute and eternal" essence.

This "defect . . . demands a transition to a higher form," the romantic. The threat of classical art lies in its sensuousness. Romantic art, even as it utilizes sensuous forms, must move both artist and audience (by irony and sublimity) toward "the *inwardness of self-consciousness*," toward the indwelling spirit. As a synthesis and overcoming of symbolic and classical art, romantic art dissociates the idea from the sensuous form (as does symbolic art) even as it presents the sensuous form (as does classical art). Romantic art stages the "inadequacy" of the material embodiment so that "the Idea . . . appear[s] *perfected* in itself as spirit and heart."

Thus Hegel is a champion of Romantic art. In the move from sensuous form to

inwardness, he places the expression of "subjective inner depth" and "reflective emotion" at the center of the artistic enterprise. This notion of art as expression is the cornerstone of Romantic aesthetics—WILLIAM WORDSWORTH, PERCY BYSSHE SHELLEY, and RALPH WALDO EMERSON are among the nineteenth-century writers who espouse some version of an expressivist aesthetic—and it continues to dominate popular understandings of art, especially poetry. But Hegel's historicism also suggests a broader expressivist understanding of art, in which the artwork is viewed as an expression of an era, zeitgeist, culture, or nation rather than of the artist's self. In both cases, artistic representation is tied not to some visible thing imitated by the artist but to some invisible ideas, emotions, attitudes, values, or spirit.

While much contemporary critical practice, knowingly or not, is Hegelian, postmodern theory has self-consciously struggled (sometimes desperately) to slough off Hegelian habits. The great problem is Hegel's will to totality, the movement of his philosophy, through dialectical overcoming and synthesis, to include everything. Postmodern theorists resist this philosophical imperialism, this "totalizing impulse," insisting that inclusion through the dialectic always comes at the price of overcoming what is most singular and different in the incorporated other. The problem with subsuming everything into a totalizing system is the erasure of difference. Hence, in our selection Hegel makes art safe for philosophy by downplaying or explaining away everything that makes art different from and even antithetical to thinking.

By highlighting the different and the singular, postmodernists question Hegel's placing of everything into a relational, systematic whole. But since postmodern theory does accept that meaning is the product of systematic, though differential, relations, Hegel has been hard to negate. Because he can be neither banished nor embraced, Hegel remains a figure to whom much contemporary theory obsessively returns.

BIBLIOGRAPHY

Edited by Eva Moldenhauer and Karl Markus Michel, Hegel's *Werke* (22 vols., 1969–72) is a complete German edition of his writings. Most of his work has been translated into English, though there is no standard scholarly edition of the complete works. Of special relevance to students of literature are *Philosophy of Right*, translated by T. M. Knox (1942); *Hegel's Aesthetics: Lectures on Fine Art*, translated by T. M. Knox (2 vols., 1975); *Lectures on the Philosophy of World History*, edited by H. B. Nisbet (1975); *Phenomenology of Spirit*, translated by A. V. Miller (1977); and *Lectures on the History of Philosophy*, edited by Robert Brown (3 vols., 1990). *The Hegel Reader*, edited by Stephen Houlgate (1998), offers selections covering the breadth of Hegel's interests. The best biography is Terry Pinkard's *Hegel: A Biography* (2000).

The secondary literature on Hegel is immense; thus the following bibliography is extremely selective. Jean Hyppolite's *Genesis and Structure of Hegel's Phenomenology of Spirit* (1946; trans. 1974) and Alexandre Kojève's *Introduction to the Reading of Hegel* (1947; trans. 1969) are two French works that shaped the existentialist and poststructuralist understandings of Hegel. Herbert Marcuse's *Reason and Revolution: Hegel and the Rise of Social Theory* (1941) and György Lukács's *The Young Hegel* (1948; trans. 1975) are important documents in Western Marxism's appropriation of Hegel.

Jack Kaminsky's *Hegel on Art* (1962) provides a useful summary of Hegel's aesthetics, while G. R. G. Mure's *The Philosophy of Hegel* (1965) is a good overview of Hegel's whole philosophical system. The single best, and most influential, overview is Charles Taylor's *Hegel* (1975), which also comes in a slimmer version called *Hegel and Modern Society* (1979). Two other good overviews are Robert Solomon's *In the Spirit of Hegel* (1983), which focuses on *Phenomenology of Spirit*, and Peter Singer's *Hegel* (1983), which is especially fine on Hegel's politics.

Jacques Derrida's *Glas* (1974, trans. 1986) is the most important of many poststructuralist encounters with Hegel. For other reexaminations of Hegel through the lens of contemporary theory, see William Desmond, *Art and the Absolute: A Study of Hegel's Aesthetics* (1986); David Kolb, *The Critique of Pure Modernity: Hegel, Hei-*

degger, and *After* (1986); Stephen Houlgate, *Hegel, Nietzsche, and the Criticism of Metaphysics* (1986); Judith Butler, *Subjects of Desire: Hegelian Reflections in Twentieth-Century France* (1987); and John McGowan, *Postmodernism and Its Critics* (1991). The best places for those unfamiliar with Hegel to start are Stephen Houlgate's superb *Freedom, Truth, and History: An Introduction to Hegel's Philosophy* (1991) and *The Cambridge Companion to Hegel*, edited by Frederick C. Beiser (1993), which provides clear essays that summarize Hegel's work in areas ranging from metaphysics to ethics. Works that continue to analyze him in relation to current debates and themes in literary theory include Slavoj Žižek, *Tarrying with the Negative: Kant, Hegel, and the Critique of Ideology* (1993); Paul Redding, *Hegel's Hermeneutics* (1996); *Feminist Interpretations of Hegel*, edited by Patricia J. Mills, (1996); Jeffrey A. Gauthier, *Hegel and Feminist Social Criticism: Justice, Recognition, and the Feminine* (1997); Robert R. Williams, *Hegel's Ethics of Recognition* (1997); *Hegel, History, and Interpretation*, edited by Shaun Gallagher (1997); and *Hegel after Derrida*, edited by Stuart Barnett (1998).

Kurt Steinhauer's massive German/English *Hegel Bibliographie* (1980, with additional volumes in 1993) covers almost all the secondary literature from 1802 onward. A more manageable bibliography, helpfully arranged by topic, can be found in *The Cambridge Companion to Hegel* (cited above).

From Phenomenology of Spirit¹

[The Master-Slave Dialectic]

178. Self-consciousness exists in and for itself when, and by the fact that, it so exists for another; that is, it exists only in being acknowledged [*als ein Anerkanntes*]. The Notion of this its unity in its duplication embraces many and varied meanings. Its moments, then, must on the one hand be held strictly apart, and on the other hand must in this differentiation at the same time also be taken and known as not distinct, or in their opposite significance. The twofold significance of the distinct moments has in the nature of self-consciousness to be infinite, or directly the opposite of the determinateness in which it is posited. The detailed exposition of the Notion of this spiritual unity in its duplication will present us with the process of Recognition [*Anerkennen*].

179. Self-consciousness is faced by another self-consciousness; it has come out of itself. This has a twofold significance: first, it has lost itself, for it finds itself as an *other* being; secondly, in doing so it has superseded the other, for it does not see the other as an essential being, but in the other sees its own self.

180. It must supersede this otherness of itself. This is the supersession of the first ambiguity, and is therefore itself a second ambiguity. First, it must proceed to supersede the *other* independent being in order thereby to become certain of *itself* as the essential being; secondly, in so doing it proceeds to supersede its *own* self, for this other is itself.

181. This ambiguous supersession of its ambiguous otherness is equally an ambiguous return into *itself*. For first, through the supersession, it receives back its own self, because, by superseding its otherness, it again becomes equal to itself; but secondly, it equally gives the other self-consciousness

1. Translated by A. V. Miller, who sometimes retains the original German or adds clarifying words or phrases in brackets and has added the paragraph numbers.

back again to itself, for it saw itself in the other, but supersedes this being of itself in the other and thus lets the other again go free.

182. Now, this movement of self-consciousness in relation to another self-consciousness has in this way been represented as the action of *one* self-consciousness, but this action of the one has itself the double significance of being both its own action and the action of the other as well. For the other is equally independent and self-contained, and there is nothing in it of which it is not itself the origin. The first does not have the object before it merely as it exists primarily for desire, but as something that has an independent existence of its own, which, therefore, it cannot utilize for its own purposes, if that object does not of its own accord do what the first does to it. Thus the movement is simply the double movement of the two self-consciousnesses. Each sees the *other* do the same as it does; each does itself what it demands of the other, and therefore also does what it does only in so far as the other does the same. Action by one side only would be useless because what is to happen can only be brought about by both.

183. Thus the action has a double significance not only because it is directed against itself as well as against the other, but also because it is indivisibly the action of one as well as of the other.

184. In this movement we see repeated the process which presented itself as the play of Forces, but repeated now in consciousness. What in that process was *for us*, is true here of the extremes themselves. The middle term is self-consciousness which splits into the extremes; and each extreme is this exchanging of its own determinateness and an absolute transition into the opposite. Although, as consciousness, it does indeed come *out of itself*, yet, though out of itself, it is at the same time kept back within itself, is *for itself*, and the self outside it, is *for it*. It is aware that it at once is, and is not, another consciousness, and equally that this other is *for itself* only when it supersedes itself as being for itself, and is for itself only in the being-for-self of the other. Each is for the other the middle term, through which each mediates itself with itself and unites with itself; and each is for itself, and for the other, an immediate being to its own account, which at the same time is such only through this mediation.² They *recognize* themselves as *mutually recognizing* one another.

185. We have now to see how the process of this pure Notion of recognition, of the duplicating of self-consciousness in its oneness, appears to self-consciousness. At first, it will exhibit the side of the inequality of the two, or the splitting-up of the middle term into the extremes which, as extremes, are opposed to one another, one being only *recognized*, the other only *recognizing*.

186. Self-consciousness is, to begin with, simple being-for-self, self-equal through the exclusion from itself of everything else. For it, its essence and absolute object is 'I'; and in this immediacy, or in this [mere] being, of its being-for-self, it is an *individual*. What is 'other' for it is an unessential, negatively characterized object. But the 'other' is also a self-consciousness; one individual is confronted by another individual. Appearing thus immediately on the scene, they are for one another like ordinary objects, *independent* shapes, individuals submerged in the being [or immediacy] of *Life*—for the object in its immediacy is here determined as Life. They are, *for each*

2. That is, the encounter with the other is necessary for self-consciousness.

other, shapes of consciousness which have not yet accomplished the movement of absolute abstraction, of rooting-out all immediate being, and of being merely the purely negative being of self-identical consciousness; in other words, they have not as yet exposed themselves to each other in the form of pure being-for-self, or as self-consciousness. Each is indeed certain of its own self, but not of the other, and therefore its own self-certainty still has no truth. For it would have truth only if its own being-for-self had confronted it as an independent object, or, what is the same thing, if the object had presented itself as this pure self-certainty. But according to the Notion of recognition this is possible only when each is for the other what the other is for it, only when each in its own self through its own action, and again through the action of the other, achieves this pure abstraction of being-for-self.

187. The presentation of itself, however, as the pure abstraction of self-consciousness consists in showing itself as the pure negation of its objective mode, or in showing that it is not attached to any specific *existence*, not to the individuality common to existence as such, that it is not attached to life. This presentation is a twofold action: action on the part of the other, and action on its own part. In so far as it is the action of the *other*, each seeks the death of the other. But in doing so, the second kind of action, action on its own part, is also involved; for the former involves the staking of its own life. Thus the relation of the two self-conscious individuals is such that they prove themselves and each other through a life-and-death struggle. They must engage in this struggle, for they must raise their certainty of being *for themselves* to truth, both in the case of the other and in their own case. And it is only through staking one's life that freedom is won; only thus is it proved that for self-consciousness, its essential being is not [just] being, not the *immediate* form in which it appears, not its submergence in the expanse of life, but rather that there is nothing present in it which could not be regarded as a vanishing moment, that it is only pure *being-for-self*. The individual who has not risked his life may well be recognized as a *person*, but he has not attained to the truth of this recognition as an independent self-consciousness. Similarly, just as each stakes his own life, so each must seek the other's death, for it values the other no more than itself; its essential being is present to it in the form of an 'other', it is outside of itself and must rid itself of its self-externality. The other is an *immediate* consciousness entangled in a variety of relationships, and it must regard its otherness as a pure being-for-self or as an absolute negation.

188. This trial by death, however, does away with the truth which was supposed to issue from it, and so, too, with the certainty of self generally. For just as life is the *natural* setting of consciousness, independence without absolute negativity, so death is the *natural* negation of consciousness, negation without independence, which thus remains without the required significance of recognition. Death certainly shows that each staked his life and held it of no account, both in himself and in the other; but that is not for those who survived this struggle. They put an end to their consciousness in its alien setting of natural existence, that is to say, they put an end to themselves, and are done away with as *extremes* wanting to be *for themselves*, or to have an existence of their own. But with this there vanishes from their interplay the essential moment of splitting into extremes with opposite char-

acteristics; and the middle term collapses into a lifeless unity which is split into lifeless, merely immediate, unopposed extremes; and the two do not reciprocally give and receive one another back from each other consciously, but leave each other free only indifferently, like things. Their act is an abstract negation, not the negation coming from consciousness, which supersedes in such a way as to preserve and maintain what is superseded, and consequently survives its own supersession.³

189. In this experience, self-consciousness learns that life is as essential to it as pure self-consciousness. In immediate self-consciousness the simple 'I' is the absolute object which, however, for us or in itself is absolute mediation, and has as its essential moment lasting independence. The dissolution of that simple unity is the result of the first experience; through this there is posited a pure self-consciousness, and a consciousness which is not purely for itself but for another, i.e. is a merely *immediate* consciousness, or consciousness in the form of *thinghood*. Both moments are essential. Since to begin with they are unequal and opposed, and their reflection into a unity has not yet been achieved, they exist as two opposed shapes of consciousness; one is the independent consciousness whose essential nature is to be for itself, the other is the dependent consciousness whose essential nature is simply to live or to be for another. The former is lord [*Herr*], the other is bondsman [*Knecht*].⁴

190. The lord is the consciousness that exists *for itself*, but no longer merely the Notion of such a consciousness. Rather, it is a consciousness existing *for itself* which is mediated with itself through another consciousness, i.e. through a consciousness whose nature it is to be bound up with an existence that is independent, or thinghood in general. The lord puts himself into relation with both of these moments, to a *thing* as such, the object of desire, and to the consciousness for which thinghood is the essential characteristic. And since he is (a) *qua* the Notion of self-consciousness an immediate relation of *being-for-self*, but (b) is now at the same time mediation, or a being-for-self which is for itself only through another, he is related (a) immediately to both, and (b) mediately to each through the other. The lord relates himself mediately to the bondsman through a being [a thing] that is independent, for it is just this which holds the bondsman in bondage; it is his chain from which he could not break free in the struggle, thus proving himself to be dependent, to possess his independence in thinghood. But the lord is the power over this thing, for he proved in the struggle that it is something merely negative; since he is the power over this thing and this again is the power over the other [the bondsman], it follows that he holds the other in subjection. Equally, the lord relates himself mediately to the thing through the bondsman; the bondsman, *qua* self-consciousness in general, also relates himself negatively to the thing, and takes away its independence; but at the same time the thing is independent *vis-à-vis* the bondsman, whose negating of it, therefore, cannot go to the length of being altogether done with it to the point of annihilation; in other words, he only *works* on it. For the lord, on the other hand, the *immediate* relation becomes through this mediation the sheer negation of the thing, or the enjoyment of it. What

3. This description of "the negation coming from consciousness" encapsulates the dialectic.

4. *Herr* and *Knecht* have often been translated "Master" and "Slave."

desire failed to achieve, he succeeds in doing, viz. to have done with the thing altogether, and to achieve satisfaction in the enjoyment of it. Desire failed to do this because of the thing's independence; but the lord, who has interposed the bondsman between it and himself, takes to himself only the dependent aspect of the thing and has the pure enjoyment of it. The aspect of its independence he leaves to the bondsman, who works on it.

191. In both of these moments the lord achieves his recognition through another consciousness; for in them, that other consciousness is expressly something unessential, both by its working on the thing, and by its dependence on a specific existence. In neither case can it be lord over the being of the thing and achieve absolute negation of it. Here, therefore, is present this moment of recognition, viz. that the other consciousness sets aside its own being-for-self, and in so doing itself does what the first does to it. Similarly, the other moment too is present, that this action of the second is the first's own action; for what the bondsman does is really the action of the lord. The latter's essential nature is to exist only for himself; he is the sheer negative power for whom the thing is nothing. Thus he is the pure, essential action in this relationship, while the action of the bondsman is impure and unessential. But for recognition proper the moment is lacking, that what the lord does to the other he also does to himself, and what the bondsman does to himself he should also do to the other. The outcome is a recognition that is one-sided and unequal.

192. In this recognition the unessential consciousness is for the lord the object, which constitutes the *truth* of his certainty of himself. But it is clear that this object does not correspond to its Notion, but rather that the object in which the lord has achieved his lordship has in reality turned out to be something quite different from an independent consciousness. What now really confronts him is not an independent consciousness, but a dependent one. He is, therefore, not certain of *being-for-self* as the truth of himself. On the contrary, his truth is in reality the unessential consciousness and its unessential action.

193. The *truth* of the independent consciousness is accordingly the servile consciousness of the bondsman. This, it is true, appears at first *outside* of itself and not as the truth of self-consciousness. But just as lordship showed that its essential nature is the reverse of what it wants to be, so too servitude in its consummation will really turn into the opposite of what it immediately is; as a consciousness forced back into itself, it will withdraw into itself and be transformed into a truly independent consciousness.

194. We have seen what servitude is only in relation to lordship. But it is a self-consciousness, and we have now to consider what as such it is in and for itself. To begin with, servitude has the lord for its essential reality; hence the *truth* for it is the independent consciousness that it is *for itself*. However, servitude is not yet aware that this truth is implicit in it. But it does in fact contain within itself this truth of pure negativity and being-for-self, for it has experienced this its own essential nature. For this consciousness has been fearful, not of this or that particular thing or just at odd moments, but its whole being has been seized with dread; for it has experienced the fear of death, the absolute Lord. In that experience it has been quite unmanned, has trembled in every fibre of its being, and everything solid and stable has been shaken to its foundations. But this pure universal movement, the absolute melting-away of everything stable, is the simple, essential nature of self-

consciousness, absolute negativity, *pure being-for-self*, which consequently is *implicit* in this consciousness. This moment of pure being-for-self is also *explicit* for the bondsman, for in the lord it exists for him as his *object*. Furthermore, his consciousness is not this dissolution of everything stable merely in principle; in his service he *actually* brings this about. Through his service he rids himself of his attachment to natural existence in every single detail; and gets rid of it by working on it.

195. However, the feeling of absolute power both in general, and in the particular form of service, is only implicitly this dissolution, and although the fear of the lord is indeed the beginning of wisdom, consciousness is not therein aware that it is a being-for-self. Through work, however, the bondsman becomes conscious of what he truly is. In the moment which corresponds to desire in the lord's consciousness, it did seem that the aspect of unessential relation to the thing fell to the lot of the bondsman, since in that relation the thing retained its independence. Desire has reserved to itself the pure negating of the object and thereby its unalloyed feeling of self. But that is the reason why this satisfaction is itself only a fleeting one, for it lacks the side of objectivity and permanence. Work, on the other hand, is desire held in check, fleetingness staved off; in other words, work forms and shapes the thing. The negative relation to the object becomes its *form* and something *permanent*, because it is precisely for the worker that the object has independence. This *negative* middle term or the formative *activity* is at the same time the individuality or pure being-for-self of consciousness which now, in the work outside of it, acquires an element of permanence.⁵ It is in this way, therefore, that consciousness, *qua* worker, comes to see in the independent being [of the object] its *own* independence.

196. But the formative activity has not only this positive significance that in it the pure being-for-self of the servile consciousness acquires an existence; it also has negative significance with respect to its first moment, *fear*. For, in fashioning the thing, the bondsman's own negativity, his being-for-self, becomes an object for him only through his setting at nought the existing *shape* confronting him. But this objective *negative* moment is none other than the alien being before which it has trembled. Now, however, he destroys this alien negative moment, posits *himself* as a negative in the permanent order of things, and thereby becomes *for himself*, someone existing ~~on~~ his own account. In the lord, the being-for-self is an 'other' for the bondsman, or is only *for* him [i.e. is not his own]; in fear, the being-for-self is present in the bondsman himself; in fashioning the thing, he becomes aware that being-for-self belongs to *him*, that he himself exists essentially and actually in his own right. The shape does not become something other than himself through being made external to him; for it is precisely this shape that is his pure being-for-self, which in this externality is seen by him to be the truth. Through this rediscovery of himself by himself, the bondsman realizes that it is precisely in his work wherein he seemed to have only an alienated existence that he acquires a mind of his own. For this reflection, the two moments of fear and service as such, as also that of formative activity, are necessary, both being at the same time in a universal mode. Without the discipline of service and obedience, fear remains at the formal stage, and

5. Work as "formative activity," according to Hegel, creates a stable object that comes to signify a similar stability for the consciousness that shapes that object.

does not extend to the known real world of existence. Without the formative activity, fear remains inward and mute, and consciousness does not become explicitly *for itself*. If consciousness fashions the thing without that initial absolute fear, it is only an empty self-centered attitude; for its form or negativity is not negativity *per se*, and therefore its formative activity cannot give it a consciousness of itself as essential being. If it has not experienced absolute fear but only some lesser dread, the negative being has remained for it something external, its substance has not been infected by it through and through. Since the entire contents of its natural consciousness have not been jeopardized, determinate being still *in principle* attaches to it; having a 'mind of one's own' is self-will, a freedom which is still enmeshed in servitude. Just as little as the pure form can become essential being for it, just as little is that form, regarded as extended to the particular, a universal formative activity, an absolute Notion; rather it is a skill which is master over some things, but not over the universal power and the whole of objective being.

From Introduction

* * *

THE WORK OF ART AS A PRODUCT OF HUMAN ACTIVITY

(a) As for the first point, that a work of art is a product of human activity, this view has given rise to the thought that this activity, being the *conscious* production of an external object, can also be *known* and expounded, and learnt and pursued by others. For what one man makes, another, it may seem, could make or imitate too, if only he were first acquainted with the manner of proceeding; so that, granted universal acquaintance with the rules of artistic production, it would only be a matter of everyone's pleasure to carry out the procedure in the same manner and produce works of art. It is in this way that the rule-providing theories, mentioned above, with their prescriptions calculated for practical application, have arisen. But what can be carried out on such directions can only be something formally regular and mechanical. For the mechanical alone is of so external a kind that only a purely empty exercise of will and dexterity is required for receiving it into our ideas and activating it; this exercise does not require to be supplemented by anything concrete, or by anything not prescribed in universal rules. This comes out most vividly when such prescriptions do not limit themselves to the purely external and mechanical, but extend to the significant and spiritual activity of the artist. In this sphere the rules contain only vague generalities, for example that 'the theme should be interesting, every character should speak according to his standing, age, sex, and situation'. But if rules are to satisfy here, then their prescriptions should have been drawn up at the same time with such precision that they could be observed just as they

1. Translated by T. M. Knox, who sometimes adds explanatory words or phrases in brackets.

are expressed, without any further spiritual activity of the artist's. Being abstract in content, however, such rules reveal themselves, in their pretence of adequacy to fill the consciousness of the artist, as wholly inadequate, since artistic production is not a formal activity in accordance with given specifications. On the contrary, as spiritual activity it is bound to work from its own resources and bring before the mind's eye a quite other and richer content and more comprehensive individual creations [than formulae can provide]. Therefore, in so far as such rules do actually contain something specific and therefore of practical utility, they may apply in case of need, but still can afford no more than specifications for purely external circumstances.

(b) Thus, as it turns out, the tendency just indicated has been altogether abandoned, and instead of it the opposite one has been adopted to the same extent. For the work of art was no longer regarded as a product of *general* human activity, but as a work of an entirely *specialty gifted* spirit which now, however, is supposed to give free play simply and *only* to its own particular gift, as if to a specific natural force; it is to cut itself altogether loose from attention to universally valid laws and from a conscious reflection interfering with its own instinctive-like productive activity. Indeed it is supposed to be protected from such reflection, since its productions could only be contaminated and spoiled by such awareness. From this point of view the work of art has been claimed as a product of *talent* and *genius*, and the natural element in talent and genius has been especially emphasized. In a way, rightly, since talent is specific and genius universal capability, which man has not the power to give to himself purely and simply through his own self-conscious activity. On this topic we shall speak at greater length later.

Here we have only to mention the false aspect of this view, namely that in artistic production all consciousness of the artist's own activity is regarded as not merely superfluous but even deleterious. In that case production by talent and genius appears as only a *state* and, in particular, a state of *inspiration*. To such a state, it is said, genius is excited in part by an object, and in part can transpose itself into it by its own caprice, a process in which, after all, the good services of the champagne bottle are not forgotten. In Germany this notion became prominent at the time of the so-called *Period of Genius* which was introduced by Goethe's first poetical productions and then sustained by Schiller's.² In their earliest works these poets began afresh, setting aside all the rules then fabricated; they worked deliberately against these rules and thereby surpassed all other writers. However, I will not go further into the confusions which have been prevalent about the concept of inspiration and genius, and which prevail even today about the omniscience of inspiration as such. All that is essential is to state the view that, even if the talent and genius of the artist has in it a natural element, yet this element essentially requires development by thought, reflection on the mode of its productivity, and practice and skill in producing. For, apart from anything else, a main feature of artistic production is external workmanship, since the work of art has a purely technical side which extends into handicraft, especially in architecture and sculpture, less so in painting and music, least of all in poetry. Skill in technique is not helped by any inspiration, but

2. Johann Wolfgang von Goethe (1749–1832) and FRIEDRICH VON SCHILLER (1759–1805) were the two most important poets of the Romantic period in Germany.

only by reflection, industry, and practice. But such skill the artist is compelled to have in order to master his external material and not be thwarted by its intractability.

Now further, the higher the standing of the artist, the more profoundly should he display the depths of the heart and the spirit; these are not known directly but are to be fathomed only by the direction of the artist's own spirit on the inner and outer world. So, once again, it is study whereby the artist brings this content into his consciousness and wins the stuff and content of his conceptions.

* * *

(c) A third view concerning the idea of the work of art as a product of human activity refers to the placing of the work of art in relation to the external phenomena of nature. Here the ordinary way of looking at things took easily to the notion that the human art-product ranked below the product of nature; for the work of art has no feeling in itself and is not through and through enlivened, but, regarded as an external object, is dead; but we are accustomed to value the living higher than the dead. That the work of art has no life and movement in itself is readily granted. What is alive in nature is, within and without, an organism purposefully elaborated into all its tiniest parts, while the work of art attains the appearance of life only on its surface; inside it is ordinary stone, or wood and canvas, or, as in poetry, an idea expressed in speech and letters. But this aspect—external existence—is not what makes a work into a product of fine art; a work of art is such only because, originating from the spirit, it now belongs to the territory of the spirit; it has received the baptism of the spiritual and sets forth only what has been formed in harmony with the spirit. Human interest, the spiritual value possessed by an event, an individual character, an action in its complexity and outcome, is grasped in the work of art and blazoned more purely and more transparently than is possible on the ground of other non-artistic things. Therefore the work of art stands higher than any natural product which has not made this journey through the spirit. For example, owing to the feeling and insight whereby a landscape has been represented in a painting, this work of the spirit acquires a higher rank than the mere natural landscape. For everything spiritual is better than any product of nature. Besides, no natural being is able, as art is, to present the divine Ideal.

Now on what the spirit draws from its own inner resources in works of art it confers permanence in their external existence too; on the other hand, the individual living thing in nature is transient, vanishing, changeable in outward appearance, while the work of art persists, even if it is not mere permanence which constitutes its genuine pre-eminence over natural reality, but its having made spiritual inspiration conspicuous.

But nevertheless this higher standing of the work of art is questioned by another idea commonly entertained. For nature and its products, it is said, are a work of God, created by his goodness and wisdom, whereas the art-product is a purely human work, made by human hands according to human insight. In this contrast between natural production as a divine creation and human activity as something merely finite there lies directly the misunderstanding that God does not work in and through men at all, but restricts the sphere of his activity to nature alone. This false opinion must be completely

rejected if we are to penetrate to the true nature of art. Indeed, over against this view we must cling to the opposite one, namely that God is more honoured by what the spirit makes than by the productions and formations of nature. For not only is there something divine in man, but it is active in him in a form appropriate to the being of God in a totally different and higher manner than it is in nature. God is spirit, and in man alone does the medium, through which the Divine passes, have the form of conscious and actively self-productive spirit; but in nature this medium is the unconscious, the sensuous, and the external, which stands far below consciousness in worth. Now in art-production God is just as operative as he is in the phenomena of nature; but the Divine, as it discloses itself in the work of art, has been generated out of the spirit, and thus has won a suitable thoroughfare for its existence, whereas just being *there* in the unconscious sensuousness of nature is not a mode of appearance appropriate to the Divine.

(d) Now granted that the work of art is made by man as the creation of his spirit, a final question arises, in order to derive a deeper result from the foregoing [discussion], namely, what is man's *need* to produce works of art? On the one hand, this production may be regarded as a mere play of chance and fancies which might just as well be left alone as pursued; for it might be held that there are other and even better means of achieving what art aims at and that man has still higher and more important interests than art has the ability to satisfy. On the other hand, however, art seems to proceed from a higher impulse and to satisfy higher needs,—at times the highest and absolute needs since it is bound up with the most universal views of life and the religious interests of whole epochs and peoples.—This question about the non-contingent but absolute need for art, we cannot yet answer completely, because it is more concrete than an answer could turn out to be at this stage. Therefore we must content ourselves in the meantime with making only the following points.

The universal and absolute need from which art (on its formal side) springs has its origin in the fact that man is a *thinking* consciousness, i.e. that man draws out of himself and puts *before himself* what he is and whatever else is. Things in nature are only *immediate* and *single*, while man as spirit *duplicates* himself, in that (i) he is as things in nature are, but (ii) he is just as much *for* himself; he sees himself, represents himself to himself, thinks, and only on the strength of this active placing himself before himself is he spirit. This consciousness of himself man acquires in a two-fold way: *first, theoretically*, in so far as inwardly he must bring himself into his own consciousness, along with whatever moves, stirs, and presses in the human breast; and in general he must see himself, represent himself to himself, fix before himself what thinking finds as his essence, and recognize himself alone alike in what is summoned out of himself and in what is accepted from without. *Secondly*, man brings himself before himself by *practical* activity, since he has the impulse, in whatever is directly given to him, in what is present to him externally, to produce himself and therein equally to recognize himself. This aim he achieves by altering external things whereon he impresses the seal of his inner being and in which he now finds again his own characteristics. Man does this in order, as a free subject, to strip the external world of its inflexible foreignness and to enjoy in the shape of things only an external realization of himself. Even a child's first impulse involves this practical alteration of

external things; a boy throws stones into the river and now marvels at the circles drawn in the water as an effect in which he gains an intuition of something that is his own doing. This need runs through the most diversified phenomena up to that mode of self-production in external things which is present in the work of art. And it is not only with external things that man proceeds in this way, but no less with himself, with his own natural figure which he does not leave as he finds it but deliberately alters. This is the cause of all dressing up and adornment, even if it be barbaric, tasteless, completely disfiguring, or even pernicious like crushing the feet of Chinese ladies, or slitting the ears and lips. For it is only among civilized people that alteration of figure, behaviour, and every sort and mode of external expression proceeds from spiritual development.

The universal need for art, that is to say, is man's rational need to lift the inner and outer world into his spiritual consciousness as an object in which he recognizes again his own self. The need for this spiritual freedom he satisfies, on the one hand, within by making what is within him explicit to himself, but correspondingly by giving outward reality to this his explicit self, and thus in this duplication of himself by bringing what is in him into sight and knowledge for himself and others. This is the free rationality of man in which all acting and knowing, as well as art too, have their basis and necessary origin.

* * *

DEVELOPMENT OF THE IDEAL INTO THE PARTICULAR FORMS OF THE BEAUTY OF ART

But because the Idea is in this way a concrete unity, this unity can enter the art-consciousness only through the unfolding and then the reconciliation of the particularizations of the Idea,³ and, through this development, artistic beauty acquires a *totality of particular stages and forms*. Therefore, after studying artistic beauty in itself and on its own account, we must see how beauty as a whole decomposes into its particular determinations. This gives, as the *second* part of our study, the doctrine of the *forms of art*. These forms find their origin in the different ways of grasping the Idea as content, whereby a difference in the configuration in which the Idea appears is conditioned. Thus the forms of art are nothing but the different relations of meaning and shape, relations which proceed from the Idea itself and therefore provide the true basis for the division of this sphere. For division must always be implicit in the concept, the particularization and division of which is in question.

We have here to consider *three* relations of the Idea to its configuration.

(a) *First*, art begins when the Idea, still in its indeterminacy and obscurity, or in bad and untrue determinacy, is made the content of artistic shapes. Being indeterminate, it does not yet possess in itself that individuality which the Ideal demands; its abstraction and one-sidedness leave its shape externally defective and arbitrary. The first form of art is therefore rather a *mere search* for portrayal than a capacity for true presentation; the Idea has not found the form even in itself and therefore remains struggling and striving

3. That is, the different historical forms of art.

after it. We may call this form, in general terms, the *symbolic* form of art. In it the abstract Idea has its shape outside itself in the natural sensuous material from which the process of shaping starts⁴ and with which, in its appearance, this process is linked. Perceived natural objects are, on the one hand, primarily left as they are, yet at the same time the substantial Idea is imposed on them as their meaning so that they now acquire a vocation to express it and so are to be interpreted as if the Idea itself were present in them. A corollary of this is the fact that natural objects have in them an aspect according to which they are capable of representing a universal meaning. But since a complete correspondence is not yet possible, this relation can concern only an *abstract* characteristic, as when, for example, in a lion strength is meant.

On the other hand, the abstractness of this relation brings home to consciousness even so the foreignness of the Idea to natural phenomena, and the Idea, which has no other reality to express it, launches out in all these shapes, seeks itself in them in their unrest and extravagance, but yet does not find them adequate to itself. So now the Idea exaggerates natural shapes and the phenomena of reality itself into indefiniteness and extravagance; it staggers round in them, it bubbles and ferments in them, does violence to them, distorts and stretches them unnaturally, and tries to elevate their phenomenal appearance to the Idea by the diffuseness, immensity, and splendour of the formations employed. For the Idea is here still more or less indeterminate and unshapable, while the natural objects are thoroughly determinate in their shape.

In the incompatibility of the two sides to one another, the relation of the Idea to the objective world therefore becomes a *negative* one, since the Idea, as something inward, is itself unsatisfied by such externality, and, as the inner universal substance thereof, it persists *sublime* above all this multiplicity of shapes which do not correspond with it. In the light of this sublimity, the natural phenomena and human forms and events are accepted, it is true, and left as they are, but yet they are recognized at the same time as incompatible with their meaning which is raised far above all mundane content.

These aspects constitute in general the character of the early artistic pantheism of the East, which on the one hand ascribes absolute meaning to even the most worthless objects, and, on the other, violently coerces the phenomena to express its view of the world whereby it becomes bizarre, grotesque, and tasteless, or turns the infinite but abstract freedom of the substance [i.e. the one Lord] disdainfully against all phenomena as being null and evanescent. By this means the meaning cannot be completely pictured in the expression and, despite all striving and endeavour, the incompatibility of Idea and shape still remains unconquered.—This may be taken to be the first form of art, the symbolic form with its quest, its fermentation, its mysteriousness, and its sublimity.

(b) In the *second* form of art which we will call the *classical*, the double defect of the symbolic form is extinguished. The symbolic shape is imperfect

4. An unknown block of stone may symbolize the Divine, but it does not represent it. Its natural shape has no connection with the Divine and is therefore external to it and not an embodiment of

it. When shaping begins, the shapes produced are symbols, perhaps, but in themselves are fantastic and monstrous [Hegel's note].

because, (i) in it the Idea is presented to consciousness only as indeterminate or determined *abstractly*, and, (ii) for this reason the correspondence of meaning and shape is always defective and must itself remain purely abstract. The classical art-form clears up this double defect; it is the free and adequate embodiment of the Idea in the shape peculiarly appropriate to the Idea itself in its essential nature. With this shape, therefore, the Idea is able to come into free and complete harmony. Thus the classical art-form is the first to afford the production and vision of the completed Ideal and to present it as actualized in fact.

Nevertheless, the conformity of concept and reality in classical art must not be taken in the purely *formal* sense of a correspondence between a content and its external configuration, any more than this could be the case with the Idea itself. Otherwise every portrayal of nature, every cast of features, every neighbourhood, flower, scene, etc., which constitutes the end and content of the representation, would at once be classical on the strength of such congruity between content and form. On the contrary, in classical art the peculiarity of the content consists in its being itself the concrete Idea, and as such the concretely spiritual, for it is the spiritual alone which is the truly inner [self]. Consequently, to suit such a content we must try to find out what in nature belongs to the spiritual in and for itself. The *original* Concept itself it must be which *invented* the shape for concrete spirit, so that now the *subjective* Concept—here the spirit of art—has merely *found* this shape and made it, as a natural shaped existent, appropriate to free individual spirituality. This shape, which the Idea as spiritual—indeed as individually determinate spirituality—assumes when it is to proceed out into a temporal manifestation, is the human form. Of course personification and anthropomorphism have often been maligned as a degradation of the spiritual, but in so far as art's task is to bring the spiritual before our eyes in a sensuous manner, it must get involved in this anthropomorphism, since spirit appears sensuously in a satisfying way only in its body. The transmigration of souls⁵ is in this respect an abstract idea, and physiology should have made it one of its chief propositions that life in its development had necessarily to proceed to the human form as the one and only sensuous appearance appropriate to spirit.

But the human body in its forms counts in classical art no longer as a merely sensuous existent, but only as the existence and natural shape of the spirit, and it must therefore be exempt from all the deficiency of the purely sensuous and from the contingent finitude of the phenomenal world. While in this way the shape is purified in order to express in itself a content adequate to itself, on the other hand, if the correspondence of meaning and shape is to be perfect, the spirituality, which is the content, must be of such a kind that it can express itself completely in the natural human form, without towering beyond and above this expression in sensuous and bodily terms. Therefore here the spirit is at once determined as particular and human, not as purely absolute and eternal, since in this latter sense it can proclaim and express itself only as spirituality.

This last point in its turn is the defect which brings about the dissolution

5. Reincarnation, belief in which was widespread in Greek antiquity; it began with Greek Orphic cults and followers of the pre-Socratic philosopher Pythagoras (6th c. B.C.E.).

of the classical art-form and demands a transition to a higher form, the *third*, namely the *romantic*.

(c) The romantic form of art cancels again the completed unification of the Idea and its reality, and reverts, even if in a higher way, to that difference and opposition of the two sides which in symbolic art remained unconquered. The classical form of art has attained the pinnacle of what illustration by art could achieve, and if there is something defective in it, the defect is just art itself and the restrictedness of the sphere of art. This restrictedness lies in the fact that art in general takes as its subject-matter the spirit (i.e. the *universal*, infinite and concrete in its nature) in a *sensuously* concrete form, and classical art presents the complete unification of spiritual and sensuous existence as the *correspondence* of the two. But in this blending of the two, spirit is not in fact represented in its *true nature*. For spirit is the infinite subjectivity of the Idea, which as absolute inwardness cannot freely and truly shape itself outwardly on condition of remaining moulded into a bodily existence as the one appropriate to it.⁶

Abandoning this [classical] principle, the romantic form of art cancels the undivided unity of classical art because it has won a content which goes beyond and above the classical form of art and its mode of expression. This content—to recall familiar ideas—coincides with what Christianity asserts of God as a spirit, in distinction from the Greek religion which is the essential and most appropriate content for classical art. In classical art the concrete content is *implicitly* the unity of the divine nature with the human, a unity which, just because it is only immediate and implicit, is adequately manifested also in an immediate and sensuous way. The Greek god is the object of naïve intuition and sensuous imagination, and therefore his shape is the bodily shape of man. The range of his power and his being is individual and particular. Contrasted with the individual he is a substance and power with which the individual's inner being is only implicitly at one but without itself possessing this oneness as inward subjective knowledge. Now the higher state is the *knowledge* of that *implicit* unity which is the content of the classical art-form and is capable of perfect presentation in bodily shape. But this elevation of the implicit into self-conscious knowledge introduces a tremendous difference. It is the infinite difference which, for example, separates man from animals. Man is an animal, but even in his animal functions, he is not confined to the implicit, as the animal is; he becomes conscious of them, recognizes them, and lifts them, as, for instance, the process of digestion, into self-conscious science. In this way man breaks the barrier of his implicit and immediate character, so that precisely because he *knows* that he is an animal, he ceases to be an animal and attains knowledge of himself as spirit.

Now if in this way what was implicit at the previous stage, the unity of divine and human nature, is raised from an *immediate* to a *known* unity, the *true* element for the realization of this content is no longer the sensuous immediate existence of the spiritual in the bodily form of man, but instead the *inwardness of self-consciousness*. Now Christianity brings God before our imagination as spirit, not as an individual, particular spirit, but as absolute

6. In other words, thought is "inwardness" in the sense that thoughts are not outside one another in the way that parts of a body are. That is why the

spirit cannot find an adequate embodiment in things but only in thoughts, or at least only in the inner life [Hegel's note].

in spirit and in truth. For this reason it retreats from the sensuousness of imagination into spiritual inwardness and makes this, and not the body, the medium and the existence of truth's content. Thus the unity of divine and human nature is a known unity, one to be realized only by *spiritual* knowing and *in spirit*. The new content, thus won, is on this account not tied to sensuous presentation, as if that corresponded to it, but is freed from this immediate existence which must be set down as negative, overcome, and reflected into the spiritual unity. In this way romantic art is the self-transcendence of art but within its own sphere and in the form of art itself.

• We may, therefore, in short, adhere to the view that at this third stage the subject-matter of art is *free concrete spirituality*, which is to be manifested as *spirituality* to the spirituality inward. In conformity with this subject-matter, art cannot work for sensuous intuition. Instead it must, on the one hand, work for the inwardness which coalesces with its object simply as if with itself, for subjective inner depth, for reflective emotion, for feeling which, as spiritual, strives for freedom in itself and seeks and finds its reconciliation only in the inner spirit. This *inner* world constitutes the content of the romantic sphere and must therefore be represented as this inwardness and in the pure appearance of this depth of feeling. Inwardness celebrates its triumph over the external and manifests its victory in and on the external itself, whereby what is apparent to the senses alone sinks into worthlessness.

• On the other hand, however, this romantic form too, like all art, needs an external medium for its expression. Now since spirituality has withdrawn into itself out of the external world and immediate unity therewith, the sensuous externality of shape is for this reason accepted and represented, as in symbolic art, as something inessential and transient; and the same is true of the subjective finite spirit and will, right down to the particularity and caprice of individuality, character, action, etc., of incident, plot, etc. The aspect of external existence is consigned to contingency and abandoned to the adventures devised by an imagination whose caprice can mirror what is present to it, *exactly as it is*, just as readily as it can jumble the shapes of the external world and distort them grotesquely. For this external medium has its essence and meaning no longer, as in classical art, in itself and its own sphere, but in the heart which finds its manifestation in itself instead of in the external world and its form of reality, and this reconciliation with itself it can preserve or regain in every chance, in every accident that takes independent shape, in all misfortune and grief, and indeed even in crime.

• Thereby the separation of Idea and shape, their indifference and inadequacy to each other, come to the fore again, as in symbolic art, but with this essential difference, that, in romantic art, the Idea, the deficiency of which in the symbol brought with it deficiency of shape, now has to appear *perfected* in itself as spirit and heart. Because of this higher perfection, it is not susceptible of an adequate union with the external, since its true reality and manifestation it can seek and achieve only within itself.

• This we take to be the general character of the symbolic, classical, and romantic forms of art, as the three relations of the Idea to its shape in the sphere of art. They consist in the striving for, the attainment, and the transcendence of the Ideal as the true Idea of beauty.

WILLIAM WORDSWORTH

1770-1850

"I am not a critic," William Wordsworth stated in 1830, "and set little value upon the art. The preface which I wrote long ago to my own Poems I was put upon to write by the urgent entreaties of a friend, and heartily regret I ever had anything to do with it; though I do not reckon the principles then advanced erroneous." Wordsworth defined himself as a poet above all, and he is less prolific and gifted as a literary theorist and critic than his friend SAMUEL TAYLOR COLERIDGE. Nevertheless, the preface that he wrote for the second edition of their book *Lyrical Ballads* (1800) is one of the most important documents in English criticism.

Wordsworth was born in Cockermouth, Cumberland, in the English Lake District. His mother died when he was eight; his father, an attorney, died less than six years later. Wordsworth was educated first at Hawkshead Grammar School, Westmorland, a boarding school noted for its training in mathematics and classics, and then at Cambridge University (1787-91), spending July-October 1790 on a walking tour of Europe. In France he was caught up in the excitement that followed the fall of the Bastille on July 14, 1789, and he became a fervent republican sympathizer.

Wordsworth's guardians wanted him to become an Anglican minister, but he persuaded them to support another twelve months of residence in France. When he was forced to return home in December 1792 by the threat of war between France and England, Wordsworth left behind the pregnant Annette Vallon; he supported her and their daughter in later years.

In 1793 Wordsworth's first works of poetry were published, *Descriptive Sketches* and *An Evening Walk*. In 1795 a legacy of £900 from a friend gave him the freedom to pursue a career as a poet. At this time he was living with his sister Dorothy; in 1797 they moved to Alfoxden in Somerset, with Coleridge (whom the poet had met in September 1795) a short distance away. There Wordsworth began to write the lyric and dramatic poems that many readers judge to be the central achievement of his career. The twentieth-century critic NORTHROP FRYE connects the poet's innovative descriptions to social and political critique: "In Wordsworth the existing social and educational structure is artificial, full of inert custom and hypocrisy. Nature is a better teacher than books, and one finds one's lost identity with nature in moments of feeling in which one is penetrated by the sense of nature's 'huge and mighty forms'" (quoting Wordsworth's *Prelude* 1.398).

Wordsworth's early compositions, and his creative partnership with Coleridge, resulted in September 1798 in the anonymous publication of *Lyrical Ballads*. The volume opened with Coleridge's "Ancient Mariner" and closed with Wordsworth's "Tintern Abbey"; all but three of the intervening poems were Wordsworth's. A new edition of *Lyrical Ballads*, incorporating Wordsworth's Preface and many new poems, was issued in 1800; this edition gave Wordsworth's name on the title page but not Coleridge's (whose "Ancient Mariner" was moved back to become the penultimate poem in the collection). In the Preface, Wordsworth declared that the book's object was "to choose incidents and situations from common life and to relate or describe them . . . in a selection of language really used by men, . . . tracing in them . . . the primary laws of our nature." Still another edition was published in 1802, and it was reprinted in 1805.

In later decades, Wordsworth not only wrote new poems but also revised (not always for the better) his earlier work. A collected edition, which includes many of his best poems and two critical essays, was published in 1815. His collections culminated in the six-volume edition of 1849-50. In these years the poet enjoyed both personal happiness—marrying Mary Hutchinson in 1802 and winning recognition as a national figure (he was named poet laureate in 1843)—and painful losses, including

the death at sea of his favorite brother in 1805, a long and never wholly ended estrangement from Coleridge, the deaths of two of his children in 1812, and the physical and mental decline of his sister Dorothy that began in the 1830s. An even earlier loss was of his liberal ideals, much to the dismay of such younger poets as Byron, Keats, and SHELLEY. Wordsworth was horrified by the bloody aftermath of the French Revolution and alarmed by the rise of the French military leader and emperor Napoleon; he became increasingly orthodox in his political, social, and religious beliefs.

The critic HAROLD BLOOM has said that in dramatizing the movements of the individual consciousness, Wordsworth made "the poet's own subjectivity" the "prevalent subject" of poetry. Wordsworth spurred writers to break free from the authority of neoclassical rules and conventions and to find inspiration instead in the emotions, experiences, and speech of ordinary persons. In valuing naturalness and spontaneity, Wordsworth was proposing not that poets abandon literary craft but that poetry should begin with acts of self-expression and self-exploration. There is much truth in the familiar generalization that Romantic poets are visionary, evocative describers of nature—its scenes, settings, landscapes. But the movement outward into the natural world is really one dimension of an interior journey or quest into what Wordsworth called "the hiding-places of man's power." M. H. Abrams concisely explains this fundamental change, in his classic study *The Mirror and the Lamp: Romantic Theory and the Critical Tradition* (1953):

The paramount cause of poetry is not, as in Aristotle, a formal cause, determined primarily by the human actions and qualities imitated; nor, as in neoclassic criticism a final cause, the effect intended upon the audience; but instead an efficient cause—the impulse within the poet of feelings and desires seeking expression, or the compulsion of the "creative" imagination which, like God the creator, has its internal source of motion.

A number of the formulations in the preface have become widely known and are permanently linked to Wordsworth's name—for example, that the modern poems included in *Lyrical Ballads* fit to "metrical arrangement a selection of the real language of men in a state of vivid sensation," and that "good poetry is the spontaneous overflow of powerful feelings," "tak[ing] its origin from emotion recollected in tranquillity." Yet, as W. J. B. Owen and other scholars have noted, Wordsworth is less original than his bold tone and manner suggest; much of what he says about figurative language, poetic diction, and the relationship between poetry and prose draws on an array of eighteenth-century English writings on emotion, knowledge, and aesthetic theory. That we remember Wordsworth's words, not those of his sources, testifies both to the eloquence of his prose and to its association with a magnificent series of poems.

In his criticism, and in the Preface especially, Wordsworth seeks to explain and defend his own literary practice; in this respect, he is akin to fellow poets JOHN DRYDEN and T. S. ELIOT and the novelist HENRY JAMES, whose criticism fabricates frameworks through which their creative endeavors should be understood and appreciated. Like them, Wordsworth possesses a sharp sense of literary history and tradition; where he differs is in his refusal or failure to make the interpretation and evaluation of writers and texts an integral part of his literary project and identity. Indeed, overall his criticism—found in prefaces for his books of poems, a few essays, sentences and paragraphs in letters, and tossed-off opinions and asides in conversations with friends and acquaintances—is not impressive, nor are his judgments compelling. He radically misunderstood and devalued ALEXANDER POPE, SAMUEL JOHNSON, Goethe, and Byron and failed to perceive the genius of Thomas Carlyle and RALPH WALDO EMERSON. As he admitted himself, he was not much interested in the writing of his contemporaries; he cared little for novels, despite living in a period when the novel as a genre was coming to a new, rich prominence. Instead, Wordsworth's mission is to return to basic, timeless truths—and thus he raises and confronts such questions as "What is a Poet?" and "To whom does he address himself?"

Like many important theoretical works by creative writers, Wordsworth's Preface is not always in accord with his actual practice. In the *Biographia Literaria* (1817), Coleridge makes exactly this point and states further that Wordsworth simply asserts without proof that the language of rural folk has a richer reality than that of city dwellers. There are other overemphases, ambiguities, and contradictions in Wordsworth's arguments as well. He stresses that poetry heals and restores the feelings of persons; but when one reviews his poetry and prose as a whole, particularly that of his later career, his point becomes hard to grasp: does Wordsworth mean that poetry will lead to a regenerated society or, instead, that it will accommodate readers to their society as it is? And despite Wordsworth's insistence that the poet engage and employ the language "really used by men," and that such language is best located among those living a "low and rustic life," two of his own greatest literary heroes, as the scholar René Wellek has pointed out, were Spenser and Milton—"the most learned, even bookish poets of the English tradition."

The Preface is to some extent a political text as well as a literary position paper. Wordsworth's desire to select "incidents and situations from common life" blends into poetry the democratic sentiments that the French Revolution had inspired in him in the early 1790s. By advocating "the real language of men," Wordsworth cuts against the neoclassical view that the language of poetry must be more elevated than everyday speech. The rebelliousness in this stance helps us understand why the Romantic critic and essayist William Hazlitt connected Wordsworth's verse with "the revolutionary movement of our age": "His Muse," Hazlitt said, "is a levelling one." By directing attention to ballads, folklore, and other materials usually deemed nonliterary or unpoetical, Wordsworth expands the range of subjects for poetry. He honors children and common men and women, and even criminals and idiots: his poetry does not bestow dignity on them but expresses the dignity they already possess.

Wordsworth was actively concerned about the pressures that impinge on the lives of those living in newly industrialized cities, the pressures that threaten to reduce the mind "to a state of almost savage torpor" and that lead individuals to immerse themselves in reports and stories of sensational incidents. Here he looks forward to the opposition between high and mass or popular cultures that modern critics such as RAYMOND WILLIAMS later explored. Insofar as the Preface establishes the writer as an adversary to popular culture and the always-accelerating trends in social and cultural life, Wordsworth anticipates themes articulated by writers ranging from Shelley to D. H. Lawrence. The poet, he maintains in an important appendix added in 1802; "is the rock of defense of human nature; an upholder and preserver, carrying every where with him relationship and love." Moreover, as he discusses in some detail, poets in the future will be obliged to defend the worth of their activity as against that of the scientists. This is a struggle to which MATTHEW ARNOLD, later in the nineteenth century, and I. A. Richards and the New Critics, in the twentieth century, return with even greater urgency.

BIBLIOGRAPHY

A new complete edition, under the general editorship of Stephen Parrish, is being published by Cornell (1975-). For the criticism and related prose writings, see *Prose Works*, edited by W. J. B. Owen and J. M. Smyser (3 vols., 1974). Collections of Wordsworth's critical prose include *The Critical Opinions of William Wordsworth*, edited by Markham L. Peacock (1950), which presents 450 pages of primary source quotations divided into three categories—subjects, authors, and works, and Wordsworth on his own works; *Literary Criticism of William Wordsworth*, edited by Paul M. Zall (1966); and *Wordsworth's Literary Criticism*, edited by W. J. B. Owen (1974). A good single-volume edition of the poetry and prose is *William Wordsworth*, in the Oxford Authors Series, edited by Stephen Gill (1984).

The standard biography, *William Wordsworth: A Biography*, is by Mary Moorman (2 vols., 1957-65), but Stephen Gill's *William Wordsworth: A Life* (1989) is also

valuable. On the poet's early adulthood, see Kenneth R. Johnston, *The Hidden Wordsworth: Poet, Lover, Rebel, Spy* (1998). See also Mark L. Reed, *Wordsworth: The Chronology of the Early Years, 1770–1799* (1967) and *Wordsworth: The Chronology of the Middle Years, 1800–1815* (1975). For intellectual and literary contexts, consult Duncan Wu, *Wordsworth's Reading, 1770–1799* (1993) and *Wordsworth's Reading, 1800–1815* (1995).

For an excellent study of Wordsworth's Preface as well as an edition of the text, see *Wordsworth's Preface to "Lyrical Ballads,"* edited by W. J. B. Owen (1957). Also insightful is Owen's *Wordsworth as Critic* (1969). There is an extensive body of scholarship on the relationship between Wordsworth and Coleridge and its importance for literary theory and criticism. Among the best books on this topic are Lucy Newlyn, *Coleridge, Wordsworth, and the Language of Allusion* (1986); Theresa M. Kelley, *Wordsworth's Revisionary Aesthetics* (1988); Paul Magnuson, *Coleridge and Wordsworth: A Lyrical Dialogue* (1988); Nicholas Roe, *Wordsworth and Coleridge: The Radical Years* (1988); and Susan Eilenberg, *Strange Power of Speech: Wordsworth, Coleridge, and Literary Possession* (1992).

See also three collections of essays: *The Age of William Wordsworth*, edited by Kenneth R. Johnston and Gene W. Ruoff (1987); *Romantic Revolutions: Criticism and Theory*, edited by Kenneth R. Johnston (1990); and *Wordsworth in Context*, edited by Pauline Fletcher and John Murphy (1992). For further background and bibliography, see the relevant entries in *The English Romantic Poets: A Review of Research and Criticism* (ed. Frank Jordan, 1985), and *British Romantic Poets, 1789–1832*, first and second series (ed. John R. Greenfield, 1990).

Preface to *Lyrical Ballads, with Pastoral and Other Poems* (1802)¹

The first Volume of these Poems has already been submitted to general perusal. It was published, as an experiment, which, I hoped, might be of some use to ascertain, how far, by fitting to metrical arrangement a selection of the real language of men in a state of vivid sensation, that sort of pleasure and that quantity of pleasure may be imparted, which a Poët may rationally endeavour to impart.

I had formed no very inaccurate estimate of the probable effect of those Poems: I flattered myself that they who should be pleased with them would read them with more than common pleasure: and, on the other hand, I was well aware, that by those who should dislike them they would be read with more than common dislike. The result has differed from my expectation in this only, that I have pleased a greater number, than I ventured to hope I should please.

For the sake of variety, and from a consciousness of my own weakness, I was induced to request the assistance of a Friend,² who furnished me with the Poems of the ANCIENT MARINER, the FOSTER-MOTHER'S TALE, the NIGHT-INGALE, and the Poem entitled LOVE. I should not, however, have requested this assistance, had I not believed that the Poems of my Friend would in a

1. This preface first appeared in the second edition of *Lyrical Ballads*, expanded to two volumes and dated 1800. For an edition published in 1802, Wordsworth revised the preface (he made more revisions for subsequent editions) and added an

appendix; the important additions to the 1800 text are here given in brackets.

2. SAMUEL TAYLOR COLERIDGE (1772–1834), English poet and critic.

great measure have the same tendency as my own, and that, though there would be found a difference, there would be found no discordance in the colours of our style; as our opinions on the subject of poetry do almost entirely coincide.

Several of my Friends are anxious for the success of these Poems from a belief, that, if the views with which they were composed were indeed realized, a class of Poetry would be produced, well adapted to interest mankind permanently, and not unimportant in the multiplicity, and in the quality of its moral relations: and on this account they have advised me to prefix a systematic defence of the theory, upon which the poems were written. But I was unwilling to undertake the task, because I knew that on this occasion the Reader would look coldly upon my arguments, since I might be suspected of having been principally influenced by the selfish and foolish hope of *reasoning* him into an approbation of these particular Poems: and I was still more unwilling to undertake the task, because, adequately to display my opinions, and fully to enforce my arguments, would require a space wholly disproportionate to the nature of a preface. For to treat the subject with the clearness and coherence, of which I believe it susceptible, it would be necessary to give a full account of the present state of the public taste in this country, and to determine how far this taste is healthy or depraved; which, again, would not be determined, without pointing out, in what manner language and the human mind act and re-act on each other, and without retracing the revolutions, not of literature alone, but likewise of society itself. I have therefore altogether declined to enter regularly upon this defence; yet I am sensible, that there would be some impropriety in abruptly obtruding upon the Public, without a few words of introduction, Poems so materially different from those, upon which general approbation is at present bestowed.

It is supposed, that by the act of writing in verse an Author makes a formal engagement that he will gratify certain known habits of association; that he not only thus apprizes the Reader that certain classes of ideas and expressions will be found in his book, but that others will be carefully excluded. This exponent or symbol held forth by metrical language must in different areas of literature have excited very different expectations: for example, in the age of Catullus, Terence and Lucretius, and that of Statius or Claudian;³ and in our own country, in the age of Shakespeare and Beaumont and Fletcher, and that of Donne and Cowley, or Dryden, or Pope.⁴ I will not take upon me to determine the exact import of the promise which by the act of writing in verse an Author, in the present day, makes to his Reader; but I am certain, it will appear to many persons that I have not fulfilled the terms of an engagement thus voluntarily contracted. [They who have been accustomed to the gaudiness and inane phraseology of many modern writers, if they persist in reading this book to its conclusion, will, no doubt, frequently have to struggle with feelings of strangeness and awkward-

3. Wordsworth names Roman poets in different genres, before and after the common era (and thus writing in "Golden" vs. "Silver" Latin): Catullus (84-54 B.C.E.), lyric poet; Terence (ca. 190-159 B.C.E.), comic dramatist; Lucretius (ca. 94-55 B.C.E.), didactic poet; Statius (45-96 C.E.), epic poet; and Claudian (d. ca. 404 C.E.), an Alexandrian whose Latin poetry represents the end of the classical tradition.

4. Wordsworth names three English dramatists—Shakespeare (1564-1616), Francis Beaumont (ca. 1584-1616), and John Fletcher (1579-1625); and four poets—John Donne (1572-1631), Abraham Cowley (1618-1667), JOHN DRYDEN (1631-1700), and ALEXANDER POPE (1688-1744). As their dates suggest, he focuses here less on chronology than on style.

ness: they will look round for poetry, and will be induced to inquire by what species of courtesy these attempts can be permitted to assume that title.] I hope therefore the Reader will not censure me, if I attempt to state what I have proposed to myself to perform; and also, (as far as the limits of a preface will permit) to explain some of the chief reasons which have determined me in the choice of my purpose: that at least he may be spared any unpleasant feeling of disappointment, and that I myself may be protected from the most dishonourable accusation which can be brought against an Author, namely, that of an indolence which prevents him from endeavouring to ascertain what is his duty, or, when his duty is ascertained, prevents him from performing it.

The principal object, then, which I proposed to myself in these Poems was to [chuse incidents and situations from common life, and to relate or describe them, throughout, as far as was possible, in a selection of language really used by men; and, at the same time, to throw over them a certain colouring of imagination, whereby ordinary things should be presented to the mind in an unusual way; and, further, and above all, to make these incidents and situations interesting] by tracing in them, truly though not ostentatiously, the primary laws of our nature: chiefly, as far as regards the manner in which we associate ideas in a state of excitement. Low and rustic life was generally chosen, because in that condition, the essential passions of the heart find a better soil in which they can attain their maturity, are less under restraint, and speak a plainer and more emphatic language; because in that condition of life our elementary feelings co-exist in a state of greater simplicity, and, consequently, may be more accurately contemplated, and more forcibly communicated; because the manners of rural life germinate from those elementary feelings; and, from the necessary character of rural occupations, are more easily comprehended; and are more durable; and lastly, because in that condition the passions of men are incorporated with the beautiful and permanent forms of nature. The language, too, of these men is adopted (purified indeed from what appear to be its real defects, from all lasting and rational causes of dislike or disgust) because such men hourly communicate with the best objects from which the best part of language is originally derived; and because, from their rank in society and the sameness and narrow circle of their intercourse, being less under the influence of social vanity they convey their feelings and notions in simple and unelaborated expressions. Accordingly, such a language, arising out of repeated experience and regular feelings, is a more permanent, and a far more philosophical language, than that which is frequently substituted for it by Poets, who think that they are conferring honour upon themselves and their art, in proportion as they separate themselves from the sympathies of men, and indulge in arbitrary and capricious habits of expression, in order to furnish food for fickle tastes, and fickle appetites, of their own creation.⁵

I cannot, however, be insensible of the present outcry against the triviality and meanness both of thought and language, which some of my contemporaries have occasionally introduced into their metrical compositions; and I acknowledge that this defect, where it exists, is more dishonourable to the

5. It is worth while here to observe that the affecting parts of Chaucer [ca. 1343–1400] are almost always expressed in language pure and universally intelligible even to this day [Wordsworth's note].

Writer's own character than false refinement or arbitrary innovation, though I should contend at the same time that it is far less pernicious in the sum of its consequences. From such verses the Poems in these volumes will be found distinguished at least by one mark of difference, that each of them has a worthy *purpose*. Not that I mean to say, that I always began to write with a distinct purpose formally conceived; but I believe that my habits of meditation have so formed my feelings, as that my descriptions of such objects as strongly excite those feelings, will be found to carry along with them a *purpose*. If in this opinion I am mistaken, I can have little right to the name of a Poet. For all good poetry is the spontaneous overflow of powerful feelings; but though this be true, Poems to which any value can be attached, were never produced on any variety of subjects but by a man, who being possessed of more than usual organic sensibility, had also thought long and deeply. For our continued influxes of feeling are modified and directed by our thoughts, which are indeed the representatives of all our past feelings; and, as by contemplating the relation of these general representatives to each other we discover what is really important to men, so, by the repetition and continuance of this act, our feelings will be connected with important subjects, till at length, if we be originally possessed of much sensibility, such habits of mind will be produced, that, by obeying blindly and mechanically the impulses of those habits, we shall describe objects, and utter sentiments, of such a nature and in such connection with each other, that the understanding of the being to whom we address ourselves, if he be in a healthful state of association, must necessarily be in some degree enlightened, and his affections ameliorated.

I have said that each of these poems has a purpose. I have also informed my Reader what this purpose will be found principally to be: namely, to illustrate the manner in which our feelings and ideas are associated in a state of excitement. But, speaking in language somewhat more appropriate, it is to follow the fluxes and refluxes of the mind when agitated by the great and simple affections of our nature. This object I have endeavoured in these short essays to attain by various means; by tracing the maternal passion through many of its more subtle windings, as in the poems of the IDIOT BOY and the MAD MOTHER; by accompanying the last struggles of a human being, at the approach of death, cleaving in solitude to life and society, as in the Poem of the FORSAKEN INDIAN; by showing, as in the Stanzas entitled WE ARE SEVEN, the perplexity and obscurity which in childhood attend our notion of death, or rather our utter inability to admit that notion; or by displaying the strength of fraternal, or to speak more philosophically, of moral attachment when early associated with the great and beautiful objects of nature, as in THE BROTHERS; or, as in the Incident of SIMON LEE, by placing my Reader in the way of receiving from ordinary moral sensations another and more salutary impression than we are accustomed to receive from them. It has also been part of my general purpose to attempt to sketch characters under the influence of less impassioned feelings, as in the TWO APRIL MORNINGS, THE FOUNTAIN, THE OLD MAN TRAVELLING, THE TWO THIEVES, &c. characters of which the elements are simple, belonging rather to nature than to manners, such as exist now, and will probably always exist, and which from their constitution may be distinctly and profitably contemplated. I will not abuse the indulgence of my Reader by dwelling longer upon this subject; but it is proper

that I should mention one other circumstance which distinguishes these Poems from the popular Poetry of the day; it is this, that the feeling therein developed gives importance to the action and situation, and not the action and situation to the feeling. My meaning will be rendered perfectly intelligible by referring my Reader to the Poems entitled POOR SUSAN and the CHILDLESS FATHER, particularly to the last Stanza of the latter Poem.

I will not suffer a sense of false modesty to prevent me from asserting, that I point my Reader's attention to this mark of distinction, far less for the sake of these particular Poems than from the general importance of the subject. The subject is indeed important! For the human mind is capable of being excited without the application of gross and violent stimulants; and he must have a very faint perception of its beauty and dignity who does not know this, and who does not further know, that one being is elevated above another, in proportion as he possesses this capability. It has therefore appeared to me, that to endeavour to produce or enlarge this capability is one of the best services in which, at any period, a Writer can be engaged; but this service, excellent at all times, is especially so at the present day. For a multitude of causes, unknown to former times, are now acting with a combined force to blunt the discriminating powers of the mind, and unfitting it for all voluntary exertion to reduce it to a state of almost savage torpor. The most effective of these causes are the great national events which are daily taking place,⁶ and the encreasing accumulation of men in cities, where the uniformity of their occupations produces a craving for extraordinary incident, which the rapid communication of intelligence⁷ hourly gratifies. To this tendency of life and manners the literature and theatrical exhibitions of the country have conformed themselves. The invaluable works of our elder writers, I had almost said the works of Shakespeare and Milton, are driven into neglect by frantic novels, sickly and stupid German Tragedies,⁸ and deluges of idle and extravagant stories in verse.—When I think upon this degrading thirst after outrageous stimulation, I am almost ashamed to have spoken of the feeble effort with which I have endeavoured to counteract it; and, reflecting upon the magnitude of the general evil, I should be oppressed with no dishonorable melancholy, had I not a deep impression of certain inherent and indestructible qualities of the human mind, and likewise of certain powers in the great and permanent objects that act upon it, which are equally inherent and indestructible; and did I not further add to this impression a belief, that the time is approaching when the evil will be systematically opposed, by men of greater powers, and with far more distinguished success.

Having dwelt thus long on the subjects and aim of these Poems, I shall request the Reader's permission to apprise him of a few circumstances relating to their *style*, in order, among other reasons, that I may not be censured for not having performed what I never attempted. [The Reader will find that personifications of abstract ideas rarely occur in these volumes; and, I hope, are utterly rejected as an ordinary device to elevate the style, and raise it

6. The French Revolution and the Napoleonic Wars, primarily between France and Great Britain (1799–1815), that grew out of it and out of the rise to power of the French general Napoléon Bonaparte (1769–1821), later emperor (1804–15).

7. Information, news (daily newspapers were spreading rapidly in England).

8. German melodramas by authors such as August

von Kotzebue (1761–1819); in Jane Austen's novel *Mansfield Park* (1814), the Bertram family performs Elizabeth Inchbald's *Lovers' Vows*, which is based on von Kotzebue's *Das kind der Liebe*. "Frantic novels": Gothic novels, such as *The Mysteries of Udolpho* (1794) by Ann Radcliffe and *The Monk* (1796) by M. G. Lewis.

above prose. I have proposed to myself to imitate, and, as far as is possible, to adopt the very language of men; and assuredly such personifications do not make any natural or regular part of that language. They are, indeed, a figure of speech occasionally prompted by passion, and I have made use of them as such; but I have endeavoured utterly to reject them as a mechanical device of style, or as a family language which Writers, in metre seem to lay claim to by prescription.] I have wished to keep my Reader in the company of flesh and blood, persuaded that by so doing I shall interest him. I am, however, well aware that others who pursue a different track may interest him likewise; I do not interfere with their claim, I only wish to prefer a different claim of my own. There will also be found in these volumes little of what is usually called poetic diction; I have taken as much pains to avoid it as others ordinarily take to produce it; this I have done for the reason already alleged, to bring my language near to the language of men, and further, because the pleasure which I have proposed to myself to impart is of a kind very different from that which is supposed by many persons to be the proper object of poetry. I do not know how, without being culpably particular, I can give my Reader a more exact notion of the style in which I wished these poems to be written than by informing him that I have at all times endeavoured to look steadily at my subject, consequently, I hope that there is in these Poems little falsehood of description, and that my ideas are expressed in language fitted to their respective importance. Something I must have gained by this practice, as it is friendly to one property of all good poetry, namely good sense; but it has necessarily cut me off from a large portion of phrases and figures of speech, which from father to son have long been regarded as the common inheritance of Poets. I have also thought it expedient to restrict myself still further, having abstained from the use of many expressions, in themselves proper and beautiful, but which have been foolishly repeated by bad Poets, till such feelings of disgust are connected with them as it is scarcely possible by any art of association to overpower.

If in a Poem there should be found a series of lines, or even a single line, in which the language, though naturally arranged, and according to the strict laws of metre, does not differ from that of prose, there is a numerous class of critics, who, when they stumble upon these prosaisms, as they call them, imagine that they have made a notable discovery, and exult over the Poets over a man ignorant of his own profession. Now these men would establish a canon of criticism which the Reader will conclude he must utterly reject, if he wishes to be pleased with these volumes. And it would be a most easy task to prove to him, that not only the language of a large portion of every good poem, even of the most elevated character, must necessarily, except with reference to the metre, in no respect differ from that of good prose, but likewise that some of the most interesting parts of the best poems will be found to be strictly the language of prose, when prose is well written. The truth of this assertion might be demonstrated by innumerable passages from almost all the poetical writings, even of Milton himself. I have not space for much quotation; but, to illustrate the subject in a general manner, I will here adduce a short composition of Gray,⁹ who was at the head of those who, by

9. Thomas Gray (1716–1771); the poem quoted is "Sonnet on the Death of Richard West" (1775; West was a friend of Gray's at Eton). Gray, in a

letter to West, had maintained that "the language of the age is never the language of poetry."

their reasonings, have attempted to widen the space of separation betwixt Prose and Metrical composition, and was more than any other man curiously elaborate in the structure of his own poetic diction.

In vain to me the smiling mornings shine,
 And reddening Phoebus¹ lifts his golden fire:
 The birds in vain their amorous descant join,
 Or chearful fields resume their green attire.
*These ears, alas! for other notes repine;
 A different object do these eyes require;
 My lonely anguish melts no heart but mine;
 And in my breast the imperfect joys expire;*
 Yet morning smiles the busy race to cheer,
 And new-born pleasure brings to happier men;
 The fields to all their wonted tribute bear;
 To warm their little loves the birds complain.
*I fruitless mourn to him that cannot hear,
 And weep the more because I weep in vain.*

It will easily be perceived that the only part of this Sonnet which is of any value is the lines printed in Italics: it is equally obvious, that, except in the rhyme, and in the use of the single word 'fruitless' for fruitlessly, which is so far a defect, the language of these lines does in no respect differ from that of prose.

[By the foregoing quotation I have shewn that the language of Prose may yet be well adapted to Poetry; and I have previously asserted that a large portion of the language of every good poem can in no respect differ from that of good Prose. I will go further. I do not doubt that it may be safely affirmed, that there neither is, nor can be, any essential difference between the language of prose and metrical composition.] We are fond of tracing the resemblance between Poetry and Painting,² and, accordingly, we call them Sisters: but where shall we find bonds of connection sufficiently strict to typify the affinity betwixt metrical and prose composition? They both speak by and to the same organs; the bodies in which both of them are clothed may be said to be of the same substance, their affections are kindred, and almost identical, not necessarily differing even in degree; Poetry³ sheds no tears 'such as Angels weep,'⁴ but natural and human tears; she can boast of no celestial Ichor⁵ that distinguishes her vital juices from those of prose; the same human blood circulates through the veins of them both.

If it be affirmed that rhyme and metrical arrangement of themselves constitute a distinction which overturns what I have been saying on the strict

1. Apollo, Roman and Greek god of the sun, here identified with the sun.

2. A topic examined, for example, by the poets and critics HORACE, *Ars Poetica* (ca. 10 B.C.E.); Dryden, *A Parallel of Poetry and Painting* (1695); SIR PHILIP SIDNEY, *An Apology for Poetry* (1595); Pope, *An Essay on Criticism* (1711); GOTTHOLD EPHRAIM LESSING, *Laocöon* (1766); and SAMUEL JOHNSON, *Idler*, no. 34 (1758).

3. I here use the word "Poetry" (though against my own judgment) as opposed to the word Prose, and synonymous with metrical composition. But

much confusion has been introduced into criticism by this contradistinction of Poetry and Prose, instead of the more philosophical one of Poetry and Matter of Fact, or Science. The only strict antithesis to Prose is Metre; nor is this, in truth, a strict antithesis; because lines and passages of metre so naturally occur in writing prose, that it would be scarcely possible to avoid them, even if it were desirable [Wordsworth's note].

4. From John Milton, *Paradise Lost* (1667), 1.620.

5. In Greek mythology, the fluid that flows in the veins of the gods.

affinity of metrical language with that of prose, and paves the way for other artificial distinctions which the mind voluntarily admits,⁶ [I answer that the language of such Poetry as I am recommending is, as far as is possible, a selection of the language really spoken by men; that this selection, wherever it is made with true taste and feeling, will of itself form a distinction far greater than would at first be imagined, and will entirely separate the composition from the vulgarity and meanness of ordinary life; and, if metre be superadded thereto, I believe that a dissimilitude will be produced altogether sufficient for the gratification of a rational mind. What other distinction would we have? Whence is it to come? And where is it to exist? Not, surely, where the Poet speaks through the mouths of his characters: it cannot be necessary here, either for elevation of style, or any of its supposed ornaments; for, if the Poet's subject be judiciously chosen, it will naturally, and upon fit occasion, lead him to passions the language of which, if selected truly and judiciously, must necessarily be dignified and variegated, and alive with metaphors and figures. I forbear to speak of an incongruity which would shock the intelligent Reader, should the Poet interweave any foreign splendour of his own with that which the passion naturally suggests: it is sufficient to say that such addition is unnecessary. And, surely, it is more probable that those passages, which with propriety abound with metaphors and figures, will have their due effect, if, upon other occasions where the passions are of a milder character, the style also be subdued and temperate.

But, as the pleasure which I hope to give by the Poems I now present to the Reader must depend entirely on just notions upon this subject, and, as it is in itself of the highest importance to our taste and moral feelings, I cannot content myself with these detached remarks. And if, in what I am about to say, it shall appear to some that my labour is unnecessary, and that I am like a man fighting a battle without enemies, I would remind such persons that, whatever may be the language outwardly holden⁷ by men, a practical faith in the opinions which I am wishing to establish is almost unknown. If my conclusions are admitted, and carried as far as they must be carried if admitted at all, our judgments concerning the works of the greatest Poets both ancient and modern will be far different from what they are at present, both when we praise, and when we censure: and our moral feelings influencing, and influenced by these judgments will, I believe, be corrected and purified.

Taking up the subject, then, upon general grounds, I ask what is meant by the word Poet? What is a Poet? To whom does he address himself? And what language is to be expected from him? He is a man speaking to men: a man, it is true, endued with more lively sensibility, more enthusiasm and tenderness, who has a greater knowledge of human nature, and a more comprehensive soul, than are supposed to be common among mankind; a man pleased with his own passions and volitions, and who rejoices more than other men in the spirit of life that is in him; delighting to contemplate similar volitions and passions as manifested in the goings-on of the Universe, and habitually impelled to create them where he does not find them. To these

6. Here begins the longest and most important addition made in 1802; it contains 9 paragraphs.

7. Held.

qualities he has added a disposition to be affected more than other men by absent things as if they were present; an ability of conjuring up in himself passions, which are indeed far from being the same as those produced by real events, yet (especially in those parts of the general sympathy which are pleasing and delightful) do more nearly resemble the passions produced by real events, than any thing which, from the motions of their own minds merely, other men are accustomed to feel in themselves; whence, and from practice, he has acquired a greater readiness and power in expressing what he thinks and feels, and especially those thoughts and feelings which, by his own choice, or from the structure of his own mind, arise in him without immediate external excitement.

But, whatever portion of this faculty we may suppose even the greatest Poet to possess, there cannot be a doubt but that the language which it will suggest to him, must, in liveliness and truth, fall far short of that which is uttered by men in real life, under the actual pressure of those passions, certain shadows of which the Poet thus produces, or feels to be produced, in himself. However exalted a notion we would wish to cherish of the character of a Poet, it is obvious, that, while he describes and imitates passions, his situation is altogether slavish and mechanical, compared with the freedom and power of real and substantial action and suffering. So that it will be the wish of the Poet to bring his feelings near to those of the persons whose feelings he describes, nay, for short spaces of time perhaps, to let himself slip into an entire delusion, and even confound and identify his own feelings with theirs; modifying only the language which is thus suggested to him, by a consideration that he describes for a particular purpose, that of giving pleasure. Here, then, he will apply the principle on which I have so much insisted, namely, that of selection; on this he will depend for removing what would otherwise be painful or disgusting in the passion; he will feel that there is no necessity to trick out or elevate nature; and, the more industriously he applies this principle, the deeper will be his faith that no words, which his fancy or imagination can suggest, will be to be compared with those which are in the emanations of reality and truth.

But it may be said by those who do not object to the general spirit of these remarks, that, as it is impossible for the Poet to produce upon all occasions language as exquisitely fitted for the passion as that which the real passion itself suggests, it is proper that he should consider himself as in the situation of a translator, who deems himself justified when he substitutes excellences of another kind for those which are unattainable by him; and endeavours occasionally to surpass his original, in order to make some amends for the general inferiority to which he feels that he must submit. But this would be to encourage idleness and unmanly despair. Further, it is the language of men who speak of what they do not understand; who talk of Poetry as of a matter of amusement and idle pleasure; who will converse with us as gravely about a *taste* for Poetry, as they express it, as if it were a thing as indifferent as a taste for Rope-dancing, or Frontiniac⁸ or Sherry. Aristotle, I have been told, hath said, that Poetry is the most philosophic of all writing:⁹ it is so: its object is truth, not individual and local, but general, and operative; not stand-

8. A sweet wine.

than history, since poetry tends to make general statements, while those of history are particular."

ing upon external testimony, but carried alive into the heart by passion; truth which is its own testimony, which gives strength and divinity to the tribunal to which it appeals, and receives them from the same tribunal. Poetry is the image of man and nature. The obstacles which stand in the way of the fidelity of the Biographer and Historian, and of their consequent utility, are incalculably greater than those which are to be encountered by the Poet who has an adequate notion of the dignity of his art. The Poet writes under one restriction only, namely, that of the necessity of giving immediate pleasure to a human Being possessed of that information which may be expected from him, not as a lawyer, a physician, a mariner, an astronomer or a natural philosopher, but as a Man. Except this one restriction, there is no object standing between the Poet and the image of things; between this, and the Biographer and Historian there are a thousand.

Nor let this necessity of producing immediate pleasure be considered as a degradation of the Poet's art. It is far otherwise. It is an acknowledgment of the beauty of the universe, an acknowledgment the more sincere, because it is not formal, but indirect; it is a task light and easy to him who looks at the world in the spirit of love: further, it is a homage paid to the native and naked dignity of man, to the grand elementary principle of pleasure, by which he knows, and feels, and lives, and moves.¹ We have no sympathy but what is propagated by pleasure: I would not be misunderstood; but wherever we sympathize with pain it will be found that the sympathy is produced and carried on by subtle combinations with pleasure. We have no knowledge, that is, no general principles drawn from the contemplation of particular facts, but what has been built up by pleasure, and exists in us by pleasure alone. The Man of Science,² the Chemist and Mathematician, whatever difficulties and disgusts they may have had to struggle with, know and feel this. However painful may be the objects with which the Anatomist's knowledge is connected, he feels that his knowledge is pleasure; and where he has no pleasure he has no knowledge. What then does the Poet? He considers man and the objects that surround him as acting and re-acting upon each other, so as to produce an infinite complexity of pain and pleasure; he considers man in his own nature and in his ordinary life as contemplating this with a certain quantity of immediate knowledge, with certain convictions, intuitions, and deductions which by habit become of the nature of intuitions; he considers him as looking upon this complex scene of ideas and sensations, and finding every where objects that immediately excite in him sympathies which, from the necessities of his nature, are accompanied by an overbalance of enjoyment.

To this knowledge which all men carry about with them, and to these sympathies in which without any other discipline than that of our daily life we are fitted to take delight, the Poet principally directs his attention. He considers man and nature as essentially adapted to each other, and the mind of man as naturally the mirror of the fairest and most interesting qualities of nature. And thus the Poet, prompted by this feeling of pleasure which accompanies him through the whole course of his studies, converses with general nature with affections akin to those, which, through labour and

1. Compare St. Paul's declaration that in God "we live, and move, and have our being" (Acts 17.28).

2. Wordsworth may have had in mind in particular

the English chemist Humphrey Davy (1778–1829), who had lectured at the Royal Institution on January 21, 1802.

length of time, the Man of Science has raised up in himself; by conversing with those particular parts of nature which are the objects of his studies. The knowledge both of the Poet and the Man of Science is pleasure; but the knowledge of the one cleaves to us as a necessary part of our existence, our natural and unalienable inheritance; the other is a personal and individual acquisition, slow to come to us, and by no habitual and direct sympathy connecting us with our fellow-beings. The Man of Science seeks truth as a remote and unknown benefactor; he cherishes and loves it in his solitude: the Poet, singing a song in which all human beings join with him, rejoices in the presence of truth as our visible friend and hourly companion. Poetry is the breath and finer spirit of all knowledge; it is the impassioned expression which is in the countenance of all Science. Emphatically may it be said of the Poet, as Shakespeare hath said of man, 'that he looks before and after.'³ He is the rock of defence of human nature; an upholder and preserver, carrying every where with him relationship and love. In spite of difference of soil and climate, of language and manners, of laws and customs, in spite of things silently gone out of mind and things violently destroyed, the Poet binds together by passion and knowledge the vast empire of human society, as it is spread over the whole earth, and over all time. The objects of the Poet's thoughts are every where; though the eyes and senses of man are, it is true, his favorite guides, yet he will follow wheresoever he can find an atmosphere of sensation in which to move his wings. Poetry is the first and last of all knowledge—it is as immortal as the heart of man: If the labours of Men of Science should ever create any material revolution, direct or indirect, in our condition, and in the impressions which we habitually receive, the Poet will sleep then no more than at present, but he will be ready to follow the steps of the Man of Science, not only in those general indirect effects, but he will be at his side, carrying sensation into the midst of the objects of the Science itself. The remotest discoveries of the Chemist, the Botanist, or Mineralogist, will be as proper objects of the Poet's art as any upon which it can be employed, if the time should ever come when these things shall be familiar to us, and the relations under which they are contemplated by the followers of these respective Sciences shall be manifestly and palpably material to us as enjoying and suffering beings. If the time should ever come when what is now called Science, thus familiarized to men, shall be ready to put on, as it were, a form of flesh and blood, the Poet will lend his divine spirit to aid the transfiguration, and will welcome the Being thus produced, as a dear and genuine inmate of the household of man.—It is not, then, to be supposed that any one, who holds that sublime notion of Poetry which I have attempted to convey, will break in upon the sanctity and truth of his pictures by transitory and accidental ornaments, and endeavour to excite admiration of himself by arts, the necessity of which must manifestly depend upon the assumed meanness of his subject.

What I have thus far said applies to Poetry in general; but especially to those parts of composition where the Poet speaks through the mouths of his characters; and upon this point it appears to have such weight that I will conclude, there are few persons of good sense, who would not allow that the dramatic parts of composition are defective, in proportion as they deviate

3. *Hamlet* (ca. 1600), 4.4.36 ("Looking before and after").

from the real language of nature, and are coloured by a diction of the Poet's own, either peculiar to him as an individual Poet, or belonging simply to Poets in general, to a body of men who, from the circumstance of their compositions being in metre, it is expected will employ a particular language.

It is not, then, in the dramatic parts of composition that we look for this distinction of language; but still it may be proper and necessary where the Poet speaks to us in his own person and character. To this I answer by referring my Reader to the description which I have before given of a Poet. Among the qualities which I have enumerated as principally conducing to form a Poet, is implied nothing differing in kind from other men, but only in degree. The sum of what I have there said is, that the Poet is chiefly distinguished from other men by a greater promptness to think and feel without immediate external excitement, and a greater power in expressing such thoughts and feelings as are produced in him in that manner. But these passions and thoughts and feelings are the general passions and thoughts and feelings of men. And with what are they connected? Undoubtedly with our moral sentiments and animal sensations, and with the causes which excite these; with the operations of the elements and the appearances of the visible universe; with storm and sun-shine, with the revolutions of the seasons, with cold and heat, with loss of friends and kindred, with injuries and resentments, gratitude and hope, with fear and sorrow. These, and the like, are the sensations and objects which the Poet describes, as they are the sensations of other men, and the objects which interest them. The Poet thinks and feels in the spirit of the passions of men. How, then, can his language differ in any material degree from that of all other men who feel vividly and see clearly? It might be *proved* that it is impossible. But supposing that this were not the case, the Poet might then be allowed to use a peculiar language when expressing his feelings for his own gratification, or that of men like himself. But Poets do not write for Poets alone, but for men. Unless therefore we are advocates for that admiration which depends upon ignorance, and that pleasure which arises from hearing what we do not understand, the Poet must descend from this supposed height, and, in order to excite rational sympathy, he must express himself as other men express themselves. To this it may be added, that while he is only selecting from the real language of men, or, which amounts to the same thing, composing accurately in the spirit of such selection, he is treading upon safe ground, and we know what we are to expect from him. Our feelings are the same with respect to metre; for, as it may be proper to remind the Reader,] the distinction of metre is regular and uniform, and not like that which is produced by what is usually called poetic diction, arbitrary, and subject to infinite caprices upon which no calculation whatever can be made. In the one case, the Reader is utterly at the mercy of the Poet respecting what imagery or diction he may choose to connect with the passion, whereas, in the other, the metre obeys certain laws, to which the Poet and Reader both willingly submit because they are certain, and because no interference is made by them with the passion but such as the concurring testimony of ages has shown to heighten and improve the pleasure which co-exists with it.

It will now be proper to answer an obvious question, namely, Why, professing these opinions, have I written in verse? To this, in addition to such answer as is included in what I have already said, I reply in the first place,

because, however I may have restricted myself, there is still left open to me what confessedly constitutes the most valuable object of all writing, whether in prose or verse, the great and universal passions of men, the most general and interesting of their occupations, and the entire world of nature, from which I am at liberty to supply myself with endless combinations of forms and imagery. Now, supposing for a moment that whatever is interesting in these objects may be as vividly described in prose, why am I to be condemned, if to such description I have endeavoured to superadd the charm which, by the consent of all nations, is acknowledged to exist in metrical language? To this, by such as are unconvinced by what I have already said, it may be answered, that a very small part of the pleasure given by Poetry depends upon the metre, and that it is injudicious to write in metre, unless it be accompanied with the other artificial distinctions of style with which metre is usually accompanied, and that by such deviation more will be lost from the shock which will be thereby given to the Reader's associations, than will be counterbalanced by any pleasure which he can derive from the general power of numbers.⁴ In answer to those who still contend for the necessity of accompanying metre with certain appropriate colours of style in order to the accomplishment of its appropriate end, and who also, in my opinion, greatly under-rate the power of metre in itself, it might perhaps, as far as relates to these Poems, have been almost sufficient to observe, that poems are extant, written upon more humble subjects, and in a more naked and simple style than I have aimed at, which poems have continued to give pleasure from generation to generation. Now, if nakedness and simplicity be a defect, the fact here mentioned affords a strong presumption that poems somewhat less naked and simple are capable of affording pleasure at the present day; and, what I wished *chiefly* to attempt, at present, was to justify myself for having written under the impression of this belief.

But I might point out various causes why, when the style is manly, and the subject of some importance, words metrically arranged will long continue to impart such a pleasure to mankind as he who is sensible of the extent of that pleasure will be desirous to impart. The end of Poetry is to produce excitement in co-existence with an over-balance of pleasure. Now, by the supposition, excitement is an unusual and irregular state of the mind; ideas and feelings do not in that state succeed each other in accustomed order. But, if the words by which this excitement is produced are in themselves powerful, or the images and feelings have an undue proportion of pain connected with them, there is some danger that the excitement may be carried beyond its proper bounds. Now the co-presence of something regular, something to which the mind has been accustomed in various moods and in a less excited state, cannot but have great efficacy in tempering and restraining the passion by an intertexture of ordinary feeling, [and of feeling not strictly and necessarily connected with the passion. This is unquestionably true, and hence, though the opinion will at first appear paradoxical, from the tendency of metre to divest language in a certain degree of its reality, and thus to throw a sort of half consciousness of unsubstantial existence over the whole composition, there can be little doubt but that more pathetic situations and sentiments, that is, those which have a greater proportion of pain connected

4. Metrical language.

with them, may be endured in metrical composition, especially in rhyme, than in prose. The metre of the old Ballads is very artless; yet they contain many passages which would illustrate this opinion, and, I hope, if the following Poems be attentively perused, similar instances will be found in them.] This opinion may be further illustrated by appealing to the Reader's own experience of the reluctance with which he comes to the re-perusal of the distressful parts of *Clarissa Harlowe*, or the *Gamester*.⁵ While Shakespeare's writings, in the most pathetic scenes, never act upon us as pathetic beyond the bounds of pleasure—an effect which, in a much greater degree than might at first be imagined, is to be ascribed to small, but continual and regular impulses of pleasurable surprise from the metrical arrangement.—On the other hand (what it must be allowed will much more frequently happen) if the Poet's words should be incommensurate with the passion, and inadequate to raise the Reader to a height of desirable excitement, then, (unless the Poet's choice of his metre has been grossly injudicious) in the feelings of pleasure which the Reader has been accustomed to connect with metre in general, and in the feeling, whether cheerful or melancholy, which he has been accustomed to connect with that particular movement of metre, there will be found something which will greatly contribute to impart passion to the words, and to effect the complex end which the Poet proposes to himself.

If I had undertaken a systematic defence of the theory upon which these poems are written, it would have been my duty to develop the various causes upon which the pleasure received from metrical language depends. Among the chief of these causes is to be reckoned a principle which must be well known to those who have made any of the Arts the object of accurate reflection; I mean the pleasure which the mind derives from the perception of similitude in dissimilitude. This principle is the great spring of the activity of our minds, and their chief feeder. From this principle the direction of the sexual appetite, and all the passions connected with it, take their origin: it is the life of our ordinary conversation; and upon the accuracy with which similitude in dissimilitude, and dissimilitude in similitude are perceived, depend our taste and our moral feelings. It would not have been a useless employment to have applied this principle to the consideration of metre, and to have shown that metre is hence enabled to afford much pleasure, and to have pointed out in what manner that pleasure is produced. But my limits will not permit me to enter upon this subject, and I must content myself with a general summary.

I have said that Poetry is the spontaneous overflow of powerful feelings: it takes its origin from emotion recollected in tranquillity: the emotion is contemplated till by a species of reaction the tranquillity disappears, and an emotion, kindred to that which was before the subject of contemplation, is gradually produced, and does itself actually exist in the mind. In this mood successful composition generally begins, and in a mood similar to this it is carried on; but the emotion, of whatever kind and in whatever degree, from various causes is qualified by various pleasures, so that in describing any passions whatsoever, which are voluntarily described, the mind will upon the

5. *The Gamester* (1753), a tragedy by Edward Moore, about gambling. *Clarissa Harlowe*: an epistolary novel (1747–48) by Samuel Richardson; the title character is abducted and raped, and she dies of grief.

whole be in a state of enjoyment. Now, if Nature be thus cautious in preserving in a state of enjoyment a being thus employed, the Poet ought to profit by the lesson thus held forth to him, and ought especially to take care, that whatever passions he communicates to his Reader, those passions, if his Reader's mind be sound and vigorous, should always be accompanied with an overbalance of pleasure. Now the music of harmonious metrical language, the sense of difficulty overcome, and the blind association of pleasure which has been previously received from works of rhyme or metre of the same or similar construction, an 'indistinct perception' perpetually renewed of language closely resembling that of real life, and yet, in the circumstance of metre, differing from it so widely, all these imperceptibly make up a complex feeling of delight, which is of the most important use in tempering the painful feeling which will always be found intermingled with powerful descriptions of the deeper passions. This effect is always produced in pathetic and impassioned poetry; while, in lighter compositions, the ease and gracefulness with which the Poet manages his numbers are themselves confessedly a principal source of the gratification of the Reader. I might perhaps include all which it is *necessary* to say upon this subject by affirming, what few persons will deny, that, of two descriptions, either of passions, manners, or characters, each of them equally well executed, the one in prose and the other in verse, the verse will be read a hundred times where the prose is read once. We see that Pope, by the power of verse alone, has contrived to render the plainest common sense interesting, and even frequently to invest it with the appearance of passion. In consequence of these convictions I related in metre the Tale of GOODY BLAKE AND HARRY GILL, which is one of the rudest of this collection. I wished to draw attention to the truth, that the power of the human imagination is sufficient to produce such changes even in our physical nature as might almost appear miraculous. The truth is an important one; the fact (for it is a *fact*) is a valuable illustration of it. And I have the satisfaction of knowing that it has been communicated to many hundreds of people who would never have heard of it, had it not been narrated as a Ballad, and in a more impressive metre than is usual in Ballads.

Having thus explained a few of the reasons why I have written in verse, and why I have chosen subjects from common life, and endeavoured to bring my language near to the real language of men, if I have been too minute in pleading my own cause, I have at the same time been treating a subject of general interest; and it is for this reason that I request the Reader's permission to add a few words with reference solely to these particular poems, and to some defects which will probably be found in them. I am sensible that my associations must have sometimes been particular instead of general, and that, consequently, giving to things a false importance; sometimes from diseased impulses I may have written upon unworthy subjects; but I am less apprehensive on this account, than that my language may frequently have suffered from those arbitrary connections of feelings and ideas with particular words and phrases, from which no man can altogether protect himself. Hence I have no doubt, that, in some instances, feelings even of the ludicrous may be given to my Readers by expressions which appeared to me tender and pathetic. Such faulty expressions, were I convinced they were faulty at present, and that they must necessarily continue to be so, I would willingly take all reasonable pains to correct. But it is dangerous to make these alterations

on the simple authority of a few individuals, or even of certain classes of men; for where the understanding of an Author is not convinced, or his feelings altered, this cannot be done without great injury to himself: for his own feelings are his stay and support, and, if he sets them aside in one instance, he may be induced to repeat this act till his mind loses all confidence in itself, and becomes utterly debilitated. To this it may be added, that the Reader ought never to forget that he is himself exposed to the same errors as the Poet, and perhaps in a much greater degree: for there can be no presumption in saying, that it is not probable he will be so well acquainted with the various stages of meaning through which words have passed, or with the fickleness or stability of the relations of particular ideas to each other; and above all, since he is so much less interested in the subject, he may decide lightly and carelessly.

Long as I have detained my Reader, I hope he will permit me to caution him against a mode of false criticism which has been applied to Poetry in which the language closely resembles that of life and nature. Such verses have been triumphed over in parodies of which Dr. Johnson's stanza is a fair specimen.

'I put my hat upon my head,
And walk'd into the Strand,
And there I met another man
Whose hat was in his hand.'

Immediately under these lines I will place one of the most justly admired stanzas of the '*Babes in the Wood*.'

'These pretty Babes with hand in hand
Went wandering up and down;
But never more they saw the Man
Approaching from the Town.'

In both these stanzas the words, and the order of the words, in no respect differ from the most unimpassioned conversation. There are words in both, for example, 'the Strand,' and 'the Town,' connected with none but the most familiar ideas; yet the one stanza we admit as admirable, and the other as a fair example of the superlatively contemptible. Whence arises this difference? Not from the metre, not from the language, not from the order of the words; but the *matter* expressed in Dr. Johnson's stanza is contemptible. The proper method of treating trivial and simple verses, to which Dr. Johnson's stanza would be a fair parallelism, is not to say, This is a bad kind of poetry, or This is not poetry; but This wants sense; it is neither interesting in itself, nor can *lead* to any thing interesting; the images neither originate in that sane state of feeling which arises out of thought, nor can excite thought or feeling in the Reader. This is the only sensible manner of dealing with such verses. Why trouble yourself about the species till you have previously decided upon the genus? Why take pains to prove that an ape is not a Newton,⁸ when it is self-evident that he is not a man?

6. Printed in the *London Magazine*, April 1785, parodying the ballad *The Hermit of Warkworth* (1771), by Thomas Percy. The Strand: a business street in central London.

7. A popular name for the old ballad "The Children in the Wood," which tells of two children cru-

elly treated by a wicked uncle. It is included in Thomas Percy's collection *Reliques of Ancient English Poetry* (3 vols., 1765), which Wordsworth valued highly.

8. Sir Isaac Newton (1642-1727), English scientist and mathematician.

I have one request to make of my Reader, which is, that in judging these Poems he would decide by his own feelings genuinely, and not by reflection upon what will probably be the judgment of others. How common is it to hear a person say, 'I myself do not object to this style of composition, or this or that expression, but to such and such classes of people it will appear mean or ludicrous.' This mode of criticism, so destructive of all sound unadulterated judgment, is almost universal: I have therefore to request, that the Reader would abide independently by his own feelings, and that if he finds himself affected he would not suffer such conjectures to interfere with his pleasure.

If an Author by any single composition has impressed us with respect for his talents, it is useful to consider this as affording a presumption, that, on other occasions where we have been displeased, he nevertheless may not have written ill or absurdly; and, further, to give him so much credit for this one composition as may induce us to review what has displeased us with more care than we should otherwise have bestowed upon it. This is not only an act of justice, but, in our decisions upon poetry especially, may conduce in a high degree to the improvement of our own taste: for an *accurate* taste in poetry, and in all the other arts, as Sir Joshua Reynolds⁹ has observed, is an *acquired* talent, which can only be produced by thought, and a long continued intercourse with the best models of composition. This is mentioned, not with so ridiculous a purpose as to prevent the most inexperienced Reader from judging for himself, (I have already said that I wish him to judge for himself;) but merely to temper the rashness of decision, and to suggest, that, if Poetry be a subject on which much time has not been bestowed, the judgment may be erroneous; and that in many cases it necessarily will be so.

I know that nothing would have so effectually contributed to further the end which I have in view, as to have shewn of what kind the pleasure is, and how that pleasure is produced, which is confessedly produced by metrical composition essentially different from that which I have here endeavoured to recommend: for the Reader will say that he has been pleased by such composition; and what can I do more for him? The power of any art is limited; and he will suspect, that, if I propose to furnish him with new friends, it is only upon condition of his abandoning his old friends. Besides, as I have said, the Reader is himself conscious of the pleasure which he has received from such composition, composition to which he has peculiarly attached the endearing name of Poetry; and all men feel an habitual gratitude, and something of an honorable bigotry for the objects which have long continued to please them; we not only wish to be pleased, but to be pleased in that particular way in which we have been accustomed to be pleased. There is a host of arguments in these feelings; and I should be the less able to combat them successfully, as I am willing to allow, that, in order entirely to enjoy the Poetry which I am recommending, it would be necessary to give up much of what is ordinarily enjoyed. But, would my limits have permitted me to point out how this pleasure is produced, I might have removed many obstacles, and assisted my Reader in perceiving that the powers of language are not so

9. Portrait painter, essayist, and lecturer (1723–1792), author of annual *Discourses* (1769–90) on the arts delivered to students at the Royal Academy. See *Discourse XII*: "The habit of contemplat-

ing and brooding over the ideas of great geniuses, till you find yourself warmed by the contact, is the true method of forming an artist-like mind."

limited as he may suppose; and that it is possible that poetry may give other enjoyments, of a purer, more lasting, and more exquisite nature. This part of my subject I have not altogether neglected; but it has been less my present aim to prove, that the interest excited by some other kinds of poetry is less vivid, and less worthy of the nobler powers of the mind, than to offer reasons for presuming, that, if the object which I have proposed to myself were adequately attained, a species of poetry would be produced, which is genuine poetry; in its nature well adapted to interest mankind permanently, and likewise important in the multiplicity and quality of its moral relations.

From what has been said, and from a perusal of the Poems, the Reader will be able clearly to perceive the object which I have proposed to myself: he will determine how far I have attained this object; and, what is a much more important question, whether it be worth attaining: and upon the decision of these two questions will rest my claim to the approbation of the public.

Appendix to the Preface (1802)

As perhaps I have no right to expect from a Reader of an Introduction to a volume of Poems that attentive perusal without which it is impossible, imperfectly as I have been compelled to express my meaning, that what I have said in the Preface should throughout be fully understood, I am the more anxious to give an exact notion of the sense in which I use the phrase *poetic diction*; and for this purpose I will here add a few words concerning the origin of the phraseology which I have condemned under that name.—The earliest Poets of all nations generally wrote from passion excited by real events; they wrote naturally, and as men: feeling powerfully as they did, their language was daring, and figurative. In succeeding times, Poets, and men ambitious of the fame of Poets, perceiving the influence of such language, and desirous of producing the same effect, without having the same animating passion, set themselves to a mechanical adoption of those figures of speech, and made use of them, sometimes with propriety, but much more frequently applied them to feelings and ideas with which they had no natural connection whatsoever. A language was thus insensibly produced, differing materially from the real language of men in *any situation*. The Reader or Hearer of this distorted language found himself in a perturbed and unusual state of mind: when affected by the genuine language of passion he had been in a perturbed and unusual state of mind also: in both cases he was willing that his common judgment and understanding should be laid asleep, and he had no instinctive and infallible perception of the true to make him reject the false; the one served as a passport for the other. The agitation and confusion of mind were in both cases delightful, and no wonder if he confounded the one with the other, and believed them both to be produced by the same, or similar causes. Besides, the Poet spake to him in the character of a man to be looked up to, a man of genius and authority. Thus, and from a variety of other causes, this distorted language was received with admiration; and Poets, it is probable, who had before contented themselves for the most part with misapplying only expressions which at first had been dictated by real passion, carried the abuse still further, and introduced phrases composed apparently in the spirit of the original figurative language of passion, yet altogether of their own

invention, and distinguished by various degrees of wanton deviation from good sense and nature.

It is indeed true that the language of the earliest Poets was felt to differ materially from ordinary language, because it was the language of extraordinary occasions; but it was really spoken by men; language which the Poet himself had uttered when he had been affected by the events which he described, or which he had heard uttered by those around him. To this language it is probable that metre of some sort or other was early superadded. This separated the genuine language of Poetry still further from common life, so that whoever read or heard the poems of these earliest Poets felt himself moved in a way in which he had not been accustomed to be moved in real life, and by causes manifestly different from those which acted upon him in real life. This was the great temptation to all the corruptions which have followed: under the protection of this feeling succeeding Poets constructed a phraseology which had one thing, it is true, in common with the genuine language of poetry, namely, that it was not heard in ordinary conversation; that it was unusual. But the first Poets, as I have said, spake a language which, though unusual, was still the language of men. This circumstance, however, was disregarded by their successors; they found that they could please by easier means: they became proud of a language which they themselves had invented, and which was uttered only by themselves; and, with the spirit of a fraternity, they arrogated it to themselves as their own. In process of time metre became a symbol or promise of this unusual language, and whoever took upon him to write in metre, according as he possessed more or less of true poetic genius, introduced less or more of this adulterated phraseology into his compositions, and the true and the false became so inseparably interwoven that the taste of men was gradually perverted; and this language was received as a natural language; and at length, by the influence of books upon men, did to a certain degree really become so. Abuses of this kind were imported from one nation to another, and with the progress of refinement this diction became daily more and more corrupt, thrusting out of sight the plain humanities of nature by a motley masquerade of tricks, quaintnesses, hieroglyphics, and enigmas.

It would be highly interesting to point out the causes of the pleasure given by this extravagant and absurd language: but this is not the place; it depends upon a great variety of causes, but upon none perhaps more than its influence in impressing a notion of the peculiarity and exaltation of the Poet's character, and in flattering the Reader's self-love by bringing him nearer to a sympathy with that character; an effect which is accomplished by unsettling ordinary habits of thinking, and thus assisting the Reader to approach to that perturbed and dizzy state of mind in which if he does not find himself, he imagines that he is *balked* of a peculiar enjoyment which poetry can, and ought to bestow.

The sonnet which I have quoted from Gray, in the Preface, except the lines printed in Italics, consists of little else but this diction, though not of the worst kind; and indeed, if I may be permitted to say so, it is far too common in the best writers, both antient and modern. Perhaps I can in no way, by positive example, more easily give my Reader a notion of what I mean by the phrase *poetic diction* than by referring him to a comparison between the metrical paraphrases which we have of passages in the old and new

Testament, and those passages as they exist in our common Translation. See Pope's 'Messiah' throughout, Prior's 'Did sweeter sounds adorn my flowing tongue,'¹ &c. &c. 'Though I speak with the tongues of men and of angels,' &c. &c. See 1st Corinthians, chapter 13th. By way of immediate example, take the following of Dr. Johnson:²

'Turn on the prudent Ant thy heedless eyes,
Observe her labours, Sluggard, and be wise;
No stern command, no monitory voice,
Prescribes her duties, or directs her choice;
Yet, timely provident, she hastes away
To snatch the blessings of a plenteous day;
When fruitful Summer loads the teeming plain,
She crops the harvest and she stores the grain.
How long shall sloth usurp thy useless hours,
Unnerve thy vigour, and enchain thy powers?
While artful shades thy downy couch enclose,
And soft solicitation courts repose,
Amidst the drowsy charms of dull delight,
Year chases year with unremitting flight,
Till want now following, fraudulent and slow,
Shall spring to seize thee, like an ambushed foe.'

From this hubbub of words pass to the original. 'Go to the Ant, thou Sluggard, consider her ways, and be wise: which having no guide, overseer, or ruler, provideth her meat in the summer, and gathereth her food in the harvest. How long wilt thou sleep, O Sluggard? when wilt thou arise out of thy sleep? Yet a little sleep, a little slumber, a little folding of the hands to sleep. So shall thy poverty come as one that travaileth, and thy want as an armed man.' Proverbs, chap. 6th.

One more quotation and I have done. It is from Cowper's verses³ supposed to be written by Alexander Selkirk:

'Religion! what treasure untold
Resides in that heavenly word!
More precious than silver and gold,
Or all that this earth can afford.
But the sound of the church-going bell
These valleys and rocks never heard,
Ne'er sighed at the sound of a knell,
Or smiled when a sabbath appear'd.

Ye winds, that have made me your sport,
Convey to this desolate shore
Some cordial endearing report
Of a land I must visit no more.
My Friends, do they now and then send

1. "Charity. A Paraphrase on the Thirteenth Chapter of the First Epistle to the Corinthians" (1703), by Matthew Prior (1664-1721). "Messiah": a "sacred eclogue" (1712), imitating Virgil's Latin *Eclogue* 4 (ca. 37 B.C.E.).

2. "The Ant" (1766).

3. "Verses Supposed to be Written by Alexander Selkirk" (1782), stanzas 4-5, by William Cowper (1731-1800). Selkirk (1676-1721), a Scottish sailor who lived from 1704 to 1709 on an uninhabited island off the coast of Chile.

A wish or a thought after me?
 O tell me I yet have a friend,
 Though a friend I am never to see.'

I have quoted this passage as an instance of three different styles of composition. The first four lines are poorly expressed; some Critics would call the language prosaic; the fact is, it would be bad prose, so bad, that it is scarcely worse in metre. The epithet 'church-going' applied to a bell, and that by so chaste a writer as Cowper, is an instance of the strange abuses which Poets have introduced into their language till they and their Readers take them as matters of course, if they do not single them out expressly as objects of admiration. The two lines 'Ne'er sighed at the sound,' &c. are, in my opinion, an instance of the language of passion wrested from its proper use, and, from the mere circumstance of the composition being in metre, applied upon an occasion that does not justify such violent expressions; and I should condemn the passage, though perhaps few Readers will agree with me, as vicious poetic diction. The last stanza is throughout admirably expressed: it would be equally good whether in prose or verse, except that the Reader has an exquisite pleasure in seeing such natural language so naturally connected with metre. The beauty of this stanza tempts me here to add a sentiment which ought to be the pervading spirit of a system, detached parts of which have been imperfectly explained in the Preface,—namely, that in proportion as ideas and feelings are valuable, whether the composition be in prose or in verse, they require and exact one and the same language.

1800, 1802

4. Austere, ornament-free.

SAMUEL TAYLOR COLERIDGE

1772–1834

Samuel Taylor Coleridge has been praised as the premier English literary intellectual of his era and as the first modern critic, a writer who sought to integrate literary analysis with the insights of other disciplines and who labored (with less than complete success) to give literary criticism a philosophical foundation. But he has also been dismissed and derided in hostile tones rarely found in academic commentary. Was Coleridge a great original thinker? He drew on many eighteenth-century and contemporary authors, particularly German Idealist and Romantic philosophers and critics, including IMMANUEL KANT, FRIEDRICH VON SCHILLER, Friedrich and A. W. Schlegel, and Friedrich von Schelling—and some scholars have commended him for introducing the best of German thought to an English readership. Less charitably, though with some reason, others have termed these literary debts, references, and borrowings to be nothing more than plagiarisms.

Coleridge has also been rebuked and mocked for the ambitious projects he proposed, launched, but left undone: an eight- to ten-volume history of literature, an epic poem on the origin of evil, and so on. He had extraordinary literary gifts, but was

an undisciplined author who failed to make full use of his exceptional talents—as he himself knew well. Coleridge wrote in his copy of his book *The Statesman's Manual* (1816) that while he had produced a number of significant works, he stood in the world's eyes as “the wild eccentric Genius that has published nothing but fragments & splendid Tirades.” With the possible exception of the *Biographia Literaria* (1817) and a handful of poems, none of his works holds together as an effective whole. Yet as a writer, and as a speaker (we have ample records of his conversations and lectures), he was, and still is, brilliantly impressive and stimulating.

Coleridge was born the son of the vicar of Ottery St. Mary, a small town in south-west England; but at age nine, following the death of his father, he was sent to school in London, attending Christ's Hospital as a charity student. In 1791 he enrolled in Jesus College, Cambridge University; two years later, plagued by debts, he enlisted in the Fifteenth Light Dragoons under the alias Silas Tomkyn Comberbache (S.T.C.). He was soon rescued from this mistake by his family and returned to the university, but he left in December 1794 without completing his degree.

In June 1794, while on a walking tour, Coleridge met the poet Robert Southey at Oxford, and the two concocted a plan for a “pantisocracy” (a society ruled by equals). They decided on a location (in Pennsylvania) and on the twelve men who, with their wives, would create this agricultural commune; but the only action taken was Coleridge's engagement (made necessary by the scheme) to Sara Fricker, the sister of Southey's fiancée. Though the plan collapsed, he married her in 1795.

In late 1794 Coleridge's first published poetry appeared (sonnets addressed to contemporary political radicals such as William Godwin and Joseph Priestley). In 1795 he worked as a journalist and lectured in Bristol on politics, religion, and history. Most scholars believe that he there first met WILLIAM WORDSWORTH, beginning an intense friendship that soon led to the most significant collaboration in English literary history. By May 1796 Coleridge was calling Wordsworth “a very dear friend of mine, who is in my opinion the best poet of the age,” and his own first collection of poetry, *Poems on Various Subjects*, had just been published. In December, Coleridge and his wife Sara settled in Nether Stowey, and soon thereafter Wordsworth and his sister Dorothy moved nearby, to Alfoxden. Beginning in mid-1797 Coleridge and Wordsworth worked together on *Lyrical Ballads*, which they published anonymously in September 1798. Among the works of this period, Coleridge's high point as a poet, are “This Lime Tree Bower My Prison,” “The Rime of the Ancient Mariner,” “Frost at Midnight,” “Fears in Solitude,” “The Nightingale,” part I of “Christabel,” and probably the fragment “Kubla Khan” as well.

Leaving his wife and two children behind, Coleridge accompanied the Wordsworths to Germany in September 1798, where he read and absorbed the philosophical and literary speculations of Kant, Schelling, the Schlegels, and Schiller (whose work he later translated).

On his return to England in mid-1799, Coleridge wrote political articles and made plans (unrealized) for a biography of the German critic and dramatist GOTTHOLD EPHRAIM LESSING and for a major book on Romantic metaphysics. The Coleridges followed the Wordsworths to the Lake District in 1800; and although the second edition of *Lyrical Ballads* (1800) appeared with only Wordsworth's name on the title page and with a long preface by Wordsworth that ignored Coleridge's poems, the men remained close. But Coleridge's personal life was in disarray. Already indifferent to his wife, he had fallen in love with Sara Hutchinson, whose sister, Mary, Wordsworth would marry in 1802; even worse, he had become dependent on laudanum (opium dissolved in alcohol, widely used to treat a number of disorders). Leaving his family behind, Coleridge spent two years traveling the Mediterranean and working in Malta; but he returned to England in 1806 still an addict. He lived for some months with the Wordsworths, and the relationship grew strained; the men finally broke on bitter terms in 1810.

Under the circumstances, Coleridge was surprisingly productive. In 1809 and

1810, he wrote and published *The Friend*, a periodical that ran for twenty-eight issues; and between 1808 and 1819, he lectured frequently on politics, religion, education, philosophy, and literature, offering especially incisive commentaries on Shakespeare and Milton. During the period from June to September 1815, he focused on the *Biographia Literaria*, which he dictated rather than wrote. From spring 1816 until his death in 1834, Coleridge lived in Highgate, a northern suburb of London, with and under the care of Dr. James Gillman, who helped control his drug addiction.

By this time known as the "Sage of Highgate," Coleridge published *Christabel and Other Poems* (1816); the first volume of his collected poems, *Sibylline Leaves* (1817; expanded 1828, 1834); and his *Poetical Works* (3 vols., 1828; 2d ed., 1829; 3d ed., 1834). His major prose works are *Lay Sermons* (1816, 1817), essays on national education and the structure of an organic society; *Biographia Literaria* (1817); "Treatise on Method" (included in the three-volume edition of *The Friend*, 1818); *Aids to Reflection* (1825; 2d ed., 1831); and *On the Constitution of the Church and State* (1829; 2d ed., 1830), in which he proposed the establishment of teachers, scholars, and priests as an independent estate of the realm, "the clerisy." In addition; *Table Talk* (edited by his nephew Henry Coleridge, 1836), which displays his skills in conversation; *Literary Remains* (1836), which contains an account of his 1818–19 lectures on "the history of philosophy" and the "general course of literature"; and *Anima Poetae* (1895), selections from his notebooks, all appeared after his death.

Coleridge frequently professed a commitment to system, logic, and method, but his own practice time and again resists global theories and highly elaborated schemes and structures. It is the penetrating phrase or sentence, the powerful paragraph of speculation, and the shrewd, suggestive judgment that reveal Coleridge at his best. Still, for English and American critics in the early twentieth century, especially I. A. Richards, CLEANTH BROOKS, and other New Critics, the central Coleridge text is *Biographia Literaria*, where they found and built on Coleridge's famous theory of the imagination, his exposition of organic unity, and his treatment of poetry as the reconciliation of opposites.

Biographia Literaria, a hastily assembled work, mixes modes and genres. It includes autobiography, philosophy, literary theory, and analytical literary criticism, as well as a memoir of Wordsworth, a study of his poems, and a critique of his theory of poetic diction. At the center of Coleridge's project is his inquiry into and defense of the imagination. Coleridge's account, distinguishing between "fancy" and "imagination," lacks the splendor and breadth of PERCY BYSSHE SHELLEY's tribute to the imagination in the *Defence of Poetry* (written 1821; see below) as "the great instrument of moral good," but it has exercised a greater influence on later literary theory and criticism. Coleridge speaks first of the "primary" imagination: the "living power" of God, in the eternal act of creation, it is also the power of creation in each person. The "secondary" imagination echoes the primary; in conjunction with the will and understanding, it dissolves in order to re-create, making whole and harmonizing as a "synthetic and magical power." Fancy, in contrast, merely associates "fixities and definites."

This is an intriguing, if elusive, theory, over which commentators have puzzled. But the real importance of Coleridge's words is their departure from eighteenth-century neoclassical theory. SAMUEL JOHNSON, in his *Dictionary* (1765), offers "fancy" as one of the definitions of "imagination"; that Coleridge makes a distinction between the two has important implications for his conception of the poet and the poem. Neoclassical critics such as ALEXANDER POPE and Johnson could exempt only a great genius like Shakespeare from external rules of literary decorum, insisting that others rely on deliberate craft; but for Coleridge the creative work of every poet springs from an imaginative power at once available for analysis yet mysterious in its sources. He sees a poem as *organic*, true to itself, acquiring its shape like a plant from a seed and thereby growing according to its own internal law of development.

Coleridge's theory of the primary and secondary imagination honors the creative capacity of persons while remaining steadfast to the primacy of God; even more,

Coleridge implies that each re-creative act that a poet performs is an act of worship. As modern scholars have pointed out, Coleridge was the most devout of all the major Romantic writers; his Christian faith is central to all his work. He sees "a similar union of the universal and the individual" in religion and in the fine arts. Yet implicit in Coleridge's theory of the imagination are both difficulty and failure, which take on added bleakness in this context. When he sets the imagination in contrast to a world of "essentially fixed and dead objects," does he mean that God has made a world that is dead—at least until awakened or renewed by a creative act?

Coleridge makes a similar distinction in his commentaries on allegory and symbol (one of which, from *The Statesman's Manual*, is excerpted below). Allegory, he indicates, is mechanical and formulaic, part of the larger problem of our degenerate age of triumphant "mechanic" philosophy; but symbol is organically unified, fusing the particular and the general, the temporal and the eternal. This distinction is crucial for Coleridge, yet, as PAUL DE MAN argues in "The Rhetoric of Temporality" (1969), his arguments do not sustain it: the more that Coleridge explores the distinction, the more he complicates and blurs its terms. Indeed, some of his best-known poetry ("The Rime of the Ancient Mariner," "Kubla Khan," "Christabel") has invited allegorical interpretation.

Coleridge's emphasis on the power of the imagination is at odds with much contemporary theory and historical and cultural criticism, which is suspicious of claims that appear to give certain individuals the power to create new worlds out of nothing but their imagination. The New Historicist STEPHEN GREENBLATT speaks, for example, not of the imaginative power and prowess of the author but of "social energy"; and it is true that Coleridge pays too little attention to the powerful social networks of signification in which an author's work takes shape. But recent theorists, reacting perhaps too sweepingly against the idea of the author as a Romantic genius, have tended to undervalue the creative power of the individual author, the agent of the imagination who, as Coleridge says of Shakespeare, demonstrates his authority and skill "not only in the general construction, but in all the detail."

BIBLIOGRAPHY

Primary sources include *The Collected Works of Samuel Taylor Coleridge*, general editor Kathleen Coburn (13 vols. to date, 1969–), published by the Bollingen Foundation and Princeton University Press, superbly edited and with comprehensive introductions; *The Collected Letters*, edited by Earl Leslie Griggs (6 vols., 1956–71); and *Selected Letters*, edited by H. J. Jackson (1987). Also illuminating are *The Notebooks*, edited by Kathleen Coburn (4 vols. to date, 1957–). Collections of Coleridge's criticism include *Shakespearean Criticism* (2 vols., 1930) and *Miscellaneous Criticism* (1936), both edited by T. M. Raysor. See also *Coleridge on the Seventeenth Century*, edited by Roberta Florence Brinkley (1955), and *Writings on Shakespeare: A Selection of the Essays, Notes, and Lectures*, edited by Terence Hawkes (1959).

Walter Jackson Bate, *Coleridge* (1968), is a fine introduction to the life and works; two volumes by Richard Holmes, *Coleridge: Early Visions, 1772–1804* (1989) and *Coleridge: Darker Reflections, 1804–1834* (1999) constitute the best biography. Rosemary Ashton, *The Life of Samuel Taylor Coleridge: A Critical Biography* (1996), is astute. Norman Fruman, *Coleridge: The Damaged Archangel* (1971), assembles the evidence of Coleridge's plagiarisms.

The best point of departure for studying Coleridge's criticism is the *Biographia Literaria*. See especially the editions by James Engell and Walter Jackson Bate, vol. 7 of the Bollingen *Samuel Taylor Coleridge* (1983), and by John Shawcross (2 vols., 1907). Scholarly studies of *Biographia Literaria* include Kathleen M. Wheeler, *Sources, Processes, and Methods in Coleridge's "Biographia Literaria"* (1980); Catherine Miles Wallace, *The Design of "Biographia Literaria"* (1983); and *Coleridge's "Biographia Literaria": Text and Meaning*, edited by Frederick Burwick (1989), which

presents fourteen essays on major themes of the text and on its style, sources, significance for the history of Romanticism, and connections to contemporary literary theory. For critical responses to Coleridge to the year 1900, consult *Coleridge: The Critical Heritage*, edited by J. R. de J. Jackson (2 vols., 1970–91).

There are many fine books on Coleridge's literary theory: J. A. Appleyard, *Coleridge's Philosophy of Literature: The Development of a Concept of Poetry, 1791–1819* (1965); Thomas McFarland, *Coleridge and the Pantheist Tradition* (1969), which includes cogent chapters on Coleridge's plagiarisms and pantheist beliefs; J. R. de J. Jackson, *Method and Imagination in Coleridge's Criticism* (1969); J. Robert Barth, *The Symbolic Imagination: Coleridge and the Romantic Tradition* (1977); and Jerome C. Christensen, *Coleridge's Blessed Machine of Language* (1981). On Coleridge's theories of literary language and poetic diction, see Emerson R. Marks, *Coleridge on the Language of Verse* (1981); a fine treatment of Coleridge's interest in language "as an artistic medium"; Timothy Corrigan, *Coleridge, Language, and Criticism* (1982); Paul Hamilton, *Coleridge's Poetics* (1983), an insightful study of Coleridge's significant influence on post-Romantic literary criticism; James C. McKusick, *Coleridge's Philosophy of Language* (1986); and A. C. Goodson, *Verbal Imagination: Coleridge and the Language of Modern Criticism* (1988), which relates Coleridge's theory of poetry to the development of modern literary criticism.

For bibliographies, see *Samuel Taylor Coleridge: An Annotated Bibliography of Criticism and Scholarship*, edited by Richard and Josephine Haven and Maurianne Adams (2 vols., 1976–83), which covers work to 1939. See also Jefferson D. Caskey and Melinda M. Capper, *Samuel Taylor Coleridge: A Selective Bibliography of Criticism, 1935–1977* (1978).

From The Statesman's Manual¹

* * *

But do you require some one or more particular passage from the Bible, that may at once illustrate and exemplify its applicability to the changes and fortunes of empires? Of the numerous chapters that relate to the Jewish tribes, their enemies and allies, before and after their division into two kingdoms, it would be more difficult to state a single one, from which some guiding light might *not* be struck. And in nothing is Scriptural history more strongly contrasted with the histories of highest note in the present age² than in its freedom from the hollowness of abstractions: While the latter present a shadow-fight of Things and Quantities, the former gives us the history of Men, and balances the important influence of individual Minds with the previous state of the national morals and manners, in which, as constituting a specific susceptibility, it presents to us the true cause both of the Influence itself, and of the Weal or Woe that were its Consequents. How should it be otherwise? The histories and political economy of the present and preceding century partake in the general contagion of its mechanic philosophy, and are the *product* of an unenlivened generalizing Understanding. In the Scriptures they are the living *educts*³ of the Imagination; of that reconciling and medi-

2. Probably a reference to DAVID HUME, *History of England* (5 vols., 1754–62), and Edward Gibbon, *The History of the Decline and Fall of the Roman Empire* (6 vols., 1776–88).

3. Things drawn forth, developed.

atory power, which incorporating the Reason in Images of the Sense, and organizing (as it were) the flux of the Senses by the permanence and self-circling energies of the Reason, gives birth to a system of symbols, harmonious in themselves, and consubstantial with the truths, of which they are the *conductors*. These are the Wheels which Ezekiel⁴ beheld, when the hand of the Lord was upon him, and he saw visions of God as he sat among the captives by the river of Chebar. *Whithersoever the Spirit was to go, the wheels went, and thither was their spirit to go: for the spirit of the living creature was in the wheels also.* The truths and the symbols that represent them move in conjunction and form the living chariot that bears up (for us) the throne of the Divine Humanity. Hence, by a derivative, indeed, but not a divided, influence, and though in a secondary yet in more than a metaphorical sense, the Sacred Book is worthily intitled *the WORD OF GOD*. Hence too, its contents present to us the stream of time continuous as Life and symbol of Eternity, inasmuch as the Past and the Future are virtually contained in the Present. According therefore to our relative position on its banks the Sacred History becomes prophetic, the Sacred Prophecies historical, while the power and substance of both inhere in its Laws, its Promises, and its Cominations.⁵ In the Scriptures therefore both Facts and Persons must of necessity have a two-fold significance; a past and a future, a temporary and a perpetual, a particular and a universal application. They must be at once Portraits and Ideals.

Eheu! paupertina philosophia in paupertinam religionem ducit:⁶—A hunger-bitten and idea-less philosophy naturally produces a starveling and comfortless religion. It is among the miseries of the present age that it recognizes no medium between *Literal* and *Metaphorical*. Faith is either to be buried in the dead letter, or its name and honors usurped by a counterfeit product of the mechanical understanding, which in the blindness of self-complacency confounds SYMBOLS with ALLEGORIES. Now an Allegory is but a translation of abstract notions into a picture-language which is itself nothing but an abstraction from objects of the senses; the principal being more worthless even than its phantom proxy, both alike unsubstantial, and the former shapeless to boot. On the other hand a Symbol (ὁ ἔστιν ἅει ταυτηγόρικον)⁷ is characterized by a translucence of the Special in the Individual or of the General in the Especial or of the Universal in the General. Above all by the translucence of the Eternal through and in the Temporal. It always partakes of the Reality which it renders intelligible;⁸ and while it enunciates the whole, abides itself as a living part in that Unity, of which it is the representative. The other are but empty echoes which the fancy arbitrarily associates with apparitions of matter, less beautiful but not less shadowy than the sloping orchard or hill-side pasture-field seen in the transparent lake below. Alas! for the flocks that are to be

4. A Hebrew prophet (6th c. B.C.E.) during the Babylonian Exile, when thousands of Jews were deported from Palestine by King Nebuchadnezzar. For his vision of the wheels, see Ezekiel 1.1–21; Coleridge quotes verse 20.

5. Threats of divine vengeance.

6. Alas! An impoverished philosophy leads to an impoverished religion (Latin).

7. Which is always tautegorical (Greek). According to the *Oxford English Dictionary*, Coleridge

invented this word (as well as its Greek "original"), which he said meant "expressing the same subject but with a difference."

8. The notion of partaking of a "Reality" that is known only through individual (imperfect) instantiations strongly echoes PLATO's theory of unchanging, eternal Forms or Ideas, in whose reality ordinary objects "participate" (see the selection from *Republic* 7 above; more generally on Forms, see *Parmenides*).

led forth to such pastures! "It shall even be as when the hungry dreameth, and behold! he eateth; but he waketh and his soul is empty: or as when the thirsty dreameth, and behold he drinketh; but he awaketh and is faint!" (ISAIAH XXIX. 8.) O! that we would seek for the bread which was given from heaven, that we should eat thereof and be strengthened! O that we would draw at the well at which the flocks of our forefathers had living water drawn for them, even that water which, instead of mocking the thirst of him to whom it is given, becomes a well within himself springing up to life everlasting!⁹

* * *

From Appendix C

* * *

That, which we find in ourselves, is (*gradu mutato*)¹ the substance and the life of *all* our knowledge. Without this latent presence of the "I am,"² all modes of existence in the external world would flit before us as colored shadows, with no greater depth, root, or fixture, than the image of a rock hath in a gliding stream or the rain-bow on a fast-sailing rain-storm. The human mind is the compass, in which the laws and actuations of all outward essences are revealed as the dips and declinations. (The application of Geometry to the forces and movements of the material world is both proof and instance.) The fact therefore, that the mind of man in its own primary and constituent forms represents the laws of nature, is a mystery which of itself should suffice to make us religious: for it is a problem of which God is the only solution, God, the one before all, and of all, and through all!—True natural philosophy is comprized in the study of the science and language of *symbols*. The power delegated to nature is all in every part: and by a symbol I mean, not a metaphor or allegory or any other figure of speech or form of fancy, but an actual and essential part of that, the whole of which it represents. Thus our Lord speaks symbolically when he says that "the eye is the light of the body."³

From Biographia Literaria¹

From Part I

FROM CHAPTER I

* * *

As the result of all my reading and meditation, I abstracted two critical aphorisms, deeming them to comprize the conditions and criteria of poetic style;

9. This sentence echoes and alludes to John 4.14.

1. On a different level (Latin).

2. See Exodus 3.14: "And God said unto Moses: I AM THAT I AM." Compare also Coleridge's *Biographia Literaria* (1817), chap. 12: "We begin with the I KNOW MYSELF, in order to end with the absolute I AM. We proceed from the SELF, in order to lose

and find all self in GOD."

3. Matthew 6.22: "The light of the body is the eye."

1. The full title is *Biographia Literaria; Or, Biographical Sketches of My Literary Life and Opinions*. Footnotes by Coleridge have been omitted from this selection.

first, that not the poem which we have *read*, but that to which we *return*, with the greatest pleasure, possesses the genuine power, and claims the name of *essential poetry*. Second, that whatever lines can be translated into other words of the same language, without diminution of their significance, either in sense, or association, or in any worthy feeling, are so far vicious² in their diction. Be it however observed, that I excluded from the list of worthy feelings, the pleasure derived from mere novelty, in the reader, and the desire of exciting wonderment at his powers in the author. Oftentimes since then, in perusing French tragedies, I have fancied two marks of admiration at the end of each line, as hieroglyphics of the author's own admiration at his own cleverness. Our genuine admiration of a great poet is a continuous *undercurrent* of feeling; it is every where present, but seldom any where as a separate excitement. I was wont boldly to affirm, that it would be scarcely more difficult to push a stone out from the pyramids with the bare hand, than to alter a word, or the position of a word, in Milton or Shakspeare, (in their most important works at least) without making the author say something else, or something worse, than he does say. One great distinction, I appeared to myself to see plainly, between, even the characteristic faults of our elder poets, and the false beauty of the moderns. In the former, from DONNE to COWLEY,³ we find the most fantastic out-of-the-way thoughts, but in the most pure and genuine mother English; in the latter, the most obvious thoughts, in language the most fantastic and arbitrary. Our faulty elder poets sacrificed the passion, and passionate flow of poetry, to the subtleties of intellect, and to the starts of wit; the moderns to the glare and glitter of a perpetual, yet broken and heterogeneous imagery, or rather to an amphibious something, made up, half of image, and half of abstract meaning. The one sacrificed the heart to the head; the other both heart and head to point and drapery.

* * *

FROM CHAPTER 4

* * *

This excellence,⁴ which in all Mr. Wordsworth's writings is more or less predominant, and which constitutes the character of his mind, I no sooner felt, than I sought to understand. Repeated meditations led me first to suspect, (and a more intimate analysis of the human faculties, their appropriate marks, functions, and effects matured my conjecture into full conviction) that fancy and imagination were two distinct and widely different faculties, instead of being, according to the general belief, either two names with one meaning, or at furthest, the lower and higher degree of one and the same power. It is not, I own, easy to conceive a more apposite translation of the Greek *Phantasia*, than the Latin *Imaginatio*; but it is equally true that in all societies there exists an instinct of growth, a certain collective, unconscious good sense working progressively to desynonymize⁵ those words originally of

2. Defective.

3. Abraham Cowley (1618–1667), English satirist, poet, and essayist. John Donne (1572–1631), English poet. Both wrote so-called metaphysical poetry, reliant on complex metaphors and images.

4. Coleridge has just claimed that it is the mark of genius "to represent familiar objects so as to

awaken in the minds of others a kindred feeling concerning them." A considerable portion of the *Biographia Literaria* is devoted to a critical analysis of the English poet WILLIAM WORDSWORTH (1770–1850), Coleridge's friend and collaborator.

5. To differentiate in meaning words previously synonymous (so defined by the *Oxford English*

the same meaning, which the conflux of dialects had supplied to the more homogeneous languages, as the Greek and German: and which the same cause, joined with accidents of translation from original works of different countries, occasion in mixt languages like our own. The first and most important point to be proved is, that two conceptions perfectly distinct are confused under one and the same word, and (this done) to appropriate that word exclusively to one meaning, and the synonyme (should there be one) to the other. But if (as will be often the case in the arts and sciences) no synonyme exists, we must either invent or borrow a word. In the present instance the appropriation had already begun, and been legitimated in the derivative adjective: Milton⁶ had a highly *imaginative*, Cowley a very *fanciful* mind. If therefore I should succeed in establishing the actual existences of two faculties generally different, the nomenclature would be at once determined. To the faculty by which I had characterized Milton, we should confine the term *imagination*; while the other would be contra-distinguished as *fancy*. Now were it once fully ascertained, that this division is no less grounded in nature, than that of delirium from mania, or Otway's

Lutes, lobsters, seas of milk, and ships of amber,⁷

from Shakespear's

What! have his daughters brought him to this pass?⁸

or from the preceding apostrophe to the elements;⁹ the theory of the fine arts, and of poetry in particular, could not, I thought, but derive some additional and important light. It would in its immediate effects furnish a torch of guidance to the philosophical critic; and ultimately to the poet himself. In energetic minds, truth soon changes by domestication into power; and from directing in the discrimination and appraisal of the product, becomes influence in the production. To admire on principle, is the only way to imitate without loss of originality.

FROM CHAPTER 13

* * *

The IMAGINATION then I consider either as primary, or secondary. The primary IMAGINATION I hold to be the living Power and prime Agent of all human Perception, and as a repetition in the finite mind of the eternal act of creation in the infinite I AM.¹ The secondary I consider as an echo of the former, co-existing with the conscious will, yet still as identical with the primary in the *kind* of its agency, and differing only in *degree*, and in the *mode* of its operation. It dissolves, diffuses, dissipates, in order to re-create; or where this process is rendered impossible, yet still at all events it struggles to idealize and to unify. It is essentially *vital*, even as all objects (*as* objects) are essentially fixed and dead.

Fancy, on the contrary, has no other counters to play with, but fixities and

¹ *Dictionary*, which gives this as the first use of the word).

⁶ John Milton (1608–1674) was a contemporary of but far greater poet than Cowley.

⁷ *Venice Preserved* (1682), 5.2.151; by Thomas Otway (1652–1685). Coleridge uses the word "lobsters" where Otway had written "laurels."

⁸ *King Lear* (ca. 1604–05), 3.4.61 (Shakespeare begins the line "What, has").

⁹ That is, Lear's address to the storm, 3.2.1–9, 13–23.

¹ See Exodus 3.14: "And God said unto Moses, I AM THAT I AM."

definites. The Fancy is indeed no other than a mode of Memory emancipated from the order of time and space; and blended with, and modified by that empirical phenomenon of the will, which we express by the word CHOICE. But equally with the ordinary memory it must receive all its materials ready made from the law of association.

* * *

From *Part II*

CHAPTER 14

During the first year that Mr. Wordsworth and I were neighbours,² our conversations turned frequently on the two cardinal points of poetry, the power of exciting the sympathy of the reader by a faithful adherence to the truth of nature, and the power of giving the interest of novelty by the modifying colours of imagination. The sudden charm, which accidents of light and shade, which moon-light or sun-set diffused over a known and familiar landscape, appeared to represent the practicability of combining both. These are the poetry of nature. The thought suggested itself (to which of us I do not recollect) that a series of poems might be composed of two sorts. In one, the incidents and agents were to be, in part at least, supernatural; and the excellence aimed at was to consist in the interesting of the affections by the dramatic truth of such emotions, as would naturally accompany such situations, supposing them real. And real in *this* sense they have been to every human being who, from whatever source of delusion, has at any time believed himself under supernatural agency. For the second class, subjects were to be chosen from ordinary life; the characters and incidents were to be such, as will be found in every village and its vicinity, where there is a meditative and feeling mind to seek after them, or to notice them, when they present themselves.

In this idea originated the plan of the "Lyrical Ballads;" in which it was agreed, that my endeavours should be directed to persons and characters supernatural, or at least romantic; yet so as to transfer from our inward nature a human interest and a semblance of truth sufficient to procure for these shadows of imagination that willing suspension of disbelief for the moment, which constitutes poetic faith. Mr. Wordsworth, on the other hand, was to propose to himself as his object, to give the charm of novelty to things of every day, and to excite a feeling analogous to the supernatural, by awakening the mind's attention from the lethargy of custom, and directing it to the loveliness and the wonders of the world before us; an inexhaustible treasure, but for which in consequence of the film of familiarity and selfish solicitude we have eyes, yet see not, ears that hear not, and hearts that neither feel nor understand.³

With this view I wrote the "Ancient Mariner," and was preparing among other poems, the "Dark Ladie," and the "Christabel," in which I should have more nearly realized my ideal, than I had done in my first attempt. But Mr. Wordsworth's industry had proved so much more successful, and the number of his poems so much greater,⁴ that my compositions, instead of forming a

2. In 1797-98 Coleridge was living at Nether Stowey and Wordsworth was nearby at Alfoxden, in southwest England.

3. See *Isalah* 6.9-10.

4. Wordsworth wrote 19 of the 23 poems in the first edition of *Lyrical Ballads* (1798).

balance, appeared rather an interpolation of heterogeneous matter. Mr. Wordsworth added two or three poems written in his own character, in the impassioned, lofty, and sustained diction, which is characteristic of his genius. In this form the "Lyrical Ballads" were published; and were presented by him, as an *experiment*,⁵ whether subjects, which from their nature rejected the usual ornaments and extra-colloquial style of poems in general, might not be so managed in the language of ordinary life as to produce the pleasurable interest, which it is the peculiar business of poetry to impart. To the second edition he added a preface of considerable length; in which notwithstanding some passages of apparently a contrary import, he was understood to contend for the extension of this style to poetry of all kinds, and to reject as vicious and indefensible all phrases and forms of style that were not included in what he (unfortunately, I think, adopting an equivocal expression) called the language of *real* life. From this preface, prefixed to poems in which it was impossible to deny the presence of original genius, however mistaken its direction might be deemed, arose the whole long continued controversy.⁶ For from the conjunction of perceived power with supposed heresy I explain the inveteracy and in some instances, I grieve to say, the acrimonious passions, with which the controversy has been conducted by the assailants.

Had Mr. Wordsworth's poems been the silly, the childish things, which they were for a long time described as being; had they been really distinguished from the compositions of other poets merely by meanness of language and inanity of thought; had they indeed contained nothing more than what is found in the parodies and pretended imitations of them; they must have sunk at once, a dead weight, into the slough⁷ of oblivion, and have dragged the preface along with them. But year after year increased the number of Mr. Wordsworth's admirers. They were found too not in the lower classes of the reading public, but chiefly among young men of strong sensibility and meditative minds; and their admiration (inflamed perhaps in some degree by opposition) was distinguished by its intensity, I might almost say, by its *religious* fervour. These facts, and the intellectual energy of the author, which was more or less consciously felt, where it was outwardly and even boisterously denied, meeting with sentiments of aversion to his opinions, and of alarm at their consequences, produced an eddy of criticism, which would of itself have borne up the poems by the violence, with which it whirled them round and round. With many parts of this preface in the sense attributed to them and which the words undoubtedly seem to authorise, I never concurred; but on the contrary objected to them as erroneous in principle, and as contradictory (in appearance at least) both to other parts of the same preface, and to the author's own practice in the greater number of the poems themselves. Mr. Wordsworth in his recent collection has, I find, degraded this prefatory disquisition to the end of his second volume, to be

5. See the brief advertisement to the first edition of *Lyrical Ballads*: "The majority of the following poems are to be considered as experiments. They were written chiefly with a view to ascertain how far the language of conversation in the middle and lower classes of society is adapted to the purposes of poetic pleasure."

6. That is, the controversy that arose over Wordsworth's theory and practice of poetry, especially in hostile essays by the critic Francis Jeffrey in the *Edinburgh Review*. See Wordsworth, preface to *Lyrical Ballads* (1800; above).

7. Soft, muddy ground.

read or not at the reader's choice.⁸ But he has not, as far as I can discover, announced any change in his poetic creed. At all events, considering it as the source of a controversy, in which I have been honored more, than I deserve, by the frequent conjunction of my name with his, I think it expedient to declare once for all, in what points I coincide with his opinions, and in what points I altogether differ. But in order to render myself intelligible I must previously, in as few words as possible, explain my ideas, first, of a POEM; and secondly, of POETRY itself, in *kind*, and in *essence*.

The office of philosophical *disquisition* consists in just *distinction*; while it is the privilege of the philosopher to preserve himself constantly aware, that distinction is not division. In order to obtain adequate notions of any truth, we must intellectually separate its distinguishable parts; and this is the technical *process* of philosophy. But having so done, we must then restore them in our conceptions to the unity, in which they actually co-exist; and this is the *result* of philosophy. A poem contains the same elements as a prose composition; the difference therefore must consist in a different combination of them, in consequence of a different object proposed. According to the difference of the object will be the difference of the combination. It is possible, that the object may be merely to facilitate the recollection of any given facts or observations by artificial arrangement; and the composition will be a poem, merely because it is distinguished from prose by metre, or by rhyme, or by both conjointly. In this, the lowest sense, a man might attribute the name of a poem to the well known enumeration of the days in the several months;

Thirty days hath September,
April, June, and November, &c.

and others of the same class and purpose. And as a particular pleasure is found in anticipating the recurrence of sounds and quantities, all compositions that have this charm superadded, whatever be their contents, *may* be entitled poems.

So much for the superficial *form*. A difference of object and contents supplies an additional ground of distinction. The immediate purpose may be the communication of truths; either of truth absolute and demonstrable, as in works of science; or of facts experienced and recorded, as in history. Pleasure, and that of the highest and most permanent kind, may *result* from the *attainment* of the end; but it is not itself the immediate end. In other works the communication of pleasure may be the immediate purpose; and though truth, either moral or intellectual, ought to be the *ultimate* end, yet this will distinguish the character of the author, not the class to which the work belongs. Blest indeed is that state of society, in which the immediate purpose would be baffled by the perversion of the proper ultimate end; in which no charm of diction or imagery could exempt the Bathyllus even of an Anacreon, or the Alexis of Virgil,⁹ from disgust and aversion!

But the communication of pleasure may be the immediate object of a work

8. For *Poems* (2 vols., 1815), Wordsworth moved the preface for *Lyrical Ballads* to an appendix and wrote a new preface and "supplementary" essay.

9. The Roman poet (70–19 B.C.E.) whose *Eclogue* 2 (ca. 37 B.C.E.) is the shepherd Corydon's love-

sick address to the male slave Alexis. Bathyllus: a beautiful boy of Samos to whom several odes of the Greek lyric poet Anacreon (b. ca. 570 B.C.E.) are addressed.

not metrically composed; and that object may have been in a high degree attained, as in novels and romances. Would then the mere superaddition of metre, with or without rhyme, entitle *these* to the name of poems? The answer is, that nothing can permanently please, which does not contain in itself the reason why it is so, and not otherwise.¹ If metre be superadded, all other parts must be made consonant with it. They must be such, as to justify the perpetual and distinct attention to each part, which an exact correspondent recurrence of accent and sound are calculated to excite. The final definition then, so deduced, may be thus worded: A poem is that species of composition, which is opposed to works of science, by proposing for its *immediate* object pleasure, not truth; and from all other species (having *this* object in common with it) it is discriminated by proposing to itself such delight from the *whole*, as is compatible with a distinct gratification from each component part.

Controversy is not seldom excited in consequence of the disputants attaching each a different meaning to the same word; and in few instances has this been more striking, than in disputes concerning the present subject. If a man chooses to call every composition a poem, which is rhyme, or measure, or both, I must leave his opinion uncontroverted. The distinction is at least competent to characterize the writer's intention. If it were subjoined, that the whole is likewise entertaining or affecting, as a tale, or as a series of interesting reflections, I of course admit this as another fit ingredient of a poem, and an additional merit. But if the definition sought for be that of a *legitimate* poem, I answer, it must be one, the parts of which mutually support and explain each other; all in their proportion harmonizing with, and supporting the purpose and known influences of metrical arrangement. The philosophic critics of all ages coincide with the ultimate judgement of all countries, in equally denying the praises of a just poem, on the one hand, to a series of striking lines or distichs,² each of which absorbing the whole attention of the reader to itself disjoins it from its context, and makes it a separate whole, instead of an harmonizing part; and on the other hand, to an unsustained composition, from which the reader collects rapidly the general result unattracted by the component parts. The reader should be carried forward; not merely or chiefly by the mechanical impulse of curiosity, or by restless desire to arrive at the final solution; but by the pleasureable activity of mind excited by the attractions of the journey itself. Like the motion of a serpent, which the Egyptians made the emblem of intellectual power; or like the path of sound through the air; at every step he pauses and half recedes, and from the retrogressive movement collects the force which again carries him onward. *Precipitandus est liber spiritus*,³ says Petronius Arbiter most happily. The epithet, *liber*, here balances the preceding verb; and it is not easy to conceive more meaning condensed in fewer words.

But if this should be admitted as a satisfactory character of a poem; we have still to seek for a definition of poetry. The writings of PLATO, and Bishop BURTON, and the *Theoria Sacra* of BURNET,⁴ furnish undeniable proofs that

1. Coleridge's editors cite SAMUEL JOHNSON, *Dictionary* (no. 154 (1751): "That which hopes to escape the blast of malignity, and stand firm against the attacks of time, must contain in itself some essential principle of growth."

2. Couplets (in Greek and Latin verse, such

couplets do not rhyme).

3. The free spirit must be hurried onward (Latin); from *Satyricon* 118, a novel by the Roman writer Petronius Arbiter (1st c. C.E.). *Liber* means "free."

4. Thomas Burnet (1635-1735), an English clergyman who wrote *Telluris Theoria Sacra* (1681,

poetry of the highest kind may exist without metre, and even without the contradistinguishing objects of a poem. The first chapter of Isaiah (indeed a very large proportion of the whole book) is poetry in the most emphatic sense: yet it would be not less irrational than strange to assert, that pleasure, and not truth, was the immediate object of the prophet. In short, whatever *specific* import we attach to the word, poetry, there will be found involved in it, as a necessary consequence, that a poem of any length neither can be, or ought to be, all poetry. Yet if an harmonious whole is to be produced, the remaining parts must be preserved *in keeping* with the poetry; and this can be no otherwise effected than by such a studied selection and artificial arrangement, as will partake of *one*, though not a *peculiar*, property of poetry. And this again can be no other than the property of exciting a more continuous and equal attention, than the language of prose aims at, whether colloquial or written.

My own conclusions on the nature of poetry, in the strictest use of the word, have been in part anticipated in the preceding disquisition on the fancy and imagination.⁵ What is poetry? is so nearly the same question with, what is a poet? that the answer to the one is involved in the solution of the other. For it is a distinction resulting from the poetic genius itself, which sustains and modifies the images, thoughts, and emotions of the poet's own mind. The poet, described in *ideal* perfection, brings the whole soul of man into activity, with the subordination of its faculties to each other, according to their relative worth and dignity. He diffuses a tone, and spirit of unity, that blends, and (as it were) *fuses*, each into each, by that synthetic and magical power, to which we have exclusively appropriated the name of imagination. This power, first put in action by the will and understanding, and retained under their irremissive,⁶ though gentle and unnoticed, controul (*laxis effertur habenis*)⁷ reveals itself in the balance or reconciliation of opposite or discordant qualities: of sameness, with difference; of the general, with the concrete; the idea, with the image; the individual, with the representative; the sense of novelty and freshness, with old and familiar objects; a more than usual state of emotion; with more than usual order; judgement ever awake and steady self-possession; with enthusiasm and feeling profound or vehement; and while it blends and harmonizes the natural and the artificial, still subordinates art to nature; the manner to the matter; and our admiration of the poet to our sympathy with the poetry. "Doubtless," as Sir John Davies⁸ observes of the soul (and his words may with slight alteration be applied, and even more appropriately to the poetic IMAGINATION.)

Doubtless this could not be, but that she turns
 Bodies to spirit by sublimation strange,
 As fire converts to fire the things it burns,
 As we our food into our nature change.

The Sacred Theory of the Earth). Jeremy Taylor (1613–1667), Anglican religious writer whose sermons Coleridge esteemed. On the Greek philosopher PLATO (ca. 427–ca. 347 B.C.E.), see above.

5. In chapter 4.

6. Unremitting.

7. It is exalted with loose reins (Latin).

8. English poet (1569–1626). Coleridge slightly misquotes his poem *Nosce Teipsum* (1599; the title means "know thyself"), which explores the theme of immortality and the nature of the soul.

From their gross matter she abstracts their forms,
 And draws a kind of quintessence from things;
 Which to her proper nature she transforms
 To bear them light, on her celestial wings.

Thus does she, when from individual states
 She doth abstract the universal kinds;
 Which then re-clothed in divers names and fates
 Steal access through our senses to our minds.

Finally, GOOD SENSE is the BODY of poetic genius, FANCY its DRAPERY, MOTION its LIFE, and IMAGINATION the SOUL that is every where, and in each; and forms all into one graceful and intelligent whole.

1817

THOMAS LOVE PEACOCK

1785–1866

Thomas Love Peacock's "Four Ages of Poetry" is less well-known than the text that it inspired—PERCY BYSSHE SHELLEY's *Defence of Poetry* (written 1821; see below). But Peacock's satiric attack on the value of poetry is a stimulating work that scornfully dismantles the ambitions and achievements of the Romantic authors who were Peacock's contemporaries and, in some cases, his friends. It is not always clear what Peacock's own position is; in part, he succeeds in making readers uncomfortable precisely because we feel it possible that he really believes what he is saying. Indeed, he suggests something about the marginal place of poetry in the modern period that the Romantic poets may have sensed all too keenly themselves—that their exalted claims for poetry could not be maintained in the midst of modern industry, science, and commerce; that few outside their circle were interested in what they had to say; and that poets had overlooked the plain truth of their marginality because of their own self-regard and self-absorption.

Peacock was born the son of a glass merchant, in Weymouth, Dorset, in southern England. His formal schooling ended when he was thirteen, but an inheritance from his father enabled him to embark on a career as a writer, first as a poet and later as a novelist and essayist. In 1812 he met Shelley, and the two became good friends. At first they supported each other's work; later they were friendly antagonists. Peacock became Shelley's literary executor after his death.

Peacock is a skillful satirist; in his novels he particularly delighted in witty dissections of the main figures of the Romantic movement, including WILLIAM WORDSWORTH, SAMUEL TAYLOR COLERIDGE, Byron, Robert Southey, and Shelley. Among these entertaining "comic romances" (Peacock's term) were *Headlong Hall* (1816), *Melincourt* (1817), and *Nightmare Abbey* (1818). Despite their sensitivity to the abuse and ridicule inflicted by reviewers and critics, the Romantic writers seem not to have minded Peacock's verbal play and caricature. They saw in his work—filled with conversation interspersed with lyric poems and drinking songs—evidence of genuine talent, and perhaps they sensed the complexity of his response to their literary innovations. Peacock's other works include an "Essay on Fashionable Literature" (a fragment written in 1818); reviews and articles written from the 1820s to the 1850s on

literature, satire, and the theater; *Gryll Grange* (1860), a satire on the Victorian age that some scholars judge his most accomplished book; and *Memoirs of Shelley* (1858–60).

Peacock also had another, very different career. Beginning in 1818–19, he was the examiner of India correspondence for the East India Company, whose government-supported trading monopoly made it the major force in Great Britain's control of India's peoples, markets, and resources. His supervisor was James Mill, the Scottish utilitarian philosopher and economist, whose position Peacock took over after Mill's death in 1836. James Mill and his more famous son, John Stuart Mill, were intellectuals engaged in addressing social problems. They sought, as utilitarians, to ensure the greatest happiness of the greatest number; and there is a strong current of social and political interest and commitment in Peacock's "Four Ages of Poetry."

Peacock's own life contained much unhappiness. He married in 1820, but his wife suffered a breakdown after the death of their three-year-old daughter from which she never recovered. Two other daughters predeceased him. Peacock retired on a pension in March 1856 and devoted himself to his library, filled with fine editions of Greek, Latin, and Italian classics.

In "The Four Ages of Poetry," Peacock's writing is barbed and derisive but has a serious purpose. Poetry began, he notes, with the warrior's wish for acclaim, which a bard, inspired by strong liquor, came forward to provide: poetry was thus merely another commodity in the marketplace. Here and elsewhere, Peacock wants to make readers reexamine the poets' myths of their origins, the stories through which generations have been taught literary and cultural history; he proposes instead to tell the unadorned truth that the poets and their idealizing followers and critics have concealed or failed to perceive. This same puncturing of historical reputation and pretense is displayed in Peacock's ridicule of the Romantic "Lake Poets" Wordsworth and Coleridge as well as Southey, Sir Walter Scott, Byron, and others. His sallies are extreme and often unfair, but the satirist's point is to be provocative—to unsettle us with the kernel of accuracy lurking in overstatements and to shake our unexamined confidence in conventional opinions.

Peacock boldly asks an unnerving question: since there are already many good poems in existence, why are new ones needed? A new era of business and science has dawned, and Peacock claims that his contemporaries have not shown any originality in responding to it. The poets' pride in their rich self-expression is simply self-indulgence, an admission that poetry is too weak to engage social concerns or contribute to knowledge. At times Peacock seems to be playfully teasing, in effect signaling the poets that he does not really hold the position he presents so forcefully. Occasionally one suspects that Peacock is mimicking the voice of a utilitarian, an act of impersonation that the shrewdest members of his audience would recognize. But at other moments Peacock appears to be in deadly earnest, disgusted at the complacency of poets so immersed in their theories and texts that they have missed the glaring signs of their own irrelevance.

Peacock is hardly the first to attack contemporary poetry. Writers from Ben Jonson and JOHN DRYDEN in the seventeenth century to ALEXANDER POPE and SAMUEL JOHNSON in the eighteenth had severely criticized the poetry of their own day. But they were serious poets themselves, and their complaints and satiric thrusts were aimed not at poetry per se but at its degradation in the marketplace; too many so-called poets had compromised their integrity in overeager attempts to please patrons and all readers. Ultimately Jonson and the others argued that authentic poets and critics should be more rigorous in maintaining high standards. To Peacock, in contrast, standards are irrelevant: taking the side neither of the neoclassical nor of the Romantic writers, he drives home the point that gifted persons waste their energies when they pursue the vocation of a poet. No mature mind, he insists, should content itself with the trifles and toys of childhood.

At the same time, Peacock is not a booster of business and moneymaking but a

liberal dissenter, making a provocative case. He accuses poets and writers of standing outside the society they think they are leading. Peacock said *No* to the literary theory and practice of many of the best minds of his era, without offering any substitutes. As he revealingly stated in a late essay on Greek literature: "it is in negation that Plato shines most,—in the exposure of the errors of others."

In reading "The Four Ages of Poetry," we see clearly why the radical poet Shelley felt compelled to answer it. Peacock's argument is brilliant and unrelenting, and the momentum of his prose as he moves to his conclusion shows that he knew he was constructing a case that would be difficult but crucial for poets to refute. Perhaps it is not surprising that today "The Four Ages of Poetry" is viewed primarily within the context of Shelley studies. The only readers able to take pleasure in this essay in its own right are those who are confident that they can advance an effective reply to it—and constructing such a reply now is an even more daunting task than it was in Peacock and Shelley's day.

BIBLIOGRAPHY

For the writings of Peacock, see *Works of T. L. Peacock*, edited by H. F. B. Brett-Smith and C. E. Jones (10 vols., 1924–34; rpt. 1967); *Novels*, edited by David Garnett (2 vols., 1948); and *Poems*, edited by Brimley Johnson (1906). For biographical context, see Howard Mills, *Peacock: His Circle and His Age* (1968), which highlights Peacock's friendship with Shelley; and Robert Forbes Felton, *Thomas Love Peacock* (1973). There are three enlightening studies of Peacock's literary work; Carl Dawson, *His Fine Wit: A Study of Thomas Love Peacock* (1970), treats Peacock as an "outspoken enemy of industrial might, a feminist, and a student of mythology"; James Mulvihill, *Thomas Love Peacock* (1987); and Marilyn Butler, *Peacock Displayed: A Satirist in His Context* (1979), which includes an examination of each of Peacock's novels and provides a separate account of his work as a social and cultural critic. For bibliography, consult J. P. Donovan, "Thomas Love Peacock," in *Literature of the Romantic Period: A Bibliographical Guide* (ed. Michael O'Neil, 1988).

The Four Ages of Poetry

Qui inter haec nutriuntur non magis sapere possunt, quam bene olere qui in culinâ habitant.

PETRONIUS.¹

Poetry, like the world, may be said to have four ages, but in a different order: the first age of poetry being the age of iron; the second, of gold; the third, of silver; and the fourth, of brass.²

The first, or iron age of poetry, is that in which rude bards celebrate in rough numbers the exploits of ruder chiefs, in days when every man is a warrior, and when the great practical maximum of every form of society, "to keep what we have and to catch what we can," is not yet disguised under names of justice and forms of law, but is the naked motto of the naked sword, which is the only judge and jury in every question of *meum* and *tuum*.³ In

1. Those who are nourished among these things are no more able to taste than those who live in a kitchen are able to smell well (Latin). From *Satyricon* 2, by the Roman writer Petronius (1st c. C.E.).
2. The myth of 4 (or 5) ages goes back to the Greek poet Hesiod (active ca. 700 B.C.E.), *Works*

and *Days*, lines 109–201; see also *Metamorphoses* (ca. 8 C.E.), 1.89–150, by the Roman poet Ovid. Traditionally, the first (and best) age is the golden age.

3. Mine and yours (Latin).

these days, the only three trades flourishing (besides that of priest which flourishes always) are those of king, thief, and beggar: the beggar being for the most part a king deject, and the thief a king expectant. The first question asked of a stranger is, whether he is a beggar or a thief:⁴ the stranger, in reply, usually assumes the first, and awaits a convenient opportunity to prove his claim to the second appellation.

The natural desire of every man to engross to himself as much power and property as he can acquire by any of the means which might makes right, is accompanied by the no less natural desire of making known to as many people as possible the extent to which he has been a winner in this universal game. The successful warrior becomes a chief; the successful chief becomes a king: his next want is an organ to disseminate the fame of his achievements and the extent of his possessions; and this organ he finds in a bard, who is always ready to celebrate the strength of his arm, being first duly inspired by that of his liquor. This is the origin of poetry, which, like all other trades, takes its rise in the demand for the commodity, and flourishes in proportion to the extent of the market.

Poetry is thus in its origin panegyric. The first rude songs of all nations appear to be a sort of brief historical notices, in a strain of tumid hyperbole, of the exploits and possessions of a few pre-eminent individuals. They tell us how many battles such an one has fought, how many helmets he has cleft, how many breastplates he has pierced, how many widows he has made, how much land he has appropriated, how many houses he has demolished for other people, what a large one he has built for himself, how much gold he has stowed away in it, and how liberally and plentifully he pays, feeds, and intoxicates the divine and immortal bards, the sons of Jupiter,⁵ but for whose everlasting songs the names of heroes would perish.

This is the first stage of poetry before the invention of written letters. The numerical modulation is at once useful as a help to memory, and pleasant to the ears of uncultured men, who are easily caught by sound: and from the exceeding flexibility of the yet unformed language, the poet does no violence to his ideas in subjecting them to the fetters of number. The savage indeed lisps in numbers,⁶ and all rude and uncivilized people express themselves in the manner which we all call poetical.

The scenery by which he is surrounded, and the superstitions which are the creed of his age, form the poet's mind. Rocks, mountains, seas, unsubdued forests, unnavigable rivers, surround him with forms of power and mystery, which ignorance and fear have peopled with spirits, under multifarious names of gods, goddesses, nymphs, genii,⁷ and *dæmons*. Of all these personages marvellous tales are in existence: the nymphs are not indifferent to handsome young men, and the gentlemen-genii are much troubled and very troublesome with a propensity to be rude to pretty maidens: the bard therefore finds no difficulty in tracing the genealogy of his chief to any of the deities in his neighbourhood with whom the said chief may be most desirous of claiming relationship.

4. See the *Odyssey* (ca. 8th c. B.C.E.), passim; and Thucydides, 1.5 [Peacock's note]. Thucydides (ca. 455–ca. 400 B.C.E.), Athenian historian, author of an incomplete history of the Peloponnesian War between Sparta and Athens (431–404 B.C.E.).

5. The Roman king of the gods, identified with the

Greek god Zeus.

6. See ALEXANDER POPE, "An Epistle to Dr. Arbuthnot" (1735): "I lisp'd in Numbers, for the Numbers came" (line 128). "Numbers": metrical verse.

7. Spirits of the place.

In this pursuit, as in all others, some of course will attain a very marked pre-eminence; and these will be held in high honour, like Demodocus in the *Odyssey*, and will be consequently inflated with boundless vanity, like Thamyris⁸ in the *Iliad*. Poets are as yet the only historians and chroniclers of their time, and the sole depositories of all the knowledge of their age; and though this knowledge is rather a crude congeries of traditional phantasies than a collection of useful truths, yet, such as it is, they have it to themselves. They are observing and thinking, while others are robbing and fighting; and though their object be nothing more than to secure a share of the spoil, yet they accomplish this end by intellectual, not by physical, power: their success excites emulation to the attainment of intellectual eminence: thus they sharpen their own wits and awaken those of others, at the same time that they gratify vanity and amuse curiosity. A skilful display of the little knowledge they have gains them credit for the possession of much more which they have not. Their familiarity with the secret history of gods and genii obtains for them, without much difficulty, the reputation of inspiration; thus they are not only historians but theologians, moralists, and legislators: delivering their oracles *ex cathedra*, and being indeed often themselves (as Orpheus and Amphion⁹) regarded as portions and emanations of divinity: building cities with a song, and leading brutes with a symphony; which are only metaphors for the faculty of leading multitudes by the nose.

The golden age of poetry finds its materials in the age of iron. This age begins when poetry begins to be retrospective; when something like a more extended system of civil polity is established; when personal strength and courage avail less to the aggrandizing of their possessor and to the making and marring of kings and kingdoms, and are checked by organized bodies, social institutions, and hereditary successions. Men also live more in the light of truth and within the interchange of observation; and thus perceive that the agency of gods and genii is not so frequent among themselves as, to judge from the songs and legends of the past time, it was among their ancestors. From these two circumstances, really diminished personal power, and apparently diminished familiarity with gods and genii, they very easily and naturally deduce two conclusions: 1st, That men are degenerated, and 2nd, That they are less in favour with the gods. The people of the petty states and colonies, which have now acquired stability and form, which owed their origin and first prosperity to the talents and courage of a single chief, magnify their founder through the mists of distance and tradition, and perceive him achieving wonders with a god or goddess always at his elbow. They find his name and his exploits thus magnified and accompanied in their traditional songs, which are their only memorials. All that is said of him is in this character. There is nothing to contradict it. The man and his exploits and his tutelary deities are mixed and blended in one invariable association. The marvellous too is very much like a snowball: it grows as it rolls downward, till the little nucleus of truth which began its descent from the summit is hidden in the accumulation of superinduced hyperbole.

When tradition, thus adorned and exaggerated, has surrounded the foun-

8. A legendary Thracian poet and musician whose boasting was punished by the Muses (see *Iliad* 2.594-600). Demodocus: a blind bard at the court of the Phaeacian king Alcinous (see *Odyssey* 8.43-92).

9. A son of Zeus and Antiope, who ruled Thebes

with his twin brother Zethus; he built the city's walls by charming the stones into place with his lyre. Orpheus: legendary Greek musician whose playing could move trees and beasts (as well as persuade the lord of the underworld to conditionally release his dead wife).

ders of families and states with so much adventitious power and magnificence, there is no praise which a living poet can, without fear of being kicked for clumsy flattery, address to a living chief, that will not still leave the impression that the latter is not so great a man as his ancestors. The man must in this case be praised through his ancestors. Their greatness must be established, and he must be shown to be their worthy descendant. All the people of a state are interested in the founder of their state. All states that have harmonized into a common form of society, are interested in their respective founders. All men are interested in their ancestors. All men love to look back into the days that are past. In these circumstances traditional national poetry is reconstructed and brought like chaos into order and form. The interest is more universal: understanding is enlarged: passion still has scope and play: character is still various and strong: nature is still unsubdued and existing in all her beauty and magnificence, and men are not yet excluded from her observation by the magnitude of cities or the daily confinement of civic life: poetry is more an art: it requires greater skill in numbers, greater command of language, more extensive and various knowledge, and greater comprehensiveness of mind. It still exists without rivals in any other department of literature; and even the arts, painting and sculpture certainly, and music probably, are comparatively rude and imperfect. The whole field of intellect is its own. It has no rivals in history, nor in philosophy, nor in science. It is cultivated by the greatest intellects of the age, and listened to by all the rest. This is the age of Homer, the golden age of poetry. Poetry has now attained its perfection: it has attained the point which it cannot pass: genius therefore seeks new forms for the treatment of the same subjects: hence the lyric poetry of Pindar and Alcæus,¹ and the tragic poetry of Æschylus and Sophocles. The favour of kings, the honour of the Olympic crown,² the applause of present multitudes, all that can feed vanity and stimulate rivalry, await the successful cultivator of this art, till its forms become exhausted, and new rivals arise around it in new fields of literature, which gradually acquire more influence as, with the progress of reason and civilization, facts become more interesting than fiction: indeed the maturity of poetry may be considered the infancy of history. The transition from Homer to Herodotus is scarcely more remarkable than that from Herodotus³ to Thucydides: in the gradual dereliction of fabulous incident and ornamented language, Herodotus is as much a poet in relation to Thucydides as Homer is in relation to Herodotus. The history of Herodotus is half a poem: it is written while the whole field of literature yet belonged to the Muses, and the nine books of which it was composed were therefore of right, as well as of courtesy, superinscribed with their nine names.

Speculations, too, and disputes, on the nature of man and of mind; on moral duties and on good and evil; on the animate and inanimate components of the visible world; begin to share attention with the eggs of Leda and the horns of Io,⁴ and to draw off from poetry a portion of its once undivided audience.

1. Greek poet of Mytilene on Lesbos (b. ca. 620 B.C.E.). Pindar (518–438 B.C.E.), Greek poet from Boeotia. Both Æschylus and Sophocles were active in the 5th century B.C.E.

2. Victors at the quadrennial games at Olympia (first held 776 B.C.E.) won a wreath of wild olive.

3. Greek historian (ca. 484–ca. 420 B.C.E.),

author of a history of the Persian Wars (499–479 B.C.E.). A later editor divided the work into nine "Muses" (each Muse was thought to preside over a different branch of the arts or sciences).

4. In Greek mythology, daughter of the river-god Inachus (mythical founder of Argos); after seducing her, Zeus turned her into a cow to protect her

Then comes the silver age, or the poetry of civilized life. This poetry is of two kinds, imitative and original. The imitative consists in recasting, and giving an exquisite polish to, the poetry of the age of gold: of this Virgil is the most obvious and striking example.⁵ The original is chiefly comic, didactic, or satiric: as in Menander, Aristophanes, Horace, and Juvenal.⁶ The poetry of this age is characterized by an exquisite and fastidious selection of words, and a laboured and somewhat monotonous harmony of expression: but its monotony consists in this, that experience having exhausted all the varieties of modulation, the civilized poetry selects the most beautiful, and prefers the repetition of these to ranging through the variety of all. But the best expression being that into which the idea naturally falls, it requires the utmost labour and care so to reconcile the inflexibility of civilized language and the laboured polish of versification with the idea intended to be expressed, that sense may not appear to be sacrificed to sound. Hence numerous efforts and rare success.

This state of poetry is however a step towards its extinction. Feeling and passion are best painted in, and roused by, ornamental and figurative language; but the reason and the understanding are best addressed in the simplest and most unvarnished phrase. Pure reason and dispassionate truth would be perfectly ridiculous in verse, as we may judge by versifying one of Euclid's demonstrations. This will be found true of all dispassionate reasoning whatever, and all reasoning that requires comprehensive views and enlarged combinations. It is only the more tangible points of morality, those which command assent at once, those which have a mirror in every mind; and in which the severity of reason is warmed and rendered palatable by being mixed up with feeling and imagination, that are applicable even to what is called moral poetry: and as the sciences of morals and of mind advance towards perfection, as they become more enlarged and comprehensive in their views, as reason gains the ascendancy in them over imagination and feeling, poetry can no longer accompany them in their progress, but drops into the back ground, and leaves them to advance alone.

Thus the empire of thought is withdrawn from poetry, as the empire of facts had been before. In respect of the latter, the poet of the age of iron celebrates the achievements of his contemporaries; the poet of the age of gold celebrates the heroes of the age of iron; the poet of the age of silver recasts the poems of the age of gold: we may here see how very slight a ray of historical truth is sufficient to dissipate all the illusions of poetry. We know no more of the men than of the gods of the Iliad; no more of Achilles than we do of Thetis; no more of Hector and Andromache than we do of Vulcan and Venus:⁸ these belong altogether to poetry; history has no share in them:

from the jealousy of Hera. Leda: the wife of Tyn-
dareus, mythical king of Sparta; Zeus took the form
of a swan to seduce her. According to one account,
she bore two eggs; one contained the half-divine
Polydeuces (or Pollux) and Helen, the other Castor
and Clytemnestra.

5. The Latin poetry of Virgil (70-19 B.C.E.) might
be said to imitate Greek originals: his *Eclogues*, the
pois of Theocritus (ca. 300-ca. 260 B.C.E.); his
Georgics, the *Works and Days* of Hesiod and works
of the Alexandrian didactic poets; and his *Aeneid*,
the *Odyssey* and *Iliad* of Homer.

6. Peacock puts together writers usually placed in

distinct "ages" of literature. The Greek comic
dramatists Menander (ca. 342-ca. 292 B.C.E.) and
Aristophanes (ca. 450-ca. 385 B.C.E.) exemplify
New and Old Comedy, respectively; the Roman
lyric and satiric poet HORACE (65-8 B.C.E.) is a
writer of Augustan or "Golden" Latin, while Juve-
nal (ca. 55-ca. 140 C.E.), the last great Roman sat-
irist, wrote "Silver" Latin.

7. Greek mathematician (active ca. 300 B.C.E.),
famous for his 13-volume textbook, the *Elements*.

8. Peacock pairs human and divine characters of
the *Iliad*: the mortal Achilles with his mother, the
sea nymph Thetis; the Trojan prince Hector (slain

but Virgil knew better than to write an epic about Cæsar; he left him to Livy;⁹ and travelled out of the confines of truth and history into the old regions of poetry and fiction.

Good sense and elegant learning, conveyed in polished and somewhat monotonous verse, are the perfection the original and imitative poetry of civilized life. Its range is limited, and when exhausted, nothing remains but the *crambe repetita*¹ of common-place, which at length becomes thoroughly wearisome, even to the most indefatigable readers of the newest new nothings.

It is now evident that poetry must either cease to be cultivated, or strike into a new path. The poets of the age of gold have been imitated and repeated till no new imitation will attract notice: the limited range of ethical and didactic poetry is exhausted: the associations of daily life in an advanced state of society are of very dry, methodical, unpoetical matters-of-fact: but there is always a multitude of listless idlers, yawning for amusement, and gaping for novelty: and the poet makes it his glory to be foremost among their purveyors.

Then comes the age of brass, which, by rejecting the polish and the learning of the age of silver, and taking a retrograde stride to the barbarisms and crude traditions of the age of iron, professes to return to nature and revive the age of gold. This is the second childhood of poetry. To the comprehensive energy of the Homeric Muse, which, by giving at once the grand outline of things, presented to the mind a vivid picture in one or two verses, inimitable alike in simplicity and magnificence, is substituted a verbose and minutely-detailed description of thoughts, passions, actions, persons, and things, in that loose rambling style of verse, which any one may write, *stans pede in uno*,² at the rate of two hundred lines in an hour. To this age may be referred all the poets who flourished in the decline of the Roman Empire. The best specimen of it, though not the most generally known, is the *Dionysiaca* of Nonnus,³ which contains many passages of exceeding beauty in the midst of masses of amplification and repetition.

The iron age of classical poetry may be called the bardic; the golden, the Homeric; the silver, the Virgilian; and the brass, the Nonnic.

Modern poetry has also its four ages: but "it wears its rue with a difference."⁴

To the age of brass in the ancient world succeeded the dark ages, in which the light of the Gospel began to spread over Europe, and in which, by a mysterious and inscrutable dispensation, the darkness thickened with the progress of the light. The tribes that overran the Roman Empire brought back the days of barbarism, but with this difference, that there were many books in the world, many places in which they were preserved, and occasionally some one by whom they were read, who indeed (if he escaped being

by Achilles) and his wife, Andromache, with Vulcan (god of fire and metalworking) and his wife, Venus (goddess of love).

9. Roman historian (59 B.C.E.–17 C.E.). Caesar: Julius Caesar (100–44 B.C.E.), whose assumption of power marked the end of the Roman Republic; the emperor Augustus (63 B.C.E.–14 C.E.) was his grandnephew and heir.

1. Cabbage served a second time; same old story (Latin).

2. While standing on one foot (Latin).

3. Greek poet of Egypt (ca. 5th c. C.E.); his *Dionysiaca*, an epic in 48 books, treats Dionysus's conquest of India.

4. See *Hamlet* (ca. 1600), 4.5.179, where the mad Ophelia, bearing various herbs and flowers, says, "O, you must wear your rue with a difference." In heralding, a "difference" is the variation on a coat of arms that distinguishes a minor branch of the family.

burned *pour l'amour de Dieu*),⁵ generally lived an object of mysterious fear, with the reputation of magician, alchymist,⁶ and astrologer. The emerging of the nations of Europe from this superinduced barbarism, and their settling into new forms of polity, was accompanied, as the first ages of Greece had been, with a wild spirit of adventure, which, co-operating with new manners and new superstitions, raised up a fresh crop of chimæras,⁷ not less fruitful, though far less beautiful, than those of Greece. The semi-deification of women by the maxims of the age of chivalry, combining with these new fables, produced the romance of the middle ages. The founders of the new line of heroes took the place of the demi-gods of Grecian poetry. Charlemagne and his Paladins,⁸ Arthur and his knights of the round table, the heroes of the iron age of chivalrous poetry, were seen through the same magnifying mist of distance, and their exploits were celebrated with even more extravagant hyperbole. These legends, combined with the exaggerated love that pervades the songs of the troubadours, the reputation of magic that attached to learned men, the infant wonders of natural philosophy, the crazy fanaticism of the crusades, the power and privileges of the great feudal chiefs, and the holy mysteries of monks and nuns, formed a state of society in which no two laymen could meet without fighting, and in which the three staple ingredients of lover, prize-fighter, and fanatic, that composed the basis of the character of every true man, were mixed up and diversified, in different individuals and classes, with so many distinctive excellencies, and under such an infinite motley variety of costume, as gave the range of a most extensive and picturesque field to the two great constituents of poetry, love and battle.

From these ingredients of the iron age of modern poetry, dispersed in the rhymes of minstrels and the songs of the troubadours, arose the golden age, in which the scattered materials were harmonized and blended about the time of the revival of learning; but with this peculiar difference, that Greek and Roman literature pervaded all the poetry of the golden age of modern poetry, and hence resulted a heterogeneous compound of all ages and nations in one picture; an infinite licence, which gave to the poet the free range of the whole field of imagination and memory. This was carried very far by Ariosto,⁹ but farthest of all by Shakespeare and his contemporaries, who used time and locality merely because they could not do without them, because every action must have its when and where: but they made no scruple of deposing a Roman Emperor by an Italian Count, and sending him off in the disguise of a French pilgrim to be shot with a blunderbuss by an English archer. This makes the old English drama very picturesque, at any rate, in the variety of costume, and very diversified in action and character; though it is a picture of nothing that ever was seen on earth except a Venetian carnival.

The greatest of English poets, Milton,¹ may be said to stand alone between

5. For the love of God (French). That is, as a heretic condemned to burn at the stake.

6. Alchemist.

7. Fire-breathing she-monsters of Greek mythology, usually represented as having a lion's head, a goat's body, and a serpent's tail.

8. Champions (here, noblemen of the court). Charlemagne: Charles the Great (742-814), king

of the Franks, the founder of the first empire in western Europe after the fall of Rome.

9. Ludovico Ariosto (1474-1533), Italian poet, author of the romantic epic *Orlando Furioso* (1516).

1. John Milton (1608-1674), who wrote pastoral poems, lyric poems, and sonnets as well as epics.

the ages of gold and silver, combining the excellencies of both; for with all the energy, and power, and freshness of the first, he united all the studied and elaborate magnificence of the second.

The silver age succeeded; beginning with Dryden, coming to perfection with Pope, and ending with Goldsmith, Collins, and Gray.²

Cowper³ divested verse of its exquisite polish; he thought in metre, but paid more attention to his thoughts than his verse. It would be difficult to draw the boundary of prose and blank verse between his letters and his poetry.

The silver age was the reign of authority; but authority now began to be shaken, not only in poetry but in the whole sphere of its dominion. The contemporaries of Gray and Cowper were deep and elaborate thinkers. The subtle scepticism of Hume, the solemn irony of Gibbon, the daring paradoxes of Rousseau, and the biting ridicule of Voltaire,⁴ directed the energies of four extraordinary minds to shake every portion of the reign of authority. Enquiry was roused, the activity of intellect was excited, and poetry came in for its share of the general result. The changes had been rung on lovely maid and sylvan shade, summer heat and green retreat, waving trees and sighing breeze, gentle swains and amorous pains, by versifiers who took them on trust, as meaning something very soft and tender, without much caring what: but with this general activity of intellect came a necessity for even poets to appear to know something of what they professed to talk of. Thomson⁵ and Cowper looked at the trees and hills which so many ingenious gentlemen had rhymed about so long without looking at them at all, and the effect of the operation on poetry was like the discovery of a new world. Painting shared the influence, and the principles of picturesque beauty were explored by adventurous essayists with indefatigable pertinacity.⁶ The success which attended these experiments, and the pleasure which resulted from them, had the usual effect of all new enthusiasms, that of turning the heads of a few unfortunate persons, the patriarchs of the age of brass, who, mistaking the prominent novelty for the all-important totality, seem to have ratiocinated much in the following manner: "Poetical genius is the finest of all things, and we feel that we have more of it than any one ever had. The way to bring it to perfection is to cultivate poetical impressions exclusively. Poetical impressions can be received only among natural scenes: for all that is artificial is anti-poetical. Society is artificial, therefore we will live out of society. The mountains are natural, therefore we will live in the mountains. There we shall be shining models of purity and virtue, passing the whole day in the innocent and amiable occupation of going up and down hill, receiving poet-

2. Peacock lists the English poets JOHN DRYDEN (1631-1700), Oliver Goldsmith (1730-1774), William Collins (1721-1759), and Thomas Gray (1716-1771).

3. William Cowper (1731-1800), English poet.

4. Pen name of François Marie Arouet (1694-1778), French philosopher, dramatist, and poet. DAVID HUME (1711-1776), Scottish philosopher and historian. Edward Gibbon (1734-1794), English historian whose "solemn irony" is displayed in *The History of the Decline and Fall of the Roman Empire* (1776-88). Jean-Jacques Rousseau (1712-1778), Swiss-born French philosopher and writer.

5. James Thomson (1700-1748), Scottish-born English poet whose works include *The Seasons* (1726-30).

6. Peacock is referring to such books as William Gilpin's *On Picturesque Beauty* (1792), Uvedale Price's *Essays on the Picturesque* (1794), and Richard Payne Knight's *Analytical Inquiry into the Principles of Taste* (1805). "The picturesque" refers to rough or irregular forms of beauty, especially in a landscape or its representations, which are striking or interesting in an unusual way; some writers treated it as a midway point between the sublime and the beautiful.

ical impressions, and communicating them in immortal verse to admiring generations." To some such perversion of intellect we owe that egregious confraternity of rhymesters, known by the name of the Lake Poets;⁷ who certainly did receive and communicate to the world some of the most extraordinary poetical impressions that ever were heard of, and ripened into models of public virtue, too splendid to need illustration. They wrote verses on a new principle; saw rocks and rivers in a new light; and remaining studiously ignorant of history, society, and human nature, cultivated the phantasy only at the expence of the memory and the reason; and contrived, though they had retreated from the world for the express purpose of seeing nature as she was, to see her only as she was not, converting the land they lived in into a sort of fairy-land, which they peopled with mysticisms and chimæras. This gave what is called a new tone to poetry, and conjured up a herd of desperate imitators, who have brought the age of brass prematurely to its dotage.

The descriptive poetry of the present day has been called by its cultivators a return to nature. Nothing is more impertinent than this pretension. Poetry cannot travel out of the regions of its birth, the uncultivated lands of semi-civilized men. Mr. Wordsworth, the great leader of the returners to nature, cannot describe a scene under his own eyes without putting into it the shadow of a Danish boy or the living ghost of Lucy Gray,⁸ or some similar phantastical parturition of the moods of his own mind.

In the origin and perfection of poetry, all the associations of life were composed of poetical materials. With us it is decidedly the reverse. We know too that there are no Dryads in Hyde-park nor Naiads in the Regent's-canal.⁹ But barbaric manners and supernatural interventions are essential to poetry. Either in the scene, or in the time, or in both, it must be remote from our ordinary perceptions. While the historian and the philosopher are advancing in, and accelerating, the progress of knowledge, the poet is wallowing in the rubbish of departed ignorance, and raking up the ashes of dead savages to find gewgaws and rattles for the grown babies of the age. Mr. Scott¹ digs up the poachers and cattle-stealers of the ancient border. Lord Byron² cruizes for thieves and pirates on the shores of the Morea and among the Greek Islands. Mr. Southey³ wades through ponderous volumes of travels and old chronicles, from which he carefully selects all that is false, useless, and absurd, as being essentially poetical; and when he has a commonplace book full of monstrosities, strings them into an epic. Mr. Wordsworth picks up village legends from old women and sextons; and Mr. Coleridge,⁴ to the valuable information acquired from similar sources, superadds the dreams of crazy theologians and the mysticisms of German metaphysics, and favours

7. Particularly, WILLIAM WORDSWORTH (1770–1850) and SAMUEL TAYLOR COLERIDGE (1772–1834).

8. Wordsworth's poems include "The Danish Boy" (1800) and "Lucy Gray" (1800); he used the heading "Moods of My Own Mind" for a section of his *Poems in Two Volumes* (1807).

9. In Regent's Park in north-central London. "Dryads": Greek nymphs associated with trees. Hyde Park: a large public park in west-central London. "Naiads": nymphs, associated with freshwater sources.

1. Sir Walter Scott (1771–1832), Scottish novelist

and poet, whose works include *Minstrelsy of the Scottish Border* (1802–03).

2. George Gordon, Lord Byron (1788–1824), English Romantic poet; Peacock here refers to *The Giaour* (1813), a story of romantic passion and vengeance.

3. Robert Southey (1774–1843), English poet, biographer, and professional writer. The epic made of "monstrosities" may refer to his *Roderick: The Last of the Goths* (1814).

4. See Coleridge's "Rime of the Ancient Mariner" and "Christabel" in *Lyrical Ballads* (1798). For Wordsworth, see *The Excursion* (1814).

the world with visions in verse, in which the quadruple elements of sexton, old woman, Jeremy Taylor, and Emanuel Kant,⁵ are harmonized into a delicious poetical compound. Mr. Moore presents us with a Persian, and Mr. Campbell⁶ with a Pennsylvanian tale, both formed on the same principle as Mr. Southey's epics, by extracting from a perfunctory and desultory perusal of a collection of voyages and travels, all that useful investigation would not seek for and that common sense would reject.

These disjointed relics of tradition and fragments of second-hand observation, being woven into a tissue of verse, constructed on what Mr. Coleridge calls a new principle⁷ (that is, no principle at all), compose a modern-antique compound of frippery and barbarism, in which the puling sentimentality of the present time is grafted on the misrepresented ruggedness of the past into a heterogeneous congeries of unamalgamating manners, sufficient to impose on the common readers of poetry, over whose understandings the poet of this class possesses that commanding advantage, which, in all circumstances and conditions of life, a man who knows something, however little, always possesses over one who knows nothing.

A poet in our times is a semi-barbarian in a civilized community. He lives in the days that are past. His ideas, thoughts, feelings, associations, are all with barbarous manners, obsolete customs, and exploded superstitions. The march of his intellect is like that of a crab, backward. The brighter the light diffused around him by the progress of reason, the thicker is the darkness of antiquated barbarism, in which he buries himself like a mole, to throw up the barren hillocks of his Cimmerian⁸ labours. The philosophic mental tranquillity which looks round with an equal eye on all external things, collects a store of ideas, discriminates their relative value, assigns to all their proper place, and from the materials of useful knowledge thus collected, appreciated, and arranged, forms new combinations that impress the stamp of their power and utility on the real business of life, is diametrically the reverse of that frame of mind which poetry inspires, or from which poetry can emanate. The highest inspirations of poetry are resolvable into three ingredients: the rant of unregulated passion, the whining of exaggerated feeling, and the cant of factitious sentiment: and can therefore serve only to ripen a splendid lunatic like Alexander, a puling driveller like Werter,⁹ or a morbid dreamer like Wordsworth. It can never make a philosopher, nor a statesman, nor in any class of life an useful or rational man. It cannot claim the slightest share in any one of the comforts and utilities of life of which we have witnessed so many and so rapid advances. But though not useful, it may be said it is highly ornamental, and deserves to be cultivated for the pleasure it yields. Even if this be granted, it does not

5. IMMANUEL KANT (1724-1804), German idealist philosopher. Taylor (1613-1667), English theologian, devotional writer, and bishop.

6. Thomas Campbell (1777-1844), Scottish poet and journalist; in his *Gertrude of Wyoming* (1809), "Wyoming" refers to a settlement in Pennsylvania. Thomas Moore (1779-1852), Irish poet; his "Persian tale" is the popular *Lalla Rookh* (1817), a series of four oriental tales in verse within a prose frame.

7. In the preface to "Christabel," Coleridge states that its meter is "founded on a new principle . . .

of counting in each line the accents, not the syllables."

8. That is, done in gloom and darkness. According to Homer (*Odyssey* 11.14-19), the Cimmerians lived in a land where the sun never shone.

9. The protagonist of *The Sorrows of Young Werther* (1774) by Johann Wolfgang von Goethe. Alexander: usually identified as Alexander the Great (356-323 B.C.E.), one of greatest generals of the ancient world. Perhaps he is a "lunatic" for insisting that the Greek cities treat him like a god.

follow that a writer of poetry in the present state of society is not a waster of his own time, and a robber of that of others. Poetry is not one of those arts which, like painting, require repetition and multiplication, in order to be diffused among society. There are more good poems already existing than are sufficient to employ that portion of life which any mere reader and recipient of poetical impressions should devote to them, and these having been produced in poetical times, are far superior in all the characteristics of poetry to the artificial reconstructions of a few morbid ascetics in unpoetical times. To read the promiscuous rubbish of the present time to the exclusion of the select treasures of the past, is to substitute the worse for the better variety of the same mode of enjoyment.

But in whatever degree poetry is cultivated, it must necessarily be to the neglect of some branch of useful study: and it is a lamentable spectacle to see minds, capable of better things, running to seed in the specious indolence of these empty aimless mockeries of intellectual exertion. Poetry was the mental rattle that awakened the attention of intellect in the infancy of civil society: but for the maturity of mind to make a serious business of the playthings of its childhood, is as absurd as for a full-grown man to rub his gums with coral, and cry to be charmed to sleep by the jingle of silver bells.

As to that small portion of our contemporary poetry, which is neither descriptive, nor narrative, nor dramatic, and which, for want of a better name, may be called ethical, the most distinguished portion of it, consisting merely of querulous, egotistical rhapsodies, to express the writer's high dissatisfaction with the world and every thing in it, serves only to confirm what has been said of the semi-barbarous character of poets, who from singing dithyrambics and "Io Triumphe,"¹ while society was savage, grow rabid, and out of their element, as it becomes polished and enlightened.

Now when we consider that it is not the thinking and studious, and scientific and philosophical part of the community, not to those whose minds are bent on the pursuit and promotion of permanently useful ends and aims, that poets must address their minstrelsy, but to that much larger portion of the reading public, whose minds are not awakened to the desire of valuable knowledge, and who are indifferent to any thing beyond being charmed, moved, excited, affected, and exalted: charmed by harmony, moved by sentiment, excited by passion, affected by pathos, and exalted by sublimity: harmony, which is language on the rack of Procrustes;² sentiment, which is canting egotism in the mask of refined feeling; passion, which is the commotion of a weak and selfish mind; pathos, which is the whining of an unmanly spirit; and sublimity, which is the inflation of an empty head: when we consider that the great and permanent interests of human society become more and more the main spring of intellectual pursuit; that in proportion as they become so, the subordinacy of the ornamental to the useful will be more and more seen and acknowledged; and that therefore the progress of useful art and science, and of moral and political knowledge, will continue more and more to withdraw attention from frivolous and uncondusive, to

1. The cry of Roman soldiers as they marched in their generals' triumphs through the streets of Rome. "Dithyrambics"; Greek lyric poetry sung by a chorus and leader, in turn, in honor of Dionysus (Greek god of wine and fertility), usually telling the

stories of heroes.

2. A legendary robber of Attica who forced travelers to fit his bed, cutting off or stretching limbs as necessary.

solid and conducive studies: that therefore the poetical audience will not only continually diminish in the proportion of its number to that of the rest of the reading public, but will also sink lower and lower in the comparison of intellectual acquirement: when we consider that the poet must still please his audience, and must therefore continue to sink to their level, while the rest of the community is rising above it: we may easily conceive that the day is not distant, when the degraded state of every species of poetry will be as generally recognized as that of dramatic poetry has long been: and this not from any decrease either of intellectual power, or intellectual acquisition, but because intellectual power and intellectual acquisition have turned themselves into other and better channels, and have abandoned the cultivation and the fate of poetry to the degenerate fry³ of modern rhymesters, and their olympic judges, the magazine critics, who continue to debate and promulgate oracles about poetry, as if it were still what it was in the Homeric age, the all-in-all of intellectual progression, and as if there were no such things in existence as mathematicians, astronomers, chemists, moralists, metaphysicians, historians, politicians, and political economists, who have built into the upper air of intelligence a pyramid, from the summit of which they see the modern Parnassus⁴ far beneath them, and, knowing how small a place it occupies in the comprehensiveness of their prospect, smile at the little ambition and the circumscribed perceptions with which the drivellers and mountebanks upon it are contending for the poetical palm and the critical chair.

3. Offspring.

4. A mountain in Greece, sacred to Apollo and the Muses and to Dionysus.

PERCY BYSSHE SHELLEY

1792–1822

Like the American poet Walt Whitman, Percy Bysshe Shelley has been revered by many readers for his haunting lyrics and, even more, for the radical views he expresses in both his poetry and prose. But more than any other nineteenth-century poet, he came in for relentless and mean-spirited abuse at the hands of the major modernist poets and critics, including T. S. ELIOT, F. R. Leavis, JOHN CROWE RANSOM, and Allen Tate. For them, Shelley represented everything that modern poetry was seeking to move beyond, and they pummeled him time and again for (as they saw it) the intersecting weaknesses of his poetry and his character: dreaminess, arrogance, self-absorption, irresponsibility. They judged his personal conduct offensive and his verse marred by muddled imagery and confused symbolism. Writing in 1950, the critic Leslie Fiedler reflected: "The only way to find out if a poet is immortal is to kill him; Milton and Wordsworth slain have risen; Cowley and Shelley are rotting in their tombs." Shelley seemed no more likely to recover his prestige than did the third-tier metaphysical poet with whom he was paired.

This downgrading of Shelley was already under way in the nineteenth century. In *Essays in Criticism* (1865), MATTHEW ARNOLD slighted him: "The right sphere for Shelley's genius was the sphere of music, not of poetry . . . A beautiful and ineffectual angel, beating in the void his luminous wings in vain." And in *Literary Studies* (1884), the editor and essayist Walter Bagehot concluded: "He floats away into an imaginary Elysium or an expected Utopia; beautiful and excellent, of course, but having nothing in common with the absolute laws of the present world." This tone seemed to be justified by Shelley himself, who, for example, observed to his friend Edward Trelawny: "When my brain gets heated with thought it soon boils and throws off images and words faster than I can skim them off." But Shelley's words to Trelawny bear witness to his creative energy and exhilaration, to his yearning to break free from constraint. Shelley's commitment to personal and social freedom perhaps provides the best context for understanding and valuing his writing. His poetry and prose attacked social and political tyranny, assailing the ways in which law and religion functioned to support an oppressive state. In phrasing that anticipated RALPH WALDO EMERSON's in *Nature* (1836), "The American Scholar" (1837), and other seminal American Transcendentalist texts, Shelley declared: "Let us believe in a kind of optimism in which we are our own gods" (letter, 1819). As he once said, he sought to call attention to the "else unfeelt oppressions of this earth" ("Julian and Maddalo," line 450), that is, to make readers feel the nature and depth of human oppression and lift them to a higher conception of possibility. In doing this, he was performing the special office of the poet.

Shelley was born the son of a wealthy squire (and member of Parliament) near Hورشam in Sussex, England. He was educated first at Syon House Academy, in Brentford, a western suburb of London, and then at Eton, the largest and most famous of England's public (i.e., endowed boarding) schools, where he was dubbed "mad Shelley" for his antics and "Eton atheist" for his skeptical views on religion. Imaginative and rebellious, he was already writing prose and poems while in his teens. He entered University College, Oxford University, in 1810; there he read such radical authors as William Godwin, author of the *Enquiry concerning Political Justice* (1793), and Thomas Paine, author of *The Rights of Man* (1791-92) and *The Age of Reason* (1793).

In March 1811, because Shelley coauthored an empiricist pamphlet, *The Necessity of Atheism*, which he then mailed to the bishops and heads of the colleges at Oxford, he was expelled from the university. His life became even more scandalous when he eloped to Edinburgh, Scotland, with sixteen-year-old Harriet Westbrook. This action, together with his refusal to renounce the pamphlet, caused a breach with his family that cost Shelley his inheritance.

After their marriage in August 1811, the young couple spent the next three years in England and Ireland, moving often. Shelley corresponded with Godwin, wrote addresses and proposals on such topics as Catholic emancipation, and was kept under watch by the civil authorities. His first important poem, *Queen Mab*, which exhibits his radical views on both religion and conventional morality, was privately printed in 1831. He wrote and lectured on a host of other subjects as well, from freedom of the press to vegetarianism. During this time, Harriet bore two children; but she and Shelley grew estranged.

When Shelley fell in love with Mary Godwin, the sixteen-year-old daughter of William Godwin and the English writer and reformer MARY WOLLSTONECRAFT, he acted according to his views on the primacy of love. Leaving his family behind, in 1814 he traveled to France with Mary (and her fifteen-year-old half-sister, Jane "Claire" Clairmont). After travels in France, Switzerland, and Germany, they returned to London; in spring 1815 Mary gave birth to a daughter who died prematurely, and in 1816 she bore a son, William. In Switzerland, with the Romantic poet Lord Byron as their companion during the summer of 1816, Mary began her famous novel *Frankenstein* while Percy worked on such major philosophical poems as "Hymn to Intellectual Beauty" and "Mont Blanc." They married, despite their objections to the Institution

of marriage, after Harriet drowned herself in 1816. Harriet's parents quickly secured a decree declaring Shelley unfit to have custody of his and Harriet's children, who were placed in foster care at his expense. In spring 1818 he left England for Italy, where he spent the rest of his life with Mary, their three children (two of whom died, within a nine-month period in 1818–19), Claire Clairmont, and her daughter (whose father was Byron).

While in Pisa, Shelley lived amid a circle of writers and adventurers, including Byron and Edward Trelawny. In April 1822 he moved to the village of Lerici on the Gulf of Spezia, where he wrote a number of his best lyrics and vivid letters. Caught in a sudden storm while in a boat with his friend Edward Williams, he drowned in July 1822. Shelley left unfinished a political drama and "The Triumph of Life," a dream allegory that has figured significantly in contemporary criticism and theory (e.g., see the essays by HAROLD BLOOM, PAUL DE MAN, JACQUES DERRIDA, and others in *Deconstruction and Criticism*, 1997).

Shelley matters in literary history above all for his poetry, but his prose works are often powerful and remain undervalued. The best (and best-known) of them is *A Defence of Poetry*, which he wrote in response to his friend THOMAS LOVE PEACOCK'S "Four Ages of Poetry" (1820; see above). Peacock presents a satiric, witty survey of the historical rise and decline of poetry that draws a parallel between the classical and modern periods. He traces English poetry's movement from the iron age of song, to the golden age of Shakespeare, then to the silver age of ALEXANDER POPE, and, finally, to the brass age of his Romantic contemporaries, whose work consists, he says, of "rant," "whining," and "cant." In reply, Shelley honors the activity of the poet and emphasizes that poetry has increased, rather than diminished, in importance in the modern era. Many of the ideas he presents are fairly familiar, deriving from PLATO and, especially, from SIR PHILIP SIDNEY'S *Apology for Poetry* (1595, also known as *The Defence of Poesie*), which Shelley read as he prepared and planned his own work. But Shelley gives them a fervent Romantic cast, particularly in the glowing images and passionate rhythms of the *Defence*'s final passages.

Peacock and Shelley had met in 1812, and they visited and corresponded with one another often. After Peacock's "Four Ages" appeared, Shelley wrote in a letter, January 1821, that he planned "an answer" to it: "It is very clever but, I think, very false." On March 21, he sent Peacock the first part of an essay meant to be its "antidote." In the original plan for the *Defence*, Shelley included a number of references to Peacock, but most of these were omitted when the text was prepared for publication after his death. Originally, too, the *Defence* was to have three parts: a general defense of poetry and its role in society, a survey of the development of English poetry, and a discussion of the literature of the day. Only the first part was completed.

Despite being an incomplete piece that draws on and adapts his own earlier writings—the prefaces to *The Revolt of Islam* and *Prometheus Unbound*, "Discourse on the Manners of the Ancient Greeks" (which prefaced his translation of Plato's *Symposium*), "Essay on Christianity," the first two chapters of *A Philosophical View of Reform*, and "Essay on the Devil"—the *Defence* is held together by the force of Shelley's personality and his literary and political convictions. Poetry, says Shelley, combines wisdom with delight; it is a source of pleasure; and it inculcates virtue, as readers seek to imitate the noble traits of character that Homer portrays in his heroes. Poetry kindles the sympathetic imagination, enabling us to locate ourselves "in the place of another"; it thereby unites individuals by breaking down the differences among them. It is so closely linked to the society from which it rises that its health serves as a barometer of society's health. It counterbalances the ascendant sciences of calculation and accumulation, which exacerbate inequality and selfishness. It is a universal spiritual force of evanescent inspiration, superseding logic and will and possessing prophetic power. At a memorable moment Shelley even envisions literature as one great poem that all poets have built up since time began.

There are tensions, even contradictions, in Shelley's text that his powerful prose cannot reconcile or explain. Thus on the one hand, he presents much historical commentary on ancient Greek and Roman literary genres and on the literature of later periods. But on the other hand, his highest flights of rhetoric pay tribute to the power of poetry to transcend history. There is a gap between the kind of historical particularity that Shelley provides in his running literary and cultural comments and the general function that he assigns to poetry as "something divine" that "enlarges the circumference of the imagination."

In addition, Shelley's claims for the special qualities of the poet are problematic in his own terms. In exalting poets as the "best and happiest minds," the "unacknowledged legislators of the World," he paradoxically reinvokes the social distinctions, the ranking of persons, the law-giving from on high, that his works so fiercely challenge. Indeed, there may be a darker dimension to the vital, vigorous rhetoric that Shelley mobilizes in defense of literature. As RAYMOND WILLIAMS remarks in *Culture and Society* (1958), Shelley means the word *unacknowledged* to imply poets' importance—their great (albeit almost invisible) sociopolitical work. But the term also carries "the felt helplessness of a generation" as "a culture now dominated by science and industry [fails] to bestow upon poets the 'acknowledgment' that they merit." Williams also points out the mixed implications of Shelley's language about poets: their special high status both distinguishes and marginalizes them, separating them from the community to which Shelley insists they contribute so much.

The poet, Shelley maintains, is a power working for social and moral transformation—the chief influence in civilizing the community. Yet the poet, he also says, is "a nightingale, who sits in darkness and sings to cheer its own solitude with sweet sounds." Shelley's forthright testimonies on behalf of poetry and the tensions and contradictions that his rhetoric attempts to surmount continue to fascinate the *Defence's* readers.

BIBLIOGRAPHY

For Shelley's prose, primary sources include *The Prose Works*, edited by E. B. Murray (1 vol. to date, 1993—), and *The Letters*, edited by Frederick L. Jones (2 vols., 1964). For a single-volume collection that includes critical essays, see *Shelley's Poetry and Prose*, edited by Donald H. Reiman and Sharon B. Powers (1977). Other resources include *Shelley and His Circle, 1773–1822*, edited by Kenneth Neill Cameron (9 vols. to date, 1961—), which presents the manuscripts by Shelley, his family, friends, and literary acquaintances held in the New York Public Library; it contains important critical and contextual commentary. The standard biographical work is Newman Ivey White, *Shelley* (2 vols., 1940). Kenneth Neill Cameron, in *The Young Shelley* (1950) and *Shelley: The Golden Years* (1974), is informative on the poet's radical political views. Richard Holmes, *Shelley: The Pursuit* (1974), gives a good sense of the person behind the poetry and prose.

On Shelley's literary theory, consult Fanny Delisle, *A Study of Shelley's "A Defence of Poetry": A Textual and Critical Evaluation* (2 vols., 1974). Among the many studies of Shelley's poetic theory and practice are Harold Bloom, *Shelley's Mythmaking* (1959); Earl Wasserman, *Shelley: A Critical Reading* (1971); William Keach, *Shelley's Style* (1984), which deals well with Shelley's complex and contradictory attitudes toward language; and Jerrold E. Hogle, *Shelley's Process: Radical Transference and the Development of His Major Works* (1988). On the relationships between literature and politics in Shelley's life and works, see Timothy Clark, *Embodying Revolution: The Figure of the Poet in Shelley* (1989); Michael O'Neill, *The Human Mind's Imaginings: Conflict and Achievement in Shelley's Poetry* (1989); David Duff, *Romance and Revolution: Shelley and the Politics of a Genre* (1994); and Timothy Morton, *Shelley and the Revolution in Taste: The Body and the Natural World* (1994).

Helpful on trends in Shelley scholarship are *Shelley: The Critical Heritage*, edited

by James E. Barcus (1975); *Deconstruction and Criticism*, by Harold Bloom et al. (1979), which offers a series of exemplary deconstructive readings of "The Triumph of Life"; *Essays on Shelley*, edited by Miriam Allott (1982); *The New Shelley: Later Twentieth-Century Views*, edited by G. Kim Blank (1991); and *Shelley: Poet and Legislator of the World*, edited by Betty T. Bennett and Stuart Curran (1996). For bibliography, look to Clement Dunbar, *Bibliography of Shelley Studies: 1823–1950* (1976), and *Shelley Studies, 1950–1984: An Annotated Bibliography* (1986).

From A Defence of Poetry, or Remarks Suggested by an Essay Entitled "The Four Ages of Poetry"¹

* * *

Poetry is ever accompanied with pleasure: all spirits on which it falls, open themselves to receive the wisdom which is mingled with its delight. In the infancy of the world, neither poets themselves nor their auditors are fully aware of the excellence of poetry: for it acts in a divine and unapprehended manner, beyond and above consciousness; and it is reserved for future generations to contemplate and measure the mighty cause and effect in all the strength and splendour of their union.² Even in modern times, no living poet ever arrived at the fulness of his fame; the jury which sits in judgement upon a poet, belonging as he does to all time, must be composed of his peers: it must be impanelled by Time from the selectest of the wise of many generations. A Poet is a nightingale, who sits in darkness and sings to cheer its own solitude with sweet sounds; his auditors are as men entranced by the melody of an unseen musician, who feel that they are moved and softened, yet know not whence or why. The poems of Homer and his contemporaries were the delight of infant Greece; they were the elements of that social system which is the column upon which all succeeding civilization has reposed. Homer embodied the ideal perfection of his age in human character; nor can we doubt that those who read his verses were awakened to an ambition of becoming like to Achilles, Hector and Ulysses;³ the truth and beauty of friendship, patriotism and persevering devotion to an object, were unveiled to the depths in these immortal creations: the sentiments of the auditors must have been refined and enlarged by a sympathy with such great and lovely impersonations, until from admiring they imitated, and from imitation they identified themselves with the objects of their admiration. Nor let it be objected, that these characters are remote from moral perfection, and that they can by no means be considered as edifying patterns for general imitation. Every epoch under names more or less specious has deified its peculiar errors; Revenge is the naked Idol of the worship of a semi-barbarous age; and Self-deceit is the veiled Image of unknown evil before which luxury and satiety lie prostrate. But a poet considers the vices of his contemporaries as the temporary dress in which his creations must be arrayed, and which

1. "The Four Ages of Poetry" (1820), by THOMAS LOVE PEACOCK.

2. This emphasis on the pleasure given by poetry echoes SIR PHILIP SIDNEY's *Apology for Poetry* (1595). See also WILLIAM WORDSWORTH's preface to *Lyrical Ballads* (1800): "Nor let this necessity of

producing immediate pleasure be considered as a degradation of the Poet's art. It is far otherwise."

3. Odysseus, the hero of the *Odyssey*. Achilles and Hector are the greatest warriors (Greek and Trojan, respectively) of the *Iliad*. These poems are the earliest Greek epics (ca. 8th c. B.C.E.)

cover without concealing the eternal proportions of their beauty. An epic or dramatic personage is understood to wear them around his soul, as he may the antient armour or the modern uniform around his body; whilst it is easy to conceive a dress more graceful than either. The beauty of the internal nature cannot be so far concealed by its accidental vesture, but that the spirit of its form shall communicate itself to the very disguise, and indicate the shape it hides from the manner in which it is worn. A majestic form and graceful motions will express themselves through the most barbarous and tasteless costume. Few poets of the highest class have chosen to exhibit the beauty of their conceptions in its naked truth and splendour; and it is doubtful whether the alloy of costume, habit, etc., be not necessary to temper this planetary music⁴ for mortal ears.

The whole objection however of the immorality of poetry rests upon a misconception of the manner in which poetry acts to produce the moral improvement of man. Ethical science arranges the elements which poetry has created, and propounds schemes and proposes examples of civil and domestic life: nor is it for want of admirable doctrines that men hate, and despise, and censure, and deceive, and subjugate one another. But Poetry acts in another and diviner manner. It awakens and enlarges the mind itself by rendering it the receptacle of a thousand unapprehended combinations of thought. Poetry lifts the veil from the hidden beauty of the world, and makes familiar objects be as if they were not familiar: it reproduces all that it represents, and the impersonations clothed in its Elysian⁵ light stand thenceforward in the minds of those who have once contemplated them, as memorials of that gentle and exalted content which extends itself over all thoughts and actions with which it coexists. The great secret of morals is Love: or a going out of our own nature, and an identification of ourselves with the beautiful which exists in thought, action, or person, not our own.⁶ A man, to be greatly good, must imagine intensely and comprehensively; he must put himself in the place of another and of many others; the pains and pleasures of his species must become his own. The great instrument of moral good is the imagination; and poetry administers to the effect by acting upon the cause. Poetry enlarges the circumference of the imagination by replenishing it with thoughts of ever new delight, which have the power of attracting and assimilating to their own nature all other thoughts, and which form new intervals and interstices whose void for ever craves fresh food. Poetry strengthens that faculty which is the organ of the moral nature of man, in the same manner as exercise strengthens a limb. A Poet therefore would do ill to embody his own conceptions of right and wrong, which are usually those of his place and time, in his poetical creations, which participate in neither. By this assumption of the inferior office of interpreting the effect, in which perhaps after all he might acquit himself but imperfectly, he would resign the glory in a participation in the cause. There was little danger that Homer, or any of the eternal poets, should have so far misunderstood themselves as to have abdicated this throne of their widest dominion. Those in

4. The music of the spheres: the beautiful sound said to be made by the movements of the planets.

5. Paradisiacal. According to classical mythology, after death the blessed dwell in the Elysian Fields.

6. Editors have noted the influence here of PLATO's *Symposium* (ca. 384 B.C.E.), which Shelley

himself translated. He rendered one of its key sentences "Love, therefore, and every thing else that desires anything, desires that which is absent and beyond his reach, that which it has not, that which it not itself, that which it wants."

whom the poetical faculty, though great, is less intense, as Euripides, Lucan, Tasso, Spenser,⁷ have frequently affected a moral aim, and the effect of their poetry is diminished in exact proportion to the degree in which they compel us to advert to this purpose.

Homer and the cyclic poets⁸ were followed at a certain interval by the dramatic and lyrical Poets of Athens, who flourished contemporaneously with all that is most perfect in the kindred expressions of the poetical faculty; architecture, painting, music, the dance, sculpture, philosophy, and we may add the forms of civil life. For although the scheme of Athenian society was deformed by many imperfections⁹ which the poetry existing in Chivalry and Christianity have erased from the habits and institutions of modern Europe; yet never at any other period has so much energy, beauty, and virtue, been developed: never was blind strength and stubborn form so disciplined and rendered subject to the will of man, or that will less repugnant to the dictates of the beautiful and the true, as during the century which preceded the death of Socrates.¹ Of no other epoch in the history of our species have we records and fragments stamped so visibly with the image of the divinity in man. But it is Poetry alone, in form, in action, or in language, which has rendered this epoch memorable above all others, and the storehouse of examples to everlasting time. For written poetry existed at the epoch simultaneously with the other arts, and it is an idle enquiry to demand which gave and which received the light, which all as from a common focus have scattered over the darkest periods of succeeding time. We know no more of cause and effect than a constant conjunction of events: Poetry is ever found to coexist with whatever other arts contribute to the happiness and perfection of man. I appeal to what has already been established to distinguish between the cause and the effect.

It was at the period here adverted to, that the Drama had its birth; and however a succeeding writer may have equalled or surpassed those few great specimens of the Athenian drama which have been preserved to us, it is indisputable that the art itself never was understood or practised according to the true philosophy of it, as at Athens. For the Athenians employed language, action, music, painting, the dance, and religious institutions, to produce a common effect in the representation of the highest idealisms of passion and of power; each division in the art was made perfect in its kind by artists of the most consummate skill, and was disciplined into a beautiful proportion and unity one towards another. On the modern stage a few only of the elements capable of expressing the image of the poet's conception are employed at once. We have tragedy without music and dancing; and music and dancing without the highest impersonations of which they are the fit accompaniment, and both without religion and solemnity. Religious institution has indeed been usually banished from the stage. Our system of divesting the actor's face of a mask, on which the many expressions appropriated to his dramatic character might be moulded into one permanent and unchanging expression, is favourable only to a partial and inharmonious

7. Edmund Spenser (1552–1599), English poet. Euripides (ca. 485–ca. 406 B.C.E.), Greek tragedian. Lucan (39–65 C.E.), Roman poet. Torquato Tasso (1544–1595), Italian poet.

8. Poets after Homer who filled out the story of the Trojan War.

9. That is, slavery and the second-class status of women (Shelley explicitly names these "imperfections" below).

1. That is, the 5th century B.C.E., the golden age of Athenian politics and art (the philosopher Socrates was put to death in 399 B.C.E.).

effect; it is fit for nothing but a monologue, where all the attention may be directed to some great master of ideal mimicry. The modern practice of blending comedy with tragedy, though liable to great abuse in point of practice, is undoubtedly an extension of the dramatic circle; but the comedy should be as in King Lear, universal, ideal, and sublime. It is perhaps the intervention of this principle which determines the balance in favour of King Lear against the *Cædipus Tyrannus* or the *Agamemnon*, or, if you will, the trilogies with which they are connected;² unless the intense power of the choral poetry, especially that of the latter, should be considered as restoring the equilibrium. King Lear, if it can sustain this comparison, may be judged to be the most perfect specimen of the dramatic art existing in the world; in spite of the narrow conditions to which the poet was subjected by the ignorance of the philosophy of the Drama which has prevailed in modern Europe. Calderon³ in his religious *Autos* has attempted to fulfill some of the high conditions of dramatic representation neglected by Shakespeare; such as the establishing a relation between the drama and religion, and the accommodating them to music and dancing; but he omits the observation of conditions still more important, and more is lost than gained by a substitution of the rigidly-defined and ever-repeated idealisms of a distorted superstition for the living impersonations of the truth of human passion.

But we digress.—The Author of the *Four Ages of Poetry* has prudently omitted to dispute on the effect of the Drama upon life and manners. For; if I know the knight by the device of his shield, I have only to inscribe *Philoctetes*⁴ or *Agamemnon* or *Othello* upon mine to put to flight the giant sophisms which have enchanted him, as the mirror of intolerable light; though on the arm of one of the weakest of the Paladins,⁵ could blind and scatter whole armies of necromancers and pagans. The connexion of scenic exhibitions with the improvement or corruption of the manners of men, has been universally recognized: in other words, the presence or absence of poetry in its most perfect and universal form has been found to be connected with good and evil in conduct and habit. The corruption which has been imputed to the drama as an effect, begins, when the poetry employed in its constitution, ends: I appeal to the history of manners whether the periods of the growth of the one and the decline of the other have not corresponded with an exactness equal to any other example of moral cause and effect.

The drama at Athens, or wheresoever else it may have approached to its perfection, coexisted with the moral and intellectual greatness of the age. The tragedies of the Athenian poets are as mirrors in which the spectator beholds himself, under a thin disguise of circumstance, stript of all but that ideal perfection and energy which every one feels to be the internal type of all that he loves, admires, and would become. The imagination is enlarged by a sympathy with pains and passions so mighty, that they distend in their

2. Sophocles' "trilogy" (the plays were not performed together) is *Oedipus Tyrannus* (ca. 430 B.C.E.), *Oedipus Coloneus* (ca. 401), and *Antigone* (ca. 441); Aeschylus's Oresteian trilogy (458) comprises *Agamemnon*, *The Libation Bearers*, and *The Eumenides*. *King Lear* was first performed ca. 1605.

3. Pedro Calderón de la Barca (1600–1681), Spanish dramatist and poet; after he became a

priest in 1651, he wrote only *autos sacramentales*, one-act religious dramas (usually allegorical).

4. Greek hero in the Trojan War and the subject of many tragedies; that by Sophocles (ca. 409 B.C.E.) survives.

5. The twelve peers of the court of Charlemagne (742–814), king of the Franks and founder of the first western European empire after the fall of Rome.

conception the capacity of that by which they are conceived; the good affections are strengthened by pity, indignation, terror and sorrow;⁶ and an exalted calm is prolonged from the satiety of this high exercise of them into the tumult of familiar life; even crime is disarmed of half its horror and all its contagion by being represented as the fatal consequence of the unfathomable agencies of nature; error is thus divested of its wilfulness; men can no longer cherish it as the creation of their choice. In a drama of the highest order there is little food for censure or hatred; it teaches rather self-knowledge and self-respect. Neither the eye nor the mind can see itself, unless reflected upon that which it resembles. The drama, so long as it continues to express poetry, is as a prismatic and many-sided mirror, which collects the brightest rays of human nature and divides and reproduces them from the simplicity of these elementary forms, and touches them with majesty and beauty, and multiplies all that it reflects, and endows it with the power of propagating its like wherever it may fall.

But in periods of the decay of social life, the drama sympathizes with that decay. Tragedy becomes a cold imitation of the form of the great masterpieces of antiquity, divested of all harmonious accompaniment of the kindred arts; and often the very form misunderstood: or a weak attempt to teach certain doctrines, which the writer considers as moral truths; and which are usually no more than specious flatteries of some gross vice or weakness with which the author in common with his auditors are infected. Hence what has been called the classical and domestic drama. Addison's "Cato"⁷ is a specimen of the one; and would it were not superfluous to cite examples of the other! To such purposes Poetry cannot be made subservient. Poetry is a sword of lightning, ever unsheathed, which consumes the scabbard that would contain it. And thus we observe that all dramatic writings of this nature are unimaginative in a singular degree; they affect sentiment and passion: which, divested of imagination, are other names for caprice and appetite. The period in our own history of the grossest degradation of the drama is the reign of Charles II⁸ when all forms in which poetry had been accustomed to be expressed became hymns to the triumph of kingly power over liberty and virtue. Milton⁹ stood alone illuminating an age unworthy of him. At such periods the calculating principle pervades all the forms of dramatic exhibition, and poetry ceases to be expressed upon them. Comedy loses its ideal universality: wit succeeds to humour; we laugh from self-complacency and triumph instead of pleasure; malignity, sarcasm and contempt, succeed to sympathetic merriment; we hardly laugh, but we smile. Obscenity, which is ever blasphemy against the divine beauty in life, becomes, from the very veil which it assumes, more active if less disgusting; it is a monster for which the corruption of society for ever brings forth new food, which it devours in secret.

The drama being that form under which a greater number of modes of expression of poetry are susceptible of being combined than any other, the

6. One interpretation of ARISTOTLE'S idea of "catharsis" in tragedy, expressed in *Poetics* 6, 1449b (see above).

7. The popular neoclassical tragedy (1713) about the Roman statesman Cato by the English poet and essayist JOSEPH ADDISON (1672-1719).

8. King of England (1630-1685; reigned 1660-

85) during the Restoration, a period with a reputation for dissoluteness and frivolity.

9. The poet John Milton (1608-1674) was a supporter of the Puritan Revolution and a defender of the execution of Charles I (king of England from 1625 to 1649).

connexion of poetry and social good is more observable in the drama than in whatever other form: and it is indisputable that the highest perfection of human society has ever corresponded with the highest dramatic excellence; and that the corruption or the extinction of the drama in a nation where it has once flourished, is a mark of a corruption of manners, and an extinction of the energies which sustain the soul of social life. But, as Machiavelli¹ says of political institutions, that life may be preserved and renewed, if men should arise capable of bringing back the drama to its principles. And this is true with respect to poetry in its most extended sense: all language, institution and form, require not only to be produced but to be sustained: the office and character of a poet participates in the divine nature as regards providence, no less than as regards creation.

Civil war, the spoils of Asia, and the fatal predominance first of the Macedonian,² and then of the Roman arms were so many symbols of the extinction or suspension of the creative faculty in Greece: The bucolic writers,³ who found patronage under the lettered tyrants of Sicily and Egypt, were the latest representatives of its most glorious reign. Their poetry is intensely melodious: like the odour of the tuberose, it overcomes and sickens the spirit with excess of sweetness; whilst the poetry of the preceding age was as a meadow-gale of June which mingles the fragrance of all the flowers of the field, and adds a quickening and harmonizing spirit of its own which endows the sense with a power of sustaining its extreme delight. The bucolic and erotic delicacy in written poetry is correlative with that softness in statuary, music, and the kindred arts, and even in manners and institutions which distinguished the epoch to which we now refer. Nor is it the poetical faculty itself, or any misapplication of it, to which this want of harmony is to be imputed. An equal sensibility to the influence of the senses and the affections is to be found in the writings of Homer and Sophocles: the former especially has clothed sensual and pathetic images with irresistible attractions. Their superiority over these succeeding writers consists in the presence of those thoughts which belong to the inner faculties of our nature, not in the absence of those which are connected with the external; their incomparable perfection consists in an harmony of the union of all. It is not what the erotic writers have, but what they have not, in which their imperfection consists. It is not inasmuch as they were Poets, but inasmuch as they were not Poets, that they can be considered with any plausibility as connected with the corruption of their age. Had that corruption availed so as to extinguish in them the sensibility to pleasure, passion and natural scenery, which is imputed to them as an imperfection, the last triumph of evil would have been achieved. For the end of social corruption is to destroy all sensibility to pleasure; and therefore it is corruption. It begins at the imagination and the intellect as at the core, and distributes itself thence as a paralyzing venom, through the affections into the very appetites, until all become a torpid mass in which sense hardly survives. At the approach of such a period, Poetry ever addresses

1. Niccolò Machiavelli (1469–1527), Italian political philosopher; he discusses political institutions in *The Prince* (1513) and *The Discourses* (ca. 1518).

2. Alexander the Great (356–323 B.C.E.), king of Macedonia, whose conquests extended to Egypt

and India.

3. Greek pastoral poets, who wrote of shepherds and country folk; the first was Theocritus (ca. 300–ca. 260 B.C.E.) followed by Moschus (active ca. 150 B.C.E.) and Bion (active ca. 100 B.C.E.).

itself to those faculties which are the last to be destroyed, and its voice is heard, like the footsteps of Astræa,⁴ departing from the world. Poetry ever communicates all the pleasure which men are capable of receiving; it is ever still the light of life; the source of whatever of beautiful, or generous, or true can have place in an evil time. It will readily be confessed that those among the luxurious citizens of Syracuse and Alexandria who were delighted with the poems of Theocritus; were less cold, cruel and sensual than the remnant of their tribe. But corruption must have utterly destroyed the fabric of human society before Poetry can ever cease. The sacred links of that chain have never been entirely disjoined, which descending through the minds of many men is attached to those great minds, whence as from a magnet the invisible effluence is sent forth, which at once connects, animates and sustains the life of all. It is the faculty which contains within itself the seeds at once of its own and of social renovation. And let us not circumscribe the effects of the bucolic and erotic poetry within the limits of the sensibility of those to whom it was addressed. They may have perceived the beauty of those immortal compositions, simply as fragments and isolated portions: those who are more finely organized, or born in a happier age, may recognize them as episodes to that great poem, which all poets, like the co-operating thoughts of one great mind, have built up since the beginning of the world.

The same revolutions within a narrower sphere had place in antient Rome; but the actions and forms of its social life never seem to have been perfectly saturated with the poetical element. The Romans appear to have considered the Greeks as the selectest treasuries of the selectest forms of manners and of nature, and to have abstained from creating in measured language, sculpture, music or architecture, anything which might bear a particular relation to their own condition, whilst it should bear a general one to the universal constitution of the world. But we judge from partial evidence; and we judge perhaps partially. Ennius, Varro, Pacuvius, and Accius,⁵ all great poets, have been lost. Lucretius is the highest, and Virgil⁶ in a very high sense, a creator. The chosen delicacy of the expressions of the latter is as a mist of light which conceals from us the intense and exceeding truth of his conceptions of nature. Livy⁷ is instinct with poetry. Yet Horace, Catullus, Ovid,⁸ and generally the other great writers of the Virgilian age, saw man and nature in the mirror of Greece. The institutions also and the religion of Rome were less poetical than those of Greece, as the shadow is less vivid than the substance. Hence poetry in Rome, seemed to follow rather than accompany the perfection of political and domestic society. The true Poetry of Rome lived

4. The goddess of justice. She dwelled on earth during the Golden Age but was driven into heaven during the Iron Age by humanity's evil ways. See Ovid, *Metamorphoses* (ca. 10 C.E.), 1.149–50; Juvenal, *Satire* 6.19–20 (ca. 116 C.E.).

5. All pre-Augustan writers, whose work survives only in fragments: Ennius (239–169 B.C.E.), author of tragedies, comedies, prose, and an epic on Roman history, *Annales*; Varro (116–27 B.C.E.), the greatest scholar among the Romans, who wrote or edited hundreds of books (one on the Latin language survives in part, together with a volume of a work on farm management); Pacuvius (220–ca. 130 B.C.E.), author of tragedies and satires; and

Accius (170–ca. 90 B.C.E.), author of tragedies and a 9-book poem on the history of literature, *Didascalica*.

6. Author (70–19 B.C.E.) of the *Aeneid*, generally considered the greatest Latin epic. Lucretius (ca. 94–55 B.C.E.), philosopher and author of a didactic Epicurean poem, *On the Nature of Things*.

7. Roman historian (59 B.C.E.–17 C.E.).

8. Author (43 B.C.E.–17 C.E.) of love poetry, fictional love letters, and the mock-heroic *Metamorphoses*. HORACE (65–8 B.C.E.), author of odes, satires, epistles, and the *Ars Poetica* (see above). Catullus (ca. 84–ca. 54 B.C.E.), author of lyric love poetry and elegy.

in its institutions; for whatever of beautiful, true and majestic they contained could have sprung only from the faculty which creates the order in which they consist. The life of Camillus, the death of Regulus;⁹ the expectation of the Senators, in their godlike state, of the victorious Gauls; the refusal of the Republic to make peace with Hannibal after the battle of Cannae,¹ were not the consequences of a refined calculation of the probable personal advantage to result from such a rhythm and order in the shews of life, to those who were at once the poets and the actors of the immortal dramas. The imagination beholding the beauty of this order, created it out of itself according to its own idea: the consequence was empire, and the reward everlasting fame. These things are not the less poetry, *quia carent vate sacro*.² They are the episodes of the cyclic poem written by Time upon the memories of men. The Past, like an inspired rhapsodist, fills the theatre of everlasting generations with their harmony.

At length the antient system of religion and manners had fulfilled the circle of its revolution. And the world would have fallen into utter anarchy and darkness, but that there were found poets among the authors of the Christian and Chivalric systems of manners and religion, who created forms of opinion and action never before conceived; which, copied into the imaginations of men, became as generals to the bewildered armies of their thoughts. It is foreign to the present purpose to touch upon the evil produced by these systems: except that we protest, on the ground of the principles already established, that no portion of it can be imputed to the poetry they contain.

It is probable that the astonishing poetry of Moses, Job, David, Solomon and Isaiah³ had produced a great effect upon the mind of Jesus and his disciples. The scattered fragments preserved to us by the biographers of this extraordinary person, are all instinct with the most vivid poetry. But his doctrines seem to have been quickly distorted. At a certain period after the prevalence of a system of opinions founded upon those promulgated by him, the three forms into which Plato had distributed the faculties of mind⁴ underwent a sort of apotheosis, and became the object of the worship of the civilized world. Here it is to be confessed that "Light seems to thicken," and

The crow makes wing to the rooky wood,
Good things of day begin to droop and drowse,
And night's black agents to their preys do rouze.⁵

But mark how beautiful an order has sprung from the dust and blood of this fierce chaos! how the World, as from a resurrection, balancing itself on the golden wings of knowledge and of hope, has reassumed its yet unwearied

9. Marcus Atilius Regulus (d. ca. 249 B.C.E.): Roman general who, though himself held by the Carthaginians, persuaded the Roman Senate not to ransom him and the other soldiers; he returned to Carthage and died in captivity (perhaps tortured to death; see Horace, *Odes* 3.5). Marcus Furius Camillus (d. ca. 365 B.C.E.), the second founder of Rome, who managed the city's military and political recovery after the Gallic invasion of 387/6 B.C.E.

1. Village in Apulia where in 216 B.C.E. the Romans suffered a major defeat by Hannibal, the great Carthaginian general (247–183/2 B.C.E.); the Romans ultimately won the war, however.

2. Because they lack a sacred poet (Latin); from Horace, *Odes* 4.9.28.

3. Job and Isaiah were once regarded as the authors of the books of the Bible given their names; Moses is traditionally credited with writing the entire Torah (the first five books of the Bible); David was thought to have composed most of the Psalms; Ecclesiastes, Proverbs, and the Song of Solomon were ascribed to Solomon.

4. Plato divided the human soul into three parts: the desiring, the rational, and the spirited (see *Republic* 4.439d–444a).

5. *Macbeth* (ca. 1606), 3.2.51–54, slightly misquoted.

flight into the Heaven of time. Listen to the music, unheard by outward ears, which is as a ceaseless and invisible wind, nourishing its everlasting course with strength and swiftness.

The poetry in the doctrines of Jesus Christ, and the mythology and institutions of the Celtic conquerors of the Roman empire,⁶ outlived the darkness and the convulsions connected with their growth and victory, and blended themselves into a new fabric of manners and opinion. It is an error to impute the ignorance of the dark ages to the Christian doctrines or the predominance of the Celtic nations. Whatever of evil their agencies may have contained sprung from the extinction of the poetical principle, connected with the progress of despotism and superstition. Men, from causes too intricate to be here discussed, had become insensible and selfish: their own will had become feeble, and yet they were its slaves, and thence the slaves of the will of others: lust, fear, avarice, cruelty and fraud, characterised a race amongst whom no one was to be found capable of *creating* in form, language, or institution. The moral anomalies of such a state of society are not justly to be charged upon any class of events immediately connected with them, and those events are most entitled to our approbation which could dissolve it most expeditiously. It is unfortunate for those who cannot distinguish words from thoughts, that many of these anomalies have been incorporated into our popular religion.

It was not until the eleventh century that the effects of the poetry of the Christian and Chivalric systems began to manifest themselves. The principle of equality had been discovered and applied by Plato in his Republic, as the theoretical rule of the mode in which the materials of pleasure and of power produced by the common skill and labour of human beings ought to be distributed among them. The limitations of this rule were asserted by him to be determined only by the sensibility of each, or the utility to result to all. Plato, following the doctrines of Timæus and Pythagoras,⁷ taught also a moral and intellectual system of doctrine comprehending at once the past, the present, and the future condition of man. Jesus Christ divulged the sacred and eternal truths contained in these views to mankind, and Christianity, in its abstract purity, became the exoteric expression of the esoteric doctrines of the poetry and wisdom of antiquity. The incorporation of the Celtic nations with the exhausted population of the South, impressed upon it the figure of the poetry existing in their mythology and institutions. The result was a sum of the action and reaction of all the causes included in it; for it may be assumed as a maxim that no nation or religion can supersede any other without incorporating into itself a portion of that which it supercedes. The abolition of personal and domestic slavery, and the emancipation of women from a great part of the degrading restraints of antiquity were among the consequences of these events.

The abolition of personal slavery is the basis of the highest political hope that it can enter into the mind of man to conceive. The freedom of women produced the poetry of sexual love. Love became a religion, the idols of whose worship were ever present. It was as if the statues of Apollo and the Muses⁸

6. The Germanic tribes of northern Europe.

7. Greek philosopher and mathematician (ca. 6th B.C.E.). Timæus: a Pythagorean, perhaps a fictional character, who is the key speaker in Plato's

Timæus.

8. In Greek mythology, 9 daughters of Memory who preside over the arts and all intellectual pursuits. Apollo: Greek and Roman god of poetry.

had been endowed with life and motion and had walked forth among their worshippers; so that earth became peopled by the inhabitants of a diviner world. The familiar appearance and proceedings of life became wonderful and heavenly; and a paradise was created as out of the wrecks of Eden. And as this creation itself is poetry, so its creators were poets; and language were the instrument of their art: "Galeotto fù il libro, e chi lo scrisse."⁹ The Provençal Trouveurs, or inventors, preceded Petrarch,¹ whose verses are as spells, which unseal the inmost enchanted fountains of the delight which is in the grief of Love. It is impossible to feel them without becoming a portion of that beauty which we contemplate: it were superfluous to explain how the gentleness and the elevation of mind connected with these sacred emotions can render men more amiable, more generous, and wise, and lift them out of the dull vapours of the little world of self. Dante understood the secret things of love even more than Petrarch. His *Vita Nuova*² is an inexhaustible fountain of purity of sentiment and language: it is the idealized history of that period, and those intervals of his life which were dedicated to love. His apotheosis of Beatrice in Paradise and the gradations of his own love and her loveliness, by which as by steps he feigns himself to have ascended to the throne of the Supreme Cause, is the most glorious imagination of modern poetry. The acutest critics have justly reversed the judgement of the vulgar, and the order of the great acts of the "Divine Drama," in the measure of the admiration which they accord to the Hell, Purgatory and Paradise.³ The latter is a perpetual hymn of everlasting love. Love, which found a worthy poet in Plato alone of all the antients, has been celebrated by a chorus of the greatest writers of the renovated world; and the music has penetrated the caverns of society, and its echoes still drown the dissonance of arms and superstition. At successive intervals, Ariosto, Tasso, Shakespeare, Spenser, Calderon, Rousseau,⁴ and the great writers of our own age, have celebrated the dominion of love, planting as it were trophies in the human mind of that sublimest victory over sensuality and force. The true relation borne to each other by the sexes into which human kind is distributed has become less misunderstood; and if the error which confounded diversity with inequality of the powers of the two sexes has become partially recognized in the opinions and institutions of modern Europe, we owe this great benefit to the worship of which Chivalry was the law, and poets the prophets.

The poetry of Dante may be considered as the bridge thrown over the stream of time, which unites the modern and antient world. The distorted notions of invisible things which Dante and his rival Milton have idealized, are merely the mask and the mantle in which these great poets walk through eternity enveloped and disguised. It is a difficult question to determine how far they were conscious of the distinction which must have subsisted in their minds between their own creeds and that of the people. Dante at least appears to wish to mark the full extent of it by placing Riphæus, whom Virgil calls *justissimus unus*, in Paradise,⁵ and observing a most heretical caprice

9. Gallehaut was the book and he who wrote it (Italian). From DANTE ALIGHIERI, *Inferno* (1321), 5.137.

1. Francesco Petrarca (1304–1374), Italian poet and scholar. "Provençal": the language of southern France. The troubadours of the south, 12th- and 13th-century poets, were the first to celebrate chivalric and courtly love.

2. *New Life* (ca. 1293), poetry and prose that tell

of Dante's love for Beatrice.

3. The 3 books of Dante's *Divine Comedy*.

4. Jean-Jacques Rousseau (1712–1778), Swiss-born French philosopher and political theorist. Ludovico Ariosto (1474–1533), Italian epic poet.

5. Dante makes the Trojan warrior Riphæus the only pagan in Paradise (see *Paradiso*, canto 20). *Justissimus unus*: the one most just [who was among the Trojans]; Virgil, *Aeneid* 2.426–27.

in his distribution of rewards and punishments. And Milton's poem contains within itself a philosophical refutation of that system of which, by a strange and natural antithesis, it has been a chief popular support. Nothing can exceed the energy and magnificence of the character of Satan as expressed in *Paradise Lost*.⁶ It is a mistake to suppose that he could ever have been intended for the popular personification of evil. Implacable hate, patient cunning, and a sleepless refinement of device to inflict the extremest anguish on an enemy, these things are evil; and although venial in a slave are not to be forgiven in a tyrant; although redeemed by much that ennobles his defeat in one subdued, are marked by all that dishonours his conquest in the victor. Milton's Devil as a moral being is as far superior to his God as one who perseveres in some purpose which he has conceived to be excellent in spite of adversity and torture, is to one who in the cold security of undoubted triumph inflicts the most horrible revenge upon his enemy, not from any mistaken notion of inducing him to repent of a perseverance in enmity, but with the alleged design of exasperating him to deserve new torments. Milton has so far violated the popular creed (if this shall be judged to be a violation) as to have alleged no superiority of moral virtue to his God over his Devil. And this bold neglect of a direct moral purpose is the most decisive proof of the supremacy of Milton's genius. He mingled as it were the elements of human nature, as colours upon a single pallet, and arranged them into the composition of his great picture according to the laws of epic truth; that is, according to the laws of that principle by which a series of actions of the external universe and of intelligent and ethical beings is calculated to excite the sympathy of succeeding generations of mankind. The *Divina Commedia* and *Paradise Lost* have conferred upon modern mythology a systematic form; and when change and time shall have added one more superstition to the mass of those which have arisen and decayed upon the earth, commentators will be learnedly employed in elucidating the religion of ancestral Europe, only not utterly forgotten because it will have been stamped with the eternity of genius.

Homer was the first, and Dante the second epic poet: that is, the second poet the series of whose creations bore a defined and intelligible relation to the knowledge, and sentiment, and religion, and political conditions of the age in which he lived, and of the ages which followed it, developing itself in correspondence with their development. For Lucretius had limed the wings of his swift spirit in the dregs of the sensible world; and Virgil, with a modesty which ill became his genius, had affected the fame of an imitator even whilst he created anew all that he copied; and none among the flock of mock-birds, though their notes were sweet, Apollonius Rhodius, Quintus Calaber Smyrnaeus, Nonnus, Lucan, Statius, or Claudian,⁷ have sought even to fulfil a single condition of epic truth. Milton was the third Epic Poet. For if the title of epic in its highest sense be refused to the *Æneid*, still less can it be

6. Shelley echoes the Romantic poet William Blake: "The reason Milton wrote in fetters when he wrote of Angels & God, and at liberty when of Devils & Hell, is because he was a true Poet and of the Devils party without knowing it," and "Energy is Eternal Delight" (*The Marriage of Heaven and Hell*, 1790). *Paradise Lost* was published in 1667.

7. Classical epic poets of varying quality, the first three writing in Greek and the others in Latin:

Apollonius (3d c. B.C.E.), author of the *Argonautica*; Quintus Smyrnaeus (4th c. C.E.), author of a sequel to Homer's *Iliad*; Nonnus (5th c. C.E.), author of the 48-book *Dionysiaca*; Lucan, author of the *Civil War*; Statius (ca. 45-96 C.E.), author of the epic *Thebais*; and Claudian (d. 404 C.E.), a Greek-speaking Alexandrian whose poetry, including an unfinished epic, *The Rape of Proserpina*, marked the end of the classical tradition in Latin poetry.

conceded to the Orlando Furioso, the Gerusalemme Liberata, the Lusiad, or the Fairy Queen.⁸

Dante and Milton were both deeply penetrated with the antient religion of the civilized world; and its spirit exists in their poetry probably in the same proportion as its forms survived in the unreformed worship of modern Europe. The one preceded and the other followed the Reformation at almost equal intervals. Dante was the first religious reformer, and Luther⁹ surpassed him rather in the rudeness and acrimony, than in the boldness of his censures of papal usurpation. Dante was the first awakener of entranced Europe: he created a language in itself music and persuasion out of a chaos of inharmonious barbarisms. He was the congregator of those great spirits who presided over the resurrection of learning; the Lucifer¹ of that starry flock which in the thirteenth century shone forth from republican Italy, as from a heaven, into the darkness of the benighted world. His very words are instinct with spirit; each is as a spark, a burning atom of inextinguishable thought; and many yet lie covered in the ashes of their birth, and pregnant with a lightning which has yet found no conductor. All high poetry is infinite; it is as the first acorn, which contained all oaks potentially. Veil after veil may be undrawn, and the inmost naked beauty of the meaning never exposed. A great Poem is a fountain for ever overflowing with the waters of wisdom and delight; and after one person and one age has exhausted all its divine effluence which their peculiar relations enable them to share, another and yet another succeeds, and new relations are ever developed, the source of an unforeseen and an unconceived delight.

The age immediately succeeding to that of Dante, Petrarch, and Boccaccio,² was characterized by a revival of painting, sculpture, music, and architecture. Chaucer caught the sacred inspiration, and the superstructure of English literature is based upon the materials of Italian invention.

But let us not be betrayed from a defence into a critical history of Poetry and its influence on Society. Be it enough to have pointed out the effects of poets, in the large and true sense of the word, upon their own and all succeeding times and to revert to the partial instances cited as illustrations of an opinion the reverse of that attempted to be established in the Four Ages of Poetry.

But poets have been challenged to resign the civic crown to reasoners and mechanists on another plea. It is admitted that the exercise of the imagination is most delightful, but it is alleged that that of reason is more useful. Let us examine as the grounds of this distinction, what is here meant by Utility.³ Pleasure or good in a general sense, is that which the consciousness of a sensitive and intelligent being seeks, and in which when found it acquiesces. There are two kinds of pleasure, one durable, universal, and perma-

8. Shelley names epics by, respectively, Ariosto (1516, 1532), Tasso (1581), the Portuguese Luis Vaz de Camões (1572), and Spenser (1590, 1596).

9. Martin Luther (1483-1546), German theologian and reformer, founder of the Reformation.

1. Literally, "light bearer" (Latin), the morning star. In Milton's *Paradise Lost*, Lucifer is the leader of the revolt of the angels against God, and is called Satan after his fall.

2. GIOVANNI BOCCACCIO (1313-1375), Italian writer and poet.

3. Shelley replies here to the followers of Jeremy Bentham (1748-1832), English social reformer and philosopher, the founder of utilitarianism; he claimed that all conduct and legislation should aim at "the greatest happiness of the greatest number," and formulated a calculus of pleasure. Peacock argues in "The Four Ages of Poetry": "[Poetry] can never make a philosopher nor a statesman nor in any class of life a useful or rational man. It cannot claim the slightest share in any one of the comforts or utilities of life."

nent; the other transitory and particular. Utility may either express the means of producing the former or the latter. In the former sense, whatever strengthens and purifies the affections, enlarges the imagination, and adds spirit to sense, is useful. But the meaning in which the Author of the *Four Ages* of Poetry seems to have employed the word utility is the narrower one of banishing the impertinence of the wants of our animal nature, the surrounding men with security of life, the dispersing the grosser delusions of superstition, and the conciliating such a degree of mutual forbearance among men as may consist with the motives of personal advantage.

Undoubtedly the promoters of utility in this limited sense, have their appointed office in society. They follow the footsteps of poets, and copy the sketches of their creations into the book of common life. They make space, and give time. Their exertions are of the highest value so long as they confine their administration of the concerns of the inferior powers of our nature within the limits due to the superior ones. But whilst the sceptic destroys gross superstitions, let him spare to deface, as some of the French writers have defaced, the eternal truths character'd upon the imaginations of men. Whilst the mechanist abridges, and the political œconomist combines, labour, let them beware that their speculations, for want of correspondence with those first principles which belong to the imagination, do not tend, as they have in modern England, to exasperate at once the extremes of luxury and want. They have exemplified the saying, "To him that hath, more shall be given; and from him that hath not, the little that he hath shall be taken away."⁴ The rich have become richer, and the poor have become poorer; and the vessel of the state is driven between the Scylla and Charybdis⁵ of anarchy and despotism. Such are the effects which must ever flow from an unmitigated exercise of the calculating faculty.

It is difficult to define pleasure in its highest sense; the definition involving a number of apparent paradoxes. For, from an inexplicable defect of harmony in the constitution of human nature, the pain of the inferior is frequently connected with the pleasures of the superior portions of our being. Sorrow, terror, anguish, despair itself are often the chosen expressions of an approximation to the highest good. Our sympathy in tragic fiction depends on this principle; tragedy delights by affording a shadow of the pleasure which exists in pain. This is the source also of the melancholy which is inseparable from the sweetest melody. The pleasure that is in sorrow is sweeter than the pleasure of pleasure itself. And hence the saying, "It is better to go to the house of mourning, than to the house of mirth."⁶ Not that this highest species of pleasure is necessarily linked with pain. The delight of love and friendship, the extacy of the admiration of nature, the joy of the perception and still more of the creation of poetry is often wholly unalloyed.

The production and assurance of pleasure in this highest sense is true utility. Those who produce and preserve this pleasure are Poets or poetical philosophers.

The exertions of Locke, Hume, Gibbon, Voltaire, Rousseau,⁷ and their

4. Mark 4.25.

5. That is, two equal dangers. In Greek mythology, Scylla and Charybdis are two monsters (who become a rock and whirlpool, respectively) that endanger sailors between Sicily and Italy.

6. Ecclesiastes 7.2.

7. I follow the classification adopted by the author of the *Four Ages of Poetry*. But Rousseau was essentially a poet. The others, even Voltaire, were mere reasoners [Shelley's note]. John Locke (1632-1704), English philosopher. DAVID HUME (1711-1776), Scottish empiricist philosopher,

disciples, in favour of oppressed and deluded humanity, are entitled to the gratitude of mankind. Yet it is easy to calculate the degree of moral and intellectual improvement which the world would have exhibited, had they never lived. A little more nonsense would have been talked for a century or two; and perhaps a few more men, women, and children, burnt as heretics. We might not at this moment have been congratulating each other on the abolition of the Inquisition in Spain.⁸ But it exceeds all imagination to conceive what would have been the moral condition of the world if neither Dante, Petrarch, Boccaccio, Chaucer, Shakespeare, Calderon, Lord Bacon, nor Milton, had ever existed; if Raphael and Michael Angelo⁹ had never been born; if the Hebrew poetry had never been translated; if a revival of the study of Greek literature had never taken place; if no monuments of antient sculpture had been handed down to us; and if the poetry of the religion of the antient world had been extinguished together with its belief. The human mind could never, except by the intervention of these excitements, have been awakened to the invention of the grosser sciences, and that application of analytical reasoning to the aberrations of society, which it is now attempted to exalt over the direct expression of the inventive and creative faculty itself.

We have more moral, political and historical wisdom, than we know how to reduce into practise; we have more scientific and œconomical knowledge than can be accommodated to the just distribution of the produce which it multiplies. The poetry in these systems of thought; is concealed by the accumulation of facts and calculating processes. There is no want of knowledge respecting what is wisest and best in morals, government, and political œconomy, or at least, what is wiser and better than what men now practise and endure. But we let "*I dare not wait upon I would*, like the poor cat i' the adage."¹ We want² the creative faculty to imagine that which we know; we want the generous impulse to act that which we imagine; we want the poetry of life: our calculations have outrun conception; we have eaten more than we can digest. The cultivation of those sciences which have enlarged the limits of the empire of man over the external world, has, for want of the poetical faculty, proportionally circumscribed those of the internal world; and man, having enslaved the elements, remains himself a slave. To what but a cultivation of the mechanical arts in a degree disproportioned to the presence of the creative faculty, which is the basis of all knowledge, is to be attributed the abuse of all invention for abridging and combining labour, to the exasperation of the inequality of mankind? From what other cause has it arisen that the discoveries which should have lightened, have added a weight to the curse imposed on Adam?³ Poetry, and the principle of Self, of

historian, and economist. Edward Gibbon (1737–1794), English historian best known as the author of *The History of the Decline and Fall of the Roman Empire* (6 vols., 1776–88). Voltaire: pen name of François-Marie Arouet (1694–1778), French writer and philosopher. These figures are apparently linked by their opposition, in different degrees, to Christianity.

8. The Spanish Inquisition, the harsh Roman Catholic tribunal for suppressing heresy, was established in 1478; it was not definitively abolished until the 1820 revolution led by reformist army officers.

9. Michelangelo [Buonarrotti] (1475–1564), Italian Renaissance sculptor, painter, and architect. Francis Bacon (1561–1626), English philosopher and essayist. Raphael: Raffaello Sanzio (1483–1520), master painter of the Italian Renaissance.

1. *Macbeth*, 1.7.44–45.

2. Lack.

3. That is, the need to labor for a living; imposed on Adam because he and Eve ate the forbidden fruit of the tree of knowledge: "In the sweat of thy face shalt thou eat bread, till thou return unto the ground" (Genesis 3.19).

which money is the visible incarnation, are the God and the Mammon⁴ of the world.

The functions of the poetical faculty are two-fold; by one it creates new materials of knowledge, and power and pleasure; by the other it engenders in the mind a desire to reproduce and arrange them according to a certain rhythm and order which may be called the beautiful and the good. The cultivation of poetry is never more to be desired than at periods when, from an excess of the selfish and calculating principle, the accumulation of the materials of external life exceed the quantity of the power of assimilating them to the internal laws of human nature. The body has then become too unwieldy for that which animates it.

Poetry is indeed something divine.⁵ It is at once the centre and circumference of knowledge; it is that which comprehends all science, and that to which all science must be referred. It is at the same time the root and blossom of all other systems of thought; it is that from which all spring, and that which adorns all; and that which, if blighted, denies the fruit and the seed, and withholds from the barren world the nourishment and the succession of the scions of the tree of life. It is the perfect and consummate surface and bloom of things; it is as the odour and the colour of the rose to the texture of the elements which compose it, as the form and the splendour of unfaded beauty to the secrets of anatomy and corruption. What were Virtue, Love, Patriotism, Friendship &c.—what were the scenery of this beautiful Universe which we inhabit—what were our consolations on this side of the grave—and what were our aspirations beyond it—if Poetry did not ascend to bring light and fire from those eternal regions where the owl-winged faculty of calculation dare not ever soar? Poetry is not like reasoning, a power to be exerted according to the determination of the will. A man cannot say, "I will compose poetry." The greatest poet even cannot say it: for the mind in creation is as a fading coal which some invisible influence, like an inconstant wind, awakens to transitory brightness: this power arises from within, like the colour of a flower which fades and changes as it is developed, and the conscious portions of our natures are unprophetic either of its approach or its departure. Could this influence be durable in its original purity and force, it is impossible to predict the greatness of the results; but when composition begins, inspiration is already on the decline, and the most glorious poetry that has ever been communicated to the world is probably a feeble shadow of the original conception of the poet. I appeal to the greatest Poets of the present day, whether it be not an error to assert that the finest passages of poetry are produced by labour and study. The toil and the delay recommended by critics can be justly interpreted to mean no more than a careful observation of the inspired moments, and an artificial connexion of the spaces between their suggestions by the intertexture of conventional expressions; a necessity only imposed by a limitedness of the poetical faculty itself. For Milton conceived the *Paradise Lost* as a whole before he executed it in portions. We have his own authority also for the Muse having "dictated" to him the "unpremeditated song,"⁶ and let this be an answer to those who would allege the fifty-six various readings of the first line of the Orlando

4. The personification of avarice and lust for worldly gain; according to Matthew 6.24 and Luke 16.13, it is impossible to serve both God and Mammon.

5. Compare Sidney's reference, in *An Apology for Poetry*, to poetry as "a divine gift."

6. *Paradise Lost* 9.20–24.

Furioso. Compositions so produced are to poetry what mosaic is to painting. This instinct and intuition of the poetical faculty is still more observable in the plastic and pictorial arts: a great statue or picture grows under the power of the artist as a child in the mother's womb, and the very mind which directs the hands in formation is incapable of accounting to itself for the origin, the gradations, or the media of the process.

Poetry is the record of the best and happiest moments of the happiest and best minds. We are aware of evanescent visitations of thought and feeling sometimes associated with place or person, sometimes regarding our own mind alone, and always arising unforeseen and departing unbidden, but elevating and delightful beyond all expression; so that even in the desire and the regret they leave, there cannot but be pleasure, participating as it does in the nature of its object. It is as it were the interpenetration of a diviner nature through our own; but its footsteps are like those of a wind over a sea, which the coming calm erases, and whose traces remain only as on the wrinkled sand which paves it. These and corresponding conditions of being are experienced principally by those of the most delicate sensibility and the most enlarged imagination; and the state of mind produced by them is at war with every base desire. The enthusiasm of virtue, love, patriotism, and friendship is essentially linked with these emotions; and whilst they last, self appears as what it is, an atom to a Universe. Poets are not only subject to these experiences as spirits of the most refined organization, but they can colour all that they combine with the evanescent hues of this ethereal world; a word, a trait in the representation of a scene or a passion, will touch the enchanted chord, and reanimate, in those who have ever experienced these emotions, the sleeping, the cold, the buried image of the past. Poetry thus makes immortal all that is best and most beautiful in the world; it arrests the vanishing apparitions which haunt the interlunations⁷ of life, and veiling them or in language or in form sends them forth among mankind, bearing sweet news of kindred joy to those with whom their sisters abide—abide, because there is no portal of expression from the caverns of the spirit which they inhabit into the universe of things. Poetry redeems from decay the visitations of the divinity in man.

Poetry turns all things to loveliness; it exalts the beauty of that which is most beautiful, and it adds beauty to that which is most deformed: it marries exultation and horror, grief and pleasure, eternity and change; it subdues to union under its light yoke all irreconcilable things. It transmutes all that it touches, and every form moving within the radiance of its presence is changed by wondrous sympathy to an incarnation of the spirit which it breathes; its secret alchemy turns to potable gold the poisonous waters which flow from death through life; it strips the veil of familiarity from the world, and lays bare the naked and sleeping beauty which is the spirit of its forms.

All things exist as they are perceived: at least in relation to the percipient. "The mind is its own place, and of itself can make a heaven of hell, a hell of heaven."⁸ But poetry defeats the curse which binds us to be subjected to the accident of surrounding impressions. And whether it spreads its own figured curtain or withdraws life's dark veil from before the scene of things, it equally

8. Satan's defiant assertion in *Paradise Lost* 1.254–55, slightly misquoted.

creates for us a being within our being. It makes us the inhabitants of a world to which the familiar world is a chaos. It reproduces the common universe of which we are portions and percipients, and it purges from our inward sight the film of familiarity which obscures from us the wonder of our being.⁹ It compels us to feel that which we perceive, and to imagine that which we know. It creates anew the universe after it has been annihilated in our minds by the recurrence of impressions blunted by reiteration. It justifies that bold and true word of Tasso—*Non merita nome di creatore, se non Iddio ed il Poeta*.¹

A Poet, as he is the author to others of the highest wisdom, pleasure, virtue and glory, so he ought personally to be the happiest, the best, the wisest, and the most illustrious of men. As to his glory, let Time be challenged to declare whether the fame of any other institutor of human life be comparable to that of a poet. That he is the wisest, the happiest, and the best, inasmuch as he is a poet, is equally incontrovertible: the greatest poets have been men of the most spotless virtue, of the most consummate prudence, and, if we could look into the interior of their lives, the most fortunate of men: and the exceptions, as they regard those who possessed the poetic faculty in a high yet inferior degree, will be found on consideration to confirm rather than destroy the rule. Let us for a moment stoop to the arbitration of popular breath, and usurping and uniting in our own persons the incompatible characters of accuser, witness, judge and executioner, let us decide without trial, testimony, or form, that certain motives of those who are "there sitting where we dare not soar"² are reprehensible. Let us assume that Homer was a drunkard, that Virgil was a flatterer, that Horace was a coward, that Tasso was a madman, that Lord Bacon was a speculator,³ that Raphael was a libertine, that Spenser was a poet laureate. It is inconsistent with this division of our subject to cite living poets, but Posterity has done ample justice to the great names now referred to. Their errors have been weighed and found to have been dust in the balance; if their sins "were as scarlet, they are now white as snow"; they have been washed in the blood of the mediator and the redeemer Time. Observe in what a ludicrous chaos the imputations of real or fictitious crime have been confused in the contemporary calumnies against poetry and poets; consider how little is, as it appears—or appears, as it is: look to your own motives, and judge not, lest ye be judged.⁴

Poetry, as has been said, in this respect differs from logic, that it is not subject to the controul of the active powers of the mind, and that its birth and recurrence has no necessary connexion with consciousness or will. It is presumptuous to determine that these are the necessary conditions of all mental causation, when mental effects are experienced insusceptible of being referred to them. The frequent recurrence of the poetical power, it is

9. Shelley echoes SAMUEL TAYLOR COLERIDGE in *Biographia Literaria* (1817), chap. 14, which describes Wordsworth's method as "awakening the mind's attention from the lethargy of custom, and directing it to the loveliness and the wonders of the world before us; an inexhaustible treasure, but for which in consequence of the film of familiarity and selfish solicitude we have eyes, yet see not, ears that hear not, and hearts that neither feel nor understand."

1. No one deserves the name of creator except

God and the Poet (Italian). From Pierantonio Serassi's *Life of Torquato Tasso* (1785).

2. *Paradise Lost* 4.829, slightly misquoted.

3. Embezzler.

4. Shelley repeatedly echoes the Bible in this passage. Their errors have been weighed in the balance: Daniel 5.27; dust of the balance: Isaiah 40.15; were as scarlet: Isaiah 1.18; washed in the blood: Revelation 7.14; the mediator: Hebrews 9.15, 12.24; judge not: Matthew 7.1.

obvious to suppose, may produce in the mind an habit of order and harmony correlative with its own nature and with its effects upon other minds. But in the intervals of inspiration, and they may be frequent without being durable, a poet becomes a man, and is abandoned to the sudden reflux of the influences under which others habitually live. But as he is more delicately organized than other men, and sensible to pain and pleasure, both his own and that of others, in a degree unknown to them, he will avoid the one and pursue the other with an ardour proportioned to this difference. And he renders himself obnoxious to calumny, when he neglects to observe the circumstances under which these objects of universal pursuit and flight have disguised themselves in one another's garments.

But there is nothing necessarily evil in this error, and thus cruelty, envy, revenge, avarice, and the passions purely evil, have never formed any portion of the popular imputations on the lives of poets.

I have thought it most favourable to the cause of truth to set down these remarks according to the order in which they were suggested to my mind by a consideration of the subject itself, instead of following that of the treatise that excited me to make them public. Thus although devoid of the formality of a polemical reply; if the view they contain be just, they will be found to involve a refutation of the Four Ages of Poetry, so far at least as regards the first division of the subject. I can readily conjecture what should have moved the gall of the learned and intelligent author of that paper; I confess myself like him unwilling to be stunned by the Theseids of the hoarse Codri⁵ of the day. Bavius and Mævius⁶ undoubtedly are, as they ever were, insufferable persons. But it belongs to a philosophical critic to distinguish rather than confound.

The first part of these remarks has related to Poetry in its elements and principles; and it has been shewn, as well as the narrow limits assigned them would permit, that what is called poetry, in a restricted sense, has a common source with all other forms of order and of beauty according to which the materials of human life are susceptible of being arranged, and which is poetry in an universal sense.

The second part will have for its object an application of these principles to the present state of the cultivation of Poetry, and a defence of the attempt to idealize the modern forms of manners and opinion, and compel them into a subordination to the imaginative and creative faculty. For the literature of England, an energetic development of which has ever preceded or accompanied a great and free development of the national will, has arisen as it were from a new birth. In spite of the low-thoughted envy which would undervalue contemporary merit, our own will be a memorable age in intellectual achievements, and we live among such philosophers and poets as surpass beyond comparison any who have appeared since the last national struggle for civil and religious liberty.⁷ The most unfailing herald, companion, and follower of the awakening of a great people to work a beneficial change in opinion or institution, is Poetry. At such periods there is an accumulation of the power

5. Juvenal begins *Satire* 1 by complaining about the Theseid (i.e., an epic poem on Theseus, the chief hero of Attica in ancient Greek legend) of "hoarse Codrus."

6. Mediocre Latin poets (1st c. B.C.E.) satirized by

7. That is, the English Civil War (1642–46, 1648).

of communicating and receiving intense and impassioned conceptions respecting man and nature. The persons in whom this power resides, may often, as far as regards many portions of their nature, have little apparent correspondence with that spirit of good of which they are the ministers. But even whilst they deny and abjure, they are yet compelled to serve, the Power which is seated upon the throne of their own soul. It is impossible to read the compositions of the most celebrated writers of the present day without being startled with the electric life which burns within their words. They measure the circumference and sound the depths of human nature with a comprehensive and all-penetrating spirit, and they are themselves perhaps the most sincerely astonished at its manifestations, for it is less their spirit than the spirit of the age. Poets are the hierophants⁸ of an unapprehended inspiration, the mirrors of the gigantic shadows which futurity casts upon the present, the words which express what they understand not; the trumpets which sing to battle, and feel not what they inspire: the influence which is moved not, but moves. Poets are the unacknowledged legislators of the World.

8. Interpreters of sacred mysteries.

RALPH WALDO EMERSON

1803–1882

"Emerson is God," declared the literary theorist HAROLD BLOOM in an interview in 1993, in perhaps the most extravagant testimony yet to Emerson's impact on American literature and culture. Lecturer, poet, and essayist, and the leading exponent of New England Transcendentalism, Emerson's advocacy of self-reliance and nonconformity inspired American writers of his own time—notably, Henry David Thoreau, Margaret Fuller, Emily Dickinson, and Walt Whitman—and later: Emerson was significant as well for English and European intellectuals and philosophers, including George Eliot (1819–1880) and FRIEDRICH NIETZSCHE (1844–1900), and for the American philosophers William James (1842–1910) and John Dewey (1859–1952). A radical thinker and a shaper of striking sentences and aphorisms, Emerson made claims for himself (and, by extension, for readers) as daring as Bloom makes for Emerson. "The simplest person who in his integrity worships God," Emerson affirms in his essay "The Over-Soul," "becomes God."

In *Nature* (1836), the lecture "The American Scholar" (1837), the Address before the Harvard Divinity School (1838), and two volumes of *Essays* (1841, 1844), Emerson announced and articulated nearly all of the central themes of Transcendentalism and, at the same time, subjected them to critique. He encouraged readers and audiences to feel the exaltation of their highest potential, to trust instinct and intuition (the signs of God's presence in persons), and to perceive Nature as a rich realm of truths more profound than any that human social orders made available. He expressed these themes in provocative, allusive prose, which proceeds with a rich if frequently discontinuous rhythm. At the same time, with regular self-questioning he maintained that there was no Transcendentalist party and no "pure" Transcendentalism at all.

Emerson attended the Boston Latin School and Harvard College (1817–21). While at Harvard, he began keeping a journal, and its stock of allusions, commentaries on his reading, and reflections on persons and events became the "Savings Bank"—annotated, cross-referenced, indexed—for his lectures, essays, and books. After graduation, Emerson taught school and then entered the Harvard Divinity School to prepare for the ministry, taking up a position at Boston's Second Unitarian Church in 1829. In September 1829 Emerson married the seventeen-year-old Ellen Louisa Tucker, but her health was poor, and she died from tuberculosis in February 1831.

Biographers have suggested that Emerson's grief led him to question his Unitarian faith, but his doubts about conventional Christian beliefs and his "antiquated" profession had been present in his journals and even sermons for years. Later, he remarked that if his teachers at the Harvard Divinity School had been aware of his true thoughts and feelings, they would not have allowed him to graduate. In October 1832, saying he could no longer administer the sacrament of the Lord's Supper, Emerson resigned as minister of his Boston church. He explained, "It is my desire to do nothing which I cannot do with my whole heart."

In December 1832, Emerson traveled to Europe, and during his nine months abroad he met WILLIAM WORDSWORTH, SAMUEL TAYLOR COLERIDGE, and the Scottish-born essayist and historian Thomas Carlyle, with whom he corresponded for half a century. After returning to the United States, he lectured on natural history, biography, and history; settled in Concord, Massachusetts; remarried (Lydia Jackson in 1835); and worked on his first book, *Nature*, published anonymously (and at his own expense) in September 1836. Other important texts of this decade include "The American Scholar" and the Divinity School address, in which Emerson attacked religious tradition, doctrine, and the ministry for denying men and women the possibility for authentic self-discovery and religious fulfillment. "I think no man can go with his thoughts about him into one of our churches," he contended in the address, "without feeling that what hold the public worship had on men is gone, or going."

In the 1830s Emerson said, "I am a poet. . . . That is my nature & vocation," and he produced a number of difficult, gnomic poems that were collected in *Poems* (1847). But his real distinction lay in essays, journals, and books of cultural criticism and philosophy. Most scholars now agree that Emerson's best work is in the *Essays*, pointing especially to "History," "Self-Reliance," "The Over-Soul," "Circles," "The Poet," and "Experience." He followed the lectures and essays of the 1830s and 1840s with a series of powerful books: *Representative Men* (1850), which contains studies of PLATO, Goethe, and others; *English Traits* (1856), a shrewd work of social criticism in which Emerson examines English life, tradition, and culture; and *The Conduct of Life* (1860), based on lectures he had presented in 1851 and including three major philosophical pieces—"Fate," "Power," and "Illusions."

Emerson played an active role in the meetings of the Transcendental Club, which the Unitarian clergyman F. H. Hedge organized in 1836 for the "exchange of thought among those interested in the new views in philosophy, theology, and literature." Like the other Transcendentalists, Emerson believed that all of creation is one, that men and women are inherently good, that intuition is the source of truth, and that individual perception illuminates and structures the world. "Nothing is at last sacred but the integrity of your own mind," Emerson professed, and this view led him to criticize the traditions, beliefs, and practices of the past that restricted the intellectual and moral development of persons in the present. God dwells within, according to Emerson, and thus each person should, he said early and late, establish an "original relation to the universe."

In his *Essay Concerning Human Understanding* (1690), John Locke had argued that the senses produce a register of impressions of the physical world on the blank tablet (the *tabula rasa*) of the mind; the understanding transforms them into abstractions and complex ideas. Emerson disagreed. Drawing on the writings of IMMANUEL KANT and, even more, Coleridge (the *Biographia Literaria*, 1817, and the religious

and philosophical treatise *Aids to Reflection*, 1825), Emerson made "understanding"—the process by which the mind gathers the evidence of the senses and converts it into knowledge of the external world—subordinate to "reason," which he defined as the intuitive perception of truth. In *Nature*, Emerson affirmed, "I become a transparent eyeball; I am nothing; the currents of the Universal Being circulate through me; I am part or particle of God."

Emerson's reference to "Universal Being" points to the American version of Neoplatonism that he espoused. Each person must seek to regain communion with "Universal Being" or (Emerson's terms vary) Nature or Spirit. When it is lost, human beings view themselves as (and behave as if they were) isolated, powerless, alienated, corrupt. When it is restored, they sense their wholeness and enjoy a thrilling power and independence. This ecstatic feeling, Emerson suggests, is precious and precarious, astonishing and invigorating yet difficult for human beings to sustain. His philosophy is one of constant striving, of working to perfect and empower the self. Those (including HENRY JAMES) who take it for easy optimism are mistaken. In "Fate," Emerson emphasizes that "Nature is no sentimentalist,—does not cosset or pamper us. We must see that the world is rough and surly, and will not mind drowning a man or a woman, but swallows your ship like a grain of dust." And in "The Poet," he pictures the imaginative seer as liberating us from ordinary life, which is characterized as miserable and prisonlike.

Our selections demonstrate Emerson's centrality for literary theory, philosophy (especially American pragmatism), and cultural criticism. The first, an excerpt from "The American Scholar," presents Emerson's mobile, and somewhat unnerving, account of the reading process. Truth, he suggests, does not lie in great books waiting for readers to extract it. "Creative reading," the right kind of reading, is instead the result of the truth that readers bring with them—a claim that would reemerge in the reader-response criticism of the 1970s and 1980s (without crediting Emerson). Reading should inspire us, Emerson states; but the genuine scholar, he implies, is occupied with reading only when there is nothing better to do. He is more concerned with writing, arguing that "each age must write its own books. . . . The books of an older period will not fit this." Emerson calls for truth-seekers—persons who look within themselves rather than in books for truth and who bear witness to their spiritual discoveries in books of their own.

As he makes clear in "The Poet" (1844), our second selection, the writer reports passionately on personal experiences that will stimulate readers embarked on their own spiritual and intellectual journeys. All experience is meaningful; no "sensual fact" (that is, nothing that is perceived by the senses) lacks spiritual significance. The special office of the "poet" (i.e., the imaginative writer) is to be alert to the meanings that saturate all of existence; all persons have the potential to be poets (which is one way in which the poet is "representative"), but those who actually become poet-geniuses are "sovereign": they are potentates, emperors, liberating gods. Though Emerson found PERCY BYSSHE SHELLEY "wholly unaffecting," his grand vision of the poet's powers is akin to Shelley's in "The Defence of Poetry" (written 1821; see above). In Emerson's view, the more faithful the poet is to Nature, to Nature's harmonies, the better will be his or her art. Overall, he pays little attention to craft, style, technique. For Emerson, a poem is defined by a thought that is "passionately alive," not by its pattern of rhyme or meter or structure; he explicitly puts content before form.

Through most of the essay, Emerson speaks in universal terms; but toward its end, his commitment to literary and cultural nationalism becomes clear. He beckons for American poets who will take as a basis for their verse the facts, the experiences, and the sweep of the land itself. Though he honors the great writers of the past and of other lands, he emphasizes that present-day citizens of the new nation cannot find inspiration in them. He admits, however, "I look in vain for the poet whom I describe."

Emerson appeals for a literature that is American and modern, and at moments he sounds akin to major twentieth-century theorists and practitioners of literary modernism. T. S. ELIOT and Ezra Pound, for example, would seem to share Emerson's belief that the poet makes things new: "The poet, by an ulterior intellectual perception, gives them a power which makes their old use forgotten, and puts eyes and a tongue into every dumb and inanimate object." But the Romantic cast of Emerson's arguments ultimately made him more a foe than a friend for the modernists, with important exceptions (such as Gertrude Stein and Robert Frost). Eliot, in particularly strong terms, rejected the concept of the poet as inspired sage or spiritual seer and reaffirmed the sobering significance of tradition (see "Tradition and the Individual Talent," 1919; below). The immersion in the literature of the past that Eliot believed necessary for poets to find the stimulus for literary work of their own would have struck Emerson as a postponement of the individual's direct endeavor to hearken to the voice within, to the inner light (a phrase that Eliot despised).

For Emerson, what counts is who the poet is, which perhaps suggests why as a reader he preferred biography and history to poetry and fiction. He valued books that recounted a gifted individual's quest for freedom, power, and great achievement. Writing in his journal on January 10, 1832, he noted: "The difficulty is that we do not make a world of our own but fall into institutions already made & have to accommodate ourselves to them to be useful at all." Harold Bloom no doubt exaggerated when he called Emerson "God," but some critics have proposed, without exaggeration, that there was no truly American writing before Emerson, and that his presence has influenced everything written since.

BIBLIOGRAPHY

The standard editions are *The Collected Works of Ralph Waldo Emerson*, edited by Robert Spiller et al. (4 vols. to date, 1971-); *The Early Lectures*, edited by Stephen Whicher, Robert Spiller, and Wallace E. Williams (3 vols., 1959-72); *Journals and Miscellaneous Notebooks*, edited by William H. Gilman et al. (16 vols., 1960-84); and *Letters*, edited by Ralph L. Rusk (6 vols., 1939). For excellent single-volume collections (which include annotations), consult *Emerson's Literary Criticism*, edited by Eric W. Carlson (1979), and *Ralph Waldo Emerson*, edited by Richard Poirier, in the Oxford Authors series (1990). For more wide-ranging selections, see the Emerson volumes in the Library of America series, especially *Essays and Lectures* (1983). For selections from the journals, refer to *Emerson in His Journals*, edited by Joel Porte (1982).

Ralph L. Rusk's *Life of Ralph Waldo Emerson* (1949) remains a basic starting point. Biographies have also been written by Gay Wilson Allen, *Waldo Emerson: A Biography* (1981), and John McAleer, *Ralph Waldo Emerson: Days of Encounter* (1984). Robert D. Richardson, *Emerson: The Mind on Fire* (1995), explores Emerson's career as an American scholar, reader, and writer. For an account of Emerson's friends and contemporaries, see Carlos Baker, *Emerson among the Eccentrics: A Group Portrait* (1996). For incisive commentaries on Emerson's style and strategies as a writer, turn to Warner Berthoff, introduction to his edition of *Nature* (1968); Alfred Kazin, *An American Procession* (1984); Richard Poirier, *The Renewal of Literature: Emersonian Reflections* (1984); and Poirier, *Poetry and Pragmatism* (1992).

Many books have been written on Emerson; particularly worthy of attention are Barbara L. Packer, *Emerson's Fall: A New Interpretation of the Major Essays* (1982), a keen analysis of Emerson's uses of language; Julie Ellison, *Emerson's Romantic Style* (1984); Irving Howe, *The American Newness: Culture and Politics in the Age of Emerson* (1986), a suggestive book that relates Emerson to his contemporaries; David Van Leer, *Emerson's Epistemology: The Argument of the Essays* (1986), a cogent investigation of Emerson's theory of knowledge; Richard A. Grusin, *Transcendentalist Her-*

meneutics: Institutional Authority and the Higher Criticism of the Bible (1991), which is helpful on religious contexts; Merton M. Sealts, *Emerson on the Scholar* (1992); George J. Stack, *Nietzsche and Emerson: An Elective Affinity* (1992), an argument for the German philosopher's deep indebtedness to Emerson's ideas; Christina Zwarg, *Feminist Conversations: Fuller, Emerson, and the Play of Reading* (1995); and Stanley Cavell, *Philosophical Passages: Wittgenstein, Emerson, Austin, Derrida* (1995), a rewarding meditation on Emerson's significance for twentieth-century philosophy. Also valuable are *Emerson and Thoreau: The Contemporary Reviews*, edited by Joel Myerson (1992); and *Critical Essays on Ralph Waldo Emerson*, edited by Robert E. Burkholder and Joel Myerson (1983).

Joel Myerson has prepared a bibliography of Emerson's writings, *Ralph Waldo Emerson: A Descriptive Bibliography* (1982), and, with Robert E. Burkholder, two bibliographies of secondary sources: *A Secondary Bibliography of Ralph Waldo Emerson* (1985) and *Ralph Waldo Emerson: An Annotated Bibliography of Criticism, 1980–1991* (1994). Albert J. Von Frank, *An Emerson Chronology* (1994), is an indispensable reference.

From The American Scholar¹

* * *

The next great influence into the spirit of the scholar is the mind of the Past,—in whatever form, whether of literature, of art, of institutions, that mind is inscribed. Books are the best type of the influence of the past, and perhaps we shall get at the truth,—learn the amount of this influence more conveniently,—by considering their value alone.

The theory of books is noble. The scholar of the first age received into him the world around; brooded thereon; gave it the new arrangement of his own mind, and uttered it again. It came into him life; it went out from him truth. It came to him short-lived actions; it went out from him immortal thoughts. It came to him business; it went from him poetry. It was dead fact; now, it is quick thought. It can stand, and it can go. It now endures, it now flies, it now inspires. Precisely in proportion to the depth of mind from which it issued, so high does it soar, so long does it sing.

Or, I might say, it depends on how far the process had gone, of transmuting life into truth. In proportion to the completeness of the distillation, so will the purity and imperishableness of the product be. But none is quite perfect. As no air-pump can by any means make a perfect vacuum, so neither can any artist entirely exclude the conventional, the local, the perishable from his book, or write a book of pure thought, that shall be as efficient, in all respects, to a remote posterity, as to contemporaries, or rather to the second age. Each age, it is found, must write its own books; or rather, each generation for the next succeeding. The books of an older period will not fit this.

Yet hence arises a grave mischief. The sacredness which attaches to the act of creation, the act of thought, is transferred to the record. The poet chanting was felt to be a divine man: henceforth the chant is divine also.

1. First published as a pamphlet, with the title *An Oration, Delivered before the Phi Beta Society, at Cambridge, August 31, 1837*. Emerson chose the

title "The American Scholar" when it was republished in *Nature, Addresses, and Lectures* (1849).

The writer was a just and wise spirit: henceforward it is settled the book is perfect; as love of the hero corrupts into worship of his statue. Instantly the book becomes noxious: the guide is a tyrant. The sluggish and perverted mind of the multitude, slow to open to the incursions of Reason, having once so opened, having once received this book, stands upon it, and makes an outcry if it is disparaged. Colleges are built on it. Books are written on it by thinkers, not by Man Thinking; by men of talent, that is, who start wrong, who set out from accepted dogmas, not from their own sight of principles. Meek young men grow up in libraries, believing it their duty to accept the views which Cicero, which Locke, which Bacon,² have given; forgetful that Cicero, Locke, and Bacon were only young men in libraries when they wrote these books.

Hence, instead of Man Thinking, we have the bookworm. Hence the book-learned class, who value books, as such; not as related to nature and the human constitution, but as making a sort of Third Estate³ with the world and the soul. Hence the restorers of readings, the emendators,⁴ the bibliomaniacs of all degrees.

Books are the best of things, well used; abused, among the worst. What is the right use? What is the one end which all means go to effect? They are for nothing but to inspire. I had better never see a book than to be warped by its attraction clean out of my own orbit, and made a satellite instead of a system. The one thing in the world, of value, is the active soul. This every man is entitled to; this every man contains within him, although in almost all men obstructed and as yet unborn. The soul active sees absolute truth and utters truth, or creates. In this action it is genius; not the privilege of here and there a favorite, but the sound estate of every man. In its essence it is progressive. The book, the college, the school of art, the institution of any kind, stop with some past utterance of genius. This is good, say they,—let us hold by this. They pin me down. They look backward and not forward. But genius looks forward: the eyes of man are set in his forehead, not in his hindhead: man hopes: genius creates. Whatever talents may be, if the man create not, the pure efflux of the Deity is not his;—cinders and smoke there may be, but not yet flame. There are creative manners, there are creative actions, and creative words; manners, actions, words, that is, indicative of no custom or authority, but springing spontaneous from the mind's own sense of good and fair.

On the other part, instead of being its own seer, let it receive from another mind its truth, though it were in torrents of light, without periods of solitude, inquest, and self-recovery, and a fatal disservice is done. Genius is always sufficiently the enemy of genius by over-influence. The literature of every nation bears me witness. The English dramatic poets have Shakspearized now for two hundred years.

Undoubtedly there is a right way of reading, so it be sternly subordinated. Man Thinking must not be subdued by his instruments. Books are for the scholar's idle times. When he can read God directly, the hour is too precious

2. Sir Francis Bacon (1561–1626), English statesman and writer, whose works include *The Advancement of Learning* (1605). Cicero (106–43 B.C.E.), Roman orator and statesman. John Locke (1632–1704), English philosopher, author of *An*

Essay Concerning Human Understanding (1690).

3. In prerevolutionary France, the common people (the first estate or political order was the clergy, the second the nobility).

4. Editors of texts.

to be wasted in other men's transcripts of their readings. But when the intervals of darkness come, as come they must,—when the sun is hid and the stars withdraw their shining,—we repair to the lamps which were kindled by their ray, to guide our steps to the East again, where the dawn is. We hear, that we may speak. The Arabian proverb says, "A fig tree, looking on a fig tree, becometh fruitful."

It is remarkable, the character of the pleasure we derive from the best books. They impress us with the conviction that one nature wrote and the same reads. We read the verses of one of the great English poets, of Chaucer, of Marvell, of Dryden,⁵ with the most modern joy,—with a pleasure, I mean, which is in great part caused by the abstraction of all *time* from their verses. There is some awe mixed with the joy of our surprise, when this poet, who lived in some past world, two or three hundred years ago, says that which lies close to my own soul, that which I also had well-nigh thought and said. But for the evidence thence afforded to the philosophical doctrine of the identity of all minds, we should suppose some preëstablished harmony, some foresight of souls that were to be, and some preparation of stores for their future wants, like the fact observed in insects, who lay up food before death for the young grub they shall never see.

I would not be hurried by any love of system, by any exaggeration of instincts, to underrate the Book. We all know, that as the human body can be nourished on any food, though it were boiled grass and the broth of shoes, so the human mind can be fed by any knowledge. And great and heroic men have existed who had almost no other information than by the printed page. I only would say that it needs a strong head to bear that diet. One must be an inventor to read well. As the proverb says, "He that would bring home the wealth of the Indies, must carry out the wealth of the Indies."⁶ There is then creative reading as well as creative writing. When the mind is braced by labor and invention, the page of whatever book we read becomes luminous with manifold allusion. Every sentence is doubly significant, and the sense of our author is as broad as the world. We then see, what is always true, that as the seer's hour of vision is short and rare among heavy days and months, so is its record, perchance, the least part of his volume. The discerning will read, in his Plato⁷ or Shakspeare, only that least part,—only the authentic utterances of the oracle;—all the rest he rejects, were it never so many times Plato's and Shakspeare's.

Of course there is a portion of reading quite indispensable to a wise man. History and exact science he must learn by laborious reading. Colleges, in like manner, have their indispensable office,—to teach elements. But they can only highly serve us when they aim not to drill, but to create; when they gather from far every ray of various genius to their hospitable halls, and by the concentrated fires, set the hearts of their youth on flame. Thought and knowledge are natures in which apparatus and pretension avail nothing. Gowns and pecuniary foundations, though of towns of gold, can never countervail the least sentence or syllable of wit. Forget this, and our American

5. JOHN DRYDEN (1631–1700), poet, dramatist, and critic. Geoffrey Chaucer (ca. 1343–1400), author of *The Canterbury Tales*. Andrew Marvell (1621–1678), poet and satirist.

6. Emerson likely found this proverb in James

Boswell's *Life of Samuel Johnson*, LL.D. (1791), in the conversation for April 17, 1778.

7. On the Greek philosopher PLATO (ca. 427–ca. 347 B.C.E.), see above.

colleges will recede in their public importance, whilst they grow richer every year.

1837, 1849

The Poet

Those who are esteemed umpires of taste are often persons who have acquired some knowledge of admired pictures or sculptures, and have an inclination for whatever is elegant; but if you inquire whether they are beautiful souls, and whether their own acts are like fair pictures, you learn that they are selfish and sensual. Their cultivation is local, as if you should rub a log of dry wood in one spot to produce fire, all the rest remaining cold. Their knowledge of the fine arts is some study of rules and particulars, or some limited judgment of color or form, which is exercised for amusement or for show. It is a proof of the shallowness of the doctrine of beauty as it lies in the minds of our amateurs, that men seem to have lost the perception of the instant dependence of form upon soul. There is no doctrine of forms in our philosophy. We were put into our bodies, as fire is put into a pan to be carried about; but there is no accurate adjustment between the spirit and the organ, much less is the latter the germination of the former. So in regard to other forms, the intellectual men do not believe in any essential dependence of the material world on thought and volition. Theologians think it a pretty air-castle to talk of the spiritual meaning of a ship or a cloud, of a city or a contract, but they prefer to come again to the solid ground of historical evidence; and even the poets are contented with a civil and conformed manner of living, and to write poems from the fancy, at a safe distance from their own experience. But the highest minds of the world have never ceased to explore the double meaning, or shall I say the quadruple or the centuple or much more manifold meaning, of every sensuous fact; Orpheus, Empedocles, Heraclitus, Plato, Plutarch, Dante, Swedenborg,¹ and the masters of sculpture, picture and poetry. For we are not pans and barrows, nor even porters of the fire and torch-bearers, but children of the fire,² made of it, and only the same divinity transmuted and at two or three removes, when we know least about it. And this hidden truth, that the fountains whence all this river of Time and its creatures floweth are intrinsically ideal and beautiful, draws us to the consideration of the nature and functions of the Poet, or the man of Beauty; to the means and materials he uses, and to the general aspect of the art in the present time.

The breadth of the problem is great, for the poet is representative. He stands among partial men for the complete man, and apprises us not of his wealth, but of the common wealth. The young man reverses men of genius,

1. Emanuel Swedenborg (1688–1772), Swedish mystic and scientist. Orpheus: legendary Greek poet to whom hymns and fragments were attributed. Empedocles (ca. 493–ca. 433 B.C.E.), Heraclitus (active ca. 500 B.C.E.), and PLATO (ca. 427–ca. 347 B.C.E.): Greek philosophers. Plutarch (ca.

50–ca. 120 C.E.), Greek biographer and historian. DANTE ALIGHIERI (1265–1321), Italian poet, author of *The Divine Comedy*.

2. A phrase derived from Heraclitus, who used fire to symbolize the process of change.

because, to speak truly, they are more himself than he is. They receive of the soul as he also receives, but they more. Nature enhances her beauty, to the eye of loving men, from their belief that the poet is beholding her shows at the same time. He is isolated among his contemporaries by truth and by his art, but with this consolation in his pursuits, that they will draw all men sooner or later. For all men live by truth and stand in need of expression. In love, in art, in avarice, in politics, in labor, in games, we study to utter our painful secret. The man is only half himself, the other half is his expression.

Notwithstanding this necessity to be published, adequate expression is rare. I know not how it is that we need an interpreter, but the great majority of men seem to be minors, who have not yet come into possession of their own, or mutes, who cannot report the conversation they have had with nature. There is no man who does not anticipate a supersensual utility in the sun and stars, earth and water. These stand and wait³ to render him a peculiar service. But there is some obstruction or some excess of phlegm⁴ in our constitution, which does not suffer them to yield the due effect. Too feeble fall the impressions of nature on us to make us artists. Every touch should thrill. Every man should be so much an artist that he could report in conversation what had befallen him. Yet, in our experience, the rays or appulses⁵ have sufficient force to arrive at the senses, but not enough to reach the quick and compel the reproduction of themselves in speech. The poet is the person in whom these powers are in balance, the man without impediment, who sees and handles that which others dream of, traverses the whole scale of experience, and is representative of man; in virtue of being the largest power to receive and to impart.

For the Universe has three children, born at one time, which reappear under different names in every system of thought, whether they be called cause, operation and effect; or, more poetically, Jove, Pluto, Neptune;⁶ or, theologically, the Father, the Spirit and the Son; but which we will call here the Knower, the Doer and the Sayer. These stand respectively for the love of truth, for the love of good, and for the love of beauty. These three are equal. Each is that which he is, essentially, so that he cannot be surmounted or analyzed, and each of these three has the power of the others latent in him and his own, patent.

The poet is the sayer, the namer, and represents beauty. He is a sovereign, and stands on the centre. For the world is not painted or adorned, but is from the beginning beautiful; and God has not made some beautiful things, but Beauty is the creator of the universe. Therefore the poet is not any permissive potentate, but is emperor in his own right. Criticism is infested with a cant of materialism, which assumes that manual skill and activity is the first merit of all men, and disparages such as say and do not, overlooking the fact that some men, namely poets, are natural sayers, sent into the world to the end of expression, and confounds them with those whose province is action but who quit it to imitate the sayers. But Homer's words are as costly and admirable to Homer as Agamemnon's victories are to Agamemnon.⁷ The

3. See John Milton, "When I Consider How My Light Is Spent" (1673): "They also serve who only stand and wait" (line 14).

4. One of the four "humors" of early physiology; said to cause sluggishness and lethargy.

5. Driving motions toward something.

6. Three Roman gods: king of the gods (Jove), god of the dead and ruler of the underworld (Pluto), and god of the sea (Neptune).

7. Commander of the Greek army in Homer's epic poem the *Iliad* (ca. 8th c. B.C.E.).

poet does not wait for the hero or the sage, but, as the architect and think primarily, so he writes primarily what will and must be taken, reckoning the others, though primaries also, yet, in respect to them, secondaries and servants; as sitters or models in the studio of a painter, or as assistants who bring building-materials to an architect.

For poetry was all written before time was, and whenever we are so finely organized that we can penetrate into the region where the air is music, we hear those primal warblings and attempt to write them down, but we lose ever and anon a word or a verse and substitute something of our own, and thus miswrite the poem. The men of more delicate ear write down these cadences more faithfully, and these transcripts, though imperfect, become the songs of the nations. For nature is as truly beautiful as it is good, or as it is reasonable, and must as much appear as it must be done, or be known. Words and deeds are quite indifferent modes of the divine energy. Words are also actions, and actions are a kind of words.

The sign and credentials of the poet are that he announces that which no man foretold. He is the true and only doctor;⁸ he knows and tells; he is the only teller of news, for he was present and privy to the appearance which he describes. He is a beholder of ideas and an utterer of the necessary and causal. For we do not speak now of men of poetical talents, or of industry and skill in metre, but of the true poet. I took part in a conversation the other day concerning a recent writer of lyrics,⁹ a man of subtle mind, whose head appeared to be a music-box of delicate tunes and rhythms, and whose skill and command of language we could not sufficiently praise. But when the question arose whether he was not only a lyrist but a poet, we were obliged to confess that he is plainly a contemporary, not an eternal man. He does not stand out of our low limitations, like a Chimborazo under the line,¹ running up from a torrid base through all the climates of the globe, with belts of the herbage of every latitude on its high and mottled sides; but this genius is the landscape-garden of a modern house, adorned with fountains and statues, with well-bred men and women standing and sitting in the walks and terraces. We hear, through all the varied music, the ground-tone of conventional life. Our poets are men of talents who sing, and not the children of music. The argument is secondary, the finish of the verses is primary.

For it is not metres, but a metre-making argument that makes a poem,—a thought so passionate and alive that like the spirit of a plant or an animal it has an architecture of its own, and adorns nature with a new thing. The thought and the form are equal in the order of time, but in the order of genesis the thought is prior to the form. The poet has a new thought; he has a whole new experience to unfold; he will tell us how it was with him, and all men will be the richer in his fortune. For the experience of each new age requires a new confession, and the world seems always waiting for its poet. I remember when I was young how much I was moved one morning by tidings that genius had appeared in a youth who sat near me at table. He had left his work and gone rambling none knew whither, and had written hundreds of lines, but could not tell whether that which was in him was therein told; he could tell nothing but that all was changed,—man, beast, heaven, earth

8. Teacher.

9. Perhaps the English poet Alfred, Lord Tennyson (1809–1892).

1. The equator. Chimborazo: a mountain in Ecuador, in the Andes range.

and sea. How gladly we listened! how credulous! Society seemed to be compromised. We sat in the aurora of a sunrise which was to put out all the stars. Boston seemed to be at twice the distance it had the night before, or was much farther than that. Rome,—what was Rome? Plutarch and Shakspeare were in the yellow leaf,² and Homer no more should be heard of. It is much to know that poetry has been written this very day, under this very roof, by your side. What! that wonderful spirit has not expired! These stony moments are still sparkling and animated! I had fancied that the oracles were all silent,³ and nature had spent her fires; and behold! all night, from every pore, these fine auroras have been streaming. Every one has some interest in the advent of the poet, and no one knows how much it may concern him. We know that the secret of the world is profound, but who or what shall be our interpreter, we know not. A mountain ramble, a new style of face, a new person, may put the key into our hands. Of course the value of genius to us is in the veracity of its report. Talent may frolic and juggle; genius realizes and adds. Mankind in good earnest have availed so far in understanding themselves and their work, that the foremost watchman on the peak announces his news. It is the truest word ever spoken, and the phrase will be the fittest, most musical, and the unerring voice of the world for that time.

All that we call sacred history attests that the birth of a poet is the principal event in chronology. Man, never so often deceived, still watches for the arrival of a brother who can hold him steady to a truth until he has made it his own. With what joy I begin to read a poem which I confide in as an inspiration! And now my chains are to be broken; I shall mount above these clouds and opaque airs in which I live,—opaque, though they seem transparent,—and from the heaven of truth I shall see and comprehend my relations. That will reconcile me to life and renovate nature, to see trifles animated by a tendency, and to know what I am doing. Life will no more be a noise; now I shall see men and women, and know the signs by which they may be discerned from fools and satans. This day shall be better than my birthday: then I became an animal; now I am invited into the science of the real. Such is the hope, but the fruition is postponed. Oftener it falls that this winged man, who will carry me into the heaven, whirls me into mists, then leaps and frisks about with me as it were from cloud to cloud, still affirming that he is bound heavenward; and I, being myself a novice, am slow in perceiving that he does not know the way into the heavens, and is merely bent that I should admire his skill to rise like a fowl or a flying fish, a little way from the ground or the water; but the all-piercing, all-feeding and ocular air of heaven that man shall never inhabit. I tumble down again soon into my old nooks, and lead the life of exaggerations as before, and have lost my faith in the possibility of any guide who can lead me thither where I would be.

But, leaving these victims of vanity, let us, with new hope, observe how nature, by worthier impulses, has insured the poet's fidelity to his office of announcement and affirming, namely by the beauty of things, which becomes a new and higher beauty when expressed. Nature offers all her

2. See the words of Macbeth, in *Macbeth* (ca. 1606), 5.3.23–24; "My way of life / Is fall'n into the scree, the yellow leaf." See also George Gordon, Lord Byron, "On This Day I Complete My Thirty-sixth Year" (1824): "My days are in the yellow leaf"

(line 5).

3. See John Milton, "On the Morning of Christ's Nativity" (1645): "The oracles are dumb" (line 173).

creatures to him as a picture-language. Being used as a type, a second-wonderful value appears in the object, far better than its old value; as the carpenter's stretched cord, if you hold your ear close enough, is musical in the breeze. "Things more excellent than every image," says Jamblichus,⁴ "are expressed through images." Things admit of being used as symbols because nature is a symbol, in the whole, and in every part. Every line we can draw in the sand has expression; and there is no body without its spirit or genius. All form is an effect of character; all condition, of the quality of the life; all harmony, of health; and for this reason a perception of beauty should be sympathetic, or proper only to the good. The beautiful rests on the foundations of the necessary.

The soul makes the body, as the wise Spenser teaches:—

"So every spirit, as it is more pure,
And hath in it the more of heavenly light,
So it the fairer body doth procure
To habit in, and it more fairly dight,
With cheerful grace and amiable sight.
For, of the soul, the body form doth take,
For soul is form, and doth the body make."⁵

Here we find ourselves suddenly not in a critical speculation but in a holy place, and should go very warily and reverently. We stand before the secret of the world, there where Being passes into Appearance and Unity into Variety.

The Universe is the externization of the soul. Wherever the life is, that bursts into appearance around it. Our science is sensual, and therefore superficial. The earth and the heavenly bodies, physics and chemistry, we sensually treat, as if they were self-existent; but these are the retinue of that Being we have. "The mighty heaven," said Proclus,⁶ "exhibits, in its transfigurations, clear images of the splendor of intellectual perceptions; being moved in conjunction with the unapparent periods of intellectual natures." Therefore science always goes abreast with the just elevation of the man, keeping step with religion and metaphysics; or the state of science is an index of our self-knowledge. Since every thing in nature answers to a moral power, if any phenomenon remains brute and dark it is because the corresponding faculty in the observer is not yet active.

No wonder then, if these waters be so deep, that we hover over them with a religious regard. The beauty of the fable proves the importance of the sense; to the poet, and to all others; or, if you please, every man is so far a poet as to be susceptible of these enchantments of nature; for all men have the thoughts whereof the universe is the celebration. I find that the fascination resides in the symbol. Who loves nature? Who does not? Is it only poets, and men of leisure and cultivation, who live with her? No; but also hunters, farmers, grooms and butchers, though they express their affection in their choice of life and not in their choice of words. The writer wonders what the coachman or the hunter values in riding, in horses and dogs. It is not super-

4. Jamblichus (ca. 250—ca. 325 C.E.), Neoplatonic philosopher of Syria; Emerson read his *Life of Pythagoras*.

5. "An Hymne in Honour of Beautie" (1596), lines

127—33, by the English poet Edmund Spenser (1552—1599).

6. Greek Neoplatonic philosopher (412—485 C.E.).

ficial qualities. When you talk with him he holds these at as slight a rate as you. His worship is sympathetic; he has no definitions, but he is commanded in nature by the living power which he feels to be there present. No imitation or playing of these things would content him; he loves the earnest of the north wind, of rain, of stone and wood and iron. A beauty not explicable is dearer than a beauty which we can see to the end of. It is nature the symbol, nature certifying the supernatural, body overflowed by life which he worships with coarse but sincere rites.

The inwardness and mystery of this attachment drive men of every class to the use of emblems. The schools of poets and philosophers are not more intoxicated with their symbols than the populace with theirs. In our political parties, compute the power of badges and emblems. See the great ball which they roll from Baltimore to Bunker Hill!⁷ In the political processions, Lowell goes in a loom, and Lynn in a shoe, and Salem in a ship. Witness the cider-barrel, the log-cabin, the hickory-stick, the palmetto,⁸ and all the cognizances of party. See the power of national emblems. Some stars, lilies, leopards, a crescent, a lion, an eagle, or other figure which came into credit God knows how, on an old rag of bunting, blowing in the wind on a fort at the ends of the earth, shall make the blood tingle under the rudest or the most conventional exterior. The people fancy they hate poetry, and they are all poets and mystics!

Beyond this universality of the symbolic language, we are apprised of the divineness of this superior use of things, whereby the world is a temple whose walls are covered with emblems, pictures and commandments of the Deity,—in this, that there is no fact in nature which does not carry the whole sense of nature; and the distinctions which we make in events and in affairs, of low and high, honest and base, disappear when nature is used as a symbol. Thought makes everything fit for use. The vocabulary of an omniscient man would embrace words and images excluded from polite conversation. What would be base, or even obscene, to the obscene, becomes illustrious, spoken in a new connection of thought. The piety of the Hebrew prophets purges their grossness.⁹ The circumcision is an example of the power of poetry to raise the low and offensive. Small and mean things serve as well as great symbols. The meaner the type by which a law is expressed, the more pungent it is, and the more lasting in the memories of men; just as we choose the smallest box or case in which any needful utensil can be carried. Bare lists of words are found suggestive to an imaginative and excited mind as it is related of Lord Chatham that he was accustomed to read in Bailey's¹ Dictionary when he was preparing to speak in Parliament. The poorest experience is rich enough for all the purposes of expressing thought. Why covet a knowledge of new facts? Day and night, house and garden, a few books, a

7. In the Charlestown section of Boston. This stunt was undertaken by the Whig Party for their candidate William Henry Harrison during the presidential campaign in 1840 to illustrate that year's slogan, "Keep the ball a-rolling." Emerson then associates each Massachusetts town with its major product.

8. Emerson names symbols closely associated with politicians of the 1830s: the cider barrel and log cabin, with William Henry Harrison; the hickory stick, with "Old Hickory," Andrew Jackson (Democratic president, 1829–37); and the pal-

metto, with John C. Calhoun (Jackson's vice president), who was from South Carolina (the "palmetto state").

9. Emerson may have in mind such passages as Ezekiel's comparison of Jerusalem to a harlot (15) and his description of the city's sins (22).

1. Nathan (or Nathaniel) Bailey (d. 1742), lexicographer and philologist, author of *An Universal Etymological English Dictionary* (1721). Lord Chatham, William Pitt (1708–1778), English statesman and orator.

few actions, serve us as well as would all trades and all spectacles. We are far from having exhausted the significance of the few symbols we use. We can come to use them yet with a terrible simplicity. It does not need that a poem should be long. Every word was once a poem. Every new relation is a new word. Also we use defects and deformities to a sacred purpose, so expressing our sense that the evils of the world are such only to the evil eye. In the old mythology, mythologists observe, defects are ascribed to divine natures, as lameness to Vulcan, blindness to Cupid,² and the like,—to signify exuberances.

For as it is dislocation and detachment from the life of God that makes things ugly, the poet, who re-attaches things to nature and the Whole,—re-attaching even artificial things and violation of nature, to nature, by a deeper insight,—disposes very easily of the most disagreeable facts. Readers of poetry see the factory-village and the railway, and fancy that the poetry of the landscape is broken up by these; for these works of art are not yet consecrated in their reading; but the poet sees them fall within the great Order not less than the beehive or the spider's geometrical web. Nature adopts them very fast into her vital circles, and the gliding train of cars she loves like her own. Besides, in a centred mind, it signifies nothing how many mechanical inventions you exhibit. Though you add millions, and never so surprising, the fact of mechanics has not gained a grain's weight. The spiritual fact remains unalterable, by many or by few particulars; as no mountain is of any appreciable height to break the curve of the sphere. A shrewd country-boy goes to the city for the first time, and the complacent citizen is not satisfied with his little wonder. It is not that he does not see all the fine houses and know that he never saw such before, but he disposes of them as easily as the poet finds place for the railway. The chief value of the new fact is to enhance the great and constant fact of Life, which can dwarf any and every circumstance, and to which the belt of wampum and the commerce of America are alike.

The world being thus put under the mind for verb and noun, the poet is he who can articulate it. For though life is great, and fascinates and absorbs; and though all men are intelligent of³ the symbols through which it is named; yet they cannot originally use them. We are symbols and inhabit symbols; workmen, work, and tools, words and things, birth and death, all are emblems; but we sympathize with the symbols, and being infatuated with the economical uses of things, we do not know that they are thoughts. The poet, by an ulterior intellectual perception, gives them a power which makes their old use forgotten, and puts eyes and a tongue into every dumb and inanimate object. He perceives the independence of the thought on the symbol, the stability of the thought, the accidenty and fugacity⁴ of the symbol. As the eyes of Lyncæus⁵ were said to see through the earth, so the poet turns the world to glass, and shows us all things in their right series and procession. For through that better perception he stands one step nearer to things, and sees the flowing or metamorphosis; perceives that thought is multiform; that

2. The Roman god of love, son of Venus. Vulcan: the Roman god of fire and metalworking.

3. Acquainted with, versed in.

4. Transience, lack of enduring qualities. "Accidenty": accidental or chance character.

5. In Greek mythology, the seaman with the keenest eyesight among those who sailed with Jason in quest of the Golden Fleece. See Apollonius of Rhodes, *Argonautica* 1.155.

within the form of every creature is a force impelling it to ascend into a higher form; and following with his eyes the life, uses the forms which express that life, and so his speech flows with the flowing of nature. All the facts of the animal economy, sex, nutriment, gestation, birth, growth, are symbols of the passage of the world into the soul of man, to suffer there a change and reappear a new and higher fact. He uses forms according to the life, and not according to the form. This is true science. The poet alone knows astronomy, chemistry, vegetation and animation, for he does not stop at these facts, but employs them as signs. He knows why the plain or meadow of space was strown with these flowers we call suns and moons and stars; why the great deep is adorned with animals, with men, and gods; for in every word he speaks he rides on them as the horses of thought.

By virtue of this science the poet is the Namer or Language-maker, naming things sometimes after their appearance, sometimes after their essence, and giving to every one its own name and not another's, thereby rejoicing the intellect, which delights in detachment or boundary. The poets made all the words, and therefore language is the archives of history, and, if we must say it, a sort of tomb of the muses. For though the origin of most of our words is forgotten, each word was at first a stroke of genius, and obtained currency because for the moment it symbolized the world to the first speaker and to the hearer. The etymologist finds the deadest word to have been once a brilliant picture. Language is fossil poetry. As the limestone of the continent consists of infinite masses of the shells of animalcules, so language is made up of images or tropes, which now, in their secondary use, have long ceased to remind us of their poetic origin. But the poet names the thing because he sees it, or comes one step nearer to it than any other. This expression or naming is not art, but a second nature, grown out of the first, as a leaf out of a tree. What we call nature is a certain self-regulated motion or change; and nature does all things by her own hands, and does not leave another to baptize her but baptizes herself; and this through the metamorphosis again. I remember that a certain poet⁶ described it to me thus:—

Genius is the activity which repairs the decays of things, whether wholly or partly of a material and finite kind. Nature, through all her kingdoms, insures herself. Nobody cares for planting the poor fungus; so she shakes down from the gills of one agaric countless spores, any one of which, being preserved, transmits new billions of spores to-morrow or next day. The new agaric of this hour has a chance which the old one had not. This atom of seed is thrown into a new place, not subject to the accidents which destroyed its parent two rods off. She makes a man; and having brought him to ripe age, she will no longer run the risk of losing this wonder at a blow, but she detaches from him a new self, that the kind may be safe from accidents to which the individual is exposed. So when the soul of the poet has come to ripeness of thought, she detaches and sends away from it its poems or songs,—a fearless, sleepless, deathless progeny, which is not exposed to the accidents of the weary kingdom of time; a fearless, vivacious offspring, clad with wings (such was the virtue of the soul out of which they came) which carry them fast and far, and infix them irrecoverably into the hearts of men.

6. Emerson himself, in his journal, paraphrasing Plato.

These wings are the beauty of the poet's soul. The songs, thus flying immortal from their mortal parent, are pursued by clamorous flights of censures, which swarm in far greater numbers and threaten to devour them; but these last are not winged. At the end of a very short leap they fall plump down and rot, having received from the souls out of which they came no beautiful wings. But the melodies of the poet ascend and leap and pierce into the deeps of infinite time.

So far the bard taught me, using his freer speech. But nature has a higher end, in the production of new individuals, than security, namely *ascension*, or the passage of the soul into higher forms. I knew in my younger days the sculptor who made the statue of the youth which stands in the public garden. He was, as I remember, unable to tell directly what made him happy or unhappy, but by wonderful indirections he could tell. He rose one day, according to his habit, before the dawn, and saw the morning break, grand as the eternity out of which it came, and for many days after, he strove to express this tranquillity, and lo! his chisel had fashioned out of marble the form of a beautiful youth, Phosphorus,⁷ whose aspect is such that it is said all persons who look on it become silent. The poet also resigns himself to his mood, and that thought which agitated him is expressed, but *alter idem*,⁸ in a manner totally new. The expression is organic, or the new type which things themselves take when liberated. As, in the sun, objects paint their images on the retina of the eye, so they, sharing the aspiration of the whole universe, tend to paint a far more delicate copy of their essence in his mind. Like the metamorphosis of things into higher organic forms is their change into melodies. Over everything stands its dæmon or soul, and, as the form of the thing is reflected by the eye, so the soul of the thing is reflected by a melody. The sea, the mountain-ridge, Niagara, and every flower-bed, pre-exist, or super-exist, in pre-cantations,⁹ which sail like odors in the air, and when any man goes by with an ear sufficiently fine, he overhears them and endeavors to write down the notes without diluting or depraving them.¹ And herein is the legitimation of criticism, in the mind's faith that the poems are a corrupt version of some text in nature with which they ought to be made to tally. A rhyme in one of our sonnets should not be less pleasing than the iterated nodes of a seashell, or the resembling difference of a group of flowers. The pairing of the birds is an idyl, not tedious as our idyls are; a tempest is a rough ode, without falsehood or rant; a summer, with its harvest sown, reaped and stored, is an epic song, subordinating how many admirably executed parts. Why should not the symmetry and truth that modulate these, glide into our spirits, and we participate the invention of nature?

This insight, which expresses itself by what is called Imagination, is a very high sort of seeing, which does not come by study, but by the intellect being where and what it sees; by sharing the path or circuit of things through forms, and so making them translucent to others. The path of things is silent. Will they suffer a speaker to go with them? A spy they will not suffer; a lover, a poet, is the transcendency of their own nature,—him they will suffer. The condition of true naming, on the poet's part, is his resigning himself to the divine *aura*¹ which breathes through forms, and accompanying that.

7. The Greek personification of the morning star (literally, "light-bearer"), sometimes represented as a youth bearing a torch.

8. A second self (Latin).

9. Enchantments, foretellings.

1. Gentle breeze; intangible quality, atmosphere.

It is a secret which every intellectual man quickly learns, that beyond the energy of his possessed and conscious intellect he is capable of a new energy (as of an intellect doubled on itself), by abandonment to the nature of things; that beside his privacy of power as an individual man, there is a great public power on which he can draw, by unlocking, at all risks, his human doors, and suffering the ethereal tides to roll and circulate through him; then he is caught up into the life of the Universe, his speech is thunder, his thought is law, and his words are universally intelligible as the plants and animals. The poet knows that he speaks adequately then only when he speaks somewhat wildly, or "with the flower of the mind;"² not with the intellect used as an organ, but with the intellect released from all service and suffered to take its direction from its celestial life; or as the ancients³ were wont to express themselves, not with intellect alone but with the intellect inebriated by nectar. As the traveller who has lost his way throws his reins on his horse's neck and trusts to the instinct of the animal to find his road, so must we do with the divine animal who carries us through this world. For if in any manner we can stimulate this instinct, new passages are opened for us into nature; the mind flows into and through things hardest and highest, and the metamorphosis is possible.

This is the reason why bards love wine, mead, narcotics, coffee, tea, opium, the fumes of sandalwood and tobacco, or whatever other procurers of animal exhilaration. All men avail themselves of such means as they can, to add this extraordinary power to their normal powers; and to this end they prize conversation, music, pictures, sculpture, dancing, theatres, travelling, war, mobs, fires, gaming, politics, or love, or science, or animal intoxication,—which are several coarser or finer *quasi*-mechanical substitutes for the true nectar, which is the ravishment of the intellect by coming nearer to the fact. These are auxiliaries to the centrifugal tendency of a man, to his passage out into free space, and they help him to escape the custody of that body in which he is pent up, and of that jail-yard of individual relations in which he is enclosed. Hence a great number of such as were professionally expressers of Beauty, as painters, poets, musicians and actors, have been more than others wont to lead a life of pleasure and indulgence; all but the few who received the true nectar; and, as it was a spurious mode of attaining freedom, as it was an emancipation not into the heavens but into the freedom of baser places, they were punished for that advantage they won, by a dissipation and deterioration. But never can any advantage be taken of nature by a trick. The spirit of the world, the great calm presence of the Creator, comes not forth to the sorceries of opium or of wine. The sublime vision comes to the pure and simple soul in a clean and chaste body. That is not an inspiration, which we owe to narcotics, but some counterfeit excitement and fury. Milton says⁴ that the lyric poet may drink wine and live generously, but the epic poet, he who shall sing of the gods and their descent unto men, must drink water out of a wooden bowl. For poetry is not 'Devil's wine,' but God's wine. It is with this as it is with toys. We fill the hands and nurseries of our children with all manner of dolls, drums and horses; withdrawing their eyes from the plain

2. A translation of a Greek phrase from the "Chaldean Oracles" (2d c. C.E., though attributed to the Persian religious leader and prophet Zoroaster, ca. 7th c. B.C.E.), selections from which appeared in the Transcendentalist journal, *The Dial*, in 1844. Others have noted as a source *The True Intellec-*

tual System of the Universe (1678), by the English Neoplatonist Ralph Cudworth.

4. In *Elegy VI* (1629), lines 55–78.

face and sufficing objects of nature, the sun and moon, the animals, the water and stones, which should be their toys. So the poet's habit of living should be set on a key so low that the common influences should delight him. His cheerfulness should be the gift of the sunlight; the air should suffice for his inspiration, and he should be tipsy with water. That spirit which suffices quiet hearts, which seems to come forth to such from every dry knoll of sere grass, from every pine stump and half-imbedded stone on which the dull March sun shines, comes forth to the poor and hungry, and such as are of simple taste. If thou fill thy brain with Boston and New York, with fashion and covetousness, and wilt stimulate thy jaded senses with wine and French coffee, thou shalt find no radiance of wisdom in the lonely waste of the pine woods.

If the imagination intoxicates the poet, it is not inactive in other men. The metamorphosis excites in the beholder an emotion of joy. The use of symbols has a certain power of emancipation and exhilaration for all men. We seem to be touched by a wand which makes us dance and run about happily, like children. We are like persons who come out of a cave or cellar into the open air. This is the effect on us of tropes,⁵ fables, oracles and all poetic forms. Poets are thus liberating gods. Men have really got a new sense, and found within their world another world, or nest of worlds; for, the metamorphosis once seen, we divine that it does not stop. I will not now consider how much this makes the charm of algebra and the mathematics, which also have their tropes, but it is felt in every definition; as when Aristotle defines *space* to be an immovable vessel in which things are contained;⁶—or when Plato defines a *line* to be a flowing point; or *figure* to be a bound of solid;⁷ and many the like. What a joyful sense of freedom we have when Vitruvius⁸ announces the old opinion of artists that no architect can build any house well who does not know something of anatomy. When Socrates, in Charmides, tells us that the soul is cured of its maladies by certain incantations, and that these incantations are beautiful reasons, from which temperance is generated in souls; when Plato calls the world an animal, and Timæus affirms that the plants also are animals; or affirms a man to be a heavenly tree, growing with his root, which is his head, upward; and, as George Chapman, following him, writes,

“So in our tree of man, whose nerve root
Springs in his top;”—

when Orpheus speaks of hoariness as “that white flower which marks extreme old age;” when Proclus calls the universe the statue of the intellect; when Chaucer, in his praise of ‘Gentilesse,’ compares good blood in mean condition to fire, which, though carried to the darkest house betwixt this and the mount of Caucasus, will yet hold its natural office and burn as bright as if twenty thousand men did it behold; when John saw, in the Apocalypse, the ruin of the world through evil, and the stars fall from heaven as the fig tree casteth her untimely fruit; when Æsop reports the whole catalogue of common daily relations through the masquerade of birds and beasts;⁹—we

9. In the allusion-filled preceding lines, Emerson's

references to calling the world “an animal” and to “plants also are animals” are taken from Plato's dialogues *Charmides* (157) and *Timæus* (30, 77); George Chapman (1559—1634), an English poet and translator of Homer, wrote the lines quoted in the dedication to Prince Henry at the beginning of

take the cheerful hint of the immortality of our essence and its versatile habit and escapes, as when the gypsies say of themselves "it is in vain to hang them, they cannot die."¹

The poets are thus liberating gods. The ancient British bards had for the title of their order, "Those who are free throughout the world." They are free, and they make free. An imaginative book renders us much more service at first, by stimulating us through its tropes, than afterward when we arrive at the precise sense of the author. I think nothing is of any value in books excepting the transcendental and extraordinary. If a man is inflamed and carried away by his thought, to that degree that he forgets the authors and the public and heeds only this one dream which holds him like an insanity, let me read his paper, and you may have all the arguments and histories and criticism. All the value which attaches to Pythagoras, Paracelsus, Cornelius Agrippa, Cardan, Kepler, Swedenborg, Schelling, Oken,² or any other who introduces questionable facts into his cosmogony, as angels, devils, magic, astrology, palmistry, mesmerism, and so on, is the certificate we have of departure from routine, and that here is a new witness. That also is the best success in conversation, the magic of liberty, which puts the world like a ball in our hands. How cheap even the liberty then seems; how mean to study, when an emotion communicates to the intellect the power to sap and upheave nature; how great the perspective! nations, times, systems, enter and disappear like threads in tapestry of large figure and many colors; dream delivers us to dream, and while the drunkenness lasts we will sell our bed, our philosophy, our religion, in our opulence.

There is good reason why we should prize this liberation. The fate of the poor shepherd, who, blinded and lost in the snow-storm, perishes in a drift within a few feet of his cottage door, is an emblem of the state of man. On the brink of the waters of life and truth, we are miserably dying. The inaccessibility of every thought but that we are in, is wonderful. What if you come near to it; you are as remote when you are nearest as when you are farthest. Every thought is also a prison; every heaven is also a prison. Therefore we love the poet, the inventor, who in any form, whether in an ode or in an action or in looks and behavior, has yielded us a new thought. He unlocks our chains and admits us to a new scene.

This emancipation is dear to all men, and the power to impart it, as it must come from greater depth and scope of thought, is a measure of intellect. Therefore all books of the imagination endure, all which ascend to that truth that the writer sees nature beneath him, and uses it as his exponent.³ Every verse or sentence possessing this virtue will take care of its own immortality. The religions of the world are the ejaculations of a few imaginative men.

But the quality of the imagination is to flow, and not to freeze. The poet did not stop at the color or the form, but read their meaning; neither may he rest in this meaning, but he makes the same objects exponents of his new

his translation; Chaucer's praise of "gentillesse" is in "The Wife of Bath's Tale" (ca. 1400), lines 1139-45; for John's vision, see Revelation 6.13; Aesop wrote his best fables in the 6th century B.C.E.

1. George Borrow, *The Zincali; or, An Account of the Gypsies of Spain* (1842).

2. Lorenz Oken (1779-1851), German naturalist and mystic philosopher. Pythagoras (6th c. B.C.E.), Greek philosopher and mathematician. Paracelsus

(1493-1541), German alchemist and writer on occult subjects. Henricus Cornelius Agrippa van Nettesheim (1486-1535), German physician and magician. Girolamo Cardano (1501-1576), Italian physician, astrologer, and mathematician. Johann Kepler (1571-1630), German astronomer. Friedrich Wilhelm Joseph von Schelling (1775-1854), German philosopher.

3. The means through which his beliefs are expounded.

thought. Here is the difference betwixt the poet and the mystic, that the last nails a symbol to one sense, which was a true sense for a moment, but soon becomes old and false. For all symbols are fluxional; all language is vehicular and transitive, and is good, as ferries and horses are, for conveyance, not as farms and houses are, for homestead. Mysticism consists in the mistake of an accidental and individual symbol for an universal one. The morning-redness happens to be the favorite meteor to the eyes of Jacob Behmen,⁴ and comes to stand to him for truth and faith; and, he believes, should stand for the same realities to every reader. But the first reader prefers as naturally the symbol of a mother and child, or a gardener and his bulb, or a jeweller polishing a gem. Either of these, or of a myriad more, are equally good to the person to whom they are significant. Only they must be held lightly, and be very willingly translated into the equivalent terms which others use. And the mystic must be steadily told,—All that you say is just as true without the tedious use of that symbol as with it. Let us have a little algebra, instead of this trite rhetoric,—universal signs, instead of these village symbols,—and we shall both be gainers. The history of hierarchies seems to show that all religious error consisted in making the symbol too stark and solid, and was at last nothing but an excess of the organ of language.

Swedenborg, of all men in the recent ages, stands eminently for the translator of nature into thought. I do not know the man in history to whom things stood so uniformly for words. Before him the metamorphosis continually plays. Everything on which his eye rests, obeys the impulses of moral nature. The figs become grapes whilst he eats them. When some of his angels affirmed a truth, the laurel twig which they held blossomed in their hands. The noise which at a distance appeared like gnashing and thumping, on coming nearer was found to be the voice of disputants. The men in one of his visions, seen in heavenly light, appeared like dragons, and seemed in darkness; but to each other they appeared as men, and when the light from heaven shone into their cabin, they complained of the darkness, and were compelled to shut the window that they might see.

There was this perception in him which makes the poet or seer an object of awe and terror, namely that the same man or society of men may wear one aspect to themselves and their companions, and a different aspect to higher intelligences. Certain priests, whom he describes as conversing very learnedly together, appeared to the children who were at some distance, like dead horses; and many the like misappearances.⁵ And instantly the mind inquires whether these fishes under the bridge, yonder oxen in the pasture, those dogs in the yard, are immutably fishes, oxen and dogs, or only so appear to me, and perchance to themselves appear upright men; and whether I appear as a man to all eyes. The Brahmins⁶ and Pythagoras propounded the same question, and if any poet has witnessed the transformation he doubtless found it in harmony with various experiences. We have all seen changes as considerable in wheat and caterpillars. He is the poet and shall draw us with love and terror, who sees through the flowing vest the firm nature, and can declare it.

4. Jakob Böhme (1575–1624), German theosophist and mystic, author of *Aurora: The Day-Spring, or, Dawning of the Day in the East: or, Morning-Redness in the Rising of the Sun*.

5. Each chapter of Swedenborg's *Apocalypse*

Revealed (1766) concludes with "Memorable Revelations."

6. Members of the highest Hindu caste, from which priests and religious teachers are drawn.

I look in vain for the poet whom I describe. We do not with sufficient plainness or sufficient profoundness address ourselves to life, nor dare we chaunt our own times and social circumstance. If we filled the day with bravery, we should not shrink from celebrating it. Time and nature yield us many gifts, but not yet the timely man, the new religion, the reconciler, whom all things await. Dante's praise is that he dared to write his autobiography in colossal cipher, or into universality.⁷ We have yet had no genius in America, with tyrannous eye, which knew the value of our incomparable materials, and saw, in the barbarism and materialism of the times, another carnival of the same gods whose picture he so much admires in Homer; then in the Middle Age; then in Calvinism. Banks and tariffs, the newspaper and caucus, Methodism and Unitarianism, are flat and dull to dull people, but rest on the same foundations of wonder as the town of Troy and the temple of Delphi,⁸ and are as swiftly passing away. Our log-rolling, our stumps and their politics, our fisheries, our Negroes and Indians, our boats and our repudiations,⁹ the wrath of rogues and the pusillanimity of honest men, the northern trade, the southern planting, the western clearing, Oregon and Texas, are yet unsung. Yet America is a poem in our eyes; its ample geography dazzles the imagination, and it will not wait long for metres. If I have not found that excellent combination of gifts in my countrymen which I seek, neither could I aid myself to fix the idea of the poet by reading now and then in Chalmers's collection of five centuries of English poets.¹ These are wits more than poets, though there have been poets among them. But when we adhere to the ideal of the poet, we have our difficulties even with Milton and Homer. Milton is too literary, and Homer too literal and historical.

But I am not wise enough for a national criticism; and must use the old largeness a little longer, to discharge my errand from the muse to the poet concerning his art.

Art is the path of the creator to his work. The paths or methods are ideal and eternal, though few men ever see them; not the artist himself for years, or for a lifetime, unless he come into the conditions. The painter, the sculptor, the composer, the epic rhapsodist, the orator, all partake one desire, namely to express themselves symmetrically and abundantly, not dwarfishly and fragmentarily. They found or put themselves in certain conditions; as, the painter and sculptor before some impressive human figures; the orator into the assembly of the people; and the others in such scenes as each has found exciting to his intellect; and each presently feels the new desire. He hears a voice, he sees a beckoning. Then he is appraised, with wonder, what herds of dæmons hem him in. He can no more rest; he says, with the old painter, "By God it is in me and must go forth of me." He pursues a beauty, half seen, which flies before him. The poet pours out verses in every solitude. Most of the things he says are conventional, no doubt; but by and by he says something which is original and beautiful. That charms him. He would say nothing else but such things. In our way of talking we say 'That is yours, this is mine;' but the poet knows well that it is not his; that it is as strange and

7. In Dante's epic *Divine Comedy*, the poet himself plays a first-person role.

8. The site in Greece of the most important oracle of Apollo.

9. Refusals to pay debts. "Log-rolling": the exchange of political favors. "Stumps": speech plat-

forms. "Boats": some editors print "boasts."

1. Alexander Chalmers (1759-1834), Scottish biographer and journalist, compiled *The Works of the English Poets, from Chaucer to Cowper* (21 vols., 1810).

beautiful to him as to you; he would fain hear the like eloquence at length. Once having tasted this immortal ichor,² he cannot have enough of it, and as an admirable creative power exists in these intellections, it is of the last importance that these things get spoken. What a little of all we know is said! What drops of all the sea of our science are baled³ up! and by what accident it is that these are exposed, when so many secrets sleep in nature! Hence the necessity of speech and song; hence these throbs and heart-beatings in the orator, at the door of the assembly, to the end namely that thought may be ejaculated as Logos,⁴ or Word.

Doubt not, O poet, but persist. Say 'It is in me, and shall out.' Stand there, balked and dumb, stuttering and stammering, hissed and hooted, stand and strive, until at last rage draw out of thee that *dream*-power which every night shows thee is thine own; a power transcending all limit and privacy, and by virtue of which a man is the conductor of the whole river of electricity. Nothing walks, or creeps, or grows, or exists, which must not in turn arise and walk before him as exponent of his meaning. Comes he to that power, his genius is no longer exhaustible. All the creatures by pairs and by tribes pour into his mind as into a Noah's ark, to come forth again to people a new world. This is like the stock of air for our respiration or for the combustion of our fireplace; not a measure of gallons, but the entire atmosphere if wanted. And therefore the rich poets, as Homer, Chaucer, Shakspeare, and Raphael,⁵ have obviously no limits to their works except the limits of their lifetime, and resemble a mirror carried through the street, ready to render an image of every created thing.

O poet! a new nobility is conferred in groves and pastures, and not in castles or by the sword-blade any longer. The conditions are hard, but equal. Thou shalt leave the world, and know the muse only. Thou shalt not know any longer the times, customs, graces, politics, or opinions of men, but shalt take all from the muse. For the time of towns is tolled from the world by funereal chimes, but in nature the universal hours are counted by succeeding tribes of animals and plants, and by growth of joy on joy. God wills also that thou abdicate a manifold and duplex life, and that thou be content that others speak for thee. Others shall be thy gentlemen and shall represent all courtesy and worldly life for thee; others shall do the great and resounding actions also. Thou shalt lie close hid with nature, and canst not be afforded to the Capitol or the Exchange.⁶ The world is full of renunciations and apprenticeships, and this is thine; thou must pass for a fool and a churl for a long season. This is the screen and sheath in which Pan⁷ has protected his well-beloved flower, and thou shalt be known only to thine own, and they shall console thee with tenderest love. And thou shalt not be able to rehearse the names of thy friends in thy verse, for an old shame before the holy ideal. And this is the reward; that the ideal shall be real to thee, and the impressions of the actual world shall fall like summer rain, copious, but not troublesome to thy invulnerable essence. Thou shalt have the whole land for thy park and manor, the sea for thy bath and navigation, without tax and without envy; the woods and the rivers thou shalt own, and thou shalt possess

that wherein others are only tenants and boarders. Thou true land-lord! sea-lord! air-lord! Wherever snow falls or water flows or birds fly, wherever day and night meet in twilight, wherever the blue heaven is hung by clouds or sown with stars, wherever are forms with transparent boundaries, wherever are outlets into celestial space, wherever is danger, and awe, and love,—there is Beauty, plenteous as rain, shed for thee, and though thou shouldst walk the world over, thou shalt not be able to find a condition inopportune or ignoble.

1844

EDGAR ALLAN POE

1809–1849

Edgar Allan Poe is a writer most American critics love to hate—or hate to love. In France, on the other hand, Poe has been considered a writer of genius by admirers from CHARLES BAUDELAIRE to JACQUES LACAN. Is this discrepancy a sign that the French lack the finesse in English that the Americans possess? Or does it say something about two very different concepts of poetic language?

The American poet James Russell Lowell wrote in his *Fable for Critics* (1848):

There comes Poe, with his Raven, like Barnaby Rudge,
 Three fifths of him genius and two fifths sheer fudge,
 Who talks like a book of iambs and pentameters,
 In a way to make people of common sense damn meters,
 Who has written some things quite the best of their kind,
 But the heart somehow seems all squeezed out by the mind.

For American readers, this view of Poe as excessively calculating exists side by side with a view of Poe as completely lacking control: he is seen as either sick (alcoholic, melancholic, necrophilic, impotent) or dissolute (alcoholic, immoral, untrustworthy, untruthful). Was it precisely this combination of craft and transgression that appealed to a poet like Baudelaire? Lowell was certainly right about one thing: genius or madman, visionary or drunk, seer or trickster, excessively in control or excessively out of control, Edgar Allan Poe was not made to please “people of common sense.”

Born in Boston to the traveling actors David and Elizabeth Arnold Poe, Edgar lost both his father (who disappeared) and his mother (who died) by his third birthday. Edgar Poe was renamed “Edgar Allan” when he entered the home of the childless Frances and John Allan, although they never legally adopted him. As a self-made prosperous merchant in Richmond, Virginia, John Allan had little in common with his brilliant foster child, and the financial support he gave was always fraught and conditional. Edgar entered the University of Virginia in 1826 (a year after classes began at the college founded by Thomas Jefferson); but in an attempt to supplement his insufficient allowance, he gambled, lost money, and, when John Allan refused to make good the debt, left the university. Enlisting in the army in Boston under the name “Edgar A. Perry,” he managed to pursue a double career: as a poet (his first book, *Tamerlane and Other Poems*, was signed “by a Bostonian”) and as a military man. He asked for John Allan’s financial help in attending the West Point military academy (grudgingly given) and in publishing his second book (denied); Edgar no sooner enrolled than deliberately got himself expelled in 1831 for disobeying orders.

Breaking with John Allan, Poe took up residence in Baltimore with the remnants of the Poe family: his father's mother, his older brother, his paternal aunt Maria Clemm, and her eight-year-old daughter, Virginia (whom he married in 1836, when she was not quite fourteen). He began submitting tales to writing contests and rose through the ranks of the *Southern Literary Messenger*, penning biting book reviews that increased the journal's circulation. His fierce originality and his desire for an American literary tradition not based on the "puffery" by which reviewers were expected to promote all American authors attracted both notice and misgivings: within two years he became the editor of the journal and then, in 1837, was fired. His would-be Southernness and his resentment of the Northern literary coteries through which writer's reputations were usually made gave him little tolerance for Northern ideals. He recoiled against literary didacticism in part out of irritation with the self-satisfactions of Northern abolitionist literature.

In 1838, still shy of his twentieth birthday, Poe wrote and published a novel, *The Narrative of Arthur Gordon Pym*, and collected his *Tales of the Grotesque and Arabesque* a year later. Moving to Philadelphia and then to New York, he was a prolific reviewer for *Graham's Magazine*, the *Broadway Review*, and other journals. He became a popular success for two of his most unlikely feats of writing: his hoax about a balloon journey across the Atlantic and his poem "The Raven." "The Raven" is based on a combination of absurdity and inevitability: a bereaved lover admits a black bird into his chamber on a stormy night and, receiving from the bird an unexpected answer to a question, asks it whether he will ever see his beloved again: the bird can only repeat the same word, "nevermore." The poem was written in 1842; Poe's wife Virginia had just burst a blood vessel while singing and was to die of tuberculosis in 1847. Critics have thus noted the biographical sources of the poem in Poe's anticipated mourning, but Poe tells a very different story about the poem's origins in our selection, "The Philosophy of Composition" (1846).

In demand as a writer and lecturer, Poe attempted to raise money to start a new journal called *The Stylus*, which had been a dream of his since 1843. But he often alienated even those close to him with his intermittent drinking, his nervous depression, his delusions of persecution, and his campaigns against plagiarism (his accusations against Henry Wadsworth Longfellow in particular lost him the friendship of Lowell, for whom Poe's "sheer fudge" probably included false accusations). He died of "congestion of the brain" at age forty.

Fated even beyond the grave to depend on the resources of those who lacked benevolence toward him, Poe owed his negative posthumous reputation to the editorial skills and moral perspectives of his literary executor, Rufus Griswold. Griswold told Poe's story as a cautionary tale fit for a temperance tract: it was a life full of promise, ruined by drink and the lack of a moral compass. With the pathological base of Poe's genius established, the diagnostic strain of American criticism later moved to psychoanalysis: now Poe was not morally bankrupt but mad, a patient etherized upon the table of necrophilia, repetition, and impotence. In 1926 Joseph Wood Krutch published *Edgar Allan Poe: A Study in Genius*, a psychoanalytical study typical of this early phase of Freudian criticism.

But in mid-nineteenth-century France, it was the poets who noticed him. Charles Baudelaire was immediately smitten by the image of a poet rejected and misunderstood in his own country. He translated many of Poe's tales and introduced Poe to a privileged audience quite inclined to find value in whatever the small-minded, puritanical, and mediocre Americans could not understand.

Baudelaire's young admirer, the French poet STÉPHANE MALLARMÉ, who claimed to have learned English only to read Poe, went on to translate the poems, which Baudelaire had largely left untranslated. Baudelaire and Mallarmé found in Poe a theory of poetry that privileged the aesthetic over the moral, the beautiful over the true, and artistic effect over authorial intention. "The Philosophy of Composition," published shortly after the success of "The Raven," is Poe's account of how he com-

posed the poem "backwards" through sheer calculation. Often considered a mystification when read as a *record* of how Poe actually wrote "The Raven," the essay became for Baudelaire and Mallarmé (and later, for ROMAN JAKOBSON, who inherited Poe through the French symbolists) a superb *analysis* of its poetic language. In Poe's explanations, words and even letters—the signifier, not the signified—take the lead in creating the poetic effect. Like the intentionless repetition of a word by a bird made oracular only by the obsessed listener, the network of relations created by words alone is filled with meaning only by the reader. None of the essay's causal explanations can be taken at face value, but what Poe calls the "air of consequence" created by treating effects as causes situates the author's intention in the poem's design rather than in his own experience or sentiment. Which does not, of course, prevent readers from attributing a morbid state of mourning to the author, whose calculations are seen—perhaps rightly—as covering over raw feeling.

In the Freudian Marie Bonaparte's *Life and Works of Edgar Allan Poe* (1933; trans. 1949), the French poetic tradition met the psychoanalytic interpretation, and the status of Poe's poetry was lifted from symptom to dream. Later, in Jacques Lacan's celebrated "Seminar on 'The Purloined Letter'" (1966), Poe the patient was fully promoted to the position of analyst, ingeniously demonstrating, both in that story and in the mechanical repetitions depicted in "The Raven," an understanding of what FREUD would call the "repetition compulsion."

In a way, the two sides of Poe cannot be dissociated. Exploring the vast gap and tension between the unconscious and the intellect, Poe would never have gone so far if he had not known both madness and fabrication. What is seen as Poe's individual pathology, indeed, is often the revelation of aesthetic drives that are usually explained in another way. When Poe proclaims, in "The Philosophy of Composition," that "the death . . . of a beautiful woman is, unquestionably, the most poetical topic in the world," the generalization sounds pathological—until one remembers the many dead women in poetry whose authors cover up their attraction to the image by seeming only to lament it. In his stress on beauty, originality, and intense emotion, Poe is very much part of Romanticism; but in his emphasis on literary technique and construction; on details of meter, rhyme, and sound effects; and on fine calibration of scene, tone, and suspense, he is very much a forerunner of the modernism and its related formalism to come.

BIBLIOGRAPHY

Poe wrote in a surprising variety of literary genres: poems, fantastic tales designed to explore what Freud would call "the uncanny," detective stories (a genre he *seems* to have invented), novels, reviews, and literary theory. For a good collection of Poe's literary theory and criticism, see the interesting short collection edited by Leonard Cassuto, *Edgar Allan Poe: Literary Theory and Criticism* (1999). For more extensive collections, see the Library of America volume titled *Edgar Allan Poe: Essays and Reviews* (1984), with selections, notes, and a useful chronology by G. R. Thompson. *Literary Criticism of Edgar Allan Poe*, edited by Robert L. Hough (1965), and *Selections from the Critical Writings of Edgar Allan Poe*, edited by F. C. Prescott (1981), are also useful. The most recent full-length biography is Kenneth Silverman's *Edgar Allan Poe: Mournful and Never-Ending Remembrance* (1991). For an appreciation of broader biographical issues, the two essays on the history of Poe biography in *A Companion to Poe Studies* (ed. Eric W. Carlson, 1996) are indispensable, as is *A Poe Log: A Documentary Life of Edgar Allan Poe*, edited by Dwight Thomas and David K. Jackson, (1987).

For a book-length study of Poe's criticism, see Robert D. Jacobs's *Poe: Journalist and Critic* (1969). A good general collection of essays is *Critical Essays on Edgar Allan Poe*, edited by Eric W. Carlson (1987). Recent American work on poetic theory, race, gender, and historical context is found in *The American Face of Edgar Allan Poe*,

edited by Shawn Rosenheim and Stephen Rachman (1995), which alludes to the earlier *The French Face of Edgar Allan Poe*, by Patrick Quinn (1954). The texts generated around Jacques Lacan's "Seminar on 'The Purloined Letter'"—authored by Lacan, Jacques Derrida, Barbara Johnson, and others—are collected in *The Purloined Poe* (ed. John P. Muller and William J. Richardson, 1988). And Roman Jakobson's essay on "The Raven" is in his *Language and Literature* (1987). For bibliographies, see J. Lasley Dameron and Irby B. Cauthen Jr., *Edgar Allan Poe: A Bibliography of Criticism, 1827–1967* (1974); Esther Hyneman, *Edgar Allan Poe: An Annotated Bibliography of Books and Articles in English* (1974); and Leona Rasmussen, *Edgar Allan Poe: An Annotated Bibliography* (1978).

The Philosophy of Composition

Charles Dickens, in a note now lying before me, alluding to an examination I once made of the mechanism of "Barnaby Rudge,"¹ says—"By the way, are you aware that Godwin wrote his 'Caleb Williams'² backwards? He first involved his hero in a web of difficulties, forming the second volume, and then, for the first, cast about him for some mode of accounting for what had been done."

I cannot think this the *precise* mode of procedure on the part of Godwin—and indeed what he himself acknowledges,³ is not altogether in accordance with Mr. Dickens' idea—but the author of "Caleb Williams" was too good an artist not to perceive the advantage derivable from at least a somewhat similar process. Nothing is more clear than that every plot, worth the name, must be elaborated to its *dénouement* before any thing be attempted with the pen. It is only with the *dénouement* constantly in view that we can give a plot its indispensable air of consequence, or causation, by making the incidents, and especially the tone at all points, tend to the development of the intention.

There is a radical error, I think, in the usual mode of constructing a story. Either history affords a thesis—or one is suggested by an incident of the day—or, at best, the author sets himself to work in the combination of striking events to form merely the basis of his narrative—designing, generally, to fill in with description, dialogue, or aurtorial comment, whatever crevices of fact, or action, may, from page to page, render themselves apparent.

I prefer commencing with the consideration of an *effect*. Keeping originality *always* in view—for he is false to himself who ventures to dispense with so obvious and so easily attainable a source of interest—I say to myself, in the first place, "Of the innumerable effects, or impressions, of which the heart, the intellect, or (more generally) the soul is susceptible, what one shall I, on the present occasion, select?" Having chosen a novel, first, and secondly a vivid effect, I consider whether it can best be wrought by incident or tone—whether by ordinary incidents and peculiar tone, or the converse, or by peculiarity both of incident and tone—afterward looking about me (or rather within) for such combinations of event, or tone, as shall best aid me in the construction of the effect.

1. An 1841 novel by Dickens (1812–1870), the most popular English novelist of the 19th century. Published serially, it presents a murder mystery whose solution Poe tried to guess from the early

installments.

2. A 1794 novel by the English political theorist William Godwin (1756–1836).

3. In his preface to the 1832 edition.

I have often thought how interesting a magazine paper might be written by any author who would—that is to say, who could—detail, step by step, the processes by which any one of his compositions attained its ultimate point of completion. Why such a paper has never been given to the world, I am much at a loss to say—but, perhaps, the authorial vanity has had more to do with the omission than any one other cause. Most writers—poets in especial—prefer having it understood that they compose by a species of fine frenzy—an ecstatic intuition⁴—and would positively shudder at letting the public take a peep behind the scenes, at the elaborate and vacillating crudities of thought—at the true purposes seized only at the last moment—at the innumerable glimpses of idea that arrived not at the maturity of full view—at the fully matured fancies discarded in despair as unmanageable—at the cautious selections and rejections—at the painful erasures and interpolations—in a word, at the wheels and pinions—the tackle for scene-shifting—the step-ladders and demon-traps—the cock’s feathers, the red paint and the black patches, which, in ninety-nine cases out of the hundred, constitute the properties of the literary *histrion*.⁵

I am aware, on the other hand, that the case is by no means common, in which an author is at all in condition to retrace the steps by which his conclusions have been attained. In general, suggestions, having arisen pell-mell, are pursued and forgotten in a similar manner.

For my own part, I have neither sympathy with the repugnance alluded to, nor, at any time, the least difficulty in recalling to mind the progressive steps of any of my compositions; and, since the interest of an analysis, or reconstruction, such as I have considered a *desideratum*, is quite independent of any real or fancied interest in the thing analyzed, it will not be regarded as a breach of decorum on my part to show the *modus operandi* by which some one of my own works was put together. I select “The Raven,”⁶ as the most generally known. It is my design to render it manifest that no one point in its composition is referrible either to accident or intuition—that the work proceeded, step by step, to its completion with the precision and rigid consequence of a mathematical problem.

Let us dismiss, as irrelevant to the poem *per se*, the circumstance—or say the necessity—which, in the first place, gave rise to the intention of composing a poem that should suit at once the popular and the critical taste.

We commence, then, with this intention.

The initial consideration was that of extent. If any literary work is too long to be read at one sitting, we must be content to dispense with the immensely important effect derivable from unity of impression—for, if two sittings be required, the affairs of the world interfere, and every thing like totality is at once destroyed. But since, *ceteris paribus*, no poet can afford to dispense with *any thing* that may advance his design, it but remains to be seen whether there is, in extent, any advantage to counterbalance the loss of unity which attends it. Here I say no, at once. What we term a long poem is, in fact, merely a succession of brief ones⁷—that is to say, of brief poetical effects. It is needless to demonstrate that a poem is such, only inasmuch as it intensely excites, by elevating, the soul; and all intense excitements are, through a

4. A critical allusion to RALPH WALDO EMERSON'S essay “The Poet” (1844).

5. Actor (Latin).

6. Still Poe's best-known poem (1845).

7. Poe apparently has in mind the long, didactic poems of Henry Wadsworth Longfellow (1807–1882), an immensely popular American poet.

psychal necessity, brief. For this reason, at least one half of the "Paradise Lost"⁸ is essentially prose—a succession of poetical excitements interspersed, *inevitably*, with corresponding depressions—the whole being deprived, through the extremeness of its length, of the vastly important artistic element, totality, or unity, of effect.

It appears evident, then, that there is a distinct limit, as regards length, to all works of literary art—the limit of a single sitting—and that, although in certain classes of prose composition, such as "Robinson Crusoe,"⁹ (demanding no unity,) this limit may be advantageously overpassed, it can never properly be overpassed in a poem. Within this limit, the extent of a poem may be made to bear mathematical relation to its merit—in other words, to the excitement or elevation—again in other words, to the degree of the true poetical effect which it is capable of inducing; for it is clear that the brevity must be in direct ratio of the intensity of the intended effect:—this, with one proviso—that a certain degree of duration is absolutely requisite for the production of any effect at all.

Holding in view these considerations, as well as that degree of excitement which I deemed not above the popular, while not below the critical, taste, I reached at once what I conceived the proper *length* for my intended poem—a length of about one hundred lines. It is, in fact, a hundred and eight.

My next thought concerned the choice of an impression, or effect, to be conveyed: and here I may as well observe that, throughout the construction, I kept steadily in view the design of rendering the work *universally* appreciable. I should be carried too far out of my immediate topic were I to demonstrate a point upon which I have repeatedly insisted, and which, with the poetical, stands not in the slightest need of demonstration—the point, I mean, that Beauty is the sole legitimate province of the poem.¹ A few words, however, in elucidation of my real meaning, which some of my friends have evinced a disposition to misrepresent. That pleasure which is at once the most intense, the most elevating, and the most pure, is, I believe, found in the contemplation of the beautiful. When, indeed, men speak of Beauty, they mean, precisely, not a quality, as is supposed, but an effect—they refer, in short, just to that intense and pure elevation of *soul*—*not* of intellect, or of heart—upon which I have commented, and which is experienced in consequence of contemplating "the beautiful." Now I designate Beauty as the province of the poem, merely because it is an obvious rule of Art that effects should be made to spring from direct causes—that objects should be attained through means best adapted for their attainment—no one as yet having been weak enough to deny that the peculiar elevation alluded to, is *most readily* attained in the poem. Now the object, Truth, or the satisfaction of the intellect, and the object, Passion, or the excitement of the heart, are, although attainable, to a certain extent, in poetry, far more readily attainable in prose. Truth, in fact, demands a precision, and Passion, a *homeliness* (the truly passionate will comprehend me) which are absolutely antagonistic to that Beauty which, I maintain, is the excitement, or pleasurable elevation, of the

8. Long Christian epic (1667) by the English poet John Milton.

9. A 1719 novel by the English writer Daniel Defoe; because it is episodic, recounting the "Life and adventures" of the title character, it need not be unified.

1. Poe's view of Beauty as universally pleasing was loosely derived from the German philosopher IMMANUEL KANT (1724–1804), probably via the English poet and critic SAMUEL TAYLOR COLERIDGE (1772–1834).

soul. It by no means follows from any thing here said, that passion, or even truth, may not be introduced, and even profitably introduced, into a poem—for they may serve in elucidation, or aid the general effect; as do discords in music, by contrast—but the true artist will always contrive, first, to tone them into proper subservience to the predominant aim, and, secondly, to enveil them, as far as possible, in that Beauty which is the atmosphere and the essence of the poem.

Regarding, then, Beauty as my province, my next question referred to the *tone* of its highest manifestation—and all experience has shown that this tone is one of *sadness*. Beauty of whatever kind, in its supreme development, invariably excites the sensitive soul to tears. Melancholy is thus the most legitimate of all the poetical tones.

The length, the province, and the tone, being thus determined, I betook myself to ordinary induction, with the view of obtaining some artistic piquancy which might serve me as a key-note in the construction of the poem—some pivot upon which the whole structure might turn. In carefully thinking over all the usual artistic effects—or more properly *points*, in the theatrical sense—I did not fail to perceive immediately that no one had been so universally employed as that of the *refrain*. The universality of its employment sufficed to assure me of its intrinsic value, and spared me the necessity of submitting it to analysis. I considered it, however, with regard to its susceptibility of improvement, and soon saw it to be in a primitive condition. As commonly used, the *refrain*, or burden, not only is limited to lyric verse, but depends for its impression upon the force of monotone—both in sound and thought. The pleasure is deduced solely from the sense of identity—of repetition. I resolved to diversify, and so vastly heighten, the effect, by adhering, in general, to the monotone of sound, while I continually varied that of thought: that is to say, I determined to produce continuously novel effects, by the variation of the *application* of the *refrain*—the *refrain* itself remaining, for the most part, unvaried.

These points being settled, I next bethought me of the *nature* of my *refrain*. Since its application was to be repeatedly varied, it was clear that the *refrain* itself must be brief, for there would have been an insurmountable difficulty in frequent variations of application in any sentence of length. In proportion to the brevity of the sentence, would, of course, be the facility of the variation. This led me at once to a single word as the best *refrain*.

The question now arose as to the *character* of the word. Having made up my mind to a *refrain*, the division of the poem into stanzas was, of course, a corollary: the *refrain* forming the close to each stanza. That such a close, to have force, must be sonorous and susceptible of protracted emphasis, admitted no doubt: and these considerations inevitably led me to the long *o* as the most sonorous vowel, in connection with *r* as the most producible consonant.

The sound of the *refrain* being thus determined, it became necessary to select a word embodying this sound, and at the same time in the fullest possible keeping with that melancholy which I had predetermined as the tone of the poem. In such a search it would have been absolutely impossible to overlook the word "Nevermore." In fact, it was the very first which presented itself.

The next *desideratum* was a pretext for the continuous use of the one word "nevermore." In observing the difficulty which I at once found in inventing

a sufficiently plausible reason for its continuous repetition, I did not fail to perceive that this difficulty arose solely from the pre-assumption that the word was to be so continuously or monotonously spoken by a *human* being—I did not fail to perceive, in short, that the difficulty lay in the reconciliation of this monotony with the exercise of reason on the part of the creature repeating the word. Here, then, immediately arose the idea of a *non*-reasoning creature capable of speech; and, very naturally, a parrot, in the first instance, suggested itself, but was superseded forthwith by a Raven, as equally capable of speech, and infinitely more in keeping with the intended *tone*.

I had now gone so far as the conception of a Raven—the bird of ill omen—monotonously repeating the one word, “Nevermore,” at the conclusion of each stanza, in a poem of melancholy tone, and in length about one hundred lines. Now, never losing sight of the object *supremeness*, or perfection, at all points, I asked myself—“Of all melancholy topics, what, according to the *universal* understanding of mankind, is the *most* melancholy?” Death—was the obvious reply. “And when,” I said, “is this most melancholy of topics most poetical?” From what I have already explained at some length, the answer, here also, is obvious—“When it most closely allïes itself to *Beauty*: the death, then, of a beautiful woman is, unquestionably, the most poetical topic in the world—and equally is it beyond doubt that the lips best suited for such topic are those of a bereaved lover.”

I had now to combine the two ideas; of a lover lamenting his deceased mistress and a Raven continuously repeating the word “Nevermore”—I had to combine these, bearing in mind my design of varying, at every turn, the *application* of the word repeated; but the only intelligible mode of such combination is that of imagining the Raven employing the word in answer to the queries of the lover. And here it was that I saw at once the opportunity afforded for the effect on which I had been depending—that is to say, the effect of the *variation of application*. I saw that I could make the first query propounded by the lover—the first query to which the Raven should reply “Nevermore”—that I could make this first query a commonplace one—the second less so—the third still less, and so on—until at length the lover, startled from his original *nonchalance* by the melancholy character of the word itself—by its frequent repetition—and by a consideration of the ominous reputation of the fowl that uttered it—is at length excited to superstition, and wildly propounds queries of a far different character—queries whose solution he has passionately at heart—propounds them half in superstition and half in that species of despair which delights in self-torture—propounds them not altogether because he believes in the prophetic or demoniac character of the bird (which, reason assures him, is merely repeating a lesson learned by rote) but because he experiences a phrenzied pleasure in so modeling his questions as to receive from the *expected* “Nevermore” the most delicious because the most intolerable of sorrow. Perceiving the opportunity thus afforded me—or, more strictly, thus forced upon me in the progress of the construction—I first established in mind the climax, or concluding query—that to which “Nevermore” should be in the last place an answer—that in reply to which this word “Nevermore” should involve the utmost conceivable amount of sorrow and despair.

Here then the poem may be said to have its beginning—at the end, where

all works of art should begin—for it was here, at this point of my preconsiderations, that I first put pen to paper in the composition of the stanza:

“Prophet,” said I, “thing of evil! prophet still if bird or devil!
By that heaven that bends above us—by that God we both adore,
Tell this soul with sorrow laden, if within the distant Aidenn.²
It shall clasp a sainted maiden whom the angels name Lenore—
Clasp a rare and radiant maiden whom the angels name Lenore.”
Quoth the raven “Nevermore.”

I composed this stanza, at this point, first that, by establishing the climax, I might the better vary and graduate, as regards seriousness and importance, the preceding queries of the lover—and, secondly, that I might definitely settle the rhythm, the metre, and the length and general arrangement of the stanza—as well as graduate the stanzas which were to precede, so that none of them might surpass this in rhythmical effect. Had I been able, in the subsequent composition, to construct more vigorous stanzas, I should, without scruple, have purposely enfeebled them, so as not to interfere with the climacteric effect.

And here I may as well say a few words of the versification. My first object (as usual) was originality. The extent to which this has been neglected, in versification, is one of the most unaccountable things in the world. Admitting that there is little possibility of variety in mere *rhythm*, it is still clear that the possible varieties of metre and stanza are absolutely infinite—and yet, *for centuries, no man, in verse, has ever done, or ever seemed to think of doing, an original thing*. The fact is, originality (unless in minds of very unusual force) is by no means a matter, as some suppose, of impulse or intuition. In general, to be found, it must be elaborately sought, and although a positive merit of the highest class, demands in its attainment less of invention than negation.

Of course, I pretend to no originality in either the rhythm or metre of the “Raven.” The former is trochaic—the latter is octameter acatalectic, alternating with heptameter catalectic³ repeated in the *refrain* of the fifth verse, and terminating with tetrameter catalectic. Less pedantically—the feet employed throughout (trochees) consist of a long syllable followed by a short: the first line of the stanza consists of eight of these feet—the second of seven and a half (in effect two-thirds)—the third of eight—the fourth of seven and a half—the fifth the same—the sixth three and a half. Now, each of these lines, taken individually, had been employed before, and what originality the “Raven” has, is in their *combination into stanza*; nothing even remotely approaching this combination has ever been attempted. The effect of this originality of combination is aided by other unusual, and some altogether novel effects, arising from an extension of the application of the principles of rhyme and alliteration.

The next point to be considered was the mode of bringing together the lover and the Raven—and the first branch of this consideration was the *locale*. For this the most natural suggestion might seem to be a forest, or the fields—but it has always appeared to me that a close *circumscription of space*

2. Arabic term for paradise, *Adn* (Eden).

3. Lacking a syllable in the last foot (thus a line of $7\frac{1}{2}$ feet, as Poe explains). “Trochaic”: based on a

metrical foot of the pattern long-short, or stressed-unstressed. “Acatalectic”: complete in its syllables (literally, “not catalectic”).

is absolutely necessary to the effect of insulated incident:—it has the force of a frame to a picture. It has an indisputable moral power in keeping concentrated the attention, and, of course, must not be confounded with mere unity of place.

I determined, then, to place the lover in his chamber—in a chamber rendered sacred to him by memories of her who had frequented it. The room is represented as richly furnished—this in mere pursuance of the ideas I have already explained on the subject of Beauty, as the sole true poetical thesis.

The *locale* being thus determined, I had now to introduce the bird—and the thought of introducing him through the window, was inevitable. The idea of making the lover suppose, in the first instance, that the flapping of the wings of the bird against the shutter, is a “tapping” at the door, originated in a wish to increase, by prolonging, the reader’s curiosity, and in a desire to admit the incidental effect arising from the lover’s throwing open the door, finding all dark, and thence adopting the half-fancy that it was the spirit of his mistress that knocked.

I made the night tempestuous, first, to account for the Raven’s seeking admission, and secondly, for the effect of contrast with the (physical) serenity within the chamber.

I made the bird alight on the bust of Pallas,⁴ also for the effect of contrast between the marble and the plumage—it being understood that the bust was absolutely *suggested* by the bird—the bust of *Pallas* being chosen, first, as most in keeping with the scholarship of the lover, and, secondly, for the sonorousness of the word, Pallas, itself.

About the middle of the poem, also, I have availed myself of the force of contrast, with a view of deepening the ultimate impression. For example, an air of the fantastic—approaching as nearly to the ludicrous as was admissible—is given to the Raven’s entrance. He comes in “with many a flirt and flutter.”

Not the *least obeisance made he*—not a moment stopped or stayed he,
But with *mien of lord or lady*, perched above my chamber door.

In the two stanzas which follow, the design is more obviously carried out:—

Then this ebony bird beguiling my sad fancy into smiling
By the *grave and stern decorum of the countenance it wore*,
“Though thy *crest be shorn and shaven* thou,” I said, “art sure no craven,
Ghastly grim and ancient Raven wandering from the nightly shore—
Tell me what thy lordly name is on the Night’s Plutonian⁵ shore!”
Quoth the Raven “Nevermore.”

Much I marvelled *this ungainly fowl* to hear discourse so plainly,
Though its answer little meaning—little relevancy bore;
For we cannot help agreeing that no living human being
*Ever yet was blessed with seeing bird above his chamber door—
Bird or beast upon the sculptured bust above his chamber door,*
With such name as “Nevermore.”

4. A title of Athena, the Greek goddess of wisdom, the arts, and war.

5. Of or pertaining to Pluto, Roman god of the underworld.

The effect of the *dénouement* being thus provided for, I immediately drop the fantastic for a tone of the most profound seriousness:—this tone commencing in the stanza directly following the one last quoted with the line,

But the Raven, sitting lonely on that placid bust, spoke only, etc.

From this epoch the lover no longer jests—no longer sees any thing even of the fantastic in the Raven's demeanor. He speaks of him as a "grim, ungainly, ghastly, gaunt, and ominous bird of yore," and feels the "fiery eyes" burning into his "bosom's core." This revolution of thought, or fancy, on the lover's part, is intended to induce a similar one on the part of the reader—to bring the mind into a proper frame for the *dénouement*—which is now brought about as rapidly and as *directly* as possible.

With the *dénouement* proper—with the Raven's reply, "Nevermore," to the lover's final demand if he shall meet his mistress in another world—the poem, in its obvious phase, that of a simple narrative, may be said to have its completion. So far, every thing is within the limits of the accountable—of the real. A raven, having learned by rote the single word "Nevermore," and having escaped from the custody of its owner, is driven, at midnight, through the violence of a storm, to seek admission at a window from which a light still gleams—the chamber-window of a student, occupied half in poring over a volume, half in dreaming of a beloved mistress deceased. The casement being thrown open at the fluttering of the bird's wings, the bird itself perches on the most convenient seat out of the immediate reach of the student, who, amused by the incident and the oddity of the visiter's demeanor, demands of it, in jest and without looking for a reply, its name. The raven addressed, answers with its customary word, "Nevermore"—a word which finds immediate echo in the melancholy heart of the student, who, giving utterance aloud to certain thoughts suggested by the occasion, is again startled by the fowl's repetition of "Nevermore." The student now guesses the state of the case, but is impelled, as I have before explained, by the human thirst for self-torture, and in part by superstition, to propound such queries to the bird as will bring him, the lover, the most of the luxury of sorrow, through the anticipated answer "Nevermore." With the indulgence, to the utmost extreme, of this self-torture; the narration, in what I have termed its first or obvious phase, has a natural termination, and so far there has been no overstepping of the limits of the real.

But in subjects so handled, however skilfully, or with however vivid an array of incident, there is always a certain hardness or nakedness, which repels the artistical eye. Two things are invariably required—first, some amount of complexity, or more properly, adaptation; and, secondly, some amount of suggestiveness—some under current, however indefinite of meaning. It is this latter, in especial, which imparts to a work of art so much of that *richness* (to borrow from colloquy a forcible term) which we are too fond of confounding with *the ideal*. It is the *excess* of the suggested meaning—it is the rendering this the upper instead of the under current of the theme—which turns into prose (and that of the very flattest kind) the so called poetry of the so called transcendentalists.⁶

6. A group of 19th-century writers and philosophers in New England; they viewed the individual soul as corresponding directly with the universe (thus eliminating language) and they located the

truest source of knowledge in intuition, not experience. Emerson was one of the foremost Transcendentalists.

Holding these opinions, I added the two concluding stanzas of the poem—their suggestiveness being thus made to pervade all the narrative which has preceded them. The under current of meaning is rendered first apparent in the lines—

“Take thy beak from out *my heart*, and take thy form from off my door!”
Quoth the Raven “Nevermore!”

It will be observed that the words, “from out my heart,” involve the first metaphorical expression in the poem. They, with the answer, “Nevermore,” dispose the mind to seek a moral in all that has been previously narrated. The reader begins now to regard the Raven as emblematical—but it is not until the very last line of the very last stanza, that the intention of making him emblematical of *Mournful and Never-ending Remembrance* is permitted distinctly to be seen:

And the Raven, never flitting, still is sitting, still is sitting,
On the pallid bust of Pallas just above my chamber door;
And his eyes have all the seeming of a demon's that is dreaming,
And the lamplight o'er him streaming throws his shadow on the floor;
And my soul *from out that shadow* that lies floating on the floor
Shall be lifted—nevermore.

1846

THÉOPHILE GAUTIER

1811–1872

“Nothing is really beautiful unless it is useless,” proclaims Théophile Gautier in our selection; “everything useful is ugly, for it expresses a need, and the needs of man are ignoble and disgusting, like his poor weak nature. The most useful place in a house is the lavatory.”

In his celebrated manifesto of what came to be known as “art for art's sake,” Gautier contrasts beauty and need, art and biological life. Art for art's sake had two origins in France. It was a consequence of the French assimilation of IMMANUEL KANT's theory, presented in the *Critique of Judgment* (1790), of the aesthetic as a disinterested, autonomous realm of pure beauty, and it was also a reaction against two very different ways of seeing art in the service of something else: while conservative moralists wanted artists to serve the cause of virtue, progressive liberals, including the Romantic writer Victor Hugo, wanted to enlist art in the cause of social justice. In England poetry was, similarly, dismissed as useless in THOMAS PEACOCK's satirical work “The Four Ages of Poetry” (1820), which PERCY BYSSHE SHELLEY answered in his *Defence of Poetry* (written 1821). Gautier spoke out, in the preface to his 1835 novel *Made-moiselle de Maupin*, against what he perceived as increasing pressure both from the right and from the left to judge art according to its moral or political functions. He brazenly defended the value not of the useful but of the useless, declaring, “I am among those to whom the superfluous is necessary.”

Born in 1811 in the south of France, Gautier lived most of his life in Paris, where his father, a minor government official, moved the family in 1814. Remembered now

more for his influence (BAUDELAIRE dedicated *Les Fleurs du mal* to him) than for his own works, Gautier nonetheless wrote in many genres—novels, poems, short stories, plays, ballets, literary histories, travel accounts. His fantastic tales (*contes fantastiques*) are still included in studies of that subgenre. He began his career as a member of the bohemian young Romantics and soon became famous for the flamboyant red vest he wore to the opening night of Victor Hugo's controversial play *Hernani* (1830). For almost twenty years he wrote a weekly literary column for the journal *La Presse*; then in 1855 he moved to *Le Moniteur Universel*, the semiofficial newspaper of the Second Empire. At the end of his life, he was no longer trying to "dumbfound the bourgeois" (*épater les bourgeois*) but rather attempting to entertain them with his wit and brilliance. He who had once taken pride in his extravagant nonconformity thus eventually became part of the establishment. He was a member of the salon of Princess Mathilda, Napoleon III's cousin; in 1868 she offered him a sinecure as her librarian. On the money he made from journalism, he supported his father, his two sisters, a son from an early liaison with Eugénie Fort, and his mistress Ernesta Grisi and their two daughters. When the Second Empire was brought to an end in 1871 by defeat in the Franco-Prussian War, Gautier was at a loss to know how to reinvent himself again. His death in 1872 was said to have been hastened by the near-destitution of his family during the Prussian siege of Paris, about which he published *Tableaux de siège* (1871). Thus the poet of sublime superfluity died, ultimately, of want.

Victor Hugo had earlier written a manifesto-by-preface to his unperformable play *Cromwell* (1827), and Gautier considered it to be "the tablets of the law" of Romanticism. The young would-be Romantic took to heart Hugo's call to rehabilitate the aesthetics of the grotesque in literature. In a series of articles he began to publish in 1834 in the journal *La France Littéraire* (later printed as *Les Grotesques*, 1844), he attempted to restore to literary prominence those authors who had been devalued by classical criteria. On the basis of his articles on the poets François Villon (1431–ca. 1463) and Théophile de Viau (1590–1626), he was attacked by an anonymous critic in the semiofficial newspaper of the bourgeois monarchy, *Le Constitutionnel*, for condoning immorality. A legal battle over literary censorship on moral grounds (prefiguring the more famous 1857 trials involving Baudelaire's *Les Fleurs de mal* and Flaubert's *Madame Bovary*) was settled in his favor, but Gautier's brush with the defenders of virtue led to some memorable moments in the preface he was writing to his current novel, *Mademoiselle de Maupin*.

The Romantic editor Eugène Renduel had suggested that Gautier write a novel, based on the life of the seventeenth-century cross-dressing singer and duellist Madeleine de Maupin, who had affairs with both men and women and died repentant at the age of thirty. Inspired by the recent success of historical novels by Sir Walter Scott and Victor Hugo, and expecting a swashbuckling adventure novel with a moral ending, Renduel was dismayed to find instead a lyrical tale of impossible love in the *Mademoiselle de Maupin* that Gautier presented to him.

It is a commonplace of Gautier criticism that the preface to *Mademoiselle de Maupin* has nothing to do with the novel, that it was tacked on simply to fill out the two volumes of the original publication. And indeed, the story of a cross-dressing woman who loves and leaves both the man and the woman who are in love with her appears, at first sight, to be a strange example of art for art's sake. This bisexual love story certainly further estranged Gautier from the defenders of virtue, but it did not immediately seem related to the vigorous defense of superfluity undertaken in his preface. Readers saw the depiction of impossible love as a symptom of Gautier's failed idealism rather than as a demonstration of art for art's sake. Yet the "double love" depicted in the novel is fundamentally, and not just circumstantially, unlivable. It is a love that can exist only in fantasy—or in literature. Thus in his novel as in his preface, Gautier critiques what he sees as a tendency to restrict the literary imagination either to remedies for material need or to moral instructions for living. A

dimension of fantasy and play, justified neither by usefulness nor by goodness, is just as necessary to life: it lies in the realm of beauty. In this way, Gautier draws a relation between the superfluity of art and the fundamentally unsatisfiable dimension of desire.

In his later and most famous book of poems, *Emaux et camées* (1852, *Enamels and Cameos*; expanded ed., 1872), Gautier continues to equate poetry with decorative and superfluous luxuries, with craftsmanship and intricate carving, with mastery of the difficulties of form. In the poem that stands as his "ars poetica" ("Art," written in 1857 and included in the later edition), he compares poetry to sculpture, exhorting the poet to "sculpt, chisel, and seal a dream into the resistant block." Already in the novel *Mademoiselle de Maupin*, he had claimed: "If there is something noble and fine about loving a statue, it is that your love is quite disinterested, that you need not fear the satiety or weariness of victory." "Disinterested," of course, was Kant's characterization of the nature of aesthetic pleasure. By 1857 Gautier's Romantic rebelliousness had congealed into the kind of "resistance" that material objects offer to artists. He and a number of other poets, calling themselves "Parnassians," turned to the classical world of myth and sculpture for inspiration.

For nineteenth-century French poets, the luxury and superfluity of form was often symbolized by "Oriental" figures: Moroccan arabesques, Chinese pots, Egyptian sphinxes. Gautier's *Enamels and Cameos* opened with the image of Goethe writing his own Orientalist work, the *West-östliche Divan* (1819, *The West-Eastern Divan*), while turning his back on the storm of history swirling around him. The splendid arabesques of Victor Hugo's book of Orientalist poetry, *Les Orientales* (1828), remained an inspiration for Gautier long after Hugo himself had gone on to more political writings.

Like other nineteenth-century French writers, then, Gautier used two privileged symbols of art for art's sake: lesbianism, equated with nonreproductive sexuality (Baudelaire's original title for *Les Fleurs du mal* was *Les Lesbiennes*), and Orientalism, equated with nonrepresentational art. In both cases, the symbol was chosen by European male writers to represent what was *not* bourgeois European patriarchy, and not to champion the rights of women or inhabitants of the East. The idealization of lesbians in art was accompanied by no perceptible diminution in misogyny in real life. And Romantic writers, who used the image of the Orient to highlight what they disliked about Europe, became very much Europeans when they set foot in the real Middle East, as EDWARD SAID makes clear in his critique of Orientalism (see below).

In recent years, Gautier has received a certain amount of attention, most of it negative, from critics who are working from contemporary versions of the very political and moral perspectives that Gautier was opposing. Marxist critics have seen art for art's sake as embodying the worst of formalism and mounting the most bourgeois of rebellions against bourgeois ideology; they assail its supposedly apolitical stance as instead confirming the status quo. Said, in analyzing European Orientalism, also attacks the aestheticizing conception of the Orient as apolitical. For feminists, queer theorists, and critics of sexuality, Gautier's importance is more ambiguous: he may have exploited rather than promoted women's sexual freedom, but whatever its intention, *Mademoiselle de Maupin* has always enjoyed a reputation among adolescents as an underground classic of liberating sexual ambiguity. The debates over the political, moral, and aesthetic function of literature that Gautier discussed in 1835 are still going on today.

BIBLIOGRAPHY

Because Gautier wrote a great deal—travel literature, literary history, art criticism, dance and music reviews, novels and short stories, plays and poetry—and because many of his works were published only in journals, there exists, even in French, no complete works. *Mademoiselle de Maupin*, however, translated by Joanna Richardson

(1981), is readily accessible. A critical edition of the preface in French, George Matoré's *La Préface de Mademoiselle de Maupin* (1946), contains helpful notes. A collection of Gautier's art criticism was translated in 1969 by Michael Clifford Spencer as *The Art Criticism of Théophile Gautier*. His *History of Romanticism* has been translated by Howard Fertig (1988). Joanna Richardson is also the author of the only full-length biography of Gautier (1958), which needs updating.

Enid Starkie's *From Gautier to Eliot: The Influence of France on English Literature, 1851–1939* (1960) was an influential study of Gautier as a proponent of "art for art's sake." There are no critical studies entirely devoted to his aesthetic theory, although many modern critical works contain a few pages of comment on Gautier; see the remarks on his poetry in Jean-Paul Sartre's *What Is Literature?* (1947), on Gautier's travels to the Orient in Edward Said's *Orientalism* (1978), on the French artistic image of the lesbian in Joan de Jean's *Fictions of Sappho, 1546–1937* (1989), and on cross-dressing in Marjorie Garber's *Vested Interests: Cross-Dressing and Cultural Anxiety* (1992). Two short general studies of Gautier deserve note: Richard Grant's *Théophile Gautier* (1975), the most complete general study in English but marred by dated and simplistic interpretations, and P. E. Tennant's *Théophile Gautier* (1975), a much crisper and better short study (with quotations left in French). The most complete bibliography, compiled by Andrew G. Gann and Peter J. Whyte, is published in *A Critical Bibliography of French Literature*, vol. 5 (ed. David Baguley, 1994).

*From Preface to Mademoiselle de Maupin*¹

One of the most ridiculous things in the glorious epoch which we have the happiness to live in is undoubtedly the rehabilitation of virtue. It is undertaken by every paper, whatever its political hue, red, green, or tricolour.²

Virtue is certainly most respectable, and, heaven knows! we shouldn't want to show her disrespect, good and worthy woman that she is! Her eyes are shining through their spectacles, her stockings aren't put on too awry, she takes a pinch from her golden snuff-box with all imaginable grace, and her little dog makes its bow like a dancing-master. All this is true. We even agree that she isn't in too bad a shape for her age, and that she couldn't carry her years better than she does. She is a very agreeable grandmother—but a grandmother she is . . . It seems to me natural, especially when you're twenty, to prefer some immoral little thing who is very sprightly, flirtatious and obliging, with her hair somewhat ruffled, her skirt on the short side, her feet and eyes provocative, her cheeks slightly flushed, a laugh on her lips and her heart on her sleeve. The most monstrously virtuous journalists couldn't be of any other opinion; and, if they say the contrary, it's very probable that they don't think it. To think one thing and to write another happens every day, especially to virtuous people.

I remember the insults which were hurled before the Revolution (I'm talking of the July Revolution)³ at the unfortunate and virginal Vicomte Sosthène de La Rochefoucauld,⁴ who lengthened the dresses of the dancers at the

1. Translated by Joanna Richardson.

2. The red, white, and blue of the French flag (thus representing nationalism and anti-Bourbon sentiment). "Red": the revolutionary color. "Green": the color of a journal called *Vert-Vert* (Green-Green), which was favorable to Gautier.

3. The revolution of 1830 that ended the Bourbon restoration, replacing Charles X (1757–1836) with the "bourgeois king" Louis Philippe (1773–1850).

4. Ultraroyalist (1785–1864) who as director of fine arts in 1824 covered the genitals of statues with fig leaves.

Opéra, and with this patrician hands, stuck a modest plaster on the middle of every statue. M. le Vicomte Sosthène de La Rochefoucauld has been far surpassed. Modesty had been much improved since those days, and we achieve refinements which he wouldn't have imagined.

Personally I am not in the habit of looking at certain parts of statues. Like other people, I found the vine-leaf cut out by the Minister's scissors the most ridiculous thing in the world. Apparently I was wrong, and the vine-leaf is among the most praiseworthy of institutions.

* * *

In spite of all the respect we feel for the modern apostles, we think that the authors of these so-called immoral works,⁵ though they aren't as married as the virtuous journalists, very frequently have a mother. Some of them have sisters, and they are provided with an abundant female family. But their mothers and sisters don't read novels, even immoral novels; they sew, embroider and busy themselves with housework. Their stockings, as M. Planard⁶ would say, are—absolutely white; you can look at their legs—they are not *blue*, and the good Chrysale, who so hated learned women, would set them up as an example to the learned Philaminte.⁷

I come to the *wives*⁸ of these gentlemen, since they have so many of them. However virginal their husbands may be, it seems to me that there are certain things which they ought to know. It may well be that their husbands haven't shown them anything. If so, I understand if they decide to keep them in this precious and blessed ignorance. God is great and Mahomet is his prophet!⁹ Women are curious; may heaven and morality grant that they satisfy their curiosity in a more legitimate manner than their grandmother, Eve, and not go and ask questions of the Serpent!

As for their daughters, if they have been to a boarding-school, I don't see what these books might teach them.

It is as ridiculous to say that a man is a drunkard because he describes an orgy, a rake because he describes debauchery, as to claim that a man is virtuous because he writes a moral book. Every day one sees the contrary. It is the character who speaks and not the author. His hero is an atheist, that doesn't mean that he himself is an atheist; he makes the brigands act and speak like brigands, he is not a brigand for that reason. At that rate, one would have to guillotine Shakespeare, Corneille, and all the authors of tragedies; they have committed more murders than Mandrin and Cartouche.¹ This has not been done, though, and in fact I don't believe it will be done for a long time, however virtuous and however moral the critics may become. It is one of the manias of these little scribblers with tiny minds, always to

5. That is, contemporary works. Gautier has been discussing the remarkable attentiveness of contemporary guardians of virtue to immorality in modern literature and their remarkable blindness to the immorality of the classical authors (especially Molière) whom they recommend.

6. Eugène de Planard (1783–1855), French dramatist and librettist.

7. Wife of Chrysale in Molière's play *The Learned Ladies* (1672). "Blue": that is, they are not blue-stockings (female pedants).

8. In French, *épouses*; for Gautier the term (unlike the more traditional *femmes*) belongs to the hated bourgeois vocabulary of grocers, notaries, and so on.

9. Part of Islamic ritual prayer. Islam was thought to have especially restrictive practices toward women.

1. Louis Mandrin (1725–1755) and Louis-Domingue Cartouche (1693–1721), brigands and folk heroes. On PIERRE CORNEILLE (1606–1684), see above.

substitute the author for the work and to turn to the personality, to give some poor scandalous interest to their wretched rhapsodies. They know quite well that nobody would read them if they just contained their personal opinion.

We can hardly imagine the purpose of all this wrangling, the point of all this raging and baying. We can hardly imagine what pushes the nimble-footed Messrs Geoffroy to make themselves the Don Quixotes of morality,² to set themselves up as the policemen of literature, and to apprehend and cudgel, in the name of virtue, every idea which strolls through a book with its mob-cap a little askew or its skirt pulled up a little too high. It is very singular.

Whatever they say, the age is immoral (if that word means anything, which we very much doubt), and we need no proof except the quantity of immoral books that it produces and the success which they enjoy. Books follow manners and manners don't follow books. The Regency made Crébillon,³ it wasn't Crébillon who made the Regency. The little shepherdesses of Boucher⁴ were painted and bare-breasted because the little *marquises* were painted and bare-breasted. Pictures are done from models, and not models from pictures.⁵ Someone or other said somewhere or other that literature and the arts had an influence on manners. Whoever it was, he was certainly a great fool. It is as if one said: green peas make the spring grow; green peas grow, on the contrary, because it is the spring, and cherries grow because it is the summer. Trees bear fruit, it is certainly not the fruit that bears the trees, and that is an eternal law, and unchanging in its variety; centuries follow one another, and each one bears its fruit, which is not the fruit of the previous century; books are the fruit of manners.

Beside the moral journalists, under this rain of homilies, as under a summer shower in a park, there has sprung up, between the planks of the Saint-Simonian⁶ platform, a series of little mushrooms of a new and rather curious kind, whose natural history we are going to write.

These are the utilitarian critics. Poor people who had such short noses that they couldn't wear spectacles on them, and yet didn't see as far as their noses.

When an author tossed some or other book, novel or poetry, on to their desk—these gentlemen lay back nonchalantly in their armchairs, balanced them on their back legs, and, rocking to and fro with a knowing look, a superior air, they said:

'What is the use of this book? How can one apply it to moralization and to the wellbeing of the largest and poorest class? What! Not a word about the needs of society, nothing civilizing and progressive! How, instead of making the great synthesis of humanity, and following, through the events of history, the phases of regenerating and providential inspiration, how can one produce poems and novels which lead nowhere, and do not advance the present generation along the path to the future? How can one be concerned

2. That is, to act like the impractically idealistic title character of the novel (1605, 1615) by Miguel de Cervantes. Julien-Louis Geoffroy (1743–1814), traditionalist drama critic.

3. Prosper Crébillon (*fils*) (1707–1777), libertine novelist. The Regency: that is, the regency (1715–23) of Philippe II, duc d'Orléans.

4. François Boucher (1703–1770), French rococo painter.

5. Later, Gautier maintained the opposite, writing, "Nature is an invention of painters."

6. Following the philosophy of Claude Henri de Rouvroy, comte de Saint-Simon (1760–1825), a prominent French Utopian protosocialist theorist.

with style and rhyme in the presence of such grave matters? What do we care, ourselves, about style, and rhyme, and form? This is the real question (poor foxes, they are too green⁷)! Society is suffering, it is suffering from great inner anguish (in other words, no one wants to subscribe to useful periodicals). It is for the poet to seek the cause of this uneasiness, and cure it. He will find the means by sympathizing, heart and soul, with humanity (philanthropic poets! That would be something rare and delightful). We await this poet and invoke him with all our prayers. When he appears, he will deserve the acclamations of the crowd, the palms, the wreaths, the *prytaneum*⁸ . . .

Well and good; but as we hope our reader will stay awake till the end of this happy preface, we shall not continue this very faithful imitation of the utilitarian style. By its nature, it is pretty soporific, and it might with advantage replace laudanum and academic speeches.

No, imbeciles, no, idiotic and goitrous creatures that you are, a book does not make jellied soup; a novel is not a pair of seamless boots; a sonnet, a syringe with a continuous spurt; a drama is not a railway, though all these things are essentially civilizing, and they advance humanity along the path of progress.

By the bowels of all the Popes, past, present and future, no, and two hundred thousand times no!

You don't make yourself a cotton cap out of a metonymy, you don't put on a comparison instead of a slipper; you can't use an antithesis as an umbrella; unfortunately you couldn't lay a few multicoloured rhymes on your stomach by way of a waistcoat. I have a deep conviction that an ode is too light an apparel for the winter, and that one wouldn't be better dressed with a strophe, an antistrophe and epode,⁹ than the cynic's wife who contented herself with her virtue alone for shift, and went about stark naked, so the story goes.

However, the celebrated M. de La Calprenède¹ once had a coat, and, when someone asked him what it was made of, he answered: *Silvandre*. *Silvandre* was a play that he had just had successfully performed.

Such reasoning makes one shrug one's shoulders above one's head, and higher than the Duke of Gloucester.²

People who claim to be economists, and want to rebuild society from top to bottom, seriously suggest such nonsense.

A novel has two uses: one is material, the other spiritual, if you can use that expression about a novel. The material use is, for a start, the several thousand francs which go into the author's pocket, and ballast him so that the wind or the devil doesn't bear him away; for the publisher it is a fine thoroughbred horse which paws the ground and trots in front of his cabriolet of steel and ebony, as Figaro says.³ For the paper-merchant, the material use is another factory on another stream, and often the means of spoiling a fine site; for the printers, it is a few barrels of logwood, to colour their gullets

7. A reference to Aesop's fable, retold by Jean de La Fontaine (1621-1695), in which the fox dismissed the ripe grapes that were out of reach as "too green."

8. Greek town hall.

9. The three stanza forms that make up a Pindaric ode.

1. Gauthier de Coste, sieur de La Calprenède

(1610-1633), French playwright and novelist.

2. The future Richard III, portrayed in plays by Shakespeare and Casimir Delavigne (1793-1843) as a hunchback.

3. The newspaper *Figaro* had earlier printed this description of Eugène Renduel, the publisher of *Mademoiselle de Maupin*.

every week; for the reading-room, a heap of coppers, covered with very proletarian verdigris, and a quantity of grease which, if it were duly collected and used, would make whale-fishing superfluous. The spiritual use of novels is that, while people read them, they sleep, and don't read useful, virtuous and progressive periodicals, or other similar indigestible and stupefying drugs.

Let people say after this that novels don't contribute to civilization. I shan't talk about tobacconists, grocers, and sellers of fried potatoes; they have a very great interest in this branch of literature, since the paper it's printed on is generally of superior quality to that of the newspapers.⁴

It is really enough to make one laugh fit to burst, just to listen to the utilitarian republicans or Saint-Simonians. I should very much like, for a start, to know exactly what it means, this great gawky noun with which they stuff the emptiness of their columns every day, the noun which serves as a shibboleth⁵ and a sacramental expression. Utility: what does the word mean, and what do we apply it to?

There are two kinds of utility, and the meaning of the term is always relative. What is useful for one is not useful for another. You are a cobbler, I am a poet. It is useful for me that my first line rhymes with my second. A rhyming dictionary is very useful to me; it is no use to you, except to cobble an old pair of boots, and it's fair to say that a shoemaker's knife wouldn't help me very much to make an ode. You will now object that a cobbler is much above a poet, and that people can more easily do without one than without the other. I have no wish to disparage the illustrious profession of cobbler, which I honour as much as the profession of constitutional monarch, but I humbly admit that I should rather have my shoe unsewn than my line ill-rhymed, and that I'd rather do without shoes than do without poetry. As I hardly ever go out, and walk more skilfully on my head than I do on my feet, I wear out fewer shoes than a virtuous republican who does nothing but run from one ministry to another to have some appointment thrown to him.

I know that there are those who prefer mills to churches, and the bread of the body to that of the soul. To them, I have nothing to say. They deserve to be economists in this world, and in the next.

Is there anything absolutely useful on this earth and in this life which we are living? To begin with, there is very little use in our being on earth and being alive. I defy the most learned of the company to say what purpose we serve, unless it is not to subscribe to *Le Constitutionnel*⁶ or to any kind of paper whatever.

And then, if we admit *a priori* the usefulness of our existence, what do we really need to maintain it? Soup and a bit of meat twice a day is all we need to fill our stomachs, in the strict sense of the word. A coffin two feet wide and six feet long is more than enough for man after his death; he does not need a much larger space in his lifetime. A hollow cube seven or eight feet square, with a hole to breathe through, a single cell in the hive, that is all he needs for lodging and for shelter from the rain. A blanket, suitably rolled

4. Better-quality paper made better wrapping for their commodities.

5. Password. In Judges 12.5-6, the inability of Ephraimites to pronounce the word *shibboleth*

betrayed them to their enemies, the Gileadites.

6. A journal (the semi-official newspaper of the constitutional monarchy) that had attacked Gautier for promoting immorality.

round the body, will protect him as well as—and better than—the most elegant and the best-cut frock-coat from Straub's.⁷

With that, he will be able literally to subsist. They say in fact that one can live on twenty-five sous a day; but preventing oneself from dying is not living; and I don't see how a town which is planned for its usefulness would be pleasanter to live in than Père-Lachaise.⁸

Nothing beautiful is indispensable to life. If you suppressed the roses, the world would not materially suffer; yet who would wish there were an end of flowers? I would rather give up potatoes than roses, and I believe that there is only one utilitarian in the universe who could tear up a bed of tulips to plant cabbages.

What is the use of women's beauty? Provided that a woman is physically well formed, and that she is capable of bearing children, she will always be enough for economists.

What is the use of music? What is the use of painting? Who would be mad enough to prefer Mozart to M. Carrel, and Michelangelo to the inventor of white mustard?⁹

Nothing is really beautiful unless it is useless; everything useful is ugly, for it expresses a need, and the needs of man are ignoble and disgusting, like his poor weak nature. The most useful place in a house is the lavatory.

For myself—and I hope it does not displease these gentlemen—I am among those to whom the superfluous is necessary—and I prefer things and people in the inverse ratio to the services that they perform for me. I prefer to a certain useful pot a Chinese pot which is sprinkled with mandarins and dragons, a pot which is no use to me at all, and the talent of mine which I most esteem is guessing logogriffs and charades.¹ I should most joyfully renounce my rights as a Frenchman and as a citizen to see an authentic picture by Raphael, or a beautiful woman naked: Princess Borghese, for example, when she has posed for Canova, or Julia Grisi,² when she enters the bath. I should very readily agree, myself, to the return of that cannibal, Charles X, if he brought me back a hamper of Tokay or Johannisberg from his castle in Bohemia,³ and I should find the electoral laws broad enough, if some streets were wider, and other things less wide. I was not born a dilettante, but I prefer the sound of screeching fiddles and tambourines to that of the President's little bell.⁴ I should sell my trousers to have a ring, and my bread for jam. The most becoming occupation for a civilized man seems to me to be inactivity, or cogitating as one smokes one's pipe or cigar. I also have much esteem for those who play skittles, and those who write good verses. As you see, the utilitarian principles are far from being mine, and I shall never be editor of a virtuous paper, unless I am converted, which would be rather funny.

7. A celebrated society tailor.

8. A Parisian cemetery.

9. That is, to prefer great artists—the Austrian composer Wolfgang Amadeus Mozart (1756–1791) and the Italian painter and sculptor Michelangelo Buonarroti (1475–1564)—to purveyors of utility such as the Republican journalist Armand Carrel (1800–1836) and the inventor of white mustard (thought to have medicinal properties).

1. Two word games.

2. An opera singer (one of three musical sisters in

Gautier's life; he idealized Julia and Carlotta, and later lived with the third, Ernesta). Raffaello Santi (1483–1520), Italian painter. Princess Pauline Borghese: Napoleon's sister, who modeled for the Italian sculptor Antonio Canova (1757–1822) in 1807.

3. Charles X fled first to Scotland and then to Prague. Tokay and Johannisberg are both wines from Central Europe.

4. Used to call a session of government to order.

Instead of creating a *prix Monthyon* as a reward for virtue, I should prefer, like Sardanapalus,⁵ that great philosopher who has been so misunderstood, to give a handsome prize to the man who invented a pleasure—for enjoyment seems to me to be the end of life, and the only useful thing in the world. God has willed it so, He who created women, perfumes and light, lovely flowers, good wines, lively horses, greyhounds and angora cats: He who said not to His angels 'Be virtuous', but 'Be loving', He who has given us a mouth more responsive than the rest of our skin so that we may kiss women, eyes looking upwards that we may see the light, a subtle sense of smell to draw in the souls of flowers, strong thighs to grip the flanks of stallions and fly as swift as thought without railways or steam-boilers, sensitive hands to caress the long heads of greyhounds, the velvet backs of cats, and the satin shoulders of creatures of little virtue, and Who, in short, has given us alone the triple and glorious privilege of drinking without thirst, of striking light, and of making love in every season, which distinguishes us from the brute far more than the habit of reading papers and making charters.

My God! What a stupid thing it is, this so-called perfectibility⁶ of the human race! I am sick and tired of hearing about it. You would really think that man was a machine which could be improved, and that a cog which was better engaged, a counterweight more appropriately placed, could make it work in an easier and more convenient way. When they come to giving a double stomach to man, so that he can ruminate like an ox, eyes on the other side of his head so that, like Janus,⁷ he can see those who put out their tongues at him behind his back, and contemplate his *indignity* in a less uncomfortable position than that of the Callipygian Venus⁸ in Athens when they fix wings on his shoulderblades so that he is not obliged to pay six sous to go by omnibus; when they have created a new organ for him, then well and good! The word *perfectibility* will begin to mean something.

* * *

1835

5. Legendary king of Assyria (by tradition, d. 817 B.C.E.), notorious for hedonism and luxury, who had recently been treated in Lord Byron's tragedy *Sardanapalus* (1821) and Eugène Delacroix's painting *The Death of Sardanapalus* (1827). *Prix Monthyon*: one in a series of annual prizes for virtue and public utility, distributed by the French Academy, that were founded in 1780 by the philanthropist Baron Monthyon (1733–1820).

6. A word made famous in political theories of human progress.

7. Roman god of doors and beginnings, represented with a double-faced head.

8. A statue depicting the goddess looking over her shoulder at her own buttocks (thus the name *cal-lipygian*, "having beautiful buttocks"). A Roman copy of a Greek original, it was found not in Athens but Naples; there is a copy at Versailles.

KARL MARX
1818–1883

FRIEDRICH ENGELS
1820–1895

Karl Marx and Friedrich Engels are central figures in the history of literary criticism and theory and in the development of cultural studies, though neither produced a body of literary-critical work. The young Marx wrote lyrics, attempted drama and

fiction, and read deeply in eighteenth- and nineteenth-century German philosophy and aesthetics, and the writings of Marx and Engels often refer to and quote literature (ranging from classical Greek drama to the novels of Charles Dickens). But as economic historians, social theorists, and revolutionaries seeking to change the world, their main work lay elsewhere, and their direct contributions to literary criticism are scattered, uneven, and generally meager. Yet perhaps that incompleteness makes their comments and observations about literature and criticism all the more suggestive, giving a long line of twentieth-century writers—including GYÖRGY LUKÁCS, Bertolt Brecht, WALTER BENJAMIN, GAYATRI SPIVAK, and FREDRIC JAMESON—much speculative and interpretive leeway in developing their own Marxist theories of literature.

To many it may seem perverse to study Marxist theory today, given the collapse between 1989 and 1991 of Communist governments in the Soviet Union and in the nations of Eastern Europe. But we must clearly distinguish between Marx and Engels as social theorists, philosophers, historians, and cultural critics and as revolutionaries—or, more accurately, as revolutionaries under whose name Communist leaders and parties seized power. The fall of particular regimes, “Marxist” more in name than in ideas, does little to lessen the impact of Marx’s relentless, fascinated, shocked (and shocking) examination of capitalism and its costs to the men and women caught in its grasp. In brilliant passages such as our selection from *Capital* (1867) on the working day, his skillfully modulated prose can be powerfully moving.

For literary and cultural criticism, the seminal passage by Marx appears in his preface to *A Contribution to the Critique of Political Economy* (1858–59, excerpted below). Here Marx emphasizes that he is concerned primarily with the “material conditions of life,” the “economic structure of society.” On this “foundation . . . rises a legal and political superstructure”; moreover, “The mode of production of material life conditions the social, political and intellectual life process in general. It is not the consciousness of men that determines their being, but, on the contrary, their social being that determines their consciousness.” This formulation raises a number of questions: To what *degree* is consciousness socially and economically “determined”? What is the role of human agency? How closely connected are the base and the superstructure, and can the latter—which includes intellectual work and cultural institutions—affect the former?

The answers of Marx and Engels waver. As a famous passage (excerpted below) from the *Grundrisse* (1857–58, *Foundations or Outlines*) suggests, Marx found it difficult to explain the relationship between Greek art and the society within which it arose; his argument is hurried and unpersuasive. Engels, too, recognized the limitations of the base/superstructure model. In a letter to Joseph Bloch (our final selection), Engels maintains that “According to the materialist conception of history, the *ultimately* determining element in history is the production and reproduction of real life,” insisting that economics is not the only determinant and leaving room for the influence of “human minds.”

Marx was born in Trier, Prussia (a region now part of Germany), the son of a Jewish lawyer who had converted to Protestantism to protect his job. Marx studied at the universities of Bonn, Berlin, and Jena, receiving his doctorate in April 1841 for a thesis on the Greek philosophers Democritus and Epicurus. In 1842 he edited a radical newspaper in Cologne, but the German authorities, angered by his criticisms, forced him to resign in 1843. He then traveled to Paris, where he and Engels, whom he had met in Cologne, began their collaboration. Engels, born in Barmen, in western Germany, was the son of a wealthy textile manufacturer; in the 1840s, he managed a factory in England that his father owned, and his horror at the harsh economic and social conditions in Manchester led him to write *The Condition of the Working Class in England in 1844* (1845). Engels later said that as he and Marx worked together in Paris; their “agreement in all theoretical fields became obvious.”

Marx and Engels’s joint work in the 1840s includes *The Holy Family* (1845) and *The German Ideology* (not published until 1932). In these texts, and in Marx’s polem-

ical pamphlet *The Poverty of Philosophy* (1847), they sought to prove that economic and social forces shape human consciousness. This materialism was meant to displace the idealist view that human consciousness shapes economic and social forms. They based their interpretation of reality on *dialectical* materialism, believing that all change results from the constant conflict arising from the oppositions inherent in all ideas, movements, and events. They further argued that the internal tensions and contradictions in capitalism would lead inevitably to its demise.

Also important are Marx's writings collected in *Economic and Philosophic Manuscripts of 1844* (1932; trans. 1959), which contain much of his most passionate, incisive thinking about industrial conditions and the nature of consciousness under capitalism and present an excellent entry point into Marxist cultural analysis. Building on the work of the German philosopher Ludwig Feuerbach, author of *The Essence of Christianity* (1841), Marx is especially concerned here with the origin and impact of alienation. The industrial capitalist economy, says Marx, "alienates" individuals from the work that they do; unable to control their own labor, which they must "give" (sell) to another, they lack control and knowledge of themselves and never achieve their full human potential. However much they resent their situation, they believe—that is, they are conditioned to believe—that it cannot be changed, and that ultimately they have only themselves to blame for their discontent and failures.

Marx and Engels's most significant publication of the decade appeared in London in 1848: *Manifesto of the Communist Party* (soon known by and reprinted with the shorter title *The Communist Manifesto*). In this intense pamphlet Marx (who did the bulk of the writing) describes the triumphs of capitalism; the creation of a world market, world literature, and cosmopolitanism; the misery that capitalism imposes on the masses; the class struggle between the exploiters (owners) and the exploited (workers); the connection of people primarily via cash; the inevitability of revolution; and the dawn of a new, class-free society. Though specifically commissioned to state the principles and objectives of the Communist League (a secret organization composed primarily of German emigrés), it quickly became the position paper of militant working-class movements everywhere.

Because of his political writing and activity, Marx was expelled from both France and Germany in the late 1840s; in May 1849 he settled with his family in London. There, supported by Engels but nonetheless often in poverty, he resided for the remainder of his life. His major works during these decades are the *Grundrisse*, a manuscript of some 800 printed pages (1857–58, published 1939–41); the multivolume *Theories of Surplus Value* (1860s, published 1905–10); and above all *Das Kapital*, volume 1 of which appeared in 1867 (trans. 1886), with volumes 2 and 3, edited by Engels, published posthumously in 1885 and 1894 (trans. 1907, 1909). Marx also wrote many articles for newspapers in the United States and Europe. Engels's writings include *Herr Eugen Dühring's Revolution in Science* (1878, usually referred to as *Anti-Dühring*), parts of which later appeared as a summary of the basics of socialism titled *Socialism: Utopian and Scientific* (1892); *The Origin of the Family, Private Property, and the State* (1884); and *Dialectics of Nature* (1925).

The literary theorist and critic reading Marx and Engels may raise questions that the texts do not answer. What roles do writers, critics, and intellectuals play? Do they illuminate for workers the nature of capitalist exploitation, or instead act as the service of those who already and best understand their true circumstances? Should writers be free to state the social and political facts as they see them, or must the goal of working-class revolution always shape their work—and if so, who sets the limits?

Marx has one simple but powerful reply: the answers will come only when the contradictions within capitalism produce them. Capitalism has no remedy for the worst social and economic problems that it creates and that will eventually rend it asunder. Marx is certain that capitalism will end, and why: but no one can know exactly what the roles of intellectuals and critics will be, and what the new society will look like, until the force of historical necessity brings them into being.

Meanwhile, Marxist critics have work to perform, practicing a discipline linked to the goal of radical social change. Thus they must approach literature, literary education, criticism, and theory as integral parts of economic and social life. In *The German Ideology*, as our selection indicates, Marx and Engels emphasize that we must study *real* men and women and *real* processes, not what has typically been said or thought by and about them.

Marx thus promotes "ideology critique," that is, the demystifying exposure of how class interests really operate through cultural forms, whether political or legal, religious or philosophical, educational or literary. It is the nature of ideology to conceal the reality of class struggle from our perception and consciousness; and insofar as working-class people unconsciously absorb bourgeois values, they are unwitting carriers of "false consciousness."

The term *ideology* rarely appears in Marx's *Grundrisse* and *Capital*, but it is implicit in many of Marx's formulations of the difference between the surface and reality of capitalist society. Marxist critics are expected to investigate the systemic masking of the real methods and consequences of existing socioeconomic arrangements. Sometimes, however, Marx uses the term differently, as when he declares in *A Contribution to the Critique of Political Economy* that we grow aware of and fight the conflict between classes in "ideological forms."

Later Marxists have developed both the positive and negative senses of ideology. One dominant line of inquiry follows from the writings of ANTONIO GRAMSCI, who in his *Prison Notebooks* (published 1945–75) describes ideology as "the terrain on which men move, acquire consciousness of their position, struggle, etc."; he explores how a privileged social class can achieve cultural "hegemony," the manufactured assent to its beliefs and practices won peacefully through ideology. This concept of hegemony, developed by the British Marxist RAYMOND WILLIAMS (especially in *Marxism and Literature*, 1977) and by those he has influenced (notably STUART HALL and DICK HEBDIDGE) has become fundamental to cultural studies. Critics use it in studying classic texts, the relationships and differences between canonical and noncanonical literature, popular culture, the media, education, and publishing—all outlets for ideology.

The power of ideology to mask and obscure is also at work in what Marx calls "the fetishism of commodities," which he discusses in our first selection from *Capital*. Under capitalism, human relations are increasingly characterized by more or less thoroughgoing alienation, monetization, and commodification. Relationships between workers and owners, buyers and sellers, are mediated through the things produced. These commodities become objects of fetishism—seeming to have an objective existence of their own that obscures the individual labor involved in their production. By being exchanged, they acquire a seemingly inherent value distinct from their use value or physical properties.

As a social and cultural theory, Marxism demands of its followers ongoing critical scrutiny and self-questioning of its own basic texts, which are richly suggestive but sometimes flawed and often incomplete. Marx and Engels underestimated, for example, the extraordinary power of capitalism to turn back and absorb opposition, and apparently they overlooked the damaging overstatements and reductiveness that mar their arguments. Moreover, though Marx was acutely responsive to the economic and political situation of workers, he appears incapable of actually seeing and making imaginative contact with them and their families, of conveying how they live, think, and feel. Even in his most illuminating work, Marx often mirrors the dehumanizing tendencies that his radical critiques of capitalism condemn. Individuals matter most to him as embodiments of ideas, as components of systems—a form of thinking that the best novelists of his time, such as Dickens and Balzac, brilliantly exposed and corrected.

On the "material conditions of life" and the "economic structure of society," Marx and Engels are sharp and compelling; on the subject of the creative and critical

consciousness of persons and cultures, they falter. For foundational Marxist interpretations of cultural life, one must look instead to the work of such later theorists and critics as W. E. B. DU BOIS, EDMUND WILSON (in his writings of the 1930s), THEODOR ADORNO, C. L. R. James, and Raymond Williams. They built upon but went beyond the insights that Marx and Engels provide, and their critical projects drew directly from the literary texts and cultural traditions that Marx and Engels admired but never fully engaged.

BIBLIOGRAPHY

The fifty-volume English translation of the collected works of Marx and Engels, *Karl Marx, Frederick Engels: Collected Works* (1975–), is nearing completion. The best single-volume editions are David McLellan's *Karl Marx: Selected Writings* (1977) and Robert C. Tucker's *Marx-Engels Reader* (2d ed., 1978). For Marx's letters, see *Correspondence*, edited by Saul K. Padover (1979). Helpful introductions to Marx's life and writings include David McLellan, *Karl Marx: His Life and Thought* (1973); Isaiah Berlin, *Karl Marx: His Life and Environment* (4th ed., 1978); and Francis Wheen, *Karl Marx* (1999). On Engels, see Steven Marcus, *Engels, Manchester, and the Working Class* (1974), an excellent work of cultural history; W. O. Henderson, *The Life of Friedrich Engels* (1976); Terrell Carver, *Engels* (1981), a good overview; and Carver, *Marx and Engels: The Intellectual Relationship* (1983).

There is a vast secondary literature on Marx and Engels's views on literature and criticism and on the long line of theorists and critics who belong to the Marxist tradition. Essay collections provide a good starting point: see *Radical Perspectives in the Arts*, edited by Lee Baxandall (1972); *Marxism and Art: Writings in Aesthetics and Criticism*, edited by Berel Lang and Forrest Williams (1972); *Marxism and Art: Essays Classic and Contemporary*, edited by Maynard Solomon (1973); *Karl Marx and Frederick Engels on Literature and Art: A Selection of Writings*, edited by Lee Baxandall and Stefan Morawski (1974); and *Marxists on Literature: An Anthology*, edited by David Craig (1975). More up-to-date are *Contemporary Marxist Literary Criticism*, edited by Francis Mulhern (1992), and *Marxist Literary Theory: A Reader*, edited by Terry Eagleton and Drew Milne (1996). See also *Aesthetics and Politics*, edited by Ernst Bloch (1977), and *Marxism and the Interpretation of Culture*, edited by Cary Nelson and Lawrence Grossberg (1988).

On the history of Marx and Engels's interest in and response to literature, Peter Demetz's *Marx, Engels, and the Poets: Origins of Marxist Literary Criticism* (1967) and S. S. Prawer's *Karl Marx and World Literature* (1976) are informative. A concise and popular survey of Marxist literary criticism is Terry Eagleton, *Marxism and Literary Criticism* (1976). Tony Bennett, *Formalism and Marxism* (1979), deals well with Russian formalism and Marxist theory and criticism; and Fredric Jameson, *Marxism and Form: Twentieth-Century Dialectical Theories of Literature* (1971), examines several leading twentieth-century intellectuals influenced by Marx's writings. In *The Ideology of the Aesthetic* (1990) and *Ideology: An Introduction* (1991), Eagleton studies the meanings and implications of two key terms in Marxist criticism, *ideology* and *aesthetics*.

On the relationships between Marxism and recent theories of literature and criticism, consult Michael Ryan, *Marxism and Deconstruction: A Critical Articulation* (1982); John Frow, *Marxism and Literary History* (1986); and Scott Wilson, *Cultural Materialism: Theory and Practice* (1995). Dated but worth consulting are Lee Baxandall, *Marxism and Aesthetics: A Selective Annotated Bibliography* (1968), and Chris Bullock and David Peck, *Guide to Marxist Literary Criticism* (1980).

From Economic and Philosophic Manuscripts of 1844¹

* * *

We have proceeded from the premises of political economy.² We have accepted its language and its laws. We presupposed private property, the separation of labour, capital and land, and of wages, profit of capital and rent of land—likewise division of labour, competition, the concept of exchange-value, etc. On the basis of political economy itself, in its own words, we have shown that the worker sinks to the level of a commodity and becomes indeed the most wretched of commodities;³ that the wretchedness of the worker is in inverse proportion to the power and magnitude of his production; that the necessary result of competition is the accumulation of capital in a few hands, and thus the restoration of monopoly in a more terrible form; that finally the distinction between capitalist and land-rentier,⁴ like that between the tiller of the soil and the factory-worker, disappears and that the whole of society must fall apart into the two classes—the property-owners and the propertyless workers.

Political economy proceeds from the fact of private property, but it does not explain it to us. It expresses in general, abstract formulae the *material* process through which private property actually passes, and these formulae it then takes for *laws*. It does not *comprehend* these laws—i.e., it does not demonstrate how they arise from the very nature of private property. Political economy does not disclose the source of the division between labour and capital, and between capital and land. When, for example, it defines the relationship of wages to profit, it takes the interest of the capitalists to be the ultimate cause; i.e., it takes for granted what it is supposed to evolve. Similarly, competition comes in everywhere. It is explained from external circumstances. As to how far these external and apparently fortuitous circumstances are but the expression of a necessary course of development, political economy teaches us nothing. We have seen how, to it, exchange itself appears to be a fortuitous fact. The only wheels which political economy sets in motion are *avarice* and the *war amongst the avaricious—competition*.

Precisely because political economy does not grasp the connections within the movement, it was possible to counterpose, for instance, the doctrine of competition to the doctrine of monopoly, the doctrine of craft-liberty to the doctrine of the corporation, the doctrine of the division of landed property to the doctrine of the big estate—for competition, craft-liberty and the division of landed property were explained and comprehended only as fortuitous, premeditated and violent consequences of monopoly, the corporation, and feudal property, not as their necessary, inevitable and natural consequences.

Now, therefore, we have to grasp the essential connection between private property, avarice, and the separation of labour, capital and landed property; between exchange and competition, value and the devaluation of men,

1. Translated by Martin Milligan.

2. The 19th-century social science concerned with the relations between political and economic processes (now often separated into political science and economics).

3. Because labor itself is sold to others, and at a very low price.

4. One who lives on income from land, stocks, or bonds.

monopoly and competition, etc.; the connection between this whole estrangement and the *money*-system.

Do not let us go back to a fictitious primordial condition as the political economist does, when he tries to explain. Such a primordial condition explains nothing. He merely pushes the question away into a grey nebulous distance. He assumes in the form of fact, of an event, what he is supposed to deduce—namely, the necessary relationship between two things—between, for example, division of labour and exchange. Theology in the same way explains the origin of evil by the fall of man: that is, it assumes as a fact, in historical form, what has to be explained.

We proceed from an *actual* economic fact.

The worker becomes all the poorer the more wealth he produces, the more his production increases in power and range. The worker becomes an ever cheaper commodity the more commodities he creates. With the *increasing value* of the world of things proceeds in direct proportion the *devaluation* of the world of men. Labour produces not only commodities; it produces itself and the worker as a *commodity*—and does so in the proportion in which it produces commodities generally.

This fact expresses merely that the object which labour produces—labour's product—confronts it as *something alien*, as a *power independent* of the producer. The product of labour is labour which has been congealed in an object, which has become material: it is the *objectification* of labour. Labour's realization is its objectification. In the conditions dealt with by political economy this realization of labour appears as *loss of reality* for the workers; objectification as *loss of the object* and *object-bondage*; appropriation as *estrangement*, as *alienation*.

So much does labour's realization appear as loss of reality that the worker loses reality to the point of starving to death. So much does objectification appear as loss of the object that the worker is robbed of the objects most necessary not only for his life but for his work. Indeed, labour itself becomes an object which he can get hold of only with the greatest effort and with the most irregular interruptions. So much does the appropriation of the object appear as estrangement that the more objects the worker produces the fewer can he possess and the more he falls under the dominion of his product, capital.

All these consequences are contained in the definition that the worker is related to the *product of his labour* as to an *alien* object. For on this premise it is clear that the more the worker spends himself, the more powerful the alien objective world becomes which he creates over-against himself, the poorer he himself—his inner world—becomes, the less belongs to him as his own. It is the same in religion. The more man puts into God, the less he retains in himself. The worker puts his life into the object; but now his life no longer belongs to him but to the object. Hence, the greater this activity, the greater is the worker's lack of objects. Whatever the product of his labour is, he is not. Therefore the greater this product, the less is he himself. The *alienation* of the worker in his product means not only that his labour becomes an object, an *external* existence, but that it exists *outside him*, independently, as something alien to him, and that it becomes a power of its own confronting him; it means that the life which he has conferred on the object confronts him as something hostile and alien.

Let us now look more closely at the *objectification*, at the production of the worker; and therein at the *estrangement*, the *loss* of the object, his product.

The worker can create nothing without *nature*, without the *sensuous external world*. It is the material on which his labor is manifested, in which it is active, from which and by means of which it produces.

But just as nature provides labor with the *means of life* in the sense that labour cannot *live* without objects on which to operate, on the other hand, it also provides the *means of life* in the more restricted sense—i.e., the means for the physical subsistence of the *worker* himself.

Thus the more the worker by his labour *appropriates* the external world, sensuous nature, the more he deprives himself of *means of life* in the double respect: first, that the sensuous external world more and more ceases to be an object belonging to his labour—to be his labour's *means of life*; and secondly, that it more and more ceases to be *means of life* in the immediate sense, means for the physical subsistence of the worker.

Thus in this double respect the worker becomes a slave of his object, first, in that he receives an *object of labour*, i.e., in that he receives *work*; and secondly, in that he receives *means of subsistence*. Therefore, it enables him to exist, first, as a *worker*; and, second, as a *physical subject*: The extremity of this bondage is that it is only as a *worker* that he continues to maintain himself as a *physical subject*, and that it is only as a *physical subject* that he is a *worker*.

(The laws of political economy express the estrangement of the worker in his object thus: the more the worker produces, the less he has to consume; the more values he creates, the more valueless, the more unworthy he becomes; the better formed his product, the more deformed becomes the worker; the more civilized his object, the more barbarous becomes the worker; the mightier labour becomes, the more powerless becomes the worker; the more ingenious labour becomes, the duller becomes the worker and the more he becomes nature's bondsman.)

Political economy conceals the estrangement inherent in the nature of labour by not considering the direct relationship between the worker (labour) and production. It is true that labour produces for the rich wonderful things—but for the worker it produces privation. It produces palaces—but for the worker, hovels. It produces beauty—but for the worker, deformity. It replaces labour by machines—but some of the workers it throws back to a barbarous type of labour, and the other workers it turns into machines. It produces intelligence—but for the worker idiocy, cretinism.

The direct relationship of labour to its produce is the relationship of the worker to the objects of his production. The relationship of the man of means to the objects of production and to production itself is only a *consequence* of this first relationship—and confirms it. We shall consider this other aspect later.

When we ask, then, what is the essential relationship of labour we are asking about the relationship of the *worker* to production.

Till now we have been considering the estrangement, the alienation of the worker only in one of its aspects, i.e., the worker's *relationship to the products of his labour*. But the estrangement is manifested not only in the result but in the *act of production*—within the *producing activity* itself. How would the

worker come to face the product of his activity as a stranger, were it not that in the very act of production he was estranging himself from himself? The product is after all but the summary of the activity of production. If then the product of labour is alienation, production itself must be active alienation, the alienation of activity, the activity of alienation. In the estrangement of the object of labour is merely summarized the estrangement, the alienation, in the activity of labour itself.

What, then, constitutes the alienation of labour?

First, the fact that labour is *external* to the worker, i.e., it does not belong to his essential being; that in his work, therefore, he does not affirm himself but denies himself, does not feel content but unhappy, does not develop freely his physical and mental energy but mortifies his body and ruins his mind. The worker therefore only feels himself outside his work, and in his work feels outside himself. He is at home when he is not working, and when he is working he is not at home. His labour is therefore not voluntary, but coerced; it is *forced labour*. It is therefore not the satisfaction of a need; it is merely a *means* to satisfy needs external to it. Its alien character emerges clearly in the fact that as soon as no physical or other compulsion exists, labour is shunned like the plague. External labour, labour in which man alienates himself, is a labour of self-sacrifice, of mortification. Lastly, the external character of labour for the worker appears in the fact that it is not his own, but someone else's, that it does not belong to him, that in it he belongs, not to himself, but to another. Just as in religion the spontaneous activity of the human imagination, of the human brain and the human heart, operates independently of the individual—that is, operates on him as an alien, divine or diabolical activity—in the same way the worker's activity is not his spontaneous activity. It belongs to another; it is the loss of his self.

As a result, therefore, man (the worker) no longer feels himself to be freely active in any but his animal functions—eating, drinking, procreating, or at most in his dwelling and in dressing-up, etc.; and in his human functions he no longer feels himself to be anything but an animal. What is animal becomes human and what is human becomes animal.

*From The German Ideology*¹

* * *

The fact is, therefore, that definite individuals who are productively active in a definite way enter into these definite social and political relations. Empirical observation must in each separate instance bring out empirically, and without any mystification and speculation, the connection of the social and political structure with production. The social structure and the State are continually evolving out of the life process of definite individuals, but of individuals, not as they may appear in their own or other people's imagina-

1. Translated by S. Ryazanskaya, based on an earlier translation by W. Lough.

tion, but as they *really* are; i.e., as they operate, produce materially, and hence as they work under definite material limits, presuppositions and conditions independent of their will.

The production of ideas, of conceptions, of consciousness, is at first directly interwoven with the material activity and the material intercourse of men, the language of real life. Conceiving, thinking, the mental intercourse of men, appear at this stage as the direct efflux of their material behaviour.² The same applies to mental production as expressed in the language of politics, laws, morality, religion, metaphysics, etc., of a people. Men are the producers of their conceptions, ideas, etc.—real, active men, as they are conditioned by a definite development of their productive forces and of the intercourse corresponding to these, up to its furthest forms. Consciousness can never be anything else than conscious existence, and the existence of men is their actual life-process. If in all ideology men and their circumstances appear upside-down as in a *camera obscura*,³ this phenomenon arises just as much from their historical life-process as the inversion of objects on the retina does from their physical life-process.

In direct contrast to German philosophy⁴ which descends from heaven to earth, here we ascend from earth to heaven. That is to say, we do not set out from what men say, imagine, conceive, nor from men as narrated, thought of, imagined, conceived, in order to arrive at men in the flesh. We set out from real, active men, and on the basis of their real life-process we demonstrate the development of the ideological reflexes and echoes of this life-process. The phantoms formed in the human brain are also, necessarily, sublimates of their material life-process, which is empirically verifiable and bound to material premises. Morality, religion, metaphysics, all the rest of ideology and their corresponding forms of consciousness, thus no longer retain the semblance of independence. They have no history, no development; but men, developing their material production and their material intercourse, alter, along with this their real existence, their thinking and the products of their thinking. Life is not determined by consciousness, but consciousness by life. In the first method of approach the starting-point is consciousness taken as the living individual; in the second method, which conforms to real life, it is the real living individuals themselves, and consciousness is considered solely as *their* consciousness.

This method of approach is not devoid of premises. It starts out from the real premises and does not abandon them for a moment. Its premises are men, not in any fantastic isolation and rigidity, but in their actual, empirically perceptible process of development under definite conditions. As soon as this active life-process is described, history ceases to be a collection of dead facts as it is with the empiricists⁵ (themselves still abstract), or an imagined activity of imagined subjects, as with the idealists.

Where speculation ends—in real life—there real, positive science begins:

2. That is, the actions that human beings take in their relationship to the productive forces of their society.

3. Literally, "dark chamber" (Latin): an apparatus invented in the 17th century consisting of a darkened box with an aperture (usually a lens) through which an image is projected (inverted) on the opposite wall.

4. That is, idealism, which holds that reality and

knowledge derive not from perceptions but from ideas or the workings of the human mind or spirit; idealists include IMMANUEL KANT (1724–1804) and GEORG WILHELM FRIEDRICH HEGEL (1770–1831).

5. Those who believe that experiences, especially of the senses, are the only sources of knowledge; for example, DAVID HUME (1711–1776).

the representation of the practical activity, of the practical process of development of men. Empty talk about consciousness ceases, and real knowledge has to take its place.

1932

*From The Communist Manifesto*¹

A spectre is haunting Europe—the spectre of Communism. All the Powers of old Europe have entered into a holy alliance to exorcise this spectre: Pope and Czar, Metternich and Guizot,² French Radicals and German police-spies.

Where is the party in opposition that has not been decried as Communistic by its opponents in power? Where the Opposition that has not hurled back the branding reproach of Communism, against the more advanced opposition parties, as well as against its reactionary adversaries?

Two things result from this fact.

I. Communism is already acknowledged by all European Powers to be itself a Power.

II. It is high time that Communists should openly, in the face of the whole world, publish their views, their aims, their tendencies, and meet this nursery tale of the Spectre of Communism with a Manifesto of the party itself.

To this end, Communists of various nationalities have assembled in London,³ and sketched the following Manifesto, to be published in the English, French, German, Italian, Flemish and Danish languages.

*I. Bourgeois and Proletarians*⁴

The history of all hitherto existing society is the history of class struggles.

Freeman and slave, patrician and plebeian, lord and serf, guild-master⁵ and journeyman,⁶ in a word, oppressor and oppressed, stood in constant opposition to one another, carried on an uninterrupted, now hidden, now open fight, a fight that each time ended either in a revolutionary reconstitution of society at large, or in the common ruin of the contending classes.

In the earlier epochs of history, we find almost everywhere a complicated

1. Originally titled *Manifesto of the Communist Party*. This English text was edited by Engels.

2. François Pierre Guillaume Guizot (1787–1874), French statesman and historian who supported the idea of a constitutional monarchy. Metternich (1773–1859), Austrian statesman and foreign minister, who worked to suppress nationalist and popular constitutional movements.

3. Members of the Communist League (an international association made up mostly of German emigrés) met in November 1847; they commissioned the writing of the *Manifesto*.

4. By bourgeoisie is meant the class of modern

Capitalists, owners of the means of social production and employers of wage-labour. By proletariat, the class of modern wage-labourers who, having no means of production of their own, are reduced to selling their labour-power in order to live [Engels's note].

5. Guild-master, that is, a full member of a guild, a master within, not a head of a guild [Engels's note].

6. A skilled artisan, not yet a full member of a guild, who works for master artisans rather than for himself.

arrangement of society into various orders, a manifold gradation of social rank. In ancient Rome we have patricians, knights, plebeians, slaves; in the Middle Ages, feudal lords, vassals, guild-masters, journeymen, apprentices, serfs; in almost all of these classes, again, subordinate gradations.

The modern bourgeois society that has sprouted from the ruins of feudal society has not done away with class antagonisms. It has but established new classes, new conditions of oppression, new forms of struggle in place of the old ones.

Our epoch, the epoch of the bourgeoisie, possesses, however, this distinctive feature: it has simplified the class antagonisms: Society as a whole is more and more splitting up into two great hostile camps, into two great classes directly facing each other: Bourgeoisie and Proletariat.

From the serfs of the Middle Ages sprang the chartered burghers⁷ of the earliest towns. From these burgesses⁸ the first elements of the bourgeoisie were developed.

The discovery of America, the rounding of the Cape,⁹ opened up fresh ground for the rising bourgeoisie. The East-Indian and Chinese markets, the colonisation of America, trade with the colonies, the increase in the means of exchange and in commodities generally, gave to commerce, to navigation, to industry, an impulse never before known, and thereby, to the revolutionary element in the tottering feudal society, a rapid development.

The feudal system of industry, under which industrial production was monopolised by closed guilds, now no longer sufficed for the growing wants of the new markets. The manufacturing system took its place. The guild-masters were pushed on one side by the manufacturing middle class; division of labour between the different corporate guilds vanished in the face of division of labour in each single workshop.

Meantime the markets kept ever growing, the demand ever rising. Even manufacture no longer sufficed. Thereupon, steam and machinery revolutionised industrial production. The place of manufacture was taken by the giant, Modern Industry, the place of the industrial middle class, by industrial millionaires, the leaders of whole industrial armies, the modern bourgeois.

Modern industry has established the world-market, for which the discovery of America paved the way. This market has given an immense development to commerce, to navigation, to communication by land. This development has, in its turn, reacted on the extension of industry; and in proportion as industry, commerce, navigation, railways extended, in the same proportion the bourgeoisie developed, increased its capital, and pushed into the background every class handed down from the Middle Ages.

We see, therefore, how the modern bourgeoisie is itself the product of a long course of development, of a series of revolutions in the modes of production and of exchange.

Each step in the development of the bourgeoisie was accompanied by a corresponding political advance of that class. An oppressed class under the sway of the feudal nobility, an armed and self-governing association in the medieval commune;¹ here independent urban republic (as in Italy and Ger-

9. The Cape of Good Hope, at the southern tip of Africa.

1. This was the name given their urban communities by the townsmen of Italy and France, after they had purchased or wrested their initial rights of self-government from their feudal lords [Engels's note].

many), there taxable "third estate"² of the monarchy (as in France), afterwards, in the period of manufacture proper, serving either the semi-feudal or the absolute monarchy as a counterpoise against the nobility, and, in fact, corner-stone of the great monarchies in general, the bourgeoisie has at last, since the establishment of Modern Industry and of the world-market, conquered for itself, in the modern representative State, exclusive political sway. The executive of the modern State is but a committee for managing the common affairs of the whole bourgeoisie.

The bourgeoisie, historically, has played a most revolutionary part.

The bourgeoisie, wherever it has got the upper hand, has put an end to all feudal, patriarchal, idyllic relations. It has pitilessly torn asunder the motley feudal ties that bound man to his "natural superiors," and has left remaining no other nexus between man and man than naked self-interest, than callous "cash payment." It has drowned the most heavenly ecstasies of religious fervour, of chivalrous enthusiasm, of philistine³ sentimentalism, in the icy water of egotistical calculation. It has resolved personal worth into exchange value, and in place of the numberless indefeasible chartered freedoms, has set up that single, unconscionable freedom—Free Trade. In one word, for exploitation, veiled by religious and political illusions, it has substituted naked, shameless, direct, brutal exploitation.

The bourgeoisie has stripped of its halo every occupation hitherto honoured and looked up to with reverent awe. It has converted the physician, the lawyer, the priest, the poet, the man of science, into its paid wage-labourers.

The bourgeoisie has torn away from the family its sentimental veil, and has reduced the family relation to a mere money relation.

The bourgeoisie has disclosed how it came to pass that the brutal display of vigour in the Middle Ages, which Reactionists⁴ so much admire, found its fitting complement in the most slothful indolence. It has been the first to show what man's activity can bring about. It has accomplished wonders far surpassing Egyptian pyramids, Roman aqueducts, and Gothic cathedrals; it has conducted expeditions that put in the shade all former Exoduses of nations and crusades.

The bourgeoisie cannot exist without constantly revolutionising the instruments of production, and thereby the relations of production, and with them the whole relations of society. Conservation of the old modes of production in unaltered form, was, on the contrary, the first condition of existence for all earlier industrial classes. Constant revolutionising of production, uninterrupted disturbance of all social conditions, everlasting uncertainty and agitation distinguish the bourgeois epoch from all earlier ones. All fixed, fast-frozen relations, with their train of ancient and venerable prejudices and opinions, are swept away, all new-formed ones become antiquated before they can ossify. All that is solid melts into air, all that is holy is profaned, and man is at last compelled to face with sober senses, his real conditions of life, and his relations with his kind.

The need of a constantly expanding market for its products chases the

4. Reactionaries.

bourgeoisie over the whole surface of the globe. It must nestle everywhere, settle everywhere, establish connexions everywhere.

The bourgeoisie has through its exploitation of the world-market given a cosmopolitan character to production and consumption in every country. To the great chagrin of Reactionists, it has drawn from under the feet of industry the national ground on which it stood. All old-established national industries have been destroyed or are daily being destroyed. They are dislodged by new industries, whose introduction becomes a life and death question for all civilised nations; by industries that no longer work up indigenous raw material, but raw material drawn from the remotest zones; industries whose products are consumed, not only at home, but in every quarter of the globe. In place of the old wants, satisfied by the productions of the country, we find new wants, requiring for their satisfaction the products of distant lands and climes. In place of the old local and national seclusion and self-sufficiency, we have intercourse in every direction, universal inter-dependence of nations. And as in material, so also in intellectual production. The intellectual creations of individual nations become common property. National one-sidedness and narrow-mindedness become more and more impossible, and from the numerous national and local literatures, there arises a world literature.

The bourgeoisie, by the rapid improvement of all instruments of production, by the immensely facilitated means of communication, draws all, even the most barbarian, nations into civilisation. The cheap prices of its commodities are the heavy artillery with which it batters down all Chinese walls, with which it forces the barbarians' intensely obstinate hatred of foreigners to capitulate.⁵ It compels all nations, on pain of extinction, to adopt the bourgeois mode of production; it compels them to introduce what it calls civilisation into their midst, i.e., to become bourgeois themselves. In one word, it creates a world after its own image.

The bourgeoisie has subjected the country to the rule of the towns. It has created enormous cities, has greatly increased the urban population as compared with the rural, and has thus rescued a considerable part of the population from the idiocy of rural life. Just as it has made the country dependent on the towns, so it has made barbarian and semi-barbarian countries dependent on the civilised ones, nations of peasants on nations of bourgeois, the East on the West.

The bourgeoisie keeps more and more doing away with the scattered state of the population, of the means of production, and of property. It has agglomerated population, centralised means of production, and has concentrated property in a few hands. The necessary consequence of this was political centralisation. Independent, or but loosely connected provinces, with separate interests, laws, governments and systems of taxation, became lumped together into one nation, with one government, one code of laws, one national class-interest, one frontier and one customs-tariff.

The bourgeoisie, during its rule of scarce one hundred years, has created more massive and more colossal productive forces than have all preceding generations together. Subjection of Nature's forces to man, machinery,

⁵ China unsuccessfully fought the Opium Wars (1839-42, 1856-60) to prevent the expansion of Western trade.

application of chemistry to industry and agriculture, steam-navigation, railways, electric telegraphs, clearing of whole continents for cultivation, canalisation of rivers, whole populations conjured out of the ground—what earlier century had even a presentiment that such productive forces slumbered in the lap of social labour?

From Grundrisse¹

* * *

In the case of the arts, it is well known that certain periods of their flowering are out of all proportion to the general development of society, hence also to the material foundation; the skeletal structure as it were, of its organization. For example, the Greeks compared to the moderns or also Shakespeare. It is even recognized that certain forms of art, e.g. the epic, can no longer be produced in their world epoch-making, classical stature as soon as the production of art, as such, begins; that is, that certain significant forms within the realm of the arts are possible only at an undeveloped stage of artistic development. If this is the case with the relation between different kinds of art within the realm of the arts, it is already less puzzling that it is the case in the relation of the entire realm to the general development of society. The difficulty consists only in the general formulation of these contradictions. As soon as they have been specified, they are already clarified.

Let us take e.g. the relation of Greek art and then of Shakespeare to the present time. It is well known that Greek mythology is not only the arsenal of Greek art but also its foundation. Is the view of nature and of social relations on which the Greek imagination and hence Greek [mythology] is based possible with self-acting mule spindles² and railways and locomotives and electrical telegraphs? What chance has Vulcan against Roberts & Co., Jupiter against the lightning rod and Hermes against the Credit Mobilier?³ All mythology overcomes and dominates and shapes the forces of nature in the imagination and by the imagination; it therefore vanishes with the advent of real mastery over them. What becomes of Fama⁴ alongside Printing House Square? Greek art presupposes Greek mythology, i.e. nature and the social forms already reworked in an unconsciously artistic way by the popular imagination. This is its material. Not any mythology whatever, i.e. not an arbitrarily chosen unconsciously artistic reworking of nature (here meaning everything objective, hence including society). Egyptian mythology could

1. Translated by Martin Nicolaus, who sometimes includes clarifying words in brackets: the title, usually left untranslated, means "outlines" or "foundations."

2. Machines used in spinning, invented in the late 18th century.

3. A major investment bank in France during the Second Empire (1852–70), against which Marx

pits Hermes, Greek god of commerce and invention. The other two (Roman) gods are similarly paired: Vulcan, god of metalworking, with a commercial firm and Jupiter, supreme god and wielder of the thunderbolt, with a lightning rod.

4. Rumor (Latin), a Roman personification; she repeated whatever she heard until everyone knew it.

never have been the foundation or the womb of Greek art. But, in any case, a *mythology*. Hence, in no way a social development which excludes all mythological, all mythologizing relations to nature; which therefore demands of the artist an imagination not dependent on mythology.

From another side, is Achilles⁵ possible with powder and lead? Or the *Iliad* with the printing press, not to mention the printing machine? Do not the song and the saga and the muse necessarily come to an end with the printer's bar,⁶ hence do not the necessary conditions of epic poetry vanish?

But the difficulty lies not in understanding that the Greek arts and epic are bound up with certain forms of social development. The difficulty is that they still afford us artistic pleasure and that in a certain respect they count as a norm and as an unattainable model.

A man cannot become a child again, or he becomes childish. But does he not find joy in the child's naiveté, and must he himself not strive to reproduce its truth at a higher stage? Does not the true character of each epoch come alive in the nature of its children? Why should not the historic childhood of humanity, its most beautiful unfolding, as a stage never to return, exercise an eternal charm? There are unruly children and precocious children. Many of the old peoples belong in this category. The Greeks were normal children. The charm of their art for us is not in contradiction to the undeveloped stage of society on which it grew. [It] is its result, rather, and is inextricably bound up, rather, with the fact that the unripe social conditions under which it arose, and could alone arise, can never return.

1857-58

1939-42

From Preface to A Contribution to the Critique of Political Economy

* * *

The first work which I undertook for a solution of the doubts which assailed me was a critical review of the Hegelian philosophy of right, a work the introduction to which appeared in 1844 in the *Deutsch-Französische Jahrbücher*,¹ published in Paris. My investigation led to the result that legal relations as well as forms of state are to be grasped neither from themselves nor from the so-called general development of the human mind, but rather have their roots in the material conditions of life, the sum total of which Hegel, following the example of the Englishmen and Frenchmen of the eighteenth century, combines under the name of "civil society," that, however, the anatomy of civil society is to be sought in political economy. The investigation of the latter, which I began in Paris, I continued in Brussels, whither I had emigrated in consequence of an expulsion order of M. Guizot.² The

6. Lever used to screw down the platen of a manual printing press (the German word used here, *Preßbengel*, can also mean printing in general). "The muse": goddess presiding over the arts and intellectual pursuits, traditionally invoked by epic poets as an aid to memory.

1. *German-French Yearbook*. The German philosopher GEORG WILHELM FRIEDRICH HEGEL (1770-

1831) described his political philosophy in the *Philosophy of Right* (1821); Marx's essay was "Contribution to the Critique of Hegel's Philosophy of Right."

2. François Pierre Guillaume Guizot (1787-1874), French statesman and historian who supported the idea of a constitutional monarchy; he was the chief power in the government between 1840 and 1848.

general result at which I arrived and which, once won, served as a guiding thread for my studies, can be briefly formulated as follows: In the social production of their life, men enter into definite relations that are indispensable and independent of their will, relations of production which correspond to a definite stage of development of their material productive forces. The sum total of these relations of production constitutes the economic structure of society, the real foundation, on which rises a legal and political superstructure and to which correspond definite forms of social consciousness. The mode of production of material life conditions the social, political and intellectual life process in general. It is not the consciousness of men that determines their being, but, on the contrary, their social being that determines their consciousness. At a certain stage of their development, the material productive forces of society come in conflict with the existing relations of production, or—what is but a legal expression for the same thing—with the property relations within which they have been at work hitherto. From forms of development of the productive forces these relations turn into their fetters. Then begins an epoch of social revolution. With the change of the economic foundation the entire immense superstructure is more or less rapidly transformed. In considering such transformations a distinction should always be made between the material transformation of the economic conditions of production, which can be determined with the precision of natural science, and the legal, political, religious, aesthetic or philosophic—in short, ideological forms in which men become conscious of this conflict and fight it out. Just as our opinion of an individual is not based on what he thinks of himself, so can we not judge of such a period of transformation by its own consciousness; on the contrary, this consciousness must be explained rather from the contradictions of material life, from the existing conflict between the social productive forces and the relations of production. No social order ever perishes before all the productive forces for which there is room in it have developed; and new, higher relations of production never appear before the material conditions of their existence have matured in the womb of the old society itself. Therefore mankind always sets itself only such tasks as it can solve; since, looking at the matter more closely, it will always be found that the task itself arises only when the material conditions for its solution already exist or are at least in the process of formation. In broad outlines Asiatic, ancient, feudal, and modern bourgeois modes of production can be designated as progressive epochs in the economic formation of society. The bourgeois relations of production are the last antagonistic form of the social process of production—antagonistic not in the sense of individual antagonism, but of one arising from the social conditions of life of the individuals; at the same time the productive forces developing in the womb of bourgeois society create the material conditions for the solution of that antagonism.³ This social formation brings, therefore, the prehistory of human society to a close.

* * *

3. That is, socialism—the final “mode of production,” which is in the process of emerging through the class struggle of the bourgeois and proletarians.

*From Capital, Volume 1*¹*From Chapter 1. Commodities*SECTION 4. THE FETISHISM OF COMMODITIES AND
THE SECRET THEREOF.

A commodity appears, at first sight, a very trivial thing, and easily understood. Its analysis shows that it is, in reality, a very queer thing, abounding in metaphysical subtleties and theological niceties. So far as it is a value in use, there is nothing mysterious about it, whether we consider it from the point of view that by its properties it is capable of satisfying human wants, or from the point that those properties are the product of human labour. It is as clear as noon-day, that man, by his industry, changes the forms of the materials furnished by Nature, in such a way as to make them useful to him. The form of wood, for instance, is altered, by making a table out of it. Yet, for all that, the table continues to be that common, every-day thing, wood. But, so soon as it steps forth as a commodity, it is changed into something transcendent. It not only stands with its feet on the ground, but, in relation to all other commodities, it stands on its head, and evolves out of its wooden brain grotesque ideas, far more wonderful than "table-turning" ever was.

The mystical character of commodities does not originate, therefore, in their use-value. Just as little does it proceed from the nature of the determining factors of value. For, in the first place, however varied the useful kinds of labour, or productive activities, may be, it is a physiological fact, that they are functions of the human organism, and that each such function, whatever may be its nature or form, is essentially the expenditure of human brain, nerves, muscles, &c. Secondly, with regard to that which forms the ground-work for the quantitative determination of value, namely, the duration of that expenditure, or the quantity of labour, it is quite clear that there is a palpable difference between its quantity and quality. In all states of society, the labour-time that it costs to produce the means of subsistence, must necessarily be an object of interest to mankind, though not of equal interest in different stages of development. And lastly, from the moment that men in any way work for one another, their labour assumes a social form.

Whence, then, arises the enigmatical character of the product of labour, so soon as it assumes the form of commodities? Clearly from this form itself. The equality of all sorts of human labour is expressed objectively by their products all being equally values; the measure of the expenditure of labour-power by the duration of that expenditure, takes the form of the quantity of value of the products of labour; and finally, the mutual relations of the producers, within which the social character of their labour affirms itself, take the form of a social relation between the products.

A commodity is therefore a mysterious thing, simply because in it the social character of men's labour appears to them as an objective character stamped upon the product of that labour; because the relation of the producers to the sum total of their own labour is presented to them as a social

1. Translated by Samuel Moore and Edward Aveling, and edited by Engels.

relation, existing not between themselves, but between the products of their labour. This is the reason why the products of labour become commodities, social things whose qualities are at the same time perceptible and imperceptible by the senses. In the same way the light from an object is perceived by us not as the subjective excitation of our optic nerve, but as the objective form of something outside the eye itself. But, in the act of seeing, there is at all events, an actual passage of light from one thing to another, from the external object to the eye. There is a physical relation between physical things. But it is different with commodities. There, the existence of the things *quâ* commodities, and the value-relation between the products of labour which stamps them as commodities, have absolutely no connexion with their physical properties and with the material relations arising therefrom. There it is a definite social relation between men, that assumes, in their eyes, the fantastic form of a relation between things. In order, therefore, to find an analogy, we must have recourse to the mist-enveloped regions of the religious world. In that world the productions of the human brain appear as independent beings endowed with life, and entering into relation both with one another and the human race. So it is in the world of commodities with the products of men's hands. This I call the Fetishism which attaches itself to the products of labour,² so soon as they are produced as commodities, and which is therefore inseparable from the production of commodities.

This Fetishism of commodities has its origin, as the foregoing analysis has already shown, in the peculiar social character of the labour that produces them.

As a general rule, articles of utility become commodities, only because they are products of the labour of private individuals or groups of individuals who carry on their work independently of each other. The sum total of the labour of all these private individuals forms the aggregate labour of society. Since the producers do not come into social contact with each other until they exchange their products, the specific social character of each producer's labour does not show itself except in the act of exchange. In other words, the labour of the individual asserts itself as a part of the labour of society, only by means of the relations which the act of exchange establishes directly between the products, and indirectly, through them, between the producers. To the latter, therefore, the relations connecting the labour of one individual with that of the rest appear, not as direct social relations between individuals at work, but as what they really are, material relations between persons and social relations between things. It is only by being exchanged that the products of labour acquire, as values, one uniform social status, distinct from their varied forms of existence as objects of utility. This division of a product into a useful thing and a value becomes practically important, only when exchange has acquired such an extension that useful articles are produced for the purpose of being exchanged, and their character as values has therefore to be taken into account, beforehand, during production. From this moment the labour of the individual producer acquires socially a two-

2. By analogy with religious fetishism, the attribution of magical or divine power to objects. Similarly, according to Marx, we impute to commodities a life of their own (and a seemingly inher-

ent value). We treat as relations between people what are in fact relations between commodities and people, thereby attributing human powers to things.

fold character. On the one hand, it must, as a definite useful kind of labour, satisfy a definite social want, and thus hold its place as part and parcel of the collective labour of all, as a branch of a social division of labour that has sprung up spontaneously. On the other hand, it can satisfy the manifold wants of the individual producer himself, only in so far as the mutual exchangeability of all kinds of useful private labour is an established social fact, and therefore the private useful labour of each producer ranks on an equality with that of all others. The equalisation of the most different kinds of labour can be the result only of an abstraction from their inequalities, or of reducing them to their common denominator, viz., expenditure of human labour-power or human labour in the abstract. The two-fold social character of the labour of the individual appears to him, when reflected in his brain, only under those forms which are impressed upon that labour in every-day practice by the exchange of products. In this way, the character that his own labour possesses of being socially useful takes the form of the condition, that the product must be not only useful, but useful for others, and the social character that his particular labour has of being the equal of all other particular kinds of labour, takes the form that all the physically different articles that are the products of labour, have one common quality, viz., that of having value.

Hence, when we bring the products of our labour into relation with each other as values, it is not because we see in these articles the material receptacles of homogeneous human labour. Quite the contrary: whenever, by an exchange, we equate as values our different products, by that very act, we also equate, as human labour, the different kinds of labour expended upon them. We are not aware of this, nevertheless we do it. Value, therefore, does not stalk about with a label describing what it is. It is value, rather, that converts every product into a social hieroglyphic. Later on, we try to decipher the hieroglyphic, to get behind the secret of our own social products; for to stamp an object of utility as a value, is just as much a social product as language. The recent scientific discovery, that the products of labour, so far as they are values, are but material expressions of the human labour spent in their production, marks, indeed, an epoch in the history of the development of the human race, but, by no means, dissipates the mist through which the social character of labour appears to us to be an objective character of the products themselves. The fact, that in the particular form of production with which we are dealing, viz., the production of commodities, the specific social character of private labour carried on independently, consists in the equality of every kind of that labour, by virtue of its being human labour, which character, therefore, assumes in the product the form of value—this fact appears to the producers, notwithstanding the discovery above referred to, to be just as real and final, as the fact, that, after the discovery by science of the component gases of air, the atmosphere itself remained unaltered.

What, first of all, practically concerns producers when they make in exchange, is the question, how much of some other product they get for their own? in what proportions the products are exchangeable? When these proportions have, by custom, attained a certain stability, they appear to result from the nature of the products, so that, for instance, one ton of iron and two ounces of gold appear as naturally to be of equal value as a pound of

gold and a pound of iron in spite of their different physical and chemical qualities appear to be of equal weight. The character of having value, when once impressed upon products, obtains fixity only by reason of their acting and re-acting upon each other as quantities of value. These quantities vary continually, independently of the will, foresight and action of the producers. To them, their own social action takes the form of the action of objects, which rule the producers instead of being ruled by them. It requires a fully developed production of commodities before, from accumulated experience alone, the scientific conviction springs up, that all the different kinds of private labour, which are carried on independently of each other, and yet as spontaneously developed branches of the social division of labour, are continually being reduced to the quantitative proportions in which society requires them. And why? Because, in the midst of all the accidental and ever fluctuating exchange-relations between the products, the labour-time socially necessary for their production forcibly asserts itself like an overriding law of Nature. The law of gravity thus asserts itself when a house falls about our ears. The determination of the magnitude of value by labour-time is therefore a secret, hidden under the apparent fluctuations in the relative values of commodities. Its discovery, while removing all appearance of mere accidentality from the determination of the magnitude of the values of products, yet in no way alters the mode in which that determination takes place.

Man's reflections on the forms of social life, and consequently, also, his scientific analysis of those forms, take a course directly opposite to that of their actual historical development. He begins, *post festum*,³ with the results of the process of development ready to hand before him. The characters that stamp products as commodities, and whose establishment is a necessary preliminary to the circulation of commodities, have already acquired the stability of natural, self-understood forms of social life, before man seeks to decipher, not their historical character, for in his eyes they are immutable, but their meaning. Consequently it was the analysis of the prices of commodities that alone led to the determination of the magnitude of value, and it was the common expression of all commodities in money that alone led to the establishment of their characters as values. It is, however, just this ultimate money-form of the world of commodities that actually conceals, instead of disclosing, the social character of private labour, and the social relations between the individual producers. When I state that coats or boots stand in a relation to linen, because it is the universal incarnation of abstract human labour, the absurdity of the statement is self-evident. Nevertheless, when the producers of coats and boots compare those articles with linen, or, what is the same thing, with gold or silver, as the universal equivalent, they express the relation between their own private labour and the collective labour of society in the same absurd form.

The categories of bourgeois economy consist of such like forms. They are forms of thought expressing with social validity the conditions and relations of a definite, historically determined mode of production, viz., the production of commodities. The whole mystery of commodities, all the magic and necromancy that surrounds the products of labour as long as they take the form

3. After the feast (Latin); after the fact, too late.

of commodities, vanishes therefore, so soon as we come to other forms of production.

Since Robinson Crusoe's⁴ experiences are a favourite theme with political economists, let us take a look at him on his island. Moderate though he be, yet some few wants he has to satisfy, and must therefore do a little useful work of various sorts, such as making tools and furniture, taming goats, fishing and hunting. Of his prayers and the like we take no account, since they are a source of pleasure to him, and he looks upon them as so much recreation. In spite of the variety of his work, he knows that his labour, whatever its form, is but the activity of one and the same Robinson, and consequently, that it consists of nothing but different modes of human labour. Necessity itself compels him to apportion his time accurately between his different kinds of work. Whether one kind occupies a greater space in his general activity than another, depends on the difficulties, greater or less as the case may be, to be overcome in attaining the useful effect aimed at. This our friend Robinson soon learns by experience, and having rescued a watch, ledger, and pen and ink from the wreck, commences, like a true-born Briton, to keep a set of books. His stock-book contains a list of the objects of utility that belong to him, of the operations necessary for their production; and lastly, of the labour-time that definite quantities of those objects have, on an average, cost him. All the relations between Robinson and the objects that form this wealth of his own creation, are here so simple and clear as to be intelligible without exertion, even to Mr. Sedley Taylor.⁵ And yet those relations contain all that is essential to the determination of value.

Let us now transport ourselves from Robinson's island bathed in light to the European middle ages shrouded in darkness. Here, instead of the independent man, we find everyone dependent; serfs and lords, vassals and suzerains, laymen and clergy. Personal dependence here characterises the social relations of production just as much as it does the other spheres of life organised on the basis of that production. But for the very reason that personal dependence forms the ground-work of society, there is no necessity for labour and its products to assume a fantastic form different from their reality. They take the shape, in the transactions of society, of services in kind and payments in kind. Here the particular and natural form of labour, and not, as in a society based on production of commodities, its general abstract form is the immediate social form of labour. Compulsory labour is just as properly measured by time, as commodity-producing labour, but every serf knows that what he expends in the service of his lord, is a definite quantity of his own personal labour-power. The tithe to be rendered to the priest is more matter of fact than his blessing. No matter, then, what we may think of the parts played by the different classes of people themselves in this society, the social relations between individuals in the performance of their labour, appear at all events as their own mutual personal relations, and are not disguised under the shape of social relations between the products of labour.

4. The hero and title character of Daniel Defoe's 1719–20 novel, an English sailor shipwrecked for 24 years on a small tropical island. He is discussed by some political economists—including Adam Smith (1723–1790) and Jean-Jacques Rousseau (1712–1778)—who base their analyses of produc-

tion on the solitary independent worker.

5. A Fellow of Trinity College, Cambridge (1834–1920), who wrote both about musical sounds and harmony and about the relationship between capital and labor.

For an example of labour in common or directly associated labour, we have no occasion to go back to that spontaneously developed form which we find on the threshold of the history of all civilised races. We have one close at hand in the patriarchal industries of a peasant family, that produces corn, cattle, yarn, linen, and clothing for home use. These different articles are, as regards the family, so many products of its labour, but as between themselves, they are not commodities. The different kinds of labour, such as tillage, cattle tending, spinning, weaving and making clothes, which result in the various products, are in themselves, and such as they are, direct social functions, because functions of the family, which, just as much as a society based on the production of commodities, possesses a spontaneously developed system of division of labour. The distribution of the work within the family, and the regulation of the labour-time of the several members, depend as well upon differences of age and sex as upon natural conditions varying with the seasons. The labour-power of each individual, by its very nature, operates in this case merely as a definite portion of the whole labour-power of the family, and therefore, the measure of the expenditure of individual labour-power by its duration, appears here by its very nature as a social character of their labour.

Let us now picture to ourselves, by way of change, a community of free individuals, carrying on their work with the means of production in common, in which the labour-power of all the different individuals is consciously applied as the combined labour-power of the community. All the characteristics of Robinson's labour are here repeated, but with this difference, that they are social, instead of individual. Everything produced by him was exclusively the result of his own personal labour, and therefore simply an object of use for himself. The total product of our community is a social product. One portion serves as fresh means of production and remains social. But another portion is consumed by the members as means of subsistence. A distribution of this portion amongst them is consequently necessary. The mode of this distribution will vary with the productive organisation of the community, and the degree of historical development attained by the producers. We will assume, but merely for the sake of a parallel with the production of commodities, that the share of each individual producer in the means of subsistence is determined by his labour-time. Labour-time would, in that case, play a double part. Its apportionment in accordance with a definite social plan maintains the proper proportion between the different kinds of work to be done and the various wants of the community. On the other hand, it also serves as a measure of the portion of the common labour borne by each individual, and of his share in the part of the total product destined for individual consumption. The social relations of the individual producers, with regard both to their labour and to its products, are in this case perfectly simple and intelligible, and that with regard not only to production but also to distribution.

The religious world is but the reflex of the real world. And for a society based upon the production of commodities, in which the producers in general enter into social relations with one another by treating their products as commodities and values, whereby they reduce their individual private labour to the standard of homogeneous human labour—for such a society,

Christianity with its *cultus*⁶ of abstract man, more especially in its bourgeois developments, Protestantism, Deism,⁷ &c., is the most fitting form of religion. In the ancient Asiatic and other ancient modes of production, we find that the conversion of products into commodities, and therefore the conversion of men into producers of commodities, holds a subordinate place, which, however, increases in importance as the primitive communities approach nearer and nearer to their dissolution. Trading nations, properly so called, exist in the ancient world only in its interstices, like the gods of Epicurus in the Intermundia,⁸ or like Jews in the pores of Polish society. Those ancient social organisms of production are, as compared with bourgeois society, extremely simple and transparent. But they are founded either on the immature development of man individually, who has not yet severed the umbilical cord that unites him with his fellowmen in a primitive tribal community, or upon direct relations of subjection. They can arise and exist only when the development of the productive power of labour has not risen beyond a low stage, and when, therefore, the social relations within the sphere of material life, between man and man, and between man and Nature, are correspondingly narrow. This narrowness is reflected in the ancient worship of Nature, and in the other elements of the popular religions. The religious reflex of the real world can, in any case, only then finally vanish, when the practical relations of every-day life offer to man none but perfectly intelligible and reasonable relations with regard to his fellowmen and to Nature.

The life-process of society, which is based on the process of material production, does not strip off its mystical veil until it is treated as production by freely associated men, and is consciously regulated by them in accordance with a settled plan. This, however, demands for society a certain material ground-work or set of conditions of existence which in their turn are the spontaneous product of a long and painful process of development.

Political Economy has indeed analysed, however incompletely, value and its magnitude, and has discovered what lies beneath these forms. But it has never once asked the question why labour is represented by the value of its product and labour-time by the magnitude of that value. These formulæ, which bear it stamped upon them in unmistakable letters that they belong to a state of society, in which the process of production has the mastery over man, instead of being controlled by him, such formulæ appear to the bourgeois intellect to be as much a self-evident necessity imposed by Nature as productive labour itself. Hence forms of social production that preceded the bourgeois form, are treated by the bourgeoisie in much the same way as the Fathers of the Church⁹ treated pre-Christian religions.

To what extent some economists are misled by the Fetishism inherent in commodities, or by the objective appearance of the social characteristics of labour, is shown, amongst other ways, by the dull and tedious quarrel over the part played by Nature in the formation of exchange-value. Since exchange-value is a definite social manner of expressing the amount of labour

6. Care of, adoration, worship (Latin).

7. Belief in a supreme being as the source of existence that rejects the supernatural doctrines of Christianity and the influence or revelation of God in the universe, stressing instead the importance of reason and ethical conduct.

8. The spaces between the worlds (Latin). Epicurus: (341–270 B.C.E.), Greek philosopher who held that the gods had nothing to do with human affairs.

9. Early Christian writers who established Christian doctrine before the 8th century.

bestowed upon object, Nature has no more to do with it, than it has in fixing the course of exchange.

The mode of production in which the product takes the form of a commodity, or is produced directly for exchange, is the most general and most embryonic form of bourgeois production. It therefore makes its appearance at an early date in history, though not in the same predominating and characteristic manner as now-a-days. Hence its Fetish character is comparatively easy to be seen through. But when we come to more concrete forms, even this appearance of simplicity vanishes. Whence arose the illusions of the monetary system? To it gold and silver, when serving as money, did not represent a social relation between producers but were natural objects with strange social properties. And modern economy, which looks down with such disdain on the monetary system, does not its superstition come out as clear as noon-day, whenever it treats of capital? How long is it since economy discarded the physiocratic illusion, that rents grow out of the soil and not out of society?¹

But not to anticipate, we will content ourselves with yet another example relating to the commodity-form. Could commodities themselves speak, they would say: Our use-value may be a thing that interests men. It is no part of us as objects. What, however, does belong to us as objects, is our value. Our natural intercourse as commodities proves it. In the eyes of each other we are nothing but exchange-values. Now listen how those commodities speak through the mouth of the economist. "Value"—(*i.e.*, exchange-value) "is a property of things, riches"—(*i.e.*, use-value) "of man. Value, in this sense, necessarily implies exchanges, riches do not." "Riches" (use-value) "are the attribute of men, value is the attribute of commodities. A man or a community is rich, a pearl or a diamond is valuable. . . . A pearl or a diamond is valuable" as a pearl or diamond. So far no chemist has ever discovered exchange-value either in a pearl or a diamond. The economic discoverers of this chemical element, who by-the-by lay special claim to critical acumen, find however that the use-value of objects belongs to them independently of their material properties, while their value, on the other hand, forms a part of them as objects. What confirms them in this view, is the peculiar circumstance that the use-value of objects is realised without exchange, by means of a direct relation between the objects and man, while, on the other hand, their value is realised only by exchange, that is, by means of a social process. Who fails here to call to mind our good friend, Dogberry, who informs neighbour Seacoal, that, "To be a well-favoured man is the gift of fortune; but reading and writing comes by Nature."²

From *Chapter 10. The Working-Day*

SECTION 5. THE STRUGGLE FOR A NORMAL WORKING-DAY.

COMPULSORY LAWS FOR THE EXTENSION OF THE WORKING-DAY FROM THE MIDDLE OF THE 14TH TO THE END OF THE 17TH CENTURY

"What is a working-day? What is the length of time during which capital may consume the labour-power whose daily value it buys? How far may the work-

1. The Physiocrats, late-18th-century French economists who were proponents of free trade, believed that agriculture is the source of all wealth.
2. Shakespeare, *Much Ado about Nothing* (ca.

1598), 3.3.13–14 (slightly misquoted). Dogberry is a comic character, the commander of the watch; Seacoal is one of the watchman.

ing-day be extended beyond the working-time necessary for the reproduction of labour-power itself?" It has been seen that to these questions capital replies: the working-day contains the full 24 hours, with the deduction of the few hours of repose without which labour-power absolutely refuses its services again. Hence it is self-evident that the labourer is nothing else, his whole life through, than labour-power, that therefore all his disposable time is by nature and law labour-time, to be devoted to the self-expansion of capital. Time for education, for intellectual development, for the fulfilling of social functions and for social intercourse, for the free-play of his bodily and mental activity, even the rest time of Sunday (and that in a country of Sabbatarians!)—moonshine!³ But in its blind unrestrainable passion, its werewolf hunger for surplus-labour, capital oversteps not only the moral, but even the merely physical maximum bounds of the working-day. It usurps the time for growth, development, and healthy maintenance of the body. It steals the time required for the consumption of fresh air and sunlight. It higgles⁴ over a meal-time, incorporating it where possible with the process of production itself, so that food is given to the labourer as to a mere means of production, as coal is supplied to the boiler, grease and oil to the machinery. It reduces the sound sleep needed for the restoration, reparation, refreshment of the bodily powers to just so many hours of torpor as the revival of an organism, absolutely exhausted, renders essential. It is not the normal maintenance of the labour-power which is to determine the limits of the working-day; it is the greatest possible daily expenditure of labour-power, no matter how diseased, compulsory, and painful it may be, which is to determine the limits of the labourers' period of repose. Capital cares nothing for the length of life of labour-power. All that concerns it is simply and solely the maximum of labour-power, that can be rendered fluent in a working-day. It attains this end by shortening the extent of the labourer's life, as a greedy farmer snatches increased produce from the soil by robbing it of its fertility.

The capitalistic mode of production (essentially the production of surplus-value,⁵ the absorption of surplus-labour), produces thus, with the extension of the working-day, not only the deterioration of human labour-power by robbing it of its normal, moral and physical, conditions of development and function. It produces also the premature exhaustion and death of this labour-power itself. It extends the labourer's time of production during a given period by shortening his actual life-time.

But the value of the labour-power includes the value of the commodities necessary for the reproduction of the worker, or for the keeping up of the working-class. If then the unnatural extension of the working-day, that capital necessarily strives after in its unmeasured passion for self-expansion, shortens the length of life of the individual labourer, and therefore the duration of his labour-power, the forces used up have to be replaced at a more rapid rate and the sum of the expenses for the reproduction of labour-power will be greater; just as in a machine the part of its value to be reproduced every day is greater the more rapidly the machine is worn out. It would seem

3. Nonsense, foolishness. Sabbatarians: those who favor strict observance of the Sabbath.

4. Haggles.

5. The difference between the amount of capital

needed to produce something and the amount of capital that product is worth; it is created from labor power.

therefore that the interest of capital itself points in the direction of a normal work-day.

The slave-owner buys his labourer as he buys his horse. If he loses his slave, he loses capital that can only be restored by new outlay in the slave-market. But "the rice-grounds of Georgia, or the swamps of the Mississippi may be fatally injurious to the human constitution; but the waste of human life which the cultivation of these districts necessitates, is not so great that it cannot be repaired from the teeming preserves of Virginia and Kentucky. Considerations of economy, moreover, which, under a natural system, afford some security for human treatment by identifying the master's interest with the slave's preservation, when once trading in slaves is practised, become reasons for racking to the uttermost the toil of the slave; for, when his place can at once be supplied from foreign preserves, the duration of his life becomes a matter of less moment than its productiveness while it lasts. It is accordingly a maxim of slave management, in slave-importing countries, that the most effective economy is that which takes out of the human chattel in the shortest space of time the utmost amount of exertion it is capable of putting forth. It is in tropical culture, where annual profits often equal the whole capital of plantations, that negro life is most recklessly sacrificed. It is the agriculture of the West Indies, which has been for centuries prolific of fabulous wealth, that has engulfed millions of the African race. It is in Cuba, at this day, whose revenues are reckoned by millions, and whose planters are princes, that we see in the servile class, the coarsest fare, the most exhausting and unremitting toil, and even the absolute destruction of a portion of its numbers every year."⁶

*Mutato nomine de te fabula narratur.*⁷ For slave-trade read labour-market, for Kentucky and Virginia, Ireland and the agricultural districts of England, Scotland, and Wales, for Africa, Germany. We heard how over-work thinned the ranks of the bakers in London. Nevertheless, the London labour-market is always over-stocked with German and other candidates for death in the bakeries. Pottery, as we saw, is one of the shortest-lived industries. Is there any want therefore of potters? Josiah Wedgwood,⁸ the inventor of modern pottery, himself originally a common workman, said in 1785 before the House of Commons that the whole trade employed from 15,000 to 20,000 people. In the year 1861 the population alone of the town centres of this industry in Great Britain numbered 101,302. "The cotton trade has existed for ninety years . . . It has existed for three generations of the English race, and I believe I may safely say that during that period it has destroyed nine generations of factory operatives."⁹ * * *

What experience shows to the capitalist generally is a constant excess of population, *i.e.*, an excess in relation to the momentary requirements of surplus-labour-absorbing capital, although this excess is made up of generations of human beings stunted, short-lived, swiftly replacing each other, plucked, so to say, before maturity. And, indeed, experience shows to the intelligent observer with what swiftness and grip the capitalist mode of production,

9. Quoted from a speech delivered in the House of Commons, April 27, 1863. The following ellipsis is the translators'.

dating, historically speaking, only from yesterday, has seized the vital power of the people by the very root—shows how the degeneration of the industrial population is only retarded by the constant absorption of primitive and physically uncorrupted elements from the country—shows how even the country labourers, in spite of fresh air and the principle of natural selection, that works so powerfully amongst them, and only permits the survival of the strongest, are already beginning to die off. Capital that has such good reasons for denying the sufferings of the legions of workers that surround it, is in practice moved as much and as little by the sight of the coming degradation and final depopulation of the human race, as by the probable fall of the earth into the sun. In every stock-jobbing swindle every one knows that some time or other the crash must come, but every one hopes that it may fall on the head of his neighbour, after he himself has caught the shower of gold and placed it in safety. *Après moi le déluge!*¹ is the watchword of every capitalist and of every capitalist nation. Hence Capital is reckless of the health or length of life of the labourer, unless under compulsion from society. To the out-cry as to the physical and mental degradation, the premature death, the torture of over-work, it answers: Ought these to trouble us since they increase our profits? But looking at things as a whole, all this does not, indeed, depend on the good or ill will of the individual capitalist. Free competition brings out the inherent laws of capitalist production, in the shape of external coercive laws having power over every individual capitalist.

The establishment of a normal working-day is the result of centuries of struggle between capitalist and labourer. The history of this struggle shows two opposed tendencies. Compare, *e.g.*, the English factory legislation of our time with the English Labour Statutes from the 14th century to well into the middle of the 18th. Whilst the modern Factory Acts² compulsorily shortened the working-day, the earlier statutes tried to lengthen it by compulsion. Of course the pretensions of capital in embryo—when, beginning to grow, it secures the right of absorbing a *quantum sufficit*³ of surplus-labour, not merely by the force of economic relations, but by the help of the State—appear very modest when put face to face with the concessions that, growling and struggling, it has to make in its adult condition. It takes centuries ere the “free” labourer, thanks to the development of capitalistic production, agrees, *i.e.*, is compelled by social conditions, to sell the whole of his active life, his very capacity for work, for the price of the necessaries of life, his birthright for a mess of pottage.⁴ Hence it is natural that the lengthening of the work-day, which capital, from the middle of the 14th to the end of the 17th century, tries to impose by State-measures on adult labourers, approximately coincides with the shortening of the working-day which, in the second half of the 19th century, has here and there been effected by the State to prevent the coining of children’s blood into capital. That which to-day, *e.g.*, in the State of Massachusetts, until recently the freest State of the North-American Republic, has been proclaimed as the statutory limit of the labour of children under 12,⁵ was

1867

From Letter from Friedrich Engels to Joseph Bloch¹

London, September 21–22, 1890

According to the materialist conception of history, the *ultimately* determining element in history is the production and reproduction of real life. More than this neither Marx nor I have ever asserted. Hence if somebody twists this into saying that the economic element is the *only* determining one, he transforms that proposition into a meaningless, abstract, senseless phrase. The economic situation is the basis, but the various elements of the superstructure: political forms of the class struggle and its results, to wit: constitutions established by the victorious class after a successful battle, etc., juridical forms, and then even the reflexes of all these actual struggles in the brains of the participants, political, juristic, philosophical theories, religious views and their further development into systems of dogmas, also exercise their influence upon the course of the historical struggles and in many cases preponderate in determining their *form*. There is an interaction of all these elements in which, amid all the endless host of accidents (that is, of things and events, whose inner connection is so remote or so impossible of proof that we can regard it as non-existent, as negligible) the economic movement finally asserts itself as necessary. Otherwise the application of the theory to any period of history one chose would be easier than the solution of a simple equation of the first degree.

We make our history ourselves, but, in the first place, under very definite assumptions and conditions. Among these the economic ones are ultimately decisive. But the political ones, etc., and indeed even the traditions which haunt human minds also play a part, although not the decisive one. The Prussian state also arose and developed from historical, ultimately economic causes. But it could scarcely be maintained without pedantry that among the many small states of North Germany, Brandenburg² was specifically determined by economic necessity to become the great power embodying the economic, linguistic and, after the Reformation, also the religious difference between North and South, and not by other elements as well (above all by its entanglement with Poland, owing to the possession of Prussia, and hence with international political relations—which were indeed also decisive in the formation of the Austrian dynastic power). Without making oneself ridiculous it would be a difficult thing to explain in terms of economics the existence of every small state in Germany, past and present, or the origin of the High German consonant shifts,³ which widened the geographical wall of

1. A socialist (1871–1936), who in the 1890s was a student at the University of Berlin. The translator is not named.

2. Region that became the core of the kingdom of

Prussia (1701–1871) and of the German Empire (1871–1918).

3. Linguistic changes (ca. 500–700 C.E.) that distinguish the German of central and southern Ger-

partition, formed by the mountains from the Sudetic range to the Taunus,⁴ to the extent of a regular fissure across all Germany.

In the second place, however, history is made in such a way that the final result always arises from conflicts between many individual wills, of which each again has been made what it is by a host of particular conditions of life. Thus there are innumerable intersecting forces, an infinite series of parallelograms of forces which give rise to one resultant—the historical event. This may again itself be viewed as the product of a power which works as a whole, *unconsciously* and without volition. For what each individual wills is obstructed by everyone else, and what emerges is something that no one willed. Thus past history proceeds in the manner of a natural process and is essentially subject to the same laws of motion. But from the fact that individual wills—of which each desires what he is impelled to by his physical constitution and external, in the last resort economic, circumstances (either his own personal circumstances or those of society in general)—do not attain what they want, but are merged into a collective mean, a common resultant, it must not be concluded that their value is equal to zero. On the contrary, each contributes to the resultant and is to this degree involved in it.

I would furthermore ask you to study this theory from its original sources and not at second-hand; it is really much easier. Marx hardly wrote anything in which it did not play a part. But especially *The Eighteenth Brumaire of Louis Bonaparte* is a most excellent example of its application. There are also many allusions in *Capital*.⁵ Then may I also direct you to my writings: *Herr Eugen Dühring's Revolution in Science* and *Ludwig Feuerbach and the End of Classical German Philosophy*,⁶ in which I have given the most detailed account of historical materialism which, as far as I know, exists.

Marx and I are ourselves partly to blame for the fact that the younger people sometimes lay more stress on the economic side than is due to it. We had to emphasise the main principle *vis-à-vis* our adversaries, who denied it, and we had not always the time, the place or the opportunity to allow the other elements involved in the interaction to come into their rights. But when it was a case of presenting a section of history, that is, of a practical application, it was a different matter and there no error was possible. Unfortunately, however, it happens only too often that people think they have fully understood a new theory and can apply it without more ado from the moment they have mastered its main principles, and even those not always correctly. And I cannot exempt many of the more recent "Marxists" from this reproach, for the most amazing rubbish has been produced in this quarter, too.

* * *

1890

many (High German, the official dialect) from the speech of northern Germany (Low German); for example, *hopen* (to hope) becomes in High German *hoffen*, and *Plante* (plant) becomes *Pflanze*.

4. A mountain range in southwest central Germany. "The Sudetic range": the Sudetes, moun-

tains between the Czech Republic and Poland.

5. Vol. 1 was published in 1867, vols. 2 and 3 in 1893 and 1894; *The Eighteenth Brumaire* first appeared in 1852.

6. Published in 1886; *Dühring's Revolution in Science*, now known as *Anti-Dühring*, was published in 1877-78.

CHARLES BAUDELAIRE

1821–1867

Charles Baudelaire, who wanted to include the right to contradict oneself among the Rights of Man, made self-contradiction into a quintessentially modern form of poetics. But his canonization as a major poet would have surprised both him and his contemporaries. Although his book *Les Fleurs du mal* (1857, *The Flowers of Evil*) is now considered a masterpiece, it had an inauspicious start. The volume explicitly addresses a “hypocritical reader” who will *not* want the self-image the poems depict. The book’s notorious 1857 obscenity trial (which required Baudelaire to remove six poems and pay a fine) seemed to enact the rejection the poems predicted, but it also lent the author’s celebrity an unseemly luster. Few of Baudelaire’s friends could have foreseen a time when he would be hailed as a genius. And even *they* would not have guessed how many roles literary historians would assign to him.

Viewed by contemporaries as a late, decadent Romantic or as a Parnassian lover of art for art’s sake, Baudelaire is often described as the founder of what would later be known as symbolism, especially in his theory of “universal analogy” and in his early sonnet “Correspondances.” But what was peculiarly modern about Baudelaire was perhaps best described by one of his last editors, who called him “that strange classic of nonclassical things,” or by the poet Paul Claudel (1868–1955), who said he combined “the style of Racine with the style of a journalist of the Second Empire.” Theorists of Romanticism, Parnassianism, symbolism, modernism and even realism have all claimed him as a key figure, but in very different—sometimes antithetical—ways. It is hard to imagine a more fitting tribute to Baudelaire’s practice of self-contradiction.

Baudelaire’s father, François, was a sixty-year-old ex-priest and widower when he married Caroline Dufays, a penniless orphan, who was twenty-six. When François died in 1827, he left Caroline with a twenty-two-year-old son, Alphonse, from his first marriage, along with her own five-year-old son, Charles. Charles later fondly remembered his mother as a beautiful widow whom he had all to himself during this period, but in 1828 she married a handsome army officer, Jacques Aupick, in some haste. It is not known when, or whether, Charles ever learned of the birth of his stillborn half-sister in December 1828.

Jacques Aupick’s career in the military was remarkably successful; he was promoted to general on the same day that Charles passed the *baccalauréat* exam (despite having been expelled from his Parisian high school earlier in 1839 for swallowing rather than surrendering a note from a classmate). For the next two years, Baudelaire lived a bohemian life among artists and students, wrote poetry, contracted gonorrhea and sizable debts, and generally enjoyed life. His stepfather and half-brother, however, foreseeing only ruin from his failure to establish himself professionally, paid his debts, borrowed money from his patrimony, and sent him on what was planned as a yearlong voyage to India to separate him from “the slippery streets of Paris” (as Aupick put it) before he turned twenty-one. Baudelaire did indeed journey around Africa as far as Réunion Island, but caught a return ship there back to France. Though it failed to protect Charles’s future bank account, the trip provided him with a different kind of capital: a store of poetic images and themes he was to draw on in his poetry.

Once back in Paris, Baudelaire fell in love with a beautiful mixed-race actress named Jeanne Duval. Along with his brief liaisons with other women, the poet maintained a complicated, tempestuous, sometimes domestic relationship with Jeanne for most of his life. When he turned twenty-one he came into the inheritance left him by his father—the interest from which would have given him an annual income of 2,400 francs (approximately the starting salary for a typical civil service job)—and quickly spent half of it. His mother, alarmed at the speed with which his funds were

disappearing, imposed a legal mediator between him and what remained. For the next twenty years, Baudelaire's correspondence with editors and colleagues records his attempts to earn money through his writings, while the frequent letters he sent to his mother express both his desire to play on her maternal sympathies and his rage against the permanent infantilization his financial situation imposed. In March 1866 he suffered a stroke, undoubtedly caused by end-stage syphilis, while on an unsuccessful lecture tour in Belgium. The stroke left him partially paralyzed and aphasic, able to utter only the single word "crénom!" (from *sacré nom de Dieu!* or "holy name of God!"). He died in a Paris clinic seventeen months later, his mother by his side.

Baudelaire's first publications were *Salons*, reviews of the annual art exhibit at the Louvre museum. Unlike other rebels against society who were frequently supported by the same bourgeois world they scorned, Baudelaire was fully aware of the often perverse and hated interdependency between artists and patrons, beginning his *Salon of 1845* by describing the economic purpose of such annual shows: "One must please those on whose resources one wants to live." In 1847 he discovered the work of the American poet EDGAR ALLAN POE (1809–1849), whom he considered a fellow martyr to bourgeois values. Paradoxically, his translations of Poe would earn Baudelaire more money than all his other works put together; his introductions to the translations create a portrait of poetic genius that still shapes the French view of Poe to this day. He tried his hand at theater, wrote about drugs and addictions, published often contradictory theoretical essays in reviews, and started to publish his poetry; but *Les Fleurs du mal* did not appear until 1857, just months after the death of Jacques Aupick. When the volume drew legal charges of immorality, he removed the six "condemned" poems and published a new edition. The offending poems all dealt with female—particularly lesbian—sexuality (an early title of *Les Fleurs du mal* had been *Les Lesbiennes*). Baudelaire joined his contemporary THÉOPHILE GAUTIER and others in using lesbianism to get at the nature of art for art's sake. His descriptions of female sexuality were considered not only immoral but a sign of "realism," then a term of condemnation for works exposing frank, unidealized, and unpleasant realities. When, in 1949, the ban was finally lifted, the poems were defended on the grounds that they were symbolic, not realistic.

In everything he wrote (or sometimes in two equal and opposite texts), Baudelaire depicted a human nature profoundly at odds with itself. In the first section of *Les Fleurs du mal*, titled "Spleen et Idéal," the poet is torn between an aspiration toward an ideal ("Idéal") that can neither be realized nor renounced, and an attraction to degradation ("Spleen") that can neither be accepted nor denied. "Spleen," an English term used by eighteenth-century poets to mean "melancholy," here designates "depression," "boredom," "disgust," "abjection," "sin," and even "materiality." Baudelaire's poetic speaker becomes addicted to his torture, desiring what he flees and fleeing what he desires while remaining excruciatingly aware of his impossible position, which then becomes the subject of the poems.

In his later work, this metaphysical, aesthetic, or psychological self-division is subject to a further force of estrangement: the historical process. In the second edition of *Les Fleurs du mal* (1861), Baudelaire added a section called "Tableaux Parisiens" ("Parisian Scenes"). Responding to the reconstructions of Paris undertaken during the Second Empire, Baudelaire wrote (in his poem "Le Cygne"): "Paris is changing, but nothing in my melancholy has budged. . . . The form of a city changes faster, alas, than the heart of a man." The anachronistic relationship between man and his desires is exacerbated by the speed of modernization. Even alienation does not have a permanent form. It is this divided perception of modernity—not a simple process of change but something partly unchanging and partly fleeting, partly eternal and partly historical—that Baudelaire discusses in our selection, "The Painter of Modern Life" (1863).

"The Painter of Modern Life," first published in the widely circulated newspaper *Le Figaro*, sketches out an unprecedented theory of modern aesthetics. Many later critics have felt that the essay should have been about Édouard Manet, with whom Baudelaire was soon to become friends—and who they take to be the true "painter

of modern life"—in preference to Constantin Guys, a minor nineteenth-century draftsman whom history has almost forgotten. But Baudelaire begins his essay with a plea for minor artists, indicating that what he appreciated in Guys was his *lack* of monumentality—the speed of his sketches, the almost photographic accuracy of his reportage (although Baudelaire scorned photography itself), and perhaps even his ephemerality. Guys captured for Baudelaire the aesthetics of the *flâneur*—an idler on the city streets, filled with curiosity but without goal or interest, made possible by the growth of modern commodity culture and display.

In his long essay, Baudelaire describes two complementary paradigms for the artist: the *flâneur*, who gives himself over to the crowd (Baudelaire calls it a "saintly prostitution of the soul" in his prose poem "Crowds"), and the dandy, who holds himself aloof and unmoved. While the *flâneur* is contextualized by new practices of shopping on the city streets, the dandy resists the promiscuity of buying and selling in general. In his recoil from vulgarity and commerce, the dandy personifies the stance of aristocracy, searching for *distinction* as opposed to the "leveling" that Baudelaire associates with democracy. Baudelaire's "modernity" is thus deeply opposed to the postrevolutionary economic modernization that also informs it.

Both the *flâneur* and the dandy contrast sharply with, but owe part of their appeal to, femininity. In section 11, "In Praise of Cosmetics," Baudelaire goes so far as to see makeup—a sign of theater as well as a sign of femininity—as a paradigm for art. In a violent put-down of the Romantic idealization of nature, he claims that nature can only counsel crime and self-interest, while everything good is a product of restraint and calculation. Hence cosmetics should not try to recover the artlessness of youth ("Nature"), but should frankly seek the beauty of artifice ("Art"). The implication for the modern artist is that everything of value comes through culture, not nature, and that to pretend otherwise leads to a distorted and distorting idealization of a nature that never existed.

Baudelaire thus forged "The Painter of Modern Life" out of a clash between nostalgia for lost aristocratic values and fascination with the contemporary street life of commodity culture. In his poetry and in his prose, he was able to distill from the shocks and chance encounters of the changing city a radically new poetics. Those "slippery streets of Paris" so feared by Jacques Aupick became, for Baudelaire and perhaps for modern art in general, the very substance of modernity.

BIBLIOGRAPHY

Baudelaire's prose works were collected after his death and published in two volumes, *Curiosités esthétiques* (1868) and *L'Art romantique* (1869). An excellent English edition of the main texts is available in two volumes, translated by Jonathan Mayne: *Art in Paris, 1845–1862* (1965) and *The Painter of Modern Life and Other Essays* (1965). Shorter selections can be found in *My Heart Laid Bare*, edited by Peter Quennell, translated by Norman Cameron (1950); *Baudelaire as a Literary Critic*, translated by Lois Boe Hyslop and Francis E. Hyslop Jr. (1964); and *Baudelaire: Writings on Art and Artists*, translated by P. E. Charvet (1972). *Baudelaire*, by Claude Pichois and Jean Ziegler (1987; trans. 1989), is a rich and meticulously researched biography.

Margaret Gilman's study, *Baudelaire the Critic* (1943), provides the classic introduction to Baudelaire's critical writings. Criticism of Baudelaire was for a long time influenced by Théophile Gautier's 1868 introduction to the third edition of *Les Fleurs du mal*. Gautier's Baudelaire was a lover of artifice, an adherent of art for art's sake. A good sampling of critical essays in this mode can be found in Henri Peyre's *Baudelaire: A Collection of Critical Essays* (1962). Early readers took Baudelaire at his word and lamented the bad luck that had given him such a mediocre mother, such a difficult financial situation, and such impossible desires. A study by Jean-Paul Sartre, *Baudelaire* (1946; trans. 1949), reversed this view: Sartre treated Baudelaire as a man who had gotten exactly what he wanted, including the appearance of having wanted something else. Another important critical perspective on Baudelaire's modernity took

shape in the writings of Walter Benjamin, a number of which were published in English as *Charles Baudelaire: A Lyric Poet in the Era of High Capitalism* (1973). His study of Baudelaire was part of an immense project on the Paris Arcades, which was finally published as *Das Passagen-Werk* (1982; trans. 1999, *The Arcades Project*). This work by Benjamin is essential for an understanding of what is modern about Baudelaire.

T. J. Clark's *Painting of Modern Life: Paris in the Art of Manet and His Followers* (1984) takes its title, if little else, from Baudelaire and analyzes art in Paris as if Baudelaire had written about Manet. For more explicit discussions of Baudelaire and modern aesthetics, see David Carrier's *High Art: Charles Baudelaire and the Origins of Modernist Painting* (1996) and J. A. Hiddleston's *Baudelaire and the Art of Memory* (1999). Of the many recent critical studies, four focus on Baudelaire's modernity: essays by Paul de Man in *Blindness and Insight* (1971) and *The Rhetoric of Romanticism* (1984); Timothy Raser, *A Poetics of Art Criticism: The Case of Baudelaire* (1989); Richard Terdiman, *Present Past: Modernity and the Memory Crisis* (1993); and Susan Blood, *Baudelaire and the Aesthetics of Bad Faith* (1997). And finally, an excellent and wide-ranging collection of essays directly addressing Baudelaire's modernity can be found in *Baudelaire and the Poetics of Modernity*, edited by Patricia A. Ward (2001). The annotated bibliography in David Baguley's *Critical Bibliography of French Literature* (1994) is excellent, as are the annual bibliographical updates published by the W. T. Bandy Center for Baudelaire Studies at Vanderbilt University.

From The Painter of Modern Life¹

From I. Beauty, Fashion, and Happiness

The world—and even the world of artists—is full of people who can go to the Louvre,² walk rapidly, without so much as a glance, past rows of very interesting, though secondary, pictures, to come to a rapturous halt in front of a Titian or a Raphael³—one of those that have been most popularized by the engraver's art; then they will go home happy, not a few saying to themselves, 'I know my Museum.' Just as there are people who, having once read Bossuet and Racine,⁴ fancy that they have mastered the history of literature.

Fortunately from time to time there come forward righters of wrong, critics, amateurs, curious enquirers, to declare that Raphael, or Racine, does not contain the whole secret, and that the minor poets too have something good, solid and delightful to offer; and finally that however much we may love *general* beauty, as it is expressed by classical poets and artists, we are no less wrong to neglect *particular* beauty, the beauty of circumstance and the sketch of manners.

It must be admitted that for some years now the world has been mending its ways a little. The value which collectors today attach to the delightful coloured engravings of the last century proves that a reaction has set in in the direction where it was required; Debucourt, the Saint-Aubins⁵ and many others have found their places in the dictionary of artists who are worthy of study. But these represent the past: my concern today is with the painting of manners of the present. The past is interesting not only by reason of the

1. Translated by Jonathan Mayne.

2. The national art museum of France, in Paris.

3. Two famous Italian Renaissance painters, Tiziano Vecellio (ca. 1488–1576) and Raffaello Santi (1483–1520).

4. Jean Racine (1639–1699), quintessential French neoclassical playwright. Jacques-Bénigne

Bossuet (1627–1704), French bishop and neoclassical writer.

5. The brothers Charles (1721–1786) and Gabriel (1724–1780) de Saint-Aubin, along with Philibert-Louis Debucourt (1755–1832), were graphic artists and painters (as was Baudelaire's father).

beauty which could be distilled from it by those artists for whom it was the present, but also precisely because it is the past, for its historical value. It is the same with the present. The pleasure which we derive from the representation of the present is due not only to the beauty with which it can be invested, but also to its essential quality of being present.

* * *

This is in fact an excellent opportunity to establish a rational and historical theory of beauty, in contrast to the academic theory of an unique and absolute beauty; to show that beauty is always and inevitably of a double composition, although the impression that it produces is single—for the fact that it is difficult to discern the variable elements of beauty within the unity of the impression invalidates in no way the necessity of variety in its composition. Beauty is made up of an eternal, invariable element, whose quantity it is excessively difficult to determine, and of a relative, circumstantial element, which will be, if you like, whether severally or all at once, the age, its fashions, its morals, its emotions. Without this second element, which might be described as the amusing, enticing, appetizing icing on the divine cake, the first element would be beyond our powers of digestion or appreciation, neither adapted nor suitable to human nature. I defy anyone to point to a single scrap of beauty which does not contain these two elements.

Let me instance two opposite extremes in history. In religious art the duality is evident at the first glance; the ingredient of eternal beauty reveals itself only with the permission and under the discipline of the religion to which the artist belongs. In the most frivolous work of a sophisticated artist belonging to one of those ages which, in our vanity, we characterize as civilized, the duality is no less to be seen; at the same time the eternal part of beauty will be veiled and expressed if not by fashion, at least by the particular temperament of the artist. The duality of art is a fatal consequence of the duality of man. Consider, if you will, the eternally subsisting portion as the soul of art, and the variable element as its body. That is why Stendhal⁶—an impertinent, teasing, even a disagreeable critic, but one whose impertinences are often a useful spur to reflection—approached the truth more closely than many another when he said that ‘Beauty is nothing else but a promise of happiness.’ This definition doubtless overshoots the mark; it makes Beauty far too subject to the infinitely variable ideal of Happiness; it strips Beauty too neatly of its aristocratic quality: but it has the great merit of making a decided break with the academic error.

I have explained these things more than once before.⁷ And these few lines will already have said enough on the subject for those who have a taste for the diversions of abstract thought. I know, however, that the majority of my own countrymen at least have but little inclination for these, and I myself am impatient to embark upon the positive and concrete part of my subject.

From *III. The Artist, Man of the World, Man of the Crowd, and Child*

Today I want to discourse to the public about a strange man, a man of so powerful and so decided an originality that it is sufficient unto itself and does

6. Pen name of Marie Henri Beyle (1783–1842), French novelist and critic; the quotation is from *De l'amour* (1822), chap. 17.

7. E.g. in the article on “Critical Method” on the occasion of the Exposition Universelle of 1855 [translator’s note].

not even seek approval. Not a single one of his drawings is signed, if by signature you mean that string of easily forgeable characters which spell a name and which so many other artists affix ostentatiously at the foot of their least important trifles. Yet all his works are signed—with his dazzling *soul*; and art-lovers who have seen and appreciated them will readily recognize them from the description that I am about to give.

A passionate lover of crowds and incognitos, Monsieur C. G.⁸ carries originality to the point of shyness. Mr. Thackeray,⁹ who, as is well known, is deeply interested in matters of art, and who himself executes the illustrations to his novels, spoke one day of Monsieur G. in the columns of a London review.¹ The latter was furious, as though at an outrage to his virtue. Recently again, when he learnt that I had it in mind to write an appreciation of his mind and his talent, he begged me—very imperiously, I must admit—to suppress his name, and if I must speak of his works, to speak of them as if they were those of an anonymous artist. I will humbly comply with this singular request.

* * *

For ten years I had wanted to get to know Monsieur G., who is by nature a great traveller and cosmopolitan. I knew that for some time he had been on the staff of an English illustrated journal,² and that engravings after his travel-sketches, made in Spain, Turkey and the Crimea, had been published there. Since then I have seen a considerable quantity of those drawings, hastily sketched on the spot, and thus I have been able to *read*, so to speak, a detailed account of the Crimean campaign³ which is much preferable to any other that I know. The same paper had also published, always without signature, a great number of his illustrations of new ballets and operas. When at last I ran him to earth, I saw at once that it was not precisely an *artist*, but rather a *man of the world* with whom I had to do.

* * *

And so, as a first step towards an understanding of Monsieur G., I would ask you to note at once that the mainspring of his genius is *curiosity*.

Do you remember a picture (it really is a picture!), painted—or rather written—by the most powerful pen of our age, and entitled *The Man of the Crowd*?⁴ In the window of a coffee-house there sits a convalescent, pleasantly absorbed in gazing at the crowd, and mingling, through the medium of thought, in the turmoil of thought that surrounds him. But lately returned from the valley of the shadow of death, he is rapturously breathing in all the odours and essences of life; as he has been on the brink of total oblivion, he remembers, and fervently desires to remember, everything. Finally he hurls himself headlong into the midst of the throng, in pursuit of an unknown, half-glimpsed countenance that has, on an instant, bewitched him. Curiosity has become a fatal, irresistible passion!

8. Constantin Guys (1802–1892), prolific draftsman whose sketches of the Crimean War were forerunners of photojournalism.

9. William Makepeace Thackeray (1811–1863), English novelist and satirist.

1. The reference has not been traced [translator's note].

2. *The Illustrated London News* [translator's note].

3. War (1854–56) in which Britain, France, and Sardinia came to the aid of Turkey against Russia.

4. A story by EDGAR ALLAN POE, included among his *Tales* (1845) and translated by Baudelaire in the *Nouvelles Histoires Extraordinaires* [translator's note].

Imagine an artist who was always, spiritually, in the condition of that convalescent, and you will have the key to the nature of Monsieur G.

Now convalescence is like a return towards childhood. The convalescent, like the child, is possessed in the highest degree of the faculty of keenly interesting himself in things, be they apparently of the most trivial. Let us go back, if we can, by a retrospective effort of the imagination, towards our most youthful, our earliest, impressions, and we will recognize that they had a strange kinship with those brightly coloured impressions which we were later to receive in the aftermath of a physical illness, always provided that that illness had left our spiritual capacities pure and unharmed. The child sees everything in a state of newness; he is always *drunk*. Nothing more resembles what we call inspiration than the delight with which a child absorbs form and colour. I am prepared to go even further and assert that inspiration has something in common with a convulsion, and that every sublime thought is accompanied by a more or less violent nervous shock which has its repercussion in the very core of the brain. The man of genius has sound nerves, while those of the child are weak. With the one, Reason has taken up a considerable position; with the other, Sensibility is almost the whole being. But genius is nothing more nor less than *childhood recovered* at will—a childhood now equipped for self-expression with manhood's capacities and a power of analysis which enables it to order the mass of raw material which it has involuntarily accumulated.

* * *

The crowd is his element, as the air is that of birds and water of fishes. His passion and his profession are to become one flesh with the crowd. For the perfect *flâneur*,⁵ for the passionate spectator, it is an immense joy to set up house in the heart of the multitude, amid the ebb and flow of movement, in the midst of the fugitive and the infinite. To be away from home and yet to feel oneself everywhere at home; to see the world, to be at the centre of the world, and yet to remain hidden from the world—such are a few of the slightest pleasures of those independent, passionate, impartial natures which the tongue can but clumsily define. The spectator is a *prince* who everywhere rejoices in his incognito. The lover of life makes the whole world his family, just like the lover of the fair sex who builds up his family from all the beautiful women that he has ever found, or that are—or are not—to be found; or the lover of pictures who lives in a magical society of dreams painted on canvas. Thus the lover of universal life enters into the crowd as though it were an immense reservoir of electrical energy. Or we might liken him to a mirror as vast as the crowd itself; or to a kaleidoscope gifted with consciousness, responding to each one of its movements and reproducing the multiplicity of life and the flickering grace of all the elements of life. He is an 'I' with an insatiable appetite for the 'non-I', at every instant rendering and explaining it in pictures more living than life itself, which is always unstable and fugitive.

* * *

Few men are gifted with the capacity of seeing; there are fewer still who possess the power of expression. So now, at a time when others are asleep,

5. Idler, man-about-town (French).

Monsieur G. is bending over his table, darting on to a sheet of paper the same glance that a moment ago he was directing towards external things, skirmishing with his pencil, his pen, his brush, splashing his glass of water up to the ceiling, wiping his pen on his shirt, in a ferment of violent activity, as though afraid that the image might escape him, cañtankerous though alone, elbowing himself on. And the external world is reborn upon his paper, natural and more than natural, beautiful and more than beautiful, strange and endowed with an impulsive life like the soul of its creator. The phantasmagoria has been distilled from nature. All the raw materials with which the memory has loaded itself are put in order, ranged and harmonized, and undergo that forced idealization which is the result of a childlike perceptiveness—that is to say, a perceptiveness acute and magical by reason of its innocence!

IV. *Modernity*

And so away he goes, hurrying, searching. But searching for what? Be very sure that this man, such as I have depicted him—this solitary, gifted with an active imagination, ceaselessly journeying across the great human desert—has an aim loftier than that of a mere *flâneur*, an aim more general; something other than the fugitive pleasure of circumstance. He is looking for that quality which you must allow me to call 'modernity'; for I know of no better word to express the idea I have in mind. He makes it his business to extract from fashion whatever element it may contain of poetry within history, to distil the eternal from the transitory. Casting an eye over our exhibitions of modern pictures, we are struck by a general tendency among artists to dress all their subjects in the garments of the past. Almost all of them make use of the costumes and furnishings of the Renaissance, just as David⁶ employed the costumes and furnishings of Rome. There is however this difference, that David, by choosing subjects which were specifically Greek or Roman, had no alternative but to dress them in antique garb, whereas the painters of today, though choosing subjects of a general nature and applicable to all ages, nevertheless persist in rigging them out in the costumes of the Middle Ages, the Renaissance or the Orient. This is clearly symptomatic of a great degree of laziness; for it is much easier to decide outright that everything about the garb of an age is absolutely ugly than to devote oneself to the task of distilling from it the mysterious element of beauty that it may contain, however slight or minimal that element may be. By 'modernity' I mean the ephemeral, the fugitive, the contingent, the half of art whose other half is the eternal and the immutable. Every old master has had his own modernity; the great majority of fine portraits that have come down to us from former generations are clothed in the costume of their own period. They are perfectly harmonious, because everything—from costume and coiffure down to gesture, glance and smile (for each age has a deportment, a glance and a smile of its own)—everything, I say, combines to form a completely viable whole. This transitory, fugitive element, whose metamorphoses are so rapid, must on no account be despised or dispensed

6. Jacques-Louis David (1748–1825), artist famous for his classical depictions of the French Revolution. Renaissance: in France, the 16th–17th centuries.

with. By neglecting it, you cannot fail to tumble into the abyss of an abstract and indeterminate beauty, like that of the first woman before the fall of man. If for the necessary and inevitable costume of the age you substitute another, you will be guilty of a mistranslation only to be excused in the case of a masquerade prescribed by fashion. (Thus, the goddesses, nymphs and sultanas of the eighteenth century are still convincing portraits, *morally speaking*.)

It is doubtless an excellent thing to study the old masters in order to learn how to paint; but it can be no more than a waste of labour if your aim is to understand the special nature of present-day beauty. The draperies of Rubens or Veronese⁷ will in no way teach you how to depict *moire antique*, *satins à la reine*⁸ or any other fabric of modern manufacture, which we see supported and hung over crinoline or starched muslin petticoat. In texture and weave these are quite different from the fabrics of ancient Venice or those worn at the court of Catherine.⁹ Furthermore the cut of skirt and bodice is by no means similar; the pleats are arranged according to a new system. Finally the gesture and the bearing of the woman of today give to her dress a life and a special character which are not those of the woman of the past. In short, for any 'modernity' to be worthy of one day taking its place as 'antiquity', it is necessary for the mysterious beauty which human life accidentally puts into it to be distilled from it. And it is to this task that Monsieur G. particularly addresses himself.

I have remarked that every age had its own gait, glance and gesture. The easiest way to verify this proposition would be to betake oneself to some vast portrait-gallery, such as the one at Versailles.¹ But it has an even wider application. Within that unity which we call a Nation, the various professions and classes and the passing centuries all introduce variety, not only in manners and gesture, but even in the actual form of the face. Certain types of nose, mouth and brow will be found to dominate the scene for a period whose extent I have no intention of attempting to determine here, but which could certainly be subjected to a form of calculation. Considerations of this kind are not sufficiently familiar to our portrait-painters; the great failing of M. Ingres,² in particular, is that he seeks to impose upon every type of sitter a more or less complete, by which I mean a more or less despotic, form of perfection, borrowed from the repertory of classical ideas.

In a matter of this kind it would be easy, and indeed legitimate, to argue *a priori*. The perpetual correlation between what is called the 'soul' and what is called the 'body' explains quite clearly how everything that is 'material', or in other words an emanation of the 'spiritual', mirrors, and will always mirror, the spiritual reality from which it derives. If a painstaking, scrupulous, but feebly imaginative artist has to paint a courtesan of today and takes his 'inspiration' (that is the accepted word) from a courtesan by Titian or Raphael, it is only too likely that he will produce a work which is false, ambiguous and

7. Paolo Caliari (1528-1588), major painter of the 16th-century Venetian school (called "Veronese" because born in Verona). Peter Paul Rubens (1577-1640), Flemish baroque painter.

8. Literally "old-fashioned watered silk" and "satin for the queen" (French), two elegant modern fabrics.

9. Catherine de Medici (1519-1589), the queen

consort of Henry II of France, and subsequently regent.

1. The royal palace at Versailles (near Paris), built (1676-1708) by Louis XIV; the seat of government for more than 100 years, it was designated a national museum in 1837.

2. Jean-August-Dominique Ingres (1780-1867), celebrated French painter and portraitist.

obscure. From the study of a masterpiece of that time and type he will learn nothing of the bearing, the glance, the smile or the living 'style' of one of those creatures whom the dictionary of fashion has successively classified under the coarse or playful titles of 'doxies', 'kept women', *lorettes*, or *biches*.³

The same criticism may be strictly applied to the study of the military man and the dandy, and even to that of animals, whether horses or dogs; in short, of everything that goes to make up the external life of this age. Woe to him who studies the antique for anything else but pure art, logic and general method! By steeping himself too thoroughly in it, he will lose all memory of the present; he will renounce the rights and privileges offered by circumstance—for almost all our originality comes from the seal which Time imprints on our sensations. I need hardly tell you that I could easily support my assertions with reference to many objects other than women. What would you say, for example, of a marine-painter (I am deliberately going to extremes) who, having to depict the sober and elegant beauty of a modern vessel, were to tire out his eyes by studying the overcharged, involved forms and the monumental poop of a galleon, or the complicated rigging of the sixteenth century? Again, what would you think if you had commissioned an artist to paint the portrait of a thoroughbred, famed in the annals of the turf, and he then proceeded to confine his researches to the Museums and contented himself with a study of the horse in the galleries of the past, in Van Dyck, Borgognone or Van der Meulen?⁴

Under the direction of nature and the tyranny of circumstance, Monsieur G. has pursued an altogether different path. He began by being an observer of life, and only later set himself the task of acquiring the means of expressing it. This has resulted in a thrilling originality in which any remaining vestiges of barbarousness or *naïveté* appear only as new proofs of his faithfulness to the impression received, or as a flattering compliment paid to truth. For most of us, and particularly for men of affairs, for whom nature has no existence save by reference to utility, the fantastic reality of life has become singularly diluted. Monsieur G. never ceases to drink it in; his eyes and his memory are full of it.

From IX. *The Dandy*

* * *

If I speak of love in connection with dandyism, this is because love is the natural occupation of the idle. The dandy does not, however, regard love as a special target to be aimed at. If I have spoken of money, this is because money is indispensable to those who make a cult of their emotions; but the dandy does not aspire to money as to something essential; this crude passion he leaves to vulgar mortals; he would be perfectly content with a limitless credit at the bank. Dandyism does not even consist, as many thoughtless people seem to believe, in an immoderate taste for the toilet and material elegance. For the perfect dandy these things are no more than symbols of

3. Affectionate terms for sexually free women of the demimonde.

4. The Flemish Anthony van Dyke (1599–1641), the French Jacques Courtois, il Borgognone

(1620–1676), and the Flemish Adam Frans van der Meulen (1632–1690) all painted horses (in battle scenes, equestrian portraits, and murals).

his aristocratic superiority of mind. Furthermore to his eyes, which are in love with *distinction* above all things, the perfection of his toilet will consist in absolute simplicity, which is the best way, in fact, of achieving the desired quality. What then is this passion, which, becoming doctrine, has produced such a school of tyrants? what this unofficial institution which has formed so haughty and exclusive a sect? It is first and foremost the burning need to create for oneself a personal originality, bounded only by the limits of the proprieties. It is a kind of cult of the self which can nevertheless survive the pursuit of a happiness to be found in someone else—in woman, for example; which can even survive all that goes by in the name of illusions. It is the joy of astonishing others, and the proud satisfaction of never oneself being astonished. A dandy may be blasé, he may even suffer; but in this case, he will smile like the Spartan boy under the fox's tooth.⁵

* * *

Whether these men are nicknamed exquisites, *incroyables*,⁶ beaux, lions or dandies, they all spring from the same womb; they all partake of the same characteristic quality of opposition and revolt; they are all representatives of what is finest in human pride, of that compelling need, alas only too rare today, of combating and destroying triviality. It is from this that the dandies obtain that haughty exclusiveness, provocative in its very coldness. Dandyism appears above all in periods of transition, when democracy is not yet all-powerful, and aristocracy is only just beginning to totter and fall. In the disorder of these times, certain men who are socially, politically and financially ill at ease, but are all rich in native energy, may conceive the idea of establishing a new kind of aristocracy, all the more difficult to shatter as it will be based on the most precious, the most enduring faculties, and on the divine gifts which work and money are unable to bestow. Dandyism is the last spark of heroism amid decadence; and the type of dandy discovered by our traveller in North America does nothing to invalidate this idea; for how can we be sure that those tribes which we call 'savage' may not in fact be the *dissecta membra*⁷ of great extinct civilizations? Dandyism is a sunset; like the declining daystar, it is glorious, without heat and full of melancholy. But alas, the rising tide of democracy, which invades and levels everything, is daily overwhelming these last representatives of human pride and pouring floods of oblivion upon the footprints of these stupendous warriors. Dandies are becoming rarer and rarer in our country, whereas amongst our neighbours in England the social system and the constitution (the true constitution, I mean: the constitution which expresses itself through behaviour) will for a long time yet allow a place for the descendants of Sheridan, Brummel and Byron,⁸ granted at least that men are born who are worthy of such a heritage.

What to the reader may have seemed a digression is not so in truth. The moral reflections and considerations provoked by an artist's drawings are in many cases the best translation of them that criticism can make; such sug-

8. The Irish-born dramatist Richard Brinsley Sheridan (1751–1816), George Bryan ("Beau") Brummel (1778–1840), and the poet George Gordon, Lord Byron (1788–1824) were all English dandies.

gestions form part of an underlying idea which begins to emerge as they are set out one after the other. It is hardly necessary to say that when Monsieur G. sketches one of his dandies on the paper, he never fails to give him his historical personality—his legendary personality, I would venture to say, if we were not speaking of the present time and of things generally considered as frivolous. Nothing is missed; his lightness of step, his social aplomb, the simplicity in his air of authority, his way of wearing a coat or riding a horse, his bodily attitudes which are always relaxed but betray an inner energy, so that when your eye lights upon one of those privileged beings in whom the graceful and the formidable are so mysteriously blended, you think: 'A rich man perhaps, but more likely an out-of-work Hercules!'⁹

The distinguishing characteristic of the dandy's beauty consists above all in an air of coldness which comes from an unshakeable determination not to be moved; you might call it a latent fire which hints at itself, and which could, but chooses not to burst into flame. It is this quality which these pictures express so perfectly.

XI. In Praise of Cosmetics

I remember a song, so worthless and silly that it seems hardly proper to quote from it in a work which has some pretensions to seriousness, but which nevertheless expresses very well, in its *vaudeville* manner, the aesthetic creed of people who do not think. 'Nature embellishes Beauty', it runs. It is of course to be presumed that, had he known how to write in French, the poet would rather have said 'Simplicity embellishes Beauty', which is equivalent to the following startling new truism: 'Nothing embellishes something.'

The majority of errors in the field of aesthetics spring from the eighteenth century's false premiss in the field of ethics. At that time Nature was taken as ground, source and type of all possible Good and Beauty. The negation of original sin played no small part in the general blindness of that period. But if we are prepared to refer simply to the facts, which are manifest to the experience of all ages no less than to the readers of the Law Reports, we shall see that Nature teaches us nothing, or practically nothing. I admit that she *compels* man to sleep, to eat, to drink, and to arm himself as well as he may against the inclemencies of the weather: but it is she too who incites man to murder his brother, to eat him, to lock him up and to torture him; for no sooner do we take leave of the domain of needs and necessities to enter that of pleasures and luxury than we see that Nature can counsel nothing but crime. It is this infallible Mother Nature who has created patricide and cannibalism, and a thousand other abominations that both shame and modesty prevent us from naming. On the other hand it is philosophy (I speak of good philosophy) and religion which command us to look after our parents when they are poor and infirm. Nature, being none other than the voice of our own self-interest, would have us slaughter them. I ask you to review and scrutinize whatever is natural—all the actions and desires of the purely natural man: you will find nothing but frightfulness. Everything beau-

9. The Roman name of Heracles, the greatest of the legendary Greek heroes; among other feats, he performed 12 famous labors.

tiful and noble is the result of reason and calculation. Crime, of which the human animal has learned the taste in his mother's womb, is natural by origin. Virtue, on the other hand, is artificial, supernatural, since at all times and in all places gods and prophets have been needed to teach it to animalized humanity, man being powerless to discover it by himself. Evil happens without effort, naturally, fatally; Good is always the product of some art. All that I am saying about Nature as a bad counsellor in moral matters, and about Reason as true redeemer and reformer, can be applied to the realm of Beauty. I am thus led to regard external finery as one of the signs of the primitive nobility of the human soul. Those races which our confused and perverted civilization is pleased to treat as savage, with an altogether ludicrous pride and complacency, understand, just as the child understands, the lofty spiritual significance of the toilet. In their naïf adoration of what is brilliant—many-coloured feathers, iridescent fabrics, the incomparable majesty of artificial forms—the baby and the savage bear witness to their disgust of the real, and thus give proof, without knowing it, of the immateriality of their soul. Woe to him who, like Louis XV¹ (the product riot of a true civilization but of a recrudescence of barbarism), carries his degeneracy to the point of no longer having a taste for anything but nature unadorned.²

Fashion should thus be considered as a symptom of the taste for the ideal which floats on the surface of all the crude, terrestrial and loathsome bric-à-brac that the natural life accumulates in the human brain: as a sublime deformation of Nature, or rather a permanent and repeated attempt at her *reformation*. And so it has been sensibly pointed out (though the reason has not been discovered) that every fashion is charming, relatively speaking, each one being a new and more or less happy effort in the direction of Beauty, some kind of approximation to an ideal for which the restless human mind feels a constant, titillating hunger. But if one wants to appreciate them properly, fashions should never be considered as dead things; you might just as well admire the tattered old rags hung up, as slack and lifeless as the skin of St. Bartholomew,³ in an old-clothes dealer's cupboard. Rather they should be thought of as vitalized and animated by the beautiful women who wore them. Only in this way can their sense and meaning be understood. If therefore the aphorism 'All fashions are charming' upsets you as being too absolute, say, if you prefer, 'All were once justifiably charming'. You can be sure of being right.

Woman is quite within her rights, indeed she is even accomplishing a kind of duty, when she devotes herself to appearing magical and supernatural; she has to astonish and charm us; as an idol, she is obliged to adorn herself in order to be adored. Thus she has to lay all the arts under contribution for the means of lifting herself above Nature, the better to conquer hearts and rivet attention. It matters but little that the artifice and trickery are known to all, so long as their success is assured and their effect always irresistible. By reflecting in this way the philosopher-artist will find it easy to justify all

1. King of France (1710–1774; reigned 1715–74).

2. We know that when she wished to avoid receiving the king, Mme Du Barry made a point of putting on rouge. It was quite enough; it was her way of closing the door. It was in fact by beautifying herself that she used to frighten away her royal

disciple of nature [Baudelaire's note]. Marie Jeanne Bécu, comtesse du Barry (1743–1793), the mistress of Louis XV.

3. One of Jesus' disciples, said to have been martyred by being flayed alive.

the practices adopted by women at all times to consolidate and as it were to make divine their fragile beauty. To enumerate them would be an endless task: but to confine ourselves to what today is vulgarly called 'maquillage',⁴ anyone can see that the use of rice-powder, so stupidly anathematized by our Arcadian philosophers,⁵ is successfully designed to rid the complexion of those blemishes that Nature has outrageously strewn there, and thus to create an abstract unity in the colour and texture of the skin, a unity, which, like that produced by the tights of a dancer, immediately approximates the human being to the statue, that is to something superior and divine. As for the artificial black with which the eye is outlined, and the rouge with which the upper part of the cheek is painted, although their use derives from the same principle, the need to surpass Nature, the result is calculated to satisfy an absolutely opposite need. Red and black represent life, a supernatural and excessive life: its black frame renders the glance more penetrating and individual, and gives the eye a more decisive appearance of a window open upon the infinite; and the rouge which sets fire to the cheek-bone only goes to increase the brightness of the pupil and adds to the face of a beautiful woman the mysterious passion of the priestess.

Thus, if you will understand me aright, face-painting should not be used with the vulgar, unavowable object of imitating fair Nature and of entering into competition with youth. It has moreover been remarked that artifice cannot lend charm to ugliness and can only serve beauty. Who would dare to assign to art the sterile function of imitating Nature? Maquillage has no need to hide itself or to shrink from being suspected; on the contrary, let it display itself, at least if it does so with frankness and honesty.

I am perfectly happy for those owlish gravity prevents them from seeking Beauty in its most minute manifestations to laugh at these reflections of mine and to accuse them of a childish self-importance; their austere verdict leaves me quite unmoved; I content myself with appealing to true artists as well as to those women themselves who, having received at birth a spark of that sacred flame, would tend it so that their whole beings were on fire with it.

1863

4. Makeup (French).

5. Utopian lovers of nature; according to long-standing literary convention, Arcadia (a district of

Greece) is the home of pastoral simplicity and happiness.

MATTHEW ARNOLD

1822-1888

In an assessment published in the 1970s, the New York Intellectual Lionel Trilling concluded that Matthew Arnold is "virtually the founding father of modern criticism in the English-speaking world." Citing our first selection, "The Function of Criticism at the Present Time" (1865), Trilling quoted Arnold's famous injunction that the critic should strive to "see the object as in itself it really is" and his celebrated definition of

criticism as the "disinterested endeavour to learn and propagate the best that is known and thought in the world." These authoritative statements, Trilling maintained, gave later scholars and teachers their inspiration and interpretive mission.

Arnold provided literary criticism with an important social function and paved the way for its "institutionalization" in the academy. He regarded the writing and reading of literature as urgent activities in the world, insisting "that poetry is at bottom a criticism of life; that the greatness of a poet lies in his powerful and beautiful application of ideas to life,—to the question: How to live." Serious criticism, he believed, was responsible for generating and maintaining the context of ideas and high standards that the production of literature required. Even more: criticism, for Arnold, meant an engagement with history, education, politics, religion, philosophy and other subjects and concerns; literature is vitally connected to society and culture.

Arnold continues today to represent an ideal of literary and cultural humanism that many critics honor. But this same ideal is one that radical critics and contemporary literary theorists have sought to complicate or undermine. As the scholar Joseph Carroll has noted, Arnold's key term "disinterestedness" is "now the most violently disputed word in the Arnoldian lexicon," and many theorists from the 1970s to the present have launched their proposals by taking issue with Arnold's and his followers' account of the critic's role and procedures. For example, STANLEY FISH's reader-response criticism denies the possibility of "disinterested" objective perception, and the Marxist critic TERRY EAGLETON emphasizes Arnold's alignment with state power and the privileged classes in his stress on "timeless truths."

Arnold excelled as a critic and polemicist, and he frequently took delight in the public controversies that his books and articles kindled and in the charges hurled against him. But Arnold was also a poet, an educator, and an advocate for civility and moderation who followed in the footsteps of his eminent father—Thomas Arnold (1795–1842), a religious leader, historian, and, from 1828 to 1841, the influential, reform-minded headmaster of Rugby, a venerable boarding school for boys. At Rugby, Thomas Arnold added the study of French, German, and mathematics to the traditional classical curriculum and gave new emphasis to history and geography. He resolutely campaigned for Christianity, patriotism, self-reliance, loyalty, duty, and public service, and he won great renown for his commitment to them in education.

Educated at Rugby and Oxford University, Matthew Arnold seems at first to have concentrated more on his social life (he was something of a dandy) than on his studies. His poetry—most of which he wrote during the 1840s and 1850s—left him unsatisfied, yet it eloquently expresses the self-doubt, intellectual unease, and emotional hesitancy felt by midcentury intellectuals, when Charles Darwin's theories of evolution and the skeptical inquiry into the historical status and transmission of biblical texts (the "higher criticism") were calling the time-honored principles of Christian faith into question. Arnold's first two books were *The Strayed Reveller, and Other Poems* (1849) and *Empedocles on Etna, and Other Poems* (1852). In his preface to his 1853 collection—his first piece of published prose—Arnold articulated what he conceded was missing from his own verse: "the spirit of the great classical works," "their intense significance, their noble simplicity, and their calm pathos" that create "unity and profoundness of moral impression." He felt that this failure to evoke the best in European moral value was shared generally by modern literature.

In 1851 Arnold received an appointment as an inspector of schools, and this demanding work involved much tedious discussion with teachers and administrators and painstaking reviews of students' examinations and papers. It also required extensive travel in England and research trips abroad in 1859 and 1865, which led to three books on European (particularly French) systems of education. Though it was often wearying, Arnold took great pride in his work and did not retire until 1883; he viewed the schools as the crucial site for "civilising the next generation of the lower classes, who, as things are going, will have most of the political power of the country in their hands." Clearly, much more than literary interpretation was at stake. In his duties as

an inspector, he saw the privations that workers and their families suffered, and he was dedicated to the task of social and cultural progress, identifying himself as a "Liberal of the future."

Arnold was named Professor of Poetry at Oxford University in 1857, a position he held until 1867. This appointment did not oblige him to teach or supervise students or to be in residence, and so he was able both to remain in his government post and to gain notice as a prolific social, cultural, and literary critic. His major prose works are *Essays in Criticism, First Series* (1865), *Essays in Criticism, Second Series* (1888), and *Culture and Anarchy* (1869), which examines the condition of England as represented by the three groups Arnold nicknamed the Barbarians (the aristocracy), the Philistines (the middle classes), and the Populace (the working classes). He also wrote extensively on religion, including *Literature and Dogma* (1873), which, he said, was the "most important" of all his prose works, the one most capable "of being useful." Examining the shaken doctrines and tenets of orthodox creeds and churches, it made a forthright case for a literary response and approach to the Scriptures that would treasure their enduring moral truths. *Literature and Dogma* sold 100,000 copies, far more than any of his other books.

Arnold stated in *Culture and Anarchy* that he wanted to heighten among the English "the impulse to the development of the whole man, to connecting and harmonizing all parts of him, perfecting all, leaving none to take their chance." Though these sentiments were presented as possessing a timeless validity, Arnold voiced them at a moment in English history when "anarchy"—social unrest and rioting—had erupted in the streets and revolution seemed a real possibility. The Reform Act of 1832 had increased the number of voters by 50 percent, but the working class and the poor remained without the vote. The defeat of an effort to extend eligibility to their ranks in 1866 brought down the Liberal government and spurred mass protests and violent demonstrations across the country. The Reform Act of 1867, passed in the midst of this social and political upheaval, added 938,000 voters and thereby doubled the size of the electorate.

Who shall inherit England? This question, which Trilling called central to one major tradition of English novelists from Charles Dickens (1812–1870) to E. M. Forster (1879–1970), was raised as well by intellectuals of the nineteenth century (such as Thomas Carlyle and John Ruskin) and twentieth century (such as T. S. ELIOT and D. H. Lawrence) in their works of cultural criticism. Not only *who* shall inherit England, but what kinds of power could they be trusted with? What forms of education should they receive? For Arnold in particular, the answers to these crucial, interconnected questions could be found in many literary sources—some in the distant past, others closer to his own era. He counseled moral betterment and spiritual renewal, achieved through the appreciative reading of the best literature. The best persons would be critics—poised, balanced, and reflective; they would be foes of fanaticism, zealotry, and political enthusiasm, and they would be aspirants to "perfection" (a term Arnold fastened on in both *Essays in Criticism* and *Culture and Anarchy*). Such arguments echo those of literary and philosophical precursors and contemporaries. In "An Apology for Poetry" (1595; see above), for example, SIR PHILIP SIDNEY had affirmed that "the final end" of learning "is to lead and draw us to as high a perfection as our degenerate souls, made worse by their clayey lodgings, can be capable of." And in "The Poet" (1844; see above), RALPH WALDO EMERSON, whose writings Arnold knew well, celebrated the poet as "representative of man, in virtue of being the largest power to receive and impart."

Arnold's limitations are not hard to identify. Because he is mainly interested in the personality and moral tone of the author, not in the resources of language or the unfolding meanings of literary works themselves, he does not devote much attention to specific texts (an exception is his series of lectures *On Translating Homer*, published in 1861). Lines that he does quote typically function for him as "touchstones," those "specimens of poetry of the high, the very highest quality" that "save

us from fallacious estimates of value"—and that seem to beg the very question of "greatness" that they are meant to answer. Arnold assumed that his readers would know these authors and texts and their contexts, and that the "touchstones" would be recognized by all as profound and memorable. Yet he himself had little sympathy for (or understanding of) English writers of the eighteenth and nineteenth centuries. Moreover, Arnold mentioned fiction only briefly and not very perceptively. Unlike, for example, HENRY JAMES, he showed little interest in music, sculpture, painting, or the theater.

But even these serious faults do little to diminish the power with which Arnold defined the "function of criticism" for the Victorian and modern periods. Wholeheartedly defending literature against its enemies and detractors, whose emphasis on science, moneymaking, and commercial prosperity had led them to regard poetry as merely a pleasant pastime, he argued that it equipped men and women to perceive authentic value in the workings of the society and culture around them.

Criticism is not, ultimately, something one does; it gestures toward who one is. And the same is true of "culture," as Arnold presents it in *Culture and Anarchy* (excerpted below). Culture is "a study of perfection," an "internal condition"; it mandates a sharp yet supple movement of mind, a vigilant guard against an excess of commitment to a single point of view, and a refusal to accept the alluring power of extreme, polarizing judgments. Unlike later critics influenced by anthropology, Arnold does not view culture as designating the distinctive whole way of life of a people or a period. Nor would he agree with such critics as ANTONIO GRAMSCI, STUART HALL, and EDWARD SAID, who characterize culture as often an instrument of social and political control and conquest. For Arnold, culture is selective and harmonious, not conflictual. Criticism and culture loom large because of their beneficent effects on the individual, as they impel sustained acts of reflection and prevent persons from falling into complacency and "self-satisfaction."

Arnold defines criticism as involving flexibility, openness to new experiences, and curiosity (a word he explores in both "The Function of Criticism" and *Culture and Anarchy*). He insists, too, on the "free play" of mind—a phrase that poststructuralist theorists such as JACQUES DERRIDA would define far more radically and subversively, without Arnold's belief in a stable textual object that provides a center around which analysis and reflection occur. Arnold tethers criticism to a rigorous duty; criticism, he explains, "tends to establish an order of ideas" and seeks to "make the best ideas prevail." As his choice of verbs indicates, criticism is challenging work; the campaign must be waged, in a phrase used in "The Function of Criticism," with "inflexible honesty." Arnold firmly believes that some ideas are right and others wrong; he is no relativist. Nor is he a revolutionary, but rather a careful, cautious, deliberate reformer, wary of the ways in which the impulse for change can run wild and become destructive. A good literary critic is, inevitably for Arnold, a good critic in general: a person of culture embarked on a steady, steadfast inquiry into self and society. For all of his witty turns of phrase, topical references and allusions, and stylistic clarity and poise, Arnold is at heart a writer who realized, as he acknowledged in a letter in 1863, that his arguments would make "a good many people uncomfortable."

BIBLIOGRAPHY

The Complete Prose Works of Matthew Arnold, edited by R. H. Super (11 vols., 1960–77), offers a definitive text and excellent notes. P. J. Keating (1970) and Christopher Ricks (1972) have edited collections of Arnold's critical writings. For the poetry and prose, the editions by Lionel Trilling (1949) and A. Dwight Culler (1961) are useful, though thin in their annotations. For the correspondence, *Letters, 1848–1888*, edited by George W. E. Russell (2 vols., 1895) remains important. This edition, and other selections, will be superseded by the multivolume *Letters of Matthew Arnold*, edited by Cecil Y. Lang (1996–). Excellent biographies include Park Honan, *Matthew*

Arnold: *A Life* (1981); Nicholas Murray, *A Life of Matthew Arnold* (1995); and Ian Hamilton, *A Gift Imprisoned: The Poetic Life of Matthew Arnold* (1999).

For critical overviews, see Lionel Trilling, *Matthew Arnold* (1939); Douglas Bush, *Matthew Arnold: A Survey of His Poetry and Prose* (1971), an especially cogent and informative survey of Arnold's life and literary career; and Stefan Collini, *Arnold* (1988). Also helpful is a collection of essays, *Matthew Arnold*, edited by Kenneth Allott (1976).

Critical studies that focus on Arnold's prose include John Holloway, *The Victorian Sage: Studies in Argument* (1953), insightful on Arnold's style and rhetorical strategies; Raymond Williams, *Culture and Society: 1780–1950* (1958), a landmark history of British cultural criticism that includes a substantial discussion of Arnold; Vincent Buckley, *Poetry and Morality: Studies on the Criticism of Matthew Arnold, T. S. Eliot, and F. R. Leavis* (1959); Leon Gottfried, *Matthew Arnold and the Romantics* (1963); David J. DeLaura, *Hebrew and Hellene in Victorian England: Newman, Arnold, and Pater* (1969), which explicates keenly the affinities and differences between Arnold and his contemporaries and successors; Fred G. Walcott, *The Origins of Culture and Anarchy: Matthew Arnold and Popular Education in England* (1970); Sidney Coulling, *Matthew Arnold and His Critics: A Study of Arnold's Controversies* (1974), which provides historical context; Joseph Carroll, *The Cultural Theory of Matthew Arnold* (1982), an excellent study of Arnold's main themes and ideas; and Ruth apRoberts, *Arnold and God* (1983). For responses to Arnold by his contemporaries, see *Matthew Arnold—Prose Writings: The Critical Heritage*, edited by Carl Dawson and John Pfordresher (1979). Edward Said, in *The World, the Text, and the Critic* (1983), and Geoffrey H. Hartman, in *Criticism in the Wilderness: The Study of Literature Today* (1980), are among the important contemporary literary theorists who have assessed Arnold's impact on the academy. Additional commentaries can be found in an edition of *Culture and Anarchy* prepared by Samuel Lipman (1994).

Concentrating on Arnold's poetry but including pertinent commentary on the prose are A. Dwight Culler, *Imaginative Reason: The Poetry of Matthew Arnold* (1961); Alan Roper, *Arnold's Poetic Landscapes* (1969); and David G. Riede, *Matthew Arnold and the Betrayal of Language* (1988).

Thomas Burnett Smart has compiled *The Bibliography of Matthew Arnold* (1892); it should be supplemented by the listing in *The Works of Matthew Arnold*, vol. 15 (1903–04). See also Clinton Machann, *The Essential Matthew Arnold: An Annotated Bibliography of Major Modern Studies* (1993).

The Function of Criticism at the Present Time¹

Many objections have been made to a proposition which, in some remarks of mine on translating Homer,² I ventured to put forth; a proposition about criticism, and its importance at the present day. I said: 'Of the literature of France and Germany, as of the intellect of Europe in general, the main effort, for now many years, has been a critical effort; the endeavour, in all branches of knowledge, theology, philosophy, history, art, science, to see the object as in itself it really is.' I added, that owing to the operation in English literature of certain causes, 'almost the last thing for which one would come to English

1. First delivered as a lecture at Oxford University, on October 29, 1864, and published in the *National Review* in November 1864, with the title given in the plural, "Functions." Arnold altered the title for the book version (1865) and added several footnotes. The text reprinted here is that of the

1875 third edition, the last one that Arnold prepared.

2. See Lecture II of *On Translating Homer* (1861). The Greek *Iliad* and *Odyssey* of Homer (ca. 8th c. B.C.E.) were a standard part of English elite education.

literature is just that very thing which now Europe most desires,—criticism; and that the power and value of English literature was thereby impaired. More than one rejoinder declared that the importance I here assigned to criticism was excessive, and asserted the inherent superiority of the creative effort of the human spirit over its critical effort. And the other day, having been led by a Mr. Shairp's excellent notice of Wordsworth³ to turn again to his biography, I found, in the words of this great man, whom I, for one, must always listen to with the profoundest respect, a sentence passed on the critic's business, which seems to justify every possible disparagement of it. Wordsworth says in one of his letters:—

'The writers in these publications' (the Reviews), 'while they prosecute their inglorious employment, can not be supposed to be in a state of mind very favourable for being affected by the finer influences of a thing so pure as genuine poetry.'

And a trustworthy reporter⁴ of his conversation quotes a more elaborate judgment to the same effect:—

'Wordsworth holds the critical power very low, infinitely lower than the inventive; and he said to-day that if the quantity of time consumed in writing critiques on the works of others were given to original composition, of whatever kind it might be, it would be much better employed; it would make a man find out sooner his own level, and it would do infinitely less mischief. A false or malicious criticism may do much injury to the minds of others, a stupid invention, either in prose or verse, is quite harmless.'

It is almost too much to expect of poor human nature, that a man capable of producing some effect in one line of literature, should, for the greater good of society, voluntarily doom himself to impotence and obscurity in another. Still less is this to be expected from men addicted to the composition of the 'false or malicious criticism' of which Wordsworth speaks. However, everybody would admit that a false or malicious criticism had better never have been written. Everybody, too, would be willing to admit, as a general proposition, that the critical faculty is lower than the inventive. But is it true that criticism is really, in itself, a baneful and injurious employment; is it true that all time given to writing critiques on the works of others would be much better employed if it were given to original composition, of whatever kind this may be? Is it true that Johnson had better have gone on producing more *Irenes*⁵ instead of writing his *Lives of the Poets*; nay, is it certain that Wordsworth himself was better employed in making his Ecclesiastical Sonnets than when he made his celebrated Preface,⁶ so full of criticism, and

3. I cannot help thinking that a practice, common in England during the last century, and still followed in France, of printing a notice of this kind,—a notice by a competent critic,—to serve as an introduction to an eminent author's works, might be revived among us with advantage. To introduce all succeeding editions of Wordsworth, Mr. Shairp's notice might, it seems to me, excellently serve; it is written from the point of view of an admirer, nay, of a disciple, and that is right; but then the disciple must be also, as in this case he is, a critic, a man of letters, not, as too often happens, some relation or friend with no qualification for his task except affection for his author [Arnold's note]. John Campbell Shairp (1819–1885) was a friend of Arnold's at Balliol College, Oxford; the

"notice" (in which Arnold is praised) is "Wordsworth: The Man and the Poet," *North British Review* 41 (August 1864): 1–54. WILLIAM WORDSWORTH (1770–1850) is the preeminent English Romantic poet.

4. Christopher Wordsworth, *Memoirs of William Wordsworth* (1851).

5. *Irene* (1749), an unsuccessful neoclassical tragedy by SAMUEL JOHNSON (1709–1784), whose *Lives of the Poets* (1779–81) were a considerable critical achievement.

6. The preface to *Lycal Ballads* (1800, 1802; see above). The 132 "Ecclesiastical Sonnets" (1821–22), which recount the history of the Church of England, are not considered among Wordsworth's major works.

criticism of the works of others? Wordsworth was himself a great critic, and it is to be sincerely regretted that he has not left us more criticism; Goethe⁷ was one of the greatest of critics, and we may sincerely congratulate ourselves that he has left us so much criticism. Without wasting time over the exaggeration which Wordsworth's judgment on criticism clearly contains, or over an attempt to trace the causes,—not difficult, I think, to be traced,⁸—which may have led Wordsworth to this exaggeration; a critic may with advantage seize an occasion for trying his own conscience, and for asking himself of what real service at any given moment the practice of criticism either is or may be made to his own mind and spirit, and to the minds and spirits of others.

The critical power is of lower rank than the creative. True; but in assenting to this proposition, one or two things are to be kept in mind. It is undeniable that the exercise of a creative power, that a free creative activity, is the highest function of man; it is proved to be so by man's finding in it his true happiness. But it is undeniable, also, that men may have the sense of exercising this free creative activity in other ways than in producing great works of literature or art; if it were not so, all but a very few men would be shut out from the true happiness of all men. They may have it in well-doing, they may have it in learning, they may have it in criticising. This is one thing to be kept in mind. Another is, that the exercise of the creative power in the production of great works of literature or art, however high this exercise of it may rank, is not at all epochs and under all conditions possible; and that therefore labour may be vainly spent in attempting it, which might with more fruit be used in preparing for it, in rendering it possible. This creative power works with elements, with materials; what if it has not those materials, those elements, ready for its use? In that case it must surely wait till they are ready. Now, in literature,—I will limit myself to literature, for it is about literature that the question arises,—the elements with which the creative power works are ideas; the best ideas on every matter which literature touches, current at the time. At any rate we may lay it down as certain that in modern literature no manifestation of the creative power not working with these can be very important or fruitful. And I say *current* at the time, not merely accessible at the time; for creative literary genius does not principally show itself in discovering new ideas, that is rather the business of the philosopher. The grand work of literary genius is a work of synthesis and exposition, not of analysis and discovery; its gift lies in the faculty of being happily inspired by a certain intellectual and spiritual atmosphere, by a certain order of ideas, when it finds itself in them; of dealing divinely with these ideas, presenting them in the most effective and attractive combinations,—making beautiful works with them, in short. But it must have the atmosphere, it must find itself amidst the order of ideas, in order to work freely; and these it is not so easy to command. This is why great creative epochs in literature are so rare, this is why there is so much that is unsatisfactory in the productions of many men of real genius; because, for the creation of a master-work of literature two powers must concur, the power of the man and the power of the moment, and the man is not enough without the moment;⁹ the creative

poetry.

9. A reference to Hippolyte Taine's *History of English Literature* (3 vols., 1863); in the introduc-

power has, for its happy exercise, appointed elements, and those elements are not in its own control.

Nay, they are more within the control of the critical power. It is the business of the critical power, as I said in the words already quoted, 'in all branches of knowledge, theology, philosophy, history, art, science, to see the object as in itself it really is.' Thus it tends, at last, to make an intellectual situation of which the creative power can profitably avail itself. It tends to establish an order of ideas, if not absolutely true, yet true by comparison with that which it displaces; to make the best ideas prevail. Presently these new ideas reach society, the touch of truth is the touch of life, and there is a stir and growth everywhere; out of this stir and growth come the creative epochs of literature.

Or, to narrow our range, and quit these considerations of the general march of genius and of society,—considerations which are apt to become too abstract and impalpable,—every one can see that a poet, for instance, ought to know life and the world before dealing with them in poetry; and life and the world being in modern times very complex things, the creation of a modern poet, to be worth much, implies a great critical effort behind it; else it must be a comparatively poor, barren, and short-lived affair. This is why Byron's¹ poetry had so little endurance in it, and Goethe's so much; both Byron and Goethe had a great productive power, but Goethe's was nourished by a great critical effort providing the true materials for it, and Byron's was not; Goethe knew life and the world, the poet's necessary subjects, much more comprehensively and thoroughly than Byron. He knew a great deal more of them, and he knew them much more as they really are.

It has long seemed to me that the burst of creative activity in our literature, through the first quarter of this century, had about it in fact something premature; and that from this cause its productions are doomed, most of them, in spite of the sanguine hopes which accompanied and do still accompany them, to prove hardly more lasting than the productions of far less splendid epochs. And this prematureness comes from its having proceeded without having its proper data, without sufficient materials to work with. In other words, the English poetry of the first quarter of this century, with plenty of energy, plenty of creative force, did not know enough. This makes Byron so empty of matter, Shelley² so incoherent, Wordsworth even, profound as he is, yet so wanting in completeness and variety. Wordsworth cared little for books, and disparaged Goethe. I admire Wordsworth, as he is, so much that I cannot wish him different; and it is vain, no doubt, to imagine such a man different from what he is, to suppose that he *could* have been different. But surely the one thing wanting to make Wordsworth an even greater poet than he is,—his thought richer, and his influence of wider application,—was that he should have read more books, among them, no doubt, those of that Goethe whom he disparaged without reading him.

But to speak of books and reading may easily lead to a misunderstanding here. It was not really books and reading that lacked to our poetry at this

tion, the French critic and philosopher describes the impact of heredity, environment, and history ("la race, le milieu, le moment").

English Romantic poet.

2. PERCY BYSSHE SHELLEY (1792–1822), English poet.

epoch; Shelley had plenty of reading, Coleridge³ had immense reading. Pindar and Sophocles⁴—as we all say so glibly, and often with so little discernment of the real import of what we are saying—had not many books; Shakespeare was no deep reader. True; but in the Greece of Pindar and Sophocles, in the England of Shakspeare, the poet lived in a current of ideas in the highest degree animating and nourishing to the creative power; society was, in the fullest measure, permeated by fresh thought, intelligent and alive. And this state of things is the true basis for the creative power's exercise, in this it finds its data, its materials, truly ready for its hand; all the books and reading in the world are only valuable as they are helps to this. Even when this does not actually exist, books and reading may enable a man to construct a kind of semblance of it in his own mind, a world of knowledge and intelligence in which he may live and work. This is by no means an equivalent to the artist for the nationally diffused life and thought of the epochs of Sophocles or Shakspeare; but, besides that it may be a means of preparation for such epochs, it does really constitute, if many share in it, a quickening and sustaining atmosphere of great value. Such an atmosphere the many-sided learning and the long and widely-combined critical effort of Germany formed for Goethe, when he lived and worked. There was no national glow of life and thought there as in the Athens of Pericles or the England of Elizabeth.⁵ That was the poet's weakness. But there was a sort of equivalent for it in the complete culture and unfettered thinking of a large body of Germans. That was his strength. In the England of the first quarter of this century there was neither a national glow of life and thought, such as we had in the age of Elizabeth, nor yet a culture and a force of learning and criticism such as were to be found in Germany. Therefore the creative power of poetry wanted, for success in the highest sense, materials and a basis; a thorough interpretation of the world was necessarily denied to it.

At first sight it seems strange that out of the immense stir of the French Revolution and its age should not have come a crop of works of genius equal to that which came out of the stir of the great productive time of Greece, or out of that of the Renaissance, with its powerful episode the Reformation. But the truth is that the stir of the French Revolution took a character which essentially distinguished it from such movements as these. These were, in the main, disinterestedly intellectual and spiritual movements; movements in which the human spirit looked for its satisfaction in itself and in the increased play of its own activity. The French Revolution took a political, practical character. The movement which went on in France under the old *régime*, from 1700 to 1789, was far more really akin than that of the Revolution itself to the movement of the Renaissance; the France of Voltaire and Rousseau⁶ told far more powerfully upon the mind of Europe than the France of the Revolution. Goethe reproached this last expressly with having 'thrown quiet culture back.' Nay, and the true key to how much in our Byron, even

3. SAMUEL TAYLOR COLERIDGE (1772-1834), English poet and critic, whose wide reading in German Romantic philosophers led to his introducing many of their ideas to English readers.

4. Greek tragedian (ca. 496-406 B.C.E.). Pindar (ca. 518-438 B.C.E.), Greek lyric poet.

5. Elizabeth I (1553-1603; reigned 1558-1603). Pericles (ca. 495-429 B.C.E.), Athenian statesman,

military leader, and supporter of the arts. He was the most influential man in Athens during the city's Golden Age.

6. Jean-Jacques Rousseau (1712-1778), Swiss-born French political theorist and philosopher. Voltaire: pen name of François Marie Arouet (1694-1778), French poet, dramatist, historian, and satirist.

in our Wordsworth, is this!—that they had their source in a great movement of feeling, not in a great movement of mind. The French Revolution, however,—that object of so much blind hatred,—found undoubtedly its motive-power in the intelligence of men, and not in their practical sense; this is what distinguishes it from the English Revolution of Charles the First's time. This is what makes it a more spiritual event than our Revolution, an event of much more powerful and worldwide interest, though practically less successful; it appeals to an order of ideas which are universal, certain, permanent. 1789 asked of a thing, Is it rational? 1642 asked of a thing, Is it legal? or, when it went furthest, Is it according to conscience? This is the English fashion, a fashion to be treated, within its own sphere, with the highest respect; for its success, within its own sphere, has been prodigious. But what is law in one place is not law in another; what is law here to-day is not law even here to-morrow; and as for conscience, what is binding on one man's conscience is not binding on another's. The old woman who threw her stool at the head of the surpliced minister in St. Giles's Church at Edinburgh⁷ obeyed an impulse to which millions of the human race may be permitted to remain strangers. But the prescriptions of reason are absolute, unchanging, of universal validity; *to count by tens is the easiest way of counting*—that is a proposition of which every one, from here to the Antipodes, feels the force; at least I should say so if we did not live in a country where it is not impossible that any morning we may find a letter in the *Times* declaring that a decimal coinage is an absurdity.⁸ That a whole nation should have been penetrated with an enthusiasm for pure reason, and with an ardent zeal for making its prescriptions triumph, is a very remarkable thing, when we consider how little of mind, or anything so worthy and quickening as mind, comes into the motives which alone, in general, impel great masses of men. In spite of the extravagant direction given to this enthusiasm, in spite of the crimes and follies in which it lost itself, the French Revolution derives from the force, truth, and universality of the ideas which it took for its law, and from the passion with which it could inspire a multitude for these ideas, a unique and still living power; it is—it will probably long remain—the greatest, the most animating event in history. And as no sincere passion for the things of the mind, even though it turn out in many respects an unfortunate passion, is ever quite thrown away and quite barren of good, France has reaped from hers one fruit—the natural and legitimate fruit, though not precisely the grand fruit she expected: she is the country in Europe where *the people* is most alive.

But the mania for giving an immediate political and practical application to all these fine ideas of the reason was fatal. Here an Englishman is in his element: on this theme we can all go on for hours. And all we are in the habit of saying on it has undoubtedly a great deal of truth. Ideas cannot be too much prized in and for themselves, cannot be too much lived with; but to transport them abruptly into the world of politics and practice, violently to revolutionise this world to their bidding,—that is quite another thing.

7. A riot broke out in July 1637 in St. Giles' Cathedral in protest against a new Anglican liturgy written by Archbishop Laud. It was said to have begun when a woman named Jenny Geddes threw her stool at the dean giving the service and accused

him of saying Mass.

8. Letters in the London *Times* in 1863 debated whether England should change its system of weights and measures to the metric system (itself an outgrowth of the French Revolution).

There is the world of ideas and there is the world of practice; the French are often for suppressing the one and the English the other; but neither is to be suppressed. A member of the House of Commons said to me the other day: 'That a thing is an anomaly, I consider to be no objection to it whatever.' I venture to think he was wrong; that a thing is an anomaly is an objection to it, but absolutely and in the sphere of ideas: it is not necessarily, under such and such circumstances, or at such and such a moment, an objection to it in the sphere of politics and practice. Joubert⁹ has said beautifully: 'C'est la force et le droit qui règlent toutes choses dans le monde; la force en attendant le droit.' (Force and right are the governors of this world; force till right is ready.) *Force till right is ready*; and till right is ready, force, the existing order of things, is justified, is the legitimate ruler. But right is something moral, and implies inward recognition, free assent of the will; we are not ready for right,—*right*, so far as we are concerned, *is not ready*,—until we have attained this sense of seeing it and willing it. The way in which for us it may change and transform force, the existing order of things, and become, in its turn, the legitimate ruler of the world, should depend on the way in which, when our times comes, we see it and will it. Therefore for other people enamoured of their own newly discerned right, to attempt to impose it upon us as ours, and violently to substitute their right for our force, is an act of tyranny, and to be resisted. It sets at nought the second great half of our maxim, *force till right is ready*. This was the grand error of the French Revolution; and its movement of ideas, by quitting the intellectual sphere and rushing furiously into the political sphere, ran, indeed, a prodigious and memorable course, but produced no such intellectual fruit as the movement of ideas of the Renaissance, and created, in opposition to itself, what I may call an *epoch of concentration*. The great force of that epoch of concentration was England; and the great voice of the epoch of concentration was Burke.¹ It is the fashion to treat Burke's writings on the French Revolution as superannuated and conquered by the event; as the eloquent but unphilosophical tirades of bigotry and prejudice. I will not deny that they are often disfigured by the violence and passion of the moment, and that in some directions Burke's view was bounded, and his observation therefore at fault. But on the whole, and for those who can make the needful corrections, what distinguishes these writings is their profound, permanent, fruitful, philosophical truth. They contain the true philosophy of an epoch of concentration, dissipate the heavy atmosphere which its own nature is apt to engender round it, and make its resistance rational instead of mechanical.

But Burke is so great because, almost alone in England, he brings thought to bear upon politics, he saturates politics with thought. It is his accident² that his ideas were at the service of an epoch of concentration, not of an epoch of expansion; it is his characteristic that he so lived by ideas, and had such a source of them welling up within him, that he could float even an epoch of concentration and English Tory politics with them. It does not hurt him that Dr. Price³ and the Liberals were enraged with him; it does not even

9. Joseph Joubert (1754–1824), French writer and moralist, known for his essays, maxims, and letters.

1. EDMUND BURKE (1729–1797), statesman and author of *Reflections on the French Revolution* (1790).

2. Fortune.

3. Richard Price (1723–1791), Welsh dissenting minister, moral philosopher, supporter of the American and French Revolutions, and one of Burke's opponents.

hurt him that George the Third and the Tories were enchanted with him. His greatness is that he lived in a world which neither English Liberalism nor English Toryism is apt to enter;—the world of ideas, not the world of catchwords and party habits. So far is it from being really true of him that he 'to party gave up what was meant for mankind,'⁴ that at the very end of his fierce struggle with the French Revolution, after all his invectives against its false pretensions, hollowness, and madness, with his sincere conviction of its mischievousness, he can close a memorandum on the best means of combating it, some of the last pages he ever wrote,⁵—the *Thoughts on French Affairs*, in December 1791,—with these striking words:—

'The evil is stated, in my opinion, as it exists: The remedy must be where power, wisdom, and information, I hope; are more united with good intentions than they can be with me. I have done with this subject, I believe, for ever. It has given me many anxious moments for the last two years. *If a great change is to be made in human affairs, the minds of men will be fitted to it; the general opinions and feelings will draw that way. Every fear, every hope will forward it; and then they who persist in opposing this mighty current in human affairs, will appear rather to resist the decrees of Providence itself, than the mere designs of men. They will not be resolute and firm, but perverse and obstinate.*'

That return of Burke upon himself has always seemed to me one of the finest things in English literature, or indeed in any literature. That is what I call living by ideas: when one side of a question has long had your earnest support, when all your feelings are engaged, when you hear all round you no language but one, when your party talks this language like a steam-engine and can imagine no other,—still to be able to think, still to be irresistibly carried, if so it be, by the current of thought to the opposite side of the question, and, like Balaam,⁶ to be unable to speak anything *but what the Lord has put in your mouth*. I know nothing more striking, and I must add that I know nothing more un-English.

For the Englishman in general is like my friend the Member of Parliament, and believes, point-blank, that for a thing to be an anomaly is absolutely no objection to it whatever. He is like the Lord Auckland⁷ of Burke's day, who, in a memorandum on the French Revolution, talks of 'certain miscreants, assuming the name of philosophers, who have presumed themselves capable of establishing a new system of society.' The Englishman has been called a political animal, and he values what is political and practical so much that ideas easily become objects of dislike in his eyes, and thinkers 'miscreants,' because ideas and thinkers have rashly meddled with politics and practice. This would be all very well if the dislike and neglect confined themselves to ideas transported out of their own sphere, and meddling rashly with practice; but they are inevitably extended to ideas as such, and to the whole life of intelligence; practice is everything, a free play of the mind is nothing. The notion of the free play of the mind upon all subjects being a pleasure in itself, being an object of desire, being an essential provider of elements without

4. An observation about "good Edmund" Burke in Oliver Goldsmith's poem "Retaliation" (1774), line 32.

5. R. H. Super, the modern editor of Arnold's prose works, notes that in fact Burke continued to write until his death in 1797.

6. Despite being sent by his king to curse the Israelites, Balaam blessed them, speaking "the word that God putteth in [his] mouth" (Numbers 22. 38).

7. William Eden, first Baron Auckland (1744–1814), statesman and diplomat.

which a nation's spirit, whatever compensations it may have for them, must, in the long run, die of inanition, hardly enters into an Englishman's thoughts. It is noticeable that the word *curiosity*, which in other languages is used in a good sense, to mean, as a high and fine quality of man's nature, just this disinterested love of a free play of the mind on all subjects, for its own sake,—it is noticeable, I say, that this word has in our language no sense of the kind, no sense but a rather bad and disparaging one. But criticism, real criticism, is essentially the exercise of this very quality. It obeys an instinct prompting it to try to know the best that is known and thought in the world, irrespectively of practice, politics, and everything of the kind; and to value knowledge and thought as they approach this best, without the intrusion of any other considerations whatever. This is an instinct for which there is, I think, little original sympathy in the practical English nature, and what there was of it has undergone a long benumbing period of blight and suppression in the epoch of concentration which followed the French Revolution.

But epochs of concentration cannot well endure for ever; epochs of expansion, in the due course of things, follow them. Such an epoch of expansion seems to be opening in this country. In the first place all danger of a hostile forcible pressure of foreign ideas upon our practice has long disappeared; like the traveller in the fable, therefore, we begin to wear our cloak a little more loosely.⁸ Then, with a long peace, the ideas of Europe steal gradually and amicably in, and mingle, though in infinitesimally small quantities at a time, with our own notions. Then, too, in spite of all that is said about the absorbing and brutalising influence of our passionate material progress, it seems to me indisputable that this progress is likely, though not certain, to lead in the end to an apparition⁹ of intellectual life; and that man, after he has made himself perfectly comfortable and has now to determine what to do with himself next, may begin to remember that he has a mind, and that the mind may be made the source of great pleasure. I grant it is mainly the privilege of faith, at present, to discern this end to our railways, our business, and our fortune-making; but we shall see if, here as elsewhere, faith is not in the end the true prophet. Our ease, our travelling, and our unbounded liberty to hold just as hard and securely as we please to the practice to which our notions have given birth, all tend to beget an inclination to deal a little more freely with these notions themselves, to canvass them a little, to penetrate a little into their real nature. Flutterings of curiosity, in the foreign sense of the word, appear amongst us, and it is in these that criticism must look to find its account. Criticism first; a time of true creative activity, perhaps,—which, as I have said, must inevitably be preceded amongst us by a time of criticism,—hereafter, when criticism has done its work.

It is of the last importance that English criticism should clearly discern what rule for its course, in order to avail itself of the field now opening to it, and to produce fruit for the future, it ought to take. The rule may be summed up in one word,—*disinterestedness*.¹ And how is criticism to show disinterestedness? By keeping aloof from what is called 'the practical view of things'; by resolutely following the law of its own nature, which is to be a free play of the mind on all subjects which it touches. By steadily refusing to lend

8. In Aesop's fable of the wind and the sun, the two have a contest (which the sun wins) to see which can first make a traveler remove his cloak.

9. An appearance before the world.

1. Objectivity, independence of judgment.

itself to any of those ulterior, political, practical considerations about ideas, which plenty of people will be sure to attach to them, which perhaps ought often to be attached to them, which in this country at any rate are certain to be attached to them quite sufficiently, but which criticism has really nothing to do with. Its business is, as I have said, simply to know the best that is known and thought in the world, and by in its turn making this known, to create a current of true and fresh ideas. Its business is to do this with inflexible honesty, with due ability; but its business is to do no more, and to leave alone all questions of practical consequences and applications, questions which will never fail to have due prominence given to them. Else criticism, besides being really false to its own nature, merely continues in the old rut which it has hitherto followed in this country, and will certainly miss the chance now given to it. For what is at present the bane of criticism in this country? It is that practical considerations cling to it and stifle it. It subserves interests not its own. Our organs of criticism are organs of men and parties having practical ends to serve, and with them those practical ends are the first thing and the play of mind the second; so much play of mind as is compatible with the prosecution of those practical ends is all that is wanted. An organ like the *Revue des Deux Mondes*,² having for its main function to understand and utter the best that is known and thought in the world, existing, it may be said, as just an organ for a free play of the mind, we have not. But we have the *Edinburgh Review*, existing as an organ of the old Whigs, and for as much play of the mind as may suit its being that; we have the *Quarterly Review*, existing as an organ of the Tories, and for as much play of mind as may suit its being that; we have the *British Quarterly Review*, existing as an organ of the political Dissenters, and for as much play of mind as may suit its being that; we have the *Times*, existing as an organ of the common, satisfied, well-to-do Englishman, and for as much play of mind as may suit its being that. And so on through all the various fractions, political and religious, of our society; every fraction has, as such, its organ of criticism, but the notion of combining all fractions in the common pleasure of a free disinterested play of mind meets with no favour. Directly this play of mind wants to have more scope, and to forget the pressure of practical considerations a little, it is checked, it is made to feel the chain. We saw this the other day in the extinction, so much to be regretted, of the *Home and Foreign Review*.³ Perhaps in no organ of criticism in this country was there so much knowledge, so much play of mind; but these could not save it. The *Dublin Review* subordinates play of mind to the practical business of English and Irish Catholicism, and lives. It must needs be that men should act in sects and parties, that each of these sects and parties should have its organ, and should make this organ subserve the interests of its action; but it would be well, too, that there should be a criticism, not the minister of these interests, not their enemy, but absolutely and entirely independent of them. No other criticism will ever attain any real authority or make any real way towards its end,—the creating a current of true and fresh ideas.

It is because criticism has so little kept in the pure intellectual sphere, has so little detached itself from practice, has been so directly polemical and

2. A highly respected and widely read French bimonthly review of culture, the arts, politics, and economics.

3. Liberal Catholic quarterly in London (1862–64).

controversial, that it has so ill accomplished, in this country, its best spiritual work; which is to keep man from a self-satisfaction which is retarding and vulgarising, to lead him towards perfection, by making his mind dwell upon what is excellent in itself, and the absolute beauty and fitness of things. A polemical practical criticism makes men blind even to the ideal imperfection of their practice, makes them willingly assert its ideal perfection, in order the better to secure it against attack; and clearly this is narrowing and baneful for them. If they were reassured on the practical side, speculative considerations of ideal perfection they might be brought to entertain, and their spiritual horizon would thus gradually widen. Sir Charles Adderley⁴ says to the Warwickshire farmers:—

‘Talk of the improvement of breed! Why, the race we ourselves represent, the men and women, the old Anglo-Saxon race, are the best breed in the whole world. . . . The absence of a too enervating climate, too unclouded skies, and a too luxurious nature, has produced so vigorous a race of people, and has rendered us so superior to all the world.’

Mr. Roebuck⁵ to the Sheffield cutlers:—

‘I look around me and ask what is the state of England? Is not property safe? Is not every man able to say what he likes? Can you not walk from one end of England to the other in perfect security? I ask you whether, the world over or in past history, there is anything like it? Nothing. I pray that our unrivalled happiness may last.’

Now obviously there is a peril for poor human nature in words and thoughts of such exuberant self-satisfaction, until we find ourselves safe in the streets of the Celestial City.

‘Das wenige verschwindet leicht dem Blicke,
Der vorwärts sieht, wie viel noch übrig bleibt—’

says Goethe;⁶ ‘the little that is done seems nothing when we look forward and see how much we have yet to do.’ Clearly this is a better line of reflection for weak humanity, so long as it remains on this earthly field of labour and trial.

But neither Sir Charles Adderley nor Mr. Roebuck is by nature inaccessible to considerations of this sort. They only lose sight of them owing to the controversial life we all lead, and the practical form which all speculation takes with us. They have in view opponents whose aim is not ideal, but practical; and in their zeal to uphold their own practice against these innovators, they go so far as even to attribute to this practice an ideal perfection. Somebody has been wanting to introduce a six-pound franchise, or to abolish church-rates,⁷ or to collect agricultural statistics by force, or to diminish local self-government. How natural, in reply to such proposals, very likely improper or ill-timed, to go a little beyond the mark, and to say stoutly, ‘Such a race of people as we stand, so superior to all the world! The old Anglo-Saxon race, the best breed in the whole world! I pray that our unrivalled happiness may last! I ask you whether, the world over or in past history, there is anything like it?’ And so long as criticism answers this dithyramb by insist-

5. John Arthur Roebuck (1801–1879), radical member of Parliament.

6. *Iphigenia in Tauris* (1787), 1.2.91–92.

7. Taxes legally imposed by the Church of England. “Six-pound franchise”: a proposal by radicals to extend the vote to anyone who owned land or buildings worth £6 annual rent (not £10, as set in 1832).

ing that the old Anglo-Saxon race would be still more superior to all others if it had no church-rates, or that our unrivalled happiness would last yet longer with a six-pound franchise, so long will the strain, 'The best breed in the whole world!' swell louder and louder, everything ideal and refining will be lost out of sight, and both the assailed and their critics will remain in a sphere, to say the truth, perfectly unvital, a sphere in which spiritual progression is impossible. But let criticism leave church-rates and the franchise alone, and in the most candid spirit, without a single lurking thought of practical innovation, confront with our dithyramb this paragraph on which I stumbled in a newspaper immediately after reading Mr. Roebuck:—

'A shocking child murder has just been committed at Nottingham. A girl named Wragg⁸ left the workhouse there on Saturday morning with her young illegitimate child. The child was soon afterwards found dead on Mapperly Hills, having been strangled. Wragg is in custody.'

Nothing but that; but, in juxtaposition with the absolute eulogies of Sir Charles Adderley and Mr. Roebuck, how eloquent, how suggestive are those few lines! 'Our old Anglo-Saxon breed, the best in the whole world!'—how much that is harsh and ill-favoured there is in this best! *Wragg!* If we are to talk of ideal perfection, of 'the best in the whole world,' has any one reflected what a touch of grossness in our race, what an original shortcoming in the more delicate spiritual perceptions, is shown by the natural growth amongst us of such hideous names,—Higginbottom, Stiggins, Bugg! In Ionia and Attica⁹ they were luckier in this respect than 'the best race in the world'; by the Ilissus¹ there was no Wragg, poor thing! And 'our unrivalled happiness';—what an element of grimness, bareness, and hideousness mixes with it and blurs it; the workhouse, the dismal Mapperly Hills,—how dismal those who have seen them will remember;—the gloom, the smoke, the cold, the strangled illegitimate child! 'I ask you whether, the world over or in past history, there is anything like it?' Perhaps not, one is inclined to answer; but at any rate, in that case, the world is very much to be pitied. And the final touch,—short, bleak, and inhuman: *Wragg is in custody*. The sex lost in the confusion of our unrivalled happiness; or (shall I say?) the superfluous Christian name lopped off by the straightforward vigour of our old Anglo-Saxon breed! There is profit for the spirit in such contrasts as this; criticism serves the cause of perfection by establishing them. By eluding sterile conflict, by refusing to remain in the sphere where alone narrow and relative conceptions have any worth and validity, criticism may diminish its momentary importance, but only in this way has it a chance of gaining admittance for those wider and more perfect conceptions to which all its duty is really owed. Mr. Roebuck will have a poor opinion of an adversary who replies to his defiant songs of triumph only by murmuring under his breath, *Wragg is in custody*; but in no other way will these songs of triumph be induced gradually to moderate themselves, to get rid of what in them is excessive and offensive, and to fall into a softer and truer key.

It will be said that it is a very subtle and indirect action which I am thus prescribing for criticism, and that, by embracing in this manner the Indian virtue of detachment² and abandoning the sphere of practical life, it con-

demns itself to a slow and obscure work. Slow and obscure it may be, but it is the only proper work of criticism. The mass of mankind will never have any ardent zeal for seeing things as they are; very inadequate ideas will always satisfy them.³ On these inadequate ideas reposes, and must repose, the general practice of the world. That is as much as saying that whoever sets himself to see things as they are will find himself one of a very small circle; but it is only by this small circle resolutely doing its own work that adequate ideas will ever get current at all. The rush and roar of practical life will always have a dizzying and attracting effect upon the most collected spectator, and tend to draw him into its vortex; most of all will this be the case where that life is so powerful as it is in England. But it is only by remaining collected, and refusing to lend himself to the point of view of the practical man, that the critic can do the practical man any service; and it is only by the greatest sincerity in pursuing his own course, and by at last convincing even the practical man of his sincerity, that he can escape misunderstandings which perpetually threaten him.

For the practical man is not apt for fine distinctions, and yet in these distinctions, truth and the highest culture greatly find their account. But it is not easy to lead a practical man,—unless you reassure him as to your practical intentions, you have no chance of leading him,—to see that a thing which he has always been used to look at from one side only, which he greatly values, and which, looked at from that side, quite deserves, perhaps, all the prizing and admiring which he bestows upon it,—that this thing, looked at from another side, may appear much less beneficent and beautiful, and yet retain all its claims to our practical allegiance. Where shall we find language innocent enough, how shall we make the spotless purity of our intentions evident enough, to enable us to say to the political Englishman that the British Constitution itself, which, seen from the practical side, looks such a magnificent organ of progress and virtue, seen from the speculative side,—with its compromises; its love of facts, its horror of theory, its studied avoidance of clear thoughts,—that, seen from this side, our august Constitution sometimes looks,—forgive me, shade of Lord Somers!⁴—a colossal machine for the manufacture of Philistines?⁵ How is Cobbett⁶ to say this and not be misunderstood, blackened as he is with the smoke of a lifelong conflict in the field of political practice? how is Mr. Carlyle⁷ to say it and not be misunderstood, after his furious raid into this field with his *Latter-day Pamphlets*? how is Mr. Ruskin,⁸ after his pugnacious political economy? I say, the critic must keep out of the region of immediate practice in the political, social, humanitarian sphere, if he wants to make a beginning for that more free speculative treatment of things, which may perhaps one day make its benefits felt even in this sphere, but in a natural and thence irresistible manner.

Do what he will, however, the critic will still remain exposed to frequent

journalist and reformer.

7. Thomas Carlyle (1795–1881), Scottish-born essayist and historian; he expressed bitter antidemocratic views in *Latter-Day Pamphlets* (1850).

8. John Ruskin (1819–1900), art critic and social critic. In *Unto This Last* (1860–62), he challenged the business and industrial practices and materialism of the age.

misunderstandings, and nowhere so much as in this country. For here people are particularly indisposed even to comprehend that without this free disinterested treatment of things, truth and the highest culture are out of the question. So immersed are they in practical life, so accustomed to take all their notions from this life and its processes, that they are apt to think that truth and culture themselves can be reached by the process of this life, and that it is an impertinent singularity to think of reaching them in any other. 'We are all *terræ filii*,'⁹ cries their eloquent advocate; 'all Philistines together. Away with the notion of proceeding by any other course than the course dear to the Philistines; let us have a social movement, let us organise and combine a party to pursue truth and new thought, let us call it *the liberal party*, and let us all stick to each other, and back each other up. Let us have no nonsense about independent criticism, and intellectual delicacy, and the few and the many. Don't let us trouble ourselves about foreign thought; we shall invent the whole thing for ourselves as we go along. If one of us speaks well, applaud him; if one of us speaks ill, applaud him too; we are all in the same movement, we are all liberals, we are all in pursuit of truth.' In this way the pursuit of truth becomes really a social, practical, pleasurable affair, almost requiring a chairman, a secretary, and advertisements; with the excitement of an occasional scandal, with a little resistance to give the happy sense of difficulty overcome; but, in general, plenty of bustle and very little thought. To act is so easy, as Goethe says; to think is so hard!¹ It is true that the critic has many temptations to go with the stream, to make one of the party movement, one of these *terræ filii*; it seems ungracious to refuse to be a *terræ filius*, when so many excellent people are; but the critic's duty is to refuse, or, if resistance is vain, at least to cry with Obermann: *Périssons en résistant*.²

How serious a matter it is to try and resist, I had ample opportunity of experiencing when I ventured some time ago to criticise the celebrated first volume of Bishop Colenso.³ The echoes of the storm which was then raised I still, from time to time, hear grumbling round me. That storm arose out of a misunderstanding almost inevitable. It is a result of no little culture to attain to a clear perception that science and religion are two wholly different things. The multitude will for ever confuse them, but happily that is of no great real importance, for while the multitude imagines itself to live by its false science, it does really live by its true religion. Dr. Colenso, however, in his first volume did all he could to strengthen the confusion,⁴ and to make

9. Sons of the earth (Latin); that is, men of the soil.

1. A reference to Goethe's novel *Wilhelm Meister's Apprenticeship* (1795-96).

2. Let us die resisting (French). Quoted from *Obermann* (1804), a Romantic epistolary novel by Etienne de Sénancour.

3. So sincere is my dislike to all personal attack and controversy, that I abstain from reprinting, at this distance of time from the occasion which called them forth, the essays in which I criticised Dr. Colenso's book; I feel bound, however, after all that has passed, to make here a final declaration of my sincere impotence for having published them. Nay, I cannot forbear repeating yet once more, for his benefit and that of his readers, this sentence from my original remarks upon him: *There is truth of science and truth of religion; truth of science does not become truth of religion till it is*

made religious. And I will add: Let us have all the science there is from the men of science; from the men of religion let us have religion [Arnold's note]. John William Colenso (1814-1883), bishop of Natal in South Africa, whose controversial studies disputed orthodox theology and the historical accuracy of biblical texts. In "The Bishop and the Philosopher" (*Macmillan's Magazine*, January 1863), Arnold sharply criticized Colenso's scholarship and failure to address true spiritual needs.

4. It has been said I make it 'a crime against literary criticism and the higher culture to attempt to inform the ignorant.' Need I point out that the ignorant are not informed by being confirmed in a confusion? [Arnold's note]. Quoted from the jurist and essayist Fitzjames Stephen in "Mr. Matthew Arnold and His Countrymen," *Saturday Review*, December 3, 1864.

it dangerous. He did this with the best intentions, I freely admit, and with the most candid ignorance that this was the natural effect of what he was doing; but, says Joubert, 'Ignorance, which in matters of morals extenuates the crime, is itself, in intellectual matters, a crime of the first order.' I criticised Bishop Colenso's speculative confusion. Immediately there was a cry raised: 'What is this? here is a liberal attacking a liberal. Do not you belong to the movement? are not you a friend of truth? Is not Bishop Colenso in pursuit of truth? then speak with proper respect of his book. Dr. Stanley⁵ is another friend of truth, and you speak with proper respect of his book; why make these invidious differences? both books are excellent, admirable, liberal; Bishop Colenso's perhaps the most so, because it is the boldest, and will have the best practical consequences for the liberal cause. Do you want to encourage to the attack of a brother liberal his, and your, and our implacable enemies, the *Church and State Review* or the *Record*,—the High Church rhinoceros and the Evangelical hyæna? Be silent, therefore; or rather speak, speak as loud as ever you can! and go into ecstasies over the eighty and odd pigeons.'⁶

But criticism cannot follow this coarse and indiscriminate method. It is unfortunately possible for a man in pursuit of truth to write a book which reposes upon a false conception. Even the practical consequences of a book are to genuine criticism no recommendation of it, if the book is, in the highest sense, blundering. I see that a lady⁷ who herself, too, is in pursuit of truth, and who writes with great ability, but a little too much, perhaps, under the influence of the practical spirit of the English liberal movement, classes Bishop Colenso's book and M. Renan's⁸ together, in her survey of the religious state of Europe, as facts of the same order, works, both of them, of 'great importance'; 'great ability, power, and skill'; Bishop Colenso's, perhaps, the most powerful; at least, Miss Cobbe gives special expression to her gratitude that to Bishop Colenso 'has been given the strength to grasp, and the courage to teach, truths of such deep import.' In the same way, more than one popular writer has compared him to Luther.⁹ Now it is just this kind of false estimate which the critical spirit is, it seems to me, bound to resist. It is really the strongest possible proof of the low ebb at which, in England, the critical spirit is, that while the critical hit in the religious literature of Germany is Dr. Strauss's book,¹ in that of France M. Renan's book, the book of Bishop Colenso is the critical hit in the religious literature of England. Bishop Colenso's book reposes on a total misconception of the essential elements of the religious problem, as that problem is now presented for solution. To criticism, therefore, which seeks to have the best that is known and thought on this problem, it is, however well meant, of no importance whatever. M. Renan's book attempts a new synthesis of the elements furnished to us by the Four Gospels. It attempts, in my opinion, a synthesis, perhaps premature, perhaps impossible, certainly not successful. Up to the

ken Lights (1864).

8. Ernest Renan (1823–1892), French critic, historian, orientalist, and author of *The Life of Jesus* (1863).

9. Martin Luther (1483–1546), German religious reformer and founder of the Reformation.

1. David Friedrich Strauss (1808–1874), German theologian, author of *The Life of Jesus* (1835–36).

present time, at any rate, we must acquiesce in Fleury's sentence on such recastings of the Gospel-story: *Quiconque s' imagine la pouvoir mieux écrire, ne l'entend pas.*² M. Renan had himself passed by anticipation a like sentence on his own work, when he said: 'If a new presentation of the character of Jesus were offered to me, I would not have it; its very clearness would be, in my opinion, the best proof of its insufficiency.' His friends may with perfect justice rejoin that at the sight of the Holy Land, and of the actual scene of the Gospel-story, all the current of M. Renan's thoughts may have naturally changed, and a new casting of that story irresistibly suggested itself to him; and that this is just a case for applying Cicero's maxim: Change of mind is not inconsistency—*nemo doctus unquam mutationem consilii inconstantiam dixit esse.*³ Nevertheless, for criticism, M. Renan's first thought must still be the truer one, as long as his new casting so fails more fully to commend itself, more fully (to use Coleridge's happy phrase about the Bible) to *find us.*⁴ Still M. Renan's attempt is, for criticism, of the most real interest and importance, since, with all its difficulty, a fresh synthesis of the New Testament *data*,—not a making war on them, in Voltaire's fashion,⁵ not a leaving them out of mind, in the world's fashion, but the putting a new construction upon them, the taking them from under the old, traditional, conventional point of view and placing them under a new one,—is the very essence of the religious problem, as now presented; and only by efforts in this direction can it receive a solution.

Again, in the same spirit in which she judges Bishop Colenso, Miss Cobbe, like so many earnest liberals of our practical race, both here and in America, herself sets vigorously about a positive reconstruction of religion, about making a religion of the future out of hand, or at least setting about making it. We must not rest, she and they are always thinking and saying, in negative criticism, we must be creative and constructive; hence we have such works as her recent *Religious Duty*,⁶ and works still more considerable, perhaps by others, which will be in every one's mind. These works often have much ability; they often spring out of sincere convictions, and a sincere wish to do good; and they sometimes, perhaps, do good. Their fault is (if I may be permitted to say so) one which they have in common with the British College of Health, in the New Road. Every one knows the British College of Health; it is that building with the lion and the statue of the Goddess Hygeia before it; at least I am sure about the lion, though I am not absolutely certain about the Goddess Hygeia.⁷ This building does credit, perhaps, to the resources of Dr. Morrison⁸ and his disciples; but it falls a good deal short of one's idea of what a British College of Health ought to be. In England, where we hate public interference and love individual enterprise, we have a whole crop of places like the British College of Health; the grand name without the grand thing. Unluckily, creditable to individual enterprise as they are, they tend to

me than I have experienced in all other books put together."

5. Voltaire's works include a number of attacks on Catholic doctrine and religious intolerance.

6. Published in 1864.

7. Greek deity personifying health.

8. James Morrison (1770–1840), merchant and vendor, described himself as "the Hygeist"; in 1828 he founded the British College of Health, from which he distributed his cure-all patent medicine.

impair our taste by making us forget what more grandiose, noble, or beautiful character properly belongs to a public institution. The same may be said of the religions of the future of Miss Cobbe and others. Creditable, like the British College of Health, to the resources of their authors, they yet tend to make us forget what more grandiose, noble, or beautiful character properly belongs to religious constructions. The historic religions, with all their faults, have had this; it certainly belongs to the religious sentiment, when it truly flowers, to have this; and we impoverish our spirit if we allow a religion of the future without it. What then is the duty of criticism here? To take the practical point of view, to applaud the liberal movement and all its works,—its New Road religions of the future into the bargain,—for their general utility's sake? By no means; but to be perpetually dissatisfied with these works, while they perpetually fall short of a high and perfect ideal.

For criticism, these are elementary laws; but they never can be popular, and in this country they have been very little followed, and one meets with immense obstacles in following them. That is a reason for asserting them again and again. Criticism must maintain its independence of the practical spirit and its aim. Even with well-meant efforts of the practical spirit it must express dissatisfaction, if in the sphere of the ideal they seem impoverishing and limiting. It must not hurry on to the goal because of its practical importance. It must be patient, and know how to wait; and flexible, and know how to attach itself to things and how to withdraw from them. It must be apt to study and praise elements that for the fulness of spiritual perfection are wanted, even though they belong to a power which in the practical sphere may be maleficent. It must be apt to discern the spiritual shortcomings or illusions of powers that in the practical sphere may be beneficent. And this without any notion of favouring or injuring, in the practical sphere, one power or the other; without any notion of playing off, in this sphere, one power against the other. When one looks, for instance, at the English Divorce Court,—an institution which perhaps has its practical conveniences, but which in the ideal sphere is so hideous; an institution which neither makes divorce impossible nor makes it decent, which allows a man to get rid of his wife, or a wife of her husband, but makes them drag one another first, for the public edification, through a mire of unutterable infamy,—when one looks at this charming institution, I say, with its crowded trails, its newspaper reports, and its money compensations, this institution in which the gross unregenerate British Philistine has indeed stamped an image of himself,—one may be permitted to find the marriage theory of Catholicism⁹ refreshing and elevating. Or when Protestantism, in virtue of its supposed rational and intellectual origin, gives the law to criticism too magisterially, criticism may and must remind it that its pretensions, in this respect, are illusive and do it harm; that the Reformation was a moral rather than an intellectual event; that Luther's theory of grace no more exactly reflects the mind of the spirit than Bossuet's¹ philosophy of history reflects it; and that there is no more antecedent probability of the Bishop of Durham's stock of ideas being agreeable to perfect reason than of Pope Pius the Ninth's.² But criticism will not

9. That is, that in Christian marriage, once consummated, there can never be an absolute divorce.

on that account forget the achievements of Protestantism in the practical and moral sphere; nor that, even in the intellectual sphere, Protestantism, though in a blind and stumbling manner, carried forward the Renaissance, while Catholicism threw itself violently across its path.

I lately heard a man of thought and energy contrasting the want of ardor and movement which he now found amongst young men in this country with what he remembered in his own youth, twenty years ago. 'What reformers we were then!' he exclaimed; 'what a zeal we had! how we canvassed every institution in Church and State, and were prepared to remodel them all on first principles!' He was inclined to regret, as a spiritual flagging, the lull which he saw. I am disposed rather to regard it as a pause in which the turn to a new mode of spiritual progress is being accomplished. Everything was long seen, by the young and ardent amongst us, in inseparable connection with politics and practical life. We have pretty well exhausted the benefits of seeing things in this connection, we have got all that can be got by so seeing them. Let us try a more disinterested mode of seeing them; let us betake ourselves more to the serener life of the mind and spirit. This life, too, may have its excesses and dangers; but they are not for us at present. Let us think of quietly enlarging our stock of true and fresh ideas, and not, as soon as we get an idea or half an idea, be running out with it into the street, and trying to make it rule there. Our ideas will, in the end, shape the world all the better for maturing a little. Perhaps in fifty years' time it will in the English House of Commons be an objection to an institution that it is an anomaly, and my friend the Member of Parliament will shudder in his grave. But let us in the meanwhile rather endeavour that in twenty years' time it may, in English literature, be an objection to a proposition that it is absurd. That will be a change so vast, that the imagination almost fails to grasp it. *Ab integro sæclorum nascitur ordo.*³

If I have insisted so much on the course which criticism must take where politics and religion are concerned, it is because, where these burning matters are in question, it is most likely to go astray. I have wished, above all, to insist on the attitude which criticism should adopt toward things in general; on its right tone and temper of mind. But then comes another question as to the subject-matter which literary criticism should most seek. Here, in general, its course is determined for it by the idea which is the law of its being; the idea of a disinterested endeavour to learn and propagate the best that is known and thought in the world, and thus to establish a current of fresh and true ideas. By the very nature of things, as England is not all the world, much of the best that is known and thought in the world cannot be of English growth, must be foreign; by the nature of things, again, it is just this that we are least likely to know, while English thought is streaming in upon us from all sides, and takes excellent care that we shall not be ignorant of its existence. The English critic of literature, therefore, must dwell much on foreign thought, and with particular heed on any part of it, which, while significant and fruitful in itself, is for any reason specially likely to escape him. Again, judging is often spoken of as the critic's one business, and so in some sense it is; but the judgment which almost insensibly forms itself in a

3. From the renewal of the generations a [great] order is born (Latin). From Virgil, *Eclogue* 4.5 (ca. 37 B.C.E.). This poem was sometimes interpreted

by Christians as predicting the birth of the Messiah.

fair and clear mind, along with fresh knowledge, is the valuable one; and thus knowledge, and ever fresh knowledge, must be the critic's great concern for himself. And it is by communicating fresh knowledge, and letting his own judgment pass along with it,—but insensibly, and in the second place, not the first, as a sort of companion and clue, not as an abstract lawgiver,—that the critic will generally do most good to his readers. Sometimes, no doubt, for the sake of establishing an author's place in literature; and his relation to a central standard (and if this is not done, how are we to get at our *best in the world?*), criticism may have to deal with a subject-matter so familiar that fresh knowledge is out of the question, and then it must be all judgment; an enunciation and detailed application of principles. Here the great safeguard is never to let oneself become abstract, always to retain an intimate and lively consciousness of the truth of what one is saying, and, the moment this fails us, to be sure that something is wrong. Still, under all circumstances, this mere judgment and application of principles is, in itself, not the most satisfactory work to the critic; like mathematics, it is tautological, and cannot well give us, like fresh learning, the sense of creative activity.

But stop, some one will say; all this talk is of no practical use to us whatever; this criticism of yours is not what we have in our minds when we speak of criticism; when we speak of critics and criticism, we mean critics and criticism of the current English literature of the day; when you offer to tell criticism its function, it is to this criticism that we expect you to address yourself. I am sorry for it, for I am afraid I must disappoint these expectations. I am bound by my own definition of criticism: *a disinterested endeavour to learn and propagate the best that is known and thought in the world*. How much of current English literature comes into this 'best that is known and thought in the world'? Not very much, I fear; certainly less, at this moment, than of the current literature of France or Germany. Well, then, am I to alter my definition of criticism, in order to meet the requirements of a number of practising English critics, who, after all, are free in their choice of a business? That would be making criticism lend itself just to one of those alien practical considerations, which, I have said, are so fatal to it. One may say, indeed, to those who have to deal with the mass—so much better disregarded—of current English literature, that they may at all events endeavour, in dealing with this, to try it, so far as they can, by the standard of the best that is known and thought in the world; one may say, that to get anywhere near this standard, every critic should try and possess one great literature, at least, besides his own; and the more unlike his own, the better. But, after all, the criticism I am really concerned with,—the criticism which alone can much help us for the future, the criticism which, throughout Europe, is at the present day meant, when so much stress is laid on the importance of criticism and the critical spirit,—is a criticism which regards Europe as being, for intellectual and spiritual purposes, one great confederation, bound to a joint action and working to a common result; and whose members have, for their proper outfit, a knowledge of Greek, Roman, and Eastern antiquity, and of one another. Special, local, and temporary advantages being put out of account, that modern nation will in the intellectual and spiritual sphere make most progress, which most thoroughly carries out this programme. And what is that but saying that we too, all of us, as individuals, the more thoroughly we carry it out, shall make the more progress?

There is so much inviting us!—what are we to take? what will nourish us in growth towards perfection? That is the question which, with the immense field of life and of literature lying before him, the critic has to answer; for himself first, and afterwards for others. In this idea of the critic's business the essays brought together in the following pages⁴ have had their origin; in this idea, widely different as are their subjects, they have, perhaps, their unity.

I conclude with what I said at the beginning: to have the sense of creative activity is the great happiness and the great proof of being alive, and it is not denied to criticism to have it; but then criticism must be sincere, simple, flexible, ardent, ever widening its knowledge. Then it may have, in no contemptible measure, a joyful sense of creative activity; a sense which a man of insight and conscience will prefer to what he might derive from a poor, starved, fragmentary, inadequate creation. And at some epochs no other creation is possible.

Still, in full measure, the sense of creative activity belongs only to genuine creation; in literature we must never forget that. But what true man of letters ever can forget it? It is no such common matter for a gifted nature to come into possession of a current of true and living ideas, and to produce amidst the inspiration of them, that we are likely to underrate it. The epochs of Æschylus⁵ and Shakspeare make us feel their pre-eminence. In an epoch like those is, no doubt, the true life of literature; there is the promised land, towards which criticism can only beckon. That promised land it will not be ours to enter, and we shall die in the wilderness;⁶ but to have desired to enter it, to have saluted it from afar, is already, perhaps, the best distinction among contemporaries; it will certainly be the best title to esteem with posterity.

1864, 1875

From Culture and Anarchy

From Chapter I. Sweetness and Light¹

The disparagers of culture make its motive curiosity; sometimes, indeed, they make its motive mere exclusiveness and vanity. The culture which is supposed to plume itself on a smattering of Greek and Latin is a culture which is begotten by nothing so intellectual as curiosity; it is valued either out of sheer vanity and ignorance or else as an engine of social and class distinction, separating its holder, like a badge or title, from other people who have not got it. No serious man would call this *culture*, or attach any value to it, as culture, at all. To find the real ground for the very different estimate which serious people will set upon culture, we must find some motive for culture

4. In the book *Essays in Criticism*; this essay was the first in the volume.

5. Greek tragedian (525–456 B.C.E.).

6. Like Moses, who viewed the Promised Land but did not live to enter it. See Deuteronomy 32.48–52, 34.1–4.

1. First delivered, with the title "Culture and Its

Enemies," as Arnold's final lecture as Professor of Poetry at Oxford University, June 7, 1867, and published in the *Cornhill Magazine* in July. It appeared as chapter 1 of *Culture and Anarchy* in 1869. The text reprinted here is that of the 1882 third edition, the last that Arnold himself prepared.

in the terms of which may lie a real ambiguity; and such a motive the word *curiosity* gives us.

I have before now pointed out² that we English do not, like the foreigners, use this word in a good sense as well as in a bad sense. With us the word is always used in a somewhat disapproving sense. A liberal and intelligent eagerness about the things of the mind may be meant by a foreigner when he speaks of curiosity, but with us the word always conveys a certain notion of frivolous and unedifying activity. In the *Quarterly Review*, some little time ago, was an estimate of the celebrated French critic, M. Sainte-Beuve,³ and a very inadequate estimate in my judgment was. And its inadequacy consisted chiefly in this: that in our English way it left out of sight the double sense really involved in the word *curiosity*, thinking enough was said to stamp M. Sainte-Beuve with blame if it was said that he was impelled in his operations as a critic by curiosity, and omitting either to perceive that M. Sainte-Beuve himself, and many other people with him, would consider that this was praiseworthy and not blameworthy, or to point out why it ought really to be accounted worthy of blame and not of praise. For as there is a curiosity about intellectual matters which is futile, and merely a disease, so there is certainly a curiosity,—a desire after the things of the mind simply for their own sakes and for the pleasure of seeing them as they are,—which is, in an intelligent being, natural and laudable. Nay, and the very desire to see things as they are implies a balance and regulation of mind which is not often attained without fruitful effort, and which is the very opposite of the blind and diseased impulse of mind which is what we mean to blame when we blame curiosity. Montesquieu⁴ says: 'The first motive which ought to impel us to study is the desire to augment the excellence of our nature, and to render an intelligent being yet more intelligent.' This is the true ground to assign for the genuine scientific passion, however manifested, and for culture, viewed simply as a fruit of this passion; and it is a worthy ground, even though we let the term *curiosity* stand to describe it.

But there is of culture another view, in which not solely the scientific passion, the sheer desire to see things as they are, natural and proper in an intelligent being, appears as the ground of it. There is a view in which all the love of our neighbour, the impulses towards action, help, and beneficence, the desire for removing human error, clearing human confusion, and diminishing human misery, the noble aspiration to leave the world better and happier than we found it,—motives eminently such as are called social,—come in as part of the grounds of culture, and the main and pre-eminent part. Culture is then properly described not as having its origin in curiosity, but as having its origin in the love of perfection; it is *a study of perfection*. It moves by the force, not merely or primarily of the scientific passion for pure knowledge, but also of the moral and social passion for doing good. As, in the first view of it, we took for its worthy motto Montesquieu's words: 'To render an intelligent being yet more intelligent!' so, in the second view of

2. In "The Function of Criticism at the Present Time" (1864; see above).

3. Charles Augustin Sainte-Beuve (1804–1869), French literary critic. In the review mentioned (*Quarterly Review* 119 [January 1866]: 80–108), the author identifies Arnold as Sainte-Beuve's dis-

ciple and states that the *Essays in Criticism* are "graceful but perfectly unsatisfactory."

4. Charles de Secondat Montesquieu (1689–1755), French philosopher and legal and political theorist.

it, there is no better motto which it can have than these words of Bishop Wilson:⁵ 'To make reason and the will of God prevail!'

Only, whereas the passion for doing good is apt to be overhasty in determining what reason and the will of God say, because its turn is for acting rather than thinking and it wants to be beginning to act; and whereas it is apt to take its own conceptions, which proceed from its own state of development and share in all the imperfections and immaturities of this, for a basis of action; what distinguishes culture is, that it is possessed by the scientific passion as well as by the passion of doing good; that it demands worthy notions of reason and the will of God, and does not readily suffer its own crude conceptions to substitute themselves for them. And knowing that no action or institution can be salutary and stable which is not based on reason and the will of God, it is not so bent on acting and instituting, even with the great aim of diminishing human error and misery ever before its thoughts, but that it can remember that acting and instituting are of little use, unless we know how and what we ought to act and to institute.

This culture is more interesting and more far-reaching than that other, which is founded solely on the scientific passion for knowing. But it needs times of faith and ardour, times when the intellectual horizon is opening and widening all round us, to flourish in. And is not the close and bounded intellectual horizon within which we have long lived and moved now lifting up, and are not new lights finding free passage to shine in upon us? For a long time there was no passage for them to make their way in upon us, and then it was of no use to think of adapting the world's action to them. Where was the hope of making reason and the will of God prevail among people who had a routine which they had christened reason and the will of God, in which they were inextricably bound, and beyond which they had no power of looking? But now the iron force of adhesion to the old routine,—social, political, religious,—has wonderfully yielded; the iron force of exclusion of all which is new has wonderfully yielded. The danger now is, not that people should obstinately refuse to allow anything but their old routine to pass for reason and the will of God, but either that they should allow some novelty or other to pass for these too easily, or else that they should underrate the importance of them altogether, and think it enough to follow action for its own sake, without troubling themselves to make reason and the will of God prevail therein. Now, then, is the moment for culture to be of service, culture which believes in making reason and the will of God prevail, believes in perfection, is the study and pursuit of perfection, and is no longer debarred, by a rigid invincible exclusion of whatever is new, from getting acceptance for its ideas, simply because they are new.

The moment this view of culture is seized, the moment it is regarded not solely as the endeavour to see things as they are, to draw towards a knowledge of the universal order which seems to be intended and aimed at in the world, and which it is a man's happiness to go along with or his misery to go counter to,—to learn, in short, the will of God,—the moment, I say, culture is considered not merely as the endeavour to *see* and *learn* this, but as the endeav-

5. Thomas Wilson (1663–1755), English churchman and author of devotional works. Arnold is condensing a passage from Wilson's *Maxims*.

our, also, to make it *prevail*, the moral, social, and beneficent character of culture becomes manifest. The mere endeavour to see and learn the truth for our own personal satisfaction is indeed a commencement for making it prevail, a preparing the way for this, which always serves this, and is wrongly, therefore, stamped with blame absolutely in itself and not only in its caricature and degeneration. But perhaps it has got stamped with blame, and disparaged with the dubious title of curiosity, because in comparison with this wider endeavour of such great and plain utility it looks selfish, petty, and unprofitable.

And religion, the greatest and most important of the efforts by which the human race has manifested its impulse to perfect itself,—religion, that voice of the deepest human experience,—does not only enjoin and sanction the aim which is the great aim of culture, the aim of setting ourselves to ascertain what perfection is and to make it prevail; but also, in determining generally in what human perfection consists, religion comes to a conclusion identical with that which culture,—culture seeking the determination of this question through *all* the voices of human experience which have been heard upon it, of art, science, poetry, philosophy, history, as well as of religion, in order to give a greater fulness and certainty to its solution,—likewise reaches. Religion says: *The kingdom of God is within you*;⁶ and culture, in like manner, places human perfection in an *internal* condition, in the growth and predominance of our humanity proper, as distinguished from our animality. It places it in the ever-increasing efficacy and in the general harmonious expansion of those gifts of thought and feeling, which make the peculiar dignity, wealth, and happiness of human nature. As I have said on a former occasion:⁷ 'It is in making endless additions to itself, in the endless expansion of its powers, in endless growth in wisdom and beauty, that the spirit of the human race finds its ideal. To reach this ideal, culture is an indispensable aid, and that is the true value of culture.' Not a having and a resting, but a growing and a becoming, is the character of perfection as culture conceives it; and here, too, it coincides with religion.

And because men are all members of one great whole, and the sympathy which is in human nature will not allow one member to be indifferent to the rest or to have a perfect welfare independent of the rest, the expansion of our humanity, to suit the idea of perfection which culture forms, must be a *general* expansion. Perfection, as culture conceives it, is not possible while the individual remains isolated. The individual is required, under pain of being stunted and enfeebled in his own development if he disobeys, to carry others along with him in his march towards perfection, to be continually doing all he can to enlarge and increase the volume of the human stream sweeping thitherward. And here, once more, culture lays on us the same obligation as religion, which says, as Bishop Wilson has admirably put it, that 'to promote the kingdom of God is to increase and hasten one's own happiness.'

But, finally, perfection,—as culture from a thorough disinterested study of human nature and human experience learns to conceive it,—is a harmonious expansion of *all* the powers which make the beauty and worth of human nature, and is not consistent with the over-development of any one

6. Luke 17.21.

7. In *A French Eton* (1864), chapter 3.

power at the expense of the rest. Here culture goes beyond religion, as religion is generally conceived by us.

If culture, then, is a study of perfection, and of harmonious perfection, general perfection, and perfection which consists in becoming something rather than in having something, in an inward condition of the mind and spirit, not in an outward set of circumstances,—it is clear that culture, instead of being the frivolous and useless thing which Mr. Bright, and Mr. Frederic Harrison,⁸ and many other Liberals are apt to call it, has a very important function to fulfil for mankind. And this function is particularly important in our modern world, of which the whole civilisation is, to a much greater degree than the civilisation of Greece and Rome, mechanical and external, and tends constantly to become more so. But above all in our own country has culture a weighty part to perform, because here that mechanical character, which civilisation tends to take everywhere, is shown in the most eminent degree. Indeed nearly all the characters of perfection, as culture teaches us to fix them, meet in this country with some powerful tendency which thwarts them and sets them at defiance. The idea of perfection as an *inward* condition of the mind and spirit is at variance with the mechanical and material civilisation in esteem with us, and nowhere, as I have said, so much in esteem as with us. The idea of perfection as a *general* expansion of the human family is at variance with our strong individualism, our hatred of all limits to the unrestrained swing of the individual's personality, our maxim of 'every man for himself.' Above all, the idea of perfection as a *harmonious* expansion of human nature is at variance with our want of flexibility, with our inaptitude for seeing more than one side of a thing, with our intense energetic absorption in the particular pursuit we happen to be following. So culture has a rough task to achieve in this country. Its preachers have, and are likely long to have, a hard time of it, and they will much oftener be regarded, for a great while to come, as elegant or spurious Jeremiahs than as friends and benefactors. That, however, will not prevent their doing in the end good service if they persevere. And, meanwhile, the mode of action they have to pursue, and the sort of habits they must fight against, ought to be made quite clear for every one to see, who may be willing to look at the matter attentively and dispassionately.

Faith in machinery is, I said, our besetting danger; often in machinery most absurdly disproportioned to the end which this machinery, if it is to do any good at all, is to serve; but always in machinery, as if it had a value in and for itself.⁹ What is freedom but machinery? what is population but machinery? what is coal but machinery? what are railroads but machinery? what is wealth but machinery? what are, even, religious organisations but machinery? Now almost every voice in England is accustomed to speak of these things as if they were precious ends in themselves, and therefore had some of the characters of perfection indisputably joined to them. I have before now noticed Mr. Roebuck's¹ stock argument for proving the greatness

8. English Jurist and philosopher (1831–1923), and critic of Arnold's cultural views. John Bright (1811–1889), English political reformer, orator, and member of Parliament.

9. In "Signs of the Times" (1829), the Scottish-born author Thomas Carlyle had stated that it was now "the Mechanical Age. It is the Age of Machin-

ery, in every outward and inward sense of that word."

1. John Arthur Roebuck (1801–1879), radical member of Parliament. "Before now": see "The Function of Criticism at the Present Time" (above).

and happiness of England as she is, and for quite stopping the mouths of all gainsayers. Mr. Roebuck is never weary of reiterating this argument of his, so I do not know why I should be weary of noticing it. 'May not every man in England say what he likes?'—Mr. Roebuck perpetually asks; and that, he thinks, is quite sufficient, and when every man may say what he likes, our aspirations ought to be satisfied. But the aspirations of culture, which is the study of perfection, are not satisfied, unless what men say, when they may say what they like, is worth saying,—has good in it, and more good than bad. In the same way the *Times*, replying to some foreign strictures on the dress, looks, and behaviour of the English abroad, urges that the English ideal is that every one should be free to do and to look just as he likes. But culture indefatigably tries, not to make what each raw person may like the rule by which he fashions himself; but to draw ever nearer to a sense of what is indeed beautiful, graceful, and becoming, and to get the raw person to like that.

And in the same way with respect to railroads and coal. Every one must have observed the strange language current during the late discussions as to the possible failure of our supplies of coal. Our coal, thousands of people were saying, is the real basis of our national greatness; if our coal runs short, there is an end of the greatness of England. But what is greatness?—culture makes us ask. Greatness is a spiritual condition worthy to excite love, interest, and admiration; and the outward proof of possessing greatness is that we excite love, interest, and admiration. If England were swallowed up by the sea to-morrow, which of the two, a hundred years hence, would most excite the love, interest, and admiration of mankind,—would most, therefore, show the evidences of having possessed greatness,—the England of the last twenty years, or the England of Elizabeth,² of a time of splendid spiritual effort, but when our coal, and our industrial operations depending on coal, were very little developed? Well, then, what an unsound habit of mind it must be which makes us talk of things like coal or iron as constituting the greatness of England, and how salutary a friend is culture, bent on seeing things as they are, and thus dissipating delusions of this kind and fixing standards of perfection that are real!

Wealth, again, that end to which our prodigious works for material advantage are directed,—the commonest of commonplaces tells us how men are always apt to regard wealth as a precious end in itself; and certainly they have never been so apt thus to regard it as they are in England at the present time. Never did people believe anything more firmly than nine Englishmen out of ten at the present day believe that our greatness and welfare are proved by our being so very rich. Now, the use of culture is that it helps us, by means of its spiritual standard of perfection, to regard wealth as but machinery, and not only to say as a matter of words that we regard wealth as but machinery, but really to perceive and feel that it is so. If it were not for this purging effect wrought upon our minds by culture, the whole world, the future as well as the present, would inevitably belong to the Philistines.³ The people who believe most that most greatness and welfare are proved by our being very rich, and who most give their lives and thoughts to becoming rich, are

2. Elizabeth I (1533–1603; reigned 1558–1603).

3. The materialist middle classes (a name taken

from a biblical people that waged war against the Israelites).

just the very people whom we call Philistines. Culture says: 'Consider these people, then, their way of life, their habits, their manners, the very tones of their voice; look at them attentively; observe the literature they read, the things which give them pleasure, the words which come forth out of their mouths, the thoughts which make the furniture of their minds: would any amount of wealth be worth having with the condition that one was to become just like these people by having it?' And thus culture begets a dissatisfaction which is of the highest possible value in stemming the common tide of men's thoughts in a wealthy and industrial community, and which saves the future, as one may hope, from being vulgarised, even if it cannot save the present.

Population, again, and bodily health and vigour, are things which are nowhere treated in such an unintelligent, misleading, exaggerated way as in England. Both are really machinery; yet how many people all around us do we see rest in them and fail to look beyond them! Why, one has heard people, fresh from reading certain articles of the *Times* on the Registrar-General's returns of marriages and births in this country,⁴ who would talk of our large English families in quite a solemn strain, as if they had something in itself beautiful, elevating, and meritorious in them; as if the British Philistine would have only to present himself before the Great Judge with his twelve children, in order to be received among the sheep⁵ as a matter of right!

But bodily health and vigour, it may be said, are not to be classed with wealth and population as mere machinery; they have a more real and essential value. True; but only as they are more intimately connected with a perfect spiritual condition than wealth or population are. The moment we disjoin them from the idea of a perfect spiritual condition, and pursue them, as we do pursue them, for their own sake and as ends in themselves, our worship of them becomes as mere worship of machinery, as our worship of wealth or population, and as unintelligent and vulgarising a worship as that is. Every one with anything like an adequate idea of human perfection has distinctly marked this subordination to higher and spiritual ends of the cultivation of bodily vigour and activity. 'Bodily exercise profiteth little; but godliness is profitable unto all things,' says the author of the Epistle to Timothy.⁶ And the utilitarian Franklin⁷ says as explicitly:—'Eat and drink such an exact quantity as suits the constitution of thy body, *in reference to the services of the mind.*' But the point of view of culture, keeping the mark of human perfection simply and broadly in view, and not assigning to this perfection, as religion or utilitarianism assigns to it, a special and limited character, this point of view, I say, of culture is best given by these words of Epictetus:⁸—'It is a sign of *ἀφύια*,' says he,—that is, of a nature not finely tempered,—'to give yourselves for instance, a great fuss about exercise, a great fuss about eating, a great fuss about drinking, a great fuss about walking, a great fuss about riding. All these things ought to be done merely by the way: the formation of the spirit and character must be our real concern.' This is admirable; and, indeed, the Greek word *εὐφύια*, a finely tempered nature, gives

4. "When Marriages are many and Deaths are few it is certain that the people are doing well" (London *Times*, February 3, 1866).

statesman, writer, and scientist. Arnold quotes Franklin's first recommendation in "Rules of Health," from *Poor Richard's Almanack* (1732–1757).

8. Greek Stoic philosopher (ca. 55–ca. 135 C.E.), who taught in Rome, in *Enchiridion* 41.

exactly the notion of perfection as culture brings us to conceive it: a harmonious perfection, a perfection in which the characters of beauty and intelligence are both present, which unites 'the two noblest of things,'—as Swift,⁹ who of one of the two, at any rate, had himself all too little, most happily calls them in his *Battle of the Books*,—'the two noblest of things, *sweetness and light*.' The *εὐφρηγίς* is the man who tends towards sweetness and light; the *ἀφρηγίς*, on the other hand, is our Philistine. The immense spiritual significance of the Greeks is due to their having been inspired with this central and happy idea of the essential character of human perfection; and Mr. Bright's misconception of culture, as a smattering of Greek and Latin, comes itself, after all, from this wonderful significance of the Greeks having affected the very machinery of our education, and is in itself a kind of homage to it.

In thus making sweetness and light to be characters of perfection, culture is of like spirit with poetry, follows one law with poetry. Far more than on our freedom, our population, and our industrialism, many amongst us rely upon our religious organisations to save us: I have called religion a yet more important manifestation of human nature than poetry, because it has worked on a broader scale for perfection, and with greater masses of men. But the idea of beauty and of a human nature perfect on all its sides, which is the dominant idea of poetry, is a true and invaluable idea, though it has not yet had the success that the idea of conquering the obvious faults of our animality, and of a human nature perfect on the moral side,—which is the dominant idea of religion,—has been enabled to have; and it is destined, adding to itself the religious idea of a devout energy, to transform and govern the other.

The best art and poetry of the Greeks, in which religion and poetry are one, in which the idea of beauty and of a human nature perfect on all sides adds to itself a religious and devout energy, and works in the strength of that, is on this account of such surpassing interest and instructiveness for us, though it was,—as, having regard to the human race in general, and, indeed, having regard to the Greeks themselves, we must own,—a premature attempt, an attempt which for success needed the moral and religious fibre in humanity to be more braced and developed than it had yet been. But Greece did not err in having the idea of beauty, harmony, and complete human perfection, so present and paramount. It is impossible to have this idea too present and paramount; only, the moral fibre must be braced too. And we, because we have braced the moral fibre, are not on that account in the right way, if at the same time the idea of beauty, harmony, and complete human perfection, is wanting or misapprehended amongst us; and evidently it is wanting or misapprehended at present. And when we rely as we do on our religious organisations, which in themselves do not and cannot give us this idea, and think we have done enough if we make them spread and prevail, then, I say, we fall into our common fault of overvaluing machinery.

* * *

1867, 1882

9. Jonathan Swift (1667–1745), English satirist, poet, and clergyman. In *The Battle of the Books* (1704), he recounts why Aesop, judging a contest between the spider (here representing the moderns) and the bee (the ancients), decided in favor of the bee: "the difference is, that, instead of dirt

and poison, we have rather chosen to fill our hives with honey and wax; thus furnishing mankind with the two noblest of things, which are sweetness and light." In the larger battle that Swift describes, the outcome is less certain.

WALTER PATER

1839–1894

Contemporary critics and theorists have returned to Walter Pater's books and essays, reexamined them in relation to current interests in figurative language, creativity in criticism, and historical study, and dramatically raised his critical stock. Literary histories had often described Pater as a "minor" Victorian overshadowed by MATTHEW ARNOLD. An impressionist critic who coined the English phrase "art for art's sake" (which he later amended to "art for its own sake"), he sketched, it was said, the adventures of his soul among masterpieces. Now, however, Pater's conception of art and exaltation of aesthetic experience have linked him with his contemporaries RALPH WALDO EMERSON and FRIEDRICH NIETZSCHE as a crucial writer for postmodern theory and criticism.

Pater's work has always been important for creative writers, including William Butler Yeats, who refashioned Pater's prose description of Leonardo da Vinci's *Mona Lisa* in *Studies in the History of the Renaissance* (1873) and made it the first "poem" in the *Oxford Book of Modern Verse* (1936). Pater has also inspired such twentieth-century theorists of literary and critical consciousness as GEORGES POULET and (in his early writings) PAUL DE MAN. HAROLD BLOOM and J. Hillis Miller point to Pater as having enriched and supplemented the Romantic tradition in criticism inaugurated by SAMUEL TAYLOR COLERIDGE and refined by John Ruskin (in *Modern Painters*, 1843–56, and *The Stones of Venice*, 1851–53).

Pater was born in the East End of London. His father, a surgeon, died in 1842, and he was raised in a household of women that included his mother, a grandmother, and an aunt. After attending King's School, Canterbury, he began his undergraduate career at Queen's College, Oxford University, where he wrote essays on Greek philosophy for the eminent scholar Benjamin Jowett. Pater received his degree in 1862 and the following year was elected to Old Mortality, a literary society at Oxford. He became a fellow of Oxford's Brasenose College in 1864, living first there and later in London as a teacher, scholar, and critic.

During the summer of 1865, Pater made his first trip to Italy, traveling in the company of his pupil and close friend C. L. Shadwell, to whom he would dedicate *Studies in the History of the Renaissance*. The paintings he saw in Florence and other cities deeply moved him, giving him "a richer, more daring sense of life than any to be seen in Oxford." For Pater, the Italian Renaissance was not merely a historical period but a tremor in the heart that marked the consciousness of the person attuned to its splendors. To know the glorious works of Renaissance art was intensely, indeed erotically, to *feel* them, and this feeling was Pater's means of countering the dulling of sensation, the termination of feeling, the inevitability of death.

Pater's first essays were published anonymously in the late 1860s. A study of Coleridge in the *Westminster Review* (1866) suggests that Pater found a central theme early on: "Modern thought is distinguished from ancient by its cultivation of the 'relative' spirit in place of the 'absolute.' . . . To the modern spirit nothing is, or can be rightly known, except relatively and under certain conditions." Pater's first publication under his name was "Notes on Leonardo da Vinci" (1869). *Studies in the History of the Renaissance*, a collection of essays on writers and Italian painters (including da Vinci and Sandro Botticelli), appeared four years later.

Pater's next book, the romance *Marius the Epicurean* (1885), describes the development of a young Roman in the time of Marcus Aurelius, the second-century C.E. Roman emperor and Stoic philosopher. He conceived it as the first of a three-part series—the second to be set in sixteenth-century France and the third in late-eighteenth-century England—but the other volumes remained unwritten. Pater's later books include *Imaginary Portraits* (1887), *Appreciations, with an Essay on Style* (1889), and *Plato and Platonism* (1893). *Greek Studies* (1895) and an unfinished

romance, *Gaston de Latour* (1896), were published posthumously. The three-volume theological project that Pater planned for his later years, which he seems to have envisioned as a response to Arnold's writings on religion and culture, was left undone.

Studies in the History of the Renaissance was a momentous text for a number of Pater's younger contemporaries, including OSCAR WILDE. Pater states that his primary concern is with Italy in the fifteenth century, but he deliberately defines the term *Renaissance* much more widely, describing it as an "outbreak of the human spirit" from the "limits which the religious system of the middle ages imposed on the heart and the imagination." Throughout the book, Pater emphasizes the precious, fine textures of art, but always with the implication that only persons of rich receptiveness, of exquisite and accurate perception, can wholly sense and appreciate its singularities. The reliance on austere discipline to achieve liberation—the free life that art renders possible—helps explain Pater's great appeal. By making a religion of art, a sacred duty of artistic creation and perception, Pater built the foundation for modern aestheticist rapture as well as for impressionist criticism.

On publication, *Studies in the History of the Renaissance* received mixed reviews. Some concurred with Pater, against Ruskin, in his esteem for the Renaissance. But others attacked Pater for advocating pleasure as the highest good and self-gratification as the best rule for the conduct of life. George Eliot in a letter called the book "quite poisonous in its false principles of criticism and false conceptions of life." Some accused Pater of projecting nineteenth-century modes of thinking onto the Renaissance. To defend himself against these charges of hedonism and ahistoricism, Pater changed the title of the second edition (1877) to *The Renaissance: Studies in Art and Poetry* and omitted the conclusion, which declared that nothing mattered more than the experience of brilliant moments (he restored it, in a slightly modified form, for the third and fourth editions). The damage had been done, however; in later years, he failed to win Oxford appointments he might otherwise have received.

In the preface, Pater sounds a concrete, pragmatic note. Impatient with the notion that critics should seek broad, general definitions of key terms, he declares that "Beauty, like all other qualities presented to human experience, is relative." And referring to the pleasure that we receive from "a picture, a landscape, a fair personality in life or in a book," Pater intimates that on one level at least there is no difference between life and art, nature and culture: each matters only insofar as it gives pleasure.

Pater at first seems to directly challenge Arnold's dictum that the critic must see the object as in itself it really is by adding a necessary "first step": "to know one's own impression as it really is, to discriminate it, to realise it distinctly." Yet their goal is the same; knowing the impression is the means through which one perceives how and why one is "deeply moved by the presence of beautiful objects." This response to art matters, according to Pater, because it frees each mind from being "a solitary prisoner [in] its own dream of a world." Even more important, it frees individuals from their bondage to routine and particularly to death. The love of art for its own sake is what makes us, while the response lasts, more alive than dead. Like other late-nineteenth-century figures, Pater registers a heightened sense of fleeting beauty wherever it materializes, qualities also evident in so-called decadent literature and impressionist painting of the time.

Pater's view of criticism and art startled his contemporaries, because God is absent from it. Most of them saw death not as final but as the pathway to the highest form of life. Pater neither offers any religious consolation nor invokes the moral earnestness and high seriousness of earlier Victorian writers, including Thomas Carlyle, Arnold, and Eliot. Pater seems unconcerned as well about social and political change: there is no higher purpose than seizing, desperately, each moment for whatever intensities it might supply. This is obviously the main limitation of his position, for the responsibility of the critic is maximizing his or her *pleasure*, not contributing to knowledge or to change in a body politic that in Pater's view can no more withstand decay and death than anything or anyone else.

From Studies in the History of the Renaissance

Preface

Many attempts have been made by writers on art and poetry to define beauty in the abstract, to express it in the most general terms, to find some universal formula for it. The value of these attempts has most often been in the suggestive and penetrating things said by the way. Such discussions help us very little to enjoy what has been well done in art or poetry, to discriminate between what is more and what is less excellent in them, or to use words like beauty, excellence, art, poetry, with a more precise meaning than they would otherwise have. Beauty, like all other qualities presented to human experience, is relative; and the definition of it becomes unmeaning and use-

less in proportion to its abstractness. To define beauty, not in the most abstract but in the most concrete terms possible, to find, not its universal formula, but the formula which expresses most adequately this or that special manifestation of it, is the aim of the true student of æsthetics.

"To see the object as in itself it really is,"¹ has been justly said to be the aim of all true criticism whatever; and in æsthetic criticism the first step towards seeing one's object as it really is, is to know one's own impression as it really is, to discriminate it,² to realise it distinctly. The objects with which æsthetic criticism deals—music, poetry, artistic and accomplished forms of human life—are indeed receptacles of so many powers or forces: they possess, like the products of nature, so many virtues or qualities. What is this song or picture, this engaging personality presented in life or in a book, to me? What effect does it really produce on me? Does it give me pleasure? and if so, what sort or degree of pleasure? How is my nature modified by its presence, and under its influence? The answers to these questions are the original facts with which the æsthetic critic has to do; and, as in the study of light, of morals, of number, one must realise such primary data for one's self, or not at all. And he who experiences these impressions strongly, and drives directly at the discrimination and analysis of them, has no need to trouble himself with the abstract question what beauty is in itself, or what its exact relation to truth or experience—metaphysical questions, as unprofitable as metaphysical questions elsewhere. He may pass them all by as being, answerable or not, of no interest to him.

The æsthetic critic, then, regards all the objects with which he has to do, all works of art, and the fairer forms of nature and human life, as powers or forces producing pleasurable sensations, each of a more or less peculiar or unique kind. This influence he feels, and wishes to explain, by analysing and reducing it to its elements. To him, the picture, the landscape, the engaging personality in life or in a book, *La Gioconda*, the hills of Carrara, Pico of Mirandola,³ are valuable for their virtues, as we say, in speaking of a herb, a wine, a gem; for the property each has of affecting one with a special, a unique, impression of pleasure. Our education becomes complete in proportion as our susceptibility to those impressions increases in depth and variety. And the function of the æsthetic critic is to distinguish, to analyse, and separate from its adjuncts, the virtue by which a picture, a landscape, a fair personality in life or in a book, produces this special impression of beauty or pleasure, to indicate what the source of that impression is, and under what conditions it is experienced. His end is reached when he has disengaged that virtue, and noted it, as a chemist notes some natural element, for himself and others; and the rule for those who would reach this end is stated with great exactness in the words of a recent critique of Sainte-Beuve:—*De se borner à connaître de près les belles choses, et à s'en nourrir en exquis amateurs, en humanistes accomplis.*⁴

1. MATTHEW ARNOLD's phrase, which he used first in "On Translating Homer" (1862) and then in the opening paragraph of a more widely read essay, "The Function of Criticism at the Present Time" (1864; see above).

2. To perceive its distinguishing features.

3. Giovanni Pico, count of Mirandola (1463–1494), an Italian humanist and Neoplatonist philosopher whom Pater examines in one of the chap-

ters of *The Renaissance*. *La Gioconda*: Leonardo da Vinci's painting *Mona Lisa* (ca. 1504). Carrara: a region of Italy famous for its white marble.

4. One should limit oneself to knowing beautiful things intimately, and nourish oneself on them like exquisite amateurs, like accomplished humanists (French). Charles-Augustin Sainte-Beuve (1804–1869), an eminent French critic and journalist; he wrote this sentence in an 1867 essay on the French

What is important, then, is not that the critic should possess a correct abstract definition of beauty for the intellect, but a certain kind of temperament, the power of being deeply moved by the presence of beautiful objects. He will remember always that beauty exists in many forms. To him all periods, types, schools of taste, are in themselves equal. In all ages there have been some excellent workmen, and some excellent work done. The question he asks is always:—In whom did the stir, the genius, the sentiment of the period find itself? where was the receptacle of its refinement, its elevation, its taste? "The ages are all equal," says William Blake, "but genius is always above its age."³

Often it will require great nicety to disengage this virtue from the commoner elements with which it may be found in combination. Few artists, not Goethe or Byron⁶ even, work quite cleanly, casting off all *débris*, and leaving us only what the heat of their imagination has wholly fused and transformed. Take, for instance, the writings of Wordsworth.⁷ The heat of his genius, entering into the substance of his work, has crystallised a part, but only a part, of it; and in that great mass of verse there is much which might well be forgotten. But scattered up and down it, sometimes fusing and transforming entire compositions, like the Stanzas on *Resolution and Independence*, or the *Ode on the Recollections of Childhood*,⁸ sometimes, as if at random, depositing a fine crystal here or there, in a matter it does not wholly search through and transmute, we trace the action of his unique, incommunicable faculty, that strange, mystical sense of a life in natural things, and of man's life as a part of nature, drawing strength and colour and character from local influences, from the hills and streams, and from natural sights and sounds. Well! that is the *virtue*, the active principle in Wordsworth's poetry; and then the function of the critic of Wordsworth is to follow up that active principle, to disengage it, to mark the degree in which it penetrates his verse.

The subjects of the following studies are taken from the history of the *Renaissance*, and touch what I think the chief points in that complex, many-sided movement. I have explained in the first of them what I understand by the word, giving it a much wider scope than was intended by those who originally used it to denote that revival of classical antiquity in the fifteenth century which was only one of many results of a general excitement and enlightening of the human mind, but of which the great aim and achievements of what, as Christian art, is often falsely opposed to the Renaissance, were another result. This outbreak of the human spirit may be traced far into the middle age itself, with its motives already clearly pronounced, the care for physical beauty, the worship of the body, the breaking down of those limits which the religious system of the middle age imposed on the heart and the imagination. I have taken as an example of this movement, this earlier Renaissance within the middle age itself, and as an expression of its qualities, two little compositions in early French; not because they constitute the best

poet and humanist JOACHIM DU BELLAY (1522–1560). Pater devotes a later chapter of *Studies in the Renaissance* to du Bellay.

5. From annotations to volume 1 of *The Works of Sir Joshua Reynolds* made by the Romantic poet Blake (1757–1827).

6. George Gordon, Lord Byron (1788–1824), English Romantic poet. Johann Wolfgang von

Goethe (1749–1832), German poet, dramatist, and novelist.

7. WILLIAM WORDSWORTH (1770–1850), the greatest of the English Romantic poets.

8. That is, "Ode: Intimations of Immortality from Recollections of Early Childhood" (1807). "Resolution and Independence" was also published in 1807.

possible expression of them, but because they help the unity of my series, inasmuch as the Renaissance ends also in France, in French poetry, in a phase of which the writings of Joachim du Bellay are in many ways the most perfect illustration. The Renaissance, in truth, put forth in France an aftermath, a wonderful later growth, the products of which have to the full that subtle and delicate sweetness which belongs to a refined and comely decadence, as its earliest phases have the freshness which belongs to all periods of growth in art, the charm of *ascêsis*,⁹ of the austere and serious girding of the loins in youth.

But it is in Italy, in the fifteenth century, that the interest of the Renaissance mainly lies,—in that solemn fifteenth century which can hardly be studied too much, not merely for its positive results in the things of the intellect and the imagination, its concrete works of art, its special and prominent personalities, with their profound æsthetic charm, but for its general spirit and character, for the ethical qualities of which it is a consummate type.

The various forms of intellectual activity which together make up the culture of an age, move for the most part from different starting-points, and by unconnected roads. As products of the same generation they partake indeed of a common character, and unconsciously illustrate each other; but of the producers themselves, each group is solitary, gaining what advantage or disadvantage there may be in intellectual isolation. Art and poetry, philosophy and the religious life, and that other life of refined pleasure and action in the conspicuous places of the world, are each of them confined to its own circle of ideas, and those who prosecute either of them are generally little curious of the thoughts of others. There come, however, from time to time, eras of more favourable conditions, in which the thoughts of men draw nearer together than is their wont, and the many interests of the intellectual world combine in one complete type of general culture. The fifteenth century in Italy is one of these happier eras, and what is sometimes said of the age of Pericles is true of that of Lorenzo:¹—it is an age productive in personalities, many-sided, centralised, complete. Here, artists and philosophers and those whom the action of the world has elevated and made keen, do not live in isolation, but breathe a common air, and catch light and heat from each other's thoughts. There is a spirit of general elevation and enlightenment in which all alike communicate. The unity of this spirit gives unity to all the various products of the Renaissance; and it is to this intimate alliance with mind, this participation in the best thoughts which that age produced, that the art of Italy in the fifteenth century owes much of its grave dignity and influence.

I have added an essay on Winckelmann,² as not incongruous with the studies which precede it, because Winckelmann, coming in the eighteenth century, really belongs in spirit to an earlier age. By his enthusiasm for the things of the intellect and the imagination for their own sake, by his Hellenism, his life-long struggle to attain to the Greek spirit, he is in sympathy

9. Practice, training (Greek); but in his essay "Style," included in *Appreciations* (1889), Pater defines it as "self-restraint, a skillful economy of means."

1. Lorenzo de Medici (1449–1492), ruler of and

patron of the arts in Florence, and himself a poet. Pericles (ca. 495–429 B.C.E.), Athenian statesman and patron of the arts and architecture.

2. Johann Joachim Winckelmann (1717–1768), German classical archaeologist and art historian.

with the humanists of a previous century. He is the last fruit of the Renaissance, and explains in a striking way its motive and tendencies.

Conclusion³

Λέγει που Ἡράκλειτος ὅτι πάντα χωρεῖ καὶ οὐδὲν μένει⁴

To regard all things and principles of things as inconstant modes or fashions has more and more become the tendency of modern thought. Let us begin with that which is without—our physical life. Fix upon it in one of its more exquisite intervals, the moment, for instance, of delicious recoil from the flood of water in summer heat. What is the whole physical life in that moment but a combination of natural elements to which science gives their names? But those elements, phosphorus and lime and delicate fibres, are present not in the human body alone: we detect them in places most remote from it. Our physical life is a perpetual motion of them—the passage of the blood, the waste and repairing of the lenses of the eye, the modification of the tissues of the brain under every ray of light and sound—processes which science reduces to simpler and more elementary forces. Like the elements of which we are composed, the action of these forces extends beyond us: it rusts iron and ripens corn. Far out on every side of us those elements are broadcast, driven in many currents; and birth and gesture and death and the springing of violets from the grave⁵ are but a few out of ten thousand resultant combinations. That clear, perpetual outline of face and limb is but an image of ours, under which we group them—a design in a web, the actual threads of which pass out beyond it. This at least of flame-like our life has, that it is but the concurrence, renewed from moment to moment, of forces parting sooner or later on their ways.

Or if we begin with the inward world of thought and feeling, the whirlpool is still more rapid, the flame more eager and devouring. There it is no longer the gradual darkening of the eye, the gradual fading of colour from the wall—movements of the shore-side, where the water flows down indeed, though in apparent rest—but the race of the midstream, a drift of momentary acts of sight and passion and thought. At first sight experience seems to bury us under a flood of external objects, pressing upon us with a sharp and importunate, reality, calling us out of ourselves in a thousand forms of action. But when reflexion begins to play upon those objects they are dissipated under its influence; the cohesive force seems suspended like some trick of magic; each object is loosed into a group of impressions—colour, odour, texture—in the mind of the observer. And if we continue to dwell in thought on this world, not of objects in the solidity with which language invests them, but of impressions, unstable, flickering, inconsistent, which burn and are extin-

3. This brief "Conclusion" was omitted in the second edition of this book, as I conceived it might possibly mislead some of those young men into whose hands it might fall. On the whole, I have thought it best to reprint it here, with some slight changes which bring it closer to my original meaning. I have dealt more fully in *Marius the Epicurean* with the thoughts suggested by it [Pater's note]. *Marius the Epicurean* (1885), philosophical novel set in 2d-century C.E. Rome.

4. Somewhere Heraclitus says that all things are in motion and nothing is lasting (Greek); in *Plato and Platonism* (1893), Pater translated the end of the epigraph, "All things give way: nothing remaineth." Heraclitus (active ca. 500 B.C.E.), pre-Socratic Greek philosopher.

5. An echo of Laertes' words at the grave of Ophelia, *Hamlet* (ca. 1600), 5.1.222-23: "And from her fair and unpolluted flesh / May violets spring."

guished with our consciousness of them, it contracts still further: the whole scope of observation is dwarfed into the narrow chamber of the individual mind. Experience, already reduced to a group of impressions, is ringed round for each one of us by that thick wall of personality through which no real voice has ever pierced on its way to us, or from us to that which we can only conjecture to be without. Every one of those impressions is the impression of the individual in his isolation, each mind keeping as a solitary prisoner its own dream of a world. Analysis goes a step further still, and assures us that those impressions of the individual mind to which, for each one of us, experience dwindles down, are in perpetual flight; that each of them is limited by time, and that as time is infinitely divisible, each of them is infinitely divisible also; all that is actual in it being a single moment, gone while we try to apprehend it, of which it may ever be more truly said that it has ceased to be than that it is. To such a tremulous wisp constantly re-forming itself on the stream, to a single sharp impression, with a sense in it, a relic more or less fleeting, of such moments gone by, what is real in our life fines itself down. It is with this movement, with the passage and dissolution of impressions, images, sensations, that analysis leaves off—that continual vanishing away, that strange, perpetual, weaving and unweaving of ourselves.

Philosophiren, says Novalis, *ist dephlegmatisiren, vivificiren*.⁶ The service of philosophy, of speculative culture, towards the human spirit, is to rouse, to startle it to a life of constant and eager observation. Every moment some form grows perfect in hand or face; some tone on the hills or the sea is choicer than the rest; some mood of passion or insight or intellectual excitement is irresistibly real and attractive to us,—for that moment only. Not the fruit of experience, but experience itself, is the end. A counted number of pulses only is given to us of a variegated, dramatic life. How may we see in them all that is to be seen in them by the finest senses? How shall we pass most swiftly from point to point, and be present always at the focus where the greatest number of vital forces unite in their purest energy?

To burn always with this hard, gem-like flame, to maintain this ecstasy, is success in life. In a sense it might even be said that our failure is to form habits: for, after all, habit is relative to a stereotyped world, and meantime it is only the roughness of the eye that makes any two persons, things, situations, seem alike. While all melts under our feet, we may well grasp at any exquisite passion, or any contribution to knowledge that seems by a lifted horizon to set the spirit free for a moment, or any stirring of the senses, strange dyes, strange colours, and curious odours, or work of the artist's hands, or the face of one's friend. Not to discriminate every moment some passionate attitude in those about us, and in the very brilliancy of their gifts some tragic dividing of forces on their ways, is, on this short day of frost and sun, to sleep before evening. With this sense of the splendour of our experience and of its awful brevity, gathering all we are into one desperate effort to see and touch, we shall hardly have time to make theories about the things we see and touch. What we have to do is to be for ever curiously testing new opinions and courting new impressions, never acquiescing in a facile orthodoxy, of Comte, or of Hegel,⁷ or of our own. Philosophical theories or ideas,

6. To philosophize is to cast away inertia, to bring oneself to life (German). Novalis: the pen name of Baron Friedrich von Hardenberg (1772–1801), German Romantic poet and novelist; "Fragmente

11" from his *Hymns to the Night* (1800) is quoted here.

7. GEORG WILHELM FRIEDRICH HEGEL (1770–1831), German idealist philosopher. Auguste

as points of view, instruments of criticism, may help us to gather up what might otherwise pass unregarded by us. "Philosophy is the microscope of thought."⁸ The theory or idea or system which requires of us the sacrifice of any part of this experience, in consideration of some interest into which we cannot enter, or some abstract theory we have not identified with ourselves, or of what is only conventional, has no real claim upon us.

One of the most beautiful passages of Rousseau⁹ is that in the sixth book of the *Confessions*, where he describes the awakening in him of the literary sense. An undefinable taint of death had clung always about him, and now in early manhood he believed himself smitten by mortal disease. He asked himself how he might make as much as possible of the interval that remained; and he was not biased by anything in his previous life when he decided that it must be by intellectual excitement, which he found just then in the clear, fresh writings of Voltaire.¹ Well! we are all *condamnés*, as Victor Hugo says: we are all under sentence of death but with a sort of indefinite reprieve—*les hommes sont tous condamnés à mort avec des sursis indéfinis*:² we have an interval, and then our place knows us no more. Some spend this interval in listlessness, some in high passions, the wisest, at least among "the children of this world,"³ in art and song. For our one chance lies in expanding that interval, in getting as many pulsations as possible into the given time. Great passions may give us this quickened sense of life, ecstasy and sorrow of love, the various forms of enthusiastic activity, disinterested or otherwise, which come naturally to many of us. Only to be sure it is passion—that it does yield you this fruit of a quickened, multiplied consciousness. Of such wisdom, the poetic passion, the desire of beauty, the love of art for its own sake, has most. For art comes to you proposing frankly to give nothing but the highest quality to your moments as they pass, and simply for those moments' sake.

1873, 1893

Comte (1798–1857), French positivist philosopher.

8. From *Les Misérables* (1862), by Victor Hugo (1802–1885), the leader of the Romantic movement in France.

9. Jean-Jacques Rousseau (1712–1778), Swiss-born French philosopher and political theorist; his *Confessions* were published in 12 books (1781, 1788).

1. The editor Donald L. Hill has pointed out that Rousseau, in his *Confessions*, nowhere mentions reading the French Enlightenment philosopher and writer Voltaire (François-Marie Arouet, 1694–1778).

2. Men are all condemned to death with indefinite reprieves (French). From Hugo, *The Last Day of a Condemned Person* (1832).

3. Luke 16.8.

STÉPHANE MALLARMÉ

1842–1898

"Such is my life, devoid of anecdote," wrote Stéphane Mallarmé to Paul Verlaine, who had asked him to provide biographical information for a headnote in an anthology of contemporary poets. Mallarmé responded by describing a life entirely subordinate to writing: "I have always dreamed and attempted something else, with the patience of an alchemist, ready to sacrifice all vanity and satisfaction, as people once burned their furniture and their roof-beams, to stoke the fires of the Great Work. . . . The

Orphic explanation of the Earth, which is the sole duty of the poet and the literary game par excellence: the very rhythm of the book, coming alive impersonally all the way down to its pagination, would take its place alongside the equations of this dream, or Ode." Writing with a combination of grandiosity and modesty, Mallarmé spent a lifetime describing and exploring the tensions inherent not in personal life but in a poetry that aspires to the condition of music, mathematics, metaphysics, and myth.

Born in 1842 to a family of Parisian functionaries, Mallarmé spent his childhood in various boarding schools after the death of his mother in 1847. Married in 1863, he worked as a high school English teacher for the next thirty years, unhappily and unsuccessfully. (He claimed to have learned English in order to read EDGAR ALLAN POE.) To make ends meet, he undertook to write textbooks for language and literature instruction, cursing the amount of time these texts forced him to take away from what he saw as his true vocation, the invention of an entirely new kind of poetry. At his death in 1898, he considered his Great Work barely begun. Of the 1,659 pages included in the 1945 Pléiade edition of Mallarmé's works, fewer than 100 contain what he considered serious poems (a proportion still smaller in the updated edition), and even those he referred to as mere "calling cards."

How did a poet who wrote so little come to be known as the Master of French Symbolism? On the one hand, by holding weekly meetings at his Paris apartment, where he dazzled a whole generation of poets with opaque yet suggestive discourses no one could quite remember. On the other, by locating his writing *within* its own impossibility. The "vibratory near-disappearance," the "almost nothing," the "stilled ode, in the blanks" of his texts were paradoxes of writing, exploring while collapsing the differences between language and silence, presence and absence, verse and prose. And he always exaggerated his lack of accomplishment: his notoriously difficult poems exerted a tremendous fascination on his contemporaries, and even in his textbooks and in the fashion journal, *La Dernière Mode* (*The Latest Fashion*), which he wrote singlehandedly for four months, he worked out sustained, innovative aesthetic and linguistic theories.

In his later years, Mallarmé invented what he called the "critical poem," a genre of theoretical text as stylistically dense and complex as his verse. "Crisis in Poetry" (1896), our selection, belongs to that genre. In all of Mallarmé's writing, the distinction between "poetry" and "theory" breaks down: every text is a lesson in how language works, weaving and unweaving the poetic act that it itself is in the process of not quite accomplishing. The materiality of page, ink, paragraph, and spacing is often just as important as the logic of syntax, figure, and sense.

The crisis in poetry about which Mallarmé writes is in one sense peculiarly French. The classical French verse form, codified by François de Malherbe in the early seventeenth century and exemplified by PIERRE CORNEILLE, Jean Racine, and Jean-Baptiste Molière, was the alexandrine—a line of twelve syllables divided into two halves, or "hemistichs," by a pause called a *caesura*. For almost three centuries, the rules of prosody were strictly observed. Even the displacement of the caesura from its central position in the line caused an uproar when Victor Hugo dared to attempt it in 1830 (in his play *Hernani*). But as of 1886, just after the death of Hugo, the poetic line seemed to Mallarmé to be breaking up altogether. Poets were writing in "free verse." To a French ear, accustomed to counting syllables and evaluating rhyme, this was a revolution. Mallarmé even goes so far as to treat it as a kind of second French Revolution.

But in another sense, in Mallarmé's account of the "crisis," this "liberation" of verse is merely a way of rediscovering Language itself and is not, strictly speaking, confined to French: all languages mobilize sound and sense, rhythm and rhyme, deploying words as material, sensual objects with properties that go beyond their meanings, with connotations that create networks of effects, as well as with syntax and rhetoric that provide structure and suggestion. The sounds of words may be related to their meaning, but the very existence of multiple languages indicates that that relation is

not one of perfect reflection. Mallarmé notes that unlike God, we do not speak words that are themselves the things they name. While God can say "Let there be light," and there is light, in French the spoken word *jour* (day) has a dark vowel sound while *nuit* (night) has a light sound. But our ability to notice this lack of attunement between sound and sense leads us to imagine a virtual language that would be perfectly in tune with itself. One might think that this perfect language would be pure poetry, but Mallarmé does not exactly say so. In fact, he claims that if this language existed, verse itself would not exist, because verse consists of compensating for the failings of language, creating a "total word, new, unknown to the language," suspending the multiple facets of an idea so that its fragments balance in a kind of "universal musicality."

Mallarmé was not the only symbolist whose highest ambitions for poetry were expressed in terms of music. Paul Verlaine (1844–1896) had already asked for "music above all things." And Richard Wagner, the German Romantic composer (1813–1883), had considerable influence on French poetry. That influence sprang less from his music than from his imperfectly understood but enthusiastically endorsed theory of the *Gesamtkunstwerk*, the total work of art, which would combine music, dance, theater, painting, and poetry. When Mallarmé speaks of Music, he refers simultaneously to two different things: a system of sounds that appeals directly to the senses and emotions, and a system of pure relations and intervals that has no referential but only a structural existence.

"Crisis in Poetry" offers a critique of two dominant aesthetic theories of the nineteenth century: namely, realism and Romanticism. About realism, Mallarmé suggests that a book can offer only "allusions," "suggestions"—effects—not any real object, "on which the pages would have difficulty closing." By describing realism as a book trying to enclose a palace, he is saying (somewhat humorously) that reality cannot be presented directly, that any realism is already an interpretation of the real. About Romanticism, Mallarmé critiques the notion that the "personal breath" or voice of the individual poet controls the meaning of the poem. Rather, he claims, in pure poetry the initiative is taken by words themselves in their clashes and rhymes. For Mallarmé, the poet is absent and anonymous. Intentionality and inspiration are eclipsed by the workings of language itself: the poet's voice is "stilled." Convinced that all poets are attempting to write the same Book, Mallarmé sees poetry as eternal, canonical, and unified rather than historically, culturally, and politically diverse. Mallarmé's concept of poetic anonymity is thus at the farthest remove from VIRGINIA WOOLF's. When Woolf claimed in 1929 that "anonymous was a woman," she was referring to the fact that creative women have often been deprived of a place in history and a proper name. For Mallarmé, poetic anonymity is a sign not of dispossession but of cultural authority—precisely the kind of cultural authority that has often deprived women of voice.

In Mallarmé's "Crisis in Poetry," the importance of the "liberation" of verse lies less in the actual accomplishments of writers in free verse than in the dissolution of the old distinction between verse and prose. In another essay, titled "Music and Letters" and first delivered as a lecture at Oxford and Cambridge in 1894, Mallarmé goes so far as to say that "prose does not exist": there is "verse" as soon as there is style, as soon as there is any linguistic residue of effectiveness beyond pure instrumentality (what he calls the "journalistic" or "commercial" use of language). Ironically, Mallarmé himself never wrote in free verse. However difficult or "unknown to the language" his late poems may be, they observe classical forms of prosody. But he did undertake one experiment that was definitely not "classical," at least in its form. In *A Throw of the Dice Will Never Abolish Chance* (1897), Mallarmé positioned lines of varying lengths and sizes in different places on the page, letting a long conducting sentence be surrounded by subordinate clauses and typefaces, and sculpting the blanks as well as the writing. This stretching of the spacing of syntax to the breaking point, this exposure of the materiality of writing, and this recognition of the poetic

line as an art of flows and interruptions have had a major impact on twentieth-century poetry and theory.

Indeed, French critics and theorists have been not only attentive to, but also influenced by, the writings of Mallarmé. It was largely by learning the lesson of Mallarmé that critics like ROLAND BARTHES came to speak of "the death of the author" in the making of literature. Rather than seeing the text as the emanation of an individual author's intentions, structuralists and deconstructors followed the paths and patterns of the linguistic signifier, paying new attention to syntax, spacing, intertextuality, sound, semantics, etymology, and even individual letters. The theoretical styles of JACQUES DERRIDA, JULIA KRISTEVA, and especially JACQUES LACAN also owe a great deal to Mallarmé's "critical poem."

BIBLIOGRAPHY

There are two authoritative French editions of Mallarmé's works: the *Pléiade Oeuvres complètes*, first edited by Henri Mondor and G. Jean-Aubry (1945) and updated by Bertrand Marchal (1998) and the Flammarion *Poésies*, edited by Carl-Paul Barbier and Charles Gordon Millan (1983). An excellent English translation by Henry Weinfield of Mallarmé's prose and verse poems, *Collected Poems*, has been published in a bilingual edition (1994), but there is no complete translation of the critical prose. Robert Greer Cohn, in *Mallarmé's Divagations: A Guide and Commentary* (1990), offers a useful blend of paraphrase and commentary. Bradford Cook translated a collection of poems, essays, and letters titled *Mallarmé: Selected Prose Poems, Essays, and Letters* (1956), and Mary Ann Caws edited his *Selected Poetry and Prose* (1982). Our selection is printed as an appendix to Rosemary Lloyd's *Mallarmé: The Poet and His Circle* (1999), a useful contextualization. Lloyd also translated *The Selected Letters of Stéphane Mallarmé* (1988), which contains many of Mallarmé's best-known statements about poetry. For a well-researched biography in English, see Gordon Millan, *Mallarmé: A Throw of the Dice* (1994).

The history of Mallarmé criticism reads like a history of twentieth-century developments in French criticism more generally. The first readers, including Mallarmé's first editor and biographer, Henri Mondor (a wealthy doctor who owned many of Mallarmé's papers), emphasized the metaphysical aspirations of Mallarmé's poetic project. An important example is Albert Thibaudet's *La Poésie de Stéphane Mallarmé* (1912). Reacting against Mallarmé's perceived other-worldly aestheticism, the existentialist Jean-Paul Sartre complained that literature had turned its back on life and separated the aesthetic from political engagement (*Mallarmé, or the Poet of Nothingness*, 1986; trans. 1988; also see our selection below from *What Is Literature?*). A good sampling of diverse approaches to Mallarmé can be found in *Stéphane Mallarmé*, edited by Harold Bloom (1987), and in *Literary Debate: Texts and Contexts*, edited by Denis Hollier and Jeffrey Mehlman (1999). Jacques Derrida, in *Dissemination* (1972; trans. 1981), analyzes Mallarmé's displacement of classical, Platonic concepts of mimesis; and Julia Kristeva, in *Revolution in Poetic Language* (1974; partial trans., 1984), uses the example of Mallarmé to define her concepts of "the semiotic" and "negativity" in poetry. Excellent studies by critics in English include Malcolm Bowie's *Mallarmé and the Art of Being Difficult* (1978) and Leo Bersani's *The Death of Stéphane Mallarmé* (1982). Other recent studies of Mallarmé's theory and practice of poetic language include Michael Temple, *The Name of the Poet* (1995); Graham Robb, *Unlocking Mallarmé* (1996); Roger Pearson, *Unfolding Mallarmé* (1996); and Richard Cándida Smith, *Mallarmé's Children* (1999). A collection of essays dealing with Mallarmé's legacy in France is *Meetings with Mallarmé*, edited by Michael Temple (1998). For a bibliographical overview of twentieth-century criticism, see D. Hampton Morris's *Stéphane Mallarmé: Twentieth-Century Criticism* (1989).

Crisis in Poetry¹

Just now, abandoning any possibility of action, with the lassitude brought about by one afternoon after another of distressing bad weather,² I let fall, without any curiosity but with the feeling of having read it all twenty years ago, the thread of multicolored pearls that stud the rain, once more, in the glimmer of booklets in the bookshelves. Many a work under the bead-curtain will send out its own scintillation: as, in a mature sky against the window pane, I love to follow the lights of a storm.

Our phase, which is recent, is, if not closing, taking breath or perhaps stock: considering it attentively reveals the creative and fairly sure will power driving it.

Even the press, which usually needs twenty years to discover the news, is suddenly preoccupied with the subject, and on time.

Literature here is undergoing an exquisite crisis, a fundamental crisis.

Whoever grants that function a place, whether or not it be the first place, recognizes in this the substance of current affairs. We are observing, as a finale to the century not what last century observed,³ not disruptions; but, outside the public arena, a trembling of the veil in the temple revealing significant folds, and to some extent, its tearing down.⁴

French readers, their habits disrupted by the death of Victor Hugo,⁵ cannot fail to be disconcerted. Hugo, in his mysterious task, turned all prose, philosophy, eloquence, history, to verse, and as he was verse personified, he confiscated from any thinking person, anyone who talked or told stories, all but the right to speak. A monument in this desert, with silence far away; in a crypt, thus lies the godhead of a majestic and unconscious idea, to wit that the form we call verse is simply in itself literature; that there is verse as soon as diction is stressed, that there is rhythm as soon as style is emphasized. Poetry, I believe, waited respectfully until the giant who identified it with his tenacious hand, a hand stronger than that of a blacksmith, ceased to exist; waited until then before breaking up. The entire language, tailored to metrics, now recovered its vital rhythms and escaped, in a free disjunction of thousands of simple elements; and, as I'll show, it was not unlike the multiplicity of cries in an orchestra, but an orchestra remaining verbal.

The change dates from then: although it was surreptitiously and unexpectedly prepared beforehand by Verlaine,⁶ who, fluid as he was, was called back to primitive forms.

A witness to this adventure, in which people have asked me to play a more efficacious role although such a role suits no one, I did at least take a fervent

1. "Crise de vers"; translated by Rosemary Lloyd.
 2. *Le temps* in French means "weather" as well as "time." By describing an innocuous rainy day, Mallarmé is actually starting both his "news of the day" sequence and his "verse" sequence; the raindrops are like beads of glass (*verroterie*: from *verre*, "glass," which sounds just like *vers*, "verse"). The title of an earlier version of this essay brought the two sequences together by using the word *averse*, which means "shower" ("Averse ou critique," or "Shower or Criticism," 1895).

3. That is, the French Revolution of 1789.

4. An allusion to the veil in the temple separating off the Holy of Holies, which was said to be rent at the time of Christ's crucifixion to show that all men, not merely high priests, could have access to God (see Mark 15:38). In the same way, Mallarmé implies, the "veil" of prosody has been rent by the discovery of free verse.

5. Prolific French Romantic poet, novelist, and playwright (1802-1885).

6. Paul Verlaine (1844-1896), French poet known for the musicality of his verse.

interest in it and the time has come to talk about it, preferably from a distance, since what took place did so almost anonymously.

Let's grant that French poetry, because of the primary rôle played by rhyme in creating its enchantment, has, in its evolution up to our time, proved to be intermittent: for a time it gleams, then fades and waits. Extinct, or rather worn threadbare by repetition. Does the need to write poetry, in response to a variety of circumstances, now mean, after one of those periodical orgiastic excesses of almost a century comparable only to the Renaissance,⁷ that the time has come for shadows and cooler temperatures? Not at all! It means that the gleam continues, though changed. The recasting, a process normally kept hidden, is taking place in public, by means of delicious approximations.

I think one can separate under a triple aspect the treatment given to the solemn canon of poetry, taking each in order.

That prosody, with its very brief rules, is nevertheless untouchable: it is what points to acts of prudence, such as the hemistich,⁸ and what regulates the slightest effort at stimulating versification, like codes according to which abstention from flying is for instance a necessary condition for standing upright.⁹ Exactly what one does not need to learn; because if you haven't guessed it yourself beforehand, then you've proved the uselessness of constraining yourself to it.

The faithful supporters of the alexandrine, our hexameter,¹ are loosening from within the rigid and puerile mechanism of its beat; the ear, set free from an artificial counter, discovers delight in discerning on its own all the possible combinations that twelve timbres can make amongst themselves.

It's a taste we should consider very modern.

Let's take an intermediate case, in no way the least curious:

The poet who possesses acute tact and who always considers this alexandrine as the definitive jewel, but one you bring out as you would a sword or a flower only rarely and only when there is some premeditated motive for doing so, touches it modestly and plays around it, lending it neighboring chords, before bringing it out superb and unadorned. On many occasions he lets his fingering falter on the eleventh syllable or continues it to the thirteenth. M. Henri de Régnier² excels in these accompaniments, of his own invention, I know, an invention as discrete and proud as the genius he instills into it, and revelatory of the fleeting disquiet felt by the performers faced with the instrument they have inherited. Something else, which could simply be the opposite, reveals itself as a deliberate rebellion in the absence of the old mold, grown weary, when Jules Laforgue,³ from the outset, initiated us into the unquestionable charm of the incorrect line.

So far, in each of the models I've just mentioned, nothing apart from reserve and abandon, because of the lassitude caused by excessive recourse to our national rhythm; whose use, like that of the flag, ought to remain an exception. With this nevertheless amusing particularity that willful infrac-

7. That is, the Romantic period.

8. Half a verse line.

9. *Voler* means both "to fly" and "to steal"; *droiture* means "uprightness" in both the moral and the physical sense. The sentence can thus also mean "abstaining from stealing is (not) a necessary condition of honesty." In this way, the "laws" of verse are similar to the laws of gravity and honesty.

1. The meter of Greek and Latin epic poetry

(based on 6 metrical feet). "The alexandrine": the meter of classical French verse, a 12-syllable line with a break (the caesura) in the middle, separating the two hemistichs. The English equivalent to both is iambic pentameter.

2. French poet and novelist (1864-1936), a faithful attender of Mallarmé's Tuesday gatherings.

3. French poet (1860-1887), born in Uruguay, known for his ironic, innovative verse.

tions or deliberate dissonances appeal to our delicacy, whereas, barely fifteen years ago, the pedant that we have remained would have felt as exasperated as if confronted with some ignorant sacrilege! I'll say that the memory of the strict line of poetry haunts these games on the side and confers on them a certain benefit.

The entire novelty, where free verse is concerned, resides not as the seventeenth century attributed verse to the fable or the opera (that was merely a non-strophic arrangement⁴ of diverse famous meters) but in what it might be suitable to call its "polymorphous" nature: and we should now envisage the dissolution of the official number into whatever one wishes, as far as infinity, provided that it contains a renewed source of pleasure. Sometimes it's a euphony fragmented with the consent of an intuitive reader, someone with inborn and precious good taste—just now, M. Moréas; or a languishing gesture of dream, leaping up in passion and finding the right beat—that's M. Viélé-Griffin; beforehand it was M. Kahn with a very erudite notation of the tonal value of words. I'm giving names, for there are others who are typical, MM Charles Morice, Verhaeren, Dujardin, Mockel⁵ and all, only as a proof of what I'm saying, so that you can consult their publications.

What's remarkable is that, for the first time in the course of any nation's literary history, concurrently with the great general and secular organs, in which, following an inborn keyboard, orthodoxy expresses its exaltation, whoever wishes to use his or her own techniques and individual hearing can create a personal instrument on which to breathe, to touch or stroke with skill; and it can be used on its own, and also be dedicated to the Language in general.

A high freedom has been acquired, the newest: I don't see, and this remains my own intensely felt opinion, that anything that has been beautiful in the past has been eliminated, and I remain convinced that on important occasions we will always conform to the solemn tradition, that owes its prevalence to the fact that it stems from the classical genius; only, when what's needed is a breath of sentiment or a story, there's no call to disturb the venerable echoes, so we'll look to do something else. Every soul is a melody, which needs only to be set in motion; and for that we each have our own flute or viola.

In my view this is the belated eruption of a real condition or of a possibility, that of not only expressing ourselves, but of bursting into song, as we see fit.

Languages, which are imperfect in so far as they are many, lack the supreme language: because thinking is like writing without instruments, not a whispering but still keeping silent, the immortal word, the diversity of idioms on earth, prevents anyone from proffering the words which otherwise would be at their disposal, each uniquely minted and in themselves revealing the material truth. This prohibition flourishes expressly in nature (you stumble upon it with a smile) so that there is no reason to consider yourself God; but, as soon as my mind turns to aesthetics, I regret that speech fails to express objects by marks that correspond to them in color and movement,

4. That is, not arranged in metrically complex stanzas (such as those characteristic of odes).

5. All poets writing in French and experimenting with free verse: Jean Moréas (1856–1910), born in Greece; Francis Viélé-Griffin (1864–1937), born

in Virginia; Gustave Kahn (1859–1936); Charles Morice (1861–1919); Émile Verhaeren (1855–1916), born in Belgium; Édouard Dujardin (1861–1949), founder of *La Revue Wagnerienne*; and Albert Mockel (1866–1945), born in Belgium.

marks that exist in the instrument of the voice, among languages and sometimes in a single language. Compared to the word *ombre* (shadow) which is opaque, *ténèbres* (darkness) is not much blacker; how disappointing to discover the perversity that in contradictory fashion bestows on the word *jour* (day, light) sounds that are dark, while those of *nuit* (night) are bright.⁶ We desire a word of brilliant splendor or conversely one that fades away; and as for simple, luminous alternatives. . . . *But*, we should note, *otherwise poetry would not exist*: philosophically, it is poetry that makes up for the failure of language, providing an extra extension.

Strange mystery; and from intentions no less strangely mysterious burst forth in the days when everything was coming into being.

Let an average group of words, under the comprehension of the gaze, line up in definitive traits, surrounded by silence.

If, in the French case, no private invention were to surpass the prosody that we've inherited, there would be an outpouring of displeasure, as if a singer were unable, away from others or walking where he pleased among the infinite number of little flowers, wherever his voice met a notation, to pluck it. . . . This attempt took place just recently, and, leaving aside the erudite research in the same direction, accentuation⁷ and so forth, that has been announced, I know that a seductive game leads, together with shreds of the old still recognizable line, to the possibility of eluding it or revealing it, rather than to a sudden discovery of something entirely alien. It just takes the time needed to loosen the constraints and whip up some *zèle*, where the school went astray. And it's very precious: but to go from that freedom to imagine more, or simply to think that each individual brings a new prosody arising from their own way of breathing—which is certainly how some people spell—well it's a joke to cause much laughter and to inspire the preface-writers to build their platforms. Similarity between lines of poetry and old proportions, this will provide the regularity that will last because the poetic act consists in suddenly seeing that an idea splits into a number of motives of equal value and in grouping them; they rhyme: and to place an external seal upon them we have their common metrics which the final beat binds together.

It is in the very interesting treatment meted out to versification in this age of recess and interregnum, no less than in our virginal mental circumstances, that lies the crisis.

To hear the unquestionable ray of light—as features gild or tear a meander of melodies: or Music rejoins Verse, to form, since Wagner,⁸ Poetry.

It's not that one element or another moves away, advantageously, towards an integrity triumphing somewhere else, in the form of a concert that remains mute if it is not given voice, and the poem, enunciator: of their community or their new form, illuminating the instrumentation until it's obvious under the veil, as elocution descends from the sky of sounds. The

6. Harking back to theories of language discussed in PLATO's *Cratylus* (ca. 385 B.C.E.), Mallarmé describes words as though their sounds could imitate the things they name; here, vowel tones are expected to correspond to degrees of luminosity.

7. Unlike in English, syllables in French words have no inherent accents: stress always falls on the last syllable of a word or group of words. French therefore lends itself to syllabic rather than accen-

tual verse; but since stresses do occur before pauses, it is possible to shape their occurrence into patterns.

8. Richard Wagner (1813–1883), German composer, conductor, and author whose influence was pervasive among late-19th-century French poets even though his operas were largely banned in France after the Franco-Prussian War (1870–71).

modern meteor, the symphony, at the pleasure of the musicians or unbeknownst to them, draws closer to thought, but a thought which no longer draws on current expressions.

Some explosion of Mystery into all the skies of its impersonal magnificence, where the orchestra should not have failed to influence the ancient effort which has long sought to extract it from the mouth of the race.

A double indication arises from this—

Decadent or mystic,⁹ the schools describe themselves or are given labels hastily by our news media,¹ and adopt, as meeting point, an Idealism² which (like fugues or sonatas) refuses the natural materials and brutally demands an exact thought to put them in order, so as to keep nothing but the mere suggestion. To create an exact relationship between the images, in such a way that a third aspect, fusible and light, and whose presence can be divined, will break free . . . We've abolished the pretension—an aesthetic error, although one that has commanded masterpieces³—of including on the subtle paper of the volume anything other than for instance the horror of the forest or the silent thunder scattered through the foliage, not the intrinsic and dense wood of the trees. A few bursts of the intimate pride truthfully trumpeted awaken the architecture of the palace, the only place where one can dwell; no stone, on which the pages would have difficulty closing.

"Monuments, the sea, the human face, in their plenitude, and as they are, preserving a virtue which is more attractive than if they were veiled by a description, call it *evocation*, or *allusion*, *suggestion*: that somewhat random terminology bears witness to the tendency, a very decisive tendency perhaps, that literary art has experienced, a tendency that limits it and dispenses it. Literature's witchery, if it is not to liberate from a fistful of dust or reality without enclosing it in the book, even as a text, that volatile dispersion which is the mind, which has nothing to do with anything but the musicality of everything."⁴

Speech has no connection with the reality of things except in matters commercial; where literature is concerned, speech is content merely to make allusions or to distill the quality contained in some idea.

On this condition the song burst forth, as a lighthearted joy.

This ambition, I call Transposition—Structure is something else.

The pure work of art implies the elocutionary disappearance of the poet who yields the initiative to words, set in motion by the clash of their inequalities; they illuminate each other with reciprocal lights like a virtual trail of fire on precious stones, replacing the perceptible breath of the old lyric or the individual enthusiastic direction of the sentence.

An order of the book of verse springs from it, innate or pervasive, and eliminates chance; such an order is essential, to omit the author: well, a subject, destined, implies amongst the elements of the whole, a certain accord as to the appropriate place for it within the volume. This is a possi-

9. Movements that were literary reactions against 19th-century bourgeois realism, positivism, and utilitarianism.

1. Despite his professed scorn for journalism, Mallarmé at this time often portrays himself as a purveyor of news. When asked to speak in England on the state of French poetry, he announced, "I do indeed bring news: verse has been tampered with."

2. A term (like *Spirit* and *Idea*) that in Mallarmé is often seen as having Platonic or Hegelian significance, referring to ultimate metaphysical realities.

3. That is, realist novels.

4. Mallarmé quotes his own "Music and Letters" (1894), originally delivered in England.

bility brought about by the fact that each cry has its echo—in the same way motifs balance each other, from a distance, producing neither the incoherent sublimity of the romantic pagination, nor that artificial unity of more recent times, measured out to the book en bloc. Everything becomes suspense, a fragmentary disposition with alternations and oppositions, all working towards the total rhythm of the white spaces, which would be the poem silenced; but it is translated to some extent by each pendant. I want to consider it as instinct, perceived in these publications and, if the supposed type does not remain separate from complementary types, youth, for once, in poetry where a dazzling and harmonious plenitude imposes itself, has stuttered the magic concept of the Work.⁵ Some symmetry, in parallel fashion, which, from the situation of the lines in the poem that are linked to the authenticity of the poem within the volume, fly beyond it, several of them inscribing on the spiritual plane the amplified signature of the genius, anonymous and perfect as an artistic existence.

A chimera,⁶ having thought of it proves, from the reflection of its scales, how much the current cycle or this last quarter century, is undergoing some absolute illumination—whose wild shower on my window panes wipes away the dripping murkiness sufficiently to illuminate those panes—that, more or less, all books contain the fusion of some counted repetitions: even if there were only one—the world's law—a bible of the kind nations simulate. The difference from one work to another offers as many lessons set forth in an immense competition for the true text, between the ages termed civilized or—lettered.

Certainly I never sit down on the terraces to hear a concert without glimpsing amidst the obscure sublimity some sketch of one or other of humanity's immanent poems or their original state, all the more comprehensible for not being spoken, and I see that to determine its vast line the composer experienced that easy suspension of even the temptation to express it. I imagine, through a no doubt ineradicable prejudice of writers, that nothing will remain if it is not given form; a form we have reached the stage, precisely, of seeking out, faced with a break in the great literary rhythms (I discussed this above) and their dispersal into shivers articulated in ways close to instrumentation. An art of achieving the transposition in the Book of the symphony or simply to take back our own: for there is no question that it is not the elementary sounds produced by the brass, strings, woods, but the intellectual word at its purest point that must lead, with plenitude and undeniably as the ensemble of links existing within everything, to Music.

An undeniable longing of my time has been to separate as if for different purposes the double state of the word, raw and immediate on the one hand, on the other, essential.

Telling, teaching, even describing, that's all very well and yet all that would be needed perhaps for each of us to exchange our thoughts as humans would be to take from or leave in the hand of another a coin, in silence, but the elementary use of speech serves the universal reporting in which all the contemporary written genres participate, with the exception of literature.

5. The (Great) Work, another name for the philosophers' stone, sought by the alchemists to turn base metals into gold. Mallarmé saw alchemy as an origin not only of aesthetics but also of political economy.

6. Literally, in Greek mythology a fire-breathing monster with a lion's head, a goat's body, and a serpent's tail; more generally, anything composed of incongruous parts, or an illusory mental fabrication.

What is the point of the marvel of transposing a fact of nature into its almost vibratory disappearance according to the action of the word, however, if it is not so that there emanates from it, without the predicament posed by a near or concrete reminder, the pure notion.

I say: a flower! And from the oblivion to which my voice relegates all contours, as something other than the unmentioned calyces, musically arises, the idea itself, and sweet, the flower absent from all bouquets.⁷

Contrary to the facile numerical and representative functions, as the crowd first treats it, speech which is above all dream and song, finds again in the Poet, by a necessity that is part of an art consecrated to fictions, its virtuality.

The line of several words which recreates a total word, new, unknown to the language and as if incantatory, achieves that isolation of speech: denying, in a sovereign gesture, the arbitrariness that clings to words despite the artifice of their being alternately plunged in meaning and sound, and causes you that surprise at not having heard before a certain ordinary fragment of speech, at the same time as the memory of the named object bathes in a new atmosphere.

1896

7. In the original, the sentence ends "l'absente de tous bouquets" (the absent of all bouquets). By omitting the word "flower," the French thus dem-

onstrates more forcefully that a name indicates the absence of the thing named.

HENRY JAMES

1843-1916

Born in New York City, Henry James typically is placed in anthologies of American literature, but he was in truth a cosmopolitan novelist and critic who sought to make his mark on the American, English, and European literary scenes. "We can deal freely with forms of civilization not our own," he affirmed in a letter in 1867, "can pick and choose and assimilate and in short (aesthetically) claim our property wherever we find it." He wished to bring about "a vast intellectual fusion and synthesis of the various National tendencies of the world"; his concern with the complex challenges and rewards of the "art of fiction" was general, not limited to American fiction alone.

Henry James Sr., a religious philosopher and visionary, believed that his five children should be educated with as few restrictions as possible; hence he had taken them to Europe in 1855 for a three-year acquisition of a "sensuous education." Theaters, art galleries, museums, monuments, and landscapes were his favored sites for learning. Among the gifted members of this family was William James, Henry's elder brother, a professor of philosophy and then psychology at Harvard whose influential books include *The Varieties of Religious Experience* (1902) and *Pragmatism* (1907). During the late 1860s and early 1870s, Henry James lived abroad much of the time; in 1876 he decided to reside in London and frequently visit the Continent, especially Rome and Paris.

James was an explorer of, and mediator between, cultures. One of his best early stories, "A Passionate Pilgrim" (1871), deals with the social and cultural challenges faced by an American visitor to Europe. He developed this theme of cultural interanimation and difference in travel writings, such as *Transatlantic Sketches* (1875),

and in a series of novels and novellas that includes *Roderick Hudson* (1876), *The American* (1877), *The Europeans* (1878), *Daisy Miller* (1879), *An International Episode* (1879), and *The Portrait of a Lady* (1881). "I aspire to write in such a way," James declared, "that it would be impossible to an outsider to say whether I am at a given moment an American writing about England or an Englishman writing about America. . . . And so far from being ashamed of such an ambiguity I should be exceedingly proud of it, for it would be highly civilised."

As his work of the 1870s and early 1880s attests, James was already an accomplished author when our selection, "The Art of Fiction"—his credo as a novelist—was published in London in September 1884. A month after the essay appeared, James lamented in a letter to the critic and biographer T. S. Perry that "my poor article has not attracted the smallest attention here & I haven't heard, or seen, an allusion to it." But soon critics and reviewers, especially in England, began to refer and reply to the piece. In subsequent decades, as James's own reputation rose, "The Art of Fiction" gained prominence as an inquiry into, and defense of, the novelist's craft. A century later, the scholar James E. Miller Jr., judged it "perhaps the most popular and surely the most influential brief statement of fictional theory ever made."

British and American novelists before James, including Henry Fielding, Jane Austen, Sir Walter Scott, and Nathaniel Hawthorne, had commented on the nature of the novel and its relationship to the romance. Beginning in the mid-eighteenth century with SAMUEL JOHNSON, critics had considered the status and structure of "fiction" as a narrative form. Book-length studies included Clara Reeve's *Progress of Romance* (1785) and John Dunlop's massive two-volume survey, *The History of Fiction* (1816). And by 1884 countless essays and reviews in Victorian periodicals had debated plot, character, design and unity, morality in fiction, and many other topics in analyses written by such eminent novelists as George Eliot and by such noteworthy critics as G. H. Lewes and Leslie Stephen.

James added to his own rich experience as a writer the decades of development that the novel had undergone by the 1880s. He profited from extensive reading and close personal contact with the best writers of the day (among them William Dean Howells, Gustave Flaubert, Guy de Maupassant, Émile Zola, and Ivan Turgenev). As an active essayist and reviewer since the 1860s for the *Nation*, the *North American Review*, and the *Atlantic Monthly*, James was defining his own artistic identity and measuring himself alongside both national and international competition. His critical books of this period include *French Poets and Novelists* (1878) and *Hawthorne* (1879), and he examined fiction with a keen awareness of his own practice.

Taking as his point of departure an 1884 lecture by the popular novelist, historian, and philanthropist Walter Besant and borrowing its title, James insisted that the novelist be allowed to pursue artistic experiments freely. He told his friend Robert Louis Stevenson that "The Art of Fiction" was "simply a plea for liberty," which for him signified the writer's choice of subject and right both to experiment and to dissent from conventional standards and opinions. In one of the ironies that makes James so intriguing, he was a very interested critic, not an objective one. Even when he focuses on authors whom he genuinely admires, such as Honoré de Balzac, Turgenev, and George Eliot, he cannot quite bring himself to respond to (let alone accept) them on their own terms—though his theory implies that he should. Here, as elsewhere in his critical writings, his allegiance to his own artistic aims and methods prevented James from engaging writers with full understanding; his assessments of Charles Dickens, Walt Whitman, CHARLES BAUDELAIRE, and Fyodor Dostoyevsky, among others, suffer from his impatience with their often controversial subjects and innovations in form. James's criticisms thus sometimes tell us less about the shortcomings of the work discussed than about the tensions between his theory and practice.

Like MATTHEW ARNOLD in "The Function of Criticism at the Present Time" (1864; see above), James in "The Art of Fiction" maintains that criticism prepares and enhances the context for creative writing. And in an essay about Arnold published in

the same year as "The Art of Fiction," James describes the good novel (it "emits its light and stimulates our desire for perfection") in a manner very close to Arnold's definition of "the pursuit of perfection" as "the pursuit of sweetness and light" in *Culture and Anarchy* (1869; see above). James's tone is forthright, optimistic, and celebratory of the power of the literary imagination. Indeed, "The Art of Fiction" is a controlled, resonant rearticulation of the tributes to the imagination voiced decades earlier by WILLIAM WORDSWORTH, SAMUEL TAYLOR COLERIDGE, PERCY BYSSHE SHELLEY, and RALPH WALDO EMERSON on behalf of the poet. James is often identified as a literary realist and early modernist—Ezra Pound and T. S. ELIOT esteemed him highly. But the roots of his creative and critical practice lie in Romanticism's organic conception of literary form, and in its exalted view of the literary vocation (the writer, James remarked, is an alchemist who "renews something like the old dream of the secret of life").

These connections are important to bear in mind when reading James's essay. "The Art of Fiction" often has been interpreted in isolation, with little note of its affinities to other critical and theoretical texts that preceded it. Sometimes it has been treated exclusively within the canon of James's own creative and critical writings, as a prelude both to his dense, difficult final three novels, *The Wings of the Dove* (1902), *The Ambassadors* (1903), and *The Golden Bowl* (1904), and to the later prefaces—a "comprehensive manual" for "aspirants" to the profession—that he composed for the twenty-six-volume New York Edition of his novels and stories (1907–09, 1917). Such intensively "Jamesian" readings value "The Art of Fiction" as a formative text in James's own career: it shows him, like Wordsworth and Coleridge, establishing the terms through which his own work should be understood and appraised. But if we locate the essay solely within James's corpus, we are prevented from understanding how this piece (and others he produced) contributes to his significance in the general history of narrative theory.

James's concern for taste, judgment, and discrimination glances backward to the eighteenth-century writers DAVID HUME and EDMUND BURKE. And when he hails the novel as "a personal, a direct impression of life," he more immediately echoes the heightened phrasing that WALTER PATER had employed in *Studies in the History of the Renaissance* (1873; see above). His account of the novel as an "organism" not only reinforces the account of "organic form" delineated by Coleridge in the *Biographia Literaria* but also anticipates the elaborations of this same idea in the writings of JOHN CROWE RANSOM, CLEANTH BROOKS, and other New Critics of the 1930s and 1940s.

"The Art of Fiction" is a subtle verbal performance; playful, witty, and ironic, it is both generous and tough-minded toward James's target-of-opportunity Walter Besant. Reading James profitably means paying close attention to his metaphors (e.g., the "huge spider-web" of experience) and analogies (e.g., between the novel and the picture). It means being alert as well to the illuminations provided by James's handling of specific words, as when he reiterates the "torment" of the writer. There are also key moments when James invites readers to reflect on the implications of his claims. In perhaps the most elusive of these, he asserts that "the deepest quality of a work of art will always be the quality of the mind of the producer." James realized the demands inherent in such a claim: How will we know, in the case of each novel, when we have made contact with the mind of its producer? How can we determine that mind's special quality? But his chosen criterion highlights the intimate relationship between writer and reader that the cosmopolitan James always looked for, and that he called on readers of "The Art of Fiction" to share.

BIBLIOGRAPHY

James's literary criticism has been collected by the Library of America in two volumes, titled *Essays, American and English Writers and European Writers and the Prefaces* (1984). This is an essential collection for the serious student of James's work. Selec-

tions can be found in *Literary Reviews and Essays on American, English, and French Literature*, edited by Albert Mordell (1957); *Henry James: Selected Literary Criticism*, edited by Morris Shapira (1963); *Theory of Fiction: Henry James*, edited by James E. Miller Jr. (1972), arranged according to topics and categories; *The House of Fiction: Essays on the Novel*, edited by Leon Edel (1973); *The Art of Criticism: Henry James on the Theory and the Practice of Fiction*, edited by William Veeder and Susan M. Griffin (1986), which includes excellent discussion of and detailed notes for each selection; and *The Critical Muse: Selected Literary Criticism of Henry James*, edited by Roger Gard (1988), which is the best selection for an overview of James's achievement in criticism and theory. Also important is *The Art of the Novel: Critical Prefaces by Henry James*, with an introduction by R. P. Blackmur (new ed., 1984), which gathers the prefaces that James wrote for the New York Edition. Additional primary sources include *Henry James: Autobiography*, edited by F. W. Dupee (1956), written in James's late labyrinthine, evocative manner; *The Complete Notebooks of Henry James*, edited by Leon Edel and Lyall H. Powers (1987); and *Letters*, edited by Leon Edel (4 vols., 1974–84).

The definitive biography is *Henry James*, variously subtitled, in five volumes by Leon Edel (1953–72); it is condensed and updated in the single volume *Henry James: A Life* (1985). Other excellent biographies include Fred Kaplan, *Henry James: The Imagination of Genius: A Biography* (1992), and Kenneth Graham, *Henry James: A Literary Life* (1995). Lyndall Gordon, *A Private Life of Henry James: Two Women and His Art* (1999), probes the impact on James's writing of two important relationships: one with his cousin Minnie Temple, the other with the author Constance Fenimore Woolson.

The best scholarly writings on James as a critic and theorist are Sarah B. Daugherty, *The Literary Criticism of Henry James* (1981), and Vivien Jones, *James the Critic* (1984). Also helpful are Adeline Tintner, *The Book World of Henry James: Appropriating the Classics* (1987); Jonathan Freedman, *Professions of Taste: Henry James, British Aestheticism, and Commodity Culture* (1990), which makes cogent connections among James, Walter Pater, and Oscar Wilde; Edwin S. Fussell, *The French Side of Henry James* (1990); Tony Tanner, *Henry James and the Art of Nonfiction* (1995), which includes a suggestive chapter on the criticism; and Pierre A. Walker, *Reading Henry James in French Cultural Contexts* (1995).

Among the many books on James's fiction, the most pertinent to his critical writings are Laurence Bedwell Holland, *The Expense of Vision: Essays on the Craft of Henry James* (1964), a brilliant analysis of the novels that relates them to the criticism, especially to the prefaces; John Carlos Rowe, *The Theoretical Dimensions of Henry James* (1984); Michael Anesko, "Friction with the Market": *Henry James and the Profession of Authorship* (1986), on the pressures that James faced in struggling to meet but not surrender to the demands of the literary marketplace; Sharon Cameron, *Thinking in Henry James* (1989); Ross Posnock, *The Trial of Curiosity: Henry James, William James, and the Challenge of Modernity* (1991), a wide-ranging comparison of the James brothers' attitudes toward the challenges of modernity; and Garry Hagberg, *Meaning and Interpretation: Wittgenstein, Henry James, and Literary Knowledge* (1994).

See also *A Bibliography of Henry James*, by Leon Edel and Dan H. Laurence, revised with the assistance of James Rambeau (3rd ed., 1982). Secondary sources are listed in Linda J. Taylor, *Henry James, 1866–1916: A Reference Guide* (1982); Kristin Pruitt McColgan, *Henry James, 1917–1959: A Reference Guide* (1979); Dorothy McInnis Scura, *Henry James, 1960–1974: A Reference Guide* (1979); and Judith E. Funston, *Henry James: A Reference Guide, 1975–1987* (1991).

The Art of Fiction

I should not have affixed so comprehensive a title to these few remarks, necessarily wanting in any completeness upon a subject the full consideration of which would carry us far, did I not seem to discover a pretext for my temerity in the interesting pamphlet lately published under this name by Mr. Walter Besant.¹ Mr. Besant's lecture at the Royal Institution—the original form of his pamphlet—appears to indicate that many persons are interested in the art of fiction, and are not indifferent to such remarks, as those who practise it may attempt to make about it. I am therefore anxious not to lose the benefit of this favourable association, and to edge in a few words under cover of the attention which Mr. Besant is sure to have excited. There is something very encouraging in his having put into form certain of his ideas on the mystery of story-telling.

It is a proof of life and curiosity—curiosity on the part of the brotherhood of novelists as well as on the part of their readers. Only a short time ago it might have been supposed that the English novel was not what the French call *discutable*.² It had no air of having a theory, a conviction, a consciousness of itself behind it—of being the expression of an artistic faith, the result of choice and comparison. I do not say it was necessarily the worse for that: it would take much more courage than I possess to intimate that the form of the novel as Dickens and Thackeray³ (for instance) saw it had any taint of incompleteness. It was, however, *naïf* (if I may help myself out with another French word); and evidently if it be destined to suffer in any way for having lost its *naïveté* it has now an idea of making sure of the corresponding advantages. During the period I have alluded to there was a comfortable, good-humoured feeling abroad that a novel is a novel, as a pudding is a pudding, and that our only business with it could be to swallow it. But within a year or two, for some reason or other, there have been signs of returning animation—the era of discussion would appear to have been to a certain extent opened. Art lives upon discussion, upon experiment, upon curiosity, upon variety of attempt, upon the exchange of views and the comparison of stand-points; and there is a presumption that those times when no one has anything particular to say about it, and has no reason to give for practice or preference, though they may be times of honour, are not times of development—are times, possibly even, a little of dulness. The successful application of any art is a delightful spectacle, but the theory too is interesting; and though there is a great deal of the latter without the former I suspect there has never been a genuine success that has not had a latent core of conviction. Discussion, suggestion, formulation, these things are fertilising when they are frank and sincere. Mr. Besant has set an excellent example in saying what he thinks, for his part, about the way in which fiction should be written, as well as about the way in which it should be published; for his view of the “art,” carried on into an appendix, covers that too. Other labourers in the same field will doubtless take up the argument, they will give it the light of their

2. Discussable, debatable (French).

3. William Thackeray (1811–1863), English novelist and satirist. Charles Dickens (1812–1870), most popular 19th-century English novelist.

experience, and the effect will surely be to make our interest in the novel a little more what it had for some time threatened to fail to be—a serious, active, inquiring interest, under protection of which this delightful study may, in moments of confidence, venture to say a little more what it thinks of itself.

It must take itself seriously for the public to take it so. The old superstition about fiction being “wicked” had doubtless died out in England; but the spirit of it lingers in a certain oblique regard directed toward any story which does not more or less admit that it is only a joke. Even the most jocular novel feels in some degree the weight of the proscription that was formerly directed against literary levity: the jocularity does not always succeed in passing for orthodoxy. It is still expected, though perhaps people are ashamed to say it, that a production which is after all only a “make believe” (for what else is a “story”?) shall be in some degree apologetic—shall renounce the pretension of attempting really to represent life. This, of course, any sensible, wide-awake story declines to do, for it quickly perceives that the tolerance granted to it on such a condition is only an attempt to stifle it disguised in the form of generosity. The old evangelical hostility to the novel, which was as explicit as it was narrow, and which regarded it as little less favourable to our immortal part than a stage-play, was in reality far less insulting. The only reason for the existence of a novel is that it does attempt to represent life.⁴ When it relinquishes this attempt, the same attempt that we see on the canvas of the painter, it will have arrived at a very strange pass. It is not expected of the picture that it will make itself humble in order to be forgiven; and the analogy between the art of the painter and the art of the novelist is, so far as I am able to see, complete. Their inspiration is the same, their process (allowing for the different quality of the vehicle), is the same, their success is the same. They may learn from each other, they may explain and sustain each other. Their cause is the same, and the honour of one is the honour of another. The Mahometans⁵ think a picture an unholy thing, but it is a long time since any Christian did, and it is therefore the more odd that in the Christian mind the traces (dissimulated though they may be) of a suspicion of the sister art should linger to this day. The only effectual way to lay it to rest is to emphasise the analogy to which I just alluded—to insist on the fact that as the picture is reality, so the novel is history. That is the only general description (which does it justice) that we may give of the novel. But history also is allowed to represent life; it is not, any more than painting, expected to apologise. The subject-matter of fiction is stored up likewise in documents and records, and if it will not give itself away, as they say in California, it must speak with assurance, with the tone of the historian. Certain accomplished novelists have a habit of giving themselves away which must often bring tears to the eyes of people who take their fiction seriously. I was lately struck, in reading over many pages of Anthony Trollope,⁶ with his want of discretion in this particular. In a digression, a parenthesis or an aside, he concedes to the reader that he and this trusting friend are only “making

4. In the first version of the essay, James wrote “does compete with life.” Robert Louis Stevenson criticized the use of the word “compete” in his reply to James, “A Humble Remonstrance,” in the December 1884 issue of *Longman's*.

5. Muslims (i.e., followers of Muhammad, or Mahomet). Islam generally prohibits representational art.

6. Prolific English novelist (1815–1882).

believe." He admits that the events he narrates have not really happened, and that he can give his narrative any turn the reader may like best. Such a betrayal of a sacred office seems to me, I confess, a terrible crime; it is what I mean by the attitude of apology, and it shocks me every whit as much in Trollope as it would have shocked me in Gibbon or Macaulay.⁷ It implies that the novelist is less occupied in looking for the truth (the truth, of course I mean, that he assumes, the premises that we must grant him, whatever they may be), than the historian, and in doing so it deprives him at a stroke of all his standing-room. To represent and illustrate the past, the actions of men, is the task of either writer, and the only difference that I can see is, in proportion as he succeeds, to the honour of the novelist, consisting as it does in his having more difficulty in collecting his evidence, which is so far from being purely literary.⁸ It seems to me to give him a great character, the fact that he has at once so much in common with the philosopher and the painter; this double analogy is a magnificent heritage.

It is of all this evidently that Mr. Besant is full when he insists upon the fact that fiction is one of the *fine arts*, deserving in its turn of all the honours and emoluments that have hitherto been reserved for the successful profession of music, poetry, painting, architecture. It is impossible to insist too much on so important a truth, and the place that Mr. Besant demands for the work of the novelist may be represented, a trifle less abstractly, by saying that he demands not only that it shall be reputed artistic, but that it shall be reputed very artistic indeed. It is excellent that he should have struck this note, for his doing so indicates that there was need of it, that his proposition may be to many people a novelty. One rubs one's eyes at the thought; but the rest of Mr. Besant's essay confirms the revelation. I suspect in truth that it would be possible to confirm it still further, and that one would not be far wrong in saying that in addition to the people to whom it has never occurred that a novel ought to be artistic, there are a great many others who, if this principle were urged upon them, would be filled with an indefinable mistrust. They would find it difficult to explain their repugnance, but it would operate strongly to put them on their guard. "Art," in our Protestant communities, where so many things have got so strangely twisted about, is supposed in certain circles to have some vaguely injurious effect upon those who make it an important consideration, who let it weigh in the balance. It is assumed to be opposed in some mysterious manner to morality, to amusement, to instruction. When it is embodied in the work of the painter (the sculptor is another affair!) you know what it is: it stands there before you, in the honesty of pink and green and a gilt frame; you can see the worst of it at a glance, and you can be on your guard. But when it is introduced into literature it becomes more insidious—there is danger of its hurting you before you know it. Literature should be either instructive or amusing, and there is in many minds an impression that these artistic preoccupations, the search for form, contribute to neither end, interfere indeed with both. They are too frivolous to be edifying, and too serious to be diverting; and they are moreover priggish and paradoxical and superfluous. That, I think, represents the manner in

7. Thomas Babington Macaulay (1800–1859), English historian, essayist and statesman. Edward Gibbon (1737–1794), English historian, author of *The History of the Decline and Fall of the Roman*

Empire (6 vols., 1776–88).

8. On somewhat different grounds, ARISTOTLE argues in *Poetics* 9 (see above) that poetry is more philosophical and more worthwhile than history.

which the latent thought of many people who read novels as an exercise in skipping would explain itself if it were to become articulate. They would argue, of course, that a novel ought to be "good," but they would interpret this term in a fashion of their own, which indeed would vary considerably from one critic to another. One would say that being good means representing virtuous and aspiring characters, placed in prominent positions; another would say that it depends on a "happy ending," on a distribution at the last of prizes, pensions, husbands, wives, babies, millions, appended paragraphs, and cheerful remarks. Another still would say that it means being full of incident and movement, so that we shall wish to jump ahead, to see who was the mysterious stranger, and if the stolen will was ever found, and shall not be distracted from this pleasure by any tiresome analysis or "description." But they would all agree that the "artistic" idea would spoil some of their fun. One would hold it accountable for all the description, another would see it revealed in the absence of sympathy. Its hostility to a happy ending would be evident, and it might even in some cases render any ending at all impossible. The "ending" of a novel is, for many persons, like that of a good dinner, a course of dessert and ices, and the artist in fiction is regarded as a sort of meddlesome doctor who forbids agreeable aftertastes. It is therefore true that this conception of Mr. Besant's of the novel as a superior form encounters not only a negative but a positive indifference. It matters little that as a work of art it should really be as little or as much of its essence to supply happy endings, sympathetic characters, and an objective tone, as if it were a work of mechanics: the association of ideas, however incongruous, might easily be too much for it if an eloquent voice were not sometimes raised to call attention to the fact that it is at once as free and as serious a branch of literature as any other.

Certainly this might sometimes be doubted in presence of the enormous number of works of fiction that appeal to the credulity of our generation, for it might easily seem that there could be no great character in a commodity so quickly and easily produced. It must be admitted that good novels are much compromised by bad ones, and that the field at large suffers discredit from overcrowding. I think, however, that this injury is only superficial, and that the superabundance of written fiction proves nothing against the principle itself. It has been vulgarised, like all other kinds of literature, like everything else to-day, and it has proved more than some kinds accessible to vulgarisation. But there is as much difference as there ever was between a good novel and a bad one: the bad is swept with all the daubed canvases and spoiled marble into some unvisited limbo, or infinite rubbish-yard beneath the back-windows of the world, and the good subsists and emits its light and stimulates our desire for perfection. As I shall take the liberty of making but a single criticism of Mr. Besant, whose tone is so full of the love of his art, I may as well have done with it at once. He seems to me to mistake in attempting to say so definitely beforehand what sort of an affair the good novel will be. To indicate the danger of such an error as that has been the purpose of these few pages; to suggest that certain traditions on the subject, applied *a priori*, have already had much to answer for, and that the good health of an art which undertakes so immediately to reproduce life must demand that it be perfectly free. It lives upon exercise, and the very meaning of exercise is freedom. The only obligation to which in advance we may hold

a novel, without incurring the accusation of being arbitrary, is that it be interesting. That general responsibility rests upon it, but it is the only one I can think of. The ways in which it is at liberty to accomplish this result (of interesting us) strike me as innumerable, and such as can only suffer from being marked out or fenced in by prescription. They are as various as the temperament of man, and they are successful in proportion as they reveal a particular mind, different from others. A novel is in its broadest definition a personal, a direct impression of life: that, to begin with, constitutes its value, which is greater or less according to the intensity of the impression. But there will be no intensity at all, and therefore no value, unless there is freedom to feel and say. The tracing of a line to be followed, of a tone to be taken, of a form to be filled out, is a limitation of that freedom and a suppression of the very thing that we are most curious about. The form, it seems to me, is to be appreciated after the fact: then the author's choice has been made, his standard has been indicated; then we can follow lines and directions and compare tones and resemblances. Then in a word we can enjoy one of the most charming of pleasures, we can estimate quality, we can apply the test of execution. The execution belongs to the author alone; it is what is most personal to him, and we measure him by that. The advantage, the luxury, as well as the torment and responsibility of the novelist, is that there is no limit to what he may attempt as an executant—no limit to his possible experiments, efforts, discoveries, successes. Here it is especially that he works, step by step, like his brother of the brush, of whom we may always say that he has painted his picture in a manner best known to himself. His manner is his secret, not necessarily a jealous one. He cannot disclose it as a general thing if he would; he would be at a loss to teach it to others. I say this with a due recollection of having insisted on the community of method of the artist who paints a picture and the artist who writes a novel. The painter is able to teach the rudiments of his practice, and it is possible, from the study of good work (granted the aptitude), both to learn how to paint and to learn how to write. Yet it remains true, without injury to the *rap-prochement*,⁹ that the literary artist would be obliged to say to his pupil much more than the other, "Ah, well, you must do it as you can." It is a question of degree, a matter of delicacy. If there are exact sciences, there are also exact arts, and the grammar of painting is so much more definite that it makes the difference.

I ought to add, however, that if Mr. Besant says at the beginning of his essay that the "laws of fiction may be laid down and taught with as much precision and exactness as the laws of harmony, perspective, and proportion," he mitigates what might appear to be an extravagance by applying his remark to "general" laws, and by expressing most of these rules in a manner with which it would certainly be unaccommodating to disagree. That the novelist must write from his experience, that his "characters must be real and such as might be met with in actual life;" that "a young lady brought up in a quiet country village should avoid descriptions of garrison life," and "a writer whose friends and personal experiences belong to the lower middle-class should carefully avoid introducing his characters into society;" that one should enter one's notes in a common-place book; that one's figures should be clear in

9. The bringing together (French); that is, of painting and novel writing.

outline; that making them clear by some trick of speech or of carriage is a bad method, and "describing them at length" is a worse one: that English Fiction should have a "conscious moral purpose;" that "it is almost impossible to estimate too highly the value of careful workmanship—that is, of style;" that "the most important point of all is the story," that "the story is everything": these are principles with most of which it is surely impossible not to sympathise. That remark about the lower middle-class writer and his knowing his place is perhaps rather chilling; but for the rest I should find it difficult to dissent from any one of these recommendations. At the same time, I should find it difficult positively to assent to them, with the exception, perhaps, of the injunction as to entering one's notes in a common-place book. They scarcely seem to me to have the quality that Mr. Besant attributes to the rules of the novelist—the "precision and exactness" of "the laws of harmony, perspective, and proportion." They are suggestive, they are even inspiring, but they are not exact, though they are doubtless as much so as the case admits of: which is a proof of that liberty of interpretation for which I just contended. For the value of these different injunctions—so beautiful and so vague—is wholly in the meaning one attaches to them. The characters, the situation, which strike one as real will be those that touch and interest one most, but the measure of reality is very difficult to fix. The reality of *Don Quixote* or of Mr. Micawber¹ is a very delicate shade; it is a reality so coloured by the author's vision that, vivid as it may be, one would hesitate to propose it as a model: one would expose one's self to some very embarrassing questions on the part of a pupil. It goes without saying that you will not write a good novel unless you possess the sense of reality; but it will be difficult to give you a recipe for calling that sense into being. Humanity is immense, and reality has a myriad forms; the most one can affirm is that some of the flowers of fiction have the odour of it, and others have not; as for telling you in advance how your nosegay should be composed, that is another affair. It is equally excellent and inconclusive to say that one must write from experience; to our supposititious aspirant such a declaration might savor of mockery. What kind of experience is intended, and where does it begin and end? Experience is never limited, and it is never complete; it is an immense sensibility, a kind of huge spider-web of the finest silken threads suspended in the chamber of consciousness, and catching every airborne particle in its tissue. It is the very atmosphere of the mind; and when the mind is imaginative—much more when it happens to be that of a man of genius—it takes to itself the faintest hints of life, it converts the very pulses of the air into revelations. The young lady living in a village has only to be a damsel upon whom nothing is lost to make it quite unfair (as it seems to me) to declare to her that she shall have nothing to say about the military. Greater miracles have been seen than that, imagination assisting, she should speak the truth about some of these gentlemen. I remember an English novelist, a woman of genius,² telling me that she was much commended for the impression she had managed to give in one of her tales of the nature and way of life of the French Protestant youth. She had been asked where she learned

1. Character in *David Copperfield* (1849–50), by Dickens. *Don Quixote*: title character of the novel (1605, 1615), by Miguel de Cervantes.

2. Identified by James's biographer Leon Edel as

Anne Thackeray, Lady Ritchie (1837–1919), the daughter of William Thackeray and the author of *The Story of Elizabeth* (1862–63), to which James seems to be alluding.

so much about this recondite being, she had been congratulated on her peculiar opportunities. These opportunities consisted in her having once, in Paris, as she ascended a staircase, passed an open door where, in the household of a *pasteur*,³ some of the young Protestants were seated at table round a finished meal. The glimpse made a picture; it lasted only a moment, but that moment was experience. She had got her direct personal impression, and she turned out her type. She knew what youth was, and what Protestantism; she also had the advantage of having seen what it was to be French, so that she converted these ideas into a concrete image and produced a reality. Above all, however, she was blessed with the faculty which when you give it an inch takes an ell, and which for the artist is a much greater source of strength than any accident of residence or of place in the social, scale. The power to guess the unseen from the seen, to trace the implication of things, to judge the whole piece by the pattern, the condition of feeling life in general so completely that you are well on your way to knowing any particular corner of it—this cluster of gifts may almost be said to constitute experience, and they occur in country and in town, and in the most differing stages of education. If experience consists of impressions, it may be said that impressions *are* experience, just as (have we not seen it?) they are the very air we breathe. Therefore, if I should certainly say to a novice, "Write from experience and experience only," I should feel that this was rather a tantalising monition if I were not careful immediately to add. "Try to be one of the people on whom nothing is lost!"

I am far from intending by this to minimise the importance of exactness—of truth of detail. One can speak best from one's own taste, and I may therefore venture to say that the air of reality (solidity of specification) seems to me to be the supreme virtue of a novel—the merit on which all its other merits (including that conscious moral purpose of which Mr. Besant speaks) helplessly and submissively depend. If it be not there they are all as nothing, and if these be there, they owe their effect to the success with which the author has produced the illusion of life. The cultivation of this success, the study of this exquisite process, form, to my taste, the beginning and the end of the art of the novelist. They are his inspiration, his despair, his reward, his torment, his delight. It is here in very truth that he competes with life; it is here that he competes with his brother the painter in *his* attempt to render the look of things, the look that conveys their meaning, to catch the colour, the relief, the expression, the surface, the substance of the human spectacle. It is in regard to this that Mr. Besant is well inspired when he bids him take notes. He cannot possibly take too many, he cannot possibly take enough. All life solicits him, and to "render" the simplest surface, to produce the most momentary illusion, is a very complicated business. His case would be easier, and the rule would be more exact, if Mr. Besant had been able to tell him what notes to take. But this, I fear, he can never learn in any manual; it is the business of his life. He has to take a great many in order to select a few, he has to work them up as he can, and even the guides and philosophers who might have most to say to him must leave him alone when it comes to the application of precepts, as we leave the painter in communion with his palette. That his characters "must be clear in outline," as Mr. Besant says—

3. Protestant minister, pastor (French).

he feels that down to his boots; but how he shall make them so is a secret between his good angel and himself. It would be absurdly simple if he could be taught that a great deal of "description" would make them so, or that on the contrary the absence of description and the cultivation of dialogue, or the absence of dialogue and the multiplication of "incident," would rescue him from his difficulties. Nothing, for instance, is more possible than that he be of a turn of mind for which this odd, literal opposition of description and dialogue, incident and description, has little meaning and light. People often talk of these things as if they had a kind of internecine distinctness, instead of melting into each other at every breath, and being intimately associated parts of one general effort of expression. I cannot imagine composition existing in a series of blocks, nor conceive, in any novel worth discussing at all, of a passage of description that is not in its intention narrative, a passage of dialogue that is not in its intention descriptive, a touch of truth of any sort that does not partake of the nature of incident, or an incident that derives its interest from any other source than the general and only source of the success of a work of art—that of being illustrative. A novel is a living thing, all one and continuous, like any other organism, and in proportion as it lives will it be found, I think, that in each of the parts there is something of each of the other parts. The critic who over the close texture of a finished work shall pretend to trace a geography of items will mark some frontiers as artificial, I fear, as any that have been known to history. There is an old-fashioned distinction between the novel of character and the novel of incident which must have cost many a smile to the intending fabulist who was keen about his work. It appears to me as little to the point as the equally celebrated distinction between the novel and the romance—to answer as little to any reality. There are bad novels and good novels, as there are bad pictures and good pictures; but that is the only distinction in which I see any meaning, and I can as little imagine speaking of a novel of character as I can imagine speaking of a picture of character. When one says picture one says of character, when one says novel one says of incident, and the terms may be transposed at will. What is character but the determination of incident? What is incident but the illustration of character? What is either a picture or a novel that is *not* of character? What else do we seek in it and find in it? It is an incident for a woman to stand up with her hand resting on a table and look out at you in a certain way; or if it be not an incident I think it will be hard to say what it is. At the same time it is an expression of character. If you say you don't see it (character in *that—allons donc!*),⁴ this is exactly what the artist who has reasons of his own for thinking he *does* see it undertakes to show you. When a young man makes up his mind that he has not faith enough after all to enter the church as he intended, that is an incident, though you may not hurry to the end of the chapter to see whether perhaps he doesn't change once more. I do not say that these are extraordinary or startling incidents. I do not pretend to estimate the degree of interest proceeding from them, for this will depend upon the skill of the painter. It sounds almost puerile to say that some incidents are intrinsically much more important than others, and I need not take this precaution after having professed my sympathy for the major ones in remarking that the only classifi-

4. Come now, that's nonsense (French).

cation of the novel that I can understand is into that which has life and that which has it not.

The novel and the romance, the novel of incident and that of character—these clumsy separations appear to me to have been made by critics and readers for their own convenience, and to help them out of some of their occasional queer predicaments, but to have little reality or interest for the producer, from whose point of view it is of course that we are attempting to consider the art of fiction. The case is the same with another shadowy category which Mr. Besant apparently is disposed to set up—that of the “modern English novel”; unless indeed it be that in this matter he has fallen into an accidental confusion of stand-points. It is not quite clear whether he intends the remarks in which he alludes to it to be didactic or historical. It is as difficult to suppose a person intending to write a modern English as to suppose him writing an ancient English novel: that is a label which begs the question. One writes the novel, one paints the picture, of one’s language and of one’s time, and calling it modern English will not, alas! make the difficult task any easier. No more, unfortunately, will calling this or that work of one’s fellow-artist a romance—unless it be, of course, simply for the pleasantness of the thing, as for instance when Hawthorne gave this heading to his story of *Blithedale*.⁵ The French, who have brought the theory of fiction to remarkable completeness, have but one name for the novel, and have not attempted smaller things in it, that I can see, for that. I can think of no obligation to which the “romancer” would not be held equally with the novelist; the standard of execution is equally high for each. Of course it is of execution that we are talking—that being the only point of a novel that is open to contention. This is perhaps too often lost sight of, only to produce interminable confusions and cross-purposes. We must grant the artist his subject, his idea, his *donnée*:⁶ our criticism is applied only to what he makes of it. Naturally I do not mean that we are bound to like it or find it interesting; in case we do not our course is perfectly simple—to let it alone. We may believe that of a certain idea even the most sincere novelist can make nothing at all, and the event may perfectly justify our belief; but the failure will have been a failure to execute, and it is in the execution that the fatal weakness is recorded. If we pretend to respect the artist at all, we must allow him his freedom of choice, in the face, in particular cases, of innumerable presumptions that the choice will not fructify. Art derives a considerable part of its beneficial exercise from flying in the face of presumptions, and some of the most interesting experiments of which it is capable are hidden in the bosom of common things. Gustave Flaubert has written a story about the devotion of a servant-girl to a parrot,⁷ and the production, highly finished as it is, cannot on the whole be called a success. We are perfectly free to find it flat, but I think it might have been interesting; and I, for my part, am extremely glad he should have written it; it is a contribution to our knowledge of what can be done—or what cannot. Ivan Turgéniéff has written a tale about a deaf and dumb serf and a lap-dog,⁸ and the thing is touching, loving, a little masterpiece. He

5. *The Blithedale Romance* (1852), by Nathaniel Hawthorne (1804–1864). The American writer’s clearest statement of the distinction he saw between novel and romance appears in his preface to *The House of Seven Gables* (1851).

6. That which is given, starting point (French).

7. “A Simple Soul” (1877), by the French author Flaubert (1821–1880).

8. “Mumu” (1856), by the Russian author Turgenev (1818–1883).

struck the note of life where Gustave Flaubert missed it—he flew in the face of a presumption and achieved a victory.

Nothing, of course, will ever take the place of the good old fashion of “liking” a work of art or hot liking it: the most improved criticism will not abolish that primitive, that ultimate test. I mention this to guard myself from the accusation of intimating that the idea, the subject, of a novel or a picture, does not matter. It matters, to my sense, in the highest degree, and if I might put up a prayer it would be that artists should select none but the richest. Some, as I have already hastened to admit, are much more remunerative than others, and it would be a world happily arranged in which persons intending to treat them should be exempt from confusions and mistakes. This fortunate condition will arrive only, I fear, on the same day that critics become purged from error. Meanwhile, I repeat, we do not judge the artist with fairness unless we say to him, “Oh, I grant you your starting-point, because if I did not I should seem to prescribe to you, and heaven forbid I should take that responsibility. If I pretend to tell you what you must not take, you will call upon me to tell you then what you must take; in which case I shall be prettily caught. Moreover, it isn’t till I have accepted your data that I can begin to measure you. I have the standard, the pitch; I have no right to tamper with your flute and then criticise your music. Of course I may not care for your idea at all; I may think it silly, or stale, or unclean; in which case I wash my hands of you altogether. I may content myself with believing that you will not have succeeded in being interesting, but I shall, of course, not attempt to demonstrate it, and you will be as indifferent to me as I am to you. I needn’t remind you that there are all sorts of tastes: who can know it better? Some people, for excellent reasons, don’t like to read about carpenters; others, for reasons even better, don’t like to read about courtesans. Many object to Americans. Others (I believe they are mainly editors and publishers) won’t look at Italians. Some readers don’t like quiet subjects; others don’t like bustling ones. Some enjoy a complete illusion, others the consciousness of large concessions. They choose their novels accordingly, and if they don’t care about your idea they won’t, *a fortiori*, care about your treatment.”

So that it comes back very quickly, as I have said, to the liking: in spite of M. Zola,⁹ who reasons less powerfully than he represents, and who will not reconcile himself to this absoluteness of taste, thinking that there are certain things that people ought to like, and that they can be made to like. I am quite at a loss to imagine anything (at any rate in this matter of fiction) that people *ought* to like or to dislike. Selection will be sure to take care of itself, for it has a constant motive behind it. That motive is simply experience. As people feel life, so they will feel the art that is most closely related to it. This closeness of relation is what we should never forget in talking of the effort of the novel. Many people speak of it as a factitious, artificial form, a product of ingenuity, the business of which is to alter and arrange the things that surround us, to translate them into conventional, traditional moulds. This, however, is a view of the matter which carries us but a very short way, condemns the art to an eternal repetition of a few familiar *clichés*, cuts short its

9. Émile Zola (1840–1902), French novelist, critic, and theorist of the naturalist movement in literature. James finds Zola’s theory less impressive than his practice.

development, and leads us straight up to a dead wall. Catching the very note and trick, the strange irregular rhythm of life, that is the attempt whose strenuous force keeps Fiction upon her feet. In proportion as in what she offers us we see life *without* rearrangement do we feel that we are touching the truth; in proportion as we see it *with* rearrangement do we feel that we are being put off with a substitute, a compromise and convention. It is not uncommon to hear an extraordinary assurance of remark in regard to this matter of rearranging, which is often spoken of as if it were the last word of art. Mr. Besant seems to me in danger of falling into the great error with his rather unguarded talk about "selection." Art is essentially selection, but it is a selection whose main care is to be typical, to be inclusive. For many people art means rose-coloured window-panes, and selection means picking a bouquet for Mrs. Grundy.¹ They will tell you glibly that artistic considerations have nothing to do with the disagreeable, with the ugly; they will rattle off shallow commonplaces about the province of art and the limits of art till you are moved to some wonder in return as to the province and the limits of ignorance. It appears to me that no one can ever have made a seriously artistic attempt without becoming conscious of an immense increase—a kind of revelation—of freedom. One perceives in that case—by the light of a heavenly ray—that the province of art is all life, all feeling, all observation, all vision. As Mr. Besant so justly intimates, it is all experience. That is a sufficient answer to those who maintain that it must not touch the sad things of life, who stick into its divine unconscious bosom little prohibitory inscriptions on the end of sticks, such as we see in public gardens—"It is forbidden to walk on the grass; it is forbidden to touch the flowers; it is not allowed to introduce dogs or to remain after dark; it is requested to keep to the right." The young aspirant in the line of fiction whom we continue to imagine will do nothing without taste, for in that case his freedom would be of little use to him; but the first advantage of his taste will be to reveal to him the absurdity of the little sticks and tickets. If he have taste, I must add, of course he will have ingenuity, and my disrespectful reference to that quality just now was not meant to imply that it is useless in fiction. But it is only a secondary aid; the first is a capacity for receiving straight impressions.

Mr. Besant has some remarks on the question of "the story" which I shall not attempt to criticise, though they seem to me to contain a singular ambiguity, because I do not think I understand them. I cannot see what is meant by talking as if there were a part of a novel which is the story and part of it which for mystical reasons is not—unless indeed the distinction be made in a sense in which it is difficult to suppose that any one should attempt to convey anything. "The story," if it represents anything, represents the subject, the idea, the *donnée* of the novel; and there is surely no "school"—Mr. Besant speaks of a school—which urges that a novel should be all treatment and no subject. There must assuredly be something to treat; every school is intimately conscious of that. This sense of the story being the idea, the starting-point, of the novel, is the only one that I see in which it can be spoken of as something different from its organic whole; and since in proportion as the work is successful the idea permeates and penetrates it, informs and

1. The unseen arbiter of taste and morals in the play *Speed the Plough* (1798), by Thomas Morton; a symbol of moral rigidity.

animates it, so that every word and every punctuation-point contribute directly to the expression, in that proportion do we lose our sense of the story being a blade which may be drawn more or less out of its sheath. The story and the novel, the idea and the form, are the needle and thread, and I never heard of a guild of tailors who recommended the use of the thread without the needle, or the needle without the thread. Mr. Besant is not the only critic who may be observed to have spoken as if there were certain things in life which constitute stories, and certain others which do not. I find the same odd implication in an entertaining article² in the *Pall Mall Gazette*, devoted, as it happens, to Mr. Besant's lecture. "The story is the thing!" says this graceful writer, as if with a tone of opposition to some other idea. I should think it was, as every painter who, as the time for "sending in" his picture³ looms in the distance, finds himself still in quest of a subject—as every belated artist not fixed about his theme will heartily agree. There are some subjects which speak to us and others which do not, but he would be a clever man who should undertake to give a rule—an index expurgatorius⁴—by which the story and the no-story should be known apart. It is impossible (to me at least) to imagine any such rule which shall not be altogether arbitrary. The writer in the *Pall Mall* opposes the delightful (as I suppose) novel of *Margot la Balafrée* to certain tales in which "Bostonian nymphs" appear to have "rejected English dukes for psychological reasons."⁵ I am not acquainted with the romance just designated, and can scarcely forgive the *Pall Mall* critic for not mentioning the name of the author, but the title appears to refer to a lady who may have received a scar in some heroic adventure. I am inconsolable at not being acquainted with this episode, but am utterly at a loss to see why it is a story when the rejection (or acceptance) of a duke is not, and why a reason, psychological or other, is not a subject when a cicatrix is. They are all particles of the multitudinous life with which the novel deals, and surely no dogma which pretends to make it lawful to touch the one and unlawful to touch the other will stand for a moment on its feet. It is the special picture that must stand or fall, according as it seem to possess truth or to lack it. Mr. Besant does not, to my sense, light up the subject by intimating that a story must, under penalty of not being a story, consist of "adventures." Why of adventures more than of green spectacles?⁶ He mentions a category of impossible things, and among them he places "fiction without adventure." Why without adventure, more than without matrimony, or celibacy, or parturition, or cholera, or hydropathy, or Jansenism?⁷ This seems to me to bring the novel back to the hapless little rôle of being an artificial, ingenious thing—bring it down from its large, free character of an immense and exquisite correspondence with life. And what is adventure, when it comes to that, and by what sign is the listening pupil to recognise it? It is an adventure—an immense one—for me to write this little article;

2. "The Art of Fiction," *Pall Mall Gazette*, April 30, 1884, by the Scottish critic and journalist Andrew Lang.

3. That is, the time he sends it off to an exhibit at the Royal Academy.

4. Rule for justifying (James's Latin coinage).

5. In James's *International Episode* (1879) (the writer may also have had in mind *The Portrait of Lady*, 1881). *Margot: Margot the Scarred Woman* (1884), by the French romantic novelist Fortuné

du Boisgobey.

6. An allusion to an episode in Oliver Goldsmith's *Vicar of Wakefield* (1766), in which a son spends the money from the sale of the family colt on a gross of green spectacles.

7. A Roman Catholic religious movement, condemned as heresy, that emphasized predestination and the importance of personal holiness; it grew out of the writings of the Dutch theologian Cornelis Jansen (1585–1638).

and for a Bostonian nymph to reject an English duke is an adventure only less stirring, I should say, than for an English duke to be rejected by a Bostonian nymph. I see dramas within dramas in that, and innumerable points of view. A psychological reason is, to my imagination, an object adorably pictorial; to catch the tint of its complexion—I feel as if that idea might inspire one to Titianesque⁸ efforts. There are few things more exciting to me, in short, than a psychological reason, and yet, I protest, the novel seems to me the most magnificent form of art. I have just been reading, at the same time, the delightful story of *Treasure Island*, by Mr. Robert Louis Stevenson and, in a manner less consecutive, the last tale from M. Edmond de Goncourt, which is entitled *Chérie*.⁹ One of these works treats of murders, mysteries, islands of dreadful renown, hairbreadth escapes, miraculous coincidences and buried doubloons. The other treats of a little French girl who lived in a fine house in Paris, and died of wounded sensibility because no one would marry her. I call *Treasure Island* delightful, because it appears to me to have succeeded wonderfully in what it attempts; and I venture to bestow no epithet upon *Chérie*, which strikes me as having failed deplorably in what it attempts—that is in tracing the development of the moral consciousness of a child. But one of these productions strikes me as exactly as much of a novel as the other, and as having a “story” quite as much. The moral consciousness of a child is as much a part of life as the islands of the Spanish Main, and the one sort of geography seems to me to have those “surprises” of which Mr. Besant speaks quite as much as the other. For myself (since it comes back in the last resort, as I say, to the preference of the individual), the picture of the child’s experience has the advantage that I can at successive steps (an immense luxury, near to the “sensual pleasure” of which Mr. Besant’s critic in the *Pall Mall* speaks) say Yes or No, as it may be, to what the artist puts before me. I have been a child in fact, but I have been on a quest for a buried treasure only in supposition, and it is a simple accident that with M. de Goncourt I should have for the most part to say No. With George Eliot,¹ when she painted that country with a far other intelligence, I always said Yes.

The most interesting part of Mr. Besant’s lecture is unfortunately the briefest passage—his very cursory allusion to the “conscious moral purpose” of the novel. Here again it is not very clear whether he be recording a fact or laying down a principle; it is a great pity that in the latter case he should not have developed his idea. This branch of the subject is of immense importance, and Mr. Besant’s few words point to considerations of the widest reach, not to be lightly disposed of. He will have treated the art of fiction but superficially who is not prepared to go every inch of the way that these considerations will carry him. It is for this reason that at the beginning of these remarks I was careful to notify the reader that my reflections on so large a theme have no pretension to be exhaustive. Like Mr. Besant, I have left the question of the morality of the novel till the last, and at the last I find I have used up my space. It is a question surrounded with difficulties,

8. That is, characteristic of the Venetian painter Titian (Tiziano Vecellio, ca. 1488–1576), especially famous for his use of color.

9. A psychological study of a young woman (1884), by Goncourt (1822–1896). *Treasure Island*, by Stevenson (1850–1894), was published

in 1883.

1. English novelist (1819–1880). George Eliot depicted “that country” of a child’s consciousness in *The Mill on the Floss* (1860) and *Silas Marner* (1861).

as witness the very first that meets us, in the form of a definite question, on the threshold. Vagueness, in such a discussion, is fatal, and what is the meaning of your morality and your conscious moral purpose? Will you not define your terms and explain how (a novel being a picture) a picture can be either moral or immoral? You wish to paint a moral picture or carve a moral statue: will you not tell us how you would set about it? We are discussing the Art of Fiction; questions of art are questions (in the widest sense) of execution; questions of morality are quite another affair, and will you not let us see how it is that you find it so easy to mix them up? These things are so clear to Mr. Besant that he has deduced from them a law which he sees embodied in English Fiction, and which is "a truly admirable thing and a great cause for congratulation." It is a great cause for congratulation indeed when such thorny problems become as smooth as silk. I may add that in so far as Mr. Besant perceives that in point of fact English Fiction has addressed itself preponderantly to these delicate questions he will appear to many people to have made a vain discovery. They will have been positively struck, on the contrary, with the moral timidity of the usual English novelist; with his (or with her) aversion to face the difficulties with which on every side the treatment of reality bristles. He is apt to be extremely shy (whereas the picture that Mr. Besant draws is a picture of boldness), and the sign of his work, for the most part, is a cautious silence on certain subjects. In the English novel (by which of course I mean the American as well), more than in any other, there is a traditional difference between that which people know and that which they agree to admit that they know, that which they see and that which they speak of, that which they feel to be a part of life and that which they allow to enter into literature. There is the great difference, in short, between what they talk of in conversation and what they talk of in print. The absence of moral energy is to survey the whole field, and I should directly reverse Mr. Besant's remark and say not that the English novel has a purpose, but that it has a diffidence. To what degree a purpose in a work of art is a source of corruption I shall not attempt to inquire; the one that seems to me least dangerous is the purpose of making a perfect work. As for our novel, I may say lastly on this score that as we find it in England to-day it strikes me to be addressed in a large degree to "young people," and that this in itself constitutes a presumption that it will be rather shy. There are certain things which it is generally agreed not to discuss, not even to mention, before young people. That is very well, but the absence of discussion is not a symptom of timorous moral passion. The purpose of the English novel—"a truly admirable thing and a great cause for congratulation"—strikes me therefore as rather negative.

There is one point at which the moral sense and the artistic sense lie very near together; that is in the light of the very obvious truth that the deepest quality of a work of art will always be the quality of the mind of the producer. In proportion as that intelligence is fine will the novel, the picture, the statue or the work of the substance of beauty and truth. To be constituted of such elements is, to my vision, to have purpose enough. No good novel will ever proceed from a superficial mind; that seems to me an axiom which, for the artist in fiction, will cover all needful moral ground: if the youthful aspirant take it to heart it will illuminate for him many of the mysteries of "purpose." There are many other useful things that might be said to him, but I have

come to the end of my article, and can only touch them as I pass. The critic in the *Pall Mall Gazette*, whom I have already quoted, draws attention to the danger, in speaking of the art of fiction, of generalising. The danger that he has in mind is rather, I imagine, that of particularising, for there are some comprehensive remarks which, in addition to those embodied in Mr. Besant's suggestive lecture, might without fear of misleading him be addressed to the ingenuous student. I should remind him first of the magnificence of the form that is open to him, which offers to sight so few restrictions and such innumerable opportunities. The other arts, in comparison, appear confined and hampered; the various conditions under which they are exercised are so rigid and definite. But the only condition that I can think of attaching to the composition of the novel is, as I have already said, that it be sincere. This freedom is a splendid privilege, and the first lesson of the young novelist is to learn to be worthy of it. "Enjoy it as it deserves," I should say to him; "take possession of it, explore it to its utmost extent, publish it, rejoice in it. All life belongs to you, and do not listen either to those who would shut you up into corners of it and tell you that it is only here, and there that art inhabits, or to those who would persuade you that this heavenly messenger wings her way outside of life altogether, breathing a superfine air, and turning away her head from the truth of things. There is no impression of life, no manner of seeing it and feeling it, to which the plan of the novelist may not offer a place; you have only to remember that talents so dissimilar as those of Alexandre Dumas and Jane Austen,² Charles Dickens and Gustave Flaubert have worked in this field with equal glory. Do not think too much about optimism and pessimism; try and catch the colour of life itself. In France to-day we see a prodigious effort (that of Emile Zola, to whose solid and serious work no explorer of the capacity of the novel can allude without respect), we see an extraordinary effort vitiated by a spirit of pessimism on a narrow basis. M. Zola is magnificent, but he strikes an English reader as ignorant; he has an air of working in the dark; if he had as much light as energy, his results would be of the highest value. As for the aberrations of a shallow optimism, the ground (of English fiction especially) is strewn with their brittle particles as with broken glass. If you must indulge in conclusions, let them have the taste of a wide knowledge. Remember that your first duty is to be as complete as possible—to make as perfect a work. Be generous and delicate and pursue the prize."

1884, 1888

2. English novelist (1775–1817). Dumas (1802–1870), French dramatist and novelist whose works include *The Three Musketeers* (1844).

FRIEDRICH NIETZSCHE

1844–1900

Friedrich Nietzsche is the wild man, the self-proclaimed anti-Christ, of Western thought. A brilliant polemicist, he champions energy over reason and art over science while contemptuous of the quiet, "timid" virtues of domesticity, democracy, and peace. His extravagances not only remind us of modernism's persistent desire to shock the staid middle classes but also recall the many twentieth-century figures—from W. B. Yeats and Ezra Pound to MARTIN HEIDEGGER and PAUL DE MAN—whose genius is inextricably mixed with dubious political views. But Nietzsche, an inveterate foe of Christianity and of Platonic philosophy, is absolutely central to modern and post-modern attempts to rethink the Western tradition's most fundamental assumptions.

Nietzsche was born in Röcken, a small village in Prussian Saxony. He was the son and grandson (on both sides of the family) of Lutheran ministers. His father died when he was four and his younger brother died the next year, leaving him the only male in a household with five women. Nietzsche's subsequent infatuations with the work of German philosopher Arthur Schopenhauer (1788–1860) and with the work, theories, and wife of German composer Richard Wagner, followed by equally violent rejections of the two men, are sometimes explained in terms of "surrogate father figures" and Oedipal rebellion. Certainly, Wagner and his wife Cosima dominated Nietzsche's life in the early 1870s. Having received his doctorate at the University of Leipzig, Nietzsche was appointed professor of philology at the University of Basel in Switzerland in 1869. He met Wagner and Cosima von Bülow in late 1868, and his first book, *The Birth of Tragedy* (1872), combines a new theory of Greek tragedy with an extended argument that Wagner's work constitutes a German rebirth of that ancient form. By 1876, however, Nietzsche had broken completely with Wagner, repelled by Wagner's turn to Christianity and his increasing anti-Semitism. That same year, ill health forced Nietzsche to stop teaching. In 1879 he officially resigned his university post, receiving a small disability pension. He spent the next ten years writing the books that present his ambitious attempt to overthrow Christianity and post-Socratic philosophy through a radical "revaluation of all values." The last ten years of Nietzsche's life were lost to incoherent madness. After a mental breakdown in 1889, he returned to Röcken to live with his mother; when she died, in 1897, he came under the care of his sister Elisabeth, which continued until his death.

Even before Nietzsche's death, his sister wrote a biography to publicize his work, and she published her own editions of his writings. She stressed those elements that accorded with her own anti-Semitic and pro-Aryan views and is often blamed for the Nazis' later appropriation of Nietzsche as a philosopher sympathetic to their policies. But blaming his sister does not absolve Nietzsche. Some aspects of his thought chime with National Socialism, while others contradict it. Those who read and interpret Nietzsche's challenging work must grapple with his relation to the Nazis, just as they must take into account his tremendous influence on modernism, existentialism, and poststructuralism.

Our first selection, the essay "On Truth and Lying in a Non-Moral Sense" (written 1873), was not published during Nietzsche's lifetime. It articulates a number of Nietzsche's major themes and became a favorite reference point for poststructuralists such as JACQUES DERRIDA and Paul de Man during the 1970s. Nietzsche's target here is nothing less than the epistemological foundations of Western philosophy. From PLATO on, Western philosophy has been committed (with a few exceptions) to ascertaining the fixed and solid truth that exists independently of human minds. Nietzsche simply denies that we can ever know anything except through the lens of human perception. We cannot put that lens aside in order to judge which perceptions accu-

rately portray the world and which do not. Given this impossibility, why are humans committed to the search for "truth"? Because, Nietzsche answers, truth is a useful illusion, one that serves a fundamental drive to survive. Truth is a comfortable lie; it suggests that "the world [is] something which is similar in kind to humanity," and it boosts self-confidence, the untroubled conviction of being right. While Nietzsche is scornful of this smug "anthropomorphism," he does underline its utility.

The essay's account of language's role in human cognition has been especially influential among literary theorists. Nietzsche accepts that the outer world impinges on the human perceiver, but we translate that experience into human terms by naming it. This "first metaphor" introduces an unbridgeable gap, which leads Nietzsche to conclude that "subject and object" are "absolutely different spheres." Nor do the nonrepresentational additions ("supplements") supplied by language stop there. We also use the same name to designate separate experiences of nerve stimulation. We call today's "leaf" by the same word used to label yesterday's. This substitution of one "concept" in the place of multiple experiences is the "second metaphor" that Nietzsche identifies—and his account of how concepts erase awareness of differences would later echo throughout poststructuralism. "Every concept," he writes, "comes into being by making equivalent that which is non-equivalent[,] . . . by forgetting those features which differentiate one thing from another."

Once Nietzsche pulls the veil of illusion from our eyes and shows that truth is a "mobile army of metaphors, metonymies, anthropomorphisms," what next? One possible response is stoicism, described in the essay's last paragraph. Alone in an alien world, humans could just endure, preserving a "dignified equilibrium" in the face of everything to which life subjects them. More extreme is the "nihilistic" denial of this world as "fallen" or "evil," a position that Nietzsche associates with Christianity. Against stoicism and nihilism, Nietzsche calls on humans to forcefully and joyfully step into the vacuum created by the death of truth, of God, and of the other metaphysical guarantees on which the West has traditionally relied. We must learn not just to accept but to proudly affirm that "humanity" is a "mighty architectural genius who succeeds in erecting the infinitely complicated cathedral of concepts on moving foundations, or even, one might say, on flowing water." Nietzsche celebrates the creativity and the will that builds a world for humans to inhabit—and he takes the artist as his prime example of an individual responding joyfully to the challenge of shedding the illusion of truth.

Our selections from *The Birth of Tragedy* (1872) show how Nietzsche returns to Greek thought before Plato to discover the artistic form and worldview that he prefers to the Platonic and Christian traditions. (MATTHEW ARNOLD in the nineteenth century and MARTIN HEIDEGGER and Erich Auerbach in the twentieth also return to the pre-Socratic Greeks for principles to counter modernity.) Nietzsche's mantra in this text is that "only as an aesthetic phenomenon do existence and the world appear justified." This formula draws on the root meaning of *aesthetic* as "pertaining to sense perception." Nietzsche says that life is worthwhile only if we experience strong feelings or sensations. As WALTER PATER, who was writing at almost exactly the same time, would put it, the quality and intensity of our sensations indicates the quality of our lives. And for Nietzsche, as for Pater, the step from the "aesthetic" as sensation to the "aesthetic" as art is a short one. Art is the realm of heightened sensation. But whereas Pater stresses the experience of the spectator, Nietzsche focuses on the exuberant joy felt by the artist/creator in the struggle to bend recalcitrant materials to his or her will.

Nietzsche thus appears to promote heroic individualism and transcendent genius. He has often been read this way, not least by countless modernist artists, who also responded to his diatribes against the conformist "herds" that try to curb the strong, amoral artist. Much in Nietzsche celebrates the "will" of the "overman" (superman) and denigrates everything (from conventional morality to democracy) that would make the genius answerable to any authority outside of his self. "His" is used advis-

edly—Nietzsche often contrasts this individual's manly strength to the effeminate weakness of lesser souls.

Yet to read Nietzsche as a philosopher of heroic individualism is to miss much. Both our texts show that human suffering figures largely in Nietzsche's thought; the individual is subjected to a world that precedes and is more powerful than the self. Greek tragedy, in Nietzsche's view, grants us a glimpse of a "primordial unity" that predates individuation (which Nietzsche associates with comedy). He takes seriously the claim that Greek tragedy originated in choral songs performed at a festival of Dionysus and that Aeschylus introduced the first individualized characters.

Such individuation, Nietzsche argues in *The Birth of Tragedy*, is necessary for artistic expression, artistic form. (In his later work, he often claims that "the subject" is a grammatical form that we consistently mistake for a metaphysical entity.) The chaos of Dionysian nondifferentiation (intimated by music) can be rendered intelligible or expressible only by the "calm" Apollonian "semblance" (conveyed by words and images). But the glory of Greek tragedy is that it does not take Apollonian semblance for truth—or, at least, not for the entire truth. Prometheus becomes Nietzsche's primary example of the need to establish an existence apart from the primordial unity. But Prometheus "must suffer for the fact of [his] individuation." And Nietzsche insists that it is the sufferings of Dionysus himself, whose repeated deaths and rebirths enact the "end of individuation," that are represented in every tragedy. The "primal contradiction hidden within the things of this world" is that while humans can experience energy, will, and sensation only as individuals, the process of individuation separates them from the universe. Thus suffering is inevitable; the essence of the tragic view is to affirm that suffering, to glory in the active wrongdoing by which the hero offends the way things are, and to say, as Nietzsche imagines Aeschylus saying: "All that exists is just and unjust and is equally justified in both respects."

Tragedy can exist only so long as we recognize, accept, and affirm the irresolvable contradiction between our hopes and how the world is. Once we believe that suffering is not inevitable, tragedy dies: we begin to demand justice from our gods, and life is justified not as an aesthetic phenomenon but rather because justice is finally done. In the comic ending, the good are rewarded, the bad punished, and human desires and worldly facts are aligned. In *The Birth of Tragedy*, Nietzsche blames Euripides and Socrates for the death of the tragic worldview in ancient Athenian society. Euripides effects a reconciliation with the gods in many of his plays, thus assuring the audience that all can be made right in this world. Socrates, and then Plato, suggests that reason can lead humans to ascertain the truths of the universe to which they can conform.

Later in his career Nietzsche attacked Christianity for its essentially comic vision. We get hints of that critique here when he contrasts the Semitic notion of "sin" to the Aryan notion of "wrongdoing." This passage, with its oppositions of Aryan and Semite, masculine and feminine, highlights problematic features in Nietzsche's work (as does his lyric call for a rebirth of the German spirit). We admire the tragic hero, who often (as in Oedipus's case) could not have avoided wrongdoing. But the notion of "sin" indicates both that one is free to act and that acting differently would have been better, would (it is strongly implied) not have led to suffering. Nietzsche urges us to have the strength to love life even though suffering is inevitable. Indeed, he suggests that we are most alive when we suffer, because that is when we are feeling most intensely. The murdered and resurrected god whose myth embodies this worldview is the tragic Dionysus, not the comic Christ.

This mixture of nobility and masochism, of rebellion (against Plato and Christianity) and submission (to Dionysus), proved heady stuff to many modernists. Of course, other factors—ranging from SIGMUND FREUD's use of the Oedipal myth to the slaughter of a generation in World War I—also shaped the modernist fascination with tragedy and pre-Socratic Greece. But Nietzsche is central to attempts during the twentieth century to find imaginative and historical alternatives to both the Christian

worldview and to the narrative of Western progress and enlightenment. That such attempts came from both the political left and the right indicates the complexity of the Western heritage and of Nietzsche's engagement with it.

For the modernists of the early twentieth century, Nietzsche was often more an attitude, a stance, than a philosopher. A few powerful phrases—"the death of God," "overman," "will to power," "herd morality," and "beyond good and evil"—suggested his blasphemous demystification of progressive, "enlightened" values. Nietzsche's aestheticism, his disdain of reason, and his lyrical style led many readers to see his work as existing somewhere between poetry and philosophy. But his work received much more extensive scholarly and philosophical analysis in the second half of the century. His critiques of truth, of substance, and of the self, along with his accounts of language and the formation of moral codes, have all been taken extremely seriously, despite their summary dismissal by some intellectuals. Perhaps debates about Nietzsche's politics have been especially fierce because his views have often been adopted—and not just by poststructuralists.

For literary critics, Nietzsche's methods may be as important as any view he holds. Famously described by the French philosopher Paul Ricoeur as, in company with KARL MARX and Freud, a founder of the "hermeneutics of suspicion," Nietzsche teaches us not to take any pronouncement at face value. If we want to understand the meaning of a term, we must discover its "genealogy"—the way the term has been deployed in specific circumstances to achieve specific results. (MICHEL FOUCAULT later explicitly adopted this Nietzschean method in his studies of the prison and of sexuality.) From the perspective of Nietzschean genealogy, terms are tools and weapons in the continual struggles and conflicts that characterize human interactions with the world and with each other. Nietzsche's own effort to alter our understanding of tragedy is concerned less with determining the "truth" of tragedy than with revising the dominant worldviews that his readers have inherited from Christianity and Western philosophy. The success of that attempt stands apart from whatever virtues his genealogical method possesses—but those to whom the method appeals have usually been sympathetic to the message.

BIBLIOGRAPHY

The standard German edition of Nietzsche's work is *Kritische Gesamtausgabe*, edited by Giorgio Colli andazzino Montinari (15 vols., 1967–77). Stanford University Press is in the process of publishing the Colli-Montinari edition in a twenty-volume English version edited by Bernd Magnus (3 vols. to date, 1995–). The major works are all available in English translation; the best translations follow, with the original German publication date given first: *The Birth of Tragedy*, translated by Ronald Speirs (1872; 1999); *Untimely Meditations*, translated by R. J. Hollingdale (1877; 1983); *On the Advantage and Disadvantage of History for Life*, translated by Peter Preuss (1877; 1980); *Human, All Too Human*, translated by R. J. Hollingdale (1878; 1986); *Daybreak: Thoughts on the Prejudices of Morality*, translated by R. J. Hollingdale (1881; 1982); *The Gay Science*, translated by Walter Kaufmann (1882; 1974); *Thus Spoke Zarathustra*, translated by R. J. Hollingdale (1885; 1973); *Beyond Good and Evil*, translated by Walter Kaufmann and R. J. Hollingdale (1886; 1966); *On the Genealogy of Morals*, translated by Walter Kaufmann and R. J. Hollingdale (1887; 1967); *The Case of Wagner*, translated by Walter Kaufmann (1888; 1966); *Twilight of the Idols*, translated by Walter Kaufmann (1889; 1954); *The Antichrist*, translated by Walter Kaufmann (1895; 1954); and *Ecce Homo*, translated by Walter Kaufmann (1908; 1967). *The Will to Power* (1901, 1910–11; 1967) is an important collection of entries from Nietzsche's notebooks, while *Nietzsche on Rhetoric and Language*, edited and translated by Sander L. Gilman, Carole Blair, and David J. Parent (1989), collects work of particular interest to literary critics. *Selected Letters of Friedrich Nietzsche*, edited and translated by Christopher Middleton (1969), is the most useful collection

letters. *Ecce Homo* is Nietzsche's half-mad and fascinating autobiography; the most readable biography is Ronald Hayman's *Nietzsche: A Critical Life* (1980). Arthur Danto's *Nietzsche as Philosopher* (1965) remains a superb overview; it can be supplemented with Richard Schacht's *Nietzsche* (1983) and Alexander Nehamas's influential *Nietzsche: Life as Literature* (1985). *The Cambridge Companion to Nietzsche*, edited by Bernd Magnus and Kathleen M. Higgins (1996), collects essays that address a wide range of issues connected to Nietzsche's life, work, and influence. Martin Heidegger's *Nietzsche* (2 vols., 1961; trans. in 4 vols., 1979–87) is a major document of twentieth-century philosophy as well as a powerful, if idiosyncratic, interpretation of Nietzsche. Many poststructuralists have written extensively on Nietzsche. A partial list includes Michel Foucault, *Language, Counter-Memory, Practice* (1977); Paul de Man, *Allegories of Reading* (1979); Jacques Derrida, *Spurs: Nietzsche's Styles* (1978; trans. 1979); Gilles Deleuze, *Nietzsche and Philosophy* (1962; trans. 1983); and Sarah Kofman, *Nietzsche and Metaphor* (1972; trans. 1993). Four studies of particular relevance to literary critics are Alan D. Schrift, *Nietzsche and the Question of Interpretation* (1990); Henry Staten, *Nietzsche's Voice* (1990); Ernst Behler, *Confrontations: Derrida, Heidegger, Nietzsche* (1991); and John Sallis, *Crossings: Nietzsche and the Space of Tragedy* (1991). The reader who wants a sense of the ways that literary theorists (especially) have approached Nietzsche's work in recent decades can start with the many fine collections of essays on his work: *The New Nietzsche*, edited by David B. Allison (1977); *Why Nietzsche Now?*, edited by Daniel O'Hara (1985); *Friedrich Nietzsche*, edited by Harold Bloom (1987); *Nietzsche as Postmodernist: Essays Pro and Contra*, edited by Clayton Koelb (1990); *Feminist Interpretations of Friedrich Nietzsche*, edited by Kelly Oliver and Marilyn Pearsall (1998); and *Why Nietzsche Still?*, edited by Alan D. Schrift (2000). The most useful bibliography can be found in *The Cambridge Companion to Nietzsche* (cited above).

On Truth and Lying in a Non-Moral Sense¹

1

In some remote corner of the universe, flickering in the light of the countless solar systems into which it had been poured, there was once a planet on which clever animals invented cognition. It was the most arrogant and most mendacious minute in the 'history of the world'; but a minute was all it was. After nature had drawn just a few more breaths the planet froze and the clever animals had to die. Someone could invent a fable like this and yet they would still not have given a satisfactory illustration of just how pitiful, how insubstantial and transitory, how purposeless and arbitrary the human intellect looks within nature; there were eternities during which it did not exist; and when it has disappeared again, nothing will have happened. For this intellect has no further mission that might extend beyond the bounds of human life. Rather, the intellect is human, and only its own possessor and progenitor regards it with such pathos, as if it housed the axis around which the entire world revolved. But if we could communicate with a midge we would hear that it too floats through the air with the very same pathos, feeling that it too contains within itself the flying centre of this world. There is nothing in nature so despicable and mean that would not immediately swell up like a balloon from just one little puff of that force of cognition; and just as every bearer of burdens wants to be admired,

1. Translated by Ronald Speirs. Except as indicated, all notes are the translator's.

so the proudest man of all, the philosopher, wants to see, on all sides, the eyes of the universe trained, as through telescopes, on his thoughts and deeds.

It is odd that the intellect can produce this effect, since it is nothing other than an aid supplied to the most unfortunate, most delicate and most transient of beings so as to detain them for a minute within existence; otherwise, without this supplement, they would have every reason to flee existence as quickly as did Lessing's infant son.² The arrogance inherent in cognition and feeling casts a blinding fog over the eyes and senses of human beings, and because it contains within itself the most flattering evaluation of cognition it deceives them about the value of existence. Its most general effect is deception—but each of its separate effects also has something of the same character.

As a means for the preservation of the individual, the intellect shows its greatest strengths in dissimulation, since this is the means to preserve those weaker, less robust individuals who, by nature, are denied horns or the sharp fangs of a beast of prey with which to wage the struggle for existence. This art of dissimulation reaches its peak in humankind, where deception, flattery, lying and cheating, speaking behind the backs of others, keeping up appearances,³ living in borrowed finery, wearing masks, the drapery of convention, play-acting for the benefit of others and oneself—in short, the constant fluttering of human beings around the one flame of vanity is so much the rule and the law that there is virtually nothing which defies understanding so much as the fact that an honest and pure drive towards truth should ever have emerged in them. They are deeply immersed in illusions and dream-images; their eyes merely glide across the surface of things and see 'forms'; nowhere does their perception lead into truth; instead it is content to receive stimuli and, as it were, to play with its fingers on the back of things. What is more, human beings allow themselves to be lied to in dreams every night of their lives, without their moral sense ever seeking to prevent this happening, whereas it is said that some people have even eliminated snoring by will-power. What do human beings really know about themselves? Are they even capable of perceiving themselves in their entirety just once, stretched out as in an illuminated glass case? Does nature not remain silent about almost everything, even about our bodies, banishing and enclosing us within a proud, illusory consciousness, far away from the twists and turns of the bowels, the rapid flow of the blood stream and the complicated tremblings of the nerve-fibres? Nature has thrown away the key, and woe betide fateful curiosity should it ever succeed in peering through a crack in the chamber of consciousness, out and down into the depths, and thus gain an intimation of the fact that humanity, in the indifference of its ignorance, rests on the pitiless, the greedy, the insatiable, the murderous—clinging in dreams, as it were, to the back of a tiger. Given this constellation, where on earth can the drive to truth possibly have come from?

Insofar as the individual wishes to preserve himself in relation to other

2. Lessing's first and only son died immediately after birth, followed soon after by his mother. This drew from Lessing the comment: "Was it good sense that they had to pull him into the world with iron tongs, or that he noticed the filth so quickly? Was it not good sense that he took the first opportunity to leave it again?" (Letter to Eschenburg, 10

January 1778). [GOTTHOLD EPHRAIM LESSING (1729–1781), German dramatist and critic—editor's note.]

3. The verb Nietzsche uses is *repräsentieren*. This means keeping up a show in public, representing one's family, country, or social group before the eyes of the world.

individuals, in the state of nature he mostly used his intellect for concealment and dissimulation; however, because necessity and boredom also lead men to want to live in societies and herds, they need a peace treaty,¹ and so they endeavour to eliminate from their world at least the crudest forms of the *bellum omnium contra omnes*.⁴ In the wake of this peace treaty, however, comes something which looks like the first step towards the acquisition of that mysterious drive for truth. For that which is to count as 'truth' from this point onwards now becomes fixed, i.e. a way of designating things is invented which has the same validity and force everywhere, and the legislation of language also produces the first laws of truth, for the contrast between truth and lying comes into existence here for the first time: the liar uses the valid tokens of designation—words—to make the unreal appear to be real; he says, for example, 'I am rich', whereas the correct designation for this condition would be, precisely, 'poor'. He misuses the established conventions by arbitrarily switching or even inverting the names for things. If he does this in a manner that is selfish and otherwise harmful, society will no longer trust him and therefore exclude him from its ranks. Human beings do not so much flee from being tricked as from being harmed by being tricked. Even on this level they do not hate deception but rather the damaging, inimical consequences of certain species of deception. Truth, too, is only desired by human beings in a similarly limited sense. They desire the pleasant, life-preserving consequences of truth; they are indifferent to pure knowledge if it has no consequences, but they are actually hostile towards truths which may be harmful and destructive. And, besides, what is the status of those conventions of language? Are they perhaps products of knowledge, of the sense of truth? Is there a perfect match between things and their designations? Is language the full and adequate expression of all realities?

Only through forgetfulness could human beings ever entertain the illusion that they possess truth to the degree described above. If they will not content themselves with truth in the form of tautology, i.e. with empty husks, they will for ever exchange illusions for truth. What is a word? The copy of a nervous stimulation in sounds. To infer from the fact of the nervous stimulation that there exists a cause outside us is already the result of applying the principle of sufficient reason wrongly. If truth alone had been decisive in the genesis of language, if the viewpoint of certainty had been decisive in creating designations, how could we possibly be permitted to say, 'The stone is hard', as if 'hard' were something known to us in some other way, and not merely as an entirely subjective stimulus? We divide things up by gender, describing a tree as masculine and a plant as feminine⁵—how arbitrary these translations are! How far they have flown beyond the canon of certainty! We speak of a snake; the designation captures only its twisting movements and thus could equally well apply to a worm. How arbitrarily these borders are drawn, how one-sided the preference for this or that property of a thing! When different languages are set alongside one another it becomes clear that, where words are concerned, what matters is never truth, never the full

¹ "War of all against all" [Latin]: phrase associated with Thomas Hobbes' description of the state of nature before the institution of political authority. Hobbes, *De cive* I.12 and *Leviathan*, chapter

XIII. [Hobbes (1588–1679), English political philosopher—editor's note.]

⁵ "Tree" is masculine in German (*der Baum*) and "plant" (*die Pflanze*) is feminine.

and adequate expression;⁶ otherwise there would not be so many languages. The 'thing-in-itself'⁷ (which would be, precisely, pure truth, truth without consequences) is impossible for even the creator of language to grasp, and indeed this is not at all desirable. He designates only the relations of things to human beings, and in order to express them he avails himself of the boldest metaphors. The stimulation of a nerve is first translated into an image: first metaphor! The image is then imitated by a sound: second metaphor! And each time there is a complete leap from one sphere into the heart of another, new sphere. One can conceive of a profoundly deaf human being who has never experienced sound or music; just as such a person will gaze in astonishment at the Chladnian sound-figures in sand,⁸ find their cause in the vibration of a string, and swear that he must now know what men call sound—this is precisely what happens to all of us with language. We believe that when we speak of trees, colours, snow, and flowers, we have knowledge of the things themselves, and yet we possess only metaphors of things which in no way correspond to the original entities. Just as the musical sound appears as a figure in the sand, so the mysterious 'X' of the thing-in-itself appears first as a nervous stimulus, then as an image, and finally as an articulated sound. At all events, things do not proceed logically when language comes into being, and the entire material in and with which the man of truth, the researcher, the philosopher, works and builds, stems, if not from cloud-cuckoo land, then certainly not from the essence of things.

Let us consider in particular how concepts are formed; each word immediately becomes a concept, not by virtue of the fact that it is intended to serve as a memory (say) of the unique, utterly individualized, primary experience to which it owes its existence, but because at the same time it must fit countless other, more or less similar cases, i.e. cases which, strictly speaking, are never equivalent, and thus nothing other than non-equivalent cases. Every concept comes into being by making equivalent that which is non-equivalent. Just as it is certain that no leaf is ever exactly the same as any other leaf, it is equally certain that the concept 'leaf' is formed by dropping these individual differences arbitrarily, by forgetting those features which differentiate one thing from another, so that the concept then gives rise to the notion that something other than leaves exists in nature, something which would be 'leaf', a primal form, say, from which all leaves were woven, drawn, delineated, dyed, curled, painted—but by a clumsy pair of hands, so that no single example turned out to be a faithful, correct, and reliable copy of the primal form. We call a man honest; we ask, 'Why did he act so honestly today?' Our answer is usually: 'Because of his honesty.' Honesty!—yet again, this means that the leaf is the cause of the leaves. We have no knowledge of an essential quality which might be called honesty, but we do know of numerous individualized and hence non-equivalent actions which we equate with

6. Nietzsche uses the term *adäquat* which indicates that the meaning of something is fully conveyed by a word or expression; English "adequate" alone does not convey this sense completely.

7. Term used by the German philosopher IMMANUEL KANT (1724–1804) for the real object independent of our awareness of it. Kant argues that such categories as time and space, mentioned later by Nietzsche, are part of our own form of thought,

not of what we observe [editor's note].

8. The vibration of a string can create figures in the sand (in an appropriately constructed sand-box) which give a visual representation of that which the human ear perceives as a tone. The term comes from the name of the physicist Ernst Chladni [1756–1827], whose experiments demonstrated the effect.

individuals, in the state of nature he mostly used his intellect for concealment and dissimulation; however, because necessity and boredom also lead men to want to live in societies and herds, they need a peace treaty,⁴ and so they endeavour to eliminate from their world at least the crudest forms of the *bellum omnium contra omnes*.⁴ In the wake of this peace treaty, however, comes something which looks like the first step towards the acquisition of that mysterious drive for truth. For that which is to count as 'truth' from this point onwards now becomes fixed, i.e. a way of designating things is invented which has the same validity and force everywhere, and the legislation of language also produces the first laws of truth, for the contrast between truth and lying comes into existence here for the first time: the liar uses the valid tokens of designation—words—to make the unreal appear to be real; he says, for example, 'I am rich', whereas the correct designation for this condition would be, precisely, 'poor'. He misuses the established conventions by arbitrarily switching or even inverting the names for things. If he does this in a manner that is selfish and otherwise harmful, society will no longer trust him and therefore exclude him from its ranks. Human beings do not so much flee from being tricked as from being harmed by being tricked. Even on this level they do not hate deception but rather the damaging, inimical consequences of certain species of deception. Truth, too, is only desired by human beings in a similarly limited sense. They desire the pleasant, life-preserving consequences of truth; they are indifferent to pure knowledge if it has no consequences, but they are actually hostile towards truths which may be harmful and destructive. And, besides, what is the status of those conventions of language? Are they perhaps products of knowledge, of the sense of truth? Is there a perfect match between things and their designations? Is language the full and adequate expression of all realities?

Only through forgetfulness could human beings ever entertain the illusion that they possess truth to the degree described above. If they will not content themselves with truth in the form of tautology, i.e. with empty husks, they will for ever exchange illusions for truth. What is a word? The copy of a nervous stimulation in sounds. To infer from the fact of the nervous stimulation that there exists a cause outside us is already the result of applying the principle of sufficient reason wrongly. If truth alone had been decisive in the genesis of language, if the viewpoint of certainty had been decisive in creating designations, how could we possibly be permitted to say, 'The stone is hard', as if 'hard' were something known to us in some other way, and not merely as an entirely subjective stimulus? We divide things up by gender, describing a tree as masculine and a plant as feminine⁵—how arbitrary these translations are! How far they have flown beyond the canon of certainty! We speak of a snake; the designation captures only its twisting movements and thus could equally well apply to a worm. How arbitrarily these borders are drawn, how one-sided the preference for this or that property of a thing! When different languages are set alongside one another it becomes clear that, where words are concerned, what matters is never truth, never the full

4. "War of all against all" [Latin]: phrase associated with Thomas Hobbes' description of the state of nature before the institution of political authority (cf. Hobbes, *De cive* I. 12 and *Leviathan*, chapter

XIII). [Hobbes (1588–1679), English political philosopher—editor's note.]

5. "Tree" is masculine in German (*der Baum*) and "plant" (*die Pflanze*) is feminine.

and adequate expression;⁶ otherwise there would not be so many languages. The 'thing-in-itself'⁷ (which would be, precisely, pure truth, truth without consequences) is impossible for even the creator of language to grasp, and indeed this is not at all desirable. He designates only the relations of things to human beings, and in order to express them he avails himself of the boldest metaphors. The stimulation of a nerve is first translated into an image: first metaphor! The image is then imitated by a sound: second metaphor! And each time there is a complete leap from one sphere into the heart of another, new sphere. One can conceive of a profoundly deaf human being who has never experienced sound or music; just as such a person will gaze in astonishment at the Chladnian sound-figures in sand,⁸ find their cause in the vibration of a string, and swear that he must now know what men call sound—this is precisely what happens to all of us with language. We believe that when we speak of trees, colours, snow, and flowers, we have knowledge of the things themselves, and yet we possess only metaphors of things which in no way correspond to the original entities. Just as the musical sound appears as a figure in the sand, so the mysterious 'X' of the thing-in-itself appears first as a nervous stimulus, then as an image, and finally as an articulated sound. At all events, things do not proceed logically when language comes into being, and the entire material in and with which the man of truth, the researcher, the philosopher, works and builds, stems, if not from cloud-cuckoo land, then certainly not from the essence of things.

Let us consider in particular how concepts are formed; each word immediately becomes a concept, not by virtue of the fact that it is intended to serve as a memory (say) of the unique, utterly individualized, primary experience to which it owes its existence, but because at the same time it must fit countless other, more or less similar cases, i.e. cases which, strictly speaking, are never equivalent, and thus nothing other than non-equivalent cases. Every concept comes into being by making equivalent that which is non-equivalent. Just as it is certain that no leaf is ever exactly the same as any other leaf, it is equally certain that the concept 'leaf' is formed by dropping these individual differences arbitrarily, by forgetting those features which differentiate one thing from another, so that the concept then gives rise to the notion that something other than leaves exists in nature, something which would be 'leaf', a primal form, say, from which all leaves were woven, drawn, delineated, dyed, curled, painted—but by a clumsy pair of hands, so that no single example turned out to be a faithful, correct, and reliable copy of the primal form. We call a man honest; we ask, 'Why did he act so honestly today?' Our answer is usually: 'Because of his honesty.' Honesty!—yet again, this means that the leaf is the cause of the leaves. We have no knowledge of an essential quality which might be called honesty, but we do know of numerous individualized and hence non-equivalent actions which we equate with

6. Nietzsche uses the term *adäquat* which indicates that the meaning of something is fully conveyed by a word or expression; English "adequate" alone does not convey this sense completely.

7. Term used by the German philosopher IMMANUEL KANT (1724–1804) for the real object independent of our awareness of it. Kant argues that such categories as time and space, mentioned later by Nietzsche, are part of our own form of thought,

not of what we observe [editor's note].

8. The vibration of a string can create figures in the sand (in an appropriately constructed sand-box) which give a visual representation of that which the human ear perceives as a tone. The term comes from the name of the physicist Ernst Chladni [1756–1827], whose experiments demonstrated the effect.

each other by omitting what is unlike, and which we now designate as honest actions; finally we formulate from them a *qualitas occulta*⁹ with the name 'honesty'.

Like form, a concept is produced by overlooking what is individual and real, whereas nature knows neither forms nor concepts and hence no species, but only an 'X' which is inaccessible to us and indefinable by us. For the opposition we make between individual and species is also anthropomorphic and does not stem from the essence of things; although we equally do not dare to say that it does *not* correspond to the essence of things, since that would be a dogmatic assertion and, as such, just as incapable of being proved as its opposite.

What, then, is truth? A mobile army of metaphors, metonymies, anthropomorphisms, in short a sum of human relations which have been subjected to poetic and rhetorical intensification, translation, and decoration, and which, after they have been in use for a long time, strike a people as firmly established, canonical, and binding; truths are illusions of which we have forgotten that they are illusions, metaphors which have become worn by frequent use and have lost all sensuous vigour, coins which, having lost their stamp, are now regarded as metal and no longer as coins. Yet we still do not know where the drive to truth comes from, for so far we have only heard about the obligation to be truthful which society imposes in order to exist, i.e. the obligation to use the customary metaphors, or, to put it in moral terms, the obligation to lie in accordance with firmly established convention, to lie *en masse* and in a style that is binding for all. Now, it is true that human beings forget that this is how things are; thus they lie unconsciously in the way we have described, and in accordance with centuries-old habits—and precisely *because of this unconsciousness*, precisely because of this forgetting, they arrive at the feeling of truth. The feeling that one is obliged to describe one thing as red, another as cold, and a third as dumb, prompts a moral impulse which pertains to truth; from its opposite, the liar whom no one trusts and all exclude, human beings demonstrate to themselves just how honourable, confidence-inspiring and useful truth is. As creatures of *reason*, human beings now make their actions subject to the rule of abstractions; they no longer tolerate being swept away by sudden impressions and sensuous perceptions; they now generalize all these impressions first, turning them into cooler, less colourful concepts in order to harness the vehicle of their lives and actions to them. Everything which distinguishes human beings from animals depends on this ability to sublimate sensuous metaphors into a schema, in other words, to dissolve an image into a concept. This is because something becomes possible in the realm of these schemata which could never be achieved in the realm of those sensuous first impressions, namely the construction of a pyramidal order based on castes and degrees, the creation of a new world of laws, privileges, subordinations, definitions of borders, which now confronts the other, sensuously perceived world as something firmer, more general, more familiar, more human, and hence as something regulatory and imperative. Whereas every metaphor standing for a sensuous perception is individual and unique and is therefore always able to escape classification, the great edifice of concepts exhibits the rigid reg-

9. Hidden property (Latin).

ularity of a Roman *columbarium*,¹ while logic breathes out that air of severity and coolness which is peculiar to mathematics. Anyone who has been touched by that cool breath will scarcely believe that concepts too, which are as bony and eight-cornered as a dice and just as capable of being shifted around, are only the left-over *residue of a metaphor*, and that the illusion produced by the artistic translation of a nervous stimulus into images is, if not the mother, then at least the grandmother of each and every concept. Within this conceptual game of dice, however, 'truth' means using each die in accordance with its designation, counting its spots precisely, forming correct classifications, and never offending against the order of castes nor against the sequence of classes of rank. Just as the Romans and the Etruscans divided up the sky with rigid mathematical lines and confined a god in a space which they had thus delimited as in a *templum*,² all peoples have just such a mathematically divided firmament of concepts above them, and they understand the demand of truth to mean that the god of every concept is to be sought only in *his* sphere. Here one can certainly admire humanity as a mighty architectural genius who succeeds in erecting the infinitely complicated cathedral of concepts on moving foundations, or even, one might say, on flowing water; admittedly, in order to rest on such foundations, it has to be like a thing constructed from cobwebs, so delicate that it can be carried off on the waves and yet so firm as not to be blown apart by the wind. By these standards the human being is an architectural genius who is far superior to the bee; the latter builds with wax which she gathers from nature, whereas the human being builds with the far more delicate material of concepts which he must first manufacture from himself. In this he is to be much admired—but just not for his impulse to truth, to the pure cognition of things. If someone hides something behind a bush, looks for it in the same place and then finds it there, his seeking and finding is nothing much to boast about; but this is exactly how things are as far as the seeking and finding of 'truth' within the territory of reason is concerned. If I create the definition of a mammal and then, having inspected a camel, declare, 'Behold, a mammal', then a truth has certainly been brought to light, but it is of limited value, by which I mean that it is anthropomorphic through and through and contains not a single point which could be said to be 'true in itself', really and in a generally valid sense, regardless of mankind. Anyone who researches for truths of that kind is basically only seeking the metamorphosis of the world in human beings; he strives for an understanding of the world as something which is similar in kind to humanity, and what he gains by his efforts is at best a feeling of assimilation. Rather as the astrologer studies the stars in the service of human beings and in relation to humanity's happiness and suffering, this type of researcher regards the whole world as linked to humankind, as the infinitely refracted echo of an original sound, that of humanity, and as the multiple copy of a single, original image, that of humanity. His procedure is to measure all things against man, and in doing so he takes as his point of departure the erroneous belief that he has these things directly before him, as pure objects. Thus, forgetting that the original metaphors of perception were indeed metaphors, he takes them for the things themselves.

1. Originally a dovecote, then a catacomb with niches at regular intervals for urns containing the ashes of the dead.

2. Literally, a space marked out; the space of the heavens; sanctuary, temple (Latin) [editor's note].

Only by forgetting this primitive world of metaphor, only by virtue of the fact that a mass of images, which originally flowed in a hot, liquid stream from the primal power of the human imagination, has become hard and rigid, only because of the invincible faith that *this* sun, *this* window, *this* table is a truth in itself—in short only because man forgets himself as a subject, and indeed as *an artistically creative* subject, does he live with some degree of peace, security, and consistency; if he could escape for just a moment from the prison walls of this faith, it would mean the end of his ‘consciousness of self.’³ He even has to make an effort to admit to himself that insects or birds perceive a quite different world from that of human beings, and that the question as to which of these two perceptions of the world is the more correct is quite meaningless, since this would require them to be measured by the criterion of the *correct perception*, i.e. by a *non-existent* criterion. But generally it seems to me that the correct perception—which would mean the full and adequate expression of an object in the subject—is something contradictory and impossible; for between two absolutely different spheres, such as subject and object are, there is no causality, no correctness, no expression, but at most an *aesthetic* way of relating, by which I mean an allusive transference, a stammering translation into a quite different language. For which purpose a middle sphere and mediating force is certainly required which can freely invent and freely create poetry. The word appearance (*Erscheinung*) contains many seductions, and for this reason I avoid using it as far as possible; for it is not true that the essence of things appears in the empirical world. A painter who has no hands and who wished to express in song the image hovering before him will still reveal more through this substitution of one sphere for another than the empirical world betrays of the essence of things. Even the relation of a nervous stimulus to the image produced thereby is inherently not a necessary relationship; but when that same image has been produced millions of times and has been passed down through many generations of humanity, indeed eventually appears in the whole of humanity as a consequence of the same occasion, it finally acquires the same significance for all human beings, as if it were the only necessary image and as if that relation of the original nervous stimulus to the image produced were a relation of strict causality—in exactly the same way as a dream, if repeated eternally, would be felt and judged entirely as reality. But the fact that a metaphor becomes hard and rigid is absolutely no guarantee of the necessity and exclusive justification of that metaphor.

Anyone who is at home in such considerations will certainly have felt a deep mistrust of this kind of idealism when once he has become clearly convinced of the eternal consistency, ubiquitousness and infallibility of the laws of nature; he will then conclude that everything, as far as we can penetrate, whether to the heights of the telescopic world or the depths of the microscopic world, is so sure, so elaborated, so endless, so much in conformity to laws, and so free of lacunae, that science will be able to mine these shafts successfully for ever, and that everything found there will be in agreement and without self-contradiction. How little all of this resembles a product of the imagination, for if it were such a thing, the illusion and the unreality would be bound to be detectable somewhere. The first thing to be

3. The word Nietzsche uses here—*Selbstbeurtheilsein*—could also mean “self-confidence.”

said against this view is this: if each of us still had a different kind of sensuous perception, if we ourselves could only perceive things as, variously, a bird, a worm, or a plant does, or if one of us were to see a stimulus as red, a second person were to see the same stimulus as blue, while a third were even to hear it as a sound, nobody would ever speak of nature as something conforming to laws; rather they would take it to be nothing other than a highly subjective formation. Consequently, what is a law of nature for us at all? It is not known to us in itself but only in its effects, i.e. in its relations to other laws of nature which are in turn known to us only as relations. Thus, all these relations refer only to one another, and they are utterly incomprehensible to us in their essential nature; the only things we really know about them are things which we bring to bear on them: time and space, in other words, relations of succession and number. But everything which is wonderful and which elicits our astonishment at precisely these laws of nature, everything which demands explanation of us and could seduce us into being suspicious of idealism, is attributable precisely and exclusively to the rigour and universal validity of the representations of time and space. But these we produce within ourselves and from ourselves with the same necessity as a spider spins; if we are forced to comprehend all things under these forms alone, then it is no longer wonderful that what we comprehend in all these things is actually nothing other than these very forms; for all of them must exhibit the laws of number, and number is precisely that which is most astonishing about things. All the conformity to laws which we find so imposing in the orbits of the stars and chemical processes is basically identical with those qualities which we ourselves bring to bear on things, so that what we find imposing is our own activity. Of course the consequence of this is that the artistic production of metaphor, with which every sensation begins within us, already presupposes those forms, and is thus executed in them; only from the stability of these original forms can one explain how it is possible for an edifice of concepts to be constituted in its turn from the metaphors themselves. For this conceptual edifice is an imitation of the relations of time, space, and number on the foundations of metaphor.

2

Originally, as we have seen, it is *language* which works on building the edifice of concepts; later it is *science*. Just as the bee simultaneously builds the cells of its comb and fills them with honey, so science works unceasingly at that great *columbarium* of concepts, the burial site of perceptions, builds ever-new, ever-higher tiers, supports, cleans, renews the old cells, and strives above all to fill that framework which towers up to vast heights, and to fit into it in an orderly way the whole empirical world, i.e. the anthropomorphic world. If even the man of action binds his life to reason and its concepts, so as not to be swept away and lose himself, the researcher builds his hut close by the tower of science so that he can lend a hand with the building and find protection for himself beneath its already existing bulwarks. And he has need of protection, for there exist fearful powers which constantly press in on him and which confront scientific truth with 'truths' of quite another kind, on shields emblazoned with the most multifarious emblems.

That drive to form metaphors, that fundamental human drive which can-

not be left out of consideration for even a second without also leaving out human beings themselves, is in truth not defeated, indeed hardly even tamed, by the process whereby a regular and rigid new world is built from its own sublimated products—concepts—in order to imprison it in a fortress. The drive seeks out a channel and a new area for its activity, and finds it in myth and in art generally. It constantly confuses the cells and the classifications of concepts by setting up new translations, metaphors, metonymies; it constantly manifests the desire to shape the given world of the waking human being in ways which are just as multiform, irregular, inconsequential, incoherent, charming and ever-new, as things are in the world of dream. Actually the waking human being is only clear about the fact that he is awake thanks to the rigid and regular web of concepts, and for that reason he sometimes comes to believe that he is dreaming if once that web of concepts is torn apart by art. Pascal is right to maintain that if the same dream were to come to us every night we would occupy ourselves with it just as much as we do with the things we see every day: 'If an artisan could be sure to dream each night for a full twelve hours that he was a king,' says Pascal, 'I believe he would be just as happy as a king who dreamt for twelve hours each night that he was an artisan.'⁴ Thanks to the constantly effective miracle assumed by myth, the waking day of a people who are stimulated by myth, as the ancient Greeks were, does indeed resemble dream more than it does the day of a thinker whose mind has been sobered by science. If, one day, any tree may speak as a nymph, or if a god can carry off virgins in the guise of a bull, if the goddess Athene herself is suddenly seen riding on a beautiful chariot in the company of Pisistratus through the market-places of Athens⁵—and that was what the honest Athenian believed—then anything is possible at any time, as it is in dream, and the whole of nature cavorts around men as if it were just a masquerade of the gods who are merely having fun by deceiving men in every shape and form.

But human beings themselves have an unconquerable urge to let themselves be deceived, and they are as if enchanted with happiness when the bard recites epic fairy-tales as if they were true, or when the actor in a play acts the king more regally than reality shows him to be. The intellect, that master of pretence, is free and absolved of its usual slavery for as long as it can deceive without *doing harm*, and it celebrates its Saturnalian festivals⁶ when it does so; at no time is it richer, more luxuriant, more proud, skilful, and bold. Full of creative contentment, it jumbles up metaphors and shifts the boundary stones of abstraction, describing a river, for example, as a moving road that carries men to destinations to which they normally walk. The intellect has now cast off the mark of servitude; whereas it normally labours, with dull-spirited industry, to show to some poor individual who lusts after life the road and the tools he needs, and rides out in search of spoils and booty for its master, here the intellect has become the master itself and is

4. *Pensées* VI.386. [Blaise Pascal (1623–1662), French mathematician, theologian, and philosopher—editor's note.]

5. Herodotus 1.60. [The Greek historian (ca. 484–ca. 425 B.C.E.) describes in the passage cited a ruse of the Athenian ruler Pisistratus (d. 527 B.C.E.) after he was forced out of the city in 566: he dressed a tall, handsome woman in armor and led the people to believe that Athena, goddess of

war and wisdom and the patron of Athens, was herself restoring him to power. "The guise of a bull": Zeus, the Greek king of the gods, took the form of a bull when he abducted Europa, a Phoenician princess—editor's note.]

6. Roman holidays at the winter solstice during which no business was conducted, slaves were temporarily freed, and the normal rules of propriety were suspended [editor's note].

permitted to wipe the expression of neediness from its face. Whatever the intellect now does, all of it, compared with what it did before, bears the mark of pretence, just as what it did before bore the mark of distortion. It copies human life, but it takes it to be something good and appears to be fairly content with it. That vast assembly of beams and boards to which needy man clings, thereby saving himself on his journey through life, is used by the liberated intellect as a mere climbing frame and plaything on which to perform its most reckless tricks; and when it smashes this framework, jumbles it up and ironically re-assembles it, pairing the most unlike things and dividing those things which are closest to one another, it reveals the fact that it does not require those makeshift aids of neediness, and that it is now guided, not by concepts but by intuitions. No regular way leads from these intuitions into the land of the ghostly schemata and abstractions; words are not made for them; man is struck dumb when he sees them, or he will speak only in forbidden metaphors and unheard-of combinations of concepts so that, by at least demolishing and deriding the old conceptual barriers, he may do creative justice to the impression made on him by the mighty, present intuition.

There are epochs in which the man of reason and the man of intuition stand side by side, the one fearful of intuition, the other filled with scorn for abstraction, the latter as unreasonable as the former is unartistic. They both desire to rule over life; the one by his knowledge of how to cope with the chief calamities of life by providing for the future, by prudence and regularity, the other by being an 'exuberant hero'⁷ who does not see those calamities and who only acknowledges life as real when it is disguised as beauty and appearance. Where the man of intuition, as was once the case in ancient Greece, wields his weapons more mightily and victoriously than his contrary, a culture can take shape, given favourable conditions, and the rule of art over life can become established; all the expressions of a life lived thus are accompanied by pretence, by the denial of neediness, by the radiance of metaphorical visions, and indeed generally by the immediacy of deception. Neither the house, nor the gait, nor the clothing, nor the pitcher of clay gives any hint that these things were invented by neediness; it seems as if all of them were intended to express sublime happiness and Olympian⁸ cloudlessness and, as it were, a playing with earnest things. Whereas the man who is guided by concepts and abstractions only succeeds thereby in warding off misfortune, is unable to compel the abstractions themselves to yield him happiness, and strives merely to be as free as possible of pain, the man of intuition, standing in the midst of a culture, reaps directly from his intuitions not just protection from harm but also a constant stream of brightness, a lightening of the spirit, redemption, and release. Of course, *when* he suffers, he suffers more severely; indeed he suffers more frequently because he does not know how to learn from experience and keeps on falling into the very same trap time after time. When he is suffering he is just as unreasonable as he is when happy, he shouts out loudly and knows no solace. How differ-

7. Phrase used to describe Siegfried in Wagner's *Götterdämmerung* (Act III). [Richard Wagner (1813–1883), German composer who was Nietzsche's friend and mentor until their falling out in 1876. *Götterdämmerung*, the conclusion of Wag-

ner's *Ring* cycle, was first produced in 1876—editor's note.]

8. That is, characteristic of Mount Olympus, the home of the Greek gods [editor's note].

ently the same misfortune is endured by the stoic who has learned from experience and who governs himself by means of concepts! This man, who otherwise seeks only honesty, truth, freedom from illusions, and protection from the onslaughts of things which might distract him, now performs, in the midst of misfortune, a masterpiece of pretence, just as the other did in the midst of happiness: he does not wear a twitching, mobile, human face, but rather a mask, as it were, with its features in dignified equilibrium; he does not shout, nor does he even change his tone of voice. If a veritable storm-cloud empties itself on his head, he wraps himself in his cloak and slowly walks away from under it.

1903

From The Birth of Tragedy¹

1

We shall have gained much for the science of aesthetics when we have come to realize, not just through logical insight but also with the certainty of something directly apprehended (*Anschauung*), that the continuous evolution of art is bound up with the duality of the *Apolline* and the *Dionysiac* in much the same way as reproduction depends on there being two sexes which co-exist in a state of perpetual conflict interrupted only occasionally by periods of reconciliation. We have borrowed these names from the Greeks who reveal the profound mysteries of their view of art to those with insight, not in concepts, admittedly, but through the penetratingly vivid figures of their gods. Their two deities of art, Apollo and Dionysos,² provide the starting-point for our recognition that there exists in the world of the Greeks an enormous opposition, both in origin and goals, between the Apolline art of the image-maker or sculptor (*Bildner*) and the imageless art of music, which is that of Dionysos. These two very different drives (*Triebe*) exist side by side, mostly in open conflict, stimulating and provoking (*reizen*) one another to give birth to ever-new, more vigorous offspring in whom they perpetuate the conflict inherent in the opposition between them, an opposition only apparently bridged by the common term 'art'—until eventually, by a metaphysical miracle of the Hellenic 'Will', they appear paired and, in this pairing, finally engender a work of art which is Dionysiac and Apolline in equal measure: Attic tragedy.³

In order to gain a closer understanding of these two drives, let us think of them in the first place as the separate art-worlds of *dream* and *intoxication* (*Rausch*). Between these two physiological phenomena an opposition can be observed which corresponds to that between the Apolline and the Dionysiac. As Lucretius⁴ envisages it, it was in dream that the magnificent figures of

1. Translated by Ronald Speirs. Except as indicated, all subsequent notes are the translator's; in the text, he occasionally retains the original German in parentheses. The full title is *The Birth of Tragedy from the Spirit of Music*.

2. Greek god of wine, the object of frenzied cult worship (somewhat muted in its official form). Apollo: Greek god of music, prophecy, and medicine, associated with the higher developments of

civilization; as Phoebus Apollo, he is god of light [editor's note].

3. Plays performed at the festival of Dionysus in Athens during the 5th century B.C.E. [editor's note].

4. Roman poet and philosopher (ca. 94–55 B.C.E.); see *De Rerum Natura* (*On the Nature of Things*) 5.1169–82 [editor's note].

the gods first appeared before the souls of men; in dream the great image-maker saw the delightfully proportioned bodies of super-human beings; and the Hellenic poet, if asked about the secrets of poetic procreation, would likewise have reminded us of dream and would have given an account much like that given by Hans Sachs in the *Meistersinger*:

My friend, it is the poet's task
To mark his dreams, their meaning ask.
Trust me, the truest phantom man doth know
Hath meaning only dreams may show:
The arts of verse and poetry
Tell nought but dreaming's prophecy.⁵

Every human being is fully an artist when creating the worlds of dream, and the lovely semblance of dream is the precondition of all the arts of image-making, including, as we shall see, an important half of poetry. We take pleasure in dreaming, understanding its figures without mediation; all forms speak to us; nothing is indifferent or unnecessary. Yet even while this dream-reality is most alive, we nevertheless retain a pervasive sense that it is *semblance*; at least this is my experience, and I could adduce a good deal of evidence and the statements of poets to attest to the frequency, indeed normality, of my experience. Philosophical natures even have a presentiment that hidden beneath the reality in which we live and have our being there also lies a second, quite different reality; in other words, this reality too is a semblance. Indeed Schopenhauer actually states that the mark of a person's capacity for philosophy is the gift for feeling occasionally as if people and all things were mere phantoms or dream-images.⁶ A person with artistic sensibility relates to the reality of dream in the same way as a philosopher relates to the reality of existence: he attends to it closely and with pleasure, using these images to interpret life, and practising for life with the help of these events. Not that it is only the pleasant and friendly images which give him this feeling of complete intelligibility; he also sees passing before him things which are grave, gloomy, sad, dark, sudden blocks, teasings of chance, anxious expectations, in short the entire 'Divine Comedy'⁷ of life, including the Inferno, but not like some mere shadow-play—for he, too, lives in these scenes and shares in the suffering—and yet never without that fleeting sense of its character as semblance. Perhaps others will recall, as I do, shouting out, sometimes successfully, words of encouragement in the midst of the perils and terrors of a dream: 'It is a dream! I will dream on!' I have even heard of people who were capable of continuing the causality of one and the same dream through three and more successive nights. All of these facts are clear evidence that our innermost being, the deep ground (*Untergrund*) common to all our lives, experiences the state of dreaming with profound pleasure (*Lust*) and joyous necessity.

The Greeks also expressed the joyous necessity of dream-experience in

5. Wagner, *Die Meistersinger*, Act III, sc. 2. [Richard Wagner (1813–1883), German composer whose music and aesthetic theories greatly influenced Nietzsche's argument in *The Birth of Tragedy*. Hans Sachs (1494–1576), German poet and dramatist who has a major role in Wagner's 1868 opera—editor's note.]

6. *Ans Schopenhauers handschriftlichem Nachlass*,

ed. J. Frauenstädt (Leipzig 1874), p. 295. [Arthur Schopenhauer (1788–1860), German philosopher, a major influence on Nietzsche—editor's note.]

7. Epic poem by the Italian poet DANTE ALIGHIERI (1265–1321); in the first part of the *Inferno*, the poet narrates a passage through hell [editor's note].

their Apollo: as the god of all image-making energies, Apollo is also the god of prophecy. According to the etymological root of his name, he is 'the luminous one' (*der Scheinende*), the god of light; as such, he also governs the lovely semblance produced by the inner world of fantasy. The higher truth, the perfection of these dream-states in contrast to the only partially intelligible reality of the daylight world, together with the profound consciousness of the helping and healing powers of nature in sleep and dream, is simultaneously the symbolic analogue of the ability to prophesy and indeed of all the arts through which life is made possible and worth living. But the image of Apollo must also contain that delicate line which the dream-image may not overstep if its effect is not to become pathological, so that, in the worst case, the semblance would deceive us as if it were crude reality; his image (*Bild*) must include that measured limitation (*maßvolle Begrenzung*), that freedom from wilder impulses, that wise calm of the image-making god. In accordance with his origin, his eye must be 'sun-like'; even when its gaze is angry and shows displeasure, it exhibits the consecrated quality of lovely semblance. Thus, in an eccentric sense, one could apply to Apollo what Schopenhauer says about human beings trapped in the veil of maya:

Just as the boatman sits in his small boat, trusting his frail craft in a stormy sea that is boundless in every direction, rising and falling with the howling, mountainous waves, so in the midst of a world full of suffering and misery the individual man calmly sits, supported by and trusting in the *principium individuationis*⁸[...] (*World as Will and Representation*, I, p. 416)

Indeed one could say that Apollo is the most sublime expression of imperishable trust in this principle and of the calm sitting-there of the person trapped within it; one might even describe Apollo as the magnificent divine image (*Götterbild*) of the *principium individuationis*, whose gestures and gaze speak to us of all the intense pleasure, wisdom and beauty of 'semblance'.

In the same passage Schopenhauer has described for us the enormous horror which seizes people when they suddenly become confused and lose faith in the cognitive forms of the phenomenal world because the principle of sufficient reason, in one or other of its modes, appears to sustain an exception. If we add to this horror the blissful ecstasy which arises from the innermost ground of man, indeed of nature itself, whenever this breakdown of the *principium individuationis* occurs, we catch a glimpse of the essence of the *Dionysiac*, which is best conveyed by the analogy of *intoxication*. These Dionysiac stirrings, which, as they grow in intensity, cause subjectivity to vanish to the point of complete self-forgetting, awaken either under the influence of narcotic drink, of which all human beings and peoples who are close to the origin of things speak in their hymns, or at the approach of spring when the whole of nature is pervaded by lust for life. In the German Middle Ages, too, ever-growing throngs roamed from place to place, impelled by the same Dionysiac power, singing and dancing as they went; in these St John's and St Vitus' dancers we recognize the Bacchic choruses of the Greeks, with

8. Principle of individuation (Latin). For Schopenhauer, the mind can apprehend the world only by dividing it up into individual things; this process

produces an erroneous vision of reality, which he calls "the veil of maya" [editor's note].

their pre-history in Asia Minor, extending to Babylon and the orgiastic Sacaean.⁹ There are those who, whether from lack of experience or from dullness of spirit, turn away in scorn or pity from such phenomena, regarding them as 'popular diseases' while believing in their own good health; of course, these poor creatures have not the slightest inkling of how spectral and deathly pale their 'health' seems when the glowing life of Dionysiac enthusiasts storms past them.

Not only is the bond between human beings renewed by the magic of the Dionysiac, but nature, alienated, inimical, or subjugated, celebrates once more her festival of reconciliation with her lost son, humankind. Freely the earth offers up her gifts, and the beasts of prey from mountain and desert approach in peace. The chariot of Dionysos is laden with flowers and wreaths; beneath its yoke stride panther and tiger. If one were to transform Beethoven's jubilant 'Hymn to Joy' into a painting and place no constraints on one's imagination as the millions sink into the dust, shivering in awe, then one could begin to approach the Dionysiac. Now the slave is a freeman, now all the rigid, hostile barriers, which necessity, caprice, or 'impudent fashion'² have established between human beings, break asunder. Now, hearing this gospel of universal harmony, each person feels himself to be not simply united, reconciled or merged with his neighbour, but quite literally one with him, as if the veil of maya had been torn apart, so that mere shreds of it flutter before the mysterious primordial unity (*das Ur-Eine*). Singing and dancing, man expresses his sense of belonging to a higher community; he has forgotten how to walk and talk and is on the brink of flying and dancing, up and away into the air above. His gestures speak of his enchantment. Just as the animals now talk and the earth gives milk and honey,³ there now sounds out from within man something supernatural: he feels himself to be a god, he himself now moves in such ecstasy and sublimity as once he saw the gods move in his dreams. Man is no longer an artist, he has become a work of art: all nature's artistic power reveals itself here, amidst shivers of intoxication, to the highest, most blissful satisfaction of the primordial unity. Here man, the noblest clay, the most precious marble, is kneaded and carved and, to the accompaniment of the chisel-blows of the Dionysiac world-artist, the call of the Eleusinian Mysteries rings out: 'Fall ye to the ground, ye millions? Feelst thou thy Creator, world?'⁴

9

Everything that rises to the surface in dialogue, the Apolline part of Greek tragedy, appears simple, transparent, beautiful. In this sense the dialogue is

9. A festival of the winter solstice. Nietzsche links together a number of ecstatic celebrations [editor's note].

1. Beethoven used a version of Schiller's ode *To Joy* for the choral finale of his Ninth Symphony. [Ludwig van Beethoven (1770-1827), German composer. FRIEDRICH VON SCHILLER (1759-1805), German poet and playwright—editor's note.]

2. Quotation from Schiller's *To Joy*.

3. Conflation of Euripides *Bacchae* lines 142 and

708-11 with Exodus 3.8. [Euripides (ca. 485-ca. 406 B.C.E.), the last of the three great Attic tragedians; Nietzsche associates him with the decline of tragedy. The Bacchae of the play are the frenzied women who follow Dionysus—editor's note.]

4. Schiller's *To Joy*, lines 33-34. [Eleusinian Mysteries: the most famous of the secret Greek cults, which were connected with Demeter (goddess of the fruits of the earth) and Dionysus. Eleusis was an important town in southwest Attica—editor's note.]

a copy of the Hellene, whose nature is expressed in dance, because in dance the greatest strength is still only potential, although it is betrayed by the suppleness and luxuriance of movement. Thus the language of Sophocles'⁵ heroes surprises us by its Apolline definiteness and clarity, so that we feel as if we are looking straight into the innermost ground of its being, and are somewhat astonished that the road to this ground is so short. But if we once divert our gaze from the character of the hero as it rises to the surface and becomes visible—fundamentally, it is no more than an image of light (*Lichtbild*) projected on to a dark wall, i.e. appearance (*Erscheinung*) through and through—if, rather, we penetrate to the myth which projects itself in these bright reflections, we suddenly experience a phenomenon which inverts a familiar optical one. When we turn away blinded after a strenuous attempt to look directly at the sun, we have dark, coloured patches before our eyes, as if their purpose were to heal them; conversely, those appearances of the Sophoclean hero in images of light, in other words, the Apolline quality of the mask, are the necessary result of gazing into the inner, terrible depths of nature—radiant patches, as it were, to heal a gaze seared by gruesome night. Only in this sense may we believe that we have grasped the serious and significant concept of 'Greek serenity' (*Heiterkeit*) correctly; admittedly, wherever one looks at present one comes across a misunderstood notion of this as 'cheerfulness', something identified with a condition of unendangered ease and comfort.

The most suffering figure of the Greek stage, the unfortunate *Oedipus*,⁶ was understood by Sophocles as the noble human being who is destined for error and misery despite his wisdom, but who in the end, through his enormous suffering, exerts on the world around him a magical, beneficent force which remains effective even after his death. The noble human being does not sin, so this profound poet wants to tell us; every law, all natural order, indeed the moral world, may be destroyed by his actions, yet by these very actions a higher, magical circle of effects is drawn which found a new world on the ruins of the old one that has been overthrown. This is what the poet, inasmuch as he is also a religious thinker, wishes to tell us; as a poet he first shows us a wonderfully tied trial-knot which the judge slowly undoes, strand by strand, to bring great harm upon himself; the genuinely Hellenic delight in this dialectical solution is so great that an air of sovereign serenity pervades the whole work, blunting all the sharp, horrifying preconditions of that trial. We encounter this same serenity in *Oedipus at Colonus*, but here it is elevated into infinite transfiguration; in this play the old man, stricken with an excess of suffering, and exposed, purely as a *suffering being*, to all that affects him, is contrasted with the unearthly serenity which comes down from the sphere of the gods as a sign to us that in his purely passive behaviour the hero achieves the highest form of activity, which has consequences reaching far beyond his own life, whereas all his conscious words and actions in his life hitherto have merely led to his passivity. Thus the trial-knot of the story

5. Greek tragedian (ca. 496–406 B.C.E.) [editor's note].

6. The hero of *Oedipus the King* (ca. 430 B.C.E.), who unknowingly kills his father, the king of Thebes, and then marries his mother, becoming king in turn; when he discovers the truth, he blinds himself and is banished. In *Oedipus at Colonus*

(produced posthumously), the ruler of Thebes unsuccessfully attempts to persuade Oedipus, now a dying old man, to return so that after his death he will benefit and not curse the city (Greek heroes were thought to exert power even when dead) [editor's note].

of Oedipus, which strikes the mortal eye as inextricably tangled, is slowly unravelled—and we are overcome by the most profound human delight at this matching piece of divine dialectic. If our explanation has done justice to the poet, the question remains whether the content of the myth has been exhausted thereby; at this point it becomes plain that the poet's whole interpretation of the story is nothing other than one of those images of light held out to us by healing nature after we have gazed into the abyss. Oedipus, murderer of his father, husband of his mother, Oedipus the solver of the Sphinx's riddle! What does this trinity of fateful deeds tell us? There is an ancient popular belief, particularly in Persia, that a wise magician can only be born out of incest; the riddle-solving Oedipus who woos his mother immediately leads us to interpret this as meaning that some enormous offence against nature (such as incest in this case) must first have occurred to supply the cause whenever prophetic and magical energies break the spell of present and future, the rigid law of individuation, and indeed the actual magic of nature. How else could nature be forced to reveal its secrets, other than by victorious resistance to her, i.e. by some unnatural event? I see this insight expressed in that terrible trinity of Oedipus' fates: the same man who solves the riddle of nature—that of the double-natured⁷ sphinx—must also destroy the most sacred orders of nature by murdering his father and becoming his mother's husband. Wisdom, the myth seems to whisper to us, and Dionysiac wisdom in particular, is an unnatural abomination: whoever plunges nature into the abyss of destruction by what he knows must in turn experience the dissolution of nature in his own person. 'The sharp point of wisdom turns against the wise man; wisdom is an offence against nature': such are the terrible words the myth calls out to us. But, like a shaft of sunlight, the Hellenic poet touches the sublime and terrible Memnon's Column of myth⁸ so that it suddenly begins to sound—in Sophoclean melodies!

I shall now contrast the glory of passivity with the glory of activity which shines around the *Prometheus* of Aeschylus.⁹ What the thinker Aeschylus had to tell us here, but what his symbolic poetic image only hints at, has been revealed to us by the youthful Goethe in the reckless words of his Prometheus:

Here I sit, forming men
In my own image,
A race to be like me,
'To suffer and to weep,
'To know delight and joy
And heed you not,
Like me!¹

Raising himself to Titanic heights, man fights for and achieves his own culture, and he compels the gods to ally themselves with him because, in his

8. The remnants of a monumental statue in Egypt were said to produce a musical tone when illuminated by the rays of the rising sun.

9. Greek tragedian (525–456 B.C.E.), generally credited with giving Attic drama its traditional form. *Prometheus Bound* depicts Prometheus, a Titan (pre-Olympian god) punished by Zeus, the

supreme god who has overthrown the Titans, for giving fire to humans. Prometheus is chained to a rock in the mountains, where daily a vulture tears out his liver. According to some stories, Prometheus created humans out of mud [editor's note].

1. Goethe, *Prometheus*, lines 51 ff. [Johann Wolfgang von Goethe (1749–1832), German poet, playwright, and novelist; Nietzsche quotes the final stanza of his 1773 poem—editor's note.]

very own wisdom, he holds existence and its limits in his hands. But the most wonderful thing in that poem about Prometheus (which, in terms of its basic thought, is the true hymn of impiety) is its profound, Aeschylean tendency to *justice*: the limitless suffering of the bold 'individual' on the one hand, and the extreme plight of the gods, indeed a premonition of the twilight of the gods, on the other; the power of both these worlds of suffering to enforce reconciliation, metaphysical oneness—all this recalls in the strongest possible way the centre and principal tenet of the Aeschylean view of the world, which sees *moira*,² as eternal justice, throned above gods and men. If the boldness of Aeschylus in placing the world of the Olympians on his scales of justice seems astonishing, we must remember that the deep-thinking Greek had an unshakably firm foundation for metaphysical thought in his Mysteries, so that all attacks of scepticism could be discharged on the Olympians. The Greek artist in particular had an obscure feeling that he and these gods were mutually dependent, a feeling symbolized precisely in Aeschylus' Prometheus. The Titanic artist found within himself the defiant belief that he could create human beings and destroy the Olympian gods at least, and that his higher wisdom enabled him to do so, for which, admittedly, he was forced to do penance by suffering eternally. The magnificent 'ability' (*Können*) of the great genius, for which even eternal suffering is too small a price to pay, the bitter pride of the *artist*: this is the content and the soul of Aeschylus' play, whereas Sophocles, in his *Oedipus*, begins the prelude to the victory-hymn of the *saint*. But even Aeschylus's interpretation of the myth does not plumb its astonishing, terrible depths; rather, the artist's delight in Becoming, the serenity of artistic creation in defiance of all catastrophes, is merely a bright image of clouds and sky reflected in a dark sea of sadness. Originally, the legend of Prometheus belonged to the entire community of Aryan peoples³ and documented their talent for the profound and the tragic; indeed, it is not unlikely that this myth is as significant for the Aryan character as the myth of the Fall is for the Semitic character, and that the relationship between the two myths is like that between brother and sister. The myth of Prometheus presupposes the unbounded value which naive humanity placed on *fire* as the true palladium⁴ of every rising culture; but it struck those contemplative original men as a crime, a theft perpetrated on divine nature, to believe that man commanded fire freely, rather than receiving it as a gift from heaven, as a bolt of lightning which could start a blaze, or as the warming fire of the sun. Thus the very first philosophical problem presents a painful, irresolvable conflict between god and man, and pushes it like a mighty block of rock up against the threshold of every culture. Humanity achieves the best and highest of which it is capable by committing an offence and must in turn accept the consequences of this, namely the whole flood of suffering and tribulations which the offended heavenly powers *must* in turn visit upon the human race as it strives nobly towards higher things: a bitter thought, but one which, thanks to the *dignity* it accords to the offence, contrasts strangely with the Semitic myth of the Fall, where the

2. Fate or destiny (Greek) [editor's note].

3. Speakers of Indo-European, the prehistoric language whose descendants include Greek, German, English, and Hindi; here they are contrasted with speakers of Semitic languages, such as those who

wrote Genesis in Hebrew [editor's note].

4. Here simply: "prized possession." [Specifically, in Greek mythology, the Palladium was a statue of the goddess Pallas Athena, whose presence at Troy supposedly kept the city safe—editor's note.]

origin of evil was seen to lie in curiosity, mendacious pretence, openness to seduction, lasciviousness, in short: in a whole series of predominantly feminine attributes. What distinguishes the Aryan conception is the sublime view that *active sin* is the true Promethean virtue; thereby we have also found the ethical foundation of pessimistic tragedy, its *justification* of the evil in human life, both in the sense of human guilt and in the sense of the suffering brought about by it. The curse in the nature of things, which the reflective Aryan is not inclined simply to explain away, the contradiction at the heart of the world, presents itself to him as a mixture of different worlds, e.g. a divine and a human one, each of which, taken individually, is in the right, but which, as one world existing alongside another, must suffer for the fact of its individuation. The heroic urge of the individual to reach out towards the general, the attempt to cross the fixed boundaries of individuation, and the desire to become the *one* world-being itself, all this leads him to suffer in his own person the primal contradiction hidden within the things of this world, i.e. he commits a great wrong and suffers. Thus great wrongdoing is understood as masculine by the Aryans, but as feminine by the Semites,⁵ just as the original wrong was committed by a man and the original sin by a woman. These, incidentally, are the words of the warlocks' chorus:

So what, if women on the whole
Take many steps to reach the goal?
Let them run as fast as they dare,
With one good jump a man gets there.⁶

Anyone who understands the innermost kernel of the legend of Prometheus—namely that wrongdoing is of necessity imposed on the titanically striving individual—is bound also to sense the un-Apolline quality of this pessimistic view of things, for it is the will of Apollo to bring rest and calm to individual beings precisely by drawing boundaries between them, and by reminding them constantly, with his demands for self-knowledge and measure, that these are the most sacred laws in the world. But lest this Apolline tendency should cause form to freeze into Egyptian stiffness and coldness, lest the attempt to prescribe the course and extent of each individual wave should cause the movement of the whole lake to die away, the flood-tide of the Dionysiac would destroy periodically all the small circles in which the one-sidedly Apolline will attempted to confine Hellenic life. That sudden swell of the Dionysiac tide then lifts the separate little waves of individuals on to its back, just as the Titan Atlas,⁷ brother of Prometheus, lifted up the earth. This Titanic urge to become, as it were, the Atlas of all single beings, and to carry them on a broad back higher and higher, further and further, is the common feature shared by the Promethean and the Dionysiac. In this respect the Prometheus of Aeschylus is a Dionysiac mask, whereas the aforementioned deep strain of justice in Aeschylus reveals to those with eyes to see his paternal descent from Apollo, the god of individuation and of the boundaries of justice. The double essence of Aeschylus' Prometheus, his simultaneously Apolline and Dionysiac nature, could therefore be expressed

5. The noun translated as "wrongdoing" (*der Frevel*) has masculine gender in German; "sin" (*die Sünde*) has feminine.

6. Goethe, *Faust* [1808], I, 3982 ff.

7. In Greek myth, punished for warring against the Olympian gods by having to bear the world upon his shoulders [editor's note].

like this: 'All that exists is just and unjust and is equally justified in both respects.'

That is your world. That you call a world.⁸

10

It is a matter of indisputable historical record that the only subject-matter of Greek tragedy, in its earliest form, was the sufferings of Dionysos, and that for a long time the only hero present on the stage was, accordingly, Dionysos. But one may also say with equal certainty that, right down to Euripides, Dionysos never ceased to be the tragic hero, and that all the famous figures of the Greek stage, Prometheus, Oedipus etc., are merely masks of that original hero, Dionysos. The fact that there is a deity behind all these masks is one of the essential reasons for the 'ideal' quality of those famous figures which has prompted so much astonishment. Someone or other (I do not know who) once remarked that all individuals, as individuals, are comic, and therefore un-tragic; from which one could conclude that the Greeks were quite *incapable* of tolerating any individuals on the tragic stage. And indeed this does appear to have been their feeling, just as the reason for the Platonic distinction between, and deprecation of, the 'idea' as opposed to the 'idol',⁹ or copied image, lay deep within the Hellenic character. Using Plato's terminology, one would have to say something like this about the tragic figures of the Hellenic stage: the one, truly real Dionysos manifests himself in a multiplicity of figures, in the mask of a fighting hero and, as it were, entangled in the net of the individual will. In the way that he now speaks and acts, the god who appears resembles an erring, striving, suffering individual; and the fact that he *appears* at all with such epic definiteness and clarity, is the effect of Apollo, the interpreter of dreams, who interprets to the chorus its Dionysiac condition by means of this symbolic appearance. In truth, however, this hero is the suffering Dionysos of the Mysteries, the god who experiences the sufferings of individuation in his own person, of whom wonderful myths recount that he was torn to pieces by the Titans when he was a boy and is now venerated in this condition as Zagreus;¹ at the same time, it is indicated that his being torn into pieces, the genuinely Dionysiac *suffering*, is like a transformation into air, water, earth, and fire, so that we are to regard the state of individuation as the source and primal cause of all suffering, as something inherently to be rejected. From the smile of that Dionysos the Olympian gods were born, from his tears human beings. In this existence as a dismembered god, Dionysos has a double nature; he is both cruel, savage demon and mild, gentle ruler. But what the epopts² hoped for was the rebirth of Dionysos, which we must now understand, by premonition, as the end of individuation; the epopts' roaring song of jubilation rang out to greet this third Dionysos. Only in the hope of this

8. Goethe, *Faust*, I, 409.

9. That is, an *eikōn*, or "likeness," which PLATO (ca. 427—ca. 347 B.C.E.) sees as necessarily inferior to the Form or Idea (*idea*) of which it can be only an imperfect representation and through which it participates in what is truly real [editor's note].

1. A myth to the effect that Dionysos, under the name 'Zagreus,' is torn apart and then reassembled occurs in some late Hellenistic sources.

Whether this is a survival of an older (perhaps secret) doctrine about Dionysos, as Nietzsche assumes, or a late innovative embellishment of earlier tradition is, given the state of our knowledge, undecidable. [This version of Dionysos is the son of Demeter; in most myths, he is said to be the son of a mortal woman, Semele, and Zeus—editor's note.]

2. Devoted followers who have "seen" their god.

is there a gleam of joy on the countenance of a world torn apart and shattered into individuals; myth symbolizes this in the image of Demeter, sunk in eternal mourning, who knows no *happiness* until she is told that she can give birth to Dionysos *again*. In the views described here we already have all the constituent elements of a profound and pessimistic way of looking at the world and thus, at the same time, of *the doctrine of the Mysteries taught by tragedy*: the fundamental recognition that everything which exists is a unity; the view that individuation is the primal source of all evil; and art as the joyous hope that the spell of individuation can be broken, a premonition of unity restored.

* * *

24

* * *

At this point we need to take a bold run-up and vault into a metaphysics of art, as I repeat my earlier sentence that only as an aesthetic phenomenon do existence and the world appear justified; which means that tragic myth in particular must convince us that even the ugly and disharmonious is an artistic game which the Will, in the eternal fullness of its delight, plays with itself. Yet this difficult, primal phenomenon of Dionysiac art can be grasped in a uniquely intelligible and direct way in the wonderful significance of *musical dissonance*; as indeed music generally is the only thing which, when set alongside the world, can illustrate what is meant by the justification of the world as an aesthetic phenomenon. The pleasure engendered by the tragic myth comes from the same homeland as our pleasurable sensation of dissonance in music. The Dionysiac, with the primal pleasure it perceives even in pain, is the common womb from which both music and the tragic myth are born.

Could it not be that, with the assistance of musical dissonance, we have eased significantly the difficult problem of the effect of tragedy? After all, we do now understand the meaning of our desire to look, and yet to long to go beyond looking when we are watching tragedy; when applied to our response to the artistic use of dissonance, this state of mind would have to be described in similar terms: we want to listen, but at the same time we long to go beyond listening. That striving towards infinity, that wing-beat of longing even as we feel supreme delight in a clearly perceived reality, these things indicate that in both these states of mind we are to recognize a Dionysiac phenomenon, one which reveals to us the playful construction and demolition of the world of individuality as an outpouring of primal pleasure and delight, a process quite similar to Heraclitus the Obscure's comparison of the force that shapes the world to a playing child who sets down stones here, there, and the next place, and who builds up piles of sand only to knock them down again.³

Thus, in order to judge the Dionysiac capacity of a people correctly, it is necessary for us to consider the evidence not simply of their music but also of their tragic myth. Given the intimate relationship between music and myth, one would expect that the atrophy of the one would be connected to

3. Heraclitus, fragment 52. [Heraclitus (active ca. 500 B.C.E), pre-Socratic Greek philosopher—editor's note.]

the degeneration and depravation of the other, if indeed it is true that any weakening of myth generally expresses a waning of the capacity for the Dionysiac. One only needs to glance at the development of the German character to be left in no doubt on both counts: we saw that the nature of Socratic optimism,⁴ something which is as unartistic as it is parasitic on life, was revealed in equal measure both in opera and in the abstract character of our mythless existence, in an art which had sunk to the level of mere entertainment as much as in a life guided by concepts. We took some comfort, however, from certain signs that, despite all this, the German spirit has remained whole, in magnificent health, depth, and Dionysiac strength, resting and dreaming in an inaccessible abyss like a knight who has sunk into slumber; now the Dionysiac song rises from this abyss to tell us that, at this very moment, this German knight still dreams his ancient Dionysiac myth in blissfully grave visions. Let no one believe that the German spirit has lost its mythical home for ever, if it can still understand so clearly the voices of the birds which tell of its homeland. One day it will find itself awake, with all the morning freshness that comes from a vast sleep; then it will slay dragons, destroy the treacherous dwarfs, and awaken Brünnhilde—and not even Wotan's spear itself will be able to bar its path!⁵

My friends, you who believe in the music of Dionysos, you also know what tragedy means for us. In it we have the tragic myth, reborn from music—and in this you may hope for all things and forget that which is most painful! But for all of us the most painful thing is that long period of indignity when the German genius lived in the service of treacherous dwarfs, estranged from hearth and home. You understand what my words mean—just as you will also understand, finally, my hopes.

25

Music and tragic myth both express, in the same way, the Dionysiac capacity of a people, and they cannot be separated from one another. Both originate in an artistic realm which lies beyond the Apolline; both transfigure a region where dissonance and the terrible image of the world fade away in chords of delight; both play with the goad of disinclination, trusting to their immeasurably powerful arts of magic; both justify by their play the existence of even the 'worst of all worlds'. Here the Dionysiac shows itself, in comparison with the Apolline, to be the eternal and original power of art which summons the entire world of appearances into existence, in the midst of which a new, transfiguring semblance is needed to hold fast within life the animated world of individuation. If you could imagine dissonance assuming human form—and what else is man?—this dissonance would need, to be able to live, a magnificent illusion which would spread a veil of beauty over its own nature. This is the true artistic aim of Apollo, in whose name we gather together all those countless illusions of beautiful semblance which, at every moment, make existence at all worth living at every moment and thereby urge us on to experience the next.

4. In sections that we have omitted, Nietzsche portrays the Greek philosopher Socrates (469–399 B.C.E.) as opposed to Dionysus and an ally of Euripides [editor's note].

5. In Wagner's opera *Siegfried* (1876) the hero

slays a dragon (really the giant Fafner), kills the dwarf Mime, and awakens the heroine Brünnhilde despite the efforts of Wotan, chief of the gods, to block him [editor's note].

At the same time, only as much of that foundation of all existence, that Dionysiac underground of the world, can be permitted to enter an individual's consciousness as can be overcome, in its turn, by the Apolline power of transfiguration, so that both of these artistic drives are required to unfold their energies in strict, reciprocal proportion, according to the law of eternal justice. Where the Dionysiac powers rise up with such unbounded vigour as we are seeing at present, Apollo, too, must already have descended amongst us, concealed in a cloud, and his most abundant effects of beauty will surely be seen by a generation which comes after us.

That there is a need for this effect is a feeling which each of us would grasp intuitively, if he were ever to feel himself translated, even just in dream, back into the life of an ancient Hellene. As he wandered beneath rows of high, Ionic columns, gazing upwards to a horizon cut off by pure and noble lines, seeing beside him reflections of his own, transfigured form in luminous marble, surrounded by human beings who walk solemnly or move delicately, with harmonious sounds and a rhythmical language of gestures—would such a person, with all this beauty streaming in on him from all sides, not be bound to call out, as he raised a hand to Apollo: 'Blessed people of Hellas! How great must Dionysos be amongst you, if the God of Delos considers such acts of magic are needed to heal your dithyrambic⁶ madness!' It is likely, however, that an aged Athenian would reply to a visitor in this mood, looking up at him with the sublime eye of Aeschylus: 'But say also this, curious stranger: how much did this people have to suffer in order that it might become so beautiful! But now follow me to the tragedy and sacrifice along with me in the temple of both deities!'

1872

6. Manifest in dithyrambs, choral poems originally sung in honor of Dionysus and later associated with highly excited music and impassioned language. Delos: Greek island in the Cyclades, site of an important oracle of Apollo [editor's note].

OSCAR WILDE

1854–1900

Oscar Wilde is known for his keen epigrammatic wit, dazzling skills in conversation, and scandalous homosexual behavior, which in 1895 led to his trial and imprisonment for sodomy. But Wilde was more than a brilliant—and tragic—cultural personality. He was a gifted, wonderfully entertaining, and disquieting writer, the author of an impressive body of work that includes the superb comedy *The Importance of Being Earnest*, the haunting novel *The Picture of Dorian Gray*, and sharp, suggestive critical essays.

Wilde was born in Dublin, Ireland. His father was a surgeon and respected author; his mother also wrote (both verse and prose). Educated in classics at Trinity College, Dublin, Wilde won a fellowship to Magdalen College, Oxford University. There he was influenced by the eminent art historian John Ruskin, WALTER PATER, and the Pre-Raphaelite brotherhood of English poets and painters. The young Wilde began to lead his life as if it were a work of art, to be crafted, cultivated, and made to sparkle. Defying orthodoxy and social convention, he was flamboyant and theatrical.

In 1881, at his own expense, Wilde published his first book, *Poems*, a promising but derivative volume that reflects the influence of Wilde's reading of John Keats (1795–1821), Algernon Swinburne (1837–1909), Pater, and the Pre-Raphaelites. In the following year, Wilde toured and lectured in the United States. It is said that on his arrival in New York City, when asked by customs officials if he had anything to declare, he replied, "Only my genius." Wilde was by now a leader of the aesthetic movement, which rallied around the dictum of "art for art's sake." His deliberate eccentricity and exuberant self-regard drew ridicule in the weekly comic periodical *Punch*, and he was parodied as Bunthorne in Gilbert and Sullivan's 1881 operetta *Patience*.

Though Wilde had (in the words of one recent scholar) "flirted" with homosexuality for a number of years, he married Constance Lloyd, daughter of a prominent Irish barrister, in 1884. For his two sons Wilde wrote stories—inspired by the Danish writer Hans Christian Andersen—included in *The Happy Prince and Other Tales* (1888) and *A House of Pomegranates* (1892). He also wrote reviews for the *Pall Mall Gazette* and, from 1887 to 1889, served as the editor of *Woman's World*, a popular periodical to which Constance also contributed articles on politics and women's issues.

In the early 1890s, Wilde hit his stride. *The Picture of Dorian Gray* appeared first in *Lippincott's Magazine* in 1890; the book, revised and expanded by six chapters, was published in 1891. It recounts the story of a beautiful young man who seems not to age but whose portrait becomes aged and ugly over time, the sign of his own corruption. In *Intentions* (1891), an important collection of essays, Wilde presented his keen and audacious views on literature, art, and criticism; and in *Collected Poems* (1892), he gathered his verse. Originally Wilde had hoped to center his literary career in poetry, but his greatest success was as a comic and satiric dramatist. His plays include *Lady Windemere's Fan* (1892); *A Woman of No Importance* (1893); *An Ideal Husband* (1895); and, above all, *The Importance of Being Earnest* (1895), which describes the courtships and betrothals of two young men-about-town who are leading double lives. Wilde also wrote the historical tragedies *The Duchess of Padua* (1892) and *Salomé* (1893); the latter, about the woman who danced before Herod and afterward demanded the head of John the Baptist, was written in French and then published in an English translation (1894) that included eerie, erotic illustrations by Aubrey Beardsley.

Wilde's pleasure in titillating and unnerving his audiences and readers resulted in many striking witticisms, such as Cecily's reproach in *The Importance of Being Earnest*: "I hope you have not been leading a double life, pretending to be wicked and being really good all the time. That would be hypocrisy." Yet in his own way, Wilde was deeply serious and morally earnest. A critic of middle-class Philistine smugness and moral complacency, he too wanted greater opportunity—though more than MATTHEW ARNOLD would have accepted—for freedom of expression and dissent, for the right to contest the status quo.

In one of his lectures in America, Wilde had declared, "To disagree with three fourths of all England on all points of view is one of the first elements of sanity." But in 1895 Wilde discovered that social and moral convention could be relentlessly punitive. When the marquess of Queensberry, the father of Wilde's lover, Lord Alfred Douglas, left a card at his club addressed "To Oscar Wilde, posing as a sodomite," Wilde unsuccessfully sued for libel—and then was himself arrested for violating the law forbidding "indecencies between grown-up men, in public or private." Wilde was found guilty and sentenced to two years' imprisonment at hard labor.

After his release in May 1897, Wilde—divorced, broken, bankrupt, and disgraced—left for France, calling himself "Sebastian Melmoth" ("Sebastian" after the Christian martyred by arrows in early-fourth-century Rome, and "Melmoth" after the doomed hero of Charles Maturin's 1820 Gothic novel *Melmoth the Wanderer*). Wilde spent the rest of his life as an exile in Europe, recovering enough focus as a

writer to tell of his painful prison experiences in *The Ballad of Reading Gaol* (1898). He died in Paris in November 1900, having remarked, "If I were to survive into the twentieth century, it would be more than the English people could bear." *De Profundis* ("out of the depths," the first two words of the Latin version of Psalm 130), both a book-length letter of reproach to Lord Alfred and a personal testament, was published in 1905. His self-judgment in this text is unsparing, as he declares: "Terrible as was what the world did to me, what I did to myself was far more terrible still."

In the preface to *The Picture of Dorian Gray*, our first selection, Wilde sketches his position on art and morality in a sequence of aphorisms. Authentic artists, says Wilde, concern themselves with style and form, with the adroit handling of the artistic medium and the shaping of beautiful works. Morality, he explains, is not a matter of an artist's or writer's message; it instead rests in how well he or she has executed an aesthetic task. Wilde revises Arnold's statement that critics should be devoted to the best that has been thought and said by maintaining that the best is the most beautiful, whose nature is ultimately formal and stylistic rather than ethical. Wilde provokes us by concluding, "All art is quite useless."

In "The Critic as Artist" (1890, 1891), a brisk, pointed dialogue on the nature of, and relationship between, the arts and criticism, Wilde expands on and develops the claims he advanced in the preface. His mouthpiece Gilbert not only celebrates criticism in its own right but asserts and praises its superiority over so-called creative or primary literary and artistic work. Throughout, Wilde emphasizes and honors style, form, and self-conscious craft; in an anti-Romantic thrust, he devalues inspiration. He is antihistorical as well, opposed to history because of (and here he echoes RALPH WALDO EMERSON) the constraints that it imposes on individual expression.

"The details of history," according to Gilbert in part 1, "are always wearisome." Criticism "is more fascinating than history," for it "is concerned simply with oneself": it is a type of autobiography and impressionism. As Gilbert's comments on Ruskin and Pater indicate, for Wilde it does not matter whether the creative critic is faithful to the work of art: accurate statements about an aesthetic object or the artist's intentions count less than the critical essay's status as an independent work of art. In part 2, Wilde qualifies and complicates this position; for example, in his references to Shakespeare he concedes that historical study is important after all. But he continues to stress that "the highest criticism, being the purest form of personal impression, is, in its way, more creative than creation."

Wilde is not an especially original thinker. He draws on nineteenth-century French and English authors, including the poet-critic THÉOPHILE GAUTIER, the novelist Joris-Karl Huysman, CHARLES BAUDELAIRE, and Pater. The concept of "art for art's sake" was in fact proposed by Gautier, in the preface to *Mademoiselle de Maupin* (1835), where he affirmed: "Les choses sont belles en proportion inverse de leur utilité" (Things are beautiful in inverse proportion to their usefulness). Sometimes, Wilde's cool, canny ironies can feel predictable, produced on cue and according to formula. There is a measure of truth to the complaint of the American cultural critic H. L. Mencken (1880–1956) that in his endless flaunting of paradoxes, Wilde can be as insufferable as an overpious preacher.

On the other hand, Wilde's epigrams and arguments at their best are compelling, and in recent years his life has drawn equal interest. Literary critics and theorists and scholars in gender and gay and lesbian studies have since the 1980s devoted countless books and essays to Wilde's writings and extraordinary and aggrieved life. Even earlier, critics including NORTHROP FRYE and HAROLD BLOOM praised him extravagantly; Frye, in *Creation and Recreation* (1980), portrayed Wilde as a theorist of the imagination equal in significance to the revolutionary painter and poet William Blake (1757–1827). Like Blake, and like the later Romantics PERCY BYSSHE SHELLEY and Emerson, Wilde contends that great writers and artists give structure to life through the power

of their enlightened vision. Indeed, for him the terms and values of art themselves constitute life. Nature, Wilde maintained, "is our creation. . . . Things are because we see them." The result of critical inquiry is not truth, but an interpretation—or rather a series of misinterpretations, of misreadings, since we do not (and never will) possess an objectively known reality with which we could appraise and firmly decide among conflicting views.

This line of argument gives us a Wilde less akin to Pater than to the German philosopher FRIEDRICH NIETZSCHE, the Nietzsche of *The Will to Power* (1901) in particular: "It is our needs that interpret the world; our drives and their For and Against. Every drive is a kind of lust to rule; each one has its perspective that it would like to compel all the other drives to accept as a norm." Wilde lacks this tone of grim intensity, but his elegantly articulated ideas imply the consequences that Nietzsche and later authors have expressed.

BIBLIOGRAPHY

Wilde's *Complete Works* were published in twelve volumes in 1923. *The Complete Works of Oscar Wilde*, edited by Bobby Fong and Karl Beckson, is now being published by Oxford University Press; volume 1, *Poems and Poems in Prose*, appeared in 1999. There are a number of one-volume collections, including *Oscar Wilde: Selected Writings*, edited by Richard Ellmann (1961), and *Selected Writings of Oscar Wilde*, edited by Russell Fraser (1969). The best, because it is annotated, is *Oscar Wilde*, edited by Isobel Murray (1989). For the correspondence, see the volumes edited by Rupert Hart-Davis, *Letters* (1962) and *More Letters* (1985). For his literary criticism, consult *Literary Criticism of Oscar Wilde*, edited by Stanley Weintraub (1968), and *The Artist as Critic: Critical Writings of Oscar Wilde*, edited by Richard Ellmann (1969).

Biographies include Hesketh Pearson, *The Life of Oscar Wilde* (1946), a good overview of Wilde's career that deals well with his shift from poetry to fiction and drama, and Richard Ellmann, *Oscar Wilde* (1988), a major study, especially in its account of Wilde's early life and his response to John Ruskin, Walter Pater, Henry James, and contemporary French writers. Vyvyan Holland, *Oscar Wilde: A Pictorial Biography* (1960), is also valuable. H. Montgomery Hyde has edited *The Trials of Oscar Wilde* (1948); see also Hyde's *The Three Trials of Oscar Wilde* (1956) and *Oscar Wilde in Prison* (1956). Other resources include *Oscar Wilde: Interviews and Recollections*, edited by E. H. Mikhail (2 vols., 1979); *Oscar Wilde's Oxford Notebooks*, edited by Philip E. Smith II and Michael S. Helfand (1989); and Norman Page, *An Oscar Wilde Chronology* (1991).

Collections surveying the critical and scholarly response to Wilde include *Oscar Wilde: A Collection of Critical Essays*, edited by Richard Ellmann (1969); *Oscar Wilde: The Critical Heritage*, edited by Karl Beckson (1970); *Critical Essays on Oscar Wilde*, edited by Regenia Gagnier (1991); and *Oscar Wilde: A Collection of Critical Essays*, edited by Jonathan Freedman (1996).

Lawrence Danson, *Wilde's Intentions: The Artist in His Criticism* (1997), is an excellent treatment of Wilde's views on literature and criticism. A number of studies in the 1990s have focused on the social, sexual, and cultural issues that Wilde's life and, especially, his trial and imprisonment dramatize. Among these are Eve Kosofsky Sedgwick, *Epistemology of the Closet* (1990); Patricia Flanagan Behrendt, *Oscar Wilde: Eros and Aesthetics* (1991); Ed Cohen, *Talk on the Wilde Side: Toward a Genealogy of a Discourse on Male Sexualities* (1993); Melissa Knox, *Oscar Wilde: A Long and Lovely Suicide* (1994); Gary Schmidgall, *The Stranger Wilde: Interpreting Oscar* (1994); Alan Sinfield, *The Wilde Century: Effeminacy, Oscar Wilde, and the Queer Moment* (1994); and John Stokes, *Oscar Wilde: Myths, Miracles, and Imitations* (1996). Julia Prewitt Brown, *Cosmopolitan Criticism: Oscar Wilde's Philosophy of Art* (1997), deals succinctly with Wilde's aesthetic theory and its influence on later writers. Michael S. Foldy, *Trials of Oscar Wilde: Deviance, Morality, and Late-Victorian Society* (1998), describes the range of threats (including, but not limited to, deviant

sexuality) that English society associated with Wilde. *Wilde the Irishman*, edited by Jerusha McCormack (1998), deals with the Irish dimension of Wilde's work and with the responses to Wilde by poets, playwrights, sculptors, and others. See also Bruce Bashford, *Oscar Wilde: The Critic as Humanist* (1999). Reference works include Stuart Mason, *Bibliography of Oscar Wilde* (1914); Thomas A. Mikolyzk, *Oscar Wilde: An Annotated Bibliography* (1993); Ian Small, *Oscar Wilde Revalued: An Essay on New Materials and Methods of Research* (1993); and Karl Beckson, *The Oscar Wilde Encyclopedia* (1998).

Preface to *The Picture of Dorian Gray*

The artist is the creator of beautiful things.

To reveal art and conceal the artist is art's aim. The critic is he who can translate into another manner or a new material his impression of beautiful things.

The highest as the lowest form of criticism is a mode of autobiography. Those who find ugly meanings in beautiful things are corrupt without being charming. This is a fault.

Those who find beautiful meanings in beautiful things are the cultivated. For these there is hope.

They are the elect to whom beautiful things mean only Beauty.

There is no such thing as a moral or an immoral book. Books are well written, or badly written. That is all.

The nineteenth century dislike of Realism is the rage of Caliban seeing his own face in a glass.¹

The nineteenth century dislike of Romanticism is the rage of Caliban not seeing his own face in a glass.

The moral life of man forms part of the subject-matter of the artist, but the morality of art consists in the perfect use of an imperfect medium.

No artist desires to prove anything. Even things that are true can be proved.

No artist has ethical sympathies. An ethical sympathy in an artist is an unpardonable mannerism of style.

No artist is ever morbid. The artist can express everything.

Thought and language are to the artist instruments of an art.

Vice and virtue are to the artist materials for an art.

From the point of view of form, the type of all the arts is the art of the musician.

From the point of view of feeling, the actor's craft is the type.

All art is at once surface and symbol.

Those who go beneath the surface do so at their peril.

Those who read the symbol do so at their peril.

It is the spectator, and not life, that art really mirrors.

Diversity of opinion about a work of art shows that the work is new, complex, and vital.

When critics disagree the artist is in accord with himself.

We can forgive a man for making a useful thing as long as he does not admire it. The only excuse for making a useless thing is that one admires it intensely.

All art is quite useless.

From The Critic as Artist¹

From Part I

* * *

Ernest. * * * I am quite ready to admit that I was wrong in what I said about the Greeks. They were, as you have pointed out, a nation of art critics. I acknowledge it, and I feel a little sorry for them. For the creative faculty is higher than the critical. There is really no comparison between them.

Gilbert. The antithesis between them is entirely arbitrary. Without the critical faculty, there is no artistic creation at all worthy of the name. You spoke a little while ago of that fine spirit of choice and delicate instinct of selection by which the artist realises life for us, and gives to it a momentary perfection. Well, that spirit of choice, that subtle tact of omission, is really the critical faculty in one of its most characteristic moods, and no one who does not possess this critical faculty can create anything at all in art. Arnold's definition of literature as a criticism of life,² was not very felicitous in form, but it showed how keenly he recognised the importance of the critical element in all creative work.

Ernest. I should have said that great artists worked unconsciously, that they were "wiser than they knew," as, I think, Emerson remarks somewhere.³

Gilbert. It is really not so, Ernest. All fine imaginative work is self-conscious and deliberate. No poet sings because he must sing. At least, no great poet does. A great poet sings because he chooses to sing. It is so now, and it has always been so. We are sometimes apt to think that the voices that sounded at the dawn of poetry were simpler, fresher, and more natural than ours, and that the world which the early poets looked at, and through which they walked, had a kind of poetical quality of its own, and almost without changing could pass into song. The snow lies thick now upon Olympus, and its steep, scarped sides are bleak and barren, but once, we fancy, the white feet of the Muses brushed the dew from the anemones in the morning, and at evening came Apollo⁴ to sing to the shepherds in the vale. But in this we are merely lending to other ages what we desire, or think we desire, for our own. Our historical sense is at fault. Every century that produces poetry is, so far, an artificial century, and the work that seems to us to be the most natural and simple product of its time is always the result of the most self-conscious effort. Believe me, Ernest, there is no fine art without self-consciousness, and self-consciousness and the critical spirit are one.

Ernest. I see what you mean, and there is much in it. But surely you would admit that the great poems of the early world, the primitive, anonymous collective poems, were the result of the imagination of races, rather than of the imagination of individuals?

1. Originally titled "The True Function and Value of Criticism, with Some Remarks on the Importance of Doing Nothing." For his book *Intentions* (1891), Wilde retitled and revised the text.

2. Often in "The Critic as Artist," Wilde alludes or responds directly to MATTHEW ARNOLD's views on literature and criticism in *Essays in Criticism: First Series* (1865), in particular "The Function of Criticism at the Present Time" (see above).

3. See "The Over-Soul" and "Compensation," both in *Essays: First Series* (1841), by RALPH WALDO EMERSON (1803-1882).

4. The Greek god of prophecy, music, and poetry. Olympus: mountain range in northern Greece and home of the Greek gods. Muses: in Greek mythology, the 9 daughters of memory; they presided over the arts and sciences.

Gilbert. Not when they became poetry. Not when they received a beautiful form. For there is no art where there is no style, and no style where there is no unity, and unity is of the individual. No doubt Homer had old ballads and stories to deal with, as Shakespeare had chronicles and plays and novels from which to work, but they were merely his rough material. He took them and shaped them into song. They became his, because he made them lovely. They were built out of music,

And so not built at all,
And therefore built for ever.⁵

The longer one studies life and literature, the more strongly one feels that behind everything that is wonderful stands the individual, and that it is not the moment that makes the man, but the man who creates the age. Indeed, I am inclined to think that each myth and legend that seems to us to spring out of the wonder, or terror, or fancy of tribe and nation, was in its origin the invention of one single mind. The curiously limited number of the myths seems to me to point to this conclusion. But we must not go off into questions of comparative mythology. We must keep to criticism. And what I want to point out is this. An age that has no criticism is either an age in which art is immobile, hieratic, and confined to the reproduction of formal types, or an age that possesses no art at all. There have been critical ages that have not been creative, in the ordinary sense of the word, ages in which the spirit of man has sought to set in order the treasures of his treasure-house, to separate the gold from the silver, and the silver from the lead, to count over the jewels, and to give names to the pearls. But there has never been a creative age that has not been critical also. For it is the critical faculty that invents fresh forms. The tendency of creation is to repeat itself. It is to the critical instinct that we owe each new school that springs up, each new mould that art finds ready to its hand. There is really not a single form that art now uses that does not come to us from the critical spirit of Alexandria,⁶ where these forms were either stereotyped, or invented, or made perfect. I say Alexandria, not merely because it was there that the Greek spirit became most self-conscious, and indeed ultimately expired in scepticism and theology, but because it was to that city, and not to Athens, that Rome turned for her models, and it was through the survival, such as it was, of the Latin language that culture lived at all. When, at the Renaissance, Greek literature dawned upon Europe, the soil had been in some measure prepared for it. But to get rid of the details of history, which are always wearisome, and usually inaccurate, let us say generally that the forms of art have been due to the Greek critical spirit. To it we owe the epic, the lyric, the entire drama in every one of its developments, including burlesque, the idyll, the romantic novel, the novel of adventure, the essay, the dialogue, the oration, the lecture, for which perhaps we should not forgive them, and the epigram, in all the wide meaning of that word. In fact, we owe it everything, except the sonnet, to which, however, some curious parallels of thought

5. Slightly misquoting Alfred, Lord Tennyson, *Idylls of the King* (1859-85), "Gareth and Lynette," lines 272-74.

6. City and major seaport in northern Egypt.

Founded by Alexander the Great after he conquered Egypt in 331 B.C.E., it was the center of Hellenistic commerce and learning, with a great university and two royal libraries.

movement may be traced in the Anthology,⁷ American journalism, to which no parallel can be found anywhere, and the ballad in sham Scotch dialect, which one of our most industrious writers⁸ has recently proposed should be made the basis for a final and unanimous effort on the part of our second-rate poets to make themselves really romantic. Each new school, as it appears, cries out against criticism, but it is to the critical faculty in man that it owes its origin. The mere creative instinct does not innovate, but reproduces.

Ernest. You have been talking of criticism as an essential part of the creative spirit, and I now fully accept your theory. But what of criticism outside creation? I have a foolish habit of reading periodicals, and it seems to me that most modern criticism is perfectly valueless.

Gilbert. So is most modern creative work, also. Mediocrity weighing mediocrity in the balance, and incompetence applauding its brother—that is the spectacle which the artistic activity of England affords us from time to time. And yet, I feel I am a little unfair in this matter. As a rule, the critics—I speak, of course, of the higher class, of those, in fact, who write for the sixpenny papers—are far more cultured than the people whose work they are called upon to review. This is, indeed, only what one would expect, for criticism demands infinitely more cultivation than creation does.

Ernest. Really?

Gilbert. Certainly. Anybody can write a three-volumed novel.⁹ It merely requires a complete ignorance of both life and literature. The difficulty that I should fancy the reviewer feels is the difficulty of sustaining any standard. Where there is no style a standard must be impossible. The poor reviewers are apparently reduced to be the reporters of the police court of literature, the chroniclers of the doings of the habitual criminals of art. It is sometimes said of them that they do not read all through the works they are called upon to criticise. They do not. Or at least they should not. If they did so, they would become confirmed misanthropes; or, if I may borrow a phrase from one of the pretty Newnham graduates, confirmed womanthropes¹ for the rest of their lives. Nor is it necessary. To know the vintage and quality of a wine one need not drink the whole cask. It must be perfectly easy in half an hour to say whether a book is worth anything or worth nothing. Ten minutes are really sufficient, if one has the instinct for form. Who wants to wade through a dull volume? One tastes it, and that is quite enough—more than enough, I should imagine. I am aware that there are many honest workers in painting as well as in literature who object to criticism entirely. They are quite right. Their work stands in no intellectual relation to their age. It brings us no new element of pleasure. It suggests no fresh departure of thought, or passion, or beauty. It should not be spoken of. It should be left to the oblivion that it deserves.

Ernest. But, my dear fellow—excuse me for interrupting you—you seem to me to be allowing your passion for criticism to lead you a great deal too

7. The Greek or Palatine Anthology, a collection of Greek epigrams (some from as early as the 7th c. B.C.E.) compiled ca. 980 C.E.

8. William Sharp (1855–1905), Scottish writer whose works (written under the name Fiona Macleod) include mystic Celtic tales and romances of peasant life.

9. Standard length of Victorian novels.

1. A nonsensical coinage meaning “woman-haters.” Newnham College: the second of the colleges for women in Cambridge (founded in 1871; women initially did not follow the university curriculum and were not granted Cambridge degrees for another half century).

far. For, after all, even you must admit that it is much more difficult to do a thing than to talk about it.

Gilbert. More difficult to do a thing than to talk about it? Not at all. That is a gross popular error. It is very much more difficult to talk about a thing than to do it. In the sphere of actual life that is, of course, obvious. Anybody can make history. Only a great man can write it. There is no mode of action, no form of emotion, that we do not share with the lower animals. It is only by language that we rise above them, or above each other—by language, which is the parent, and not the child, of thought. Action, indeed, is always easy, and when presented to us in its most aggravated, because most continuous form, which I take to be that of real industry, becomes simply the refuge of people who have nothing whatsoever to do. No, Ernest, don't talk about action. It is a blind thing, dependent on external influences, and moved by an impulse of whose nature it is unconscious. It is a thing incomplete in its essence, because limited by accident, and ignorant of its direction, being always at variance with its aim. Its basis is the lack of imagination. It is the last resource of those who know not how to dream.

Ernest. Gilbert, you treat the world as if it were a crystal ball. You hold it in your hand, and reverse it to please a wilful fancy. You do nothing but rewrite history.

Gilbert. The one duty we owe to history is to rewrite it. That is not the least of the tasks in store for the critical spirit. When we have fully discovered the scientific laws that govern life we shall realise that the one person who has more illusions than the dreamer is the man of action. He, indeed, knows neither the origin of his deeds nor their results. From the field in which he thought that he had sown thorns we have gathered our vintage, and the fig-tree that he planted for our pleasure is as barren as the thistle, and more bitter.² It is because Humanity has never known where it was going that it has been able to find its way.

Ernest. You think, then, that in the sphere of action a conscious aim is a delusion?

Gilbert. It is worse than a delusion. If we lived long enough to see the results of our actions, it may be that those who call themselves good would be sickened with a dull remorse, and those whom the world calls evil stirred by a noble joy. Each little thing that we do passes into the great machinery of life, which may grind our virtues to powder and make them worthless, or transform our sins into elements of a new civilisation, more marvellous and more splendid than any that has gone before. * * *

Ernest. * * * But, surely, the higher you place the creative artist, the lower must the critic rank.

Gilbert. Why so?

Ernest. Because the best that he can give us will be but an echo of rich music, a dim shadow of clear-outlined form. It may, indeed, be that life is chaos, as you tell me that it is; that its martyrdoms are mean and its heroisms ignoble; and that it is the function of Literature to create, from the rough material of actual existence, a new world that will be more marvellous, more enduring, and more true than the world that common eyes look upon, and through which common natures seek to realise their perfection. But surely,

2. See Matthew 7.16: "Do men gather grapes of thorns, or figs of thistles?"

if this new world has been made by the spirit and touch of a great artist, it will be a thing so complete and perfect that there will be nothing left for the critic to do. I quite understand now, and indeed admit most readily, that it is far more difficult to talk about a thing than to do it. But it seems to me that this sound and sensible maxim, which is really extremely soothing to one's feelings, and should be adopted as its motto by every Academy of Literature all over the world, applies only to the relations that exist between Art and Life, and not to any relations that there may be between Art and Criticism.

Gilbert. But, surely, Criticism is itself an art. And just as artistic creation implies the working of the critical faculty, and, indeed, without it cannot be said to exist at all, so Criticism is really creative in the highest sense of the word. Criticism is, in fact, both creative and independent.

Ernest. Independent?

Gilbert. Yes; independent. Criticism is no more to be judged by any low standard of imitation or resemblance than is the work of poet or sculptor. The critic occupies the same relation to the work of art that he criticises as the artist does to the visible world of form and colour, or the unseen world of passion and of thought. He does not even require for the perfection of his art the finest materials. Anything will serve his purpose. And just as out of the sordid and sentimental amours of the silly wife of a small country doctor in the squalid village of Yorville-l'Abbaye, near Rouen, Gustave Flaubert³ was able to create a classic, and make a masterpiece of style, so from subjects of little or of no importance, such as the pictures in this year's Royal Academy, or in any year's Royal Academy, for that matter, Mr. Lewis Morris's poems, M. Ohnet's novels, or the plays of Mr. Henry Arthur Jones,⁴ the true critic can, if it be his pleasure so to direct or waste his faculty of contemplation, produce work that will be flawless in beauty and instinct with intellectual subtlety. Why not? Dulness is always an irresistible temptation for brilliancy, and stupidity is the permanent *Bestia Trionfans*⁵ that calls wisdom from its cave. To an artist so creative as the critic, what does subject-matter signify? No more and no less than it does to the novelist and the painter. Like them, he can find his motives everywhere. Treatment is the test. There is nothing that has not in it suggestion or challenge.

Ernest. But is Criticism really a creative art?

Gilbert. Why should it not be? It works with materials, and puts them into a form that is at once new and delightful. What more can one say of poetry? Indeed, I would call criticism a creation within a creation. For just as the great artists, from Homer and Æschylus, down to Shakespeare and Keats,⁶ did not go directly to life for their subject-matter, but sought for it in myth, and legend, and ancient tale, so the critic deals with materials that others have, as it were, purified for him, and to which imaginative form and colour have been already added. Nay, more, I would say that the highest Criticism,

3. French novelist (1821–1880); the "amours" are created in *Madame Bovary* (1856).

4. English dramatist (1851–1929). Morris (1833–1907), Welsh poet, essayist, and barrister. Georges Ohnet (1848–1918), French novelist and dramatist.

5. *Triumphant Beast* (Italian); the reference is to *Spaccio della bestia Trionfante* (1584, *Expulsion of*

the Triumphant Beast), a philosophical allegory by the Italian scientist and philosopher Giordano Bruno.

6. John Keats (1795–1821), English Romantic poet; roughly 2 centuries separated his works from those of Shakespeare, and the tragedies of Æschylus (525–456 B.C.E.) from the epics of Homer.

being the purest form of personal impression, is, in its way, more creative than creation, as it has least reference to any standard external to itself, and is, in fact, its own reason for existing, and, as the Greeks would put it, in itself, and to itself, an end. Certainly, it is never trammelled by any shackles of verisimilitude. No ignoble considerations of probability, that cowardly concession to the tedious repetitions of domestic or public life, affect it ever. One may appeal from fiction unto fact. But from the soul there is no appeal.

Ernest. From the soul?

Gilbert. Yes, from the soul. That is what the highest Criticism really is, the record of one's own soul. It is more fascinating than history, as it is concerned simply with oneself. It is more delightful than philosophy, as its subject is concrete and not abstract, real and not vague. It is the only civilised form of autobiography, as it deals not with the events, but with the thoughts of one's life; not with life's physical accidents of deed or circumstance, but with the spiritual moods and imaginative passions of the mind. I am always amused by the silly vanity of those writers and artists of our day who seem to imagine that the primary function of the critic is to chatter about their second-rate work. The best that one can say of most modern creative art is that it is just a little less vulgar than reality; and so the critic, with his fine sense of distinction and sure instinct of delicate refinement, will prefer to look into the silver mirror or through the woven veil, and will turn his eyes away from the chaos and clamour of actual existence, though the mirror be tarnished and the veil be torn. His sole aim is to chronicle his own impressions. It is for him that pictures are painted, books written, and marble hewn into form.

Ernest. I seem to have heard another theory of Criticism.

Gilbert. Yes: it has been said by one whose gracious memory we all revere, and the music of whose pipe once lured Proserpina from her Sicilian fields, and made those white feet stir, and not in vain, the Cumnor cowslips, that the proper aim of Criticism is to see the object as in itself it really is.⁷ But this is a very serious error, and takes no cognisance of Criticism's most perfect form, which is in its essence purely subjective, and seeks to reveal its own secret and not the secret of another. For the highest Criticism deals with art not as expressive, but as impressive, purely.

Ernest. But is that really so?

Gilbert. Of course it is. Who cares whether Mr. Ruskin's views on Turner⁸ are sound or not? What does it matter? That mighty and majestic prose of his, so fervid and so fiery-coloured in its noble eloquence, so rich in its elaborate, symphonic music, so sure and certain, at its best, in subtle choice of word and epithet, is at least as great a work of art as any of those wonderful sunsets that bleach or rot on their corrupted canvases in England's Gallery;⁹ greater, indeed, one is apt to think at times, not merely because its equal beauty is more enduring, but on account of the fuller variety of its appeal, soul speaking to soul in those long-cadenced lines, not through form and colour alone, though through these, indeed, completely and without loss,

7. Matthew Arnold defines the "aim of criticism" in "The Function of Criticism at the Present Time" (1864, 1865). In his poem "Thyrsis" (1866), Arnold says that he would supplicate Proserpina, the goddess of fertility and queen of the underworld, "in vain"; for while she knows Sicily well,

she does not know the "Cumnor cowslips," near Oxford.

8. The painter J. M. W. Turner (1775-1851), passionately defended by the English writer, reformer, and art critic John Ruskin (1819-1900).

9. The National Gallery, in London.

but with intellectual and emotional utterance, with lofty passion and with loftier thought, with imaginative insight, and with poetic aim; greater, I always think, even as Literature is the greater art. Who, again, cares whether Mr. Pater has put into the portrait of Monna Lisa¹ something that Lionardo never dreamed of? The painter may have been merely the slave of an archaic smile, as some have fancied, but whenever I pass into the cool galleries of the Palace of the Louvre, and stand before that strange figure "set in its marble chair in that cirque of fantastic rocks, as in some faint light under sea," I murmur to myself, "She is older than the rocks among which she sits; like the vampire, she has been dead many times, and learned the secrets of the grave; and has been a diver in deep seas, and keeps their fallen day about her; and trafficked for strange webs with Eastern merchants; and, as Leda, was the mother of Helen of Troy, and, as St. Anne, the mother of Mary; and all this has been to her but as the sound of lyres and flutes, and lives only in the delicacy with which it has moulded the changing lineaments, and tinged the eyelids and the hands." And I say to my friend, "The presence that thus so strangely rose beside the waters is expressive of what in the ways of a thousand years man had come to desire"; and he answers me, "He's is the head upon which all 'the ends of the world are come,' and the eyelids are a little weary."

And so the picture becomes more wonderful to us than it really is, and reveals to us a secret of which, in truth, it knows nothing, and the music of the mystical prose is as sweet in our ears as was that flute-player's music that lent to the lips of La Gioconda² those subtle and poisonous curves. Do you ask me what Lionardo would have said had any one told him of this picture that "all the thoughts and experience of the world had etched and moulded there in that which they had of power to refine and make expressive the outward form, the animalism of Greece, the lust of Rome, the reverie of the Middle Age with its spiritual ambition and imaginative loves, the return of the Pagan world, the sins of the Borgias?"³ He would probably have answered that he had contemplated none of these things, but had concerned himself simply with certain arrangements of lines and masses, and with new and curious colour-harmonies of blue and green. And it is for this very reason that the criticism which I have quoted is criticism of the highest kind. It treats the work of art simply as a starting-point for a new creation. It does not confine itself—let us at least suppose so for the moment—to discovering the real intention of the artist and accepting that as final. And in this it is right, for the meaning of any beautiful created thing is, at least, as much in the soul of him who looks at it as it was in his soul who wrought it. Nay, it is rather the beholder who lends to the beautiful thing its myriad meanings, and makes it marvellous for us, and sets it in some new relation to the age, so that it becomes a vital portion of our lives, and a symbol of what we pray for, or perhaps of what, having prayed for, we fear that we may receive. The longer I study, Ernest, the more clearly I see that the beauty of the visible arts is, as the beauty of music, impressive primarily, and that it may be

1. In the essay on Leonardo da Vinci included in *Studies in the History of the Renaissance* (1873), by WALTER PATER (1839–1894); Gilbert then quotes Pater.

2. The subject of Leonardo's painting was the wife of Francesco del Gioconda; thus, the *Mona Lisa* is

sometimes referred to as *La Gioconda*.

3. An Italian family, influential from the 14th to the 16th century, that included religious, military, and political leaders and patrons of the arts; they were notorious for their ruthlessness and greed.

marred, and indeed often is so, by any excess of intellectual intention on the part of the artist. For when the work is finished it has, as it were, an independent life of its own, and may deliver a message far other than that which was put into its lips to say. Sometimes, when I listen to the overture of *Tannhäuser*,⁴ I seem indeed to see that comely knight treading delicately on the flower-strewn grass, and to hear the voice of Venus calling to him from the caverned hill. But at other times it speaks to me of a thousand different things, of myself, it may be, and my own life, or of the lives of others whom one has loved and grown weary of loving, or of the passions that man has known, or of the passions that man has not known, and so has sought for. To-night it may fill one with that *ΕΡΩΣ ΤΩΝ ΑΔΥΝΑΤΩΝ*, that *Amour de l'Impossible*,⁵ which falls like a madness on many who think they live securely and out of reach of harm, so that they sicken suddenly with the poison of unlimited desire, and, in the infinite pursuit of what they may not obtain, grow faint and swoon or stumble. To-morrow, like the music of which Aristotle and Plato tell us, the noble Dorian music⁶ of the Greek, it may perform the office of a physician, and give us an anodyne against pain, and heal the spirit that is wounded, and "bring the soul into harmony with all right things." And what is true about music is true about all the arts. Beauty has as many meanings as man has moods. Beauty is the symbol of symbols. Beauty reveals everything, because it expresses nothing. When it shows us itself it shows us the whole fiery-coloured world.

Ernest. But is such work as you have talked about really criticism?

Gilbert. It is the highest Criticism, for it criticises not merely the individual work of art, but Beauty itself, and fills with wonder a form which the artist may have left void, or not understood, or understood incompletely.

Ernest. The highest Criticism, then, is more creative than creation, and the primary aim of the critic is to see the object as in itself it really is not; that is your theory, I believe?

Gilbert. Yes, that is my theory. To the critic the work of art is simply a suggestion for a new work of his own, that need not necessarily bear any obvious resemblance to the thing it criticises. The one characteristic of a beautiful form is that one can put into it whatever one wishes, and see in it whatever one chooses to see; and the Beauty, that gives to creation its universal and æsthetic element, makes the critic a creator in his turn, and whispers of a thousand different things which were not present in the mind of him who carved the statue or painted the panel or graved the gem.

It is sometimes said by those who understand neither the nature of the highest Criticism nor the charm of the highest Art, that the pictures that the critic loves most to write about are those that belong to the anecdotage of painting, and that deal with scenes taken out of literature or history. But this is not so. Indeed, pictures of this kind are far too intelligible. As a class, they rank with illustrations, and, even considered from this point of view, are failures, as they do not stir the imagination, but set definite bounds to it. For the domain of the painter is, as I suggested before, widely different from that

4. An 1845 opera by the German composer Richard Wagner, which describes the legendary relationship between the 14th-century German poet of the title and Venus, Roman goddess of love.

5. The Greek and French phrases both mean "love of the impossible."

6. Restrained and simple music associated with the Dorians, the last of the northern invaders of Greece (ca. 11th c. B.C.E.). On the Greek philosophers PLATO (ca. 427-347 B.C.E.) and ARISTOTLE (384-322 B.C.E.), see above.

of the poet. To the latter belongs life in its full and absolute entirety; not merely the beauty that men look at, but the beauty that men listen to also; not merely the momentary grace of form or the transient gladness of colour, but the whole sphere of feeling, the perfect cycle of thought. The painter is so far limited that it is only through the mask of the body that he can show us the mystery of the soul; only through conventional images that he can handle ideas; only through its physical equivalents that he can deal with psychology. And how inadequately does he do it then, asking us to accept the torn turban of the Moor for the noble rage of Othello, or a dotard in a storm for the wild madness of Lear! Yet it seems as if nothing could stop him. Most of our elderly English painters spend their wicked and wasted lives in poaching upon the domain of the poets, marring their motives by clumsy treatment, and striving to render, by visible form or colour, the marvel of what is invisible, the splendour of what is not seen. Their pictures are, as a natural consequence, insufferably tedious. They have degraded the visible arts into the obvious arts, and the one thing not worth looking at is the obvious. I do not say that poet and painter may not treat of the same subject. They have always done so, and will always do so. But while the poet can be pictorial or not, as he chooses, the painter must be pictorial always. For a painter is limited, not to what he sees in nature, but to what upon canvas may be seen.

And so, my dear Ernest, pictures of this kind will not really fascinate the critic. He will turn from them to such works as make him brood and dream and fancy, to works that possess the subtle quality of suggestion, and seem to tell one that even from them there is an escape into a wider world. It is sometimes said that the tragedy of an artist's life is that he cannot realise his ideal. But the true tragedy that dogs the steps of most artists is that they realise their ideal too absolutely. For, when the ideal is realised, it is robbed of its wonder and its mystery, and becomes simply a new starting point for an ideal that is other than itself. This is the reason why music is the perfect type of art. Music can never reveal its ultimate secret. This, also, is the explanation of the value of limitations in art. The sculptor gladly surrenders imitative colour, and the painter the actual dimensions of form, because by such renunciations they are able to avoid too definite a presentation of the Real, which would be mere imitation, and too definite a realisation of the Ideal, which would be too purely intellectual. It is through its very incompleteness that Art becomes complete in beauty, and so addresses itself, not to the faculty of recognition nor to the faculty of reason, but to the æsthetic sense alone, which, while accepting both reason and recognition as stages of apprehension, subordinates them both to a pure synthetic impression of the work of art as a whole; and, taking whatever alien emotional elements the work may possess, uses their very complexity as a means by which a richer unity may be added to the ultimate impression itself. You see, then, how it is that the æsthetic critic rejects those obvious modes of art that have but one message to deliver, and having delivered it becomes dumb and sterile, and seeks rather for such modes as suggest reverie and mood, and by their imaginative beauty make all interpretations true and no interpretation final. Some resemblance, no doubt, the creative work of the critic will have to the work that has stirred him to creation, but it will be such resemblance as exists, not between Nature and

the mirror that the painter of landscape or figure may be supposed to hold up to her, but between Nature and the work of the decorative artist. Just as on the flowerless carpets of Persia, tulip and rose blossom indeed, and are lovely to look on, though they are not reproduced in visible shape or line; just as the pearl and purple of the sea-shell is echoed in the church of St. Mark at Venice; just as the vaulted ceiling of the wondrous chapel of Ravenna⁷ is made gorgeous by the gold and green and sapphire of the peacock's tail, though the birds of Juno⁸ fly not across it; so the critic reproduces the work that he criticises in a mode that is never imitative, and part of whose charm may really consist in the rejection of resemblance, and shows us in this way not merely the meaning but also the mystery of Beauty, and, by transforming each art into literature, solves once for all the problem of Art's unity.

* * *

From Part 2

* * *

Ernest. * * * You have told me that the highest criticism deals with art, not as expressive, but as impressive purely, and is, consequently, both creative and independent; is, in fact, an art by itself, occupying the same relation to creative work that creative work does to the visible world of form and colour, or the unseen world of passion and of thought. Well, now tell me, will not the critic be sometimes a real interpreter?

Gilbert. Yes; the critic will be an interpreter, if he chooses. He can pass from his sympathetic impression of the work of art as a whole, to an analysis or exposition of the work itself, and in this lower sphere, as I hold it to be, there are many delightful things to be said and done. Yet his object will not always be to explain the work of art. He may seek rather to deepen its mystery, to raise round it, and round its maker, that mist of wonder which is dear to both gods and worshippers alike. Ordinary people are "terribly at ease in Zion."⁹ They propose to walk arm in arm with the poets, and have a glib, ignorant way of saying, "Why should we read what is written about Shakespeare and Milton? We can read the plays and the poems. That is enough." But an appreciation of Milton is, as the late Rector of Lincoln¹ remarked once, the reward of consummate scholarship. And he who desires to understand Shakespeare truly must understand the relations in which Shakespeare stood to the Renaissance and the Reformation, to the age of Elizabeth and the age of James;² he must be familiar with the history of the struggle for supremacy between the old classical forms and the new spirit of romance, between the school of Sidney, and Daniel, and Jonson, and the school of Marlowe³ and Marlowe's greater son; he must know the materials that were

7. City in north central Italy, known for its Roman and Byzantine buildings, tombs (including that of the poet DANTE ALIGHIERI), and mosaics.

8. That is, peacocks (associated with Juno, the queen of the Roman gods).

9. In a passage in *Culture and Anarchy* (1868, 1869). Matthew Arnold quotes a remark by the Scottish-born essayist and historian Thomas Carlyle (1795-1881) on the difference between Hellenism and Hebraism: "Socrates is terribly at

case in Zion."

1. Mark Pattison (1813-1884), English scholar whose works include a book on John Milton (1879); he was elected rector of Lincoln College, Oxford University, in 1861.

2. James I (1566-1625) reigned 1603-25, after the death of Elizabeth I.

3. Christopher Marlowe (1564-1593), English poet and dramatist. SIR PHILIP SIDNEY (1554-1586), English poet, politician, and soldier. Sam-

at Shakespeare's disposal, and the method in which he used them, and the conditions of theatric presentation in the sixteenth and seventeenth centuries, their limitations and their opportunities for freedom, and the literary criticism of Shakespeare's day, its aims and modes and canons; he must study the English language in its progress, and blank or rhymed verse in its various developments; he must study the Greek drama, and the connection between the art of the creator of the *Agamemnon*⁴ and the art of the creator of *Macbeth*; in a word, he must be able to bind Elizabethan London to the Athens of Pericles,⁵ and to learn Shakespeare's true position in the history of European drama and the drama of the world. The critic will certainly be an interpreter, but he will not treat Art as a riddling Sphinx, whose shallow secret may be guessed and revealed by one whose feet are wounded and who knows not his name.⁶ Rather, he will look upon Art as a goddess whose mystery it is his province to intensify, and whose majesty his privilege to make more marvellous in the eyes of men.

And here, Ernest, this strange thing happens. The critic will, indeed, be an interpreter, but he will not be an interpreter in the sense of one who simply repeats in another form a message that has been put into his lips to say. For, just as it is only by contact with the art of foreign nations that the art of a country gains that individual and separate life that we call nationality, so, by curious inversion, it is only by intensifying his own personality that the critic can interpret the personality and work of others, and the more strongly this personality enters into the interpretation the more real the interpretation becomes, the more satisfying, the more convincing, and the more true.

Ernest. I would have said that personality would have been a disturbing element.

Gilbert. No; it is an element of revelation. If you wish to understand others you must intensify your own individualism.

Ernest. What, then, is the result?

Gilbert. I will tell you, and perhaps I can tell you best by definite example. It seems to me that, while the literary critic stands, of course, first, as having the wider range, and larger vision, and nobler material, each of the arts has a critic, as it were, assigned to it. The actor is a critic of the drama. He shows the poet's work under new conditions, and by a method special to himself. He takes the written word, and action, gesture, and voice become the media of revelation. The singer, or the player on lute and viol, is the critic of music. The etcher of a picture robs the painting of its fair colours, but shows us by the use of a new material its true colour-quality, its tones and values, and the relations of its masses, and so is, in his way, a critic of it, for the critic is he who exhibits to us a work of art in a form different from that of the work itself, and the employment of a new material is a critical as well as a creative element. Sculpture, too, has its critic, who may be either the carver of a gem, as he was in Greek days, or some painter like Mantegna,⁷ who

uel Daniel (1562–1619), English poet and historian. Ben Jonson (1572–1637), English poet and dramatist.

4. *Agamemnon* (458 B.C.E.) is the first play in the *Oresteia* trilogy of Aeschylus.

5. Great Athenian statesman, military leader, and famous patron of the arts (ca. 495–429 B.C.E.).

6. The parents of Oedipus (literally, "swollen foot") left their newborn son—his feet pierced and

bound together—on a mountainside to die. He grew up to solve the Sphinx's riddle and fulfill the prophecy they had hoped to avert by his death (that he would kill his father). His story is told in the *Iliad* and in many Greek dramas, most notably Sophocles' *Oedipus Rex* (ca. 430 B.C.E.).

7. Andrea Mantegna (1431–1506), northern Italian painter and engraver, known for his mastery of perspective and compositional techniques.

sought to reproduce on canvas the beauty of plastic line and the symphonic dignity of processional bas-relief. And in the case of all these creative critics of art it is evident that personality is an absolute essential for any real interpretation. When Rubinstein plays to us the *Sonata Appassionata*⁸ of Beethoven, he gives us not merely Beethoven, but also himself, and so gives us Beethoven absolutely—Beethoven reinterpreted through a rich artistic nature, and made vivid and wonderful to us by a new and intense personality. When a great actor plays Shakespeare we have the same experience. His own individuality becomes a vital part of the interpretation. People sometimes say that actors give us their own Hamlets, and not Shakespeare's; and this fallacy—for it is a fallacy—is, I regret to say, repeated by that charming and graceful writer who has lately deserted the turmoil of literature for the peace of the House of Commons—I mean the author of *Obiter Dicta*.⁹ In point of fact, there is no such thing as Shakespeare's Hamlet. If Hamlet has something of the definiteness of a work of art, he has also all the obscurity that belongs to life. There are as many Hamlets as there are melancholies.

Ernest. As many Hamlets as there are melancholies?

Gilbert. Yes: and as art springs from personality, so it is only to personality that it can be revealed, and from the meeting of the two comes right interpretative criticism.

Ernest. The critic, then, considered as the interpreter, will give no less than he receives, and lend as much as he borrows?

Gilbert. He will be always showing us the work of art in some new relation to our age. He will always be reminding us that great works of art are living things—are, in fact, the only things that live. So much, indeed, will he feel this, that I am certain that, as civilisation progresses and we become more highly organised, the elect spirits of each age, the critical and cultured spirits, will grow less and less interested in actual life, and *will seek to gain their impressions almost entirely from what Art has touched*. For Life is terribly deficient in form. Its catastrophes happen in the wrong way and to the wrong people. There is a grotesque horror about its comedies, and its tragedies seem to culminate in farce. One is always wounded when one approaches it: Things last either too long, or not long enough.

* * *

Ernest. But where in this is the function of the critical spirit?

Gilbert. The culture that this transmission of racial experiences¹ makes possible can be made perfect by the critical spirit alone, and indeed may be said to be one with it. For who is the true critic but he who bears within himself the dreams, and ideas, and feelings of myriad generations, and to whom no form of thought is alien, no emotional impulse obscure? And who the true man of culture, if not he who by fine scholarship and fastidious rejection has made instinct self-conscious and intelligent, and can separate the work that has distinction from the work that has it not, and so by contact and comparison makes himself master of the secrets of style and school, and understands their meanings, and listens to their voices, and develops that

8. Piano Sonata in F Minor, opus 57 (1805), by Ludwig van Beethoven (1770-1827). Anton Rubinstein (1829-1894), famous Russian pianist.
9. Augustine Birrell (1850-1933), English writer and politician; *Obiter Dicta* was published in 3

vols. (1884, 1887, 1924).

1. That is, the experiences of a tribe, nation, or people, regarded as forming a distinct ethnic stock or group.

spirit of disinterested curiosity which is the real root, as it is the real flower, of the intellectual life, and thus attains to intellectual clarity; and, having learned "the best that is known and thought in the world," lives it—is not fanciful to say so—with those who are the Immortals?

Yes, Ernest: the contemplative life, the life that has for its aim not *doing* but *being*, and not *being* merely, but *becoming*—that is what the critical spirit can give us. The gods live thus: either brooding over their own perfection, as Aristotle tells us, or, as Epicurus² fancied, watching with the calm eyes of the spectator the tragi-comedy of the world that they have made. We, too, might live like them, and set ourselves to witness with appropriate emotions the varied scenes that man and nature afford. We might make ourselves spiritual by detaching ourselves from action, and become perfect by the rejection of energy. It has often seemed to me that Browning³ felt something of this. Shakespeare hurls Hamlet into active life, and makes him realise his mission by effort. Browning might have given us a Hamlet who would have realised his mission by thought. Incident and event were to him unreal or unmeaning. He made the soul the protagonist of life's tragedy, and looked on action as the one undramatic element of a play. To us, at any rate, the *ΒΙΟΣ ΘΕΩΡΗΤΙΚΟΣ*⁴ is the true ideal. From the high tower of Thought we can look out at the world. Calm, and self-centred, and complete, the æsthetic critic contemplates life, and no arrow drawn at a venture can pierce between the joints of his harness. He at least is safe. He has discovered how to live.

Is such a mode of life immoral? Yes: all the arts are immoral, except those baser forms of sensual or didactic art that seek to excite to action of evil or of good. For action of every kind belongs to the sphere of ethics. The aim of art is simply to create a mood. Is such a mode of life unpractical? Ah! it is not so easy to be unpractical as the ignorant Philistine⁵ imagines. It were well for England if it were so. There is no country in the world so much in need of unpractical people as this country of ours. With us, Thought is degraded by its constant association with practice. Who that moves in the stress and turmoil of actual existence, noisy politician, or brawling social reformer, or poor, narrow-minded priest, blinded by the sufferings of that unimportant section of the community among whom he has cast his lot, can seriously claim to be able to form a disinterested intellectual judgment about any one thing? Each of the professions means a prejudice. The necessity for a career forces every one to take sides. We live in the age of the overworked, and the under-educated; the age in which people are so industrious that they become absolutely stupid. And, harsh though it may sound, I cannot help saying that such people deserve their doom. The sure way of knowing nothing about life is to try to make oneself useful.

Ernest. A charming doctrine, Gilbert.

Gilbert. I am not sure about that, but it has at least the minor merit of being true.

* * *

1890, 1891

2. Greek philosopher (341–270 B.C.E.) whose teachings emphasize gaining happiness through self-restraint, moderation, and detachment. Aristotle: see *Metaphysics* 12.7, 9.

3. Robert Browning (1812–1889), English poet.

4. *Bios theōretikos*: contemplative life (Greek).

5. A member of a biblical people who waged war against the Israelites. Matthew Arnold applies the name in *Culture and Anarchy* to the complacent materialist middle classes, indifferent or antagonistic to artistic and cultural values.

SIGMUND FREUD

1856-1939

It is hard to imagine the twentieth century without Sigmund Freud. Along with Charles Darwin (1809-1882), KARL MARX (1818-1883), and Albert Einstein (1879-1955), he helped revolutionize the modern Western conception of human life and its place in the universe. For Freud, human reason was not master in its own house but a precarious defense mechanism struggling against, and often motivated by, unconscious desires and forces. His theory and practice of psychoanalysis have changed the way people think about themselves today, whether they are aware of it or not. At the same time, psychoanalysis has been controversial from the beginning because, unlike experimental science, it cannot be adequately tested, falsified, or objectified. It aims higher than—or falls short of—objective verifiability because it is a study of the very limits of objectivity itself. The impossibility of separating psychoanalysis from the biography of its founder has been used to discredit it, but in fact Freud's writings signal a significant change in the relation between autobiography and thought. They make visible in new ways the narrative challenges involved in telling the story of a life—one's own in particular. Freud's attention to language may help explain why his writings have grown in importance for literary scholars at the same time that they are increasingly criticized for diverging from the protocols of science. Yet perhaps it is also in large part because his writings exist at the limits of *both* literature and science that Freud continues to fascinate us.

Freud was born in Moravia (in what is now the Czech Republic), the first of seven children, to poor Jewish parents. His young mother, Amalia, was his father Jacob's third wife. The Freuds moved to Vienna in 1860, where Sigmund obtained all his education (with the exception of a few months in Paris). Although psychoanalysis today is associated with the "talking cure" and the theory of infantile sexuality, Freud began his career as a clinical neurologist, obtaining his medical degree in 1881. He entered the University of Vienna in 1873, at a time when Jews, who had moved to liberal Vienna in sizable numbers, were already being scapegoated for Austria's economic problems. Freud, in his *Autobiographical Study* (1925), attributed his independence of mind to his position just outside the "compact majority" (Henrik Ibsen's phrase) of German gentile culture, which he nevertheless also shared. When Nazi Germany annexed Austria in 1938, Freud left Vienna reluctantly and under duress. In his lifetime, social liberalism had given way to the most virulent anti-Semitism—a sad confirmation of his warning against taking any notion of the progress of civilization for granted.

While working to obtain his medical degree, Freud was distracted by his broad interests in research. Among other subjects, he became fascinated by the account given by the respected physician Josef Breuer of the treatment of a particularly intelligent hysterical patient. "Anna O." invented the term "talking cure"; she is often considered the first patient of psychoanalysis, although Freud himself never treated her. Fifteen years later, Freud and Breuer would write *Studies on Hysteria* (1895) about this and later cases. In the meantime Freud met Martha Bernays, the woman he hoped would become his wife, and went to Paris. Too poor to marry, he progressed in his profession by getting a small grant to work at the famous Salpêtrière mental hospital under the supervision of the medical showman and great specialist in hysteria Jean-Martin Charcot. In 1886 he returned to Vienna, opened his medical practice, and married Martha; they had six children (three girls and three boys). From 1891 onward, the Freuds lived at Berggasse 19, where Sigmund set up his famous consulting room.

In the years leading up to his groundbreaking *Interpretation of Dreams* (1900), Freud began a formative and intellectually wide-ranging correspondence with Wil-

helm Fliess, an ear, nose, and throat specialist from Berlin. In his practice, Freud gradually abandoned the hypnotic treatments for hysteria recommended by Charcot, substituting instead a form of dialogue between patient and doctor. At first convinced that many of his patients had suffered sexual abuse (or "seduction") by their fathers in childhood, he later came to realize that some of his patients' tales of sexual events were fantasies. The death in 1896 of Freud's own father perhaps increased his unwillingness to believe in paternal guilt. What he called the "abandonment of the seduction theory" has become controversial in recent decades (largely because of Jeffrey Mousaieff Masson's 1984 book, *The Assault on Truth: Freud's Suppression of the Seduction Theory*), criticized as an abandonment of the realities of childhood sexual abuse. But the shift was not first and foremost a denial of the reality of incest; Freud saw in fantasies of incest a psychic reality, and an infantile sexuality, that had to be taken seriously in itself. In his move from realities of fact to realities of fantasy, however, Freud changed the sex of the representative subject: in his new theory of unconscious desire (the "Oedipus complex"), he substituted the desiring son for the abused daughter, the desirable mother for the guilty father. The father, in his account, was no longer a lawbreaker but a lawgiver: the enforcer of the law prohibiting incest between the son and the mother.

In order to gather evidence of the existence of unconscious forces at work in everyday life, Freud turned to psychological phenomena that were at once recognized and disregarded. His first three books—*The Interpretation of Dreams* (1900), *The Psychopathology of Everyday Life* (published in a journal in 1901 and as a book in 1904), and *Jokes and Their Relation to the Unconscious* (1905)—lay out the analytical strategies that would inform the better-known *Three Essays in the Theory of Sexuality* (1905). His theory would have been impossible without the meticulous study of the discredited forms of knowledge revealed by dreams, slips of the tongue, memory lapses, and jokes.

Freud continued seeing patients and published several extensive and now famous case studies—*Fragment of an Analysis of a Case of Hysteria* (better known as "Dora," 1905), "Analysis of a Phobia in a Five-Year-Old Boy" ("Little Hans," 1909), "Notes Upon a Case of Obsessional Neurosis" ("Rat Man," 1909), "Psycho-Analytic Notes on an Autobiographical Account of a Case of Paranoia" ("Schreber," 1911), and *From the History of an Infantile Neurosis* ("Wolf Man," written 1914 and published 1918). Each attempts to come to terms with a difficult psychoanalytic but also narrative challenge: for example, Dora left treatment before Freud was finished with her, and his later footnotes allude to oversights in his understanding; Wolf Man's childhood neurosis could be analyzed only through the screen of adult constructions; and Schreber was analyzed not as Freud's patient but as the author of an autobiography. Freud's case histories offer a fascinating hybrid of certainty, doubt, and inner debate.

In addition to his research and his practice, Freud, at the suggestion of a disciple, founded the Psychological Wednesday Society (later transformed into the Vienna Psychoanalytic Society) in 1902. He traveled to the United States in 1909 to lecture and receive an honorary degree from Clark University in Worcester, Massachusetts, accompanied by his younger colleagues CARL G. JUNG and Sandor Ferenczi (lectures subsequently published as *Five Lectures on Psychoanalysis*, 1910). The tensions—theoretical, personal, and institutional—between Freud and Jung were already growing; by the end of 1912, the two had essentially stopped speaking to each other. Freud took his revenge on his wayward disciples in his polemical "History of the Psycho-Analytic Movement" (1914). He also published a new series of lectures and a number of papers on psychoanalytic technique.

When World War I began Freud's three sons volunteered for the army, but he grew more and more critical of war as a solution to human problems. (Later, at the request of the League of Nations, Freud would collaborate with Albert Einstein in writing *Why War?* [1933].) The war deeply affected his thought, already in a new phase with the publication of his celebrated essay on narcissism in 1914. Traumatic neuroses seemed to put in question the dominance in psychic life of the "pleasure principle"

that he had posited as the motive force of dreams. Even children's games sometimes seemed to give greater weight to the process of repetition itself than to the pleasurable thing repeated. It was at this time that Freud wrote his essay "The 'Uncanny'" (1919) and the longer *Beyond the Pleasure Principle* (1920). A sense of strangeness, of genuinely enigmatic forces, pervades his theory of the "death instinct" and the "repetition compulsion." But perhaps this strangeness was also a way of reconnecting with the strangeness of his original discoveries, which had grown quite familiar. The theoretical gains from this period are formulated in *The Ego and the Id* (1923). (The famous Latin names for the almost allegorical parts of the self—ego, id, superego—were bestowed by translators; Freud himself used German terms meaning "I," "it," and "over-I.")

In the 1920s Freud wrote about larger cultural forces and structures (*Group Psychology and the Analysis of the Ego*, 1921; *The Future of an Illusion*, 1927; and *Civilization and Its Discontents*, 1929), provided major reformulations of his theory, and turned his attention to the problem of sexual difference. His paper "Some Psychological Consequences of the Anatomical Distinction between the Sexes" (1925) began to explore the question of "castration" in a new way. When children observe that some people have penises and others do not, he asserted, they assume that everyone must at first have had one, and that in some people it had been cut off. This encounter with the fact of difference is more satisfying to the little boy than to the little girl. But the "psychic consequences" are far-reaching: the boy takes seriously the father's threat of castration as the punishment for incest, thus experiencing "castration anxiety," while the girl tries to deal with her "inferiority," thus feeling "penis envy." In later essays—especially "Female Sexuality" (1931) and "Femininity" (1932)—Freud attempted to make sense of the desires his theory allotted to women. Feminists have treated his theories with ambivalence: on the one hand, he had the merit of describing human sexuality as a *question*, not a *given*; on the other hand, his phrase "anatomy is destiny" seems in the final analysis to uphold the sexual certainties he himself questioned.

The lectures Freud wrote that include "Femininity" were never meant to be delivered; a series of operations for mouth cancer (beginning in 1923) had left him unable to perform in public. The political situation was also worrisome: Adolf Hitler had been appointed chancellor of Germany, and the Nazi Party was in control. Freud's books were among those burned in Berlin. His last book, *Moses and Monotheism*, was not completed until his own "exodus" to England in 1938. In London in 1939, his cancer worsening, Freud officially closed his practice; and, just after the Germans invaded Poland and after France and Britain declared war on Germany, Freud asked his physician to give him a lethal dose of morphine. He died in September of that year.

How did Freud practice interpretation, then, and how did his theory transform it? Although the details of each individual dream are particular to the dreamer, there are, says Freud, some dreams that occur widely and point to the existence of universal desires. Incest and its prohibition—the universal break between nature and culture, according to anthropologists—form the core of Freud's theory of unconscious desire. In our first selection from *The Interpretation of Dreams*, he turns to the same literary text as ARISTOTLE for a version of the fundamental human plot: Sophocles' *Oedipus Rex*. Warned by an oracle that he will kill his father and marry his mother, Oedipus leaves home in order to escape his fate, only to kill a man and marry a woman who turn out to be the very biological parents who had abandoned him as an infant in order to thwart the same oracle. Literature thus exists for Freud as a form of evidence: the play's centuries-long hold over the attention of viewers must correspond to its depiction of something universally fascinating and repressed. The truth told by the oracle corresponds to unconscious desire, fulfilling itself despite—or perhaps because of—every conscious effort to escape it. The plot of Sophocles' play also furnishes a parallel to the plot of an analysis: a patient's resistance to unconscious knowledge is like Oedipus's reluctance to learn his true identity. Freud goes on to discuss the

relation between *Oedipus Rex* and Shakespeare's *Hamlet*—both in terms of the incest taboo. In answer to the question "Why does Hamlet delay his revenge for his father's death?" Freud replies, "Because his uncle has only carried out a murder that he himself wanted to accomplish." In a few short pages, Freud thus revolutionized the reading of two major canonical texts of Western culture and placed the world of the imagination at the center of human subjectivity.

Freud's attention to new modes of meaning has been immensely suggestive for literary studies. While the relation between literature and dreams has often been noted, as in the ancient work of MACROBIUS (b. ca. 360 C.E.), Freud pursues the connection beyond the realm of general symbolism to lay out a kind of rhetoric of everyday dreams. In our second selection, on the dream-work, he writes that dreams are not nonsensical but meaningful. They are composites made out of the residues of individual lives chosen by the unconscious to represent the fulfilment of a wish: no simple "key" can decode them. Only the dreamer can provide a set of associations to illuminate the "dream-thoughts" behind the dream. Beneath the composite surface, which functions like a puzzle, lies the wish, the puzzle's solution. The dream-thoughts function like a "latent content" behind the "manifest content" of the dream.

Distortion and disguise fill dreams—or literary texts—because the unconscious wish is in some way unacceptable and must evade censorship. Dreams have three main sources of unavoidable distortion, he argues: condensation, displacement, and the needs of representation. These unconscious "primary processes" are also subject to "secondary revision," the editing to which a dream is subject if the dreamer tries to remember it on awakening. Freud's description of the four rhetorical operations ("distortions") performed by dreams has been productively extended to literary texts: while the role of secondary revision there is stronger and more complex, literary texts may provide access to forces that are not directly accessible in other ways.

Freud often uses literary texts to illustrate or confirm his theory. His reading of a 1903 novella by Wilhelm Jensen (*Delusion and Dream in Wilhelm Jensen's "Gradiva,"* 1907) aims to ratify his theory of dreams; "Creative Writers and Daydreaming" (1908) expands on his description of fantasy life; in "The Theme of the Three Caskets" (1913), he turns again to Shakespeare; and in numerous other short essays and notes Freud focuses directly on literature or art. But some of the most explicit literary demonstrations function as "secondary revisions" of the theory itself, eliding the role of literature in *forming* central concepts (the Oedipus complex, narcissism, etc.). For Freud, it is always as if a bourgeois drama is playing on the conscious stage of the psyche, while a Greek tragedy is going on somewhere else.

Freud's celebrated essay on "The 'Uncanny,'" our third selection, offers both a literary application and a new theoretical direction. It contains an extensive analysis of E. T. A. Hoffmann's short story "The Sandman" (1816), in which a young man, Nathaniel, traumatized by the mysterious death of his father, falls in love with a wooden doll, Olympia, in preference to his flesh-and-blood sweetheart. Freud argues that what is uncanny about the story is related not to intellectual uncertainty about whether the doll is alive (as an article by Ernst Jentsch had speculated), but to anxiety about the cause of Nathaniel's father's death. When Nathaniel encounters Coppola, an optician, he thinks he recognizes Coppelius, a lawyer, whom he believes to have caused his father's death and who is conflated in his mind with the Sandman—a storybook figure who takes the eyes of little children who won't go to bed. These threats to the eyes are connected in Freud's mind to the castration complex (Oedipus had blinded himself on learning that he had fulfilled the prophecy). The uncanny return of these figures (the Sandman, Coppelius, Coppola) is also related to Freud's new sense of the "repetition compulsion." Dolls and inanimate objects, which for Freud are not uncanny in the story, nevertheless return to haunt the essay's discussion of "the omnipotence of thoughts" and of the supposedly surmounted childhood belief in animism.

Freud begins his discussion with the characteristics of the word *uncanny*, exten-

sively documented through citations from a dictionary. The German *unheimlich* (unhomely, uncanny) turns out to share a meaning with its apparent opposite. *Heimlich* (homey, familiar) can also mean "concealed, secret," and thus the opposite of the familiar and open. This process of estrangement of the familiar (of the "home") is exactly the same as the process of repression. The fear of being buried alive, for example, is a distorted desire to return to the mother's womb—the "home" of all humanity. The German term gives a clue to a process that psychoanalysis tries to understand more generally. Freud expresses astonishment that other languages lack the equivalent of what in German is such a handy word. But if all languages had the same process in the same place, that process would become a theme, a topic, and thus belong to conscious, rather than unconscious, knowledge.

The essay also addresses "aesthetics" more generally, as its first sentence announces. Indeed, it investigates what analyses of the "beautiful" and the "sublime" leave out: the disturbing, the unsettling, the uncomfortable. Freud's essay itself is far from beautiful: it wanders from topic to topic, it quotes others at great length, it places major points in footnotes, and, in general, it seems sewn together from mismatched parts. Yet this poorly sutured text offers the reader an opportunity to follow the *process*, and not just the *result*, of Freud's thinking. Indeed, that the essay lacks "organic" form, so that readers tend to get lost in it, contributes powerfully to its own uncanny effect. In recent years, partly as a result of Freud's essay, critics have devoted increasing attention to the Gothic in literature and to elements Freud associates with the uncanny—unexpected doubles, severed limbs, bodies buried alive, the return of the dead, magical thinking. Freud's reading of Hoffmann's story allows him to touch many theoretical bases that he, unlike many others, feels comfortable with—unacceptable authorial desires, castration anxieties, homosexual fantasies. But Freud's essay itself also makes readable the persistence of questions he dismisses, and it vividly reveals, in its wandering way, his fascination with what is escaping his grasp.

Freud's short essay titled "Fetishism" (1927), our final selection, builds on his analysis of the consequences of sexual difference. Certain men, he claims, cannot accept the evidence that the woman (the mother) doesn't have a penis. In order to fall in love with women and not become homosexual, they choose as a substitute some object that will continue to support the sexual interest they originally had in the missing maternal penis. The logic of fetishism thus involves both perceiving and denying the evidence of maternal "castration." In a very different way, the same logic of denial and displacement underlies Karl Marx's theory of "the fetishism of the commodity" (*Capital*, vol. 1, 1867; see above). There, the commodity itself appears to contain the value that is really produced by the processes of labor invisible behind it. Here, the substitute (foot, velvet, hair, etc.) appears to function like a sexual organ. In both cases there is a "gleam" around the fetish that attracts desire (sexual or commercial), as if the fetish actually contained the values that it represents.

Freud's analyses have had a fundamental impact on what we now understand as literary theory, influencing virtually every twentieth-century critic. On the one hand, Freud's radical new view of subjectivity has deeply affected the analysis of characters, authors, and readers, enabling a new understanding of split, hidden, or contradictory desires and intentions. On the other hand, for Freud literature is not just an illustration but also a source and authority for understanding those desires and intentions in the first place.

Perhaps more profoundly, Freud changed the nature of attentiveness itself. It was in listening to patients differently that Freud discovered the unconscious—a force of otherness as powerful as, but in no way equivalent to, a god. Inside every person, he said, there was *something* transmitting scrambled messages in a cryptic language, trying to break through the conscious surface of life. The "other" was in ourselves—indeed, it *was* ourselves. Despite the limitations of Freud's middle-class Viennese patriarchal assumptions, his conception of a human subjectivity fundamentally at

odds with itself opened up possibilities he never dreamed of. Each person's life was documented in more than one way: official personal history (conscious remembrance and self-image) and unofficial personal history (the record of changes, traumas, desires, anxieties, and associations that might never have been conscious). Unconscious history contained impossible or forbidden wishes, repressed from the official record or simply outgrown—wishes that remained active in the unconscious and sought expression in dreams, mistakes, jokes, myths, and other discredited or discounted forms of communication. Psychoanalysis is the name for the theory and practice of their interpretation, and literary theory continues to derive inspiration from the psychoanalytic engagement with the most canonical as well as the most uncanonical of texts.

BIBLIOGRAPHY

The English translation of Freud's collected works, carried out under the direction of James Strachey for Leonard and Virginia Woolf's Hogarth Press, has become in many ways more authoritative than any collected works in German. This *Standard Edition of the Complete Psychological Works of Sigmund Freud* (24 vols., 1953–74) is thus the edition most often cited. A handy collection of Freud's literary and artistic essays was edited by Neil Hertz in 1997 under the title *Writings on Art and Literature*. For more general purposes, see Peter Gay's *Freud Reader* (1989) and Elisabeth Young-Bruehl's *Freud on Women* (1990). Many volumes of Freud's copious correspondence (he never left a letter unanswered) have also been published. A monumental three-volume biography, *The Life and Work of Sigmund Freud*, was published by Ernest Jones, who knew Freud well (1953–57; abridged into one volume, 1961). The more recent *Freud: A Life for Our Time* (1988) by Peter Gay is excellent; his invaluable bibliographical essays appended to each chapter delineate all the major debates.

Philip Rieff's *Freud: The Mind of the Moralizer* (1959) and Peter Gay's *Reading Freud* (1990) are good introductions, the latter more literary. See also Paul Ricoeur's *Freud and Philosophy: An Essay on Interpretation* (1970) and Steven Marcus's *Freud and the Culture of Psychoanalysis: Studies in the Transition from Victorian Humanism to Modernity* (1984). For a recent collection of essays critical of Freud, see *Unauthorized Freud: Doubters Confront a Legend*, edited by Frederick C. Crews (1998).

For the centrality of Freud to contemporary critical theory, see the works of Jacques Lacan and Jacques Derrida. Related developments can be found in *The Literary Freud: Mechanisms of Defense and the Poetic Will* (1980), edited by Joseph H. Smith; Malcolm Bowie, *Psychoanalysis and the Future of Theory* (1993), speculates about Freud's continuing impact on discussions of art; while *Freud and Forbidden Knowledge*, edited by Peter L. Rudnytsky and Ellen Handler Spitz (1994), investigates the literary and religious sources of Freud's concepts. See also Graham Frankland's *Freud's Literary Culture* (2000).

For a good general approach to early feminist responses to Freud, see Juliet Mitchell's *Psychoanalysis and Feminism* (1974). A related work by Lisa Appignanesi and John Forrester, *Freud's Women* (1992), analyzes both the historical and the theoretical importance of femininity and of the many woman analysts and patients who surrounded Freud. Luce Irigaray, in *Speculum of the Other Woman* (1974; trans. 1985), and Sarah Kofman, in *The Enigma of Woman* (1980; trans. 1985), revisit Freud's writings on femininity from a French poststructuralist perspective. For a good overview of the intersection of Freud, feminism, and literary studies, see *In Dora's Case: Freud—Hysteria—Feminism*, edited by Charles Bernheimer and Claire Kahane (2d ed., 1990).

On Freud's *Interpretation of Dreams*, see Lawrence M. Porter, *The Interpretation of Dreams: Freud's Theories Revisited* (1987); Alexander Welsh, *Freud's Wishful Dream Book* (1994); Harvie Ferguson, *The Lure of Dreams: Sigmund Freud and the*

Construction of Modernity (1996); and the collection of interdisciplinary essays edited by Laura Marcus, *Sigmund Freud's "The Interpretation of Dreams": New Interdisciplinary Essays* (1999).

Two essays on Freud's "Uncanny" deserve special note: Hélène Cixous, "Fiction and Its Phantoms," *New Literary History* 7 (1976), and "Freud and the Sandman" by Neil Hertz, published in his study of the sublime, *The End of the Line: Essays on Psychoanalysis and the Sublime* (1985). Contemporary literary studies have been greatly affected by Freud's notion of the uncanny, from those focusing on the Renaissance (Marjorie Garber, *Shakespeare's Ghost Writers: Literature as Uncanny Causality*, 1984) to the Enlightenment (Terry Castle, *The Female Thermometer: Eighteenth-Century Culture and the Invention of the Uncanny*, 1995) to the posthuman Gothic (Judith Halberstam, *Skin Shows: Gothic Horror and the Technology of Monsters*, 1995). Julia Kristeva, in *Strangers to Ourselves* (1988; trans. 1991), applies the notion to political science, while Anthony Vidler, in *The Architectural Uncanny: Essays in the Modern Unhomely* (1994), explores it in architecture.

E. L. McCallum's *Object Lessons: How to Do Things with Fetishism* (1999) offers a full-scale analysis of Freud's notion. Two books attempt to combine the Freudian and the Marxian versions of fetishism: Slavoj Žižek's *The Sublime Object of Ideology* (1989) and Rachel Bowlby's *Shopping with Freud* (1993).

Much recent research deals with Freud's Jewishness: Marthe Robert's *From Oedipus to Moses: Freud's Jewish Identity* (1974; trans. 1976) and Susan Handelman's *Slayers of Moses: The Emergence of Rabbinic Interpretation in Modern Literary Theory* (1982) give two early versions of this analysis, later taken in other directions by Sander Gilman in both *Freud, Race, and Gender* (1993) and *The Case of Sigmund Freud: Medicine and Identity at the Fin de Siècle* (1993). Other recent new directions include Diana Fuss's *Identification Papers* (1995), which reads Freud through the lenses of queer and postcolonial theory.

The Cambridge Companion to Freud, edited by Jerome Neu (1991), is a useful resource. Among the bibliographies available in English, by far the best for the period up to 1988 is the bibliographical survey in Peter Gay's biography.

From The Interpretation of Dreams¹

From Chapter V. The Material and Sources of Dreams

* * *

[THE OEDIPUS COMPLEX]

In my experience, which is already extensive, the chief part in the mental lives of all children who later become psychoneurotics is played by their parents. Being in love with the one parent and hating the other are among the essential constituents of the stock of psychical impulses which is formed at that time and which is of such importance in determining the symptoms of the later neurosis. It is not my belief, however, that psychoneurotics differ sharply in this respect from other human beings who remain normal—that they are able, that is, to create something absolutely new and peculiar to themselves. It is far more probable—and this is confirmed by occasional observations on normal children—that they are only distinguished by exhib-

1. Translated by James Strachey. This standard edition incorporates later revisions made by Freud.

iting on a magnified scale feelings of love and hatred to their parents which occur less obviously and less intensely in the minds of most children.

This discovery is confirmed by a legend that has come down to us from classical antiquity: a legend whose profound and universal power to move can only be understood if the hypothesis I have put forward in regard to the psychology of children has an equally universal validity. What I have in mind is the legend of King Oedipus and Sophocles'² drama which bears his name.

Oedipus, son of Laius, King of Thebes, and of Jocasta, was exposed as an infant because an oracle had warned Laius that the still unborn child would be his father's murderer. The child was rescued, and grew up as a prince in an alien court, until, in doubts as to his origin, he too questioned the oracle and was warned to avoid his home since he was destined to murder his father and take his mother in marriage. On the road leading away from what he believed was his home, he met King Laius and slew him in a sudden quarrel. He came next to Thebes and solved the riddle set him by the Sphinx³ who barred his way. Out of gratitude the Thebans made him their king and gave him Jocasta's hand in marriage. He reigned long in peace and honour, and she who, unknown to him, was his mother bore him two sons and two daughters. Then at last a plague broke out and the Thebans made enquiry once more of the oracle. It is at this point that Sophocles' tragedy opens. The messengers bring back the reply that the plague will cease when the murderer of Laius has been driven from the land.

But he, where is he? Where shall now be read
The fading record of this ancient guilt?⁴

The action of the play consists in nothing other than the process of revealing, with cunning delays and ever-mounting excitement—a process that can be likened to the work of a psychoanalysis—that Oedipus himself is the murderer of Laius, but further that he is the son of the murdered man and of Jocasta. Appalled at the abomination which he has unwittingly perpetrated, Oedipus blinds himself and forsakes his home. The oracle has been fulfilled.

Oedipus Rex is what is known as a tragedy of destiny. Its tragic effect is said to lie in the contrast between the supreme will of the gods and the vain attempts of mankind to escape the evil that threatens them. The lesson which, it is said, the deeply moved spectator should learn from the tragedy is submission to the divine will and realization of his own impotence. Modern dramatists have accordingly tried to achieve a similar tragic effect by weaving the same contrast into a plot invented by themselves. But the spectators have looked on unmoved while a curse or an oracle was fulfilled in spite of all the efforts of some innocent man: later tragedies of destiny have failed in their effect.

If *Oedipus Rex* moves a modern audience no less than it did the contemporary Greek one, the explanation can only be that its effect does not lie in the contrast between destiny and human will, but is to be looked for in the particular nature of the material on which that contrast is exemplified. There

2. Greek tragic dramatist (ca. 496–406 B.C.E.), author of *Oedipus the King* (ca. 430, better known by its Latin name, *Oedipus Rex*).

3. A monster with a woman's face, lion's body, and bird's wings who killed travelers who could not

answer her riddle; when Oedipus solved it, she killed herself.

4. Lewis Campbell's translation (1883), lines 108–9 [translator's note].

must be something which makes a voice within us ready to recognize the compelling force of destiny in the *Oedipus*, while we can dismiss as merely arbitrary such dispositions as are laid down in [Grillparzer's] *Die Ahnfrau*⁵ or other modern tragedies of destiny. And a factor of this kind is in fact involved in the story of King Oedipus. His destiny moves us only because it might have been ours—because the oracle laid the same curse upon us before our birth as upon him. It is the fate of all of us, perhaps, to direct our first sexual impulse towards our mother and our first hatred and our first murderous wish against our father. Our dreams convince us that that is so. King Oedipus, who slew his father Laïus and married his mother Jocasta, merely shows us the fulfilment of our own childhood wishes. But, more fortunate than he, we have meanwhile succeeded, in so far as we have not become psychoneurotics, in detaching our sexual impulses from our mothers and in forgetting our jealousy of our fathers. Here is one in whom these primaevial wishes of our childhood have been fulfilled, and we shrink back from him with the whole force of the repression by which those wishes have since that time been held down within us. While the poet, as he unravels the past, brings to light the guilt of Oedipus, he is at the same time compelling us to recognize our own inner minds, in which those same impulses, though suppressed, are still to be found. The contrast with which the closing Chorus leaves us confronted—

. . . Fix on Oedipus your eyes,
 Who resolved the dark enigma, noblest champion and most wise.
 Like a star his envied fortune mounted beaming far and wide:
 Now he sinks in seas of anguish, whelmed beneath a raging tide . . . ⁶

—strikes as a warning at ourselves and our pride, at us who since our childhood have grown so wise and so mighty in our own eyes. Like Oedipus, we live in ignorance of these wishes, repugnant to morality, which have been forced upon us by Nature, and after their revelation we may all of us well seek to close our eyes to the scenes of our childhood.⁷

There is an unmistakable indication in the text of Sophocles' tragedy itself that the legend of Oedipus sprang from some primaevial dream-material which had as its content the distressing disturbance of a child's relation to his parents owing to the first stirrings of sexuality. At a point when Oedipus, though he is not yet enlightened, has begun to feel troubled by his recollec-

5. *The Ancestress* (1817), by the Austrian dramatist Franz Grillparzer. The play's protagonist unknowingly falls in love with his sister and kills his father.

6. Campbell's translation, lines 1524–27 [translator's note].

7. [Footnote added 1914:] None of the findings of psycho-analytic research has provoked such embittered denials, such fierce opposition—or such amusing contortions—on the part of critics as this indication of the childhood impulses towards incest which persist in the unconscious. An attempt has even been made recently to make out, in the face of all experience, that the incest should only be taken as "symbolic."—Ferenczi ("The Symbolic Representation of the Pleasure and Reality Principles in the Oedipus Myth," 1912) has proposed an ingenious "over-interpretation" of the Oedipus myth, based on a passage in one of Scho-

penhauer's letters.—[Added 1919:] Later studies have shown that the "Oedipus complex," which was touched upon for the first time in the above paragraphs in the *Interpretation of Dreams*, throws a light of undreamt-of importance on the history of the human race and the evolution of religion and morality. (See my *Totem and Taboo*, 1912–13 [Essay IV].) [Freud's note].—[Actually the gist of this discussion of the Oedipus complex and of the *Oedipus Rex*, as well as of what follows on the subject of *Hamlet*, had already been put forward by Freud in a letter to Fliess as early as October 15, 1897. A still earlier hint at the discovery of the Oedipus complex was included in a letter of May 31, 1897.—The actual term "Oedipus complex" seems to have been first used by Freud in his published writings in the first of his "Contributions to the Psychology of Love" (1910)—translator's note.] Some of Freud's later footnotes are omitted.

tion of the oracle, Jocasta consoles him by referring to a dream which many people dream, though, as she thinks, it has no meaning:

Many a man ere now in dreams hath lain
With her who bare him. He hath least annoy
Who with such omens troubleth not his mind.⁸

To-day, just as then, many men dream of having sexual relations with their mothers, and speak of the fact with indignation and astonishment. It is clearly the key to the tragedy and the complement to the dream of the dreamer's father being dead. The story of Oedipus is the reaction of the imagination to these two typical dreams. And just as these dreams, when dreamt by adults, are accompanied by feelings of repulsion, so too the legend must include horror and self-punishment. Its further modification originates once again in a misconceived secondary revision of the material, which has sought to exploit it for theological purposes. (Cf. the dream-material in dreams of exhibiting [discussed earlier].) The attempt to harmonize divine omnipotence with human responsibility must naturally fail in connection with this subject-matter just as with any other.

Another of the great creations of tragic poetry, Shakespeare's *Hamlet*, has its roots in the same soil as *Oedipus Rex*. But the changed treatment of the same material reveals the whole difference in the mental life of these two widely separated epochs of civilization: the secular advance of repression in the emotional life of mankind. In the *Oedipus* the child's wishful phantasy that underlies it is brought into the open and realized as it would be in a dream. In *Hamlet* it remains repressed; and—just as in the case of a neurosis—we only learn of its existence from its inhibiting consequences. Strangely enough, the overwhelming effect produced by the more modern tragedy has turned out to be compatible with the fact that people have remained completely in the dark as to the hero's character. The play is built up on Hamlet's hesitations over fulfilling the task of revenge that is assigned to him; but its text offers no reasons or motives for these hesitations and an immense variety of attempts at interpreting them have failed to produce a result. According to the view which was originated by Goethe⁹ and is still the prevailing one to-day, Hamlet represents the type of man whose power of direct action is paralysed by an excessive development of his intellect. (He is 'sicklied o'er with the pale cast of thought'.)¹ According to another view, the dramatist has tried to portray a pathologically irresolute character which might be classed as neurasthenic. The plot of the drama shows us, however, that Hamlet is far from being represented as a person incapable of taking any action. We see him doing so on two occasions: first in a sudden outburst of temper, when he runs his sword through the eavesdropper behind the arras, and secondly in a premeditated and even crafty fashion, when, with all the callousness of a Renaissance prince, he sends the two courtiers to the death that had been planned for himself. What is it, then, that inhibits him in fulfilling the task set him by his father's ghost? The answer, once again, is that it is the peculiar nature of the task. Hamlet is able to do anything—

8. Campbell's translation, lines 982–84 [translator's note].

9. Johann Wolfgang von Goethe (1749–1832),

German poet, playwright, and novelist.

1. *Hamlet* (ca. 1600), 3.1.87.

except take vengeance on the man who did away with his father and took that father's place with his mother, the man who shows him the repressed wishes of his own childhood realized. Thus the loathing which should drive him on to revenge is replaced in him by self-reproaches, by scruples of conscience, which remind him that he himself is literally no better than the sinner whom he is to punish. Here I have translated into conscious terms what was bound to remain unconscious in Hamlet's mind; and if anyone is inclined to call him a hysteric, I can only accept the fact as one that is implied by my interpretation. The distaste for sexuality expressed by Hamlet in his conversation with Ophelia fits in very well with this: the same distaste which was destined to take possession of the poet's mind more and more during the years that followed, and which reached its extreme expression in *Timon of Athens*. For it can of course only be the poet's own mind which confronts us in Hamlet. I observe in a book on Shakespeare by Georg Brandes² (1896) a statement that *Hamlet* was written immediately after the death of Shakespeare's father (in 1601), that is, under the immediate impact of his bereavement and, as we may well assume, while his childhood feelings about his father had been freshly revived. It is known, too, that Shakespeare's own son who died at an early age bore the name of 'Hamnet', which is identical with 'Hamlet'. Just as *Hamlet* deals with the relation of a son to his parents, so *Macbeth* (written at approximately the same period) is concerned with the subject of childlessness. But just as all neurotic symptoms, and, for that matter, dreams, are capable of being 'over-interpreted' and indeed need to be, if they are to be fully understood, so all genuinely creative writings are the product of more than a single motive and more than a single impulse in the poet's mind, and are open to more than a single interpretation. In what I have written I have only attempted to interpret the deepest layer of impulses in the mind of the creative writer.³

From Chapter VI. *The Dream-Work*

Every attempt that has hitherto been made to solve the problem of dreams has dealt directly with their *manifest* content as it is presented in our memory. All such attempts have endeavoured to arrive at an interpretation of dreams from their manifest content or (if no interpretation was attempted to form a judgement as to their nature on the basis of that same manifest content. We are alone in taking something else into account. We have introduced a new class of psychical material between the manifest content of dreams and the conclusions of our enquiry: namely, their *latent* content, or (as we say) the 'dream-thoughts', arrived at by means of our procedure. It is from these dream-thoughts and not from a dream's manifest content that we disentangle its meaning. We are thus presented with a new task which had no previous existence: the task, that is, of investigating the relations

2. Danish critic and scholar (1842-1927); his *William Shakespeare* was translated into German in 1896.

3. [Footnote added 1919:] The above indications of a psycho-analytic explanation of *Hamlet* have since been amplified by Ernest Jones and defended

against the alternative views put forward in the literature of the subject. (See Jones, *Hamlet and Oedipus*, 1910 [and, in a complete form, 1949].) - [Added 1930:] Incidentally, I have in the meantime ceased to believe that the author of Shakespeare's works was the man from Stratford [Freud's note].

between the manifest content of dreams and the latent dream-thoughts, and of tracing out the processes by which the latter have been changed into the former.

The dream-thoughts and the dream-content are presented to us like two versions of the same subject-matter in two different languages. Or, more properly, the dream-content seems like a transcript of the dream-thoughts into another mode of expression, whose characters and syntactic laws it is our business to discover by comparing the original and the translation. The dream-thoughts are immediately comprehensible, as soon as we have learnt them. The dream-content, on the other hand, is expressed as it were in a pictographic script, the characters of which have to be transposed individually into the language of the dream-thoughts. If we attempted to read these characters according to their pictorial value instead of according to their symbolic relation, we should clearly be led into error. Suppose I have a picture-puzzle, a rebus, in front of me. It depicts a house with a boat on its roof, a single letter of the alphabet, the figure of a running man whose head has been conjured away, and so on. Now I might be misled into raising objections and declaring that the picture as a whole and its component parts are nonsensical. A boat has no business to be on the roof of a house, and a headless man cannot run. Moreover, the man is bigger than the house; and if the whole picture is intended to represent a landscape, letters of the alphabet are out of place in it since such objects do not occur in nature. But obviously we can only form a proper judgement of the rebus if we put aside criticisms such as these of the whole composition and its parts and if, instead, we try to replace each separate element by a syllable or word that can be represented by that element in some way or other. The words which are put together in this way are no longer nonsensical but may form a poetical phrase of the greatest beauty and significance. A dream is a picture-puzzle of this sort and our predecessors in the field of dream-interpretation have made the mistake of treating the rebus as a pictorial composition: and as such it has seemed to them nonsensical and worthless.

(A).

THE WORK OF CONDENSATION

The first thing that becomes clear to anyone who compares the dream-content with the dream-thoughts is that a work of *condensation* on a large scale has been carried out. Dreams are brief, meagre and laconic in comparison with the range and wealth of the dream-thoughts. If a dream is written out it may perhaps fill half a page. The analysis setting out the dream-thoughts underlying it may occupy six, eight or a dozen times as much space. This relation varies with different dreams; but so far as my experience goes its direction never varies. As a rule one underestimates the amount of compression that has taken place, since one is inclined to regard the dream-thoughts that have been brought to light as the complete material, whereas if the work of interpretation is carried further it may reveal still more thoughts concealed behind the dream. I have already had occasion to point out that it is in fact never possible to be sure that a dream has been completely interpreted. Even if the solution seems satisfactory and without gaps, the possibility always remains that the dream may have yet another meaning.

Strictly speaking, then, it is impossible to determine the amount of condensation.

* * *

(B).

THE WORK OF DISPLACEMENT

* * *

Among the thoughts that analysis brings to light are many which are relatively remote from the kernel of the dream and which look like artificial interpolations made for some particular purpose. That purpose is easy to divine. It is precisely *they* that constitute a connection, often a forced and far-fetched one, between the dream-content and the dream-thoughts; and if these elements were weeded out of the analysis the result would often be that the component parts of the dream-content would be left not only without overdetermination⁴ but without any satisfactory determination at all. We shall be led to conclude that the multiple determination which decides what shall be included in a dream is not always a primary factor in dream-construction but is often the secondary product of a psychical force which is still unknown to us. Nevertheless multiple determination must be of importance in choosing what particular elements shall enter a dream, since we can see that a considerable expenditure of effort is used to bring it about in cases where it does not arise from the dream-material unassisted.

It thus seems plausible to suppose that in the dream-work a psychical force is operating which on the one hand strips the elements which have a high psychical value of their intensity, and on the other hand, *by means of overdetermination*, creates from elements of low psychical value new values, which afterwards find their way into the dream-content. If that is so, *a transference⁵ and displacement of psychical intensities* occurs in the process of dream-formation, and it is as a result of these that the difference between the text of the dream-content and that of the dream-thoughts comes about. The process which we are here presuming is nothing less than the essential portion of the dream-work; and it deserves to be described as 'dream-displacement'. Dream-displacement and dream-condensation are the two governing factors to whose activity we may in essence ascribe the form assumed by dreams.

Nor do I think we shall have any difficulty in recognizing the psychical force which manifests itself in the facts of dream-displacement. The consequence of the displacement is that the dream-content no longer resembles the core of the dream-thoughts and that the dream gives no more than a distortion of the dream-wish which exists in the unconscious. But we are already familiar with dream-distortion. We traced it back to the censorship which is exercised by one psychical agency in the mind over another. Dream-displacement is one of the chief methods by which that distortion is achieved. *Is fecit cui profuit.*⁶ We may assume, then, that dream-

4. That is, multiple causal factors (a model for causality implying a network rather than the simply linear).

5. A term that in psychoanalysis later comes to signify a displacement of psychical intensities from

a person in the past to a person in the present (especially to the analyst, in the course of a treatment).

6. The old legal tag: "He did the deed who gained by it" [(Latin); translator's note].

displacement comes about through the influence of the same censorship—that is, the censorship of endopsychic defence.

The question of the interplay of these factors—of displacement, condensation and overdetermination—in the construction of dreams, and the question which is a dominant factor and which a subordinate one—all of this we shall leave aside for later investigation. But we can state provisionally a second condition which must be satisfied by those elements of the dream-thoughts which make their way into the dream: *they must escape the censorship imposed by resistance*. And henceforward in interpreting dreams we shall take dream-displacement into account as an undeniable fact.

(C).

THE MEANS OF REPRESENTATION IN DREAMS

In the process of transforming the latent thoughts into the manifest content of a dream we have found two factors at work: dream-condensation and dream-displacement. As we continue our investigation we shall, in addition to these, come across two further determinants which exercise an undoubted influence on the choice of the material which is to find access to the dream.

* * *

We are here interested only in the essential dream-thoughts. These usually emerge as a complex of thoughts and memories of the most intricate possible structure, with all the attributes of the trains of thought familiar to us in waking life. They are not infrequently trains of thought starting out from more than one centre, though having points of contact. Each train of thought is almost invariably accompanied by its contradictory counterpart, linked with it by antithetical association.

The different portions of this complicated structure stand, of course, in the most manifold logical relations to one another. They can represent foreground and background, digressions and illustrations, conditions, chains of evidence and counter-arguments. When the whole mass of these dream-thoughts is brought under the pressure of the dream-work, and its elements are turned about, broken into fragments and jammed together—almost like pack-ice—the question arises of what happens to the logical connections which have hitherto formed its framework. What representation do dreams provide for 'if', 'because', 'just as', 'although', 'either—or', and all the other conjunctions without which we cannot understand sentences or speeches?

In the first resort our answer must be that dreams have no means at their disposal for representing these logical relations between the dream-thoughts. For the most part dreams disregard all these conjunctions, and it is only the substantive content of the dream-thoughts that they take over and manipulate. The restoration of the connections which the dream-work has destroyed is a task which has to be performed by the interpretative process.

The incapacity of dreams to express these things must lie in the nature of the psychical material out of which dreams are made. The plastic arts of painting and sculpture labour, indeed, under a similar limitation as compared with poetry, which can make use of speech; and here once again the reason for their incapacity lies in the nature of the material which these two forms of art manipulate in their effort to express something. Before painting became acquainted with the laws of expression by which it is governed, it

made attempts to get over this handicap. In ancient paintings small labels were hung from the mouths of the persons represented, containing in written characters the speeches which the artist despaired of representing pictorially.

At this point an objection may perhaps be raised in dispute of the idea that dreams are unable to represent logical relations. For there are dreams in which the most complicated intellectual operations take place, statements are contradicted or confirmed, ridiculed or compared, just as they are in waking thought. But here again appearances are deceitful. If we go into the interpretation of dreams such as these, we find that the whole of this is *part of the material of the dream-thoughts and is not a representation of intellectual work performed during the dream itself*. What is reproduced by the ostensible thinking in the dream is the *subject-matter* of the dream-thoughts and not the *mutual relations between them*, the assertion of which constitutes thinking. I shall bring forward some instances of this. But the easiest point to establish in this connection is that all spoken sentences which occur in dreams and are specifically described as such are unmodified or slightly modified reproductions of speeches which are also to be found among the recollections in the material of the dream-thoughts. A speech of this kind is often no more than an allusion to some event included among the dream-thoughts, and the meaning of the dream may be a totally different one.

* * *

What means does the dream-work possess for indicating these relations in the dream-thoughts which it is so hard to represent? I will attempt to enumerate them one by one.

In the first place, dreams take into account in a general way the connection which undeniably exists between all the portions of the dream-thoughts by combining the whole material into a single situation or event. They reproduce *logical connection by simultaneity in time*. Here they are acting like the painter who, in a picture of the School of Athens or of Parnassus,⁷ represent in one group all the philosophers or all the poets. It is true that they were never in fact assembled in a single hall or on a single mountain-top; but they certainly form a group in the conceptual sense.

Dreams carry this method of reproduction down to details. Whenever they show us two elements close together, this guarantees that there is some specially intimate connection between what correspond to them among the dream-thoughts. In the same way, in our system of writing, 'ab' means that the two letters are to be pronounced in a single syllable. If a gap is left between the 'a' and the 'b', it means that the 'a' is the last letter of one word and the 'b' is the first of the next one. So, too, collocations in dreams do not consist of any chance, disconnected portions of the dream-material, but of portions which are fairly closely connected in the dream-thoughts as well.

For representing *causal relations* dreams have two procedures which are in essence the same. Suppose the dream-thoughts run like this: 'Since this was so and so, such and such was bound to happen.' Then the common method of representation would be to introduce the dependent clause as an

7. A mountain in Greece sacred to Apollo and the Muses and hence the region of poetry. The School of Athens: Raphael's famous fresco of this title

(1509-11) depicts philosophers of very different times as if they were contemporaries.

introductory dream and to add the principal clause as the main dream. If I have interpreted aright, the temporal sequence may be reversed. But the more extensive part of the dream always corresponds to the principal clause.

* * *

The alternative 'either—or' cannot be expressed in dreams in any way whatever. Both of the alternatives are usually inserted in the text of the dream as though they were equally valid. The dream of Irma's injection contains a classic instance of this.⁸ Its latent thoughts clearly ran: 'I am not responsible for the persistence of Irma's pains; the responsibility lies *either* in her recalcitrance to accepting my solution, *or* in the unfavourable sexual conditions under which she lives and which I cannot alter, *or* in the fact that her pains are not hysterical at all but of an organic nature.' The dream, on the other hand, fulfilled *all* of these possibilities (which were almost mutually exclusive), and did not hesitate to add a fourth solution, based on the dream-wish. After interpreting the dream, I proceeded to insert the 'either—or' into the context of the dream-thoughts.

If, however, in reproducing a dream, its narrator feels inclined to make use of an 'either—or'—e.g. 'it was either a garden or a sitting-room'—what was present in the dream-thoughts was not an alternative but an 'and', a simple addition. An 'either—or' is mostly used to describe a dream-element that has a quality of vagueness—which, however, is capable of being resolved. In such cases the rule for interpretation is: treat the two apparent alternatives as of equal validity and link them together with an 'and'.

For instance, on one occasion a friend of mine was stopping in Italy and I had been without his address for a considerable time. I then had a dream of receiving a telegram containing this address. I saw it printed in blue on the telegraph form. The first word was vague:

'Via', perhaps
or 'Villa'
or possibly even ('Casa') } the second was clear: 'Secerno'.

The second word sounded like some Italian name and reminded me of discussions I had had with my friend on the subject of etymology. It also expressed my anger with him for having kept his address *secret* from me for so long.⁹ On the other hand, each of the three alternatives for the first word turned out on analysis to be an independent and equally valid starting-point for a chain of thoughts.¹

During the night before my father's funeral I had a dream of a printed notice, placard or poster—rather like the notices forbidding one to smoke in railway waiting-rooms—on which appeared either

'You are requested to close the eyes'
or,
'You are requested to close an eye'.

8. Freud has previously described a dream in which he tells a patient, Irma, "If you still get pains, it's really only your fault"; it is that dream that Freud calls "the specimen dream of psychoanalysis."

9. The Italian word meaning "secret" is *segreto*;

the verb *secernere* means "to secrete," in the sense of giving off a secretion.

1. This dream will be found described in greater detail in Freud's letter to [Wilhelm] Fliess (the friend in question) of April 28, 1897 [translator's note].

I usually write this in the form:

You are requested to close the
 eye(s).'
 an

Each of these two versions had a meaning of its own and led in a different direction when the dream was interpreted. I had chosen the simplest possible ritual for the funeral, for I knew my father's own views on such ceremonies. But some other members of the family were not sympathetic to such puritanical simplicity and thought we should be disgraced in the eyes of those who attended the funeral. Hence one of the versions: 'You are requested to close an eye', i.e. to 'wink at' or 'overlook'. Here it is particularly easy to see the meaning of the vagueness expressed by the 'either—or'. The dream-work failed to establish a unified wording for the dream-thoughts which could at the same time be ambiguous, and the two main lines of thought consequently began to diverge even in the manifest content of the dream.²

In a few instances the difficulty of representing an alternative is got over by dividing the dream into two pieces of equal length.

The way in which dreams treat the category of contraries and contradictories is highly remarkable. It is simply disregarded. 'No' seems not to exist so far as dreams are concerned. They show a particular preference for combining contraries into a unity or for representing them as one and the same thing. Dreams feel themselves at liberty, moreover, to represent any element by its wishful contrary; so that there is no way of deciding at a first glance whether any element that admits of a contrary is present in the dream-thoughts as a positive or as a negative.³

* * *

1900, 1929

The "Uncanny"¹

I

It is only rarely that a psycho-analyst feels impelled to investigate the subject of aesthetics, even when aesthetics is understood to mean not merely the theory of beauty but the theory of the qualities of feeling. He works in other strata of mental life and has little to do with the subdued emotional impulses which, inhibited in their aims and dependent on a host of concurrent factors,

2. This dream is reported by Freud in a letter to Fliess of November 2, 1896. It is there stated to have occurred during the night after the funeral. In its first wording the dream referred to closing the dead man's eyes as a filial duty [translator's note].

3. [Footnote added 1911:] I was astonished to learn from a pamphlet by K. Ahel, *The Antithetical Meaning of Primal Words* (1884) (cf. my review of it, 1910)—and the fact has been confirmed by other philologists—that the most ancient languages behave exactly like dreams in this respect. In the first instance they have only a single word

to describe the two contraries at the extreme ends of a series of qualities or activities (e.g., "strong-weak," "old-young," "far-near," "bind-sever"); they only form distinct terms for the two contraries by a secondary process of making small modifications in the common word. Abel demonstrates this particularly from Ancient Egyptian; but he shows that there are distinct traces of the same course of development in the Semitic and Indo-Germanic languages as well [Freud's note].

1. Translated by Alix Strachey, who sometimes adds a word or phrase in square brackets in the text for clarification.

usually furnish the material for the study of aesthetics. But it does occasionally happen that he has to interest himself in some particular province of that subject; and this province usually proves to be a rather remote one, and one which has been neglected in the specialist literature of aesthetics.

The subject of the 'uncanny'² is a province of this kind. It is undoubtedly related to what is frightening—to what arouses dread and horror; equally certainly, too, the word is not always used in a clearly definable sense, so that it tends to coincide with what excites fear in general. Yet we may expect that a special core of feeling is present which justifies the use of a special conceptual term. One is curious to know what this common core is which allows us to distinguish as 'uncanny' certain things which lie within the field of what is frightening.

As good as nothing is to be found upon this subject in comprehensive treatises on aesthetics, which in general prefer to concern themselves with what is beautiful, attractive and sublime—that is, with feelings of a positive nature—and with the circumstances and the objects that call them forth, rather than with the opposite feelings of repulsion and distress. I know of only one attempt in medico-psychological literature, a fertile but not exhaustive paper by Jentsch (1906).³ But I must confess that I have not made a very thorough examination of the literature, especially the foreign literature, relating to this present modest contribution of mine, for reasons which, as may easily be guessed, lie in the times in which we live;⁴ so that my paper is presented to the reader without any claim to priority.

In his study of the 'uncanny' Jentsch quite rightly lays stress on the obstacle presented by the fact that people vary so very greatly in their sensitivity to this quality of feeling. The writer of the present contribution, indeed, must himself plead guilty to a special obtuseness in the matter, where extreme delicacy of perception would be more in place. It is long since he has experienced or heard of anything which has given him an uncanny impression, and he must start by translating himself into that state of feeling, by awakening in himself the possibility of experiencing it. Still, such difficulties make themselves powerfully felt in many other branches of aesthetics; we need not on that account despair of finding instances in which the quality in question will be unhesitatingly recognized by most people.

Two courses are open to us at the outset. Either we can find out what meaning has come to be attached to the word 'uncanny' in the course of its history; or we can collect all those properties of persons, things, sense-impressions, experiences and situations which arouse in us the feeling of uncanniness, and then infer the unknown nature of the uncanny from what all these examples have in common. I will say at once that both courses lead to the same result: the uncanny is that class of the frightening which leads back to what is known of old and long familiar. How this is possible, in what circumstances the familiar can become uncanny and frightening, I shall show in what follows. Let me also add that my investigation was actually begun by collecting a number of individual cases, and was only later con-

2. The German word, translated throughout this paper by the English "uncanny," is *unheimlich*, literally "unhomely." The English term is not, of course, an exact equivalent of the German one [translator's note].

3. "On the Psychology of the Uncanny," by the German psychologist Ernst Jentsch (1867-1919).

4. An allusion to the First World War only just concluded [translator's note].

firmed by an examination of linguistic usage. In this discussion, however, I shall follow the reverse course.

The German word '*unheimlich*' is obviously the opposite of '*heimlich*' [homely], '*heimisch*' ['native']—the opposite of what is familiar; and we are tempted to conclude that what is 'uncanny' is frightening precisely because it is *not* known and familiar. Naturally not everything that is new and unfamiliar is frightening, however; the relation is not capable of inversion. We can only say that what is novel can easily become frightening and uncanny; some new things are frightening but not by any means all. Something has to be added to what is novel and unfamiliar in order to make it uncanny.

On the whole, Jentsch did not get beyond this relation of the uncanny to the novel and unfamiliar. He ascribes the essential factor in the production of the feeling of uncanniness to intellectual uncertainty; so that the uncanny would always, as it were, be something one does not know one's way about in. The better oriented in his environment a person is, the less readily will he get the impression of something uncanny in regard to the objects and events in it.

It is not difficult to see that this definition is incomplete, and we will therefore try to proceed beyond the equation 'uncanny' = 'unfamiliar'. We will first turn to other languages. But the dictionaries that we consult tell us nothing new, perhaps only because we ourselves speak a language that is foreign. Indeed, we get an impression that many languages are without a word for this particular shade of what is frightening.

I should like to express my indebtedness to Dr. Theodor Reik⁵ for the following excerpts:—

LATIN: (K. E. Georges, *Deutschlateinisches Wörterbuch*, 1898). An uncanny place: *locus suspectus*; at an uncanny time of night: *intempesta nocte*.

GREEK: (Rost's and Schenk's Lexikons). ξένος (i.e. strange, foreign).

ENGLISH: (from the dictionaries of Lucas, Bellows, Flügel and Muret-Sanders). Uncomfortable, uneasy, gloomy, dismal, uncanny, ghastly; (of a house) haunted; (of a man) a repulsive fellow.

FRENCH: (Sachs-Villatte). *Inquiétant, sinistre, lugubre, mal à son aise*.

SPANISH: (Tollhausen, 1889). *Sospechoso, de mal aguero, lúgubre, siniestro*.

The Italian and Portuguese languages seem to content themselves with words which we should describe as circumlocutions. In Arabic and Hebrew 'uncanny' means the same as 'daemonic', 'gruesome'.

Let us therefore return to the German language. In Daniel Sanders's *Wörterbuch der Deutschen Sprache* (1860, 1:729), the following entry, which I here reproduce in full, is to be found under the word '*heimlich*'. I have laid stress on one or two passages by italicizing them.

Heimlich, adj., subst. *Heimlichkeit* (pl. *Heimlichkeiten*): I. Also *heimelich, heimelig*, belonging to the house, not strange, familiar, tame, intimate, friendly, etc.

(a) (Obsolete) belonging to the house or the family, or regarded as so

5. German psychologist (1888-1967).

belonging (cf. Latin *familiaris*, familiar): *Die Heimlichen*, the members of the household; *Der heimliche Rat* (Gen. xli, 45; 2 Sam. xxiii. 23; 1 Chron. xii. 25; Wisd. viii. 4), now more usually *Geheimer Rat* [Privy Councillor].

(b) Of animals: tame, companionable to man. As opposed to wild, e.g. 'Animals which are neither wild nor *heimlich*', etc. 'Wild animals . . . that are trained to be *heimlich* and accustomed to men.' 'If these young creatures are brought up from early days among men they become quite *heimlich*, friendly' etc.—So also: 'It (the lamb) is so *heimlich* and eats out of my hand.' 'Nevertheless, the stork is a beautiful, *heimelich* bird.'

(c) Intimate, friendly comfortable; the enjoyment of quiet content, etc., arousing a sense of agreeable restfulness and security as in one within the four walls of his house. 'Is it still *heimlich* to you in your country where strangers are felling your woods?' 'She did not feel too *heimlich* with him.' 'Along a high, *heimlich*, shady path . . . beside a purling, gushing and babbling woodland brook.' 'To destroy the *Heimlichkeit* of the home.' 'I could not readily find another spot so intimate and *heimlich* as this.' 'We pictured it so comfortable, so nice, so cosy and *heimlich*.' 'In quiet *Heimlichkeit*, surrounded by close walls.' 'A careful housewife, who knows how to make a pleasing *Heimlichkeit* (*Häuslichkeit* [domesticity]) out of the smallest means.' 'The man who till recently had been so strange to him now seemed to him all the more *heimlich*.' 'The protestant land-owners do not feel . . . *heimlich* among their catholic inferiors.' 'When it grows *heimlich* and still, and the evening quiet alone watchès over your cell.' 'Quiet, lovely and *heimlich*, no place more fitted for their rest.' 'He did not feel at all *heimlich* about it.'—Also, [in compounds]: 'The place was so peaceful, so lonely, so shadily-*heimlich*.' 'The in- and outflowing waves of the current, dreamy and lullaby-*heimlich*.' Cf. in especial *Unheimlich* [see below]. Among Swabian Swiss authors in especial, often as a trisyllable: 'How *heimelich* it seemed to Ivo again of an evening, when he was at home.' 'It was so *heimelig* in the house.' 'The warm room and the *heimelig* afternoon.' 'When a man feels in his heart that he is so small and the Lord so great—that is what is truly *heimelig*.' 'Little by little they grew at ease and *heimelig* among themselves.' 'Friendly *Heimeligkeit*.' 'I shall be nowhere more *heimelich* than I am here.' 'That which comes from afar . . . assuredly does not live quite *heimelig* (*heimatlich* [at home], *freundnachbarlich* [in a neighbourly way]) among the people.' 'The cottage where he had once sat so often among his own people, so *heimelig*, so happy.' 'The sentinel's horn sounds so *heimelig* from the tower, and his voice invites so hospitably.' 'You go to sleep there so soft and warm, so wonderfully *heim'lig*.'—This form of the word deserves to become general in order to protect this perfectly good sense of the word from becoming obsolete through an easy confusion with II [see below]. Cf.: "The Zecks [a family name] are all *heimlich*." (in sense II) " 'Heimlich'? . . . What do you understand by *heimlich*?" "Well, . . . they are like a buried spring or a dried-up pond. One cannot walk over it without always having the feeling that water might come up there again." "Oh, we call it '*unheimlich*'; you call it '*heimlich*'. Well, what makes you think that there is something secret and untrustworthy about this family?"' (Gutzkow).⁶

(d) Especially in Silesia: gay, cheerful; also of the weather.

⁶ Karl Gutzkow (1811–1878), German novelist and dramatist.

II. Concealed, kept from sight, so that others do not get to know of or about it, withheld from others. To do something *heimlich*, i.e. behind someone's back; to steal away *heimlich*; *heimlich* meetings and appointments; to look on with *heimlich* pleasure at someone's discomfiture; to sigh or weep *heimlich*; to behave *heimlich*, as though there was something to conceal; *heimlich* love-affair, love, sin; *heimlich* places (which good manners oblige us to conceal) (1 Sam. v. 6). 'The *heimlich* chamber' (privy) (2 Kings x. 27). Also, 'the *heimlich* chair'. 'To throw into pits or *Heimlichkeiten*'.—'Led the steeds *heimlich* before Laomedon.'—'As secretive, *heimlich*, deceitful and malicious towards cruel masters . . . as frank, open, sympathetic and helpful towards a friend in misfortune.' 'You have still to learn what is *heimlich* holiest to me.' 'The *heimlich* art' (magic). 'Where public ventilation has to stop, there *heimlich* machinations begin.' 'Freedom is the whispered watchword of *heimlich* conspirators and the loud battle-cry of professed revolutionaries.' 'A holy, *heimlich* effect.' 'I have roots that are most *heimlich*. I am grown in the deep earth.' 'My *heimlich* pranks.' 'If he is not given it openly and scrupulously he may seize it *heimlich* and unscrupulously.' 'He had achromatic telescopes constructed *heimlich* and secretly.' 'Henceforth I desire that there should be nothing *heimlich* any longer between us.'—To discover, disclose, betray someone's *Heimlichkeiten*; 'to concoct *Heimlichkeiten* behind my back'. 'In my time we studied *Heimlichkeit*'. 'The hand of understanding can alone undo the powerless spell of the *Heimlichkeit* (of hidden gold).' 'Say, where is the place of concealment . . . in what place of hidden *Heimlichkeit*?' 'Bees, who make the lock of *Heimlichkeiten*' (i.e. sealing-wax). 'Learned in strange *Heimlichkeiten*' (magic arts).

For compounds see above, 1c. Note especially the negative 'un-': eerie, weird, arousing gruesome fear: 'Seeming quite *unheimlich* and ghostly to him.' 'The *unheimlich*, fearful hours of night.' 'I had already long since felt an *unheimlich*, even gruesome feeling.' 'Now I am beginning to have an *unheimlich* feeling.' . . . 'Feels an *unheimlich* horror.' 'Unheimlich and motionless like a stone image.' 'The *unheimlich* mist called hill-fog.' 'These pale youths are *unheimlich* and are brewing heaven knows what mischief.' 'Unheimlich" is the name for everything that ought to have remained . . . secret and hidden but has come to light' (Schelling).⁷—'To veil the divine, to surround it with a certain *Unheimlichkeit*.'—*Unheimlich* is not often used as opposite to meaning II (above).

What interests us most in this long extract is to find that among its different shades of meaning the word '*heimlich*' exhibits one which is identical with its opposite, '*unheimlich*'. What is *heimlich* thus comes to be *unheimlich*. (Cf. the quotation from Gutzkow: 'We call it "*unheimlich*"; you call it "*heimlich*".') In general we are reminded that the word '*heimlich*' is not unambiguous, but belongs to two sets of ideas, which, without being contradictory, are yet very different: on the one hand it means what is familiar and agreeable, and on the other, what is concealed and kept out of sight.⁸ '*Unheimlich*' is customarily used, we are told, as the contrary only of the first signification of '*heimlich*', and not of the second. Sanders tells us nothing

7. Friedrich von Schelling (1775–1854), German philosopher.

8. According to the *Oxford English Dictionary*, a

similar ambiguity attached to the English "canny," which may mean not only "cosy" but also "endowed with occult or magical powers" [translator's note].

concerning a possible genetic connection between these two meanings of *heimlich*. On the other hand, we notice that Schelling says something which throws quite a new light on the concept of the *Unheimlich*, for which we were certainly not prepared. According to him, everything is *unheimlich* that ought to have remained secret and hidden but has come to light.

Some of the doubts that have thus arisen are removed if we consult Grimm's dictionary. (1877, 4.2:873ff.)

We read:

Heimlich; adj. and adv. *vernaculus, occultus*; MHG. *heimelich, heimlich*. (P. 874.) In a slightly different sense: 'I feel *heimlich*, well, free from fear.' . . .

[3] (b) *Heimlich* is also used of a place free from ghostly influences . . . familiar, friendly, intimate.

(P. 875: β) Familiar, amicable, unreserved.

4. From the idea of 'homelike', 'belonging to the house', the further idea is developed of something withdrawn from the eyes of strangers, something concealed, secret; and this idea is expanded in many ways . . .

(P. 876.) 'On the left bank of the lake there lies a meadow *heimlich* in the wood.' (Schiller,⁹ *Wilhelm Tell*, I. 4.) . . . Poetic license, rarely so used in modern speech . . . *Heimlich* is used in conjunction with a verb expressing the act of concealing: 'In the secret of his tabernacle he shall hide me *heimlich*.' (Ps. xxvii. 5.) . . . *Heimlich* parts of the human body, *pudenda* . . . 'the men that died not were smitten on their *heimlich* parts.' (1 Samuel v. 12.) . . .

(c) Officials who give important advice which has to be kept secret in matters of state are called *heimlich* councillors; the adjective, according to modern usage, has been replaced by *geheim* [secret] . . . 'Pharaoh called Joseph's name "him to whom secrets are revealed"' (*heimlich* councillor). (Gen. xli. 45.)

(P. 878.) 6. *Heimlich*, as used of knowledge—mystic, allegorical: a *heimlich* meaning, *mysticus, divinus, occultus, figuratus*.

(P. 878.) *Heimlich* in a different sense, as withdrawn from knowledge, unconscious . . . *Heimlich* also has the meaning of that which is obscure, inaccessible to knowledge . . . 'Do you not see? They do not trust us; they fear the *heimlich* face of the Duke of Friedland.' (Schiller, *Wallensteins Lager*, Scene 2.)

9. The notion of something hidden and dangerous, which is expressed in the last paragraph, is still further developed, so that '*heimlich*' comes to have the meaning usually ascribed to '*unheimlich*'. Thus: 'At times I feel like a man who walks in the night and believes in ghosts; every corner is *heimlich* and full of terrors for him'. (Klinger,¹ *Theater*, 3:298.)

Thus *heimlich* is a word the meaning of which develops in the direction of ambivalence, until it finally coincides with its opposite, *unheimlich*. *Unheimlich* is in some way or other a sub-species of *heimlich*. Let us bear this discovery in mind, though we cannot yet rightly understand it, alongside of Schelling's definition of the *Unheimlich*. If we go on to examine individual instances of uncanniness, these hints will become intelligible to us.

9. FRIEDRICH VON SCHILLER (1759–1805), German dramatist, poet, and historian, whose plays include *Wilhelm Tell* (1804) and *Wallen-*

stein's Camp (1798).

1. Friedrich von Klinger (1752–1831), German dramatist and novelist.

II

When we proceed to review the things, persons, impressions, events and situations which are able to arouse in us a feeling of the uncanny in a particularly forcible and definite form, the first requirement is obviously to select a suitable example to start on. Jentsch has taken as a very good instance 'doubts whether an apparently animate being is really alive; or conversely, whether a lifeless object might not be in fact animate'; and he refers in this connection to the impression made by 'waxwork figures, ingeniously constructed dolls and automata. To these he adds the uncanny effect of epileptic fits, and of manifestations of insanity; because these excite in the spectator the impression of automatic, mechanical processes at work behind the ordinary appearance of mental activity. Without entirely accepting this author's view, we will take it as a starting-point for our own investigation because in what follows he reminds us of a writer who has succeeded in producing uncanny effects better than anyone else.

Jentsch writes: 'In telling a story, one of the most successful devices for easily creating uncanny effects is to leave the reader in uncertainty whether a particular figure in the story is a human being or an automaton, and to do it in such a way that his attention is not focused directly upon his uncertainty, so that he may not be led to go into the matter and clear it up immediately. That, as we have said, would quickly dissipate the peculiar emotional effect of the thing. E. T. A. Hoffmann² has repeatedly employed this psychological artifice with success in his fantastic narratives.'

This observation, undoubtedly a correct one, refers primarily to the story of 'The Sand-Man' in Hoffmann's *Nachtstücken*,³ which contains the original of Olympia, the doll that appears in the first act of Offenbach's opera, *Tales of Hoffmann*.⁴ But I cannot think—and I hope most readers of the story will agree with me—that the theme of the doll Olympia, who is to all appearances a living being, is by any means the only, or indeed the most important, element that must be held responsible for the quite unparalleled atmosphere of uncanniness evoked by the story. Nor is this atmosphere heightened by the fact that the author himself treats the episode of Olympia with a faint touch of satire and uses it to poke fun at the young man's idealization of his mistress. The main theme of the story is, on the contrary, something different, something which gives it its name, and which is always re-introduced at critical moments: it is the theme of the 'Sand-Man' who tears out children's eyes.

This fantastic tale opens with the childhood recollections of the student Nathaniel. In spite of his present happiness, he cannot banish the memories associated with the mysterious and terrifying death of his beloved father. On certain evenings his mother used to send the children to bed early, warning them that 'the Sand-Man was coming'; and, sure enough, Nathaniel would not fail to hear the heavy tread of a visitor, with whom his father would then be occupied for the evening. When questioned about the Sand-Man, his mother, it is true, denied that such a person existed except as a figure of

2. German author of fantastic and often humorous tales (1776–1822).

3. *Night Pieces* (1816–17); "The Sandman" was published in vol. 1 (1816).

4. An 1881 opera based on three tales by Hoffmann, by Jacques Offenbach (1819–1880), a German-born French composer of many light operas.

speech; but his nurse could give him more definite information: 'He's a wicked man who comes when children won't go to bed, and throws handfuls of sand in their eyes so that they jump out of their heads all bleeding. Then he puts the eyes in a sack and carries them off to the half-moon to feed his children. They sit up there in their nest, and their beaks are hooked like owls' beaks, and they use them to peck up naughty boys' and girls' eyes with.'

Although little Nathaniel was sensible and old enough not to credit the figure of the Sand-Man with such gruesome attributes, yet the dread of him became fixed in his heart. He determined to find out what the Sand-Man looked like; and one evening, when the Sand-Man was expected again, he hid in his father's study. He recognized the visitor as the lawyer Coppelius, a repulsive person whom the children were frightened of when he occasionally came to a meal; and he now identified this Coppelius with the dreaded Sand-Man. As regards the rest of the scene, Hoffmann already leaves us in doubt whether what we are witnessing is the first delirium of the panic-stricken boy, or a succession of events which are to be regarded in the story as being real. His father and the guest are at work at a brazier with glowing flames. The little eavesdropper hears Coppelius call out: 'Eyes here! Eyes here!' and betrays himself by screaming aloud. Coppelius seizes him and is on the point of dropping bits of red-hot coal from the fire into his eyes, and then of throwing them into the brazier, but his father begs him off and saves his eyes. After this the boy falls into a deep swoon; and a long illness brings his experience to an end. Those who decide in favour of the rationalistic interpretation of the Sand-Man will not fail to recognize in the child's phantasy the persisting influence of his nurse's story. The bits of sand that are to be thrown into the child's eyes turn into bits of red-hot coal from the flames; and in both cases they are intended to make his eyes jump out. In the course of another visit of the Sand-Man's, a year later, his father is killed in his study by an explosion. The lawyer Coppelius disappears from the place without leaving a trace behind.

Nathaniel, now a student, believes that he has recognized this phantom of horror from his childhood in an itinerant optician, an Italian called Giuseppe Coppola, who at his university town, offers him weather-glasses for sale. When Nathaniel refuses, the man goes on: 'Not weather-glasses? not weather-glasses? also got fine eyes, fine eyes!' The student's terror is allayed when he finds that the proffered eyes are only harmless spectacles, and he buys a pocket spy-glass from Coppola. With its aid he looks across into Professor Spalanzani's house opposite and there spies Spalanzani's beautiful, but strangely silent and motionless daughter, Olympia. He soon falls in love with her so violently that, because of her, he quite forgets the clever and sensible girl to whom he is betrothed. But Olympia is an automaton whose clock-work has been made by Spalanzani, and whose eyes have been put in by Coppola, the Sand-Man. The student surprises the two Masters quarrelling over their handiwork. The optician carries off the wooden eyeless doll; and the mechanic, Spalanzani, picks up Olympia's bleeding eyes from the ground and throws them at Nathaniel's breast, saying that Coppola had stolen them from the student. Nathaniel succumbs to a fresh attack of madness, and in his delirium his recollection of his father's death is mingled with this new experience. 'Hurry up! hurry up! ring of fire!' he cries. 'Spin about, ring of fire—Hurräh! Hurry up, wooden doll! lovely wooden doll, spin about—'

He then falls upon the professor, Olympia's 'father', and tries to strangle him.

Rallying from a long and serious illness, Nathaniel seems at last to have recovered. He intends to marry his betrothed, with whom he has become reconciled. One day he and she are walking through the city market-place, over which the high tower of the Town Hall throws its huge shadow. On the girl's suggestion, they climb the tower, leaving her brother, who is walking with them, down below. From the top, Clara's attention is drawn to a curious object moving along the street. Nathaniel looks at this thing through Coppola's spy-glass, which he finds in his pocket, and falls into a new attack of madness. Shouting 'Spin about, wooden doll!' he tries to throw the girl into the gulf below. Her brother, brought to her side by her cries, rescues her and hastens down with her to safety. On the tower above, the madman rushes round, shrieking 'Ring of fire, spin about!'—and we know the origin of the words. Among the people who begin to gather below there comes forward the figure of the lawyer Coppelius, who has suddenly returned. We may suppose that it was his approach, seen through the spy-glass, which threw Nathaniel into his fit of madness. As the onlookers prepare to go up and overpower the madman, Coppelius laughs and says: 'Wait a bit; he'll come down of himself.' Nathaniel suddenly stands still, catches sight of Coppelius, and with a wild shriek 'Yes! "Fine eyes—fine eyes!"' flings himself over the parapet. While he lies on the paving-stones with a shattered skull the Sand-Man vanishes in the throng.

This short summary leaves no doubt, I think, that the feeling of something uncanny is directly attached to the figure of the Sand-Man, that is, to the idea of being robbed of one's eyes, and that Jentsch's point of an intellectual uncertainty has nothing to do with the effect. Uncertainty whether an object is living or inanimate, which admittedly applied to the doll Olympia, is quite irrelevant in connection with this other, more striking instance of uncanniness. It is true that the writer creates a kind of uncertainty in us in the beginning by not letting us know, no doubt purposely, whether he is taking us into the real world or into a purely fantastic one of his own creation. He has, of course, a right to do either; and if he chooses to stage his action in a world peopled with spirits, demons and ghosts, as Shakespeare does in *Hamlet*, in *Macbeth* and, in a different sense, in *The Tempest* and *A Midsummer-Night's Dream*, we must bow to his decision and treat his setting as though it were real for as long as we put ourselves into his hands. But this uncertainty disappears in the course of Hoffmann's story, and we perceive that he intends to make us, too, look through the demon optician's spectacles or spy-glass—perhaps, indeed, that the author in his very own person once peered through such an instrument. For the conclusion of the story makes it quite clear that Coppola the optician really is the lawyer Coppelius⁵ and also, therefore, the Sand-Man.

There is no question therefore, of any intellectual uncertainty here: we know now that we are not supposed to be looking on at the products of a madman's imagination, behind which we, with the superiority of rational minds, are able to detect the sober truth; and yet this knowledge does not

5. Frau Dr. Rank has pointed out the association of the name with *coppella* = crucible, connecting it with the chemical operations that caused the

father's death; and also with *coppo* = eye-socket [Freud's note].

lessen the impression of uncanniness in the least degree. The theory of intellectual uncertainty is thus incapable of explaining that impression.

We know from psycho-analytic experience, however, that the fear of damaging or losing one's eyes is a terrible one in children. Many adults retain their apprehensiveness in this respect, and no physical injury is so much dreaded by them as an injury to the eye. We are accustomed to say, too, that we will treasure a thing as the apple of our eye. A study of dreams, phantasies and myths has taught us that anxiety about one's eyes, the fear of going blind, is often enough a substitute for the dread of being castrated. The self-blinding of the mythical criminal, Oedipus,⁶ was simply a mitigated form of the punishment of castration—the only punishment that was adequate for him by the *lex talionis*.⁷ We may try on rationalistic grounds to deny that fears about the eye are derived from the fear of castration, and may argue that it is very natural that so precious an organ as the eye should be guarded by a proportionate dread. Indeed, we might go further and say that the fear of castration itself contains no other significance and no deeper secret than a justifiable dread of this rational kind. But this view does not account adequately for the substitutive relation between the eye and the male organ which is seen to exist in dreams and myths and phantasies; nor can it dispel the impression that the threat of being castrated in especial excites a peculiarly violent and obscure emotion, and that this emotion is what first gives the idea of losing other organs its intense colouring. All further doubts are removed when we learn the details of their 'castration complex' from the analysis of neurotic patients, and realize its immense importance in their mental life.

Moreover, I would not recommend any opponent of the psycho-analytic view to select this particular story of the Sand-Man with which to support his argument that anxiety about the eyes has nothing to do with the castration complex. For why does Hoffmann bring the anxiety about eyes into such intimate connection with the father's death? And why does the Sand-Man always appear as a disturber of love? He separates the unfortunate Nathaniel from his betrothed and from her brother, his best friend; he destroys the second object of his love, Olympia, the lovely doll; and he drives him into suicide at the moment when he has won back his Clara and is about to be happily united to her. Elements in the story like these, and many others, seem arbitrary and meaningless so long as we deny all connection between fears about the eye and castration; but they become intelligible as soon as we replace the Sand-Man by the dreaded father at whose hands castration is expected.⁸

6. Oedipus, a favorite subject of Greek tragedy and vase painting, was king of Thebes; he blinded himself when he realized that he had killed his father and married his mother.

7. Law of retaliation in kind (Latin).

8. In fact, Hoffmann's imaginative treatment of his material has not made such wild confusion of its elements that we cannot reconstruct their original arrangement. In the story of Nathaniel's childhood, the figures of his father and Coppellius represent the two opposites into which the father-*imago* is split by his ambivalence; whereas the one threatens to blind him—that is, to castrate him—the other, the "good" father, intercedes for his sight. The part of the complex which is most

strongly repressed, the death-wish against the "bad" father, finds expression in the death of the "good" father, and Coppellius is made answerable for it. This pair of fathers is represented later, in his student days, by Professor Spalanzani and Coppola the optician. The Professor is in himself a member of the father-series, and Coppola is recognized as identical with Coppellius the lawyer. Just as they used before to work together over the secret brazier, so now they have jointly created the doll Olympia; the Professor is even called the father of Olympia. This double occurrence of activity in common betrays them as divisions of the father-*imago*: both the mechanician and the optician were the father of Nathaniel (and of

We shall venture, therefore, to refer the uncanny effect of the Sand-Man to the anxiety belonging to the castration complex of childhood. But having reached the idea that we can make an infantile factor such as this responsible for feelings of uncanniness, we are encouraged to see whether we can apply it to other instances of the uncanny. We find in the story of the Sand-Man the other theme on which Jentsch lays stress, of a doll which appears to be alive. Jentsch believes that a particularly favourable condition for awakening uncanny feelings is created when there is intellectual uncertainty whether an object is alive or not, and when an inanimate object becomes too much like an animate one. Now, dolls are of course rather closely connected with childhood life. We remember that in their early games children do not distinguish at all sharply between living and inanimate objects, and that they are especially fond of treating their dolls like live people. In fact, I have occasionally heard a woman patient declare that even at the age of eight she had still been convinced that her dolls would be certain to come to life if she were to look at them in a particular, extremely concentrated, way. So that here, too, it is not difficult to discover a factor from childhood. But, curiously enough, while the Sand-Man story deals with the arousing of an early childhood fear, the idea of a 'living doll' excites no fear at all; children have no fear of their dolls coming to life, they may even desire it. The source of uncanny feelings would not, therefore, be an infantile fear in this case, but rather an infantile wish or even merely an infantile belief. There seems to be a contradiction here; but perhaps it is only a complication, which may be helpful to us later on.

Hoffmann is the unrivalled master of the uncanny in literature. His novel, *Die Elixiere des Teufels*,⁹ contains a whole mass of themes to which one is tempted to ascribe the uncanny effect of the narrative; but it is too obscure and intricate a story for us to venture upon a summary of it. Towards the end of the book the reader is told the facts, hitherto concealed from him, from which the action springs; with the result, not that he is at last enlightened, but that he falls into a state of complete bewilderment. The author has piled up too much material of the same kind. In consequence one's grasp

Olympia as well). In the frightening scene in childhood, Coppelius, after sparing Nathaniel's eyes, had screwed off his arms and legs as an experiment; that is, he had worked on him as a mechanician would on a doll. This singular feature, which seems quite outside the picture of the Sand-Man, introduces a new castration equivalent; but it also points to the inner identity of Coppelius with his later counterpart, Spalanzani the mechanician, and prepares us for the interpretation of Olympia. This automatic doll can be nothing else than a materialization of Nathaniel's feminine attitude towards his father in his infancy. Her fathers, Spalanzani and Coppola, are, after all, nothing but new editions, reincarnations of Nathaniel's pair of fathers. Spalanzani's otherwise incomprehensible statement that the optician has stolen Nathaniel's eyes, so as to set them in the doll, now becomes significant as supplying evidence of the identity of Olympia and Nathaniel. Olympia is, as it were, a dissociated complex of Nathaniel's which confronts him as a person, and Nathaniel's enslavement to this complex is expressed in his senseless

obsessive love for Olympia. We may with justice call love of this kind narcissistic, and we can understand why someone who has fallen victim to it should relinquish the real, external object of his love. The psychological truth of the situation in which the young man, fixated upon his father by his castration complex, becomes incapable of loving a woman, is amply proved by numerous analyses of patients whose story, though less fantastic, is hardly less tragic than that of the student Nathaniel.

Hoffmann was the child of an unhappy marriage. When he was three years old, his father left his small family, and was never united to them again. According to Grisebach, in his biographical introduction to Hoffmann's works, the writer's relation to his father was always a most sensitive subject with him [Freud's note]. Eduard Grisebach (1845-1906), German diplomat, editor, and literary historian; his edition of Hoffmann's *Complete Works* was published in 1905.

9. *The Devil's Elixirs* (1816).

of the story as a whole suffers, though not the impression it makes. We must content ourselves with selecting those themes of uncanniness which are most prominent, and with seeing whether they too can fairly be traced back to infantile sources. These themes are all concerned with the phenomenon of the 'double', which appears in every shape and in every degree of development. Thus we have characters who are to be considered identical because they look alike. This relation is accentuated by mental processes leaping from one of these characters to another—by what we should call telepathy—, so that the one possesses knowledge, feelings and experience in common with the other. Or it is marked by the fact that the subject identifies himself with someone else, so that he is in doubt as to which his self is, or substitutes the extraneous self for his own. In other words, there is a doubling, dividing and interchanging of the self. And finally there is the constant recurrence of the same thing¹—the repetition of the same features or character-traits or vicissitudes, of the same crimes, or even the same names through several consecutive generations.

The theme of the 'double' has been very thoroughly treated by Otto Rank (1914).² He has gone into the connections which the 'double' has with reflections in mirrors, with shadows, with guardian spirits, with the belief in the soul and with the fear of death; but he also lets in a flood of light on the surprising evolution of the idea. For the 'double' was originally an insurance against the destruction of the ego, an 'energetic denial of the power of death', as Rank says; and probably the 'immortal' soul was the first 'double' of the body. This invention of doubling as a preservation against extinction has its counterpart in the language of dreams, which is fond of representing castration by a doubling or multiplication of a genital symbol. The same desire led the Ancient Egyptians to develop the art of making images of the dead in lasting materials. Such ideas, however, have sprung from the soil of unbounded self-love, from the primary narcissism which dominates the mind of the child and of primitive man. But when this stage has been surmounted, the 'double' reverses its aspect. From having been an assurance of immortality, it becomes the uncanny harbinger of death.

The idea of the 'double' does not necessarily disappear with the passing of primary narcissism, for it can receive fresh meaning from the later stages of the ego's development. A special agency is slowly formed there, which is able to stand over against the rest of the ego, which has the function of observing and criticizing the self and of exercising a censorship within the mind, and which we become aware of as our 'conscience'. In the pathological case of delusions of being watched, this mental agency becomes isolated, dissociated from the ego, and discernible to the physician's eye. The fact that an agency of this kind exists, which is able to treat the rest of the ego like an object—the fact, that is, that man is capable of self-observation—renders it possible to invest the old idea of a 'double' with a new meaning and to ascribe a number of things to it—above all, those things which seem to self-criticism to belong to the old surmounted narcissism of earliest times.³

1. This phrase seems to be an echo from Nietzsche (e.g., from the last part of *Also Sprach Zarathustra* [1883–92]). In chapter 3 of *Beyond the Pleasure Principle* (1920), Freud puts a similar phrase, "the perpetual recurrence of the same thing," into inverted commas [translator's note].

2. "Der Doppelgänger" ("The Double"), by Rank (1884–1939), Austrian psychotherapist and a colleague of Freud's.

3. I believe that when poets complain that two souls dwell in the human breast, and when popular psychologists talk of the splitting of people's egos,

But it is not only this latter material, offensive as it is to the criticism of the ego, which may be incorporated in the idea of a double. There are also all the unfulfilled but possible futures to which we still like to cling in phantasy, all the strivings of the ego which adverse external circumstances have crushed, and all our suppressed acts of volition which nourish in us the illusion of Free Will.⁴

But after having thus considered the *manifest* motivation of the figure of a 'double', we have to admit that none of this helps us to understand the extraordinarily strong feeling of something uncanny that pervades the conception; and our knowledge of pathological mental processes enables us to add that nothing in this more superficial material could account for the urge towards defence which has caused the ego to project that material outward as something foreign to itself. When all is said and done, the quality of uncanniness can only come from the fact of the 'double' being a creation dating back to a very early mental stage, long since surmounted—a stage, incidentally, at which it wore a more friendly aspect. The 'double' has become a thing of terror, just as, after the collapse of their religion, the gods turned into demons.⁵

The other forms of ego-disturbance exploited by Hoffmann can easily be estimated along the same lines as the theme of the 'double'. They are a harking-back to particular phases in the evolution of the self-regarding feeling, a regression to a time when the ego had not yet marked itself off sharply from the external world and from other people. I believe that these factors are partly responsible for the impression of uncanniness, although it is not easy to isolate and determine exactly their share of it.

The factor of the repetition of the same thing will perhaps not appeal to everyone as a source of uncanny feeling. From what I have observed, this phenomenon does undoubtedly, subject to certain conditions and combined with certain circumstances, arouse an uncanny feeling, which, furthermore, recalls the sense of helplessness experienced in some dream-states. As I was walking, one hot summer afternoon, through the deserted streets of a provincial town in Italy which was unknown to me, I found myself in a quarter of whose character I could not long remain in doubt. Nothing but painted women were to be seen at the windows of the small houses, and I hastened to leave the narrow street at the next turning. But after having wandered about for a time without enquiring my way, I suddenly found myself back in the same street, where my presence was now beginning to excite attention. I hurried away once more, only to arrive by another *détour* at the same place yet a third time. Now, however, a feeling overcame me which I can only describe as uncanny, and I was glad enough to find myself back at the piazza I had left a short while before, without any further voyages of discovery. Other situations which have in common with my adventure an unintended

what they are thinking of is this division (in the sphere of ego-psychology) between the critical agency and the rest of the ego, and not the antithesis discovered by psycho-analysis between the ego and what is unconscious and repressed. It is true that the distinction between these two antitheses is to some extent effaced by the circumstance that foremost among the things that are rejected by the criticism of the ego are derivatives of the repressed [Freud's note].

4. In [Hanns] Ewers's [1871–1943] *Der Student von Prag* [1912 film], which serves as the starting-point of Rank's study on the "double," the hero has promised his beloved not to kill his antagonist in a duel. But on his way to the duelling-ground he meets his "double," who has already killed his rival [Freud's note].

5. Heine, *Die Götter im Exil* [1854, "The Gods in Exile"; Freud's note]. Heinrich Heine (1797–1856), German poet and critic.

recurrence of the same situation, but which differ radically from it in other respects, also result in the same feeling of helplessness and of uncanniness. So, for instance, when, caught in a mist perhaps, one has lost one's way in a mountain forest, every attempt to find the marked or familiar path may bring one back again and again to one and the same spot, which one can identify by some particular landmark. Or one may wander about in a dark, strange room, looking for the door or the electric switch, and collide time after time with the same piece of furniture—though it is true that Mark Twain⁶ succeeded by wild exaggeration in turning this latter situation into something irresistibly comic.

If we take another class of things, it is easy to see that there, too, it is only this factor of involuntary repetition which surrounds what would otherwise be innocent enough with an uncanny atmosphere, and forces upon us the idea of something fateful and inescapable when otherwise we should have spoken only of 'chance'. For instance, we naturally attach no importance to the event when we hand in an overcoat and get a cloakroom ticket with the number, let us say, 62; or when we find that our cabin on a ship bears that number. But the impression is altered if two such events, each in itself indifferent, happen close together—if we come across the number 62 several times in a single day, or if we begin to notice that everything which has a number—addresses, hotel rooms, compartments in railway trains—invariably has the same one, or at all events one which contains the same figures. We do feel this to be uncanny. And unless a man is utterly hardened and proof against the lure of superstition, he will be tempted to ascribe a secret meaning to this obstinate recurrence of a number; he will take it, perhaps, as an indication of the span of life allotted to him.⁷ Or suppose one is engaged in reading the works of the famous physiologist, Hering,⁸ and within the space of a few days receives two letters from two different countries, each from a person called Hering, though one has never before had any dealings with anyone of that name. Not long ago an ingenious scientist (Kammerer, 1919)⁹ attempted to reduce coincidences of this kind to certain laws, and so deprive them of their uncanny effect. I will not venture to decide whether he has succeeded or not.

How exactly we can trace back to infantile psychology the uncanny effect of such similar recurrences is a question I can only lightly touch on in these pages; and I must refer the reader instead to another work,¹ already completed, in which this has been gone into in detail, but in a different connection. For it is possible to recognize the dominance in the unconscious mind of a 'compulsion to repeat' proceeding from the instinctual impulses and probably inherent in the very nature of the instincts—a compulsion powerful enough to overrule the pleasure principle, lending to certain aspects of the mind their daemonic character, and still very clearly expressed in the impulses of small children; a compulsion, too, which is responsible for a part

6. Pen name of Samuel L. Clemens (1835–1910), American writer. Freud refers to a passage in his 1880 work *A Tramp Abroad*.

7. Freud had himself reached the age of 62 a year earlier, in 1918 [translator's note].

8. Ewald Hering (1834–1918), German physiologist and psychologist.

9. *Das Gesetz der Serie (The Law of Series)*, by the Austrian zoologist Paul Kammerer (1880–1926).

1. This was published a year later as *Beyond the Pleasure Principle* (1920). The various manifestations of the "compulsion to repeat" enumerated here are enlarged upon in chapters 2 and 3 of that work. The "compulsion to repeat" had already been described by Freud as a clinical phenomenon, in a technical paper published five years earlier [translator's note].

of the course taken by the analyses of neurotic patients. All these considerations prepare us for the discovery that whatever reminds us of this inner 'compulsion to repeat' is perceived as uncanny.

Now, however, it is time to turn from these aspects of the matter, which are in any case difficult to judge, and look for some undeniable instances of the uncanny, in the hope that an analysis of them will decide whether our hypothesis is a valid one.

In the story of 'The Ring of Polycrates',² the King of Egypt turns away in horror from his host, Polycrates, because he sees that his friend's every wish is at once fulfilled, his every care promptly removed by kindly fate. His host has become 'uncanny' to him. His own explanation, that the too fortunate man has to fear the envy of the gods, seems obscure to us; its meaning is veiled in mythological language. We will therefore turn to another example in a less grandiose setting. In the case history of an obsessional neurotic,³ I have described how the patient once stayed in a hydropathic establishment and benefited greatly by it. He had the good sense, however, to attribute his improvement not to the therapeutic properties of the water, but to the situation of his room, which immediately adjoined that of a very accommodating nurse. So on his second visit to the establishment he asked for the same room, but was told that it was already occupied by an old gentleman, whereupon he gave vent to his annoyance in the words: 'I wish he may be struck dead for it.' A fortnight later the old gentleman really did have a stroke. My patient thought this an 'uncanny' experience. The impression of uncanniness would have been stronger still if less time had elapsed between his words and the untoward event, or if he had been able to report innumerable similar coincidences. As a matter of fact, he had no difficulty in producing coincidences of this sort; but then not only he but every obsessional neurotic I have observed has been able to relate analogous experiences. They are never surprised at their invariably running up against someone they have just been thinking of, perhaps for the first time for a long while. If they say one day 'I haven't had any news of so-and-so for a long time', they will be sure to get a letter from him the next morning, and an accident or a death will rarely take place without having passed through their mind a little while before. They are in the habit of referring to this state of affairs in the most modest manner, saying that they have 'presentiments' which 'usually' come true.

One of the most uncanny and wide-spread forms of superstition is the dread of the evil eye, which has been exhaustively studied by the Hamburg oculist Seligmann (1910-11).⁴ There never seems to have been any doubt about the source of this dread. Whoever possesses something that is at once valuable and fragile is afraid of other people's envy, in so far as he projects on to them the envy he would have felt in their place. A feeling like this betrays itself by a look⁵ even though it is not put into words; and when a man is prominent owing to noticeable, and particularly owing to unattractive,

2. A poem by Schiller, based on the story in the Greek historian Herodotus (ca. 484-ca. 425 B.C.E.), 3.40-43; it became in turn the basis of a Faust opera by Erich Korngold (1913).

3. "Notes upon a Case of Obsessional Neurosis" (1909) [Freud's note].

4. *Der böse Blick und Verwandtes: Ein Beitrag zur*

Geschichte des Aberglaubens der aller Zeiten und Völker (The Evil Eye and Related Beliefs: An Investigation into the Superstitions of All Times and Peoples), by Siegfried Seligmann (1870-1926).

5. "The evil eye" in German is *der böse Blick*, literally "the evil look" [translator's note].

attributes, other people are ready to believe that his envy is rising to a more than usual degree of intensity and that this intensity will convert it into effective action. What is feared is thus a secret intention of doing harm, and certain signs are taken to mean that that intention has the necessary power at its command.

These last examples of the uncanny are to be referred to the principle which I have called 'omnipotence of thoughts', taking the name from an expression used by one of my patients. And now we find ourselves on familiar ground. Our analysis of instances of the uncanny has led us back to the old, animistic conception of the universe. This was characterized by the idea that the world was peopled with the spirits of human beings; by the subject's narcissistic overvaluation of his own mental processes; by the belief in the omnipotence of thoughts and the technique of magic based on that belief; by the attribution to various outside persons and things of carefully graded magical powers, or '*mana*';⁶ as well as by all the other creations with the help of which man, in the unrestricted narcissism of that stage of development, strove to fend off the manifest prohibitions of reality. It seems as if each one of us has been through a phase of individual development corresponding to this animistic stage in primitive men, that none of us has passed through it without preserving certain residues and traces of it which are still capable of manifesting themselves, and that everything which now strikes us as 'uncanny' fulfils the condition of touching those residues of animistic mental activity within us and bringing them to expression.⁷

At this point I will put forward two considerations which, I think, contain the gist of this short study. In the first place, if psycho-analytic theory is correct in maintaining that every affect belonging to an emotional impulse, whatever its kind, is transformed, if it is repressed, into anxiety, then among instances of frightening things there must be one class in which the frightening element can be shown to be something repressed which *recurs*. This class of frightening things would then constitute the uncanny; and it must be a matter of indifference whether what is uncanny was itself originally frightening or whether it carried some *other* affect. In the second place, if this is indeed the secret nature of the uncanny, we can understand why linguistic usage has extended *das Heimliche* ['homely'] into its opposite, *das Unheimliche*; for this uncanny is in reality nothing new or alien, but something which is familiar and old-established in the mind and which has become alienated from it only through the process of repression. This reference to the factor of repression enables us, furthermore, to understand Schelling's definition of the uncanny as something which ought to have remained hidden but has come to light.

It only remains for us to test our new hypothesis on one or two more examples of the uncanny.

Many people experience the feeling in the highest degree in relation to death and dead bodies, to the return of the dead, and to spirits and ghosts. As we have seen some languages in use to-day can only render the German

6. Anthropological term used of "primitive" cultures.

7. Cf. my book *Totem and Taboo* (1912-13), Essay III, "Animism, Magic, and the Omnipotence of Thoughts," where the following footnote will be found: "We appear to attribute an 'uncanny' qual-

ity to impressions that seek to confirm the omnipotence of thoughts and the animistic mode of thinking in general, after we have reached a stage at which, in our *judgement*, we have abandoned such beliefs" [Freud's note].

expression 'an *unheimlich* house' by 'a *haunted* house'. We might indeed have begun our investigation with this example, perhaps the most striking of all, of something uncanny, but we refrained from doing so because the uncanny in it is too much intermixed with what is purely gruesome and is in part overlaid by it. There is scarcely any other matter, however, upon which our thoughts and feelings have changed so little since the very earliest times, and in which discarded forms have been so completely preserved under a thin disguise, as our relation to death. Two things account for our conservatism: the strength of our original emotional reaction to death and the insufficiency of our scientific knowledge about it. Biology has not yet been able to decide whether death is the inevitable fate of every living being or whether it is only a regular but yet perhaps avoidable event in life. It is true that the statement 'All men are mortal' is paraded in text-books of logic as an example of a general proposition; but no human being really grasps it, and our unconscious has as little use now as it ever had for the idea of its own mortality. Religions continue to dispute the importance of the undeniable fact of individual death and to postulate a life after death; civil governments still believe that they cannot maintain moral order among the living if they do not uphold the prospect of a better life hereafter as a recompense for mundane existence. In our great cities, placards announce lectures that undertake to tell us how to get into touch with the souls of the departed; and it cannot be denied that not a few of the most able and penetrating minds among our men of science have come to the conclusion, especially towards the close of their own lives, that a contact of this kind is not impossible. Since almost all of us still think as savages do on this topic, it is no matter for surprise that the primitive fear of the dead is still so strong within us and always ready to come to the surface on any provocation. Most likely our fear still implies the old belief that the dead man becomes the enemy of his survivor and seeks to carry him off to share his new life with him. Considering our unchanged attitude towards death, we might rather enquire what has become of the repression, which is the necessary condition of a primitive feeling recurring in the shape of something uncanny. But repression is there, too. All supposedly educated people have ceased to believe officially that the dead can become visible as spirits, and have made any such appearances dependent on improbable and remote conditions; their emotional attitude towards their dead, moreover, once a highly ambiguous and ambivalent one, has been toned down in the higher strata of the mind into an unambiguous feeling of piety.

We have now only a few remarks to add—for animism, magic and sorcery, the omnipotence of thoughts, man's attitude to death, involuntary repetition and the castration complex comprise practically all the factors which turn something frightening into something uncanny.

We can also speak of a living person as uncanny, and we do so when we ascribe evil intentions to him. But that is not all; in addition to this we must feel that his intentions to harm us are going to be carried out with the help of special powers. A good instance of this is the '*Gettatore*',⁸ that uncanny figure of Romanic superstition which Schaeffer,⁹ with intuitive poetic feeling

8. Literally "thrower" (of bad luck), or "one who casts" (the evil eye) [translator's note].

9. Albrecht Schaeffer (1885-1950), who published the novel *Josef Montfort* in 1918.

and profound psycho-analytic understanding, has transformed into a sympathetic character in his *Josef Montfort*. But the question of these secret powers brings us back again to the realm of animism. It was the pious Gretchen's intuition that Mephistophelès possessed secret powers of this kind that made him so uncanny to her.

Sie fühlt dass ich ganz sicher ein Genie,
Vielleicht sogar der Teufel bin.¹

The uncanny effect of epilepsy and of madness has the same origin. The layman sees in them the working of forces hitherto unsuspected in his fellow-men, but at the same time he is dimly aware of them in remote corners of his own being. The Middle Ages quite consistently ascribed all such maladies to the influence of demons, and in this their psychology was almost correct. Indeed, I should not be surprised to hear that psycho-analysis, which is concerned with laying bare these hidden forces, has itself become uncanny to many people for that very reason. In one case, after I had succeeded—though none too rapidly—in effecting a cure in a girl who had been an invalid for many years, I myself heard this view expressed by the patient's mother long after her recovery.

Dismembered limbs, a severed head, a hand cut off at the wrist, as in a fairy tale of Hauff's,² feet which dance by themselves, as in the book by Schaeffer which I mentioned above—all these have something peculiarly uncanny about them, especially when, as in the last instance, they prove capable of independent activity in addition. As we already know, this kind of uncanniness springs from its proximity to the castration complex. To some people the idea of being buried alive by mistake is the most uncanny thing of all. And yet psycho-analysis has taught us that this terrifying phantasy is only a transformation of another phantasy which had originally nothing terrifying about it at all, but was qualified by a certain lasciviousness—the phantasy, I mean, of intra-uterine existence.

There is one more point of general application which I should like to add, though, strictly speaking, it has been included in what has already been said about animism and modes of working of the mental apparatus that have been surmounted; for I think it deserves special emphasis. This is that an uncanny effect is often and easily produced when the distinction between imagination and reality is effaced, as when something that we have hitherto regarded as imaginary appears before us in reality, or when a symbol takes over the full functions of the thing it symbolizes, and so on. It is this factor which contributes not a little to the uncanny effect attaching to magical practices. The infantile element in this, which also dominates the minds of neurotics, is the over-accentuation of psychical reality in comparison with material reality—a feature closely allied to the belief in the omnipotence of thoughts. In the middle of the isolation of war-time a number of the English *Strand Magazine* fell into my hands; and, among other somewhat redundant matter, I

1. "She feels that surely I'm a genius now,—Perhaps the very Devil indeed!" Goethe, *Faust*, Part I [1808], scene 16; Bayard Taylor's translation [1870–71; translator's note]. Johann Wolfgang von Goethe (1749–1832), German poet, playwright, and dramatist. Mephistophelès is the spirit to

whom the old Faust promises his soul; Gretchen is the young girl whom Faust, made young again, falls in love with and seduces.

2. *Die Geschichte von der abgehauenen Hand* (The Story of the Severed Hand) [translator's note]. Wilhelm Hauff (1802–1827), German novelist.

read a story about a young married couple who move into a furnished house in which there is a curiously shaped table with carvings of crocodiles on it. Towards evening an intolerable and very specific smell begins to pervade the house; they stumble over something in the dark; they seem to see a vague form gliding over the stairs—in short, we are given to understand that the presence of the table causes ghostly crocodiles to haunt the place, or that the wooden monsters come to life in the dark, or something of the sort. It was a naïve enough story, but the uncanny feeling it produced was quite remarkable.

To conclude this collection of examples, which is certainly not complete, I will relate an instance taken from psycho-analytic experience; if it does not rest upon mere coincidence, it furnishes a beautiful confirmation of our theory of the uncanny. It often happens that neurotic men declare that they feel there is something uncanny about the female genital organs. This *unheimlich* place, however, is the entrance to the former *Heim* [home] of all human beings, to the place where each one of us lived once upon a time and in the beginning. There is a joking saying that 'Love is home-sickness'; and whenever a man dreams of a place or a country and says to himself, while he is still dreaming: 'this place is familiar to me, I've been here before', we may interpret the place as being his mother's genitals or her body. In this case too, then, the *unheimlich* is what was once *heimisch*, familiar; the prefix '*un*' ['un-'] is the token of repression.

III

In the course of this discussion the reader will have felt certain doubts arising in his mind; and he must now have an opportunity of collecting them and bringing them forward.

It may be true that the uncanny [*unheimlich*] is something which is secretly familiar [*heimlich-heimisch*], which has undergone repression and then returned from it, and that everything that is uncanny fulfils this condition. But the selection of material on this basis does not enable us to solve the problem of the uncanny. For our proposition is clearly not convertible. Not everything that fulfils this condition—not everything that recalls repressed desires and surmounted modes of thinking belonging to the pre-history of the individual and of the race—is on that account uncanny.

Nor shall we conceal the fact that for almost every example adduced in support of our hypothesis one may be found which rebuts it. The story of the severed hand in Hauff's fairy tale certainly has an uncanny effect, and we have traced that effect back to the castration complex; but most readers will probably agree with me in judging that no trace of uncanniness is provoked by Herodotus's story of the treasure of Rhampsinitus,³ in which the master-thief, whom the princess tries to hold fast by the hand, leaves his brother's severed hand behind with her instead. Again, the prompt fulfilment of the wishes of Polycrates undoubtedly affects us in the same uncanny way as it did the king of Egypt; yet our own fairy stories are crammed with instantaneous wish-fulfilments which produce no uncanny effect whatever. In the story of 'The Three Wishes', the woman is tempted by the savoury smell of

3. See Herodotus 2.121.

a sausage to wish that she might have one too, and in an instant it lies on a plate before her. In his annoyance at her hastiness her husband wishes it may hang on her nose. And there it is, dangling from her nose. All this is very striking but not in the least uncanny. Fairy tales quite frankly adopt the animistic standpoint of the omnipotence of thoughts and wishes, and yet I cannot think of any genuine fairy story which has anything uncanny about it. We have heard that it is in the highest degree uncanny when an inanimate object—a picture or a doll—comes to life; nevertheless in Hans Andersen's⁴ stories the household utensils, furniture and tin soldiers are alive, yet nothing could well be more remote from the uncanny. And we should hardly call it uncanny when Pygmalion's beautiful statue comes to life.⁵

Apparent death and the re-animation of the dead have been represented as most uncanny themes. But things of this sort too are very common in fairy stories. Who would be so bold as to call it uncanny, for instance, when Snow-White opens her eyes once more?⁶ And the resuscitation of the dead in accounts of miracles, as in the New Testament, elicits feelings quite unrelated to the uncanny. Then, too, the theme that achieves such an indubitably uncanny effect, the unintended recurrence of the same thing, serves other and quite different purposes in another class of cases. We have already come across one example in which it is employed to call up a feeling of the comic;⁷ and we could multiply instances of this kind. Or again, it works as a means of emphasis, and so on. And once more: what is the origin of the uncanny effect of silence, darkness and solitude? Do not these factors point to the part played by danger in the genesis of what is uncanny, notwithstanding that in children these same factors are the most frequent determinants of the expression of fear [rather than of the uncanny]? And are we after all justified in entirely ignoring intellectual uncertainty as a factor, seeing that we have admitted its importance in relation to death?

It is evident therefore, that we must be prepared to admit that there are other elements besides those which we have so far laid down as determining the production of uncanny feelings. We might say that these preliminary results have satisfied *psycho-analytic* interest in the problem of the uncanny, and that what remains probably calls for an *aesthetic* enquiry. But that would be to open the door to doubts about what exactly is the value of our general contention that the uncanny proceeds from something familiar which has been repressed.

We have noticed one point which may help us to resolve these uncertainties: nearly all the instances that contradict our hypothesis are taken from the realm of fiction, of imaginative writing. This suggests that we should differentiate between the uncanny that we actually experience and the uncanny that we merely picture or read about.

What is *experienced* as uncanny is much more simply conditioned but comprises far fewer instances. We shall find, I think, that it fits in perfectly with our attempt at a solution, and can be traced back without exception to

4. Hans Christian Andersen (1805–1875), Danish writer best known for his fairy tales.

5. In *Metamorphoses* (ca. 10 C.E.), 10.243–97, the Roman poet Ovid tells the story of the sculptor Pygmalion, who fell in love with his own creation.

6. Snow White, believed dead, comes back to life when the poisoned apple is dislodged from her throat.

7. That is, in Mark Twain's *A Tramp Abroad*.

something familiar that has been repressed. But here, too, we must make a certain important and psychologically significant differentiation in our material, which is best illustrated by turning to suitable examples.

Let us take the uncanny associated with the omnipotence of thoughts, with the prompt fulfilment of wishes, with secret injurious powers and with the return of the dead. The condition under which the feeling of uncanniness arises here is unmistakable. We—or our primitive forefathers—once believed that these possibilities were realities, and were convinced that they actually happened. Nowadays we no longer believe in them, we have *surmounted* these modes of thought; but we do not feel quite sure of our new beliefs, and the old ones still exist within us ready to seize upon any confirmation. As soon as something *actually happens* in our lives which seems to confirm the old, discarded beliefs we get a feeling of the uncanny; it is as though we were making a judgement something like this: 'So, after all, it is *true* that one can kill a person by the mere wish!' or, 'So the dead *do* live on and appear on the scene of their former activities!' and so on. Conversely, anyone who has completely and finally rid himself of animistic beliefs will be insensible to this type of the uncanny. The most remarkable coincidences of wish and fulfilment, the most mysterious repetition of similar experiences in a particular place or on a particular date, the most deceptive sights and suspicious noises—none of these things will disconcert him or raise the kind of fear which can be described as 'a fear of something uncanny'. The whole thing is purely an affair of 'reality-testing', a question of the material reality of the phenomena.⁸

The state of affairs is different when the uncanny proceeds from repressed infantile complexes, from the castration complex, womb-phantasies, etc.; but experiences which arouse this kind of uncanny feeling are not of very frequent occurrence in real life. The uncanny which proceeds from actual experience belongs for the most part to the first group [the group dealt with in the previous paragraph]. Nevertheless the distinction between the two is theoretically very important. Where the uncanny comes from infantile complexes the question of material reality does not arise; its place is taken by psychical reality. What is involved is an actual repression of some content of thought and a return of this repressed content, not a cessation of *belief in the reality* of such a content. We might say that in the one case ~~what~~ had been repressed is a particular ideational content, and in the other the belief in its (material) reality. But this last phrase no doubt extends the term 'repre-

8. Since the uncanny effect of a "double" also belongs to this same group it is interesting to observe what the effect is of meeting one's own image unbidden and unexpected. Ernst Mach has related two such observations in his *Analyse der Empfindungen* (1900 [*Analysis of Sensations*]). On the first occasion he was not a little startled when he realized that the face before him was his own. The second time he formed a very unfavorable opinion about the supposed stranger who had entered the omnibus, and thought "What a shabby-looking school-master that man is who is getting in!"—I can report a similar adventure. I was sitting alone in my *wagon-lit* compartment when a more than usually violent jolt of the train swung back the door of the adjoining washing-cabinet, and an elderly gentleman in a dressing-gown and

a travelling cap came in. I assumed that in leaving the washing-cabinet, which lay between the two compartments, he had taken the wrong direction and come into my cabinet by mistake. Jumping up with the intention of putting him right, I at once realized to my dismay that the intruder was nothing but my own reflection in the looking-glass on the open door. I can still recollect that I thoroughly disliked his appearance. Instead, therefore, of being *frightened* by our doubles, both Mach and I simply failed to recognize them as such. Is it not possible, though, that our dislike of them was a vestigial trace of the archaic reaction which feels the "double" to be something uncanny? [Freud's note]. Mach (1838–1916), Austrian physicist and philosopher.

sion' beyond its legitimate meaning. It would be more correct to take into account a psychological distinction which can be detected here, and to say that the animistic beliefs of civilized people are in a state of having been (to a greater or lesser extent) *surmounted* [rather than repressed]. Our conclusion could then be stated thus: an uncanny experience occurs either when infantile complexes which have been repressed are once more revived by some impression, or when primitive beliefs which have been surmounted seem once more to be confirmed. Finally, we must not let our predilection for smooth solutions and lucid exposition blind us to the fact that these two classes of uncanny experience are not always sharply distinguishable. When we consider that primitive beliefs are most intimately connected with infantile complexes, and are, in fact, based on them, we shall not be greatly astonished to find that the distinction is often a hazy one.

The uncanny as it is depicted in *literature*, in stories and imaginative productions, merits in truth a separate discussion. Above all, it is a much more fertile province than the uncanny in real life, for it contains the whole of the latter and something more besides, something that cannot be found in real life. The contrast between what has been repressed and what has been surmounted cannot be transposed on to the uncanny in fiction without profound modification; for the realm of phantasy depends for its effect on the fact that its content is not submitted to reality-testing. The somewhat paradoxical result is that *in the first place a great deal that is not uncanny in fiction would be so if it happened in real life; and in the second place that there are many more means of creating uncanny effects in fiction than there are in real life.*

The imaginative writer has this licence among many others, that he can select his world of representation so that it either coincides with the realities we are familiar with or departs from them in what particulars he pleases. We accept his ruling in every case. In fairy tales, for instance, the world of reality is left behind from the very start, and the animistic system of beliefs is frankly adopted. Wish-fulfilments, secret powers, omnipotence of thoughts, animation of inanimate objects, all the elements so common in fairy stories, can exert no uncanny influence here; for, as we have learnt, that feeling cannot arise unless there is a conflict of judgement as to whether things which have been 'surmounted' and are regarded as incredible may not, after all, be possible; and this problem is eliminated from the outset by the postulates of the world of fairy tales. Thus we see that fairy stories, which have furnished us with most of the contradictions to our hypothesis of the uncanny, confirm the first part of our proposition—that in the realm of fiction many things are not uncanny which would be so if they happened in real life. In the case of these stories there are other contributory factors, which we shall briefly touch upon later.

The creative writer can also choose a setting which though less imaginary than the world of fairy tales, does yet differ from the real world by admitting superior spiritual beings such as daemonic spirits or ghosts of the dead. So long as they remain within their setting of poetic reality, such figures lose any uncanniness which they might possess. The souls in Dante's *Inferno*, or the supernatural apparitions in Shakespeare's *Hamlet*, *Macbeth* or *Julius Caesar*, may be gloomy and terrible enough, but they are no more really

uncanny than Homer's jovial world of gods.⁹ We adapt our judgement to the imaginary reality imposed on us by the writer, and regard souls, spirits and ghosts as though their existence had the same validity as our own has in material reality. In this case too we avoid all trace of the uncanny.

The situation is altered as soon as the writer pretends to move in the world of common reality. In this case he accepts as well all the conditions operating to produce uncanny feelings in real life; and everything that would have an uncanny effect in reality has it in his story. But in this case he can even increase his effect and multiply it far beyond what could happen in reality, by bringing about events which never or very rarely happen in fact. In doing this he is in a sense betraying us to the superstitiousness which we have ostensibly surmounted; he deceives us by promising to give us the sober truth, and then after all overstepping it. We react to his inventions as we would have reacted to real experiences; by the time we have seen through his trick it is already too late and the author has achieved his object. But it must be added that his success is not unalloyed. We retain a feeling of dissatisfaction, a kind of grudge against the attempted deceit. I have noticed this particularly after reading Schnitzler's *Die Weissagung* [*The Prophecy*]¹ and similar stories which flirt with the supernatural. However, the writer has one more means which he can use in order to avoid our recalcitrance and at the same time to improve his chances of success. He can keep us in the dark for a long time about the precise nature of the presuppositions on which the world he writes about is based, or he can cunningly and ingeniously avoid any definite information on the point to the last. Speaking generally, however, we find a confirmation of the second part of our proposition—that fiction presents more opportunities for creating uncanny feelings than are possible in real life.

Strictly speaking, all these complications relate only to that class of the uncanny which proceeds from forms of thought that have been surmounted. The class which proceeds from repressed complexes is more resistant and remains as powerful in fiction as in real experience, subject to one exception. The uncanny belonging to the first class—that proceeding from forms of thought that have been surmounted—retains its character not only in experience but in fiction as well, so long as the setting is one of material reality; but where it is given an arbitrary and artificial setting in fiction, it is apt to lose that character.

We have clearly not exhausted the possibilities of poetic licence and the privileges enjoyed by story-writers in evoking or in excluding an uncanny feeling. In the main we adopt an unvarying passive attitude towards real experience and are subject to the influence of our physical environment. But the story-teller has a *peculiarly* directive power over us; by means of the moods he can put us into, he is able to guide the current of our emotions, to dam it up in one direction and make it flow in another, and he often obtains a great variety of effects from the same material. All this is nothing

9. Freud names writers from a range of cultures and times: DANTE ALIGHIERI (1265–1321) visits the dead in hell in *Inferno*, the first volume of his *Divine Comedy*; in the tragedies of William Shakespeare (1564–1616) named here, ghosts appear;

and in Homer's *Iliad* and *Odyssey* (ca. 8th c. B.C.E.), the gods play active roles.

1. A short story (1905) by the Austrian playwright and novelist Arthur Schnitzler (1862–1931).

new, and has doubtless long since been fully taken into account by students of aesthetics. We have drifted into this field of research half involuntarily, through the temptation to explain certain instances which contradicted our theory of the causes of the uncanny. Accordingly we will now return to the examination of a few of those instances.

We have already asked why it is that the severed hand in the story of the treasure of Rhampsinitus has no uncanny effect in the way that the severed hand has in Hauff's story. The question seems to have gained in importance now that we have recognized that the class of the uncanny which proceeds from repressed complexes is the more resistant of the two. The answer is easy. In the Herodotus story our thoughts are concentrated much more on the superior cunning of the master-thief than on the feelings of the princess. The princess may very well have had an uncanny feeling, indeed she very probably feel into a swoon; but we have no such sensations, for we put ourselves in the thief's place, not in hers. In Nestroy's farce, *Der Zerrissene* [*The Torn Man*],² another means is used to avoid any impression of the uncanny in the scene in which the fleeing man, convinced that he is a murderer, lifts up one trapdoor after another and each time sees what he takes to be the ghost of his victim rising up out of it. He calls out in despair, 'But I've only killed *one* man. Why this ghastly multiplication?' We know what went before this scene and do not share his error, so what must be uncanny to him has an irresistibly comic effect on us. Even a 'real' ghost, as in Oscar Wilde's *Canterville Ghost*,³ loses all power of at least arousing *gruesome* feelings in us as soon as the author begins to amuse himself by being ironical about it and allows liberties to be taken with it. Thus we see how independent emotional effects can be of the actual subject-matter in the world of fiction. In fairy stories feelings of fear—including therefore uncanny feelings—are ruled out altogether. We understand this, and that is why we ignore any opportunities we find in them for developing such feelings.

Concerning the factors of silence, solitude and darkness, we can only say that they are actually elements in the production of the infantile anxiety from which the majority of human beings have never become quite free. This problem has been discussed from a psycho-analytic point of view elsewhere.

1919

Fetishism¹

In the last few years I have had an opportunity of studying analytically a number of men whose object-choice was dominated by a fetish. There is no need to expect that these people came to analysis on account of their fetish. For though no doubt a fetish is recognized by its adherents as an abnormality, it is seldom felt by them as the symptom of an ailment accompanied by suffering. Usually they are quite satisfied with it, or even praise the way in

which it eases their erotic life. As a rule, therefore, the fetish made its appearance in analysis as a subsidiary finding.

For obvious reasons the details of these cases must be withheld from publication; I cannot, therefore, show in what way accidental circumstances have contributed to the choice of a fetish. The most extraordinary case seemed to me to be one in which a young man had exalted a certain sort of 'shine on the nose' into a fetishistic precondition. The surprising explanation of this was that the patient had been brought up in an English nursery but had later come to Germany, where he forgot his mother-tongue almost completely. The fetish, which originated from his earliest childhood, had to be understood in English, not German. The 'shine on the nose' [in German '*Glanz auf der Nase*']—was in reality a '*glance* at the nose'. The nose was thus the fetish, which, incidentally, he endowed at will with the luminous shine which was not perceptible to others.

In every instance, the meaning and the purpose of the fetish turned out, in analysis, to be the same. It revealed itself so naturally and seemed to me so compelling that I am prepared to expect the same solution in all cases of fetishism. When now I announce that the fetish is a substitute for the penis, I shall certainly create disappointment; so I hasten to add that it is not a substitute for any chance penis, but for a particular and quite special penis that had been extremely important in early childhood but had later been lost. That is to say, it should normally have been given up, but the fetish is precisely designed to preserve it from extinction. To put it more plainly: the fetish is a substitute for the woman's (the mother's) penis that the little boy once believed in and—for reasons familiar to us—does not want to give up.²

What happened, therefore, was that the boy refused to take cognizance of the fact of his having perceived that a woman does not possess a penis. No, that could not be true: for if a woman had been castrated, then his own possession of a penis was in danger; and against that there rose in rebellion the portion of his narcissism which Nature has, as a precaution, attached to that particular organ. In later life a grown man may perhaps experience a similar panic when the cry goes up that Throne and Altar are in danger, and similar illogical consequences will ensue. If I am not mistaken, Laforgue would say in this case that the boy 'scotomizes' his perception of the woman's lack of a penis.³ A new technical term is justified when it describes a *new* fact or emphasizes it. This is not so here. The oldest word in our psychoanalytic terminology, 'repression', already relates to this pathological process. If we wanted to differentiate more sharply between the vicissitude of the *idea* as distinct from that of the *affect* and reserve the word '*Verdrängung*' ['repression'] for the affect, then the correct German word for the vicissitude of the *idea* would be '*Verleugnung*' ['disavowal']. 'Scotomization' seems to me particularly unsuitable, for it suggests that the perception is entirely wiped out,

2. This interpretation was made as early as 1910, in my study on Leonardo da Vinci [*Leonardo da Vinci and a Memory of His Childhood*], without any reasons being given for it [Freud's note].

3. I correct myself, however, by adding that I have the best reasons for supposing that Laforgue would not say anything of the sort. It is clear from his own remarks [in "Repression and Scotomization," 1926] that "scotomization" is a term which derives from descriptions of dementia praecox [schizo-

phrenia], which does not arise from a carrying-over of psycho-analytic concepts to the psychoses and which has no application to developmental processes or to the formation of neuroses. In his exposition in the text of his paper, the author has been at pains to make this incompatibility clear [Freud's note]. René Laforgue (1894–1962), French psychoanalyst. "Scotomize": to form a mental blind spot about.

so that the result is the same as when a visual impression falls on the blind spot in the retina. In the situation we are considering, on the contrary, we see that the perception has persisted, and that a very energetic action has been undertaken to maintain the disavowal. It is not true that, after the child has made his observation of the woman, he has preserved unaltered his belief that women have a phallus. He has retained that belief, but he has also given it up. In the conflict between the weight of the unwelcome perception and the force of his counter-wish, a compromise has been reached, as is only possible under the dominance of the unconscious laws of thought—the primary processes. Yes, in his mind the woman *has* got a penis, in spite of everything; but this penis is no longer the same as it was before. Something else has taken its place, has been appointed its substitute, as it were, and now inherits the interest which was formerly directed to its predecessor. But this interest suffers an extraordinary increase as well, because the horror of castration has set up a memorial to itself in the creation of this substitute. Furthermore, an aversion, which is never absent in any fetishist, to the real female genitals remains a *stigma indelebile*⁴ of the repression that has taken place. We can now see what the fetish achieves and what it is that maintains it. It remains a token of triumph over the threat of castration and a protection against it. It also saves the fetishist from becoming a homosexual, by endowing women with the characteristic which makes them tolerable as sexual objects. In later life, the fetishist feels that he enjoys yet another advantage from his substitute for a genital. The meaning of the fetish is not known to other people, so the fetish is not withheld from him: it is easily accessible and he can readily obtain the sexual satisfaction attached to it. What other men have to woo and make exertions for can be had by the fetishist with no trouble at all.

Probably no male human being is spared the fright of castration at the sight of a female genital. Why some people become homosexual as a consequence of that impression, while others fend it off by creating a fetish, and the great majority surmount it, we are frankly not able to explain. It is possible that, among all the factors at work, we do not yet know those which are decisive for the rare pathological results. We must be content if we can explain what has happened, and may for the present leave on one side the task of explaining why something has *not* happened.

One would expect that the organs or objects chosen as substitutes for the absent female phallus would be such as appear as symbols of the penis in other connections as well. This may happen often enough, but is certainly not a deciding factor. It seems rather that when the fetish is instituted some process occurs which reminds one of the stopping of memory in traumatic amnesia. As in this latter case, the subject's interest comes to a halt halfway, as it were; it is as though the last impression before the uncanny and traumatic one is retained as a fetish. Thus the foot or shoe owes its preference as a fetish—or a part of it—to the circumstance that the inquisitive boy peered at the woman's genitals from below, from her legs up; fur and velvet—as has long been suspected—are a fixation of the sight of the pubic hair, which should have been followed by the longed-for sight of the female member; pieces of underclothing, which are so often chosen as a fetish,

4. Indelible mark (Latin).

crystallize the moment of undressing, the last moment in which the woman could still be regarded as phallic. But I do not maintain that it is invariably possible to discover with certainty how the fetish was determined.

An investigation of fetishism is strongly recommended to anyone who still doubts the existence of the castration complex or who can still believe that fright at the sight of the female genital has some other ground—for instance, that it is derived from a supposed recollection of the trauma of birth.⁵

For me, the explanation of fetishism had another point of theoretical interest as well. Recently, along quite speculative lines, I arrived at the proposition that the essential difference between neurosis and psychosis was that in the former the ego, in the service of reality, suppresses a piece of the id,⁶ whereas in a psychosis it lets itself be induced by the id to detach itself from a piece of reality. I returned to this theme once again later on.⁷ But soon after this I had reason to regret that I had ventured so far. In the analysis of two young men I learned that each—one when he was two years old and the other when he was ten—had failed to take cognizance of the death of his beloved father—had ‘scotomized’ it—and yet neither of them had developed a psychosis. Thus a piece of reality which was undoubtedly important had been disavowed by the ego, just as the unwelcome fact of women’s castration is disavowed in fetishists. I also began to suspect that similar occurrences in childhood are by no means rare, and I believed that I had been guilty of an error in my characterization of neurosis and psychosis. It is true that there was one way out of the difficulty. My formula needed only to hold good where there was a higher degree of differentiation in the psychical apparatus; things might be permissible to a child which would entail severe injury to an adult.

But further research led to another solution of the contradiction. It turned out that the two young men had no more ‘scotomized’ their father’s death than a fetishist does the castration of women. It was only one current in their mental life that had not recognized their father’s death; there was another current which took full account of that fact. The attitude which fitted in with the wish and the attitude which fitted in with reality existed side by side. In one of my two cases this split had formed the basis of a moderately severe obsessional neurosis. The patient oscillated in every situation in life between two assumptions: the one, that his father was still alive and was hindering his activities; the other, opposite one, that he was entitled to regard himself as his father’s successor. I may thus keep to the expectation that in a psychosis the one current—that which fitted in with reality—would have in fact been absent.

Returning to my description of fetishism, I may say that there are many and weighty additional proofs of the divided attitude of fetishists to the question of the castration of women. In very subtle instances both the disavowal and the affirmation of the castration have found their way into the construction of the fetish itself. This was so in the case of a man whose fetish was an athletic support-belt which could also be worn as bathing drawers. This piece of clothing covered up the genitals entirely and concealed the distinc-

5. This argument was made by the Austrian psychotherapist Otto Rank in *The Trauma of Birth* (1924).

6. The unconscious (literally, “it”). In the Standard Edition, Freud’s German terms *das Ich* (“the I,” or “ego,” referring to the conscious self) and *das*

Es (“the it”) are rendered in Latin, as *das Uber-Ich* (the superego), the internalized voice of conscience and judgment directed toward the ego.

7. “Neurosis and Psychosis” (1924) and “The Loss of Reality in Neurosis and Psychosis” (1924) [Freud’s note].

tion between them. Analysis showed that it signified that women were castrated and that they were not castrated; and it also allowed of the hypothesis that men were castrated, for all these possibilities could equally well be concealed under the belt—the earliest rudiment of which in his childhood had been the fig-leaf on a statue. A fetish of this sort, doubly derived from contrary ideas, is of course especially durable. In other instances the divided attitude shows itself in what the fetishist does with his fetish, whether in reality or in his imagination. To point out that he reveres his fetish is not the whole story; in many cases he treats it in a way which is obviously equivalent to a representation of castration. This happens particularly if he has developed a strong identification with his father and plays the part of the latter; for it is to him that as a child he ascribed the woman's castration. Affection and hostility in the treatment of the fetish—which run parallel with the disavowal and the acknowledgment of castration—are mixed in unequal proportions in different cases, so that the one or the other is more clearly recognizable. We seem here to approach an understanding, even if a distant one, of the behaviour of the 'coupeur de nattes'.⁸ In him the need to carry out the castration which he disavows has come to the front. His action contains in itself the two mutually incompatible assertions: 'the woman has still got a penis' and 'my father has castrated the woman'. Another variant, which is also a parallel to fetishism in social psychology, might be seen in the Chinese custom of mutilating the female foot and then revering it like a fetish after it has been mutilated. It seems as though the Chinese male wants to thank the woman for having submitted to being castrated.

In conclusion we may say that the normal prototype of fetishes is a man's penis, just as the normal prototype of inferior organs is a woman's real small penis, the clitoris.⁹

1927

8. A pervert who enjoys cutting off the hair of females [translator's note].

9. This is an allusion to Alfred Adler's insistence on "organ-inferiority" as the basis of all neuroses

[translator's note]. Adler (1870–1937), Austrian psychiatrist who broke with Freud to form his own school of psychoanalysis in 1911.

FERDINAND DE SAUSSURE

1857–1913

Ferdinand de Saussure gave birth to structuralism by means of a book he never wrote. The *Course in General Linguistics*, based on student notes, was compiled by colleagues in 1916 after Saussure's death. Always described as being born into a "Swiss family distinguished for its intellectual achievements," Saussure, it seems, had no biography apart from the universities in which he studied or taught and the books he failed to write. In fact, Saussure's untimely death at age fifty-six is considered one of the few notable facts about him. Yet this man without a life came to be known as "the father of modern linguistics," and his intellectual progeny affected mid-twentieth-century thought in a wide variety of fields. After Saussure, the very idea of what it meant to study language was transformed.

In the late eighteenth century, the European study of languages had been revolu-

tionized by the encounter with Sanskrit (brought about by the British colonization of India). Comparison among Sanskrit, Greek, and Latin suggested a common ancestor behind all three, which scholars dubbed Proto-Indo-European. Comparative philologists sought to map languages as comparative anatomists had mapped organisms. But the generation of Saussure's teachers, the Neogrammarians, had begun to explore the rules of affinity and transformation in a more truly historical way. Saussure studied historical linguistics with some of them at the University of Leipzig, where he published his only book, *Mémoire sur le système primitif des voyelles dans les langues indo-européennes* (*Memoir on the Primitive System of Vowels in Indo-European Languages*) in 1878, while he was still a graduate student. His precocity was recognized by scholars in the field, and his purely theoretical description of an unknown vowel was later confirmed by studies of the Hittite language.

After spending a year studying in Berlin and receiving his doctorate from the University of Leipzig in 1880, he became a senior lecturer at the *École des Hautes Études* (School for Advanced Study) in Paris, where he began by teaching Gothic and Old High German, later adding Sanskrit (which he had studied since 1874), Latin, Persian, and Lithuanian. In 1891 he accepted a professorship at the University of Geneva, teaching there for the rest of his life. It was in 1906 that, after the death of a colleague, he was asked to add "general linguistics" to his teaching in historical and comparative linguistics.

In a letter written in 1894 to fellow linguist Antoine Meillet, Saussure outlined his dissatisfaction with linguistic theory as he knew it:

For a long time I have been above all preoccupied with the logical classification of linguistic facts and with the classification of the points of view from which we treat them; and I am more and more aware of the immense amount of work that would be required to show the linguist *what he is doing*. . . . The utter inadequacy of current terminology, the need to reform it and, in order to do that, to demonstrate what sort of object language is, continually spoil my pleasure in philology, though I have no dearer wish than not to be made to think about the nature of language in general.

Seldom has the condition for a real theoretical breakthrough been described so movingly. Saussure had taken "current terminology" to the point where it began to raise questions it could not answer. The need to study "the nature of language in general" was lived as a spoiled pleasure in philology.

As Saussure's originality increased, his scholarly productivity slowed. Searching for the best approach, he taught general linguistics in three different ways. Not only did he not write up his course, but he did not even keep his lecture notes, starting afresh each time. After his death, his young colleagues found themselves fabricating a synthesis of three fragmentary sets of student notes, with the result that the Saussure who is the author of the *Course in General Linguistics* is a function of the edited text, not its origin. Yet that was the Saussure who changed intellectual history.

What was Saussure's new theory of language? The diversity of languages, often thought to indicate a falling away from one original language (as in the story of Babel), indicated to Saussure not a story but a principle: the principle of the "arbitrary" (purely conventional) nature of the sign. Since there are thousands of human languages, the relation between words and things cannot be based on natural resemblances. For example, no inherent affinity or motivation leads people to call an avian creature *bird* or *oiseau*. Not only that, Saussure went on, but *language is not a nomenclature*. Rather than the world consisting of things that need names (the Adamic conception), each language brings into being, by describing, a world that it then knows as external. To be sure, the external world exists—but its reality remains quite nebulous until language articulates it. The way lines divide concepts and phrases, the way even concrete items are viewed, is specific to each language; each covers all that needs to be said, but in its different way.

Saussure's own theory illustrates this point: his terms *langage*, *langue*, and *parole*

have never been satisfactorily translated into English. *Le langage* (in English, "language") is a general human faculty, that which enables us to speak of "body language" or "the language of fashion." *La langue*, which in English is also called "language," is the name for specific languages (*la langue anglaise*, the English language); but it is also the most general term for language itself; the term Saussure uses to name the object of linguistics. *La langue* in this sense does not exist: it is a theoretical object abstracted from the structures of specific languages. *La parole* (speech) is what Saussure calls "the executive side": the concrete utterances that constitute all acts of language. These individual utterances are excluded from his theory of language insofar as they only "execute" possibilities that exist in language already, or depart from it for creative purposes without fundamentally changing it. But where Saussure uses three terms for these distinctions, English only possesses two.

Language, for Saussure, is a structured system of conventional signs, studied in their internal complexity as if frozen in time (synchronically) rather than as changing over time (diachronically). Saussure saw the study of language as eventually forming part of a larger science of signs in culture, which he called *semiology*, a field that later scholars (see ROLAND BARTHES) went on to develop. The atom of language is the sign, which is functionally split into two parts: a *signifier* (sound-image) and a *signified* (concept), brought inseparably together like the two sides of a sheet of paper. The relation between the signifier and the signified is "arbitrary," not "motivated" (by natural resemblance), even in cases of onomatopoeia (words that sound like what they mean). The word *arbitrary* means not that individual speakers can just make language up, but precisely that they can't: the sign is a convention that has to be learned and is not subject to individual will. The point is not that languages do not change (they are changing all the time), but that the changes themselves follow paths that have more to do with the overall structure of the language than with any intentional intervention by its speakers.

Though the signifier and the signified seem to function together as a unit to produce signification, each has *value* only by virtue of the ways in which it differs from other terms. Here, the chain of signifiers and the chain of signifieds diverge. A signifier differs from other signifiers while its signified distinguishes itself from other signifieds, and the networks of connection and distinction are not parallel, as Saussure's misleading diagram of the two realms might suggest. Saussure's distinction between "signification" and "value" is similar to KARL MARX's distinction between "use value" and "exchange value": the first appears tied to the characteristics of the object or term, whereas the second is entirely a function of the system of exchange or of language. Saussure goes so far as to say that *everything* in language is relational: "in language there are only differences. Even more important: a difference generally implies positive terms between which the difference is set up; but in language there are only differences *without positive terms*" (Saussure's emphasis). In other words, neither ideas nor sounds exist prior to their combination. This description of a difference that does not depend on the prior existence of knowable entities is one of Saussure's most radical declarations.

Jokes often play on the purely differential aspect of language. A homeowner answering the phone and hearing that "The viper is coming" might feel fear, but when the voice on the line explains that "he's coming to wipe your windows," what had initially been a serpent becomes a benign household maintenance worker. A foreign accent changes the sounds in a language without changing the system of differences. The sound *v* takes on the differential role of *w* in this joke as soon as it becomes clear *to what* it is being opposed.

Nevertheless, once combined, the signifier and signified do become a unit, an *articulus* in a system of articulations. The articulations are positive facts—the only kind of facts language possesses, since, as Saussure stresses, *language is a form and not a substance*. Once the differential structure has severed any natural connection between language and things, the sign becomes a building block of a system of oppo-

sitions: singular, plural; past, present, future; voiced, unvoiced; masculine, feminine. Saussure's favorite metaphor for the kind of structure he has in mind is chess: a rule-bound system of oppositions and differences that governs a closed but infinite set of operations.

In Saussure's conception of language, the sign is not only arbitrary but also linear (he thus uses a spatial term for what is in fact temporal, the succession of signs as they unfold in time during speech). Signs are combined like links in a chain to form the line of language according to two relations: the *syntagmatic* (all units present in their articulation) and the *associative* (all related units present in the mind but absent from the actual sequence). This distinction, later called *syntagmatic* and *paradigmatic*, would form an important part of ROMAN JAKOBSON's theory of metaphor and metonymy (see below). For Saussure, some syntagmatic relations beyond mere grammatical rules count as *language* rather than *speech*. Far from being freely chosen by each speaker, they constitute the "idioms" that a newcomer must master in order to "know" a language.

At the end of his life, Saussure was working on another project in which he had even less confidence than in his theory of general linguistics. According to notebooks published by Jean Starobinski starting in 1964 and eventually collected as *Les Mots sous les mots* (1971; trans. 1979, *Words upon Words*), Saussure was fascinated by the idea that within the verses written by certain Latin poets, deliberately concealed anagrams of proper names could be detected. Thus, a hidden poetics of names generated textual patterns that appeared to be dictated by the surface meanings of the words used as "carriers" for the letters. But Saussure could never be sure of what he found, and the notebooks remained hidden away. To compound the difficulty, the anagram project entailed a displacement of a major principle of the *Course*: while the *Course* treated the signifier-signified relation as a unit, the anagrams implied that signifiers and signifieds could function separately, that a signifier could serve more than one function, and that the signifier could take the lead in the organization of a text. These implications, which Saussure viewed with incredulity, had a profound impact on later textual theory.

Saussure's work provided the groundwork for both structuralism and poststructuralism. It was part of the larger "linguistic turn" in twentieth-century philosophy, history, anthropology, psychoanalysis, and literary studies. CLAUDE LÉVI-STRAUSS, for example, studied myths and kinship systems within different cultures as a system of signs to be interpreted. Roland Barthes explored the semiology of fashion, advertising, travel, and many other cultural phenomena. JACQUES DERRIDA, while critiquing Saussure's privileging of spoken language (Saussure called writing secondary, pathological, even monstrous with respect to the speech it records), nevertheless took up many aspects of Saussure's system of differences into what he called *différance*. LOUIS ALTHUSSER understood, on the basis of what Saussure says about language as a system, that economic and social structures, too, possess structural (rather than transitive) causality. And finally, JACQUES LACAN used Saussure to reformulate Freud in linguistic terms, while JULIA KRISTEVA developed a theory of the anagrammatical nature of literature.

Of course, the very things that made Saussure's thought so revealing and influential also led to the most serious objections. By focusing on the relation between signifier and signified, he gained insight into linguistic structure yet eliminated the world. "Bracketing the referent"—that is, leaving out the third dimension of the sign, that to which it refers—has been criticized by those, like TERRY EAGLETON, who find it impossible to speak of language without speaking of reference, things, history. After all, they argue, language is not chess. How can it be studied apart from the world to which it refers? How can reference not have a role in structure? In addition, language is neither unified nor closed, as deconstructors and poststructuralists were quick to point out. Even if it is frozen in time, conflict remains unresolved and essential within the system. And the later postmodern critique of the "universal subject" has empha-

sized that speakers are placed in very different positions within language by class, gender, race, geography, and so on. In our "viper" joke, for example, a small linguistic difference points to a whole system of class, property, ethnicity, and, varying with the gender of the homeowner, sexual politics—including an echo of the story of Adam, Eve, and the serpent.

Despite these criticisms, the *Course in General Linguistics* opened up as never before the question of the role of signs in culture and the role of language in the mind. As Jonathan Culler put it in *Ferdinand de Saussure* (1986), "What the study of language reveals about mind is not a set of primitive conceptions or natural ideas but the general structuring and differentiating operations by which things are made to signify."

BIBLIOGRAPHY

There are two existing English translations of the *Course in General Linguistics*, first edited by Charles Bally and Albert Sechehaye in 1916. The one that has become canonical is by Wade Baskin (1959). Roy Harris's more recent version (1983) solves certain problems but creates as many new ones. A critical edition comparing six different sources was published in French by Rudolf Engler (1967). Saussure's anagram project, edited by Jean Starobinski, has been translated as *Words upon Words* (1979). As one might expect, there are no biographies.

Several introductions to Saussure's work are excellent: Jonathan Culler's *Ferdinand de Saussure* (rev. ed., 1986) and David Holdcroft's *Saussure: Signs, System, and Arbitrariness* (1991) are accessible and clear. For an excellent exposition of the theories and limits of Saussure and the Russian formalists, see Fredric Jameson, *The Prison-House of Language: A Critical Account of Structuralism and Russian Formalism* (1972). Roy Harris's *Reading Saussure: A Critical Commentary of the "Cours de linguistique generale"* (1987) and Françoise Gadet's *Saussure and Contemporary Culture* (1987; trans. 1989) offer more information about Saussure in the context of linguistics. The even more detailed *Re-Reading Saussure: The Dynamics of Signs in Social Life* (1997) by Paul J. Thibault updates the discussion of many of the key concepts. For a confusing but detailed history of linguistics leading up to Saussure, see E. F. K. Koerner's *Ferdinand de Saussure: Origin and Development of His Linguistic Thought in Western Studies of Language* (1973). For a more theoretical discussion of Saussure's place in the history of linguistics, see Hans Aarsleff's insightful but not chronological *From Locke to Saussure: Essays on the Study of Language and Intellectual History* (1982). A bibliography, *Bibliographia Saussureana*, was compiled by E. F. K. Koerner (1972); more recent items can be found in the bibliographies of the Harris and Thibault volumes cited above.

From Introduction

CHAPTER III. THE OBJECT OF LINGUISTICS

2: *Place of Language in the Facts of Speech*

* * *

To summarize, these are the characteristics of language:

1) Language is a well-defined object in the heterogeneous mass of speech

1. Edited by Charles Bally and Albert Sechehaye in collaboration with Albert Riedlinger; translated by Wade Baskin, who occasionally includes the French in square brackets.

facts. It can be localized in the limited segment of the speaking-circuit where an auditory image becomes associated with a concept. It is the social side of speech, outside the individual who can never create nor modify it by himself; it exists only by virtue of a sort of contract signed by the members of a community. Moreover, the individual must always serve an apprenticeship in order to learn the functioning of language; a child assimilates it only gradually. It is such a distinct thing that a man deprived of the use of speaking retains it provided that he understands the vocal signs that he hears.

2) Language, unlike speaking, is something that we can study separately. Although dead languages are no longer spoken, we can easily assimilate their linguistic organisms. We can dispense with the other elements of speech; indeed, the science of language is possible only if the other elements are excluded.

3) Whereas speech is heterogeneous, language, as defined, is homogeneous. It is a system of signs in which the only essential thing is the union of meanings and sound-images, and in which both parts of the sign are psychological.

4) Language is concrete, no less so than speaking; and this is a help in our study of it. Linguistic signs, though basically psychological, are not abstractions; associations which bear the stamp of collective approval—and which added together constitute language—are realities that have their seat in the brain. Besides, linguistic signs are tangible; it is possible to reduce them to conventional written symbols, whereas it would be impossible to provide detailed photographs of acts of speaking [*actes de parole*]; the pronunciation of even the smallest word represents an infinite number of muscular movements that could be identified and put into graphic form only with great difficulty. In language, on the contrary, there is only the sound-image, and the latter can be translated into a fixed visual image. For if we disregard the vast number of movements necessary for the realization of sound-images in speaking, we see that each sound-image is nothing more than the sum of a limited number of elements or phonemes² that can in turn be called up by a corresponding number of written symbols. The very possibility of putting the things that relate to language into graphic form allows dictionaries and grammars to represent it accurately, for language is a storehouse of sound-images, and writing is the tangible form of those images.

3. *Place of Language in Human Facts: Semiology*

The foregoing characteristics of language reveal an even more important characteristic. Language, once its boundaries have been marked off within the speech data, can be classified among human phenomena, whereas speech cannot.

We have just seen that language is a social institution; but several features set it apart from other political, legal, etc. institutions. We must call in a new type of facts in order to illuminate the special nature of language.

Language is a system of signs that express ideas, and is therefore comparable to a system of writing, the alphabet of deaf-mutes, symbolic rites, polite formulas, military signals, etc. But it is the most important of all these systems.

2. The smallest distinctive unit of sound in a spoken language.

A science that studies the life of signs within society is conceivable; it would be a part of social psychology and consequently of general psychology; I shall call it *semiology* (from Greek *sēmeion* 'sign'). Semiology would show what constitutes signs, what laws govern them. Since the science does not yet exist, no one can say what it would be; but it has a right to existence, a place staked out in advance. Linguistics is only a part of the general science of semiology; the laws discovered by semiology will be applicable to linguistics, and the latter will circumscribe a well-defined area within the mass of anthropological facts.

To determine the exact place of semiology is the task of the psychologist. The task of the linguist is to find out what makes language a special system within the mass of semiological data. This issue will be taken up again later; here I wish merely to call attention to one thing: if I have succeeded in assigning linguistics a place among the sciences, it is because I have related it to semiology.

Why has semiology not yet been recognized as an independent science with its own object like all the other sciences? Linguists have been going around in circles: language, better than anything else, offers a basis for understanding the semiological problem; but language must, to put it correctly, be studied in itself; heretofore language has almost always been studied in connection with something else, from other viewpoints.

There is first of all the superficial notion of the general public: people see nothing more than a name-giving system in language, thereby prohibiting any research into its true nature.

Then there is the viewpoint of the psychologist, who studies the sign-mechanism in the individual; this is the easiest method, but it does not lead beyond individual execution and does not reach the sign, which is social.

Or even when signs are studied from a social viewpoint, only the traits that attach language to the other social institutions—those that are more or less voluntary—are emphasized; as a result, the goal is by-passed and the specific characteristics of semiological systems in general and of language in particular are completely ignored. For the distinguishing characteristic of the sign—but the one that is least apparent at first sight—is that in some way it always eludes the individual or social will.

In short, the characteristic that distinguishes semiological systems from all other institutions shows up clearly only in language where it manifests itself in the things which are studied least, and the necessity or specific value of a semiological science is therefore not clearly recognized. But to me the language problem is mainly semiological, and all developments derive their significance from that important fact. If we are to discover the true nature of language we must learn what it has in common with all other semiological systems; linguistic forces that seem very important at first glance (e.g., the role of the vocal apparatus) will receive only secondary consideration if they serve only to set language apart from the other systems. This procedure will do more than to clarify the linguistic problem. By studying rites, customs, etc. as signs, I believe that we shall throw new light on the facts and point up the need for including them in a science of semiology and explaining them by its laws.

From Part One. General Principles

CHAPTER I. NATURE OF THE LINGUISTIC SIGN

1. Sign, Signified, Signifier

Some people regard language, when reduced to its elements, as a naming-process only—a list of words, each corresponding to the thing that it names. For example:

This conception is open to criticism at several points. It assumes that ready-made ideas exist before words (on this point, see below); it does not tell us whether a name is vocal or psychological in nature (*arbor*, for instance, can be considered from either viewpoint); finally, it lets us assume that the linking of a name and a thing is a very simple operation—an assumption that is anything but true. But this rather naive approach can bring us near the truth by showing us that the linguistic unit is a double entity, one formed by the associating of two terms.

We have seen in considering the speaking-circuit that both terms involved in the linguistic sign are psychological and are united in the brain by an associative bond. This point must be emphasized.

The linguistic sign unites, not a thing and a name, but a concept and a sound-image.⁴ The latter is not the material sound, a purely physical thing, but the psychological imprint of the sound, the impression that it makes on our senses. The sound-image is sensory, and if I happen to call it “material,” it is only in that sense, and by way of opposing it to the other term of the association, the concept, which is generally more abstract.

The psychological character of our sound-images becomes apparent when we observe our own speech. Without moving our lips or tongue, we can talk to ourselves or recite mentally a selection of verse. Because we regard the words of our language as sound-images, we must avoid speaking of the “phonemes” that make up the words. This term, which suggests vocal activity, is

3. Tree and horse (the more usual base form is *equus*), respectively (Latin).

4. The term sound-image may seem to be too restricted inasmuch as beside the representation of the sounds of a word there is also that of its articulation, the muscular image of the phonational act. But for F. de Saussure language is essentially a depository, a thing received from without. The

sound-image is par excellence the natural representation of the word as a fact of potential language, outside any actual use of it in speaking. The motor side is thus implied or, in any event, occupies only a subordinate role with respect to the sound-image [Bally, Sechehayé, and Riedlinger's note].

applicable to the spoken word only, to the realization of the inner image in discourse. We can avoid that misunderstanding by speaking of the *sounds* and *syllables* of a word provided we remember that the names refer to the sound-image.

The linguistic sign is then a two-sided psychological entity that can be represented by the drawing:

The two elements are intimately united, and each recalls the other. Whether we try to find the meaning of the Latin word *arbor* or the word that Latin uses to designate the concept "tree," it is clear that only the associations sanctioned by that language appear to us to conform to reality, and we disregard whatever others might be imagined.

Our definition of the linguistic sign poses an important question of terminology. I call the combination of a concept and a sound-image a *sign*, but in current usage the term generally designates only a sound-image, a word, for example (*arbor*, etc.). One tends to forget that *arbor* is called a sign only because it carries the concept "tree," with the result that the idea of the sensory part implies the idea of the whole.

Ambiguity would disappear if the three notions involved here were designated by three names, each suggesting and opposing the others. I propose to retain the word *sign* [*signe*] to designate the whole and to replace *concept* and *sound-image* respectively by *signified* [*signifié*] and *signifier* [*signifiant*]; the last two terms have the advantage of indicating the opposition that separates them from each other and from the whole of which they are parts. As regards *sign*, if I am satisfied with it, this is simply because I do not know of any word to replace it, the ordinary language suggesting no other.

The linguistic sign, as defined, has two primordial characteristics. In enunciating them I am also positing the basic principles of any study of this type.

2. Principle I: The Arbitrary Nature of the Sign

The bond between the signifier and the signified is arbitrary. Since I mean by sign the whole that results from the associating of the signifier with the signified, I can simply say: *the linguistic sign is arbitrary*.

The idea of "sister" is not linked by any inner relationship to the succession of sounds *s-ø-r* which serves as its signifier in French; that it could be represented equally by just any other sequence is proved by differences among

languages and by the very existence of different languages: the signified "ox" has as its signifier *b-ö-f* on one side of the border and *o-k-s* (*Ochs*) on the other.⁵

No one disputes the principle of the arbitrary nature of the sign, but it is often easier to discover a truth than to assign to it its proper place. Principle I dominates all the linguistics of language; its consequences are numberless. It is true that not all of them are equally obvious at first glance; only after many detours does one discover them, and with them the primordial importance of the principle.

One remark in passing: when semiology becomes organized as a science, the question will arise whether or not it properly includes modes of expression based on completely natural signs, such as pantomime. Supposing that the new science welcomes them, its main concern will still be the whole group of systems grounded on the arbitrariness of the sign. In fact, every means of expression used in society is based, in principle, on collective behavior or—what amounts to the same thing—on convention. Polite formulas, for instance, though often imbued with a certain natural expressiveness (as in the case of a Chinese who greets his emperor by bowing down to the ground nine times), are nonetheless fixed by rule; it is this rule and not the intrinsic value of the gestures that obliges one to use them. Signs that are wholly arbitrary realize better than the others the ideal of the semiological process; that is why language, the most complex and universal of all systems of expression, is also the most characteristic; in this sense linguistics can become the master-pattern for all branches of semiology although language is only one particular semiological system.

The word *symbol* has been used to designate the linguistic sign, or more specifically, what is here called the signifier. Principle I in particular weighs against the use of this term. One characteristic of the symbol is that it is never wholly arbitrary; it is not empty, for there is the rudiment of a natural bond between the signifier and the signified. The symbol of justice, a pair of scales, could not be replaced by just any other symbol, such as a chariot.

The word *arbitrary* also calls for comment. The term should not imply that the choice of the signifier is left entirely to the speaker (we shall see below that the individual does not have the power to change a sign in any way once it has become established in the linguistic community); I mean that it is unmotivated, i.e. arbitrary in that it actually has no natural connection with the signified.

In concluding let us consider two objections that might be raised to the establishment of Principle I:

1) *Onomatopoeia* might be used to prove that the choice of the signifier is not always arbitrary. But onomatopoeic formations are never organic elements of a linguistic system. Besides, their number is much smaller than is generally supposed. Words like French *fouet* 'whip' or *glas* 'knell' may strike certain ears with suggestive sonority, but to see that they have not always had this property we need only examine their Latin forms (*fouet* is derived from *fāgus* 'beech-tree,' *glas* from *classicum* 'sound of a trumpet'). The quality of their present sounds, or rather the quality that is attributed to them, is a fortuitous result of phonetic evolution.

As for authentic onomatopoeic words (e.g. *glug-glug*, *tick-tock*, etc.), not

5. That is, in Germany.

only are they limited in number, but also they are chosen somewhat arbitrarily, for they are only approximate and more or less conventional imitations of certain sounds (cf. English *bow-wow* and French *ouaoua*). In addition, once these words have been introduced into the language, they are to a certain extent subjected to the same evolution—phonetic, morphological, etc.—that other words undergo (cf. *pigeon*, ultimately from Vulgar Latin *pīpiō*, derived in turn from an onomatopoeic formation): obvious proof that they lose something of their original character in order to assume that of the linguistic sign in general, which is unmotivated.

2) *Interjections*, closely related to onomatopoeia, can be attacked on the same grounds and come no closer to refuting our thesis. One is tempted to see in them spontaneous expressions of reality dictated, so to speak, by natural forces. But for most interjections we can show that there is no fixed bond between their signified and their signifier. We need only compare two languages on this point to see how much such expressions differ from one language to the next (e.g. the English equivalent of French *aié!* is *ouch!*). We know, moreover, that many interjections were once words with specific meanings (cf. French *diable!* 'darn!' *mordieu!* 'golly!' from *mort Dieu* 'God's death,' etc.).

Onomatopoeic formations and interjections are of secondary importance, and their symbolic origin is in part open to dispute.

3. Principle II: The Linear Nature of the Signifier

The signifier, being auditory, is unfolded solely in time from which it gets the following characteristics: (a) it represents a span, and (b) the span is measurable in a single dimension; it is a line.

While Principle II is obvious, apparently linguists have always neglected to state it, doubtless because they found it too simple; nevertheless, it is fundamental, and its consequences are incalculable. Its importance equals that of Principle I; the whole mechanism of language depends upon it. In contrast to visual signifiers (nautical signals, etc.) which can offer simultaneous groupings in several dimensions, auditory signifiers have at their command only the dimension of time. Their elements are presented in succession; they form a chain. This feature becomes readily apparent when they are represented in writing and the spatial line of graphic marks is substituted for succession in time.

Sometimes the linear nature of the signifier is not obvious. When I accent a syllable, for instance, it seems that I am concentrating more than one significant element on the same point. But this is an illusion; the syllable and its accent constitute only one phonational act. There is no duality within the act but only different oppositions to what precedes and what follows.

From Part Two. Synchronic Linguistics

CHAPTER IV. LINGUISTIC VALUE

1. Language as Organized Thought Coupled with Sound

To prove that language is only a system of pure values, it is enough to consider the two elements involved in its functioning: ideas and sounds.

Psychologically our thought—apart from its expression in words—is only a shapeless and indistinct mass. Philosophers and linguists have always

agreed in recognizing that without the help of signs we would be unable to make a clear-cut, consistent distinction between two ideas. Without language, thought is a vague, uncharted nebula. There are no pre-existing ideas, and nothing is distinct before the appearance of language.

Against the floating realm of thought, would sounds by themselves yield predelimited entities? No more so than ideas. Phonic substance is neither more fixed nor more rigid than thought; it is not a mold into which thought must of necessity fit but a plastic substance divided in turn into distinct parts to furnish the signifiers needed by thought. The linguistic fact can therefore be pictured in its totality—i.e. language—as a series of contiguous subdivisions marked off on both the indefinite plane of jumbled ideas (A) and the equally vague plane of sounds (B). The following diagram gives a rough idea of it:

The characteristic role of language with respect to thought is not to create a material phonic means for expressing ideas but to serve as a link between thought and sound, under conditions that of necessity bring about the reciprocal delimitations of units. Thought, chaotic by nature, has to become ordered in the process of its decomposition. Neither are thoughts given material form nor are sounds transformed into mental entities; the somewhat mysterious fact is rather that "thought-sound" implies division, and that language works out its units while taking shape between two shapeless masses. Visualize the air in contact with a sheet of water; if the atmospheric pressure changes, the surface of the water will be broken up into a series of divisions, waves; the waves resemble the union or coupling of thought with phonic substance.

Language might be called the domain of articulations, using the word as it was defined earlier. Each linguistic term is a member, an *articulus* in which an idea is fixed in a sound and a sound becomes the sign of an idea.

Language can also be compared with a sheet of paper:⁶ thought is the front and the sound the back; one cannot cut the front without cutting the back at the same time; likewise in language, one can neither divide sound from thought nor thought from sound; the division could be accomplished only abstractedly, and the result would be either pure psychology or pure phonology.

Linguistics then works in the borderland where the elements of sound and thought combine; *their combination produces a form, not a substance.*

These views give a better understanding of what was said before about the

6. The French expression *une feuille de papier* literally means "a leaf of paper."

arbitrariness of signs. Not only are the two domains that are linked by the linguistic fact shapeless and confused, but the choice of a given slice of sound to name a given idea is completely arbitrary. If this were not true, the notion of value would be compromised, for it would include an externally imposed element. But actually values remain entirely relative, and that is why the bond between the sound and the idea is radically arbitrary.

The arbitrary nature of the sign explains in turn why the social fact alone can create a linguistic system: The community is necessary if values that owe their existence solely to usage and general acceptance are to be set up; by himself the individual is incapable of fixing a single value.

In addition, the idea of value, as defined, shows that to consider a term as simply the union of a certain sound with a certain concept is grossly misleading. To define it in this way would isolate the term from its system; it would mean assuming that one can start from the terms and construct the system by adding them together when, on the contrary, it is from the interdependent whole that one must start and through analysis obtain its elements.

To develop this thesis, we shall study value successively from the viewpoint of the signified or concept (Section 2), the signifier (Section 3), and the complete sign (Section 4).

Being unable to seize the concrete entities or units of language directly, we shall work with words. While the word does not conform exactly to the definition of the linguistic unit, it at least bears a rough resemblance to the unit and has the advantage of being concrete; consequently, we shall use words as specimens equivalent to real terms in a synchronic system, and the principles that we evolve with respect to words will be valid for entities in general.

2. Linguistic Value from a Conceptual Viewpoint

When we speak of the value of a word, we generally think first of its property of standing for an idea, and this is in fact one side of linguistic value. But if this is true, how does *value* differ from *signification*? Might the two words be synonyms? I think not, although it is easy to confuse them, since the confusion results not so much from their similarity as from the subtlety of the distinction that they mark.

From a conceptual viewpoint, value is doubtless one element in signification, and it is difficult to see how signification can be dependent upon value and still be distinct from it. But we must clear up the issue or risk reducing language to a simple naming-process.

Let us first take signification as it is generally understood. As the arrows in the drawing show, it is only the counterpart of the sound-image. Everything that occurs concerns only the sound-image and the concept when we look upon the word as independent and self-contained.

But here is the paradox: on the one hand the concept seems to be the counterpart of the sound-image, and on the other hand the sign itself is in turn the counterpart of the other signs of language.

Language is a system of interdependent terms in which the value of each term results solely from the simultaneous presence of the others, as in the diagram:

How, then, can value be confused with signification, i.e. the counterpart of the sound-image? It seems impossible to liken the relations represented here by horizontal arrows to those represented above by vertical arrows. Putting it another way—and again taking up the example of the sheet of paper that is cut in two—it is clear that the observable relation between the different pieces A, B, C, D, etc. is distinct from the relation between the front and back of the same piece as in A/A', B/B', etc.

To resolve the issue, let us observe from the outset that even outside language all values are apparently governed by the same paradoxical principle. They are always composed:

- (1) of a *dissimilar* thing that can be *exchanged* for the thing of which the value is to be determined; and
- (2) of *similar* things that can be *compared* with the thing of which the value is to be determined.

Both factors are necessary for the existence of a value. To determine what a five-franc piece is worth one must therefore know: (1) that it can be exchanged for a fixed quantity of a different thing, e.g. bread; and (2) that it can be compared with a similar value of the same system; e.g. a one-franc piece, or with coins of another system (a dollar, etc.). In the same way a word can be exchanged for something dissimilar, an idea; besides, it can be compared with something of the same nature, another word. Its value is therefore not fixed so long as one simply states that it can be "exchanged" for a given concept, i.e. that it has this or that signification: one must also compare it with similar values, with other words that stand in opposition to it. Its content is really fixed only by the concurrence of everything that exists outside it. Being part of a system, it is endowed not only with a signification but also and especially with a value, and this is something quite different.

A few examples will show clearly that this is true. Modern French *mouton* can have the same signification as English *sheep* but not the same value, and this for several reasons, particularly because in speaking of a piece of meat ready to be served on the table, English uses *mutton* and not *sheep*. The difference in value between *sheep* and *mouton* is due to the fact that *sheep* has beside it a second term while the French word does not.

Within the same language, all words used to express related ideas limit each other reciprocally; synonyms like French *redouter* 'dread,' *craindre* 'fear,' and *avoir peur* 'be afraid' have value only through their opposition: if *redouter* did not exist, all its content would go to its competitors. Conversely, some words are enriched through contact with others: e.g. the new element

introduced in *décrépit* (un vieillard *décrépit*) results from the co-existence of *décrépi* (un mur *décrépi*).⁷ The value of just any term is accordingly determined by its environment; it is impossible to fix even the value of the word signifying "sun" without first considering its surroundings: in some languages it is not possible to say "sit in the sun."

Everything said about words applies to any term of language, e.g. to grammatical entities. The value of a French plural does not coincide with that of a Sanskrit plural even though their signification is usually identical; Sanskrit has three numbers instead of two (*my eyes, my ears, my arms, my legs*, etc. are dual⁸); it would be wrong to attribute the same value to the plural in Sanskrit and in French; its value clearly depends on what is outside and around it.

If words stood for pre-existing concepts, they would all have exact equivalents in meaning from one language to the next; but this is not true. French uses *louer* (*une maison*) 'let (a house)' indifferently to mean both "pay for" and "receive payment for," whereas German uses two words, *mieten* and *vermieten*; there is obviously no exact correspondence of values. The German verbs *schätzen* and *urteilen*⁹ share a number of significations, but that correspondence does not hold at several points.

Inflection offers some particularly striking examples. Distinctions of time, which are so familiar to us, are unknown in certain languages. Hebrew does not recognize even the fundamental distinctions between the past, present, and future. Proto-Germanic has no special form for the future; to say that the future is expressed by the present is wrong, for the value of the present is not the same in Germanic as in languages that have a future along with the present. The Slavic languages regularly single out two aspects of the verb: the perfective represents action as a point, complete in its totality; the imperfective represents it as taking place, and on the line of time. The categories are difficult for a Frenchman to understand, for they are unknown in French; if they were predetermined, this would not be true. Instead of pre-existing ideas then, we find in all the foregoing examples *values* emanating from the system. When they are said to correspond to concepts, it is understood that the concepts are purely differential and defined not by their positive content but negatively by their relations with the other terms of the system. Their most precise characteristic is in being what the others are not.

Now the real interpretation of the diagram of the sign becomes apparent. Thus

means that in French the concept "to judge" is linked to the sound-image *juger*; in short, it symbolizes signification. But it is quite clear that initially

7. The words translated as "decrepit" in "a decrepit old man" and "a decrepit wall" come from two different sources: *décrépit* is derived from the

Latin *dēcrepitus, décrépi* from *crispus*.

8. A special form applied to 2 of something.

9. "To value, assess" and "to judge," respectively.

the concept is nothing, that is only a value determined by its relations with other similar values, and that without them the signification would not exist. If I state simply that a word signifies something when I have in mind the associating of a sound-image with a concept, I am making a statement that may suggest what actually happens, but by no means am I expressing the linguistic fact in its essence and fullness.

3. *Linguistic Value from a Material Viewpoint*

The conceptual side of value is made up solely of relations and differences with respect to the other terms of language, and the same can be said of its material side. The important thing in the word is not the sound alone but the phonic differences that make it possible to distinguish this word from all others, for differences carry signification.

This may seem surprising, but how indeed could the reverse be possible? Since one vocal image is no better suited than the next for what it is commissioned to express, it is evident, even *a priori*, that a segment of language can never in the final analysis be based on anything except its noncoincidence with the rest. *Arbitrary* and *differential* are two correlative qualities.

The alteration of linguistic signs clearly illustrates this. It is precisely because the terms *a* and *b* as such are radically incapable of reaching the level of consciousness—one is always conscious of only the *a/b* difference—that each term is free to change according to laws that are unrelated to its signifying function. No positive sign characterizes the genitive plural in Czech *žen*; still the two forms *žena: žen* function as well as the earlier forms *žena: ženb; žen* has value only because it is different.

Here is another example that shows even more clearly the systematic role of phonic differences: in Greek, *éphēn* is an imperfect and *éstēn* an aorist¹ although both words are formed in the same way; the first belongs to the system of the present indicative of *phēmī* 'I say,' whereas there is no present **stēmī*; now it is precisely the relation *phēmī: éphēn* that corresponds to the relation between the present and the imperfect (cf. *déiknūmi: edéiknūn*,² etc.). Signs function, then, not through their intrinsic value but through their relative position.

In addition, it is impossible for sound alone, a material element, to belong to language. It is only a secondary thing, substance to be put to use. All conventional values have the characteristic of not being confused with the tangible element which supports them. For instance, it is not the metal in a piece of money that fixes its value. A coin nominally worth five francs may contain less than half its worth of silver. Its value will vary according to the amount stamped upon it and according to its use inside or outside a political boundary. This is even more true of the linguistic signifier, which is not phonic but incorporeal—constituted not by its material substance but by the differences that separate its sound-image from all others.

The foregoing principle is so basic that it applies to all the material elements of language, including phonemes. Every language forms its words on the basis of a system of sonorous elements, each element being a clearly delimited unit and one of a fixed number of units. Phonemes are character-

1. "Imperfect" and "aorist" are two past tenses of Greek verbs.

2. The present and imperfect, respectively, of the

Greek verb "to show" (all the forms in this paragraph are 1st-person singular).

ized not, as one might think, by their own positive quality but simply by the fact that they are distinct. Phonemes are above all else opposing, relative, and negative entities.

Proof of this is the latitude that speakers have between points of convergence in the pronunciation of distinct sounds. In French, for instance, general use of a dorsal *r* does not prevent many speakers from using a tongue-tip trill; language is not in the least disturbed by it; language requires only that the sound be different and not, as one might imagine, that it have an invariable quality. I can even pronounce the French *r* like German *ch* in *Bach*, *doch*, etc., but in German I could not use *r* instead of *ch*, for German gives recognition to both elements and must keep them apart. Similarly, in Russian there is no latitude for *t* in the direction of *t'* (palatalized *t*), for the result would be the confusing of two sounds differentiated by the language (cf. *govorit'* 'speak' and *govorit* 'he speaks'), but more freedom may be taken with respect to *th* (aspirated *t*) since this sound does not figure in the Russian system of phonemes.

Since an identical state of affairs is observable in writing, another system of signs, we shall use writing to draw some comparisons that will clarify the whole issue. In fact:

1) The signs used in writing are arbitrary; there is no connection, for example, between the letter *t* and the sound that it designates.

2) The value of letters is purely negative and differential. The same person can write *t*, for instance, in different ways:

The only requirement is that the sign for *t* not be confused in his script with the signs used for *l*, *d*, etc.

3) Values in writing function only through reciprocal opposition within a fixed system that consists of a set number of letters. This third characteristic, though not identical to the second, is closely related to it, for both depend on the first. Since the graphic sign is arbitrary, its form matters little or rather matters only within the limitations imposed by the system.

4) The means by which the sign is produced is completely unimportant, for it does not affect the system (this also follows from characteristic 1). Whether I make the letters in white or black, raised or engraved, with pen or chisel—all this is of no importance with respect to their signification.

4. *The Sign Considered in Its Totality*

Everything that has been said up to this point boils down to this: in language there are only differences. Even more important: a difference generally implies positive terms between which the difference is set up; but in language there are only differences *without positive terms*. Whether we take the signified or the signifier, language has neither ideas nor sounds that existed before the linguistic system, but only conceptual and phonic differences that have issued from the system. The idea or phonic substance that a sign contains is of less importance than the other signs that surround it. Proof of this

is that the value of a term may be modified without either its meaning or its sound being affected, solely because a neighboring term has been modified.

But the statement that everything in language is negative is true only if the signified and the signifier are considered separately; when we consider the sign in its totality, we have something that is positive in its own class. A linguistic system is a series of differences of sound combined with a series of differences of ideas; but the pairing of a certain number of acoustical signs with as many cuts made from the mass of thought engenders a system of values; and this system serves as the effective link between the phonic and psychological elements within each sign. Although both the signified and the signifier are purely differential and negative when considered separately, their combination is a positive fact; it is even the sole type of facts that language has, for maintaining the parallelism between the two classes of differences is the distinctive function of the linguistic institution.

Certain diachronic facts are typical in this respect. Take the countless instances where alteration of the signifier occasions a conceptual change and where it is obvious that the sum of the ideas distinguished corresponds in principle to the sum of the distinctive signs. When two words are confused through phonetic alteration (e.g. French *décrépît* from *dēcrēpitus* and *décrépi* from *crispus*), the ideas that they express will also tend to become confused if only they have something in common. Or a word may have different forms (cf. *chaise* 'chair' and *chaire* 'desk'³). Any nascent difference will tend invariably to become significant but without always succeeding or being successful on the first trial. Conversely, any conceptual difference perceived by the mind seeks to find expression through a distinct signifier, and two ideas that are no longer distinct in the mind tend to merge into the same signifier.

When we compare signs—positive terms—with each other, we can no longer speak of difference; the expression would not be fitting, for it applies only to the comparing of two sound-images, e.g. *father* and *mother*, or two ideas, e.g. the idea "father" and the idea "mother"; two signs, each having a signified and signifier, are not different but only distinct. Between them there is only *opposition*. The entire mechanism of language, with which we shall be concerned later, is based on oppositions of this kind and on the phonic and conceptual differences that they imply.

What is true of value is true also of the unit. A unit is a segment of the spoken chain that corresponds to a certain concept; both are by nature purely differential.

Applied to units, the principle of differentiation can be stated in this way: *the characteristics of the unit blend with the unit itself*. In language, as in any semiological system, whatever distinguishes one sign from the others constitutes it. Difference makes character just as it makes value and the unit.

Another rather paradoxical consequence of the same principle is this: in the last analysis what is commonly referred to as a "grammatical fact" fits the definition of the unit, for it always expresses an opposition of terms; it differs only in that the opposition is particularly significant (e.g. the formation of German plurals of the type *Nacht: Nächte*). Each term present in the grammatical fact (the singular without umlaut or final *e* in opposition to the plural with umlaut and *-e*) consists of the interplay of a number of opposi-

3. Both words derive from the Old French *chaire*.

tions within the system. When isolated, neither *Nacht* nor *Nächte* is anything: thus everything is opposition. Putting it another way, the *Nacht:Nächte* relation can be expressed by an algebraic formula a/b in which a and b are not simple terms but result from a set of relations. Language, in a manner of speaking, is a type of algebra consisting solely of complex terms. Some of its oppositions are more significant than others; but units and grammatical facts are only different names for designating diverse aspects of the same general fact: the functioning of linguistic oppositions. This statement is so true that we might very well approach the problem of units by starting from grammatical facts. Taking an opposition like *Nacht:Nächte*, we might ask what are the units involved in it. Are they only the two words, the whole series of similar words, a and \bar{a} , or all singulars and plurals, etc.?

Units and grammatical facts would not be confused if linguistic signs were made up of something besides differences. But language being what it is, we shall find nothing simple in it regardless of our approach; everywhere and always there is the same complex equilibrium of terms that mutually condition each other. Putting it another way, *language is a form and not a substance*. This truth could not be overstressed, for all the mistakes in our terminology, all our incorrect ways of naming things that pertain to language, stem from the involuntary supposition that the linguistic phenomenon must have substance.

CHAPTER V. SYNTAGMATIC AND ASSOCIATIVE RELATIONS

1. Definitions

In a language-state everything is based on relations. How do they function?

Relations and differences between linguistic terms fall into two distinct groups, each of which generates a certain class of values. The opposition between the two classes gives a better understanding of the nature of each class. They correspond to two forms of our mental activity, both indispensable to the life of language.

In discourse, on the one hand, words acquire relations based on the linear nature of language because they are chained together. This rules out the possibility of pronouncing two elements simultaneously. The elements are arranged in sequence on the chain of speaking. Combinations supported by linearity are *syntagms*.⁴ The syntagm is always composed of two or more consecutive units (e.g. French *re-lire* 're-read,' *contre tous* 'against everyone,' *la vie humaine* 'human life,' *Dieu est bon* 'God is good,' *s'il fait beau temps*, *nous sortirons* 'if the weather is nice, we'll go out,' etc.). In the syntagm a term acquires its value only because it stands in opposition to everything that precedes or follows it, or to both.

Outside discourse, on the other hand, words acquire relations of a different kind. Those that have something in common are associated in the memory, resulting in groups marked by diverse relations. For instance, the French word *enseignement* 'teaching' will unconsciously call to mind a host of other

4. It is scarcely necessary to point out that the study of *syntagms* is not to be confused with syntax. Syntax is only one part of the study of syntagms [Bally, Sechehaye, and Riedlinger's note].

words (*enseigner* 'teach,' *renseigner* 'acquaint,' etc.; or, *armement* 'armament,' *changement* 'amendment,' etc.; or *éducation* 'education,' *apprentissage* 'apprenticeship,' etc.). All those words are related in some way.

We see that the co-ordinations formed outside discourse differ strikingly from those formed inside discourse. Those formed outside discourse are not supported by linearity. Their seat is in the brain; they are a part of the inner storehouse that makes up the language of each speaker. They are *associative relations*.

The syntagmatic relation is *in praesentia*.⁵ It is based on two or more terms that occur in an effective series. Against this, the associative relation unites terms *in absentia* in a potential mnemonic series.

From the associative and syntagmatic viewpoint a linguistic unit is like a fixed part of a building, e.g. a column. On the one hand, the column has a certain relation to the architrave that it supports; the arrangement of the two units in space suggests the syntagmatic relation. On the other hand, if the column is Doric, it suggests a mental comparison of this style with others (Ionic, Corinthian, etc.) although none of these elements is present in space: the relation is associative.

Each of the two classes of co-ordination calls for some specific remarks.

2. Syntagmatic Relations

The examples have already indicated that the notion of syntagm applies not only to words but to groups of words, to complex units of all lengths and types (compounds, derivatives, phrases, whole sentences).

It is not enough to consider the relation that ties together the different parts of syntagms (e.g. French *contre* 'against' and *tous* 'everyone' in *contre tous*, *contre* and *maître* 'master' in *contremaître* 'foreman'); one must also bear in mind the relation that links the whole to its parts (e.g. *contre tous* in opposition on the one hand to *contre* and on the other *tous*, or *contremaître* in opposition to *contre* and *maître*).

An objection might be raised at this point. The sentence is the ideal type of syntagm. But it belongs to speaking, not to language.⁶ Does it not follow that the syntagm belongs to speaking? I do not think so. Speaking is characterized by freedom of combinations; one must therefore ask whether or not all syntagms are equally free.

It is obvious from the first that many expressions belong to language. These are the pat phrases in which any change is prohibited by usage, even if we can single out their meaningful elements (cf. *à quoi bon?* 'what's the use?' *allons donc!* 'nonsense!'). The same is true, though to a lesser degree, of expressions like *prendre la mouche?* 'take offense easily,' *forcer la main à quelqu'un* 'force someone's hand,' *rompre une lance* 'break a lance,' or even *avoir mal (à la tête, etc.)* 'have (a headache, etc.),' *à force de (soins, etc.)* 'by dint of (care, etc.),' *que vous en semble?* 'how do you feel about it?' *pas n'est besoin de . . .* 'there's no need for . . .,' etc., which are characterized by peculiarities of signification or syntax. These idiomatic twists cannot be improvised; they are furnished by tradition. There are also words which, while

5. Present (Latin).

6. That is, it belongs to *la parole*, not to *la langue*,

in Saussure's terms.

7. Literally, "lay hold of the fly."

lending themselves perfectly to analysis, are characterized by some morphological anomaly that is kept solely by dint of usage (cf. *difficulté* 'difficulty' beside *facilité* 'facility,' etc., and *mourrai* '[I] shall die' beside *dormirai* '[I] shall sleep').⁸

There are further proofs. To language rather than to speaking belong the syntagmatic types that are built upon regular forms. Indeed, since there is nothing abstract in language, the types exist only if language has registered a sufficient number of specimens. When a word like *indécorable*⁹ arises in speaking, its appearance supposes a fixed type, and this type is in turn possible only through remembrance of a sufficient number of similar words belonging to language (*impardonable* 'unpardonable,' *intolérable* 'intolerable,' *infatigable* 'indefatigable,' etc.). Exactly the same is true of sentences and groups of words built upon regular patterns. Combinations like *la terre tourne* 'the world turns,' *que vous dit-il?* 'what does he say to you?' etc. correspond to general types that are in turn supported in the language by concrete remembrances.

But we must realize that in the syntagm there is no clear-cut boundary between the language fact, which is a sign of collective usage, and the fact that belongs to speaking and depends on individual freedom. In a great number of instances it is hard to class a combination of units because both forces have combined in producing it, and they have combined in indeterminable proportions.

3. Associative Relations

Mental association creates other groups besides those based on the comparing of terms that have something in common; through its grasp of the nature of the relations that bind the terms together, the mind creates as many associative series as there are diverse relations. For instance, in *enseignement* 'teaching,' *enseigner* 'teach,' *enseignons* '(we) teach,' etc., one element, the radical, is common to every term; the same word may occur in a different series formed around another common element, the suffix (cf. *enseignement*, *armement*, *changement*, etc.); or the association may spring from the analogy of the concepts signified (*enseignement*, *instruction*, *apprentissage*, *éducation*, etc.); or again, simply from the similarity of the sound-images (e.g. *enseignement* and *justement* 'precisely'). Thus there is at times a double similarity of meaning and form, at times similarity only of form or of meaning. A word can always evoke everything that can be associated with it in one way or another.

Whereas a syntagm immediately suggests an order of succession and a fixed number of elements, terms in an associative family occur neither in fixed numbers nor in a definite order. If we associate *painful*, *delightful*, *frightful*, etc. we are unable to predict the number of words that the memory will suggest or the order in which they will appear. A particular word is like the center of a constellation; it is the point of convergence of an indefinite number of co-ordinated terms.

8. The anomaly of the double *r* in the future forms of certain verbs in French may be compared to irregular plurals like *oxen* in English [translator's

note].

9. That is, a word coined by analogy.

But of the two characteristics of the associative series—indeterminate order and indefinite number—only the first can always be verified; the second may fail to meet the test. This happens in the case of inflectional paradigms, which are typical of associative groupings. Latin *dominus, domini, dominō*, etc. is obviously an associative group formed around a common element, the noun theme *domin-*, but the series is not indefinite as in the case of *enseignement, changement*, etc.; the number of cases is definite. Against this, the words have no fixed order of succession, and it is by a purely arbitrary act that the grammarian groups them in one way rather than in another; in the mind of speakers the nominative case is by no means the first one in the declension,¹ and the order in which terms are called depends on circumstances.

1906–13

1916

1. In standard grammars of inflected languages such as Greek and Latin, tables illustrating the case endings of each declension, or class of nouns

or adjectives sharing the same forms, always begin with the nominative case (i.e., the form of the subject).

W. E. B. DU BOIS

1868–1963

W. E. B. Du Bois excelled in many disciplines and creative endeavors, from sociology to social commentary to poetry. He was one of the most accomplished scholar-activists and public intellectuals in American history, and his extraordinary life spanned ninety-five years. Born, raised, and educated in the latter decades of the nineteenth century, Du Bois was a Romantic visionary and Victorian professional writer who decades later grappled with the political tensions of the cold war. But he was also an African American radical, a Pan-African leader, and eventually a defiant Marxist revolutionary.

William Edward Burghardt Du Bois was born in Great Barrington in western Massachusetts, a small town with few African American residents. Raised by his mother and her relatives, in his youth he became a lover of books, and he began writing early. Before even graduating from high school in 1885, Du Bois served as a correspondent for newspapers in Massachusetts and New York City.

As he explains in his *Autobiography* (1968), Du Bois then "went South," to "the South of slavery, rebellion, and black folk," earning his B.A. at Fisk University, in Nashville, Tennessee, in 1888. Both as a student and as a teacher in rural schools during the summers, he came into contact with many African African families and communities, later recalling: "Into this world I leapt with enthusiasm. A new loyalty and allegiance replaced my Americanism: henceforward I was a Negro."

Du Bois next attended Harvard University, receiving a second B.A. in 1890 and doing graduate work (M.A., 1891; Ph.D., 1895). He also studied at the University of Berlin (1892-94), where he "began to see the race problem in America, the problem of the peoples of Africa and Asia, and the political development of Europe as one."

In the 1890s there were few professional careers open to African Americans. Du Bois taught and did research, eventually joining the faculty of Atlanta University, where he instructed black students in economics, history, and sociology (1897-1910, 1933-44).

Du Bois's first book, based on his dissertation, was *The Suppression of the African Slave Trade to the United States of America, 1638-1870* (1896). He was a serious and well-trained scholar. But his belief in the transformative power of social scientific knowledge was shattered by the virulent racism of turn-of-the-century America, when segregation laws increased and anti-black terror and lynching intensified.

By 1900 Du Bois had already begun to project his vision of race relations outward from America's shores, becoming active in Pan-African organizations and congresses. In his major work *The Souls of Black Folk* (1903), he not only examines the history of slavery and segregation in the United States but also emphasizes, more generally, that "the problem of the Twentieth Century is the problem of the color line." Still, his focus is American; *The Souls of Black Folk* includes essays, sketches, and stories on African American politics, history, education, music, and culture. Du Bois speaks evocatively in it of "the veil" that separates blacks from whites, and he famously describes the "double consciousness" that defines African American identity: "One ever feels his twoness—an American, a Negro; two souls, two thoughts, two unrec- onciled strivings; two warring ideals in one dark body, whose dogged strength alone keeps it from being torn asunder."

Du Bois was perhaps best known at this time for his opposition to Booker T. Wash- ington (1856-1915), the founder of Tuskegee Institute in Alabama and the leading spokesman on the national scene for African Americans—chosen for that position, Du Bois argued in *The Souls of Black Folk* and elsewhere, because he presented the accommodationist message that whites wanted to hear. Du Bois was far more militant; not satisfied with limited economic progress, he insisted on social and political rights, access to higher education, and the development of an elite African American intel- lectual and professional class (the "talented tenth").

Du Bois's opposition to Washington led him in 1905 to take a central role in the Niagara Movement for full rights for African Americans. He became editor of *Horizon: A Journal of the Color Line* (1907-10); he helped found the National Association for the Advancement of Colored People (NAACP) in 1909 and served as its director of publications and research; and he expanded his role in the international Pan- African movement. He was actively publishing books and articles, too, as a social critic and theorist, creative writer, and historian.

From 1910 to 1934 Du Bois was the editor of the NAACP's monthly magazine, *The Crisis*; by 1919 it reached an audience of 100,000 readers. He was an important influence on the writers and artists of the Harlem Renaissance and the "New Negro" movement of the 1920s. In the pages of *The Crisis*, he repeatedly urged readers to see "Beauty in Black," an imperative that a dazzling array of African American authors and artists sought to fulfill.

These diversely gifted men and women—LANGSTON HUGHES, Jean Toomer, ZORA NEALE HURSTON, Duke Ellington, and many others—were forming the intellectual vanguard for which Du Bois had called. But because their emphasis was cultural

rather than political, he had a mixed response to them. Du Bois welcomed their innovative creative work, but he regretted the dependence of African American authors, artists, and musicians on white patrons and audiences. And while he called for greater openness and honesty about sexual themes, he was also quick to criticize some African American authors (for example, Claude McKay) for reinforcing white stereotypes of black sexual behavior.

The Depression of the 1930s hit African Americans hard and provoked Du Bois to call for "voluntary segregation," which, he maintained, would lead to economic self-sufficiency, solidarity, and self-advancement in a country that was not seeking to reach the goal of racial integration. Because of his separatist views, Du Bois was forced out of the NAACP in 1934.

From the 1930s until his death in 1963, Du Bois remained an activist and a prolific author. His books include the epic historical study *Black Reconstruction in America, 1860-1880* (1935); *Dusk of Dawn* (1940), which he described as "the autobiography of a concept of race"; and *Color and Democracy: Colonies and Peace* (1945), one of many writings of the 1940s and 1950s that challenged imperialism and made the case for African independence. Such pioneering, uncompromising work made him highly respected on the international scene. But together with his ever-deepening interest in Communism and admiration of the Soviet Union, it brought Du Bois under suspicion in the United States. In 1951 he was placed on trial for being an "unregistered foreign agent"; though he was acquitted, his passport was revoked from 1952 to 1958. Embittered by his treatment, in 1961 Du Bois joined the Communist Party, renounced his U.S. citizenship, and took up residence in Ghana. There, at work on a multivolume *Encyclopaedia Africana*, he died in Accra, two years later.

Du Bois's writings in literary criticism and theory blend genteel Victorianism, literary realism and naturalism, and radical politics. As our selection, "Criteria of Negro Art" (1926), indicates, Du Bois believed that "all Art is propaganda and ever must be." In this address he tells African American writers and artists to strive for Truth and Beauty. But he also stresses the marketplace conditions, and the racism, that block and undercut African American literary and cultural achievement, and he insists on the need for art to function as agitation, protest, and racial propaganda. Underlying his argument is the problem that confronts all literary intellectuals who maintain strong political views: how to resolve the dual demands of art and politics. Du Bois affirms that the central duty of African American writers and artists is to advance the cause of the race; at the same time, he insists that they express the truth about African American life. But someone looking ahead several decades to reader-response theory (see, for example, STANLEY FISH and WOLFGANG ISER) might nonetheless propose that Du Bois's real concern is as much with a work's reception as with its production: How does the work of art affect the general American perception of African Americans? What will be the impact of the text on the social and political attitudes of readers?

The weakness in Du Bois's position lies precisely in his extreme demand that art must be used for propaganda and for nothing else. No doubt he believes that the needs of his people mandate this stark requirement. Yet in "Criteria of Negro Art" it clashes with his earlier evocation of the splendid beauty of Cologne's cathedral and the Venus de Milo, which he seems to value for their own sake rather than for any propagandistic service they did or might perform. Du Bois's vision is inclusive, and challengingly so: he links the cathedral and the famous Greek statue with a village in West Africa and a Negro song or spiritual. But he appears not to recognize the reductive nature of his fiery dismissal: "I do not care a damn for any art that is not used for propaganda."

Du Bois is only one voice in a complex, ongoing African American debate. His address can be profitably placed alongside and measured against the literary critical ideas that Zora Neale Hurston and Richard Wright articulate, and to which other twentieth-century authors—notably James Baldwin, Ralph Ellison, Amiri Baraka, and

Toni Morrison—have contributed. All, in their writings, have acknowledged Du Bois's majestic stature as an intellectual and cultural critic and historian. But all are also primarily creative writers—Du Bois was not—and they call for and exemplify forms of freedom in artistic expression that for political reasons he could not wholly share.

BIBLIOGRAPHY

The *Complete Published Works of W. E. B. Du Bois* has been edited by Herbert Aptheker (36 vols., 1973–86). It is supplemented by two other works edited by Aptheker: *The Correspondence of W. E. B. Du Bois* (3 vols., 1973–78) and *Against Racism: Unpublished Essays, Papers, Addresses, 1887–1961* (1985). The Du Bois volume in the Library of America series, edited by Nathan Irvin Huggins (1986), includes *The Suppression of the African Slave Trade*, *The Souls of Black Folk*, and *Dusk of Dawn*, as well as a number of essays. A range of selections is also available in *W. E. B. Du Bois: A Reader*, edited by David Levering Lewis (1995), and *The Oxford W. E. B. Du Bois Reader*, edited by Eric J. Sundquist (1996).

There are several excellent biographies: Manning Marable, *W. E. B. Du Bois, Black Radical Democrat* (1986), a cogently written survey by an author fully familiar with Du Bois's writings and the major issues in African American social and political history; Gerald Horne, *Black and Red: W. E. B. Du Bois and the Afro-American Response to the Cold War, 1944–1963* (1986), a detailed account of the final phase of Du Bois's career; and David L. Lewis, *W. E. B. Du Bois, a comprehensive two-volume biography: Biography of a Race, 1868–1919* (1993) and *The Fight for Equality and the American Century, 1919–1963* (2000).

The best study of Du Bois as a writer is Arnold Rampersad's *Art and Imagination of W. E. B. Du Bois* (1976), which explores all of Du Bois's major books. See also the extensive chapter on Du Bois in Eric J. Sundquist, *To Wake the Nations: Race in the Making of American Literature* (1993); Keith Eldon Byerman, *Seizing the Word: History, Art, and Self in the Work of W. E. B. Du Bois* (1994); Shamoan Zamir, *Dark Voices: W. E. B. Du Bois and American Thought, 1888–1903* (1995); and Adolph Reed Jr., *W. E. B. Du Bois and American Political Thought: Fabianism and the Color Line* (1997). Other helpful resources include two collections: *Critical Essays on W. E. B. Du Bois*, edited by William L. Andrews (1985), and *W. E. B. Du Bois on Race and Culture*, edited by Bernard W. Bell, Emily R. Grosholz, and James B. Stewart (1996), which sheds light on Du Bois's attitudes toward race, gender equality, and Pan-Africanism. Key bibliographic sources include Herbert Aptheker, *Annotated Bibliography of the Published Writings of W. E. B. Du Bois* (1973), and Paul G. Partington, *W. E. B. Du Bois: A Bibliography of His Published Writings* (1979).

Criteria of Negro Art

So many persons have asked for the complete text of the address delivered by Dr. Du Bois at the Chicago Conference of the National Association for the Advancement of Colored People that we are publishing the address here.¹

I do not doubt but there are some in this audience who are a little disturbed at the subject of this meeting, and particularly at the subject I have chosen. Such people are thinking something like this: "How is it that an organization like this, a group of radicals trying to bring new things into the world, a fighting organization which has come up out of the blood and dust of battle, struggling for the right of black men to be ordinary human beings—how is

1. *The Crisis*; the address was delivered in 1926.

it that an organization of this kind can turn aside to talk about Art? After all, what have we who are slaves and black to do with Art?"

Or perhaps there are others who feel a certain relief and are saying, "After all it is rather satisfactory after all this talk about rights and fighting to sit and dream of something which leaves a nice taste in the mouth."

Let me tell you that neither of these groups is right. The thing we are talking about tonight is part of the great fight we are carrying on and it represents a forward and an upward look—a pushing onward. You and I have been breasting hills; we have been climbing upward; there has been progress and we can see it day by day looking back along blood-filled paths. But as you go through the valleys and over the foothills, so long as you are climbing, the direction,—north, south, east or west,—is of less importance. But when gradually the vista widens and you begin to see the world at your feet and the far horizon, then it is time to know more precisely whither you are going and what you really want.

What do we want? What is the thing we are after? As it was phrased last night it had a certain truth: We want to be Americans, full-fledged Americans, with all the rights of other American citizens. But is that all? Do we want simply to be Americans? Once in a while through all of us there flashes some clairvoyance, some clear idea, of what America really is. We who are dark can see America in a way that white Americans can not. And seeing our country thus, are we satisfied with its present goals and ideals?

In the high school where I studied we learned most of Scott's "Lady of the Lake"² by heart. In after life once it was my privilege to see the lake. It was Sunday. It was quiet. You could glimpse the deer wandering in unbroken forests; you could hear the soft ripple of romance on the waters. Around me fell the cadence of that poetry of my youth. I fell asleep full of the enchantment of the Scottish border. A new day broke and with it came a sudden rush of excursionists. They were mostly Americans and they were loud and strident. They poured upon the little pleasure boat,—men with their hats a little on one side and drooping cigars in the wet corners of their mouths; women who shared their conversation with the world. They all tried to get everywhere first. They pushed other people out of the way. They made all sorts of incoherent noises and gestures so that the quiet home folk and the visitors from other lands silently and half-wonderingly gave way before them. They struck a note not evil but wrong. They carried, perhaps, a sense of strength and accomplishment, but their hearts had no conception of the beauty which pervaded this holy place.

If you tonight suddenly should become full-fledged Americans; if your color faded, or the color line here in Chicago was miraculously forgotten; suppose, too, you became at the same time rich and powerful:—what is it that you would want? What would you immediately seek? Would you buy the most powerful of motor cars and outrace Cook County?³ Would you buy the most elaborate estate on the North Shore? Would you be a Rotarian or a Lion or a What-not of the very last degree?⁴ Would you wear the most striking clothes, give the richest dinners and buy the longest press notices?

Even as you visualize such ideals you know in your hearts that these are

2. A poem in six cantos about early-16th-century knights and ladies (1810), by Sir Walter Scott (1771–1832).

3. County in which Chicago is located.

4. The Rotary and Lions clubs are national service organizations; Freemasons are described as achieving certain degrees.

not the things you really want. You realize this sooner than the average white American because, pushed aside as we have been in America, there has come to us not only a certain distaste for the tawdry and flamboyant but a vision of what the world could be if it were really a beautiful world; if we had the true spirit; if we had the Seeing Eye, the Cunning Hand, the Feeling Heart; if we had, to be sure, not perfect happiness, but plenty of good hard work, the inevitable suffering that always comes with life; sacrifice and waiting, all that—but, nevertheless, lived in a world where men know, where men create, where they realize themselves and where they enjoy life. It is that sort of a world we want to create for ourselves and for all America.

After all, who shall describe Beauty? What is it? I remember tonight four beautiful things: The Cathedral at Cologne,⁵ a forest in stone, set in light and changing shadow, echoing with sunlight and solemn song; a village of the Veys⁶ in West Africa, a little thing of mauve and purple quiet, lying content and shining in the sun; a black and velvet room where on a throne rests, in old and yellowing marble; the broken curves of the Venus of Milo;⁷ a single phrase of music in the Southern South—utter melody, haunting and appealing, suddenly arising out of night and eternity, beneath the moon.

Such is Beauty. Its variety is infinite, its possibility is endless. In normal life all may have it and have it yet again. The world is full of it; and yet today the mass of human beings are choked away from it, and their lives distorted and made ugly. This is not only wrong, it is silly. Who shall right this well-nigh universal failing? Who shall let this world be beautiful? Who shall restore to men the glory of sunsets and the peace of quiet sleep?

We black folk may help for we have within us as a race new stirrings, stirrings of the beginning of a new appreciation of joy, of a new desire to create, of a new will to be; as though in this morning of group life we had awakened from some sleep that at once dimly mourns the past and dreams a splendid future; and there has come the conviction that the Youth that is here today, the Negro Youth, is a different kind of Youth, because in some new way it bears this mighty prophecy on its breast, with a new realization of itself, with new determination for all mankind.

What has this Beauty to do with the world? What has Beauty to do with Truth and Goodness—with the facts of the world and the right actions of men? "Nothing," the artists rush to answer. They may be right. I am but an humble disciple of art and cannot presume to say. I am one who tells the truth and exposes evil and seeks with Beauty and for Beauty to set the world right. That somehow, somewhere eternal and perfect Beauty sits above Truth and Right I can conceive, but here and now and in the world in which I work they are for me unseparated and inseparable.

This is brought to us peculiarly when as artists we face our own past as a people. There has come to us—and it has come especially through the man we are going to honor tonight⁸—a realization of that past, of which for long years we have been ashamed, for which we have apologized. We thought nothing could come out of that past which we wanted to remember; which

inal), now armless.

8. Carter G. Woodson (1875–1950), to whom the NAACP in 1926 awarded the Spingarn Medal for African American achievement, was an African American educator and historian who in 1916 founded the *Journal of Negro History*.

we wanted to hand down to our children. Suddenly, this same past is taking on form, color and reality, and in a half shamefaced way we are beginning to be proud of it. We are remembering that the romance of the world did not die and lie forgotten in the Middle Age; that if you want romance to deal with you must have it here and now and in your own hands.

I once knew a man and woman. They had two children, a daughter who was white and a daughter who was brown; the daughter who was white married a white man; and when her wedding was preparing the daughter who was brown prepared to go and celebrate. But the mother said, "No!" and the brown daughter went into her room and turned on the gas and died. Do you want Greek tragedy swifter than that?

Or again, here is a little Southern Town and you are in the public square. On one side of the square is the office of a colored lawyer and on all the other sides are men who do not like colored lawyers. A white woman goes into the black man's office and points to the white-filled square and says, "I want five hundred dollars now and if I do not get it I am going to scream."

Have you heard the story of the conquest of German East Africa?⁹ Listen to the untold tale: There were 40,000 black men and 4,000 white men who talked German. There were 20,000 black men and 12,000 white men who talked English. There were 10,000 black men and 400 white men who talked French. In Africa then where the Mountains of the Moon raised their white and snow-capped heads into the mouth of the tropic sun, where Nile and Congo rise and the Great Lakes swim, these men fought; they struggled on mountain, hill and valley, in river, lake and swamp, until in masses they sickened, crawled and died; until the 4,000 white Germans had become mostly bleached bones; until nearly all the 12,000 white Englishmen had returned to South Africa, and the 400 Frenchmen to Belgium and Heaven; all except a mere handful of the white men died; but thousands of black men from East, West and South Africa, from Nigeria and the Valley of the Nile, and from the West Indies still struggled, fought and died. For four years they fought and won and lost German East Africa; and all you hear about it is that England and Belgium conquered German Africa for the allies!

Such is the true and stirring stuff of which Romance is born and from this stuff come the stirrings of men who are beginning to remember that this kind of material is theirs; and this vital life of their own kind is beckoning them on.

The question comes next as to the interpretation of these new stirrings, of this new spirit: Of what is the colored artist capable? We have had on the part of both colored and white people singular unanimity of judgment in the past. Colored people have said: "This work must be inferior because it comes from colored people." White people have said: "It is inferior because it is done by colored people." But today there is coming to both the realization that the work of the black man is not always inferior. Interesting stories come to us. A professor in the University of Chicago read to a class that had studied literature a passage of poetry and asked them to guess the author. They guessed a goodly company from Shelley and Robert Browning down to Tennyson and Masfield. The author was Countée Cullen.¹ Or again the English

9. Du Bois recounts events of World War I.

1. African American poet (1903-1946); his first book, *Color* (1925), used classical models such as

the sonnet. Du Bois locates him in the company of the English poets Percy Bysshe Shelley (1792-1822), Robert Browning (1812-1889), Alfred,

critic John Drinkwater² went down to a Southern seminary, one of the sort which "finishes" young white women of the South. The students sat with their wooden faces while he tried to get some response out of them. Finally he said, "Name me some of your Southern poets." They hesitate. He said finally, "I'll start out with your best: Paul Laurence Dunbar!"³

With the growing recognition of Negro artists in spite of the severe handicaps, one comforting thing is occurring to both white and black. They are whispering, "Here is a way out. Here is the real solution of the color problem. The recognition accorded Cullen, Hughes, Fauset, White⁴ and others shows there is no real color line. Keep quiet! Don't complain! Work! All will be well!"

I will not say that already this chorus amounts to a conspiracy. Perhaps I am naturally too suspicious. But I will say that there are today a surprising number of white people who are getting great satisfaction out of these younger Negro writers because they think it is going to stop agitation of the Negro question. They say, "What is the use of your fighting and complaining; do the great thing and the reward is there." And many colored people are all too eager to follow this advice; especially those who are weary of the eternal struggle along the color line, who are afraid to fight and to whom the money of philanthropists and the alluring publicity are subtle and deadly bribes. They say, "What is the use of fighting? Why not show simply what we deserve and let the reward come to us?"

And it is right here that the National Association for the Advancement of Colored People comes upon the field, comes with its great call to a new battle, a new fight and new things to fight before the old things are wholly won; and to say that the Beauty of Truth and Freedom which shall some day be our heritage and the heritage of all civilized men is not in our hands yet and that we ourselves must not fail to realize.

There is in New York tonight a black woman molding clay by herself in a little bare room, because there is not a single school of sculpture in New York where she is welcome. Surely there are doors she might burst through, but when God makes a sculpture He does not always make the pushing sort of person who beats his way through doors thrust in his face. This girl is working her hands off to get out of this country so that she can get some sort of training.

There was Richard Brown.⁵ If he had been white he would have been alive today instead of dead of neglect. Many helped him when he asked but he was not the kind of boy that always asks. He was simply one who made colors sing.

There is a colored woman in Chicago who is a great musician. She thought she would like to study at Fontainebleau this summer where Walter Damrosch⁶ and a score of leaders of Art have an American school of music. But the application blank of this school says: "I am a white American and I apply for admission to the school."

We can go on the stage; we can be just as funny as white Americans wish

us to be; we can play all the sordid parts that America likes to assign to Negroes; but for any thing else there is still small place for us.

And so I might go on. But let me sum up with this: Suppose the only Negro who survived some centuries hence was the Negro painted by white Americans in the novels and essays they have written. What would people in a hundred years say of black Americans? Now turn it around. Suppose you were to write a story and put in it the kind of people you know and like and imagine. You might get it published and you might not. And the "might not" is still far bigger than the "might." The white publishers catering to white folk would say, "It is not interesting"—to white folk, naturally not. They want Uncle Toms, Topsies,⁷ good "darkies" and clowns. I have in my office a story with all the earmarks of truth. A young man says that he started out to write and had his stories accepted. Then he began to write about the things he knew best about, that is, about his own people. He submitted a story to a magazine which said, "We are sorry, but we cannot take it." "I sat down and revised my story, changing the color of the characters and the locale and sent it under an assumed name with a change of address and it was accepted by the same magazine that had refused it, the editor promising to take anything else I might send in providing it was good enough."

We have, to be sure, a few recognized and successful Negro artists; but they are not all those fit to survive or even a good minority. They are but the remnants of that ability and genius among us whom the accidents of education and opportunity have raised on the tidal waves of chance. We black folk are not altogether peculiar in this. After all, in the world at large, it is only the accident, the remnant, that gets the chance to make the most of itself; but if this is true of the white world it is infinitely more true of the colored world. It is not simply the great clear tenor of Roland Hayes⁸ that opened the ears of America. We have had many voices of all kinds as fine as his and America was and is as deaf as she was for years to him. Then a foreign land heard Hayes and put its imprint on him and immediately America with all its imitative snobbery woke up. We approved Hayes because London, Paris and Berlin approved him and not simply because he was a great singer.

Thus it is the bounden duty of black America to begin this great work of the creation of Beauty, of the preservation of Beauty, of the realization of Beauty, and we must use in this work all the methods that men have used before. And what have been the tools of the artists in times gone by? First of all, he has used the Truth—not for the sake of truth, not as a scientist seeking truth, but as one upon whom Truth eternally thrusts itself as the highest handmaid of imagination, as the one great vehicle of universal understanding. Again artists have used Goodness—goodness in all its aspects of justice, honor and right—not for sake of an ethical sanction but as the one true method of gaining sympathy and human interest.

The apostle of Beauty thus becomes the apostle of Truth and Right not by choice but by inner and outer compulsion. Free he is but his freedom is ever bounded by Truth and Justice; and slavery only dogs him when he is denied the right to tell the Truth or recognize an ideal of Justice.

Thus all Art is propaganda and ever must be, despite the wailing of the

7. Uncle Tom and Topsy are African American characters, a saintly and an impish slave, respectively, in Harriet Beecher Stowe's novel *Uncle*

Tom's Cabin (1852).

8. African American singer of classical works and spirituals (1887–1976), the son of former slaves.

purists. I stand in utter shamelessness and say that whatever art I have for writing has been used always for propaganda for gaining the right of black folk to love and enjoy. I do not care a damn for any art that is not used for propaganda. But I do care when propaganda is confined to one side while the other is stripped and silent.

In New York we have two plays: "White Cargo" and "Congo."⁹ In "White Cargo" there is a fallen woman. She is black. In "Congo" the fallen woman is white. In "White Cargo" the black woman goes down further and further and in "Congo" the white woman begins with degradation but in the end is one of the angels of the Lord.

You know the current magazine story: A young white man goes down to Central America and the most beautiful colored woman there falls in love with him. She crawls across the whole isthmus to get to him. The white man says nobly, "No." He goes back to his white sweetheart in New York.

In such cases, it is not the positive propaganda of people who believe white blood divine, infallible and holy to which I object. It is the denial of a similar right of propaganda to those who believe black blood human, lovable and inspired with new ideals for the world. White artists themselves suffer from this narrowing of their field. They cry for freedom in dealing with Negroes because they have so little freedom in dealing with whites. DuBose Heyward writes "Porgy"¹ and writes beautifully of the black Charleston underworld. But why does he do this? Because he cannot do a similar thing for the white people of Charleston, or they would drum him out of town. The only chance he had to tell the truth of pitiful human degradation was to tell it of colored people. I should not be surprised if Octavus Roy Cohen² had approached the *Saturday Evening Post* and asked permission to write about a different kind of colored folk than the monstrosities he has created: but if he has, the *Post* has replied. "No. You are getting paid to write about the kind of colored people you are writing about."

In other words, the white public today demands from its artists, literary and pictorial, racial pre-judgment which deliberately distorts Truth and Justice, as far as colored races are concerned, and it will pay for no other.

On the other hand, the young and slowly growing black public still wants its prophets almost equally unfree. We are bound by all sorts of customs that have come down as second-hand soul clothes of white patrons. We are ashamed of sex and we lower our eyes when people will talk of it. Our religion holds us in superstition. Our worst side has been so shamelessly emphasized that we are denying we have or ever had a worst side. In all sorts of ways we are hemmed in and our new young artists have got to fight their way to freedom.

The ultimate judge has got to be you and you have got to build yourselves up into that wide judgment, that catholicity of temper³ which is going to enable the artist to have his widest chance for freedom. We can afford the Truth. White folk today cannot. As it is now we are handing everything over to a white jury. If a colored man wants to publish a book, he has got to get a white publisher and a white newspaper to say it is great;

was the basis for the later opera *Porgy and Bess*.

2. South Carolina playwright, novelist, short story writer, and humorist (1891-1959).

3. Range of disposition.

and then you and I say so. We must come to the place where the work of art when it appears is reviewed and acclaimed by our own free and unfettered judgment. And we are going to have a real and valuable and eternal judgment only as we make ourselves free of mind, proud of body and just of soul to all men.

And then do you know what will be said? It is already saying. Just as soon as true Art emerges; just as soon as the black artist appears, someone touches the race on the shoulder and says, "He did that because he was an American, not because he was a Negro; he was born here; he was trained here; he is not a Negro—what is a Negro anyhow? He is just human; it is the kind of thing you ought to expect."

I do not doubt that the ultimate art coming from black folk is going to be just as beautiful, and beautiful largely in the same ways, as the art that comes from white folk, or yellow, or red; but the point today is that until the art of the black folk compels recognition they will not be rated as human. And when through art they compel recognition then let the world discover if it will that their art is as new as it is old and as old as new.

I had a classmate once who did three beautiful things and died. One of them was a story of a folk who found fire and then went wandering in the gloom of night seeking again the stars they had once known and lost; suddenly out of blackness they looked up and there loomed the heavens; and what was it that they said? They raised a mighty cry: "It is the stars; it is the ancient stars, it is the young and everlasting stars!"

1926

CARL GUSTAV JUNG

1875–1961

During the 1950s and 1960s, largely because of the attention paid to NORTHROP FRYE's writings on literary archetypes (see especially *Anatomy of Criticism*, 1957), the psychoanalyst Carl Gustav Jung became significant for the practice of literary criticism. Neither exactly a scientist nor a literary theorist, Jung is a gifted, original, interdisciplinary thinker, a mythographer of the conscious and unconscious mind, and a writer of dazzling erudition whose mystical blend of religion and spirituality with psychology may disturb some literary critics today but keeps him popular outside academic circles.

Jung was born in Switzerland to a German-speaking family. His father was a Protestant clergyman, and for brief a time Jung seemed headed toward the ministry himself. But he grew excited about philosophy and science and, choosing to embark on a career in medicine, he studied at the universities of Basel and Zurich, where he received his medical degree (1902). He became a staff member of the Burghölzli Asylum of the University of Zurich, working under the direction of Eugen Bleuler, a pioneer in the field of mental illness. Soon his research and studies of word association led him into a period of intense collaboration with SIGMUND FREUD (1907–12). But the two men fell out in 1912 over the publication of Jung's *Psychology of the Unconscious* (trans. 1916), in which he criticized as narrow

imagery," the "archetypes" whose "primordial images are the common heritage of mankind." Jung is interested not in a text's images but in the image that lies behind them. He gives the example of a work of art that expresses the ideal of the "mother country" or the "fatherland," which gains its power by evoking an archetype: the "participation mystique" of primitive man with the land on which he lived.

For literary critics and theorists, Jung functions as a master teacher whose learning and poetic insight equip his readers to recognize the foundational stories behind stories and grasp the core images whose content and form underlie the myths, tales, and legends of the world's diverse literary traditions. We should not simply read his work as if he were demonstrating an "approach"; it is in fact very difficult to extract a ready-made method of literary criticism from Jung's varied writings. They do, however, provide a rich resource for exploration, as he tests the boundaries of our thinking about the mind, creativity, and symbolism. Jung's best work is not in the systems he builds but in the process—when, in the midst of forming them, his writing attests to the power of the artistic imagination to resist containment and evade systematization.

BIBLIOGRAPHY

The standard English edition of Jung's writings is *The Collected Works of C. G. Jung*, edited by Herbert Read, Michael Fordham, and Gerhard Adler (14 vols. to date, 1966–; first published in 20 vols., 1953–83). It includes works originally published in English, revised versions of previously published texts, new translations, and translations of works formerly unavailable in English. Selections from his work can be found in *Psyche and Symbol*, edited by Violet S. de Laszlo (1958), and *The Essential Jung*, edited by Anthony Storr (1983). Another important source is the *Letters*, edited by Gerhard Adler (2 vols., 1973–75), and *The Freud/Jung Letters*, edited by William McGuire (1979). Biographies include Vincent Brome, *Jung* (1978); Gerhard Wehr, *Jung* (1985; trans. 1987); Richard Noll, *The Jung Cult: Origins of a Charismatic Movement* (1994); Noll, *The Aryan Christ: The Secret Life of Carl Jung* (1997); and Frank McLynn, *Carl Gustav Jung* (1997).

Perhaps the best place to begin studying Jung is with the sixteen essays in *The Cambridge Companion to Jung*, edited by Polly Young-Eisendrath and Terence Dawson (1997). Two good surveys are Anthony Storr, *C. G. Jung* (1973; rpt., 1991); and Anthony Stevens, *On Jung* (1990). *C. G. Jung and the Humanities: Toward a Hermeneutics of Culture*, edited by Karin Barnaby and Pellegrino D'Acerno (1990), includes essays on popular culture, gender, religion, and other topics. Also stimulating is Sonu Shamdasani, *Cult Fictions: C. G. Jung and the Founding of Analytical Psychology* (1998).

For Jung's impact on literary studies, consult Morris Philipson, *Outline of Jungian Aesthetics* (1963), and *Myth and Literature: Contemporary Theory and Practice*, edited by J. B. Vickery (1966). See also B. L. Knapp, *A Jungian Approach to Literature* (1984). The most comprehensive work in the field is *Jungian Literary Criticism*, edited by Richard Sugg (1992), which gives a full account of the history, theory, and practice of Jungian criticism of literature. Susan Rowland, *C. G. Jung and Literary Theory: The Challenge from Fiction* (1999), brings together Jung's theories with deconstruction and other forms of poststructuralism, and applies them to contemporary British writers. See Jos van Meurs, with John Kidd, *Jungian Literary Criticism, 1920–1980* (1988), an annotated bibliography. The *General Bibliography of C. G. Jung's Writings*, by Lisa Ress, William McGuire, Herbert Read, and Gerhard Adler (1992), updates and replaces the bibliography published as volume 19 of the *Collected Works of C. G. Jung* (1979).

and reductive Freud's conclusions about the sexual basis of neurosis. In 1914 he broke with Freud publicly by resigning from the International Psychoanalytic Society.

Jung made many contributions to psychology. In *Psychological Types* (1921; trans. 1923), for example, he developed and explored the terms *extroverted* (outward-looking) and *introverted* (inward-looking) to describe and differentiate between two personality types, and he examined as well the affinities between the conscious and the unconscious mind. Crucially, he distinguishes between the personal unconscious (repressed feelings and thoughts that an individual develops during his or her life) and the collective unconscious (the structure of inherited feelings, thoughts, and memories that all human beings possess). Within the collective unconscious are "archetypes," a word that combines the Greek *archē* (beginning) and *typos* (stamp or imprint). These are primordial images from the earliest stages of human existence; they are linked to such fundamental experiences and universal rites of passage as going on a journey, coming of age, or facing death. It is the presence of these archetypes, argues Jung, that connect and unify the major symbol systems of the world's myths, religions, and literatures.

Jung once defined archetypes as "*a priori*, inborn forms of 'intuition'; elsewhere he referred to them as "complexes of experience that come upon us like fate," whose effects "are felt in our most personal life." As Jung concedes, "We must constantly bear in mind that what we mean by 'archetype' is in itself irrepresentable, but has effects which make visualizations of it possible, namely, the archetypal images and ideas. We meet with a similar situation in physics: there the smallest particles are themselves irrepresentable but have effects from the nature of which we can build up a model" (*Collected Works*, 8:133, 9:30). Jung emphasizes that "the archetypal representations (images and ideas) mediated to us by the unconscious should not be confused with the ['irrepresentable'] archetype as such," which "is characterized by certain formal elements and by certain fundamental meanings, although these can be grasped only approximately" (*Collected Works*, 8:417).

In their canny evasiveness and seductive manner of saying much but not quite enough, these passages illuminate Jung's style and strategy as a writer. He commands respect as an adroit, sometimes exasperating, and provocative verbal performer as well as the designer of a grand system or interpretive grid.

In our selection, "On the Relation of Analytical Psychology to Poetry" (first published in 1922), Jung remarks at the outset that he is concerned with the process of artistic creation, not with the nature of the work of art itself. Throughout his text, in sharply turned phrases and image-laden sentences, he exhibits his own creative powers. One dimension of the drama of Jung's essay is his effort to evoke a more vivid and persuasive account of literature and art than that achieved by Freud—himself a powerful, challenging writer.

Relying on terms familiar in his work, Jung contends that there are two types of artistic creation—"introverted" and "extraverted" (an alternate form with the same meaning as "extroverted"). Drawing on the German Romantic writer FRIEDRICH VON SCHILLER's argument in *On Naive and Sentimental Poetry* (1795–96), Jung defines introverted art as that which shows the artist contesting or contending against the object, whereas extraverted art shows the artist subordinating him- or herself to the object. Jung describes this second type in heightened language that achieves the kind of passionate sweep and exalted tone that we associate with Schiller, PERCY BYSSHE SHELLEY, and other Romantic writers. Indeed, to read and understand Jung it may be best to relate his work to that of Shelley or the visionary Romantic poet, artist, and engraver William Blake.

As Jung concludes this essay, he delves into the question of the source of symbols in works of art. They ultimately derive, he explains, not from the author's "personal unconscious" but from the "collective unconscious"—"a sphere of unconscious

On the Relation of Analytical Psychology to Poetry¹

In spite of its difficulty, the task of discussing the relation of analytical psychology to poetry affords me a welcome opportunity to define my views on the much debated question of the relations between psychology and art in general. Although the two things cannot be compared, the close connections which undoubtedly exist between them call for investigation. These connections arise from the fact that the practice of art is a psychological activity and, as such, can be approached from a psychological angle. Considered in this light, art, like any other human activity deriving from psychic motives, is a proper subject for psychology. This statement, however, involves a very definite limitation of the psychological viewpoint when we come to apply it in practice. Only that aspect of art which consists in the process of artistic creation can be a subject for psychological study, but not that which constitutes its essential nature. The question of what art is in itself can never be answered by the psychologist, but must be approached from the side of aesthetics.

A similar distinction must be made in the realm of religion. A psychological approach is permissible only in regard to the emotions and symbols which constitute the phenomenology of religion, but which do not touch upon its essential nature. If the essence of religion and art could be explained, then both of them would become mere subdivisions of psychology. This is not to say that such violations of their nature have not been attempted. But those who are guilty of them obviously forget that a similar fate might easily befall psychology, since its intrinsic value and specific quality would be destroyed if it were regarded as a mere activity of the brain, and were relegated along with the endocrine functions to a subdivision of physiology. This too, as we know, has been attempted.

Art by its very nature is not science, and science by its very nature is not art; both these spheres of the mind have something in reserve that is peculiar to them and can be explained only in its own terms. Hence when we speak of the relation of psychology to art, we shall treat only of that aspect of art which can be submitted to psychological scrutiny without violating its nature. Whatever the psychologist has to say about art will be confined to the process of artistic creation and has nothing to do with its innermost essence. He can no more explain this than the intellect can describe or even understand the nature of feeling. Indeed, art and science would not exist as separate entities at all if the fundamental difference between them had not long since forced itself on the mind. The fact that artistic, scientific, and religious propensities still slumber peacefully together in the small child, or that with primitives the beginnings of art, science, and religion coalesce in the undifferentiated chaos of the magical mentality, or that no trace of "mind" can be found in the natural instincts of animals—all this does nothing to prove the existence of a unifying principle which alone would justify a reduction of the one to the other. For if we go so far back into the history of the mind that the distinctions between its various fields of activity become altogether invisible, we do not reach an underlying principle of their unity,

1. Translated by R. F. C. Hull.

but merely an earlier, undifferentiated state in which no separate activities yet exist. But the elementary state is not an explanatory principle that would allow us to draw conclusions as to the nature of later, more highly developed states, even though they must necessarily derive from it. A scientific attitude will always tend to overlook the peculiar nature of these more differentiated states in favour of their causal derivation, and will endeavour to subordinate them to a general but more elementary principle.

These theoretical reflections seem to me very much in place today, when we so often find that works of art, and particularly poetry, are interpreted precisely in this manner, by reducing them to more elementary states. Though the material he works with and its individual treatment can easily be traced back to the poet's personal relations with his parents, this does not enable us to understand his poetry. The same reduction can be made in all sorts of other fields, and not least in the case of pathological disturbances. Neuroses and psychoses are likewise reducible to infantile relations with the parents, and so are a man's good and bad habits, his beliefs, peculiarities, passions, interests, and so forth. It can hardly be supposed that all these very different things must have exactly the same explanation, for otherwise we would be driven to the conclusion that they actually are the same thing. If a work of art is explained in the same way as a neurosis, then either the work of art is a neurosis or a neurosis is a work of art. This explanation is all very well as a play on words, but sound common sense rebels against putting a work of art on the same level as a neurosis. An analyst might, in an extreme case, view a neurosis as a work of art through the lens of his professional bias, but it would never occur to an intelligent layman to mistake a pathological phenomenon for art, in spite of the undeniable fact that a work of art arises from much the same psychological conditions as a neurosis. This is only natural, because certain of these conditions are present in every individual and, owing to the relative constancy of the human environment, are constantly the same, whether in the case of a nervous intellectual, a poet, or a normal human being. All have had parents, all have a father- or a mother-complex, all know about sex and therefore have certain common and typical human difficulties. One poet may be influenced more by his relation to his father, another by the tie to his mother, while a third shows unmistakable traces of sexual repression in his poetry. Since all this can be said equally well not only of every neurotic but of every normal human being, nothing specific is gained for the judgment of a work of art. At most our knowledge of its psychological antecedents will have been broadened and deepened.

The school of medical psychology inaugurated by Freud² has undoubtedly encouraged the literary historian to bring certain peculiarities of a work of art into relation with the intimate, personal life of the poet. But this is nothing new in principle, for it has long been known that the scientific treatment of art will reveal the personal threads that the artist, intentionally or unintentionally, has woven into his work. The Freudian approach may, however, make possible a more exhaustive demonstration of the influences that reach back into earliest childhood and play their part in artistic creation. To this extent the psychoanalysis of art differs in no essential from the subtle psychological nuances of a penetrating literary analysis. The difference is at

2. SIGMUND FREUD (1856-1939), Austrian founder of psychoanalysis.

most a question of degree, though we may occasionally be surprised by indiscreet references to things which a rather more delicate touch might have passed over if only for reasons of tact. This lack of delicacy seems to be a professional peculiarity of the medical psychologist, and the temptation to draw daring conclusions easily leads to flagrant abuses. A slight whiff of scandal often lends spice to a biography, but a little more becomes a nasty inquisitiveness—bad taste masquerading as science. Our interest is insidiously deflected from the work of art and gets lost in the labyrinth of psychic determinants, the poet becomes a clinical case and, very likely, yet another addition to the curiosa of *psychopathia sexualis*.³ But this means that the psychoanalysis of art has turned aside from its proper objective and strayed into a province that is as broad as mankind, that is not in the least specific of the artist and has even less relevance to his art.

This kind of analysis brings the work of art into the sphere of general human psychology, where many other things besides art have their origin. To explain art in these terms is just as great a platitude as the statement that "every artist is a narcissist." Every man who pursues his own goal is a "narcissist"—though one wonders how permissible it is to give such wide currency to a term specifically coined for the pathology of neurosis. The statement therefore amounts to nothing; it merely elicits the faint surprise of a *bon mot*. Since this kind of analysis is in no way concerned with the work of art itself, but strives like a mole to bury itself in the dirt as speedily as possible, it always ends up in the common earth that unites all mankind. Hence its explanations have the same tedious monotony as the recitals which one daily hears in the consulting-room.

The reductive method of Freud is a purely medical one, and the treatment is directed at a pathological or otherwise unsuitable formation which has taken the place of the normal functioning. It must therefore be broken down, and the way cleared for healthy adaptation. In this case, reduction to the common human foundation is altogether appropriate. But when applied to a work of art it leads to the results I have described. It strips the work of art of its shimmering robes and exposes the nakedness and drabness of *Homo sapiens*, to which species the poet and artist also belong. The golden gleam of artistic creation—the original object of discussion—is extinguished as soon as we apply to it the same corrosive method which we use in analysing the fantasies of hysteria. The results are no doubt very interesting and may perhaps have the same kind of scientific value as, for instance, a post-mortem examination of the brain of Nietzsche,⁴ which might conceivably show us the particular atypical form of paralysis from which he died. But what would this have to do with *Zarathustra*? Whatever its subterranean background may have been, is it not a whole world in itself, beyond the human, all-too-human imperfections, beyond the world of migraine and cerebral atrophy?

I have spoken of Freud's reductive method but have not stated in what that method consists. It is essentially a medical technique for investigating morbid⁵ psychic phenomena, and it is solely concerned with the ways and means of getting round or peering through the foreground of consciousness

3. The curiosities of sexual psychopathology (Latin).

Zarathustra (1883–92) and *Human, All Too Human* (1878).

5. Caused by disease.

in order to reach the psychic background, or the unconscious. It is based on the assumption that the neurotic patient represses certain psychic contents because they are morally incompatible with his conscious values. It follows that the repressed contents must have correspondingly negative traits—infantile-sexual, obscene, or even criminal—which make them unacceptable to consciousness. Since no man is perfect, everyone must possess such a background whether he admits it or not. Hence it can always be exposed if only one uses the technique of interpretation worked out by Freud.

In the short space of a lecture⁶ I cannot, of course, enter into the details of the technique. A few hints must suffice. The unconscious background does not remain inactive, but betrays itself by its characteristic effects on the contents of consciousness. For example, it produces fantasies of a peculiar nature, which can easily be interpreted as sexual images. Or it produces characteristic disturbances of the conscious processes, which again can be reduced to repressed contents. A very important source for knowledge of the unconscious contents is provided by dreams, since these are direct products of the activity of the unconscious. The essential thing in Freud's reductive method is to collect all the clues pointing to the unconscious background, and then, through the analysis and interpretation of this material, to reconstruct the elementary instinctual processes. Those conscious contents which give us a clue to the unconscious background are incorrectly called *symbols* by Freud. They are not true symbols, however, since according to his theory they have merely the role of *signs* or *symptoms* of the subliminal processes. The true symbol differs essentially from this, and should be understood as an expression of an intuitive idea that cannot yet be formulated in any other or better way. When Plato, for instance, puts the whole problem of the theory of knowledge in his parable of the cave, or when Christ expresses the idea of the Kingdom of Heaven in parables,⁷ these are genuine and true symbols, that is, attempts to express something for which no verbal concept yet exists. If we were to interpret Plato's metaphor in Freudian terms we would naturally arrive at the uterus, and would have proved that even a mind like Plato's was still struck on a primitive level of infantile sexuality. But we would have completely overlooked what Plato actually created out of the primitive determinants of his philosophical ideas; we would have missed the essential point and merely discovered that he had infantile-sexual fantasies like any other mortal. Such a discovery could be of value only for a man who regarded Plato as superhuman, and who can now state with satisfaction that Plato too was an ordinary human being. But who would want to regard Plato as a god? Surely only one who is dominated by infantile fantasies and therefore possesses a neurotic mentality. For him the reduction to common human truths is salutary on medical grounds, but this would have nothing whatever to do with the meaning of Plato's parable.

I have purposely dwelt on the application of medical psychoanalysis to works of art because I want to emphasize that the psychoanalytic method is at the same time an essential part of the Freudian doctrine. Freud himself

6. This essay was first delivered in May 1922 as a lecture to the Society for German Language and Literature in Zurich.

7. For example, see the parable of the Good Samaritan (Luke 10.30-37) and that of the Prodigal Son (Luke 15.11-32). "Parable of the cave":

the allegory in PLATO'S *Republic* (7.514-18) in which Socrates likens most of humanity to prisoners chained in a cave, seeing only the shadows of objects by firelight; the authentic seekers of knowledge are those who emerge from the cave to see the objects themselves in sunlight.

by his rigid dogmatism has ensured that the method and the doctrine—in themselves two very different things—are regarded by the public as identical. Yet the method may be employed with beneficial results in medical cases without at the same time exalting it into a doctrine. And against this doctrine we are bound to raise vigorous objections. The assumptions it rests on are quite arbitrary. For example, neuroses are by no means exclusively caused by sexual repression, and the same holds true for psychoses. There is no foundation for saying that dreams merely contain repressed wishes whose moral incompatibility requires them to be disguised by a hypothetical dream-censor. The Freudian technique of interpretation, so far as it remains under the influence of its own one-sided and therefore erroneous hypotheses, displays a quite obvious bias.

In order to do justice to a work of art, analytical psychology must rid itself entirely of medical prejudice; for a work of art is not a disease, and consequently requires a different approach from the medical one. A doctor naturally has to seek out the causes of a disease in order to pull it up by the roots, but just as naturally the psychologist must adopt exactly the opposite attitude towards a work of art. Instead of investigating its typically human determinants, he will inquire first of all into its meaning, and will concern himself with its determinants only in so far as they enable him to understand it more fully. Personal causes have as much or as little to do with a work of art as the soil with the plant that springs from it. We can certainly learn to understand some of the plant's peculiarities by getting to know its habitat, and for the botanist this is an important part of his equipment. But nobody will maintain that everything essential has then been discovered about the plant itself. The personal orientation which the doctor needs when confronted with the question of aetiology in medicine is quite out of place in dealing with a work of art, just because a work of art is not a human being, but is something supra-personal. It is a thing and not a personality; hence it cannot be judged by personal criteria. Indeed, the special significance of a true work of art resides in the fact that it has escaped from the limitations of the personal and has soared beyond the personal concerns of its creator.

I must confess from my own experience that it is not at all easy for a doctor to lay aside his professional bias when considering a work of art and look at it with a mind cleared of the current biological causality. But I have come to learn that although a psychology with a purely biological orientation can explain a good deal about man in general, it cannot be applied to a work of art and still less to man as creator. A purely causalistic psychology is only able to reduce every human individual to a member of the species *Homo sapiens*, since its range is limited to what is transmitted by heredity or derived from other sources. But a work of art is not transmitted or derived—it is a creative reorganization of those very conditions to which a causalistic psychology must always reduce it. The plant is not a mere product of the soil; it is a living, self-contained process which in essence has nothing to do with the character of the soil. In the same way, the meaning and individual quality of a work of art inhere within it and not in its extrinsic determinants. One might almost describe it as a living being that uses man only as a nutrient medium, employing his capacities according to its own laws and shaping itself to the fulfilment of its own creative purpose.

But here I am anticipating somewhat, for I have in mind a particular type of art which I still have to introduce. Not every work of art originates in the way I have just described. There are literary works, prose as well as poetry, that spring wholly from the author's intention to produce a particular result. He submits his material to a definite treatment with a definite aim in view; he adds to it and subtracts from it, emphasizing one effect, toning down another, laying on a touch of colour here, another there, all the time carefully considering the over-all result and paying strict attention to the laws of form and style. He exercises the keenest judgment and chooses his words with complete freedom. His material is entirely subordinated to his artistic purpose; he wants to express this and nothing else. He is wholly at one with the creative process, no matter whether he has deliberately made himself its spearhead, as it were, or whether it has made him its instrument so completely that he has lost all consciousness of this fact. In either case, the artist is so identified with his work that his intentions and his faculties are indistinguishable from the act of creation itself. There is no need, I think, to give examples of this from the history of literature or from the testimony of the artists themselves.

Nor need I cite examples of the other class of works which flow more or less complete and perfect from the author's pen. They come as it were fully arrayed into the world, as Pallas Athene⁸ sprang from the head of Zeus. These works positively force themselves upon the author; his hand is seized, his pen writes things that his mind contemplates with amazement. The work brings with it its own form; anything he wants to add is rejected, and what he himself would like to reject is thrust back at him. While his conscious mind stands amazed and empty before this phenomenon, he is overwhelmed by a flood of thoughts and images which he never intended to create and which his own will could never have brought into being. Yet in spite of himself he is forced to admit that it is his own self speaking, his own inner nature revealing itself and uttering things which he would never have entrusted to his tongue. He can only obey the apparently alien impulse within him and follow where it leads, sensing that his work is greater than himself, and wields a power which is not his and which he cannot command. Here the artist is not identical with the process of creation; he is aware that he is subordinate to his work or stands outside it, as though he were a second person; or as though a person other than himself had fallen within the magic circle of an alien will.

So when we discuss the psychology of art, we must bear in mind these two entirely different modes of creation, for much that is of the greatest importance in judging a work of art depends on this distinction. It is one that had been sensed earlier by Schiller,⁹ who as we know attempted to classify it in his concept of the *sentimental* and the *naïve*. The psychologist would call "sentimental" art *introverted* and the "naïve" kind *extraverted*. The introverted attitude is characterized by the subject's assertion of his conscious intentions and aims against the demands of the object, whereas the extraverted attitude is characterized by the subject's subordination to the demands which the

8. Greek goddess of war, the arts, and wisdom, who was born fully armed from the head of Zeus, king of the gods.

9. FRIEDRICH VON SCHILLER (1759-1805),

German dramatist, lyric poet, and critic, whose works include *On Naïve and Sentimental Poetry* (1795-96).

object makes upon him. In my view, Schiller's plays and most of his poems give one a good idea of the introverted attitude: the material is mastered by the conscious intentions of the poet. The extraverted attitude is illustrated by the second part of *Faust*:¹ here the material is distinguished by its refractoriness. A still more striking example is Nietzsche's *Zarathustra*, where the author himself observed how "one became two."

From what I have said, it will be apparent that a shift of psychological standpoint has taken place as soon as one speaks not of the poet as a person but of the creative process that moves him. When the focus of interest shifts to the latter, the poet comes into the picture only as a reacting subject. This is immediately evident in our second category of works, where the consciousness of the poet is not identical with the creative process. But in works of the first category the opposite appears to hold true. Here the poet appears to be the creative process itself, and to create of his own free will without the slightest feeling of compulsion. He may even be fully convinced of his freedom of action and refuse to admit that his work could be anything else than the expression of his will and ability.

Here we are faced with a question which we cannot answer from the testimony of the poets themselves. It is really a scientific problem that psychology alone can solve. As I hinted earlier, it might well be that the poet, while apparently creating out of himself and producing what he consciously intends, is nevertheless so carried away by the creative impulse that he is no longer aware of an "alien" will, just as the other type of poet is no longer aware of his own will speaking to him in the apparently "alien" inspiration, although this is manifestly the voice of his own self. The poet's conviction that he is creating in absolute freedom would then be an illusion; he fancies he is swimming, but in reality an unseen current sweeps him along.

This is not by any means an academic question, but is supported by the evidence of analytical psychology. Researchers have shown that there are all sorts of ways in which the conscious mind is not only influenced by the unconscious but actually guided by it. Yet is there any evidence for the supposition that a poet, despite his self-awareness, may be taken captive by his work? The proof may be of two kinds, direct or indirect. Direct proof would be afforded by a poet who thinks he knows what he is saying but actually says more than he is aware of. Such cases are not uncommon. Indirect proof would be found in cases where behind the apparent free will of the poet there stands a higher imperative that renews its peremptory demands as soon as the poet voluntarily gives up his creative activity, or that produces psychic complications whenever his work has to be broken off against his will.

Analysis of artists consistently shows not only the strength of the creative impulse arising from the unconscious, but also its capricious and wilful character. The biographies of great artists make it abundantly clear that the creative urge is often so imperious that it battens on their humanity and yokes everything to the service of the work, even at the cost of health and ordinary human happiness. The unborn work in the psyche of the artist is a force of nature that achieves its end either with tyrannical might or with the subtle cunning of nature herself, quite regardless of the personal fate of the man who is its vehicle. The creative urge lives and grows in him like a tree in the

1. Two-part verse drama (1808, 1832) by Johann Wolfgang von Goethe.

earth from which it draws its nourishment. We would do well, therefore, to think of the creative process as a living thing implanted in the human psyche. In the language of analytical psychology this living thing is an *autonomous complex*. It is a split-off portion of the psyche, which leads a life of its own outside the hierarchy of consciousness. Depending on its energy charge, it may appear either as a mere disturbance of conscious activities or as a supraordinate authority which can harness the ego to its purpose. Accordingly, the poet who identifies with the creative process would be one who acquiesces from the start when the unconscious imperative begins to function. But the other poet, who feels the creative force as something alien, is one who for various reasons cannot acquiesce and is thus caught unawares.

It might be expected that this difference in its origins would be perceptible in a work of art. For in the one case it is a conscious product shaped and designed to have the effect intended. But in the other we are dealing with an event originating in unconscious nature; with something that achieves its aim without the assistance of human consciousness, and often defies it by wilfully insisting on its own form and effect. We would therefore expect that works belonging to the first class would nowhere overstep the limits of comprehension, that their effect would be bounded by the author's intention and would not extend beyond it. But with works of the other class we would have to be prepared for something suprapersonal that transcends our understanding to the same degree that the author's consciousness was in abeyance during the process of creation. We would expect a strangeness of form and content, thoughts that can only be apprehended intuitively, a language pregnant with meanings, and images that are true symbols because they are the best possible expressions for something unknown—bridges thrown out towards an unseen shore.

These criteria are, by and large, corroborated in practice. Whenever we are confronted with a work that was consciously planned and with material that was consciously selected, we find that it agrees with the first class of qualities; and in the other case with the second. The example we gave of Schiller's plays, on the one hand, and *Faust II* on the other, or better still *Zarathustra*, is an illustration of this. But I would not undertake to place the work of an unknown poet in either of these categories without first having examined rather closely his personal relations with his work. It is not enough to know whether the poet belongs to the introverted or to the extraverted type, since it is possible for either type to work with an introverted attitude at one time, and an extraverted attitude at another. This is particularly noticeable in the difference between Schiller's plays and his philosophical writings, between Goethe's perfectly formed poems and the obvious struggle with his material in *Faust II*, and between Nietzsche's well-turned aphorisms and the rushing torrent of *Zarathustra*. The same poet can adopt different attitudes to his work at different times, and on this depends the standard we have to apply.

The question, as we now see, is exceedingly complicated, and the complication grows even worse when we consider the case of the poet who identifies with the creative process. For should it turn out that the apparently conscious and purposeful manner of composition is a subjective illusion of the poet, then his work would possess symbolic qualities that are outside the range of his consciousness. They would only be more difficult to detect,

because the reader as well would be unable to get beyond the bounds of the poet's consciousness which are fixed by the spirit of the time. There is no Archimedean point² outside his world by which he could lift his time-bound consciousness off its hinges and recognize the symbols hidden in the poet's work. For a symbol is the intimation of a meaning beyond the level of our present powers of comprehension.

I raise this question only because I do not want my typological classification to limit the possible significance of works of art which apparently mean no more than what they say. But we have often found that a poet who has gone out of fashion is suddenly rediscovered. This happens when our conscious development has reached a higher level from which the poet can tell us something new. It was always present in his work but was hidden in a symbol, and only a renewal of the spirit of the time permits us to read its meaning. It needed to be looked at with fresher eyes, for the old ones could see in it only what they were accustomed to see. Experiences of this kind should make us cautious, as they bear out my earlier argument. But works that are openly symbolic do not require this subtle approach; their pregnant language cries out at us that they mean more than they say. We can put our finger on the symbol at once, even though we may not be able to unriddle its meaning to our entire satisfaction. A symbol remains a perpetual challenge to our thoughts and feelings. That probably explains why a symbolic work is so stimulating, why it grips us so intensely, but also why it seldom affords us a purely aesthetic enjoyment. A work that is manifestly not symbolic appeals much more to our aesthetic sensibility because it is complete in itself and fulfils its purpose.

What then, you may ask, can analytical psychology contribute to our fundamental problem, which is the mystery of artistic creation? All that we have said so far has to do only with the psychological phenomenology of art. Since nobody can penetrate to the heart of nature, you will not expect psychology to do the impossible and offer a valid explanation of the secret of creativity. Like every other science, psychology has only a modest contribution to make towards a deeper understanding of the phenomena of life, and is no nearer than its sister sciences to absolute knowledge.

We have talked so much about the meaning of works of art that one can hardly suppress a doubt as to whether art really "means" anything at all. Perhaps art has no "meaning," at least not as we understand meaning. Perhaps it is like nature, which simply is and "means" nothing beyond that. Is "meaning" necessarily more than mere interpretation—an interpretation secreted into something by an intellect hungry for meaning? Art, it has been said, is beauty, and "a thing of beauty is a joy for ever."³ It needs no meaning, for meaning has nothing to do with art. Within the sphere of art, I must accept the truth of this statement. But when I speak of the relation of psychology to art we are outside its sphere, and it is impossible for us not to speculate. We must interpret, we must find meanings in things, otherwise we would be quite unable to think about them. We have to break down life and events, which are self-contained processes, into meanings, images, concepts, well knowing that in doing so we are getting further away from the

2. That is, no point at which to apply leverage. The Greek inventor and mathematician Archimedes (ca. 287–212 B.C.E.) is said to have declared, "Give

me a place to stand and I will move the earth."

3. John Keats, "Endymion" (1818), l. 1.

living mystery. As long as we ourselves are caught up in the process of creation, we neither see nor understand; indeed we ought not to understand, for nothing is more injurious to immediate experience than cognition. But for the purpose of cognitive understanding we must detach ourselves from the creative process and look at it from the outside; only then does it become an image that expresses what we are bound to call "meaning." What was a mere phenomenon before becomes something that in association with other phenomena has meaning, that has a definite role to play, serves certain ends, and exerts meaningful effects. And when we have seen all this we get the feeling of having understood and explained something. In this way we meet the demands of science.

When, a little earlier, we spoke of a work of art as a tree growing out of the nourishing soil, we might equally well have compared it to a child growing in the womb. But as all comparisons are lame, let us stick to the more precise terminology of science. You will remember that I described the nascent work in the psyche of the artist as an autonomous complex. By this we mean a psychic formation that remains subliminal until its energy-charge is sufficient to carry it over the threshold into consciousness. Its association with consciousness does not mean that it is assimilated, only that it is perceived; but it is not subject to conscious control, and can be neither inhibited nor voluntarily reproduced. Therein lies the autonomy of the complex: it appears and disappears in accordance with its own inherent tendencies, independently of the conscious will. The creative complex shares this peculiarity with every other autonomous complex. In this respect it offers an analogy with pathological processes, since these too are characterized by the presence of autonomous complexes, particularly in the case of mental disturbances. The divine frenzy of the artist comes perilously close to a pathological state, though the two things are not identical. The *tertium comparationis*⁴ is the autonomous complex. But the presence of autonomous complexes is not in itself pathological, since normal people, too, fall temporarily or permanently under their domination. This fact is simply one of the normal peculiarities of the psyche, and for a man to be unaware of the existence of an autonomous complex merely betrays a high degree of unconsciousness. Every typical attitude that is to some extent differentiated shows a tendency to become an autonomous complex, and in most cases it actually does. Again, every instinct has more or less the character of an autonomous complex. In itself, therefore, an autonomous complex has nothing morbid about it; only when its manifestations are frequent and disturbing is it a symptom of illness.

How does an autonomous complex arise? For reasons which we cannot go into here, a hitherto unconscious portion of the psyche is thrown into activity, and gains ground by activating the adjacent areas of association. The energy needed for this is naturally drawn from consciousness—unless the latter happens to identify with the complex. But where this does not occur, the drain of energy produces what Janet calls an *abaissement du niveau mental*.⁵ The intensity of conscious interests and activities gradually diminishes, leading either to apathy—a condition very common with artists—or to a regressive development of the conscious functions, that is, they revert to an

4. Third [point] of comparison (Latin); that is, the common factor between two different things.

5. Lowering of the mental level (French). Pierre

Janet (1859–1947), French psychologist and neurologist, best known for his theory of hysteria.

infantile and archaic level and undergo something like a degeneration. The "inferior parts of the functions," as Janet calls them, push to the fore; the instinctual side of the personality prevails over the ethical, the infantile over the mature, and the unadapted over the adapted. This too is something we see in the lives of many artists. The autonomous complex thus develops by using the energy that has been withdrawn from the conscious control of the personality.

But in what does an autonomous *creative* complex consist? Of this we can know next to nothing so long as the artist's work affords us no insight into its foundations. The work presents us with a finished picture, and this picture is amenable to analysis only to the extent that we can recognize it as a symbol. But if we are unable to discover any symbolic value in it, we have merely established that, so far as we are concerned, it means no more than what it says, or to put it another way, that it is no more than what it *seems* to be. I use the word "seems" because our own bias may prevent a deeper appreciation of it. At any rate we can find no incentive and no starting-point for an analysis. But in the case of a symbolic work we should remember the dictum of Gerhard Hauptmann:⁶ "Poetry evokes out of words the resonance of the primordial word." The question we should ask, therefore, is: "What primordial image lies behind the imagery of art?"

This question needs a little elucidation. I am assuming that the work of art we propose to analyse, as well as being symbolic, has its source not in the *personal unconscious* of the poet, but in a sphere of unconscious mythology whose primordial images are the common heritage of mankind. I have called this sphere the *collective unconscious*, to distinguish it from the personal unconscious. The latter I regard as the sum total of all those psychic processes and contents which are capable of becoming conscious and often do, but are then suppressed because of their incompatibility and kept subliminal. Art receives tributaries from this sphere too, but muddy ones; and their predominance, far from making a work of art a symbol, merely turns it into a symptom. We can leave this kind of art without injury and without regret to the purgative methods employed by Freud.

In contrast to the personal unconscious, which is a relatively thin layer immediately below the threshold of consciousness, the collective unconscious shows no tendency to become conscious under normal conditions, nor can it be brought back to recollection by any analytical technique, since it was never repressed or forgotten. The collective unconscious is not to be thought of as a self-subsistent entity; it is no more than a potentiality handed down to us from primordial times in the specific form of mnemonic images or inherited in the anatomical structure of the brain. There are no inborn ideas, but there are inborn possibilities of ideas that set bounds to even the boldest fantasy and keep our fantasy activity within certain categories: *a priori* ideas, as it were, the existence of which cannot be ascertained except from their effects. They appear only in the shaped material of art as the regulative principles that shape it; that is to say, only by inferences drawn from the finished work can we reconstruct the age-old original of the primordial image.

The primordial image, or archetype, is a figure—be it a daemon,⁷ a human

6. German dramatist and novelist (1862–1946).

7. For example, the *theios daimōn* (divine guide) of Socrates (Plato, *Apology* 31c–d).

being, or a process—that constantly recurs in the course of history and appears wherever creative fantasy is freely expressed. Essentially, therefore, it is a mythological figure. When we examine these images more closely, we find that they give form to countless typical experiences of our ancestors. They are, so to speak, the psychic residua of innumerable experiences of the same type. They present a picture of psychic life in the average, divided up and projected into the manifold figures of the mythological pantheon. But the mythological figures are themselves products of creative fantasy and still have to be translated into conceptual language. Only the beginnings of such a language exist, but once the necessary concepts are created they could give us an abstract, scientific understanding of the unconscious processes that lie at the roots of the primordial images. In each of these images there is a little piece of human psychology and human fate, a remnant of the joys and sorrows that have been repeated countless times in our ancestral history, and on the average follow ever the same course. It is like a deeply graven riverbed in the psyche, in which the waters of life, instead of flowing along as before in a broad but shallow stream, suddenly swell into a mighty river. This happens whenever that particular set of circumstances is encountered which over long periods of time has helped to lay down the primordial image.

The moment when this mythological situation reappears is always characterized by a peculiar emotional intensity; it is as though chords in us were struck that had never resounded before, or as though forces whose existence we never suspected were unloosed. What makes the struggle for adaptation so laborious is the fact that we have constantly to be dealing with individual and atypical situations. So it is not surprising that when an archetypal situation occurs we suddenly feel an extraordinary sense of release, as though transported, or caught up by an overwhelming power. At such moments we are no longer individuals, but the race; the voice of all mankind resounds in us. The individual man cannot use his powers to the full unless he is aided by one of those collective representations we call ideals, which releases all the hidden forces of instinct that are inaccessible to his conscious will. The most effective ideals are always fairly obvious variants of an archetype, as is evident from the fact that they lend themselves to allegory. The ideal of the "mother country," for instance, is an obvious allegory of the mother, as is the "fatherland" of the father. Its power to stir us does not derive from the allegory, but from the symbolical value of our native land. The archetype here is the *participation mystique* of primitive man with the soil on which he dwells, and which contains the spirits of his ancestors.

The impact of an archetype, whether it takes the form of immediate experience or is expressed through the spoken word, stirs us because it summons up a voice that is stronger than our own. Whoever speaks in primordial images speaks with a thousand voices; he enthral and overpowers, while at the same time he lifts the idea he is seeking to express out of the occasional and the transitory into the realm of the ever-enduring. He transmutes our personal destiny into the destiny of mankind, and evokes in us all those beneficent forces that ever and anon have enabled humanity to find a refuge from every peril and to outlive the longest night.

That is the secret of great art, and of its effect upon us. The creative process, so far as we are able to follow it at all, consists in the unconscious activation of an archetypal image, and in elaborating and shaping this image into the finished work. By giving it shape, the artist translates it into the

language of the present, and so makes it possible for us to find our way back to the deepest springs of life. Therein lies the social significance of art: it is constantly at work educating the spirit of the age, conjuring up the forms in which the age is most lacking. The unsatisfied yearning of the artist reaches back to the primordial image in the unconscious which is best fitted to compensate the inadequacy and one-sidedness of the present. The artist seizes on this image, and in raising it from deepest unconsciousness he brings it into relation with conscious values, thereby transforming it until it can be accepted by the minds of his contemporaries according to their powers.

Peoples and times, like individuals, have their own characteristic tendencies and attitudes. The very word "attitude" betrays the necessary bias that every marked tendency entails. Direction implies exclusion, and exclusion means that very many psychic elements that could play their part in life are denied the right to exist because they are incompatible with the general attitude. The normal man can follow the general trend without injury to himself; but the man who takes to the back streets and alleys because he cannot endure the broad highway will be the first to discover the psychic elements that are waiting to play their part in the life of the collective. Here the artist's relative lack of adaptation turns out to his advantage; it enables him to follow his own yearnings far from the beaten path, and to discover what it is that would meet the unconscious needs of his age. Thus, just as the one-sidedness of the individual's conscious attitude is corrected by reactions from the unconscious, so art represents a process of self-regulation in the life of nations and epochs.

I am aware that in this lecture I have only been able to sketch out my views in the barest outline. But I hope that what I have been obliged to omit, that is to say their practical application to poetic works of art, has been furnished by your own thoughts, thus giving flesh and blood to my abstract intellectual frame.

1922

LEON TROTSKY

1879–1940

Dedicated to the international workers' revolution and to Marxist theory, Leon Trotsky wrote little in the way of literary criticism, but his *Literature and Revolution* is an important text in the Marxist tradition. In it Trotsky argues cogently against formalist critical approaches even as he seeks to prevent literary study from being overtaken by the ideological imperatives of the communist state.

Born in November 1879, the son of a Jewish farm owner in Ukraine, Trotsky's name at birth was Lev Davidovich Bronstein. In his youth he was quickly recognized as a brilliant student with a promising future. He was also sympathetic to the plight of the farmers and peasants around him, and in the mid-1890s he turned to Marxism. His political activities led him to be exiled to Siberia in 1900; he escaped—with a forged passport that used the name of a jailer in Odessa's prison, Trotsky—and jour-

neyed to London, where he, Vladimir Lenin, and others edited a journal, *The Spark*. In December 1905, having returned to Russia, Trotsky (as he was now named) was imprisoned again. Once again he escaped, and for the next few years, he worked as a journalist in Vienna, Paris, and New York City, where he was living when in 1917 the Russian Revolution began.

Trotsky returned to Russia, supported Lenin, joined the Bolshevik Party (the name derives from the Russian word for "majority"), and won election to its Central Committee. A superb orator, writer, and agitator, Trotsky first was appointed foreign minister and then commissar of war. He commanded the Red Army during the civil war that followed the Bolshevik seizure of power in 1917, and he believed that he would be Lenin's successor. But Joseph Stalin was a shrewder, more vicious politician; after Lenin's death in 1924, Stalin outmaneuvered Trotsky, who was eventually expelled from the Communist Party (1927) and deported (1929). He lived in Turkey (1929–33), France (1933–35), Norway (1935–36), and finally Mexico (1935–40). In August 1940, in Mexico City, a Spanish communist named Ramón Mercader assassinated him.

During the late 1920s and, especially, in the 1930s, a number of prominent communists in America rallied behind Trotsky's criticisms of official Communism and Soviet policy. These Trotskyists, including James P. Cannon and Max Shachtman, argued that the Soviet Union under Stalin had become undemocratic and bureaucratized; they saw it as no longer committed to the goal of international revolution. American Trotskyism enjoyed the support of influential critics and intellectuals, including Philip Rahv, William Phillips, and others associated in the mid- to late 1930s with the literary and political journal the *Partisan Review*. The critic IRVING HOWE was a Trotskyist student leader at City College in New York City, and later in his career he edited a selection of Trotsky's political writings (1963) and wrote a book about Trotsky (1978).

Trotsky's main contribution to Marxist theory is his concept of "permanent revolution." KARL MARX and FRIEDRICH ENGELS had predicted that the proletariat (that is, industrial workers') revolution would occur first in the industrialized nations of western Europe, but it had taken place instead in unmodernized, industrially undeveloped Russia. Trotsky argued that countries could follow different paths—developing "unevenly"—in the transition from feudalism to capitalism to socialism and communism. But the crucial point, for him, was that a revolution within one nation must lead to revolution internationally. For the revolution in Russia to succeed, it would need the reinforcement, Trotsky maintained, of revolutionary movements elsewhere, in particular in the advanced European societies. As he explains in his book *The Permanent Revolution* (1930):

This struggle, under the conditions of an overwhelming predominance of capitalist relationships on the world arena, must inevitably lead to explosions, that is, internally to civil wars and externally to revolutionary wars. Therein lies the permanent character of the socialist revolution as such. . . . The socialist revolution begins on the national arena, it unfolds on the international arena, and is completed on the world arena.

Stalin for his part declared that "socialism in one country" was possible, that the revolution in the Soviet Union must be defended without qualification, and that Trotsky's commitment to world revolution thus was a form of betrayal, a failure to believe in and fight for the revolution in Russia. Stalin branded Trotsky the enemy of the Russian people, and it is generally believed that he ordered Trotsky's murder.

Trotsky produced his best literary and historical work—much of it directed against Stalinism—during his years in exile in the 1930s. His books of this period include an autobiography, *My Life* (1930; trans. 1930); the *History of the Russian Revolution* (3 vols., 1931–33; trans. 1932–33); the powerful anti-Stalinist polemic *The Revolution Betrayed* (1937); and many essays on events in Russia, Hitler's rise to power, fascism,

and the Spanish Civil War. The greatest of these texts is his massive, vividly conceived and written *History*. This stunning, panoramic work is relentless in its momentum, immensely confident in its tone, and breathtaking in its visionary power. As a narrative informed by a grand conception of how each agent and incident form part of an epic whole, it has never been equaled—and because of Trotsky's unique position in the story and his literary gifts, it never will be. It is, of course, Trotsky's version of the revolution, his account of a near-paradise that Stalin corrupted. It is a brilliant and essentially literary work.

In our selection from *Literature and Revolution* (1924), Trotsky begins by saying that art is neither self-contained, separate from politics, nor political, a matter solely of ideology. He pays tribute to art ("it brings thought and feeling closer. . . . It enriches the spiritual experience"), and, while defining a "Marxist point of view," he stresses that Marxism does not require that we "dominate art by means of decrees and orders" or mandate that we esteem only those works of art that celebrate workers. We cannot, says Trotsky, prescribe to the literary artist how he or she should write.

At the same time, Trotsky by no means favors allowing art to exist independently of political judgments, as his adverse commentary on formalism and futurism indicates. Formalism was an early-twentieth-century movement in literary criticism that emphasized the analysis of literary language; its formal properties and strategies. (On Slavic formalism, see especially BORIS EICHENBAUM, MIKHAIL BAKHTIN, and ROMAN JAKOBSON.) It sought to align literary study with the methods of the sciences, moving away from biography, impressionism, and historical content and toward the disciplines of rhetoric and structuralist linguistics. Futurism, which overlapped formalism in time and to some extent in adherents (e.g., Jakobson and Shklovsky were involved with both), was a major movement in Russian poetry and Italian art; it included disparate groups with the common belief that poetry is an autonomous and experimental art. Futurist poets sought to direct the language of poetry toward the language of the modern city, and they attacked the classic authors of the past, such as Aleksandr Pushkin (1799–1837) and Leo Tolstoy (1828–1910), whose work was, they claimed, outdated and irrelevant.

Trotsky displays a measure of respect for formalism; he appreciates its search for precise methods of analysis and evaluation. But he criticizes formalists, Shklovsky in particular, for being narrow and superficial—disconnected, like the futurists, from social process. Trotsky contends that new cultural movements cannot, and must not, reject the culture of the past; culture must absorb and grow within tradition. In the 1920s, when he stated these views, the Bolshevik regime was granting some leeway for experimentation and debate in literature and the arts; the only condition (soon to be made more strict and comprehensive) was that new art not criticize the revolution or party leaders and the state. In keeping with this time of relative openness, Trotsky is flexible and nondogmatic in professing that each work of art must be judged as art, though he insists that history shapes artistic production and that innovation in art arises from the pressures of historical context. "Artistic creation," he states, "is always a complicated turning inside out of old forms, under the influence of new stimuli which originate outside of art. . . . The effort to set art free from life, to declare it a craft self-sufficient unto itself, devitalizes and kills art."

Marxism alone, Trotsky believes, can explain the origins of a trend or development in the arts. In a later chapter of *Literature and Revolution*, while discussing the "formation of folklore," he declares that because Marxism emphasizes "the all-determining significance of natural and economic conditions," it is the only proper basis for description and judgment. Thus he endorses censorship and repression: "Our standard is, clearly, political, imperative and intolerant." Truth is not to emerge from debate in which positions are articulated and free to compete; it is known in advance, and hence the leadership should prescribe what is and is not to be tolerated.

The Marxist critic TERRY EAGLETON has observed: "In its blend of principled yet flexible Marxism and perceptive practical criticism, *Literature and Revolution* is a

disquieting text for non-Marxist critics." But that disquiet results less from Trotsky's showing a laudable respect for artistic autonomy than from the conflict one senses between Trotsky's humanist conception of literature and art and his tendency toward dogmatism. As EDMUND WILSON notes in "Marxism and Literature" (1937; see below), "even in combatting" the party's tendency to use politics to appraise art, Trotsky himself "cannot avoid passing censure and pinning ribbons."

Trotsky would be impatient with such criticisms. Attacking liberal self-righteousness, he stated repeatedly that democracies claiming in theory to honor freedom of speech were always ready to repudiate it in practice. But this deflection of the argument does not remove the problem embedded in his own position.

BIBLIOGRAPHY

For students of literary criticism, the essential text by Trotsky is *Literature and Revolution* (1924). Selections from his voluminous writings can be found in *The Basic Writings of Trotsky*, edited by Irving Howe (1963); *The Age of Permanent Revolution: A Trotsky Anthology*, edited by Isaac Deutscher (1964); and *Leon Trotsky on Literature and Art*, edited by Paul N. Siegel (1970). *The Trotsky Papers, 1917-1922*, edited by Jan M. Meijer (2 vols., 1964-71) contains documents from the Trotsky Archive, including the Lenin-Trotsky correspondence. But many other sources are now becoming available, and studies undertaken in the future will make use of archival materials in the former Soviet Union that were inaccessible in the past.

The classic scholarly biography of Trotsky is the three-volume study by Isaac Deutscher: *The Prophet Armed, 1879-1921* (1954), *The Prophet Unarmed, 1921-1929* (1959), and *The Prophet Outcast, 1929-1940* (1963). A more recent treatment is offered by Ronald Segal, *Leon Trotsky: A Biography* (1979). See also Trotsky's *My Life* (1930).

A cogent survey is Irving Howe, *Leon Trotsky* (1978). Also important is Dmitri Antonovich Volkogonov, *Trotsky: The Eternal Revolutionary* (1992; trans. 1996). For discussions of Trotsky's political thought (which intersects with his ideas about literature and culture), see Baruch Knei-Paz, *The Social and Political Thought of Leon Trotsky* (1978); Ernest Mandel, *Trotsky: A Study in the Dynamic of His Thought* (1979); Robert S. Wistrich, *Trotsky: Fate of a Revolutionary* (1982); and Alex Callinicos, *Trotskyism* (1990). A dated but still useful resource is Louis Sinclair, *Leon Trotsky: A Bibliography* (1972).

From Literature and Revolution!

The Formalist School of Poetry and Marxism

Leaving out of account the weak echoes of pre-revolutionary ideological systems, the only theory which has opposed Marxism in Soviet Russia these years is the Formalist theory of Art. The paradox consists in the fact that Russian Formalism connected itself closely with Russian Futurism,² and that while the latter was capitulating politically before Communism, Formalism opposed Marxism with all its might theoretically.

Victor Shklovsky³ is the theorist of Futurism, and at the same time the head of the Formalist school. According to his theory, art has always been

ents in Russia.

3. An important Russian formalist critic (1893-1984).

the work of self-sufficient pure forms, and it has been recognized by Futurism for the first time. Futurism is thus the first conscious art in history, and the Formalist school is the first scientific school of art. Owing to the efforts of Shklovsky—and this is not an insignificant virtue!—the theory of art, and partly art itself, have at last been raised from a state of alchemy to the position of chemistry. The herald of the Formalist school, the first chemist of art, gives a few friendly slaps in passing to those Futurist “conciliators” who seek a bridge to the Revolution, and who try to find this bridge in the materialistic conception of history. Such a bridge is unnecessary; Futurism is entirely sufficient unto itself.

There are two reasons why it is necessary to pause a little before this Formalist school. One is for its own sake; in spite of the superficiality and reactionary character of the Formalist theory of art, a certain part of the research work of the Formalists is useful. The other reason is Futurism itself; however unfounded the claims of the Futurists to a monopolistic representation of the new art may be, one cannot thrust Futurism out of that process which is preparing the art of the future.

What is the Formalist school?

As it is represented at present by Shklovsky, Zhirmunsky, Jacobson⁴ and others, it is extremely arrogant and immature. Having declared form to be the essence of poetry, this school reduces its task to an analysis (essentially descriptive and semi-statistical) of the etymology and syntax of poems, to the counting of repetitive vowels and consonants, of syllables and epithets. This analysis which the Formalists regard as the essence of poetry, or poetics, is undoubtedly necessary and useful, but one must understand its partial, scrappy, subsidiary and preparatory character. It can become an essential element of poetic technique and of the rules of the craft. Just as it is useful for a poet or a writer to make lists of synonyms for himself and increase their number so as to expand his verbal keyboard, so it is useful, and quite necessary for a poet, to estimate a word not only in accord with its inner meaning, but also in accord with its acoustics, because a word is passed on from man to man, first of all by acoustics. The methods of Formalism, confined within legitimate limits, may help to clarify the artistic and psychologic peculiarities of form (its economy, its movement, its contrasts, its hyperbolism,⁵ etc.). This, in turn, may open a path—one of the paths—to the artist's feeling for the world, and may facilitate the discovery of the relations of an individual artist, or of a whole artistic school, to the social environment. In so far as we are dealing with a contemporary and living school which is still developing, there is an immediate significance in our transitional stage in probing it by means of a social probe and in clarifying its class roots, so that not only the reader, but the school itself could orientate itself, that is, know itself, purify and direct itself.

But the Formalists are not content to ascribe to their methods a merely subsidiary, serviceable and technical significance—similar to that which statistics has for social science, or the microscope for the biological sciences. No, they go much further. To them verbal art ends finally and fully with the word, and depictive art with color. A poem is a combination of sounds, a

1971), Russian literary scholar.

5. Use of exaggeration (hyperbole).

painting is a combination of color spots and the laws of art are the laws of verbal combinations and of combinations of color spots. The social and psychological approach which, to us, gives a meaning to the microscopic and statistical work done in connection with verbal material, is, for the Formalists, only alchemy.

"Art was always free of life, and its color never reflected the color of the flag which waved over the fortress of the City." (Shklovsky.) "Adjustment to the expression, the verbal mass, is the one essential element of poetry." (R. Jakobson, in his "Recent Russian Poetry".) "With a new form comes a new content. Form thus determines content." (Kruchenikh.)⁶ "Poetry means the giving of form to the word, which is valuable in itself" (Jakobson), or, as Khlebnikov⁷ says, "The word which is something in itself", etc.

True, the Italian Futurists have sought in the word a means of expressing the locomotive, the propeller, electricity, the radio, etc., for their own age. In other words, they sought a new form for the new content of life. But it turned out that "this was a reform in the field of reporting, and not in the field of poetic language". (Jakobson.) It is quite different with Russian Futurism; it carries to the end "the adjustment to verbal mass". For Russian Futurism, form determines content.

True, Jakobson is compelled to admit that "a series of new poetic methods finds application (?) for itself in urbanism" (in the culture of the city). But this is his conclusion: "Hence the urban poems of Mayakovsky⁸ and Khlebnikov." In other words: not city culture, which has struck the eye and the ear of the poet and which has reeducated them, has inspired him with new form, with new images, new epithets, new rhythm, but, on the contrary, the new form, originating arbitrarily, forced the poet to seek appropriate material and so pushed him in the direction of the city! The development of the "verbal mass" went on arbitrarily from the "Odyssey" to "A Cloud in Trousers";⁹ the torch, the wax candle, the electric lamp, had nothing to do with it! One has only to formulate this point of view clearly to have its childish inadequacy strike the eye. But Jakobson tries to insist; he replies in advance that the same Mayakovsky has such lines as these: "Leave the cities, you silly people." And the theorist of the Formalist school reasons profoundly: "What is this, a logical contradiction? But let others fasten on the poet's thoughts expressed in his works. To incriminate a poet with ideas and feelings is just as absurd as the behavior of the medieval public which beat the actor who played Judas." And so on.

It is quite evident that all this was written by a very capable high-school boy who had a very evident and quite "self-significant" intention to "stick the pen into our teacher of literature, a notable pedant". At sticking the pen, our bold innovators are masters, but they do not know how to use their pen theoretically or grammatically. This is not hard to prove.

Of course Futurism felt the suggestions of the city—of the tram-car, of electricity, of the telegraph, of the automobile, of the propeller, of the night cabaret (especially of the night cabaret) much before it found its new form.

6. Aleksei Eliseevich Kruchenikh (1886-1969), Russian poet and literary theorist.

7. Velimir (originally Viktor Vladimirovich) Khlebnikov (1885-1922), poet, poetic theorist, and founder of Russian futurism.

8. Vladimir Vladimirovich Mayakovsky (1893-

1930), the leading poet of the Russian Revolution of 1917 and of the early Soviet period.

9. A major work (1915) by the Russian poet Mayakovsky. The *Odyssey* is one of the earliest epics of Western literature (ca. 8th c. B.C.E.).

Urbanism (city culture) sits deep in the subconsciousness of Futurism, and the epithets, the etymology, the syntax and the rhythm of Futurism are only an attempt to give artistic form to the new spirit of the cities which has conquered consciousness. And when Mayakovsky exclaims: "Leave the cities, you silly people", it is the cry of a man citified to the very marrow of his bones, who shows himself strikingly and clearly a city person, especially when he is outside the city, that is, when he "leaves the city" and becomes an inhabitant of a summer resort. It is not at all a question of "incriminating" (this word misses something!) a poet with the ideas and feelings which he expresses. Of course the way he expresses them makes the poet. But after all, a poet uses the language of the school which he has accepted or which he has created to fulfill tasks which lie outside of him. And this is even true also when he limits himself to lyricism, to personal love and personal death. Though individual shadings of poetic form correspond to individual makeup, they do go hand in hand with imitation and routine, in the feeling itself, as well as in the method of its expression. A new artistic form, taken in a large historic way, is born in reply to new needs. To take an example from intimate lyric poetry, one may say that between the physiology of sex and a poem about love there lies a complex system of psychological transmitting mechanisms in which there are individual, racial and social elements. The racial foundation, that is, the sexual basis of man, changes slowly. The social forms of love change more rapidly. They affect the psychologic superstructure of love, they produce new shadings and intonations, new spiritual demands, a need of a new vocabulary, and so they present new demands on poetry. The poet can find material for his art only in his social environment and transmits the new impulses of life through his own artistic consciousness. Language, changed and complicated by urban conditions, gives the poet a new verbal material, and suggests or facilitates new word combinations for the poetic formulation of new thoughts or of new feelings, which strive to break through the dark shell of the subconscious. If there were no changes in psychology produced by changes in the social environment, there would be no movement in art; people would continue from generation to generation to be content with the poetry of the Bible, or of the old Greeks.

But the philosopher of Formalism jumps on us, and says it is merely a question of a new form "in the field of reporting and not in the field of poetic language". There he struck us! If you will, poetry is reporting, only in a peculiar, grand style.

The quarrels about "pure art" and about art with a tendency took place between the liberals and the "populists". They do not become us. Materialistic dialectics¹ are above this; from the point of view of an objective historical process, art is always a social servant and historically utilitarian. It finds the necessary rhythm of words for dark and vague moods, it brings thought and feeling closer or contrasts them with one another, it enriches the spiritual experience of the individual and of the community, it refines feeling, makes it more flexible, more responsive, it enlarges the volume of thought in advance and not through the personal method of accumulated experience,

1. The Marxist theory that maintains the priority of matter over mind, stressing the material basis of reality as a changing dialectical process (or reciprocal interaction) of matter and mind.

it educates the individual, the social group, the class and the nation. And this it does quite independently of whether it appears in a given case under the flag of a "pure" or of a frankly tendencious² art. In our Russian social development tendenciousness was the banner of the intelligentsia which sought contact with the people. The helpless intelligentsia, crushed by Tsarism³ and deprived of a cultural environment, sought support in the lower strata of society and tried to prove to the "people" that it was thinking only of them, living only for them and that it loved them "terribly". And just as the "populists" who went to the people were ready to do without clean linen and without a comb and without a toothbrush, so the intelligentsia was ready to sacrifice the "subtleties" of form in its art, in order to give the most direct and spontaneous expression to the sufferings and hopes of the oppressed. On the other hand, "pure" art was the banner of the rising bourgeoisie, which could not openly declare its bourgeois character, and which at the same time tried to keep the intelligentsia in its service. The Marxist point of view is far removed from these tendencies, which were historically necessary, but which have become historically *passé*. Keeping on the plane of scientific investigation, Marxism seeks with the same assurance the social roots of the "pure" as well as of the tendencious art. It does not at all "incriminate" a poet with the thoughts and feelings which he expresses, but raises questions of a much more profound significance, namely, to which order of feelings does a given artistic work correspond in all its peculiarities? What are the social conditions of these thoughts and feelings? What place do they occupy in the historic development of a society and of a class? And, further, what literary heritage has entered into the elaboration of the new form? Under the influence of what historic impulse have the new complexes of feelings and thoughts broken through the shell which divides them from the sphere of poetic consciousness? The investigation may become complicated, detailed or individualized, but its fundamental idea will be that of the subsidiary rôle which art plays in the social process.

Each class has its own policy in art, that is, a system of presenting demands on art, which changes with time; for instance, the Macænas-like protection⁴ of court and grand seigneur, the automatic relationship of supply and demand which is supplemented by complex methods of influencing the individual, and so forth, and so on. The social and even the personal dependence of art was not concealed, but was openly announced as long as art retained its court character. The wider, more popular, anonymous character of the rising bourgeoisie led, on the whole, to the theory of "pure art", though there were many deviations from this theory. As indicated above, the tendencious literature of the "populist" intelligentsia was imbued with a class interest; the intelligentsia could not strengthen itself and could not conquer for itself a right to play a part in history without the support of the people. But in the revolutionary struggle, the class egotism of the intelligentsia was turned inside out, and in its left wing, it assumed the form of highest self-sacrifice.

2. Tendencious.

3. The autocratic government of Russia under the czars (tsars). Along with his family, the last of the czars, Nicholas II (1868-1918), was executed by the Bolsheviks in July 1918.

4. That is, patronage. Maecenas (d. 8 B.C.E.), trusted friend and counselor of Augustus Caesar, was a great patron of Roman poets (including HORACE and Virgil).

That is why the intelligentsia not only did not conceal art with a tendency, but proclaimed it, thus sacrificing art, just as it sacrificed many other things. Our Marxist conception of the objective social dependence and social utility of art, when translated into the language of politics, does not at all mean a desire to dominate art by means of decrees and orders. It is not true that we regard only that art as new and revolutionary which speaks of the worker, and it is nonsense to say that we demand that the poets should describe inevitably a factory chimney, or the uprising against capital! Of course the new art cannot but place the struggle of the proletariat⁵ in the center of its attention. But the plough of the new art is not limited to numbered strips. On the contrary, it must plow the entire field in all directions. Personal lyrics of the very smallest scope have an absolute right to exist within the new art. Moreover, the new man cannot be formed without a new lyric poetry. But to create it, the poet himself must feel the world in a new way. If Christ alone or Sabaoth⁶ himself bends over the poet's embraces (as in the case of Akhmatova, Tsvetaeva, Shkapskaya⁷ and others), then this only goes to prove how much behind the times his lyrics are and how socially and aesthetically inadequate they are for the new man. Even where such terminology is not a survival of experience so much as of words, it shows psychologic inertia and therefore stands in contradiction to the consciousness of the new man. No one is going to prescribe themes to a poet or intends to prescribe them. Please write about anything you can think of! But allow the new class which considers itself, and with reason, called upon to build a new world, to say to you in any given case: It does not make new poets of you to translate the philosophy of life of the Seventeenth Century into the language of the Acméists.⁸ The form of art is, to a certain and very large degree, independent, but the artist who creates this form, and the spectator who is enjoying it, are not empty machines, one for creating form and the other for appreciating it. They are living people, with a crystallized psychology representing a certain unity, even if not entirely harmonious. This psychology is the result of social conditions. The creation and perception of art forms is one of the functions of this psychology. And no matter how wise the Formalists try to be, their whole conception is simply based upon the fact that they ignore the psychological unity of the social man, who creates and who consumes what has been created.

The proletariat has to have in art the expression of the new spiritual point of view which is just beginning to be formulated within him, and to which art must help him give form. This is not a state order, but an historic demand. Its strength lies in the objectivity of historic necessity. You cannot pass this by, nor escape its force.

The Formalist school seems to try to be objective. It is disgusted, and not without reason, with the literary and critical arbitrariness which operates only with tastes and moods. It seeks precise criteria for classification and valuation. But owing to its narrow outlook and superficial methods, it is constantly falling into superstitions, such as graphology and phrenology.

5. That is, the laboring class; more specifically, the class of industrial workers who lack their own means of production and who thus must sell their labor in order to live.

6. The Lord of Hosts.

7. Trotsky names major 20th-century Russian

poets: Anna Akhmatova (Anna Andreyevna Gorkenok, 1888-1966), Marina Tsvetaeva (1892-1941), and Mariya Shkapskaya (1891-1952).

8. Members of a small group of 20th-century vanguard Russian poets.

These two "schools" have also the task of establishing purely objective tests for determining human character; such as the number of the flourishes of one's pen and their roundness, and the peculiarities of the bumps on the back of one's head. One may assume that pen-flourishes and bumps do have some relation to character; but this relation is not direct, and human character is not at all exhausted by them. An apparent objectivism based on accidental, secondary and inadequate characteristics leads inevitably to the worst subjectivism. In the case of the Formalist school it leads to the superstition of the word. Having counted the adjectives, and weighed the lines, and measured the rhythms, a Formalist either stops silent with the expression of a man who does not know what to do with himself, or throws out an unexpected generalization which contains five per cent of Formalism and ninety-five per cent of the most uncritical intuition.

In fact, the Formalists do not carry their idea of art to its logical conclusion. If one is to regard the process of poetic creation only as a combination of sounds or words, and to seek along these lines the solution of all the problems of poetry, then the only perfect formula of "poetics" will be this: Arm yourself with a dictionary and create by means of algebraic combinations and permutations of words, all the poetic works of the world which have been created and which have not yet been created. Reasoning "formally" one may produce "Eugene Onegin"⁹ in two ways: either by subordinating the selection of words to a preconceived artistic idea (as Pushkin himself did), or by solving the problem algebraically. From the "Formal" point of view, the second method is more correct, because it does not depend upon mood, inspiration, or other unsteady things, and has besides the advantage that while leading to "Eugene Onegin" it may bring one to an incalculable number of other great works. All that one needs is infinity in time, called eternity. But as neither mankind nor the individual poet have eternity at their disposal, the fundamental source of poetic words will remain, as before, the preconceived artistic idea understood in the broadest sense, as an accurate thought and as a clearly expressed personal or social feeling and as a vague mood. In its striving towards artistic materialization, this subjective idea will be stimulated and jolted by form and may be sometimes pushed on to a path which was entirely unforeseen. This simply means that verbal form is not a passive reflection of a preconceived artistic idea, but an active element which influences the idea itself. But such an active mutual relationship—in which form influences and at times entirely transforms content—is known to us in all fields of social and even biologic life. This is no reason at all for rejecting Darwinism¹ and Marxism and for the creation of a Formalist school either in biology or sociology.

Victor Shklovsky, who flits lightly from verbal Formalism to the most subjective valuations, assumes a very uncompromising attitude towards the historico-materialistic theory of art. In a booklet which he published in Berlin, under the title of "The March of the Horse", he formulates in the course of three small pages—brevity is a fundamental and, at any rate, an undoubted merit of Shklovsky—five (not four and not six, but five) exhaustive

9. Verse novel (1833) by the Russian writer Aleksandr Pushkin (1799–1837).

1. The biological process of development (through natural selection), theorized by Charles Darwin

(1802–1882); here presented as parallel to the economic and political theories of KARL MARX (1818–1883).

arguments against the materialist conception of art. Let us examine these arguments, because it won't harm us to take a look and see what kind of chaff is handed out as the last word in scientific thought (with the greatest variety of scientific referencés on these same three microscopic pages).

"If the environment and the relations of production," says Shklovsky, "influenced art, then would not the themes of art be tied to the places which would correspond to these relations? But themes are homeless." Well, and how about butterflies? According to Darwin, they also "correspond" to definite relations, and yet they flit from place to place, just like an unweighted litterateur.

It is not easy to understand why Marxism should be supposed to condemn themes to a condition of serfdom. The fact that different peoples and different classes of the same people make use of the same themes, merely shows how limited the human imagination is, and how man tries to maintain an economy of energy in every kind of creation, even in the artistic. Every class tries to utilize, to the greatest possible degree, the material and spiritual heritage of another class. Shklovsky's argument could be easily transferred into the field of productive technique. From ancient times on, the wagon has been based on one and the same theme, namely, axles, wheels, and a shaft. However, the chariot of the Roman patrician was just as well adapted to his tastes and needs as was the carriage of Count Orlov, fitted out with inner comforts, to the tastes of this favorite of Catherine the Great.² The wagon of the Russian peasant is adapted to the needs of his household, to the strength of his little horse, and to the peculiarities of the country road. The automobile, which is undoubtedly a product of the new technique, shows, nevertheless, the same "theme", namely, four wheels on two axles. Yet every time a peasant's horse shies in terror before the blinding lights of an automobile on the Russian road at night, a conflict of two cultures is reflected in the episode.

"If environment expressed itself in novels," so runs the second argument, "European science would not be breaking its head over the question of where the stories of 'A Thousand and One Nights'³ were made, whether in Egypt, India, or Persia." To say that man's environment, including the artist's, that is, the conditions of his education and life, find expression in his art also, does not mean to say that such expression has a precise geographic, ethnographic and statistical character. It is not at all surprising that it is difficult to decide whether certain novels were made in Egypt, India or Persia, because the social conditions of these countries have much in common. But the very fact that European science is "breaking its head" trying to solve this question from these novels themselves, shows that these novels reflect an environment, even though unevenly. No one can jump beyond himself. Even the ravings of an insane person contain nothing that the sick man had not received before from the outside world. But it would be an insanity of another order to regard his ravings as the accurate reflection of an external world. Only an experienced and thoughtful psychiatrist, who knows the past of the patient, will be able to find the reflected and distorted bits of reality in the contents of his ravings. Artistic creation, of course, is not a raving, though

2. Empress of Russia (1729-1796; reigned 1762-96). Gregory Orlov (1734-1783) was one of her court favorites.

3. A series of anonymous ancient tales in Arabic (also titled *The Arabian Nights*), codified in its present form ca. 1450.

it is also a deflection, a changing and a transformation of reality, in accordance with the peculiar laws of art. However fantastic art may be, it cannot have at its disposal any other material except that which is given to it by the world of three dimensions and by the narrower world of class society. Even when the artist creates heaven and hell, he merely transforms the experience of his own life into his phantasmagorias, almost to the point of his landlady's unpaid bill.

"If the features of class and caste are deposited in art," continues Shklovsky, "then how does it come that the various tales of the Great Russians about their nobleman are the same as their fairy tales about their priest?"

In essence, this is merely a paraphrase of the first argument. Why cannot the fairy tales about the nobleman and about the priest be the same, and how does this contradict Marxism? The proclamations which are written by well-known Marxists not infrequently speak of landlords, capitalists, priests, generals and other exploiters. The landlord undoubtedly differs from the capitalist, but there are cases when they are considered under one head. Why, then, cannot folk-art in certain cases treat the nobleman and the priest together, as the representatives of the classes which stand above the people and which plunder them? In the cartoons of Moor and of Deni,⁴ the priest often stands side by side with the landlord, without any damage to Marxism.

"If ethnographic traits were reflected in art," Shklovsky goes on, "the folklore about the peoples beyond the border would not be interchangeable and could not be told by any one folk about another."

As you see, there is no letting up here. Marxism does not maintain at all that ethnographic traits have an independent character. On the contrary, it emphasizes the all-determining significance of natural and economic conditions in the formation of folk-lore. The similarity of conditions in the development of the herding and agricultural and primarily peasant peoples, and the similarity in the character of their mutual influence upon one another, cannot but lead to the creation of a similar folk-lore. And from the point of view of the question that interests us here, it makes absolutely no difference whether these homogeneous themes arose independently among different peoples, as the reflection of a life-experience which was homogeneous in its fundamental traits and which was reflected through the homogeneous prism of a peasant imagination, or whether the seeds of these fairy tales were carried by a favorable wind from place to place, striking root wherever the ground turned out to be favorable. It is very likely that, in reality, these methods were combined.

And finally, as a separate argument—"The reason (*i.e.*, Marxism) is incorrect in the fifth place"—Shklovsky points to the theme of abduction which goes through Greek comedy and reaches Ostrovsky.⁵ In other words, our critic repeats, in a special form, his very first argument (as we see, even in so far as formal logic is concerned, all is not well with our Formalist). Yes, themes migrate from people to people, from class to class, and even from author to author. This means only that the human imagination is economi-

4. D. S. Moor (1883-1946) and V. N. Deni (1893-1946) were political cartoonists and satirists, known in particular for their agitational poster art in the decade after the Bolshevik Revolution. Posters mocking the Bolsheviks' enemies

frequently grouped together landlords and priests (caricatured as fat and ugly).

5. Aleksandr Ostrovsky (1823-1886), Russian dramatist.

cal. A new class does not begin to create all of culture from the beginning, but enters into possession of the past, assorts it, touches it up, rearranges it, and builds on it further. If there were no such utilization of the "second-hand" wardrobe of the ages, historic processes would have no progress at all. If the theme of Ostrovsky's drama came to him through the Egyptians and through Greece, then the paper on which Ostrovsky developed his theme came to him as a development of the Egyptian papyrus through the Greek parchment. Let us take another and closer analogy: the fact that the critical methods of the Greek Sophists,⁶ who were the pure Formalists of their day, have penetrated the theoretic consciousness of Shklovsky, does not in the least change the fact that Shklovsky himself is a very picturesque product of a definite social environment and of a definite age.

Shklovsky's destruction of Marxism in five points reminds us very much of those articles which were published against Darwinism in the magazine "The Orthodox Review" in the good old days. If the doctrine of the origin of man from the monkey were true, wrote the learned Bishop Nikanor of Odessa⁷ thirty or forty years ago, then our grandfathers would have had distinct signs of a tail, or would have noticed such a characteristic in their grandfathers and grandmothers. Second, as everybody knows, monkeys can only give birth to monkeys. . . . Fifth, Darwinism is incorrect, because it contradicts Formalism—I beg your pardon, I meant to say the formal decisions of the universal church conferences. The advantage of the learned monk consisted, however, in the fact that he was a frank *passéist*⁸ and took his cue from the Apostle Paul and not from physics, chemistry or mathematics, as the Futurist, Shklovsky, does.

It is unquestionably true that the need for art is not created by economic conditions. But neither is the need for food created by economics. On the contrary, the need for food and warmth creates economics. It is very true that one cannot always go by the principles of Marxism in deciding whether to reject or to accept a work of art. A work of art should, in the first place, be judged by its own law, that is, by the law of art. But Marxism alone can explain why and how a given tendency in art has originated in a given period of history; in other words, who it was who made a demand for such an artistic form and not for another, and why.

It would be childish to think that every class can entirely and fully create its own art from within itself, and, particularly, that the proletariat is capable of creating a new art by means of closed art guilds or circles, or by the Organization for Proletarian Culture, etc. Generally speaking, the artistic work of man is continuous. Each new rising class places itself on the shoulders of its preceding one. But this continuity is dialectic, that is, it finds itself by means of internal repulsions and breaks. New artistic needs or demands for new literary and artistic points of view are stimulated by economics, through the development of a new class, and minor stimuli are supplied by changes in the position of the class, under the influence of the growth of its wealth and cultural power. Artistic creation is always a complicated turning inside out of old forms, under the influence of new stimuli which originate

8. Traditionalist.

outside of art. In this large sense of the word, art is a handmaiden. It is not a disembodied element feeding on itself, but a function of social man indissolubly tied to his life and environment. And how characteristic it is—if one were to reduce every social superstition to its absurdity—that Shklovsky has come to the idea of art's absolute independence from the social environment at a period of Russian history when art has revealed with such utter frankness its spiritual, environmental and material dependence upon definite social classes, subclasses and groups!

Materialism does not deny the significance of the element of form, either in logic, jurisprudence, or art. Just as a system of jurisprudence can and must be judged by its internal logic and consistency, so art can and must be judged from the point of view of its achievements in form, because there can be no art without them. However, a juridical theory which attempted to establish the independence of law from social conditions would be defective at its very base. Its moving force lies in economics—in class contradictions. The law gives only a formal and an internally harmonized expression of these phenomena, not of their individual peculiarities, but of their general character, that is, of the elements that are repetitive and permanent in them. We can see now with a clarity which is rare in history how new law is made. It is not done by logical deduction, but by empirical measurement and by adjustment to the economic needs of the new ruling class. Literature, whose methods and processes have their roots far back in the most distant past and represent the accumulated experience of verbal craftsmanship, expresses the thoughts, feelings, moods, points of view and hopes of the new epoch and of its new class. One cannot jump beyond this. And there is no need of making the jump, at least, for those who are not serving an epoch already past nor a class which has already outlived itself.

The methods of formal analysis are necessary, but insufficient. You may count up the alliterations in popular proverbs, classify metaphors, count up the number of vowels and consonants in a wedding song. It will undoubtedly enrich our knowledge of folk art, in one way or another; but if you don't know the peasant system of sowing, and the life that is based on it, if you don't know the part the scythe plays, and if you have not mastered the meaning of the church calendar to the peasant, of the time when the peasant marries, or when the peasant women give birth, you will have only understood the outer shell of folk art, but the kernel will not have been reached. The architectural scheme of the Cologne cathedral⁹ can be established by measuring the base and the height of its arches, by determining the three dimensions of its naves, the dimensions and the placement of the columns, etc. But without knowing what a mediæval city was like, what a guild was, or what was the Catholic Church of the Middle Ages, the Cologne cathedral will never be understood. The effort to set art free from life, to declare it a craft self-sufficient unto itself, devitalizes and kills art. The very need of such an operation is an unmistakable symptom of intellectual decline.

The analogy with the theological arguments against Darwinism which was made above may appear to the reader external and anecdotal. That may be true, to some extent. But a much deeper connection exists. The Formalist theory inevitably reminds a Marxist who has done any reading at all of the

9. The largest gothic church in northern Europe (begun in the 13th c.).

familiar tunes of a very old philosophic melody. The jurists and the moralists (to recall at random the German Stammler, and our own subjectivist Mikhailovsky)¹ tried to prove that morality and law could not be determined by economics, because economic life was unthinkable outside of juridical and ethical norms. True, the formalists of law and morals did not go so far as to assert the complete independence of law and ethics from economics. They recognized a certain complex mutual relationship of "factors", and these "factors", while influencing one another, retained the qualities of independent substances, coming no one knew whence. The assertion of complete independence of the æsthetic "factor" from the influence of social conditions, as is made by Shklovsky, is an instance of specific hyperbole whose roots, by the way, lie in social conditions too; it is the megalomania of æsthetic turning our hard reality on its head. Apart from this peculiarity, the constructions of the Formalists have the same kind of defective methodology that every other kind of idealism has. To a materialist, religion, law, morals and art represent separate aspects of one and the same process of social development. Though they differentiate themselves from their industrial basis, become complex, strengthen and develop their special characteristics in detail, politics, religion, law, ethics and æsthetics remain, none the less, functions of social man and obey the laws of his social organization. The idealist, on the other hand, does not see a unified process of historic development which evolves the necessary organs and functions from within itself, but a crossing or combining and interacting of certain independent principles—the religious, political, juridical, æsthetic and ethical substances, which find their origin and explanation in themselves. The (dialectic) idealism of Hegel² arranges these substances (which are the eternal categories) in some sequence by reducing them to a genetic unity. Regardless of the fact that this unity with Hegel is the absolute spirit, which divides itself in the process of its dialectic manifestation into various "factors", Hegel's system, because of its dialectic character, not because of its idealism, gives an idea of historic reality which is just as good as the idea of a man's hand that a glove gives when turned inside out. But the Formalists (and their greatest genius was Kant)³ do not look at the dynamics of development, but at a cross-section of it, on the day and at the hour of their own philosophic revelation. At the crossing of the line they reveal the complexity and multiplicity of the object (not of the process, because they do not think of processes). This complexity they analyze and classify. They give names to the elements, which are at once transformed into essences, into sub-absolutes, without father or mother; to wit, religion, politics, morals, law, art. Here we no longer have a glove of history turned inside out, but the skin torn from the separate fingers, dried out to a degree of complete abstraction, and this hand of history turns out to be the product of the "inter-action" of the thumb, the index, the middle finger, and all the other "factors". The æsthetic "factor" is the little finger, the smallest, but not the least beloved.

1. Nikolai Mikhailovsky (1842–1904), literary critic best known for his essays on Tolstoy and other Russian novelists; a leader of the liberal populists, he engaged in debates with Lenin and other Russian Marxists. Rudolf Stammler (1856–

1938), German jurist and legal philosopher.

2. GEORG WILHELM FRIEDRICH HEGEL (1770–1831), German philosopher.

3. IMMANUEL KANT (1724–1804), German philosopher.

In biology, vitalism⁴ is a variation of the same fetish of presenting the separate aspects of the world-process, without understanding its inner relation. A creator is all that is lacking for a super-social, absolute morality or æsthetics, or for a super-physical absolute "vital force". The multiplicity of independent factors, "factors" without beginning or end, is nothing but a masked polytheism. Just as Kantian idealism represents historically a translation of Christianity into the language of rationalistic philosophy, so all the varieties of idealistic formalization, either openly or secretly, lead to a God, as the Cause of all causes. In comparison with the oligarchy of a dozen sub-absolutes of the idealistic philosophy, a single personal Creator is already an element of order. Herein lies the deeper connection between the Formalist refutations of Marxism and the theological refutations of Darwinism.

The Formalist school represents an abortive idealism applied to the questions of art. The Formalists show a fast ripening religiousness. They are followers of St. John. They believe that "In the beginning was the Word".⁵ But we believe that in the beginning was the deed. The word followed, as its phonetic shadow.

1924

4. The theory or doctrine that life processes arise from or contain a nonmaterial vital principle and cannot be explained entirely as physical and chem-

ical phenomena.
5. John 1.1.

VIRGINIA WOOLF

1882-1941

Invited to address the topic of "women and fiction" at Cambridge University's Newnham and Girton Colleges in October of 1928, Virginia Woolf presented two lectures that would later become, after considerable expansion and revision, her celebrated book *A Room of One's Own* (1929). Working at the intersection of modernism and feminism, both of which she stood for, Woolf analyzed the differences between women as *objects* of representation and women as *authors* of representation, and invited her audience to think about "the books that are not there." In the process, she opened up the entire territory of modern feminist criticism.

Woolf was a member of a highly literate and artistic family. Born Adeline Virginia Stephen, she was the daughter of Leslie Stephen, a distinguished Victorian literary figure, and Julia Jackson Duckworth Stephen, a beauty who had once frequented pre-Raphaelite circles. It was the second marriage for each. The resultant blended family included three Duckworths (George, Stella, and Gerald), one Stephen from the first marriage (Laura, later institutionalized because of mental retardation), and four new Stephens (Vanessa, Thoby, Virginia, and Adrian). Leslie Stephen lived in a world of letters: his first wife was the daughter of novelist William Makepeace Thackeray; he possessed a large library (in which Virginia got her education); he published several books of philosophy and literary history; and he became, partly for financial reasons, the first editor of the multivolume *Dictionary of National Biography* in 1882, the year of Virginia's birth. The Stephen family was organized in a typically Victorian way, the father occupying himself with money and intellectual matters and the mother attending to the emotional and social needs of her husband and eight children.

Her mother's death in 1895 was for thirteen-year-old Virginia a terrible loss. When Sir Leslie died nine years later, twenty-two-year-old Virginia felt an intense though

ambivalent liberation, and began to write. The Stephen children moved across London to Gordon Square, Bloomsbury, where they were surrounded by Thoby's Cambridge friends, many of whom had been members of a college group known as the Apostles, and who later would become well known: Lytton Strachey, a biographer and historian; John Maynard Keynes, an economist; Clive Bell, a critic of art and literature; and Leonard Woolf, a writer of novels and political science.

In 1906, however, the circle was devastated by the unexpected loss of its connecting link: Thoby Stephen died of typhoid fever. Two days after Thoby's death, Vanessa agreed to marry Clive Bell. Virginia and her remaining brother, Adrian, moved to 29 Fitzroy Square (London), where Virginia began working on a novel. She had also begun to publish reviews for money and do some (unpaid) teaching in a working-class college. When she inherited £2,500 from an aunt, she acquired an important economic safety net.

In 1912 Virginia married Leonard Woolf, who had just returned from serving as an administrator in Ceylon (now Sri Lanka). They shared many intellectual interests and both felt themselves to be outsiders within their social circle. In response to Virginia's periodic nervous breakdowns, Leonard was both attentive and controlling; she relied on, and raged against, his prescriptions. In the 1920s, Virginia had an affair with Victoria ("Vita") Sackville-West, a fellow writer, who was married to Harold Nicolson, a diplomat. The relationship coincided with a period of great productivity and originality in Woolf's writing.

In 1917 Leonard had had the inspired idea of buying a printing press, originally to provide a therapeutic hobby. The Hogarth Press, born of a machine small enough to fit on a kitchen table, soon became an important disseminator of modernist texts. It published brightly covered books, often designed by Vanessa Bell or Roger Fry, and launched T. S. Eliot's *Waste Land* (1922); fiction by Maksim Gor'ky, E. M. Forster, and Katherine Mansfield; all the works of Virginia Woolf, beginning with *Jacob's Room* (1922); and the complete twenty-four-volume translation of the works of SIGMUND FREUD. The "Woolves," as their friends called them, had found their outlet.

Starting with *The Voyage Out*, her first novel (1915), Woolf wrote a great deal. Her novels experiment increasingly with form and style: *Mrs. Dalloway* (1925), her fourth, is set, like James Joyce's *Ulysses* in Dublin, in a single day in London, pairing the war and the drawing room; *To the Lighthouse* (1927) is a radical rethinking of what a novel can do, a fictional biography of her parents relying on a stream of consciousness narrative. Her later novels take diverse approaches to expanding the form, and she published three very different "biographies," including *Orlando* (1928, a novel celebrating her relationship with Vita), whose three-hundred-year-old protagonist changes sex in midlife, and *Flush* (1933), about the life of Elizabeth Barrett Browning's spaniel. Woolf also wrote more than four volumes' worth of essays and short fiction and two groundbreaking feminist works: *A Room of One's Own* and *Three Guineas* (1938).

Her productivity was all the more remarkable in that it was often punctuated by nervous illnesses and by treatments, of dubious effectiveness, that required her to stop writing. In 1941, with the voices in her head becoming more insistent and the war in Europe ever more threatening (she and Leonard, who was Jewish, had made provisions to kill themselves in the event of a Nazi invasion), she drowned herself.

People attempting to explain the sources of Woolf's creativity have written a great deal on several topics: her sexuality, her class position, and her madness. Much has been said about her sexuality: she had too much of it or too little; her androgyny obscured her bisexuality, or vice versa; she idealized motherhood, or feared it, or resented Leonard, who was afraid of inherited insanity, for deciding that they shouldn't have children; and so on. Evidence for these arguments comes, of course, from her writing itself; her contradictions indicate her success in finding textual forms—in her diaries and letters, her fiction and essays—that would allow all these forces to do battle.

Both of her feminist treatises link women and money. As one of the "daughters of

educated men" (as she puts it in *Three Guineas*), she belonged to a culturally, if not economically, privileged class. In *A Room of One's Own* she argues that women need £500 a year (an amount somewhere between subsistence and comfort), and in *Three Guineas*—a meditation on the ties between war and patriarchal values—she responds to a solicitation to sign a petition and contribute money to a society for the prevention of war. On the one hand, the link she makes between freedom and property can be critiqued from a Marxist perspective; on the other, society's denial of women's independent rights over property marks a resistance to women's freedom. It is clear that Woolf is breaking a gender taboo, rather than merely claiming a class privilege, by going into the economic details of women's lives.

Woolf has also been seen as a representative of the sexual sea change that came after, and out of, the Victorian era. She grew up, like many others, in a world of exaggerated gender roles, secret transgressions, and repressive silence about sexual matters (she was apparently abused in childhood by her two stepbrothers). The Bloomsbury group, in contrast, broke gender taboos spectacularly—almost all of them had relations with both sexes, and they sometimes lived with the people they were *not* sleeping with. Nevertheless, even in liberated Bloomsbury, female creativity could still be categorized as "madness" whenever it became too hard to handle (this is the premise behind *The Madwoman in the Attic*, the influential 1979 study by SANDRA M. GILBERT AND SUSAN GUBAR). The line between psychopathology and impeded gifts is very hard to draw, as Woolf makes clear in her parable of Shakespeare's sister.

Our selection contains three celebrated moments from *A Room of One's Own*, which we have labeled "Shakespeare's Sister," "Chloe Liked Olivia," and "Androgyny." What would have happened, Woolf asks in the first, if Shakespeare had had a sister as gifted as himself? She would have lacked even the education *he* had, she answers. Shakespeare's sister would have been excluded from the Renaissance stage (on which all the parts were played by males); she would probably have found herself with child by some man who had taken pity on her; and, crazed by her gifts and her prospects, she would probably have ended up committing suicide. Judith Shakespeare thus represents one kind of "book that isn't there."

A second kind of missing book may be lurking behind the cover of the fictitious novel Woolf is about to open in our second section, Mary Carmichael's *Life's Adventure*. "Chloe liked Olivia," she reads, and looks about her to make sure the room contains only women. By wondering whether "that red curtain over there" conceals the figure of Sir Chartres Biron—the magistrate presiding at that very moment over the censorship trial of Radclyffe Hall's lesbian novel *The Well of Loneliness* (1928)—Woolf implies that one of the things that keeps women unfree is the law's policing of the relations women can have with women. Women in literature have almost always been imagined as *only* sexual, she argues, and usually only in their relations or non-relations to men, leaving no dealings with each other but as rivals ("Cleopatra did not like Octavia"). But, Woolf exclaims, how small a part of any woman's life is the part seen by the other sex and in relation to the other sex! Women as authors now have the opportunity to depict "that vast chamber where nobody has yet been."

Woolf's idealization of authorial "androgyny" in our third passage would seem to fly in the face of her descriptions earlier in the essay of male and female sentences or male and female plots. How can she argue both that the exclusion of women from the canon has made a difference and that great authors are androgynous? Two clarifications need to be made. First, the "woman" in Shakespeare's brain is not the same as the "women" who did not write in history. But second, the women entering literature do more than fill up an absence. If the greatest authors used both "sides" of their brain, the new authors must do so as well. Her warning that "consciousness of sex" destroys literature can be interpreted as both feminist and antifeminist. Writing with "unconsciousness of sex" may very well be taken as "indifference to sex"—often seen as a modernist privileging of style over politics. Yet this unconsciousness does not preclude gender difference, mandating simply that the gender differences that

inform good writing not become *conscious*. If women were free to write, would they not open a window on a world of experiences that have remained invisible, even to themselves? a world too quickly dismissed or devalued, a world that would *require* different sentences? Woolf presents *men*, not women, as having become overly conscious of their sex as a result of feminism. In arguing for a new writerly androgyny, Woolf comes close to what HÉLÈNE CIXOUS later calls "the other bisexuality."

A Room of One's Own is one of the most imitated titles ever devised. Written during the trial of Radclyffe Hall's lesbian novel and published during the same month as the stock market crash of 1929, *A Room of One's Own* marks an upheaval more subtle, yet in some ways as profound, as these. The time was right for it: the book was so successful that the proceeds enabled Virginia Woolf to add a room of her own onto her house in Sussex.

BIBLIOGRAPHY

Most of Woolf's works are available in easily accessible editions. *A Room of One's Own* and *Three Guineas*, edited by Hermione Lee, were published together in 1984. Woolf's other essays on women's writing, edited by Michèle Barrett, were published as *Women and Fiction* (1979). In addition to her novels and her feminist essays, Woolf collected some of her articles in two volumes called *The Common Reader* (1925, 1932). Before he died in 1969, Leonard Woolf edited her *Collected Essays* (4 vols., 1967); he also edited *A Writer's Diary* (1953), now superseded by *The Diary of Virginia Woolf*, edited by Anne Olivier Bell (5 vols., 1977–84), and *A Passionate Apprentice: The Early Journals, 1897–1909*, edited by Mitchell Leaska (1990). See also *The Letters of Virginia Woolf*, edited by Nigel Nicolson and Joanne Trautmann (6 vols., 1975–80).

There are at least a dozen biographies of Woolf. The first, *Virginia Woolf*, was written by her nephew, Quentin Bell, in 1973. The most even-handed and well-researched recent biography is Hermione Lee's monumental *Virginia Woolf* (1996). The flavor of the many "diagnostic" biographical studies can be gleaned from Alma Halbert Bond's *Who Killed Virginia Woolf? A Psychobiography* (1989), the kind of Freudian reading that has given Freudian readings a bad name; Louise de Salvo's *Virginia Woolf: The Impact of Childhood Sexual Abuse on Her Life and Work* (1989); and Mitchell Leaska's *Granite and Rainbow* (1998), which attributes all Woolf's creativity to her repressed relationship with her father.

The history of Woolf criticism mirrors the larger changes in twentieth-century criticism. An invaluable collection of contemporary reviews was published as *Virginia Woolf: The Critical Heritage*, edited by Robin Majumdar and Allen McLaurin (1975), which includes acerbic reviews in the journal *Scrutiny* (the most memorable may be Q. D. Leavis's review of *Three Guineas*). Woolf's canonization as a modernist is perhaps best illustrated by her inclusion in Erich Auerbach's monumental *Mimesis: The Representation of Reality in Western Literature* (1946). Early feminist criticism was often critical of Woolf: Elaine Showalter's *A Literature of Their Own* (1977), despite its title, dismisses Woolf's experience of femininity. But Jane Marcus's edited collections—*New Feminist Essays on Virginia Woolf* (1981) and *Virginia Woolf: A Feminist Slant* (1983)—began revising that picture; and when, in her groundbreaking *Textual/Sexual Politics* (1985), Toril Moi contrasted Anglo-American feminism's desire for realism with French feminism's interest in textuality, she called for a rereading of Woolf's style that has continued to this day. See, particularly, *Virginia Woolf: A Collection of Critical Essays*, edited by Margaret Homans (1993); Ellen Bayuk Rosenman, *A Room of One's Own: Women Writers and the Politics of Creativity* (1995); and Jane Goldman, *The Feminist Aesthetics of Virginia Woolf: Modernism, Post-Impressionism, and the Politics of the Visual* (1998). The emergence of gay and lesbian studies has focused new attention on the relationship between Virginia Woolf and Vita Sackville-West. Suzanne Raitt's *Vita and Virginia* (1993) gives a good over-

view of the relationship of the two writers, whose letters were dramatized in 1994 by Eileen Atkins in her play *Vita and Virginia* (starring Atkins and Vanessa Redgrave). Other valuable studies include Elizabeth Abel, *Virginia Woolf and the Fictions of Psychoanalysis* (1989); Pamela Caughie, *Virginia Woolf and Postmodernism* (1991); Gillian Beer, *Virginia Woolf: The Common Ground* (1996); and Rachel Bowlby, *Feminist Destinations and Further Essays on Virginia Woolf* (1997).

There are also two useful resources for Woolf studies: Edward Bishop's day-to-day chronicle of Woolf's activities, *A Virginia Woolf Chronology* (1989), and Mark Hussey's dictionary of Woolf information, *Virginia Woolf A to Z* (1995). The proceedings of the annual Virginia Woolf conference are published by Pace University Press (1992-). B. J. Kirkpatrick and Stuart N. Clarke compiled *A Bibliography of Virginia Woolf* (1997); a bibliographic update, *The Virginia Woolf Miscellany*, is published by Sonoma State University.

From A Room of One's Own

* * *

[SHAKESPEARE'S SISTER]

Let me imagine, since facts are so hard to come by, what would have happened had Shakespeare had a wonderfully gifted sister, called Judith, let us say. Shakespeare himself went, very probably—his mother was an heiress—to the grammar school, where he may have learnt Latin—Ovid, Virgil and Horace¹—and the elements of grammar and logic. He was, it is well known, a wild boy who poached rabbits, perhaps shot a deer, and had, rather sooner than he should have done, to marry a woman in the neighborhood, who bore him a child rather quicker than was right. That escapade sent him to seek his fortune in London. He had, it seemed, a taste for the theatre; he began by holding horses at the stage door. Very soon he got work in the theatre, became a successful actor, and lived at the hub of the universe, meeting everybody, knowing everybody, practising his art on the boards, exercising his wits in the streets, and even getting access to the palace of the queen. Meanwhile his extraordinarily gifted sister, let us suppose, remained at home. She was as adventurous, as imaginative, as agog to see the world as he was. But she was not sent to school. She had no chance of learning grammar and logic, let alone of reading Horace and Virgil. She picked up a book now and then, one of her brother's perhaps, and read a few pages. But then her parents came in and told her to mend the stockings or mind the stew and not moon about with books and papers. They would have spoken sharply but kindly, for they were substantial people who knew the conditions of life for a woman and loved their daughter—indeed, more likely than not she was the apple of her father's eye. Perhaps she scribbled some pages up in an apple loft on the sly, but was careful to hide them or set fire to them. Soon, however, before she was out of her teens, she was to be betrothed to the son of a neighboring wool-stapler. She cried out that marriage was hateful to her, and for that she was severely beaten by her father. Then he ceased to scold her. He begged her instead not to hurt him, not to shame him in this matter of her marriage. He would give her a chain of beads or a fine

1. The 3 Roman poets—Ovid (43 B.C.E.—17 C.E.), Virgil (70—19 B.C.E.), and HORACE (65—8 B.C.E.)—were standard authors studied by boys in schools from the Renaissance on.

petticoat, he said; and there were tears in his eyes. How could she disobey him? How could she break his heart? The force of her own gift alone drove her to it. She made up a small parcel of her belongings, let herself down by a rope one summer's night and took the road to London. She was not seventeen. The birds that sang in the hedge were not more musical than she was. She had the quickest fancy, a gift like her brother's, for the tune of words. Like him, she had a taste for the theatre. She stood at the stage door; she wanted to act, she said. Men laughed in her face. The manager—a fat, loose-lipped man—guffawed. He bellowed something about poodles dancing and women acting—no woman, he said, could possibly be an actress.² He hinted—you can imagine what. She could get no training in her craft. Could she even seek her dinner in a tavern or roam the streets at midnight? Yet her genius was for fiction and lusted to feed abundantly upon the lives of men and women and the study of their ways. At last—for she was very young, oddly like Shakespeare the poet in her face, with the same grey eyes and rounded brows—at last Nick Greene³ the actor-manager took pity on her; she found herself with child by that gentleman and so—who shall measure the heat and violence of the poet's heart when caught and tangled in a woman's body?—killed herself one winter's night and lies buried at some cross-roads where the omnibuses now stop outside the Elephant and Castle.⁴

That, more or less, is how the story would run, I think, if a woman in Shakespeare's day had had Shakespeare's genius. But for my part, I agree with the deceased bishop,⁵ if such he was—it is unthinkable that any woman in Shakespeare's day should have had Shakespeare's genius. For genius like Shakespeare's is not born among labouring, uneducated, servile people. It was not born in England among the Saxons and the Britons. It is not born today among the working classes. How, then, could it have been born among women whose work began, according to Professor Trevelyan,⁶ almost before they were out of the nursery, who were forced to it by their parents and held to it by all the power of law and custom? Yet genius of a sort must have existed among women as it must have existed among the working classes. Now and again an Emily Brontë or a Robert Burns⁷ blazes out and proves its presence. But certainly it never got itself on to paper. When, however, one reads of a witch being ducked, of a woman possessed by devils, of a wise woman selling herbs, or even of a very remarkable man who had a mother, then I think we are on the track of a lost novelist, a suppressed poet, of some mute and inglorious Jane Austen,⁸ some Emily Brontë who dashed her brains out on the moor or mopped and mowed about the highways crazed with the torture that her gift had put her to. Indeed, I would venture to guess that

2. In the Elizabethan theater, women's roles were played by boys.

3. Possibly modeled on Robert Greene (1558–1592), a dramatist whose 1592 pamphlet contains the first literary reference to Shakespeare (an attack).

4. Suicides were often buried at crossroads to prevent their spirits from returning. The Elephant and Castle was a famous tavern, bombed during World War II, that stood at one of the busiest intersections in London.

5. An "old gentleman" who earlier in the essay is said to have "declared that it was impossible for

any woman past, present, or to come, to have the genius of Shakespeare."

6. George Macaulay Trevelyan (1876–1962), English historian; Woolf has already referred to his *History of England* (1926).

7. Scottish poet (1759–1796). Brontë (1818–1848), English novelist and poet.

8. Probably the most canonical of English women novelists (1775–1817); the phrase "some mute and inglorious Jane Austen" echoes "some mute inglorious Milton," in Thomas Gray's "Elegy Written in a Country Churchyard" (1751).

Anon, who wrote so many poems without signing them, was often a woman. It was a woman Edward Fitzgerald,⁹ I think, suggested who made the ballads and the folk-songs, crooning them to her children, beguiling her spinning with them, or the length of the winter's night.

This may be true or it may be false—who can say?—but what is true in it, so it seemed to me, reviewing the story of Shakespeare's sister as I had made it, is that any woman born with a great gift in the sixteenth century would certainly have gone crazed, shot herself, or ended her days in some lonely cottage outside the village, half witch, half wizard, feared and mocked at. For it needs little skill in psychology to be sure that a highly gifted girl who had tried to use her gift for poetry would have been so thwarted and hindered by other people, so tortured and pulled asunder by her own contrary instincts, that she must have lost her health and sanity to a certainty.

* * *

[CHLOE LIKED OLIVIA]

I am almost sure, I said to myself, that Mary Carmichael¹ is playing a trick on us. For I feel as one feels on a switchback railway when the car, instead of sinking, as one has been led to expect, swerves up again. Mary is tampering with the expected sequence. First she broke the sentence; now she has broken the sequence. Very well, she has every right to do both these things if she does them not for the sake of breaking, but for the sake of creating. Which of the two it is I cannot be sure until she has faced herself with a situation. I will give her every liberty, I said, to choose what that situation shall be; she shall make it of tin cans and old kettles if she likes; but she must convince me that she believes it to be a situation; and then when she has made it she must face it. She must jump. And, determined to do my duty by her as reader if she would do her duty by me as writer, I turned the page and read . . . I am sorry to break off so abruptly. Are there no men present? Do you promise me that behind that red curtain over there the figure of Sir Chartres Biron² is not concealed? We are all women, you assure me? Then I may tell you that the very next words I read were these—"Chloe liked Olivia . . ." Do not start. Do not blush. Let us admit in the privacy of our own society that these things sometimes happen. Sometimes women do like women.

"Chloe liked Olivia," I read. And then it struck me how immense a change was there. Chloe liked Olivia perhaps for the first time in literature. Cleopatra did not like Octavia.³ And how completely *Antony and Cleopatra* would have been altered had she done so! As it is, I thought, letting my mind, I am afraid, wander a little from *Life's Adventure*, the whole thing is simplified, conventionalised, if one dared say it, absurdly. Cleopatra's only feeling about Octavia is one of jealousy. Is she taller than I am? How does she do her hair?

9. English scholar and poet (1809–1883), who anonymously translated *The Rubáiyát of Omar Khayyám* (1859).

1. Woolf's name for a fictitious contemporary author of a novel, *Life's Adventure*, which bears a resemblance to the novel published by Mary Stopes (under the name Mary Carmichael) titled *Love's Creation* (1928).

2. The magistrate presiding over the trial that was to ban Radcliffe Hall's *Well of Loneliness* (1928) for depicting lesbianism.

3. In Shakespeare's *Antony and Cleopatra* (1606–07), Antony loves Cleopatra but marries Octavia to cement a political alliance; Cleopatra interrogates a messenger about Octavia's height, voice, gait, and hair color (3.3).

The play, perhaps, required no more. But how interesting it would have been if the relationship between the two women had been more complicated. All these relationships between women, I thought, rapidly recalling the splendid gallery of fictitious women, are too simple. So much has been left out, unattempted. And I tried to remember any case in the course of my reading where two women are represented as friends. There is an attempt at it in *Diana of the Crossways*.⁴ They are confidantes, of course, in Racine⁵ and the Greek tragedies. They are now and then mothers and daughters. But almost without exception they are shown in their relation to men. It was strange to think that all the great women of fiction were, until Jane Austen's day, not only seen by the other sex, but seen only in relation to the other sex. And how small a part of a woman's life is that; and how little can a man know even of that when he observes it through the black or rosy spectacles which sex puts upon his nose. Hence, perhaps, the peculiar nature of woman in fiction; the astonishing extremes of her beauty and horror; her alternations between heavenly goodness and hellish depravity—for so a lover would see her as his love rose or sank, was prosperous or unhappy. This is not so true of the nineteenth-century novelists, of course. Woman becomes much more various and complicated there. Indeed it was the desire to write about women perhaps that led men by degrees to abandon the poetic drama which, with its violence, could make so little use of them, and to devise the novel as a more fitting receptacle. Even so it remains obvious, even in the writing of Proust,⁶ that a man is terribly hampered and partial in his knowledge of women, as a woman in her knowledge of men.

Also, I continued, looking down at the page again, it is becoming evident that women, like men, have other interests besides the perennial interests of domesticity. "Chloe liked Olivia. They shared a laboratory together. . . ." I read on and discovered that these two young women were engaged in minging liver, which is, it seems, a cure for pernicious anaemia: although one of them was married and had—I think I am right in stating—two small children. Now all that, of course, has had to be left out, and thus the splendid portrait of the fictitious woman is much too simple and much too monotonous. Suppose, for instance, that men were only represented in literature as the lovers of women, and were never the friends of men, soldiers, thinkers, dreamers; how few parts in the plays of Shakespeare could be allotted to them; how literature would suffer! We might perhaps have most of Othello; and a good deal of Antony; but no Caesar, no Brutus, no Hamlet, no Lear, no Jaques⁷—literature would be incredibly impoverished, as indeed literature is impoverished beyond our counting by the doors that have been shut upon women. Married against their will, kept in one room, and to one occupation, how could a dramatist give a full or interesting or truthful account of them? Love was the only possible interpreter. The poet was forced to be passionate or bitter, unless indeed he chose to "hate women," which meant more often than not that he was unattractive to them.

Now if Chloe likes Olivia and they share a laboratory, which of itself will

4. An 1885 novel by George Meredith, who had been a friend of Woolf's father.

5. Jean Racine (1639–1699), French dramatist.

6. Marcel Proust (1871–1922), French novelist, whose multivolume *À la recherche du temps perdu*

(1913–27, *Remembrance of Things Past*) Woolf read with great appreciation.

7. All characters in Shakespeare's plays, from *Othello*, *Antony and Cleopatra*, *Julius Caesar*, *Hamlet*, *King Lear*, and *As You Like It*.

make their friendship more varied and lasting because it will be less personal; if Mary Carmichael knows how to write, and I was beginning to enjoy some quality in her style; if she has a room to herself, of which I am not quite sure; if she has five hundred a year of her own—but that remains to be proved—then I think that something of great importance has happened.

For if Chloe likes Olivia and Mary Carmichael knows how to express it she will light a torch in that vast chamber where nobody has yet been. It is all half lights and profound shadows like those serpentine caves where one goes with a candle peering up and down, not knowing where one is stepping. And I began to read the book again, and read how Chloe watched Olivia put a jar on a shelf and say how it was time to go home to her children. That is a sight that has never been seen since the world began, I exclaimed. And I watched too, very curiously. For I wanted to see how Mary Carmichael set to work to catch those unrecorded gestures, those unsaid or half-said words, which form themselves, no more palpably than the shadows of moths on the ceiling, when women are alone, unlit by the capricious and coloured light of the other sex. She will need to hold her breath, I said, reading on, if she is to do it; for women are so suspicious of any interest that has not some obvious motive behind it, so terribly accustomed to concealment and suppression, that they are off at the flicker of an eye turned observingly in their direction. The only way for you to do it, I thought, addressing Mary Carmichael as if she were there, would be to talk of something else, looking steadily out of the window, and thus note, not with a pencil in a notebook, but in the shortest of shorthand, in words that are hardly syllabled yet, what happens when Olivia—this organism that has been under the shadow of the rock these million years—feels the light fall on it, and sees coming her way a piece of strange food—knowledge, adventure, art. And she reaches out for it; I thought, again raising my eyes from the page, and has to devise some entirely new combination of her resources, so highly developed for other purposes, so as to absorb the new into the old without disturbing the infinitely intricate and elaborate balance of the whole.

* * *

[ANDROGYNY]

But the sight of the two people getting into the taxi and the satisfaction it gave me made me also ask whether there are two sexes in the mind corresponding to the two sexes in the body, and whether they also require to be united in order to get complete satisfaction and happiness. And I went on amateurishly to sketch a plan of the soul so that in each of us two powers preside, one male, one female; and in the man's brain, the man predominates over the woman, and in the woman's brain, the woman predominates over the man. The normal and comfortable state of being is that when the two live in harmony together, spiritually cooperating. If one is a man, still the woman part of the brain must have effect; and a woman also must have intercourse with the man in her. Coleridge⁸ perhaps meant this when he said that a great mind is androgynous. It is when this fusion takes place that the mind is fully fertilised and uses all its faculties. Perhaps a mind that is purely

8. SAMUEL TAYLOR COLERIDGE (1772–1834), English Romantic poet and critic; see *Table Talk*, September 1, 1832.

masculine cannot create, any more than a mind that is purely feminine, I thought. But it would be well to test what one meant by man-womanly, and conversely by woman-manly, by pausing and looking at a book or two.

Coleridge certainly did not mean, when he said that a great mind is androgynous, that it is a mind that has any special sympathy with women; a mind that takes up their cause or devotes itself to their interpretation. Perhaps the androgynous mind is less apt to make these distinctions than the single-sexed mind. He meant, perhaps, that the androgynous mind is resonant and porous; that it transmits emotion without impediment; that it is naturally creative, incandescent and undivided. In fact one goes back to Shakespeare's mind as the type of the androgynous, of the man-womanly mind, though it would be impossible to say what Shakespeare thought of women. And if it were true that it is one of the tokens of the fully developed mind that it does not think specially or separately of sex, how much harder it is to attain that condition now than ever before. Here I came to the books by living writers, and there paused and wondered if this fact were not at the root of something that had long puzzled me. No age can ever have been as stridently sex-conscious as our own; those innumerable books by men about women in the British Museum⁹ are a proof of it. The Suffrage campaign¹ was no doubt to blame. It must have roused in men an extraordinary desire for self-assertion; it must have made them lay an emphasis upon their own sex and its characteristics which they would not have troubled to think about had they not been challenged. And when one is challenged, even by a few women in black bonnets, one retaliates, if one has never been challenged before, rather excessively. That perhaps accounts for some of the characteristics that I remember to have found here, I thought, taking down a new novel by Mr. A, who is in the prime of life and very well thought of; apparently, by the reviewers. I opened it. Indeed, it was delightful to read a man's writing again. It was so direct, so straightforward after the writing of women. It indicated such freedom of mind, such liberty of person, such confidence in himself. One had a sense of physical well-being in the presence of this well-nourished, well-educated, free mind, which had never been thwarted or opposed, but had had full liberty from birth to stretch itself in whatever way it liked. All this was admirable. But after reading a chapter or two a shadow seemed to lie across the page. It was a straight dark bar, a shadow shaped something like the letter "I." One began dodging this way and that to catch a glimpse of the landscape behind it. Whether that was indeed a tree or a woman walking² I was not quite sure. Back one was always hailed to the letter "I." One began to be tired of "I." Not but what this "I" was a most respectable "I"; honest and logical; as hard as a nut, and polished for centuries by good teaching and good feeding. I respect and admire that "I" from the bottom of my heart. But—here I turned a page or two, looking for something or other—the worst of it is that in the shadow of the letter "I" all is shapeless as mist. Is that a tree? No, it is a woman. But . . . she has not a bone in her body, I thought, watching Phoebe, for that was her name, coming across the beach. Then Alan got up and the shadow of Alan at once obliterated Phoebe. For Alan had views and Phoebe was quenched in the flood of his views. And

9. That is, in the Reading Room of the British Museum (in Bloomsbury), where Woolf did her research.

1. The movement to obtain the vote for women

succeeded in England in 1918.

2. Possibly an allusion to Mark 8.24: "I see men as trees, walking."

then Alan, I thought, has passions; and here I turned page after page very fast, feeling that the crisis was approaching, and so it was. It took place on the beach under the sun. It was done very openly. It was done very vigorously. Nothing could have been more indecent. But . . . I had said "but" too often.³ One cannot go on saying "but." One must finish the sentence somehow, I rebuked myself. Shall I finish it, "But—I am bored!" But why was I bored? Partly because of the dominance of the letter "I" and the aridity, which, like the giant beech tree, it casts within its shade. Nothing will grow there. And partly for some more obscure reason. There seemed to be some obstacle, some impediment of Mr. A's mind which blocked the fountain of creative energy and shored it within narrow limits. And remembering the lunch party at Oxbridge, and the cigarette ash and the Manx cat and Tennyson and Christina Rossetti⁴ all in a bunch, it seemed possible that the impediment lay there. As he no longer hums under his breath, "There has fallen a splendid tear from the passion-flower at the gate," when Phoebe crosses the beach, and she no longer replies, "My heart is like a singing bird whose nest is in a water'd shoot," when Alan approaches what can he do? Being honest as the day and logical as the sun, there is only one thing he can do. And that he does, to do him justice, over and over (I said, turning the pages) and over again. And that, I added, aware of the awful nature of the confession, seems somehow dull. Shakespeare's indecency uproots a thousand other things in one's mind, and is far from being dull. But Shakespeare does it for pleasure; Mr. A, as the nurses say, does it on purpose. He does it in protest. He is protesting against the equality of the other sex by asserting his own superiority. He is therefore impeded and inhibited and self-conscious as Shakespeare might have been if he too had known Miss Clough and Miss Davies.⁵ Doubtless Elizabethan literature would have been very different from what it is if the woman's movement had begun in the sixteenth century and not in the nineteenth.

What, then, it amounts to, if this theory of the two sides of the mind holds good, is that virility has now become self-conscious—men, that is to say, are now writing only with the male side of their brains. It is a mistake for a woman to read them, for she will inevitably look for something that she will not find. It is the power of suggestion that one most misses, I thought, taking Mr. B the critic in my hand and reading, very carefully and very dutifully, his remarks upon the art of poetry. Very able they were, acute and full of learning; but the trouble was, that his feelings no longer communicated; his mind seemed separated into different chambers; not a sound carried from one to the other. Thus, when one takes a sentence of Mr. B into the mind it falls plump to the ground—dead; but when one takes a sentence of Coleridge into the mind, it explodes and gives birth to all kinds of other ideas, and that is the only sort of writing of which one can say that it has the secret of perpetual life.

But whatever the reason may be, it is a fact that one must deplore. For it

3. The first word of *A Room of One's Own* is "But."

4. In the book's first chapter, Woolf discusses the missing tails of Manx cats along with the poems (quoted here) "Maud" (1855) by Alfred, Lord Tennyson (1809–1892), and "A Birthday" (1862), by Christina Rossetti (1830–1894), which represent what men and women, respectively, hummed at garden parties before the war. "Oxbridge": an invented place, blending Oxford and Cambridge

Universities.

5. Anne Jemima Clough (1820–1892) and Emily Davies (1830–1921), leaders in the movement to promote women's education. Clough was the first principal of Newnham Hall, the first institution for women at Cambridge University; Davies helped found and was the first mistress of Girton College, the second such institution at Cambridge.

means—here I had come to rows of books by Mr. Galsworthy and Mr. Kipling⁶—that some of the finest works of our greatest living writers fall upon deaf ears. Do what she will a woman cannot find in them that fountain of perpetual life which the critics assure her is there. It is not only that they celebrate male virtues, enforce male values and describe the world of men; it is that the emotion with which these books are permeated is to a woman incomprehensible. It is coming, it is gathering, it is about to burst on one's head, one begins saying long before the end. That picture will fall on old Jolyon's head; he will die of the shock; the old clerk will speak over him two or three obituary words; and all the swans on the Thames will simultaneously burst out singing. But one will rush away before that happens and hide in the gooseberry bushes, for the emotion which is so deep, so subtle, so symbolic to a man moves a woman to wonder. So with Mr. Kipling's officers who turn their backs; and his Sowers who sow the Seed; and his Men who are alone with their Works; and the Flag—one blushes at all these capital letters as if one had been caught eavesdropping at some purely masculine orgy. The fact is that neither Mr. Galsworthy nor Mr. Kipling has a spark of the woman in him. Thus all their qualities seem to a woman, if one may generalise, crude and immature. They lack suggestive power. And when a book lacks suggestive power, however hard it hits the surface of the mind it cannot penetrate within.

And in that restless mood in which one takes books out and puts them back again without looking at them I began to envisage an age to come of pure, of self-assertive virility, such as the letters of professors (take Sir Walter Raleigh's letters, for instance) seem to forebode; and the rulers of Italy have already brought into being. For one can hardly fail to be impressed in Rome by the sense of unmitigated masculinity; and whatever the value of unmitigated masculinity upon the state, one may question the effect of it upon the art of poetry. At any rate, according to the newspapers, there is a certain anxiety about fiction in Italy. There has been a meeting of academicians whose object it is "to develop the Italian novel." "Men famous by birth, or in finance, industry or the Fascist corporations" came together the other day and discussed the matter, and a telegram was sent to the Duce⁸ expressing the hope "that the Fascist era would soon give birth to a poet worthy of it." We may all join in that pious hope, but it is doubtful whether poetry can come out of an incubator. Poetry ought to have a mother as well as a father. The Fascist poem, one may fear, will be a horrid little abortion such as one sees in a glass jar in the museum of some county town. Such monsters never live long, it is said; one has never seen a prodigy of that sort cropping grass in a field. Two heads on one body do not make for length of life.

However, the blame for all this, if one is anxious to lay blame, rests no more upon one sex than upon the other. All seducers and reformers are responsible, Lady Bessborough when she lied to Lord Granville; Miss Davies when she told the truth to Mr. Greg.⁹ All who have brought about a state of

6. Rudyard Kipling (1865–1936), English poet and novelist. John Galsworthy (1867–1933), English novelist and playwright. Jolyon is a character in his *Forsyte Saga* (1906–22).

7. English essayist and critic (1861–1922), the first professor of English Literature at Oxford; his letters were published in 1926.

8. Benito Mussolini (1883–1945), Italian dictator.

9. Probably the English essayist William Rathbone Greg (1809–1891), who in a text of 1862 asked, "Why Are Women Redundant?" Lady Bessborough (1761–1821) is Henrietta, countess of Bessborough, the lover of Lord Granville Leveson-Gower (1773–1846).

sex-consciousness are to blame, and it is they who drive me, when I want to stretch my faculties on a book, to seek it in that happy age, before Miss Davies and Miss Clough were born, when the writer used both sides of his mind equally. One must turn back to Shakespeare then, for Shakespeare was androgynous; and so was Keats and Sterne and Cowper and Lamb and Coleridge. Shelley perhaps was sexless. Milton and Ben Jonson had a dash too much of the male in them. So had Wordsworth and Tolstoi.¹ In our time Proust was wholly androgynous, if not perhaps a little too much of a woman. But that failing is too rare for one to complain of it, since without some mixture of the kind the intellect seems to predominate and the other faculties of the mind harden and become barren. However, I consoled myself with the reflection that this is perhaps a passing phase; much of what I have said in obedience to my promise to give you the course of my thoughts will seem out of date; much of what flames in my eyes will seem dubious to you who have not yet come of age.

Even so, the very first sentence that I would write here, I said, crossing over to the writing-table and taking up the page headed *Women and Fiction*, is that it is fatal for any one who writes to think of their sex. It is fatal to be a man or woman pure and simple; one must be woman-manly or man-womanly. It is fatal for a woman to lay the least stress on any grievance; to plead even with justice any cause; in any way to speak consciously as a woman. And fatal is no figure of speech; for anything written with that conscious bias is doomed to death. It ceases to be fertilised. Brilliant and effective, powerful and masterly, as it may appear for a day or two, it must wither at nightfall; it cannot grow in the minds of others. Some collaboration has to take place in the mind between the woman and the man before the act of creation can be accomplished. Some marriage of opposites has to be consummated. The whole of the mind must lie wide open if we are to get the sense that the writer is communicating his experience with perfect fullness. There must be freedom and there must be peace. Not a wheel must grate, not a light glimmer. The curtains must be close drawn. The writer, I thought, once his experience is over, must lie back and let his mind celebrate its nuptials in darkness. He must not look or question what is being done. Rather, he must pluck the petals from a rose or watch the swan's float calmly down the river. And I saw again the current which took the boat and the undergraduate and the dead leaves; and the taxi took the man and the woman,² I thought, seeing them come together across the street, and the current swept them away, I thought, hearing far off the roar of London's traffic, into that tremendous stream.

1929

1. All canonical authors, in varying degrees: John Keats (1795-1821), English poet; Laurence Sterne (1713-1768), English novelist; William Cowper (1731-1800), English poet; Charles Lamb (1775-1834), English essayist and critic; PERCY BYSSHE SHELLEY (1792-1822), English poet; John

Milton (1608-1674), English poet; Ben Jonson (1572-1637), English poet and playwright; WILLIAM WORDSWORTH (1770-1850), English poet; and Leo Tolstoy (1828-1910), Russian novelist and moral philosopher.

2. Scenes described earlier in the book.

GYÖRGY LUKÁCS

1885–1971

The Marxist philosopher and aesthetician György Lukács played a fundamental role in the early development of Marxist literary and cultural theory. His original analysis of the commodity form in *History and Class Consciousness* (1923) continues to influence Marxist cultural theory, especially in the wide-ranging work of FREDRIC JAMESON. In the area of aesthetics, Lukács remains influential as well, not only because of his sophisticated historical approach to literature, best exemplified in *The Historical Novel* (1937), but also because of his participation in the so-called realism debate of the 1930s, which involved such Marxist luminaries as THEODOR ADORNO, WALTER BENJAMIN, and Bertolt Brecht. On the controversial question of representation in literature, Lukács was a staunch advocate of the realist position. He opposed the experimental aesthetics of high modernism, arguing that its obscure and fragmentary literary forms were symptomatic of the alienation characteristic of life under capitalism. For Lukács, realist literature was a salutary corrective to the disorienting conditions of modernity: at its best it presented an expansive picture (the concrete totality) of society, including the historical forces shaping it. Lukács contended that if realist literature were reenergized in the modern world, it would not only counter the decadence of bourgeois modernist experimentation but also "play the leading part, hitherto always denied it, in the democratic rebirth of nations." To this political and aesthetic cause, Lukács devoted much of his professional life, securing his reputation as realism's most passionate defender in the mid-twentieth century.

Born to an affluent Jewish family in Budapest, György Lukács displayed at an early age a repugnance for his parents' middle-class values. His father, József Lowinger, was the director of the Hungarian General Credit Bank, a leading financial institution of Austria-Hungary; Lowinger changed his last name to Lukács in 1890 to reflect his assimilation to Hungarian culture. Lukács's mother, Adél Wertheimer, derived her ancestry from one of the oldest and wealthiest Jewish families in Eastern Europe. In his youth Lukács embraced the fin de siècle attitudes inspired by the nineteenth-century writers Søren Kierkegaard, FRIEDRICH NIETZSCHE, and Fyodor Dostoyevski, among others. His intellectual interests eventually took him to Germany, where he studied under the sociologists Georg Simmel and Max Weber. Characterized by an anguished Romanticism, this initial phase of Lukács's career is reflected in his two early works, *Soul and Form* (1911) and *The Theory of the Novel* (1916), both published in German under the German version of his name, Georg Lukács. With its typology of forms indebted to G. W. F. HEGEL, the latter work became influential in large part because it interestingly historicized the novel; but Lukács later renounced it for developing a bleak view of the novel as fragmentary and ironic.

The barbarism of World War I, the promise of the Russian Revolution of 1917, and the subsequent demise of the Austro-Hungarian Empire precipitated Lukács's conversion to Marxism in 1918. He was a deeply committed communist, but he often ran into trouble with the Communist Party. He found his *History and Class Consciousness*, for example, censured by the Comintern Congress in Moscow. In this crucial work, which later became an important text for the student uprisings of the 1960s, Lukács addressed the widespread sense of fragmentation and alienation under capitalism, out of which emerged his conception of "reification"—the sense of objectification experienced by individuals who are subordinated to the rationalizing processes of commodity production and reduced to the status of things. He achieved an original synthesis of MARX's theory of commodity fetishism, Weber's concept of rationalization, and Hegel's philosophy of the dialectic. However, the Comintern objected to the unorthodox Hegelian (idealist) emphasis on the consciousness of the proletar-

iat, thus setting the stage for Lukács's "autocriticisms," or public recantations of his own published writings.

From the 1930s onward, Lukács directed considerable effort toward the construction and defense of a Marxist realist aesthetic conceived in materialist terms and opposed to the idealist tradition from FRIEDRICH VON SCHILLER (1759–1805) to Arthur Schopenhauer (1788–1860). However, during Joseph Stalin's consolidation of power in the 1930s and up to the "thaw" of the 1950s, Lukács sometimes employed a coded language to express his unorthodox opinions on realism, because the theory and practice of literature in the Soviet Union had been increasingly regulated by the policy of Proletkult, the Bolshevik Party Central Committee, and the All Russian Association of Proletarian Writers (RAPP)—all of which endorsed the view that writers must serve the interests of the party. The result was a growing intolerance that prompted the exile of such figures as the revolutionary and cultural theorist LEON TROTSKY and the noted Russian formalist ROMAN JAKOBSON. Intellectual constraints were also imposed on BORIS EICHENBAUM, another formalist. At issue was the theory of "socialist realism," which was devised by Maxim Gorky in consultation with Stalin, promulgated by A. A. Zhdanov, and sanctioned by the Congress of Soviet Writers in 1934. In theory, socialist realism insisted that realistic novels must be overtly didactic, serving the interests of socialism and the working class. Trotsky thought such a definition of realism was too narrow, and Lukács himself would have nothing to do with it because he opposed overt didacticism and admired such European novelists as Walter Scott (1771–1832), Honoré de Balzac (1799–1850), and Thomas Mann (1875–1955), classifying them as "critical realists." After Stalin's death in 1953, Lukács was able to work more openly, summing up his views in *Die Eigenart des Ästhetischen* (1963, *The Specificity of the Aesthetic*).

Published originally in the German literary journal *Das Wort* (*The Word*), Lukács's "Realism in the Balance" (1938), our selection, is a classic Marxist essay from the realism debate that critiques German expressionism in particular and modernism in general, promoting instead realist literature. As its introduction indicates, the essay is a response to the major Marxist philosopher Ernst Bloch's defense of expressionism in "Discussing Realism" (1938). Lukács faults expressionism for being content merely to depict immediate sense impressions and fragmentary subjective states, as demonstrated by its practitioners' preference for montage. In "juxtaposing heterogeneous, unrelated pieces of reality torn from their context," expressionism attends only to the uncomprehended surfaces and appearances of things, producing opaque, chaotic, and random works. It thus abandons the goal of mirroring objective reality and its underlying socioeconomic laws, becoming instead a passive depiction of the alienation of people under capitalism. More important, by universalizing alienation (rather than seeing it as an effect of capitalism), the movement provides no basis for progressive politics. Looking at expressionism from the perspective of late 1930s politics, Lukács associated it with the undermining of the socialist revolution in Germany after World War I and the rise of fascism just before World War II.

Modern progressive art, Lukács explains, should not further alienate an already alienated audience: it should work toward revealing the underlying objective totality of the economic system responsible for reducing human beings to things. Realist literature performs just such a task. Demonstrating, like Marx, that the "relations of production of every society form a whole," great realist literature represents reality as it is—namely, as a totality, Lukács's key concept. At its best, the realist novel reflects the totality of social relationships by creating "types" or representative characters. Rather than abandoning plot for a chaotic montage or a disconnected stream of consciousness, it devises prophetic narratives that reveal the historical "tendencies" of development within society. Lukács thus argues that realism and not modernism constitutes the true avant-garde: an avant-garde not of self-identified leaders but of works whose portrayals anticipate where social developments are headed.

For Lukács, realism is distinguished from expressionism and other modernist artistic movements such as symbolism and surrealism, all of which regressively emphasize subjectivity, alienation, and fragmentation. He also distinguishes realism from other ostensibly realistic movements such as naturalism and impressionism, both of which focus on immediate and random sense perceptions. In his opinion, the entire historical progression of literary periods—naturalism, impressionism, symbolism, expressionism, and surrealism—marks an increasing dissolution of the objectivity of classic early-nineteenth-century realism, as represented most notably by Balzac's fiction, which occupies the opposite end of the spectrum from James Joyce's decadent modernist fiction. (The historical basis for this undermining of classic realism is fully developed in Lukács's *Historical Novel*.) Lukács's great hope is that twentieth-century realists like Thomas Mann can stem the tide of this reactionary process by providing the basis for a truly accessible "popular" literature attuned to objectivity and adaptable to leftist political coalitions and popular fronts.

Lukács's advocacy of realism came under immediate and persistent criticism. Perhaps best known is that of Bertolt Brecht, who accuses Lukács of inadvertently lapsing into formalism by privileging the form of an outdated nineteenth-century genre above all others. More severe are the criticisms directed at Lukács's central conceptions of totality and typicality. With the advent of postmodernism, totalizing theories in general have come under attack; for instance, the leading philosopher of the postmodern, JEAN-FRANÇOIS LYOTARD, famously urged his readers to "wage a war on totality" and to critique "grand narratives" that purport to explain everything. In spite of all this, Lukács's work has made important contributions to contemporary debates; his influence is clear in the roles that reification, realism, and periodization play in the work of Fredric Jameson, the most important American theorist of postmodernism.

BIBLIOGRAPHY

The standard edition of Lukács's writings is the German *Georg Lukács Werke* (17 vols., 1926–86). A number of scholarly edited texts are also available in Hungarian. English translations to date are *Soul and Form* (1910; trans. 1974), *The Theory of the Novel* (1916, trans. 1971), *History and Class Consciousness* (1923; trans. 1971), *Lenin: A Study on the Unity of His Thought* (1924; trans. 1971), *The Historical Novel* (1937; trans. 1962), *Studies in European Realism: A Sociological Survey of the Writings of Balzac, Stendhal, Zola, Tolstoy, Gorki, and Others* (1945; trans. 1950), *Goethe and His Age* (1947; trans. 1978), *Essays on Thomas Mann* (1947; trans. 1965), *The Young Hegel: Studies in the Relations between Dialectics and Economics* (1948; trans. 1976), *Essays on Realism* (1948; trans. 1981), *German Realists in the Nineteenth Century* (1951; trans. 1993), *The Destruction of Reason* (1954; trans. 1981), *The Meaning of Contemporary Realism* (1958; trans. 1963), *Conversations with Lukács* (1967; trans. 1975), *Tactics and Ethics: Political Writings, 1919–1929* (1968; trans. 1972), *Solzhenitsyn* (1969; trans. 1971), *Writer and Critic and Other Essays* (trans. 1970), *The Ontology of Social Being* (2 vols., 1976; trans. 1978), *Record of a Life: An Autobiographical Sketch* (1981; trans. 1983), *The Process of Democratization* (trans. 1991), and *In Defense of History and Class Consciousness* (trans. 1999). A sampling of essays is available in *The Lukács Reader*, edited by Arpad Kadarkay (1995). For a detailed biography, see Kadarkay's *Georg Lukács: Life, Thought, and Politics* (1991).

For critical responses to Lukács's involvement in the realism debate, see the essays by Theodor Adorno, Walter Benjamin, Bertolt Brecht, and Ernst Bloch in the oft-cited *Aesthetics and Politics*, edited by the *New Left Review* (1977). Also helpful in this regard is Eugene Lunn's *Marxism and Modernism: An Historical Study of Lukács, Brecht, Benjamin, and Adorno* (1982). On Lukács's theory of the novel, see Lucien Goldmann, *Towards a Sociology of the Novel* (1964; trans. 1975), and J. M. Bernstein, *The Philosophy of the Novel: Lukács, Marxism, and the Dialectic of Form* (1984). Fredric Jameson's most developed account of Lukács's work appears in his *Marxism*

and Form (1971). Béla Királyfalvi's *Aesthetics of György Lukács* (1975) offers a systematic examination of Lukács's aesthetic theories, while Terry Eagleton's introductory *Marxism and Literary Criticism* (1976) and his *Ideology of the Aesthetic* (1990) present some suggestive critical remarks on Lukács. Andrew Arato and Paul Breines's *The Young Lukács and the Origins of Western Marxism* (1979) and Martin Jay's *Marxism and Totality: The Adventures of a Concept from Lukács to Habermas* (1984) situate Lukács's work within the tradition of Western Marxism. For a survey of contemporary Marxist critics' assessments of Lukács, see the interviews gathered in *Lukács After Communism*, edited by Eva L. Corredor (1997). Bibliographies of Lukács's writing and criticism of it can be found in Peter Murphy's *Writings by and about Georg Lukács: A Bibliography* (1976), François Lapointe's *Georg Lukács and His Critics (1910–1982)* (1983), and Kadarkey's reader and biography mentioned above.

Realism in the Balance¹

In its day the revolutionary bourgeoisie conducted a violent struggle in the interests of its own class; it made use of every means at its disposal, including those of imaginative literature. What was it that made the vestiges of chivalry the object of universal ridicule? Cervantes' *Don Quixote*.² Don Quixote was the most powerful weapon in the arsenal of the bourgeoisie in its war against feudalism and aristocracy. The revolutionary proletariat could do with at least one little Cervantes (*laughier*) to arm it with a similar weapon. (Laughter and applause.)

Georgi Dimitrov,³ Speech given during an anti-Fascist evening in the Writers' Club in Moscow.

Anyone intervening at this late stage in the debate on Expressionism in *Das Wort* finds himself faced with certain difficulties.⁴ Many voices have been raised in passionate defence of Expressionism. But as soon as we reach the point when it becomes imperative to specify *whom* we are to regard as the exemplary Expressionist writer, or even to include in the category of Expressionism; we find that opinions diverge so sharply that no single name can count on general agreement. One sometimes has the feeling, particularly when reading the most impassioned apologies, that perhaps there was no such thing as an Expressionist writer.

Since our present dispute is concerned not with the evaluation of individual writers but with general literary principles, it is not of paramount importance for us to resolve this problem. Literary history undoubtedly recognizes a trend known as Expressionism, a trend with its poets and its critics. In the discussion which follows I shall confine myself to questions of principle.

1. Translated by Rodney Livingstone; he occasionally inserts the original German words in brackets.

2. Novel (1605, 1615) by Miguel de Cervantes (1547–1616).

3. Bulgarian Communist leader (1882–1949).

4. Inspired by Lukács's earlier essay "Expressionism: Its Significance and Decline" (1934), the debate on expressionism in the literary journal *Das Wort* (*The Word*) began in 1937 with an attack on the expressionist poet Gottfried Benn (1886–1956) by the German writer Alfred Kurella (1895–1975), who, following Lukács, argued that the sub-

jective experimental art forms of expressionism were not only irrational but responsible for the rise of fascism in Germany. There followed a series of rejoinders by supporters of expressionism, including Herwarth Walden (1878–1941), editor of a key expressionist journal; Bela Balazs (1884–1949); Gustav von Wangenheim (1895–1975); and, most notably, the German Marxist philosopher Ernst Bloch (1885–1977), whose essay "Discussing Expressionism" (1938) prompted Lukács to write "Realism In the Balance."

1.

First, a preliminary question about the nature of the central issue: is it really a conflict between modern and classical (or even neo-classical) literature, as has been implied by a number of writers who have concentrated their attack on my critical activities? I submit that this way of posing the question is fundamentally wrong. Its implicit assumption is that modern art is identical with the development of specific literary trends leading from Naturalism and Impressionism via Expressionism to Surrealism. In the article by Ernst Bloch and Hanns Eisler in the *Neue Weltbühne*, to which Peter Fischer refers,⁵ this theory is formulated in a particularly explicit and apodictic way. When these writers talk of modern art, its representative figures are taken *exclusively* from the ranks of the movements just referred to.

Let us not pass judgement at this stage. Let us rather enquire: can this theory provide an adequate foundation for the history of literature in our age?

At the very least, it must be pointed out that a quite different view is tenable. The development of literature, particularly in capitalist society, and particularly at capitalism's moment of crisis, is extraordinarily complex. Nevertheless, to offer a crude over-simplification, we may still distinguish three main currents in the literature of our age; these currents are not of course entirely distinct but often overlap in the development of individual writers:

1) Openly anti-realist or pseudo-realist literature which is concerned to provide an apologia for, and a defence of, the existing system. Of this group we shall say nothing here.

2) So-called avant-garde literature (we shall come to authentic modern literature in due course) from Naturalism to Surrealism. What is its general thrust? We may briefly anticipate our findings here by saying that its main trend is its growing distance from, and progressive dissolution of, realism.

3) The literature of the major realists of the day. For the most part these writers do not belong to any literary set; they are swimming against the mainstream of literary development, in fact, against the two currents noted above. As a general pointer to the complexion of this contemporary form of realism, we need only mention the names of Gorky, Thomas and Heinrich Mann and Romain Rolland.⁶

In the articles which leap so passionately to the defence of the rights of modern art against the presumptuous claims of the so-called neo-classicists, these leading figures of contemporary literature are not even mentioned. They simply do not exist in the eyes of modernist literature and its chroniclers. In Ernst Bloch's interesting work *Erbschaft dieser Zeit*,⁷ a book rich both in information and in ideas, the name of Thomas Mann occurs only once, unless my memory deceives me; the author refers to Mann's (and Wassermann's⁸) 'bourgeois refinement' [*soignierte Bürgerlichkeit*] and with that he dismisses the matter.

5. E. Bloch and H. Eisler, "Die Kunst zu erben," in *Die Neue Weltbühne*, 1938 [Lukács's note]. Eisler (1898-1962), German composer. Ernst Peter Fischer (1899-1972), German poet, philosopher, and aesthetician.

6. French novelist, playwright, and scholar (1866-1944). Maxim Gorky or Gorky (pseudonym of Aleksey Peshkov, 1868-1936), Russian author, con-

sidered the founder of Soviet socialist realism. Thomas Mann (1875-1955), German novelist and Nobel laureate for literature in 1929. Heinrich Mann (1871-1950), German novelist, brother of Thomas.

7. *Heritage of Our Times* (1934).

8. Jakob Wassermann (1873-1934), German novelist.

Views such as these turn the entire discussion on its head. It is high time to put it back on its feet and take up cudgels on behalf of the best modern literature, against its ignorant detractors. So the terms of the debate are not classics versus modernists; discussion must focus instead on the question: which are the progressive trends in the literature of today? It is the fate of realism that hangs in the balance.

2.

One of Ernst Bloch's criticisms of my old essay on Expressionism⁹ is that I devoted too much attention to the theoreticians of the movement. Perhaps he will forgive me if I repeat this 'mistake' here and this time make his critical remarks on modern literature the focal point of my analysis. For I do not accept the view that the theoretical descriptions of artistic movements are unimportant—even when they make statements that are theoretically false. It is at such moments that they let the cat out of the bag and reveal the otherwise carefully concealed 'secrets' of the movement. Since, as a theoretician, Bloch is of quite a different stature than Picard and Pinthus¹ were in their day, it is not unreasonable for me to examine his theories in somewhat greater depth.

Bloch directs his attack at my view of 'totality'. (We may leave out of account the extent to which he interprets my position correctly. What is at issue is not whether I am right or whether he has understood me correctly, but the actual problem under discussion.) The principle to be refuted, he believes, is 'the undiluted objective realism which characterized Classicism'. According to Bloch my thought is premised throughout 'on the idea of a closed and integrated reality . . . Whether such a totality in fact constitutes reality is open to question. If it is, then Expressionist experiments with disruptive and interpolative techniques are but an empty *jeu d'esprit*, as are the more recent experiments with montage and other devices making for discontinuity.'

Bloch regards my insistence on a unified reality as a mere hangover from the systems of classical idealism, and he goes on to formulate his own position as follows: 'What if authentic reality is also discontinuity? Since Lukács operates with a closed, objectivistic conception of reality, when he comes to examine Expressionism, he resolutely sets his face against any attempt on the part of artists to shatter any image of the world, even that of capitalism. Any art which strives to exploit the real fissures in surface inter-relations and to discover the new in their crevices, appears in his eyes merely as a wilful act of destruction. He thereby equates experiments in demolition with a condition of decadence.'

Here we have a coherent theoretical justification of the development of modern art, one which goes right to the heart of the ideological issues at stake. Bloch is absolutely right: a fundamental theoretical discussion of these questions 'would raise all the problems of the dialectical-materialist theory of reflection [*Abbildlehre*].' Needless to say, we cannot embark on such a discussion here, although I personally would greatly welcome the opportu-

9. "Expressionism: Its Significance and Decline" (1934).

1. Kurt Pinthus (1886-1975), German critic, known for editing *Menschheitsdämmerung* (1920,

Dawn of Humanity), an influential anthology of expressionist poetry. Jacob Picard (1883-1967), German expressionist poet.

nity to do so. In the present debate we are concerned with a much simpler question, namely, does the 'closed integration', the 'totality' of the capitalist system, of bourgeois society, with its unity of economics and ideology, really form an objective whole, independent of consciousness?

Among Marxists—and in his latest book Bloch has stoutly proclaimed his commitment to Marxism—there should be no dispute on this point. Marx² says: 'The relations of production of every society form a whole.' We must underscore the word 'every' here, since Bloch's position essentially denies that this 'totality' applies to the capitalism of our age. So although the difference between our views seems to be immediate, formal and non-philosophical, one which revolves instead round a disagreement about the socio-economic interpretation of capitalism, nevertheless, since philosophy is a mental reflection of reality, important philosophical disagreements must be implicit in it.

It goes without saying that our quotation from Marx has to be understood historically—in other words, economic reality as a totality is itself subject to historical change. But these changes consist largely in the way in which all the various aspects of the economy are expanded and intensified, so that the 'totality' becomes ever more closely-knit and substantial. After all, according to Marx, the decisive progressive role of the bourgeoisie in history is to develop the world market, thanks to which the economy of the whole world becomes an objectively unified totality. Primitive economies create the superficial appearance of great unity; primitive-communist villages or towns in the early Middle Ages are obvious examples. But in such a 'unity' the economic unit is linked to its environment, and to human society as a whole, only by a very few threads. Under capitalism, on the other hand, the different strands of the economy achieve a quite unprecedented autonomy, as we can see from the examples of trade and money—an autonomy so extensive that financial crises can arise directly from the circulation of money. As a result of the objective structure of this economic system, the surface of capitalism appears to 'disintegrate' into a series of elements all driven towards independence. Obviously this must be reflected in the consciousness of the men who live in this society, and hence too in the consciousness of poets and thinkers.

Consequently the movement of its individual components towards autonomy is an objective fact of the capitalist economic system. Nevertheless this autonomy constitutes only one part of the overall process: The underlying unity, the totality, all of whose parts are objectively interrelated, manifests itself most strikingly in the fact of crisis. Marx gives the following analysis of the process in which the constituent elements necessarily achieve independence: 'Since they do in fact belong together, the process by means of which the complementary parts become independent must inevitably appear violent and destructive. The phenomenon in which their unity, the unity of discrete objects, makes itself felt, is the phenomenon of crisis. The independence assumed by processes which belong together and complement each other is violently destroyed. The crisis thus makes manifest the unity of processes which had become individually independent.'³

These, then, are the fundamental objective components of the 'totality' of

2. KARL MARX (1818–1883), German revolutionary, economist, and philosopher.

3. See *Capital*, vol. 1, p. 209, London 1976 (Penguin/NLR edition) [translator's note].

capitalist society. Every Marxist knows that the basic economic categories of capitalism are always reflected in the minds of men, directly, but always back to front. Applied to our present argument this means that in periods when capitalism functions in a so-called normal manner, and its various processes appear autonomous, people living within capitalist society think and experience it as unitary, whereas in periods of crisis, when the autonomous elements are drawn together into unity, they experience it as disintegration. With the general crisis of the capitalist system, the experience of disintegration becomes firmly entrenched over long periods of time in broad sectors of the population which normally experience the various manifestations of capitalism in a very immediate way.

3.

What has all this to do with literature?

Nothing at all for any theory—like those of Expressionism or Surrealism—which denies that literature has any reference to objective reality. It means a great deal, however, for a Marxist theory of literature. If literature is a particular form by means of which objective reality is reflected, then it becomes of crucial importance for it to grasp that reality as it truly is, and not merely to confine itself to reproducing whatever manifests itself immediately and on the surface. If a writer strives to represent reality as it truly is, i.e. if he is an authentic realist, then the question of totality plays a decisive role, no matter how the writer actually conceives the problem intellectually. Lenin repeatedly insisted on the practical importance of the category of totality: 'In order to know an object thoroughly, it is essential to discover and comprehend all of its aspects, its relationships and its "mediations". We shall never achieve this fully, but *insistence on all-round knowledge* will protect us from errors and inflexibility.'⁴

The literary practice of every true realist demonstrates the importance of the overall objective social context and the 'insistence on all-round knowledge' required to do it justice. The profundity of the great realist, the extent and the endurance of his success, depends in great measure on how clearly he perceives—as a creative writer—the true significance of whatever phenomenon he depicts. This will not prevent him from recognizing, as Bloch imagines, that the surface of social reality may exhibit 'subversive tendencies', which are correspondingly reflected in the minds of men. The motto to my old essay on Expressionism underscores the fact that I was anything but unaware of this factor. That motto, a quotation from Lenin, begins with these words: 'The inessential, the apparent, the surface phenomenon, vanishes more frequently, is less "solid", less "firm" than the "essence".'⁵

However, what is at issue here above all is not the mere recognition that such a factor actually exists in the context of the totality. It is even more important to see it as a factor in this totality, and not magnify it into the sole emotional and intellectual reality. So the crux of the matter is to understand the correct dialectical unity of appearance and essence. What matters is that

the slice of life shaped and depicted by the artist and re-experienced by the reader should reveal the relations between appearance and essence without the need for any external commentary. We emphasize the importance of shaping [*gestalten*] this relation, because, unlike Bloch, we do not regard the practice of left-wing Surrealists as an acceptable solution to the problem. We reject their method of 'inserting' [*Einmontierung*] these into scraps of reality with which they have no organic connection.

By way of illustration, just compare the 'bourgeois refinement' of Thomas Mann with the Surrealism of Joyce.⁶ In the minds of the heroes of both writers we find a vivid evocation of the disintegration, the discontinuities, the ruptures and the 'crevices' which Bloch very rightly thinks typical of the state of mind of many people living in the age of imperialism. Bloch's mistake lies merely in the fact that he identifies this state of mind directly and unreservedly with reality itself. He equates the highly distorted image created in this state of mind with the thing itself, instead of objectively unravelling the essence, the origins and the mediations of the distortion by comparing it with reality.

In this way Bloch does as a theorist exactly what the Expressionists and Surrealists do as artists. Let us take a look at Joyce's narrative method. Let my hostile assessment put the matter in a false light, I shall quote Bloch's own analysis: 'Here, in and even beneath the flowing stream we find a mouth without Ego, drinking, babbling, pouring it out. The language mimes every aspect of this collapse, it is not a fully developed, finished product, let alone normative, but open-ended and confused. The sort of speech with puns and slips of the tongue that you normally find at moments of fatigue, in pauses in the conversation, and in dreamy or slovenly people—it is all here, only completely out of control. The words have become unemployed, they have been expelled from their context of meaning. The language moves along, sometimes a worm cut in pieces, sometimes foreshortened like an optical illusion, while at yet other times, it hangs down into the action like a piece of rigging.'

That is his account. Here is his final evaluation: 'An empty shell and the most fantastic sellout; a random collection of notes on crumpled scraps of paper, gobbledygook, a tangle of slippery eels, fragments of nonsense, and at the same time the attempt to found a scholastic system on chaos; . . . confidence tricks in all shapes and sizes, the jokes of a man who has lost his roots; blind alleys but paths everywhere—no aims but destinations everywhere. Montage⁷ can now work wonders; in the old days it was only thoughts that could dwell side by side,⁸ but now things can do the same, at least in these floodplains, these fantastic jungles of the void.'

We found it necessary to quote this lengthy passage because of the highly important, even crucial role given to Surrealist montage in Bloch's historical assessment of Expressionism. Earlier on in the book we find him, like all apologists of Expressionism, making a distinction between its genuine and its merely superficial exponents. According to him, the genuine aspirations

6. James Joyce (1882–1941), Irish modernist writer, author of *Ulysses* (1922).

7. The technique of juxtaposing heterogeneous elements removed from their contexts.

8. An allusion to celebrated lines in [FRIEDRICH

VON] SCHILLER'S *Wallensteins Tod* ([1799, *Wallenstein's Death*] 2.2): "The world is narrow, broad the mind—/Thoughts dwell easily side by side/Things collide violently in space" [translator's note].

of Expressionism live on. He writes: 'But even today there is no artist of great talent around without an Expressionist past, or at least without its highly variegated, highly storm-laden after-effects. The ultimate form of "Expressionism" was created by the so-called Surrealists; just a small group, but once again that is where the avant-garde is, and furthermore, Surrealism is nothing if not montage . . . it is an account of the chaos of reality as actually experienced, with all its caesuras and dismantled structures of the past.' The reader can see here very clearly, in Bloch's advocacy of Expressionism, just what he regards as the literary mainstream of our age. It is no less clear that his exclusion of every realist of importance from that literature is perfectly conscious.

I hope that Thomas Mann will pardon me for making use of him here as a counter-illustration. Let us call to mind his Tonio Kröger, or his Christian Buddenbrook, or the chief characters from *The Magic Mountain*.⁹ Let us further suppose that they had been constructed, as Bloch requires, directly in terms of their own consciousness, and not by contrasting that consciousness with a reality independent of them. It is obvious that if we were confronted merely by the stream of associations in their minds, the resulting 'disruption of the surface' of life would be no less complete than in Joyce. We should find just as many 'crevices' as in Joyce. It would be a mistake to protest that these works were produced *before* the crisis of modernity—the objective crisis in Christian Buddenbrook, for example, leads to a more profound spiritual disturbance than in Joyce's heroes. *The Magic Mountain* is contemporary with Expressionism. So if Thomas Mann had contented himself with the direct photographic record of the ideas and scraps of experience of these characters, and with using them to construct a montage, he might easily have produced a portrait as 'artistically progressive' as the Joyce whom Bloch admires so hugely.

Given his modern themes, why does Thomas Mann remain so 'old-fashioned', so 'traditional'; why does he choose not to clamber on to the bandwagon of modernism? Precisely because he is a *true realist*, a term which in this case signifies primarily that, as a creative artist, he knows exactly who Christian Buddenbrook, who Tonio Kröger and who Hans Castorp, Settembrini and Naphta¹ are. He does not have to know it in the abstract way that a social scientist would know it; in that sense he may easily make mistakes, as Balzac, Dickens and Tolstoy² did before him. He knows it after the manner of a creative realist: he knows how thoughts and feelings grow out of the life of society and how experiences and emotions are parts of the total complex of reality. As a realist he assigns these parts to their rightful place within the total life context. He shows what area of society they arise from and where they are going to.

So when, for example, Thomas Mann refers to Tonio Kröger as a 'bourgeois who has lost his way', he does not rest content with that: he shows how and why he still is a bourgeois, for all his hostility to the bourgeoisie, his homelessness within bourgeois society, and his exclusion from the life of the bourgeois. Because he does all this, Mann towers as a creative artist and in

9. One of Mann's most celebrated novels (1924). The two characters mentioned are from Mann's novels *Tonio Kröger* (1903) and *Buddenbrooks* (1901).

1. Three characters in *The Magic Mountain*.

his grasp of the nature of society, above all those 'ultra-radicals' who imagine that their anti-bourgeois moods, their—often purely aesthetic—rejection of the stifling nature of petty-bourgeois existence, their contempt for plush armchairs or a pseudo-Renaissance cult in architecture, have transformed them into inexorable foes of bourgeois society.

4.

The modern literary schools of the imperialist era, from Naturalism to Surrealism, which have followed each other in such swift succession, all have one feature in common. They all take reality exactly as it manifests itself to the writer and the characters he creates. The form of this immediate manifestation changes as society changes. These changes, moreover, are both subjective and objective, depending on modifications in the reality of capitalism and also on the ways in which class struggle and changes in class structure produce different reflections on the surface of that reality. It is these changes above all that bring about the swift succession of literary schools together with the embittered internecine quarrels that flare up between them.

But both emotionally and intellectually they all remain frozen in their own immediacy; they fail to pierce the surface to discover the underlying essence, i.e. the real factors that relate their experiences to the hidden social forces that produce them. On the contrary, they all develop their own artistic style—more or less consciously—as a spontaneous expression of their immediate experience.

The hostility of all modern schools towards the very meagre vestiges of the older traditions of literature and literary history at this time culminates in a passionate protest against the arrogance of critics who would like to forbid writers, so it is alleged, to write as and how they wish. In so doing, the advocates of such movements overlook the fact that authentic freedom, i.e. freedom from the reactionary prejudices of the imperialist era (not merely in the sphere of art), cannot possibly be attained through mere spontaneity or by persons unable to break through the confines of their own immediate experience. For as capitalism develops, the continuous production and reproduction of these reactionary prejudices is intensified and accelerated, not to say consciously promoted by the imperialist bourgeoisie. So if we are ever going to be able to understand the way in which reactionary ideas infiltrate our minds, and if we are ever going to achieve a critical distance from such prejudices, this can only be accomplished by hard work, by abandoning and transcending the limits of immediacy, by scrutinizing all subjective experiences and measuring them against social reality. In short it can only be achieved by a deeper probing of the real world.

Artistically, as well as intellectually and politically, the major realists of our age have consistently shown their ability to undertake this arduous task. They have not shirked it in the past, nor do they today. The careers of Romain Rolland and of Thomas and Heinrich Mann are relevant here. Different though their development has been in other respects, this feature is common to them all.

Even though we have emphasized the failure of the various modern literary schools to progress beyond the level of immediate experience, we should not

wish it to be thought that we decry the artistic achievements of serious writers from Naturalism to Surrealism. Writing from their own experience, they have often succeeded in developing a consistent and interesting mode of expression, a style of their own, in fact. But when we look at their work in the context of social reality, we see that it never rises above the level of immediacy, either intellectually or artistically.

Hence the art they create remains abstract and one-dimensional. (In this context it is immaterial whether the aesthetic theory espoused by a given school favours 'abstraction' in art or not. Ever since Expressionism the importance attached to abstraction has been consistently on the increase, in theory as well as in practice.) At this point the reader may well believe that he detects a contradiction in our argument: surely immediacy and abstraction are mutually exclusive? However, one of the greatest achievements of the dialectical method—already found in Hegel³—was its discovery and demonstration that immediacy and abstraction are closely akin, and, more particularly, that thought which begins in immediacy can only lead to abstraction.

In this context, too, Marx put Hegelian philosophy back on its feet, and in his analysis of economic relationships he repeatedly showed, in concrete terms, just how the kinship between immediacy and abstraction finds expression in the reflection of economic realities. We must confine ourselves to one brief illustration. Marx shows that the relationship between the circulation of money and its agent, mercantile capital, involves the obliteration of all mediations and so represents the most extreme form of abstraction in the entire process of capitalist production. If they are considered as they manifest themselves, i.e. in apparent independence of the overall process, the form they assume is that of the purely automatic, fetishized abstraction: 'money begets money'. This is why the vulgar economists who never advance beyond the immediate epiphenomena of capitalism feel confirmed in their beliefs by the abstract, fetishized world that surrounds them. They feel at home here like fish in water and hence give vent to passionate protests about the 'presumption' of a Marxist critique that requires them to look at the entire process of social reproduction. Their 'profundity, here as everywhere else, consists in perceiving the clouds of dust on the surface and then having the presumption to assert that all this dust is really very important and mysterious', as Marx comments à propos of Adam Müller.⁴ It is from considerations such as these that I described Expressionism in my old essay on the subject as an 'abstraction away from reality'.

It goes without saying that without abstraction there can be no art—for otherwise how could anything in art have representative value? But like every movement, abstraction must have a direction, and it is on this that everything depends. Every major realist fashions the material given in his own experience, and in so doing makes use of techniques of abstraction, among others. But his goal is to penetrate the laws governing objective reality and to uncover the deeper, hidden, mediated, not immediately perceptible network of relationships that go to make up society. Since these relationships do not lie on the surface, since the underlying laws only make themselves felt in

3. GEORG WILHELM FRIEDRICH HEGEL (1770–1831), German philosopher.

4. German political philosopher (1779–1829).

very complex ways and are realized only unevenly, as trends, the labour of the realist is extraordinarily arduous, since it has both an artistic and an intellectual dimension. Firstly, he has to discover these relationships intellectually and give them artistic shape. Secondly, although in practice the two processes are indivisible, he must artistically conceal the relationships he has just discovered through the process of abstraction—i.e. he has to transcend the process of abstraction. This twofold labour creates a new immediacy, one that is artistically mediated; in it, even though the surface of life is sufficiently transparent to allow the underlying essence to shine through (something which is not true of immediate experience in real life), it nevertheless manifests itself as immediacy, as life as it actually appears. Moreover, in the works of such writers we observe the whole surface of life in all its essential determinants, and not just a subjectively perceived moment isolated from the totality in an abstract and over-intense manner.

This, then, is the artistic dialectic of appearance and essence. The richer, the more diverse, complex and 'cunning' (Lenin) this dialectic is, the more firmly it grasps hold of the living contradictions of life and society, then the greater and the more profound the realism will be.

In contrast to this, what does it mean to talk of an abstraction away from 'reality'? When the surface of life is only experienced immediately, it remains opaque, fragmentary, chaotic and uncomprehended. Since the objective mediations are more or less consciously ignored or passed over, what lies on the surface is frozen and any attempt to see it from a higher intellectual vantage-point has to be abandoned.

There is no state of inertia in reality. Intellectual and artistic activity must move either towards reality or away from it. It might seem paradoxical to claim that Naturalism has already provided us with an instance of the latter. The milieu theory, a view of inherited characteristics fetishized to the point of mythology, a mode of expression which abstractly pinpointed the immediate externals of life; along with a number of other factors, all those things thwarted any real artistic breakthrough to a living dialectic of appearance and essence. Or, more precisely, it was the absence of such a breakthrough that led to the Naturalist style. The two things were functions of each other.

This is why the photographically and phonographically exact imitations of life which we find in Naturalism could never come alive; this is why they remained static and devoid of inner tension. This is why the plays and novels of Naturalism seem to be almost interchangeable—for all their apparent diversity in externals. (This would be the place to discuss one of the major artistic tragedies of our time: the reasons why Gerhart Hauptmann⁵ failed to become a great realist writer after such dazzling beginnings. But we have no space to explore this here. We would merely observe in passing that Naturalism inhibited rather than stimulated the development of the author of *The Weavers* and *The Beaver Coat*, and that even when he left Naturalism behind him he was still unable to discard its ideological assumptions.)

The artistic limitations of Naturalism quickly became obvious. But they were never subjected to fundamental criticism. Instead, the preferred method was always to confront one abstract form with another, apparently

5. German dramatist, poet, and novelist (1862–1946), the Nobel laureate for literature in 1912, known for founding German naturalism. *The*

Weavers (1892), a tragic play, is considered his most successful work; *The Beaver Coat* (1893), a comedy, is less well-known.

contrary, but no less abstract form. It is symptomatic of the entire process that each movement in the past confined its attention entirely to the movement immediately preceding it; thus Impressionism concerned itself exclusively with Naturalism, and so on. Hence neither theory nor practice ever advanced beyond the stage of abstract confrontation. This remains true right up to the present discussion. Rudolf Leonhard,⁶ for example, argues the historical inevitability of Expressionism in just this way: 'One of the foundations of Expressionism was the antagonism felt towards an Impressionism which had become unbearable, even impossible.' He develops this idea quite logically, but fails to say anything about the other foundations. It looks as if Expressionism were utterly opposed to, and incompatible with, the literary trends that preceded it. After all, what Expressionism emphasizes is its focus on essences; this is what Leonhard refers to as the 'non-nihilistic' feature of Expressionism.

But these essences are not the objective essence of reality, of the total process. They are purely subjective. I will refrain from quoting the old and now discredited theoreticians of Expressionism. But Ernst Bloch himself, when he comes to distinguish the true Expressionism from the false, puts the emphasis on subjectivity: 'In its original form Expressionism meant the shattering of images, it meant breaking up the surface from an original, i.e. subjective, perspective, one which wrenched things apart and dislocated them.'

This very definition made it inevitable that essences had to be torn from their context in a conscious, stylized and abstract way, and each essence taken in isolation. When followed through logically, Expressionism repudiated any connection with reality and declared a subjectivist war on reality and all its works. I would not wish to intervene here in the debate about whether, and to what extent, Gottfried Benn⁷ can be thought of as a typical Expressionist. But I find that the sense of life which Bloch describes so picturesquely and fascinatingly in his account of Expressionism and Surrealism, finds its most direct, candid and vivid expression in Benn's book *Kunst und Macht*:⁸ 'Between 1910 and 1925 the anti-naturalist style reigned supreme in Europe to the exclusion of almost everything else. For the fact is that there was no such thing as reality, at best there were only travesties of reality. Reality—that was a capitalist concept. . . . Mind [*Geist*] had no reality.' Wangenheim,⁹ too in his highly eclectic apologia for Expressionism, arrives at similar conclusions, although by a less analytical, more descriptive route: 'Successful works could not be expected in any quantity, since there was no reality corresponding to it [i.e. to Expressionism.—G.L.] . . . Many an Expressionist longed to discover a new world by abandoning terra firma, leaping into the air and clinging to the clouds.'

We can find a perfectly clear and unambiguous formulation of this situation and its implications in Heinrich Vogeler.¹ His accurate assessment of abstraction in Expressionism leads him to the correct conclusion: 'It [i.e. Expressionism—G.L.] was the Dance of Death of bourgeois art . . . The Expressionists thought they were conveying the "essence of things" [*Wesen*], whereas in fact they revealed their decomposition [*Verwesung*].'

9. German author, actor, and stage producer.

1. German painter (1872–1942).

One inescapable consequence of an attitude alien or hostile to reality makes itself increasingly evident in the art of the 'avant-garde': a growing paucity of content, extended to a point where absence of content or hostility towards it is upheld on principle. Once again Gottfried Benn has put the situation in a nutshell: 'The very concept of content, too, has become problematic. Content—what's the point of it nowadays, it's all washed up, worn out, mere sham—self-indulgence of emotions, rigidity of feelings, clusters of discredited elements, lies, amorphous shapes. . . .'

As the reader can see for himself, this account closely parallels Bloch's own description of the world of Expressionism and Surrealism. Needless to say, their respective analyses lead Bloch and Benn to entirely opposite conclusions. At a number of points in his book, Bloch clearly sees the problematic nature of modern art as something arising from the attitude he himself describes: 'Hence major writers no longer make their home in their own subject-matter, for all substances crumble at their touch. The dominant world no longer presents them with a coherent image to depict, or to take as the starting-point for their imagination. All that remains is emptiness, shards for them to piece together.' Bloch goes on to explore the revolutionary period of the bourgeoisie down to Goethe.² He then continues: 'Goethe was succeeded not by a further development of the novel of education, but by the French novel of disillusionment, so that today in the perfected non-world, anti-world or ruined world of the grand bourgeois vacuum, "reconciliation" is neither a danger nor an option for the writer. Only a dialectical approach [?!—G.L.] is possible here: either as material for a dialectical montage or as an experiment in it. In the hands of Joyce even the world of Odysseus³ became a kaleidoscopic gallery of the disintegrating and disintegrated world of today in microscopic cross-section—no more than a cross-section, because people today lack something, namely the most important thing of all'

We have no desire to quibble with Bloch over trifles, such as his purely idiosyncratic use of the word 'dialectics', or the mistaken logic which allows him to suggest that the novel of disillusionment follows directly upon Goethe. (My early work, *The Theory of the Novel*,⁴ is partly to blame for Bloch's *non-sequitur* here.) We are concerned with more vital issues. In particular, with the fact that Bloch—although his evaluation is the reverse of ours—expresses the notion that the subject-matter and the composition of works of literature depend on man's relationship to objective reality. So far so good. But when Bloch comes to demonstrate the historical legitimacy of Expressionism and Surrealism, he ceases to concern himself with the objective relations between society and the active men of our time, relations which, as we can see from *Jean Christophe*,⁵ even permit a novel of education to be written. Instead, taking the isolated state of mind of a specific class of intellectuals as his starting-point, he constructs a sort of home-made model of the contemporary world, which logically enough appears to him as a 'non-world'—a conception which, regrettably enough, turns out to be very similar

2. Johann Wolfgang von Goethe (1749–1832), German poet, novelist, and dramatist.

3. That is, the adaptation of Homer's *Odyssey* (ca. 8th c. B.C.E.) in Joyce's *Ulysses*.

4. A pre-Marxist work (written in 1914 and 1915) that Lukács renounced after 1918 when he

became a member of the Communist Party.

5. The major work of Romain Rolland, a novel in 10 volumes [1904–12] whose theme is Franco-German relations as reflected in the life of a German musician [translator's note].

to that of Benn. For writers who adopt this kind of stance towards reality there obviously cannot be any action, structure, content or composition in the 'traditional sense'. For people who experience the world like this it is in fact perfectly true that Expressionism and Surrealism are the only modes of self-expression still available. This philosophical justification of Expressionism and Surrealism suffers 'merely' from the fact that Bloch fails to make reality his touchstone and instead uncritically takes over the Expressionist and Surrealist attitude towards reality, and translates it into his own richly imaginative language.

Despite my sharp disagreement with all of Bloch's judgements, I find his formulation of certain facts both correct and valuable. In particular, he is the most consistent of all defenders of modernism in his demonstration that Expressionism necessarily leads to Surrealism. In this context he also deserves praise for having recognized that montage is the inevitable mode of expression in this phase of development. Moreover, his achievement here is all the greater because he shows that montage is important not only in modernist art, but also in the bourgeois philosophy of our time.

However, one consequence of this is that he brings out the anti-realistic one-dimensionality of the entire trend much more starkly than other theoreticians who think along these lines. This one-dimensionality—about which, incidentally, Bloch has nothing to say—was already a feature of Naturalism. In contrast to the Naturalist, the artistic 'refinement' introduced by Impressionism 'purifies' art even more completely of the complex mediations, the tortuous paths of objective reality, and the objective dialectics of Being and Consciousness. The symbolist movement is clearly and consciously one-dimensional from the outset, for the gulf between the sensuous incarnation of a symbol and its symbolic meaning arises from the narrow, single-tracked process of subjective association which yokes them together.

Montage represents the pinnacle of this movement and for this reason we are grateful to Bloch for his decision to set it so firmly in the centre of modernist literature and thought. In its original form, as photomontage, it is capable of striking effects, and on occasion it can even become a powerful political weapon. Such effects arise from its technique of juxtaposing heterogeneous, unrelated pieces of reality torn from their context. A good photomontage has the same sort of effect as a good joke. However, as soon as this one-dimensional technique—however legitimate and successful it may be in a joke—claims to give shape to reality (even when this reality is viewed as unreal), to a world of relationships (even when these relationships are held to be specious), or of totality (even when this totality is regarded as chaos), then the final effect must be one of profound monotony. The details may be dazzlingly colourful in their diversity, but the whole will never be more than an unrelieved grey on grey. After all, a puddle can never be more than dirty water, even though it may contain rainbow tints.

This monotony proceeds inexorably from the decision to abandon any attempt to mirror objective reality, to give up the artistic struggle to shape the highly complex mediations in all their unity and diversity and to synthesize them as characters in a work of literature. For this approach permits no creative composition, no rise and fall, no growth from within to emerge from the true nature of the subject-matter.

Whenever these artistic trends are dismissed as decadent, there is a cry of

indignation against 'pedantic hectoring by eclectic academics'. Perhaps I shall be permitted, therefore, to appeal to Friedrich Nietzsche,⁶ an expert on decadence whom my opponents hold in high regard in other matters too: 'What is the mark of every form of literary decadence?' he enquires. He replies: 'It is that life no longer dwells in the totality. The word becomes sovereign and escapes from the confines of the sentence; the sentence encroaches on the page, obscuring its meaning; the page gains in vitality at the cost of the whole—the whole ceases to be a whole. But that is the equation of every decadent style: always the same anarchy of the atoms, disintegration of the will. . . . Life, the same vitality, the vibrance and exuberance of life is compressed into the most minute structures, while the rest is impoverished. Paralysis, misery, petrification or hostility and chaos everywhere: in either case the consequences are the more striking, the higher one rises in the hierarchy of organizations. The whole as such no longer lives at all; it is composite, artificial, a piece of cerebration, an artefact.'⁷ This passage from Nietzsche is just as truthful an account of the artistic implications of these literary trends as that of Bloch or Benn. I would invite Herwarth Walden,⁸ who dismisses every critical interpretation of Expressionism as a vulgarization and who regards every example used to illustrate the theory and practice of Expressionism as an instance of 'vulgar-Expressionism' which proves nothing, to comment on the following adaptation of Nietzsche's theory of decadence to the theory of literary language in general: 'Why should only the sentence be comprehensible and not the word? . . . Since the poets like to dominate, they go ahead and make sentences, ignoring the rights of words. But it is the word that rules: The word shatters the sentence and the work of art is a mosaic. Only words can bind. Sentences are always just picked up out of nowhere.' This 'vulgar-Expressionist' theory of language comes in fact from Herwarth Walden himself.

It goes without saying that such principles are never applied with absolute consistency, even by Joyce. For 100 per cent chaos can only exist in the minds of the deranged, in the same way that Schopenhauer⁹ had already observed that a 100 per cent solipsism is only to be found in a lunatic asylum. But since chaos constitutes the intellectual cornerstone of modernist art, any cohesive principles it contains must stem from a subject-matter alien to it. Hence the superimposed commentaries, the theory of simultaneity,¹ and so on. But none of this can be any more than a surrogate, it can only intensify the one-dimensionality, of this form of art.

5.

The emergence of all these literary schools can be explained in terms of the economy, the social structure and the class struggles of the age of imperi-

6. German philosopher (1844–1900; see above).

7. The words significantly omitted by Lukács after "disintegration of the will" are "freedom of the individual, in oral terms—generalized into a political theory: 'equal rights for all.'" Nietzsche, *Der Fall Wagner* [1888, *The Case of Wagner*] [translator's note].

8. German critic and editor of *Der Sturm* (1910–23), a prominent expressionist journal.

9. Arthur Schopenhauer (1788–1860), German philosopher.

1. Theory developed by Robert Delaunay [1885–1941], who together with [Wassily] Kandinsky [1866–1944] was one of the pioneers of abstraction in art. In his great series of "Window" paintings starting in 1912, he sought to put it into practice. Taking the transparent interpenetrating colours of [Paul] Cézanne's [1839–1906] later period, he fused them with the forms of analytical Cubism, and claimed that the result, a simultaneous impact of two or more colours, gave the picture a dynamic force [translator's note].

alism. So Rudolf Leonhard is absolutely right when he claims that Expressionism is a necessary historical phenomenon. But it is at best a half-truth when he goes on to assert, echoing Hegel's celebrated dictum, that 'Expressionism was real; so if it was real it was rational.' Even in Hegel the 'rationality of history' was never as straightforward as this, although he occasionally contrived to smuggle an apologia for the actual into his concept of reason. For a Marxist, 'rationality' (historical necessity) is unquestionably a more complex business. For Marxism the acknowledgment of a historical necessity neither implies a justification of what actually exists (not even during the period when it exists), nor does it express a fatalistic belief in the necessity of historical events. Once again we can illustrate this best with an example from economics. There can be no doubt that primitive accumulation, the separation of the small producers from their means of production, the creation of the proletariat, was—with all its inhumanities—a historical necessity. Nevertheless, no Marxist would dream of glorifying the English bourgeoisie of the period as the embodiment of the principle of reason in Hegel's sense. Even less would it occur to a Marxist to see thereby any fatalistic necessity in the development from capitalism to socialism. Marx repeatedly protested against the way in which people fatalistically insisted that the only possible development for the Russia of his day was from primitive accumulation to capitalism. Today, in view of the fact that socialism has been established in the Soviet Union, the idea that undeveloped countries can only achieve socialism via the route of primitive accumulation and capitalism is a recipe for counter-revolution. So if we concur with Leonhard, and agree that the emergence of Expressionism was historically necessary, this is not to say that we find it artistically valid, i.e. that it is a necessary constituent of the art of the future.

For this reason we must demur when Leonhard discerns in Expressionism 'the definition of man and the consolidation of things as a stepping-stone towards a new realism'. Bloch is absolutely in the right here when, unlike Leonhard, he looks to Surrealism and the dominance of montage as the necessary and logical heir to Expressionism. Our dear old Wangenheim inevitably arrives at completely eclectic conclusions when he tries to use the debate on Expressionism for his own purposes, i.e. to salvage and preserve the formalistic tendencies of his early work—tendencies which so often inhibited and even suppressed his native realism—by bringing them under the umbrella of a broad and undogmatic conception of realism. His aim in defending Expressionism is to rescue for socialist realism² a priceless heritage of permanent value. He attempts to defend his position in this way: 'Fundamentally, the theatre of Expressionism, even when its effects were powerful, reflected a world in tatters. The theatre of socialist realism reflects uniformity amidst all the diversity of its forms.' Is this why Expressionism has to become an essential component of socialist realism? Wangenheim has not got a single aesthetic or logical argument in reply, merely a biographical one: a reluctance to jettison his own earlier formalism.

Taking as his starting-point the historical assessment of Expressionism clearly stated in my old essay, Bloch goes on to make the following criticism

2. The Soviet-approved artistic and literary doctrine developed by Maxim Gorky, A. A. Zhdanov (1896–1948), and Joseph Stalin (1879–1953); officially adopted in 1934, it requires the optimistic

depiction of socialism and the clear presentation of party doctrine, using conventional literary techniques.

of me: 'The result is that there can be no such thing as an avant-garde within late capitalist society; anticipatory movements in the superstructure³ are disqualified from possessing any truth.' This accusation arises from the circumstance that Bloch regards the road that leads to Surrealism and montage as the only one open to modern art. If the role of the avant-garde is disputed, the inescapable conclusion in his eyes is that any ideological anticipation of social tendencies must be called in question.

But this is quite simply untrue. Marxism has always recognized the anticipatory function of ideology. To remain within the sphere of literature, we need only remind ourselves of what Paul Lafargue⁴ has to say about Marx's evaluation of Balzac: 'Balzac was not just the chronicler of his own society, he was also the creator of prophetic figures who were still embryonic under Louis Philippe and who only emerged fully grown after his death, under Napoleon III.' But is this Marxian view still valid in the present? Of course it is. Such 'prophetic figures', however, are to be found exclusively in the works of the important realists. In the novels, stories and plays of Maxim Gorky such figures abound. Anyone who has been following recent events in the Soviet Union attentively and dispassionately will have realized that in his *Karamora*, his *Klim Samgin*, his *Dostigayev*,⁵ etc., Gorky has created a series of typical figures which have only now revealed their real nature and who were 'prophetic' anticipations in Marx's sense. We might point with equal justice to the earlier works of Heinrich Mann, novels such as *Der Untertan* and *Professor Unrat*.⁶ Who could deny that a large number of the repellent, mean and bestial features of the German bourgeoisie, and of a petty bourgeoisie seduced by demagogues, were 'prophetically' portrayed here and that they only blossomed completely later under Fascism? Nor should we overlook the character of Henri IV in this context.⁷ On the one hand, he is a historically authentic figure, true to life; on the other hand he anticipates those humanist qualities which will only emerge fully in the struggles leading to the defeat of Fascism, in the fighters of the anti-Fascist Front.

Let us consider a counter-illustration, likewise from our own time. The ideological struggle against war was one of the principal themes of the best Expressionists. But what did they do or say to anticipate the new imperialist war raging all around us and threatening to engulf the whole civilized world? I hardly imagine that anyone today will deny that these works are completely obsolete and irrelevant to the problems of the present. On the other hand the realist writer Arnold Zweig⁸ anticipated a whole series of essential features of the new war in his novels *Sergeant Grischka* and *Education before Verdun*. What he did there was to depict the relationship between the war

3. A term from Marxist social theory that refers to the realm of culture and ideology built atop society's socioeconomic base. "As in the base, so in the superstructure" is a Marxist rule of thumb.

4. Son-in-law of Karl Marx (1842-1911), founder in 1882 of the French Marxist Party. Louis Philippe (1773-1850) was France's constitutional monarch (1830-48); Louis-Napoléon (1808-1873) was elected president in 1848 and then became emperor (1850-70).

5. Varied works by Gorky: "Karamora" (1923) is a short story, *The Life of Klim Samgin* (1927-31) a multivolume novel, and *Dostigayev and Others*

(1934) a play.

6. Translated into English as *Man of Straw* [1918] and *The Blue Angel* [1904] respectively [translator's note].

7. The eponymous hero of two novels Heinrich Mann published in the 1930s: *Die Jugend des Königs Henri Quatre* [1935, *Young Henry of Navarre*] and *Die Vollenkung des Königs Henri Quatre* [1938, *Henry, King of France*] [translator's note].

8. German Jewish writer (1887-1968); the novels mentioned were published in 1927 and 1935, respectively.

at the front and what went on behind the lines, and to show how the war represented the individual and social continuation and intensification of 'normal' capitalist barbarity.

There is nothing mysterious or paradoxical about any of this—it is the very essence of all authentic realism of any importance. Since such realism must be concerned with the creation of types (this has always been the case, from *Don Quixote* down to *Oblomov*⁹ and the realists of our own time), the realist must seek out the lasting features in people, in their relations with each other and in the situations in which they have to act; he must focus on those elements which endure over long periods and which constitute the objective human tendencies of society and indeed of mankind as a whole.

Such writers form the authentic ideological avant-garde since they depict the vital, but not immediately obvious forces at work in objective reality. They do so with such profundity and truth that the products of their imagination receive confirmation from subsequent events—not merely in the simple sense in which a successful photograph mirrors the original, but because they express the wealth and diversity of reality, reflecting forces as yet submerged beneath the surface, which only blossom forth visibly to all at a later stage. Great realism, therefore, does not portray an immediately obvious aspect of reality but one which is permanent and objectively more significant, namely man in the whole range of his relations to the real world, above all those which outlast mere fashion. Over and above that, it captures tendencies of development that only exist incipiently and so have not yet had the opportunity to unfold their entire human and social potential. To discern and give shape to such underground trends is the great historical mission of the true literary avant-garde. Whether a writer really belongs to the ranks of the avant-garde is something that only history can reveal, for only after the passage of time will it become apparent whether he has perceived significant qualities, trends, and the social functions of individual human types, and has given them effective and lasting form. After what has been said already, I hope that no further argument is required to prove that only the major realists are capable of forming a genuine avant-garde.

So what really matters is not the subjective belief, however sincere, that one belongs to the avant-garde and is eager to march in the forefront of literary developments. Nor is it essential to have been the first to discover some technical innovation, however dazzling. What counts is the social and human content of the avant-garde, the breadth, the profundity and the truth of the ideas that have been 'prophetically' anticipated.

In short, what is at issue here is not whether or not we deny the possibility of anticipatory movements in the superstructure. The vital questions are: *what* was anticipated, in what manner and by whom?

We have already given a number of illustrations, and we could easily multiply them, to show what the major realists of our time have anticipated in their art, by their creation of types. So let us now turn the question round and enquire what Expressionism anticipated? The only answer we can possibly receive, even from Bloch, is: Surrealism, i.e. yet another literary school whose fundamental failure to anticipate social trends in its art has emerged with crystal clarity, and nowhere more clearly than from the description of

9. An 1859 novel by Ivan Goncharov, a Russian writer noted for illuminating class conditions in Russia.

it given by its greatest admirers. Modernism has not, nor has it ever had, anything to do with the creation of 'prophetic figures' or with the genuine anticipation of future developments.

If we have been successful in clarifying the criterion by which the literary avant-garde is to be distinguished, then it is no great problem to answer certain concrete questions. Who in our literature belongs to the avant-garde? 'Prophetic' writers of the stamp of Gorky, or writers like the late Hermann Bahr¹ who, like a drum-major, marched proudly at the head of every new movement from Naturalism to Surrealism, and then promptly dismissed each phase a year before it went out of fashion? Granted, Hermann Bahr is a caricature, and nothing could be further from my mind than to put him on the same footing as the sincere defenders of Expressionism. But he is the caricature of something real, namely of a formalist modernism, bereft of content, cut off from the mainstream of society.

It is an old truth of Marxism that every human activity should be judged according to its objective meaning in the total context, and not according to what the agent believes the importance of his activity to be. So, on the one hand, it is not essential to be a conscious 'modernist' at all costs (Balzac, we recall, was a royalist); and, on the other hand, even the most passionate determination, the most intense sense of conviction that one has revolutionized art and created something 'radically new', will not suffice to turn a writer into someone who can truly anticipate future trends, if determination and conviction are his sole qualifications.

6.

This ancient truth can also be expressed as a commonplace: the road to hell is paved with good intentions. The validity of this proverb may on occasion appear with the force of a home-truth to anyone who takes his own development seriously and is therefore prepared to criticize himself objectively and without pulling any punches. I am quite willing to start with myself. In the winter of 1914–15: subjectively, a passionate protest against the War, its futility and inhumanity, its destruction of culture and civilization. A general mood that was pessimistic to the point of despair. The contemporary world of capitalism appeared to be the consummation of Fichte's² 'age of absolute sinfulness'. My subjective determination was a protest of a progressive sort. The objective product, *The Theory of the Novel*, was a reactionary work in every respect, full of idealistic mysticism and false in all its assessments of the historical process. Then 1922: a mood of excitement, full of revolutionary impatience. I can still hear the bullets of the Red War against the imperialists whistling around my head, the excitement of being an outlaw in Hungary still reverberates within me.³ Everything in me rebelled against the notion that the first great revolutionary wave was past and that the resolution of the Communist vanguard was insufficient to bring about the overthrow of capitalism. Thus the subjective foundation was revolutionary

1. Austrian novelist, critic, and playwright (1863–1934).

2. Johann Gottlieb Fichte (1762–1814), German philosopher. The quoted phrase is from *Characteristics of the Present Age* (1806), a work on the philosophy of history.

3. After serving in the short-lived Hungarian Soviet Republic in 1919, Lukács was exiled to Vienna; there he worked for the emigré Hungarian Communist Party until 1929, when he dropped out of active politics.

impatience. The objective product was *History and Class Consciousness*⁴—which was reactionary because of its idealism, because of its faulty grasp of the theory of reflection and because of its denial of a dialectics in nature. It goes without saying that I am not alone in having had such experiences at this time. On the contrary, it also happened to countless others. The opinion expressed in my old essay on Expressionism which has aroused so many dissenting voices, namely the assertion that ideologically Expressionism was closely related to the Independent Socialists,⁵ is based on the aforementioned ancient truth.

In our debate on Expressionism, revolution (Expressionism) and Noske⁶ have been put in opposing camps—in the good old Expressionist manner. But could Noske have managed to emerge the victor without the Independent Socialists, without their vacillation and hesitation, which prevented the Workers' Councils from seizing power while tolerating the organization and arming of reactionary forces? The Independent Socialists were, in party terms, the organized expression of the fact that even those German workers who were radical at the level of their feelings, were not yet equipped ideologically for revolution. The Spartacus League was too slow in detaching itself from the Independent Socialists and it did not criticize them incisively enough; both failures are an important index of the weakness and backwardness of the subjective side of the German revolution, the very factors that Lenin singled out right from the start in his critique of the Spartacus League.

Of course, the whole situation was anything but straightforward. In my original essay, for instance, I drew a very sharp distinction between leaders and masses within the Independent Socialists. The masses were instinctively revolutionary. They showed that they were also objectively revolutionary by going on strike in munitions factories, by undermining efforts at the front and by a revolutionary enthusiasm which culminated in the January strike. For all that, they remained confused and hesitant; they let themselves be ensnared by the demagoguery of their leaders. The latter were in part consciously counter-revolutionary (Kautsky, Bernstein and Hilferding)⁷ and worked objectively and expressly to preserve bourgeois rule, in collaboration with the old SPD leadership. Other leaders were subjectively sincere; but when it came to the crisis, they were unable to offer effective resistance to this sabotage of the revolution. Notwithstanding their sincerity and their reluctance, they slipped into the wake of the right-wing leadership until their misgivings finally led to a split within the Independent Socialists and so to their destruction. The really revolutionary elements in the Independent Socialist Party were those who, after Halle,⁸ pressed for the Party's dissolution and the repudiation of its ideology.

What then of the Expressionists? They were ideologues. They stood

4. This 1923 work remains Lukács's most influential.

5. The Independent Social Democratic Party of Germany (USPD), one of several socialist parties (the Spartacus League was another) that emerged in opposition to the Social Democratic Party of Germany (SPD), which decided to collaborate with the bourgeois German government for the duration of World War I. Lukács's point is that in a time of ideological confusion, the expressionists—despite being socialists opposed to the war—played into the hands of the SPD with their anti-

realistic artworks.

6. Gustav Noske (1868–1946), right-wing leader of SPD; known as the "bloodhound of the revolution" for his military efforts to suppress the socialist revolution in Germany.

7. All three—Karl Kautsky (1854–1938), Eduard Bernstein (1850–1932), and Rudolf Hilferding (1877–1941)—were members of the SPD; Kautsky had been a founder of the USPD.

8. At its Congress in Halle in 1920, the USPD voted by a majority to merge with the KPD [Communist Democratic Party] (translator's note).

between leaders and masses. For the most part their convictions were sincerely held, though they were also mostly very immature and confused. They were deeply affected by the same uncertainties to which the immature revolutionary masses were also subject. In addition they were profoundly influenced by every conceivable reactionary prejudice of the age, and this made them more than susceptible to the widest possible range of anti-revolutionary slogans—abstract pacifism, ideology of non-violence, abstract critiques of the bourgeoisie, or all sorts of crazy anarchist notions. As ideologists, they stabilized both intellectually and artistically what was essentially a merely transitional ideological phase. From a revolutionary point of view, this phase was much more retrograde in many respects than the one in which the vacillating masses of Independent Socialists supporters found themselves. But the revolutionary significance of such phases of ideological transition lies precisely in their fluidity, in their forward movement, in the fact that they do not yield a crystallization. In this case stabilization meant that the Expressionists and those who were influenced by them were prevented from making further progress of a revolutionary kind. This negative effect, typical of every attempt to systematize ideological states of flux, received an especially reactionary colouring in the case of the Expressionists: firstly, because of the highflown pretensions to leadership, the sense of mission, which led them to proclaim eternal truths, particularly during the revolutionary years; secondly, because of the specifically anti-realist bias in Expressionism, which meant that they had no firm artistic hold on reality which might have corrected or neutralized their misconceptions. As we have seen, Expressionism insisted on the primacy of immediacy, and by conferring a pseudo-profundity and pseudo-perfection on immediate experience both in art and thought, it intensified the dangers which inevitably accompany all such attempts to stabilize an essentially transitional ideology.

Thus, to the extent that Expressionism really had any ideological influence, its effect was to discourage rather than to promote the process of revolutionary clarification among its followers. Here, too, there is a parallel with the ideology of the Independent Socialists. It is no coincidence that both came to grief on the same reality. It is an over-simplification for the Expressionists to claim that Expressionism was destroyed by Noske's victory. Expressionism collapsed, on the one hand, with the passing of the first wave of revolution, for the failure of which the ideology of the Independent Socialists must carry a heavy burden of responsibility. On the other hand, it suffered a loss of prestige from the growing clarity of the revolutionary consciousness of the masses who were beginning to advance with increasing confidence beyond the revolutionary catchwords from which they had started.

But Expressionism was not dethroned by the defeat of the first wave of revolution in Germany alone. The consolidation of the victory of the proletariat in the Soviet Union played an equally important role. As the proletariat gained a firmer control of the situation, as Socialism began to permeate more and more aspects of the Soviet economy, and as the cultural revolution gained wider and wider acceptance among the masses of the workers, so the art of the 'avant-garde' in the Soviet Union found itself gradually but inexorably forced back on to the defensive by an increasingly confident school of realism. So in the last analysis the defeat of Expressionism was a product

of the maturity of the revolutionary masses. The careers of Soviet poets like Mayakovsky, or of Germans such as Becher,⁹ make it clear that this is where the true reasons for the demise of Expressionism have to be sought and found.

7.

Is our discussion purely literary? I think not. I do not believe that any conflict between literary trends and their theoretical justification would have had such reverberations or provoked such discussion were it not for the fact that, in its ultimate consequences, it was felt to involve a political problem that concerns us all and influences us all in equal measure: the problem of the Popular Front.¹

Bernhard Ziegler² raised the issue of popular art in a very pointed manner. The excitement generated by this question is evident on all sides and such a vigorous interest is surely to be welcomed. Bloch, too, is concerned to salvage the popular element in Expressionism. He says: 'It is untrue that Expressionists were estranged from ordinary people by their overweening arrogance. Again, the opposite is the case. The *Blue Rider*³ imitated the stained glass at Murnau, and in fact was the first to open people's eyes to this moving and uncanny folk art. In the same way, it focused attention on the drawings of children and prisoners, on the disturbing works of the mentally sick, and on primitive art.' Such a view of popular art succeeds in confusing all the issues. Popular art does not imply an ideologically indiscriminate, 'arty' appreciation of 'primitive' products by connoisseurs. Truly popular art has nothing in common with any of that. For if it did, any swank who collects stained glass or negro sculpture, any snob who celebrates insanity as the emancipation of mankind from the fetters of the mechanistic mind, could claim to be a champion of popular art.

Today, of course, it is no easy matter to form a proper conception of popular art. The older ways of life of the people have been eroded economically by capitalism, and this has introduced a feeling of uncertainty into the world-view, the cultural aspirations, the taste and moral judgement of the people; it has created a situation in which people are exposed to the perversions of demagogy. Thus it is by no means always progressive simply to collect old folk products indiscriminately. Nor does such a rescue operation necessarily imply an appeal to the vital instincts of the people, which do remain progressive against all obstacles. Similarly, the fact that a literary work or a literary trend is greatly in vogue does not in itself guarantee that it is genuinely popular. Retrograde traditionalisms, such as regional art [*Heimatkunst*], and bad modern works, such as thrillers, have achieved mass circulation without being popular in any true sense of the word.

With all these reservations, however, it is still not unimportant to ask how

9. Johannes Becher (1891-1958), German expressionist poet. Vladimir Mayakovsky (1893-1930), Russian futurist poet.

1. All the different socialist groups that, along with the Communists, attempted in the 1930s to present a united front against the rise of fascism, especially against Adolf Hitler. The Popular Front became official Communist policy at the Seventh Comintern Congress of 1935.

2. Pseudonym of Alfred Kurella (1895-1975), an associate of Lukács who began the critique of expressionism in *Das Wort*.

3. Kandinsky's 1903 painting, widely associated with expressionism; it appeared on the cover of the groundbreaking expressionist publication *Blue Rider Almanac* (1912), issued by a group that took its name.

much of the real literature of our time has reached the masses, and how deeply it has penetrated. But what 'modernist' writer of the last few decades can even begin to compare with Gorky, with Anatole France,⁴ Romain Rolland or Thomas Mann? That a work of such uncompromising artistic excellence as *Buddenbrooks* could be printed in millions of copies must give all of us food for thought. The whole problem of popular art would, as old Briest in Fontane's⁵ novel used to say, 'lead us too far afield' for us to discuss it here. We shall confine ourselves therefore to two points, without pretending to an exhaustive treatment of either.

In the first place, there is the question of the cultural heritage. Wherever the cultural heritage has a living relationship to the real life of the people it is characterized by a dynamic, progressive movement in which the active creative forces of popular tradition, of the sufferings and joys of the people, of revolutionary legacies, are buoyed up, preserved, transcended and further developed. For a writer to possess a living relationship to the cultural heritage means being a son of the people, borne along by the current of the people's development. In this sense Maxim Gorky is a son of the Russian people, Romain Rolland a son of the French and Thomas Mann a son of the German people. For all their individuality and originality, for all their remoteness from an artiness which artificially collects and aestheticizes about the primitive, the tone and content of their writings grow out of the life and history of their people, they are an organic product of the development of their nation. That is why it is possible for them to create art of the highest quality while at the same time striking a chord which can and does evoke a response in the broad masses of the people.

The attitude of the modernists to the cultural heritage stands in sharp contrast to this. They regard the history of the people as a great jumble sale. If one leafs through the writings of Bloch, one will find him mentioning the topic only in expressions like 'useful legacies', 'plunder', and so on. Bloch is much too conscious a thinker and stylist for these to be mere slips of the pen. On the contrary, they are an index of his general attitude towards the cultural heritage. In his eyes it is a heap of lifeless objects in which one can rummage around at will, picking out whatever one happens to need at the moment. It is something to be taken apart and stuck together again in accordance with the exigencies of the moment.

Hanns Eisler has expressed the same attitude very clearly in an article he and Bloch wrote together. He was—rightly—highly enthusiastic about the *Don Carlos* demonstration in Berlin.⁶ But instead of pondering what Schiller really represented, where his achievement and his limitations actually lay, what he has meant for the German people in the past and still means today, and what mountain of reactionary prejudices would have to be cleared away in order to forge the popular and progressive aspects of Schiller into a usable weapon for the Popular Front and for the emancipation of the German people—instead of all that, he merely puts forward the following programme for the benefit of writers in exile: 'What must our task be outside Germany? It is evident that it can only be for us all to help select and prepare classical

4. French novelist (1844–1924).

5. Theodor Fontane (1819–1898), the first master of the realistic novel in Germany; *Effi Briest* (1895) is his greatest work.

6. Hanns Eisler/Ernst Bloch: *Die Kunst zu erben* [translator's note]. *Don Carlos* (1787), a historical drama by Schiller, caused controversy with its confusing story and its deviation from historical fact.

material that is suitable for such a struggle.' Thus what Eisler proposes is to reduce the classics to an anthology and then to reassemble whatever 'material is suitable'. It would be impossible to conceive of a more alien, arrogant or negative attitude towards the glorious literary past of the German people.

Objectively, however, the life of the people is a continuum. A theory like that of the modernists which sees revolutions only as ruptures and catastrophes that destroy all that is past and shatter all connection with the great and glorious past, is akin to the ideas of Cuvier,⁷ not those of Marx and Lenin. It forms an anarchistic pendant to the evolutionary theories of reformism. The latter sees nothing but continuity, the former sees nothing but ruptures, fissures and catastrophes. History, however, is the living dialectical unity of continuity and discontinuity, of evolution and revolution.

Thus here, as everywhere, everything depends on a correct appreciation of content. Lenin puts the Marxist view of the cultural heritage in this way: 'Marxism attained its world-historical importance as the ideology of the revolutionary proletariat by virtue of its refusal to reject the most valuable achievements of the bourgeois era. Instead, it appropriated and assimilated all that was valuable in a tradition of human thought and human culture stretching back over 2000 years.' So everything depends on recognizing clearly where to look for what is truly of value.

If the question is correctly formulated, in the context of the life and the progressive tendencies of the people, then it will lead us organically to our second point: the question of realism. Modern theories of popular art, strongly influenced by avant-garde ideas, have pushed the sturdy realism of folk art very much into the background. On this issue, too, we cannot possibly discuss the entire problem in all its ramifications, so we shall confine our observations to one single, crucial point.

We are talking here to writers about literature. We must remind ourselves that owing to the tragic course of German history, the popular and realistic element in our literature is nothing like as powerful as in England, France or Russia. That very fact should spur us to attend all the more closely to the popular, realistic literature of the German past and to keep its vital, productive traditions alive. If we do so, we shall see that despite the whole 'German *misère*,'⁸ popular, realistic literature produced such major masterpieces as the *Simplizissimus* of Grimmelshausen.⁹ It may be left to the Eislers of this world to take the book to pieces and estimate their montage value; for the living tradition of German literature it will continue to survive intact in all its greatness, and with all its limitations.¹

7. Georges Cuvier (1769–1832). According to his theory every geological era terminated in a catastrophe and every new one was brought about by an immigration and a re-creation. He rejected theories of evolution [translator's note].

8. Trouble (French).

9. H. J. Christoffel Von Grimmelshausen (ca. 1621–1676). His picaresque novel *The Adventures of a Simpleton* (1669), set in the Thirty Years' War, is the major German literary work of the 17th century [translator's note].

1. The plural formulation "It may be left to the Eislers . . ." provoked Brecht to write the following *Minor Corrections*: "In the debate on Expressionism in *Das Wort* something has happened in the heat of battle that stands in need of a minor correction.

Lukács has been wiping the floor, so to speak, with my friend Eisler, who, incidentally, is hardly anyone's idea of a pale aesthete. It appears that Eisler has failed to exhibit the pious reverence towards the cultural heritage expected from the executors of a will. Instead he just rummaged around in it and declined to take everything into his possession. Well, it may be that, as an exile, he is not in a position to lug so much stuff around with him. However, perhaps I may be allowed a few comments on the formal aspects of the incident. Reference was made to 'the Eislers,' who were alleged to be doing, or not doing, something or other. In my opinion, the Lukácses ought to refrain from using such plurals when in fact there is only one Eisler among our musicians. The millions of white,

Only when the masterpieces of realism past and present are appreciated as *wholes*, will their topical, cultural and political value fully emerge. This value resides in their inexhaustible diversity, in contrast to the one-dimensionality of modernism. Cervantes and Shakespeare, Balzac and Tolstoy, Grimmelshausen and Gottfried Keller,² Gorky, Thomas and Heinrich Mann—all these can appeal to readers drawn from a broad cross-section of the people because their works permit access from so many different angles. The large-scale, enduring resonance of the great works of realism is in fact due to this accessibility, to the infinite multitude of doors through which entry is possible. The wealth of the characterization, the profound and accurate grasp of constant and typical manifestations of human life is what produces the great progressive reverberation of these works. The process of appropriation enables readers to clarify their own experiences and understanding of life and to broaden their own horizons. A living form of humanism prepares them to endorse the political slogans of the Popular Front and to comprehend its political humanism. Through the mediation of realist literature the soul of the masses is made receptive for an understanding of the great, progressive and democratic epochs of human history. This will prepare it for the new type of revolutionary democracy that is represented by the Popular Front. The more deeply anti-Fascist literature is embedded in this soil, the better able it will be to create contrasting types of good and evil, models of what should be admired and what hated—and the greater will be its resonance among the people.

In contrast to this, it is but a very narrow doorway which leads to Joyce or the other representatives of avant-garde literature: one needs a certain 'knack' to see just what their game is. Whereas in the case of the major realists, easier access produces a richly complex yield in human terms, the broad mass of the people can learn nothing from avant-garde literature. Precisely because the latter is devoid of reality and life, it foists on to its readers a narrow and subjectivist attitude to life (analogous to a sectarian point of view in political terms). In realism, the wealth of created life provides answers to the questions put by the readers themselves—life supplies the answers to the questions put by life itself! The taxing struggle to understand the art of the 'avant-garde', on the other hand, yields such subjectivist distortions and travesties that ordinary people who try to translate these atmospheric echoes of reality back into the language of their own experience, find the task quite beyond them.

A vital relationship to the life of the people, a progressive development of the masses' own experiences—this is the great social mission of literature. In his early works Thomas Mann found much to criticize in the literature of Western Europe. It is no accident that his objections to the problematic

yellow and black workers who have inherited the songs Eisler wrote for the masses will undoubtedly share my opinion here. But in addition there are all sorts of experts on music who think highly of Eisler's works, in which, so they tell me, he magnificently builds on and extends the cultural heritage of German music, and they would be very confused if the German émigrés should seek to outdo the seven cities of Greece, who quarreled about which of them had produced a single Homer, by allowing themselves to start boasting

that they had seven Eislers." When the essay was revised for republication in book-form (Aufbau, Berlin 1948), Lukács rewrote the sentence to read "It may be left to Eisler and Bloch . . ." while in vol. 4 *Probleme des Realismus*, Luchterhand 1971, we find: "It may be left to Eisler . . ." (translator's note). Bertolt Brecht (1898–1956), German dramatist and Marxist.

2. Swiss writer known for realistic works (1819–1890).

nature and remoteness from life of many modern works were counter-balanced by his indication of an alternative creative ideal, in his description of the Russian literature of the nineteenth century as 'sacred'.³ What he had in mind was this very same life-creating, popular progressiveness.

The Popular Front means a struggle for a genuine popular culture, a manifold relationship to every aspect of the life of one's own people as it has developed in its own individual way in the course of history. It means finding the guidelines and slogans which can emerge out of this life of the people and rouse progressive forces to new, politically effective activity. To understand the historical identity of the people does not, of course, imply an uncritical attitude towards one's own history—on the contrary, such criticism is the necessary consequence of real insight into one's own history. For no people, and the Germans least of all, has succeeded in establishing progressive democratic forces in a perfect form and without any setbacks. Criticism must be based, however, on an accurate and profound understanding of the realities of history. Since it was the age of imperialism which created the most serious obstacles to progress and democracy in the spheres of both politics and culture, a trenchant analysis of the decadent manifestations of this period—political, cultural and artistic—is an essential prerequisite for any breakthrough to a genuinely popular culture. A campaign against realism, whether conscious or not, and a resultant impoverishment and isolation of literature and art is one of the crucial manifestations of decadence in the realm of art.

In the course of our remarks we have seen that we should not simply accept this decline fatalistically. Vital forces which combat this decadence not just politically and theoretically, but also with all the instruments at the disposal of art, have made and continue to make themselves felt. The task that faces us is to lend them our support. They are to be found in a realism which has true depth and significance.

Writers in exile, together with the struggles of the Popular Front in Germany and other countries, have inevitably strengthened these positive forces. It might be thought sufficient to point to Heinrich and Thomas Mann,⁴ who, starting from different assumptions, have steadily grown in stature in recent years both as writers and thinkers. But we are concerned here with a broad trend in anti-Fascist literature. We need only compare Feuchtwanger's *Sons* with his *History of the Jewish Wars* to see the strenuous efforts he is making to overcome the subjectivist tendencies which distanced him from the masses, and to assimilate and formulate the real problems of ordinary people. Just a short while ago Alfred Döblin gave a talk in the Paris SDS⁶ in which he declared his commitment to the historical and political relevance of literature and in which he saw a realism of the kind practised by Gorky as exemplary—an event of no little importance for the future course of our

3. Lukács is evidently referring to the celebrated discussion on the value of literature in *Tonio Kröger* [translator's note].

4. In 1933 both Manns were forced into exile by the Nazi government.

5. Lion Feuchtwanger (1884–1958), German writer, one of three editors of *Das Wort*; *The Jewish War* (1932; trans. as *Josephus*) and *The Sons* (1935) are the initial novels in a 3-volume trilogy on the Jewish historian and soldier Flavius Jose-

phus (b. 37/8 C.E.), who both fought against and admired the Romans (and thus the trilogy was also on assimilation vs. Jewishness).

6. SDS—*Der Schutzverband deutscher Schriftsteller* (Association for the Protection of the Rights of German Authors) where Döblin gave an important lecture *Die deutsche Literatur (im Ausland seit 1933)* in January 1938 [translator's note]. Döblin (1878–1957), German writer and early adherent of expressionism.

literature. In the third number of *Das Wort*, Brecht published a one-act playlet (*The Informer*)⁷ in which he turns to what is for him a novel, highly differentiated and subtle form of realism as a weapon in the struggle against the inhumanity of Fascism. By depicting the fates of actual human beings, he provides a vivid image of the horrors of the Fascist reign of terror in Germany. He shows how Fascism destroys the entire foundations of the human community, how it destroys the trust between husbands, wives and children, and how in its inhumanity it actually undermines and annihilates the family, the very institution it claims to protect. Along with Feuchtwanger, Döblin and Brecht one could name a whole series of writers—the most important and the most talented we have—who have adopted a similar strategy, or are beginning to do so.

But this does not mean that the struggle to overcome the anti-realist traditions of the era of imperialism is over. Our present debate shows, on the contrary, that these traditions are still deeply rooted in important and loyal supporters of the Popular Front whose political views are unquestionably progressive. This is why such a forthright but comradely discussion was of such vital importance. For it is not just the masses who learn through their own experiences in the class-struggle; ideologists, writers and critics, have to learn too. It would be a grave error to overlook that growing trend towards realism which has emerged from the experiences of fighters in the Popular Front and which has even affected writers who favoured a very different approach before their emigration.

To make this very point, to reveal some of the intimate, varied and complex bonds which link the Popular Front, popular literature and authentic realism, is the task I have set out to accomplish in these pages.

1938

7. A scene from *Furcht und Elend des dritten Reichs* [1945], trans. by Eric Bentley as *The Private Life of the Master Race*. Brecht's reaction to Lukács's praise has been recorded in his *Arbeitsjournal* (vol. 1, p. 22): "Lukács has welcomed *The Informer* as if I were a sinner returning to the bosom of the Salvation Army. At last something

taken from life itself! He has overlooked the montage of 27 scenes and the fact that it is really no more than a catalogue of gestures, such as the gesture of falling silent, of looking over one's shoulder, of terror, etc.; in short, the gestures of life under a dictatorship" [translator's note]. Brecht's early work was inspired by expressionism.

BORIS EICHENBAUM

1886–1959

The literary critics and theorists known as the Russian formalists flourished during a remarkable period in modern history, one which witnessed the Russian Revolution of 1917 and the first large-scale institution of a socialist state, the Union of Soviet Socialist Republics (U.S.S.R.). This was also an extraordinarily fertile time for experiment and innovation in the arts, as avant-garde modernist literary movements such as symbolism, futurism, and acmeism flourished. Although their movement ended in the late 1920s with the rise of Joseph Stalin and the suppression of ideas perceived to be noncommunist, the Russian formalists constitute the first group of theo-

rists whom many contemporary literary scholars recognize as modern in their theoretical investigations of literary language, innovation, and history. Boris Eichenbaum was a leading figure among the Russian formalists, and his famous "Theory of the 'Formal Method'" (1926) surveys their history and their central theoretical concepts.

At St. Petersburg University, Eichenbaum initially planned to become a medical doctor but switched his studies to language and literature; he graduated in 1912. After teaching at a private secondary school, in 1918 he returned to the university—in 1924 renamed, with the city, Leningrad University in honor of the revolution's leader, V. I. Lenin—as a professor. In 1949 he was dismissed for "eclecticism and cosmopolitanism," but he was reinstated in 1956 at the Institute of Russian Literature at the university, where he taught until his death. Eichenbaum's involvement with the formalist movement represents only one phase, dating from the mid-1910s to 1928, in a long career as a critic and scholar. After 1928 his work shifted from the analytical approach of formalism to a series of biographical studies of the great Russian novelist Leo Tolstoy (1828–1910).

Like all of his colleagues who continued to work in the Stalinist era, Eichenbaum knew that if he wished to continue writing criticism, he would have to support socialist realism. He, like many ex-formalists, chose instead to turn to scholarly research; but unlike them, he faced continued persecution even after abandoning his theoretical work. The reason given was always his early record as a formalist, but probably the real motive, never directly stated, was anti-Semitism. Although Eichenbaum sustained a career on the margins of Soviet academic literary studies, he completed relatively little work after 1930. The final volume of his Tolstoy project appeared only posthumously, and the draft of another volume was lost during the German army's siege of Leningrad during World War II.

In "The Theory of the 'Formal Method,'" Eichenbaum takes stock of the first decade of work of the formalist movement. By using scare quotes around "formal method," he signals that he has adopted for convenience a label coined not by those within the movement but by opponents who criticized their focus on literary language and formal innovations. Most notably, the formalists were attacked in a famous analysis by the Marxist LEON TROTSKY (see above), an early leader of the Russian Revolution as well as a powerful writer on history and literature, who castigated them for their lack of attention to the social significance of literary works. In actuality, those joined under the mantle of formalism were not a tightly unified school but a heterogeneous movement. Although Eichenbaum is careful to say that his essay is not a "dogmatic codification" of formalism, it has regularly been construed as such.

Originally there were two different Russian formalist groups, which later came in close contact. The first was the Moscow Linguistic Circle, which initially gathered in 1914 and was led by ROMAN JAKOBSON until his departure for Prague in 1920. Primarily a group of researchers, the circle applied new scientific developments in linguistics to the study of literature. Other important members of the Moscow group were Osip Brik and Boris Tomashevsky. Meanwhile, in 1916 the Society for the Study of Poetic Language (known by the Russian acronym *Opoyaz*) first gathered in St. Petersburg (then called Petrograd), led by Victor Shklovsky, Eichenbaum, and Yury Tynyanov. Trained as literary scholars, they were less interested in linguistics and more concerned with literary history, although they rebelled against traditional biographical approaches. Both groups were influenced by the heady climate of the Russian Revolution and avant-garde art and literature in Russia, a context that promoted sweeping new ideas in all areas of life and culture. (Another group that flourished in Leningrad simultaneously with *Opoyaz* was the so-called Bakhtin Circle, organized around the philosopher-turned-critic MIKHAIL BAKHTIN). Other linguists and critics sympathetic to but independent of the formalist movement included Leo Jakubinsky, Victor Vinogradov, and Victor Zhirmunsky. Vladimir Propp, a folklorist who worked

apart from both groups, is frequently associated with Russian formalism by present-day critics.

The first five of nine main sections of "The Theory of the 'Formal Method'" survey the themes and issues addressed by formalists during what Eichenbaum calls the movement's initial "years of struggle and polemics," 1916 to 1921. The remaining four sections cover the years 1922 to 1926. Overall, there is a heady as well as combative tone to the essay, recounting in sometimes heightened rhetoric the formalists' accomplishments and struggles against their antagonists ("We had to demolish the academic tradition"), who ranged from academic literary historians, biographers, and cultural critics to Russian symbolist poets and theoreticians, aestheticians, and dogmatic Marxists. Eichenbaum singles out several key opponents, especially Aleksandr Potebnya and Aleksandr Veselovsky, prominent literary scholars who represented the status quo of traditional criticism and thus served as foils. At one point Eichenbaum admits that "the basic passion for our historical-literary work had to be a passion for destruction and negation, and such was the original tone of our theoretical attacks."

"The Theory of the 'Formal Method'" provides a comprehensive review of the preoccupations of the formalists: the desire for a science or "poetics" of literature (hence Eichenbaum cites a biologist in the epigraph to the essay); the linguistic basis of literature and especially of poetry (drawing on Jakobson and others); the distinctive attributes of literature, its "literariness" and its autonomous history; the stress on literary devices; the view of literary history as an evolutionary accretion of innovative devices; the concept of the "dominant" (the focusing element of each literary structure, to which other elements are subordinate); the insistence on form and technique as part of content; and the nature of narrative (notably the key distinction between "story" or *fabula*, the raw chronological events of a narrative, and "plot" or *syuzhet*, the artistic arrangement of events, frequently out of chronological order).

Eichenbaum emphasizes Victor Shklovsky's role as the intellectual leader of the formalist movement, the first to identify and tackle its major concerns. While this stress has perhaps led later critics to overestimate Shklovsky's importance, his contributions were significant. Most influential is his concept of "defamiliarization" (*ostraneniye* in Russian), both as a goal of art and as a category of critical analysis. Using the example of a walk down a familiar street, Shklovsky points out that one's perceptions become automatic, so that one notices only what is out of the ordinary. But, he observes, literary artists take this tendency into account and show things out of the ordinary, thereby freshening and renewing readers' perceptions. This process of defamiliarization becomes a formalist measure of aesthetic value, privileging literary works that make the familiar strange and break the "automatism" of normal expectation; for Shklovsky, literary history builds on such aesthetic innovations.

The Russian formalists' theoretical focus, stress on the functional role of literary devices, and conception of the evolution of literary history distinguish them from other early- and mid-twentieth-century schools of criticism concerned with form, such as the American New Critics. The New Critics largely provided readings of individual literary works, focusing on what WILLIAM K. WIMSATT JR. called "the verbal icon," whereas the Russian formalists were more interested in making theoretical generalizations about the nature of literature and in defining the range of technical linguistic devices common to literary works. Moreover, the Russian formalists proposed an original model of literary history, combining the scientific schematization of devices with an account of historical change.

Although the formalist movement was suppressed, it has continued to wield broad influence. It was a progenitor of the Prague school of structuralism that flourished from the mid-1920s to 1948, especially through the mediation of Jakobson after his arrival there and through the work of Jan Mukařovský. After TZVETAN TODOROV recovered and translated key formalist texts, they provided an important model of analysis for the literary wing of French structuralism in the 1960s and 1970s—notably for

the structuralist narratology of Todorov, ROLAND BARTHES, and Gérard Genette, which in turn influenced later Anglo-American theorists of narrative. Contemporary narrative theory continues to look back to the work of Shklovsky, Eichenbaum, and Propp. The formalist theory of literary history has been foundational for contemporary reception theory, particularly for the work of HANS ROBERT JAUSS, whose central concept of the "horizon of expectation" draws on formalist notions of defamiliarization. The evolutionary theory of literary history has also influenced Marxist accounts of aesthetics, despite Marxist reservations about the formalist view of the autonomy of literature. While in recent years interest in formal approaches to literature has declined—largely giving way to a social consciousness in a sense akin to what Trotsky had demanded—the Russian formalists remain foundational for contemporary theory in their emphases on making theoretical generalizations about the nature of literary works; their use of linguistics and their desire for a more exact, scientific study of literature; and their account of literary history and aesthetic innovation.

BIBLIOGRAPHY

"The Theory of the 'Formal Method'" originally appeared in 1926 (in Ukrainian; the Russian text translated here dates from 1927). Our selection, the best translation in English, is taken from *Russian Formalist Criticism: Four Essays*, translated and edited by Lee T. Lemon and Marion J. Reis (1965), which offers a good place to start investigating Russian formalism. Though uncollected, a number of other key essays from Eichenbaum's formalist period are available in English in diverse sources, among them his important "How Gogol's 'Overcoat' Is Made" (1919), in *Gogol from the Twentieth Century: Eleven Essays* (trans. and ed. Robert A. Maguire, 1974); and "O. Henry and the Theory of the Short Story" (1925), "Literary Environment" (1927), and a different translation of "The Theory of the 'Formal Method,'" all in *Readings in Russian Poetics: Formalist and Structuralist Views*, edited by Ladislav Matejka and Krystyna Pomorska (1971), which is the most comprehensive anthology of formalist writings in English. Additionally, Eichenbaum's monographs include *The Young Tolstoy* (1922; trans. 1972); *Lermontov* (1924; trans. 1977); *Tolstoy in the Fifties* (1928; trans. 1982); *Tolstoy in the Sixties* (1931; trans. 1982) and *Tolstoy in the Seventies* (1960; trans. 1982). The early Tolstoy volume is an analytical study of literary conventions, but its sequels replace formalist method with a biographical orientation. An exemplary biographical study, Carol Any's *Boris Eichenbaum: Voices of a Russian Formalist* (1994), traces several phases of Eichenbaum's career.

The standard critical account in English of Russian formalism as a whole, Victor Erlich's *Russian Formalism: History—Doctrine* (3d ed., 1981) devotes substantial attention to Eichenbaum's role in it. For a retrospective assessment from a colleague, see Roman Jakobson, "Boris Mikhailovich Eikhenbaum," *International Journal of Slavic Linguistics and Poetics* 6 (1963). Perhaps the most influential critical introduction of Russian formalism to contemporary American theory, Fredric Jameson's *Prison-House of Language: A Critical Account of Structuralism and Russian Formalism* (1972) credits Eichenbaum with being "the most pugnacious and combative of the group." In "The Changing Focus of Eikhenbaum's Tolstoy Criticism," *Russian Review* 37 (1978), Harold K. Schefski discusses Eichenbaum's shift away from formalism. See also Peter Steiner's *Russian Formalism: A Metapoetics* (1984) and Juri Streidter's *Literary Structure, Evolution, and Value: Russian Formalism and Czech Structuralism* (1989), which offer significant commentary on Eichenbaum. For comprehensive bibliographies, consult the entries on Eichenbaum in David Gorman's "Bibliography of Russian Formalism in English," *Style* 26 (1992), and his "Supplement to a Bibliography of Russian Formalism in English," *Style* 29 (1995).

From The Theory of the "Formal Method"¹

The worst, in my opinion, are those who describe science as if it were settled.

[*Le pire, à mon avis, est celui qui représente la science comme faite.*]—

A. DE CANDOLLE²

The so-called "formal method" grew out of a struggle for a science of literature that would be both independent and factual; it is not the outgrowth of a particular methodology. The notion of a "method" has been so exaggerated that it now suggests too much. In principle the question for the Formalist³ is not how to study literature, but what the subject matter of literary study actually is. We neither discuss methodology nor quarrel about it. We speak and may speak only about theoretical principles suggested to us not by this or that ready-made methodology, but by the examination of specific material in its specific context. The Formalists' works in literary theory and literary history show this clearly enough, but during the past ten years so many new questions and old misunderstandings have accumulated that I feel it advisable to try to summarize some of our work—not as a dogmatic system but as a historical summation. I wish to show how the work of the Formalists began, how it evolved, and what it evolved into.

The evolutionary character of the development of the formal method is important to an understanding of its history; our opponents and many of our followers overlook it. We are surrounded by eclectics and late-comers who would turn the formal method into some kind of inflexible "formalistic" system in order to provide themselves with a working vocabulary, a program, and a name. A program is a very handy thing for critics, but not at all characteristic of our method. Our scientific approach has had no such prefabricated program or doctrine, and has none. In our studies we value a theory only as a working hypothesis to help us discover and interpret facts; that is, we determine the validity of the facts and use them as the material of our research. We are not concerned with definitions, for which the late-comers thirst; nor do we build general theories, which so delight eclectics. We posit specific principles and adhere to them insofar as the material justifies them. If the material demands their refinement or change, we change or refine them. In this sense we are quite free from our own theories—as science must be free to the extent that theory and conviction are distinct. There is no ready-made science; science lives not by settling on truth, but by overcoming error.

This essay is not intended to argue our position. The initial period of sci-

2. Alphonse de Candolle (1806–1893), Swiss botanist.

3. By "Formalists" I mean in this essay only that group of theoreticians who made up the Society for the Study of Poetic Language (the *Opoyaz*) and who began to publish their studies in 1916

[Eichenbaum's note]. Some of the author's notes have been edited and some omitted. Led by Victor Shklovsky (1893–1984), Eichenbaum, and Yuri Tynyanov (1894–1943), *Opoyaz* was centered in St. Petersburg, but Eichenbaum also includes members of the Moscow Linguistic Circle in his account. Arising independently in 1914 but soon coming into contact with the Petersburg group, the circle was led by ROMAN JAKOBSON (1896–1982), Osip Brik (1888–1945), and Boris Tomashevsky (1890–1957).

entific struggle and journalistic polemics is past. Such attacks as that in *The Press and the Revolution*⁴ (with which I was honored) can be answered only by new scientific works. My chief purpose here is to show how the formal method, by gradually evolving and broadening its field of research, spread beyond the usual "methodological" limits and became a special science of literature, a specific ordering of facts. Within the limits of this science, the most diverse methods may develop, if only because we focus on the empirical study of the material. Such study was, essentially, the aim of the Formalists from the very beginning, and precisely that was the significance of our quarrel with the old traditions. The name "formal method," bestowed upon the movement and now firmly attached to it, may be tentatively understood as a historical term; it should not be taken as an accurate description of our work. Neither "Formalism" as an aesthetic theory nor "methodology" as a finished scientific system characterizes us; we are characterized only by the attempt to create an independent science of literature which studies specifically literary material. We ask only for recognition of the theoretical and historical facts of literary art as such.

1. *The Origins of Formalism*

Representatives of the formal method were frequently reproached by various groups for their lack of clarity or for the inadequacy of their principles—for indifference to general questions of aesthetics, sociology, psychology, and so on. These reproaches, despite their varying merit, are alike in that they correctly grasp that the chief characteristic of the Formalists is indeed their deliberate isolation both from "aesthetics from above" and from all ready-made or self-styled general theories. This isolation (particularly from aesthetics) is more or less typical of all contemporary studies of art. Dismissing a whole group of general problems (problems of beauty, the aims of art, etc.), the contemporary study of art concentrates on the concrete problems of aesthetics. Without reference to socio-aesthetic premises, it raises questions about the idea of artistic "form" and its evolution. It thereby raises a series of more specific theoretical and historical questions. Such familiar slogans as Wölfflin's⁵ "history of art without names" characterized experiments in the empirical analysis of style and technique (like Voll's⁶ "experiment in the comparative study of paintings"). In Germany especially the study of the theory and history of the visual arts, which had had there an extremely rich history of tradition and experiment, occupied a central position in art studies and began to influence the general theory of art and its separate disciplines—in particular, the study of literature. In Russia, apparently for local historical reasons, literary studies occupied a place analogous to that of the visual arts in Germany.

The formal method has attracted general attention and become controversial not, of course, because of its distinctive methodology, but rather because of its characteristic attitude toward the understanding and the study of technique. The Formalists advocated principles which violated solidly entrenched traditional notions, notions which had appeared to be "axio-

6. Karl Voll (1867–1917), German art historian.

matic" not only in the study of literature, but in the study of art generally. Because they adhered to their principles so strictly, they narrowed the distance between particular problems of literary theory and general problems of aesthetics. The ideas and principles of the Formalists, for all their concreteness, were pointedly directed towards a general theory of aesthetics. Our creation of a radically unconventional poetics,⁷ therefore, implied more than a simple reassessment of particular problems; it had an impact on the study of art generally. It had its impact because of a series of historical developments, the most important of which were the crisis in philosophical aesthetics and the startling innovations in art (in Russia most abrupt and most clearly defined in poetry). Aesthetics seemed barren and art deliberately denuded—in an entirely primitive condition. Hence, Formalism and Futurism⁸ seemed bound together by history.

But the general historical significance of the appearance of Formalism comprises a special theme; I must speak of something else here because I intend to show how the principles and problems of the formal method evolved and how the Formalists came to their present position.

Before the appearance of the Formalists, academic research, quite ignorant of theoretical problems, made use of antiquated aesthetic, psychological, and historical "axioms" and had so lost sight of its proper subject that its very existence as a science had become illusory. There was almost no struggle between the Formalists and the Academicians,⁹ not because the Formalists had broken in the door (there were no doors), but because we found an open passageway instead of a fortress. The theoretical heritage which Potebnya and Veselovsky¹ left to their disciples seemed to lay like dead capital—a treasure which they were afraid to touch, the brilliance of which they had allowed to fade. In fact, authority and influence had gradually passed from academic scholarship to the "scholarship" of the journals, to the work of the Symbolist² critics and theoreticians. Actually, between 1907 and 1912 the books and essays of Vyacheslav Ivanov, Bryusov, Merezhkovsky, Chukovsky,³ and others, were much more influential than the scholarly studies and dissertations of the university professors. This journalistic "scholarship," with all its subjectivity and tendentiousness, was supported by the theoretical principles and slogans of the new artistic movements and their propagandists. Such books as Bely's *Simvolizm*⁴ (1910) naturally meant much more to the younger generation than the monographs on the history of literature which sprang up from no set of principles and which showed that the authors completely lacked both a scientific temperament and a scientific point of view.

The historical battle between the two generations [the Symbolists and the Formalists]—a battle which was fought over principles and was extraordi-

1. Aleksandr Potebnya (1835-1891) and Aleksandr Veselovsky (1838-1906), Russian literary scholars.

2. A movement (with origins in 1870s France)

that aimed at renovating Russian poetry at the beginning of the 20th century; it emphasized mysticism and aestheticism, in an impressionistic style.

3. All Russian literary figures associated with symbolism: Ivanov (1866-1949), Valery Bryusov (1873-1924), Dmitri Merezhkovsky (1865-1941), and Korney Chukovsky (1882-1969).

4. *Symbolism (Russian)*. Andrey Bely: the pseudonym of Boris Bugayev (1880-1934), a Russian novelist, poet, and critic.

narily intense—was therefore resolved in the journals, and the battle line was drawn over Symbolist theory and Impressionistic criticism⁵ rather than over any work being done by the Academicians. We entered the fight against the Symbolists in order to wrest poetics from their hands—to free it from its ties with their subjective philosophical and aesthetic theories and to direct it toward the scientific investigation of facts. We were raised on their works, and we saw their errors with the greatest clarity. At this time, the struggle became even more urgent because the Futurists (Khlebnikov, Kruchenykh, and Mayakovsky),⁶ who were on the rise, opposed the Symbolist poetics and supported the Formalists.

The original group of Formalists was united by the idea of liberating poetic diction from the fetters of the intellectualism and moralism which more and more obsessed the Symbolists. The dissension among the Symbolist theoreticians (1910–1911) and the appearance of the Acmeists⁷ prepared the way for our decisive rebellion. We knew that all compromises would have to be avoided, that history demanded of us a really revolutionary attitude—a categorical thesis, merciless irony, and bold rejections of whatever could not be reconciled with our position. We had to oppose the subjective aesthetic principles espoused by the Symbolists with an objective consideration of the facts. Hence our Formalist movement was characterized by a new passion for scientific positivism⁸—a rejection of philosophical assumptions, of psychological and aesthetic interpretations, etc. Art, considered apart from philosophical aesthetics and ideological theories, dictated its own position on things. We had to turn to facts and, abandoning general systems and problems, to begin “in the middle,” with the facts which art forced upon us. Art demanded that we approach it closely; science, that we deal with the specific.

2. *The Science of Literature: The Independent Value of Poetic Sound*

The establishment of a specific and factual literary science was basic to the organization of the formal method. All of our efforts were directed toward disposing of the earlier position which, according to Alexander Veselovsky, made of literature an abandoned thing [a *res nullius*]. This is why the position of the Formalists could not be reconciled with other approaches and was so unacceptable to the eclectics. In rejecting these other approaches, the Formalists actually rejected and still reject not the methods, but rather the irresponsible mixing of various disciplines and their problems. The basis of our position was and is that the object of literary science, as such, must be the study of those specifics which distinguish it from any other material. (The secondary, incidental features of such material, however, may reasonably

5. Unsystematic, subjective criticism; elsewhere Eichenbaum calls it “journalistic” criticism.

6. Three Russian poets and critics: Velimir Khlebnikov (1885–1922), Alexey Kruchenykh (1886–1968), and Vladimir Mayakovsky (1893–1930).

7. The Acmeists, like the Futurists, rebelled against the principles and practices of the Symbolists. But unlike the Futurists, they attempted a

highly controlled, polished style of poetry. The best-known Acmeists were Anna Akhmatova [1889–1966] and Oshp Mandelstam [1891–1938]. The movement did not survive World War I [translators' note].

8. The view that knowledge and meaning derive solely from what can be empirically observed.

and rightly be used in a subordinate way by other scientific disciplines.) Roman Jakobson formulated this view with perfect clarity:

The object of the science of literature is not literature, but literariness—that is, that which makes a given work a work of literature. Until now literary historians have preferred to act like the policeman who, intending to arrest a certain person, would, at any opportunity, seize any and all persons who chanced into the apartment, as well as those who passed along the street. The literary historians used everything—anthropology, psychology, politics, philosophy. Instead of a science of literature, they created a conglomeration of homespun disciplines. They seemed to have forgotten that their essays strayed into related disciplines—the history of philosophy, the history of culture, of psychology, etc.—and that these could rightly use literary masterpieces only as defective, secondary documents.⁹

To apply and strengthen this principle of specificity and to avoid speculative aesthetics, we had to compare literary facts with other kinds of facts, extracting from a limitless number of important orders of fact that order which would pertain to literature and would distinguish it from the others by its function. This was the method Leo Jakubinsky¹ followed in his essays in the first *Opoyaz* collection, in which he worked out the contrast between poetic and practical language that served as the basic principle of the Formalists' work on key problems of poetics. As a result, the Formalists did not look, as literary students usually had, toward history, culture, sociology, psychology, or aesthetics, etc., but toward linguistics, a science bordering on poetics and sharing material with it, but approaching it from a different perspective and with different problems. Linguistics, for its part, was also interested in the formal method in that what was discovered by comparing poetic and practical language could be studied as a purely linguistic problem, as part of the general phenomena of language. The relationship between linguistics and the formal method was somewhat analogous to that relation of mutual use and delimitation that exists, for example, between physics and chemistry. Against this background, the problems posed earlier by Potebnya and taken for granted by his followers were reviewed and reinterpreted.

Leo Jakubinsky's first essay, "On the Sounds of Poetic Language,"² compared practical and poetic language and formulated the difference between them:

The phenomena of language must be classified from the point of view of the speaker's particular purpose as he forms his own linguistic pattern. If the pattern is formed for the purely practical purpose of communication, then we are dealing with a system of *practical language* (the language of thought) in which the linguistic pattern (sounds, morphological features, etc.) have no independent value and are merely a *means* of communication. But other linguistic systems, systems in which the

1. Russian linguist and critic (1892–1945), asso-

ciated with *Opoyaz* but not a member.

2. Leo Jakubinsky, "O zvukakh poeticheskovo yazyka," *Sborniki 1* (1916) [Eichenbaum's note].

practical purpose is in the background (although perhaps not entirely hidden) are conceivable; they exist, and their linguistic patterns acquire *independent value*.

The establishment of this distinction was important both for the construction of a poetics and for understanding the Futurist's preference for "nonsense language"³ as revealing the furthest extension of the sheer "independent" value of words, the kind of value partially observed in the language of children, in the glossolalia of religious sects,⁴ and so on. The Futurist experiments in nonsense language were of prime significance as a demonstration against Symbolism which, in its theories, went no further than to use the idea of "instrumentation" to indicate the accompaniment of meaning by sound and so to de-emphasize the role of sound in poetic language. The problem of sound in verse was especially crucial because it was on this point that the Formalists and Futurists united to confront the theorists of Symbolism. Naturally, the Formalists gave battle at first on just that issue; the question of sound had to be disposed of first if we were to oppose the aesthetic and philosophical tendencies of the Symbolists with a system of precise observations and to reach the underlying scientific conclusions. This accounts for the content of the first volume of *Opoyaz*, a content devoted entirely to the problem of sound and nonsense language.

Victor Shklovsky, along with Jakubinsky, in "On Poetry and Nonsense Language,"⁵ cited a variety of examples which showed that "even words without meaning are necessary." He showed such meaninglessness to be both a widespread linguistic fact and a phenomenon characteristic of poetry. "The poet does not decide to use the meaningless word; usually 'nonsense' is disguised as some kind of frequently delusive, deceptive content. Poets are forced to acknowledge that they themselves do not understand the content of their own verses." Shklovsky's essay, moreover, transfers the question from the area of pure sound, from the acoustical level (which provided the basis for impressionistic interpretations of the relation between sound and the description of objects or the emotion represented), to the level of pronunciation and articulation. "In the enjoyment of a meaningless 'nonsense word,' the articulatory aspect of speech is undoubtedly important. Perhaps generally a great part of the delight of poetry consists in pronunciation, in the independent dance of the organs of speech." The question of meaningless language thus became a serious scientific concern, the solution of which would help to clarify many problems of poetic language in general. Shklovsky also formulated the general question:

If we add to our demand of the word as such that it serve to clarify understanding, that it be generally meaningful, then of course "meaningless" language, as a relatively superficial language, falls by the wayside. But it does not fall alone; a consideration of the facts forces one to wonder whether words always have a meaning, not only in meaningless speech, but also in simple poetic speech—or whether this notion is only a fiction resulting from our inattention.

3. Language used solely for its sound, ignoring its sense.

4. That is, speaking in tongues: ecstatic language-

like utterances.

5. Victor Shklovsky, "O poezii i zaumnom yazyke," *Sborniki* 1 (1916) [Eichenbaum's note].

The natural conclusion of these observations and principles was that poetic language is not only a language of images, that sounds in verse are not at all merely elements of a superficial euphony, and that they do not play a mere "accompaniment" to meaning, but rather that they have an independent significance. The purpose of this work was to force a revision of Potebnya's general theory, which had been built on the conviction that poetry is "thought in images." Potebnya's analysis of poetry, the analysis which the Symbolists had adopted, treated the sound of verse as "expressive" of something behind it. Sound was merely onomatopoeic, merely "aural description." The works of Andrey Bely (who discovered the complete sound picture that champagne makes when poured from a bottle into a glass in two lines from Pushkin, and who also discovered the "noisomeness of a hangover" in Blok's⁶ repetition of the consonantal cluster *rdt*) were quite typical. Such attempts to "explain" alliteration, bordering on parody, required a rebuff and an attempt to produce concrete evidence showing that sounds in verse exist apart from any connection with imagery, that they have an independent oral function.

Leo Jakubinsky, in his essays, provided linguistic support for [our arguments in favor of] the independent value of sound in verse. Osip Brik's essay on "Sound Repetitions"⁷ illustrated the same point with quotations from Pushkin and Lermontov⁸ arranged to present a variety of models. Brik doubted the correctness of the common opinion that poetic language is a language of "images":

No matter how one looks at the interrelationship of image and sound, there is undoubtedly only one conclusion possible—the sounds, the harmonies, are not only euphonic accessories to meaning; they are also the result of an independent poetic purpose. The superficial devices of euphony do not completely account for the instrumentation of poetic speech. Such instrumentation represents on the whole an intricate product of the interaction of the general laws of harmony. Rhyme, alliteration, etc., are only obvious manifestations, particular cases, of the basic laws of euphony.

In opposing the work of Bely, Brik, in the same essay, made no comment at all on the meaning of this or that use of alliteration, but merely affirmed that repetition in verse is analogous to tautology in folklore—that is, that repetition itself plays something of an aesthetic role: "Obviously we have here diverse forms of one general principle, the principle of simple combination, by which either the sounds of the words or their meanings, or now one and now the other, serve as the material of the combination." Such an extension of one device to cover the various forms of poetic material is quite characteristic of the work of the Formalists during their initial period. After the presentation of Brik's essay the question of sound in verse lost something of its urgency, and the Formalists turned to questions of poetics in general.

6. Aleksandr Blok (1880–1921), Russian poet associated with symbolism. Aleksandr Pushkin (1799–1837), great Russian writer of fiction, plays, and especially poetry.

7. Osip Brik, "Zvukovye povtory," *Sborniki* 2 (1917) [Eichenbaum's note].

8. Mikhail Lermontov (1814–1841), Russian poet and novelist.

3. *Content and Correspondent Form Versus Technique as Content*

The Formalists began their work with the question of the sounds of verse—at that time the most controversial and most basic question. Behind this particular question of poetics stood more general theses which had to be formulated. The distinction between systems of poetic and practical language, which defined the work of the Formalists from the very beginning, was bound to result in the formulation of a whole group of basic questions. The idea of poetry as "thought by means of images" and the resulting formula, "Poetry = Imagery," clearly did not coincide with our observations and contradicted our tentative general principles. Rhythm, sound, syntax—all of these seemed secondary from such a point of view; they seemed uncharacteristic of poetry and necessarily extraneous to it. The Symbolists accepted Potebnya's general theory because it justified the supremacy of the image-symbol; yet they could not rid themselves of the notorious theory of the "harmony of form and content" even though it clearly contradicted their bent for formal experimentation and discredited it by making it seem mere "aestheticism." The Formalists, when they abandoned Potebnya's point of view, also freed themselves from the traditional correlation of "form and content" and from the traditional idea of form as an envelope, a vessel into which one pours a liquid (the content). The facts of art demonstrate that art's uniqueness consists not in the "parts" which enter into it but in their original use. Thus the notion of form was changed; the new notion of form required no companion idea, no correlative.

Even before the formation of the *Opoyaz* in 1914, at the time of the public performances of the Futurists, Shklovsky had published a monograph, *The Resurrection of the Word*,⁹ in which he took exception partly to the concepts set forth by Potebnya and partly to those of Veselovsky (the question of imagery was not then of major significance) to advance the principle of perceptible form as the specific sign of artistic awareness:

We do not experience the commonplace, we do not see it; rather, we recognize it. We do not see the walls of our room; and it is very difficult for us to see errors in proofreading, especially if the material is written in a language we know well, because we cannot force ourselves to see, to read, and not to "recognize" the familiar word. If we have to define specifically "poetic" perception and artistic perception in general, then we suggest this definition: "Artistic" perception is that perception in which we experience form—perhaps not form alone, but certainly form.

Perception here is clearly not to be understood as a simple psychological concept (the perception peculiar to this or that person), but, since art does not exist outside of perception, as an element in art itself. The notion of "form" here acquires new meaning; it is no longer an envelope, but a complete thing, something concrete, dynamic, self-contained, and without a correlative of any kind. Here we made a decisive break with the Symbolist principle that some sort of "content" is to shine through the "form." And we

9. Victor Shklovsky, *Voskresheniye slova* (Petersburg, 1914) [Eichenbaum's note].

broke with "aestheticism"—the preference for certain elements of form consciously isolated from "content."

But these general acknowledgements that there are differences between poetic and practical language and that the specific quality of art is shown in its particular use of the material were not adequate when we tried to deal with specific works. We had to find more specific formulations of the principle of perceptible form so that they could make possible the analysis of form itself—the analysis of form understood as content. We had to show that the perception of form results from special artistic techniques which force the reader to experience the form. Shklovsky's "Art as Technique," presenting its own manifesto of the Formalist method, offered a perspective for the concrete analysis of form. Here was a really clear departure from Potebnaya and Potebnayism and, at the same time, from the theoretical principles of Symbolism. The essay began with objections to Potebnaya's basic view of imagery and its relation to content. Shklovsky indicates, among other things, that images are almost always static:

The more you understand an age, the more convinced you become that the images a given poet used and which you thought his own were taken almost unchanged from another poet. The works of poets are classified or grouped according to the new techniques they discover and share, and according to their arrangement and development of the resources of language; poets are much more concerned with arranging images than creating them. Images are given to poets; the ability to remember them is far more important than the ability to create them. Imagistic thought does not, in any case, include all aspects of art or even all aspects of verbal art. A change in imagery is not essential to the development of poetry.¹

He further pointed out the difference between poetic and nonpoetic images. The poetic image is defined as one of the devices of poetic language—as a device which, depending upon the problem, is as important as such other devices of poetic language as simple and negative parallelism, comparison, repetition, symmetry, hyperbole, etc., but no more important. Thus imagery becomes a part of a system of poetic devices and loses its theoretical dominance.

Shklovsky likewise repudiated the principle of artistic economy, a principle which had been strongly asserted in aesthetic theory, and opposed it with the device of "defamiliarization"² and the notion of "roughened form." That is, he saw art as increasing the difficulty and span of perception "because the process of perception is an aesthetic end in itself and must be prolonged";³ he saw art as a means of destroying the automatism of perception; the purpose of the image is not to present the approximate meaning of its object to our understanding, but to create a special perception of the object—the creation of its "vision," and not the "recognition" of its meaning. Hence the image is usually connected with the process of defamiliarization.

1. Victor Shklovsky, "Art as Technique" (1917), in *Russian Formalist Criticism: Four Essays*, trans. and ed. Lee T. Lemon and Marlon J. Reis (Lincoln: University of Nebraska Press, 1965), p. 7.

2. A formalist technical term (*ostraneniye* in Russian, also translated as "making strange") for mak-

ing a familiar word, image, or event seem strange, thus countering habituated perception or "automatism" and provoking renewed aesthetic response. A related concept is that of "roughened" (*zatrudnyonny*) form.

3. Shklovsky, "Art as Technique," p. 12.

The break with Potebnya was formulated definitely in Shklovsky's essay "Potebnya."⁴ He repeats once more that imagery—symbolization—does not constitute the specific difference between poetic and prosaic (practical) language:

Poetic language is distinguished from practical language by the perception of its structure. The acoustical, articulatory, or semantic aspects of poetic language may be felt. Sometimes one feels the verbal structure, the arrangement of the words, rather than their texture. The poetic image is one of the ways, but only one of the ways, of creating a perceptible structure designed to be experienced within its very own fabric. . . . The creation of a scientific poetics must begin inductively with a hypothesis built on an accumulation of evidence. That hypothesis is that poetic and prosaic languages exist, that the laws which distinguish them exist, and, finally, that these differences are to be analyzed.

These essays are to be read as the summation of the first phase of the Formalists' work. The main achievement of this period consisted in our establishment of a series of theoretical principles which provided working hypotheses for a further investigation of the data for the defeat of the current theories based on Potebnyaism. The chief strength of the Formalists, as these essays show, was neither the direction of their study of so-called "forms" nor the construction of a special "method"; their strength was founded securely on the fact that the specific features of the verbal arts had to be studied and that to do so it was first necessary to sort out the differing uses of poetic and practical language. Concerning form, the Formalists thought it important to change the meaning of this muddled term. It was important to destroy these traditional correlatives and so to enrich the idea of form with new significance. *The notion of "technique,"*⁵ because it has to do directly with the distinguishing features of poetic and practical speech, *is much more significant in the long-range evolution of formalism than is the notion of "form."*

4. Applications of Theory: Questions of Plot and Literary Evolution

The preliminary stage of our theoretical work had passed. We had proposed general principles bearing directly upon factual material. We now had to move closer to the material and to make the problems themselves specific. At the center stood those questions of theoretical poetics that had previously been outlined only in general form. We had to move from questions about the sound of verse to a general theory of verse. The questions about the sound of verse, when originally posed, were meant only as illustrations of the difference between poetic and practical language. We had to move from questions about "technique-in-general" to the study of the specific devices of composition, to inquiry about plot, and so on. Our interest in opposing Veselovsky's general view and, specifically, in opposing his theory of plot, developed side by side with our interest in opposing Potebnya's.

At this time, the Formalists quite naturally used literary works only as material for supporting and testing their theoretical hypothesis; we had put

4. Victor Shklovsky, "Potebnya," *Poetika* (1919) [Eichenbaum's note].

5. A formalist technical term (*prijom* in Russian,

also translated as "device") for any of the basic elements that have a function in an artistic composition.

aside questions of convention, literary evolution, etc. Now we felt it important to widen the scope of our study, to make a preliminary survey of the data, and to allow it to establish its own kind of "laws." In this way we freed ourselves from the necessity of resorting to abstract premises and at the same time mastered the materials without losing ourselves in details.

Shklovsky, with his theory of plot and fiction, was especially important during this period. He demonstrated the presence of special devices of "plot construction" and their relation to general stylistic devices in such diverse materials as the *skaz*, Oriental tales,⁶ Cervantes' *Don Quixote*, Tolstoy's works, Sterne's *Tristram Shandy*,⁷ and so on. I do not wish to go into details—those should be treated in specialized works and not in a general essay such as this on the Formalist method—but I do wish to cover those ideas in Shklovsky's treatment of plot which have a theoretical significance beyond any relationship they might have to particular problems of plots as such. Traces of those ideas can be found in the most advanced pieces of Formalist criticism.

The first of Shklovsky's works on plot, "The Relation of Devices of Plot Construction to General Devices of Style,"⁸ raised a whole series of such ideas. In the first place, the proof that special devices of plot arrangement exist, a proof supported by the citation of great numbers of devices, changed the traditional notion of plot as a combination of a group of motifs⁹ and made plot a compositional rather than a thematic concept. Thus the very concept of plot was changed; *plot* was no longer synonymous with *story*.¹ Plot construction became the natural subject of Formalist study, since plot constitutes the specific peculiarity of narrative *art*. The idea of form had been enriched, and as it lost its former abstractness, it also lost its controversial meaning. Our idea of form had begun to coincide with our idea of literature as such, with the idea of the literary fact.

Furthermore, the analogies which we established between the devices of plot construction and the devices of style had theoretical significance, for the step-by-step structure usually found in the epic was found to be analogous to sound repetition, tautology, tautological parallelism, and so on. All illustrated a general principle of verbal art based on parceling out and impending the action.

For instance, Roland's three blows on the stone in the *Song of Roland*² and the similar triple repetition common in tales may be compared, as a single type of phenomenon, with Gogol's³ use of synonyms and with such linguistic structures as "hoity-toity," "a diller, a dollar," etc.⁴ "These varia-

6. Folktales with exotic settings in India, Persia, and Arabic countries, like those collected in the *Arabian Nights*, written in Arabic but first translated and published in Europe in the eighteenth century. *Skaz*: a Russian literary form; perhaps best translated "yarn."

7. The works of three novelists working in different languages and periods: in Spanish, Miguel de Cervantes (1567–1616), also a poet and playwright, best-known for *Don Quixote* (1606, 1616); in Russian, Leo Tolstoy (1828–1910), who wrote plays and moral philosophy as well as novels, including *War and Peace* (1863–69); and in English, Laurence Sterne (1713–1768), whose *Tristram Shandy* (1759–67) is a deliberately eccentric "life" of its hero.

8. First published in Russian in 1919; translated in Viktor Shklovsky, *Theory of Prose*, trans. Benja-

min Sher (Elmwood Park, Ill.: Dalkey Archive Press, 1990), pp. 15–51.

9. The smallest isolatable units of narrative (a term from folklore study).

1. A seminal formalist distinction in narrative theory: "story" (*fabula*, Latin) designates the events in their chronological sequence; "plot" (*syuzhet*, Russian) refers to the events in the order they are arranged by the author.

2. An 11th-century French epic; Roland, one of Charlemagne's paladins, attempts three times to break his sword against a stone to keep it from his enemies' hands.

3. Nikolay Gogol (1809–1852), Russian novelist and dramatist.

4. Eichenbaum gives two nonsense phrases here, *kudy-mudy* and *plyushki-mlyushki*. The point is that repetition of sound alone may keep alive cer-

tions of step-by-step construction usually do not all occur together, and attempts have been made to give each case a special explanation." Shklovsky shows how we attempt to demonstrate that the same device may reappear in diverse materials. Here we clashed with Veselovsky, who in such cases usually avoided theory and resorted to historical-genetic hypotheses. For instance, he explained epic repetition as a mechanism for the original performance (as embryonic song). But an explanation of the genetics of such a phenomenon, even if true, does not clarify the phenomenon as a fact of literature. Veselovsky and other members of the ethnographic school⁵ used to explain the peculiar motifs and plots of the *skaz* by relating literature and custom; Shklovsky did not object to making the relationship but challenged it only as an explanation of the peculiarities of the *skaz*—he challenged it as an explanation of a specifically literary fact. The study of literary genetics can clarify only the origin of a device, nothing more; poetics must explain its literary function. The genetic point of view fails to consider the device as a self-determined use of material; it does not consider how conventional materials are selected by an author, how conventional devices are transformed, or how they are made to play a structural role. The genetic point of view does not explain how a convention may disappear and its literary function remain. The literary function remains not as a simple experience but as a literary device retaining a significance over and beyond its connection with the convention. Characteristically, Veselovsky had contradicted himself by considering the adventures of the Greek romance⁶ as purely stylistic devices.

The Formalists naturally opposed Veselovsky's "ethnographism" because it ignored the special characteristic of the literary device and because it replaced the theoretical and evolutionary point of view with a genetic point of view.

Veselovsky saw "syncretism"⁷ as a phenomenon of primitive poetry, a result of custom, and he later was censured for this in B. Kazansky's "The Concept of Historical Poetics."⁸ Kazansky repudiated the ethnographic point of view by affirming the presence of syncretic tendencies in the very nature of each art, a presence especially obvious in some periods. The Formalists naturally could not agree with Veselovsky when he touched upon general questions of literary evolution. If the clash with the Potebnyaists clarified basic principles of poetics, the clash with Veselovsky's general view and with that of his followers clarified the Formalists' views on literary evolution and, thereby, on the structure of literary history.

Shklovsky began to deal with the subject of literary evolution in the essay I cited previously, "The Relation of Devices of Plot Construction to General Devices of Style." He had encountered Veselovsky's formula, a formula broadly based on the ethnographic principle that "the purpose of new form is to express new content," and he decided to advance a completely different point of view:

The work of art arises from a background of other works and through association with them. The form of a work of art is defined by its relation

tain otherwise meaningless expressions [translators' note].

5. That is, those explaining literary material in terms of cultural background; ethnography is a field of anthropology.

6. Prose narratives introduced in the 1st century

B.C.E., characterized by complicated adventures, terrifying dangers, and eroticism.

7. The combination of forms and beliefs.

to other works of art, to forms existing prior to it. . . . Not only parody, but also any kind of work of art is created parallel to and opposed to some kind of form. *The purpose of the new form is not to express new content, but to change an old form which has lost its aesthetic quality.*⁹

Shklovsky supported this thesis with B[roder] Christiansen's¹ demonstration of "differentiated perceptions" or "perceptions of difference." He sees that the dynamism characteristic of art is based on this and is manifested in repeated violations of established rules. At the close of his essay, he quotes F[erdinand] Brunetière's² statements that "of all the influences active in the history of literature, the chief is the influence of *work on work*," and that "one should not, without good cause, increase the number of influences upon literature, under the assumption that literature is the expression of society, nor should one confuse the history of literature with the history of morals and manners. These are entirely different things."

Shklovsky's essay marked the changeover from our study of theoretical poetics to our study of the history of literature. Our original assumptions about form had been complicated by our observation of new features of evolutionary dynamics and their continuous variability. Our moving into the area of the history of literature was no simple expansion of our study; it resulted from the evolution of our concept of form. We found that we could not see the literary work in isolation, that we had to see its form against a background of other works rather than by itself. Thus the Formalists definitely went beyond "Formalism," if by "Formalism" one means (as some poorly informed critics usually did) some fabricated system which permitted us to be "classified," some system which zealously adapted itself to logic-chopping, or some system which joyously welcomed any dogma. Such scholastic "Formalism" was neither historical nor essentially connected with the work of the *Opoyaz*. We were not responsible for it; on the contrary, we were irreconcilably its enemies on principle.

5. Prose Fiction: "Motivation" and Exposed Structure

Later I shall return to the historical-literary work of the Formalists, but now I wish to conclude the survey of those theoretical principles and problems contained in the early work of the *Opoyaz*. The Shklovsky essay I referred to above contains still another idea which figured prominently in the subsequent study of the novel—the idea of "motivation."³ The discovery of various techniques of plot construction (step-by-step structure, parallelism, framing, the weaving of motifs, etc.) clarified the difference between the elements used in the construction of a work and the elements comprising its material (its story, the choice of motifs, the characters, the themes, etc.). Shklovsky stressed this difference at that time because the basic problem was to show the identity of individual structural devices in the most diverse materials imaginable. The old scholarship worked exclusively with the material, taking it as the "content" and treating the remainder as an "external

3. A formalist technical term for the functional

reason governing the use of a particular device, ranging from a way to shock readers to the insertion of specific props required to further events in the action.

form" either totally without interest or of interest only to the dilettante. Hence the naive and pathetic aesthetics of our older literary critics and historians, who found "neglect of form" in Tyutchev's⁴ poetry and simply "bad form" in Nekrasov and Dostoevsky.⁵ The literary reputations of these authors were saved because their intensity of thought and mood excused their formlessness. Naturally, during the years of struggle and polemics against such a position, the Formalists directed all their forces to showing the significance of such compositional devices as motivation and ignored all other considerations. In speaking of the formal method and its evolution, we must constantly remember that many of the principles advanced by the Formalists in the years of tense struggle were significant not only as scientific principles, but also as slogans, as paradoxes sharpened for propaganda and controversy. To ignore this fact and to treat the work of the *Opoyaz* (between 1916 and 1921) in the same way as one would treat the academic scholarship is to ignore history.

The concept of motivation permitted the Formalists to approach literary works (in particular, novels and short stories) more closely and to observe the details of their structure, which Shklovsky did in two later works, *Plot Development* and *Sterne's Tristram Shandy and the Theory of the Novel*.⁶ In these works, he studied the relationship between technique and motivation in Cervantes' *Don Quixote* and Sterne's *Tristram Shandy*. He uses *Tristram Shandy* as material for the study of the structure of the short story and the novel apart from literary history, and he studies *Don Quixote* as an instance of the transition from collections of tales (like the *Decameron*⁷) to the novel with a single hero whose travels justify or "motivate" its episodic structure. *Don Quixote* was chosen because the devices it contains and their motivation are not fully integrated into the entire context of the novel. Material is often simply inserted, not welded in; devices of plot construction and methods of using material to further the plot structure stand out sharply, whereas later structures tend "more and more to integrate the material tightly into the very body of the novel." While analyzing "how *Don Quixote* was made," Shklovsky also showed the instability of the hero and concluded that his "type" appeared "as the result of the business of constructing the novel." Thus the dominance of structure, of plot over material, was emphasized.

Neither a work fully "motivated" nor an art which deliberately does away with motivation and exposes the structure provides the most suitable material for the illumination of such theoretical problems. But the very existence of a work such as *Don Quixote*, with a deliberately exposed structure, confirms the relevance of these problems, confirms the fact that the problems need to be stated as problems, and confirms the fact that they are *significant* literary problems. Moreover, we were able to explain works of literature entirely in the light of these theoretical problems and principles, as Shklovsky did with *Tristram Shandy*. Shklovsky not only used the book to illustrate our theoretical position, he gave it new significance and once more attracted

4. Fyodor Tyutchev (1803-1873), Russian poet.

5. Fyodor Dostoyevsky (1821-1881), major Russian novelist. Nikolay Nekrasov (1821-1878), Russian poet and editor.

6. Both essays were first published in Russian in 1921, and are translated in Shklovsky, *Theory of Prose*. The latter, translated as "Sterne's *Tristram*

Shandy: Stylistic Commentary," also appears in Lemon and Reis, *Russian Formalist Criticism*, pp. 25-57.

7. A collection of 100 tales in a frame story (1351-53), the most famous work of the Italian prose writer and poet GIOVANNI BOCCACCIO.

attention to it. Studied against the background of an interest in the *structure* of the novel, Sterne became a contemporary; people spoke about him, people who previously had found in his novel only boring chatter or eccentricities, or who had prejudged it from the point of view of its notorious "sentimentalism," a characteristic for which Sterne is as little to blame as Gogol for "realism."

Shklovsky pointed out Sterne's deliberate laying bare⁸ of his methods of constructing *Tristram Shandy* and asserted that Sterne had "exaggerated" the structure of the novel. He had shown his awareness of form by his manner of violating it and by his manner of assembling the novel's contents. In his conclusion to the essay, Shklovsky formulated the difference between plot and story:

The idea of plot is too often confused with the description of events— with what I propose provisionally to call the *story*. The story is, in fact, only material for plot formulation. The plot of *Eugeny Onegin*⁹ is, therefore, not the romance of the hero with Tatyana, but the fashioning of the subject of this story as produced by the introduction of interrupting digressions. . . .

The forms of art are explainable by the laws of art; they are not justified, by their realism. Slowing the action of a novel is not accomplished by introducing rivals, for example, but by simply *transposing* parts. In so doing the artist makes us aware of the aesthetic laws which underlie both the transposition and the slowing down of the action.¹

My essay "How Gogol's 'Greatcoat' Was Made,"² also considers the structure of the novel, comparing the problem of plot with the problem of the *skaz*—the problem of structure based upon the narrator's manner of telling what had happened. I tried to show that Gogol's text "was made up of living speech patterns and vocalized emotions," that words and sentences are selected and joined by Gogol as they are in the oral *skaz*, in which articulation, mimicry, sound gestures, and so on, play a special role. From this point of view I showed how the structure of "The Greatcoat" imparts a grotesque tone to the tale by replacing the usual humor of the *skaz* (with its anecdotes, puns, etc.) with sentimental-melodramatic declamation. I discussed, in this connection, the end of "The Greatcoat" as the apotheosis of the grotesque—not unlike the mute scene in *The Inspector General*.³ The traditional line of argument about Gogol's "romanticism" and "realism" proved unnecessary and unilluminating.

Thus we began to make some progress with the problem of the study of prose. The line between the idea of plot as structure and the idea of the story as material was drawn; this explanation of the typical techniques of plot construction opened the door for work on the history and theory of the novel; and furthermore, the *skaz* was treated as the structural basis of the plotless short story. These works have influenced a whole series of recent studies by persons not directly connected with the *Opoyaz*.

8. A formalist technical term (*obnazheniye*, Russian) for introducing an element in a composition without any artistic justification, thereby signaling that element's functional role (e.g., presenting a meeting as pure coincidence rather than trying to explain it).

9. An 1833 novel in verse by Pushkin (the title is

usually translated *Eugene Onegin*); Tatyana is its heroine.

1. Shklovsky, "Sterne's *Tristram Shandy*," p. 57.

2. First published in Russian in 1919. "The Greatcoat" (1842) is Gogol's best-known story.

3. An 1836 play by Gogol; it ends with a minute and a half of silence as the curtain falls.

6. Poetry: Meter *versus* a Complete Linguistic Prosody: Syntax, Intonation, Phonemics

As our theoretical work broadened and deepened it naturally became specialized—the more so because persons who were only beginning their work or who had been working independently joined the *Opoyaz* group. Some of them specialized in the problems of poetry, others in the problems of prose. The Formalists insisted upon keeping clear the demarcation between poetry and prose in order to counterbalance the Symbolists, who were then attempting to erase the boundary line both in theory and in practice by painstakingly attempting to discover meter in prose.

The earlier sections of this essay show the intensity of our work on prose. We were pioneers in the area. Several Western works resembled ours (in particular, such observations on story material as Wilhelm Dibelius' *Englische Romankunst*,⁴ 1910), but they had little relevance to our theoretical problems and principles. In our work on prose we felt almost free from tradition; but in dealing with verse the situation was different. The great number of works by Western and Russian literary theorists, the numerous practical and theoretical experiments of the Symbolists, and the special literature of the controversies over the concepts of rhythm and meter (produced between 1910 and 1917) complicated our study of poetry. The Futurists, in that same period, were creating new verse forms, and this complicated things still more. Given such conditions, it was difficult for us to pose the right problems. Many persons, instead of returning to basic questions, were concerned with special problems of metrics or with trying to put the accumulation of systems and opinions in good order. Meanwhile, we had no general theory of poetry: no theoretical elucidations of verse rhythm, of the connection of rhythm and syntax, of the sounds of verse (the Formalists had indicated only a few linguistic premises), of poetic diction and semantics, and so on. In other words, the nature of verse as such remained essentially obscure. We had to draw away from particular problems of metrics and to approach verse from some more disciplined perspective. We had, first of all, to pose the problem of rhythm so that it did not rest on metrics and would include a more substantial part of poetic speech.

Here, as in the previous section, I shall dwell upon the problem of verse only insofar as its exploration led to a new theoretical view of verbal art or a new view of the nature of poetic speech. Our position was stated first in Osip Brik's "On Rhythmic-Syntactic Figures" [1920], an unpublished lecture delivered before the *Opoyaz* group and, apparently, not even written out.⁵ Brik demonstrated that verse contained stable syntactical figures indissolubly connected with rhythm. Thus rhythm was no longer thought of as an abstraction; it was made relevant to the very linguistic fabric of verse—the phrase. Metrics became a kind of background, significant, like the alphabet, for the reading and writing of verse. Brik's step was as important for the study of verse as the discovery of the relation of plot to structure was for the study of prose. The discovery that rhythmic patterns are related to the grammatical patterns of sentences destroyed the notion that rhythm is a superficial appendage, something floating on the surface of speech. Our theory of verse

4. *Art of the English Novel* (German). Dibelius (1876–1931), German literary scholar.

5. Brik's lecture was published in 1927 in *New Left* [translators' note].

was founded on the analysis of rhythm as the structural basis of verse, a basis which of itself determined all of its parts—both acoustical and nonacoustical. A superior theory of verse, which would make metrics but a kindergarten preparation, was in sight. The Symbolists and the group led by Bely, despite their attempts, could not travel our road because they still saw the central problem as metrics in isolation.

But Brik's work merely hinted at the possibility of a new way; like his first essay, "Sound Repetitions,"⁶ it was limited to showing examples and arranging them into groups. From Brik's lecture one could move either into new problems or into the simple classification and cataloging, or systematizing, of the material. The lecture was not necessarily an expression of the formal method. V[ictor] Zhirmunsky continued the work of classification, in *The Composition of Lyric Verse*.⁷ Zhirmunsky, who did not share the theoretical principles of the *Opoyaz*, was interested in the formal method as only one of the possible scientific approaches to the division of materials into various groups and headings. Given his understanding of the formal method, he could do nothing else; he accepted any superficial feature as a basis for the grouping of materials. Hence the unvarying cataloging and the pedantic tone of all of Zhirmunsky's theoretical work. Such works were not a major influence in the general evolution of the formal method; in themselves they merely emphasized the tendency (evidently historically inevitable) to give the formal method an academic quality. It is not surprising, therefore, that Zhirmunsky later completely withdrew from the *Opoyaz* over a difference of opinion about the principles he stated repeatedly in his last works (especially in his introduction to the translation of O[skar] Walzel's⁸ *The Problem of Form in Poetry* [1923]).

My book, *Verse Melody*,⁹ which was prepared as a study of the phonetics of verse and so was related to a whole group of Western works (by Sievers, Saran,¹ etc.), was relevant to Brik's work on rhythmic-syntactic figures. I maintained that stylistic differences were usually chiefly lexical:

With that we drop the idea of versification as such, and take up poetic language in general. . . . We have to find something related to the *poetic phrase* that does not also lead us away from the *poetry* itself, something bordering on both phonetics and semantics. This "something" is syntax.

I did not examine the rhythmic-syntactic phenomena in isolation, but as part of an examination of the structural significance of metrical and vocal intonation. I felt it especially important both to assert the idea of a *dominant*,² upon which a given poetic style is organized, and to isolate the idea of "melody" as a system of intonations from the idea of the general "musicality" of verse. On this basis, I proposed to distinguish three fundamental styles of lyric poetry: declamatory (oratorical), melodic, and conversational. My entire book is devoted to the peculiarities of the melodic style—to peculiarities in the material of the lyrics of Zhukovsky, Tyutchev, Lermontov, and Fet.³

6. Published in Russian in 1919.

1. Franz Saran (1866–1931), German verse theorist. Eduard Stevers (1850–1932), German linguist.

2. A formalist technical term for the element in a composition to which other elements are subordinate; for the formalists, a composition is not merely a set of elements but a hierarchy of them.

3. Afanasy Fet (1820–1892), Russian lyric poet. Vasily Zhukovsky (1783–1852), Russian poet and translator.

Avoiding ready-made schematizations, I ended the book with the conviction that "in scientific work, I consider the ability to see facts far more important than the construction of a system. Theories are necessary to clarify facts; in reality, theories are made of facts. Theories perish and change, but the facts they help discover and support remain."

The tradition of specialized metrical studies still continued among the Symbolist theoreticians (Bely, Bryusov, Bobrov,⁴ Chudovsky, and others), but it gradually turned into precise statistical enumeration and lost what had been its dominant characteristic. Here the metrical studies of Boris Tomashevsky, concluded in his text *Russian Versification*,⁵ played the most significant role. Thus, as the study of metrics became secondary, a subsidiary discipline with a very limited range of problems, the general theory of verse entered its first stage.

Tomashevsky's "Pushkin's Iambic Pentameter"⁶ outlined the entire previous course of developments within the formal method, including its attempt to broaden and enrich the notion of poetic rhythm and to relate it to the structure of poetic language. The essay also attempted to go beyond the idea of meter in language. Hence the basic charge against Bely and his school: "The problem of rhythm is not conformity to imaginary meters; it is rather the distribution of expiratory energy within a single wave—the line itself."⁷ In "The Problems of Poetic Rhythm" Tomashevsky expressed this with perfect clarity of principle. Here the earlier conflict between meter and rhythm is resolved by applying the idea of rhythm in verse to all of the elements of speech that play a part in the structure of verse. The rhythms of phrasal intonation and euphony (alliterations, etc.) are placed side by side with the rhythm of word accent. Thus we came to see the line as a *special form of speech* which functions as a single unit in the creation of poetry. We no longer saw the line as something which could create a "rhythmic variation" by resisting or adjusting to the metrical form (a view which Zhirmunsky continued to defend in his new work, *Introduction to Metrics*⁸). Tomashevsky wrote that:

Poetic speech is *organized* in terms of its sounds. Taken singly, any phonetic element is subject to rules and regulations, but sound is a *complex* phenomenon. Thus classical metrics singles out accent and normalizes it by its rules. . . . But it takes little effort to shake the authority of traditional forms, because the notion persisted that the nature of verse is not fully explained by a single distinguishing feature, that poetry exists in "secondary" features, that a recognizable rhythm exists alongside meter, that poetry can be created by imposing a pattern on only these secondary features, and *that speech without meter may sound like poetry*.

The important idea of a "rhythmic impulse" (which had figured earlier in Brik's work) with a general rhythmic function is maintained here:

Rhythmic devices may participate in various degrees in the creation of an artistic-rhythmic effect; this or that device may dominate various

4. Sergei Bobrov (1889–1971), Russian poet, critic, and novelist.

5. Published in Russian in 1923.

6. Boris Tomashevsky, "Pyatistopny iamb Pushkina," *Ocherki po poetike Pushkina* [Essays on the Poetics of Pushkin] (Berlin, 1923) [Eichenbaum's

note].

7. Boris Tomashevsky, "Problema stikhotvornovo ritma," *Literaturnaya mysl* [Literary Thought] 2 (1922) [Eichenbaum's note].

8. Published in Russian in 1925.

works—this or that means may be the *dominant*. The use of a given rhythmic device determines the character of the particular rhythm of the work. On this basis poetry may be classified as accented-metrical poetry (e.g., the description of the Battle of Poltava⁹), intoned-melodic poetry (the verses of Zhukovsky), or harmonic poetry (common during the recent years of Russian Symbolism).

Poetic form, so understood, is not contrasted with anything outside itself—with a “content” which has been laboriously set inside this “form”—but is understood as the genuine content of poetic speech. Thus the very idea of form, as it had been understood in earlier works, emerged with a new and more adequate meaning.

7. Toward a More Complete Prosody

In his essay “On Czech Versification” Roman Jakobson pointed out new problems in the general theory of poetic rhythm.¹ He opposed the [earlier] theory that “verse adapts itself completely to the spirit of the language,” that is, that “form does not resist the material [it shapes]” with the theory that “poetic form is the organized coercion of language.” He applied this refinement of the more orthodox view—a refinement in keeping with the formalist method—to the question of the difference between the phonetic qualities of practical language and those of poetic language. Although Jakobson had noted that the dissimilation of liquid consonants² is relatively infrequent in poetry, Jakobson showed that it existed in both poetic and practical language but that in practical language it is “accidental”; in poetic language it is, “so to speak, contrived; these are two distinct phenomena.”

In the same essay Jakobson also clarified the principle distinction between emotional and poetic language (a distinction he had previously considered in his first book, *Modern Russian Poetry*):

Although poetry may use the methods of emotive language, it uses them only for *its own* purposes. The similarities between the two kinds of language and the use of poetic language in the way that emotive language is used frequently leads to the assumption that the two are identical. The assumption is mistaken because it fails to consider the radical difference of *function* between the two kinds of language.
